July 8, 1972

In the threshold

When the TUC turned up at No. 10 on Tuesday seemed that the Government wanted to try to bring an incomes policy based on allowing cost of living adjustments and threshold movements. Mr Vic Feather is despairing, but the scheme is most unlikely to work. The CBI may keep its price restraint for three months, and then find that it ends just as the Government has to impose its long-delayed freeze, page 91. The employers say they would like a threshold agreement, but a 30 per cent wage rise as well, page 92.

Real alternative?

Powell will come to power in a national calamity which inflation may yet bring about. How he could make himself a better prospect for public respect, page 19.

Concorde caper

It seems likely, the Government gives in to pressure to develop a bigger, more efficient Concorde, it will be almost impossible to develop any other aircraft in Britain, page 76.

No go

The army in Ulster is back to where it came in—trying to contain Protestant mobs. But if the politicians of both communities do not act they will be engulfed by their own extremists, page 14. The army versus the UDA, page 23.

The Emu's not extinct

A compromise suggestion on European money which Mr Heath could put to M. Pompidou and Herr Brandt, page 13. The second week of sterling's floating has not been a happy one for advocates of fixed rates, or the departing Herr Schiller, page 79.

Fence strengthened

With M. Messmer as prime minister France isn't likely to be a very co-operative neighbour to its fellow-Europeans, page 31.

Fence mended

Peace isn't about to break out all over Mrs Gandhi's subcontinent, but she and Mr Bhutto have started to sort out their particular corner, page 16.

Union monopolies

SIR—Among the reasons put forward for introducing industrial relations legislation under the previous or present governments has been the need to confront the unions when they are acting in a monopolistic way. It has not been common to describe the unions as acting in a monopolistic way, but how else can one describe a situation where a union representing all the employees of a certain kind in a certain industry attempts to negotiate on a national basis with one employer, particularly if that employer is a nationally-owned undertaking. When people talk about the need to maintain the freedom of collective bargaining, they cannot be thinking of a situation in which one group of people can demand a particular price for their services and if they do not get it hold the country to ransom. The sanctity of free collective bargaining in such a situation becomes a farce.

With the developments in the miners' strike, and recently on the railways, the situation has got quite out of hand. This has been made worse rather than better by the Government's inept use of the Industrial Relations Act, cooling off and ballot procedure during the railway dispute. The man on the shopfloor now thinks that if he is trying to have a strike to secure an increase, and a strike ballot is called, if he and a majority of his fellow workers vote in support of the union it will be only fair for the Government to see that he gets the full rise that he has been demanding. The truth of the matter is that the position of union bargaining monopolies should be dealt with like any other monopoly, using the same legislation, and not by using the Industrial Relations Act, which is completely unfitted for the purpose.

The basic acts covering monopolies and restrictive trade practices in Britain are the Monopolies and Restrictive Practices (Enquiry and Control) Act, 1948, and the Restrictive Trade Practices Act, 1956.—Yours faithfully, PETER MCGREGOR
Bramhall, Cheshire

How to prevent strikes

SIR—Mr Raymond Kershaw has suggested (Letters, June 17th) that strikes be prevented by letting a computer decide the settlement terms. I would like to suggest another method by which inconvenience to the public caused by a strike can be avoided in those cases where public pressure is not a determining element in the outcome.

• A strike is called when an employee is

so dissatisfied with his employment situation that he is willing to forgo wages in order to deprive an employer of income. Since the dispute concerns the employee and employer there is no reason for the public to be harmed.

In order to limit the effects of the strike to the parties directly involved, I suggest that when an employee "strikes" he continues working but his wages be reduced immediately by a certain amount and this amount be placed in escrow. At the same time a part of the income that the employer would have lost had the employee stopped working is also placed in escrow. These escrow payments continue until a settlement is reached; the accumulated funds are then either returned to the employee and employer, or donated to charity, or whatever. In this way the public is not inconvenienced because the goods and services continue to be provided, but at the same time both the employee and the employer are under pressure to settle because both are not as well off as they were before the "strike" was called.

Many details would have to be worked out, such as determining the proper share of both wages and income that should be placed in escrow and calculating the effect on income when only a part of the work force strikes. Maybe here is where Mr Kershaw's computer can play a role.—Yours faithfully, DONALD G. RICHARDS
Vienna, Virginia

Martyrs or militants?

SIR—In your issue of June 17th you associate the men who are opposing the use of "containers" with the Tolpuddle martyrs. Is not this to give them an undeserved halo?

Surely if an historical comparison is wanted they should be compared to the Luddites.—Yours faithfully, L. J. CADBURY
Birmingham

Air traffic control

SIR—Your piece on air traffic control (June 24th) criticises the Civil Aviation Authority for buying the FAA's 9020D air traffic control system, using IBM's 360 computers, instead of going like Eurocontrol for the later and more powerful IBM 370s.

The article fails to appreciate that the critical feature of a flight data processing system is software development. That for the full Eurocontrol 370 system is still in process of development, and it is not possible to forecast when it will be ready for operational service. Furthermore, it would need considerable modification and development to be applied to United Kingdom airspace.

The software for the system we are getting from the FAA, on the other hand, is already operational, reliable now, is capable of adapting to the requirements of the London Air Traffic Control Centre and provides a substantial

margin over estimated needs. It is vital for the United Kingdom to bring this system into initial operation by 1975.

In the issue of May 20th you recommended a computer (the Goodyear Staran IV) as a solution to our air traffic control problems. This has not been programmed for flight data processing, and in any case is much too small for such an application in United Kingdom airspace.—Yours faithfully,

G. W. SEALLIBRASS
Controller, National
Air Traffic Services,
Civil Aviation Authority

London, WC2

SIR—You comment on the "hideous air traffic control problems in the south of England" (June 24th). These are magnified by the proximity of Luton to Heathrow, involving a special rules zone for the former.

The quickest easement of the problem would be secured by a much more severe curtailment of aircraft movements at Luton than that recently announced, and that not until 1973. You will know that there is ample capacity at the airports in the Midlands and the north to serve even one in those areas locally, so relieving pressure on the air space in the south.—Yours faithfully, A. W. DAVIES
Harpenden, Herts

Trusting the communists

SIR—Your Paris correspondent (June 18th), reporting on the agreement between "M. Mitterrand's Socialists" and "M. Georges Marchais's Communist party, much the larger and better organised of the two," hazards his guess that for the French electorate "the red bogy has lost its force."

All liberals—and this I know includes the editor of *The Economist* and, I should have hoped, his Paris correspondent—must wish that this guess is mistaken. For we have, surely, been given no reason whatsoever to believe that this particular leopard has changed his spots: that "M. Georges Marchais's Communist party, much the larger and better organised of the two" parties to this alliance, will not employ every office it may obtain in order to establish its own irremovable dictatorship.

If the threat is, as it so obviously is, real the expression "the red bogy" is inept. And if your Paris correspondent does indeed wish to suggest that all the past experience of democrats who made alliances with powerful communist parties is now happily no longer relevant, he should not simply suggest this in a contemptuous catch-phrase. He should express his belief outright; and then give us reasons for thinking as he does.

M. Mitterrand had a choice of, and has chosen communists. This makes it even less likely than it is that President Mitterrand would, where, for instance, President Ben

MANAGEMENT APPOINTMENTS

£7000 PA AND OVER

Group Commercial Director

Electrical Household Appliance Industry

A Group Commercial Director is required for this appointment in a very large and profitable group manufacturing and selling throughout the United Kingdom and world markets.

He will be aged between 35 and 45 and will have behind him a successful record of professional achievement in marketing preferably in the field of consumer durable products. He will require to be of the highest personal, intellectual and managerial stature if he is to succeed in this most demanding and challenging role.

He will be a member of the Group's top management team and will be responsible to the Managing Director for the overall marketing function, product development, sales and distribution. He will lead the Group's commercial activity during a period of rapid change as Britain enters the Common Market.

The remuneration will be negotiable and will be in excess of £10,000 per annum plus the usual benefits.

We are a leading firm of International Management Consultants who are advising on this appointment. Apply in confidence giving full details of background experience, qualifications and achievements to Box Number 2509.

Managing Director DESIGNATE

• SPECIAL tool steels are the main product of this company which has recently been doubled in size by an important acquisition. Turnover exceeds £4m from two plants and further profitable expansion is projected.

• THE present Managing Director retires in April 1973; his successor will be responsible to the Group Chairman for profitable operation of a business which is largely autonomous.

• METALLURGY or engineering will probably have formed the basis for a successful career in general management involving full profit responsibility.

• SALARY negotiable above £7,000 with attractive fringe benefits.

Write in complete confidence to Dr. W. M. Dixon as adviser to the group.

JOHN TYZACK & PARTNERS
LIMITED

10 HALLAM STREET • LONDON W1N 6DJ

Economic Adviser

to the Chairman of a major British bank with extensive overseas interests.

• THE role involves the provision of economic intelligence and reviews on a wide range of overseas countries and markets, and of ad hoc assessments for the bank of economic issues. An ability to guide and administer the work of a small department of young graduates is important.

• THE requirement is for a qualified economist, preferably with some knowledge of African and Far Eastern affairs. Familiarity with the workings of international bodies like the I.M.F. would be apposite.

• AGE over 40. Salary around £7,000.

Write in complete confidence to A. Longland as adviser to the bank.

JOHN TYZACK & PARTNERS
LIMITED

while the notoriously stalinist French Communist party will surely not keep promises which the supposedly different Czech Communist party of Gottwald and Clementis so decisively and unhesitatingly broke in 1948.—Yours faithfully,
Alsager, Stoke on Trent ANTHONY FLEW

Computers for commies

SIR—Mr Szuprowicz, in his letter to you (June 24th), goes a long way towards correcting the comment in your issue of May 27th. In particular he has pointed out ICL's very considerable progress in the Soviet market. There are, however, a number of points that are seriously misleading and need to be corrected.

1. ICL's computers may be installed in key ministries but no ICL computer has been installed in a "key defence complex ministry" or, for that matter, in the ministry of radio industry. The large 1906As mentioned are installed in a high energy physics research institute which is open to scientists from all over the world.
2. The actual ICL computers installed or on order in the Soviet Union are: two 1906As, three 1903As, one 1905E, five 4-50s, two 4-62s and two 4-70s.
3. ICL, in addition to employing some 14 Russian staff, has British staff based in Moscow now numbering 28, who are working closely with their Soviet customers in the successful installation of normal data processing work.

It may be of interest to note that IBM has maintained an office in Vienna specifically for its east European business since 1967, and employs a staff four times greater than ICL employs in this market. ICL's success in the Soviet Union and other east European markets is due to the quality of its products and sales support.—Yours faithfully,
P. V. ELLIS
Joint Assistant Managing Director, ICL.
London, SW15

New Zealand, Fiji

The New Zealand budget has come as a surprise. Spending is encouraged despite rising public expenditure and unemployment, and falling wool sales. Wider investment is the key to future stimulation of the economy. The Fiji elections unexpectedly returned Mr Mara who has reshuffled his cabinet and speculation has provoked the introduction of a capital gains tax. Implications of recent developments are analysed in our latest New Zealand/Fiji QER.

Every quarter the EIU publishes 70 reviews covering 150 countries. An annual subscription to one review (4 issues and an Annual Supplement) is £15 (US\$40). Airmail postage £2 (US\$5). Single copies £4.50 (US\$12), payment with order please.

Guerrillas in Lebanon

SIR—Your interesting article on Lebanon (July 1st) left out one very important factor in the situation. This is that Lebanon signed an actual agreement in November, 1969, under which Palestinian guerrillas were given the "right" to use Lebanese territory for military operations against Israel. The agreement laid down that the guerrillas should not fire across the Israeli frontier but should "only" launch attacks into the interior of Israel from bases in Lebanon.

As long as the Cairo agreement is in force, and Lebanon is obliged by its Arab "friends" to observe it, Israel has to take periodic counteraction against guerrilla bases. It should be noted that neither Egypt nor Syria will have guerrilla bases in their countries, while Jordan expelled the guerrillas after a bitter and bloody battle. Lebanon is being exploited by Egypt and Syria for operations which those countries do not want carried out from their own soil.—Yours faithfully,
London, W8 TERENCE PRITTE

Insurance

SIR—I should like to congratulate you on the excellent survey "Insurance 1972" (June 24th). But I think it would have been even better had it shown some more penetrating knowledge of the successful structures of continental insurance markets.

For instance, the report by Mainz University scholars, mentioned on page 34, not only concluded "that it is perfectly possible for the government to safeguard policyholders' security by simply controlling insurers' solvency margins properly, without any need to control premium rates too," at which prospect "German insurers were terrified." It also suggested, logical within its own framework of thought, that insurers should establish a fund to pay claims against any insolvent motor insurers. This would have compelled prudent companies first to lose their business to stupid competitors and then to pay for the losses of those competitors. It was such ideas which terrified German insurers.

The survey then continues to describe recent problems of the British motor insurance market, among which the V and G crash was by no means the only one; but there is not a single reference to the fact that such problems have been much less pronounced on continental markets and not a word of doubt is raised in respect of the superiority of the British system.

With respect, in our market during the past 20 years no insured person who had paid his premiums suddenly found himself without cover, no traffic victims were left without the compensation due to them, and losses of insurance companies have remained within reason. Thus, after all, there may be some value in carefully balanced co-operation between insurers and governments.—Yours faithfully,
Stuttgart W. H. BÖRNER

RPD

SIR—I would like to bring to your attention the gross error contained in your article "Monetarists' gain" (June 24th). In it you stated that RPD "did not even exist as a concept, let alone in a statistical series, until early this year." Not only has RPD, as a concept, long predated 1972, it has been used as an approach to money stock analysis for some years now. The most extensive, if not the only, user has been the Federal Reserve Bank of St Louis, well known throughout the Federal Reserve System as the stronghold of monetarist theory and application. Data and charts of reserves available for private demand deposits have appeared for years in the bank's monthly Monetary Trends and its weekly US Financial Data. The reserves available approach was discussed in the bank's publication, Review, of October, 1967, in an article by Leonall C. Andersen, vice-president of the bank, entitled "Three Approaches to Money Stock Determination."

The solitary difference between RPD as currently applied by Fed and RPD as applied by Federal Reserve of St Louis, in their analyses, is that the former takes in all private non-bank deposits and the latter all private non-bank demand deposits. Monetarists would not consider the difference to be significant.—Yours faithfully,
LEONARD A. SIWEK
New York

Rebels on the rack

SIR—As reported in your columns (June 24th), Mr Ronald Bell, QC, now Member for South Bucks, is about to fight for his political survival as the official Conservative candidate for the new Beaconsfield constituency.

At the first ballot Mr Bell polled 47 votes; the runners-up 27 and 26. At the second—the third candidate having been eliminated—Mr Bell and the second candidate polled 50 each. A final choice is to be made at a special general meeting of all members of the Beaconsfield Constituency Association on July 17th.

Here we have a first-hand example of the transferable vote system in action: for good or ill must be a matter of opinion.—Yours faithfully,
JOHN NORTH
Beaconsfield, Bucks.

Afrikaans

SIR—I was surprised to read in your review of Mr Oliver Ransford's "The Great Trek" (May 13th), that you refer to Afrikaans as an "ugly" tongue. Ugly to whom: to the reviewer, *The Economist*, or to the English-speaking nations?

Are Dutch, German or, for that matter, all Germanic languages ugly? Or are all foreign languages, according to *The Economist*, ugly to the English ear?—Yours faithfully,
A. J. J. WESSELS
Johannesburg

How to tell good room service from bad room service.

- Nice guy that you are, you'd probably never complain about missing salt and pepper shakers, a broken egg or a late start.
- But the way we see it, you have every right in the world.

Maybe it's just that we define "elegance" with a little more precision than most people. To us it means an ease and a style and a way of doing things.

And a whole lot more than just hot water.

That's why our 63 hotels around the world are subject to no less than 800 checks on everything from blankets to banquets, several times a year. It's a Quality Control System we've devised to tell the good guys from the bad, middling, or mediocre ones.

And, speaking of good guys, we've got some pretty special ones on our side.

In fact, you might think our worldwide staff was involved in some incredible, on-

going conspiracy, with one single aim: To make you happy. And we don't deny it.

So don't be surprised when that simple little breakfast of yours comes complete with a bunch of flowers and a bright-eyed waiter with a smile a mile long.

Or when you sit down to dine in a setting that's lush and rich and right out of Victorian England or Louis XVI, or any of 60 magical eras.

Our people just happen to care a little more than most people. It's that simple.

And that philosophy has gotten us around the world and back again. 63 times over, all in just 26 short years. That means thousands of rooms. Millions of satisfied guests. And—need we add—a few raised eyebrows in the hotel industry.

But every single one of them is a feather in our cap.

For reservations call Inter-Continental Hotels or your travel agent.

Inter-Continental Hotels. How to tell the good hotels in:

Ford introduce Perpetual Motion.

Perpetual Motion is the name of the vehicle leasing plan we've devised in conjunction with our dealers. We don't just sell vehicles; 50 years in the transport business has shown us various ways of solving different transport problems.

Have a look at these reasons for leasing vehicles rather than buying them, they may surprise you.

1. A Ford Leasing Dealer will undertake all the day to day running of your fleet. You can drop all the paperwork in his lap, and get out of the transport business and back into your own.

2. You can release a lot of useful capital previously tied up in your fleet.

3. If a leased vehicle breaks down, the dealer will fix it. And, under some plans, if it takes more than a day and a half to repair, he'll replace it. No worry, no cost, no fuss.

4. You can lease 1 or 100 vehicles. Whatever the size of your company, you'll get the leasing plan that is tailor-made for you.

5. Together with our Dealers we can claim to have more experience in the transport business than anyone else in the country. We're the experts.

Perpetual Motion, Ford's vehicle leasing plan. We'll stop at nothing to keep you on the move.

If you think your company could benefit from Perpetual Motion, fill in the coupon and we'll put you in touch with your nearest Leasing Dealer

Only our terminal in New York, can get you from seat to street in 15 minutes.

The BOAC Terminal at Kennedy has been designed for the future. Which means it will be working well below capacity for years.

You can get through its immigration and customs and baggage areas so fast you'll normally find yourself standing on the sidewalk 15 minutes after you step off the plane.

No other terminal into New York comes near it.

And this is just one of many ways we

lead across the Atlantic.

No other airline, for instance, flies direct to so many major U.S. cities.

No other European airline offers you a choice of 80 flights a week to North America. And no other airline offers you a choice of flying 707 or VC10 or 747.

In fact no other airline in the world serves America better than BOAC. Not even the Americans.

We'll take good care of you.

Up to the threshold

The 34 leading members of Britain's trade union movement crowded into No. 10 Downing Street on Tuesday, after having reached an unfriendly agreement that only two of them would be allowed to speak. The immediate result was the sort of party you would expect if 32 trade unionists sat silently drinking your whisky in your drawing room, watching intently that their two spokesmen did no more than utter wooden statements in respect of and having regard to rude motions about the Industrial Relations Act passed by duly-authorised bodies lower down.

Mr Heath nevertheless seemed well-pleased with this experience, because the two brothers who spoke did not instantly reject his proposal that a small committee of cabinet ministers and union leaders should hold urgent discussions with a formal agenda later this month. The Prime Minister hopes that this committee will help to work out the next sort of incomes policy at which he appears to have half-decided to have a stab. It is a policy which might, in the very short term, and provided everything went absolutely right, look slightly better than the present mess; but it would be innately bound to make Britain's economic situation even worse once things in it started to go wrong.

Although the proposed agenda for the committee also talks of conciliation procedures and special help for the lower paid, Mr Heath wants the central features to be cost-of-living links and threshold agreements. The essence of the half-formulated scheme apparently runs somewhat as follows, although we have inked in sample figures because the Government does not seem yet even to have pencilled them (and may well make its opening asking bids tougher if the pound sterling continues to fall). The hope is that henceforth most wage rises might be held down near to rises in the cost of living index (say, 8 per cent wage rises if the cost of living stays just over 6 per cent higher than a year ago). Then the Government would smile favourably on threshold agreements, which would allow the workers another rise if prices increased during their annual contract period by more than, say, 4

per cent. But the hope would be that 5 per cent economic growth (which is Mr Barber's aim for 1972) plus a leaning on profit margins by a continuation of Confederation of British Industry's 5 per cent maximum price rises in the minority of goods under its control might hold down the rise in living costs, even after 10 per cent wage inflation, to less than 4 per cent. Then there would be no threshold pay rises, and the near-to-cost living increases in the winter of 1973-74 could be to something less than 4 per cent. The golden de-escalator would then be under way.

Slow, quick, quicker

There is as yet no certainty that the Trades Union Congress will even pretend to co-operate with this scheme but something like it is being warmly discussed by cabinet ministers just now. It is therefore important that our commentators should discuss it more coolly. The most significant feature of any such system is that it would be extraordinarily fitted with built-in destabilisers which would cause any failures in the system to become breeders of other failures. When any big union gets a grossly inflationary rise above the new near-to-the-cost-of-living-norm (and, of course, some big union will soon be pretty certain to do so), this would force up the cost of living and provide an accepted case for the unions to get new threshold and end-of-the-year rises. The device is one for trying to stop the inflationary spiral by promising that the inflationary spiral will be automatically stopped if (or rather when) it has unfortunately failed to be stopped.

A key element in the plan is reasonably to trust that Britain can aim for 5 per cent economic growth in 1972 while underutilised resources are being re-employed, and not unreasonably to forget that there will be a slowdown in growth once resources are fully employed; the scheme builds in a worsening of inflation for when the bad news of slowdown breaks. One danger is a blind eye may be turned to the fact that an 8 per cent a year negotiated wage rise at a time when output

rising by 6 per cent does not lead only to 2 per cent cost inflation per unit of output, because piecework and overtime and other agreements mean that earnings rise by more than negotiated wages do at a time when output is going up. If somebody got an 8 per cent rise a year ago, since when prices have risen 6 per cent, negotiators under the index scheme will probably assume that his living standards have fallen by 6 per cent since the day after his last wage rise—and forget that by giving him over 6 per cent now they will put his money wages up by over 14 per cent compared with one year and one day ago, which is a fine recipe for keeping an existing inflation spinning if production is rising by only 5 per cent a year. There are many other inconsistencies, all arising from one misconception. You really cannot introduce an incomes policy to curb inflation by saying that you will be realistic enough to allow modifications in it to the extent that there unfortunately is an inflation.

From confrontation to anything

Why has so cool a rationalist as Mr Heath half-clutched at this quite unsustainable straw of cost-of-living adjustments? He told the Commons on Monday that the alternatives lay between inflation, confrontation, agreement and legal compulsion. The political truth is that there is a confession of defeat by the advocates of confrontation, a familiar blurring of aims by the apostles of agreement, and a residual misunderstanding about legal compulsion by the Prime Minister himself.

The advocates of confrontation, who used to be the hawks in the cabinet, are no longer confident of leading resistance to the next wage demand grossly in excess of 10 per cent: they are no longer willing to take the public and party blame when resistance is seen to have collapsed after the next successful strike or go-slow. The ministers who are apostles of agreement instinctively divide trade union leaders into baddies like Mr Jack Jones who are believed to be after political ends (ie, are willing to bring gross national product down in the hope that the Tory Government will then be brought down too), and goodies like the present Sir Sidney Greene and the future Sir Joe Gormley who might like to sign an agreement but have indicated that they cannot stand up to their militants if they do not get wage rises at least equal to rises in the cost of living. The aim of the doves in the cabinet is presumably to secure some less formal version of the "declaration of intent" to hold down wage demands which the TUC signed with Mr George Brown in 1964, but which it then shamelessly broke; or of the "solemn and binding undertaking" to reduce strikes which the TUC signed to get Mr Harold Wilson to withdraw his industrial relations bill in 1969, but which it then shamelessly broke; the doves do not realise that any new agreement with the TUC will similarly not be worth the paper that it is not yet written on.

Lastly, the Prime Minister's reluctance to move to legal compulsion is still largely based on the fear that some union leaders and shop stewards would not accept it, and on the argument that you cannot put people in prison for trying (or even managing) to get wage rises. It is only slowly dawning that the solution must be to

make the enforcement through the tax system, as under the proposal to impose surcharges on workers' weekly insurance contributions whenever earnings per employee in any workplace rise by more than 6 per cent above their level a year ago (with provisions for appeals, arbitrated exceptions for special cases, putting the money into escrow for deferred payment instead of into the insurance fund, any other trimmings you like). It would not be easy to organise a strike against that, any more than it would be to organise one against an increase in PAYE income tax. If Mr Jones did try to call one, Mr Heath could threaten to call a general election—and in those circumstances would coast to victory, even although the Labour party would hasten to get off the hook of appearing to support Mr Jones in any way whatever. By contrast, any proposal to fine employers who gave excessive wage increases would be much less effective, although it seems to have more support in Whitehall.

Distortions in the meantime

It is by legal compulsion that Mr Heath will have to tackle wage inflation in the end. That end might be only a week or two off, and a resort to a statutory policy might fortunately be expedited if the TUC refuses even to discuss the alternatives in Mr Heath's proposed urgent committee. However, just as the intention up to a fortnight ago was not to float the pound, so the present intention of the Government is to try to resort to a voluntary policy of cost of living adjustments during a period while the necessity for the inevitable eventual statutory policy is denied.

It is therefore worth giving warning of the distortions that may be introduced if and while this temporary expedient is tried. One incentive may be to try to stop the pound floating down too far (ie, to divert resources away from the most important form of production, which is exports). Another may be to lean on profit margins through CBI freezes (ie, to divert resources away from the second most important form of production, which is fixed investment). Private enterprise will respond to this squeeze on margins by laying off workers (ie, by increasing unemployment), but nationalised and subsidised industries will not be allowed to do this; the Government will therefore increase its enormous aid to any nationalised and subsidised industries like shipbuilding that are in secular decline (ie, Mr Heath will continue to see that employment is particularly strongly maintained in the least economic jobs). There may also be an incentive to distort tax and subsidy policy in order to doctor the cost of living index, and some of this doctoring (eg, in respect of food prices) may cause trouble with our European partners. Maybe these distortions will not be very large. Maybe they will even seem worth suffering while production rises and before the built-in destabilisers to any price-linked wages policy cause the system to be discontinued with a bang. But those destabilisers must wreak their effect in the end. The most that can be hoped for from the price-linked wages policy is that it may very temporarily check our rush over the cliff edge, so that we may briefly dither on the threshold of a dead end.

Saving the Emu from extinction

Europe's curious bird, economic and monetary union, needs to adapt itself still further to the facts of life. Mr Heath should say so now

It may not appear very obvious how Europe can get much good from a week when Europe's newspapers are bemoaning yet another Eurofailure in Bonn, when resignations and probable elections are shattering the chandeliers in Paris as well as Bonn (see pages 31 and 79) and when President Pompidou of France is wrongly reported by the British press as demanding a return to fixed parity for sterling as a precondition of British entry into the common market on January 1st. But the fact is that Europe has managed to pick its way through this political tangle, and the time is now ripe for an initiative which could keep it in the clear. The chance was first created by the week in which Europe's own monetary rules helped to provoke Britain's correct decision to float the pound. It has been kept open through the subsequent fortnight because, despite some muddling by the Six, these two weeks have yielded the best discussion in a long time about the future of Europe's plan for "economic and monetary union," Emu.

The opportunity is there. For the debate about Emu, rather than when or how to hold the summit of the enlarged common market, or who will be in power to attend it, is what Europe's sensible hesitations are now about. President Pompidou arrived in Bonn on Monday with weaknesses in his European policy which tough talking did not disguise. He was up against an incipient change of his prime minister in Paris, he was in a corner of his own making on the subjects of European institutions and the site of Europe's future diplomatic secretariat, and he was at last starting to realise that the scheme for narrow exchange margins between a block of European currencies will not survive as some mystical expression of political will but will make sense only when policies eventually exist to help Europe's national economies to keep in step.

Herr Brandt entered this regular Franco-German summit meeting even weaker than M. Pompidou, with his powerful economics minister, Karl Schiller, on the verge of resignation, and his government needing to under-fash from nothing a west European success to undercut the Christian Democrats in the likely November election. He failed to screw M. Pompidou down, at least for the moment, to holding the proposed European summit in October. So by the standards of the journalists present in Bonn the two sides, particularly the Germans, were judged to have failed.

The idea Ted could propose

But a closer examination of what went on in Bonn shows that these negotiating weaknesses of France and Germany, at a decisive moment in Europe's monetary life, may in fact prove to be a blessing. The possible delay in the summit is a result not only of weakness but

of conscious recognition by both the French and the Germans that, given time, someone somewhere might have an idea that could save Emu from its own inconsistency. This could be the British Government's opportunity, and Mr Heath's in particular, to give a lead.

The state of play in the Emu game is as follows. Last year the Six hoped to start a scheme for narrowing the margins between their currencies, an idea which became christened the "snake in the tunnel." This was washed into oblivion in May, 1971, when the D-mark was obliged to float. France demanded that the whole community go over to a two-market system of exchange control, which would protect ordinary trade transactions from the onrush of footloose dollar capital. Germany, in the person of Herr Schiller, refused, and only in late 1971 did it even introduce modest capital controls to prevent the mark floating up too high. France equally brusquely refused to discuss Herr Schiller's half-hearted suggestion that Germany might be willing to finance a joint float of all European currencies as a block against the dollar.

After the Smithsonian agreement re-pegged parities against the dollar in December, Europe put a new snake together, with two important additions. First, it was tacitly acknowledged that living inside the snake did not mean that currencies whose value got out of line could not jump outside for a moment to change their parity, provided they quickly came back into the snake again at their new parity. Second, the Germans cleverly arranged that intervention among Europe's central banks to keep their currencies inside the snake should take place only in community currencies, and that any debts run up among the banks should be repaid within the month. It was this system which, as the Germans had intended, had the beneficial effect two weeks ago of persuading the first test case, Britain, to take early and sensible action once sterling was shown clearly to be overvalued. Last week the Italian lira nearly followed the pound out of the snake. It did not, partly because Frenchmen were worried that the whole scheme would go west if two currencies were out at once, partly because the Americans twisted Germany's arm not to let it, and mostly because Germany does not believe the lira to be genuinely overvalued.

French opinion on all this is split—ranging from the straight disapproval of a monetary paleolithic man like the foreign minister, M. Maurice Schumann, to M. Giscard d'Estaing at the finance ministry, who understands very well what a sensible thing Britain has done, but does not say so too loud. President Pompidou is in the middle, veering towards M. Giscard's view, provided a long British float does not lead to a pattern in which Europe's currencies float more often than they stay still, killing off the common farm price system in the process.

What is new to Europe's monetary discussions, and was particularly in evidence in Bonn this week, is a string of conciliatory attitudes between France and Germany which with time could lead to a compromise way of protecting the system at least against a flood of dollars. Thus the sterling float has (a) reconcentrated French and German minds on getting international monetary reform off the ground; (b) got Germany, even under Herr Schiller, telling the French in Bonn that it wants to study the French double market system to see if it might work in Germany; (c) got M. Giscard admitting that the pure French double market system probably won't work in Britain or Germany after all, because of the different British and German balance of payments structures and banking systems, and that France is no longer a priori against a joint European float; and (d) had M. Giscard actually volunteering that Europe's currencies cannot be expected to stick together, joint floating or whatever, so long as real economic co-ordination does not take place. It is here that the whole system will break down time and again, in the end destroying the common farm system which France so wishes to preserve. National sovereignty being what it is, there is no early hope of effective common economic policies, beyond helpful but inadequate regional and industrial programmes.

Britain, through Mr Barber and Mr Heath, has constantly said that it supports monetary union. At the same time, it should now point out that making a crisis of every occasion when a European parity gets out of

line, which they all inevitably will from time to time, will be the best way of sinking monetary union and with it the farm policy. The Ten should formally incorporate into the snake the idea that when one or more currencies get patently out of line they should, as sterling did a fortnight ago, float out of the snake for a limited time. In the present instance, for example, a statement from the Ten would say that

it is the intention of Her Majesty's Government to re-fix the value of the pound at a time during the month of October when the Government and the Bank of England, in consultation with Britain's partners, shall decide that the sterling exchange rate has reached a more realistic level. The pound will then rejoin Ecu at its new parity.

Germany and most of its partners would welcome such an idea. France could be persuaded, once it was shown that the occasional absence of one or more currencies from the snake for a month or two every couple of years would not wreck the farm price system (as the far worse experience of last year clearly showed it would not)—indeed, would protect it better than having Europe teeter on the brink of crisis every time a currency gets out of line. Whenever Europe's currency alignments were clearly all awry at once, the whole snake might be consciously dropped for a three-month period, during which time they could float to new values against one another before setting the snake up in business again. A formal announcement of this policy would earn for the Ten the best of the world of fixed parities and of floating.

A patched-up peace

Mr Whitelaw, for all his virtues, is no miracle worker. And if the political leaders on both sides in Ulster do not recognise that soon they will be engulfed by their own extremists

It is almost time once again to despair completely of Ulster. Indeed, very many British people, including some politicians, already have. That is understandable. Less than three years ago the army went into the streets of Northern Ireland to separate the Catholic and Protestant mobs, but largely to protect the Catholic community. Four hundred dead and over 4,000 injured and maimed soldiers and civilians later, casualties mostly caused by Catholic gunmen, the army is once again attempting to contain the Protestant mobs. But the wheel has turned full circle only in the sense that Ulster is now as close to civil war as it has ever been. In the meantime, most of the hopes of 1969 have withered, many of the options which seemed open then have closed, and it is beginning to look as if the people of Ulster, Catholic and Protestant alike, can never have enough. So perhaps it is time that the majority in both communities started to share some of their friends' despair.

When the army backed down

Of course, successive British governments have made mistakes in Ulster; who could have expected otherwise? In such a divided society it was always inevitable that any action taken to solve the problems of one community

would create equal but opposite problems with the other. There has only ever been one clear-cut British solution for Ulster and that has been the total withdrawal of British troops and responsibility: it was touted a bit once, but after Monday night's confrontation between the British army and 5,000 uniformed Protestant extremists of the Ulster Defence Association in the streets of Belfast nothing has been heard from its one-time advocates, at home or abroad. Would they still like the British army to leave? Yet it was an unhappy compromise which was reached between Major-General Ford and the thugs of the UDA on Monday night, for the no-go areas, whether they are Catholic or Protestant, are a political obscenity (see page 23). No sensible person will blame General Ford for allowing the UDA to set up its barricades, or Mr Willie Whitelaw for authorising the agreement. If they did not keep anything which could really justify the term peace they at least prevented further casualties.

It is said that time is now running out for Mr Whitelaw. Time has always been running out for Mr Whitelaw, if only because neither community has been disposed to give any of his gestures to the other community time to work. Mr Whitelaw has been wooing the Catholics

he had to, for it was they who were supporting the gunmen who were doing the killing. He did what was in his power to do: he kept the army at a low profile and began to wind up internment. That produced a ceasefire. He has not been able to end the rents and rates strike (or the non-payment of gas and electricity bills in Belfast) or dismantle the barricades in the Bogside and Creggan, which are genuine Protestant grievances, except at a price which would be intolerable for British or international opinion. Yet it is precisely because he could not give a promise of exactly how and when those Protestant grievances would be resolved which has persuaded the UDA to set up its own barricades.

The question for Faulkner

But was that not more of an excuse than a reason for the UDA to take to the streets? It is very much open to doubt how many of the hooded men who now flaunt their power behind the Protestant barricades would really welcome a return to normal life in the whole province—unless by normalcy was meant a return to complete Protestant ascendancy. And that in turn raises another question. Most of the former Stormont ministers have warned often enough that the inevitable consequence of direct rule would be an uncontrollable extremist Protestant upsurge. That upsurge has now started and it very probably is uncontrollable by the British Government alone. When persuasion has failed, as it seems to have done with the UDA, Mr Whitelaw is left with just two weapons—force or bluff. When the UDA itself turns out in force and is astute enough to keep its firearms hidden, as it has done so far, Mr Whitelaw's bluff is called and the British force that would be required to prevent it from setting up Protestant barricades is as unacceptable as that which would be required to bring the Catholic barricades down. The question which must, therefore, be asked of Mr Faulkner and his friends is this: are they quite sure that in their bitterness at their treatment by the British Government they have not convinced most of their Unionist supporters that they would rather see Mr Whitelaw and direct rule fail than peace be brought to the province without their assistance?

British opinion can be accused of much in Ulster, but it cannot be accused of having lacked sympathy for the moderate politicians in both communities, or not understanding the extreme difficulties in which they have had to work. The moderates have had to learn to live, quite literally, under the constant threat of assassination by extremists of their own or the other side. But despite the threats can they continue for much longer to duck any real attempt to persuade the majority in both communities to show patience and allow compromise? The trouble is that both lots of politicians think that time is on their side: the Catholics of the Social Democratic and Labour party act and speak at times as if they really believe that Mr Whitelaw is their prisoner, and the Unionists seem equally convinced that Mr Whitelaw will eventually have to turn to them to pick up the pieces left behind by direct rule. They could both be very wrong, for it is entirely likely that far from time being on their side it could disastrously pass them by.

Certainly there can be no doubt what is now most urgently needed in Ulster: it is a gesture of goodwill by the Catholic community. If the SDLP had been able to persuade their constituents to bring down all the barricades in Londonderry and cease their civil disobedience campaign immediately after the IRA ceasefire, the UDA would have been deprived of the excuse to set up its own no-go areas. The SDLP leaders were unwilling or unable to do so, and if the conflict in Ulster follows its usual pattern such a gesture even now might not be sufficient to remove a great deal of the tension in the province. If there is one lesson that should have been learned by now by all politicians concerned with Ulster it is that delay in enacting any policy simply raises the threshold of its acceptability among the community it was intended to impress. So it is late, but not yet too late, for the Catholic community to make that gesture towards real peace.

But the shortcomings of the SDLP cannot give the Unionist politicians cause to adopt an attitude of self-righteousness. With a few honourable exceptions, Mr Faulkner and his former ministerial colleagues have behaved like a government in exile in their own country, as no doubt many of them believe they are. That they were unwilling to do anything actively to assist Mr Whitelaw to make direct rule work is disappointing but more excusable than it is with the SDLP. But they have not left it there; instead, some of their speeches have shown a vindictiveness which British ministers will need a long time to forgive or forget, and outside that tiny minority of Orangemen in Scotland and Liverpool they have done almost as much as the thugs of the UDA to alienate most of their natural allies in this country.

To whom will Willie turn?

There may be a brutal but simple truth about the parliamentary political leaders of both communities in Ulster: perhaps singularly and collectively they are not up to the measure of the events which have engulfed them. They certainly act like it at times. That is why there is now an even greater duty on the supporters of both communities, in this country and abroad, to consider the most likely drift of events in Ulster and impress its consequences upon their co-religionists and political friends there. In a conflict in which there is no possible compromise between the extremists on both sides, round one of the fight has undoubtedly gone to the IRA and round two looks very much as if it is going to the UDA. Without the support of most members of both the Protestant and Catholic communities Mr Whitelaw cannot hope to achieve very much more than a slight and uneasy delay before round three. He might be able to go on for some time patching up a sort of peace; he will certainly try. But if at the end of this present round the two communities wind up locked behind their own barricades it will not be to the SDLP or the Unionist party that Mr Whitelaw or his successor will need to turn to prevent an even bloodier round three. However distasteful, it will be with the leaders of the two enclaves, the IRA and the UDA, that he will have to treat. And where would that leave Ulster—or Ireland itself?

One summit that worked

Mrs Gandhi and Mr Bhutto decided it was better to agree than to go home empty-handed

It has often been said that summit meetings are pointless: either they ratify agreements already drawn up by junior officials, or they advertise the failure to agree. Last weekend's outing to Simla by India's Mrs Gandhi and Pakistan's President Bhutto looked like proving the sceptics right with a vengeance: what could be more useless than a summit conference where the leaders could hardly even agree to confer? But in the end it was the presence of the two top decision-makers which saved the day. Both Mrs Gandhi and Mr Bhutto had a personal interest in preventing the collapse of negotiations, if only to retrieve their invested prestige. So they overruled their officials with eleventh-hour concessions—when a communiqué admitting their agreement to disagree was already being drafted—and produced an accord which offers some hope that India and the surviving half of Pakistan may now be moving towards a durable peace.

The remarkable thing about the agreement is its balance. Mr Bhutto proclaimed to a cheering crowd in Rawalpindi on Monday that "nobody has won and no one has lost." Mr Bhutto can claim credit for having persuaded India to withdraw from over 5,000 square miles of Pakistani territory occupied during last December's war, thus allowing more than a million displaced Pakistanis to return home. But since Mrs Gandhi has all along maintained that this land would eventually be returned, his greater accomplishment is probably one that sounds less substantial: breaking her resolve to wrap up all outstanding issues in a package deal. The Simla agreement expressly calls for the "step-by-step" approach Mr Bhutto had been demanding: a gradual resumption of communications, trade and diplomatic relations and at the same time a gradual resolution of the by-products of war—the repatriation of prisoners and "a final settlement of Jammu and Kashmir."

This last phrase is Mrs Gandhi's trump card. As the unequivocal victor in last year's conflict, she went to the summit with much more to give than to receive: India will get back only 70 square miles as a result of the troop withdrawal, and there are only some 500 Indians in Pakistani hands compared with 91,000 Pakistani prisoners in India. But apart from the renunciation of force—which India claimed to be even keener on than Pakistan—Mrs Gandhi had one central demand: that the 25-year dispute over Kashmir be settled for good and all. She did not get her final solution of the Kashmir problem at last week's meeting. But she did win two major concessions from Mr Bhutto: a promise to "respect" the ceasefire line in Kashmir, which was excluded from the general troop withdrawal; and, more important, an agreement to settle all questions between the two countries bilaterally. This means that Kashmir, which, much to India's annoyance, has for years been on the United Nations agenda and has had UN observers

patrolling the old ceasefire line, from now on will be nobody's business but India's and Pakistan's.

For the moment, the Kashmir dispute has been frozen. It will come up again, along with other unresolved issues, at the next Bhutto-Gandhi meeting, tentatively scheduled for September in Pakistan. But if another summit is to be productive—and, in Pakistan's terms, this means arranging for the repatriation of prisoners—it will have to be triangular. And if it is to be triangular, Mr Bhutto will have to recognise Bangladesh. The indications are that he is now ready to do so, perhaps as early as next week. Mr Bhutto's first official act on returning from Simla was to summon his national assembly to meet on Monday, a month earlier than scheduled. One reason for his urgency was undoubtedly to set the troop withdrawals in train—according to the Simla declaration, withdrawals must be completed within 30 days of ratification of the agreement by both sides. But another of Mr Bhutto's reasons for calling the assembly may well be to get a public mandate for recognising Bangladesh.

Now Pakistan has gone west

Public opinion in Pakistan has probably been reconciled to the loss of its eastern wing, and official propaganda has started to reflect this feeling. Last Sunday, when the chances of an agreement at Simla still seemed dim, Karachi radio declared that "Bangladesh is a firmly entrenched reality and it will be natural to recognise that reality." Once Mr Bhutto is convinced that his public opinion is under control it is possible that there will be a series of meetings, involving Sheikh Mujib of Bangladesh too, to sort out the other issues left over from December. Except, that is, for Kashmir. Pakistani national pride is heavily vested in Kashmir—partly as a result of Mr Bhutto's own former anti-Indian crusades—and these days Pakistanis have precious little else left to feel pride about. So the prospects of a durable peace may turn out to depend on Mrs Gandhi's willingness to grant Mr Bhutto time to sell a Kashmir settlement. This will require good faith on both sides; but then without some mutual trust even the formal treaty by which Mrs Gandhi wants to make the division of Kashmir permanent would have little value.

The subcontinent is not about to become a region of miraculous peace. It is too important to the great powers—and particularly to the rivalry between Russia and China—for that. But if Mr Bhutto can reconcile his people to the permanent division of Kashmir the centre of the subcontinent's troubles will have moved away from the Indian-Pakistani relationship to the problem-state of Bangladesh. That is where the next crisis is likely to find its starting point. At least the Pakistanis, if not the Indians, can now reflect that they have probably extricated themselves from that one.

You won't know now rich you are...

WILLIAMS & GLYN'S BANK

NatWest would like to change your mind about factoring.

Too many people have still got the wrong idea about factoring: a survey commissioned by our subsidiary, Credit Factoring Ltd, proves the point.

To set matters straight, we'd like to stress that, in our view, factoring is more—much more—than a way of releasing money. Factoring must relieve the client of all sales accounting, provide credit management and

give a 100% guarantee against bad debts. Offer, in a word, service. Credit Factoring Ltd operate this way. And, as the table below shows, it's the service aspect that people who use factoring find most important. It also shows that the more you know about factoring, the better you like it. An elegant demonstration of the difference between ignorance and bliss.

The Pros and Cons of factoring, as seen by users and non-users.

Non-users		Users	
PROS	CONS	PROS	CONS
"You have fluid money to spend."	"Factoring is far too expensive. There is nothing to stop any self-respecting person going to the bank."	"I do not think the cost is much more and you gain in terms of service."	*
"I suppose if you had no liquid assets you would have to factor."	"Factoring is additional expense to the firm. No extra income is gained by using one."	"We expand by over 15% a year and factoring is for us."	
"One of our suppliers uses factoring. It didn't imply to me that they were in financial difficulties. It was just to their convenience."	"We do not insure bad debts. We just make sure we do not have any."	"If you quadruple your business you can carry it up without going for outside capital."	
"Factoring is a greater thing in export than in home selling because of the complications in exporting."	"Factoring is bad for your image with the larger businesses."	"We are an expanding firm and Credit Factoring gives us a 100% guarantee against bad debts."	
	"We might have to create redundancies."	"Factoring is good for the image. Customers feel you must be of some strength for them to take you on."	
	"You would lose your image, lose your customers; they get a more gentle treatment from our own staff."	"We have not had any redundancies—we have just run down our staff through normal wastage."	
		"Credit Factoring would not do anything to upset the relationship between us and our customers."	
		"We employ a credit factor for our export trade, which works exceedingly well. It is an advantage for the customers to pay in their own currency."	
		"It is nice to know that the money will be in by a certain date. With the old system we had no idea when to expect payment."	
		"The advantages are: regular cash flow, no bad debts, you know how much it is going to cost, and most importantly, if we didn't factor we would have to attract quick payment by offering discounts."	

The British Market Research Bureau Ltd, who conducted the survey, found that users of Credit Factoring Ltd were pleased with the service. Any National Westminster bank manager will be delighted to point the moral for you. Or, if you prefer, please write or telephone Christopher Blower of Credit Factoring at: Smith House, P.O. Box 50, Feltham, Middlesex. Telephone 01-890 1390.

Is he the alternative?

Mr Powell may, or may not, really be the man the country could call on if all else fails, but his potential would be much greater if he settled down to concentrate on the main issue

Mr Enoch Powell has made yet another speech about coloured immigrant communities in Britain, and once again he has been duly criticised by much of liberal opinion for it. Mr Powell believes that Britain's cities are about to experience what has happened in the northern cities of the United States, and his language, his talk of "ghettoes" and of the tide flowing "ever forward as it flows towards Niagara," is of a piece with his argument. He will not be worried that his critics dispute his figures for he has been able to claim statistical successes against them in the past. Nor will he care about the admonitions (themselves often in extravagant language) directed at him because he is sure he has the majority with him. As he has contended before, he believes there is a gulf

between the overwhelming majority of people throughout the country on the one side, and on the other side a tiny minority, with almost a monopoly hold upon the channels of communication, who seem determined not to know the facts and not face the realities and who will resort to any device or extremity to blind both themselves and others.

There is an exaggeration in that sort of language which runs through many of Mr Powell's speeches, and it is a great intellectual count against him, but it remains very likely that most people in the country, when they think about immigrants, find much in common with Mr Powell's fears. As for the trendier liberals, since it is central to their creed that the United States is still about to collapse in violence because the whites are repressing the blacks, they are inhibited from telling Mr Powell that there have actually been signs of a cooling-off in American race relations; that may tickle Mr Powell's sense of humour. But Mr Powell is not being funny in his politics. It is no good dismissing him with epithets or even moral scorn because he is not going to go away, and he will argue the toss on morals at any time. Mr Powell has to be taken seriously over the broad sweep of his policies both because he has a following in the country today and because he still has a very big potential following, perhaps the biggest of any single politician, if a calamity (say 10 per cent inflation a year for two more years) were to end public confidence in the present political parties. That will sound far-fetched even when public disappointment with the Commons is becoming reminiscent of that felt in the 1930s. If it does not seem far-fetched to Mr Powell then perhaps he should be taking his own words even more seriously than he does.

Mr Powell is a nationalist. This is the strength of his politics and the root of his policies. It is because he is the only remaining politician of intelligence in England who gives his nationalism such priority (for socialist little Englanders have other priorities) that his voice is so identifiable, so clear in the noise of politics. It has been assumed that his voice has only been heard when he has spoken about race; and, therefore, that he has had

to go on speaking about race, even when he might have wished to climb some part of the way back down from the limb he is on, merely to be heard at all. There is something in that, although perhaps no more than that the popular sense of what is familiar (and identified with the nation) and what is alien is more highly developed over race than anything else. Mr Powell knows very well how to exploit this, how to tell the Englishman looking "into the eyes of Asia" that he is

face to face with those who will dispute with him the possession of his native land.

That native land is, of course, England. Mr Powell is so much the nationalist that he would never deny the Scots or the Welsh their nationhood if they ever wanted to claim it. But it is England that matters above all else to him:

For the unbroken life of the English nation over a thousand years and more is a phenomenon unique in history, the product of a specific set of circumstances like those which in biology are supposed to start by chance a new line of evolution.

England is as special as that. The invocation is the rallying cry, the declaration of separate identity and special strength, to which people will respond instinctively at a time of danger or great uncertainty. No other Tory now speaks about England, far less Britain, as Mr Powell does. It is as if his conscious model were the Churchill of the 1930s, whose imperialist defence of India, romantic attachment to the crown of Edward VIII and nationalist assertion against the drifting of the League and pacifist internationalism were as unpopular with the establishment as anything Mr Powell is trying to put across today.

The extreme commitment of nationalism

Mr Powell has seemed increasingly conscious, since Mr Heath won the election in June, 1970, that he is very likely not going to get near the leadership of the Tory party except after the collapse and humiliation of present Tory policies, and even some national collapse sets in. So he loses no opportunity to emphasise his nationalism. It has led him to the extreme defence of the most threatened and questionable part of the national frontier, Northern Ireland, far beyond what any other leading British politician has committed himself to:

The plantation of Ulster, right or wrong, wise or unwise, beneficent or not, did take place; neither it nor its consequences can be pretended out of existence. The people of this province are part of the British nation, and the soil of this province is British soil, because the great majority of its inhabitants are so minded.

Others might wish, but few would dare, to push on without drawing breath from the first sentence of visible historical and moral doubt to the second of absolute historical and moral certainty.

Mr Powell is not an imperialist (not for some years);

the computer and distribution

For Victorians, problems of distribution were created by industrialisation and overseas trade, migration into cities and a newly prosperous middle class. Though supplying the new-fangled department stores, co-operatives and city emporia offered many challenges, the low cost of holding substantial stocks provided a comfortable cushion for producer and wholesaler.

Stringent demands are imposed on today's distributors by the need to utilise modern transport, by a faster pace of living and the high cost of urban storage space. In a fiercely competitive market, success depends on comprehensive coverage, frequent and regular replenishment and minimal overheads. Which explains why the effective use of computers is essential.

How else could a distributor handle the increasing volume and complexity of the accounting; meet legislative requirements such as VAT; collect and process orders from thousands of outlets within hours; compile the statistics on which shrewd purchasing and pricing depend; reconcile minimal stocks with high availability, and optimise the siting of warehouses, the use of manpower and the operation of far-ranging transport fleets?

For the world's most competitive distributors, it is Univac computers. For Univac meets all the criteria that count. Inexpensive yet outstandingly efficient and reliable hardware. Generous support services without extra charge. Software and communications expertise that take the anxiety out of tightly scheduled on-line work. An open-minded approach to special problems but also a range of package programs for standard applications such as automatic ordering, inventory control and wholesale accounting.

Successful distributors, of food, clothing, footwear, engineering spares and hundreds of other commodities choose Univac—naturally. When profit depends so heavily upon the performance of your computer system, there is no substitute for successful experience.

he is not a particular admirer of the Americans and, indeed, took much persuading ever to visit the United States. So he is no Churchillian in the true sense, but Ulster is his India and if it were ever to slip from British hands he might turn out to be the last man seriously to consider retaking it, just as he was the last man seriously to consider retaking India. It seems to be for nationalist reasons, not primarily economic ones, that he is also utterly opposed to the common market and ready to die in the last ditch, to pronounce that most unpolitical concept "never," in resisting it:

The first and most important thing to say about British entry into the European Economic Community is that it is not going to happen.

The tests for the man in reserve

Those people in the Tory party (and outside it) who have given up any prospect that Mr Heath and Mr Powell can ever make common cause and so now look on Mr Powell solely as being in reserve for the day of calamity probably have three main, contemporary tests for him as the man of calamity, the man who might be able to claim enough credibility, as well as reveal the self-confidence, to pick up the pieces. The first is his nationalism, or patriotism. Mr Powell is not unique among politicians, of right and left, in possessing it, but his credentials are apparent and in good repair. The second is his economic grasp (since any calamity giving him his chance is now most likely to be an economic one). And here, especially after two years of Conservative government, there is much to be said for him. Mr Powell was not a late convert to floating: he has been an advocate of it for years. He was not surprised at the failure of the Industrial Relations Act to help to curb wage inflation: he had denied from the beginning that it ever could. He did not suppose that the CBI's best efforts at a price curb a year ago would influence the unions at all: he said expressly they would not. His economic forecasting has a better record than Mr Heath's or Mr Wilson's. Unlike Mr John Davies, he has never been called on to eat his words about lame ducks.

Where the doubt about Mr Powell's record arises, and this includes the past two years, is in his striving for effect, for simplistic answers. Few modern electorates believe in simple economic answers from politicians. They are not wrong. If things were really as simple as Mr Powell says only an idiot prime minister would not have applied his remedy overnight. Mr Powell has been adamant that the unions have no responsibility whatsoever for inflation: "the unions and their members are innocent as lambs, pure white as the driven snow." And if that is interpreted as a populist bid to enlist Mr Jones and Mr Scanlon, he absolves the employers and shareholders, too. His culprit, and the sole one, is the Government, and its failure, accounting for everything, is the failure to control the money supply. Although few nowadays would deny the importance of Mr Powell's diagnosis as a main factor, fewer would venture out into the announcement of revealed truth with him. So why does he pin his reputation to one cause and one cure? Perhaps he is merely trying to be smart, knowing that

economics can be a complicated business with which the electorate is quickly satiated, and that the remedies of opposition frequently bear little resemblance to the policies of office. But that is not really Mr Powell. He gives much more the impression of sincerity, of actual conviction (which is why most of the efforts to brush him aside as ambitious or frustrated have failed with his audience). After all, it was not a cynical man who voted for the abolition of capital punishment long before many members of the present Tory front bench. The worry about Mr Powell is that he may believe every word he utters.

For this is the third test of a politician holding himself, or held, in reserve for the nation. He frustrates his purpose, his very sincerity, as often as he commits himself, for whatever reason, to words that do not ring wholly true and prophecies that do not come good in ordinary people's own lives. Mr Powell has too many ships of that kind at sea just now. The cities are still some way from chronic racial decay; the common market entry looks like being achieved. It will be argued that Churchill succeeded in the end after his collapses on India and the abdication had made it wholly unlikely that he could hold his head up again. Mr Powell's admirers might say that he, too, would not expect to succeed unless the establishment of the two parties had been stripped away. They might say that the very importance of his arguments demands that they be defended on the most difficult ground and in the most emphatic way. But if Mr Powell is thinking at all along these lines himself, and if he wishes to reinforce his claims to be taken as a radical alternative to the Heath Government (which Mr Wilson and Mr Foot are not), he would be wiser now to concentrate his fire on the central issue of British life in the 1970s, the economy. If he means business he ought to be giving his mind to reducing the chances that a major crisis would only bring in (as the last one nearly did) a Halifax.

How not to get to Downing Street

Colour will never get Mr Powell to Downing Street, nor will Ulster: they are not central to the national identity, and the more extreme he is about them, the more likely he is to encourage extremists of the thuggish, not the patriotic, kind to do their thing. That is the path to debasement. Mr Powell would express horror if he believed that such could be the effect of his interventions: after all, he has maintained that by mentioning the unmentionable he has helped to avoid the worst. The claim is now likely to be put to the test much sooner in Ulster than in any English cities. Mr Powell should know what he is doing either way. "Words," he has said, "are weapons and can be the most dangerous of weapons." He will show that he really does understand this if he concentrates his thoughts and efforts on the national economic task in the next couple of years, and gives less of himself, and his reputation, to causes (however much they give him exposure) that are tangential to the country's, and his own best, purpose.

The quotations from Mr Powell's speeches are taken from "Freedom and Reality" (£1.75, Batsford) and, just published, "Still to Decide" (£2.80, Batsford), both edited by John Wood.

Air conditioning helps stop rising tempers.

You will have noticed that people's tempers tend to rise as the temperature rises.

This is partly because they're uncomfortable.

And partly because their bodies are working harder to keep them cool.

Which makes them tired.

Which makes them irritable. Which pushes your productivity down. Air conditioning changes the air constantly.

Hot air is drawn out and cooled and mixed with fresh air as required.

De-humidified to take out some of the moisture.

And filtered to take out the smoke and dirt. Then it's fed back,

so it's always clean and fresh.

And cool and dry. When the temperature stays down, people's tempers are more likely to stay down. It's as simple as that.

If you would like some friendly advice on air conditioning, phone or write to Bernard Hough, The Air Conditioning Advisory Bureau, 2 Charing Cross, London SW1A 2DR. Telephone: 01-839 7182.

He'll arrange for your Electricity Board to give you any information you want. And help you to get a free estimate of the equipment you need, and the cost.

The Air Conditioning Advisory Bureau.

BRITAIN

The Smith Square socialists ride again

No one can any longer accuse the Labour party of having no policy except that of abandoning most ideas it regarded as practical when in office. For what it is worth the party now has thousands and thousands of words of policy. After a final session lasting 8½ hours on Wednesday, the national executive committee approved the draft of the document which will be presented to the annual conference in Blackpool in the autumn, and it all duly saw the light of day for the first time in the party's official newspaper, Labour Weekly, on Thursday. The method of presentation was the most novel thing about it.

The document is very much what one would expect from a Labour party in opposition when the left-wing is in the ascendancy. Indeed, successive drafts of it had been leaked so extensively, even to unfriendly newspapers, over the previous weeks that most Labour MPs had difficulty in working up much enthusiasm for finding out on Wednesday evening just what the NEC had finally approved as the party's economic and social policies for the next few years. They, like everybody else, were more concerned about the compromise which had been struck over the common market. For while most realistic Labour MPs will sensibly shrug off the crackbrained ideas in the policy statement as a cross they are always doomed to bear when in opposition, it is widely recognised that the common market issue is one which could still split the party wide open.

Mr Wilson had certainly held that view, and he has been at great pains recently to assure Labour's marketeers that he would fight any attempt by the left to stampede the Labour conference out of Europe. On Wednesday, Mr Wilson was not quite as successful as he had hoped with his woolly little

paragraph which would have fudged the issue in his own inimitable style. But neither was Mr Wedgwood Benn with his far longer, more detailed and specifically anti-market amendment. The executive rejected both in favour of a formula devised by Mrs Hart.

This commits the next Labour government to renegotiate the Brussels treaties, which, of course, Labour has been told by its European fellow-socialists that it can't. Undeterred, the policy ploughs on to assert that if the renegotiations do not succeed Labour will not regard the treaty obligations as binding, and will "consult" the British people on the "advisability of negotiating our withdrawal from the communities." If, however, the renegotiations which cannot take place do succeed the new terms would be put to the British people either at a general election or in a referendum.

It is, of course, pretty meaningless mumbo-jumbo, but apparently it has made most of the anti-marketeers on the executive happy, and it is something the marketeers say they can live with. The fact is that the marketeers were determined from the start to believe that they could live with anything that fell short of rejecting the common market in principle. Some take the view that as the market is not likely to be an issue when the Labour party next forms a government it is not worth risking further unpopularity with their own rank and file by appearing to be quibbling over words now. Of course, Mr Heath will have fun at their expense at the next general election, but they are reconciled to that, too. What remains to be decided is whether the far left of the party will still attempt to hive-off Mr Jenkins and his friends by forcing on the conference a policy of total withdrawal. It now looks unlikely that it will.

Life behind the UDA barricades

Ulster

Thuggery comes in many guises

They had, said Major-General Ford, been on the "edge of the precipice." He might have added that when the army stepped back it was merely to stand on the brink. Faced with 5,000 chanting, hooded thugs of the Ulster Defence Association in Belfast late on Monday night, Mr Whitelaw and the army had no alternative but to compromise and let the UDA construct another no-go area in West Belfast. General Ford had 500 troops available, but the UDA was armed only with pick handles and sticks. They are weapons enough to intimidate the local community but hardly sufficiently powerful, in the present climate, to justify the army opening fire if the UDA had pushed things to a direct clash. And the Protestant mob seemed more than willing to do just that.

So the British Government backed down and the UDA claimed a victory for itself, as no doubt it was. Although the barriers are to remain up off the Springfield road—until the Londonderry barricades come down, so the

UDA says—trapping 40 or more Catholic families behind them, General Ford at least wrung the concession that, as well as setting up its own checkpoints on the perimeter, the army would patrol the district and the UDA patrols would be unarmed.

Mr Whitelaw has frequently said that he would not tolerate any Protestant no-go areas, and they are certainly intolerable. No worse, no doubt, than the Catholic enclaves, but that could be little compensation for many of those who were caught inside the barriers at the weekend, at the mercy of men revelling in an opportunity to match their virility with the IRA's. The consequences of mob rule and summary street justice are an affront to British and Irish society alike, whatever the religion of the perpetrators. But what else could Mr Whitelaw and General Ford have done? Monday night's operation by the UDA was so well organised—and permitted by the Protestant community—that it was impossible not to believe the UDA threat that had the security forces not backed down 20,000 of its followers would have rolled into action throughout the province.

The one-for-one assassination campaign that appears to have broken out between the extremists on both sides is bad enough, but the UDA action is the bigger danger. In the past fortnight it has barricaded five districts. Three are in West Belfast—between the Crumlin and Woodvale roads, and off the Protestant Shankill along the border with the Catholic Falls. The other two no-go areas are in Portadown and the Irish street district of Londonderry. The UDA intends to create another one this weekend.

Since the imposition of direct rule an estimated 18,000 men have been recruited to the UDA, which now boasts a province-wide strength of 43,000. Around 60 per cent of its members are reckoned to be Protestant ex-servicemen. The UDA is controlled by a 13-man inner council under a leader who, for the moment, prefers anonymity for fear of IRA assassination or arrest by the authorities. According to a UDA spokesman, he is just "an ordinary man with an ordinary education." The organisation claims that it has no prominent Unionist politicians in its ranks, but it is getting money from somewhere other than its working-class supporters.

It is a disciplined and ruthless organisation with over 30 units dotted around Ulster, under an HQ in Belfast. Short-wave radio sets are used to keep

groups in contact with one another, and coaches were hired or commandeered on Monday to bring UDA men into West Belfast from as far away as Bangor and Newtownards. Although the UDA has not claimed responsibility for any killings or bombing, its members are being trained in hand-to-hand combat in the streets behind the barricades, and it has gathered within its ranks many of the militants who once belonged to the Ulster Volunteer Force, which was declared an illegal organisation under the Special Powers Act in 1967. Its main achievement has been to hammer out some coherence among the myriad of extremist splinter groups on the Protestant right.

But the UVF is still in existence with around a thousand followers. It claims responsibility for the kidnapping of the Protestant hero, Mr Gusto Spence, who was whisked away while on parole from Crumlin road jail after serving six years of a sentence for murdering a Catholic barman. And there are also gangs such as The Red Hand and the Silent Defenders, who live in the twilight world between political extremism and just plain thuggery. Mr Whitelaw's new public protection agency to combat intimidation will not lack work.

Parliament

EEC and all that

After 22 days of debate on the floor of the Commons the committee stage of the European Communities Bill was completed on Wednesday night. In this Parliament alone the European issue has now occupied the Commons for over 310 hours, and it is not finished yet. As the committee stage was taken on the floor of the House and the bill went through unamended it does not require a report stage but will go straight to third reading. It will then go to the Lords—where it will have no difficulty going through—and only if it is amended there will it come back to the Commons.

