Even in California North American's success will not produce a cornucopia of immediate jobs. The firm expects to employ some 9,000 new workers at the peak of the programme in two or three years' time, but it only plans to take on 1,000 more this year. For the moment the gain is that it will not need to sack anyone; no wonder its workers celebrated far into the night last week. In time subcontractors are expected to need 20,000 more men and the state is relying on a multiplier effect to produce more jobs. Luckily California is beginning to boom again. Even in the aerospace industry employment has edged up a bit although, with 448,500 people in jobs, it is still far below the record 616,000 in December, 1967.

Magic camera

FROM A CORRESPONDENT IN BOSTON

Polaroid, the developer of "instant photography" and a darling of the stock market for many years, reported last month a drop in its second-quarter earnings of 62 per cent compared with earnings in the same period a year ago; sales were off 14 per cent. At the same time, the Eastman Kodak Company, the huge firm which dominates the American camera and film industry, announced a 34 per cent increase in its second-quarter earnings, with sales up 17 per cent.

Kodak's great leap forward is due to its introduction of pocket-sized Instamatics, tiny, inch-thick cameras now selling as fast as they can be produced. Polaroid's difficulty is due partly to the shops' big stocks of new Kodak products and partly to its own \$200m investment in the SX-70, a revolutionary new camera with the advantage of the original Polaroid Land camera (almost instant development of film) and none of its disadvantages (bulk, wet pictures and waste paper).

The new camera is as yet unnamed but security analysts call it Aladdin. In fact, the camera is the magic lamp and Aladdin is Mr Edwin Land, the scientist and inventor who 25 years ago gave the first Polaroid Land camera to a sceptical world, instantly turning his company's \$2m loss into profit. Mr Land's new camera is expected to conjure up the same genie: money.

Mr Land is a peculiarly American combination of scientist and entrepreneur, an imaginative recluse in the laboratory who turns into a magician at shareholders' meetings. His genius was to invent a camera which, using

July 27, 1972

a known scientific principle of filtering light, did something never before attempted: it developed its own film, inside the camera, within 60 seconds.

The camera was both expensive and bulky but it appealed to the amateur's desire to see his picture on the spot. It became an international success, not only for fun, but for myriad commercial uses as well. Since then, Mr Land has shortened the development time to 15 seconds, provided automatic exposure, smaller size cameras, film packets instead of rolls. His most dramatic development was an "instant" colour film, produced in 1963.

Price plagued Polaroid until the inexpensive Swinger came out in 1965, tempting Kodak to try belatedly, and so far unsuccessfully, to produce an instant-development camera of its own. This year Polaroid entered the market for cheap cameras with its \$25 Square Shooter. The Square Shooter's swift success raised Polaroid's sales for the first quarter of 1972 \$19m above any previous quarter in its history.

But dealers who had laid in heavy stocks of the Square Shooter pulled back in anticipation of the new SX-70 while Polaroid's enormous investment in three new plants and in personnel began to show up on its balance sheets. (The firm intends to assemble its own cameras and produce the miraculous new film for them—work which in the past has been done mostly by sub-contractors.) The SX-70 is promised for the Christmas market. Polaroid believes that it is Mr Land's greatest invention since the original Polaroid Land camera of 1947. It is certainly Polaroid's largest risk.

Heroin run

Trade in Turkey is bad but the narcotics dealers are doing well in Thailand. Just when the Americans are congratulating themselves that the opium traffic from Turkey is ending they discover that more heroin is coming into the United States from south-east Asia than they realised.

Stopping the flow of heroin at its source is a mammoth task. The Administration is already giving the Turkish government money to help the peasants who will not be allowed to grow another crop of opium after this year. In south-east Asia the problem is even more difficult. A high level report prepared by the Central Intelligence Agency claims that it will be virtually impossible to stem the flow of drugs from this area because of the lack

Nixon hears a success story from his anti-drug officers

of co-operation from both the governments concerned and from Americans living in the area. A book called "The Politics of Heroin in South-east Asia," which is due to be published in September, comes to virtually the same conclusion. But the author, Mr McCoy, goes further and accuses the agency itself of collusion with those trafficking in drugs.

Generally the CIA prefers not to respond to criticism but this book, which some officials were allowed to see before publication, has triggered heated denials and allegations that the evidence used is out of date. But these protestations seem to ring rather hollow since the agency's own report appears to support much of the evidence used in the book against the governments in the region. It is obviously a sensitive subject. The CIA has its own reason for wanting to protect its agents who are involved in highly dangerous operations. But it also seems that the Administration wants to protect the reputation of the governments in south-east Asia. Its spokesmen are now saying that the evidence used in the CIA report which was completed last February is out of date and that the governments concerned are co-operating enthusiastically in the fight against narcotics.

The most effective part of the attack on heroin seems to be within the United States itself, judging from the figures. The federal narcotics authorities claim to have seized an average of 71 lb of heroin a month, or \$31m worth, on the east coast alone in the past 12 months. This is nearly nine times more than in the same period of the previous year. These successes have led to both an increase in the price of a gramme of heroin from \$418 to \$785 and to a lowering of the quality of the heroin on sale. This may not have helped those who are already addicted but it may have stopped

others from getting hooked. The real effects of the programme are unlikely to be felt for a few years. At present no one is even sure how many heroin addicts there are in the United States. President Nixon has now asked Congress to add another \$135m to bring the total for the fight against narcotics next year to over £300m.

Fireman, farewell

It may be a long farewell, but the firemen on railway freight trains are at last on their way out. For a generation they have been a prime example of feather-bedding, the retention of men in jobs which no longer exist. When diesel engines came in there was no longer any need for a fireman; there was no fire to tend. But ever since 1937, through strikes and in spite of the labours of five emergency boards and of two presidential panels, the argument between the union and the railways has persisted. It had become the oldest labour dispute in the United States.

The agreement reached last week does not provide for the dismissal of any of the 18,000 firemen who now fill unnecessary positions as assistant engine drivers; indeed the minority who work on passenger trains remain untouched for the moment, in the interests of safety. But as firemen on freight trains die or retire or leave their jobs or are promoted to engine driver they are not to be replaced. How many years this will take, no one knows. The railways, many of them in serious financial trouble, some of them, like the Penn Central, bankrupt, are not going to enjoy any immediate lightening of their pay rolls. But the agreement represents a step towards the modernisation of labour practices which they—and some other industries—need if they are to survive.

Fodens

The seventieth Annual General Meeting of Fodens Limited will be held on 16th August at Elworth, Sandbach, Cheshire. The following is a summary of major points from the circulated statement of the Chairman, Mr. Albert Stubbs.

Trading Conditions

The heavy Commercial Motor Industry has passed through a period of recession, causing a reduction in the Company's turnover from £14,561,000 to £12,986,000 of which 76% was Home Market and 24% Overseas.

Signs of recovery were evident by the end of December last and normal trading levels were reached by the end of March 1972.

Overseas

The trading profit of Fodens (S.A.) (Pty) Ltd was a record, but the figure appropriated to the Consolidated Accounts was minimal, due to the adverse effects of foreign exchange fluctuations. The C.D.F.C. acquired 33½% interest in the enlarged Capital of Fodens (S.A.) (Pty) Ltd and also granted a long term loan.

Future Policy

For over a year a long term development plan has been in course of preparation and this was adopted by the Board in April. It calls for increased production, with increased profits and cash flow, and is based on the marketing of top quality products with continual review of design to meet the needs of a highly competitive market.

Recovery Already Started

Output figures for the first quarter of the current year, April to June, are on target, with an increase of 22.5% on the similar period of last year. Orders on hand from overseas and U.K. are very satisfactory and early profit figures augur well for a strong recovery.

Dividend
The Directors recommend a dividend of 12½%, as last year.

Imagination run riot

THE MYTHOLOGY OF THE SECRET SOCIETIES

By J. M. Roberts.
Secker and Warburg. 380 pages. £6.

Historians are rarely imaginative. The historian who is praised for his imagination will probably consider his scholarship insulted. Consequently their activities are predictable. Run your eye down the list of theses completed this year, and you will be reading the publishers' lists for the history books which will be appearing within the next five years. The writing of history is firmly established on its tram lines. It is, therefore, rare to find an historian doing what Dr John Roberts has done. He has followed up a subject which jumps all over the place, but about which he has for long been curious: secret societies. He is interested in specific secret societies as they have existed in the past, and he is concerned with their positive activities and with measuring their importance. But he is really intrigued by what people have thought about these societies, about the persistent delusion of the intellectual

and governing classes of western Europe that these societies are all-important in determining the course of history.

Dr Roberts quotes Disraeli, for example, assuring the House of Commons that the whole of France and Italy, and a great portion of Germany, were being covered with a network of secret societies of great strength, just as the earth was being covered with a network of railroads. Why, asks Dr Roberts, have so many intelligent people believed in the sinister power of the Jesuits, the freemasons, the Jews, the carbonari, the comintern? It is plain that to this author, interested in fears as much as in facts, the distinction between societies whose membership is secret and those which deliberate in camera but whose members are readily identifiable (and who make up something more like a closed shop than the conventional idea of a secret society) is of minor importance. The theme of this book, which passes from the end of the eighteenth century, through the French revolution and Napoleonic era, to the European restoration period, is the constant

The roots of mythology: freemasons and their arms in St Paul's

claim that it is the leaders of these secret organisations who are the invisible manipulators of events—that they have more control over what happens than the simple statesmen who appear in public.

It must be said that this work is rather lengthy. It could be that it was somewhat hastily put together, and that the author was still uncertain as to the limits of his subject or the nature of his investigation even while he was writing it. Perhaps he is a little too anxious to make clear that he fully realises how much of the mythology he is investigating is sheer nonsense. And he might have been a little bolder in some of his conclusions. But there is no doubt that this is a fascinating book and also an important essay in understanding past attitudes and beliefs. It is to be recommended for its intelligence and its persistence.

Dr Roberts is at his best when describing how the hard-headed, commonsense world of the English freemasons became caught up in the legend and fancy with which people came to interpret freemasonry on the continent. He tells us about the imaginings of Cagliostro and he analyses the work of Barruel, the ecclesiastical journalist and émigré whose fame rested on his denunciation of jacobinism as the outcome of long-standing plots and conspiracies. When Dr Roberts asks how it was that the charlatanism of the one and the gullibility of the other did not prevent them from being taken seriously, we are at the heart of his study. He works through, at last, to mankind's penchant for the irrational, and his strictures are sensible enough. But we must remember how hindsight can make absolute nonsense of what circumstances may well once have made to seem eminently reasonable. On the plane of reality, some secret societies were more important than others. We cannot dismiss them all, just because we now have superior theories of how history is made.

The immiscibles

PREJUDICE AND TOLERANCE IN ULSTER

By Rosemary Harris.
Manchester University Press. 250 pages. £3.

COMMUNITY RELATIONS

By Maurice N. Hayes.
Runnymede Trust. 28 pages. 10p.

Research begun 20 years ago on the life and attitudes of a small rural community in Ulster's border country may

not seem to be the most promising subject for a book. But Dr Harris, a social anthropologist, has produced the best study yet to appear on that unhappy province. Ballybeg is a fictitious name for the area in which Dr Harris lived for a short period in the early 1950s and kept in close touch with until 1965. Its population is evenly divided between Roman Catholics and Protestants. It provides a microcosm of Ulster's wider, fractured community.

The people of Ballybeg, farmers and labourers, share a common way of life, shaped by the seasons. Their homes, their daily diet, even their intense family relationships are very much alike. So are many of their common assumptions. There is a distaste for snobbery, a suspicion of bureaucracy, a hardy egalitarianism and a dislike of the English, who are seen as ruthless, pompous, godless heathens. But Ballybeg is divided infusibly into two communities. Roman Catholics and Protestants rarely intermarry. Their children are taught in separate schools and they play different games. Each community holds its own dances, film shows, bazaars and sales of work, and they patronise their own doctors, chemists and grocers. Even though they live side by side, they harbour prejudices of each other which contradict their own daily experience. Catholics assume Protestants are hard-working, money-grubbing Philistines, while Protestants see Catholics as untrustworthy and superstitious inferiors, who sponge on the welfare state. With such perspectives it is surprising that the people of Ballybeg have not perished in social discord.

But Dr Harris, with considerable subtlety, shows how they have found a way of living together. Strict taboos on religious and political matters govern conversations across the divide to avoid conflict, but of course such reticence reinforces the stereotype prejudices of each community. These have little reality. Dr Harris writes with an eye for detail and without jargon. Her book is a model of its kind; but it conveys no message of hope.

Of course, the dichotomy of Ballybeg lacks the hopeless despair and bitterness of Belfast and Londonderry, which Mr Maurice Hayes, the first chairman of the community relations commission, had to tackle with a small staff of field workers and a puny budget from the summer of 1970. In his Runnymede lecture, Mr Hayes is a sober realist. Inter-community groups tend to be middle-class and suburban for "the realities of geography and

ingrained fear" thwart the growth of such groups in working-class districts. The commission found itself seeking to build up the self-confidence of each community through tenants' associations, but Mr Hayes is right to question whether such efforts did not actually strengthen mutual animosity and distrust. The violence, the lack of consensus and the commission's links with Stormont all weakened its credibility. Its creation was little more than a pious gesture. Perhaps it could never have been anything else. Dr Harris has shown that Ulster's divisions cannot be spirited away with the application of "platitudes and rose water."

Strangers and brothers

THE ANATOMY OF EXILE

By Paul Tabori.

Harrap. 432 pages. £6.

John Wesley claimed, a shade complacently, that all the world was his parish, and Sir Thomas Browne that he was in England "every where and under any Meridian." Neither was compelled to put high sentiment to the test of actually having to live in exile. Mr Paul Tabori, a Hungarian by birth and upbringing, has lived (voluntarily) in England since 1937. He seems bent on doing for exile what Robert Burton did for melancholy; and he has struck so rich and largely unexploited a vein that he is already at work on a second volume. That is to be devoted to considering, in detail, the contributions that refugees have made to the life of their host countries. Since the roll-call in this first volume, a compendium-cum-anthology of exile, includes such names as Ovid, Dante, Erasmus, Comenius, Voltaire, Napoleon, de Stael, Byron, Heine, Marx, Mann, Beckmann and de Gaulle, it is easy to see he will not be short of material.

Mr Tabori assembles most of the definitions and synonyms for exile and the exiled, and handles, apparently without shuddering, such pieces of current official jargon as "eligibility determination." He then provides a wordy label of his own:

An exile is a person compelled to leave or remain outside his country of origin on account of well-founded fear of persecution for reasons of race, religion, nationality, or political opinion; a person who considers his exile temporary (even though it may last a lifetime), hoping to return to his fatherland when circumstances permit—but unable or unwilling to do so as long as the factors that made him an exile persist.

He submitted his tentative classification to several hundred exiles and

international experts; their comments led him to add that since the forces that drive a person into exile may be political, economic or purely psychological, it does not make an essential difference whether he is expelled by physical force or whether he decides to go without direct pressure. The status of the exile, he says, is a dynamic one, changing from exile to emigration, or emigration to exile, as conditions change in the homeland or in the new society's ability to assimilate. The lot of an exile can be determined by his own efforts to be accepted and by the assets that he brings with him. Exiles and refugees complain that for the most part their hosts are coldly uncomprehending. But Mr Tabori quotes with approval another Hungarian, Mr George Mikes, on this subject:

The native... is irritated to see his privacy invaded by a lot of wayfarers who make life more difficult, compete with him in every field, and, on top of it all, keep on complaining and criticising—and yet expecting sympathy... But on the whole the world is behaving in a commendable fashion; and we must not forget that the émigrés are not all roses either.

In the last paragraph of this engaging volume Mr Tabori reflects that perhaps the "supreme summary and the most perfect direction to the world of exile and native, of refugee and Samaritan, of door-openers and gate-slammer," was given 2,000 years ago. He quotes the passage in the twenty-fifth chapter of the gospel according to St Matthew, in praise of those to whom the Son of Man could say: "I was a stranger and ye took me in." As Mr Tabori points out, the word translated into English as "stranger" was the ancient Greek one for "foreigner." The practical difficulty for most of us these days is that the word is so hugely and bewilderingly in the plural.

Portrait of a gentleman

HENRY JAMES: VOLUME 5, THE MASTER 1901-1916

By Leon Edel.

Hart-Davis. 592 pages. £6.95.

Five volumes may seem a formidable expanse to give to the story of the life of any writer, but admirers of Henry James are not the sort to be put off by mere length. Dr Edel's final volume is fully up to the standard of the previous four, a shining example of biography at its best. The years covered in this final volume show James in his advancing age, accepting the role of literary master, writing some of his best books (among them "The Golden Bowl"),

Two ages of James, by Beerbohm

and coming to appreciate, in his own measured remote way, the force of physical love. Most of these last years were spent at Rye in Sussex and in London.

Rather than leave Rye, from which aliens were barred during the first world war, James renounced his American nationality and became British. There are illuminating accounts of his relationships with Hart Crane, Edith Wharton and his philosopher brother, William James, and of his last visit to America. It is rare to find biography like this: scholarly yet unpretentious, sympathetic but not sycophantic, monumental in detail but readable as a novel—more readable than some of James's. Dr Edel has made Henry James an understandable man: the job could not have been done better.

A people set apart

SOUTH AFRICA: AN HISTORICAL INTRODUCTION

By Freda Troup.

Eyre Methuen. 428 pages. £4.50.

Of the many difficult ways of writing history Miss Troup, in attempting to refract through an unfamiliar prism an already very familiar light, has chosen perhaps the most difficult. In the spectrum of history-writing on South Africa, there are not many interstices waiting to be painted in. But Miss Troup has undeniably discovered one: a white history presented as though through black eyes by a white writer unsympathetic to her kind.

She has dangerously depended on

secondary and tertiary sources and even at times on rumour and hearsay, but the result is neither tenuous nor tendentious. It is a good general introduction to the received history of South Africa, and its special slant turns out, after all, to be a pretty good idea, producing some surprisingly vicious insights into the character and motives of white South Africans and into the flaccid laissez-faire thinking of people in Britain.

Calvinist habits of thought are, probably with justice, blamed by Miss Troup for much. But it is fair to ask why Calvinism took this particular path only in South Africa. Is it something to do with the land itself? Or is there some insight to be obtained from consideration of the class of people who took white civilisation to its shores? For unlike new Americans, Canadians, even New Zealanders, the settlers who came to South Africa in the eighteenth and nineteenth centuries were enterprising materialists, kulaks and petit bourgeois unleavened by refugee liberalism or radicalism, whose harsh mores could flourish in that cultural isolation unchecked by European "natural selection." In such isolation evolved unique classes of beings: marsupials, flightless rails, Galapagos tortoises and Australians—and white South Africans?

This is a book that must stir passions in South Africa—if it is given the chance. But all South Africans share the passionate love for the land to which Miss Troup freely confesses, which is so central to an understanding of its inhabitants. There are passages in this book that at first (and even at tenth) reading appear to be pedestrian recitals of familiar events; yet inexplicably they conjure up mental glimpses of those narrow foot-worn paths that are said to thread the length of Africa, of the stupendous desolation of the Mfecane, of the doomed nobility of San and Rozwi, of the paradisaical vista over the Tugela from Kranskop. This is a damned good trick if it is not a considerable gift: one feels certain Miss Troup's heart was in her work.

Summer of '44

THE WARSAW UPRISING

By George Bruce.

Hart-Davis. 224 pages. £2.95.

At the end of the Warsaw uprising in the summer of 1944, the defeated Polish Home Army detachments, marching

out of the city between lines of German security police, passed by field after field of white crosses at Wola, where the German casualties of two months' bitter fighting were buried. Some 10,000 dead Germans, 7,000 missing and 9,000 wounded—that was the price Hitler and Himmler had to pay for crushing Warsaw. But over 250,000 Poles lost their lives; their unexampled heroism ended in appalling tragedy. This was the first modern full-scale urban guerrilla battle, which destroyed one of Europe's historic capitals. It was designed and executed to prevent Poland passing straight from the German frying-pan to the Russian fire. By January, 1945, Poland was not only under Soviet military occupation, but also under total communist domination.

What went wrong, and who was to blame? After more than a quarter of a century of bitter controversy, Mr Bruce's calm, comprehensive account is most welcome. His careful researches, in London and Warsaw, included personal interviews with many of the survivors of the Polish leadership. His answers are pretty convincing; he copes well with the diplomatic background and tells a good story. Geography was, of course, important. Poland had to be liberated from the Nazi tyranny by the

BEYOND BABEL

New directions
in communications

Brenda Maddox

... the author is clearly a master of the art of communication. In *Beyond Babel* she has chosen to enter the jungle of the telecommunication business and has emerged to give a lucid description of the political and organisational problems which beset it. R. Ian Hart—*New Scientist*. £2.95.

André Deutsch

October, 1944: the defeated

soldiers of Poland's historic enemy, Russia. The Polish government in London, and the commanders of the Home Army in Poland, tried to devise a way out which would ensure Poland's liberation and its national independence after the war. After a series of failures in eastern Poland to assert the non-communist underground forces' independent role, Warsaw became the last trump card in their hands.

Despite all their heroism they did not play it well. Both the strategy and the tactics of the Home Army command were marked by the same lack of realism that stamped the military planning of the prewar Polish army. Stalin's treachery undoubtedly clinched the outcome against the defenders of Warsaw. The London Poles lacked a leader of stature; but even if General Sikorski had not been killed in 1942, it is doubtful how much he would have been able to save. The western Allies, most particularly Roosevelt, who still needed the Russians for the battle against Japan, were not keen to help.

Economic logic

THEORY OF PUBLIC CHOICE

Edited by James M. Buchanan and Robert D. Tollison.
University of Michigan Press. 330 Pages. \$15.

If people behave rationally, whether altruistically or selfishly, in private choices about market behaviour, they presumably do the same in their public

choices about political behaviour. So the sort of theorising which is employed by economists to examine the functioning of markets should also serve in the study of politics. The essays in this book, subtitled "Political Applications of Economics," are all dedicated to this idea.

The authors are methodological purists who wish to distinguish prediction from prescription and who judge a set of assumptions by their usefulness for prediction rather than by any reference to their realism. In practice, prediction means consistency with observed fact, so some of the authors are content if they can show that a few apparently silly assumptions plus some economics-type logic produces conclusions which are not silly.

One example is Professor Buchanan's discussion of the national health service. If decisions about it were taken separately from other government decisions and were democratic, the representative rational citizen would compare benefits with tax cost when deciding how much to spend on health services. But when deciding how much of them to consume he would regard them as free. So he would plan to provide less than he will demand, which means that there would be queues and waiting lists. These exist. Hence, so the argument runs, they have been explained.

This is a caricature of an admittedly simplified analysis. But it indicates the sort of topic dealt with. Sometimes a "representative individual" is used to explain things; sometimes majority choice is assumed, as in a discussion of the effects of different ways of financing education on the amount provided. Some of the authors love to generate paradoxes and display an academic style which may fail to attract many readers. Following a discussion which assumes voters to have "perfect knowledge" of their share of the costs and benefits of budgetary expenditures, one essay notes with irritating naivety that "it is more realistic" to assume otherwise. Its authors then persuade themselves that there is no a priori reason to suppose that ignorance will alter the outcome, but fail to examine the effects of indifference or sheer boredom on the part of voters. However, it would be wrong to dismiss gleams of insight on the grounds that they fail to illuminate everything at once. The economics approach is stimulatingly different and if pursued with due modesty provides a useful challenge to political scientists.

Always with us?

REGULATING THE POOR

By Frances Fox Piven and Richard A. Cloward.
Tavistock. 407 pages. £3.75.

One thing all Americans seem to be agreed on: their system of public assistance is a disaster which must be rebuilt from top to bottom. All, that is, except Mrs Piven and Mr Cloward, who feel that the huge increase in the number of people on assistance means that at last the poor and the helpless are being saved from despair and near-starvation. Talk of reform worries them for they believe, with some justification, that any reform will require people to take any job, no matter how badly paid or temporary, or lose their assistance.

These two teachers of social work, who have seen America's system of relief through the eyes of the poor, have a harsh thesis to expound: that help is given only when the people have been driven by privation to resort to violence and that as soon as calm is restored, the relief is cut off to force people back into the labour market. Two American crises are examined in detail: the tremendous expansion of federal assistance and job creation under the New Deal and the huge increase in (mainly black) people receiving what in Britain would be called supplementary benefit in the big cities in the later half of the 1960s.

Great numbers of southern blacks were driven off the land and went north during the 1940s, 1950s and early 1960s and could not find work. Yet the swelling in the relief rolls, north and south, did not begin until 1964: the authors argue that by then turmoil in the ghettos had thoroughly frightened both the cities and the federal government. This rise of violence they explain, convincingly, as the result of two developments: the breakdown of parental control in a new, strange environment and the absence of jobs for the young, always the most volatile section of any population.

The argument has obviously considerable validity but it does not fit the facts of the 1960s quite as neatly as it does those of the 1930s. Mrs Piven and Mr Cloward refuse to believe that there has been any general increase in compassion towards the poor or in governmental or individual benevolence. Yet they themselves show, in two closely observed chapters, that it was the poverty programme and the thousands of idealistic social workers and young lawyers that it attracted

which helped poor people to secure the assistance to which they were entitled, in part through court cases which liberalised the standards of eligibility. The idea of the poverty programme dates from 1963, before there were any riots (although it did not become law until 1964), while the terrible riot in Watts did not usher in the era of urban riots until 1965. Nevertheless, this is a book well worth reading; it shows the side of the coin which is seldom seen.

Social survey

There are two kinds of guides to the social services: one for those trying to understand the statistics and one for those who want to know how to become part of them. They can overlap. For example, the first edition of an admirable new annual publication, the *Social Services Year Book, 1972-73* (Councils and Education Press, £3.75), would be inordinately useful for anyone wrestling with a faceless bureaucracy. Here, in neat small print, are the addresses and telephone numbers, but most important of all the names, of the people-in-charge—of not only central and local government social service departments and offices but also of the remand homes, day nurseries, old people's homes and so forth in their areas. But this is obviously a book for professionals and libraries.

So is a rather different new annual publication, *The Year Book of Social Policy in Britain* edited by Kathleen Jones (Routledge and Kegan Paul, £4), a mildly interesting group of essays by people involved in the social services on the developments of 1971, including a disappointingly bland little piece by the Secretary of State, Sir Keith Joseph. A new collection of essays from the Social Science Research Council, *Social Indicators and Social Policy* (*The Economist*, July 22nd) looks at the tools of policy rather than the outcome. And a useful, highly technical, description of the theory of the decision-making with reference to the social sciences comes from John O'Shaughnessy in *Inquiry and Decision* (Allen and Unwin, £3.80)—which takes one just about as far from the ordinary consumer of personal social services as one can get.

The guide most plainly directed at them is still the *Consumer's Guide to the British Social Services* by Phyllis Willmott (Penguin, 40p). This concentrates on helping people to find help; it lists agencies, departments and social workers whose job it is to provide it

and defines their responsibilities; sketches the law on, for example, abortion, adoption and divorce (incidentally running through the prohibited degrees of marriage); covers the voluntary societies and, rather chattily, possible improvements and the power of pressure groups. A second edition was published last year; the updating was fairly adequate. But a handy little guide published earlier this year by Mr N. J. Smith, a probation officer, social worker and university lecturer, *A Brief Guide to Social Legislation* (Methuen, £2), which provides histories, summaries, and bibliographies of the laws on welfare, education, health, the courts, income maintenance and so forth, has totally neglected the Courts Act, in force since the beginning of 1971. The old system of quarter sessions and assizes is described as if it was still in existence. Otherwise, this is a remarkably well laid-out and helpful little book. *A Dictionary of Social Services* by Joan Clegg (Bedford Square Press, £1.50 hardbound, 90p paperback) is as much for the student as for the bemused form-filler: it copes very well with the confusing terminology of social security and national insurance benefits, but also defines, for example, participation and poverty. These definitions are still concise, brisk and matter-of-fact.

Where the rainbow ended

ISLAND ON THE EDGE OF THE WORLD
By Charles Maclean.
Tom Stacey. 160 pages. £1.90.

Rising out of the Atlantic, about 150 miles west of Harris, is the Hebridean island of St Kilda. On this blasted island, visited only by seabirds and sink-rock, a small colony of men and women developed a utopian arcady which, by 1930, had been unhappily snuffed out by unsympathetic influences from the Scottish mainland—or

so you might think, if you got no further than the dustcover of Mr Charles Maclean's excellent book. The author himself is less extravagant in his claims. He draws some rather tendentious conclusions about the implications of St Kildan life for larger societies, but he is fully alive to the drawbacks of such a remote existence. A diet of gannets, fulmars and puffins, leavened in good season with bread and in bad with seaweed, must have a limited appeal. Curiously, the St Kildans did not fish.

But some aspects of St Kildan civilisation were of considerable interest. The system of common ownership and the parliament in which all the men of the island met each day enabled a remarkable egalitarianism to flourish: disputes were rare and law-breaking almost unheard of. Generosity, contentment and good looks were, it seems, lavished upon the St Kildans to compensate for nature's rough treatment.

But the society collapsed. The isolation that had given rise to the development of such a social system also set the conditions for its corruption. In the nineteenth century the St Kildans were not equipped to stave off the encroachments—chiefly in the form of missionaries and *tetanus infantum*—of the outside world. As the islanders increasingly came to rely upon charity they lost their old skills as birdcatchers and cragsmen and their self-confidence. In 1930 the island was evacuated.

Mr Maclean tells the tale with a skill of which the St Kildans would have approved. His knowledge of the published sources and of the island itself combine with his enthusiasm for the subject to make his account compelling. Lest other remote islands such as Foulra or Fair Isle suffer the same fate as St Kilda, Mr Maclean's book should be read in Whitehall's Scottish Office and Edinburgh's St Andrew's House.

St Kilda: parliament in session

What you'll be missing if you don't fly the new Saudi Arabian Airlines

Progress is a continuing affair with Saudi Arabian Airlines so we'd like to keep you up to date with all our latest moves to improve our passenger and cargo services in the air and on the ground.

New name

Because it seemed so popular, we've adopted our 'Trade' name, Saudia. It's short, easy to say and remember. And we hope you will say it. Often.

saudia

New-Improved Schedules All 4-Engine Boeing-Fanjets

- Non-Stop - London/Jeddah.
- Four flights weekly - Europe/Saudi Arabia.
- Faster service to Gulf - New Flight - London/Rome/Dhahran.
- All-Cargo flights - Boeing 707s - the only scheduled service Europe/Saudi Arabia.
- Plus increased jet service in Saudi Arabia and Mid-East - to Karachi-Bombay-Yemen. (Boeing 707s and 737s).

New ticket offices - and more of them

They don't just look more modern and efficient. They are more modern and efficient. And so are the courteous, well-trained personnel who serve you. New offices have recently opened in Bombay, Jeddah, Rome, Sanaa and soon Cairo, Amman, Mecca, Riyadh, Dhahran, Medina, Karachi, with more on the way.

New Cargo terminal - London Heathrow

It isn't only the building that's new and better. The service that goes with it is too.

New Bonded Warehouse in Jeddah

No-one can touch it for efficiency. And no-one can touch your cargo. It's all under cover and well protected.

New all-cargo jets

Only Saudia fly all-cargo Boeing 707s London, Frankfurt then non-stop to Saudi Arabia. It's the fastest service, the only scheduled service and a fully-palletised service. And our new improved cargo facilities at London (Heathrow) and in Jeddah, mean we're just as efficient on the ground too.

New wide-body look

Only Saudia 737s have the new wide-body look, with new 'Twin-seats' in Economy. All our 4-engine Boeings will also have the new livery outside and colourful interior decor, also with 'Twin-seats' in Economy.

New livery

We think you'll go for our smooth new livery in green, white and blue. A big Saudia on the fuselage and our emblem on an all-green tail mean you can spot us easily.

New fleet

Our new fleet of 737s, now in service, throughout Saudi Arabia and the Middle East, are the latest and most advanced short-haul jets in the world. They're as wide as our 707s - and just as comfortable. Their new fan-jet engines have more power, so the range is longer and the take-offs are shorter.

New improved reservations

Increased telephones - electronic communications - modernized procedures will pleasantly surprise you in faster - more reliable service.

New business advisory service

Saudia Arabia is big business and we can help make it your business. Step into any Saudia office in Europe and we will assist you with market knowledge, arrange itineraries and business leads.

All this and Experience too:

1972 is Saudia's 27th year of dependable air transport. And we're serving 47 cities in Europe - Africa - Mid-East - Asia!

saudia

THE POLITICS OF WORLD MONEY

From 1958 to 1966 Fred Hirsch was *The Economist's* principal writer on international financial affairs. Between 1966 and 1972 he was a senior member of the staff of the International Monetary Fund in Washington, where he was directly concerned with the performance and improvement of the international monetary system. Now he has decided to have an academic spell at Oxford. In this 10,000-word survey, he sets down for us his present views on the most desirable sort of monetary reform that should be politically possible.

In broad outline, his views are still intriguingly close to those that we now advocate in *The Economist*. In particular details, they are intriguingly different. But we present the Hirsch proposals as a document that should be studied by all who have any part to play in present international financial regulations and at next month's annual meeting of the International Monetary Fund

Hirsch: his own plan

A fragile freedom

International monetary reform has become the modern equivalent of world disarmament: the subject of seemingly unending national negotiations whose periodic triumphs somehow keep getting overwhelmed with fresh upsets. What can be regarded as the first in the long line of international conferences to change the international monetary system by design took place just 50 years ago, in the attempt at Genoa to provide a broader base for what had been the pre-1914 gold standard. And it is just ten years since Reginald Maudling brought the need for international monetary reform to the attention of a then complacent monetary establishment. The question has remained on the official agenda ever since, and in the past year has been elevated to political summit level. This survey attempts a comprehensive view of the issues involved. It suggests a way forward that differs in important aspects from the course on which European politicians are currently but not yet irretrievably set.

The admixture of monetary talk, market upheaval and official action that has characterised the past 10 years has made for some real progress, which needs to be set against the inconveniences and dangers inherent in the hybrid system that has emerged

semi-planned. Ten years ago adaptation of the external value of a currency to match its internal value—the achievement which Keynes, in 1945, hoped and claimed for the postwar monetary arrangement hammered out under his influence at Bretton Woods—was still held to be unthinkable for Britain and the pound sterling; while alteration in the exchange value of the United States dollar was declared by all monetary officials and by a surprising number of so-called monetary experts to be not only unthinkable but impossible. Ten years ago, too, the possibility of establishing a synthetic international money in the form that now exists in the IMF's Special Drawing Rights was dismissed with equal assurance by almost all those who claimed expertise in the practicable and the negotiable.

The loosening of the system that has been achieved has restored a needed degree of manoeuvre for domestic economic policies. The measure of this achievement is seen by the fact that no government would find it possible today, as the Wilson government did in 1964-67, to rationalise a bad domestic economic policy by the excuse or belief that the economically correct policy was against the international rules. Nothing could better demon-

strate the change in attitudes that has occurred than the tolerant international response accorded to Britain's recent floating of the pound.

Yet the loosening of the old international constraints is not enough by itself to assure continued freedom of manoeuvre for domestic policy to meet legitimate aims. It is not enough because, in international finance as in highway traffic or in any other collective activity, the absence of any agreed rules can limit individual freedom as severely as can the presence of unduly severe rules. It is obvious enough that the only practicable means for a motorist to get round Trafalgar Square is for him and all his counterparts to agree to keep left and to stop at red lights. But interdependence in financial relationships is often obscured, not least by the formal appearance that countries control their exchange rate against other currencies. This belief is as fallacious and almost as dangerous as the opposite and now discarded belief that the exchange rate is outside any country's control.

As in any mutual relationship, the control has to be exerted jointly, or at least by one party remaining passive. Countries may, and do in practice, take independent action to change their exchange rate against all other

currencies; but a succession of such actions may tend to offset or negate the effects of earlier changes, so that no country can be sure an independent move of its own will have more than a momentary impact in the intended way. The fact that Britain by unilateral action was able to float the sterling exchange rate at least to the \$2.40 range without encountering resistance or retaliation does not therefore belie the need for an international rule book, any more than one's ability to drive round Trafalgar Square the wrong way at 3 am belies the need for rules of the road.

Yet no working international rule book for the exchange rate mechanism currently exists. Perhaps inevitably, the old and over-rigid system has broken before agreement has been attained on what is to replace it. Without such agreement, in the context of comprehensive monetary reform, there can be no assurance that present freedom of manoeuvre for domestic policy can be retained. Why then do the obstacles to such agreement appear so great and the prospects so dim?

The traditional explanation for any such impasse, to be heard from

financial officials and the private financial community alike, is the intransigence and ignorance of politicians. In fact, politicians from Churchill in his fight against the gold standard in 1925 to Macmillan and Kennedy in their too whimsical flirtation with serious international monetary reform in the early 1960s, were well ahead of their financial mandarins. Today the constellation is very different. As a result of a variety of influences—above all the battering of events, but also including the increased influence exerted by economists in finance ministries and central banks—the financial technicians are more receptive to constructive reform of the international financial system than ever before. Unfortunately the tables have now turned 180 degrees rather than 90. While the politicians are well and truly engaged—finance ministers seem to have taken over from foreign ministers as the main practitioners of international diplomacy—the political push is preponderantly in the wrong direction: towards a dubious regional turning.

Europa: the money illusion

Electoral necessity will ensure that present plans for European monetary union are not carried through. But there are at least three bad results from the present pretence that they will be

The impetus for this regional turn has been the declared intention of the European Economic Community to tighten financial links between its members to the point of establishing, within a decade on the official timetable, an economic and monetary union. This involves first minimising and later renouncing exchange rate changes between EEC members, followed by adoption of a common currency.

The prospect of one monetary block breeds others. The practice of the EEC in international negotiations of holding interminable cabals in the midst of those negotiations has long caused frustration and irritation among the other participants. This frustration came to a head in the reign of John Connally at the American Treasury. The now fashionable paper division of the world into four financial and trading blocks—North America, the enlarged EEC, a Japanese Pacific, and developing countries, with the communist world sometimes thrown in to make a fifth block—stems partly from

Connally's hankering to sit round a small table with a group he could do business with. But this only personified a more general feeling, which lingers on, that organisation of the world on this regional basis is a more practicable, less ambitious undertaking in present conditions than the attempt to maintain the ideal one world system.

This reading is superficially attractive at the high level of abstraction indulged in by the esoteric few who are professional practitioners of, or professional commentators on, economic diplomacy (a trade that may be defined as knowing equally little about either component). The most usual fear expressed about the prospect of regional blocks, whether emerging within or outside the existing international institutions, is that they will involve dangerous economic frictions, and thereby eventually political friction, between those blocks; dark references are made to the 1930s. This anxiety misses the central point. There seems no reason why a cohesive and smooth-running

Connally: deals at small tables

enlarged EEC should not have harmonious economic and political relations with a smooth-running North American economic community. The real danger is the virtual certainty that the blocks themselves will be neither cohesive nor smooth-running.

It is an inconvenient fact that the most severe trading and financial maladjustments between economies today occur within these designated blocks, and not between them. Thus for Britain—and for that matter for France—the biggest payments maladjustment in recent years has been vis-à-vis Germany; in the past five years, the mark has appreciated against the pound by almost 50 per cent. For Canada, the continuing difficulties in maintaining external balance have been overwhelmingly vis-à-vis the United States.

The only way that has been found of dealing with such recurring maladjustments without severe economic damage has been through corresponding adjustment of exchange rates. Yet it is the essence of monetary integration that it removes the possibility of exchange rate adjustment. Monetary integration in areas within which latent payments maladjustments persist would in practice involve a return to much of the pain and frustrations of a fixed exchange rate world. Formally, the possibility would remain for fluctuations between the exchange rate of the block as a whole and the outside world, and this is envisaged for the European monetary union. But no extensive use can be expected to be made of such outside flexibility in conditions of this kind. For if Germany has a recurring tendency towards a payments surplus, and Britain towards a deficit, a fixed exchange link between them will not

only cause inflation in Germany and unemployment in Britain; it will also involve directly conflicting interests on whether the common currency should appreciate or depreciate against the outside world. Exactly the same conflict would quickly emerge in a "common European float" which is currently seen as a political earnest of good European intent.

The implications of European monetary union are fairly well agreed by economists, and may be briefly summarised as follows:

1. The fixed exchange link within the union will mean that a country, or region as it will then become, in which productivity is growing relatively slowly in relation to wages will face problems of deflation and unemployment, while a region whose productivity is growing relatively fast in relation to wages will experience increased inflation. If nothing else changes, there will be more unemployment and/or inflation in the region as a whole.

2. The ensuing regional maladjustment, which will be the new name for a balance of payments problem made intractable by abandonment of the exchange rate instrument, may be relieved if there is extensive labour mobility. This would involve a drain of labour from the weak areas to the strong.

3. If regional depopulation of this kind, which has characterised existing monetary unions, such as the United States, Italy and the British Isles, either fails to materialise or is to be deliberately checked by regional policy, then avoidance of mass unemployment in the financially weaker regions will require extensive fiscal transfers from well-placed regions to the weaker ones. Such transfers will occur in part through automatic equalisation if fiscal policy becomes fully centralised in the union, but will in any case require in addition specific regional grants and subsidies akin to those prevailing within Britain and other constituent countries at present. Total cross regional subsidisation would necessarily be larger than the sum of regional subsidies among the various countries at present, since the variations between conditions of competitiveness in an area linked by a common currency are bound to be greater, the larger and more diverse the economy that the common currency binds together.

4. Free movement of capital within the currency area, which is an essential facet of monetary union, would automatically finance the disequilibrium in the short term, but might exacerbate the imbalance in the long term, to the extent that the weaker regions offered a lower return on capital. The resultant drain of capital would reduce employment in the weaker regions and shift their distribution of income from wages

to profits.

Regional transfers on the scale required to avoid extensive unemployment in the weaker areas would therefore involve extensive subsidies across existing national frontiers. Because not all regional problems would fall on poor regions, any more than all balance of payments difficulties do, some of this cross subsidisation would be at the expense of taxpayers who were poorer than the beneficiaries. Thus taxpayers in the Ruhr might find themselves subsidising Londoners, or at least relieving Londoners of the subsidisation of Scotland. Since no forewarning has been given to the taxpayers of Germany and Holland that subsidies on a scale larger than has ever been required of them for domestic regional policy will become necessary to support the competitiveness of a Britain, a Denmark or a Sicily, and since the German and Dutch governments will be dependent upon the votes of these taxpayers, the only reasonable conclusion seems to be that transfers on anything like the necessary scale will not take place. If one concludes on similar ground of politico-economic logic that the excess unemployment and the excess inflation that would be incurred in a currency union without the requisite fiscal transfers would be equally unacceptable to the workers and housewives, the conclusion follows that European monetary union will not be carried through.

All experience in international finance since 1931 shows that paper commitments that involve demonstrable economic damage are likely sooner rather than later to be overwhelmed by electoral necessity. Central bankers,

and even Eurocrats, have only one vote, and this has turned out to be a fortunate check on financial irresponsibility. It is, therefore, entirely predictable that moves towards European monetary union will not be pressed to the point at which they will do massive economic damage, and that these moves will therefore continue to be essentially cosmetic. In this sense one can conclude that European monetary integration is not a serious issue. It belongs to that category of commitments that are endorsed by national authorities at the highest level, but are in fact ranked low in their priorities when it comes to the test. It is the 1970s' equivalent of Mr Wilson's unalterable commitment to \$2.80.

The facts of bureaucratic life and of good administration are such that the official world is unable to make a full distinction between pseudo commitments of this kind and commitments that are related in a meaningful way to the likely course of future events. Unfortunately, the exposure that might be expected from journalists, economists and parliamentarians seems to go against the natural instinct of these groups, not least of the journalists, whose natural instinct is to ride with the future and to assume that the future beckons with a ministerial finger. As a result, the pursuit of European monetary union remains declared official policy, and obeisance is required to be made to it as part and parcel of actions torpedoing it. This disjunction between actions and declared intentions cannot just be dismissed as play acting; it has a number of important and mainly negative effects.

Good Europeans playing Canute

First, the attempt to make moves towards exchange fixity induces half measures such as the ill-fated but continuing "snake" arrangement for reducing exchange margins between European currencies, an arrangement that inevitably makes parity changes and temporary floats more disruptive and more expensive in terms of gifts to speculators (as Britain found in June).

Second, the same attempt exerts pressure to shore up exchange fixity with dubious exchange controls. While there are a number of purposes for which controls on capital outflows are entirely appropriate—eg, to offset differences in national taxation or in political risk, or to offset a bias against domestic in-

vestment—exchange controls have proved singularly ineffective in deterring movements of short-term funds in pursuit of exchange profits. Moreover, to the extent that the controls are applied to transactions within the community, they involve a step back in this aspect of monetary integration.

Thirdly, as long as European monetary integration remains on the official agenda, it overrides other aspects of future planning in all related spheres. The ambiguity of whether the world's largest trading unit is to be represented by nine currencies or by one has become the most serious stumbling block towards monetary reform on an international plane.

Exchange rates for all players

The practical choice lies between managed floating, crawling pegs and routine parity changes. The choice between these three slightly different systems of controlled flexibility is less important than recognition that changes in the mechanism of exchange adjustment need to accompany the changes already made in official attitudes

For the reasons mentioned and reiterated above, it is vital to retain the instrument of exchange rate adjustment for existing national economies. This in itself argues for a loose global system rather than for a network of tight regional links. The basis on which a durable system of exchange flexibility should be constructed is almost certainly the most difficult question in international monetary reform. The other main aspect of reform, covering the reserve system and the role to be played by reserve currencies, gold and an international unit such as Special Drawing Rights, also involve a good deal of controversy; but the effective choices in this field have by now narrowed considerably.

A standard official view of the problem of the exchange rate system comes close to denying its existence. On this view, the delays in payments adjustment and the recurring exchange crises of the past few years are to be explained not by any institutional fault in the existing provisions for exchange adjustment—involving adjustment of parities on the initiative of a country when it decides and the international community agrees that its economy is in fundamental disequilibrium. The fault, it is said, has lain simply in the way the system has been operated, specifically in governments hanging on to outdated parities for too long. "Is it not possible instead," the Bank for International Settlements asked in its recent annual report, "for statesmen to guide public opinion to see the

advantages of restoring the exchange parity to equilibrium?" The trouble is that such guidance was precisely what Mr Barber provided in the predictably quoted and requoted sentence in his Budget speech; and in the third week of June he lost \$2½ billion across the exchanges and transferred perhaps \$100m as a free gift in exchange profits to international bankers and 13-year-old schoolchildren who had been smart enough to follow his guidance.

The willingness of monetary authorities to change their parities at an early stage of payments disequilibrium, which is so desirable on the grounds of economic management, has unavoidable effects on the behaviour of market operators. In Professor Haberler's phrase, it destroys "stability illusion," and since monetary authorities adhere to the view that parity changes need

to be of a certain minimum size (which is of itself a hangover from the days when parity adjustments were infrequent), it is hardly surprising that market operators find it profitable to anticipate movements in steps of 8 to 10 per cent and thereby, through the ensuing speculation, to force the authorities to anticipate their own intentions and to move earlier than they would otherwise wish. For six straight years now the world's monetary authorities have been making regular and predictable transfers to private operators in hundreds of millions of dollars; for large corporations, exchange profits have become almost a budget item.

The basis of these exchange profits has been a flaw in the official mechanism of exchange support, which remains in the form appropriate to a regime of virtually fixed rates despite the practical transition to visibly flexible rates. The move towards a widening of the exchange margins from the old maximum of 1 per cent against the intervention currency to 2½ per cent in the Smithsonian Agreement of last December was a step in the right direction. But the pressures exerted by the EEC and its visions of monetary union made the step a very small one, and then prevented even this degree of leeway from being used in the ill-fated "snake" arrangement. But even aside from this EEC pressure, there was little sign that countries generally had understood the need, in a regime of prompt and frequent parity adjustment, for the size of the parity adjustments to be small in relation to the permitted exchange margins—which means that the less is done to widen the margins the more needs to be done to minimise the size of parity changes, and therefore to make them effectively a matter of routine.

Turning a blind eye to the problem of securing a sustainable system of

exchange adjustment is not an exclusive prerogative of monetary officials. The crux of the issue is equally ducked by those advocates of a system of floating who do not specify what that system is to be and how it is to be made internationally consistent. Now that the United States has an active exchange rate and balance of payments policy, for reasons that are discussed in the next section, it is transparently no longer possible for other countries to achieve independent balance of payments aims at America's expense. The mutual character of any exchange rate or balance of payments relationships has therefore taken operational form. This was graphically demonstrated in the negotiations preceding the Smithsonian Agreement, in which European countries wanted one rate of exchange for their currencies against the dollar and the United States was determined to get another.

The one exchange system that would dispense with the need for any organised arrangements for reconciliation of conflicting objectives would be, aside from a system of completely fixed exchange rates, a system of freely floating rates, devoid of any official intervention. The troubles with a system of this kind are fairly familiar, though they are conveniently ignored in many academic discussions. The system would require that governments not only pay no attention to their external reserves, which would cause them little hardship in a system in which external reserves were not needed for exchange support. The system would also require that governments pay no attention to changes, however abrupt, in the structure of their balance of payments—that they would be prepared to see marginal export industries knocked out and made profitable again in response to exchange rate movements that might reflect only temporary financial flows. Governments would also have to be indifferent to the effect of changes in their exchange rates on domestic prices.

While the advocates of freely floating rates may be right that the outcome would be closer to the remarkable stability displayed by the postwar Canadian dollar than to the wild gyrations of the prewar French franc, such stability could not be expected for all currencies at all times. Occasions would arise in which unforeseeable uncertainties—large-scale strikes, particular political changes—would cause sharp fluctuations in an unsupported exchange rate, of a kind that could well exacerbate (eg, through the effect on food prices) the original disturbance. It is incon-

ceivable that in such conditions the national authorities would not use what means they had to stabilise the exchange rate. Yet once such a possibility of official intervention is conceded, even as an exceptional circumstance, the anonymity and automaticity of a system of freely floating rates is broken. The system becomes one of at least partially managed floating; and national management of floating requires international rules if conflict between the national currency managers is to be avoided.

Proceeding by elimination, therefore, three possible exchange rate systems can be ruled out viz, completely fixed rates, completely floating rates, and the beleaguered system of parity adjustments associated with fundamental disequilibrium and narrow exchange margins. In my view, the choice of a sustainable system of exchange adjustment lies between three other systems, which would differ substantially in form, but not necessarily in their practical results. These systems are:

1. Managed floating subject to international rules;
2. An automatic and mandatory crawling peg, probably geared simply to past movements of market exchange rates, and with wider margins around the moving parities;
3. A continued system of administered parity changes, protected from speculation by wider margins and a systematic policy of routine parity adjustments by small amounts, and involving obligatory parity changes for countries whose currencies were demonstrably out of line.

Managed floating

A system of managed floating with

Market operators aren't easy to outwit

international rules would probably be the most satisfactory from a purely economic standpoint. In principle, the system could approximate an international buffer stock designed to even out the fluctuations in market movements without disturbing the trend. There would be difficulties in assessment of such trends, but these are not in principle more severe than those involved in any attempted official intervention in exchange markets. Less ambitiously, and more practicably, management would be by national authorities subject to international overview; thus target levels or ranges for national reserves and perhaps some other balance of payments magnitudes would be established through regular consultations, and national exchange authorities could be required to confine their intervention to operations that respected these targets.

National authorities have traditionally been particularly sensitive about international interference in their tactics of exchange support, partly for the good reason that international committees are not the best counterparts to sharp-pencilled market operators. A system of managed floating is likely in practice to require a particularly large degree of international supervision; this may make it unsuitable for present requirements, which are for international ground rules that do not make excessive demands on transfer of effective power from national to international hands. But this option remains open and deserves more thorough investigation.

Crawling pegs

The family of crawling peg proposals are all designed to provide leeway for adequate exchange adjustment over time while providing assurance against excessive short-term fluctuations. The

proposals have in common the limitation of parity adjustment within a period such as a year to some total amount such as 2 or 3 per cent.

Under some variants, such changes are at the discretion of the authorities, and under other variants the authorities are guided by "presumptive" indicators, such as an average of past movements in market exchange rates or in external reserves. Under the automatic variant there is no such discretion and movements in the parity would be required weekly or even daily, on the basis of an average of market indicators in a given past reference period. None of these variants is free of difficulties—but the same is unfortunately true of any exchange rate system.

The advantages of the simple automatic compulsory crawl would be that: (a) the exchange adjustment would take place continuously and free of political inhibitions; (b) by relating adjustment to an objective market indicator such as the exchange rate, and requiring such adjustment of all countries, surplus countries and deficit countries would always make an equal contribution. The main disadvantage of the system is that, because no average of past movements can be a perfect guide to present needs in the light of future prospects, the parity would occasionally be in the wrong place. But this error would rarely be more than 2 or 3 per cent, and, as such, might be considered as a reasonable insurance premium to pay for the high assurance the system would provide against the parity ever getting out of line by 10 or 15 per cent as has frequently happened in the past. Since no one can be confident of being able to calculate an equilibrium parity within 2 or 3 per cent, and the serious problems arise from the large maladjustments, this insurance premium may be well worth paying. With exchange margins of, say, 3 per cent, a good combination of short-term stability and long-term adjustment should be attainable.

Routine parity changes

Whatever economic and administrative arguments can be made for an automatic crawling peg, it has to be recognised that such a system is perhaps the least acceptable to present national authorities, being particularly unpopular at the technical level. No self-respecting manager likes a computer to set him his daily dealing limits. It is therefore worth exploring how far the benefits of such a system might be obtained within the framework of the

existing system of administratively set parities; or, to put the question another way, considering what amendments would need to be made in the system of administered parity adjustments to adapt it to conditions in which such adjustments are frequently made.

The underlying need for such a system, as indicated earlier, is that the size of parity adjustments should be small in relation to the permitted exchange rate margins, which effectively requires that the parity adjustments themselves should become much smaller than has hitherto been the case, and that they should be made as a matter of routine. The associated changes in market rates would therefore become much more difficult to predict. Parity changes would no longer always involve a movement of the exchange rate outside the existing margins, and the exchange authorities could use the same kind of tactics to fend off market speculation as the Bank of England has used with some success to keep the market guessing about Bank rate. However, while manipulation of the parity in such ways is desirable to achieve smooth adjustment in market exchange rates with a minimum of disruptive speculation, it would raise a new problem of devising satisfactory international safeguards against unreasonable manipulation of parities.

A possible basis for reconciling these objectives which I have developed more fully elsewhere* can be summarised as follows. An international authority such as the IMF would calculate, at intervals such as six months, the estimated equilibrium parity rates for the main trading countries. These calculations would be made, as is now standard practice, taking into account not only the latest recorded historical balance of payments data, but the impact of cyclical influences and any other assured prospective influences on the payments balance. (In this respect the results would differ from a crawling peg based on market indications.) To take account of the uncertainties involved in such calculations, and also to provide a substantial degree of national discretion, these calculations would be expressed as an "equilibrium parity zone" which would be, say, 5 per cent on either side of the calculated equilibrium parity. Within this zone of 10 percentage points, the national authority could change its parity on

notification to the IMF. But it would undertake to prevent its parity falling outside this range, even if this occurred as a result not of its own excessive devaluation or revaluation but simply as a result of inaction in the face of an underlying payments imbalance.

Since countries are in practice unable to finance underlying deficits indefinitely—at least once other countries stop giving them credits—the main effect of this provision would be a new assurance against what has been called "competitive non-revaluation" under the Bretton Woods system, as practised by Germany before 1961 and Japan before 1972. While such a system would involve some new explicit obligations for national authorities to the international community, these obligations would be incurred only in positions of extreme imbalance. At the same time, national authorities would gain new freedom of action for small adjustments; and they would be protected from bilateral pressures such as those recently implicit in the American Treasury taking views on whether other countries are in fundamental disequilibrium on the basis of its own assessment of historical payments records.

The operative issue on exchange rates is not the grand argument between fixed and flexible, but the form that a system of controlled flexibility should take. Urgent attention now needs to be given to the choice between alternative arrangements such as those just described, and others. It seems to be impossible to devise an exchange rate regime without considerable faults or risks. But there is a lot to be said for the insurance principle of putting up with small faults if that minimises the chance of large ones.

The shape of the future reserve system—the role to be played by reserve currencies, gold and a synthetic international unit such as Special Drawing Rights—is much easier to envisage, at least at the technical level. At the political level, consensus has still to be achieved. This is currently bedevilled by the will of the wisp of European monetary union and by the defensive posture of the United States. This aside, any important changes in the reserve system will inevitably encounter resistance from sectional and bureaucratic interests. But few real national interests would be damaged by even far reaching moves toward a full international reserve system. The main issues involved are discussed in the next three sections, on the dollar and other reserve currencies, SDRs and gold.

* "The Exchange Rate Regime: An Analysis and a Possible Scheme," IMF Staff Papers, July, 1972.

The dollar: unbenign neglect

The best reform would be for America to have to convert newly created excess dollars into SDRs, but to be able to change its exchange rate when needed. This would allow America's foreign investment and military interventions to be properly costed

The international financial system established at Bretton Woods was in form fully multilateral. In practice it was centred on the dollar and on the United States acting as the reserve banker of the system. Convertibility of the dollar into gold provided a link between all currencies and gold. In the 1960s it became clear that this system—dollar-gold convertibility and an effectively passive exchange rate policy for the United States—was imposing excessive burdens on the dollar. The effective choice then became: (a) to modify the special position of the United States by matching its external obligations and policy instruments to those of other countries, in a fully international system; or (b) to maintain the special financial role of the United States in line with its position as the world's largest economy and true financial centre, but to remove the exposure arising from this role by relieving the United States of the obligation to convert foreign holdings of dollars into gold, or anything else. The latter strategy would involve a further and formal move to a world dollar standard. The dollar would be officially established as the world's money, with no more need for the United States authorities to pay gold or other reserve assets in exchange for dollars presented by other countries of the dollar-using world than there is need for the Bank of England to pay Englishmen gold for pound notes. This strategy paradoxically required the enthronement of the dollar from a position of weakness rather than of strength.

The option of the dollar standard was—and is—available in both a hard and a soft variant. In the soft variant, it was a plan for the United States to be fully passive on all aspects of its balance of payments policy, permitting the shape of the balance of payments and the exchange rate of the dollar to be determined entirely by the actions of other countries. The United States would be the residual of the system, the world problem of reconciling divergent balance of payments aims would thereby be solved (as other countries could always get to their desired positions at the expense of the United States), and, in return, the United States would provide the money

of the system in response to demand, without any convertibility obligations. Thus America could undiscover its balance of payments while other countries continued to enjoy effective freedom of action in dealing with theirs.

This strategy, which was given the accurate but inevitably misunderstood label of "benign neglect," always had more to be said for it than its European and internationalist critics allowed. It was to be preferred to the untenable status quo of the late 1960s, under which the United States undertook obligations—gold redemption of officially held dollars—that it could not possibly fulfil, while the Europeans carped at the United States for the grievous state of its balance of payments while themselves pursuing policies that kept it that way. Benign neglect was preferable, too, to another alternative, which eventuated under the Connally regime, and could be christened unbenign neglect or active inconvertibility. Under this system the United States pursued very definite aims for the shape of its balance of payments, and even for the geographical shape of its trade balance; but was decidedly passive on the side of its obligations to other monetary authorities and the IMF.

A policy of benign neglect by the United States for its external finances would be much more acceptable to other countries than the present combination of active policies and suspended obligations. Yet the United States seems very unlikely to adopt such a policy, and for good reasons. The policy of payments passivity for the dollar always lacked a certain real world credibility: its economic advantages were manifest only by neglecting a number of influences that find no place in simple classical models—dynamic effects, the role of sectional groups and international politics.

Thus dynamically, a willingness by the United States to let its trade balance be determined entirely by the actions of other countries was likely to result, in a world in which mercantilist interests are still rife, in progressively increasing trade deficits paid for by receipts of investment income and the accumulation of liquid

claims on the United States. A payments pattern of this kind would become unstable and unsound over time despite the protection of inconvertibility; although an eventual collapse in foreign confidence in the dollar would then involve no threat to the gold stock, it would force abrupt adjustments in the American trade balance—and for American industry, made uncompetitive by the earlier passive policy.

Admittedly, this scenario is not unlike that followed by Britain in the years between the Victorian heyday and the aftermath of World War II. But this was an example that the United States was unlikely to follow, first because the British example was there as a warning, and second because the manufacturers who would be made genteelly uncompetitive through such a policy are politically far more powerful in the policy-forming elite in the United States than manufacturers were vis-à-vis bankers in Britain. The key economic adviser whose analysis underlay the Nixon-Connally decision to force a devaluation of the dollar in August, 1971, was Mr Peter Peterson, ex-president of Bell and Howell, a midwest corporation which became a conglomerate by being driven out of its original photographs by Japanese competition. The key financial adviser who did all he could to prevent a devaluation of the pound in the first half of the 1960s, and thereby avoid a further blow to the international role of sterling and prestige of the City of London, was Lord Cromer, ex-managing director of Baring Brothers, a firm which owes its modern existence to the confidence commanded by the Bank of England. Associations such as these, and other more indirect ones, have more influence on policies than the standard analysis suggests.

If benign neglect for the dollar and for the American trade balance is a chimera, what of the "internationalist" alternative of a continued active payments policy combined with a restoration in some form of American obligations on convertibility? Public and official debate on this issue has been in terms of convertibility as an American concession and sacrifice. This is so only in the narrowest terms. Provided—and the proviso is essential—the necessary amendments are made in the mechanism of exchange rate adjustment to ensure that the United States is able to adjust its exchange rate in line with the needs of its underlying payments balance, an obligation of convertibility—eg, for

THE ECONOMIST AUGUST 5, 1972

Flexible Peterson.

the United States to redeem new accumulations of dollars beyond working needs by other countries by transferring reserve assets such as SDRs—need not be a burden to the United States. It could even be a welcome spur to adjustment. Convertibility, in a regime of sufficient flexibility in exchange rates and reasonably ample reserves and credit lines, does not in itself constrict domestic policies; rather, by obliging adjustment at an early rather than a later stage, it exposes to public view the full economic costs of domestic policies that have an external impact. The menu would be as varied as before, but the prices would be shown. Thus policies for which the public was

WORLD MONEY

Inflexible Cromer

reluctant to pay the price might indeed become harder to put through. The most obvious example is the foreign military adventure. The ability of the American government to undertake foreign expenditures without restraint from external finance is undoubtedly still given important weight by many American administrators and politicians. What is more remarkable is to find this facility blessed by liberal economists. But another view, which is probably shared by the Democratic candidate for the presidency, is that political and military decisions themselves are likely to be improved rather than damaged if their full cost is exposed to public view.

SDRs: a bigger package

We need a special issue of SDRs, carrying a higher interest rate, to fund dollar and sterling balances; and a link between SDRs and aid to poorer countries. This should be a politically negotiable package

Restoration of convertibility obligations to the United States will necessitate not only a reformed exchange rate regime but also a major extension of the role of Special Drawing Rights, involving their development as the central reserve asset of the system. At present, SDRs are allocated simply as a supplement to existing reserve assets. The next step is to make special issues of SDRs to replace reserve currencies directly, and gold indirectly—helping along the natural tendency for gold to fade out of the monetary system, as a growth commodity far too valuable to use as an efficient means of exchange. Existing reserve currencies consist preponderantly of official holdings of dollars, but also of sterling, and, in increasing volume, marks, yen and other obstinately growing reserve media in

currency form. Their replacement by SDRs, in so far as they are held in excess of working balances, is necessary for a sound reserve system because (1) for a sound reserve system involves multiplicity of reserve assets, switching the continuing risk of official switching between them, which can be destabilising in exactly the same way as private shifts of short-term funds which central bankers so deplore; and (2) the United States could not contemplate restoring convertibility to the dollar as long as the current excess of accumulated dollars was liable to be converted, and the only way of removing this overhang while maintaining its usability as international money for the holders is to convert it into a monetised instrument such as SDRs; and (3) if official holders of dollar—or sterling or mark—reserves are to be allowed to

retain these currencies in their reserves in amounts of their own choosing, problems of excess conversion pressures will be shifted into the future. The United States, Britain and Germany will face periods of under-conversion followed by demands for over-conversion, and the familiar reserve currency cycle of cushioning followed by crisis will be perpetuated.

Thus a funding of existing reserve currency holdings, and avoidance of future accumulations of currencies in national reserves, is needed in the interests of smooth payments adjustments. How is it to be achieved?

Special issues of SDRs to absorb the present excess dollar, sterling and other excess currency holdings would involve a massive expansion in the existing SDR issue. It would almost certainly necessitate an increase in the rate of interest on SDRs, from the current level of 1½ per cent, but this is highly desirable in itself. This need involve no increase in total service payments on dollar and sterling balances by the United States and Britain, since amortisation could be stretched to fit. It has always been anomalous that the SDR system—as indeed the operations of the IMF as a whole—should subsidise debtor countries, rather than poor countries, at the expense of creditor countries, rather than of rich countries. Under this system, Upper Volta and Kenya subsidise Britain and Denmark. But because introduction of a realistic interest rate would increase interest charges for many developing countries, it would provide the natural opportunity for compensation by introducing the long-awaited link between SDRs and development aid.

Political pressure for this reform has been building up, and the developing countries are almost certain to make it a condition of their support for the next set of IMF amendments, which are dependent on developing countries' votes. With a higher interest rate on SDRs, special technical devices, which are quite feasible, would be needed for the link to retain its full value. One possible formula would be to devote one half of annual SDR allocations to the International Development Association, the World Bank's soft loan agency, and to relieve IDA or the recipients of its loans of the need to pay the normal interest charge when transferring these SDRs to the supplier country.

How negotiable is an SDR package of this kind—special issues to fund dollar and sterling balances, a higher

interest rate, and a link with aid on concessionary terms? Among IMF members, large and small, the SDR facility has been highly popular since its introduction at the beginning of 1970, and there is a general desire to see the scheme continued and extended. At the same time, most countries are averse to the suggestion that they should no longer be free to hold reserves in the form they choose and that they should be obliged to convert excess holdings of reserve currencies into SDRs. Among industrial countries, there is also a marked lack of enthusiasm for the aid link, for reasons as varied and detached as those usually put up by the rich when it is suggested that they should be given less money.

Thus, the major powers like SDRs well enough, but prefer them without the embellishment of links with aid and limitations on reserve currency holdings. The trouble is that this choice is an essentially false one. It has arisen from the unfortunate appearance of SDRs as a kind of new year's goody churned out by the good offices of the IMF computer. In fact the rationale for SDRs, as insisted on by the continental Europeans in particular, was as a means to bring the regulation of global reserves under conscious control. It is now clear that such control is not attainable while countries are free to hold reserves in any other form they choose, so that the real choice is between a much more tightly regulated SDR system or something quite different. Since the industrial countries will probably get reconciled to at least a partial aid link, the main question is then how strongly they feel about retaining their freedom of action to hold reserve currencies.

It is difficult to believe that any serious national interests are involved in this overblown technical question. This may not always be apparent from the strong views held by the financial officials responsible for reserve management, who share the natural aversion of all managers and bureaucrats to being tied down. Nowhere was this attitude stronger than in the Bank of England, yet within a few short years the composition of Britain's reserves has been transformed from 90 per cent gold to around 10 per cent gold. What has been done through absence of mind might conceivably also be done through deliberate policy.

When central banks give their commercial banks access to the source of domestic money creation, they are careful to ensure that these commercial banks observe prescribed rules on the

holding of their reserves, so that the monetary authority can regulate, or at least influence, the aggregate money supply. The same principle now needs to be carried forward to international reserve creation. Allocations of SDRs should be reserved to those monetary

authorities that undertake associated commitments on the holding and management of their reserves. If the choice were put this way, it would be surprising if the difficulties raised over reserve composition were not rather quickly resolved.

Gold: for loyal service . . .

Gold is now too valuable and too scarce to be used as international money. It would be tidier to change the rules to recognise this

At one time the most sensitive issue in the regulation of national reserves would have been the treatment of gold. Now this issue can be neatly sidestepped. Gold has already become, de facto, a secondary rather than a primary reserve asset—corresponding in some ways to the British Government's former portfolio of dollar securities, available as a second line of reserves for mobilisation in a tight liquidity squeeze, but essentially held as part of an investment portfolio rather than as a working reserve.

Transactions in gold at the official monetary price have become rare, and are likely to remain so as long as the market price remains at a significant premium. The few remaining transactions are almost entirely connected with international institutions. Certain transactions with the IMF still have to be made in gold, including the important gold subscriptions to quota increases. It would be a simple matter to make SDRs eligible for all such payments, as was the original intention when the SDR scheme was drawn up. Gold transfers are also required, in theory, in connection with the limping EEC scheme for mutual currency sup-

port within the confines of the snake, as settlements are to be in proportion to the composition of the reserves of the debtor country. However, the first use of this arrangement, in the settlement of Britain's June currency support, necessitated an ad hoc bending of the basic concept.

Muddles of this sort arise from the pretence that gold is still on a par with other reserve assets. It is not. Two generations ago, gold became too valuable and too scarce to be used as domestic money, and now it is too valuable and too scarce for international money. The international reserve system would be tidier if this were recognised by actions such as: (1) permitting, if not requiring, the replacement of gold by SDRs in all IMF transactions; (2) ending the taboo on official gold dealings in private markets associated with the two-tier system adopted in the gold crisis of 1968, a system which survives largely through bureaucratic lethargy (virtually no central bank would consider buying at present premium prices, and sales or the threat of sales could have a useful damping effect); (3) desirably, but not essentially,

It's all the same stuff to us

expressing currency values in terms of SDRs, and dropping the SDR link to gold (this link now has significance in giving an SDR and currency value to gold, but no significance in giving a gold value to SDRs, since the only link to gold value is to the artificial monetary price); and (4) if possible, removing gold from the remaining various legal definitions of international monetary reserves, and also from official reserve statistics (this would have the useful and not wholly specious effect of deflating the swollen global reserve total).

In France, and occasionally in Basle, the role of gold is still regarded as a bulwark against the global influence

of the dollar. This was always a dubious proposition: the one action that might have extended America's financial dominance a decade longer would have been a sharp increase in the gold price at an early stage of America's payments troubles. Now that the United States has no intention of undertaking gold conversions again, and that the technical acceptability of a synthetic international reserve unit has been demonstrated, the continued monetary role of gold serves no clear purpose. Many countries have strong attachments to gold, and diverse reasons for holding it. They should be fully free to do so, along with their other strategic and artistic reserves.

Summary and conclusions

The proposals in outline, and the prospects for achieving something like them

The main policy conclusion of this survey may be recapitulated as follows.

1. The loosening that has occurred in the international monetary system in recent years is to be welcomed in itself, but it now needs to be codified in a new set of international rules and practices. Effective freedom for national policies will be more assured through establishment and preservation of a set of liberal international rules than through a free for all.

2. The currently politically fashionable attempts to organise financial links on a regional basis would, if implemented, involve excessive rigidity within the regional blocks. The upshot would be something close to a return to fixed exchange rates in the world as a whole. This would involve major economic losses and would threaten the return of mass unemployment; it therefore almost certainly will not be allowed to come about, but, until this is recognised, progress on solutions that relieve rather than exacerbate existing problems of economic management will continue to be impeded. Official insistence that Europe is moving to monetary union also removes effective pressure from the United States to adopt internationalist commitments.

3. A main basis of a reformed international system should be a global system of exchange flexibility on a controlled basis. The frictions of the past few years, in which an effective system of exchange flexibility has been operated within a mechanism designed for long periods of exchange fixity, demonstrate that changes in institutional arrangements must now be made to

supplement the change that has occurred in official exchange policies and attitudes. The key to this institutional change should be to turn adjustments in parities, or their equivalent, into matters of routine. This could be done through a system of managed floating, or through an automatic crawling peg, or through administered changes that kept parities within fairly wide equilibrium parity zones.

4. Although it would be intellectually simpler to operate the monetary system if the United States agreed to be its residual, the United States is unlikely to so agree, for good reasons. An active American policy for the dollar makes it especially necessary to establish a system of exchange adjustment that can absorb the necessary changes on a non-crisis basis.

5. Such a system will be helped by phasing out the role of all reserve currencies, which would now be technically feasible through a special issue of SDRs. This should be combined with an increase in the SDR interest rate and a link between reserve creation and concessionary development aid. A reformed SDR facility should be associated with obligations for participating countries to limit their holdings of reserve currencies.

6. Countries nowadays treat their holdings of gold as valuable investments rather than on a par with other reserve assets. This tendency for gold to be kicked upstairs from the monetary system should be encouraged, if possible by formal recognition of its elevation. Central banks should again be

entirely free to deal in private gold markets, thereby performing a valuable buffer stock function.

The proposals for future evolution of the international monetary system made in this survey are all currently within the realms of technical feasibility, and in broad terms they would command wide support from economists, including economic officials in a wide range of countries. Yet politicians in their current mood have their eyes on a different economic road, a road that a great majority of economists see, in the light of a half century's experience, as unfit to travel. The politicians, and the commentators who encourage them, regard the economists as men of little faith who put technical details of international adjustment above grand vistas of European symbols and European concert. But economists, and especially British economists, remember the last time instruments of financial adjustment were abandoned in favour of lofty aspirations: in the return to gold foisted on sceptical politicians by the City establishment in 1925.

The reform of the international financial system that is now in technical reach could in effect complete Keynes's attempts to free domestic economic policy-making from artificial international constraints. It would appear as a cruel irony if at the moment when the old shackles seemed on the point of removal, they slipped back in new guise.

But such a grim conjuncture could hardly be pure historical coincidence. If the limitations on domestic economic policies, and the risks for employment and for the well-being of the worse off, that are inherent in any freezing of the exchange rate, were accepted for a second time—and, this time, open-eyed to economists' forewarnings—then such action would be difficult to attribute merely to accident, mistake or misunderstanding.

External financial pressure has always had its positive side to some eyes—as a discipline on trade unions and a check on social and financial experiments of radical governments. There is no doubt that in some quarters such efforts are seen as the silver lining in the constriction of a European monetary union. This is not the stuff of which idealists' Europe is made. As has been argued in this survey, electoral forces are likely to check the process of full monetary integration in its tracks. But the issue will have to be tackled more frontally if progress towards the taming of external finance is to be resumed.

— See you tomorrow in Sydney.

—

— No, I mean **tomorrow!** Thursday. And I'll arrive at 21.25.

—

— I take a flight to Copenhagen at 9.40, so I'm just about to leave for the airport. And from Copenhagen it's Scandinavian Airlines to Bangkok.

—

— From Bangkok the Thai airline takes over, but the plane is the same — it just goes straight through, with a stop at Singapore. And, as I said, I'll be in Sydney tomorrow at 21.25. Just four stops, including Copenhagen, that's not so bad either.

—

— Yes, what I really like is to fly straight through to Australia with just one night on board. I can stand one night in an airplane seat, if I have to. But I refuse to take another two-nights flight without breaking it off half-way.

—

— Oh yes, you're quite right, it's 18 D-Mark a minute, so we'd better hang up now. Bye-bye, and see you tomorrow!

The call was fictitious, but the facts are accurate. The place would have been Hamburg, and the day either Wednesday or Saturday — these are the two days with "arriving-tomorrow" connections to Sydney. And not only from Hamburg, but from all over central and western Europe, including Great Britain.

Lockheed's TriStar is powered by 25,000 Britons.

The 25,000 people who build Rolls-Royce engines.

These engines made our TriStar the quietest big jet in the world. (The U.S.A.'s Federal Aviation Administration has made it official: the TriStar is the quietest big jet now flying.)

The three RB.211 engines that power the plane are built with fewer moving, noise-making parts.

And while noise is designed out of the plane, power isn't. The TriStar takes off with

twice the thrust of older jets. And with less than half the annoying jet noise. That's documented by acoustical annoyance studies published in U.S. Government reports.

A plane as quiet as that is bound to solve a lot of problems for the airlines. Eastern and TWA just took delivery. And Air Canada, Delta and PSA have their orders in, too. And of course, Court Line, the British tour carrier.

Thanks to 25,000 Britons, airports will be quieter all over the world.

**The Lockheed L-1011 TriStar.
The world's quietest big jet.**

Why should a German company turn to Bank of Montreal for help in financing a plant in Australia?

Or why should a Japanese exporter seek financing from the same source for a distribution center in the United States? Or to get raw materials from Asia?

The answer is: People. Bank of Montreal people who've made it their business to bring companies, countries and opportunities together with profitable punctuality. People who can do the same for you. Anywhere in this changing world. With the surety and dispatch of international bankers who know what they're about.

Call on John Kelderman in Düsseldorf. Bill Hill in Melbourne. Peter Blonar in Tokyo. Al Horton in New York. Hal Hartmann in Hong Kong. And 19,000 other Bank of Montreal people in over 1,100

London, Paris, Düsseldorf, Amsterdam, Milan, New York, Chicago, Houston, San Francisco, Los Angeles, Sacramento, San Diego, Mexico City, Buenos Aires, Melbourne, Tokyo, Hong Kong. Business Brief

Equal pay: it's a slow haul

It looks as if the Government has no option but to use some of its reserve powers to make companies move towards equal pay for women workers at a faster rate than most firms are doing. The official deadline is end-1975, but if employers drag their feet too much the Government can order them to bring women's rates to within 90% of men's by the end of next year. Mr Maurice Macmillan, Secretary of State for Employment, has been waiting for the results of a survey carried out by his department's Office of Manpower Economics before deciding whether or not he will have to do this. Its report*, published on Tuesday, seems to leave him little choice.

Mrs Barbara Castle's Equal Pay Act in 1970 was intended to remove discrimination between men and women on both pay and other conditions of employment. After 1975, it will be illegal to have separate, lower pay scales for work done by women. If men and women are doing different jobs, a complicated form of sizing up their jobs will have to be used to see that women get paid the same as men for work requiring the same sort of effort. In a firm

*Equal Pay. First Report by the Office of Manpower Economics. HMSO. 90p.

where no such job evaluation exercise has taken place, women will get at least the minimum rate of the lowest paid men.

The act has a phrase, "equal pay for the same or broadly similar work," which is going to become important to all those employers looking for loopholes. The International Labour Office convention 100 on equal pay, which Britain at last ratified last year, uses the much wider concept of "work of equal value." On the other hand, article 119 of the Treaty of Rome calls for "equal remuneration for the same work as between male and female workers," which sounds so narrow as to be almost useless, but the European Commission is interpreting it so widely that it ends up meaning roughly the same as the ILO convention.

Most common market countries have made better progress towards equal pay than Britain (see chart). Admittedly, because of differences of definition, and differences in the way overtime and shift work is counted, Britain's showing compared with Europe may not be quite as bad as it looks.

Awkwardly, other countries' experience suggests that legislation does not necessarily remove discrimination. In the United States, women's earn-

ings relative to men's are now lower than before the 1963 Equal Pay Act which prohibited pay differentials based on sex. Sweden, which has no specific equal pay legislation, pays its women a higher proportion of men's rates than any other western country. West Germany, where separate wage categories for women have been illegal since 1955, has a special dodge of classifying work into "light" and "heavy;" in practice women end up in the lesser-paid "light" group. British employers will be left to interpret the 1970 act for themselves until a case law can be built up after 1975, and it is already clear that it can mean a lot of different things to different people.

More numerous than the would-be evaders were companies that had sat tight and done nothing. The register of progress towards equal pay, as reflected in national agreements and wages council orders, which the Department of Employment has been keeping since the act was passed, shows only one-fifth of agreements included positive measures to get rid of discrimination before 1975. In nearly a quarter men got larger rises than women. About two-fifths gave equal increases, thus narrowing the percentage differential.

Laggards

To be fair to British bosses, few seem to be planning blatantly to evade the act. The OME report does cite one company (where 80% of the workers were women, so the cost of introducing equal pay would have been steep) which has been busy dividing its men from its women and putting them into wholly different categories of jobs. So successfully has it done this that by the end of this year they will not be doing even broadly similar work. The question of equal pay will therefore not arise. Significantly, this has been done with the full blessing of the local trade union, which is worried about the number of men out of work in the area. Although in principle the unions have championed equal pay for the best part of a century, the OME found that some are in practice growing lukewarm about implementing it, and

have been finding ways like this for getting round it.

It is just conceivable that employers have not fully understood the act. More than a quarter of the firms that had done nothing about implementing it thought that the act did not apply to them because their men and women did different jobs. A third of the laggards were just waiting around to see what would happen, reluctant to take any initiative. Some of the larger employers were delaying in co-ordinating their schemes with those of other companies in the same industry, or were waiting on the results of job evaluation. Generally speaking, though, larger companies are much more likely to have got themselves organised for equal pay. Of the companies employing more than 5,000 people examined by the OME, only two had done nothing about it.

It is the smaller firms that have the leeway to make up. A special survey among 200 companies with fewer than 100 employees discovered that a quarter of them were either not

aware of the act at all or had no idea what was in it. Of those who had heard of it, 90% did not know that it took effect in 1975. Because of this widespread ignorance among small firms the OME is pressing for a large-scale publicity campaign by the Government.

A guide to the act was published last year, but only a fifth of the small employers interviewed seemed to have a copy. There is plenty of extra information available for those who want it; the latest book on the subject* is specifically written for employers. But the OME is probably right in calling for an additional drive now; the longer companies leave it, the more painful it will be to comply with the act by 1975.

Progress towards equal pay has differed between industries. Among major employers of women, the retail trade has done particularly well; women now get at least 80% of men's rates virtually everywhere. Food, drink and tobacco and chemicals have also pushed up women's rates faster than the average. But engineering has slipped marginally. In the motor industry, Ford is still the only company to pay equal rates for work of equal value. Textiles have been slow, apart from two sectors (cotton spinning and weaving, and hosiery manufacture) in which, in theory, women get equal pay for the same work. Progress in clothing, where three-quarters of the staff are women, has been particularly disappointing. Only the public sector, where it does not

*An Employer's Guide to Equal Pay. By Peter Paterson and Michael Armstrong. Kogan Page. £2.50.

have equal pay already (the non-industrial civil service has had it since 1961), seems to be reasonably well set for the 1975 deadline.

Costs seem to have been given little thought. Of the companies visited by the OME, fewer than half had calculated the financial impact. Of these, about two-thirds thought equal pay would cost them no more than 5%, although one or two reckoned it could be more than 20% extra. But a lot of managers did not think it was worth making estimates while the size of future wage settlements generally was so uncertain.

Earnings

There is also the question of what effect equal pay will have when it does arrive. Many firms think that the act will lose jobs to women once they are no longer cheap to employ, although this does not seem to have happened yet. But this assumes that men will be available to do their jobs, which in areas like the south east may not be so. Higher wages for women may also jolt employers into using them more efficiently, turning more to mechanisation and automation as a way of saving on cost. This will improve productivity in industry, but may also eliminate some traditional women's jobs. There is also the awkward question of how men will react to any public narrowing of the differential between their own and women's pay. They may ask for higher rises.

Equal pay does not mean that women will necessarily ever earn the same as men. Of Britain's 22m employees, nearly 8½m, or 38%, are women. But their aggregate pay adds up to

I haven't struck it rich yet

only 20% of the total. Over the past 20 years average basic weekly rates for women manual workers have been running consistently at about half those for men. Between 1970 and 1971 women did move ahead faster, probably because of the equal pay legislation. But there is little chance of their earnings ever catching up, for a number of reasons.

Probably as many as 2½m women are part-timers, which not only keeps down their earnings but probably also their chances of promotion. Even among full-time workers, women's hours are on average shorter than men's, although their standard working week is the same. In April, 1971, women manual workers averaged 38½ hours a week, and men 45 hours. This is partly because women do less shiftwork (Factory Act restrictions mean they still need special permission to work night shifts) and less overtime, and partly because they lose more time during the week, probably because of domestic commitments.

Women tend to be concentrated in the less well-paid industries. Less than a third work in manufacturing, and they are crowded into the less glamorous occupations in food, drink and tobacco or textiles and clothing. Among production workers, only a quarter of the women are in skilled jobs, compared with half the men. Two-thirds of women workers are in service industries, particularly in low-pay strongholds like catering or shop work.

The general level of pay in an industry does rub off, as demonstrated by women in non-manual jobs. They are strongly represented in the public sector (40% of them

work there), and well-off industries like banking, insurance, finance and professional and scientific services. Equal pay has not universally arrived for non-manual women workers either, although there is equal pay in the professions. But their basic pay is much nearer the men's rates than for the manual women workers, and absolute pay is higher.

The 1970 act deliberately steered clear of such questions as maternity benefits and pensions for women; the latter is still a major area of discrimination. Nor was there any attempt to deal with inequality of opportunities, although no one pretends that women have an even chance in training and employment and many think this a much more serious source of discrimination. A House of Lords select committee is now gathering evidence for the Anti-Discrimination (No 2) Bill, introduced by Lady Sear, and is getting plenty. It cannot be by accident that women account for only 8% of barristers, 4% of architects and ½% of engineers in Britain. But the explanation does not lie solely in male chauvinism. A government survey on women's employment in 1968 found that the majority of women were quite happy with their jobs, and employers still complain of their refusal to accept either promotion or responsibility. Married women, in particular, tend to rate the convenience of a job, and the ease with which they can adjust it to their home responsibilities, above what it pays them, and it does not follow that their priorities are wrong. But until other, less compromised women start bidding for better jobs, they won't be handed them on a plate.

LBI and EUROPE.

A strategic banking network where it matters!

The LBI Group has offices in:

Argentina, Australia, Bahamas, Belgium, Brazil, Colombia, Costa Rica, Ecuador, El Salvador,
France, Guatemala, Honduras, Japan, Mexico, Netherlands, New Zealand, Nicaragua, Panama, Paraguay,
Peru, Portugal, Spain, Switzerland, United Kingdom, U.S.A., Uruguay, Venezuela, West Germany.

BUSINESS

Yes, we have no bananas

The first visible effect of the dock strike was that the shops began to run out of bananas. Then, more seriously, the farmers began to run out of animal feed, and on Thursday the Government declared a state of emergency

Many companies had anticipated trouble and built up their stocks of essential imports, but the animal feed industry was not one of them. Some manufacturers have only a week's supply of grains in stock, few have more than two weeks and the same goes for many farmers. When the order was signed by the Queen on Thursday morning, preparations were made to start rationing feed, and farmers talked ominously about the large number of beasts and poultry they would have to slaughter if the strike lasted much longer. Farm animals turn up their noses at grass these days and go out of condition without their high protein additives.

The strike may not necessarily last for more than another week. By Wednesday, Mr Jack Jones was talking about the possibility of another conference of dockers voting on an amended peace formula; this could happen shortly after the weekend. It can only mean that Lord Aldington, who had quietly been putting pressure on them to promise to find real or imaginary jobs for dockers to enable Mr Jones to spring this news as a surprise package at the conference. The delegates are then intended to be so stunned by the beneficence of it all that they will vote yes, where a week before they had been voting no. Dockers' delegates usually go to conferences with their minds already made up, and the personal intervention of the Archangel Gabriel, still less that of Mr Jones, will not make them change it. But Mr Jones may be taking comfort from the calculated sweet reasonableness of Mr Bernie Steer and chums who, when interviewed by the Aldington-Jones team during the week, gave a fair imitation of men in whose mouths butter could not possibly melt.

This may have been because the strike has so far caused little public alarm; August is a month when it is difficult, unless you happen to be a banana- or a tomato-grower, to worry about the dumping of 1,450 tons of bananas in the Atlantic on Thursday, or the fact that half the labour force of Guernsey is without its livelihood while the tomatoes rot. Of the 42,000 dockers in Britain, fewer than 800 have continued working this week, and of the 574 ships holed up in British ports 101 are carrying food. Air freight has picked up, although not as much as it might have, for fear

of blacking by the dockers. But the freight has been in valuable chemicals and scientific instruments rather than perishables like food. So far Britain's hoarding-prone housewives have largely ignored the whole thing.

The other unions did not. There are signs that the dockers' stand has made them take a stickier line about redundancy, and British Rail faced a good deal of arguing from its men during the week, 20,000 of whom are likely to lose their jobs in the foreseeable future, but with £2,000 apiece to sweeten their going. They are not as willing to take this now as they might have been before the dockers voted down redundancy pay of £4,000 a head, and the British Steel Corporation is not likely to get away in future with paying an average of £400 or less severance pay.

The dock strike is now moving into its third week, at a cost to the port employers and their customers of more than £200 for every man on strike. The dockers themselves have lost £80 each in pay. They have turned down the most generous terms of security against redundancy any British industry has ever offered—the choice of remaining at their jobs at a full rate of pay that is higher than most workers get in industry, or leaving with a golden cloth cap many a redundant executive would envy. Why did they do it? Explanations range from historical bitterness down to a suspicion that the Aldington-Jones report that spelled out this offer was so complicated as to be largely unintelligible to them. This leaves the way open to all the pub rabble-rousers.

Even the port employers are not sure that they fully understand the report. A pull-out version prepared by The Port newspaper tries to explain it, and 50,000 reprints were distributed this week. It was a beginning, but no attempt was made to follow it up and see that the men understood it. This is typical of the long failure of public relations in the docks and it is also, regrettably, typical of the long failure of the Government to put its case in any industrial dispute across either to the country or to the men involved in a strike. Otherwise there could never have been the rash of rumours this week that the Government will amend the Industrial Relations Act.

These suggestions did not come from the unions, who want the act abolished, not amended, but from members of the more woolly section of the industrial relations

establishment who think that everything would be all right if the National Industrial Relations Court no longer had powers to send men to jail, and even better if no employer could go to the court without first getting the express permission of the Secretary of State for Employment. The first suggestion ignores the fact that a law cannot work unless it has some sanctions against those who disobey it; the second ignores the whole purpose of the act, which is to deal with industrial relations problems by what one hopes is the impartial machinery of the law, but which would no longer be impartial if every case rested on the Government's discretion. Although both the Prime Minister and Mr Maurice Macmillan at the Department of Employment have said they are prepared to consider amendments to the act, they are not likely to be thinking of wrecking amendments of this kind. What Mr Macmillan is known to have been considering are much smaller changes that would make it easier for unions to have a closed shop, and that would stop bogus unions from registering, and this is not really the right time to be talking about either of them.

The dockers themselves are no longer particularly interested in the act, now their own heroes are out of Pentonville and since Midland Cold Storage, the company whose action put them there, asked the NIRC on Monday to withdraw the order banning the picketing that had led to their arrest. NIRC did just that and then adjourned for the traditional two-month legal summer holiday. All that the dockers are concerned with now are their twin objects of getting for themselves jobs in container depots now done by other workers, and getting small but expanding ports that are not members of the Dock Labour Scheme to join it or at least contribute to it.

This is a highly emotive issue. The dockers believe that the men they call cowboys have taken jobs from them by unfair means (some of them have). They resent the fact that some prosperous small ports contribute nothing at all towards redundancy schemes.

Firms that have recruited dockers for jobs outside dockland have mostly found them willing and intelligent. But some employers have been so disillusioned with the dockers they employed that they have closed their old wharves in the ports, and opened new depots, sometimes just down the road, where they need not use dock labour. This has, of course, exacerbated labour relations. Most of the depots are now willing to employ dockers as the price of peace.

But they are only willing to employ dockers on their terms, which means at the lower rates of pay ruling in container packing, and with conditions of employment that certainly do not approximate to a job for life as dock work does. The dockers are not prepared to accept these terms.

Furthermore, they want the container depots to take on surplus labour in order to create jobs. Lord Aldington is prepared to persuade the container companies to meet the dockers' demands, but the calling of a strike at this stage, before giving the Aldington-Jones proposals a chance to work, has hardly made the depots eager to acquire dockers surplus to their requirements. So far they are digging their heels in. The dockers' best chance of dissuading them is to go back to work.

Lord Aldington is also trying to persuade the small ports to contribute a kind of voluntary pension to be distributed to surplus dockers in the registered ports, against which they compete, and the Government is backing him by inviting these ports to discuss the proposals. There is a moral argument circulating, which says that since these successful little ports have gained at the expense of the big and often cumbersome ones, they ought to pay compensation to the big ports that have suffered. It is as if Ford had lost business to Chrysler and expected Chrysler to reimburse it. Taken to its logical conclusion, the argument would mean that no one would, or should, ever take business away from anyone else.

The little ports vary from river banks where one small ship unloads a year, and whose only capital equipment is a boat hook, to medium-sized East Coast ports like Felixstowe, Harwich and Shoreham. Felixstowe has become one of the leading container ports in Europe, and Shoreham has succeeded in winning much of the wine trade away from London and Bristol: sherry is now shipped to Shoreham, and then taken right across the country by road to Bristol. As with container depots, these ports have flourished partly through geography and partly through efficiency. Some, like Felixstowe, pay men more than they would get in London.

There are about 3,500-4,000 men employed in the non-scheme ports, mostly members of the docks section of the TGWU, and handling about 6 per cent of Britain's trade. They do not have all the facilities to rival the big ports, but they should be encouraged as sources of innovation and efficiency.

Pomp and circumstance

The huge pay offer to building workers shows what the latest "agreement" between Mr Vic Feather and Mr Campbell Adamson is likely to lead to; and wrong price policies in several industries show how the confusion is being compounded

The Trades Union Congress and the Confederation of British Industry met the Prime Minister for yet more talks on Tuesday about inflation and all that. The only firm agreement in their puzzling ritual was to meet again next Monday. On Wednesday the leaders of the TUC and CBI signed a private agreement to set up a conciliation body that will pay no regard to anti-inflationary policy at all. A much more significant event was the attempted settlement of the six weeks' old building industry dispute on that same day.

The unions were not overjoyed by an offer from the employers which would raise guaranteed earnings by an astounding 44 per cent in just 10 months. On top of this, the employers conceded a threshold clause. This would add about 0.8 per cent to wages for every 0.75 per cent rise in the retail price index beyond 8½ per cent between August, 1972, and August, 1973. This kind of agreement means that once inflation hits those heights, there will be a built-in mechanism to ensure that it accelerates still faster. There is no evidence that by conceding a threshold clause the employers will lower the level of the settlement. It is just a bonus.

The offer, to which the unions will give their considered reply next week, is perhaps only about half as awful as the figure of 44 per cent makes it look. It is intended to run till May, 1974 (although there is no guarantee that the unions would stick by their word), and most building workers already earn far above the minimum. But most of the 750,000 workers in the industry will expect their pay packets to rise by the same percentage as the minima.

The employers estimate that the offer will add about 13½ per cent a year to the industry's wage bill. The real cost will almost certainly be much higher, even if the employers do not raise their offer. Ministers have vainly tried to argue that the miners' 25 per cent award and the railwaymen's 13½ per cent were special cases which would not set a pattern. The builders have shown this week just what that argument is worth. Ministers have also vainly tried to argue that the steam has been taken out of wage inflation. They say that the latest figure of average earnings in this country, for May, was only 10.8 per cent higher than a year before, whereas 18 months ago the same comparison would have shown a 14 per cent increase. *The Economist* has often in the past been taken to task by Whitehall pundits for relying on the naive tool of a 12-months' yardstick in this day and age of seasonally adjusted track indicators. The Department of Employment produces just such a smart indicator of average earnings; it shows that the braking at the turn of the year is now being reversed and the lever has slipped into top gear again. Earnings are now rising at a rate equivalent to about 13 per cent a year. Incomes Data Services also

draws attention to the reversal in trend in its latest quarterly analysis of settlements at national level: from the March low of a 7.9 per cent average increase in minimum rates, the average went up month by month to reach 13.4 per cent in June.

No wonder, then, that seven out of 10 of the manufacturers who replied to the Confederation of British Industry's latest quiz expect their average costs per unit of output to rise still further in the next three months. A like number reported increases in the past three months, as they did in the three months before that, and before that. The proportions reporting and expecting increases have been exceptionally high ever since the autumn of 1970.

The CBI's survey of unit costs was conducted in the two weeks preceding the decision of the CBI's council to seek an extension of the voluntary price restraints for a further three months. In that uneasy atmosphere, over half the respondents said they expect to raise their domestic prices in this period. The CBI itself, when it reported on Thursday, felt partly muzzled on this politically sensitive front. But it could not refrain from saying: "As in the immediate past, the major qualification on optimism is the continuance of an unrealistic and unacceptable rate of wage inflation."

British Leyland's car prices are to rise by 3.6 per cent on Sunday. This will be their third increase this year, making a total of about 10 per cent. This is good news only for the distributors of imported cars, who now hold over 26 per cent of the British market. British Leyland is going out on a limb, largely because, with delivery dates up to nine months, it can sell every car it can make. Ford and Vauxhall, British Leyland's American-owned competitors, have agreed to hold their prices for another three months, in accordance with the CBI's latest initiative. The real danger of the trend can be seen by comparing British Leyland's record with that of its foreign competitors. The value

Among the price increases announced or forecast since July 1st were:

	% rise		% rise
Aluminium	8	Fish (over last year)	26
Beer (Watney's Red, Truman, Bass/Worthington, Double Diamond, Whitbread Tankard)	8.5	Glenlivet whisky	6.7
Bricks	7.5	Nylon yarn	5.10
Cars (VW, BMW, British Leyland)	3.6.5	Leather (over one year)	100
Cocoa, per ton	1.7	Meat "inevitable increase"	
Coffee, per ton	4	Metal (scrap) per ton	7.5-10
Domestic air fares	5-15	New houses	17
Electricity	15	Package tours	20
Domestic Industrial	2	Railfares	
		Passenger	7.5
		Freight	2.5
		Zinc, per ton	6.7

Aldington and Jones talked,

the ports were idle,

tomatoes rotted,

Maurice had to wait

having their advice rejected, but they are constitutionally entitled to be told why. The committee's deputy chairman, Mr Arthur Palmer, suggested to Lord Jellicoe that when the Government's own proposals came to be drafted, someone had said:

Oh Heavens, we mustn't forget the select committee; better put in a few polite references,

and Lord Jellicoe could not really deny it. Sir Harry-Legge Bourke described the process as "abominably rude" to the long line of eminent witnesses who had come to give their evidence—virtually all of it anti-Rothschild—to the committee. Other members went through the list of reports, on computers, space research and a host of other items, that the committee has published without any answer from the Government to its criticisms and recommendations. Lord Jellicoe was suitably penitent. He was in no position to be otherwise. But with a massive report on public spending in private industry to answer, recently issued by another select committee, whose chairman is another Tory outside the Government's charmed circle, namely Mr Edward du Cann, the Government is going to have to think up rather a lot of answers in a relatively short space if it is to mend its fences.

The Government may have handled the whole affair clumsily, but it does not follow that its proposals are wrong. The committee was so exercised over the Government's treatment of select committees generally that it left almost no time to go into the Government's

reasons for deciding that the spending powers of at least three research councils really did need to be curbed; their total budgets are not being cut, but they are going to have less money to distribute entirely at their own discretion and rather more is to be spent at the discretion of government departments. This is an important break with tradition, and the committee has heard largely the opposition view from scientists who have massed in one of the most impressive and intellectual lobbies seen for a long time. The change implies that scientists have been wasting resources entrusted to them. The Government deserves a chance to say what convinced it this was so.

Nuclear power

Coming non-event

The Government's long-awaited statement on the nuclear power industry now looks like being something of a non-event. The chairman of the Central Electricity Generating Board, Mr Arthur Hawkins, told the Commons committee on science and technology on Wednesday that a decision did not need to be made now on Britain's next nuclear power reactor since one will not be ordered for at least a year. Mr Hawkins is in a position to know since the CEB is the main customer for nuclear power reactors in Britain.

Mr Hawkins's testimony presumably means that the Government's statement will concentrate on laying out the new

structure of the industry. However, Mr Tom Boardman, Minister of Industry, has already indicated that the two nuclear design and construction consortia will already be merged into one: a proposition, Mr Hawkins admitted to the committee, that the CEB no longer opposes.

Besides the merger of the two consortia, the Government is expected to announce that the new group will include the British Nuclear Fuels Company, as well as the involvement of a large industrial company that until now has not played a major role in nuclear power. Speculation exists that this will be a large oil or mining company, though the name of the firm may be omitted from the Government's announcement, expected before the House rises next week.

Mr Hawkins, while refusing to be drawn on which reactor the CEB might choose in a year's time, had critical things to say about all four of the contending systems; the advanced gas-cooled reactor, which Britain is now building, the high temperature reactor, the steam generating heavy water reactor, and the American light-water reactors. He said it is important that Britain does not fritter away valuable technological resources working on these present-day reactors when the country's main interest lies in the fast breeder reactor of the future. He admitted, though, that Britain's lead in breeders may be only marginal now. The CEB and the Government talk about starting construction on a commercial-size breeder in 1976. Only a year ago Sir John Hill, chairman of the Atomic Energy Authority, was predicting a construction start in 1974.

Exchange reserves

Buying off Emu

When the members of the enlarged common market first dreamed up their slippery snake, it was widely assumed that the new game would require repayments of any support to be made in a package of gold, SDRs and currencies, according to the proportions of these assets in a country's reserves. In other words, debtors would have to part with some of their precious gold boards at an official price which is now barely half that fetched on the free market. Not so, it now appears. Italy avoided such a drain by insisting that it be allowed to break the rules altogether. Now Britain is buying immunity from the gold bite by taking on a new debt at the International Monetary Fund.

The rules of Emu clearly never envisaged the current unwillingness of member countries to part with gold. The intention of likely creditors was not so much to gain gold as to avoid being swamped with yet more dollars. For the purposes of the scheme a country's reserves are regarded as including not only its outright holdings of gold, SDRs and currencies, but also a fourth element, its reserve position at the IMF. (This is the so-called gold tranche, normally equivalent to its gold quota, under which a country may draw automatically, with no strings attached). In reckoning repayment obligations, only two proportions matter: first, the debtor country's outright holdings of currencies and, second, all its other assets, lumped together as under the label of "gold or gold-guaranteed assets."

What this means in practice is that a country can pay in dollars only that proportion of its debt corresponding to its outright holdings of currencies in its reserves. The balance must be paid in gold, SDRs or through drawings from the IMF of the currencies of its creditor countries. The choice of the latter mix is left to the debtor.

Happily, Britain had just managed to reconstitute its IMF reserve position two months before the balloon went up on sterling. It had paid off the last of its earlier IMF debt in April. (Would it otherwise have now agreed to pay perhaps \$100m in gold, at \$38 an ounce, to its EEC partners?) It has therefore been able to choose to meet that proportion of its EEC debt

The reserves arithmetic

	\$m	£m*
Britain's resources end-June:		
Owned reserves	6,965	2,843
IMF reserve position	760	310
Total	7,725	3,153
Forward swaps outstanding (est.)	1,150	469
Repayments of June		
ECC support:		
Financed from:	634	259
IMF drawings	1,150	469
forward swaps reserves	823	338
Total	2,607	1,064
Britain's resources end-July:		
Owned reserves	5,956	2,431
IMF reserve position	126	51
Total	6,082	2,482
Forward swaps outstanding (est.)	nil	nil

*at \$2.45

which must come from gold or gold-guaranteed assets, just over \$630m out of the total of \$2.6 billion, wholly from drawings under that IMF gold tranche. Half has been drawn in SDRs, half in the currencies of our June creditors (Belgium, France, Germany, the Netherlands and Norway).

The manoeuvre has conserved Britain's modest remaining stock of gold. It has also helped to cushion the reserves as a whole from the full impact of the EEC repayments—as has the decision to cash in some \$1,150m of forward currency swaps that the Bank of England had earlier salted away with other central banks. The drop in Britain's reserves in July was therefore only \$883m (to \$6,082m after inclusion of the remainder of our IMF reserve position), despite the fact that the United States chose that month to convert some £83m (\$203m at the ruling exchange rate of \$2.45) of sterling that it had acquired in April. Without these special transactions, the reserves would have shown very little change last month, which was the first full month of floating. That is exactly what floating is meant to do: take the strain on the exchange rate, not the reserves.

There will be some annoyance that Britain was treated less well than Italy. Why should Britain be forced to limit its freedom of action to make future IMF drawings and to take on a continuing debt servicing obligation merely to prove that it is a better European than its partners? In future, no one may be willing to pay that price.

Prospects in Europe

Gloom in t'North

Industry in northern England is unenthusiastic about its chances in the common market. This is the overwhelming impression of a special study* published this week by the Northern Economic Planning Council. The council looks manfully on the bright side, muttering the right phrases about intangible advantages in the longer term. But it didn't find local industries expecting any visible, short-term ones.

The study consulted a broad sample of companies accounting for 27 per cent of the region's manufacturing employment. Generally, they feel that

*The Northern Region and The Common Market. Northern Economic Planning Council.

tariffs are a less important barrier to trade than entrenched buying habits. The Europeans, they fear, have more rooted objections to foreign goods than the internationalist British (even though the average northern Englishman's knowledge of foreign languages is poor). The respondents think that the prejudices of the European housewife are mirrored by the chauvinistic policies of big buyers like public utilities, which ought to be an important market for the north's capital equipment, but are not because European firms in the capital goods industries tend to share directors with utilities and banks. They reflect on hidden subsidies, market sharing agreements, the deliberate use of standards and specifications; and generally take the view that while Britain will fall over backwards to comply with the free trade principles of the community, Europeans will not.

For its part, the council fails to find any startling export opportunities in Europe for the region. A large continental market may open for coking coal and the steam-raising coals produced in the north-east, but there is not much of them to spare for export anyhow. There is some scope for steel exports, but an equal threat on the home front from the Netherlands. For shipbuilding, the outlook seems bleak. Sea-going ships are already free of tariffs, but few European orders come to British yards. The north's farmers seem generally optimistic about their European future, but even more generally know nothing about EEC agricultural policy and marketing. Tourism could benefit, the council hopes, but only if facilities improve.

The road to Weimar

The Institute of Economic Affairs could hardly have chosen a better week to discuss inflation. But what the businessmen and economists who spoke at Wednesday's conference chiefly did was dramatise inflation's effects, not produce a cure. That may be the most important lesson of all.

Professor D. R. Myddelton observed that, in real terms, the Financial Times industrial ordinary share index is actually 10 per cent lower now than it was when it began in 1935. He went on to argue that most companies fail to account properly for inflation, and that the average company's retained profits are probably negative in real terms. Nationalised industries, for example, lost £2,200m between 1948 and 1970, but in real terms the losses added up to £8,300m.

Other speakers nailed the idea that it is possible to compensate those who lose most from inflation. Mr Brian Griffiths pointed out that those who

lost were the non-unionised and those holding fixed-interest savings. These groups are so heterogeneous that it is almost impossible to list them so that they can be compensated. But, as Mr Lewis Whyte said, if such people could be identified and compensated (by, for example, index-linked gilts), the most powerful restraints on inflation would be removed and, instead of trotting, inflation would gallop.

Mr John Treasure, the chairman of J. Walter Thompson, discussed an opinion poll on inflation which the IEA had commissioned. This showed that 72 per cent of those interviewed thought that rising prices was the most important political issue, and 40 per cent thought that prices would go on rising faster and faster. The poll also showed that the main blame for inflation was put at the door of the trade unions. If Mr Feather does not respect that, Mr Wilson and the Labour party should.

of British Leyland's worldwide sales has risen only 31 per cent since before the merger in the devaluation year of 1967; in that period sales by Volkswagen have risen by 113 per cent, by Fiat 54 per cent, by Renault 81 per cent, and by Toyota 163 per cent. In assets growth and invested capital, British Leyland lags even farther behind these competitors.

While our main export industries are raising their prices by too much, our domestic nationalised industries are putting their burden on the taxpayer. British Rail's latest price increases—7.5 per cent for passengers, 2.5 per cent for freight—are way below what is needed to pay for a £30m loss of revenue this year from strikes and a wages bill over £40m higher than the year before. The taxpayer, Parliament was told a week ago, is to foot the bill for a £50m-£60m cash flow shortfall expected between now and the end of the year.

On Tuesday Mr Richard Marsh, BR's chairman, forecast that, unless the railways' role was rethought, there might be only a few main routes left in 10 years' time. He cited the advanced passenger train, which will do routes like London to Edinburgh at 150 mph, to suggest a new railway era was coming in. Yet the APT, and electrification, are the only examples of a dramatic improvement in passenger service, and even the APT is unlikely to make much impact before the end of the decade. The immediate rethink is needed in the other direction: to stop subsidising BR for whatever losses it makes, to sack far more of the railwaymen whose last wage rise has priced so many of them right out of the market, to close uneconomic railway lines, and to develop competitive transport in its place.

The post office is in the same position of apparently incurable deficit. Its 1971-72 report, published on Thursday, showed a loss on postal services of £12.6m. This was much less than the previous year's £72m, but then so it should have been with the benefit of a large increase in charges in February, 1971, and another smaller one last March. The trouble is that consumers have now got touchy about higher postal charges; postal

traffic is running 9 per cent below a year ago. The main beneficiary is the telephone—hence the healthy £58m profit on the telecommunications side in 1971-72. But since there is no cross-subsidisation between the two services, that is no help to the posts. The post office says that without price increases early next year the 1972-73 results will be quite a bit worse. It also asks the Government to write off its accumulated deficit of £180m.

The steel, coal and electricity industries are also shouldering heavy deficits. The British Steel Corporation, which lost £68m last year, has been trying to bump up its prices for some time. Last April, it wanted to raise prices by 14 per cent, but the Government only allowed it to go to 7 per cent. This April, steel prices went up by 5 per cent, but there will be another price rise of around 7 per cent soon after the CBI price pledge runs out.

Coal's situation is more difficult. The National Coal Board raised prices by 7.5 per cent on March 26th, after the ruinous 25 per cent wage increase to the miners. The price increase will yield only £56m, far too small to meet the cost of the settlement, estimated at more than £100m yearly. Yet if the NCB raises prices further it will probably lose many private customers, as well as further antagonising the electricity supply industry, which endured coal price rises of 45 per cent.

Ideally, the electricity industry would like a price increase of 15 per cent, though nothing should happen within the next three months. After that, the industry may have to settle for less than it wants, but deficits of £23m and £56m in its last two financial years give it a strong argument. This is the industry that has suffered most from the Government's lack of an incomes policy. On Thursday the 110,000 electricity workers put in for an extra £6 a week to bring their minimum basic rate to £25, plus a 35-hour week, plus 4 weeks' holiday; a package equivalent to 40 per cent on earnings. This claim comes after the Wilberforce award gave them an extra 22 per cent from the beginning of 1971, while hangovers from that award and another straight 7½ per cent increase will probably add 12 per cent to earnings this year. The fever of inflation is growing alarmingly.

BUSINESS

Weinstock wants a change at ICL

Strong pressure is being put on Mr Tom Hudson to resign as chairman and chief executive of International Computers Limited. He was only appointed in March. Sir Arnold Weinstock, head of the General Electric Company, which owns an 18 per cent share of ICL, is leading the attack. His nominee as Mr Hudson's replacement is Lord Kearton, the head of Courtaulds. There must be doubt whether Lord Kearton is even interested. He had already turned the post down once before Mr Hudson's appointment, saying he would accept it only if strong Government support for the company was forthcoming. The Government has since announced it is giving ICL £14.2m over 18 months, mostly to finance ICL's new range of computers, but is this enough for Lord Kearton to change his mind?

It is doubtful if Sir Arnold will have his way. It is thought he has taken exception to Mr Hudson partly because Mr Hudson previously worked for, and is still a director of, the Plessey Company, another major ICL shareholder and a powerful GEC competitor, and partly because he wants someone who is better known in the City. Sir Arnold feels that ICL must revive its drooping share price and that to do so it needs a chairman like Lord Kearton.

A better image in the City will not necessarily help ICL to sell a single extra computer, but it would give the company greater freedom from the Government than it has now. Mr Christopher Chataway, Minister for Industrial Development, said on Thursday that one reason why the Government has accepted responsibility for financing much of ICL's research and development was because the risks made the company an unattractive prospect for raising money on the open

market. In conditions like these the Government is bound to have a dominant say in the shaping of company policy, and Mr Chataway's ambitions for ICL seem distinctly modest, probably more modest than those of Sir Arnold.

Mr Chataway is not only thinking in a small way, he is thinking in purely European terms. He ruled out, on Thursday, any early merger with a European manufacturer, and settled instead for a round of exploratory talks next month with his opposite numbers in the French and German governments to see what scope there was for integrating their computer interests after Britain becomes an EEC member. Talks like these foster goodwill, but not business. Sir Arnold, who usually does things on a grander scale, could be understandably irked at the way the Government continually turns from the big American market.

Science

"Abominably rude"

There was not a great deal left of Earl Jellicoe, the Lord Privy Seal, by the time the Commons select commit-

tee on science and technology had finished with him on Wednesday morning. Had he been a less tough customer, there would not have been anything left at all. The meeting had nominally been called to hear from Lord Jellicoe why the Government had decided on a policy for the scientific research councils that was diametrically opposite to the one proposed only a few weeks earlier by the committee. But it was turned into an occasion to warn the Government of its parliamentary obligation to take select committees more seriously than it has shown signs so far of doing. It carried the tug-of-war between the increasingly more knowledgeable select committees, aiming for the powers and prestige of the formidable American committees of Congress, and the Government, trying to stop them, a considerable step along the American road.

The Government need not have walked into the trap. This committee has two formidable Tory backbenchers in the shape of Mr Airey Neave (the chairman) and Sir Harry Legge-Bourke, who have no political expectations from this Government and can therefore be as rude to members of it as they choose; Mr Neave was rude icily, and Sir Harry with more heat. The committee's report on the debate at issue (the one that had erupted over Lord Rothschild's original proposals for reforming the research councils, and reducing their powers) was not in fact a good one; it has done better work on other issues. The Government therefore ignored it. This was a mistake. Select committees are used to

Jellicoe got badly roughed up by Neave and Legge-Bourke

Key indicators: British economy

Reserves

Official reserves down \$883m in July after EEC repayments, conversions by US authorities and inclusion of remaining IMF reserve position.

Bank advances

Further sharp rise in lending, particularly to personal borrowers.

Construction

New orders still at a high level in May; lower public sector figures were offset by increases in orders for private housing and shops.

International

Going easy on Concorde

At his meeting with Mr Michael Heseltine in London on Tuesday, the French transport minister, M. Robert Galley, had to explain why Air France had signed an order the previous weekend for only four Concorde, when it had originally been down for eight. The British Overseas Airways Corporation cut its order too, but at least did not halve it. BOAC has dropped just three of its eight options, but then BOAC has been given an exceptional subsidy from the Government for its five orders and all the signs in Paris have been of Air France being put through the hoops by the treasury.

Air Canada is still the only airline of substance to have dropped all its Concorde options (it had four), but Lufthansa, with options on three, has said repeatedly that it has no intention of taking them up at this stage, which comes close to the same thing. Swissair said on Thursday it would not buy any.

The Dutch and Italians, too, have never reached the option stage, so that the future of the aircraft now lies with the Americans and the Japanese. A Japanese order would frighten Pan American, and probably the Australians too, into ordering Concorde for their Pacific operations. Understandably, Mr Heseltine and M. Galley

decided not to authorise the production of additional Concorde until they see how many of the remaining paper options (eight for Pan American, six for TWA, four for Qantas, six each for the big American domestic airlines, among others) go the way of Air France's.

The tensions set up inside the EEC when members refuse to back joint projects—and Britain and France regard Concorde as an exercise in EEC togetherness, if nothing else—has led the commission in Brussels to suggest, in its draft aviation policy, prepared last month, that no policy for rationalising the aircraft industries of Europe will work unless airlines are included so that they can be ordered to buy the products of Europe's aircraft factories. The airlines will fight this to the death; if they are reluctant to order Concorde, they are showing even greater reluctance to order the co-operatively built European air bus, designed with precisely their requirements in mind. The commission is dismayed at the fragmentation of the industry among 10 aircraft manufacturers where there is work for only three, and it suggests that mergers, when they come, should be between manufacturers in different countries, to avoid the build-up of

BOAC's Granville (right) bought five.

Air France's Galichon (left) only four.

China's Wang Ya-xian may have three—

and with the Shah's three that makes 15

national pressure groups. Soundings that the commission took among the Six before publishing its proposals showed no support for this idea at all; governments intended to keep up their support for their own national industries. The only bait that the commission has to offer is that it may be in a position, one day, to help to finance development. Greed versus pride?

Key indicators: world commodity prices

Soured

Sugar prices have dropped steadily back from their record £90 a ton earlier this year to £58. Producers have been considering reimposing export quotas which were suspended as the price soared. A longer-term shortage is predicted, however, of about 5m tons at world demand for 77m tons this year, so prices are unlikely to drop lower.

Montagu Trust Limited

Mr. F. D. O'Brien Newman, the Chairman, reports:

Earnings after tax for the year to 31 March 1972 of £5,378,000 compared with an adjusted figure for 1971 of £3,545,000.

An exceptionally good year for Samuel Montagu, and disclosed profits after tax of £2,671,000 compared with £1,598,000 last year.

A rise of approximately 20% in the profits of Bland Welch, E. W. Payne and Bland Payne, the group's principal insurance broking subsidiaries.

Confidence that the group can exploit the wider scope which Britain's entry into Europe will give, and that growth will continue in the long term.

SUMMARY OF RESULTS

	Year ended 31 March	
	1972 £000	1971 £000
Profit after tax		
Banking	3,556	2,096
Insurance broking	2,609	1,822
Insurance underwriting	154	88
	6,319	4,006
Central management expenses and long-term loan interest	(464)	(291)
Profit after tax	5,855	3,715
Profit attributable to minority interests in subsidiaries	(477)	(170)
Earnings of Montagu Trust group	5,378	3,545
Result per fully paid share		
Disclosed earnings	13.06p	8.62p
Dividend	5.00p	3.50p
Times dividend covered	2.61	2.46

MONTAGU TRUST HAS SUBSIDIARY AND ASSOCIATED COMPANIES IN AUSTRALIA, CANADA, SOUTH AFRICA, THE FAR EAST, SWITZERLAND, FRANCE AND OTHER EUROPEAN COUNTRIES.

Russian trade

Kama grand prix

The new British £200m credit agreement with Russia did not happen by accident. It came at a crucial moment in the Kama River lorry saga, and was announced on the very day that Mr Peter Peterson, the American Secretary of Commerce, arrived in Moscow for his follow-up to President Nixon's visit. What the Export Credits Guarantee Department and ministers in London were anticipating, however, did not happen. American exports to Russia continue to be ineligible for export-import bank credits. The Russians and Americans continued to quarrel over the remaining commercial issue that divides them: settlement of Russia's lend-lease debt from the last war. But American manufacturers are itching to get in on those parts of the Kama River project that are still up for grabs.

The Kama project will cost £400m-£800m and will be capable of producing 150,000 lorries a year. The works will employ 40,000, compared with 35,000 at Togliatti, and a new town of 300,000 people is already being built. The Russians suffer from a huge inferiority complex about their motor industry technology. Some western observers reckon that too much has been made of this, and that what the Russians lack is not technical know-how but just experience of big lorry manufacture that western firms have accumulated over time. Nevertheless the project is running seriously behind schedule: four months according to the Soviet press, much more in the view of outsiders. The Russians are still sticking to their 1974 target, so they are in a hurry.

Originally they planned to hire a single western firm to act as main contractor, as with Fiat at Togliatti. Ford nearly got the job, but the

Defence Department intervened. Later the Russians said they would subcontract the work out themselves. Renault then emerged as the main western contractor for the machine tool side. What remains to be settled is the whole foundry installation. Here the American consultancy firm of Swindell-Dressler has won the \$9m design contract for the foundry, but the Russians have reserved the right to place orders for the equipment themselves. They are believed to favour American manufacturers, who have unrivalled experience. This would mean a sizeable spin-off for British manufacturers. But although the ECGD has now bowed to Russian insistence, not only on lowering the credit rate of interest from 7 per cent to 6 per cent, but also by setting up a £200m line of credit specifically for Russian trade, the problem remains that comparable cover is not available for Americans.

This means that the Swiss and German rivals for the installation (George Fischer and Kunkel Wagner) are still very much in the running, both able to offer attractive credit terms, and with the Swiss in particular offering a very advanced, though only partially tested, technology. Altogether the foundry contracts may be worth even more than the £70m or so Renault has already chalked up.

Because of the delays, the Russians are cutting corners elsewhere and are exploring the possibility of importing components for their lorries until their own plant is ready. The scale of the orders means that any western manufacturer would have to lay down extra plant; the companies approached want to be able to write off that plant over the life of any contract the Russians place with them, which means either that the price will be higher or the contracts long. The Russians are making half-hearted offers to pay in kind, but they may not push this one too hard.

Into Europe

Run for cover

Brussels

The European Economic Community has instituted anti-dumping procedures against imports of acrylic fibres from Japan, South Korea and Taiwan. They are said to be undercutting European prices by 20 per cent. Countervailing duties will not necessarily be imposed, especially if the producers take the hint and raise prices. But the move suggests that the Eurocrats are going to fail to open the heavily protected European fibre and textiles market to outside competition.

No countervailing duties have yet been applied in the two years since the commission took over responsibility for anti-dumping action from the member states in 1970; but some importers have tactfully been asked to cut deliveries or raise prices. Apart from fibres, inquiries are being made into fertilisers from communist countries. Aluminium and desk top calculators from Japan are also being watched.

The flow of complaints from industry to the commission has risen sharply this year. Commission officials say this is because industry has only recently latched on to the new procedures. They deny indignantly that the EEC is lurching towards protection on the American pattern. America's anti-dumping procedures, unlike the EEC's, violate Gatt rules, and have been applied with increasing vigour in recent months. The EEC's relative virtuosity on the dumping issue is one of the strongest cards in its negotiating hand.

The Americans, meanwhile, are methodically stacking up cards for their own hand. Under Gatt rules they are entitled to compensation for any damage to their trade that results from the enlargement of the community and from EEC agreements with the Efta

members. Some of the EEC-Mediterranean preference agreements, even in their present, unrevised form do not conform to Gatt rules. In the past two weeks the Americans have enraged commission officials by demanding details of EEC trade with the new members down to the last nut and bolt. At the weekend the EEC agreed to scrap most of the 2½-4½ per cent import levies slapped on agricultural imports into Germany and Benelux after last year's devaluation of the dollar, but is keeping them on \$500,000-worth of the \$40m-worth of annual imports originally affected. America is still not satisfied, and has tabled a formal complaint. Outlook stormy.

Farmers' friends

Brussels

Britain and the other new members are behaving increasingly as if they were already in the European Economic Community, without bothering to wait until next January 1st. At Britain's requests, all four are taking part in preparations for a review of the community's preference arrangements with Mediterranean countries, and for the 1973 community budget.

The draft for this budget, just issued by the commission, proposes a 20 per cent increase in spending, to \$5 billion a year. Half the increase reflects the cost of opening the Six to new members. The common agricultural policy accounts for 80 per cent of expenditure, compared with 90 per cent last year. The most spectacular rise—to \$260m next year, against only \$40m in 1970—is for the newly revamped social fund, which will begin dishing out money directly to firms for retraining and resettling workers, as well as reimbursing the money spent by governments. The costs of the community's supposedly massive bureaucracy are also sharply up, but administration is still only 5 per cent of the total.

Figures in the budget will change with key decisions yet to be taken: notably on farm prices, the workings of the social fund and whether to set up the regional development fund the Italians want so badly. Britain will benefit from increased community activity in research, the social fund and regional policy; but expects to lose on agriculture. The hope in the long run is that the budget will be paid for partly from the tariffs on goods imported into the EEC, and partly by a contribution from members equal to the first 1 per

cent of their value-added taxes.

Members now pay into the budget on a formula based on gross national products. Britain, in the first year of the transitional period, will come in at an agreed 8.55 per cent, or £180m at pre-float exchange rates. Part of this will flow back again as contributions from

The great gas swap

Rome

The French bought natural gas from Russia, but did not know how to get it to France. The Italians, meanwhile, bought gas from Holland. During President Pompidou's visit to Italy last week a sensible swap was arranged about it all. The 2.5 billion cubic metres a year of gas that France has bought from Russia will now go instead to Italy, down a 465-mile pipeline being built to take the annual 6 billion cubic metres of Russian gas the Italians are already buying under a contract signed in 1969. The pipeline will run from the Austro-Czechoslovak border to north-east Italy, where it joins the Italian gas grid. The only way France could have got the gas would have been by extending the pipe across either Germany or Italy.

In return Eni (the Italian state oil and gas corporation) will cede to Gaz de France an equivalent share of the 6 billion cubic metres a year of gas that it will shortly be getting from the Groningen field in Holland. The gains to Italy are that the pipe to Russia will now be used to capacity, and a possibly awkward gas shortage will be avoided—even if there continue to be headaches over the 3 billion cubic metres a year of liquid natural gas that the Italians thought they had bought from Esso Libya on a 20-year contract. First there was trouble with the liquefying

plant at Mars el Brega; then the Libyans made Esso revise the contract price. Two years after the scheduled date, no Libyan gas has arrived on the Italian grid, and the deliquifying plant at the Italian end is doing nothing. The Algerians are still working on their idea of running a pipeline under the sea to Europe, via Tunisia and Sicily. Meanwhile Italy is relying entirely on its domestic sources of natural gas, which yield some 13 billion cubic metres a year.

I told you we'd end up in Italy, tovarich

Key indicators: world economies

America is winning in the industrial world's fight against inflation. Its industrial output is not quite as buoyant as expected, but should gather speed.

Britain's 3-months' figures distorted by miners' strike.

	Industrial production			Exports	% change	1 year	Retail prices		
	1963=100	3 mths	1 year	1963=100	3 mths	1 year	1963=100	3 mths	1 year
United States	147†	+1½	+5	209†	+1	+6½	136†	+1	+3
Japan	293*	+4½	+9½	473†	+5½	+7	160	+2½	+5

Benelux	173*	+2½	+7½	315	-1	+22½	151	+2	+6½

Index numbers refer to May, 1972, except * (April) and † (June). Industrial production and value of exports (in dollar terms) seasonally adjusted.

Japanese trade A gesture

Tokyo

The best thing that can be said of the outcome of the four days of American-Japanese trade talks in Tokyo is that President Nixon's special trade representative, Mr William Eberle, did not leave completely empty-handed. The Japanese verbally agreed to raise the ceiling on the domestic market share of foreign computers from 46 to 50 per cent; to permit foreign retail groups to open 11 wholly-owned stores each for the sale of imported goods; to liberalise the bulk import, processing and packaging of black and white film and photographic paper (as well as of pharmaceuticals and cosmetics); to end Tokyo's "buy Japanese" policy except for computers; to permit electric power companies to import atomic reactors; to take steps to increase the import of American maize and wheat; and to pay in advance for 5,000 tons of uranium.

How much in foreign exchange does this mean? If the figures for the concessions on uranium (\$160m), food-stuffs (\$45m) and wheat (\$5m) are representative, the Americans will have to sell a lot of black and white film, not to mention atomic reactors, if they are to make any visible dent in the \$3.8 billion trade deficit that is expected with Japan this year.

There was no progress on oranges, beef, or beans; the Japanese, as expected, refused to liberalise imports of integrated circuits. Mr Tanaka says that all Japan's imports should rise sharply because he is aiming for a faster domestic economic growth. Mr Eberle's rather gentle protests marked real disappointment.

Coffee

Who's COPEC?

Rio de Janeiro

The key to the future of the world coffee market is held by Sr Carlos Alberto de Andrade Pinto, president of the Brazilian Coffee Institute, who arrives in Geneva this Friday for talks with other producers. Because supplies have fallen well short of demand, producers have been basking in a 20 per cent rise in prices. Now they are toying with the idea of forming a multinational corporation to act like a coffee bank, buying when prices are low and selling when they are high,

with the initial buffer stock donated by the major growers. Helped by the present shortage, Brazil, Colombia, the Ivory Coast, Costa Rica, El Salvador, Guatemala, Mexico, Peru and Portugal have reached a measure of agreement.

Whether or not they will go ahead with the plan hinges on the talks beginning in London on August 14th, when the producers will press for a world production quota for 1973 of no more than 48m bags. Consumers are holding out for 56m bags, which will inevitably produce a much lower coffee price. If they stand firm and there is no agreement, then the producers will go ahead and set up their own cartel. But coffee is not oil: the number of actual and would-be producers is huge enough to thwart most price rigging schemes of this sort.

French taxes

Still optional?

Paris

For the second time within a few months Frenchmen are being faced with uncomfortable facts about their tax system. In February the former prime minister, M. Jacques Chaban-Delmas, came under fire for (quite legally) using the "avoir fiscal" system

of rebates on dividends to save himself several thousand francs. This week the first annual report of an independent advisory body, the tax council, confirms what everyone has known for years: that it is easy—for some—to avoid French income tax. In the years between 1962 and 1969, according to the council, the proportion of wage-earners in the population increased, while the proportion of the self-employed and those living off investments fell. But while the tax yield from employees increased in line with their numbers, the self-employed appeared to be paying less per head.

The administration does not know enough about how much money the self-employed make. Only an estimated 23 per cent of farm incomes are known in full, only 44 per cent of industrial and commercial profits, and only 78 per cent of incomes from property. As a result, the council reports against the government's plan to put all types of income (earned or not) on to the same footing. This would extend to non-earned incomes the same 20 per cent tax-free allowance now enjoyed only by wage earners; the council in effect endorses the ancient assumption by French tax collectors that non-wage earners deserve to be taxed more heavily, on the grounds that they are bound not to be declaring everything.

No ark for Marcos

Manila

And lo, the rain fell more than 30 days and 30 nights and the waters prevailed exceedingly upon the earth and all the high hills that were under the whole heaven were covered. And as he beheld it President Marcos of the Philippines told his national disaster co-ordinating centre: "I guess the only thing to do now is pray."

The deluge poured 14½ ft of rain in one month on to the island of Luzon, where much of the Philippines' development effort has been concentrated and where the capital is located. More than 300 people have been killed and over 2m made homeless in the area of greater Manila alone; 1m acres of rice fields were destroyed; so was 30 per cent of the sugar crop, which dominates the Philippines' export earnings. Government estimates put material damage at £200m.

The floods came as the Philippine economy was showing signs that the stricter housekeeping rules set by the International Monetary Fund were paying off. Tax reforms, exchange and import controls and credit restrictions imposed in the face of political unpopu-

larity have enabled the Marcos government to start repaying foreign debts and wipe out the trade deficit.

The price has been development spending. The rapid pace of development and modernisation in rice, sugar, mining, road-building and irrigation of President Marcos's first term has faltered. Ironically the country that fathered the rice revolution and had an exportable rice surplus in 1968 had to import 500,000 tons of rice this year. The government had hoped to have a recovery under way in time for next year's presidential elections.

This hope has vanished into the deluge. Three years at least will be needed for the Philippines to get over the past 30 days. In an unsophisticated but predominantly Catholic country natural calamities require a supernatural explanation. Extraordinary disaster can only be the fruit of extraordinary wickedness and retribution for the sins of the rulers. Mr Marcos may now have to face growing demands that he be sacrificed in expiation of the sins of his regime. Prayer is indeed in order.

BUSINESS

Investment

What is gold worth?

Gold has touched \$70 an ounce, its highest level ever and twice the official price of a year ago. It has been helped to this height by the news that the French and Italians are hatching a plan to revalue the metal's official price within the EEC. But the rapid rise in the price can be justified on grounds that have little to do with international speculation or even with industrial demand, but with the simple fact that the South African reserve bank, which controls the bulk of the free world's supply, has cut back its sales to a trickle (see chart).

The latest results from South Africa's gold mines, which have been analysed in this week's Mining Journal, show that as much as 25% of their production is being kept off the free market. In the past six months alone, the South African treasury has boosted its own gold reserves by 50 tons (or 1.6m ounces). This has been a short-term measure to keep South Africa's foreign reserves split evenly between gold and foreign currencies. It will soon stop. And when the republic's full supply is made available again to

the London market the price of \$70 an ounce will look high. If the Russians begin cashing in some of their huge gold production to finance their new industrial overtures to the West it will look ridiculous.

Where does this leave gold shares? The Financial Times gold index has more than doubled since the start of the year, though this obscures the fact that gold shares have been a pathetic investment in the long run. The FT index was pitched at 100 in 1955: in 17 years an investment of £100 in the index would show just £6 capital gains. The latest results from South Africa's mines have not been good because spiralling labour costs and increased machinery costs after the rand devaluation have eaten into profit margins. Things have been made worse, however, by the fact that only a fraction of the mines' production has been sold at free market prices. Mining Journal estimates that the average price now being received is close to \$50 an ounce.

When the free market price does fall back share prices are likely to fall in line. There is no reason for this, however, as most mines will be better off selling all their production at a lower free price than having much of it kept back by the South African treasury for which they are paid only the official price of \$38 an ounce. The South African government's hope, however, must be that by causing a shortage of gold now it might be able to force a massive revaluation of the official world gold price. But in the end it realises that the ultimate strength of gold rests on its industrial use.

This means that many of the recent big gains in South African gold shares, led this week by Libanon, Hartebeest, and President Steyn, are likely to be

cut back in the near future, before the next half-year results can show the real profit increases. Until then an investor is backing a decision by the South African treasury rather than any commercial mining concern.

London and Wall Street

No longer twins

For a month Wall Street has been spoon-fed with unparalleled profit figures from American industry. Yet the market is still so obsessed with Vietnam that it was a visit by Dr Henry Kissinger to Paris, rather than the strength of the economy, that pushed the Dow Jones industrial average up 5.7 points on Tuesday and a further 10.7 points on Wednesday to 941. Anyway, the two-day bounce more than compensated for the strange downward drift towards the end of last week, which had occurred despite excellent figures from the car manufacturers, as well as the sight of the Democratic party tearing itself to pieces. But this has been a time when wise investment managers have been building up their portfolios on the cheap for the almost certainly heady days of Wall Street's Indian summer.

If the Street caught London's optimism the Dow Jones would be through the 1,000 mark in no time. For despite the national dock strike and impending state of emergency the Financial Times ordinary index put on 9 points on Monday and a further 8 on Wednesday, to close at 517.8 on Thursday. The resilience in London this week has come from the blue chips. Imperial Chemical Industries were up 17p to 288p and Unilever up 32½p on the week. Gold and oil shares all improved strongly. Shell Transport and Trading has gone up 27p in the past two weeks to 378p. A spate of takeover rumours, particularly for the brewers, Courage, kept brokers from growing glum over the news from dockland. The lesson is that the London market still thinks that things are cheap if the FT index drops below 500, regardless of Wall Street or stark reality.

Things are looking up at Chase

American banks

Chicago leads

New York

Thanks to rising interest rates and firmer demands from business for loans, American banks are back to doing what they like best: coining money. Many, but not all, major banking institutions have just checked in sizeable gains in profits in the April-June quarter. After their gloomy first three months of the year, they needed them. Chase Manhattan Corp has reported earnings up by 35.4% in the three months. Barclays Bank of New York has this week responded to the boom by beginning discussions to buy the Long Island Trust Company, a bank with assets of \$450m.

Nationwide, the best performers this year have been the two largest Chicago banking organisations: Continental Illinois Corp, owner of Continental Illinois National Bank, and First Chicago Corp, parent of First National of Chicago. Illinois is one of the few states that still bars banks from having branch offices. This is a restriction that deeply rankles, but it has helped to hold down operating costs. Ironically, although Continental can own no branches in its home city or state, it has 10 branches abroad where it claims earnings were especially good. Chicago and other mid-eastern industrial centres were also helped by the fact that the volume of corporate loans rose faster outside New York than in it. Continental Illinois reported a 66.7% jump in net operating earnings in the second quarter, and profits for the whole six months that were 30% ahead of the year before; both figures were

the nation's best in the big league.

Most west coast banks have been performing less well. A higher percentage of their deposits is interest-paying, so the benefits from higher lending charges are often negated by rising deposit costs. Crocker National Corp, which owns Crocker National Bank in San Francisco, actually recorded decreases of 6.1% and 6.7% in the bank's net operating earnings in the second quarter and first half of the year respectively. The giant Bank-America Corp, which owns the Bank of America, had a gain in net operating earnings of 5.2% in the second quarter and only 4.3% in the half year.

Tobacco

Rothmans v. Bits?

London is now set to be the headquarters of the European tobacco industry. Two new British-based companies will soon be locked in battle for the lion's share of the European market. The first, but probably smaller, lion in the field is Rothmans International. Plans for this new £220m group were announced on Tuesday. It will be formed by Carreras buying up a string of European companies, as shown in the table below.

Meanwhile negotiations between the world's biggest tobacco company, British-American Tobacco, and Imperial Tobacco should soon be concluded. British entry into the EEC means that Bats and Imps cannot continue their 68-year-old deal, whereby Imps only sells in Britain and Bats only sells abroad. The outcome may be the formation of a quite massive new group, perhaps to be called British Imperial Tobacco (Bits). The British cigarette could rule Europe. The main barriers in its way are the state monopolies in France and Italy, but the European commission is putting strong pressure on both countries to liberalise the rules to allow competition. When this happens, the markets will be very lucrative.

Here come the British

Country	Rothmans companies	Market share	Bats/Imps market share
Britain	Carreras, Rothmans of Pall Mall	8%	67%
Belgium	Tabacofina (60%)		
Holland	Tabacofina (60%), Turmac	40%	10%
West Germany	Martin Brinkmann AG	52%	25%
Switzerland	Tabacofina (60%)	21%	28%
		n.a.	15%

Figures in brackets show Rothmans' holding in companies.

The Rothmans deal is complex, because all the companies are partly owned by various holding companies linked to the South African tobacco giant, Rembrandt—which is the personal creation of Dr Anton Rupert, the former lecturer on chemistry at Pretoria University who is one of the most extraordinary self-made millionaires of the whole postwar era.

He decided that the old guard dominance of South African business could most easily be challenged in industries where the British had gone soft through forming a monopoly, and that is why he chose tobacco as his field. Although it is claimed that Rothmans will be the first genuine European multinational—with seven different nationalities on the board, including such names as the Spanish Duke of Badajoz and the German Prince of Prussia—it looks as though ownership will be divided between South Africa and Britain, with Dr Rupert keeping a healthy commanding interest.

The mergers are being financed by a straight share swap together with a £107m issue of convertible bonds. This makes it hard to calculate at what price the currently suspended Carreras shares will reopen. With nil conversion, a sensible price would be around 100p; with full conversion nearer 60p. The consensus in the City is around 75p, nearly double the price at the start of the year. The convertible bonds are attracting interest from British institutions, so this could mean that much of the potential European equity will pass into British control.

All this activity has focused attention on tobacco shares, and at last the City is waking up to their merits. Imps has risen sharply in recent weeks to 124p, aided by a suggestion that it could be Mr Max Joseph's next target. Gallahers has moved up 13% after surprisingly good results last week. Bats has been a bit higher as its results announced on Wednesday were better than the market expected. The sinking pound should ensure rising profits this year, making the share on a p/e of 11 look the cheapest in the sector.

Paper

Bowater wakes up

Suddenly, there is a flurry of interest in Bowater, long regarded as a sleeping giant. In 1967, its best year, it achieved only a 10% return on capital: by last year it had dropped to 5%. There have been some costly mistakes. In a single investment in Canadian forestry, Bowater lost £11m in only three years.

In short, Bowater looked like a grey-chip, if ever there was one. It is a surprise to find the shares at 186p on a historic p/e ratio of 32. The main explanation is that the paper industry is on a strong recovery tack. Bowater, in particular, stands to gain from this year's 6% rise in consumption in the United States, where it makes two-thirds of its profits.

Profits for the whole of 1972 will be about £14½m, a 50% rise on 1971. But this still leaves the shares on a prospective p/e ratio of 21, which is discounting not only the 1972 profit rise, but most of the rise in 1973. The shares begin to look cheap only in terms of the profits expected in 1974 and 1975, when there will probably be a world shortage of paper. If shareholders want to look that far ahead, they should also keep in mind the likelihood of a slump in 1976-77.

The current excitement is based on two different hopes: first, the asset situation and second, diversification. The assets are something of a mystery. Their book value is 220p a share, but two-thirds of this is overvalued plant and machinery. Properties only add up to about 50p a share, but the balance sheet valuation is at cost, so the real value could be five times higher. Slater Walker is thought to have been buying heavily in the market in recent months, for precisely this reason.

But the best moment for a takeover may have passed; Bowater is waking up. British newsprint production, which has lost more money than shareholders care to remember, was slashed in half last year. Now Bowater has embarked on an ambitious plan for acquisitions in consumer goods. A bid for the bedmakers, Relyon, flopped, but a bid was agreed last week for Beautility. This makes Bowater the biggest furniture company in the country, and it should soon be bigger.

If Bowater can make a success of furniture they could soon be turning the tables on Reed International. Reed got the message about diversification long ago. That is why its share price has risen by 164% in 18 months, and figures published on Thursday showed yet another sharp profit rise, 35% up on the year before. Reed's shares rose to 338p, but still look attractive on a prospective p/e ratio of 14½.

Dalton, Barton

A very quick buck

Dalton, Barton will be bringing a nice cash dowry to its marriage with Keyser Ullman Holdings. Pre-tax profits for the first half are up 175% to £2.2m. And this leaves out the near £1.5m profit it made in a bare two months by buying Paramount Realty, and then selling them to Eastern and General Holdings for nearly £14m.

True, there was less in this for Dalton Barton than meets the eye. The sale to Eastern and General is being back-dated to the beginning of the year so that the purchaser will benefit from the £600,000 profits Paramount might turn in during the current year. Some of the payment is deferred, which is worth £400,000 in interest saved;

and Dalton, Barton has to pay the dividend on the equity issued to buy Paramount. Basically, then, Dalton, Barton has made a rights issue and an ultra-quick dealing profit. Mr John Ritblat, of British Land, which held 14% of Paramount, tried his best to arrange a takeover, but did not bring it off. Mr Jack Dellal, Dalton, Barton's chairman fast gaining a reputation as the City's ace deal-maker (except that his offices are in Knightsbridge), did, however, manage to get an option agreement from the directors of Paramount before going ahead with the bid.

The reason Eastern and General is so interested in the nether regions of Ealing, where Paramount is the dominant office landlord, is that rents in such suburbs are rising fast. Hefty reversions, and a couple of development sites where 100,000 square feet of new offices might be built, explain the rapid rise in what the professional developers reckon can be made out of Paramount. The effect of the acquisition on Eastern and General is to boost the diluted asset value per share to 75p. This is still a lot lower than the market price of 110p. For the future, though, there are whisperings of a growth in net assets from the current level to 140p over the next few years. Obviously a company to watch, carefully.

But so is Dalton, Barton. Admirers are delighted that the merger with Keyser Ullman will add assets and respectability (if not the full honours yet of Accepting Houses Committee status) to fast-growing earnings. The merger documents will take time to come out, but the rumblings are that Dalton, Barton's profits are likely to be nearer £6m than the already mooted £5m for 1973. This makes the shares at 380p look less dear than before. They have almost doubled this year.

Offshore funds

Floating sterling offshore

Waves from the sterling float are rolling over the offshore islands. The sudden extension of Britain's investment currency rules to cover most of the old sterling area has complex implications for sterling-denominated funds based in traditional tax havens like Bermuda and the Cayman Islands.

Sterling funds are a minority of the offshore business. The large majority of offshore funds are denominated in dollars and based in tax havens like the Netherlands Antilles, outside the sterling area. They, like any other foreign currency security, have always had to be bought by sterling area residents through the investment currency pool and to pay the fluctuating premium: an extra risk. Because of this, sterling funds had been developing well—before the float.

Now the premium also applies to British investors in the old sterling area. Only the Channel Islands, the Isle of Man and the Republic of Ireland are exempt. Fortunately for fund managers, the Channel Islands have always been popular places for sterling offshore funds because they are near at hand.

A relatively small number of sterling funds appear in our performance list, which is prepared by Seiden and de Cuevas International. Many of them fall below the \$5m minimum size for inclusion. Among those listed, M & G

Island and New Court Overseas Fund, which are both based in Guernsey, are unaffected. So are the Manx International funds like Pan Australian External. Slater Walker, with typical good luck or foresight, recently shifted its International Fund from the Bahamas, where it would have faced problems, to Jersey, where it does not.

Not so lucky are those funds that spurned the tiny taxation of the Channel Islands for the nil-tax havens of Bermuda or the Cayman Islands, including Tyndall International, Save and Prosper Sterling, most of the Management International Group's Anchor funds and M & G's Atlantic Exempt. The Bank of England, after some shilly-shallying, appears to have decided that these funds must change from sterling to a foreign currency if they want to continue to do business in Britain. Managers are now pondering the next move.

British holders of these funds, unlike their bemused managers, have cause to be smug. Their shares, when changed into foreign currency, will get the built-in currency premium added to their sale value. By the same token they will be in a fund which does not itself face a premium currency problem on its investments outside the sterling area. The only snag is that any premium value attached to the funds' own investments is lost and,

with their new status, the funds will now have to be sold through authorised depositories rather than directly back to the fund management. This will mean an extra commission charge, but one which the value of the premium will amply pay for. New investors in a redesignated fund will, of course, miss out on these windfalls.

But just which currency to switch into is the big problem facing the fund managers. There is still an important difference in the status of outer sterling area currencies in that the 25% surrender rule does not apply to them. (Normally 25% of the premium must be given up with the sale of foreign currency securities.) This gives managers an incentive to switch to one of the more negotiable currencies of the outer sterling area like Hongkong or Australian dollars. Save and Prosper will do this for its "feeders" Monitor and Hampstead. For funds like Anchor Australian it is also the obvious course.

M & G has decided on a more exotic choice. Atlantic Exempt has been swapped into Cayman Islands dollars (which are floating with the pound): an option not open to funds based in the Bahamas or Bermuda where the authorities have refused permission, fearing that fund redemptions would weaken their balance of payments.

Management International Group takes another view, which is that investors are not buying exchange risks but stock exchange securities. The effect of currency fluctuations on a fund should be kept to a minimum, and to introduce a third currency which is neither that of the investor nor of the fund's portfolio only muddles things. Consequently their Anchor Unit Fund will probably be redesignated in American dollars. Save and Prosper might do the same with their other Bermuda funds.

Management International's Anchor B Fund illustrates another problem. Its role has been purely that of a sterling "feeder" fund. Sterling area investors went into Anchor B, which then invested in dollar-designated Anchor Wall Street, avoiding the premium by raising dollar loans—easy for institutions but hard for individuals. Since the Bermuda-based Anchor B can no longer be designated in sterling, its particular use in dodging the rules is redundant. The same problem applies to Save and Prosper's Monitor, which feeds SEPRO, and Tyndall Overseas Fund Ltd which supplies Tyndall Overseas Fund.

In yet another way of interpreting what the float means, BarclayTrust Frontier Management has hit on a compromise with the Bank of England for the four sterling feeder funds it operates in Bermuda. These are being allowed to retain their status as sterling securities while still remaining based in Bermuda for tax purposes. They will, however, be subject to British exchange controls. This solution, which leaves all these funds in precisely the same position as they were before, might be available to others. But each company must make its own deal with the Bank of England, and the fog hanging over offshore waters at present obscures whether the BarclayTrust funds are being treated as special cases or not. It might be convenient for managers to remain in sterling, but

existing fundholders should be irked at missing out on the float's bonus.

The feeder idea as a way of easing along British investors through the dollar premium remains possible for a sterling fund based in the Channel Islands or the Isle of Man, and most probably a number of new ones will be setting up there to replace their defunct counterparts in Bermuda. But feeder funds are far from foolproof. Back-to-back loans are costly to arrange and may not, in fact, be preferable to investment through the premium. Many funds make big profits investing in the premium itself. Gaps can open out between the feeders and their basic funds.

Whatever pattern develops, the Channel Islands must enjoy a boost

as offshore havens, with the added advantage of their proximity to the newly-fashionable continental stock markets and to European investors whom it is hoped will be increasingly interested in London. Quite a number of new funds have been set up there recently including: Anchor Gilt-Edged Fund, a gilt-edged specialist; Triumph Oceanic International, the first offshore venture of the successful unit trust stable; and no fewer than three new funds operated by BarclayTrust Frontier Management. This company is clearly aiming for the big league in offshore business following the link-up between Barclays Bank and the stockbrokers, Joseph Sebag. This year it has also started a Japanese fund as well as the three specially-treated feeder funds in Bermuda.

Offshore and overseas funds performances

Growth records of the funds, calculated on net asset value including income, over 12 months to end-June 1972 (and two years to the same date, where applicable). Only funds over \$5m. No real estate funds.

CHAIRMEN'S STATEMENTS

Salient points from the Statement by the Chairman, Mr. Alexander Crawford

- Pre-tax profits of the Group for the year to 31 March 1972 were £826,610. After-tax profits were £462,716 (1971 £472,741)
- Pre-tax profits for the second half of the year were £460,633 compared with £365,977 for the first half
- The Board are of the opinion that this progress should continue during the current year

**PRINTING INKS - PRINTERS' ROLLERS & SUNDRIES -
CONTAINER COATINGS - RESINS - AUTOMOBILE &
INDUSTRIAL FINISHES - SPECIALIST COATINGS,
FLOORINGS & LININGS**

HEPWORTH CERAMIC HOLDINGS LTD

The A.G.M. will be held on 7th September in London.

Salient Points from the Circulated Statement of the Chairman, Mr. John F. Booth

- **VITRIFIED CLAY PIPES.** Demand has moved forward strongly. The Company has a strong and profitable position in the market for underground drainage and conduit products against all competitive materials.
- **PLASTICS** have improved substantially. Acquisitions in the year have cost £3.6 million.
- **REFRACTORIES.** The world-wide recession in the steel industry affected the U.K. severely. Exports however increased by over 30%.
- **INDUSTRIAL SANDS.** A steady demand from the glass industry but consumption in foundries was adversely affected by difficult trading conditions in that industry.
- **ENGINEERING AND MISCELLANEOUS.** Substantial net profit improvement despite a recession in some of the engineering industries served.
- **FUTURE OUTLOOK.** Great opportunities are offered to us by the European Common Market of which the Board intends to take every advantage.

	Year ended 31st March	
	1972	1971
Turnover	£000	£000
Profit before Tax	71,270	60,655
Taxation	7,777	6,965
Dividends	3,238	3,050
Shareholders Interests	2,075	1,736
Earnings per share	40,425	30,947
Dividends per share	4.7p	4.7p
Number of employees	2.1p	2.0p
	11,800	11,600

The effects of the miners' strike reduced profits by approximately half a million pounds.

APPOINTMENTS

Coláiste na hOllscoile, Gaillimh

Lectureship in Applied Economics

Applications are invited for the above post from candidates qualified in any branch of Applied Economics. However, special knowledge of one of the following fields would be an advantage: International Trade; Development Economics; Monetary Economics; Mathematical Economics.

Salary Scale (under review): £2756 x £108 - £3836.

Marriage and children's allowances and a non-contributory pension are additional to salary.

The latest date for receiving applications will be:

15 SEPTEMBER, 1972

Prior to application, further information should be obtained from the Secretary of the College.

University College,
Galway.

25th July, 1972.

Australian National University

Master of University House

The University is moving to the appointment of a Master of University House to succeed Professor Sir Rutherford Robertson FAA, FRGS, who will relinquish the position at the end of this year on his appointment as Director, Research School of Biological Sciences. The Vice-Chancellor would welcome expressions of interest by the end of August. All communications will be treated in the strictest confidence.

University House has a central place in the community life of the University and the post of Master is one of the most important appointments the University is called upon to make.

Information about University House and the duties and functions of the Master may be obtained from Mr. D. K. R. Hodgkin, Registrar, Australian National University, P.O. Box 4, Canberra, ACT 2600, Australia, or from the Association of Commonwealth Universities (AppUs), 38 Gordon Square, London WC1H 0PP (Tel: 01-387 8572).

APPOINTMENTS

University of Hong Kong

Senior Lectureship in Accountancy

Applications are invited for a post of Senior Lecturer in Accountancy in the Department of Economics.

Applicants should have suitable qualifications including (1) a university degree in the appropriate field, (2) recognised professional accountancy qualifications, and (3) teaching and professional experience.

Annual salary (superannuable) is HK\$61,680 x 2,840 - \$2,800 [US\$1=HK\$9.65 approx].

The entry point to the salary scale will depend on qualifications and experience.

Further particulars and application forms may be obtained from the Secretary-General, Association of Commonwealth Universities (AppUs), 38 Gordon Square, London WC1H 0PP (Tel: 01-387 8572), or the Secretary to the Council, University of Hong Kong.

Closing date for applications 8 September 1972.

Polytechnic of the South Bank

DEPARTMENT OF ACCOUNTANCY & FINANCE

Lecturer II in Finance (Ref. WA10)

Applications are invited from graduates who are interested in finance as a sub-set of micro-economic theory and have an understanding of accounting, and from Accountants with an interest in this aspect of financial studies.

The Department is developing the teaching of Finance in courses to first degree and post-professional levels and aims to introduce post-graduate studies in Finance.

Opportunities are available to collaborate with industry and commerce and to undertake research.

Salary scale, £2,473-£3,201 per annum.

Further particulars and application forms from the Clerk to the Council (Room No. 249), The Polytechnic of the South Bank, Borough Road, London SE1 0AA. Tel. 01-928 8989.

The London School of Economics and Political Science

THE HIGHER EDUCATION RESEARCH UNIT will shortly have the following vacancies: (a) Two research posts on a study of the labour market for school teachers. (One ECONOMIST; one person well-qualified or experienced in COMPUTING/STATISTICS).

(b) One research post for an ECONOMIST on a study of the economics of new educational media (television, programmed learning etc.). Candidates with M.Sc. or higher qualifications or similar relevant research experience will be preferred.

Starting salaries £1,347-£2,040, according to qualifications and experience. Applications should be sent by 18 August 1972 to the Research Secretary, Higher Education Research Unit, London School of Economics, Houghton Street, Aldwych, London WC2A 2AE, from whom application forms and further particulars may be obtained.

Hampshire

Statistician/Research Assistant

£1803 TO £2388

This post in the Research Section of the County Planning Department involves the preparation of population forecasts, advice on survey techniques and the analysis and interpretation of data used in planning studies. The Section is developing a number of computer data files and software systems in association with the County Council's Computer section as part of its work on the Planning Department's information system. There will be considerable scope for using statistical and computer mapping packages on the County Council's IBM 370/145 computer for the analysis of 1971 census data.

Applicants should have had some experience of using statistics as an applied science and be graduates in statistics, mathematics or associated social science disciplines.

Further details of the post, together with an application form, are available from the Clerk of the County Council, The Castle, Winchester, to whom applications should be sent quoting reference SE0912/S, not later than 21st August, 1972.

La Trobe University MELBOURNE, AUSTRALIA

Lecturer/Senior Lecturer in Sociology

Applications are invited for several new positions at Senior Lecturer and Lecturer level to be filled in 1973.

The Department at present has 25 full-time members of staff. It teaches undergraduate courses, postgraduate courses, and honours. Candidates for Masters' degrees, by course work or thesis, and for the Ph.D. degree are also accepted. The Department's teaching and research programme covers a wide range of areas of specialisation. Applications from sociologists qualified in any area of the discipline will therefore, be welcome.

It is, however, hoped to make one appointment in the area of statistics and research methodology, and at least two more in one or another of the following areas: industrial sociology, the sociology of organizations, the sociology of deviance, medical sociology, the sociology of minority groups, the history of sociological thought and Latin American studies.

The present Chairman of the Department is Professor Jean T. Martin. Professor Claudio Veliz has recently taken up an appointment to a second chair. Academic enquiries may be addressed to the Chairman in the University.

Salaries: Senior Lecturer: \$A 9644 - \$A 11,234 p.a.; Lecturer: \$A 8801 - \$A 9390 p.a.

P.S.U. type superannuation. Further information and application forms are available from the Association of Commonwealth Universities (AppUs), 38 Gordon Square, London WC1H 0PP (Tel: 01-387 8572), or from the Registrar, La Trobe University Bundoora, Victoria 3083, Australia.

Applications close on 21 August 1972.

Interest, dividends and other income less interest and other expenses	533	
Provision for income taxes	7,015	
Net earnings	9,382	

Semi annual cash dividends: 6 months to 30th September, 1971, ¥4.25 per share - ¥1,628 million; 6 months to 31st March, 1972, ¥3.75 per share - ¥1,831 million. This last dividend is not reflected in the above figures. Copies of the Annual Report are available from Morgan Guaranty Trust Company of New York, 33 Lombard Street, London, E.C.3.

APPOINTMENTS

TOUGH JOB IN BANGLADESH

Bangladesh needs rebuilding. A small, but vital part of this job is being done with the help of three British organisations: Christian Aid, Oxfam, War on Want, operating as the Consortium of British Charities. The Consortium needs a Chief Executive to run its programme of mechanised agricultural reconstruction, which extends to the building of workshops and the organisation of a Central Training School. This work is an integral part of development of a system of producer co-operatives.

The person will be an engineer or an agriculturalist. He will be expected to operate in the workshop and in the field, but will also be required to organise training at all levels. Above all, he must have the experience to manage the project and account for its financial running. The successful candidate must also be capable of negotiating at government level.

Experience in the Developing World, particularly Asia, would obviously be an advantage. The initial engagement would probably be for 12 months, with a break after six, and the successful candidate may not be able to take his wife and family. This job requires resourcefulness, physical and mental toughness, and commitment. The principal attraction will not be the salary, which will be in the region of £3,000.

Apply in writing to the Consortium of British Charities, c/o 2b The Grove, London W5

CIVIL SERVICE COMMISSION (NORTHERN IRELAND)

AGRICULTURAL ECONOMIST

Applications are invited for a pensionable post of Agricultural Economist in the Economics and Statistics Division of the Ministry of Agriculture for Northern Ireland.

QUALIFICATIONS:

Normally a first or second class Honours Degree in Economics or Agricultural Economics with Statistics, Statistics or Mathematics. Postgraduate experience in Agricultural Economics or allied research is essential and a higher degree and/or teaching experience is desirable.

Candidates otherwise qualified who do not have the appropriate research experience may be considered for appointment initially at Assistant Agricultural Economist level.

DUTIES:

The Economics and Statistics Division of the Ministry of Agriculture for Northern Ireland conducts research into the development of agriculture in Northern Ireland in relation to market and other economic factors and with reference to regional, national and EEC policies as these affect agriculture. It is intended that the successful candidate should work primarily on the comparative economics of regional agriculture and specialise in the study of trends in agricultural employment and productivity. A candidate appointed as Assistant Agricultural Economist would be encouraged to register as a research student degree.

SALARY SCALES:

Agricultural Economist (Grade III)	£1,957-£3,483
Assistant Agricultural Economist (Grade IV)	£1,290-£1,801

Grading and entry point to salary scales will be related to qualifications and experience. Application forms and further details may be obtained from the Secretary, Civil Service Commission, Clarendon House, Adelaide Street, Belfast BT2 8ND (Tel: 44300, Ext 26), quoting SB 140/72/60. Application forms should be returned by 24 August, 1972.

TUC International Department

The Trades Union Congress requires an assistant for the International Department. Applicants should speak one European language other than English and have a qualification in a social science. Trade union experience an advantage. Salary scale starts at £1,500 per year, rising to £2,500. Please write to the General Secretary, TUC, 21-25 Great Russell Street, WC1B 3LS, or telephone 01-636 4030 ext. 215 for an application form.

Queen Mary College UNIVERSITY OF LONDON Department of Economics

Applications are invited for a Lectureship in Economics, tenable from 1 October 1972 or as soon as possible thereafter. Salary scale £1641-£3,522 p.a. (under review) plus £162 London allowance.

Application forms obtainable from the Registrar (E 5/6), Queen Mary College, Mile End Road, London, E1 4NS to be returned by 25 August 1972.

Producer/ Scriptwriter External Broadcasting

required by the BBC in London. Duties include writing, producing and presenting talks on current international and political issues for overseas listeners. Applicants should have proven writing experience and a lively interest in world affairs. Knowledge of a foreign language desirable.

Salary £2,601 p.a. (may be higher if qualifications exceptional) rising by annual increments of £126 and progressing after two years' fully satisfactory service by increments of £144 to a maximum of £3,573 p.a. plus £180 p.a. non-day working allowance.

Write or telephone now for application form (enclosing addressed foolscap envelope and quoting reference 72.0.313 Ect) to: Appointments Department, BBC, London W1A 1AA. Tel: 01-580 4468 Ext. 4618.

Research Officer

economist, to prepare (for publication) an annotated bibliography on AGRICULTURAL MECHANISATION in developing countries as preliminary to major research project. Appointment initially for six months from 1 October 72 in salary scale £1891 x £150 - £1641. Application forms and further details from Administrator Research

APPOINTMENTS

University of Liverpool

MARINE TRANSPORT
CENTRE
Director

The Science Research Council is to finance the development of a Marine Transport Centre within the University of Liverpool for an initial period of five years from October, 1972. The primary aim of the Centre will be to foster interdisciplinary research work into a range of problems affecting port and fleet operators. The Centre will employ six academic staff drawn from a range of disciplines including engineering, operational research and economics. They will be supported by technical and secretarial assistants.

Applications are invited for the post of Director of the Centre. The person appointed will be expected to be academically qualified in a discipline relevant to the work of the Centre and should, for preference, have had managerial experience within the marine transport industry or similar close acquaintance with its operations.

The salary will be within the Professorial range (minimum £5,376 per annum).

Applications (12 copies) stating age, qualifications and experience, together with the names and addresses of three referees, should be received not later than 18th September, 1972, by the Registrar, The University, P.O. Box 147, Liverpool L69 3BX, from whom further particulars may be obtained. (Candidates overseas may send one application only by air-mail). Quote ref. RV/E/13975.

University of New South Wales

Professor of Accountancy

Applications are invited for appointment to the above chair in the School of Accountancy. Other chairs are held by Professor A. S. Carrington, Head of School, Professor R. A. Ma (accountancy), and Professor R. O. Olson (finance).

The new professor will organise and participate in teaching and research in one or more of the major areas within the School, which include financial accounting, legal studies and taxation, management accounting, information systems, financial management and operations research.

Salary—\$A15,368 per annum. Salaries are under consideration. Subject to the consent of the University Council, professors may undertake a limited amount of higher consultative work. The University reserves the right to fill any chair by invitation.

Details of appointment, including superannuation, study leave and housing scheme, may be obtained from the Secretary-General, Association of Commonwealth Universities, (Apple), 38 Gordon Square, London, WC1H 0PP (Tel: 01-387 8572). Applications close in Australia and London on 16th October, 1972.

Teaching and Research Position in the School of Agricultural Economics and Extension Education

UNIVERSITY OF QUELPH

Applications are invited for a vacant position in the School of Agricultural Economics and Extension Education, University of Guelph. The position is for a specialist in the field of Agricultural Policy.

The teaching responsibilities include undergraduate and graduate teaching to the Ph.D. level in agricultural policy, rural development, and agriculture in economic development. The successful candidate will be required to supervise the course programs and research theses of Masters and Doctoral students.

Research responsibilities include the development and conduct of research programs and projects on public policy issues relating to the agricultural industry and rural sector.

The position may be filled at the level of Assistant or Associate Professor. Salary is negotiable and will be commensurate with experience. Present salary floors are \$11,900 and \$15,250 per annum for the Assistant and Associate Professor grades respectively.