All Labour's pro-marketeers in particular are praying that it will not come back to the Commons. That is not simply because the bill seriously damaged the political prospects of many of them—although it has done that all right—but because if the Government suddenly discovers in the Lords that the bill does require amendment after all it will smell of political jiggery-pokery. The anti-marketeers have all along complained that the

Howe, whodunit

Government has resisted every amendment in the Commons because it wanted to avoid a report stage which would have opened up the whole bill to a flood of amendments once again; and even Labour's most ardent marketeers are not entirely convinced that Sir Geoffrey Howe, the Solicitor-General, did such a brilliant job of drafting the bill that it almost uniquely does not require any second thoughts whatsoever.

If Sir Geoffrey does prove to have achieved just that he will have carved himself a very considerable niche in parliamentary history; if he has not he will be execrated by the very men who have most courageously supported him in the Commons. For the point about making amendments to a bill during its passage through the Lords is that when the bill returns to the Commons the debate is limited to such amendments—the whole bill cannot be opened up afresh. There is no indication whatsoever that the Government believes it will be necessary to amend the bill in the Lords, but Labour's marketeers will be keeping their fingers crossed until it is safely through the other place. For there have been worrying, and possibly mischievous rumours, and if the bill does have to come back to the Commons it will require, in effect, another vote on the principle of joining Europe, and in those circumstances the majority will be nothing like the 112 of last October.

It will be a blessing and relief when the bill finally receives the royal assent, for it has done little to elevate the standing of Parliament with the electorate. That is not because the debates—either on the principle or on details during the committee stage—have been poor; indeed, with such able parliamentarians as Mr Michael Foot,

Hoechst

keeps thinking ahead

Protecting tomorrow's children today

Our children will not know of many of the health problems of the present generation. Throughout the world, scientists are engaged in a constant search for safer and more effective pharmaceutical and therapeutic agents. Much research is devoted to preparations that will prevent disease rather than treat established illness. In the important field of preventive medicine, Hoechst is making a vital contribution through its subsidiary Behringwerke in Marburg. The foundation for this work was laid by Emil von Behring with the discovery of prophylactic immunization against diphtheria. Today, Behringwerke is developing and producing an extensive range of sera for therapy and vaccines for prevention.

Ahead through systems thinking
DPT adsorbed vaccine for active immunization against diphtheria, pertussis and tetanus. Quinto-

Virelon additionally against measles and poliomyelitis. Partigen and Tripartigen immunodiffusion plates for improved diagnostic techniques – the result of Hoechst know-how and experience in many fields: In planned medical research, in pharmacology, pathology, chemistry, biochemistry, microbiology; in close collaboration in these fields and integration of the work. Systems thinking is the Hoechst strategy. Research, development and product experience in many areas are concentrated on the solution of specific problems. Interdisciplinary thinking, systems analysis and systems technique to bring success.

To keep thinking ahead – to solve the problems of today and tomorrow – Hoechst employs 10,300 people in research and development with a research investment this year of more than £60 million.

Hoechst in Britain

Hoechst UK Ltd is an independent company within the international Hoechst group. Its British staff know their country, its problems, its people; and they realise where Hoechst know-how can inject into Britain's economy the experience gained by the parent company during more than a century in chemistry. In pharmaceuticals, for example, where Lasix – the modern diuretic – has revolutionised therapy for both man and animal. In veterinary medicine, where the traditions of Behringwerke are being carried forward by the research workers of International Serum Laboratories, part of Hoechst UK, who are engaged in the development and manufacture of bacterial vaccines and sera for farm animals – products exported to many parts of the world. In the textile industry, where Trevira* polyester fibre has brought an entirely new concept to fashion. And where membrane structures from Trevira high tenacity fabric have at long last rendered outdoor events independent of the weather. Or in dyestuffs where experiments are proceeding to make the grass look greener in football stadiums and other sports arenas. Whether your problems are in plastics or paint raw materials, in dyestuffs or pigments, in fibres or pharmaceuticals, in agrochemicals or films, Hoechst UK can help you promptly and efficiently.

Now an Inter-City express leaves London for Birmingham every half-hour

This new service combines the fastest times with the highest Inter-City train-frequency in Britain. All day, between 0740 and 2010 Mondays to Fridays, you can be certain a train will leave Euston for Birmingham within half an hour. (Later departures at 2110, 2310 and 0010.) And the 112-mile journey takes as little as 92 minutes. Three services bring you the latest in coach design, fully air-conditioned and exceptionally comfortable.

Catch the 0740 and arrive Birmingham 0912—or the 0810 arriving 0942. With timings like these, you can plan your Inter-City trips to Birmingham for short business meetings and for whole or half days there.

You'll travel in true Inter-City style. Start the trip with a hot breakfast or buffet snack; or with lunch (you'll still manage a full afternoon in Birmingham).

The new homeward-bound service offers you a fast train from Birmingham

every half-hour up to 1915, followed by special late departures at 2015 and 2115. **A CAR TO MEET YOU**

Ring the Godfrey Davis Rail Drive Kiosk at Euston (01-387 9710), before you go, or call in on your way through the station. You'll have a car waiting for you when you arrive.

Inter-City's new London-Birmingham service offers one of the best business refresher courses in Britain. Try taking it regularly.

*These services have fully air-conditioned coaches for all passengers—at no extra cost.

Inter-City is for you
Take it in comfort

Sir Derek Walker-Smith and Mr Enoch Powell always to the fore the debates have been of high quality. But the rhetoric has not disguised the reality that the opponents of the bill were never trying to improve it but to destroy it, and if they could not do that then to obstruct it.

The tactic of obstruction to deny the Government parliamentary time for other measures that it thinks necessary is well understood and accepted at Westminster. It is a game most MPs of all parties like to play when in opposition—even when, for some of them, they are in opposition to their own government. But it makes Parliament look an increasingly futile place to the general public, and when obstruction becomes more important than argument—as, for additional example, on the Government's Industrial Relations Bill of last session—opposition parties slip too easily into the politics of ya-boo. Perhaps this Parliament is not really very much worse than its predecessors in that respect, but anyone who did not know quite how awful previous Houses of Commons could be at times would require a lot of convincing of that, particularly if they had heard Mr Harold Wilson's opening speech in the industrial relations debate on Monday.

Hospitals

Fire hazards

What are officially termed "significant fires" in health service hospitals are not all that uncommon: in England and Wales 122, with 8 deaths, in 1970 and 126, with 9 deaths, last year. But serious ones such as occurred at the Coldharbour hospital near Sherborne early on Wednesday, killing 30 mentally handicapped men, are fortunately rare.

The last one of similar magnitude was at Shelton Hospital near Shrewsbury in February 1968. This too was a long-stay hospital, and 24 mentally ill women—most of them elderly—died. That fire was probably caused by a lighted cigarette left in an easy chair by a patient. But its effects would have been much less serious had there not been a few minutes delay in summoning the fire service. The committee of inquiry found the hospital authorities to blame in not ensuring that the nursing staff had had sufficient training in fire procedure and evacuation.

There will be a similar inquiry into the Sherborne fire, which will presumably find out whether the

The ward where 30 men died

instructions on fire precautions that have been issued to hospitals both from the Department of Health and from regional hospital boards had been carried out. On the face of it the Sherborne hospital does not look such a fire hazard as Shelton or indeed other antiquated hospitals. The ward where the patients died was a single-storey building and had recently been modernised; and apparently at least two doors were open. But the fire appears to have spread too fiercely and rapidly for more than a handful of patients to be evacuated.

There is some controversy about how realistically fire practice in hospitals should be carried out. Apart from the very young, the most vulnerable patients in a fire are the old, the mentally ill and the mentally and physically handicapped, particularly as many of them are given sedatives at night and sleep heavily. It is a moot point whether rousing these patients from their beds in a practice evacuation exposes them to greater risk than the remote possibility of an actual fire. But several full-scale fire drills are said to have been held in the past two years in the wing where this week's disaster occurred.

Psychiatry and the law

Back to square one

Fortunately there have been no signs of a panic reaction to the news that a young man convicted of murder by poisoning was a conditionally discharged Broadmoor patient. Mr Graham Young had been sent to Broadmoor by the court when he was a boy of 14 for having poisoned—not fatally—members of his family and a schoolmate. A restriction was placed on his discharge, which could have

lasted for 15 years. But on the advice of the doctor looking after him Mr Maudling agreed to his conditional discharge after nine years.

However exceptional this case, and however rare for former Broadmoor patients to repeat their crime, Mr Maudling and Sir Keith Joseph (who is responsible for the management of Broadmoor but not for discharges) had to take some steps to allay public anxiety. First, no patient will be discharged from any of the special hospitals unless the doctor looking after him obtains a concurring recommendation from another psychiatrist. This can be regarded as a placebo for the public. It may provide extra reassurance; but can a psychiatrist, interviewing a patient for an hour and flipping through his case notes, add anything worthwhile—in the matter of discharge, as distinct from treatment—to the opinion of those who have had the patient in their care for years? Secondly, and much more realistically, the arrangements for supervision after discharge have been strengthened. Coupled with more effective supervision is the requirement that, "where necessary," an ex-patient's employer is "sufficiently informed" about a case to warn the supervisor if things appear to be going wrong. Clearly this stipulation, if carried too far, will make it exceedingly difficult to resettle special hospital patients in the community. In addition a small expert committee will advise on whether any more changes should be made in the discharge procedures.

Quite independently of this committee and of the Young case, however, Mr Maudling and Sir Keith Joseph had already decided to institute an extensive inquiry into the application of the criminal law to mentally abnor-

mal offenders under the chairmanship of Lord Butler. The main provisions governing it are contained in §60, §65 and §72 of the Mental Health Act of 1959 and in §4 of the Criminal Justice Act of 1948. Under §60, after anyone has been convicted of an offence and two doctors have found him mentally disordered, the court can order him to be detained in hospital. He is there treated like any non-offending patient; his doctor can recommend his discharge at any time; and he can appeal to a tribunal to be discharged. But if under §65 a court adds a restriction order whether for a fixed period—as in the Young case—or for an unlimited one, a patient can be discharged only with the consent of the Home Secretary while the restriction order is in force. What is more, he cannot be given leave of absence without that consent or take up a job outside the hospital during the day.

These restrictions are valid for special hospital patients, who are there because they are dangerous. But doctors in other mental hospitals find the few §65 patients they receive (135 in 1970) a nuisance. The restrictions entail endless and often fruitless communication with the Home Office and are often inimical to a patient's rehabilitation. If he is psychopathic, like Mr Young, he may resent being labelled "mental" and refuse to co-operate in treatment; but because a hospital order has been made he cannot be transferred to prison. In the event, a §65 patient may serve a longer sentence in hospital than he would have done in prison—as did Mr Young in Broadmoor. Perhaps the Home Office should employ its own psychiatrists to supervise restricted patients. As things are, it takes decisions affecting someone's liberty without ever seeing him.

§72 of the Mental Health Act and §4 of the Criminal Justice Act create fewer headaches. The first enables a prisoner found to be mentally disordered to be transferred to hospital for treatment. §4 is for milder offenders—particularly those found guilty of minor sexual offences—who are given the option of probation coupled with psychiatric treatment instead of prison.

So far as the existing law is concerned the committee undertaking the extensive inquiry will be likely to concentrate on §65 and perhaps on the relations between the special hospitals, the Home Office and the Department of Health. It may also discuss the placing of mentally abnormal offenders in the future when the large hospitals

Butler: philosophical problems

are supposed to have been run down. But its remit goes much further. It is to examine

To what extent, and on what criteria, the law should recognise mental disorder... as a factor affecting the liability to trial or conviction of a person accused of a criminal offence, and his subsequent disposal.

This remit will bring up the hoary old questions of fitness to plead, not guilty by reason of insanity and the McNaghten rules. It will also stir up again many unresolved dilemmas. Where is the boundary between medicine and the law, between who is sick and needs treatment, and who is sinful and should be punished? Is psychopathy a true illness? If so, has the doctrine of criminal responsibility been eroded so far that it might as well be abandoned altogether? With his experience as Home Secretary and his longstanding interest in the workings of disordered minds, Lord Butler should enjoy examining philosophical problems like these.

Families

Five-year plans

Any interpretation of surveys of married couples' "family intentions"—a euphemism for breeding plans—must be as fraught with provisos as an insurance policy. The gap between reported and real intention may be particularly wide, to say nothing of the gap between intention and achievement. As indicators of the trend in the birth rate such surveys have the rather obvious disadvantage of leaving unplanned pregnancies out of account. But they are the most sophisticated that exist, and they are useful because the birth rate has proved tiresomely unpredictable over the past eight years.

The Hull Family Survey, whose second report was published on Wed-

nesday, is particularly valuable because the original 350 couples, questioned shortly after their marriages in 1965-66, have been retraced and questioned. So the survey offers answers to two sorts of questions: are family intentions changing, and how fully (or overfully) are they realised? It is not quite possible to separate the two: the average of the number of children desired by each couple had dropped substantially, from 2.61 to 2.23, but is this because of a general change in attitudes or because these couples found child-rearing a more onerous business than they had supposed?

By far the most common explanation given (by over half of the couples who had changed their minds) for deciding to have fewer children was economic. This could still mean no more than that five years of marriage had made these couples less starry-eyed, but it is a useful pointer to the continued failure of the birth rate to pick up after it declined in the mid-1960s. Only 5 per cent gave the state of the world population explosion as an explanation. One in 19 couples had actually revised their intentions upwards; the most common reason for this was "over-achievement." (For one couple, for example: "The first pregnancy was twins and the second triplets.")

Other surveys have suggested that one-third of pregnancies are unwanted at the time of conception, and, neatly, one-third of the pregnancies occurring during this survey were said to be unplanned—these made up an increasing proportion of second, third and fourth pregnancies. Well over half of fifth and subsequent pregnancies were unplanned. But the survey tries to distinguish between risk-taking and contraceptive failure: the latter appears to account for under a third of unwanted pregnancies.

Some 93 per cent of the couples had used a contraceptive at some stage—a surprisingly high figure—and 60 per cent had used condoms. As many as 50 per cent had at some stage used the pill—more confirmation that the trend towards the pill was strong in the late 1960s. But perhaps the most interesting piece of evidence of all is on how the class and religious differences in original intentions (those at the top and the bottom of the economic pile intended to have more children than those in the middle, and Catholics intended to have more than the rest) had not stood the test of time. Differences in achievement were virtually nil.

Otto Secher

on how and why

Albright & Wilson

have prospered in Cumberland

In a recent interview Otto Secher, Chairman of Albright and Wilson Ltd., Marchon Division, expressed his views on the strategic and social advantages of the County of Cumberland as territory for industrial development. He said:

"When we moved into West Cumberland we found local authorities ready and willing to give us every facility to build up a new industry, as well as a large pool of local labour with no experience of chemicals but with the enthusiasm and adaptability to learn new trades."

We brought into Cumberland technicians, scientists and research workers to teach their skills to the local labour force. These 'offcomers', as strangers to Cumberland are known, came with the avowed intention of getting away again as quickly as they could; but once they had got themselves settled in, they discovered how much the County had to offer them, culturally, socially,

and in every way including the education of their children.

In 30 years, from humble beginnings in a couple of more-or-less derelict cottages in the Borough of Whitehaven, we have established one of the most important and modern chemical plants in Britain. This success can be attributed to a very large extent to the keen co-operation, at all levels, of the people of West Cumberland."

The whole of Cumberland is a development area and the region includes the following special development areas which qualify

for maximum development grants: Alston, Aspatria, Cleator Moor, Cockermouth, Lillyhall, Maryport, Millom, Whitehaven, Workington. There are additional training grants and assistance for key workers coming into the area.

Among the other famous Companies flourishing in the new resurgent Cumberland are Hawker Siddeley, Metal Box, Courtaulds, British Gypsum, High Duty Alloys, Pirelli, Rowntrees, Nestles, Quaker Oats, Carrs, Bata and Sekers. May we suggest that you send for full particulars of this progressive County and what it has to offer you.

Write or telephone to:
Clerk of the County Council,
The County of Cumberland,
The Courts,
Carlisle CA3 8BR.
Tel: Carlisle (0228) 23456.

THE WORLD

International Report

Chaban goes, gaullism stays

FROM OUR PARIS CORRESPONDENT

M. Pierre Messmer will do what he is told. That was the first reaction in France to President Pompidou's dumping of the prime minister, Jacques Chaban-Delmas, and his replacement by M. Messmer. M. Messmer is known as a gaullist *dur et pur* and, whatever else gaullism means, it certainly means unquestioning acceptance of the president as the maker of policy. Although M. Chaban-Delmas had always accepted this verbally more loudly than anyone, there have been signs more than once that he had a mind of his own. His removal is generally seen as a presidential reassertion that the buck stops nowhere before the Elysée.

Certainly M. Messmer has the qualifications. For nine years from 1960 he was General de Gaulle's minister of defence—not a field in which the general was inclined to seek advice from his subordinates. More recently, under M. Pompidou, he has held the job which in plain English would be that of colonial secretary; he has rigorously applied the constitutional theory that a colony is not a colony as long as you call it an overseas territory or department, and that those overseas citizens who think otherwise had better shut up or have it done for them. Nothing suggests that M. Messmer has ever disagreed with the policies he has had to apply, which have included comforting the army after the retreat from Algeria, deciding to create a nuclear deterrent, withdrawing from Nato, and defence *tous azimuts*. With M. Couve de Murville he was the first politician, and one of the few, to be received at Colombey after de Gaulle's retirement.

M. Messmer's first job is to limit the losses of the ruling party in the forthcoming elections. The government will get a new and leaner face, although not it seems—names were not known when *The Economist* went

to press—a totally new one: the foreign minister, Maurice Schumann, and the defence minister, Michel Debré, have been allowed to carry on with official trips to China and America respectively, and the ejection of M. Valéry Giscard d'Estaing from the finance ministry would be a political eccentricity at this moment.

Since the government will need time to make its mark the early dissolution of the national assembly, which has been often talked of, now seems unlikely. Meanwhile, one can guess that M. Messmer will be trying to reassure the more orthodox and conservative members of the ruling party, who found M. Chaban-Delmas too liberal by half in his readiness to listen, for instance, to the trade unions. It may have been precisely for this purpose that a man of M. Messmer's views was chosen, although he was anyway clearly second favourite for the succession. One can guess again—although inevitably it is

firmly denied—that, having served his purpose, unless he does it unusually well, after the elections he too will follow M. Chaban-Delmas to the chopping block. It is hard to believe that M. Pompidou will be content for long with a prime minister whose first loyalty has been to the president's predecessor.

Whether M. Messmer's appointment in fact means an end to M. Chaban-Delmas's occasional attacks of liberalism is another story. So-called left-gaullism is today a very sick joke, one of its leading practitioners having recently been caught with his hand not too far from somebody else's till. The equally so-called reform of the public broadcasting authority, another touchstone of liberalism, seems likely to lead back to the days when broadcast news and government views were not easily distinguishable. One of the frequent gaullist complaints against M. Chaban-Delmas was that he had allowed the broadcasters too much freedom, and the "reform," although prepared under his prime ministership, reflects his critics' views more than his own.

And yet, if the ruling party is to regain its prestige, it has got to destroy the idea, created by a year of scandals, that the state and the public

Pompidou changes shirts: on with Messmer, off with Chaban

Tanaka: more natural than traditional

that a move away from the slow, orderly pace of bureaucratic decision-making might boost the party's popularity in time for the general election that will inevitably be called either this autumn or early next year.

In his first televised press conference as prime minister, Mr Tanaka acted more naturally than a traditional leader of Japan. He sweated profusely, and took to wiping his forehead as if he had just sat down in a coffee shop and been given a hot towel. He was even more rambling than Mr Sato, grunting and modulating his raspy voice in much the same way as an ordinary Japanese in everyday conversation.

He tried to promise everything. The time is ripe to normalise relations with China, he said, without discussing the terms under which this might occur. A peace treaty with the Soviet Union is in order, he declared, again without offering any new ideas about the offshore islands or Siberian oil questions. He also said Japan needs to strengthen its relations with the United States—an idea taken for granted in the past. On domestic matters he ran the gamut of housing, traffic, pollution and health, and promised programmes to deal with all of them. He has won the race, but not quite begun to govern.

China

More tall tales

Most visitors to China like to poke a toe into forbidden territory by asking about the fate of that non-person, Lin Piao, and most are brushed off with a non-answer. But one recent traveller elicited a remarkable explanation from his card-carrying communist guide. Lin Piao was purged, he was told, for

three reasons: he promoted the cult of personality; he was a difficult man to get along with; and he opposed China's rapprochement with the United States. Dissension within the army over policy towards the United States was so acute, according to this informant, that it erupted into a shoot-out at Wuhan.

This traveller's report may be nothing more than the Peking version of the classic taxi-driver's tale. But such snippets continue to be prized because 10 months after Mao's chosen successor, his wife, and four top military leaders vanished into the night—or into a Mongolian hillside, if they were indeed passengers in that mysteriously vagrant Trident jet—the Chinese have offered no official explanation of the event. Lin is regularly attacked by implication in the Chinese press, although not yet by name. (His predecessor, Liu Shao-chi, was similarly nameless for two years after his disappearance.) But despite the carefully maintained public silence Peking has been systematically informing the Chinese people about the Lin Piao affair in a series of top-secret documents circulated in the party.

One purported example of such a document has recently been released by the Chinese Nationalists. Its assertions include plans for an armed coup to be carried out by Mr and Mrs Lin, their son Lin Li-kuo, who was the deputy director of the air force combat department, and a number of other air force officers. The plan was to capture Mao and the rest of the high command on the occasion of a major meeting. (A long-postponed session of the National People's Congress was reported to be scheduled for September, 1971, just after Lin Piao disappeared.) The main force behind the coup was to be the Chinese air force, but Soviet support was expected "because of maoist maltreatment of the Russians." The document conceded that the army would not be solidly behind Lin and his co-conspirators because of Mao's policy of divide-and-rule, and that the security net around Mao himself made him a difficult prey. But "this is a life-and-death struggle," the author declared. "Either we swallow them up or they will swallow us."

The document links the disappearance of Lin Piao with the purge a year earlier of Mao's erstwhile political secretary, Mr Chen Po-ta. It is now known that Chen was denounced at the second plenum of the central committee in August, 1970. According to the papers released by the Nationalists, Lin's five fellow-victims, headed

by the former chief of staff, Huang Yung-sheng, were forced to make public self-criticisms at the same meeting. The Lin family, fearing that the defence minister's head might roll with the rest, then began to plot their coup.

It is a credible scenario. But there is no way of knowing whether this and other, similar, stories represent truth or politically inspired fiction. All that is certain is that except for a recently appointed deputy chief of staff, the top offices in China's armed services are still empty; there is no minister of defence, no chief of staff. There is not even, six years after the last great purge, a head of state. And this week, for the umpteenth time, 78-year-old Mao was reported to be dying.

Russia

In the dark ages of psychiatry

FROM A SPECIAL CORRESPONDENT

Jerusalem

The Soviet practice of incarcerating political nonconformists in "mental asylums" has acquired considerable notoriety over the past few years. As a result of the reports appearing regularly in the clandestine Russian periodical *Chronicle of Current Events*, and of the information supplied by the young Soviet dissident Vladimir Bukovsky, recently sentenced by a Soviet court to a total of 12 years' imprisonment and exile, the western world has been able to learn a good deal about this technique of political repression. Now this knowledge has been confirmed and amplified by a new source—the Soviet émigrés in Israel. Dr Norman B. Hirt, an eminent Canadian psychiatrist, has just spent a year in Jerusalem, interviewing many former "patients" as well as a few former Soviet psychiatrists.

Some of the most chilling pages in the book Dr Hirt plans to publish on the subject will deal with the director of all diagnoses connected with political cases at the Serbsky Institute of Forensic Psychiatry in Moscow—the man in charge of the whole system of psychiatric treatment of "socially dangerous" people in Russia, Daniel Lunts. According to Dr Hirt's informants (all of whom were interviewed independently and without each other's knowledge), Dr Lunts—described as a professor of psychiatry, but a KGB colonel—is a man in his fifties, of medium height, whose connections with the secret police eventually led

Some of our aircraft
are built to meet
one specialised need...

The BAC 221 was built for research into slender delta wing forms and has provided valuable data for Concorde

...but most of them are sold worldwide

Every minute of every day, a BAC One-Eleven jet airliner takes off and lands somewhere in the world.

The BAC 221 was a one-off experimental aircraft. The BAC One-Eleven, however, already serves destinations in over fifty countries. It is the only European-built jet ever to have penetrated, in depth, the American-dominated markets, including the USA itself. BAC's achievements in commercial aircraft, military and experimental aircraft and in guided weapons and space programmes have given it an across-the-board ability in Aerospace which is unrivalled by any one firm in Europe and second to none in the world.

It's a Barclays world of banking

Barclays, the largest bank in Britain, is also the fourth largest bank in the world. The Barclays Group with close on 5,000 branches, is the world's largest banking network.

Quite a lot of people work in quite a lot of places to maintain and expand this remarkable organisation. In the United States you will find Barclays in New York with three branches, Barclays in California with twenty-three, and Barclays with an office in Chicago.

And around the world: the West Indies; South America; Africa; the Mediterranean; France; Germany and Switzerland; the New Hebrides, Bermuda, Mauritius and the Seychelles; Brussels, Milan, Sydney and Tokyo.

Barclays in 48 countries (including, of course, England and Wales). No wonder Barclays feels at home in the world of banking.

THE BARCLAYS GROUP

The Barclays Group includes:
Barclays Bank Limited
Barclays Bank International Limited
Barclays Bank (London and International) Limited
Barclays Bank S.A.

Tom's job bit the dust when the pit closed

That was three years ago.

Since then, he's completed a training course and become a skilled tradesman - a Drilling Machine Operator. Tom is happy with his job - happy with the prospects that lie ahead.

In Irvine New Town, there are many people like Tom. Men who, having lost their former livelihood through redundancy, have retrained and are now skilled workers in industry.

And there are many more, eager to retrain once the demand for them increases. Once you bring your industry to Irvine.

Why don't you?

We've a lot to offer. Besides willing, trained staff, you'll find ample housing and well-appointed factory sites, prestige office blocks, convenient sea and air ports. And SPACE. Space to move to breathe. To expand.

Lots of it.

You'll find all that - and more - in Irvine New Town. But find out all the facts.

Write, Telephone or Telex:

Michael S. Thomson,
Commercial Director,
Irvine Development Corporation,
Perceton House, IRVINE,
Ayrshire, KA11 2AL.

Brief Books order form

This background series of 28-page briefs, illustrated with maps, charts and photographs, looks at some current world problems and isolates the real issues.

The next 40 years

The survey "The Future of International Business," which appeared in The Economist dated January 22, has been republished as a 48-page booklet. Norman Macrae, the deputy editor of The Economist, has tried to turn himself into a futurologist. He has forced himself to make the best forecast he can of a logical course for international trends and organisation in 1972-2012 and especially 1972-1992. He has come up with some highly unconventional views.

Industrial Relations—Britain's battle for reform

Industrial Relations in Britain today is still a hotbed of political controversy. The Industrial Relations Act is a landmark in the battle for reform, but the argument does not end there. How do British Unions work and did they need reform? How will the new Act work? What problems does it leave unsolved?

WOOD GUNDY LIMITED

We'll answer all your questions about Yen. Even if you're not sure what your questions should be.

Don't feel badly if you don't know much about Yen. Because the international money market has never been as complicated and confusing as it is today.

That's why you need as much information about Yen as you can get. And we'll be glad to help you in any way we can.

We're Sumitomo Bank. One of Japan's biggest. We have branches in cities around the world. And fifty years experience in international transactions. Which puts us in a pretty good position to assist you.

We'll give you all the background information on Yen. Then we'll tell you about such things as Yen finance, Yen quotations, Yen accounts and Yen transactions. And we'll do more than just tell you about them. If you want us to, we'll handle them for you.

And then we'll go a few steps further than that. If you'd like, we'll help you borrow Yen. We'll help you open a business in Japan. Or establish a joint venture. And if you're already doing business in Japan, we'll help you do more.

In short, we'll do everything for you that we've done for our domestic clients for years.

So please contact the Sumitomo Bank nearest you. If you have a million questions about Yen. Or if you can't even think of one.

to his being given the job of supervising all the political psychiatric cases in Russia, of whom there are many thousands, according to Dr Hirt's informants. He is said to have told patients that "when I say a man is schizophrenic, he is schizophrenic, just as if I say an ashtray is schizophrenic, it is schizophrenic." Witnesses claim that he has stripped women patients and stuck pins in their breasts, ostensibly to determine their "hypersensitivity" and thus their "pathological characteristics."

This man is responsible for perfecting a system whereby virtually every Soviet citizen who has ever undergone any psychiatric examination may find himself pronounced neurotic or

psychotic on the flimsiest grounds. To be sure, only a small proportion of Soviet psychiatric patients are branded "psychotic." Indeed, it must be borne in mind that alongside the forensic psychiatric system dominated by Dr Lunts and the KGB there is a much larger system of ethically run and well organised clinics, dispensaries and hospital wards, staffed by men who abhor the Lunts methods.

Yet so pervasive is the power of the KGB that it may at any time decide to arrest a political dissident, merely on the basis of former illnesses, and to confine him either for observation in a psychiatric clinic or, after a bogus trial, to an indefinite term in one of the notorious "special psychiatric hospitals." It is Dr Lunts who has built

Something, but not enough

"Very like a whale," said Polonius to Hamlet. Had he been referring to the taste of pet food, or even of sun tan lotion or gearbox oil, he might have been right. Whales, among the world's most amiable and intelligent creatures, have been hunted and killed to the verge of extinction lest human beings should bronze in blotches or the squeals of their kittens be drowned by those of their gears.

Now the danger of the annihilation of the species seems to have been averted. The 24th annual meeting of the International Whaling Commission which ended in London last week agreed to reduce marginally the quotas on the killing of most varieties of whales. Although the world's total catch, which was in the region of 40,000 last year, is now set at a maximum of 38,600, scientists believe the reduction will enable most stocks to be built up.

An important achievement at the conference was the decision to abolish

the blue whale unit which has been used in the past to measure quotas. One blue whale unit was equivalent to 2 fin whales, 2½ humpbacks or 6 seis. The effect of this was to encourage whalers confronted with a shortage of one variety to make good their quota by increasing the pressure on others. In future quotas are to be set for each variety of whale individually. It is also encouraging that the commission's members have agreed to carry foreign observers on their ships.

But there is still cause for anxiety. The fin whale, even though its annual quota has been reduced by about two-fifths to 2,600, may still be in danger of extinction. And the commission does not represent some whaling countries such as Brazil, Chile, Peru, Portugal and Spain whose total catch came to about 3,000 last year. Even more important, last week's meeting rejected the resolution passed at last month's UN environment conference in Stockholm, which called for a 10-year moratorium on all whaling. Proposed by the Americans last week, this motion was strongly attacked by the Russians and Japanese—who between them account for over 80 per cent of the world's catch—and was defeated with the help of Iceland, Norway, Panama and South Africa.

Such is the state of ignorance about numbers, distribution and breeding habits of whales that a moratorium of this kind may be necessary to ensure the survival of some members of the species. In the absence of such a ban the British Government should emulate the Americans by forbidding the importation of all whale products. Otherwise some future Polonius may know as much about, say, the fin whale as we know today about its ancestor, the basilosaurus. Which is not much.

Victim of a Japanese harpoon

up the techniques of mock "medical investigations" and who is most frequently responsible for the forced medical "treatment" of people against the wishes of their relatives, despite contrary evidence adduced by lawyers and acquaintances, and even regardless of other medical judgment.

The medical treatment, it is made clear by the evidence amassed by Dr Hirt, is a form of punishment. The use—or excessive use—of certain anti-depressants, tranquillisers and narcosynthetic chemicals (so-called "truth serums") is a case in point. The drugs include aminazin which, when used in excess, produces debilitating after-effects such as athetosis—a violent lack of control of muscular movements—severe skin reactions, the destruction of the memory system, and the complete exhaustive collapse of the victim; reserpine, which has been used in such quantities that post-mortems have shown severe destruction of the protein structure of the victims' brain substrates; and sulfozin—a 1 per cent solution of purified sulphur in a peach-oil base which, according to Dr Hirt, "is never employed in ethical practice" but which is liberally used by the KGB.

Other punishments testified to by Dr Hirt's informants include beatings and the use of the "dry pack"—a wet canvas in which the patient is rolled from head to foot, and which causes the most agonising pains as it begins to dry and contract. The Serbsky Institute is also reported to have a cage, one metre square, for patients who have been given an overdose of drugs that cause muscular spasms.

I asked one former Soviet psychiatrist, whom I interviewed together with Dr Hirt, why neither he nor his colleagues in the Soviet Union have seen fit to denounce Dr Lunts and his system. After all, they have the necessary evidence, and protests against injustices are no longer a novelty in Russia. The psychiatrist looked at me for a few seconds, and then exclaimed: "Would a western psychiatrist ever dare to come out openly against his professor?" A melancholy answer, but perhaps, given the stalinist power exercised by Dr Lunts and the KGB, an understandable one. Dr Hirt says that such answers strengthen his determination to expose a man who, together "with the powers that be, is setting us back to the dark ages of psychiatry. If my medical colleagues remain silent they will in effect be condoning one of the greatest medical criminals of the century next to Dr Mengele of Nazi Germany."

*Eastern Europe***With friends like these . . .**

FROM OUR SPECIAL CORRESPONDENT

Warsaw

Life is not getting easier for Russia's allies in Europe in the early aftermath of President Nixon's visit to Moscow. On the contrary, the very success of the visit has apparently strengthened Russia's writ in eastern Europe. Some middle-ranking officials from the Moscow foreign trade agencies travelled to Warsaw last week for an east-west trade conference sponsored by the Polish chamber of commerce. There they singlemindedly set out to create an air of plenty and peace, singing a song which nobody present could recall hearing from them before.

Russia now believes, they said, in the international division of labour. No longer is the aim the old one of economic self-sufficiency for the communist world. Growth can come only through trade and industrial co-operation with the west and Japan. East-west deals should henceforward give every western partner a handsome profit; indeed, according to one Russian, there should be "a perfect guarantee" that there will be no loss. Never mind how, so long as the method does not involve a direct western share in ownership or management inside Russia. Any speaker, from east or west, who cast doubts on where the resources or bureaucratic skill would be found in communist countries to increase trade substantially was immediately taken to task by the Russian delegation.

Russia's trump was an old warhorse who worked for Lenin—Professor Ljubimov, who was trundled out not, as in the old days, to mock the weakness of the west's monetary system, but to drop heavy hints that Russia expects its views to be taken into account in the discussion of any new world monetary system. The implied suggestion was that the rouble might eventually afford the cost of being made convertible if room could be found in any new system for gold at a much higher price—a means, among other things, of completing Russian financial dominance in eastern Europe.

The reaction to this by most of the other east Europeans present at the Warsaw meeting was little short of panic. It took the form of desperate public attacks—toned down strenuously by the Russians, following Mr

Brezhnev's lead in March—against the enlargement of the common market. The east Europeans see an enlarged community as combining fatally with Mr Nixon's visit to strengthen Russia's claim to conduct the trading policies of the whole of eastern Europe, as a block, from Moscow. Several east Europeans remembered, for the benefit of your correspondent, a warning given by *The Economist* the week after Mr Nixon's Moscow trip that block negotiating by the EEC at the forthcoming European security conference would destroy any remaining hope the east Europeans might have had of behaving at that conference with even the slightest independence of the Soviet Union.

Already President Nixon's visit to Moscow has been the signal for Russian "observers" to start turning up uninvited at negotiations being conducted by the Hungarians and Poles to buy western factories—on the handy pretext of warming up the conversation with a dram of the Moscow spirit. Hungary, which has spun the most varied web of loans to finance more trade with the west, including straight access to the Eurobond market, is obliged for the moment to watch its step. Throughout eastern Europe, Rumania alone excepted, talk of joint ventures with western firms on the Yugoslav model is being muted for the time being. It is a time for would-be heretics in the east, now that the Washington patriarch has been and departed bearing gifts, to be more catholic than the Moscow pope.

*Jugoslavia***The trouble with terrorism**

Is Yugoslavia about to have a guerrilla problem? Probably not, despite last weekend's dramatic announcement from Belgrade that a Croat terrorist group, infiltrated from the west, had been broken up by security forces and territorial army units near Bugojno, in mountainous western Bosnia. It is true that Croat extremists have in recent years mounted a number of bomb attacks on Yugoslav offices in various western countries. In April, 1971, the Yugoslav ambassador in Sweden, Mr Vladimir Rolovic, was assassinated by two young Croats who had recently arrived from Yugoslavia. And the crash of the Yugoslav DC-9 airliner over Czechoslovakia last January, in which 28 people were

*But Tito's still got too many friends*

killed, was probably the work of Croat extremists trying, unsuccessfully, to assassinate the Yugoslav prime minister, Mr Bijedic.

But there is a world of difference between sporadic acts of violence committed on foreign soil and serious guerrilla action within Yugoslavia itself. There is no sign that the Croat extremists—poorly led, politically disunited and scattered all over the world—are capable of taking on the well trained and well armed Yugoslav army without the support of the local population and at least some backing from a foreign power. They do not seem to have either. Neither Russia nor China nor any western country is even remotely likely, at the moment at any rate, to support anti-Tito guerrillas. Despite the widespread disillusionment that President Tito's purge in Croatia has caused among Croats at home and in the west, there is no sign of a shift to the sort of policies that could produce a political base for terrorism.

The most worrying aspect of the weekend's news is that it may play into the hands of all those hardliners in Yugoslavia who have been agitating for a return to the "firm-hand" policy associated with the former vice-president and security chief, Mr Rankovic, who was dismissed in 1966. Last week's meeting of the Serbian central committee revealed that the hardliners are a force to be reckoned with. The vision of a terrorist threat within Yugoslavia could be a godsend to the advocates of harsher measures against political enemies of all sorts.

In Croatia the hardliners have been unhappy with the pace of the political purge—despite the fact that more than 1,300 junior and middle-rank party officials have been dismissed and

that police prosecutions have been started against more than 1,000 students, intellectuals and former party officials (but not the top party men sacked in December). The result of next month's trial of some Zagreb student leaders, who organised a strike in November to support the deposed Croatian leaders' economic demands, may show the relative strength of the two sides in Yugoslavia.

Sportsmanship

Great chess bore

With that elderly ailing yachtsman, Sir Francis Chichester, safely where he belongs (in hospital) we can devote our undivided attention to that other mid-summer non-event: moody Bobby Fischer, the capitalist world's money-grubbing little horror, playing, or not playing, chess against sporty Boris Spassky, whose sportiness vanishes at a flick from the Soviet machine behind him. It is all much too tedious to regurgitate but when a chess-happy Mr Jim Slater's offer to double the prize money belatedly lured Mr Fischer to Reykjavik (where the poor Icelanders are said to be paying what amounts to at least a dollar each for the privilege of playing host to the championship) the Soviet chess federation chose to get stuffy and foul things up all over again.

The Russian move is no doubt part of the psychological warfare integral to this cerebral exercise. The Russians, whom Mr Fischer—before his groveling apology on Thursday—had accused of lying, cheating and hypocrisy, have held the championship for 35 years; the experts say that America's genius can probably wrest it from them. Great chess players, as Mr Arthur Koestler explained in a scholarly article in the Sunday Times on July 2nd, are seldom nice or happy. Icelandic chess sagas tell tales of slaughter, including that of King Canute's opponent. Such extremes are now unusual but two more recent champions have died insane.

One former champion who has clearly escaped this peril is Mr Max Euwe, the Dutchman who has the wretched job of organising the present spectacular. Cheerfully admitting that he has been making up his own rules in order to try to save the game, he has apologised in the way the Russians demanded. The awful thing is that if the game is saved the two men will fight it out for the best of 24 games. Chess may not be more savage, or more inductive to international ill-will, than other games, but it is certainly slower.

Palestine

Bond Street gang?

Britain's part in co-sponsoring last week's Security Council resolution—which “condemned” the recent Israeli raids into Lebanon, while only “deploring” the guerrilla attacks that led to them—has detonated an Israeli reaction. The Israeli government was angered by the resolution, particularly by the clause which called for it, albeit in convoluted phrasing, to return the Syrian officers captured during the previous week. Hence, one must assume, Israel's decision to embarrass the British Government by challenging Britain's supposed decision to allow the guerrillas' Palestine Liberation Organisation to set up an office in London—although the Israelis had already been informed that under British law and tradition neither decision nor permission was involved.

The Government has indeed been embarrassed, with members of parliament on both sides protesting at the thought of a terrorist nest in the centre of London. In Parliament on Monday Mr Joseph Godber, Minister of State at the Foreign Office, reiterated what Sir Alec Douglas-Home had replied to Mr Abba Eban last week: there are no means of preventing anyone establishing such an office so long as it operates within the framework of British law. This means that a PLO office, like the other offices in Britain which are or have been attached to a wide variety of political movements, can provide information or lobby anybody who is available to be lobbied but cannot operate as a guerrilla base for planning terrorism or training terrorists.

The distinction can be a fine one and there is no doubt that the activities of a PLO office, when established, will be closely scrutinised. So too, as Mr Godber assured Mr Callaghan, the shadow Home Secretary, will its personnel. The most likely head of the new office will be Mr Said Hammami, a PLO representative who has been in London for about a year attached to the Arab League information office. With his own office and staff, Mr Hammami's job will be extended but will remain, he insists, for information only.

A PLO office has existed more or less quietly in New York since 1965. The quiet was broken last year when the office was raided, and its chief beaten up, by militant Jews. There is also an office in Geneva but in most

European capitals information about the Palestinians and their cause is disseminated, if at all, by the Arab League and its PLO representatives. It may be these who were meant by the resolution passed last week by the political committee of the Council of Europe, which called on the council's 17 members (who include Switzerland and Britain) to close what it called their PLO offices.

Israel's desire to prevent the propagation of more efficient information about the Palestine guerrilla movement (at present scanty and even more confused than the movement itself) is understandable, although it comes rather curiously from Mr Menahem Begin, the leader of the Jewish guerrilla organisation which fought both Arabs and Britons in the last years of the British mandate. The past being the past, Mr Begin was correctly given a visa for his recent visit to London. The Palestine guerrillas being very much part of the present, it is questionable whether their leader, Mr Yasser Arafat, should receive similar hospitality if, as rumoured, he applies for a visa to open the London office. As chairman of the PLO's executive committee, Mr Arafat is, in theory at least, ultimately responsible for all acts of violence by the guerrilla groups which belong to the organisation.

But it is improbable that Mr Arafat will make the attempt. The information office can do its work as well, and in fact a good deal better, without the hullabaloo of a controversial opening. And Palestinians in London, pointing to the rock-bottom state of the fortunes of the guerrilla movement, say starkly that Mr Arafat has, or should have, a great many more important things to do than ceremonial openings.

You're looking at an exciting new programme from Scotland.

That, of course, is no ordinary screen. It's the read-off screen on what is formally called the IBM 3270 Information Display System. But the 3270 is a Scottish programme: IBM's manufacturing plant at Greenock has the responsibility for supplying it to over 100 countries throughout the world. (And if orders and interest are anything to go by that means a lot of exports!) But the 3270 is just one programme keeping Greenock busy. In addition to display units they also manufacture

data entry equipment, terminals, computers and optical character readers. Giving employment to around 2000 people.

And, together with Havant (IBM's other major UK manufacturing plant) their delivered exports approached £50m. in 1971.

But all this activity means more than statistics. Projects like the IBM 3270 are putting British computer manufacturing personnel among the most advanced in the world.

And that's a long-term benefit that just can't be measured.

The Vatican

The Pope at war with the enemy within

FROM OUR SPECIAL CORRESPONDENT

Pope Paul and his court are away at Castel Gandolfo, the Pope's summer residence in the mountains, and the only people—apart from the tourists—to be seen around the Vatican now are a handful of junior officials left in charge of the papal shop. But even the Pope's absence does not signify a closed season for the headquarters of a religious community whose members make up 16 per cent of the world's population. The Roman Catholic church and its external and internal preoccupations are big news even in the middle of summer.

Last week the Vatican caused a stir by promoting to the rank of full bishop a number of apostolic administrators in Poland's western territories, which belonged to Germany until 1945. The Vatican thus officially recognised the permanence of Poland's western border only a few weeks after the Bundestag in Bonn had ratified the non-aggression treaty between Poland and west Germany which Herr Willy Brandt signed in December, 1970. The Pope has as much of an Ostpolitik as Herr Brandt, President Pompidou or any other western statesman. He also has on his hands a number of bitter internal controversies. One is over whether priests should be allowed to marry. The other concerns the ban on birth control which was confirmed by Pope Paul four years ago.

Even in this very secular age there is an almost insatiable thirst for information about the most traditional of the Christian churches. It is a curiosity that is not easy to satisfy, for the Vatican is in some ways a more secretive place than a communist capital. For example, the Osservatore Romano, the papal daily, is a unique model of carefully misleading evasiveness, by comparison with which Pravda appears to bristle with information and even gossip. Nevertheless, despite the Vatican's information smokescreen, it is possible to catch a glimpse of what is happening, and to form some basis for speculation about the future.

It is persistently rumoured that the Pope will retire on his 75th birthday

on September 26th. There is a precedent for retirement: a predecessor, Celestin V, returned to monastic life after only five months on St Peter's throne in 1294. Certainly the Pope is thought to be sincere when he says from time to time that he would like to give up.

He is showing signs of tiredness. And there is his 1968 ruling bidding heads of congregations and other top prelates to retire at the age of 75. Some very respectable Vaticanologists maintain that he would hardly prescribe for others what he was not going to practise himself. So they think he will go this year. This theory, however, ignores the Pope's deep sense of personal mission in the struggle against the forces of secularism which he sees threatening the Roman Catholic church from within. Last week's statement by Archbishop Benelli, the Vatican's deputy foreign minister, that the Pope will not retire must be taken seriously.

Speculation about the next Pope is therefore premature, and expectations that Pope Paul will shortly hold another consistory at which a number of new cardinals will be appointed make prediction well-nigh impossible. The new Pope could conceivably be elected from their ranks—and he could very well be a non-Italian. Italian cardinals now form less than a third of the electoral college.

The ancient system of smoke signals which heralded the election of a new Pope is gone: the final announcement will be made on the radio, and the voting will take place in a modern hall. But not much else has changed. The conclave, the body which will elect the new Pope, will be smaller than before. Since cardinals over the age of 80 have been barred from voting, only 89 out of the 118 cardinals will have full voting rights. The reformist Cardinal Pellegrini of Turin has suggested that the conclave should be widened to include representatives of national episcopal conferences and even a small number of Catholic laymen. But this is unlikely to be accepted because of strong opposition from the

more conservative figures, such as Cardinal Siri of Genoa, and the influential Archbishop Benelli, who is said to have the Pope's confidence.

One of the strongest arguments put forward by the traditionalists against widening the conclave is that it would give various governments the opportunity to influence the vote through their national bishops and laymen. Some Vatican figures still shudder at the memory of how Emperor Franz Josef exercised his rights as Europe's last "apostolic ruler" before the first world war to veto the election of a very popular cardinal because he was too pro-French.

The liberals reject this. They claim that the traditionalists are not seriously interested in making the present selection procedures in the church more democratic and cite the continuation of a relatively restricted papal conclave system as one proof of this. They also point to the recently published guide for the selection of new bishops which, in theory at least, provides for wider consultation before episcopal appointments are made by the Pope. There is some truth in the critics' view that, although the new guide provides more opportunity for the apostolic delegates or nuncios in various countries to make their own inquiries, it does not actually oblige them to do so, and certainly it does not oblige the Holy See to take local opinion into account. The critics particularly resent the absence of any provisions for laymen and other interested persons to make their views known to those in authority.

There has been a storm of protest in

Holland over recent episcopal appointments made contrary to advice from the local dioceses. Cardinal Alfrink of Utrecht even went on television to criticise the appointment of the reportedly conservative Bishop of Roermond, Monsignor Gijsen, over the head of the diocesan chapter in February. Feeling among some Dutch Catholics is running high and moderates like Cardinal Alfrink are already being accused of being too soft. The advocates of a tougher line are suggesting that the faithful should stop giving money to the church until the Vatican agrees to consult with the Dutch dioceses. The Pope is unlikely to condone such actions. There is a real possibility of an eventual schism between Rome and Holland.

In west Germany the Vatican is under fire from several directions. Cardinal Höpfer's intervention in the present debate over the controversial bill which would allow abortion until the third month of pregnancy has angered the ranks of the government coalition in Bonn. The cardinal had said that Catholics should not vote in elections for candidates who support this measure. Some government supporters have suggested that the 1933 concordat between the Vatican and Germany should be reconsidered. The Catholic ranks are divided and there has been criticism of the hierarchy for its handling of the issue.

Perhaps significantly, the majority of the 33 theologians who signed the March manifesto "against discouragement in the church" come from various German universities. This manifesto, which proclaims that the church is suffering from a crisis of leadership and confidence and calls for direct action to remedy the situation, has already been described by Cardinal Garonne, the head of the congregation for education in Rome, as an example of "ecclesiastical guerrilla warfare."

But even more worrying than the troubles in mixed Catholic and Protestant countries such as Germany and Holland is the mounting dissent in Italy right under the Vatican's nose. A group calling itself the "November 7, 1971, movement" (after the last day of last year's bishops' synod) has attracted some quite big names from among the clergy, but also much criticism from the hierarchy.

In view of its troubles in the traditionally "easier" areas of north-west Europe, Spain and Latin America, the Vatican must be tempted to win some solid success in the communist coun-

At least the Pope can keep the cardinals in line

tries. But top Vatican policymakers insist that they are pursuing their variant of Ostpolitik in a strictly realistic spirit of small expectations. They know that if and when there is a measure of liberalisation in the communist world the Catholic church will probably be the last to be allowed to benefit from it. They admit that the policy has not yet yielded any tangible results, except in Yugoslavia, which is a different kettle of fish anyway. On one front, at least, the Vatican has made no progress at all. The Chinese apparently refuse to realise that although the Catholic community in China is small the Catholic church throughout the world is large and powerful.

The Vatican is saddened that the church in black Africa, for many years regarded as a future growth point of world Catholicism, has made so little progress. But Islam seems to be making the converts and the Vatican is clearly still licking its wounds after the Nigerian civil war. It also has serious problems in Zaïre, where there has been a head-on clash between President Mobutu and the local hierarchy. The recent massacres in Burundi, one of the Vatican's most favoured African countries, have come as a severe blow.

Like other worldwide institutions, the Catholic church is suffering from difficulties inseparable from times of rapid change. One of these is the problem of manpower: the number of men and women deciding to become priests or nuns has been falling rapidly, and nowhere more so than in the developed countries of north-western Europe and north America. The church also has its financial problems. This might be hard to believe in

view of its worldwide investments and land ownership, but Vatican officials claim that vastly rising costs have resulted in the church being short of money; it is, they say, far from having "unlimited financial puissance," as claimed by Mr Avro Manhattan in a new book on Vatican finances*. The Vatican delegation at the recent Unctad conference in Santiago was particularly galled to be classified as a member of the rich-nation club.

Ultimately, neither the problem of manpower nor that of money can be solved by the technical means that business or even a political organisation would apply. When all is said and done, the Roman Catholic church is not like any other institution in the world. It has been preaching eternal truths to man in a uniquely absolute and self-confident manner. Much of that self-confidence, which other Christians tend to find so irritating, has gone now. But it cannot be regained solely through the reform of power structures within the church. The church's present crisis may be one of "leadership and confidence," as the 33 theologians say, but there is also a deep crisis of faith. And how do you solve problems of faith? It is possible to sympathise with the more conservative elements in the Catholic church who say that there are things which cannot be settled by a vote and that the church cannot become as radical and democratic as some would like it. It would then cease to be what it is. Perhaps they are right. But then that does not mean that those who see reform in the church will, or should stop arguing for change.

*The Vatican Billions. Avro Manhattan. Paravision Books. 220 pp.

What the world needs today is a good alternative. Brazil offers one.

The world's export and import markets are getting more competitive every day. And there are companies and even countries that actually celebrate when they achieve an increase of 1% in their international business.

Brazil knows this. Research has shown that the importers of a country, of an industry, of a company, are constantly preoccupied by dependence on a single source of supply. By reducing the risks such a dependence represents. By increasing the bargaining power. Through the negotiation of alternative sources of supply, importers can strengthen their potential profit position.

Brazil has understood this. Its vast progress has not been limited to a 50% growth over the last five years. In increasing its GNP by 11.3% only in 1971. By the construction of Brasilia. In opening 2,000 km of roads in the Amazon region. In developing an automobile industry now producing 55,000 units per month. In eliminating the deficit of the national budget. In increasing foreign currency reserves to 2 billion dollars. In increasing power supply from 5 to 12 million kilowatts during the last six years. In investing 5% of the GNP in educational programs. In creating one million new jobs every year. Brazil did more: It turned abroad and attracted foreign capital investments. Volkswagen, Ford, Rhodia, General Electric, Ishikawajima, General Foods, Philips, Alfa Romeo, Carlsberg.

Shell and hundreds of other huge companies are here contributing to our development, participating in our progress. And in our profits.

Now we are taking the next step. Brazil, the big alternative for those who have invested in the future of a 95 million market, is now developing its export potential.

We know that the importing world needs good alternatives. Alternatives in products, in prices, in commercial conditions, in infra-structure, in zones of influence, in means of transportation, in freight rates.

These alternatives have already been created. Come to São Paulo from September 5 to 14 to see hundreds of stands at the Brasil Export 72 Fair. Then you will understand why Brazilian exports are growing at the rate of 15% a year. And why so many importers are participating in our enthusiasm. And in our profits.

Anhembi Exposition Grounds in São Paulo, largest in Latin America (over 150,000 square meters).

Four men who changed the court

FROM A SPECIAL CORRESPONDENT IN WASHINGTON, DC

With some notable exceptions, President Nixon's campaign to "balance" the Supreme Court really began to pay off in the term which has just ended. It is true that the death penalty was all but eliminated and government wiretappers were admonished that they would have to obtain court warrants in order to eavesdrop on domestic "subversives." But with four Nixon appointees, twice the number of a year earlier, the nine-man court more often than not tilted its decisions towards the police and prosecutors and away from criminal suspects. When the Justices rose for the summer, the President was able to observe with obvious satisfaction: "I feel at the present time that the court is as balanced as I have had an opportunity to make it."

What the President meant was that he had filled four vacancies, not enough for a numerical majority. But the four men he appointed, Chief Justice Warren Burger and Justices Harry Blackmun, William Rehnquist and Lewis Powell, were as reliably conservative and dedicated to "law and order" as any chief executive could

reasonably expect. After all, as Mr Nixon noted, lawyers by their nature are bound to disagree sometimes. So it is even more remarkable that the four voted as a block in 54 of the 67 cases in which they all participated during the past term. Once in a long while, one of them, usually Mr Powell, strayed. In his first judicial post, he appeared to be trying to pattern himself after the late Justice John Harlan, a highly independent jurist. It fell to Mr Powell to write the opinion that invalidated the Administration's policy of not obtaining judicial warrants before tapping the telephone wires of individuals and groups considered to be subversive. In an extraordinary break with the White House and the Justice Department, the ruling came down without a single dissenting vote. But any fair observer would have to say that even Mr Powell is more conservative than the least liberal of the five other Justices, Mr Byron White.

Only the four Nixon appointees voted to retain the death penalty. They alone voted to permit a rural community in Virginia to secede from a county school system in which there were

many more blacks and form a white school district. They lost. Had they won, federal judges, already under pressures from the White House and Congress, would have been even less inclined to override geographical lines to bring about racial desegregation in schools. The four Nixon judges, alone, voted to uphold contempt judgments against witnesses before grand juries who were unwilling to testify until the government proved that it had not used illegal wiretaps against them. Here, too, the Nixon block lost, 5 to 4.

More frequently it prevailed by attracting Justice White or Justice Potter Stewart, or both, to its point of view. For example, Mr White and the four Nixon appointees banded together to prevent a test of the army's surveillance of civilians. Several individuals and groups, including war protesters, had sued on the grounds that spying by about 1,000 agents, beginning in 1965, inhibited freedom of speech, assembly and dissent. But the Chief Justice said that the plaintiffs had failed to show concrete injury or even that their particular rights were endangered. In an opinion that exemplified his judicial philosophy, Mr Burger said that federal courts cannot serve "as virtually continuing monitors of the wisdom and soundness of executive action; such a role is appropriate for the Congress."

The same majority, the Nixon men plus Mr White, produced on the final day of the term a 5 to 4 ruling that members of Congress may be haled before grand juries to testify about how they acquired secret government documents. The case concerned publication of the Pentagon Papers by Beacon Press in Boston. The question, everyone thought, was whether a grand jury could summon assistants of Senator Gravel of Alaska, a passionate opponent of the Vietnam war, who released the study a year ago. Surprisingly, the court held that even members of Congress could be compelled to answer for actions that are not "legislative in nature." Justice Stewart, one of the four dissenters, said that the decision breached "the

Front row: Justices Stewart, Douglas, Burger, Brennan and White; back: Justices Powell, Marshall, Blackmun and Rehnquist

Ruling for life

Six hundred prisoners in 31 states were overjoyed last week when the Supreme Court outlawed capital punishment. But if Congress or any of the states is determined to try to reintroduce the death penalty, as Governor Reagan says that California will if a referendum supports it in November, the effort might prevail by meeting the objections of two members of the five-man majority. Each of the nine Justices wrote his own opinion and Justices Stewart and White opposed capital punishment not because it was "cruel and unusual"—the view of Justices Brennan and Marshall—but because it is imposed erratically, at the discretion of judges and juries. Even Justice Douglas, the court's senior liberal, simply argued that it was the poor and the black who were most often condemned to death. Of the prisoners who have been waiting on death row, 329 are black, 14 are members of other racial minorities and only 257 are white.

The Chief Justice, who voted to retain the death penalty, pointed out that states could make it mandatory for certain crimes or could instruct judges and juries on the kind of cases in which capital punishment could be imposed. Either step might convince a member of last week's majority that the penalty was not being applied in a hit-or-miss manner. Only 11 states have actually abolished the death penalty, although no one has been executed since 1967 as the country waited for the court's decision.

traditional separation of powers and could be a boon to "a vindictive executive."

Again, by exactly the same vote, the court held that the Constitution's guarantee of a free press did not give reporters a special privilege to protect their confidential sources by refusing to assist grand juries. Justice Stewart, again one of four dissenters, argued that the decision was an invitation to state and federal authorities to undermine the historic independence of the press. A week earlier, an identical majority held that the malls of urban shopping centres could be declared off-limits to peaceful distributors of political pamphlets. This undercut a 1968 decision and served to make private property rights superior to freedom of speech and assembly.

Supported by both Justices White and Stewart, the Nixon appointees upheld the Justice Department's authority to bar alien marxists from visiting the United States to attend academic conferences. In another

ruling reminiscent of the suspicious 1950s, Justices Burger, Blackmun and the somewhat reluctant Justices Stewart and White combined to rule that states may discharge public employees for refusing to swear or affirm that they will oppose the violent overthrow of the government.

It was in the field of criminal law, especially, that the Nixon appointees had their greatest impact. With the help of Justice White, they held that trial juries could convict defendants by verdicts that are less than unanimous. With the support of Justice Stewart, meanwhile, they ruled that in general suspects are not entitled to a lawyer at identification parades. And with the votes of both Justices White and Stewart they widened the power of grand juries to compel witnesses to testify, made it easier for prosecutors to put questionable confessions before juries and expanded the authority of policemen to search suspects.

When Justice William Douglas, the court's senior member and most consistent liberal, announced a major extension of the right-to-counsel, the event seemed almost anomalous. During the Warren years the court had granted trial lawyers to poor people only if they were charged with serious crimes. Now, with the endorsement of all the Justices except Mr Powell and Mr Rehnquist, the court has held that if a defendant faces the prospect of even one day in jail he is entitled to counsel at his trial, no matter how minor the charge against him.

This kind of decision was an exception, however, as was the major departure that spares all the present inmates of death cells. The mood was generally one of restraint. For example, over anguished dissents by the three liberals, Justices Douglas, Brennan and Marshall, the court allowed private social clubs that hold liquor licences granted by the state to exclude blacks as guests. Such racial discrimination had been attacked as unconstitutional because the state helped to keep the clubs in business. But Justice Rehnquist, in a 6 to 3 ruling, said that "such a holding would utterly emasculate the distinction between private as distinguished from state conduct."

During the term as a whole, Justice Douglas dissented most frequently, 56 times. Justice Brennan dissented 37 times and Justice Marshall 31 times. The fact that the three holdover liberals were in the minority most often should be strong evidence of the court's movement to the right. No other President in memory has been as successful as

Mr Nixon in influencing the court. Few, of course, have had the chance to make so many appointments. But even President Franklin Roosevelt, who named eight Justices, found two of them far less liberal than he had expected them to be. The performance of the prosecution-oriented Justice White would probably have surprised President Kennedy, who named him.

The Nixon quartet is proving much more reliable. They are as conservative as the President who put them there and control of the court is within their grasp. Mr Nixon's re-election and new vacancies on the court would only make a certainty of what seems to have happened already.

ELECTION '72

Whose delegates?

With over twice as many delegates pledged to him as to Senator Humphrey, his nearest rival, Senator McGovern is still within reach of the Democratic party's nomination for President. But it is no longer an easy reach. Just how much of a struggle he will have at Miami Beach will not be known until next week when the members of the convention decide whether or not to restore to him the full 271 votes of the delegation from California. If the convention decides to uphold the decision made last week by the credentials committee—that the state's delegation should be divided between the candidates in proportion to the popular vote which they won in the primary in June—then Mr McGovern will have to scramble for another 151 votes, if he still wants the nomination, to replace

Now, how many have I?

Who will cure most European headaches in 1980?

Even if you are not directly interested in the pharmaceutical industry, the prospect of intense competition within a given industry on an international basis, is a prospect of general interest to the business man. More and more, as Europe integrates, we shall see such battles, while the national giants of various industries integrate amongst themselves. And it is important for the European-minded businessman to be able to predict the outcome of such contests. They affect his future, directly or indirectly.

Within national boundaries the detailed information which a man needs, to form his business decisions, may be found in his chosen daily newspaper. But how about the international information—the birdseye view of a particular industry, taking in the whole of Europe and the world? The Financial Times does not claim to be

able to tell you more about your own country's business than your country's own leading journals. It does claim, however, to tell you more about other countries' businesses—from pharmaceuticals to steel, from cars to crops—than you may find in any other daily newspaper. It also claims a very high degree of accuracy, detail and political impartiality.

Perhaps these are some of the reasons why, according to a recent survey*, 41% of senior management throughout Europe already rate it essential reading, and why more and more international companies find it an important advertising medium. If you would like to judge the Financial Times for yourself by letting us send you or any of your executives free copies each day for two weeks, please complete the coupon and send it to us.

those he lost to Mr Humphrey and the other candidates. In his first angry outburst in the wake of the credential committee's decision, Mr McGovern threatened to bolt the party. But since then he has been trying to cool the bitter feuds between the party's old guard and its new reformers. Even if these do not deny him the nomination, they could well endanger the Democrats' chances against the Republicans in November.

Senator McGovern's supporters argue that while the system that allocates all the California votes to the winner of the primary may not be in the spirit of the party's reform rules this was the way that all the candidates, including Mr Humphrey, had agreed to play the game before the election. But can Mr McGovern overturn the decision on the convention floor? No one yet knows whether the 118 McGovern delegates who are not in dispute will be allowed to vote on the issue. The other 151 are disqualified from voting on a challenge in which they are concerned.

This week Mr McGovern won a historic victory when an appeals court overturned a decision in a lower court which upheld the action of the credentials committee. But calling in the courts sets a dangerous precedent and may lead to other difficulties. In the past such disputes have always come under the jurisdiction of the members of national political conventions. Now for the first time a court has shown that the rules which govern such conventions can be disputed. This could endanger the party's reforms.

The best example of the dilemma is whether or not the delegation headed by Mayor Richard Daley of Chicago should be seated at the convention. In retaliation for their defeat on the Californian issue Mr McGovern's supporters voted in the credentials committee to unseat the 59 members of the mayor's delegation on the grounds that their election did not comply with the reform rules. At least 40 members of the new delegation are McGovern supporters. But if the election of the Daley delegation was not in violation of Illinois law should it not therefore be seated along with the Senator's 271 delegates from California? So far the courts have ruled against Mr Daley. But if the Senator (who does not want a confrontation with the mayor which might well cost the Democrats Illinois in November) gets his 271 delegates then he may be happy to come to some arrangement with Mr Daley.

Going, going . . .

The United States returns to the negotiating table in Paris on July 13th for what President Nixon hopes may at last be "constructive" talks on ending the war in Vietnam, conceivably before the end of Mr Nixon's first term in January. But there were few signs in the President's press conference last week that a chance of accommodation had arrived. The communist leaders only understand "bargaining from

strength," he said. The present bombing of North Vietnam, the heaviest for five years, will continue until the communists agree to the conditions which he laid down in May: release of American prisoners of war, safety for the remaining American servicemen in Vietnam and no communist takeover of the government of South Vietnam. The thought of a coalition government imposed on Saigon was dismissed with unusual vigour.