The preferred candidate will have a Ph.D. in Agricultural Economics with specialization in agricultural policy, familiarity with agricultural and rural policy issues in Canada is highly desirable but not essential.

Applications, résumés, and supporting letters from three referees should be received by 31 August 1972 and should be directed to: Professor T. K. Warley, Director, School of Agricultural Economics & Extension Education, Ontario Agricultural College, University of Guelph, Guelph, Ontario, Canada.

Industrial Relations

The Commission on Industrial Relations, which became a statutory body under the Industrial Relations Act 1971 after nearly three years as a Royal Commission, is now seeking additional staff at the following levels:—

Senior Industrial Relations Officer E3478-E4708	+ £175 p.a. London weighting—Ref. E/1.
Industrial Relations Officer E1355-E3076	+ £175 p.a. London weighting—Ref. E/2.

Applicants for the SIRO posts should have extensive knowledge of industrial relations and have the ability to think constructively and to produce, under pressure, written work of a high standard. A university degree will be regarded as a desirable, but not an essential, qualification. It is unlikely that anyone under the age of 28 will have had the necessary experience.

Applicants for the IRO posts should normally be graduates with at least two years first hand experience in industrial relations or an allied field, e.g. other aspects of personnel management, labour economics, labour law etc.

Applicants for both may be required to undergo tests of constructive thinking and writing ability. Starting salaries can be above the minimum depending upon age, qualifications and experience. Posts are at present non-pensionable, but negotiations on this point are currently being pursued.

All posts are London based, but some travelling and short periods away from home are necessary. Further details of the posts and application forms, which should be returned completed by 16 August 1972, may be obtained from the Establishments and Finance Officer, Commission on Industrial Relations, 140 Gower St., London WC1E 6HT, tel: 01-387 4333 Ext. 420, quoting the appropriate reference number.

ECONOMISTS

for INVESTMENT ANALYSIS

The Prudential Assurance Company has two vacancies in the field of investment analysis for recent graduates with at least upper second class honours in economics or related courses. For one post knowledge of econometric technique is essential. As one of the country's largest investors the company offers varied and interesting work and excellent career prospects. Initially total remuneration will be around £1,600 but in certain cases could be higher.

Those interested should contact John Barnes on 01-405 9222 (ext 565) or by writing to him at the address below.

TENDER

REPUBLIC OF NIGER

MINISTRY OF PUBLIC WORKS, TRANSPORT
AND TOWN PLANNING
DIRECTORATE OF PUBLIC WORKS AND
TOWN PLANNING
CENTRAL ENGINEERING SERVICE ROAD
SURVEY DIVISION

NOTICE OF INVITATION TO TENDER
PRELIMINARY SELECTION

Invitation to compete in the preliminary selection of companies allowed to participate in the restricted Invitation to Tender to be issued later, for road works on the MAGARIA-TIMKIN-NIGERIA (19.5 km) and TIMKIN-DAN TYAO (13 km) sections.

The work will be financed in part by a loan from the International Association for the Development of the Republic of Niger (Credit Agreement 231 NIR of 29th January, 1971) and in part from the country's national budget.

NOTICE OF INVITATION TO TENDER
PRELIMINARY SELECTION OF COMPANIES

The Directorate of Public Works and Town Planning of the Republic of Niger will accept until 31st August, 1972 at 12 noon local time applications from companies or groups of companies wishing to participate in the restricted Invitation to Tender, to be issued later, for roadworks on the MAGARIA-TIMKIN-NIGERIA (19.5 km) and TIMKIN-DAN TYAO (13 km) sections.

Participation in the preliminary selection is open to all persons and corporate bodies, as well as groups of such persons or bodies, who are nationals of member countries of the International Bank for Reconstruction and Development, and of Switzerland.

Brief technical documentation, in French, has been prepared for the preliminary selection and will be available to companies or groups of companies wishing to participate in the invitation to Tender.

These documents may be consulted:

1—IN THE REPUBLIC OF NIGER

- (a) at the Directorate of Public Works and Town Planning, Central Engineering Service, at NIAMEY
- (b) at the offices of the official representations at NIAMEY of the member countries of the International Bank for Reconstruction and Development, and of Switzerland.

2—OUTSIDE THE REPUBLIC OF NIGER

- (a) at the embassies of the Republic of Niger
- (b) at the offices of SOCIETE POUR L'EQUIPEMENT DU TERRITOIRE—INTERNATIONAL, 5/7 rue BELLINI—92 PUTEAUX (FRANCE).

Moreover the preliminary selection documents are available to companies and groups of companies on request from SOCIETE CENTRALE POUR L'EQUIPEMENT DU TERRITOIRE—INTERNATIONAL, 5/7 rue BELLINI—92 PUTEAUX, or from the Niger Directorate of Public Works and Town Planning at NIAMEY (P.O.B. 235).

NIAMEY, 13th July, 1972,
The Minister of Public Works,
Transport and Town Planning.

(after reading the CFA Report.) for solid reasons — you might decide to incorporate in Switzerland

The well established economy of Switzerland and its ancient and well defined body of laws does not offer romantic or exotic attractions. Its tax level can, however, be considered moderate by modern standards and is designed to provide a solid structure, giving legitimate financial incentive to growth — personal and corporate, income and capital. Low taxes are only one of the incentives offered by Switzerland's stable economy. Its stable political and economic climate and its conservative business tradition make it a reliable home for the preservation of capital and for the employment of capital in the industrialization of other countries, and in real estate, bond, equity and endeavors of other countries, and the like. Your interests may best be served by incorporating in Switzerland for the custody or exploitation of any type of asset, fortune or form of endeavor, for the purpose of expanding into the Common Market, or for the general conduct of multi-national trade. Many thousands who have discovered this have already established their enterprises in what has become the favorite canton of Zug — only 18 miles from the city of Zurich — where the Corporate Fiduciary AG is in the business of serving you on a personal or corporate basis in the pursuit of objects mentioned above. Mail coupon for our Report "Switzerland as your corporate base", without any obligations.

ARNOLDO MONDADORI EDITORE

S.p.A.—Head Office in Milan
Capital Lit. 6,825,000,000

Annual General Meeting of July 25, 1972
The Annual General Meeting of ARNOLD MONDADORI EDITORE S.p.A. was held in Milan on July 25 under the chairmanship of Cav. del Lav. Giorgio Mondadori to approve the Report and the Accounts for the financial year ended March 31, 1972.

The Report of the Board of Directors states the following facts:

- Total turnover for the year under review amounted to Lit. 79,597 million (+ 12.6%);
- Exports, already included in the total turnover, amounted to Lit. 15,284 million (+ 10.5%);
- Profits amounted to Lit. 788 million; (+ 10.5%);
- Industrial investments for the year under review amounted to Lit. 2,706 million (+ 10.5%);
- Fixed Assets in machinery amounted to Lit. 25,101 million; (+ 10.5%);
- Ordinary depreciation for the financial year totalled Lit. 1,382 million. The Depreciation Fund reached Lit. 17,186 million; (+ 10.5%);
- Reserves shown in the Accounts at the end of the financial year totalled Lit. 17,186 million; (+ 10.5%);
- Personnel employed by the company at the end of March 31, 1972 numbered 5,369. Total personnel amounted to Lit. 26,899 million (+ 22.6%).

The Meeting approved the Report, the Balance Sheet and the plan for the distribution of profits proposed by the Board which anticipates, from the statutory allocation to the Reserve, the distribution of a dividend of 100 for each of the 3,675,000 ordinary shares (equal to 10% of the nominal value) and a dividend of Lit. 120 for each of the 3,150 preference shares (equal to 12% of nominal value).

**Barclays
International
announce a
new service
to Euro-investors.**

Barclays Bank International
announce a new service of Registered
Depository Receipts. We will now act as
depository and issuer of receipts for
Bonds, in order to facilitate the
operations of institutional and private
investors in the Eurobond market.

Enquiries will be welcomed by
Mr. M. J. Mumford, Stock Office,
33, Old Broad Street, London, EC2P 2JE.
Phone: 01-588 6448, Ext. 101.
Telex: 88 62 41

Recommendations of:

- 1 March 1970 — BUY.
- 2 August 1970 — BUY.
- 3 December 1970 — lower prices first quarter 1971.
- 4 February 1971 — make major commitments around 287 — 290.
- 5 June 1971 — prices above 340 soon.
- 6 August 1971 — BUY late October early November.
- 7 September 1971 — prices at 285 undervalued.
- 8 November 1971 — BUY. Significantly higher prices.

For over a quarter of a century, our basic research has enabled us to anticipate well in advance a major reversal in the price trend. It is indicative of the commodity work performed by us for many large corporations in industrial and agricultural commodities.

Crisis? What crisis?

If you change your plans suddenly, we'll change your plane suddenly.

Who said Germans aren't flexible?

Plans can change over night. Unexpectedly. Unavoidably. And when they do, Lufthansa can help right on the spot. By arranging a seat on another flight maybe to another destination, maybe with us or some other airline. That's one reason we even have offices in cities where we don't fly to. We think we owe it to you.

What crisis?

The Government has escaped to the beaches badly battered, and although Tory MPs would prefer to look on the bright side they can see worse troubles looming this winter. It may be that the only way to gain greater acceptance of trade union reform and stop the subversives will be to call another general election—which Mr Heath has been unwilling to do until he has got Britain into Europe, page 11.

The terms of surrender are being decided in the docks, page 59. The 40 per cent claims on the bill, page 62. The trouble with the unclear laws on picketing, page 19. Ministers are still flag-handing out millions to flag-handing industries, except, sensibly, the coal board, page 53.

Enter Shriver

Senator McGovern's new running mate looks so handy a politician that it's a wonder he wasn't picked the first time, page 40. Now Mr McGovern has begun his real campaign, with a broadside at Nixonomics, page 42.

God told him

President Amin's divine inspiration cruelly to expel Asians from Uganda raises problems that will need to be tackled internationally, but Britain's responsibility is clear, page 13. The damage he's done to Uganda, page 27.

In the balance

Mr Whitelaw is still plugging away for political talks in Ulster, and the Catholic politicians are still talking to him, but the old IRA areas are not taking the army lying down, page 17.

Conferring with Russia

The divisions have already started to appear on the western side of the coming all-European security conference, page 16.

Getting together

Thorn and Plessey are arranging a £725m merger, page 71, after big bids for Courage, Bovis, others, page 74.

Letters

Dock strike

SIR—In your excellent article on the dock strike (July 29th) you mention that "... Britain led the world into the nineteenth-century industrial revolution because it was the first to overthrow the protectionist squires..." These allusions to our glorious past are particularly encouraging when expressed by advocates of free trade in the money market and other spheres. What a pity then that in the same article you beat the drum for a compulsory incomes policy.

Unionism was the workers' answer to the problems of expressing themselves collectively to management. The Labour party was born on the basis of unionism; socialism was merely an adjunct to it. Now the unionists have reached their zenith in so far as they are jockeying, on equal terms, voluntarily, with the CBI over the issues which remain the nub of their own existence and that of the Labour party. Yet you wish to interpose with the statute book.

Any help the Government can give to assist the two sides in their discussions must be applauded but we should not ask the Government to go beyond the call of their duty to govern. A working marriage between the TUC and the CBI could be extremely beneficial to everybody. Having forced the issue and discovered the feeling of the congregation, the TUC may be more willing to go to the altar. Discouraging noises about compulsory policies will upset what is really a fabulous opportunity.

Perhaps the world will watch whilst Britain leads the way into the twentieth century industrial relations revolution.—Yours faithfully, DEREK NEWMAN
London, SW8

SIR—In your article on the docks dispute (July 29th) you adopt the popular but misguided posture which blandly assumes that the London dockers would have felt the rigour of the law even if the Industrial Relations Act had not been passed.

But this belief is based on the doubtful assumption that in the arena of industrial relations, which would thereby be devoid of the present atmosphere of legal intervention in industrial disputes, an employer would be prepared to make use of the law to solve his labour relations problems.

Prior to the present controversy, which clearly began in earnest with "In Place of Strife," such action by an employer would clearly have been unthinkable in practically every industrial dispute.

Every year we have suffered millions of

days lost through strikes, and the vast majority of these strikes undoubtedly constituted breaches of contract according to a strict interpretation of the law. But where were all the actions by employers for breach of contract in (say) 1962 or 1968? The answer, of course, is that very few employers made use of their undoubted right to sue their workers, as it was far from being normative behaviour in industrial relations to go to court over a labour dispute before "In Place of Strife" or even the Act of 1971.

But what is significant is that the more talk there is about "law" to control strikes the worse the statistics become, and the more enthusiasm there is on the part of employers to make use of labour injunctions. This is one of the grave dangers of the Industrial Relations Act and, in fact, of other brands of legal intervention in industrial relations. It will encourage more work groups to defy the law, and will encourage more employers to by-pass established conflict resolution procedures.

A quick glance at the strike statistics for the past four years (the period commencing with "In Place of Strife") reveals both a dismal picture and a stark contrast with the preceding periods when talk of legal intervention was, in general, noticeable by its absence.

A new atmosphere in industrial relations has been created which can only lead to even more conflict and more resort to the courts. If we could only get back to Donovan and look at what it said about the role of the law, we could then get down to the serious business of analysing the real ill of our industrial relations system, that is, the absence of satisfactory, voluntary collective agreements and related procedures.—Yours faithfully, G. R. RUBIN
Bridge of Don, Aberdeen

SIR—It would be ungenerous not to express appreciation of your comment on Britain's present economic and industrial situation. The release of the dockers from Pentonville constituted an internal Munich and will be noted as a crucial stepping stone by the future chroniclers of our decline towards complete impotence and anarchy. Subsequent debate was indeed "muted." It was staggering to see how the national press as a whole, once graciously demuzzled, gave in deference to the muzzlers only the most kid-gloved treatment to the grave issues involved.

Your phrase "the encouragement to law-breaking by some foolish public men" is also most apt. Has there ever been a clearer instance of *quem deus vult perdere*...? What looms clearly ahead is hoodlumocracy.—Yours faithfully, G. REICHARDT
Poole, Dorset

McGovern

SIR—Your article (July 29th) correctly points out the dangers of a substantial reduction of American ground forces in Europe without either a matching reduction by the Russians or a compensating

increase in European ground forces. And you correctly point out that, while Europeans could and perhaps should bear a larger share of the Nato defence burden, they are unlikely to make a compensating increase in ground forces because for Britain it "would mean bringing back conscription, which is virtually inconceivable in the present state of British politics," "the French are certainly not going to help," the Belgians, the Dutch and the Canadians "are all looking for convenient excuses to put less into the defence effort," and the German army "has probably the worst morale problem in western Europe."

But does this analysis of the situation call for such a strong attack on Senator McGovern ("John Foster McGovern") for recommending such action when faced with an electorate disillusioned with America's overseas military policies, sensitive to past European criticism of many of them, and no more enthusiastic than most Europeans for a large standing army?

Doesn't it call, instead, for recognition of the plain fact that an adequate western defence places politically unpopular demands upon all Nato governments, and that these demands are not likely to be met unless the alliance can be renewed with a sense of common purpose through close co-ordination of the political strategies of the member governments and visible, frequent consultation between their political leaders?

And is it likely—is it even conceivable—that Senator McGovern would give such consultation and co-ordination an even lower priority than President Nixon has done?—Yours faithfully, EDMUND COFFIN
Old Brookville, NY

World money

SIR—Fred Hirsch writes (August 5th) that the result of monetary union is to drain peripheral areas dry, as with Ulster and Scotland, and that therefore the common market governments will not allow it to happen. I cannot, however, fault Mr Maudling's argument, when he said (May 10, 1967) that: "We shall finish up, if we enter, with a common currency, a common reserve system, and common policies on the pressure of demand, because there cannot be a free movement of goods, labour and capital unless we work on this basis."

Since that time, the Six, with our agreement, have set a 10-year timetable for monetary union, and Mr Heath has said again and again that he sees complete union, economic, monetary and political, as the aim. It is unfortunate for Mr Hirsch's arguments that you published the letter from Ernest Wistrich, of the European Movement, on the same day as his article: Mr Wistrich shows clearly that full union is the Government's aim. Mr Hirsch apparently has not yet understood that our Government is not going into the market to further national interests; if they were they would hardly have agreed to the CAP, unlimited immigration and

MANAGEMENT APPOINTMENTS

£7000 PA AND O

Project Manager Hong Kong Mass Transit Railway

Freeman, Fox and Partners (Far East) have been appointed by the Hong Kong Government as principal consultants to this project, the total cost of which will exceed £300m.; it involves cut and cover construction, bored tunnelling, immersed tubes, elevated construction etc., and will continue over 15 years. After an initial period in London, he will be based in Hong Kong, and will be directly responsible to a Partner for the co-ordination of a large internal team supported by specialist firms of retained consulting engineers, and the planning of the design and execution of the project. He will supervise the tender procedures and the operations of the major contracting companies involved in the construction, to ensure completion within plan and budget, maintaining close liaison with Government bodies and safeguarding the interests of the general public. The ideal candidate is probably aged about 45, is a professionally qualified engineer, has experience both as a senior resident engineer and as a site agent. This should have involved the control of £multi-million projects, both within cities and in the under-developed countries; experience in the Far East would be an advantage. A five-figure salary and other emoluments are negotiable; accommodation provided. Please write—in confidence—stating how each requirement is met to J. M. Ward ref. S.41121.

Managing Director Designate International Trading—Far East

to succeed the present incumbent who is returning to the UK within two years. The company, with a turnover well in excess of £15m., is a member of a British group trading internationally, and is pursuing a policy of expansion; he will be a member of the Boards of subsidiary and associate companies, chairing some of these. Candidates, ideally aged about 45, must have experience as Chief Executives of companies operating in similar fields and, preferably, with experience in the Far East. Remuneration, which includes salary, commission, housing and education allowances and other benefits, is negotiable; family passages paid. Please write—in confidence—stating how each requirement is met to J. M. Ward reference S.41125.

free movement of capital. They are going in to build a new super-state, which Mr Heath compared last summer to the empires of Napoleon, Hitler and Charlemagne. Just as Hitler, though Austrian by birth, would not have seen the relevance of arguments against Anschluss based on Austria's interests, so our Government is concerned first for the good of a united Europe, and only secondly for benefits to Britain.—Yours faithfully,
DAVID LAZARUS
 London, NW2

National Health Service

SIR—After Dr Wyndham Davies's somewhat doctrinaire personal attack (July 15th) I hesitate to comment again on one of your excellent editorial notes on health. However, valour overrides discretion and I write to supplement your piece on the reorganisation of the National Health Service (August 5th).

Devotees of organisational theory of the 1920s (Taylor, "scientific management" and all that jazz) may like to know that a well-preserved specimen may be found in the third appendix of the white paper. It remains to be seen whether the proverbially busy doctor will have time to read so far in the unlikely event that he buys a copy of the white paper rather than relies on the bowdlerised summaries in the trade magazines.

Undue alarm may, however, not be justified. Cynical students of the organisation of health care are already suggesting that however tightly the rules are laid down, however carefully jobs are defined, delegation delighted in and "accountability upwards" sung like a hymn of praise, the rank and file doctor (doc'or?) will hold things steady by simply refusing to work to rule. Students of industrial relations apply now for research posts in the new NHS.—Yours faithfully,
PETER DRAPER
 London, SE1

Scientists

SIR—In your article "Why leave home?" (June 10th) you rightly point out the drain on scientists, except agricultural ones, from developing countries.

In addition to the reasons you give, one must also recognise the difficulties for a man just graduated in taking individual professional responsibilities: in fact, he cannot receive from his studies all the necessary information and training for the particular and local job he will actually face. Consequently, he will remain abroad also to gain practical experience, while he will confidently begin his work at home immediately after his studies only if supervised by a qualified, experienced and reliable man or supported by a professional study.—Yours faithfully,
GIOVANNI BALDINI
 Turin

Wales

SIR—It is a pity that, in your otherwise excellent Welsh survey (July 15th), you accept uncritically the wisdom of dividing Glamorgan into three rather than two. Your statement that the interests of Cardiff and the valleys of mid-Glamorgan are diametrically opposed is not in any way substantiated by the facts. In fact, the two areas are complementary. Thousands commute to Cardiff from the valleys every day and this acts as a useful safety valve for house and land prices in Cardiff, which are already on the high side. To run down the valley communities too fast would do as much harm to Cardiff as it would to the valleys.

The real reason for the three-way split is quite simply that a two-way split would leave Labour comfortably in control, whereas with the three-way split the enlarged Cardiff area might remain under Conservative control. I am surprised that a journal of your level of sophistication has not cottoned on to this aspect of the matter.—Yours faithfully,
JOHN LEWIS
 Porth, Glam.

Waiting for God

SIR—I have only just read your article "Waiting for God" (June 24th), which seems to have been written by an economist for *The Economist*. The treatment of Explo '72 centres on the organisational efficiency of Mr Bill Bright and the cost of the festival. Plans for growth rate are also mentioned. It all sounds like a political convention or an expanding business.

The article did contain two useful thoughts, which I would like to attempt to tie together. I quote: "Rather than worry about the war in Vietnam, racial tensions or poverty, they [the new fundamentalists] quote chunks of the Bible, clock up large numbers of conversions and wait enthusiastically for the Second Coming." Again: "the Dallas police were happy to find that for a change the young regarded them as friends and potential converts rather than as pigs."

Surely the second quote is relevant to the first. Conversion has always been intended for the whole man. In the eyes of those who have not experienced re-birth—a spiritual phenomenon—it reveals itself in a changed attitude to people, real live people. Jesus's second commandment, "love your neighbour as yourself," is surely the key to solving the social problems which you mention. The "fundamentalist" approach is that social problems are spiritual problems, too. On reading the New Testament, it is impossible to come to any other conclusion than this: a changed attitude to God must manifest itself in love for other people. Love, in the truly Christian sense, embraces individual social concern. This seems too simple.

Sociological examinations of the colour prejudice problem seem rather limited if Christ can transform attitudes. Similarly, poverty seems less of a problem, indeed might well be no problem even today, if true love for God breeds a spirit of generosity. Selfishness, not shortage, is the root cause.

The shortcoming of your article, as I see it, albeit not from a disinterested viewpoint, is that conversion should be examined as a personal encounter, not an organisation-induced phenomenon being promoted in a largely untapped market. Sometimes the simple answer is the correct one. It is also the hardest to apply personally.—Yours faithfully,
ROGER WILLIAMSON
 Hamburg

Contempt

SIR—Your article (July 1st) on contempt of court was much too short but there was enough in it, I think, to warrant a suggestion concerning criticism of judges.

No critic of judges ought to be punished, it seems to me, unless his criticism (1) is false, (2) is made with either actual malice or reckless disregard of the truth, and (3) results in a clear and present danger to the administration of justice.

I fail to see why judges need any more protection than this. Anyone who would claim that justice has suffered in the United States because of improper criticism of the judiciary would be hard put to make his case. I realise that the United Kingdom lacks a written guarantee of freedom of speech and press, but all I can say is "try it, you'll like it."—Yours faithfully,
STEPHEN S. RAPPOPORT
 Washington, DC

Let the mud settle

SIR—The advertisement for gas on page 23 of your issue of July 29th used the expression "our name was mud." There are nearly 300 heirs of Dr Mudd (the physician who was imprisoned for life for setting the broken leg of Lincoln's assassin) and they are unhappy about this sort of thing.—Yours faithfully,
WILLIAM STOCKLEY
 Port Credit, Ontario

[On the summits is freedom! The breath of the charnel never taints the clear air of the heights eternal.]
 Friedrich von Schiller.

This is a drawing from the 68-page Swissair color brochure on everything you can do in the Alps. We present you with the tome to make sure you do it.

WORD HAS more or less got around

that the Alps are a fine place for skiing and winter holidays.

But as to how you climb the Jungfrau by Europe's loftiest cog railway; how long decency permits you to spend in covering a 30-kilometer cross-country course and what that is; the best way to recuperate from a spill off a skeleton toboggan; and how James Bond got up the Schilthorn...

All this is to be found in our Alpine encyclopedia with the apt title of *Snow Beach*.

It's really entertaining reading—though Swissair didn't write it for fun. Actually it's a detailed and accurate

work of reference with calendars of events, ski-lift fares, prices, air routes, and every variety of sports.

But don't imagine you can simply order the best-seller, read it, and then stay at home. Everything in the book is true, true enough, but so compellingly described that you won't be able to resist.

So you have been warned; Swissair wishes you happy holidays in the heart of Europe.

Oh, all right, please send this Snow Beach album.
 But gratis, if you don't mind, and in particular without obligation. Merci.

He knows the way there (and back) with his eyes closed

So does he

There's still one road where you can joyfully ignore the speed limits, avoid traffic jams and cut straight through the rush hour. The railroad.

While others fume, you can sit back in your comfortable Inter-City seat. Read your paper, work a little—or a lot—or stretch out and close your eyes as Inter-City carries you smoothly to your destination.

And to give yourself a full day on arrival, why not use an Inter-City Sleeper? On the way back too, for that matter.

Travel when time costs you nothing—

in your sleep!

On arrival, relaxed and unruffled, you're probably just a short cab ride from your meeting. But if you need a car, Godfrey Davis Rail Drive car-hire service is available at all London termini and at over 70 other Inter-City stations.

Day or night, Inter-City is certainly your best business refresher course. Start the day's journey with a good hot breakfast; unwind from it with dinner on the way home. Or sleep easy all the way.

Some fastest timings from or to London Monday to Friday

Route	Fastest time
Birmingham/Euston	1 hr. 30 mins.

August 12, 1972

The ultimate weapon

The Government has got through to the holidays visibly battered, and, if not actually bowed (Mr Heath is not a bowing man), with an appropriately low profile. There is neither hope nor kudos for it in the docks, where what is being negotiated is simply the final terms of surrender. It can see industrial violence spreading: the violence of the miners' pickets has been escalated by the dockers' pickets and the criminal law is being openly flouted. The Government knows that its present policy on inflation is mostly hope and little else. When it hears of a lame duck firm nowadays it swathes it in subsidies.

Conservatives in the country have grown glumly accustomed to the cabinet standing up to strikes for several weeks, only to cave in and hand over the money. Conservative MPs feel tetchily that they have been driven hard through the lobbies to pass legislation that is not turning out at all as they hoped. MPs often feel that way by early August, but the Tory managers know they have a growing band of doubters and questioners on their hands. What has kept the party going in the past weeks has been two beliefs. The first is that Labour is much worse off. The second is that, in dealing with the unions, the law, violence, strikes and the rest, the Tories believe that they have the public on their side, if only they could rally it.

But the Government is in balk. Although, in its policies and psychology alike, it considers that there could be only one outcome of an election fought whenever the unions overstep the mark and take half the Labour party with them, that shot has never been in Mr Heath's mind if it meant putting Britain's entry into Europe in any doubt. Europe has come first. If the price of getting safely to January 1, 1973, is to buy off the unions, entertain Mr Campbell Adamson and Mr Vic Feather at No. 10, and bandage up any more lame ducks that start quacking, then Mr Heath will pay it and will even be cheerful about it. After all, elections do go wrong; he does not need the sight of Mr Wilson across the floor of the House to remind him of that.

What is no less true is that this suits Mr Heath's temperament as well. The Prime Minister is forceful, and would be firmer if he could, but he is not an adventurous man. The idea of having a general election before one is decently due is unlikely to come naturally to him. For Mr Heath, like Mr Wilson, enjoys government. He retains, like Mr Wilson in his palmier days, his confidence that he is the only conceivable prime minister in his own party, and in the opposing one, too. He would like his Government to complete its full term. When the Prime Minister addressed the 1922 Committee the other day he left no impression but that the Government would go on for another two years. Whether he sensed it or not, that was when a number of doubters had their doubts confirmed.

No mutiny, but growing doubts

There is no mutiny among the Tories because Mr Heath is still greatly admired, because his policies are still those of the great majority of the party, and because there is no one to lead a mutiny anyway. (Mutiny is not Mr Powell's forte: he needs the roof to fall in on the party before his hour can strike.) But Conservatives who now look three months ahead have profound doubts about where the Government's strategy is going to land them. They are entirely content that Mr Adamson and Mr Feather should be listened to, although they are sceptical that either of them can deliver anything much that matters in the end. They are ready to be told that threshold agreements may help a little, especially if the economy is expanding in the next six months, so that Britain's wage inflation may come to look rather more like other people's than it has done for the past eight years. They certainly do not want to prejudice the entry into the common market any more than the Prime Minister does. But they want to know what relevance any of this is likely to have when the next 40 per cent pay claim in a vulnerable industry comes up, accompanied by the next escalation of violence by the pickets

and (especially if it is a power strike) the next round of deaths among innocent people. They know what their constituencies are going to think after another defeat.

In ordinary times governments rely for their effectiveness on a general willingness to accept laws and changes once they have passed the Commons. That is not so today, and it is not only the Industrial Relations Act which is going to be defied, and the defiance encouraged by a number of Labour parliamentarians, if this Government goes on as it has been going. Ministers may think that this is a passing phase, that if they continue to pretend to be in charge as if nothing had happened, quieter times will follow and the moderates in the unions and in Labour town councils will reassert themselves. But that is now very unlikely: too many people have seen violence and lawbreaking and industrial aggro succeed for the moderates to have much chance of making themselves heard. When Mr Joe Gormley, Sir Sidney Greene and even Mr Jack Jones have all failed to call their people off at what they thought was the right moment, no one else is likely to manage it.

The one way to stop the wreckers

Nor is the force of public opinion, expressed through the newspapers and the opinion polls (which are invariably anti-union) going to do much to help. The men who are running the extremists and organising the aggro do not worry particularly about public opinion; in fact they have spent much of their lives in trying to subvert ordinary people in British industry in conscious defiance of what they know majority opinion to be. They make mistakes, but they know what to do in male-dominated unions, especially when these are in an industry, such as mining and the docks, which is relatively isolated from the rest of the community and where the sense of social cohesion is strong. They also know pretty well what sort of support they can expect from particular politicians, civil servants and communicators who do not much like capitalism or the market or even parliamentary democracy.

It now seems increasingly likely that these people will never be stopped except by the exercise of parliamentary democracy itself. A government that deliberately excludes the possibility of a general election in its own thinking is going to remain at a permanent disadvantage if all it can do instead is to appeal to people's better natures. (Mr Heath's Government is not particularly good at that anyway). It is not that an election, returning the Conservative Government for another term, would stop the subversives themselves. But it would go a considerable way towards persuading those whose inclination is to see the better side of the miners because they would not like to do that sort of work, and of the less bad side of Mr Bernie Steer and Mr Vic Turner because someone has compared them to John Hampden or the Tolpuddle martyrs, that the reasonable feeling of the majority, twice expressed at the polls, deserves respect. For there are times in politics when once is not enough. It is not inapposite that it needed two general elections in 1910 to persuade the Tory party and, in the end, the Tory House of Lords (which in those days was nearly as

conservative a body as the Trades Union Congress is now) to swallow the Parliament bill. It could not persuade the diehards, but it persuaded the ordinary opposition in the country. To many people of a settled way of looking at things, to alter the law about trade unions, even although a popular cause by most tests, has seemed similar to changing the constitution.

This is the shot that an increasing number of Conservatives would like Mr Heath to feel free to play after January 1st. But they are worried that there will be another major surrender to union violence before then, which their constituents (who are not quite as enamoured of Europe as Mr Heath or the newspapers) may not forgive. In fact, Mr Heath need not wait as long. Unless the dockers now take leave of their senses, it is not possible for the Government to summon the country to stand firm in that dispute after the authorities themselves have seemed so anxious to run away. So there is not likely to be a head-on collision before the late autumn. The Government may also need the Commons to return to do essential things for Northern Ireland, including the bill for a referendum there. But by mid-November Mr Heath should feel able to order his strategy in such a way that an early election is seen to be a credible and proper option for him when he judges the time right. An appalling by-election result would, of course, be a severe discouragement, and would end much of that credibility. But not necessarily all: any early election would not be fought on the customary grumbles but on a single, major issue which the country would be asked to resolve. The entry into Europe would, of course, remain a worry. But Mr Heath would be wise to look particularly closely at what happens about Europe at the Labour party conference in October. If Mr Wilson does exert himself successfully against the little Englishers who insist that a Labour government should take Britain out, the danger will be sensibly diminished. If Mr Wilson does not exert himself, or actually loses the day, then the state of the Labour party will not be such that it will look a convincing challenger for power. After all, it is always at Labour conferences that Mr Jones and Mr Hugh Scanlon make it clearer than clear that they will have no truck with Mr Wilson's ideas on wages.

Hard thoughts for the beaches

Mr Heath will think this all much too risky before January. Many Conservative MPs, fearful at the evidence of unpopularity, especially over prices, would not be happy about an election this year either. For them this is a time to lie on the beaches, look on the bright side and trust to luck. But it is very hard for others to see that a continuation of the present mode of government, without the ultimate deterrent to put in the unions' faces, is going to get them any more popular. Quite the reverse. Another year of retreat, of 10 per cent inflation, of laws being ignored and no plausible explanation for it all from the top is a recipe for mutinous Tory talk at Westminster and dwindling morale outside. It is not a recipe for government, far less a fulfilment of the programme on which Mr Heath and the Tory MPs were all elected two long years ago.

God on his side

General Amin, Uganda's president, has threatened to expel some 50,000 British Asians in the next three months. The problem is international but Britain's special responsibility is quite clear

President Amin said again on Wednesday, after meeting the British high commissioner, that he intended to go through with the expulsion of all Asians in Uganda holding British passports, although this time he seemed ready to exempt, for the time being at any rate, those who could be most useful to his country. The British Government is working on the assumption that he means what he says, even although it would be unwise to apply normal, rational criteria in judging what General Amin does or is likely to do. By his own account it was God who, in a dream, told him he must act.

Since he came to power in January last year by leading an army coup to depose Dr Obote, President Amin has shown himself increasingly erratic in behaviour and intemperate in his outbursts. But he happens to be the present head of the Ugandan government and Britain must deal with him if it is to deal with anyone. So the effort must be made to understand why he has given the British Government this ultimatum and has boasted of his determination to teach this country a lesson.

General Amin achieved power with the help of the armed forces. One of his earliest acts was to increase military expenditure and build a much bigger army. But that has made his dependence on the army greater not less; and he must know that an army which connived in his takeover of power—by no means the first attempt at a military coup in independent Uganda—could back another to get rid of him as he got rid of Dr Obote. The army he depends on is notoriously indisciplined, riven by tribal feuds which have led to large-scale killings, and emaciated by desertions. The build-up of the armed forces has been at the expense of economic development; the Ugandan people, to whom he offered himself as a father-figure come to save and protect them, have been exhorted to austerity, and the country's reserves have withered. The president has sought to contain the unrest in the army and among his countrymen by classic diversions, alleging less and less credible foreign plots to oust him and to attack Uganda. In April this year he turned on the country which was thought by many to have helped him to power, expelling several hundred Israelis who had been privileged friends of his regime.

A warning last December

The Asians in Uganda are a much more fertile focus for xenophobia, however. Resentment of their general prosperity, their acquisitive skill as traders and their professional status is common throughout East Africa. General Amin identified them as the counterpart of Hitler's Jews, supposedly draining the strength of his country, responsible for all its miseries. And, after all, while the real Jews, the Israelis, could be counted only in hundreds, the British Asians numbered many thousands: 57,000

according to British estimates, 80,000 according to the Ugandans, although that figure would appear to include those Asians who opted for Ugandan citizenship and whom the president has said can stay. So General Amin, who started out expressing tolerance towards them, has now said they must go. Whatever part God played in his decision, it was not quite so sudden and visionary as might appear. Last December, he cited the failure of Asian girls to marry African men as evidence of the Asians' unwillingness to integrate, a statement which, for all the official apologetics, awoke understandable fears that the forced marriages of Zanzibar could be repeated in Uganda.

The immediate effect of the president's action has been to alienate the British Government and the governments of India, Pakistan and Bangladesh, whose nationals have all been included in his 90-day ultimatum. He has driven his neighbours into acts of self-defence, with Kenya and Tanzania proposing to seal their borders against Uganda to block the entry of Asian refugees. He has imperilled the aid he now receives from Britain of some £4.5m a year and the continuance of the assistance he receives from the British army in training Ugandan soldiers. If all the British Asians were to leave, his country would lose, apart from any question of physical assets, the commercial skills and professional qualifications indispensable to it at this stage of development. General Amin seems to have recognised the national self-interest to the point of modifying his initial threats and would now allow those engaged in certain professions to stay on.

Britain is embarrassed

The ultimatum to Britain and the accompanying threats to other countries with nationals in Uganda could be the act of a man desperate to keep power by a dramatic popular demonstration. The manner of it has an air of desperation. But the possibility must be considered at least that the general is trying to do a Minto, even if he seems to lack the political finesse of the Maltese bargainer. Clearly President Amin is also trying to exploit the weakness of Britain's own position, and there he has a lot going for him.

As Sir Alec Douglas-Home said in the Commons on Monday, Britain accepts that it has a special obligation for Asians who are British passport holders. Under the 1968 and 1971 immigration acts they are allowed into Britain only if they have special work vouchers. The Government acknowledged its special responsibility in tangible form last year by doubling the annual allocation of 1,500 vouchers for holders of United Kingdom passports in East Africa (plus a once-for-all allocation for 1,500 hard cases) and raised the quota to 3,500 last May. That seemed to have dealt with the really destitute and

to have cleared most of the Kenyan queue (there are an estimated 55,000 British Asians in Kenya and another 20,000 in Tanzania), although the Ugandan queue for vouchers was still, until President Amin's announcement, about 3,000 strong. And the shuttlecocking of those who try to jump the queue goes on, refused entry to Britain time and again, unwanted by any of the other countries to which they are then flown.

British embarrassment at the decisions of the European court for human rights to uphold the right of 31 such individual Asians to enter Britain would be compounded if the court extended those judgments into comprehensive principle embracing all British passport holders now excluded by the immigration acts. That is something the Government clearly wishes to avoid. Until now, by a combination of diplomatic pressure and the evidence of good intentions, it has just managed it. But it looks as though Britain is now faced with the direct challenge.

Early tension, eventual asset

If President Amin does not relent, or is not bought off by promises of more aid, then Britain will have no choice. It will have to discharge its plain obligation to take all 57,000 British Asians from Uganda, and it is clear the British Government will do so. That would be morally right and, in terms of Britain's international standing, inescapable. It would do much to take away the bad taste left by the immigration acts which denied Asians automatic entry. But it would be silly to imagine that it could be done without a lot of initial tension and friction, and hardship for many Asian families—especially if the Ugandan government restricts the export of their capital.

It can be said that if all 57,000 arrived in Britain this year coloured immigration would still be well below that for the peak years of the 1960s. Because of their prosperity and their educational and professional attainments—perhaps as much as a third of the men are doctors, lawyers, accountants, teachers and so on—they would be much less likely to head for the ghetto areas of the big cities, but rather disperse quickly, as other middle-class Asians have done, and head for the suburbs and the home counties. The typical East African Asian is provident

and ambitious, saving up to get his own business, running, say, a launderette in Croydon or a sub-post office in New Barnet. He does not like sending his children, who are used to lessons in English, to "black" schools. Generally, it is the young ones who most want to come to Britain, even if their elders might be willing to retire to India. On almost every ground these adaptable, self-sufficient, industrious and entrepreneurial people would, in the long run, be likely to prove a great positive asset to Britain. But in the short run?

Apart from the obvious difficulties of finding somewhere to live in a strange, cramped country, many of even the best qualified would take time to land jobs and be accepted for what they are. In their own interest a mass migration would be undesirable. In Britain they would find hostility. It would come from those who oppose the entry of all coloured immigrants and who would be ready to exploit the situation for political ends. The fighting between white and coloured youths in Liverpool will no doubt be used to show the dangers of mixing races. The position there is in fact more comparable to the conflicts between sects in Northern Ireland, but the riots do show what can happen at the lower end of the social scale in cities where people are scrambling for a living and a place to live and look for scapegoats when things go against them.

The only good thing that can come out of President Amin's eruption is the coming together of all other interested countries. No country, not Britain, nor India, nor Pakistan, nor Bangladesh, nor Kenya and Tanzania (two countries which might well see their own interests jeopardised by Uganda) can stand aside. Each has a responsibility, none more than Britain. Every pressure should be exerted upon General Amin to calm down. Britain should make a positive offer to increase substantially the numbers of vouchers for those East African Asians (including those from Kenya and Tanzania) who want to come to Britain, while continuing to phase their entry. India, in particular, should be prevailed upon to do what it can to open its doors to people who could well help its development. Above all, the resolution must be for international action to end what is an international problem and an international scandal.

Living with Nixon

America's allies in Europe and Japan have begun to learn what Mr Nixon's famous actions of last August 15th were about

From Camp David a year ago this weekend President Nixon launched a time in the lives of his allies which they will not easily forget. The question for them today is how they should now deal with the results of Mr Nixon's remarkable year. For the paradox of what has happened is that so much of it should seem to have been inevitable so soon after America's allies were either denouncing or trembling at each of the three decisive new steps which

Mr Nixon has taken.

Even before his economic measures of August 15th. Mr Nixon's first step towards China had succeeded—partly by being clumsily announced—in causing a crisis in Japan among the same Japanese politicians and businessmen who now approve of what Mr Nixon has done. Similarly, Mr Nixon's visit to Moscow this May left many Europeans afraid that they would have to

pay a price for the dialogue between the world's two chief nuclear adversaries. Any colloquy of the great, even one which makes the safety catch between them one notch tighter than it was before, will temporarily unnerve those smaller fry who have grown used to automatic protection from one side or the other. But Europe, too, is now gingerly beginning to approve of something which at the time it would have preferred not to happen. Third, on August 15th itself last year, Mr Nixon loosened both Japan's and Europe's monetary link with the dollar; some of the politicians of the developed world have come to appreciate the overdue exchange rate freedom which this gave them, although none of them has actually expressed gratitude and, in the presence of John Connally at least, never will.

The shock was the message

There are two easy reactions to all this. The first is to indulge in heavy head-wagging and solemn declarations that nothing is ever going to be the same again—which it rarely is. The second is to retreat in the jovial company of Art Buchwald into supposing that the entire year has been a nicely timed electoral ramp which will doubtless end up before election day with Mr Nixon in a spacesuit boarding the next Apollo mission to the moon.

A third reaction, more difficult to make, is probably the right one. It is to accept that all these comments on what the United States has done—the cross ones, the panicky ones and the cynical ones—are fair to a point, but that none of them need leave America's allies one year later feeling the worse for much that has happened. Not, at least, provided they learn its lessons. The most obvious single lesson is that America's quadrennial presidential elections, confusing and disturbing though they seem to anyone looking in from outside, do serve to concentrate the American mind. Many of the changes Mr Nixon has wrought in the past year date from his previous election campaign four years ago, not from the one which he is engaged in against Mr McGovern today. The preaching of self-reliance among America's allies, and the consequences of the American attempt to come to terms with the world's two other great ideological powers, date from Mr McCarthy's, the late Senator Kennedy's and Mr Nixon's own election speeches in 1968, and from the Guam doctrine in 1969, rather than from anything new which has been said in 1971 and 1972.

None of America's allies can complain of too little time to prepare. But only in the belated admission of Britain into the European community can the non-communist world outside the United States claim to have responded in good time to the message which has been coming from across the Atlantic. This apart, and though no European or Japanese politician will admit it, the economic shock therapy which the United States chose to administer to itself and to its friends last August has probably been the most useful, if brutal, way of waking up a world that was comatose. If the Americans made a mistake it was to ease up on the treatment in the Smithsonian agreement in December, when the moment presented itself to cure the patient for good.

It was three full years before last August that Mr Nixon first gave his pledge to South Carolina textile workers that he would protect them against the little wave, then only beginning to grow to any size, of textile imports from Japan. It was some years again before that that America ceased at all willingly to cash in dollars for gold. Overuse, followed by overvaluation, of the dollar was an apparent and growing phenomenon for the best part of a decade before anyone, even an American Administration, and then only under the threat of latent American protectionism, would consent to do anything about it.

What is remarkable in retrospect, as a second lesson for America's friends, and at a time when the American economy and its will to stand firm in the world have each been under strain, is that its leaders should so successfully have managed to hold the line. The Nixon Administration, American big business and American farmers have kept alive the coalition in favour of freer trade from which organised labour, certain industries and a growing number of Congressmen speaking for smaller firms have defected. Likewise, a similar group which determines foreign policy in government and in the universities still believes that concerted defence of Europe is defence of the United States too. This goes for the best of Senator McGovern's foreign policy advisers.

If Europe comes across, America will

What Europeans in particular need to learn from these two lessons is that the Americans' allies can help. They can help by recognising what is rhetoric in America and what is real, and how, if America's friends refuse to lend a hand, what may start as rhetoric can all too easily and all too suddenly turn into being real. The United States is not, for example, in favour of undoing the common market now that it has finally been enlarged; even its ritual complaints against the common agricultural policy are more an expression of a real American grievance than a real American policy to break it up. But grievance may become policy four years hence, or earlier, if Europe does not learn to curb its dumping outside Europe of export surpluses and to restrain its habit of extending selective trade preferences. There are signs that Europe is learning the need for both these things, as there are signs that the monetary experts who have stayed behind in the Brussels commission during the holiday may at last be coming up with proposals aimed at making Europe's plans for monetary union easier for the rest of the world to live with. But only Europe's political leaders have the authority to make these stirrings of European good sense stick.

The next year looks no easier than the last. When the American election is done, Germany and France will still be facing theirs, and the politics of much of the rest of Europe will still be in turmoil. And to these will be added the uncertainties of perpetual negotiation with Russia and its allies who, for reasons that Europe and America will not wish to imitate, present an unenviably united front; the next article sets out some of the difficulties. No matter. For what Mr Nixon was really saying to his allies last August 15th and before was no more than that it was well past time for a change.

So is it November 22nd?

The date's been proposed for the great all-European security conference, but there's still the tiny matter of getting the Russians to talk about security

Some people feel confident enough about starting the preliminaries of a European security conference this year to begin arguing about the languages it should be held in. First it was to be French, English and Russian; then a bid for German got wide support; now the Italians want Italian, and if that is conceded Spanish may have to be included as a United Nations language as well. Anyhow, even if it becomes a Tower of Babel, there now seems a better than even chance that officials of the 30-odd European countries plus the United States and Canada will meet in Helsinki on Wednesday, November 22nd, to begin planning the conference.

The Finns have proposed this date in deference to the Americans' wish to leave the conference until after their November election. It would also come after the summit of the Ten in October, and about coincide with the German elections which should take place by December 3rd; that will please Herr Brandt, who hopes to campaign on his foreign policy record as much as he can. The Finns have got the Russians' approval for the November 22nd date. Of the four main western powers, Britain and France have told the Finns that they accept, but the west Germans and the United States are both hanging back, for different reasons.

The west Germans are still trying to make up their minds what to do about Finland's desire to be the first European country that recognises both German states. There would be very little point in holding a conference at all if the west Germans declined to turn up on November 22nd in Helsinki because they would find an east German ambassador there if they did. The Americans dislike Helsinki as a conference centre because they found communications difficult there during their missile negotiations with the Russians. But the main reason why they are withholding their approval of the date is that they want the Russians first to show some signs of willingness to start negotiating about mutual and balanced force reductions—MBFR, the troop-cut talks. Some Europeans, but not the French, have sympathy for this point of view. Despite all the Nato studies which have concluded that MBFR just spells "much better for the Russians," it is generally agreed that negotiations about troop cuts would at least tackle the subject of security in a way the so-called security conference probably will not, because it is too big.

Russia has shown no sign of hurrying to the table to discuss MBFR since Mr Nixon left Moscow with what he thought was a Russian willingness to start talking soon. For its part, Nato has yet to make up its mind about which of its member countries should take part in the troop-cutting negotiations. It might seem sensible to limit the participants in these talks (whose complexity com-

pared with Salt will be roughly what Spassky-Fischer chess is to dominoes) to the central European countries. But Nato's southern countries, Greece and Turkey and Italy, want to be in on the act—with some reason, because Soviet troops withdrawn from central Europe might turn up on the frontier of Greece or Turkey. So they would like to see the subject discussed at the big all-European conference, where they are guaranteed a seat. The best way out of the difficulty may be to keep the southern-flank countries closely consulted about MBFR and to use the security conference to discuss what are called "confidence-building measures"—such things as the posting of observers on both sides, and advance notification of military manoeuvres, which would make a Russian surprise attack that bit harder.

Did Nixon sell a pass?

Just how difficult it is going to be to maintain allied solidarity on all the different topics that will come up at the security conference is made clear by European accusations that Mr Nixon has given much of the game away in advance by signing those "basic principles" when he met Mr Brezhnev in Moscow in May. The nub of these complaints is that the phrase "peaceful coexistence," which Nato had agreed to avoid because it implies acceptance of the Brezhnev doctrine, popped up in the Moscow declaration, but other phrases such as "self-determination" and "freer movement of people and ideas," which Nato had agreed to press for, failed to make an appearance. The Americans can rightly reply that the Moscow declaration was only a bilateral document, but they rather weaken their defence when they admit that they are aiming for much the same form of words from a security conference. The important thing is the Russian interpretation. Mr Gromyko, when he was in Brussels recently, coldly crossed out a reference to self-determination in the joint Belgian-Russian communiqué on the ground that what the Americans didn't get no one else would.

Whether you regard this as an important pass that has been sold depends on how much value you place on such declarations by conferences. So often these are just words. But a declaration on the principles governing relations between states is going to feature prominently in the security conference, and what might seem niggling semantics in other contexts will not be so there. The Russians like declarations, because they think they can make use of them afterwards. It is necessary for the west to hold out for the right language, because even a verbal Soviet agreement to "freer movement of people and ideas" would bring some progress on the one subject that could really make this conference worth while.

BRITAIN

Ulster is where there is a new question every minute

The optimists about Northern Ireland like to think of the meetings between the leaders of the Social Democratic and Labour party and Mr Willie Whitelaw this week as something of a political breakthrough. But only four hours after the end of the second meeting, a great number of Ulster's Catholics came out on the streets early on Wednesday morning to bang dustbin lids, blow whistles and hurl stones to commemorate the first anniversary of internment without trial. Mr Whitelaw's decision to release a further 47 internees, bringing the number of men still in Long Kesh camp down to 283, did not placate the Catholics. The SDLP leaders once again demanded the release of all the internees before the start of political talks; there has been speculation that Mr Whitelaw is to discuss this with Mr Heath on Friday. In their turn, many of the dustbin lid-rattlers do not recognise the SDLP politicians as their representatives. On Wednesday morn-

ing they burned effigies of Mr Gerry Fitt and Mr Paddy Devlin in the Lower Falls district of Belfast.

The mounting criticism of the SDLP by most republican organisations shows how small the power base of Ulster's principal Catholic party has become. But it is not only the Catholic communities who are asking pointed questions about just whom the SDLP speaks for. There are real doubts that anybody has the trust and confidence of the confused and volatile communities that have been harbouring the IRA. Few responsible and moderate leaders have yet emerged from either the Catholic middle class or the church, for, although the army now dominates the old no-go areas, the fear and sympathy which the IRA commands have by no means disappeared.

That knowledge shapes the demands that the SDLP has made to Mr Whitelaw. As well as the ending of internment, its leaders want a reduction in the army's presence in Catholic dis-

tricts, the evacuation by the troops of the new posts they have established in schools, playing fields and the like, the prosecution of Protestants who wear paramilitary uniforms on the streets, the calling in of licensed guns and an assurance that searches for arms will be as vigorous in Protestant districts as they are in Catholic ones. But in fact it is the army's constant patrols that for the moment have brought some respite to the violence; and on Wednesday the troops broke up a crowd of masked UDA members staging a protest march in Belfast. In Londonderry, after Mr Whitelaw had banned their traditional route, the Apprentice Boys announced that same day that they were cancelling their annual August 12th march.

The troops should be out of Derry's schools before the end of the summer holiday; but they may well have to stay on in some of the Belfast schools for a little longer. At the same time the army does realise that its occupation of such places can provide a pretext for further violence—as indeed this week's episodes at Casement Park and La Salle school in Andersonstown showed. The SDLP rejects what the army is doing in the Catholic areas and in the same breath demands that it should do the same in Protestant ones.

The small children are still happily throwing stones at the personnel carriers on patrol and there has been a handful of shooting and bombing incidents. But many of the troops believe that most Catholics over the age of 30 or so are secretly glad that they have moved in, though they recognise that the younger people, from whom the IRA gunmen are recruited, are still openly hostile to them. Anyone who goes through the streets of, say, Andersonstown in Belfast or the Creggan in Londonderry cannot mistake the atmosphere of bitter suspicion. Behind every net curtain there always seems to be someone counting the troops going by.

The army is waiting to see what the IRA Provisionals may do next, particularly now that there is some evidence, at least in Belfast, that certain of the better known Provisional

Andersonstown: riots start at the drop of a brick

It's a long road that has no Tarmac

Wherever you are, Tarmac is right up your street. You can be sure of that. Take to the highway, and sooner or later you'll be riding on us. At the same time, you're sure to see our fuel oil and bitumen tankers going about their business, as well as our construction and roadstone vehicles.

Tarmac is an essential part of living today. So much so that you don't leave us outside on the road when you shut the front door.

It's possible that Tarmac built the dam and power station that bring water and electricity into your home. In fact, we may well have built your house, or your office block, or the supermarket in the high street. That's how resourceful we are. Whether it's laying a road, or underlaying a carpet (we provide crushed limestone from our quarries for the manufacture of foam rubber backing), you certainly won't have to go far to find us.

Tarmac
THE MEANS AND THE END
TARMAC GROUP, WOLVERHAMPTON, ENGLAND.

leaders have come back across the border again. The soldiers cannot afford to relax their vigilance. In Londonderry, for instance, the soldiers have set up an observation post on top of the Rossville flats in the Bogside, but even so, for fear of snipers, anyone who goes on the city's walls nearby doubles up from one observation post to another. Nevertheless, now that it occupies the former IRA strongholds the army does not believe that the gunmen will dare to engage in an all-out shooting battle. Rather, it expects that in order to recover lost prestige the extremists may well try to attack the more exposed army posts and quarters with their fertiliser-based explosives. This may be associated with a hotting-up of attacks near the border with the republic.

The IRA may prove this assessment wrong, but such tactics do appear more logical than a renewal of indiscriminate attacks by bombs and bullets on civilian targets (which have devastated the centre of Londonderry to the point where it appears drained of life). The Provisionals will, no doubt, take any opportunity to stir up civil riots, but they may not be able to organise a repetition of the walk-out by Catholics in Lenadoon Avenue on any large scale.

The soldiers are seeking to guard against such dangers by unremitting patrols and frequent road blocks (often manned by the 6,000 men of the Ulster Defence Regiment who have volunteered for full-time duty). Occasionally a member of the Royal Ulster Constabulary will go out with the soldiers in the traditional Catholic enclaves of Belfast. But this is nothing more than a token gesture—and even that is not being made in the Bogside and Creggan. Everyone in Ulster realises that soldiers cannot behave like policemen indefinitely, but the RUC has long since lost the confidence of many Catholics. No semblance of the rule of law can return to Ulster until some kind of policing system which meets with the approval of both the Protestant and Catholic communities has been created.

No one in Ulster denies how formidable a task this would be—and, indeed, many believe it to be impossible of solution even if the current talks with the SDLP, November's plebiscite on the border issue, December's district council elections and the army's slow campaign of attrition against the IRA do succeed in beginning to shift the emphasis away from confrontation towards compromise.

Police and persuaders

Picketing Nothing to do with the case

The obscurities of the Industrial Relations Act do not increase or decrease the courts' powers to deal with any violence by picketing dockers near Scunthorpe, since it makes only one significant change in the criminal law (excluding people's homes from the places where peaceful picketing shall be lawful). But both the civil and criminal law on picketing are less than clear. The Industrial Relations Act, following the provisions of the 1906 act that was previously in force, provides that "in contemplation or furtherance of an industrial dispute"—a proviso which has proved important—the attendance of pickets:

... only for the purpose of peacefully obtaining information from [a person] or peacefully communicating information to him or peacefully persuading him to work or not to work ... a) shall not of itself constitute an offence under Section 7 of the Conspiracy and Protection of Property Act, 1875 (penalty for intimidation or annoyance by violence or otherwise) or under any other enactment or rule of law, and b) shall not of itself constitute a tort.

But that does not, of course, protect a picketer from prosecution for, say, wounding a police officer, nor from being charged with the less serious offences of obstruction or of behaviour likely to cause a breach of the peace. In 1960, a man was found guilty of obstructing the police for attempting to make the third in a picket line when a policeman considered two were enough at that particular spot.

But the limits of peaceful persuasion are ill-defined. The Donovan commis-

sion turned down flat the idea that mass picketing should be permitted by law, pointing out that: "It is not clear ... why mass picketing is required simply to communicate information." It did not consider that the existing law precluded "communicating information" to lorry-drivers, and turned down a proposal from the Society of Labour Lawyers that a right to stop lorries should also be made law. But the opportunity provided by the passing of the Industrial Relations Bill to make the limits of persuasion statutorily clear was not taken. Nor has the distinction between persuasion and intimidation been made plain by the courts. Mr Maudling went so far as to tell the House of Commons at the time of the miners' strike that it was up to the police to decide it in individual cases; his survey of the law on picketing did not win universal approval among lawyers, and it was plain that the police were unclear. The law was enforced rather patchily.

Since Mr Maudling spoke, the even more controversial civil law provisions of the Industrial Relations Act have come into force, creating the strange new legal animal, a tort which is not a tort, the "unfair industrial practice." When is picketing an actionable unfair industrial practice? Section 96 (the section under which Heaton's Transport and others obtained judgment in the House of Lords two weeks ago) states that:

It shall be an unfair industrial practice for any person, in contemplation or furtherance of an industrial dispute, knowingly to induce or threaten to induce another person to break a contract to which that other person is a party...

unless the inducer acts with the authority of a registered trade union.

The court order Sir John Donald-

son made against the five dockers at Chobham Farm prohibited not picketing, but threats. Subsequent sections of the Industrial Relations Act seem, in practice, to limit the meaning of "contract" in Section 96 to commercial contracts—excluding contracts of employment. And it has apparently been ruled that picketing in support of an unfair industrial practice is not itself actionable. But the important point is that this imprecise tangle of civil law should not be confused with the criminal law (and in many picketers' minds it undoubtedly is). It is more than ever important that this should be constantly and consistently enforced.

Parliament

Question time

One of the last little bits of parliamentary business before the Commons went on holiday was a motion to change the procedure for electing future Speakers. It was put by Mr Carr, Lord President of the Council, and agreed to by the House, and it is to be hoped that the change—recommended by the Select Committee on Procedure—will avoid the messiness surrounding the election of Mr Speaker Lloyd in January last year. In the event, Mr Selwyn Lloyd has exercised the office well, although he has been at the heart of one or two violent storms. But the row that accompanied his election is still remembered. The focus of dissatisfaction was not Mr Lloyd himself but the apparently high-handed manner in which he was foisted upon the House as the result of collusion between the two front benches. That, at any rate, was the widespread feeling among backbenchers, and it is imperative in the future, apart from changes in the actual procedure of election, that there should be and be seen to be the fullest consultation with all MPs before a candidate is nominated.

The same all-party select committee made suggestions this week for new parliamentary machinery to accompany Britain's entry into Europe. It shows a proper concern about the adequacy of established procedures to sift and scrutinise community legislation, commission proposals and policy documents, and fears the consequence could be that Parliament would be "substantially weaker" in its relationship to the executive. The report observes that the present lack of a "comprehensive structure of specialist

Electoral reform for Mr Speaker

committees covering the principal functions of government and able to interrogate ministers, such as exists in parliaments of member states of the European communities," must add to the difficulties of keeping a vigilant eye on what is going on in Europe.

The need for more specialist committees, not only to examine European questions but also to probe more critically into the whole range of government activity, is now manifest. Yet it is not enough merely to set up committees, if their reports and recommendations are not heeded, and that, all too often, has been the experience so far of such committees as the one on expenditure (see page 54). They are likely to go on being largely ignored by government, unless more publicity is given to their proceedings, which are generally unreported. It may be that, if Parliament again refuses to allow television cameras within the Palace of Westminster when it votes on October 19th, those committees will have to conduct their business elsewhere and invite the cameras in. That might start things humming. But specialist committees set up by the Commons are unlikely to achieve the strength or influence of American congressional ones. If assisted by professional research staff, though, they could do useful work.

They could certainly offer more hope of acting as a check upon the power of the executive than is afforded by question time, that daily hour which is alleged to be the envy of the world but which is in fact a feeble instrument for making ministers account in public for their actions. At worst, it has become an occasion for

leaden facetiousness and party abuse. At best, it fails to offer anything like as sustained a critique of government policy as is achieved even by many a television interview.

The Select Committee on Parliamentary Questions has made some sensible recommendations for improving the efficiency of question time. It suggests, for instance, an experimental extra 15 minutes of prime minister's questions on Tuesdays, and an extra hour on Friday mornings for ministers appearing by rota. It is also wise to recommend that in future civil servants should not be asked to prepare questions whose sole object is to redress the balance of questions on the order paper, in other words to abet the government in what is purely a matter of party political tactics. That was what civil servants at the environment department had to do last year. The head of the civil service, Sir William Armstrong, told the select committee there was nothing improper in the request, because the impartiality of the civil service rested in its ability and readiness to serve any government of the day, not in impartiality between government and opposition. Such a use of the civil service may not be improper; there may be precedents; but it is without doubt undesirable. All the committee's recommendations amount, however, to no more than tinkering. They cannot make question time the formidable and searching cross-examination some parliamentary romantics would like to pretend it is.

What goes home?

Parliament was well up to its summer batting average when the House of Commons rose for the holiday recess on August 9th. It had put 55 Government measures and the exceptionally high total of 15 private members' bills on the statute book. When Parliament went on holiday last summer it had a total of 85 acts under its belt; but 1970-71 was, of course, an exceptionally long session. The summer average for the late 1960s was 57 acts, of which an average of 49 were put through by the government.

Some 11 Government measures scraped through at the last minute, to receive the royal assent on Wednesday. Among them were the Industry Bill and the National Insurance Bill. That leaves six Government measures which will not become law until the autumn. These include the European Communities Bill, though the Lords

We're busy keeping ours

Not so long ago the idea of natural gas in the North Sea was just a geologists' pipe dream. Then seismic exploration indicated that the dream might come true.

The North Sea kept its promise.

We're busy keeping ours: bringing the benefits to the largest number of people in the shortest amount of time.

Those plans are being fulfilled—on target—and sometimes even ahead of target.

*The natural gas transmission system has been extended to all Area Boards—on time. 1,726 miles in six years.

*The sales targets set at the beginning of the 'seventies are being met. Last year showed a massive rise of 30%.

*Conversion of homes, offices and factories continues to meet its targets—some six million consumers have so far been brought the benefits of natural gas and by 1975 over 90% of all consumers will have been converted.

*90% of all gas used in Britain is now natural gas. A target that didn't seem possible when the North Sea first looked promising.

Promises kept—targets met.

We think we have reason to be proud of our performance. But we're not resting on our laurels, nor do we think we're perfect.

So we're making one more promise—to keep trying harder.

Gas—the natural fuel

Commercial Union Assurance Company Limited

The following are the estimated and unaudited results of the Company for the six months to 30th June 1972, together with the comparable results for the six months to 30th June 1971, and the actual results for 1971.

RESULTS	6 months to 30 June 1972 Estimate	6 months to 30 June 1971 Estimate	Year 1971 Actual
	£m	£m	£m
Net Written Premiums			
Fire, Accident and Marine	289.9	218.7	467.8

Taxation	6.1	4.3	10.8
Profit after Taxation	12.1	10.1	22.7
Earnings per Share (fully diluted)	5.93p	5.56p	11.92p

NOTES

- The underwriting loss for the half year to 30th June is after charging:
- (1) £1.2m repayable to automobile policyholders in Massachusetts, U.S.A. in respect of premiums paid by them for 1971 which the State Commissioner for Insurance ruled to be excessive. The Supreme Court decision in that State in May 1972 upheld that ruling.
 - (2) £1.4m in respect of the total loss of one mine at Wankie Colliery, Rhodesia which was insured by our subsidiary company in South Africa. This loss was of a catastrophic nature and the extent of it could not reasonably have been foreseen.
 - (3) £1m in respect of increased provisions for claims that are required as a result of higher statutory Workmen's Compensation benefits introduced recently in certain States in Australia. Under the reinsurance arrangements between the Parent Company and its Australian Subsidiary most of this will be absorbed by the Parent Company.

Principal Exchange Rates used:

U.S.A.	\$2.42	\$2.40	\$2.55
Canada	\$2.38	\$2.45	\$2.55
Australia	\$2.04	\$2.15	\$2.15

UNDERWRITING TREND

U.K. business, as a whole, continues to be profitable but the Motor and Liability classes remain unprofitable. There has also been a further improvement in the U.S., as compared with the same period of last year. The statutory operating ratio for the six months was 97.1% compared with 100.4% for the same period last year. The results in the Rest of the World have deteriorated appreciably, due mainly to bad claims experience in Australia and Africa. The 1970 London Marine underwriting year, which will be closed at the end of 1972, is expected to produce a profit of £1.5m, half of which is taken into account in arriving at the above figures.

DIVIDEND

The Directors have decided to pay on 17th November next to Ordinary Shareholders on the register of members on 3rd October an interim dividend in respect of the year 1972 of 2.75p per share (compared with an interim of 2.75p per share in 1971), subject to the deduction of income tax. The cost of this interim dividend will be £5.5m (£5.1m). In 1971 the total dividend was 8.25p per new share.

stayed at work two days after the Commons to sweat on with the committee stage. Then there is the Criminal Justice Bill, which is also through the Commons; it would have made sense to have saved time and started this measure in the Lords, even though criminal law (as opposed to civil) is the responsibility of the Home Office. Two others still in the Lords are the Local Government Bill and a minor reform of Scottish company law. The Museums and Galleries Bill is through the Lords but stuck in the Commons; the Horserace Totalisator and Betting Levy Boards Bill has yet to go through the Lords.

Of the 20 MPs who won places in the ballot for time for private members' bills, a total of eight have succeeded in pushing their cherished proposals through to the royal assent. It cannot be said that these are a particularly interesting bunch. Mr David Reed's act seeks to deter door-to-door salesmen from pretending their wares are made by disabled people; Mr John Peel's to deter people selling foreign goods from pretending they were made in the United Kingdom. Mr Eric Ogden's incorporates an international convention on railway companies' liabilities. Dame Joan Vickers's requires corroboration of the mother's evidence in certain sorts of affiliation proceedings. Mr Simon Wingfield Digby put through a rather longer act which lays down close seasons and other protections for salmon and trout. Mr Neville Sandelson's act gives the courts power to order "matrimonial relief" (divorce, financial arrangements and so forth) for the parties to polygamous marriages. Mr Ivor Richard's act lays rather stricter duties on the builders and landlords of defective premises.

Mr Roy Hattersley, who won first place, has got his Employed Persons (Safety) Bill—which seeks to give trade unions the right to appoint safety representatives for factories—through committee but no further. Mr Phillip Whitehead's bill, to permit vasectomies to be provided on the same basis as contraceptives services under the 1967 family planning act, is through both houses; but it needs to go back through the House of Commons for consideration of the Lords' amendments. And Mr William Hamilton's much-publicised Anti-Discrimination Bill never completed even a second reading. Outside the ballot list, Mr Martin McLaren has enshrined a law commission report on expert evidence in civil proceedings

and Dr Dickson Mabon has extended certain clauses of the Chronically Sick and Disabled Persons Act to Scotland; and five other very minor acts have squeezed their way through. It is all a long way from the legislative milestones set up by private members in the 1960s.

Social work

Rivals in care

It is a pity that the unification of the local authority social services in line with the Seebohm committee's recommendations has produced rivalry with the two main branches of social work that were not unified—probation and social work in hospitals. Not that the probation service wishes to be unified: on the contrary, in England its members have opposed any idea that they should be absorbed into the new local authority social service departments—as has happened to their Scottish colleagues. Social workers in hospitals—whether medical (those who used to be called almoners) or psychiatric—are divided about where their future should lie; all that last week's white paper on health service reorganisation had to say about it was that their future was under review.

But on one subject all hospital social workers are united, together with probation officers. They come off badly in terms of pay by comparison with local authority social workers. Links have already been established in theory between the local authority pay scales and those of the other two groups. But, as the report (Cmnd 5076) of the Butterworth inquiry into the work and pay of probation officers and social workers points out, these links are not

Butterworth: local brain drains

maintained. Individual local authorities are not bound by national agreements and many of them are far more generous in their starting salaries than the centralised authorities that apply the pay scales of the other two groups. This divergence of pay, and in the prospects for promotion, has become more marked since local authorities have been building up their new departments in the past 18 months, and the effect has been seen in a steady flow of trained staff from the probation and hospital services to the local authorities—which can also compete more successfully for new recruits.

Mr Butterworth's main recommendation, therefore, is that the two badly done by services must have their pay scales permanently linked to the local authority one by the introduction of a series of link points, where one probation and hospital grade can be deemed roughly comparable in terms of job importance with a particular local authority grade. When the pay for the latter goes up, so automatically will the pay of comparable employees in the other two services, and all three should have identical starting salaries (£1,689 for qualified graduates). Local authorities that bid up rates are tartly asked to consider whether "the present exercise of their autonomy is wholly compatible with an enlightened incomes policy."

Yet in matters other than pay and promotion, probation and hospital social work apparently provide more job satisfaction—at present—than the local authority social services. This report, which was serviced by the Office of Manpower Economics with an outside assessor, and is reminiscent of the invaluable factual reports that the prices and incomes board used to put out, says that workers in the first two groups appreciate their greater independence, the absence of a hierarchical structure and their role as caseworkers rather than managers. Local authority workers, on the other hand, complain of excessive bureaucracy and red tape. More importantly, many of them resented giving up their specialist roles in child care, old people's welfare, mental illness and so on to become all-purpose social workers—a change of role that was at the centre of the Seebohm recommendations but which the Butterworth report suggests may have to be modified. Provided the pay is right, the probation service should be able to face with confidence the new burdens that penal reform is for ever placing on it.

London housing

It's more than acres

The immediate problem in London is to get enough land into the hands of local authorities to keep up the rate of building at 35,000 houses a year. The Government's action group on London housing has combed the boroughs and found 9,000 acres of land which can or might be used for housing before 1981. That is about 2,500 acres short of what is needed if present building rates are to be maintained, but it does not include dockland, subject of a separate study.

Only about half the 9,000 acres is free from restraints which prevent house building, but land for another 46,000 houses must be freed if London's crude housing shortage is to be overcome within the decade. What the group's list does take in is some 500 acres of so-called green belt and other land that would be swallowed up if certain major road schemes were to go ahead but might be better used for housing. Approval for proposals of that kind would require controversial decisions by Mr Peter Walker, the environment secretary. But getting the list accepted would mostly be a matter of chivvying and of minor planning changes by individual boroughs.

The boroughs did the land surveys and are the main instrument for realising the policy. Sweet reason is the only pressure to be used on outer boroughs which fail to pull their weight: Mr Reginald Eyre, parliamentary under-secretary at the Department of the Environment, says that the individual boroughs must be free to choose the type of housing (public or private) in their own areas. No Tory government is going to do much to change the balance in outer London, but this is now being justified in fashionable terms like "community" and "social balance."

But the real social balance to worry about is that in Greater London as a whole. Even if new gimmicks like sponsored house purchase catch on, council building for letting will remain by far the biggest factor in new building in London. Given the future availability of dockland, it will become a bit easier soon to provide working-class flats in inner London, while working-class jobs and middle-class people continue to move out. Government policy should be directed towards correcting these trends by helping working people to

move out too. But if inflated house prices continue, and frustrate the normal middle-class outward movement, then everyone may have to think again.

School meals

Cut and come again

There was a time when a frequent uprating of state benefits was a laudable ambition; an annual uprating of social security benefits, for example, was one of the Tories' election promises. Inflation has made this a necessity, and a rather sick joke. Unfairly, it tends to disguise any real improvements in benefits, which get swallowed up in arguments about the true rise in the cost of living. There is another serious danger. Frequent changes in benefit rates affect take-up, not only because public knowledge is always somewhat out-of-date but also because those who have applied and been rejected are unlikely to reapply within the next six months. The free school meals service could become a classic example.

Mrs Thatcher, the education secretary, has just announced that the income scale by which eligibility is to be determined is to be raised from September, 1972. From that date a three-child family will be entitled to free school meals for all the children, if its net income (deducting tax, insurance, rent, expenses of employment but adding family allowances) is below

More sums for parents

£20.40 a week. This is much to be welcomed: a lot of the furore against increased charges for school meals in 1971 was nonsense, but the income scales were decidedly mean. (And the literature available to applicants was misleading.) But this is now the fourth set of income scales to be in force in 19 months, and each is a fairly complicated affair. Free school meals should be one of those benefits for which take-up is very high; any shortfall on expected take-up will be a significant pointer to the depressing impact of inflation on any income-selective policy.

Smoking

Credits and debits

On Tuesday, Sir Keith Joseph announced that the first report of the standing scientific liaison committee on smoking and health has been accepted. This means that in the new year cigarette brands will be listed according to their tar content, and hardened smokers will be officially advised to choose brands whose tar content is low. Further steps are being taken, also by agreement with the manufacturers, to counter the effect of cigarette advertising: advertising films will carry a health warning, for instance, and television authorities may obscure brand advertisements at sporting events.

At the same time, the Department of Health and Social Security has put out some pretty calculations on the effect of a reduction in smoking on health service costs and social security funds. Mortality from the smoking diseases (lung cancer, bronchitis and heart attacks) will fall. But if people live longer they will eventually need a lot of health care—and pensions. On the other hand, there should be less sickness absenteeism, and therefore less benefit paid out and more insurance contributions received. And so on—the net effect, according to the department, being a financial gain (assuming a 20 per cent fall in smoking) of £8m a year in 1981, £3m by 1991 and a loss of £12m by the turn of the century when the increased numbers of old people will be all-important. But the department still has a card to play. The fall in sickness absence, together with the increase in the working population because of the fall in mortality, should increase the gross domestic product by £42m by 1981. But taxes on tobacco... Whoa, how pedantic and therefore meaningless can statisticism get?

If you're the kind of manager who's managed to avoid metrication, how long do you think you can manage?

By 1975 Britain will be substantially metric. The Government has endorsed this target.

Already by 1973 the construction industry will have completed their changeover. By 1975 the engineering industry will be 75% metric.

Most industrial materials are already available in metric. Examples are asbestos, glass, non-ferrous metals, paints, plastics, rubber, steel and timber.

If you're responsible for your firm's future, you need to know about metrication.

To help your changeover, the Metrication Board has published a ten-point Check List for Managers. A step-by-step leaflet advising you how to arrange your metrication programme to get the maximum benefit at the minimum cost.

Send for the Check List today.

With modern industry getting more and more complex, material-handling is becoming a crucial problem. IHI has a well-earned reputation in this field. We produce material-handling equipment for almost any need. For instance, we've recently delivered an 8,000 t/h ore shiploader to the Mt. Newman Mining Co., Pty., Ltd. of Australia. It's one of the world's largest. We are clearly a leader in loading ore.

The Earth. Whatever helps people span it, develop it, live on it, IHI is involved in it.

But we don't take a backseat to anyone about unloading ore either. We've recently completed the world's largest 2,500 t/h double cantilever type iron/ore coal unloader for Nippon Steel Corp. We have discussed only part of IHI's unique engineering capacities, as a development of its varied experience. With these elements of capability and experience, IHI stands ready at all times to help solve your material-handling problems.

THE WORLD

International Report

The man who decided that only black was beautiful

FROM OUR UGANDA CORRESPONDENT

President Amin has committed himself politically beyond the point of no return. This means that the British Government, which lacks the means to force him to change his mind about the expulsion of Ugandan Asians, is equally unlikely to be able to persuade him to do so.

The Asian situation in Uganda had been quiescent for many months when it erupted into a major crisis late last week. The reasons given for the sudden upsurge of activity vary from the bizarre to the merely strange. According to General Amin himself, God appeared to him in a dream and urged him to act immediately to "save the situation." The next morning he drove to a barracks in eastern Uganda and announced that Britain must repatriate all the estimated 50,000 British Asians.

Possibly General Amin was influenced by the recent spate of publicity over the shuttlecocking of British Asians from east Africa. Alternatively, his action may have resulted from the presumed completion of a census of Asians undertaken by the government last year. In any event, the decision, once taken, was rapidly transformed into a full-blown anti-Asian crusade. The president christened it a War of Liberation, and swore that if necessary he would sacrifice his life to rid the economy of foreign domination.

Under a decree he signed this week, the Ugandan entry permits and residence certificates of all British Asians and citizens of Bangladesh, India and Pakistan were revoked. Subsidiary legislation provides for the temporary exemption of doctors, dentists and other professional people whose services Uganda cannot at present do without. In one of the government's few concessions to economic realities, the owners of industrial and agricultural enterprises are also exempted.

All the rest, some 60,000 Asians who do not have Ugandan citizenship, including perhaps three out of every four Ugandan shopkeepers, have 90 days in which to dispose of their property and leave the country as best they can. So far there have been only veiled hints of what may happen to them if they do not leave in time, but in a country where all power rests with the army veiled hints are all that is needed. Since Kenya has closed its border to Ugandan Asians, and Tanzania will probably follow suit, the only means of departure available to them will be by air. Assuming that the exodus does not begin in earnest for another 10 days or so, it will require the equivalent of seven VC-10 flights a day. Although General Amin is now adamant that the deadline will not be changed, the sheer physical difficulty of arranging an exercise on this scale may persuade him to grant a short extension. In the way of compromise, that is about all that can be expected.

The outlook is not much brighter for Asians with Ugandan citizenship. In recent statements General Amin has made a distinction between "Ugandan citizens" and "black Ugandans," indicating that it is the blacks whom he wants to control Uganda's economy. All the 23,000 Asians here who claim to hold Ugandan citizenship have now been ordered to produce documentary proof of their claim because the government feels there should be "much fewer" of them. Asked this week whether he wanted these citizens to leave Uganda as well, General Amin replied, encouragingly, "They are free to go, too."

The president himself has admitted that the economic consequences of the Asians' withdrawal will be disastrous for Uganda's shaky economy. Everyone will suffer, he has said, but such diffi-

God spoke to him

culties are necessary. He looks forward to the time, "a few years" distant, when Ugandans will manage their commerce just as they now manage their agriculture. What will happen in the course of these few years of learning he did not say. Nor has he referred to the effects of the cessation of Asian and other foreign investment which must follow his decision. Still less does he appear to have thought of the drain on Uganda's foreign reserves that 60,000 people taking the permitted amount of money out of the country would cause. Under present exchange control regulations, this is estimated at £100m. Uganda's gross foreign reserves stand at about £15m. If the regulations are changed, as it seems they must be, many Asians will leave here destitute.

The manifest suffering that General Amin's edict will cause, along with some of the absurdities of his pronouncements, have obscured the other, semi-rational, arguments he has advanced in support of his decision. He has said, for instance, that Asian businessmen have been frustrating Africans' attempts to get on in commerce, and that they have been sabotaging the economy. Undoubtedly some have. Not as many as he believes, perhaps, but more than the occasional black sheep the Asians admit to.

Fortunately, General Amin seems

likely to remain alone among African leaders in taking an extreme stand. Kenya, with 140,000 Asians, some 60,000 of them Kenyan citizens, and Tanzania with 75,000 Asians, some 30,000 of them Tanzanians, are both deeply concerned at the possible repercussions of General Amin's move. When Uganda succeeds in getting rid of its Asians, pressures may briefly mount for similar moves by its neighbours. But they are unlikely to be sustained.

The Mediterranean

The Russians have lost a lot

The one firm piece of information about the Russian military exodus from Egypt is that since it was announced in the middle of last month no Russian aircraft have made reconnaissance flights over the Mediterranean. Whether all the aircraft that the Russians used for the surveillance of the American Sixth Fleet and other Nato navies in the Mediterranean have been ejected from their Egyptian air bases is less certain.

Their Il-38 planes, fitted with special submarine detection kit, have apparently left: these never had a role against Israel. So have a number of the Tu-16s which were the main Russian reconnaissance force. These planes, with their stand-off air-to-surface missiles, might conceivably have been used against Israel had the Russians allowed the Egyptians to fly them. One rumour has it that the Egyptians are holding on to some of them, presumably as a bargaining counter. The third make of aircraft used for anti-Nato operations were the Mig-23s. These planes, which fly higher and faster than any Nato fighters, are also believed to have gone.

The fact that the Russians have within the past fortnight sent three Krivak-class destroyers into the Mediterranean for the first time may be a compensation for their new aerial weakness. The Krivaks came into

Is Sadat holding on to this Tu-16?

service only last year and with gas turbines and guided missiles are better than their equivalents in the Sixth Fleet. Russian ships will be able to use Mersa Matruh and Alexandria, where President Sadat has said they will still have facilities. These ports are also important to Russian submarines in the Mediterranean, which all come from the far-off Baltic and Arctic fleets.

Although the Russians have lost their former freedom of operation, it is too early to tell how much the new restrictions will hamper them. More firepower from surface ships may replace the loss of the Tu-16 missiles but it cannot make good the loss of the Egyptian airfields for aerial intelligence. No doubt the longer-range Tu-20 plane could fly reconnaissance missions from home bases near the Black Sea; but that would require in-flight refuelling over Nato territory.

Some Russian planes taken out of Egypt are reported to have landed in Iraq. But it is hard to see any useful role for them there and it could just be a staging post on the way back to Russia. Very nearly as large a part of the Mediterranean could be covered from Syrian airfields as from Egypt. But Syria, although even more in need of Russian military advice than Egypt since its air defence system is relatively new, has already revealed its reluctance to become too deeply involved with the Russians.

A great deal of Russian equipment remains in Egypt. This includes all but the latest version of the Sam ground-to-air missile and probably some of the more modern versions of the Mig-21 fighter planes which Russian pilots were flying. All this equipment will need spares and maintenance, and this is where the Russians come in again. The two countries still need each other.

Egypt and Libya

One more deadline

FROM OUR CAIRO CORRESPONDENT

Putting a brave face on things, Egyptian commentators are trying to convince their readers or listeners that the projected union with Libya, unlike the late unlamented union with Syria, is based on reality and not on dreams. The 13 months before the union becomes effective will, it is argued, provide time for working out a solid foundation. Yet President Sadat's telephone call last week ordering the prime

minister, Mr Aziz Sidki, to join him in Benghazi to seal the merger deal came as a jolt to members of the cabinet. And the reaction among many ordinary Egyptians has ranged from an indifferent shrug to downright scepticism.

President Qaddafi of Libya does not conceal his hopes or his ambitions. Libya is to do for the Arab world what Prussia did for the unification of Germany. With the mantle of Nasser pulled down ever more firmly on his frail shoulders, the young pan-Arab nationalist pursues his vision. But, as he told his country's one political party last April, Libya can carry out its role only by working "with Egypt and through Egypt."

Mr Sadat's reasons for agreeing to the union must be more devious and are certainly less obvious. Some Egyptians believe that Libya may be able to obtain from western Europe the type of arms that Egypt has failed to get from Russia. Others believe that Egypt, through American oil interests in Libya, is hoping to reawaken the pro-Arab oil lobby that is said to exist in Washington.

On one point most Egyptians are agreed: Colonel Qaddafi's insistence that Israel must be defeated militarily need not inhibit Mr Sadat from exploiting his dismissal of the Soviet military advisers by opening a major campaign late this year for a political settlement with Israel. The 13 months allowed for planning the merger may, in Mr Sadat's mind, represent another deadline for getting a political settlement. In this sense the projected merger, no less than the expulsion of the Russians, is one more bid by President Sadat to buy himself time.

Mésalliance

FROM OUR LEVANT CORRESPONDENT

Previous schemes for Arab union have failed, or were stillborn, because they were mésalliances between impetuous Arab Antonys and a wary worldwide Cleopatra. The present project for Libyan-Egyptian union is no exception. President Sadat's hesitant acquiescence has still further reduced the prestige of Egypt, which now looks like a Cleopatra rolled up in an especially expensive Libyan carpet. Any true unification of the Arab countries needs the undramatic groundwork of mutually beneficial co-operation—and strong leadership by Egypt.

There are a number of Arabs who would argue that the Federation of Arab Republics was moving step by cautious step towards a working co-

MITSUBISHI BANK

LONDON BRANCH: No. 6 Lombard Street, London EC3V 9AA, England Tel: 623-9201 Telex: 886409, 888230 HEAD OFFICE: Marunouchi, Tokyo, Japan OTHER OVERSEAS OFFICES: New York, Los Angeles, Paris, Düsseldorf, Seoul, Hong Kong, The Mitsubishi Bank of California in Los Angeles, ASSOCIATED BANKS: Japan International Bank in London, Orion Multinational Services, Orion Term Bank & Orion Bank in London, Australian International Finance Corporation in Melbourne

operation between Egypt, Libya and Syria. This has now been elbowed aside by Colonel Qaddafi, so that Syria, which had tried to achieve a modified resumption of its former special relationship with Egypt, finds itself out in the cold. The lukewarm Syrian reaction to the Libyan-Egyptian union is a clear indication that it is not going to become its third member; which means that the federation has in fact lapsed. The Syrian communist party, which is represented in the government, has given firm notice that it will contest any attempt by the Syrian regime to follow Egypt's example either in expelling Russian advisers or in joining the union with Libya. But there have been no signs that Syria's pragmatic president, General Hafez Assad, is about to do anything so foolish.

Iraq's reaction has been even colder. A few months ago Iraq tried unsuccessfully to bring about its own special relationship with Egypt, which would have included Syria but excluded Libya. Jordan, on bad terms with Egypt and worse with Libya, has predictably condemned the new move; Saudi Arabia and Lebanon have been studiously silent. Kuwait, while in principle welcoming all moves towards Arab unity, has expressed fears that yet another failure would be a long-lasting setback to that ideal.

Thus, in contrast to the general joy that greeted the Syrian-Egyptian merger in 1958, the major countries of the Mishrek, the eastern Arab area, are thoroughly disunited over the projected union between Egypt, the largest country of the Mishrek, and Libya, the drawbridge between the Mishrek and the western Maghreb. The three Maghreb countries, Algeria, Tunisia and Morocco, wisely seem to regard these eastern goings-on as no great concern of theirs.

The union might work if it led to a firm-handed Egyptian takeover of Libya. But Egypt lacks the hardihood to put through such a bold colonising enterprise. As it is, association with Libya will adversely affect Egypt's relations with a whole range of countries with which it is trying to be friendly: with Russia and the United States, with Britain, India, Iran, Saudi Arabia and Morocco. President Qaddafi is a fossilised nasserist who is using his financial power to push the dangerously outdated idea that Arab unity can be brought about through the soft option of unification rather than by the slower, more tedious, but surer path of co-operation.

Baram's church is no asylum

Israel

Broken promise

On Monday the Israeli police threw out the Christian Arabs who had been camping in the church and the ruined houses of Baram, their former village near Israel's frontier with Lebanon. The Arabs put up a fight and men on both sides were injured; several Arabs were arrested. Two weeks earlier the Israeli cabinet had ruled that the villagers were not to return either to Baram or to its neighbouring village, Ikrit. On Tuesday Mrs Golda Meir confirmed this ruling at a meeting with the Greek Catholic Archbishop Yusuf Raya, who has been negotiating on the villagers' behalf.

So, perhaps finally, the Israelis have broken the pledge they made 24 years ago when the Israeli army evicted the villagers but promised them that they would be allowed to return soon. In 1952 the Israeli supreme court upheld the villagers' right to return, albeit conditionally. They continued to be barred for security reasons. Recently the area ceased to be a closed military zone and the villagers, their hopes newly encouraged, started to repair their abandoned churches. They were further encouraged last month when Mr Yigal Allon, acting as prime minister during Mrs Meir's temporary absence, outlined a solution that might have allowed those who wanted to return to do so (see *The Economist*, July 15, 1972). Mrs Meir came back and the cabinet turned down these proposals; instead, the process of compensating the evacuees would be completed. The cabinet vote was not unanimous and other Israelis have this week been demonstrating on the villagers' behalf. But Mrs Meir has pronounced their return to be impossible.

EEC

Who'll be who

FROM OUR SPECIAL CORRESPONDENT

Brussels

M. François-Xavier Ortoli is still front-runner as President Pompidou's choice to become president of the common market's commission in January. It is France's turn to name the president, and M. Ortoli, who was a director-general in the commission's early days, has throughout the 1960s been a faithful minister in successive governments in Paris. The doubts about M. Ortoli are his own reluctance (like others in Europe) to go to Brussels if he can see a better chance for himself in his national capital, and the fact that he is more of a civil servant turned minister than a politician of convincingly gaullist or any other stamp.

Mr Heath and others have long hoped that France might appoint real politicians to Brussels. But they would be content with M. Ortoli—and, if he does not go, then just as content with M. Paul Delouvrier, now under M. Giscard d'Estaing in the ministry of finance, who is thought to be next in line. Britain's likeliest members of the commission, if they can be persuaded to drop their domestic political careers, remain Sir Christopher Soames and Mr George Thomson.

Britain's ambassadors in Europe's capitals on January 1st will be a different lot from the team fielded when the entry negotiations got under way. Sir Edward Tompkins is being withdrawn as ambassador in The Hague and will probably take over soon in Paris. Sir Edward is half-French by birth and an old hand in the Paris embassy as well as in Washington, where he was minister during the late 1960s. On present plans, Sir Christopher Soames will make way for him after the summit meeting of the Ten planned for October in Paris—maybe to become one of Britain's two commissioners in Brussels, maybe to return to Conservative party politics in Britain (where his reception would be mixed), maybe to quit public life altogether.

The former number two in Paris, Mr Michael Palliser (the son-in-law of Paul-Henri Spaak, who died in Brussels last week), is already Britain's ambassador to the European community in Brussels. From January 1st he will be Britain's permanent representative in the decision-making machinery of the community. Sir Nicholas Henderson has just taken over

the embassy in Bonn, having previously been ambassador in Warsaw—a long way on from the bright young private secretary whom Ernie Bevin wangled into the Foreign Office over the heads of others. Mr John Barnes, an author of the ill-fated idea of a multilateral missile submarine force in the 1960s, comes to The Hague from Tel Aviv. The ambassadors in the other two Benelux countries stay put, as does the shrewd Sir Patrick Hancock in Rome.

The all-round improvement is particularly evident in the Bonn embassy and in the delegation to the community in Brussels, whose bright staffs now have a better chance than before to bring their energies to bear. The notable thing about Britain's common market diplomacy at present is that its men in the field are generating more ideas than the thinkers and policymakers back at home. In London there is plenty of paper about Europe but little urgency. This is partly a result of the Prime Minister's deliberately cautious approach to change in the community until Britain is safely inside. But the greater imagination in evidence in the field partly reflects the fact that the Foreign Office, even as it has been reshaped to cope with common market life, has not yet worked out with the other ministries in London how to carve up the work which flows back from Brussels and the national capitals in a way that can produce quick and imaginative results.

Ireland

Uncorked

FROM OUR DUBLIN CORRESPONDENT

Cheered by his unexpected by-election victory in Mid-Cork on August 2nd, Mr Lynch now reckons he has got Irish public opinion behind him in three things he wants to do about Ulster. The first is to give full backing to Mr Whitelaw's attempts to get the Northern Ireland political parties around the conference table. The Irish prime minister shares Mr Whitelaw's frustration about the delaying tactics of the Social Democratic and Labour party. Although it will avoid any obvious pressure on Mr Fitt and his colleagues, the Irish government has been using its influence behind the scenes to moderate the SDLP's demands—and feels fairly satisfied with the progress achieved this week.

Second, Mr Lynch does now seem determined to crack down on the IRA if it starts to operate in the south. He still refuses to intern its members; but the appointment of four more judges

to the special criminal court and the calling in of larger-calibre licensed guns (about 90 per cent of these have been handed in) are clear warning of his intentions. The trouble with trying to get IRA men on charges of belonging to an illegal organisation is that it is nearly impossible to produce the evidence. But being caught with a gun is now almost certain to lead to conviction. The Provisionals have read the signs and most of those who left Derry before the British army occupied the no-go areas are now believed to be back in the Bogside and Creggan. There may be some IRA raids across the border from bases in the south but most people in Dublin think the gunmen will concentrate their activities in the north.

The third thing Mr Lynch means to do is to play down all talk of Irish reunification. He is convinced that unity is a long way off, and that talking about it too much only postpones it even longer. What he wants now is to get a new sort of administration going in Northern Ireland without the powers of Stormont and with built-in guarantees for the minority.

Trieste

Who blew up the oil?

FROM OUR ROME CORRESPONDENT

The Italian authorities, including the military intelligence service, are not convinced by the claim put forward by Black September, a small but militant Palestinian guerrilla faction, that it was responsible for the explosions that last weekend wrecked oil storage tanks in Trieste. If Arabs had done it, say the police, the Italians would have expected to receive more information than they have yet got either from Interpol or from the Israeli security

service. As it is, the police are following up every possible trail; a process that will take time.

One obvious trail has taken the Trieste police to Milan, where their colleagues are working on a number of terrorist mysteries including the explosion that killed Signor Feltrinelli, a left-wing millionaire, in March and the murder of three carabinieri who were killed recently when their car blew up. The Milan police have been following the "red" and "black" trails, the anarchist and fascist threads which appear to run, separately or together, through all the unsolved cases of violence, murder and sabotage of the past three years.

In Trieste suspicion seems divided between Yugoslavia's Croat guerrillas, German "Tupamaros" (believed to have been involved with Feltrinelli), extreme right-wing Italians, and the Arabs. The manager of the terminal, Signor di Mondo, is certain that the saboteurs had local accomplices who could be either Italian or German. He thinks it most improbable that any Arab government could be involved (though this would not rule out Palestinian guerrillas). The Libyan government has only recently reached agreement with Italy to send some of its crude oil to Trieste. And the German trail is hotly denied by the Hamburg police, who claim that most of the Baader-Meinhof gang are either dead or under lock and key.

The Italian police are following up but not particularly impressed by a report from an unofficial Israeli source in Jerusalem that Rome conceals the headquarters of an Arab guerrilla organisation, which also has a branch in Perugia. According to this report, the Palestinians are using four flats in Rome as hideouts and deposits for arms supplied to them by the embassy of an Arab country, and the Black

It's a fine blaze and it costs somebody about £2.5m

September group has a headquarters camouflaged as a centre for Arab students at the university for foreigners in Perugia. In Rome the police have found no confirmation of this report, nor is it endorsed by the Israeli government.

The Rome police claim to have kept a strict check on all suspect foreigners after the outrage at Lydda airport on May 30th. The three Japanese terrorists responsible for the massacre had spent a few days in Rome before they flew to Israel but the Japanese Interpol official who interrogated the surviving killer assured the Italian authorities that there was nothing to suggest that the stay in Rome was significant. No evidence of a Palestinian headquarters in Rome came from this interrogation. In Perugia the local police have been screening the 2,000 Arab students registered at the university. Only some 200 of these are believed to be Palestinians but many are not identifiable as such because they have been issued with passports by various Arab countries, mainly Libya and Syria. It is a long, slow trail.

Italy

Cosa nostra

FROM OUR ROME CORRESPONDENT

That great Italian coalition known as the Christian Democratic party met at the weekend to look itself straight in the eye and, having done so, looked away again. The three-day session of the Christian Democrats' national council that finished on Monday has greatly strengthened the position of the party's secretary, Signor Forlani, but leaves the prime minister, Signor Andreotti, as much alone as he was before the council met. Signor Moro, the leader of the party's left wing, who made an impassioned appeal to the party to change course, saw his support whittled down. He emerges as the only top-rank Christian Democrat wedded to a clearcut line and not disposed to juggle with right and left. In the long run this may be an advantage. But in the short run Signor Forlani has won out with the usual policy of looking both ways at once.

The council met to pass judgment on Signor Forlani's and Signor Andreotti's handling of the long crisis which ended in June with the formation of a centre government that includes the Liberals for the first time in 12 years, and leaves the Socialists in opposition after 10 years' participation in governments of the centre-left. Should the Christian Democrats look

Forlani the juggler

on this as a deliberate political choice or as an emergency solution forced upon them by circumstances?

Characteristically, while promising the new government its loyal support, the council has endorsed the second line. Signor Forlani aims to keep the door open for the Socialists to come back after their party conference in October if they then promise to cleave faithfully to the centre-left and keep their distance from the Communists. He did not say whether he would be willing to drop the Liberals to make this possible, which is the crux of the quarrel between the Christian Democrats and the Socialists.

In a fervent speech Signor Moro accused Signor Forlani and Signor Andreotti of making a deliberate choice: to include the Liberals, he said, automatically implied excluding the Socialists. Signor Moro believes the party's policy will make it harder for the Socialists to come back: so they run the risk of falling under the hegemony of the Communists, and the Christian Democrats themselves will be tempted ever farther to the right. He sees a real danger of the nation becoming divided into two camps, Christian Democrats versus Communists.

The Christian Democratic party contains nine, perhaps now 10, different factions, which are for ever peeling off and re-forming. The party has no undisputed leader. There are at least half a dozen senior near-equals and the party is really a syndicate for the management of power. It has been dominant in office for 25 years without interruption, and is likely to remain so. That is why it tends to look upon political power and patronage as "our thing."

Germany

Willy needs help

The first thing Willy Brandt had to do when he came back to Bonn from his Norwegian holiday last weekend was to start thinking of how to organise his own government's defeat. He may not relish it but, under the 1949 constitution, he must be defeated in the Bundestag in order to clear the way for the fresh elections that both west Germany's government and its opposition want, because neither has a majority in parliament. After consultations with his own party and his Free Democrat coalition partners, Herr Brandt seems to have decided to get out by arranging for his own supporters not to vote for him on a motion of confidence during the long-delayed debate on the 1972 budget. This may now take place on September 26th-29th.

If a handful of government deputies stay away during that vote—and if the opposition votes solidly against him—Herr Brandt will be defeated and President Heinemann will be free to dissolve the Bundestag and order new elections. Assuming that Rainer Barzel, the Christian Democrats' leader, waives his constitutional right to become chancellor by mustering a majority for himself within three weeks of his rival's defeat, the election could take place sooner than originally thought—perhaps as early as November 19th.

The whole rignmarole would not be half so depressing for Herr Brandt and his colleagues if their hopes of being re-elected were reasonably bright. But the time-bomb of Karl Schiller's resignation in July is still ticking away. To the effect on the voters of the angry resignation of the key economics minister, who was a major vote-catcher in the 1969 election, is added the awful thought, still not entirely squashed, that Herr Schiller might actually go over to the opposition. And the police raid on Wednesday on the magazine that printed Herr Schiller's secret resignation letter will hurt the government.

Helmut Schmidt, who has taken Herr Schiller's place as the government's economics overlord, has a few cards to play. The new pensions bill which will soon be presented to the Bundestag could be a vote-catcher among the old and the middle-aged. But the opposition are plugging their own, in some ways even more attractive, offer to the pensioners.

Of course, Willy Brandt himself remains the government's biggest electoral asset. But even the popular Herr

Shipped by Luis Gordon and Sons Ltd., one of the Luis Gordon group of companies.

Domecq
Simply good taste.

Brandt needs some palpable success with which to impress the electorate. He may hope to be saved, even now, by his Ostpolitik.

When negotiations for the so-called "general agreement" with east Germany start next week, the Russians might like the east Germans to be readier to make concessions than they have shown themselves to be in the exploratory talks. The Russians want their European security conference, and they would probably prefer to have to deal with Herr Brandt rather than with Herr Barzel. Mr Brezhnev may have advised the east German leaders, at the recent communist summit meeting in the Crimea, to be more pliant. But any really substantial progress towards the "human improvements" that Herr Brandt expects from these negotiations means east Germany either letting in more west Germans, or letting more of its own people out to the west. Will it?

Jugoslavia

No defence

The trial of four former Croat student leaders that opened in Zagreb on August 4th began badly for the prosecution. The students are accused under article 100 of Yugoslavia's penal code of having formed a "militant and terrorist phalanx permeated by nationalistic fanaticism" with the aim of taking Croatia out of Yugoslavia and eventually handing over power to Croat émigrés. More than 100 witnesses have been questioned since the students' arrest last December, and more than 8,000 pages of supporting evidence have been submitted by the prosecution. But the students simply declined to defend themselves when the trial started.

The first accused, Drazen Budisa, a former president of the Zagreb students' federation, justified his refusal to defend himself by saying that he and his colleagues had been condemned in advance. But he claimed, in a written statement, that the students' federation was neither separatist nor counter-revolutionary; its aim was a socialist Croatia within Yugoslavia. He stoutly denied any links with Croat organisations in the west.

It is unlikely that the court will be put off by the students' refusal to co-operate. Yugoslavia's leaders want to make an example of the accused students, who offended President Tito in November by organising a university strike in favour of the Croat leaders'

demand for a greater share of foreign currency to be given to Croatia, and then demonstrated when these leaders were sacked in December. The new demonstration last week in favour of the deposed leaders at the funeral of Mr Pero Pirker, the former party secretary in Croatia, will probably make the authorities even less disposed to compromise.

Vietnam

Watch the north

FROM OUR SAIGON CORRESPONDENT

It is probably no exaggeration to say that the decisive battle in Vietnam's current campaign is being fought in the United States, between Senator McGovern and Mr Nixon. In both Hanoi and Saigon it is thought that the outcome of the American election will determine the course of events in Vietnam for a considerable time to come. Nothing can ever be ruled out in this war. But unless the South Vietnamese command makes a particularly gross blunder in the coming weeks, it seems that North Vietnam's present preparations for new thrusts in the Quang Tri-Huế sector and around Saigon are not so much a serious attempt to achieve victory as a device to embarrass President Nixon at a chosen moment in his election campaign.

The North Vietnamese forces in Quang Tri have been substantially reinforced since the battles of April and May. Some entirely new units have appeared on the scene, withdrawn from Laos, and casualties in the original units have been replaced from reserves in North Vietnam.

The quick avoid becoming the dead

Despite the bombing and blockade of the north, this reinforcement seems to have presented no great difficulties. General Giap is reckoned to be willing to pay a high price for the retention of Quang Tri, and he wants to keep up the pressure on Huế. The bombing and blockade have reduced the flow of heavy weapons, oil and some other items but they cannot stop the movement of men and ammunition. They do mean that more men and resources are needed to keep the supply lines open, but the result is only a reduction, not particularly spectacular, in North Vietnam's long-term capacity to sustain the war.

The movement of North Vietnamese troops into the Mekong delta is open to various explanations. President Thieu, among others, sees it as presaging a communist drive on Saigon itself, or at least an attempt to strangle the capital by cutting it off from the surrounding provinces. However, Mr Thieu's analysis may be partly an attempt to justify his promulgation of some tough new decrees, such as the one this week that will keep the Saigon press under tighter control.

Certainly the three divisions that besieged An Loc have been replenished, and by some people's count about 7,000 North Vietnamese troops have moved into the delta south-west of Saigon, where there has been a good deal of fighting. But even if that figure is accepted—and it is probably too high, in fact—the 7,000 would not represent a major threat to Saigon or the delta. The delta is now under mid-monsoon water, and so the communists cannot use heavy artillery or tanks there as they did around An Loc. Some military sources now tend

rather to the view that the delta infiltration is primarily designed to cause alarm in Saigon, capture headlines, and above all to prevent the Saigon command taking troops out of the area to reinforce Hué and Quang Tri.

The assumption is that the bigger North Vietnamese drive, on Hué, will come in September or October just before the American election, by which time the rains will begin to hamper air operations in the northern provinces. Some observers believe it will be virtually North Vietnam's last big fling on the southern battlefield. If Mr McGovern gets in, there won't be much more need to fight. But if Mr Nixon is returned, South Vietnam can probably count on continuing American air support, and the northern troops may then pull back and await more propitious circumstances.

China

The army turned upside down

FROM OUR HONGKONG CORRESPONDENT

No one can pretend to know how many of China's army leaders and party cadres who disappeared during Lin Piao's period of favour as Chairman Mao's heir-presumptive between March, 1968, and September, 1971, have been restored to favour in the past 10 months. Of the military leaders who attended the 45th anniversary of the People's Liberation Army on August 1st, no fewer than 32 had been purged. They included such notables as the former commander and political commissar of the Wuhan military region (who ironically was then accused by Lin Piao of having tried to kidnap but not assassinate Chairman Mao) the former commander and political commissar of the Peking military region, and the former political commissar of the Chengtu military region, who had been personally denounced by Mrs Mao.

More intriguing, perhaps, is the fact—recorded by foreign diplomats in private messages from Peking—that several known Lin Piao followers who were temporarily eclipsed in the aftermath of Lin Piao's disappearance have also been indulgently restored. They are presumably the vanguard of "those comrades who had erred but did not engage in intrigue and conspiracy" and who, the paper Red Flag mercifully or expediently pronounced last

week, would be forgiven after criticism and self-criticism and willingness to rectify their mistakes.

The head of Chiang Kai-shek's intelligence service on Taiwan told a Kuomintang meeting in Taipei this week that 47 of the chief supporters of Lin Piao had been purged—in "two general headquarters, two services, three combat arms and five military districts." He claimed that a large-scale purge was still in progress. Of course, Taipei disclosures are as suspect as Peking pronouncements. But Red Flag has frankly admitted difficulties in army morale, thinking and reorganisation, and it may be plausibly presumed that the known confusion, re-forming of ranks and self-criticism in Peking is being duplicated with greater shock and fiercer revenge in other military regions.

General Ting Cheng, a formidable operator who escaped Lin Piao's disfavour, has suddenly been sent to Canton to control the key south China military region, which the vanished former chief of staff, Huang Yung-sheng, once commanded. It looks as if General Ting Cheng's immediate priority is to stem the rising flood of escapers into Hongkong and to suppress a bourgeois crime wave in Canton. Even Peking has been compelled openly to recognise this embarrassing flight of "freedom-swimmers" by denying that they are refugees—because Hongkong, after all, is China and you can't be a refugee if you remain in your own state even if you have to swim all night to get there under fire from the guns of your hometown border guards. The authorities in Hongkong privately hope that General Ting Cheng, whatever his ties or lack of ties during the Lin Piao period, now dams the flood of Chinese non-refugees with all the fraternal vigour that Lin Piao unleashed against the Red Guards in 1968.

India and Pakistan

Let the soldiers draw the line

FROM OUR NEW DELHI CORRESPONDENT

Now that both India and Pakistan have ratified last month's agreement between Mrs Gandhi and President Bhutto at Simla, the two armies met this week to draw the new dotted line between them. Up in Kashmir each side will keep what it won in last December's war, some 480 square miles for the Indians, and a modest 53 square miles for the Pakistanis near Chamb. But everywhere else they will go back to the border they crossed in December.

Jana Sangh's leader attacks the pact

The Indians are giving up more than 5,000 square miles in Punjab and Sind in exchange for some 70 held by Pakistan.

It is all going remarkably smoothly. Even in Kashmir the demarcation line has largely been agreed upon already at meetings between units facing each other. There are disputes over some small outposts around Tithwal in the Lippa valley which changed hands in skirmishes after the ceasefire; but the Pakistani foreign ministry has told your correspondent that the details of the disengagement can be left to the two armies to sort out. The only real problem, in fact, is about the role of the United Nations in Kashmir.

India says that the UN, which has supervised the dividing line in Kashmir since 1948, no longer has a job there because the ceasefire line it then established lapses with the coming into force of a new dispensation. This is unacceptable to Pakistan, because it wants to retain a theoretical right to take its claim to the Indian-occupied part of Kashmir back to the UN, despite the clause in the Simla agreement that binds the two sides to resolve disputes between themselves, or through mutually agreed means. However, both countries have agreed to abide by the new line of control, so the idea of invoking the UN again may be pretty hypothetical.

One harrowing consequence of the withdrawals is that some of Pakistan's Hindu citizens are moving to India. These are people who live in the territory occupied by India in December, and claim to be afraid that Pakistan may hold them guilty of having collaborated with the enemy then. By early this week some 50,000 had left their homes and crossed the border into India: more may follow. They are

providing a welcome argument for the super-nationalist Hindu party, Jana Sangh, which has been accusing Mrs Gandhi of betraying India's interests in her agreement with Mr Bhutto. The new refugees, and the opportunity they have given to Jana Sangh, are the delayed casualties of the war.

Russia

Not yet his castle

If Russians were asked what they wanted most, a decent flat of their own would come high on the list. The government is doing something to satisfy this need; it is also trying to convince people that the something is stupendous. Stories in the popular press reveal that with 2.3m urban flats built every year Russia is absolute world champion; or, another way of putting it, with more than nine flats per 1,000 inhabitants built a year, Russia is close to the top of the world league, somewhere between Germany and France and above both Britain and America.

The small print of more serious publications, such as a recent study in Voprosy Ekonomiki, shows the seamier side of such comparisons. First, Russian flats, which on average contain about 50 square metres of floor space, are much smaller than their western counterparts. Second, Russia has to build more because its housing shortage is even greater than in the west.

Statistics put out by the United Nations say that in 1960 there were 0.7 people for each room in Britain and America, 0.9 in France and Germany, and 1.5 in Russia. The comparison is flattering to the Soviet Union in that rooms, like flats, are smaller there. In 1960, say Russian official statistics, town-dwellers had on average nine square metres of floor space at their disposal; by 1975, if all goes well—that is, if 580m square metres are duly built in the current five-year plan—their allowance should rise to nearly 12 square metres.

The history of Russian housing encapsulates the classical story of an industrial revolution, the price paid in terms of living conditions for economic expansion. During Stalin's time, the planners made a ludicrously low allowance for new housing when set against the needs, which included wartime destruction and the mass migration from country to town. Even if one accepts at face value the official claim that the number of urban dwellings went up threefold between 1913 and 1952 (the

end of the Stalin era), the number of town-dwellers also trebled during the same period so that, at best, the appalling conditions of tsarist times were perpetuated and extended to millions of newcomers.

After Stalin's death, Russians were promised a new deal, including better accommodation. This involved an important shift of resources to investment that was not directly productive. By 1956 house building had doubled compared with the average figure for the postwar years; by 1960 it had doubled once again, reaching 83m square metres. Then it dropped. Even now, when it has again picked up, the ratio of new flats to the total urban population is lower than it was in 1960.

But putting up houses as fast as one can is not necessarily an efficient way of going about things. Mr Bobrovnikov, the author of the article in Voprosy Ekonomiki, admits that during the major housing drive between 1958 and 1963 much of the building was shoddy and neglected the true needs of the people who were going to live in it. For example, refrigerators and washing machines were becoming available at that time but few people had proper kitchens to put them in. He claims that the planners are now more thoughtful, though the new standards he mentions are still very far from luxurious. The model family flatlet that should be available in 1975 has a floor

Eggbox living for Muscovites

space of 46.6 square metres, of which 31.8 square metres is for living and sleeping and the kitchen, bathroom and corridors are squashed into the rest.

The progress towards making Russian life more comfortable can be measured by the current plan's other targets. The proportion of town houses with running water is to reach 82 per cent in 1975 compared with 56 per cent in 1959. For sewers, the comparison is 79 per cent against 53 per cent; for baths or showers, 62 per cent against 30 per cent. Where the Russians will do better than many western countries is in central heating: by 1975 more than three-quarters of urban flats should have it. And the skyline of the larger Russian towns is changing fast. Ten years ago nearly half of the new buildings were less than four floors high; now most of them are five floors or more.

Few of the new flats will be privately owned. A dozen years ago, as part of the big drive, home ownership was encouraged by state loans and nearly a third of the new buildings came into this category. The proportion has declined ever since. One of the explanations is that non-standard designs cost more to build. But there must be more to it than this: Russian housing is not ruled by cost-accounting. Anybody, for instance, who dared suggest a sudden switch to the payment of economic rents would start a revolution: Russian families are still spending only about 2.5 per cent of their income on rent. This pays no more than a fraction of the running costs of the building, let alone allowing for depreciation. Shops and offices, which now pay higher rents, account for roughly a third of the total upkeep and the rest is paid by the state.

Rent is the one aspect of housing where Russia's departure from the western pattern is still radical. Otherwise, despite their opportunities, the Russians do not seem to have come up with any genuine alternatives to western styles of town planning, but are slowly moving in the same direction. The movement is slow at least partly because there is so much to catch up with; nearly half the total building in the current plan is replacement, not new accommodation. Still, in another 10 years or so, the barrack-like living and the terrible overcrowding may be a nightmarish memory. By then, judging from present trends, Russians will be blessed or cursed by the domination of the car. All this confirms the impression that Russia, intent on catching up with America, will offer few new answers to the problems of urban living.

American Survey

Living with arms limitations

Washington, DC

Each of the two documents on the limitation of strategic arms (Salt) which President Nixon signed in Moscow at the end of May contains a clause permitting the Soviet Union or the United States to withdraw—in effect, to abrogate the agreement—"if it decides that extraordinary events . . . have jeopardised its supreme interests." For people who held that the American side got the worst of the Salt talks, and who wanted extra safeguards introduced by parliamentary means, these clauses were the natural places to try. The past week has seen a struggle in the Senate between those who want the agreements passed as they stand and those who want Congress to spell out the circumstances in which the United States should feel entitled to abrogate them.

Something similar happened nine years ago when the Senate was debating the treaty banning nuclear tests, but then the Kennedy Administration, with the support of an extensive public lobbying campaign, resisted successfully an attempt to insert various reservations into the resolution ratifying the treaty. When the same fight came to be fought again this month over the Salt agreements, a startling difference emerged: the amenders, who were led by Senator Henry Jackson of Washington State, claimed to have the Nixon Administration on their side and the Administration did not deny this, though it had concluded the agreements itself. Senator Jackson, a Democrat who is also an advocate of developing new weapons, is highly regarded by President Nixon, who once wanted him for his Secretary of Defence. While Senator McGovern has been attacking the Nixon Administration for spending too much on the defence establishment, Mr Jackson has been criticising it for letting the

Russians get ahead. So it was no surprise that he came up with an amendment. What dumbfounded the bipartisan managers of the resolution was the revelation that the Administration looked on the Jackson amendment with favour.

That they had to learn this interesting fact not from the White House but from the New York Times made things no better for them. Senator Scott, the Republican leader, also turned up on Senator Jackson's side. None of this prevented the Senate approving the treaty limiting antiballistic missiles, though it did threaten to throw some doubt on how much that treaty might mean. Formally speaking the Jackson amendment applied to the other document, the interim agreement on strategic offensive arms, debate on which was suspended for some days while the Senators tried to find out what was going on. One thing that had been going on was that Dr Kissinger, the man in the White House best qualified to grasp the danger of tampering with the Salt agreements, had been away in Paris. In the end, after rather complicated negotiations, Mr Jackson was induced to modify his amendment and the White House rewarded him with a public endorsement (instead of an indirect or tacit one) of the new version.

The most objectionable wording in his first version was deleted; it would have threatened the Russians with abrogation of the agreement if they deployed their weapons in a way that "endangered the survivability" of the American deterrent, even if they were acting within the terms of the agreement. Apart from any effect this might have on the Russians, it would also have implied a condemnation of the agreement itself; how Mr Nixon's advisers could have expected Congress

"I'm not covered by any agreement"

to vote both for the agreement and for the original Jackson amendment was never explained. Still standing, however, is an instruction to the President that, when a future treaty is negotiated to replace the interim agreement, he must insist on equality in strategic forces. Mr Jackson describes the American position under the present agreement as one of "sub-parity." But in effect, the survival of the Salt agreements was assured and the Senators were left to wrestle only with questions like the usefulness of adding redundant wording and the wisdom of tying themselves in 1972 to definitions that might make harder the task of getting a more substantial arms limitation treaty in 1976 or 1977.

Before coming to the treaties the Senate passed the defence procurement authorisation Act for the new fiscal year, a measure already approved by the House of Representatives, and passed it intact as the Armed Services Committee, by no means a pacifist body, recommended it. The sum approved for weapons procurement, research and development was \$20.5 billion out of a total defence budget which stands at \$85 billion at the moment. It is true that the \$20.5 billion is some \$2.75 billion less than

the Administration requested, but a substantial amount of the difference is made up of requests not denied but only deferred. Supplemental requests are going to be heavy in this fiscal year, to cover the effort to beat back the North Vietnamese offensive this spring, for example; seeing that more were on the way the Armed Services Committee declined to be rushed. With the same prospect in mind Senator McGovern tried last week to persuade the Senate to cut \$4 billion from the entire defence budget, leaving it to the executive branch to decide where the cut must fall; otherwise, he argued, a new President (if he were elected) would find himself committed to excessive defence spending in advance. But the Senate turned Mr McGovern down.

The Salt agreements produced one bonus, a reduction in requested funds for antiballistic missiles and installations to protect Minutemen sites. The Administration wants to transfer some of the savings to a new ABM installation to protect the capital, Washington, but the Senate put off a decision on that. The Salt agreements, or at least the strategic and diplomatic conclusions that are being drawn from them, are, however, responsible for the approaching upsurge in the costs of research, development and procurement. The crude quantitative comparisons of foot-pounds and megatons that worry Mr Jackson lose significance measured against some of the refinements which the agreements do not attempt to control and which the defence technologists have in mind.

Evidences of this trend are to be found in the existing requests for money for procurement, but more are coming. The authorisation bill contains funds to accelerate the creation of the new fleet of bigger, longer-range missile submarines (formerly called ULMS, now Trident) so that its deployment may start in 1978 instead of 1981: there are also plans to refine the accuracy of the missiles in the system to make them usable against individual military targets. While the advanced manned strategic bomber system (B-1) gets no money for production yet, funds for its development have increased substantially over last year and, as the Senate Armed Services Committee pointed out in its report, this is a force on which the Salt agreement "imposes no restriction."

President Nixon's rejection of the "assured destruction" doctrine which prevailed in the 1960s was made explicit in his last annual foreign policy report in February. Assuming a sur-

prise attack on the main American nuclear missile force, he pointed out that an American President ought not to be left with only the recourse of ordering a mass destruction of the attacker's centres of population. This was what Dr Kissinger had been saying for years. From a well-informed account in the New York Times last Saturday by its defence correspondent, Mr William Beecher, President Nixon's and Dr Kissinger's trains of thought have led to a considerable effort to make the American ability to conduct nuclear war more complex, more flexible, better-equipped and more exact.

As for the existing forces, the more accurate of the ballistic missile systems is naturally the land-based one with its range of accuracy of a quarter of a mile; but, according to Mr Beecher, the accuracy can be narrowed to a few hundred feet, so that the chance of destroying a military target thoroughly, without the risk of starting an indiscriminate attack on populations, can be multiplied several times. Like the Minuteman, the Poseidon (submarine) missile can be made more effective by multiplying its explosive force at a given size, perhaps by a factor of four. But there is also a possibility of making it more accurate by a system which would correct its trajectory during flight. There is a possible "cruise missile" not unlike the V-1 of the second world war, but flying farther and lower, and a possible manoeuvrable warhead which could dodge the antiballistic opposition.

Few people in Washington suppose that technical excellence or strategic ingenuity can restore any total American predominance in world strategy. The idea is, rather, to recover a reasonable power of choice and independence of the possible aberrations of others.

ELECTION '72

Saved by Shriver?

Mr Sargent Shriver seems an ideal substitute for Senator Eagleton as Mr McGovern's vice-presidential running-mate—so ideal that it is hard to understand, now, why he was not chosen in the first place, at Miami Beach, a miserable (for the Democrats) month ago. Like the unfortunate Mr Eagleton, but unlike the many other Democrats who were approached then, and again last week, Mr Shriver has

Agnew's challenger: Shriver

always been ready to accept the job. He has never held an elective office before and so has no past voting record to embarrass him; but he has been active in Democratic politics for many years and has served the last two Democratic Presidents in administrative posts.

He began by organising the Peace Corps for President Kennedy, one of the most satisfactory government projects for a long time and one of the most popular with Congress. It sent young Americans overseas to help developing countries and these people, now older, and natural McGovernites, are expected to work hard for their old boss in the coming campaign. Then Mr Shriver took over the poverty programme from President Johnson; less successful here, maybe inevitably so, he did come in contact through this work with mayors and city officials all across the country. Many of the Democrats among them have been alienated by the McGovernites' cavalier treatment of the old politicians, but they like Mr Shriver and he understands their problems. In particular, he has close contacts in Chicago, where he was a prominent citizen before going into government; it looks as if he, and Mr McGovern's own conciliatory efforts, may bring Mayor Daley round to backing his party's presidential candidates. Finally, Mr Shriver was President Johnson's ambassador to France; this, combined with his experience in the Peace Corps, means that he has a more practical knowledge of foreign affairs than Mr McGovern and his staff.

Mr Shriver, 56 years old, a Roman Catholic and a liberal, has other assets which Mr McGovern lacks: a new

political face, a witty touch, a down-to-earth approach. He is an energetic spokesman for idealism but of the unsophisticated kind that traditional Democrats understand. And above all his wife is a Kennedy sister; a political strength herself, she also brings to her husband some of the aura which surrounds her family, particularly where Democratic voters are concerned. This and his own business connections have also given rise to hopes that Mr Shriver may bring in some of the money that the McGovern campaign needs so desperately. Fund-raising came to a complete halt while Senator Eagleton and his psychiatric troubles were being disposed of.

The Democratic National Committee, nominating Mr Shriver with relief and almost unanimously on Tuesday, obviously thought that he was the right choice, bridging the gap between the old and the new politics that opened up so dangerously at Miami Beach. Mr McGovern's campaign is off to a fresh and enthusiastic start and he is now free to concentrate on the real issue: the alternative to President Nixon that he himself offers to the voters and, even more striking, the alternative which Mr Shriver offers to Vice President Agnew.

Whose economy?

For the first, delayed broadside of his election campaign, Senator McGovern chose as his target the handling of the economy, though he admits that he is no economist. That no doubt explains why he accused President Nixon of "throwing almost 5m Americans out of work"; the official increase in unemployment since Mr Nixon took over is just under 2m, as the accompanying Democratic "white paper" on Nixonomics makes clear. Nevertheless Senator McGovern was fully justified in zeroing in on joblessness. The proportion of the labour force which is out of work stands at 5.5 per cent, compared with 3.5 per cent in 1969, although in June there was a heartening fall from the nearly 6 per cent at which the figure had stuck for over a year and a half; the July rate, which was unchanged, suggested that this was no mere statistical fluke.

More broadly, it is Mr McGovern's theme that the Republicans have presided over "giveaways to the big corporations and take-aways from the average taxpayer." The "calamity" to the average man or woman included a loss of thousands of dollars of poten-

Foreign trade

tial income while the economy stagnated and a horrifying rise in food prices over the four years of Mr Nixon's Presidency. The white paper takes a longer, gleeful look at the failure of the President's first plan to root out inflation by reining in economic growth and at the overnight reversal of his policies just a year ago with the introduction of his measures of August 15th. And the wage and price controls which followed, Mr McGovern charges, have been weighted against the wage-earner and in favour of big business. With profits rising so sharply this year, this general charge of unfairness must be taken seriously, in political terms. But some of the other debating points made in the white paper show a lack of economic sophistication. It is hard to believe, for example, that the distinguished economists among Senator McGovern's senior advisers agreed to suggest that the overdue devaluation of the dollar was a blow at the American economy.

"Politics of desperation" is what Mr Nixon's campaign manager called the Democrats' white paper; from the White House the view is much sunnier. The economy is at last expanding rapidly, while the fall in the rate of inflation—to 2.9 per cent during the past year compared with 6 per cent a year when Mr Nixon took office—is pushing real earnings up. The number of jobs is 2.4m greater than it was a year ago and people are beginning to spend much more freely. The motor car industry has been a particular beneficiary of the new economic policies.

Some of these developments, it is admitted, might have taken place without wage and price controls; the rate of inflation was already slowing down a year ago. And there are some threatening clouds about. Last month's spurt in wholesale farm and food prices (an astonishing 22 per cent at annual rates) is one of them, although food prices are notoriously volatile. Another is the deficit in international trade, put at \$3.3 billion in the first six months

of 1972 compared with \$2.1 billion in the whole of 1971. For the whole of this year it could well exceed \$4 billion and recent efforts to persuade the Japanese and the Canadians to reduce their trade surpluses with the United States have borne little fruit. But in the end dollar devaluation may bring its reward.

Rotten cops

It is an old excuse that, while there may be a few corrupt policemen, this does not make a corrupt police force. But now, after two years of investigations and over \$500,000 spent, the Knapp Commission has confirmed, what many people have suspected, that the root of the trouble in New York City is that there are not only numerous dishonest policemen but that prosecutors and judges also turn a blind eye. It is in fact difficult to be honest in New York and almost impossible to reveal, or prove, that bribes have been taken.

Because the present law enforcement authorities cannot be trusted to do the job alone the commission's recommendations called for the creation of a new and independent agency under a special deputy attorney general to investigate and prosecute those who are involved in corruption at all levels. The commission has also recommended that many of the temptations and opportunities for dishonesty should be removed from the path of the police. For example, laws against some types of gambling and against the sale of goods on Sunday should be abolished and other regulations, such as those which govern hotels and restaurants, should become the responsibility of other agencies in the city. Various administrative changes in the police force itself have also been suggested, along with the recommendation that its head should be given more power to act against corrupt policemen.

New York City is used to these sort of investigations. But this time there are some hopeful signs that the commission's work may be more permanent than the crimes that it reveals. It is no longer a few wayward individuals who have been exposed but the whole system of criminal justice. Furthermore the mayor, Mr John Lindsay, and the commissioner of police, Mr Patrick Murphy, are behind the drive to clean up the city; in the past the men who have held these positions have usually been the ones to come under investigation. It was Mr Lindsay who actually appointed the Knapp Commission

although, as the commissioners point out, it was only after much prodding that he finally responded to complaints.

A great deal will now depend on how the governor of the State of New York, Mr Nelson Rockefeller, responds to the commission's report. It is he who will have to decide whether to establish the special agency. His attitude and that of the legislature may well depend on how persuasive the members of the commission are in the defence of their own report. Moreover, the City of New York does not like the state to interfere in its own affairs. Just to legalise gambling alone will be a formidable task and the Knapp Commission hardly touches on the problems of narcotics and homosexuality. It admits that in the case of prostitution, another area where bribery is rife, it is unable to recommend a better method of control than the one used at present. Much will also depend on how the police themselves take the report. The patrol force is already at its lowest level in four years and the head of the patrolmen's association has criticised the Knapp findings on the grounds that many of them are based on the testimony of "pimps, prostitutes, perjurers, rogue cops and other self-confessed criminals." The city's five district attorneys have also registered their objections, particularly to the proposal that a new state official should be appointed over their heads.

Crossed wire-tap

The trial of Dr Daniel Ellsberg and Mr Anthony Russo for turning over to the press much of a secret study of the Vietnam war (the so-called Pentagon papers) seems virtually certain not to take place until October. It may be postponed for many months after that. It may never take place at all. And the dilemma is entirely of the Justice Department's own making. Just before the trial was about to begin a fortnight ago, government prosecutors revealed to the judge that federal agents had inadvertently listened, through a "foreign intelligence" wire-tap, to a conversation of one of the defence's 16 lawyers and consultants. The conversation, they said, had nothing to do with the case and should be disregarded; the judge, having read the transcript, agreed.

Defence lawyers insisted, however, that they must see the transcript to assure themselves of its irrelevance and, when an appeals court upheld the judge, they flew from Los Angeles to Yakima, Washington, to get a stay from

Ellsberg, Russo: trial delayed

Justice Douglas, there on holiday; this stay, the first ever recorded in a criminal case when the jury had already been chosen, enabled them to appeal to the Supreme Court. The Court, now on holiday, does not return until October and the prosecution pointed out that the jury was due to be disbanded before then. To empanel a new jury might subject the defendants to double jeopardy and let them go free. The Department of Justice asked the Court, therefore, to break into its recess for the second time this summer to consider the appeal. But in a sharp snub, the Justices refused unanimously to do the department's bidding. So this week the judge in Los Angeles ordered the jury to remain in waiting.

In October, of course, the Court may refuse to hear the case, thus leaving the lower court's decision standing and allowing the trial to proceed. But if it does hear it, a decision would be months coming; by that time Senator McGovern might be installed in the White House and able to withdraw the charges of conspiracy and espionage. Several novel issues will confront the Justices if they accept the case. A defendant's right to see transcripts of illegal wire-taps is established, but does this constitutional right extend to his lawyers' conversations with third parties? And are "foreign intelligence" wire-taps illegal without a court warrant? Recently the Court ruled against "national security" wire-taps (involving suspected American subversives) without authorisation.

Of course the Justice Department could cut all these knots by offering the disputed transcript to the defence lawyers, but it says that it will not. In a number of recent cases the department has dropped charges rather than reveal the targets of its wire-taps. In

the Ellsberg case, it is not a foreign embassy may Mr Leonard Boudin, defence council, handles Chile as well as Cuba.

Taxing head

Since the Supreme Court April that airport "head constitutional, such taxes favour rapidly with local authorities as a means of users of airports provide revenues for operating nance; since 1970 the government has provided developing and improving the rest of the money has by the local taxpayers, actually travelled by air is a federal tax on airport taxes, so common are new to America; have appeared (seven airports have adopted the h to 100 more are considered have not been welcomed passengers or airlines.

Philadelphia's six-week considered extreme in method—has provided for a new debate on airport taxes. Most head taxes consist levy on departing passengers. Philadelphia's version differed was placed on incoming going travellers. Flights at a number of airports employees, the delegates under the Pennsylvania to demand a supplement time as high as 11 per cent all passengers bound for—and cope with their passengers took the city to July 21st the arrival fee be an unconstitutional with interstate travel promptly raised the de \$3 and the airlines are against this as well, on to collect and transport would "create monuments".

The airlines object to collector and their relief public have suffered a delayed flights and raise are all for more money improving the facilities they would like it to federal government. I found locally the air forced to pay higher local existing fees were negotiated and are now unrealistic.

The mushrooming of

in particular the furore surrounding Philadelphia's charge, has spurred Congress to action. In the House of Representatives an 18-month moratorium on the head tax has been proposed while the funding issue is studied; in the Senate a more comprehensive bill is being offered, outlawing the head tax and increasing the federal government's financial contribution to airport costs and to the new security measures against hijacking. Local authorities much prefer the Senate proposal, emphasising that the House bill would provide no alternative financial help while the moratorium on the head tax was in effect.

Status quo state

Perhaps the much-discussed revolt against the property tax does not go very deep. Certainly last month in New Jersey, the state with the highest property tax a head in the country, few people showed the slightest enthusiasm for a near-model proposal to cut the property tax (akin to British rates) by 40 per cent. Governor Cahill wanted to introduce a mildly progressive income tax (New Jersey is the only major state never to have adopted an income tax) and to levy a low, statewide tax on property. The proceeds would have enabled the state to pay the full costs of public assistance and also to shoulder the expenses of the schools, evening out the wide financial disparities which exist today between one school district and another. Governor Cahill is a progressive Republican and he has a strong legislative leader in Mr Richard de Korte, but they could get only nine Republicans to join 14 Democrats in supporting the income tax bill. It was defeated by a stunning vote of 52 to 23.

The chief victims are New Jersey's grimy, decaying towns and the multitudes of poor and underprivileged people who live in them. The costs of education and public assistance bear heavily on the cities, whose main source of income is the property tax, already about a quarter higher than it is in the state as a whole. With rates so heavy many businesses and better-off people have left for the suburbs. More will leave next year if property taxes have to go up again, as seems likely. Even so, Newark, for example, is expected to declare itself bankrupt.

Understandably, if short-sightedly, suburbanites, whose taxes would have risen a bit under the governor's plan,

jibbed. Cynically the state trade union federation ranged itself with the governor's enemies; many trade unionists are comfortably off. Strangely, many representatives of urban areas voted against the income tax, saying that their constituents would not favour any bill which had the word tax in it. Yet if the Supreme Court upholds lower court decisions (one from New Jersey) that the dependence of the schools upon the property tax is unconstitutional (since it means that children in poor areas are discriminated against), this recalcitrant state, like the rest, will have to swallow tax reform.

ELECTION '72

Outside parties

Right up to the last moment members of the American party hoped that Governor George Wallace would head their campaign. He had to tell them firmly over the telephone that he was in no physical condition to be their leader before his loyalists finally stopped pushing his name forward at the party convention last week. In an ironic twist of fate the day that the governor finally bowed off this year's political stage was the day that Mr Arthur Bremer was found guilty of shooting Mr Wallace and three others at a political rally in May. After a trial which lasted only five days Mr Bremer was declared sane and sentenced to 63 years in prison.

Without Mr Wallace the American party is a shadow of its former self. Four years ago when he made his bid for the White House the fore-runner of the present party gave him 13 per cent of the popular vote. Now under the guidance of Mr John Schmitz, its 1972 nominee for the Presidency, the new organisation which was founded in 1969 will give few politicians sleepless nights. The Republicans may pause just long enough to acknowledge that the demise of the American party will probably bring them in many of the votes that went to Mr Wallace in 1968 and the Democrats to regret that there is no strong third party to syphon off support from the Republicans.

The advent of the new leader to replace Mr Wallace may subtly change the colour of the party. Mr Wallace came from the southern, conservative Democratic faction. Until last week Mr Schmitz was a conserva-

America the beautiful

tive Republican. For the past two years he has been a Representative to Congress from California. But this year even his right-wing constituents, who are very proud of the fact that theirs is Mr Nixon's home district, decided that they could no longer tolerate his criticism of the President and chose another standard-bearer. Both Mr Schmitz and his running mate are members of the John Birch Society and may therefore deter many of the old supporters who were attracted by the populist image that Mr Wallace built up for the party. The new candidates have certainly a long way to go if they are to run a national campaign. It is doubtful whether they have enough time or enough organisation to get on the ballot in many states.

The other small party at the opposite end of the political spectrum, the People's party, is at least hoping to get on the ballot in over 30 states. But the party's ranks have been depleted somewhat since the nomination of Mr George McGovern as the Democrats' presidential candidate. Many former supporters of the People's party find that Mr McGovern is radical enough for them. But Dr Spock, the pediatrician and anti-war crusader who has now been upgraded from the party's provisional nominee to its permanent candidate for President, thinks that there is much more to be said than Mr McGovern will be allowed to say by the Democrats. The People's party wants the withdrawal of all American forces from abroad, free medical care, a guaranteed minimum income of \$6,500 for a family of four and the legalisation of abortion and marijuana.

Books

L'Etat, c'est . . .

THE GOVERNMENT AND POLITICS OF FRANCE, VOLUME I: INSTITUTIONS AND PARTIES

By Dorothy Pickles.

Methuen. 446 pages. £4 cloth, £2 paperback.

THE FRENCH DEMOCRATIC LEFT, 1963-1969

By Frank L. Wilson.

Stanford University Press; London: Oxford University Press. 258 pages. £4.25.

Mrs Dorothy Pickles has never been backward in criticising the French when they have strayed from the paths of government that she thinks desirable. But no one has ever denied that she is a redoubtable expert on French politics. There will be general rejoicing that she has revised her somewhat laconic work on the Fifth Republic and extended it into two volumes. The language in which she feels obliged to cast her writings is, however, irritating. There is a discipline called political science which usefully condenses other people's theories into a readable, if jargon-ridden, digest. But this is not Mrs Pickles's concern here, and it is a pity that she should write in the dialect of a specialisation.

Mrs Pickles is an historian, and a very good one. The question she is asking is whether contemporary France is notably different, in political matters, from the France which existed some time ago. Probably because of the traditional methods of university political science departments, she finds it necessary to begin her study by examining the constitution. So she asks first, in what ways the present constitution resembles its predecessors; and secondly, whether the 1958 constitution reaffirmed the 1789 Declaration of the Rights of Man. But it is a legend to believe that one should begin any examination of a political culture by examining constitutional arrangements. For example, Mrs Pickles answers her first question by discovering a resemblance between the present and past constitutions in their inability to create a general political consensus. That exemplifies the inversion of cause

and effect that can be created by the methods of political science. Conversely, it is misleading to say, as Mrs Pickles does, that French political crises usually lead to constitutional crises.

It would be more natural to reflect, for example, on the fact that the present minister of national education, M. Fontanet, is the fourteenth minister to hold this post since June, 1958. If one asks why it is that French ministers of education find it difficult to hold their posts for long, or perhaps rather why it is that under the Fifth Republic so many of these ministers have not been members of the reigning majority, one is unlikely to find the answer in any constitutional text. Fortunately, Mrs Pickles moves on from her discussion of the constitution to a more revealing consideration of political realities.

She makes clear her belief that it is the existence of a powerful and disciplined gaullist party that is mainly responsible for the transformation of the political system. But one of Mrs Pickles's constant tendencies is to stress the divisions and the difficulties which exist within all French political groups. She probably ascribes undue importance to the dissidents among the gaullists and the Communists (and she clearly did not foresee any agreement between Communists and Socialists). Professor Wilson, of Iowa, does see an overall tendency towards the formation of catch-all parties in western Europe. He is curious as to why the French left has shown such reluctance to share in this movement. In a thoughtful, speculative book, which does not show the same deep knowledge as Mrs Pickles's but is an interesting combination of appraisal and detail, he stresses the unusual force of political ideology in France. He, presumably, did not smile with disbelief when M. Mitterrand recently declared that the Socialists and Communists had formed an alliance not simply to get votes, but in order that they might together attack capitalism. He goes on to lament the failure of the French left to produce far-sighted and capable leaders like Harold Wilson; that might provoke

smiles elsewhere; and there could be surprises in store for him.

The Communist party is now vital in French political life. But neither of these writers quite recognises the fact. Mrs Pickles cannot altogether understand how anyone can be a communist, and Professor Wilson sees the Communist party merely as the obstacle to the depolarisation of politics and the formation of a catch-all party of the left. Yet it is the appeal of the Communists and, perhaps more important still, the force of anti-communism that require analysis today. Has the French Communist party changed? Has the French church? Is it true to say that "l'église a fait du progrès"? These questions remain open; they seem to resist the assaults of the most knowledgeable and up-to-date writers.

The careerage

LORD ON THE BOARD

By Andrew Roth.

Parliamentary Profiles. 834 pages. £3.60.

Mr Andrew Roth has compiled a thoroughly useful series of books on the business background of MPs. No one who even skims through his new work of reference could fail to become aware of that, since the illustrative material consists largely of enthusiastic press cuttings about them. Sadly, this latest effort—to give the peerage the same treatment—is not up to standard.

The peerage is that much more impenetrable than the House of Commons. It is not so much that it is bigger, though there are over 1,000 peers to 630 MPs—and beyond that there are the ramifications of peers'

Roth's table of contents

titled families. (Mr Roth includes a somewhat arbitrary selection of courtesy-titled sons and heirs.) It is partly that the structure of prestige, the strange titles and offices of the aristocracy, are rather harder to weigh up than mere vulgar finance. Mr Roth may not, for example, know quite what to make of the hereditary office of Lord Great Chamberlain; but down it goes, in the right-hand column which lists peers' interests and directorships.

But it is most of all because while a large number of peers conduct their affairs (or other people's) in the full glare of national publicity, others stay out of the newspapers and London as much as possible—and this distinction does not coincide with that between the wealthy and the impoverished. So Mr Roth can tell us a lot about the members of the peerage; about the Mancrofts, Sieffs, Leverhulmes and even the Vestey of this world; he can tell us about the bongoplayer, the Christmas tree farmhand, the showmen peers and the ex-MPs; but he is not so good on the country gentlemen peers sitting quietly, but probably lucratively, on their rolling acres. The value of peers' estates, ranging from unsaleable bog to prime development land, is obviously hard to calculate; in many cases Mr Roth does not even know the acreage. He has tried to estimate the peerage's total acreage by the decidedly dubious expedient of calculating the average—just over 17,000 acres—of the 3.2m acres he knows to be owned by 184 peers, and adding this on for each of another 146 peers he knows own land but does not know how much.

Some of the statistics in his introduction are quite entertaining; they express the divide between the older creations and the new. Only a tenth of the peers who are the seventh holders of their titles hold directorships; a third of new creations are so equipped. But Mr Roth is sometimes almost disarmingly naive, as when he finds it "striking" that the top six stately home-openers are peers, or when he discusses the historical absorption of the most alien of candidates into a seemingly homogeneous peerage. In his introduction Mr Roth talks seriously about the limited attention paid to peers airing their views in the Lords; but his book does not tell us which in fact do attend, or even which have taken up their seats.

There is, still, a lot of extremely interesting information in this book: sometimes two pages of directorships and shareholdings to a peer. Mr Roth

has been collecting the information for 10 years. The presentation is poor, but it would be churlish to complain about that. The book is remarkably cheap, and it is more important that it should be up-to-date than that it should be well finished. Additions run to 100 pages at the end of the book. Addenda are as inevitable as minor errors in a field where Mr Roth is working without the co-operation of most of his subjects. But it is hard to see why many of the additions were not in the main body of the text. The late Viscount Astor, for example, died a pretty well-publicised death as long ago as 1966; yet he still appears, with a string of directorships, in the main text. Peers created as long ago as 1968 (Lord Balogh and Lord Hartwell for example) only appear among additions. The entries on the Queen and the Prince of Wales are only adequate, though Prince Philip gets full treatment. If this were the first of Mr Roth's efforts to trace the strings of ownership and wealth to a particular category of privileged Britons, one would be delighted with his originality and persistence. As it is, one can only regret that they have not created something slightly more coherent.

Going Dutch

NO PEACE BEYOND THE LINE

By Carl and Roberta Bridenbaugh.
Oxford University Press. 462 pages.
£5.75.

Caribbean history has still not been fully written up, and this book by the Bridenbaughs covers a particularly interesting period. For one thing, it was for the English a time of unique territorial expansion. There was a twelvefold increase in territory from 1624 to 1690. (The most important acquisition was Jamaica, gained in 1655.) The possessions that came to Britain from France in the next century were, by comparison, of little importance. For another, it was a time of great expansion in wealth. This came from tobacco, cotton and indigo, then with the sugar and negro slaves that were to set the pattern of West Indian society. This book is full of interesting sidelights, which makes it doubly frustrating not to be told what happened to the native Caribs whom the English displaced. The last glimpse the Bridenbaughs give, in the 1680s, is of them still making hit-and-run raids on the English from their dugout canoes.

The authors make much of the "incompleteness" of white society and

Blueprint for an indigo factory

the negroes' astonishing adaptability. Before 1650, the vast majority of white emigrants were indentured. They paid for their voyage out with several—usually five—years of bondage. When this time was up, few could afford any land to set themselves up; many sold themselves back into servitude. From about 1660 the white population of the islands declined; few brought their families with them, disease took an alarming toll and the flow of fresh emigrants slowed as English life became more settled after the civil war. Many spread to the growing number of English islands. By contrast, the blacks from West Africa adapted well to the climate and the backbreaking work in the sugar fields. Only negroes and the upper crust white planters enjoyed a full family life. This book concludes that "it is clear as early as 1690 that the sun of the white men was setting and that time was ultimately with the black men."

The title refers to the continual state of war west of the Azores between the European powers. The Spanish, in particular, wanted no interlopers in their New World. But there was astonishing, though unofficial, Anglo-Dutch co-operation. English planters were helped with Dutch credit and technical advice on the introduction of tobacco and sugar. The Dutch self-interest in this was their virtual monopoly of shipping to and from Europe—at least until the English Navigation Acts of the later part of the century restricted the colonies' trade to English ships. This bumped up prices for the English settlers who continued, illegally, to deal with the Dutch. To add to the settlers' annoyance with the mother country, slave trade monopolies were granted by Charles II—first to the Royal Adventurers and then to the Royal African

Company. Dutch interlopers could easily undercut their prices, and did so. If England had had the power to enforce the Navigation Acts strictly, it might have had a West Indian revolt on its hands a century before the American revolution.

A petty people?

THE ANGLO-IRISH

By Terence de Vere White.
Gollancz. 293 pages. £4.

Anglo-Irish is a term of hopeless imprecision. It is used nowadays to describe Irish people who, by virtue of their English education, social class, accent or Protestantism regard themselves as apart from the mainstream of Irish life. Their primary loyalty has historically been to the British Empire rather than the Irish Republic, whose public life they consider beneath them. Nothing in the English social register corresponds to this distinction between the Anglo-Irish and the "real Irish." It defies rational sociological categorisation. It is compounded of class, religion and race, but is an indefinable mix of the three. Nobody would describe Sean MacStiofain as Anglo-Irish, despite his English father.

Mr Terence de Vere White is the Proust of Dublin life. On his own testimony he is the descendant of Georgian half-mounted gentlemen, socially a Protestant, confessionally a Catholic; he is both Anglo-Irish and a lover of Ireland. His novels and biographies abound in clever insights. He has a keen sense of the ridiculous (which he says is an Irish quality) and his wit is spiced by slight condescension—though he is usually wary enough to put his more patronising observations into the mouths of others. As a writer, he is better geared to the sprint rather than the marathon.

In this book, he traces the Anglo-Irish back to the English Protestant landowning Ascendancy which was established after the defeat of King James and his Irish Catholic followers in 1691. The Ascendancy presided over the elegance of Georgian Dublin. "We are no petty people, we are one of the great stocks of Europe," W. B. Yeats once told the Irish Senate, "We are the people of Burke; we are the people of Grattan; we are the people of Swift. . . ." In the nineteenth century things changed a little. Irish Catholics who got on joined the gentry and became Anglo-Irish in manner and outlook. Middle-class Protestant society in Dublin remained tight and very loyalist and looked down on its

Catholic social peers. Trinity College was this society's citadel; Provost Mahaffy was its most spectacular spokesman and Carson its last political champion.

This book is really a series of pen portraits of Anglo-Irishmen—Swift, Wolfe Tone, Fitzgibbon, Butt, Mahaffy, Wilde, Yeats and others. (Throughout, Yeats and Gogarty take the rap for ideas above their station.) Then there are more representative figures; an ex-army officer from King's County who was burnt out in the Troubles and retired to Shropshire to write memoirs and reflections, and a wine merchant in Dublin—a friend of the author's—who carried on after independence as if nothing had changed. It is an entertaining volume, so far as it goes. It does not purport to be a study in depth and is more concerned with the embroidery of life than the substance. Yet there is much of interest and value. There is a fine chapter on Thomas Drummond, who was a sort of Willie Whitelaw of the 1830s. He attempted to impose British standards of government on the Protestant Ascendancy and gave Ireland free elementary education 30 years before it came in England. Had there been more of his ilk, the Union might have worked.

The main message is that the Anglo-Irish, ever since their eighteenth-century heyday, have failed Ireland. A brilliant few have given them a false aura and romance. The people of Yeats and Synge were mainly philistines more interested in horses; the people of Burke had no political vision; the people of Grattan and Horace Plunkett had little patriotism for Ireland. Two archetypes of the Anglo-Irish emerge: the feckless hard-riding country gentleman and the tight-lipped urban money-changer, both with an unfashionable colonial mentality. It is little wonder that most of them failed to weather the storm and play a part in the new Ireland. Yet for all their weaknesses, they would have given style and diversity to the drab provincial life which "the risen people" have espoused in 50 years of self-government. As always, Ireland itself was the loser.

Black and blue

POLICE POWER AND BLACK PEOPLE

By Derek Humphry.
Panther. 240 pages. 40p.

The first third of Mr Humphry's book makes the statement that large sections of the black population of Britain

fear and distrust the police, and that it can be shown with well-documented case histories that some have very good reason to do so. But what leads the police to act, or react, as they do? Do the attitudes of black people themselves play a part? Can cures be found in identifying the weak points of the policing system?

Mr Humphry has a conscientious shot at these questions. If the effect is bitty, and the list of remedies familiar, that is not altogether his fault (though he suffers from the journalist's failing of thinking in short bursts of print). Some of his material gathered from talking to individual policemen is fascinating, and his own experience of court reporting stands him in good stead. The policemen he spoke to seemed to find their jobs lonely, physically and emotionally exhausting and socially isolating.

Many police constables, especially in the inner cities where family men do not want to live, are in their early 20s—yet with almost no training in this aspect of their work they have to deal with some very complicated social situations (a point brought out in Mr John Lambert's pioneering study of the Birmingham police and race relations). Experience is thin because of high

Minorities are always conspicuous

wastage. Mr Humphry suggests that policemen rely on a crude typecasting of people and approach them accordingly, and that this system breaks down when they meet people of other races. If they have only one or two stereotypes for blacks, and on top of this misread the signals, a West Indian who, for instance, seems to a policeman to be "berserk" may in fact be terrified out of his wits. Equally, a black youngster may overreact to the heavy hand on the shoulder. The British police compare very favourably with those in almost every other country; but this begs the question, which a book of this kind cannot be expected to answer, of whether the British police are using tougher methods generally in certain situations—especially those where they meet or fear crowd violence.

There is a sense of harassment in some black areas largely because of the comparatively new police stop-and-search powers under the Dangerous Drugs Act. Youth clubs and "black power" meetings often attract heavy policing. Black militants use nasty rhetoric about the police and it is a deplorable fashion; but police efforts to sort out the real thugs among them could be intensified.

When he has listed the more promising ideas about police training, complaints procedures and so on, and pointed out some failures in police-community experiments, Mr Humphry gets tired. He hands over the last section of the book to "the black view" from his friend and former collaborator, Gus John. Mr John is an experienced social researcher of the grassroots type, but the light he has shed elsewhere—on, for instance, the family backgrounds of young black offenders—does not enter here. Instead,

in fashionable rhetoric, he voices the despair and disgust of the black intellectual, and as good as says that Mr Humphry need not have bothered to write his book at all.

History is bunk

DOCKERS: THE IMPACT OF INDUSTRIAL CHANGE

By David F. Wilson.
Fontana. 336 pages. 60p.

More haste, less scholarship, is generally true of topical books rushed out while interest in some crisis is still alive. This is perhaps an exception. Labour relations in the docks are labyrinthine. But here they are explained simply without over-simplification. Historical roots of discontent are traced sympathetically but without too much emotion. The text is liberally but not indiscriminately sprinkled with statistics. This book will make a useful work of reference.

But Mr David Wilson is misguided about the central issue in the current crisis: job security. The dockers' fears on this score are perhaps inevitable, given the historical background of foremen who each day would "pick and choose the slaves with wanton brutality as one throws scraps to hungry wolves," to quote Ben Tillett, the fiery dock leader of Victorian times. But the dockers' conditions have improved enormously, even since 1967, and they are now being offered between £30 and £40 a week by employers until retirement (whether there is work for them or not), as recommended in the Aldington-Jones report, and severance payments of up to £4,000 if they leave the industry voluntarily. They are a new industrial aristocracy, granted monopoly rights equivalent to those of a medieval craft union.

The issue was clearly stated by Mr George Cattell, of the Department of Employment, in a brave speech two years ago:

Are we seriously to preserve a kind of closed shop for the sons of mechanical conveyor operators, for truck drivers, button pushers, systems analysts and container controllers, merely because their ancestors were registered dockers? Why not registration for the rest of the people who are employed in the ports and, if for them, then why not for the railwaymen, coal miners, steel workers, post office employees and countless others?

As Mr David Wilson points out, the Labour government consistently bought off the dockers, rather than set a limit to his power. That is what is happening now, with the Government supporting measures to extend the dockers' monopoly to areas outside dockland. Mr Wilson cites legal evidence that these inland jobs are just as much dock work as that on the quayside. But that must not obscure the fact that any monopoly reduces the common rights of men to do whatever work they want, and of employers to hire whomsoever they wish.

Trial by jurists

SHAKESPEARE AND THE LAWYERS

By O. Hood Phillips.
Methuen. 224 pages. £3.

The author is professor of jurisprudence at Birmingham university; Shakespeare studies are therefore somewhat out of the mainstream of his duties, but he is not the first lawyer to be fascinated by the wealth of legal allusions in Shakespeare's writings. Nearly two-thirds of his plays, states Professor Hood Phillips, have one or more trial scenes; at least 20 out of 154 sonnets contain legal figures of speech. An enormous amount of effort has been expended, principally by American lawyers, on the issue of whether Shakespeare himself had a legal training—Professor Hood Phillips does not find the evidence conclusive. Considering that, as he says, Shakespeare's references to lawyers are with only one exception uncomplimentary, it is a little hard to see why the legal profession should be so anxious to claim him.

But its enthusiasm continues unabated; there are endless juridical discussions of his court scenes and his judgments (including such flights of fancy as the consideration of an imaginary appeal by Shylock). No less a lawyer than Lord Denning once quoted Shakespeare (on Ophelia's suicide) in arguing an insurance case—apparently

without avail. Leading text writers on the law of evidence have, says Professor Hood Phillips, cited with approval the proposition in "Othello" that what a person has been heard to say while talking in his sleep seems not to be admissible in evidence against him. This book is an enjoyable and scholarly survey of Shakespeare's attitude to the law and lawyers' attitudes to Shakespeare: brief, readable and just interestingly off-beat.

Concealed confessional

TENNYSON

By Christopher Ricks.
Macmillan. 359 pages. £3.95.

To find Tennyson included in a series entitled "Masters of World Literature" is somewhat surprising. What kind of impact has he ever made outside the English-speaking countries? And for that matter, what impact does his poetry make today, even in his native land? The literary gifts cultivated by Tennyson were singularly well adapted to please the reading public of his own time. Leaving aside the concessions which he deliberately made to Victorian taste, the mellifluous fluency of his verse, his command of poignant pathos and his sensitive and exact rendering of visual details were all achievements that evoked instant appreciation. Such poetic qualities are now less esteemed than wit (which Tennyson conspicuously lacked) and candour (which he only intermittently revealed).

Professor Ricks does respond sympathetically to Tennyson's poetry. He has edited the recently published annotated edition of the complete poetic works, and in this workmanlike

study he combines critical commentary with an account of Tennyson's life. For the biography he has been able to draw on papers only recently made accessible. Whereas the memoirs by the poet's son and grandson were, understandably, coloured by caution (especially as regards the devotion to Arthur Hallam), Professor Ricks has constructed his portrait with detachment. A tragic family background, congenital melancholia, personal losses and setbacks of all kinds combined in the formation of Alfred Tennyson's creative spirit. Had he lived today, he might have been one of those confessional poets who, from their experience of near-madness, produce poems that are the alternative to screams of agony. But Tennyson did not live in an age of literary violence. The traumatic suffering which he endured and mastered is concealed by the gentlemanly mask of his verse. Dignity and restraint are at a discount nowadays, so that a considerable imaginative effort has to be made to respond to what Tennyson had to say.

Art catalogue

The British Antiques Yearbook, 1972-73 compiled by Marcelle d'Argy Smith and Philip Wilson (David and Charles, £3.50). Mr Gerald Reitlinger introduces this year's directory and guide to London dealers with a review of prices at art sales in 1971. Impressionist paintings failed to keep up with the general pace, but the darlings of 1970, Indian and Persian miniatures, Victorian and nineteenth-century national schools outside France held on to their new levels. And every kind of Chinese pottery and porcelain rose "faster and more indiscriminately."

Coins for Investment by Joseph Edmundson (W. H. Allen, £2.25). Collectors of almost anything are always advised to buy perfect examples. With coins it matters, too, how they are handled and stored. This book is a simple guide to such down-to-earth information and to British coins of the past 200 years. It also warns that coins do not appreciate automatically: you can still buy the Churchill crown of 1965 at its face value. Mr Edmundson's concluding advice, after looking at current trends, is to go for British tokens and banknotes.

English Furniture: an illustrated handbook by Maurice Tomlin (Faber, £9) is not cheap. But you get more for

your money than size (only 160 pages of text to support the many illustrations) might suggest. This guide to English furniture from the middle ages to the present is just what it sets out to be: comprehensive and compact. It is also a surprisingly good read. Mr Tomlin, who works with furniture at the Victoria and Albert Museum, knows how to mix and match his facts about design, construction and the social and economic background. Multi-purpose furniture, popular today because of space, was equally so in the middle ages because furniture was scarce. So beds became day-sofas; a chest served as a seat, a table or, occasionally, a bed; and some ingenious chairs could be turned into tables. What's new today, then? That may be hard to answer, but at least Mr Tomlin concludes that furniture design in Britain is probably better now than at any time since the eighteenth century.

The Sculpture of Verrocchio by Charles Seymour (Studio Vista, £4.60). In the later half of the quattrocento Florentine sculpture was dominated by the figure of Verrocchio. His prolific studio nurtured one genius and several admirable artists, and for liveliness and sheer beauty of detail his work has few rivals. But history has not been kind to Verrocchio, as Professor Seymour points out in this well-illustrated general critique. Verrocchio's brilliance has lived on always in the shadow of both his pupil, Leonardo da Vinci, and his great sculptural predecessor, Donatello. The author takes pains to place Verrocchio squarely in his rightful historical context and to emphasise that, far from being a slavish follower of Donatello, he was a "none-too-respectful rival."

The Etchings of the Tiepolos by Aldo Rizzi (Phaidon, £18.50). This complete edition of the etchings of Giovanni Battista Tiepolo, the last of the great Venetian decorators, and of his two sons, Giovanni Domenico and Lorenzo, is the first modern treatment of the subject. It represents considerable research by the author, which has led him to make some changes in attributions. There has always been the temptation to attribute to Giovanni Domenico works not thought good enough for his father, and to Lorenzo works not thought good enough for his brother. Some prints are published here for the first time and the book (printed in Italy) is of high quality; there are over 250 reproductions.

Tennyson: a gentlemanly mask

Business Brief

Where should steel Q-bop next?

The British Steel Corporation will be expected to earn an average return of 8% on its capital in the four years to 1976-77, the Government announced on Wednesday. This is the first financial target to be fixed for the corporation since the industry was renationalised.

The Government sweetened the pill by also allowing a transfer to the reserves of £150m borrowed from the National Loans Fund, which will help to wipe the slate clean for common market entry. But no decision is expected on the BSC's investment proposals to 1980 for some time.

If previous reviews of the steel industry's plans are anything to go by, it could take the Government several months to make up its mind—although Britain's entry into the EEC on January 1st may hurry things a bit. What is at stake is the size of the British steel industry, a subject on which BSC's chairman, Lord Melchett, and the Minister for Industry, Mr Tom Boardman, are known to differ. The only point of agreement, established when a joint industry-Whitehall steering group reported last May, is the size of the British market for finished steel in 1980: the figure is 33m-34m metric ingot tons, based on the expectation of an average growth rate for the British economy of 3½% a year.

The major point of difference is that BSC reckons on keeping its share of the British steel market, which would mean a capacity of somewhere around 31m ingot tons by 1980. Then it also expects increased export business (currently running at the equivalent of about 5m ingot tons). Together, these would push capacity up to at least 36m tons—a 50% jump on BSC's 1970 capacity, and right at the upper end of the 28m-36m tons range agreed by the joint steering group. The Government, on the other hand, reckons there will be an increase

in imports with no compensating rise in exports, and that BSC therefore needs a capacity of no more than 28m ingot tons by 1980.

BSC's present maximum capacity of 27m ingot tons includes all the so-called heritage developments, as well as the old plants that need to be closed down. The heritage schemes are those plants whose expansion and modernisation were already in hand when the corporation was set up, and they include Port Talbot, Llanwern in South Wales, Lackenby on Teesside and Ravenscraig in Scotland. When this second round of expansion has been completed, and all the obsolete plant shut (which is bound to have happened by 1980, whatever the political opposition), BSC will have a capacity close to 28m ingot tons. If the Government view prevails, expansion will stop there: the growing gap between domestic supply and demand will be filled by ever-increasing imports.

Expansion plans

But Lord Melchett has already said that the corporation should aim for the upper end of the capacity range. His plans centre on a single major scheme at Redcar, on Teesside, where a new blast furnace is already being put in to supply nearby Lackenby, alongside a deepwater port. In its first phase, the Redcar scheme will be limited to a maximum of 6m ingot tons, mainly because of the Government's lack of enthusiasm and despite the pressure by BSC's chief executive, Dr Monty Finniston, for more. Eventually the corporation hopes to expand Redcar to a full 10m tons, which is the maximum it considers feasible for a single plant in Europe (although the Japanese seem able to manage more). The rest of the scheme covers the planned growth of the heritage schemes, and one or two minor developments in Scotland and Lanca-

It'll be a hard grind to profitability

shire to pacify vociferous local lobbies.

BSC's most recent annual report, for 1971-72, which was published two weeks ago, does go some way to justify the Government's gloom. It shows that the corporation has lost some of its share of the domestic market during this depressed part of the demand cycle. Export sales did go up, but prices were low. And the jump in imports was not all because of the efforts of the Japanese. European steelmen claim that BSC, the largest steelmaker in Europe, has depressed European prices by keeping its own down. Some even argue that real selling prices (as opposed to list prices) can be lower in Europe than in Britain.

Until EEC entry, BSC is statutorily required to sell in Britain at list prices, while community steelmakers can drop theirs to compete with cheaper sources. Now that demand for steel is picking up again, the difference between British and common market actual selling prices is bound to narrow. There is also no question that BSC's prices will have to go up. The French steel industry has made it clear that it would like to see British prices rise by 15%. This would be too much in one go, but there will almost certainly be an increase of 5-7% before January 1st, and possibly another one after Britain's entry.

Under EEC rules, BSC will be allowed to cut prices to compete with imported steel, but this will further reduce its earnings. Its loss of £68m in 1971-72 was less than the forecast £100m but was pretty hefty none the less. Forecast losses for the

current year are £70m, though with any luck the corporation should get away with less than that. However, community steelmakers will not take kindly to any further government subsidies for British steel.

The BSC management claims that it will be able to cope very well with the extra competition, provided that it is left to run its own business. What has irked it most in the past is the way the Government has interfered with pricing decisions. The halving of a proposed price increase in April last year (to 7%) meant that BSC missed the peak of demand while continental steelmen were able to cash in and make respectable profits.

But EEC entry is not going to mean just more commercial freedom. It will also mean less protection. In future, when the British steel industry protests about major users such as the motor industry importing cheaper steel, the Government will no longer be able to lend even tacit support. And BSC may no longer be able to offer special terms to steel stockholders who have agreed to take only BSC's steel.

A new study of world demand for steel to 1985 by the International Iron and Steel Institute* has few encouraging things to say about British steel's medium term prospects. Over the 15 years to 1975, demand in Britain is forecast to grow by an average of 1.6% a year, compared with a world average (which, admittedly, includes all the developing countries as well as the high

*Projection 85. International Iron and Steel Institute, Brussels, BF3,500.

fliers such as Japan) of around 5.3%. For the years 1975-80 the report forecasts a spurt in British demand (averaging 3.4% a year), which brings the total demand forecast for the end of the decade to 32.90m ingot tons, near enough to the official British view not to ruffle any feathers.

At the centre of the IISI's analysis is a "steel intensity curve." This relates a country's gnp to the volume of steel used (defined as "apparent consumption," which means production plus imports less exports), and plots this against gnp per head. The IISI has performed this exercise for 16 broad areas, from the highly developed to the almost totally non-industrialised, and comes up with the following ground rules:

- (1) Steel intensity does not start growing until gross national income of \$300 a head (at 1963 prices) is reached, which suggests that this is the minimum income for economic take-off.
- (2) After this point, steel intensity increases more rapidly than gnp because of high investment levels associated with normal industrialisation.
- (3) In the next phase, industrial growth slows down, and steel intensity no longer rises so quickly.
- (4) Once the economy moves on to more sophisticated projects and to expanding the service sector, steel intensity starts to decline, usually at income levels of around \$2,500 a head (1963 prices).

750kg per head

In highly industrialised countries consumption may stabilise at around 750kg per head, but there will be exceptions. Japan is likely to reach that level by 1975, well before its

time. And Britain's low economic growth is expected to keep consumption down to only 482kg a head by 1975, and around 550kg by the end of the decade—by which time the present common market countries will have reached 640kg a head.

The report predicts that in the longer term the proportion of total demand taken up by such established markets as North America and western Europe will decline, partly because of continued Japanese growth but primarily because demand will be greater from developing countries, and especially from mainland China. China and North Korea consumed only 22kg per head in 1970; the IISI expects this to have risen to 79kg by 1985. The question raised for established steel producers is where to expand future production. If production is in a developing country, local governments will probably want a major share in the project, and possibly take over completely in due course. There may also be a political problem over lost job opportunities because plants are not being expanded back home. Because of the long time-lags in commissioning steel plants, these questions are no longer academic. A major steelworks takes at least five years to build, without allowing for planning time. Its minimum life is then 10 years at the very least.

There is a lesson for the British involvement in the EEC in all this. The IISI forecasts a growth in steel demand of 4.6% a year to 1985 for the existing common market members, which is much more than it forecasts for Britain. So this country should get itself

organised for operating in that market, and not plan purely on the basis of home market forecasts. Britain does have a number of advantages over the rest of western Europe, among them deepwater harbours and even a pool of skilled labour. Steelmakers from within the present EEC have somehow got to be involved in the next round of British investment—and may be more willing for this if BSC starts making a profit. The members of the European Coal and Steel Community now accept that they should work more closely together. Their latest report on investment trends expresses concern over future effects of the current investment boom in the community, and suggests that new capacity should be staggered.

Q-bop

There is no technical reason why new investment in Britain should be held up. The chances of any technological somersaults that would make existing plants obsolete (as the basic oxygen furnace did with open-hearth plants) seem remote. The most likely course will be the development of existing techniques, improving their yield and productivity. Blast furnaces will get bigger, helped by the use of partly reduced ore and by injecting fuel (oil or natural gas) into the blast gas. New coking processes will allow cheaper coal to be used. Continuous casting will take over from the traditional ingot casting almost everywhere.

The most exciting new development in view is a variation on the basic oxygen steel-making process. In the present version, a lance sends a jet of

high pressure pure oxygen into the vessel containing the molten iron, reducing the impurities in the iron. This, in itself, is a revolution on earlier methods: the Japanese, who have perfected the process, now turn out more than 250 tons of steel in an average of 35 minutes, compared with at least six hours for this volume with the old open-hearth process. But the newest refinement, called Q-bop, may do it even faster. The technique is to blow the oxygen through the bottom of the vessel. Initial difficulties with unduly fast corrosion of the steelmaking vessels in Q-bop now seem to have been overcome. When the process has been proved, it will be possible to modify existing basic oxygen furnaces at relatively low cost. Q-bop furnaces can use a greater proportion of scrap than conventional oxygen steelplants, which may be bad news for the mini-mills now being planned in various parts of Britain (one, at Shcerness, is already working): since they depend on scrap for their input, they could be starved out of existence.

The outlook for steel

BUSINESS

Holiday handouts

The Government ended the session handing out millions of pounds all round industry except to the National Coal Board ; what it got from the Prime Minister was a deserved lemon

The National Coal Board's chairman, Mr Derek Ezra, was on holiday when the news came that the Prime Minister had turned down the plan for the future of the coal industry on which Mr Ezra and the Department of Trade and Industry had been working for the past six months, and which was to have been announced with a great flourish before Parliament broke up for the holidays, along with all the Government's other delayed announcements about steel, atomic energy, Foulness airport, Rolls-Royce, the shipyards and the rest. In the past few days, the Government has given away well over £350m, and, in the past few months, well over £700m to every industry with a begging bowl.

The coal plan had been agreed with the Department of Trade and Industry and MPs had already picked up hints that it involved more surgery than the Government had been ready to admit at the end of the miners' strike in the spring. Mr Edwin Wainwright asked in the Commons on Monday about rumours that at least 50 pits were earmarked for closure and got the usual soft answer. But it appears that the cuts were not enough for the Prime Minister. He asked for something more drastic and Mr Ezra is back in his office trying to work it out.

It may have been growing confirmation of estimates that huge quantities of oil exist in the North Sea that stiffened Mr Heath's resolve to serve notice on the miners and other unions that the price of pushing wages too high is fewer jobs. The Government is already committed to spending around £200m on rescuing the coal board after the strike and around 100 of the present 280 pits now working would need to be shut if coal were ever to pay its way again. But Mr Heath had to call a halt somewhere, anyway. Mr Heath has flung money around industry like everyone's favourite holiday uncle until the message has been well learned : if an industry's losses are big enough, the Government can be relied on not only to rescue it but afterwards to provide the captive customers as well. A social purpose can be served by subsidising jobs in a declining industry in order to keep men in work until something better can be found for them to do. But when orders are channelled into those industries to guarantee the jobs in perpetuity, there is a danger of distorting the pattern of a country's develop-

ment, and this is something that the present Government has come perilously close to doing.

Its huge write-off of £150m on the steel industry's capital—far from the first writing-down of debt the industry has had—can be accepted, at a pinch, as a deck-clearing operation before common market entry (see page 50). And on the railways, given another £60m only a few days ago to subsidise jobs at excessively high wages, the Government has the peculiarly difficult problem of an industry in which no one is quite sure where the money is being lost. It has too many men, but it also has too big a network for the quality of service it is able to offer in competition with road transport. One thing the railways need is a period of experiment to see if such ideas as turning the track into high-speed bus lanes look as good in practice as they appear on paper. The Great Central Line into Marylebone would be an ideal stretch on which to try this out. Beeching-type cuts are possible on freight services and on some other lines, and sharp fare increases for commuters would reduce the railway deficit considerably. But the situation really calls either for something more imaginatively constructive, or for a drastic closing of the railway system.

The Government does not oblige industry to use the railways, or passengers to travel by train. But there is no disputing the pressure that it puts on customers of some other subsidised industries. It is unlikely that the British Overseas Airways Corporation would have signed its order for five Concorde had the Government not told it to, or that it would have done so with such little fuss if the Government had not sweetened the instruction with the offer of £200m additional capital to pay for the aircraft. This week, the two air corporations between them ordered 12 Tristars from Lockheed, six of which are for relatively early delivery for British European Airways, and six to come much later, and probably for what are now BOAC routes. At the same time, Rolls-Royce was given another £31m to bring the Tristar's engines up to the same sort of performance that the competing McDonnell-Douglas DC10 is getting now out of its American engines.

The orders are not as big as Lockheed and Rolls-Royce would have liked, but they are bigger, and certainly

... and

More to come

The Government is still playing down the size of the oil reserves in the North Sea, but the official estimates are beginning to burst at the seams

What is likely to be the biggest discovery of them all is yet to come. It will probably occur in the very promising structure that lies east of the Shetlands in blocks 211/21 and 211/26. Shell/Esso paid £21m for the rights to block 211/21 and is now drilling in block 211/26. This work should be completed before bad weather sets in towards the end of September. It is not the same structure as the find announced this week in the nearby, and supposedly less promising, Brent field.

The output of the Brent field is estimated at 15m tons of oil a year, although it will not be brought into production until at least 1975. This would equal 15 per cent of Britain's present oil consumption. In practice, the 15m tons is likely to be a conservative figure. Shell-Esso confirmed the discovery at a much earlier stage in the testing procedure than is usual in an attempt to scotch stock market rumours that the field was likely to have an output of 50m tons a year, which had been driving up Shell's share price. The stock market's rumours were a bit muddled, but they may only have been premature and in one sense too conservative. Much of the City apparently thought the Brent field was the same as blocks 211/21 and 211/26, which the oil companies privately call Cormorant. If the output of the Brent field proves to be larger than 15m tons a year, and if the Cormorant field is larger still, their combined output might well be over 50m tons a year. Shell may have to learn to live with a rising share price.

Shell's partner, Esso, could have something exciting to announce on its own in a few weeks. By itself, it is drilling a well in block 206/12, west of the Shetlands: the first and so far the only well to be drilled in this area. As in the Cormorant area, bad weather will stop drilling

Although the Brent field and the concession for which Shell/Esso paid £21m are close, they are not part of the same structure. Oil in one does not automatically mean oil in the other, but it will shake the geologists if the concession proves dry

in a month or two. In both areas, the companies would not have started unless they thought they saw good prospects that the wells could be completed during the present season. Esso's well could prove significant even if commercial quantities of oil are not found. Lesser amounts could still stimulate other companies to start drilling in the concessions they hold in the area.

The Government maintains that none of the discoveries announced so far, including the Brent field, calls for a revision of its official estimates of the oil reserves in the North Sea. According to this estimate, there are now sufficient reserves to make possible an annual production of 75m tons of oil by 1980 from the British sector of the North Sea. This is based on proven discoveries, and reasonable expectations of future discoveries inferred from copious seismic data. Any further proven discoveries will force the Government, however reluctantly, to revise its estimates upwards, bringing them more in line with the guesses of a potential annual 100m to 150m tons that have been floating around the oil industry for a long time. These are based on a combination of confidential information about some actual drillings and shrewd estimates of the seismic data. It will not be possible to play down the size of the North Sea fields much longer.

Key indicators: British economy

Retail trade

Jump of nearly 2% in volume of sales in June, with trade of durable goods shops particularly strong.

Consumer credit

New credit extended again high in June. Total debt outstanding at the end of the month, at £1,798m, was 28% up on a year ago. In July, HP sales of new cars were 18% up on last year, but sales of used cars fell 15%.

Profits Attributable to Ordinary Shareholders	5,398	4,703
Ordinary Dividends	4,227	3,758
Retentions	1,171	945

1971-1972

Profit before taxation amounted to £8,376,000, an increase of 19.6% over the previous year. The profit attributable to Ordinary Shareholders increased by 15% to £5,398,000.

Dividends were increased from 20% to 22½%.

Sales reached a record figure of £141,544,000. Despite this, stocks were again reduced from £19,339,000 to £18,534,000, and the number of persons employed was lower than in the previous year.

Six months later...

The food retailing business of Cater Bros. (Provisions) Ltd. has been brought into the Debenhams Group. This will provide a combined food turnover of

over £40,000,000 and form a sound base for future growth.

The first Scan Superstore has been opened at Nottingham, having a selling area of 65,000 sq. ft. of which one quarter is devoted to food.

In a further rationalisation of the organisation it has been announced that 15 small stores will close at the end of January, 1973.

Arrangements have been made for stores to accept the new 'Access' credit card, in addition to the well-known Barclaycard.

Current trading performance is very satisfactory confirming the already published forecast for the current financial year that profits before tax will exceed £10,500,000.

BUSINESS

Britain

Three against the storm

The predominant feeling in the docks is that the dockers are now likely to go back to work any time Mr Jack Jones, general secretary of the Transport and General Workers' Union, wants to put the question to them. Mr Jones is in a delicate position, and is not in a hurry to act. He has already come down from the mountain once, asked the dockers' delegates to go back to work, and been rebuffed. His prestige cannot risk another refusal. His other problem is that he promised to get concessions on container handling, and he cannot go to the dockers emptyhanded.

He would not be emptyhanded now. Whatever the reports to the contrary earlier this week, Lord Aldington, his co-chairman on the committee that so disastrously failed in its intention to buy off the threat of a national dock strike, has got agreements to employ dockers from most of the container firms he has approached. The three most conspicuous companies to hold out are Lord Vestey's Midland Cold Storage, Mr Bill Tonge's Hays Wharf, and Heaton's of Liverpool, which started the saga of

Industrial Relations Act prosecutions.

These three are unwilling to concede through honeyed persuasion what illegal picketing failed to budge them on: their right to employ whom they like, and on terms that are mutually agreed between themselves and their employees.

As for the bulk of dockers, there are signs that they would be happy to accept the guarantee of work until retirement they have been offered. With this offer, there is no need to use picketing to extend the monopoly of registered dockers. The overt purpose of the picketing is to ensure job security, and jobs are already secured. Many dockers would be happy to see the militants get on with the picketing while they went back to earning a living.

Doubts remain among the employers about how the guarantee of jobs for life is to be paid for. Committees in individual ports have been trying to work out the financing without much success. A rush of dockers to accept voluntary severance would end the problem, but the employers think this

is unlikely. So that leaves them with a large bill to fund. Many employers argue that as they were not consulted before the Aldington-Jones offer, which went well beyond anything they had authorised their negotiators to put up, was made to the dockers, they are not obliged to abide by it. It is unlikely that they will actually do this, but it gives an added incentive to go bankrupt, which some of them are quite close to anyway. One of the Mersey Companies employing 2,300 dockers announced on Wednesday that it was closing down next month, apparently because it was just tired of the whole business.

Ro-ros roll on

The number of ships idle in British ports rose by nearly 70 this week, to 643. The number of idle ships carrying food increased by 25 to 126. The figure for dockers still working remained roughly constant at 788. For those businessmen who wished to get goods away, or bring them in, the main hope was the ro-ro ships, on which lorries drive on and roll off the other end. This is an expanding trade, and the ports which do not employ registered dock workers specialise in it. It is fast, and some forwarders can beat air freight from Heathrow to Orly with it. They take the business at air freight rates but send it by lorry instead, and the customer is none the wiser.

Many ro-ro ports were open only for passengers and holidaymakers with their private cars this week (officially, at least), for fear of blacking. British Rail on the whole was fairly well off. Its men are members of the National Union of Railwaymen, not the TGWU. Elsewhere there were bits and pieces moving, fish at Fleetwood and grain at Goole, using "black" labour. Incoming oil is, broadly speaking, exempt from the effects of the strike, although some of the North Sea drilling rigs have had difficulties obtaining supplies.

Although the strike is aimed at getting work for registered dockers who work in ports that are part of the

It made a change when St Austell's men demonstrated against the dockers

Who handles the trade

National Dock Labour Scheme, many of the non-scheme ports were on strike, too. This included Felixstowe. But the Felixstowe dockers were showing signs of getting bored, and are expected to return to work next week even if their registered colleagues still refuse to. The issue of getting these non-scheme ports into the Dock Labour Scheme, which seemed so pressing a week ago, no longer seems quite so urgent.

Precious little damage so far

The dock strike will have to continue for at least another two weeks before it will have any significant impact on industry. So far the lack of damage has been remarkable. Large sections of manufacturing industry are in the middle of their summer holidays. Most big exporters or importers heeded early warnings of the strike back in May.

English China Clays, which was badly hit during the 1970 dock strike,

for several months. British Leyland's Austin-Morris division finished its holiday at the end of July, and soon announced that it was facing serious congestion. But if things get worse Leyland can divert production to the booming home market, where it still cannot meet demand.

Food supplies will not be in serious danger even if the strike lasts another month. There may be no bananas in the shops, and very few oranges and lemons; but plenty of other fruits and vegetables are being brought in daily on the roll-on, roll-off trucks. Even the Guernsey tomato growers managed to get much of their crop airlifted to Britain. As one Covent Garden manager commented: "The dockers could not have chosen a better time to strike." August is the peak month for home fruit, vegetables and other food.

Animal feed

Let them eat barley

The 100 chickens and 5m pigs that are intensively reared in Britain are likely to get plump less quickly over the next weeks of the dock strike. But there is no need for them to starve, as farmers fear. At a meeting on Wednesday with Mr James Prior, the Minister of Agriculture, farmers pressed the Government to use its emergency powers to clear the 250,000 tons of animal feedstuffs that are stocked, onshore, in warehouses around Britain's docks. Otherwise, the farmers warned, stocks will be exhausted by the middle of next week.

This is an exaggeration. The only feedstuffs that are urgently required are the proteins (like soyabean, fish-meal and linseed oil) which are added to the bulk feed of intensively-reared livestock. All these proteins need to be imported. There is a good week's supply still left in the country, another week's in dockland storage, and a third tied up in ships' holds.

Although some poultry firms are likely to kill an unusually large proportion of their stocks in the next weeks if there is no end to the strike in sight, few will cease production altogether. Many of them are welcoming the excuse to cut their stocks and push up the price of eggs, which has been bumping around at its lowest level for five years as massive surpluses have glutted the market.

Any shortage in cereal feedstuffs is already being dispelled as the harvest is being reaped. Although this year's

took care to build up stocks in overseas warehouses to prevent sales being lost. On Wednesday china clay workers marched through the streets of St Austell in Cornwall to protest at the strike, but they need not have worried too much. Distilleries producing Scotch whisky, Britain's second largest export, are now running out of space to store it. But stocks of Scotch in the biggest overseas market, America, will last

Nchanga Consolidated Copper Mines Limited

INCORPORATED IN THE REPUBLIC OF ZAMBIA

Extracts from the Statement by the Chairman Mr. D. C. Mulaisho

OPERATING RESULTS

Production: Finished copper production of 401 283 tonnes represents a slight increase on the rate for the fifteen months ended the 31st March 1971. Cobalt production for the period was 2 007 tonnes. Plant availability and performance remains good and there is every expectation that the target of 425 000 tonnes for the current financial year should be achieved. Lead and zinc production at Broken Hill was 82 882 tonnes.

Sales: Sales of copper for the year were 420 363 tonnes reflecting a satisfactory reduction in finished stocks in transit to and at African ports. Cobalt sales at 1 546 tonnes were once again well below production. The average revenue per tonne of copper was K767.

Total sales of lead and zinc for the year were 86 674 tonnes and the average revenue per tonne was K225.

Financial: Gross proceeds from the sale of metals were K348 million, and the net profit was K68.3 million. Unappropriated profit of K2.3 million was brought forward from 1971.

The board appropriated K30 million for capital expenditure and K0.12 million for preference share redemption and dividend. Ordinary dividends absorbed K36 million and a balance of K4.5 million was carried forward as unappropriated profit.

Capital expenditure totalled K42.2 million and K12.2 million of this was met by contractor finance and loans.

The Company was successful in raising a loan of K17.8 million from an international banking consortium, which together with contractor finance increased short and long term loans to K47 million compared with K25.2 million at 31st March 1971.

In addition, the Company has utilised contractor finance facilities amounting to K50 million and loan facilities of K24 million against the copper pipeline. These arrangements will be used to finance a substantial part of our capital expenditure programme on existing and new projects which will cost about K180 million over the next five years.

OPERATIONS

Rokana Division: The deepening of the main shaft at South Orebody is nearing completion. Development work between the Central sub-vertical and South Orebody is on schedule although poor ground conditions in some areas have impeded operations. Drilling results at Central-South Orebody have yielded very interesting results and there is every indication that there will be a major addition to ore reserves. A final assessment is awaited.

Construction of the gas collection plant and the third acid plant began in March, 1972. This project is designed to meet the rising demand for acid generated by increased tankhouse production over the next four years, principally from Chingola Division. Periodic current reversal is being installed in the Rokana tankhouse to raise throughput.

To assist in handling the increasing volume of production, the use of Copperbelt metallurgical plant has been maximised through toll arrangements with Roan Consolidated Mines Limited who are providing spare smelting and refining facilities on a temporary basis.

Bwana Mkubwa mine was reopened in May 1971 and is producing at its scheduled annual rate of 15 000 tonnes of copper.

Chingola Division: The second stage of deepening the underground mine is well advanced. No. 6 shaft was completed during the year and work on 'C' shaft is progressing well. Mining operations, both underground and in the open pits, have been satisfactory. The diversion of the Nchanga Stream by use of a tunnel borer was completed by the middle of 1972 and makes possible the mining of additional ore reserves.

The leach cementation plant was commissioned in October 1971. A number of teething problems were experienced but most of these have been overcome and production has improved: it is hoped to achieve the planned rate of 2 000 t.p.m. by September 1972. Stage II, including the solvent extraction plant and new tankhouse is on schedule. When completed—hopefully before the end of 1974—Stage II will produce 55 000 tonnes of copper a year.

Konkola Division: Shaft sinking programmes continue at No. 1 and 3 shafts but the water problem continues to restrict development and the expansion of production. A further increase in pumping capacity from 390 000 cubic metres to 620 000 cubic metres a day is planned. The significant increase of ore reserves from additional diamond drilling between the two shafts continues and grades show a slight increase.

Broken Hill Division: Plant performance was generally satisfactory. As anticipated the overhaul of the Imperial Smelting Furnace did not become necessary until March 1972 when it was shut down for six weeks.

Subject only to the results of final economic viability studies the board has decided to go ahead with the installation of Waelz kilns which will enable metallurgical operations to continue for some eight years after mining ceases in 1982 or thereabouts. The capital cost at approximately K22 million is much higher than preliminary estimates indicated but the scheme will add significantly to annual production and will recover approximately 500 000 tonnes of metal, principally from dump material, which is not treatable in existing plant. At present prices, the additional metal will realise more than K100 million thus contributing importantly to our country's foreign exchange reserves.

ZAMBIANISATION

Last year I emphasised the considerable importance which the Company attaches to Zambianisation. To give it increased impetus a new industry unit has been created with RCM and Mindeco, to co-ordinate Zambianisation, training and manpower planning. This will ensure that training facilities are fully utilised on an industry basis, that unnecessary duplication is eliminated, and that the optimum use is made of the skilled manpower available. Close liaison between the unit and the divisional training establishments has already been achieved.

CONCLUSION

Last year I drew attention to the need to contain and if possible reduce costs of production. At that time copper prices were about £470 per tonne. A year later costs have increased in spite of energetic efforts to control them, and the L.M.E. price has dropped to £420 per tonne. If our expectations of revival in the world economy are not realised, primary producers of copper may yet need to reassess production plans or consider collective action to induce price stability in the world copper market.

The prevailing level of prices is unsatisfactory and if the position remains unchanged for any length of time the case for concerted action by primary producers must become overwhelming. The long-term interests of the copper industry as a whole demand an assured supply of quality copper at realistic and stable prices that will offer reasonable incentives to both producer and consumer. The cost erosion of producer profit margins and continued low prices have largely undermined this requirement for the producer, for whom prospects in the short term are a matter of concern.

Lusaka, 17th July, 1972

Copies of this statement with the report and accounts are being posted to Preference Shareholders of the Company on or about 7th August, 1972, and copies will be obtainable from the London office of the Company at 40 Holborn Viaduct, EC1P 1AJ or from the office of the United Kingdom Transfer Secretaries, Charter Consolidated Limited, Kent House, Station Road, Ashford, Kent, from that date.

harvest is both poor and late, farmers are enjoying unusually good prices because of the strike. Barley is fetching up to £34 a ton; 20 per cent higher than the usual price for this time of year. Most animals can live, if not grow sleek, on barley feed.

Wages

Dustmen coming

Union leaders representing 900,000 local council workers will be putting in their claim for a 43 per cent rise early in September. Last year, they asked for 19 per cent. Their doubling-up is a direct consequence of the miners' and railwaymen's deals earlier in the year. The three unions that represent the council workers have drawn up a four-part plan. They want £4 on basic rates, a 35-hour week, a month's holiday plus two extra statutory holidays, and a threshold agreement. Granted in full, the rise in the wage bill would come to £250m a year, or 5p on the rates. The cost could be even higher if a threshold agreement is made.

Last year's settlement was worth 10 per cent. Traditionally, it sets the level for another 300,000 workers in gas, water and the health service. When the current deal runs out in November, there may well be another bout of selective strikes by dustmen and sewage workers. Glumly, some ministers are also expecting a murderous power strike later in the winter. The electricity workers remember that their go-slow in 1970-71 brought them the Wilberforce award of 22 per cent, and were disappointed by this year's peaceful settlement which they were told was worth only 7 per cent, although average earnings will in fact rise 12 per cent this year, thanks to hangovers from Wilberforce. For this year the electricity workers, like the miners, have already lodged a claim for another 40 per cent. Appetites grow with surrenders.

The building unions left their employers speechless this week by turning down an offer that would have increased minimum earnings by 44 per cent and boosted average earnings by over 26 per cent within 10 months. At first, the Union of Construction, Allied Trades and Technicians voted to accept the record offer. But there was a change of mind when its rival in the industry, the Transport and General Workers' Union, decided to reject it. Both unions are trying to outdo the other in militancy. The six-week-old

I'm in for 43 per cent

campaign of selective strikes continues with London builders voting on Thursday to come out altogether some time in the next two weeks. The building employers have made a tough rejoinder. Leaflets are being handed around building sites up and down the country, urging the men to ignore their unions and accept. An ultimatum to the unions is threatened, which would say that if there is no agreement within 48 hours, the offer will be withdrawn. Meanwhile 194,000 public service industrial workers are refusing to accept an offer of 7½ per cent from the Government.

That is the grim reality of what is happening in the country. On the fantasy level, the Prime Minister met Mr Vic Feather and others on Monday to talk about inflation. They all agreed to study the problem and meet again in six weeks. The headline in *The Times* said: "Downing Street delight at progress." The Confederation of British Industry said 150 of the 200 companies approached had undertaken to freeze prices until end-October.

Upper Clyde

Marathon's OK

The boilermakers tried to pull a fast one at the last minute, but on Monday agreement was reached between men and management on the future of the old John Brown yard of Upper Clyde Shipbuilders. Marathon Manufacturing, of Texas, which bought the yard to build oil rigs, insisted on £12m from the British Government and a promise of no strikes for four years

from the unions. There were professions of satisfaction all round when the unions, including Mr Jimmy Reid, the organiser of Clydebanks work-ins, consented to Marathon's terms. What happens next is another matter.

The agreement seemed to button up the Clyde, since the other three yards on the upper river—Govan, Linthouse and Scotstoun—are already taken care of in a new company, Govan Shipbuilders, which has been promised £35m by the Government and will take over from the liquidator in mid-September. Govan has orders for four ships from Kuwait and is expected to sign soon for more orders from a British owner. But the depressing thing is that Govan will not make money for years, if ever.

The men of the Upper Clyde must see that their long-term future, and that of their sons, lies in the lower reaches of the river. The economics of shipping dictate that large ships are needed. Even oil rigs are getting bigger, with ones the size of the Eiffel Tower needed for the North Sea: as oil prices rise, the incentive to explore for oil in deeper waters will increase.

The best possible news for British shipbuilders is that the Japanese transport ministry has decided to ban new construction of shipyards, except for three projects already under way. The decision reflects both the excess of worldwide shipyard capacity expected in 1975, and the blow to Japanese competitiveness from currency realignments. The Japanese fear that a further yen revaluation would wipe out their price advantage even in supertankers. Plans to accelerate productivity are under way, but by far the cheapest way to modernise, in the Japanese view, is to scrap the old yard and build a new one. The Europeans are unlikely to adopt that formula.

Productivity even in Japan's new yards is suffering from a shortage of orders. At Tsu shipyard, possibly the world's most modern and claimed to be capable of building seven supertankers a year, production is being cut back to 4½ ships a year. Another blow to the Japanese industry is that the cheap loans available for shipyard modernisation are to disappear from 1974.

Bank lending

Politics, not policy

Sir Leslie O'Brien, that straightforward governor of the Bank of England, denies that his arm has been twisted by

his political masters. But it is hard not to see the political overtones in his request to the banks on Monday to "make credit less readily available" to property companies and to individuals wanting a spin on the stock exchange. This specific qualitative, anti-cost-conscious directive really does not square with the assertion in the Bank of England's annual report, published only last month, that the essence of the Bank's new philosophy for credit control is to "allow banks more scope for competition and innovation by moving away from a system based on quantitative restrictions to a generalised method of control where the allocation of credit is determined primarily by its cost." It squares much more obviously with the fact that Mr Edward Heath wants to tell Mr Vic Feather, during their frequent conversations at Downing Street, that the Government is making things more difficult for those unpopular property and stock market speculators.

The economic excuse for this rather retrograde directive is that it will not really make much difference, and the politicians were getting very worried. Since the old brakes came off, credit has expanded very fast; and, particularly since May, competition for loanable funds has hotted up to bring an upward twist in interest rates. The politically unpalatable culmination of this was expected to be a rise in building society mortgage rates on Wednesday; it was delayed for a month, but is almost certain to come in September (by when the societies will know what is the composite rate of income tax they have to pay, which is important for assessing their costs). All this has happened during a period when a lion's share

of new lending has gone not to finance any upsurge in industrial investment but to investors in property and personal borrowers.

Now, according to Sir Leslie himself, the signs are that industrial borrowers are beginning to come forward. Although the bulk of last month's £350m rise in the ordinary loans of the London clearing banks again went to non-industrial borrowers, at least one clearer saw a 20 per cent jump in its lending to industry. The banks would in any case favour switching their loans to their bread-and-butter industrial customers as soon as these started to want to borrow again; they are more comfortable customers than property speculators at a time when property prices have gone to heights that may be too giddy. So Sir Leslie's directive may be rather like a request to a man who has just jumped out of a window to fall towards the ground.

Consumer boom

At long last

"Yes, they're spending; no, they're not." The debate over what people have done with their extra money has batted on like a ping-pong match ever since the budget. Now it has been resolved. Despite the terrible weather, retailers are plainly having a splendid summer.

July seemed even better than June. Department stores have been doing particularly well. While all tills are ringing more merrily, durable goods, particularly colour television sets, continue the star turns everywhere.

There is no sign of the usual summer pause as people go on holiday; and a surprising number of durables are being bought for cash over the counter. Furniture, carpets, curtains and everything else to do with the home are quoted on long delivery dates, often 10 or 12 months. It looks as if some householders who would have liked to move, but could not afford to, splashed out on feathering their old nest instead.

Official statistics are now catching up with the shopping boom. After a rise of 1.8 per cent in June, the index of the volume of retail trade was about 3 per cent above its level six months earlier. To the country's retailers this must seem an explosion. In the five years between 1966 and mid-1971 their turnover rose by about a third, but this represented an increase in the volume of business of only 5 per cent. The rise in real retail business in Britain since the mid-1960s has done little more than keep pace with the

natural growth in population in what is by far the largest period of consumer stagnation in any major industrial country since the war. No wonder Mr Tony Barber is every shopkeeper's friend.

Taxis

Fare thee well

The new deal for taxi users at Heathrow airport got off to a bad start on Monday when 200 drivers struck for two hours in protest against the few touts still trying to milk innocent foreigners of up to £15 in fares. The law says that taxis may now charge only metered fares from Heathrow for up to 20 miles within the Metropolitan Police district, as many drivers have been doing for some time. But the law says nothing about minicabs. Plain clothes detectives now lurk in wait for the touts, but the £400 in fines that some of the touts pay quite regularly are regarded by them as a form of licence fee to ply for hire. One of the taxi drivers' main complaints concerns the difference in regulations between licensed taxis and minicabs. There are about 8,500 licensed taxis in London, but probably more than 20,000 private-hire cars. The minicabs are often cheaper than taxis over anything other than short distances, but they are not allowed to solicit casual business. The licensed men also complain that their cabs can be called off the road immediately anyone considers them a risk, but anyone can ply in a minicab so long as it is properly insured (and some are not even that). Some of the cars used in minicab work are bought for a song and driven until they disintegrate.

The Royal Society for the Prevention of Accidents has asked several pertinent questions about minicabs: should the vehicles be tested beyond the ordinary Ministry of Transport standards for private cars, and should the drivers be tested more strictly than for an ordinary driving licence? The Home Office's committee on taxis recommended most of these things in 1970, but care is needed to see that the rules do not turn into an excuse to stamp out competition. Minicabs provide a service that the taxis sometimes cannot, or will not do, including a parcel delivery service in competition with the post office. Prices are high, but at least one company is prepared to pay £29 for a single trip to deliver computer print-outs between London and Manchester.

Bayer

VISIONA 3 - Ideas for the home of tomorrow from Bayer fibres and Bayer plastics

Growth with a solid foundation

Bayer AG declared dividend for 1971 is DM 239 million

This is the largest distribution made by any German stock corporation for 1971. In addition, DM 24 million was retained to strengthen the reserves.

Summary Report on 1971

At the Annual Meeting held in Cologne on 14 June 1972 it was resolved to

□ distribute a dividend of 13% for 1971, equalling DM 6.50 per share at a par value of DM 50

□ change the company's name to "Bayer Aktiengesellschaft"

The company's solid foundations have stood up to the economic strains of the past few years. Bayer group's world-wide sales showed an increase of some 7% which is in line with the general growth rate of the chemical industry. 82% of the company's consolidated sales were generated in Europe and North America, where 95% of its consolidated investments in plant facilities are located.

The company's affiliates outside Germany are contributing more and more to Bayer's consolidated growth. Their development assures the supply of large markets which otherwise might be affected by exchange risks. In 1971 the bulk of investments in plant facilities outside Germany were made by the following group companies:

Agfa-Gevaert Group, Baychem Corporation, New York, N.V. Bayer S.A., Antwerp, Bayer-Shell Isocyanates N.V., Antwerp, Sumitomo Bayer Urethane Co. Ltd., Osaka, Bayer Industrial S.A., Lima.

Research and Development

The advanced technological level in the chemical industry increasingly demands an effective utilization of resources available for research and development. Consequently, research and development work on current projects was channelled into more promising developments without, however, neglecting the long-term basic scientific research projects. Our principal aim is to develop new products within the shortest possible time. In view of the intense competition in all markets, economic success is more than ever dependent on new ideas, concepts and processes in the technical and commercial areas. Improved productivity is our basis for further economic progress.

Protecting the Environment

In 1971 Bayer invested DM 65 million in facilities for the prevention of air and water pollution. Operating costs of facilities of this type amounted to about DM 150 million. Additionally, Bayer is contributing DM 140 million to a purifying plant being built that will be used jointly by communal organizations and Bayer.

Outlook

Bayer AG (on a non-consolidated basis) plans to expend, up to 1976, a total of

DM 3 billion for new facilities and a further DM 600 million for investments in subsidiaries and affiliates. In this five-year period, its German companies plan to expend about DM 1.6 billion for plant facilities, and its foreign companies approximately DM 2.1 billion. Bayer AG's present sound financial condition indicates that these investment plans can be realized without difficulty.

Business has shown a healthy increase in the first part of 1972 and expectations now are that this year will see a 5 to 6% growth in sales. This sales increase should be paralleled by improved earnings.

British & Irish Subsidiaries of Bayer (Germany)

Bayer (U.K.) Ltd. is the holding company and is responsible for centralized administration and computer services for the following operating companies in the U.K.

In Portugal two new Sheraton Hotels open this fall.

Lisbon-Sheraton opens Sept. 1.

A fabulous new 30 storey Sheraton conveniently located near the centre of this cosmopolitan city. And 15 minutes from the international airport. 400 comfortable air conditioned guest rooms. Heated swimming pool. Health club and sauna. Rooftop restaurant, cocktail lounge and outdoor terrace with fabulous views of the city.

A ballroom and four other function rooms accommodating from 20 to 630 for meetings and banquets.

Memorable holidays in Portugal start aboard

Madeira-Sheraton opens Nov. 1.

Come to a sparkling resort Sheraton set high on a cliff overlooking the Bay of Funchal. 85 minutes by air from Lisbon. And minutes from the centre of the town and casino.

300 guest rooms, all with private balconies and terraces. Three swimming pools. Tennis and mini-golf. Portuguese speciality grill and bar. Cliff-edge night club with panoramic views.

Just one phone call makes it happen. So call. Or have your travel agent call for you.

In the United Kingdom, ask operator for Freefone 2067.

BUSINESS

International

Europe's mare nostrum

Brussels

Brussels is on holiday; the commission's offices are deserted and its telephones only partially-manned. When the Eurocrats return at the end of the month, their priority will be the EEC's Mediterranean policy. The immediate problem is that Britain has trade treaties with virtually all the Mediterranean countries, under which wines, citrus fruit, tomatoes and other fruit and vegetables now have freer access to Britain than to the Six. As equal access to all the EEC would hurt Italy and badly jolt the common agricultural policy, the obvious interim solution seemed to be the one suggested by Belgium: to maintain the status quo in Britain until a long-term formula has been worked out.

This has been vetoed by the French, who say that, since the new EEC has made trade treaties with north European non-members (ie, Efta), something on the same lines should be done for the south. They have seized on the treaty with Portugal, a member of Efta, as an argument for a similar deal with Spain. This is opposed so far by the Dutch. To sweeten the pill, the French propose that Israel should also be included—as well as all the Mediterranean countries that now have, or

want, preferential trade treaties with the EEC.

The Six have preferential agreements now with Greece, Turkey, Morocco, Tunisia and Malta; they aim specifically for eventual customs union with these countries. Similar treaties with Cyprus and Algeria are under negotiation. More limited agreements (smaller tariff cuts and covering only some products) are in force with Spain, Israel, Egypt and the Lebanon; now Jordan wants one too. Urged on by the French, the EEC would like to add all these countries to the free trade area that EEC and Efta are jointly about to create.

Paradoxically, although many of the existing preferential arrangements violate the rules of Gatt, a free trade area would not. However, its discriminatory impact on trade with America, for one, would be much greater. The Americans grumbled enough about the Efta deals, but at heart they recognised that it was out of the question for the former co-members of Efta to start building tariff barriers against each other; they could also take comfort that these deals did not apply to agriculture. The Americans will be furious as the EEC's

Si, señor, we're Europeans too

Mediterranean free trade policy takes shape, the more so as agriculture will figure strongly in it—and happens to be the one field where America can and does claim to be less protectionist.

Colour television

Sony and the old PALs act

Hamburg

The bitter shouting match in Germany between AEG-Telefunken and Japan's Sony corporation is the prelude to the long-heralded Japanese invasion of Europe's colour television market. It may also spell the end of phoney pricing in this market.

Retail prices of 25-26 inch colour televisions are around £300-£328 in Britain and continental Europe, compared with £244 in Washington. An 18-19 inch set costs about £240 in London, compared with anything between £109 and £191 in Washington. Admittedly, Britain, like most of western Europe, is using PAL, which is a more advanced version of the American NTSC. But the real explanation of the price differentials is that the

Penny plain, tuppence coloured doesn't hold here

PAL technology is patented by AEG-Telefunken. One of its licensees confirms that one of the conditions of the right to manufacture under licence is to observe strict rules about pricing in the European market. The suspicion is that all licensees are bound in the same way, except in Japan where prices are conspicuously lower.

European manufacturers justify their higher prices because they have shorter production runs and hence higher unit costs. They say, therefore, they should not be exposed to undercutting from American or Japanese manufacturers with longer runs. In the past two years this excuse has worn thinner and thinner, as demand in Europe has built up. And the high European prices are themselves the main reason why demand has not grown even faster.

The Japanese have developed a form of PAL technology of their own. They say it should permit them to market PAL-type sets in Europe without infringing AEG-Telefunken's patents, and some such sets have been sold in Switzerland and Britain. AEG-Telefunken replied by licensing Hitachi and Matsushita to manufacture PAL sets. At the end of May, portable colour sets from Sony appeared on the German market. AEG-Telefunken could take no immediate countersteps, as they had apparently come in via dealers in Holland and Switzerland. But last month it complained about them at talks with Sony about giving Sony a PAL licence. Sony denied that it had violated the German company's patent rights. Eight days later, it announced that it would market Sony sets in Germany from this month.

A war of words has erupted. AEG-Telefunken started proceedings for breach of patent rights. Sony proclaimed that the conditions for manufacturing under a PAL licence broke

anti-cartel laws of Germany, Japan and the common market. It protested to the German cartel office in Berlin. So did AEG-Telefunken. The responsible officials at the cartel office are on holiday, and those remaining have decided to take no action yet. Meanwhile German dealers handle Sony sets at the risk of being sued, until the legal smoke has cleared. But the writing is on the screen.

Air fares

£32 to New York

Yet another meeting was going on between governments at the end of this week to discuss what to do about air fares. Governments normally stay out of the rate-fixing business but they cannot shut their eyes any longer to the chaos developing on the North Atlantic, where one passenger in three now travels in a charter aircraft because scheduled fares are so preposterously out of line with what it actually costs to fly a modern jet. It is now possible for a small, independent operator like Mr Freddie Laker to submit a formal application as he did last week to operate a scheduled service to New York, using newly-bought, wide-bodied DC10s, for a one-way fare of £37 in summer and £32 in winter. The scheduled fare is £113 in summer, £93 in winter.

The British Civil Aviation Authority has to make up its mind what to do about Mr Laker's application which, price apart, goes against all the current ideas about how to meet charter competition. Seats on his flights will not be bookable, and tickets will not go on sale at the airport until six hours before take-off, raising horrendous prospects of queues. All the other schemes now gaining favour turn on cut-price tickets sold well in advance.

Just how far in advance is one of the main points of argument. It is unlikely to be less than two months, but some countries would like it to be as long as six. The idea is an invention of the British Overseas Airways Corporation, which has taken three years to gain anything approaching international acceptance as a sneaky way of getting today's charter travellers back into the scheduled jets. The present, much-flouted rule that all charter passengers have to be long-established members of the club that arranged the flight will then be dropped, and anyone who can raise the money to charter a jet will be free to do so and sell the seats to whomsoever he likes—which is very much what goes on now anyway.

Two points governments have still to settle are whether it should be possible to charter only part of a jet. And if the answer is yes, could this be part of a scheduled flight? If an airline has the equivalent of a full, 707-load of charter passengers and a half-empty 747 taking off on a scheduled flight at about the same time, it seems wasteful to put on two aircraft where one jumbo could comfortably do the job. That, anyway, is the argument of those airlines with surplus jumbo capacity. But not all of them have it, and—although it is done hourly on all the main European holiday routes—the have-nots are fighting this idea of mixing charter and scheduled passengers so hard that governments have been obliged to sit in and arbitrate. The much-abused International Air Transport Association's rate-fixing cartel has as good as collapsed. We will know by the autumn if governments on their own can do any better.

Gold

Giscard's way

The new French tactics on gold are coming into focus. France is not openly pressing for a major increase in the official price of monetary gold, as it was in gaullist days, nor even a minor one, as it was in the financial upheavals last year. But its tactics are designed to achieve the same end. This week French newspapers were happily quoting Signor Guido Carli, governor of the Italian central bank, saying that Italy has never argued for the complete demonetisation of gold.

Italy's reserves are 45 per cent in gold, formally valued at \$38 an ounce. For over a month Italy has been using dollars to support the lira and to settle its central banking debts, whereas the

Key indicators: world commodity prices

Malaysian marketing

The Malaysian government has proposed much stricter marketing arrangements for rubber in an attempt to move the price from its 20 year low. At 15p a kilo, and in the last months often lower, the price of rubber is putting a brake on Malaysia's otherwise booming economy. The government will supervise new plantings, provide a central marketing organisation for smallholders, and control exports.

rules of Europe's "snake-in-the-tunnel" say that members should intervene only in community currencies and settle their debts in a package of assets according to the proportion in their reserves. If the rules of the game had not been bent, Italy would have had to part with a sizeable chunk of gold.

In return for this assistance from its partners, Italy could now go along with France's ideas on gold. These are that the Europeans should adopt a higher price for monetary gold for settlements among themselves. This would allow Italy to return to the strict rules of the Emu (European monetary union), as it would be paying its debts partly in gold, but valued at some much higher figure.

Italy's predicament has come as a godsend to the French, who argue that if only Europe's central banks can be persuaded to adopt a higher gold price for Emu settlements, neither Mr Paul Volcker nor anybody else in the American Treasury will be able to hold out for long against a higher official American gold price. Optimistically a figure of \$70 an ounce, for Europe, was suggested in the gold fever of last week. But this week the free gold price is close to \$67. There is now a counter-rumour circulating in Washington about plans for a new version of the old gold pool to drive the free market price down closer to \$38 an ounce.

Singapore

Chitty, chitty...

Singapore

Singapore wants to become the financial capital of Asia. Whether the latest financial news from the island will advance this objective is an interesting question. What it does show is the inventiveness of its financiers.

Two chit fund management companies have had their assets impounded and their books seized by the financial authorities, including the biggest chit fund group in Singapore. And what are chit funds? They are a device, which only became legal in Singapore in 1971, to match up borrowers and lenders of funds, in a way that smacks of the nineteenth-century forerunners of building societies and friendly societies in Britain.

A chit fund management company organises groups of rich individuals or firms to contribute, say, \$10 a month for a year each. It then auctions the right to have immediate use of the

money. Whichever of the participants puts in the highest bid takes all the contributions flowing in from his group over the year. At the end of the year he will have to stump up the agreed auction price, which will then be split among his group of participants to give them the turn they expected, less an agreed charge to the managers: just compound interest really, dressed up to look a bit like gambling, but in theory ensuring that the funds go to the man or firm able and willing to pay the highest price for their use.

By law, chit fund companies must make compulsory deposits with the authorities and allow their books to be examined by a commissioner of chit funds. They must not themselves bid for money in competition with subscribers. Thus the authorities did foresee one obvious danger: a crisis of liquidity that would leave borrowers unable to repay their loans to chit fund companies, except by bidding for other chit fund money, and so on in a dangerous spiral. But these precautions were not enough. The two biggest companies—Gemini and Stallion—were placed in the official receiver's hands last week. Twenty of the remaining 30 or so others are believed to be under official pressure to increase the deposits they have lodged with the authorities. Stallion, according to an official affidavit, itself had bid successfully, if illegally, for £1m (although its total assets were only £3.8m) in order to meet maturing chit fund loans on which the subscribers had defaulted. Back to first financial principles.

Jamaica

Manley's bananas

Kingston

Those thousands of tons of Jamaican bananas dumped in the Atlantic because of Britain's dock strike were bad news for one of the island's two traditional currency earners. Since there are also doubts about sugar it was an unhappy week. Jamaica could do without dock strikes just now. Unemployment is running at 22 per cent of the working population; investment and tourism are both falling off. Mr Michael Manley, whose government has been in office only five months, cancelled this week's £10,000 party planned to celebrate the tenth anniversary of independence.

France and the rest of the Six are to "take to heart" the problems of West Indian sugar producers when

the present Commonwealth agreements expire in 1974. But no one quite knows what that means and Jamaica lives in fear of the Six's sugar beet lobbies. There is no expansion of sugar planting. Even the once-encouraging tourist trade is suffering from outbreaks of violent crime and an upsurge in black militancy: white visitors and the tourist industry are the targets.

The Manley government has imposed an indefinite freeze on all prices except local farm products, and has commissioned a study of the outflow of foreign exchange with the implied suggestion of controls to follow. There has been no tightening up yet on tax concessions to the numerous foreign-owned companies but there are to be controls on the ownership of property by non-residents and by foreign companies. A commission has been set up to study the bauxite industry.

This goes nothing like as far as the compulsory government "participation" in the aluminium companies' bauxite mines which has been imposed in Guyana, which has been copied from other countries' partial nationalisation of their oil industries. Even so, it marks a step back from Jamaica's traditional tolerance towards the bauxite producers. Officially, the government is merely looking for ways of getting more income from bauxite without taking over the mines, but foreign investors will not be encouraged by it. The flow of foreign investment has already been falling off as the island's growth rate has slumped from an annual 2 per cent to nil last year. What has been seen of Mr Manley's economic policies so far has only increased these misgivings.

Business schools

Goodbye, America

Most European business schools set up in the 1960s were a direct attempt to imitate the Americans. The argument was that American business was successful because it had good managers, and it had good managers because it had business schools. In a set of papers just published by the Organisation for Economic Co-operation and Development, Professor Dean Berry, head of INSEAD (The European Institute of Business Administration at Fontainebleau) makes another slashing attack on this fading philosophy. He argues that management education in elite American schools is dying, and that European schools could be heading for the graveyard

Triumph Investment Trust

Preliminary Results

Record Profits • Increased Dividend Bonus Issue Proposed

Summary of results for the years ended 31st March

	1972 £'000	1971 £'000
Group net profits before taxation	4427	3374
Tax: U.K.	1226	914
Overseas	557	542
Group profit after tax	2644	1456
First interim dividend of 12% (1971 equivalent to 10%)	547	362
Second interim dividend of 21% (1971 Final equivalent to 17.5%)	970	749
Retained profits are	1127	807

The group profit after tax of £2,644,000 shown above represents earnings of 57.5% on the issued share capital of £4,593,688 at 31st March, 1972 (1970/71 adjusted earnings 44.8%).

The Directors have declared a second interim dividend of 21% in lieu of final, payable on 31st August, 1972 to Shareholders on the Register on 11th August, 1972. The total dividends for the year are 33% (1971: 27.5%).

The Directors also propose a 1 for 1 capitalisation issue to be made on 19th September, 1972 to Shareholders on the register on 11th August, 1972.

The 1971 figures shown above have been adjusted where appropriate to take account of the 1 for 5 capitalisation issue made in August, 1971.

The Annual General Meeting, is expected to be held on the 19th September.

Triumph Investment Trust Limited • Pinners Hall Austin Friars London EC2N 2HR

within five years, if they are not careful. Europe, he says, has drawn all the wrong lessons from the early success of the schools like Harvard. Business schools do not produce businessmen; they can only teach the language and style of business, and cannot substitute for experience. Business education cannot be bought on the cheap using American research. Europeans must do their own, because European society is quite different. American management education is dying because it is being sucked into academic respectability. This is because the American dream is fading, and youth no longer holds business in such respect. Indeed, an American businessman complained in another paper that he expected graduates from business schools to "have an understanding of the American free enterprise system," but found "that most American young people are weak on this score."

An increasing number of Europeans argue that Europe's business education is now better than America's. Its output is still far smaller, but its growth is fast. By 1980, it is estimated that western Europe will be spending \$5 billion a year on management education. Already there are around 200 management training centres in Europe. But at least some American business schools have retained the courage of their convictions. Harvard now has plans to open a European campus at Lausanne, next door to the local Nestlé-inspired, but American-oriented, international business school, IMEDE. European business schools will now have a taste of their own prescription for others: competition.

Colombia

We love Europe

Latin America hardly beckons to investors at the moment. So perhaps it is a feather in Colombia's cap that 24 international banks agreed on Monday to provide it with a \$40m medium-term Eurodollar loan, to be used for general development. By the standards of the game, the package is neither large nor particularly multi-banked: Manufacturers Hanover, who arranged it, put together a 54-bank loan of \$250m to IMI (Istituto Mobiliare Italiano) as recently as July 21st. But it is Colombia's second such borrowing (the first arranged by Chase Manhattan) in a matter of months. And although this may only point up the fact that Eurolenders cannot be too

choosy now that traditional doors are closed to them by exchange controls, Dr Rodrigo Llorente, Colombia's finance minister, made no bones in London this week of his hopes that the international spread of these loans would strengthen his country's ties with Europe and Japan to which Colombia wants to export.

But Colombia must have the goods to sell. Coffee's share in its export earnings has been brought down to 49 per cent from 85 per cent in 1962, over a period in which total exports nearly doubled in dollar terms; but diversification must go further. Although the country's gnp has grown by an annual 6.2 per cent in the past four years, this fell short of expectations: the population, already 22½m, grows fast and is about to overtake Argentina's. The new foreign loan commitments should bolster the economy this year, but direct foreign investment is likely to be held back by the Andean common market's pact, to which Colombia now seems to be subscribing indirectly: the pact requires that most foreign firms reduce their holdings in due course to a minority ownership.

Then there is always the problem of inflation, not at present acute in Colombia by Latin American standards, but threatening to be so after an ambitiously large budget. But perhaps the most intriguing question-mark about Colombia is how its flexible exchange rate system, imitating Brazil's crawling peg, will react to the country's present coffee bonanza. The rate of the Colombian peso against the American dollar crawled up about 9 per cent last year: could it now be forced to climb down?

South Korea

Emergency package

The once-model South Korean economy has been plagued by slowing growth, a massive trade deficit and inflation. Seoul's hopes of getting out of its difficulties by massive injections of fresh foreign aid (particularly from Japan) have been disappointed. So the government has now produced a package of emergency economic measures.

Price increases are to be held to 3 per cent a year, compared with the 8 to 12 per cent in the recent past. And the exchange rate (which has been allowed repeatedly, if reluctantly, to depreciate against the dollar in a

managed float) will now be stabilised at 400 won to the dollar—a further devaluation of 6½ per cent on last December's rate. This should take some of the pressure off domestic prices; South Korea's imports amount to over a quarter of its gross national product. But the chief hope of restoring confidence lies in the government's moves to lighten the burden of interest rate charges on the country's manufacturing firms, whose ratio of debt to capital had already risen to nearly 77 per cent by 1970.

A three-year moratorium has been slapped on all "usurious" private loans to industry (equivalent to one-eighth of ordinary bank loans), after which these are to be repaid over five years at an interest rate of 16.2 per cent. Bank lending and deposit rates have been lowered from 19 to 15½ per cent for general loans and from 16.8 to 12 per cent for one-year time deposits—the sixth such downward adjustment since bank rates were doubled in 1965 to bring them into line with free market rates. In addition, the government is making available to firms over £200m in long-term loans at a modest 8 per cent interest charge to fund a portion of the companies' more expensive bank credits.

The move to throttle private money-lenders' activities in a period of sluggish domestic economic activity could leave some of South Korea's lame-duck firms high and dry. Although this could be no bad thing in the long term, the government is insuring against too abrupt an adjustment: a special loan fund of just over £50m will help to "rationalise" industry.

A major question is whether, even now, Seoul has got its exchange rate right. But the Koreans can always hope that a further revaluation of the Japanese yen will help here. And the country's economic and trade prospects would improve if there really were a detente with North Korea.

The Smithsonian pound

	USA	Aug. 9
The difficulties of placing money elsewhere with interest are still helping sterling to ride the dock dispute.	Germany	106
	France	107½

BUSINESS

Investment

Thorn + Plessey = £725m

Thorn Electrical Industries is in the process of making an agreed takeover bid for Plessey. Together they will be Britain's tenth largest company, with sales of £725m and profits of £70m. Thorn-Plessey will be the fifth electrical group in Europe. The details of the get-together are still being worked out, although this is not the first time that the two companies have shown a secret interest in each other. But the essential proposition is agreed, cemented by the long and close friendship between Sir Jules Thorn and Sir John Clark, Plessey's chairman.

Thorn's offer is likely to be considerably above the present stock market price of Plessey's shares at 165p, which values the company at £300m. This is still 40% below the 1970 price, although Thorn's shares, at 530p, are close to their all-time high. Thorn recently reported a profit increase of 30% while Plessey is recovering from a two-year setback. Both shares, however, are trading on a p/e of 24, and both companies predict a bright and profitable future.

The merger solves a lot of everyone's difficulties. The two companies have much in common, each closely associated with one family since they were founded: Thorn by Sir Jules himself, and Plessey by the father of the two Clark brothers, now chairman and managing director. Originally the companies were competitors in the market for radio components. Then they diverged. Most of Thorn's £412m of sales are in television and lighting retailed in Britain. Plessey sells telecommunications and capital electronic equipment, much of which is exported. The two will therefore be able to merge without treading on each other's terrain or risking reference to the Monopolies Commission. Yet there will be plenty of room for savings in pooling cash resources and management. Since Thorn is dependent on the consumer's purse and Plessey on public spending, the performance of the two together will be less cyclical.

But there is more to the proposal than that. Together Thorn-Plessey is safe from the prowls of the Dutch

giant Philips, which could otherwise snap up either company by itself. Merged, they are too indigestible. The new group will become Philips's major competitor and Europe's largest component manufacturer.

Once the details have been agreed—the only problem being how much of Thorn's equity should be swapped for Plessey—Sir Jules Thorn will be chairman of the new company. Mr Jack Strowger, the present managing director of Thorn, will probably remain in the same position. But this will be temporary. Sir Jules is now 73. The merger will be the crowning of his career, after which he must be expected to step down, or up to the presidency, with Sir John Clark becoming either chairman or managing director.

While Thorn's future is set on a steady path of growth, Plessey's is likely to be marked with fits and starts. Although Plessey's earnings per share are unchanged this year from last, they are expected to show a sharp improvement in the last quarter of this year, and then could double by 1975. Plessey has got over an unfortunate and loss-making investment in the United States and is increasingly relying on its telecommunications to spin profits. In this field, demand over the next decade is certain to be strong and Plessey's shares therefore are likely to improve by at least 15% on their present price with Thorn's offer.

SEC

After more power

New York

The Securities and Exchange Commission, Wall Street's vigilant watchdog, wants more power. It is using an 800-page report that it sent to Congress this week on the bankruptcy of the Penn Central Railroad in 1968 to push for tighter corporate regulations. America's largest bankruptcy could have been headed off, the SEC claims, if there had been the legislation it is now pressing for in three basic areas. The loophole which allows companies regulated by the Interstate Commerce Commis-

Jules and John: old friends get together

sion to dodge the strict SEC rules when making public stock offerings should be closed. There should be new legislation to subject issues of commercial paper to SEC regulations. And, thirdly, American companies borrowing abroad should have to make a public disclosure of the fact in the foreign country even if the law of the land does not require it.

The SEC's past success at bringing America's corporate practice to heel suggests that the recommendations stand a good chance of being enacted. The SEC's chairman, Mr William Casey, has pleaded that Congress should at least make a start by tightening the rules around the sale of commercial paper, and restricting this form of fund-raising to individual denominations larger than \$50,000. This would have prevented the situation after Penn Central's insolvency, when thousands of small and ill-informed investors were left holding the bag for \$83m in commercial paper which could never have been successfully issued if the company had had to disclose its pending debt maturities and cash resources. If commercial paper were issued only to large-scale investors, this sort of information could be better disseminated and understood.

The two-volume SEC report picks its way through the tangled wreckage of Penn Central, and urges many improvements in existing corporate practices that could be made without new legislation. It repeats its harsh criticisms that the company's directors failed to keep adequate watch over their management, and that some executives sold their shares on the market when they had inside knowledge that the railroad was doomed. The report does not shy from attacking the prestigious bank, Goldman Sachs, for failing to do its homework properly when taking on the

company's money-raising business. All round, it is the strong stuff which has added power and influence to the SEC in the past 10 years since it began assailing American stock exchanges and securities markets for their laxity. Its success, once resented, is now generally welcomed, but this attempt to regulate an area that has previously been the preserve of the corporate executive is bound to meet opposition.

Levitz Furniture

Too hot to mishandle

New York

Levitz Furniture has announced that its sales in July were up by a massive 105% on July last year. The six month total was \$141m, 88% up on 1971, making the company one of the hottest on Wall Street. Despite such super-normal growth, some of the stuffing has come out of Levitz. Recently it cancelled a planned issue of 600,000 shares after the Securities and Exchange Commission found that the prospectus had not revealed that the Teamsters' Union was actively unionising Levitz employees across the country. This week the president, Mr Leon Levitz, and his son announced they are leaving the company: a reminder of how much more exacting the SEC's regulations are than those of Europe's exchanges.

Levitz is a phenomenal stock. It is hard for the non-American investor to imagine a furniture company with a price earnings ratio of 78 on historic earnings. But that is the rating that Wall Street affords Levitz today, even after all the troubles have pulled its price down from \$60 to \$42.

The stock had its birth in the bull

market of 1968 when the brothers Levitz, adopted and helped by brokers Bache and Company, sold investors the concept of marketing furniture on the "warehouse system," under which the buyer picks up the pieces he wants and carts them away in his own station wagon. That might not sound too exciting to people used to buying food from warehouse stores. But in the American furniture industry it was a revolution. In America 5,300 manufacturers supply 35,000 dealers, mostly family-run. Marketing was an alien word until Levitz pushed warehousing. Now lots of the larger dealers are getting in on the act and an unprecedented 4% of the market is in the warehouse hands, which only shows what leeway Levitz and its followers still have.

So Levitz has remained a hot stock, after many other "concept stocks" of the late 1960s wilted in the market plunges of 1969 and 1970. Its capitalisation grew steadily and now stands at \$1 billion. A large proportion of that is held by institutions, for which Levitz is now firmly in the favourite 50.

It is the institutions that are maintaining the price of glamour stocks on Wall Street at the moment, and their grip on a specific price is particularly firm when the float of stock is as small as Levitz's. Detective work by the New York Times indicated that some 85% of the Levitz stock is held by the family, the big institutions and the mutual funds. It would be suicide for the money managers to sell in quantity --and they all know it.

Australia

Betting on the budget

Sydney

Australian stock markets have dropped back from the heady days of late June, when feverish buying from London investors fleeing the pound pushed many Australian share prices to what seemed untenable heights. But the retreat has been small and short-lived.

The Melbourne and Sydney stock exchanges are doing about £3.5m of business a day: substantially higher than the past year's average. And Australian brokers have been regaining some of their old optimism as the Sydney all-ordinaries index has shown a consistent day-to-day recovery this month. It has gained 20 points, to close on Wednesday at 596: the highest level for two years, not counting June's sudden 9% surge to 639.

The Mandarin in Hong Kong: Where luxury has a gentle touch and a warm smile.

The best hotels in the world boast a legion of people to look after you, splendid food and superb decor. The Mandarin in Hong Kong can give you something more. Here, in this gleaming, teeming city where ancient traditions dwell beside modern sciences, we call that something.

"Bun chi yu Kwai"

It means simply, the feeling of returning home. The gentle smiling people of The Mandarin have created this feeling. We would like you to experience it for yourself.

FMC Ltd.

Highlights from the Chairman's statement.

Total turnover -- a new record of £203,000,000.

Group trading profit -- at £3,424,000 less than 1% down in a most difficult year.

Group profit before tax -- at £1,600,000 the second best in the company's history, consolidating most of the improvement of the previous year.

Dividend -- held at 12% and covered 2.8 times.

Group Reserves -- increased by £1,256,000 in two years with bank overdrafts down by over £1,000,000 in the last twelve months.

In his Chairman's Statement Sir John Stratton, CBE, described the year's results as "a creditable performance bearing in mind all the facts of the case." On future prospects Sir John said:

"Though I see no dramatic change in the pattern of meat trading in the immediate future, the general trend of rising prices for meat and meat products must continue. This trend will be accentuated as we move into the EEC.

In FMC we have already a large export trade to EEC countries, as well as elsewhere. This has been built up despite varying obstacles against imports from non-member countries, and our opportunities should be greater when such barriers can no longer impede us. We are well placed to take advantage of these opportunities. In the last twelve months large sums have been spent on modernising and improving the capacity of our plant and machinery, particularly at our Harris factories at Ipswich and Calne. This expenditure should help us to expand production and keep down costs. Further substantial expenditure on plant has been planned for 1972/73 with a view to continuing this process. We believe that the higher prices for carcass meat that will be experienced as we move into the EEC will stimulate demand for a wide range of manufactured meat products and we intend to take full advantage of this."

Results for the last 4 years

Stock prices and yields are on pages 81 and 82 *Closed

These prices will be maintained only if Australian industry can prove an attractive enough investment to keep the money that rushed into the market just before sterling floated, intending to stay only temporarily. The carrot to keep these bulls in Australia must be next Tuesday's federal budget. Last year the treasurer, Mr Billy Snedden, introduced a restrictive budget. In this election year it is certain to be expansionary.

It can afford to be. The annual rate of inflation has slowed to 3.6% from 6.8% last year, although unemployment remains obstinately high. Australian business prospects are plainly good. Industrial production is rising. Exports are 11% up on last year, imports 9% down. Everything should be set for profits and dividends unseen in recent years, and for a strong and rising market. This will be edged along by Australia's massive capital inflow which, quite apart from currency speculation, reached £875m in the 12 months to June.

Against this background, the opportunity for investment does not lie in the old glamour mining stocks, which still look expensive, but in the basic blue chips. With consumer spending getting under way, stores are an obvious target. G. J. Coles, the biggest store group, has recently reported a 13% increase in profits, and yet still sells on a p/e of only 14. It looks cheaper than its major rival Myer Emporium (often referred to as Australia's Marks and Spencer) which sells on a p/e of 17.

The expansion of consumer spending should mean good times for the hire purchase companies, Industrial Acceptance Corp and Australian Guarantee Corp, selling at 15 times earnings. Following the pattern of London's market, the banking sector also looks attractive; Australian banks

are shortly going to have to make a full disclosure of their reserves, which will prove to be comfortably high. A seemingly unexciting stock like the Commercial Bank of Australia may prove a good investment. Not, of course, anything like as spectacular as the market's present darling, Woodside-Burmah, whose colossal gas discoveries have boosted the price by 30% to 200p in London in the past five weeks.

For the British investor who wants a blend between the staid and the spectacular, two new unit trusts have been recently opened in London: Jessel Australia and General, and Vavasour Australian Trust. Slater Walker has also produced an investment trust—Slater Walker Australian. These are probably the safest way back into the Australian markets for private investors who have been burned before by the vagaries of the outback.

London market

Dutch courage

The London market has been chasing hares. After both gold and oil shares had been forced up to dizzying heights last week as brokers felt that no price was too expensive for their clients, the slide came. The gold price dropped predictably back from \$70 an ounce to \$66 and a full 10% was knocked off the value of the Financial Times gold index, with all the market's favourites, President Steyn, Vaal Reefs, Union Corp, in the forefront of the retreat. The market has still not got used to the fact that gold has become a commodity and can quite easily vary in price by 5-10% in a week; a performance that gold shares may not follow, although on Thursday they were firming with the bullion price.

Since the silly season had begun the market decided to re-rate the oil sector last week and pushed up the price of Shell Transport and Trading from 325p to a high of 380p, although the company had explicitly warned that its profits this year would be disappointing. They are. Thursday's results from the Royal Dutch group show profits in the second quarter of £53m, less than half those earned in the same period last year. The market had got nervous ahead of the results and brought the price down to 356p; but it was still shocked that they should have been as bad as Shell had said, and cut the shares further back, to 347p. And the rest of the oil sector drooped in sympathy, British Petroleum shed-

ding 20p.

News from the other Anglo-Dutch giant, Unilever, was remarkably good. Pre-tax profit for the half-year was 11% up at £109m, on only marginally increased sales. At 372p, the shares have improved 10p since the results but are still on a p/e of only 14. The test now will be whether Unilever will be able to maintain its better margins, which it gained largely by a steep drop in the prices of its raw materials.

Although these are the shares that have made the running in the past week none is included in the Financial Times index of 30 industrials. Having gained 25 points last week, this index faded slightly at the start of the week. But at Thursday's close of 517.2 it had shed only 5.6 points. So much for the dock strike. But before that close Bovis shares rose 79p to 460p after P&O announced it had made an agreed bid. There is no industrial logic for a shipper to take over a builder, but plenty of financial logic. P&O is asset-rich and profit-hungry, and Bovis quite the reverse. The hope is that Bovis's property skills will help P&O exploit its assets.

That was not the end of Thursday's excitement in the market. After hours, came the news that the speculated-on bidder for the brewers Courage is Imperial Tobacco. The agreed bid (which will turn one Courage share into one Imps ordinary share, plus 50p of a new 8% convertible, plus 55p of 10½% unsecured loan stock) is worth 220p a share for Courage shareholders. At the same time, Imps announced it is to raise its dividend from 21p to 23½p. Intriguingly, too, Imps and Bats came out with a joint statement that their two companies are to plan their future developments separately. Perhaps Imps is opting out of the European opportunities to go it with Courage in the home market.

Textiles

The way to do it

The interim results from N. Corah, out on Monday, are a tribute to the company's conviction that two years and a lot of money spent in restructuring itself would pay off. A 34% leap in profits to £508,000 has been a textbook example of how to revitalise underused assets through higher productivity. A productivity drive could also have given a lift to the many small British textile companies which have only just managed to stay in business over the past three slump years. But most of them have just sat and felt sorry for themselves. So Corah is not typical, especially as a high proportion of the company's sales are tied to Marks and Spencer. At 91p, on a prospective p/e of 16, the shares therefore look solid in a sector that has been largely left aside in the bull markets of the past 18 months.

The clearest parallel with Corah is Nottingham Manufacturing which, at 158p, is on a p/e of 21 and, with a continually successful record behind it, is still a market favourite. These two companies have been in the forefront of the thoughts gathering in the City over the past few weeks that the textile sector as a whole is undervalued: the fact that the City still links consumer expenditure with textile profits has brought on a mood of speculative buying for the two textile giants, Courtaulds and English Calico. But since the industry is facing the largest wage claim in its history and the prices of man-made fibres are beginning to edge up, the near-certain increases in sales could be made at even lower margins. The textile sector on a p/e of 15 is not underpriced, and N. Corah's results are unlikely to be reflected elsewhere for some time.

Britain's airlines

Can they make profits?

Nobody would pretend that life for a small airline in Britain is a bed of roses, but not everyone loses his shirt. Privately-owned airlines have not in the past been particularly forthcoming with their accounts; as a result, some private backers have badly burnt their fingers. In future, the Government will oblige the airlines to provide more financial information as a condition of

Insurers' choice

It seems a long time since last year's roaring gilt-edged market, but memories are revived by the Department of Trade and Industry's figures on how insurance companies deploy their vast resources. Last year they poured a net £504m into government securities, seven times more than in 1970. The insurance companies' "problem" was that they had to find a home for an extra £1.23 billion of funds. The combination of high yields in gilts and insecurity about equities in the early part of 1971 meant that 41% of this went into government securities. How much was withdrawn in time?

Not that the insurance companies ignored equities: they put £487m into the stock market. This was 34% more than in 1970, and meant that by the end of 1971 insurance funds were controlling £7 billion worth of company securities at book value alone. Their share of equity ownership at market values is now over 12%.

The insurance companies backed their 1971 fancies in the gilt and equity markets at the expense of some of their more traditional sorts of investment. Their holdings in local authority securities dropped by £13m, and their

investments in what insurance companies now consider the troublesome and time-consuming business of mortgages was slashed from £134m to £56m in 1971. Investment in property was cut back by the life companies, intimidated by what was incorrectly considered the inflated heights of the market. This meant that, despite the expansion of property bonds and real estate prices, life fund investment in property was £13m lower than in 1970: a bad mistake. The general insurance companies, however, increased their property investments, and so the overall investment by insurance companies in property remained roughly the same.

The vast bulk of investment money that insurance companies pour into the markets each year comes from life funds; but 1971 showed a particularly large contribution from general insurance. The £265m that these general funds invested accounted for 22% of the total compared with 16% in 1970 and only 8% in 1969. This rapid rise is a reflection of both the way inflation has heaved up premiums and the recovery in underwriting profits.

getting an operator's licence. Meanwhile the Department of Trade and Industry has recently published the results of a handful of privately-owned airlines for either the calendar year 1970 or the financial year 1970-71.

The most important on its list are Lord Thomson's Britannia Airways, Mr Adam Thomson's Caledonian Airways, Mr Freddie Laker's Laker Airways and, for purposes of comparison, British and Commonwealth's British United Airways, which has since been taken over by Caledonian. The figures show how profitable holiday flying can be. Britannia, with no scheduled services, assets of just over £10m and annual sales of just under £9m, made a pre-tax profit of £1.3m.

This put it at the top of the league; with Thomson's new acquisition of the Sunair Lunn Poly Travel group last week it is likely to get pushed higher. British Caledonian, which had no scheduled services in 1970 either, had greater assets (nearly £17m) than Britannia and approximately twice its turnover, but its profits were only £549,000 (with no tax liabilities that year). The remarkable Mr Laker did better than this. His assets stood in March, 1971, at just under £5m, raised on nothing more tangible than his own personal reputation as a manager. Sales were just under

£6m; profits were £385,000 (again no tax was paid). Unfortunate British United, however, was getting more than half its revenue in its last independent year of operation from scheduled services. With assets of £25m, sales of £23m, it lost £600,000, before tax. The secret of being small and successful is either to own, as Laker does, or be owned by, a holiday group, as Britannia is.

CHAIRMEN'S STATEMENTS

Eastern Asia Navigation Company Limited

A year of outstanding success.

Extracts from the Statement by the Chairman, Mr Y. K. Pao.

Results

The year ended 31st March 1972 has been another one of outstanding success for the Company. Total profits increased by more than 187% to HK\$ 60,712,253 (1971 HK\$ 21,090,946) including capital profits of HK\$ 35,925,406 (HK\$ 7,568,704). Results of subsidiaries included in the consolidated accounts are equally impressive.

Dividends

The amount available for appropriation is HK\$ 64,920,216 from which an interim dividend of 13 cents per share has already been paid, and Directors recommend a final dividend of 22 cents per share totalling HK\$ 20,506,770 (HK\$ 11,139,480) for the year ended 31st March 1972. An interim dividend of 15 cents per share has been declared for the year ended 31st March 1973.

Bonus Issue

Subject to approval at an Extraordinary General Meeting, following the Annual General Meeting to be held in Hong Kong on 31st August 1972, one new share will be issued for every five shares held.

Rights Issue

The Company intends to raise HK\$ 151,902,000 additional capital by means of a one for five rights issue at HK\$ 12 per share.

Future Dividends

For the year ended 31st March 1973 an estimated final dividend of not less than HK\$ 0.25 on the increased number of shares is forecast which, with the interim of HK\$ 0.15 on the presently issued shares, will give a total of not less than HK\$ 0.40.

Shipping Market

The Company has not been adversely affected by the prevailing depression in the shipping market, since good charters have been fixed for all vessels and the Company has been protected against past, and any possible future, Yen revaluation by arranging sufficient income in Japanese Yen to service any outgoing obligations in that currency.

At times like this, the policy of securing long-term charters for every new building bears fruit and allows the Company to face the future with undiminished confidence.

Fleet Structure and Operation

Two bulk carriers and one very large tanker have commenced trading in the reporting period. A bulk carrier, an ore/oil carrier and the part interest in a new building tanker were sold profitably. Orders have been placed for one very large tanker and two car/bulk carriers. The Company has acquired the issued shares in the owning companies of four tankers in the range 70/90,000 tons d.w. all of which have favourable long-term charters.

The total deadweight tonnage of the Fleet in service and on order amounts to 3,436,947 t.d.w. No major difficulties or accidents have been encountered during the year and the Shipping Managers have been very successful in the operation of the Fleet and in keeping universal increases in operating costs within reasonable levels.

Future

The Company intends to watch out for future attractive new building opportunities and sound business commitments, the success of which policy is clearly evidenced by accounts for the year and, satisfied with our record in the past, we shall make every endeavour to accomplish even more in the future.

The Hong Kong and Shanghai Banking Corporation has recently acquired approximately 10% of the Company's shares, and it gives me pleasure to welcome the Bank as one of our shareholders.

Eastern Asia Navigation Company Limited is an Owing Company within the World-Wide Shipping Group.

WEST CUMBERLAND SILK MILLS

Extracts from the circulated statement of the Chairman, Mr. G. M. Miller:

The pre-tax profit of £78,464 as against £50,165 (in fact £68,365 after correcting the overstatement of stock in the year 1969-1970) was achieved in a year generally considered to be difficult for the weaving industry.

The Board feel justified in proposing a final dividend of 5 per cent, making the year's total 10 per cent. (9 per cent.).

The increase in profits has been achieved despite a 4 per cent. decrease in turnover for the year. This loss in turnover is entirely due to the serious trading difficulties which we have met in a number of our Export Markets where the respective Countries' internal conditions have hindered our activities.

The Company is continuing to diversify its production and merchandising; its management and organisation are being streamlined and a number of recommendations, contained in a report received from a firm of Management Consultants, are being implemented.

I look forward with confidence to the future of the Company. Addressing the Annual General Meeting held in Whitehaven on Tuesday 8th August, the Chairman Mr. G. M. Miller said: "The reports for the first four months disclosed that the turnover to date is gratifyingly in excess of the comparable figures for last year. It is still too early in the year to draw any firm conclusions from the Company's performance against budget. However, the Board expect that the rate of recovery experienced last year should be at least maintained."

APPOINTMENT

University of Dar Es Salaam

TANZANIA

Applications are invited for the post of (a) RESEARCH FELLOW or (b) SENIOR RESEARCH FELLOW IN MICRO-ECONOMIC STUDIES in the Economic Research Bureau. Appointee should have M.A. or Ph.D. and have 3 or more years experience in Micro-Economic studies in either teaching or research. Micro-Economic studies will involve a qualitative as well as quantitative analysis of Tanzania's economy, with special emphasis in the post-Arusha Declaration. Salary scales: (a) £EA2,300-£EA2,800 p.a. (b) £EA1,800-£EA2,318 p.a. (£EA6-£7 sterling). F.S.S.U. family passages, biennial overseas leave. Detailed applications (2 copies) including a curriculum vitae and naming 3 referees should be sent by air mail as soon as possible to the Chief Academic Officer, University of Dar-es-Salaam, P.O. Box 35051, Dar-es-Salaam, Tanzania, from whom further particulars may be obtained.

APPOINTMENTS

ECONOMIST

As a result of internal promotion, the Central Intelligence Department of the Imperial Tobacco Group in London has a vacancy for an Economist. He will be concerned mainly with monitoring national and international economic developments and with detailed micro-economic analysis and research in connection with Group development. A degree in Economics is required with 2 1/2 years practical experience of applying economic analysis to business problems. A knowledge of one of the major European languages would be an advantage. The minimum salary envisaged is £2,700 per annum, and there are good career prospects. Please write giving full details of qualifications and experience to: D. A. Clark, General Intelligence Department, Imperial Tobacco Group Ltd., Imperial House, 1 Grosvenor Place, London, SW1X 7HB.

JAMES MORRELL & ASSOCIATES

BUSINESS ANALYST

Leading firm of business forecasters seeks young economist (24-30) to promote its publishing services.

Candidates must have a good degree, preferably in economics or business studies, and 2-3 years' industrial experience. Must be confident in face-to-face business negotiations.

Salary to be negotiated.

Please send full description of career to date to: Leslie Staniland, Deputy Chairman, James Morrell & Associates Ltd., 1 Paternoster Row, London EC4P 4HP.

PRINCIPAL ASSISTANT ENGINEER

£4329 to £5019 p.a.

Applications are invited for this post, which is vacant as a result of promotion, from men or women qualified in engineering or science.

The person appointed will be responsible to the Assistant Commercial Adviser (Tariffs) for the theoretical aspects of electricity pricing. This work involves the interpretation of load characteristics and the analysis of expenditure, their continuing integration into a coherent cost structure, and orderly presentation for discussion with other Departments of the Council and the Electricity Boards. The person appointed will be expected to identify new requirements and improve existing techniques.

Practical experience of retail tariffs would be an advantage, but evidence of an intelligent ability to solve problems is more important. A good honours degree and at least five years post-graduate experience would normally be expected.

Write, giving full personal and career details and quoting E/110/72 by 25 August to:

Howard Bussey, Personnel Officer

the electricity council
30 Millbank, London, SW1P 4RD

INTERNATIONAL FINANCE OPPORTUNITY

Residence—Paris, France

A growing organisation providing financial services and sponsored by outstanding international banks, is seeking an

EXECUTIVE (28-35)

for merger and acquisition work in an advisory capacity, covering the entire European continent.

University degree or equivalent professional qualification is essential, as is experience in investment/commercial banking, or corporate financial planning. Knowledge of company law or background in treasurer's office of an international company would be additional assets.

The successful candidate will be familiar with the European industrial and financial environment and have a working knowledge of German. Knowledge in French is desirable, in addition to basic command of English.

This position presents challenging opportunities for an imaginative, ambitious financier with a sense of responsibility and leadership. Salary is negotiable within the \$15,000 to \$25,000 bracket, depending on qualifications and experiences.

Send curriculum vitae to

No. E9548, Contesse Publicité,
20 Ave. de l'Opera, Paris 1er, France,
who will forward.

£350,000 TO PLAY WITH

Financial acumen more important than bowler hat. YVFF, the thrustful neo-Government social development agency, and Task Force, the innovative, London-based community education and service organisation, in a unique partnership, seek skilled and qualified accountant to handle finance, management and organisation of these two rapidly developing agencies.

Task Force and YVFF together deploy 130 young professionals throughout Britain in teams aiming to stimulate community self-help in deprived areas and urban conurbations.

This position will be Assistant Director status heading the joint finance and administrative department in the national HQ Resource Centre which services and advises field units. Preference will be given to a man under 35, thoroughly competent yet adaptable, with a flair for people and wanting to broaden his experience and interests.

We don't try to compete financially with industry but think we may have something worth even more to offer. Salary £2,500 x £180, £3,400. Appointment according to experience/qualifications. Write in confidence to Anthony D. Steen, Director of YVFF, Abbey House, 2/8 Victoria Street, London, S.W.1.

Closing date: Monday 21st August.

APPOINTMENTS

The Bank for International Settlements, Basle, Switzerland has a vacancy for a

SENIOR TRANSLATOR/REVISER

Age 30-45. Languages required: English (mother tongue), German, French and Italian. Candidates should have a good degree from a British university and preferably experience in translating financial and economic texts.

Good salary, pension scheme and many other ancillary benefits.

Please write, enclosing short curriculum vitae and recent photograph, to the Staff Office, Bank for International Settlements, CH-4002 Basle.

University of St. Andrews

DEPARTMENT OF ECONOMICS

Applications are invited for the post of LECTURER in ECONOMICS. Salary scales: Lecturer £1764-£4299; Senior Lecturer £4143-£5247; starting salary in either case according to qualifications and experience. F.S.S.U. grant towards expenses of furniture removal. Applications (two copies, preferably in typescript), with the names of three referees, should be lodged by 26 August, 1972, with the Deputy Secretary of the University, Collegiate Gate, St. Andrews, from whom further particulars may be obtained.

University of Birmingham

CENTRE FOR URBAN & REGIONAL STUDIES

Housing Research Post (RE-ADVERTISEMENT)

Applications are invited from graduates in economics, social sciences and other related fields for a further post of SENIOR RESEARCH ASSOCIATE or RESEARCH ASSOCIATE for a period of two years in the first instance from as soon as possible. The post is in connection with a Housing Systems research programme supported by S.S.R.C. Applicants must have experience of housing research.

Salary: £1320-£1935 (Research Associate), £1935-£2676 (Senior Research Associate)—in exceptional cases to £3652 plus F.S.S.U.

Applications (3 copies) naming 3 referees should be sent by 1st September 1972 to Assistant Registrar (C), University of Birmingham, Edgbaston, Birmingham B15 2TT, from whom application forms and further particulars should be obtained.

Please quote ref C/054/G.

Herfordshire County Council

EDUCATION COMMITTEE

Administrative Assistant—Buildings and Statistics

Applications invited from young men and women aged under 35 with good educational background who already have or would be interested in furthering their career by studying for a qualification either in statistics or in social science. Facilities could be provided for training. The duties of the post will include work with the collection, analysis and presentation of statistics and administration work related to the education building programme. Salary on grade AP.2/3 £1930 to £2100 with starting point related to age, experience and ability.

Apply to the County Education Officer (Ref. AP.2/3/360), County Hall, Herford, giving details of age, education, experience and the names of two referees as soon as possible.

APPOINTMENTS

University of Stirling

INSTITUTE OF FINANCE AND INVESTMENT

Applications are invited for a post of RESEARCH FELLOW in the Institute of Finance and Investment, for work on a study of Flows of Funds in U.K. Capital Markets. Applicants should have a good Honours Degree in Economics, and should either have successfully completed a higher degree, including the use of econometric techniques, or have equivalent relevant experience. Salary will be on the scale £1764 to £2556 per annum, plus F.S.S.U.

Applications, including the names of two referees, should be sent not later than 4 September 1972 to the Deputy Secretary (EC), University of Stirling, Stirling from whom further particulars may be obtained.

Polytechnic of the South Bank

DEPARTMENT OF ESTATE MANAGEMENT

Lecturer in Economics

To lecture in Economics to degree and professional course students in Departments of Building Economics, Estate Management and Town Planning.

Applicants should have a degree in Economics, preferably with a knowledge of Land Economics. Previous experience in teaching not essential.

Salary scale up to £3,201 per annum.

Further particulars and application forms from the Clerk to the Council (Room 251), Polytechnic of the South Bank, Borough Road, London SE1 0AA. Tel. 01 928 8869.

BUSINESS ANNOUNCEMENT

STATE OF ABU DHABI EXPLORATION AND EXPLOITATION OF OIL RESOURCES

With reference to the announcement concerning the above subject that appeared in earlier issues of this paper, the Government of Abu Dhabi wishes hereby to inform interested parties that the bidding period concerning the (14827) sq kms in question has now been extended to 30th September, 1972.

For further details application may be made

to the
Minister of Petroleum and Industry,
Abu Dhabi,
Post-Box No. 9.

(Signed)
MANA SAEED AL-OTEIBA,
Minister of Petroleum and Industry and
Chairman of the Board of Administration,
Abu Dhabi National Oil Company.

Department of Agriculture and Fisheries for Scotland

Assistant Agricultural Economist

Applications are invited for two posts in Edinburgh concerned with the economic aspects of agricultural policy and development, including studies of agricultural and horticultural support, farm business structure, capital and land use problems, analysis of trends in prices and farm incomes, agricultural statistics, and the economics of the fishing industry.

Candidates, aged at least 20 and under 28, must have a first or second class honours degree (or post-graduate degree) in economics, agriculture, horticulture or a closely related subject.

Starting salary will be within the scale £1371-£2236. Unestablished (ie temporary) appointment with prospects of pensionable employment and of advancement.

Full details and application forms (to be returned by Wednesday 30 August, 1972), from Scottish Office, Establishment Division, Room 172, St Andrew's House, Edinburgh, EH1 3BX. Please quote reference PM/4/2/72.

University of the West Indies

TRINIDAD

Applications are invited for a) SENIOR LECTURESHIP or b) LECTURESHIP in INTERNATIONAL RELATIONS IN THE CARIBBEAN AND CARIBBEAN STUDIES at the Institute of International Relations. Appointee will teach students for the one-year Postgraduate Diploma Course in International Relations and the M.Sc. in International Relations, supervise the research work of candidates for M.Sc., and take part in the research programme conducted at and by the Institute, on Caribbean problems. Academic background and interests of applicants should include West Indian History and Politics, Caribbean economic problems, theory and practice of foreign relations, as applicable to the entire Caribbean region. Preference given to those having academic qualifications in International History, and/or International Economics and/or International Organizations, as well as having a command of at least two of the regional languages.

Salary scales: (a) £2,700-£4,200 p.a. (b) £1,850-£3,265 p.a. Child allowance, F.S.S.U. Family allowances: triennial study leave. Detailed applications (6 copies) including a curriculum vitae and the names and addresses of 3 referees should be sent as soon as possible to the Secretary, University of the West Indies, St. Augustine, Trinidad, from whom further particulars may also be obtained.

Kingsgate College

Applications are invited for the post of RESIDENT TUTOR. Applicants should be able to teach one of the following subjects: Economics, Industrial Relations, Politics and Government, or Social and Economic History. Salary £1,000. Board and Accommodation provided free. Further particulars from The Principal, Kingsgate College, Broadstairs, Kent.

Heriot-Watt University

Lecturer in Marketing

The University invites applications for the post of Lecturer in Marketing. Applicants should have a good honours degree in Social Science, postgraduate marketing qualifications and industrial experience desirable.

Salary on the scale £1,641 to £3,909 per annum with placing according to qualifications and experience. Further particulars and application form may be obtained from the Secretary, Heriot-Watt University, Chambers Street, Edinburgh, EH1 1HX, with whom applications should be lodged not later than Friday, 25th August, 1972. Please quote reference 321 3050.

New Zealand University of Canterbury

CHRISTCHURCH

Applications are invited for the following positions:

SENIOR LECTURERS OR LECTURERS IN ECONOMICS

Applicants may have qualifications in any of the main areas of Economics, Econometrics or Operations Research.

The salary for Lecturers \$NZ\$589 to \$7149 per annum, for Senior Lecturers \$NZ\$7276 to \$8579 (bar) \$8839 to \$9358 per annum.

Particulars, including information on travel and removal allowances, study leave, housing and superannuation may be obtained from the Association of Commonwealth Universities, 36 Gordon Square, London WC1H 0PF (Tel: 01-367 8572).

Applications close on 31 August 1972.

University of Exeter

Research Assistantship in Agricultural Economics

Applications are invited from suitably qualified persons to participate in an investigation financed by The Meat and Livestock Commission into Margins for Meat.

The appointment which is on salary scale rising to £1,788 per annum (at present under review) will be for one year in the first instance.

Further particulars may be obtained from the Secretary of the University, Northcote House, The Queens Drive, Exeter, EX4 4QJ. Closing date for applications 31st August, 1972. Please quote reference 1 33 7012

WELCOME

British Passport Holders

We know many of you didn't really want to leave your homes and jobs in Uganda.

**You know we didn't really want you to come before
because we have problems with homes and jobs here.**

But most of us believe that this is a country that can use your skills and energies.

We have worked out plans about how you should start and where you should go. They won't be perfect but they will help.

You will find that we, like other countries, have our bullies and misfits. We are particularly sorry about those of our politicians who are trying to use your troubles for their own ends.

And we're glad your British passport means something again.

Money Market Indicators

Most money market rates in London eased a bit further this week—though not without substantial help from the authorities via the discount houses. Sterling remained remarkably unruffled by the dock strike.

There's a reward for catching this bird.

It's yours on Iran Air's superjet route through Europe to Turkey, Iran, the Persian Gulf, Afghanistan, Pakistan and India.

Thousands of years ago, according to legend, the 'Homa' brought good fortune to Cyrus the Great, King of Persia (now Iran). You can see its majestic profile on the tail of every Iran Air jet. The rewards for catching this fabulous bird are many and marvellous. They begin when you join Iran Air's jet set: Boeing 707s, 727s and 737s whose mighty wings lift you from the major cities in Europe to Tehran, the Persian Gulf and beyond in a

matter of a few smooth hours.

Then there's the food: always deliciously fresh (never frozen). And there are the smiles which say sincerely, 'I'm glad to be of service'. Cushions to make you comfortable. Pilots who are specialists in trans Europe/Middle East and Eastern routes. And a warm welcome from the whole Iran Air family who keep up the national tradition for hospitality which goes back thousands of years.

Two flights daily from Heathrow, one on Saturday. Non-stop Tues. and Thurs. For more about the fabulous 'Homa' and all the rewards that come with it, see your Travel Agent.

Iran Air, 135 New Bond Street, London W1X 7DB. Tel: 01-629 4417. Reservations: 01-581 2051. Information on tours to Iran available on request. Iran Air's General Sales Agents for the U.K.-Anglo Persian Agencies Ltd.

Making the best

The Government is sensibly keeping its cool with General Amin. But it must immediately start making plans to settle the Asians who hold British passports in Britain—whatever Mr Powell says about it, page 13. What General Amin has done to his own economy is little short of disastrous, page 66.

Wahlkampfmunition

The Germans have got a word for the stuff you throw about in election campaigns, and Rainer Barzel and Willy Brandt are ready to start chucking, page 27.

Behind the dikes

The argument about the dikes is important, but Henry Kissinger isn't likely to confuse it with the real issue in Indochina, page 14.

The cod saga

Britain got a court judgment in its 50-mile-limit fishing dispute with Iceland, but it's not likely to make much difference, page 71.

Defying the thugs

Despite the dock militants' efforts at intimidation, the union decision has been to accept the amended offer by the Aldington-Jones committee. Many ports are going back to work, but Liverpool isn't. The settlement requires some unpleasant bullying of employers who run their businesses better than the big docks do, page 63.

What the women of Garthorpe did on Tuesday the country may do tomorrow, page 21.

Private firms, particularly in the engineering industry, seem to be managing their wage negotiations a little better than the Government does, page 64.

There is a consumer boom all right, but exports are not growing, page 71.

A stock market indicator for chaos, page 83.

If he's lucky

Mr Whitelaw is ready to get political talks about Northern Ireland's future off the ground, but in the end he is going to have to make the main decisions, himself, page 16.

Dock strike

SIR—It is, as you say in your interesting article about the docks situation (August 5th), perfectly obvious that the country as a whole is on a hiding to nothing since the "establishment" is on a surrender path.

As has been seen so often over the past few years and months—Ulster, docks, mines and, no doubt, soon the Ugandan Asians—all our governments and the now almost completely discredited establishment (civil service) are, under the guise of liberal blah-blah, completely gutless.

I no longer ever admit to being a native of this now so spineless country.

Unless the "real" people take over and build a completely new society very soon, then I fear that this one will sink lower and lower to final extinction, as a place worth living in.

Sensitive, intelligent, sensible, and badly needed young people will pour out—and who can blame them? In any situation people need leadership, not gutless vacillation and frightened give-in-manship. We need a peoples' vigilante group to take over from the police and fight to the death, if need be, the like of B. Steer and co.—Yours faithfully,
E. GAGE
Chelmsford, Essex

SIR—Isn't it time there was some action on the part of consumers? There is a quiet, legitimate, effective answer to the dock strike and all other unreasonable strikes.

If the products or services of those who, noisily, and by fair means and foul, squeeze out of the economy more than is their due were boycotted until such time as their pay were put into line with the economy it should help to cure the outrageous situation that now prevails.

This would give employers and union leaders who do realise what is happening to the country through inflation, but who now fear to do what they know to be economically feasible, a handle to hold on to during negotiations. At present it is just too easy to pass along the higher prices to the consumer. If the consumer balks, they must negotiate more sensibly.

How will the consumer know what to boycott in some of these complicated situations? Lists of goods and services must be published. Perhaps a watch dog board could be set up. Then a campaign must be put on so the consumer will know exactly why he must boycott these items, and hold out on it till the "all clear" is sounded.—Yours faithfully,
RUTH TAPLIN
Castries, St Lucia, WI

SIR—I respectfully submit that Mr G. Reichardt's coining of "hoodlumocracy" (Letters, August 12th) may, and should, pass into the national vocabulary parallel to "quisling," "blitz" and "sputnik."

I am a socialist, over 40, and have never voted Conservative in my life but I totally repudiate any communion with men who march, 800-strong, on Felixstowe armed with billhooks, bludgeons and garden forks. Their political progeniture seems to owe more to Al Capone than to Harold Laski. I am deeply interested in the reform of society but I want a society left to reform. I invite you to contemplate a situation where militant strikers were injured so that life could be saved only by blood-transfusion and discovered that hospitals were militantly picketed by the National Union of Blood Transfusion Operatives in protest against the Industrial Relations Act.

I begin to suspect that, if Mr Enoch Powell ever led his party in a general election, he would gain at least as many votes from traditional Labour supporters as from his own party.

Will history record Mr Heath as second violinist to Nero?—Yours faithfully,
SIMON ELLIS
London, W4

SIR—"Sapping the will" (August 5th) does not go deep enough. I appeal to you to go on to expose the causes of the rot which is poisoning our national life.

Compare the self-respect, self-reliance and self-responsibility, the confidence and energy of Queen Victoria's subjects with the temper and behaviour of today. What has happened? Even in 1898 all was not well with the mighty British Empire. Social and economic hardship at home, formidable economic competition and militarist nationalism abroad, and envious hatred of the world-wide empire combined to threaten the British future. The reckoning came quickly. In just over 30 years (1914-45) the British in the United Kingdom and from overseas fought to a finish the two most exhausting wars in their whole history, with 21 years of disabled economy, financial fumbling, world slump and timid leadership between them. By 1945 there was an appalling price to pay: not only in debt and national rehabilitation, but in terms of the human spirit, depleted by the continuance of physical austerity.

Isn't that when the rot began? When the efforts demanded by self-respect and the customary standards of British conduct became unacceptable? That was the source of the infection. No more endurance, no more hardship: "we've a right to take it easy and enjoy ourselves." A purpose in living that required self-reliance and self-responsibility began to crumble in the individual and the nation. Loss of self-respect led to loss of patriotism; and loss of self-discipline was replaced by cynicism, grasping selfishness and hedonism. Of course, this is an obsolete kind of language, because the moral values which it represents have been repudiated. Maybe it is

necessary to emphasise that, in fact, morals (in the sense of responsible, moderate conduct) cannot be banished. If ignored, they exert negative influences that are literally destructive.

Other factors have contributed, and are mostly unrecognised. Here is the first of them. Apart from an understandable leaven of class hatred, the motives underlying socialism were idealist and humane. The methods of establishing it were, however, far from innocuous. The expansion and magnification of the state, dating from 1945 (counting wartime controls as exceptional), have had, among others, one deplorable result. They have encouraged the easy assumption that the citizen need no longer fend for himself: from the cradle to the grave he is in the care of the state. The employers are saddled with a similar responsibility to those whom they employ. Thus the Department of Social Security, in effect, finances strikes; and the port employers are being pressed to enrol and pay crippling wages to dockers for whom they have no work.

The second factor, "Progressive" sneers at the former empire and Commonwealth are a typically inverted way of alluding to the grievous wound to British confidence by the striking of the flag around the world in the 20 years following the last war. There are still many Britons who do not regard our imperial record as shameful, both at home and overseas; and there are still thousands of British families who abruptly lost their livings and their prospects at the successive declarations of independence. The effect of this has been to intensify the mood of rancorous or despondent misgiving.

Third and last. Since the second war we have not had a leader. Churchill in his last administration was, by general admission, too old and weary to rally his fellow countrymen. For 27 years there has been no one as head of government with the stature, courage, conviction and mission to rouse and recall the British to their better selves, to chastise and inspire them to faith and purpose, to goad and stimulate them to energy and effort. We are still abdicating: sovereignty, law and order, honesty and resolve.

To the call of an undoubtedly great and apostolic man the British would thankfully and ardently respond. The whole atmosphere would change, because it would be the beginning of the end of our troubles.—Yours faithfully,
Fleet; Hants, W. F. WENTWORTH-SHEILDS

Counter-violence

SIR—Because I believed you knew better, I was shocked into audible blasphemy on reading your dissent from Edmund Burke (July 29th) in your comment that neither the new vehemence of the Uruguayan army nor the new strength of the Protestant militants in Ulster can be justified. Elsewhere in the same issue you speculate that "when the gods would destroy a country they

MANAGEMENT APPOINTMENTS

£7000 PA AND OVER

Opportunity to exercise a high degree of autonomy—prospects exist to advance to the Board in the short/medium term

INVESTMENT ANALYST

—FOREIGN

CITY

Up to £8,000

LEADING INTERNATIONAL MERCHANT BANK

The requirement is for candidates aged 25-32 who have been trained in investment analysis and have a thorough knowledge of the U.K. market. The successful candidate will have been responsible for advising on investment policy and assisted in the management of sizeable funds. Further experience will have been gained overseas in investment in European and Foreign markets. He will have established contacts with foreign institutions and companies. He will be required to advise on investment overseas primarily in Europe, Australasia and Japan and will be expected to handle a sizeable portfolio (of several £ millions). Up to 35% European travel is likely. Languages are essential. Candidates must have the necessary mix of forcefulness, leadership and tact to contribute effectively as an authority in this field. Initial salary negotiable up to £8,000; contributory pension scheme; free life assurance; free B.U.P.A.; housing and personal loan facilities; assistance with removal expenses if necessary. Applications in strict confidence, under reference, 1A3246/E to the Managing Director:

Campbell-Johnston Associates (Management Recruitment Consultants) Ltd., 35, New Broad Street, London, EC2M. Tel. No. 01-588 3588 or 01-638 0553.

WILLIAMS & GLYN'S BANK LIMITED

Managing Director Secondary Banking About £8,000

Williams & Glyn's Bank wish to appoint a Managing Director to develop certain of their interests in Secondary Banking, including instalment credit, leasing and associated activities. Considerable potential is seen in this area of the Bank's business over the next five years. The Managing Director will be fully accountable for forward planning, day to day management, staff motivation and control systems.

Applicants, probably between 35-45, should have good management experience in the instalment credit industry, preferably with experience of leasing. A qualification in accountancy is desirable.

Applicants are invited to write, quoting reference MD/WG/ either to

T P Lyons, Executive Director (Personnel), Williams & Glyn's Bank Limited, 20 Birchin Lane London EC3P 3DP

or to David Sheppard and Partners Limited who have been retained to assist with the appointment.

John Leach

DAVID SHEPPARD & PARTNERS LTD.

2-4 King Street, London SW1Y 6QL

Controller

BUSINESS PLANNING EVALUATION

- THIS is an unusual appointment offering a springboard for future career development and a unique opportunity to work at the heart of central government for about three years and to play a substantial part in the development of corporate planning in relation to a range of nationalised industries.

- THE role is to establish a small specialised unit to aid ministers and senior officials in the overall appraisal and in the financial evaluation of the plans of the individual industries. The unit will also monitor progress against the agreed plans.

- THE need is for an accountant or an economist, preferably with a qualification in business administration, with comparable experience gained at the centre of a major industrial group which has applied successfully advanced business planning techniques.

- PREFERRED age late 30s. Starting salary around £7,000. Terms for secondment would also be considered.

Write in complete confidence
to P. A. R. Lindsay
as adviser to the client.

JOHN TYZACK & PARTNERS
LIMITED

10 HALLAM STREET • LONDON WIN 6DJ

first make its communicators and financiers mad." I submit that your implication that it is wrong for those threatened with organised violence to associate for self-defence casts doubt on your own sanity.

The impression I have been getting from *The Economist* is that Britain is in a state comparable to that of the sad 1930s. There was confirming evidence in this morning's news, which told of a British soldier, apparently under orders not to use his weapons, allowing himself to be killed by a swarm of Roman Catholic children. Also, the eagerness of British politicians to appease the IRA reminds me of Mr Chamberlain submitting his speech to Mussolini for approval before presenting it to the House of Commons. Small comfort these days, when man is showing he is as unfit for liberal democracy as he is for Christianity, to remember that nemesis overtook both Chamberlain and Mussolini. —Yours faithfully, R. J. DIAMOND
Pasadena, California

World money

SIR—Fred Hirsch refers to gold as a growth commodity far too valuable to use as an efficient means of exchange (August 5th). Since few countries today are prepared to part with it, the logic of that statement is easy to see, but I wonder if we have yet come to the point where we trust one another enough to build a lasting system based on the synthetic reserves which are being handed out these days. There will be many countries which will wish to continue to hold gold in their reserves for strategic reasons and because valuable commodities make an excellent store of wealth.—Yours faithfully,
Hamilton, Bermuda ALAN R. THOMSON

Bank lending

SIR—The reaction of many to the denial by the Bank of England that its exercise of qualitative controls was unconnected with the CBI and TUC initiative (August 12th) could be a knowing smile.

But the smile must be wiped away if one takes the Bank's denial at its face value. For this simply avers that in the absence of clear indicators that there was at least some industrial revival the Bank of England would have left the banks to maintain an all time high outflow of credit to property speculators. This evidently would have been treated as an acceptable alternative to achieve an economic revival for the country.

The inflation of house prices over the past two years has been the single most disruptive social force that has confronted the nation. Under prevailing market conditions, self-interest asserts itself one way or another.

Owner-occupiers expect to benefit from every excess arising from inflation; tenants, plagued by the apprehension that any change must be unfairly adverse, take every step to resist change.

There are so many ways in which social

accounting must be brought into reckoning, along with monetary controls. I cannot accept that the Bank of England, the joint stock banks or the building societies have mastered that discipline yet.—Yours faithfully,
JOHN T. WILLIS
London, WC2 Director, Shelter

Paper industry

SIR—Your article "Rippon's paper tiger" (July 15th) assuredly must have been written for political ends and without any knowledge of the paper-making industry in this country.

Great Britain is the largest producer of paper in Europe and Scandinavia in spite of the fact that it has to import nearly all its raw material. When Britain entered Efta, the paper-making industry warned the government that unless assistance was given in some form or other the industry would not be able to compete, to the substantial detriment of our balance of payments.

The Six of the EEC have been wiser and have maintained a substantial tariff, at present 12 per cent against Scandinavia, and have built up a healthy industry. They propose to reduce this to 8 per cent by 1977, which is an excellent sign, but why should not this country receive the same benefits on entry to the EEC? After all, we shall suffer quite a few disabilities: why should we not receive the advantages?

You refer to "Britain's declining and largely inefficient paper industry." True, many old mills have closed down and more will follow suit, but what is being left is efficient and is more suitable to this country's varied market than many of the Scandinavian mills.

The paper industry in this country employs nearly 100,000 people, and it has already allowed over 33½ per cent of its market to be handed over to imports. Is it expected quietly to hand over the remainder and go out of business, and to allow the Swedes and Finns to enjoy the whole market?

I myself am 100 per cent for entry into the EEC, though in the process this country will have to suffer many disadvantages. Why should we, therefore, on entry, not immediately come into line with the regulations appertaining to the Six and enjoy some of the advantages, thereby keeping a viable and efficient paper-making industry alive in this country, thus saving much foreign currency.

The paper industry is a world-wide growth industry, and does not go cap in hand to the Government for huge sums of largesse, unlike many other industries. We merely ask for equality with our new partners in the EEC.—Yours faithfully,
Dartford, Kent A. D. P. TANNER

Textile imports

SIR—You state (July 1st) that both Germany and Holland have much more generous import arrangements for textiles

from poor countries than Britain. I must say that this statement comes as a considerable surprise to me. Earlier in your article you state that over half of Britain's clothing and textile imports come from low-cost countries and I have seen from other statistics that for the European Economic Community countries as a whole the percentage is approximately 20 per cent. The comparison does not lead one to deduce that Britain's arrangements are less generous than those of the EEC countries.

It is a matter of very grave concern for those companies in Britain which are trying to maintain their position in the textile industry by modernising and improving their efficiency that recent governments of all colours have seen fit to allow, either by positive policy or sheer indifference, such a large proportion of the total textile consumption of Britain to come from low-cost countries.

It is obviously right that a developed country such as Britain should play its part in assisting the developing world, but it is surely a matter of seeing the situation in perspective. While 20 per cent textile imports, as in the EEC, is perhaps on the low side 50 per cent, as in Britain, is surely too high to permit real stability in Britain's own textile trade.—Yours faithfully,
J. B. BRYSON
Belfast

Rhodesia

SIR—Your article on Rhodesian sanctions (July 29th), implying that these may be intensified in September when China presides over the Security Council, perhaps overlooks the fact that China itself buys quantities of Rhodesian chrome. So, despite its supposed sympathy for black Africa, China acts in its own economic interests and, like the United States and most western European countries, trades with Rhodesia. The only country really harmed by sanctions is Britain.—Yours faithfully,
J. E. LATHAM
London, SW10

Bus v train

SIR—Your excellent articles showing the general superiority of buses to trains are long overdue. You have, however, failed to mention the vital effect of station time. Meyer, Kain and Wohl, in their Rand Corporation study of "The Urban Transportation Problem," proved that one bus bay can handle 70 buses per hour, whilst a footnote in a Prices and Incomes Board report of a few years ago proved that as signalled stations are added to a rail system line capacity drops.

Nor need rail/road conversion be confined to open sections of the underground, such as the Stanmore branch. In the Santa Doloroso silver mine works buses follow dump trucks at 15½-second headway, whilst the Blackwall tunnel proves that ventilation problems can be overcome.

Lastly, you will be interested to know

The day the Imperia installed air conditioning. A true story.

There is a restaurant in Charing Cross Road, London, called the Imperia.

It's intimate, and it serves good speciality dishes at low prices.

But it tended to become hot and smoky as the evening wore on. And customers were finding that as they enjoyed their lasagne verdi at one table, they were also having to savour the aroma of someone else's steak pizzaiola two tables along.

So the Imperia had a problem. As its reputation grew, the number of customers grew. Which was nice for the Imperia, but not so nice for their customers. Because the more people who went there, the hotter it got.

Until the Imperia installed air conditioning.

Now it stays cool however many people come.

And one man can enjoy his food while the next man enjoys his cigar.

Because air conditioning filters the smoke and dirt out of the air, as well as keeping it cool and dry.

The Imperia reckon their air conditioning paid for itself in six months, so it was worth the cost.

I think it was worth it, too. I've been there. And I'll keep on going there.

If you'd like to know more about air conditioning, phone or write to Bernard Hough, The Air Conditioning Advisory Bureau, 2 Charing Cross, London SW1A 2DR. 01-839 7182.

He'll arrange for your Electricity Board to give you any information and advice you want. And help you to get a free estimate of the equipment you need, and the cost.

The Air Conditioning Advisory Bureau.

that research is under way at the University of Ghent, for the Belgian Vincinal administration, to devise a method of electronically-synchronised overtaking via vehicle-mounted roof ramps, in the opposing direction, at speeds of 40-45 kph on busways formed from obsolete single-line railways.—Yours faithfully,
Cambridge

GERALD VAN GEKHUIS

SIR—Your idea of the railways turning the track into high-speed bus-lanes (August 12th) may well provide a solution to British Rail's economic problems, but can you tell me how you imagine the bus-lanes could be built in practice. For example, on the Marylebone line? Presumably the bus-lanes would take two to three years to build, while the railway would be closed at stage one. How would we commuters manage in the meantime?—Yours faithfully,
Chesham, Bucks

PATRICK ARBUTHNOT

McGovernment

SIR—I agree that the Democratic presidential candidate's defence proposals revive the massive retaliation spectre of the 1950s (July 29th). However, I must take issue with your historical attribution. Mr Dulles was merely the spokesman, and not the author, of a policy which was an outgrowth of a substantial curtailment of our defence expenditures resulting from the efforts of George Humphrey, the then Secretary of State. His forecast of "inflation that will curl your hair" was a particularly effective metaphor, as you recall, in persuading the Congress to curb our military budget. In short, Dulles did not have, in that fiscal framework, the luxury of options in responding to communist threats. The successor administrations did, and perhaps the morass of Vietnam resulted from their exercise.—Yours faithfully, GAVIN MURPHY

Ugandan Asians

SIR—May I develop your admirable articles on the Ugandan Asians (August 12th)?

Though Whitehall dilatoriness over the financing of the recently-opened Hongkong-Kowloon road tunnel showed a lamentable erosion of our old capacity to think imperially, I suggest that there are plenty of men in the field, in both official and private capacities, who have not lost the old touch. Hongkong proves it. The nerve and good faith which enabled the Hongkong and Shanghai Bank to handle so well the financial transition from the Japanese occupation is still there.

We still have an empire, mainly little islands scattered across the oceans of the world, long vanished from the general consciousness.

But, as the example of Hongkong and the advertisements for the Caymans show, the political stability provided by the colonial system is an asset.

A combination of refined financial techniques and swift communications and telecommunications has brought the little islands into the mainstream.

Their geographical location prevents their having a hope of achieving the position of Hongkong but I suggest that the multifarious abilities of the East African Asians could bring enormous benefit, especially in the Pacific, which is becoming increasingly important.

Though the Hongkong achievement is out of reach, I suggest the Indian achievement in Mauritius is an attainable goal.

Anyone with experience at home and abroad of people originally from the Indian subcontinent knows how deep has been the British imprint. These people are, by and large, on our side.

The Italians planned their inter-war Cyrenaican settlements with great care. I am confident that in London there are enough experienced and enthusiastic people to form a working-party to examine the possibilities of imperial settlement for a proportion, at any rate, of these East African Asians, who came into our orbit through the empire.—Yours faithfully,
George A. Short

Population

SIR—I am worried by the increasing popularity of the catch-phrase "zero population growth" or "zpg." My worry results from a desire, not that population growth should continue, but that it should halt and then go into reverse. Like the understain, this seems to be a possibility we don't talk about. The reason, I suspect, is that we have a primeval fear of seeing our tribe shrink away, and we rationalise this fear by referring to the horrors (even with zpg) of ageing populations and falling activity rates. It is true, of course, that shrinkage would eventually bring us back to a mirror-image Adam and Eve—but in the long term: even Adam and Eve

are dead.

Perhaps, also, we have learnt to fear the effects of any geometric trend. But with shrinkage the more familiar—and frightening—growth curve is turned round and instead of steepening it becomes gentler with time. To illustrate the undramatic nature of such a trend—and for fun—I have calculated the United Kingdom population over the next century, assuming that it could be stabilised by 1980 and then work up to a shrinkage rate of 0.5 per cent per annum.

	United Kingdom home population (millions)
1970	55.7
1980	58.0
1990	56.4
2000	53.6
2010	51.0
2020	48.5
2030	46.2
2040	43.9
2050	41.8
2060	39.7
2070	37.8
2080	35.9

Concealed in those figures could be the realisation of some of our most cherished hopes. So let us accept population shrinkage as an objective, and start discussing the means and the implications—for education, for industry, for private and public investment, for social values, for our whole growth-gorged philosophy.—Yours faithfully
John Standingford
Barnet, Herts

Fighting fish

SIR—Your remarks on the Icelandic fishing dispute (July 15th) seem only to have the barest resemblance to reality.

First, despite your denial, there is a real danger of overfishing off Iceland. The average fish size has been falling, while the cod reproduction rate of 1.1 is almost half the prewar figure. If the Icelandic grounds are such as the Georges Banks, then effective control must be implemented.

Secondly, it is wrong to say that Iceland's decision to extend its limits was the result of a new left-wing government; all five parties in Iceland were committed to it before the election and the bill went through the Althing without any dissenting votes. Rather, I would suggest that the real reason for the extension lies in the example set by countries like the United Kingdom in claiming and exploiting the mineral rights of their own continental shelf. Why, the Icelanders ask, should a country which legally exploits a monopoly of its sea bed not also be allowed to exploit the fish above the bed?

The consequences to Britain of Iceland's extension are not grave; many English fishermen, and almost all Scottish fishermen, earn their livelihood from coastal fishing, an industry that would undoubtedly benefit greatly from the United Kingdom following Iceland's lead.—Yours faithfully,
Glasgow

CAMERON AITKEN

Your Chairman will now explain why the Board has just invested half a million in an aeroplane

"We are about to enter the EEC. Your company will soon be in competition with some of the world's shrewdest and most successful businessmen.

So we must have total management mobility. We cannot risk our future in Europe on the vagaries of airline timetables, delays and missed connections.

That is why your company now owns a British executive jet whose cost-effective combination of high speed and long range,

exceptional reliability and economy of operation, is unique. The Hawker Siddeley 125.

As a result, we are independent of the shackles of airline schedules, and now have direct access to the home towns of twice as many of our existing and potential customers in Europe as are served by all the scheduled services put together.

Your company has instantly become bigger, more powerful, more effective.

The production capacity of your senior executives is now doubled. And the markets of all Europe are now in your own back yard."

The HS 125 Eurojet.
One take-off covers the EEC.

Hawker Siddeley Group supplies mechanical, electrical and aerospace equipment with world-wide sales and service.

NEW INDUSTRIES ARE WELCOME IN BRITISH COLUMBIA.

ON OUR TERMS.

We want and need new industries in British Columbia — but to avoid any misconceptions, we believe in stating our position clearly right from the start.

Our belief is that industry should pay its own way if it wishes to enjoy the many advantages offered by our province. Furthermore, we demand that industry conform to a rigid set of pollution-control standards.

These two factors bear directly on the cost of establishing and operating an industry in British Columbia. So you might well ask if it's worth your while to consider such a move. We think it is — when you consider the many benefits we do offer to industry.

These benefits include access to one of the continent's richest preserves of natural resources... an almost unlimited choice of prime industrial sites... a reliable labor pool... first-rate shipping links with major markets in western North America and Pacific Rim nations. Plus the benefit of Canada's lowest tax structure, for industries and individuals.

The opportunities are great in this vast and beautiful land... for industries willing to operate on our terms. If the attitude seems fair to your company, we'd like to hear from you.

Making the best of it

The Government's prompt acknowledgement of responsibility for Uganda's Asian holders of British passports is admirable, and goes some way to wipe out the shame of the Commonwealth Immigration Act of 1968. It is good, too, that the British side, to judge by Mr Rippon's attitude, can keep its cool when required. But it would be doing Uganda's unfortunate Asian community a great disservice indeed to pretend that President Amin's determination to expel them within 90 days does not present this country with some staggering problems. Those problems are by no means insoluble, but the well being, if not also the very lives, of many thousands of British citizens could be put at risk if everyone concerned does not recognise just how difficult they are.

There is, first of all, the deadline. As Mr Rippon said on his return to London on Wednesday, that deadline cannot be met in a humane and orderly manner. Even if the British Government acts immediately, as it must, to prepare for the Asians' arrival, it may well prove impossible to bring up to 50,000 people from Uganda to Britain in 90 days in anything like a tolerable state. It must be hoped that General Amin has been made fully aware that the responsibility for those British citizens which the Government has accepted does not start only when they reach Dover or Heathrow.

It would, of course, be very nice if God would only communicate a change of mind to General Amin. But the only two working assumptions on which Mr Heath can operate is that, at worst, General Amin will put into concentration camps any of the Asians still remaining in Uganda after 90 days, and that, at best, if the arrangements for bringing the Asians who are entitled to come to Britain are sufficiently far advanced General Amin might be persuaded to extend the deadline. Either way the evacuation requires an immediate and massive effort by the British Government and by local and voluntary authorities in this country.

It will not be a welcome effort to many British people. Mr Enoch Powell has already sounded off: on Wednes-

day he grandiloquently accepted the continuing obligation for Britain to succour those in distress, but he then pronounced it an obligation which would be more than met if Britain took only an "infinitesimal" number of refugees. Unfortunately, Mr Powell will have many supporters for that view, and those supporters will become increasingly vocal the moment steps actually start to be taken to receive the Asians. That should not be an excuse to put off action until it is certain that the intolerable will in fact occur. To do so would be a grave mistake. The Government must realise that to let the Asians in, however or whenever it is done, will cause it a good deal of political pain, but the shouting will die quicker and the Asians themselves will have a better chance to be decently assimilated if the measures to help them are started immediately. All British political parties must do their best to make common cause on that, nationally and locally.

International effort needed

What needs to be done? The first step is to find out the exact scale of the problem, and the team of British officials in Kampala must be reinforced to sort out who are British, Indian or Ugandan citizens. International opinion must be mobilised to persuade General Amin to extend the deadline and to allow the deported to take some (although they will not get anything like all) of their capital. The international community must be ready to accept responsibility for those Asians who believe themselves to be Ugandans but may find themselves stateless at any time. The very problem of transporting the Asians out of Uganda may also need international co-operation.

At home, one of the more encouraging things this week has been the response of some local authorities—notably Leicester and the London borough of Brent—who have reason to anticipate that substantial numbers of Ugandan Asians will choose to live with their relatives in their areas. But such boroughs cannot be expected

ted to take more than a few hundred families each, and the Government must offer generous assistance to all those local authorities who will take immigrants. It will probably be necessary to relieve housing bottlenecks in existing properties and hope the overcrowding will only be short term. It will almost certainly be necessary to step up new housing starts and to encourage special educational measures (such as learning English), probably in ad hoc immigrant schools to begin with. Special employment registers will also be required. These are local measures to meet a national obligation and the burden of paying for them should not fall on the ratepayers.

Inevitably, as Ealing has already shown, there will be demands for some form of direction or dispersal. That will be anathema to others, and would hamper the natural process of absorption anyway. This does not mean that much could not be done to encourage the immigrants to settle in areas where there is a housing surplus. Since many of the Asians are accustomed to work in the service trades they may actually help service industries (like tourism) where they are most needed and under-staffed—out of London. Encouragement to settle in those places where there are both housing and jobs should be part of the screening process.

And although the outlook both for the Uganda Asians and the home community is not easy, especially if the refugees come in one mass exodus, it is not wholly

negative. Many of the immigrants will be business-inclined and their predecessors have already made an impact in the shopping and catering trades. Much will depend upon how much of their own capital they are allowed to bring, but there is a precedent here which could be followed. When 7,000 British subjects were expelled from Egypt at the time of Suez they got £7.4m in loans from the British Government (most of which was soon repaid as they made profits from their new businesses). To assist the Asians in that way may cause the racialists to go into paroxysms, but such a policy would be economically sensible.

The overriding need is for the Government to act swiftly, intelligently and humanely while a good deal of the country still feels angry at General Amin. But it would compound the Asians' present misery to pretend to them that they are going to be welcomed with open arms by everyone in this country; they are not, but if the problem is handled well there will be enough goodwill at least to make their reception tolerable. After all, Britain absorbed 30,000 Hungarians in the wake of the Russian invasion in 1956, and £2.6m was raised by voluntary subscription to help them. Britain accepted more than its share of moral obligation then, and rightly so. The effort must be no less generous and determined now simply because the faces are coloured.

It is a real issue

Henry Kissinger, flying from Le Duc Tho to President Thieu, is one man who doesn't think the Indochina war is pointless

It has happened often enough before with Vietnam, and it is happening again now: the argument is all about means, and hardly anybody is talking about ends. It is right that the methods used to fight the war should always be kept under inspection; that applies particularly at the moment to the American bombing of North Vietnam. But in a week that has seen the withdrawal of the American army's last combat unit from South Vietnam, and the more or less simultaneous arrival on the battlefield of units from what may be North Vietnam's last previously uncommitted fighting division, there is something eerily unreal about much of the present American debate. It is no use talking about methods and ignoring causes. How matters; why matters even more.

The numbers are wrong

The argument about means has come back to the question of whether the United States is systematically trying to destroy the network of dikes that protects the Red river delta. On the evidence that has been produced so far, by anyone with any claim to objectivity, it is almost certainly not. Mr Ramsey Clark, the former American attorney-general, is reported to have said on his return from North Vietnam on Monday that in a tour of more than 600 miles he had seen "at least three" bombed dikes. As it happens, that is the number this

paper was able to identify on the map it published on July 29th; they may or may not be the same three. The Americans themselves say they have hit at least 12 dikes, 10 of which had roads or anti-aircraft guns on them or were close to other legitimate targets. None of this constitutes a deliberate attack on the dike system. Even the North Vietnamese claim reported by one of Mr Clark's fellow-tourists—that dikes have been damaged in 58 places in four months—has to be measured against the fact that there are about 2,500 miles of dikes, some of them 40 or 50 yards wide at the base, and that there have been 200 to 300 American planes a day over North Vietnam during most of that four months. It is worth remembering that at this time last year, without any bombing at all, the dikes were already being swamped by the flood-waters that inundated much of the delta. So far this year's rains have not been as heavy; but if there is another flood the cause could be the damage nature did last year, more than the bombing now.

Of course, it is clear that American bombs have been hitting a good many other non-military targets in addition to some dikes: there is sufficient evidence of that, from the scrupulous Joseph Kraft as well as from other recipients of visas to Hanoi. It is not enough to say that these are the inevitable accidents involved in the still rather imprecise business of delivering high explosive over

long distances, whether the means of delivery is an American bomber or the rockets and artillery the North Vietnamese are using in the south. The pilots have to be reminded to be accurate, even if it means they are likelier to get killed; the search for technological precision has to be continued, by laser beams and television-guided bombs and whatever the next device is; the men who select the targets have to be as careful as the airmen are expected to be. It is possible that within a few weeks the Americans will have come to the end of their list of legitimate targets. From then on they may be able to reduce the number of planes they send out each day, and concentrate on keeping out of action the two railway lines and the emergency oil pipeline from China to Hanoi, and the roads and storage areas south of Hanoi that supply the army beyond the borders.

The issue is what the South Vietnamese prefer

But none of this relieves the American opponents of the war from the responsibility they have too. It is a fair criticism of the way they have been conducting their argument that they have talked almost exclusively about the means by which the war is fought, and even then almost entirely about the American and South Vietnamese side of it. Mr McGovern has said very little so far this year about the issues behind the war except to repeat the phrase that South Vietnam is a "corrupt military dictatorship." There is some truth, if not a decisive amount, in each of those words; it would be odd if there were not, in a poor country fighting a long war. But to try to dismiss the causes of the war in that single phrase, like a man irritably hitting out at a wasp, makes Mr McGovern seem either naive or contemptuous about the problems of south-east Asia, and perhaps both.

The advantage that Mr Nixon has over Mr McGovern at the moment—the reason why the American opinion polls are still on his side over Vietnam—is the fact that this year's attack by the North Vietnamese army has made a good many people re-examine their ideas about the nature of the war. In the past Mr Nixon, like Mr Johnson before him, had managed to make life remarkably difficult for himself in explaining what he was trying to achieve in Vietnam. He did this by erecting a whole superstructure of other reasons and justifications for the war, on top of the basic argument about self-determination for the South Vietnamese. There were those tottering dominoes in the rest of south-east Asia; there was the credibility of America's promises to its friends in Europe and Israel; there was even the curious proposition that the United States was just not going to lose a war, full stop.

All of these reasons, except the last one, had something to be said for them, but they did not make it easy to offer a simple explanation to baffled and war-weary Americans. Anyway, none of these other arguments would justify the war unless it could be shown that a policy of resisting the communists in South Vietnam was something the South Vietnamese themselves were willing to fight for too. Events have now simplified Mr Nixon's

task. The North Vietnamese invasion, and South Vietnam's resistance to it, have made this conflict look less like a civil war within the south, and more like a war between two separate states, than ever before.

The most obvious thing about south-east Asia today is that North Vietnam has virtually its entire army outside its own frontiers, fighting in three different countries. In South Vietnam and Cambodia, the local communists and their supporters would certainly be unable to keep the war going without North Vietnamese help; in Laos, the most the Pathet Lao could hold on to by themselves would probably be the hill-country in the north and the east. In all three countries the local armies go on fighting the North Vietnamese, and getting the recruits to replace the losses of each successive campaign, even though they seem condemned to a permanent defensive war. They do not fight brilliantly, and quite possibly they would be defeated without the help of American air power gives them; but that is because they are up against the most efficient army in their part of the world, and nobody who has read any history believes that there is much connection between the efficiency of an army and the acceptability of the political ideas it serves. There is no evidence from the movement of refugees in Indochina that a majority of people in the areas occupied by the North Vietnamese army have welcomed the sort of government it has brought with it. It is true that most of the refugees want to get out of the fighting zone as much because they are afraid of the bombing the government's counter-attack will bring as because of what the communists do when they arrive; but they always move away from the North Vietnamese, not deeper into their territory.

Ask Lenin's question

Lenin said that if you want to see your way through a difficult problem you should ask who is doing what to whom. It is a test that should be applied to the four countries of Indochina. Whose army is where?

This is the basic difficulty in the private talks between Mr Kissinger and Mr Le Duc Tho, which went into their 16th session on Monday, after which Mr Kissinger flew off to talk to President Thieu in Saigon. The North Vietnamese are saying that their army will keep on fighting until the Americans agree to remove Mr Thieu from power and put the communists into a new government in Saigon. The Americans are saying that who next governs South Vietnam should be decided by an election. They recognise that an election held after such a war will be something less than a perfect expression of people's wishes, but they have suggested a number of ways of making it as free as possible. It is the difference between those who believe that power comes from the barrel of a gun, and those who think that power should be referred, even if imperfectly, to the people who have to live under it. There is no real compromise between such points of view, and those who want to make even more concessions to the North Vietnamese in the name of peace should recognise what it is they are proposing. They are proposing to subordinate politics to violence.

There is a curious similarity between those who advocate this sort of "peace" in Indochina, and those who advocate peace on similar terms in Britain's present industrial crisis. The militants among Britain's dockers have been using violence to insist that they should be given jobs in companies outside the docks, irrespective of the wishes of those companies and ultimately at the expense of the men who at present work in them. The North Vietnamese are using their army to insist that their friends should be put into the governments of

South Vietnam and Cambodia and Laos, irrespective of any attempt to test the wishes of the population of those countries. And there are many people who would greet giving both of them what they want as a feat of peace-making, who in fact demand such a peace, and who deplore a policy of resistance because, they say, it will only lead to more trouble. The comparison is worth dwelling on. It is strange how many people will put up with injustice, for others, in the name of a temporary suspension of trouble for themselves.

If the luck holds

Mr Whitelaw can get Northern Ireland back to talking serious politics again, but he will need to take the big decisions himself

The Provisional IRA has failed to make any effective response so far to the army's martyrless occupation of the no-go areas in Belfast and Londonderry. Instead, the bombings and shootings have declined remarkably. The issue of the moment in Northern Ireland is the number of individual killings of Catholics and Protestants that have taken place since direct rule began: this is a serious matter, and it could make serious political trouble, but, unlike so much else that has faced Mr Willie Whitelaw in Belfast, it is not a likely precursor of civil war. The Provisionals must be expected to have another major try at setting the communities at each other's throats, and they may succeed. Yet the political and moral effect of Bloody Friday in Northern Ireland and far beyond it has been to deny to the Provos the indiscriminate bombing which had been their most effective tactic, the one, indeed, which forced the Faulkner government to insist on the internment policy which, in turn, proved to be Stormont's downfall. If the Provos' next effort fails, they could find themselves out of business faster than anyone has yet dared to say.

But guerrilla wars seldom come to an end while there is an open frontier across which men and arms can be moved to hit the targets they want and back over which wanted men can always find refuge. The first requirement of the British Government in what are likely to be the difficult and wearying months ahead while Mr Whitelaw tries to get political life going again in Northern Ireland should be to encourage the Irish prime minister, Mr Lynch, to go every bit as far against the IRA as his own electorate in Mid-Cork showed it was ready to go two weeks ago. Mr Lynch is not popular with everyone in the Conservative Government, but even those whose personalities clash with his should be encouraged by the plain evidence that he has reverted to the policy which he was propounding, with sense and eloquence, two years ago: that Irish unity is not just round the corner, that there are two traditions in the island, and that the way towards reconciliation is by persuading the two traditions to adapt cautiously to each other over the years. Mr Whitelaw and Mr Lynch would probably get on famously if they met, and the

Secretary of State must sometimes be tempted to do what Lord O'Neill once did, a temptation that is the easier to resist because Lord O'Neill paid so dearly for the initiative. The Protestants in the north see Mr Whitelaw in a different light now that the no-go areas have gone, but they are not ready to change their view of Mr Lynch or anyone who talks to him.

That is, of course, a misfortune. If Ireland were actually united under Mr Lynch he could manage very well without the Social Democratic and Labour party but he would need to come to terms with the Unionists. It is, therefore, the nicest of hypothetical questions whether, two decades or so from now, it will be the Unionist politicians or the Catholic ones in the north who prove to be most against an understanding with the south. But for as far as anyone can see now the Dublin government and the northern Protestants are not going to admit that they are, or could be, natural allies. So Mr Whitelaw's task is to get Mr Lynch's co-operation and understanding in determining the next political steps in Northern Ireland without stiffening the moderate Protestants' backs again.

The clamour of opinions

This means that Mr Lynch is not going to be invited to any talks this year, something that he himself seems to have accepted with a good grace. He knows as well as anyone that even if most of Ulster's parties with elected representatives were got to Mr Whitelaw's conference table the prospect of anything meaningful resulting from the clamour of their opinions is nil. It is a necessary exercise to try to get them there. If some of them, like the SDLP or even Mr Faulkner in one of his moods, care to commit political suicide by attaching wildly unrealistic conditions to their attendance (the political equivalent of a Bloody Friday), then it may even be to the good, although Mr Whitelaw could have difficulty explaining this to the less percipient at Westminster. What is most likely to happen is that the differences are going to be so wide and deep that Mr Whitelaw can cheerfully say at the end that he has listened carefully to everyone but that the disagreement

leaves him no option but to make up his own mind. At precisely that moment he would be wise to listen to whatever Mr Lynch may put to him privately.

There are many ingenious and sensible ideas about how Northern Ireland's affairs could be regulated in the next decade or two if, as it is safe to assume, the November referendum shows a massive majority for continuing the constitutional link with the United Kingdom. Thus Mr Charles Carter, writing under the auspices of the Irish Association*, has suggested that a Northern Ireland inside the United Kingdom should have control over its own economic affairs, virtually to the extent that the republic has over its economy. He would go along with a condominium between Dublin and Westminster over defence and foreign policy and would allow Northern Ireland citizens to opt for either nationality and vote for both Parliaments. Sir Fred Catherwood, contributing to a collection of papers published for the Institute for the Study of Conflict†, advocates the need for a two-thirds majority in a future Ulster assembly, first to encourage the participation of the minority community and then, by that participation, to secure the demise of the border issue. These are all useful suggestions, but they are probably a bit in advance of what Mr Whitelaw will feel he can do this year.

There is a fair argument to be made for Mr Whitelaw to have a scheme ready on paper, going beyond the plain choice between belonging to the United Kingdom and belonging to the Irish Republic, which could be put to the voters in November. But that could be held to prejudice the main issue and there might not be time to put out a coherent plan anyway. What Mr Whitelaw has to judge is the temper of his province. It is getting weary of its civil war. Most of the Catholic community seems weary enough now to wish to be rid of the gunmen if it dared to be. It might be more positive yet if the army can defeat whatever the Provisionals try next without the captures and occupations

*"The Northern Ireland Problem." By Denis P. Barrist and Charles F. Carter. Oxford University Press. 90p.

A candle in a fog

What was a nice man like Forbes Burnham of Guyana doing at something like that non-aligned conference? Well, playing host, actually

It was the French, with their capacity for believing their own rhetoric, who invented the third world when most of the rest of us were trying to make do with the familiar one. The idea of a middle way between capitalism and communism has its charms, and no one would deny that the developing countries have some common interests to defend in their economic relationship with the richer world. But since those heady days back in 1961 when Sukarno, Nehru and Marshal Tito got

and searches all conspiring to make the Catholics believe that they are going to be defenceless against a hostile majority and pushed down into an inferior community again. Most of the Protestant community has never been ready to see the industrial and financial society it built up driven into ruin by its own extremists; its blackest moments have been when it felt it saw no alternative. It may be more positive in its pursuit of agreement if it can believe that the IRA is under control and sectarian politics can be partly subordinated to the opportunities and problems of going into Europe. Both sides may accept compromises if they feel secure again. For that the first priority is continued pressure against the IRA and the second the assurance by the British Government that the control of internal security is not going to fall into openly sectarian hands again.

These are the real problems for Mr Whitelaw to decide. He is still in the business of opening as many political doors as he can, and keeping them open as long as he can. A political scheme drawn up while Northern Ireland lives under the real threat of an IRA counter-stroke is bound to be very different from one which seems right to a country that has begun to find its feet again. A scheme that makes sense in a purely Northern Ireland context could soon get out of date if the political and economic advantages of the Europe of Ten start to get Irishmen thinking beyond the nationalist issue. If Mr Whitelaw decides that his choice cannot be taken within the present time-scale for direct rule there would be no voice (except perhaps his own) which would deny him another year's hard labour. Northern Ireland, if the luck holds, is coming out of a night of malignancy and despair. It is a time for moderate men to be encouraged to speak and show themselves: for as many schools of thought as the island supports to contend politically with each other so that what has grown in the darkness can be seen in the light for what it is. If the combination of exhaustion and hope is sufficient, Ulster may yet take, and work, what seems to Mr Whitelaw and Mr Lynch and decent and realistic men to be closest to a decent and realistic settlement.

together to toast the concept of non-alignment in Belgrade, the idea has lost most of what credibility it ever had. Today the phrase "non-alignment" has become about as politically neutral as "people's democracy" or "democratic centralism."

Consider what went on at Georgetown in Guyana, at the fourth international conference of 64 supposedly non-aligned countries last week. The meeting could have served a constructive purpose. The delegates could have

discussed new arrangements between producer countries to defend the prices of primary exports. They could have talked about exchange of technology and industrial co-operation. They might have had another go at trying to persuade the western countries to let them have a stake in the system of special drawing rights. But when the agenda was announced "economic problems" were listed as point nine, right down at the bottom of the page. The people who wanted to tackle the bread-and-butter issues had been elbowed aside by those who took more pleasure in rehashing the old witches' brews.

Who are you non-aligned against?

So the delegates spent a whole day wrangling over whether or not the Vietcong should take a seat at the "non-aligned" table and whether Prince Sihanouk, who now lives in Peking, should be recognised as the true leader of Cambodia. When they decided to give the Vietcong and Prince Sihanouk's envoys seats at the conference table, three Asian delegations (from Indonesia, Malaysia and Laos) walked out. But there were other things that might also alarm those who still have sympathy for the original concept of non-alignment. The list of invited guests included guerrilla movements from South Africa, Rhodesia and Portuguese Africa, and a few young men from the revolutionary Puerto Rican socialist party. The Palestine commandos not only turned up, but went home congratulating themselves on the attack on the Israelis that was written into the final declaration. Chile's marxist president, Sr Allende, also got the conference's total support for a policy that even the Chilean communist party has started to have public doubts about.

All these views about the state of the world—which included a demand that the Americans should pull everything out of Vietnam unconditionally, and a statement of the "urgent necessity" of helping to arm and train African guerrillas—would have been the normal product of a student teach-in. But it is a pity that so many foreign ministers were induced to waste the best part of a working week in an exchange of rhetoric that will do nothing to help their countries deal with their own problems, and which many of them intended as nothing but rhetoric anyway.

One of the things that went wrong in Georgetown was that the Africans and the Arabs had most things their own way, at the expense of the other delegates. This was obvious when they insisted on seating the Vietcong, and used their weight of numbers to do so, when it was clear that this would oblige the delegates of three south-east Asian countries to leave. It was even more obvious when they put into action their prearranged plan to make Algiers the site of the next conference, although almost all the Asians wanted Colombo. The Ceylonese have been dusting down their big new Chinese-donated conference hall, and they appeared to have a solid claim to receive the delegates next time. Ceylon was the only Asian country to break off diplomatic relations with Israel during the six-day war in 1967, which should have given it the Arabs' backing. There have

been non-aligned summits in Cairo and Lusaka, but there has never been one in Asia. The Afro-Arabs' insistence on railroading through their choice of Algiers was not only a slight to the Asians; it makes a nonsense of the claim that these conferences are a demonstration of third-world solidarity.

Assuming that a fair proportion of the countries that will actually turn up in Algiers next time want to get some business done, how can they? Three lessons can be drawn from the fiasco in Georgetown. The first is that only governments should be represented at future conferences. It is not the function of any group of politicians who profess to be non-aligned to take it upon themselves to decide that a legally constituted government such as Marshal Lon Nol's is an "imperialist puppet," and that a political exile living in the capital of a superpower is the rightful, and neutralist, representative of the Cambodian people. The concept of non-alignment flickers like a candle in a fog when it is used to support so open a taking of sides.

Second, the voting procedure at these conferences should be revised. The African delegates at Georgetown operated as a caucus to get their own way throughout the discussions, at the expense of the Asians, who were snubbed, and the Latin Americans, whose voice (apart from Mr Burnham's opening address on behalf of Guyana) went almost unheard. The Arabs, marching in step with the Africans, did well for themselves by getting the conference to endorse their view of the Middle East crisis. But non-alignment, as the Asians are saying, is not a geographical notion, and it is a pity to see a regional clique stealing the show and to some extent rigging the vote. Perhaps it would be fairer to assign voting power to the various countries according to their population. Failing that, it will be up to the Asians and the Latin Americans to organise their own voting lobbies.

The subjects for Algiers

The other point is that it is clear that the main effect of meetings like the Georgetown one is to divert attention from the ways in which the developing countries can do something practical to narrow the widening gap between the rich and poor nations. It tempts them to relate all their problems to a conspiracy theory of international relations. (In practice, of course, the United States comes in for most of the blame and China for none at all.) The coffee producers' agreement the Brazilians are pressing for at the moment—which will cover the Portuguese and the Colombians as well as the Africans—is far more constructive than any of the proposals put forward at Georgetown. If the developing countries are ever to find a useful form of co-operation it will be on the basis of the economic issues where a country following a free-market development model, such as Brazil, can make common cause with a socialist state such as Tanzania. This cannot be done on the Georgetown model. Maybe the differences among the developing countries, with their diverse economic policies, are so great that it cannot be done at all. But any hope that it can will not survive another non-discussion.

United Nations Building, New York.

World trading patterns shifting dramatically...Let the Hongkong Bank Group give you the global view.

The days when world finance revolved around a few European capitals are over.

In a world where Japan is the third largest industrial power, and where new investment opportunities are appearing daily in Asia and Africa, a global view is necessary.

The Hongkong Bank Group offers that global view. They are working not just in the booming Near and Far East, but in Europe, North America and Australia. Everywhere they are assessing the local situation, analysing exporting opportunities, forecasting future trends.

This expertise could be yours—and your clients.

If your interest is in export or overseas investment, call the Hongkong Bank Group.

If your problem is in Sandakan or in San Francisco, in rupees or deutschmarks, they can help. Theirs is the global view. Try them and see.

We're raising the speed limit to ease road congestion.

As train services become faster and more comfortable, so more and more people are using them in preference to their cars. And this in turn helps to take the pressure off our roads.

British Rail will soon be introducing even faster trains capable of travelling at 125 miles an hour and more.

One of them is the High Speed Diesel, which will lop 23 minutes off the London to Cardiff journey, 29 off London to Leeds and

35 off London to Newcastle.

The other train, soon to go on test, is the APT, short for Advanced Passenger Train. So revolutionary is its design that eventually it will be capable of doing 155 miles an hour and more.

Both these trains are designed to run on conventional rail track. And only minor signalling changes will be needed to accommodate them. By the end of the decade, Inter-City should be carrying 50% more passengers than they do now.

All that without creating new lines or using up precious land space.

Urban planners know the value of an efficient public transport system. Without it our roads would be choked and our environment spoilt forever. Investment in British Rail is an investment in all our futures.

British Rail

A Great British Investment

BRITAIN

The tactics of intimidation

It was a laugh but no joke when a group of dockers complained to the police on Tuesday that, as they were driving in their cars through the village of Garthorpe in Lincolnshire to picket a wharf six miles away, they were set upon by an angry band of housewives. What had apparently finally incensed the village ladies were Monday night's television pictures of pickets from outside the area clashing with police at the wharf. The women waved placards urging "no violence"; but the placards, sticks and stones came down on the dockers' cars when they refused to turn back.

The Daily Mirror knew what it was doing when it made the incident the front page splash on Wednesday morning. The ladies of Garthorpe had done what an increasing number of British citizens feel like doing as they watch the police defending themselves when attacked but are seemingly impotent to prevent the violence and intimidation which now accompany every major industrial dispute. And it is not only the police and workers not involved in the dispute who are the victims of the

militants and the fanatics. Mr Jack Jones and the delegates' conference of the Transport and General Workers Union had a taste of it when they met to call off the strike on Wednesday (see page 63).

Unless the militants (it does not seem to matter which union is involved) change their tactics, and there is no sign that they are ready to, the question of picketing will become a major political issue. Even before Tuesday's have-a-go senior police officers were expressing in private their growing fears that the militants' tactics would lead to retaliatory violence by members of the public. The police forces themselves are only too well aware how ill-equipped they are at present to deal with the problem on their own.

Although the law on picketing (see last week's issue of *The Economist*) is ill-defined it is not all that obscure that the presence of several hundred picketers can be regarded as anything but blatant intimidation rather than "peaceful persuasion." But it is sheer numbers which prevent even those chief constables who would like to act against such intimidation from doing so, for outside London it is virtually impossible for any police force to muster the hundreds of men at very short notice that are needed. While the police lack that ability the initiative will always lie with the militants, for they can pick and choose their targets outside their own areas and then scale down the operation when the police reserves have been built up in any one place.

Those were the tactics employed by the miners, picked up by the engineering workers in the Midlands, and used by the dockers with almost total impunity. They do not require very large numbers of men to be effective, and it must be obvious to every trade

unionist where such tactics will inevitably lead. If the union leaders themselves are unable to check the drift the Government will be forced to strengthen the law on picketing—possibly by reducing to a handful the number of men who can lawfully picket at any one place of work—and organise its implementation. For if it does not, the ladies of Garthorpe have shown in their own small way the alternative course.

Health service

Maternal mortality

In the three years 1967-69 there were 527 deaths in England and Wales directly resulting from pregnancy and childbirth, and 455 of them were the subject of a confidential inquiry (HMSO, 85p) by the Department of Health. This is the sixth of its kind: with all the current talk about the need for monitoring performance in the health service, it is worth pointing out that this particular aspect of the maternity services has been monitored since 1952.

In the years 1952-54 over 1,000 maternal deaths were investigated (out of 1,404 that occurred), and the birth-rate was then lower. So there is no doubt about the improvement. But with the rise in standards of care the investigators have themselves become stricter in applying the test of whether a death was avoidable or not. Thus accompanying the fall in the death-rate is a rise in the proportion of deaths with avoidable factors—43.1 per cent in 1952-54 but 56 per cent in 1967-69. This does not mean that 255 mothers' deaths could have been avoided, but the avoidability test does indicate the sort of case in which particular care should be taken. The report points out that although the proportion of births that take place in hospital is continuing to rise, too many unsuitable cases are still booked for home confinement, and it describes one or two horrifying examples of medical mismanagement by general practitioners looking after mothers either at home or in GP maternity units. Hospi-

Jones: a taste of militancy

tal care was by no means faultless either. Admittedly, the most complicated cases are—or should be—booked for hospital delivery, so the hospital death rate can be expected to be higher. All the more reason, therefore, for careful supervision by senior doctors, which on occasion was completely lacking. In particular, 34 of the 50 deaths associated with anaesthesia in 1967-69 had avoidable factors, and in most of these deaths the anaesthetic was administered by a junior doctor. But it is still true that many deaths, whether in or out of hospital, might have been avoided had the mother sought advice and followed it.

The effect of the Abortion Act is apparent in this report. Abortion is the biggest single cause of maternal death, accounting for 117 of the deaths investigated in 1967-69. Of these 74 resulted from illegal abortion (all deemed to have avoidable factors), and 32 were of coloured women. But over the three-year period the number fell from 28 and 29 in 1967 and 1968 to 17 in 1969—the first full year of the Abortion Act. Nevertheless, the switch to legal abortion has not put an end to avoidable deaths, particularly when the operation is carried out after the first three months of pregnancy.

In a preface to the report, Sir George Godber (Chief Medical Officer) says that in 1952 no one contemplated the extent of the fall in maternal mortality over the next 20 years. If the report is followed up—action has already been taken over anaesthesia—perhaps its successor will show that his goal—a reduction in maternal deaths to below 100 a year—is near realisation. In 1970 they numbered 146.

Cricket

What the actress saw

Cricket is dead, long live cricket. A season which began with appropriately funeral weather is ending with a rout of the pessimists and decorative pictures in papers with an eye for such things of an actress in a bikini lolling on the boundary at the Oval. For others there was Mick Jagger among the members. England kept the ashes, but Australia squared the series on the last day of the last match and receipts for the five tests rose to a new record of around £1m. Three one-day matches between the two sides are still to come and, rain apart, are bound to be sell-outs.

The series has been an absorbing

Cricket itself is not out

one and it might seem to those with tiresomely good memories that *The Economist* (see April 22, 1972) owes someone an apology. Looking back, there is little cause to modify the assessment of the sides as other than mediocre. In many ways the excitement of the series has been the product of their weaknesses, the inconsistency of their top batsmen and, in the early days, the rank fallibility of their fielding. But as should have been anticipated, because cricket is uniquely that kind of game, there were exemplary individual performances and partnerships which, time and again, rescued their teams from what had seemed to be certain, ignominious defeat. There was little to deserve the title of greatness but much of courage and tenacity, and if amends are due to any they should go particularly to the two captains, the Australian, Ian Chappell, who, with his brother, Greg, did so much to win the last test, and Ray Illingworth, who not only demonstrated his rare intelligence as a tactician but also acted the reliable anchorman when, invariably, the established English batsmen failed.

Although, undoubtedly, there are better teams in the world, the battle for the ashes remains the supreme contest so far as spectators are concerned. But it has not been only the test matches which have drawn the crowds. The one-day, limited overs game has caught the imagination and, with a second tobacco firm offering sponsorship this season, there are now three such competitions and no sign of satiation. Others may question the ethical relationship between cigarette manufacturers and sport but it has been

financially a life-saver for cricket.

The pity is that there is no sign that this new popular enthusiasm has spilled over into the county championship. The cricketing addict may be delighted by the sight of unfashionable counties like Gloucester and Essex near the top, but three-day matches are still lonely affairs. It is evident that those who rule cricket must learn to live with the one-day game, for cricket will not live on as a professional sport without it. Some commentators argue that the lack of concentration and the suicidal spasms shown by England's test batsmen are attributable to the demands of get on or get out imposed upon them in one-day games. But there are players who look first-class whether they are playing one-day, three-day or five-day matches. The different forms of the game call for an adaptation of technique and an assertion of character. Nothing less will be expected in future of men who want to play at the top level and make a decent living at it.

Water

Name games

It is always wonderful to see how a radical government reform of administration, designed to sweep away a host of unnecessary minor bureaucracies, always ends by something pretty similar to each supposedly redundant institution creeping back into the system—under, of course, another name. The Government's important scheme for the abolition of the Water Resources Board, the British Waterways Board and no fewer than 1,400 minor water authorities, and the creation of 10 new regional water authorities, was more than welcome.

But it has naturally attracted a good deal of criticism, not least from the host of local authorities to be deprived of their water powers. However, on August 11th the Department of the Environment announced the details of the proposals for the new advisory body, the National Water Council, which (despite the fact that it will have no executive powers) do their best to make it sound as like the old Water Resources Board as possible. At the same time, the department promised the creation of a hideously-titled Water Space Amenity Commission which (despite the fact that power will still rest with the regional water authorities) is supposed to provide the same impetus to improve Britain's canals and waterways that has recently been the signal achievement of the

Inchcape & Co. Limited

Continuing growth and expansion.

In the course of his Statement, the Chairman, The Rt. Hon. The Earl of Inchcape, reports that:

“The profit available to Ordinary Shareholders for the year under review at £5,036,450 confirms the estimated profit contained in the Offer document relating to our recent acquisition of Dodwell and Company Limited in May this year of “approximately £5 million”. The available profit compares favourably with the comparable figure of £3,436,610 for the previous year. The increase in earnings per Ordinary Share was 46 per cent.

The inclusion of a full year's profit from recent acquisitions, particularly Bewac Motor Corporation Limited and Anglo-French Holdings Limited (formerly Wheelock Marden & Co. (Malaysia) Limited), has contributed to the improved result,

together with the inclusion of six months' profits from the new acquisitions in Australia, Melinga Mining and Finance Company Pty. Limited and Timber Investments Limited. Apart from this, however, most of the other Group companies have returned better results and contributed to the satisfactory figures shown in the Accounts.

I would emphasise the difficulty of forecasting the results of a diverse and widely-spread group at this stage in the financial year, especially in a year including a major development such as the recent acquisition of Dodwell and Company Limited and with the added difficulty of world currency markets being in disarray but on present information there is little doubt in my mind that the progress of the Group will continue.☺☺

Salient features of year's results

	1972	1971
Profit before Taxation	£9,514,000	£6,544,000
Profit available to Ordinary Shareholders	£5,036,000	£3,437,000
Earnings per Ordinary Share	26.6p	18.2p
Dividends per Ordinary Share	13p	9p
Ordinary Shareholders Capital Employed	£34,387,000	£27,754,000
Return on Ordinary Shareholders Capital Employed	14.6%	12.4%

Geographical Distribution

The following table gives a broad indication of the geographical distribution of the income attributable to Shareholders and Loan Stockholders of Inchcape & Co. Limited, after charging taxation.

	1972 %	1971 %
Africa	11	18
Australia	2	1
Canada	1	1
Caribbean	1	1

British Waterways Board. And on August 15th, Mr Peter Walker and his parliamentary under-secretary, Mr Eldon Griffiths, wrote to the four local authority associations and the Greater London Council in terms which make it clear that they accept their pleas for more consultation with, and devolution to, local authorities than the original proposals appeared to allow for.

The local authorities were particularly concerned about losing their control over "sewerage" (meaning the provision of sewers, rather than the disposal of sewage). It is obviously right that all powers over water supply, use and drainage should be vested in authorities covering areas large enough to take in entire water basins, but there is no reason why the RWAs should not hand down limited control to local authorities. These will, in fact, be able to requisition sewerage from the RWAs, though Mr Walker is not yet saying whether he will allow them to be the only bodies to do so. And he has also agreed that local authorities should be represented on the RWAs.

The GLC, which is never shy, went so far as to ask to become a RWA itself. This would have made great sense for the London area, but the department has turned it down because with the area boundaries now planned the GLC would thereby have become the water authority for towns as far off as Banbury. It was therefore possible to turn the tables neatly and use the local authorities' demands for local democracy against the GLC. The department has also turned down the suggestion that the Thames area should be cut in half. That would apparently make hydrological nonsense while still leaving the GLC responsible for Luton's sewerage.

The Government's consultation paper leaves it less than clear what (apart from providing advice in all directions and licensing pleasure craft) the new amenity commission will actually be able to do. It is to be chaired by the "amenity member" of the National Water Council, whose own functions are not all that concrete. The council is intended to be a forum for the RWAs, whose chairmen will be ex-officio members, and an advisory committee for the Government. But the environment department is full of the importance of inland waterways for leisure, pointing out that there are more people messing around the waterways on a summer weekend than there are on the football terraces on a winter

weekend. The comparison is getting a little too apt. Considering the increasing use of the waterways and the unuseable condition of so many of them, the water enthusiasts will soon be packed as tight as the football crowds. That brings one back to the reason for this administrative upheaval, though in an effort to be tactful with local authorities the department is at present using euphemisms for it: the need for a new system to get the waterways out of the stinking mess that the old system (and, to be fair, shortage of money) has allowed them to get into.

Fanfare for Europe

And brass bands too

It is impossible not to have a sense of remoteness, almost of unreality, when talking in August of a national festival to be held in January to celebrate Britain's entry into Europe. But festivals, like treaties, if they are going to be worth while have to be prepared in advance, and a Fanfare for Europe is a good idea only so long as it is well done.

It is right to recognise from the start that Fanfare has been conceived as a public relations exercise to win support and stimulate enthusiasm for European entry and the Government is providing up to £350,000. But that should not invalidate it or compromise the quality of it. Any programme offering more than 150 events on a countrywide basis is likely to contain one or two items which, on the day, turn out to be palpably less exciting than they looked on paper. What should stimulate the organisers is the knowledge that they will face

political as well as artistic criticism of their efforts.

The prospect of staging a festival in January must be daunting, although to have held it at any other time would probably have seemed artificial and from the political point of view would have diminished its potential impact upon public opinion. Of the two parallel committees which are planning the celebrations the one chaired by Lord Mancroft, responsible for everything which cannot be called cultural, obviously has most to fear from the weather. Who, for instance, would wander out into a snowstorm to watch a parade of vintage EEC cars? The time of year must also make it difficult to put on, say, an international football match, so heavy are the commitments of clubs and players.

It is not surprising, therefore, that preparations for the artistic side of things look to be more firmly in hand. These have been the work of Lord Goodman's committee and the chairman has enjoyed the help of several influential figures. He also has an experienced professional, Mr Stephen Reiss, as full-time director. The result has been an impressive programme, combining artists, orchestras and theatre companies of international reputation with a full and proper representation of regional talent.

One of the most heartening aspects of what is so far known of the festival is that the organisers have clearly understood the need to make Fanfare for Europe a genuinely national festival and not just a series of metropolitan galas, and also one which will appeal beyond the privileged, aesthetic minority. The Goodman committee is certainly not to be criticised for aiming at the best. What must be hoped is that as many as possible will be allowed to share the pleasure.

Goodman and Mancroft: let the good times roll

If you're there, we're there.

The Far East, Europe, Latin America. Wherever in the world you do business, Wells Fargo Bank is there to help.

Our global network of branches, representative offices, and affiliates—including our new, wholly-owned merchant bank in London, Wells Fargo Ltd.—offers a full range of banking services. And they are backed by the strength of \$7 billion in assets and the skill of 120 years experience.

In addition, Wells Fargo makes it a point to maintain close working relationships with banking, government and corporate interests all over the world in order to serve you better wherever you choose to do business.

In short, whatever international banking services you need, and wherever you need them, Wells Fargo Bank will deliver.

If you're there, we're there: Auckland, Buenos Aires, Bogotá, Caracas, Dubai, Hong Kong, Lima, London, Los Angeles, Luxembourg, Managua, Manila, Mexico City, Miami, Nassau, New York, Panama City, San Francisco, San Salvador, São Paulo, Sydney, Taipei, Tokyo.

International Report

The armourers are thriving along the Rhine

FROM OUR BONN CORRESPONDENT

The Christian Democrat opposition leader, Herr Barzel, came back from holiday this week and asserted that "Dieses Land ist nicht in Ordnung," which, if translated by Sean O'Casey, would mean that west Germany is in a state of chassiss. Allowing for pardonable exaggeration on the part of an opposition leader, the diagnosis does contain elements of truth. The fact of the political matter is that the country is in a brittle and nervous state.

The election campaign has already begun, though it is worth repeating that there is still no definite election date (the heavy betting is still on December 3rd). The chancellor, Herr Brandt, has been stumping the country this week, showing himself to an electorate which has still to experience the constitutional eccentricity of a premature election. Every issue, from the rise in the cost of living index (up 5.6 per cent during the past year) to the intra-German talks, is being examined for its campaign value. During these sultry August days on the Rhine, down which many a political reputation may soon be sold, one word keeps cropping up: *Wahlkampf-munition*, meaning ammunition for the

election campaign. *Wahlkampf-munition* ricochets around the country, substituting itself for the smack of firm government from a government with a majority of none. Since the west Germans conduct their politics seriously, and on occasion bitterly, the country is in for four months of rare politicking.

The Quick affair must be seen in this context. The government, including the minister in charge of the chancellor's office, Herr Ehmke, repeatedly denies that it has any responsibility for the instigation of the searches of the magazine's offices. The opposition says it doesn't believe the government, which allegedly had a motive for hounding Quick because it had published the private letter of resignation to the chancellor from the former minister of finance and economics, Herr Schiller.

Clearly there are principles involved, notably two that are often in conflict: the freedom of the press and the necessary secrecy of government business (Bonn has the reputation of being the leakiest capital in the world). But the whole affair has been blown up

and obfuscated by electoral considerations, by rumour, by the uncertain promise of scandals to come, and above all by the remarkable tenacity of the anti-government Springer press. Amid all this *Wahlkampf-munition* flak, it seems that nobody has had the time to ponder why, if the Quick affair has done such electoral harm to the government, the government should be suspected of having taken the risk of putting it in train. At this point, doublethink-minded readers are invited to begin exercising their imaginations. Herr Brandt has merely exercised his political cool. Given the present talk about a "fair" election agreement between the parties, as in the past, it has to be said that the campaign has got off to a very inauspicious start.

Meanwhile, in Düsseldorf, the advertising agency boys have been in session for some weeks, tossing suggestions for party images around and seeing which of them will stick to the wall. Four agencies are involved, the Christian Democrats allowing themselves the luxury of two. Given the comparative unpopularity of the Social Democrats as a party, it seems that the ever-popular Herr Brandt is destined for personal packaging even more than in the past. There will be some such slogan as "Every vote for the SPD is a vote for Willy Brandt." The Christian Democrats will make much of the dissension inside Herr Brandt's party (this week Herr Barzel saw Herr Schiller, who is still contributing to the general nervousness by keeping his own political counsel). The opposition will also sound warnings that the Social Democrats will shift ominously to the left if they are re-elected, and that they bring inflation in their train.

Although inflation applies equally to election expenses, the parties are in the happy position of receiving state subsidies at the rate of DM2.50 for every vote they got at the last election, as well as donations from private, industrial or trade union sources. Each of the two larger parties, the Social Democrats and Christian Democrats, has some DM40m (about £5m) at the moment to invest in the coming battle.

Barzel sees disorder, Brandt keeps his cool

Two down: Pintado (left) and Martins

Portugal

Two steps backward

Those Portuguese who expected great things from Dr Caetano when he became their prime minister after Salazar's stroke in 1968 will not like his latest decision. His attempts to give a new momentum to the static "situation" created by Salazar have run out of steam. Indeed, such changes as still occur suggest a rolling backward.

Dr Caetano has been obliged to bow to the insistence of his most conservative colleagues that the 77-year-old Admiral Américo Thomaz, who has been president of the republic since 1958, should be given a third seven-year term. The right-wingers, who also continue to dominate the single-party national assembly, have thus consolidated their double grip on the prime minister, for according to the constitution he can be dismissed by the president at any time—and this constitutional provision is no longer the dead letter that it was in Salazar's day. Moreover, the few reformists whom Dr Caetano had brought into the government are now being squeezed out.

As a formal consequence of Admiral Thomaz's reappointment, all the ministers offered their resignations; and when the new government was announced, on August 10th, sweeping changes were made in the economic posts. Senhor Rogério Martins and Senhor Xavier Pintado, who as junior ministers respectively for industry and commerce had shown themselves eager to lift Portugal out of the stuffily monopolistic ways of the Salazarian system and to fit it for a European role, have been ousted. So has Senhor João Dias Rosas, who as economic and finance minister had allowed some scope to these two young technocrats. The

diehards of the ruling party will be reassured by the appointment of the chairman of its executive committee to succeed Senhor Dias Rosas, and of another member of that committee to replace Senhor Martins. But many Portuguese will note sadly that Dr Caetano no longer seems to be in a position to make even symbolic gestures in the direction of reform.

Holland

Neglect and nemesis

Labour drawn from Mediterranean countries has long played an important part in the economies of France, Switzerland, west Germany and even Scandinavia. But, until last week's outbreak of race riots in Rotterdam, it was not generally realised that the same applied to Holland too—which, with more than 900 people per square mile, is the world's most densely populated country. The Dutch enjoyed a reputation for skill in assimilation, arising from their remarkably successful absorption of some 300,000 refugees from Indonesia during the first decade of its independence. They had made a particular effort to resettle these refugees, who were regarded as a national responsibility whatever the colour of their skin. But no such care was given to the reception of the Spaniards, Italians, Yugoslavs, Turks and others who came to Holland as migrant workers in more recent years. The formation of ghettos duly followed.

The Dutch authorities had already begun to worry about the prospect of Indian, Pakistani and Caribbean migrants moving in from Britain after the enlargement of the common market, but they did not apparently foresee the more immediate trouble of the

kind that broke out on August 9th in Rotterdam. Turks who had settled in the city's Afrikaander district were the main victims of mob violence that was still raging six days later when the mayor of Rotterdam, vainly trying to calm a rampaging crowd, was himself attacked and had to be rescued by armed police. Now the authorities are hastily getting to grips with what has clearly become a critical situation. Things are not made any easier by the fact that the breakdown of Mr Biesheuvel's year-old coalition has been followed by the formation of a temporary minority government intended only to last until elections are held in November.

Australia

The last chance

FROM OUR CANBERRA CORRESPONDENT

If elections were decided solely by budgets, the Australian government would be a certainty to stay in power in November after the budget announced on Tuesday night. The Treasurer, Mr Snedden, raised pensions of all kinds, provided fresh educational benefits, increased grants to a variety of organisations, lowered personal income tax by an average of 10 per cent, and reduced estate duty (see page 82). It was a giveaway budget, but acceptable because most people had been urging the government to stimulate the economy and damn the inflationary consequences.

The level of unemployment is about 2 per cent, which would draw no attention in most other developed countries but is regarded as too high in Australia. So Mr Snedden is deliberately trying to make the economy move faster. The fact that in the process he is giving a great many people more money is being attacked by his opponents as vote-buying; but he can reply that any treasurer would do much the same in the circumstances.

The question now is whether this budget can redeem the 23-year-old coalition government of the Liberal and Country parties in time for the election. Opinion polls suggest that if the election were held now the government would be swept from office by the Labor opposition. Its prestige is low and that of its prime minister, Mr McMahon, is lower even than his party's. Although he is diligent and hardworking, he looks uncertain and inconsistent. His speeches are dull, and his whole public presence suggests indecision. These public manifestations

YKK Production Now Formally Underway In England

YKK Fasteners (U.K.) Ltd. have formally opened their new 33,000 sq. m. Runcorn Plant facilities for production. **

Following on the heels of YKK plants in New York, U.S.A., and Sneek, Netherlands, the Runcorn Plant completes another link in the world-wide network of YKK facilities.