Mr Nixon insists that there has been a turnaround in the war since the

ELECTION '72 Big-money race

Counting the cost of the 1972 presidential campaign has begun. Already there are two big uncertainties: where did the President get the \$10m already in hand for his re-election campaign and what will Senator George McGovern do for money if he is chosen as the Democratic candidate for the Presidency?

Raising money to pay the astronomical bills incurred by candidates in presidential election years is always a delicate subject but this year it is even more so. The Republicans, traditionally well-supplied with cash, are labouring under the burden of the new federal election spending act, which requires candidates to divulge the sources of their financial support. The Democrats carry a double burden: the \$9.3m debt left over from the unsuccessful campaign for Mr Hubert Humphrey in 1968 and Senator McGovern's populist economic policies, which terrify even liberal Democrats in business, banking and industry.

This weekend the Democrats will meet the debt problem head-on. Led by Mr John Brown, chairman of the Kentucky Fried Chicken Corporation, they will present a television programme 18½ hours long, in which more than 100 celebrities from sport and show business will invite the viewers to telephone in contributions to bail the Democrats out. The so-called telethon is to be allowed by a special waiver of the rules of the Federal Communications Commission, which ordinarily require that the nationwide networks take no more than three of the peak viewing hours in the evening away from local stations for the showing of network programmes. The Democratic party has convinced the American Broadcasting Companies and the FCC and hopes to convince the viewers that the telethon is really a bipartisan effort to save the two-party system. The fact that donors may charge contributions to their credit card accounts is expected to help the money roll in.

But the Democrats have disagreed over whether to spend the proceeds of the telethon on this year's campaign or to pay off the party's debt. Senator McGovern's backers want the coming campaign to take priority. Yet the Democratic National Committee insists on clearing the debt first. The problem for Mr McGovern, if he is nominated, will be to find enough self-sacrificial philanthropists like Mr Stewart Mott, the General Motors heir, willing to give hundreds of thousands of dollars to the man who has promised Americans harsh inheritance taxes and many other measures to redistribute wealth.

The New York Times has reported that the McGovern economic philosophy so alarms Wall Street that it may not only deprive the Democrats of from 10 to 20 per cent of their traditional backing but may also make it easier for the Republicans to attract contributions. The Republicans have already collected one-third of the \$30m estimated to be the cost of Mr Nixon's re-election campaign. They are not the slightest bit embarrassed by the fact that most of it was garnered before April 7th from donors who were told that, if they gave before the new law went into effect on that date, they would not have to have their names made public.

Shirley MacLaine: Democratic star

present communist offensive began. He must also believe that the American people will not hold against him in November a war fought almost entirely from the sea and in the air by professionals: he can now point to the virtually complete withdrawal of troops on the ground. At the end of June only 49,000 soldiers remained in Vietnam and this number is to fall to 39,000 by September 1st. No more conscripts are to be sent to Vietnam against their will, although the 4,000 who are there at present will have to remain. But the build-up at sea and in Thailand, let alone at staging posts in the Pacific, exceeds withdrawals from Vietnam since the offensive began. The North Vietnamese will have noticed, suspiciously, the statement of the White House spokesman that the presence of forces outside Vietnam is not a matter for negotiation.

The few men who remain in Vietnam now come under the command of General Weyand, General Abrams's former deputy; for the first time the post of deputy is to be filled by an air force officer. General Abrams has slipped away after completing a job no soldier relishes—withdrawal most of his men in the face of a skilful and determined enemy. He has been chosen to succeed General Westmoreland as army chief of staff but there is one obstacle which must be cleared away before he is confirmed by the Senate. Its armed services committee is holding a full inquiry into statements by General Lavelle that his unauthorised bombing strikes last winter were known to General Abrams. The Secretary of Defence has denied that this is true but Senator Stennis, the committee's chairman, wants to satisfy himself about the "serious questions of command and control" raised by the disclosures concerning General Lavelle, who has been demoted and retired.

Old age comfort

A time-honoured way of winning votes in an election year is to increase old-age pensions. This year Congress, which is controlled by the Democrats, has outdone itself. It voted overwhelmingly to give about 28m pensioners their biggest rise—a 20 per cent increase in their social security benefits as from September 1st. The average pension for an elderly couple will go up from \$223 to \$270 a month. There will also be an automatic increase in pensions whenever the cost of living index rises more than 3 per cent a year.

In order to pay for these higher benefits the social security tax, which falls on both the employee and the employer, will go up on January 1, 1973, from its present level of 5.2 per cent on the first \$9,000 of annual earnings to 5.5 per cent on the first \$10,800. From then on the rate of tax will remain the same indefinitely—at present it tends to creep up year by year—but the wage base on which the tax is levied will continue to rise according to a formula linking it with the rise in the general level of wages. Under this new system those with higher incomes will pay proportionally more of the bill than those lower down the scale. People earning under \$9,000 a year—about two-thirds of the 66m who pay social security taxes—will only have to pay an extra \$27 a year at most. Those who earn \$10,800 will pay an extra \$136.

President Nixon, who has signed the bill, is not pleased with the new rises. He claims that they are inflationary and that they will add a deficit of \$3.7 billion to the federal budget for the fiscal year which started on July 1st. He has threatened that the additional cost will have to be met by cuts in other federal programmes. The President also fears that the Senate will have little incentive to struggle on with his controversial and difficult proposals to reform the welfare system now that the popular social security increase is no longer part of the package. But he could not veto the pension proposal because it was attached to a measure continuing the federal debt ceiling at \$450 billion until October 1st. Without this bill the debt ceiling would have reverted to \$400 billion—and the actual debt now stands at about \$426 billion.

The financial battles between the President and Congress are by no means over. Congress will have to vote

Generation gets a pay rise

again on the debt ceiling just before the November elections and it is expected that the Democrats will try to play the same game and attach to it a number of measures, such as tax reforms, which the President might otherwise veto.

John and Martha

The playwright, Mr Edward Albee, denied that the bickering George and Martha in "Who's Afraid of Virginia Woolf?" were intended to be George and Martha Washington, the founding couple of the United States. None the less, many people took the play to be a dissection of American marriage in general. Now the marital troubles of the Mitchells, John and Martha, have been interpreted by no less than President Nixon as typical of those suffered by other husbands and wives in American political life. In accepting the resignation of Mr Mitchell, the manager of his campaign for re-election, because of Mr Mitchell's need to spend more time with his wife and daughter, the President said that of the sacrifices made by those entering public life, "the greater share of the sacrifice was usually the woman's" because she had to put up with the "absence of a husband and father."

The President's statement will not lose him much of the women's vote. And he may not in fact have to do without the services of Mr Mitchell. As Mr Nixon's former law partner, the manager of his 1968 campaign and the Administration's first Attorney General, Mr Mitchell remains a friend and adviser with influence at the White House. He will give up his \$60,000 salary, but he can make more money practicing law—in Washington offices one floor above those of the Committee

John Mitchell, won't you please come home?

to Re-elect the President. His job on the committee has been given to Mr Clark MacGregor, Mr Nixon's astute chief adviser on relations with Congress.

What is wrong with Mrs Mitchell? Rumours suggest that general emotional strain is the answer and that Mr Mitchell resigned not out of uxoriousness nor pressure from the White House but out of a need to deal with a pressing family problem. That explanation, however, does not erase the possibility that the outspoken Mrs Mitchell was telling something near the truth when she telephoned a journalist to say that she was being held a political prisoner, restrained by bodyguards and forcibly administered sedatives, and that she was not "going to stand for all those dirty things that go on." She has been one of the few candid and spontaneous characters in the Nixon Administration's line-up and, whatever her verbal indiscretions, it was not a figment of her imagination that five men linked with the Republicans were found breaking into the Democrats' national headquarters. Moreover, although Mr Mitchell may not agree with his wife's statement that politics is "nothing but a cops and robbers game," he apparently does share her view that their life was more agreeable before he acceded to Mr Nixon's request that he step down from the Justice Department to head the 1972 Republican campaign.

No secret accounts

FROM A CORRESPONDENT IN CALIFORNIA

The Bank Secrecy Act, passed in 1970 to provide for official scrutiny of the flow of dollars overseas, mainly as a check on criminal activities, has also

raised the question of whether information-seeking government agencies may violate the privacy of domestic bank accounts. For in drafting rules to implement the law, the Treasury Department has required not only that "unusually" large transactions be reported and that records be kept for five years of international payments over \$10,000, but also that copies of all cheques be held, in order to enable any bank account to be reconstructed.

Before the law was passed, banks had objected to such an idea because of the huge burden of keeping such records (the United States generates 22 billion cheques yearly), while civil libertarians protested at the potential invasion of privacy. Congress delegated the decision to the Treasury, which was to draft rules not restricted to foreign transactions, but to those necessary to maintain evidence with a high degree of usefulness in criminal, tax or regulatory investigations or proceedings.

Most banks were ready to fall in line. Cheques are usually micro-filmed anyway, to guard against loss, so only expanded procedures and storage are needed; to object to the new rules might merely annoy the authorities while needlessly upsetting customers. But in California the state's huge banking chains are, as symbols of the establishment, already a target for radical attack. Now, goaded by the publicity and by complaints from customers, they have joined in a suit already brought by one small banker and by the American Civil Liberties Union seeking an injunction against the new rules on the ground that they are unconstitutional. Added pressure came from California's Senator John W. Tunney, one of whose constituents received with his statement an internal

bank communication saying: "This is to authorise you to read cheques to the FBI before sending the statement to the customer." Last week a federal judge in San Francisco suspended the objectionable provisions just as the rules were about to go into effect. Hearings are to begin on July 20th.

Most Americans are unaware, or unconcerned, that bank records are already almost casually available to the Federal Bureau of Investigation, the Internal Revenue Service and other government agencies under present laws. The banks co-operate because frequently they need assistance themselves in countering fraud and other crimes. They hope that now the courts may set some specific guidelines, to extricate them from an embarrassing conflict between their obligations to their customers and to the authorities. They fear that people may be unwilling to open bank accounts once they realise that there is a risk of complete disclosure of their affairs. Bankers observe, too, that criminals are unlikely to be caught by the new rules: drug pushers, after all, do not accept cheques and determined criminals can easily conceal their activities.

The ACLU sees the new rules as a serious extension of the present dubious practices, which will encourage "fishing expeditions" against controversial individuals and organisations. It has urged the banks to declare that no disclosures will be made without a written subpoena or court order, providing for notification to the customer, with sufficient time for him to oppose the order legally.

Gas in jeopardy?

Natural gas, the non-sulphurous fuel which is in great demand to comply with clean-air standards, is in short supply in the United States and last week the Federal Power Commission finally gave the El Paso Natural Gas Company permission to go ahead with the first large-scale, long-term imports of liquefied natural gas. The company has contracted with Sonatrach, the Algerian state-owned oil agency, to buy 1 billion cubic feet a day for the next 25 years. This will be sold to subsidiaries of three domestic pipeline companies on the east coast and will supplement supplies from Georgia to New York. LNG, as it is called, occupies only about one-sixth of the space which it takes up in its non-frozen state and will be brought across the Atlantic in nine "cryogenic"

NEW ZEALAND

The pattern changes

"Timber, one of the fastest growing industries... Export earnings doubled in the past two years..."

The expansion of the forest industries has been outstanding. Paper, pulp and kraft board as well as sawn timber are exported in ever-increasing quantities.

This is New Zealand's news today. Food bowl of the Pacific, but expecting also a 174% increase in the export of forest products well within the next ten years. And we are there, intimately involved in the daily changing pattern of it all. Well placed to help you with your export or investment problem. Contact us when you need us. GROUP LE NICKEL — PENARROYA — MOKTA

Extracts from Shareholders' reports

This group of 65 companies operating in 16 different countries and established in 12 others, is the largest lead producer and the second most important nickel producer of the Western world, beside being the major private uranium ore producer in France. In 1971, it was faced with a diminished growth rate and an international monetary crisis, as well as with falling raw material prices and a lowdown of consumption. These adverse conditions resulted, as elsewhere in the non-ferrous industries of the world, in an appreciable reduction in profits.

Main production of the Group

	ore	metals
Nickel	4,298,000	40,019
Lead	165,500*	313,200
Zinc	110,600*	119,800
Copper	138,300*	18,200
Iron	3,029,000†	—
Manganese	2,020,000†	—

* concentrated ore, to which should be added 329,000 tons of lead, zinc and copper ore mined by the Cie des Mines de Huarant.

† Including the Mokta company's contribution.

The grand total of the consolidated balance sheet amounting to 4,285 million francs (against 3,404 million in 1970) shows a 26% increase, half of which is derived from the integration of the Mokta group.

Consolidated turnover amounted to a total of 2,896 million francs (against 3,018 million in 1970), the activities in metal and ore production having contributed 2,661 million francs.

Consolidated results reached 104 million francs (against 154 million in 1970) and reflect the year's adverse economic conditions.

LE NICKEL: 1971 was dominated by the following factors:

- A substantial setback on the nickel market and a consequential 10% decrease in metal sales. Turnover reached 745 million francs as against 847 million in 1970 and 573 million in 1969.
- An 8% drop in the price of nickel expressed in francs occurred in December 1971 as a result of the devaluation of the dollar. The full effect of this move will be felt during the 1972 financial year.
- The pursuit of mining exploration and metallurgical research in connection with processes as well as products.
- A 36 million francs trading profit (1970: 82 million), including 13 million derived from foreign exchange gains and 15 million from dividends paid by subsidiaries.

PENARROYA: The report submitted to shareholders highlighted the following:

- A drop (in relation to 1970) in the output of lead and zinc concentrates of around 4% and 8% respectively.
- An adaptation of metal products to market conditions and developments during the year.
- The pursuit of mining prospection, which had been undertaken during previous years, and the discovery of two rich zinc deposits in France.

Total turnover recorded by the Penarroya group's industrial concerns was 1,287 million francs (against 1,478), and that of the industrial and commercial companies combined reached 1,851 million francs (as against 2 million francs).

MOKTA: The Compagnie de Mokta experienced a particularly favourable year, and obtained the best results of the past ten years.

After taking into account a provision for mining research and a capital gain of 6.9 million obtained from the disposal of assets, there was a net profit of 19.2 million francs after a 13.5 million francs allocation to reserves; the available balance allows for the distribution of a net dividend of 7.50 francs per share.

tankers, beginning in 1975.

At first it was taken for granted that the FPC's decision would encourage many more applications for large-scale imports of LNG. But this looks more questionable since El Paso's chairman and the chairman of one of the importing companies have declared the commission's conditions "unreasonable" and "unacceptable." LNG is expensive gas—at least twice as expensive as gas produced in the United States, whose price is controlled. The importers had expected to be allowed to average in this cost with that of domestic supplies, so that no consumer would have to pay a great deal more. This the commission refused to authorise and the pipeline companies fear that they may have trouble selling their LNG on long-term contracts.

The commission also refused to permit the price at which the imported gas was sold to the domestic pipelines to rise until 1980—and then by only 1 cent per 1,000 cubic feet. Yet the contract with Sonatrach provides for higher prices under certain circumstances. The FPC also insisted that El Paso-Algeria, the subsidiary created to bring the oil over, transferring title on the high seas, must apply for an FPC certificate, thus putting itself under the commission's unwelcome jurisdiction.

The importers and their shareholders would thus bear the full economic risks. They would also be under pressure to hold their costs and prices to a minimum in order to keep the cost of gas to the consumer as low as possible. But with the United States becoming increasingly dependent on imports of natural gas, the consumer and the FPC may soon be faced with a choice between higher prices and forgoing gas they need.

Eyeing the sky

The United States first launched a communications satellite for commercial international traffic in 1965. By 1974 or 1975 it may be using the same kind of satellite at home. The Federal Communications Commission, after six years of deliberating over the complex legal and economic problems presented by introducing satellites into the domestic communications industry, has come out with its policy at last. There is to be no monopoly on domestic space communications. Instead any company which can produce a technically and economically sound plan may own a satellite.

The free-entry policy is far from what had been expected when the FCC first took up the issue in 1966. Then it looked as if the Communications Satellite Corporation (Comsat), the quasi-public company which runs the American end of the international satellite system, might be allowed to operate the domestic service by itself. The FCC was leaning toward Comsat or some other form of monopoly control until early 1970. Then President Nixon's Office of Telecommunications Policy suggested that there might be free competition in satellites as long as the aspiring companies could demonstrate to the FCC that they had potential customers for their satellite service and that their system would not interfere technically with others.

The FCC's new policy might seem Republican-tailored, therefore, but three of President Nixon's appointees to the commission have dissented from it. The chairman, Mr Dean Burch, and two colleagues believe that the new rules place too many restrictions on Comsat and on the American Telephone and Telegraph Company, two of the most likely entrants in the race. What the new rules do is to prevent AT&T, the powerful company which holds a monopoly on long distance telephone service, from using a satellite for anything but telephone service in the next three years. And they also force Comsat to choose

between the two plans that it has had in mind. One was to collaborate with AT&T on a satellite system; the other was to operate one of its own, seeking its own direct customers. The decision was a severe blow to Comsat, which has asked the FCC to reconsider.

So far eight applicants have filed preliminary proposals before the FCC. For virtually all of these, AT&T and Comsat included, the most desirable customers are the three national television networks. The networks now transmit their programmes around the country over AT&T's land lines and microwave towers and pay the company \$75m a year for this service. For a long time, the networks have believed that they could save about half this sum by using satellites and the satellite applicants have been wooing them with various offers. Now the FCC has complicated the question. AT&T will not be allowed to have the television business; Comsat may have it only by giving up its reliance on AT&T. And the networks have begun to wonder, with rising costs, if they had not better stick with AT&T's land lines after all. It may be that the early winners in the satellite stakes will be the specialised communications companies which want to distribute computer data, cable television programmes and telex messages over new networks which only satellites will make possible.

Profits from that silver lining

The American public was right. It did want the commemorative Eisenhower silver dollars (the first silver dollar minted in the United States since 1935) and it has been willing to pay for them—to the embarrassment of the Treasury. The Secretary of the Treasury, a long-time opponent of high government profits, called the profits from sales of the collector's dollar "unconscionable"; they are estimated at \$55m a year for 11m coins, so there is not much disagreement with him.

The dollars became available a year ago after a congressional hassle in 1971 over whether they should contain any silver. The compromise—a 40 per cent silver content—seems to have pleased everyone. Now three coins are being issued: two made of 40 per cent silver—a collector's "proof" coin selling for \$10.00 (available in London for \$22.22) and an uncirculated \$3.00 version that is slightly imperfect—and the layman's copper-nickel sandwich coin that is freely circulated as an alternative to the greenback bill.

The Eisenhower coin (with a

"pleasant looking eagle" spreading its wings over the Apollo 11 moon landing site—the "tail" to Ike's "head") is probably the last silver coin that the Treasury will produce. Most of the government's silver reserves are being disposed of, except for a defence stockpile and the 23m ounces that were set aside for the Eisenhower issue. But profits from the government's numismatic activities are not likely to decline. Sometime soon part of the Treasury's 2.9m rare silver dollars will come up for sale—including the 90 per cent silver Carson City dollar (some still in the mint bags). These sell for \$6.50 for an 1879 issue and up to a cool \$60.00 for the rare 1881.

New energy patterns

Large electric utility expanding its capacity. Requirement: two 1150-MW high temperature gas-cooled nuclear reactors. We deliver. And refuelling will only be needed once every 4-5 years.

As a total energy company, we stand ready for the energy patterns of the future. We're engaged not just in petroleum and natural gas, but coal, uranium, synthetic fuels. We're well advanced in our nuclear and fusion energy programmes. We're examining geothermal and even solar energy prospects. Any way you look at it, Gulf is energy.

Gulf Oil Corporation, Pittsburgh, Pa., U.S.A. and throughout the world.

New personalities

Modern power-units with their rapid acceleration enable the fast, courteous driver to move swiftly and safely through today's congested traffic.

Mercedes-Benz now complete their smaller bodied range with four new cars with completely new engines. The 280, 280 E, 280 C and the 280 CE are now at the top of this group. Naturally, these cars have safety features which enable their extra power to be used with complete safety.

New twin-overhead camshaft engine.

The new 2.8 litre, twin-overhead, camshaft engine is one of the most advanced designs in production anywhere in the world. In relation to its performance, fuel consumption is extremely favourable. Its top speed will satisfy demanding drivers.

Mercedes-Benz 280 E and 280 CE, 185 h.p. DIN (210 h.p. SAE), electronically-metered fuel-injection system, 0-60 mph in 9.9 seconds.

At the top of the successful 200-250 C range, Mercedes-Benz now introduce four new models, the 280, 280 E, 280 C and the 280 CE, all with new engines.

Mercedes-Benz 280 and 280 C, 160 h.p. DIN (180 h.p. SAE), dual compound down-draught carburettor, 0-60 mph in 10.6 seconds.

Harnessing the engine power is more important than the power itself, so the models have more powerful brakes and wider tyres. Fuel tank capacity is 17 gallons.

There are also changes in the cars of the whole range: additional exterior safety colours, improved interior finish,

The current Mercedes-Benz range:

200 D	280 S
220 D	280 SE
200	280 SE 3.5
220	280 SEL 3.5
230	300 SEL 3.5
250	300 SEL 6.3
250 C	350 SL
New 280	350 SLC
New 280 E	600
New 280 C	600 Pullman
New 280 CE	

The range available varies in some countries to suit local requirements.

extra position on wiper switch for interval operation. Headlamp washers as an optional extra on some models.

Talking about Mercedes-Benz is thinking about safety.

There are many good reasons why a JAL 747 Garden Jet is different from all the other Jumbos.

Here are twelve of them.

The interior of our 747 Garden Jet has been described as 'Serene' and 'Breathtaking'. But for all its difference and original décor, for JAL that's not the most important feature.

For us, service has, and always will be more important than anything else. And service on a JAL flight means our own very special hostesses.

They, above all, personify the gracious hospitality that is Japan at its most pleasing. Their simple elegance, gentle femininity and inborn desire to please, are the main reasons why JAL has the reputation for having the most delightful in-flight service in the world.

They are the reason why JAL carries more passengers over the Pole to Tokyo than any other airline.

They are the reason why JAL has jumped from No 14 to No 6 in the world airline league in six years.

They are the reason why in only 11 months, just four of our Garden Jets carried more than 200,000 passengers across the Pacific.

And now, similar 747 Garden Jets are flying from Europe to Tokyo. Fly with JAL and you'll find twelve memorable reasons that will make flying a pleasure again.

JAPAN AIR LINES
the worldwide airline of Japan

NO NATION CAN AFFORD A HUNGRY CHILD

The world is divided.

Divided between the filled and the hungry. The nourished, and the starving.

Hunger is our common enemy. Human understanding cannot be built on empty stomachs.

Fortunately, the skills to produce an adequate world food supply are at hand. And, hopefully, the determination.

Increasing food production is a primary business of our company. We've been helping people and countries do so for more than 80 years.

Start with the basics: Soil and Water. We've engineered and built water distribution systems to bring some of the world's most unpromising regions into productive cultivation.

We help growers choose the best seeds for their environment, then provide equipment to prepare the soil and do the planting.

Our agricultural chemicals, power sprayers, and dusters

enable crops to flourish, undiminished by insect or pest.

Our mechanical harvesters enable growers to manage larger areas of production.

We design intricate processing machinery that can do everything from removing fruit pits, peeling tomatoes, or juicing oranges to filling and cooking the product in metal cans.

We manufacture automatic packaging equipment to speed food products into eye-appealing containers of paper, film, or cardboard.

We even manufacture see-through films for the packages.

It is safe to say that no other single company offers so broad a range of capabilities to the world's food-producing industries.

Putting the world into better nutritional balance is not a task of simple magnitude.

But our kind of technology can reduce the obstacles.

FMC has offices in principal cities throughout the world. To learn more about this versatile company, please write for our booklet, "Achievements."

FMC CORPORATION

San Jose, California 95106, U.S.A.

A VERY USEFUL COMPANY

An ASEA thyristor-controlled electric locomotive hauling a goods train in Sweden.

This is ASEA in transportation

No other company in the world has developed and delivered so many thyristor-controlled main-line locomotives and multiple-unit trains as ASEA. Materials handling—fork trucks, hoists, cranes, mine winders, conveyors, automatic stackers and industrial locomotives—is another field for ASEA in transportation. We have solved many intricate problems in different areas. We want to tackle yours, too. To serve your needs, ASEA have 40,000 employees, factories in nine countries, sales offices and agents in over 70 countries. That is ASEA.

Books

War and peace

THE COLLAPSE OF BRITISH POWER

By Correlli Barnett.
Eyre Methuen. 655 pages. £5.

TOTAL WAR

By Peter Calvocoressi and Guy Wint.
Allen Lane, The Penguin Press. 976 pages £6.

Correlli Barnett is well known to be no respecter of persons whose leadership his parents' generation were brought up to take for granted: a useful quality in a radical historian. He must have done some of the work for this book on the fall of the empire while he compiled his history of the British army; in it, he covers a narrower span in time but a wider historical canvas. His central thesis is that the British imperial governing class was badly taught, and therefore failed to hold the empire. At school and university, boys learned to pursue "all that is noble and good" (J. R. Green on Mr Gladstone in 1876), to write prose and verse in Latin and Greek, instead of learning how to be numerate, or the principles of engineering or any other socially useful science. They went out, conscious of their mission to govern, crammed full of good intentions and manly character but with no grasp of the world around them; knowing nothing of its recent, little of its past history; and taking for granted that all responsible men's motives were as high as their own.

By an unusual double, the author has written a book which will infuriate liberals and conventionalists alike. No surviving member of the League of Nations Union will be able to read it without a tremor; crusty old schoolmasters whose great-uncles served in the Mutiny will be appalled; but the line of argument, severely realist, merits attention. Mr Barnett claims that the empire fell because the home country's resources were inadequately organised and hopelessly over-extended; and because the leading imperial statesmen were simpletons enough to stir up, in India and the colonies, political opposition among native races which might have remained supine and content under firmer, sterner rule.

The first two thirds of his book is

based on wide and deep reading of history books, and on his own meditations; in the closing third, he dissects British armament and foreign policy in the 1930s, with the help of the recently opened cabinet archives and all the advantages of hindsight. Baldwin emerges comparatively favourably: his villain is Neville Chamberlain, with:

The forbidding personality of a Victorian headmaster, aloof, authoritative; the very embodiment of rectitude... devoid of charm and outward warmth;... devoid of insight into other men's feelings or motives.

The inadequacies of the machine tool industries, and the slothful incompetence of the central government machine, also come in for stricture. In the end, the British found themselves caught up in "a war which, according to the Treasury, they could only afford to wage if short, but, according to the Chiefs of Staff, could only hope to win if long. The crisis of British power had begun." In a brief coda, Mr Barnett fires another round at another sacred cow he had assaulted earlier—"to the last, the existence of the empire forced on England a world role she had not the resources to sustain"—and concludes that:

Lend-Lease gradually consummated the process Churchill had begun of transforming England into an American satellite warrior-state dependent for its existence on the flow of supplies across the Atlantic.

For a wider, a world-comprehensive view of that world war, there is at last a book we can turn to. Mr Calvocoressi and Guy Wint's "Total War" is the best single-volume history in English of the struggle that came to convulse the world between 1936 and 1945. It has nearly a thousand pages, fortified by nearly a hundred excellent illustrations; it is even better printed than Mr Barnett's book, only a pound dearer, and not unmanageably heavy in the hand. Instead of concentrating, as most war histories do, on actual warlike operations, it delves for diplomatic, strategic, and cultural causes. It takes in political and social as well as military struggles, and surveys results as well as events. In fact, it seeks to explain what the war was about as well as how it was

Chamberlain: forbidding villain

conducted.

There are in fact two books, sensibly placed within a single pair of covers: a study of the war in the Far East and the Pacific, written by Guy Wint between his first and second heart attacks and revised by his widow, and a study of the European-Mediterranean-Atlantic war by Peter Calvocoressi, ably assisted by Mrs Righter. They are well written, full of intelligent comment as well as a great deal of history. For example, from a chapter on this country's cardinal front:

The Germans came closer to victory at sea than anywhere else after 1941, and at the time of their defeat they had not exhausted their capabilities. They lost, not because they had no more cards to play, but because they played them just too late... These innovations did not have the chance to take effect in the battle because allied science had beaten the U-boat back to a position of no recovery.

Or, in an aside in a chapter named after Bose, the Indian nationalist leader who hoped to reconquer Delhi with Japanese bayonets, "It may be that Wingate demonstrated, not the success of his own guerrilla strategy, but the success of British propaganda."

Guerrillas are given a fuller measure of attention and credit than is usual in war histories, which are so often written from inside the closed world of the uniformed. A long section on nazi-occupied Europe includes a chapter on resistance:

This impressive resurgence of European nationalism in arms helped to salve the humiliation of the defeats in 1940-41 and by doing so contributed more to the spiritual rehabilitation of Europe, which was in the balance, than to the defeat of Germany, which was assured by other forces.

The resurgence was called out against themselves by the Germans, whose police bodies that "dealt death in the open and death in the camp" were the terror of all occupied Europe for four

agonizing years. Horrible as modern wars must be, a war that put down Himmler's *Schutzstaffeln* was a war worth fighting.

Grand nationalist

GAULLISM

By Anthony Hartley.
Routledge and Kegan Paul. 373 pages. £3.25.

This is a very illuminating assessment of de Gaulle, and one that seems to be scrupulously fair, although done by an Anglo-Saxon and pro-marketeer. Everything up to page 33, on the roots of gaullism, is brilliant, and has never been done quite as well elsewhere. Mr Hartley has got the nationalism exactly right. "The supreme interest of mankind dictates that each nation be responsible for itself": that is the key to gaullism and to de Gaulle. It was meant to be a statement both of inevitability and of high romance, and both were in de Gaulle and were understood by him. It still goes on in a petty sort of way; it was the reasoning behind the Mururoa tests. If this reasoning now reads so strangely in English print (where only powellism comes anywhere near to the same preaching) then the rest of Mr Hartley's book is a good explanation of why it should not.

Mr Hartley runs through the history of the Third, Fourth and Fifth Republics with assurance, not centring it all on de Gaulle and even letting him wander off (as he did) into the wings. This, too, adds to the book's credibility. Mr Hartley even seems secretly on the side of that Fourth Republic which did rather well with France's economy. But he leaves no doubt that the crises of 1940, 1958 and (although it was in a genre of its own) 1968 were crises of nationality, to which only a nationalist could give a convincing answer on the spot politically—and in what one suspects will be the judgment of the continuing nationalism of France and most of its neighbours.

That is why de Gaulle was, and will remain, a great man: the last European, perhaps for many generations, who provided dramatic nationalist solutions, first against a Churchill who was providing the British with alliance solutions (which became client ones) and then against the postwar men who were offering federalist or internationalist solutions. He got away with it as late as the 1960s because everyone else knew that France was actually a satisfied power, so that although his

nationalism was damaging to the British, in a decade of appalling weakness for them, it had little or no effect in the world, not even in Canada. In the end he knew that, too: he went because there was no reason to carry on. Mr Hartley throws light in the right corners, and in some unsuspected ones.

Echoes of the past

BRITISH ECONOMIC POLICY AND THE EMPIRE, 1919-39

By Ian M. Drummond.
Allen and Unwin. 241 pages. £4 cloth, £2.40 paperbound.

THE FRENCH ECONOMY, 1913-39

By T. Kemp.
Longman. 183 pages. £2.50.

The economic problems, thought and policy of the prewar period do not precisely parallel those of our own—how could they? But for those with eyes to see they relate to and anticipate much that we have to deal with in the apparently more sophisticated 1970s. And books like these—Professor Drummond's quite explicitly, Mr Kemp's less directly—help redress the dreary tendency to imagine that all our problems and all our debates are entirely new.

In their different ways, Britain and France were both in decline in the interwar period. In each instance fragmented visions of alternative futures became tangled with nostalgic and obstinate attempts to return to a lost past. The pre-1914 world could not be recalled—even if the trappings of its relationships and policies (prewar parities, stringent monetary policies, an imperial division of labour, a smoothly working international economy, a system of settling wages and investment which relied on market forces and private power) could be briefly maintained or energetically advocated. In like manner, the history of the interwar years is still worth studying: first, because the essence of our problems is not new; second, because our debates about their solutions are still heavy with the echoes of the past.

Professor Drummond's book combines a moderately detailed study of attitudes and policies towards the imperial economic system with documents exemplifying those attitudes and policies. The documents are, unavoidably, patchy in quality and coverage—although there are a few (notably a transcript of a private meeting on unemployment in 1919, in which Lloyd

George hounds some of his ministers with slashing commonsense) which provide fascinating sights into the abyss of official decision-making. But in his own 125 pages Professor Drummond provides a succinct, robust and eminently clear analysis of the history of imperial economic policy, particularly as it related to the white dominions. That history—as he rightly emphasises—must be seen as part of the history of economic development.

Admittedly, the rosy picture of the Empire as a coherent network of "men, money and markets" harked back to a pre-1914 engine of growth which could no longer work, while the views of the Treasury, as well as the harshness of economic and political reality, emasculated the development programmes of those whom Professor Drummond calls the imperial visionaries. But many of the ideas which were intertwined with fallacious assumptions were eminently reasonable. Professor Drummond's historical perception and keen economic logic provide a spirited counterbalance to the sloppy neo-colonialist interpretation of imperial policy, and a welcome reminder that:

Those who wish to make reputations and fees in the guiding of economic development would find it distressing to admit that their creative breakthroughs of the 1960s were the stock-in-trade of grey civil servants and flamboyant imperialist politicians in the 1920s.

Mr Kemp's fairly slim study of interwar France is based upon secondary sources and places much more emphasis on a general narrative and much less on systematic analysis. This is partly because he is more concerned to grapple with ill-defined socio-economic problems (in particular a presumed crisis of confidence on the part of the French bourgeoisie, which is constantly referred to, rarely elaborated, and never explained). The result, although far more detailed than Professor Drummond's work, is less informative and intrinsically less interesting. Nevertheless, it provides a useful introduction to a field neglected by English authors. Moreover, it, too, reminds us of some of the enduring themes of twentieth-century economic history: of the cruel worship of monetary policies and exchange parities which are the product of historical accident rather than economic reality; of the inevitable and painful clash on the one hand between monetary ideologies and practical necessities, and on the other hand between the free-wheeling exercise of working-class economic power and the maintenance of prosperity in a system relying on private investment.

Shavian zenith

BERNARD SHAW: COLLECTED LETTERS, 1898-1910

Edited by Dan H. Laurence.
Max Reinhardt. 1041 pages. £6.

For the second of four planned volumes only an interim report is necessary, and a warm welcome—all the warmer for a seven years' wait. Mr Laurence has now got Shaw past his fifty-fourth birthday; that is, well into the second half of his life. It is awful to think of how much of his own life Mr Laurence is allowing to be consumed, at this rate of progress, by the task he does so well. He has put literature deep in his debt.

The years covered by this instalment carry Shaw to his prime of achievement and reputation. He began badly, collapsing from overwork and a mysterious foot ailment. Fortunately this at last enabled Charlotte Payne-Townshend to capture him for marriage, as Ann Whitefield was to capture John Tanner in "Man and Superman." (Shaw's struggles to save his bachelorhood were exactly those of his hero.) Thus rescued from journalistic drudgery—Charlotte being rich—Shaw was able to produce, with remarkable speed, a series of important works, some of them masterpieces, like "John Bull's Other Island," the success of which began the great Shavian boom. By 1910 he was acknowledged to be one of Britain's most influential writers, even though he was passing through a bad patch, writing comparatively tedious works such as "Getting Married" and "Misalliance." "Pygmalion" and Mrs Patrick Campbell still lay ahead.

The public life is excellently illus-

Shaw: prime time

trated in this volume—better than in the first. Shaw is away from London more often; his wife insists on the necessity of annual holidays, and the house at Ayot St Lawrence has been acquired. We see Shaw the fabian, Shaw the controversialist, Shaw the evolutionist crank, Shaw the businessman, above all Shaw the man of the theatre. The letters about the production of his plays are of the deepest fascination. Taken with Mr Bernard F. Dukore's recent book on Shaw as a director they reinforce the view that one of his greatest strengths as a dramatist was his complete theatrical professionalism. Nor is it merely the tact and intelligence with which he advised his actors and actresses that impress; it is also his profound commitment to the value of the art he practised so well. Perhaps he made the stage too much a platform in his own work; but no one could read his letters on the subject without feeling that he had vindicated that high place for the drama which is more easily given, in much recent criticism, to the novel.

Shaw's inner life is comparatively poorly represented. Living with Charlotte he no longer needed to write to her, and she put a stop to the philandering with other women which had so commonly expressed itself in intimate correspondence. The reader must make do with the jokes, of which there are plenty—the jewel, perhaps, being the meeting with August Strindberg:

After some further conversation, consisting mainly of embarrassed silence and a pale smile or two by A.S. and floods of energetic eloquence in a fearful lingo, half French, half German, by G.B.S., A.S. took out his watch and said in German, "At two o'clock I am going to be sick." The visitors accepted this delicate intimation and withdrew.

This catches the ridiculous side of both playwrights to perfection.

Release

IN HIDING

By Ronald Fraser.
Allen Lane, The Penguin Press. 252 pages. £2.50.

FRANCO'S PRISONER

By Miguel Garcia.
Hart-Davis. 171 pages. £2.25.

On March 28, 1969, Manuel Cortes listened to the radio in his house in the Andalusian village of Mijas as he had done every Friday for the past 30 years. This was the day the Spanish cabinet met. He was waiting for an announcement. On that day it came: the Spanish government declared an

amnesty for all alleged offences committed during the civil war. Sr Cortes sent his wife to Malaga to check the news and when she returned with the confirmation he stepped out of his house, a free man.

Manuel Cortes's imprisonment in his own house had, in a sense, been self-imposed. When the civil war ended he returned home to hear that republican supporters were being shot out of hand by General Franco's victorious forces. His own fate was clearly sealed since at the outbreak of the war he had been the village mayor and was known as a life-long socialist. His wife and foster-father persuaded him to hide in their home rather than to give himself up or try to escape. And for the next 30 years he lived in his own village, unbeknown to anyone except his immediate family.

Mr Ronald Fraser has told the story of these years in the words of Sr Cortes, his wife and daughter. It is a moving and illuminating account of the courage, persistence, patience and faith of a simple couple who persevered with the dangerous plot through much hardship, poverty and fear. But Mr Fraser has led Manuel and Juliana to wider fields than the claustrophobic atmosphere of the room beneath the stairs. They talk of their early life in the village, of Manuel's initial hopes for the republic and for the lot of the Spanish workers, of his efforts to control the extremists in his village and of his experiences in the fearsome civil war. And now that he is free in a prosperous village devoted to the tourists he can reflect on the changes that have come about. He is particularly saddened by the young people. "This has been the biggest disappointment to me in coming back to the world. For today's youth is tomorrow's leadership and what hope is there with a youth that knows nothing and cares even less?"

Miguel Garcia was arrested in October, 1949, and sentenced to death for being a member of an anarchist terrorist organisation in Barcelona. In the end he spent 20 years in various Spanish prisons before being released in March, 1969. His own account of his prison treatment is not a pretty story, but his experience, harsh and often cruel as it was, could be matched by long-term prisoners in most countries. He gives some fascinating glimpses of the dedicated men he worked with to disrupt the Franco regime and stir up the revolution again, but his bitter hatred of his political enemies flavours all he writes and, one suspects, all his judgments.

Unpumiced

HOMER
By C. M. Bowra.
Duckworth. 191 pages. £2.95.

It was a constant surprise to find a certain flatness in the writings of the late Sir Maurice Bowra, one of the most scintillating talkers of his time. This book may offer an explanation. It was found after his death almost ready for the printers, except for a missing last chapter; and it is (on top of those other virtues which one expects from him) delightfully readable. Was that flatness in other works the result of too much pumice-work in revision and proof-correction? Whether it was or not, this book can be recommended without that slight hesitation which one felt about much of his written popularisation—that it risked boring the newcomer.

Bowra was a classical classicist, unhesitating and—when it came to the most fundamental points—slightly unquestioning. Greece was best, and Homer was the best of epic poets. He does not ask how far we find him so good because he was the first, and set the standards by which, ever since, Europe has consciously or unconsciously judged other poets and, by circular argument, Homer himself. If one does not look for questions of this kind, which smack of heresy, this is as good an introduction to Homer as one could want.

Bowra gives a clear but somewhat simplified account of the Homeric question and its background. There is no room in so short a book for doubts and complexities: for example, the Ahijawa of the Hittite records are simply Achaeans, with no reservations

Homer: Europe's standard-setter

or explanations. Bowra's wide knowledge of epics in many languages made him an exceptionally good expounder of Milman Parry's path-breaking discoveries, based on his study of Serbian ballads, about the way in which oral poetry develops; though it appears from a rather strange remark about the natural rhythms of Serbo-Croat that even to Bowra it was only a written language, as it very clearly is to most Homerists.

He intended to deal with the question of the unity of Homer in the missing last chapter. There is no reason to suppose that he had changed his earlier view that stylistic arguments favour a single poet, but that, once one accepts that the two poems are the culmination of a long oral tradition, it hardly matters. He is, of course, best on the literary qualities of the poems. His brief chapter on the general structure of the Iliad is a masterpiece of understanding and concision. This book can be strongly recommended both to those who read Greek and those who do not.

Spiritual circus

THE NEW RELIGIONS
By Jacob Needleman.
Allen Lane, The Penguin Press. 255 pages. £2.75.

Clinical psychologist turned philosopher, Professor Needleman tries to describe and assess for us the youth-based, California-based enthusiasm for old religions that is flooding America. They are new religions to western culture which, at an advanced stage of organising and controlling human life, increasingly questions and rejects what it is doing. Professor Needleman gives a sympathetic account of what a growing number of people are discovering in Zen Buddhism, Subud, Tibetan Buddhism, and in particular in gurus such as Meher Baba, Maharishi and Krishnamurti. It has become, he says, a spiritual explosion. He is more successful in portraying than in assessing because, whether from choice or from conviction, he adopts no particular standpoint from which to evaluate the phenomenon. He does not consider or attempt to tie in the pentecostalist spirituality that is sweeping the established Christian churches.

The common features of these religions or world-views are roughly as follows. They regard the ordinary techniques of living as an illusion constantly recreated by human desire, disintegrating and lowering human life; our most intellectual operations

are carried out simply to serve the illusion. (Reason is and ought to be the slave of passion, thought Hume.) They offer man a higher source of wisdom, of serenity and perspective, of reality in place of illusion, which can only be reached by disciplines of detachment and of inward withdrawal, either to immanent divinity or to a true self. These disciplines include physical and ritual rigours as well as mental ones, and the suggestion is that they relate us to cosmic powers or energies from which western man has become alienated and detached. Christianity and Judaism, in so far as they have diluted their disciplines, joined the illusory search for an earthly paradise and become part of institutional life instead of challenging it, have lost out.

It is not clear what these mainly young people are looking for, or how they would know when they had found it. Perhaps it can only be characterised as peace of mind, a sense of the value of human activity, something to integrate the chaos of their experience. They do, however, seem convinced that they can never integrate their multiform experience from a point within it, but only from a point outside.

Old Smithsonians

BRITISH MONETARY POLICY, 1924-31
By D. E. Moggridge.
Cambridge University Press. 311 pages. £6.80.

This interesting, well-written and misnamed book is the fruit of Dr Moggridge's extensive researches, though cabinet papers and other documents, into Britain's return to gold in 1925, at an exchange rate that was at least 10 per cent too high. The decision was "ultimately an act of faith in an incompletely understood adjustment mechanism undertaken for largely moral reasons," and those advising the chancellor "added almost no analysis of current conditions and problems." Once \$4.86 was chosen, the avoidance of devaluation became a matter of religious conviction, upheld by both the Treasury and the Bank of England with a farrago of rubbish that throws appalling light on the decision-making apparatus of the time. Churchill asked some of the right questions, but nobody in the civil service of the Bank answered them.

The usual catchphrase was "that the City and its institutions deserved special consideration in the formula-

Snowden: clinging to \$4.86

tion of economic policy, because invisible earnings played a large role in the balance of payments." When the Labour government of 1929-31 came to office, the fervour against devaluation was heightened by the chancellor's hyperbole and ignorance; Snowden told the Labour cabinet that devaluation would "reduce the standard of living of the workmen by 50 per cent." If this book had been written in time, it should have been required reading for everybody in Westminster, Whitehall and the City of London during Mr Callaghan's chancellorship, which again resisted devaluation in 1964-67. One would like to think last month's floating has put it out of date in Britain, but the threat of another Smithsonian fixing suggests that it isn't.

Map-reading

THE TIMES ATLAS OF THE WORLD
The Times/John Bartholomew. 312 pages plus 123 plates. £20.
OXFORD ECONOMIC ATLAS OF THE WORLD
Clarendon Press: Oxford University Press. 248 pages. £5.75 cloth, £3 paperbound.

The fourth revision of the fourth atlas produced by The Times is quite as abreast of the times as can possibly be expected in a work of its size and scope. On the excellent Bartholomew maps, as well as in the list of contents, not only have the Basses-Alpes become the Alpes de Haute Provence, but East Pakistan has become Bangladesh and the Trucial States have become the United Arab Emirates. In the 272 pages of index that follow the 244 pages of maps, it may appear at first glance as if there had not been a corresponding effort to catch up; but the perceptive reader will quickly find there is a supplementary index. Again, a glance at the contents page might

Dissent on Development

Studies and Debates in Development Economics
P. T. BAUER

"The combination of his broad-minded and tolerant approach with his technical economic expertise could be of far more value to the cause of development than the received wisdom he so ruthlessly criticises."
Christopher Tugendhat
Financial Times
"... brilliant collection of essays... Prof. Bauer's style is drily academic; yet he is witty as well as wise, a satirist as well as a sage."
Colin Welch

Business Brief

Madison Avenue's slim-in

The Advertising Association's annual conference in London this week revolved, inevitably, round Britain's entry into Europe. Advertising outside the United States is now growing much faster than it is in America, but Madison Avenue has such a head start that it will take many years for the others to catch up. Of Britain's three largest advertising agencies, two are American. Of the world's 20 largest agencies, all are American.

This does not mean that life on Madison Avenue (actually, few of the agencies have their offices there) is or is going to be roses. After the heady growth rates in agency business in the early 1960s (7%-9% a year) came a sticky patch, with almost no growth at all in 1967, and things have never been quite the same since. Admen still inhabit plush offices, employ glamorous girls and earn luscious salaries, but if they are not also very good at the job the chances are they will not enjoy these privileges for long.

The American Association of Advertising Agencies (4As), which counts the bulk of agencies among its members, has

figures to show that employment in the industry has actually declined over the past few years while turnover has kept on going up (see chart). Some of these gains in productivity are more apparent than real because of what inflation has done to the cost of buying advertising space, but there is no doubt that the industry has cut out some of its dead wood, and is now squeezing a lot more work out of the survivors. With labour costs accounting for two-thirds of the industry's income, it was the obvious thing to do.

The slimming was largely a response to the slowdown in the American economy. Advertising suffers disproportionately from economic depressions, because manufacturers tend to look on promotional spending as a frill that can be dispensed with when the pressure is really on. Advertisers began—often for the first time—to question whether they get value from their agencies, and to explore ways of getting the same kind of service more cheaply.

By the late 1960s most large advertisers had developed fairly efficient marketing departments of their own, and no longer

I'm Jo.

I've got a lot going for you to Miami and the Sunshine States of America, with the only daily non-stop flights from London and our own kind of personal service.

And a lot from Miami: I've got great connections to all of Florida, New Orleans, Houston, California; you name it. Then fly it.

And starting 26 May, I'll have more: the nice convenience of the only daily 747's to Miami. Pick the day you want to go. Then go.

And the beautiful luxury of the great 747, with more cabin room than any airliner in the sky today.

And the 747 extras en route: first-run movies, multi-channelled audio entertainment and our international gourmet cuisine.

And a refreshing kind of personal service, person-to-person.

Give it a go, won't you? Fly my daily 747's to the Sunshine States of America.

Telephone National Airlines direct, or ring up your travel agent. Tell him Jo sent you.

Soft sell makes hard cash

depended on their agencies for this.

At the same time, a rash of new operators appeared in the market, offering creative services, research or media buying on a piecemeal basis—which was often cheaper than the established agencies' "full service" package.

Commission v. fee

Agencies are traditionally paid by a commission—formerly 15%, now increasingly 17½%—on the cost of the advertising space they buy for their clients in the press, radio or television. This has the merit of simplicity, but can work unfairly. With an established campaign for a well-known product, the agency probably does rather well out of it. With new products which need a lot of work, or on special services, it may not cover its costs but will quietly cross-subsidise itself from its more profitable clients, to the disadvantage of the less demanding of them. So there has been a progressive move away from commission and towards charging fees for specific services. The Association of National Advertisers, in a study published at the end of May, found that between a quarter and a third of the members questioned were paying their agencies on a fee basis—more than double the proportion in the last survey in 1967.

The main reason for the change, the ANA found, was that advertisers are now much more inclined to use their agencies on a "partial service" basis, picking out and paying only for the services they want.

Agencies have been bulldozed into providing this kind of service by competition from the new, small, single-service operators. Independent media buying services have probably

done most to shake up the agencies' complacency. When these first appeared a few years ago, they upset the agencies' applecart by undercutting rates for television air time, which they were able to do because of their lower overheads. After some initial success, several of them came a cropper over the way they used clients' money, not always producing the advertising spots asked for. They have now receded into the shadows, but not without having administered a snock to the agencies, which revamped their media buying departments, put more senior people on the job and came out a lot more competitive than they had been before.

The advertisers also by-passed agencies by setting up house agencies to handle their business. Companies like Monsanto and Norton Simon, who switched to this during the last year or two, seem happy with the results. But house agencies do not necessarily save that much money; it could be as little as 5% on the firm's advertising budget. The bulk of advertising spending goes on buying space in the media, and a house agency can do little to reduce this. There is also some risk that house agencies may not attract the best advertising talent because the scope they can offer is usually more restricted than a normal agency's. One possible way out, which has been taken by several companies, is to use the house agency for routine advertising and go to specialists for the rest.

But many advertisers do not want to be bothered with the details and prefer to hand the work over to a professional agency even if doing so costs more. As the economy picks up, most of the big agencies are now reasonably confident that 1972

will be a much better year, with business up by perhaps as much as 10%. They think that the small independent operators have been cut down to size, and are unlikely to take much business away in future. The men who run the small "hot shops"—agencies whose success depends on their creative work rather than their range of other services—would dispute this. They claim that clients are still worried by the big agencies' excess fat in the middle ranks, among account executives and the like, and that an increasing share of the cake will be going to such smaller and nimbler outfits as themselves. But big agency chiefs point out that a first class little hotshop automatically grows big—like Wells, Rich, Greene, which the energetic Miss Mary Wells catapulted from nothing six years ago to number 19 in America last year, with a worldwide turnover of \$110m.

Consumerism

If the internecine strifes in the industry seem less vicious, it could be because a new enemy has emerged which threatens large and small alike. The shorthand name for this is consumerism. Over the past couple of years or so, the public mood has become much less tolerant of advertising's eccentricities and little white lies. The new catchword is "truth in advertising," meaning you can no longer get away with claiming "Cheerios make you feel groovy all day long" if in fact they do no such thing.

Against this changed background, the Federal Trade Commission, which has a watching brief over the advertising industry, has recently started

acting very tough. Last autumn it took the novel step of holding a series of hearings on modern advertising practices. It has now become more specific on the sort of changes it is looking for—all highly alarming for the industry.

The commission's first aim, in the interest of getting rid of "unfair and deceptive" advertising, is to get companies that have been guilty to run "corrective" ads, explaining that their claims have been misleading. The idea had been floating around for some time, but the FTC has recently really turned on the heat. Several cases have been brought, but so far only one advertiser has published a correction. This was the unfortunate Continental Baking Co (an ITT subsidiary) which had claimed that its Profile bread helped people to lose weight. The FTC took issue with this; Continental Baking, not wanting an expensive lawsuit over a product with relatively small turnover, agreed to spend 25% of Profile's advertising budget for a year telling consumers that it was no good for slimming.

The FTC also challenged Continental Baking's claims for Wonder Bread, and this case has not been settled yet. Wonder Bread "helped to build strong bodies twelve ways," and the proteins, minerals, carbohydrates and vitamins it contained were all listed. It does indeed contain all of them—but so does every other bread on the market. The FTC feels that the company should not use these facts to imply that Wonder Bread is somehow different. Ocean Spray cranberry juice is in the same sort of trouble; the makers agreed last month

to run a series of advertisements to correct any impression that their product contains more vitamins and minerals than, perhaps, orange or tomato juice.

Advertisers' attitudes towards the FTC are hardening, and they seem increasingly willing to fight in court, partly because they feel that unless they make a stand the FTC might acquire too great a hold over the industry. It has already demanded free air time for people who want to dispute commercials. And if the FTC succeeded in its aim to be allowed to issue trade regulations, it could simply rule that a claim was unfair or deceptive without even having to prove it.

Despite their grouses, many admen will admit that the FTC

had a point over "unfair and deceptive" claims. What is worrying them now is that they do not know where it will stop. They are trying to cope with the uncertainty by producing ads that are either crammed with facts or which say nothing in particular and concentrate mainly on creating an aura round the product. What this does for the effectiveness of the advertisements is very much an open question. But then nobody really knows what makes an ad a good one. It would be hard to imagine a softer sell than National Airlines' "I'm Jo/Barbara. Fly me." Yet Bill Free, whose New York agency thought up the theme, maintains that on the day the campaign started National's switchboard broke down under its load.

The labour shake-out

Some people never notice our bridges.

We take it as a kind of compliment.

Behind us we have major bridges of every kind of design; in hand we have some of the biggest projects in the world—bridges across the Bosphorus and Rio Bay, to mention but two.

It all adds up to an awful lot of people happily ignoring us every day.

It also adds up to a sizeable number of people who *have* noticed us.

The people—at every level—who make the vital decisions on bridge building.

We like to think our experience and expertise have a lot to do with getting noticed and getting contracts. After all we've been bridge building and fabricating structural steelwork of every type for over 90 years.

That adds up, too. To the fact that you can rely on Cleveland to help you cross your bridges before you come to them.

BUSINESS

Does the Bank know when to stop?

The Bank of England acquired a new domestic technique during sterling's latest crisis. It must not use it to expand money supply more recklessly still

One of the few immediate domestic effects of the sudden flight from sterling that unpegged the pound was the sharp upward twist it brought in interest rates. How virtuously have the Bank of England's guardians of the money supply behaved during this hectic period? Have they, as some suspect, acquired any bad new habits?

The task suddenly imposed on them was huge. In the 15 months to March of this year non-residents had built up their banking and money market liabilities in sterling by just over £1.5 billion. This inflow of funds from abroad accounted for nearly half of the £3.1 billion growth, to £20.6 billion, in money stock (M3) during this period; it has been one of the main sad reasons why M3 up to May of this year was expanding at an exorbitant annual rate of over 20 per cent. Then, in the week before sterling floated in the early morning of June 23rd, on the Chancellor's own reckoning, nearly £1 billion fled back out of sterling, most of it in two days.

The Bank of England behaved on this seesaw with its normal crisis tactics, to which it has become very used. Inevitably, it massively pumped in money to a suddenly starved market through all the traditional channels—direct loans to the discount houses and purchases of Treasury bills, local authority bills and commercial paper. But its intervention was carefully designed to offset only partially the outflow over the exchanges, thus making speculators pay through the nose. At one stage this nose-extraction brought overnight interest rates in London to 200-300 per cent.

Then, once sterling was safely floating, the Bank of England came more generously to the aid of the suddenly deprived domestic banking system. Borrowing a page from the American book, it agreed, exceptionally, to lend money directly to the banking system against gilts. Its undertaking was to stand ready, initially for a fortnight only, to purchase at current market prices government securities with more than a year to run to maturity, on the understanding that the banks would later repurchase them, after having paid an effective annual interest charge of 6½ per cent. For use in the kind of exceptional circumstances that do rather hamstring a money market when there has suddenly been £1 billion of a run on sterling, this is a reasonable addition to the Bank's armoury of monetary weapons. Although econo-

mists are always rightly suspicious when a central bank says that it is merely smoothing out a threatened hump in interest rates—because that often means that it is about to try to buck an underlying trend in them—200-300 per cent of interest on overnight money is quite a hump. Criticism should arise only if the Bank falls so in love with its new technique that it allows it to undermine its new regime of credit control and further to fuel a runaway growth in the money supply.

To be fair, there is no evidence that the Bank of England intends anything of the sort. It has used its new tactical mix to engineer a return to more normal conditions in the money markets; those overnight lending rates had been brought back below double figures by the end of last week. However, it seems prepared to live with the higher basic structure of money market and bank lending rates that has been the ultimate fall-out of the crisis. This, if it is indeed the end of the story, looks like the right balance.

For there have been two distinct factors at work behind the recent jump in interest rates. The predominant one in the days after mid-June was obviously that flight of £1 billion from sterling. The secondary one was that the flight came when the commercial banks already had relatively little fat left in their liquidity positions.

Even before sterling's crisis, competition for funds to

feed the accelerated rise in bank advances of the past two months was beginning to push up the cost of money at the margin. Six-month inter-bank deposits, which had moved up from just over 4½ per cent at the end of April to more than 5¼ per cent at the beginning of June, when the banks first put up their base rates, were commanding nearly 7 per cent before the run on sterling reached its peak. The rise of £280m in the London clearing banks' domestic advances (net of inter-bank and other money market lending) in the five weeks to mid-June had to be financed in part through further sales of gilts and recourse to the wholesale market for funds. This was all relatively, and increasingly, expensive money. It is true that at the same time the banks were still pulling in relatively cheap retail deposit funds. The underlying rise in domestic deposits to mid-June was quite strong. Even so, the banks' combined reserve ratio on June 21st, the day before the Bank rate increase from 5 per cent to 6 per cent and two days before the floating of the pound, was as low as 13.9 per cent. Barclays' ratio was down to 12.7 per cent, barely above the requisite 12.5 per cent. A further upward adjustment in some banks' lending and deposit rates was only a matter of time—even without sterling's crisis.

Small wonder, then, that the massive switch out of sterling in the next couple of days sent overnight borrowing rates rocketing and the Bank of England scurrying to the rescue. More than one clearing bank saw its reserve ratio dip temporarily below the 12½ per cent floor after June 21st, although the banks most in need of aid may prove to have been not the giants but smaller fry.

If the Bank of England rests content with merely having taken the worst of this extra, and wholly exceptional, strain off interest rates—if it allows its special repurchase facility to elapse on schedule—well and good.

Buying time for ICL

The Government gave International Computers Ltd £14.2m on Monday to complete its new range—enough to buy an 18-month breathing space in which to turn the company round

The Government had already turned down the option offered by the American Burroughs company which, had it been allowed to buy 51 per cent of ICL on terms that ICL shareholders must have considered generous, would then have moved its own management into ICL and assumed responsibility for putting the company to rights. Burroughs obviously felt unable to do this without the completely free hand a 51 per cent shareholding would have given it, although some of the other American companies still interested have intimated they would be prepared to settle for less. The Government preferred to put its faith in the abilities of the recently appointed chairman, Mr Thomas Hudson, and managing director, Mr Geoffrey Cross (both with American backgrounds), to do the job on their own.

It needs some faith. ICL's requirement for a further

But it should be on its guard against political pressure to use the new technique more aggressively. After all, the sharp upward adjustment in lending rates and the squeeze on bank liquidity has come embarrassingly early on in the business cycle, when lending to industry is still weak.

The politicians may argue that this is no time to allow rising interest rates to "nip expansion in the bud." The Treasury, with an eye to the gilt-edged market and the Government's massive borrowing requirements, is inclined to sympathise with arguments in favour of letting the money supply rip. Both of them should be resisted.

Given the present pace of inflation, the recent rise in interest rates is not likely to hold back any worthwhile investment scheme—indeed, the rates themselves are partly a mirror of inflation. One possible counter-argument is that it is admittedly in Britain's interest to keep the floating exchange rate for sterling low; somewhere around \$2.40 should be welcomed, not regretted; it would be a pity if higher interest rates (and dollar woes) kept the exchange rate up higher than that. But the proper remedy to adopt, if they do, is to dash for freedom by removing exchange controls.

The whole object of a devalued pound is that more of the 5 per cent growth in gross national product which Britain hopes for over the next year should go into exports, and less into domestic consumption. This does not require a further large squeeze on domestic spending, but it does mean that the squeeze should be bigger than is consistent with a 20 per cent per annum increase in domestic money supply. It will be a misfortune if one consequence of sterling's crisis is that the authorities discover that the Bank of England has picked up, in order to defend its children, a weapon that can conveniently be used to make the expansion in domestic money supply even bigger.

£14.2m shows which way the company is heading. This sum will pay for about a third of ICL's research and development during the 18 months from April this year to September next year, and demonstrates the extent to which cash flow is falling below both needs and expectations. ICL now requires twice the rate of subsidy that it did four years ago, when a £13.5m grant towards research and development in 1968 could see the company through well into 1971. This is an industry which cannot survive without an expanding cash flow that keeps pace with expanding research and development bills. Unless the basis of ICL's business can be changed, the company is bound to need increasingly large direct subsidies from the Government. The length of time it can stay in business under these circumstances then depends on how long the present and any future government choose to be

generous.

Cash flow can be increased by increasing sales and by increasing profits on sales. ICL's new men will try to put up profits by raising productivity throughout the company, something long overdue. ICL has fired people, but it compares poorly with some other companies (as the chart shows), and the Government has admitted that more redundancies are inevitable. When ICL was still two separate companies, the combined staffs totalled 34,187. Two years after the merger in 1968, this went up to 36,329. It is now down to 32,669, which for ICL's turnover is probably 5,000 too many.

There is scope here for improving profit margins, but that of itself will not be enough unless sales are also increased. There is little room for a large expansion of the home market, which has led ministers to look anxiously to Europe, which undoubtedly offers a market large enough to support a company of ICL's size. However, International Business Machines already has something like 70 per cent of this, and the other American computer companies are making considerable inroads into the rest. What remains now looks pretty unattractive and ICL would have to compete for it with the two European-owned computer interests of any importance—Siemens in Germany and Compagnie Internationale pour l'Informatique in France—which have already rejected partnership with it.

Eliminate Europe, and the only sizeable markets remaining are in Japan and America. The Japanese government is not about to let foreigners buy a majority share of any Japanese computer firm. That leaves America.

In America, ICL could get the volume of sales needed to put its business on a proper footing, but not by direct exports from this country. It would have either to buy an established American company as a shell through which to do business, or, alternatively, be bought up by one. Plenty of American companies have been up for sale at prices the Government could well have afforded to advance to ICL. The computer divisions of both General Electric and the RCA Corporation were hawked around for a long time before being bought up by other American companies, which neither particularly wanted, or needed, them.

RCA was sold for less than £55m. It had 500 cus-

tomers, with 1,000 computers installed and all eventually falling due for replacement. Those customers alone were worth many times the price paid, and ICL will never again be able to acquire so much of the market so cheaply. The computer division of General Electric sold for around £100m, and would have been an even more attractive buy because General Electric was second only to IBM in Europe.

Had either company been combined with ICL a business would have been created with a customer base large enough to guarantee survival. The opportunities are still not entirely closed. Other American computer manufacturers are looking vulnerable and could be up for auction some day; they include such plums as National Cash Register, Control Data and Xerox Data Systems. On a smaller scale, there are numerous software companies not actually building computers but providing the services that go with them. They are still suffering grievously from the cutbacks in the American military and space programmes; some of them are rich in technical talent but could be bought for a song. ICL's new management seems to be concentrating on getting a software partnership of some kind in America—and in Europe too.

ICL's biggest technical gap happens to be in software. The Government's latest £14.2m will be needed mainly to develop software for the company's new range of computers. Work on the computers themselves has been virtually completed, and raises few problems. Given the demands of today's customers, the software side is the tricky bit, and the cost of designing and testing software programmes has a nasty habit of rising beyond expectations. That £14.2m will turn out to be insufficient to see ICL through.

If the Government is apprehensive about ICL's acquiring an American subsidiary and prefers to go on providing the company with subsidies that could soon add up to the equivalent of the purchase price, what about the alternative of allowing American companies to buy into ICL? ICL's own management has treated inquiries frostily, and the Government itself seems fearful of the changes American buyers would demand. When the Minister for Industrial Development, Mr Chataway, announced that, while it had turned down Burroughs, the Government was still ready to entertain a proposal from another American company, like Univac, he said

Chataway has the handouts . . .

but has Hudson the winners?

that it must be for a minority share of ICL, and that control must stay in British hands so that decisions about research, manufacturing and marketing continue to be taken here. An arrangement like this, assuming Univac accepted it, might reduce the amount of money ICL would need from the Government in future, but would do little else unless substantial management control did in practice pass into Univac's hands.