YKK assure prompt delivery and service for their widest variety of zippers.

** Opening ceremonies were honoured by the attendance of approximately 400 dignitaries including Mr. & Mrs. M. Carlisle, Q.C., M.P. and Minister of State, Mr. & Mrs. H.J.S. Dewes, Governor of Cheshire, Mr. & Mrs. V. Arnold, Chairman of Runcorn Development Corp., and Mr. & Mrs. S. Williams, Mayor of Runcorn.

McMahon, looking indecisive

do not tell the whole truth, but they are what the public has to go on. There has even been a belated effort to replace him by his dethroned predecessor, Mr John Gorton, before the election, which must be held by the end of November. This scheme will come to nothing, since even the most dissatisfied member of parliament can see that it is no good swapping horses so far from midstream.

It looks as if the most the budget can do politically is to restore some of the government's lost standing, but probably not the whole of it. However, it would be wrong to view this financial exercise solely in political terms. The government's expansiveness has enabled a number of worthwhile steps to be taken, steps which would be hailed as social advances for whatever reason they were being taken. For example, the budget's provisions for old people are not only generous but also creative. Even if Mr Snedden's party loses the election, he can feel that he did some good while he had the chance.

Uganda

An even bigger problem?

FROM OUR UGANDA CORRESPONDENT

Now that Britain has decided that it must, if need be, take in the 50,000 British Asians from Uganda its government is going to have to face a second and even harder question. What attitude should it adopt to the very many Ugandan Asians who are being told that their Ugandan citizenship is being revoked? Mr Rippon predicted when he was in Uganda that these people would pose an even bigger problem

than the passport-holding British Asians. He looks like being proved right.

The exodus of the British passport holders calls for the solution of many practical problems, including the sale of their businesses here, the provision of foreign exchange by the Ugandan banks and of transport to Britain. Awesome though these problems may be, solutions no doubt can and will be found. Uganda's finance minister has talked of holding the assets of expellees in frozen bank accounts and releasing foreign exchange to them as and when it becomes available. General Amin himself has promised government support for Africans wishing to buy Asian businesses (where the money will come from he did not say, but it might be from those "frozen" bank accounts). But for the 10,000 people, or perhaps even more, who are liable to lose their Ugandan citizenship in a verification campaign that is designed to discover the minutest flaw in an Asian citizen's documentation, the future must depend on finding a country to take them.

The British Government is involved for two reasons. First, those affected were formerly British subjects, and many of them will have lost their Ugandan citizenship because they did not renounce their British citizenship quickly enough; and delays at the Home Office have been partly to blame for this. Second, in many Asian families here citizenship cuts across family ties. If Britain will not admit stateless Ugandan Asians, parents will be separated from children.

In this respect, if in no other, Mr Rippon's visit may prove to have been useful, for it did establish a channel of communication through which problems of this kind can at least be discussed. Whether they can be resolved is another matter. Mr Rippon's own experience showed that communication with General Amin is not necessarily the precursor of compromise. His talks here won no concessions from the Ugandan side, except oral promises that Asians' businesses would be sold fairly and their lives and property safeguarded, and every fresh mention of the difficulties involved in the exodus seemed to spur General Amin to a fresh manoeuvre to ensure that his time limit of 90 days would be met. In fairness it must be added that General Amin had made his mind up long before Mr Rippon arrived, and that no British minister could have devised a diplomacy to counter his alternation between lambastings of British

imperialism and assurances that "the British are my best friends."

What General Amin wants ultimately is that all people of Asian origin should leave Uganda. How this is to be achieved even he is not yet clear. But if he remains in power and defers his promised handover to a civilian regime, a way may still be found. His contention is that Asians do not integrate willingly with other racial groups. So the biggest long term problem for Uganda's Asians concerns not those who are about to leave, nor even those who must leave and have nowhere to go, but those who must stay and face the next round.

Morocco

Second time lucky

King Hassan of Morocco has a charmed life. On Wednesday he survived the second attempt on his life in 13 months when his Boeing 727, in which he was returning from a holiday in France, was attacked in the air by at least one of the Moroccan air force's escorting fighters. The king's plane landed safely. The rebel planes then attacked the group of ministers and officials waiting at the airport and, soon after, the king's palace in Rabat. The army promptly took over the air force base at Kenitra. Several air force officers were arrested, and two others fled to Gibraltar and asked the British Government for asylum. On Thursday it was reported in Rabat that General Oufkir, the defence minister, had killed himself.

When senior army officers tried to overthrow King Hassan in July last year, by ordering trainee non-commissioned officers to mow down his birthday-party guests and take over Rabat radio and ministry buildings, the Libyan leader, Colonel Qaddafi, jumped to the false conclusion that this was Morocco's socialist revolution. The young air force officers involved in Wednesday's affair are more likely to share Colonel Qaddafi's political ideas than were the instigators of the attempt last year.

Whatever, and whoever, lies behind this week's plot, King Hassan's throne now looks distinctly insecure. After last year's botched coup General Oufkir, the security chief, was made minister of defence to purge the armed forces of dissidents. He cannot have done his job well—and there are already suggestions that he secretly promoted this new plot, and that ministers may also have been involved.

SOME PEOPLE BUY WATER BY THE CUP

In arid regions the water-vendor is a familiar tradesman.

A coin for a cup. Scarcity makes water a precious commodity. Don't be careless with it.

There are careless people, though — people who live where water is so plentiful that they've taken it for granted. Let it run to waste. Polluted it. Mismanaged it.

The needs are urgent. Where water is scarce, it must be provided. Where endangered, it must be rescued.

Water needs to be managed as expertly as money, or homes, or businesses.

Helping regions and nations harness, conserve, and protect their water resources is a very important part of our company's business.

We have engineered vast irrigation projects that have brought major areas of desert land into fertile cultivation.

We design and build waste treatment systems to process the sewage of a small community, a sizeable town, or a city of millions of people. And, in the process, make waste-water re-usable.

We manufacture pumps that can irrigate a farm, a golf course, a municipal park, or, indeed, an entire province. Pumps to put out fires. Or to move millions of gallons of water in giant flood control projects.

We also build treatment systems to reclaim water at industrial plants, refineries, and factories.

We think water deserves a high priority on the human scale.

And our kind of technology can be very useful to those who agree.

FMC has offices in principal cities throughout the world. To learn more about this versatile company, please write for our booklet, "Achievements."

FMC CORPORATION

San Jose, California 95106, U.S.A.

A VERY USEFUL COMPANY

Every key business centre in Europe is only a hop, skip and a jump from Frankfurt.

If you're on a tight schedule in Europe, here's something to think about: Frankfurt is 50 minutes from Brussels, 60 minutes from Amsterdam and Prague, 65 minutes from Milan, 70 minutes from Paris, 90 minutes from London and only 180 minutes from Moscow. You see, Europe isn't very big when you start from the centre. And our schedule makes it even smaller: 396 quick daily connections to 52 European cities. Next time you fly anywhere, check with Lufthansa. We'll get you there as well or better than anybody else. And if we can't we won't sell you a ticket — unless you insist.

Hijackers

Please land somewhere else

The Algerians have got stuck with another lot of problem hijackers. Their government regards the providing of asylum for political refugees as part and parcel of its international policy, which is one of general support for liberation movements, and as a humanitarian and hospitable action too. But when those who claim to be political refugees arrive in hijacked planes, and carry suitcases stuffed with money extorted from the planes' owners, the government is faced with an embarrassing dilemma. It has happened twice this summer.

On June 3rd, a Boeing 720 landed at Algiers after being hijacked from America. The hijackers, a man and a woman, had collected \$500,000 from Western Airlines. They claimed to be members of the Black Panthers, and asked for asylum. Three weeks later the government returned the money to the airline, but it has not yet announced its decision about the hijackers' fate. The hijackers of the Delta Airlines DC8 that landed on August 1st brought \$1m with them and also claimed Black Panther membership. The Algerians confiscated the money and began inquiries about the hijackers' backgrounds; the Americans claim that two of them are escaped criminals.

The Algerians' hesitation about what to do spurred their best known Black Panther guest, Mr Eldridge Cleaver, to write an open letter to President Boumedienne. Those who deprived the Black Panthers of money, he said, were depriving them of freedom. This was followed by a letter from the hijackers themselves saying they were shocked at their treatment by the Algerian government. The government's reply was to send police to search the Black Panther headquarters in Algiers and to allow the newspaper *El Moudjahid* to comment that, although Algeria was "a land of refuge for all noble causes, it would not wish them to be tarnished by any sort of impurity." Delta Airlines will almost certainly get its money back, and the two men whom the Americans claim are escaped criminals may not be allowed to stay in Algeria.

If this sort of compromise deters potential hijackers from choosing Algeria as their destination, its government will be delighted. It is becoming increasingly disturbed about the Black

INTERNATIONAL REPORT

35

Another view of Cleaver

Panthers. The split within the movement's ranks, which has led to internecine killings in the United States, has given the Algerians a jaundiced view of Mr Cleaver and his faction, who have settled in their midst. But no other country seems to want them, and the Algerians do not want to ship them back to the United States.

When the Algerians are criticised for not extraditing hijackers back to America, they ask why there is no similar demand, for example, for the Bonn government to return the Czechs who, in June, escaped by hijacking a plane to Germany and killed one of its crew in the process. One difference is that there are many ways of leaving the United States other than by hijacking aircraft, which is one of the few means of escape for those who want to leave a country that tightly controls all movement by its citizens.

The subcontinent

No entry

While India and Pakistan this week celebrate their silver jubilees of 25 years of independence, the final seal on Bangladesh's new independence—admission to the United Nations—swings in the balance. No sooner had Bangladesh applied for UN membership last week than President Bhutto announced that this week's meeting of the Pakistani national assembly would not take the long expected step of recognising the new state, and the Chinese representative in the Security

Council threatened to use his veto to block its entry, unless two conditions are met. These are the return of the 93,000 Pakistani prisoners of war from India, and the complete withdrawal of Indian troops from Bangladesh. There may now be only a few Indian soldiers left in Bangladesh. But there is not a chance of the first condition being met by Monday, when Bangladesh's application is due to receive further Security Council consideration. If an early vote is demanded, a Chinese veto looks certain.

The Chinese are certainly playing an odd hand. They base their stand against Bangladesh partly on the fact that the General Assembly resolution which was passed during the December war, and which called for an immediate ceasefire and withdrawal of troops, was rejected by India, with Russian backing. At the time, this resolution got much support—104 votes to 11. But all this has long been overtaken by events. Last year many people looked askance at China's support for Pakistan against a visibly popular separatist movement in east Bengal. And for the self-proclaimed champion of the rights of small states to veto Bangladesh will look odder still. Are the Chinese following the "revisionist" Russians in putting national interests before those of world revolution? Whatever Peking's motives, Mr Bhutto would hardly have been categorical in refusing recognition had he not been sure of Chinese backing.

Nevertheless, Mr Bhutto has his own reasons for backpedalling on recognition. As last month's language riots in Sind showed, what is left of Pakistan has still not reached a comfortable degree of political stability. A prime objective of the rioters was to burn the offices of Mr Bhutto's own People's party. More ominous still was the dismissal last week of six senior army officers who were accused of having tried to stage a coup last December. The possibility of an extra-parliamentary opposition appealing to the army could arise again if Bangladesh were recognised.

Mr Bhutto may be withholding recognition in the hope that a growth of anti-Indian feeling in Dacca will in time lead Sheikh Mujibur Rahman to accept some sort of link with Pakistan. True, there are some signs that Bengalis may be coming to resent Indian domination of the new country, and the opposition parties are fanning this resentment. But this could only be a long-term development; and Mr

Bhutto would be unwise to rely on it.

His decision will not necessarily disrupt last month's Simla accord between India and Pakistan. On August 10th, Indian and Pakistani officers had a successful meeting to work out the details of withdrawals from occupied areas in the west. Agreement has even been reached on a slightly altered ceasefire line in Kashmir. But it is now unlikely that the second summit meeting planned for September will take place. The first item on its agenda would have been the Pakistani prisoners, whose return India says is conditional on Pakistani recognition of Bangladesh. Now China has weighed in on Pakistan's side. But Bangladesh can live without UN membership a bit longer; and it is probably easier for the Indian economy to go on feeding 93,000 extra mouths than it is for Pakistani emotions to be denied the return of the prisoners of war.

Japan and China

Let's normalise, not abrogate

FROM OUR TOKYO CORRESPONDENT

Japan and China are now officially committed to a rapprochement. A week ago, Peking's news agency announced that Mr Chou En-lai had invited the Japanese prime minister, Mr Kakuei Tanaka, "to visit China for negotiations and settlement of the question of normalisation of diplomatic relations between China and Japan." Mr Tanaka had in fact accepted the invitation the day before, when his foreign minister met Mr Sun Ping-hua, the deputy secretary-general of the China-Japan friendship association. Then this week, on the 27th anniversary of the end of the second world war, Mr Tanaka himself and Mr Sun got together for a chat at the Imperial Hotel.

No date for Mr Tanaka's visit to Peking has been announced, and a Japanese government spokesman has said that no date will be made public until after his meeting on August 31st with President Nixon. However, the Japanese press continues to predict a week-long period late next month, after Mr Heath's visit to Tokyo. Some observers expect that a preparatory mission, consisting of representatives both from the Liberal Democratic party and from the foreign ministry, will travel to Peking well ahead of Mr Tanaka. Meanwhile,

domestic politics continue to favour Mr Tanaka and the ruling party's special council dealing with Chinese problems has given its approval to his proposed trip.

What is likely to come out of this visit? The fast pace of events in the six weeks since Mr Tanaka took office suggests that Peking and Tokyo are now bent on setting the process of normalisation in motion, and irrevocably. This can be done, according to those here who expect it to be done, through a general statement in which both sides could acknowledge the end of hostilities and accept a set of principles—such as non-interference in the domestic affairs of other countries (implying, presumably, an end to China's formerly frequent attempts to influence Japanese domestic politics), and the idea that no single power should dominate east Asia. Full-scale normalisation, according to this argument, would have to wait until the details of a Japan-China peace treaty can be worked out.

This relatively smooth scenario would depend on the willingness of both sides to shelve the legal tangles that could obstruct normalisation. The question of Japan's present ties to Taiwan is clearly the most intractable of these issues. Here the Japanese goal is to reverse the current formula, and to establish full diplomatic relations with Peking while keeping a semi-official "trade" channel open to Taipei.

The Japanese, though they are famous opportunists on political matters, are also famous legalists when they have to get down to legal matters. Plainly Japan would like to avoid an outright abrogation of its 1952 peace treaty with the Taipei government. Through various hints and leaks, Mr Tanaka's new government has indicated that it expects that Japan's diplomatic ties with Taipei will be severed and that the 1952 treaty will become "ineffective." To the Japanese, in the legal context, "ineffective" sounds better than "abrogated"; to the Chinese, it is hoped, the distinction will not matter.

Certainly the Chinese, when viewed from Tokyo, seem at least as anxious as the Japanese to normalise relations. But the Japanese press is already so committed to normalisation, and is so firmly playing down all news that might dampen this prospect, that a sudden stiffening in China's apparent terms would create grave problems for Mr Tanaka in the domestic field as well as in the diplomatic one.

Japan and Taiwan

Trade follows two flags

FROM OUR HONGKONG CORRESPONDENT

For Taiwan, the prospective insult of an abrogated peace treaty has been added to the long-expected injury of Japan's switch of diplomatic recognition to Peking. But the precise formula for the approaching visit to Peking by the Japanese prime minister, Mr Kakuei Tanaka, will probably not be even tentatively shaped until Mr Tanaka meets Mr Nixon in Honolulu at the end of this month. By confucian standards, the annulment of the bilateral treaty that was concluded in 1952 between Chiang Kai-shek and Mr Yoshida, who was then Japan's prime minister, is perfidious as well as insulting, because both sides had hailed it for 20 years as a shining example of self-restraint and self-respect.

When Japan capitulated in 1945, Chiang was the first allied leader to urge publicly that the Japanese should be treated with "magnanimity and non-retaliation," and he held aloof from the armed occupation of Japan. But when the 1951 San Francisco peace conference was convened, Mao was in Peking and Chiang was in Taipei. Britain sided with Russia against the United States in urging that the Chinese communists should replace the Nationalists at the peace conference. In the end China was not represented there at all, and it was agreed that the Japanese should in due course decide for themselves which government represented China. (Russia refused to sign the 1951 treaty because of the Peking government's absence from the conference.) Mr Yoshida chose the Nationalists, and the bilateral 1952 treaty was duly signed.

However, in this imperfect world, neither international insults nor con-

Confucian analects get the same high priority as trade. And the new, resilient Chiang Ching-kuo administration in Taipei has no doubt that Japanese industrialists will discover effective means of circumventing Peking's insistence that contracts will be granted to them only when they stop doing trade deals with Taiwan. Much Japanese business with Taiwan is already conducted through dummy companies. Taiwan's new trade centre in Tokyo—established after the diplomatic switch had been tacitly accepted—will be followed by a tourist centre there, and Japanese counterparts in Taipei are expected to operate long after the diplomats have departed.

A Taipei official spokesman recently remarked blandly that "transferred or non-existent diplomatic ties do not necessarily sabotage trade." It was a Confucian understatement. Taiwan's trade with Canada, west Germany, Holland, Britain, Singapore, Indonesia and Malaysia actually increased last year. Japan still supplies some 40 per cent of Taiwan's imports, and the total in the first four months of this year reached a record of \$267m.

Canada and China

Beavers in Peking

FROM OUR CANADA CORRESPONDENT

In the flock of flying visitors to Peking, the 500 Canadian businessmen who are now in the Chinese capital may be less colourful in plumage than the eagles that surrounded President Nixon in February or the doves that accompanied Mr Waldheim, the UN secretary-general, earlier this month. Yet, even if they seem mere sparrows in comparison, their search is not just for scraps. The 13-day fair that Canada's external affairs minister, Mr Mitchell Sharp, is to open on August 21st is the largest that any foreign country has yet staged in Peking. The Canadian government has invested about \$2m in preparing for it, paying for everything from the translation of 400 technical papers into Chinese to the transporting to Peking of plastic ice for Canadian skaters to dance on.

Canadian sales to China leapt from \$112m in 1969 to \$204m last year, putting Canada among China's top five trading partners. A great part of this increase has been in wheat sales, and the prairie farmers have cashed in on the establishment of diplomatic relations in 1970, after which the Chinese switched purchases away from an Australia that retained its links with

Sharp's the word for salesmanship

Taiwan. Three large wheat agreements between China and Canada have been made since July, 1971, and Ottawa expects that record shipments of more than 3m tons will be made this year.

But the Peking fair is not just a big wheat silo. The 225 firms exhibiting are a cross-section of Canadian industry, from primary oil producers to electronics manufacturers. In talks held last year, when Mr Jean-Luc Pepin, the trade minister, visited China, his hosts outlined general areas in which they were interested in imports: transport equipment, base metals, wood-pulp, livestock for breeding, and medical materials were high on their list. Some of these items are already flowing to China. And there are other items which, according to the Canadian embassy staff, the Chinese have shown interest in buying from this country: they include industrial chemicals, insecticides, and special paper products. The general picture that Canadians see is one of the Chinese making up for time lost during the cultural revolution, but being careful to remain as autarchic as possible and to use imports only in essential areas of agriculture and industry. They have no wish to succumb to other nations' consumer goods; the Canadians got this message, and have put no consumer goods on show.

Whether Canada will remain a favoured trading partner once China's relations with the United States and Australia get better is not clear. At this month's fair, the Chinese did not bar Canadian firms that are in fact American subsidiaries; and some energetic American importers who went to the Canton fair in May placed some pretty large orders for Chinese goods,

which should in turn soften Chinese attitudes about purchasing American wheat and technology. Conscious of this coming rivalry from its big neighbour, and conscious also of the need to show a corresponding increase in purchases from the Chinese, Canada arranged that they should put on the largest foreign display at the Canadian national exhibition in Toronto, which coincides with the Peking fair this month.

For their part the Chinese have been giving preferential treatment to Canada in various ways. They allowed three Canadian Pacific chartered airliners to enter Chinese air space to bring the businessmen all the way to Peking. They agreed to the exhibiting of films that show the Canadian way of life as well as of purely technical films. And no doubt Mr Sharp will be told how they are looking forward to welcoming Mr Trudeau next year.

Thailand

The revolution that never was

FROM A CORRESPONDENT IN BANGKOK

The trouble with announcing a revolution without actually having one is that it is not easy for people to take it seriously. So the makers of the coup in Thailand of last November 17th must now be realising. For all the melodramatic reasons given by Field Marshal Thanom Kittikachorn for sacking himself as prime minister and pointing his tanks at an (emptied) parliament building for a few weeks, it is tempting to see the whole thing as a dramatic public relations effort to shake the complacency not only of Thailand's people but also of its rulers. It might have been more successful if it had not been so obviously an imitation of the previous, and decisive, coup in 1958 by the strong man of that time, Field Marshal Sarit.

For all the theatre, the coup does seem to have changed some things. The incidence of violent crime, for instance, appears to have been checked by 20 summary executions. The security forces have mounted operations against the two worst areas of insurgency, in the far north and the deep south, which although probably not as successful as claimed were at least the first proper drives against the guerrillas. There have been successes in putting down gun-running from Laos and narcotics trafficking. The seizure in Cheng Rai province in the extreme north on July 24th of more than 2,000

Prapas needs someone in front

kilos of opium, morphine and heroin, claimed to be worth \$213m to the drug-pushers in New York, capped a recent series of pounces that have silenced, at least temporarily, American accusations of half-heartedness.

Two issues remain to be settled. Foreigners, and foreign companies, in Thailand are still uncertain of their future position. More important, there has still been no decisive move towards the promised restoration of ministerial government.

Some new legislation about aliens has been on the cards for three years or longer. The original idea was just to bring the immigration laws up to date. But now the aim has grown more ambitious, and there are two main bills on the stocks. One will institute a system of work permits for foreigners working in Thailand; the other will regulate the way foreign businesses can operate in Thailand. The debate about them demonstrates how ambivalent the Thais are about the whole business.

On the one hand, leading Thais make speeches from time to time welcoming foreign investment. On the other, the Thai chamber of commerce is working assiduously behind the scenes to limit the opportunities open to foreigners. Despite public gestures of encouragement, it looks as if the draft legislation the government is drawing up will require 51 per cent Thai participation in most Thai limited companies, and the policy of forcing Thai control on foreign-financed business enterprises is already beginning. The World Bank, in its latest report on Thailand, advises the government to clear up the uncertainty in order to give real encouragement to foreign investment.

It is extraordinary that for the past decade there has been virtually no change in the patchwork quilt of political groupings that makes up the power

structure in Thailand. Field Marshal Thanom is a nice man who needs to be backed by a tough man; General Prapas, the minister of the interior, is a tough man who needs to be fronted by a nice man. There are rumours now that the national executive council, which presides over the result of November's coup, has not yet carried out its promise of restoring ministerial government because of tensions within the ruling caucus; the problem is probably rivalry among the second-line men over the succession to the more important posts.

None of this has prevented the Thais from keeping their options open in foreign policy. Much of the American air power in the Vietnam war comes from bases in Thailand. Yet a Thai pingpong team is off to Peking next month. There's nothing like waiting to see which way the ball bounces.

Russia

Fear of the waves

The Soviet government is getting worried about the prospect of foreign television programmes reaching Russian homes by way of artificial satellites. Its foreign minister wrote to the United Nations secretary-general, Mr Kurt Waldheim, last week suggesting that all television broadcasts not approved of by the governments of the receiving nations should be outlawed by an international convention. Mr Gromyko asked that his proposal be put on the agenda of the United Nations general assembly when it meets next month.

In fact, his fears are a bit premature. Even the most powerful artificial satellites in use now send relatively faint signals to the earth, and these need to be picked up by large aerials and amplified before being piped to radio and television stations or telephone subscribers. The Soviet government isn't about to put up aerials for that. But American space communications technology is making good progress, and it may soon be possible to construct satellites capable of direct transmission without the aid of aerials and amplifiers on the earth.

Russia's friends in eastern Europe, who have also taken up the theme of the alleged threat from foreign television broadcasts, claim that these could be used by the big powers to establish their dominance over weaker countries, as the Polish paper *Głos Pracy* put it last week. But presumably the real worry of the communist

governments is the possibility that such broadcasts might destroy their own monopoly of information.

Their monopoly is already breached by the radio broadcasts beamed to eastern Europe by the BBC, the Voice of America and the two American-financed stations in Munich, Radio Free Europe and Radio Liberty. The Munich stations are a particular thorn in the flesh of Russia and other east European countries because of their relatively outspoken political commentaries on internal developments in communist countries. The Soviet Union and its allies have gone to great lengths to have these stations silenced or discredited, and very nearly succeeded earlier this year when the American Senate voted to stop the stations' funds. That decision was reversed, and the stations have survived for the time being. It is easy to imagine the chagrin of the Russians if they were to be replaced by a number of television stations that provided hot competition for the stale and predictable domestic product.

These Russian manoeuvres aimed at restricting international freedom of communications will have to be resisted. After all, Russia itself claims to want better east-west relations, and one of the most important purposes of any real improvement should be to increase the two-way flow of people and ideas. Rather than complain about western television programmes, why don't the Russians try beaming their own to the west—as they already do in radio?

Czechoslovakia

He may not even get the benefit

The present series of political trials in Czechoslovakia started just over a month ago. The score over the month is nine trials with 46 defendants, and no acquittals. In Brno last week the two chief accused were women; they were sentenced to 4½ and 3½ years of imprisonment. The trials have produced a lot of bad publicity for Czechoslovakia in the west, and some strains and stresses in the ranks of the west European communist parties. Even *Pravda* was moved on Monday to react to some of the unfavourable comments; and on Wednesday, perhaps in response to them, the prosecution of 10 young Czechoslovaks was called off.

Whatever their international consequences, the Czechoslovak trials have

served to put out of action a small but important group of people who had long been a thorn in the flesh of the regime headed by Mr Husak. Most of those who have been tried were communists or ex-communists in their thirties or forties who felt very strongly that the spirit of the 1968 "Prague spring" had to be kept alive. Their actions were limited to things like putting out leaflets to remind voters of their constitutional rights during last November's election, and informing sympathetic western communists about what was happening; but this was enough to make the regime move against them.

Mr Husak has presumably made the familiar calculation that the suppression of a fairly small number of known "troublemakers" will leave him free to pursue his policy of keeping other Czechoslovaks quiet by letting them have more consumer goods. But even if the device works, he may still have to face the painful sight of somebody else enjoying the fruits of his labours. His chief rival in the ruling party, Vasil Bilak, has just received fulsome birthday greetings from the Soviet central committee, and it looks as if he is being groomed to take over the party leadership. Mr Husak may find himself being shoved upstairs into the presidency of Czechoslovakia as the reward for his endeavours to make the country safe for Mr Brezhnev.

Haiti

Guns make friends

FROM OUR CENTRAL AMERICA CORRESPONDENT

The memory of "Papa Doc" has faded enough for Haiti to be given the mark of regained respectability: the Americans are going to sell it arms again. Ten years ago President Kennedy suspended all economic and military assistance to Haiti in an effort to force President François Duvalier to ease his repression of local opposition groups. The attempt failed: until his death in April last year, Papa Doc continued his regular purges of enemies and friends alike, undeterred by foreign criticism. So when he was succeeded last year by his 20-year-old son, Mr Jean-Claude Duvalier, the Americans decided to review their policy towards the impoverished black republic and try to reassert their influence over its government.

In no time at all the American ambassador, Mr Clinton Knox, was to be seen regularly visiting the national palace to confer with the new presi-

dent-for-life and his influential mother, Mrs Simone Duvalier. American embassy spokesmen began to say that "things were much improved" under Jean-Claude. A year ago American economic advisers returned to Haiti after a nine-year break. Now the United States has decided to resume arms sales. A military mission which visited Port-au-Prince early in August is expected to recommend the sale of between \$5m and \$10m worth of arms to Haiti this year, and new arrangements are to be made for the training of army officers by American teams.

To obtain this change of policy, the Haitian government tried to convince the Americans that it was threatened by the Castro regime in Cuba, by the Dominican Republic (with which it shares the island of Hispaniola), and by Haitian exiles. None of these "enemies" seems very real; the Dominican Republic, at any rate, is more scared of Haiti than vice versa, and the exiles are divided and ineffective. A more convincing reason for the arms sales is that the United States would like to consolidate its influence over the Haitian army.

During the 1960s, Papa Doc Duvalier deliberately weakened the army and gave responsibility for internal security to his private militia of thugs called the Tonton Macoutes. After the old man's death efforts were made to dismantle the Tonton Macoutes, and a new elite regiment, called the Leopards, was created in the army to counter-balance the power of the presidential guard. Increasingly, therefore, the army is moving back towards a position as arbiter of Haitian politics. It has already happened several times in recent years in Latin America. If and when it is Haiti's turn, the United States hopes to have a few good friends among Haiti's senior military officers.

The Olympics

Forever Avery

Mr Avery Brundage, the crusty octogenarian president of the international Olympic committee, arrived in Munich on Tuesday with every intention of sticking to his insistence that Rhodesian athletes should take part, on the same terms as they did in Tokyo in 1964—almost as if UDI had never happened. For the moment this seems to suit Mr Ian Smith's book as well as Mr Brundage's.

By mid-week, the expected mass boycott by African nations had not

Brundage takes umbrage

taken full shape. Tanzania had withdrawn. Kenya, Ethiopia, Sierra Leone, Sudan, Liberia, Uganda, Ghana and Zambia had decided to withdraw if the Rhodesians did participate. In purely athletic terms, Kenya was the one that mattered most, though Keino and his team-mates could not expect to achieve in Munich the spectacular success that they enjoyed at the high altitude of Mexico City in 1968. The same might be said to apply to Ethiopia, but its long-distance runners do not seem to need altitude all that much; they won the marathon at each of the last three Olympics.

But for west Germany, the host nation, what matters is less the displeasure of the Africans than the new intentions of the east Germans. The spectacle of the east German team marching around the Munich track under its own flag will have immense political symbolism; indeed, Herr Ulbricht and Herr Honecker have been preparing for this day for the past four years. Reports are still circulating that Herr Ulbricht himself may decide to attend. If he does it will give Herr Brandt a political headache that not even Mr Brundage's very special rules of protocol may be able to smoothe away.

But perhaps the most significant aspect of the Munich games is the non-story which (appropriately) has never been reported by the daily press. So far there has been no significant rumbling of black-power protest or disaffection from the black athletes who form the backbone of the American track team. A week before the 1968 Olympics it was a very different story. This may, or may not, have political significance. Mr Nixon will be keeping his fingers crossed.

Hoechst keeps thinking ahead

Protecting tomorrow's children today

Our children will not know of many of the health problems of the present generation. Throughout the world, scientists are engaged in a constant search for safer and more effective pharmaceutical and therapeutic agents. Much research is devoted to preparations that will prevent disease rather than treat established illness. In the important field of preventive medicine, Hoechst is making a vital contribution through its subsidiary Behringwerke in Marburg. The foundation for this work was laid by Emil von Behring with the discovery of prophylactic immunization against diphtheria. Today, Behringwerke is developing and producing an extensive range of sera for therapy and vaccines for prevention.

Ahead through systems thinking

DPT adsorbed vaccine for active immunization against diphtheria, pertussis and tetanus, Quinto-

Virelon additionally against measles and poliomyelitis, Partigen and Tripartigen immunodiffusion plates for improved diagnostic techniques – the result of Hoechst know-how and experience in many fields: In planned medical research, in pharmacology, pathology, chemistry, biochemistry, microbiology; in close collaboration in these fields and integration of the work. Systems thinking is the Hoechst strategy. Research, development and product experience in many areas are concentrated on the solution of specific problems. Interdisciplinary thinking, systems analysis and systems technique to bring success.

To keep thinking ahead – to solve the problems of today and tomorrow – Hoechst employs 10,300 people in research and development with a research investment this year of more than £60 million.

Hoechst in Britain

Hoechst UK Ltd is an independent company within the international Hoechst group. Its British staff know their country, its problems, its people; and they realise where Hoechst know-how can inject into Britain's economy the experience gained by the parent company during more than a century in chemistry. In pharmaceuticals, for example, where Lasix – the modern diuretic – has revolutionised therapy for both man and animal. In veterinary medicine, where the traditions of Behringwerke are being carried forward by the research workers of International Serum Laboratories, part of Hoechst UK, who are engaged in the development and manufacture of bacterial vaccines and sera for farm animals – products exported to many parts of the world. In the textile industry, where Trevira[®] polyester fibre has brought an entirely new concept to fashion. And where membrane structures from Trevira high tenacity fabric have at long last rendered outdoor events independent of the weather. Or in dyestuffs where experiments are proceeding to make the grass look greener in football stadiums and other sports arenas. Whether your problems are in plastics or paint raw materials, in dyestuffs or pigments, in fibres or pharmaceuticals, in agrochemicals or films, Hoechst UK can help you promptly and efficiently.

THE WORLD

American Survey

Shultz (Treasury), Weinberger (Budget office) and the problem they share

Spending for a tax increase

Washington, DC

On the anniversary of President Nixon's "new economic policy" of last August, his Administration has been pointing with pride to the accomplishments of that policy, notably a distinct pickup in the rate of growth of the national output and some slowing (by most measures) in the rate of inflation. But the joy is tempered by constant warnings from the President and his top economic officials about the dangerous trend of government spending. They have good reason for their concern. Congress, whose procedures—quite apart from partisan politics—seem to make self-control impossible, is in the process of adding billions of dollars to the total spending proposed by the President for this year; at \$250 billion that total itself is large enough to produce a deficit of some \$30 billion in the budget. The problem may not be so much the current fiscal year 1973, ending next June; many economists believe that such a deficit, or even one a little larger, remains appropriate so long as there is still a substantial amount of underused resources in the economy. The problem lies in the future.

Making their calculations mainly before Congress embarked on its current spending spree, economists of the

Brookings Institution estimated earlier this year that, with laws now on the books and the addition only of new programmes already proposed by Mr Nixon, federal spending will reach \$300 billion in the 1975 fiscal year. Assuming that the resources of the country would be fully employed by then, they estimated that the present tax system would yield only \$283 billion in revenues in that year. The obvious conclusion was that a tax increase would be necessary, especially if any more programmes were undertaken.

The Administration, while not objecting to the Brookings arithmetic, has persistently rejected its conclusion. Pointing to the "tax revolt" around the country and to the fact that Congress has not enacted a general tax increase in peacetime since 1933, Mr Herbert Stein, the chairman of the President's Council of Economic Advisers, says that "a tax increase could become necessary without being probable." Mr George Shultz, the Secretary of the Treasury, noting the present budget of \$250 billion, says that the American people are not so persuaded of the ability of the government to spend effectively that they regard a quarter trillion dollars as insufficient.

Asked what can be done, these men and Mr Caspar Weinberger, the budget chief, simply refuse to concede that a tax increase will be necessary and make rather vague pledges that spending somehow can be held below the amounts projected by Brookings. A tax increase is "the worst way" to solve the problem, says Mr Weinberger.

Last month the President issued an unusual special appeal to Congress, saying:

just when we have succeeded in cutting the rate of inflation in half, and just when we have succeeded in making it possible for America's workers to score their largest real spendable income gains in eight years, this tangible, pocketbook progress may be wiped out by proposed excessive spending.

He threatened to veto bills that would push spending above his budgeted levels, but that is not always easy to do. And he again asked the Democratic Congress to impose a spending ceiling upon itself of \$250 billion for this year; this would be unprecedented and Congress apparently has no intention of doing it, though the Republican leaders have promised to make a good try. The President this week vetoed the pending bill appropriating \$30.5 billion for education and health programmes, on the ground that it would all but force him to spend \$1.8 billion more than he wanted. He may possibly veto other bills that are nearing final enactment, but this is only a partial answer to the problem.

There is no doubt that the heart of the matter lies in Congress and its procedures for handling spending and

revenues—procedures that Mr Weinberger has labelled “gruesome.” Many Congressmen, perhaps a majority, do not even understand how they are adding to the spending total and to the deficit. They continue to regard the annual appropriations bills—in which Congress nearly always makes a small net reduction from presidential requests—as the beginning and ending of government spending. In fact, most government spending occurs now through programmes establishing certain levels of benefits, with appropriations following automatically.

This year alone, Congress has already increased or is in the process of increasing benefits for ex-servicemen, retired military personnel, coal miners, pensioners and local school districts—all through separate legislative actions without the slightest effort at co-ordination. Only one of these increases came through an appropriation bill, the one which the President has just vetoed. What Congress does not seem to understand is that, though each year it may cut total appropriations below the President's request, in places like defence where there is some discretion, it still votes \$15 billion-\$20 billion more than the previous year, mainly because of its own earlier actions. Appropriations bills are now the least important part of the government's spending process.

A grotesque example of this has just come to light. As long ago as 1967, Congress—hoping to improve “social services” to the poor and slow the increase in the number of people on public welfare—provided that the federal government would pay 75 per cent of state and local government expenditures in social services for persons on welfare and for the general purpose of improving the cohesiveness of the family. Ingenious state officials, following the original example of California, have learned how to use this obscure provision of the law to obtain federal money for numerous programmes which they had previously paid for themselves. Applications for federal aid under this scheme have zoomed to \$4.8 billion in the current fiscal year, though last winter an estimate was \$1.2 billion.

On the assumption that total spending at a level well above the yield of the tax system at full employment will again revive classic demand-pull inflation, what can be done? Most private observers reject the Administration's contention that a general increase in taxes can be avoided (while accepting its argument that vast new revenues

cannot be achieved quickly by closing “loopholes” in the tax laws that mainly favour the rich). But there is much in what Mr Stein and Mr Shultz say. Even during the height of the Vietnam war, when the need for a tax increase was obvious to everyone, it took Congress 11 months to enact the surcharges on income taxes proposed by President Johnson. In peacetime individual Congressmen would be able to find even more excuses for inaction.

Another solution would be a major reform of congressional procedures, which might just be possible, particularly if the next Congress is more conservative, as it may be if President Nixon achieves a sweeping victory in November. Although this would come too late to help the spending problem much for the next year or two, it could improve the situation significantly for the latter half of the decade by forcing Congress to realise what it is doing to spending and to raise taxes if it insists on more spending than is proposed by the President in office.

Unfortunately, the most likely prospect is that there will be neither a large tax increase nor congressional reform. This appears to leave only one alternative: renewed inflation, in 1973 or, more likely, later. Such a result is not inevitable, but the outlook is not promising.

Trade challenge

Mr Paul Volcker, Under Secretary of the Treasury for Monetary Affairs, reporting on the year since the new economic policy of August 15, 1971, believed that “we can confidently look forward to improvement in our trade and payments.” His optimism was justified immediately when the figures came out for America's international transactions in the second quarter of this year; they showed rapidly shrinking deficits. Indeed the accounts might have been in balance on the basis of official reserve transactions, which represent the dollars held by central banks abroad, had it not been for the speculative pressures set off at the end of the period by the floating of the pound. But when the figures based on current accounts are available, in a few weeks' time, they are not expected to be so favourable since they reflect the trading figures more closely; there the deficit, at \$1.93 billion, was worse than in the first three months of 1972.

But the President's Council of Economic Advisers, in the report on the economy at mid-year which it has just

Balance not so bad: International payments, annual rates, seasonally adjusted, \$billion

issued, has reason to think that in real terms the trade deficit may have been stabilised; prices of imports have been rising much faster than those of exports. While this year's economic recovery in America has stimulated the demand for imports, the price differential should slow this down while encouraging exports. But if the United States is ever to re-establish its trading account on a satisfactory basis, and if the protectionist forces in the country are to be held in check, then foreign barriers against American exports must be lowered. “Strong new commitments on a multinational basis,” in the words of the CEA's report, are essential, however difficult these may be to negotiate under today's conditions. In principle America's trading partners agree that there is a need for reform in the international trading system; but in practice they are very suspicious of the conditions which, in the view of the President's economic advisers, should govern the negotiations.

The CEA's report sets a challenge with its insistence that any new trade agreement should be comprehensive, covering all economic sectors, especially agriculture, and all forms of trade barrier. Maximum reliance, the report says, should be placed on “market-directed trade” and policies designed to insulate major sectors from market forces should be avoided. Any new system of trading rules should be fairer than the present one. Domestic social policies, such as those setting environmental or health standards, should not be allowed to disrupt foreign trade. Finally there must be safeguards allowing industries time to adjust and providing help in making the adjustment, when patterns of production or consumption are changed as the result of trade agreements.

ELECTION '72

On the box

The thesis that competitive television will not prove that it has come of age until it has shown the courage to be dull is all very well, but few professional broadcasters see much point in being worthy if their programmes are also unseen or unheard. That would probably be the fate of the three major networks if they followed the Public

Broadcasting Service's decision to show next week's Republican convention neat and unadulterated. The PBS cameras will be trained on the podium at Miami Beach and there they will stay—whatever the major networks might be doing to show—or create—interesting events on the floor or outside. If those events are genuine the PBS will discreetly draw its viewers' attention to the commercial stations.

The two leading frontmen of PBS, Mr Sander Vanocur and Mr Robert MacNeil, are not exactly enamoured by the decision and not simply because

it leaves them with very little to do. They have a valid argument that no television service, even a small minority one, should accept any political party's offerings at their face value, which is largely what the PBS broadcasts of the Republican convention will do. But there is an equally valid argument that political parties are entitled to have their whole case heard before it is challenged or analysed (or, worse still, ignored for something superficially more interesting) and, as the major networks are unwilling to do that at national conventions, it comes down to

Conventional Republicans

FROM A CORRESPONDENT IN MIAMI BEACH

Two national political conventions will take place in the gaudy resort city of Miami Beach next week. In the north hall of the Miami Beach convention centre, the Republican party's convention will renominate Mr Richard Nixon for President of the United States and Mr Spiro Agnew for Vice President. The job will be done by 1,348 delegates and an equal number of alternates, substituting enthusiasm for suspense.

Outside the hall, and beyond the chain link fence that surrounds it, is where the real action may well take place. How much of it? That depends upon the number of people attracted by the dozens of political dissent movements in the country. Optimistic local officials predict, hesitantly, that there will not be many more than the 3,000 or 4,000 who came for the Democratic convention. Optimistic protest leaders, such as Mr Rennie Davis of the People's Coalition for Peace and Justice, predict that the demonstrators will number as many as 30,000. Supposedly objective people who have worked as medical, religious and social service volunteers at other protests across the country make estimates in the range of 15,000 to 20,000. The more outsiders there are, the greater will be the possibilities of violent confrontation with the 7,000 policemen, government security agents and troops who have been assembled to protect the city and the convention.

At this writing, the major protest groups, who have formed a Miami Conventions Coalition, have promised to conduct only non-violent dissent. They have shared their plans for demonstrations with local officials, who are co-ordinating in order to prevent clashes between dissenters of conflicting ideologies. That approach worked with surprising success last month, but even those leaders most determined to avoid violence and mass arrests admit that they cannot force fellow dissenters to maintain cool heads.

Up till now, the only serious alarm raised has been over plans of the Vietnam Veterans Against the War. Six of the organisation's leaders have been charged by the government with conspiracy to disrupt the convention with violence. Last week the Miami Herald reported evidence that VVAW officers had bought a number of weapons, including eight cases of slingshots, and that a federal grand jury which summoned 23 members to testify deliberately timed the appearance date to get the leaders out of Miami Beach during the Democratic convention. It would come as no surprise if similar action were taken this week or next against the VVAW.

As for the convention of the Republican party, the preliminary events have begun. The platform and rules committees began their deliberations on Monday. They and other committees have been meeting all week. The convention proper opens at 1 pm next Monday, August 21st, with welcoming speeches, action on committee reports and election of California's Governor, Mr Ronald Reagan, as temporary chairman.

The evening session starts at 8.30 with a speech by Mr Reagan. Then, in a gesture of unity, five-minute keynote talks will be given by Mr Edward Brooke, the party's only black Senator, by Mayor Richard Lugar of Indianapolis, the President's favourite young city official, and by Mrs Ann Armstrong, co-chairman of the Republican National Committee. She will be the first female keynoter in the party's 118-year history.

On Tuesday afternoon the convention will act on the reports of the various committees, with Congressman Gerald Ford of Michigan as permanent chairman. In the evening session, Governor Nelson Rockefeller of New York will renominate President Nixon. Next day Vice President Agnew will be renominated and the President and Vice President will give their acceptance

Back to jail for Vietnam Veterans

speeches. All will be carefully timed to suit the television audiences, with none of the argument and delay that beset the lively Democrats.

With the Republican convention in general carefully orchestrated and choreographed by the White House, there is little prospect of a controversy, except on the topic of reforming the party's and the convention's procedures. A committee, headed by Mrs Rosemary Ginn of Missouri, has proposed a list of reforms designed to broaden the party's base by opening the action to more women, youths and members of minority groups. This year's convention—with some states already accepting the spirit of those proposals—will have more delegates and alternates in each of those categories than any previous Republican convention, although not as high a proportion as the Democrats achieved. If the convention as a whole adopts the reforms, they will be put into effect for the 1976 gathering when a new presidential nominee will have to be chosen. If there is any argument, it will be over how far reform should go.

an argument for at least one service carrying a broadcast of complete record. It will, no doubt, only have minority appeal; but that is what minority networks should cater for.

In fact, the major networks have behaved pretty well so far. At the Democratic convention what come over the screens was recognisably the same convention that was taking place in the hall, which was a vast improvement on the coverage of both party conventions four years ago. But that was probably because this time the story was the convention itself. No doubt those few people who wanted to hear and see every speech in full were irritated when the networks cut away from the podium to interviews on the convention floor, as, inevitably, they will do with the Republicans. But that is not an abuse of television's power; it is a matter of news judgment—as it will be next week if the networks spend more time on demonstrations outside the hall than they did at the Democratic convention.

But even if the networks come through the Republican convention without serious criticism there will be no cause for complacency. There is still an intensely competitive situation between the major networks, and there is still the danger that in their desire to keep one step ahead of their rivals they might, at some future convention where the result was not a foregone conclusion, create an entirely phoney situation which could affect the outcome of the event that they were supposed to be merely reporting.

Watergate, part 2

There is one political serial running in Washington which lifts up the spirits of the most depressed Democrat and which Senator McGovern is exploiting relentlessly. It is the sequel to the clumsy break-in at the Watergate headquarters of the Democratic National Committee in June by five men with wire-tapping implements—and with connections reaching into the Central Intelligence Agency, the Committee for the Re-election of the President, the Republican National Committee and the White House itself. Suspicions of a link to someone high up in the Republican establishment have been strengthened by the revelation that a cheque for \$25,000, representing contributions to the Republican presidential campaign, turned up in the Florida bank account of Mr Bernard Barker; he is one of the five suspects

"Strange—They All Seem To Have Some Connection With This Place"

in the bugging incident and apparently their leader.

A cheque for \$25,000 is small beer, no doubt, to a party whose national presidential committees have just reported collecting \$3.8m and spending \$5.9m in June and July alone and which, on August 1st, still had \$7.7m in the kitty. But the awkward fact is that a midwestern fund-raiser gave the cheque to Mr Maurice Stans, the President's fund-raiser-in-chief, on April 10th, three days after the reporting requirements of the new federal elections act went into effect. Yet there is no record of it in the party's reports to the Office of Federal Elections. That office's head is now suggesting that several violations of the act may have been committed. Worse still, Mr Stans has failed so far to make any public statement about what he did with the cheque. He is supposed to have told the Federal Bureau of Investigation that he turned it over to Mr G. Gordon Liddy, financial counsel to the Committee to Re-elect the President, and that it was eventually exchanged for cash, which was paid into party funds. But this account raises new questions. Mr Liddy has since been fired by the committee for refusing to answer the FBI's questions.

The Republicans, ostensibly to ensure that political passions do not intrude, want any trial or inquiry arising out of this affair to be postponed until after the election. They are likely to have their wish, even if the grand jury now looking into the case brings in criminal indictments and even though the judge who is to hear a \$1m civil suit (brought by Mr Lawrence O'Brien, head of the Democratic National Committee at the

time of the break-in), has refused to postpone the trial. But next week Mr O'Brien's lawyers are to begin taking formal statements from over a dozen Republicans, including Mr Stans and Mr John Mitchell, the former Attorney General and subsequently, for a time, head of the Committee to Re-elect the President. Meanwhile Senator Proxmire, a Democrat, is threatening that the Senate will institute its own bipartisan examination, to be completed in 30 days, unless President Nixon arranges for an independent inquiry.

Courts' plea

FROM A SPECIAL CORRESPONDENT
IN SAN FRANCISCO

Mr Ramsey Clark, the former Attorney General, recently returned from North Vietnam, provided a disquieting presence with his talk of buckling dikes and napalmed babies, but he was much the odd man out at the American bar association's 95th annual meeting in San Francisco this week. No one expected the 7,000 lawyers and judges to dash over to Indochina to learn "the truth" about American bombing, as Mr Clark suggested. They seemed more comfortable with the observation of the current Attorney General, Mr Richard Kleindienst, that "this is not an age of shame." Anyway, the bar decided long ago that the war was a "political issue," best left to the legislature.

The meeting also provided a forum for Chief Justice Warren Burger's third annual "state of the judiciary" report. Like Mr Clark, he served a challenge, but of an entirely different sort. Mr Burger asked the lawyers to help to unclog the judicial machinery by supporting administrative efficiency. He suggested to Congress that it co-operate in two specific ways. The first was to eliminate the special three-judge federal district courts that channel "constitutional" cases to the Supreme Court without the benefit of a judgment by an appeals court.

These three-judge courts were set up by Congress in 1910 when states which had created commissions to regulate the rates charged by privately-owned public utilities such as gas companies often found themselves stymied by orders obtained from a local federal district judge. The new courts included a member of the circuit's court of appeals, as well as two district judges, chosen by lot, and there was a right of appeal directly to the Supreme Court. Recently three-judge courts have been used increasingly by lawyers

**We made the airlines
a long-range promise.
Now we're making good on it:**

the intercontinental DC-10.

We promised airlines a DC-10 for every route from 173 to 5,270 n.m. Domestic DC-10s are already fulfilling their part of our promise. Now we're building the first of our Intercontinental tri-jets. □ We've given them higher-thrust turbofans from Pratt & Whitney and General Electric. Their wingspans are longer. And we've added fuel capacity for nonstop flights exceeding 5,210 n.m. They also have a centreline landing gear to share the gross takeoff weight of 555,000 lbs. □ They retain all the features that make DC-10s the best DCs yet: true wide-cabin comforts, with seating for 270 to 345 passengers; spacious baggage and cargo compartments; and operating economies for low seat-mile cost. Exceptional flight and control characteristics make DC-10s immediate favourites with pilots. And quieter, smoke-free takeoffs and landings make DC-10s welcome wherever they go. McDonnell Douglas DC-10s—domestic or intercontinental, passenger or convertible freighter. It's the family of jets for the future.

MCDONNELL DOUGLAS

handling cases concerning civil liberties (318 were convoked last year compared with 129 in 1963) and these courts have been responsible, at least in part, for the doubling of the workload of the Supreme Court in the past decade. At lower levels they make great demands on the available judges.

Mr Burger also asked Congress to attach a "court impact statement" to every law creating new federal crimes or civil actions. By this he meant that Congress should estimate the number of additional judges which the measures would necessitate. The effect might be to deter Congress from passing such laws. The Chief Justice suggested, as well, that the number of federal judges should be increased from 670 today to 900 by 1980.

Specials winged

The best that the Senate could do was to make it more difficult to shoot a neighbour, a policeman or a presidential candidate; it still refuses to make it too difficult. Under the new gun control law which passed the upper house last week the manufacture and sale of the small and cheap pistols called Saturday night specials is prohibited. This type of easily-concealed handgun is the sort that wounded Governor George Wallace last May and which killed Senator Robert Kennedy four years ago. According to crime statistics handguns were used in over 50 per cent of the murders committed in 1970 and nearly all the policemen killed last year were murdered by these guns.

Those who are in favour of gun controls may have chosen the right target when they picked the Saturday night special, but their firing was not accurate enough. The Senate's measure will only remove from the market about 1m of the 2.5m pistols which are sold annually in America. It will not get rid of the millions which are already privately owned although it does encourage people to turn them in voluntarily in return for \$25. Nor does the bill forbid individuals to sell guns: many criminals manage to get hold of their weapons through private sales. It is estimated that there are over 100m firearms of all types in millions of private homes throughout the country. A large number of these are rifles or shotguns used by sportsmen who fanatically resist all attempts to restrict their freedom. Efforts in Congress to require guns to be licensed and registered have been beaten back time and again, most recently last week.

It's more fun by ferry

FROM A CORRESPONDENT IN SAN FRANCISCO

Commuter ferry boats, with wall-to-wall carpeting for comfort and jet-propulsion turbine engines for speed and smoothness, are in prospect for San Francisco Bay, even though they promise to be far costlier than was first expected. Three vessels are proposed, each capable of carrying 750 passengers at a speed of 25 knots an hour. But the bids ranged from \$3m-\$7m higher than the original estimates and the cost of the three boats will amount to between \$12m and \$16m.

Such extravagant transport for commuters dismays the sponsor, the Golden Gate Bridge and Highway District, but it still plans to lure motorists from their smog- and - congestion - producing cars with the offer of a speedy, refreshing ferry ride from home to office and back, complete with luxurious cocktail and coffee bars. One ferry boat has been operated experimentally by the bridge authorities for the past two years; it runs from a pier near downtown San Francisco across the neck of San Francisco Bay to the northerly bedroom community of Marin County.

No metropolitan region in the United States has been more imaginative in its moves to solve its traffic problem than San Francisco, which opens its high-speed 75-mile modern suburban railway system next month.

Now the rest of California is also modifying its passion for the motor car. A new statewide sales tax of five cents a gallon imposed on petrol since July 1st will provide about \$140m a year for Californian cities and counties to put into public transport. The ferry boat system will have a share of these funds, which the federal government will triple. This is the first time that money for public transport facilities has been drawn from something other than the over-used property tax.

The motor car has also enabled the

Golden Gate Bridge District to provide mass transport, both by ferry boat and by bus. Bridge tolls of 25 cents a crossing on something over 33m cars a year have permitted the authority to build up a surplus of about \$25m and to forecast an annual profit of some \$4.5m now that its construction bonds are all paid off. The existence of this reserve, together with the congestion on the narrow bridge that arches over the Golden Gate, led the state legislature to order the bridge authority to provide some alternative means of transport which would reduce both pollution and congestion. Thus, by an odd twist of history, the bridge, whose opening in 1937 ultimately killed off what was then the largest ferry-boat fleet anywhere in the world, has now provided money to bring ferry boats back to San Francisco Bay.

The bridge authority began by virtually exempting car pools, and cars with three or more occupants, from paying tolls. This year the bridge district is also operating a \$9m fleet of 186 new-style buses that make stops all through the San Francisco business district, giving speedy express service to the Marin County area; then they fan out to become a local service in a charming suburban district which never before had adequate public transportation. This costs money: the bridge district provides a subsidy of more than \$3m a year, even though the number of riders is increasing rapidly.

Ultimately, it is hoped, more sophisticated ways can be found to speed bus service through the city (perhaps by tunnel). But for engineering reasons, Marin County is still unlikely ever to see high-speed trains, such as will link the rest of the San Francisco commuter area, because it is not advisable for them to use the Golden Gate Bridge.

Today's slower boat to Marin County

Mr. W. D. Dwyer, managing director of Burroughs machines Ltd. says:
"As a Company engaged in 'Frontier Technology' an important reason for choosing Glenrothes as a site for manufacturing advanced disk file systems for the Burroughs '500' and '700' Systems families of EDP computers was its proximity to fine schools and universities.
"Labour force availability in Glenrothes, and its adaptability to being trained on new and very advanced skills, has also been reflected in the speed with which we have been able to set up production at the factory."

GLENROTHES: an ideal place

Mr. Murray Mott, managing director of Cessna Industrial Products Ltd. states:
"In 1961 the Cessna Aircraft Co. decided to base its U.K. hydraulic manufacturing subsidiary in Glenrothes. At the time, this was done for the same basic reasons most companies decide to expand into any development area—Government financial assistance, good availability of trainable labour, and advance factories at very reasonable rates. "Since then, however, Cessna have had every assistance from the Glenrothes Development Corporation in expanding their facilities and product line. In fact it has been decided, as sales increase in both the U.K. and also the European areas, all expansion of plant and facilities to cope with the increased demand, will take place in the Glenrothes area."

Books

Old man eloquent

SUKARNO: A POLITICAL BIOGRAPHY
 By J. D. Legge.
 Allen Lane, The Penguin Press. 442
 pages. £3.50.

Prince Sihanouk once called Sukarno "a scatterbrained old man fond of virgins." Professor Legge's estimate of the late Indonesian leader is more charitable and rather more accurate. The picture of Sukarno that emerges from this book is of a complex man of great talents and weaknesses. The author clearly faced considerable problems of interpretation. The Sukarno of the 1930s, eagerly proclaiming the cause of Indonesian nationalism, was a much more attractive figure than the leader of Indonesia during the confrontation with Malaysia: a man grown gross in physical appearance and increasingly coarse in his search for sexual satisfaction.

It is a tribute to Professor Legge's own balanced approach that he is able to cull from the numerous existing accounts of Sukarno's life a picture of the man that is convincing without being colourless. He does not hide the warts. But the account provided here shows how Sukarno could continue to be a figure of veneration for his countrymen, even when his image throughout the outside world, with a few and rather special exceptions, was black. Not least, a reader of Professor Legge's book will gain some sense of Sukarno's qualities as an orator. To have heard him address a political meeting at the height of his powers was an experience not to be forgotten.

The size and importance of the Indonesian state has made it a subject of continuing interest to scholars and journalists since the second world war. Not surprisingly, the flamboyant personality and dramatic political actions of the first Indonesian president became and remain a focus for attention. At first glance, the approach that Professor Legge has adopted is surprising. Almost half the book is concerned with events before the proclamation of Indonesia's independence in 1945. Moreover, in its concluding chapter the book only gives a brief

account of that most controversial of developments, the 1965 *Gestapu* affair. This highlights the importance of Sukarno's early life, but leaves important aspects of the attempted coup unresolved. But it is justified by the author's own statement of intent. This is an account of Sukarno's political career, and that began long before the Dutch unwillingly conceded independence to Indonesia. The affair of September, 1965, is still open to further research; by acknowledging this Professor Legge injects a degree of calm into what has become a matter of frenetic and frequently ill-judged commentary.

This book is the best introduction to Sukarno yet published; but it is not, as the author rightly points out, definitive. Not all specialists will agree with Professor Legge's view of Sukarno's role during the second world war, nor with his description of the Indonesian leader as the "Chairman of the Revolution." And the author is plainly reluctant to come to a firm conclusion about Sukarno's intentions towards the Indonesian Communist party. But Professor Legge has been meticulous in recording the range of opinions, and the problems of reconciling contrary yet considerable views of Sukarno. He remains a controversial figure; this book will do little to move his record from the arena of debate. On the contrary, it provides a starting point for debate.

Sukarno: gross national leader

Fratricidal fresco

O JERUSALEM I

By Larry Collins and Dominique
 Lapierre.
 Weidenfeld and Nicolson.
 638 pages. £4.

GENESIS 1948

By Dan Kurzman.
 Vallentine, Mitchell. 768 pages.
 £3.95.

This genre (what the dustcover of "O Jerusalem!" describes as "historic fresco") has its own peculiar requirements. The first, it must be admitted, is a great deal of industry. Mr Kurzman writes like a tape-recorder, Messrs Collins and Lapierre like a reel of film, but for both books the feat of bringing editorial order to such a mass of material is far from despicable. Comprehensiveness is achieved by accumulation. Weidenfeld and Nicolson's blurb-writer quantifies this with pride: "One hundred and fifty thousand miles travelled across the Middle East, Europe and America, two thousand interviews, six thousand pages of documentation, the collaboration of twenty investigators and the study of half a ton of secret documents. . . ." The price for such a mountain of endeavour is surely reasonable. Both books have been published elsewhere: "O Jerusalem!" in particular achieved great popular success when published in France last summer. Neither can be condemned as instant history.

The second, equally laudable, requirement is to create something readable out of all this honest toil. There is no lack of colour. In a nasty, cruel little struggle like the Palestinian war of 1948 there was enough slaughter, rape, ambush and destruction to fill every chapter; neither Mr Kurzman nor Messrs Collins and Lapierre appear to have any difficulty in resisting the temptation to reduce this blood and pain to cold statistics. Perhaps while the war of 1967 was a matter for military analysis, the war of 1948 was a matter simply for reportage; even so, the high drama with which Mr Kurzman recharges innumerable reported snatches of conversation, orders and remarks reputedly made nearly a quarter of a century ago is a bit rich.

Messrs Collins and Lapierre are less impassioned, but the literary tricks jump out of both books like stuffed rabbits. Trick number one is the ascription of thoughts and emotions without quotation marks: so-and-so held his breath; someone else's voice is low

Pillar of fire: Jerusalem, 1948

with fury and barely-concealed passion. Trick number two is the addition of trivia, particularly of personal appearance, to sharpen an image: "Shoes polished and uniforms pressed. . . ." Trick number three is the portentous use of hindsight: "It was to be almost two decades before [Ben Gurion] would shed tears again. . . ." Trick number four is to achieve balance by juxtaposition rather than judgment: to chop from Jewish hospitals to Arab doctors, from Haganah to Arab Legion. All of these can be legitimate, useful and instructive: in turn, an escape from the heavy paraphernalia of footnotes; a leavening of official reportese; a light spicing of perspective; and a way out of set-piece one-sided chapters or strict chronology.

But there are limits. If one man remembers wondering if he was dying when blood spurted from his chest, it is a fair presumption that that was what he felt at the time: but not all reminiscent self-analysis is so accurate. Then, does it really improve the narrative to be told that "the middle-aged woman in her bathrobe" was reluctant to wake such-and-such a character up? Or, for that matter, that it was to be "a year before" so-and-so "got home for lunch?" Messrs Collins and Lapierre, despite obvious sympathy for the Jews of 1948, are at their best, their most careful, and their most hard-working (and footnote-ridden) on the brutal slaughter of Arab villagers at Deir Yassin. So is Mr Kurzman. But in both books, judgment and analysis are conspicuous by their absence.

As she is spoke

A CONCISE PRONOUNCING
DICTIONARY OF BRITISH AND
AMERICAN ENGLISH

By J. Windsor Lewis.
Oxford University Press. 254 pages.
£1.40.

"Foreigners," said Mark Twain, "always spell better than they pronounce." The Oxford University Press, whose dictionaries have been helping them to do so for quite a while, has now devoted one to the delicate matter of English pronunciation—or rather, to the delicate differences between British and American English, quaintly symbolised in the text by £ and \$. It is designed for those to whom either kind of English is a foreign language, though they will first have to assimilate the "simplified" phonetic alphabet used by Mr J. Windsor Lewis, for which Oxford had to get special type made, and which is explained by reference to other English words. This takes some getting used to: Churchill, for example, comes out as something like tf3tfl. But the result is an admirable and fascinating piece of work.

The accents represented are described as "general American" and "BBC English"; that excludes, for example, Southern drawl or English public-school elision. But sometimes as many as three or four different pronunciations are given. For example, lieutenant appears as lef'tenant, loo'tenant but also le'tenant (British Navy). For American pronunciations Mr Windsor Lewis deferred to American authorities and acknowledges his debt to Webster's Third International Dictionary; for English pronunciation, on which he is a considerable expert, he has been monitoring BBC and subsequently ITV newsreaders since 1963, even sending them questionnaires on their linguistic backgrounds. Mr Windsor Lewis's sharp ear had picked up distinctions they probably did not know they made: in "the outlook for Thursday and Friday," for example, the a in Thursday is pronounced as in sit while the a in Friday is pronounced as in page.

The most common distinction appears to be the English failure to pronounce every r (ove'time, unde'neath). Then there is a whole list of words for which Americans turn the vowel into a double o (Toosday, dooty) or -ile into ill (missill, virill). There are differences of emphasis (garage and garage). Many differences in tone seem to be incapable of representation. A lot of the words for which only one

pronunciation is given—Oxbridge, for example—would still be a dead giveaway (the 24,000 words listed include a useful proportion of proper names). But the author is, after all, trying to show the foreign student what is correct rather than pander to the accent-conscious; which makes one wonder why he gives an American pronunciation for Llandudno and Llanelli (all simple l-sounds), especially when he does not record the common British mispronunciation of Arkansas. But at least he does not record the English aristocracy's established mispronunciation of Londonderry.

Beyond price

ECONOMIC ANALYSIS FOR
EDUCATIONAL PLANNING

Edited by Karl A. Fox.
Johns Hopkins University Press.
392 pages. £6.75.

The problem of applying economics to educational institutions or to educational systems is that for the conclusions to be practicable a great many assumptions have to be made; added to the dubiety of the analysis is the uncertainty of the assumptions. This book has the merit of being an attempt to take a series of specific questions and choose the most suitable set of techniques to answer them, rather than setting out a priori deductions which lead inexorably to a foregone conclusion. But it still has a serious drawback at its heart, namely that it assumes a series of relationships; and on that assumption rests a series of prescriptions which to the ordinary man might seem at the very best arguable, and at the very worst disreputable.

Professor Fox and a team of younger Indian economists decided to apply economic theory to the process of decision-making at Iowa State university. This was 10 years ago, when such attempts were not as frequent as they are now. It is also worth pointing out that it was at the peak of the Kennedy period of near-full employment, when resources were thought to be scarce. At that moment the demand for higher education seemed beyond the likely possibilities of American finance, though it has since been achieved with ease and the era of low employment levels has thrown doubt upon the basic full-employment assumption. This caveat applies to similar attempts being made now. But then, resource efficiency seemed essential to achieve the targets.

Since the basic problem was that

many inputs and most outputs had no direct price or monetary value, and that therefore a market simulation exercise could not be mounted to point to an optimal allocation of resources according to the canons of market or price theory, it was decided to adopt a series of notional prices for the activities of the economics department of Iowa State. Possible courses of action were then plotted out on a computer model similar to those used by Jan Tinbergen in the Netherlands and since widely adopted elsewhere. This was a serious and worthwhile attempt to answer a serious question—how best to allocate resources where there are effectively no prices—and despite some hilarious moments along the way (one serious book equals six articles, one article equals eight book-reviews) it is a valuable lesson in the strengths and weaknesses of the approach and of the techniques. What shines through the complexities of the work, which is lucidly presented and admirably sophisticated in its approach, is the weakness of the assumptions underlying the algebra and the computer formulations. For it is doubtful whether these sorts of decisions are best taken by numerical simulation; common sense still seems a better guide.

Travels of the mind

WILD EXCURSIONS: THE LIFE AND
FICTION OF LAURENCE STERNE

By David Thomson.
Weidenfeld and Nicolson. 340
pages. £3.95.

Since the name of Sterne is bound to conjure up "A Sentimental Journey," it may be as well to establish at once that the "Wild Excursions" of the title have nothing to do with any travels undertaken either by Yorick or his creator. They refer to the vagaries of the muse. If ever a writer was a master of deviation, it was Sterne. By indirections he found directions out; even his most outrageous digressions are calculated, in Charles Churchill's words, "to help the whole with wondrous art."

Mr Thomson delights in Sterne's fiction, but does not pretend that he was an estimable man; "equivocal, unreliable, evasive and unappetising" are some of the adjectives he uses. But he is fascinated by a quality thought of as distinctively modern—Sterne's uncertainty about his own identity. Reality for him was essentially a matter of his own consciousness. Fiction was a means of exploring his inner

Sterne: eccentric fiction

world of doubts and dreams.

"Tristram Shandy" was a best-seller in its day, though sober critics, Dr Johnson among them, reckoned that its eccentricity would tell against its chances of long survival. They judged wrongly; but Sterne enthusiasts, since his first vogue, have not been very numerous. Only a few years ago, Shandy Hall, in Sterne's Yorkshire parish of Coxwold, was in a state of sad dilapidation. It has, however, just been restored, and this book is dedicated to the secretary of the Sterne Trust, who lives there. It is an attractive introduction to one of the most original of English authors.

Reform and reaction

THE DIARY OF SIR EDWARD HAMILTON,
1880-1885

Edited by Dudley W. R. Bahlman.
Clarendon Press: Oxford University
Press. Two volumes, 1,046 pages.
£10 per set.

THE POLITICS OF REFORM, 1884
By Andrew Jones.
Cambridge University Press. 295
pages. £6.40.

LORD SALISBURY ON POLITICS: A
SELECTION FROM HIS ARTICLES IN THE
QUARTERLY REVIEW, 1860-1883

Edited by Paul Smith.
Cambridge University Press. 395
pages. £6.80.

A man, as Lady Bracknell remarked to Ernest Worthing, should know either everything or nothing. "Eddy" Hamilton, a private secretary to Mr Gladstone from 1880 to 1882 and principal private secretary for the rest

of the GOM's rather unhappy second ministry, was the kind of amiable, unassuming, thoroughly straightforward young man who would have answered, like Ernest, that he knew nothing. Mr Jones, one suspects, is the kind of young Cambridge historian who knows everything. And Lord Salisbury, as one who earned his bread in lean disinherited years by journalism, of course knew everything as part of the journalist's stock-in-trade.

Hamilton indeed had a fairly accurate notion of his intellectual limitations: he "knew that he had a valuable talent for clear written—not oral—exposition; with characteristic modesty he ascribed this talent to his possession of moderate rather than superior intellectual powers." Aware of unsurpassed opportunities as one in the confidence of great men and the spectator of great events, he determined to keep a diary which might become a "contribution to history." Hamilton appreciated also that he could not penetrate "that unintelligibility" which Gladstone himself "went so far as to say . . . was a characteristic common to all men of political mark." Mr Jones, who has made use of Hamilton's diaries and found them valuable as "a reliable factual record of the comings and

first in the new series of

WORLD BANK
Country Economic Reports

**ECONOMIC
GROWTH
OF COLOMBIA**
Problems and Prospects

In 1970 a large World Bank mission led by Dragoslav Avramovic compiled this comprehensive analysis of the Colombian economy. The authors assess the country's present needs and, through a novel preinvestment study programme, make recommendations for the future needs of particular sectors. Industry, agriculture, transport, tourism, education, and public health are considered in detail.

509 pages, over 350 tables.

goings at Downing Street," observes from a standpoint of great advantage—which, it is fair to remark, was not constructed entirely by Mr Jones's own unaided efforts—that Hamilton "fails to plumb Gladstonian depths." How many did—or have? Hamilton in many ways was disequipped for the task. There was no spice of malice in him. Greville would have done better. Hamilton was not uncritical of Gladstone, but too overawed and too Liberal in political sympathy. He was the rather sad case of a valet who could not help making a hero of his master. But at least he could have the satisfaction of pointing out that Mr Jones is incorrect in alleging that he did not take a degree at Oxford.

Lord Salisbury and Mr Jones, in their very different ways—though Mr Jones bids fair to emulate Salisbury's talent as a master of "flouts and jibes and jeers"—both repudiate the assumption at the bottom of Hamilton's Liberalism. Hamilton assumed that politics is a national process informed increasingly by decency, fair dealing, tolerance and good will, whereby the legitimate prerogatives of an entity called "the people" will ultimately be realised. Lord Salisbury and Mr Jones insist that politics is about the struggle for power between social groups and interests. Salisbury, in 1883, judging that if classes were not in actual conflict, they were "at least matching each other with vigilant distrust," foresaw a future of rancorous dissension, an epoch of "sharp contention, in which the country will need all the strength that can be given to it by the union and energy of the Conservative party." Mr Jones analyses with dogmatic verve and opaquely allusive brilliance a particular series of transactions between Gladstone and Salisbury about franchise reform and constituency redistribution in 1884 and 1885. He insists that the historian's concern centrally is what the politicians of the past concerned themselves with: "the bases of power for a generation."

He is concerned to demonstrate how and why the Third Reform Act of 1884 and the Redistribution Act of 1885 which established the modern pattern of constituencies were deals between party leaders about the appropriation and sharing out of bases of political power. Gladstone wanted a reform act more than he wanted a conflict with the Lords; Salisbury wanted to avoid a Commons-Lords conflict more than he wanted to stop reform; but his price for co-operation was equitable redistribution of the con-

Salisbury: politics mean power

stituencies which let in the Liberal majority of 1880.

Above all Mr Jones repudiates the interpretation that the transactions of 1884 and 1885 had to do with the march of democracy towards its goals. "Historians whose sympathies lie with the inarticulate in their unknown graves, and who dismiss as an exercise in word-play the subtle exercise of power by 'an insolent aristocratical band,' are those to whose academic predilections and moral outrage one cannot defer." The subtle exercise of power! Indeed, it has all the allurements of a kind of historiographical pornography. It is there, without doubt, and much needs to be understood. But it has been, and is, not the only thing there, and obsession with it carries the penalty of sterility. Gladstone once had occasion to remind his insolently aristocratical brother-in-law that outside were millions of hard hands, who had to be governed by force, fraud, or good will; and that good will unquestionably was answering best.

Spoilt monument

STANLEY MORISON
By Nicolas Barker.
Macmillan. 566 pages. £10.

No one was like Stanley Morison: strong-featured, infinitely attractive, with a voice like a bell, and nonpareil achievements in many fields. But he was always a puzzle. How could one man comprehend so many different, often seemingly incompatible, features? A rationalist from his earliest years, yet a devout Catholic from the age of 22; a profound scholar, entirely self-taught, yet a practical businessman; a hater of the capitalist system, who regarded money-making

as evil but enjoyed wielding influence at the centre of the establishment.

When Mr Barker told Morison that he wanted to write his life, Morison said: "You will find it very difficult, because I have never looked back." That is not so true for Morison's later years, when documentation and recent memory took over, but true of his earlier years. His development remains something of a mystery, particularly in two respects. The first and most important is his conversion from atheism to Catholicism. Little remains to explain why anyone so critical should have needed an authoritative faith and never wavered from it.

Nor is it easy to understand how, starting from nothing, a bank clerk inspired by a printing supplement of The Times, he became so quickly a great and acknowledged scholar in his field. Hardly enough documents remain to explain the transitional stages; one can only put it down to natural talent and a typically clear view, from the start, of how to study his chosen subject: historically, but always with a view to discovering causes and applying the lessons so learned to the needs of the day. The expertise so gained led on to other things; to his long connection with the Monotype Corporation and the Cambridge University Press; to the Times New Roman, one of the best of all modern types; and thence to being a highly influential character in the development of The Times.

The publishers are right to call this the definitive life of Stanley Morison. Mr Barker has made a thorough job of it, but unfortunately also a clumsy one. For all its virtues of substance, it is not a book which one reads without distraction and irritation. It is beautifully printed—of course by Morison's Cambridge University Press—and there is nothing to complain of there, except that the proof-reading is short of perfect. The text is less good. Mr Barker has a pleasant style, but it is undisciplined. To find out what he means one has too often to turn to the notes at the end of the book, which have an excruciatingly clumsy system of reference, or even to the index, which is fortunately excellent. There is no chronological table, a serious loss in so varied a life.

All this is nothing compared with the lack of illustration. A book which is largely about the development of founts demands constant illustration, on the page, of the types referred to: in the whole book there is only one such illustration, and that of someone

else's fount. It can only usefully be read if one has beside one books, such as Morison's "On Type Designs," which are so illustrated. Some 16 pages of plates, inserted at the end—mostly irrelevant, under-scaled and smudgy—are no consolation. The book is already pricey: it passes comprehension that the last ha'porth of tar should have been grudged.

Freewheeling

THE TWISTED ROAD TO AUSCHWITZ
By Karl A. Schleunes.
Deutsch. 287 pages. £2.50.

There is little in this account of nazi policy towards the Jews that has not already been discussed by other historians in much greater detail. Yet Mr Schleunes's approach is strongly his own. He writes as one haunted by misgiving: for "the realisation that some men will construct a factory in which to kill other men raises the gravest questions about man himself." Are not most of us being dangerously complacent in supposing it could never happen again?

Mr Schleunes does not put the question quite so plainly: but he answers it in the affirmative. Pointing out that the "final solution" was in no anti-semitic German's mind at the outset—not even in Hitler's or Himmler's—Mr Schleunes follows the course of the road to the extermination camps mile by mile, and turn by turn. The terrible destination was reached in consequence of assorted human weaknesses, individual and collective—of ignorance, prejudice, avarice, inertia, apathy and fear, all subjected eventually to the tensions of desperate international war. So far as the German people themselves were concerned the irrevocable step was taken with the introduction of press censorship (*Gleichschaltung*, call it what you will), after which disquieting information was withheld from the public, and no further stage in the direction of Auschwitz could be openly challenged.

Views in view

THE LANDSCAPE OF IDEAS
By Patrick Nuttgens.
Faber. 116 pages. £4.

Perhaps because so much of what we see built around us now seems formless and unrelated to its surroundings, it gives particular pleasure to realise that the more satisfying man-made land-

scapes of the past did not occur by accident. There have been many good books in recent and not so recent years on various aspects of what might be called the philosophy of the environment or, in Dr Nuttgens's better phrase, "The Landscape of Ideas." He draws heavily on earlier authors for his book, which ranges from Delphi to Chartres, from eighteenth-century Scottish villages (his own speciality) to twentieth-century English new towns.

The theme is a rich one, although his separate chapters, originally a series of lectures, read better individually than they do as a whole. The best is "The Metaphysics of Light" (as expressed in medieval cathedrals), which leans on Mr Otto von Simson's classic study "The Gothic Cathedral" and on Mr J. R. Johnson's technical analysis of the mystical effect of the glass of Chartres. It takes half an hour for the full intensity of the glass to penetrate the human eye inside the dark cathedral, a gradual revelation achieved deliberately, so it has been proved, by particular methods of manufacture and construction.

The latest and best-known environmental philosophy is the social philosophy of the new towns, so well documented already that it is a pity that a chapter on it was unavoidable. Dr Nuttgens's look at the future follows closely the rather over-rated writings of Mr Constantinos Doxiadis. What it boils down to is that however fast or slowly you travel, people are much the same size when you get there. Still, architects do need reminding.

Short list

Africa Contemporary Record, 1971-72, edited by Colin Legum (Rex Collings, £12.50). Of all the many works of reference devoted to Africa, this is the only one that is worth buying in its latest edition year after year. There are certainly other works which give basic information more than adequately. But each bumper volume of "Africa Contemporary Record" that appears provides a wealth of information about the past year's events in a continent not noted for its unchanging character. Comprehensive, lucid and accurate, it fulfils all the requirements that one might ask of such a work of reference.

A Survey of Race Relations in South Africa compiled by Muriel Horrell and others (University of California Press, £1.80 paperbound). What "Africa Contemporary Record" is for Africa, this book is for South Africa. In a

country where words lose their meaning and figures become twisted, the South African Institute of Race Relations valiantly continues to separate the facts from the fallacies. This annual survey is a tribute to the dedication and scholarship of Mrs Muriel Horrell and her research staff. As long as its publication is allowed in their country no South African can plead ignorance of what is taking place. It is the Bradshaw of apartheid.

German-English Glossary of Financial and Economic Terms by C. A. Gunston and C. M. Corner (Fritz Knapp Verlag, Germany; London: Macdonald and Evans, £10). This is the sixth edition of what has now become a standard work, "greatly compressed, but in content much amplified" (as it claims on the title page) since it first appeared in 1953. The glossary is sensible and useful, giving brief explanations as well as translations of the more obscure items and, sometimes, translations for whole phrases and sentences. The book is pricey at £10, or more as the pound floats down farther, but would be worth having for anyone who frequently finds himself faced with terms like *volkswirtschaftliches Gesamtprodukt*—gnp to you.

Sukarno

A political biography
J. D. Legge

Sukarno was one of the charismatic leaders of Asian and African nationalism. In the twenties and thirties he helped create in his people an awareness of the injustices of colonial rule. He became the embodiment of their aspirations, and he gave them the sense of being part of Indonesia over and above their sense of being, say, Javanese or Ambonese. Sukarno was also a highly individual leader with a distinctive, mercurial style. His vanity, charm, resourcefulness and unpredictability were a source of both admiration and exasperation. Among his people he inspired devotion or hostility—but never indifference. Professor Legge's book is a comprehensive analysis of Sukarno's career and its impact on Indonesia.

Allen Lane
The Penguin Press

CREDIT LYONNAIS

Financial Year 1971

EXTRACTS FROM THE DIRECTORS' REPORT

Throughout 1971, when interest rates were dropping, business continued to increase steadily; the balance sheet totals reached FF72,916m at the 31st of December 1971, an improvement of 34.7% over the position at the 31st of December 1970. The profit for 1971 amounted to FF109,557,541 compared with FF90,768,372 in 1970.

RESOURCES

Deposits from clients reached FF40,970m (+22.2%) of which 49.3% related to private individuals. The increase in sight deposits, as in 1970, was considerably lower than that of savings and long-term deposits which increased by 35.2%. Savings now represent 49.4% of all clients' deposits. Foreign branches were responsible for slightly over 4% of the total.

The resources made available to Crédit Lyonnais, by banks and other financial institutions operating on the money markets, rose from FF9,968m to FF17,832m; this was primarily due to long-term deals which doubled, whereas sight deposits only increased by 8.2%.

LOANS

Loans to customers increased by 14.8%, rising to FF44,024m principally in the following areas: private individuals, property and foreign trade. Industrial and commercial activities combined represented 65.4% of the total.

Advances to Banks and to non-banking organisations operating on the money market nearly doubled, having increased by FF8,496m. This related equally to sight and long-term loans.

Liquid liabilities have increased considerably. The heading "Account with the Bank of France, Treasury Bills and Giro Loans" has been multiplied five times.

CLIENTS—FACILITIES & IMPROVEMENTS

Certain services have been improved and better adapted to resolve the financial problems facing groups of companies: intervention on the international money market, bridging loans in connection with an increase in Share Capital, complex financing operations.

During 1971 Crédit Lyonnais also undertook to improve its knowledge of the requirements of small to medium-sized companies and merchants. This effort was illustrated, at the end of the year, by the advent of "banking guides" for company directors, traders and exporters. The new procedures for accelerating purchases of capital plant costing under FF500,000 have been widely used.

The intervention of Crédit Lyonnais has either been direct or through its many subsidiaries, which have grown considerably during 1971 primarily in the leasing field.

INTERNATIONAL OPERATIONS

The expansion of Crédit Lyonnais' international activities necessitated strengthening its footholds abroad. In this respect the year was marked by the opening of a branch in New York.

International operations developed rapidly during 1971, primarily as a result of the agreement made with the Banco di Roma and the Commerzbank. Clients, both private individuals and companies, are now able to benefit from the Group's 3,000 branches and its world-wide network.

A new and simplified financing procedure, based on a specialised structure, enables Crédit Lyonnais to offer more rapidly to its subsidiaries or its clients a wide variety of loans which they may require in the native countries of our banking partners. Numerous loans have already been channelled in this manner.

Similarly the execution of payment orders has been accelerated and information on potential markets and entries into negotiation with the customers of our partners have been provided promptly to companies requiring these services.

Five joint representative offices have been opened in more distant countries, while in New York our common subsidiary Europartners Securities Corporation has experienced an outstanding growth rate.

Finally, international financing, as a whole, has expanded considerably.

ISRAEL INFORMATION CENTRE

The Information Division of the Ministry for Foreign Affairs has opened an Information Centre in Jerusalem.

The purpose of the Centre is to supply you, free of charge, with information services on the following subjects:

- ★ ISRAEL, History, Society, Economy, Government, Foreign Relations, Education and Science, Culture and other subjects.
- ★ THE ARAB-ISRAELI CONFLICT. History, Principal issues, Israeli positions.
- ★ THE MIDDLE EAST. Current affairs.

You may ask for information on specific subjects, or simply request to add your name to our mailing list. Our address is:

10 Ussishkin Street, Jerusalem. Telephone: 02-30013

You can write, call, telephone or send the following form:

Israel Information Centre,
10 Ussishkin Street,
P.O.B. 13010,
Jerusalem.

1. Please add our name and address to your mailing list.
2. Subjects of special interest.

Extracts from the accounts for the year to 31st March, 1972,
and the report of the Chairman, Jack Frye, C.B.E.

RESULTS**YEAR ENDED 31st MARCH**

	1972			1971		
	Group as now constituted	Operations closed or being closed	Total	Group as now constituted	Operations closed or being closed	Total
	£'000	£'000	£'000	£'000	£'000	£'000
GROSS TURNOVER	24,371	2,481	26,852	28,033	5,167	33,200
EXTERNAL TURNOVER	21,978	1,439	23,417	24,374	2,583	26,957
TRADING SURPLUS/(LOSS)	2,007	(691)	1,316	2,855	(678)	2,177
PROFIT/(LOSS) BEFORE TAX	924	(840)	84	1,744	(986)	758
			1972			1971
			£'000			£'000
Profit before tax of group as now constituted			924			1,744
Less loss before tax of operations closed or being closed			(840)			(986)
			84			758
Taxation and Minorities			371			566
			(287)			192
Cost of and provision for terminating operations closed or being closed			533			102
Loss (1971-Profit) for the year			(820)			90

* As a result of the unprecedented recession in demand for machine tools further reductions have been made in the investment in machine tool manufacturing. Provision has been made in the 1972 figures above for terminating all operations closed or being closed.

* Overall the Group is in a stronger financial position than before, with a much better balance of its investment between machine tool manufacture, machine tool merchanting and general engineering, which is now an increasingly important proportion of its business.

* In the year to 31st March 1972 the Group as now constituted showed a profit before tax of £924,000. Operations closed or being closed made a loss before tax of £840,000; in addition costs of and provisions for termination of these operations amounted to £533,000. Substantial tax losses are available for relief against profits in the current and future years.

* Revaluation of Group properties shows a surplus of £521,000.

* Borrowings and commitments have been reduced by £3,200,000 since May, 1969. The Group has adequate facilities available for current requirements and to cover any expansion of trade in the near future.

* In the first three months of the current year the Group has operated at a reasonable profit; in view of this the Directors have recommended a final dividend of 2½% for the year to March 1972 and expect to resume the payment of an interim dividend in the current year unless there is a further deterioration in demand.

A copy of the report and accounts including the Chairman's Statement for the year to 31st March, 1972, can be obtained from The Secretary, B. Elliott & Co Ltd, BEC House, Victoria Road, London NW10 6NY.

PHILIPS

Tied-up in a communications knot?

The opportunities offered by data-communications - one of the pivots on which present day business turns - are today greater than ever.

With the increasing use of computers for information storage, processing and distribution, it becomes progressively easier to link all types of branches to an automatic information-distribution network and, perhaps more important still, for management to be kept abreast of events all around the world, either through private computers or by timesharing or data-banks.

Data-switching and -transmission are indispensable to the maintenance of clear, direct communications: but the reliability, flexibility and speed of the equipment are the limits to your scope.

If they tie you up in a communications knot, find out about Philips data-switching and data-transmission equipment. Get in touch with N.V. Philips' Telecommunicatie Industrie, P.O. Box 32, Hilversum, The Netherlands.

Business Brief

Can commodity agreements work?

The annual meeting of the International Coffee Council, which started in London on Thursday, promises some tough haggling sessions. The coffee producing countries held a preliminary get-together in Geneva last weekend, and came up with proposals for an initial world coffee quota of 49m 60-kilo bags for 1972-73. The proposals are clearly designed to keep coffee prices around their present levels. Prices are now higher than at any time since the International Coffee Agreement was set up in 1962, partly because of a severe frost in Brazil last month, but mainly because the major producers have taken to limiting exports. But this week prices on the London futures market have been falling sharply on the news that Brazil is reducing its coffee export tax and scrapping the quota system for exporters only recently set up. The coffee consumers at the London meeting are likely to hold out for a quota of nearer 56m bags, which would help to ease prices further.

The 1962 agreement—which runs out next year, and will have to be renegotiated at the meeting—divides the world's coffee production between 25 countries. Supporters say that, despite a number of crises, it has kept the coffee price steady over the past decade. Critics say that it has done so only because Brazil, the world's largest coffee producer with over one-third of total output, has sometimes not been filling its quotas, partly because of bad weather but also because it is getting rich enough to be more interested in producing other things. Nevertheless, Brazil is still the dominant voice in the agreement; and it exerts that voice so as to keep the quotas (and thus the export earnings) of poorer African countries lower than they would be in the absence of an agreement. The Africans are unlikely to stand for this for long; and the agreement—like so many

commodity agreements before—may soon be broken up. The United States has already complained about recent tactics for keeping prices up, and may well want to bow out of the agreement altogether.

The coffee talks will revive the old argument over whether or not commodity agreements are a good thing. The advocates of more attempts at commodity agreements or cartels for primary products are those who think that such attempts will aid poor producers of primary products by keeping up prices in the medium-term as well as the short-term. They are now joined by some customers for these commodities (eg, the Japanese) for an opposite reason; they think that agreements keep commodities in "adequate," or sometimes excessive, and thus eventually cheap supply. Most national bureaucrats in the poor countries, and many international bureaucrats dealing with them, advocate agreements because they say that greater stability in commodity prices is essential for modern development planning.

Criticisms

Economists have traditionally opposed commodity agreements, because attempts to fix (ie, put up) prices can lead to great distortions in both the level and geographic distribution of supply. Commodity agreements provide an incentive to keep developing countries concentrating on products for which they are losing a comparative advantage, while trying unsuccessfully to bully even poorer underdeveloped countries from advancing economically into them. Economists argue that the leaders in successful development in each poor area of the world (Japan, Mexico, the tourist development countries) have almost always been those who have not been protected by the cartelised sugar agreements and tin agreements and rubber agreements whose

remains have littered the world trading scene for so many years. It used to be supposed that cartel agreements would work in commodities with presumably inelastic supply, like oil and gold and diamonds; but now there are doubts whether the cartelised markets even in them have helped balanced development in, say, the Middle East, Ghana or Sierra Leone.

Nevertheless, advocacy of commodity agreements is growing; and so certainly is criticism of absolutely free markets.

Classical markets

The best example of an "absolutely free" market is the London Metal Exchange's copper market. It is also largely typical of the markets in all base metals, silver, cocoa and some other internationally-traded commodities. Interestingly, Imperial Chemical Industries is trying to get a similar free market going for bulk chemicals, while the aluminium industry is fighting hard to prevent the LME from opening a free market in aluminium.

The LME has a nominal annual turnover in copper contracts worth £1.2 billion (1971), but the great majority of this never materialises into an actual delivery. Contracts are bought and sold by consumers and industrial speculators who wish to cover forward. The market essentially determines the price that a consumer is willing to

pay for the marginal surplus or deficit in the copper supply.

In 1968, when demand for copper was running about 5% ahead of supply, the price of copper nearly doubled to £817 a ton. When industrial recession and an expansion of copper mines turned that deficit into a very slight surplus, the price came back to £400. Although this was only the price at the margin, it affected the price of all copper internationally traded in the world. Because of this, the cost of all consumption in the industrialised world fell by 30% from 1969 to 1971, although total copper consumption probably only levelled out over that period. In oil or iron ore, this kind of over-reaction would be unthinkable.

The Japanese, the world's largest importers of copper, are opposed to such fluctuations in prices. So are some other big consumers. Britain's largest consumer of copper, British Insulated Callender's Cables, was stuck on a profit plateau while the copper price was high; then, when the price came down in 1970, its profits leapt by 36%, although its sales volume increased only marginally. For the company and its shareholders the fluctuating price was a nuisance; the company thinks that its job is to make cables, not speculate in copper.

Another criticism of a free market is that the violent price

fluctuations may be partly caused by speculation. Earlier this year the LME warned its members against speculation because consumers were angered by copper prices bobbing up and down without market backing. Supporters of a free market will say that speculation would be much worse in markets where attempts were made to hold to limits, because these speculators have a one-way option. In free markets, at least, they are deterred because prices sometimes fall. Back in 1970, the Swiss branch of the United Bank of California, in a move reminiscent of the 1920s, tried to corner the cocoa market, failed, and the price then dropped 35%. If both producers and consumers want to avoid this kind of "disruption," what can they do?

Mixed systems

An example of a "half-and-half market" is the method used in selling such commodities as tin and rubber. Free market forces are given a certain amount of rein, but, if the price moves excessively, a central authority steps into the market and supports or sells the commodity. The mechanism is similar to a dirty currency float. With tin, a buffer stock has been financed by the producers with which they intervene on the LME. The intervention limits are fixed every year. Currently, if tin falls below £1,450 a ton the buffer stock manager buys; if it rises above £1,790, he sells; in the middle range he can largely deal as he wishes. The aim of the International Tin Agreement is that tin should rarely move by more than 15%

in a year.

This sort of compromise only works because free market forces are not shut out. Some people think that it would not be difficult for the copper producers to imitate it, but all attempts to date have ended in a failure to agree on who should finance it. One difficult problem to overcome is the complete absence of any common political link between the copper producers of black Africa, Latin America, Australia and South Africa.

The rubber market operates on an easier, though cruder, system. The Malaysian government, which controls most of the world's supply, buys directly in the open market to support the price. This method of control can work only if there are relatively few producers and the intervention point is constantly adapted to market conditions.

A second variation on the free market is the system used for pricing zinc, lead, platinum and many other metals. The producers fix their smelter prices between themselves. The free market then runs an exchange in parallel which will usually be at a slight discount or premium to the official price. But the two are inevitably tied together, preventing wild fluctuations. The consumer goes directly to the smelters for normal requirements, and uses the free market only for marginal purchases or to sell surplus stocks. This system probably would work even for copper, and that is indeed one major example of it. In the United States, the world's largest producer and consumer of copper, the price of the metal is fixed in broadly this way.

Quotas

The crudest way to control a commodity market is for the producers to divide total output between themselves and, having gauged world demand, supply the market with only enough to keep the price up. The most popular recent example among most countries is the tea agreement which, by restricting supplies, has forced the tea price up 10% in its two years of life, although in the previous 10 years the price had fallen steadily. It will be interesting to see if Ceylon, India and East African countries do expand more quickly as a result. Supporters of the system say that quotas are often the best method of sustaining prices of commodities sold at auction. They are used, among others, for tobacco (locally), coffee and sisal.

The danger of quotas is their inflexibility. Once a country has been allotted its share of the world's output of a particular commodity, there is little incentive for it to boost either its production or efficiency. And the system does not allow for the constantly shifting conditions of commodity production. A tea pact made even a decade ago would have given the tea producers of East Africa only a 9% share of the world market; today they have 16%. At the turn of the century rubber was grown only in Latin America; now all of it comes from south-east Asia. Ceylon used to grow coffee, but now produces only tea.

Quotas suffer from the evils of most cartels. They may work

more successfully when a single country has an overwhelming share of the world's production. In 1970 the world's wool price, set largely by Australian markets, was bumping along at its lowest since the war. Now it has climbed by 56%, earning Australia at least an extra £30m a year. The rise was aided by the establishment of a central wool commission which bought up much of the crop at auction. The Australians are now considering a plan under which all their wool should be centrally bought and resold.

This way of controlling the price is also practised internationally in the diamond industry. De Beers entirely controls the marketing of diamonds and therefore the world price. The central diamond selling organisation is a model that has been frequently copied in an attempt to raise prices. Ghana has a central cocoa board, and Bangladesh has recently set up a jute board to buy the country's entire output. The difficulty of those running these new cartels is to persuade consumer countries to promise to buy only from them. Repeated attempts to set up a cocoa pact for the five major producing countries have come to nothing, both in Geneva and at the Santiago Unctad conference, because the consumer countries could not agree. The consumers want to hold back because prices at the moment are very low, and any new price range would raise them artificially, though to nothing like what they were only three years ago.

Tin and coffee have regulated markets; copper and cocoa do not. This chart shows how annual fluctuations are much greater without agreements.

Yes, we have an awful lot of coffee in Brazil

All these bonds having been sold, this announcement appears as a matter of record only.

BUSINESS

Any peace at any price

The dockers' delegates agreed by 53 to 30 on Wednesday to call off their national strike, but the unofficial leaders voted unanimously in the afternoon to continue it

The Liverpool dockers decided to stay out on Thursday, but at Tilbury the vote was unanimously for going back and the militants hardly got a hearing. At the private ports, which were reluctant strikers anyway, the men were already drifting back; at Felixstowe they had begun again on Wednesday afternoon. The temperature seemed to be coming down, perhaps as the dockers grasped just what damage to their remaining claims for public sympathy the militants' behaviour had cost them.

There were fewer militant toughs, and more police, outside Transport House this time than last as the delegates inside discussed the improved Aldington-Jones proposals on Wednesday. The militants threw their weight around, but four weeks on social security was beginning to tell among the ranks of the placard-bearers. For all the intimidation being tried outside, the 53-30 vote suggested that the dockers might have gone back earlier, had the question been put sooner. As the militants chased the "traitor" delegates through the streets, Mr Jack Jones, general secretary of the Transport and General Workers' Union, told a press conference that he was confident that all the ports would abide by the conference's democratic decision.

At that point about 30 dockers burst into the room, including several of the militants' leaders. Mr Jones was punched and had water thrown over him, and journalists had their notes torn up and were ordered out by extremists bent on telling Mr Jones in private what they thought of him. As the reporters left, another lynching party rushed the stairs in search of Mr Jones. They accused him of selling them out, which shows just how out of touch they are with reality. What he has guaranteed them is permanent employment at a crippling cost to everyone else. The stamp of the militants, apart from their obscenities, has been their refusal to believe this.

To the delegates' conference Mr Jones was able to elaborate on the Aldington-Jones plan, and what he said makes the precedents being set by the docks industry all the more disturbing. The country's smaller ports are the latest victims of the efforts at appeasement. The Minister for Transport Industries, Mr John Peyton, has instructed the National Ports Council to report by October 31st on whether some of these smaller ports should be controlled by their big and inefficient competitors. It is one thing (and a bad thing at that) to

rescue lame ducks indiscriminately, but it is much worse to wing healthy birds. It is to be hoped that Mr Peyton is chiefly playing for time.

In the opposition to Labour's plan for nationalising the docks the Conservatives made great play of the healthy competition provided by independent ports. Their favourite was Felixstowe, a privately-owned port, where dockers earn up to £4,000 a year, and which by sheer efficiency has won business from the near-bankrupt public-sector ports. It has grown to an annual pre-tax profit of over £500,000, and its payroll has risen from 8 to over 800 men. This is the way to generate employment opportunities. But now Felixstowe and others like it are being asked to finance the mistakes of incompetent giants like London, Liverpool and Hull, where the chief militants are. These are ports with high strike records, which are frightening shipowners away. They are overmanned and inefficient: by Lord Aldington's own admission container packing in these ports has been uneconomic because of the wasteful administration charges imposed by the ports.

The second piece of news Mr Jones had was how the committee had concluded that one "appropriate procedure" for getting container packing back into the hands of dockers was for port authorities to surcharge all containers from firms who do not "observe proper conditions of working." The issue of container packing has been blown up out of all proportion by the militants in this dispute, and the Aldington-Jones committee found it convenient to go along with the hard luck story. It is as a red rag to a bull when, in a declining labour market, a leading employer of dockers packs his bags, leaves the docks and reopens shop again just outside dockland. But who drove him out? And there are only about 500 jobs that dockers could do in this container packing area—against 12,000 dockers who will become redundant in the next three years. Many of these 500 jobs are held by dockers already, and others have in the past been turned down by them.

The issue is whether the Government is going to insist that precedents are created under which efficient businesses have to subsidise the competitors they are winning customers from. It is ironic that such precedents should be created by a Government whose Prime Minister once

forced through the abolition of resale price maintenance. Mr Heath never argued then that if Tesco took business away from Safeway by price-cutting it should pay Safeway a subsidy equal to the price cuts. Nor did he ever argue that if Safeway took customers from Tesco because Tesco's staff were slow, or unco-operative or pilfered, then Safeway had to employ Tesco's displaced staff. But that is what the Aldington-Jones committee is doing now in the Government's name.

The third piece of news Mr Jones delivered to the dockers was of moves to establish a cold store inside the Port of London, and to release several hundred acres of London's disused dockland for warehouse and other distribution activities, where dockers and others in dockland can be employed. This is meant to be an example to other ports, and is, at least, one welcome piece of news. One of the omissions of the original Aldington-Jones report was that it paid little attention to the social plight of communities that are dying.

The central part of the committee's proposals remains the abolition of the temporary unattached register, so that, instead of doing nothing and getting £23 a week, unneeded dockers will be given a sort of job and paid nearer £40 a week. But increased pay to these dockers may reduce the incentive to take the £4,000 redundancy pay and leave.

The greater danger is the precedent the dockers are

creating for other groups of workers. This is already happening in dockland, where there are as many non-dockers as dockers employed. The ports are one of the last bastions of the old-fashioned pen-pushing clerks of Dickens's day. There are 900 clerks on strike in Liverpool, demanding a guarantee of job security, a voluntary severance scheme comparable with what Aldington-Jones has recommended for the dockers, and other proposals that have a familiar ring about them.

The nation found that it could get by for four weeks without the major ports, where the militancy is generated. The National Ports Council, which will undertake what may turn out to be a bullying review of the smaller ports, has always been biased towards allowing the largest ones to maintain their predominance. It believes that the smaller harbours do not have sufficient potential to cater for all the country's trade. Is that true? With modern handling methods, turnaround in port is so fast that far fewer berths are needed.

The answer to the rundown in jobs in traditional dockland, and other industries that need to change, is to create enough jobs in the country as a whole for no one to be afraid of the mobility required by an expanding economy. After all, in percentage terms the rundown in dockland is no worse than what the railways and coal mines have gone through fairly painlessly, and in actual numbers of men it is a fraction the size.

Does private industry do better?

The engineering industry struck a better wage bargain with the unions this week than the Government, with its own record of surrender, had any right to hope that it would

It is an alarming commentary on the still galloping rate of wage inflation that the engineering industry's new national pay deal, struck on Wednesday, looks almost tolerable. Engineering is a militant sector of industry and plenty has happened in the mines, on the railways and now in the docks to suggest that militancy cannot lose. But in an unprecedented display of solidarity, the engineering employers concluded the bones of a national deal that should add at most only 3.6 per cent to the industry's wage bill in 1973. Together with the 7-8 per cent increases conceded during this summer's plant level strikes and sit-ins, the annual total will be around 11 or 12 per cent. Normally this would be regarded as terrible (which it is), but it is below what has been the national average.

It could have been even worse. The engineering deal may yet turn out to be more expensive than it looks—there is a lot of small print yet to be written in. But, in principle, the deal is confined to minimum rates, setting the levels below which no one's pay will fall. Not many engineering workers are paid on the basic rates and the unions have accepted that the deal does not mean the start of a general post for everyone above them. What else? One extra day's holiday this year and another in 1973.

The minimum goes up in two stages, in the next pay packet, and again on August 25th next year. It will lift the labourer's rate for a 40-hour week from £16 first to £17.50 and then to £20, and the skilled rate from today's £19.50 to £22 and then £25. There is a nod towards equal pay: women's rates get a proportionally greater increase, from £13 to £15.50, going up next year to 90 per cent of the male labourer's rate, or £18 a week, the most expensive single concession in the agreement.

The Engineering Employers' Federation estimates the cost of the new minimum wage as equivalent to 2 per cent on the wage bill this year and 2.4 per cent next (after making some allowance for further local deals during 1973). Add to that another 0.6 per cent for firms upping incentive schemes that have begun to look less attractive now the minimum rate has gone up and a further 0.6 per cent this year and again next year for each of the extra days' holiday. How did they get away with it?

The engineering industry has an inglorious record of surrender to inflationary, and at times preposterous, wage claims, and the motor manufacturers are traditionally the most craven sector of it. But this time, when the unions put in a wage claim that would have cost £700m to meet in full, something snapped. The employers

were so angry that they offered the unions only £1.50 a week extra. Mr Hugh Scanlon, the engineers' president, therefore decided to take the battle to the grass roots, and attempt to pick off the managements one by one by negotiating with each company separately. It ought to have worked out for him; Mr Scanlon is one of the union movement's most able tacticians. But this fight did not go exactly the way he wanted.

He misjudged the mood of his members, even in his old home territory, Manchester. There were plenty of sit-ins and strikes, all well-publicised and designed to strike terror into the hearts of other employers. But many were poorly supported. The employers resisted by adopting trade union tactics: a £2m strike fund, daily briefings to keep wavering employers in line and even expulsion from the bosses' club, the EEF (six were actually booted out). The workers had no heart for the fight, having learned the hard way that bigger rises mean fewer jobs. The lesson of 106,000 engineering industry redundancies in 1971, which had allowed the industry to keep unit wage costs stable, seems to have passed right over Mr Scanlon's head. Also, real earnings in engineering were moving ahead faster than prices. The disputes cost the engineering industry 3,710,000 lost days in the first six months of this year, but it cost the hard pressed union £750,000 in strike pay. No wonder, then, that Mr Scanlon was willing to bow to pressure from leaders of other engineering unions (so long as it did not show) and resume national talks.

What the industry cannot necessarily rely on is Mr Scanlon repeating this year's mistakes. He needs to do something to restore the prestige he has lost among his left-wing members and there are plenty of fresh fights coming up. The industry is dreading next year's round of talks. Engineering companies have learned the advantage of solidarity and working together, but a few big deals in or outside the industry could cut the ground from under their feet. The motor industry continues to be the weak point. British Leyland has been giving huge

wage rises, but it is at least getting something in return for its money: a new wage system throughout its factories that ought to reduce substantially the power of the militants. British Leyland considers it is worth paying a sizeable premium for that. This week it made a breakthrough at the notoriously militant Longbridge plant in Birmingham, where the shop stewards agreed for the first time to discuss the new system. This may in its turn have repercussions at Jaguar, where a strike is now in its eighth week, and make the men think they would be wise to negotiate around the extra £4 a week offered them.

More ominous is the impending renegotiation of the Ford pay deal, which is due next spring. That, and a comparable settlement by Chrysler at around the same time, was the signal that started the country's calamitous wage inflation on its way at the beginning of 1971. There is a queue of massive public sector claims also in the wings. They will all watch what the million building workers settle for in the end. The builders have already been offered and have rejected a 44 per cent increase in their minimum rates which would have boosted the wage bill by 13½-14½ per cent this year and the same amount next year. They want 70 per cent, and have decided to step up their campaign to get it. Only a third of building workers belong to a union, and they are quarrelling among themselves, so that a call for a national strike would probably flop. Hence the attack on selected sites where the unions are strongest. The building contractors met on Thursday to see whether there was enough solidarity among them to follow engineering's example and set up a strike fund. They agreed that in principle there was and that they would set up a committee to work out the details. The contractors are seriously worried about the intimidation not only on the sites, but directed at the men's wives and families. Although any kind of picketing of a man's home is illegal under the Industrial Relations Act, the militants do not worry about that. But the contractors' trouble is that even if they get tough now they have already conceded a super-inflationary rise.

The Government gives more than industry

Wage inflation may have begun in private industry in the last days of the Wilson government, but in a shattering series of wage awards in the public sector since then this Government has contributed far more to the subsequent rate of inflation than industry has done. How much longer industry can resist pressures to match the rate of public sector settlements is a matter for prayer.

Earnings may be hit by lack of overtime, but the basic wage rate is beginning to show another turn upwards. The engineers' settlement is much in line with the general rate of increase in private industry, but the offer that building contractors have made, and had turned down, is most certainly not.

The cost of President Amin

The human cost of Uganda's erratic president cannot be measured. But the economic cost to his own country can—and is hair-raising

President Amin's decision to deport Uganda's Asians who hold British passports probably has no economic calculation behind it at all. But his political need for scapegoats has not come as a surprise to those who do watch Uganda's economy, least of all to the compilers of the latest "confidential" report of the International Monetary Fund and World Bank on this sorry subject which has been privately circulating round the world for some time. Because such reports are passed, via the executive directors, to no fewer than 120 governments, leaks are not uncommon.

The report makes it painfully clear that the economic consequences of General Amin's accession to power have been even more damaging than outsiders have been in a position to suppose. In just 20 months, from January last year, the general has virtually bankrupted his country by his heavy spending on armaments. The conclusion of the joint report is that Uganda's financial position "is approaching a crisis." The staff of the IMF and World Bank managed to extract some unpublished data, added estimates of their own, and did not mince words about the results. Their only caveat was over the timing of the crunch:

How soon this may come about is difficult to say. The situation may continue somewhat longer since foreign exchange will be coming in from the new coffee and cotton crops . . . and bank credit to the government could be expanded further against the advance deposits importers are now required to make.

It is only this relief from the sales of its new crops that has kept Uganda coasting on. But these inflows cannot long be adequate. According to the report, the current overseas account swung from a surplus of over \$20m in 1970 to a deficit of roughly \$56m last year. This drained the reserves by \$52m: indeed, they would have been exhausted but for \$7m coming in at the turn of the year from the IMF in the form of new SDRs (special drawing rights) and an automatic increase in Uganda's credit tranche. Even so, by early 1972 the reserves had slipped to below \$5m, or less than would

be needed to pay for just two weeks of current imports. (At their peak of \$77m in September, 1970, they could have covered almost eight months of imports.)

The deterioration is attributed mainly to the splurge on arms. It is reckoned that Uganda's identifiable military outlays could have risen to over \$90m in the fiscal year that ended in June, from \$20m in the last full financial year of the Obote government in 1968-69. Moreover, the true budget deficit of President Amin's government in this past financial year was at least \$112m, more than twice the officially published figure.

All this has been underwritten in part by some \$42m of unpublicised medium and short-term foreign debt contracted during 1970 and 1971, which may have had an average maturity of around three years and borne an average interest rate of about 8 per cent a year. But the report also suggests that, nevertheless, a large part of recent arms purchases has had to be financed in cash, or at very short-term with substantial down-payments. Altogether, the servicing of the cumulative foreign debt is expected to cost about \$33m this year and over \$40m next year, figures that would absorb 13-15 per cent of Uganda's export earnings over the period.

The Ugandan authorities may say that these figures are not unusually high compared with debt ratios in some other countries and that Uganda did impose import controls last December. But the report reckons that these controls are cutting mainly into imports by the private sector, damaging both investment and production at home. Nor was the staff impressed with the ratio argument; the absolute amounts of debt involved are substantial for a country with so few foreign exchange resources, and Uganda is already thought to have raised the question of rescheduling with some of its overseas creditors.

None the less, as the international assessors conclude: "The basic problem in Uganda is not a debt problem: it is a spending problem." That will not be solved—nor are creditors likely to be reassured—by the president's decision to deport a large part of the country's ablest citizens.

Rolex watches: guaranteed touched by human hand.

The only hands placed on many watches today are the two that tell you the time.

Which very often means they don't tell the time as well as they should.

We at Rolex, on the other hand, believe that men—craftsmen—put watches together better than machines.

So we use machines where precision engineering is called for.

And where craftsmanship is called for, then we use craftsmen.

It's because so much of the work is done by hand that each Rolex takes over a year to make.

And, at the end of that year, most of them aren't watches at all.

They're Chronometers.

But, before we are allowed to call one of our watches a 'chronometer,' we pay for it to undergo 15 days and nights of punishment at the hands of one of the Swiss Institutes for Official Chronometer Tests.

Here, they will lock it in an oven, clamp it in a refrigerator, suspend it in iron racks in various wrist positions: testing its accuracy each day, searching for the slightest deviation.

We've won nearly half the chronometer certificates ever awarded, even though we're responsible for a mere fraction of the annual production of Swiss watches.

To protect this superb Perpetual rotor self-winding movement, we carve a virtually indestructible Oyster case out of one solid block of surgical stainless steel, or 18ct. gold.

safe under the most trying circumstances.

Here, for example, is a quote from just one of the hundreds of letters we have on file in Geneva. "...recently an accident happened and my Rolex fell into a gas furnace in our factory.

The average temperature in that oven was about 650° Celsius. I did not expect very much of the watch when I managed to get it out of the furnace. To my great surprise, however, it was still running and the only damage done was a slight deformation of the glass window."

Letters like this make our craftsmen feel very proud.

They're also rather proud of the fact that Rolex watches are worn by many of the world's leading Heads of State, and by men like World Champion Jackie Stewart, Sir Francis Chichester and explorer Haroun Tazieff.

These men get a great deal of satisfaction out of owning what they consider to be the best watch in the world.

Almost as much as our craftsmen get out of making one.

Owning one is almost as satisfying as making one.

Environmental Systems Department is a new name for a Procon group with more than 100 man-years of experience in pollution control engineering. Its know-how is available to all industries, everywhere.

We have experts in designing and installing systems to dispose of, remove, or recover your air-, gas- and liquid- entrained pollutants, including particulates and SO₂. One current Procon project is design of a complete SO₂ removal system for a 2.31-million kilowatt electric generating station.

Procon "total services" for pollution control include technical surveys and economic studies; process development and design; detailed engineering and scheduling; equipment selection and pro-

curement; quality control; construction; plant commissioning, and personnel training. Choose any or all.

Whether your plant produces electric power or manufactures products, Procon can help you solve your pollution problems.

All services of Procon Incorporated are available through the European marketing staff at Procon (Great Britain) Limited, Greater London House, Hampstead Road, London N.W. 1, England, or any of Procon's other offices, world-wide: Bangkok, Des Plaines (Chicago), Houston, Kogarah (Sydney), Los Angeles, Madrid, Makati (Manila), New York, Paris, Pleasant Hill (San Francisco), Rio de Janeiro, Rotterdam, Sao Paulo, Seoul, Singapore and Tulsa.

Ask Procon about systems for particulate and SO₂ removal.

This is our world

Our cities are growing. Yet, they must be prevented from growing into concrete monsters. Healthy, friendly and colorful – that's what they should be. And they should be made more human. With sports facilities and parks, recreation centres and children's playgrounds.

Every day we make it

Better living: BASF makes it possible. Our new building materials help to make bold architectural dreams come true. With gay facades and new insulating materials that defy the heat and keep out the cold. BASF make crops green and flowers bloom. Our soil regenerators step in where nature itself leaves off, we can even make a garden grow on a roof top.

a better place to live in

Plastics, adhesives, dyes, magnetic tapes as well as horticultural products and appliances will shape our future style of living. And that's what BASF is all about. BASF – that's research and production, applied technology and partnership throughout the world. A hundred thousand people are employed by the BASF group today. Working for a better tomorrow.

BUSINESS

Britain

Yes, we have a cod war

The decision went, as expected, in Britain's favour when the International Court of Justice at The Hague gave its interim judgment on Thursday that Iceland's claim to impose a 50-mile fishing limit was illegal. This gives Britain a marginally stronger negotiating position (and would justify the use of the navy to protect British trawlers), but that is about all. Iceland, which had denied that the court had any jurisdiction, said immediately that it would ignore the judgment, and it will try to impose the new limits from September 1st.

The issue is not at all an easy one. Britain and other fishing countries (especially west Germany) have undoubted historical rights in the waters Iceland now claims for its own. But many developing countries take the view that wider fishing limits are their due. Since Iceland's 200,000 people depend on fishing and fish products for 85 per cent of their foreign earnings, there is considerable sympathy for them. Britain offered to reduce its catch in the disputed waters to 75 per cent of the 180,000

tons haul of the past few years. But Iceland wants British trawlers to be confined to two small areas and restricted in other ways. British trawlermen say this could not possibly yield the catch they need. And in the long term Iceland's manifest aim is to expel British and German trawlers from waters within the 50-mile limit, as it has already done with its 12-mile limit.

Plans are even being laid to annex the whole of Iceland's continental shelf, some of it up to 80 miles offshore. Since about half of Britain's deep sea catch comes from these banks and provides a livelihood for Hull and Grimsby, the Government obviously thinks that putting pressure on Iceland will be a necessary evil.

Iceland has four small patrol boats and two reconnaissance aircraft, and would be unable to police the whole area. But offending British trawlers were caught last time and would be again if they put into Iceland's ports for emergencies or repairs. Even with extra support ships, access to Iceland's ports is vital for many smaller British fishing vessels, which otherwise will be forced to fish in more dangerous northern seas for which they are ill-equipped.

Iceland's case is based on the need to conserve stocks. The sustainable yield is now only 80 per cent of that 10 years ago. Cod now being caught are young small fish. Few have the chance to spawn twice, or to grow to the most efficient marketing size. But Iceland's record of conservation is not good, and the government has given no indication that it will cut back its own catch. Indeed, 40 new large trawlers are on order and the fleet is likely to expand by 30 per cent. There was a similar build-up of the herring fleet 10 years ago.

But Britain has few bargaining counters. Iceland's tiny population

(equal to Aberdeen's) lives on the cod. If Britain refused to buy Icelandic catches they could easily be sold off to America or Russia. The Government's threat to hold up Iceland's EEC treaty is either bluff or unacceptable bullying. The fish dispute has become interwoven with the left-wing campaign in Iceland to get the country out of Nato, and the American base off the island, a movement led largely by Mr Ludvik Josephsson, the communist minister of fisheries. British warships patrolling Iceland's fishing grounds would please him. Not surprisingly, Russia has accepted its expulsion from Iceland's 50-mile waters without a murmur.

Economy

Lopsided boom

Any lingering doubts on whether the British public is spending à la Barber will be dispelled this weekend. Figures for the second quarter will have been revised upwards, and there is no reason to doubt the Treasury's claim that the level of spending in the first half of this year was probably in line with what it told the Chancellor to expect at budget-time. A huge amount of extra purchasing power must have been released.

Price inflation in Britain is now accelerating again just because wages have been running so far ahead. In the year to June, 1972, hourly wage rates rose by 12½ per cent and the cost of living by 6 per cent. So, over that time, real hourly wage rates increased by as much as 6 per cent, compared with an average of under 2 per cent in the previous 12 years. Now that overtime is beginning to turn up, too, the standard of living of millions has been given a big boost.

But how lopsided the expansion in economic activity has been is still guesswork. Exports are holding up in value, but not growing: the July figure, which was little, if at all, affected by the dock strike, was £761m. That, broadly, has been the monthly value ever since the spring of 1971; this means that, after allowing for price

Josephsson: hoping for gunboats

increases, the volume of exports has fallen 5 per cent. There seems little hope that exports can continue to cover imports when these resume their pre-strike levels and more.

Nor do the latest figures of industrial production provide any assurance that economic growth is widening out. The fact that the index for all industries in June was a shade off its all-time peak in May is probably not significant. But the extent to which the total index has been helped by the construction boom and an unseasonal use of fuel and power in a bad summer is. Britain's manufacturers by themselves turned out only fractionally more, a mere 0.6 per cent more, in the March-June quarter than they had done 18 months before, at the close of 1970. Some sectors did manage to grow (chemicals by 6 per cent), their gains being offset by falls elsewhere, largely in metal manufacture. But what is particularly depressing is that the engineering industry, which accounts for two-fifths of manufacturing activity, increased its combined output scarcely a whit over those 18 months.

So have we talked ourselves out of a consumer boom? Not at all: property, services, cars and consumer durables can absorb a lot of money between them. Unfortunately for home suppliers, some of these things can be, and are being, imported. But one trade in Britain at least must be pleased with the new affluent society. The Department of Trade and Industry reported on Monday that deliveries of domestic furniture in June were valued at £23.6m and orders-in-hand at £57.8m, figures that compare with £17.6m and £38.7m respectively a year before. How many of these manufacturers were signatories to the CBI pledge?

Oil

Klondike days

Unemployment in the Cromarty Firth area dropped from 13 per cent to less than 5 per cent in six months, as the boom in North Sea oil jobs got under way. Stories of the rate at which new jobs are being created get wilder at every telling. Although no oil will come ashore for years, the supply industries are moving into top gear.

The Cromarty Firth is emerging as the centre of the oil-platform building industry. Already one firm, Brown and Root, is building the first platforms for delivery next summer, and three other companies will be setting up shortly. A Cromarty port authority is to be

created to be the overlord for industrial development and help to build wharves and docks.

Brown and Root has recruited most of its labour locally and is spending £1m in training unskilled men. But the demand for labour is going to outrun supply, and there could be large-scale migration into the area. To meet this, the local council is planning to build 4,000 new houses in the next two years. Cromarty looks like becoming a classic growth point that will trigger off development throughout the region.

The platform industry is big enough by itself: between 100 and 250 platforms (each bigger than Nelson's column) are expected to be needed in the next 30 years. But a spin-off in ancillary industry is being felt throughout the Highlands. In Fort William, a new company has been set up to start trials on underwater equipment. In Invergordon, a factory is being built to make pipe coatings which will employ about 250. Nearby, an American consortium, including Lincoln Electric and Arnco Steel, has been set up to service the platform industry with welding gases and other services.

Orkney and Shetland are buzzing with activity. Hudsons, a supply group, has set up a base in Shetland and plans another in Orkney. It is spending about £1m on each. A consortium of British Petroleum, Shell and Sedco plans to set up a base near Scapa Flow, probably as a prelude to building bunkering facilities and oil terminals. Sedco is expected to build a local factory to produce "top-structures" for oil platforms, which means such things as the living quarters for the oilmen. Local businessmen are on the ball, and are combining to provide a variety of services.

Altogether, the industry is expected to provide 6,000 new jobs in the Highlands in the next few years. That is more than the total unemployed in the entire Highlands and Islands area. This does not include any of the developments in Aberdeen, now well established as the Houston of the north. Around 110 new companies have moved in since the oil boom got under way, and two more come each week.

About 2,800 people in north-east Scotland are employed directly or indirectly by the oil business, and by 1975 the total should be nearer 10,000. The only worry is that 50 per cent of the new companies coming to Aberdeen are American, and only 40 per cent British. The Government is at last trying to prod British industry into action. This week, the Department of Trade

and Industry published an assessment in its weekly Trade and Industry of the developing market in oil equipment, calculating that the total market over the next decade should be worth £1,500m.

Whitehall is now pushing ahead with the necessary infrastructure. It has provided a £1m loan to expand Aberdeen's harbour and has amended an ancient law to allow the expansion of Peterhead's harbour, where BP will bring its oil ashore. It has also accelerated the local road building programme. But why are ministers still so reticent in telling the good news about the regional success story of the decade?

Rolls-Royce

Scraping the barrel

The courtship of tiny British airlines that the two big American manufacturers, Lockheed and McDonnell-Douglas, have been carrying on in the past 10 days shows that they are beginning to scrape the barrel for new customers. Lockheed has now sold 110 Tristars, and McDonnell-Douglas 168 DC 10s, and they have exhausted all but two of the sort of airline that buys up to 50 jets at a time. The only uncommitted large customers immediately worth fighting for are the Japanese, who have said they will choose their next jet from whichever of the two is the quieter, and Pan American, whose financial travails make it unwilling to order anything at present. The two companies are therefore now courting airlines who may never buy more than two or three jets at a time, and it was

Tristar's are to do with size

ROYAL DUTCH/SHELL GROUP OF COMPANIES

This is an interim report by Royal Dutch Petroleum Company and The "Shell" Transport and Trading Company, Limited on the results of the Royal Dutch/Shell Group of Companies, in which their interests are 60% and 40% respectively.

Results for First Half 1972

The net income of the Royal Dutch/Shell Group of Companies for the second quarter of 1972 was £53.2 million, making a total of £126.4 million for the first half of the year. The comparable amounts for 1971 (before the appropriations in that year for additional depreciation) were £111.6 million and £224.5 million respectively.

No account has been taken in the first half of 1972 of adjustments amounting to a net charge of £34 million arising from the translation of non-sterling assets and liabilities at the floating rate of the pound sterling prevailing on June 30. The accounting principles for dealing with such adjustments have been under general review. Amortization of the adjustments relating to long-term loans over their periods to redemption would have the effect of deferring the whole of the above net charge.

The volume of oil sold in the second quarter by Group companies outside North America increased by 8.0% over the second quarter of last year, making an increase of 4.5% for the half year. In spite of continuing increases in costs, prices in the principal markets outside North America were substantially below those obtained in the second quarter of last year.

There were improved results from Shell Oil and Shell Canada but the fiscal measures in Venezuela again had a particularly adverse effect on the earnings of Compañía Shell de Venezuela.

Group companies' capital expenditure during the half year totalled £322 million, compared with £313 million in the first half of 1971.

STATEMENT OF INCOME

	Second Quarter			First Half		
	1972 £ million	1971	percentage change	1972 £ million	1971	percentage change

the discovery that Lockheed was bringing the Tristar for demonstrations this week that led to the hurried appearance of the DC 10 last weekend.

Both are wide-bodied jets in the Boeing 747 tradition, which gives charter airlines the opportunity to pack the passengers in while still giving them the illusion of travelling in some style. Among small British charter operators the score is so far two each. Court Line has bought two Tristars, which is hardly surprising since Mr Ian Morrow, who is managing director of Rolls-Royce, is a director of one of Court Line's chief customers, and Rolls-Royce's future is tied up with the Tristars. Laker Airways has bought two DC 10s. Both may buy more, but the airlines worth watching are Lord Thomson's Britannia, financially the most successful of all the small British operators with a fleet of 10 jets, and British Caledonian with a fleet of 32, a dozen of which are long-range aircraft. British Caledonian will have to change soon to wide-bodied jets if it is to establish itself on murderously competitive routes like the North Atlantic.

The DC 10's substantial edge over the Tristar lies in the size of its engines. Although both jets set out as medium-range aircraft, DC 10s will be delivered later this year which can operate on the North Atlantic, something the Tristar will not be able to do until Rolls-Royce has spent the £31m recently allocated by the British Government to step up its engine power. Airlines in the charter business need jets for the North Atlantic holiday traffic, although whether they would need quite so many were the scheduled airlines to adopt a more competitive fares policy is another matter. McDonnell-Douglas is also promising, if it gets enough orders, to shorten the DC 10, take the third engine out of its tail and, presto, produce a short-range twin-engined version that would use all the same components as the bigger DC 10s, which is nice for the company and for the airlines.

Some would say the sooner McDonnell-Douglas gets rid of its tail engine the better, since the engine seems determined to get rid of itself. Bearings have twice broken in the low pressure turbine immediately behind the combustion section of the jet, allowing the turbine to slide along the rotor shaft until it tangled with the next stage, flinging segments of engine out of the back of the aircraft. The immediate cure is frequent inspection

of the bearing; the most comforting hypothesis is that the cause lies in the lubricating oil; all sorts of stiffening of joints and changes in operating procedure are going on, but McDonnell-Douglas may have something much more serious on its hands.

What it does not have are Lockheed's persisting money troubles. McDonnell-Douglas can finance any work on the DC 10 itself. Even Rolls-Royce has the British Government behind it. But Lockheed does not have the money to modify the Tristar into the sort of North Atlantic aircraft that the DC 10 is now becoming, and will have to borrow it from sceptical bankers wanting to know when a profit is expected out of the Tristar. Tristar sales of 275 is the latest magic figure; even counting options for a further 54 aircraft, this leaves Lockheed a long way to go. Lockheed is not, in the circumstances, talking of trying to match McDonnell-Douglas with a truncated, tubby, twin-engined Tristar version.

Fast trains

Speed merchants

British Rail's new generation of 100 mph-plus trains is being threatened by the drivers, who are refusing to drive the prototypes. Behind their action lie the urge for more money and worries about job security in an overmanned industry, but also some genuine concern about the safe running of the trains.

BR has two trains under development. One is the 125 mph high-speed train, due for introduction in 1974 on the London to Bristol route, where the railways face stiff motorway competi-

Now we want a driver

tion. This is a hotted-up conventional train, with 5,000 hp engines, compared with the 3,000 hp on the present Inter-City trains, which have a maximum speed of 100 mph. The second train is the advanced passenger train (APT), which will come in a little later, and involves a host of technical innovations that will give it 155 mph on existing track, travelling 50 per cent faster on curves without inconveniencing passengers, and braking from full speed in the distance today's trains need.

The drivers' union is holding out for higher pay on faster trains and so far is getting nowhere. But it has also raised three other serious points. It objects to the cab, with no side-windows and only one seat. BR has now belatedly promised to modify the design. The union wants two drivers. Here BR rightly does not want to commit itself, though it needs to do more research on what crew a 155 mph train does need. The drivers are not satisfied, either, with the 80 hours' training suggested.

BR has designed the APT with one driver's seat quite deliberately, to cut its huge wages bill. APT should help anyway, because a driver will cover more miles in a working day. But there is room for argument about whether high-speed trains need one driver, or two, or even none. Little is known about the job. No driver is likely to see obstacles in his path at these speeds, but two drivers might have a better chance of recognising something wrong than one. The union says that on existing 100 mph trains, many of which have only one driver, the men are beginning to feel the strain of being on their own. This makes the drivers' criticism of the design of the APT cab all the more pertinent. There are signs that foreign drivers would be reluctant to work such trains, which is important for APT's export potential. The fast trains being designed by the French and Swedes keep their side-windows.

The drivers are right, too, to be concerned about training, but it is not clear quite how disinterested their concern is. Drivers now get a mileage bonus for driving fast trains. Since an APT train will cover 250,000 miles a year, against 200,000 for the present Inter-City trains, the APT should increase average earnings and all the drivers want to have a bash at it. On the present rota system, all the men in a depot would be able to, but there must be reservations about how many of today's drivers would themselves be safe at 155 mph.

Nationalised industries

What public dividend?

Several nationalised industries, steel among them, have envied the British Overseas Airways Corporation's peculiar capital structure, under which it pays the Treasury the usual fixed interest on half its capital but the equivalent of a public company's ordinary dividend on the rest. Since the experiment started in 1965, BOAC has made profits, and the dividend in 1970-71, not a particularly good year, was still 7½ per cent. But last year was dreadful; BOAC only just made an operating surplus of £2m, a third of the previous year's. The corporation decided this was the year to ask the Treasury to take the rough with the smooth and it proposed to pass its dividend. The British Airways Board approved. The Government did not. BOAC was ordered to pay a £3¼m dividend, or 5 per cent, and has therefore shown a net loss of £1.4m, its first in a decade.

The corporation is understandably sulky, and this shows through its annual report, published on Thursday. But the argument will be over whether the Government was right to act as it did. BOAC is going to plead that it acted as a normal, prudent company. But the relationship of a nationalised industry when it borrows from the Treasury can never be the same as that of a publicly-quoted company when it borrows on the open market, and it is not unknown for public companies to pay dividends out of reserves in order to maintain good relations with their shareholders. It is a warning to the

other nationalised industries that public dividend capital on the BOAC lines is not an open authorisation to management to cease paying interest on it every time the going gets tough. Not that the biggest loss-makers have ever taken particularly seriously the obligation to pay fixed interest on ordinary Treasury borrowings.

Insurance

Exit two

Two insurance companies have given up trying to write motor insurance profitably. The Excess and the Welfare both prefer to concentrate on their main business of, respectively, handling industrial and commercial risks from Lloyd's brokers and life assurance. Despite the large and repeated increases in premiums motorists have been charged for the past 18 months—and will pay over the next 18—insurance companies are still finding it difficult to keep pace with the rising cost of claims. These costs tend to increase faster than prices generally, as they consist of labour-intensive garage costs and injury awards by courts. A further problem is that the higher the premiums the more capital an insurance company needs to insure a given number of cars; cutting the number of policies issued means higher administrative costs per policy. So smaller companies concerned mainly with non-motor business may stop bothering with motor in future.

One point needs to be got straight. The exit of Excess and of Welfare is in no way a consequence of the ending of the motor tariff in 1969, which produced cut-throat competition for two years and big losses for the com-

panies before sanity returned. On past form, if the tariff were still in existence, the companies would find it even harder to get their rates up to meet increased claims costs, just because of the time it takes to get agreement among the members. But the tariff still remains for industrial and commercial fire insurance, and last week the Monopolies Commission said it should go. Under the tariff system, member companies (which include all the big ones except two) agree on premium rates and policy conditions among themselves, and refuse to share in the insurance on any factory or whatever unless club members get first option on at least 65 per cent of it.

The companies are fighting to keep the tariff, warning that its disappearance would mean an outbreak of pretty frenetic competition, a decline in public confidence, a cutback in fire insurance and reinsurance on offer, and instability and losses all round. The Government is unconvinced and has accepted the recommendation "in principle." It is not easy to see the companies falling over themselves in heedless competition to insure ICI's plastics factories, or even a well-fire-protected store, fitted with sprinklers and everything, the more so as insurance on all these buildings, apart from the smallest, is shared out round the market. By the same token, although the 65 per cent rule is an unnecessary restrictive practice, collective rate-fixing by these companies (which have only 63 per cent of the market) may not be as harmful as all that. The real objection to the system is its inflexibility to changing conditions. Without it the outcome might be not chaos but price leadership, which may be the ideal set-up.

Key indicators: British economy

Overseas trade

Surplus of £29m in July. The dock strike reduced imports but had little effect on exports. The floating of sterling also had a greater effect on imports, increasing their value by an estimated £25m.

Industrial output

Down nearly 1% from May's record level. Gas and electricity output again exceptionally high because of bad weather.

	Month	Index 1963=100	Percentage change on		
			previous month	three months	one year

NOW AIRPORTS CAN EXPAND WITHOUT GETTING BIGGER.

CABLE AND WIRELESS SHOW THE WAY.

It's not the length of runway that limits the capacity of modern airports. It's baggage and passenger handling.

Cable & Wireless are the pioneers of LOPAC—a new system for dealing with this problem. LOPAC (Load Optimisation and Passenger Acceptance Control) marries computer and communications technology to increase passenger throughput. Automatic issue of boarding passes, increased information availability at check-in mean less time spent on documentation, more time available for service to passengers.

How many on standby? Who gets a vegetarian dinner? LOPAC keeps track of all the interdependent detail that only electronic data processing can handle simultaneously. Up to 100 flights can be handled at the same time, with separate and confidential data for each airline. And

modular construction makes the system really flexible and remarkably easy to install.

This is the kind of expertise we offer—based on traffic management and operational experience in satellite, cable and radio communications. It's available to solve your telecommunication problems.

We bring together the things that bring people together. By telephone, telegraph, telex and television.

The Cable and Wireless Group of Companies and Associates, with offices around the world.

**CABLE &
WIRELESS**
THE BIG LINK

UDT Group: Sir Alexander Ross reports...

**Profit up by 72%,
scrip issue planned;
further growth ahead.**

THE YEAR'S RESULTS The group has achieved a record profit of £19,161,000 before tax, an increase of 72% on the previous year, with earnings per share up from 12.33p to 18.47p. The Board recommends a final dividend of 17% on the ordinary stock. This, together with the interim of 13% paid in March, makes a total dividend for the year of 30% (7.50p per ordinary stock unit) compared with 25% (6.25p per ordinary stock unit) for the year to 30th June 1971.

The Board also recommends that an issue by way of capitalisation of reserves be made to ordinary stockholders at the rate of one ordinary stock unit for each ordinary stock unit registered at the close of business on 6th September, 1972 and that the authorised share capital of the company be increased by £20 million.

The stock units comprised in this issue will not rank for the final dividend recommended for the year to 30th June 1973. However, the Board intends that for the year to 30th June 1973 the total rate of dividend on the increased ordinary capital should be at least 17%, equivalent to a dividend of 34% on the present issued ordinary capital.

SCOPE OF ACTIVITIES

The scope of our activities is too little recognised. The reputation of UDT as one of the leading finance houses in Europe has tended to divert attention from the range of our other banking and financial operations. Of group profit, 41.3% emanated from UK banking and industrial finance, compared with 27.7% from consumer credit.

BANKING STATUS We now have the benefit of exemption from the Protection of Depositors Act, the added advantage of access to marginally cheaper funds, and the ability to issue our own certificates of deposit. Formal recognition of our banking status and its intangible advantages will greatly assist our future development.

CONSUMER CREDIT Abolition of control orders and removal of ceiling restrictions have led to rapid expansion in the consumer credit market. We are confident of our ability to take advantage of this challenge. Our past growth has depended primarily upon an ability to meet customers' needs and to seize opportunities as they arise. It has been largely through these skills that we have grown.

There is ample scope for us to expand both our point of sale and direct credit business. We have written a record volume of business during the year and our current planning and marketing efforts are aimed at an increasing share of the growing market. Our computer and other techniques will enable us to handle this expansion without a proportionate rise in overheads.

It would be wrong to assume that the likely impact of

clearing banks on the consumer credit market represents a major threat to our business. Many of our customers have current accounts with clearing banks, but more than half the adult population have no such accounts. From that majority we derive valuable business for point of sale credit and direct loans.

MONEYCENTRES Our new Moneycentres offer, directly to the customer, personal credit schemes, current account and other facilities, and counselling on financial matters. These services are provided in attractive surroundings and at convenient times, including Saturdays. Our confidence that the Moneycentres meet a real need is supported by their most encouraging initial success.

BUSINESS CREDIT Through both our instalment credit and banking divisions we offer a wide variety of credit for commercial and industrial purposes in the United Kingdom. Apart from the clearing banks, we are one of the principal suppliers of this type of credit.

INDUSTRIAL DIVISION Our industrial division deals with other than purely financial operations. It manages our equipment hiring and distributive activities which, though basically financial, also involve special technical skills in handling associated services; it provides internal management expertise in a variety of industries - a valuable adjunct to our merchant banking operations; and it supplies entrepreneurial skills whenever our resources can be advantageously deployed outside the field of banking and finance.

SUMMARY OF RESULTS	1972	1971
	£'000	£'000
Group Profit before Tax	19,161	11,130
Group Profit after Tax	11,157	7,021
Dividends paid		
on Ordinary Stock: Interim	13%	11%
Final	17%	14%
Earnings per Ordinary Stock Unit	18.47p	12.33p

OVERSEAS Our overseas activities, which have consistently contributed a substantial part of total profit, are being further extended. Existing operations, principally in the provision of commercial and industrial finance and services, are growing steadily and total receivables now exceed £100m. Our planned expansion will be sustained by our experience in establishing and controlling overseas activities.

PROSPECTS I am confident that the continued expansion of our operations will ensure significant increases in group profits over the longer term. With reasonable stability in trading conditions greater profits should be earned in the current year. The effect of any adverse movements in UK money costs will be mitigated by the composition of our current funding: by our substantial portfolio of loans at interest rates related to the cost of money; by our overseas activities which are mainly funded in the countries of operation; and by those expanding operations in the industrial division which are less dependent on borrowed funds.

BUSINESS

International

It's mid-August and there isn't a crisis yet

With only five weeks to go before the annual meeting of the International Monetary Fund, much political heat has been generated but not too many exchange market jitters. And despite all the odds against it—Britain's labour problems, Italy's political tangles, the failure of Japan's gimmicks to dent its disruptive export strength, and the openly divided views of governments on gold and dollar convertibility—there is a chance that calm, or relative calm, will prevail in this sensitive time for currencies.

This is not because agreement on long-term monetary reform looks any closer. Far from it. The IMF executive directors are not finding it easy to agree on their own report, and Washington has emphasised again this week, in the mid-year outlook from President Nixon's Council of Economic Advisers, that any agreement on international monetary reform must be linked to substantial trade concessions to help America to get a sustainable surplus on its balance of payments.

This has raised hackles in Europe, where it has been interpreted as an attack on the common market's agricultural policy. But the exchange markets have focused less on America's pre-IMF (and pre-election) bargaining stance than on hard pointers to short-term dollar stability.

There are three: (1) the readiness of the Federal Reserve to intervene again in the markets, most recently in Belgian francs, to underwrite the Smithsonian structure of exchange rates; (2) the official confirmation that, but for the backlash of the sterling float in June, America's balance of payments would have swung into surplus in the second quarter of this year; and (3) the expectation that New York money market rates will again begin to rise, after an earlier

upward trend had been reversed by the conversion into marketable American government securities of a substantial portion of the dollars that had flooded into foreign central banks in the speculation after the pound float.

But, when all is said and done, the main reason why the Smithsonian structure is holding up is because the pound has been taken out of it. Of course, what remains of the structure would be vulnerable if sterling were floundering hopelessly. But the pound rode out the dock strike with remarkable aplomb. Indeed, the spot rate was much steadier throughout the 20 days of the official strike than it had been in its eight weeks inside the EEC snake. This was partly because Britain's underlying payments have not, yet, swung into deficit; partly because relatively high interest returns here and exchange controls abroad have made alternative outlets for funds less attractive.

It would be rash to assume that the official settlement of the dock strike on Wednesday means that sterling is now out of danger. There is a long list of potentially inflationary wage claims coming up (see page 63). But the exchange markets are more likely to wait on, than to anticipate, trouble here. As for the weakest member left in the EEC snake, the Bank of Italy has insisted that the pressure on the lira has not reached dangerous proportions and, for once, such denial of intervention may reflect the truth.

Israel-EEC

The orange card

Jerusalem

Israel is not satisfied with the EEC's long-term plan to form a Mediterranean free trade area, linked to the

EEC in the same way as the remaining EFTA countries will be. Mr Abba Eban, the Israeli foreign minister, has welcomed the idea but only as a long-term solution. What is urgent, he said, is the need to widen Israel's treaty with the EEC when the new members join, or soon after. Britain's entry is likely to cause serious economic losses to Israel.

Israel wants associate status but is unlikely to get what has been already denied to the EFTA countries. So, as a second best, Israel is asking for developing country status, which would mean that its exports would qualify for favoured treatment under the Unctad generalised preferences scheme, as do the exports of such developing countries as Singapore and Mexico which are far from the bottom of the development ladder. But the Israelis recognise that they will be lucky to get this either, and will probably have to settle for a widening of their existing agreement until a Mediterranean free trade area comes about.

Under the present deal, dating from June, 1970, the EEC agreed to halve the external tariff rates for Israeli exports, but with a wide range of exceptions, including many types of fruit (eg, oranges), vegetables and food products, and some industrial goods.

They could turn sour

When Britain joins the effect of these exceptions will be more severe: oranges, plywood and citrus fruit will pay higher duties in Britain. Some other Israeli exports like woollen fabrics will bear lower ones, but these are of much less importance to Israel. Altogether the new EEC accounted for 40 per cent of Israel's 1971 exports of £390m (including virtually all its citrus exports), and provided 48 per cent of its 1971 imports of £730m.

Israel will probably have to offer the EEC something in return. EEC exports now get tariff cuts in the Israeli market, but the cuts are less than half as generous as the ones Israel gets. Israeli ministers are now in a mood to trade a much bigger opening up of the Israeli market in return for better access to the EEC. This Israeli adventurousness, however, will be wasted if it runs into political opposition from the French, as previous overtures have. Support from Britain, Germany, Benelux and the Scandinavians will help. But the French will probably demand concessions for Spain too—and that would upset the Dutch.

Italian television

Too clever by half

Rome

Italy's decision to open up a colour television service in time for the Olympic games looks like a monumental defeat for common sense. Unwilling to decide between the Secam (French) and Pal (German) systems, Rome is to use each of them on alternate days.

Most of the 40,000 Italians with colour sets have Pal ones, picking up programmes from Switzerland and Yugoslavia. Practically nobody owns a Secam set. Italian manufacturers make Pal sets for export—and in the hope that the government will eventually choose Pal—all under licence from AEG-Telefunken, which holds a 25 per cent stake in Zanussi, Italy's largest domestic appliance manufacturer. The decision to give equal time to Secam is exclusively political. President Pompidou himself has pushed hard for it, painting pictures of France and Italy jointly selling Secam systems in Spain, other Mediterranean countries and South America. The French claim there are great opportunities to strengthen the Latin cultural and political influence in these countries, the ties with east Europe (where Russia uses a modified form of Secam) and to stave off German technological domination.

The Germans have relied on Pal's

technical superiority, Italian RAI-TV's known preference for it, and the influence wielded by the Italian television manufacturing lobby. But the botched choice could be the last straw for the Germans. German industry is already furious about the prevarication over the planned new power station for Rome, in which Kraftwerk Union may have been balked of a £60m contract because of domestic political pressures. Germany will now be less willing than ever to help Italy get its EEC regional policy, or with easy let-outs from the rules of monetary union.

The row in Italy itself is one which Signor Giulio Andreotti's new government could do without. There are dark mutterings about politicians who might benefit personally from a choice of Secam, and the communist opposition, in particular, wants to know how RAI-TV is capable suddenly of launching

full-scale Secam and Pal transmissions at the drop of a hat, when only limited test transmissions have been conducted so far. The hunt is on to know who authorised the expenditure needed, at a time when there has been no money to raise state pensions.

Russia and Japan

Linked by a pipe

Tokyo

El Paso Natural Gas is negotiating with the Russians to buy Siberian gas on a 20-year contract to supply both the east and west coasts of America. It is one of several American companies now exploring the possibilities of oil and gas deals which, on past Soviet performance, may take years to come to anything.

The talks were revealed by a Soviet

Looking a rich nephew in the mouth

Cairo

Colonel Qaddafi has now pulled off another coup, according to French reports, by browbeating the Italian oil and gas holding company, ENI, into ceding a 50 per cent stake in one of its Libyan concessions. ENI, naturally, has been putting out denials.

The colonel plainly means to prove to other Arabs his diplomatic skill in securing more "participation" in oil operations. But what sort of participation the Libyan government is going to have in the Egypt-Libya union is another matter, and one that economists in Cairo have now had three weeks to brood over.

Even after recent cuts in Libya's oil production, 2.2m Libyans have an oil income of £800m a year. In 1971, the 35m Egyptians exported goods worth only £340m, but imported £500m worth. Libya's reserves last December had topped £1 billion (nearing, say, Belgium's); Egypt's reserves are one-tenth this size and it has known foreign debts of £800m, including £60m to the United States, on which it defaulted on payment in April and July; it owes unknown amounts to Russia.

But many Egyptians doubt if Colonel Qaddafi sees himself in the role of rich nephew paying off the debts of his old uncle, although he may use his millions to beef up Egypt's military capacity against Israel. They would be surprised if the Libyans allowed their oil money to flow into a joint central bank. And they are concerned that Libyan money might surge into Egypt's domestic economy, causing an avalanche of inflation and enabling Libyans to buy up Egyptian businesses.

For fear of getting the worst of both

worlds, the Egyptians are now studying less ambitious paths to economic union. Trade between the two countries has been averaging no more than £1.5m a year. Communications are part of the trouble. Alexandria and Tripoli are 1,000 miles apart. Roads are bad. Developing road and sea transport would make good sense. So might vaguer plans for piping 1m cubic metres of Nile water a day to Libya for drinking and irrigation, and for a nuclear power and desalination plant to provide water for agricultural development along the coastal strip. In such schemes Libya would provide the money, Egypt the expertise.

Who's riding whom?

Now...from the Dominican Republic... nickel for world markets

La Española was discovered by Christopher Columbus back in 1492. It became the isle he loved best. His tomb is enshrined in a cathedral in Santo Domingo, the country's picturesque capital.

And only 50 miles from the great discoverer's shrine, in the hills of the Yuna Valley, Falconbridge has just unlocked nickel ore deposits that have lain undisturbed for countless centuries.

It was 1955 when Falconbridge became interested in the Yuna's promising nickel-bearing deposits. From a miner's standpoint, they were easy to extract; from a metallurgist's, there was no known process that would permit

economic recovery of the nickel.

Falconbridge research evolved the answer, a patented pyrometallurgical process that made economic production of ferronickel from these ores technically feasible.

International financing was arranged, and in 1969 Falconbridge Dominicana, C. por A., commenced work on the huge \$180 million mining and smelting complex, the largest industrial undertaking in the history of the Dominican Republic.

First commercial production ingots were poured and shipped in December, 1971. And on June 21 this year at inauguration ceremonies, the Dominican Republic officially joined the ranks of the world's nickel producing countries.

Falconbridge... an international group of companies mining, smelting, refining and marketing worldwide...

FALCONBRIDGE
Toronto Canada

72-O-1

trade official now in America. Tokyo will not be pleased. Gas is one of the joint Soviet-Japanese projects on which talks have dragged on for years but on which agreement has never materialised. And even the Japanese oil deal could still come unstuck for political reasons.

The Russians developed a sudden enthusiasm for an oil deal with Japan after President Nixon announced his Peking visit. In January Mr Andrei Gromyko arrived in Tokyo, offering talks on a peace treaty and on Japanese participation in Siberian development. If he was hoping to quench the growing Japanese interest in trade and investment in China he did not succeed. Japan's relations with Peking have warmed since Mr Tanaka took over as prime minister; he plans to take to the Peking trail himself next month. Pessimists in Tokyo are afraid Moscow may now register its displeasure by going slow on its Siberian offer and instead cultivating the Americans—like Occidental Petroleum, which has now started detailed talks with the Russians as a follow-up to the hazy deal fixed last month.

The Japanese are now dead keen on the oil deal, having allowed the idea to hang fire for months among doubts about its technical feasibility and its cost. They have been to see for themselves that Russia's Tyumen deposits are as big as they are cracked up to be and that the quality (less than 1 per cent sulphur) is as good. Something like £1.2 billion will need to be spent on developing the reserves and laying 2,700 miles of pipe to carry the oil from Irkutsk to Nakhodka, on Russia's Pacific coast. Deliveries could begin about 1976, at 40m tons a year for 20 years. This would help to diversify Japan's sources of oil away from the Middle East, which now supplies 85 per cent of the 240m tons a year that Japan imports.

Australian budget

Snedden tries

Sydney

It was a foregone conclusion that Mr Billy Snedden, the federal treasurer, would present a popular budget on Tuesday in a last-ditch attempt to swing opinion in advance of the general election in October or November. But has he gone too far? The budget is a political prospectus constructed to take full electoral advantage of the existing slack in the Australian economy and the unprece-

dent strength of the balance of payments, while still bearing the Liberal party trademark.

There were some concessions to the welfare state: pensioners, for instance, will receive bigger benefits and the means test will be abolished over three years. But Mr Snedden's declared aim has been to get taxes down rather than spending up. Tax concessions will cost £210m to the exchequer at last year's tax rates, and, in consequence, revenue will rise 6.8 per cent (to £4.6 billion) or less than usual. Spending, however, is up 11.6 per cent at £4.9m, although this is little more than the natural growth expected from inflation and real gnp growth. The main tax cuts are a 10 per cent reduction in income tax, tapered to give bigger percentage cuts towards the bottom of the scale, and a big jump in the tax threshold from £200 to £505.

Politics apart, the boost is intended to lift Australia's growth rate from the 3 per cent level where it has been stuck for the past year, mainly because of sluggish consumer spending. The aim is to boost business investment outlays as well as personal spending, and so bring down the unemployment rate from its present 2 per cent to, say, the 1½ per cent to which Australia is more accustomed. Mr Snedden's optimism is indicated by the government's new immigration plans for a total of 140,000 new settlers in 1972, after a year in which immigration dropped by about one-third to 88,000, largely because Canberra, with one eye on unemployment, has been limiting the assisted passages scheme.

Car engines

Reverend power

The Stirling engine was invented in 1816 by a Scottish minister: this piece of advanced technology has now been bought by the Ford Motor Company from Philips of Holland, which has been

working on it since 1938. It illustrates the lengths to which the big motor companies are now going in order to meet the demand for ever-intensifying controls of fumes and noise from cars, most immediately the new American standards that take effect in 1975.

The Stirling consumes little fuel and is low on fumes and noise. It works on external rather than internal combustion. The internal combustion engine produces power by compressing air and fuel into a small space and igniting it. The explosion moves the pistons which turn a crankshaft and compress the next charge to be ignited. Internal combustion engines need gearboxes and clutches, and leave a residue of unburnt gases, a further waste of power as well as fumes. External combustion engines (of which the steam engine is one form), use the fuel to vapourise a fluid, which then drives a piston. So exhaust gases can be recycled for further use cutting pollution to about 2 per cent of that caused by a normal car.

This is not the sum total of Ford's research effort. The company has also invested in a research firm called Thermo-Electron, which is developing a steam engine, and has even explored the stratified charge engine. This is an internal combustion engine, but the air is sucked in on its own and only when the valves are closed is vaporised fuel sprayed in. Because of the tight control over the combustion process fuel consumption and fumes are cut. Ford's team regards it as a serious contender for 1980.

But the Wankel rotary engine is still where Detroit's hopes chiefly centre. This, too, is an internal combustion engine, but the ignition and expansion of gases take place in a space formed by a triangular rotor inside a casing. Some, but by no means all, of Detroit, rates the rotary the anti-pollution winner. General Motors thinks so anyway, having paid \$50m for the rights to make it.

BUSINESS

Investment

A ratio for chaos

During the dock strike the Financial Times industrial ordinary index rose 40 points. So is the market just having a silly season, or is it really well adjusted to Britain's industrial chaos?

Strikes lead to bigger wage deals, which accelerate inflation. This pushes up interest rates and makes equity yields look low; it also cuts directly into profits because of higher costs. But if prices are raised to match wages, equities gain by inflation because they become more attractive than fixed-interest stocks. That leaves the inflationary impact of strikes on shares unpredictable. Output losses are another matter.

Production and, therefore, company profits suffer not only from strikes inside companies but from national strikes, like the miners' one. Indeed the miners' strike, including the power cuts that accompanied it, is a useful indicator of the relation between the loss of output and the loss of profits that strikes cause. Industrial production was cut by about 2.1% in the first three months of this year (excluding loss of coal and electricity production), while industrial company profits were 7.9% lower, according to Phillips and Drew, the brokers. This suggests that the ratio between lost output and lost profits was about 1:4 for this period.

Some strike-earnings ratios

British Leyland	146
Beaverbrook Newspapers	35
General Electric Company	16
Westinghouse	16
Joseph Lucas	10
Birmid Qualcast	9
Dunlop	8
Associated Engineering	5
Dickinson Robinson Group	5
Associated Newspapers	5
Great Universal Stores	2
Imperial Chemical Industries	2
Marks and Spencer	1
Barclays Bank	0
Tilley Lamp	-10
G&M Power Plant	-15

But, of course, a proportion of output lost during this and other strikes, is made up later. It is hard to estimate how much this is, and it depends primarily on the spare capacity.

Assuming that, on average, one-third of lost production is recovered, then a week's strike will cut a typical company's annual profits by 5%. But this does not mean that the share price should fall by 5% unless profits in all future years are going to fall by 5%. In fact, profits in future years will fall because a week's profit growth has been lost, but the impact is comparatively negligible.

The share price, in theory, is equal to the sum of future years' earnings suitably discounted. So if the share is on a prospective p/e ratio in the current year of 16 (roughly the average at the moment), a fall in the current year's earnings of 5% should only affect the price by 1/16 x 5%, that is 0.31%. On this basis, a week-long general strike should depress the FT industrial ordinary index by only 0.31%, about 1½ points. Of course it would do nothing of the sort, but that is what reason would say and reason tends to win eventually. A longer strike would have proportionately greater effects because the ratio between lost output and profits would change. Still, it may be less remarkable than some people think that the market should have treated the dock strike as peanuts.

But all this assumes that the strike in question is a one-off event, which is seldom true in recent years. If a company is hit by a strike in one year, it is likely to be hit again in the future (even if the strike is the first in the company's history, like that recently at Imperial Tobacco). So even one strike should have a permanent impact on a share's rating (although the relative drop in the share price should still be

Hands up, shares down

less than the relative drop in that year's profits).

In general, then, the stock market is right to take most strikes in its stride. But there are a few individual companies in which the effects can be very large.

We have devised a new measure to identify the small handful of companies which do suffer badly from strikes: the strike-earnings ratio. This is defined as the percentage by which a company's earnings would have exceeded its actual earnings over the past two years had there been no strikes. Thus British Leyland has an s/e ratio of 146. This means that its earnings would have been 146% higher in the past two years had there been no strikes.

Our table shows estimates of s/e ratios for a sample of companies. These are compiled from company and brokers' estimates and our own guesswork. An s/e ratio of zero means that a company is unaffected by strikes. A negative s/e ratio means that the company has actually gained by strikes. Our two examples are Tilley Lamp, which makes paraffin lamps, and G&M Power Plant, which makes electric generators. Both have done very nicely as a result of the various power cuts over the past two years. Ever Ready might have been another example, but the gain from extra torch battery sales has been wiped out by the loss of production caused by the strikes.

Key indicators: world commodity prices

Coffee jitters

Coffee prices fell sharply but then rallied on the London market as consumer countries prepared to put up a stiff fight at the London coffee talks against the producers' plans to impose their own pattern of export quotas and prices. If the consumers stand firm in their demands for bigger export quotas, the end of the International Coffee Agreement could be near.

Glynwed Interim Report

52 weeks ending 30th December, 1972

Trading results. The unaudited results of the Group for the 26 weeks ended 1st July 1972, together with the published figures for the corresponding period of the previous year and the final audited figures for that year are summarised below:

	1972 26 weeks to 1st July £	1971 Half year to 30th June £	1971 Year ended 31st December £
Turnover of the Group	57,071,000	42,510,000	85,787,000
Group Trading Profit	5,220,000	4,150,000	9,112,000
Debt and Loan Stock			
Interest	799,000	781,000	1,555,000
Group Profit before Taxation	4,421,000	3,369,000	7,557,000
Taxation	1,768,000	1,348,000	2,816,000
Preacquisition Profits			84,000
Group Profit after Taxation	2,653,000	2,021,000	4,657,000
Dividends: Ordinary—Interim 3.5p	1,439,029	3.125p 1,052,667	3.125p 1,052,667
Final		5.25p 1,816,205	
7% Preference	50,033	50,033	100,066

Notes: 1. U.K. Taxation on the profits of the current half year has been estimated on the basis of Corporation Tax at 40%; Overseas Taxation has been estimated at the appropriate rate.

2. Turnover and Profits before Taxation of three newly acquired subsidiaries amounting to £9,957,000 and £525,000 respectively have been included. (John Cashmore Limited from 1st February, 1972.)

GLYNWED

STATEMENT

Trading results. Group profit before taxation shows an increase of approximately 31% in the first half of 1972 over the corresponding period of the year 1971 (16% if new subsidiaries are excluded).

The half year's figures reflect the continuing high level of activity for the building sector of the economy and most of the increase in profits came from that part of the Group's business which supplies the building industry. Most of the other areas of the Group's activities have only shown any material upturn in trading during the last few weeks of the period. It is estimated that the disruption caused by the miners' strike cost the Group some £250,000 in profits. The South African subsidiary has had a difficult period of trading due mainly to economic restrictions.

Acquisitions. Since 1st January 1972 the Group has acquired four companies, three of which are included in the half year's figures, viz. W. H. Paul Limited (Steel Pressings), W. Lewthwaite & Sons Limited (Stockists of Bearings) and John Cashmore Limited (Steel Stockholders). The fourth acquisition, Sidney Flavel & Co. Limited (Gas Appliance Manufacturers), was not finalised at 1st July 1972 and has, therefore, not been included in the results.

Dividend and Prospects. The Directors have declared an Interim Dividend for the 52 weeks ending 30th December 1972 of 3.5p per share (1971: 3.125p) subject to deduction of income tax. In order to minimise the Company's liability to tax under the forthcoming change in the U.K. tax system, this dividend will be paid on 3rd January 1973 to Ordinary shareholders on the Register at the close of business on 15th September, 1972. The Directors expect, in the absence of unforeseen circumstances, that profits before tax for the second half of 1972 will show an improvement over those earned in the first half of the year.

GLYNWED LIMITED Bilston · Staffordshire

London and Wall Street After the bids

Bull markets have a delightful habit of ignoring bad news and exaggerating good news. So it was with London this week. The continuation of the dock strike did not depress shares, but as soon as it looked like ending prices shot up. On Wednesday, when the dock delegates voted to end the strike, the Financial Times 500-share index hit a new peak of 227.9. And the 30-share industrial ordinary index was close to its high, although it shaded 4½ points on Thursday to close at 533.3, in a rather idle market.

But the main interest still centres on bid stocks. Despite last Thursday's news that P&O had made an agreed bid for Bovis, the market reckoned someone else would step in with a pre-emptive bid for P&O to exploit its rich assets. P&O shares rose 70p on the week to 355p. After the recent spate of brewery takeovers, Guinness and Scottish and Newcastle both rose sharply in the hope that they might go the same way.

Our Wall Street correspondent reports that the market there continues to play its cards close to the chest, price gains one day as likely as not being partly clipped the next. But the emphasis has been on "partly." Prices have moved higher by an impressive 6% since the current rally started in the third week in July. Indeed, on Monday the blue-chip Dow Jones industrial average, after putting on 20 points in two days, hit 973.51, its highest since December, 1968, and only 2% off its all-time peak. But by mid-week it had eased to 964.25.

The latest weakness was mainly in motor stocks, induced by the Nixon

Administration's request that the car industry reconsider its plans to raise prices on 1973 models. Chrysler, which was the first to assail the White House request by branding it "arbitrary and discriminatory," saw its shares close on Wednesday at \$30½, down \$½. General Motors was off \$1½ at \$75½, Ford fell \$1½ to \$64½, while American Motors wound up at \$10, down \$½.

On the other hand, American Telephone and Telegraph, one of the big board's most actively traded issues, on Wednesday climbed \$½ to \$43½ following the announcement that the quarterly dividend had been raised to 70 cents from 65 cents. Another fairly active stock, Plessey, which denied a report in these columns last week that it was all set to join forces with Thorn Electrical Industries, held at \$3 for the day, down only \$½ from the year's high reached last Friday.

While the current rally basically mirrors continued economic strengthening, confidence has been slow to return to the market, as evidenced by the continued moderate trading volume, roughly 15m shares a day. The recovery, brokers observe, has been sustained not so much from any marked expansion in demand as from a reluctance of present holders to part with stocks. So it has been a bloodless recovery, but a rally none the less.

Tobacco

Dobson's choice?

The news that should have been announced on Wednesday was that British Imperial Tobacco is the name of Britain's newest and biggest multinational company, formed from the merger of Imperial Tobacco and British-American Tobacco. Instead the two companies explained that a year's

joint talks had led to an agreement to end their 70-year-old trading deal.

One of the two main arguments for a merger is that EEC competition rules, as interpreted in a test case at the Court of Justice last year, mean that no company can hold a monopoly of a brand of goods in one country. Since an agreement in 1902, Imps has sold no fags outside Britain and Bats none inside, although both companies sell many of the same brands, like Players. So it would be legal for a German importer to buy, say, Players in Britain and sell them in Germany in direct competition with the identical cigarettes produced by Bats. The second argument is that Bats's earnings come almost entirely from abroad and so will be taxed more heavily under the new corporation tax system. In a merged company Bats's foreign earnings could be offset by Imps's home earnings.

The two chairmen, Mr Richard Dobson and Sir John Partridge, explained on Wednesday that they had rejected the merger plan because they were frightened that the new company would be too big to be popular, and might come under attack from the EEC commission. This may be true, but neither company seems to have talked to officials in Brussels. Although Bats would have been Europe's biggest tobacco firm, it would have had only 29% of the total market, and the commission could hardly take tough action against it while both France and Italy have state monopolies in tobacco. City gossip has it that neither board was happy at the inevitable demotions that would follow a merger. Anyway, the decision was taken not to merge, but to end the 1902 agreement, so the two companies are now free to compete in the same markets.

This would be fine if there was a real prospect of competition between them. But to judge by the tone of Wednesday's press conference neither has any plans to do so. The trouble is that Imps and Bats cannot be expected to operate independently while Imps holds 28% of the Bats equity. But Imps is reluctant to pay up the £50m capital gains tax that liquidation would require. There must be a good chance that either the Monopolies Commission or the EEC commission will eventually ask Imps to sell its stake in Bats.

The main loser from the failure to agree on a merger is undoubtedly Bats, and its share price dropped sharply on the news. Imps, meanwhile, is proceeding with its bid for Courage.

There was talk in the City that another bidder would emerge for Courage, because the Imps bid was not generous enough. In fact, the Imps bid is even more generous than the Grand Metropolitan bid for Watney Mann. The approximate exit p/e ratio for Courage is 27, against Watney's 23.5.

While Imps and Bats have fiddled about, Carreras has merged itself into a new European group, Rothmans International. The quotation for the shares reopened this week close to the pre-suspension level of 71p. This values the company on a p/e ratio of 12½, assuming full dilution after the full conversion of the convertible bonds. But since the majority of the bonds cannot be converted until 1977, this basis of valuation makes the shares look more expensive than they actually are. When the speculators who rushed in before the suspension have finished ditching their holdings, the share could rise a little higher. Given Rothmans's large stake in Europe, which is a faster-growing market than Britain, the share probably deserves a higher rating than Imps or Gallaher do.

Smith and Nephew

No miracles

Those who expected that the Hydron soft contact lenses would turn solid, reliable Smith and Nephew into a shooting star overnight have been disappointed. The results to mid-June bear no sign that the lenses have been marketed since March. But, then, it was unrealistic to expect anything so soon after the launch. Speculation over the pay-off from Hydron sent S and N's shares bounding to 81p earlier this year. They started this week at 74p, and then shed 2½p after results, which showed the group's

pre-tax profits in the second quarter 11% up on the year before. When the less good performance in the strike-hit first quarter is included, the rise for the half-year over the same period of 1971 was 8.4%, to £3.8m. The corresponding increase in sales was 9.4%, to £30.5m.

The real disappointment is the quiet time experienced by S and N's bulk pharmaceutical and hygiene business. (One of its household names is Elastoplast.) This was compensated for by the expected good out-turn from 55%-owned Gala, whose results are consolidated; and a better-than-expected turn-in from the associated companies. Among these, British Tissues showed it was nearly back to break-even compared with a loss of £1.1m last year, of which S and N sustained its 20% share. Despite only modest results from Jeyes, the associates altogether provided pre-tax profits of £174,000 in the first six months, compared with £98,000 in the same period last year.

As market leader in many essentials, S and N is usually well-placed to outstrip inflation. But price control made it much more difficult to maintain margins after allowing for the 8% interest on the £7.5m loan stock issued in April, 1971. S and N, however, has ducked out of signing the CBI agreement again.

The prospective p/e of 22 reflects increasing appreciation of good quality earnings, with a touch of spice from Hydron, which still has major marketing problems to sort out. The decision to price soft lenses at a premium over conventional hard ones may be a mistake, but Hydron has other uses.

Carrington Viyella

Material improvement

In the end, the first-half results from Carrington Viyella were not quite up to the market's expectations. Over the past euphoric month the share price had risen 30% and this fell back 1½p to 47p. But recent optimism has been far nearer the mark than the earlier despondency fuelled by a gloomy chairman's warning to the annual general meeting of the blows to the first-quarter's figures dealt by the power cuts, consumer reluctance in advance of the budget and world overcapacity in polyester yarn. These remarks may have owed something to strategy since they were accompanied

by a plea for more protection against imports. And when it began to dawn on shareholders that an upturn could be expected in the first half after all, they overreacted—but not by too much. The pre-tax profits of £3.07m were just within the range the market expected and would have been better without a more conservative depreciation charge.

Comparison with the same period last year is confused by the ever-changing structure of the group. In particular, there was the sale last September to the fairy godmother, ICI, of the two trouble-hit polyester texturing interests, William Tatton and Aycliffe Textiles, for £10m cash plus royalties. The proceeds were partly devoted to reducing Carrington's hefty borrowing; the interest charge, helped also by lower interest rates, was down by a useful £580,000. This saving, together with the royalties from Tatton and Aycliffe, probably contributed in the half-year only some £200,000 less than the profits the companies made in the comparable period last year. So it was an excellent deal for Carrington, particularly as the companies are now making a loss.

In the absence of another strike, some quickening in the pace of growth can be expected in the usually more profitable second half. A 32% upturn would produce £8m pre-tax profits for the year, giving a prospective p/e of 16 at 47p. The share can just about support this, but not much more. There is still the question-mark hanging over the 64% shareholding that must be reduced by ICI.

Carrington Viyella LIMITED

INTERIM STATEMENT

The Directors of Carrington Viyella Limited announce the following unaudited results for the Group for the six months to 30th June, 1972:

	1972 £'000	1971 £'000
Sales to External Customers	74,647	77,465
Profit before Depreciation	6,863	6,647
Depreciation	(2,473)	(2,316)
Profit after Depreciation	4,390	4,331
Investment Income	37	43
Interest payable	(1,357)	(1,937)
Profit before Taxation	3,070	2,437
Taxation	(1,201)	(941)
Profit after Taxation	1,869	1,496
Interest of Minorities	(84)	(4)
Preference Dividend	(366)	(341)
Profit attributable to Ordinary Shareholders	1,419	1,151
Cost of Interim Ordinary Dividend (Gross)	699	699

1. On 30th September, 1971, the Company's main texturing interests were sold to Imperial Chemical Industries Limited. On 30th April, 1972, the Company sold its subsidiary Ingham & Tipping Limited. On 25th May, 1972, the Company acquired a majority holding in Consolidated Textile Mills Limited of Canada and sold its wholly owned subsidiary, Dominion Dyeing & Printing Company Limited to that company.

The results related to these companies are included for the appropriate periods.

2. The growth in external sales for the first six months of 1972 compared with the same period of 1971 was 9% excluding those companies sold and those acquired in these periods (see Paragraph 1).

3. As reported at the Annual General Meeting the profits for the first quarter were adversely affected by the severe impact of the miners' strike and the consequent power cuts. The profits for the second quarter showed a good recovery.

4. Provided that there are no further adverse factors beyond the control of the Company, there are indications that the second half of the year is likely to show continuing progress, since in most areas the level of activity and order books are ahead of this period last year.

5. During the early part of 1972 the Board decided to adjust depreciation rates for plant and machinery to accord with a re-assessment of the economic life of these assets.

6. Dividends paid and payable on the Cumulative Preference Shares:

	Cost £'000	1972	1971
6% to 30th June, 1971	—	—	168
6½% from 1st July, 1971	—	—	182
7½% to 30th June, 1971	—	—	173
8% from 1st July, 1971	—	—	184
		732	707

INTERIM DIVIDEND

7. The Directors have declared an Interim Dividend of 2% less tax on the Ordinary Share capital of the Company.

INFLATION AHEAD

Proceed with caution

The rate of inflation in the United States in the 1970's will be nearly twice the rate of the 1960's. This will affect your profits. But you can do something about it. For sound judgment on the U.S. economy, you can consult a private information service that U.S. businessmen have been using—profitably—for nearly fifty years.

THE KIPLINGER WASHINGTON LETTER—edited by a staff of experts; headed by Austin Kiplinger, noted authority on U.S. business and economics—lets you know in advance which way the U.S. economy is going . . . where profits will be made . . . and what effect those developments will have on your business.

Your weekly copy of **THE KIPLINGER WASHINGTON LETTER** interprets the often-confusing news of U.S. government actions . . . American political maneuvering . . . labor union strategy . . . U.S. corporate policy and other developments. It helps you understand how these will affect U.S. interest rates . . . stock prices . . . real estate values . . . spending . . . inventories . . . imports and exports.

THE KIPLINGER WASHINGTON LETTER is a proven publication. It warned readers of oncoming U.S. inflation as early as 1935. Those who were astute enough to heed its advice reaped rich benefits in the 1930's, continued to avoid the losses and enjoy the profits of the surging U.S. economy of the late 1940's, early 1950's and mid 1960's.

The penetrating forecasts and judgments you will receive in every weekly issue of **THE KIPLINGER LETTER** are based on solid facts and intelligent interpretations. Written in crisp, concise paragraphs, **THE KIPLINGER WASHINGTON LETTER** can help you realize big rewards and avoid the financial and business blunders that others, less-informed, may make.

To try **THE KIPLINGER WASHINGTON LETTER** for the next six months—a full 26 weeks of information and advice—mail this advertisement with your name, address, and your bank draft in an amount equivalent to 18½ U.S. dollars to:

KIPLINGER

Suite K-48

Do it now . . . today's predictions can turn into tomorrow's profits for you.

Investment trusts

Time to buy?

Investment trusts have not had a very happy three months. The investment trust index has generally lagged behind the all-share index, although catching up a bit recently. This sent the average discount between a trust's assets and its market valuation soaring to 18%. That is high ground by any of the standards of recent years, and particularly compared with the 5% discount during the short-lived euphoria over investment trusts just after Mr Barber's last budget.

What has gone wrong? The market for investment trusts is suffering from indigestion. Since April an unprecedented diet of 23 new trusts, plus rights issues worth £17m, have been thrust on its plate. The new boys—many of them with jazzy specialisations in Europe, Japan, new issues and the like—have soaked up money that would otherwise have gone into established trusts and lifted their ratings. Institutions, under pressure to give room to the newcomers, may have tossed out some of their old trust holdings. So the market has come down.

This has been hard on the staid and

cautious investors who are an important mainstay of the trust market. They may not have been in a position to subscribe for rights or to get into the adventurous new trusts. They have watched helplessly as the value of their existing holdings has dwindled. Their disappointment is the more acute as they hoped for a boost for their funds from the budget bonus of a cut in the trusts' capital gains tax from 30% to 15%. This moment, when existing holders are feeling so disappointed, may be the right moment for other investors to buy.

There are now some good grounds for optimism. The new tax advantages given to trusts have not yet been fully assimilated by the investing public. While the market has rated investment trusts lower, their actual performance, in terms of underlying assets, has improved. This shows up in our quarterly statistics, compiled by stockbrokers Wood Mackenzie, who measure each trust's performance against an index of British and American equities and fixed-interest securities, weighted in proportion to the average investment trust's participation in these

sectors. The long-term (or "five-year") performance figures, on the right-hand side of our table on the opposite page, are shown as a gain or loss on this index.

The short-term figures, on the left-hand side of the table, show the changes in net assets over the year to July 31st. The Wood Mackenzie index has risen 16% over this period, which means that all of the 126 trusts in this survey have beaten this average except for the 10 sad laggards at the bottom of the league.

Managers are perhaps already profiting from the greater flexibility given by the budget: in effect the previous tax on switching between stocks has been cut in half. Some of the ambitious and imaginative ideas of the "new look" investment trusts may be putting pep into the traditional workhorses of the industry.

None of the top trusts in our one-year table is strictly orthodox. The spectacular Flag still flourishes under the unconventional management of Slater Walker. Throgmorton has been skipping along since it pioneered the idea of taking small company holdings from insurance companies in exchange for its own shares. General Funds, Investing in Success and Berry have all distinguished themselves by their big, profitable, but risky, holdings in Japan.

For those who agree that a lot of trusts now look cheap, a pair of especially striking bargains on our scatter graph are the two funds under the banner of City Financial Administra-

tion: Investing in Success and General Funds. Their average appreciation over the past five years has been impressive; but their setback in 1971, when Tokyo turned against them, still seems to be hanging over their ratings. Tiny participation in the United States and some good British growth stocks have helped both these trusts along; but the real bounce comes from the 25% stake in Japan. The investment managers lurking modestly behind the management company front are the old Far East hands, Vickers da Costa: a company which is also enjoying a winning streak in unit trusts and offshore funds.

Another family of funds which falls into the cheaper section of the chart is managed by Fleming and Murray. Only one, Capital and National, has yet made it into the top 20 over five years, but three, London and Holyrood, London and Montrose and United British Securities, are all strong in the one-year table. The last two have still to produce their full 1971-72 results. These might well push them up into the five-year top twenty, which they currently miss by only a small margin. Good results

have been achieved with a generally conventional investment policy, though they have been dabbling in the rocketing Hongkong market. Their problem may be one of marketability; despite the size of the trusts, institutions have got them carefully locked away.

The most notable shift in our tables since they were last published in May is that of Atlantic Assets, which had misleadingly featured at the bottom of the short-term table recently because of the valuation problems of its large unquoted assets, but has soared up on latest published figures. The managers, Ivory and Sime, have upvalued its 26% holding in the unit trust group Save and Prosper from £10 to £20 a share. Still to be added into Atlantic's assets is the real worth of the wholly-owned and energetic merchant bank, Edward Bates, which is still valued at cost. A realistic valuation would add about £9m to Atlantic and boost its growth this year to around 80%. In practice, a revaluation of Edward Bates would make it an impermissibly high proportion of the trust's portfolio, and so the group

intends floating the bank off as a rights issue to Atlantic shareholders.

With a disappointing shift in the opposite direction, the five-year chart topper, London and Aberdeen, is now at the bottom of the one-year table. It has a special problem. With 56% of assets in stablemate trust Stockholders, its performance has been hit by the problems of the investment trust sector. Stockholders' price is unchanged over the year to July 31st, and with a further 4.6% in oil interests which are only valued triennially, all the growth has come from under 40% of the portfolio. In future the managers, John Govett and Co, intend to value the Stockholders component at asset rather than market values.

On this basis London and Aberdeen's growth over the year would be a more respectable 18% but still way below past standards. The whole group has been going through a thin patch with large holdings in America and some troublesome mining investments. So, while the management has a good long-term reputation, London and Aberdeen on current going is less cheap than it looks on the chart.

One-year growth to July 31, 1972

APPOINTMENTS

University of
St. Andrews

Institute of Economic and Social Research
Applications are invited for a LEVERHULME FELLOWSHIP IN ECONOMIC DEVELOPMENT, tenable for four years. Salary scale £1,872-£2,292, with provision for travel: scale at present under review. Applications, with the names of three referees, should be lodged by 31st August, 1972 with the Deputy Secretary of the University, College Gate, St. Andrews, from whom further particulars may be obtained.

Research Assistant

NALGO requires a Research Assistant to work on pay, economic and industrial relations matters. Salary £1,803-£2,100 plus £144 London Weighting. Details and application form from the General Secretary, NALGO House, 8 Harewood Row, London, NW1 6SQ. Closing date 11th September 1972.

CHAIRMAN'S STATEMENT

WHITBREAD

AND COMPANY LIMITED

In his statement for the year ended April 1, 1972, the Chairman, Mr. Alex Bennett, reports:

- * Profits before tax have risen from £16.949 million in the previous year to £20.889 million, an increase of £3.94 million or 23.2%. This improvement has been achieved by a higher turnover in beer and wines and spirits and a most satisfactory increase in retail profits.
- * Wholesale beer prices were held level between the autumn of 1970 and the end of February 1972, so that during the year itself we have absorbed considerable inflationary costs, particularly in wages and salaries.
- * The final dividend recommended is 10½%, making 14½% for the year, as against 12½% last year.
- * We have improved our liquidity position by £5.0 million in the year, in spite of spending over £6 million on the new brewery at Samlesbury and on new production centres for wines and spirits and soft drinks at Hatfield and Beckton.
- * As part of our management reorganisation, an Executive Committee of nine Directors, responsible for the day-to-day running of the Company, came into operation officially in April, 1972. This will make for quicker decisions and communications down the line.
- * Our free trade expanded at a rate which was over two and a half times better than the average for the country. Outstanding were Tankard, Heineken draught lager, Mackeson and Gold Label. Canned beers improved by over 30%. The trend towards draught beers continues, and draught Stella Artois has shown the biggest percentage gain of any lager in the Group.
- * Retail profits in the Group increased by over £1½ million to nearly £6 million. This is the result of skilled investment and management, and covers the whole range of improvements and new ideas from the traditional pub to theme houses, grill rooms, bistros and discotheques, catering for a wide range of customers of different ages and tastes.
- * Probably three-quarters of our licensed houses will always be under tenancy, so that enterprising and successful landlords will remain the backbone of our trade, and we aim to attract the best talent for this exacting way of life.
- * Our wine and spirit company, Stowells of Chelsea, had an excellent year with a very substantial increase in both sales and profits. Our Corrida range of wines continues its steady increase in sales volume, and we are now also very pleased to have taken on the U.K. agency for St. Raphael, the largest selling wine aperitif of France.
- * This year we are aiming for a further satisfactory increase in profits. Provided inflation can be contained, with the attendant difficulties of wage claims and rising costs, I am confident that the Company will continue to forge ahead.

COLIN BUCHANAN AND PARTNERS PPBS AND BUDGETING STUDIES

Colin Buchanan and Partners have a vacancy for an economist (or appropriately qualified person from another relevant discipline such as O.R. or management sciences) for studies of financial planning, programming and budgeting in the public sector. Both theoretical knowledge and substantial practical experience—preferably in a local authority context—are essential; a background in transport economics would be a major advantage. Applications stating qualifications, experience and present salary, should be sent to Mrs. J. Harrison at Colin Buchanan and Partners, 47 Princes Gate, London SW7 2QE.

Lloyds & Bolsa International Bank is becoming increasingly active in the international investment business. As part of our development plan we are seeking high calibre investment specialists for challenging and rewarding opportunities in Investment Management and Research.

Senior Portfolio Managers

Two experienced Managers are required for international equity portfolios.

- A specialist in U.S. securities.
 - A specialist in European and Japanese securities. A knowledge of French and German is highly desirable.
- Candidates currently earning less than £5,000 p.a. are unlikely to have the necessary experience for these appointments.

Senior Research Analysts

We are looking for three experienced Analysts.

- An Analyst with research experience in U.S. shares.
- An Analyst with research experience in European or Japanese shares.
- An Analyst with research experience in fixed interest stocks.

In each case a degree or professional qualification is desirable. Remuneration will be negotiable in the region of £4,000 p.a.

Benefits of working for Lloyds & Bolsa include:

- House purchase scheme.
- Generous non-contributory pension scheme.
- Above average holidays.
- Free lunches.

Written applications in strict confidence to J. G. Green,

LLOYDS & BOLSA
International Bank Limited
40-66 Queen Victoria St., London EC4P 4EL.

Interviews can be arranged outside London if necessary.

APPOINTMENTS

ECONOMIST

for London Electricity

An important vacancy has arisen for an Executive Officer (Economics) in the LEB Commercial Directors' Department in New Broad Street in the City. Applicants should be qualified and experienced Economists. The person appointed will have to grasp quickly and easily the pricing technicalities of marketing electricity. He will be called on for informed comment and advice on the effects of economic policy changes and will be asked to carry out projects, prepare reports and statistics from time to time. Some training and experience in financial and management accounting would be desirable. The position carries a salary within a scale rising to £3528 per annum, plus a superannuation scheme, good sick pay scheme, excellent working conditions, etc.

Please write with full details to the Personnel Director,

LONDON ELECTRICITY BOARD

46 New Broad Street, London, EC2M 1LS.

Quoting ref: PER/V/307.

Young Statistician

New Appointment in
Sales Research

Reckitt & Colman Food Division manufactures and markets such well-known products as Colmans mustards & sauces, Gales Honey, Robinsons Drinks and Baby foods. Success in these highly-competitive, fast-moving markets calls not only for a lively approach to selling but also for a quantitative evaluation of past performance and future potential. The role of the Statistician will be to provide management with the appropriate data and comment.

He will develop the sales forecasting service for both long and short-term business; monitor results of sales promotions and undertake sales force operational research. Ample computer time will be available. These activities will bring him into regular contact with production, sales and marketing staff. The position calls for sound commercial judgment as well as a good background in statistics. Previous experience entailing market analyses and reviewing of trading conditions would be very useful. A man in his 20's, keen on developing his career in this field would find this an ideal opportunity.

Salary will depend on age and experience and there are the usual fringe benefits including contributory pension and bonus scheme. Assistance with removal expenses where appropriate. Please write, quoting reference S.19, and giving full details of your career and experience to date and any other information which may support your application to: Divisional Personnel Director,

Reckitt & Colman
FOOD DIVISION
Carrow Norwich NOR 75A

POST GRADUATE STUDENTSHIP IN SOCIAL SCIENCES

Applications are invited from graduates of British Universities wishing to read for M.Phil./Ph.D. by research in

**ECONOMICS, SOCIOLOGY,
GOVERNMENT,
PUBLIC ADMINISTRATION**

or related fields

Basic grant £650 per annum. Increments for experience. Dependents' allowances.

For further particulars write to:

H. N. Sheldon,
Head of Department of Social Studies,
Paisley College of Technology,
High Street,
Paisley, PA1 2BE.

Closing date 1/9/72.

Transportation Planning

Vacancies exist for suitably qualified staff to assist in the urgent task of interpreting the GLC's broad strategy for transport in London, which is now awaiting Government approval as part of the Greater London Development Plan, and of examining the options for converting the strategy into programmes of action. The work includes appraisals of London Transport's annual and multi-year investment programme, studies of the effects of different fares policies, general public transport planning, and the further development of traffic restraint and highway development policies.

In general the Council is seeking experienced professional people who are qualified in planning, engineering, research, economics or management, preferably in connection with transportation. In particular qualified people with experience in transport economics and in highways and traffic planning are required, to lead teams of officers working in the key areas of bus priority measures, traffic restraint and highways development.

There are also positions at a more junior level for graduates in economics, traffic and transportation engineering.

Starting salaries according to qualifications and experience within the following scales:

- (i) £4,230-£4,878 range (under review)
- (ii) £4,344-£4,647
- (iii) £3,594-£4,164
- (iv) £2,316-£3,429
- (v) £1,598-£2,211

Application forms, returnable by 31 August, obtainable from the Controller of Planning and Transportation (EO/313/D), County Hall, SE1 7PB.

GLC GREATER LONDON COUNCIL
Department of Planning
and Transportation

APPOINTMENTS

University of Durham

The NORTH-EAST AREA STUDY, established with S.S.R.C. support, aims to conduct research into socio-economic conditions in North-East England whilst providing a training for postgraduates in methods of social research, especially in survey research.

Applications are invited from graduates with social science, statistics or other appropriate qualifications for one 2-year post of TRAINEE ASSISTANT (half-time Research Assistant and half-time higher degree student).

Salary £1100 per annum (under review).

The Trainee appointed will be required to join in a study of 'Sense of Place and Local Identity' in the first year and probably in a further project in the second year.

Further particulars and application forms from the Registrar and Secretary, Old Shire Hall, Durham, DH1 3HP, to whom applications should be sent by 4th September, 1972.

Monash University

MELBOURNE, AUSTRALIA

DEPARTMENT OF ECONOMICS

Senior Lecturer in Economic History

Applications are invited for the position of Senior Lecturer in Economic History. Applicants with appropriate qualifications will be considered for a Readership or Associate Professorship.

No particular area of interest is specified for this position, but preference will be given to candidates with proven ability to undertake and supervise research in a field of modern economic history.

Salary: \$49,540-\$111,130 per annum, with superannuation based on an endowment assurance scheme, the employee and employer contributing 5 per cent and 10 per cent respectively.

Benefits: Travelling expenses for appointee and family; removal allowance, repatriation after three years' appointment if desired; temporary housing for an initial period. Study leave entitlement accumulates at the rate of one month's leave for each six months' service up to six years, with provision for financial assistance.

Further general information and details of application procedure are available from the Acting Academic Registrar, Monash University, Wellington Road, Clayton, Victoria 3168, Australia, or the Secretary, General Association of Commonwealth Universities (Appts), 24 Gordon Square, London WC1E 6PP (Tel: 01-387 8372). Enquiries about the Department of Economics to Professor D. Cochrane, Dean, Faculty of Economics and Politics in the University.

Closing date: 2 September 1972.

The University reserves the right to make no appointment or to appoint by invitation.

Howard Humphreys & Sons

APPOINTMENTS

Market Research and Planning Executive

Polygram is a major international company in the music, gramophone record, cassette and cartridge industry. Two of its best-known subsidiaries are Polydor Limited and Phonogram Limited whose labels (for example Polydor, Phillips, Fontana, D.G.G., Vertigo, etc.) are international household words.

We are seeking an executive of about 30 years of age, probably a graduate, to undertake research studies in the U.K. covering the whole field of recorded entertainment in order to play a part in the Company's long term planning and philosophy and to act as U.K. co-ordinator for similar studies being carried out on an international basis. He or she will be expected to make use of information gathered from every possible source in order to present to management an all-round analysis of short and long term future market trends.

Previous experience in market research (particularly primary surveys, panels, statistics, etc.) or experience as an Economist in a fast-moving retail environment is essential. Some travel in both U.K. and abroad will be necessary and therefore fluency in at least one European language other than English would be useful.

Please write or telephone for application form to the Personnel Department, Stanhope House, Stanhope Place, London, W.2. Telephone: 01-262 7788.

University College, Galway, Ireland

COURSE

ISCOL

THE PLANNING OF PRODUCTION AND DISTRIBUTION SYSTEMS IN THE PROCESS INDUSTRIES

A course will be held from 17-19 October in Windermere. The course is designed to demonstrate the Systems Approach to the planning and control production and distribution systems, and by identifying the problem areas to illustrate the effective use of techniques in their solution. Problems will throughout be tackled from a systems viewpoint, examining production, distribution, and marketing as a total system and avoiding the piecemeal approach often associated with these activities.

APPOINTMENTS

S

Head Office

Social & Regional Policy Officer

The Department advises on the social and regional implications of BSC rationalisation and development; helps to develop, implement, and monitor policies designed to assist employees involved in such situations; and seeks to promote good relationships between the Corporation and local communities.

The Manager is supported in these tasks by two Officers and junior staff. The officers assist in developing the activities outlined above, but the person appointed to the current vacancy (arising from internal promotion), will take particular interest in the following: (i) assessing the social implications of rationalisation and development schemes; (ii) applying quantitative techniques to these problems; (iii) assisting the Manager to advise the Corporation's senior management on such proposals.

It is essential that the holder of this post has a mature appreciation of the problems of regional development and industrial rationalisation. He should also have the ability to analyse socio-economic data; present complex information in an easily understandable form; and liaise effectively with BSC managers and senior government officials of varying levels and functions, with minimal supervision. Industrial experience and/or higher educational qualifications in an appropriate subject, together with familiarity with statistical techniques, are essential. Additionally, the person appointed may well have prior experience of liaison with government departments and a broad interest in official social and industrial policies.

There may be an opportunity for eventual promotion within the Department itself, but career development is equally likely to lead into either the Corporation's planning function or another aspect of the personnel function with which the officer will have regular contact.

Please write giving brief details of your career to date (quoting reference H.O.21) to:-

**Personnel Manager (Head Office),
BRITISH STEEL CORPORATION,
P.O. Box No. 5, 403 Grosvenor Place,
London SW1X 7JG.**

Department of Agriculture and Fisheries for Scotland

Assistant Agricultural Economist

Applications are invited for two posts in Edinburgh concerned with the economic aspects of agricultural policy and development, including studies of agricultural and horticultural support, farm business structure, capital and land use problems, analysis of trends in prices and farm incomes, agricultural statistics, and the economics of the fishing industry.

Candidates, aged at least 20 and under 28, must have a first or second class honours degree (or post-graduate degree) in economics, agriculture, horticulture or a closely related subject.

Starting salary will be within the scale £1371-£2235. Unestablished (ie temporary) appointment with prospects of pensionable employment and of advancement.

Full details and application forms (to be returned by Wednesday 30 August, 1972), from Scottish Office, Establishment Division, Room 172, St. Andrew's House, Edinburgh, EH1 3BX. Please quote reference PM4/2.72.

Staffordshire County Council

Group Leader

COUNTY PLANNING AND DEVELOPMENT DEPARTMENT
Reference No. 38 (S.O.1/2-£2565 to £3324 per annum.)

Applications are invited for the above post in the Research and Industry Section of the Department. The Section is responsible for research on a wide range of economic and social topics as well as monitoring of industrial development. It has a major role in the preparation of the County Population, Employment, Industry and Shopping.

This post will carry special responsibility for Population and Employment studies and forecasts and related needs in terms of Shopping and Social Services. Applicants should have experience in analysing and evaluating statistical data, and in the preparation of reports.

The commencing salary for the successful applicant will be at any point on any of the grades commensurate with age, qualifications and experience.

Applications (no forms) giving details of age, education, qualifications, present and previous appointments, experience, and addresses of two persons to whom reference may be made, should be sent to J. H. Barratt, County Planning and Development Officer, Martin Street, Stafford, by not later than 28th August, 1972.

Relationship to any member or senior officer of the County Council must be disclosed.

University of the West Indies

TRINIDAD

Applications are invited for a) SENIOR LECTURESHIP or b) LECTURESHIP IN INTERNATIONAL RELATIONS IN THE CARIBBEAN AND INSTITUTE OF INTERNATIONAL RELATIONS. Appointees will teach students for the one-year Postgraduate Diploma Course in International Relations and the M.Sc. in International Relations, supervise the research work of candidates for M.Sc., and take part in the research programme conducted at and by the Institute on Caribbean problems. Academic background and interests of applicants should include West Indian History and Politics, Caribbean economic problems, theory and practice of foreign relations, as applicable to the entire Caribbean region. Preference given to those having International qualifications in International History, and/or International Economics and/or International Organisations, as well as having a command of at least two of the regional languages.

Salary scales: (a) £2,700-£4,200 p.a. (b) £1,850-£3,250 p.a. Child allowance, F.S.S.U. Family passages: triennial study leave. Detailed applications (8 copies) including a curriculum vitae and the names and addresses of 3 referees should be sent as soon as possible to the Secretary, University of the West Indies, St. Augustine, Trinidad, from whom further particulars may also be obtained.

New Zealand

Ministry of Transport

Applications are invited for the undermentioned vacancies:

Senior Economists (2): Head Office, Wellington

Salary: Salary and maximum up to \$7,400 according to qualifications and experience.

Duties: One position to supervise and develop long term research programme relating to the economics of New Zealand transport. The other position to supervise research in current studies dealing with shipping economics, aviation studies and general transport economics.

Qualifications desired: University degree in economics preferably with some econometrics. Experience in transport economics an advantage.

Economists or Assistant Economists (3) Head Office, Wellington

The positions are in the Ministry's Economic Division.

Salary: Salary and maximum up to \$6,174 according to qualifications and experience.

Qualifications desired: The minimum qualification required is a university degree with economics to stage III, formal study in mathematics and/or transport economics an advantage.

Passages: Fare for appointee and his wife and family, if married, will be paid.

Incidental expenses: Up to \$55 for a single man and \$183 for a married man can be claimed to cover the cost of taking personal effects to New Zealand.

Application forms and general information are available from the High Commissioner for New Zealand, New Zealand House, Haymarket, London, SW1, with whom applications will close on 2 September 1972.

Please quote reference B13/B/30 when enquiring.

for solid reasons — you might decide to incorporate in Switzerland

The well established economy of Switzerland and its ancient and well defined body of laws does not offer romantic or exotic attractions. Its tax level can, however, be considered moderate by modern standards and is designed to provide a solid structure, giving legitimate financial incentive to growth — personal and corporate, income and capital. Low taxes are only one of the incentives offered by Switzerland's stable economy. Its stable political and economic climate and its conservative business tradition make it a reliable home for the preservation of capital and for the employment of capital in the industrialization of other countries, and in real estate, bond, equity and endeavors of other countries, and the like. Your interests may best be served by incorporating in Switzerland for the custody or exploitation of any type of asset, fortune or form of endeavor, for the purpose of expanding into the Common Market, or for the general conduct of multi-national trade. Many thousands who have discovered this have already established their enterprises in what has become the favorite canton of Zug — only 18 miles from the city of Zurich — where the Corporate Fiduciary AG is in the business of serving you on a personal or corporate basis in the pursuit of objects mentioned above. Mail or coupon for our Report "Switzerland as your corporate base", without any obligations.

FRANCE GARANTIE

OBJECT

FRANCE GARANTIE manages a portfolio composed exclusively of bonds admitted under the rules covering institutional investments. As a result FRANCE GARANTIE shares have themselves been put on the same footing as these bonds by the Insurance Directorate of the Ministry for Economic Affairs and Finance. They are therefore particularly suitable for companies writing insurance or reinsurance business in France and anxious to be relieved of the direct management of a portfolio of French bonds.

Bonds admitted under the regulations can therefore be exchanged without charge for FRANCE GARANTIE shares.

TAX POSITION

Please note that, on the strength of a recent decision, that part of the FRANCE GARANTIE dividend which represents the return on bonds enjoys the same tax position as French bonds.

Position as at 30th June, 1972			
	Position as at 31st Dec., 1971	Position as at 30th June, 1972

Just as a squirrel's storehouse is made necessary by a seasonal cycle, so commercial warehousing used to be no more than a roof over a stockpile necessitated by commercial cycles.

Nowadays, the emphasis has shifted from stockpile to stockturn - from tied capital investment to profit-making rotation.

On the production line, at the retail point, there is movement. It is fed from warehousing. So that the flow of goods can be calculated and maintained, uninterrupted.

Warehousing is the axis. And that's why we take so much trouble over it.

Its location - scientifically planned in terms of the economic relation

between plant site and delivery zone.

The optimal number of sites required by the total distribution configuration.

Operating methods and handling procedures designed to combine maximum utilisation of space (in the interests of economy) with maximum speed of access (for the sake of customer service).

We will build warehousing to an individual client's specific requirements.

Or we will provide temporary, intermediate warehousing - in the form of inflatable air-houses.

We have the space - at 150 branches, depots and other locations

round the country.

We have the vehicles - 10,000 of every variety - to keep throughput moving.

We have the specialist personnel, the experience, the administrative and maintenance support.

Hibernation may be part of Nature's pattern. But in the modern commercial environment, you can't afford to let sleeping stocks lie. Our distribution methods will keep your supply lines wide awake.

Our friend, Amin

General Amin has probably won his war, and disaster though he is on almost every count—for Uganda, for Africa, for the expelled Asians—he is at least the remaining barrier to tribal anarchy in his own country and a reason for other governments with unwelcome minorities to pause for shame before they expel them, page 13. The arrival of the first refugees, page 26.

A danger

Many people in Britain will agree with how Lord Longford and his friends feel about pornography, but will hesitate to act on the flimsy evidence of social harm that they provide, page 18.

High noon

The world's finance ministers, converging on Washington next week, should at least decide to cut the IMF down to size, page 69.

Beside the seaside

The Liberals begin the conference season at Margate, page 24. Although they hope to win at Rochdale, it's more likely that an ex-Liberal will take Uxbridge, page 25.

It goes on

Consumers' spending alone, though now booming, will not sustain 5 per cent growth for long against the drag of 14 per cent wage inflation: but an autumn budget won't solve the problem either, page 66.

Our bread, your gas

The shape of the coming expansion of American-Russian trade—and the rules that are needed to make it happen, page 17.

Return to sender

Bombs by letter are the latest device that technology has added to the terrorists' armoury. The address on the back can be traced to the heart of the Palestinian organisation, page 15. The Israelis' new hit-and-miss retaliation, page 41. And Mr Wilson's rather odd trip to Tunisia, page 22.

Fighting it out

What the first year's free-for-all has meant to the City, a special survey, after page 56.

Wanted: an NECC

SIR—On several occasions in recent years there have been disputes and misunderstandings over the exact details and interpretation of a wage claim and its subsequent settlement. Secondly, the repercussive and longer term effects of price rises and wage increases seem rarely to be considered by those who regulate the former and negotiate the latter. Every pressure group works in isolation from the mainstream of national life, and under the circumstances it is difficult to blame individual groups, the miners or the railwaymen for instance, for striving for all they can get without regard for the consequences elsewhere.

What is needed is, first, for the facts, as they are, to be agreed and seen publicly to be agreed by everyone; and second for every suggested movement of prices and wages to be computed and analysed, and the likely effects to be openly discussed and understood, before any decision is taken.

The method for doing this is not difficult to find. A National Economic Computing Centre should be established, with a directorate and staff wholly independent of the government, of management and of the unions. When an industry wished to put up prices, or a union to make a wage claim, all the available evidence would be given to the NECC where appropriate models would be constructed. All concerned (including representatives of the public interest) would be able to sit down and discuss the different alternatives. Every proposal would be quantified and fed into the computer, and the likely result of each proposal could be forecast and fully discussed. The national repercussions of each price rise and wage claim could thus be witnessed by all—and the economic and social wisdom of each one analysed and recorded.

From some on both sides of industry there will be strong objections to this idea at first. But the introduction of some such system is bound to take place some time during the next decade or two. It should be in the interest of the present Government to take the first steps to set it up.—Yours faithfully, PHILIP NIND
Foundation For Management Education
London, WC2

Ugandan Asians

SIR—Your correspondents force each other into extremes. The language of Mrs Eileen Whale (September 2nd) is so exaggerated and intentionally emotive that she ruins her case. Of course it is easier for those

who do not live with a problem to deny that a problem exists. But I live in Wembley too, and not in a posh area; my next-door-neighbours are Asians; and those that I have met are socially more desirable and (especially the children) a sight cleaner than many of the indigenous population.

Let me reassure you, therefore, that neither is all Wembley as Mrs Whale describes, nor—thankfully—are all who live there like her. I have given my name to the Resettlement Board as a "first-night refuge" for an Asian family, and am looking forward to meeting some more of these pleasant, polite people who have been manipulated so sadly in the international political game.—Yours faithfully, Wembley, Middlesex D. ARTHUR

SIR—Before the people in this country become too sympathetic over the plight of the Asians in Uganda, they should ask themselves why they are being driven out. The answer is that, as a class, they are mostly traders and lived on the labour of the Africans, and General Amin far from being mad, as one national paper dubbed him, is eminently sane and it will not be long before every market square in this country is occupied by them.

It must be remembered that before the African states received their independence these same Asians were anti-British and caused unrest, but we are now told by one paper that they are now more "British than the British"; this of course is rubbish. They have an inborn dislike for the British, which will take generations to eradicate, if ever, and we have sufficient dissidents without importing them.

I have lived among them for many years in India, and liked them there very much, and there they should stay. I could understand their xenophobia, but having got their independence it is strange that, after struggling so long for it, they want to live with us, whom they have so long hated. The magnet is our social services.

It is not a comforting thought that in years to come this fair land of ours may be populated by half castes, and for that reason it is to be hoped the Asians will never integrate, but the names of those responsible for allowing this alien influx should be recorded, so that future generations, who will have to face terrible problems, and probably internecine warfare, will know whom to hold responsible—their names will certainly not be hallowed.—Yours faithfully, Cookham Dean, Berks. A. W. RANDALL

SIR—I don't often read *The Economist* but I did by chance pick up the current issue and was shocked to read your libellous diatribe against Mr Enoch Powell. Mr Powell speaks for Britain on the Ugandan Asians and on many other subjects. In fact he speaks for the British people—and I mean the English, Welsh, Scots and Northern Irish—on these vital

issues that today threaten the very survival of our national independence and national identity—Europe, immigration and the debasement of the currency.

Mr Powell has done immense good in nailing the lies of Her Majesty's ministers over their mythical obligations to receive Ugandan Asians in this country. They have no such obligation. If you don't believe, read the Immigration Acts of 1968 and 1971. India is the country which ought to receive its own and it should be made to receive them. The British Government's obligation is to the British people, whom they promised at the time of the last election that there would be no more large-scale immigration.

We cannot stand much more of Mr Heath's dictatorship, his anti-British policies, his shilly-shallying over Ulster, his mendacity and broken promises and his insolent contempt for public opinion. Mr Dictator Heath must be taught a lesson—the political sovereignty of the people is not to be lightly disregarded. He must be deposed and his place taken by Mr Enoch Powell without more delay.—Yours faithfully, ISLA M. ATHERLEY
Charlbury, Oxford

Vietnam

SIR—I was surprised to read (Letters, September 2nd) that some people still believe that this is a war of liberation fought by the North Vietnamese against the American colonialists to free the people of the south. I thought recent events had finally shown the fallacy of that argument.

In March this year there was an open invasion by regular troops of communist North Vietnam across the demilitarised zone on to the territory of the Republic of Vietnam. If the fashionable assessment of South Vietnamese public opinion is correct, one would have expected a massive popular uprising in support. An uprising of sorts there was; over half a million ordinary people left behind all they possessed to flee from the communist forces. The truth is that the people preferred the security and freedom the government offered, rather than remaining to welcome their so-called "liberators," remembering the atrocities and barbarism that accompanied the communist Tet offensive in 1968.

The Republic of Vietnam is not perhaps a Utopian democracy but to my knowledge the North Vietnamese authorities have not held two presidential and four parliamentary elections since 1967. Neither is the existence of 11 political parties tolerated in North Vietnam; this happened, and is allowed, in South Vietnam.

Since coming to power, the present government has carried out many reforms. The most important of these, the land reform programme, has resulted in nearly a million tenant farmers receiving deeds of land ownership, while positive aid is being given to foster industrial and agricultural production by the development programme. Admittedly at the present

MANAGEMENT APPOINTMENTS

£7000 PA AND OVER

O E C D

Paris

Vacancies at various levels in the
Manpower and Social Affairs Directorate
for

ECONOMISTS — SOCIAL SCIENTISTS

Duties include empirical and theoretical studies of manpower questions (labour market policy) in O.E.C.D. Member countries. Qualifications required: University degree in Economics or other Social Sciences; experience in research, policy-making and/or administration concerning manpower questions; excellent knowledge of either English or French, good knowledge of the other language.

Appointments may be for a fixed term from 3 months to 5 years or of indefinite duration, starting immediately or later.

The minimum net tax-free starting salary will be in the bracket 56,000 French francs to 91,000 French francs per annum (married expatriate), depending on qualifications. In addition: fringe benefits (provident fund, children's allowances), annual increments.

Applications (marked MAS/72), accompanied by detailed curricula vitae in either English or French (the two official languages) and possibly specimens of writings, should be addressed to Personnel Division, O.E.C.D., 2 rue André Pascal, 75775 PARIS CEDEX 16.

The Football Association

• THE ASSOCIATION is the governing body for football responsible for administering all aspects of the game and for representing the United Kingdom in international negotiations. The Football League, together with the County Associations and 33,000 amateur clubs, are affiliated organisations.

• THE SECRETARY is nearing retirement and a successor is to be appointed to follow him as the chief executive officer.

• A MAN of standing is required to direct major new developments. Preferably, he must be broadly experienced in business administration and international negotiations, at or near the apex of commerce, industry or in government. He also needs to have an enthusiasm for the game and to be well informed on football affairs.

• AGE under 55. Terms are for discussion and remuneration, with generous fringe benefits, will be geared to the man and his circumstances.

Write in complete confidence
to Dr. R. F. Tuckett
as adviser to the Association.

JOHN TYZACK & PARTNERS
LIMITED

10 HALLAM STREET • LONDON W1N 6DJ

time President Thieu has greatly increased administrative powers, but then surely one realises that this is usual during times of war. And for the people of South Vietnam this is a war for survival, not an inconsequential military exercise. For this reason alone it is impossible, and verging on the ridiculous, to judge various actions of the government of the Republic of Vietnam by standards relevant only to a country at peace.—Yours faithfully,

VINH NINH

First Secretary,

London, W8 Embassy of Vietnam

Computer trading

SIR—Mr J. D. Hollis (Letters, September 16th) makes the fair point that the three months' "continuation" rule on the Stock Exchange has the effect of giving clients the benefits of the lower rates which apply to large orders. Perhaps I may be allowed to say that it is more than probable that Ariel will also have provisions for continuation; and, given that it is our intention to impose a maximum transaction fee on any bargain, however large, of perhaps £2,000 the competitiveness of the Ariel system should be clear. For example, in the case of the £5m bargain referred to in your article of September 2nd and by Mr Hollis, Ariel's £2,000 fee would represent a cut of over 79 per cent from the newly-reduced Stock Exchange commission of £9,662.50.—Yours faithfully,

J. H. G. LEACH
Managing director,
Ariel

London, EC3

The Munich killings

SIR—I hope you allow me the space in your columns to express my total frustration with the western fuss. You say (September 9th) that "the Munich killings have once again shown the width of the

emotional gap between the west and the Arabs." Why is it that the western press always shows the gap in its moral conscience when reporting the killing of Arabs by Israelis? Over 60 men, women and children were killed by the Israelis following the events in Munich, with hardly a word of protest.

I cannot condone the event in Munich, with its human loss, but I insist that it must be seen in the context of the fate and misery of the Palestinian people. The west, plagued by a bad conscience, always places justice on the side of the Israelis, but conveniently forgets the injustice perpetrated by the Israelis on the Palestinian people. Palestinians are not fighting for eviction of the Israelis from Palestine, but for their own inclusion in a multiracial state, and the Arabs cannot sit back and watch while Israel consolidates its hold on occupied Arab territories with new settlements.—Yours faithfully,

MILAN ABBAD AL RADI

World money

SIR—I am as anxious as Mr Scott Stokes (Letters, September 9th) claims to be to allow individual countries to go their own financial way. But that demands above all a working system—repeat, system—of exchange rate adjustment. It will not be enhanced by a bouillabaisse of reserve assets, even with gold in the centre of the dish.

The resistance to tidying up the world reserve structure is probably now stronger in Washington than anywhere else, because it is there that the existing practices of national bureaucracies would be most affected by the shock of change, and because it is American private banking interests that feel they have the most to lose from a deliberate downgrading of the international use of national currencies.

Private interests, bureaucratic lethargy and intellectual misunderstanding have long been the main blocks to constructive international monetary reform. National interests, in the sense of the interests of all the nationals, have little to do with it.—Yours faithfully,

FRED HIRSCH

Oxford

Dissenting judgments

SIR—The reviewer of "Final Appeal," by Blom-Cooper and Drewry (August 26th), has stated the law inaccurately. Comparing the House of Lords, the subject of the book, with that great Commonwealth appeal tribunal, the Judicial Committee of the Privy Council, he says that only "single judgments" are delivered in the latter. This was indeed so for a very long time for reasons that need not be gone into, but it has been changed by the Judicial Committee (Dissenting Opinions) Order, 1966 (S.I. No. 1100).

Since then dissenting judgments are allowed, and seeing that the judges serv-

ing on both courts are largely the same men an anomaly has been removed. Wherever they sit the law lords can now deliver minority judgments, thus contributing to legal scholarship and doctrine also in the field of Commonwealth law.

The opportunity was seized almost immediately. In the very year in which the order was made Lord Morris of Borth-y-Gest delivered a dissenting judgment in *National & Grindlays Bank v. Vallabhji* [1967] 1 A.C.211, on a point concerning hypothecation as a security for an overdraft in the law of Kenya.

This is not the place to enumerate the Judicial Committee cases where dissenting judgments were delivered; they constitute a comparatively large percentage. I would only say that the 1970 and 1971 reports alone contain six such cases; in one of them two dissenting judgments were actually delivered. The laws concerned were those of Ceylon and New Zealand (revenue law), Malta (compulsory land purchase), Hongkong (conflict of United Kingdom and colonial legislation), and Sierra Leone (nationality).—Yours faithfully,

O. C. GILES

Reading

Economists

SIR—There are, perhaps, two additional reasons why some academic economists "play abstract games of little relevance while others engage in meretricious quantification" (Books, September 2nd).

First, on the supply side, both activities are rendered necessary and useful by the relative failure of both business and governments to provide comprehensive, detailed and up-to-date statistics for all variables that affect and represent economic activities. It is paradoxical that the academic economist, who cannot experiment with people or institutions, is nevertheless accused of being unable to predict the illogical behaviour of groups or the social consequences of legislative or institutional changes that he had no part in formulating.

Secondly, if we accept the hypothesis of self-induced demand, it may be instructive to consider the determinants of research acceptability. Surely, editors and publishers of academic journals and texts are responsible for setting the standards of academic debate on economic issues. They should meticulously ensure that critical comment is encouraged and published. Such comment should not be stultified by disarming prefaces, apologetic conclusions and a reluctance to concede that a previous contribution, in view of a critique or new research, no longer appears to say as much as it had originally purported. It may also be wise for editors to consider deleting the names of authors, and their institutions, from articles submitted for publication, before they send them out for referees' comments.—Yours faithfully,

K. A. TUCKER

Canberra

ONCE YOU'RE IN THE FIVE IT'S EASY TO GET OUT AGAIN

Not that you'll want to get out. Permanently.

Scotland's five New Towns offer too much in terms of labour, financial incentive and economic growth for any thoughts of that.

But it's nice to know you can get out to your markets. In person, and in product.

None of the New Towns are more than a half-hour drive from either Glasgow or Edinburgh (some are even nearer).

So all are within an hour and a half of London's airports. And within day-return distance of the major continental cities.

They also have first-class access to South-leading motorways—and express rail routes.

And all are within easy reach of both Clydeport and Forthport.

It's not for nothing that the region the five New Towns inhabit (the

central industrial axis of Scotland) is tipped as the future Gateway to Europe.

With the best natural deep water port facilities on the North Atlantic seaboard on the Clyde, and on the East coast the Container port of Grangemouth—the region could also be one of the major processing and manufacturing powerhouses of Europe.

This prospect plus the North Sea oil boom makes the region of the five Scottish New Towns the single most promising development area in Europe.

550 new industries have already moved into the five. Many more are on their way. They come for what the future

holds, as much as for the Special Development Area incentives. Contact the General Managers at the The Scottish New Towns listed below, or write to The Scottish New Towns, PO Box No 122, Head Post Office, Edinburgh, EH3 6LU.

Good job there's Ward

**A giant size contribution
to the chemical industry –
made by Widnes Foundry
(a Ward Group Company)**

With companies like Widnes Foundry The Ward Group goes a long way in meeting industry's needs. These giant steel vessels are en route to a chemical works on Merseyside. In addition to the chemical industry, Widnes makes products for the oil, food, gas and allied industries – these include castings in heat and acid-resisting high-duty and alloy irons and fabricated tanks and vessels in mild and stainless steel. The work of Widnes Foundry is just one example of how The Ward Group serves our vital industries. Ward makes for efficiency – in a myriad of ways.

*Fabricated vessels –
another thing Ward does well*

In Europe it pays to talk the same language

In the search for office, industrial and development possibilities in Europe it pays to be familiar with the kind of problems you are likely to have to face. It pays to talk to people who have a professional knowledge of the area.

Knight Frank and Rutley have been operating in Europe for years and have offices in the heart of the market where our clients need us.

Every day, our 747 flies non-stop to Chicago.

Every day connections leave Chicago, for over 150 US destinations.

Not even New York can match Chicago when it comes to internal US flights.

Chicago boasts 1141 of them. Every day.

32 to Minneapolis alone. 27 to St Louis. 24 to Pittsburgh. 19 to Kansas City. 19 to Kalamazoo. And flights to over 150 other places in the USA.

Now you can fly non-stop to Chicago in the comfort of a BOAC 747.

Take off from London at 2pm, any day of the week. Sit back and enjoy a good film, or listen to your favourite music*. Land at Chicago at 4.25pm—

in time for flights to most American cities.

This is just one of many ways we lead across the Atlantic.

No other airline, for instance, flies direct to so many major North American cities. No other European airline offers you a choice of 80 flights a week to North America. And no other airline offers you a choice of flying 707 or VC10 or 747.

In fact no other airline in the world serves America better than BOAC.

Not even the Americans.

We'll take good care of you.

Economist

September 23, 1972

Our friend, Amin

President Amin has had an exciting week; and the excitement may lead him into new excesses. Nasty things are happening in his Uganda. Many people, besides the apparently unsuccessful supporters of the exiled Mr Milton Obote who crossed the frontier from Tanzania, would like to see an end to him. He will probably come to a sticky end sooner rather than later. But the appalling paradox is that, disastrous though General Amin is to Uganda, to the cause of black Africa, to the lives of the Asians he is expelling and to the remaining reputation of Britain as a charitable country, he is probably the best man to have presiding over the mess today. Uganda itself looks increasingly ungovernable: it would probably be reverting to outright tribalism now if it were not for General Amin's armed forces. Since it is doubtful if Mr Obote, after the debacle that has overtaken his cause, can ever expect to be welcomed back to office again, General Amin may be able to avert the worst for his people by retaining his grip on the troops and the consent of the Baganda, however strained that, too, has become lately.

For the British Government General Amin is now, to take the paradox further, a major ally. The more he looks like a black Hitler (and his favourable remarks about the Nazis' treatment of the Jews have been an uncovenanted benefit), the more the British public feels a little sorry for the unwanted Asians who have begun to descend on them (see page 26). It takes a cold heart to avert one's eyes from the plight of other human beings and fellow citizens, white and black, in General Amin's hands; the more Mr Enoch Powell argues the legalities, the more ashamed and sorry British people are going to be about him. In the same way, the more General Amin rants and raves, the more the evidence accumulates of how sick Uganda is, the more other African leaders are going to be ashamed of him, so that any likelihood of their imitating him, in expelling their Asians too, is diminished for the time being. It must always be a temptation for a political leader in a new country to believe that he can

win time by turning popular resentment against an alien minority. It is only because General Amin has done it so crassly that he is likely to give the Heath Government a few more years before any of the other Commonwealth prime ministers with British passport-holders to rob and evict see the chance to get away with it. The last government to want to be rid of General Amin today is the British one.

That this should be so is, of course, a setback to those in Britain itself who like to conjure up the millions of Asians and Chinese whom they foresee arriving on Mr Heath's doorstep. Now that several other countries have agreed to take their share of the Ugandan Asians, so that the number coming to Britain is likely to be less than disruptive, it is to the looming threat of future hordes that the Powellite attack has been switched. There are still a number of countries who affect a high moral and humanitarian tone in their pronouncements about the world who would now be wise to imitate, as modestly as they like, the example of Mr Trudeau. For the moment, however, General Amin seems determined to help his old friends, Mr Heath and Sir Alec, in appealing to what remains of the British conscience. The British public does not exactly suffer sleepless nights at the thought of Uganda and Tanzania quarrelling, but it all helps to show that General Amin is precisely the sort of black man whom Powellites and Smithfield porters, as well as intellectuals and liberals, are naturally leery of. The seeming fiasco of the anti-Amin invasion reinforces this.

Arab oil on African fire

The fiasco is not yet complete. On Wednesday, just as it began to look as though Tanzania and Uganda would stop short of total war and be content with a pitched battle of vituperation, first Libya and then Sudan entered the fray. Libya's Colonel Qaddafi had reportedly promised assistance to General Amin earlier in the week, and on Wednesday night the Sudanese

government said that an airborne force of 400 Libyan troops on their way to Uganda had been ordered to land at Khartoum airport, having entered Sudan's air space without permission; they were refused permission to continue. The troops, it emerged, were the spearhead of a larger force all bound for Uganda. By spiking Libya's guns Sudan's President Numeiry may well have averted, or at least postponed, a planned invasion of Tanzania from Uganda. General Amin gave warning on Wednesday that he would order a pre-emptive strike against rebel bases in Tanzania, and that "we must have no mercy on Tanzania." If this had been put into effect with Libyan aid it would have nullified all Mr Numeiry's attempts to mediate.

The effects, both on black Africa and on the Middle East, will be complicated and profound. General Amin is going to be very angry with Sudan, quite possibly to the detriment of the newly-won peace in southern Sudan. So will Colonel Qaddafi. If it turns out that Colonel Qaddafi acted with the foreknowledge and consent of Egypt's President Sadat the row will spread even wider. It is a tiny shooting war that looks like ending with a big bang of some sort.

They thought he was off balance

The invasion was a small one, and it made a small war. Comprising at most 1,000 men and probably no more than 700 to begin with, it could never have hoped to capture Kampala and take control of the country without assistance from within. Although Tanzania was the springboard from which the operation was launched, and although Tanzania's President Nyerere must have known about and possibly aided the invasion, no Tanzanian troops seem to have been involved and none crossed the border. General Amin has produced no captured Tanzanians. Nor have his charges about Israeli mercenaries been substantiated. These allegations were presumably ritual outbursts against all who have ever fallen foul of him.

But it remains plausible that Mr Obote's followers should have thought this a good moment to catch General Amin off guard, and they may also have calculated that a lot of people would view their operation sympathetically. More important, they probably thought that a part of the Ugandan forces would rally to their cause. The Ugandan army has been torn by strife and bloodshed since General Amin seized power. Many members of the northern Lango and Acholi tribes, who between them accounted for almost half the army, either fled the country at the time of the coup or else were slaughtered for their suspected loyalty to Mr Obote, himself a Lango. The officer corps, in particular, was left with many gaps in it, depletions which were often made good by promotions, some of them from the ranks, of West Nilers with tribal origins similar to General Amin's.

This has fostered neither discipline nor good relations within the army, and the invaders no doubt hoped to exploit the situation. But, although there have been unconfirmed reports of fighting within various Ugandan barracks, the hoped-for defections do not seem to have taken place. The main force of 500 exiles which

succeeded initially in taking the town of Masaka on the road to Kampala seems to have been driven back southwards, and the Ugandans say they have retaken all the other towns that were lost. The casualties are probably proportionate to the fighting. The figures should doubtless be treated with even greater caution than most information coming from Uganda, but it is unlikely that as many as 500 people have lost their lives. The Ugandans implausibly say they have killed 300 invaders at a cost to themselves of only nine soldiers, but that 150 civilians have also died. The Tanzanians say nine people died and 20 were injured in Bukoba, a Tanzanian town bombed on Monday by Ugandan planes.

General Amin now seems to accept that the invaders are mostly Mr Obote's followers, although his abuse is directed at an ever wider range of people. The bombing of Bukoba has led President Nyerere to complain to the Organisation of African Unity and give warnings about the "real and urgent danger" to peace that it constitutes. But so long as there are no further attacks the matter may be allowed to rest, particularly if, as seems possible, the Kenyans are discreetly mediating between the two sides. It is understandable that Mr Nyerere should be concerned at the bombings, but, with a weaker and less well equipped army than Uganda's, and with no air force worth speaking of, he is powerless to retaliate. His position is also compromised by his willingness to let the Ugandan exiles use Tanzanian soil to mount their attack, even if he has denied them arms and men. But probably neither of these is his main concern: ever anxious about the possibility of Portuguese retaliation across his southern border against the guerrillas who use his territory as a base against Mozambique, he keeps most of the Tanzanian army in the southern part of the country. A war with Uganda is about the last thing he wants.

Don't think he isn't popular

So long as that is averted the worst direct consequence of this week's events, as distinct from the new damage done to the OAU, will be felt by the Ugandans themselves. By stimulating his now well-developed paranoia, the fighting will have made General Amin even more unpredictable than before. His statement on Tuesday, linking Ugandan Asians, imperialists, Zionists, British, Tanzanians and Mr Obote in the attack, shows the current pattern of his mind. He seems to have arrested his own chief justice, a member of the Baganda tribe, on Thursday. But General Amin is still in control and still knows what he is doing. The expulsion of the Asians, seen by most of the world as brutal, inhumane and foolish, has enhanced his popularity not just in Uganda but throughout east Africa. If he is now able to present himself as the man who saved Uganda from the invading forces of a hostile world he will no doubt be even more popular with a lot of Africans.

Of course, his popularity is less than complete. The Baganda, the largest tribe in Uganda, have lost much of the enthusiasm they felt for General Amin when he brought home the body of their king for a state funeral in Kampala last year. There are other people in Uganda who can see that the expulsion of the Asians has hurt

the economy, that the civil service is demoralised, that the supply of money coming in aid from abroad is drying up. But General Amin still has the army, and the army has won a war of sorts, and it is on that sort of foundation that the survival of any national unity and any civil peace probably rests in Uganda, and in other African countries in Uganda's condition. For Ugandans, this man

may be the last barrier between a pretence of organised statehood and the chaos of tribal war. For Britain, he has at least deflected for a time the possibility of more expulsions by more countries of more inconveniently competitive people with the wrong colour of skin. There is not much that can be said for General Amin, but there is that much.

Terror through the mails

The bombs posted in Amsterdam leave a trail that stretches back to the core of the Palestinian guerrilla movement

The bomb that on Tuesday ended the life of Mr Ami Shachori, the agricultural counsellor at the Israeli embassy in London, is a model of what technology has done for terrorists. That even one such bomb, innocuously camouflaged as a small envelope, should have slipped through the hands of postal officials in Amsterdam and London and of the embassy's own mail sorters and finally landed on the desk of a senior diplomat shows how vulnerable society is to the new weapons of the men with nothing to lose but other men's lives. Both their callousness and their technical skill have been underrated.

It is easy enough for an experienced man to pack an ounce of plastic explosives and a miniature detonator into an envelope in a way that would baffle any eye but the eye of the X-ray camera (see box); both the GPO and the Israeli security men slipped up by not subjecting Mr Shachori's letter to such a test. More letter-bombs posted by someone in Amsterdam were intercepted by mail sorters or security men in London, Paris, Geneva and Tel Aviv. One of them was addressed to Mr Shimon Peres, the Israeli transport minister and former intelligence chief. There could be others in the post. Maybe some of them are already at the Earls Court sorting station.

It is no longer enough to plead that it is impossible to check every parcel, let alone every letter. Security-minded men in the post offices will now have to regard certain addresses, such as the Israeli embassy, as target areas and to undertake a special screening of all mail going to those addresses. It doesn't take long for a new experiment in terror to become part of the repertoire of many of the world's would-be guerrillas. Remember how the fashion for political kidnappings and skyjackings spread like wildfire once the Palestinian and Brazilian terrorists had blazed the way a couple of years ago. What goes for post offices also applies to airports. Is it still possible to argue that an efficient system of baggage screening by an X-ray device would be too costly, or too time-consuming, for Heathrow?

The world has come a long way since Russian terrorists like the People's Will group in the 1880s set out to murder the tsar and his friends in operations in which they placed their own lives at risk. Some of them were men acutely conscious of the moral dilemmas involved in using violence

for political ends; some even believed that they could not justify assassination unless they sacrificed their own lives in the process of carrying it out. At least the Black September men who killed the Israeli athletes outside Munich took that risk. But an icy young man called Nechayev came along, as remote in his belief in "merciless destruction" and his contempt for calculations of means and ends from the idealists who dreamed of dying for democracy in Russia as are the men who send letter-bombs. Terrorism via the post-box, like putting a bomb in a plane or a baby's carriage in Belfast, is the method of men and women who lack the courage to take on their enemies face to face, or any willingness to make some discrimination between the combatants in their shadowy war and those who are not directly involved. But then one of the features of the international terrorist campaign is that the distinction between soldiers and civilians has fallen by the wayside.

The Arab governments have a job too

Throwing up hands in horror achieves nothing. Last week this paper put forward some suggestions about how western governments should reorganise themselves to deal with terrorism. One issue that has to be looked into further is how to deal with the terrorists' friends. By flying off to Tunisia to talk with President Bourguiba (see page 22) Mr Harold Wilson is no doubt seeking to pull off his own little political coup. But every chance to impress on Arab governments that they too have a responsibility to curb the terrorists is worth trying. Letter-bombs and the killing of athletes have not helped the Palestinians to convince the world of the justice of a cause which calls for the dissolution of Israel. The latest atrocities, and the Israeli reprisals, may even have tempted some people in the Lebanese government to try to break the guerrilla movement in Lebanon as King Hussein broke it in Jordan in 1970.

Palestinian terrorism and Israel's reluctance to withdraw from the land it occupied in 1967 appear to many people as opposite sides of one coin. There will be no durable peace in the Middle East, we are often reminded, until Israel is willing to negotiate away some of what it took in 1967. The trouble is that those Palestinians who want to remove Israel and put a new state in its

place will never be satisfied with the sort of peace settlement almost everybody else would accept. In fact, as Arab governments have shown a willingness to compromise with Israel, the extremist fringe of the commando movement has grown in desperation. It needs to be remembered that the name Black September derives from what the Jordanians, not the Israelis, did to the Palestinians in 1970.

So, whether they like it or not, the Arab states that currently play host to the Palestinian guerrillas will have to accept the need to restrain their guests if they ever propose to achieve a negotiated settlement with Israel. That means they will have to recognise who the terrorists are, and what connections they have with the rest of the Palestinian movement. Black September, most western intelligence chiefs now agree, is a new name for a secret squad of triggermen that the Palestinians have maintained, in one form or another, for some years. It is closely linked with Rasd, the intelligence section of the Palestine Liberation Organisation, which is responsible, among other things, for vetting new recruits to Fatah. It is said that Ali Hassan Salameh, one of the leaders of Rasd, is now in charge of Black September operations. He has been able to move freely around the world in the past under various pseudonyms and is said to have used an Algerian diplomatic passport on several occasions. The mobility of Palestinian extremists in western Europe is partly explained by the ease with which they have been able to acquire genuine passports, including diplomatic ones.

The helpers in Europe

It is very hard to draw any clear-cut dividing line between Black September, Fatah and the PLO. There are deep dissensions within the guerrilla movement, as Yasser Arafat's second-in-command, Khalil Hassan, showed recently when he promised a "settling of accounts" during the Palestinian conference that starts on October 1st. There is a conflict between the marxists and non-marxists, and at another level between old-established leaders such as Mr Arafat, who are attacked for their "moderacy," and an element that believes in terror à l'outrance. Whichever faction a Fatah leader happens to belong to, it is useful to preserve the fiction that Black September is a separate organisation, since that is a way to avoid assuming responsibility for some of its actions.

For west European governments, the question of Black September's relationship with Fatah and Rasd is less decisive than its links with new-left extremists closer to home. The letter-bomb campaign started in Amsterdam may be the work of a Black September cell set up in Holland. It might even be connected with the report that Miss Leila Khaled visited that country just before the Munich killings. The only suggestion that the bombing campaign is the work of Black September is a leaflet signed with the name of that group that was found with an unexploded letter-bomb at the Israeli embassy in London. But the idea that there are now Palestinian terrorist cells dotted across western Europe and in the United States (where there are 12,000 Arab students) no

longer seems far-fetched.

They can count on the active support of the European underground. The explosion at the oil refinery in Trieste, for which Black September claimed responsibility, is in fact now thought to have been the work of home-grown anarchists. The trotskyite Fourth International, with its headquarters in Brussels, is said to have helped with transport and supplies and to have co-ordinated the complex operation that flew Japanese terrorists from the Red Army Fraction around Europe and supplied them with the Czech weapons they used to mow down passengers at Lydda airport in May. This apparent co-operation is going to produce more violence. Early this year it was rumoured that the Black September group was planning one spectacular operation every month this year, including far-fetched schemes like hijacking a supertanker out at sea and sitting on it for weeks if necessary in order to extort a ransom from one of the big oil companies. It could happen. The multinational company, as much as individual governments, is the target for the new breed of terrorists. But then, in a sense, we are all targets. The battle is no longer "over there," whether over there means the Bogside or the Golan Heights. When a foreign embassy is bombed in London, it is the security of people in Britain that is threatened as well as the lives of Israeli diplomats.

How they get it through the post

The letter-bomb that killed Mr Shachori was a more sophisticated device than, say, the parcel bombs planted by the IRA. But anyone used to handling explosives would have no great difficulty in manufacturing it. How do you make a letter-bomb?

(1) To avoid suspicion, it must not be bulky. But since it requires only one or two ounces of explosive to kill a man at a range of two feet, it is possible to pack the explosive and detonator in an ordinary correspondence envelope.

(2) To withstand the normal buffeting received by a letter in transit, both the explosive and the detonator should be stable until the envelope is opened—which may mean packing them between strips of cardboard, as was done with the embassy bombs.

(3) The best materials are either a mouldable plastic explosive which can be rolled flat (obtainable from quarries) or a sheet plastic explosive (more difficult to get) or even compressed gelignite. A normal tube detonator, measuring, say, 1½ in by ½ in, could be used and, with care, could be flattened to reduce its bulk and hide its shape. (Safebreakers have been known to do this with their teeth.)

(4) There is a choice of firing switches. You could use a mechanical device, such as a specially prepared plunger or pull-switch, operating on a firing cap when the envelope is opened; or a friction device operated, like a match, by abrasion; or an electrical device, which requires a small battery and a contact-breaker made of wire.

But a man trained to know what to look for would normally be able to detect such devices by using a simple X-ray apparatus to screen the letters.

Before the trade begins

Yes, the Americans and Russians have a lot to sell each other, but the rules have got to be worked out before they can get very far

Quite soon, possibly before the American election on November 7th, President Nixon will reach a trade agreement with Russia. Then all those who for a year now have been forecasting an imminent \$2 billion trade deal will finally be able to claim that their prophecies came true. Or at least half-true. For the American government will not at any point, either now or next year, be signing a "trade deal." What President Nixon does hope to sign is an overall charter or agreement which, by achieving a number of not very remarkable things, will give the green light to American businessmen to make their own deals with a fair degree of confidence.

This charter has, first, to clear the decks between the two governments. It has to settle the debt which Russia has owed to the United States since common cause was made against Germany and Japan 30 years ago. The Russians consider that the debt they accumulated in the second world war was expunged by the amount of Russian blood lost in that war; so a debt which was numbered in billions of dollars will doubtless be whittled down to repayment by Russia of around \$500m at about 2 per cent interest over a period lasting into early in the next century. With this token in his pocket, Mr Nixon hopes to get Congress to give Russia what most advanced nations already give it—equal tariff treatment against the competing imports of all comers.

Such subjects—the lend-lease debt and most-favoured-nation tariffs—are the politically striking ones. But they are markedly less important than the rest of what the United States wants. American businessmen are at present tumbling over one another to get into Russia, sometimes unwittingly undercutting President Nixon's bargaining position by doing so. The fact is that little they do will be durable if several matters are not sorted out in advance. There needs to be some sort of guarantee of lasting business facilities in Moscow—an apparently insignificant point until one hears of the limitations, when the first flush of enthusiasm has worn off, of working from a Russian hotel, without access to telex, and dependent for introductions on the lady from Intourist. It is with this in mind, and with his usual eye on the main chance, that Mr Hammer of Occidental Petroleum now suggests a western-designed hotel and trade centre in Moscow.

Of more lasting importance, if western businessmen are to enter joint enterprises inside a Soviet Union whose absorption of credit will be limited, and whose political fuse is sure at times to prove short, is that Russia should be brought to accept arbitration procedures outside those offered by Soviet courts. Something also needs to be written down which recognises that Russia does not yet subscribe to any international policing of dumping and market-disruption practices. Who will decide, for instance, whether those fine trucks to be built with American

tools on the Kama river are being sold by Russia at crackpot prices in western markets just in order to earn a little handy foreign exchange?

These are the thickets across any path meant to lead to lasting economic co-operation between a market economy like America's and a place where the only commercial company is the state. Other countries in the west, notably Japan and the west Europeans, have managed it without quite so much fuss. But then Japan and Europe are only second-ranking members of that alliance with which, Mr Brezhnev admits, Russia is still ideologically at war. The United States, by contrast, is its declared leader. Anyway, for all their enterprise, and despite the fact that together they sell nearly 20 times as much to Russia as the Americans do, the trade which Japan and Europe do with Russia is still modest; their exports were under \$2.7 billion last year. Precisely because so much lost ground in Soviet-American trade may now be made up so fast, there is an overriding need for care.

Food in exchange for metals and gas

Some notion of the volume of trade which may now grow up between two such complementary economies as Russia's and America's can be gathered from the scale of just the first of the American grain sales to Russia this year, which is so unexpectedly large that it has disrupted prices in the United States and become an election issue between Mr Nixon and Mr McGovern. It is now a commonplace, even a subject for Art Buchwald to write about, that the world's two great antagonists, the United States and the Soviet Union, find themselves with economies which may increasingly depend on each other. Beyond wheat in a bad harvest year like 1972, Russia will need animal feed-grains for many years yet, come fair weather or foul: an American now eats more than two and a half times as much meat as a Russian. Russia needs technology for its industry, too. But more than that it needs the sheer ability to make things and manage them in long, efficient runs. It is this last need which such projects as the Kama river are about. In the Soviet Union there are four vacuum cleaners and one car for every 100 Russians. In the United States the figures are 29 and 45. Soviet labour productivity is perhaps two-fifths that in America.

And maybe the Americans' dependence on their adversary could one day be as great as Russia's on them. To be prosperous the United States has consumed resources, as its present Secretary of Commerce likes to say, like a drunken sailor. It is increasingly short of metal ores: Russia has them. Russia has natural gas, some of which could come from eastern Siberia to America's west coast by way of Japan, some to the

east coast from western Siberia: the United States, on the other hand, is unpleasantly short of domestic supplies of natural gas. These two projects alone may take \$10 billion of credit just to get them off the ground. How safe will those credits be?

What exercises Mr Nixon's Administration about all this, and exercises it rightly, is that haste may take over from care. There is the unspoken fact that the climate of opinion in America will be more amenable to making concessions over the lend-lease debt, and other things,

if events show that the Russians have helped, or at least not hindered, a satisfactory end of the Vietnam war. And if any agreement is to be signed it must work. If credits are to be given or underwritten by the American government on a scale which has never been attempted before by the Export-Import Bank or any other American government agency then the conditions must be known. For a lot can happen to world politics in the 10 years that it will take to get such schemes out of the harsh Siberian ground and into the air of western trade.

A danger of repression

The report of his private committee's inquiry into pornography shows that Lord Longford is a fine crusader but not such a good investigator

No one asked Lord Longford to set up a committee to investigate pornography. As he says himself in his introduction to his committee's report this week*, he felt that "pornography had increased, was increasing and ought to be diminished" and he "proposed in conjunction with a few friends to set up a committee of investigation." It is fair to acknowledge that he went beyond his friends to find the 50-odd members of the inquiry, but some who might have provided a useful balance declined his invitation and others parted company with him on the way. The result is broadly what one might expect of such an exercise: a report confirming and reinforcing the convictions and prejudices of the author and those of like mind.

There is no doubt of Lord Longford's sincerity when he says he has been leading an inquiry into pornography and not leading a campaign against it. But his report rests heavily upon assertion and is short on evidence. The research by his sub-committees lacks either the method or the depth to commend itself as a serious, independent study. The report of the sub-committee on the effects and control of pornography, chaired by Professor Norman Anderson, has this preliminary paragraph, for instance:

The subcommittee met on a number of occasions. Inevitably, there were comparatively few who could attend regularly, but others came whenever their professional duties permitted. It was manifestly impossible, moreover, for busy men and women themselves to do any original research, so the conclusions reached were necessarily based on written material, interviews and such knowledge or expertise as the members themselves brought to their task.

Mr Frank Gillard, a former director of sound broadcasting for the BBC and a member of the Longford team, publishes a "rejoinder," regretting that the work of the broadcasting sub-committee "has been so very incomplete." He considers that the seven-man panel, headed by Mr Malcolm Muggeridge, could not be called representative, which is a restrained observation. He says of the report presented by Mr Muggeridge:

I think he would agree that the paper he has circulated

is something of a subjective document. It puts forward very forcefully some sincerely-held views which Mr Muggeridge has also expressed elsewhere from time to time, and it presents them with his customary rhetorical distinction. Some of its content arises from subcommittee discussions which took place early in the year at which opinion was not unanimous. The report itself has not been discussed by the subcommittee, although I understand that a majority of members endorsed it.

None of this means that the Longford report, running to some 500 pages, is not worth reading. But its value as an objective inquiry is small and much more evidence would be needed to sustain and justify the sweeping changes in the law and penalties it recommends, which could issue in a new phase of repression.

A nasty business

The Longford committee starts from the assumption that there is cause for concern about pornography—or, more generally, the exploitation of sex—in Britain today. There are many liberals who share that concern up to a point, at least. The libertarian impulse which has swept away old restrictions and taboos has brought excesses. The ending of theatre censorship has freed writers from the ignorant, often ludicrous interference of the Lord Chamberlain but it has also encouraged a licence—such as simulated sexual intercourse on stage—which was never in the minds of such campaigners as Bernard Shaw or Sir Alan Herbert. Young actors and actresses feel themselves obliged to strip on stage to earn a living. Cinemas cater openly for the dirty mackintosh brigade and often, it seems, for nobody else. Sex is presented much more explicitly than before on television and sometimes solely for the sake of sensation. What used to be kept in the backrooms of Soho bookshops is now displayed in the front window. The local newsagent-tobacconist carries his revolving stand of lurid paperbacks and the works of even the most ladylike novelists have to be dressed up—or undressed—to titillate. Those who exploit, in the cinema, on the stage, in strip joints both soft and hard "porn," with "aids" promising enhanced sexual pleasure and equipment for perversion, are making fortunes, and whatever may be said of the appetites or

First through the arithmetic barrier HP-35

Yes, logs, trig, roots, exponents and other complex functions. The amazing HP-35 does so much more than simple arithmetic.

Whether you are an engineer or scientist, an academic, statistician, surveyor, banker, broker or administrator, HP-35 is the pocket problem solver you've always needed. Just see what it can do!

* Much more than simple arithmetic

Arithmetic: +, -, ×, ÷
Logarithmic & Exponential: Log, Ln, e^x, x^y
Trigonometric: sin, cos, tan, are sin, are cos, are tan
Misc: 1/x, √x, π
Operating Range: 200 decades (10⁻⁹⁹—10⁹⁹)
Calculating Speeds: (60—500) milliseconds
Accuracy: Errors confined to tenth (least significant) digit.
Decimal Point: Either scientific or fixed point notation.

* Complete: ready to work

Supplied with soft leather carrying case, safety travel case, battery charger/ac adaptor, 46 page manual with many sample calculations; even personalised label. One-year warranty. World-wide service.

* Packs power of 30,000 transistors

Result of technical breakthroughs in California advanced research laboratories of Hewlett-Packard—world's largest manufacturer of precision electronic instruments—with over 2000 products including computers and programmable calculators.

HEWLETT  PACKARD

Hewlett-Packard Ltd., Department E,
224 Bath Road, Slough, Bucks, SL1 4DS.

* Bright, clear LED (light-emitting diode) display

Ultra-reliable. Shows answers to ten significant digits—plus two-digit exponent, sign and decimal point.

* Works anytime, anywhere

—from ac mains or rechargeable internal batteries.

* Reduces note-taking

Sub-totals and constants automatically recalled from store when wanted. HP-35 has 5 data registers.

* No risk. 10 days trial: £10 saving

Cut out and return this order form with purchase order — or cheque which secures cash discount of £10. If not completely satisfied, return HP-35 within ten days. Money refunded or order cancelled without question. To save on amazing HP-35—act now!

HOW TO ORDER

Simply complete order form and return with cheque or company purchase order made out to Hewlett-Packard Ltd. Your HP-35 will be despatched by recorded delivery.

10 DAYS TRIAL ON RECEIPT OF CHEQUE OR PURCHASE ORDER:

No risk. If not satisfied completely, money returned or order cancelled without question. TO SAVE £10, enclose cheque for cash payment discount.

ORDER FORM To Hewlett-Packard Ltd., Department E,
224 Bath Road, Slough, Bucks, SL1 4DS.

Please send me by recorded delivery the HP-35 complete with accessories for £199 (£189 if cheque enclosed) which includes all taxes, shipping and handling charges. If I am not satisfied completely I may return the unit and accessories within 10 days for a complete refund. Tick one payment option below.

☐ Bill my company for £199. Our purchase order is enclosed.

☐ A cheque for £189 (which allows for my cash payment discount) is enclosed. ☒

*Pornography: the Longford report. Coronet Books. 60p.

Chemical Bank 5th largest international bank in the U.S.A. or how a small laboratory gave up chemistry to do more for your money.

From palladium.

In 1823 we were called the New York Chemical Manufacturing Company: customers came in to buy a few pounds of palladium. The following year we changed our statutes and obtained permission to enter the banking business. Our reputation as financiers and the number of our clients grew so quickly (we were already doing more for our customers' money) that we had to choose between palladium and dollars. In 1844 we became Chemical Bank.

To dollars.

Today, 128 years later, our total assets exceed \$ 13 billion. We have branches and representative offices throughout the world. And we do business with 60% of the non-American companies with annual sales of more than \$ 2 billion.

To international operations.

Of our business done outside the U.S.A. a good part is in Europe. Our international business is larger than the total resources of most U.S. banks. Whatever the action needed or merely foreseen, maybe a routine transaction such as a foreign exchange operation, or the financing of

projects between Frankfurt and Tokyo, Chemical Bank is in key money centres to give you first-class guidance backed by experience. No wonder our clients consider us top specialists for international deals. 128 years ago we may have switched from chemical formulae to banking formulae but we haven't forgotten the value of research. It leads to discoveries of even more sophisticated methods of international financing. We do more for your money. That's no paper formula, it's plain fact.

How to find us.

London Branches:
10 Moorgate - Phone: 606-8040
13 Davies Street - Phone: 493-2921

Main Office: New York. Branch Offices: Brussels, Frankfurt, London, Paris, Tokyo, Zurich and Nassau. Representative Offices: Beirut, Madrid, Bogota, Buenos Aires, Caracas, Rio de Janeiro, São Paulo, Mexico City, Hong Kong, Manila and Sydney. Correspondent Banks in over 185 nations.

CHEMICAL BANK

We do more for your money.

inadequacies of their customers, their business is a nasty one.

All that is at once true and at the same time a caricature. The attitude towards sexual love and towards sexual morality has changed and is still changing. A minority seeks total freedom, the abolition of all legal restriction. Many are glad to see society ridding itself of fears, inhibitions, humbug. Others regret what is happening and are afraid it portends a profound moral and spiritual malaise. But the most flagrant excesses are confined to the west end of London and the seedy centres of the biggest cities. The abbreviation of the very word pornography to "porn," to fit the headlines of tabloid newspapers, may have made it part of common conversation, but that does not mean that half the population spends its evenings poring over dirty books.

But does it do harm?

It is this sense of proportion which is missing from the Longford report. It shows itself in the way the report extends beyond what reasonable people think of as pornography—even if they have never seen any—into an indiscriminate censure of things which may or may not be to one's taste but which are hard to consider as pornography: nude pin-ups in newspapers, the exploitation of sexual suggestion for advertising purposes, the telling of blue jokes on radio and television, and of sheer vulgarity. What the Longford report offers is a critique of the moral and spiritual bases of modern society. What it does not do is offer an evidential assessment of whether pornography does harm and, if so, how and to whom. It admits that hardly any systematic research has been done on the subject in Britain, but its own contribution is negligible.

It advances instead the familiar argument that if man can be inspired and uplifted by words and pictures and by example, so, surely, can he be debased by them. It is a persuasive argument, one which appeals to common sense. All men are formed by their experiences, and among those experiences must be counted what they read, what they see, what they hear. It is right to question the cumulative effect of a daily diet of sex divorced from emotion and from personal relationship, just as it is right to question whether the display of violence as a commonplace of life may so numb the senses as to remove the capacity for shock. It is right to be apprehensive about the effect, above all, upon children. It is right to question, but it is the job of a serious inquiry to make some real attempt to provide the evidence with which to answer the questions.

Yet the Longford committee dismisses almost contemptuously what it admits is the most thorough research ever promoted by a government—that of the President's Commission on Obscenity and Pornography in the United States which reported two years ago. A majority of that commission "found no evidence that exposure to erotic materials adversely affects behaviour patterns." In short, it found no causal relationship between pornography and sexual offences. It could neither prove nor disprove such a relationship. President Nixon could exercise his prerogative in rejecting that commission's report. But that is no

excuse for the Longford committee doing so and choosing instead to devote far more space to the views of a dissenting minority on the commission merely because the view of the dissentients was in tune with the preconceptions of the Longford inquiry. Of course it is difficult to devise ways of measuring a person's reactions to pornography and even more so of checking whether it leads on to actions which are socially harmful. But that is what an inquiry which wants its recommendations to be taken seriously must try to do. The way to repudiate the findings of the American commission is to produce superior evidence.

The American commission recommended that adults should be free to make their own choice about pornography for themselves and for their children, while recommending that children should be protected by the law from exposure to pornography. Where there continues to be doubt about the possible harmful effect of pornography but no substantial proof one way or the other, that is a sensible recommendation and it is not, as the Longford report suggests, in contradiction to the commission's main conclusion.

A sweeping change

It is one which would certainly commend itself here. It commends itself much more readily than the Longford recommendation for a sweeping change in the law of obscenity. Under the present law the test of obscenity is that which "tends to deprave or corrupt." That definition, like others before it, has not been entirely satisfactory. It could be said that under it hard-core pornographers have flourished while, occasionally, writers with some genuine artistic intent have suffered. But it is preferable to the new law proposed by the Longford committee which would define as obscene anything which "outraged contemporary standards of decency or humanity which were accepted by the public at large," a definition the committee would apply to the theatre, cinema, radio and television and to sex education in schools as well as to the printed word. Such a law, with such a vague definition of obscenity, would be open to the most erratic interpretations and therefore to judgments which would leave artists, never mind pornographers, in chronic uncertainty. Taken along with the abandonment—also recommended by the committee—of the defence of an obscene publication as being "in the public good," it could lead on to a populist reaction and repression.

Lord Longford quotes D. H. Lawrence's definition of pornography as "doing dirt on sex." His committee offers a definition of it as something which "exploits and dehumanises sex, so that human beings are treated as things and women in particular as sex objects." That is not only an eloquent expression of the committee's own basis for concern but an articulation of the anxieties which beset many others about the quality of much that is now offered as entertainment. So much of the Longford report is an essay in personal taste and conviction. As such it is a valuable stimulus to a debate in which other voices must be heard and more objective investigations undertaken before any attempt is made to frame new or amending legislation.

BRITAIN

The old night news editor is running out of luck

What is Mr Wilson up to? His extraordinary cloak-and-dagger trip to Tunisia on Tuesday has reinforced the growing doubts among many of his senior colleagues not only about his judgment but also about his temperamental stability. Mr Wilson has had a bad time since returning from his holidays in the Scillies. There was the strange silence about the Ugandan Asians—all apparently, because no newspaper bothered to ask him for his views—and there was the even odder business about his statement on General Amin. Was Mr Wilson simply ignorant about the geography of Africa? His views on the need for vigorous naval measures suggested as much. Or was it just a sloppy piece of work by his staff?

And then there was the business of his stern demand for the immediate withdrawal of the British Olympic team from Munich. His colleagues groaned with disbelief. It sounded as though Mr Benn had prematurely taken over the leadership of the Opposition.

Since the last election Mr Wilson has done himself grievous damage by his gyrations over the common market and by his far-from-glittering performances on the Opposition front bench. But there has been a continuing belief among many Labour MPs, not only that he was the best man to hold a seriously-divided party together, but that, as one of the best night news editors in the business, he was supremely fitted to take swift political advantage of political errors by the Government. They have been seriously disappointed. On almost every major tactical decision he has made since June, 1970, Mr Wilson has boomed.

It was different when he was prime minister. Then he was able to divert attention away from tedious domestic

problems by his extraordinarily well-developed sense as a political publicist. There was the Commonwealth prime ministers' peace initiative to Vietnam, and the visit to Indochina of Lord Davies of Leek, then parliamentary secretary to the Ministry of Pensions, one of the more hilarious pieces of nonsense during the Labour government's period of office. There was the saga of the good ship *Torrey Canyon*, and the Winter Emergency Committee. And of course there was the D-Notice affair.

Simply to run through the list sounds like the roll of the battle honours of a famous regiment of the line. But, to be fair, many members of his own party, and certainly many journalists, at the time enjoyed watching the old maestro at work. Yet being prime minister or alternative prime minister requires more qualities than these. It needs more than the tactical cunning of remaining silent when a crucial issue of principle, such as that of the Ugandan Asians, is presented for the judgment of his fellow-countrymen. It needs more than the absurdity of sitting in a Dublin pub with the Provisional IRA, in the apparent belief that this could, in some way, raise him in their estimation.

It would be a waste of time to analyse the range of motives behind Mr Wilson's trip to Tunisia. No doubt, as a decent and kindly man, which he is, Mr Wilson may have hoped to encourage some of the more moderate Arab heads of state to take a tougher line against terrorism; if so, his recent insults directed at the Egyptians and Sir Alec Douglas-Home seem ill-judged. But it has to be said that the central motive for his trip may have little to do with Arab terrorism; it is more likely that it was prompted almost exclusively to his obsessive

desire to steal a quick headline.

There is evidence that Mr Wilson's conduct is doing him some harm with the voters. In a Gallup poll published in Thursday's *Daily Telegraph* the Labour lead increased to 11 per cent, but Mr Wilson's slide in popularity continued.

The case against Mr Wilson is not that he is a wicked man; he is just frivolous. He is no longer spoken of in the higher echelons of his party with anger or even distaste; now there is generally an element of pity. It is his party's misfortune that it is now led by a man who has forfeited the confidence of so many of his senior colleagues.

Ulster

Helpful, actually

The Social Democratic and Labour party did the Secretary of State for Northern Ireland, Mr Willie Whitelaw, the favour of publishing its constitutional plans on Thursday, although it still seems determined not to turn up at his conference in Darlington, County Durham, next week. Mr Whitelaw has two reasons to be relieved: the SDLP has gone far enough towards a condominium, including a veto for the Irish republic in northern affairs, to make whatever Mr Whitelaw himself eventually comes up with more likely to seem tolerable to many Unionists; and the proposals appear sufficiently unworkable for most politicians in Ireland, north and south, to want to forget about them. The SDLP is thinking of machinery, especially a national Irish senate, which would be useful enough if there were a real will for unity among all parties. But without that will the machinery remains as pointless as all such schemes have been since 1921.

The Rev. Ian Paisley, once the darling of Whitehall, reaffirmed on Wednesday that not only would he not be attending in County Durham, he would not even send his proposals. If any Ulster party leader is now in any danger of looking moderate in British

Hoechst

keeps thinking ahead

Astrolon watch developed and produced by Tissot.

Hoechst research permits manufacture of low-cost precision instruments

Until now, the mass production of precision instruments has been an expensive and complicated procedure. To attain the required precision with the conventional materials, expensive machining was necessary. And later, these parts required costly maintenance.

Hoechst research has developed Hostaform, an acetal copolymer from which even the most complicated micro-parts can be injection-moulded down to an accuracy of one hundredth of a millimetre. Components do not need machining, require no maintenance and can be produced at economic prices. Hostaform is tough, hard-wearing and dimensionally stable – the ideal material wherever optimum precision under permanent stress is essential. Moreover, a large number of individual components can be moulded into a single unit. Hostaform is proving invaluable in the production of

watches, computers, telecommunications equipment, cameras, television, radios and tape-recorders. In close collaboration with leading industrial companies, Hostaform's range of application is steadily being enlarged.

Ahead through systems thinking

Hostaform – the result of Hoechst know-how and experience in many fields: petrochemistry, polymer research, process engineering. One example of the systematic development of plastics for use everywhere.

Systems thinking is the Hoechst strategy. Research, development and product experience in many areas are concentrated on the solution of specific problems. Interdisciplinary thinking, systems analysis and systems technique to bring success.

To keep thinking ahead – to solve the problems of today and tomorrow – Hoechst employs 10,300 people in research and development with a research investment this year of more than £60 million.

Hoechst in Britain

Hoechst UK Ltd is an independent company within the international Hoechst group. Its British staff know their country, its problems, its people; and they realise where Hoechst know-how can inject into Britain's economy the experience gained by the parent company during more than a century in chemistry.

In textiles, for example, where Trevira high tenacity fabrics have, at long last, rendered outdoor events independent of the weather; and where 'Jersey Man', evolved in collaboration with leading UK knitters and based on Trevira Jersey cloths, is introducing an entirely new concept into male fashion. In resins, where Mowilith, 'the raw materials with a thousand uses', is helping to preserve and restore works of art such as the priceless lace and gobelins in Karen Finch's Ealing workshop. Or in pharmaceuticals, where construction has recently begun of a new research centre for nuclear medicine to develop new diagnostic techniques and to speed the evaluation of new preparations.

Whether your problems are in plastics or paint raw materials, dyestuffs or pigments, fibres or pharmaceuticals, agrochemicals or films, graphite products or offset printing plates, Hoechst UK can help you promptly and efficiently.

eyes it is Mr Brian Faulkner; he will naturally be chary of the accolade.

Liberal assembly

No smoke but a little fire

FROM OUR SPECIAL CORRESPONDENT AT MARGATE

The Liberal party's annual assembly opened in Margate on Wednesday with a surprise and a shock. The surprise was the number of delegates who turned up. Inconveniently, there was no count on the opening day (although there were some curious votes) but there were probably some 700 or 800 people in the Winter Gardens; certainly it was a better turnout than for many a year. The shock had come the day before with the discovery that there is a sea-side town in Britain which is actually worse than Blackpool and it is called Margate. Margate is so lacking in anything approaching reasonable living standards that the Liberals were unable even to designate, never mind use, any establishment as a conference headquarters hotel. Mr Jeremy Thorpe's merry quip to his friends in the press was to ask them whether they were staying over as part of their annual holidays. Mr Thorpe, who had retreated to Mr Heath's Broadstairs in search of decent lodgings, is a man who likes to live dangerously.

Whether it was the horrors without or the attractions within, the Liberals almost filled the hall on Wednesday. Mr Thorpe had wisely decided to make the main address to the assembly on the opening day, and only rather nasty people reflected that, as this year's assembly was a week later than usual, he was able to attend both the Barnstaple fair and his party conference. Mr Thorpe knows that his constituency is more important than his party to his survival as a politician. Yet it must also be acknowledged that Mr Thorpe did his big speech rather well.

It went on a bit too long, but he was trying hard to be honest and tell delegates what he would like them to do over the whole range of issues that were coming before them. As these ranged from sewers to nuclear weapons the area was vast. Mr Thorpe touched on most of them, sometimes with a joke, and at other times with real courage. It is always possible to laugh at the Liberals, and this can be done with affection or derision, depending on the point of view. But it was heartening to anyone who is liberal to

hear Mr Thorpe speak so warmly of Britain's obligations to such people as the Ugandan Asians—and to hear his words so warmly applauded. There is no other party conference where the Asian refugees would be welcomed so genuinely.

Mr Thorpe spoke on the same day as the House of Lords gave the third reading to the European Communities Bill—the final parliamentary vote on that issue. He was entitled, if any party leader was, to take pride in that achievement. The Liberals have led the field as Europeans, and Mr Thorpe could deservedly claim some credit for the bill's passage through the Commons. Quite sensibly, he used the occasion to rub home to those middle-aged trendies (why do Liberal members of the Lords insist on wearing sweaters when they sit on the platform while their Commons colleagues are all toggled up in gents' suits?) and young Liberals who think that participation and local action is the real scene, that Parliament is the place that counts. Parliamentary power, he said, is central, and it is that vote the Liberals have to win. Young Mr Peter Hain, sitting with his elders on the platform, was not seen to applaud enthusiastically at that point.

Mr Thorpe had some jokes, too. Of course, they were at the expense of Mr Harold Wilson and Mr Wedgwood Benn, and one becomes very conscious that those two are such easy targets. Is there not a danger that if they are always taken seriously—ie, joked about—they might be elevated to the high status and affection of genuine English eccentrics? Anyway, Mr Wilson first. Mr Thorpe had fun with Mr Wilson's deplorable silence on the Ugandan Asians, as far as it is possible to get many laughs out of such a situation.

Ex-Orpington man: lordly sweater

His joke about Mr Wedgwood Benn leavened a serious section on inflation and industrial relations, during which Mr Thorpe came as near as he dared to promising that the Liberals would support a statutory wages (and prices) policy when Mr Heath introduces it. He called for an end to the "trench warfare" which characterises industrial relations, and he twitted the Labour party in not making up its mind whether it is always on the side of the unions whatever they or their members do. Mr Benn, for example, had said that it would be quite wrong to tell others to break the law, but he had also applauded the dockers who went to jail for flouting what he regarded as an evil law. "Wedgwood is for the rule of law; Benn is for those who break it." Oh dear.

It is always difficult to know just how seriously the Liberals should be taken. Mr Thorpe can claim—and does loudly—that the Liberals were the first party to discuss publicly many of the issues which are now at the forefront of British politics. The list is very considerable: the common market, the problems of the low-paid, devaluation and the floating of the pound, the environment and even the creaming off of inflationary wage awards by fiscal means. That they could do that is very largely because they are a party which does not have to deliver on its promises. But there is another side to that coin. Along with all the sensible things (invariably picked up from other people) that go into the appallingly convoluted resolutions presented at Liberal conferences, there is at least an equal amount of totally absurd nonsense.

The Liberals do not attract really serious politicians. Indeed, those academics and media men who pass through it use it for what it is: a respectable platform for their views rather than a vehicle for action. Yet many Liberal delegates are determined to be oblivious of the effect that their actions and antics will have on the electorate or anyone else, so that in the end even the sympathetic observer must conclude that their pride in their lack of discipline is really a product of shallowness or selfishness.

Two instances on the opening morning give the flavour of that. The poor mayor of Margate, Councillor Harry Anish, had very courteously welcomed the delegates to his town for the first time, and it is obviously not his fault that his town is what it is. But before he could be thanked for coming along

(after all, even an unbusy man can find good reasons for not attending a Liberal conference) a delegate jumped up to move that all smoking should be banned in the hall. That was one individual's discourtesy, but what could not be excused was the prolonged applause he received from the delegates—and from some members of the platform. Mr Stephen Terrell, who proved himself to be very formal in the unenviable position of Liberal party chairman, rightly ignored the demonstration to thank the mayor. But he had to go back to the smoking issue: the motion was carried and no-smoking signs were erected suspiciously quickly. The press, on Mr Emlyn Hooson's suggestion, was exempted from the rule, and the very empty press tables thus became a safe haven for those delegates who wanted to smoke.

The second issue was rather more important. Mr Hooson, again, had moved an emergency resolution condemning assassination, kidnapping and piracy, and urging the Government to get international agreement to deny such terrorists the right to asylum and bring sanctions against countries which give them aid. A perfectly reasonable, civilised and concerned resolution in all the circumstances. Of course, it was opposed by three speakers. What about states and governments that commit violence, said two of them. And would we have denied asylum to anyone who tried to bump off Hitler in 1938, asked a third. Mr Russell Johnston, in as masterly a display of how to control one's temper as will be seen in this conference season, pointed out that the resolution dealt specifically with terrorists who took or jeopardised innocent people's lives in pursuit of their political ends. But it did not satisfy the Young Liberals and their friends, and the chairman had to allow those who were "positively abstaining" to stand up and be looked at, if not exactly counted.

The conference had thinned out a bit by Thursday, but not by very much, for there is nothing Liberals like doing more than acting as fairy godmothers and they always provide themselves with ample opportunity to do just that. To relieve "the burden of late entry into the EEC," for example, they want a statutory minimum earning level of £20 a week for every working adult, pensions related to average national earnings and more equal pay for women. On urban transport they would make the public transport in these areas free. On the other hand, the conference also called on all Liberal

councillors to campaign for their local authorities to provide a positive welcome to the Ugandan Asian refugees. And in Britain in 1972 that takes real political courage.

By-elections

The Sykes show

Miss Manuela Sykes looks like being a lucky lady. After fighting five parliamentary elections as a Liberal she joined the Labour party; and now she is favourite to be the next MP for Uxbridge.

Uxbridge is just the sort of seat in which a government is desperately anxious to avoid a by-election. It has switched its allegiance four times since the war—though it has to be said that its boundaries have been changed—and now with the death of its agreeable Tory MP, Mr Charles Curran, last Saturday the Conservatives seem destined to lose their second parliamentary seat since the last general election. It would take a swing of only 3.8 per cent to send Miss Sykes to Westminster, well under half that achieved by Labour at Macclesfield a year ago, where the Tory scraped home, and just about a third of that at Bromsgrove, which Labour won.

The Tories face a number of problems at Uxbridge. First there is their choice of candidate. Mr Curran has been their man there in every election since 1951; three times he won, three times he lost. Whoever they choose now is likely to forfeit some of Mr Curran's personal vote, and with a majority of only 3,646 they cannot afford to let anyone slip away. Secondly, they face a formidable campaigner in Miss Sykes. Although many Liberals regarded her as a disruptive influence and were happy to see her join Labour, as a performer on the doorsteps and at the factory gates she can be relied upon to give her opponent a hard time.

Thirdly the timing of the by-election is difficult for the Tories. They are unlikely to get a candidate selected until mid-November, so a pre-Christmas by-election is out of the question, even if it were desirable on other grounds, which it isn't. But it is just as difficult to believe that a by-election before mid-February, when the new electoral register comes out, is very likely either. An election on a 17-month-old register would look suspiciously like sharp practice, and it might not even work: the Tories tried it at North Lewisham in 1957 and still lost

Manuela: a winner at last?

the seat. So it looks like either March or April—either just before or just after the budget and the Greater London Council elections. A Labour victory in the GLC elections would not help in holding Uxbridge; and, whatever may be the merits of Mr Barber's budgets, it is hard to find much evidence of any relationship between tax giveaways and Tory electoral successes. The battalions of Tory councillors who lost their seats in 1971 and 1972 after the two most reflationary budgets since the war know that. So it looks like the second week of March for Uxbridge, before the budget and the GLC elections, but on the new register.

Labour has a rather different timing problem at Rochdale, where a by-election is also due because of the death of another decent MP, Mr Jack McCann. Labour's chief fear, as in 1958 when Mr McCann won his seat from the Tories, is what the Liberals will be up to. In 1958 the Liberal was Mr Ludovic Kennedy; now it is the 23-stone Alderman Cyril Smith, an ex-Labour man who has drifted well to the right of the Liberal party, nearly as far, indeed, as Mr Wallace Lawler in Birmingham. But that will not cause Mr Smith much trouble; after all, Mr Lawler did win the Ladywood by-election in the last Parliament. The Tories, who run third in Rochdale nowadays, have chosen a vigorous, and youthful, local man, and Labour has selected an attractive moderate candidate from nearby Farnworth, Mr Lawrence Cunliffe, a mining engineer and local councillor; so it is possible that Mr Smith, who seems skilled at making enemies in his own party, may not have at all a freewheeling run.

The Labour machine in Rochdale proposes to take no chances. Now that

The last trump of Gabriel

FROM OUR PARIS CORRESPONDENT

Suddenly we have another *affaire* in France, and the noisiest, most rumbustious and most bizarre of all those that have brightened the opposition's days and darkened those of the French government for the past 14 months. But is it a *scandale* and, if so, what? Or, as the opposition now puts it happily, how many?

It all begins with Gabriel Aranda: 34, ex-banker, ex-business journalist, and, most important, ex-member of the private staff, concerned with press relations, of M. Albin Chalandon, the minister, until he was thrown out in the July reshuffle, of housing and public works—a ministry that also covers the money-stuffed field of planning permission. M. Aranda dropped his curious bombshell on September 13th, in, predictably, *Le Canard Enchaîné*. He declared that he and two friends, so far unidentified, if indeed they exist, possessed a mass of documents compromising members of the ruling party. (The *Canard* published two, and M. Aranda threatened that the floodgates would be opened unless the government got back the Mirages it had sold Libya.

For the next three days, while an examining magistrate opened what the French know as a case "against X" for theft of the documents, M. Aranda was busy inching the floodgates apart to various newspapers and the mud began to fly, to, fro and sideways. By Monday, which brought the most sensational revelations, and also M. Aranda's appearance at last before the magistrate, who duly charged him in X's place, the affair had become a major political fight.

M. Aranda has declared that he holds 136 documents, photocopied at the time M. Chalandon quit his ministry, compromising 48 people. He has named M. René Tomasini, publishing

a photostat of a letter in which the former general secretary of the ruling Union des Démocrates pour la République (UDR) had urged that a motorway contract should go to a certain company, and has claimed that the files of the ministry were stuffed with similar letters from the same source. Also named, without supporting evidence, is M. Michel Habib-Deloncle, a deputy general secretary of the party and political director of its paper, *La Nation*. He has replied that as a member of parliament he had naturally done his best for his constituents and would turn the whole of his correspondence with the ministry over to the magistrate.

M. Aranda has accused a little known UDR deputy, M. Gérard Siebeud, of faking a document to make it appear that he had been instrumental in getting planning permission for one of his constituents to build a supermarket. This M. Siebeud totally denied, and still does. But Monday brought sensational support for the charge. Not merely was it true, said the head of the supermarket chain concerned, but a subordinate had given M. Siebeud a "loan" of £2,250 for his intervention. This was repaid only after the supermarketier had taken the whole affair up with government departments. M. Aranda adds the succulent allegation that his minister, M. Chalandon, wanted to take action against the erring deputy, but another minister, M. Jacques Chirac, a protégé of President Pompidou's, had insisted that the affair should be hushed up.

So much for the scandals, although the curious are now waiting with bated breath for further instalments of the famous 136 documents. This Wednesday's *Canard* produced further letters from M. Tomasini, evidence of

Simple citizen arrives at court

pressure from M. Habib-Deloncle and from M. Chirac, among lesser fry, mostly urging that contracts should go to certain companies, usually without being put out to tender. But the curious may be disappointed. The photostats, or copies of them, are now with the examining magistrate, and M. Aranda gives the impression of trusting the mills of justice to produce the whole truth, which, at best, will mean in their own good time.

But the affair rages on. What lies behind it? The pro-Israeli motive has rapidly been despatched: M. Aranda now maintains that he is essentially a simple citizen sick of political corruption and that the Mirage bit was merely an attempt to kill two birds with one stone. Government supporters, from the prime minister down, have savaged him for betraying the trust given even a temporary civil servant and declare, although no one has yet found a jot of evidence, that the whole thing is a carefully organised plot before next spring's parliamentary election. Somewhere in the middle, M. Chalandon, who appears as the white

SERVICE RATHER THAN RISK JUSTIFIES COMPANY PROFITS

Barcelona was the site of the General Shareholders' Meeting of Banco Atlántico, coinciding with the 10th Anniversary of service by its new management team.

The trajectory of Catalonia's foremost banking institution was analyzed in the course of the meeting by the President, D. Casimiro Molins, the Vice-president, D. José Ferrer and Board Member, D. Guillermo Bañares.

The adoption of a functional outlook and structure in accordance with modern times has characterized the last ten years' activities, placing the Bank in a magnificent position for the future.

- In 1961 Banco Atlántico was number 67 among the local banks. It is now 10th nationally.
- Client deposits have increased from 487 million pesetas in 1961 to 21,088 million in 1971.
- During the same period, investment in the private sector has climbed from 250 million to 19,382 million pesetas.
- Capital and reserves have risen from 18.5 million pesetas of capital in 1961 to 1,734 million in 1971.
- The human team has grown from 100 to 1,611 persons.

BANCO ATLANTICO WANTS TO CONTRIBUTE TO SPAIN'S PROGRESS AS ONE OF THE BEST INSTRUMENTS OF THE PRIVATE FINANCIAL SECTOR

- The market share in commercial banking rose from 0.15% to 1.54% (the leading national bank's percentage was 14.46%) and the percentage of investment in the private sector went from 0.10% to 1.73% (the top Spanish bank had 15.74% in 1971).
- Banco Atlántico created Bankuni6n in order to contribute to the country's industrialization. At 31 December 1971 this Bank's contribution to the private sector reached 18,605 million pesetas. Either through it or directly, Banco Atlántico is involved in the foremost Spanish undertakings (Autopistas del Mediterráneo, Refinería de Tarragona, etc.).
- Cooperation agreements have been signed with the Continental Illinois National Bank of Chicago and with the Bayerische Hypotheken-und Wechsel-Bank of Munich.

THE BANK'S RAPID GROWTH IS THE FRUIT OF THE SOLIDARITY AMONG MANAGEMENT, SHAREHOLDERS AND CLIENTS

- Up to 15% of Banco Atlántico's profits are designated to personnel advancement.
- Conscious of the fact that *service rather than risk justifies company profits* and of the private company's position with respect to the community, Banco Atlántico has created the Fundación General Mediterránea to support socially oriented projects.
- Banco Atlántico believes that private enterprise is the protagonist of development and firmly supports it with greater strength in periods of tight credit. Each of the Bank's clients is No. 1 client.

WHATEVER THE BUSINESS OUTLOOK, BANCO ATLANTICO HAS ALWAYS HAD A SATISFACTORY ANSWER FOR ANY SERIOUS FINANCIAL PROPOSAL

- Banco Atlántico seeks success through the success of its clients. It will never compete with its clientele.
- By acting as a motive force in the economy and offering new financial formulas, it aids economic progress.
- It aspires to an institutional presence in the world market by tightening its ties with the Continental Bank and the Hypobank and their correspondent banks.
- Broadening of the geographic infrastructure is another objective. Banco Atlántico can double the number of offices in two years.

1971 FINANCIAL REPORT

Deposits:	An increase of 29.99% to 21,087.7 million pesetas.
Financing to the private sector:	An increase of 49.86% (19,382 million total).
International business:	Foreign currency deposits: A 79.5% increase; deposits in and from foreign banks: 120.7%; volume of net income from foreign operations: 43%.
Profits:	276 million pesetas (an increase of 29.5%).

BANCO ATLANTICO, A UNIQUE APPROACH

about 30,000 out since December, 1970, but the west German Red Cross claims that 250,000 more would like to emigrate. The Poles have lately been letting fewer and fewer of these ethnic Germans leave. Nor is the general opening up of movement and ideas that Herr Brandt wants with Poland likely to be rapid.

Maybe the Poles are merely following the Russian hint that they ought to hold back in their dealings with Herr Brandt until he has made more concessions to east Germany and Czechoslovakia. But perhaps Mr Gierk and his colleagues do not really want to get all that close to west Germany, except in matters of trade. Willy Brandt must be thinking, with Andrew Marvell's impatient lover wooing his coy mistress, "Had we but world enough, and time. . . ."

East-west

Still tuning up

Mr Kissinger's visit to Moscow has eased, but not ended, the difficulties that surround the related projects of a European security conference and talks about mutual and balanced force reductions (MBFR) by the two alliances in Europe. At his press conference on September 16th, President Nixon's adviser could say only that the Nato allies were considering a new Soviet proposal about the relationship between the two projects. Some Nato officials in Brussels are confidently indicating that a deal is already in the bag and that preliminary talks about a pan-European conference can start in Helsinki on November 22nd (the date proposed by the Finns, with enthusiastic Russian support) on the understanding that the Russians will operate in starting MBFR talks in January. But on September 14th, just after Mr Kissinger's meetings with Mr Brezhnev, Pravda published a characteristically intransigent article by Mr Yuri Zhukov rejecting the idea that the two projects should be linked.

The Finns have built a fine new hall in Helsinki, for orchestral or conference use, in which President Kekkonen hopes soon to be able to set a new concert of Europe in swing with a tap of his baton. But the familiar discords of the past four years linger in many people's ears. The Russians' notion of a security conference still seems to be one in which their grip on eastern Europe will be confirmed while the west Europeans are obliged to accept greater insecurity. The general western

view is that Europe would feel more secure if its peoples were more free to move and make contacts across the east-west divide, and if there were fewer tank divisions clanking around on each side of that divide.

But Mr Brezhnev is not keen on either of these ideas; and the western allies themselves are far from agreed about the approach to MBFR. The chances of something worth while getting under way in November have now been further diminished by the forthcoming west German elections. It has become hard to imagine a fully instructed representative from Bonn appearing in Helsinki only three days after the polling.

Croats

Anything for independence

The Swedish prime minister decided not to have his police shoot it out with the three Croat hijackers of a DC-9 airliner with 89 passengers on board at Malmö last weekend. Whether Mr Olof Palme was right to let the hijackers take off for Spain with £40,000 in cash and six of their comrades, whose release from Swedish prisons they had traded against the release of the hostages, will not be known for sure until General Franco decides what to do about the Swedish request for their extradition.

If the Spanish government either hands the nine back to Sweden, or slaps long prison sentences on them, Mr Palme's gamble will be justified. He presumably reckoned that the DC-9 was too small a plane to fly anywhere outside Europe, and that no country within its flying range would release either the hijackers or the men they freed from prison. And the Spaniards do have reason to be tough. They want to deter Spain's own dissidents, especially the militant

Basque nationalists, from similar acts of terrorism. And they do not want to risk their improving relations with the communist world for the sake of a group of Croats whose desire to break away from Yugoslavia has very little support outside Croatia.

It is unlikely that this will stop the Croats striking again, and next time they will presumably have caught the point and make sure of getting a bigger plane which can fly them to a country they might hope to argue their way out of. But this particular hijacking will have done nothing for their cause if General Franco does what Mr Palme expects of him.

In Yugoslavia itself it will strengthen the hardliners' argument for a really tough policy to keep Yugoslavia both intact and communist. That was what happened after the murder last year of the Yugoslav ambassador in Sweden—four of the six men the hijackers released were in prison in connection with that—and the destruction of a Yugoslav airliner with 27 people on board over Czechoslovakia in January, which the official Czechoslovak report attributes to a bomb in the luggage compartment. Certainly the hijacking will have an adverse effect on the position of the Croat intellectuals and students now on trial in Zagreb.

Who are the Croat extremists? The Yugoslav government says they are members of the extreme right-wing Ustasha (the word just means "rebel") movement. The Ustasha was set up in Croatia in 1929 to fight King Alexander's dictatorship, but ended by setting up a particularly brutal regime of its own during the second world war. In 1945 the bulk of the retreating Ustasha units were captured by the allies and handed over to Tito's men, who shot most of them. The majority of those who managed to escape found their way via Italy and Spain to Latin America, especially Perón's Argentina. After the death in 1959 of Ante Pavelic, Croatia's notorious wartime

The hijackers flew off, but probably to the wrong place

dictator, these old Ustasha groups of ageing men became hopelessly split.

Now the most active extremist groups—in Sweden, west Germany and Australia—consist of younger men in their twenties and thirties who emigrated from Yugoslavia after 1945. Many of them come from areas of Croatia and Bosnia-Herzegovina where Croats and Serbs are mixed together and where there has been considerable tension between them. These younger militants apparently despise the surviving leaders of the old Ustasha movement for their lack of revolutionary zeal, and have set up their own groups such as the Croatian Revolutionary Brotherhood in Australia and west Germany. They are just as nationalist as the original Ustashas, but not as anti-communist; some of their literature says they would be willing to co-operate with the Soviet Union to achieve the aim of an independent Croatia.

Of the 20,000 Croats living in Sweden, only about 100 are estimated to belong to hardcore extremist groups. There may be up to 200 in Australia out of the 150,000 Croats now living there. In all, there are 2m Croats in the west, and the men of violence among them probably total between 2,000 and 3,000. They appear to finance themselves from subscriptions and their own earnings. Unlike the prewar Ustasha movement, which was supported by Hungary and Italy, these new Croat extremists are not supported by any government, or by a worldwide movement.

The Croat ultranationalist movement is unlikely to become a serious international danger unless it is taken up by a major power. The question is whether it has any Russian support. Russia has reputedly been intriguing at a fairly low level with some groups, such as the Croatian National Committee in west Berlin led by the late Branko Jelic, who, before his death in May, was apparently promised independence for Croatia in return for its pro-Soviet neutrality.

The possibility that Russia may indeed be manipulating these extremists seems to worry Yugoslavia's leaders. General Herljevic, the military commander in Bosnia-Herzegovina, said a few days ago that there was a danger of the extreme nationalist and "cominformist" enemies of Yugoslavia joining forces. On Tuesday the Belgrade paper Politika chastised the Soviet news agency Tass for its "neutral" reporting of the hijacking in Sweden. But Russia stays mum.

Croats in Australia

From soccer to bombs

FROM OUR CANBERRA CORRESPONDENT

The bomb explosion at a Yugoslav travel agency in a busy Sydney street on September 16th, and a series of threatening bomb hoaxes since then, are the climax of a long campaign by Croats in Australia against the local representatives of the Yugoslav government. Yugoslavia's consular offices in Sydney and its embassy in Canberra have been the targets for protest meetings and minor riots. Its representatives have maintained that the Ustasha movement is active among Croats in Australia, and claim that the terrorists recently killed in Yugoslavia itself included some trained in Australia.

There has been a substantial and increasing migration from Yugoslavia to Australia under a system of assisted passages arranged by the Australian government, the first such scheme negotiated with a communist government. After arriving in Australia the migrants tend to divide into their ethnic groups and the Croats have been especially solid behind their clubs and soccer teams, and with their own priests provided by the Roman Catholic church. There have been frequent clashes between Croats and Serbs.

A number of government members of parliament and influential members of the Democratic Labor party have actively supported the idea of Croatian nationalism because of the Croats' stalwart anti-communism. This has been badly received by the Yugoslav

government, which considers that it encourages Croats to plot against the legal government of their country of origin. It has also had the effect of polarising the issue in terms of Australian politics. The Yugoslav migrants hostile to Croatian nationalism have turned to the Labor party for support and have furnished Labor politicians—especially Dr Jim Cairns of Melbourne—with material suggesting not only that the Ustasha is active in Australia but that it has run training camps for terrorists here.

Dr Cairns has been arguing for years that the government permits Croatian terrorists to use Australia as a base for subversion in Yugoslavia. The government replies that there is no evidence of a Croatian terrorist organisation in Australia, although it admits that individual Yugoslavs may wish to use violence. Some Croats allege that bomb threats and damage are provocations by the Yugoslav government's agents.

The latest events have made Dr Cairns's allegations look more believable than they seemed before, but the government has been reluctant to move. Presumably it feared that the Labor party would use the occasion for political purposes; nor can it be absolutely sure that if the whole situation were searchingly investigated some of its own associates might not be implicated. But on Tuesday Yugoslavia threatened to break off diplomatic relations, and Mr McMahon, the prime minister, is now proposing a commission on the subject of violence. Perhaps this will do something to meet the charge that the government is tougher on extremists of the left than those of the right.

The hand of terrorism reaches all the way to Sydney: this bomb wounded 15 people

Who lights the environment of the Department of the Environment?

Atlas do, and what's more, largely with perfectly standard Atlas Pop Packs.

The Department of the Environment is the new multi-ministry dedicated to giving us all better surroundings in which to work and live. What they do with their own office environment has some significance for all of us.

So that their choice of Atlas fluorescent tubes and fittings (close on a million of them for their own and other government departmental use) is something which makes Atlas glow with pride.

Off-the-peg for Brummell.

Astonishingly, moreover, most of the Atlas fittings chosen by the Department are perfectly standard Pop Packs: the kind you can buy over the counter or write into any specification tomorrow morning.

It's rather as if Beau Brummell were electing to wear off-the-peg breeches or Brillat-Savarin had started eating out of cans.

But then, Atlas's new run-of-the-mill stark white finished Pop Pack fittings are the run of a very superior mill indeed.

Pop Packs are some of the many thousand different ways Atlas can lighten and brighten your environment. Write, telephone or drop by personally for specific information:

up there

Hello world.

Here you are in the U.K. And here we are, Australia's biggest company. 56,000 of us — miles away from you. There are plenty of good reasons for us to come closer together, for your benefit, and ours.

Minerals

Last year we produced 27 million tons of iron ore, coal, manganese, limestone and dolomite. This makes BHP one of the world's great mining companies.

Iron and Steel

This year, in our four iron and steel works, we produced just under 6.5 million tons of steel. Next year, new plant will boost our capacity to about 9 million tons. This ranks BHP 13th among free world producers.

Oil and Gas

BHP in partnership with Esso has found oil and natural gas under Bass Strait. 1,600 million barrels of oil and 9.5 trillion cubic feet of gas. And these reserves are growing all the time.

Shipbuilding

Since 1941, BHP has built 53 vessels. This year, we've already launched an 83,000 dwt. bulk carrier. And there are more on the way. All built with BHP steel.

Investment

Over the past 10 years, BHP has ploughed back over £Stg. 604 million in new plant and equipment. Over that same period, the company has paid out £Stg. 109 million to its 183,000 shareholders. Enough reason to look in our direction. To Australia's BHP.

Australia's
BHP

When you're up to your ears in work, the last thing you need is another business trip.

What a week! Barely a chance to breathe between one meeting and another. The work piled on your desk is enough for three men.

And just when you're starting to come out from under you have to interrupt everything to fly half way around the world.

Obviously Air France can't change all that. But we do understand that a business trip can be the most hectic part of your hectic life.

So we do everything we can to make the time spent with us as relaxed and enjoyable as possible.

That means the attention

you deserve. Service and entertainment when you want it. Or the choice to work or rest undisturbed.

Maybe it can be summed up best by the *savoir-vivre* that knows the value of a smile.

AIR FRANCE

Air France understands

Israeli tanks passed here

Lebanon

The south pays

FROM OUR LEVANT CORRESPONDENT

Among the many gruesome photographs of the Israeli incursion into southern Lebanon last weekend, two have drawn special attention. The first is of a large metal pancake about 18 inches high which is what was left of a taxi and its seven occupants after it was flattened by an Israeli Centurion tank. The second is of a baby in hospital with extensive burns.

These pictures suggest to the Lebanese that although the given reason for Israel's attack was the killing near the frontier of three Israeli soldiers by Palestinian guerrillas, the target was less guerrilla bases than Lebanon's "disinherited south," as it is often called. The Israelis hit at powerhouses and a new water filtering plant serving 70 villages and are claimed to have hit a hospital and two schools with bombs; 23 civilians were killed and 36 are in hospital with burns.

The Israelis launched a force of more than 5,000 men and 200 armoured vehicles, and claim to have dynamited 160 houses used by guerrillas. The guerrillas melted away but the Lebanese army stood and fought well in the heaviest engagement it has ever had with the Israelis. It had been expected that the Israeli attack would be a precisely calculated dosage of destruction, large enough to drive a wedge between the Lebanese and the Palestinian guerrillas, who had brought on the attack, but not so large as to arouse Lebanese wrath directly against Israel. In the event the Israeli army may have succeeded in creating new enmity against it in Lebanon.

Lebanon's biggest battle to date, in which the army fought creditably, has

produced a new sense of national pride. With some exaggeration it is being called "Lebanon's war." A former president, Mr Camille Chamoun, summed it up: "Since 1948 we have been in a state of truce with Israel. Today we are in a state of war."

That is the emotional aspect. However, according to the 1969 Cairo agreement between the Lebanese and the guerrillas, the latter were not even supposed to be in the area attacked. So now new instructions have been issued for the strict enforcement of the agreement, which will confine the guerrillas to the hills and refugee camps and will exclude them from all Lebanese villages near the frontier. The guerrillas at first expressed great alarm but a *modus vivendi* has been worked out and accepted. The guerrillas are going to have to pay a fairly heavy price for their indiscipline if they are to maintain any sort of armed presence.

The guerrillas in southern Lebanon do not seriously threaten Israel. But any Israeli action that further reduces their importance will bring nearer the removal of the present incompetent Palestinian leadership. It may also have the effect of encouraging frustrated guerrillas to become terrorists of the Black September sort. Israel's new enemy, the urban guerrillas, may now be partly responsible for the beginning of the end of the old commandos.

Zayyat in London

Noises off

Violence dominated the very brief visit to London on Monday and Tuesday of Egypt's very new foreign minister, Mr Mohammed Hassan Zayyat. In his set speech on Monday, Mr Zayyat joined Sir Alec Douglas-

Home in condemning terrorism wherever it might break out. But with the reverberations from Israel's latest retaliatory raid on Lebanon last weekend ringing loud, Mr Zayyat then went on to speak of "terrorism by states" and quoted Sir Winston Churchill's dictum, made in the context of pre-Israel Zionist terrorism, that a whole community should not be punished for the acts of a small minority. On Tuesday Mr Zayyat responded to the murder that morning of Israel's agricultural counsellor in London by deploring briefly and simply both forms of terrorism; he sympathised, he said, with the sorrow of the murdered man's family as he did with the sorrow of the families of Israel's victims in Lebanon.

Mr Zayyat was appointed foreign minister only days before he set off for Rome, London and Brussels on his way to the United Nations. He brought bronchitis with him to London but neither a shopping list for arms (which is not his job) nor any precise idea about what he hoped to accomplish. Certainly the talks with him, friendly as they were, showed that Egypt knows as little as Britain does about what can possibly be meant by the talk of "a European initiative" in solving the Arab-Israeli conflict.

In his speech on Monday Sir Alec Douglas-Home said that recent events should bring home to everyone that the present situation in the Middle East should not be allowed to remain as it is. He suggested that one way of starting to change it would be a declaration from Israel stating that, given adequate security arrangements in Sinai, it had no desire to annex Egyptian territory. It is certainly an idea, although not a new one. But there is no reason to suppose that it meets Israel's definition of a safe border.

Canada and Uganda

How wide a welcome?

The British Government has gone to more than 50 other governments for help in coping with the expulsion of the Ugandan Asians. It is understood that there have been some positive responses that are not being publicly announced; several governments are willing enough to admit small numbers of the refugees, but wish to avoid the domestic frictions that a formal announcement might set off. This probably applies to some of the Latin

American countries that have been approached through the Intergovernmental Committee for European Migration. West Germany has offered to admit 1,000, Sweden 300, New Zealand 200. Malawi has sent 500 application forms to Uganda; Australia is sending officials there to process applications. Other known offers have come from Austria, Fiji, Iran and Mauritius, and Norway has indicated that it will soon make one.

But the major responses have been those of India and Canada. On Monday it was announced that India will admit refugees who hold British passports, on the understanding that they will retain their ultimate right to go to Britain; in practice, this may provide some 15,000 of them with a permanent refuge in India. Canadian immigration officials arrived in Uganda on September 4th and at once met an eager response among the Asians.

Our Canada correspondent writes: With a federal election due on October 30th and unemployment still at about 6 per cent, Mr Trudeau has shown courage in opening Canada's doors to the Ugandan Asians. Before he made the offer only some 3,000 of them had said they hoped to come to Canada, but within a week of a Canadian immigration team's arrival in Uganda more than 20,000 had picked up application forms and 6,000 had actually applied. The first are expected in Montreal this weekend. An immigration department spokesman said last week that Canada would not impose any sort of quota. But on Tuesday the external affairs minister, Mr Sharp, said that the number coming to Canada would not be unlimited.

There is an existing provision that restricts the flow of immigrants from all sources into Canada. Applicants who have no close relative already here to sponsor them have to score at least half marks in a test of qualifications which is weighted in favour of people with good schooling and skills. This system, introduced in 1967, lacks the racial features of earlier Canadian immigration policies. Nearly a third of last year's 129,000 immigrants came from developing countries, including 5,700 from India. Indeed, some Caribbean leaders have begun to complain that Canada is creaming off the top layer of professional people who might otherwise be serving the West Indies.

From Ottawa's point of view, the present system provides Canada with a kind of technical assistance programme that any developing country would envy and also minimises racial

friction. Immigrants from India have won respect for their competence. Last year a third of the Indians joining the work force were classified as professionals, which was about the same ratio as among immigrants from Britain and the United States. Last year India also provided Canada with 494 farm workers, but when it comes to general labourers the large numbers are drawn from Italy and Greece.

Immigration officials in Ottawa have said that they will need all the help they can get in finding jobs and accommodation for Uganda's Asians. Several municipalities have announced the numbers they think they can absorb without aggravating unemployment. No doubt the 70,000 Canadians of Indian origin will organise a welcome in many cities, but it will be a test of non-racialism among other Canadians, who willingly enough accepted the arrival of 37,000 Hungarians in 1956 and 11,000 Czechs and Slovaks in 1968.

Cambodia

Fighting for rice

FROM OUR INDOCHINA CORRESPONDENT

When there are rice riots in Cambodia, something really has to be wrong. Either there has been a bad harvest, or war in the countryside has cut off supplies, or the rice has been sold illegally by corrupt officials, or people have no money to buy it with. When all four things occur at the same time, Cambodia is in sorry shape indeed—not to mention that the government is broke, the cabinet is falling apart and the army is being thrashed on the battlefield.

Two and a half years after Prince Sihanouk was ousted as dictator, the hapless Cambodians have little to

cheer about. They do not share President Lon Nol's obsession with elections and referendums, which have preoccupied the government and the army for the past several months to the exclusion of practically all else. In last Sunday's election for 24 seats in the new senate, the voters stayed away in droves, although the official polling figures do not admit it. So did the opposition political parties, including some of Lon Nol's former close supporters, who declared the whole exercise a gerrymandered farce and refused to field candidates for the two houses of parliament.

What made the rice-looting in Phnom Penh's central market a fortnight ago particularly alarming was that the rioters were soldiers. This was not just another case of armed piracy by men in uniform, but an act of desperation by Lon Nol's own soldiers, underfed, underpaid and expected to fight for an administration in which they are losing confidence. A bad harvest last season and a worse one to come because of drought, combined with communist attacks on the road from the ricefields of Battambang, have sent prices soaring. Emergency supplies have been airlifted from Saigon by the Americans and more shipments are on the way, but it remains to be seen whether any will get through the official distribution system to the public.

Morale in the refugee-packed capital declines further with each successive report of defeat on the battlefield. President Lon Nol's insistence on reopening the road to Saigon, which cuts through a communist sanctuary area, has led to the loss of some of his best units. There is still no sign of a pacification plan to consolidate control over areas still run by the government, which include most of the

SAFETY

"Volvo has always been the most safety-conscious of the European car manufacturers..."

This was said by one of the leading financial newspapers when Volvo this spring unveiled the VESC, the Volvo Experimental Safety Car. And the paper continued: "The VESC is the first realistic attempt by a European manufacturer to produce a design that incorporates all the latest thinking in safety."

The VESC is a rolling laboratory for safety where every feature will be analysed and evaluated for future regular production of cars.

Volvo invests in the future - to make you feel secure when you invest in Volvo.

During the second half of '71 and the first half of '72 Volvo has invested 635 million Swedish kronor to ensure a

continued solid development. Among the investments:

- The Volvo Technical Center, with the aid of which the VESC and other products of the future are being developed and tested thoroughly.
- An extension of the Gothenburg factory.
- Increased car production capacity in Belgium.
- A new truck frame factory in Sweden.
- A new truck factory in Australia.

Volvo Group sales

The Volvo Group manufactures cars, trucks, buses, agricultural machinery, construction machinery, loaders, marine and industrial engines, aircraft engines, etc.

During the first half of 1972, the Volvo Group sales increased by 17 %

compared with the same period last year. Today it is estimated that the total turnover for 1972 will be about 7,000 million Swedish kronor.

Approximately 75 % of the car production and 80 % of the truck and bus production is sold outside Sweden.

Results

The profit (before allocations and taxes) for the first half of 1972 was 344 million Swedish kronor - an increase of 40 % in comparison with the first half of 1971.

The Volvo Experimental Safety Car is fitted with air bags or automatic passive safety belts, with "diving" engine, safety steering wheel, anti-lock brakes, telescopic shock-absorbing bumpers etc.

major populated regions and about 60 per cent of the people, but are being continually eroded. The communists could easily take Phnom Penh itself, with North Vietnamese help, if they wanted to.

The Cambodian pot will go on stewing for quite a while longer, it seems, at least until there is some change in Vietnam. One aim of Cambodia's first minister, Mr Son Ngoc Thanh, on his recent visit to Saigon, was to make sure Cambodia is not forgotten in any peace settlement. According to President Thieu no such deal is in the air. The communists are simply indulging in trickery to exploit the American election campaign, he told reporters after visiting troops in the city of Quang Tri, recaptured from the North Vietnamese last weekend. Mr Thieu announced new plans to push the communists "back up into the mountains," and discounted any major attack on Saigon. The recapture of Quang Tri, after four months in North Vietnamese hands, is a major success for the south. But increased communist activity elsewhere in the northern region, and in the Mekong delta, is a cause for continuing worry in Saigon.

South Africa

Mulder's the man

FROM OUR SOUTH AFRICA CORRESPONDENT

Almost unnoticed, South Africa's ruling Nationalist party has selected Mr John Vorster's probable successor as prime minister. He is the minister of the interior and information, Mr Connie Mulder, a hefty, energetic former schoolteacher, aged 47. Despite his right-wing record, he could conceivably be the man to turn South Africa on to a more pragmatic political course.

As rumours have persisted that Mr Vorster's health was poor (he suffers from low blood pressure), a bitter fight over the succession was expected. With the number two position—chairmanship of the party in the Transvaal—held by the ageing minister of transport, Mr Ben Schoeman, the situation seemed wide open. There were thought to be at least five main contenders: the minister of defence, Mr P. W. Botha, the minister of Bantu administration and the party's chief ideologist, Mr M. C. Botha, the minister of labour, Mr Marais Viljoen, Mr Mulder, and Mr Andries Treurnicht, a rising star on the far right of the party who

South Africa's next prime minister?

recently captured the chairmanship of the powerful Broederbond, the secret society that is believed to wield vast influence behind the scenes over all aspects of Afrikaner nationalism.

But the scrap did not materialise. Mr Schoeman, with the connivance of the prime minister, avoided it by announcing unexpectedly at last week's congress of the Transvaal branch of the party that he intended to retire soon and was therefore relinquishing the chairmanship. With no time for lobbying, the choice of a new provincial chairman was put to the vote and Mr Mulder won overwhelmingly against Mr M. C. Botha and Mr Viljoen. Mr Treurnicht was not even nominated; the whole thing had clearly been a manoeuvre to catch him off balance and settle the leadership issue before he became too powerful.

There have been signs, before and since the congress, that many rank-and-file Nationalists are resentful of the power wielded by Mr Treurnicht and his elitist fraternity. The scale of Mr Mulder's victory, together with the fact that the Nationalist party is dominated by its Transvaal branch, means that there can be little doubt he will be the next prime minister.

His record places him on the right wing of the party. When a group of diehards under Mr Albert Hertzog split from the party three years ago, Mr Mulder showed some signs of sympathy for them. Yet his success last week was welcomed by most of South Africa's opposition newspapers who, having had long contact with him as minister of information, believe that he is in fact a more flexible man than Mr Vorster or any previous Nationalist prime minister. They have speculated that he could be the man to allow the economic forces at work in South Africa to break down the rigid racial barriers of apartheid.

Korea

Come and see us

FROM A CORRESPONDENT IN SEOUL

Now that North and South Korea have each put on a public relations show for the other, they are ready to get down to business. In Seoul last week, during the second round of the Red Cross talks between the two Koreas aimed at locating and possibly reuniting some 100 members of divided families, the two sides agreed to meet again in Pyongyang in October in an attempt to find a way of tracing the missing people.

The real achievement of the first two sessions, declared Mr Lee Hu Rak, who in May was the first South Korean official to visit the north, is that they took place at all. Until last year, the Korean peninsula stood out as a frozen model of the cold war. Now the Koreans have agreed to coexist.

By showing each other their respective splendours, each side clearly hopes to undermine the morale of the other. The North Koreans seem less interested in impressing the far-off United Nations with their peaceful intentions—and thus perhaps winning support for ending the UN presence in the south—than in gaining access to South Korean society through the nationally televised conferences and later, presumably, through sports events and cultural exchanges. But South Koreans have an eye on the UN too; they are delighted that the General Assembly's steering committee recommended on Wednesday, over Russian and Chinese objections, that Korea be left off this year's agenda.

The South Koreans, for their part, believe in the superiority of liberal democracy, even if they are only beginners at it. This has led a number of them into the romantic view that South Korea's system can win, and already is winning, converts up north. Some South Koreans, including members of the Red Cross delegation, are horrified at the lengths to which the government went to please its North Korean visitors. In one speech Mr Lee put the whole responsibility for the Korean war of 1950-53 on the shoulders of "foreign forces" whose troops partitioned the country in 1945. This is a new line for South Korea, which has always blamed the northern regime for starting the war. It is just this kind of nationalist reinterpretation of history—the "us against them" approach—that could begin to help the two Koreas to live together.

VOLVO

Bangladesh

Students with guns

An announcement that Bangladesh was to hold its first general election had been expected; the surprise is that it is going to hold it so soon. The statement on Sunday said that a new constitution should be ready by October and new electoral rolls by January, making an election possible early in the new year.

Sheikh Mujibur Rahman was quick to set the machinery in motion after his return from a prolonged convalescence in Britain and Switzerland. But the discontent during his absence has grown with his return. At a rally in Dacca on Sunday a student leader, Mr Abdur Rab, accused Sheikh Mujib of failing to keep his pre-independence pledge that no one would starve in Bangladesh and then went on to threaten him: "You have used in your speeches the metaphor of weapons. But have you ever used a weapon? We know how to use real weapons."

Hostile students are a danger to Mujib; it was students who provided the backbone of the 1971 resistance against Pakistan. Mr Rab's words voice the contempt that those who wielded a gun last year feel towards those who did not, or, like Sheikh Mujib who was in a Pakistani jail, could not. The guerrillas were supposed to have handed in all their arms months ago. But there are still enough arms hidden around the country to back up the threat.

Mr Rab leads a growing number of students who advocate "scientific socialism." At the end of May the Awami League student organisation

Mujib comes home to trouble

split into "Mujibists" and "scientific socialists" because the would-be marxists wanted Sheikh Mujib to dissolve the national assembly and rule by decree—which he refused to do. Support for Mr Rab's movement has been increased by economic troubles and by reports of official corruption. The "scientific socialists" are also thought to have several prominent, but secret, sympathisers within Sheikh Mujib's cabinet, including the ministers for finance, industry and foreign affairs.

Norway

Yes or Norse?

For the second time in a period of only nine months, Europe is being kept guessing by one of its least volatile communities, the Norwegians. In January it was touch and go up to the last moment whether the government in Oslo would join the three other applicants for common market membership in signing the treaty of accession. Now, with the referendum campaign in Norway in its last hectic stage (an opinion poll published on Wednesday indicated a shift towards a yes vote), there is no telling how the voting on September 24th and 25th will go. And the electorate's decision may well settle the question of EEC membership for Denmark as well as for Norway.

The west German chancellor, Herr Brandt, addressed a pro-market meeting in Oslo on September 14th. The French Socialist leader, M. Mitterrand, had spent the three previous days in Denmark. And on Tuesday the European commission itself was drawn into the Scandinavian controversy: it formally denied allegations made by anti-marketeers in Norway that its member responsible for regional policy, M. Borschette, was working out a plan for the limiting of pay increases throughout the community.

Strangest of all the external factors, however, was the announcement that Mr Heath had accepted an invitation to visit Norway in November from its Social Democratic prime minister, Mr Bratteli, who had earlier given warning that he would resign if the anti-marketeers won the day in the imminent referendum. If they do win, it seems unlikely that Norway will have any government in November able to welcome visiting statesmen, for the anti-marketeers hold only about 40 of the Storting's 150 seats and there can be no general election until September, 1973.

Chile

The wrong ladies

President Allende of Chile has followed an ancient example: when your government is in trouble, find a scapegoat. A week ago, on the basis of information courteously supplied by the extremist Movement of the Revolutionary Left (Mir), Sr Allende announced the details of a "September plot" to overthrow the government: right-wing extremists were supposedly planning a transport stoppage, street demonstrations and a military uprising on national independence day, September 19th.

In fact, over the past few months most of the incitement to violence has come from the other side—from the Mir and from similar men among Sr Allende's own Socialists. Members of Sr Carlos Altamirano's wing of the Socialist party were implicated in several plots in July and August, including a plan to attack the president's private residence. When the police entered the "Lo Hermida" encampment last month to track down some of the ringleaders of the National Liberation Army, which was behind that conspiracy, they were fired on and a gunbattle began in which one man was killed and 11 wounded.

Then, at the end of August, several thousand building workers were paraded through the streets of the affluent Barrio Alto to prove the assertion of the Socialist prefect of Santiago that "40,000 proletarians" were ready to defend the government in the event of civil war. They made their point by smashing the windscreen of a car that contained two ladies whom one of the labourers described as "looking like real old reactionaries." They turned out to be the wife of a leader of the Independent Action party, one of the groups within the ruling coalition, and the cousin of Sr Allende's new minister of mines.

That may lead the president to ask himself whether he has, like the sorcerer's apprentice, unleashed a force beyond his control. The violence engendered by the conflict between farmers and left-wing extremists in the south of Chile has now spread to the capital, where ordinary householders have organised themselves in vigilante groups such as Protoco—which sends out patrol cars at night—to resist the incursions of the Mir. Violence and the food shortages will be two of the main issues in the congressional elections next March.

THE BANKER

The Banker—London's international journal for bankers, economic advisers, multinational company managers and everyone interested in economic, banking and monetary affairs. Now in a new attractive format, it provides each month:

1. Review and comment on what has happened in London and overseas
2. Contributed articles by experts on a wide range of topics
3. A survey of a special subject or financial centre
4. Special attention to the Common Market, the United States and Japan

In the JULY issue—the Eurobond market today; the floating pound; medium-term financing; Rhodesia; control of the smaller company account; legal decisions; special survey—Amsterdam.

In the AUGUST issue—Paul Bareau on the death of the sterling area; UK monetary policy now; bankers and secrecy; the end of the Schiller era in Germany; investment in Malta; special survey—the Pacific Basin.

In the SEPTEMBER issue—World Money Reform by Prof. Richard Gardner; European money, Prof. Michael Parkin; Revolving Eurocurrency credits; French banking control; survey—Australia.

Subscription rates, including postage—£7.00 U.K. and any part of the world by seamount, airmail—U.S.A. & Canada \$46.20; Europe £12.00; Far East £21.60; other rates on application.

Growth Prospects

**EASTERN
PRODUCE
(Holdings) Ltd.**

16 Finsbury Circus, London, EC2

Points from Mr. K. P. Legg's 1971 statement to shareholders.

● Results

Group profits have shown a significant increase; the profit after tax was £515,379 compared to £310,091—the highest profit earned in the company's history. The Dividend is increased from 15% to 18% and not less than 20% has been forecast for the current year. A one for one sub-division followed by a 1 for 2 scrip issue is proposed. The growth came partly from the group's original companies and partly from acquisitions made during the year.

● Acquisitions

The British New Guinea Development Co. Ltd. was acquired on 1st April, 1971 and has contributed significantly, both in profit and cash terms. Cholo Holdings became a subsidiary on 29th October, 1971 and our trading activities have been extended by the purchase of Sandbach Export Ltd. Since the year end Robert Hudson Limited has been acquired.

● Tea Production

The group has increased its holdings in certain associated companies, particularly in Malawi where profits have shown satisfactory increases. This has counteracted the rather disappointing results from Kenya where the crop was seriously hit by drought conditions. A full recovery is anticipated in 1972.

● Investment Activity

E. P. Fund Managers Ltd. which manages the E. P. Growth Fund had a successful year. The Fund showed capital appreciation of 56.1%. Property development and investment dealing show a substantial improvement over 1970 and investment revenue and income from associated companies shows a healthy increase.

● Future

With the addition of Robert Hudson, the group now has a wide spread of activities in both the United Kingdom and overseas. The opportunities for expansion both at home and overseas have rarely been better and I look forward to reporting a further set of record figures in a year's time. Copies of the Annual Report and Accounts are available from the Company Secretary.

Take the Northern Approach to banking in London

A total systems approach applied with personal attention by technically experienced bankers—that is The Northern Approach to the worldwide financial problems of business.

We offer a full range of financial services, including Eurocurrency financing, foreign exchange transactions, and a wide variety of financial management assistance through our London branch at 38, Lombard Street.

Add the resources and resourcefulness of our London branch to those of our Chicago

headquarters, The Northern Trust International Banking Corporation in New York, our global network of business and correspondent bank affiliations, and our participation in London Multinational Bank—and you have all the facilities necessary for applying The Northern Trust's total systems approach to your financial problems.

Learn more about the facilities available at 38, Lombard Street. Contact David W. Fox, Vice President and Manager.

Blocking the bus

Washington, DC

Not by chance, the privilege of deciding whether Congress should try to reverse the trend of judicial decisions against racial segregation in the schools has landed in the lap of the Senate. The autumn reopening of the schools has not brought the big flare-up of resistance to school busing (a shorthand for schemes to correct racial imbalance by moving school children from one district to another) that many, including some of President Nixon's advisers, had expected. Las Vegas, Nevada, where the local administration kept the schools closed rather than obey a court order to integrate them racially, was an exception.

That busing for reasons of racial equality is widely unpopular is not, however, in doubt. Its opponents, led by President Nixon on the one hand and for a time by Governor George Wallace on the other, have been doing their best to secure whatever advantage busing can give them in the elections, while the liberals, those who face re-election at least, can do little more than dodge the issue. Since the entire House of Representatives does face re-election, the liberals in the House have lain low and let the matter go to the Senate, hoping for resistance there, since only a third of the senatorial terms expire in any one election year. On one point a solid majority is to be found in either chamber since in both the majority is Democratic: whatever is done, President Nixon must not get the credit for it. So the Republican Administration's own bills, sent to Congress with some fanfare in the spring, remain comfortably tucked away in the appropriate committees.

One measure to restrict school busing was passed by both chambers and is now law. This was the Broomfield amendment to the Higher Education Act, passed by the House of

Representatives last year and accepted by the Senate in the spring. (Congressman Broomfield is a Republican from Michigan, a northern state where feeling about school busing has been running particularly high and the electoral contests are keen.) The Broomfield amendment has not had any striking effect. It sought to delay the enforcement of court orders requiring busing "designed to achieve racial balance" until the appeals process had been exhausted. But the judges do not believe that they have been ordering racial balance at all; they believe that they have been merely demolishing established systems of unlawful discrimination, which is not (or sometimes is not) the same thing.

On that ground a liberal Justice of the Supreme Court, like Mr William Douglas, and a conservative Justice, like Mr Powell or Mr Rehnquist, have been able to agree. Justice Douglas refused to stay the court order in Las Vegas. Justice Powell and Justice Rehnquist, both appointed by President Nixon, similarly refused to stay the orders of lower federal courts that schools should be desegregated in Augusta, Georgia, Nashville, Tennessee, and Oklahoma City. Mr Powell found that the Augusta plan was intended to put an end to unlawful segregation, not to "achieve racial balance." Thus the constitutional question which lurks in all this agitation about the schools, whether Congress and the President are within their rights in seeking to tie the hands of the courts at all, has been neatly avoided so far. The Broomfield amendment has had the effect of delaying an unpopular school busing scheme in Detroit (Michigan again), where a ruling by the United States Circuit Court of Appeals is expected early in November, but that is about the extent

of its impact.

Nothing has happened yet to suggest that President Nixon's declared policy of appointing more conservative Justices is going to make the Supreme Court tear down the whole legal fabric of equal treatment of the races and classes built up over 20 years and more. Since the judges believe that they are interpreting the Constitution, the idea of amending the Constitution naturally flourishes at a time when social habits and the law are in conflict. Between 40 and 50 such amendments have been proposed to the present Congress.

The Senate has a number of these filed away in the office of a subcommittee of the Judiciary Committee (itself somewhat reactionary) and unexpectedly vigorous action will be needed to bring any of them to the light of day. The Rules Committee of the House of Representatives did take such vigorous action last month, removing from the competence of the House Judiciary Committee a proposal for a constitutional amendment which would state that "no public school student shall, because of his race, creed, or colour, be assigned to or required to attend a particular school." While this amendment does not

mention the lowly bus, it is obviously the bus that is being got at. However, a constitutional amendment requires an affirmative vote of two-thirds of each chamber and thereafter the concurrence of three-quarters of the states within (in this case) a period of seven years. President Nixon was manifestly right in rejecting this course as being likely to take too long.

The serious weapon is a bill passed by the House of Representatives last month with the pious title Equal Educational Opportunities Act of 1972 but colloquially known, even by its proponents, as "the antibusing bill." The proponents fought a sharp, successful action to get this bill on the Senate calendar and thus prevent any procedural effort to lose it in committee. The liberal Democratic Senators and the moderate Republicans would gladly have allowed it to be lost but they failed.

The idea of restricting the use of busing for the sake of racial equality and calling the restriction "equal educational opportunity" came from President Nixon and even his proposed bill ran the risk of provoking a constitutional clash between Congress and the courts. A bipartisan majority in the House of Representatives went further than he did and produced something that is constitutionally even more questionable. The House bill does its best to establish the neighbourhood school as a compulsory universal principle and to prevent local school authorities, the federal government or courts of law making children travel any avoidable distance to school with only narrow exceptions. A good many existing desegregation plans would have to be unravelled if the bill were established as law.

The Senate liberals, led in this instance by Senators Hart, Javits and Mondale, will do their best to stop it. In the past they have usually been able to muster a small but sufficient majority on this kind of question, but this time they evidently feel doubtful of their strength; they are trying to avoid a vote, while the anti-busing Senators seek to force one. As this Congress draws to its end and the pressure mounts on the Senate to dispose of the mass of unfinished business, it looks like being, for once, the supporters of equal civil rights who resort to delay and even to filibuster while the segregationists press for cloture and decision.

When the State of North Carolina passed a similar law the Supreme Court declared the state law to be unconstitutional and therefore invalid.

Whether the Court would do the same to a federal law is a matter of speculation. The judges, and the politicians when their electoral situation permits them to be sensible, habitually do their best to avoid such a head-on clash between theoretically equal and independent branches of the government.

When a deadlock threatens, the social theorists are encouraged to come to the rescue with pleas for a new look at the underlying realities. Thus a normally liberal educationist, Mr Christopher Jencks, is, with a Harvard colleague, about to bring out a book ("Inequality: a Reassessment of the Effect of Family and Schooling in America") questioning the whole attempt which flourished in the 1960s to use the schools as an instrument for levelling up the races and classes. A society which cannot make its adults live in racially mixed neighbourhoods,

argue the authors, will not achieve social equality by forcing its children into mixed schools.

The propositions under question are that the education of black children can be improved by putting them in school with white children and that the black community can be rescued from poverty by giving its children better schooling. A Yale lawyer who is also a relative liberal, Professor Alexander Bickel, maintains in two articles in the New Republic that school busing cannot do what is expected of it, if only because the urban concentration of the black population—a third of the whole lives in 15 cities—has gone too far already. Mr Bickel's solution is for Congress and the White House to take their eyes off the legal conflicts and address themselves to the reform of primary and secondary education.

Moscow on the ballot

Mr Henry Kissinger's latest trip to Moscow served a useful political purpose in itself, reminding American voters once again of President Nixon's success in building up harmonious relations with the Soviet Union. But the trip also promises to pay several nicely timed political bonuses even closer to election day on November 7th. True, the visit does not seem to have brought any nearer the peace in Vietnam which would assure Mr Nixon's re-election beyond any doubt. It had been suggested that Russia was to be rewarded for putting pressure on Hanoi to reach a settlement by commercial concessions from the United States. But in fact Russia is now getting these without fulfilling its side of the bargain (if there was one)—publicly, at least.

Three Soviet negotiating teams were

arriving in Washington this week to complete a general agreement which was so far advanced when Mr Kissinger left Moscow that there is now hope of signing it before November 7th. The first team has to arrange for American vessels to carry what the American maritime trade unions consider a fair share of the cargoes being sent to Russia—mostly wheat, at present—as trade builds up between the two countries. The second team is to organise that build-up; credits will be essential for the Russians and in return the Americans will want some assurance that the Soviet state trading corporations will not dump their products in the United States. Both the shipping and the trade arrangements will mean more jobs for American workers and more profits for American businessmen

—and more thanks for President Nixon.

But first of all must come a settlement of the Russian lend-lease debt to the United States; this legacy of the second world war is put at \$11 billion but Mr Kissinger is reported to be ready to accept \$500m. The third team has to decide the terms on which this will be paid. Then the way will be open for Congress to be asked to allow Russian goods to come into the United States on most-favoured-nation terms. But Congress will probably demand its own quid pro quo for this: abolition of the exit fees which the Soviet Union is imposing on Jewish emigrants. This could mean a bitter argument but it will not come until after the election; the trade agreement is not likely to be debated in Congress until next year.

Mr Kissinger also expects that the second round of the talks on the limitation of strategic arms (Salt) will begin before the end of the year—another election plus for Mr Nixon with peace lovers. These talks will undoubtedly be complex, tough and prolonged and they may be affected—although no one is sure quite how—by Senator Jackson's amendment which was attached last week by the Senate to its approval of the interim agreement which is to apply while the second round of talks goes on. The approval had been delayed for weeks by argument over this amendment which says that any future treaty on offensive nuclear weapons should not limit America's intercontinental strategic forces to any level inferior to that of the Soviet Union; in Mr Jackson's view the interim agreement does just that.

Senator Fulbright, who led the opposition, maintains that the amendment casts doubt on the sincerity of the United States when negotiating. The White House, which approved the Jackson amendment, is said to feel that its hand will be strengthened by it in the coming negotiations—and certainly in the coming elections, since some of Mr Nixon's right-wing supporters feel that he has given too much to the Russians. Mr Jackson's instruction is not legally binding on the President and in any case it may not appear in the final resolution which still has to be reconciled with the version passed by the House of Representatives. That, says Senator Jackson, would not matter since his amendment stands as a warning that any future Salt treaty will be in trouble with the Senate if the demand for equality with Russia is ignored.

Do-nothing Congress?

FROM A CORRESPONDENT IN WASHINGTON, DC

In 1948, the Democratic President Truman made political capital out of the "do-nothing" 80th Congress (a Republican one). In 1972, the Republican President Nixon, never a man to ignore a valuable political lesson, is doing the same thing with the "spend-thrift" 92nd Congress. What is more, up until recently, the Democrats who control that Congress did not seem to know what to do about this.

This year the President has been using a number of methods to attack Congress and none has he used to such effect as his veto messages—the statement which accompanies the formal disapproval of legislation, usually because it is too costly, and returns it to Congress. Apart from a few pro-forma statements in self-defence, the Democrats seemed to be taking this lying down. Not so, however, Senator Mansfield, the usually quiet leader of the Senate's Democratic majority. For the first time, Mr Mansfield has used some strong language of his own in a major Senate speech, taking sharp issue with the President and accusing him and "various bureaucrats" of having

pointed the finger at Congress for the Administration's own failings, for its own commissions of misfeasance and nonfeasance in the area of the economy, the environment, social needs, health and welfare and all the rest of the many critical neglects this nation still continues to suffer.

One problem which Democrats in Congress face is that they know as well as Mr Nixon that there is in the United States an open revolt against paying more taxes, against increased spending by the federal government.

Also a President, by his office, commands the attention of the public and the 535 members of the Senate and the House of Representatives can match that attention only with great difficulty.

Between now and the middle of October, when Congress adjourns until after election day in November, there will be a few opportunities to rebut Mr Nixon's charge and turn St George into the dragon. On military appropriations, for example, the cost of the air war in Vietnam will be revealed and the Democrats can make considerable noise about it. Measures to reform the ponderous American tax structure can also provide a chance to embarrass

the White House and, perhaps, to smoke out Mr Nixon's future tax plans, which may or may not include the value-added tax. The battle has been joined and for the final two weeks of this session of Congress, the Senate and House will be major arenas of the 1972 political campaign.

Sharing at last

Last week this Congress, which according to Mr Nixon has done little or nothing, gave the President an historic piece of legislation, the revenue-sharing bill which he has been calling for since 1970. The federal revenues to be shared out will total \$30 billion over five years, going one-third to the states and two-thirds to cities and other local governments. In a departure from precedent which pained conservatives, these sums will not be subject to annual appropriation by Congress; the voters in each jurisdiction are being relied on to see that the money is not misspent. Best of all this largesse will start flowing next month, before the election. Most states and big cities will receive amounts equal to about 5 per cent of their budgets; this may look small but it may make the vital difference between raising local taxes and leaving them as they are. Although the federal budget is in heavy deficit, attempts to raise federal taxes to pay for revenue-sharing were flicked aside.

Quite different formulae for distributing the money emerged from the Senate (which favoured the smaller, rural states but within states did well by the urban regions) and the House of Representatives, whose recipe leaned toward the big urban states. But the conferees of the two houses found no difficulty in solving this problem: states will just be allowed to take 90.4

Senators share the bill: Bennett, Long

per cent of the amount that they would get under the formula which suits them best. Inside the states, relative poverty and tax effort are taken into account so that a Watts, for example, will do better than a rich suburb like Beverly Hills. The sovereign states may spend their money as they like but lesser governments have been given a list of permissible objects of expenditure: public transport, public safety and protection of the environment (including sewage and waste disposal). This was at the insistence of Mr Wilbur Mills, the powerful chairman of the House Ways and Means Committee.

Mr Mills, the key congressional figure, was determined early in 1971 to kill the whole idea of revenue-sharing but he was converted, partly by his own political ambitions, partly by a coalition of governors, mayors, county heads and public employees who banded together to impress the magnitude of their needs on Congress. They are so pleased with the results of their efforts that they are planning to keep their coalition alive in case next year Congress tries to take away with its left hand what it has given with its right. Something like that is happening with the present bill; it contains an annual ceiling of \$2.5 billion on the amount which states can claim under what has been an open-ended scheme to provide \$3 in federal aid for every \$1 they spend on certain social services.

Because of this New York State expects to lose \$400m, compared with the \$591m it will receive this year in new shared revenues. But most state and city officials knew that this ever-running tap was too good to last. Even if the states and cities are not as well off as they had hoped to be, it is a great thing for them to have established a claim to some share of the revenues produced by the federal tax system, which is more flexible and more productive than their own.

UN's check

The United Nations, whose General Assembly opened its 27th annual session in New York on Tuesday, is well aware that its stock in the United States, once its strongest supporter, is at a low ebb. Virtually bankrupt though the UN is, the least of the problems with its host is the announced intention of the United States to seek to cut its contribution to the UN's regular budget, beginning in January, 1974. This is the earliest date when the cut can take effect, given that the Commit-

Bush: let's be realists

tee on Contributions does not meet until the spring. At present the United States, assessed on its ability to pay, meets 31.5 per cent of the UN's regular budget but this is hard to defend now that it is only one of 132 member countries.

The intention is to reduce the American share to 25 per cent. Without waiting for the UN to act, Congress has already voted to cut America's contribution to this level. The Senate tactfully put the effective date at December 31, 1973, but Mr John Rooney's Appropriations Committee persuaded the House of Representatives to flout treaty obligations by making the reduction apply at once and to all the UN's affiliated agencies; these account for the bulk of American contributions to UN activities. Presumably the Senate, backed by the Administration, will prevail when an agreed version of the bills is worked out.

The idea that there should be a closer relationship between America's financial support and the voting power and influence which it wields in the United Nations is widespread in the United States. And American influence today has been diluted severely by the admission of so many small, frequently hostile states. Mr Rooney is not the only American still smarting over the expulsion of Nationalist China at the time of the admission of Peking. The fact that the United States was compelled to use its veto in the Security Council, for only the second time, to block a resolution in effect condemning Israel but ignoring the terrorist attacks by Arabs on the Israeli athletes, is another sign of America's waning influence. Even Cuba has been able to tweak a feather out of the eagle's tail:

last month the Colonialism Committee, by a vote of 12 to 0 (with 10 abstentions) recognised the "inalienable right of the people of Puerto Rico to self-determination and independence." In fact, not more than 10 per cent of the people of Puerto Rico are expected to vote to break their profitable tie with the United States when the issue is put to them in November. The United States has rubbed home the lesson by appointing a Puerto Rican woman to its delegation to this year's United Nations Assembly.

Senator George McGovern, in his campaign, has criticised President Nixon for turning his back on the United Nations. But the Senator is out of step with public opinion; a poll last year showed that only 35 per cent of Americans thought that the UN was doing a good job. From the President down, the Administration is now openly critical of it: Mr George Bush, the ambassador to the UN, spoke recently of its "limited" potentialities while Mr Samuel DePalma, who deals with international organisations at the State Department, said frankly that America's present concern is to adjust and improve relationships among the big centres of power—and that this seemed impossible to achieve in the Security Council.

ELECTION '72

Brooklyn: no change

New York

The forces of reform in New York City's warring Democratic party suffered fresh blows this week when Representative William Ryan of Manhattan died and Mr Allard Lowenstein lost a special nominating (primary) election to Representative John Rooney in Brooklyn. Mr Lowenstein, 43 years old, had lost his Long Island constituency in the redistribution of seats and had claimed fraud in the regular June primary election in Brooklyn which was won narrowly by Congressman Rooney, aged 69. New York's highest law court ordered a new election and Mr Lowenstein had great hopes of emerging victorious on his second try. But in a classic confrontation between the old and new politics, the regular Democratic machine in Brooklyn, with some assistance from the Nixon Administration, managed to increase Mr

Rooney's margin even though the total poll was somewhat lower than it had been in June.

Mr Lowenstein, a hero of reformers ever since he had spearheaded the movement to oust President Johnson in 1968, claimed that fraud was more widespread this week than it had been last time, but it is clear that he was up against powerful ethnic opposition resentful of past, and perhaps future, change. The contested district, heavily Democratic, is a polyglot community that includes blacks, Puerto Ricans, rigidly orthodox Jews, Irish and Italian Roman Catholics and an enclave of middle- and upper-income residents in fashionable Brooklyn Heights, which is just across the river from Wall Street. Mr Lowenstein had strong support from educated and liberal voters but, despite an expensive and active campaign, he did not get the turnout that he had expected in black and Spanish-speaking neighbourhoods. The white "ethnics," who associated Mr Lowenstein with Mayor Lindsay and with Senator McGovern, and consequently with softness on the Vietnam war, wavering on Israel,

favouritism toward blacks and laxity on moral issues such as abortion, voted to send Mr Rooney back to Washington for a 15th term.

Congressman Rooney has not had a distinguished record in the House of Representatives and, in contrast to Mr Lowenstein, did little in the way of street campaigning. But he has been a strong backer of American shipping which gained him financial help from maritime interests and endorsements from labour organisations, while his support for Israel won over Jewish groups. The Brooklyn regulars, who are hostile to Mayor Lindsay and lukewarm towards Senator McGovern, demonstrated that they still have the strength to overcome the sizeable corps of volunteers that Mr Lowenstein deployed in the district. Since many of the volunteers were new to Brooklyn, resentment against outsiders may have played a part in his defeat.

The result shows that the running conflict between reform and regular Democrats in the city will improve President Nixon's chances of carrying New York State in November. Traditionally, the city's Democrats provide

enough of a majority to offset Republican strength in the suburbs and in the rest of the state, but white ethnic voters appear increasingly opposed to reformers. There is a strong likelihood that those who consider themselves regular Democrats will give their backing to local candidates while withholding support from Mr McGovern. The campaign for President Nixon in New York City is concentrating its efforts on weaning away the white ethnics (the Administration provided a last minute subsidy for Mr Rooney's district).

The reformers are even split among themselves. Congressman Ryan won a notable primary victory over Mrs Bella Abzug, the vociferous champion of women's rights who, like Mr Lowenstein, was the victim of gerrymandering. Now that this safe seat is vacant, Mrs Abzug might be considered the logical choice for it. But she is bitterly opposed by former supporters of Mr Ryan who feel that she should never have pitted her brand of reform against his. This divisiveness in the ranks of reformers can only benefit their Democratic and Republican opposition.

San Francisco builds a pyramid

FROM A CORRESPONDENT IN CALIFORNIA

The shape is the most astonishing thing about the Transamerica Pyramid. Although the building will not be occupied until October its aesthetic contribution to the San Francisco skyline has been hotly debated for some time. But its remarkable form is not the only innovation in the city's newest office building which, at 853 feet, is the tallest in western America. This towering structure is also, it is claimed, one of the safest.

This boast stems in part from its shape. It is argued that the lowered centre of gravity which the pyramidal structure allows and the exterior bracing of the lower floors make the building particularly earthquake-proof, a highly desirable quality in a city which stands near a major fault. But, in addition, the structure contains elaborate new safety precautions, particularly against fire, which are attracting the attention of builders around the world.

Fire used to be considered a trifling problem for modern skyscrapers. Steel and concrete were so protective in themselves that old-fashioned precautions like sprinkler systems were discarded long ago. But recently tragic fires in modern buildings have given rise to anxiety. New hazards arose in skyscrapers, says the fire chief of San Francisco, when construction

actually done on the site was replaced by a method of building under which components are assembled on the site and then hung together. Exterior walls are attached like a skin and interior walls planned for mobility, not permanence. As a result openings are left through which flames, heat and smoke can seep.