As it stands, the package that the Government is offering interested foreign investors is not a particularly attractive one, since it appears deliberately to preclude opportunities for reorganising ICL. Mr Hudson himself has brushed off more informal approaches from some of the big American software companies which would like

to link up with ICL on the basis of a much smaller shareholding than would satisfy big computer manufacturers like Burroughs or Univac. His technique has been to say that he might be ready to talk after he has straightened out ICL to his own satisfaction. But unless Mr Hudson's middle name is Hercules, he needs an American partner now rather than later, because the shape that an ICL with links in the American software industry should take could be very different to the shape of an ICL without them. Mr Hudson, with his IBM background, must appreciate this. Given the state of the company, the Government cannot seriously think it has bought off its problems with £14.2m. It has only bought time.

That Concorde caper

The Government is considering yielding to airline demands for a bigger, more efficient version of Concorde. Has it considered all the consequences?

The pressure for an enlarged Concorde has been growing over the years. Airlines have asked for a much larger aircraft into which they can get more passengers. They can buy range now, if they must, by reducing passenger numbers—which explains why, although the manufacturers claim that Concorde can carry 128 seats, some airlines have talked of only 90. But because of the restricted size of the cabin airlines cannot do a trade-off the other way round, and increase the number of passengers carried by taking out some of the fuel. On the calculations now being done by potential buyers, even if a premium is charged on first-class fares, Concorde operations will show a loss on a full aircraft. Air Canada is the first airline so far to have dropped its Concorde options altogether, chiefly because it does not see enough of this super-first-class traffic to justify a supersonic service. Other airlines may share these misgivings, but have preferred to put pressure on the British and French governments to give them an aircraft with more seats, which would then open up the opportunity to reduce both their losses and their fares.

Should the two governments do this? There are no insuperable technical problems in the way either of doubling the seating to around 200 or increasing engine power to operate the much bigger aircraft. But there are big financial ones. The airlines would, if the governments promise them a better Concorde, agree to buy more of the present version now than they might otherwise do, and this must weigh heavily in both London and Paris. The present sales drive is a mainly British one, carried out on Lord Rothschild's advice to see how many Concorde the airlines will buy when they have to commit themselves to legally-binding contracts, and to large progress payments to the manufacturers. Sir Frederick Corfield, who was the minister in charge of Concorde until his sharp tongue talked him out of the job in the Prime Minister's spring reshuffle, has put the figure as low as 30. This is a depressingly poor return for 13 years' work by 50,000 men in two countries and an investment

of well over £1 billion.

It is very tempting to buy more work for the two Concorde production lines by promising to develop the bigger version. Almost despite itself, the British Government is coming to accept it as inevitable, and part of the premium for joining the EEC. But the spending that would be needed to start development work on a Mark II Concorde even before the first version has gone into service is going to pre-empt all the funds available for aircraft development in Britain. No other new project could be started. If Concorde continues, the rest of the aircraft industry may as well shut down.

This is causing considerable alarm inside the Ministry of Defence, which has more to worry about in the present condition of the Royal Air Force and its equipment than it has over any other branch of the services. The RAF is in trouble: its equipment is either obsolete or ordered in penny packages, and a big, new Concorde programme would mean that it stays that way for a long time to come. Nor is there any obvious money to spare for new civil projects.

The Government may feel that Britain's return on its investment in aircraft manufacture over the past decade has been so unrewarding that this really will not matter. The price of salvaging Rolls-Royce's RB-211 engine in order to deliver it to the Americans for less than it costs us to build, may have convinced Mr Heath that Britain can no more afford to have a success in this industry than it can a failure. Sour experience with British aircraft was an important contributory factor to the Air Canada decision to drop its Concorde options; it was Air Canada that raised most difficulties about taking up its Tristar orders again after the Rolls-Royce collapse. The decision to proceed with a fresh round of Concorde development is going to be taken, if it is taken, because the Government finds it simpler to give in to airline pressure than it is to resist it, and not because it has seriously thought through the consequences for the rest of the aircraft industry.

ISTITUTO MOBILIARE ITALIANO

Annual Meeting — June 22, 1972

On June 22, the Annual Meeting of the Shareholders of Istituto Mobiliare Italiano (IMI) was held in Rome, chaired by Mr Silvio Borri, to approve the Balance Sheet and Reports for the Institute's 40th fiscal year.

The Board of Directors' Report, read by Mr Borri, contains an extensive review of the activities of IMI, which in the past year have shown further significant developments. Their highlights are reflected in the following figures (data converted into US dollars): new loan applications received totalling 6,533 million dollars (74% over the preceding year); loan agreements signed totalling 1,527 million dollars (+41%), or 1,629 million dollars if we include the transactions entered into by the Autonomous Section for Maritime Credit. As of March 31, 1972, the Institute's outstanding loans amounted to 6,592 million dollars (+14%).

The following is the breakdown of IMI's loan agreements signed by main classes: investment financing 1,250 million dollars (+50%); export credit financing 237 million dollars (+6%); financial credit to foreign countries 26 million dollars (+32%); loans to non-residents 14 million dollars (+38%).

From a geographic standpoint, 58% of the investment loans related to projects in Southern and Insular Italy.

A specially large expansion was registered in industrial investment financing (+74%). The main recipients were the following industries: engineering (351 million dollars), petrochemicals (306 million dollars), metallurgy (210 million dollars); food processing, textiles and paper (31 million dollars each).

The Report stresses that the loans extended to industries (1,008 million dollars, of which about one third for the constructions of new plants) have contributed to the implementation of investment programmes for 1,759 million dollars and expected to provide over 28,000 jobs. During the year, 47 new concerns were established with the Institute's financial support, of which 24 are in the South of Italy. The loans to enterprises operating in the service and utilities sector (182 million dollars) of which 129 million dollars in the telecommunications sector registered a 4% increase.

In the course of the fiscal year the Institute has started the activity, pursuant to Title I of Law No. 184 of March 22, 1971, for the restructuring of industrial enterprises. In this connection, it is stressed that the Institute has been methodically supporting the enterprises in the drafting of appropriate plans, striving to encourage co-operation among several enterprises, with a view to promoting the solution of problems on an intercorporate basis in the framework of the special features of each individual sector.

As regards the special operations for the account of the Government, the Report dwells on the R & D Fund, which has consolidated its character as a permanent instrument for the support of industrial research. With the approval during the year of additional financing totalling 31 million dollars and the

establishment of the two new research companies, the total amount of financing approved by IMI since the inception of this Fund has exceeded the initial 172 million dollars.

The transactions entered into during the 40th year have brought the amount of IMI's outstanding operations as of March 31, 1972 to 6,592 million dollars, of which 94% against the Institute's own funds and 6% under "special operations" (i.e. the operations turned over to IMI by the Government for specific economic-policy purposes and financed out of public funds).

IMI's domestic fund-raising activity has been developing without special problems, in view of the liquidity condition prevailing in the Italian economic system. During the 40th fiscal year, IMI has placed bonds on the Italian capital market in the amount of 703 million dollars, plus subscribed bonds now being issued totalling 222 million dollars and bonds for term delivery totalling about 292 million dollars. As of March 31, 1972, IMI's bonds outstanding in Italy totalled 4,653 million dollars, with a 9% increase during the year. Foreign-currency loans have been contracted on foreign markets to a total amount equivalent to 198 million dollars: at the end of the 40th fiscal year, IMI's foreign-currency borrowing totalled 696 million dollars.

During its tenth year of activity, the "Credito Navale"—Sezione Autonoma dell'IMI (Maritime Credit—Autonomous Sections of IMI) has extended maritime-credit loans totalling about 103 million dollars. Outstanding loans as of March 31, 1972, totalled 490 million dollars.

The Report stresses that, at the end of the Institute's 40th fiscal year, IMI's active role in the events of Italy's economic life during the last four decades has gained for it increasing prestige both in Italy and abroad. This performance, in addition to bringing about a rapid growth of activities in quantitative terms, has enabled the Institute to build up a wealth of experiences and skills, continuously enriched by an increasing degree of activity diversification and by a steady improvement in operating methods.

After a brief review of the trends on the capital market, the Report finally introduces the Institute's balance sheet and profit and loss statement, showing that, after the largest allocation to the risk fund permitted by the tax law and after the customary depreciation allowances, the profits totalled 14,019 thousand dollars. The Board proposed that 9,788 thousand dollars of this sum be allocated to the Ordinary Reserve Fund and that 4,127 thousand dollars be distributed to the Shareholders (being the equivalent of an 8% dividend on paid-in capital stock), allocating part of the balance to other reserve funds and bringing forward the residual.

After the reading of the Board of Auditors' Report the Shareholders' Meeting unanimously approved the Board of Directors' and Board of Auditors' Reports and decided in conformity with the recommendations made by the Directors.

BALANCE SHEET SUMMARY AS OF MARCH 31, 1972

(40th Fiscal Year)

(Dollar equivalents calculated at the rate of Lit. 581.50 per US Dollar)

BUSINESS

International

Come on, is it really worth it?

The lull in the foreign exchange markets that initially followed on Britain's decision to float the pound has come to an abrupt end. The emerging pattern — of pressure on the dollar, reluctant and expensive support operations and proliferating exchange controls — was all too predictable and is all too familiar. When to the almost daily imposition of some new exchange restriction on flows of money into Switzerland were added the resignation of the French government and the looming resignation of the German economics minister, Herr Karl Schiller, the dealers were hardly able to keep pace with events. Some almost threw in the sponge. This was one factor in the easing of outright selling pressure on the dollar on Wednesday. Sterling started to float up too. Many of the closing exchange rates quoted that day were little more than nominal. Thursday was no more encouraging for those wedded to the Smithsonian agreement.

The dollar on Thursday lost more ground. It was reported that the Swiss, Germans and Dutch central banks may have all given support to it. Sterling settled at around \$2.43½, supported by the fact that it is virtually the only currency on which you can earn some money. But every foreign exchange dealer was saying that markets are thin and increasingly nervous.

Central bankers still seemed determined to hold what remains of the Smithsonian line one way or another, but it has been costing them a lot. On Monday and Tuesday alone support given to the dollar in the major continental markets and in Tokyo exceeded \$1½ billion. The brunt of the burden fell on the German Bundesbank, which may have had to pick up as much as \$300m on Monday and \$500m on Tuesday when would-be hedgers, thwarted by the Swiss National Bank's

decision to charge a commission of 2 per cent a quarter on new foreign deposits, switched their attention to Frankfurt. There was a pause on Wednesday while everyone costed the third round of Swiss exchange controls. The Swiss commercial banks themselves were having to buy dollars to cover their positions to conform to the new rules. German banks, anticipating similar controls, have done so too.

Certainly it was clear that last week's round of Germany's exchange controls had little, if any, effect. The steps taken by the German cabinet were so minimal that outsiders at first wrongly saw in the decision a partial victory to Herr Schiller. But he had wanted no further exchange controls at all, which is another way of saying he thinks the D-mark should be floated.

And how right he is. This week's muddle in the exchanges must prompt a question even in the minds of the Smithsonian conformists: are fixed rates really worth it?

Schiller

Bye, bye supremo

Bonn

At long last, late on Thursday, came the news that had been expected all week. Germany's minister of finance and economics, Professor Karl Schiller, has resigned and Herr Brandt has accepted his resignation. So ended a struggle which was being fought at the end in political terms, but which could have important economic implications. Herr Schiller's party, which dislikes him but needed him, had been trying to persuade him to stay.

On the party's side, it had seemed, was Karl Schiller's own taste for power (shared and rather obviously encour-

Going, going, gone

aged by his third wife), and his knowledge that as an economic liberal who has stamped on many of his party's plans for social reform he will not be called back in a hurry. Herr Schiller is aged 61, although he does not look it.

With the German economy now picking up nicely, just as Herr Schiller said it would when everyone else a year ago was crying doom, Herr Brandt might just pull it off again in a November election. But a campaign without Herr Schiller will, even in the eyes of Social Democrats who curse him, come dangerously close to confessing economic failure before it begins.

The first favourites tipped for Herr Schiller's two jobs were the Fre Democratic interior minister, Herr Hans-Dietrich Genscher, fresh from triumphantly rounding up the Baader Meinhof gang, to be minister of economics (which takes in international economic affairs), with a junior minister, Herr Hans Hermsdorf, taking over at finance. The majority of Social Democrats, however, would prefer the defence minister, Herr Helmut Schmidt, who would help to allay electoral fears of a soak-the-rich tax policy. On Thursday he seemed the most likely successor, even if, as it is said, he did not really want the job.

Germany's gross national product is expected to grow by just over 7½ per cent this year, most of it in the second half, of which less than 3 per cent will

be real growth. The rest will be inflation. The target for gnp growth next year is 9 per cent, of which as little as 4 per cent should be in higher prices; but Herr Schiller says that inflation will be bigger than that unless the central and local governments can cut their budget deficits. As he was told that he could not have a rise in taxation ahead of an election, Herr Schiller wanted government spending cut back both this year and next. The spending ministries refused.

This was Herr Schiller's first defeat. His second was the now celebrated moment 10 days ago when he stood alone against the whole cabinet—and against Herr Karl Klasen, his own appointee as chairman of the Bundesbank—and opposed the imposition of foreign exchange controls. On Monday, the "five wise men" backed him up by reporting that Herr Klasen's controls are not only bad for Germany's economy, but are likely to undermine that European monetary union in whose name Herr Klasen largely invoked them. The wise men believe that Europe's currencies should be set jointly floating.

South Africa

Rundown rand

Johannesburg

Taken by surprise at Britain's decision to float the pound, the South African authorities scratched their heads for a week and eventually agreed to maintain the currency link with their largest trading partner by floating the rand. This was only six months after a 12 per cent devaluation. The South African currency is now 25 per cent cheaper against the pre-Smithsonian yen parity, and even 10 per cent lower than the debilitated dollar.

South Africa floated on the fear that an unrealistic exchange rate for the rand might have slowed its vital capital inflow and delayed its export receipts.

The current account is still far from healthy (see chart) although it has improved from an annual rate of deficit in the first quarter of last year of £880m to £250m in the first quarter of 1972. And foreign reserves, although almost doubled from their low point in December, still need building up. Politically, South Africa has to be certain of an economic upswing from last year's wretched growth rate of 1 per cent a head.

But there is open disagreement whether the inflationary effect of the

South Africa's trade problem

float will outweigh the trading advantage of a cheaper rand. The demand for imports is inelastic, as about 80 per cent of South Africa's purchases are for the capital goods and raw materials necessary for growth. Moreover, the supply position of South Africa's major exports, mainly primary commodities, is inflexible. Both the government's ideological labour restrictions and the country's lack of adequate transport facilities for bulk commodities, such as iron ore, coal and maize, compound the problem. Against this background excessive devaluation could have a perverse effect while boosting the country's inflation rate of about 6 per cent.

At the same time, capital has been flowing strongly into South Africa, and there is a revival in private investment and production. This augurs well for a recovery in British imports, which dropped 21 per cent in the first quarter of this year against 1971. The outlook for South Africa's metal and mineral exports is generally promising, while the high gold price (at present exchange rates, the rand price of gold is more than double the average price received in 1970) is bringing in large funds of extra foreign currency. It is unlikely, therefore, that the rand will float, or be eventually fixed, as low as the pound.

Japan's strike

The pinch comes

Tokyo

More than half Japan's merchant fleet has been strikebound for close on 12 weeks, and it has at last begun to hurt; 1,260 ships, 4 per cent of the world's total, are idle along the Japanese coast. In Tokyo Bay, which normally holds 126 ships, there are 323 at anchor clogging up berths

needed by foreign ships. The strike is reckoned to have cost £42m so far, the brunt of which will fall on the 80 owners of ocean-going vessels whose crews are the backbone of the strike. Offers to the 160,000 seamen have been raised to an extra £3.60 a week in the latest attempt at conciliation, but the union is holding out for a further £1. A settlement is unlikely unless the government intervenes, as it was threatening to do before the change in prime minister put off any action.

Japanese industry, which at first universally welcomed the strike as an excellent way to run down surplus stocks, is feeling the pinch. Oil stocks have dropped below the 30 days that are the normal margin of safety, and some of the smaller refineries have had to close. Sharp rises in the prices of oil-based products are now being forecast, although Japan may stave off actual rationing by chartering an increasing number of foreign tankers.

The animal feed industry, which imports 90 per cent of its grains, has reported that stocks have halved since the strike began and doubts if it can keep up supplies to farmers for more than another month. Even the steel industry, which had embarrassingly large stocks, is being forced to cut production.

At Japan's two biggest ports, Yokohama and Kobe, 500,000 tons of exports are piled up on the piers and in warehouses. One of the seamen's complaints is that these are the only two of Japan's 91 ports that are entirely safe for international shipping. A survey by the union claims that 20 ports have no fire-fighting facilities, and nine no navigational lighting at all. At one port, Rumoi, six ships have recently run aground.

EEC

Coaxing the mandarins

Brussels

Now that the EEC commission is beginning to weed out 350 of its Brussels staff to make way for civil servants from Britain and the other countries joining the community next year, a political row is developing about who should go. Under the system of national quotas Britain, France, Germany, Italy and the Benelux countries will each provide 18 per cent of the commission's staff; Ireland,

J. LYONS

& COMPANY LIMITED

"Improved earnings in the current year and in the years ahead"

B. L. SALMON

The following is the Statement by the Chairman of J. Lyons & Company Limited, Mr. B. L. SALMON, C.B.E., which has been circulated to stockholders with the Report and Accounts.

The Year's Trading

The results for the year show a further satisfactory increase over the previous year both in profit and in earnings per share.

	1972 £'000	1971 £'000
Trading Profit	11,233	9,774
Profit before Tax	7,055	6,127
Profit for Equity	4,635	3,464
Earnings per Share	33.38p	25.00p

Group turnover is appreciably up on last year, despite the fact that none is included this year in respect of our bread and milling interests, which now form part of Spillers-French, as already announced. This increase in turnover is general throughout our businesses.

The results reflect improved performance across the Group. In a year characterized by rapidly rising costs and a depressed economic environment, we have pursued the policy of expansion and modernization which we have been following for the past few years. At the same time we have given continuing and increased attention to efficiency and have initiated a searching examination of our operations. The results of a profit improvement unit, which we have recently formed to help executive management in this work, have already made a significant contribution and will do so increasingly in the future.

The Directors are recommending a final dividend of 11p per £1 unit of Ordinary and "A" (non-voting) Ordinary stocks making a total for the year of 16p per unit; an increase of 2.42p over last year.

Food Products

Lyons Bakery Limited has maintained its position as leader in the packaged cake market and is set on a course of steady and sound expansion. This business will be given further impetus by our plan to build and equip a new factory in Yorkshire which, when open in 1975, will be the most up-to-date cake factory in the world.

The main product of Lyons Groceries Limited is tea. During 1971 its market share improved in packet tea and more than doubled in the fast growing tea bag market. Its brand leadership in ground coffee, with nearly two-thirds of the market, was maintained. The "Ready Brek" cereal achieved another year of dynamic growth while a new cereal product, "8 till 1", was successfully test-marketed and will be expanded nationally during 1972.

Lyons Maid Limited achieved reasonable results in spite of the weather being somewhat below average. To strengthen its position in this highly competitive market the establishment of a new image for the product range was initiated emphasizing the appeal of ice cream as a "fun-food", and it is intended to develop the presentation on these lines.

Henry Telfer Limited, manufacturing meat products, continues to grow in both turnover and profit. Work has commenced on the construction of a new factory in Northampton to which it will

transfer its operations in 1974, thus providing a modern factory with facilities for the further developments which are planned in this growing market.

Despite severe competition in the coffee market, Sol Café Limited continues to grow and prosper in the instant coffee sector. The substantial additional investment made in this business, which is based upon a high and advancing level of technology, expresses our confidence in its further growth prospects.

Lyons Catering Supplies Limited is now reaping the benefits of the Symingtons and Margetts acquisitions. The keystone of this activity is in offering a specialized service designed specifically to meet the needs of caterers, which represent a very substantial and developing market.

In soft drinks our London factory is one of the largest production units in the country for concentrated citrus drinks, and O. R. Groves Limited continues to command the major share of the private label sector of this business.

After some hesitation last year, the frozen food market has resumed its upward trend and the improved results of Findus Limited, already evident in the second half of last year, account largely for the enhanced contribution from associated companies' profits.

The merger, which was described last year, of our bread and flour interests with those of the Co-operative Wholesale Society Limited was aimed at improving our market share by participating in a larger grouping—J. W. French (Milling & Baking Holdings) Limited—and thus achieving a level of size and potential efficiency which was not attainable on our own. A similar opportunity arose when discussions initiated by Spillers Limited led to the possibility of merging the relevant interests of the three parties and ultimately enabled us to participate at a still higher level in the market, wherein Spillers-French Holdings Limited is now of comparable size with the two market leaders. The business is managed by Spillers, our participation being nearly 10% of the equity, and we are gratified by our association in this way with two such distinguished partners.

Hotels and Catering

The development of Strand Hotels Limited, our hotel operating subsidiary, has continued with the opening of the Rugby Albany Inn at Crick (Northamptonshire) and the Alpha Hotel in Amsterdam both of which have made losses in their first year but are now improving. Since the year ended, the Wakefield Albany Inn at Ossett (Yorkshire) has opened.

During the next 12 months the new 250-room Albany Hotel at Glasgow and a further 100-room Albany Inn at Havant will come into operation, as will the modernized Park Court Hotel at Lancaster Gate where, rebuilding behind a historic façade from a number of small hotels acquired on the site, we are developing a modern hotel of 450 bedrooms each with private bathroom. In addition our new 830-room Tower Hotel at St. Katharine's Dock, adjacent to the Tower of London, will be open.

These developments are in some respects different one from another; they do, however, have one key characteristic in common—they have been specifically designed to meet the market for medium-priced as opposed to luxury-class accommodation

continued overleaf

J. Lyons & Co. Ltd. continued

without losing those elements of service which customers require. There are many widely conflicting estimates of future demand for hotels in London and elsewhere and some suggestion that over-capacity will result. We recognize this possibility but believe that the value for money which we plan to continue to offer will attract the high levels of occupancy that have characterized our business.

We also intend to establish hotels in major Western European cities to develop an international referral linkage for the growing business and tourist traffic.

Perceiving, in the outer suburbs and in the provinces, a market for country inns with conference facilities, high-quality restaurants and particular emphasis on comfort and an intimate atmosphere, our new subsidiary, Falcon Inns Limited, has embarked on the establishment of a chain of country inns of which six are already operating successfully—at Frimley (Surrey), Brandon (near Coventry), Stratford-upon-Avon, Keswick and two at Bowness-on-Windermere. We are developing this business.

There is an improved contribution from J. L. Catering Limited, which has largely completed the modernization of its many establishments and brought their ambience and menu structure into line with the public taste of the 1970s. Developments are concentrated on speciality restaurants and in particular the London Steak House chain, which is already thirty strong, and in leisure catering such as at safari parks.

Wimpy International Limited, our catering franchise company, has had another good year and services 580 Wimpy outlets in the United Kingdom and a further 300 in 30 countries overseas. It is now developing the Golden Egg franchise, which is showing good performance at present and good promise for the future. The growth prospects for "fast-food" franchises look very promising, both in the U.K. and in overseas countries.

Lyons Overseas

Lyons Irish Holdings Limited maintains its dominant position in the tea market in the Republic of Ireland and is fast developing the cake business, Gâteaux Limited, which it acquired in 1970.

In Africa, Lujeri Tea Estates Limited (Malawi) and Clarkham Produce Limited (Kenya) continue to prosper.

We are acquiring an interest in DCA Food Industries Inc., an American company which markets cereal mixes including doughnut mixes and other specialized products. Its main activities are in the United States of America, where it is one of the most prominent companies in this field; it also has interests in the United Kingdom, Spain, Japan, Australia and Canada.

The Continent of Europe

Although for a number of years the fortunes of the Group will be largely dominated by our performance in the domestic markets in which we operate, we are impressed with the possibilities on the Continent of Europe, particularly with the accession of the United Kingdom to the European communities. We see both the need and the opportunity to establish ourselves as a trans-European business.

Whilst we plan to develop our export business to the Continent it is probable that our main involvement there will be to acquire or set up local operations.

We have already announced the acquisition of Homburg N.V., one of the major meat processing businesses in Western Europe and one which has developed a high technology in this field and achieved a significant rate of growth. Negotiations are proceeding for the acquisition of other businesses; two of these are at an advanced stage and we hope to be making further acquisitions during the year. None of these is expected to make a significant contribution to profits this year.

Non-Food Activities

James Hayes & Sons Limited, our linen hire and contract laundry business, has consolidated its recent acquisitions and is now one of the leading companies in this field in the south of England.

The performance of Normand Limited, our motor vehicle business, has continued to improve.

Cadby Hall

I have already mentioned our plans to establish new factories outside London for Lyons Bakery Limited and Henry Telfer Limited. We have for some time perceived the need to provide more modern production resources for these businesses and more up-to-date working conditions for our staff. Extensive studies convinced us that it was not possible to do this within the confines of Cadby Hall or even elsewhere in the metropolitan area, a pressing priority of food processing equipment nowadays being the establishment of flow lines in long single-storey buildings.

As a result of these decisions the opportunity has arisen to develop the ten-acre Cadby Hall site and we have announced plans, and are awaiting planning permissions, for a major development scheme embodying a hotel, an apartment block and an office building. In drawing up these plans we have also been conscious of the need to make a positive contribution to the environmental development of the area with which we have been associated for so long, and the whole complex of new buildings is to be set back from Hammersmith Road behind a generously landscaped frontage.

We cherish our links with Hammersmith and intend to maintain the corporate headquarters in one of our adjoining sites; to which end we have already embarked upon site clearance for the construction of a new office block which will perpetuate the name of Cadby Hall.

The total operation, including the two new factories, is on a considerable scale. The programme will take some eight years to complete and require upwards of £30m of investment, without allowing for inflation. We are confident that our plans will be in every sense rewarding—to our staff, to the neighbourhood and to our shareholders.

Property

Our substantial property portfolio provides important underpinning for our financial plans and affords, when needed, a second-line source of liquidity. At the same time it is a continuing and improving source of profit.

We have in recent years formed two subsidiary companies, The Auriol Property Company Limited and Green Elms Limited, devoted to realizing the development potential of properties which we own and no longer need to use and also to carrying on the business of property dealing on their own account. They have already made a useful contribution to profit and we see property dealing as a continuing source of profit in the future.

The Board

Since the last Annual General Meeting a number of changes have taken place on the Board.

In anticipation of his retirement from the Board Mr. G. I. H. Salmon relinquished the office of Chairman in January last and I was appointed to succeed him. His retirement from the Board in May came after many years of outstanding service to the business, culminating in his Chairmanship during the last four years when he guided the Company through the important changes which have taken place in its affairs and its prosperity. My colleagues join with me in offering our warm wishes on retirement to him and to Mr. G. M. Gluckstein, who retired from the Board in December last after 38 years of service to the Company.

As recently announced, Sir Samuel Salmon relinquished the office of President which he had occupied since 1968. Mr. G. I. H. Salmon accepted the Board's invitation to assume this office and we shall therefore continue to have the benefit of his wide experience and counsel, we trust for some time to come.

To take account of the developing needs of the business Mr. G. K. Lawrence and Mr. N. L. Salmon, who remains Group Managing Director, were appointed Deputy Chairmen. Mr. L. Badham was appointed Assistant Group Managing Director and, assumed responsibility for our hotel and catering activities.

Mr. J. M. H. Gluckstein, who was formerly Managing Director of Lyons Groceries Limited and since January has been concerned with the developments on the Continent, was appointed a Director on 20th April this year. My colleagues join me in welcoming him to the Board.

Management and Staff

Central to the purpose of the Lyons Group of companies is the development and maintenance of our value systems—and especially those which relate the business to its employees: its management and staff. It must never be forgotten that, however perceptive the plans may be, in the ultimate it is on the co-operation, the energy and the responsibility of people that the business depends for the execution of those plans.

We are particularly anxious to maintain the maximum of stability and continuity in this relationship. Thus, when we announced the plans for the re-location of our Cadby Hall factories, a key feature of the arrangements was our undertaking to make possible continuity of employment to all those staff who at that time had two years' service in the Group, and to provide re-location and re-training where necessary.

Again, during the fuel crisis last winter, we decided to do all in our power to avoid laying off any staff, even where there may not have been any work for them to do, and we told them so. Although there was some impairment to production, we were able to maintain this policy and were greatly heartened by the response of our staff in this difficult situation and were helped to keep the business going by their flexibility, ingenuity and co-operation.

The Economic Environment

We welcome the measures for deflation introduced by the Chancellor of the Exchequer in the course of the year. A deflated economy means more to us than the problem of operating a business in a difficult environment; as employers of over 30,000 staff we must view with concern any phase of industrial recession.

We believe, however, that industrial activity is on the upturn and that this will be accelerated by the realization of wider opportunities that will emerge through the Common Market.

Before our next Annual General Meeting value added tax will have been introduced. Our plans for dealing with it are well advanced, and although it will represent an additional administrative burden this will not be of considerable proportions. Whilst we applaud the proposed zero-rating of manufactured food in general we must deplore the continued discrimination against ice cream, soft drinks and confectionery, which perpetuates an anomaly of purchase tax.

An even greater burden will fall on hotels and catering, where not only the service but the very food element itself is to be taxed. The additional burden of VAT in these sectors far outweighs the abolition of selective employment tax and purchase tax and is bound to lead to price increases.

The Future

An essential component of the drive for continued growth in size and in profitability to which we are committed lies in the improved prospects which will result from the broadening of the base of the Group's activities. Proposals for our corresponding capital requirements in this connection are set out in a separate letter which accompanies this report.

In particular, in the current year and more so in the years to come the Group will be developing increasingly as a European business. It will be some time before the developments on the Continent make a significant impact on the growth in earnings for which we plan but we shall meanwhile continue to grow in the United Kingdom and are confident that this will be reflected in improved earnings in the current year and in the years ahead.

NOW MIDLAND EXPANDS EVEN FURTHER INTO EUROPE.

**New Brussels Office opened to
spearhead Midland Bank EEC operations.**

As a vital part of Midland Bank Group's special interest in developing business between the EEC countries and the United Kingdom in the framework of the enlarged Community, the Bank announces the opening of an important Representative Office in Brussels, the heart of the Common Market.

The purpose of the new Office, at Rue de la Loi 15, 1040 Brussels is to aid and encourage trade and investment in both directions between continental Europe and the United Kingdom. It will extend our involvement with Europe already evidenced by our close relationship with major European banks and our participation in European Banks International (EBIC) in Brussels.

The Midland and its European banking

partners have nearly 8,000 branches in Europe and combined assets totalling almost £16,000 million. This, together with Midland Group's great strength in the financial markets of the United Kingdom, will enable the new Brussels Office to fulfil a major liaison function between businessmen in the Common Market and in Britain.

If you're thinking of setting up in Europe, or expanding existing trade and investments, get in touch with your local manager; or if you're a European businessman who would like to gain a foothold in Britain, get in touch with one of the offices below.

In either case, this addition to the Midland's services will be of the greatest importance in expanding trade and investment activity.

Mr. Keith Cheshire, senior Midland Bank Group Representative. Has until now been the Midland Bank Group Representative in Zurich. Wide experience in international banking in Europe and the United Kingdom.

Mr. Geoffrey Masters, Midland Bank Group Representative. Has had managerial responsibilities in the industrial Midlands of England. Experienced in lending to industry and commerce.

Mr. Norman Brade, Midland Bank Group Representative. Has gained wide experience in large London branches. Recently concerned with the control of lending in the Bank's Head Office.

Our three Representatives have the languages and the contacts to help you.

Midland Bank

A GREAT BRITISH BANK

Brussels Representative Office: Rue de la Loi 15, 1040 Brussels.
Head Office: Poultry, London, EC2P 2BX.
Overseas Branch: 60 Gracechurch Street, London, EC3P 3BN.
Zurich Representative Office: Bleicherweg 21, 8002 Zurich.
West End Overseas Branch: 215 Piccadilly, London W1V 0QA.
Provincial Overseas Branch Offices: Birmingham, Bradford, Bristol, Cardiff, Hull, Leeds, Leicester, Liverpool, Manchester, Newcastle, Sheffield, Southampton.

meets any financial need...anywhere

WHY is the University of Aston in Birmingham launching a new management centre?

A new centre for management education at the University of Aston in Birmingham will be established in October. One of the industrialists intimately involved in its conception was Noel Bond-Williams, Director of Delta Metal Company Limited, and a past president of Birmingham Chamber of Commerce. He has been involved with the University of Aston since its foundation in 1966, and is now its Pro-Chancellor. In this interview he talks about the management education needs of industry and the University of Aston Management Centre.

As an industrialist, a customer of business schools, how do you make your own assessment of them?

One builds up an impression of each school based on their record of achievement, the companies they have serviced, the qualities of their teaching staff, and the extent to which they use industry as a working laboratory. I try, as a manager, to understand what each business school is good at.

How do you judge particular teaching skills in business schools?

Well, if you believe, as I do, that born managers can be made even better, then you are looking for two kinds of training. The first is for overall training in management techniques for young managers, the second is for specialised teaching of particular skills to supplement or strengthen those which a

manager already has. Some schools are good at providing both kinds of training, others are specially strong in the teaching of particular skills. But there may be dangers for a school that concentrates exclusively on one or the other.

In what way is specialisation a danger?

The needs of business and industry are constantly shifting. A specialist approach can become irrelevant. A business school could find itself strong in an expertise that no-one wants, and find it difficult to change tack, if it bases its whole outlook on a specialised field.

The Owen Report advocated regional business schools -- was this the seed from which Aston University Management Centre grew?

It is never easy to recollect the exact beginning of an idea. It seemed to many of us that Aston's wide experience of management training could be a starting point, and the University Grants Committee's suggestion that we look afresh at the joint interest in business studies at Aston and Birmingham Universities actually got us going. As a result, it was decided that the Graduate Centre for Management Studies should cease to operate as a joint venture of the two Universities, and the concept of a comprehensive Management Centre at Aston naturally developed from this decision.

In what ways are the needs of industry going to be reflected in the character of the new Centre?

The Aston Centre will have the experience of over 20 years work in management education. The University has helped some of the biggest of Britain's companies, and some of the smallest. The people in it have eminent qualifications, not only in an academic sense, but in their experience of industry and business. As a technological University, Aston has been a leader of those co-operating with and working in industry. Aston has tremendous experience in educating graduates in management subjects, of in-plant training and advanced management courses and research. And all the time, through sandwich courses, industrially based higher degree schemes and industrial consultancy, it has been -- and has been seen to be -- intimately involved in industry.

What do you see as problems facing a new management centre in Birmingham?

Some would see Aston's distance from the seat of government a disadvantage, others that the Centre will be in a city, not in rural seclusion. Perhaps the most important handicap is that Aston might find it difficult to service many of the needs of the maritime industries, which are such a significant sector of British industry. The advantages, however, seem to me to be stronger. Geography and communications make the Centre easy to get to, and from. And being in the midst of Europe's biggest industrial

conurbation is an outstanding advantage: the industrial laboratory you need is all around, together with a tempo of work which is hard to find anywhere else. The variety of local industry makes it improbable that any management student should not find a field of study akin to his own. After all, the management of technology cannot take place in isolation from technology itself.

Finally, what are your own predictions for the success or otherwise of the Aston Centre?

The omens are good. Competition will force an increasing demand for good management education. Aston's experience shows that it can deliver the goods. It has proved its ability in the area of broad management education, particularly at undergraduate level. The matrix structure, in an academic institution, should enable it to develop expertise to meet specific needs -- but be flexible enough to change rapidly to meet new ones. But ultimately its only chance of real success lies in its ability to continually meet the needs of the business and industrial communities. And I think it can do that.

YKK Production Now Formally Underway In England

YKK Fasteners (U.K.) Ltd. have formally opened their new 33,000 sq. m. Runcorn Plant facilities for production. **

Following on the heels of YKK plants in New York, U.S.A., and Sneek, Netherlands, the Runcorn Plant completes another link in the world-wide network of YKK facilities.

YKK assure prompt delivery and service for their widest variety of zippers.

** Opening ceremonies were honoured by the attendance of approximately 400 dignitaries including Mr. & Mrs. M. Carlisle, Q.C., M.P. and Minister of State, Mr. & Mrs. H.J.S. Dewes, Governor of Cheshire, Mr. & Mrs. V. Arnold, Chairman of Runcorn Development Corp., and Mr. & Mrs. S. Williams, Mayor of Runcorn.

Denmark and Norway will together make up the remaining 10 per cent.

The official line is that there should be no net increase in the number of staff unless it is justified by new work in monetary or regional policy. The commission is hoping to avoid repeating the 1967 debacle when the EEC, Euratom, and the Coal and Steel Community staffs merged. All the brightest men took the severance pay (equal to three years' salary) and left. Most of the deadwood stayed. This time the commission wants to choose who goes, but this has generated some sharp in-fighting as each commissioner feels responsible for his compatriots. The commission has, however, proposed to end the statutory guarantees on staff appointments, despite much union opposition.

Britain is having an equally hard time coaxing Whitehall men to go to Brussels, although there have been 500 applicants from outside the civil service. The conditions of pay and service have only recently been circulated but the lack of response is so startling that the British have asked the commission to introduce certain improvements. One suggestion is an educational allowance for British staff for so long as the European school in Brussels fails to provide facilities for all ages. The British Government is also pushing for an additional allowance for all nationalities working in the top two grades: director-general and director. At present the pay for these ranks, though tax-free, falls appreciably below the going rate in Whitehall, in private industry or in the British mission in Brussels itself.

Iran

The next Japan?

After a spectacular jump of \$155m in sales last year to \$500m, the United States has for the first time in a decade ousted west Germany as Iran's largest supplier, providing over one-fifth of its total imports. Ambitious Americans in Teheran are convinced that Iran is emerging as the Japan of the Middle East. In the Iranian year ended March 20th, gross national product increased 13 per cent in real terms, far outstripping the 3.2 per cent increase in population. The same sort of remarkable growth is expected in 1972-73. Oil income was over \$2.1 billion last year, and promises to be about \$2.7 billion this year.

There are worries about the 7 or 8 per cent annual rise in prices and the 25 per cent jump in the money supply. Because oil revenues do not pay for all the ambitious development spending, Iran still depends on external credits; its annual debt payments take up about 17 per cent of its exports. But the development projects under way look well-chosen and even workable—including those for petrochemicals, metals, electronics, pipelines, power stations, and the extensive copper mining project at Sar-Cheshmeh.

The big problem is the usual one for fast-developing countries. Rural destitution is being exported into urban poverty, which can be politically much more dangerous. Although the outlook for crops appears more promising, following two years of disastrous drought, the drift of small farmers to the urban areas has created an unfilled demand for social services. The quickening of the agricultural revolution and the avoidance of urban revolution are tasks to test the Shah's remarkable political skills.

Shipbuilding

For the rapids

By 1975, the world's shipyards will be geared up to build 50 more supertankers a year than there are likely to be orders for; an excess capacity of well over half the current output of tankers in the free world. It is this near certainty of chaos which this week brought the European and Japanese shipbuilders into sharp conflict at a meeting of 18 shipbuilders from nine countries in the Hague.

Japan's present plans, which aim at doubling the nation's shipbuilding capacity within the next few years, clearly threaten the rest of the world. But with increasing pressure on the yen to upvalue, with cutbacks in the growth of Japan's steel production, and a recent round of inflationary wage settlements, the plans also look increasingly unrealistic in Japan. But many of them have reached the point where they cannot easily be stopped, and few Japanese shipbuilders would want to cut back even if they could.

At the same time, Europe is littered with shipyards rescued from bankruptcy by rationalisation programmes that will only further increase their capacity. To prevent the yards lying idle European governments may require shipowners to buy from home yards, as the Japanese now insist. European shipowners would protest most

We've room to build plenty more in Japan

strongly. The fact is that even a cut in Japanese capacity would still leave Europe with too many yards.

It is almost inevitable that most shipyards will have to cut their labour forces if they are to stay in business through the 1970s. They will also have to stop accepting orders at a loss just to keep work flowing. This is hardly an attractive option for the capital-intensive supertanker industry, and an alternative some Japanese shipbuilders have supported an agreement on minimum prices.

The more likely solution is further government intervention. This in turn will merely add to excess capacity. President Nixon has just announced extra \$300m of subsidies for American shipyards, on contracts worth over \$660m. American protectionism on this scale will soon make the present estimate of a surplus of 50 supertankers look conservative. The only area where there could be a shortage of shipbuilding capacity for the rest of the decade, in liquid natural carriers and oil rigs, is one to which few yards have the skill to switch.

The Smithsonian pound

	USA	July
Sterling recovered	10	
to \$2.4460 on	Germany	10
Wednesday so	France	10
that the dollar	Italy	10
has been	Belgium	10

and other currencies	Switzerland	10
upvalued	Sweden	10
by roughly 9%	Japan	10

Table shows the cost, in Britain, of goods which could have been bought from other countries for £100 at Smithsonian central rates. The method was explained on page of The Economist for July 1st.

Hongkong

A coup for Britain

A key contract has just been won by the British railway industry, breaking the French export monopoly in underground systems. It is to design the first two stages of a £131m underground for Hongkong. The firms involved include Freeman Fox, Scott Wilson Kirkpatrick, GEC and London Transport.

Over 70 undergrounds are being planned by different cities round the world. In Calcutta and Bombay, they face difficulties of finance. Others, such as the one burrowing beneath suburban Washington, DC, have little justification other than the political urge to show that something is being done about public transport. But many crowded cities like Hongkong, in developing parts of the world, may be better suited to some kind of fixed-track public transport than to buses. It would be a pity if Britain, the inventor of undergrounds, did not get some of the business.

Three foreign contracts, in Mexico City, Santiago, and Montreal, all went to the French, whose rubber-tyre system is now being discredited.

So far Britain has not been good at selling its railway technology. Overseas visitors are constantly being entertained at British Rail's research centre in Derby, to see what is allegedly going to be the world's newest train. British Rail and London Transport are continually being brought in as consultants to foreign railways. This earns a lot of thanks but usually not much business. The Hongkong contracts could be the start of a change.

Italian industry

Decimated

Italian private industry is slowly recovering from the recession of the

Index-linking: it's a risk

Experience with index-linked wages abroad has not been such as to encourage Mr Heath or anyone else casting around for an anti-inflationary nostrum. Even the system's defenders would not seriously claim that it stops or slows down inflation, but merely that it regularises the process of adjusting pay to higher living costs which, without index-linking, is inclined to proceed in fits and starts and be accompanied by strikes.

How well the system works depends partly on how fast inflation is already progressing. The Finns were for many years quite happy with their very extensively index-linked wages, but found the system increasingly self-defeating as inflation gathered speed. They abandoned it altogether after their 1967 devaluation. But Belgium, where index-linking has been in general use since the war, is still not showing any signs of disenchantment and it is one country in which it could be claimed to have worked. Over 90 per cent of Belgian wages, as well as pensions, social security benefits and professional fees, are covered by the net, and Belgium has one of the best price stability records in western Europe, averaging

only 3 per cent a year in the past decade. Apart from Luxemburg, which has very similar index-linking arrangements, the only west European country to have done better on the prices front is Germany—where index-linking is hardly used and needs special approval from the Bundesbank.

Sweden and Denmark have both been inflating heavily in recent years, yet in Sweden index-linking is unknown and in Denmark wages and pensions are adjusted to the cost-of-living index every six months. France, Italy and Holland all have index-linking schemes of one kind or another but it is impossible to single out what effect this has had on the general level of inflation in any of them.

The basic flaw in the system, in whatever form, is that it can push the spiral up; employers, faced with higher wages caused by the rise in the cost of living yet not underpinned by extra productivity, will try to recoup their extra costs by higher prices, causing a rise in the cost of living which will lead to higher wages and so on. In the end, it all comes down to the simple fact that wages rises must be matched by productivity rises.

past two years, only to find its ranks thinned by a spate of foreign take-overs and a mushrooming of state ownership. Although the government has tried to stem some of the invasion of foreign capital, checking Westinghouse's expansion and preventing American domination of the food industry, it has been official policy to lift Italy out of its recession by expanding public and foreign ownership. Many Italians are now rethinking the wisdom of this.

The last of the Italian private giants is Fiat, followed at a distance by companies such as Sir, a petrochemicals group; Falck, a steel company; the Pesenti empire and a number of protected food companies. Three years ago the list would have been much

longer. Montedison was then still a bastion of private enterprise; now it is controlled largely by the state companies Eni and Iri. Pirelli had not joined up with Dunlop, and electrical companies like Ignis, Zanussi and Zoppas were still the independent showpieces of the Italian economic miracle. Now Ignis has become a subsidiary of the Dutch Philips empire and Zanussi has taken over Zoppas at the price of big loans from the state and a close link with the German Aeg group. Nor has public money been exclusive to Italy's big companies. Since Gepi, the state-financed rescue organisation, was set up a year ago, 250 small and medium-sized companies have asked for help.

Many of the recent foreign acquisitions have been made by British capital. British Leyland has taken the heavy machinery side of the Innocenti group; Pilkington has gone into partnership with a leading glass manufacturer, Siv, and Lucas has taken a stake in the motor accessory makers, Fausto Carrello. The continuing low level of stock prices on the Italian bourse and the increasing willingness of private entrepreneurs to sell out at what seem attractive prices after years of disappointing profits make it likely that the foreign stake in Italian industry still has a long way to go.

REDIFFUSION

"ENCOURAGING UPTURN IN COMPANY'S FORTUNES"

Group well placed to benefit from new developments and greater freedom

Sir John Spencer Wills (Chairman)

The forty-fourth Annual General Meeting of Rediffusion Limited will be held on July 26th at the Connaught Rooms, London.

The following are extracts from the Review of the Chairman, Sir John Spencer Wills, which has been circulated with the Report and Accounts for the year ended 31st March 1972:—

The Year's Results

The year has seen an encouraging upturn in the Company's fortunes. The improvement in the Group profit after all charges was well in excess of 40%, even before taking account of extraordinary items or of the benefit which the comparison with last year obtains from the new practice of including our proportion of the profits of associated companies. This is a heartening improvement after the difficulty we had in the past few years in keeping up with the ravages of inflation.

Television and Related Business—U.K.

The outstanding feature of the financial year is the substantial increase, from £3.3 million to nearly £5.5 million, in the profit from our television-set business and its associated cable networks in the United Kingdom. Most of the increase came from new colour television-set rental contracts.

We have increased our share of the national market and our expensive colour-television assets have since been fully employed. In towns where Rediffusion has cable networks their advantages for colour-television reception continue to be attractive to viewers. The spread of colour viewing into all income groups has become marked, and business has remained unusually buoyant.

I am especially pleased to say that no television sets have greater customer appeal than the superb colour receivers designed by our own staff and produced, efficiently and economically, in our own factories. To meet a demand for these which is far greater than we can yet satisfy, we have been bringing into service successive expansions of our productive capacity. Further factory extensions are in hand.

Rediffusion Industrial Services, which undertakes the installation of all kinds of communication systems and audio and television distribution, had another record year in volume of new business, but is not finding it easy to keep its margins ahead of inflation. The development of the hotel industry is providing opportunities for the company, since most new hotels want to provide television-sets—and, increasingly, colour television-sets—in their guest-rooms. The

Rediffusion HF cable-television system is particularly well suited to hotel installations.

Redifon and Subsidiaries

The operating structure of the Redifon companies has been reorganised. All activities except flight simulation put up better performances than in the previous year. During the year the 'Redifon Navigator' was introduced, using the world-wide Omega network of marine navigational radio transmissions. Initial orders for this equipment give cause for optimism about its prospects. Redifon also succeeded in making a major break-through into the American military market, by securing an order for the supply of a Redifon visual simulator to the United States Air Force, in collaboration with American Airlines with whom the company has concluded a sales agency agreement.

Music Services

Our music services have again shown a satisfactory increase in profit and an excellent return. Redifon, which has many more customers in this country, and operates in more countries abroad, than any other background music service, achieved an overall subscriber growth of 10%, mostly in overseas countries. Carlton Phonograph Services, the new 'jukebox' business, expects to become profitable in the current year. Rediffusion International Music has increased the production of its gramophone records and its export and licensing operations.

Associated Companies

Our share of the profits of associated companies, included in the Group total for the first time, was double the comparable figure for the previous year. The improvement was mainly attributable to Rediffusion Television, reflecting increased profits from its 50% holding in Thames Television, from which source there has since been a further improvement.

Overseas Operations

The aggregate profit from our overseas operations in the classification 'Television and radio' was 10%, better than last year's quite good total.

New Developments

I will refer briefly to developments from which we may in the course of time receive some benefit.

Local Commercial Radio in the U.K.

Legislation to establish local commercial radio has now been passed. Rediffusion Radio Holdings, the company that we formed last year, stands ready to provide services to operators. It has been in active discussions with some intending applicant companies, and will have a limited equity participation in at least one of them. We are confident that our experience will enable us to take a significant part in this new development.

Local Cable Television in the U.K.

Rediffusion has applied for permission to conduct an experiment over its cable networks at Bristol and Hull. If the Minister grants our application the experiment can be expected to

cost us money, but it should provide much interesting and useful information and experience. It is our intention that local people, and especially the organisers of local community activities, should be involved in the experiment to the greatest possible extent—from behind the camera as well as in front of it.

Developments in Cable Communications

In the United States cable operators serving the large cities are to be obliged to erect network of very large channel capacity to provide extensive facilities for serving local community television needs. By contrast, in the United Kingdom, which was the first country in the world to develop cable-television systems on a large scale, the official attitude towards enabling these systems to enlarge the freedom of choice of the television viewer is still one of extreme caution.

'Dial-a-program'

Conventional cable-TV equipment already in production in America can cater for the high, but still limited, channel capacity now stipulated for the major American cities, and companies like our Delta-Benco company which make such equipment are hoping that the opening up of this market will improve their sales. However, it is our hope that some far-seeing operators will consider installing Rediffusion's 'Dial-a-program' system. The system is already showing its usefulness for 'institutional' customers. 'Dial-a-program' has now been installed at Case Western Reserve University at Cleveland, Ohio, and has been ordered for the large new Nova Park Hotel to be erected at Zurich.

'Video cassettes'

A substantial domestic market for video cassettes may still be some years off, but we continue to study the development closely.

I have mentioned three factors—local cable television, the obligation on cable-television operators in America to provide viewers with a very wide choice, and the development of video cassettes—which are symptoms of the growing realisation of a very obvious and simple fact: that the choice of what may be shown on our television screens need not be limited to what can be fitted into the available wavebands for transmission and reception over the air. Rediffusion will be ready to benefit from the greater freedoms which, sooner or later, are bound to open up in this country as well as elsewhere.

The Future

Many of our overseas companies are working under difficult conditions and we may well suffer quite an appreciable diminution of our profits from them. For this reason, and because the current year's results will be measured against the substantially increased profits earned last year, a rate of improvement in profits of the order of that seen for the year under review is most unlikely. However, I am pleased with the spirit of determination very evident throughout the Group and my confident hope is that the results will be good.

A copy of the Accounts containing the Chairman's Review can be obtained on application to The Secretary (P.E.T.), Carlton House, Lower Regent Street, London, SW1Y 4LS.

Key indicators: world commodity prices

Up they go

The world's leading zinc producers have pushed up their sterling price by £10 to £160 a ton, blaming it on floating sterling. It is the first of an expected run of increases wherever producers have a say in price fixing. Tin has also risen sharply to £1,515 a ton as new sterling intervention prices were fixed for the tin agreement's buffer stock.

BUSINESS

Britain

It's Ted they're chiefly afraid of now

The new president of the Confederation of British Industry, Mr Michael Clapham, went to Downing Street on Wednesday evening to be privately briefed by the Prime Minister on the general drift of his talks with the Trades Union Congress, but also to be warned at the same time that unless the CBI could table details of a further price freeze when its team goes formally to Downing Street next Monday, the meeting may as well be called off. Mr Heath intimated that he had heard enough platitudes from the TUC to last him for a considerable time.

This was awkward for Mr Clapham. The CBI is certainly ready to renew the freeze for a limited period, but the 200 biggest companies whose views were canvassed in the early part of the week are growing increasingly fearful that at the end of that period, when they want to take the freeze off, the Government will clamp it on again, statutorily, as part of a policy of trying to keep wages down by threshold agreements linked to the cost of living, which would then be kept down by a compulsory prices freeze.

These fears have grown as the rumours from Whitehall spread, even before Mr Heath asked the TUC, at the end of Tuesday's meeting, to join a small working party that would consider, among other things, index-linked wages. Many companies have come through the past 12 months of price freeze with buoyant profits because they had already raised their prices sharply in the first half of last year, before the freeze was introduced. All of them are insisting that when they formally agree to extend the freeze for a further three months, increases made in the previous 12 months will be disregarded. A company, therefore, that had raised prices by 5 per cent or more in the early part of last year, and by a

further 5 per cent during the 12 months of the freeze, should be free to raise them again by another 5 per cent in the coming three months, making a total of over 15 per cent in under two years. Some companies do not like the new arrangements and would have preferred to sign on for a longer freeze at some slightly higher figure, like 7½ per cent, but it seems politically impossible for either the Government or the CBI to budge beyond 5 per cent now.

So if industry generally does expect a Government price freeze in the autumn, some companies may think it sensible to take what opportunities are offered now to raise their prices. But if they do raise prices in the next three months that could push the Government into imposing a freeze that it might not otherwise have had to introduce. Whatever it says in public, industry is much more concerned about this

Hughie went to Downing Street

possibility than it is about the general drift of wages. Settlements are running at an appreciably lower rate—so far—in private industry than in the mines and railways. The apparently vulnerable engineering and motor industries are coming out of the present round of wage negotiations with fewer scars than they expected.

Engineering wages Near the end

Mr Hugh Scanlon has almost admitted that he has lost the plant-by-plant battle for the engineering industry's wage claim. In Sheffield recently he said that he had more or less given up hope on most of the 13 points in the claim. The fight was taken to the plant level after he had been turned down by the national employers' federation. Mr Scanlon is now concentrating on wages, hours and holidays.

There is precious little left for him to achieve: over 60 per cent of the 2m workers covered by the national Engineering Employers' Federation have agreed to wage increases for their own factories, most of which fall within a 7-8 per cent band, with no shorter working hours. Of the remainder, a third work for those 2,500 small companies in the federation that employ around 100 men each, very few of whom have put in for higher wages at all.

Mr Scanlon is under considerable pressure to return to national bargaining. The union is getting too little support at the grass roots, where this battle is supposed to be being conducted, as the low attendances at Mr Scanlon's public meetings have shown. His union also has dwindling funds available for strike pay. Already there are informal contacts between the union and the employers' federation.

Even in normally militant areas, like the Midlands, there has been little success for the militants. At Jaguar, the men accepted £3 a week, or well under 10 per cent. At British Leyland's Longbridge works the militants have done better; the men were show-

ing a much greater interest than the shop stewards this week in accepting the 15 per cent plus deal the management had offered them to buy off piece rates. There have been some hiccups in getting this deal through, largely because the Longbridge men are hoping for the lump payments that have been handed out to some at BLMC's Cowley works: 400 lucky paintshop men there got a £250 handout this week.

British Leyland feels it can justify this level of payout in order to get consistent output, especially at a time when it is trying to beat Ford in the market. But settlements of this order pose a problem for managements in other motor industry plants. A secret ballot at Chrysler's engine plant at Stoke, Coventry, gave the moderates a chance to reject the shop stewards' advice on Wednesday and accept £3.60, an 8.8 per cent increase. Last year Chrysler was paying roughly double this. But Lucas recently gave the national employers a heart attack by offering up to £4.25 a week. So far, however, there have been few deals above 10 per cent.

There appear to be two main reasons for the lack of militancy in the ordinary engineering worker. In the past two years he has learned painfully that managements have worked out how to control unit costs: each wage increase means fewer jobs. In engineering last year, unit wage costs were kept stable, and 106,600 jobs went. He has also had an increase in real wages. Up to the budget, the average increase in earnings over a two-year period had been over 20 per cent.

Dockers

So hard to make the summer hot

The militants in the docks are trying to make the atmosphere heat up again, to avoid the risk of holiday apathy setting in at the dock delegates' conference of the Transport and General Workers' Union when it meets at the end of the month to review its strike threat. The militants are planning a one-day strike on July 26th to coincide with the publication of the joint union-management report on the fall in jobs at the docks. But the TGWU leadership is cleverly not giving away the date of the conference it is calling to discuss the report.

If the National Industrial Relations Court again came to the brink of making martyrs of some of the mili-

Bernie's and Vic's lads were out on picket

tants, as it did three weeks ago at Chobham Farm, this might raise the temperature. Some of the old faithfuls, like Mr Bernie Steer and Mr Vic Turner, were again summoned to the NIRC this week, and again failed to appear. But so far there has been no mention of prison, and everyone is doing their best to keep things cool.

The company asking for an injunction against blacking this time is another east London firm, Midland Cold Storage, and it proceeded with its case, despite the absence of those allegedly responsible, citing the non-arrival of a consignment of Chinese rabbits, of some boilersuits from British Road Services, of some prawns for Young's Seafoods and so on. The Official Solicitor graciously represented Mr Steer and his friends, who refuse to recognise the court, and Sir John Donaldson, the court's president, was also very solicitous of their interests, asking many questions on their behalf. One surprising aspect of the case was that Midland asked for much of the evidence to be given in camera, because it said some witnesses from other firms were unwilling to give it in public.

Every attempt to keep things cool is being made by the employers too. They could be accused, and are accused privately by many exporters, of breaking contracts themselves by not making more vigorous attempts to stop the blacking, which is becoming increasingly effective. Dagenham Cold Storage where the militants concentrated their energies after their success at Chobham Farm, has also been negotiating to take on dockers, having been frightened financially by Ford

Motor's withdrawal of its contract.

Apparently, the success of the blacking was a major reason why the militants rather unexpectedly did not vote for an unofficial strike after the last dock delegates' conference. The London militants felt the blacking was achieving their ends more successfully than a strike would have at that stage. Liverpool and Hull voted against them. But this week a proposed extension of picketing in Hull did not happen because there was so much work to do on ships that there were no men to spare for the picket lines.

Miners

30 per centers

Morecambe

The miners, at their annual conference this week, did not waste much time celebrating their victory. On Tuesday they got down to fixing next year's wage claim. While holidaymakers outside played the fruit machines along Morecambe's rainswept promenade, the miners talked with the confidence of men who know where richer pickings are to be found.

The bluff Mr Joe Gormley presided over the conference, but his moderate views were visibly out of touch with the mood of the delegates, which was avowedly militant. On Monday, Mr Gormley urged them all "not to give the impression that the only way to solve our problems is by the use of the strike weapon." It was almost enough to warm the heart of Mr Derek Ezra, chairman of the National Coal Board, who had pointedly not been sent the customary invitation to address the conference.

But Mr Lawrence Daly, the general secretary and co-leader of the union, was much more in tune with the mood of the moment. He declared, with a Goldwater-like echo, that "moderation in the pursuit of justice is no virtue." He also gave a distinct impression of taking charge, and did most of the talking from the platform. Mr Daly can be eloquent and intelligent; he also appears to be in closer personal touch with the delegates than Mr Gormley.

The first motion on wages merely called for higher pay. It just scraped through, because many delegates thought this approach was too wishy-washy. The second motion called for pay rises worth 30 per cent on the top of any threshold agreement linked to the cost of living. No speaker dared oppose it; the vote was unanimous.

Joe, Lawrence: look who's talking

In the past, the miners were content to pass motions calling for substantial pay rises, leaving it to the union executive to agree to any deal it liked. But the conference decided, as it did last year, to give the leaders less leeway and to specify the actual size of the claim. The motion also told the executive that if it did not get a satisfactory offer, there should be a strike vote.

The demand for a threshold agreement seemed to have been added as an afterthought. One delegate reckoned no one in the union had much idea of what a threshold agreement is. Another was worried about what would happen if the cost of living actually went down: would they have to accept a wage cut? No one suggested that the 30 per cent claim should be reduced if a threshold deal were negotiated, which after all would be the object of such a deal.

Various arguments were used to justify the 30 per cent claim. One delegate said the whole of last year's 25 per cent wage award will have been eaten away by inflation by next February. Others argued that the miners must maintain their new ranking in the wages league. Miners' wages were compared unfavourably with the earnings of floor sweepers in British Leyland factories.

Economy

Wanna spend?

The Chancellor believes that the British economy is on target for 5 per cent growth. But other people wonder how he works that out. He appears to be going on unemployment: the drop in numbers since the beginning of this year seems the main reason for his confidence.

But which employers are doing the hiring? The latest measure of the

size of the industrial labour force is for April; it was then doing nothing more encouraging than no longer falling and was still 4½ per cent less than a year before. As for employment outside industry, nothing is recorded later than last September. It requires inspired guesswork to judge the current strength of the economy.

Take the latest indicator. The May index of the volume of retail sales (adjusted for price changes and seasonal factors) was 108.5 (1966=100), up 0.4 per cent from April but virtually unchanged from the 108.4 of October. Yet the two sub-components of the total (likewise adjusted) each moved up between October and May: that for food shops by nearly 1 per cent, from 102.2 to 103.2; and that for non-food shops by 0.4 per cent, from 113.0 to 113.5. How come one and one don't make two? The answer, according to the statisticians at the Department of Trade and Industry, is that all series are seasonally adjusted independently of one another, which, they say, "occasionally results in inconsistencies." This time round is one of the occasions: if the two seasonally adjusted components are combined, the total index would be 109.0 instead of the 108.5 recorded. That would be very acceptable to Mr Barber and it could even be the truer measure. But the statisticians should not indulge in self-righteous exposure of these discrepancies: their job is to provide workable figures.

All that is certain is that shop buying did increase in the two months after the March budget; it would have been a poor look-out had it not. But it is the next set of these figures that is critical, after the income tax concessions came through in the June pay packets. What did people do with that extra money?

We have analysed in the accompanying table the annual changes (which should be more reliable than monthly ones) in British consumption. Last year, which was marked by the highest unemployment for 25 years, put a brake on the improvement in essential living standards: that is to say, in the volume of spending on food, housing, fuel and clothing. Indeed, it saw the first actual cutback in food consumption since the early 1950s, which probably meant no more hardship than that people switched from frying steak to stewing steak and so on. The most revealing feature is the concentration of last year's extra buying on cars, household durables, drink and services. These booms are probably still

How does your spending grow?

Per cent changes in spending in real terms (1963 prices)

	Average a year:		
	1960-65	1965-70	1970-71
Food	+1.1	+1.0	-0.3
Alcoholic drink	+3.5	+3.8	+7.1
Smoking	-0.8	+0.4	-3.4
Housing	+2.8	+3.1	+1.2
Fuel & light	+4.2	+4.3	+1.6
Clothing & footwear	+2.8	+1.6	+0.8
Cars & motor cycles	+7.4	+3.6	+26.3
Furniture & floor coverings	+3.3	-2.6	+0.9
Radio & electrical goods	+3.8	+2.1	+10.2
Other goods	+4.8	+3.1	+2.0
Other services	+3.7	+0.9	+2.4
All goods & services	+2.9	+2.0	+2.5
Population	+0.7	+0.5	+0.4

going on, but we would guess that more, too, is now going into housing, beyond that required to meet inflationary house prices (which, incidentally, have gone up 18 per cent in the past six months).

But if the Treasury's budget-time forecasts, to which it seems to be sticking, are to be realised, then the column in the table for 1971-72, when it can be calculated, must show rises in consumption of all goods and services of 5.7 per cent. This implies that in the next six months the increase over the 1971 average has to be a massive 7.5 per cent. It is asking a lot.

Exchange reserves

Someone owes us money too

By itself, the published decline of \$185m in Britain's reserves in June (\$69m of which reflected the normal mid-year servicing of long-term debts with the United States and Canada) gives a totally misleading picture of sterling's shattered fortunes last month. It is a net figure; it specifically excludes the cost of intervention in European Economic Community currencies (the bill for which need not be settled until July, if then); no forward dealings show up in it at all. None the less, read in conjunction with the Chancellor's statement to the Commons on the £1 billion cost of intervention in the markets before the floating, it becomes more revealing.

On June 29th, the day when Mr

Continued on page 97

GRÄNGES

annual report

INCREASED STEEL DELIVERIES DESPITE CYCLICAL WEAKNESS

In 1971 the steel market in Europe experienced one of its worst years, with considerable production cutbacks and declining prices. Gränges iron-ore deliveries from the mines in Grängesberg and Stråssa decreased from 3.5 to 3.2 million tons owing to the failure of the ore customers to fetch large quantities that had been ordered for the year. This held iron-ore exports to 1.45 million tons, compared with 1.98 million tons the year before.