A fire three years ago in San Francisco's gigantic 52-storey Bank of America focused the attention of the city's safety engineers and the planners of the Transamerica building on new types of protection for buildings which cannot easily be escaped from if fire breaks out. The pyramid is the first modern office block to be totally covered with sprinklers. In addition three major features were developed. One is a ventilation scheme using the air-conditioning system. It is flexible enough to suck smoke out of a floor and vent it immediately outside and to direct fresh air to one floor or one section of a floor to combat fire and smoke. Another feature is manual lift controls to override the automatic system when this breaks down. The third innovation is a fire-proof telephonic network connecting with a communication centre below ground level which will be manned around the clock.

This is the heart of the safety system.

Safe as houses?

It will make possible two-way communication between those inside and those outside the building and will ensure that firemen can maintain contact in an emergency. Any rise in temperature or excessive smoke will signal the command post to summon firemen at the same time as it sets off sprinklers. In addition the command post will have automatic controls which monitor all the stairways. The ability to question who is using stairways or to lock doors from the control panel is expected to reduce the thefts which plague many buildings today.

The City fights it out

The Economist a survey

You can take a National Westminster loan to any country in the world. For a big international loan, come to a big international banking group. National Westminster. Through its wide international financial network, National Westminster can provide Eurodollar loans or other currency finance on the scale you need in any country in the world, for overseas expansion or investment.

 **National Westminster Bank**

Associated Japanese Bank (International) Limited

offers the following services:

- Euro-currency finance on a medium and long term basis.
- Foreign Exchange and Euro-dollar dealings.
- Underwriting Euro-bonds and Euro-equities.

With your brains and our finance you can really go places

Your business expertise and our finance facilities are bound to lead to success.

We provide a full and comprehensive range of financial services. Personal Loans and Domestic Loans, Industrial Hire Purchase, Block Discounting, Contract Hire, short and long term Bank Loans, and Leasing for example.

Not that we care to put loans, people, or companies into categories. We are open-minded enough to consider each and every proposition individually.

Occasionally we do have to say 'no', and it hurts. But mostly we say 'yes', and having said it we act fast.

Forward Trust's team of consultants will tell you how you can make the best possible use of its facilities and at the same time

achieve the maximum in tax relief and other investment allowances.

We'd like to help you go places on your next project. Please write to our Head Office, or contact your local Forward Trust branch—we're in the 'phone book.

Forward Trust the Finance Company that likes to say 'yes'.

The half-successful revolution

There were two objects in the British banking revolution that was fathered by the Bank of England a year ago. One object was to introduce new competitive life into British banking. The clearing banks were told that they should no longer ration their lending according to gentlemanly priorities suggested to them by the Bank of England, but by commercial criteria. They were to end their cartel agreements, and fight for business within a new framework whereby the only real Bank of England control was a requirement that banks should maintain 12½ per cent of their broadly defined sterling resources in liquid reserve assets. It is a pity that in August the Bank of England half-rattled on its own new rules, when the governor asked the banks not to lend so heavily to property companies and for financial (as distinct from industrial) transactions. This heavy lending was a sign that the inflation foolishly permitted by the authorities had made property speculation over-attractive, and it was almost an advantage of the new competitive system that it rubbed the authorities' noses so pointedly in their own mistakes.

Most of this survey is devoted to discussing how far this part of the reform—the dash for more competition—has worked. It is a dash that has been at least a qualified success. Competition in the City may not be quite as red in either tooth or claw as some customers and most economists would like. There is not always a sulphurous atmosphere of devil-take-the-hindmost, because the devil is not a City sort of chap. But the dignified dash of the past year has nearly all been in the right direction. The large clearing banks have advanced further to cash in on their great economic advantage (which is that they can get £15 billion of deposits so cheaply) and their possibly smaller economic advantage (that the economies of large scale in some sorts of banking are increasing). They have tried competitively to offer the new sorts of sound lending that the changing market seems to be showing it wants, instead of only the sorts that were recommended in the banking textbooks of yesteryear. After so many years when it was assiduously explained to ignorant financial journalists that the great banks would be irretrievably ruined if their cartel

was ever to be ended, the movements of their share prices in the first year of free competition to mid-September are worth recounting: National Westminster shares are up about 42 per cent, Lloyds 18 per cent, Barclays 49 per cent and Midland 27 per cent.

The reform has also benefited the smaller pioneers of new financial services and new financial media. This is important, because the elbow room for this pioneering has been the City of London's great and slightly unexpected glory in the postwar era. The City has allowed in newcomers with new ideas much more readily than either other British professions (like architecture, law and medicine) or most other international financial centres.

Four stages of monetary failure

The second point of the reform initiated in mid-September of 1971 was supposed to be better control of the economy through an intelligent and more flexible monetary policy. This is where the sad part of this past year's story begins. While the drive for more competition in the private enterprise banking system has been a qualified success, the drive for greater efficiency in the operation of public monetary policy has been an unqualified failure—of the peculiar sort that has become all too familiar under the present British Government.

Critics can justly say that the cause of the failure has been the same as that in the Heath Government's industrial relations policy, its lame duck policy and some other things; and yet it is often difficult to get those in the midst of the action or inaction to recognise the four distinct stages in the now familiar disease.

In the first stage, the authorities say very toughly that they are going to do the right thing. In the second stage, they softly do precisely the opposite, thus naturally creating a mess. In the third stage, the realisation that the soft policy has created a mess makes the authorities less willing actually to soften policy any further, and they may even try to stick by a few of their former toughly expressed rules, even although the intervening softness has by now made the problems they have to handle almost overwhelming. Then, in the fourth stage, everybody quite wrongly says that the whole trouble has been created by the Government

The first full year of the credit revolution has been one in which the banks, finance houses and other City institutions have all bounded over old demarcation lines and taboos to grab for new business. Above all it has been a time for borrowing. But success at the competitive grass roots has not been matched at the monetary policy level. It is not simply that, twice, the Bank of England has bent its new rules. The real failure has been its non-control over the money supply

being so inflexible and doctrinaire. It is frequently said in the City today that the authorities have been too tough in withdrawing the services of the government broker and about not letting him incontinently increase the money supply: just as it is sometimes mythically said that the Government has been too tough about confronting the trade unions in nationalised industries and about killing off lame ducks. And nobody looks at the actual record, and laughs and cries and laughs. The history of the past year's crisis in monetary policy and in the gilt-edged market has passed through all these four familiar stages.

Not supposed to lean

It will be best to begin by understanding the two rather separate reasons why the authorities in 1971 withdrew the old system of keeping the government broker in place to buy, with money newly created by the Bank of England, any gilt-edged offered to him on a particular day (and also to sell any gilt-edged demanded from him). The economists' objection to the old system was that "it caused the central bank to lean against the natural market movement of interest rates." Although the government broker moved his prices with the market, a rush of sales to him at a time of inflation made the Bank of England feel that gilt-edged prices were being driven to a disruptively low level; so it kept up the broker's selling price most unprofitably for a while, and slowed a rise in interest rates which would have had some therapeutic anti-inflationary effect. Similarly, at times of disinflationary pressure, the Bank sometimes thought that there was a tendency in the market to make money irresponsibly cheap; and its leaning against a proper downward trend of interest rates may sometimes have intensified the stop phase of the stop-go cycle.

The Friedmanite school of economists has long blamed almost all macro-economic troubles all over the world on this tendency of so many central banks to "lean against" the natural market trend of interest rates. Dr Friedman preaches that central banks should concentrate solely on raising money supply annually by some fixed amount appropriate to the underlying rise in productivity—say, something between 4 and 6 per cent—and otherwise have no policy of intervention in government bond markets at all. Most economists have partly come round towards Dr Friedman's

Government broker: stay out

views in at least this limited sense: almost all studies of what has happened to major industrial economies since the war suggest that the traditional "leaning against" interest rates by central banks has almost always had perverse results, so that the case for getting the government broker out of his previous posture of automatic daily purchaser or seller was very strong indeed.

The Bank of England had a second reason. It realised that the pre-1971 situation allowed discount houses and others to make large short-term profits at the Bank's expense. Whenever it was obvious that gilt-edged prices were about to fall, everybody could hasten to unload gilts on the government broker; and he stood there, "maintaining an orderly market," buying gilts at something like a temporarily fixed price. This was very similar to the one-way option that international speculators so profitably exercise against central banks when countries try to stick by unmaintainable fixed exchange rates.

In the days when the Bank of England regarded its defence of orderliness in the exchange markets as a gallant and patriotic duty, it tended to regard defence of orderliness in the gilt-edged market in some of the same reflected light. It then swung over rather sharply towards recognising that the bearing of both sorts of loss could be the action of a sucker. This feeling was bound to bruise somebody when next the market began to fall, but it did not hurt anybody in the first period of the government broker's withdrawal from the market. For the truth is that the authorities

started on their announced strategy of not "leaning against" the natural trend of interest rates by leaning against them more heavily than in any period of postwar history.

Sitting on interest rates

The reason is that in 1971 the Government was quite naturally running scared of the level of unemployment and of underproduction in the economy. The course was therefore set in Mr Barber's budgets for demand reflation, at a time when the surrender to the workers in electricity supply and in some other totally uncommercial nationalised industries meant that cost inflation was also proceeding at an unprecedented pace. The instructions given to the Bank of England were that it should allow money supply to expand sufficiently so as not to get in the way of the policy of restimulating employment. In practice, the Bank of England interpreted this as meaning that it should pump out enough money to keep interest rates down at the sort of rate that did not seem unreasonable at a time when the internal economic objective was to restimulate activity, and when the balance of payments was in surplus. But there had never previously been a time when the internal objective was to restimulate activity, but cost inflation was also proceeding at 1971's rate. At the turn of the year the rate of interest on long-term gilts was around 8 per cent, but the rate of price inflation was around 10 per cent, so that there was actually a slight negative interest rate in real terms; and this had been achieved by the Bank of England inflating money supply at an annual rate of over 20 per cent.

There were three reasons why interest rates seemed bound to rise after that. First, a negative real interest rate at a time of such inflation is economically absurd. Secondly, the Bank of England seemed likely to feel too guilty to expand money supply at any much faster rate still. Thirdly, sterling had been fixed at an overvalued exchange rate in the Smithsonian agreement in December, and some of us suspected that the Bank of England would foolishly try to protect sterling at \$2.60 by putting up Bank rate.

In the event, the third of the above expectations proved mostly unjustified: the authorities, very sensibly, resorted to a floating exchange rate for sterling more quickly than we had expected, although they mysteriously and perversely raised Bank rate a few

Financing home or overseas operations? Our complex is the simple answer.

When you find yourself facing the complex problems of financing operations at home or abroad, you need a bank that has the right experience – and the right answers.

Take Lloyds Bank. Of course, one of the basic functions of Lloyds Bank Limited is to provide finance for commerce, industry and agriculture. But the Lloyds Bank Group now includes a range of companies, whose combined expertise – both at home and abroad – could well help you in your plans for future growth.

Lloyds Associated Banking Company Limited specialises in supplying, through the Bank, medium term finance for up to five years. To assist overseas expansion the Bank's Overseas Department handles Eurocurrency finance, and provides expert advice on arranging foreign exchange for immediate or forward delivery.

For public companies, or companies going to the market, Lloyds Bank's Registrar's Department – the largest in Europe – provides a professional registration service at an economic cost. Lloyds Bank also manages over £100 million of pension funds for major British companies.

An important part of the Group's international operations is LBI – Lloyds & Bolsa International Bank Limited.

A recent merger of the Bank of London and South America and Lloyds Bank Europe, LBI is a major international bank with on-the-spot knowledge of Europe and Latin America.

Two further international banks in the Group are the National Bank of New Zealand, with its Head Office in London and over 217 branches in New Zealand and the Far East, and the National and Grindlays Bank Group, whose activities include commercial and merchant banking in Europe, Asia, Africa and the Middle East.

These three banks give the Lloyds Bank Group a global spread, with branch representation and management expertise in every continent.

At home, Lloyds and Scottish Limited specialise in the leasing and hire purchase of plant and equipment as well as financing hire purchase for consumer goods.

So, in the daily management of your business or whenever you're planning to expand, it's important that exactly the right kind of finance, and financial advice, is available to you. They are within the Lloyds Bank Group, both internationally and at home.

Go and see your local Lloyds manager. He'll put you in touch with the right people.

Money stock

hours before doing so, presumably as part of a previous strategic plan which had precisely the opposite objective in view. The second of the above expectations proved too kindly to the authorities. They went on expanding money supply at an even faster rate in the first half of 1972, especially after the surrender to the miners' strike had given a new twist to cost inflation. But the first, and economically-logical (because market-oriented), expectation conquered all. When the surrender to the miners' strike made it clear that cost inflation would continue, interest rates began to rise. Between the beginning of January and the beginning of September, the Financial Times index of government securities fell by 11 per cent.

During all previous recent periods of falls in gilt-edged prices, the City had been used to unloading gilts on to the government broker as the all-purpose mug. Since one of the Bank of England's main reasons for embracing the new reforms had been its desire not to be such a mug in future, it was very willing to implement the rules to the extent of not keeping the government broker at his loss-making role of daily longstop. The result is that large losses have fallen on those who were used to him being there. Three jobbing firms in gilt-edged have ceased dealing in them; the discount market has made some very large losses; and the commercial banks have had their bonanza year spoiled by having to sell a lot of gilts at well below original cost.

What could make it work?

This experience has given rise to two criticisms: (1) Some people say that 1971-72 has shown that the Friedmanite policy of trying to aim for a fixed increase in money supply can-

not be operated in Britain. (2) Many people say that the institutions of the City of London cannot all survive a system where the government broker keeps outside the gilt-edged market, except for being willing to buy gilts with less than one year to go to maturity.

The argument that Friedmanite policies are impossible springs largely from that continuing assumed obligation for the government broker to buy stocks with less than one year of life. It is said that this is the cheapest way of ensuring that the Government can fund its debt. There happen in 1971-72 to have been a lot of maturities, and the reflationary budget policy has meant that the Government has also relapsed into a large borrowing requirement. The Bank of England blames the growth in money supply, at an annual rate frequently above 20 per cent, quite largely on this need to ensure that money was available to meet these requirements for maturities and new government borrowing "at a reasonable rate" and "while market conditions were difficult."

Two separate points are intertwined here. First, the idea that new government borrowing and refunding must be kept at the cheapest possible rate is another way of saying that the authorities were leaning like mad against a logical rise in interest rates. The supreme objective of the authorities in the money market should be to keep money supply from rising at more than an equilibrium rate; the supreme objective should not be to act as bargain hunter for the Government. Secondly, however, so long as it is assumed that government securities can only be of the fixed-interest type, it will admittedly be especially difficult at times of great inflationary pressure for the Government to sell enough of these securities to keep down the rise in money supply; yet it is precisely at such times of great inflationary pressure that it is most vital that money supply should be controlled. The conclusion is obvious that the Government should be able to sell some other securities than fixed-interest bonds.

The alternative borrowing instrument that *The Economist* has long argued that the authorities should also have at their disposal is what we have called a "national income equity." Today a new issue of £500m of orthodox long-term fixed-interest gilts would probably require a coupon rate of around 10 per cent, and thus an annual interest fund of around £50m. But if the authorities were to float a

"national income equity," for which the annual dividend fund was declared as one per mille of national income, the initial dividend fund would be £50m a year when gross national product was £50 billion a year, but it would rise above £50m in later years as money national income grew because of both inflation and real economic growth. At present the authorities would almost certainly be able to raise much more than £500m on a national income equity that carried a dividend fund of one per mille of gnp. Such a stock should be especially popular with pension funds. For some reason, this is still considered a new-fangled and unorthodox idea: like, until just over a year ago, the idea that abandonment of the clearing banks' cartel really would not send clearing banks bust. But the criticism that an idea is "new-fangled" does some day have to cede to the fact that it is also surely really rather obvious.

Institutional issues

This also has relevance to the fear that some existing institutions in the City will find their task to be impossible unless the government broker comes back to the role of active longstop in the market. There are, admittedly, two conditions in which it is terribly unprofitable for gilt-edged jobbers or some other unfortunates to have to try to hold adequate supplies of gilt-edged stock.

One is if gilt-edged prices seem bound to fall, because they have been held artificially high by an excessive creation of money supply which had just that purpose in view; the gilt-edged jobbers wounded this year were hit not so much by last year's decision to withdraw the government broker from the market as by last year's excess bidding up by the Government of its own securities.

Secondly, however, the job of holding fixed-interest government securities will also generally be unprofitable if the Government is continually producing a greater supply of them than the market really wants; and the Government will be doing this so long as custom requires it always to borrow on fixed-interest terms and never on national income equities.

If the Heath Government were to abjure these mistakes and archaic customs, the business of jobbing in government stocks should soon become economic and profitable again. Admittedly, it needs to be a more capitalised business than before. While the government broker stood in the

A boom in high-margin lending

.....but not without squeezing reserves

.....and going for more expensive money

*Following repayment of special deposits on Sept 15th, the clearing banks agreed to subscribe for some £750m of three new government stocks. This has been excluded from our Sept figure.

market, the jobbing function could be fulfilled by firms with a very limited capital base. Now that he is no longer there, the limits set by their capital base restricts the size of the lines in which they are prepared to deal. This is why price movements in gilt-edged during the course of daily trading periods this year have been so sharp. The best way to bring more capital into the jobbing function in government stock is probably through the creation of consortia. But few people or institutions will want to join such consortia until the Government puts its ideas about the marketing of government stock into order. Few people would want to take up the trade of inventory-holders of, and dealers in, widgets if the monopoly producer of widgets followed a marketing policy of (a) always supplying what it had previously always supplied, because the idea of bringing in a new line which the customers would buy more readily was regarded as new-fangled; and (b) inflating the initial supply price of

widgets above what the market would conceivably later pay for them, on the grounds that this is the most economic way of keeping down the servicing cost of the widget monopoly's debt.

However, it would also not be sound economics to say that the best way of making this absurd marketing system viable again would be to return to the old method of having a representative of the widget monopoly standing around each day, ready to buy back all widgets at a large loss to himself; in compensation for having sold them at too high a price originally and in quantities that he (not the market) overestimated, and in order to be able to go on selling them only in a deliberately old-fashioned form and packaging that does not conform to the pattern of customers' modern requirements anyway. It really would not be sensible to return even from the unsuccessful half of the past year's banking reform to the indefensible *status quo ante*.

It comes slowly to the clearers

The most exciting prospect for the banks—that they might come to play so large a part in the British capital market that we would move gradually towards a system of largely bank-controlled industry—is still very much in the future. Until British industry increases its demand for finance quite substantially above present levels, the biggest challenge to the banks remains untested. Even so, it is disappointing that they have not been girding up their loins. With the striking exception of the British Petroleum loan, there has been no evidence that they have gone nearly so far as they should in exploring new techniques of lending to industry, such as term lending.

Of course, these have been salad days. With money as easy as it has been, the dash for borrowers has been for those who were neglected in the bad old days of restraints and who could now be attracted in out of the cold with little effort. The increased share of lending going to newly-favoured borrowers has been quite dramatic. In the late 1960s and into early 1971, the share of the clearers' total advances going to personal borrowers was only just over 14 per cent and that going to financial borrowers, including property companies, 7 or 8 per cent. By August of this year, the proportions had risen to some 21 per cent and to 12½ per cent respectively.

Hand in hand with this growth has been a proliferation of services provided by the clearing banks, especially to personal borrowers. The tendency has been for all of them to do everything, rather than to specialise. This could, in the end, prove a mistake on their part. Indeed, it can be expected that after this first rush they will try to strike more individual notes. At least one of the smaller clearers, Williams & Glyn's, has already struck out with some individual package deals. And at least one of the big clearers organised an opinion poll with a view to improving its image.

Finding the men

However, no opinion poll was needed to tell the banks that staff recruitment is critical to them. Personnel is what the City lives on. Indeed, it is particularly here that the most competitive spirit has emerged among the clearers in the past year. As their services become more sophisticated, they are having to rethink their whole recruitment policy. The strains on top management are obviously increasing and from the middle upwards to the top of the hierarchy the clearers are in direct competition with the merchant banks. There was a time when they would not have had much chance against them, but they seem pretty pleased with the results of their own

raid on outsiders—merchant bankers, insurance men, computer personnel, and so on. Now they should be thinking about regularly training up their own specialists and managers.

If the importance of personnel management needs any emphasis, it is provided by the fact that the pay bill of the London clearing banks last year for some 200,000 staff was not far short of £300m, between two-thirds and three-quarters of their total costs. Having done something to restructure top management and specialist needs, the big question now is how staffing should be organised at the branch level. Between them, the six London clearing banks hold properties valued in the latest balance sheets at nearly £600m and the premises of any of the big four would place them in the top flight of property companies. The

branch offices are now the selling points for a very wide range of services, some of which are profitable (and some that are not). But the dramatic rise in site and rental values has raised the threshold of branch profitability; moreover, centralised computer accounting has reduced the need for office space. So a full range of services in each branch is no longer necessary. The whole branch structure needs hard thinking. Another consequence widely anticipated of the new system of credit control has been a broader range of interest rates. Even base rates are no longer all the same all the time, although there are obvious limits to how much the clearers, especially the big ones, can be out of step. Further, the new operative flexibility in the spread of margins over base rates reflects a more sophisticated attitude to acceptable

risks. Whereas "most" customers paid just 1 per cent over Bank rate in 1959, according to the Radcliffe report, now most of the overdraft lending by the big four to industrial and commercial borrowers is probably done at rates 2 per cent over base rate, but quite a number of industrial customers pay 3 per cent over the odds, and some property companies and personal borrowers considerably more.

Testing time

The tougher test will be the real fight for deposits. This is now beginning. The very success of the dash for new lending followed by, in June, the pre-float run out of the pound whittled much of the fat from the clearing banks' reserve ratios. These have since been beefed up again, but only by recourse to increasingly expensive money—got through dumping gilts on to a weak market, bidding for large "wholesale" deposit accounts and, most strikingly, by issues of certificates of deposit (which have risen over tenfold since October, 1971). Indeed, at one stage, the clearers even found themselves forced to borrow, again expensively, from the merchant banks and others on the interbank market.

Moreover, the hotting pace has percolated back into the banks' bidding for retail sources of funds as well. As early as February Williams & Glyn's, reading the handwriting on the wall, introduced an insurance-based savings plan in direct competition with the schemes of the building societies. Then, in July, when base rates were last increased, the banks mostly raised their ordinary seven-day deposit rates by even more. By last week Williams & Glyn's came up with a new deposit scheme offering as much as 8½ per cent. for money placed at fixed periods of two to five years.

All this has made the Bank of England now wish that it had never abandoned its old reliance on the crude M1 measure of the money stock (which includes only cash in circulation and current accounts) in favour of the more sophisticated measure of M3 (which includes deposit accounts as well). The new competition from the banks for deposit accounts has accounted for not a little of the faster growth of M3, particularly since May. Indeed, as the Bank of England rather wistfully pointed out in its September bulletin, if the old M1 measure were taken the money supply would be seen to have increased by just 14 per cent in the year to June, not over 20 per cent. But either way: by too much.

What all of them do

Personal loans; negotiable certificates of deposit; medium-term export finance; payroll service; estate duty, income tax and investment advice; Eurodollar business; portfolio management; new issue business; "on-line" interbranch communication and special services for computerised customers.

Do you question their charges?

Freedom has so far induced the clearing banks to broaden their lending services over a wider price range and to start offering more realistic rates for deposit and savings funds. By rights it should also have got them to tidy up their idiosyncratic approach towards charges on their bread-and-butter current accounts. But not a bit of it. Or at least not yet, although competition from upstart newcomers—the Americans and the finance-houses-turned-banks—may yet succeed where public jibes, Mr Aubrey Jones, and the sheer logic of the increasing use of computers failed.

For the banks the system of charging should perform two functions. First, it should favour those customers who regularly keep comfortable credit balances. After all, the whole point of the (expensive) business of maintaining wide-flung branch networks and labour-intensive cash dispensing services is to tap relatively cheap retail funds to lend onwards at a good turn. Second, the charges should cover the real costs of handling the accounts. If they are pitched artificially low, then current account customers must, in effect, be subsidised by borrowers, by holders of deposit accounts or by shareholders. If they are pitched too high, then it is the current account holders who are subsidising the others.

But from the customer's point of view, there is a third criterion as well. The rules of the game should be spelled out so that he can make a rational choice between the banks themselves or between the banks and the rivals like the post office giro. But it requires time, if not cheek, to get some banks to come clean. *The Economist* asked

for help from the head offices of all the major clearing banks and of a sample of other banks. That help was invaluable, although some of the banks were more reluctant than others to give what might be (wrongly) interpreted as precise rules. But more of that later. The results, as we understood them, are summarised in the accompanying table and chart; and we have based our judgments below on them.

Where credit's due

On the first test the banks come out reasonably well. They are probably right in thinking that the real bait to current account customers is the package of services to which an account is a key. Certainly American research suggests that the additional inducement of a straight interest rate return on current accounts has not justified the cost. But the banks do offer a baby carrot to persuade their clients to keep a juicy balance—an interest rate offset which ranges from 2 per cent a year (1 per cent a half-year) at Midland and NatWest to as much as 4 per cent a year at United Dominions Trust (UDT). So if you keep enough in the bank you can end up paying no bank charges at all. This holds for over 40 per cent of current account customers of Barclays and of over half of those of Coutts, to take two examples.

The clearers' bank charges come out much less well in the second test, that of reflecting costs. It is not surprising that they are all higher than those of, say, giro or the American banks or other newcomers to retail banking, like UDT. Barclays and NatWest maintain more than 3,000 branches: too many perhaps, but very convenient. UDT, on

The new rarefied atmosphere has not made banks any less secretive about their charges. But their hands may—and should be—forced

the other extreme, has only eight "money centres" offering current account services (its regular branches handle only commercial, not personal, business); and none outside provincial cities.

Nor do most of their rivals come near to the clearers' range of services: overdrafts, tailored-to-fit loan schemes,

foreign exchange and safe deposit facilities, free cheque and credit cards (as well as cheque books and statements), wide-ranging financial advisory services, insurance, and so on. UDT money centres offer much more limited borrowing facilities (personal loans, revolving credits and secured second mortgage loans), all of which carry

an interest charge of 18 per cent or more a year; the cheaper overdraft facility is not available. All the same, the money centres hit back with their Saturday opening.

It is true that the major American banks come closer in services to the London clearing banks. Moreover, so far, it has been astonishingly cheap

What they say the ground rules are

How your charges are calculated every six months . . .	. . . if you stay in credit (employee of large company that pays directly into account)	(other "ordinary" account holders)	. . . if you overdraw
National Westminster	"ICI group terms" (see below) on first 30 withdrawals; additional withdrawals charged at 7½p each; payments into account free.	10p per transaction (credit or debit), plus an extra 2½p per standing order; total offset by 1% of average credit balance.	Up to 12p per transaction plus an extra 2½p per standing order plus any interest charge on the overdraft itself.
Barclays	"ICI group terms" for first 30 withdrawals; charge per additional withdrawal negotiable (but normally probably 7p-8p); payments into account free at branch manager's discretion.	Normally 7p-8p per transaction (except salary payments into account might be free of charge); total offset by 1½% of average credit balance.	Normally 7p-8p per transaction (though could be higher); plus any interest charge on the overdraft itself.
Midland	Variant of "ICI group terms" on first 30 withdrawals; additional withdrawals charged at 8½p each; total offset by 1% of average credit balance in excess of £100 (eg. 1% on £50 if average credit balance of £150). Payments into account free.	8½p per transaction; total offset by 1% of average credit balance.	8½p per transaction (plus any interest charge on the overdraft itself). If the overdraft is persistent, unauthorised and troublesome an extra surcharge of, say, £1-£2 may be added to the total charges.
Lloyds	"ICI group terms" for first 30 withdrawals; additional withdrawals charged at 7½p each; payments into account free.	A flat £1.50 for first 30 withdrawals for each account-holder; additional withdrawals charged at 7½p for cheques or cash, at 12½p for standing orders; total offset by 1½% of average credit balance. Payments into account free.	7½p per transaction, except standing orders which are charged at 12½p each (plus any interest charge on the overdraft itself).
Williams & Glyn's	New group terms coming into effect on March 1, 1973. Details not yet available (but see chart).	Charging structure for ordinary accounts also being rationalised. Details not available (but see chart).	
Coutts	Group terms on first 30 withdrawals (but, in view of forthcoming review of the old interbank pact on ICI terms, details not given). Then 15p per transaction offset by 1.66% of average credit balance.	15p per transaction, offset by 1.66% of average credit balance (ie, one free transaction per £9 of average credit balance).	15p per transaction (plus any interest charge on the overdraft itself).
United Dominions Trust (UDT): money centres only	4p per transaction, offset by a nominal interest allowance on average credit balance pegged at 2% per annum below Bank rate (eg, the offset would now be running at 2% per half year).		No overdrafts allowed.
PO Giro	6p per cheque. Standing orders, transfer payments and payments into account free. Service charge of £1 paid half-yearly by account holder or employer.	8p per cash withdrawal; 6p per cheque; plus stationery charge (10p for 20 cheques or 20 transfer slips or 25 Giro envelopes). Standing orders and payments into account free. From October 1st, 5p surcharge on transactions if balance is under £30.	No overdrafts allowed.

The old standard ICI group terms specify that the first 30 withdrawals from an account in any half year period are free if the minimum credit balance never falls below £100; are charged at a flat 75p if the minimum balance does not fall below £50; and at £1.50 if the minimum balance falls below £50 (but is still positive). The Midland Bank uses the same scale of charges but applies it to the average (rather than the minimum) credit balance.

to have a current account with one of these banks—so cheap, indeed, that none of them with whom *The Economist* spoke was willing to have its charges committed to print. But before anyone dashes off to switch his custom, a word of warning. Accounts at American bank branches have, so far, been extended mainly as a courtesy service to employees of the banks' large corporate customers. Those banks which are now thinking of building up retail business for its own sake are also getting down to the hardnosed business of properly costing accounts. That must almost certainly mean higher charges.

What is curious is not that the charges of the clearing banks as a group should be high, but that they should vary so much, even taking into account that their cost structures are not identical. (And Coutts, of course, aims at a very special coterie and offers a highly personalised service and such extras as a full narrative statement). It is hard to believe that the striking difference in charges between, for example, Lloyds and NatWest reflects true differences in their relative cost

efficiency and package of services offered.

Failure to disclose

But the most serious failure of the banks is their continued clamminess over charges. Five years ago Mr Aubrey Jones's Prices and Incomes Board called on them to publish tariffs (and for that matter to give customers a full accounting of their particular charges). But the bankers demurred. One of their objections is that disclosure would eventually mean only one standard schedule. But until one is convinced that the present range is rational that risk looks worth taking. The bankers, more basic argument is that no two accounts are alike and that each branch manager should have full discretion to vary charges. In short, that rules are made to be broken, or at least interpreted.

Of course, discretion has its points. It would be silly to penalise a debit customer, by withdrawing his group terms privileges or by otherwise charging him at penalty rates, if the overdraft has been properly negotiated and the extension of the lending facil-

The only cash on a Sunday

ities promises to bring other lucrative business in its train. It would be equally silly to penalise a customer who chalks up an overdraft for a day or two simply because an expected credit item is late arriving. On the other hand, it makes good sense to penalise the customer who persistently overdraws, without warning, and who causes considerable extra work and expense (in phone calls, letters, returned cheques) in the process. A single automatic rule would not do. Nevertheless this sort of distinction could be made clear in a published tariff of "normal" charges. Certainly at least one major clearing bank (significantly, perhaps, also one with particularly systematic internal costing) manages to write into its computer programme an overdraft "allowance" factor to cover the occasional unintended overdraft; the computer is told, in effect, to ignore it in computing charges.

This is the crux. Rules that can and must be spelled out to a computer surely can also be spelled out to customers. If nothing else, the present refusal of the banks to publish tariffs of charges smacks of bad public relations. There is really no other service industry that gets away with murder as the banks do. Fortunately, their competitors are sniffing out this weakness, which may force the issue. UDT has leapt into the banking game with a published tariff—and some of the American banks are expected soon to follow suit.

It is true that any bank customer with the time and disposition can pop into his local branch manager (and to all his rival managers up and down the High Street) and ask for a full explanation of his charges. The banks say they welcome this, but they also shelter behind the fact that their average customer is rather daunted by such a prospect and does not "pop" into the banking parlour. It is the ordinary man who loses out against the more powerful and sophisticated customer.

Action World

United Nations Building, New York.

World trading patterns shifting dramatically... Let the Hongkong Bank Group give you the global view.

The days when world finance revolved around a few European capitals are over.

In a world where Japan is the third largest industrial power, and where new investment opportunities are appearing daily in Asia and Africa, a global view is necessary.

The Hongkong Bank Group offers that global view. They are working not just in the booming Near and Far East, but in Europe, North America and Australia. Everywhere they are assessing the local situation, analysing exporting opportunities, forecasting future trends.

This expertise could be yours—and your clients.

If your interest is in export or overseas investment, call the Hongkong Bank Group.

If your problem is in Sandakan or in San Francisco, in rupees or deutschmarks, they can help. Theirs is the global view. Try them and see.

NATIONAL BANK OF GREECE

Established 1841

THE OLDEST AND LARGEST GREEK BANK

Activities and results in 1971

At the annual general meeting of shareholders of the National Bank of Greece held on 25th May 1972, the Governor, Mr. Christos Achis, was able to underline some of the Bank's major achievements in the past year. The progress made by the Institution, said the Governor, was in line with the great strides forward by Greek economy as a whole.

Increased volume of business

The expansion in National Bank business last year is indeed reflected in the Bank's Balance Sheet for 31st December, 1971. All items on the assets side were substantially higher at the end of 1971 than at the end of 1970. Total assets, not including contra accounts, rose by 27.9% as compared with the previous year. It is noteworthy that this increase was 2.5 times as high as the percentage rise in the national income at current prices. The continuous and rapid growth in the activity of the National Bank further consolidates its leading position in the bank system and economic life of Greece. Furthermore, the Bank is now one of the big international banks ranking amongst the 100 largest financing institutions outside the USA.

Particular attention should be drawn to the fact that deposits of all types with the National Bank rose last year by 16,200 million drachmae, or 32.8%. The increase represents more than half the value of total deposits channelled into all commercial banks. The rise in deposit accounts was higher, namely 53.7%, whilst savings and current accounts rose by 28% and 20.2% respectively.

Availabilities, on the other hand, increased by 35%, thus ensuring a high rate of liquidity.

The great increase in deposits accounted for the fact that the Bank was able adequately to finance the economy. Advances at the end of 1971 were 8,037 million drachmae, or 20.7%, higher than at the end of 1970. Three-quarters of the advances went to industry and workshops and the balance to trade.

Furthermore a considerable proportion of State investment is financed by the National Bank through the purchase of State bonds and interest-bearing bills. In 1971 the Bank took up 1,638 million drachmae-worth of interest-bearing bills and 590 million drachmae-worth of bonds of economic development loans.

The Bank also increased its investment by purchasing bonds issued by legal persons and shares of various companies. Investment last year increased by a total of 1,985 million drachmae.

Results of the year

The expansion in business was accompanied by a substantial rise in receipts. Total gross profits amounted to 2,619 million drachmae which was an increase of 393.9 million drachmae, or 17.7% over 1970.

Out of total gross receipts 503.6 million drachmae was allocated to contingencies of all kinds and 62.2 million drachmae to depreciation. After the deduction from the gross profits of 1,079.8 million drachmae for expenditure on personnel and 305.8 million drachmae for general expenses and taxes the enterprise showed a net profit of 667.3 million drachmae. Out of this sum a larger amount is being allocated

this year to the reserve (180 million drachmae, as compared with 105 million last year) whilst 90 million drachmae instead of 50 million is being set aside for income tax. Over half the net profits are being distributed in dividends to shareholders. Total distributed profits amount to 379.6 million drachmae, as compared with 303.7 million in 1970. This year the dividend per share (on 1,518,300 shares) is 250 drachmae, as compared with 200 drachmae last year.

Expansion of foreign network

During the year under review there was also an expansion of National Bank Business activity abroad. New branches were opened in Bayswater, London, and in Rotterdam, whilst the Hellenic Canadian Trust, an organisation affiliated to the Bank, was set up in Montreal, Canada. The extension of the Bank's international network was continued early this year with the establishment of an office in Chicago. In South Africa it was also intended to open a new branch at Pretoria which will bring the number of branches of the Bank's local affiliate, the South African Bank of Athens, up to five. The Governor moreover announced the Bank's decision to participate in the capital of the French Monod-La Henin Bank—a member of the Banque de Suez group. The Bank is now represented in eight countries abroad by a total of 26 branches and offices owned either by itself or by subsidiary banks.

The Bank's foreign operations, as a whole, were expected to further increase in 1972, the Governor said. The trend of business during the early part of this year was already considered very satisfactory.

Modernising and administrative and operating methods

The great increase and wide range of the Bank's activities at home and abroad have made it necessary to overhaul and modernise its organisation and methods of operation. A major effort is under way to this end, the main object of which is to simplify business procedure in order to speed up transactions and improve the efficiency of the Bank's services to its clients. A further target is to render as wide a variety of services to as large a public as possible. Amongst the most important services now provided by the Bank are consumer credit, payment of pensions by cheque, and the collection of accounts of public utility organisations. Plans for the modernisation of Bank premises are also in full swing.

Decentralisation, a major factor of progress

A further important feature of reorganisation is decentralisation. This takes the form of the delegation of powers and responsibilities by the central management to executives at intermediate levels between itself and the Bank's branches. This will entail the grouping of branches, mainly by geographical region.

Decentralisation will be beneficial in many ways. It will give scope for the application of new methods of management at all levels throughout the Bank's whole network and ensure greater flexibility of the machinery of decision-making and action. It will also reduce the burden of work on the central services, facilitate the speedier introduction of new business procedures throughout the Bank's network, ensure rational employment of the abilities of staff, and improve the Bank's services to its clients.

Buying insurance from the banks

It has long been apparent that the clearing banks enjoyed an immense advantage in their possession of 12,000 High Street money shops. Their logical move was to find ways of exploiting these assets more effectively, by finding other quasi-financial business to put through them. Four years ago our summer banking survey suggested that they should make a real push to retail insurance business through these outlets. That is exactly what they are now doing, and on a scale that few foresaw then.

In the intervening time, the clearers have taken over the insurance agencies that their branch managers had traditionally run as a sort of freelance operation on the side, with the commission being pocketed by the manager and seen as a traditional perk of the job. For giving up these agencies the managers have, of course, been compensated by special salary increases. Some of them continued to grumble for some time afterwards, especially those in medium-sized provincial towns who had made quite a good thing out of their insurance agency work. The present position is that the commissions all go to the bank, though 50 per cent, or sometimes 100 per cent, of the commissions are now credited to the manager's branch profit and loss account so that they enter into the assessment of the performance of his branch.

At the same time each bank has set up an insurance unit at the centre to give the branch managers (1) regular briefings on insurance developments, drawing their attention to the different types and new forms of insurance they ought to be trying to sell, and (2) somewhere they can turn for expert insurance advice to meet particular customer requirements. Many branch managers as a result have got very interested in insurance and the scope

for selling it that they realise they now possess. Some others, however, are bored by the whole business; when they have time to spare, they prefer to go out and play golf or lunch some accountants in the hope of drumming up more lending business.

At the centre the pattern varies. Barclays' activities have been most conspicuous. It has set up a separate insurance broking subsidiary, Barclays Insurance Services Company (Bisco), which has run an extensive advertising campaign directed at customers. Its effective head is an ex-senior manager of the Northern and Employers group, which was taken over by the Commercial Union in June, 1968. It has over a hundred staff, largely ex-insurance people, many of them recruited from the Northern and Employers and other insurance companies that have merged recently; of these staff over 30 are in Barclays regional head offices (so-called) and it is to these offices that the branch managers will turn for advice first of all.

The emerging pattern

The Midland's operation is run by a former director of a Lloyd's broking firm, styled "insurance adviser," but whose job seems to have developed into rather more than that. At any rate Midland is now on the brink of setting up its own insurance broking subsidiary too. Williams and Glyn's, which is much smaller than its competitors but often rather quicker on the draw as a result, has also had a full-scale insurance subsidiary for over a year, run by an ex-Lloyd's broking executive, staffed entirely by insurance people. The banks differ in how far they have put their insurance experts out into regional head offices: Barclays has gone furthest while some others have tried to concentrate their experts at the centre. They also differ

If the clearing banks move more heavily into the insurance broking business, as they probably will, do they face the threat of takeover bids from insurance companies?

Insurance men turned bankers: Beacroft (Barclays), Manwaring (Midland), Slatery (Williams & Glyn's). Bankers turned insurance men: Kerr (Lloyds), Crittenden (NatWest).

The markets they can tap

in their willingness to hire top insurance men from outside, put them in charge, let them hire their own insurance staff and run the thing themselves. But the broad pattern is becoming clear. Those that have shrunk from taking the plunge so far may have to take it later.

The effect of this conscious effort to boost the banks' insurance broking business has been dramatic. The Midland reckons that its insurance commission earnings were 60 per cent up in 1971, 40 per cent up in 1972 (so far) and expects to see 30 to 40 per cent a year for the next few years. Thus bank managers have obviously not lost their incentive to sell insurance now that they no longer pocket the commissions. Even more important, the banks can now claim to be offering a far better service to customers than in the old days when the typical manager might have been an agent for two or three companies, put business with whichever of their representatives he liked best or had played golf with last, and himself knew nothing about insurance, though pretended he did.

The range of choice

Nowadays, therefore, the private customer can go to his branch manager and reasonably expect him to know (or quickly find out) which life office is best for conventional with-profits life policies, which are the good equity-linked policies and property bonds, what is a sensible way to invest his £5,000 lump sum pension, how he might use life assurance to avoid estate duty, or whether he can get his motor insurance more cheaply and whether it is worth switching if the cheap company is likely to be tougher

on claims. And so on. One bank reckons its commission breakdown is now something like this:

Income bonds, growth bonds etc	30%
Life policies	25%
Annuities	25%
Pensions	10%
Fire and accident	10%

In other words, 90 per cent of the business is savings business, or life assurance in the broadest sense. This is not surprising. Commissions are most generous on this sort of business (because the premiums involved are big). And it is the type of business that customers are least likely to be putting through a proper insurance broker already. The banks are not particularly keen to go after motor insurance because it causes endless bother even when there are no claims. But they would like to get their hands on more of their customers' ordinary personal insurances (if only because life and savings type business is then more likely to follow). Williams and Glyn's now offers its own insurance package, the Masterguard, insured with four big offices and intended to combine the best features of the personal insurance packages offered by these companies. Claims settlement will be quick and local—by the local branches of the Royal Insurance (one of the four participants), through the local branches of Williams and Glyn's. The Midland is trying a slightly different tack, and is setting up a personal insurance package scheme insured with Lloyd's underwriters, but with the branch managers having limited powers

to issue policies on the spot in all except problem cases (which might include those living in SW1, SW3, NW8 and other noted burglary areas).

There is good reason to forecast, therefore, that the bank branches might rapidly come to displace the part-time insurance agent, except possibly for motor insurance. For most of the other part-time insurance agents—the accountants, solicitors and so forth—will be unable to bring to bear the knowhow and back-up service that bank managers are now able to deploy. The result will be a huge improvement in the standard of selling and service at this level. People will get much better insurance advice, skilled help with their claims, and will probably be encouraged to buy extra insurance, which most of them still need. The High Street brokers, unqualified and usually only partially skilled, will probably remain, to cater for the two-thirds of the population that have no bank account. As now they will continue to make a feature of motor insurance. Some of the sleeper specialist life assurance brokers may feel the draught. The more alert of them will continue to thrive by being quick to dream up new life assurance devices and gimmicks.

The bigger insurance broking companies will not be sorry to see their personal insurance business ebb away. With its small commissions and expensive administrative handling costs, the business is ludicrously uneconomic for the big broking firms, geared up as they are to handle the bigger risks. One of them, Staplegreen, is reputed in the insurance market to have worked out that it was using 1,000 staff to handle personal insurances a few years ago, out of which it made a net profit of £1,000 a year. The banks will also play a useful part in selling pension schemes to smaller employers, especially in the next two years as the new Tory state pension scheme—with its direct encouragement to occupational pension schemes—grinds into action. But what will be interesting in the medium term is what happens when the banks have pushed into the personal insurance field as far as they can. With the expertise they will then have built up, their next logical step would be to push into medium-sized commercial and industrial insurance.

Here their position is potentially strong. If a bank lends money to a firm, it not only needs to look over the firm's financial position, it ought also to run over the hazards the firm is exposed to, and advise or insist

Neil Little: "When times are tough, Midland Bank bend over backwards to help."

Neil Little is the go-ahead Managing Director who is making Vono Ltd. into the pacemakers in furniture design. His latest success—a "coals to Newcastle" deal with Dux Nobel, a leading Swedish company, to market Vono furniture in design-conscious Sweden.

Vono's link with Midland Bank goes back to 1896, when Ernest Vaughan founded The Vono Company—to cast bedstead brackets. Since then the company has grown into the multi-industry Duport Group, of which Vono Ltd. is a member. And the Midland has been with them all the way.

As Neil Little says: "In easy times, any bank will fall over itself to help. It's when cash is tight that we know where our friends are—at the Midland."

"Ours is a flow dependent industry... and when the

money sticks in the other fellow's hands the Midland are always ready with theirs".

With his eyes firmly on European expansion, Neil Little may need the Midland's help more than ever. And he knows he'll get it.

The Midland would like the chance to help you too. If you have export requirements coming up, need more working capital, or have any other financial problems, your nearest Midland manager will be pleased to see you.

Almost certainly, the Midland can help.

that adequate insurance cover be taken, if only to protect its own investment. Of course, this is just what the big brokers already do with their clients, who tend to be the larger firms; it is also what insurance managers do in those large firms that have them. But there is a widespread suspicion that things stop there, and that there is a large mass of medium-sized firms that do not get properly looked over by an insurance expert to see what insurances they need and do not get expert advice about where to get it, or how to claim. This is the gap that ought to be filled—and is occupied to a small degree—by medium-sized broking firms in the provincial cities. But it is the gap into which the banks will probably move heavily once their insurance departments have had a few years to play themselves in and their managers get used to being all-purpose financial retailers instead of just bankers. But when this happens the banks will be in the insurance broking business up to their necks—as is already happening in Holland. They will then be in direct competition with the big broking firms, and ought to belong to things like the Corporation of Insurance Brokers. The logical step after that would be to buy their way into Lloyd's to get direct access to Lloyd's underwriters.

Who takes over whom?

Bank-insurance links are not new. The merchant banks have long owned insurance broking firms (handling industrial risks). One broking firm, C. T. Bowring, recently bought a merchant bank (Singer and Friedlander) and already owns a hire purchase company (Bowmaker). The Midland not only has its own insurance broking operation now but owns a 35 per cent stake in Montagu Trust and hence in its insurance broking subsidiaries,

Bland Welch and Bland Payne.

How much further will these links go? A merchant bank might find it useful to build up its insurance underwriting: Hill Samuel, for instance, has a life insurance subsidiary and one for general insurance. But there is no obvious reason why a clearing bank should want to move into insurance underwriting, by taking over an insurance company big or small. The logical line of advance is further into broking.

The interesting question, though, is how the insurance companies see it. The Commercial Union has already taken a stake in hire purchase (Mercantile Credit). And, significantly, now that Barclays has decided to sell its holding in United Dominions Trust, the buyers are the Eagle Star and the Prudential. The takeover of a clearing bank would permit a huge rationalisation of outlets; many of its local insurance branches could be closed and the work put through nearby bank branches instead. As an additional advantage, it would shut out its competitor insurance companies from selling their policies through those bank branches.

If any insurance company should get ideas along these lines, it would be interesting to know what the Bank of England would say. In South Africa, the Franzsen Committee into the monetary and fiscal system recently had quite a lot to say about the objections to clearing banks and insurance companies owning each other. Officially there is no policy in Britain because no such case has ever arisen. All the same there is a widespread belief that the Royal (based in Liverpool) did take discreet soundings about what would happen if it bid for Martins Bank (also based in Liverpool) when the bank was up for grabs. It did not bid.

Let speculation thrive

The gilt-edged market has had a startling year. January saw the top of an 18-month bull market, prolonged long after the know-alls had expected the turn. Then the bear, when it came, was large and grisly. The market fell more sharply than at any time since the war. The Financial Times 20-year government stock index fell from its January high of 91 to below 75 in June. A subsequent attempt at a rally fizzled out. So the long-term bear may still be at large.

Whether or not this is so, it is clear that, as *The Economist*, among others, suggested last year, one consequence of the government broker no longer supporting the market is more rapid and more violent movements in the price of gilts.

So much so, in fact, that three jobbers have retired from the market in the past few months, leaving only six. And of the six only two, Wedd Durlacher and Ackroyd and Smithers, are

Continued on page 36

Some jobbers in the gilt-edged market have already fallen out of bed. What is needed is both a reinforced jobbing system and a more speculative market

Ins and outs of money flows

Just in time for the first anniversary of the credit revolution, the Bank of England has produced an impressive study of the flow of funds in Britain*. This is a relatively new tool of analysis in this country, a post-Radcliffe innovation. The data, which is taken back to 1952, throws some light on how shifts in fiscal and monetary policy work their way through private financial channels. But, needless to say, not everything can be quantified.

One point to emerge is the extent to which the impact of the unprecedented swing into surplus of the government's finances in the post-devaluation squeeze of 1968-70 was diluted, first by the authorities' support of the gilt-edged market and then by massive inflows of funds from abroad. Another point, not unrelated, is the disproportionate, and finally unworkable, burden placed on the commercial banking sector in the bad old days of credit directives and the interest rate cartel.

How the accounts work

The more familiar national income accounts focus on real activities rather than financial activities. They express economic flows starting from the fact that output both generates income and is used to meet the demand generated by various forms of expenditure. The links between national income accounting and financial transactions arise from the fact that those who receive income are not necessarily those who spend, since spending can come out of saving or borrowing; and those who save are by no means necessarily those who invest in physical assets like buildings and machinery.

The common point of departure

*An introduction to flow of funds accounting: 1952-70. Bank of England. 50p.

The money go-round

between the national income accounts and the flow of funds accounts is the financial surplus or deficit of each of the four main sectors of the economy, public, personal, company and overseas. In national income terms this measures the gap between (1) a sector's direct income (in wages, salaries, profits or rent) adjusted to reflect its net transfers with other sectors (in taxes, grants and interest and dividend payments), and (2) its outlays on current consumption and capital investment. For the overseas sector the financial surplus (or deficit) would mirror Britain's deficit (or surplus) on the current account of its balance of payments: when a country manages to buy abroad more than it sells, it is in effect buying on tick, swapping financial assets for real goods and services. For the economy as a whole, the surpluses and deficits of the individual sectors balance each other out. If the government moves into financial surplus as a result of a restrictive fiscal policy, it puts an equal and opposite pressure on the financial balance of the other sectors of the economy.

A financial surplus also measures the amount a sector has available either to add to its financial assets, say through purchases of gilt-edged, or to reduce its financial liabilities, say through repaying bank loans. The new accounts detail these transactions, tracing the transactions of banks and other financial institutions, as well as those of the public, company, personal and overseas sectors. What is intriguing about these data is that they show just how important the financial intermediaries are in channelling funds between the other sectors.

The point of the sharp swing in government finances following the November, 1967, devaluation of the

Dollars flow in

pound was, of course, precisely to put pressure on domestic demand in order to free productive resources for exports and import-saving. By all conventional yardsticks the squeeze was massive. As the chart shows, the swing in the public sector's financial position from deficit into surplus between 1967 and 1970 was of the order of £2½ billion—or 7 per cent of gross domestic expenditure at the time. Moreover, the fiscal squeeze was backed by the then usual package of monetary restraints, above all tough credit directives and (until 1970) by the requirement that importers place deposits with the government against purchases of goods from abroad. The combination did eventually bite. But the impact on the domestic financial markets and, more especially, on company liquidity was both slower to come and less severe than might reasonably have been expected. Why?

The borrowing requirement

One technical point has to be made before answering the question. The usual measure of the impact of government financing on the domestic money and capital markets is the government's borrowing requirement. This can differ from its financial deficit (derived from the national income accounts) to the extent that the authorities engage in certain other transactions (such as the refinancing of export credits or the acceptance, or repayment, of import deposits), that must equally be financed.

The table detailing the swing in the public sector's finances shows both measures. And it is this table that tells the basic story: how in 1968 the authorities simply botched their opportunities, by giving the government broker instructions that effectively undid much of the work of basic budgetary policy, and how in 1969 and 1970 the domestic squeeze was swamped by the very success of the earlier decision to devalue the pound.

Gilts and currencies

It is true that in 1968 the financial balances of both the central government and the public sector were still in deficit. But so, too, was the balance of payments. So the authorities were taking in sterling (against net sales of

The flow through the intermediaries 1967-71 average £6134 m

foreign exchange made by the Exchange Equalisation Account) to finance the shortfall in overseas earnings. Indeed, this intake was more than sufficient to cover the central government's own borrowing requirement (if not that of the public sector as a whole). The margin might have been used to reduce Whitehall's indebtedness to the banking system, reinforcing the squeeze on the financial markets.

But that opportunity was missed. Instead, in pursuit of their bad old policy of bucking any sharp falls in gilt-edged prices, the authorities wound up underwriting a massive rundown of government stock by the non-bank private sector. The OECD later estimated that this fiasco accounted for roughly half of the above-target growth in the money supply in Britain in 1968.

Over the next two years what mattered most was the swing into surplus of Britain's balance of payments. The authorities misjudged this. That was not too surprising: even the outturn of the current account of the balance of payments is notoriously hard to predict. And, in the event, the inflow of foreign exchange on the capital accounts was also rapidly building up.

There are two points to be made here. First, any net inflow of foreign exchange must be financed by sterling counterpart funds and if the amount of sterling needed on this account cannot be met from a surplus on the government's own financial accounts, then it must be borrowed in the domestic markets. Second, in both 1969 and 1970 the inflow of foreign exchange was not simply a passive reflection of trade flows and the decisions of foreign investors. British companies deliberately, and successfully, solicited funds from abroad to ease the squeeze on their liquidity at home. Some firms with overseas affiliates transferred funds over intra-

company accounts. Others used the leeway provided by the return of confidence in sterling to swing the balance of trade credits (or leads and lags) in their favour.

Pressure on the banks

Companies also turned to the banks. This was the time when British firms first turned heavily to borrowing in foreign currencies to finance their domestic operations. It was also the period in which the Bank of England's overworked credit directives on sterling lending broke under the strain—not least because the artificial pegging of clearing banks' lending rates to Bank

rate made bank loans so temptingly cheap to cost-conscious company treasurers (especially after Bank rate was reduced in March, 1969). By the summer of 1969 the London clearing banks were £220m overlent. Even so, in 1969, exceptionally, companies actually ran down their bank deposits.

Nor was this all to frustrate the bankers. The 1969-70 squeeze had also helped to build up the inter-company lending market, as firms desperate for funds were prepared to by-pass the banks.

The brakes come off

Until 1971, also, that is until the credit revolution, the banks' share of the personal borrowing business was dimly small. Even in the "good" years their share was not much over 10 per cent. The hire purchase firms did not do much better. The running was left almost entirely to the unregulated (and tax-favoured) building societies, although insurance companies also had a corner of the massive market for house-purchase lending.

Then, in 1971, bank lending (other than home loans) to the personal sector shot up to £585m, or 23 per cent of total borrowing, the bulk of the gain coming, not surprisingly, in the second half of the year. A further £1,085m was extended in the first half of 1972 alone. Home loans, too, were up. The revolution was on.

That swing in government financing

Other domestic borrowing:	— 27	313	222	2,139
(of which: non-bank holdings of gilts)	(— 208)	(361)	(93)	(1,848)

Figures for financing may not add up to the total domestic borrowing requirement because of minor intra-sector debt transfers (included in the borrowing requirement of the local authorities and public corporations above).

sizeable operators. Since the jobbers make the market, by quoting bid and offer prices and dealing, the actual existence of the market is in question; and few would maintain that it is entirely satisfactory.

The three jobbers who left the market were a mixed bunch. The largest, and the first to leave, was Smith Brothers. It has traditionally been a jobber in industrial and mining stocks, and entered the gilt market only 14 weeks before it decided to bow out. Its entry was a serious attempt to widen the base of the market, since it is comparable in size to Wedd and Ackroyd. But it lost money fast. The main problem was the sheer speed of the drop: it had expected maximum daily movements of a point in the prices of long-dated stocks and $\frac{1}{4}$ of a point in shorts. In the event, even shorts sometimes dropped by 2 points a day. And four out of its eight directors had to be diverted to gilts, instead of the one it had intended, so that plenty of profitable opportunities for dealing in equities were being lost.

Next to go was Pyke and Bryant, a small, specialist jobber with 12 years in the market. Then Francis and Praed stopped too. Francis used to be the largest gilt-edged jobber, before Wedd and Ackroyd came into the market, and the only sizeable jobber in gilts apart from them and Smiths. So their retirement meant the removal of two of the big four within a month.

The cause of these upheavals was removal of the government broker's automatic support from the market as part of the new deal for competition in the City. It was a long overdue and clearly desirable switch in official priorities. The new policy is to have uniform treatment of various types of financial institutions and to run monetary policy through open market operations and reserve ratios (with occasional help from special deposits), leaving prices to ration credit. But market forces can only work properly in a market, and the excellence of the gilt market has been built up over the years through which it has been automatically supported. The question is whether its foundations are strong enough to survive in the new, unsheltered conditions, and what improvements can be made.

Reinforcing the jobbers

The first need is to strengthen the jobbers. *The Economist* has already suggested (July 15th) a possible blueprint for a backing system for jobbers akin to the syndicates of Lloyd's

underwriters. The idea is that industrial and commercial companies, and perhaps individuals, would back the jobbers and enable them to do the big deals that are necessary. The jobbers would act as agents for these syndicates. Concentrated participation by financial institutions would have to be avoided, because of possible conflicts of interest: a bank wanting to put through a large sale should not be connected with a jobber who might be about to take on the stock. (In America, where the jobbing in Treasury bonds is done by 20 large banks and brokers, a bank's investment side is restricted from deals with its dealing department in many situations).

The alternative to some reinforcement of the jobbing system is that large and medium gilt deals will come to be made outside the market, as often happens in equities where the markets are small. This would be unsatisfactory, however, because the price of stocks would be set by the smallest deals, although there would be feedback from outside deals. Also, one of the main needs of a good market—information—would be reduced sharply. It would be curious to have the large and medium deals cut off from the biggest deals of all—the issue of new stock through the taps.

Apart from strengthening the jobbers so that they can steady the market, conditions could be improved by strengthening the speculative element in the market. That may seem curious, but bear speculation can steady the market because a bear is a much quicker buyer after a drop than a new buyer. The bear has a profit to defend and will move fast to secure it. He may well be happy to buy on the way down if he is showing a reasonable profit. But the new buyer will

Bears in a china shop

want to be more sure of an upturn before buying: indeed, there must be an upturn for him to want to buy, whereas for the bear there need not be. A good illustration is provided by the market's knowledge in the first half of this year that there would be large forced sales of gilts by the clearing banks. There was no limit to the size of the drop that this could cause. But had there been bears, they would have sold as soon as the situation became clear (or before) and would have been ready to receive the clearers' stock when it came. The drop would have been more orderly, and some of the jobbing casualties might have been avoided.

One encouragement to the bears would be for the Bank to introduce a register of them. At present gilt-edged operations have to be settled with the actual transfers as soon as possible, instead of there being an account, as with equities. And nobody is allowed to go short of stock. So a bear must either have a large body of stock at his disposal or be able to borrow it. Even if he has a body of stock he wants to sell, it may well be in a different part of his organisation. Either way, selling becomes a cumbersome and time-consuming operation. And the essence of speculation is speed. A registered bear, as in America, would be able to go short without further ado. His sale would effectively be covered by stock from the Bank, until he covered with a purchase.

"Z" accounts or "re-pos"

Another encouragement to the speculators would be if the Bank were to allow "Z" accounts to a far wider range of gilt market operators than the discount houses and the few brokers who have them at present. "Z" accounts with the Bank enable the holders to sell a stock after holding it only a day. Other operators cannot sell until they can deliver the stock. But when they buy, it can take a week to get the deed and another for the certificate, after which a sale can occur. Those with large blocks of stock can use old purchases from their block and replace them with the newly bought stock, but this is cumbersome and slow. It also discriminates between operators arbitrarily. If a wider group of operators were in a position to sell soon after buying, they would be keener to buy and would require a smaller profit for doing so. This would make recoveries in the market come sooner.

Repurchase agreements are agreements with the Bank that it will

exchange bills (or other liquid assets) for gilts for a specified time and with specified repurchase prices. They would differ from the old automatic support in being at the Bank's convenience. But much more important is that they would enable the Bank to signal to the market. The prices at which it does "re-pos" would show its view about interest rates, enabling it to steady the market. Re-pos are the practice in America and enable the Fed to signal. The Bank's vast involvement in the market through its £2½ billion-£3 billion borrowing requirement in 1972-73 makes its view about the course of interest rates necessary to fund this, and to achieve its monetary objectives, of prime importance; and, if known, a stabilising factor. The obvious danger would be the temptation to use "re-pos" to buck market trends in the name of stabilisation.

It is tempting to believe that reform is no longer an urgent issue now that the storm has been weathered. Certainly the elephantine behaviour of the clearing banks, who found themselves over-committed by clients' lending ceilings that had been enthusiastically increased last year, is unlikely to be repeated. They got very short of cash, with interbank rates going up to 9 per cent

at one stage: some nimble operators were making a turn by using their bank advances to lend back at a profit, sometimes even through the same branch. The resulting forced sales of gilts hit the market just as it was on the way down. Presumably the clearers will become more adept as they get used to the new competitive credit environment.

But there are plenty of good reasons for expecting a further fall in gilt prices. Restraint of monetary expansion has not been attempted yet. There is the £2½ billion-£3 billion deficit to be managed, and autumn is the worst season. The Government could only sell £1.8 billion of gilts to the non-bank private sector in 1971, the best year ever for gilts, and this year there will be competition for the funds from the private sector. The inflationary outlook has got worse, and if there is a prices and incomes policy that looks like working, the market's joy would be restrained by the almost certain prospect of tighter monetary policy. American interest rates, which are a strong influence, will probably go up further after the presidential election. So the autumn could see another sharp fall. It would be nice if the market were ready for it.

Are wits enough?

The merchant banks are wondering which way to go next. During the 1950s and 1960s the more dynamic ones grew by extending the range of their services from pure banking, and export financing through acceptance credits, to corporate finance and investment management—and from there to an ever-broadening battery of related financial activities like leasing, insurance and running unit and investment trusts. The more far-sighted seized the opportunity of the growth in the Euro-dollar market to boost their balance sheet totals. The attribute that gave the merchant banks a special place in the City's—and their own—esteem was their mental flexibility and agility. They may not sit on very large deposits (the clearing banks have four times as much as the members of the Accepting Houses Committee), and they may not—as on the continent of Europe—own powerful segments of industry; but they pride themselves on the ability to do a deal, arrange a financing, bring out a new issue, manage a merger, and generally minister to the more specialised needs of their clients better than any other class of competitor.

But challengers are looming up on several sides. Since the Government's new competition and credit philosophy was introduced at a time of monetary ease, with the money supply growing at a record rate, those banks that were previously subject to quantitative restrictions have been able to go out and market their loans. This in turn has made it worth while to become more active in the search for deposits. New banks have emerged. In the case of some, like Wintrust and Corinthian, the ratio of shareholder funds to deposits has to be high. But as reputation grows, then so do the deposits. The Burston Group, which, in one form or another, has been going for 17 years, has a much more extended ratio. Now that quantitative restrictions have gone, it is up to the persuasiveness of the banker to attract business and up to his skills to make profits.

Dividing lines have become progressively harder to draw. There used to be the clearers and the rest. And the rest were divided into those banks that had made it into the merchant bankers club, the Accepting Houses Committee, and those that were on the fringe.

Merchant banks are meant to live on their wits. But they are going to need brawn as well as brain

In from the fringe: British Bank of Commerce's Stone, Keyser Ullmann's Stoutzker, London and County's Caplan and Triumph's Whyte

But in the frenzy of the bull market and the property boom, property companies have started up their own banking operations: there is one at Star (Great Britain) and another at Bovis, the builders. Finance companies now offer some banking facilities and advisory services. Clearing banks now own merchant banks: the National and Commercial has Williams and Glyn's; National and Grindlays has bought out the minority holding in Wm Brandt's Sons; National Westminster started its own, County Bank, and Midland owns a third of Samuel Montagu's parent, the Montagu Trust.

The threat posed by the clearing banks is perhaps the most serious. They are muscling in on the strength of their deposits. The writing on the wall was, perhaps, the £360m raised to finance the development of British Petroleum's North Sea discoveries. A great part of the British contribution was provided by the clearing banks. In the bad old days of rigid cartelisation, such a commitment to medium-term financing, and in a highly complex and relatively risky form, would have been impossible. British Petroleum's merchant banks would have had to rack their brains to think up rights issues, debenture issues, consortia lendings, Euro-dollar borrowings and the whole gamut of clever and ingenious things merchant banks are paid to think up. But BP's merchant bank, Lazard Brothers, was one of a troika of managers which included Morgan Guaranty Trust of New York, and BP's clearing bank, National Westminster. Now that Nat-West has got a notion of how the thing works, it can go along to an oil company and offer to arrange another consortium deal—and to take 10 per cent of the amount to be subscribed (perhaps to Shell, whose own bankers, Lloyds, were hostile to the BP scheme, though they are likely to be dragged, however reluctantly, into a similar package for Shell). Merchant banks cannot write that kind of business—and so will not get it. The difficulty that the clearing

banks still suffer from is that of attracting merchant bankers to work in the bureaucratic behemoths—and at salaries which do not upset the mainstream mandarin clearers. The simplest way out is to have a tame merchant bank which is wholly owned but autonomous, but somehow, the tame ones have not yet sparkled.

Then there are also the new (for Britain) banques d'affaires, of which the most famous and successful is the organisation created by Mr Jim Slater: Slater, Walker Securities. In the short period of its existence, Slater, Walker's capital resources have far outstripped those of even the biggest merchant banks, Hambros and Hill Samuel. The alternatives are: to beat him, to join him, to play a different game, or to try and have it all ways.

There is a real choice that merchant banks have to make. Either they, or their satellites, decide to become aggressive buyers and sellers of companies, which means getting deeply involved with their banking and banking services clients—or they can maintain the lawyer-like detachment of the professional, and take their profit from the interest rate differential, from fees, and from diversifications in the financial field. Hill Samuel, for example, makes about two-thirds of its profits out of banking (of which straight banking provides about 60 per cent and fees the rest) and the other third from shipping and insurance. It still has to get a larger capital base to expand all its activities, and has, in common with several others, used the Eurobond market for fairly substantial borrowings. The bank feels that to become a stockmarket-orientated bank, of the Slater, Walker mould, would drive clients away. The attitude is understandable; there is a real fear in industry that merchant banks are simply talent scouts for the takeover merchants.

There is another way out, and that is to try to have one's cake and eat it. This difficult operation is being done

with delicacy by N. M. Rothschild and Sons. On the one hand there is the bank. And on the other there is the Rothschild Investment Trust, which goes after special situations in the stock market and makes some pretty aggressive bids. The name of Rothschild is kept firmly in the financial news, and the equity stake in the trust owned by the bank provides a faster rate of capital growth than any of the traditional activities.

The need for capital

Even to stay in relatively straight banking, resources have to be increased. Mergers would seem, on historical evidence, one way of bringing this about. In fact, the number of bank mergers—outside those hundreds that led to the formation of the clearing banks—has been fairly small since the war. The largest series, of which the architect was Mr (now Sir) Kenneth Keith, culminated in the formation of Hill Samuel in 1965; this followed the merger of Philip Hill and Higginson in 1951 and the incorporation of Erlangers in 1959. But Sir Kenneth clearly reckons that those kind of mergers are not what is needed any more—all they bring are more deposits, a little more capital, and a very great many directors. In retrospect, the logic of the merger that he tried to bring off with the Metropolitan Estate and Property Corporation has many more supporters now than it had then. Not only were the terms opposed, but there was a great amount of moral opposition. One of the most influential moralists was the Prudential Assurance company. Two years later, it appears as fairly godmother to the takeover of the Central and District property company by Keyser Ullmann. Things change fast in the City.

The most spectacular merger is the one proposed between that property-laden bank and one of the whizzers of the fringe banks, Dalton Barton. The combined bank will have lendings of

We help in all sorts of wild projects.

East Africa, 1971. With a beautiful climate, hordes of wild animals, and a burning need for foreign currency.

The answer—develop the rich potential tourist market. The problem—raising funds to provide the facilities.

National and Grindlays Finance and Development Corporation helped by making finance available.

It won't be the last time that National and Grindlays—with branches, subsidiaries and associates in the Middle and Far East, India, Pakistan and Bangladesh, and all over Africa—help the developing countries, by providing vital funds in the places where they can do most good.

If that's wild, we're proud of it.

*bank is member of Accepting Houses Committee.

around £110m, and net assets of around £100m. In a few big jumps, Keyser Ullmann/Dalton Barton will have joined the very big league. It is interesting to note that neither bank is a member of the Accepting Houses Committee. As the table indicates, membership of that body does not demonstrate either size, or safety (as judged by the capital deposit ratio) or anything much that anyone should take any notice of any longer. What it does denote is members of the banking establishment. It is about time that it got together with the Issuing Houses Association and formed a new associa-

tion that would lay down the ground rules for banking in the new conditions of flexibility. The speed of Dalton Barton's growth has left many critics in its wake, and the merger of this fringe bank with another merchant bank not in the club, has also produced its detractors, who doubt whether a construction of this size, built with such suddenness, can be solid. No doubt the same was said when some of today's stalwarts were in the process of setting out on the path to ultra-respectability. The next year is going to be a particularly interesting one to watch developments in the non-clearing banks.

The foreign legion

One fall-out from the ending of ceiling controls is the direct and accelerating competition British banks now face from foreign banks in their corporate business. But it would be misleading to suggest that foreign banks have only just become important in British domestic banking. Far from it.

Only those foreign banks which set up in London in the later 1960s suffered positive discrimination during the era of ceiling controls, being given derisory limits for their sterling lending. Others, which had been here for a long time—and many can date

their operations back 40 years or more—had already built up substantial sterling business before the ceilings came in. They suffered no more than the smaller British banks.

And, despite the ceilings, the impact of the foreign banks on the British banking scene has never been greater. New financial techniques like factoring, leasing, certificates of deposit and credit cards have all come from the other side of the Atlantic; and many were actually introduced here by the American banks themselves. More than that, some would

Overbanked though Britain is, foreign banks in London think they can get the business of the larger internationally-minded British firms. Why? Their answer is simple: aggressive marketing and a wider range of more sophisticated services

even say that the newly competitive philosophy behind all the developments in British banking in the past few years, not excluding last year's credit revolution itself, can be attributed to the influence of foreign banks. It should not be forgotten that Citibank first introduced to London the notion of a base rate, and that was back in 1969.

Who matters most

But now the sterling market has been opened up to foreign banks which have arrived in London only in the past few years. At the same time, many long-standing foreign banks, particularly American banks, are now putting the full force of their superior marketing into building up their business in Britain. So far the main impact of the new credit control system has been felt in the volume of foreign banks' business (see table). Their sterling advances to residents in Britain have risen by 87 per cent since September, 1971, when the ratio of foreign bank lending to London clearing bank lending was roughly 1:8. Although the clearers themselves have increased their own lending by over 50 per cent since then, the ratio is now 1:7. Foreign banks' sterling lending to non-banks is roughly double that of the accepting houses.

There are now well over 230

foreign banks represented in London in one way or another. But then only a small number are significantly involved in sterling business. Exactly who does what in the sterling market—and how much of it—is a closely guarded secret: foreign bank branches here do not have to publish individual statistics of any kind. However, it is probably fair to say that only the leading American banks and the odd Canadian, Australian or European bank (Bank of Nova Scotia has branches in Glasgow, Edinburgh, Belfast and Slough as well as London) are of any importance. It seems to be mainly the newer American arrivals and the Eurocurrency consortium banks which are trying to start up from scratch. In addition, some European banks are building up their contacts with British companies with an eye on Britain's entry to the EEC. Crédit Lyonnais, for example, has just opened a Glasgow branch.

Other banks are, of course, involved in a small way. So far this year, for example, three Bangladesh banks have announced London operations—mainly to channel funds from British residents back home. Similarly, there are two Irish banks with six London branches between them: their purpose is mainly to serve the Irish community here.

Citibank, which reckons to be in the

same league as the big merchant banks, is certainly the largest. It is involved in two separate areas of business: consumer finance and corporate business. On the retail side it has taken over the seventeenth largest of the finance houses, Campbell Discount, and merged this with its own small consumer finance company, National City Trust. It pioneered the "money shop" idea, and now has 28 of these, with a target of 50 for the end of 1974. The distinctive aim of the money shop is to destroy the anonymity of the finance house in the mind of the consumer by getting him to borrow direct rather than through a retailer.

It should be emphasised, however, that Citibank, in company with other foreign banks, has no intention of becoming involved heavily in what it sees as the expensive business of gathering retail deposits. Although it does offer savings accounts through its money shops, it has, to date, avoided advertising them. Nor have the American banks advertised their minor cheque account facilities, offered as a convenience to employees of their large corporate customers.

What they go for

Apart from such excursions, the foreign banks are aiming only at the wholesale market. It is probably fair to say that until 1960 the vast majority of foreign banks' corporate business related to their country of origin. Thus a Canadian bank would finance a British company's trade with Canada or arrange working capital for the British subsidiary of a Canadian company. American banks in particular built up their British business on the back of American companies' subsidiaries here. Now foreign banks can also claim substantial corporate business which is not home-based. Their main targets for the future are the medium-sized and large British firms, particularly those with international requirements: this makes business not only for the British branch but also for the wide overseas networks which American banks in particular have been building up so assiduously over the past decade.

The most important side of foreign banks' sterling business is still the provision of loans either for working capital or for investment. American banks have led the way in promoting term loans to replace the overdraft. The interest rate either moves with base rate or is revised at fixed intervals of between three months and a

How to keep in touch with KUWAIT.

Get in touch with us. We're the Gulf Bank of Kuwait. One of the largest banks out here, with assets exceeding £110 million.

And, not surprisingly we know the local market better than anyone.

We keep in touch with outside markets through a world-wide correspondent link with other banks.

So, if you want to conduct any business transactions with Kuwait.

Or want any information about a particular market in the Gulf area.

Or just want the services of a bank in that country, drop us a line.

We can help.

P.O. Box 3200,
Kuwait, Arabia.

Head Office: Abdullah Salim Street, Kuwait
Telegraphic Address: Gulfbank, Kuwait
Telex: 001 Telephone 22076

year according to interbank rate (a technique borrowed from the medium-term Eurocurrency market).

However, the foreign banks are also trying to sell a broad range of corporate banking services. This is particularly true of some American banks with merchant banking subsidiaries. Bankers Trust International, the foremost of these in sterling business, has just become the first foreign bank to manage a sterling new issue. This was for G. M. Firth (Metals), in which, in true merchant banking tradition, it had previously built up a stake.

It pays to fight

Ask a foreign bank why it can expect to make headway in overbanked Britain and the first answer will almost certainly be "marketing." As one American banker bluntly put it: "Greater aggression is probably our biggest advantage." A list of foreign banks' other selling points might include: speed in taking decisions; better international branch networks than British banks (smaller in numbers but more select in location); and the width and sophistication of their corporate services. Few British banks can boast an international cash management service, for example.

A glance at how Citibank is organised in Britain gives some idea of the kind of competition which British

banks can now expect to face from an increasing number of foreign banks. Citibank has a separate department in London for British corporate business. This is divided five ways on an industry basis (an idea later taken up, incidentally, by head office in New York). These industry divisions are petroleum/chemicals, transportation (covering shipping and airlines but not car manufacturers), consumer products (pharmaceuticals, food, entertainment, etc), engineering (which ranges from cars through electronics, mining and metallurgy) and City activities such as insurance (Citibank are bankers to Lloyds' American Trust Fund).

Altogether Citibank has some 50 "account managers" whose sole job is to identify likely companies all round the country and sell them the bank's services. Provincial companies whose experience of banks has in the past been limited to the clearing banks' local branch managers are hardly in a position to resist.

One final point: for all the foreign banks' enthusiasm to compete with the British banks for comparable business, this is still a very minor part of their activities here. To judge from the figures of advances, indigenous British business accounts for well under 10 per cent of the foreign banks' reason for being in London. But there are new pressures to build this up.

Buddy, can you spare a Eurodime?

It is probably too crude to say that the rush of American banks into London a few years back represented no more than a stampede into the lucrative and explosively growing Euromarkets, but the prospect of extensive and fast growing Euro business promised newcomers that branches set up for other reasons (including prestige) might pay at least part of their way. Now even that modest target has become more elusive. Since the heydays of 1968-69, the growth of the Eurocurrency markets as a whole has slowed down; the proportion of dollars in those markets has diminished; the share of the business done by London has become smaller; and, to cap it all, the proportion of that London business done by the colony of American banks in the City may have contracted.

This harsher climate has already induced American bankers to adopt the British habit of wringing their hands

and declaring that matters have never been blacker and that the outlook is gloomier still. Many have a good deal to complain of in a centre where most have never done very much domestic business, where rents are among the highest in the world, and where the costs of recruiting the specialised staff on which the Bank of England insists have been bid sky-high. While the Eurocurrency market was growing hand-over-fist it was easy enough to rake in the profits there and to ignore the disadvantages of a London location on other counts. But the recent slowdown, in a market so geared to rapid expansion, has brought out the competitive claws. Intense competition has narrowed the spread for bank lending to good names, and the need to keep business going (and the search for more lucrative lending spreads) has channelled more lending to borrowers in Africa, Asia, the Middle East, as well as to an increasing number of second

Crédit Lyonnais; over the border

For those American banks in London in a position to exploit them, the new opportunities of the credit revolution may have come just in time. The salad days of their Eurodollar business could be over

and third-class names in Europe.

Partly as a result, the flood of American banks into London has slowed down to a trickle, and the Bank of England has probably been sensible to decide that it will not permit any more whose parent banks cannot show assets of at least \$1 billion. No fewer than 16 of the 34 American banks now in the City came with a concerted rush in 1968 and 1969. Since then, only three more have arrived. Indeed, the most notable American newcomer this year has been not another bank at all, but a watchdog from the United States Comptroller of the Currency who arrived at the end of August with a brief to exercise permanent supervision over the American banks here (complementing the controls exercised under British law by the Bank of England).

Not just temporary

If this pinch on their Eurodollar prospects were thought to be merely an abnormal aberration, the bankers would not be so bothered. The trouble is that all the evidence suggests that it was the rapid growth of 1968-69 that was the aberration and the cooling pace since that represents the more "normal" pattern. The Euromarkets received a very special boost in 1968 and 1969 from President Johnson's restrictions on overseas direct investment and bank lending. As a result of the investment curbs American companies were forced from New York to the Eurodollar market to finance expansion abroad, while the restrictions on overseas lending by American parent banks shifted more of this business to their offices abroad. At the same time, the American credit squeeze, which began in late 1968, gave the Eurodollar market a further boost, while regulation Q, in preventing American banks from securing all the funds they needed at home, turned

them into heavy borrowers from their London and other overseas branches.

The tables show just how much of a boom these factors produced in the world's Euromarkets, and more especially for London and the American banks here. In the two years to the end of 1969, the Euromarkets more than doubled in size (with dollar liabilities accounting for more than 80 per cent of the total); London's share of the total business rose to just under 50 per cent, and the American banks got almost two-thirds of that.

Since then, the initial impetus to the markets' growth given by President Johnson's restrictions has worn off. Indeed, the outlook is that these restrictions will be gradually dismantled by President Nixon once the dollar begins to recover strength and some progress is made on negotiating a reformed world payments system—both of which could happen around late next year or early 1974. Nor is that all. The special contribution made to the Euromarkets by America's regulation Q has been absent since June of 1970, when this restriction was abruptly removed to give American banks in the United States the added liquidity it was thought they would need to absorb the shock of the Penn Central collapse. The response was shattering: the head offices of American banks promptly ran down their (relatively expensive) liabilities to overseas offices from a peak of \$15 billion in November, 1969, to almost nothing.

Small wonder, then, that in the past two years the expansion of the Euromarkets has been far less rapid, although still appreciable. Yet even this slower rate of growth has owed much to special factors, that are again diminishing. The differences between the business cycles in America and Europe created an exceptional amount of in-

terest arbitrage between national money markets and the Euromarkets in 1970 and 1971. In addition, a large part of the impetus behind the expansion that took place in these years was created indirectly by America's massive basic payments deficit, which not only fuelled world liquidity, but also led to controls on capital inflows on the part of surplus countries—a partial closure of domestic markets which forced the placement of funds on the Euromarkets instead. At the same time, the uncertainty created for exchange rates by the weakening of the dollar made Eurolending attractive in currencies expected to appreciate and borrowing attractive in those expected to depreciate, while interest rates rose sufficiently to provide borrowers in the first case and fell sufficiently to produce lenders in the second.

Many of these special factors have already lost some force. They could lose more still if, as seems just possible, the outlook for exchange rate stability improves further. The markets have already steadied since sterling came off its peg. A gradual recovery of the dollar and any reform of the world payments system would obviously contribute even more to stability. Moreover, the economies of nearly all the large industrial countries are now gradually moving into step in an almost universal expansion of output and trade, so that interest differentials should become less marked.

Creamed by the few

To be sure, the proportion of London's Eurobusiness done by American banks in the City has probably not contracted as much in reality as the Bank of England's figures would suggest, if only because some of this business is now done by the new medium-term Eurobanks in which American banks

That decline in the growth of the Euromarkets

end-year	Total for all centres \$ billion	% change	London \$ billion	American banks in London \$ billion	% share of total
1967	24.2	+22	10.5	5.5	23
1968	38.0	+57	17.1	9.9	26
1969	58.2	+53	28.8	17.7	30
1970	78.3	+34	35.3	18.9	24
1971	100.4	+28	43.6	22.2	22

Data are for banks' gross foreign currency claims on nonresidents. The Bank for International Settlements put the gross size of the Euromarkets at \$100.4 billion at the end of 1971: the net size of the market, after allowing for double counting, was estimated at \$71 billion, and the dollar component at \$57 billion.

How UDT helps make money work harder.

That's precisely the function of UDT—to make money work harder. UDT can help in money matters, devising methods of making money more productive. These methods answer the needs of companies for new equipment, more capital, or credit for their customers. For private and professional

people, UDT provides help for them to prosper and improve their standard of living. Here are some examples of these UDT methods at work. They show that when money really matters, United Dominions Trust can be relied upon to make it work harder. Perhaps UDT could help you.

The UK agent of an overseas car manufacturer has been entrusted with the job of buying a range of British machine tools for a car assembly line. The financing of the whole deal has been speeded up and simplified with the help of International Finance and Services Ltd, export finance house in the UDT Group. The overseas buyer is given credit for all purchases from the various machine tool suppliers under a single financial agreement. In turn, the suppliers' part in the deal is concluded with a cash payment in London.

Local schoolmaster has just completed an extension to his house. It was paid for by a UDT Key Loan, making it unnecessary for him to cash in his savings.

A property development company wishing to construct an office and shopping complex requires a bridging loan to cover the period of the development. Old Broad Street Securities Ltd, the merchant banking arm of UDT, has provided the major part of the finance. Being acknowledged specialists in this field, they are able to tailor the arrangements to the specific requirements of the company.

HELLENIC INDUSTRIAL DEVELOPMENT BANK ETBA

Actively participating in the National Government's effort for the development of the Greek economy, the Hellenic Industrial Development Bank (E.T.B.A.) has intensified its activities, in order to offer a substantial contribution to the country's economic revival.

To this end, E.T.B.A. sought to establish co-operation with world-known financial institutions and major foreign banking establishments. E.T.B.A.'s new orientations calling for its dynamic presence both in Greece and abroad has made it necessary to reorganize the Bank's offices in New York and Cologne and to establish representatives in Paris, Milan and Tokyo. Thus, 1972 has found E.T.B.A. at the decisive stage of materializing its investment programs which were studied and elaborated last year; the Bank's reorganization and interconnection with foreign Banks being the basic conditions under which key industrial investments projects may be carried out.

The Bank's efforts to expand its loan financing activities were speeded up during the past year. Thus, total loan approvals during that year increased by 17% and loan granting by 11.5%, compared to those of 1970. The expansion of the Bank's loan financing activity reflects the growing interest of private enterprise in new investments within the framework of the country's economic development.

The basic principles governing the Bank's activities in the Industrial Sector may be outlined as follows:

- Utilization of domestic raw materials.
- Preferential support to export-orientated industrial enterprises or units whose products are likely to replace imported goods.
- Support to provincial industrial enterprises.

In view of the foregoing targets, total loans approved to industry last year amounted to about 1,475 million drs. Moreover, on the approval of the appropriate currency authorities, the Bank extends medium-term loans to shoe manufacturers for working capital requirements.

The recently recorded sharp rise in the flow of tourists in Greece calls for substantial increase in hotel facilities. To help meet this requirement E.T.B.A. has approved loans to tourism, which last year amounted to about 716 million drs. Out of this amount, 79% went to tourist facilities in the provinces.

As a sector of decisive importance to the economy, Merchant Shipping has been the object of particular care on the part of E.T.B.A. Last year, loans approved to shipping amounted to about 1,701 million drs. and

contributed not only to the expansion and renewal of the merchant fleet but also to the development of the shipbuilding industry in this country. In 1971, loan approvals to shipping increased by 28.4%.

Total loans approved by E.T.B.A. last year amounted to about 3,970 million drs. In 1972, the total figure of loans to be approved in industry, tourism and shipping is expected to reach an even higher amount.

In addition to loan financing, the Bank makes equity investments, holding majority or minority interests, in various companies. By such equity participations, the Bank helps these companies to replenish their resources in capital and promote themselves into viable productive units. Thus, the Bank, far from competing with or superseding private enterprise, becomes its valuable supporter.

The Bank's ultimate goal is to transfer its shares to private investors, so as to release its funds for activity in other developmental sectors.

In addition to its activities in the financing, equity investment and promotion sectors, the Bank has assumed responsibilities for the realization of major infrastructure projects financed under the Public Investment Programme.

- These are:
- Development of industrial areas in Thessaloniki, Volos, Patras, Kavala, Heraklion and Chania (Crete).
 - Establishment of sea water desalination plants on certain islands and in other areas where there is shortage of fresh water.
 - Systematic exploration of the country's mineral resources.

Thus, E.T.B.A., moved by the principles of supporting and encouraging private initiative, of continuous and constructive participation in domestic and foreign business activities and of preferential aid to pioneer ventures, has offered substantial contribution to the long term financing of Greek Economy, and to the economic policy of the National Government.

have an important share but which are listed by the Bank of England among European and other foreign banks in London. It may be that, taking this business into account, the share of London's Euro-lending done by American banks has not declined at all.

But the business remains as concentrated as it ever was. Three years ago the American Fed's Mr Andrew Brimmer estimated that 95 per cent of the Eurobusiness done by American banks in London was done by 14 banks. A contemporary estimate by a well-placed source suggests that two-thirds

of the business is now done by only 10 banks: the Chase, Citibank, Bank of America, Manufacturers Hanover, Morgan, Chemical, the First National of Chicago, Bankers Trust, Irving Trust, and Continental Illinois. These are mostly the long-established banks here (the Chase came as early as 1872), and it leaves a pretty thin spread for the other 24, especially as most of these newcomers are not well equipped to take advantage of the new freedom to go for sterling lending. These smaller fry will need all their American ingenuity.

Nobody's hurting the building societies

When the Bank of England gave the banks freedom to compete for personal savings, it made a proviso that if the pressure of competition got too much for the building societies, some limits might have to be imposed on the terms offered for banks' savings deposits. But no such mollicoddling has yet been necessary; nor does it seem at all probable in the near future.

For the best part of the past year, the building societies have enjoyed a rip-roaring boom. In the first six months of 1972 alone, their total assets increased at an annual rate of 17 per cent, and lending was up by 44 per cent on a year earlier—although, because of the astronomic rise in house prices, the number of loans made was up only 14 per cent. This orgy of lending was made possible by an unprecedented inflow of funds, in flight from lower interest rates elsewhere, and from a dull stock market. The net increase in building society saving in the first half was no less than £1,154m, 36 per cent up on a year earlier.

And yet the banks had not been idly standing by. Just how much more they are lending to outsiders for home-buying is difficult to say because the figures are lumped together with home loans for their own staff. But the significant rise in this category this year must mean that the banks are much more willing to look at house finance for ordinary customers.

But not in the same way as the building societies, whose traditional role is to borrow short (with investors' funds repayable pretty well on demand) and lend long: their standard mortgage runs for 20, sometimes even 25 or 30, years (although, because of people moving, the actual life of the

average mortgage is only 8 or 9 years). To commit themselves that far into the future does not appeal to most banks. Although there have been one or two isolated reports of 20-year bank loans for house purchase recently, 5-10 years is much more usual. Individual banks differ in their approach; Barclays has recently introduced a formal scheme for 10-year loans for house buying and major improvements. National Westminster is also prepared to lend for up to 10 years. Some of the other banks are happier with a five-year commitment.

What it costs

The price of a bank home loan can vary widely, depending on the bank and on what security is offered. If the loan is secured by the property, or some other asset, the cost can be from 2 to 5 per cent over base rate. If the

We'll help them buy their own

Banks are trying to get more of the home loan business. But somewhat faint-heartedly

Stepping up the rates

property is already mortgaged, the bank may be less happy to accept it as security and could charge towards the upper end of the scale. The most expensive way to borrow is to get a personal loan at a flat rate of interest which can work out at a true rate of 15 per cent a year or more.

A different market

Costs apart, banks essentially cater for a different market from the building societies. Not usually for them the young family man who hopes to own his suburban three-bedroom semi in 25 years time; but they will help someone who wants credit to buy a house now until he gets a lump sum on retirement in a few years' time, or someone who wants to buy a short lease, which the building societies would not look at. The banks' total share in the house finance market is probably no more than 5 per cent, even now; but, because of their flexibility, they are playing quite a useful role in greasing the wheels. And although they do not seem to be planning for all-out expansion in this field, the banks can be expected to increase this part of their business at least for the rest of this year. There is one possible snag: the recent letter from the Bank of England directing the clearers to cut back on loans for property companies. The banks have up to now assumed that this directive applies only to speculative property development, on which they had started cutting back several months ago in any case; but they are just a bit worried that the first letter might be followed by another one, perhaps in the autumn, telling them to clamp down on private borrowers too. Indeed, the banks are already less prepared to consider lending to personal borrowers buying a second property to rent out.

All this leaves the building societies very much with the lion's share of the housing finance market, one probably

not far off 90 per cent, allowing for mortgage lending by local authorities and insurance companies as well as the banks. And it is a share that is still rising. The Building Societies Association expects their share in the financing of new houses (which at present make up around a quarter of new mortgages, and will account for more in the near future as the present larger crop of new houses comes on to the market) to rise to 86 per cent next year, against 85 per cent this year and only 76 per cent as recently as 1970. With older houses, the societies' share is larger still.

The problem for the building societies is to attract sufficient funds to keep this expansion going. Investors are now more alert to interest rates, and the improving returns elsewhere have nearly halved the building societies' net monthly inflow since the beginning of this year. Despite their natural conservatism—and after having put the evil day off for a month, presumably under Government pressure—the building societies in early September therefore decided to raise their mortgage rates, having lowered them as recently as last November. The new rate, 8½ per cent, is back to the post-war high, and provoked the usual outcry.

But the building societies really had little choice. They not only had to keep up with other rates in the market, but on this occasion also had to make an allowance for the change in personal tax rates on unearned incomes next April, from 38.75 per cent to 30 per cent. This will have the effect of cutting the investor's gross interest on building society shares to the tune of about 3 per cent, and would have been enough in itself to force the building societies to raise their rates. The alternative—to fall back on the old standby of mortgage rationing—would be politically even less acceptable.

Overseas is over the Channel

The days are long gone since the ambition of a rising young man was to join a branch of a British bank in Pretoria or Calcutta rather than the coterie of clerks and decorative notables in a London office. The geographical focus of the British overseas banks has been shifting and with it the mix of business. Some of the changes have been forced on these banks, and accepted with reluctance, by the political vagaries of the third

world. But by far the most significant have been deliberate acts of policy. Certainly this is true of the latest and most fundamental—though oddly unremarked—shift in the British overseas banks' priorities: the decision to become truly international banks and to move, on the eve of Britain joining the common market, into Europe.

The most talked-about development has been the emergence of the British overseas banks as a force in the new

The British overseas banks too have been adapting to changed conditions. Theirs has been a revolution pursued with less éclat but no less élan

The giants among the British overseas banks (1971 figures)

	Total assets (£m)	Rank in the world's top 300	Number of full branches
Barclays Bank International	2,888	49	1,584
Standard and Chartered Group	2,513	59	1,397
Hongkong and Shanghai Banking Corporation	1,818	79	230
Australia and New Zealand Banking Group	1,768	84	1,500
Lloyds and Bolsa International	1,559	91	182
National and Grindlays	906	136	112

international money markets—indeed, even now, they are probably second only to the American banks in the London Eurocurrency markets. Between 1963 (when the Bank of England's detailed statistics began) and 1971, the foreign currency business of the British overseas and Commonwealth banks shot up very dramatically. The one major bank which gives a geographical breakdown, National and Grindlays, derived more than 57 per cent of its group profits in 1967-71 (and over half of its worldwide deposits) from its London operations. And even before the mergers and reorganisations of the past few years, the London operations of the banks that are now grouped into Barclays International, the Standard and Chartered Group, and Lloyds and Bolsa International were almost certainly at least as important in their results. The exceptions to the rule, not surprisingly, would be the Hongkong and Shanghai Banking Corporation and the Australia and New Zealand Banking Group.

To some extent, this growing weight of London simply reflects the fact that much of the bread-and-butter business of international banking today need

no longer be parcelled out among several geographical centres—at least not so long as countries eschew running backwards into capital controls. But this does not mean that the vast overseas branch networks built up over the years by the British overseas banks have now become little more than expensive embarrassments. Far from it.

There has been some pruning, particularly in some of the more politically volatile areas of the developing world. Moreover, some banks have deliberately transferred some of their traditional retail banking activities to locally owned, or at least locally controlled companies. But in other fields there has been expansion. Above all, there has been a shift in accent increasingly towards activities more normally associated with merchant banks in this country.

It was Bolsa and National Grindlays, two of the banks most exposed to political uncertainties, that led the pack into the Eurodollar market. (It has been groups like the Australia and New Zealand that have felt able to stick more to settled patterns of business.) In one sense, these shifts represented a return to first origins. Long before the British overseas banks branched inland to become dominant domestic retail bankers (and in some cases virtually also the central bankers) of the emerging empire, they were specialists in foreign exchange transactions and the financing of foreign trade. Indeed, in their early days they were called not overseas but foreign exchange banks.

Into Europe

But the positive break with legacies of the past is the banks' new focus on the rich Japan-Europe-America axis of the developed world, especially on the continent. The decision to go truly international and to tap these new pastures is the latest chapter in the story of the British overseas banks, one that began only at the very end of the 1960s. And it is this decision that has been the thrust behind the recent mergers and reorganisations that have

so fundamentally reshaped these banks.

There have been two prongs to the attack. First, there has been the move into the United States, in some cases by the outright acquisition of American banks, in other cases by the forging of links with American partners—Bolsa with Mellon, the Standard with Chase Manhattan, National and Grindlays with First National City. Second, there have been the links and rationalisations that produced Barclays International (wedding the traditional overseas outlets of Barclays DCO with the broader international stake in the developed world of Barclays proper) and Lloyds and Bolsa International. National and Grindlays got into Europe as early as 1969 through its acquisition of the European branches of the Ottoman Bank. (There was perhaps a conscious element of double insurance in this decision not to count only on the bank's link with Lloyds—a realisation that Lloyds may eventually plump to maintain only its Bolsa partnership.) The other major merger was the coming together of the Standard and Chartered. Here, too, a major target is the common market.

How successful the plunge will be is a story still to be written. Most of the new groups combine specialised foreign exchange expertise and an established presence in the developing countries (which are now likely to come into closer partnership with an enlarged common market), with experience in Europe itself. That is a powerful combination. Admittedly, the Standard and Chartered may find the going tougher. But the overseas bankers have gambled before. They are willing to gamble to win again.

How much growth (1963=100)

How much outstanding (1971)

Learning to live on credit

The consumer in search of a loan has never had it so good. Restrictions to bridle his spending have been abolished, the Chancellor has been heaping favours on him, and the financial institutions are queueing up to cater for his every need. The reaction, naturally, has been that money has been channelled into the kinds of spending formerly held back by controls. Between September last year, when the Bank of England announced its new deal on competition and credit control, and this July, buying in durable goods shops (discounting price rises) rose by well over 12 per cent, twice as sharply as it did in the rest of retailing. What is more, money owed to retailers and to hire purchase companies (which includes the financing of car purchases) shot up a full 22 per cent.

The first pointer to a change in climate was the publication in March last year of the long-awaited report of the Crowther commission on consumer credit. It recommended, very broadly, that all loan transactions should be put on the same footing, to be governed by a new Lending and Security Act; and that consumers should be protected by a Consumer Sale and Loan Act which would, among other things, make it mandatory to state the true rate of interest being paid. Of more immediate relevance, the commission wanted to see all "terms controls" (government regulation of the size of deposits and of repayment periods) abolished for good. At the time, this seemed little more than a pious hope. But come July, last year, after consumers had proved so resistant to his blandishments, Mr Barber did drop the controls—which affected not only the hire purchase companies, but also the banks which had previously been forced to abide by the same rules on their lending on items such as motor cars.

Lifting of the restrictions unleashed the predicted run on durables. But it also set the scene for greater changes to come. A certain amount of competition had already crept into the consumer credit business. While finance houses had not altogether abandoned deposits and shortish repayment periods on hire purchase deals, there was now room for more variation; some of the smaller companies, particularly, felt able to offer more attractive terms.

There was also some reappraisal of the finance houses' traditional way of

doing business mainly through their links with retailers. Their personal lending—which was not subject to terms control—had already greatly expanded during the period of government restrictions. Some of them have now taken this development further, into more flexible personal lending arrangements, and into opening up "money shop" type high street premises for direct dealings with the public. The pioneer in this field was a subsidiary of the American First National City Bank, National City Credit. Several others have now followed suit, among them the largest finance house, United Dominions Trust, which has already set up a string of eight "moneycentres" up and down the country in provincial centres, and plans to open several more before the year is out.

The idea is to attract people who already have a bank account but may resent their bank manager's stern paternalism, as well as that "unbanked" half of the population which finds an ordinary bank too intimidating. According to some bosses of finance houses, direct lending is going to be the most promising field, in line with the Crowther prediction that "connected loans" will gradually be replaced by direct loans. Others insist that there will always be a niche for their companies' traditional hire purchase business. But all agree that the clearing banks have been snapping at their heels pretty hard, which is one reason why most of the majors have sought, and been granted, banking status, in the hope that they may be able to lay their hands on slightly cheaper funds that way.

The banks join in

The banks have been going all out for the consumer market. And very successful they have been. In the year to this August, their loans for house purchase went up by more than half, and other advances to private borrowers by a staggering 118 per cent. Nor does this mean just the same old overdraft more liberally applied. The banks, rather cannily, now tend to offer would-be borrowers personal loans (even Lloyds, which used not to favour these, now has them), to be repaid at a regular monthly rate at attractive-sounding flat rates of interest—which, once converted into true annual rates, turn out to be rather

Continued on page 60

The credit game is not yet a national sport in Britain. But it promises to become one. Unfortunately the Crowther proposals for reforming the legal tangles have got bogged down

a new base for international investors

the cayman islands

The Cayman Islands in the British West Indies have become a major centre for international investors. This development has been encouraged by the fact that there is modern corporate legislation under which exempted companies and trusts are guaranteed freedom from taxes for from 20 to 50 years. The Cayman Islands are a British Crown Colony. There is complete political stability and a highly-ordered monetary system. Bank secrecy is guaranteed by law. To learn more about this stable financial community write today for your free copy of the new Investors Chronicle special survey.

What's new about Term Loans?

We've been making them for over 30 years. By 1935, The First National Bank of Chicago was already making term loans to many of America's major companies. Since then, we've loaned thousands of millions of dollars in virtually every currency there is, making big differences to all types of companies all over the world. And naturally, our expertise is available to you right here in London. We have experienced people waiting to arrange your financial needs. So, when you need Pounds, Dollars or any other currency whether for revolving credits, multicurrency lines, or standby facilities, contact us.

Take advantage of our experience.

MERCANTILE BANK LIMITED
Provides a Complete Banking Service

We'll all be using them one day

Confounding the prophets, the cashless society is still a thing of the future. But the big clearing banks are now working more seriously on the demise of hard cash. If they have their way, credit cards will eventually take over for all but the smallest transactions.

For a start, at the end of next month the number of credit card holders in Britain (now about 2m) will more than double overnight, with the launch of Access—the new credit card operation jointly run by National Westminster, Midland, Lloyds, and the most recent recruit to the scheme, Williams and Glyn's. For the first time since Barclaycard was started up during the 1966 credit squeeze there will be serious competition in Britain's general credit card market.

There is, of course, a stack of credit cards already, starting from American Express and Diners Club (in which, incidentally both Lloyds and National Westminster have interests) down to more limited operations such as Hertz, Avis, Blue Star or even such as Harrods's own card. But even the largest of the specialist operations—Diners Club and American Express—probably have a membership of not much above 100,000 each in this country. By contrast, there are about 2m holders of the Barclaycard. Access has already lined up more than 3m, and hopes to have as many as 5m within a year of launch—a lot more than the present combined issue of all cards.

Onto the bandwagon

Access is coming in somewhat late in the day. When Barclays first struck out, the other clearing banks opted for the cheque guarantee card instead of a competitive venture. They thought the British public would make more use of personal cheques if this was made easy enough, but was not ready for a radically new departure in the shape of general credit cards. In fact, Barclays did have to spend a lot of time and money enticing the British into the credit habit. But after a number of years in the red, the service is now beginning to be profitable.

No doubt it was the prospect of a not-too-distant profit that induced the other clearers to follow suit. But when the Joint Credit Card Company (the operating company for Access) was set up in April last year, there was, in the words of its chief executive, Mr Hugh Cameron, little more to it than "three big banks and a computer expressing confidence." Now, with over 60,000 retailers (roughly half the eventual goal) already signed up for the

service, the prospects are looking a lot more solid. Almost certainly, Barclaycard's pioneering work has made the task for Access easier. But there is still no telling how long it will take to break into profitability after the huge start-up costs.

Access has cast its net much wider than Barclaycard, but has been pretty careful about selecting its potential customers, working through local bank managers who vet customers' accounts and send a letter of invitation to the good risks. Fraudulent use of credit cards and bad debts have not so far been a major problem in Britain: although Barclaycard handed out its cards fairly indiscriminately when it first started, its losses on fraud and defaulting are probably no more than half of 1 per cent. But in the United States, where credit cards have been going for much longer and ownership is much more widespread, fraud losses run at about 2 per cent of turnover. Criminals in Britain too might become more active in this field as the use of credit cards spreads.

Buying on tick

If customers all settle their accounts promptly, there is little gravy for the card operators. Profitability is dependent on customers making use of the extended credit facilities offered. Barclaycard holders get their cards free and have between one and two months to pay for a transaction. After that, interest, at 1½ per cent a month, is charged on the sum outstanding. Access is likely to offer similar terms—although it remains to be seen what effect competition will have on the rivals' terms. And how canny will the British get? Some American credit card companies have come badly unstuck by counting on fat interest rates and then finding their customers much less tardy than expected. The American Diners Club has lost £27m over the past two years. And even the BankAmericard group—which with Master Charge leads the American credit card business—admits that fewer than half of the banks issuing their cards run the system at a profit.

Part of the card operators' expenses will, of course, be met by contributions from retailers. In Britain, this charge now varies between 1½ and 5 per cent of the turnover generated by the cards. To a small trader, the expense may be worth while because he will probably be able to cut down on his bookkeeping, and there will be less free financing of customers' debts. There is also the hope that

Take your choice

extra turnover generated by the card will more than make up for the discount—but this becomes increasingly less cogent as more retailers join the scheme. Particularly for the larger stores, accepting credit cards is more a matter of not wanting to turn away business—though possibly people do spend more freely if they do not have to pay on the nail.

A growth market

As larger numbers of people latch on to the banking habit, the market for credit cards will surely expand. They are, after all, a great convenience. How far customers will use the system for extended credit, however, is another question: it is almost as pricey as hire purchase and more expensive than a bank overdraft or even a personal loan.

If the card operators want maximum spread they should hurry into Europe. Barclaycard is already recognised in Spain, Portugal and Greece. Access has long-term plans for Europe (and card-holders using Thos. Cook can safari now and pay later). There are exchange rate problems to be sorted out—particularly when the pound is floating—and security obviously becomes trickier. But Eurocheques—which allow customers to draw money on a British cheque while travelling in Europe, against presentation of a plastic identification card at a European bank—are already spreading. Barclaycard and Access should not be far behind.

expensive (usually around 15 per cent a year). But they are still cheaper than ordinary hire purchase terms for cars (usually upwards of 20 per cent). Even a few trustee savings banks (in Glasgow, Paisley, Perth and Kirkcaldy) have got into the market, without waiting on official blessing, by joining hands with the Bank of Scotland to extend loans of up to £1,000 over three years at 7½ per cent flat.

Retailers themselves are also getting increasingly active in the credit field. The Co-op, for instance, now offers a shoppers' loan plan (at 9½ per cent flat), and Woolworth has recently

ventured into giving credit to support its new policy of trading-up. Yet the finance houses are keeping their cool. The reckoning is that the whole consumer credit cake will expand so much that there will be plenty for everybody. Consumer credit in Britain as yet accounts for only 9 per cent of total consumers' expenditure, well below the level in many other countries.

Whatever happened to the Crowther proposals for reforming the legal tangle surrounding the field? In June, the Earl of Limerick said in a debate on consumer credit in the House of Lords that a considerable amount of work

had been done on this. The Minister for Trade, Mr Michael Noble, gave a similarly encouraging answer to a question in the Commons. But, eighteen months after publication of the report, indications from the Department of Trade and Industry are still that there can be no certainty that legislation will be introduced next session. And even then there is a good chance that it may only deal with the consumer sale and loan side, leaving out the more basic reform of lending and security practice. The legal mills not only grind slowly, they may not even grind all that fine.

Climbing the rungs

All the big four among the London clearing banks rank among the top 25 giants of the international banking league, although only Barclays and the fast-expanding NatWest are comfortably ensconced among the top 10. Lloyds and Midland are well down. The trick is to climb the next rungs, past some formidable rivals bent on the same game. And one of the newer prongs of the attack is the greater attention of the clearers to their image. In some fields, especially in pushing their bank bulletins, the British still have a lot to learn. But their poster image is brightening.

Where British banks stand in the league

Europe's banks come in all shapes and sizes. So why talk to Toronto Dominion?

In Europe, banks are already pretty thick on the ground, so what special advantages can we offer?

Look behind some of today's important projects in Europe, and you'll see Toronto Dominion have quietly established themselves as a major force on the international banking scene.

Bringing finance and expertise to projects as varied as mining in Australia, harbours in Greece, roadbuilding in Spain and steel plants in the U.K.

If you need this kind of financial service, the man from Toronto Dominion can show you the full extent of our international banking activities.

He'll bring you the experience not just of a great Canadian bank, but of a truly great international bank as well.

TORONTO DOMINION BANK

Finding a way through the international money market isn't always easy...

... unless you've an experienced guide

As a leading member of the London Discount Market, King and Shaxson has provided reliable guidance and service in money markets since 1866.

In the last 100 years—and particularly over the last decade—those markets have changed a good deal, and the services offered by King & Shaxson have progressed in step. Today we provide a market in Euro Dollar and Sterling Certificates of Deposit and Foreign Currency Bills of Exchange. We also provide specialised investment services to holders of British Government Securities in addition to our traditional role as dealers in Bonds, Deposits and Bills of Exchange.

King & Shaxson... an experienced guide in international money markets.

RIYAD BANK LIMITED

PERFECT ENVIRONMENT

Many of tomorrow's growth markets will result from imaginative problem solving.

For example, cities covered with transparent domes to create a perfect environment. Today, we have the all-weather Astrodome sports stadium in Houston, Texas and vast enclosed shopping centers. Tomorrow, enclosed cities!

But you don't have to wait until tomorrow for innovative banking services. Franklin National offers

right now—here in Europe. We offer European businessmen the expertise to search out and finance today's exciting growth markets—anywhere in the world.

Franklin understands growth as well as any banking institution. Our growth story has become a legend and a fact in the financial world. Our International Headquarters—soon to be located in the World Trade Center, N.Y.C. is motivated by the same desire for growth, through helping others grow, too.

For imaginative banking services—for a direct line to the future—think first of Franklin.

Books

"I am sorry for Russia"

AUGUST, 1914

By Alexander Solzhenitsyn.
Bodley Head. 645 pages. £3.

On August 14, 1914, Emperor Nicholas II informed his foreign minister that he had ordered the commander-in-chief of Russia's troops, the Grand Duke Nikolai Nikolaevich, to open up the road to Berlin as quickly as possible and at all costs. Some 11 days after the first Russian units entered East Prussia, the army was completely destroyed at Tannenberg by a German force it far outnumbered, a defeat compounded of monumental Russian blunders and sweetened for the Germans by a deep folk-memory of a Prussian humiliation on the same spot half a millennium before.

This great battle, only the first of a series of national humiliations and disasters for tsarist Russia, is the backdrop for Mr Alexander Solzhenitsyn's utterly successful blend of history and fiction, completed last year and published then in Russian—but only in the west. Backdrop is perhaps the wrong word: for fiction takes second place to historical narrative. It is impossible to test the strength of the threads of plot and characterisation. Perhaps it will become easier to do so as Solzhenitsyn works his way along the sequence of novels he is reputed to be engaged on: a project on which he apparently plans to spend 20 years and whose theme is nothing less than the state of Russia.

There are important fictional sequences, of which the most intriguing is naturally the visit by Isaakii Lazhenitsyn (a semi-anagrammatic disguise for Solzhenitsyn's father, who died in the first world war) to Tolstoy, since Solzhenitsyn is confessedly much influenced by "the father of us all." But one must set against this the careful construction of accurate history: Solzhenitsyn has clearly read and digested all the literature on the battle that he could lay his hands on in Russia, and the brilliant chapter on the artillery bombardment displays professional knowledge and experience. (In the second world war Solzhenitsyn was an artillery officer and served in

East Prussia.) Not that his account is drained of blood and personality: the idiocy of the high command and the heroism of the Russian soldiery as witnessed by a fictional character, Colonel Vorotyntsev, whose movements link events at the front and in the rear, provide them in abundance. The two senior Russian commanders, Samsonov and Rennenkampf, were not on speaking terms with each other. But when the Russians did manage to communicate with each other, they did not do so in code—which Russian telegraphists had apparently not been able to master. On his arrival as chief of the German staff in east Prussia, General Ludendorff was handed an intercepted message giving the complete dispositions of the Russian army. And Solzhenitsyn follows the ill-prepared, confused Russian troops into alien territory, through the terrible ordeal of sudden bombardment to the ignominy of encirclement: the Germans took 92,000 of them prisoner.

None of this, one might suppose, took him off marxist tramlines. But it is in fact easy to see why this book has not been published in the Soviet Union. Solzhenitsyn, despite obvious deep and passionate patriotism, is a shining example of objectivity. He gives as much recognition to the brilliance of the German commanders as to the individual heroism of the Russians. This fairness spills over into little things: he

Solzhenitsyn: atypical patriot

records, for example, the impression made on the Russian soldiers by the tidy German villages with their neat, well-built, two-storey brick houses, concreted well-heads, stone piggeries and electric lighting. By the same token, the courage of officers is recorded along with the heroism of the peasants. And Solzhenitsyn's characters are not silent. Some talk of God and pray. General Samsonov who—although only partly to blame—took full responsibility for the defeat upon himself, and killed himself alone in the forest, pauses before he pulls the trigger: as a deeply religious man, he prays for forgiveness, because he knows that he is committing the sin of suicide. Another character, an engineer, Obodovsky, argues that there is "neither capitalist nor socialist production, but only one which creates national wealth." The view of history this book expresses runs completely counter to the official marxist view that the revolution was the culmination of a long and inevitable historical process.

It could not be construed as anti-Soviet, nor, even, anti-Russian. Solzhenitsyn's love for his country is deep and sincere. But it could be called un-Soviet in its utter disregard for the official version of life and history, its passionate search for the truth and, indeed, in its pity for Russia. This book's leitmotif is the sentence: "I am sorry for Russia." These, in the eyes of his critics and detractors in Russia, are sins. They are, of course, Solzhenitsyn's greatest strengths as a writer.

Attempt and failure

KING GEORGE III

By John Brooke.

Constable. 430 pages. £3.95.

The appearance of the second biography of George III within four months, the first being by Mr Stanley Ayling, is for the authors an unfortunate coincidence, especially as such a biography has been needed for over 40 years to fill out and supplement the view of George III's character and intentions which was pioneered by the late Sir Lewis Namier. Both works succeed in doing this, but Mr Brooke's is the better and more authoritative of the two, based on his long association with Namier and careful search of the royal archives at Windsor. In fact, Mr Brooke's work is likely to remain the standard work on the subject for a long time.

Essentially the new biography is a defence of George III against the school of "Whig" interpretation, dominant from the early nineteenth

until the early twentieth century, which regarded the king as both bad and mad. The sensitive and sympathetic character interpretation given by Mr Brooke will ensure that few who read the book will be left with the impression that George was a tyrant, that he wished to overthrow the constitution by force or corruption, or that he was insane in the generally accepted sense. George's eager and well-intentioned plans in youth for the reformation of politics, his callow but understandable acceptance of the political ideas and personal ambitions of his trusted tutor Lord Bute, and his gradual and painful emancipation from the same in the years after his accession to the throne are carefully portrayed. The king's family life and interests are described in fuller and more accurate detail than has previously been available. Of backstairs political intrigues, personal relationships and the whole intricate web of eighteenth-century "interest" and patronage Mr Brooke is a master; at one point he calls for the pen of a Trollope or a Disraeli to describe the scene, but indeed he himself is capable of all their literary insight with the addition of careful scholarship and command of historical data.

Although Mr Brooke has "tried to

George III: overworked monarch

write a biography of King George and not a history of his reign," political history inevitably plays a leading part in the work, and it is in the matter of interpretation of this subject that not all scholars will agree with the author. It is an unfortunate fact that the "Namierite revolution" which has succeeded in giving justice to George III did so at the expense of denying it to his political opponents. Mr Brooke's treatment is not free from this tendency, as may be seen by his references to the leading element of the opposition, the Rockingham Whig party. To ascribe the appointment as First Lord of the Treasury in 1765 of their leader, the Marquess of Rockingham, to his being a racing friend of the Duke of Cumberland is amusing but little else. That there was "no disagreement in principle" among politicians over imperial policy cannot be accepted even as early as the mid-1760s, when Rockingham and Chatham were formulating their views on the American problem. And to claim that the sweeping nature of the Whigs' constitutional demands in forming their ministry in 1783 was due to Fox's hatred of George III is to misunderstand their entire party philosophy; Portland, who actually presented the demands, and the rest of the party, were entirely at one with Fox. The Namierites' feud with the Whigs seems likely to go on as long as did the Whig historians' feud with George III.

Much of the later part of the book is devoted to the problem of the king's supposed madness. There is little to suggest that his affliction, whatever it was, ever occurred before 1788 (although one would like to know why Queen Charlotte thought it necessary at this time to confide to the younger

Dr Willis that the king "25 years ago from a blister on his back, got out of bed in the night, and lay upon the floor and rolled about like a Madman" —Mr Brooke misses this, and it could be the origin of the story of the early onset of George's malady in 1765). The researches of Drs Macalpine and Hunter have pretty firmly established that the origin of the trouble was a physical rather than a mental condition—the Willis diary in the British Museum confirms this impression—and their view holds good, as Mr Brooke points out, even if their tentative diagnosis of porphyria is not the correct one. George III was, by his own choice, an overworked monarch. If any general conclusion is to be drawn from his reign, it is that a long lifetime of attempting a personal oversight of the nation's government is too much for the physical strength of one man. Mr Brooke's book helps us to understand George's attempt and his failure.

Hollowness and emptiness

COLERIDGE: THE DAMAGED ARCHANGEL

By Norman Fruman.
Allen and Unwin. 628 pages. £5.50.

It was Charles Lamb, who had known Coleridge since their shared school-days at Christ's Hospital, who in a letter to Wordsworth in 1816 described him as "an Archangel a little damaged." By that time Coleridge, his constitution seriously undermined by his addiction to opium, had long been the despair of his friends. The Wordsworths and his brother-in-law Southey had written him off as wholly untrustworthy, and have been blamed for doing so by partisans of Coleridge. Of course he sorely needed and depended on their love, and it is never pleasant to see moral rectitude lined up against irresponsibility. But Dorothy Wordsworth was not in the least a self-righteous person, and it was she who wrote to Catherine Clarkson: "His whole time and thoughts (except when he is reading, and he reads a great deal) are employed in deceiving himself and seeking to deceive others. . . . This habit pervades all his words and actions, and you feel perpetually the hollowness and emptiness. Burn this letter, I entreat you. I am loath to say it, but it is the truth."

This passage might have served as a text for Mr Fruman's entire discourse. He has written a long and carefully argued account of the literary activi-

ties of Coleridge, which shows how empty are many of his pretensions to originality. His propensity to plagiarise has of course been noted by many scholars, but they usually stretch a point in his favour. Weak he may have been, but surely basically good and phenomenally gifted.

Mr Fruman believes that Coleridge's surreptitious use of other men's work and his constant defensiveness stem from a deep psychic rift. His unhappy childhood and boyhood left him with an insatiable craving for love and praise, and he bent his mind, with its extraordinary powers of assimilation, to creating for himself a reputation not only as a polymath but as a thinker of exceptional originality. Mr Fruman exposes the falsity of Coleridge's claims on both counts. How far STC's deceptions were calculated and how far compulsive it is indeed hard to decide. The psychological evidence from the notebooks reveals an anguished, guilt-ridden, haunted man: protesting his guilelessness, but driven at times to the verge of madness by conflicting drives, imperfectly understood or unacknowledged.

This book is constructed on a sound strategic principle. We are invited to examine the accumulated evidence of Coleridge's plagiarisms and prevarications, and only when the case against him has been established do we move to the *annus mirabilis*, when his association with William and Dorothy Wordsworth stimulated him to an outburst of marvellous poetry. Why the period of blossoming was so brief, why the finest poems are so enigmatic, are questions examined in the light of Coleridge's recorded dreams and private jottings. We put down the massive study with a feeling of intense sympathy for a man whose great intellec-

Coleridge: damaged archangel?

tual powers were so often perverted by his appalling emotional insecurity.

Mr Fruman's book is bound to stir up plenty of controversy, for it discredits the claim of devout Coleridgeans that he was one of the seminal thinkers of European Romanticism. It much diminishes his stature as a critic. But it is far from being a work of destruction, and will not break the spell that Coleridge the man and poet exercises over twentieth-century readers.

A nation of resisters

IF BRITAIN HAD FALLEN

By Norman Longmate.
BBC/Hutchinson. 276 pages. £2.50.

Mr Longmate (in parallel rather than in concert with BBC television) has tried to reconstruct, not invent, what could have happened 32 years ago. With characteristic thoroughness he has put together the evidence of German intentions and the accounts of German occupation elsewhere, especially in the Channel Islands. Where the book is thin, it is because the evidence is thin. Hitler never really expected to have to conquer Britain; he expected Britain to give in and co-operate. The British victory in the Battle of Britain was no doubt decisive. But, equally, the German plans to invade and occupy this country, which are the pediment of Mr Longmate's conscientious reconstruction, were as indecisive, and even jejune, as they could be.

Opponents of British entry into the EEC are always listing crucial differences between Britain and the rest of Europe. But the one distinctive difference between us and all the others is that we have not been invaded and occupied except back in history. And we tend to be both cocky and unsympathetic about this. We won the Battle of Britain—or, rather, a few pilots died. We stood firm in the blitz—with no alternative, of course. We were therefore, by contrast with the rest, a nation of resisters. There is enough in "If Britain Had Fallen" to show how largely accidental the different experience was.

Mr Longmate, sticking to his factual formula, refuses to spice his book with personal speculation on the likely kind and extent of collaboration or resistance the Germans would have encountered here. He concludes, after talking to Sir Oswald Mosley, that he would have been a patriot in his fashion rather than a Quisling if the Germans had come. He does refer to the silly

little stereotyped lists the Germans had of foes and friends in our midst, but he rather suggests that, when the dust settled, the ratio between resisters, collaborators and the resigned majority might have been much the same as elsewhere. He succumbs to stereotypes himself now and then, as in his opinion that Geoffrey Dawson's Times could have become a Nazi sheet with little change, which is a woeful misunderstanding. And almost the only break in the deliberate impersonality of his scenario is the Flemingish character of the cruel SS Colonel Professor Dr Franz Six, short, bald, with protruding ears, who was to lead the security police in Britain.

Fat in the fire

GOERING: AIR LEADER

By Asher Lee.

Duckworth. 256 pages. £2.95.

AIR POWER: A CONCISE HISTORY

By Robin Higham.

Macdonald. 282 pages. £5.25.

When Hermann Goering, two hours before the time of his execution in 1946, gulped down that fatal phial of cyanide, he not only cheated the hangman and exploded the sham of the

Goering: ample Nazi

Nuremberg trials, he also laid up against his own name a huge fund of fury and abuse. Mr Asher Lee draws heavily from this fund. Goering was physically brave, yes, but that seems about all that can be said for him. He lost the air war in Europe, Mr Lee asserts, "before it had begun," he was crassly ignorant of the RAF's strength, he failed to build up the Luftwaffe, he knew nothing of the technical side of aviation, he was unversed in air strategy, he was bad-tempered, conceited, hasty, he lacked policy, was unwilling to listen or to read at length, was self-indulgent and, of course, gross. Boosted by drugs, he was often overconfident. He is even denied credit for the tactically-important Crete operations in 1941 when 500 Junkers transport aircraft were committed.

This rehearsal of Goering's faults becomes monotonous. And, in spite of Mr Lee's skill in sorting and presenting the facts, it also becomes unconvincing. In the 1914-18 war Goering proved himself to be a brave and skilful pilot and a good leader of the Richthofen formations. He was a competent commercial pilot for Danish and then Swedish airlines. After they had met in Munich in 1922 he gave Hitler loyalty and good service. His collaboration with Walter Dornberger, head of Peenemünde, and with Ernst Heinkel, the jet aircraft pioneer, was, on the whole, fruitful. In spite of the pressures from all sides he was never—and Heinkel confirms this in his memoirs—anti-Jew. He pioneered the employment of airborne troops and he established the first air-sea rescue service.

But he liked pictures, clothes, jewels, wine, music and hunting. He flaunted opossum coats, silver spurs and immense, platinum-set, ruby rings and his person was lavishly perfumed. One could hardly assemble a catalogue of qualities more likely to drive allied ascetics into hysterical detestation.

From Mr Lee, with his high reputation for detailed studies of the compositions and strengths of foreign air forces, a cool, objective assessment of Goering as air leader might have been expected. But here his book disappoints. Although it is better documented than most, it is mainly a diatribe directed against the fat man who committed the crime of not being funny.

Goering receives a few fleeting references in Mr Robin Higham's book: his view that the German air force suffered (in both major wars) more from supply difficulties and dwindling reserves than anything else, including Goering's diabolism or incompetence, seems realistic. Mr Higham concentrates mainly on summarising some of the main aerial warfare campaigns and on discussing the operational doctrines and strategical inferences that may be drawn from them. He devotes 25 pages to a rather frustrating "bibliographical essay" giving a few words each to a large number of books of varying relevance to his subject, their authors ranging from Machiavelli to Lyndon Johnson.

Bridge double

FROM SADOWA TO SARAJEVO

By F. R. Bridge.

Routledge and Kegan Paul. 496 pages. £6.

GREAT BRITAIN AND AUSTRIA-HUNGARY, 1906-14

By F. R. Bridge.

Weidenfeld and Nicolson. 332 pages. £5.50.

No, there is not a misprint in the heading. Two books on the same subject quite often, by a curious freak of authorship, appear at once. On September 7th, by a still more curious freak of publishing, two books by the same man appeared from different houses simultaneously. Both are works of exhaustive historical scholarship. Both deal—from different aspects, though with some overlapping—with the Austro-Hungarian empire in its approach to the catastrophe of the great war of 1914, in which it foundered. "From Sadowa to Sarajevo," a study of the foreign policy of the empire from 1866 to the outbreak of the war, is the third book

to appear in Professor C. J. Lowe's series on "Foreign Policies of the Great Powers." "Great Britain and Austria-Hungary" is an LSE research monograph. The author taught at LSE for eight years, before his recent move to Leeds; the monograph is based on his London PhD thesis, prepared under C. H. D. Howard at King's.

Both books show a real historian's ability to weld together the content of other peoples' work with his own discoveries in the archives. He cites secondary sources in Swedish and Russian as well as French, German and Italian. The sources for most of his original quotations are to be found in London or Vienna; he has also made effective use of the Cartwright papers at Delapré Abbey. His longer book includes 60 pages of illuminating documents, many of them unpublished; and excellent portraits of Franz Joseph and seven of his ministers. The shorter has all the dryness of a souped-up thesis—over a fifth of it consists of footnotes, and the "unjustified" text is uneasy on the eye. But it contains new light on Aehrenthal, drawn from his papers, which professional historians need to think over; and has a good deal of wider interest in it as well.

For these two books, whether read together or separately, enhance our understanding of the world we live in through their account of a world that (though recent) is now stone dead. Readers over 60 have co-existed with the prewar Habsburg monarchy of which the "subjects were spending more than three times as much money on beer, wine and tobacco than on the entire armed forces." In it, Germans, Magyars, and Poles maintained an uneasy authority over a dozen other races they thought inferior: "if nationality ever replaced dynasticism as the principle on which the state was based, the Habsburg monarchy would cease to exist"—as indeed it did in 1918.

Inside non-story

THE NATIONAL BOARD FOR PRICES AND INCOMES

By Joan Mitchell.

Secker and Warburg. 306 pages. £4.75.

Although she was a member of it, Dr Mitchell gives away few secrets in her account of the prices and incomes board. In fact both her introductory account of the prices and incomes policy and her survey of the problems tackled by the board and what it said about them could have been written by an outsider. But she has summarised

the relevant material very competently and, since this includes 170 reports, her summation of the board's doings in one book is worth having for the record.

One chapter, on the board's methods of work, is useful. She rightly stresses its initiative in investigation and the informality of its proceedings. Otherwise, the only novelty in the book is promised by the title of the last chapter: "Success or Failure?" Unfortunately, Dr Mitchell is no better able to answer this question than anyone else has been. She ignores the attempt to answer it by Messrs Lipsey and Parkinson and quotes an even cruder econometric estimate made by the board itself. This appeared to show (as she says) that the policy slowed down wage inflation. But it also appeared to show that the policy speeded up price inflation, and this she fails to mention. Otherwise, her conclusions are both sage and innocuous. Looking back at the development of the policy she reflects that it did not so much fail but was never really tried, and that it was the policy rather than the board that lost public esteem.

Short list

The Crimean War by Philip Warner (Arthur Barker, £3.25). Too many books have been written about the Crimean War. Many of them are indifferent reshapes of Kinglake's unfinished history. So it is difficult to see what audience yet another account of this campaign of ineptitude is supposed to command. But this book by Mr Philip Warner, a senior lecturer at Sandhurst, has two merits. First, it sets the blunders in a sober, rational perspective. Second, it makes great use of contemporary diaries, letters and so on, Russian as well as British. As many have not previously been published they add pepper to an old dish.

A Call to Arms by Edmund Ions (David and Charles, £3.25). The latest, and one of the most perceptive, if *The Economist* may say that about a member of its staff, of the revisionist school of books about the army and soldiers. War is terrible (Korea, for Mr Ions), but a whole man can survive it. Armies, and the men who make them up, are the blunt instruments of complex purposes, but they possess qualities that seem the more noteworthy the rarer and more unfashionable they temporarily are. This book is a desirable counterbalance to current received ideas about military life.

The Strategy of Financial Pressure

A. T. K. Grant

Continuous application of fiscal and monetary pressure over a number of years was followed by spectacular success in righting the United Kingdom balance of payments, and conspicuous failure in keeping prices and unemployment down and growth up. *The Strategy of Financial Pressure* examines in turn the factors which could have contributed to such an outcome.

Japan's leading bank in industrial finance since 1902

THE INDUSTRIAL BANK OF JAPAN, LTD.

Head Office: 1-1, Yaesu 5-chome, Chuo-ku, Tokyo, Japan
Other Overseas Offices: New York, Frankfurt/M. and Sydney.

In Portugal two new Sheraton Hotels open this fall.

Lisbon-Sheraton Now Open.

A fabulous new 30 storey Sheraton conveniently located near the centre of this cosmopolitan city. And 15 minutes from the international airport. 400 comfortable air conditioned guest rooms. Heated swimming pool. Health club and sauna. Rooftop restaurant, cocktail lounge and outdoor terrace with fabulous views of the city. A ballroom and four other function rooms accommodating from 20 to 630 for meetings and banquets.

Memorable holidays
in Portugal
start aboard

Madeira-Sheraton opens Nov. 1.

Come to a sparkling resort Sheraton set high on a cliff overlooking the Bay of Funchal. 85 minutes by air from Lisbon. And minutes from the centre of the town and casino.

300 guest rooms, all with private balconies and terraces. Three swimming pools. Tennis and mini-golf. Portuguese speciality grill and bar. Cliff-edge night club with panoramic views.

Just one phone call makes it happen. So call. Or have your travel agent call for you.

In the United Kingdom, ask
operator for Freefone 2067.

Sheraton Hotels in Portugal

SHERATON HOTELS AND MOTOR INNS. A WORLDWIDE SERVICE OF ITC

Why should a U.S. manufacturer turn to Bank of Montreal for help in building a plant in Argentina?

Or why should a German businessman seek help from the same source to build hotels on the Costa Blanca? Or sell machine tools in the Far East?

The answer is: People. Bank of Montreal people, who understand that the financial and political realities of doing business multi-nationally are constantly shifting. People who have the sensitivity and grace to react to these shifts with imagination—for the benefit of multinational companies.

People like Al Horton, in New York. Gustav Fischer, our worldly-wise representative in Germany. People like talented Alfonso Racedo in Buenos Aires. Hal Hartmann in Hong Kong. And 19,000 other Bank of Montreal people in more than

1,100 offices in major cities all around the world.

These innovative bankers, plus more than \$10,000,000,000 in assets and a sympathetic comprehension of the multi-national corporation, can help your customers carve out its place in the new international economy.

The time to call them in is now.

Bank of Montreal

The First Canadian Bank

The bank that gets it done—internationally

London, Paris, Düsseldorf, Amsterdam, Milan, New York, Chicago, Houston, San Francisco, Los Angeles, Sacramento, San Diego, Mexico City, Buenos Aires, Melbourne, Tokyo, Hong Kong. Wholly-owned subsidiaries: Bank of Montreal (Bahamas & Caribbean) Limited, Nassau, Freeport. Bank of Montreal Jamaica Ltd., Kingston.

Business Brief

Do we need an autumn budget?

The economic statistics published this week more or less complete the post-holiday crop of indicators and make it possible to review where the economy stands now and where it could be going. Although total unemployment fell between August and September, the more meaningful guide to the underlying trend, the seasonally-adjusted change in the numbers of wholly unemployed, increased by 5,000. This, the third successive monthly increase, supports the view that the March peak was something of an aberration caused by the miners' strike.

This renewed rise in unemployment was accompanied by plain evidence that wages were on the rampage again. The basic wage rate index rose by nearly 3½% in August, bringing the increase on a year earlier up to 14%. The latest earnings figures, while they do not yet show so rapid an increase, relate, however, to July. One favourable development, the slowdown in the growth of bank advances, deposits and the money supply in the month to mid-August, unfortunately reflects the unwinding of special factors related to the run on sterling earlier in the summer. It does not, therefore, establish that the runaway growth in the money supply has been arrested.

Further back in the past, the national income and expenditure figures for the second quarter, published this week, contained no surprises. They confirmed the revival of consumer expenditure and the continued depressed levels of both investment and stockbuilding. They were, of course, significantly affected by the recovery from the industrial dislocation of the first quarter during the miners' strike. But the recovery was not nearly rapid enough to bring the economy back to the level anticipated by the Chancellor at the time of the budget. Compared with the first half of 1971 the economy grew by less than 2%, against the anticipated 4% increase. The main culprit was stockbuilding; instead of rising by £90m as forecast, stocks were reduced in the first half of the year by over £200m. Consumer spending, on the other hand, rose by nearly 6% compared with an expected 5½%.

The question posed by these figures is whether the economy has now been firmly placed on a 5% per annum growth path, as the Chancellor intended; or whether, because of inflation, the present boom will once again prove short lived and collapse into higher unemployment? Do we need an autumn budget or will this year be an exception? The evidence is

mixed, for while it is clear that the recovery has already begun, there is little to show that it has the momentum to carry it far beyond the end of this year. There may be substance in predictions that a continuation of the present rate of inflation could mean up to 1½m out of work this winter. It would, of course, be helpful if the Government published the official forecasts as they are revised during the year, instead of only at the time of the budget. But, as Mr Patrick Jenkin's clash with the Select Committee on Expenditure shows, the Government even resists publication of the innocuous medium-term projections. None the less, the best way to assess the situation is within the framework of conventional forecasting.

This distinction, while by no means as clear-cut as this suggests, is of considerable importance. Broadly speaking, it is the exogenous elements in demand which determine whether the economy can be moved on to a higher growth path. Consumer-led growth is something of a long-term impossibility. In the short term the Government can, by tax cuts, boost consumers' spending and so achieve faster growth for a time. But it does so by increasing the proportion of total incomes which finds its way into people's pockets as real disposable income.

Two kinds of demand

Forecasts for the domestic economy are normally constructed by examining in turn the various components which make up total demand for the gross national product. A distinction is conventionally made between the "exogenous" elements in demand and the "endogenous" elements. The exogenous elements in demand are those determined by events outside the domestic economy, outside the time covered by the forecast, or by political decisions. They include exports, which are more strongly influenced by world demand and by past changes in relative prices than by current changes in competitiveness; investment, which is influenced by past movements in output and profits; and public expenditure. The endogenous elements are largely determined within the system during the time period

of the forecasts and include imports, which are a function of demand and of stockbuilding, and, most important, consumers' expenditure which, tax changes apart, is a function of income.

This distinction, while by no means as clear-cut as this suggests, is of considerable importance. Broadly speaking, it is the exogenous elements in demand which determine whether the economy can be moved on to a higher growth path. Consumer-led growth is something of a long-term impossibility. In the short term the Government can, by tax cuts, boost consumers' spending and so achieve faster growth for a time. But it does so by increasing the proportion of total incomes which finds its way into people's pockets as real disposable income.

The effects of this are once-for-all. When consumers' spending has adjusted to its new higher level with respect to incomes, the growth in consumption slows down once more to rise in line with income. But consumption, on its own, can never keep incomes rising because consumers' expenditure only accounts for about 60% of total demand. In order to keep income rising rapidly the other, exogenous, elements in demand have to take off.

Conditions for lift-off

It is easy to see why the problem of forecasting at the present time is so difficult. There is the evidence that consumers' expenditure, as a result of the last budget, is now booming. Moreover this is already being reflected in the level of activity as a whole. But there is no sign as yet that this recovery in consumption is being matched

by an acceleration in the main exogenous elements in demand.

Recent trade figures may be difficult to interpret but they are not as meaningless as the Department of Trade and Industry suggests. Even allowing for the dock strike, the August visible deficit of £193m looks bad. Taking the longer perspective, there are two opposing forces affecting British exports. Over recent years there has been a substantial loss of price competitiveness, not withstanding exchange rate changes. On the other hand, the prospects for world demand are now much more favourable. We may gain a smaller share of world trade but at least it is likely to be of a faster growing total. But this can only help our exports for a limited time. Unless the exchange rate is to sink rapidly, an eventuality which European entry in principle rules out, the momentum of export growth cannot be maintained in the face of our present inflation.

Public expenditure presents a similar picture. The fast growth in the current year results from an acceleration of spending programmes. On present policies it will be followed by a slowdown next year. Our hopes must therefore rest on the development of an investment boom. While there are no signs as yet that this has begun, in the past the Government's success in boosting consumer spending and hence activity generally could have confidently been expected to herald such a boom. This is why some people are already wondering whether the Government has already overdone its reflation and will have to reverse engines in the next two years.

Impact of inflation

Unfortunately it is manifestly apparent that the economy no longer operates in the same way as it did a few years ago. Inflation can and does throw an enormous spanner into the works. This is most apparent in the breakdown of the link between the level of unemployment and the rate of increase of wages. As the chart opposite shows, it is no longer true that the higher the level of unemployment the slower the growth in wage rates. In today's conditions it is fairer to say that the faster wage rates increase the higher unemployment will be.

The emergence of wage inflation unrelated to the pressure of demand contributes to the second breakdown in the system. When wage inflation coincided with periods of high demand pressure, cost increases could readily be passed on into prices. But in conditions of depressed demand, the ability of a company to pass on wage cost increases is determined by its competitive position. Unless the exchange rate falls as fast as home costs rise, which itself would have inflationary repercussions, industries competing in export markets or with importers in the home market must find ways of absorbing wage cost increases. This is also true in conditions of keen competition in the domestic market or where a large part of a firm's work is to fixed-price contracts.

Wage cost inflation thus directly adds to pressure on profits, which all too often are already dangerously low. Most firms have little alternative but to seek ways of absorbing such pressures in higher productivity. This leads to the phenomenon of labour shake-out. Instead of prices rising so fast in relation to wage costs, productivity rises, employment falls and unemployment rises.

This process is reinforced by fiscal drag. The faster the rate of inflation, the greater the proportion of income taken up in taxation. Thus higher incomes generated in the production process produce a lower proportionate feedback on to expenditure. In this process the public sector gains extra revenue basically at the expense of company sector profits.

Evidence of this process is seen in the breakdown in the link between output and unemployment. The labour shakeout, which results from pressure on profits, by raising productivity reduces the amount of employment generated by a given level of output. Normally, through the cycle, production and productivity march hand in hand. But, as the chart on this page shows, recent years have seen a remarkable rise in productivity at a time when output growth has been sluggish.

Last year's large rise in unemployment can be explained in this way, although the situation was exacerbated by a worldwide slump in demand. Moreover, the rise in unemployment which then occurred was a

significant factor in reducing the growth of earnings, thereby depressing the growth of demand below what had been expected. Far from the 1970-71 tax cuts setting the economy on a new growth path, they were barely sufficient to maintain the forward momentum of the economy against the drag imposed by wage-price inflation. As a result more powerful stimulants were needed this year.

But if the stimulants are now more powerful so too are the forces of inflation. It is clearly apparent, from the latest wage and price statistics, from the recent spate of wage claims, from the building workers' settlement and from the price increases in the pipeline, that wage-price inflation is going up again very much faster than even the National Institute's gloomy forecasts supposed. In this event, one can write off all hope of export-led growth. On the contrary, imports are likely to prove a much more powerful factor restraining home output. Nor is investment likely to recover as profits come under increased strain. The best hope, and that a faint one, is that public expenditure will grow faster than at present expected.

There seems little likelihood that the exogenous elements in demand, so essential for sustained and rapid growth, will show anything like enough buoyancy to keep the boom going. The inflationary forces holding the economy back are still too powerful to be overcome, except very briefly, by what has already been done in the way of tax cuts and expenditure increases. One must regretfully conclude that the dangers of unemployment rising to even higher levels next

year are very real indeed. One does not need to be a politician to see that we can't go on as we are.

An autumn budget?

The first thing which should be apparent is what cannot be done. The Government cannot simply administer another dose of tax cuts or restraint on nationalised industry prices in an autumn budget to keep the consumer pot a-boiling. There are serious repercussions in store even now from what has already been done in the past two years. Such action, in the absence of restraint over wage-price inflation merely buys a short-term breathing space from rising unemployment at the expense of increasing the money supply and destroying the Government's ability to control the nationalised industries. It leaves in its wake a legacy of mounting inflation.

This is not to say this policy would not have worked if applied sufficiently vigorously and in good time. Indeed it might even have worked had the Government not made such a mess over its handling of the miners' dispute. But in today's conditions it is as futile as sprinting after a bus which has already gone.

The only way to bring the economy back under control and so secure both faster growth and a tolerable level of unemployment is by bringing pressure directly to bear upon wages. Sooner or later, and probably sooner, the Government will have to grasp this particular nettle. Indeed the most cheerful thing about bad trade figures and rising unemployment is that they must bring this day nearer.

How BBA meets international competition

When it comes to meeting and beating international competition, the BBA Group is well-placed. We have seven teams on four continents and ten based in the UK. They have been in top condition for years and winning increasing orders.

One of our biggest overseas subsidiaries is Textar in West Germany—where all the action is in this year's Olympics. Textar produces thousands of different designs of brake liners, disc brake pads and

clutch facings and supplies to every West German motor manufacturer and many others abroad.

The Group's products also include low-friction reinforced plastic bearings and bushes, conveyor and transmission belts, mechanical handling equipment, and glass fibre and asbestos products for insulation and flame-resistant applications. Last year, total BBA sales reached nearly £40m throughout the world.

BUSINESS

The road to Washington

Nothing like a new world monetary system has begun to be born. It is now essential for America to give a lead, but hopes are not high that it will do so at next week's meeting of finance ministers

As likely as not, next week's meeting of the governors of the International Monetary Fund will be no more than a game of bluff, with everybody trying to outwit everybody else in making nothing sound like something. But there is always room for surprise. The two dark horses this year are Germany's Herr Helmut Schmidt and America's Mr George Shultz. Both are newcomers in governments that face elections in a matter of weeks.

Last Monday the Bundesbank threatened to impose new curbs on capital inflows, after disclosing that Germany's money supply has been growing in British style at an annual rate of 27 per cent. This is not something its economics minister can brush aside: he will have some sharp things to say next week about the world's problem of inflation. But the principal role in the meeting is reserved for the American Secretary of the Treasury if he chooses to take it.

The Nixon Administration knows that the shove towards a new world monetary system must come from America, but seems undecided about the value of giving a lead. This is partly for the very good reason that it has not agreed a plan in detail, but it is also influenced by the uneasy realisation that the tolerance of the rest of the world for American superiority went for ever in the early days of the former Secretary from Texas, Mr John Connally. "We don't want any plan to have made in America branded all over it," is how one Washington official put it.

But there is pressure from Congress, and from many American bankers too, which may bring some response from Mr Shultz. It is to be hoped that it does. The discussion so far since the Smithsonian currency agreement has added up to nothing. The Americans have got the broad priorities right, even if they then twist them for purely selfish reasons. They recognise that the vital problem is that of evolving a better adjustment process when a country's exchange rate has become unrealistic, or, rather, before it has become patently and visibly so. Beside this the minor problems of defining the numeraire of the system, dispersing the overhang of dollars, using special drawing rights (SDRs) as the unit of settlement, and even the role of gold (which the French, in private, are now prepared to see diminished) are strictly subsidiary.

Unfortunately, once the Americans start to ride this

particular and admirable hobby-horse of improving the adjustment process, they dig in their spurs in a very individual way. They really want to keep the world on a dollar standard; and they want automatic unilateral flexibility in exchange rates which would force surplus countries to appreciate their rates against the dollar. Naturally other countries are not prepared to accept such a simple, lopsided solution. They want a mechanism which will provide a symmetrical adjustment for both devaluations and upvaluations; they also want a return to full convertibility of the dollar.

The other divide, and an even greater one, between America and its negotiating partners is that America wants an exchange rate which will allow it a sizeable surplus on ordinary trade, in order to accommodate its traditional outflow of capital; whereas the Bretton Woods convention and the wisdom of John Maynard Keynes, which was much concerned with the burden-sharing between deficit and surplus countries, was focused implicitly on balancing current accounts. The underdeveloped countries come into this part of the discussion: they do not want America to stop pumping out aid, but encourage those who say that adjustment should be achieved partly on capital account by tougher American restrictions on direct investment in developed countries.

In their anxiety that open disagreements should not be openly arrived at, many of the finance ministers may mutter to each other next week that there is no urgency about reforming the world's money system. It has become almost an act of faith to uphold the Smithsonian currency realignment, excusing sterling's departure from it as some sort of prank. It seems forgotten that, at the time, the agreement left no country completely satisfied, while the proliferation of exchange controls that followed so quickly showed proof, if proof were needed, of its shakiness. So long as governments want independent national monetary policies, they cannot create a world of both fixed exchange rates and free capital movements: one of these three parameters has to give way, as the common market countries are in the process of learning painfully with their "snake in the tunnel."

Supporters of the Smithsonian agreement also should not forget that one currency, the Japanese yen, has been banging its head against the ceiling almost continuously

and that although the British Government acted, by any previous standards, like a flash to allow sterling to float in June, nevertheless one-third of Britain's official reserves were lost in the preceding hectic scramble out of sterling. Even the present calm in the exchanges looks suspicious: why has the dollar strengthened against almost every major currency except the pound sterling? Interest rates are certainly in Britain's favour, but the gloomy fears about wage inflation and a heavy slide in London share prices might have been expected to drag the rate down. But the central banks have been messing about in the exchanges like nobody's business (even their own). It is considered to be better for mutual relations to defer any crisis until next week's meeting has come and gone.

It will be a pity if the intervention is too "dirty," as the Germans would say, and if the pound is not allowed to find its right level. The most encouraging thing about this meeting of the International Monetary Fund is that it will be the third out of the past four to take place when at least one major world currency has been floating (the D-mark in 1969, the whole pack in 1971, and this time the pound). Although the world is not yet ready to accept multi-floating as a permanent feature, it has seen the sense in letting a transition from one exchange rate to another be effected through a float. It is also encouraging that exchange dealers are not clamouring to refix the pound; most are even saying that in today's changeable conditions it would be premature to do so for some time.

The most ardent supporters of fixed exchange rates are those with blatantly undervalued ones, especially Japan. Capital and import liberalisation may be accelerated in Japan; but a revaluation or a float is still out of the question politically, unless the Japanese government can show that outside events forced its hand.

What "outside events" would be accepted? At times governments might find it politically convenient to be able to tell their business community that their hands

had been forced on a currency change, but they can hardly be expected to admit that it has been a mere civil servant who has waved the stick. The bitterness with which the Nixon Administration has come to view the IMF's Mr Pierre-Paul Schweitzer, about which we wrote last week, has since leapt dramatically into the headlines. The French leaked that the Americans will blackball Mr Schweitzer's reappointment next August. Although this is an embarrassment for the meeting, and the corridors will buzz with tips about his successor—our Newmarket correspondent tells us that the favourite, Holland's Dr Jelle Zijlstra, does not care for the running—this should not obscure that the vital issue is not who should head the IMF, but what sort of an organisation should run the reformed monetary system, if ever it is reformed. During the past decade the financial institutions, like the IMF or the Bank for International Settlements, have followed events; they have been wise only after them. The inevitable move to more flexible exchange rates was foreseen by most economists, but by few international civil servants.

The new Group of Twenty, which will be comprised of deputies of the finance ministers and central bankers, may well be the best (ie, least rigid) sort of body to direct and police the flexible part of the new system. This would still leave to the IMF its role of running the world's banking system. One decision that has to be taken at next week's meeting is the size of the second allocation of SDRs, due on January 1st. Many of those who worked hardest for their launch now only want a token distribution, because the world's reserves are awash with dollars. But the developing countries, highly suspicious of these new assets at first, are pressing for more. The management of world liquidity, and the injection of more of it into the developing countries, is a task at which the IMF ought to be good, and which it should make its priority. The organisation of different countries' specific exchange rates is a task for which it is totally unsuited.

Germany has a California

Europe's economic centre of gravity has been quietly shifting south and it need not necessarily stop at Germany's border

The streets of Stuttgart will be festooned next week with Union Jacks, the shops full of British goods and the rest of the panoply of a British shopping week much in evidence. The British trade drive in south Germany will then move into gear with exhibitions and seminars to a culmination in a jolly shopping week in Munich after the Oktoberfest. All this is part of the long overdue process of educating the British businessman out of his habit of identifying Germany with the Ruhr (for industry), Hamburg (for ships) and Frankfurt (for banks), leaving Munich as a sort of beer cellar at the bottom.

The growth region of Germany is now in the two southern länder of Bavaria and Baden-Württemberg. For the British exporter this region is largely unknown. Britain accounts for a pitiful 4 per cent of all Germany's imports, but for an even feeble 2.5 per cent of Bavaria's.

Britain's sales in Baden-Württemberg are up to the average British performance in Germany as a whole; but this country's 4 per cent is a sad contrast to America's 9 per cent and France's 14 per cent.

Bavaria was mainly farming country 20 years ago and such industry as had recovered from the war—textiles, porcelain, glass and motors—had been stunted by the iron curtain, which chopped off raw materials like china clay for porcelain making and energy for industry generally—and also part of its market. But now little more than one-tenth of the labour force is on the land. The gross domestic product per head is within 6 per cent of the west German average, compared with 25 per cent below it in 1950. Prognos, the Swiss research institute, forecasts that by 1985 Bavaria will have completed its transition from being Germany's weakest state economically, to

Precision engineering makes an Adler always run true to type

Put your best face forward to the people with whom you do business with the Adler Electric 21D. This machine consistently produces better typing and continues to do so for many, many years. Here's why.

To begin with the keys are made of specially hardened steel. So each letter comes out that much crisper and clearer.

Then there are a number of features which will improve the efficiency of your typists.

A keyboard with a featherlight responsive touch to add extra speed and efficiency; a phased keyboard which prevents jamming should the typist miscue; a carbon ribbon system which eliminates messy ribbon changing and helps the typist keep her cool; and a paper thickness control dial which ensures that the type register is bang on key.

Make your choice from these features:-

- *A full range of typefaces and carriage lengths
- *Single bar 9-key Decimal Tabulator for numerical schedules
- *Keyboards for most languages and specialised applications.

Adler typewriters and desk calculators are distributed in the U.K. solely by OEM.
See them at your dealer now or contact us.

OEM stands for the best in Office and Electronic Machines

Office & Electronic Machines Ltd. 140-154 Borough High Street, London SE1 1LH. Tel: 01-407 3191. Telex: 887349.

being its richest and the nearest thing in Germany to the booming bits of California.

Bavaria began its take-off with the inestimable asset of almost no old industry to hamper growth, and above all no coal mines. It enjoyed Bonn's subsidies for border areas. Then, for the first time, the southern Germans got their hands on cheap sources of power. These were three oil pipelines from Genoa, Trieste and France, all leading to the new refinery centre of Ingolstadt, midway between the four key cities of Munich, Nuremberg, Regensburg and Augsburg, at the very time when cheap oil was knocking the bottom out of the economics of the coal industry of north Germany. Now a new pipe has almost been completed from the north-west German gas fields.

Bavaria also started talks with the Russians, which were later completed in Bonn and produced the deal for the Russian gas pipe which is due to open in October next year. This summer the quantities of gas on order from Russia went up again, so that Russia will eventually be providing up to one-fifth of Bavaria's energy, and there are some rumblings about the political risks involved in such dependence. But there is no doubt about the commercial advantages: the deals have eliminated the handicap of high-cost energy under which south Germany has always laboured. And Bavaria has spawned a petrochemical industry in the shape of Hoescht's £17m complex now under construction.

Bavaria has cashed in heavily on Germany's postwar investment growth. It now boasts a powerful electrical engineering industry, claims to have 75 per cent of the country's electronics capacity, and has developed considerable strength in engineering, process control, instrumentation and optical equipment. Most important, it has cornered the lion's share of Germany's science-based industry. Siemens has centralised its research in Bavaria (as well as its buying). The German aero-space industry, which means largely Messerschmitt-Bölkow-Blohm, is in Munich. Germany's first nuclear research centre and first atomic power station were built in Bavaria, too.

Along with Hamburg, Bavaria stands to become an important beneficiary from the Ostpolitik. It is bounded by more than half of Germany's eastern frontier. Bavarian firms had a flood of inquiries from Czechoslovakia for

joint ventures and industrial co-operation during the brief Dubcek period and now, under Mr Husak, the Czechs are again making discreet inquiries along the same lines.

Can the boom last? Bavaria has problems. One is Munich itself: it suffers all the stresses of rapid urban growth, from acute housing shortages to inadequate public transport, spiced with bad traffic jams. The imminent setting-up of Europe's central patents office, with its thousands of hangers-on, will do nothing to help. One of Bavaria's secret advantages has been a pool of relatively cheap labour to draw on as men came off the land, but the rundown of farming cannot go on for ever. Many of the men ostensibly coming off the land now are continuing as part-time farmers, working in with other smallholders. So Bavaria has had to turn increasingly to immigrant workers; the immigrants are now 3.4 per cent of the labour force, not far short of the German average. Baden-Württemberg actually has twice the national average of immigrants, a sign that it is not only probably the most prosperous region of Germany, but the one with the most acute labour shortage. It is potentially the most attractive region for British exporters, with a sprawling concentration of light industry stretching for miles outside Stuttgart, which not only feeds components to Daimler-Benz and Porsche, but also produces 90 per cent of Germany's watches and jewellery, 50 per cent of its office equipment, and much of its chemicals, textile machinery, precision tools and optical goods. The parallels with Switzerland are close.

Is Bavaria the place for British and other foreign companies looking for a European base? The best time for investing there may be past. Bavaria's wages will soon be no longer low by German standards. The place to watch instead could be Austria; tariffs between Austria and the common market will, for all practical purposes, vanish in the next five years. In many ways Austria now is what Bavaria was 10 years ago: mountainous, predominantly rural, with a pool of cheap labour, but suddenly starting to enjoy cheap energy and improved road connections with the rest of Europe (although Austrian roads could do with a bit more improving). The shift of Europe's economic centre of gravity that has brought prosperity to Bavaria need not stop at the German frontier.

Gracious me, how...

... the place has changed

Last year, BEA looked after 17,000 Unaccompanied...

A BEA passenger talks about her first flight.

"It was great. They gave me a stripey BEA badge to wear. I asked could I keep mine, and they said yes. I bet no-one at school's got one."

"We had a special stewardess all to ourselves. Her name was Helen, and she told me all about her job. She said it was really fabulous, except sometimes her feet hurt."

"I saw clouds from on top, all white and beautiful, like the fluffiest snow ever."

"I had UM written on my ticket. Helen said that meant Unaccompanied Minor, so they'd take special care."

"I thought it sounded nice and mysterious, like a spell, so I kept saying Um to everybody, and they looked so surprised."

"And at the airport I met a real live Captain! He stopped and looked at my badge, and asked had I enjoyed my flight, and I said yes, terrifically."

"I had, too."

BEA
Your Captain wishes you
a pleasant flight

How a Pan Am pilot tells the time in New York in New Delhi.

Imagine you're a Pan Am pilot, and you've just landed a giant 747 on the steamy tarmac of New Delhi airport.

Your three hundred and sixty two passengers have alighted, and you're beginning to relax.

You start wondering what your family's doing right now, back home in New York. You look at your watch. It's a Rolex GMT-Master, showing local time correct to the nearest second. So you turn the revolving outer bezel, and it tells you the time back home in New York and will keep telling you New York time as long as you wish.

This unique feature obviously has many uses, both professional and otherwise.

But it's by no means the only reason why Pan Am chose the GMT-Master to be their official timepiece.

The main reason was that the GMT-Master is a Rolex Oyster.

And Rolex Oysters are built with care and patience by the most experienced craftsmen in the world.

They work on each watch for over twelve months. The final result is not a watch at all, but a 'chronometer': a fact we signify with the Rolex red seal, which you can see below.

'Chronometer' is one of the most sought-after titles in Switzerland. And it can only be bestowed by one of the Swiss Institutes for Official Chronometer Tests after they've tested the movement's accuracy over a gruelling two weeks.

Our rotor self-winding 'Perpetual' movement has won us nearly half the chronometer certificates ever awarded—although the time it takes to make each

day we reached a hut at 13,000 ft., after a tiring march; it was in the evening and very cold with rain, sleet and snow falling. During a brief break I went to a stream nearby for a quick wash, and as I was taking off the Rolex it slipped through my numb fingers into the stream. A foot downstream from where it had fallen, the stream dropped into a five-foot hole and continued its course for the next twenty

yards underground. It being nearly dark and cold I was unable to see the watch and offered a reward to anyone who could return it to me next day.

"The stream was almost freezing having come from a glacier a mile higher up, nevertheless next morning the porters were in the stream and after half an hour found the watch caught by its strap in the fast-flowing water and still working... The watch has continued to keep perfect time ever since, without even a cleaning."

This was sent to us by an Englishman living in East Africa. Obviously, owning a Rolex gives him a great deal of satisfaction.

Almost as much as it gives our craftsmen, who spend their lives making sure that each Rolex they make is a superb example of their craft.

Owning one is almost as satisfying as making one.

What can your banker tell you about industrial expansion in Hong Kong?

Can he tell you how the labor market is affected by the industrial expansion? Can he explain the need for Hong Kong's switch from entrepôt trader to industrial exporter of electronics, plastics, and optical goods? Can he tell you how this diversification will influence its trade balance? How it will affect its domestic economic growth? And external payment position?

A Chaseman can.

Can your banker tell you how regionalism could spur intra-area cooperation? How it could expand the effective market area? The integration of the financial markets? Can he tell you how it will affect your company?

A Chaseman can.

Chase Manhattan's huge worldwide network of branches, associated banks and representative offices reacts quickly to unexpected political and economic events. Our special analysts often anticipate these changes. They understand what consequences these events can have on your international business. They carefully evaluate alternative courses of action for you to follow. And our

sophisticated communications network loses little time executing your decisions.

When you want to do business on a multi-national scale in the Far East—or anywhere else in the world—speak to Chase first.

Chase Network Pacific:

There's a reward for catching this bird.

It's yours on Iran Air's superjet route through Europe to Turkey, Iran, the Persian Gulf, Afghanistan, Pakistan and India.

Thousands of years ago, according to legend, the 'Homa' brought good fortune to Cyrus the Great, King of Persia (now Iran). You can see its majestic profile on the tail of every Iran Air jet. The rewards for catching this fabulous bird are many and marvellous. They begin when you join Iran Air's jet set: Boeing 707s, 727s and 737s whose mighty wings lift you from the major cities in Europe to Tehran, the Persian Gulf and beyond in a

matter of a few smooth hours.

Then there's the food: always deliciously fresh (never frozen). And there are the smiles which say sincerely, 'I'm glad to be of service'. Cushions to make you comfortable. Pilots who are specialists in trans Europe/Middle East and Eastern routes. And a warm welcome from the whole Iran Air family who keep up the national tradition for hospitality which goes back thousands of years.

Two flights daily from Heathrow, one on Saturday. Non-stop Tues. and Thurs. For more about the fabulous 'Homa' and all the rewards that come with it, see your Travel Agent.

Iran Air, 135 New Bond Street, London W1X 7DB. Tel: 01-629 4417. Reservations: 01-581 2051. Information on tours to Iran available on request. Iran Air's General Sales Agents for the U.K.-Anglo Persian Agencies Ltd.

BUSINESS

International

We've got the ads ready

Brussels

With the European Communities Bill now through both Houses of Parliament, Brussels is geared up to start recruiting the necessary quota of British staff for the new European commission which takes office next January. First advertisements calling for applications will appear in the national press as soon as the royal assent has been given. For junior and medium grades the idea is to build up lists of suitable candidates, leaving the new commission to make the final choice. The more senior director-general and director appointments will be negotiated by the two new British commissioners; members of the commission traditionally exercise a watching brief for their own nationals.

London, however, is taking its time. Neither the royal assent nor the names of the two British commissioners will be forthcoming until Parliament reassembles next month. This will delay the whole process by a month or more, and may provoke the Brussels headquarters quite a bit. The assumption there is still that Sir Christopher Soames and Mr George Thomson will be Britain's two men at the Berlaymont. M. François-Xavier Ortoli, the former French minister and technocrat,

is still favourite for the next president of the commission.

A brief storm blew up last week over the rate at which British civil servants are to be recruited. The commission had said it would not create new jobs for the newcomers unless these were justified by increasing work. Room would be made for the British quota of officials and those from the other new member countries by sacking up to 300 of the present staff, but the departure would be sweetened by generous handshakes. The budgetary committee of the council has, however, jibbed at the number of new posts that the commission has now decided that it wants, not to cope with the extra work involved in enlarging the community but because the commission is assuming that plans to expand its control over the monetary, industrial and regional policies of the Ten are likely to be approved at the summit meeting in Paris next month. The Dutch and the French treasury experts now suspect that many of these new jobs are being created with the sole intention of minimising the numbers that will have to be sacked. They have unhelpfully suggested that the intake of British civil servants should be limited to 9 per cent in the first year, only building up to the full quota of 18 per cent over three years. This was turned down flat by the British and by the commission, which realises that its political credibility in London depends on building up the British contingent as quickly as possible. Unfortunately, there is a nagging doubt whether enough highly qualified and reasonably multilingual civil servants and others from Britain, and the other new member-countries, will be found to be willing to go to Brussels.

The commission has already started recruiting translators without waiting for British membership. Professional translators with the necessary academic qualifications and a knowledge of two EEC languages are scarce, and the commission finds itself competing both with industry and with the United Nations which pay higher rates. The present team of English translators is too small to cope with the extra work that will be caused by the British request for all official legal texts to be published in English from October 1st; ie, from the end of next week. In practice this will probably be stretched to mid-October, by which time it will be clear whether Danish and Norwegian will have to be introduced as well, with the additional translation problems that these would cause. To make matters worse, the commission is digging in its heels and refusing to pay the market price for translators.

One new job the commission is clearly not going to take on is to run a prices policy, with a prices commission in Brussels to probe price rises. This is what the European Confederation of Free Trade Unions urged in a memorandum this week. M. Borschette, the commissioner for competition policy, was quick to deny that the commission would ever do any such thing, which would certainly run heavily against the grain of the philosophy of the Rome treaty. The rest of the ECFTU's memo was idealistic supranationalist stuff; more power for the commission and parliament and so forth. This contrasts sharply with the current mood of British trade unions,

Soames, Thomson, Ortoli: waiting in the wings

who are due to join the ECFTU next year (unless they choose to boycott it in a wild moment). What the ECFTU will have to say after that will be interesting to see.