Oxelösunds Järnverk nevertheless continued to increase its deliveries of heavy plate, reaching the new record level of 633,000 tons, although profitability suffered in consequence of lower prices and higher costs. During the year a 140-ton ASEA-SKF ladle furnace was commissioned — the world's largest to date. It opens up fresh scope for progress towards ever higher steel qualities — the line the Works has pursued since it began operations ten years ago. Nyby Bruk, in defiance of the adverse market conditions, also succeeded in increasing its deliveries of stainless steel sheet and tubing, but the fierce competition from foreign producers, in particular the Japanese, which exerted heavy pressure on prices, sharply reduced its profits.

Erland Waldenström, Chairman of the Gränges Board and of the Executive Committee, which also includes Sven Ersman, Deputy Chairman of the EC and Johan Åkerman, President.

COPPER STRIP FOR AUTOMOTIVE RADIATORS A GOOD EXPORT PRODUCT

The negative world-market trend for raw aluminium grew more pronounced during 1971. Consumption in the Western world rose a good deal less than in the previous few years; at the same time, capacity was rapidly expanded. Production cutbacks were not sufficient to stave off price reductions. GRÄNGES ESSEM could not keep more than 88% of its capacity at the enlarged smelter in Sundsvall occupied during 1971, and production was held to 75,000 tons of raw aluminium (1970: 66,000 tons).

The market for semimanufactures, both of aluminium and of copper, was circumscribed by the slack state of business. Gränges Essem nevertheless succeeded in substantially raising production and deliveries of thin strips in copper and brass, the main factor herein being larger exports to the U.S. The plastics market remained under pressure in respect of standard products, but Gränges Essem's special products Akatherm (sewage systems), Meltaway (snow-clearance systems) and Neptub (sea-bed sewage lines) increased their turnover.

LONG-TERM CONTRACTS FOR OIL SHIPMENTS RAISED SHIPPING PROFIT

The booming freight market of 1970 faded out quickly in 1971, and rates in both the tanker and the dry-cargo sectors fell precipitately. GRÄNGES SHIPPING nevertheless improved its results by about 60% thanks to the advantageous freight contracts for oil movements that had been signed up while the shipping market was still strong. The uncommitted tonnage had to seek work on a market growing ever weaker, though cheaper chartering of outside tonnage and declining bunkerage rates did something to offset the extremely low freight level.

The Division's own fleet of 733,000 d.w. tons, reinforced by time-chartered shipping aggregating some 540,000 d.w. tons, was kept fully occupied and ran up 74,000 million ton-nautical miles of haulage — an increase of about 10% on the 1970 figure. The fleet now includes four chemical carriers aggregating 109,000 d.w. tons. The building of three 265,000-ton combined ore/oil carriers, ordered from a Yugoslavian yard, is to begin in 1972. Gränges owns two of them outright and has a 25% share of the third.

GROUP'S EXTERNAL DELIVERIES (SKr m)

Gränges, the Swedish group that is becoming increasingly international in scope, found foreign buyers for 50% of its total 1971 turnover of \$ 633 m. Iron ore, steel, copper and aluminium make up the backbone of its business, with a growing emphasis on mining. A feature of the year was large-scale prospecting in Canada, Australia, New Caledonia and elsewhere, chiefly in quest of copper and nickel ores.

Gränges profits in 1971 were heavily affected by the weak state of world trade, especially in the steel sector, and the economic slackness that was evident in Sweden.

1972 will probably be another poor year for profits, whereas a substantial improvement is expected in 1973.

NEW IRON ORE MINE IN LIBERIA

GRÄNGES INTERNATIONAL MINING is responsible for the Lamco Joint Venture's iron-ore production in Liberia. Deliveries of Nimba ore fell off in 1971 by about 11% to 10 million tons in consequence of restrictive fetchings by ore customers. Prospecting operations in neighbouring orefields yielded encouraging results during the year and the decision was taken to commence extraction at Mt Tokadeh 25 km from the present mining area. The initial stage of development, scheduled for completion by the beginning of 1973, is expected to permit the extraction of about 1½ million tons of ore per year.

ORE PROSPECTING ALL OVER THE WORLD

GRÄNGES DEVELOPMENT continued its studies of various projects aimed at expanding Gränges mining activities to other ores besides those of iron. Surveys were carried out in Australia and Canada and elsewhere, and nickel prospecting was commenced on New Caledonia. At Bethlehem Copper Corporation, Canada, in which the Group has a 25% interest, operations at the mines in Highland Valley, British Columbia, proceeded normally during the year at an unchanged rate of production. A new orebody was discovered in the same area, and test drillings so far indicate reserves of about 300 million tons of ore.

FUTURE SHIFT TOWARDS SPECIAL PRODUCTS

The overall aim for the long-term development of Gränges is to reduce the Company's preoccupation with the standard commodities of the world market and to go in for special products with a greater degree of inherent technology and with their own markets and individual pricing.

In his address to the shareholders at the 1972 Annual General Meeting, Chairman Erland Waldenström foreshadowed a shift of emphasis onto international mining industry, heavy engineering based mainly on steel plate, and certain specialities of Gränges Essem.

On the steel side, Gränges will continue to concentrate on product development and marketing work, leaving quantitative expansion in abeyance for the time being.

This report is a summary of the Annual Report adopted at the Annual Shareholders' Meeting, held on May 30th 1972. Copies of the full report in English are available from the Head Office, Box, S-103 26 Stockholm 16, Sweden.

Continued from page 93

Barber made his statement and just one day before the June reserve figure was struck, Britain's reserves totalled roughly \$7 billion. The Chancellor put the cost of supporting the pound during the critical period of June 15th to 22nd at \$2½ billion. He further said that if Britain had chosen to settle the bill on the 29th, "from the reserves and from funds swapped forward," there would still have been over \$5½ billion left in the reserve kitty. The implication is that only \$1½ billion would have had to be taken on the reserves; something close to \$1 billion could have been met from sums owed us on forward swaps. Perhaps there was point in the grumbles in the French press about the Bank of England being too clever by half in its forward dealings.

Investment

Anti-depressants?

The National Economic Development Council's meeting on Wednesday was partly given over to considering how to avoid a violent cutback in investment in the next economic downturn. It was acknowledged that little could be done about the present trough, which has been particularly damaging to the machine tool and process plant industries. Nedo has looked at the Swedish system under which companies may put money into a tax-free reserve during boom times that can later be used for investment during periods decided by the government, ie in an investment slump. The trouble with copying Sweden is that Britain has 100 per cent first-year depreciation for plant and machinery investment, so

money used for that purpose is tax-free anyhow. If tax (as opposed to accounting) depreciation is so large that it causes tax losses in any year, these may be set against future profits and also profits in the previous three years. So tax-free reserves accumulated for future investment would be no bonus. They might help building, but that is not the problem area.

Another approach would be to allow more than 100 per cent depreciation in depressed years and less than 100 per cent in booms. This would be a more complicated version of the pre-1966 investment allowances, whereby more than 100 per cent of investment could be depreciated (though not all in the first year). The Inland Revenue hates investment allowances, the Government is not very keen—and neither is the EEC. As for a general investment grant in the depressed years, the Government has eaten enough words on investment grants with its regional ones. Apart from using regional grants on a cyclically selective basis as well, it is back to the old drawing board.

Antiques

Buying them back

Dealers in antiques and art are very relaxed about the worries of the foreign exchanges, for they know what's good for them. They look back lovingly on 1968 and 1969, those years of international monetary upheavals after the 1967 devaluation of sterling, when money was the last thing people wanted to hold. Both years saw record attendances of 25,000-26,000 at the swish

Grosvenor House Antiques Fair in London. After much poorer times in 1970 and 1971, and big reactions in some trades, notably silver, buyers were back again this year: when the fair closed in the wake of the floating pound, 20,000 people had seen it, a record daily attendance as it was of shorter duration this time. While the Americans were conspicuous by their absence and the Japanese by their overnight queueing for first grabs, the bulk of business was done with British buyers. Dealers say their prices are still below those of the auction rooms.

Certainly there have been fancy prices in the London salerooms recently: world records, for instance, for English paintings, notably 140,000 guineas (still the quaint monetary unit of auctions) for a George Romney sold at Christie's. Many non-outstanding impressionist and modern paintings which have gone at top prices are destined for Japanese buyers, maybe anxious to get in before the next yen upvaluation. But the new gimmick is that the Japanese are now tracking down their own art, and the salerooms round the world are tracking down collections of Japanese art to sell. Last week a record £4,600 was paid at Sotheby's for a Japanese colour print, only shortly after the same auctioneers had sold a dozen seventeenth-century Japanese lacquer boxes for an astonishing £14,000.

African countries clamped down, too late, on the export of their native art and they, like the Japanese, will come to buy it back at inflated prices from Europe and America. The tip to heartless collectors is: think of the next emerging nation and snap its antiquities up.

Max's red revolution is what the market wanted

It may, of course, be a coincidence. But the steady recovery of the London stock market, after the first floating week had brought a fall of 26 points in the Financial Times industrial index, started with the victory of Grand Metropolitan Hotels over Watney Mann. By Thursday the market had improved to 507.9, compared with the previous Friday's close of 480.6.

After the failure of previous mega-bids, like the one for the Metropolitan Estate and Property Corporation by the Commercial Union (a mere £120m) or Allied Breweries' bid for Trust Houses Forte (£131m), the main lesson for the market was that big bids can succeed. The participants and spectators are now girding themselves for the Beecham/Glaxo/Boots fight, which is in the GMH-Watney £400m class but also in a state of suspension pending the decision of the Secretary of State for Trade and Industry. The Monopolies Commission has handed in its report. The latest figures from the Beecham Group suggest that if the bid for Glaxo is opened again there will be plenty of cash in the till for a long fight with Boots.

When the bidding was shut off by the Government, Beecham's shares were priced at 296p, Boots's at 238p; today the prices are 317p and 267p respectively.

At GMH-Watney Mr Maxwell Joseph now controls a company with assets of roughly £430m and sales of £500m. A week ago his sphere of influence was half as large. It would be churlish not to congratulate him on his victory, but the economic arguments in favour of a merger were not as strong as the arguments for keeping two less-than-juggernaut companies separately alive. In the absence of Governmental guidelines, some City fathers seriously considered that the protection of capitalism required them to oppose the bid. No doubt there were some unpleasant elements in a few of the arguments to keep the beerage pure, but it is doubtful if GMH shareholders' prospects have been increased by as much as the management's power.

However, perhaps what most deserves a postmortem by both groups of shareholders is that a battle for the organisation of industry was fought out at a cost of something like £1m

to each combatant, largely in newspaper advertisements.

If ever there was a merger to illustrate with textbook exemplariness the benefits of letting a strong management get to work on underutilised assets, it was the takeover of Associated Electrical Industries by the General Electric Company in 1967. For the year to March, 1972, GEC has lifted profits by £14m to a record £77m. Industrial efficiency shows up in the increased trading margins; financial control in the massive £100m cash turnaround and a fall of a half in the interest charge. All those ratios and numbers that measure the economic efficiency in the use of plant and machinery continue to show the improvements that are the reverse side of the coin of making 35,000 people redundant in the past three years. At 176p on a p/e of 20, the market does not pay the respect it should to a company which shows that manufacturing industry can still pay handsomely.

Wall Street

No bigger than McGovern's hand

New York

Share prices have steadied for the first time since mid-June as Wall Street noted two new grounds for encouragement: the scheduled resumption of the Vietnam peace talks in Paris on July 13th and the fact that some foreigners are still willing to hold dollars despite Britain's surprise floating of the pound. On Wednesday the Dow Jones industrial average rose 4.81 to close at 933.47, down only 1.81 from a week before.

Investors felt they could give more attention to the prospect of lots of reports showing favourable second quarter earnings and other continuing signs of economic improvement. Special situation stocks and growth glamour issues have been especially favoured. At midweek, Curtiss Wright, the former aero-engine manufacturer which currently commands attention as holder of North American rights to the Wankel

He runs off to Rio with the profits and where does that leave you?

It doesn't happen often, but a lot of silly things can affect shares just when you want to sell.

That's why, if you're wise, you will have invested at least part of your portfolio in the Leicester Permanent.

Where it's safe as houses; earns 4½% interest - with income tax paid by the Society; and is readily available when you need it - no matter what the world's coming to.

Leicester Permanent £

Leicester Permanent Building Society · Head Office: Oadby, Leicester, LE2 4PF
London Office: 49 Park Lane, W.1 · City Office: 66 Gresham Street, E.C.2.

Rotary engine, rose \$1½ to \$57. This followed an even more spectacular \$3½ jump on Monday (before the exchange's July 4th holiday). Another favourite, Control Data, tacked on another \$1 to \$77½ on Wednesday, following a similar \$3½ increase on the previous trading day.

But the market's underlying nervousness over the ascendancy of Senator McGovern, the Democratic anti-business pushover for the Presidential nomination next week in Miami Beach, was underscored on Wednesday. A seven-point gain in the Dow was abruptly pared towards the close to under five points, on news that a United States appeals court had just ruled that the Senator should enjoy at the convention both the California delegation that he had won and the part of the Illinois delegation Mayor Daley had been keeping.

Meanwhile, foreign buying of American stocks seems to be receding. While net purchases in the January-March period totalled nearly \$600m (compared with \$700m for all of 1971 and a record \$2.3 billion in 1968), they declined in April to \$80m from \$177m the month before. The inflow probably dwindled even more markedly in June, as the market turned dull and the dollar came under pressure.

Lazard Frères

We stated in our issue of June 24th (page 99) that Lazard Frères had been accused by the SEC of "not disclosing details of the negotiations with the Justice Department at the time they made a distribution of ITT shares." This may be misleading. Lazard was, in fact, charged with a small technical violation of registration requirements for the period ended in May, 1971. This was not connected with the SEC charge against two officers of ITT about the use of insider knowledge about discussions with the Justice Department in June, 1971. Both sets of charges were quickly settled, Lazard Frères accepting a consent decree. That is, without accepting that it was guilty, Lazard agreed to an injunction restricting it from the same infractions of the securities laws. Lazard has made it clear that the consent decree was chosen to avoid "protracted litigation over so technical a question."

After thorough investigation by the SEC, no evidence has been found to substantiate the claim by one of Mr Ralph Nader's aides that Lazard Frères engaged in insider trading.

Eurobonds

Normal service will be resumed

Amsterdam

Coming on top of a sharp attack of indigestion, the latest round of currency jitters has put paid to hopes that the volume of new Eurobond issues this year could top the \$5 billion mark, compared with the 1971 peak of £3.6 billion. Nervousness about the dollar which, despite everything, still remains the most popular unit in which to denominate a Euroloan, has knocked both the primary and secondary sectors of the Eurodollar bond market.

Three dollar issues currently on offer—\$95m worth of convertibles by J. C. Penney, Southland Corporation and Mass Mutual Mortgage and Realty Investors—have been postponed until later this month. The rub is that when the new issue flow resumes borrowers are going to have to pay more, probably ½%, for a straight debt loan which could have been sold—just—on a coupon of 8% and at a sharp discount before sterling was floated just two weeks ago.

One encouraging sign is that the secondary market for dollar bonds, traditionally the weak link in the chain, has held up remarkably well, and already selective buying of high-yielding issues has been noted. But

Pensions' progress

Something over £1 billion is channelled into stocks and shares through pension schemes every year. Soon the Government's new scheme to ensure every worker has an occupational pension will be adding another £250m-£500m. Yet incredibly little is known about pension schemes. Now, however, the British Institute of Management, in a new survey*, comes up with some statistics of importance to the 12m-13m people thought to be covered by occupational schemes.

Almost every existing scheme, says the BIM, is due for amendment in the next three years because of the Government's new pension policy. The BIM's survey, covering 570 companies, indicates plenty of scope for improvement. One important change for the better is the trend towards basing pensions on final salaries rather than on an inflation-threatened flat rate. Nearly four out of five schemes for staff employees now do this; however, only 21 per cent of schemes for manual workers are so arranged. The trade unions should be trying to get this

changed.

Where there are separate schemes for manual workers (in 27% of the companies surveyed) they provide fewer benefits than staff schemes all along the line. For example, where lump sum death benefits are paid to dependents the sum is less than one year's pay for most manual schemes and between one and three years' salary for most staff schemes. Manual workers, of course, pay less since over a third of their schemes are non-contributory or contributions are small and flat-rate. Staff contributions are levied at 5 per cent (usually) of income.

Women are another underprivileged group. They are excluded from 5 per cent of staff schemes and 23 per cent of schemes for manual employees; they must put in longer service to qualify; and, while contributions of their male colleagues may be earning a widow's pension rights, widower's pensions are scarcely known.

*Pensions Today, by N. Kingston. British Institute of Management, £5.

I'm not covered, actually

Associated British Foods

Mr. Garry H. Weston reports a year of record earnings growth

	1971-72	1970-71	Increase
Profits before Tax	£27.5 million	£23.8 million	15.6%
Earnings per Share	4.22p	3.49p	20.9%

1971-72 was a year in which all operating divisions in the United Kingdom achieved profit increases to give Associated British Foods twelve months of record earnings growth. Whilst highly satisfied by these results we prefer our progress to be judged from the company's continuous growth over the past five years.

The comparisons given below demonstrate what has been achieved by constant attention to the better utilisation of our assets and by our policy of backing the management in our operating divisions with a high level of capital investment. This policy will continue and I firmly believe will be reflected in our future results.

Five year comparison	1972	1967	% Increase
	£ million	£ million	
Sales	612.0	300.0	104
Profits before Tax	27.5	13.3	106
Net Assets	157.3	93.6	68
Ordinary Shareholders Funds	99.9	45.5	98
Earnings per Share	4.22p	2.33p	81
Return on Net Assets	17.5%	14.3%	22

some big traders are reducing their exposure.

Only two sectors of the Eurobond market effectively remain open to borrowers. Although the **Finnish Mortgage Bank** is raising DM70m at 7% by way of an internationally-syndicated offering, no further foreign D-mark loans will be floated until next month at the earliest. This leaves the Eurofranc market, where the province of Nova Scotia is borrowing Fr100m for 15 years at 7½%, and the Euroguillemet market, where Philips has raised Fl100m for seven years at the low rate of 6%.

J. Lyons

Rights for Europe

J. Lyons is changing gear. Over the next few years the old teashop image will finally fade, and shareholders will find themselves owning a European food group with major British property interests. The ease with which the market absorbed the news of the £20m

rights issue, and also another possible £17m-£20m in convertible preference shares, shows the confidence bred during years of steady share price and earnings growth.

The word is that the subscription price will be 130p, and ownership of each share will give the right to subscribe to a new one. At the current price of 677p, this gives the rights a value of 273p. Underwriting will not, quite clearly, be necessary. The sweetener to the inevitable initial earnings dilution is that the dividend payout on the increased capital will be higher. The changeover to imputation tax is already swinging the balance a little of the way back to equity finance from debt finance.

The addition of nearly £40m equity on to the existing £63m of shareholders' funds is a measure of the change in stature that the company is planning. And an equity base of £100m is a wide one for further gearing up. The revaluation of £17m on to the £56m book value of property indicates where the money will be used, and the group has already announced plans to spend £32m over the next seven years on property.

For the continent of Europe the spending plans are for around £60m over the next few years, which is a lot in anyone's currency. The convertible preference shares will be quoted on the major bourses, and will in fact count as foreign currency securities so far as British exchange control is concerned. Some of them will be issued to repay the £8m borrowed from the banks for the first major acquisition in Europe, of Homburg, a Dutch meat company. Meat, hotels and cakes, in that disparate order, are the most probable areas of expansion. The shares, on a p/e of about 20 at 677p, do not fully discount the medium-term growth in earnings and assets.

International Life Insurance Still unresolved

The decisions by Keyser Ullmann, the merchant bank, and its chairman, Mr Edward du Cann, to take a 9% stake each in International Life Insurance are either very brave or very foolhardy. ILI, it can hardly be forgotten, is the British subsidiary of IOS Ltd, and the affairs of IOS are still far from resolution. Keyser Ullmann and Mr du Cann hoped to buy control of ILI—but IOS is well aware that this company, managed in conformity with British insurance company rules, is one of the few bits of the old IOS empire which catches a few rays of sun, and IOS wanted an astronomic sum of £7m or more.

So the buyers settled for second best—or worst. They paid relatively little, £65,000 each, but any success achieved in galvanising ILI will clearly benefit the majority owners. Premium income dropped by £9m to £16m in 1971. Mr du Cann is given day-to-day control, but he will have an uphill job in reassuring the twitchy insurance broking fraternity that he cannot be outboxed by the other shareholders. IOS now owns 60% of ILI, and IOS's Fund of Funds has promptly bought a 3% stake in Keyser Ullmann, making it the largest single outside shareholder. Another 22% of ILI is owned by three independent American shareholders.

What Keyser Ullmann achieves out of an association with ILI is also hard to see. It will be the investment manager, but it has to find a way of coping with the £18m of the fund which is in Fund of Funds Sterling. ILI can hardly be Keyser's route into insurance. Keyser recently paid a lot for a property company, but at least took

RAS

RIUNIONE ADRIATICA DI SICURTA'

Milan - Italy

RESULTS OF 133rd FINANCIAL YEAR

At the General Meeting of the shareholders held in Milan on 27th June, 1972, the balance sheet and accounts for 1971 were approved and a dividend of 500 lire per share was declared, payable as from 6th July, 1972. At the Extraordinary Meeting immediately following, a free and tax exempt increase in the Company's share capital was decided. The nominal value of each share was increased from 3,500 lire to 3,750 lire, general reserves being utilized for this purpose.

In their Annual Report on the year's activities, the Board of Directors stressed favourable trends in Life Insurance, both in Italy and abroad, where impressive rates of growth were recorded. The results of the non-Life activity, however, showed a substantial deterioration in the claims rate, especially in Italy. Favourable financial results were sufficient however to offset underwriting losses, to strengthen reserves and to pay a dividend to the shareholders. In 1971 the Company's premium income was £67,211,442 net of taxes, a 12.6% increase over 1970. In the same year, the premium income of the whole RAS Group (comprising 9 domestic and 25 foreign Companies) reached almost £235 million.

the whole thing over. Paying a little for a bit of an IOS insurance company does not appear to make much sense. One point on which there can be little doubt is the personal enthusiasm of Mr du Cann. As one of the pioneers of the unit trust movement, he perhaps sees himself as the saviour of the suckers. At least the task will be more exciting than the job he has just relinquished as chairman of Barclays Unicorn. Having built up the Unicorn group, he sold it to Martins (now Barclays) Bank; it has been highly successful in sales, but its dull record on innovations contrasts with its founder's outlook.

SEC and profits

Whether forecasting

New York

Oddly enough, Wall Street, a hotbed of opportunism when it comes to

finding ways of selling securities, does not use the profit forecast. Equally curiously, while the British takeover panel has cast a wary eye on the use of earnings forecasts to bolster the value of takeover bids, the Securities and Exchange Commission is actively pushing for the use of forecasts in America as a means of taking some of the hot air out of speculative issues.

The SEC still has not come out with a directive on the matter but should do so any day. The commission's staff has been holding a series of meetings with professional bodies, most of which have urged caution. It seems that the SEC's first step may be to introduce some form of cash flow projection falling short of an estimate of actual profit. All the associations want to know exactly where their members will stand legally in the event of a projection proving wildly out of kilter. So the law will have to be meticulously spelled out before the system begins to work.

Share incentives get the go-ahead

The Government has altered that part of the Finance Bill dealing with share schemes. Profit-linked schemes, in which ordinary shares are issued in relation to profits, will not be affected; neither will schemes involving the straight purchase of ordinary shares. But the benefits from share-option schemes and share-incentive schemes will be subject to income tax and surtax unless they meet certain conditions.

Share-option schemes involve granting the holder the option to subscribe to shares at a certain price at certain times in the future. Share-incentive schemes require the purchase by the participants of incentive shares that turn into ordinary shares when certain conditions are fulfilled. Sometimes these conditions simply specify a time limit, sometimes profit targets; and the purchase of incentive shares can be outright, by part-payment (with full payment when the shares mature) or with the benefit of loans.

One contentious rule limited the value of shares a person could have in relation to his salary. Originally it was proposed that he could only get shares worth up to 40% of salary in any year, with an overall limit of twice his salary. Now there is to be no annual limit, and the overall limit is raised to four times salary.

The Government's original idea was to limit the maximum number of shares that could be issued to 5% of the company's issued capital. But to help small companies, where a decent

individual stake could exceed this, the limit has been raised to 10% if the share capital is less than £2m, and £200,000 if it is between £2m and £4m. The original rules allowed employees of subsidiaries to participate in the schemes of parent companies; this is now to be allowed for employees of consortium companies as well. The Government has also promised to look again at the possibility of allowing part-time directors to participate, and of allowing subsidiary companies to have their own schemes. Part-time directors vary from the vital to the parasitic; it is difficult to include the first without the second. Subsidiary companies' shares are easy to manipulate in value, making tax avoidance possible, although excluding them is hard on British subsidiaries of foreign companies.

The Government has made no concession on the rule saying that share-incentive schemes must not include shares issued at more than a 20% discount, which is a pity. Some schemes have such fierce profits targets as a condition of the maturity of the incentive shares that they genuinely are worth less than 80% of an unrestricted share. Such schemes offer the greatest spur to managers taking part in them.

The Government is also dead against the Cunard type of scheme in which executives bought incentive shares that did not themselves become ordinary shares but entitled the holders to a scrip issue of ordinary shares

whenever profits exceeded a certain value (the highest level previously achieved by the company); 5% of the excess was to be so distributed as a scrip issue. This scheme was an excellent incentive because the rewards were precisely related to performance. But it also involves the turning of reserves into capital gains, when they would normally count as dividends when distributed. The Inland Revenue is frightened of this—rightly, as the long history of dividend stripping shows.

The new rules are a codification of ideas that were around under Labour as well as Tory governments. Labour spokesmen were not very happy about them in the Finance Bill committee; particularly about stock options, which are more suspect than share-incentive schemes. Mr Barber has promised that he will look for ways of devising share schemes that reach down to the shop floor, a necessary concession to win Labour support, which may well be needed if the rules are to be stable over the 10 years that a scheme can last for. One suggestion from Lowndes Management Incentives would link share schemes to Save-As-You-Earn. For instance, a regular payment of £10 a month could be used for SAYE, while an extra 5p a month could provide a ½p share part-payment to 10 shares worth £1. At the maturity of the SAYE contract, the SAYE contributions could be used to pay up the rest of the price of the shares, and the SAYE bonus would be a cash extra. Such schemes would need to protect the shop-floor worker against large losses through a share price decline.

De La Rue

"A favourable outlook for the Group in the current year"

Sir Arthur Norman—Chairman

1972 RESULTS

A major upswing in profits and margins in Thomas De La Rue International and a decline in profits and margins in Potterton International and in Formica International.

1973 PROSPECTS

Another significant advance in sales and profits in Thomas De La Rue International.

A tough year ahead for the central heating industry in the UK with a stern fight for market share and better margins.

Rationalisation of manufacture and products combined with improved manufacturing efficiency create confidence in Formica International.

	1972	1971
Profit before tax	£4.10m	£3.50m
Profit attributable to De La Rue	£1.79m	£1.50m
Earnings for each Ordinary Share	14.3p.	12.0p.
Dividends for each Ordinary Share	11.25p.	11.25p.

CHAIRMAN'S STATEMENT

THE SABAH TIMBER
COMPANY LIMITEDMR. H.G.C. TOWNSEND'S
REVIEW

The Annual General Meeting of The Sabah Timber Company Limited will be held on July 28th in London. The following is an extract from the circulated statement by MR. H.G.C. TOWNSEND, O.B.E., the Chairman.

Group profit for 1971, before taxation but after paying £935,325 royalties to the Sabah Government, amounted to £3,723,880, a new record for the Company. Taxation absorbs £1,672,215 net. Its incidence is lower than last year, mainly because more of the profit came from the less heavily taxed U.K. sector. After deducting pre-acquisition profits and minority interests, the balance attributable to the parent company is £1,808,689.

The board recommend a final dividend of 32½ per cent., making 37½ per cent. for the year, an increase of 5 per cent. Over the years an undue disparity has grown up between interim and final payments. It is the board's intention to reduce this in 1972 by paying a larger proportion of the expected total dividend in the form of an interim distribution.

To finance the group's continuing growth the sum of £1,100,000 has been transferred to capital reserve, bringing it to £4,600,000. The directors propose the capitalisation of £1,600,000 of reserves and the issue to members of one new 10p share credited as fully paid (not ranking for the dividend now proposed) for each 10p share held.

After remaining buoyant in the earlier part of 1971, the market for South-East Asian logs turned sharply downward in the second half of the year, reaching its lowest level for five years. Averaged over the year, however, proceeds per cubic foot were not much lower than in 1970. As had been foreseen, a surge in exports from Indonesia created a situation

of temporary over-supply.

Production, at 13.8 million cubic feet, was 3.1 million below that achieved in 1970, when once-for-all special licence areas were still being logged.

In the current year, log prices have recovered slightly from their lowest 1971 level but production is expected to decrease to about 11 million cubic feet in 1972 and probably to less than 10 million in 1973 as felling is phased down to the 10½ square miles per year to which we are restricted under our cutting agreement during the remaining ten years of the concession.

High priority continues to be given to the search for suitable new forest areas. The area mentioned a year ago proved on detailed survey to be unsuitable but another, larger area in Indonesia is now being explored. If it comes up to expectations we envisage a joint venture with local partners.

About seven years ago, the board decided to enter the U.K. timber trade as a means of insuring against an eventual downturn in earnings from Sabah and providing revenue close at hand. This process has made good headway and is continuing.

On new acquisitions, our policy is to favour companies which seek the financial and other benefits available in a large group but are nevertheless keen to retain their individuality and local initiative.

After a strong finish to the year, the U.K. subsidiaries showed substantially improved results compared with 1970 and provided approximately half of the group profit. Co-operation between units is whole-hearted and proving a big factor in the group's success. 1972 has started well thanks to the high level of building.

APPOINTMENTS

KENT COUNTY
COUNCIL

PLANNING DEPARTMENT

SENIOR ASSISTANT

DIVISIONAL PLANNING OFFICER

£2,562-£3,390

A vacancy exists in the County Policy Division for a person of considerable post-graduate experience, able to make a constructive approach to the formulation of strategic policies and the evolving of research techniques of practical application, as an aid to the taking of planning decisions in the context of Structure Planning.

A casual user car allowance is payable and grants are made towards removal expenses.

Applications, giving names and addresses of two referees, should be sent under confidential cover to the County Planning Officer, County Hall, Maidstone by 17th July.

appointments

see pages 5, 106 to 112

CHAIRMAN'S STATEMENT

LONDON TIN
CORPORATIONSalient Points from the statement by
Sir Douglas Waring, C.B.E., the Chairman:

- ★ Total production by the units in Malaysia and Thailand, excluding for comparison purposes those of Austral Amalgamated Tin Berhad, was approximately the same as in the previous year. In Nigeria the position is better compared with a year ago, largely as a result of the streamlining of operations and an improvement in local conditions.
- ★ We have continued our programme of investigation work in Australia but it is still far too early to assess whether the property under investigation contains ore reserves sufficient to constitute a viable mining proposition.
- ★ As forecast, dividend income was maintained at approximately the same level as in the previous year and our total profit before taxation was slightly higher at £2,760,000. Dividends paid, amounting in all to 8.5p per share, were the same as previously.
- ★ The statistical position of tin is sound and if the general improvement in world economy which is predicted, and which is beginning to show itself in greater industrial activity, is developed according to plan there should be an increase in the demand for tin. Your Board will endeavour to maintain the total dividend at the existing rate, which in spite of the recession of the past two years or more, has remained constant for a considerable time.
- ★ I have informed my colleagues that I would like to retire as Chairman and Director as at 30th September next at the conclusion of forty-five years' service with the Organisation. It is proposed that Mr. Mitchell, Deputy Chairman and Managing Director, should be appointed Chairman and Chief Executive Officer at that time.

Annual General Meeting will be held in London on Friday 28th July 1972

National and Local Government Officers
Association

Appointment of Assistant Organising Officer

Applications are invited for the appointment of Assistant Organising Officer at this headquarters in the Health Section of the Service Conditions Department. The salary offered is in accordance with the Senior Officers Grade (£2,367-£3,075). In addition a London weighting allowance of £144 is paid. Applications should be made to the General Secretary by not later than first post on Tuesday, 25th July, 1972, on the official form, a copy of which, and particulars of the appointment, can be obtained from the General Secretary, NALGO House, 8 Harewood Row, London, NW1 6SQ.

CHAIRMAN'S STATEMENT

GENERALI
Assicurazioni Generali S.p.A.

1971 BALANCE SHEET

The annual Shareholders' Meeting of the "Assicurazioni Generali," held in Trieste on 27th June, 1972, under the Chairmanship of Senator Cesare Merzagora, Chairman of the Company, approved the Report and the Accounts for the year 1971.

The Consolidated Balance Sheet of the Generali Group for 1970 had shown a total of premiums of Lire 541,000,000,000; for 1971, according to reliable estimates, the total will exceed Lire 635,000,000,000, with an increase of almost Lire 100,000,000,000.

The stocks and bonds portfolio is entered in the Balance Sheet for a book value of Lire 300,218,000,000.

Premiums collected by "Generali" in Italy and abroad totalled Lire 309,785,000,000, with an increase of 20.4% over the previous year. Life assurance, including both direct and indirect business, accounted for Lire 109,468,000,000 (+14.2%); Non-Life insurance (both direct and indirect business) for Lire 200,317,000,000 (+24%).

The considerable increase in premiums—which reached particularly high levels in the field of third-party insurance for motor vehicles and watercraft—was offset by a strongly negative technical trend in Theft and Fire insurance as well as in motor vehicle gap between premiums and claims and the heavy financial burdens (7% of premiums collected) required by the law instituting obligatory third-party Motor Vehicle insurance in Italy.

Interest-bearing investments of

the Company were, at year's end, distributed as follows: real estate 31.7%; stocks and bonds 44.2%; deposits connected with reinsurance activity 18.2%; bank deposits 4.4%; loans on life policies and mortgage loans 1.5%.

In 1971 the three-year programme of real estate investments for over Lire 100,000,000,000 was concluded; real property now figures in the Balance Sheet for Lire 215,393,000,000.

The technical reserves reached Lire 640,062,000,000 and "guarantee funds" (including the technical reserves and other reserves required by law, as well as the company's capital) exceeded Lire 682,244,000,000. The year's profit is Lire 3,432,932,396 and—combined with the amount of Lire 354,599,948 drawn from available reserves—makes it possible to maintain the dividend at the same level as for 1970, i.e. Lire 450 per share.

The extraordinary Shareholders' Meeting approved the new Articles of Association and the new Rules for the General Meeting of the Company as well as the merger with "Immobiliare Eleonora Romana s.r.l."

After the General Meeting, the Board of Directors re-elected Life Senator Cesare Merzagora as Chairman of the Company and Dr. Carlo Faina, Dr. Franco Mannozi (Managing Director) and Dr. Fabio Padua (Managing Director) as Vice-Chairmen.

APPOINTMENTS

PAISLEY

(A SCOTTISH CENTRAL INSTITUTION OF
HIGHER EDUCATION)

Lecturer in Marketing

The introduction of a new degree course in September in Engineering Marketing creates additional posts in Marketing. Applicants should have a good degree in an appropriate discipline, preferably experience of marketing and/or post graduate marketing qualifications and have a special interest in the marketing of industrial and engineering products.

Salary scale £1482-£3309 currently under review as from 1st April, 1972.

Application forms and further particulars from Establishment Section, PAISLEY COLLEGE OF TECHNOLOGY, High Street, Paisley PA1 2BE, Renfrewshire (Tel: 041-887 1241). Closing date 4th September.

University of
New South Wales

Applications are invited for the following chair:

PROFESSOR OF
GEOGRAPHY

This is an additional chair in the School of Geography. The new Professor will share in the further development of this recently established school. He will be responsible for undergraduate and post-graduate courses in economic geography and in human geography generally, and will be expected to foster and supervise research in economic geography by staff and post-graduate students. Experience in applied economic geography is desirable. The present head of the school is Professor J. A. Mabbutt.

Salary: \$A15,368 per annum. Subject to the consent of the University Council, professors may undertake a limited amount of higher consultative work. The University reserves the right to fill any chair by invitation.

Details of appointment, including superannuation, study leave and housing scheme, may be obtained from the Secretary-General, Association of Commonwealth Universities (Apts), 38 Gordon Square, London WC1H 0PF (Tel: 01-387 8572).

Applications close in Australia and London on 15 August 1972.

University of
Manchester

Lecturer and
Research Assistant in
Econometrics

Applications invited from honours graduates in Econometrics, Statistics and Economics for the above posts. For the Lectureship applicants should have teaching and research interests in at least one of the following fields: Econometric Theory, Applied Econometrics, Mathematical Economics. Applications for the Research Assistantship will be considered from people graduating this summer. Salary ranges p.a.: Lecturer, £1,841-£2,082 (initially); Research Assistant, £1,269-£1,329. Further particulars and application forms (returnable by July 19th) from the Registrar, The University, Manchester, M13 9PL. Quote ref: 115/72/E.

The Queen's
University of
Belfast

Lectureship in Political
Science

Applications are invited for one or more Lectureships in Political Science from 1st October, 1972, or such other date as may be arranged. Salary scale is £1,841 to £3,852 (maximum to be raised to £3,999 on 1st October, 1973) with contributory pension rights under the F.S.S.U. Initial placing on the salary scale will depend on qualifications and experience. Applications should be received by 31st July, 1972. Further particulars may be obtained from The Senior Assistant Secretary (Personnel), The Queen's University of Belfast, BT7 1NN, Northern Ireland. (Please quote Ref. 72/E.)

Birkbeck College

(UNIVERSITY OF LONDON)

Postgraduate Economics

The newly established Department of Economics at Birkbeck College will admit students for an M.Sc. (Economics) course in October 1973. Details will be published later. Applications for 1972-73 are however invited from students wishing to do research leading to the M.Phil. or Ph.D. degrees, either on a part-time or a full-time basis. Preference will be given to applicants whose research interests relate closely to those of one or more members of the staff of the Department.

Further details are available from the Registrar, Birkbeck College (H3), Malet Street, London, WC1E 7HX.

APPOINTMENTS

Wye College

(UNIVERSITY OF LONDON)

Agricultural Economist
(Maize Research)

Applications are invited for the above post in the Maize Unit, which is supported by the Home-Grown Cereals Authority. Candidates should be graduates in agricultural economics or agriculture with agricultural economics. A sound practical knowledge of farming is also desirable. The appointment will be made according to qualifications and experience in a scale related to the Lecturer grade, which is currently £1,841 x £147 to £2,378 x £150 to £2,878 x £147 to £3,705. Superannuation under F.S.S.U.

Further particulars may be obtained from the Secretary, Wye College, (TE/8), Nr. Ashford, Kent, to whom applications should be submitted by 24th July, 1972. It is hoped that the appointment will begin on 1st September, 1972.

Polytechnic of the
South Bank

DEPARTMENT OF BUSINESS
STUDIES

Lecturer in Marketing

Applications are invited from suitably qualified and experienced candidates for this post, which will provide opportunities for developing Marketing as a subject in the Business Studies degree course, and new courses at post graduate and post experience level.

The appointment will be made as either Senior Lecturer or Lecturer Grade II, according to the qualifications and experience of the successful candidate.

Salary scale: up to £3,768 per annum.

Further particulars and application forms from the Clerk to the Council (Room No. 237), Polytechnic of the South Bank, Borough Road, London SE1 0AA. Tel: 01-928 8989.

Economics
GraduatesPractise Economics
at the highest
possible level

Economists in government service deal with matters of national importance. Their work is in the application of economic principles to industrial problems, and the analysis of current trends and future prospects in all fields with which government concerns itself. Their role is to give expert economic advice to ministers and senior administrators.

The experience you gain in the Government Economic Service is invaluable. And the way is open for you to rise to responsible positions near the centre of influence and decision-taking.

You'll begin as Economic Assistant on the scale £1530-£2325. You must have, or expect to gain in 1972, a degree with first or second class honours or a higher degree in economics or a related subject. You must be under 27.

You could progress to Senior Economic Assistant (£2476-£2984) in 2-4 years or earlier according to experience. Promotion to Economic Adviser (£3653-£4883) could come 2-3 years later. Further promotion takes you to Senior Economic Adviser (£5175-£6475), and there are higher posts still. These appointments may be permanent and pensionable or short-term (with FSSU).

For further details and an application form to be returned by 14th August write to Civil Service Commission, Alencon Link, Basingstoke, Hants, quoting ref. A/621/4.

COMPANY STATEMENT

ST. MARTINS PROPERTY
CORPORATION LIMITED

Preliminary Results

for the year ended 31st March, 1972

The profit of the Group for the year ended 31st March, 1972, subject to audit, was £1,570,000 as set out below:

Year to 31st March 1971 £000's		Year to 31st March 1972 £000's
3,895	Net Rents and other income, less property expenses and administration	4,201
1,584	Interest (net)	1,882
2,311		2,319
(40%) 839	Estimated Taxation	777
1,472		1,542
42	Proportion of profits, after taxation, attributable to minority shareholders	7
1,430		1,535
130	Proportion of unrealised appreciation required to compensate for expenses relevant to properties under development	110
1,560		1,645
63	Transfers to Reserves Group Profit	75
1,497		1,570
532	Parent Company Dividends, Interim Paid 1.25p per share	592
828	Final Proposed 2.00p per share	947
1,360		1,530
£137	Addition to amount carried forward	£31

The declaration of a Final Dividend of 2.00p per share (8 per cent) will be recommended to Shareholders at the Annual General Meeting to be held on Friday, 8th September, 1972, making a total for the year of 3.25p per share (13 per cent). This compares with 11½ per cent on the Share Capital after adjustment for the Capitalisation issue of 1 for 1 made in September, 1971.

On the basis of the valuation of properties at 31st March, 1972, the net asset value of the Ordinary Shares was 210p (150p). If full allowance is made for the conversion of the Convertible Loan Stock the value would be reduced to 185p (137p).

APPOINTMENTS

CJA RECRUITMENT CONSULTANTS
35 New Broad Street, London, E.C.2. Tel. 01-588 3588

A top financial appointment—opportunity for considerably increased earnings and responsibilities in the short term

FINANCIAL MANAGER
£6,000 - £8,000

MAJOR INTERNATIONAL OIL COMPANY—EXPANDING WORLD INTERESTS

This vacancy is caused by expansion and is open to candidates aged 26-30 who have a minimum of five years' practical experience in Banking or in the treasury of a multi national company. Candidates will be totally familiar with the international money markets and all aspects of corporate finance. Reporting to the European Treasurer, the Financial Manager will have prime responsibility for arranging short term, project and export financing, and will also assist in general treasury operations. Frequent European travel will be necessary. Initial salary negotiable £6,000-£8,000; contributory pension; free life assurance; assistance with removal expenses if necessary. Applications in strict confidence, under reference FM3239/FT to the Managing Director:

CAMPBELL-JOHNSTON ASSOCIATES (MANAGEMENT RECRUITMENT CONSULTANTS LTD, 35 NEW BROAD STREET, LONDON EC2M 1NH. TEL: 01-588-3588 or 01-438-0553)

For further appointments
see pages 5, 106 to 112

INTER BANK RESEARCH ORGANISATION INTERNATIONAL STUDIES

We are looking for a graduate, aged 25 to 30, to support our International Consultant.

Areas for study will include the money markets of London and other financial centres, diversification in international banking business, and trends towards multinationalism in the structure of financial institutions. The implications for the British banks of developments in Europe and in the international monetary system will also be studied.

The ideal candidate will have several years' experience in an international banking environment, and the ability to think creatively about the challenges of international banking over the next 10 to 15 years.

Salary will be competitive, according to experience and qualifications. Five weeks' annual holiday. Three year contract, renewable by agreement.

APPOINTMENTS

Chief Economist

for Coras Iompair Eireann (CIE), Ireland's National Public Transport undertaking. Reporting directly to the General Manager his function will be to provide an economic input to CIE's corporate policy and development. This will involve recommending suitable courses of action to management on those services affected or likely to be affected by outside economic events. The Chief Economist will also be expected to make a major contribution in discussions with the Government about grants and he will be one of CIE's chief contacts with EEC. The department he will direct employs a number of people with considerable economic expertise. Candidates should have a masters degree in economics with experience at senior level in relating professional economics to corporate policy and development. Some experience in transport economics and the economics of public finances embodying cost/benefit analysis and techniques is desirable. Age probably early 30's. Salary will be discussed at interview. Please write—in confidence—to P. J. H. Fryer quoting ref. S.80675.

Senior Lecturer or Lecturer in Small Business Studies

This post, due to the generosity of the Industrial and Commercial Finance Corporation, will enable the School to explore and develop teaching in the area of Small Business, including that of new ventures. It is hoped that the successful candidate will contribute to both masters degree and post-experience courses and explore means of developing teaching within Small Business. Another possible area of interest is the relation of Government to Small Business. A primary need will be for the candidate to develop case material and research relevant to future teaching activities.

The experience of applicants should include practical work in, or consulting for, this field of business. The appointment will be at lecturership or senior lecturership level according to the qualifications and seniority of the successful applicant. The post will be held, in the first instance, for three years, and the starting date is negotiable. Research assistance will be available.

Closing date for applications will be July 31st.

Salary scales: Senior Lecturer—£3852 to £4734,
plus London Allowance £162.
Lecturer —£1641 to £3999,
plus London Allowance £162.
Membership of the F.S.S.U. applies.

Apply to: Professor M. E. Beesley,
Faculty Dean,
London Graduate School of Business Studies,
Sussex Place,
Regents Park,
London, NW1.

TECALEMIT LIMITED

ORDINARY DIVIDEND — 16% AGAIN

Year to 31st March	1972	1971
Sales	£10,527,525	£11,233,142
Profit on Trading	611,431	1,045,203
Profit after Interest	471,473	874,231
Profit after Tax	285,383	530,952

DIVIDENDS	1972	1971
Preference	26,250	26,250
Ordinary—Interim—5½% (5¼%)	82,500	82,500
—Proposed Final—10½% (10¼%)	157,500	157,500
	266,250	266,250

The shortfall of orders reported at the half-year continued until the end of 1971. Although there was a marked improvement from the beginning of 1972, the miners' strike severely affected output while profitability continued to suffer from our adherence to the C.B.I. recommendation.

Copies of the Report & Accounts and Chairman's Statement can be obtained from the Secretary, Tecalemit Limited, Maidenhead, Berkshire, SL6 3AQ.

GROUPE LAFARGE CIMENTS LAFARGE

The Annual General Meeting was held on June 27th, 1972, Monsieur Marcel DEMONQUE, presiding. The accounts for the financial year 1971 which produced, after depreciation of F.128,973,819, a net profit of F.30,562,497, against F.69,314,333 and F.60,332,704 respectively in 1970, were duly adopted.

The decline in the results is due mainly to the three following factors:

- relatively stagnant business activity in 1971,
- higher in depreciation,
- effect of the loss incurred by Ciments de la Seine, which was taken over at the end of the year.

The Company's self-financing capacity remained at about the same level as in 1970, however.

It was resolved at the Meeting to fix the dividend at F.9.35 per share, the same as in the previous year, which including the tax of F.4.675 already paid to the Treasury for shareholders entitled to tax credit, provides a total income of F.14.025.

This dividend will be paid on July 10th, 1972 against coupon No. 29.

A resolution was passed at the Meeting authorising the Board to raise one or more loans for a total amount of F.300 m. on terms it considers acceptable.

The mandates of Messrs John G. BEEVOR and François de JERPHANTON as Directors, were renewed.

In his address, Monsieur Marcel DEMONQUE pointed out that the estimates for 1972, both as regards the Company and in the estimates for consolidation, were decidedly better than the results terms of consolidation, were decidedly better than the results for 1971. The results attained during the early part of the year seemed to confirm that these targets would be reached or indeed exceeded.

Replying to a question, the Chairman made it clear that the 100 m. Euro-franc loan, issued recently at 7.5%, had been highly successful as it had been subscribed twice over.

BANCA TOSCANA—Società per Azioni

Capital L. 4,000,000,000, fully paid up—Reserve funds L. 4,125,000,000

REGISTERED OFFICE: FLORENCE

An Ordinary General Meeting of the shareholders in Banca Toscana was held at the head office of the Bank, Palazzo Portinari Salvati, Florence, on 27 May 1972; 52 shareholders representing 35,769,375 shares attended the meeting.

The President, Prof. Enzo Balocchi, welcomed those present. The Managing Director, Prof. Paolo Pagliazzi, then read out the Report of the Board, commenting upon the substantial increase in the volume of deposits; the 21.29% rise brought the volume of deposits to the figure of L. 684,000 M, the net flow being over L. 120,000 M, the highest in the history of the Bank.

— the satisfactory increase in lending to customers which rose by 13.92%, exceeding the total of L. 293,000 M despite the difficult economic situation.

— the appreciable expansion in the volume of transactions in every department, including the foreign section in which dealings exceeded those during the previous year in spite of the negative effects of instability in the international monetary situation.

— the fact that with a net profit of L. 694,989,548, more than L. 256 M could be allocated to reserves, a sum could be set aside for the Charity Fund and a 9% dividend could be distributed.

Following a report from the President of the Committee of Auditors, Dr. Mario Tanini, and discussion among some of the shareholders, the Meeting approved the Directors' Report, the Balance Sheet and Profit and Loss Account and the Board's recommendations as to profit distribution.

The Meeting then appointed the members of the Board of Directors for the three-year period 1972-1974 as follows: Enzo Balocchi, Paolo Barile, Leonida Biagi, Rodolfo Brizzi, Pasquale Bruzzichelli, Marco Buitoni, Mario Ciolli, Mario Conforti, Lido Falorni, Sergio Giachetti, Natale Lorenzini, Vinicio Meoni, Paolo Pagliazzi, Ermanno Saggini, Angelo Toschi, Canzio Vannini.

The Meeting also appointed the members of the Committee of Auditors for the same period as follows: Mario Tanini, President, Alberto Bonpani, Roberto Olivieri, Aldo Venturini, Mario Materozzi.

Full auditors: Mario Della Piana and Giovanni Fabbrini.

Alternative auditors: Mario Della Piana and Giovanni Fabbrini.

The Board of Directors met on the same day to appoint the holders of office in the company as follows:

President: Prof. Enzo BALOCCHI

Deputy President: Canzio VANNINI

Managing Director: Prof. Paolo PAGLIAZZI

The Central Deputy Manager, Mario Giovannini, was asked to become Secretary to the Board.

The 9% dividend becomes payable on the 29th May 1972 at agencies of the Bank.

What you'll be missing if you don't fly the new Saudi Arabian Airlines

Progress is a continuing affair with Saudi Arabian Airlines so we'd like to keep you up to date with all our latest moves to improve our passenger and cargo services in the air and on the ground.

New name

Because it seemed so popular, we've adopted our 'Trade' name, Saudia. It's short, easy to say and remember. And we hope you will say it. Often.

saudia

New—Improved Schedules All 4-Engine Boeing-Fanjets

- Non-Stop—London/Jeddah.
- Four flights weekly—Europe/Saudi Arabia.
- Faster service to Gulf—New Flight—London/Rome/Dhahran.
- All-Cargo flights—Boeing 707s—the only scheduled service Europe/Saudi Arabia.
- Plus increased jet service in Saudi Arabia and Mid-East—to Karachi-Bombay-Yemen. (Boeing 707s and 737s).

New ticket offices— and more of them

They don't just look more modern and efficient. They are more modern and efficient. And so are the courteous, well-trained personnel who serve you. New offices have recently opened in Bombay, Jeddah, Rome, Sanaa and soon Cairo, Amman, Mecca, Riyadh, Dhahran, Medina, Karachi, with more on the way.

New Cargo terminal— London Heathrow

It isn't only the building that's new and better. The service that goes with it is too.

New Bonded Warehouse in Jeddah

No-one can touch it for efficiency. And no-one can touch your cargo. It's all under cover and well protected.

New all-cargo jets

Only Saudia fly all-cargo Boeing 707s London, Frankfurt then non-stop to Saudi Arabia. It's the fastest service, the only scheduled service and a fully-palletised service. And our new improved cargo facilities at London (Heathrow) and in Jeddah, mean we're just as efficient on the ground too.

New wide-body look

Only Saudia 737s have the new wide-body look, with new 'Twin-seats' in Economy. All our 4-engine Boeings will also have the new livery outside and colourful interior decor, also with 'Twin-seats' in Economy.

**New livery**

We think you'll go for our smooth new livery in green, white and blue. A big Saudia on the fuselage and our emblem on an all-green tail mean you can spot us easily.

New fleet

Our new fleet of 737s, now in service, throughout Saudi Arabia and the Middle East, are the latest and most advanced short-haul jets in the world. They're as wide as our 707s—and just as comfortable. Their new fan-jet engines have more power, so the range is longer and the take-offs are shorter.

New improved reservations

Increased telephones—electronic communications—modernized procedures will pleasantly surprise you in faster—more reliable service.

New business advisory service

Saudi Arabia is big business and we can help make it your business. Step into any Saudia office in Europe and we will assist you with market knowledge, arrange itineraries and business leads.

All this and Experience too:

1972 is Saudia's 27th year of dependable air transport. And we're serving 47 cities in Europe—Africa—Mid-East—Asia!

Recommendations of:

- 1 March 1970 — BUY.
- 2 August 1970 — BUY.
- 3 December 1970 — lower prices first quarter 1971.
- 4 February 1971 — make major commitments around 287 — 290.
- 5 June 1971 — prices above 340 soon.
- 6 August 1971 — BUY late October early November.
- 7 September 1971 — prices at 285 undervalued.
- 8 November 1971 — BUY. Significantly higher prices.

For over a quarter of a century, our basic research has enabled us to anticipate well in advance a major reversal in the price trend. It is indicative of the commodity work performed by us for many large corporations in industrial and agricultural commodities.

39th Year World Wide Service

for solid reasons — you might decide to incorporate in Switzerland

The well established economy of Switzerland and its ancient and well defined body of laws does not offer romantic or exotic attractions. Its tax level can, however, be considered moderate by modern standards and is designed to provide a solid structure, giving legitimate financial incentive to growth — personal and corporate, income and capital. Low taxes are only one of the incentives offered by Switzerland's stable economy. Its stable political and economic climate and its conservative business tradition make it a reliable home for the preservation of capital and for the employment of capital in the industrial endeavors of other countries, and in real estate, bond, equity and precious metal markets, and the like. Your interests may best be served by incorporating in Switzerland for the custody or exploitation of any type of asset, fortune or form of endeavor, for the purpose of expanding into the Common Market, or for the general conduct of multi-national trade. Many thousands who have discovered this have already established their enterprises in what has become the favorite canton of Zug — only 18 miles from the city of Zurich — where the Corporate Fiduciary AG is in the business of serving you on a personal or corporate basis in the pursuit of objects mentioned above. Mail coupon for our Report "Switzerland as your corporate base", without any obligations.

The evolution of energy

The development of the steam engine was, without doubt, the greatest single factor in bringing about the major technological, economic and social changes of the Industrial Revolution.

Yet in retrospect, the principles of these early engines were relatively simple compared with the complexity of today's advances in science and industry. Modern industry needs more and more energy to provide for these advances, and much of this energy comes from petroleum fuels. Shell-Mex and B.P. are Britain's leading suppliers of industrial oil fuels to meet the growing needs of industry today and tomorrow.

The sun also rises

Senator McGovern rides high in the Democratic sky, but his nomination at Miami Beach does not mean that he has won all his party to his side, far less that his new kind of populism will win him the White House in November, page 11. The whole Miami Beach story, pages 43 to 49.

Hanoi's choices

For the first time, the Vietnam peace talks are being resumed with a conceivable compromise deal on the horizon, page 13. The media are always too ready to write Saigon off, page 34.

The face of Wales

How the principality is changing in a new industrial world—and is proud of its reviving Welshness, too; a special survey, after page 50.

Boomflation

The world economy is likely to expand comfortably this year, page 16, despite the absurd and growing panoply of exchange controls, page 56, which Europe's finance ministers will discuss next week, page 20. Britain is moving ever nearer to a statutory wage policy, page 62, despite June's happier overseas trade returns, page 59.

Stabbing Willie

The IRA's latest tactics seem calculated to destroy Mr Whitelaw's political credibility with the Tory party, the Dublin government and Ulster's Catholics and Protestants, page 14. How Seamus Twomey stole the Orangemen's thunder on the Twelfth, page 23. The republic still looks for hope in the gloom, page 30.

Private lives

The Younger committee has some 40 proposals for restraining intruders and snoopers, but these don't include the creation of a legal right of privacy, page 25.

Poor Reggie

The Poulson affair is still billowing smoke; Mr Maudling really has no luck, page 26.

Letters

Enoch Powell

SIR—Even if “the country” did wish to call on Mr Powell, the fact remains that he could not (in your words) “get to Downing Street” unless a majority of Conservative MPs are prepared to vote him into the party leadership. Analogies with 1940 are surely misleading when they fail to take into account the highly significant change in the procedure for choosing their leader which the Conservatives made in 1965.

I cannot claim to be very closely in touch with Westminster nowadays, but from what I do hear, I simply cannot imagine a “scenario” which would result in Mr Powell’s election—nor, with respect, do I find it conceivable that Mr Powell should ever be invited to try his hand at forming an administration without such an election having taken place.—Yours faithfully,
EDWARD BOYLE
University of Leeds

SIR—You find that Mr Powell’s chief political failure is flying off at a tangent at problems which you consider peripheral to the nation, and using exaggerated language. I do not think it is an offence to exaggerate the truth, and the important thing is to consider the implication of Mr Powell’s assertions.

Evident in his speech on the race problem are the following important truths:

(1) There are ghettos in many of Britain’s cities. (2) Black people constitute the predominant population in these ghettos. (3) Black people do not like being confined to these ghettos. (4) If they (black people) are not removed from the country and stay in the ghettos, they will fight. And (5) the consequence will be racial violence.

What at least some black people would want to know from Mr Enoch Powell, is whether he thinks that black people will meekly submit to being removed to their countries; and if they resist being removed to their countries, what does Mr Powell think governments should do in overcoming their resistance?

Mr Powell should not evade these questions on the grounds that they seem hypothetical. One is entitled to ask the limits of his strategy for dealing with this problem. If he further avoids the task on the pretext that one need not reveal one’s contingency plans to an enemy, the black people will organise on the assumption that he will stop at nothing, including the gas chamber, in eliminating them from the ghettos.

One might go further: that the authorities in this country, when they come round

to perceive the truth of Mr Powell’s assertions, will sanction his programme for action, because it is based on what is presumably a correct analysis of the problem. Mr Powell cannot blame black people for the existence of ghettos; that he conveys that impression is only part of the process of inflating the truth. This acceptance of the truth of some of his assertions does not imply an acknowledgement of the falsehood, that black people are responsible for the existence of ghettos.—Yours faithfully,
STANLEY NWOSU
London, E17

SIR—One of the better features of your paper in the past was its steadfast refusal to have any truck with racialism. Now even this is in doubt. Your article on Enoch Powell consists of an attempt to sketch a better political tactic for him. Presumably you do not care whether or not this enables him to be more successful in his racial campaign. You say that it is no good dismissing this campaign with moral scorn. How else do you propose to frustrate it? Or do you now approve of it and wish it well?—Yours faithfully,
LONDON, NW2
E. L. PHILLIPS

SIR—It is encouraging to read in your issue of July 8th that after years of misunderstanding, if not malice, you can at last give a glimpse of the great services which Mr Enoch Powell could render to this country if given an opportunity.—Yours faithfully,
LONDON, SW3
E. C. CURTIS

The economy

SIR—Your comment on index-linked wage schemes (July 8th) was timely and interesting, but I doubt the truth of your assertion that “in the end, it all comes down to the simple fact that wage rises must be matched by productivity rises.” You have often pointed out yourself in the past that rising wages vastly increase the relative flow of funds to the central exchequer and thus strengthen the tendency towards greater government involvement in the economy. Most of this is a non-productive or even counter-productive nature for social, political or national reasons. Equally as important as productivity is a willingness on the part of government to keep spending increases in line with the trend in real gross national product.—Yours faithfully,
NICHOLAS LEONARD
Monkstown, Co. Dublin

SIR—For at least the past three years England has been living on takeover bids—the only other activities to help boost the economy being pop music and dock strikes.

Is it surprising that those who sell us their petroleum and the thousand and one other products which we import say “your pounds just aren’t worth what you think they are”—and convert them as quickly as possible into some other currency?—Yours faithfully,
G. S. CHAMBERS
Cannes

Gibraltar

SIR—It is stated in your article of July 1st that “the voters have shown considerable maturity not only in reverting to the more experienced of the two teams, but more particularly in rebuffing the IWP’s distinctly crude attempts to divert attention from its own faults by accusing Sir Joshua Hassan of intending to sell the pass to Spain.”

First, the Integration With Britain party government cleared a deficit of £368,000 left by Sir Joshua’s “more experienced” team. This deficit, according to a Ministry of Housing and Local Government official who was brought over to investigate and report on the financial position of the city council, accounts, was “contrary to law and financially imprudent.”

Secondly, the IWP government raised a dangerously low £700,000 revenue reserve to an all-time record of £1,400,000 during the three years that we were in office. We put aside £300,000 for improvement and developments, and budgeted for a surplus of about £4m to meet a forthcoming wages and salaries review. Over and above this, government expenditure was raised from £3.5m to £5m. This is exclusive of a £10m development programme which, among other things, will provide the people of Gibraltar with over 1,000 new government flats by 1975.

On the commercial side, two new hotels should be fully operational by next summer.

It is therefore incorrect to suggest that the IWP government was diverting attention from its own faults. Our record shows that this is hardly the case.

As to “accusing Sir Joshua of intending to sell the pass to Spain,” what was done was to tell the people that his view on the question of “sovereignty” is very different from that of the IWP. It was my duty to tell the people that there exists a fundamental difference between Sir Joshua and myself on the matter of absolute British sovereignty over Gibraltar, as came to light at a meeting attended by both of us on May 15th.

May I point out that although the IWP was founded only in 1967, we formed a government in 1969, and we were defeated only by about 200 votes after these elections, in which we won seven of the 15 seats being contested.—Yours faithfully,
R. J. PELIZA
Gibraltar

(Leader of the Opposition)

Rebels on the rack

SIR—Before anyone draws conclusions about transferable voting from the case of the Conservative selection for Beaconsfield (Letters, July 8th), it should be established just what system was in use. If Mr John North’s term “at the first ballot” is correct, then the Beaconsfield Conservatives, like the British Parliamentary Labour party or the French electorate, are using the staggered ballot system, not transferable voting as the term is usually used. For good or ill, under normal rules

MANAGEMENT APPOINTMENTS

£7000 PA AND OVER

Group Commercial Director

Electrical Household Appliance Industry

A Group Commercial Director is required for this appointment in a very large and profitable group manufacturing and selling throughout the United Kingdom and world markets.

He will be aged between 35 and 45 and will have behind him a successful record of professional achievement in marketing preferably in the field of consumer durable products. He will require to be of the highest personal, intellectual and managerial stature if he is to succeed in this most demanding and challenging role.

He will be a member of the Group’s top management team and will be responsible to the Managing Director for the overall marketing function, product development, sales and distribution. He will lead the Group’s commercial activity during a period of rapid change as Britain enters the Common Market.

The remuneration will be negotiable and will be in excess of £10,000 per annum plus the usual benefits.

We are a leading firm of International Management Consultants who are advising on this appointment. Apply in confidence giving full details of background experience, qualifications and achievements to Box Number 2509.

Marine Insurance

• THIS is a new, challenging and highly rewarding appointment based at the New York hub of a pre-eminent and prestigious international group.

• THE role involves responsibility for the management and further profitable development of marine business generated in some 130 countries.

• THE requirement is for a British-trained underwriter with a record of significant achievement in marine insurance, attributable to professional expertise, enterprise and managerial ability.

• TERMS to match the man are entirely negotiable. Basic remuneration will not be less than £10,000 and could be substantially more for an underwriter with an outstanding record of achievement. Age – not over 45.

Write in complete confidence to Sir Peter Youens as adviser to the group.

JOHN TYZACK & PARTNERS
LIMITED

10 HALLAM STREET • LONDON WIN 6DJ

of transferable voting, a tie is automatically resolved in favour of the candidate having a larger number of votes at the earliest stage of the count, ie, in this case Mr Bell.
—Yours faithfully,
MICHAEL STEED
Todmorden, Lancs

Gaullism

SIR—Your reviewer writes, apparently with approval, that de Gaulle provided “dramatic nationalist solutions” instead of favouring internationalism or a federal Europe (July 8th).

It is true that de Gaulle favoured an empty rhetoric which might be interpreted in this way, but all his actions, as, for example, his handing over Algeria to a communist government, show him as having been as good an internationalist as anyone. Again he could easily have left the common market but did not do so, and it is interesting to read that Miriam Camps considers that his action of keeping Britain out actually welded the market together into the nascent super state it is now, whereas Britain's admission might have led to its developing into a loose free-trade area.

De Gaulle's supposed nationalism is often used to persuade credulous Britons that nations can continue to exist in the market, and they do not realise that the French have a long history of meaningless attitudinising which contrasts sharply with their actual achievements.—Yours faithfully,
K. T. MOORE
Ilford, Essex

Insurance

SIR—Your article “Where is life assurance going?” (June 24th) begs many questions. In particular there is the supremely important matter that linked assurance can only be provided at the expense of much of the guaranteed protection traditionally provided by life assurance.

The main question I wish to take up, however, is the allegation that there is a growing need for tighter regulation of selling methods. The comparative freedom of operation has always been one of the strengths of British life assurance and is one of the factors that has helped to make it pre-eminent among European countries. The self-policing exercised by the industry itself by mutual agreement and by publicity has usually been successful in keeping extreme manifestations under control. Statutory regulation is inflexible and often less effective.

With regard to direct selling, you must be aware that this is the oldest and still a major method of life assurance promotion among the “traditional” offices and has considerable advantages for the lives assured. A large number of offices, including the London Life (mentioned in the article), does all or a large part of its business by direct representation, whether on commission or otherwise, and it is incorrect to infer that the methods in use by some of the younger office sales forces are new in principle; or that because they are “direct” they are necessarily more

reprehensible than, for instance, some broker sales. All the methods mentioned in the article have been in use for many generations and I see no reason why they should not all continue to have their place.
—Yours faithfully,
A. K. TUDOR
London, EC4 London Life Association Ltd

Hospital insurance

SIR—It is now sadly predictable that you will attack any improvements in the private sector of medical care (June 10th) presumably on doctrinaire political grounds rather than economic ones.

What is now needed is a vigorous effort by a Government devoted to freedom of choice for the individual of all measures to aid an ailing National Health Service and the prevention of state monopoly in any field.

It is sad to see that such restrictive measures are supported in your correspondence columns (June 24th) by a lecturer in social medicine who should be adequately employed in dealing with the mass of problems at his fingertips. In the growing field of social medicine there is a danger that the public confuse it with medical socialism.

Any attempts to aid more and more people to have the advantages of private medical care by their own thrift and foresight deserve our wholesale support. The day when a Conservative Chancellor of the Exchequer gives tax-exemption for medical expenses will show a great step forward in the real needs of health care in our country.—Yours faithfully,
LONDON, W1
WYNDHAM DAVIES

Students

SIR—Mr John Randall (Letters, June 10th) has raised some points which need to be answered.

The deputy-president of the NUS has made no attempt to deny the first point in my earlier letter, that the NUS is concerned to an excessive degree with pursuing overt political ends; it is an accepted fact that at NUS conferences more enthusiasm is invested in political motions than in student or undergraduate affairs. The NUS executive ought to improve its technique in negotiations, since the poor performance on grants last year was due to the self-satisfaction of the NUS at being round the negotiating table with the committee of vice-chancellors.

Finally, I take exception to what Mr Randall calls “NUS grants policy”; in reality this is a rationalisation of his, and his executive's, prejudices. Their actions show that the NUS not only dislikes academic excellence, but also prefers a levelling down rather than a raising up of academic standards. At a time when higher education has expanded far too rapidly, there is a need for greater discrimination in grant awards, and those with good A-levels studying at university clearly should have priority over those at polytechnics and colleges of further education.

When people like Mr Randall subscribe to such inverted academic standards, it is not surprising that many of us in universities have not the slightest confidence in the NUS.—Yours faithfully,
NIGEL SAUL
Oxford

That sea of peace

SIR—Your Cairo correspondent's article on the proposed Mediterranean conference (June 24th) has helped unravel the intricacies of its preliminary diplomatic manoeuvres. Statements coming out of Libya, however, indicate that the “new, and singularly clumsy, formula to define eligibility” could become even more complex than that suggested by your correspondent.

On April 29, 1972, the Tripoli *at-Tahir* radio programme spoke out against Morocco's participation at the conference, citing the alleged presence of foreign bases and forces on Moroccan territory as a violation of the criterion that the conference be confined to those Mediterranean countries “not involved in blocks.” Your correspondent offers the more common interpretation that this criterion bars Italy, Greece and Turkey—because of their Nato membership. Colonel Qaddafi, on the other hand, has told a Greek journalist (A. Stefanopoulou in *Eleftheros Kosmos*, May 21, 1972) that he saw no obstacle to the participation of Italy, Greece and Turkey in the conference, regardless of their military ties. When it is unclear how just one Mediterranean country defines eligibility, it is easy to see how the collective formula can become so confused.—Yours faithfully,
GEORGE S. DRAGNICH
Arlington, Virginia

Bye bye, baby boom

SIR—I have just read Mrs Mona McNec's letter (June 10th). Among other things this seeks to set out to show that Sweden, a large country with a small population, should be the ideal for prosperity and social happiness. Life in Sweden, as I found it during a two-year stay, has certainly not achieved these ideals.

The cost of living is so high that entertainment, other than the cinema, is prohibitively expensive, and to pay for luxuries the average Swedish wife must work. Only, funnily enough, babies and expectant mothers are well catered for by the health service, the rest have to manage somehow! The major shipyards of the country have to be kept open by frequent large injections of Greek or Turkish immigrants, despite local Swedish objections; and the large Scania lorry factory would close tomorrow without its immigrant workers.

I find that a small crowded country, such as El Salvador with its many problems and needs for the future, is, in fact, a far happier country than those that have succeeded in gradually disappearing from the world scene.—Yours faithfully,
SAN SALVADOR, EL SALVADOR

NOW MIDLAND EXPANDS EVEN FURTHER INTO EUROPE.

New Brussels Office opened to spearhead Midland Bank EEC operations.

As a vital part of Midland Bank Group's special interest in developing business between the EEC countries and the United Kingdom in the framework of the enlarged Community, the Bank announces the opening of an important Representative Office in Brussels, the heart of the Common Market.

The purpose of the new Office, at Rue de la Loi 15, 1040 Brussels is to aid and encourage trade and investment in both directions between continental Europe and the United Kingdom. It will extend our involvement with Europe already evidenced by our close relationship with major European banks and our participation in European Banks International (EBIC) in Brussels.

The Midland and its European banking

partners have nearly 8,000 branches in Europe and combined assets totalling almost £16,000 million. This, together with Midland Group's great strength in the financial markets of the United Kingdom, will enable the new Brussels Office to fulfil a major liaison function between businessmen in the Common Market and in Britain.

If you're thinking of setting up in Europe, or expanding existing trade and investments, get in touch with your local manager; or if you're a European businessman who would like to gain a foothold in Britain, get in touch with one of the offices below.

In either case, this addition to the Midland's services will be of the greatest importance in expanding trade and investment activity.

Mr. Keith Cheshire, senior Midland Bank Group Representative. Has until now been the Midland Bank Group Representative in Zurich. Wide experience in international banking in Europe and the United Kingdom.

Mr. Geoffrey Masters, Midland Bank Group Representative. Has had managerial responsibilities in the industrial Midlands of England. Experienced in lending to industry and commerce.

Mr. Norman Drade, Midland Bank Group Representative. Has gained wide experience in large London branches. Recently concerned with the control of lending in the Bank's Head Office.

Our three Representatives have the languages and the contacts to help you.

Midland Bank

A GREAT BRITISH BANK

Brussels Representative Office: Rue de la Loi 15, 1040 Brussels.

July 15, 1972

The sun also rises

So it is to be McGovern. In the past few weeks it had always seemed most likely that it would be. And at the Democratic party convention in Miami Beach this week it had actually become self-evident that Senator McGovern would be the Democratic candidate for the presidency of the United States in November long before Senator Humphrey and Senator Muskie withdrew, wounded and having wounded, from the fight on Tuesday. But that is all that is self-evident about the proceedings in Miami Beach. The condition of American society, the state of American politics and even the fundamental quality of the man who might be the next president have yet to be decided. Mr McGovern heads the Democratic ticket, but most of America is not quite sure what that really means.

The old powerbrokers of the Democratic party professed to be in no doubt. As they watched practically every minority except that of organised professional politicians combine to give Mr McGovern his victory at the convention on Wednesday, they acted like men watching the inmates take over the asylum. In their desperation to stop Mr McGovern they may have destroyed whatever chance he may ever have had of defeating President Nixon this autumn.

But to such men losing an election is merely tragedy: losing control of their party to a bunch of idealistic amateurs was a calamity. To those amateurs, who turned out, in the end, to be remarkably professional in their organisation on the convention floor, it was a total triumph for the new politics. If that begged the question of whether the new politics was all that new, it did not stop the McGovernites from appearing to be concerned as much, if not more, with fashioning a new party as nominating a presidential candidate. For them victory in November is a target: but it was not, apparently, a goal worth the price of allowing Mayor Daley to sit on equal terms in the same hall.

They might be right in the long run—if they have the stamina which separates the politician from the dilettante. But for the immediate future the truth does

not lie with either extreme in the party, however much the very nature of conventions gives exaggerated importance to such extremes.

Mr McGovern has not lost the election, at least not yet. The old Democratic party is not dead or in ruins, at least not yet. The new politics may prove to be something more lasting than an emotional spasm, and there is room for that in America today. But the name of the game is still politics, and like every other professional Mr McGovern plays the game to win.

Whether he can this time round is problematical, and all the more so now that he has failed to persuade Senator Kennedy to be his running-mate and so has had to make do with the virtually unknown Senator Thomas Eagleton from Missouri, a border state which could help in the strategy. The McGovern forces seem happy with this, although if the election were held now President Nixon would romp home. That could change. Three months ago it did not seem possible that Mr McGovern could even win his party's nomination, and the fact that he went into this week commanding the support of little more than 30 per cent of Democratic voters is not decisive now that he is the nominee.

How long the odds are

He could still win even if many local Democratic leaders take a quiet walk in November, as their Republican counterparts did with Goldwater in 1964. Whether he could do so if Mayor Daley and his like (which includes some of the most powerful leaders of organised labour) were actively hostile is another matter. The pros may want their machine back so badly that they might do just that. Governor Wallace, too, may not have had his last word yet.

But if it would be foolish to write off Mr McGovern's prospects it would not make much more sense to take anything but very long odds on his chances at this stage. His supporters would dispute that. They argue that they have won possession of the Democratic party out in the open because the ordinary Democratic voters turned

away in disgust and despair from the synthetic machine-produced political leaders.

There is some substance in that claim: Americans have as much cause for anxiety at the general quality of their political leadership as most other countries. But politics is never as simple as all that, which is why new politics rarely last or stay new for long. To break out of party rigidities while still retaining the basic brand loyalty on which victory must be built can, of course, be done. But it requires a certain sophistication of approach, and only in times of national crisis can it be achieved without a degree of cynicism which invariably creates its own disillusionment.

There is a mood in America, a dissatisfaction almost with life itself, but it does not seem to have reached anything like crisis point yet. Part of that mood has always been there. Mr McGovern's constituency, in his own words this week, is "the people who have been passed by"—the women, the young, the alienated blue collar workers, the small farmers, the little independent businessmen, plus, of course, the anti-polluter and the anti-war protester. There is a familiarity about that constituency which belies the description of new.

The protest against affluence

But he also has another constituency, which is not only newer but provides his campaign with much of its financial muscle and almost all its intellectual furniture. That is the considerable number of Americans who have not found in those very material possessions that much of the world envies any great emotional or intellectual satisfaction. When they seek deliberately and conscientiously to share that wealth they are among the most attractive people in politics anywhere. But there is an element among them which can be best, if harshly, described as turning towards Mr McGovern rather than buying a third family car. What they are chiefly doing is to shy away from the complex problems of a world in which most families would be happier if they owned just a bicycle. It sometimes seems that what they are protesting about is the difficulty of combining luxury with the simple life.

Europe especially will follow Mr McGovern's campaign both for the presidency and a new kind of Democratic party with sympathy. The party that he and the best of his supporters are attempting to create will be instantly recognisable to moderate and right-wing social democrats. It will not be easy for Mr McGovern and his friends to create a coherent national mass party on a European model, and there are the unresolved dangers of such a party being used to coerce a fissiparous congressional system. Nevertheless, that he can even make the attempt, with at least some hope of success, to bring such a party into existence without being shackled by the conservatism of entrenched trade union leaders or a left wing half wedded to marxism, will be a source of envy among many in the British Labour party, in particular. He will not be without his admirers in the British Tory party, either.

But in his dull, flat, prudish or even slightly priggish personality, there are many echoes of the late Clem

Attlee. Like Attlee, he is as uncharismatic a leader as one could hope, or fear, to find in a generation, and no doubt a fair slice of pragmatism and ruthlessness goes with it, too. But for all his links with American populism, Mr McGovern, like Adlai Stevenson before him, may yet come to regret that Europe does not vote in American presidential elections.

Mr McGovern's quality as a presidential candidate cannot yet be fully determined. In the grinding slog of the primary campaigns he has made a number of mistakes, and even some downright blunders. His policies have not always been well thought out, which hardly makes him unique among politicians. He has to live with such foolishnesses as saying that he would go to Hanoi to "beg" for the release of American prisoners of war. To his followers part of his attractiveness is his willingness to admit errors—an engaging characteristic but not necessarily a winning one.

His commitments on ending the war in Vietnam and withdrawing American forces from Europe, as well as his ill-defined defence policies, will cause apprehension among many of America's allies. But he is no more a bogymen than he is a messiah. That both labels have been hung around his neck by members of his own party will be a handicap, perhaps an insupportable one. He could lose the election on the first and disillusion so many of his supporters if he wins on the second. It would be sensible, and certainly fairer, to judge the quality of much of his programme—particularly his social and economic policies—from what he says from now on rather than from what he has thrown off in the past. Mr Nixon will, of course, not let him off quite as easily as that. Neither will Mr Wallace.

A fresh breeze is blowing

Mr McGovern will probably prove to be a political leader of integrity and stamina but without exceptional political talent. He does not have the look of a Roosevelt or a Kennedy. Nevertheless, among that cross-section of American life which believes that great and critical changes are required to get America moving towards a more just and stable society, he inspires by his very honesty and earnestness. Perhaps it is those two qualities as much as his social democratic policies which have helped to alienate so many of the traditional power centres of the Democratic party. Mr McGovern has blown some much-needed fresh, young air through some murky corridors of his party, and most traditional Democratic voters will thank him for that. Whether or not they will also follow him is what the next three months will be all about.

The Miami Beach story

How Senator McGovern won the nomination, but may have lost his party; the kind of convention it was; the trust-McGovern platform; and where it all leaves Senator Humphrey, Senator Muskie and Governor Wallace, pages 43 to 49.

The ritual becomes more real

The reopened Paris talks could end the Vietnam war in either of two different ways—if North Vietnam really is ready

Even if Mr Nixon, against the odds, did lose in November, he would leave something behind him of his creation: the foreign policy of the United States has begun to show more evidence of planning, of intellectual coherence, of dealing with the world as it is, than it has for 20 years. The fashionable thing to say at the moment is that there is only one flaw on the smooth circle of new relationships Mr Nixon has built up around the world, and that is Vietnam. So it is, give or take a kink or two in such places as India and Egypt. The question is whether the creation of the circle will help to remove the Vietnam problem, or whether Vietnam could destroy the circle. As the Paris peace talks began again this Thursday, two months after North Vietnam's offensive got them called off, it is possible to say, very quietly, that the forces Mr Nixon has brought into play in favour of a settlement may prove too much even for the men in Hanoi.

Of course, the decision is North Vietnam's, and it would be even if the Soviet Union and China were to cut off all their aid to it. Even then, the South Vietnamese army would probably not be capable of destroying the North Vietnamese one, which would be the only conclusive way of removing the power of decision from Le Duan and Truong Chinh and their colleagues. And in fact neither the Soviet Union nor China is going to risk the furious accusations of betrayal that would follow the ending of all their assistance; the Chinese are still sending light arms across the border, and are ready to pump oil into the plastic emergency pipeline the North Vietnamese are trying to lay between the border and Hanoi, and there are still some Russian tanks trundling along the railway through China. What Mr Nixon has done is to give both of North Vietnam's rival patrons an interest in keeping the flow of help just about small enough to persuade the government in Hanoi that it cannot win the war by the means it is using at the moment—a conventional military assault, which may be the only means left to it.

The trick Nixon has pulled off

The trick Mr Nixon has been able to pull off, which neither John Kennedy nor Lyndon Johnson could, is to give both the Russians and the Chinese good reason to believe that they have less to fear from the United States than they have from each other, and at the same time to make them realise that the Vietnam war is an obstacle to what each of them most wants from America. With China that was spelled out explicitly in the statement that ended Mr Nixon's visit to Peking in February: the next stage in an American withdrawal from Taiwan, it said, would have to wait until "tension in the area diminishes." With the Russians it has been done more by a hint and a wink; but Mr Kissinger, in his briefing at the end of Mr Nixon's Moscow trip in May, made

it clear that the American credits the Soviet economy needs so badly were likelier to be forthcoming "as our general relationships improve." This is how the two wings of the circle converge on Hanoi. The mining of North Vietnam's ports, the apparent acceptance by American opinion of the renewed bombing of the north, and now the fact that both Russia and China have been given an interest in a settlement, are all working against North Vietnam's ability to continue the war.

The further price that the people of North Vietnam have had to pay in the course of this should not be ignored. When Anthony Lewis of the New York Times went to North Vietnam in May he saw some of the casualties that the bombers cause by mistake, by carelessness, sometimes by bloody-mindedness. He is right to say that even those who oppose North Vietnam's part in this war should bear in mind the suffering inflicted on people whose only share in the responsibility is to live under a government that has been determined to unite the south to itself by force. The appalling calculus of any war is that it is an attempt to purchase an exemption from future suffering, not only physical, and not only where the war is taking place, at the price of people dying and homes shattered here and now; and neither side of the calculation should ever be forgotten.

If North Vietnam does decide to give way to the pressures that are being applied to it, there are still two quite different courses it could follow. What the Russians would like, if the reports from India after President Podgorny passed through there last month are correct, is something along the lines of the ceasefire Mr Nixon proposed on May 8th, when he announced the blockade of North Vietnam. Mr Nixon has three things to offer the North Vietnamese, if they take him up on what he said then: he could end the mining, he could call off his bombers, and he could agree to withdraw the 39,000 American troops who are still scheduled to stay in South Vietnam. And North Vietnam too has three cards to play: in ascending order of military, but not political, importance they are the return of its American prisoners, a withdrawal from South Vietnam without a promise not to come back, and a supervised ceasefire that would put it in violation of an international agreement if it renewed the offensive next year. It may be that the secret negotiations of the coming weeks between Henry Kissinger and Le Duc Tho will be about who can get most for least in a bargain over these half-dozen marketable items.

What the North Vietnamese must be hoping, of course, is that getting the American prisoners back before election day is important enough to Mr Nixon to make him pay the top price. It is doubtful whether it is, although he might agree to a straight exchange of the prisoners for the withdrawal of those last 39,000 American troops by, say, early next year; the help South Vietnam needs from

then on might just adequately be provided from the Seventh Fleet, and the air bases in Thailand, and a few thousand American ex-servicemen hired by the Saigon government. But in present circumstances he is likelier to hold out for the formal, supervised ceasefire he called for in May, or at least for the observed and unmistakable withdrawal of North Vietnam's troops from the few parts of the south they still occupy.

The real issue: who shall rule in Saigon?

That is why this particular line of bargaining is so unattractive to the North Vietnamese, and why they may prefer the other negotiating course open to them. After this year's failure a supervised ceasefire, even a publicly conducted withdrawal, would make it pretty hard for them to renew the attack next year against American air power backing a much cockier South Vietnamese army. Even the return of the prisoners in exchange for the removal of the remaining American troops would cost them their last effective means of using American public opinion to put pressure on the man in the White House. So they may turn to the alternative, which is a settlement of the real issue of the war: who rules in Saigon.

It would be pleasant if North Vietnam were to accept what the Pope recommended on Sunday, free and secret elections throughout Vietnam. That is what President Thieu has proposed in the south. The trouble is that the northern government has never shown the slightest willingness to risk a normal election, let alone tolerate a real opposition with its own press and access to the electorate. The only real room for compromise here lies somewhere between Mr Thieu's offer—that he would resign a month before an election supervised by a commission that included the National Liberation Front—and the communist demand for the replacement not only of Mr Thieu but also of his whole "machine of oppression and constraint," which could mean most of the present system of administration, by a so-called coalition that would not even be committed to a date for calling an election. In practical terms, given the way

the war has gone in the past two months, that means either a compromise about how long before the election Mr Thieu would resign, or his agreement to take a few NLF people into his government before the election.

It has long been clear that the forces the NLF represents should have a place in the postwar political system of South Vietnam: either a place in its government, or a duly guaranteed right to act as a legitimate opposition without risk of persecution. The better, because more democratic, way of deciding which of the two it should be is by an election. The probability is that in such an election the communists in Vietnam, like the communists in Greece after 1949, would find themselves with a fairly small minority of the actual votes, but in a position to join other groups in an opposition that counted for something. But if Mr Nixon and Mr Thieu want to give North Vietnam something more face-saving, they might agree to include some of its southern friends in the government now. That is a far cry from the imposed coalition—the one preceded by an American expulsion of Mr Thieu and all his supporters—which Mr Nixon has quite rightly refused to consider. So long as the communists got none of the big jobs, and certainly nothing that gave them command over the guns, it might not be a wholly implausible means of blurring the issue. It might prevent North Vietnam tempting Mr McGovern with an invitation to Hanoi.

Quite possibly the North Vietnamese have gone back to Paris to negotiate about none of these things. They may just be hoping to make the most of America's election year, by throwing up suggestion after suggestion somewhere between what Mr McGovern would jump at and Mr Nixon would want to reject, in the hope that Mr Nixon can be jostled into making a mistake, or that they will find themselves with President McGovern in January. But Mr Nixon has not proved a man easy to jostle; and the decision he took on May 8th is steadily giving North Vietnam less time, and fewer resources, to jostle with. For the first time, the Paris peace talks are not necessarily just a ritual.

Stabbing at Willie

Mr Willie Whitelaw made a brave try, and he has not finished yet, but the stark and simple realities of life in Northern Ireland have reasserted themselves against him

The IRA, having disposed of Stormont and set off the para-military reaction by the UDA which now divorces the Northern Ireland Protestants from much of political opinion in the rest of the United Kingdom, is now starting a classic demolition job on the reputation of Mr Willie Whitelaw. While the British news media and public hang hopefully around promises of the on-again, off-again truce (or non-truce), the IRA has undermined Mr Whitelaw's credibility all round. This is a standard tactic: if any British politician begins to generate trust and attachment among Irish Catholics, he must be brought down. The IRA first blew the gaff

on the talks Mr Whitelaw had with its representatives last Friday: thus damaging him with the Conservative party (see page 24) and also with the Irish prime minister, Mr Jack Lynch (see page 30). That it damaged him still further with the Ulster Protestants is just as true, but of lesser importance. Then the IRA, on Wednesday night, offered to turn the truce on again, if Mr Whitelaw would give further guarantees of his good faith: the imputation to the Catholic community was that he could never be really trusted. The imputation to the Protestants was, of course, that he would sell them out to the IRA again.

That was Mr Whitelaw's dilemma on Thursday, and it is on how he resolves it, if he can, that the next stage of the political battle over Ulster will develop. It still is primarily a political battle, for all the talk of civil war, for the gun remains ancillary to the IRA's primary objective: to destroy the will of the British Government and British opinion to allow the Ulster Protestants to stay inside the United Kingdom. Naturally, the more signs there are of British hesitation on that score, the more the Protestants are tempted to turn away from Britain to set up their own little state. Although the Protestant extremists may suppose that this will save them from being handed over to Dublin, it is more likely to lead to their eventual destruction in a purely Irish battle. Mr Whitelaw was the one British politician who could just hope to stretch between Protestants and Catholics and between Mr Heath and Mr Lynch. That is why he is now the IRA's main target. If he cannot pick up the pieces again quickly the sense of hopelessness will spread in Britain and the drift towards a real civil war in Ulster will go on. For the IRA such a civil war would, of course, be the most conclusive of ways to get British opinion to wash its hands of Ireland altogether. The Heath Government now has to examine its policy and what it wants to achieve.

The first question that has to be asked is: should the British troops be pulled out? There are two reasons given by those who suggest this. The first is that the British public, its politicians and its newspapers now see no possibility of anything but a continued breakdown of society in Northern Ireland and wish to extract British soldiers before they start being killed by gunmen on both sides. It is a persuasive but despairing argument, and one that would be nationally self-destructive. It would mean that the British public was prepared to abandon responsibility for part of the United Kingdom and for the lives of the ordinary people who actually live there, and who have lived there, in the belief that they were full citizens of the United Kingdom, obeying its laws and paying its taxes and fighting in its wars. It is legitimate to ask if the army is being required to take on an impossible task, accepting unreasonable casualties in support of a bankrupt policy. Some people are no longer asking but asserting that this is so. But it would be something new, even in Britain's long retreat into itself, if this were to be the policy adopted by its governing party. Northern Ireland is not India or Cyprus or Aden. Until a very short time ago it was hardly questioned in the United Kingdom that Belfast was as manifestly part of the country as Glasgow or Liverpool were. However much that has changed, and is changing, the political and moral obligations remain to try to go on giving the ordinary people of Ulster the sort of protection that the state and its armed forces would be bound to try to give them anywhere else in the country.

A threat, and a delusion

The other reason for suggesting a pull-out, or a time limit after which a pull-out would begin, is to use the threat (so the argument runs) to bring the people of Ulster and, indeed, of all Ireland to what is called

their senses. This, too, is meant to sound persuasive, at least to English ears: the withdrawal of the civilising order must bring the lesser breeds to better behaviour. But this is mere delusion. The world, far less Ireland, does not work that way. There are very few people in Ireland who still confidently think they have any answer to the crisis of Northern Ireland which does not have bloodletting in it, but those who think in Belfast or Londonderry that the withdrawal of troops would prompt anything but open sectarian war are fewest of all; in London, naturally, it can look different. However, nothing is inconceivable. One day, perhaps, British ministers, driven distracted by Ulster, might bring themselves to take such a way out, persuaded that the moral responsibility would lie with the Irish and no one else, certainly not with them. But that day is still some time off: it is not just Mr Whitelaw but the remainder of the United Kingdom that has no option but to soldier on. What cannot be shirked is that the men who have to do the soldiering are likely to become increasingly dissatisfied if they do not think the political policy is credible.

The cost of repression

So the second question to be asked now is whether Mr Whitelaw's initiative can be continued or not. There is undeniably a military alternative: the intensification of operations against the IRA and its closest sympathisers beyond anything seen in Northern Ireland yet, including the suppression of the strongholds in the Bogside and Creggan. This is what a majority of Protestant opinion probably wants today, especially if the army would take the job on and not the UDA. But this does not seem likely to come about. Any intensification would be bound to throw much of the Catholic population back into the IRA's hands. It might even drag Mr Lynch's army, small as it is, into the reckoning. It would certainly be bought at a frightening price in relations, not just with the republic, but with the rest of western Europe and with the United States. So Mr Whitelaw knows in his bones that he has no option but to go on with what he has been doing. He cannot be expected to speed conciliation up, but he dare not slow it down either. When the Provisional IRA (or that part of it responsible for the breakdown) ended the truce, it ended it in the most damaging manner it could. Its excuse that the army sided with the UDA in stopping the rehousing of Catholic families is a bit of hard lying. They were no friends of pacification, of live-and-let-live, who organised the Catholic demo that the army stopped. Either the IRA is out of control (so that it is not exactly profitable for a British minister to talk to it for some time to come) or it engineered the whole business to discredit Mr Whitelaw in London and shake the faith of the Catholic population which had been impressed by his sincerity.

If this is what the IRA does want, it follows that it would be wrong to confirm its success by throwing all the machinery of the initiative into reverse. The appeal not to by Mr Ivan Cooper (although a Protestant, a significant member of the Social Democratic and Labour

party) was meant to show Mr Whitelaw that he still had friends, even if only rather lonely ones. Mr Whitelaw may also have a genuine sympathiser in Mr John Hume, who worked hard for the truce and who may be prepared in the end to accept reforms from the British that he rejected from the Unionists. So Mr Whitelaw will be right to go to the limit to try to hold the Catholic trust he has won. He is also not the man to knuckle under to the displeasure of the Tory ditchdiggers. As it turned out on Monday things went tolerably well for him with the party in the Commons, although he is already being made to pay for the slip of not emphasising that he only met the IRA because the shooting had stopped, precisely within the terms he had always laid down. It is understandable that Mr Whitelaw should be seething at the boneheadedness of most of what the Ulster Unionist MPs have been braying about him. Still, he has got to live with the Protestants, too, if he can: how he sets about it is another matter.

The last of the moderates

It is still true that the Protestants have more to lose than anyone in a civil war, for the very reason that they have the bulk of the businesses and shops and factory jobs in Ulster. The Protestant moderates' remaining hold on a sense of moderation is prompted by self-interest—once, that is, they are persuaded that their life is not going to be overturned altogether. That is to say, they would like a plebiscite to confirm the border, they would prefer to be protected by the army than by the UDA thugs, and their work depends on retaining a connection with Britain instead of going off with Mr Craig's fantasies of independence. This is not much to bank on at the moment, but it is a political base of sorts, and Mr Whitelaw and his advisers have under-

estimated how important this part of the community is, even if it has figured less prominently than others in the briefs of Whitehall civil servants.

Before Mr Whitelaw can have any confidence on building anything much up again there are more days to be lived through. They may go terribly wrong; indeed, they are likely to go terribly wrong. Neither community has been ready to give an inch of trust or charity or anything else to the other. The Catholics have refused to live peaceably beside the Protestants: their barricades, mental and physical, have not come down. The Protestants have done their best to disrupt any understanding between Mr Whitelaw and the Catholics: that, rather than self-defence, was their purpose in putting their barricades up. There can be two views on the desirability of direct rule when it came, but now that it has come there can be no going back on it. Both sets of extremists would like the British to disengage. The UDA would like it because it believes it can settle the score in Northern Ireland and re-establish a Protestant state there: if Britain does not accept it then the state will survive alone. The IRA would like the British out because it counts on the disengagement setting off the decisive fight for all Ireland. Because it is the extremists who want Britain out, and no one else, it would be wrong for Britain to go. It is only Britain that may still be able to rally enough moderates to give compromise a chance one day. But it is now a slimmer chance than it ever was. It is still true, as it was on the morrow of internment, on the morrow of bloody Sunday, on the morrow of direct rule, that Northern Ireland is more likely to win through only to the peace of exhaustion, not invention. That is just to state the obvious. What has chiefly happened in Northern Ireland this week is that we are back to the obvious, in all its starkness, again.

The world is a market

The world's economic prospect is for good growth, bad inflation and silly decisions at international conferences which fortunately will not really matter

There are three salient points about the world economy just now:

(1) Prospects for growth are bright, but prospects for inflation appalling.

(2) Almost all countries are trying to distort their exchange rates by ever-increasing exchange controls, which fortunately will not work.

(3) We are at the stage when most international economic conferences will temporarily produce either nil results or else slightly pernicious results. This applies to meetings of the IMF, of Groups of the Ten or the Twenty, monthly assemblies of central bankers, special Smithsonian conferences, councils of ministers to discuss proposals from the once-brilliant Brussels commission, Unotad, Stockholm environment conferences and Gatt. One reason is there has been an unusually long period without any decisive figures of really major international

economic stature on the world scene (the last ones were Jean Monnet, John Kennedy, the Hallstein Brussels commission, and possibly Per Jacobsson). Another is that institutional decay has begun to compound this blight of dominant personalities, so that modern international economic conferences are gatherings of different species of liberals who do not quite know what they want and who (more important) often no longer have the machinery to translate any agreed purposes into domestic decision-taking even if they did know. Also, it has become clear that last year's brief injection into the conference circuit of the Texan horse trader, Mr John Connally, has not revived the system but disrupted it, because more finance ministers and central bankers have become practised in resentfully shouting "no."

The Economist has no idea what can be done to mitigate this third problem. Probably it can only be

solved gradually, by osmosis. Meanwhile, the British Government should politely turn up at international economic conferences, but not expend great nervous energy on them. There is a virtue in pleasing people by agreeing to compromise versions for trying to keep snakes in tunnels (see page 20), provided you do not impose distorting controls to try to keep on fooling yourselves that even compromise schemes will last. The key to current economic wisdom, and even to making money, is to realise that for the next two years the world economy will be mainly ruled by market forces, not by non-decisions at inter-governmental conferences.

America leads the boom

By far the most important of these market forces at present is that the United States, which still provides half the free world's output, is again expanding its economy at 5½-6 per cent a year. This almost ensures an upturn of world boom in 1972-73. Despite its looming economic growth, America is holding down its inflation rate to 3½-4 per cent a year—which sounds bad enough, but is well below cost inflation in most other industrial countries (especially slow-growing ones). America's statutory incomes policy is therefore working reasonably well—as, contrary to prejudice, most statutory incomes policies now do. This relatively slower rate of inflation will probably cause an improvement in America's balance of payments in 1973. So far, however, the devaluation of the dollar in August, 1971, has been followed by a year of shocking balance of payments experience, as also befell Britain in the first year after devaluation in 1967. The continuing outflow of dollars from America has helped (a) to increase the internal money supply very sharply in all European countries, (b) to make Europeans less willing to hold dollars.

Soon after Europe and Japan have rigidified their new exchange and other controls, in order to check an inflow of American dollars, there might therefore be a stop to the inflow. Controls designed to counter a liquidity surplus and dispel threats of upvaluation might then become a creator of liquidity famines and devaluation crises instead. At one time in the 1960s, it would have seemed right to be very worried about this. Nobody should underestimate the capacity of central bankers to respond to distorting forces by imposing controls which are designed to hold whole financial systems by main strength in their previous distorted positions, even when the distorting forces have turned round 180 degrees. After last August the Bank of England imposed new controls to discourage dollars coming into the country, at the same time as maintaining longer-standing controls to prevent them going out. But experience since 1967 has shown that market forces are now strong enough to make these exchange controls surprisingly ineffective, as well as obviously absurd.

Since 1967, whenever there has been a clear need for a move in an exchange rate, that exchange rate has moved. Huge swings in the tide of international liquidity, such as occurred at Penn Central time, have been absorbed without fuss in the fortunately unregulated private liquidity market for Eurodollars. And world

economic growth has gone forward at the pace that was to be expected from the internal supply-and-demand situations in main industrial countries. For 1972-73 this supply-and-demand situation points to rather large free world economic growth, stemming from expansion in America, even though there may be a lot of apparent international financial crises (while swiftly changing international monetary forces beat up against the barriers of artificially fixed exchange rates and other controls). Although these zerebas of controls are no longer a cause of tragedy, they are a silly nuisance. In the late 1940s major economic miracles were chalked up by Dr Erhard's Germany and other European countries that dared to "dash for freedom"—to defy conventional opinion, to sweep away all internal rationing and other controls, to rely on a market economy. A rather similar advantage—especially in financial businesses—would accrue to any country now which abolished all its exchange controls while resting on a floating exchange rate. Britain, with its floating pound, has a unique opportunity to do this. But the present intention is that the opportunity should be missed.

Numeraires and the needy

Two other international financial reforms are desirable. First, as exchange rates are going to change frequently in future, there is a need for a general "numeraire," so that debtors and creditors and those fixing long-term contracts can be protected. Since the dollar floated last year, and sterling is floating this year, prices quoted in dollars or sterling will no longer suffice. It would be quite easy to draw up such a numeraire by creating an entirely new unit (called the "crown" or the "Smithsonian" or something); by stating its value in all the main currencies on the day of its establishment; and then announcing its varying value daily in terms of the weighted average movement of those main international currencies on the exchanges. There is no need to wait for an international conference to agree on this. If a number of big private organisations in the City, with a lot of international contracts to fix up, were to announce the option for their clients to state prices in terms of such a new numeraire, announced daily by themselves, that would do.

The other need in international monetary reform is to aid the poorer countries. With reasonably flexible exchange rates, developed countries should now be able to strike out for the highest growth rates that their productive capacities will allow, without being worried by balance of payments constraints while they are still falling short of full employment. The same is not true for poorer countries who lack adequate exporting industries at any feasible exchange rate. There is urgent need for a link between economic aid for developable poor countries and special drawing rights in the IMF.

Apart from these issues, the international economic outlook for 1972-73 seems set unusually fair. But "catch 1972" is that the internal economic outlook will continue to be set stormy for any country that does not control its cost inflation by bringing trade-union-bargained wages under control.

The holes in Europe

The point at issue in Europe next week will not be when to hold a summit, but whether Europe knows how to cope when the edges of its national politics start to fray

Don't tell Europe's worthy statesmen, but it does not really matter whether they decide at their two much-heralded meetings next week to hold a European summit meeting in October or not. So long as the summit is not lost sight of altogether, and so long as the members of the new common market can bring themselves either to agree or to disagree about it in an easy and undogmatic manner, that will be enough. Four things will matter in the informal meeting which Mr Anthony Barber holds for his fellow finance ministers of the common market on Monday and Tuesday, and the same four things will matter at the meeting of the ten foreign ministers to be held in Brussels on Wednesday.

Whither Pompidou?

The behaviour of France at these meetings will give the first sign of how President Pompidou proposes to play his European policy after the change of prime ministers which he made last week. For the appointment of M. Messmer, a straight gaullist, begs the obvious question: has M. Pompidou lost his way? To which the only clear answer so far seems to be: well, yes, President Pompidou has lost his way, but only sort of. Certainly M. Pompidou is not the electoral superman that he was last December, when, within six months, he had turned de Gaulle's European policy on its head and taken Britain into Europe, and had spoken "for Europe" to President Nixon in the Azores.

The horrid things which have happened to President Pompidou since then were bound to unsettle Europe. His political grip on France has been loosened; and a man in fear of his job rarely makes an effective partner. What M. Pompidou has always worked for in France is to be independent of the gaullists who helped to put him in power, and at the same time to rely on their keeping enough seats in the national assembly in next year's elections to be able to form a viable government securely under his command. First the gaullist party early this year, then the handsome prime minister himself, M. Chaban-Delmas, then the party again, have been accused of scandals which have marked the face of the entire government. Then M. Pompidou fell foul of his own ill-judged referendum on British entry.

It is important to understand what happened at that referendum, and how M. Pompidou is in danger of misinterpreting its results. When it became apparent that the referendum would not be a notable triumph, M. Pompidou found himself relying on the gaullist machine to get out the vote for what was supposed to be a personal success. When the rest of France, encouraged by the pro-European Socialists, saw that the affair was becoming more of a gaullist ramp than a vote about Europe, many of them preferred to spend a healthy Sunday out fishing rather than trailing off to the polls.

The president will be wrong if he infers from this that Europe is something Frenchmen do not care about. If he starts to hamper the progress of Europe he will discover his mistake.

M. Pompidou is a cautious and canny man, and what next week may show is which way he is laying off his political bets. Because he is a less independent prime minister, M. Messmer's presence at the Hotel Matignon hands the president even more power in making foreign policy than he had already. If M. Pompidou uses this power to cut up rough in Brussels next week or later, it means that he sees the gaullists as his only reliable source of future power. If he plays hard to get, perhaps forcing the summit to be postponed but still leaving all doors open, it means that M. Pompidou may be up to a very subtle game indeed. This would consist of letting the gaullists lose a fairly spectacular number of seats under M. Messmer at the elections next year, all flags flying, whereupon the dominant personality in French government under M. Pompidou could well become the Independent Republican, M. Giscard d'Estaing.

Whither Brandt?

The other place where every reply to the European question is a soggy one is west Germany. Herr Brandt approaches an election in December with his government in more uncertain shape than for a long time (see page 29). At his meeting last week with the French president Herr Brandt agreed to limit the agenda of a summit to a short list of subjects, which France likes, but which is going to be hard for the more ambitious smaller countries of the present common market to accept. He did this because he wants the meeting to take place before the German election to remind his electorate that he is just as good a west European as his rival Herr Barzel. A short agenda is no bad thing; but only the coming week may show whether Herr Brandt really thinks that he can get much electorally from a European summit which does not set out to achieve very much.

Whither Heath?

Which leaves Britain the only one of the big three in Europe able to take the kind of unwavering straight line on European policy which its Prime Minister would by nature be inclined to take. The snag here is that Mr Heath, under advice from Sir Christopher Soames in Paris, is being unusually cautious about doing anything which might press President Pompidou further back into the breast of every French politician. At least wait, is the command in Whitehall, until we are actually in. The outcome so far has been a set of British proposals on the summit which rightly get words like "regional policy"

Action Indonesia

Rice harvest

With the world's fifth largest population the country is making up for lost time. Explore it now—with the Hongkong Bank Group.

Since 1966, Indonesia has taken some impressive steps forward. Price inflation has been reduced from an impossible 650% per annum in 1966 to 8% per annum in 1970. The current Five-Year Plan envisages that the equivalent of about half the country's annual income is for investment and the target of 5% annual growth is the aim. As a sign of returning confidence in the country, foreign capital has been flowing into Indonesia. Current emphasis is on agriculture and the industries which service it, understandably in a country where 75% of the population are employed on the land. But Indonesia is also rich in minerals—nickel, tin, bauxite and oil. Textiles, electricity, paper and transportation are earmarked for dramatic growth.

With a population of about 120 million, Indonesia must offer tremendous possibilities for future trade. The Hongkong Bank Group are in Djakarta and have branches in 35 other countries. They know

about these possibilities and have packaged the facts into a concise 16 page economic summary of the Indonesian scene. Write for your copy now—and be briefed by the experts.

THE HONGKONG BANK GROUP

on to the order paper, but which in their modesty reassure the Germans and French that nothing too much is to be asked of them financially, anyway not just yet.

Whither monetary union?

The fourth important indication which may be gleaned from next week's meetings is whether and how soon Europe will recognise that its attempt to achieve closer monetary union has to be adjusted to the economic facts of life. On international monetary reform, which is the chief item on Mr Barber's agenda next week,

differences will continue to exist but they will not be very striking (see the box below). On monetary union, however, the fundamental recognition has yet to be made that, national sovereignty being what it is, full economic union in Europe is still a long way off. That being the case, the various countries' rates of growth and inflation in Europe will differ. And so the first scheme for monetary union, the "snake in the tunnel," will need to be made more resilient if it is to survive. The reptile should go into temporary hibernation whenever the monetary weather gets too cold.

The money-go-round comes to London

The monetary question facing Mr Barber and his common market colleagues in London next week divides into two: (1) how to reform the international monetary system as a whole; and (2) how to conduct the related but separate affair of whether, and how, Europe can walk along the road to economic and monetary union.

World money reform

The first problem is what to do with the huge dollar balances which the world's central banks, notably the Japanese and German ones, have accumulated. Official world foreign exchange reserves now approach \$85 billion, of which the great bulk is in dollars. The United States no longer undertakes even in theory to convert these dollars into gold. The first thoughts put forward by Mr Barber himself in Washington last autumn were that dollar and sterling reserves should be funded by an issue of special drawing rights (SDRs) or some other form of internationally backed monetary obligation. Thinking in Europe still runs that way, except that the French and, more particularly, the Germans now feel that the best way to get SDRs off to a bad start as the world's new reserve coin would be to issue too many of them. The Germans therefore propose that it may be better to "consolidate" existing balances by simply freezing them in a series of bilateral agreements.

It is now generally conceded, even by France, that a thumping rise in the gold price to enable the United States to meet its existing dollar obligations will get no one very far—although France might, for old times' sake and to enrich itself, join someone else's campaign to raise the price of gold at least by a bit.

As for fresh reserves to be acquired in the future, the Germans and British would both like a system which would limit the amount of official foreign exchange that may be held in dollars. Under this sort of plan the Americans would agree to convert fresh dollar

balances above a certain amount into a mix of gold, SDRs and asset positions in the International Monetary Fund. If one could peg the price of gold this would ensure that its role in such transactions progressively diminished. SDRs, perhaps backed by packages of the world's major currencies, would tend to take gold's place as the chief asset into which surplus foreign exchange reserves might be convertible.

Europe's own plans

Monetary reform in the world at large gets mixed up with Europe's own plans for monetary union the moment the system of foreign exchange parities comes under discussion. Should the system be one of fixed parities? The universal answer among governments in Europe is yes. But how easy should it be to change parities, or to float for a while? Fairly easy and quite often, was the surprisingly enlightened answer of British officials long before the pound was unpegged last month. In Europe the Italians openly support this British view. The French see the point of it, but fear that an irresolute general practice of easy changes of parity would sink the plans for monetary union (the so-called *snake in the tunnel*) in Europe and with it the system of common farm prices. (In fact, as this paper recommended last week, so long as economic policies remain national preserves a disciplined version of the British solution might be the most practical way of saving the scheme for closer European parities and the common farm prices as well. This would mean limited floating for a limited time whenever necessary.) The Germans are wide open to the British view, but want the Smithsonian rates of exchange for the moment because a further rise in the value of the mark would not help Herr Brandt win his election in December.

Countries which control their economies by money supply, instead of fiscal policies, find that control constantly threatened by too many

dollars washing around outside official reserves. How to deal with this problem has been the biggest bone of contention in Europe for over a year. But it is also the aspect of monetary affairs on which the Europeans, notably the Germans and French, show most signs of a possible meeting of minds.

It is now generally recognised that a jungle of differing capital controls inside Europe will mother other controls and soon begin to damage everyone; although that jungle is becoming ever denser at present. So the Germans are now studying France's double exchange market, though the French, knowing how close this precious brainchild of theirs came to disaster last year, will now admit privately that the system of splitting the market in capital transactions off from trade transactions will probably not transfer easily to either Britain or Germany. In return, France is no longer root and branch against the former German idea of a jointly managed float of European currencies or a block against others.

The first snag in a joint float is that as a newcomer to Europe Britain has far less of its trade in Europe than do all the rest of its common market partners. If Europe's currencies tended to float up against the dollar this would either be expensive for Britain's terms of non-European trade, or it would cause sterling to be an expensive drag for its partners.

The second snag to a joint European float is that it would invite Japan, unless the yen were allowed to float freely as well, to rig the market in favour of its exporters.

The third snag is that a joint float might well require larger powers and larger funds for a European federal reserve bank than any of Europe's three biggest nations would like to see.

Lastly, there are various similarly snag-ridden ideas, so far mostly academic, for relating Europe's individual currencies to some new European unit of exchange, which would act as a medium for international investment to offset the dollar, and which would act as Europe's monetary numeraire against currencies like the dollar and the yen.

If you're not metric-minded, where will your exports go?

Clearly, opportunities for exporters are many times greater when those exports are manufactured in metric.

Already 86% of world trade is between the 131* countries that have chosen the metric system. So obviously companies working in metric are more cost-efficient

in the world's export markets. Is yours one of those competitive and progressive companies?

If you are responsible for the future of your company start thinking about metrication. Many are already benefiting from the changeover – and not only the exporters.

**Business is
ten times simpler
in metric.**

THEY LAUGHED
AT SOME OF
OUR PROMISES.

From the Evening Standard January 1968

When it was first announced that there was natural gas under the North Sea a lot of people were rather sceptical.

They made jokes about it. They laughed.

They laughed even more when we said we'd be using natural gas to supply nearly 15% of Britain's energy requirements by 1975. 'Impossible', they said.

'Not only possible', we said, 'but we're also going to increase sales to industry more than six-fold over the ten year period 1965/75'.

It may all have seemed a bit ambitious at the time, but we knew we could do it.

In fact we're well on the way to meeting all the targets set in those far-off days a few years ago. Which is not to say that we won't be trying even harder in the future. And that's another promise.

GAS-THE NATURAL FUEL

BRITAIN

Twomey steals the Orangemen's thunder

FROM OUR SPECIAL CORRESPONDENT

Traditionally July 12th, the day Good King Billy routed the papists at the battle of the Boyne in 1690, is the day of the Orangemen. This year it was not. It rained throughout the seven-mile march through Belfast to Edenderry (not this time to Finaghy, as it is too close to the IRA enclave in Andersonstown for comfort). The turnout was down and many marchers drifted home long before the speeches were over. But, more significantly, the IRA Provisionals stole the thunder of the Lambeg drums when their leader in Belfast, Mr Seamus Twomey, hinted at a press conference on Wednesday night that the ceasefire, called off on Sunday, might be renewed—but only with the acceptance of humiliating terms by the British Government. By demanding strong guarantees, “witnessed by neutral observers,” from Mr William Whitelaw that in effect the IRA forces could regroup during a ceasefire without hindrance from the army, Mr Twomey’s aim seemed plain: to discredit Mr Whitelaw and his policies.

Mr Twomey chose his moment well, just at the time that the Protestant Orange men were furling the banners that symbolise their determination that the British Government shall never make any deal over their heads. Despite the rain, there was all the usual pageantry associated with Northern Ireland's peculiar institution—the Orange Order. Flutes, accordions and drums blasted out such lilting Orange tunes as “Dolly’s Brae” and “Derry’s Walls.” The white gloves, the orange and scarlet sashes, the ceremonial swords were all sported again. The multi-coloured banners were a perambulating museum of Protestant folklore. The Ulster flags outnumbered Union Jacks among the onlookers and in the windows of Protestant homes. This reflects the

growing doubt in Orange minds about a United Kingdom which seems neither to care about nor to understand their point of view. There was a more isolationist, self-reliant atmosphere among the Orangemen this year, for they have not recovered from the shock of the loss of Stormont four months ago.

Loyalists sat on their stools in the rain along the route even in middle-class Belfast. Contingents from the south got a particular cheer. So did the well-groomed men of the B-Specials lodge, who marched with military precision. But there were no contingents from Dublin or Limerick on parade, because, claimed the Grand Master of the Belfast Orange Lodge, of intimidation in the republic. Ulster's prominent politicians were conspicuous by their absence, though Mr John Taylor spoke in his usual style at Aghnacloy, as did Mr William Craig at Ballymena. The hooded zealots of the Ulster Defence Association kept away from the Belfast march as well, though they put in an appearance at Portadown, where it was calculated there were more soldiers on guard than Orangemen on parade. It was said the UDA had stayed behind in the Protestant districts to defend them from any possible IRA attacks. But the shootings only started up again in Belfast after the marchers had returned.

Helicopters droned overhead, one carrying Mr William Whitelaw on a tour of inspection. But the army kept in the background. None the less those extra 1,600 soldiers who were flown into Ulster early this week to put the total garrison strength up to some 16,800 were needed for the massive security operation which began in Belfast on Tuesday night when the city centre became a virtual no-go area for motorists. Many streets were shut off by barbed wire. Checkpoints were

July 12th: rain stopped affray?

frequent, manned by military police in flak jackets. Watchful soldiers knelt at street corners with their rifles at the ready. Others stood in doorways and on the rooftops. Troop carriers roamed the city.

As explosions steadily knocked out buildings in the centre of Londonderry, Protestants got angry with the authorities. The army calculated that in the first three days since the ceasefire ended there were 694 shooting incidents in the province, 23 explosions and a death toll of 10 civilians and one soldier.

Still more barricades—or barriers as the army prefers to call them—have been going up (as the map on page 24 shows). At the weekend, the UDA erected one in east Belfast and another on Monday in the Irish Street estate of Londonderry. There, the men of the IRA strengthened their barriers in the Bogside. Then, on the eve of the Twelfth, IRA barriers went up in the Catholic area of Belfast. The rain will quickly wash away the ashes of the Protestant bonfires. But their barricades remain.

It will close the list of applicants in about November, announce the contractors in early 1973, and expects them to be broadcasting early in 1974—the original target of late 1973 is beginning to slip. Still suffering from criticism of the way the last batch of television franchises was granted, the authority has issued a formidable exam paper for applicants. Their answers will not, unfortunately, be given in public but contractors' programme intentions will be published when they are ready to start broadcasting. That should provide a rather late-in-the-day disincentive to exaggerate their good intentions at the application stage; the IBA believes that immediate publication would put early applicants at an unfair disadvantage.

The 1972 Sound Broadcasting Act, and the IBA acting under it, do lay down parameters within which the contractors must operate. Advertising time is limited to nine minutes in any hour (as against a television limit of seven minutes and a present television average of six). The contractors must provide some sort of national as well as local news service. They are not bound to use all or any of the output of the second London-based company, to be devoted exclusively to news and current affairs, but applicants would obviously be less than tactful if they said they intended to eschew its products altogether. The crucial question for the news station is on finance. The IBA has not yet decided whether companies should pay a tariff according to their means and the amount of the news station's output they use, or whether (an advantage not enjoyed by Independent Television News) the station should be entitled to the revenue from advertising sold specially in association with the news. Nor is the IBA yet able to say what arrangement it has made about needle time with the Musicians' Union.

Once under way, the IBA hopes to let contracts at a rate of one a month. With a Treasury loan restricted to £2m, it needs the rental from the first stations to set up the later ones. In the end, it hopes to be extracting a two-tier rental from contractors. The secondary rental is to be pumped back into the system to "enhance" the quality of broadcasting by, say, commissioning special programmes, and will be scooped off the top of contractors' profits. That, of course, supposes that their profits reach whatever threshold the IBA considers appropriate; and if profits are high the Exchequer has a right under the act to its spoonful of cream, too.

Poulson

Name-dropping

The easiest way for any government to react to allegations of corruption in public life, however inflated or groundless they may be, is to appoint a judicial inquiry. So it had been predicted all week that Mr Heath would appoint an inquiry on Thursday after Mr John Poulson, the architect against whom bankruptcy proceedings have temporarily been adjourned, had been so liberal in his name-dropping under cross-examination. The predictions were premature; on Thursday Mr Heath told the Commons he was awaiting the Official Receiver's report and would make a statement next week.

The Civil Service Department is now conducting its own inquiry into the involvement of a senior civil servant in the Scottish Office (and the Royal Institute of British Architects is conducting its own on Mr Poulson). But Liberal MPs, led by Mr Jeremy Thorpe, who raised the matter in the Commons a week ago, and Mr David Steel, who made a shrill speech at the weekend, pressed for a special inquiry because Mr Poulson also named MPs of the two big political parties as his associates.

The biggest fish that Mr Poulson has named is poor Mr Reginald Maudling, whose run of bad luck must end one day. The connection Mr Maudling is said to have had with Mr Poulson ended well before his taking office in 1970. The worst that can be said of the Home Secretary, who added to his misfortunes by fracturing a rib at the weekend, is that he was unlucky in his choice of friends in opposition, and that has been said of Mr Maudling before. Nothing much has really been said against any other MP; but it is natural that the Liberals, who have

Maudling: luck must turn

been pressing for registration of all MPs' interests, should seize on the slimmest of opportunities. And Mr Thorpe appears to have found one advantage in having a very small parliamentary party: it should be possible to know what every little Liberal is up to all of the time.

Traffic

Jam tomorrow

A threat that London's traffic congestion is going to get much worse was made by the Greater London Council on Thursday. It asked Londoners how far they are willing to accept restrictions on car use, hinting that they may need to accept new forms of restriction. Among the possible measures is a supplementary car licence for cars in congested areas, a new tax on private car parks, tougher enforcement of traffic regulations, traffic-free precincts and the issue to which all politicians like to turn a blind eye—road-pricing—which the GLC has never mooted publicly before. The ideas are put to Londoners in a discussion paper, "Traffic and the Environment."

The GLC believes it is reaching the limit of its ingenuity in squeezing more capacity out of the existing road system, although the linking of traffic lights in inner London to a central computer is about to add 10 per cent to capacity. This adds one more unsung victory to the successes of the traffic managers, who have so far managed to improve speeds despite traffic increases.

The least controversial measures to ease congestion would probably be extra parking controls. But they would be frustrating to the motorist, and would be less efficient than more radical forms of control. The main disadvantage of parking controls is that they restrict cars only while they are parked, while the moving car takes up 12 times as much road space. Surely the person who parks his car most of the day, instead of moving on every hour, should be encouraged?

Logically, the fairest way of tackling the problem would be road-pricing, which would involve putting a black box on everyone's car and metering it, like a telephone. The charges could be varied almost street to street, according to the level of congestion and the time of day. It would enable more cars and buses to be fitted in, at higher speeds, but at an extra cost to the motorist. It would give the buses an advantage. But oh, the complications.

We know how to wrap up rubber plants

Wrapping things up is second nature to Tarmac. Whether we're handling a complete project like building a giant tyre manufacturing complex, or producing millions of bituminous paper plant pots from one of a wide range of roofing felts we make, we've got the matter very much under control. In fact, we're

resourceful enough to wrap up your business in anything from common brick to steel or aluminium wall cladding, from bitumen sheathing to reinforced concrete.

Whatever the project, Tarmac's roots go deep enough to make a healthy success of it. Ask any rubber plant.

Welcome to Australia land of surf and sunshine...?

What the ads say is true. But Australia can also be tough, particularly on those who start by expecting to have it easy. In the cities, commercial competition can be considerable. In the new lands, work can be hard before you win.

The surf and sunshine are there alright and a great many other good things too. But to start right you need to know about Australia—its customs both social and commercial. For this you need help—the help and financial advice of one of Australia's most far-reaching and respected institutions.

The National Bank of Australasia was founded in 1857. Today it has almost 1000 branches throughout Australasia and offices worldwide. It covers all sectors of corporate, commercial and personal banking. It will welcome your enquiries on any matter to do with Australian business, money, trade or immigration.

THE WORLD

International Report

Brandt's luck runs out, but things may not get any worse

"Last week I wrote a great speech for my constituents—all about how the economy is coming right and you've never had it so good. The only snag is that I will now not be able to deliver it. Our economic policy has just resigned." That was how a young Social Democratic deputy saw the final departure from government a week ago of Germany's economic supremo, Professor Karl Schiller. Matters have not improved since then for Herr Willy Brandt's coalition government, or for the Social Democratic party that he leads. And they must now face elections this year.

The day Herr Helmut Schmidt moved over from the defence ministry to take Herr Schiller's place at economics and finance, one of the junior ministers he left behind at his old ministry was eased out by his successor. Herr Günther Wetzel retaliated by leaving the party after 25 years' membership, giving as his reason that the SPD has failed to keep a tight enough rein on its radical, mostly youthful, left wing. And soon after Herr Schmidt arrived at his new agency its most gifted state secretary, might Johann Baptiste Schoellhorn, also quit it, mostly out of loyalty to Herr Schiller.

Such obvious unrest in his party could scarcely have come at a worse time for Herr Brandt. He has already lost control of the Bundestag as a result of the steady erosion of support among members of the small Free Democratic party, upon whose votes his coalition has depended for its parliamentary majorities. The one constant factor during the three years Herr Brandt has been in power has been the rigid parliamentary discipline that his whips have been able to exert on the Social Democrats, and this is now fast disappearing. It is not so much

the parliamentary ill-discipline itself which matters at this late stage; the Bundestag is now in recess and is expected to reconvene in September only for Herr Brandt to arrange the complicated preliminaries necessary to call the general election which is now planned for early December. But the sight of such disarray among Herr Brandt's troops will not send them into the forthcoming electoral battle with much confidence of success.

The issues raised by Herr Schiller's resignation may prove as awkward as its timing when an autumn campaign gets under way. Herr Brandt's personal popularity in Germany is higher now than it was when he became chancellor in 1969. But that popularity is based in part on the mixture of honesty and affability with which Herr Brandt has kept his coalition cabinet together. Now that the cabinet has such a tattered look, Herr Brandt's affability may easily be called weakness by his opponents. Herr Rainer Barzel (who came to London as a potential federal chancellor this week) and Herr Franz-Josef Strauss. The chancellor's popularity has also been earned by a generally popular foreign policy—but foreign policies rarely win elections. What Herr Brandt has to prove, if he is to retain power in December, is that SPD economics, Schiller-style, really have been good for the average German.

The professor himself might have been just capable of such a feat. He was certainly an important vote winner for the Social Democrats in 1969. Herr Schiller had an air of mastery over economic policy which Herr Schmidt—in spite of once having been the professor's pupil—cannot claim. Certainly the lilywhite laissez-faire liberalism to which he held fast, opposing controls, sitting upon many

of his party's ambitions for social reform, allowing the mark to appreciate in value, had lost Herr Schiller popularity. Certainly Herr Schiller has failed to prevent Germany from importing a little bit—although by British standards not much—of the rest of the world's inflation. But the fact remains that the German economy is coming right in time for the election, and inflation is momentarily at bay, largely because Herr Schiller refused to reflate when that was the soft option pressed upon him a year ago by friend and foe.

This little economic history will be the nub of the election campaign. If Herr Schiller was right about the economy, why has he gone? Why has Herr Brandt lost half a dozen other members of his government in the past year? What happened to all Herr Brandt's promises of social reform? Even if, as is generally assumed, Herr Schmidt's appointment is an insurance against a takeover by the SPD's radical left wing, will Herr Brandt have the guts to stick by him any longer than he stuck by Herr Schiller? Not to put too fine a point on it, the Christian Democrats mean to imply by such questions that Herr Brandt, nice chap and Nobel prizewinner though he may be, is soft: soft with his cabinet and party wild men at home, soft in his negotiations with Russia and east Germany, soft about keeping President

Schmidt lost his best man

Pompidou up to the mark on European integration.

The obvious response of the Social Democrats to all this will be to emphasise the stature of Herr Brandt as against the inconsistent, even untrustworthy, political record of Herr Barzel, whose skill as a debater on television in fact tends to mark him as a man too slick for his own good. The economy is now in the most popular and able hands left at Herr Brandt's disposal. And, by the standards of other countries, it is doing very well. The party means to publicise its plans for earlier pensions when the Bundes-tag reassembles in September as the first instalment of the social reforms which were always planned for the second half of Herr Brandt's truncated first term as chancellor. The summer holiday and the Munich Olympics are upon Germany, with £750m of tax surcharges in the process of being handed back to the electorate as promised by Herr Schiller. Father Christmas may have retired to Hamburg, but he has left quite a few of his presents behind.

Ireland

It's made Jack flinch

FROM OUR DUBLIN CORRESPONDENT

The initial reaction in the Irish republic to the renewal of fighting in Northern Ireland was one of dismay, mingled with fear that sectarian warfare, once started, might soon spread south over the border. Now, however, cautious hopes are being expressed that a new ceasefire can be negotiated if Mr Whitelaw plays his cards as astutely as he has done up to now.

This hope is based on two beliefs. The first is that the abrupt ending of the ceasefire was a local decision by Belfast IRA leaders who had opposed the original truce. The Lenadoon incident, which started off the new violence, is believed in Dublin to have been used by the Belfast IRA as an excuse to renew the fighting without the approval of the Dublin command, which supported the decision only in order to avoid a public split.

The second reason for hoping for a new ceasefire is the apparent wish of the IRA leaders in the republic to play it cool. After the initial threat from Mr Sean MacStiofain, that the fighting would be renewed with the utmost ferocity, Dublin's republican leaders are talking in calmer language

and have clearly not ruled out the possibility of a new truce. Mr Ruairi O'Bradaigh, the leader of the Provisionals' political wing, said during the week that he wanted to see a renegotiation of the truce—provided the British Government was "realistic" about it, which he explained as meaning that they should stop supporting the Protestant extremists and honour the guarantees which accompanied the original ceasefire. The Dublin IRA leadership has been concentrating on the political manoeuvres which it believes will win it a seat at the conference table. It regards last Friday's secret talks with Mr Whitelaw as important in this context and certain to increase its own status in both parts of Ireland.

Mr Lynch's government is avoiding any public stance which might stir things up at this critical time of Orange marches. But it was shaken badly both by the resumption of the fighting in the north and by the disclosure that Mr Whitelaw had met IRA leaders. It would not worry so much about the talks taking place if they were to bring a settlement nearer, and more especially if they could be kept secret. But it is feared that what has emerged will lend respectability to the IRA in the north and make it more difficult for Mr Lynch to toughen his attitude toward them in the south.

Sunday's incident at the Curragh military camp, where 16 republican prisoners were on hunger strike, came close to causing a riot. Soldiers and police were stoned for an hour by Sinn Féin demonstrators and pelted with petrol bombs and tear gas. Further demonstrations to win political status for the republican prisoners and to

protest against the special courts are planned; next time casualties may not be avoided. This, or the death of a hunger striker, would make Mr Lynch's stand against the IRA more unpopular.

France

Marchais through the looking glass

FROM OUR PARIS CORRESPONDENT

This was reassurance week in French politics. M. Pierre Messmer's new government was displaying to a still slightly bewildered public its three faces: gaullist—in the shape of M. Messmer himself and the new minister of posts, his friend M. Hubert Germain—to comfort the palaeogaullists; unchanged—all the major ministries except agriculture, planning and education remain in the same hands; and reformist—with M. Edgar Faure, heading a new super-ministry of social affairs, to convince the man in the street that M. Chaban-Delmas's *nouvelle société* has not gone out of the window with its author.