Commonwealth talks

31 characters in search of a role

It was apparent this time, at the meeting of the Commonwealth finance ministers which started on Thursday, that the Commonwealth club retains history, personal ties and a certain nostalgia in common—but increasingly little hard economic cement.

Indeed, the two topics on which there could be more substantive talks are, strictly speaking, not Commonwealth matters at all, but loose ends of the crumbling sterling area. The London gathering gave the more disgruntled members of both (overlapping) clubs an opportunity to let off steam about Britain's abrupt writing-off of sterling area exchange control privileges in June. More positively, it was hoped to make some progress on tidying up the Basle network of sterling reserve guarantees, which end next September.

From a British point of view the Basle agreements have proved almost too successful. The guarantees not only put a stop to the pre-1968 rundown of the official sterling balances of the overseas sterling countries; they helped massively to reverse it. Between the end of 1968 and June of this year the sterling reserve assets of club members jumped by more than three-quarters to £2.9 billion. This growth has not only increased Britain's potential bill if there is any devaluation of the pound below \$2.38 (as 90 per cent of these official assets are covered by the guarantees); it has also raised French eyebrows.

But the trade goes elsewhere

Trade of overseas Commonwealth countries* with—

* excluding S Africa & Rhodesia

Well, here's to a drop in your exports, old man

Britain would like to see the basic guarantees extended to 1975, but applied only to fixed amounts of sterling in countries' official reserves. Any further increases would then be at the risk of the central banks concerned. There are also more immediate technical problems to be solved now that the pound is afloat. What happens if sterling dips below \$2.38 for, say, a week and then bounces back above the guarantee point?

Heath in Japan

Fair to whom?

Tokyo

Junkets apart, Mr Heath's visit to Japan has been concerned with showing the flag, expressing a mild enthusiasm for the drawing together of Japan and China (which the Foreign Secretary is going to visit shortly) and once again reading the riot act to the Japanese about exporting too much too cheaply. On the last point, as Tokyo expected, Mr Heath seemed to be acting as a spokesman for Europe. He seems to have got little change yet.

Mr Tanaka and others assured him that their surging exports will be adequately contained by cartel arrangements like the one for ballbearings fixed up last week, under which Japanese manufacturers agreed to enforce a 15 per cent cut in ball-bearing exports to Britain this year, with room for a 10 per cent increase next year. The industry went to some lengths to pretend that it reached this decision spontaneously, and had done no deal with the British. However, the Japanese Fair Trade Commission, which is now being cast as the real

obstacle to export restraints of this kind, has not been fooled any more than anybody else.

It is now about to quiz the Ministry of International Trade and Industry to see if there was in fact any deal with the British—as it, and everybody else, suspects there was. It might then brand the whole thing as a cartel. It is denying suggestions in the Japanese press that it had been persuaded to turn a blind eye and huffily insisting that it will not be guided by mere "political considerations" in doing its job. It is also going to look into the export restraints to be applied from October to black and white television sets and tape recorders destined for eight European countries, including Britain but excluding Germany; it means to discover if here, too, there was any secret agreement with the Europeans.

This burst of energy within the FTC in Tokyo is something both the Japanese and European governments could do without. Other Japanese industries that are expecting to come under fire from Europe for their exporting zeal

TUBE INVESTMENTS LIMITED

Interim Statement

Results and Dividend

The Directors of Tube Investments Limited considered the results of the Group for the six months ended 30th June 1972 which showed profits for the period after taxation attributable to Tube Investments Limited amounting to £3,945,000 (11.1p per £1 Ordinary Stock). The Directors decided to declare an Interim Dividend on the Ordinary Stock for the year ending 31st December 1972 of 9p, less income tax, per £1 Ordinary Stock. Last year the Interim Dividend was paid on 29th October. This year, on account of the change in the system of United Kingdom company taxation, it has been decided, in order to minimise the company's liability to taxation in the transitional years, that payment of the Interim Dividend should be deferred until 3rd January 1973. Dividend warrants will be posted on 2nd January 1973 to members on the registers on 6th December 1972.

Consolidated Profit and Loss Account Summary

	Six months to 30th June 1972 £000	Six months to 30th June 1971 £000
External Sales	194,152	179,474
Trading Profit of the Group	16,346	16,883
Profit before Taxation	8,149	10,669
Taxation	3,774	4,629
Profit after tax attributable to Tube Investments Ltd.	3,945	5,177

Comment and Prospects

The Chairman's Statement for 1971, written when the miners' strike and resulting power cuts had already caused considerable disruption, indicated that the results for the first half of the current year were likely to be poor. Although it is not possible to measure accurately all the costs associated with this disruption it is estimated that the loss of profit to the Group was in excess of £1 million. This included heavy costs resulting from partial shutdown of the Invergordon smelter and loss of sales and profits in parts of the Group that were too heavily loaded to recoup with higher output after the disruption.

Buoyant consumer demand enabled the Cycle and Domestic Appliance Divisions to earn good profits. Other Divisions dependent in varying degrees on investment demand were less fortunate. Sales values in the Steel Tube, Engineering and Machine Tool Divisions were all below the 1971 levels, representing even greater sales volume reductions; in these circumstances it was impossible to avoid some further reduction of employment in these areas. Engineering Division was particularly severely affected at Geo W King in the heavy capital equipment sector. In the Aluminium Division production continued well below capacity.

There are now growing indications of a recovery in general investment demand although the prospect remains poor for some particular sectors, and here appropriate management action is being taken. If these developments continue satisfactorily it is expected that the results for the full year will be comparable with those for last year.

are eagerly sheltering behind the FTC, and positively applauding its efforts. If there are any lingering doubts about the deliberate diversion of Japanese exports away from America and towards Europe, the August export figures ought to dispel them for good. Total Japanese exports are up 17.7 per cent that month; those to America by 3.3 per cent; those to Europe by 71.8 per cent and those to Britain by 150 per cent.

Oil Progress?

Sheikh Ahmed Zaki Yamani, the negotiator for the oil-producing countries, says agreement has nearly been reached with the international oil companies on participation (ie, 51 per cent ownership by Arabs), which he claims is the only workable alternative to the outright nationalisation demanded by the more militant Middle East nations. The oil companies are more guarded in their comments on the progress of the talks, which this week shifted from Beirut to London.

Sheikh Yamani claims agreement has been reached on how to dispose of the oil that will go to the local national companies, once they assume their 20 per cent stake in local operations. Wearing his other hat, as Saudi Arabian oil minister, he claims this was the most sensitive issue, but his opposite numbers in the oil companies say there are still outstanding differences between the two sides and that without agreement on all major issues agreement on any one of them counts for little.

What all this probably means is that Sheikh Yamani already has most of what he wants but that the oil companies do not. Having given ground on compensation, disposal of the oil and perhaps on other points, the oil company negotiators feel compelled to seek iron-clad assurances that any deal they sign will be binding. More particularly, the oil company negotiators would like a firm agreement on the rate at which the countries would progress from 20 per cent participation to 51 per cent, the stated goal of the Organisation for Petroleum Exporting Countries.

If they cannot arrive at such a firm agreement, the negotiators may feel afraid to show their faces in their own boardrooms. However, Sheikh Yamani may have difficulty persuading his principals to tie themselves down on this point. Just the same, the oil companies can perhaps take solace from a

speech Sheikh Yamani gave to a London oil conference on Tuesday. In it, he said that he recognises the importance of maintaining the confidence of western investors in the oil companies. Without this confidence, the flow of western capital and technological knowhow to the Middle East oil-producing countries will dry up and "the many huge and undiscovered reserves" still remaining there will go unexplored.

Caravelle Finis

Can it really be true that after 20 years in production the French have sold only 280 Caravelle airliners and will break up the production line when the last of them is delivered? It is an aircraft that was a technical and commercial revolution in its day: technical because it was the first in the world to have its engines mounted in the tail, and commercial because it was the first short-range jet airliner; the only other jets were all for the long, North Atlantic ranges. From the day that the first prototype was ordered in 1953 it never (well, hardly ever) put a foot wrong and ought to have swept the world's markets. Yet the French only slowly mastered the technique of winning the big airlines' confidence, and by the time they had the Caravelle was beginning to show its age.

It was, inevitably, hurt by the Comet disasters of 1954, because there was a good deal of Comet technology in the Caravelle, including the entire nose section which was manufactured in Britain. The aftermath of inquiries into why the two Comets disintegrated from metal fatigue meant that some modifications had to be built into the Caravelle, although it was never as vulnerable to fatigue as the Comet. So, although the prototype flew in 1955, the aircraft did not go into service until 1959, and by then the big American jets were already on the Atlantic

and Europe's technical lead was lost. The Caravelle was copied in a whole series of tail-engined aircraft, American, British and Russian among them, and many of these ran into technical troubles that the sturdy and relatively slow Caravelle had managed to avoid. But the Caravelle still did not sell.

There was a time when it looked poised to break into the American market after a deal with the Douglas company which left Douglas responsible for American sales of Caravelles. With Douglas behind them, the French then sold 20 to the biggest airline in the west, United Air Lines, and where United leads the rest usually follow. Only this time they did not, and after two years Douglas lost interest and pulled out in 1962. Its own DC 9 was on the drawing board by the next year, using technology 10 years in advance of the Caravelle's, and more than 700 DC-9s have been sold. Although the French managed to stretch the Caravelle a bit from its original 80 passengers to a squeezed 109, they could not give it a 1960s' look without totally redesigning the wing. Various designs were tossed about, including a supersonic Caravelle that eventually turned into the Concorde, but none of them held out sufficient improvement to justify the cost. The remarkable thing is that, in spite of these handicaps, the Caravelle has gone on selling in small numbers up to the present day. It is an object lesson in how the French threw away a golden opportunity by incompetent marketing.

World Bank

No thanks to America

It is a landmark for the World Bank that its new lending and investment in developing countries topped \$3 billion in the year to June 30th. Each year the group—which includes the soft-loan

Remember that day in 1959?

agency, the International Development Association, and the commercial-nosed International Finance Corporation—increases its operations. Unlike the IMF it has no problems about leadership. Mr Robert McNamara is safely in the saddle for a second five-year term from next spring. He can now expect to beat the target he set when he arrived at the bank, which was that its development financing in the period 1969-73 would be double the £5.8 billion in the previous five years.

The big problem—indeed, the disgrace—has been the failure of the United States to make its contribution to the IDA replenishment, intended to run for three years from July 1, 1971. That the flow of credit to the poorest countries was again increased in the past year was because of special action by 15 countries, including Britain, in making advance contributions. An overloaded legislative programme in Congress is the nominal excuse for the delay, although there were signs of some action this week.

Mr McNamara's annual report naturally beats the drum to proclaim the urgency. Debt service payments from the developing countries increased in 1970 by 18 per cent, almost twice the average rate of recent years. It is argued that "the world's burden of poverty is increasing rather than declining." Mr McNamara has tried to reverse this trend by broadening assistance into fields such as urbanisation, population planning and education, as a new book* from the bank describes. The bank is to strengthen its policy-making management at regional level. But an outsider must regret that the two institutions of Bretton Woods, the World Bank and the International Monetary Fund, do not work together in the developing world as closely as they should. Most of the blame for this rests on the IMF.

Key indicators: world commodity prices

Gold jitters

In two days of panic selling the free market price of gold dropped \$5.75 an ounce to \$61.25 before pushing back to \$65. These gyrations, more typical of the riskier crop commodities, sent gold shares reeling in London despite news of much better profits from the mines. The gold price is unlikely to hold its present level if South Africa begins offloading all its output.

Chile's copper

It's ours, really

New York

The worst was confirmed for the hapless Anaconda company on Tuesday. All the compensation it is going to get for the nationalisation of its copper mines in Chile is a mere \$12m from the American government's Overseas Private Investment Corporation, which insures American companies against this sort of risk. Anaconda has been claiming \$154m for three mines. Opic is denying liability for two of them and offering the \$12m for the third, the Exotica mine. The Chilean government has already said that it is ready to pay compensation for Exotica, but not for the other two; it argues that Anaconda actually owes Chile a net \$78m of excess profits earned from them.

Anaconda's pitch may have been queered by the uncompromising attitude adopted by the other company, Kennecott, whose mines were nationalised at the same time. It is generally believed that Kennecott recognised at least 10 years ago that its El Teniente mine, the largest underground copper mine in the world, would be nationalised sooner or later and diversified accordingly. In the early 1960s, Chile provided a quarter of Kennecott's profits. By the time both companies were expropriated, this was down to 11 per cent, against Anaconda's 75 per cent. Kennecott has now announced belligerently that it is giving up any further attempt to get compensation from the Allende government, but will do instead what the oil companies do: take action against anyone buying copper from ex-Kennecott mines on the ground that the copper is Kennecott property. This threat, which is aimed mainly at European buyers, is not likely to put them off; but the attitude may annoy Kennecott's own customers. It also makes it even more difficult for the

American Administration and Chile to reach an agreement over the rescheduling of Chile's debts, along the lines suggested by the Paris Club meetings last spring. Britain and Chile struck their own deal this week. Other European companies have already done so, but the United States can hardly settle while the wrangle over compensation drags on.

Anaconda's next step could be to take its dispute with Opic to arbitration. If the decision did go Anaconda's way, that would be no comfort to Kennecott. Opic does not have the funds to meet the claims of both companies in full. The Export-Import bank is already claiming the lion's share of a debt repayment that Kennecott did squeeze out of Senor Allende. Washington is putting pressure on Kennecott from the other direction. It wants to make it sell Peabody Coal, the giant company that represented one of Kennecott's most important forms of diversification out of copper. It is a hard life when everyone shuts the doors.

Spain and Russia

We hate you but...

Barcelona

The Spanish-Russian trade treaty signed last weekend puts their trade on an official footing for the first time since the Spanish civil war. This rapprochement has not been upset by a new wave of strikes in Spain, despite perennial Spanish suspicions that international communist influence must underlie Spain's labour troubles. For over 30 years trade has been confined to barter deals through other countries. Now a wide range of goods is to be exchanged and there will be trade representatives in Moscow and Madrid. Spain has a persistent deficit on what trade there is, and this factor—plus growing uneasiness in a Madrid about being shut out of the enlarged EEC—prompted the Spanish government to look for other outlets for its manufactured goods.

There remain questions like that of the Spanish gold reserves, sent from the Bank of Spain to Russia in the civil war for safe keeping. The Franco regime has repeatedly called for their return. Russia still maintains that the full value of this gold, and more, is due to it for supplies sent to the pre-Franco republican government. This issue, and continued Russian support for the exiled Spanish communist party, still arouse high passions.

Triumph Investment Trust Limited

Eighth successive year of growth Confident of further progress

Extracts from the 1972 Statement of Mr. G. T. Whyte, Executive Chairman.

For the eighth year in succession profits and earnings per share have shown a substantial improvement. The net profit before tax has risen to a record £4,427,000 against £3,374,000 for the previous year. Earnings per share increased by 28% from 11.21p to 14.38p.

A 1 for 1 capitalisation issue is proposed together with the conversion of the 'A' shares, which have carried 20 votes each, into ordinary shares on the basis of parity. The total dividend for the year is 33% compared with 27.5% last year. As a result of the capitalisation issue the dividend forecast of 40% in respect of the current

year made at the time of the rights issue will now be equivalent to a rate of 20%.

It has long been intended that merchant banking should be the central theme of Triumph's development. Now that after many years of solid progress a large and enduring impetus has been given to the growth of the Bank, I feel that the ultimate shape of the Group is beginning to emerge. I am confident that from the position now reached, including the new opportunities opening up in our banking operations and on the Continent, the upward course of earnings per share can be maintained.

EIGHT YEAR RECORD

Profits before taxation, earnings and gross dividend per Ordinary share of the Company since 1965.

Year Ended 31st March	Profits before Taxation £	Earnings p	Gross Dividend p
1965	49,000	0.58	0.47
1966	168,000	1.39	0.94
1967	221,000	1.82	0.94
1968	344,000	2.58	1.67
1969	1,296,000	5.63	1.73
1970	2,154,000	7.98	5.42
1971	3,374,000	11.21	6.88
1972	4,427,000	14.38	8.25

BUSINESS

Britain

You can't keep a good shopkeeper down

The huge changes taking place in British retailing and distribution as resale price maintenance went out and supermarkets came in has not killed off the small, privately-owned shop in the way everyone had expected. The corner grocers and sweetshops have been disappearing at an alarming rate, pushed out by the supermarkets and self-service stores, but, surprisingly, they have been replaced by the equally small antique dealer, do-it-yourself merchant, television renter, and a whole host of shops selling semi-luxury goods like glassware and sports gear. In part this reflects the changing pattern of personal spending as living standards rise and shoppers begin to look for something more than basic consumer goods, and want a bit more fun. It explains why the number of hairdressers' shops went up by 15 per cent in five years, as backroom barbers blossomed into hair stylists with their own plate glass front.

This comes out in the initial analysis of the 1971 Census of Distribution for Britain, published by the

Department of Trade and Industry this week. It shows that about 24,000 shops closed for good in the previous five years. This was the period in which the ending of resale price maintenance should have taken a terrible toll of the country's corner shops. There was the added burden of selective employment tax, which did not affect the man-and-wife business, but hit the small man who had one or two assistants. The proportion of total trade done by the little man has not ceased to fall. But, numerically, he has shown a remarkable power of survival. In the five years to 1966, when the ending of rpm was barely beginning to bite, 38,000 retail outlets disappeared. In the decade of the 1960s the number of shops fell from 542,301 to 480,573.

True, both the grocers and the tobacconists, confectioners and newsagents have suffered most of all. Both categories lost 26 per cent of their numbers in the 10-year period (from 146,777 to 107,963 and from 70,108 to 52,105 respectively) against an overall decrease of just over 11 per cent.

Other food retailers have gone down 18 per cent (from 114,655 to 94,041).

On the whole, however, the small men have shown spirit. They have tenaciously fought parking restrictions on the arterial roads, on which they grew up in the 1920s and 1930s, which were intended to whisk the motorist through to the big store competition in redeveloped city centres. They have preserved their independence, yet banded together under symbols like Mace, VG and Spar-Vivo to buy at better wholesale prices, and they have been helped by the introduction of cash-and-carry warehouses. Unfortunately, those who tried slavishly to preserve the "service" that the supermarkets replaced with piped music are the ones that have largely disappeared. Many who continued providing credit went under.

On the tobacco side—bolstered in the main by the healthy margins on sweets and with a surprising diversification into things like budget-price records and tights—shopkeepers have not been wiped out overnight as was feared when rpm ended. With discount for bulk purchases from cigarette makers, which can make a difference of 60p per 1,000 when buying, say, 250,000 at a time, the supermarkets should have taken over. But smokers are not only creatures of habit, they are extremely casual purchasers

The supermarkets hit

the corner sweetshops.

but antique dealers proliferated

—and so did hairdressers

who will not cross the road to save 2p.

These shops must come under further pressure as more of the hypermarket projects get planning permission. With parking for 960 cars, 55,000 square feet of floor space and 25,000 different products selling for 6-8 per cent less than at nearby shops, the one that opened at Caerphilly, Wales, this month was forced to advertise on television to keep customers away in peak hours. The Department of the Environment has asked local councils to inform it of applications for shops of more than 50,000 square feet. The strong retail lobbies throughout the country are bound to oppose giant shops, backed no doubt by some councils who do not want to lose out to out-of-town rates. But as one hypermarket appears so will more, and the 1976 census will no doubt show another big fall among Britain's shopkeepers.

The growth in the multifarious band of traders catering for the more specialised buyer, with a bit more in his pocket, is particularly interesting. It is now the thing for the private investor to go into something like fancy goods, pet shops, garden centres, and antiques. Antiques, on a very rough estimate, has leapt from 2,000 shops to 7,000 in 10 years, with dealers opening up in villages throughout the country.

But the figures do not tell the full story. One success draws several imitators and, as with launderettes and boutiques, the growth soon mushrooms beyond all bounds. For all the boutique boom of the 1960s, clothing and furniture shops dropped by a fifth in five years, which suggests a horrifying casualty rate among inexperienced amateurs.

Docks

What happens next?

Dockers are rushing to accept the £4,000 voluntary severance terms offered by the Government in order to buy off the national dock strike, so much so that there is now a momentary shortage of dockers. So far, 3,200 men have accepted severance, wiping out the register of temporarily unattached dockers which had stood at around 2,000 men. The shortage of men is all the more acute because of the extra dockers still needed to clear the backlog of cargo from the strike.

Some of the lamb's left London

So far, so good. Were life on the docks to go on like this there would be no need to settle the thorny issue of how to pay for the employers' guarantee, made under the combined duress of the strikers and the Government-appointed Aldington-Jones committee, that will now abolish the temporarily-unattached register forever. But, unfortunately, the average age of the men accepting voluntary severance is getting on for 63. In other words, to solve this year's crisis the Government is buying off, at great expense, the natural wastage of retiring older men.

Picketing continues as an almost permanent recreation for those dockers, and some of their left-wing friends, who cannot think what else to do on their days off. Not content with abolishing the threat of unemployment, these men are still determined to force their labour, and that of their sons, brothers, uncles and cousins on to other parts of the economy. Since dockers are about the most privileged group of industrial workers in the country, their positions are keenly sought after. Now that a temporary shortage of dockers has arisen, the dockers are using the opportunity to press for recruitment to help their relatives into the establishment.

At the same time a storm is blowing in the London meat trade. Productivity in London is about half that for meat handling in other ports, and the New Zealand meat producers are threatening to take the trade away to Sheerness, though, ironically, the building strike has delayed handling facilities coming on stream there.

Government spending Picking right nits

Backbench MPs on the expenditure committee have held a learned seminar with Treasury officials and academic economists on "Public Expenditure and Economic Management,"*, which they turned into an exercise in reasonably well-directed nitpicking.

At present, British governments publish broad estimates for public spending for up to five years ahead, which are actually arrived at in the following way: (a) individual departments indent for what they would like to spend varying their bids according to whether their ministers and civil servants want to look frightfully reasonable or dynamically expansionist; (b) Treasury civil servants then cut down these asking bids, so that their annual total is only moderately above or (if the government is frightened of Zurich gnomes) just below the Treasury's "secret" estimate of the forward growth of productive potential for the whole economy, which is really the absurdly (but disciplinarily) low one of 3 per cent. Actual public spending then varies greatly and healthily from the published forecasts, but the departments always say until the last moment that they should not have to vary them when private consumption and investment are thumped down or up in a crisis; and such emergency cuts or boosts in government spending have indeed usually been disruptive, precisely because the preparation of them has been delayed until the last moment.

The MPs now recommend:

(1) The Treasury should be made to publish its working assumption of the forward growth in productive potential. The practical effect of this would probably be to increase government expenditure, because the Treasury would feel embarrassed at constantly saying "only 3 per cent."

(2) The Government could vary some public expenditure in the trade cycle if it would look in advance at its projects so that the time lags involved between the authorisation of work, the start of the work and the flow of economic benefits from each of them were a bit better known. Any such inculcation of normal business practices should be encouraged, but they could never be big stuff. Private consumption takes up about 60 per cent of gnp, so that a 2 per cent cut in it is 1.2 per

*Seventh report of the Expenditure Committee. HMSO. £1.25.

NIPPON FUDOSAN BANK

NFB — as one of Japan's three big long-term credit banks — contributes to the development of industry by extending long-term credit. It is also well known as a pioneer bank in making loans for housing and other real estate. With assets approaching \$6,000,000,000, NFB has been increasingly active outside Japan, too — you'll be hearing more of us soon.

DOMECQ
Simply good taste.

cent of gnp; the delayable part of public expenditure is probably only around 5 per cent of gnp, so a 2 per cent cut in it would be 0.1 per cent of gnp.

The real mess, at which the committee did not even nibble, is that government expenditure is still planned wholly in input terms. Politicians and civil servants carry on this sham fight about whether they should say that real expenditure on the police service, the health service, roads, environmental pollution should by 1976 have risen by slightly more or less than the Treasury's wrong secret estimate of productive potential in the whole economy. Of course, government spending should be planned ahead in output terms: the target for 1976 should be to reduce crime by x per cent, reduce sickness rates by x per cent, speed traffic flows by x per cent, remove pollutants from the air and water by x per cent—and we should constantly be varying production efforts, sometimes indeed bringing in private enterprise to fields where public enterprise is now failing, when these targets are not being met. In America, discussion about present public sector targets is at last veering in this direction. In Britain the House of Commons still concentrates on picking minor blemishes off an input-oriented system which is thought-decades out of date.

Coal

Ezra stirs a crisis

Thanks to Mr Derek Ezra, chairman of the National Coal Board, all that unfounded American publicity about an energy crisis is beginning to take root here. If Britain does not watch out, Mr Ezra says, the country will be facing the same energy shortage in the late 1970s as America supposedly will suffer. The message that his hearers are intended to get is that we should keep the British coal industry at its present size, at no matter what cost, in order to ward off a crisis then.

This overlooks the prospects for North Sea oil and natural gas, which guarantee there will be no energy shortage in Britain for a long time to come. That would be true even if the Government's estimates of North Sea oil reserves turn out to be correct, although they almost certainly err on the low side and perhaps by a lot. Even the Government admits that, by 1980, around 75m tons of oil should

be coming each year from the British sector of the North Sea, which would be about one-half of Britain's projected oil consumption in that year. However, some oil experts say production could reach 200m or 300m tons by 1980 and even British Petroleum, despite its close ties with the Government, estimates 1980 production at 100m tons.

Mr Ezra can be forgiven for failing to look too deeply into what is happening in America, where plenty of options are still open to anyone wanting to use them. But it is naughty of him to ignore what is happening on his doorstep. It lessens the coal board's credibility, which may be unfortunate when Mr Ezra gets around to arguing the real case for coal. This is that the cost of energy is going to rise gently but inexorably, and that in not too many years Britain's coal industry could become a money-spinner, provided it can be made to operate efficiently. But it never will operate efficiently so long as the NCB's grossly unprofitable pits continue.

Their quick demise should be part of the negotiations now going on between the NCB, the National Union of Mineworkers and the Government. Apparently, they are not. The NCB and the union want huge subsidies, amounting to several hundred million pounds, to keep the industry running at its present size. All the Government appears to want is the union's assurance that it will not present another whopping wage claim this year. Such an assurance would help the Government's anti-inflationary campaign, but it would do nothing to solve the coal industry's long-term problems.

Farnborough

Who'll give way?

A rather tense meeting of the Society of British Aerospace Companies took place on Wednesday evening to decide what line the industry should take about the future of big air shows like Farnborough when it meets the rest of the European industry in Stockholm on Monday. Everyone agrees there are too many shows. Nobody wants to give theirs up.

One of the British industry's reasons for continuing the Farnborough air show is to let the British taxpayer see and sometimes touch where his money went. This year, on the show's three public days (earlier this month: Friday, Saturday and Sunday), a total of 184,302 people paid their money and watched. This was rather more

than the last time the show was held, in 1970. Millions probably watched it on television, too. But that does not explain why 633,000 people chose to turn up to one or the other of the seven Battle of Britain air displays held around the country last Saturday. The answer is probably that there are far more aircraft included in these local displays than the industry can now muster at Farnborough.

The industry has tried everything to compensate for the fact that there is no longer the flow of new aircraft that there was to sustain public interest when a crowd of 250,000 turned up one year at Farnborough in the 1950s. It has tried the admission of foreign aircraft (not many came) and this year even a popular flying display. What can be done? There are four European shows now, at Farnborough and Paris every alternate year, and in Hanover and Turin yearly. The last two shows have no business to be held at all but if Germany and Italy insist, then at least there should be an agreement to hold only one show in Europe a year, so that each country's turn comes round only once in four years. It will be proposed at Stockholm to drop at least one of the four shows, and rotate the remaining three on a three-year cycle.

The French, as usual, are raising difficulties. Their show in Paris, with its American and Russian aircraft, is the biggest and best air show held anywhere in the world. They want to keep it that way, which means discouraging other countries from holding anything on a comparable scale. They could conceivably be right. The

ROYAL DUTCH PETROLEUM COMPANY

(N.V. Koninklijke Nederlandsche Petroleum Maatschappij)
Established at The Hague,
The Netherlands

INTERIM DIVIDEND 1972

The Board of Directors and the Managing Directors of the Company have declared on account of the expected total dividend in respect of the year 1972, an interim dividend amounting to Netherlands Guilders 3.50 per share on its outstanding shares of 20 guilders par value.

A. On the Bearer Shares

(i) This interim dividend will be payable against surrender of coupon No. 152 on or after 28th September, 1972 at the offices of N. M. Rothschild & Sons Limited, New Court, St. Swithin's Lane, London EC4P 4DU on business days between the hours of 11 a.m. and 2 p.m.

Payment will be made in sterling at the buying rate of exchange current in Amsterdam at 2 p.m. on 21st September, 1972 in the case of coupons presented on or before that date, or on the day of presentation in the case of coupons presented subsequently. In view of the fact that Netherlands guilder funds are being provided by the Company for payment of this dividend, the usual foreign exchange commission will be deducted from the sterling proceeds. Coupons must be accompanied by a presentation form, copies of which can be obtained from N. M. Rothschild & Sons Limited, and the face of each coupon must bear the stamp or other indication showing the name of the presenter. Lists of the definitive numbers of the share warrants from which the coupons have been detached need not be provided with the presentation form.

Coupons must be left for an appropriate period for examination and must be handed in personally. Coupons cannot be paid through the post.

In the case of shareholders not resident within the Scheduled Territories the paying agent may, at the request of the Authorised Depository presenting the coupons, pay the dividend in a different currency. Information in this respect will be supplied by the paying agent upon request. From the gross dividend the Netherlands dividend tax of 25 per cent is to be deducted, except where coupons are presented on behalf of residents of France and the appropriate declaration Model A or B Fr. is provided.

Netherlands dividend tax at the reduced rate of 15 per cent will be deducted where:

- (a) United Kingdom income tax has also been deducted;
- (b) Coupons are presented on behalf of residents of the United States of America, Austria, Belgium, Canada, Denmark, Finland, Ireland, Japan, Luxembourg, Netherlands Antilles, Norway, South Africa, Surinam, Sweden or West Germany, provided they lodge the declaration form No. 92 V.S., No. 92 O.S.T., No. 92 B., No. 92 CAN., No. 92 DEN., No. 92 FIN., No. 92 IER., No. 92 JA., No. 92 LUX., No. 92 N.A., No. 92 N.W., No. 92 Z.A., No. 92 SUR., No. 92 ZWE or No. 92 D respectively.

(ii) On 28th September, 1972 this interim dividend will be paid to Depositories admitted by Centrum voor Fondsenadministratie N.V., Amsterdam, on the shares whose dividend sheets were in their custody at the close of business on 15th September, 1972. Such payment will be made through the medium of N. M. Rothschild & Sons Limited, after receipt by them of a duly completed CF Dividend Claim Form.

Where appropriate, the usual affidavit certifying non-residence in the United Kingdom will also be required if payment is to be made without deduction of United Kingdom income tax.

Where under the double tax agreement between the United Kingdom and the Netherlands, 15 per cent Netherlands dividend tax has been withheld, the 15 per cent Netherlands tax is allowable for a resident of the United Kingdom as a credit against the United Kingdom income tax payable in respect of the dividend. The deduction of United Kingdom income tax at the reduced rate of 23.75 per cent instead of at the Standard Rate of 38.75 per cent represents a provisional allowance of credit at the rate of 15 per cent.

B. On the Registered Shares registered in the United Kingdom Section of the Amsterdam Register

On 25th September, 1972 the sterling amount of the dividend will be fixed on the basis of the sterling guilder rate of exchange current in Amsterdam on that date.

The record date will be 4th October, 1972; shareholders registered at the close of business on that date will be entitled to receive the dividend.

On or before 27th October, 1972 dividend warrants will be posted by the transfer agent, Algemene Bank Nederland N.V., Amsterdam, to shareholders registered in their books on the record date.

From the dividend on the registered shares Netherlands dividend tax of 25 per cent has also to be deducted. Where under the relevant tax convention shareholders are entitled to a reduction of the Netherlands dividend tax, this can only be effected through a request for a full or partial refund of the tax withheld on the appropriate tax affidavit. A further announcement will be made as soon as possible after 25th September, 1972 giving the rate of exchange, the amount of the dividend in sterling per share and the amount of the 25 per cent Netherlands dividend tax in sterling per share.

20th September, 1972 ROYAL DUTCH PETROLEUM COMPANY

The most popular sherry in Britain is one of a family of ten.

Double Century, the smooth light oloroso with a subtle touch of sweetness, is just one of ten great sherries from the House of Domecq. Shipped by Luis Gordon and Sons Ltd., one of the Luis Gordon group of companies.

pace of aircraft development has slowed to a point at which the industry cannot present a genuinely interesting show every year, and would be hard put to mount one every other year. The British and French, with the two biggest industries in Europe, would do better to agree to put on, between them, two shows in four years and cut out Hanover and Turin.

Drugs

Big's better

The scars of the Beecham-Glaxo takeover battle still rankle in the drug industry. This week the industry's neddy has come out with a report* that says, in effect, that the Monopolies Commission was wrong to advise the Department of Trade and Industry not to allow the deal. The first takeover approaches were made by Beechams in December last year. In July the commission reported that it saw nothing to suggest that the two companies together would do any more effective research than they were doing apart, so that the justification for allowing such a big concentration of power in the industry fell through.

When it was preparing its report, the commission actually had in its hands the draft of this week's neddy survey. The survey argues that the threshold level for effective research in the drug industry is £500,000 a year. The faster it rises above this threshold, the more effective research is likely to be. The bigger the company, the more productive its research, and the stronger the case for encouraging mergers in order to produce big companies.

*Focus on Pharmaceuticals. HMSO. £1.85.

The Monopolies Commission threw this argument out of the window. It looked at the number of patents registered by individual companies in the industry, and decided that it simply was not true. The neddy has now replied that it is "rather sceptical" of the weight that the commission attached to yardsticks like this; it has now commissioned a study of the number of innovations that companies produce in relation to their size, which it hopes will quash the Monopolies Commission's argument.

The neddy report was produced by a working party from the industry and the unions. To that extent it represents a piece of special pleading. It contains the industry's usual attack against continual pressure from the Department of Health and Social Security to keep down margins on drugs sold to the national health service, saying that low profits will discourage foreign investment (the return on capital has come down from 25½ per cent in 1967 to 18 per cent in 1970). In the same breath the neddy also argues that other studies it commissioned showed that £1 spent on research in British laboratories worked 2½ times as hard as the equivalent spent in America.

The Monopolies Commission turned all this down when it rejected the advice contained in the neddy draft and refused clearance for the Beecham-Glaxo merger. But, in doing so, the commission also rejected some of the genuine arguments for size: that it does help in international marketing and that it does, in particular, give companies a cushion against the occasional enormous loss incurred when a drug on which a great deal of money has been spent is suddenly taken off the market. Few people remember now

the losses the industry had to stand when the then Ministry of Health authorised the use in this country of oral polio vaccines. Manufacturers who were geared up to produce the older type given by injection, the only kind previously allowed in Britain, could not even give their stocks away.

Companies need a cushion of profits to carry them over these shocks, and big companies have a broader production base that can serve much the same purpose. But that is not the same as the industry's repeated complaint that its margins are too small to sustain either research or investment which the Monopolies Commission plainly disbelieved. When margins are squeezed, most industries cut back on research and on marketing. Research spending is already tightly controlled by the drug companies, but the amount that they spend on marketing is continually under fire. The Sainsbury committee found in 1965 that it was running at 14 per cent of sales, and said this was much too high; but four years later the Public Accounts Committee found that there had been no change. More is spent on marketing now than on research. Doctors continue to complain about sales promotion that runs beyond brochures that out-glossy each other, and includes such refinements as glass paper-weights to keep a drug before the doctor's eye when he reaches for his prescription form. There is something to be trimmed here at once. With the prospect of a drug market worth perhaps £700m a year in this country by the end of the decade, of which nearly £500m would be paid for by the NHS, no major company is going to hold back on either its research or its investment for fear of missing its share.

Key indicators: British economy

Unemployment
A small rise for the third successive month.

Gross domestic product
Recovered in the second quarter to 3 per cent above a year ago.

Wages and earnings
Basic hourly wage rates in August over 14% up on a year ago. Average earnings in July still rising at an annual rate of around 12%.

Money supply
Slight reduction in rate of increase in August, but still close to 30% over three months.

Waiting for the Lords' day

Inchcape, Catto, Poole: still arguing

In three weeks' time, on October 12th, the shareholders of Peninsular and Oriental Steam Navigation will be enfranchised. They will be given one vote per share; at present each shareholding has a limit of 20 votes, whatever its size. The company hopes to lighten the ship to take the jet-propelled Bovis into the boiler room to generate some profits—if, that is, the shareholders of Bovis agree to take to sea. They have every reason to agree. They will be given half of P&O's equity in exchange for putting up a sixth of the net assets and 60% of the post-tax profits (after using P&O's capital allowances) of the combined housebuilding/construction/property development/shipping group. The doubt is whether the newly enfranchised P&O shareholders will pipe them aboard with full honours, or haul up the gangway.

There is time to think over the implications of the merger and to await further developments. In the short time since the offer document appeared, several facts and figures which are not in the document, but are significant, have come to light. Mr Frank Sanderson, Bovis's chief executive, has specifically announced that he has made a verbal promise to stay with the new group for a minimum of five years. Is this a service

contract? Should it not have been in the document? There are some people in the City who had heard that Mr Sanderson had wanderlust. Evidently he does not have, and intends to devote his considerable energies and talents to creating an energetic team of executives for the new company (POvis?). It also emerged that P&O's property development potential has largely been realised; 80% of the new valuation of £108m is accounted for by completed developments. One could also quarrel with the description of Bovis's "proven expertise in property development" when its £100m development programme lies largely in the

future. Mr Ford Geddes, P&O's chairman, is at pains to point out that property is the bonus; the idea is to stick growing profits on to huge shipping assets. A notable omission from the document, therefore, was a detailed breakdown of Bovis's profit forecast. It will emerge, and will almost certainly be close to the unofficial one that has already appeared. Compared with last year, suitably adjusted for acquisitions, it should look like this:

	1971	1972
	£m	£m
Property	1.3	3
Construction	1.8	3
Banking	.6	1
Housing	2.6	6
	6.3	13

And the question is the extent to which these profits are maintainable, bearing in mind the dramatic leap over 1971. The increase in housing is caused by a rise in house sales by 1,000 to 3,300, but also by a 60% boost from the jump in house prices. However, with a substantial land bank worth some £55m, the current rate of sales and profits can be maintained. The other bits should show good growth too—and the profit on that £100m worth of property development, if sold to show a reasonable margin of 25%, might bring in another £6m a year on average.

*forecast

The confident men at Bovis have even more elevated ideas of their own future profitability. They saw no reason to accept less than an exit p/e at 13. Yet the question is not so much whether Bovis is too dear but whether P&O has too cheap a view of itself. That is the view of Lord Inchcape and the two other executive directors who have now followed him in opposing the merger. They see a gleaming future from the new shipping fleet and the new profit-conscious attitudes. So does Lord Catto, of Morgan Grenfell. Lord Poole of Lazard Brothers, the marriage broker, will no doubt be lending his weight to the argument when he returns from his holiday.

The market remains sceptical. The news of the property revaluation quickly pushed P&O up to 345p. If the merger fails, Bovis will fall back: if it goes through, the price of the combined POvis will fall too. So think seriously of selling Bovis. If P&O's merger plans are thwarted, the market might expect P&O itself to be bid for. That would be a miscalculation.

London and New York

Waiting for the breakout

The Financial Times industrial ordinary index fell on Thursday to 483.9, 16 points down on the week before, so keeping up the steady pace of decline since mid-August. The blood-letting will carry on a bit longer, and then there might be a rally in recognition of the splendid profits being reported by companies. There is no sign of a breakout from the 475-500 band in the up direction, and no reason for one on the downside yet. The steady fall has taken the wind out of the takeover vessels. The board of Quinton Hazell (Holdings), which booted out the lone director who did not want to merge with Burmah Oil, has now decided not to merge with Burmah Oil because Burmah's price has slumped by 13%. Quinton Hazell's advisers, S. G. Warburg, have resigned.

No one really understands why Wall Street is not going through the roof instead of remaining carpet-bound. Even American Telegraph and Telephone, which is unaccustomed to delighting anyone, came up with a 16% profit increase in the latest quarter. But, although the Dow Jones has fluctuated obstinately around 950 for six months, the balance of probabilities is in favour of a steep move up.

Compagnie Lambert Baron Lion

The Compagnie Lambert pour la Finance et l'Industrie, which owns the Banque Lambert and a host of portfolio and direct investments, is to merge with three other Belgian holding companies: Cofinter, of which it owns 51%, and Bruflina and Cofinundus, which are controlled by the de Launoit family. The new group, to be called the Compagnie Bruxelles Lambert, will have gross assets of £140m, less loan capital of £28m—not so very far off the granddaddy of Belgian holding companies, the Société Générale de Belgique, 150 years old this year, and some £200m big in assets, or more (*The Economist*, March 18th).

Stage one of the proceedings will be to get the deal agreed by shareholders. With Lambert shares at FrB2,500, other shareholders are being offered premiums of around 10% on their pre-bid prices so there should not be much problem. Then the aggressive Lambert management will get to work on the under-used assets of the newly-acquired holding companies. Immediately after the merger, the Lambert shareholder will still be getting the same FrB3,000 worth of net assets as before, and the logic of creating a more powerful grouping is to increase the net assets per share. The new group will own 10% of the Banque de Bruxelles, and will no doubt try to persuade the management of the benefits of closer co-operation with the Banque Lambert—an uphill struggle against the wish of the larger bank to stay autonomous and go multinational, if anywhere.

One of the mysteries of the deal is the percentage of the new group that the Lambert and de Launoit families

will own. All the deals are to be share exchanges. Many people anticipated a high cash element to maintain Lambert control. However, the Baron Léon Lambert is to be chairman, and the Lambert interests will undoubtedly have retained the lion's share of the shares.

SECTOR ANALYSIS Engineering: better tomorrow?

There is now a golden opportunity to invest in British engineering shares. All the economic indicators point to a recovery in Britain's fixed investment in 1973, and the latest company results suggest that the profits nadir has now been passed. But the engineering sector has moved broadly in line with the rest of the market in recent months, and some of the leaders at current prices are on prospective p/e ratios of under 10 for 1973.

Well, that's the line investment analysts are spinning to their clients. The trouble is that the clients have heard it all before. Last Christmas, everyone agreed that engineering, like mining finance, was the obvious sector for 1972. So far this year, engineering shares have under-performed the market by around 8%. Engineering shares have done worse than the market in every year since 1964; their relative rating has plummeted by 28% in 10 years.

There is no certainty that there will be a great boom in capital investment in 1973. The National Institute of Economic and Social Research predicts a rise of only 5% in private manufacturing investment. On top of this, there is the eternal worry of

NEW ZEALAND

We are where the action is

It was gold that helped New Zealand in its early days. And now New Zealand's other mineral resources are exciting close interest.

Minerals already discovered include lead, silver, zinc, sulphur, titanium, silica and bentonite; all have considerable export potential. And in their wake, the prospect of a succession of second generation industries.

Beckoning fingers to the British investor and exporter. And we are there—right where the action is—well placed to help you as and when you need.

Meanwhile, why not study a copy of the latest edition of our 'Review of the Economic Situation in New Zealand' or our booklet 'Investing in New Zealand'? They are yours for the asking.

Over 200 branches and agencies throughout New Zealand.

Quality in an age of change FAMOUS GROUSE SCOTCH WHISKY

For the true connoisseur, the first taste gives unusual satisfaction and arouses considerable interest. The mellow character of carefully-aged Whiskies reflecting our blending skill belies mass production.

Compare it neat with any other Whisky—the really sure way to make a test. The difference is unmistakable. Famous Grouse Scotch Whisky—with a century and a half of family experience behind it.

Matthew Gloag & Son Ltd., Perth, Scotland. Established 1800

disruption by strikes. All engineering companies are on high strike-earnings ratios. The mining strike, for example, hit Tube Investments to the tune of £1m. The joint frontrunners for the next big strike are electricity supply and Fords. If either strike materialises, engineering shares will be severely hit.

But the latest company results from Tube Investments, Babcock and Wilcox and Vickers do indicate that the worst is past. Chairmen are now predicting that profits for the whole of 1972 will be roughly at the same level as in 1971, which implies that the recovery in profits has already begun. Engineering profits should be rising through volume growth rather than price rises, so they would not suffer much from a statutory prices and incomes policy. Engineers can also congratulate themselves on reaching a wage deal which was less inflationary than feared.

On balance, it looks as though there is a good chance that engineering shares might break out of their seven-year relative decline at least for the next six months. The best buys at the moment include Guest, Keen and Nettlefold, with its excellent management record, Tube Investments, which has the extra attraction of a growing stake in consumer goods, and perhaps Vickers, the well-known recovery stock.

CNA Financial Elmer's fire

New York

Stock analysts can fly to Chicago next week for a two-day quizfest with executives of CNA Financial Corporation. There they will meet the new chairman of the finance and insurance group, Mr Elmer Nicholson, and hear about his realignment of the top management of the company.

Strong words, Elmer

The Chicago meeting is the latest ploy in CNA's continuing effort to put itself across as a major diversified financial service company, rather than as just another rather large insurance business, and to convince the institutional stock buyer that CNA is cheap at its current price. The shares are now languishing just above their 1972 low of \$18, putting a price/earnings ratio of just 10 on the most conservative estimate of CNA's earnings in 1972. This sounds cheap for a company which showed 38% profits growth (to \$37m) in the first half of the year.

The trouble for CNA is that it actually is an insurance company—whatever its publicity may say. Its broad-based insurance operations accounted for \$21.1m of \$23m in after-tax profit in the second quarter of 1972, a higher proportion than in the previous year. One diversification, Larwin, a housebuilder, is in a business that does not have much glitter on Wall Street and the investment management group of the celebrated Mr Jerry Tsai—one of the swinging money men of the late 1960s—lost \$2.4m in the first half. Mr Nicholson says:

I have made it clear to my associates that they had better show me profits at the end of three years on these companies, or they better show me a plan for liquidation. Or depart.

Tough stuff for a solid American company in the solid (and probably under-priced) American insurance industry.

Rio Tinto-Zinc

From here to eternity

The Church Commissioners sold off £1.5m of Rio Tinto-Zinc equity during the course of the summer, blending the dictates of their conscience

with a canny investment decision. The church wished to bow out of the increasing criticism that is being levelled against RTZ's involvement in southern Africa, its copper developments in the virgin territories of Papua-New Guinea, and its proposed mining sites in Britain's national parks. It must be equally pleased to have no connection with the results RTZ announced on Wednesday.

Although sales were up by 16% during the first half of this year, earnings grew by only 8%. These figures contrast with a bad year in 1971, and fall short of the forecast that profits for the year would equal those earned in 1970; a prediction that drove the shares up to 287p earlier this year. Most of the increase in sales came from the first production run of the company's new, and rich, copper mine at Bougainville. Earnings at its major copper mine at Palabora in South Africa were down, as were those from its iron ore operations at Hamersley in Australia.

Once again, RTZ is left promising the future. The Bougainville production is having teething problems, and the new aluminium smelter at Anglesea is losing money. Copper, which earns a third of the company's profits, is still cheap. Huge copper stocks hang over the London metal exchange. Unless there is a major disruption from Allende's Chile, prices are unlikely to rise much from the present £430 a ton in the next six months. This means that there may be little in RTZ's annual figures to justify a share price much above the present 250p.

But there is little downwards potential in RTZ. The price of copper is unlikely to drop further. The outlook for zinc has improved, and the losses on the new aluminium smelters should be stemmed. In the long run Mammon may prove God wrong.

Langham
Property
Bond

Property Bonds are supposed to provide secure, *steady* growth for investors. But here's one that has been providing investors with secure, *fast* growth for their savings.

In the first 7 months of 1972 the offer value of Langham Property Bond Units has gone up by no less than 26%: a splendid performance by any standards.

To discover why our Property Bond has performed so well, send for this free brochure. It describes how the Langham Property Bond is underwritten by Langham Life—a member of the E. Alec Colman Group of Companies—and how ours is the only Bond whose investment committee is headed by a property developer of international repute with a record of success spanning over 30 years.

Before you invest another penny in Property Bonds you owe it to yourself to find out what Langham has to offer

The property Bond that really performs

Property Bonds

The time for them

If the stock market has really turned bearish, the property bond funds will hope to attract a wave of money from savers disenchanted with equities and unit trusts. When *The Economist* did the first of its six-monthly property bond surveys 18 months ago, the total amount of money invested in these fledglings was only £80m. It is now just a mite under £300m. During most of that year and a half, the stock market was in full flower and exerted a considerable counter-attraction. Now that the equity bloom is fading, property bonds may be advertised as the answer to the average saver's search for the philosopher's stone of growth plus security plus stability. Savers should beware. While the virtues of this new medium are great, property bonds are still too young for their vices to have emerged.

The main argument for investing in property bonds is property. An increase in property values over the foreseeable future seems assured. The population and its demands for space are growing; the supply of space in places where the population wants it is (almost) fixed. The financial institutions in Britain recognise the commercial sense in becoming landlords, and have shunted hefty amounts of money into buying up completed property developments. The chart shows that

insurance companies, pension funds and the specialised unit trusts for pension funds invest over £300m a year in buying properties. In addition, there are hundreds of quoted and unquoted property companies which are creating developments and either selling them off to the institutions or hanging on to them if the long-term finance can be found.

Although the property market does not provide the same characteristics of marketability as the stock exchange, it does deal in huge amounts of money and has a pile of institutions which stand ready to buy anything that looks like a good bargain. The entry of the property bond funds into this market to some extent creates a situation of self-justifying prophecy. The bond funds are pouring money into a market where the good class properties are scarce as it is: they thus push up property prices further, and strengthen the claims that property is a good investment.

Few people expect property prices to increase in the year ahead at quite their recent pace. The huge surge in property values in 1970-72 has been a reflection of the fact that real estate always does rise by more than most other things during a state of near hyper-inflation, and it has been especially fuelled by an absurd rise in money

supply; the latter must be curbed soon, and excessive lending from the banks to the smaller and more speculative types of property trading and development is now being directly dammed at the Bank of England's request. The rise in property rents already seems to have calmed a bit in the past few months. But against these points there is the countervailing influence on property values of a change in yields. Once even 5% (ie, 20 years' purchase of net rents) used to seem a vast amount to pay for properties. Now there has been a change in the attitudes of fund managers to property. They used to compare the yields on property investments with the yields on fixed interest investments—and on this criterion property is clearly expensive in relation to the near-10% on gilts. But now they compare the yield with that on equities—and, compared with the 3.3% average yield on equities, safe old property still looks cheap, especially as, after the first few rent reviews, the yield on the purchase outlay zooms. So those who are buying property in competition with the property bonds are currently providing the valuations of the bond funds with another prop—the acceptance of smaller yields.

In our last survey (*The Economist*, March 18th) we said that the main problem before the managers of property bonds was that of finding properties to buy. One way out was to form an umbrella fund with three parts—property, equities and fixed interest—and to shunt the money into the last two while the managers scrambled around to find some bricks and mortar. Now that the fixed interest market has gone sour and equities are less than sweet, this way out does not seem appealing. In the past few weeks, many funds have been advertising the large extent to which they are now invested in properties.

The solution for some of them has

been one which carries its own dangers: they have been pouring money into property development directly instead of buying completed and tenanted buildings. *Abbey Life*, the largest fund of the lot, will put up to 35% of the fund into development. So will *Hambro Life*. The majority of the money is put into schemes where the developer guarantees a minimum return, or where a tenant is signed up. In some cases, the fund does what amounts to a sale and leaseback: buying the property, paying for the development and then getting a guaranteed 6% plus half of any rents which push the yield over 6%. While the buildings are under construction, they are valued on a basis which is even more of an art form than most property valuation: for a price a willing buyer and seller would agree on. No doubt the Scott committee, which is expected to produce its report on property bonds early in the new year, will have some recommendations on valuation methods. From the tenor of the committee's questioning, it seems likely that the emphasis will be on greater disclosure rather than on a control through some kind of watchdog.

The valuations of the property bond funds are, so far as can be judged, on the progressive side. We have, for the first time, ranked the funds according

to their performance over the past year—or since they began—but would not advise investors to assess the funds merely on the basis of growth over such a short period. To give another method of comparison, we have shown the average growth per month of the funds since their launch (this is a simple division of the growth by the number of months, and is not a compound rate). The growth is made up of the revaluation of properties, and, since there are no cash distributions, of the accumulation of income from rents and from short-term investments.

It is clear that the small funds have done best, but not clear yet whether this is because they are small or because they are smart. A good deal can create a jump in assets—a bad one a huge fall. The *Robert Silk* property bond points to the 25 years' experience of the Silk family and the fact that the family has put £180,000 of its own money into the fund. The *Langham Property Bond* plays up the 30 years' experience of Mr E. Alec Colman but has some features which the investor should note carefully. Although the prospectus does not mention the possibility, the fund goes in for considerable gearing: at present it has borrowed £600,000 from its bankers to buy properties against anticipated receipts from bondholders. The fund claims an inflow

of £300,000 per month, and that there are definite indications of all the £600,000 coming in within three months. However, for a £1.7m fund to borrow £600,000, short-term, is risky enough to have forewarned potential investors. On the other hand this "property bank" enables the fund to be fully invested. For most of the past year, *Hambro Life* was 50% liquid—which means that the creditable growth was achieved on only half the fund.

In spite of the lively performance of the new, and thus little, funds, there is certainly a strong argument in favour of size in property bonds. Big funds can buy or develop the bigger properties, the kind that will find a ready pension fund or insurance company buyer if the day should ever come when cash out exceeds cash in. Property funds are open-ended: investors can cash in (sacrificing a few percentage points) whenever they want. But property is relatively illiquid, and the prospect of redemptions exceeding sales remains the managers' nightmare.

As bond funds get closer to developers—*Property Growth* is about to announce that substantial sums have been advanced to a well-known property company—they are, inevitably, going to be a bit more risky. But there is no philosopher's stone: there is no investment without risk.

APPOINTMENTS

St. Antony's College

OXFORD

Research Assistants in Economics

Applications are invited for two posts, tenable for one year in each case, to assist in the preparation of a study of economic development in eastern Europe, a project financed by the Social Science Research Council. The candidates selected must primarily be of English mother-tongue with the ability to draft chapters from working papers already available in English from foreign project contributors and to collect and interpret economic data, applying standard statistical procedures. A good honours degree in economics is essential and a reading knowledge of French and German would be an advantage; other linguistic qualifications would also be of use, but work in the languages of the countries concerned is the responsibility of other project staff.

The salary is £1344 (though an appointment may be made at a more senior level for one with greater experience), with free lunches in College and membership of FSSU. The successful candidate would be expected to start as soon as possible. Applications should be addressed before 6 October 1972 to Miss A. McClintock, Secretary to the East European Economic History Project, St. Antony's College, Oxford OX2 6JF.

Bedford College

UNIVERSITY OF LONDON

Department of Sociology

Applications are invited from suitably qualified graduates for appointment as a Temporary Visiting Lecturer (part-time) in the Department of Sociology to teach Economics mainly to non-specialist students. Salary according to qualifications on usual scale pro rata. Further details may be obtained from The Secretary, (E) Bedford College, Regent's Park, London, NW1 4NS. (Tel: 01-486 4400 Ext. 312). Closing date for applications 13 October: 9th October. Late applications may receive consideration for subsequent arrangements.

The University of Sydney

Lectureship in Economics

Preference will be given to candidates specialising in quantitative economics with experience in either mathematical economics or econometrics.

Salary range: \$A6,697-\$A9,266 p.a.

Applications, including curriculum vitae, list of publications and names of three referees, by 16 October, 1972, to the Registrar, University of Sydney, N.S.W. 2006, Australia. Information about conditions of appointment and application procedure available from the Secretary-General, Association of Commonwealth Universities (Appl), 38 Gordon Square, London WC1H 0PF. (Tel: 01-367 8972).

CHAIRMEN'S STATEMENTS

Keyser Ullmann Holdings Limited

"Major advance in status, profitability, size and prospects"
Edward du Cann—Chairman.

Extracts from the Chairman's circulated statement:

The year under review saw a major advance in the Company's status, profitability, size and prospects. Profits for the year at £1,361,124—after tax and transfer to inner reserves—constitute a new record.

We were pleased to announce the subscription by the Prudential Assurance Company Limited of 3 million ordinary shares of 25p each at 250p per share. Most of the resulting addition to our resources was used to increase the paid-up capital of Keyser Ullmann Limited, the banking company, from £3.5 million to £10 million. This will enable the bank substantially to increase its lending.

The profits of the banking group were treble those of the previous year. This growth has been reflected in all sectors of the bank. The corporate services department has expanded considerably and it has now established itself as a major profit centre within the bank. The investment management section has also seen major growth and funds under management have increased from £40 million to some £100 million at the year's end. Since then a further expansion has taken place. Another welcome feature has been the growth of Keyser Ullmann S.A., our Swiss banking

subsidiary, which we hope is going to provide a foothold for our expansion in Europe.

A final dividend of 20 per cent is proposed making a total of 26 per cent for the year (1971—12.7 per cent).

Two major developments since the end of the year have been the merger with Central & District Properties Limited and the merger with Dalton, Barton Securities Limited. These two acquisitions transform the group. The company now comprises merchant banking activities producing profits which are substantial and broadly based, together with property investment and development in operations with a property portfolio in excess of £100 million. I believe this structure is well suited to meet the opportunities presented both at home and in Europe.

	1972	1971
	£'000	£'000
Net profit of the group after tax and transfers to reserves	1,598	792
Minority interests	237	202
Profit attributable to the group	1,361	590
Dividends	758	372
Retained profit	603	218

Copies of the Annual Report are obtainable from the Secretary:
31 Throgmorton Street, London, EC2N 2BS

ATTOCK OIL COMPANY

Extracts from the circulated statement of the Chairman, Mr. D. P. S. McCarthy, O.B.E.:

Political troubles had a serious effect throughout the year on the domestic economy of West Pakistan where the Company operates. Despite many adverse factors, the operating profit amounted to £1,006,268 at the pre-devaluation rate of exchange compared with £1,111,673 for 1970. The serious effect of devaluation has reduced the net profit for the year to £176,692 and the Board are unable to recommend any final dividend.

With regard to the future, Pakistan has undergone, and is undergoing, a very difficult period. Although conditions should improve next year the blow to the profitability of our operations in Pakistan consequent on devaluation could have a lasting effect. It is necessary, therefore, to diversify operations into other countries if the Company is to restore its profitability and this the Board has in mind.

A start has been made by negotiating a small investment in Jasper Oil Limited of Calgary, Alberta, Canada. Preliminary discussions have taken place about participations in other projects. However, these discussions can only be regarded as tentative at the moment, and your Board is unable to estimate whether they will lead to a proposition which can be submitted to stockholders.

APPOINTMENTS

Economic Statisticians

£3,653-£4,883

Department of Trade and Industry

One of the vacancies here is for a Statistician to provide statistical support in civil aviation matters. Working closely with the Civil Aviation Authority, you will be responsible for the civil aviation component in the balance of payments. You may also have certain responsibilities in the field of shipping statistics.

Ministry of Posts and Telecommunications

You will be a statistician in a small multi-disciplinary team advising the Ministry in its dealings with the Post Office. Your work will involve you in all aspects of Post Office business, in particular with policy questions. You would find experience of econometric model building and/or O.R. an advantage in this post.

These posts are at main grade Statistician level. Starting salaries could be above the minimum of the scale £3653—£4883 (Inner London) with prospects of promotion to Chief Statistician £5525—£7451.

Applicants must be at least 27 and possess an

honours degree in statistics (or in another subject involving formal training in statistics), or another appropriate qualification, e.g. A.I.S., and have had several years relevant experience. Appointment may be permanent and pensionable or on fixed period contract (with FSSU).

There are also vacancies for Statisticians and Senior Assistant Statisticians in other government departments. For Senior Assistant Statistician posts (£2476—£2984, Inner London scale) you must be 24 or over, and possess an honours degree in statistics (or in another subject involving formal training in statistics) and have had some relevant post-graduate experience. Senior Assistant Statisticians can expect promotion to Statistician within two or three years.

For full details of acceptable qualifications, information on all current vacancies in the Government Statistical Service, and for an application form (to be returned by 13th October), write to the Civil Service Commission, Alencon Link, Basingstoke, Hants, or telephone Basingstoke 29222 ext 500 or London 01-839 1992 (24 hour 'Ansafone' service) quoting reference A/619/1.

ECONOMIST

Age 28 - 32

Overseas Containers Limited is a leader in the development of international through-transport container services which are vital to the nation's export and import trades.

A vacancy has arisen at a senior level in the Company's Economics Department for a Graduate Economist. Post-university experience is essential.

The work involves trade forecasting, the analysis of opportunities for developing container services and other economic aspects of containerisation. It is related to practical problems affecting company policy and the job provides an opportunity to work with other Departments in OCL and to learn the container business.

Applicants should have a knowledge of macro-economic factors in world trade, of the elements of project analysis and of statistical techniques used in business.

Salary will be according to age and experience. The appointment will be based in London and conditions of service will include a four weeks' leave, free life cover, luncheon vouchers and a contributory pension scheme.

Applications giving details of career to date should be sent to: The Staff Adviser, Overseas Containers Limited, St. Mary Axe House, St. Mary Axe, London EC3A 8BE.

Financial Controller Property about £6000

A private Company which has expanded rapidly now wants to appoint a Financial Controller. The company now covers all aspects of property development and investment—commercial, industrial, office, residential and property financing although concentrating on office development.

He will be required to co-ordinate the financial affairs of the Company and create the organisation needed to take it from its present size (£12m) via growth and acquisition to incorporation as a public Company.

Commercial and administrative ability matched with an appreciation of financing in all its aspects will be the main characteristics of the successful candidate. Appointment to the Board is envisaged after competence and compatibility have been demonstrated.

Preferred age 28-35. Salary, which could be higher than indicated, will depend on proven experience and indication of potential.

Replies in confidence quoting reference FC/CO/3to

S Head Office

Economists

A sophisticated commercial planning system is being developed throughout the British Steel Corporation, and Economists are needed to join small specialist teams working on various aspects of macro-economic, industrial, price and demand forecasting for the Corporation's products at home and overseas. They may also be involved in the development of methodological techniques and in ad hoc depth studies of certain critical problems.

The work is exacting and calls for intelligence, initiative and ability to write clear reports. Candidates should have a good degree in economics, business studies or related disciplines. Some experience in industry, commerce or Government is looked for. They should have an understanding of statistical techniques and some specialised knowledge of international economics. For at least one of the posts experience in the use of computers is essential. Foreign languages will be of advantage.

Preferred age range: 25-35 but consideration will be given to younger candidates of outstanding promise.

Please apply in writing (quoting ref. H.O.43) stating qualifications etc., to:-
**Personnel Manager (Head Office),
BRITISH STEEL CORPORATION,
P.O. Box No. 403, Grosvenor Place,
London, SW1X 7JG.**

THE BOWATER CORPORATION LIMITED

Economist

A young economist is required to join the Economic Intelligence Unit in the London headquarters. He (or she) will be a member of a small team responsible for assessing the effects of economic, political and industrial developments on the Corporation's interests world wide. Duties will also include studies on possible areas of diversification.

Candidates should be qualified Economists, aged 25-30, with an analytical mind and experience of economic work in industry and commerce.

A good starting salary will be offered, dependent on experience and background, and benefits and conditions of service are excellent.

Please apply in writing to:-

Mr. W. E. D. Tidy,
Manager, Personnel Recruitment,
The Bowater Corporation Ltd.,
Bowater House,
Knightsbridge, London, SW1X 7LR.

APPOINTMENTS

BRITISH UNIVERSITY
in collaboration with SWISS BRITISH CENTRE
urgently require

DIRECTOR OF AGRICULTURAL STUDIES

with university degree. Bilingual applicants only (mother tongue English with German or French). Applicants will be responsible for formulating agricultural courses for Swiss, British and Commonwealth citizens in view of Common Market, and for establishing an international institute of agriculture. Initially they will be stationed in Britain. Interesting position with many opportunities. Salary by negotiation but based on British lectureship with overseas allowance.

Also immediately wanted

BILINGUAL SECRETARY

directly responsible to the above director. Appointments for both posts will be made initially for one year followed by contracts for longer periods. Will both applicants please send particulars, salary suggestion and photograph to **BOX 2924**, stating their present position and giving the earliest date of their availability for the above appointments.

Urban and Regional planning

A senior appointment in the EIU's team of economically-orientated planners. The ideal person would be over 30, have a first degree in economics, be an MRTPI and have experience in leading projects involving an economic approach to urban and regional planning. Would be expected to play a leading role both in obtaining projects and in carrying them through. Willingness to spend extensive periods abroad an advantage.

Development economics

To participate in, and lead major projects in regional economic industrial development, and agricultural development studies. Applicants should be over 30, be professional economists and have practical experience in major economic development studies. Willingness to work abroad for extensive periods essential.

Apply, with full details of qualifications and experience, to

Development & Planning Division

The Economist Intelligence Unit Ltd

Spencer House, 27 St. James's Place, London SW1A 1NT

Economists A post that could involve you in major projects like:

*Examining the possible trends in the purchasing power of the Defence Budget.
Examining various interfaces between defence activities and the civil economy.*

This vacancy for an Economic Adviser is at the Defence Operational Analysis Establishment (West Byfleet, Surrey) where you will be able to use your economic expertise in a practical way.

You have three areas of responsibility. Firstly, you guide DOAE on the right economic principles and practice in its treatment of costs. Secondly, you work for the Ministry of Defence as a whole and the Ministry of Defence from you might liaise with economists from other Departments or lead a multi-disciplinary team. Thirdly, you contribute to particular operational analysis studies. It is in this area especially that you will be required to analyse the cost of important defence operations. Usually in the defence field, investment appraisal is carried out with capability as the yardstick, rather than pure financial returns.

Much of the work relates to long-term planning - which must be based upon assumptions about equipment being evolved on the very frontiers of technology. As a member of the Government Economic Service, you are not restricted to one area of work, or even to one Department

and you can expect to be considered for a wide range of posts within the Service in the interests of your career development.

Qualifications. You will normally need to be at least 27 with a 1st or 2nd class honours or higher degree in economics or a closely related subject. Preferably you should have had experience of using mathematical, statistical or econometric techniques in long-term planning. Appointment can be on a permanent or fixed period basis.

Salary. Starting salary may be above minimum of scale £3478 - £4708, and promotion can lead to salaries of £7451 and above.

There are also interesting vacancies in other Government Departments.

Send for an application form (to be returned by 6th October 1972) and full details. Write to the Civil Service Commission, Alencon Link, Basingstoke, Hants, Or telephone Basingstoke 29222 ext 500 or London 01-839 1992 (24 hour 'Ansafone' service), quoting reference A/622/23.

University of Mauritius

Applications are invited for SENIOR LECTURER IN ACCOUNTANCY, Centre of Professional Studies, School of Administration, under assistance from the Commonwealth Foundation. Duties include organisation, supervision, and teaching of courses for the A.C.C.A. Examinations, and assistance on other courses, with a financial or accounting element. Appointee should be a member of either Institute of Chartered Accountants, or Association of Certified Accountants, or Institute of Municipal Treasurers and Accountants. Previous teaching experience is essential, preferably for A.C.C.A. Examinations. Possession of an appropriate university degree would be an advantage. Appointee will be on a 3 year contract at a salary of £3,500 p.a., of which £1,250 will be payable in UK, normally free of all tax, be provided with subsidised housing and family passages. In addition, he will be entitled to either a supplementary salary of £400 p.a. or mid-contract passage for himself, not exceeding the worth of the supplementary salary. Leave will be 8 weeks p.a. (which may be accumulated) within the period of contract.

Further particulars may be obtained from The Head of Division (B), Inter-University Council, 90-91 Tottenham Court Road, London W1P 0DT, to whom applications should be sent not later than 21 October 1972.

APPOINTMENTS

Rhodes University

GRAHAMSTOWN,
SOUTH AFRICA

Applications are invited for the post of DIRECTOR of the University's Institute of Social and Economic Research from 1st July 1973.

The salary scale for this post will be R7,500 x 300-9,900 per annum. A vacation bonus is also payable and the successful applicant will become a member of the University's pension and medical aid schemes.

The Director, who has a seat on the University Senate, is the senior administrative officer of the Institute and is concerned with the furtherance of research in the social sciences and is also expected to engage in his own research. Candidates should have suitable academic qualifications in at least one of the social sciences, and experience of research, publication and administration.

Further particulars and application forms may be obtained from the Secretary-General, Association of Commonwealth Universities (Apts), 36 Gordon Square, London WC1H 0PF or from the Registrar of the University.

Applications close on 31 October 1972.

School of Agriculture, Aberdeen

THE NORTH OF SCOTLAND COLLEGE OF AGRICULTURE AND UNIVERSITY OF ABERDEEN

Applications are invited for three College-paid posts in the Economics Division (Head: Professor G. R. Allen):

A. Senior Economist who, while probably participating in the Division's management advisory duties, will specialise in teaching and research in some field of enquiry relating to the farming sector as a whole. It is expected that the appointee will be associated with University teaching and research supervisions.

B. Economist to specialise in marketing and related studies.

C. Economist in farm management or some other appropriate branch of agricultural economics.

Posts A and B are permanent. Post C is for 18 months only; no guarantee can be offered regarding subsequent employment although this is a possibility.

Salaries, according to qualifications and experience are on the scales of Grade II or III (Post A) and Grades III or IV (Posts B and C):

Grade II £3,362 to £4,054
Grade III £2,040 to £3,611
Grade IV £1,315 to £1,878

Federated Superannuation System for Universities. Medical Examination required.

Forms of application, together with further particulars, may be obtained from the Secretary, The North of Scotland College of Agriculture, School of Agriculture, 581 King Street, Aberdeen, AB9 1UD, with whom applications which should state for which post (A, B or C) application is made, should be lodged not later than 24th October 1972.

The Queen's University of Belfast

LECTURESHIP IN ECONOMICS

This post is tenable from 1st January 1973 or such other date as may be arranged. The appointment may be subject to a period of probation of up to three years in duration. Initial placing, which will depend on qualifications and experience, will be made at one of the first three points on the Lecturers' scale £1,641 x £147 (2)-£1,935 rising to £3,852 (extended to £3,999 from 1st October 1973) (salary scale under review). Applications should be received by 16th October 1972. Further particulars may be obtained from the Senior Assistant Secretary (Personnel), The Queen's University of Belfast, BT7 1NN, Northern Ireland (Please quote Ref. 72/E.)

University of Melbourne

INSTITUTE OF APPLIED ECONOMIC AND SOCIAL RESEARCH

Research Fellows or Senior Research Fellows (3 positions)

The University invites applications from economists, econometricians, and survey statisticians who wish to be considered for appointment as Research Fellow or Senior Research Fellow in the Institute of Applied Economic and Social Research.

The research programme of the Institute has been expanded to include:

(a) further research on factors influencing short-term fluctuations of the economy
(b) the development of medium and long-term projections of the economy
(c) the commencement of a quarterly survey of consumer attitudes and intentions.

For positions (a) and (b) the Institute is seeking macro-economists or econometricians with experience in the development of use of macro-economic models. For position (c) the Institute seeks a statistician interested in the conduct and analysis of household surveys with a background of psychology and/or economics.

Fellowships in the Institute are normally for a period of three years and carry the usual rights to superannuation, travel allowances and housing finance, and rights to three months' study leave after three years' service. Salary for a Research Fellow will be equivalent to that of a Lecturer, with annual increments, and will be determined according to qualifications and experience in the range \$A8,697 to \$A9,288. Salary for a Senior Research Fellow will be equivalent to a Senior Lecturer and will be determined according to qualifications and experience in the range \$A9,540 to \$A11,130.

Applications indicating position and level sought, and giving details of age, qualifications and experience, together with the names of three referees should be sent by 30 October 1972 to The Registrar, The University of Melbourne, Parkville, Victoria, 3052, Australia, from whom further particulars may be obtained. This information is also available from the Association of Commonwealth Universities (Apts), 36 Gordon Square, London WC1H 0PF (Tel: 01-387 8572).

INTERIM STATEMENT

MOULINEX

The interim statement at 30th June shows a net profit of Frs. 30,936,743 for the first half of 1972 as against Frs. 15,529,789 for the first half of 1971.

These comparative figures have been established after the deduction of depreciation Frs. 18,777,061 at 30th June, 1972 as against Frs. 12,071,220 at 30th June 1971, but do not allow for deductions in respect of:

tax on profits, staff profit share, provision for investment based on this profit share.

The increase in profits derives both from the rise in sales during the half-year (+53.8 per cent) and from substantial industrial investments which have appreciably improved productivity.

BUSINESS NOTICES

THE ATCHISON, TOPEKA AND SANTA FE RAILWAY COMPANY

Four Per Cent 100-Year Adjustment Bonds

Notice is hereby given that the Board of Directors has declared due and payable at the office of the Company, 120 Broadway, New York City, annual interest at the rate of four per cent (4%) on its Adjustment Bonds, of which 2½ was paid on May 1, 1972, and 2½ will be payable on November 1, 1972.

Interest due November 1, 1972, will be paid as follows: On each registered bond (without coupons) to the registered holder thereof, on each STAMPEO coupon bond, upon presentation and surrender of coupon No. 132. The transfer books of the registered bonds (without coupons) will close at the close of business October 20, 1972, and will remain closed until the close of business November 1, 1972.

PROFITS UP 181%
ONE-FOR-ONE SCRIP ISSUE
DIVIDEND UP 60%

The Chairman Stanley Kalms announces another record year. Profits for the 52 weeks ended 29th April, 1972 are increased to £2,324,000 (£828,000 in the previous year).

Our products now include photographic, audio, hi-fi, radio and television, optical, electronic calculators and sports goods.

Through our overseas network of buying and development offices, we have considerably extended the number of countries with whom we are trading . . . It is reassuring to have these wider sources of supply.

CURRENT TRADING

In the first three months of the present trading year sales and profits are again substantially increased and yet another year of record profits is anticipated.

Copies of the Annual Report may be obtained from the Company Secretary:

Dixons Photographic Limited
Dixon House, 18-24 High St., Edgware HA8 7EG.

Recommendations of:

- 1 March 1970 — BUY.
- 2 August 1970 — BUY.
- 3 December 1970 — lower prices first quarter 1971.
- 4 February 1971 — make major commitments around 287 — 290.
- 5 June 1971 — prices above 340 soon.
- 6 August 1971 — BUY late October early November.
- 7 September 1971 — prices at 285 undervalued.
- 8 November 1971 — BUY. Significantly higher prices.

For over a quarter of a century, our basic research has enabled us to anticipate well in advance a major reversal in the price trend. It is indicative of the commodity work performed by us for many large corporations in industrial and agricultural commodities.

GOLD . . . for two years we have remained broadly bullish on gold!

There's a reward for catching this bird.

It's yours on Iran Air's superjet route through Europe to Turkey, Iran, the Persian Gulf, Afghanistan, Pakistan and India.

Thousands of years ago, according to legend, the 'Homa' brought good fortune to Cyrus the Great, King of Persia (now Iran). You can see its majestic profile on the tail of every Iran Air jet. The rewards for catching this fabulous bird are many and marvellous. They begin when you join Iran Air's jet set: Boeing 707s, 727s and 737s whose mighty wings lift you from the major cities in Europe to Tehran, the Persian Gulf and beyond in a

matter of a few smooth hours.

Then there's the food: always deliciously fresh (never frozen). And there are the smiles which say sincerely, 'I'm glad to be of service'. Cushions to make you comfortable. Pilots who are specialists in trans Europe/Middle East and Eastern routes. And a warm welcome from the whole Iran Air family who keep up the national tradition for hospitality which goes back thousands of years.

Two flights daily from Heathrow, one on Saturday. Non-stop Tues. and Thurs. For more about the fabulous 'Homa' and all the rewards that come with it, see your Travel Agent.

Iran Air, 135 New Bond Street, London W1X 7DB. Tel: 01-629 4417. Reservations: 01-581 2051. Information on tours to Iran available on request. Iran Air's General Sales Agents for the U.K.-Anglo Persian Agencies Ltd.

Now hear this

The Prime Minister, swallowing hard, has done the right thing to tackle inflation. But although he has rattled the unions the decisive fight for public opinion has only just begun, page 11. The electricians still seem set to call a power strike in two to three weeks, as they had always planned to do, page 69. Suppose the freeze works, what will it mean to industry, jobs, profits, wages and the rate of inflation?, pages 72-83.

Euroasion

So it can't be Ten, it may be only Eight, and its politicians must grasp the reasons why, page 12. Where Norway has landed itself, and the chances of Denmark following suit, page 31.

Half a step forward

The Shultz plan that they talked about in Washington, page 70. Hot money got hotter, page 66.

Testing time

The Labour party conference will be a major test of Mr Wilson's leadership, and of his wish to be leader. His readiness or hesitancy to fight the left on Europe will be decisive for many moderates, and especially the Jenkinsites, page 14. Mr Jenkins has a policy, and a philosophy, page 57.

East Africa goes west

General Amin's almost invisible war has left visible scars, page 15. Speeding the Asians' exodus, page 32.

Nit without grit

The Government's proposals for negative income tax, the biggest single change in the tax and social security system for 30 years, should be published within the next two weeks. The advantages of Nit and how it ought to work, page 84.

Tanaka-think

Peking's Japanese visitor plans a balancing act—just like Mao, page 18. Taiwan thinks furiously, page 44. In Tokyo they are thinking about China trade too, page 91.

Letters

McGovern and Europe

SIR—Commenting adversely on my exposition of Senator McGovern's European policy (September 16th) you say: "The heart of the matter is that most people believe that the present allied forces in western Europe . . . would not be able to defend themselves for more than a week without using nuclear weapons. . . ."

With respect, that is not the heart of the matter at all. The heart of the matter is that hardly anyone believes that a land war in Europe with the Soviet Union is anything more than a barely conceivable possibility. And among those who do, nobody believes that it could come in the form of a surprise attack on the central front with the Soviets fully mobilised in secret and no opportunity for western reinforcement in advance. Your reference to the Czech invasion on this score is peculiarly inapt, because, according to the American Nato ambassador, Harlan Cleveland, Nato was fully aware of what was going on and took a deliberate decision not to mobilise.

Most independent analysts, far from thinking the west to be hopelessly inferior in conventional forces, conclude that there is a rough overall balance. (See, eg, John Newhouse, "US Troops in Europe.") Indeed, if there were truly a perceived military vulnerability, it seems hard to believe that the Europeans themselves would not act to correct it.

No, the heart of the problem, as I was repeatedly told in every capital I visited, is not military but psychological and political. It is a widespread sense in Europe that the Atlantic partnership has eroded and attenuated over the past eight years. This is in part because of American indifference and neglect. It is in part because the energy and attention of two Presidents and their chief foreign policy and military advisers have been diverted and absorbed by a major war in a peripheral theatre. And it is in part because of the Nixon-Kissinger five-power balance theory which conceives Europe as a quasi-adversary, rather than a tried and valued partner in common enterprises for common purposes.

Senator McGovern proposes to attack this political-psychological problem directly, by reviving and reinvigorating the practices and institutions of Atlantic partnership. This involves not only consultation on the timing and phasing of the American troop redeployment. It includes joint and co-ordinate preparation for the round of east-west negotiations that are ahead—the European security conference and the MBFR, where Euro-

pean interests are central, and Salt II as well, which, unlike Salt I, will also have a significant European component. Beyond this, he proposes to return to the habits and practices of intimate consultation and co-operation in trade and monetary fields—habits and practices that have now been all but abandoned.

It is by these kinds of practical measures addressed to real world problems that the Atlantic partnership will be renewed and the essential interdependence between America and Europe confirmed—not by arid and increasingly unreal exercises in scenario writing.—Yours faithfully,

ABRAM CHAYES,
Washington, DC McGovern-Shriver '72

Inflation

SIR—Your disparaging comments regarding the settlement of the building workers' strike (September 16th), may please your executive-class readers in their cloistered offices. However, prior to this settlement, your readers might note that the take-home pay of many building workers in North Cornwall amounted to £12.50 per week—the cost of lunch for many an executive or editor!

No one would deny the urgency for a solution to the problem of inflation; but to talk in terms of percentages rather than actual money increases, avoids the basic economic fact that an additional pound to a poor man is intrinsically worth more than an additional pound to a rich man.

Neglect of this simple fact can only exacerbate the problem of the low-paid, further divide the country, and prolong the achievement of an equitable prices-incomes policy.—Yours faithfully,

J. B. BENJAMIN,
Prospective Parliamentary Labour
candidate, North Cornwall
Bristol

SIR—Contrary to what you suggest (September 9th), the government can by no means be considered to have taken all reasonable steps to halt inflation.

Reduction or abolition of charges on employees, such as National Insurance and Set, and payment by the Government (instead of by industry) of redundancy payments are, for example, possible means of reducing industrial costs. If such measures were applied preferentially to firms operating approved profit-sharing schemes, this would make it in the interest of a larger number of employees to bargain rather than strike.

Measures such as these, coupled with subsidy of public transport to keep increases to an acceptable level, must surely be tried before the Government can be said to have taken all reasonable steps in the battle against inflation. Whether or not such measures should be combined with mild selective tax increases (on, for example, cigarettes, alcohol and high octane petrol) to siphon off excess buying power is a question which I leave to the economists.—Yours faithfully, R. M. CURR
London, W10

THE ECONOMIST SEPTEMBER 30, 1972

A time of terrorists

SIR—It would appear that the leading politicians in Egypt and Jordan were working towards a position to negotiate with Israel for a peaceful solution to the Palestine problem. It is to be hoped that the events of Munich will not divert them.

The Munich tragedy has removed any doubts there may have been that we are here dealing with terrorism and the universal recognition of this, long since recognised by King Hussein, can be a major contribution to its eradication and hence a major step to peace between Israel and its neighbours. Professor A. L. Goodhart has stated that "there is a vital distinction between guerrillas and terrorists" and one of your leaders seems to echo this. "It is time," you write, (September 16th), "that we purged the language of words that confuse terrorists with freedom fighters."

It is surprising in other parts of your current issue to find the words "terrorist" and "guerrilla" used as though they were synonymous. "One ought to recognise," as George Orwell wrote in *Horizon* in 1946, "that the present political chaos is connected with the decay of language and that one can probably bring about some improvement by starting at the verbal end."—Yours faithfully, ANSEL Z. HARRIS
Kew, Surrey

SIR—The desperadoes of Black September are qualified as "terrorists." Who are we to judge such acts? Were we not "terrorists" during the second world war when we were resisting the nazis? Who was responsible for murdering 6m Jews in concentration camps? The Germans or the Arabs? Who now is paying the debt? Who were reluctant to welcome survivors of the nazi concentration camps and integrate them in their home countries? Who was responsible for creating Israel and for having millions of Arabs living since 1948 in concentration camps? What do you exactly expect from people—who were probably born in such camps and are living in those camps since 1948? Do you expect them to sit comfortably in cosy armchairs and watch peacefully television shows of the Munich Olympic games? Do these desperadoes have anything to lose except their lives, and what do their lives look like? And what about the punitive expeditions of the Israelis in Lebanon and Syria which always kill many more people than those the Israelis have actually lost?

Apparently we still feel guilty for all those Jews who were murdered during the war and we are now granting them all our complicity for any retaliatory actions they may exert on the Arabs. We have discovered that there is still someone representing less in the human scale than the Jew. It is the Arab and particularly the Palestinian.—Yours faithfully,
Brussels MARIE-JEANNE ESTERSOHN

THE ECONOMIST SEPTEMBER 30, 1972

MANAGEMENT APPOINTMENTS

£7000 PA AND OVER

The Football Association

- THE ASSOCIATION is the governing body for football responsible for administering all aspects of the game and for representing the United Kingdom in international negotiations. The Football League, together with the County Associations and 33,000 amateur clubs, are affiliated organisations.

- THE SECRETARY is nearing retirement and a successor is to be appointed to follow him as the chief executive officer.

- A MAN of standing is required to direct major new developments. Preferably, he must be broadly experienced in business administration and international negotiations, at or near the apex of commerce, industry or in government. He also needs to have an enthusiasm for the game and to be well informed on football affairs.

- AGE under 55. Terms are for discussion and remuneration, with generous fringe benefits, will be geared to the man and his circumstances.

Write in complete confidence
to Dr. R. F. Tuckett
as adviser to the Association.

JOHN TYZACK & PARTNERS
LIMITED

10 HALLAM STREET • LONDON WIN 6DJ

Managing Director

ELECT

to take charge of the international activities of a very large British Company.

- FROM a massive home base, business in branded consumer goods has been extended progressively abroad. There are now manufacturing and marketing companies in most major overseas markets which contribute substantially to group profits.

- AMPLE resources are at hand, in finance, products and management, to accelerate further development.

- THE INITIAL task is to accomplish this objective.

- CONTINUITY of achievement in general management is the principal requirement. Ideally this will have been associated with the profitable development and control of a network of overseas subsidiaries in branded consumer goods.

- REMUNERATION is for discussion: salary can be into five-figures. Age is not a bar but the high measure of overseas travel, implicit in the appointment, may prove to be a hurdle to those over 50.

Write in complete confidence
to Sir Peter Youens
as adviser to the Company.

JOHN TYZACK & PARTNERS
LIMITED

10 HALLAM STREET • LONDON WIN 6DJ

For further management appointments see page 7

SIR—Is it really intelligent to tell the general public exactly how to make "letter bombs," even to the extent of telling them where to get explosives (September 23rd)? The majority of your readers are, no doubt, not potential murderers; none the less, there is a distinct possibility that information supplied in this way could be used through personal vindictiveness or, worse, through irresponsible experimenting of the practical joke type—you make it sound so easy. May I suggest that this, and similar topics, are not those on which your readers need to be better informed?—Yours faithfully,
London, N8 ANNE HARRISON

Manufacturing investment

SIR—Your article, "Someone else has made an instant error" (September 9th), reveals that once more manufacturing investment is much lower than had been predicted.

The article does not, however, mention one of the major factors contributing to the continuing decline in expenditure on new plant, etc, this being our impending entry into the common market. Most large manufacturing companies are intending to concentrate the bulk of their activities in the "golden centre" of the common market (on the continent) and intend to reduce rather than increase the size of their operations in the United Kingdom. The economic advantages of such a location are obvious and the consequences should surprise no one. Furthermore, British capital is being channelled via banks and investment trusts to the continent (and elsewhere) at an enormous rate, thereby reducing the amount for investment here.

Until this factor is taken into account the predictions will continue to be far too

high.—Yours faithfully, R. E. SIMMERSON
Chairman,
Democratic Conservatives against the
London, W14 Common Market

Latin America

SIR—With regard to your reference to the United Nations Economic Commission for Latin America (Brazil survey, September 2nd) I should like to state the following. So far as this commission is concerned, there has never been any dilemma between economic growth and the redistribution of income. Its position has always been that maximum acceleration of growth must go hand in hand with the most equitable possible distribution of the benefits of growth.

We strongly feel that there is no antagonism between the two objectives and that the major problem of economic policy is to seek the best way of attacking them simultaneously.—Yours faithfully,
ENRIQUE V. IGLESIAS,

Executive Secretary, United Nations
Economic Commission for Latin America
Santiago

Private flying

SIR—As both a professional and private pilot, flying helicopters and aeroplanes, I was somewhat surprised by "How many others?" (September 2nd). After reading it one gets the impression that our skies are full of daring young men, mostly inebriated, who are tired out with the familiarity of flying and are potential killers because there is no one to supervise them. While not denying that there is a minute element of truth in the facts that you give, I feel that they must be put in perspective.

First, let us compare your accident statistics with those found on our roads; I don't think one has to go very far to find far grimmer accident records than those in the air. Secondly, to say that there is no supervision of private pilots is a complete falsehood; there is very real and visible control of private pilots in proficiency checks, medical examinations and limitations on the weather conditions in which they may take off. The Board of Trade, as it was then known, introduced the IMC (instrument meteorological conditions) rating for just this very reason. However, it is still possible for a private pilot to take off on a bright, sunny day and fly into the middle of a thunderstorm some miles away; in the same sense it is still possible for a young owner of a sports car to try to do 100 mph down the M1 in thick fog. Fortunately for us all, there are not too many people around with suicidal tendencies.

Prince William's accident will most likely be attributed to pilot error unless some mechanical failure is found to have occurred. This is quite normal, as all pilots know that accidents are caused by one or other of these two influences. I cannot see how it is possible to have a

THE ECONOMIST SEPTEMBER 30, 1972

combination of inexperience and calculated risk-taking, as calculated risk-taking can only be achieved by experience; for there can be no calculation if there is no experience on which to base one's calculations.

With the greatest respect, I would suggest that your article is not only factually misleading but creates a very bad impression of general aviation and flying as a whole, and is entirely unfounded.—Yours faithfully,
Singapore J. R. G. KEITH

Lorryways

SIR—If the natural medium for heavy freight such as fuel and ore is rail (Letters, September 16th) then why do shippers send so much of these by road, despite massive subsidies to the railways and punitive taxes on road transport?

In the relatively undistorted North American market, long hauls (over 125-300 miles) of primary products usually are by rail. Short hauls are accomplished by road. In fact, there is a trend toward gathering prairie grain from country elevators by truck instead of by 75-125 mile-long branch railway lines, for subsequent rail shipment from main line terminals for the 800-2,000 mile haul to Great Lakes ports. The Canadian railways have been trying to adopt this as general practice but they are frustrated by the Crows Nest Pass laws.

Britain is simply too small for railways. Who ships coal or iron from Exeter to Inverness? It is precisely because the railway routes are built to take heavy axle loads that they should be converted into lorryways, so as to get those juggernauts off tiny streets and lanes that were never intended to carry such weights.—Yours faithfully,
Northwood, Middlesex LIONEL ALBERT

Guzz

SIR—No one has asked me to set up a committee to investigate guzz, but this is not going to deter me from undertaking a thoroughly impartial inquiry that will, I hope, result in legislation to deal with this nasty business which, especially since the war, has thrived on titillating the sensual appetites with exotic fare from the sort of country that is associated with things like foot fetishism, the can-can or Kama Sutra. As the law stands at present there is nothing to prevent children from watching overfed, underexercised men and women guzzling together in public. The most flagrant excesses are confined to middle-aged middle-class males in the West End and a few large provincial cities, yet it must surely be right to question the cumulative effect on our society of a daily diet of food unrelated to hunger and often the mere adjunct of commerce and money-making.—Yours faithfully,
Stanford le Hope, Essex G. W. PATTISON

THE ECONOMIST SEPTEMBER 30, 1972

MANAGEMENT APPOINTMENTS

£7000 PA AND OVER

MERCHANT BANKER

£15,000

This is an exceptional opportunity for a Banker with International experience to join a dynamic and expanding MERCHANT BANKING GROUP as Managing Director responsible for the Banking Department. The Group has substantial resources and first class connections, there is excellent scope for rapid and profitable development of the business.

The Managing Director, who must have had experience of all aspects of banking, will take complete charge of the organisation of the Group's Banking department, and extension of the range of services given. The Banking activities are at present largely confined to the United Kingdom; he will be expected to develop and implement

plans for the promotion of business overseas, particularly in Europe.

It is expected that suitable candidates will be between 40 and 50 years of age. Salary, which could be £15,000 or more, will be offered, in addition to participation in Share Incentive Scheme and other appropriate benefits.

Apply in confidence giving brief details, quoting reference 344/S, to:

J. Kingsley White, Deloitte, Robson, Morrow & Co.,
17th Floor, St. Alphage House,
2 Fore Street, London EC2Y 5DT.

DIRECTOR

OF LONDON OPERATIONS FOR AUSTRALIAN STOCKBROKER

The Job: To provide an improved service in Australian securities to the firm's existing U.K. institutional clients and broker connections and to assist the firm's effort to expand its European institutional investment business in Australian securities.

The Manager will be supported by a research department which is regarded as pre-eminent in its field of research in depth.

The Manager to be involved in reports on U.K. and European attitudes and ideally, to be able to advise on the firm's newsletter style publications which are supplementary to the research service mentioned.

The successful candidate must have more than average authority and courtesy in servicing existing and prospective clients, must be widely known in investment circles in the United Kingdom and be able to ensure that the firm's current high standing is maintained. To ensure this, an adequate understanding and appreciation of investment analysis will undoubtedly be necessary. The position will necessarily give freedom of action and, therefore, demands maturity of judgment, self-reliance and initiative.

The Person: Age is not important but it is unlikely that anyone under thirty would be able to offer the breadth of investment experience required.

The Remuneration: A salary of £10,000 per annum is envisaged (to be supplemented by incentives) and within twelve months the successful applicant will be invited to become a partner of the firm, resident in London.

Applications should give all relevant details.

Attention I. Law, c/o Arthur Andersen & Co., St. Alphage House, Fore Street, London E.C.2.

Space on this page is reserved for managerial appointments carrying salaries of £7,000 p.a. and above.

Other appointments are advertised in the classified section on pages 102 to 108.

Inquiries for space on this page and in the classified section are invited by:

The Classified Advertisement Manager,
Telephone 01-930 5155

For further management appointments see page 5

Rubber Trends

Issue No.55, September 1972

The latest issue of Rubber Trends considers the situation of the rubber industry in SRI LANKA (Ceylon) in the light of the country's internal difficulties and discusses its position in relation to the world natural rubber market.

Articles on individual countries cover the USA, JAPAN, NETHERLANDS, SOUTH AFRICA, SOUTH VIETNAM and ZAIRE (formerly CONGO-KINSHASA).

Annual subscription £50 (US\$130)
Single copies £15 (US\$40), payment with order please.

INDUSTRY GROWS IN SCOTLAND

Scotland has the factories—S.I.E.C. has already built 28,000,000 sq. ft. of modern, well-designed production space for 400 expanding companies, has factories from 5,000 sq. ft. to 200,000 sq. ft. available for early entry and more units under construction. (Rents range from 17p to 37p per sq. ft. per annum according to locality.) Scotland also has the labour, the power supplies, the communications, the recreational facilities—and the expertise gained from years of satisfying manufacturers demands. Very substantial Government financial concessions are available in most areas. Visit us and discover the benefits for yourself.

Leadership

British Aircraft Corporation designs and builds leaders in every field of Aerospace. **Concorde** – with Aérospatiale France – will halve the world in size with supersonic services from 1975; **One-Eleven 475** brings mainline jet services to the small fields; **QTOL** – with Saab of Sweden and MBB of Germany – will bring the boon of Quiet Take-Off and Landing to the world's airports; **Jaguar** – with Dassault/Breguet – is the most cost-effective tactical support aircraft in production today; **MRCA** – with MBB and Aeritalia – is Europe's most important military aircraft, while **Strikemaster** has already been chosen by nine nations for ground attack and training. **Rapier** has revolutionised the concept of missile defence against tree-top aircraft attacks, just as **Swingfire** has changed the balance of power in the ground fight against tanks. We can say little of the surface-to-air **Seawolf** and helicopter-borne air-to-surface **CLB34** weapon systems, save that each is a world leader in its class. BAC's **Space** programmes are, beyond challenge, the most successful in Europe and include BAC teamwork on **Intelsat IV** with Hughes Aircraft and on the remarkable **Space Shuttle** with North American Rockwell.

Incomes policy, I said

Mr Heath has begun his run. With a commendable disregard for past words on incomes and prices policies (which Mr Wilson will remind everyone of) and even for what he would once have stigmatised as economic nonsense, he did what he had to do when he saw the leaders of the Trades Union Congress and the Confederation of British Industry on Tuesday. The TUC was asked to accept wage restraint in exchange for a redistribution of income in favour of the low-paid, and the CBI was asked to accept continued price restraint in exchange for wage restraint, all in the context of a Government commitment to much faster growth than this country has experienced for very many years. The TUC general council expressed shock, horror and disbelief, but said it would continue the talks. By almost all the press and much of the public Mr Heath seemed to be moving well.

The initiative was skilful, in both its timing and its content. The finishing tape for Mr Heath's race to find a credible way to deal with inflation is October 31st, when the CBI's present price restraint runs out. By putting forward its own proposals now the Government allows the TUC and CBI three weeks in which to consider them in detail before the attempt is made at the next meeting, on October 16th, to reach final agreement. During these three weeks there are the Labour and Conservative party conferences. Then, if agreement actually were reached on the 16th, the CBI and TUC could put the proposals to their councils at meetings on October 18th and 25th respectively. If all went well Mr Heath could just get home with his voluntary policy.

But good timing is not enough. The proposals themselves are astute. They can be presented as having genuinely emerged from the earlier tripartite discussions and to reflect the stated willingness of the parties to co-operate in finding a solution to the present inflation. They are consistent, too, with the TUC's Brighton resolution because they deal with wage restraint in the context of a policy for the economy as a whole, and one in

which the TUC has had a large say.

The proposals are directly concerned with the distribution of income. The suggested £2 a week maximum for wage increases for a year—which will be generally regarded as an entitlement—means a considerable redistribution of real income in favour of the low-paid. If the £2 limit holds and the rise in retail prices can be held to 5 per cent, nearly everyone earning more than the average industrial wage will be worse off in real terms. But inflation can only be cured at a cost. It seems right to the majority that the cost should fall on those with the highest incomes, who anyway stand to gain most from the faster growth in the economy which the successful restraint of inflation would allow. Mr Heath and Mr Barber can argue, as the unions do, that those on higher pay have done well out of this Government's programme of personal tax reforms. The promise that pensioners will share in the country's increasing prosperity is certainly right. Not only does this remove another social grievance, there is no reason why this promise should not be generously kept.

Industry's worries

The CBI is whipping its doubters into line, but there are many grumblers who believe they are being asked to shoulder a further substantial burden in restraining the growth of prices to 4 per cent when wages, on average, will be rising at over 8 per cent. But this overlooks the effect of faster growth and rising productivity on company profits. Companies as a whole could do very well out of the package. There are, of course, many detailed objections and questions. It is not clear precisely what is being proposed for productivity deals. Dividend restraint has yet to be considered and certainly some concessions will be made to Labour mythology—without wrecking investment altogether. There are problems about the effect on the distribution of profits. In particular, labour-intensive low-paid industries will fare very badly. This could bring on more unemployment,

especially among women. The poverty trap, in which the low-paid can lose social security benefits as their earnings rise by the £2, means that some even of the poor will join all those with more than about £35 a week in being worse off because of continued 5 per cent inflation. The Government did not go for a much slower rate of price increases because it would then have been impossible to redistribute income without those at the top actually having their money incomes cut.

One other important gap remains in the plan. As presented, the figures for wages and prices would not generate 5 per cent growth. An 8 to 9 per cent increase in wages combined with 5 per cent inflation produces no more than a 3 to 4 per cent growth in real disposable incomes and consequently in consumption. But there is nothing to stop the Government making up for this by an expansionary budget, increased pensions, or restraint on nationalised industry prices. This is an important joker which ministers have, quite rightly, kept up their sleeves.

The proposals are essentially political. They are to be seen as an offer by the Government to do a socially fair deal in exchange for the unions giving up the present free-for-all. They go even further than a once-off deal. This is an offer to the TUC and the CBI to take a really effective share in the formulation of economic policy from now on. There is no doubt that this is a genuine offer from Mr Heath, who has not yet changed in his fundamental opposition to statutory controls. He seems ready to strike a bargain. What he is doing is asking the TUC to come clean. Is it really prepared to work with the Government in dealing with inflation or is it not?

Taken all in all, the Heath proposals place the unions in quite a dilemma. Even Mr Vic Feather has admitted that "they offer a good deal of fair play to a good many people." As such they command considerable public support: people are, after all, fed up to the back teeth with inflation. So Mr Heath has set the stage for his showdown on inflation with what may turn out to be a

pretty solid public opinion behind him. The TUC's reaction on Wednesday showed just how awkward it found the corner into which it had been manoeuvred. Although the general council wanted to reject his proposals outright it did not want the odium of the consequences of breaking off the negotiations. It knows that unless it can put up a reasoned and reasonable alternative in the next three weeks Mr Heath will be in a strong position to impose a unilateral solution.

Certainly Mr Jones and Mr Scanlon can help Mr Heath in the public debate by demanding a complete political surrender by the Government. But it is probably the moderates who need to be watched most closely, for if they carry opinion with them on matters like freezing rents the Government could find the tables turned and be forced into a compulsory policy (which many ministers might welcome) amid general disapproval (which they would not). Mr Heath can consider new inducements on the threshold system and a 7½ per cent Vat. He can make sensibly encouraging noises about the scope that exists for expansionary fiscal policies generally. But that is probably about as far as he will—or should—go.

What will decide things?

But all this begs the question of the TUC's power to deliver the goods even if it puts its name to an agreement. The plain fact is that the Government's policy will be challenged by individual groups of workers. The electricity power workers, who now have a legal right to strike, are one such group. They still seem intent on pressing their claim for £12 more a week (see page 69). The question is whether such claims can now be resisted to the bitter end. If they can it will only be because public opinion is determinedly on the side of the Government, and other unions are not prepared to help those who take the public on. The Government's voluntary policy can be wrecked even if the TUC supports it. The real issue is whether it has massive public support. There can be no faltering now.

Europe goes down to nine

And whether or not the Danes imitate the Norwegians who voted down Mr Bratteli, Europe's politicians must get the message right

Norway's eleventh-hour defection from the ranks of the European community will have little practical effect on how the enlarged EEC will work. Except, perhaps, for the better: the common market will be easier to run with nine members than 10 and easier still, if Denmark votes against entry on Monday, with eight. Those crocodiles who have wept over Norway's demise, notably by the Seine, did not hide any pleasure they felt at the prospect of their diet surviving more nearly as it was before the attempt to recruit new members began. Europe's farming and fishery rules will not now be punctured by Norwegian exceptions; its common budget will be

less encroached upon by Norway's regional needs; its remaining protectionist industries in pulp and paper-making, in aluminium and other alloys will be less open to Norwegian competition. Europe's debilitating farm surpluses may even be relieved of the prospect of Denmark's heavy food surplus as well. Even Mr Heath can be glad providing he does not look too far; without the peoples of Scandinavia to provide for, British hopes of getting studies for regional policy off the ground at the Paris summit in three weeks' time should be that much improved.

Those are the practical effects on the community.

These will be wearying negotiations to take Norway, and perhaps Denmark, back out of the inner circle of the EEC and to fit them into the outer circle of European countries that have obtained a limited form of industrial free trade with the community.

But Europe's present generation of leaders—its Heaths and its Wilsons, its Pompidous, its Barzels and Brandts—will deceive themselves if they leave their post-Norway calculations at that. When Europe's postwar history is written Norway's vote on Sunday and Monday may prove to have been one of those little political dominoes whose tumbling warned the rest of Europe of what it should not be about. It has not been chance that when, after 15 years' delay, Britain's moment to enter the community finally arrived, its electorate should have proved less happy about the prospect than either of its major political parties in their European heydays had expected. It has not been chance that Norway's strange coalition of antis has prevailed over the pro-market drive led by its prime minister, Mr Trygve Bratteli. And it is not chance that Denmark (whose economic wellbeing more closely depends on entry than does any other applicant except Ireland) may nevertheless vote against entry or come close to doing so on Monday. In none of these countries has opinion simply been swayed by a primitive anti-foreigner brigade; certainly such men have been active in the cause, but it would be hard to accuse many Scandinavians, even the Norwegians with their historic dislike of outside domination, of that.

The new distrust

What has happened in these past 10 years of prosperity and peace is that the populations of western Europe, like those in North America and, more lately, in Japan, have come to question the machinery which brings them that prosperity and that peace. Bigness and central power, even in the United States where in material and social terms each had paid off so handsomely, are now distrusted or rejected out of hand by younger voters. And not just the young. The notion of "one Europe" alarmed enough other people in Norway's cities to combine with the rural worriers to win the day.

The lesson is there to read. The vision of an integrated Europe which the common market's founders aimed for, and that other vision of a Europe of like-minded states brokering its economic power in the world which Mr Heath enunciated during his visit to Japan this month, are each equally reckoned by a potential European majority to be anachronisms years before they have come to pass. The dangers in this way of thinking are real and immediate enough. The issue of Europe will now not, for instance, go to sleep, as many had hoped it would, at the Labour party conference at Blackpool next week (see page 14). But the British Labour party's hostility to Europe, like Norway's defection, can affect much more than domestic party politics in either country. It helps to make that socialist accusation that Europe is a capitalist club into a self-fulfilled prophecy, for there will be no willing socialist participants to change it. It will leave Europe to be run in the present nationalistic and bureaucratic way with less chance of

the parliamentary check that Europe's social democrats would be likeliest to bring to it. And it will help to bring about what northern Europeans practised in democracy have always resisted, promotion of the claims of countries such as Spain and Greece to be members of Europe's inner circle.

Why Russia sent flowers

The dangers in the impatience with power go beyond Europe itself. Praise for the vote in Norway was nowhere more explicit than in Moscow. This expressed not just some long-range Russian fear of western Europe's economic power. From now on Norway, and possibly Denmark too, will no longer sit in the councils of the Ten which have been preparing Europe's way to the so-called security conference of east-west negotiations between the Soviet alliance and the west. This will further undermine a western negotiating position which has never been solid. Next, and possibly more serious, the economic consequence of Norway's non-accession will almost certainly be an economic squeeze and possibly devaluation of its currency. If Denmark balks it will devalue by up to 20 or even 30 per cent next week, which will force it immediately into a heavy cutback in government expenditure. The trend in Nato's northern flank will not at that stage simply be towards "neutralism" and "Finlandisation" in theory. There are no prizes for guessing that budget cuts in Scandinavia will bite where it hurts all modern European voters least, defence; and spending on defence in both countries, particularly Denmark, is already considered in Nato circles to be dangerously low.

Stiffening Europe's backbone at such a moment of doubts is the sort of thing that Britain, at least under Mr Heath, and most of the present members of the Six should be capable of in the short run. What is less sure is whether any of them, either at the Paris summit or afterwards, will have the imagination to do more than doggedly pursue the course they were already on.

Norway's decision should, for example, encourage the other nine or eight to strengthen the democratic role of a European parliament. Modern Europeans are clearly bored both by national pretensions and the supranational bureaucracy which the first generation of Europeans wanted to put in their place. Yet it is doubtful whether the nine or the eight will do any such thing. Norway's decision should encourage Europe's inner circle to give the widest possible measure of free trade to an outer circle taking in the Scandinavian north and Mediterranean south. But it probably won't. In a week when the United States has taken the first positive step towards international monetary and trading reform (see page 70). Norway's decision should further encourage Europe to spread freer trade into the world at large. This in turn should spur those inside the common market to take the next steps in economic integration among themselves, towards a single economy in which intelligent regional transfers of resources are made and which is intelligently controlled in matters, such as pollution and sheer bigness in business and monopoly trade union power, which ordinary Norwegian and other voters will worry

about more and more. It is not yet sure that the present common market sees its way even to that.

And if Scandinavia is to be peeled off progressively from the Nato alliance, the pressure should be on the major powers in the centre of Europe to find a defence policy which their voters can tolerate and which provides

the United States with a good enough reason in addition to its own security to continue underwriting Europe's defence policy with its own. Norway's decision not to join the common market is a reminder from the voters that should jolt the politicians into remembering what they want Europe for.

To Blackpool with love

Mr Wilson's leadership of the Labour party will undergo a severe test at next week's annual conference. It may be very severe indeed

Labour party conferences rarely live up to their advance billings, particularly when the agenda seems packed with opportunities for fraternal strife and general mayhem. So it is possible that next week's conference in Blackpool will turn out to be a relatively calm affair, at least in public. But although it is possible it does not seem very likely, for to bring it about would require a collective decision by the right wing not to take on the rampant left on the battlefield where it is most outnumbered. And even if that did happen it would not alter the fact that next week's conference is likely to prove as critical as any in Labour's history, and no one will approach it all—this weekend's meetings and the attendant gatherings throughout the week, as well as the conference itself—with more justified apprehension than Mr Wilson.

Mr Wilson will be far from alone in that, for what happens in Blackpool could have a profound effect on the personal futures of many in the upper ranks of the Labour party. That is not to say, of course, that the conference can break Mr Wilson or make anyone else; however much the left would wish it otherwise it is far from having that power now, and it probably never will have it. But if Mr Wilson will not be fighting for his political life he will be fighting to regain something only slightly less vital: his political stature. If he stumbles, certainly if he stumbles badly, it could affect his own view of his future prospects; and what is even more certain is that it will cause many of his colleagues to start making agonising decisions about their own future actions.

Just how much trouble?

Many Labour politicians affect to resent the way discussion about their party's affairs concentrates on personalities rather than policies, and it may well be, as Mr John Mackintosh argues in the current issue of the Political Quarterly, that the purely political crisis inside the Labour party between what he calls the social democrats (the right) and the populist/socialist left is more serious than the old recurrent crises over leadership, doctrine and tactics. If that is true the Labour party is in even more serious trouble than anyone else has so far suggested. But in the animosities, rivalries and alliances that go to make up the Labour party, policies are invariably indistinguishable from personalities, and the higher up the party ladder the more indistinguishable

they become. Take, for example, the last great political issue which convulsed the Labour party before the common market: the campaign for nuclear disarmament. When Hugh Gaitskell died that movement immediately collapsed to the tiny handful of activists with which it had started; does anyone really doubt that the market issue is not being used by many at the top of the Labour party for similar purposes?

Mr Wilson is in an extremely difficult, but by no means unique, position. He goes to his annual conference with the latest opinion poll giving Labour a massive lead over the Government, but no longer showing him to be an asset to his party, and with his own colleagues and party members questioning his judgment and political capacity. Mr Heath knows the feeling exactly. But Mr Heath was never required to prove that he was still fit to lead his party, never mind capable of holding it together better than anyone else, in anything like the way that will be required of Mr Wilson next week.

The Economist was wrong to suggest last week that what we called Mr Wilson's "extraordinary cloak and dagger" trip to Tunisia was prompted by his obsessive desire to steal the headlines. It turned out to be even more cloak and dagger than we suspected, and Mr Wilson has made no attempt to exploit whatever success he may have had in his humanitarian mission. But then many of the great coups that Mr Wilson has attempted have had humanitarian purposes—the Vietnam peace initiatives, his visit to Nigeria, and not least his attempt to mediate in Northern Ireland since he left office. It is not his heart that is questioned, it is his judgment, and it is not newspapers but his colleagues who are embarrassed when something goes wrong or expectations are not fulfilled.

Mr Wilson cannot afford a failure at Blackpool, and neither can the Labour party. But success will not be measured by a standing ovation following his usual, and often very funny, knockabout turn on Tuesday morning. Nor will it be measured simply by whether he is able to persuade both the national executive committee and the conference itself to fudge the common market issue for a little while longer, by persuading them to accept the irreconcilable policies of being both opposed to joining the market on principle and ready to renegotiate the terms of entry. In the present circumstances such a fudging

would be an achievement, for it would allow the marketeers to stay reasonably comfortably within the party, and would give everyone a happy time watching Mr Wedgwood Benn decide which conference decision the whole party (ie, Mr Jenkins and his friends) should accept. And, of course, if the conference came out instead in clear-cut opposition in principle to the common market it would be a very considerable blow, for it would indicate that the left wing in the constituencies and the trade unions did not care a damn whether Mr Wilson had to stand on his head once more, or even whether he continued as party leader.

In either event, both Mr Wilson and the party could be in very deep trouble unless he can show that he has a renewed capacity and will for political leadership. For what has to be accepted on the market issue is this: certainly there are many in the party who are sincerely opposed to the market, but there is a core of left-wing MPs and union leaders who are using this issue in an attempt to force Mr Jenkins, and the moderates and right wingers who support him on other issues as well as that, either out of the party altogether or out of any future influence on the leadership or the policies of the party.

The common market is the only major political issue in the Labour party where the left is in alliance with the majority of the centre against the right. On all others, including strikes and industrial law-breaking, the traditional centre-right coalition is fundamentally in control. If the market issue is fudged next week, the left will not let it go; if it is clear-cut they will move to make it binding on the parliamentary party. If Mr Wilson resisted that, as he would have to, he would have an unhappy time with some unions, constituency parties and all the left-wing MPs; he might well find Mr Benn standing against him for the leadership at the beginning of the new session of Parliament. On the other hand, if through miscalculation or lack of will the left were not fought and the centre-right coalition were broken, which is the left wing's openly stated aim, there would not be much point in having Mr Wilson as party leader; and as the chances of a Labour leader becoming prime minister

would then be minimal for many years to come there would not seem to be very much point in Mr Wilson wanting to stay on, either.

That is why Mr Wilson knows that his all-round performance next week is going to be assessed very critically indeed by his most important colleagues. For it is very largely on that performance that they and their friends will start to decide whether his leadership should be challenged now, and, if so, who should do the challenging. Certainly, if he is put in the position where he must fight for the autonomy of the parliamentary party he is likely to be challenged in much the same way and on much the same grounds as he challenged Hugh Gaitskell in 1960. Yet if Mr Wilson hesitates to fight, Mr Jenkins will be urged to stand against him for his friends' protection; Mr Jenkins would have no chance of election, but his friends might believe it important that he should show just how large a section of the parliamentary party felt it was being put in jeopardy. And, of course, if Mr Wilson came out of a fudged situation with his reputation even further diminished it could open up a much wider field of possible challengers.

The malaise in the leadership of the Labour party has been too obvious for too long for a serious political party not to attempt to end it in good time before the next general election. But Mr Wilson is not entirely to blame for that. With the exception of Mr Jenkins, who must be regarded as out of the running while Europe is still an issue, those men who believe that they stand a chance of succeeding Mr Wilson are more concerned with not offending the current majority in the party than with providing the party with the leadership which its voters deserve. Some of them do not even seem greatly to care whether they would be left with a really viable party to lead. As a result, perhaps the most common cause which could be made between Labour MPs is that there has never been such a sense of drift—whatever the opinion polls say about their lead over the Tories in the country—as there is now. That drift will not be ended in Blackpool. But one way or another a start will be made.

The damage is done

An east African war looks less likely, but General Amin and Colonel Qaddafi have tied their bit of Africa up in knots

It is not General Amin's style to adopt a low profile for long, but this week his shadow has been shorter than for some time. His "war" with invading exiles from Tanzania went his way, but it seems to have taken some of the steam out of him. The habit of making astonishing remarks has been maintained: one of his spokesmen has accused India of despatching destroyers with troops to join Tanzania and Zambia in an attack on Uganda; and Uganda has also claimed that Tanzania is sending soldiers overland to their common border and by boat across

Lake Victoria to eastern Uganda. But there are hopes that in spite of these far-fetched accusations, which are denied by Tanzania, a peace is being constructed. If it is, a border skirmish has been prevented from becoming an east African war. Nevertheless, dissension has been sown not only among Africans but among Arabs, and few reputations have been enhanced by the events of the past fortnight.

That the bloodshed has not been greater is partly because of the efforts of the Somali foreign minister,

who has persuaded both the Tanzanians and the Ugandans to go to a meeting in Somalia this weekend. It also owes something to the present restraint of Tanzania's President Nyerere, who has resisted strong pressure in his own country to retaliate against Uganda for its two bombing raids on Tanzanian towns. It owes little to General Amin, whose belligerency has been more muted this week but who remains unpredictable. And it owes nothing to Libya's Colonel Qaddafi, who by the weekend had circumvented Sudanese efforts to prevent him sending troops to Uganda.

Such details of the Somali peace proposals as have emerged suggest that agreement has been reached by the two sides not to attack or subvert each other, and on a mutual withdrawal of troops to the positions that each occupied last month. The Tanzanians are anxious about a triangle of disputed land that they fear will be left undefended, and there is also disagreement about what is to happen to the remainder of the Ugandan exiles on Tanzanian soil, bands of whom apparently crossed into Uganda on September 17th. But, whatever the outcome on these points, it will be a victory for General Amin if he has extracted a Tanzanian promise not to abet the supporters of Uganda's former president, Mr Obote, in any new armed attack. And a Tanzanian agreement to sit down and negotiate with the Ugandans in itself constitutes some sort of de facto recognition, although perhaps no greater than the recognition that General Amin has already received through Tanzanian representatives sitting down with Ugandans at meetings of the east African community.

On Tuesday the Tanzanians admitted for the first time that the rebels who started the fighting in Uganda were indeed exiled followers of Mr Obote. Until then the only evidence that there had actually been any fighting in Uganda, apart from the statements of General Amin's propagandists, was a photograph of a pile of bodies, all unarmed and lying face down; the Ugandans said these were rebel dead, but they could have been almost anybody. There had, it is true, been two well-corroborated bombing raids on Tanzania, but they hardly constituted a war. Certainly neither Tanzanian nor Ugandan—still less British, Israeli, Zambian or Indian troops—had crossed the Ugandan border.

Not many dead—but many involved

A small war, therefore, but one with far-reaching consequences. In most of black Africa governments have avoided taking sides, but President Kaunda of Zambia rallied to his old friend and sympathiser, Mr Nyerere, by making a flying visit to Dar es Salaam on Sunday. Zambia, in contrast to Tanzania, has an air force; the possibility of its coming to Tanzania's aid may well have had a very salutary effect on General Amin, who had formerly felt able to send his own aircraft out to drop bombs on defenceless Tanzanian towns with complete impunity.

Some west African heads of state have fired off telegrams to both sides, urging a peaceful resolution of the dispute, but most are probably anxious to keep the problem at arm's length. President Nyerere is widely

respected in black Africa for his stand on apartheid and his commitment to African nationalism, but his dislike of military rulers and his socialist inclinations cause him to be treated with mild reserve by such men as Zaire's General Mobutu and Nigeria's General Gowon. None the less, it takes a zealot to espouse a nutcase, and only Colonel Qaddafi has wholeheartedly rushed in to support General Amin.

It is the Libyan move that has proved most divisive. Colonel Qaddafi's decision to get into this black African dispute seems to have been determined chiefly by the feeling that he ought to do something for Islam. Although Uganda is a predominantly Christian country, General Amin is a Moslem. And although once upon a time the general used to collaborate more closely with the Israelis than any other African head of state he was persuaded—largely by Colonel Qaddafi—to change his policy, and he expelled all Israelis from Uganda some months before he picked on the Asians. Libya then stepped in with the promise of aid for Uganda, first money and now troops.

Numeiry saw it differently

General Numeiry, who last week denied the Libyans permission to send Uganda-bound troops across his country, Sudan, sees things rather differently. In the face of considerable difficulties, he is trying to repair the destructive differences between the black, Christian south of his country and the Arab, Moslem north. The last thing he wanted was for Arab troops to be seen fighting African ones, even if they were fighting alongside other Africans. So even though antagonising Uganda could jeopardise the newly-won peace in southern Sudan, and even though General Numeiry has reason to thank Colonel Qaddafi for helping him to retain his position after the communist-led coup last year, General Numeiry felt it worth while sending back the Libyan troops.

It is not yet clear how the move has been taken in the Arab world. Mohammed Heikal, the influential editor of the Egyptian paper *Al Ahram*, has declared his support for the Libyan intervention, and President Sadat has reportedly sent General Amin a message offering him assistance "to stop the barbaric aggression . . . by the imperialist and Zionist elements." Since President Nyerere has been a much more consistent and effective supporter of the Arab cause than General Amin, the Egyptian interpretation looks pretty absurd. Its effect must be to weaken the solidarity, such as it is, of the Arab-African front against Israel.

For South Africans and Rhodesians, General Amin is the living justification of keeping power in white hands. For the Israelis, division in the camp of the Arabs' supporters pays off their involvement in some of Africa's internal wars, in Ethiopia and southern Sudan, and the energy they have put into their campaign to win over such Black African leaders as they could. By responding so immoderately the Libyans, and possibly the Egyptians too, have played into the hands of the Israelis. But Uganda and, to a much less extent, Tanzania have also helped to allow new lines of division to be scrawled across the map of Africa.

Gas promises you the best of both worlds

One of the perils of progress is pollution.

One of the blessings of Britain's most progressive fuel — gas — is that while we can enjoy all the benefits of our own supply of a convenient, reliable, controllable fuel, we don't have to pay penalties in the form of damage to our environment.

You can take to natural gas with a clear

conscience; knowing that the benefits of warm homes, constant hot water, well-cooked meals and, on a larger scale, more efficient industry is not harming the beautiful world around us.

It's the best of both worlds — And that's a promise worth thinking about.

GAS-THE NATURAL FUEL

Everybody goes to Peking

Now Japan's Mr Tanaka has got his link with China, at a price, but the shape of Pacific politics hasn't really changed

Mr Tanaka's descent on Peking this week had none of the moon-walk quality of Mr Nixon's trip last February; too many Japanese have been shuttling in and out of the Chinese capital for too long to duplicate that other-worldly effect. But for the folks back home the prime ministerial visit was none the less one of the most dramatic events in Japan's postwar history. It had its element of theatre—Mr Tanaka's poetic tribute to Peking and his rather more serious expression of repentance for Japanese war crimes. But unlike Mr Nixon's visit it also produced a solid agreement on an issue that touches the heart of Japanese politics today. Before Mr Tanaka left China on Saturday he was due to break a 20-year emotion-laden bond with Chiang Kai-shek's government on Taiwan and replace it with full diplomatic relations with Peking.

It was logical and predictable that the Japanese tortoise should beat the American hare in giving formal recognition to the Peking government. For almost a decade Japan has had more extensive relations with China than the United States has even now: Japanese correspondents have been resident in Peking since 1964; Japan has been China's largest trading partner since 1965; and even in the past two years, while China was conducting a virulent propaganda campaign against the "militarist" Sato government, there were more visitors in Peking from Japan than anywhere else.

Three things prevented the Japanese from extending these contacts to the diplomatic level: Tokyo's little-brother relationship with Washington, which was not itself ready to go so far; the cautious conservatism of Japan's ruling politicians; and Japan's tie with Taiwan. Mr Nixon's decision to visit Peking removed the first restraint and also the second: it was the Nixon *shokku* which put the Liberal Democratic party in the mood for a relatively unconventional leader like Mr Tanaka. The third obstacle remained. But the pressure to catch up with the 73 countries that had already recognised Peking had become irresistible. Regretfully, guiltily, equivocally, the Japanese accepted that formal ties with Taiwan had to go.

The elimination of Japan as Taiwan's most important diplomatic prop after the United States was clearly one of China's main aims in inviting Mr Tanaka to Peking. China's Taiwan strategy now seems to be to ensure that Chiang Kai-shek's claims to nation-status are undermined at every turn; after that Peking seems prepared to allow the island to maintain its independent existence in a kind of political limbo. The Japanese government evidently expects to keep up trade with Taiwan, which is still 25 per cent higher than Japan's trade with China, as it assured the Nationalists last week (see page 44) though of course it is also hoping for a trade windfall from Peking (see page 91).

Apart from China's obsession about Taiwan, both

the Chinese and the Japanese see their new relationship primarily as part of an international balancing act. One of the reasons for Chou En-lai's urgency in wooing Mr Tanaka this summer was the prospect that the Japanese were about to conclude two important agreements with the Russians—their long-delayed peace treaty, and their long-pending contract for exploitation of Siberian gas. The Chinese presumably hope that direct links with Tokyo will help them to counter Russian influence more effectively than before.

With Mr Nixon's assistance, the Chinese have already succeeded in creating some tension between Japan and America about the relative speed of their approaches to China; and they will presumably continue to exploit differences between the allies as they arise. But paradoxically China seems to have an interest in the preservation of the Japanese-American alliance. Chou En-lai's apparent generosity in not pushing for an abrogation of the American-Japanese security treaty may be explained by the calculation that removing America's nuclear umbrella would be the surest way of provoking Japan to go nuclear—which is the last thing China wants. The Chinese are undoubtedly anxious to neutralise the threat of resurgent Japanese militarism that they have been harping on, partly for propaganda purposes, partly out of real fear, for the past few years. They cannot expect the exchange of ambassadors alone to achieve this, but it may well discourage Tokyo's military lobby.

They'll get more leverage

China's view of Japan is largely defensive. But the Japanese are counting on the new China link to increase their leverage with the other superpowers. Mr Tanaka has learned his lesson from Mr Nixon well: a few days before his departure for Peking he sent a letter to Mr Brezhnev saying that Japan wanted closer relations with Russia as well as with China, but at the same time he pointedly prodded the Soviet leader to solve the problem of the four northern islands that Japan wants back.

The result of all the breathless expectations of the past few months seems to be that Japan, to be sure, is at last conducting itself in the world with something like the self-confidence of a rich and successful country; but the actual changes in its relationship with the three superpowers around it are likely to be a great deal less dramatic than it was once fashionable to suppose. The Japanese are restoring the formality of the connection with China. But the further development of that connection, once the ambassadors have been exchanged, will not be easy. And so long as Mr Tanaka continues to balance his dealings with the two great communist powers against each other the friendship of the United States is going to remain the foundation of Japanese policy.

It takes, on average, 15 years training to become a BEA Captain

"Your BEA Captain is personally responsible for every aspect of your flight"

PARA 1.2. "The Captain shall at all times look to the care and comfort of passengers and the well-being of crew."

PARA 14.9. "The Captain must check that all timepieces used by his crew are synchronised and correctly set."

PARA 22.1. "The Captain must be fully conversant with all local laws and regulations affecting the flight."

PARA 29.3. "At the end of each flight the Chief

Steward will report to the Captain full details of any defects in the passenger cabin."

PARA 32.4. "The Captain must ensure that he has complied with the regulations covering the carriage of Diplomatic Mail."

PARA 1.4. "In addition to setting and maintaining a high standard of discipline for himself, the Captain must ensure that his crew reach an equally high standard."

—extracts from the BEA Operations Manual.

Your Captain wishes you a pleasant flight.

The following to be read in plain language.

BARCLAYS BANK

INTERNATIONAL

IS IN MORE

THAN 100

PORTS AROUND

THE WORLD

K As the specialist bank for international businessmen, we have to provide our services wherever they're most needed. Naturally, we're in the major financial capitals of the world; but for importers and exporters in many countries, it's just as important that we should also be down at the ports.

□ So we are. Our representation extends to no less than 101 ports around the globe, enabling us to provide a faster and more efficient service—arranging buyer and seller credits, acceptances and guarantees; handling routine shipping

documentation; and speeding the clearance and onward transmission of the goods themselves.

□ We're specialists. So the banking and allied facilities we offer are advanced and convenient—as many people have found out already.

□ We're an integrated banking network. So you can expect the same quick procedures and high standards of efficiency everywhere we operate.

K And we have more overseas offices than any other bank in the world. So we can often replace a whole team of

banks—saving you time, trouble and money.

□ The two flags above, in case you were wondering, mean "Where are you bound?". No matter where in the world it is, the chances are that we can smooth your path and speed your progress. Because for the world of international business, Barclays International provides a world of banking.

The plan for Ulster: carry on talking

The present Whitelaw plan for Northern Ireland seems to be to bore everyone into some compromise some day. When the Darlington conference ended on Wednesday, after a lengthy barney over security, the Secretary of State calmly let it be known that he would produce a green paper which would not be his own proposals but would scan the scene and show to the discerning (and persevering) what sort of proposals he might be thinking of coming up with. But exactly what they might be would not be revealed until he put out his white paper, and that would not be until early next year. This shattered some delegates. It might have been because they really thought Ulster was slipping towards civil war while Mr Whitelaw dithered. It might have been because, for once, a British politician was encouraging Irishmen to go on talking.

But there are three reasons why Mr Whitelaw should go cannily. The first is that the campaigning for the referendum, which will be conducted on tribal lines, must be got out of the way

before there is much chance of statesmanship emerging from the Ulster party leaders in public. The second is that it is becoming steadily clearer, even to the most committed republicans in the Social Democratic and Labour party, that the Lynch government in Dublin and opinion in the south generally are not concerned to get Irish unity in a hurry. As this sinks in throughout the Catholic community in Ulster it will reinforce the effect of the referendum in turning northern minds back to settling the northern problem on its own. The third reason is that when Mr Whitelaw puts his proposals forward he wants to have got the old internment system over and the new model in operation. The SDLP will still not like it, but it may find it easier to lump it.

There is a risk in the Whitelaw timetable: that the violence will get worse again and that the IRA or the UDA will commit an act of savagery or stupidity at any time that will imperil any sort of political compromise. But that danger will be present

for a long time anyway. In fact, now that the army has been encouraged to pick up IRA leaders in the street again, it can be said that things have got steadily better since Operation Motorman. There will be relapses, but this is a bad moment to despair.

Mr Whitelaw himself is still making headway with Northern Ireland opinion, and what the Ulster parties, present at Darlington or absent, have contrived to do for him is to give him one more real chance as a conciliator. If Ulster really does feel it is still slipping towards civil war, its own parties are plainly helpless to prevent it themselves. In the end Mr Whitelaw's plans must be debated not with the parties but with Ulster's voters.

IBA

Taking the telly to task

The Independent Broadcasting Authority (better known under its old title of the Independent Television Authority) does not come out at all well from its investigation by a sub-committee of the Select Committee on Nationalised Industries. In its report, published on Wednesday, the committee is really rather scathing about the IBA's performance, especially in its duty to provide a well-balanced television service of high quality during peak viewing hours. The committee's criticisms of many aspects of the authority's work are no less pungent for being familiar; most of the recommendations are sensible enough.

Despite all that, however, the total effect of the criticisms is to paint a picture of Independent television which is too black to be true, and if the committee's report points up anything it is the overwhelming need for a really intelligent inquiry into the future structure of television (and radio) for the period after 1976 when the BBC's charter and the commercial franchises run out.

The committee pays tribute to the "quality of the Independent television productions in news, current affairs,

Whitelaw (left) with Darlington debaters

Aylestone: this is your IBA

arts and drama programmes" but it considers that the authority has "failed to make full use of opportunities given to it under the [Television] Act and has not exerted a strong enough influence to ensure sufficient representation of a wide range of programmes. . . . The authority appears to have been more influenced by the requirements of the individual companies, especially of the major companies, than by the requirements of the public which should be its first concern."

The first of the committee's recommendations is that to get the authority to take "a more positive role and exert its influence at an earlier stage than now" its senior management should be strengthened with people who have actually had wide experience in producing television programmes and command the respect of professional broadcasters. The committee, less happily, recommends that regional companies should be guaranteed some network time. In fact, it would be better if the duty laid on the authority were to ensure that only the very best programmes available are shown, irrespective of their source.

The committee would also like the authority to appoint immediately two programme planners (which the IBA said it would do if a second ITV network were set up) and a programme planning board, and to commission or produce its own programmes, particularly "experimental" programmes. It then half grasps the problem that that would create: if the IBA, which is primarily a regulatory body, becomes a producing body in its own right, who regulates the regulators? It wants an independent consumer council (appointed by the same government that appoints members of the IBA?) and

prima facie sees "much virtue" in setting up a broadcasting council, which would consider both the BBC and the IBA, hear complaints, conduct research and provide a forum for discussions of broadcasting policy.

The IBA is, naturally, criticised for the way it handled the crisis at London Weekend Television, and the committee is much concerned with the question of public accountability. It rejects the idea that all meetings of the IBA should be open to the press, but it rightly argues the need for greater accountability on such matters as why a particular regional structure was chosen, the allocation of contracts, the rentals paid by the programme companies, and so on. It also argues forcibly that hearings for allotting new contracts should be heard in public. The select committee also wants the contracts between the IBA and the television programme companies to be rolling contracts of the type that will be enforced for commercial radio, but like everyone else it has no idea how that stability could be reconciled with the periodic need to allow new applicants to compete for contracts even with companies whose performance has not been faulted.

Some of the select committee's recommendations will be disputed even by some professional broadcasters, and all will be disputed by all those members of the IBA and its staff who chiefly want a quiet life. The chairman, Lord Aylestone, will have to take the criticisms seriously, whatever—as a former chief whip—he may think about the general run of select committee reports. But when that has been said the committee's great omission becomes more glaring than ever. It seems impossible, but it is true, that a bunch of backbench MPs can talk of the excellence of ITV's news and current affairs programmes and not consider why their own political masters find vastly more fault with the BBC than they do with ITV. Could it not be that the IBA has got something rather important fairly right?

Police

The sentence stands

The rejection last week by the House of Lords of an amendment to the Local Government Bill means that a number of major police forces have lost their last chance of reprieve and must now face drastic shake-ups or

virtual dismemberment. That prospect arises because the Government is determined that police force boundaries should be the same as those for the new counties created by the reorganisation of local government which will take effect as from 1974. The amendment moved at the committee stage of the bill in the Lords—by a Labour peer, Lord Champion, but supported by a prominent and normally loyal Tory, Lord St Oswald—would have allowed the Home Secretary, Mr Robert Carr, to maintain existing police boundaries. It was lost without a division. A similar amendment was moved at the committee stage in the Commons and was lost only by the chairman casting his vote against it.

The Police Federation has mounted a skilled and sustained campaign to have the bill amended. Sometimes it has stressed the loss of efficiency likely to result from the breaking-up of particular forces; at other times, the emphasis has been upon the hardship it will bring to policemen in those forces and the consequent effect upon morale. The federation has naturally exploited the best arguments to hand. But when its case for large forces has been examined with full caution and scepticism it still looks a strong one.

It was as recently as 1966 that Mr Roy Jenkins, then home secretary, initiated a drastic reform of the police, which meant wholesale amalgamations of small forces in England and Wales into many fewer, bigger ones. The justification was police efficiency and the police accepted the upheaval on those grounds, though not without a lot of anguish and protest. The forces then created followed county boundaries, or were combined forces covering two or more counties; the biggest county boroughs continued to have their own police. The process of amalgamation was completed only three years ago, and the dust has hardly settled.

Under the present Government's local government reorganisation, new counties and metropolitan counties are established and county boroughs disappear altogether. Mr Carr is following the policy adopted by his predecessor at the Home Office, Mr Maudling, in saying that the police structure must fit in with local government. That, not police efficiency, is the criterion.

Most of the existing forces worst affected are in the northern half of the country—although the heartburning of the West Midlands should not be overlooked. Forces in Yorkshire, Durham and Northumberland can all

With so many views being aired on so many subjects,

Carr: chopping up constabularies

demonstrate what they see as the disastrous effects of recasting their boundaries, but Lancashire offers the most dramatic example. The birth of the Lancashire constabulary was a long and painful one. No fewer than 13 local authorities had to submerge their sovereignty in the making of a force some 7,000 strong. The reward was a force acknowledged to be one of superior efficiency, with a headquarters complex outside Preston geared to the needs of such a force, in terms of training, equipment and administration. Now, large chunks of the area covered by that force are to be hived off to the new constabularies. The strength of the Lancashire constabulary will be cut by more than half.

Government spokesmen say on the one hand that the reorganisation, seen in the national context, will not be as widespread as the police would like to make out, and, on the other, that police forces must be subject to democratic control and the only alternative to what is now proposed would be a national police force, which is not acceptable. The insistence upon accountability is right, but it could be achieved without subjecting the police to so much dislocation. The Police Federation has pointed out that the Crowther commission, whose report is expected soon, may well recommend a regional structure of government for Britain. If that were to come about, police forces, too, could conform to a regional pattern, with a regional police authority drawn, as now, from the magistracy and elected councillors.

But even if the idea of regional government is not put into practice, there is no reason why there should not be regional police authorities, to which existing forces, maintaining more or less their present boundaries, should be accountable. There would be initial

administrative difficulties and jealousies but that would be a smaller price to pay than what is now asked. There is need for strong police forces, which should be accompanied by a machinery for investigating complaints against them which is manifestly scrupulous and independent. The need for that kind of machinery is increasingly recognised within the police.

Crime

Borstal babies

A report* on the conviction, treatment and recidivism of girls between 17 and 20 years of age, published by the Home Office Research Unit on Tuesday, could hardly make more depressing reading. The number of offences committed by this group has doubled from 1960 to 1970 (for boys the increase has been only 42 per cent). True, the number of boys found guilty outnumber girls by 15 to 1, but for indictable (more serious) crimes the ratio is 9 to 1. Convictions for prostitution offences—which were sharply reduced after the passage of the 1959 Street Offences Act—have nearly trebled since 1964. The amount of violent crime committed by girls is tiny, but increasing sharply: there were 2½ times as many convictions in 1970 as in 1960. Convictions for shoplifting have more than trebled.

More depressing still is the study, which follows this statistical analysis, of the some 300 girls in borstals and a detention centre in the mid-1960s. Only 2 per cent of girls in this age group found guilty are sent to penal establishments, and the rate of recidivism seems to be lower than for boys, but even so it is a sorry picture. About 40 per cent were recalled or reconvicted within two years of release.

A discussion of their problems is disarmingly obvious. The saddest statistic is that of the 129 girls received into borstals (on which there is more detailed information), almost a third had one or more children on discharge. Girls with close links with their parents (and so no problems over accommodation) were far less likely to be reconvicted; girls with criminal friends or families (45 per cent of the group) were more likely to return; girls with previous convictions had a higher reconviction rate; so did those who were illegitimate and/or had had an institutional childhood. Sir Keith Joseph need search no further for examples of his "cycle of deprivation."

Planning

South Hants bonanza

It is a fair bet that there are already builders or speculators with options over most of the main sites pin-pointed in the draft plan for south Hampshire published this week; or, if not, the plan is a handy guide on where to invest now. This highlights one of the main weaknesses of the new planning system created in 1968, under which this is the first "strategic" plan to be published: how do you plan 10 or 20 years ahead for land use, with emphasis on publicity and public participation, without pricing the achievement of your plan out of reach? Still more fundamental, is there a better way of getting a public share in the profits of land development other than through taxing them after they have been realised?

Although high land prices cannot be held responsible for high house prices—rather the reverse—there is felt to be a political vacuum at present on this subject. The old Land Commission did at least have powers which are not available now, of assembling land across administrative boundaries. And even if inflation were checked the problem of putting together large parcels of land for big new communities would still exist. Mr Jenkins has called for a system of "fair prices" for building land acquired compulsorily by a local authority or government agency (the political boomerang of "fair rents" might have warned him off this one). The Labour party officially wants large-scale nationalisation of building land, but this still does not answer the question of at what point or at what price public ownership takes over.

The authors of the south Hampshire plan—who represent the county council and the two big cities of Southampton and Portsmouth soon to become mere districts within it—are wary of any development machine which (like the Land Commission) would depend too much on central government support. They believe, however, that both county and district authorities may get more into the business of advance land assembly, and that there will be means of co-operating with private enterprise in development and with private owners for the provision of services. Not by chance, the Government is due to publish during October the results of a working party which has been examining the idea of joint public-

private development agencies and, in particular, whether existing company law provides enough safeguards for this to become a general power of local government. (One or two councils, notably Buckinghamshire and Norwich, are already running joint schemes.) It is hard to see how councils will be able to afford to make adequate use of their powers of advance land purchase, which they have actually had since 1968, without tapping private sources.

South Hampshire is a boom area which for some time has been growing at the rate of 12,000 people a year and which is expected to gain over 280,000 more between 1971 and 1991. For half of this time, the planners think, it will be all right to carry on with a little bit of growth all round—adding here and there to existing towns and villages. But after 1981 it will become increasingly important to concentrate new growth in a limited number of places and enforce more stringent policies to protect the best countryside. They propose that only six places should receive 125,000 of the extra population, most of it going to two small towns, Horton Heath and Waterlooville.

Family incomes

Uncovering the traps

When the National Council for the Unmarried Mother and her Child gave evidence to the committee on one-parent families chaired by Mr Morris Finer, QC, it was asked what part it thought means-tested schemes had to play. Unable to reply, it commissioned an analysis of the impact of the six most important selective schemes in operation in Britain—family income supplement, free school meals, rent and rate rebates (taking account of the Housing Finance Act) and of course income tax (taking account of family allowances) and national insurance contributions.

The result is the most comprehensive exposition of the overlap of selective schemes and the "poverty traps" that they create that has yet been published. It contains other important conclusions, namely that the difference in disposable income between large and small families, after all selective benefits have been taken up, is too small; that a tax-credit scheme will help only if it swallows up most of the present means-tested benefits; and that the introduction of effective schemes depends on whether childless house-

holders will accept a greater redistribution of incomes away from themselves. But its most valuable contents are its figures.

The "poverty trap" problem is summarised in the examples below. At certain levels, a rise in gross income is more than eroded by a loss in benefits: the result is an actual fall in disposable income; at one point, of over £1. It must be stressed that this loss is usually theoretical; the figures assume that all benefits are claimed (including future rent rebates under the Housing Finance Act). And, of course, benefits are fixed for certain periods: if a man receives a rise in the middle, the benefit will not be withdrawn for some months—by which time the benefit rates may well have been raised again. Nor does Miss Della Nevitt, the author of the report and a reader in social administration at the London School of Economics, believe that the universalists have the answer. A £1 increase in family allowances, for example, would only serve to shift, and in some cases deepen, the poverty traps.

Hospitals

Bad food guide

Anyone who has ever sampled hospital food in Britain will be unsurprised to learn that it does not come up to the standards of the Egon Ronay Organisation. But it is quite touching to discover, in a report published on Wednesday on a survey of 31 hospitals, what pains its investigators were to make allowances.

They do have some sharp words for mushy vegetables, poor quality meat and "worst of all" puddings, which they found "almost uniformly bad." The individual reports were compiled after visits arranged with the help of the Junior Hospital Doctors' Association, after the Department of Health, which has commissioned an as yet unpublished survey of its own, had refused its assistance.

It abounds with descriptions of soggy chips, stringy vegetables, bitter and tough liver and synthetic fruit puddings. In one hospital the investigators were "privileged" with the recipe. Scrambled eggs (an abysmal choice

for mass catering) were made with diluted powdered milk, steamed until set and then whisked. The inevitable result was rubbery, pale and watery. An indifference to good cooking (seasoning was obviously a closed book to some hospitals) is merely a pity. An indifference to the value of fresh food and even to dietetics is worse. The worst report was of a mental hospital where doctors blamed the food for the patients' persistent diarrhoea.

Such hospitals have a lower budget: in May, £2.17 a head a week as against £2.40 in general hospitals. That, as the report says, is an indefensible distinction, particularly since patients there receive fewer visits and bunches of grapes. But the investigators found some mental hospitals where the catering staff made great efforts and the standards were higher than in general hospitals. The best of both earned generous praise. At New Addenbrooke's Hospital, Cambridge, the greengage tart was delicious; the Eastern General Hospital, Edinburgh, offered home-made vegetable soup, good steak and "pommes paillettes." But the investigators were well content with a less recherché menu; at St Thomas's the rice pudding was "hot, creamy and delicious."

The report is careful to admit that perfection is impossible on a budget of £2.40 a week. But how good an excuse is this? The nearest comparable figures from the National Food Survey show the actual ordinary household expenditure at much the same time was only £2.33 a head a week: large young families were making do with £1.50 a head.

NOW YOU KNOW ABOUT TWA'S AMBASSADOR SERVICE CAN YOU SERIOUSLY FLY WITH ANYONE ELSE'S ECONOMY SERVICE?

We can't imagine you prefer to eat what you're given.

When TWA offers you the choice of three main courses in economy.

Or sit in an old triple seat.

When TWA has the new twin-seat (two across or a couch if the plane's not full). On all our 707's.

And surely, you don't want to gaze at the clouds.

When TWA offers a choice of two films.*

Or fly in an old 707.

When TWA has just spent some £10 million refitting an entire fleet of planes.

And we can't think you'd rather have your luggage exposed on a trolley. When TWA protects it in containers.

Finally we're certain you won't want to end up in a terminal in New York with twenty-eight other airlines.

When TWA has its own terminal for TWA passengers only.

Or change airlines in America. When TWA flies to thirty-six cities in the USA every day.

Maybe we're biased, but we can't understand anyone flying by another airline.

When you can fly by TWA's Ambassador Service for the same price. Ask any Travel Agent.

International Report

While the winners celebrate, Bratteli mourns

Norway went thataway— and the Danes may follow

A clear "yes" from Norway this week would have virtually ensured a similar response in the Danish referendum that is to be held next Monday, October 2nd, and the European community of the Ten that had been envisaged would thus have become a firm prospect for the new year. Now the question is whether, come January, it will be the Nine or only the Eight. And that must depend on how strongly the Danes will be influenced by the Norwegians' clear "no." Clear it was. After months of strenuous campaigning on both sides, a high poll (75 per cent of the electorate) yielded 54 "no" votes for each 46 "yes" ones, giving a majority of more than 150,000 in a total of just over 2m votes cast.

True, nearly three quarters of the members of Norway's single-chamber parliament, elected in 1969, want the country to join the common market; a year from now the next general elections may well produce a new parliament of much the same persuasion; and the referendum held last Sunday and Monday was only a consultative one. But nobody can imagine that the Norwegians will reverse their decision within a matter of months. Their immediate problem is how to

get out of their present pickle with the ability to take any further decisions at all.

Mr Trygve Bratteli's Labour government, which commands 74 of the 150 seats in a Storting that cannot be dissolved until next September, had pledged itself to resign if the referendum went against it, and had rejected the suggestion that it might then quietly reassume office and negotiate a Swedish-type trade agreement with Brussels. The solidly pro-market Conservative opposition party has similarly committed itself to seeking nothing less than full EEC membership. Only the Centre party (20 seats) is now wholly anti-market; only about 24 dissident Labour, Liberal and Christian MPs have lined up with it on this issue—enough to make up the "blocking quarter" that has prevented the Storting from ratifying the treaty of accession, but hardly enough to sustain a new government and shape a new deal with Brussels. On the face of it, Norway could now find itself with a virtually paralysed caretaker cabinet and no access to the common market even of the kind that Sweden and Finland will enjoy next year.

Meanwhile the Danes, having timidly

chosen to wait till they could see which way the Norwegian cat jumped, are now jittering on a hot tin roof of their own. Norway's vote has made their dilemma more, not less, acute. Constitutionally, they have boxed themselves in even more tightly than their neighbours. Their referendum is mandatory, in the sense that it offers them their only way of joining the EEC other than by mustering a five-sixths majority in parliament—a stiffer hurdle than the three-quarters one required in Norway. Admittedly entry into the EEC, which has looked like a death sentence to Norway's heavily protected farmers, has looked like the promised land to Denmark's highly competitive ones. Given the dazzling prospect of privileged access to both the British and the German food markets, surely the Danes could not draw back from Jordan's brink and retreat into the wilderness, voluntarily renouncing both the new German opportunity and the established British connection? But they might—and for much the same reasons that swung the electorate in Norway.

The Efta years have seen a dramatic tightening of the links between the Scandinavian countries. Denmark has always been keener about the EEC than the others, but it has not wanted to find itself the only one of the group to enter. It has supported Swedish and Finnish appeals for more generous terms in the agreements between Brussels and the non-applicant Nordic states. And now that Norway has jibbed

on the very threshold of the common market, the Danes (although a few days' contemplation of Norway's new disarray may well give them the shudders) are bound to feel the Nordic pull more strongly.

Nordic solidarity should not be overestimated, but it is to be reckoned among the factors that shaped this week's Norwegian decision and will shape Monday's Danish one. The anti-market vote in Norway was not wholly accounted for by hill farmers, inshore fishermen, young ultra-leftists and elderly puritans. Nor is Norway quite such a snugly Arcadian place as it was made to appear by some of the foreign correspondents who invaded it last week. Norwegians trade and travel widely. They have known war, occupation and, in many cases, wartime exile; their ships sail all the oceans; they share a frontier with Russia, and claim a hunk of Antarctica. Indeed, some of their quails about getting boxed into a restricted European group may well reflect their inclination to look outward at wider horizons.

Norway is an Atlantic country in a special sense. Its people discovered North America in the eleventh century, emigrated there in large numbers in the nineteenth, and became founder members of Nato in the twentieth. Their vote against the common market does not necessarily imply a turning away from the Atlantic alliance or the broader idea of an Atlantic community. It does indicate a lively doubt whether a small, peripheral country, unable to influence centralised decision-making in Brussels as much as, say, Britain might hope to do, could preserve its cherished identity within a community that has not always handled small states' susceptibilities very tenderly.

Uganda

Speeding the exodus

FROM OUR UGANDA CORRESPONDENT

With the Asian exodus out of Uganda at the half-way stage, there seems a good chance that General Amin's November 8th deadline for its completion will be met after all—at least for those Asians who have somewhere to go. The British high commission has issued entry permits to about 15,000 Asians, and processing is continuing at the rate of around 1,200 a day.

Just how many Asians will be coming to Britain is still very much an open question, but the signs are that it will be in the region of 30,000. Of those

Kampala air terminal is one stage in a long journey

who have been cleared so far, about 7,500 were anyway in the queue for quota vouchers. The rest had not previously applied for entry to Britain. Of the 18,000 passport-holders called forward in the past eight days, only 7,000 have actually come and been granted entry permits. The fighting on the Tanzanian border last week, and the security measures it prompted, kept some Asians at home. Others, in up-country areas, were physically unable to reach Kampala.

The Ugandan government seems to have accepted that a good deal of red tape will have to be done away with if the Asians are to be out on time. It has also issued new regulations to ensure that the Asians do not delay their departure after receiving final clearance. Since Tuesday all outgoing Asians have had to buy their air, rail or sea tickets at the same time as they obtain their exit papers—which means they are booked on the first available aircraft or train out. Until then many had been hanging on in the hope of seeing some progress made towards selling their businesses. In practice the few weeks they might have been able to spin out would almost certainly have made little difference, for there is no more word on the sale of Asian property than there is on arrangements for the remission of the proceeds.

The airlift of Asians to Britain, which has been running at 500-600 people a day, should have expanded to 800 a day by the end of this week. The Canadian airlift is now also under way. The Canadian immigration office here has so far granted visas to about 1,500 Asians, most of them either stateless or Ugandan citizens, and they will be flown out over the next 10 days or so. Another 6,000 applications are still being processed. About 1,000 of the 4,500 Indian citizens have already left,

and 1,000 British Asians have been granted Indian visas.

The number of Asians going to countries other than Britain, Canada and India will probably be smaller than some of the forecasts now being made suggest. This is partly because, with the exception of Australia, Malawi and one or two others, none of the countries who have made statements of intent has yet begun translating them into practical terms. It is also because not all that many Asians—apart from the luckless ones who find themselves stateless—seem disposed to try their luck in places with which they have no connections.

The stateless Asians remain the most intractable of the many problems General Amin's expulsion order has produced. No official figures have yet been released on their number, but it is estimated that about 16,000 people were deprived of their citizenship in the government's "verification" campaign. Asians exempted from expulsion by virtue of their Ugandan citizenship or professional skills are currently being required to buy identity cards to "facilitate their continued stay and movement in Uganda." The stateless have no identity, and no easily identifiable future.

Rhodesia

Making no into yes

FROM OUR RHODESIA CORRESPONDENT

Mr Ian Smith apparently managed to head off a right-wing challenge to his authority over Rhodesia at last week's annual congress of the ruling Rhodesian Front, and the result is that once again there is speculation about a settlement with Britain. Even before Mr Smith told the 600 delegates that he was still anxious for a settlement

Introducing the Creative Bank Manager Mark IV.

Mk I. Prewar model, but fashionable until the early 1960s. Chief function: to represent stability in a changing world. Most admired quality: unflappable passivity. Quite a few still about, but only in the hands of the old guard.

Mk II. Fifties model. Not many styling changes, but war service had introduced some modifications under the bonnet. Greater readiness to look forward, less talent for passivity, but still lack of affinity with the go-getting businessman.

Mk III. Never became universally available. Barclays development work produced several unorthodox models—and caused anxiety by housing some of them in night-glass-walled branches. These unorthodox branches were generally condemned by all except their staff and customers.

The engineers of Barclays' future were seen to be implementing a three-point philosophy:

1. All banks need not be the same.
2. Initiative in a manager is not a sin.
3. In the successful bank of the future, the manager will need to show inventiveness and imagination on behalf of his customers.

Fundis regarded this philosophy as eccentric and even dangerous.
Mk IV. The current model. Some examples elsewhere, but chiefly concentrated in Barclays. Styling hardly matters—drive is paramount. Accepts innovation as fashionable, even habitual. Evidently a product of the company which launched Barclaycard, and which runs one of the most successful banks in America.

Chief function: financial problem-solver.

equipped with an enormous range of options and services.
The Barclays fleet consists of Mk III and Mk IV models only, and the Mk IIIs are being converted.

If you or your company are currently dealing with a Mk I or a Mk II you are almost certainly at the wrong bank. However well polished the earlier model, may be, and however affectionate you may feel about him, he is unlikely to give you the performance you need today.

Go, and we suggest a test drive. Call on your nearest Barclays manager—you will find that he's in business, too.

BARCLAYS

Banking means Barclays

The Nippon Fudosan Bank, Ltd.

The U.K. Administrative Officers:

Ken Katsuyama Director
and Representative—Europe
Toichi Danno Deputy Representative
Shigeo Ichikawa Assistant Representative

A brazilian bank is very concerned about where and how its clients live.

The National Housing Bank (BNH) was established in 1964 to perform Brazilian housing policy. A serious crisis was then responsible for a tremendous housing shortage at a time when urban population increased at the rate of more than 5% a year. Against such backgrounds, BNH was created and has developed:

- the Housing Finance System, through which 800 thousands of Brazilians acquired their homes.
- the Brazilian Savings and Loan System. Using its Pass-book Savings Accounts (Cadernetas de Poupança) and its Real Estate Bills, (Letras Imobiliárias), more than 250,000 homes for workers were financed, and Brazilians were provided with a profitable means where to invest their savings.

- the F.G.T.S. According to Brazilian labour laws, every employer has to make a deposit of 8% of every one of his workers' wage in this fund. Such deposits get the benefit of monetary correction and interest, every three months.

That is how BNH has effectively helped to control monetary inflation, and contributed for creation of new industries and jobs. But that is not all. BNH also exerts influence in urban infrastructure, has established and rules the National Plan for water supply and sewage - PLANASA - thus financing the system which until 1980 will provide 80% of the Country's population with treated water.

And all this was accomplished in only eight years.

We are glad BNH was so concerned about where and how its clients live.

there had been reports of renewed contacts between British and Rhodesian officials. Mr Smith's appeal to the congress not to rock the settlement boat seems to confirm these reports, and among businessmen in Salisbury there is a growing feeling that the two governments are trying to find a way to circumvent the Pearce report, which earlier this year found the settlement drawn up by Mr Smith and Sir Alec Douglas-Home to be unacceptable to Rhodesia's 5.4m blacks.

The press was excluded from the three-day congress, but Mr Smith seems to have taken the heat out of some of its debates by doing two things. First, he lectured his audience on the facts of life about the economy and the guerrilla problem. Rhodesia's economy remains under siege; exports rose again in the first half of 1972, but the balance of payments is still under considerable strain. As for the guerrillas, a landmine has recently exploded at the Mana Pools game park close to the Zambezi, and the Rhodesian authorities are concerned about reports of Frelimo penetration southwards in Portuguese Mozambique.

Secondly, Mr Smith emphasised that the settlement terms left lying on the table by the British Government would not interfere with "traditional" racial segregation in Rhodesia. The Land Tenure Act, which divides the country roughly equally by area between 5.4m blacks and 290,000 whites, Coloureds and Asians, would be retained under the settlement. There would still be separate schools, hospitals and residential areas, he promised. So much for the section of the proposed settlement which sets out the Rhodesian government's "firm intention" to make progress towards ending racial discrimination.

So it does seem that there was some move rightwards by the platform in response to grassroots pressures at the congress. Although delegates are reluctant to say precisely what was agreed upon in committee, it appears that the right was given some assurances about future policies. These include the siting of black townships in black areas, and the ending of "infiltration" by Coloureds and Asians into white residential areas.

This suggests that the whole thing is very much where it was a year ago; then too Mr Smith was able to divert right-wing pressures by holding out hopes of a settlement. This time, he says he has some ideas not on how to renegotiate the terms, which he has said is out of the question, but on how

to get the proposals implemented. This boils down to his apparent hope that he can convince Britain either that Lord Pearce was wrong, or that black opinion has changed since March. Some white Rhodesians are hopefully assuming that Britain is now so desperately tired of Rhodesia and so embittered about Amin-style African nationalism that it is more willing to circumnavigate the Pearce report than it was a few months ago.

Ireland

Removing the difference

FROM OUR DUBLIN CORRESPONDENT

After a summer in which things seemed to go miraculously his way—the successful referendum on Irish entry into the common market, and then the triumph of the Mid-Cork by-election—Mr Jack Lynch faces a difficult winter. The Irish prime minister knows that last week's rioting and bomb-planting in the Dundalk area, just south of the border, was nothing much by Northern Irish standards, but it shook southerners out of their complacency and shocked the republic's young minister for justice, Mr Desmond O'Malley, into threatening subversives with "tough and immediate" measures.

There are not many people who believe the Provisional IRA's disclaimer of responsibility for the business in Dundalk. It is not clear whether the incident, like similar earlier ones in other border areas, marks an extension of the Provisionals' campaign into the

republic. But Mr O'Malley was on safe ground in claiming that at least 95 per cent of the Irish people would support any action taken by the government to suppress violence.

Events are now obliging Mr Lynch to match with deeds his promises to grasp the nettle of constitutional change in order to remove some of the differences between the south and the north. Already a referendum has been promised this winter on the question of lowering the voting age to 18. Mr Lynch must decide within the next few weeks whether he will at the same time put to the people the question of removing from the constitution the article, number 44, which recognises the "special position" of the Roman Catholic church and possibly another one, number 41, prohibiting divorce.

The electorate, like the Catholic hierarchy, would probably agree to the removal of article 44 but not to the legalising of divorce. So long as these articles remain, and with them the laws against the import and sale of contraceptives, Mr Lynch can fairly be accused of hypocrisy towards the north. He would prefer to trade constitutional change—even to the extent of a totally new constitution—against a British move opening the door to eventual Irish unity by consent. But the pressures on him may oblige him to act earlier.

Most people in the republic long ago wrote off Mr Whitelaw's conference in Darlington this week as a meaningless but inevitable prelude to the eventual solution, which they believe Britain will have to impose. Mr Lynch's main interest is to secure his own

Dundalk: nothing much by northern standards

position in quadripartite talks between the London and Dublin governments and the two communities in Northern Ireland before that solution is announced. So the Irish government will press its charges against Britain at Strasbourg for alleged breaches of seven separate articles of the European convention on human rights involving torture and killings, despite Mr Heath's request when he met Mr Lynch at Munich for them to be withdrawn. But if the court accepts the admissibility of the Irish government's evidence Mr Lynch would be prepared to withdraw the charges at a later date in return for British recognition of a place for him at the conference table deciding Northern Ireland's future.

United Nations

Blood and bonhomie

The big guns rumbled this week in the United Nations General Assembly. Keynote speeches were delivered by Mr Rogers, Mr Gromyko, M. Schumann and Sir Alec Douglas-Home. The Secretary of State, pointing out that such antagonists as the two Koreas, the two Germanies and India and Pakistan had found they could talk to each other, made a fresh call for an Arab-Israeli dialogue, either generalised or limited to the priority aim of disengagement along the Suez canal. But his major theme was international terrorism.

Mr Rogers offered draft texts of three treaties. One would aim at the protection of diplomats and officials against kidnapping and other acts of violence. A second, like the project that Britain recently opposed in the International Civil Aviation Organisation, would bind signatory states to punish skyjackers and to cut off air services to countries that shielded them. The third, dealing with the "exporting" of terrorism, would provide for action against groups that attacked or kidnapped "innocent civilians in a foreign state" with the aim of blackmailing a government or an international organisation.

Mr Rogers took pains to show that he was not singling out the Arabs for condemnation; he also reassured the Africans that he was not seeking to obstruct the struggle for self-determination in white-ruled southern Africa. Next day, in an interesting contrast, Mr Gromyko included in his speech a specific denunciation of the "acts of

Waldheim paired with Trepczynski

terrorism committed by certain elements in the Palestinian movement," and notably their "criminal actions" in Munich.

But a speech is one thing, action is another. Three days before Mr Gromyko's speech, Russia had backed an unsuccessful Arab bid to prevent the subject of terrorism being debated in this year's assembly. The defeat of this move ended a four-day procedural struggle which produced a vote of 66 to 27 in favour of holding a debate. China, a conspicuous ally of the Arab opponents of this decision, thus found itself on the losing side for the third time in one day, for the assembly had also rejected its demand for a debate on Korea and overruled its objections to a debate about the admission of Bangladesh to the UN.

It was the new secretary-general, Mr Kurt Waldheim, who had made the first formal move for an assembly debate on terrorism. His initiative, taken only three days after the Munich massacre, looked like foundering at one stage during last week's procedural tussle. The necessary majority vote was mustered only after Jamaican and Saudi Arabian amendments to the first draft of the proposal had both narrowed its scope and, in another sense, widened it by adding (in words borrowed from Mr Waldheim himself) a reference to "frustration and despair" as causes of some forms of terrorism.

Yet the assembly itself had opened under the shadow. As the delegates gathered last week, airline pilots were demonstrating, with demands for urgent action against skyjacking, outside the UN buildings, in which security precautions had been tightened. The new precautions did not avert a minor incident that came just after the opening statement by this year's assembly president, Mr Stanislaw Trepczynski of Poland; but the protester who had got into the public gallery was, fortunately, content to scatter leaflets and shout

"Let the Soviet Jews go!"

The nervousness in the New York air did not noticeably reduce the bonhomie among the major powers' foreign ministers as they paired off for the usual series of private chats. This year Britain's Foreign Secretary found his Russian colleague just about as amiable as his French and American ones. Sir Alec also had a quiet word about fish with the foreign minister of Iceland. There seemed, however, no way of easing the plight of Uganda's Asians by similar discreet methods. Sir Alec had to try the effect of including in his speech a request for a debate, and for support for his appeal to President Amin to extend his November deadline and end the practice of stripping the expellees of their possessions.

Germany

Fighting back

FROM OUR SPECIAL CORRESPONDENT

Bonn

While Willy Brandt's coalition begins the fight for its political life, west Germany's security chiefs are trying out a new strategy to defeat political terrorism. The task is urgent, since spokesmen for the Black September group have promised new terrorist attacks in Germany in revenge for the battle at Fürstenfeldbruck airport on September 5th. One of them, talking in Beirut to a reporter from the German magazine, Quick, spoke of the group's determination to free the three surviving Munich killers.

The Palestinian terrorists can choose from a broad range of targets as the election campaign gets under way and politicians travel about the country. They might even try something at the Frankfurt book fair, which opened this week with a fair sprinkling of strongly Zionist Jewish publishers among the throng. The Hamburg interior minister announced after a recent conference of state interior ministers that the security forces have drawn up a new list of persons and places that require special protection, and that there will be much tighter control at airports.

But the new approach to internal security hinges on two things in particular: the creation of a special counter-terrorist force, and stricter control of foreign residents. The new squad of 180 men will be drawn from the Border Defence Force and will be responsible to the federal minister of the interior. It will provide sharpshooters, explosives experts and com-

Energy for industry

Giant new power station feeding the U.K. grid.
Requirement from us: 4500 tons of fuel oil. Per day.
We deliver Direct from refinery via undersea pipeline.

Factory machining metal components in Holland.
Requirement: cutting oils that could measurably improve tool-life, without fumes, without odour.

We deliver From our new Gulfcut range for Europe.

Energy for industry Every kind of industry.
Every type of energy Whichever way you look at it,
Gulf is energy.