Meanwhile on the left, the Communist and Socialist leaders, in separate party meetings, were reassuring the party faithful and the public that their recent political manoeuvres would indeed lead to change, but change for the better. M. François Mitterrand had the hardest task. His agreement with the Communist party on a programme of government met surprisingly little criticism from his Socialist friends. What did upset them was his newer electoral agreement with the dissidents of the Radical party, under which the two groups would stand down for each

No holds barred at the Curragh last Sunday

The power of the sun. Atomic energy. IHI is helping to put it to use generating electricity here on earth. We've built a 460,000 KW atomic pressure vessel and 780,000 KW pressure vessel and containment vessel for the Fukushima plant of the Tokyo Electric Power Company. And abroad, we've delivered two 1,100,000 KW reactor pressure vessels for the U.S. and a 750,000 KW vessel in Sweden.

The Earth. Whatever helps people span it, develop it, live on it, IHI is involved in it.

The earth gives us coal, oil, natural gas and water to convert into electrical energy. And to help meet the increasing demand for electric power, IHI is building larger capacity, higher temperature and higher pressure boilers. Recently, IHI has manufactured a 1,950 t/h super critical pressure boiler for the Tokyo Electric Power Company. IHI has also received orders for another 1,950 t/h super critical pressure boiler for the Tokyo Electric Power Company and a 1,780 t/h one for the Kansai Electric Power Company.

This announcement appears as a matter of record only

Marchais didn't even choke

other's candidates in the first round of next spring's parliamentary elections.

M. Mitterrand had agreed to leave these Radicals unopposed in 49 constituencies, in return for the corresponding courtesy elsewhere. Much of his party thought 49 seats to be a sight too many; and the left suspected that some of these Radicals, once elected with Socialist votes, would be quite ready to bolt back to the centre again—a thought that may offer some needed reassurance to M. Jean-Jacques Servan-Schreïber, who, though he controls the majority of the Radical party (as opposed to its parliamentarians), is beginning to look suspiciously like the Cheshire cat.

For M. Georges Marchais life was easier. His Communist militants put on the expected show of total agreement with their de facto general secretary's argument that the Communist-Socialist pact was the first step toward the best of all socialist worlds. His main effort was reserved for sceptics outside who might fear it would only lead to the worst of all stalinist ones.

A Communist-Socialist government, he declared, would indeed refuse to rejoin Nato and would adopt a strictly defensive military strategy directed against all possible comers, *tous*, as he might have said but didn't, *azimuts*. But it "would not call in-question, at the present stage, France's membership of the Atlantic alliance." He did not even choke over the words.

His thoughts on liberty were even more reassuring. The government would guarantee freedom of speech and of the press. Plurality of parties is "one of our democratic traditions," he said, and the parties would be entitled to operate freely, provided they kept short of armed violence. All, his own by implication included, must accept the verdict of the ballot box. The trade unions and "democratic" parties—M. Marchais did not elucidate whether these were included in

"all"—would be able to express their views on radio and television "in proportion to their influence."

As for the promised nationalisation of all finance and many major industrial firms, this would not mean everything would be nationalised: the firms concerned employ about 2½m of France's 15m employees. And it would "absolutely not" mean *étatisation*: the firms would be controlled by elected worker representatives and consumers, as well as government appointees.

True, M. Marchais affirmed, the Communist party did not regard this "advanced democracy" as ideal: it was a step toward socialism, in which all major means of production would be publicly owned, and political power would be exercised by the working class. Nevertheless M. Marchais had provided a fair basis for his closing appeal, before the Internationale—promptly followed by La Marseillaise—to virtually all classes of French society to join in the good work. All he has to do now is persuade these classes that this is not merely an invitation to let themselves be swallowed whole.

France and Israel

Switching planes

Mr Moshe Dayan has once again raised the charge that the French government is breaking the embargo it imposed after the June, 1967, war on making arms available to the Arab-Israeli conflict. Before Libya became Egypt's federal partner, France agreed to sell it 110 Mirage aircraft; about 40 are believed to have been delivered and the Israelis claim that most of these have been transferred to Egyptian airfields. If true, this is of political not military significance: Egypt could add a good many Mirages to its air force without eroding Israel's overwhelming air superiority. But it would raise awkward questions for France, which is under constant fire from Israel since General de Gaulle, the end of the Algerian war and Israel's pre-emptive strike in 1967 brought the "special relationship" between the two countries to an end.

M. Chaban-Delmas is on record as saying that if the aircraft supplied to Libya should subsequently change their destination, the rest of the order would come under the embargo. His successor as prime minister, M. Pierre Messmer, has been welcomed by the Israelis as an old friend. As minister of

defence he played a major part in arranging the flow of French arms which, until the relationship went sour and the Americans took over as providers, formed the bulk of Israel's weaponry. But the Israelis, knowing as well as everyone else does that it is the French president not his prime minister who makes policy, do not expect great things. For the present they are waiting for an answer from the French foreign ministry to a question, put several weeks ago, on the whereabouts of those Libyan planes.

Israel

Promised land

FROM OUR ISRAEL CORRESPONDENT

There is a chance that the Israeli government will allow a small group of Arab refugees to return to their former homes. But this decision, if it is taken, should arouse no general hopes. The Greek Catholic Arab refugees from the two Galilee villages, Baram and Ikrit, did not flee from their homes during the 1948 Arab-Israeli war; a few days after the war ended they were told to leave by the Israeli army, but were told that they would be allowed to return soon. A quarter of a century later some of these temporary evacuees are making a determined effort to get the Israelis to redeem their promise.

The two villages are very close to the Lebanese frontier and immediately after the 1948 war the area was declared a closed military zone. The 1,200 evacuees were moved into temporary homes nearby. A large share of their most fertile land, the fruit orchards and olive groves that they and their ancestors had tilled for centuries, was handed over to new Jewish settlements in the area. These are the settlements which now shoulder the brunt of the new tension in this frontier region.

As the years wore on and their promised return never materialised, some of the Arab evacuees accepted the compensation and new homes urged upon them by the Israeli government. By far the greater number did not. According to Mr Toledano, Mrs Meir's adviser on Arab affairs, 60 per cent of Ikrit's 104 landowners have settled with the authorities but only 8 per cent of Baram's 155 landowners have done likewise. In 1952 Israel's supreme court upheld the claim filed by a group of evacuees that they had the right to return, but made such return provisional on a permit from the

military governor. Such a permit was never granted. And five months after the court's decision, the houses in both villages were mysteriously blown up, although the two churches were untouched.

Last month the area ceased to be a closed military zone and about three weeks ago a group of Greek Catholic Arabs returned to Ikrit and Baram to start repairs on their abandoned churches. They were encouraged by Bishop Yusuf Raya who had been negotiating with the government on their behalf. Three months before, Mrs Meir had personally taken over the whole issue but she was away in Vienna when the villagers made their bid. They were told that they would not be allowed to take up residence in either village and police were sent to prevent them doing so.

Last week Mr Allon, the deputy prime minister, and Mr Toledano at last outlined a solution to be put before the government. In substance this says that those evacuees who want to return will be allowed to do so and will receive compensation for the rebuilding of their houses. They will also be paid something for their land that has been taken over by Jewish settlements; any land that has not been taken over will be handed back. Those who choose to stay where they are will be indemnified for their lost homes and property and for their 24 years as temporary evacuees.

Palestinians

Deadly sequence

It may never be established who planted the bomb that last weekend killed Ghassan Kanafani, the spokesman and one of the most effective leaders of the Popular Front for the Liberation of Palestine. In the absence of proof to the contrary, most Arabs inevitably believed it was an Israeli agent. The front was responsible for the massacre at Lydda airport on May 30th, and the murder of Kanafani, who acknowledged the responsibility and defended it, could have been, though it may not have been, a straight act of reprisal, or as straight as any undercover, unacknowledged action can be.

His murder has brought the guerrilla movement together into a single call for vengeance. This could have been predicted: Kanafani, a popular man and writer of distinction, was one of the few unifying forces within the movement and was admired even by those who violently disagreed with his

Kanafani: force for unity

views on the limits, or lack of limits, to terrorism. And some people within the guerrilla movement are arguing that the Israelis did, indeed, predict this reaction. According to this argument, the Israelis deliberately set off a further chain reaction of violence in order that they, or the Lebanese for them, could bring the chain to an end by driving the guerrillas out of southern Lebanon.

Planned or not, the consequences of Kanafani's assassination could work out along these lines. Another sequence of revenge and retaliation may stretch ahead. And nobody can tell how many more totally innocent outsiders will join the Puerto Ricans at Lydda and the Lebanese villagers in Hasbaya in paying with their lives for the fact that Israelis and Palestinians claim with equal passion the same patch of land.

Vietnam

The ship that didn't sink

FROM OUR SAIGON CORRESPONDENT

By almost any reckoning, North Vietnam has suffered a good deal more severely than the south, both militarily and politically, from the communist offensive now in its sixteenth week. This is not what a good part of the world's press was forecasting as correspondents poured into Saigon in April to report the death throes of South Vietnam. In one cable the editor of a London daily asked his man in Saigon for a story on the plight of the capital "with Red forces closing in from all sides," and specified that the story must be serious "but perhaps cynical to match the mood of a nation facing defeat." An American news magazine gave its assessment in a front-page headline: "The specter of defeat."

Knocking South Vietnam has

become a tradition among some of the news media, but recent events suggest that they might do well to heed the admonition from Brigadier Gerard's connections: "You can knock our horse when he's beaten." For, after an all-out attack by Hanoi, South Vietnam went back to the Paris peace talks this week not to negotiate the terms of its surrender but to see whether the North Vietnamese might now be ready to call it quits. Saigon's troops have not yet retaken Quang Tri, but the communist drives on Kontum and An Loc have been repulsed and most of South Vietnam has returned to a state of remarkable normalcy.

Why did South Vietnam survive when the odds against it seemed so great? Was it saved by American bombing, or by the tactical errors of the enemy? Or can the much-maligned South Vietnamese army be credited with stemming the assault? The answer is a combination of all of these, and of other less obvious factors.

Without American air support the outcome would certainly have been different. The B-52 strikes were a decisive element in the successful defence of Kontum, An Loc and even Hue. The bombing of North Vietnam has not yet had much effect on the offensive, but it has impaired Hanoi's ability to continue the attack.

But success depended on whether the South Vietnamese army could fight well. It did. True, there was the case of the 3rd division, which crumbled under strong pressure in Quang Tri, and the 22nd division which performed poorly in Kontum and Binh Dinh. But no one ever rated these units as being among Saigon's best. The troops who were expected to fight well did so, and, more significantly, the local territorial forces stood their ground. On the whole, "Vietnamisation" proved successful.

Tactical errors on the battlefield by North Vietnamese commanders—including their incompetent use of tanks—played into the hands of Saigon. But the most crucial error on Hanoi's part was its decision to open the offensive with an attack across the demilitarised zone. By showing so blatantly that this was a North Vietnamese invasion, the Hanoi politburo threw away much of the support it might otherwise have received both in the international arena and among the peasantry in the south. The invasion consolidated South Vietnam's developing nationalism. It strengthened the position of President Thieu, and effectively silenced those in the south who

COURTAULDS

Highlights from the 1971/72 Annual Report and from the Review at the AGM on Wednesday, 12th July 1972, by the Chairman, Lord Kearton, OBE, FRS.

From the Report

	1972	1971
World Sales to third parties	£681,488,000	£659,583,000
Sales to United Kingdom customers	£406,191,000	£403,260,000
Exports	£124,065,000	£113,618,000
Profit before tax	£45,567,000	£42,066,000
Profit for Ordinary Shareholders after tax	£36,471,000	£23,718,000
Dividends paid	£18,747,000	£18,747,000
Earnings per 25p share	13.519p	8.792p
Dividends per 25p share	6.875p	6.875p
Investment in new buildings and machinery	£41,705,000	£72,028,000
Net cash resources	£34,800,000	£13,700,000

From the Chairman's Review

Courtaulds is very much a British Company and an important element of the industrial base of the country. UK manufacturing produces 77.8% of external sales.

The very competitive home market for fibres and textiles has shown little growth for several years, while imports have increased steadily. Courtaulds sales increase from UK production has been export led, the Queen's Award for exports has been won for the fifth year in succession, and the Group is now one of the biggest fibre and textile exporters in the world.

As a result of recent capital expenditure the Group now has new and efficient manufacturing plant, placing it in the forefront internationally. As technology progresses this can be kept up to date from internal cash resources.

Return on total capital employed improved in the last year from 10.88% to 11.46%. The return on shareholders' equity amounted to 14.74%.

Profits were rather better than most of the Group's international competitors.

While a date cannot be firmly predicted for the upturn from the present depressed conditions in fibres and in many textiles, this upturn when it comes can be financed from internal resources and will have a beneficial effect on profits.

Unaudited figures for trading in the current year indicate that pre-tax profits for the six months to September are likely to be 10%–15% better than in the equivalent period last year. As the outlook has been unsettled by the recent floating of the pound and the intimated changeover to VAT, it will not be until November when the first half-year results are announced that an opinion on the second half can be expressed.

The Directors nevertheless have very much in mind an increase in dividends distributed next year, aiming to restore, after a three-year period of unchanged dividends, the firmly upward trend of the previous seven years.

The Resolutions for the adoption of the Directors' Report and the Accounts for the re-election of Directors, and for the payment of the final dividend on 20th July were carried at the Annual General Meeting held on 12th July, 1972. Copies of the full Statement and of the Annual Report can be obtained from The Secretary, Courtaulds Ltd., 18 Hanover Square, London W1A 2BB.

General with an eye on Quang Tri

had been talking about peace and neutralism.

The South Vietnamese have astonishing resilience after so many years of war. And their country now has a functioning political and administrative structure which has no intention of making way for the communists. In human and material terms, South Vietnam's losses in the offensive have been considerable. But that is nothing new. And even the prospect of a further communist drive nearer the date of the American presidential elections is viewed with equanimity. As they see it, the South Vietnamese have less to fear from Hanoi than from the election of Senator George McGovern.

China and Europe

A French first

The highest tribute the Chinese can offer a foreign guest is an audience with Mao Tse-tung. Since Mao's interview with his old friend, the late Edgar Snow, 18 months ago, this privilege has been restricted to heads of government, only seven of them at that. But on Monday the Chinese demonstrated that their relationship with France is still a special one by ushering the French foreign minister into Mao's Forbidden City home. M. Schumann reported that during their hour and a half's conversation (half an hour longer than Mr Nixon's) the 78-year-old leader revealed an astonishing memory for names and figures and appeared alert, vigorous and tough. Once again the only Chinese official

present, apart from Chou En-lai and the interpreter, was Wang Hai-jung, the mystery woman, recently promoted to assistant foreign minister, who is rumoured to be Mao's niece.

M. Schumann's visit confirmed an observation brought home from Peking by a British minister, Mr Antony Royle, two months ago—that the Chinese are turning a more and more amiable face towards Europe. France remains a favoured friend because de Gaulle broke the recognition barrier in 1964 and because the Chinese regard French views about national independence as similar to their own. But over the last several years the Chinese have come to feel that it is not France alone but the common market—and particularly an enlarged common market—which poses the strongest challenge to the superpowers in Europe.

The Chinese finally overcame their uncertainty about the common market a year ago; significantly the Heath-Pompidou meeting in May, 1971, brought forth their first direct endorsement of European unity. Since then both the EEC and Britain have joined France in China's good graces and Sir Alec Douglas-Home will follow M. Schumann to Peking next autumn. But now the Chinese seem to be worried about a different European movement—the prospect of a Soviet-sponsored security conference. The Chinese have yet to say a public word about the conference. But they indicated to M. Schumann this week that they will take a dim view of any European detente which leaves the Russians free to reinforce their 44 divisions on China's northern border.

Japan

Jobs for the boys

FROM A CORRESPONDENT IN TOKYO

The "new politics" in Japan has begun with a heavy dose of the old. The new prime minister, Mr Kakuei Tanaka has assigned all the important cabinet and party posts either to members of his own faction of the ruling Liberal Democratic party, or to other faction leaders who helped most in getting him elected. Thus, the foreign ministry has gone to Mr Masayoshi Ohira, who threw his support to Mr Tanaka after having trailed behind on the first ballot. The trade ministry has gone to Mr Yasuhiro Nakasone, the ambitious former defence chief who dropped out of the race in favour of Mr Tanaka. And two of the prime minister's own supporters, Mr Ueki

and Mr Kimura, took over the finance and construction portfolios, where they will be in a position to select beneficiaries for the expansionary budget that Mr Tanaka is expected to propose by the autumn. Mr Takeo Miki, another defeated candidate who lent his support to Mr Tanaka, received only an honorary post as minister without portfolio because the shift of his block of votes to Mr Tanaka was riddled with defections.

What was new and different about Mr Tanaka's cabinet-making was the short shrift given to his main opponent, Mr Fukuda. After Mr Fukuda himself reportedly turned down a cabinet post—offered in accordance with the long-standing practice of doling out ministerial jobs to all factions of the party—two of his supporters who had been designated postal minister and economic planning chief suddenly refused to serve. To avoid delaying the investiture ceremony, in which the emperor participates, an embarrassed Mr Tanaka had to assume these other portfolios as well as his own. Mr Fukuda then moved to re-group the anti-Tanaka forces into a single faction. But on Wednesday Mr Fukuda and Mr Tanaka had something of a reconciliation and the two Fukuda supporters agreed to accept their appointments.

All this politicking in Tokyo was overshadowed by the first top-level reaction to Mr Tanaka's election from Peking. On Sunday night Mr Chou En-lai declared that Mr Tanaka's initial remarks in favour of an early normalisation of relations with Peking "merit a welcome." Mr Tanaka welcomed this welcome the next day. But neither he nor his foreign minister has indicated whether they are prepared to accept Chou's controversial conditions—which he reiterated to the French this week—in return for a rapprochement with Peking. Even Mr Tanaka's supporters acknowledge that the party is a long way from a consensus on China policy. But no one would be surprised if the prime minister were to gear his approaches to China so as to produce some sign of success just before the forthcoming election.

Mr Tanaka's other big pre-election goal is to reflate the economy and, as the former trade minister, he clearly feels more confident (see page 69) in this sphere. He is well aware that the Liberal Democratic party will continue to prosper only if the economy does. But he also thinks that a high growth rate of 8-10 per cent should

be used to pay for more social overheads, including anti-pollution measures.

The solutions Mr Tanaka has proposed for Japan's other problems, including its highly embarrassing trade surplus, are neither very radical—he advocates increasing imports of raw materials—nor very new. But what impresses people who are impressed with Mr Tanaka is not so much his answers to problems as his willingness to try to do something about them.

Pakistan

Rawalpindi ratifies as Karachi burns

FROM A SPECIAL CORRESPONDENT

Rawalpindi

While language riots in Karachi were dramatising Pakistan's internal divisions, the national assembly met in Rawalpindi this week to debate the Simla agreement with India. The argument within the assembly was not between parties but between romantics and realists. Romantics like Mumtaz Daultana, a Muslim League leader, insisted that there is no reason for Pakistan to make any concessions to India. They clung to the myth that the Pakistan army was not defeated last December but was sabotaged by drunken generals. The realists admitted that the Simla summit was less favourable to Pakistan than the discredited Tashkent summit of 1966 but it was the best, they claimed, that a defeated nation could expect. The realists prevailed late on Thursday when the assembly voted overwhelmingly for ratification.

Under Indian law, the Simla agreement does not require approval by the legislature, so it now automatically goes into effect. But there is still considerable disagreement in Pakistan about the obligations which flow from it. Even within Mr Bhutto's People's party, high-placed politicians are arguing that the accord does not prevent Pakistan from giving help to freedom fighters in Indian Kashmir. And the law minister told the assembly that it does not compel him to withdraw the Kashmir issue from the United Nations. Other difficulties may still crop up over the demarcation of the ceasefire line in Kashmir since each side has accused the other of intrusions.

Although Mr Bhutto did not ask the assembly for a mandate to recognise Bangladesh, his own party has authorised him to do so whenever he thinks it appropriate, and the main

Man in a cleft stick

opposition group, the National Awami party, is urging him to offer recognition immediately. But tricky issues like Sheikh Mujib's plan to hold war crimes trials, and the unsettled future of Biharis in the east and Bengalis in the west could delay an understanding indefinitely. And the longer the delay in the return of Pakistan's war prisoners—which depends on such an understanding—the more difficult it will be for Mr Bhutto to persuade militants in the Punjab to accept the implications of the Simla agreement.

In his own home province of Sind, Mr Bhutto is under pressure from militants of a different kind. At least 40 per cent of the 14m people in Sind are Urdu-speaking migrants from India or settlers from other provinces of Pakistan. Like migrants everywhere, they have been more enterprising and hence more successful economically. In a belated effort to assert the rights of local Sindhis, the provincial legislature passed a bill on July 7th making Sindhi the only official language of the province. Urdu-speakers immediately went out in the streets against the bill. More than 100 people are thought to have died in riots which raged for five days before the army went into Karachi to enforce a round-the-clock curfew.

Mr Bhutto is caught in a cleft stick. He cannot afford to antagonise his own people nor can he risk compromising his position as a national leader by giving in to provincial pressures.

In an effort to calm down passions which had been aggravated by rivalries among his own party leaders who run the province, Mr Bhutto suspended the bill and called a meeting of representatives of both groups. Some agreement will no doubt be worked out. But Mr Bhutto's own political strength may be eroded in the process.

Sudan

Peace, but not yet plenty

FROM A CORRESPONDENT

Juba

A line of Russian helicopters, with their giant rotors tethered to the ground, stands beside the runway at Juba airport. From time to time one flies off carrying visiting bigwigs or generals out into the bush. But the immobility of the others symbolises much of what is happening in the southern Sudan three months after the end of the civil war.

The peace agreement reached at Addis Ababa in March is, miraculously, working. The ceasefire holds; the rebel Anya-Nya forces are coming out from the mountains and the bush into collection centres; recruitment of these rebels into the national army and other public services has started; and the provisional government for the southern region is in existence. Goodwill abounds, and the long years of persistent and vicious guerrilla warfare appear to have been forgotten. But it is early days yet.

The Addis Ababa settlement in essence was a victory for those southerners who felt that the three southern provinces must stay associated with Sudan over the outright secessionists. And in the north it was a victory for those who realised the impossibility of winning the war and suppressing the rebellion, and were prepared to eat humble pie by treating the guerrillas as military and political equals. The success of the agreement now depends on three things. First, the guerrilla forces must be absorbed or disbanded quickly and completely. Second, the provisional regional government must show itself to be a credible body. And, third, economic activity must begin again in the south as quickly as possible to bring work for those southerners who fled during the eight years of fighting and are now returning from neighbouring countries or emerging from the bush. On all three points there is a long way to go.

The military provisions of the ceasefire are complicated, and offer a number of points at which things could go wrong. All Anya-Nya forces have been ordered to come out of the bush and to gather in collection centres. This process is going well; at Malek in Upper Nile, for instance, well over a thousand Anya-Nya are congregated. The important thing is that, at this stage, the rebel soldiers keep their

weapons and stay under their own officers.

The next, and much more difficult, stage is that a committee of officers from both sides visits the collection camps in order to recruit Anya-Nya for the army, police and other public services. This process has been completed in Bahr-el-Ghazal province, and is now under way in Equatoria. The potential trouble lies in the fact that the figures for active rebel strength were seriously underestimated at the Addis Ababa negotiations.

At Addis, Major-General Joseph Lagu, the Anya-Nya commander, agreed that he had about 6,000 weapons, and therefore about 6,000 men actually under arms. But with the usual guerrilla ratio of two men to each weapon, and with other men growing and collecting food, General Lagu now estimates the minimum figure for combatants to be 15,000. His deputies at Anya-Nya headquarters talk of a total of 21,000 men collected under their command awaiting the recruiting teams.

The military provisions of the Addis settlement stipulate that 6,000 southerners will be recruited into the national army, 2,000 from each southern province. In Bahr-el-Ghazal things have not been too difficult: a little over 4,000 Anya-Nya have presented themselves to the recruiting team, and most have been offered jobs of one sort or another. But in Equatoria there are going to be a lot of disgruntled ex-guerrillas who are not taken into uniformed government service.

The next stage will be for training teams from the national army to come into the collection camps to get the Anya-Nya recruits into army uniform, and presumably to standardise their weapons. This again could be a critical point, because it will involve a change of discipline and the relinquishing of existing arsenals. Lastly, there will be the day, after a few weeks of training,

when the former Anya-Nya soldiers are moved into units with their northern brothers.

The second essential for the success of the peace agreement is the credibility of the southern regional government. The Provisional Higher Executive Council under Sudan's vice-president, Abel Alier, is now functioning in Juba. It contains almost all elements of the southern political spectrum, from rebels who were in the bush or exile to men who served in various Khartoum governments. Mr Alier himself was a minister in General Numeiry's government from the time of the general's takeover in 1969 until the peace was reached. All these differences, which were at their fiercest between some of the emigré factions, have been submerged while the portfolios have been handed out and the council gets down to work. But the sheer size of the task of re-establishing civilian rule over this vast area of a quarter of a million square miles would daunt an efficient and well-equipped government—and the council so far has neither equipment nor efficiency. What the south needs as much as anything is secretaries, filing cabinets, telephones and transport.

The third vital need is economic regeneration and help for returning refugees. The south is desperately poor, but so is the north of the Sudan. The cost of a minimum programme for resettlement, relief, and reconstruction is estimated by the government at £50m. On July 6th the UN High Commissioner for Refugees appealed for \$22m for the resettlement of Sudanese refugees. But there is no hope of more than a dribble of cash from the north. The British gift of £200,000 as emergency aid seems staggeringly inadequate when set against the need, particularly as Britain bears more than a little responsibility for the existence of the southern problem in the first place.

But it can be argued that the seriousness of the emergency itself is not yet acute: refugees are returning only slowly from across the borders. Most seem to be either harvesting their current crops before moving, or are waiting to see if the peace settlement does stick. What is really wanted is transport, to get the simple things—like roofing materials and blankets—that are needed immediately to the right place.

The goodwill to make the peace agreement work is there, but it is going to be a close-run thing. One factor is clear, however: President Numeiry is

deeply committed to making the settlement a success. Most of his remaining prestige depends on it. Since last July's attempted coup and the break with the communists that it brought, relations with Sudan's Arab neighbours have descended to rock bottom. The business community inside Sudan cannot forgive him for the nationalisation which has shattered its fortunes, and the traditional parties in the north, particularly the rump of Umma-Ansar, are still alienated from him. So General Numeiry vitally needs a success in the south. By the same token, if he were to be overthrown there would be a real danger of the settlement collapsing.

Philippines

Same old script

FROM A CORRESPONDENT

When times are bad and prospects worse, every Philippine president has recourse to a time-tested ritual war dance. He calls out the constabulary and mounts an offensive against the Huks. It has been done so often that all Filipinos know the script. The stage directions call for loud alarms to be sounded in the form of maximum newspaper and television publicity, a presidential call to the nation to remain calm and resolute, cameramen rushing to constabulary camps and air force headquarters, choppers whirling demoniacally about Manila and then a day or two later, the headlined claims that up to a dozen Huk commanders have been slain by the doughty warriors from town.

Such willing suspension of disbelief has been taxed so often that it has now reached the limits of credibility. So both sides have been tarring up the scenario. The Huks have disguised themselves as the New People's Army and have been giving themselves a new image, a new professionally trained leadership (two junior army officers debunked with assorted weapons and are said to have drilled the raggle taggle outlaw bands in the hills into a formidable 3,000 strong striking force), a maoist ideology as replacement for the rather mouldy reformist programme they had had for two decades, and above all a new armoury consisting of smuggled rifles delivered directly from the depots in Saigon or from the American bases right there on Luzon.

The government for its part has fed the media the kind of mind-boggling story that the Spanish governors in

Singapore is becoming the Zurich of the East. Naturally, Continental Bank is there.

In the latter 1960's, Singapore began to emerge as the financial center of South-east Asia. Singapore's flexibility and economic strength together with her increasingly sophisticated local banking system provided impressive credentials for financial leadership of the area.

Continental Bank was ready.

Continental Bank actively entered the Singapore banking community through an ownership position in Singapore International Merchant Bankers Ltd. in July, 1970.

In time to take part in the Republic's 17.4% economic growth that year.

In time to participate in the past calendar year's doubling of the Republic's non-resident deposits to \$900 million (U.S.).

The timing of our active involvement in Singapore financial life is indicative of Continental's reasoned program of international expansion.

A program which has resulted in a six-continent banking network of enviable strength, including a large international subsidiary in New York (and another soon to open in Los Angeles).

This network allows us to meet the banking needs of multinational corporations virtually anywhere in the world. Moreover, the judicious nature of our expansion has enabled Continental to maintain a flexibility and efficiency not normally associated with a \$10-billion bank.

Talk to Continental's people in the Zurich of the East. Or, in the Zurich of the West. Or, in any financial community in the world where things are happening.

the islands told their troops whenever Drake loomed up on their horizons. It seemed that the Philippine security forces had apprehended a vessel carrying guns with Chinese markings for use by the rebels. A crewman was rumoured to have revealed at gunpoint that it was one of Kim Il Sung's forays. But, predictably, the gunrunning vessel turned out to be Filipino-owned and locally financed and the guns with Chinese markings turned out to be those familiar and well-beloved American rifles.

Development

It's lopsided

The publication of yet another set of statistics showing that the gap between the rich and the poor nations of the world is steadily widening can hardly be considered news. Yet it is a fair bet that the latest figures, published this week by the United Nations Department of Economic and Social Affairs, will only be found boring in the developed world. Just for the record, the main findings boil down to the fact that between 1960 and 1970 the income per head of the developed world increased by 43 per cent, whereas that of the underdeveloped world increased by only 27 per cent. But since rich and poor did not start at the same level in 1960 the gap between them in absolute terms is enormously greater than 16 per cent.

That this is an undesirable situation is denied by almost no one. But, to judge by the action—or rather, inaction—of the richer countries over the past decade, it is a situation they are happy to tolerate. Another lot of statistics published this week—this time by the Organisation for Economic Co-operation and Development—showed that official aid given in 1971 by the world's 16 richest nations to the underdeveloped countries increased from 0.34 to 0.35 per cent of gross national product. In other words, the official flow has only just got half-way towards reaching the UN's target of 0.7 per cent of gnp during the second development decade, and there is no prospect of it getting the whole way for years to come.

It is true that net flows from the 16 rich countries increased in 1971 from 0.80 to 0.82 per cent of gnp and that they should rise to 1 per cent by 1975. But the commercial investment that now provides the bulk of what is euphemistically termed "aid," although of great value in some respects, does

next to nothing to help the development of the infrastructure of poor countries. Official aid, for all its faults, remains essential for this purpose.

Although Britain's official aid figure of 0.41 per cent of gnp is better than some countries, Britain remains one of the very few that left this year's UN

Conference in Chile on Trade and Development without having adopted 0.7 per cent as a target at which to aim. At a time when Britain is about to enter the common market—supposedly, in part, to make it more outward looking—this record is exceedingly hard to defend.

The reign of good king meat

FROM OUR EAST EUROPE CORRESPONDENT

Mr Gierk's most urgent task when he took over from Mr Gomulka 18 months ago was to reorganise Poland's sadly dilapidated agriculture. Farming is the key to any significant economic recovery: food products constitute one of Poland's major exports and a third of its labour force is employed on the land. The new leader's first act was to import 2.5m tons of grain, mostly for livestock fattening. His second was to raise substantially the prices paid to farmers for livestock. The Polish press at the time welcomed these measures as proof that "once more in Poland, meat is king."

Since then the Gierk administration has done a lot more to ease the farmer's lot. The old system of obligatory deliveries has been scrapped. A free health service, formerly available only to the industrial workers, has been extended to rural areas. Farmers now get higher prices for grain, meat and milk. They can buy tractors and other farming implements on favourable five-year credit terms, and get income tax relief on farm improvements.

The results of these policies can now be seen. Stock cattle production is up, and in 1971 the production of hogs was over 22 per cent higher than in 1970. There has been a less impressive showing on dairy products. Dairy cattle figures show a slight reduction, and, despite a dairy cow population of around 7m, milk is sometimes difficult to find in the shops.

Sporadic attempts at agricultural collectivisation finally collapsed in

Poland in 1956 and today 83 per cent of all agricultural land is still in private hands. Nearly 5½m people work on private farms, compared with 580,000 on state and collective farms. In communist countries, however, private farming has both its virtues and its weaknesses. Its strength is undoubtedly in the incentive provided by land tenure and reaping the rewards of one's own labour. Its weakness is best seen from the air. Northern, central and western Poland look like a patchwork-quilt of sometime ludicrously small and patently uneconomic strips. However, land inheritance laws have recently been altered to primogeniture to prevent further division and small private plots are being gradually absorbed into the larger state farms where mechanisation is more feasible.

Not that this fate is likely yet to overcome true men of the soil like Wawryniec Meusz, who has a flourishing 40-acre holding 30 miles west of Wrocław. As a young man of 20 he was obliged to trek nearly 500 miles from his home east of Lvov in territory annexed by the Soviet Union.

After 27 years, Mr Meusz has built up his farm with the aid of his 71-year-old mother, his wife and his daughter and his son. Mr Meusz and his family are almost certainly better off financially than the 800 workers in the neighbouring state farm. There have been no union hours for the Meusz family and it shows on their faces. But they have had the satisfaction of working their own land.

These securities having been sold, this announcement appears as a matter of record only

AMERICAN SURVEY

Democrats in Miami

The McGoverns—and the banners of change

Leader of a divided party

Miami Beach

Conclusive victory on the first night, when the formal choice of nominee comes only on the third, does not often come the way of a presidential candidate in a disputed convention. Senator George McGovern achieved it, and the following day, Tuesday, saw the withdrawal of Senator Hubert Humphrey and Senator Edmund Muskie from the contest. Thus Wednesday night brought a mere ratification of what had been settled. On the first roll call, Mr McGovern got 1,865 votes, well in excess of the required 1,509.

To suppose that the swiftness of his victory expressed any overwhelming Democratic consensus in Mr McGovern's favour would, of course, be wrong. On the contrary, it was forced on him by the desperation of his enemies. By ordinary standards the matter would have been virtually settled last month when Mr McGovern defeated Mr Humphrey in the California primary election and went on to sweep the board in New York. But at that point his opponents got together and unseated 151 of the McGovern delegates from California (see page 48). His decisive battle therefore had to be fought on the report of the credentials committee and once the convention voted to re-seat his California delegates, power in the national party was

demonstrably his.

People with power bases of their own can, however, choose in varying degrees whether they will back him up, stand aloof, or continue to treat him as an enemy. The list of potentates unreconciled to Mr McGovern at the beginning of the week was unusually imposing, and it is not clear that the course of the convention has done much to win them round. Most of the Democratic state governors and two-thirds of the Democratic Congressmen were on record to the effect that Mr McGovern's nomination would bring all-round disaster in November.

Mayor Daley of Chicago, the chief surviving exemplar of the old-fashioned city political boss, stayed away from Miami Beach and refused to respond to Mr McGovern's attempt at a compromise on the seating of his part of the Illinois delegation. The result was that the Daley delegates were kept out and a rival liberal delegation from Chicago, even less legitimately selected than they, was seated in their place. The contrast with the Chicago convention four years ago, when Mr Daley dominated the proceedings, could not have been made more stark. But none of this is good news for Mr McGovern, who will desperately need to carry Mayor Daley's

county against President Nixon.

Next on the list of the unreconciled come Mr George Meany and the management of the giant trade union federation. Mr McGovern is the first Democratic presidential candidate in memory to be nominated against their outright opposition. Organised labour came very close to saving the day for Mr Humphrey against Mr Nixon in 1968. Mr McGovern is going to need its help badly. Some of these old-style holders of power and influence are disgruntled at seeing themselves brushed aside. Some are genuinely alarmed by Mr McGovern's position on defence or the Vietnam war or public assistance or school busing. Nearly all are turned off and even infuriated by the style and outward character of his active supporters, their age, clothes, sex, race, language, personal habits and view of society constituting, as they do, the antithesis of what a serious political body is usually supposed to look like.

How is it, then, that the seasoned practitioners of Democratic politics let themselves be out-talked, out-maneuvred and in the end totally out-gunned by this bunch of underdogs? There was the old trouble that, as has been said, "you cannot stop somebody with nobody." Mr Humphrey was strong enough to kill off Senator Muskie but not competent, for various familiar reasons, to take his place as the potential unifying figure. The standard-bearers of the status quo were repeatedly ludicrously late in their efforts to save themselves. Moreover, they were genuinely feeble when it came to what local political machines

are supposed to be good at—getting out the vote, packing the caucuses and imposing authority on the county and state conventions.

Mr McGovern, after the long way he has come, would not be human if he did not believe by now that he leads a movement with its own sources of momentum. But he must also know that he owes his victory not to that alone, but also to the failure of the opposing forces at their own game. All the same, he is now going to need all the help he can get, and this week he showed willingness to go some way to meet those forces. It was Mayor Daley's friends, not his, who defeated the attempt to seat the Daley delegation with half votes, insisting on all or nothing. When the party's platform was debated on Tuesday night (in the longest session a Democratic national convention has ever known), Mr McGovern's floor managers saw to it that not only all the amendments offered by the faction allied with Governor George Wallace of Alabama were beaten back, but also all the liberal amendments which would have antagonised the angry old guard even further.

One of the surprises of the convention, at least for the old professionals with their set view of the impulsiveness and unreliability of youths and females, must have been how amenable the mass of McGovern delegates were to the discipline needed to keep them from adopting statements which they were inclined to believe in but were told would be politically disadvantageous. Mr McGovern will have to calculate many times how far he can take this restraint in the interest of compromise and party unity. He has sticking points of his own. Even on one of these, however, the Vietnam war, he gave a bit of ground this week when he said he would keep a residual force in southeast Asia (not in Vietnam, but in Thailand and at sea) until the release of the American prisoners in North Vietnam was assured.

At the end, some delegations committed to support Mr McGovern, such as those of Massachusetts and Wisconsin, showed uneasiness when they began to take in the significance of what their chosen leader had said. A few of his delegates threatened to withhold their votes. But it was too late for such gestures to have any effect and the rollcall showed none. Beyond a point, if Mr Meany and Mayor Daley and the rest will come no way to meet him, Mr McGovern will have no recourse but to give up conciliating them and

Meany and his men: they have the money too

seek to isolate them. The summer campaign, which has demonstrated within limits the force of Mr McGovern's new sources of political strength, has also demonstrated the tendency to attrition in some of the old sources which failed Mr Humphrey and Mr Muskie. The nominee may have to leave Mr Daley stranded like a whale on a beach, while the new men see what they can do. He may look for local labour support, circumventing Mr Meany to the extent that that is possible.

Presumably he was exploring one such bypass early this week when he talked of Mr Leonard Woodcock, the head of the automobile workers' union, as a possible vice presidential candidate. Democratic presidential candidates have long been spared uncertainties about organised labour and big-city support. Mr McGovern will try to offset them by exploiting another uncertainty, the unprecedented number of new young voters waiting to be registered and organised.

One rueful delegate was quoted on Monday as having reached the conclusion that Senator Muskie, whom he had come to Miami Beach to support, was "a figment of the imagination." The judgment is neither so harsh nor so hostile as it sounds: a need was manifest for a unifying figure who would be calm, strong and reassuring, and Mr Muskie was conscripted by a large consensus of the party establishment for a role which, as it turned out, did not quite suit him.

Senator McGovern exists all right, and he knows exactly who and what he is. But he does also have another existence as a figment, indeed several figments, of the imagination of his followers. There are some things about the real Mr McGovern which the other Democratic party potentates do not like. He has always gone his own way too much for the liking of the club, he has often shown a baffling indifference to the opinions of his peers, and some-

thing about his manner strikes them as self-righteous. No doubt these characteristics are in some way connected with his ability, triumphantly demonstrated, to exploit and mobilise the mood of revulsion against conventional politics. His followers think him different from other politicians.

Believing this, they naturally appoint him leader of their multifarious causes, and since it is their devoted effort that has carried him to national leadership, he cannot altogether reject the roles they thrust upon him. But it is these roles, more than any idiosyncrasies of the real Mr McGovern, that cause his peers and the other old potentates to view him with alarm as a radical leader and the natural enemy of the respectable political establishment. In a way, the more wholeheartedly he throws himself into the role of leader to his followers, the more solid are the obstacles in the way of piecing a recognisable Democratic party together again.

Some of his supporters believe that what the party needs is not to be pieced together but to be taken over by new people, radically reconstructed, and launched on a new path: and if this aim conflicts with getting the Presidency in November, then the Presidency must come second.

For some people this is all very well. For Mr McGovern, however, who is now the presidential candidate of his party, the case is different. He is a practising politician seeking the power to conduct the country's affairs. Party affairs, beyond the extent to which they need attention if they are to help him on the road to power, have always exercised the most limited fascination for him. What is more, if he were to lose badly in November he would then have little say left over the party's future course. Between now and November he will have many delicate choices to make. If, in making them, he puts the Presidency second, that will be a surprise.

All these securities have been sold. This announcement appears as a matter of record only.

Just trust George

The McGovernite chairman of a state delegation nodded his approval. "Of course the abortion laws have got to be changed," he told his delegates on Tuesday afternoon. "But the question is, do you care more about getting this into the platform than putting George into the White House?" They agreed that they preferred having George in the White House.

This scene was repeated in a score of state caucuses for McGovern delegates in the hours before the opening of the debate on the Democratic party platform, its statement of policy. Some of the delegates were unyielding.

Others said that they preferred not to vote against their convictions, but would if there appeared to be a serious risk that minority reports which would embarrass Mr McGovern in the election campaign would otherwise be carried in the convention. But it was thanks to Mr Wallace's delegates and those of some of their other opponents that the McGovern organisation succeeded in voting down a series of liberal minority reports that would have been a gift to the Republicans.

Abortion was a particularly difficult issue. An overwhelming majority of the McGovern delegates probably advocate more liberal abortion laws. And it is certainly true that there is substantial public support for this position.

Yet after the nasty shock administered to Mr McGovern in the Nebraska primary, when Mr Humphrey's men organised a highly effective smear campaign against him in the Roman Catholic precincts of Omaha, Mr McGovern's lieutenants have worked diligently to defuse this issue. It is, they say, not a question for the federal government but for the states and therefore it is a quite inappropriate issue for a plank in a national party's platform.

After a sharp little debate in the convention the McGovern strategy triumphed, but not before there had been a painful scene between two leading members of the women's political caucus, Representative Bella Abzug of

Not all that different after all

The 1972 Democratic national convention is an improvement on the last one in 1968, however one looks at it, but it is not as different as one had been led to expect. Miami Beach's notoriously nasty summer climate has been kind. The resort hotels on Collins Avenue with their spacious cool lounges absorb the candidates and their staffs, the newspapermen and the television crews, who outnumber the delegates, and all the hangers-on of both more easily than did the skyscrapers on Michigan Avenue in Chicago. The convention centre is only just down the road on the edge of a not unpleasant residential district, instead of being in the middle of stockyards.

The specially built chain fence is draped here and there with hibiscus plants. The policemen who are lined up behind it are spaced out generously (although there are busloads of tougher types there in the background). The demonstrators outside are good-humoured and being treated in a good-humoured way. In spite of advance predictions, the security arrangements on the inside are not objectionable.

Those who forecast that at this convention the proceedings would be convulsed on the floor instead of off it have been proved wrong. Inside are the same old delays in getting started, the same old religious invocations, the same old music, the same old welcoming speeches from local heroes seeking nationwide glory, the same old difficulty in keeping the

aisles clear and the delegates concentrated on their business. But perhaps it was wise not to alienate the party's traditionalists still further this year by reforming the superficialities, however boring, as well as the fundamentals.

The reforms have not, in fact, done anything to speed up the proceedings—rather the reverse. When rollcall votes are taken, it is easier to name the states in the good old alphabetical order than in the random sequence decided by lot that is now required, beginning this year with California and ending with Oklahoma. By the time that chairmen of delegations have learned when their turn comes, the convention will be over and in 1976 it will all be different again.

Then this year each delegate must be polled by his chairman on every vote and marked off on a tally sheet which must be sent up to the platform for record purposes. This seems to have presented particular difficulties to the chairman of the large Ohio delegation, never ready when called. In practice, however, the floor managers for the various presidential candidates were making sure that their delegates knew how to vote. Even the independent young McGovernites seem to have admitted that when the final showdown comes, it is best to have trained professionals in command.

Much has been made of the inexperience of this year's delegates; fewer than a fifth of them had ever been to a national convention before. But they

had fought their way there, up from the grassroots or, more often, the political science seminars, gaining plenty of sophistication in the process. They had no desire to see their party shamed by a repetition of 1968's disruption on the floor or off it—nor was there any excuse for that. This year's chairman, Mr Larry O'Brien, was even-tempered, broad minded and also, most importantly, efficient. There has been no need for protests outside the hall (with one important exception) because all the various groups that make up the party have been represented within it.

True, some of the older groups do not feel that they have been fairly represented, notably the party's office holders and the trade unions. Other famous Democrats also missed the McGovern bandwagon and are either sulking in their home-town tents, like Mayor Daley of Chicago, or sitting rather sadly in the galleries, like Mr Averill Harriman, one of the party's great financial backers. There are very few Congressmen or Senators around in Miami Beach nor are state governors as prominent as usual.

Whether the Democratic party can survive without allowing these people their traditional importance is probably going to be demonstrated during the coming election campaign. Meanwhile the floor of the convention hall gives the impression that the party is being taken over by the women although they only make up 38 per cent of the delegates. This is not really as large a group as it should be, according to the new guidelines based on the pro-

New York—a woman with a political style curiously similar to that of the late Bessie Braddock—and the actress Miss Shirley MacLaine. After Miss MacLaine, who is a strong advocate of reforming the abortion laws, had attempted to swing votes against the minority report favouring a clear party statement on the issue, Mrs Abzug, who was seated in the body of the hall, jumped to her feet and, with the aid of her very considerable lungs, denounced Miss MacLaine in biting language.

But Miss MacLaine, who obviously did not enjoy her part, succeeded in her task and the minority report went down to defeat. It was the same on policy for poor people. Mr McGovern

has already got himself into so much trouble on this issue that he would have been grievously embarrassed by the adoption of the minority report favouring the National Welfare Rights' Organisation's demand for \$6,500 a year for a poor family of four. "Now, now, now" as the claque of demonstrators in the gallery chanted.

The soft-spoken president of the Wisconsin Farmers' Union put the issue to the delegates with uncomfortable clarity: there were many small farmers in his state who only earned that much in a year. What would they say if sums of this sort were to be guaranteed to many people who did not work at all? Some of the delegates must have winced at the thought of what

Vice President Agnew would do to them on such an issue. But once again it was the Wallace men who came to the rescue, even though large numbers of McGovern delegates voted against their own friends.

However, for much of Tuesday night there was little drama and a great deal of tedium. After the introduction to the debate by Professor Richard Neustadt, the chairman of the platform committee, there was a series of short statements on the more important elements of the platform by members of the committee. As these speeches were only summaries of documents the convention already had before it, large numbers of delegates drifted off into the coffee bars and others gossiped with

portion of each group in the party in each state—but four years ago only 13 per cent of the delegates were female. At the next convention in 1976 a woman must be the "chair-person."

There are 151 Spanish-speaking delegates, three times as many as in 1968, and 450 blacks, twice as many as four years ago. Some with moustaches and business suits, some with beards and dashikis, they vary as much in appearance as they do in their aims. Negroes can hardly be regarded as a homogeneous political group in America any longer. And finally there are the young people—according to a computer, 13 per cent of delegates are under 25 and another 20 per cent are under 35 years old.

In the old days a trip to the convention was a reward for faithful political service, but an expensive one both in hotel bills and contributions to party funds. This time few of the delegates are rich and some of the young ones are making do with sleeping bags and food parcels from home; few have been subsidised by state party funds, more by parents.

Nevertheless the delegates still come from the better-off sections of the community. The group which is still not represented proportionately at the convention is that of the poor people and it is they who have been responsible for the only real protests this week.

The National Welfare Rights organisation had been meeting in Miami Beach. Joined by several other Negro and anti-war groups, it invaded a meeting of the arrangements committee to demand 750 seats on the floor of the convention; the figure was based on the proportion of poor in the population.

The demand was given serious consideration but was refused on the ground that the floor was overcrowded already; moreover the poor people had not been elected as delegates. They did gain some access to the gallery and staged a small protest there and others

in the streets. But the comparative orderliness with which the leaders put their demands and the discipline of their followers suggest that by the time the next convention comes round the poor people may have gained the special recognition that they want.

Like other groups of non-delegates they had a hotel headquarters. So did the Yippies, the Youth International party, even though they want no part of the establishment and were sleeping in tents in Flamingo Park, by the rather reluctant courtesy of the town's civic authorities. There the Yippies skinny-dipped, made music and chatted happily with the old folk who usually play in the park. Why the Yippies came at all, no one quite knows. Certainly it was not to make trouble, as they did in Chicago in 1968.

This year's convention can well do without that particular type of colour but it lacks colour in other ways as well. Apart from the gaily striped official Democratic hostesses, the pretty Pepsi-Cola girls, a few dresses exhorting everyone to vote in red, white and blue, there is little of the gay hoop-la of earlier conventions: only an occasional straw hat, a good many leaflets and posters, but none of the bright young people in costumes publicising their favourite candidate. They have other things to do this time.

They are on delegations which have been sitting at the convention hall right through the night and have been lobbied by presidential and more recently vice-presidential candidates, and advocates of special causes right through the day. In the intervals they attend workshops on how to run an election campaign. All this suggests that they are determined to go on working for Senator McGovern right into November and to prove wrong the sour old pros who have been prophesying that the young enthusiasts will get bored with politics now that they have nominated their candidate.

The Pot party convenes too

In any case there would have been little point in fancy costumes this year since the half-hour long processions through the hall that used to celebrate the putting into nomination of each presidential candidate are no longer allowed. Fifteen minutes is now the limit for nominating speeches and expressions of enthusiasm, allowing time only for a few banners, fewer balloons and comparatively little shouting. As a result, the only part of the convention that moved really speedily was the nomination of the final five presidential candidates.

States and dependencies were still allowed a little time for self-congratulation as they cast their votes—Guam "where America's day begins" Colorado "which fully supports the United Farm Workers' boycott of lettuce." But even when Illinois put Senator McGovern over the 1,509 majority, the cheers were soon checked to allow the rest of the votes to be counted.

Who is where in Miami Beach

friends.

But ultimately the interminable ritual came to an end. The chairman came forward to announce that the Governor of Alabama was now with them and was to propose the first of the minority reports. But the little dark-haired man in the wheelchair had nothing new to say, only his routine stump speech. It earned some cheers from his acolytes and a few outbursts of booing and that was that. Mr Wallace was wheeled off and his minority platform was thrown out with a series of thunderous "noes," without the convention being troubled by even a single rollcall vote.

All that remained of the evening—and there was a lot as the convention sat for almost 12 hours—was spent by the McGovern floor leaders defeating their own supporters' minority platform without incurring their serious displeasure. And on this they had a fair degree of success, though on the following day there were still some angry rumblings from some members of the women's political caucus. But even here it was only a minority who were indignant; the majority was prepared to trust George McGovern.

Just before the delegates streamed out into the muggy morning sunshine the McGovern forces managed to stage an impressive little coup. In an endeavour to mend their fences with the Jews they persuaded the convention to strengthen the statement on defence policy with an amendment making it clear that a major naval force would be maintained in the Mediterranean "to deter the Soviet Union from putting unbearable pressure on Israel." All in all it was a remarkable night's work. Mr McGovern's managers had succeeded in pushing through a liberal policy platform, expressed in moderate terms, and had managed to defeat some of their own supporters' attempts to strengthen it, without damaging the fundamental unity of their movement.

Two ways to lose

Senator Hubert Humphrey ended his 12-year quest for the Presidency not with a bang, or a whimper, but with tears. The tears came from his staff, but they were not far away from Senator Humphrey's eyes either. Through Monday night's fights on the credentials he had added up the figures and on Tuesday morning they still came to the same total: his candidacy was dead. Shortly after noon he walked into the inappropriately named Eldorado Room of his hotel to bury

As California goes . . .

For the Democrats this week the question of credentials—that is, which of rival delegates or delegations shall cast their state's votes—provided the turning-point of their convention, just as it did for the Republicans in 1952, when the Eisenhower forces ousted Senator Robert Taft's southern block. The two most controversial of the credentials committee's numerous decisions—to exclude Mayor Daley and 58 other delegates from the party organisation in Illinois and to split the California delegation between Senator McGovern, the winner, and other contenders—had been contested in the courts.

But late last week the Supreme Court, hastily reconvened, decided in effect, by 6 to 3, not to interfere with the credentials committee's work and to leave the final decision to the convention. For a century and a half, the opinion argued, delegates to party conventions have decided such questions for themselves and the practice should certainly not be changed in haste. About a dozen appeals to the convention from the committee's decisions—mainly on the score that state parties had ignored the party's new guidelines designed to increase the numbers of women, members of minorities and the young—were scheduled to be decided on the convention floor. The committee had already settled another dozen or so disputes, in one case seating the largely black "loyalists" (loyal to the national party) from Mississippi, not the whites chosen by the state organisation.

Two hotly disputed procedural questions fell to Mr Lawrence O'Brien, the convention's temporary chairman, to decide: who was eligible to vote and what was to constitute a majority? The anti-McGovernites wanted the whole California delegation—the 120 which belonged unquestionably to Mr McGovern as well as the disputed 151—to stand aside when California's case came up. More important, they insisted that a majority must be 1,509, just over half the total delegate votes—3,016. At that time the McGovern men were not absolutely certain that

they could muster so many.

Mr O'Brien ruled that Mr McGovern's Californians could vote and that a majority would be defined as over half of those entitled to vote on any particular case before the convention. On the Californian issue it would be 1,433, since the 151 anti-McGovern delegates could not take part. Both decisions pleased the Senator's aides but they still felt that they must prevent an appeal from Mr O'Brien's ruling on the majority on a case involving South Carolina. The anti-McGovern forces from California would be able to vote on it and it was to be considered first.

The McGovernites out-foxed the opposition on the challenge to South Carolina's delegation, where women were said to be underrepresented. But it was decided in a way which strong advocates of Women's Lib will find it hard to forgive. If the case had been settled by a majority of less than 1,509 a vote would have been demanded on whether this was acceptable and Mr McGovern might have lost. Instead well-drilled McGovern delegations were instructed to swallow their liberal convictions and defeat the challenge resoundingly; the vote was 1,555 to 1,429. In fact, Mr McGovern won back the whole Californian delegation by 1,618 to 1,238.

The debate on the Californian issue was for the most part good-humoured. The convention's decision to exclude Mayor Daley and his cohorts was not. It was taken after Senator McGovern's men had struggled all night to persuade the powerful mayor to share the convention votes of McGovern delegates who had been seated. In the early hours of the morning Mr Daley told Mr Frank Manckiewicz, Mr McGovern's chief lieutenant, what he could do with his compromise. This was a mistake on the part of the former maker of Presidents, as he lost by 1,487 to 1,371. On the floor Mr McGovern's managers had continued to seek a compromise but many of the delegates had not forgotten the blood on Chicago's streets in 1968.

Ribicoff, O'Brien, McGovern: all we want is a simple majority

it before press and television.

"We bow out now with the spirit of friendship and of understanding, as a good Democrat, but above all, hopefully, as a good citizen and a good family. Thank you very much." That was how it ended, but there was nothing in it for Senator McGovern to thank him for. Senator Humphrey merely released his delegates: the spirit of friendship and understanding did not extend to advising them to vote for, or support, Senator McGovern. Well, at least Mr Humphrey did not upset his sponsors among organised labour.

The original front-runner fell out less than two hours later and in a manner which only added to the Muskie enigma. Senator Muskie's statement withdrawing from the race lasted just four minutes, but it was the most impressive thing that he has done since he countered President Nixon with a superb television performance on the eve of the mid-term elections nearly two years ago. His support for Senator McGovern was not only complete but it was also generous. That might not signify as much as it sounded, but it was in striking contrast to Senator Humphrey's sentimental meanness, one of those few occasions, perhaps, in which Senator Muskie's words created the effect he intended.

Senator Muskie was back to his Sunday best. On that day he had appeared on the special edition of "Meet The Press" and upstaged all the other candidates, including Senator McGovern. But the next day, instead of showing the sense and statesmanship of Tuesday, he embarked on an absurd little exercise of trying to get all the candidates into an air-conditioned room to solve the credential problems of California and Illinois. Who could ever have seriously expected Senator McGovern to agree to that at this new-style convention—especially when he knew that he had the votes to get his way?

Rarely can the American political system have better demonstrated its supreme achievement of putting men under great stress before determining whether they are fit for the highest offices than in the case of Senator Muskie. An attractive man, in ideas and words too, when not under strain, Senator Muskie proved indecisive at moments of crisis. Through the early primary elections and again just week in Miami Beach he showed just what he was: a fine Senator but no President. It is a good thing for the country to find out—in both respects.

Wallace the Democrat

The Wallaces: where now?

All Governor George Wallace of Alabama ever wanted out of the 1972 Democratic presidential campaign was to be treated as a respectable Democratic candidate; it took a would-be assassin's bullets to put him within reach of his goal. Twice before, in 1964 and in 1968, he had gone out to win voters and had some success in doing so, only to be shunted aside at the party conventions and treated like something that had hung too long in the sun.

But after the attempt on his life, his hospital room became a place of political pilgrimage for Democratic presidential candidates and leaders, each of whom seemed to feel that Mr Wallace would make a better friend than an enemy. Even Senator George McGovern felt called upon, when speaking at Miami Beach to such conservative groups as the Texas delegation, to point to his earlier visit to Mr Wallace and to remark on the similarity of their goals.

When he was discharged from hospital on the eve of the party's nominating convention, Mr Wallace boarded an aircraft ordinarily used to ferry wounded from Vietnam and flew first to Montgomery, the capital of Alabama. At Montgomery, he was lifted down the ramp of the aircraft in his wheelchair and addressed a crowd of about 4,000 Alabamians who had come to bid him welcome home. His voice was thin and his fatigue was obvious as he went through his campaign litany of charging the Democratic party with being unresponsive to the "average people of America"—those who "are

sick and tired of high taxes and foreign aid to countries that spit on us and want to see us lose in Vietnam." The party, Mr Wallace said, could only beat President Nixon if it gave attention to "the decent, honest, law-abiding citizens" who are noticed "only on election day and tax-paying day."

In Miami Beach, he broke with tradition by coming to address the convention before nomination. He came to speak about some of the planks in the party platform. He had substitute plans to offer, particularly one calling for an end to moving children to school in buses to further racial integration and another urging what the Supreme Court had already struck down—compulsory prayer in state schools. His appearance was greeted with applause, wild from his supporters, polite from his political adversaries. His voice had returned and he was full of his old fire, despite the embarrassment of being manhandled in his wheelchair up to the speaker's platform.

"I am here because I want to help the Democratic party," Mr Wallace said. "I want it again to become the party of the average citizen and not the party of the intellectual pseudo-snobbery." But after he had been taken away, all of his proposed amendments were shouted down in a voice vote. His liberal opponents were far too strong. Mr Wallace has left open the question whether he would now go on again to form a third party, as he did in 1968.

Should Mr Wallace choose such a course in 1972, would he take more votes from President Nixon than he would from Senator McGovern? Such speculation seems academic. Mr Wallace, faced with formidable physical handicaps and a drop in financial support is unlikely to bolt his party just now.

THE ECONOMIST JULY 15, 1972

What do you know

about JAPAN

Surely a little, maybe a lot. And whatever you have learned will be useful for getting a foothold in this dynamic economy. But to unravel the intricacies of Japanese business you will need the assistance of specialists. In fact, you will need FUJI BANK.

Fuji's distinguished economists and experts have researched the problems you will be most likely to encounter, and have helped many foreign firms to set up flourishing businesses here. It's part of the comprehensive service offered by Fuji, the leader in Japanese commercial banking. Even those already well-informed about Japan will find it very useful to consult Fuji.

It pays to go with FUJI and grow with FUJI

Out of the valley

South Wales for port-linked industrial growth

If you think South Wales is a pretty mountainous region then maybe you've got some wrong ideas.

Let us try to enlighten you, by putting the emphasis on different things. It's remarkable the effect this has!

You will know already that the ports on the South Wales coast lie close to the Midlands and industrial Wales. But you may not know that there is a great deal of flat land around them only just above sea level.

Newport and Cardiff are flanked by 24,000 acres of land below 50 ft contour suitable for development.

Swansea and Port Talbot have 5,000 acres of coastal land. And the deep water around Barry and Swansea is suitable for giant off-shore anchorages capable of accommodating some of the biggest tankers afloat.

Then there's Port Talbot harbour—already designed to take vessels of up to 150,000 tons serving the South Wales steel industry.

Do you recognise the situation? It's almost a carbon copy of that which faced the Dutch and the Belgians a decade or so ago. They used very similar low-lying (and submerged) land to create the massive coast-hugging industrial developments that are the envy of Europe. And they too had on-the-doorstep ports to export and import their produce.

This stretch of South Wales is one of the best areas in the U.K. with the potential for this kind of growth.

Today the economy of Wales is right. The place is right. And now the time's right—for growth. That's why Monmouth and Glamorgan could be the U.K.'s biggest Low Counties... And now's the time to start moving in.

Find out more about the South Wales Group of ports by writing to:

T. S. Roberts, Port Director, British Transport Docks Board,
Pierhead Building, Cardiff CF1 5TH
Cardiff 42544 (STD 0222) Telex: 49371

British Transport Docks Board

South Wales

Part of a nationwide ports service operated by the British Transport Docks Board, a publicly owned undertaking, and comprising: Humber: Hull, Grimsby, Immingham, Goole, East Anglia: King's Lynn, Lowestoft. South Coast: Southampton, Plymouth. South Wales: Newport, Cardiff, Barry, Port Talbot, Swansea. North West Coast: Garston, Fleetwood, Barrow, Silloth. Scotland: Ayr, Troon.

Should Cwmbran join the Common Market?

If London and the South East go in, Cwmbran will follow. Or if the Midlands go in... or South Wales... or Severn-side. For Cwmbran has direct links with all these centres of industry and commerce by fast new motorways, and direct links with Europe and every other continent through Newport Docks—one of the most highly mechanised ports in Europe. Whatever the future holds for British industry, there is no better place to face it than Cwmbran.

Modern factories and offices

Industrial sites are available immediately and factories from 2,000 sq ft to 22,000 sq ft are under construction. Substantial rent concessions may apply. Cwmbran Development Corporation will design and build, lease or provide purchase facilities for factories of any size. Government building grants are available. There is office space, too, in new Town Centre blocks.

Excellent Labour

Labour is plentiful, skilled, well-educated and young. Cwmbran now has a population of over 42,000 and it is still growing fast. Our own schools now provide 1,000 well-educated school leavers each year.

100% Housing

The Corporation will provide housing for your entire labour force, and rents are modest. The key men who come with you will be housed immediately; and modern, centrally heated housing will be provided for all employees of new industry within weeks of arrival.

Every amenity

Cwmbran is a Garden City set amid some of the loveliest countryside in Britain. The glorious valleys of the Usk and Wye and the huge expanse of Brecon Beacons National Park are near at hand. The new Town Centre, where parking is absolutely free, provides the finest all-pedestrian under-cover shopping centre in the West. Find out more about opportunities for your industry in Cwmbran, where people live better and work better. Please write today for an informative brochure, or phone, or call and ask to speak to the General Manager, Mr. J. E. McComb.

Expecting to win

At the moment it's not bad being a Welshman, says Wales's hero Barry John: "Because we haven't lost to England since 1963 and now the Welsh just expect to win." But in Wales today the current mood of confidence can be put down to something more than just the success of its rugby team. Wales, like the rest of Britain, has experienced the pains of economic recession: the new firms with their new jobs have stopped coming in any great number and, as every Welshman knows, the coal industry is due for another bout of contraction and the steel industry for a shake-out of labour. But, once that is said, Wales, with an unemployment rate of 5 per cent, has fared comparatively better—or, as one realist put it, "less worse"—than any other of Britain's development areas.

Confidence is infectious and at the moment there is undeniably a feeling of moderate optimism in Wales. It is particularly noticeable among the business community and civil servants in Cardiff, the Welsh capital. One reason for this is that now more than ever before Welshmen are running their own affairs. The age-old resentment of the shadowy English bureaucrat in Whitehall who felt he knew better than the Celts what was good for them is fast dying, because more often than not his job is now being

done by a Welshman in Cardiff. The Welsh Office, established only seven years ago, has not all the powers or the authority of the Scottish Office. But it has substantial responsibilities in its own right, including primary and secondary education and health and welfare services, and an opportunity as well as a willingness to speak up and have its voice heard on other matters.