Gulf Oil Corporation, Pittsburgh, Pa., U.S.A., and throughout the world.

When you say you're flying Lufthansa and will arrive at 8:05, you will be expected at 8:05.

What a reputation we Germans have. Okay, so we are a little nutty about being punctual. That's not so bad when you're trying to get to an important appointment. Certainly it's possible that something may happen to keep us from being on time 100%, but you can bet we're trying. If you're a little late checking in, you'll still see a smiling face. If we're a little late taking off, you'll see a red face.

Lufthansa
the more you fly

We've given our Spitfire engine something new to run in
The Triumph Toledo.

Rather than give you more cars, Triumph give you more care. The uncommon denominator of all Triumph models is: quality. Which, when you consider everything Triumph put into it, means you get more car.

And, whether it's a luxury car or a sports car, there's no loss of that other Triumph specific: individuality. Of course, some of the sportiness rubs off on the luxury cars. And vice versa.

It may surprise you to learn the Triumph Toledo has the same basic power unit as the Spitfire. Smooth and responsive as ever.

The Toledo's light handling and agility in manoeuvre, make it a gem in the jams and

a quite exhilarating mover on the open road.

Yet it burns fuel very economically. It turns in around 33 to the gallon.

Another 'economic' advantage is its 29.75 ft. turning circle. You get in and out of tight parking situations with a lot less fuss and effort.

If you're a six-footer, the Toledo doesn't cramp your style. You'll find ample room behind the wheel to stretch your legs. And your rear passengers aren't cramped either.

While you're all enjoying the smoothness of the ride, you also enjoy the luxury touches like full carpeting and generously upholstered seats. And you'll enjoy knowing

the Toledo's a Spitfire at heart.

Prices; ex-works including purchase tax and fitted front seat belts, 2-door £992.40; 4-door £1,035.90.

Triumph Motor Company Limited, Coventry. Telephone: 020 3-75511.

Individual cars for individuals.

First through the arithmetic barrier HP-35

Yes, logs, trig, roots, exponents and other complex functions. The amazing HP-35 does so much more than simple arithmetic.

Whether you are an engineer or scientist, an academic, statistician, surveyor, banker, broker or administrator, HP-35 is the pocket problem solver you've always needed. Just see what it can do!

* Much more than simple arithmetic

Arithmetic: +, -, ×, ÷, ...
Logarithmic & | Log, Ln, e^x, x¹
Exponential: | Log, Ln, e^x, x¹
Trigonometric: sin, cos, tan, arc sin, arc cos, arc tan.
Misc: 1/x, √x, π.
Operating Range: 200 decades (10⁻⁹⁹ - 10⁹⁹).
Calculating Speeds: 60-500 milliseconds.
Accuracy: Errors confined to tenth (least significant) digit.
Decimal Point: Either scientific or fixed point notation.

* Complete: ready to work

Supplied with soft leather carrying case, safety travel case, battery charger/ac adaptor, 46 page manual with many sample calculations; even personalised label. One-year warranty. World-wide service.

* Packs power of 30,000 transistors

Result of technical breakthroughs in California advanced research laboratories of Hewlett-Packard—world's largest manufacturer of precision electronic instruments—with over 2000 products including computers and programmable calculators.

Hewlett-Packard Ltd., Department E.2,
224 Bath Road, Slough, Bucks, SL1 4DS.

* Bright, clear LED (light-emitting diode) display

Ultra-reliable. Shows answers to ten significant digits—plus two-digit exponent, sign and decimal point.

* Works anytime, anywhere

—from ac mains or rechargeable internal batteries.

* Reduces note-taking

Sub-totals and constants automatically recalled from store when wanted. HP-35 has 5 data registers.

* No risk. 10 days trial: £10 saving

Cut out and return this order form with purchase order — or cheque which secures cash discount of £10. If not completely satisfied, return HP-35 within ten days. Money refunded or order cancelled without question. To save on amazing HP-35 — act now!

*Size only
3 1/2" x 5 1/2";
weight 9oz.

HOW TO ORDER

Simply complete order form and return with cheque or company purchase order made out to Hewlett-Packard Ltd. Your HP-35 will be despatched by recorded delivery.

10 DAYS TRIAL ON RECEIPT OF CHEQUE OR PURCHASE ORDER.

No risk. If not satisfied completely, money returned or order cancelled without question. TO SAVE £10, enclose cheque for cash payment discount.

ORDER FORM

To Hewlett-Packard Ltd., Department E.2,
224 Bath Road, Slough, Bucks, SL1 4DS.
Please send me by recorded delivery the HP-35 complete with accessories for £199/£189 (if cheque enclosed) which includes all taxes, shipping and handling charges. If I am not satisfied completely I may return the unit and accessories within 10 days for a complete refund. Tick one payment option below.

- ☐ Bill my company for £199. Our purchase order is enclosed.
☐ A cheque for £189 (which allows for my cash payment discount) is enclosed.

Roman dog sniffs German mail

munications technicians who can be flown in by helicopter at short notice to handle a crisis like the Olympic tragedy. But the state security services will still be the first line of defence against political extremists, and some are forming their own commando-style squads.

Second, there will be a closer watch on west Germany's 3.4m foreign residents, who include large numbers of Yugoslavs, Turks and Greeks, as well as the 70,000 Arabs living in the country—13,000 of them without the necessary permits. The Office for the Protection of the Constitution, west Germany's internal intelligence service, claims that 47 foreign political groups are active in west Germany that are "conspiratorial or with terrorist leanings." These range from Turkish right-wingers and the Croatian separatists to the Palestinian extremists and Spanish anarchists. The state interior ministers have agreed, as a first step, to expel 60 Arabs who are believed to be in league with terrorist groups.

The Hamburg police showed the way on September 21st by deporting three Arabs back to the countries shown in their passports. For a girl called Helen Abu Hadid, who is alleged to have been an accomplice to the murder of five Jordanians, including a police informer, near Cologne in February, this was Israel. Four of the 12 people listed by the Hamburg police will have a chance to appeal in court. One of them is Yousif Abdel Muhdi, who was the local leader of the General Union of Palestinian Students, generally regarded as a front for Fatah. He was also a member of Rasd, the Palestine Liberation Organisation's intelligence service, whose chief, Ali Hassan Salameh, is thought to be the man in charge of Black September operations.

The investigations in Hamburg reveal a tangled undergrowth of terrorism and intrigue. Arab extremists in west Germany move back and forth fairly frequently from east Germany and Yugoslavia. One of the missing men on the Hamburg list is in east Berlin and another had stopped there on his way back to Beirut. How the Palestinian guerrillas get their arms is another obscure story, but many of them are equipped with arms manufactured in Russia or eastern Europe, like the Kalashnikov sub-machine guns that were used at Munich.

The west Germans accept that there has to be an international approach to what has become a trans-national concern. The new anti-terrorist division of Interpol, to be based at Scotland Yard, is a step forward, but there were 111 countries represented at the Interpol conference in Frankfurt that ended this week, and the organisation represents too many viewpoints to be really effective.

Spy country

FROM OUR BONN CORRESPONDENT

At Bonn railway station, one spring evening in 1970, a woman in her early forties was waiting for her train home to Cologne after an evening at the theatre. She never caught the train. Instead she was apprehended by the west German police, who found in her handbag copies of the minutes of two of Herr Brandt's cabinet meetings. The woman was Liane Lindner, alias Ingeborg Weber, who had been working for east German intelligence since 1960. Frau Lindner passed the time of day in the office of a Cologne publisher but devoted her real efforts to supplying the east Germans with political and scientific information. In her flat (as all good spy stories go) were found instruments for coding and false passports. Frau Lindner was a devoted theatre-goer, never failing to come to Bonn once a week. The Bonn theatre was the place where she was handed information and documents by her agents, chief of whom was Frau Irene Schultz, at that time the science minister's secretary.

The two ladies were last week handed over to the east Germans, having spent more than two years in prison while investigations went on. In return, the west Germans are receiving more than 100 "political prisoners" from the east. Some of these had been sentenced to prison for life, others were serving terms of 5-15 years. They had been charged with various crimes

including currency smuggling, attempting to help people to escape to the west, and trying to escape themselves. Perhaps, too, there were some who had been up to the same kind of mischief in Karl Marx Allee, Berlin, as was Frau Lindner in Adenauer Allee, Bonn. The west Germans are being very discreet about the whole affair.

The fact of the matter is that exchanges, arranged through lawyers in west and east Berlin, take place regularly, and normally the general public knows nothing about them. In some years there are merely two or three exchanges, in others as many as 20. Not all the exchanges are on the scale of this latest, which is one of the biggest ever, but they have become part of the way of life of a divided nation. They continue irrespective, almost, of the political atmosphere. The west German view is that east Germany stacks up political hostages against a rainy day and to secure the release of specific spies. The east looks after its own. Indeed, Frau Lindner is said to have fretted to her jailers after a couple of years that "they should have exchanged me by now."

West Germany remains an exceedingly popular place for what in other countries seems to have become a rather outmoded profession: that of the individual spy. Unofficial figures put the number of agents working for foreign interests here at 16,000. Even in central European terms this is a remarkable figure. Even more remarkable, the interior ministry affirms that 80 per cent of all agents are west Germans spying for east Germany. This makes sense when one remembers that more than 3m east Germans have crossed to the west since 1949 and are readily assimilated into west German society.

The problems of security in an open society were vividly illustrated some time ago when two men stole a 10-foot Sidewinder missile from a Nato base in broad daylight and, having dismantled it, proceeded to send it air freight to Moscow. This week a senior official of the west German trade union federation was arrested in Berlin, allegedly in the act of passing microfilm and documents to an espionage contact. For as long as there are two Germanys, the trade in secrets and in people will inevitably continue. The pool of political prisoners in east Germany encourages latter-day Frau Lindners to carry on happily ferreting out secrets, secure in the knowledge that even if they are caught it will not be long before they are exchanged.

Martial law comes to Manila's Hilton

Philippines

The mark of Marcos

FROM A SPECIAL CORRESPONDENT

With a flurry of melodramatics President Marcos last Saturday did what he was expected to do by imposing martial law on the Philippines. This development had been awaited ever since he suspended, and afterwards only partly restored, habeas corpus just over a year ago.

The question is why now. The president's second term of office does not run out until the end of next year. Evidently he calculated that this was as good a time as any to eliminate those who have persistently opposed his desire to extend his rule beyond the constitutional limit of two four-year terms. The recent floods destroyed the gains of the past three years of economic stringency; prices of food and other essentials have been climbing unmanageably in the past few weeks. To add to the president's woes, his manoeuvres in the constitutional convention to retain power legitimately, by becoming prime minister of a Westminster-style democracy, were vitiated by the convention's resolution to ban him, his wife and other close relatives from establishing a Marcos dynasty.

True, Mr Marcos and his wife have repeatedly and vehemently denied in public that either of them had any intention of hanging on to power beyond the lawful span. But some of their public actions, together with the private assurances given to palace cronies that they had no intention of retiring into political limbo after 1973,

enhanced the fears of those Filipinos who, politically weaned on American democratic values, look upon the two-party system and the orderly transfer of power as ideals no less sanctified than motherhood.

The government's dark reference to a Peking-inspired plot to undermine national safety is no more than clumsy sensationalism to provide an excuse for suppressing criticism. When the army high command displayed photographs of caches of arms with Chinese markings, most people in Manila saw only the mark of Marcos. The "new society" Mr Marcos says he intends to construct with his newly acquired powers—a country purged of corruption and social injustices—is no more than a sonorous slogan evocative of Lyndon Johnson's "great society."

Public venality, endemic in the Philippines, has probably never before been on such immodest display as in the past few years. Public funds have been blatantly diverted for partisan and personal political gain, and seldom has it been so evident as now that 5 per cent of the people own 95 per cent of the country's wealth. All this, placed alongside Mr Marcos's declarations of good intentions, has created a chasm in credibility which will take more than catch phrases to bridge. But Mr Marcos is now asking his countrymen to accept that the evils from which they are suffering cannot be eradicated without the elimination of criticism, and rule by decree.

In the course of his second term, President Marcos has rearranged the leadership of the armed forces to ensure direct loyalty to himself. He may thus have already won the battle against his political enemies. But he may also have made the mistake of under-estimating the Filipino sense of individualism, which rejects heroes or any man who comes on bigger than life as they know it. This could cost him the war.

Switzerland

Make love and war

Cohabiting is now no more illegal in Switzerland than exporting arms—at least in one part of the country. On Sunday the citizens of Zurich repealed a 116-year-old ban on "concubinage," the living together of unmarried couples, and abolished fines and jail sentences for couples failing to comply with "separation orders." On the same day Zurich was also one of 17

cantons which voted to defeat a proposal that would have prevented the export of Swiss arms to any country except European neutrals.

But it was a close call for the arms manufacturers: 593,199 votes against 584,726. Normally Swiss referendums do not come as close as that to success, particularly when they involve changing the existing state of things. The Swiss are a conservative lot. One reason why this one did so well may be memories of the Oerlikon Bührle rumpus in 1968, when it was discovered that Swiss planes of the International Red Cross, flying relief supplies to Biafra, were being shot at by Swiss guns sold to the Nigerian government. On further investigation it was discovered that Oerlikon Bührle had sold some \$20m of arms to South Africa, Egypt, Israel, Lebanon, Saudi Arabia and Nigeria between 1965 and 1968, in unusually flagrant contravention of the Swiss policy which, in theory, is supposed to prohibit sales to areas of actual or potential conflict.

Even before the start of the trial of senior employees of Oerlikon Bührle in 1970, the necessary 50,000 signatures had been collected to call for a referendum. The churches took an active part in the campaign to mobilise public opinion in favour of an export ban: one Protestant committee spent money from relief funds to finance a poster campaign. Even though the proposal has been defeated, the campaign has borne fruit in a new federal law which sets up a special office to enforce existing arms restrictions and stiffer penalties for breaking them.

The arms industry has not been exactly idle either. To show how useful Swiss arms exports can be, it ran newspaper advertisements about the Swiss-made armoured cars used by the Munich police after the Olympic killings. And it has argued that exports are essential to maintain the domestic arms industry Switzerland needs for its policy of armed neutrality. The Swiss government seemed to recognise the force of this argument when in 1969 an order that Oerlikon Bührle should be given no more export licences was rescinded only a month later.

Sweden faces the same problem, but even more so, because it imposes the same kind of export restrictions as Switzerland while aspiring to a higher level of both public morality and technology. As a result the Viggen is probably the last totally Swedish military aircraft that Saab will ever build.

There's a new face in London.

Mitsubishi Trust and Banking Corporation opens its new London Representative Office October 2nd

at Winchester House, 77 London Wall, London EC2N 1BE
Phone: 01-628 4888 9 Cable: MIBTRUST LONDON EC2 Telex: 88 7208

Maybe "old face" would be more like it. We were founded in 1927. And we helped establish the first London-based Japanese overseas investment trust group in 1931.

But there's a new look about us. Total funds at the end of March 1972 stood at £2,838.8 million—a growth of 764 per cent in ten years. And we're active in every major area of trust, general banking, agency, and

other business.

Our information on Japanese industries is exhaustive. We've extended many long-term loans to joint ventures in Japan, and will increasingly extend them to joint ventures abroad as well.

In short, we've got a lot to offer. And we'd like to tell you more about it. We may not be a new face here, exactly speaking, but we can introduce you to some new possibilities.

THE MORE YOU THINK ABOUT LATIN AMERICA

The area's latest political, economic and business developments. Easy to read, authoritative and free from bias. Culled by men on the spot, flashed to London, analysed and condensed into a compact 8,000-word weekly newsletter. All this from a close-knit team, centred on John Rennie, Christopher Roper and Jo Beresford, whose experience of the area is matched by their understanding of your needs.

This is LATIN AMERICA required reading in 60 countries for 6,000 journalists, businessmen, academics, diplomats, government officials and others concerned with Latin American developments.

As soon as you become a regular reader you start to benefit from the newsletter's shrewd interpretation and exclusive reporting. Carrying no advertising, completely independent of government and big business, LATIN AMERICA is free to tell the full story and let the chips fall where they may. Earlier this year its revelation of secret negotiations among the Peruvian and United States governments and Standard Oil upset all concerned, but the story was never denied.

In Brazil, Argentina, Chile, Venezuela, Colombia, Uruguay and Mexico, complex struggles for power presage major changes over the next two years. Follow the see-saw of events each week in LATIN AMERICA

Post the coupon today & receive it for a full 3 months at the special introductory rate of only £4.00 or US\$10

We'll post your first copy as soon as we receive your order.

Japan and Taiwan

From Taipei, with tears

FROM OUR HONGKONG CORRESPONDENT

Acting as humble interpreter, the second consul of the dying Japanese embassy in Taipei twice broke into tears at the severity of the rebukes delivered by Taiwan's prime minister, Chiang Ching-kuo, to the Japanese envoy, Mr Shiina, when the two met to discuss Japan's new pro-China policy last week. Then two members of the Shiina mission diffidently but seriously inquired why there had not been more violent demonstrations against them. Those marginal human closeups best reflect the mood of the meeting on the eve of Mr Tanaka's kowtow in Peking: Japanese nationalist guilt, Chinese Nationalist toughness.

The Japanese had come well prepared for a stony reception; they had indeed indicated that they were prepared to offer proposals for building a highway around the coast of Taiwan and an atomic energy station at a Taiwanese port as proof of their continuing interest in the island's economic future. But they were curtly told that Chiang Kai-shek's Nationalists did not wish to be insulted by this *kumshaw*.

The Nationalists were resolved to be tough and contemptuous. They disapproved of the students who harassed the Japanese, and they were severely correct themselves. They neither expect nor seek favours. They have been "adjusting" to their new position in the world, ever since the United Nations expelled them, by diversification and reorganisation of industry, and by examining the development of alternative markets.

They will give the knuckle to the Japanese, who—apart from \$68m in capital investment, now slackening and basically representative of small units—have a good deal to lose themselves by a reduction of trade. Taiwan is their third largest market and provided them with a \$635m surplus last year. The Nationalists have already decided to ban any imports from Japan which total more than \$20,000 on each order, and to pump loans from hard currency reserves into local industries that wish to stockpile raw materials now available from Japan or to produce equipment now bought from Japan. One major worry for the Nationalists is the possible contraction of the export of agricultural products to Japan, worth \$250m a year. The Japanese have

They defaced Shiina's face

already started buying bananas from China instead of Taiwan.

The belligerent Nationalists snarl that Mr Tanaka's approach to Peking is "asking the tiger for his skin." Reports of undercover feelers from Peking to Taipei are ridiculed. Less contemptuous, and perhaps more expedient, are denials of any Soviet overtures, although a recent Taipei green light discreetly offered port facilities to transient Soviet trawlers from Vladivostok which Hongkong has rejected.

One possible Peking manoeuvre would embarrass the Taipei government: an apolitical offer by the Red Cross representatives of the Mao Tse-tung "bandits" to the Red Cross representatives of the Chiang Kai-shek "bandits" for Korean-style discussions on reunions of families on the island and the mainland separated since 1949. The Chiang Kai-shek "bandits," it is clear, would reject such an approach without any concern for adverse United Nations and Geneva Red Cross reactions.

Yet dark anxieties overhang the current mood of righteous indignation on Taiwan at Japan's betrayal. It is believed that Japan and China will exchange diplomatic representatives inside three months. Can Thailand, Malaysia, the Philippines and Australia be far behind?

The Nationalists have one sound incontrovertible answer to these doubts. The 12m native Taiwanese will unswervingly support the Nationalist Chinese devil they know rather than the communist Chinese devil they don't want to.

China

You do better if you work harder

Material incentives, they say in China, are reactionary poisons used by cads like Liu Shao-chi to tempt people down the capitalist road. But then they say that "rational rewards," which are of course quite different, are a sound maoist method of strengthening the socialist economy. The difference between these two types of payment is often difficult to grasp, even for Chinese party officials. But the result of this semantic refinement is what matters: Chinese peasants are now being encouraged by the promise of profit to work harder both for the collective and for themselves.

During the past two months, the People's Daily has devoted considerable space to a series of case studies illustrating the disastrous impact of the suppression of private agricultural plots and other forms of individual enterprise. The experience of a Kwangsi production brigade is typical. Cadres there decided to confiscate the fruit trees which peasants had planted around their houses; "the result was that the fruit trees were wildly chopped down." Some cadres in Anhwei province, tilting against the same capitalist windmill, made manure collection into an unpaid activity. Fertiliser supplies promptly dropped by two-thirds because "nobody cared to keep a private cesspool" any more.

The blame for these left-wing deviations is being put on the "Lin-type swindler"—the standard codeword for that still unnamed villain, Lin Piao. It is not yet clear whether Lin and his radical followers actually orchestrated the local assaults against individual money-making, or whether they were merely independent initiatives by local officials. But they were almost certainly not a response to official Peking policy, which began the return to a moderate path as early as the spring of 1969. In the autumn of 1970 the draft state constitution guaranteed the peasant's right to keep his private plot. But it was only last December, after the fall of Lin Piao, that the central government issued a formal instruction on how income was to be distributed in the countryside.

The basic principle of distribution laid down in the directive is "to each according to his work." There is, no nonsense about the egalitarian principle of "to each according to his needs";

that belongs to the elusive age of fulfilled communism. The collective economy will, of course, remain supreme. But when collective production increases, the individual peasant should share in the profits. And even where the collective runs sideline occupations, families should not be prevented from carrying out the same activities on a private basis.

The newly articulated tolerance for private sidelines is part of the move to stimulate production by rehabilitating material incentives. But it also reflects a new effort to diversify agriculture. For 10 years or so the Chinese have concentrated on grain, often at the expense of other crops. Now that grain supplies seem to be adequate, local officials have been given the go-ahead to plant higher-priced cash crops. At the same time the directive points out the dangers of "blindly seeking profits." And for good reason. Before the cultural revolution some peasants were earning more than half their income from their private plots. The temptation is clearly there.

Vietnam

The place to hit

FROM OUR SAIGON CORRESPONDENT

The recapture of Quang Tri by South Vietnamese troops was too important for the communists to let it go unavenged. They have chosen the area south of Da Nang for a new counter-thrust. This was one of the few regions that had not seen major action during the six-month-old communist offensive, and the government's hold over this part of the country, never strong, has been further weakened by the transfer of troops for the Quang Tri operation.

Much of the action has been in districts of Quang Ngai province with a long history of communist political and military activity. This is one of the most populous provinces, and conveniently close to the corridor through northern Kontum

Death in the fields south of Da Nang

that brings in North Vietnamese troops and supplies from southern Laos and northern Cambodia. Quang Ngai town itself is safe. The road north to Da Nang, Highway 1, remains open, but increasingly hazardous; and the road south from Quang Ngai has apparently been cut in several places.

Speculation that the attacks south of Da Nang might lead up to a major attack on that city is not taken very seriously. It is still thought that if the North Vietnamese attempt an October mini-offensive to embarrass Mr Nixon before the American election, it will be concentrated on the political plum of Hue, and on the area around Saigon.

Mr Kissinger's latest talks in Paris this week with the North Vietnamese politburo member, Mr Le Duc Tho, generated a new wave of rumours in Saigon. But there is no indication that Mr Thieu is willing to soften his position on a coalition. On the contrary, a new law forbids Saigon's newspapers to distinguish between the Vietcong and the North Vietnamese; this is evidently a sign that Mr Thieu is not prepared to do business with the Vietcong's provisional revolutionary government, only with Hanoi.

Rumania and the west

Exeat

Not long ago Rumania's application to join the International Monetary Fund and the World Bank would almost certainly have caused a row with Moscow. But these days Mr Brezhnev seems to take that sort of behaviour from Rumania almost in his stride; certainly he took Rumania's application for membership of the common market's preference scheme for

developing countries last February quietly enough.

That application still hangs fire, but the one lodged in Washington last week stands a good chance of being successful. Most western countries are sympathetic to Rumania's attempts to diversify its economic contacts and reduce its dependence on Russia, and the United States in particular has been well disposed to Rumania since President Nixon's visit to Bucharest in 1969. Before it is admitted, Rumania will have to pay a financial contribution, take some of the veils of secrecy off its economy and, most important of all, promise to make the lei convertible. But that promise, as Yugoslavia discovered, need not be fulfilled on the spot: Yugoslavia has been a member since 1954 but has not actually made its dinar convertible yet.

By getting into the World Bank and the IMF, Rumania will have access both to loans and to technical and management expertise from the west. The Rumanians, knowing this very well, thought of joining in 1968, when Czechoslovakia was about to make the same move. But the Russian invasion stopped the Czechs in their tracks and persuaded the Rumanians to wait.

President Ceausescu probably calculates that Russia could hardly raise any objections to the Rumanian application when Russia itself is doing big business with the Americans. The Rumanians may not be the only ones to have such thoughts: the Poles and the Hungarians are said to be interested in the IMF and the World Bank too. But Mr Brezhnev may not feel he can loosen their leading-strings as readily as he has with Rumania.

Britain's off-shore banks... Dogger, Leman, Chase Manhattan

The company looking for oil fields in the North Sea needs a bank with its feet on the ground. That's where Chase Manhattan's feet have been since 1935, when we got the idea that the petroleum industry—which was pretty big then—was going to get even bigger.

We saw it as an industry that in the future would be needing experienced bank financing. So we got experienced.

We started Chase Manhattan's Petroleum and Energy Division, and we staffed it with financiers, engineers, economists and technicians.

And that future we were looking forward to is here now. North Sea petroleum and natural gas.

And right here, on your doorstep, is the bank with 37 years of petroleum expertise in every aspect of the industry's requirements.

Let's put it this way. You find the off-shore oil fields...we'll find the on-shore funds. The Chase Manhattan Bank N.A., Woolgate House, Coleman St., EC2 and 1 Mount St., W1 01-600 6141.

**Chase Manhattan acts,
while other banks talk.**

Agnew: Nixon's favourite son

Shriver: Kennedy family man

Running mates run for 1976?

Washington, DC

Almost any candidate for the Presidency would prefer to campaign without a vice-presidential companion if he had the choice. A running-mate who is maladroit or merely unlucky can impede him; a skilful or fortunate one can rarely help him in any decisive way. In 1968, Mr Nixon had some polls taken and found himself doing better alone than with any possible companion. He chose one of the least-known of them all, Mr Spiro Agnew, as offering some reassurance to the party's touchy conservative wing and being able to help in a few border states. Both calculations proved correct.

The discrepancy in importance between the presidential and vice-presidential offices is so huge as to make it a source of wonder that the presidential candidate is also anxious not to be outshone; but so, as a rule, he is. Mr Nixon, now enjoying a position of total supremacy in Republican politics, can have no cause for worry on that score. All the same, at this

stage of the campaign, while the President is still doing little of the campaigning himself, the burden being placed on the Vice President is less than striking.

Some 35 or more "surrogates" for Mr Nixon are criss-crossing the country on an intricate pattern plotted from headquarters in Washington. They include most of the cabinet, those of the sub-cabinet who have special affinities with various groups, the more personable heads of federal agencies and a favoured selection of Senators and Congressmen, not to mention the President's wife, brother and daughters.

Somewhere among this multitude, Vice President Agnew is busy. His aircraft ranges widely: Tennessee, North Carolina, Virginia, Kentucky, Texas and Illinois in one week. But the pace is fairly stately, intervals for rest and reflection abound and any pressure to cram in a maximum of appearances is firmly resisted.

Mr Agnew travels with his own staff,

without those lively presidential speechwriters who were seconded to him for his pugnacious intervention in the congressional campaign of 1970. His speeches, too, have become staid, their tone dignified, their syntax regular, their vocabulary conventional. With gravity Mr Agnew explains fine points of the Administration's policy, dwells on Mr Nixon's achievements and puts down the errors of his opponents, while conceding that those opponents, though misguided, are doubtless sincere.

Well aware of what he is up to, the Vice President permits himself an occasional quip about the "new Spiro Agnew" and has teased an audience with a promise of Howard Cosell as his new speechwriter: Mr Cosell is the most aggressive living football reporter. No doubt Mr Agnew could and would pull out the oratorical stops again if it became necessary. As things stand now, however, with his renomination settled and his re-election (which, in any event, will not be much influenced by any exertions of his) as near certain as such a thing can be, a becoming gravity and a touch of tedium suit his interests very well.

When this year Mr Nixon repeated the gesture of choosing a vice-presidential candidate acceptable to his party's conservatives, what was at issue,

as all could see, was the leadership of the Republicans in four years' time when Mr Nixon will be retiring. The important conflict at the Republican National Convention last month concerned the future distribution of voting power within the party; this will determine the future leadership. In that conflict Mr Agnew has declared himself to be on the conservative side, or the side of the small states against the big states. He has also said frankly that if he had ruled out the idea of seeking the Presidency in 1976, he would not be seeking the Vice Presidency today. Put together, the two statements suggest that he thinks of approaching the next convention as the conservative Republican candidate.

If he does, the reasons will lie partly in historical accident, partly in a judgment of where a majority can be found within the Republican party as it is now constituted. Up to the spring of 1968 Mr Agnew was not known as a conservative at all. He had won the Governorship of Maryland with a good deal of liberal, black and Jewish support against the segregationist who had won the Democratic nomination. He also decidedly preferred Governor Nelson Rockefeller over Mr Nixon as Republican candidate for the Presidency. But Mr Rockefeller let him down and the efficient Nixon organisation lost no time in persuading Mr Agnew to change his allegiance. At almost the same moment, the Negro riots in Baltimore which followed the murder of Martin Luther King brought out the paternalistic, disciplinarian side of Mr Agnew and detached him from the liberals and the blacks.

Once the Nixon Administration was installed the task of defending it against pacifist dissent, racial turbulence and youthful discontent seemed to fall naturally upon Mr Agnew. That nobody seems to need him for a "cutting edge" (his own term) this time is a welcome relief, frankly acknowledged. Presumably he hopes to gain some degree of latitude to pick his colours for the future when, for the first time since he gave up the Governorship of Maryland, he can be his own man.

Party continuity also played an obvious part in the belated, hasty calculations which caused Senator McGovern to select Mr Sargent Shriver, a Kennedy brother-in-law, as vice-presidential candidate for the Democrats. So wide are the Democrats' divisions and so deep their fears that a return to the Kennedy connection, once so bitterly fought over, is a source of reassurance. Mr McGovern has been

doing so disastrously himself that Mr Shriver's prestige and importance have, in a relative sense, risen and Democrats look forlornly to him to produce the party unity that, in fact, nobody but the presidential candidate is in a position to create. So Mr Shriver jets doggedly across the country, addressing rallies with that special mixture of concentrated vigour and wide cultural outlook which is a Kennedy hallmark and, not less importantly, treating the local Democratic chieftains and other potential helpers to the straightforward geniality with which he has pulled them together in past years.

But in dealing with the state and local party officers Mr Shriver has the drawback of having never, in fact, been popularly elected to a more important office than that of member of the Chicago School Board. He has held national office under three Presidents, but by appointment, not election: head of the Peace Corps, head of the Office of Economic Opportunity, ambassador to France. A lawyer by training, he served the late Joseph P. Kennedy in the management of his properties and married Mr Kennedy's daughter Eunice, a sister of President John Kennedy. Mr Shriver's chain of appointments, started through his family relationship, was continued through his own ability. But being a Kennedy son-in-law is not, in some substantial respects, the same as being a Kennedy; when the candidates were declaring their fortunes this past week, Mr Shriver came out at the bottom of the list with only \$100,000, which is somewhat less than he earns in a year through his internationally-orientated law practice. The Kennedy money, although manifestly there in abundance, is in a trust for his family.

A reading of Mr Shriver's campaign speeches is intriguing. Here is the man who is to give, is indeed giving, the Democratic presidential campaign the popular, down-to-earth touch that Senator McGovern has not quite pulled off. Mr Shriver does certainly use direct language and simple quips. He also quotes from authors little known to the average Democratic, or indeed Republican, voter but whom not only the Shriver speechwriters but Mr Shriver himself actually read: Maritain, Camus, Teilhard de Chardin, Bernanos. Obviously the French, Catholic, theological, rebel flavour is not wholly accidental. Wordsworth and Tacitus come up too and the chief speechwriter turns out to be a theologian and philosopher, Professor Michael Novak.

What is to be made of this mixture

of the eclectic and the gung-ho? Mr Shriver cannot single-handedly rescue his dramatically fallen chief. He can contribute a touch of hope, companionship, human feeling, intellectual curiosity and style which are otherwise not abundant in the campaign on either side—but to whose benefit, eventually? When the fortunes turn and opportunity knocks again on the Democrats' door, will the luck of opening that door fall to Mr Shriver? Should the times call for a Kennedy it may not be he but his brother-in-law, the Senator from Massachusetts. All that can be said with certainty is that Mr Shriver, according to his custom, is doing his best.

ELECTION '72

Poll power

The public opinion polls agree that Senator George McGovern is running far behind Mr Nixon in the presidential contest. But this week they could not agree on whether the underdog was going backwards or forwards. The Yankelovich poll which was conducted for Time magazine and the New York Times between August 25th and September 12th showed that in a month Mr McGovern had lost another 11 points, to put him behind Mr Nixon by 23 to 62 per cent. A Harris poll, taken later, between September 19th and 21st, when the McGovern campaign had really got going, claimed that since the last Harris survey the Democrat had gained on the President

"Sorry to bother you again, Sir—this time the question is: 'No kidding, are you sure?'"

One of Switzerland's Major Banks Reports

The second quarter of 1972 once again saw extremely lively activity in all sectors of Credit Suisse operations. The volume of international transactions was high.

Yet, it is to be expected that the monetary defense measures instituted by the Swiss government will make themselves felt the most in the international field. Nevertheless, the long-established business tradition, the qualified staff and the well-developed facilities of Credit Suisse, founded in 1856, and whose network of foreign representative offices will be further expanded by a new branch office in Los Angeles, will continue to ensure the efficient and conscientious customer service despite these new conditions.

1,000 million francs mark; the other mutual funds managed by the bank, such as "Credit Suisse International", have followed an equally favorable pattern.

Higher credit demand

In the credit sector, general economic and seasonal factors contributed to a marked acceleration of loan applications. Reacting to mounting monetary unrest, international business showed a strong trend towards borrowing in non-Swiss currencies. Loans and advances rose by a total

Increase in foreign currency deposits

On the liability side, sight deposits from banks showed a 416 million franc rise to almost 9,000 million francs. Customers' checking accounts declined by 476 million francs to 6,600 million, partly reflecting the strong demand for securities. Primarily because of continued low interest rates for Swiss franc deposits, time deposits also decreased. On the other hand, savings books and private accounts showed a gratifying increase of 11% to almost 3,000 million francs. Also, there was another slight increase in total outstanding medium-term notes, despite a high level of maturities.

Continued increasing profitability

Due to the conversion of outstanding convertible bonds, our open reserves rose by 32 million francs, so that the bank's own funds are now booked at over 1,500 million francs.

Thanks to the high credit volume, but particularly on account of the lively underwriting, securities trading and foreign exchange business, net earnings for the first half of 1972 were higher than anticipated.

Ask for our Credit Suisse "bulletin"

An illustrated bank magazine, the "bulletin" is published quarterly in English. It reports regularly on the most important current economic and financial developments all over the world, comments on investment policies and lists stock market prices as well as the exchange rates for the main currencies. In short, it provides the facts and figures which you need in your international business activities.

To order your copy, please use the order form below or any other means.

Downtown Los Angeles. The new Credit Suisse branch office is situated on the famous Wilshire Boulevard.

Lively securities business

The services of the bank, which enjoys international renown as a commercial and issuing bank and major institution in the securities business, are in fact meeting with an ever-increasing demand. The volume of business of the securities department reached a record high. After one and a half years already, the assets of its mutual fund "Credit Suisse Bonds" exceeded the

of 352 million francs, exceeding the 10,000 million francs level for the first time in Credit Suisse history.

Our deposits with other banks remained almost unchanged compared to the end of March, at 15,700 million francs. Despite this substantial secondary liquidity reserve, cash on hand remained high at 2,200 million francs. The balance sheet total remained virtually stable at 32,100 million francs.

who now had a lead of only 59 to 31 per cent. A survey conducted by Mr McGovern's own experts closed the gap still further, putting its candidate 22 points behind; but in July this difference had been only 17 per cent. There were other areas of disagreement: the Harris and the Yankelovich surveys differed on whether Mr McGovern had gained or lost popularity among the young voters.

The Yankelovich poll certainly paints a bleak picture for Mr McGovern. Mr Nixon has gained support among almost all geographic and ethnic groups. Most surprising of all is that even Democrats favour the Republican candidate by 43 to 40 per cent with 17 per cent undecided. The President has also lessened Mr McGovern's large lead among black voters. Mr McGovern, who is preferred now only by Jews, blacks and college students, has made progress among Jews, with a good gain of 13 per cent, among German-Americans and among the professional and executive groups. But, in spite of Mr McGovern's long opposition to the war in Vietnam, Mr Nixon is considered to be the candidate who can best end that war and, while many voters think that he is capable of underhandedness to win the election, they still feel that he is more honest than Mr McGovern.

Part of the discrepancies between polls stems from the different techniques used by each organisation. The Yankelovich poll is conducted by telephone and therefore catches fewer of the poor and the young. The Harris poll is done by personal interview. Both the Harris and the Gallup polls take a national sample on which to base their findings while many other surveys concentrate on particular states. Some polls have no statistical basis and are merely hit and miss affairs. In order to weed out the good from the bad Congress is now holding hearings on a bill which would require pollsters to disclose their methods along with their results.

What then do the polls mean and how much influence do they have? Senator McGovern, like all candidates who are doing badly, would like the voters to think that the polls—at least unfavourable ones—are the figment of someone's imagination. Yet this did not stop him rushing out his own more optimistic findings in reply to the disastrous Yankelovich survey this week. But polls which show a candidate far in the lead may make his workers and supporters dangerously complacent. Sympathy builds up for the underdog and people start to ask whether such a landslide is

really possible? A candidate who is far behind at the outset often narrows the gap during the last weeks of the campaign. And then there is always the possibility that the polls may be completely wrong.

But however the voters react to the polls, it is generally agreed that those who contribute to political campaigns do take them seriously. Mr McGovern needs money badly but large donors do not want to waste their donations on a man who looks like a loser.

GM's smoke screen?

Prospects are growing dimmer of getting the hoped-for results from the huge sums that the American motor industry is spending on reducing air pollution from car exhausts. On Tuesday the president of the General Motors Corporation, Mr Edward Cole, gave a speech to the American Petroleum Institute, in which he had been expected to declare that GM could meet the standards for controlling emissions of carbon monoxide and hydrocarbons that have been set for 1975 by the government regulators and those for nitric oxide emissions that have been set for 1976. But in the event Mr Cole could not promise that the prototype systems which he was describing would prove reliable when sold to the public; so far they have only met the standards in experimental cars at low mileage. It is hard to believe that the complex and sensitive array of devices that he proposed will stand up to the battering that most drivers give to their cars.

The devices outlined by Mr Cole include a precise system for metering fuel which involves a carburettor that is calibrated and compensated for temperature and altitude, a high energy electronic ignition system and early fuel

Buick checked for pollution control

evaporation. Most things on a car require regular servicing but drivers tend to ignore most of them until their vehicles actually grind to a halt. The chances of these new emission devices being able to perform satisfactorily without regular maintenance are slender. A spokesman for one of GM's competitors doubts whether the metal catalysts that are used to reduce pollutants will last even for 10,000 miles. Some European car manufacturers who have been showing a breezy optimism about being able to meet the American regulations may not appreciate fully the problems of translating prototypes into production models to be driven by the average motorist.

In view of all this it is surprising that GM should have talked about being able to meet the standards at all. Maybe Mr Cole was trying to get the powerful oil industry to join the lobby that is pressing in Washington for postponement of the regulations. An investment of over \$2 billion would be required from the oil industry to reduce the levels of lead and other contaminants in petrol in order to prevent the catalysts being destroyed. Meanwhile large contracts for the platinum and palladium required for these catalysts are being placed in South Africa and Russia as the car companies try to cut out the middlemen who have been selling to them up to now. The metals are very costly and if they had more time the motor manufacturers might find cheaper catalysts. They might also develop more reliable systems.

Knapp's top cop

Governor Nelson Rockefeller has acted quickly and decisively on the recommendations of the Knapp commission on how to deal with corruption in New York City. Last week he followed the commission's advice and appointed Mr Maurice Nadjari as a special prosecutor to look into all charges of corruption among the city's police and in the offices of the five district attorneys and those of the judges. Mr Nadjari will have his own independent offices, a force of 200 investigators and lawyers and a budget of \$4m from state and federal funds. He has started work already and claims that in the first five days on his new job he received hundreds of tips and complaints about corruption.

Not unexpectedly the city authorities have greeted their new prosecutor with ill grace. Although the Mayor, Mr John Lindsay, appointed the Knapp

commission, he is jealous of his territory and does not like Governor Rockefeller interfering in the city's affairs. The head of the police, Mr Patrick Murphy, also has to tread carefully, since his force is under strength and morale is low. Nor have the five district attorneys, who bring legal prosecutions on behalf of the city, taken kindly to the idea that their authority in matters of corruption will now be superseded by that of Mr Nadjari. Mr Frank Hogan, who has held office for 32 years and is one of the most able of them, has taken the appointment as a vote of no confidence in his ability to deal with corruption. So far Mr Hogan has torpedoed efforts at co-operation and is considering going to court to stop Mr Nadjari's appointment. The whole effort to clean up New York City could be endangered if the appointment of a special prosecutor only serves to stifle the vigilance and the initiative of the five elected district attorneys.

ELECTION '72

On the go

FROM A CORRESPONDENT ON THE DAKOTA QUEEN II

The atmosphere aboard the McGovern campaign aircraft is akin to that of a naval vessel's wardroom during a heavy storm at sea. There is an enforced cheerfulness among the staff, an attempt to convince all and sundry (including themselves) that everything is going to be fine. But there is also an underlying unease and anxiety, a worry that the cargo will shift, that the seas are too great and even, sometimes, that the captain is not perhaps in full control of the situation.

In Senator McGovern's case, he may not be in control, but he is doing what he can, even though it often seems repetitive and futile. The *Dakota Queen II* (the first *Queen* was the wounded bomber that Mr McGovern safely crash-landed on an Adriatic island in 1945) criss-crosses the northern industrial states—from Illinois to Pennsylvania to New Jersey—and then back again, stop after stop, day after day. In each one of these vital states, the problems are about the same: Democratic party organisations in disarray, voters who are traditionally tied to the party but who are now alienated and frustrated, trade union leaders annoyed because they find it difficult to work in harness with the young McGovern amateurs.

McGovern keeps flying

At each stop, it is the mixture as before: meetings with local Democratic officeholders and party power-wielders, with union officials and fund raisers, then the public rally or dinner speech. The crowds, in the past fortnight, are warmer and more numerous and, best of all from Mr McGovern's standpoint, contain a better mix of voters.

But so far he has not found an issue, or rather he has too many issues. He talks about eavesdropping and Republican scandals, unemployment and inflation, waste in national defence. And too often his flat, plains states' accent makes him sound like a court clerk reading an indictment. There are exceptions. In Philadelphia he returned to the theme of the war in Indochina and his rhetoric was as strident and strong and bitter as it has ever been.

The United States, he said, now present to the world the spectacle of the richest and strongest nation standing at a safe distance and raining down—on primitive, helpless and defenceless people—the most incredible and murderous bombardment in the history of mankind... the strikes come with new weapons and new techniques. These weapons have a very special purpose. They cannot blow up a bridge, or destroy a structure or stop a truck or even penetrate a rubber tyre. They are designed solely to tear human flesh... I ask here tonight how our honour is saved by fewer American deaths and more Asian.

This anger and moral outrage have long been one of the South Dakota Senator's greatest political assets. For some time they have been submerged, but if the reaction of his mesmerised listeners in Philadelphia was any indication, they may now flare more frequently. If so, the disastrous gap in the public opinion polls may close more effectively than either Mr McGovern or his staff expect.

Water fit to drink

At the beginning of September President Nixon, making a bid for the conservationist vote, listed 20 environmental measures that he had proposed and that the Democratic Congress had failed to follow up. The list was headed by the water quality bill; 10 days later an agreed version was voted in triumph by the conferees from the Senate and the House of Representatives who had been arguing over the details for four months. Both houses are expected to approve the compromise before adjourning. Yet the President may veto the bill; if he does it will be because in his view it is more important to hold down the federal government's spending than to clean up America's rivers, lakes and oceans completely by 1985, the goal set in the bill. In August his Council on Environmental Quality had reported that, while the air was getting cleaner, water was getting dirtier, partly because of the pollution from sewage and industrial wastes that the bill deals with, but also because of the runoff of pesticides and fertilisers from farms and of earth from construction projects.

Admittedly the bill goes much farther than the President (or the industries which are responsible for much of the pollution) wanted. And it offers much more money—\$24 billion over nine years instead of \$6 billion over three. But the money still has to be appropriated and the Environ-

Consumer prices

To the delight of the Administration the consumer price index was only 2.9 per cent higher last month than it had been 12 months earlier when the President announced his new economic policy, designed to cut the rate of inflation to under 3 per cent. But food prices, the housewife's main concern, were 3.8 per cent higher than in August, 1971.

A WOMAN INSIDE NO. 10

The Marcia Williams story

Here is the record of what happens in the corridors of power - more than that, in the very inner sanctum of power. Told by Marcia Williams, Harold Wilson's personal and political secretary for the past sixteen years, and his confidante during the Labour Government.

Now she has written her own account of those historic and controversial years, revealing an inside picture of life at No. 10, never seen before; of what really happens at the pinnacle of politics.

She is telling her own intriguing story of her work at the side of Harold Wilson before, during and after his term as Prime Minister.

Few women have ever held a position so close to the centre of power and decision making in British politics. Marcia Williams' revealing, immensely readable story is being serialised exclusively in the *Sunday People*. This is the inside-politics story you must not miss. It starts next Sunday... only in the

Sunday People

Tokai is the capital of Japan.

When you get acquainted with Tokai Bank, you'll necessarily become acquainted with Japan's Tokaido Megalopolis. That's where Tokai Bank maintains the lion's share of its over 200 domestic offices. The Tokaido megalopolis in the heart of Japan, with Tokyo on the northern end and Osaka on the south, is an industrial/financial/shipping region unparalleled in any other country. It is as if New York, Pittsburgh, Chicago, Detroit, Birmingham and Southern California were all located within 400 miles of each other.

Not only did Tokai Bank get its name from the Tokaido region, it's also where we get our capital. We are most active in the most active part of Japan.

Which is a fine thing for you to remember the next time you have dealings in Japan. We know Tokaido like no other bank. Which means we know Japanese business like no other bank.

mental Protection Agency must be provided with staff and funds to administer the complicated measure. As a result of experience under an earlier act which has not been very effective, the new bill gives more power to EPA, and less to the states, than Mr. Nixon would have liked. If a state is not strict enough the federal agency can take over the responsibility for issuing the permits which will be needed by every industrial plant that discharges wastes into a waterway.

These plants are required to use the "best practicable" technology to control pollution by 1977 (which means all plants in an industry must do as well as the ones which pollute least) and the "best available" technology by 1983 (which applies not only to waste treatment facilities but also to production processes). Most of the money provided by the bill will go to cities and states to improve their sewage plants; 75 per cent of the costs of doing this will now be subsidised by

Washington, while in the past municipalities had to find as much as 70 per cent of the money themselves. This is a very substantial carrot to back up the stick of the court cases which the federal government is now bringing against cities such as New York and Memphis for dumping untreated waste in rivers and oceans. Legal action is also being taken to ban new construction around Lake Tahoe and on the New Jersey coast until sewage facilities are ready.

Building a new Manhattan

New York

The din caused by the construction of new office buildings and shops all over Manhattan led the city council recently to pass a tough anti-noise measure, in spite of the furious protests of the powerful property lobby. The Mayor, Mr John Lindsay, one of whose concerns is that big business should not abandon the city, is expected to sign the bill in spite of this, since there is considerable public pressure to reduce the many annoyances—dirt and obstructions to traffic as well as noise—created by builders.

Although it has become fashionable to depict New York City as a disaster area, it continues to lure business firms and property developers. For example, approval has been won for a grandiose plan to add 113 acres to the east-side tip of lower Manhattan for a \$1.2 billion complex of luxury flats, shops and offices. The new Manhattan Landing project, when combined with Battery Park City (another landfill project already under construction on the western tip of the island), will not only enlarge the boundaries of the constricted financial district but will also transform it into an around-the-clock community. Moreover, clusters of new office skyscrapers are either finished or nearing completion in the midtown area.

This concrete evidence of belief in the city's future is not quite so solid as it seems. New construction has been concentrated on the island of Manhattan, particularly in the downtown financial district and the midtown commercial area, not in the residential sections or in the outlying boroughs of the city. In addition, a great many of the buildings now reshaping New York's celebrated skyline are the product of the stock market and property boom of the mid-1960s.

In the three years from 1966 to 1968, about 11.5m square feet of rentable office space was completed, but in 1971 almost 15m square feet came on the market. This year will mark the peak, with approximately 23m square feet due for completion, including most of the World Trade Centre, about

to be opened officially. It will account for 10m square feet when it is finished next year.

Demand for new office space in New York City runs in the neighbourhood of 6m-10m square feet a year, which means that there is now a huge glut. Developers have either slowed construction or cut rents to rock bottom levels, but the effects of the recession, which came close to a depression in the securities industry, have not worn off yet. As a result, the city estimates that nearly 15 per cent of the rentable office space is vacant, compared with an average of 4 per cent in the past decade. But the recovery in business activity should stimulate increased demand during the next few years, while construction is slated to turn down sharply.

Since the Manhattan Landing project is still only on paper and is not scheduled for completion until 1985, it represents the beginning of the next building boom. Mr David Rockefeller, long a booster of downtown development and a supporter of the new project, has expressed the conviction that there will be a need for more office space once the current glut is absorbed. He may be right, but his own plan appears overly optimistic: for example, its blueprint includes a new stock exchange on the waterfront even though the exchange has not decided to move and does not have the funds to do so. The failure of the Lower Manhattan Plan, which was to go up on the same site but never got off the ground, suggests that the new project will face many obstacles.

Already there has been criticism from civic and ethnic groups which are concerned about the absence of housing for low- and middle-income families in the proposed plan. Critics claim that the project, with flats renting at £120 a month for each room, will make the Wall Street area an enclave for the rich. Because the project involves high-cost landfill, new legislation will be required to raise the money and it is probable that, as in the case of Battery

Park City, some provision for low-cost housing will have to be added to the plan if it is to go ahead.

In spite of the current glut of offices and the uncertain future of Manhattan Landing, the death of the city has been greatly exaggerated. The fact is that the publicised exodus of business from New York is now not much greater than the influx. This is partly because of the rise in office costs and the shortage of clerical staff in the suburbs. But it is also because New York is unparalleled as a service centre—for financial transactions, auditing and legal assistance, advertising and communications. New York is also unrivalled for shopping and entertainment. It may be a dirty, dangerous and expensive city, but its amenities and attractions are so many and so diverse that it seems certain to defy the prophets of its collapse.

Still, it is questionable whether Manhattan can enjoy a real renaissance if the rest of the city and its own upper reaches continue to decay. The lack of low-income housing and the deterioration of municipal services, especially in education, jeopardise the effective labour force on which a service centre must rely. Unfortunately, existing programmes to subsidise low-cost housing cannot meet the demand. If a new building boom is to develop, it will have to furnish living as well as working space.

Top-heavy island?

This is our world

We receive news from space. And store it on BASF magnetic disc packs. Our storing systems make data processing more rapid, information is recorded even more reliably on our computer tapes. And it is easier than it ever was before to learn what we need for the future — by means of BASF audiovisual teaching devices.

We make it more

Seeing, hearing, knowing — information determines our life. It must be quick, correct, clear. BASF colouring substances for graphic arts and printing, special papers and revolutionary new printing processes — these are our contributions for better human understanding.

comprehensible for you

Discs, cassette recorders, tapes — popular instruments of communication — further successful BASF products. They establish contact between people of all continents. Partnership in all parts of the world — by research, production, application — that's what we work for. Today and tomorrow, we, the one hundred thousand employees of the BASF group.

Mr. W. D. Dwyer, managing director of Burroughs machines Ltd. says:
 "As a Company engaged in 'Frontier Technology' an important reason for choosing Glenrothes as a site for manufacturing advanced disk file systems for the Burroughs '500' and '700' Systems families of EDP computers was its proximity to fine schools and universities.
 "Labour force availability in Glenrothes, and its adaptability to being trained on new and very advanced skills, has also been reflected in the speed with which we have been able to set up production at the factory."

GLENROTHES: an ideal place

Mr. Murray Mott, managing director of Cessna Industrial Products Ltd. states:
"In 1961 the Cessna Aircraft Co. decided to base its U.K. hydraulic manufacturing subsidiary in Glenrothes. At the time, this was done for the same basic reasons most companies decide to expand into any development area—Government financial assistance, good availability of trainable labour, and advance factories at very reasonable rates.
"Since then, however, Cessna have had every assistance from the Glenrothes Development Corporation in expanding their facilities and product line. In fact it has been decided, as sales increase in both the U.K. and also the European areas, all expansion of plant and facilities to cope with the increased demand, will take place in the Glenrothes area."

Books

The pursuit of righteousness

CHRONICLES OF WASTED TIME.
VOLUME I: THE GREEN STICKBy Malcolm Muggeridge.
Collins. 284 pages. £3.

The green stick is not, like the green tree, an augury for what Mr Muggeridge would do in the dry. He "cannot recall a time when the notion of Christ and Christianity was not enormously appealing to me." But he has managed to recapture the agnosticism of his youth. He was baptised and confirmed in adolescence and in a hurry, in order to go up to what is now Selwyn College at Cambridge, where the only good thing he got out of four years' study was perhaps "a certain familiarity with the incomparable Book of Common Prayer." The first volume of his autobiography is not a journey down Damascus Road; his formal introduction to Christianity was memorable for the bishop's irritation when the young Muggeridge got out of ceremonial step.

The preoccupation of his youth was socialism, as embraced by his father (whose hero was GBS), who eventually entered Parliament, and then as promulgated by his wife's Aunt Beatrice and Uncle Sydney. The Webbs he describes with relish and acidity, not as undiluted as in his digression on C. P. Scott and Churchill in old age, but with a sharp eye for socialism's curious snobbery, a snobbery not so much inverted as diverted towards money and success. Mrs Webb, Mr Muggeridge recalls, wrote to his mother-in-law that his father was "a Fabian and a very worthy person, though of modest means." "Truly," adds Mr Muggeridge, "there is no snobbishness like that of professing equalitarians." His father had his own brand; he wanted his son to go to Cambridge "and speak down his nose as dons and Fabians do."

But ideals both he and his father plainly had in plenty. The young Malcolm was not, he recalls, sent to a grammar or public school (with a jibe at Lord Snow); and in those days (with a jibe at Holland Park) there

Muggeridge: questing

were no democratic-sounding schools "specially earmarked for the progressive elite." Mr Muggeridge is profoundly grateful for this, believing that from grammar school he might have emerged "fully brainwashed to take his place with the new socialist elite, the Hendersons and Greenwoods and Noel-Bakers." Again and again he returns to worry at this bone: at Cambridge and in the army he found "a highly developed system of sycophancy".

Even in the Labour party the unlikely emergence of such figures as Hugh Gaitskell, R. H. S. Crossman and Wedgwood Benn may well have been fostered by their sycophantic skills. Bertrand Russell's elder brother, when he was a member of a Labour government, told me that he had never before been so conscious of the advantages of being an earl.

Later, he acquires a greater cynicism, like several skins—a distaste for editorials (from his experience on the Manchester Guardian) and for statesmen's jargon; a bitterness against Ramsay MacDonald for forming a National government; the major disillusion with Soviet Russia, whither he went as the Guardian's Moscow correspondent. The end of this book, just before the second world war, is sunk in a typical Muggeridge slough of despond, where he has no expectation that "any earthly battle could be won, or earthly solution found." But the monumental death wish that he felt abroad in the world, the Tolstoian

forces of history, are represented far less effectively than the incidents and reminiscences reconstructed from memory and press cuttings, "the rags and tatters of a professionally exhibitionist ego." These are what make this autobiography so wonderfully well worth reading. Only the title is left to Tolstoy, who

... used to believe that there was a green stick, buried on the edge of a ravine ... on which words were carved that would destroy all the evil in the hearts of men and bring them everything good.

Measure for measure

WHAT MATTERS NOW

By Roy Jenkins.
Fontana. 128 pages. 30p.

This is an interesting and appealingly-written collection of speeches and essays; Mr Jenkins is one of the few remaining British politicians (Mr Powell is another) who are actually literate. Although its publication on the eve of the Labour party conference at Blackpool means that it will be chiefly read to see what Mr Jenkins feels about the leadership and the left wing, it is of much better stuff than that. It goes unerringly to the Labour party's fundamental problem:

The Labour movement was created to fight against a wealthy minority on behalf of a poor majority. Now ... it has to enlist the majority in a struggle on behalf of a poor minority.

So his party is not a class party, and the class-war attitudes struck in it are useless to him. He is not an anti-nationalisation man: far from it, for state shareholdings and state holding boards figure uncomfortably frequently in his plans. He is still very much a socialist in thought, not to be confused with a compassionate sort of Mr Heath. (He allows no word of respect for Mr Heath to enter his pages, not even on Europe.) But he is ready to experiment intelligently in the relief of poverty, being rather more unbiased than biased on the idea of a negative income tax. It is reassuring that, in months when the environmentalists were having a free run through the trendy middle class, including middle-class Labour leaders, Mr Jenkins's speeches remained firmly committed to growth.

He sets his party a nobly radical target for its next time in government: "the elimination of poverty as a social problem." Whether his ideas for the regions would actually qualify as growth measures, rather than welfare ones, is debatable. He is good enough to say that "even within the poorer

There's more to Sasebo than ships.

Ships are not Sasebo's only speciality. The company is active in many other fields of engineering and is a leading supplier of machinery to the metal processing industry.

A typical product is this hydraulic position controlled constant gap mill built under the license of the Loewy Robertson Company of England which have recently been supplied to Ranshofen-Berndorf Aktiengesellschaft of Austria and is an example of Sasebo's involvement in the international division of business.

regions a policy of indiscriminate, blanket growth is neither practicable nor desirable." He recalls that in his grandfather's day the south Wales coalfield looked like "an El Dorado" to the poverty-stricken workers of Somerset—which might be taken as an admission that labour mobility has its advantages. But one suspects that, as the proposals stand, Whitehall would have a bigger say in these matters than Mr Jenkins owns up to.

He is certainly open about how much idealism must operate in his system. He is not fond of laws about unions, and not fond of compulsory incomes and prices measures. The strong must consent to hold back for the weak's sake; and this consent can only be got by following broad policies of social justice, including social justice to the poor countries overseas:

The pessimistic view ignores the traditions of concern for those less well-off which can be mobilised in the British trade union movement.

Is it just Tory policies which make that look so fragile a basis for action today? Mr Jenkins would not be in politics if he did not believe that a Jenkins-type Labour movement would have such motives; but in government he might have to depend more on measures.

Kuwait

Prospect and Reality

Zahra Freeth & H. V. F. Winstone

Surprisingly this is the first comprehensive, modern history of this small, immensely rich and increasingly important nation. The whole of its development, from the semi-legendary civilisation of Dilmun to the hard, acrimonious bargainings for oil concessions (whole details are given here for the first time) and to its modern emergence into the full light of the twentieth century are given in this thorough and very enjoyable work.

November rising

THE REVOLUTION OF 1688 IN ENGLAND

By J. R. Jones.

Weidenfeld and Nicolson. 345 pages. £4.35.

MONARCHY AND REVOLUTION

By J. R. Western.

Blandford Press. 432 pages. £3.50 cloth, £1.50 paperbound.

Two new books describe, from converging angles, the incident our grandfathers knew as the Glorious Revolution; Professor Jones's in a series on "revolutions in the modern world," Professor Western's in one simply on "problems of history." The longer and less expensive book is the wider in scope and richer in content of the two; unhappily, it is the last we shall have from John Western, who has just died, in his early 40s.

Western wrote partly from original sources, partly from other people's books. All that he wrote was coloured by his own originality and precision. He began by sketching the powers of the crown (as the indecisive struggles of the civil war and commonwealth, and the indolence of Charles II, had left them) and by going back, as the politicians of the seventeenth century always did, to first principles of political theory. He thought there was not a great deal to choose between James II and William III, so far as capacity for despotism went. James believed it was his right and duty to be a Catholic king, William knew he could do a Protestant king's work well. The change of regime was prompted by no demagogic motive; indeed:

As the only political ideas which the people were allowed by their betters to have were anti-papery and xenophobia, it was no doubt as well that the revolution was no more democratic than it was.

The sovereign did not, according to Western, lose his independence at the revolution; it dwindled, during William's reign, "because his lengthy involvement in war was altering the character of government and the balance of political factors in the state." He took the throne because he was locked already in a lifelong struggle against the France of Louis XIV, in which he needed English help. Paying for that help tied the executive down within parliamentary bonds, from which it has only in recent memory started to break away. "Modern British liberties," Western concludes, "originated in a lucky accident. . . . Their capacity to survive under harsher conditions has yet to be

James II: unanswered prayers

determined."

On his way, he touched in illuminating detail on one of the problems Professor Jones picks out as needing further research: army organisation, on which Western as an expert on the English militia wrote with assurance. Professor Jones believes neither Macaulay's nor Marx's account of the revolution to be adequate, and controverts the view that the defeat of Charles I decided anything in the constitutional field. In a lively reinterpretation of James II's reign, he throws out several interesting suggestions on what work remains to be done. He touches less on theoretical, and hardly more on religious, subjects than did Western; but goes into more detail about political management and machinery, and makes skilful use of unpublished material. Both books show how much we still have to find out about the cardinal factor: in Western's phrase, "the way in which the system actually worked."

Worms' eye view

OSS: THE SECRET HISTORY OF AMERICA'S FIRST CENTRAL INTELLIGENCE AGENCY

By R. Harris Smith.

University of California Press. 472 pages. £3.95.

It was presumably the publishers who called this book a secret history. The author, having made it clear in his preface that the CIA had refused to make the classified archives of the Office of Strategic Services available to him, claims more modestly, and more accurately, that it is a "political history" and a "very unofficial ana-

tomy" of that organisation.

But Mr Harris Smith had plenty of published material to work with, as well as some that had not been published, gained from letters and interviews. The mixed bag of personalities recruited by General Donovan, himself a personality on a grand scale, when he was given the task of organising the first American secret service, were an intelligent and articulate lot. Nearly every operational group found its chronicler and Mr Harris Smith has read them all. There is, however, a shortage of stories from headquarters. The result is fascinating, but has had to be based on a collection of worm's eye views. Unfortunately, even 50 worms do not make a bird.

Mr Smith is an earnest, perhaps even a solemn, young man who has recently been working on Senator McGovern's campaign staff in California. It worries him when things and people do not turn out as his simple instincts tell him they should (when, for example, successful Republican lawyers are found to be imaginative and liberal in their ideas). So his last chapter, in which he tries to describe and explain how the CIA has developed from the ashes of the OSS, is the least satisfactory. He shows little comprehension of the forces which have driven the United States to its present policies but tries to find an explanation in personalities. Men, he complains plaintively, "who had been in the OSS during the second world war and had worked with the resistance . . . were responsible for planning the ill-fated invasion of Cuba." Mr Edmond Taylor, from whose "Awakening from History" Mr Smith quotes liberally, wrote in that book that it had not occurred to him at the time that the OSS wartime operations in Thailand:

were already starting to forge postwar sentimental, political and ultimately strategic links with south-east Asia that from the United States point of view would eventually turn into bonds of something strangely akin to imperial responsibilities.

Mr Smith does not quote this passage.

Most of the book is devoted to the operations of the OSS in the field. These provide some first-rate adventure stories. The most satisfactory chapters are those in which hindsight has proved his heroes, the "liberals" in OSS, right—or has at least proved the establishment policies wrong: those on the Darlan affair, on the stubborn official support for Chiang Kai-shek against those who wanted to gain the confidence of Mao Tse-tung

and, best of all, the account, so tragic in the light of all that has happened, of the spurning of Ho Chi Minh at a time when he seemed to be prepared to trust the United States.

Mr Smith seems to have little understanding of Europe, but he has an old-fashioned American liberal's distrust for Britain and its policies, which makes him dwell at length on the quarrels between OSS and SOE and use "anglophilia" as a term of reproach when applied to Americans. And his three references to the Minister Resident at the Allied headquarters in north-west Africa are to "wealthy publisher Harold Macmillan," "diplomat Harold Macmillan" and "Harold Macmillan of the Foreign Office." The winds of change seem to have passed him by.

There was a little girl

THE CASE OF MARY BELL

By Gitta Sereny.

Eyre Methuen. 229 pages. £2.75.

In December, 1968, Mary Bell was convicted at Newcastle assizes of killing two small boys by strangling. The ver-

dict was not murder, but manslaughter because of diminished responsibility and her responsibility for it was diminished, not because she was barely 11 (she committed the crime the eve of her birthday) but because she was diagnosed as suffering from a psychopathic personality. Responsibility is a concept that has been defined in the criminal law by way of the Criminal Justice Act of 1957, and was legally defined in the Health Act two years later.

Most of this book, by someone with much experience of disturbed children, tells the story of the crime and the trial of the two girls. (The 11-year-old Norma Bell—no relation to the neighbour and close friend—was acquitted of both murders.) Some of the examination of the children is a little tedious; but on the other hand the real life crime story achieves wide publicity, the account is absorbing. The account of the case is interspersed with the observations of the author, who tells the whole of it and was in the way all concerned—judges, counsel—tried to make it

FINANCIAL STRUCTURE AND GOVERNMENT REGULATION IN THE UNITED KINGDOM 1952-1980

This is a research paper which was commissioned by IBRO from Professor J. R. S. Revell of the University of North Wales, Bangor.

It is the first of a series of Occasional Papers to be published by IBRO. The purpose of the series is to stimulate informed discussion of the changing aspect of the domestic and international financial environment.

Copies are now available at 75p each (p & p incl.). To order please complete the form below.

procedure fit the age of the defendants.

But she remained uneasy. The British accusatorial system of justice was not, she felt, adequate in this case. Had it been inquisitorial, the question that everyone was asking—why did a little girl strangle two much younger boys?—might have been answered, and the problem of the disposal of Mary Bell, once convicted, might have been more successfully solved. So Miss Sereny set herself to find out the background against which the child's crimes were committed, and a long chapter gives her findings. Much of it appeared in the *Daily Telegraph Magazine* a year after the trial; it is compulsive reading. But ought it to have been given permanent form in a book? The author herself admits to having some qualms but justifies publication on the ground that knowledge of Mary Bell's disturbed childhood may help to prevent similar crimes.

She is not entirely convincing. Even at the end of her sympathetic account, although we are not surprised that Mary Bell should be abnormal, we still do not know why her abnormality should have taken the form it did. Many children have similarly bad backgrounds but do not take to strangling.

GROWTH AND WELFARE

A New Policy for Britain

John Mills

Provides a theoretical framework for answering two key questions: 'How should conflicts between competing economic objectives be resolved?' and 'How can more rapid rates of growth be achieved?' The model is applied to the British economy but could be used for any developed country.

'The book is immensely readable by the layman interested in economic policy, while at the same time carrying some impressive commendations from leading academic authorities.' *The Times* 'The main structure of growth economics has not yet been built. Mr Mills' book should be a notable landmark in the development of this branch.' Sir Roy Harrod £3.45

Coming on November 9th is *Growth and Stability in a Mature Economy* by John Cornwall price £4.95

Economic scientist

PAPERS AND CORRESPONDENCE OF WILLIAM STANLEY JEVONS: VOLUME I, BIOGRAPHY AND PERSONAL JOURNAL

Edited by R. D. Collison Black and Rosamund Könekamp. Macmillan. 243 pages. £7.

William Stanley Jevons, the economist, was one of the most fertile and lively minds working in his field in the second half of the nineteenth century. Not only was he the main investigator in this country of the so-called marginal revolution, he was also a pioneer in the construction of index numbers and the investigation of trade cycles, a vivid writer on the coal question, on the state in relation to labour and other social problems, the inventor of a logical machine and the author of a not negligible work on "The Principles of Science." If the word genius has definable meaning it certainly is applicable to him.

For long it was thought that the labours of his widow and his son, together with Foxwell and Higgs, had given to the world all that remained of his uncollected writings. But some years ago the deposit in the National Library of Ireland of the papers of J. E. Cairnes put Professor Collison Black on the track of further letters and eventually of a large cache of unpublished matter not used in Harriet Jevons's "Life and Letters" of her husband. This was a discovery which, combined with other not now easily accessible material, will eventually present us with four volumes of systematically arranged papers and correspondence—another gift to the history of thought by the Royal Economic Society.

The present volume, the first of the series, is entitled "Biography and Personal Journal." It is the product of the joint labours of Professor Black and Mrs Könekamp, Jevons's granddaughter. The title "biography" is perhaps slightly misleading, as a description of Mrs Könekamp's valuable contribution. For, save for five summary pages at the end, it stops with Jevons's marriage and is better described, as indeed it is in the body of the book as distinct from the cover, as a biographical introduction to the journal. As such it is a fine piece of scholarship which not only provides all sorts of new details about Jevons's early life but also throws light, hitherto withheld by the family, on that sense of anxiety and apprehension which has invested the tone of certain

Jevons: anxious genius

letters already published with a certain perplexity. Great wits are sure to madness near allied: one of Jevons's brothers, the one he most dearly loved, was a victim of mental illness.

Some of the more striking passages from the journal which constitutes the rest of this volume were used by Harriet Jevons in the "Life and Letters." But it is good to have the document as a whole as illustration of the development of eventual genius: early days at University College—the main asylum south of the border in those days open to those who did not subscribe to the Thirty Nine Articles; life in Australia whither, because of family financial troubles, he had gone to take up a temporary post as assayer to the local mint; the return to University College to give academic finish to the many scientific interests developed in this interval; and finally his early struggles as a university lecturer and professor. It is valuable as source material for certain aspects of Australian economic and social history, but most of all perhaps as an object lesson for those who think that the spiritual life of a scientist differs much, in its emotional aspect at least, from that of the creative artist. Professor Black and Mrs Könekamp are to be warmly congratulated.

Profits from apartheid

THE SOUTH AFRICAN CONNECTION
By Ruth First, Jonathan Steele and Christabel Gurney.
Maurice Temple Smith. 352 pages. £3.50.

Everyone, runs a familiar argument, is agreed that apartheid is obnoxious, but why support guerrillas, interrupt

cricket matches and sit down in the South African embassy when the imperatives of economic development will make it all come right in the end? Businessmen, particularly embarrassed chairmen of companies with profitable investments in South Africa, are becoming increasingly anxious to persuade the world that the dawn of enlightenment will be ushered in, not by African liberation movements, but by international capital ones. That view is strongly contested in "The South African Connection."

As South Africa as a whole has grown richer, as trade has flourished and foreign investment increased, it argues that black South Africans have become worse off, and not only worse off politically—the steady erosion of human rights and the rule of law has been well-publicised—but, so it says, in real financial terms as well.

What about the white labour shortage and the consequent breakdown of job reservation that is now beginning to take place? As the authors point out, this situation is met not by the colour bar being abolished, but by it being raised. Since you can pay a black less than a white, even though he may be doing skilled work, both employers and white workers are kept happy.

Far from working towards the destruction of apartheid, commerce and business depend upon it for high profit levels. Yet the issue is not quite as simple as the authors make out. They do not tackle the general question of the ethics of overseas investment. Is it, for example, morally all right to invest in Russia, Brazil or even Uganda? They do not tell us. It is hard to see quite where their researches lead. They despair of the few piecemeal reforms that one or two foreign companies have so far introduced, and their pessimistic conclusion seems to be that there is no hope of foreign companies ever effecting change. Those who rely on an economic resolution of the South African problem should certainly read this book. But the influence of foreign companies may in fact provide the only chance of averting hideous bloodshed there.

McFadzean round?

TOWARDS AN OPEN WORLD ECONOMY

By Frank McFadzean and others. Macmillan. 198 pages. £3.95.

Another round of negotiations under the General Agreement on Tariffs and Trade is due to begin in Geneva next year. It will be a great benefit to the

world if it can be spurred towards success, like the Kennedy round, by some dramatic initiative; and it is pretty clear what the initiative should be. The objective should be the elimination of substantially all tariffs on industrial products traded among developed countries, over an agreed transition period of five to 10 years.

The requirements now are (a) to get this idea bruited around, and (b) to suggest safeguards for the timid in the shape of escape clauses, agricultural exceptions, diplomatic noises in respect of high unemployment regions etc. Both tasks are attempted in this report from an advisory committee of the Trade Policy Research Centre of London, headed by Mr Frank McFadzean, chairman of Shell Transport and Trading, and aided by six prominent British economists (Sir Alec Cairncross, Professors Harry Johnson and James Meade, Mr Sidney Golt, Dr W. M. Corden and Mr T. M. Rybczynski). Their suggestions for escape routes include all the conventional ones, plus a sensible insistence on flexibility in exchange rates and one very bright new recommendation. This is that the benefits of all tariff-cutting agreements should be extended non-reciprocally to all developing countries on an unconditional most-favoured-nation basis, but that the multilateral negotiations between developed countries should be conducted only on a conditional most-favoured-nation basis whereby only the parties to an agreement would be allowed to benefit from it. Basically, the report recognises that the trade discrimination against the rest of the world that has resulted from the use of the customs-union exceptions to Article 1 of Gatt, in order to sanction Efta and the common market, can best be counteracted if the rest of the world, and specifically the United States, makes use of the same technique of bargaining. This would allow all the developed countries to establish bilateral freer trading blocks with anybody else (provided they let in all who follow the same rules, plus all the poor).

This is an idea that really could get the next round of all sorts of trade liberalisation moving, and it deserves strong support. Unfortunately, it does not get as strong support from the form of this book as one expects when one reads the introduction. Only the first 40 pages are the report of the advisory committee. The rest of the book contains eight background papers of rather uneven quality.

The Rio Tinto - Zinc Corporation Limited

Half-yearly report

The Directors announce the unaudited results of the RTZ Group for the six months ended 30 June 1972, with comparative figures for 1971.

GROUP SALES REVENUE

Sales for the first six months of 1972 were £261.8 million, an increase of £35.7 million compared with the same period of 1971. The increase was largely due to the inclusion of sales amounting to £14.2 million for Bougainville Copper and £9.8 million for Anglesey Aluminium, neither of which was operating in the comparable period last year. An increase of £13.3 million in sales by the RTZ Pillar Group included £6.6 million from new acquisitions. Rio Algom and Borax both increased their sales. These improvements were partly offset by reduced sales from Hamersley as a result of the Japanese seamen's strike. United Kingdom sales of lead and zinc were lower following closure of the smelting plant at Swansea and the Vertical Retorts at Avonmouth. The additional tonnage of copper sold at Palabora was coupled with a decrease in metal price so that revenue overall was virtually unchanged.

GROUP PROFIT BEFORE TAX

After deducting interest payable, the increase in which was due to the inclusion for the first time of Bougainville Copper and Anglesey Aluminium, profit amounted to £37.9 million to show an improvement of £1.4 million over the first half of 1971. Bougainville Copper made its initial profit contribution and increased profit was earned by Rio Algom, Borax and RTZ Pillar. The Group's lead and zinc operations achieved higher profit. Hamersley's profit decreased and the lower level of copper prices reduced Palabora's profit. Anglesey Aluminium experienced a loss. Its facilities were damaged and its operations were seriously interrupted as a result of the coal strike early in the year. A further loss was incurred on marketing the Group's share of metal output.

NET PROFIT

After deduction of tax and the interests of outside shareholders, net profit attributable to RTZ shareholders was £11.5 million, an increase of £0.9 million over the first six months of 1971.

AVONMOUTH

Following the publication of the Windeyer Committee Report, discussions have been reopened to finalise arrangements for transfer of the Avonmouth smelter to Australian Mining & Smelting. An announcement will be made shortly.

OUTLOOK

The Chairman indicated at the Annual General Meeting in May that 1972 should see a return to the record level of profit achieved in 1970, subject to no unforeseen circumstances and based on the then level of commodity prices. In the event, copper and aluminium prices have been lower than expected and more recently realisations from copper sales have been further affected by changes in certain

(All figures in £'millions)	Six months ended 30 June 1972	Six months ended 30 June 1971	Year ended 31 Dec. 1971

NOTES:-

(1) The comparative figures for the half year ended 30 June 1971 have been adjusted to take account of the merger of NBHC and CRA lead/zinc interests which was not finalised until after publication of the 1971 interim report.
(2) The results of overseas operations have been converted from foreign currencies into Sterling at the quoted rates of exchange at 30 June 1972.

sterling parities. Recommissioning work at Anglesey is still to be completed. Furthermore, as is not unusual with an operation of the magnitude of Bougainville, some minor problems are being encountered which are affecting output at this early stage of the project.

Taking these factors into account, the results for the full year are now expected to be less favourable than earlier forecast.

DIVIDENDS

The Directors have declared a dividend of 2.375p per share on the 4½% 'A' cumulative preference shares of the Company and a dividend of 2.5p per share on the 'B' cumulative preference shares of the Company, both in respect of the half-year to 31st December 1972.

The dividends on the preference shares will be paid on 1st January 1973 to holders on the London and Melbourne registers as at 22nd November 1972 and to holders of share warrants to bearer representing 5% 'B' cumulative preference shares on or after presentation of Coupon No. 21.

The Directors have declared an interim dividend of 2p per 25p share (1971—2p per share) in respect of the year ending 31st December 1972 on the ordinary share capital of the Company. The interim dividend on the ordinary shares will be paid on 8th January 1973 to holders on the London and Melbourne registers as at 22nd November 1972 and to holders of share warrants on or after presentation of Coupon No. 23. The Directors have been advised that the transitional provisions of the Finance Act 1972 would restrict the tax relief available to the Company in respect of dividends in 1973. Payment of the interim dividend in January 1973 one month later than usual, will remove this restriction.

Dividends on both preference and ordinary shares will be paid in United Kingdom currency less income tax at 38.75% or, in the case of shareholders resident outside the United Kingdom, at such lesser rate as may be approved by the Inland Revenue.

NAME.....
ADDRESS.....
CITY.....

LNGC Polar Alaska and LNGC Arctic Tokyo. The way it really is.

We'd like to tell you just how well things have been going for these two LNG carriers.

For the last two years they've been shuttling back and forth across the Pacific Ocean like a couple of tram-cars.

Three million cubic meters of methane per year have been transported from Alaska to Tokyo, where the Tokyo Gas and Electric Company turns the gas into light, heat and power.

Phillips Petroleum and Marathon Oil formed the consortium that set up the Alaska-Japan fuelling system, and when they asked us to build the twin

LNG tankers they didn't expect to deliver more than 2.2 million cubic meters of natural gas in a year. They got a lot more than they bargained for, and Tokyo has been thankful for every extra cubic centimeter piped into the tanks.

Most of the credit for the bonus delivery is due to our hard-working, well-behaved ships.

Fully loaded, they each carry 71,500 cubic meters. Their service speeds exceed specifications. Their turn-around time is shorter than anyone had hoped for.

Their performance has been virtually trouble-free.

You notice we said "virtually". Except for a couple of minor problems which were soon put right, life on the Alaska-Tokyo run has been strictly routine.

Here's the schedule:

- Day 1—Tie up at the Kenai dock near Cook's inlet on the southwest coast of Alaska. Loading time 16 hours.
- Day 2—Departure, destination Tokyo, 3,250 nautical miles away. Average speed 17.2 knots. Average running time 9.65 days.
- Day 9—Tie up at Negishi dock near Tokyo. Turn around time 24 hours.
- Day 10—Departure, destination Alaska . . .

And so on, week in, week out, month after month.

Sounds boring, doesn't it?—Well, uneventfulness is one of the things you expect from a 50 million dollar ship.

In January this year Polar Alaska completed the system's 38th round trip. And then she began the 39th.

No wonder that back at Kockums we allowed ourselves a few mutual pats on the back.

Those are our ships out there.

If you would like more information about the non-adventures of Polar Alaska and Arctic Tokyo please write to the Communications Department, Kockums, Malmö, Sweden. We're keeping a close watch on them.

We make our own future—and yours.

 You require factoring or invoice discounting

The turning points.

Only the Midland has a Finance Management Team to see you through.

There are occasions in the life of every business, *large or small*, when financial arrangements must move in a new direction.

This is when the best financial advice, assistance and management are essential. And it is for these occasions that the Midland Bank, alone amongst the major clearing banks, operates its Finance Management Service.

Details of the facilities of the Midland Bank Group can be discussed with a member of the Team, all of whom are highly trained, experienced men who have already held management appointments in the Midland Bank. Each is available to companies to provide a complete finance management service, and can

be contacted through the appropriate Regional Director, your Midland Manager, or through the Team's leader, Michael Clipsham—who is based in the Bank's Head Office, Poultry, London.

As a clearing bank service, it is unique. To many businesses it has already proved itself. It will be of great significance to many more in the future.

BUSINESS

Buy those candles now

The electricians seem likely to be the first of the unions to test their strength against Mr Heath's new incomes policy

Before Mr Heath made two quid the limit the leaders of the electricity workers had been preparing to call a strike within the next three weeks, in the hope of getting their 37 per cent wage claim settled before the Government brought in a wage freeze. By Wednesday evening Mr Frank Chapple, one of the Trades Union Congress's resolute moderates, was reduced to pointing out on Thames television that a voluntary incomes policy assumed that there would be some volunteers, and he did not see his members providing them.

Where does Mr Chapple go from here? At least half a dozen other unions are watching to see how he gets on, among them Mr Joe Gormley's miners, who have a 30 per cent wage claim in; Mr Alan Fisher's dustmen (43 per cent); Mr Reg Bottini's farmworkers (60 per cent); Ford's workers (50 per cent) and the teachers, policemen, printers, postmen and others with claims submitted or in preparation. Most of them have called the Government's plan inadequate, unfair, unacceptable and not their cup of tea, even though the farmworkers stand to gain a good deal from it. The Government has, in its turn, instructed all employers in the public sector not to settle for anything more than £2 a week between now and the next meeting with the TUC on October 16th, which rules out any chance of Mr Chapple rushing through a generous settlement with the Electricity Council. A flat £2 a week would give his members 6 per cent.

There is still a strong probability that the power workers will go as far as a strike, but they must now allow for the equally strong probability that, if they do, the Government will order a cooling-off period. That did not scare the railway unions when it was tried out on them for the first time, but a 60-day cooling-off period would

do precisely what Mr Chapple had hoped to avoid, which is to push the strike on into mid-winter, when the days are at their shortest, the weather is at its coldest and a national blackout is most likely to lose public sympathy. Mr Chapple's men were pretty unpopular with everyone except Lord Wilberforce when they worked to rule in December two years ago.

The electricians are, however, in an unusually militant mood; even though their earnings have risen by nearly 60 per cent in the past three years, and they have bonuses equal to at least 2 per cent still to work through from the Wilberforce settlements which the Government has reassured them are not touched by the new freeze. The men have not forgiven their leaders for settling at the beginning of the year, just before the miners ended their strike, for a modest-looking 8 per cent (which was increased by various concessions already promised to 12 per cent). To them it looked a poor achievement beside the huge increases that the miners, dockers and car workers won later in the year because they obstinately refused to go back to work for anything less. Nothing will convince the power workers that the increases in productivity that automatically follow the trebling of generator sizes in the power stations is not the result of their own efforts, and they are set on getting the rewards for it.

Even without a freeze, the electricity industry would be in no shape to pay this sort of increase; on Tuesday the Electricity Council reported a £23m loss over the network, and even bigger losses are likely this year. The Government is assuming that the mere process of holding down price increases to 5 per cent over the past year has produced a combined loss of £250m in all the nationalised

Electricians, dustmen, miners, farmers teachers, printers, postmen: more than two quid

industries before allowing for whatever other losses they made as a consequence of their own inefficiency—which must have been at least as much again. The electricity industry thinks it has done well to have shed a third of its manpower in five years, and to get rid of 10 per cent in the past year, at a time when small power stations are being steadily taken out of commission. But the rate of run-down is really a warning to the unions that theirs is still an over-staffed industry, and that if the management is pressed too far—and the new chairman, Sir Peter Menzies, comes from industry—it may nerve itself for a faster shake-out.

Mr Chapple's continually expanding Electrical, Electronic, Telecommunication and Plumbing Union, now the fifth biggest in the TUC, has continually ducked a decision on whether or not to stay registered under the Industrial Relations Act. A ballot, which has been promised but postponed, is thought almost certain to produce a majority among members for staying on the register, which would then lead to the union being thrown out of the TUC. What Mr Chapple would like before the ballot is taken is some understanding that Mr Maurice

Macmillan, the Secretary of State for Employment, will make some small amendments to the Act, which would make it easier for the electricians to organise a closed shop and rather harder for what they describe as "bogus" unions to register in order to make a closed shop difficult. In principle, the Government is not against these proposals.

It would be a coup for Mr Chapple if he emerged as the union leader who had persuaded the Government to amend the Act, and an even bigger one if he then went for a merger between his union and that of Mr Hugh Scanlon's engineers in which he was top dog. He is also looking at other mergers, too—the National Union of General and Municipal Workers has come under his eye—but these are not as attractive as the engineers. Mr Scanlon may retire soon, and Mr Chapple could be his heir-apparent. This could produce a block vote in the TUC 2m strong; as very many engineers are to the right of Mr Scanlon, under Mr Chapple's leadership it should be a moderate block vote. It is quite an ambition, and the first steps towards it depend on how Mr Chapple extricates himself from his present difficulty as the new incomes policy's stalking horse.

Too slowly, to Shultz, without sanctions?

The Americans did a Barber at the IMF meeting and quite nicely too. But there was a horrible silence about world inflation

When the finance ministers and central bankers from 124 countries met in Washington this week their discussions might have centred on the worldwide problem of inflation. But instead their job at this year's meeting of the International Monetary Fund, as they saw it, was to try to move half a step forward towards a new monetary system. Of course, the German economics minister, Herr Helmut Schmidt, said price stability must have top priority "for all of us." And he went on to say that the explosion in international liquidity (an increase of 61 per cent in two years) had certainly nourished world inflation. For that reason, it looks as if Germany will oppose any new allocation of special drawing rights (SDRs) next year. On the other hand, Italy's Signor Giovanni Malagodi, who had been expected to favour only a nominal allocation to keep the scheme going, surprised the meeting by asking for annual amounts as large as in the first three-year period (roughly \$3 billion a year), although for two years only. Taking an un-gallic mid-road position, M. Giscard d'Estaing asked for a limited allocation. If little thought was given to inflation, it goes without saying that few of this year's speeches touched on domestic economic performances. Mr Anthony Barber, perhaps, could be excused: he addressed the meeting on the same day as Mr Heath announced his incomes policy.

When President Nixon told the largest financial gathering the world has ever seen that his Secretary of the Treasury, Mr George Shultz, would outline a number of proposals, there was audible relief. Although Mr Nixon was responsible for destroying the world's old monetary system in one fell swoop on August 15, 1971,

until this week his Administration had refused to give any leadership on what should replace it. His proposals for monetary reform, although not yet spelt out in detail, have a considerable amount in common with the British scheme to reduce the role of gold and give special drawing rights a bigger role in the system, which the Chancellor presented at last year's IMF meeting. The biggest room for disagreement, however, is over what the Americans care about most: the need to improve the process by which countries correct surpluses or deficits in their balance of payments. The Americans suggest that this correction should be guided by an automatic indicator, related to a country's gains or losses in reserves. Mr Barber, on the other hand, told the meeting on Tuesday that he did not believe "that it would be practical politics to rely on any purely automatic mechanism." And M. Giscard d'Estaing, in an otherwise co-operative speech which advocated in only the mildest way the case for a continued link between parities and gold, said quite firmly that no attempt should be made to accomplish parity changes by formal procedures.

The bite in the Shultz plan lies in the sanctions proposed against countries which do not obey the new rules. While the British are not against penalties in principle, they might draw back from specifying, as the Americans do, that countries should be ultimately free to levy a surcharge on imports from a chronic surplus country.

British and American views also split on capital controls. The British Treasury still believes that wicked speculators were partly responsible for unpegging the pound last June, even though the foreign exchange markets have demonstrated so clearly since that the Smithsonian pound

was overvalued. So Mr Barber seemed to be asking for short-term capital controls, although apparently without any clear-cut idea of what he wanted, while the Americans are all for discouraging controls. Another possibly prickly point is that, if the EEC countries do move towards monetary union, the guidelines might be applied on a collective basis, provided "the countries were willing to speak with one voice."

As would be expected, the Shultz plan demands that America be able to play as equally an active role in exchange rate changes as any other country. Under the Smithsonian agreement, a currency can move by 2½ per cent either side of its central rate with the dollar. The relative rates between two non-dollar currencies, therefore, can now move by as much as 9 per cent, whereas the rate of any one against the dollar has a leeway of only 4½ per cent. If America wants the full flexibility, as it says it does, then most likely a multicurrency intervention scheme, on similar lines to that now being tried by the Europeans, will be adopted. It will be a good deal trickier to operate than the single intervention system of the old dollar world.

But at least the Americans have given a sensible lead to the new powerful Committee of 20 which is now to detail proposals for reform. And their concession that monetary reform can proceed separately from trade negotiations, although there will be some overlapping issues, should really encourage the new committee to shorten its target timetable. Ridiculously, most people seemed to think Mr Barber was sprinting when he suggested that a consensus of reform should be reached in time for the next annual meeting of the IMF in Nairobi to take "operative decisions."

The Shultz plan

Exchange rates. A fixed "central" or "par" value, but a sufficiently wide margin for fluctuations around the central value to dampen incentives for short-term capital movements. Maybe the permissible outer limits of these margins for all currencies, including the dollar, should effectively allow a fluctuation of 9 per cent between any two currencies. Floating rates not to be banned, but a country that floats its currency beyond a brief transitional period should be required to observe more stringent standards of behaviour in other respects.

Reserves. The special drawing right (SDR)—freed of present reconstitution obligations, designation procedures, and holding limits—would become the numeraire of the system. Amounts of SDRs to be changed periodically to meet the aggregate need for reserves. Official foreign currency holdings alongside SDRs need be neither generally banned nor encouraged. Proposals should be studied for exchanging part of existing reserve holdings into a

special issue of SDRs at the option of the holder. No restoration of a gold-based system, but orderly procedures to facilitate a diminishing role of gold.

Adjustment process. Disproportionate gains or losses in reserves mean that a country is in basic imbalance. Only exceptionally, and for a brief period, should a country in basic deficit be permitted direct restraints (which must be general and non-discriminatory, like import surcharges) rather than a devalu-

What do you think of it?

ation of its currency. Conversely, a country in basic surplus should usually upvalue. Any alternative measures—such as concessionary aid on an untied basis, tariff reductions, or elimination of obstacles to outward investment—must be truly corrective. Sanctions against deficit countries which do not devalue might consist of the withdrawal of borrowing or SDR allocations. Sanctions against surplus countries which do not upvalue might be the loss of the right to demand conversion: ultimately, other countries should be free to impose a surcharge on imports from a chronic surplus country. Controls on capital flows should not be allowed to become a means of maintaining a chronically undervalued currency, and certainly no country should be forced to impose capital controls.

Convertibility. After a transitional period, and after the United States had achieved equilibrium or surplus in its balance of payments, the United States would resume convertibility of official foreign dollar holdings into other reserve assets.

If the committee does spin out its job, its efforts will be in danger of being overtaken by one of two events. There may be another currency crisis which will reintroduce floating generally. This crisis might not be too far ahead if the American balance of payments shows no sign of improving. The devaluation of the dollar has as yet had no significant effect on America's exports, but considerable effect on its imports. And there were some gloomy forecasts of worsening, rather than improving, overseas accounts circulating in Washington this week. But even if there is no such crisis, the Committee of 20 could nevertheless find that its reform, if not introduced for another three or four years, is out of date. The distribution of power will go on changing: significantly, Japan and the Middle East now have 16 per cent of the free world's reserves, compared with 8½ per cent only two years ago.

Proposals for future evolution of the world's money must also include a blueprint for its management. The understandable sympathy shown at this week's meeting for the IMF's Managing Director, M. Pierre-Paul Schweitzer, after the rough handling of his reappointment by the Nixon Administration, should not obscure the real issue. The problem is not only one of personalities, but of decision-making powers. Mr Shultz wants to place the new monetary rules under the guardianship of the IMF, "which must be prepared to assume an even more critical role in the world economy." He went on to recognise that the IMF must be reorganised and strengthened, implying that there must be political representation on it. There is a lot to be said for this, and it is far more important than whether some Americans have been rude to M. Schweitzer or not.

BUSINESS

Suppose it works

There's more in it for some than for others

The justice that limits wage rises all round to £2 a week and price rises to 4 per cent is of the rough sort; men have been complaining about it ever since Christ's workers in the vineyard objected to a flat pay rate of one penny a day regardless of hours worked. Some industries can only be jubilant. They include the capital-intensive, highly-automated ones like oil, chemicals, some kinds of engineering and synthetic fibres. Their payroll, consisting of small numbers of highly-paid workers, will go up hardly at all, but their margins by quite a substantial amount if they take full advantage of the opportunity to raise prices. Industries relying on highly paid professional skills will also feel the benefit. It is small wonder that the British Overseas Airways Corporation's pilots suddenly settled their wage claim on Wednesday afternoon. The train drivers still holding out against British Rail's offer of special rates for test-driving the advanced passenger train must be regretting that they had not, too.

It is the raft of industries employ-

ing large numbers of relatively low-paid workers who are going to feel the pinch. Ministers are frankly afraid that their reaction to the freeze will simply be to get rid of them. The Government's package is intended to redistribute incomes in favour of the low-paid, but the inevitable price will be to increase unemployment among them. A fair number of industries are in no position to give pay increases of £2 a week. They include textiles, employing 580,000; clothing, employing 377,000; not to mention food manufacturing, with 830,000, and shoemaking, with 82,000, and cutting back already in the face of competition from imports.

If industries like these have to pay out an extra £2 a week to large numbers of staff over the next 12 months, their wage bill will rise sharply, and a 4 per cent rise in prices would, in many firms, not be big enough to cover it. Since industries employing large numbers of relatively low-paid people are almost by definition over-manned, this would signal the kind of labour shake-out that has already taken place in

other industries, to the benefit of the economy in the long-term, but producing some unwelcome headaches over the rise of unemployment in the short.

The greatest concern is for the textile industry. Like clothing and shoes, it is not holding its own against competition from imports, and had been campaigning for greater protection long before this blow hit it. All that ministers have been able to offer by way of comfort is the thought that the industry's plight would be even worse were inflation to continue at its present rate, together with the suggestion that the tenor of the Chequers talks indicated that, when whole industries demonstrably cannot pay an extra £2 a week, the unions will not necessarily press for it. Any volunteers?

Women's work

A good proportion of the low-paid workers in the service industries are women, and there are crumbs of comfort to be drawn from this. The obvious crumb is that service industries like garages and restaurants automatically pass increases in costs on to their customers. They do not fall within the price freeze and they will soon be relieved of the remnants of selective employment tax (although some of them will eventually be paying value-added tax). The less immediately obvious one is that the freeze also freezes further progress towards equal pay for women, and women would anyway have stood to get big pay increases in the coming year, since by law their wages were to have been brought up to 90 per cent of men's rates by the end of 1973.

This is crucial in industries like electronics, where the assembly lines are staffed almost exclusively by women, and where labour costs were bound to jump as equal pay came in. But the £2 means a good deal to retailers and to distribution generally. There are at least 600,000 women working in distribution now who earn less than £20 a week, which is the minimum for which their union has

BARCLAYS BANK BRIEFING-19

A quarterly information service
on money matters

Mr. W. G. BRYAN, Chairman of the Financial Services Division of Barclays Bank, examines one of banking's new growth areas.

New Horizons

When one looks around today at the extent and variety of diversification by the Clearing Banks it is worth while remembering how rapidly these changes have come about; for in the mid-fifties the "clearers" were sailing in pretty well-charted waters, confined to a great extent by post-war restrictions but still governed in part by pre-war philosophies.

Neither the opportunity nor, so it seemed, the desire to reach out beyond the ordinary confines of deposit banking were present and "services" were basically limited to the old established trust and tax business and the provision of currency and associated facilities. Portfolio management and corporate advice were still firmly in the hands of the merchant banks, the revival of unit trust investment had not got under way, leasing and factoring were virtually unthought of in this country and consumer credit for the masses in the shape of hire purchase was still considered a somewhat dangerous and, in some degree, an anti-social vehicle of finance.

Surprisingly, perhaps, the break from tradition came in the suspect field of HP in which, by the end of that decade, all clearers were heavily involved and which was accompanied by the brief and somewhat painful incursion of 1958 into personal loans as such. It was nearly ten years later that consumer credit was seriously marketed as a banking service and even then Barclaycard, as the front runner, was bedevilled for a number

of years by credit restrictions of one kind or another.

Awakening giants

If, however, it was becoming clear from these events that the sleeping giants were stirring, the reasons for this awakening were somewhat mixed. Competition was increasing and there was growing evidence that the traditional activities of the clearers were being eaten into by the merchant banks, the newer finance houses and the various savings institutions; costs were rising fast in a very labour intensive field and margins were increasingly under pressure; and perhaps most significantly "marketing" became respectable and the banks realised that in their 10,000 branches they possessed the most powerful marketing network that could be wished for.

From all this has emerged the new world of financial services, closely allied to the mainstream of traditional banking but given the challenging opportunity of competing with the financial specialists both new and old. It has, of course, been argued that to diversify into such peripheral activities was merely diverting effort from the main objective, that there were problems which the Clearing Banks were not equipped to handle and that the possible benefits were irrelevant in terms of overall profit. On the other hand, it has seemed logical enough to take the view that, if financial services were required and could be provided profitably and

W. G. BRYAN
Chairman, Financial Services
Division and a Deputy Chairman
of Barclays Bank

effectively, then the potential of those services should be developed for the benefit of the banks' own customers, and stockholders.

It is, indeed, a new world full of problems and not without risk, but fortunately one with a reasonable choice in the method of operation from outright purchase of an established business to 100% internal development. In Barclays we have chosen generally to develop rather than to buy, the main exception being in the case of our unit trusts where, through the merger with Martins, we were fortunate in being presented with the established Unicorn Group.

We have also chosen to combine these new activities in a separate division of the bank to ensure that their particular needs receive the special attention called for—that they do

No men in sight . . .

fewer jobs? . . .

no equal pay

CONTINUED ON FOURTH PAGE

A Study in Export Success

By any standards, Sonicaid's is a success story. In five years Sonicaid Limited of Bognor Regis has grown from a little-known firm employing 15 people in making ultrasonic detectors for industry to leading specialists in medical ultrasonic equipment. As the company's reputation has stretched world-wide its turnover has increased over 100 times, its ratio of export to total sales has risen from about 5% to 84%, and its staff now numbers close on 100.

The turning point in Sonicaid's business came in 1967 when it took its first step into the highly specialised field of medical electronics. This took the form of the

Sonicaid D205 Fetal Blood Flow Detector, a device using ultrasound, transmitted at very low power, to detect the fetal heart-beat within 10-12 weeks of conception. The D205 also had valuable diagnostic applications throughout pregnancy.

Competitive

Shown at the Ultrasonics for Industry Exhibition in October 1967 it was judged competitive in every respect with its only rival, made by one of America's biggest medical companies. Its price, on the other hand, was appreciably less than its competitor.

A Sonicaid FM2 Fetal Monitor in hospital use

The ensuing publicity led to the D205 being exhibited in Berlin early in 1968. There Mr. Ronald Cowan, Sonicaid's founder and managing director, established his first links with European distributors in readiness to meet the orders for the instrument that seemed bound to follow. And follow they did. By the end of October the European order book alone was worth nearly £50,000 for an instrument selling at about £100.

Export finance

The prospect of a large and expanding export market brought with it the problems of financing the period of credit allowed to overseas buyers. At this point Barclays' manager at Chichester, where Sonicaid keeps its accounts, introduced Mr. Cowan to Barclays Export and Finance Company.

BEAFCO its invoices expressed in sterling and with evidence of shipment. On the same day the invoice is received, and if there is no query, BEAFCO sends a cheque in payment direct to Barclays in Chichester for the credit of Sonicaid's account.

"This service might have been tailored for a company like Sonicaid," Mr. Cowan says. "To be assured of a steady cash flow in those early days of rapid growth gave us the financial backing we needed. It also freed us of exchange risks, kept our accounting staff to a minimum and enabled us to achieve considerable expansion with very little increase in our capital."

Distinction

Since those early days, less than five years ago, Sonicaid has marked up success after success. Its development and marketing of other equipment, including a Fetal Monitor—probably the first ultrasonic monitor in quantity production—have boosted the company's turnover to over £600,000. With overseas sales totalling 84% of total production Sonicaid has achieved the distinction of exporting to every continent, and in recognition of this performance Sonicaid's marketing director, Mr. K. A. Wheelodon, was made an M.B.E. for services to export.

BARCLAYS BANK BRIEFING—19

New Horizons

continued from page one

not, in effect, get overlain by the main body. Nevertheless, we believe it to be of the greatest importance that we should attract into the various companies talent and experience from outside the bank to complement the skills we can provide from within and that the interaction of differing experience, outlook and background will provide the best possible foundation for future growth.

Separate companies

The integration of individual specialists into the structure and ethos of a large organisation must inevitably create problems and, in particular, the more intractable ones of status and of reward. It has seemed right to us to incorporate the various activities into separate companies where individuals can more easily develop their particular skills without the natural fear of loss of identity and, doubtless, time and experience will help to provide the answers.

More substantial and quite vital to the whole operation is the question of marketing. This inevitably rests on the shoulders of the domestic branch managers and their staff, whose lives become daily more complex even without the added complication of providing the outlets for what must seem to be a never-ending succession of new services, at times confusing and almost always time-consuming. It calls for a high degree of understanding, at the marketing end, of overall Group requirements and, by the enthusiastic specialist, of the problems of everyday life in the market place.

Exploration and development have never been trouble-free, but though the new horizons of financial services will certainly engender their own growing pains, the rewards—financial and personal—will be earned by those who seek them.

Barclays' Chairman visits Pacific basin

Sir John Thomson, Chairman of Barclays Bank Limited, left London on September 16 on a one-month visit to Singapore, Kuala Lumpur, Australasia and San Francisco. With him is Mr. R. G. Dyson, Deputy Chairman of Barclays Bank International.

New ventures

Barclays have recently announced several new ventures in the Pacific basin and Sir John is investigating further possibilities during his tour. He will be meeting senior ministers and government officials in Australia, Singapore and Malaysia. His other engagements include attending a Foreign Correspondents' Association luncheon in Singapore.

From New Zealand the party will call at Fiji and the New Hebrides where Barclays Bank

International are expanding their branch network.

Barclays' new interests in the area, gained through Barclays International, include a 20 per cent stake in New Zealand United Corporation, New Zealand's leading merchant bank, and a 70 per cent interest in a new \$A2.2 million merchant bank to operate in Sydney and Melbourne, Barclays Australia Limited.

Barclays International also plan to set up a Far East merchant bank in conjunction with Merrill Lynch, Pierce, Fenner & Smith International and Nomura Securities.

In San Francisco is the headquarters of Barclays Bank of California which in less than seven years has built up a 26-branch network throughout the State and deposits of \$176 million.

been pressing. A wage claim is in for 200,000 workers in supermarkets whose average wage now is £14 a week. The department stores, Selfridges and John Lewis among them, have recently been giving increases of around £2 a week to men but £3 to women workers in order to move towards equal pay. Retailers as a whole will now be relieved of the growing obligation to give women bigger rises than men. Since women dominate the labour force, the shops can only be thankful for it. Still, the shops are more worried about rising overheads than about rising wage bills, and are particularly alarmed at the latest recommendation to increase road haulage rates by 10 per cent.

The mechanics of a retail price freeze mean that the Government will not really be able to stop some shopkeepers from edging up their margins. But ministers are going to come under great pressure to be seen to be doing something. The means of monitoring prices in a crude sort of way already exist in the data collected in order to compile the monthly retail price index. This would allow the Government to wag a warning finger. But because consumer goods are not homogeneous, it is always going to be possible to argue back that an apparent price rise is due to an improvement in quality, a change in technology or simply the cost of restyling. One precaution the Government is thinking of taking is to ask consumer industries to start quoting prices per pound or per unit, as they are obliged to do now for certain goods under the Weights and Measures Act. This is something that consumer organisations have been urging for some time; but while it makes it easier for shoppers to compare prices, it does nothing to see that they do not rise by more than 4 per cent over the year.

Prices will be hit : increases announced or forecast since July 1st

Good for profits

Many members of the Confederation of British Industry are wringing their hands at the prospect of a 4 per cent price ceiling. They ought, instead, to be clapping: 5 per cent growth for the economy as a whole will usually produce a somewhat faster growth in industrial production and manufacturing output. The National Institute of Social and Economic Research calculated, on its 3½ per cent growth forecast for 1973, that industrial production would rise by just over 4 per cent and manufacturing production by just under that. On top of this, productivity in industry is now rising very rapidly indeed. The July figures suggest an 8½ per cent rise in industrial productivity on a year ago.

Thus output in industry could well rise 6 per cent with little if any extra employment. Add to this a 4 per cent rise in prices and the value of final output could be up by more than 10 per cent. Against this the cost of £2 a week all round would be an extra 9 per cent on the wages bill. A difference of 1 per cent may not sound much, but as profits are only a fraction of total value-added there is considerable gearing. With gross profits, for instance, at 25-30 per cent of value-added, the rise in profits would be, not 9 per cent, but 13-14 per cent.

Economic growth is good for profits—and a far more important influence on them than simple price rises. As output rises, productivity goes up; as factories operate closer to capacity, unit costs come down. The desperate attempts of companies to retain their share of the national cake through price rises has been far less successful than that of the unions to have their cake and eat it; the share of profits in

national income has fallen war years from a high of 12 per cent in 1951 to a mere 12 per cent in 1971. The tendency has been to fall most when growth has been slowest.

The effect of a rise of 10 per cent in real output might have effect on the share of profit: income; they could conceivably increase it from 12 to 16 per cent, on a relatively crude calculation on the assumption that the rise did not intend some of the gain to go to consumers and wage earners. A better guess may be 14 per cent.

The fact remains that the effect of the incomes policy is to redistribute income in favour of company profits, and away from nationalised industries and real battle will be to win it politically. One way of winning it is to lose an unimportant battle on dividends. The Government is prepared to do this.

Dividend restraint did little for anyone. Over the past few years profits have been hanging on, and they had been before the Labour government came to power during it and after it. The share of profits that is distributed fell from 1968's 33.6 per cent to this year's 31.3 per cent.

One red herring about corporation tax, starting in 1973, is that it will be killed off; it is not. It will encourage companies to pay dividends—it simply removes the incentive of the present double taxation that they will pay tax of 30 per cent on their profits whether they pay dividends or not. Thus dividend restraint will force companies to have less money, which might encourage them to pay dividends.

It's quite tough on shops

THIS BRIEFING has been prepared by Barclays Bank in the hope that it will provide a useful service for journalists, economists and everyone interested in finance. The tables have been specially compiled from the latest available statistics. Further information is available from the Bank's Press and Information Department (01-626 1567, Ex. 7145) 54 Lombard Street, London, EC3P 3AH

Who gets what

The effect of £2 a week all round is to add 7 per cent on wages and salaries, plus another 2 per cent for the inevitable extras, making 9 per cent in all, but with higher percentage increases for the low-paid. But the effect on earnings is not going to be as simple as that. Anyone on a flat weekly wage will be restricted to £2 and no dodging about. But for men who qualify for bonus and shift payments calculated on the basic rate—and that goes for a great deal of the engineering and motor industries—by the time their wage packets have been made up some will get nearer £5 a week than £2.

The same is true for that half of the working population that does overtime, and the amount of overtime worked is starting to rise again, it is already nearly 10 per cent higher than it was last autumn. The Treasury has calculated that these aberrations from the £2 rule together add up to something like £700m on the wage bill. This was then averaged out to the 60p-a-week figure for wage drift quoted by the Prime Minister. What he omitted to explain was how unevenly it was going to be distributed.

Some of those who may get most from it are in British Leyland factories, where the new pay system that is gradually working its way through the company is going to bring some sizeable rises unaffected by the Government's freeze. This may take a lot of explaining away to other unions, and to men in other parts of the motor industry whose wage claims stand to be clobbered by the freeze (as Ford's will be). The freeze bans new productivity agreements, because Whitehall has learned from Labour's last wage freeze that the fake

productivity deal (ie, an end to tea-breaks) is the favourite management-union device for breaking one. Deals either in existence or under negotiation are, however, going on. This is crucial to British Leyland, which thinks that its only hope of breaking the perpetually disruptive power of its shop stewards lies in wooing the men off piece rates and on to the equivalent of a weekly wage. The carrot has to be luscious to persuade them, and the British Leyland factories that have accepted so far have had rises of around £5 a week. The men at the Longbridge factory, one of the company's traditional trouble spots, and at Triumph in Coventry, had been holding out the longest against the new scheme. The thought that, unless they do accept the pay system, they may be restricted to a £2 rise, instead of another £5, got talks moving smartly on Thursday afternoon. But only by stretching the definition of what constituted negotiations to its very limits could they be said to have gone far enough already to squeeze past the Government's ban on new productivity agreements. Nevertheless, Whitehall seems ready to agree that they have, indicating that the Government is preparing to treat Lord Stokes's problems as special. This spells trouble.

So could the promise of what amounts to a general threshold agreement, allowing wages to go up that bit more if retail prices rise by more than is intended. It is said that this will only be allowed if the rise is due to once-and-for-all factors like the introduction of value-added tax, or the effect of the common market on food prices. But, ominously, the offer is one of an arbitrary 20p a week increase across the board for every point by which retail prices rise above 6 per cent.

The poor do not get as much out

of the flat rate £2 as might look at first sight. Single people and couples without children do relatively well; and there are about 13m households, excluding pensioners, in this category.

On average a single man or woman now on £15 a week will get more than a 10 per cent net rise. If however, people are poor enough to get rent rebates, and, worse still, if they have children, that extra £2 on a £15 a week wage can have a net worth of only 40p. To a single man earning £40 a week, it is worth 130p.

Lots of tax cuts?

The presumption is that the package is going to put personal incomes up by around 8 per cent. It is anybody's guess what will happen to the other parts of the economy; but 8 per cent on disposable incomes, offset by a 5 per cent rise in retail prices, would seem to add growth up to only a 3 per cent rise in real consumer spending. The Government says it is going for 5 per cent real growth in gnp. If this is intended to be a consumer-led boom, 2 per cent of it appears to be missing.

It can only come from tax cuts. The Government has no intention, now that it has produced this package, of adding an autumn budget as a sort of frosting on top; but by next spring it will have to do something to stimulate spending. There are several ways open to it. Personal tax allowances will need to be raised, if only to take care of the buoyancy of the income tax system; but the main cuts may well come in indirect taxes as part of the drive to keep down prices.

The notional rate at which value-added tax will be introduced in April is 10 per cent; and the National Institute has estimated that this will actually deflate consumer demand by putting 1.1 per cent on prices, or £420m at 1972 rates of spending. This calculation is made up of £101m more from Vat-plus-the-car-surcharge than from the purchase tax and selective employment taxes it replaces; £134m from the fact that Set has not been passed on in full to the consumer, so its going will not be passed on in full either; £185m from the fact that Vat will fall more heavily on consumers and less on industry than purchase tax and Set do now.

To offset this, the Chancellor has (a) the purchase tax holiday promised before Vat comes in, which is likely to be short; and (b) the option of setting Vat at 7½ per cent, which is the lowest

end of the 7½-12½ per cent range allowed under the 1972 Finance Act.

But a 7½ per cent rate for Vat will do no more than stop indirect taxes from having a deflationary effect. To reflate on top of this more cuts are needed. The obvious candidates are not purchase tax or Set—cuts in them now would make an even lower rate of Vat necessary—but the taxes on oil, tobacco and alcohol.

If the Government aims at reductions equal to 2 per cent of consumer spending, that is £800m. Cuts in tobacco duty might cause controversy but beer duty yields nearly £500m in a year. It could be halved, with a powerful effect on the cost of living. Beer would come down by 2p a pint.

Oil duties are not such an obvious choice for cuts. Sixty per cent of them are paid by industry, which is already going to have a massive cash flow injection from the Vat changeover (the reverse of the factors causing a 10 per cent Vat to put up consumer prices). Wine duties raise only £85m a year, but halving them would put the total, with beer, up to £300m. The duty on spirits is £2.20 for the normal bottle, 550 per cent of its duty-free price; this is ludicrous, and halving it would cost £200m, making a total cut of £500m. The further £300m could come from a Vat starting rate below 7½ per cent. This gives the Government considerable scope, along with dividend restraint and some much less desirable subsidies to nationalised industries, for bargaining with the TUC.

It could work

In the past quarter of a century incomes policies of one kind or another have been tried in Britain in one year out of every two: Sir Stafford Cripps, Mr Harold Macmillan, Mr Selwyn

Lloyd, Mr Maudling, Lord George-Brown and Mr Wilson have all had a go. There is therefore plenty of experience from which to judge the success of such policies. The simplest way to do this is to assume that the rate of growth of wages is normally determined by the pressure of demand in the economy, as measured by the level of unemployment, and to see how far incomes policies changed things.

A rough calculation suggests that, over the whole period 1948 to 1965, weekly wage rates during a year rose on average by 6.7 per cent when unemployment was 1 per cent and by 2.7 per cent if unemployment increased to 2 per cent. This relationship, in which the rate of growth of wages falls by four points for every one point rise in unemployment, can be used to estimate what might have been expected to happen in any particular year during the period. The chart compares the actual movements in wage rates with such estimates. The shaded areas show when an incomes policy was in force. Very broadly speaking, wage rates do appear to have risen less rapidly in years when incomes policies have been operating than would have been expected from the pressure of demand in the economy.

The trouble is that there have been very few normal years during this period. Either we have just been recovering from the last dose of incomes policy or just about to get the next. However, a far more interesting story emerges when the calculations are divided into periods when incomes policies were being applied and periods when they were not. As the dividing line between "policy-on" and "policy-off" periods is blurred, two divisions have been made into "policy-on," which covers all periods of any policy however ramshackle; and "policy full-on," which includes only full-scale freezes.

Average rise in weekly wage rates
%
(December to December) Unemployment at

	1%	2%
1948-65	6.7	2.7
Policy-on*	4.0	4.8
Remainder of period	7.9	1.9
Policy full-on**	1.5	5.4
Remainder of period	7.1	3.7

*1948-50, 1956, 1961-68 **1949-50, 1961-62, 1966-68

The difference between policy-on periods and the remainder is striking. As expected, the rate of wage increases declines with rising unemployment when there is no incomes policy. But

when incomes policies are applied, although the rate of increase in wages is reduced at low levels of unemployment, wages rise faster the higher the level of unemployment.

The explanation is probably that periods of incomes policy have, in the past, been associated with measures to slow down the economy or to shift resources to the balance of payments, public expenditure or investment. Such measures, usually tax increases, put up both costs and prices which also increase wage demands, as well as putting up unemployment. Incomes policy is successful, but has other forces operating against it that lead to both higher wages and higher unemployment.

If this is true, this time it could be different. This time incomes policy can be reinforced by tax cuts. Mr Heath stands a better chance of success than any of his predecessors.

Hardly anyone has done worse

Tearaway inflation has not been a purely British phenomenon. Since the late 1960s virtually all major industrial countries have been facing price increases well above historic norms—and most when there has been slack in the economy. The upturn in the American economy is already well under way, but most continental European countries are only now moving into the recovery phase. The slack to be taken up varies from country to country, but none of the heavyweights has been suffering from straightforward pressure of demand, nor is any likely to in the future. Only in Holland, where there are real regional headaches, is the level of unemployment and of spare capacity in industry likely to be misleading.

The charts on the next page tell the story. For Britain and four other major economies they compare what consumer prices have done in the recent past both with earlier price movements and with indicators of shortages of labour and plant. It is a story that has been repeated everywhere, especially in Italy.

But the charts also point up just how much worse Britain's price performance has been than that of its major competitors—including those soon to be its common market partners. On the latest figures—not to mention the forecasts worked out before Mr Heath's Tuesday initiative—only Holland and

What is another £2 worth?

Figures show percent by which wages would rise for a standard 40-hour week

Those talks get moving too

The British Electric Traction Company, Limited

Sir John Spencer Wills forecasts still higher earnings

The Annual General Meeting of The British Electric Traction Company, Limited will be held on 19th October 1972, at the Connaught Rooms, Great Queen Street, London, W.C.2.

The following are extracts from the Review by Sir John Spencer Wills, Chairman and Managing Director, which has been circulated with the Report and Accounts for the year ended 31st March 1972:

Accounts

In my Review last year I said that we had begun to reap the benefits of the groundwork put into the development and expansion of the businesses in which we invested the proceeds of the sale of our United Kingdom bus interests and that we should reap further benefits in the year to 31st March 1972. This expectation has been amply fulfilled. The pre-tax profit of the Group at £23,390,000 is 22.9 per cent up on the previous year and the earnings, after tax and minority interests, attributable to the B.E.T. Company are £11,605,000, compared with £9,032,000 for the previous year—an increase of 28.5 per cent.

Excellent results were produced by Boulton & Paul and by our associated company, Thames Television, and there was a substantial improvement in those of Rediffusion, but Murphy Bros., Argus Press Holdings and our plant hire interests fared less well than in the previous year. Owing to the incidence of their financial year-ends in relation to that of B.E.T., only one of the companies which became subsidiaries during the year made a contribution—a small one—to Group results and the considerable increase in our profit came from organic growth.

The major newcomer to the Group was United Transport Company. As United Transport's year ended on 31st December 1971, a few days after it became a subsidiary, the company's 1971 earnings of £2.2 million have not been consolidated in our Profit and Loss Account. That Account includes only dividends totalling £178,000, received or receivable during the year on our shareholding in United Transport as it stood prior to B.E.T.'s Offer.

The Board recommend the payment of an increased final dividend of 3.75p per 25p share on the Deferred Ordinary capital making, with the increased interim dividend of 2.0p per share paid on 11th April this year, a total distribution of 5.75p per share for the year. The cost of the final dividend will be £5,298,200, of which £569,600 is attributable to the new shares issued to former United Transport shareholders.

Canadian Motorways

The profit, before tax, of Canadian Motorways in 1971 at £497,000 was an improvement on the previous year's results. Although recent substantial wage awards to employees will increase costs, a further improvement in profit is expected in the current year.

United Transport Company

United Transport had a successful year in 1971 and the profit, before tax, of £7,023,000 showed an increase of 13.0 per cent compared with the profit of the previous year.

The United Kingdom transport interests, which include all forms of road haulage as well as warehousing and forwarding, were subject to intense competition during the depressed economic conditions of 1971 and it is particularly encouraging that they managed to improve their profits. The Dendix brush group, which is the leading industrial brush manufacturer in this country, had a good year. The overseas road transport group earned record profits despite the cessation of all operations in Zambia and passenger services in Tanzania. The companies in Kenya, Malawi and Rhodesia, all had a successful year. Economic conditions in Uganda were unsettled and the passenger transport undertaking there suffered losses in 1971 but it has since been operating profitably. The South African companies' results, although an improvement on 1970, were a little disappointing, as were the results of the Australian undertakings.

The national miners' strike in January and February last, has adversely affected the profits of the United Kingdom haulage companies in the current financial year but the overall performance of the overseas group is expected to compensate for this.

Humphries Holdings

A pre-tax loss of £191,000 was incurred in the year to 31st March 1972, compared with the loss of £329,000 in the previous year. Although this is an improvement, the results are nevertheless a considerable disappointment.

The continued recession in the feature film industry affected the amount of work handled by the 35 mm. department of Humphries

Continued

Film Laboratories. Filmatic Laboratories achieved an increased profit and the laboratories in Manchester and Leeds also had a good year.

The Mole-Richardson subsidiaries, which specialise in the provision of lighting equipment and associated services, had a better year, although continuing to be adversely affected by conditions in the film industry.

The De Lane Lea companies, providing sound and music recording services, incurred an overall loss and the three manufacturing subsidiaries had a difficult year.

The work of consolidation, planning and reorganising Humphries Holdings' businesses to meet changed market conditions has begun to take effect and the group's management believe that the current year will show further improvement.

Argus Press Holdings

Last year I warned that the benefits of the rationalisation of the weekly newspaper interests would not be felt immediately and that the profit would be lower in 1971 owing to the cost of financing the purchase, in December 1970, of two newspaper groups. In the event, the pre-tax profit was £221,000 against £383,000 for 1970, the whole of the drop being attributable to the newspaper interests.

The results of the newspaper side for the current year should fully justify the further investment made in that sector.

All three magazine groups are expected to benefit from acquisitions made during 1971 and earn increased profits in the current year. The general printing division produced excellent profits last year and should do so again. The overall results of Argus Press Holdings for the current year are expected to show a substantial improvement.

Advance Laundries

The profit of Advance Laundries for 1971 at £1,498,000, before tax, failed to fulfil the company's expectations of the early part of the year and showed only a slight improvement on the record results of the previous year.

The group's business is now largely concentrated on its commercial services—Towelmaster towel cabinet hire and garment and linen rental, together with a number of related activities. The commercial services have consistently shown an adequate return on capital employed and should continue to do well.

Domestic laundry and dry cleaning, although much smaller sectors of the group's business than they used to be, still make useful contributions to profit.

Plant Hire

The effects of the economic recession on the civil engineering and construction industries proved to be more severe than had been expected and the total pre-tax profits of Eddison Plant, Grayston and J. D. White, at £1,168,000, were some £140,000 less than the corresponding figure for last year.

To offset increasing capital and operating costs, determined efforts continue to be made to effect economies. These measures, coupled with recent signs of an improvement in demand for contractor's hire plant, should enable our companies more than to make good the drop in last year's profits, providing that the recent industrial dispute in the building industry does not have serious repercussions.

Murphy Bros.

Murphy Bros. secured further contracts from the National Coal Board for opencast mining work in South Wales and Scotland. Increased costs and narrowing profit margins in the coal mining activities, coupled with another unsatisfactory year for the general road haulage subsidiary, resulted in pre-tax profits of £1,382,000 for the year to 30th November 1971, compared with the record figure of £1,505,000 for the previous year.

The group's results for the first six months of the current year were adversely affected by a shortfall in coal reserves at some of its own sites and at some contract sites, and also by the disastrous effects of the national miners' strike. The position is now much improved. Coal output is increasing and the new sites are producing at their scheduled rates of output, but because of the poor start to the year, Murphy Bros.' profits for 1972 cannot be expected to match those for 1971.

Rediffusion Television

The pre-tax profit of Rediffusion Television, including its share of the profits of Thames Television, for the year to 29th July 1971 was £2,287,000. This compares with £1,024,000 for the previous twelve months and reflects the substantial improvement in the profits of Thames Television, in which Rediffusion Television has a 50 per cent shareholding.

A further improvement will be shown by the Accounts of Rediffusion Television for the year which ended in July last, due mainly to a further increase in the profits of Thames Television.

Rediffusion Holdings

The pre-tax profit for the year to 31st March 1972 at £605,000, was slightly better than the results of the previous year. Wembley Stadium produced an improvement in its trading profit but the earnings of Walport, which provides filmed entertainment on ships at sea, were marginally reduced.

After difficult and protracted negotiations, Wembley Stadium received revised outline planning permission for the building of a conference centre, warehouses, offices and a multi-storey car park on its undeveloped land at Wembley.

It is expected that the hotel which the Esso Motor Hotel group are erecting at Wembley, following the grant to them by Wembley Stadium in 1971 of a building lease, and the multi-storey car park, will be completed towards the end of this year.

Oil Exploration

The consortium formed by Phillips Petroleum Company, in which B.E.T. is a participant, hopes to drill a well later this year in one of the five North Sea blocks for which it received licences in 1970: drilling on others of these blocks is planned for 1973. The consortium has a one-half interest in four other blocks in this sector of the North Sea.

In 1971, the consortium was granted licences on five blocks in the northern part of the North Sea, two blocks west of Shetlands and one block in the Celtic Sea. B.E.T.'s interest in the consortium is 5 per cent or 7 per cent, according to area.

Boulton & Paul

Our expectation that Boulton & Paul would achieve record results has been fully realised, the group's pre-tax profit of £2,892,000 for the twelve months to 31st March 1972, being over 20 per cent greater than the profit for the whole of the extended accounting period of 18 months to 31st March 1971.

All the joinery factories worked to capacity throughout the year and benefit was also derived from the further integration of the production facilities of John Sadd & Sons. The year also saw the

Continued

The British Electric Traction Co., Ltd.

Continued

commissioning of a flush-door production line which provides a further addition to Boulton & Paul's product range. At Melton Mowbray a rebuilding programme is in progress which will give substantially increased capacity.

The structural steel section of the group had another excellent year and the results of the division which manufactures mechanised handling plant for steel fabrication were particularly gratifying. Even better results are forecast for Boulton & Paul in the current financial year.

Rediffusion

Rediffusion produced much improved results for the year to 31st March last, earning a profit, before tax, of £8,238,000, compared with £5,705,000 in the previous year—an increase of 44 per cent. The outstanding feature of the year was the substantial increase from £3.3 million to £5.5 million in the profit from Rediffusion's television set business and the associated cable networks in the United Kingdom. The removal in July 1971 of all controls on hiring and credit gave a tremendous stimulus to colour television and most of the above increase came from colour television set rental contracts.

Rediffusion Industrial Services, which specialises in the installation of communication systems and audio and television distribution in industrial premises, offices and hotels, transacted a record volume of new business. With the exception of flight simulation, all departments of Redifon, the group's principal manufacturing subsidiary, put up better performances than in the previous year but Redifon's overall profit was again unsatisfactory.

The overseas broadcasting and relay companies increased their overall contribution to the group's profit by 10 per cent compared with last year's quite good performance.

Legislation to establish local commercial radio broadcasting in the United Kingdom became operative on 12th July 1972. Rediffusion Radio Holdings was formed last year to place at the disposal of interested operators Rediffusion's wide experience of all aspects of commercial broadcasting. This new company has been in discussion with some intending applicant companies and will have a limited equity participation in at least one of them.

The considerable work done by Rediffusion in recent years in laying solid foundations for a successful business at home in colour television, both on cable and off the air, is now bringing its reward. Some Rediffusion companies abroad are, however, working under difficult conditions and there may be a diminution in the profits of the overseas group for the current year. For this reason, and because Rediffusion's consolidated profit for the year to 31st March 1972 showed such a substantial increase, the results for the current year, whilst they are expected to be good, are unlikely to show the same rate of improvement as those of the year just ended.

Current Year

Having been, a year ago, insufficiently optimistic about future profits, I am even more than usually reluctant to hazard a forecast now. The results for the current year will include, for the first time, the profits of United Transport; against that, there is the extra cost of an interim dividend on the B.E.T. Deferred Ordinary capital issued in December 1971 to the shareholders of United Transport. Much hard work is being put in to secure higher profitability from all sectors of the Group, but it is unlikely to be successful in every case. All in all, I look forward to still higher earnings per Deferred Ordinary Share.

Copies of the Report and Accounts, containing the Chairman's Review, can be obtained from The Secretary (EC), Stratton House, Piccadilly, London, W1X 6AS.

Profile of stagflation

OECD figures, seasonally adjusted except for prices
* gap between actual gnp growth and normal capacity growth rates

some of the smaller Scandinavian countries have had even less enviable records.

The behaviour of prices suggests a deeper unpalatable truth. Ever since the 1967 devaluation of sterling, wage inflation in Britain has outpaced productivity gains in manufacturing industry to produce a massive rise in Britain's unit labour costs. The league tables run only to the end of last year, and it is probably just as well it is not possible to see what has happened so far this year. What signs there are suggest Britain is still going downhill.

Other freezes

Most European countries, faced with inflation, have tried price and incomes policies. Only Switzerland and Germany have not. Neither has Japan. Admittedly, there have been some spectacular failures, above all in Holland. But Mr Heath can take some heart from the evidence.

At least over short periods, and where the policies have not been expected to cope with old-fashioned demand inflation, they have made a contribution to stability, even when the results have not always measured up to official targets.

The three European countries that did survive the 1969-72 inflation without a dramatic acceleration of prices were France, Belgium and Austria. These are also the three, significantly, which combined price control with relatively smooth growth. Stop-go has never been a French predilection.

The most striking success has been in the United States. During the freeze phase of Mr Nixon's package the annual rate of increase in consumer prices fell from 4 per cent in August, 1971, to just 1.7 per cent by November. Nor has the post-freeze upsurge of

prices been particularly marked. The annual rate of increase in seasonally-adjusted consumer prices from last December to April of this year was just 3.3 per cent, and the rate has since fallen back to well within the 2½-3 per cent target fixed for the end of this year.

True, the Nixon package had unique advantages. Controls were a novelty in the United States and were introduced when the shock of the dollar's effective devaluation persuaded everyone of the need for co-operation. The timing was also good economically. The wage-price spiral had not become as rooted as it has in Britain, Holland and Italy. American companies were already enjoying the outsized productivity gains of the early upswing.

But if the American success can be chalked up in part to special factors so, too, can the Dutch failure. The breakdown of Holland's incomes policy came only after two decades of comparative success, when internal strains in the machinery were compounded from 1969 onwards by the rather messy introduction of value-added tax, excess demand and import price rises.

Norway has had two price freezes. The first, in October, 1969, was introduced to smooth the shift to Vat, and was certainly a success. The second, in December, 1970, was less so—but was imposed as a holding operation in conditions of excess demand and rising import prices. The Swedish freeze of October, 1970, held prices virtually stable over nine months until it was relaxed, step by step, after May of last year. The Danish freeze of 1970 brought a distinct slowing down in price rises and paved the way for the introduction in April last year of a new price control law aimed at restricting price increases by companies granting above-normal wage rises. Not that this has worked quite so well; prices since have been rising at or near 7 per cent.

Where Britain ranks in the international league tables

Who did best, or worst, in holding down unit labour costs in manufacturing—because rates of hourly compensation (earnings plus employers' welfare contributions) rose only moderately, or because productivity rose rapidly. Negative Income Tax

The biggest, best and most complicated simplification

Within the next two weeks, the Government will publish an outline of plans for the biggest single change in the tax system since the introduction of pay-as-you-earn in 1943, and the biggest change in social security since the Beveridge proposals were published the year before that. Mr Barber hopes to publish his green paper on "tax credits" or "negative income tax" on about October 10th; then refer it to a select committee in the 1972-73 parliamentary session, and enact the legislation in the 1973-74 session. The scheme would then come into force around 1976-78. It is the brainchild of the Chancellor's special adviser on taxation, Mr Arthur Cockfield.

The object of the reform is that income tax, tax allowances, social security benefits, family income supplements, clothing allowances, rent rebates—and all the complicated apparatus of social security that the poor, the afflicted and the not-too-bright find so hard to understand—should be combined into one relatively smooth system. Everybody in the country with an income below a

certain level will automatically receive a straight payment from the inland revenue, instead of making a tax payment to it. Everybody with an income above that level will pay taxes at a smooth progressive rate.

Until the green paper is published, it will not be certain whether the Government has had the courage to opt for the full system. There have been some hints in ministers' speeches that it does not really intend to do more at this stage than tinker with the fringes of the problem. But these are big enough in themselves. These next three pages of *The Economist* discuss what should and may be done. Consider the basic system—i.e. the system for childless taxpayers—first.

Single bliss

The present (i.e. 1972-73) tax system has a standard rate of income tax of 38½ per cent and personal tax allowances as shown in line 1 of Table 1. These personal allowances may be deducted from income before it is taxed. There are others (described later) for children and other circumstances. But before earned income is counted at all, earned income relief of 2/9ths may be deducted. This reduces the standard rate of 38½ per cent by 2/9ths to an effective 30.1 per cent on earned income. And a personal allowance is effectively worth 9/7ths as much to a person with earned income. Thus, a single person with £591 of income (9/7ths of the £460 single allowance, see line 2 of Table 1) would deduct 2/9ths of it (£131) as earned income relief, and his income for tax purposes would be represented as £460. Since that is the single allowance, no tax would be due.

Table 1

	Single person £	Married couple (Wife not working) £
(1) Present allowance	460	600
(2) Value of present allowance in earned income terms (=1 x 9/7)	591	771
(3) Allowance assumed for next year	600	780
(4) Tax credit equivalent to 3 at 30% tax rate	180	234

This is why we say in line 2 of Table 1 that a single earner's allowance is effectively worth £591.

Since 95 per cent of personal income in Britain is earned income, the Government has announced that it will reform the system from 1973-74 on. All allowances and tax rates will then be expressed in their effective earned income terms. For convenience, we have assumed that the allowances will be rounded up to the levels in line 3 of Table 1. The basic tax rate will almost certainly be 30 per cent.

For a single person earning over £600, the £600 allowance in 1973-74 will then be worth £180 at a 30 per cent tax rate (see line 4 of Table 1). That is the extra tax which he would pay if he did not have the allowance. But if he is earning less than £600—say, £400—the allowance will be only worth £120 to him in 1973-74. The allowances are therefore worth less to people on very low pay. This may seem academic for a single person, since full-time wages of below £600 (about £12 a week) are not usual, except for young girls. But a married man with a family tends to have allowances of over £1,000 and there are plenty of people earning less than that. It is they who will gain from a "tax credit" or "negative income tax" system.

The essence of the tax credit system after 1976 will be to make the

allowance worth as much to a poor man as to a rich man. This will be done by paying out the worth of the allowance (line 4 of Table 1) automatically, and taxing everybody at 30 per cent even on the first pound of his income. Thus a single man earning over £600 a year would pay just the same as before. Say he is earning £1,000 a year. Under the 1973-74 system he will deduct the £600 allowance from his £1,000 income, and pay 30 per cent tax on £400 a year—ie, £120. Under the tax credit scheme he would normally have to pay 30 per cent on £1,000 (ie, £300), but the £180 credit would reduce this to £120 again.

But the single person earning £400 a year would gain from the tax credit scheme. Under the present system he is simply left with £400, as his income is below the taxable level. Under the tax credit system, his tax nominally due on the £400 will be £120; but his tax credit will be £180, so he will get £60 net credit from the Government to add to his £400. This is how tax credits will help the lower paid.

Families come dear

At present British families are helped by an illogical hotchpotch of tax allowances, family allowances and family incomes supplement (or Fis). Table 2 shows the amounts for children of different ages. The family allowance only applies to second and subsequent children, and is at a different rate for the second child (90p a week) than for subsequent ones (£1 a week). When Mr Wilson's government increased family allowances by 50p a week, it matched this by a "clawback": the reduction of the tax

allowances of the second and subsequent children by £42 (£54 after multiplying by 9/7 into earned income terms). So second and subsequent children have lower tax allowances. This could lead to the fear that they will get lower equivalent tax credits—line 6 of Table 2, compared with line 4 for the first child. Adding these tax credits to the family allowances would give the results shown in lines 9-11 of Table 2.

However, Mr Barber has already said that family allowances and clawback will be replaced under the tax credit scheme. This must mean that the credit is to be rounded up to the figure for third and subsequent children (the £95.80 or £104.80 or £113.80 shown in line 11), since he also said that the scheme would make Fis unnecessary "in almost all cases." Socially, this will be a good move: there is no reason for favoured treatment of later children. But it will cost some hundreds of million pounds a year.

Line 12 of the Table shows that supplementary benefit levels for children today are higher still, especially for older children. So if Fis is to be largely superseded, the tax credits will have to be nearer the figures in line 12. This would be very expensive. The extra credit would be unmatched by any extra tax yield, unless the rate of 30 per cent were to be specially raised in such cases until the extra credit had been "clawed back." In the section below on poverty surtax, we will argue that this problem will arise for all welfare benefits that are now means-tested.

One important question is: "who is to be paid the child credit?" Tax allowances have always been paid to the father, but family allowances to the mother. On social grounds, it would be better for the mother to get the credit; but this would be admin-

Milk and logic don't mix

istratively expensive. The Government should state how much in the Green Paper. Politically, it has never been popular to give benefits to the mother that are then taxed away from the father; but Mr Barber should not be deterred by this.

Pensions left out

Until Mr Cockfield produced his brainwave last year, it had been assumed that pensions, unemployment and sickness benefits would have to be included in the tax credits; and that this would make the scheme impossible. For instance, the pension for a single person is about to go up to £6.75 a week, or £351 a year. If the tax credit were to be that large, while still leaving single people earning over £600 unaffected by the scheme, the tax rate on income between zero and £600 would have to be 58½ per cent (because 58½ per cent of £600 is £351). If this high tax rate were to be avoided by allowing some of the benefit from the high tax credit to spill over on to those earning above £600 a year, the cost to the revenue would be enormous. For instance, if the 30 per cent tax rate were combined with a single person's tax credit of £351, that would be equivalent under the present system to raising the single allowance by £570, to £1,170. As an increase of one third of this amount in the last budget cost over £1,000m a year, the dilemma between huge marginal income tax and vast expense has hitherto seemed insurmountable.

Mr Cockfield's scheme for the Government gets round this in admirably simple fashion by simply deciding not to include national insurance benefits in the tax credit. Instead, they will continue to be paid as usual, and will count as taxable income like income from any other source. The

The companies in the Howden Group (there are over 30 in Britain, Europe, North America, Australia and South Africa) built their reputations on quality engineering and precision-made products. Today this experience is being applied in new fields of activity – in refrigeration, pollution control, environmental and safety engineering – so that the Howden Group is helping to make the world a better place to live in.

HOWDEN GROUP LIMITED

Copies of the latest report and accounts can be obtained from the Company's registered address
195 Scotland Street, Glasgow, G5 8PJ

Government will actually gain revenue, since short-term national insurance benefits (unemployment and sickness pay) have been tax-free in the past; they were not tax-free when the social security scheme started soon after the war, but the administrative problem of taxing short-term benefits was found to be too difficult. In the tax credit scheme, it will be easy.

As well as raising £150m a year of revenue from taxing short-term benefits, the proposed treatment of national insurance could actually improve the value of these benefits in the weeks when they are received. At present, the £6.75 a week unemployment benefit is worth just that. Under the tax credit scheme the man would receive £6.75 less tax at 30 per cent from the labour exchange, which means £4.72. But he would also get his tax credit of £3.46 a week (£180 a year), making a total of £8.18 a week.

The Government's proposals for the national insurance scheme involve the replacement of the present mixture of flat rate and graduated contribution by a single graduated rate—at present intended to be 5½ per cent of earnings for the employee, to be collected under Paye. Given the revenue gains on the national insurance side from the tax credit scheme, the Government may feel able to cut this to 5 per cent, making a combined tax and contribution rate of 35 per cent.

At present, there are special tax allowances for the old, designed to exceed the normal personal allowances. They enable those who draw just the pension, plus rent under supplementary benefit, to avoid paying any income tax. The allowance for a single old person is £634, and for a married couple £929; ie, about £12 and £18 a week respectively. These allowances are generally increased each year with old age pensions, so we will round them to £650 and £950. The equivalent tax credits are £195 and £285, or £3.75 and £5.48 a week. The pension levels are £6.75 for a single person and £10.90 for a couple; these would be taxable to a net £4.72 and £7.63. Thus the total of tax credit plus pension would be £8.47 and £13.11 a week: improvements of £1.72 and £2.21 a week respectively over the value of the gross pension.

These improvements could either be removed by reducing the gross pension after the introduction of tax credits; or they could be regarded as a substitute for the amount of supplementary benefit that has to be paid to pensioners

at present. Most of the supplementary benefit is for rent, however, and the improvements of £1.72 for a single person and £2.21 for a married couple would not be enough to cover the rent in most cases. So supplementary benefit would still have to be paid; and better-off pensioners would be the only ones to benefit from the change to tax credits, since they would not suffer the reduced supplementary benefit. The best solution might therefore be to take the tough line on pensions (and unemployment and sickness benefits), and to take a generous line on rent supplements as part of the removal of the poverty surtax. The money saved on national insurance could be used to cut the contribution rate to 5 per cent (as suggested above), and reduce the Exchequer contribution rate—at present 18 per cent of the national insurance fund. The money released would then be available for more generous line on poverty surtax, helping the poorer pensioners.

Ending poverty surtax

The most important part of the whole scheme should be a major and more logical assault on poverty. At present, the combined withdrawal of various welfare benefits on a selective basis can create the absurd system of poverty surtax, which is also discussed on page 26: a rise in wages can sometimes actually lead to a fall in disposable income.

The tax credit scheme will lead to a reduced need for some of these means-tested benefits, in particular. Fis and rent subsidies. But without further modification there would still be need for help with rents, for those on national insurance benefits or low wages, and for families with children (because of the disparity between the child credit levels and the supplementary benefit levels which the Government has defined as the minimum income needed to support children).

This cannot logically be solved by adding the benefits on to the tax credits, and saying that, for example, even the richest parents should all get free school meals: especially as the benefits just added to the credit will be effectively given tax-free, since the tax yield is not altered.

The tax credit scheme should make possible a rational clawback of benefits that should be selective. This could be

done by a surcharge on the of 30 per cent (35 per national insurance contribut a surcharge could be at a 1 per cent, putting the com up to 45 per cent. This wo a higher rate than the norm but the Government shoul consider it.

36,500 fewer taxmen?

The tax credit scheme will much easier to administer present income tax. The can simply be stated withou for the present monstrous codes. Employers will then k all income at the standard r may be 35 per cent includir insurance contributions. If, introduction of the scheme, cellor adopts our proposal fo extra tax rate to claw bac that are at present withdra poverty surtax, the pos employers would become sli complicated, but not excessi is hard to see why Mr Bart to save only 15,000 civi through the reform of pay computerisation. In America a paye of the type that B be adopting, but no tax crec together with a self-assessm for the whole of income tax shows some comparisons of and assessments made.

Table 3

	Americ
(1) Total staff (1971)	68,977
(2) Total staff on in- come tax, corporation tax, surtax (approx)	56,000
(3) No. of assessments (000s)	80,432
(4) No. of assessments per employee	1,436

If it achieved American st efficiency, which would m over to the non-cumulative p that will become so easy credits and adopting self-asse other sorts of income tax, th should be able to reduce th line 2 of Table 3 from 55,000 —a saving of 36,500 civil Since 35,000 of the present employed on paye, most of would come there. The C figure of 15,000 seems far to suggests that the adoption assessment may have been This is regrettable.

BUSINESS

International

The price of North Sea licences is going up

The international oil companies may have let out a secret cheer this week when Norway voted against entry into the common market, and obliged its prime minister to resign. A new Norwegian government will mean that there is some possibility that Norway will change its policies towards exploration for oil and natural gas in the Norwegian sector of the North Sea. So far as the oil companies are concerned, any change will be for the better.

Not that the companies can hope for much. Any Norwegian government is likely to have the same general aim: to squeeze the highest possible revenues from the oil companies. Unlike Britain, which is eager to get as much North Sea oil as soon as possible to reduce its outflow of sterling to the Middle East oil-producing nations, the Norwegians are willing to sit back and wait for the oil, if necessary. Production from the Ekofisk field, the first major find to be made in the Norwegian sector, should easily surpass Norway's annual consumption of 8m tons of oil. And there is a lot more to come.

The more oil discoveries that are

Mobil struck it rich

made in the North Sea, the more valuable do the unlicensed areas become, especially those whose geology resembles that of the oil-bearing blocks. There are many attractive structures in the Norwegian sector of the North Sea, east of the Shetlands, that will soon come up for licensing. Shell/Esso recently announced major discoveries on nearby structures in the British sector. The companies stoutly maintain that they will refuse to bid for even the most attractive structures if the Norwegians attempt to squeeze too much from them—by way of royalties, taxes, participation by the recently formed Norwegian state oil company, and every other form of bear hug. But there is a hollow ring to the companies' assertions. They want the concessions more than the Norwegians want to assign them, so the advantages in bargaining must lie with the Norwegians.

The British Government is likely to stiffen its terms too: not only for the North Sea but for offshore British concessions generally. This summer's marvellous crop of discoveries, culminating this week in an announcement from Mobil which suggests that there is a major field in a block northeast of the Orkneys, has more than justified Britain's past North Sea policy: which was designed to stimulate oil exploration as much as possible in waters where only a short time ago many oil companies were reluctant to go. But the success of the policy makes it likely that changes will be made for future allocations, at least for blocks in promising areas. The present policy, or something close to it, is likely to be retained for areas with bleaker prospects.

The British Government has not yet decided how it will go about extracting more money from the oil companies, but it is known to be seriously considering holding more auctions. The first

one was held in June, 1971, on an experimental basis, and yielded £37m. The thought of further auctions makes the oil companies wince. They say that auctions siphon off money that could be better spent on exploration itself. They would prefer increased royalties, production bonuses or any one of a dozen schemes whereby they would pay out only as the oil actually flows in. But the Government is known to like immediate payments as much as the companies hate them. They are simpler than any other method, and they give the Government something dramatic to announce.

The companies console themselves with the argument that there may not be many attractive blocks left unlicensed in the British sector of the North Sea. But this is probably going to change in the next year or two, as increased geological knowledge unveils hidden assets. At any rate, there are some choice blocks still left. The risk element in their exploration should be smaller than it is anywhere else outside the Middle East.

The next round of British allocations is unlikely to be in the North Sea, but in the western approaches and Channel waters off southern Britain. The opening of these waters depends on an agreement with France, which should be signed very soon. If the French start drilling in their waters next year, as is expected, Britain will probably want to do the same, at least to a limited extent. The oil companies are known to be very interested in some of these areas, so Britain may decide to make them pay through the nose for concessions there.

EEC regions

Agreeing to disagree

Brussels

At least one group of Eurocrats is secretly relieved at Norway's decision not to join the EEC. These are the officials responsible for farm policy and

regional development in the EEC commission who have spent the past six months trying to work out ways of dealing with the problems of agriculture in Norway's far north.

The result of the Norwegian referendum reached Brussels just as the ministers of the Six had agreed to disagree on the proposed regional development fund, which has now been pushed on to the summit. Last March the Six committed themselves to a decision by October 1st as the price of Italian acceptance of the first stage of monetary union. It was obvious before the meeting began that the French had no intention of making any concessions in advance of the Paris summit next month, at which regional policy is already one of the main points on the agenda.

The commission has put forward two proposals for channelling money to the less-developed regions of the community. The first, which was approved in principle last March, is to spend \$50m a year out of the agricultural fund on specially-designated rural areas where unemployment is acute. The second is for a regional development fund which would grant interest rebates on investment in roads and other services as well as in industry. The French have insisted that the money should be channelled through the European Investment Bank, or at the very least through a government-designated body in each country, as suggested by the Germans.

Behind this apparently technical point lies a more fundamental disagreement over whether the community should have a regional development policy as such. The French representative, M. André Bettencourt, declared that France did not want the community interfering in something which it considered the responsibility of member states. The commissioner responsible, M. Albert Borschette, said the community's efforts on regional development would always be complementary to national policies, but the commission has, in fact, proposed to set up a standing committee on regional development composed of senior officials for the express purpose of co-ordinating national policies, which will become more urgent than ever in a monetary union.

The British, though determined to push for community action to deal with Europe's depressed regions, were not unduly upset by the decision to postpone the debate until the summit, since this will give them a chance to insist that the regional development

fund should concern itself with unemployment caused by the decline of traditional industries and by industrial rationalisation; hitherto the community has been inclined to think exclusively in terms of backward rural areas.

Japan-China trade

800 million customers

Tokyo

In Japan's ever-hungry business community the establishment of formal relations between Tokyo and Peking is being read to mean the opening of a vast market; one which will accept the Japanese exports and money that are meeting such resistance in the United States, Europe and even elsewhere in Asia. Some Japanese businessmen even believe that they will be allowed to invest in China's heavy industries and social infrastructure projects, as well as reaping the profits of greater trade.

A stream of Japanese economic missions have already visited China. Japan's equivalent of Britain's CBI has proposed the extension of a \$5 billion five-year, low-interest loan to China. Optimists say that the trade between the two countries may grow from \$1 billion a year today to perhaps \$5 billion in 1977, and to more than \$11 billion by 1982. Chinese industrial survey teams in Japan have shown interest in Japanese know-how in oil exploration and development, steel, petrochemicals, cars and shipbuilding, as well as in road construction and rail and subway systems. There is even a suspicion that the Chinese might like to improve their military equipment; Peking has invited Mitsubishi to send a delegation to China but not Mitsui, which is inferior to Mitsubishi only in armaments.

Much of the talk is more heady than

realistic. The Chinese have always been hard-headed about their trade relations: political considerations have been allowed to tip purchasing decisions only when the economic choices have been finely balanced. France has gained no stunning trade dividends from its diplomatic relations with Peking, and Germany has not lost much by its lack of them.

Forklift trucks

Japan's next trick

Forklift trucks may be the next source of friction between Japan and Europe. There are 20-30 manufacturers of various sizes selling in Europe, but in five years three Japanese companies, Toyota, Toyo Umpanki (TCM) and Komatsu, have taken more than 40 per cent of the market in smaller countries like Denmark, Holland and Belgium, and are now concentrating on Germany. The Germans buy something like 10,000-12,000 forklift trucks a year (no figures are published), and the Japanese have already got for themselves something like 15 per cent of the market.

So far the Japanese have concentrated on trucks in the popular ranges, selling for between £1,600 and £4,365 and defined as having a lifting capacity of up to 8,000 lb. They have not shown much interest in the bigger ranges, where capacities go up to 60,000 lb. But within their chosen market their prices are 25 per cent below European ones. Inevitably, the Europeans have argued that their trucks are stronger, last longer, and have a higher trade-in value at the end of their working life, but the dispassionate opinion of the biggest manufacturers in Britain is that there is nothing wrong with Japanese quality.

The Japanese had not made much of a drive in the past in France, Italy or Britain, and the British industry

Key indicators: world commodity prices

Jumping bean
American soyabean looks like reaching a record price of \$3.30 a bushel. The large surplus that forced down prices three years ago has gone. If exports reach their predicted record of 450m bushels, the soyabean will earn the United States \$1.5 billion, mainly from Japan and the EEC. The bean is used in animal food, margarine and as a cooking oil.

Japanese forklift trucks exported to:

	1967	1968	1969	1970	1971
Belgium and Holland	118	194	627	917	1005
Britain	58	122	233	321	442
Denmark	21	26	151	415	536
France	—	—	1	20	46
Germany	28	152	384	1,124	1,568
Italy	—	—	6	36	101
Sweden	1	10	16	58	155

believed that this was because Japanese trucks are mainly diesel or gas-driven and the British preference is for battery-electrics. But now Japanese imports into Britain have begun to boom. Toyota entered the British market 18 months ago and Japanese manufacturers sold altogether 442 trucks in Britain last year. In the first eight months of this year Toyota alone sold 240 and its British agents are stepping up the import of battery-electrics in direct competition with established British manufacturers. They may try to undercut by as much as a third. Some of the world's biggest manufacturers of forklift trucks are based in Britain, including Lansing Bagnall, which claims to be the biggest manufacturer in Europe. They have reason to be worried.

Oceans

Red tide retreats

A sudden plague of microscopic but highly poisonous algae has been sweeping down the north-east coast of the United States; sometimes in a sufficient concentration to turn the sea red. Most of the catch of New England shellfish has had to be suspended, and the industry claims that it is losing more than \$1m a week. The loss will be far greater if the large east coast scallop harvest is also affected. The algae are eaten by many types of shellfish and their poison is absorbed into the meat. More than 30 people suffered partial paralysis from eating poisoned fish before sales were banned. Now that the plague has raged for nearly two weeks, some shellfish have been found with levels of poison 100 times the lethal concentration.

Although the plague is now said to be on the retreat, many New England fishermen are frightened that it will take years to rebuild the public's confidence in clams, mussels and crabs—or even in lobsters, which were not affected by the algae but are being spurned by shoppers. Swordfish meat, whose sale was banned two years ago when mercury was found, has never recovered.

What caused the sudden plague? Environmentalists have been eager to blame man-made causes. The breeding ground of the algae has been pinned down to a site where there were large-scale dredging operations, which may have stirred up unusual quantities of food for the algae to thrive. The plague conditions may also have been helped by heavy rains which lowered the sea water's salinity. Such a plague had not appeared off New England before, although the algae had been known farther south.

The speed with which the authorities banned all shellfish sales contrasts strongly with the inaction in Japan, where sales of fish known to contain

high levels of industrial poison still continue. This week it was confirmed in Japan that poisoning from mercury and industrial chemicals was known to have harmed 15,000 people, but little official action to halt the identifiable sources of pollution has been taken.

Last week in Britain sales were banned of all oysters and molluscs farmed in those parts of the Thames estuary under the Port of London's jurisdiction because of an unacceptably high level of disease-carrying bacteria there. Sales are only permitted if the oysters remain in special tanks of clean water for 36 hours. The dangerous level of pollution has been caused by sewage from new towns.

No corn in porn

Copenhagen

The Danes don't need Lord Longford. Copenhagen's sin business has been in recession for more than a year. Recently the police have been closing down "live shows," the authentically obscene sexual exhibitions where admission costs £3-£8. More than 60 live-show joints have been closed, and the police hope to get the rest shortly.

The nominal excuse is that the clubs are not licensed for variety entertainment but the real reason is not their obscenity but their suspected links with drug peddling and other underworld activities. Some club owners have bewailed the damage this could do to the Danish balance of payments, likely to need more help than ever if Denmark follows Norway out of the EEC. A party of 4,000 Americans are

only a few of the many who have supposedly cancelled trips to Copenhagen because, says the industry, the live entertainment is not what it was. But the tourist organisations suspect that some holidaymakers avoided Denmark just because of its reputation.

Printed porn is also in decline, after a brief boom when censorship ended in Denmark in July, 1969. Where dozens of publishers once flourished, there are now only a handful, and competition has squeezed prices and profits. Color Climax, believed to be the largest porn producer, saw profits drop from £275,000 to £85,000 last year, on a £1m turnover only just maintained. A Swiss national producing porn in Denmark went bankrupt, was found to have omitted to pay his income tax and went to jail. Color Climax bought up his considerable stock, but only to prevent it from being dumped on the market at distress prices. Danish porn sales are now almost entirely for export, either to foreign tourists or through foreign wholesalers. After a brief surge in 1969 the home market all but vanished.

Sales of unillustrated books have dropped almost to zero. The backbone of the business is now lavish four-colour magazines, expensive to photograph and print. Color Climax integrated backwards from the retail end of the business, when this was still theoretically illegal, to its present porn empire of photographic studios, film-processing lab, world-wide mail order and part-ownership of a printing firm. Probably no one could build a similar empire now because profits are too slim.

The business is getting increasingly capital intensive, with emphasis shifting to 8mm colour films. If other countries lift censorship, this will bring in new competition. Germany will probably be the first to do so.

English spoken

Planning a direct trip to the United States? Then, consider the alternative. Fly IBERIA, and enjoy the gift of an unforgettable night in Madrid.

Perhaps a sophisticated dinner in the old Castilian manner - or a light-hearted round of ancient taverns. Watch the pulsating excitement of Flamenco dancers... or simply meander through the old quarters of the city following the lilting gaiety of songs from the four corners of Spain!

Why miss it? Remember that all IBERIA trans-

continental flights "must" pass through Madrid... and we will make sure that the break in your journey is an unforgettable memory!

This is why IBERIA is the airline for the people who know how to travel... how to live. Join them!

olivetti systems

one of them can shorten the queue at your computer

Companies with many branches often suffer because of their centralised computer facilities. Bottlenecks, queues and slow turnaround are just some of the symptoms of an overloaded computer. That's why Olivetti designed the DE 520 system. It links the speed and flexibility of decentralised data preparation with your existing centralised computer facilities. The DE 520 system talks to computers in their language, and to operators through a visual display. It's a modular, flexible system that can grow with your company's requirements. And from the day it starts working for you, it can take a load off your computer's mind.

Leiding's got problems

Volkswagen

It's German wages

Wolfsburg

When the chairman of Volkswagen is driven to comment on the better discipline of Japanese workers, as Herr Leiding did in the course of a press conference on Monday, things must be bad. Volkswagen plainly needs a best-seller to supplement the Beetle, which is now being priced out of some of its best export markets like the United States, but that is the least of its difficulties. They can be enumerated: dollar devaluation, President Nixon's protective measures, the fact that both General Motors and Ford have at last learned how to make small cars like the Vega and the Pinto both stylishly and cheaply, German wage inflation.

But if Volkswagen has trouble keeping the Beetle cheap, after having built 16m cars and outsold even the Model T, what chance has it of making its new models competitive? Capital investment in the Beetle has been written off over a vast output running at 5,800 cars a day. Wolfsburg is the largest factory of its kind in the world, with 125 miles of overhead conveyors, and the chances of achieving the old cost-spreading on whatever models replace the Beetle cannot be good.

The serious competitor is coming, once again, from Japan. Japanese factories have now achieved a mechanisation that is regarded as unattainable in Europe and America. Nor is Japan the only country that can now undercut the west. Before he became chairman of the main company a year ago, Herr Leiding did a stint as head of Volkswagen's Brazilian operation. Brazil, with an output of 1,500 cars a

day, can now export Beetles to Germany for less than the German-built price.

Volkswagen therefore plans to fight not on price but on variety. Herr Leiding says he intends to introduce a new model every year and, because of the urgency, will not allow the usual five years for development either. The first of his restyling operations has just been completed; the engineers thought that they were doing well to compress their original timetable for the job into 18 months, but, with a bit of prodding, they reduced this to seven. British Leyland, under the same pressure to produce a new car or go under, showed a similar turn of speed in launching the Marina, but it is generally accepted throughout the industry that this sort of hustle has its risks.

The Beetle is one of perhaps three cars in the world, the other two being Rolls-Royce and Volvo, that sell on reliability, and Volkswagen's reputation for it took a knock from Mr Ralph Nader's report in America. Mr Nader has his critics too, and much of what he said of the Beetle has since been contradicted. But it would take Volkswagen a long time to recover from the impact of one really bad—in quality terms—car. Herr Leiding is not allowing himself much margin.

World Bank

McNamara's masses

Washington

It was bad luck on the World Bank that it had to share yet another joint annual meeting at which its partner, the International Monetary Fund, hogged all the limelight. A thoughtful speech by its president, Mr Robert McNamara, got the scantest attention.

There was nothing new in the way he censured the rich nations for providing only half the targeted 0.7 per cent of their combined gross national outputs in official development assistance; or in the fact that he is starting almost immediately to try to raise the next dollop of funds, needed by mid-1974, for his soft-loan agency, the International Development Association (last Friday evening, 15 months late, the United States conceded the funds supposed to be due from it to IDA in mid-1971). More unexpectedly, Mr McNamara assailed the maldistribution of wealth in the developing countries. His main worry is not about the impoverished regions that can be pin-

pointed and therefore probably helped—such as the southern part of Yugoslavia, the north-east of Brazil, or the north-east of Thailand. His complaint is that, in the developing nations' pursuit of rapid economic growth, something like 40 per cent of their populations are being left behind and becoming utterly degraded. It is up to the governments of these countries, he believes, to give greater priority to nutrition, housing, health, literacy and employment, even if this is at the expense of some loss of advance for the privileged in these societies. Mr McNamara's world socialism will not be to everyone's liking, which makes him a braver man in asking for it.

Flexible working

Late rush on hours

Many European firms have long been enjoying better productivity, recording less absenteeism and employing happier office staff simply by allowing them to choose when they start and finish work. In Germany, more than 1,000 firms and 1m workers—including unions that originally opposed it—operate a system of flexible working hours.

In the past two or three months more British firms have begun to adopt flexible systems. On Monday, London and Manchester Assurance announced that it is introducing a scheme which could give its 450 office staff a four-day week. Wiggins Teape is one of the few British companies to have introduced such a scheme fully. The firm had a three-month trial last winter, and now about 800 staff work flexible hours. Even the British civil service is investigating its possibilities. Hengstler Flextime Ltd, which supplied most of the time-recording equipment in Germany, knows of 400 companies undertaking trials.

Systems vary from firm to firm; but generally all that is required is that staff complete a certain number of hours each week—possibly building up overtime to get more free time later—and that they be at work during peak morning and afternoon periods.

German workers regard such schemes as a job incentive. Those caught cheating, by leaving an identity key plugged in when not there, are not usually sacked, but put back on the dreary nine-to-five routine. The schemes do not always catch on. At Unilever in Holland, 1,140 workers could use the system if they wanted, but only 54 per cent now do so.

BUSINESS

Investment

The market doesn't believe that peace is breaking out

The London market greeted Mr Heath's policy for incomes with a sigh, and the rejection of it by the unions with a whimper. On Wednesday the Financial Times index of industrial shares slumped by 10.6 points to 470.4, the low point for the year. On Thursday the slump went remorselessly on. Sellers stayed away from the market, knowing there were precious few buyers around, and the index went down another 8.8 points to 461.6.

If there is any chance that Mr Heath's arithmetic will work out right, this sort of reaction must be very silly. His assumption is that the value of gross national product will rise by 10% over the next year (5% in real production, and 5% in cost inflation), while wages and salaries take about the same proportion of gnp as now. That would imply a rise in total company profits by considerably over 10% (see page 77). With the p/e ratio on the FT-Actuaries index already down to 16.85, a rise in profits by 10-15% might normally put equity prices up by more than that. But the market's refusal to cheer at Chequers is another sign of the present lack of confidence

which is the smell of a bear market. Attention is diverted away from the bread and butter job of assessing the changes in earnings that individual companies and sectors are expected to turn in towards the broader issues of how the country is being governed, whether anarchy is breaking out, whether the social fabric will be unstitched by continuing inflation and industrial unrest, and gloomy talk of that sort.

In the two weeks since *The Economist* announced that the great bull market was over, the market has fallen by nearly 10%. We were reluctant to say that the bear market had begun, because the strong undercurrent of company profits looked as if it would buoy the market up against the bearish tide, and keep the index bobbing around. But sentiment has got worse. Many brokers and chartists are now looking down to as low as 420 before the institutions come back to the market in force to pick up what will, on p/e terms, look like bargains. However, it would be quite wise to sell off stocks which are well over the market average in p/e terms, as these

are the ones the bargain hunters might spurn.

The only thing now that will put the market back on a bullish course is a prices and incomes policy that would work. There are no frissons at the thought of dividend restraint. As the chart shows, the last bull market overlapped with the last dividend freeze. But there is great pessimism in the City that any statutory policy would in fact work.

Australian market Pommies go home

Sydney

Mr Billy McMahon, prime minister of Australia, is fighting for his political life. This week's multiple therapy, which ought to have hit the Sydney market but left it strangely unmoved, is intended to take the sting out of two threatening issues in one massive application. Australia is to fight against foreign takeovers and also against short-term capital inflows. They have almost nothing to do with each other but Australia persists in treating them as a single disease.

On takeovers the government has uncharacteristically wrapped itself in the Australian flag. According to Mr McMahon, times have changed and the country