Decentralisation has not been confined to administration. Wales, with a population of only 2.75m, now has its own opera company, an independent television company, its own development corporation, tourist board and arts council. Soon it will have its own national bank and, if some influential enthusiasts have their way, might yet have its own elected council.

The other reason for confidence is that regional policy—itsself, paradoxically, the product of strong central government which some Welshmen resent—has, for all its faults, worked remarkably well in Wales. From being an area almost entirely dependent on two basic industries, coal and steel, industrial South Wales, where three-quarters of the population lives, has become an area where about half the workforce is employed in a variety of manufacturing industries. Most of the manufacturing firms—over 400 of them, in fact—have come to Wales since the war, lured by development

area incentives and the lavish provision of government-built factories on new industrial estates.

Wales was perhaps lucky that its time of greatest need, when employment in the coal industry was falling fast in the 1960s, coincided with a period when industries in the Midlands and the south east were feeling foot-loose and, if not exactly fancy free, ready to expand. In the past 10 years the number of workers in the coal industry in South Wales has more than halved from over 100,000 to around 40,000. This had repercussions in related industries and services, notably in the ports which were created by the coal trade. But, even here, after a period of stagnation, the ports have diversified their traffic so successfully that today, in contrast to very many other British ports, they make a good profit. The comparative bloodlessness of this drastic change in the structure of the Welsh economy, left Wales better placed to face the past two years of recession than any other ageing industrial area in Britain in need of special assistance.

As in the nineteenth century, Wales is still economically tied to England—a fact of geography about which most Welshmen are quite realistic but which makes nonsense of many of the claims about self-sufficiency put forward by the Welsh nationalists. Geographically and economically Wales divides into three. South Wales's natural ties are with the south-west of England and the Midlands; mid Wales also looks to the Midlands and North Wales again to the Midlands and to Merseyside. Between the main population belt on the southern coalfield and the only other substantial settlements in the north around Wrexham and the Dee estuary is an expanse of mountainous, sparsely-inhabited land with only a handful of small towns, poorly served by road and rail. It is easier to drive from Cardiff to London or Birmingham, for instance, than to Newtown in mid Wales. But few Welshmen now bother even to mention the possibility of a north-south trunk road, for the glaring truth is that there would not be the commercial traffic to use it.

Wales as a separate economic entity makes hardly any sense. But there is a need for more home-grown initiative to build up existing industries—a need which earlier regional policies, by encouraging only the newcomers rather than resident firms, failed to recognise. It is not enough, as practically every Welshman will tell an

English visitor at great length, to rest content with the idea of attracting branch factories from the prosperous industries of the Midlands.

It is important that young men like Barry John, who, having retired from rugby football at the age of 27 and at the height of his fame, works for a finance company in a bustling part of downtown Cardiff, should feel confident that they can make a future for themselves in Wales. In the past the

The other kind of nationalism

Many Welshmen today will describe themselves as "nationalists with a small n." By which they mean that they are all for preserving Wales's different identity, but not for cutting its strong and, in fact, unbreakable ties with England. When it comes to being different the Welsh have a lot going for them, besides a fanatical passion for rugby football. To start with, they are a Celtic people with very separate origins from their Anglo-Saxon neighbours and, despite the upheavals of the nineteenth century and the large emigrations from the coalfield in the 1920s and 1930s, they have managed to retain their language and traditions to an extent—at least as far as the language is concerned—that the Scots and the Irish have not. In fact, the industrial revolution, far from destroying their culture, kept the Welsh in Wales. At a time when cheap American farm products led to an agricultural slump in Europe and forced poor farmers in Scotland and Ireland to emigrate to America or England, their Welsh counterparts moved instead to the coalfield, transferring their lively folk culture, strengthened by a religious revival, to the mining villages.

The depression in the 1930s temporarily drained some of the Welsh vigour. But today nationhood is as strong a force as ever. A good number of the votes which the nationalists pick up in by-elections are more an expression of this "differentness" than any wish for literal political independence. In such an atmosphere it is important that Wales should be run as much as seems sensible from Cardiff rather than Whitehall.

Unlike Scotland, which has had a Scottish Office at St Andrew's House in Edinburgh since 1939, the transfer of administration from Whitehall to Cardiff has been comparatively recent. The present Welsh Office has its

great problem was that Wales's brightest sons left for England or abroad because home could not offer them the same job opportunities.

Even today Welsh millionaires in Wales can be counted on the fingers of one hand, while the number of Welsh teachers in English schools and universities is legion. But the drift away from Wales has been checked. The Welsh want to keep it that way. And the chances are that they will.

origins in the Welsh Office of the Ministry of Housing and Local Government that was set up in 1951. By 1958 a minister of state for Wales had also

been appointed. But it was left to the Labour government—with its strong Welsh representation—to set up a separate Welsh Office in Cardiff with a small political branch in London and to give Wales its own minister in the cabinet.

Since October, 1964, when it had a staff of 255, the Welsh Office has expanded rapidly. Its original brief was confined to housing and local government, town and country planning, water, sewerage and a few other subsidiary matters. But in 1965 its responsibilities were enlarged to include roads and by 1968 there were 550 men and women on its payroll. The next big step was taken in April, 1969, when it took over responsibility for health and welfare services and minor matters such as financing the new tourist board and listing ancient monuments.

"WHAT'S THE WREXHAM AREA GOT THAT WE HAVEN'T?"

The wistful cry from many parts of the U.K.

WHY NOT FIND OUT?

Here are some of Wrexham's attributes

Good location in Welsh Development Area

Excellent labour force

Fine sites with all main services

Full advice service on factory development and construction

Assistance with finance, housing problems etc.

Freedom from red tape

It was then also given a shared responsibility for agriculture with the Ministry of Agriculture (an unusual state of affairs which many Welshmen feel would be more sensibly resolved by handing the whole lot over to the Welsh Office). Primary and secondary education came under its wing in 1970—though this did not satisfy the National Union of Teachers, which argued that higher education should be included in the package—and in 1971 it took over child care responsibilities from the Home Office.

Now it has a staff of 930 people. All of them, apart from the two dozen or so that run the London branch, are based in Cardiff in a complex of elegantly planned buildings and spacious cherry-tree-filled gardens—often called Welsh Washington. The ques-

tion now is where should the handing-over of responsibilities stop and, more controversial still, how far can administrative devolution go without producing some form of parliamentary devolution as well? That point has also, of course, been made by the Scots who, with their own separate system of law, Home Office responsibilities, full control of agriculture and separate universities are still several laps ahead of the Welsh. Wales does have the Welsh Council—the successor of the Welsh Economic Council which was created in 1965 to advise the Secretary of State. It undertakes studies with specialised panels and sub-committees. But its members are nominated, not elected, and its powers are purely advisory. So, some Welshmen argue, it has no teeth.

Welsh Washington

Devolution has certainly helped to boost Cardiff's position as the capital of Wales—a status it officially acquired only in 1956. Cardiff has not always been accorded the respect that such a status would normally imply. The Labour government's proposals on local government reform would, for instance, have put Cardiff under the administration of East Glamorgan—an area of 1m people which includes many of the old mining valleys whose interests are often in direct conflict with those of Cardiff—and left the city's council with virtually nothing more than the powers of a parish council. More sensibly, the present government's solution is to cut East Glamorgan into two, linking Cardiff to its commuter belt in the Vale of Glamorgan within a local government area of about 400,000 people.

Although Cardiff is easily the biggest town in Wales, it has a population of only 284,000—140,000 fewer than nearby Bristol—though a recent Buchanan study estimated its population would grow to over 400,000 by the end of the century, with most of the increase in employment coming in the service sector. Its smallness explains why Cardiff does not have many of the amenities such as concert halls, orchestras, a repertory company and the like which can be found in larger English towns. Cardiff council has, however, ambitious plans for the redevelopment of a 300-acre area in the centre of town. The scheme, conceived in partnership with a private developer and estimated to cost £48m at 1968 prices, includes offices, a public library, a market, an arts centre, a concert hall and other places for entertainment.

And it is in Cardiff that the spanking new Sports Centre for Wales has opened.

There is certainly quite a lot of Cardiff—outside the impressive Cathays Park where the administrative offices, university buildings, law courts and museum sit grandly together—that is ripe for redevelopment. Cardiff could also do with better roads to steer cars out of the city centre, for even out of rush-hours the traffic is frustratingly congested. Nearly all the slums, including those in Tiger Bay, have gone. But office development has lagged. The Cardiff council put a freeze on office development while the Buchanan study was being undertaken and businessmen still complain of the high rents that the resulting scarcity of office space has created.

Cardiff grew on the coal trade. Commerce and banking have now changed its grimy image. But, in no real sense, is it an industrial city. It was not given development area status and it therefore failed to attract new firms in the 1960s. In 1969 Cardiff eventually got intermediate area status. But this has made little impact as yet, because of the general slack in the economy. And, indeed, recently several firms have moved out: Dialoy which employed 400 people making metal castings has, for example, moved six miles over the hill to Caerphilly in the development area.

Moreover, the opening of the Severn bridge linking Cardiff closely with Bristol and the south west has not been an unmixed blessing. On balance it has helped Cardiff. But some large companies operating in both towns felt that with such speedy communications they needed to keep only one office open. More often than not it was the Cardiff one that went. The Co-operative Wholesale Society, Stewarts and Lloyds, and the CEB all pulled out of Cardiff. The government's dispersal policy, however, is helping the city. Before long both the Inland Revenue and the Ministry of Defence will have large offices there, employing around 4,300 people between them, and in 1974 British Rail will open its western headquarters there, bringing another 2,000 jobs. With the motorway ending on its outskirts—its extension to Swansea is due to be completed by 1978—and with the developing airport nearby at Rhose, Cardiff's future as an administrative and business centre looks assured.

Lloyd George knew my father

When it comes to politics, Welshmen are not as other men. There is a peculiar religious fervour and emotional pitch about their fanatical interest in politics that sets them apart from Englishmen. Although numerous jokes are made at their expense, politicians in Wales are still accorded a kind of respect and importance that has eluded English MPs. And Wales breeds almost as many politicians who take themselves off to English constituencies as it breeds teachers who take themselves off to English schools. That may happen, as one MP suggested, because Welshmen have a passion for public speaking: "Every village has its own eisteddfod [a singing and poetry reciting competition]," he said, "and little Johnny has to get up and recite. By the time little Johnny is 17, he is much more able to stand on a soapbox or in the pulpit than his English counterpart."

That is true. But the tumultuous and bleakly romantic history of Welsh politics since the miners first got the vote in 1885 provides, perhaps, an even better explanation. The Celts are a radical people. There is no landed gentry to speak of in Wales and it has not the feudal traditions that breed Conservatism in rural England. Wales was originally a Liberal stronghold. But in 1900 Keir Hardie, the first Labour MP, was elected for Merthyr Tydfil and then the depression in the 1920s really sealed the fate of the Liberals and produced its own fervent brand of Welsh socialism. By 1929, Labour returned 25 of the 35 Welsh MPs—and most of those 25 were miners.

Labour today is still very much the

ruling party, with the Conservatives holding only seven seats (Mr Peter Thomas, the Tory Secretary of State for Wales, has an English constituency) and the Liberals one. Prominent politicians such as Mr James Callaghan, Mr Michael Foot and the lively Mr Leo Abse represent Welsh urban constituencies and they make quite sure that Wales is never forgotten in Whitehall. But these three MPs are not typical of the parochial approach associated with the Welsh Labour party. Far from being the party of the radicals it has become the party of the status quo: "Put a donkey up for Labour in the valleys," the saying goes "and they'd vote it in." Valley local government is entirely in the hands of the Labour party and membership of the party is traditionally—though not, of course, officially—a prerequisite for a decent job. This entrenched image has made many of the young turn away from socialism not, of course, to Conservatism, but to what seems now the only logical alternative to a self-respecting Welshman—the Welsh Nationalist Party, Plaid Cymru.

Its success in recent years has been remarkable. But it can be explained in terms of disillusion with the Labour party in Wales allied to a strong feeling that Westminster in the past has not paid enough attention to Wales. As yet the nationalists have sent only one MP, their president, Mr Gwynfor Evans from Carmarthen, to Westminster and he was elected in a by-election and then thrown out at the general election, when the voters actually started thinking serious politics.

More recently, the near-success of

Mr Emrys Roberts, the popular Plaid candidate in Merthyr's by-election in April, got the Welsh Labour party, which had sent down all the big-wigs to support its candidate, into quite a dither. The citizens of Merthyr had already shown a disturbing lack of respect for the party when at the general election they voted in the 84-year-old Mr S. O. Davies, the last of the old mining MPs, as an independent instead of the official Labour candidate.

Some of the younger Labour MPs now admit, if only privately, that the nationalist resurgence can do their party nothing but good if it can jolt it out of its present lethargy. There is, in fact, a strong nationalist element in the party already. Mr Elystan Morgan, for example, stood as a nationalist candidate in four elections. Other politicians are also edging that way. MPs like Mr Tom Ellis and Mr Gwynfor Jones (who took Carmarthen from Mr Gwynfor Evans) frequently hint at their nationalist sympathies.

All this amuses the nationalists, who take a certain malicious delight in pointing out that their new standing has forced the Labour party to change its mind and its policies. The most obvious change of heart occurred when the Welsh Parliamentary Labour Party came out in favour of an elected Welsh council, going so far as to propose it in an amendment to the Local Government Bill. Even Mr George Thomas, who opposed the idea when he was Secretary of State for Wales, now has had to change his mind.

Support for an elected Welsh council is widespread in the Welsh establishment, especially, of course, among its most Welsh elements. The Crowther commission heard evidence in its favour from several organisations including the Welsh Regional Council of Labour—but not the Welsh Parliamentary Labour Party—and many individuals. Inevitably, views differ on what the powers of such a council and what its relationship to the Welsh Office, to local government authorities and to Westminster should be.

There are many in Wales who would be quite willing to see an elected council if it would keep people happy, but only so long as its real powers were few and did not extend to such matters as economic planning. There are others who argue precisely the opposite in saying that such a council must have strong powers if it is to attract representatives of a suitable calibre. They do not want yet another talking shop. The nominated Welsh Council was so torn on the issue that it put

Political complexion

forward two opposing schemes in its evidence to the Crowther commission. The second model proposed an elected council with powers over health, education, transport and economic planning.

That the debate about an elected

council still waxes so loud and long is taken by the nationalists as a feather in their cap. Having started as a party concerned almost exclusively with the Welsh language and culture, Plaid Cymru has now attracted some bright young radicals, such as its national chairman, Dr Phyl Williams, a teacher at the University of Wales at Aberystwyth who originally joined as "a left-wing refugee from Labour party conservatism." Many of its candidates at the last election were teachers, doctors and professional people. Some eminent lawyers worked on its proposals for a Welsh constitution put before the Crowther commission.

The nationalist party has even gone as far as to claim that Wales could survive as an independent economic unit—a claim which the Treasury refuted last September when it published a special Welsh budget showing that the principality had an estimated overall deficit of £182m in 1968-69. But the Welsh nationalists represent a new spirit of self-awareness in Wales. With the Labour party out of power—a time when Plaid Cymru's fortunes might be expected to ebb—it is significant that Plaid Cymru attracts as much support at it does.

Counter-mining

Tradition has it that at the turn of the century no bed in the Rhondda valley was ever cold: as one man got up to go to the pit another came off shift to sleep. Today the Rhondda does not look all that different than it did then when, with a population around 170,000 and nearly 200 coalpits, it was the most densely mined area in the world. Fourteen continuous miles of miners' cottages hastily thrown up by such large landowners as the Marquis of Bute still stretch along the narrow valleys. Hill sheep still scavenge for tit-bits in the streets. But now, of course, most of the collieries are derelict and in the Rhondda only three, employing about 3,000 men between them, are operating. The slag-heaps and the houses are still there, but only 90,000 people now live in the Rhondda. The older men and women stay put, generally in cottages which they own rather than rent and on which plainly they often lavish a good deal of care. But the younger people are still leaving the Rhondda and the Taff and the Tawe and the other valleys of the coalfield.

As the coalpits closed, so the valley communities lost their only reason for existence. New jobs had to be found for the colliers and, if possible, for their wives and daughters too. No one can deny the humane sense of such a policy. But where government policy towards South Wales is open to criticism is the manner in which it was applied. In the immediate postwar years, much of the effort was directed, sometimes wastefully, at trying to get new industries to settle in the valleys themselves. That policy was not a complete failure. Hoover, for instance, opened a factory in Merthyr Tydfil in 1948 to provide about 500 jobs. Today Hoover makes all its washing machines there, employs 3,400 people and in general might be said to keep Merthyr alive.

But, at best, this policy achieved only a partial success. The valleys were, simply, not attractive enough. To start with, they have very little land available for industrial development. "The only bit of flat land in most valleys is the rugby pitch," said one frustrated planner, "and that's sacrosanct."

Moreover, as the coal was sent down to the ports by rail, the valleys are served by only narrow, winding roads. Nor did a history of strong left-wing politics and memories of the depression, help. Above all, the valleys were, and in many places are still, full of industrial scars of the worst kind—huge and ugly coal tips, derelict collieries, open-cast workings and the like—and companies, which had to bring in a skeleton staff from outside to retrain a workforce skilled only in mining coal, had difficulty in persuading their skilled employees and, perhaps more crucially, their wives to come and settle down among the tawdry relics of a dying industry.

The valleys enjoyed special development area status, but most incoming firms preferred to settle in the industrial estates in the development area in the Plain of Glamorgan near the valley-mouths. Government-built estates at such places as Bridgend (where about 6,000 people are now employed), Waterton (which will eventually employ around 10,000) and Llantrisant are within commuting distance for most valley dwellers and are served by better roads. Some old towns like Caerphilly at the mouth of the Rhymney valley did manage—with the help of some progressive planning—to expand and attract new investment. Some expansion also went on at the heads of the valleys, for instance at the industrial estate at Hirwain, which can use the three-lane Heads of the Valleys road that provides good access to the Midlands.

Artery of growth

Peter Thomas

George Thomas

Gwynfor Evans

But, in all, the jam of grants and incentives for new firms was spread too widely. Now, not before time, the philosophy has changed. The Welsh Office and the Department of Trade are plainly thinking in terms of concentrating future development near the valley mouths and on the south coastal plain around Swansea, Cardiff, Newport and Port Talbot. This strategy makes even more sense now that the M4, connecting South Wales with Severnside and London, is open.

Understandably, this shift in policy, however sensible it appears to the outsider, has caused considerable resentment among the local authorities in the valleys, which depend on industry for much of their rates. They fear, with good reason, that a workforce served with bad public transport and bad roads will tire of commuting and will continue to drift away from the valleys to settle near their jobs.

Such fears have really come into the open in the present public inquiry into the projected new town at Llantrisant, the linchpin of current strategy. South Wales's other new town, Cwmbran, was built soon after the war. It has been reasonably successful and now houses about 41,000 people. But Llantrisant new town—conveniently sited between Cardiff and Bridgend—will be much bigger. It is hoped that its population will be 94,000 by 1991 and between 130,000 and 145,000 by 2001. And, what is more, it is expected—and, indeed, planned—that most of the immigrants to Llantrisant will come from the valleys—from, in fact, the Rhondda, Aberdare, Mountain Ash, Galligae and Merthyr.

At first, commuters will, no doubt, come down from the valleys to Llantrisant. But, as a recent study of public transport in the Rhondda by the Department of Employment has indicated, the difficulties a community not accustomed to commuting encounters when its members have to journey for over an hour each way to work are so great that, in the end, the commuters are likely to leave the valleys for good.

The planners argue that as people will be leaving the valleys anyway it is far better to arrest the drift at Llantrisant than somewhere in England. They also point out that Llantrisant, which already has an industrial estate and now houses the Royal Mint—hence the endearing nickname “the hole with the mint in the middle”—is well placed to attract new firms to Wales. The countryside is charming; the M4 will be just over the hill; and Cardiff, with all its banking and commercial facili-

The heart of the problem

ties, is conveniently close at hand. The men of Cardiff fear, however, that Llantrisant's growth could take place at the expense of Cardiff itself.

There are some bright patches in the gloomy tale of the valleys. A strong and influential lobby is at work in Wales which believes it is essential that the valleys, with their unique way of life and their powerful community traditions, should not be allowed to die at the hands of that impersonal thing called progress. A good many influential Welshmen have what sometimes seems an almost fanatical affection for the valleys in which so many of them were born and grew up. With a high rate of owner-occupation—as much as 65 per cent in the Rhondda—there is definitely an incentive to stay. Schools in the valleys are of a high standard, and a smaller population does at least present some opportunity to improve the housing to standards that are more in keeping with the twentieth century. There is, in fact, no reason why, so long as the efforts to reclaim and rehabilitate the land are maintained, the valleys should not become perfectly pleasant places in which to live.

Since 1966, when the local coal tip slipped and smothered the village schoolchildren of Aberfan, just south of Merthyr, a great deal has been done to move dangerous and ugly tips. Some people argue that nothing short of an Aberfan disaster would have jolted the authorities into attacking the enormous problem they had been ignoring for so long on their own doorsteps. A Derelict Land Unit (DLU) was set up at the Welsh Office to distribute the vastly increased grants that were made available to councils who wished to clear their tips. An authority can get 85 per cent of the cost of doing so and may also get some of the other 15 per cent

in the form of a rate support grant. Last year the DLU handed out £1.4m. Spending such sums of money is well worth while. Once the tips are removed, danger goes and, moreover, valuable space is won for development and, no less important, the area becomes more attractive for its habitants and for their present and prospective employers.

The local authorities in Monmouthshire have been particularly active and far-sighted in making use of the grants available to them through the DLU. They set up a joint committee, representing 11 valley authorities and covering about a third of the coalfield. It has funds big enough to employ its own independent team of experts on land reclamation. Two years ago Mr Alun Rogers, the former chief planning officer of Caerphilly who was placed in charge of this team, conducted a survey of the area and identified over 5,000 acres of derelict land. Already, 1,200 acres have been cleared and sown with grass which, fertilised with broiler manure, takes root remarkably fast. Eventually, reclaimed land will be the site of schools, factories, rugby pitches and the like. Some of these new facilities are already beginning to appear. But the task is formidable. To clear the Number 9 pit site at Tredegar—formerly a positive moonscape of tips and hollows stretching over 240 acres—cost £180,000 and involved removing 1.8m cubic yards of tip material. That tip has now provided 43 acres for housing, 40 acres for industrial sites and a large area of pleasant open space. At that rate of striking, Mr Rogers believes that places like the Rhondda could become desirable residential areas 25 years from now.

To make sure that the valleys do, indeed, become places where people

Signode Service
is available all round
them both.

Wherever you're situated in the U.K., you're within easy reach of a Signode Representative—if you want any information or advice on strapping equipment, contact your local Signode Representative.

Signode equipment installed in your production line ensures a continuity of service and, should you run into any kind of problem, your Signode Representative will make sure you get help without delay. If he can't provide the solution himself, he'll soon have our engineers on the spot to sort things out.

Behind your Signode Representative are all the resources of the world-wide Signode organisation. What it all adds up to is that Signode service is as good as Signode equipment.

NEWPORT

the obvious place for industrial expansion

A focal point of the motorway network, Newport offers direct access to all UK business centres. But that's not all.

For years Newport has enjoyed stable labour relations unequalled in areas of comparable size. Hard and loyal work in return for good working conditions and sensible management makes for business growth.

Add first-class industrial sites of up to 70 acres, excellent housing at reasonable prices, good education facilities and some of Britain's loveliest countryside and you see why Newport is the obvious place for your industrial expansion.

are happy, not merely content, to live, it is necessary that there should be some sources of local employment, in manufacturing industries as well as the service trades. The question is: How much? Plainly, much of future capital spending will have to be concentrated upon the growth points at the mouths of the valleys. But all that really implies is a shift in emphasis. The valleys will not become deserted overnight. There will be a slow seepage of people away from them. But it will be

Northern niche

In Cardiff, it is easy to forget that industrial North Wales exists. This is not really surprising. Although the two areas share many of the same problems, the industrial belts in north and south Wales are geographically so divided that the north is much better understood in the context of the Merseyside and the north Midlands than it is in a specifically Welsh one. Three-quarters of the industry in the six counties of North Wales is concentrated in a narrow strip along Deeside in Flintshire and in the Wrexham area of Denbighshire. Like South Wales, this is, traditionally, an area of heavy industry which is now trying to broaden its industrial base.

The decline of the older industries hit Wrexham particularly hard. In 1951, 20 per cent of its workforce was employed in coal. Today this figure is around 4 per cent. The big cutbacks started in the late 1950s and in 1962 unemployment was high enough for the area to be designated a development area. Since then, a good number of new industries have settled in Wrexham, but as many of them—such as Fibreglass and Firestone, the latest big newcomers—are capital intensive, this has not been enough to soak up surplus labour. Today, despite the initial impression of prosperity which Wrexham presents, the unemployment rate is still about 7 per cent.

Although the coal, lead and brick industries on which the area grew have declined dramatically, the other heavy industry, steel, is still by far the largest employer in North Wales. Shotton steelworks on Deeside employ 13,000, while the smaller mill at Brymbo near Wrexham employs 2,000. Such dependence on a single industry makes local officials, particularly in Flintshire, nervous. As in South Wales they are well aware that it is only a matter of time before the British Steel Corpora-

a lengthy process in which it should be possible to reconcile what appear to be two contradictory aims but which, in fact, are not. The first of these is to give the people of South Wales new estates in which to live and work where the economic and social return on the investment outlays is high—that is outside the valleys. The second accepts the inevitable. It is to remove the sores of industrial dereliction in the valleys to make them 'decent places in which a good number of people can still live.

tion has to shed more labour. But, in addition, there have been disturbing rumours that the corporation is thinking of closing down the steelmaking end of the Shotton works (while keeping the profitable rolling mills open). This would put around 6,000 men out of work—and many others employed in subcontracting industries. Flintshire officials estimate that if this happened all at once it would raise the unemployment rate on Deeside from 3.9 per cent to 15.5 per cent.

Deeside has far fewer new industries than Wrexham. So it would find it desperately difficult to absorb such a surplus of labour. But because of its proximity to Merseyside, many Deeside workers who cannot find work near home do commute to factories in the Wirral and on Merseyside. This explains why the current unemployment rate in Deeside is so low. It also explains why, until the Government's latest measures, Deeside was denied development area status. Englishmen from across the border have also been attracted by the glorious countryside and lower house prices to settle over

the border in Wales and still commute to their jobs. In the past 10 years a third of the population growth in Wales has been in Flintshire and in a town like Buckley, near the border, 75 per cent of the workforce go out of Wales to work.

But Flintshire has no wish to become just another dormitory area and this determination has in the past divided opinions on the real benefits of building a barrage and a bridge across the Dee estuary, linking the area much more closely to Liverpool. But now that Deeside has been made an intermediate development area, it is becoming more widely accepted that the barrage, far from draining the area of growth, would help Deeside to expand industrially.

The Flintshire County Council has already set aside 400 acres for new industrial estates, some of which is ready to let. But it cannot do much more until Whitehall decides to go ahead with the Dee barrage. The betting, certainly on Deeside and Merseyside, is that eventually it will.

The coastal stretch from Prestatyn, with its holiday camps, west to Llandudno with its plush hotels is the oldest, most established tourist area of Wales. Summer business is good. Rhyl, with only 23,000 residents, attracts some 100,000 visitors (most of them Merseyside daytrippers) a week in the peak season and earns about £4m a year from them. Llandudno probably earns double that, whereas Abergelty, with as many beds but all in caravans and chalets, gets the low-spending stayers. But employment is highly seasonal. Plainly a barrage would help not simply the small industrial towns of north-east Wales, but its seaside resorts as well.

Here comes Liverpool

Moving west

British industrialists, it is said, are much happier moving east to west than south to north. Wales's recent history seems to prove this point. All of Wales is now a development area, but so is Northern Ireland, Scotland and the north east of England. Although Scotland, with its ready supply of women workers, beat everyone to the post when it attracted most of the American computer and electronics investment which came to Britain, Wales has been reasonably successful in attracting home-bred investment from the Midlands and the south east.

Even so, not enough jobs have been created. It is true that the number of job opportunities in Wales has risen since the war but this growth has taken place entirely in the female sector and the number of jobs available for men during that period actually went down by a thumping 66,000. Welshmen are not now leaving Wales at anything like the rate they did in the mid 1950s but this can be partially explained by the lack of jobs throughout the rest of Britain.

With a population working largely in heavy industry or on the land, pre-war Wales had no tradition of women going out to work. This fact, taken with a high percentage of elderly and self-employed people, accounts for Wales's low activity rate, which at 56.2 per cent compares with 62.1 per cent in Britain as a whole. What is more, the increase that has occurred so far in female employment has come about almost by accident. Firms employing women were left very much to their own devices at a time when the task at hand was to reduce unemployment rather than to add to the workforce. In the early days, indeed, the Board of Trade actually specified that its advance factories were for firms employing men.

What sort of industry has Wales managed to attract to replace the old heavy industries? It is quite a hotch-potch. There are plenty of metalworking and engineering firms which can use coal and steel. Several big firms make car or aircraft components, including Ford, British Leyland, Borg-Warner-Kenfig, Girling Brakes and Hawker-Siddeley. But there has also been an influx of chemical companies (BP Chemicals at Baglan Bay, Monsanto at Newport and ICI at Pontypool). In general, however, Wales has gained what one observer called "mid-

twentieth century industries" and not many of the newer technologies. Nor, inevitably, have all the new arrivals, attracted in the first instance by capital grants, been labour intensive.

Several impressively large American and British companies have set up shop, but Wales's problem is still that it is a country of small firms. Only 16 firms employ more than 3,000 people each and there are not all that many firms employing more than 200 people. Moreover, Wales has encouraged practically any firm that was willing to come, ranging from the mythical factory in the Rhondda where 50 women make doll's eyes to capital intensive plants like oil refineries which, once they are in production, employ only a handful of maintenance workers.

People are beginning to realise that, with other development areas competing for custom, the way Wales should sell itself lies in its proximity to the more prosperous parts of England—and western Europe. Its factories are, perhaps unavoidably, often branches of firms based in England or abroad and, equally unavoidably, decisions on their future are taken outside the principality. But once the economy revives more indigenous companies may be encouraged by the Government's new development measures, which offer assistance to established firms as well as to newcomers to expand. This could be a crucial development, for in a recession when companies are forced

to rationalise it is the branch outfits that go first, as Wales has bitterly learned in the past 18 months. Teddington Aircraft, for instance, recently shut down its factory in Merthyr leaving 1,000 people without jobs. British Aluminium, suffering from the worldwide aluminium slump, is completely closing its Newport factory at a cost of 400 jobs and half of its factory near Neath, reducing its workforce from 1,130 to around 700. At Neath itself, 430 jobs are disappearing, for the factory of High Duty Alloys, which was taken over by a Swiss company last year, is being closed down. This series of painful experiences explains the jubilation when a firm such as Parke Davis, the large American pharmaceuticals company, decides to move its British headquarters from London to Pontypool.

The Development Corporation for Wales, which since 1958 has promoted Wales as a likely spot for companies to take root, has helped not only to attract such firms but has helped them to settle down. It has done a thankless job well. But, like Wales itself, the development corporation may well have to alter its tactics, so as to attract not all and sundry but firms which can take specific advantage of what Wales has to offer—coal, steel, good ports and so on. The corporation realises that it can no longer look simply to Britain to provide the new plants and the new jobs. In comparison with Scotland, Wales has been slow in wooing American and European investment. Indeed, at the moment only about 100 of the 3,000

companies in Wales are foreign owned. Plainly, that number should be expanded if possible. With entry into the common market just around the corner, the Welsh have some reason to believe that it will, for Wales is that much closer to Europe than any other development region in Britain.

Sir Julian Hodge is one of Wales's few home-grown millionaires, and since the war has built up a financial empire, including a merchant bank, in Cardiff. He hopes that the new National Bank of Wales, opening this year, will help to attract foreign investment. At the moment, all the clearing banks in Wales are simply branches of the London-based ones. Although these

Giants of another age

For all the efforts to diversify the Welsh economy, the two giant nationalised industries of coal and steel, employing between them 113,000 people (or one Welshman in every six), are still by far the biggest employers. That is not a statistic which lets Welshman sleep happily in their beds at night. How much smaller, they ask themselves, will the coal industry become and how many fewer people will the steel industry employ?

In the 18 months up to the coal strike in February, the South Wales coalfield experienced a period of surprisingly good fortune. Not a pit had been closed since July, 1970; for the first six months of the financial year 1971-72 the coalfield was actually paying its way; demand was good; and the coal board even launched a recruiting campaign for youngsters whose slogan "there's a career in coal" must have rung hollow in many older ears.

The coal strike, however, put an end to this optimism. Since then no more pits have been closed—at the moment there are 50 operating in South Wales—but the mines are no longer recruiting labour and, more than ever before, the Welsh colliers are wondering whether high cost Welsh coal is being priced out of the market. As many industrial contracts last for a couple of years it is still difficult to assess the full effect of the coal strike and the 7½ per cent increase in the price in coal which it produced. But the writing is there on the wall for all to see. Since 1970 the British Steel Corporation (BSC) has been importing annually 500,000 tons of coal from abroad at competitive prices. The National Coal Board hopes that the BSC will soon reverse this policy; but

banks have been expanding their operations in Wales, there has been pressure from influential quarters—including the Welsh Council on which Sir Julian sits—for the establishment of a Cardiff-based bank with branches elsewhere in the principality on the lines of American regional banks. Scotland, with its own banks, is well ahead in this particular game. It shares many of Wales's problems and by developing strong international links through its banks has attracted a good number of foreign firms. But the National Bank of Wales will have another but equally important task to perform. It will have to encourage domestically-generated capital to be more enterprising locally.

the BSC is confidently contracting up to the end of this year for coal from the United States.

The South Wales coalfield now produces 12m tons of coal a year and employs 42,000 people. Most observers would be surprised if there were more than 25,000 men there by 1982. The coalfield does have the advantage of specialised coals. The power stations still rely heavily on coking coal, as the coal strike showed, and Wales, as well as producing this, is the only area in Europe mining anthracite. Specialisation should help the coalfield, but special coals can be costly to mine. About a third of the coal mined in South Wales is thrown away. Such a high rate of wastage and the complex

geological formation of the coalfield help to explain why in South Wales the productivity rate per man shift is no more than 30 cwt, compared with a national average of close to 45 cwt. Today, the pits in South Wales are producing as much coal as they did before the strike. But a couple are in jeopardy and before long will no doubt go out of business, and more colliers will be unemployed.

The question facing the Welsh steel industry is only slightly less harsh: can it go on employing as many men as it does unless the Government, sceptical as it is about the prospects for steel, decides to site in Wales the one new integrated steelworks that it appears to believe it can justify? In economic terms, Wales has perhaps more to offer—including a deep-water port for ore-carriers at Port Talbot, plenty of land and plenty of skill—than other development areas. But, elsewhere in Britain, the social need for the direct and indirect multiplier effects that a new capital project such as a steelworks can produce is just as pressing. No British region is so heavily dependent on steel as Wales. But the present workforce of about 70,000 men will have to be reduced quite substantially, by perhaps as many as 20,000 employees.

The prospects are already ominous. In January the British Steel Corporation announced it would shut the Newport Tube Works down at the end of this year, putting 1,120 men out of work. Shortly before, Guest, Keen and Nettlefold had said it would be

Where do all the steelworkers go?

U.S. cutting tool technology in Wales

The Valeron Corporation of Detroit, Michigan, U.S.A., a World Leader in the application and design of both standard and special tooling using throwaway indexable inserts, selected Pontardawe, Glamorgan, for their United Kingdom operating base. The U.K. Company offers a complete service for standard and custom-built tooling, covering the broad spectrum of today's modern machines and production needs from the toolroom lathe to the latest N.C. and in-line transfer machines. Highly skilled Sales and Service Engineers are on call throughout U.K. to advise and assist on your cutting tool problems backed by up-to-the-minute manufacturing and engineering techniques.

Industrial Opportunity in Wales LLANELLI A Forward-looking Town

SITES

Large and small sites available.

FINANCIAL ASSISTANCE

Available.

Building and training grants and mortgage facilities.

WATER

28,000,000 gallons per week of surplus trade water available at a favourable tariff.

SUPPORTING INDUSTRIES

The varied and vigorous existing industrial pattern offers many advantages to new industry. Products produced in the district range from slabs and billets to needle bearings; coal to chemicals; from motor car components to precision instruments; from copper wire to pipe welding for refineries; from tinplate to leather; from tyre manufacture machinery to rubber dinghies.

COMMUNICATIONS

Excellent communication links with London and the Midlands.

Municipal Airport—8 miles distance.

Deep water port at Swansea—12 miles away.

Frequent and regular sailing.

HOUSING

Key worker houses.

AMENITIES

Quick and easy access to the beautiful coastline and beaches.

Sailing and fishing.

ENQUIRIES

(Telephone—Llanelli 4471/8).

closing its engineering works at nearby Cwmbrn which employs 1,000 people. And no one at the moment is willing to guess quite what will happen to the steelmaking end of Shotton steelworks and the East Moors steelworks at Cardiff, which employs over 5,000 men making steel billets. Of even greater concern is the fate of the Ebbw Vale works built to provide employment in the 1930s and still employing 9,000 people. The BSC has already indicated that, while it is prepared to keep the Ebbw Vale rolling mills in being, it must close down the blast furnaces and the billet works. This will nearly halve the labour force at Ebbw Vale. The BSC has not said when this

act of surgery will take place.

Much of the tinplate and sheet-steel capacity of Wales will, of course, survive. Much of it is modern. But neither the BSC nor the Government can run away from the fact for long that the Welsh steelworks, like their counterparts elsewhere in Britain, employ too many people. As far as employment is concerned, steel as well as coal in Wales has to be seen as a contracting industry. Once it is, then more openly than before it will be recognised that the future—in employment as much as productivity—lies in those industries which can use the steel and the coal that Wales will go on producing.

On the waterfront

Ten years ago, the ports of South Wales were in just as bad a mess as the industry, coal, that had created them. As coal exports fell so did their profits until by the late 1950s they were heavily in debt. Nine years and £35m worth of capital investment later, the formerly coal-dependent ports of Swansea, Barry, Port Talbot, Cardiff and Newport were handling 21m tons of trade a year—only half the tonnage they exported in 1913—but they also managed to make a profit of over £1m. It is quite an extraordinary transformation. Coal, a mere 1.4m tons of it, is still exported from Swansea and Barry and some is imported at Cardiff and Newport. But the old coal hoists have been swept aside to make way for the handling of other specialised bulk

cargoes such as iron and steel, timber, cars, oil and petrochemicals and fruit. Port Talbot's new deep tidal harbour alone cost £18m to build but it can now take 100,000 ton ore-carriers and provision has been made for another jetty which could take carriers of up to 175,000 tons. By 1974 it will handle all the ore for both the Port Talbot steelworks and those at Llanwern (which is currently supplied through Newport). This should save money for the steel corporation and it is hoped that Newport—which recently has had to turn away traffic—will be able to cover the gap by attracting more bulk cargoes such as timber and cars.

This success story is one in the eye for the Jonahs who until quite recently were saying that South Wales had too

many ports. The little ones like Penarth, Briton Ferry, Llanelly and Barry Port certainly had to go, as did many of the older, unprofitable docks, while some larger docks, like those in Cardiff, have to adjust themselves still further to a new pattern of trade. The Cardiff docks depend heavily on the local steelworks and if they were to close or the ore they import were to be rerouted through Port Talbot, these docks would suffer, at least temporarily. But Cardiff already handles other cargoes, including large quantities of fruit, timber and cars.

Fruit has also brought prosperity to Barry, which now handles all of the banana traffic for Geest Industries (which import over half the bananas eaten in Britain). Swansea has a regular export trade in petrochemicals from the nearby BP refinery at Llandarcy, but as BP now gets its feed stocks by pipeline from Milford Haven, Swansea no longer imports very much crude oil. In 1969 Swansea also became the British terminal for a ferry service to Cork, which, however badly the tourist trade has been hit recently, is still doing well on freight.

But Swansea is not merely a port. With a population of 170,000 it comes second in size to Cardiff and is the service area for the whole of south-west Wales. Its shipping centre, rebuilt after the blitz, is thriving. The heavy and extractive industries which in the 1930s employed 45 per cent of the workers, have given way since the war to manufacturing industries. Now nearly a third of Swansea's workers work in manufacturing firms on industrial estates such as Fforestfach.

The managerial philosophy which has transformed the ports of South Wales has been specialisation, especially in the handling of bulk cargoes. South Wales, in other words, has not really tried to compete when it comes to the handling of container traffic. The reason why the 1,500 dockers of South Wales did not join the recent national blacking of containers for more than a few hours one Friday afternoon was quite simple: except for a small traffic at Newport, they do not have to handle them. Newport's deep sea container terminal is in fact heavily underutilised and used largely for steel.

Some of the ports, too, are obvious sites for what are called Maritime Industrial Development Areas (Midas). Bulk carriers have so reduced the costs of seaborne freight that it makes much more sense than before for those industries which have to import vast quantities of raw materials to get down to the waterfront. The

British Steel helps British designers take first prize

The Centre de Creation Industrielle recently organised an international competition in Paris for outstanding contributions towards the improvement of the urban environment. From 228 entries from 22 countries a proposal for a steel intensive system of street equipment designed by the British designs consultancy Butler-Isherwood-Bartlett was awarded joint first prize. Butler-Isherwood-Bartlett's proposal was sponsored by the British Steel Corporation as part of its continuing programme to encourage creativity in the use of steel. Creativity which in this case could lead to immense sociological and economic benefits.

Co-ordinated street furniture system by Butler-Isherwood-Bartlett, a leading British design partnership.

Milford Haven: superport for supertankers

Severn estuary, which—if Milford Haven is included—carries cargoes second only in volume to the Thames, has several suitable Midas sites.

But no Midas scheme is possible without substantial aid from the Government. So far, the Government has not, understandably enough, shown itself willing to get too deeply committed to such costly projects. But, if it ever does—and ports like Rotterdam have proved just how profitable such investment can be—then South Wales, no less than the east coast of Scotland, has geography on its side.

Nelson described Milford Haven as one of the finest harbours in the world. That is still true. And within the last 12 years this superb anchorage has been transformed so that now it is the most highly concentrated area of oil refining in Britain. Last year it handled a traffic of 43m tons and by 1980 it might well be handling 80m tons. This transformation was brought about by supertankers which, weighing anything up to 250,000 tons deadweight when loaded, could not use any other harbours on the south west coast. Gulf, Esso, Texaco and BP all ship crude oil into Milford Haven. The first three of them have built refineries on the spot, while BP has a terminal at Milford Haven which pipes the oil to a refinery 70 miles away at Llandarcy. Amoco has now joined in and is now spending £20m on a refinery which should come on stream next year.

The trouble with Milford Haven is that it is so far west. As the companies with refineries there ship out much of

their finished or semi-finished products this is not as great a drawback as it might seem. And, as far as the domestic traffic in oil products is concerned, a consortium of Esso, Texaco and Gulf is in the process of curing Milford Haven's apparent isolation by laying the "three Ms" pipeline linking it to the Midlands and Merseyside. That pipeline and the refineries at Milford will have even more going for them if,

as many believe, oil and natural gas strikes are made in the Irish Sea.

The Milford Haven Conservancy Board, set up in 1958 to handle navigation in the haven and establish some system of pollution control, believes that there is still room for further expansion of the existing refineries and, indeed, for one or two more without any encroachment on the national park that is already established in Pembrokeshire. Between 1967 and 1970 the board spent £7.5m to deepen the Milford Haven harbour, so as to enable 275,000-ton tankers to unload their cargoes. But that is probably sufficient for foreseeable developments.

Although the oil companies contribute a hefty sum in rates, all this activity has not brought much visible wealth to Pembrokeshire. Refineries require only a small skilled staff and so, apart from their period of construction, they have not generated much employment. Local people are more inclined to point to the danger of oil spills than to the advantages of further industrial development. A different tune may be heard if the Irish Sea does become another North Sea. Once the American oil men start spending dollars in local shops and restaurants, it is surprising how quickly attitudes can change. They have changed in Aberdeen. They could change in Milford Haven.

In yonder green valley

The Englishman's historical stereotype of the Welshman was of a small, dark thieving Taffy who scratched a living by farming in the hills and by making periodic sheep-stealing raids across Offa's Dyke. Many Herefordshire barns today still have the thin slits in the walls, loopholes dating back to the time when the farmers were forced to defend themselves. Even now, nine-tenths of Wales is still a glorious and unspoiled countryside of mountains and hills. Some of the land in the south is farmed quite profitably, but elsewhere only heavy doses of government subsidies keep the farmers going. But, of course, the average Welshman today is no longer a country shepherd. Three-quarters of the population live in the industrial south east and another sixth in the industrial north. The population in rural Wales is still declining as jobs in agriculture and traditional rural industries such as slate-quarrying disappear.

Not very much notice was taken of

this drift away from the land until the mid 1960s. But in 1966 mid Wales was eventually given development area status. It was then recognised that there is a point beyond which depopulation must not go if an area is to remain alive. If it is to be efficient, farming, which is still the main occupation of rural Welshmen, requires reasonable services from local towns. These towns in their turn cannot provide a decent range of shopping and recreational facilities unless money is flowing in. Towns in rural Wales are tiny by ordinary British standards. The largest town in mid Wales, which covers an area of 8,000 square miles, is Aberystwyth and its population only just tops 10,000 people. For a time it was thought that the best way of checking the decline in the population would be to build a new town in mid Wales—confusingly enough at Newtown in Montgomeryshire. This idea was watered down, though not entirely abandoned, in 1966 and the emphasis

Going into Europe will cost you nothing

Because we've kept our space rates low to satisfy advertisers who only seem to want to sell to the British.

Unfairly perhaps this has made THE ECONOMIST too competitive for other international media in Europe.*

What's more, it's making a handsome present of our European and other overseas readership to those advertisers for whom the UK is an important market but who also sell elsewhere.

Such advertisers benefit because THE ECONOMIST'S circulation amongst the world's influential businessmen is as select as the market it serves. We cannot easily, like other international media with their more catholic circulations, break ours up into geographical regions to sell off in lots.

Anyway businessmen travel so much these days that one must surely begin to see the whole world as their realm and conclude that one of the safest means of reaching them through advertising is by using a medium which can be bought both at home and abroad.

Advertise in THE ECONOMIST then and you only pay for our excellent coverage of influential UK businessmen—wonderful value at £360 for a whole page—but you also get the most efficient coverage* of influential businessmen in Europe (and some pretty useful attention elsewhere).

If our space rates are too low to be fair to our international competition, not just in the UK but in Europe as well—that needn't worry you.

Buy THE ECONOMIST'S British management readers wherever they are at the moment you want to reach them—at home or abroad—and going into Europe, or any other country in the world for that matter, will cost you nothing.

*"Influential European Attitudes to International Business" done for Newsweek, 1971.

For Businessmen

The
Economist

Greenfield site

was put instead on schemes designed to boost the economies of existing towns by introducing new industries and rejuvenating traditional ones.

At first sight, this appears to be a thankless and difficult task. Communications in rural Wales are notoriously bad—the only advantage being that most of the winding mountain roads are almost empty. But the Mid Wales Industrial Development Association, a self-help body set up in 1958 by representatives of five county councils to try and attract industry into the area, has proved that the task is not entirely hopeless. Some 60 firms providing 3,500 jobs, it claims, have settled in the area since then. Many arrived after mid Wales became a development area.

At Newtown itself, which is better placed than most mid Wales towns in being within comparatively easy access of the Midlands, the Mid Wales Development Corporation was set up in 1966 and given special powers under the New Towns Act to build factories and homes for a projected population of about 11,000 people by 1980. Industrial estates covering 70 acres have been planned and already 14 factories and over 200 houses have been built. All but two of the smaller factories have been filled without much difficulty. Most of the new arrivals are small firms which have moved all their operations to Newtown.

This is not a grandiose scheme and if it continues to be successful could provide a model for developments at other rural centres and the development corporation has designated Bala,

Aberystwyth, Brecon, Llandrindod Wells, Rhayader and Welshpool as suitable cases for treatment. No government is ever likely to grant special powers under the New Towns Act quite that freely; but it is worth remembering that rural Wales, with its small population, has a disproportionately high number of highly vocal MPs. The claim that the last government kept the central Wales railway line open because it went through five marginal constituencies is not without substance.

There are some areas, however, where it is difficult to imagine any of that precious light industry ever being lured. Blaenau Ffestiniog in Merionethshire, for instance, boomed in the days of slate and had a population of 15,000. Now its population is down to around 7,000 and jobs are scarce. It is too remote to make economic sense for a manufacturing company to come

and settle down, well away from its suppliers and its markets. It is in areas such as this that the dilemma occurs when a mining company like Rio Tinto-Zinc decides to explore for minerals. The conservationists and the ramblers immediately get up in arms. But for the local council it brings the promise of higher rates and, if not many jobs, some of that magic spin off that any injection of capital into an area is supposed to bring. In May the Snowdonia National Park housed the annual meeting of the National Park Planning Authorities. Under the banner of "People in the Park," these authorities asked an eminently sensible question: Should national parks be simply wildernesses, to which the urban rich can retreat at weekends, or should they also be places in which people actually live and work? Wales, as well as the Scottish Highlands, would like to know the answer.

Taffy was a farmer

When in 1955 a dissident group of Carmarthenshire farmers broke away from the National Farmers' Union and formed their own Farmers' Union of Wales, it was yet another sign that Welsh farmers did not feel that their peculiar problems were receiving enough attention from the English-based NFU. Even before that break-away occurred, many Welshmen were demanding a bigger say in government decisions on Welsh agriculture. Their demands have been partially satisfied in the sense that responsibility for Welsh agriculture is now shared between the Welsh Office and the Ministry of Agriculture.

Just how different is Welsh farming is illustrated by the fact that over half of the whole land area of Wales (56 per cent of it to be precise) is eligible for hill farming subsidies. Of the 4m acres actively farmed, some in Pembrokeshire, Carmarthenshire, Monmouthshire and the Vale of Glamorgan are lush and rolling and suited to raising dairy and fat cattle and fat sheep. A far larger area, however, consists of high moorland and mountains, in areas like Caernarvonshire, Merionethshire, Denbighshire and Cardiganshire, where the soil is thin and the rainfall heavy. In these areas it is a struggle in winter to keep the hill sheep and cattle alive and the farmers are forced to rear store cattle and sheep which are then sold to be fattened on lush pastures usually in the Midlands and the east of England. In all, over 80

per cent of Welsh farm income is derived from dairying and livestock. The number of dairy herds is falling but the actual number of cows and quantity of milk produced is going up, and while the average size of dairy herds in Wales still lags far behind that in England, there are now many profitable modern milking parlours.

Welsh farms also differ dramatically from English ones in their size. The family farm is still the pillar of all that is Welsh. The old system of inheritance broke the farms down into small holdings. Although their number has fallen by about 20,000 in the past 20 years, of the 35,300 holdings that remain, 51 per cent of them, covering only 18 per cent of the land acreage, do not normally provide full-time employment for one man and are generally farmed part time. A further 28 per cent, covering 30 per cent of the acreage, are farmed full time but provide employment for only one or two men.

Where such hill farms are concerned, the obvious policy for any government to pursue should be first to encourage mergers among small farms so as to form economic units and, second, to encourage where possible a co-operative approach to marketing. The Labour government's answer on the first score was to propose a Rural Development Board. The board was intended to introduce some kind of rationale into the haphazard system of land sales and to arrest rural de-

Penned in

population by creating more economic farms. But it was not sold to the farmers that way and when they discovered that the projected board would have powers to stop a farmer selling his land if amalgamation with a neighbouring farm was deemed better, they protested vigorously. A public inquiry was held and the idea finally received its death blow when the Tory party promised that it would get rid of the board if it came to power.

The present Government's approach is very different. Besides the obvious fact that by entering the common market it is adopting a policy of creating a strong market and high prices for agricultural products rather than giving direct subsidies to the farmers, it has dropped any idea of forcing compulsory mergers on the farmers. It hopes, however, to encourage voluntary ones by continuing to offer, under the terms of the 1967 Agriculture Act, special lump sums to outgoing smallholders and 50 per cent grants to help to cover the costs of amalgamation.

Co-operative marketing in Wales is still very much in its infancy, but, none too soon, it has begun to catch on in the last 10 years. Now 10 per cent of Welsh livestock is marketed co-operatively, dairy products being separately catered for by the Milk Marketing Board. Besides reducing costs for farmers, the co-operative bodies—such as the Brecon and Radnor Suckle Calf

Association—do give the farmers a much clearer idea of what size and quality of animal they should produce and the buyers a greater certainty that their purchases will be of reasonable standard.

Countries with well established systems of co-operative marketing, like Denmark, developed them because their farms were heavily dependent on exports and, plainly, if the Welsh farmers are to export much to the common market, co-operative marketing will become even more important to them. The common market is still, naturally enough, a matter of contention among many Welsh farmers, not least when it comes to such matters as

the price of store animals which form such a large proportion of the cattle and sheep marketed in Wales. The up-to-date dairy farmer is expected to fare reasonably under common market conditions, although those who have relied heavily on imported cereals will have to produce more animal foodstuffs themselves. And now that the hill farmers have been reassured by the Government that their interests will be respected when Britain joins the common market, they too are less restive than they were. But, plainly, the low incomes of these small farmers will remain at the heart of the problem of Welsh agriculture for many years to come.

We'll keep a welcome

Tourism in Wales is an important growth industry. It could help more, perhaps, than anything else to keep rural Wales alive. But it is also something about which Welshmen feel very ambivalent. At one minute they welcome tourism as the panacea for all rural ills and at the next they criticise it as, at best, a provider of unstable, low paid service jobs and, at worst, a despoiler of the countryside. The truth is that most of the older Welsh farmers are interested simply in farming and have traditionally regarded giving service to leisure-seeking Englishmen as being beneath their dignity. But, today, economic necessity had led many of them to stop harping on about their self-respect and to hang out their bed-and-breakfast signs.

But although the Wales Tourist Board offers grants to encourage country people to take in holiday-makers, its main efforts are directed not so much towards attracting a larger number of tourists as towards attracting bigger spending holidaymakers. Wales, unlike Scotland which with its fishing, shooting and skiing has rather an upper crust tag, suffers from a tripper image. The shoals of caravanners, weekenders and day-trippers from Merseyside and the Midlands who flock into Wales in the summer are not heavy spenders. The average Welsh visitor comes for a nine-day stay and spends £20 a head during that time. Over half the 400,000 tourist beds available in Wales are in caravans which, as hotel customers spend at least four times as much as a caravanner, does not help matters. Caravanners contribute only 15 per cent of Wales's income from tourism. What is more, the caravans have so

ruined certain parts of the Welsh coast, particularly the coast in the north stretching from Prestatyn and Rhyl to Colwyn Bay, that choosy tourists simply stay away. Elsewhere they can, however, find plenty of quiet enjoyment where the potential for sailing, fishing, pony trekking, walking and other outdoor sports as well as sight-seeing is enormous. Here Wales's great deficiency has been a lack of good hotels. But now the hotel incentive scheme started under the Development of Tourism Act has gone a long way to help to remedy the situation.

The board is also putting a lot of emphasis on special tourism projects, towards which the government allocated £200,000 in the last financial year. These can involve the opening of little mountain railways, pony trekking centres, of which there are now 70, and so on. The tourist board shelled out £175,000 in grants last year and is committed to paying out more than £273,000 next year to cover up to 49 per cent of the cost of such projects. Although the grants are not meant to cover new accommodation, this can be included if it forms part of a wider scheme and this year the board has helped to finance a new entrant into the dictionary of tourist jargon—a "chattel" development.

The optimistic chairman of the board expects Wales to earn £140m from tourists this year. Among European countries, Wales is beaten only by Switzerland and Austria in its income per head from tourists, and as tourist income doubled in the decade up to 1970 he has some grounds for his optimism. What is more, public taste seems to be going Wales's way: the "activity holiday" and the touring

holiday are now luring many young families whose counterparts 20 years ago would have headed off with buckets and spades to Eastbourne.

Another development in Wales closely tied in with tourism is the wave of middle class prospectors, mostly drawn from the Midlands and the south of England, who are buying and renovating Welsh cottages and turning them into their second home for weekends and summer holidays. There are plenty of shepherd's cottages up for grabs in north west Wales, mid Wales and the south west. And in out-of-the-way spots, where otherwise the cottages would be derelict, this on the face of it can do nothing but good. However, in some areas the locals are already grumbling that the new vogue has pushed house prices up way beyond their means. But if the Welsh want the wealthier tourists to come, they cannot afford to be too sniffy about the new breed of cottagers who pay their rates like the next man.

What the brochures show . . .

and what the tourists see

Battle of words

In the last century "the way to advancement in Wales was to deny your culture and become anglicised. Today the reverse is the case." That comment by a Welsh academic is undoubtedly true. But what do the Welsh mean by their culture? They certainly mean a vigorous folk tradition of choral singing—which explains why Wales supplies large chunks of the choruses and soloists at both Covent Garden and Sadler's Wells as well as running a first rate opera company—and a love of poetry and sermonising. But above all their culture is embodied in the language. Today only a quarter of the population still speak Welsh, but the "language issue" is the hottest topic debated in Wales and the source of countless frictions.

If a culture cannot survive without its language, efforts to keep the language alive are likely to command a great deal of sympathy. But the fervour of the protagonists—to wit, at its most extreme, the Welsh Language Society—has only served to antagonise most Welshmen. And the implication that just by speaking Welsh one man is somehow a better Welshman than his non-Welsh-speaking neighbour makes most Welshmen see red. Welsh is no longer just the language of the rural peasantry. It has been taken up by the urban intelligentsia to the point where it has a certain snobbish cachet among educated middle class people. Anyone who now fears that the Welsh language is in danger of extinction has just not reckoned with the power of the Welsh establishment.

The language controversy really comes to the boil in education and broadcasting. The Welsh, like the Scots, have always had a keener interest in education than the English. That has something to do with the nonconformist love of self-improvement. And education was, of course, the way out of the pit, if only into teaching and preaching. The Welsh universities were built on the pennies of the poor and a much higher proportion of working-class children in Wales go on to higher education than elsewhere in Britain. Cardiganshire, a county of small farmers, sends 137 young people out of every 1,000 aged 18 to university. The national average in Britain is 72. At a parent-teacher association meeting in Cardiganshire there will be standing room only and such is the parents' interest in their local schools that at Brynccroes in Caernarvonshire,

where depopulation had forced a school to close, rebellious parents took it over and ran it for a spell.

With such a lively approach to education in Wales, it is hardly surprising that more teaching of the Welsh language and other subjects through the medium of Welsh causes such a stir. Successive governments have encouraged local education authorities to provide for children who wish to learn through Welsh and, no doubt, the Welsh Office, now that it is responsible for education, will make sure that things will stay that way. There are now 23,330 places in 39 bilingual schools, 4,600 more than there were in 1968. Many parents, particularly in Welsh-speaking areas like Merioneth, are well satisfied with this trend and, so long as the children start early enough, there is no evidence that learning bilingually hinders their normal pace of advancement.

But when parents feel that their children are being forced Welsh, tempers do get high. Teachers nowadays often find it impossible to get employment without speaking Welsh. In some counties learning Welsh is compulsory in primary schools, though learning other subjects through the medium of Welsh remains optional, while in Cardiganshire Welsh lessons are compulsory in secondary schools up to GCE Ordinary Level. Some parents in Cardiganshire objected on principle to this lack of choice and 500 of them—not a number to be sniffed at—complained to the Secretary of State and in effect asked him to take the unprecedented step of forcing an education authority to change its policy. But Mr Peter Thomas has made it plain that he does not feel that such a step is justified and the Welsh Office plainly hopes that the issue will fizzle out when a bilingual school opens in Aberystwyth, leaving the present school for the use of monoglot English speakers. In the meantime the Cardiganshire parents have doggedly taken their case to the ombudsman and parents in other counties are awaiting the outcome.

The language debate is just as controversial in the universities. The University of Wales has colleges dispersed over the country at Cardiff, Swansea, Bangor, Lampeter and Aberystwyth. Of these Cardiff and Swansea are comparatively anglicised and the most keenly Welsh is Aberystwyth. Before the war all these colleges were very

small and had a high intake of Welsh-speakers. Now half their intake is made up of English students. The Welsh speakers have dwindled to a small minority and, feeling swamped, they have tended to become defensive in their attitudes. For them Welsh has become the rallying point—the flag of resistance, if not of rebellion.

At Aberystwyth itself, teaching in Welsh has been taken so far that some academics believe it has affected the quality of instruction. Good scholars have been known to leave because either they have disapproved of teaching their subject in Welsh or because, as non-Welsh speakers or non-Welshmen, they felt that their chances of promotion were slight. And there is no doubt that Welsh-speaking students are given preference in admission to Aberystwyth.

Sir Goronwy Daniel, vice-chancellor at Aberystwyth, justifies the emphasis on Welsh on the grounds that cultural diversity is important and that "the shattered remnants of the Celtic culture are worth maintaining." Aberystwyth now has special halls of residence for Welsh speakers and Sir Goronwy claims that in establishing them the college is simply meeting a very real demand. But the language lobby is now demanding not only another hall of residence—and the biggest and smartest one at that—at Aberystwyth but also the creation of a special all-Welsh-speaking college. Students organised a sit-in on the subject last Christmas term; but on this point Sir Goronwy is not prepared to give way.

The Welsh broadcasting services come in for an even bigger hammering than the universities from all sides in the language debate. BBC Wales and the commercial HTV both produce around seven hours a week of television programmes in Welsh, often at peak viewing hours. But even though their programmes are not broadcast at the same hours, many non-linguists resent not being able to receive their favourite programmes in English. In the past they could easily do that by switching over to BBC South West or North West. But the introduction of new television sets with UHF 625 lines has put a stop to this and non-Welsh speakers are now in open revolt—a situation which the BBC annual report coolly referred to as "mixed reaction in some quarters."

Nobody envies the BBC. For while its Welsh service is sometimes accused of rabid nationalism, the Welsh Language Society has staged demos outside its Cardiff headquarters to complain

that not enough Welsh programmes are produced and to demand that an all-Welsh station should be set up. So loud were its demands that the Broadcasting Council—which decides BBC policy in Wales—actually went to the length of costing the project for a separate station. It estimated that such a station would cost over £38m to build and nearly £19m a year to run—more than enough to demonstrate how ill-considered the proposal was.

The sad fact remains that the language, far from uniting Welshmen, is proving a dramatically divisive factor in their lives. Certain jobs—in teaching,

the civil service, the arts and broadcasting, for instance—are much more difficult to land if the applicant cannot speak Welsh. A bright 17-year-old in Montgomeryshire, where Welsh is little used, told this correspondent that rather than spend his year between school and university studying abroad, as he wanted to do, he was staying on at school to learn Welsh, because, he added, "otherwise I might not be able to get a good job." Wales has difficulty enough persuading such bright sparks to stay and work in the principality. To create yet another disincentive is plain folly.

Another kind of conspiracy

One thing the Welsh never tire of discussing is Wales. "Wales is not a country," chuckled one Welshman over his drink, "it's a conspiracy." Today the Welsh feel that they are more the masters of their own destiny than at any time probably since Owen Glendower. But the realists among them readily admit that for many years to come this happy state of affairs turns on Whitehall's continuing generosity in the shape of development area status for Wales. Wales cannot turn its back on England, and the men who formulate strategies and ponder tactics in Cardiff would not pretend for a second that it could.

But there is among the so-called "Welsh Welsh," those fervent nationalists and linguists who wear their leeks and daffodils with a difference a deep-seated resentment of the English. "The Welsh suffer from the Celtic curse of having very long memories," one clergyman explained. There have been times when Whitehall behaved towards Wales in a manner that was both arrogant and at times high handed. The ban on Welsh speaking in schools which near killed the language is one obvious example. But this is all history and to react to it by becoming inward-looking and concentrating on the parish pump helps nobody.

The antics of this exuberant minority—their sit-ins, bomb scares, refusals to pay television licences and so on—infuriate the silent majority of Welshmen who feel victims of the conspiracy. These antics tarnish Wales's image not only in England but abroad. The language, the rallying point of the "Welsh Welsh," is in fact safe. It will not disappear as Cornish did and Gaelic might. "I feel that if you are so convinced of the merits of Welshness, you

should try to enthuse outsiders with it, not force it down their throats," said the same clergyman. But the Welsh Welsh do not yet have enough self confidence to realise that Welsh need not be forced to survive.

Landing the Welsh with an elected council—in which most of them, in truth, are not a bit interested—might do little or no harm and would certainly provide another outlet for the Welsh instinct for political disputation and wheeling and dealing. But, with too many powers, it might easily create an artificial barrier between Wales and England which would benefit neither. Most Welshmen would no doubt agree that Wales's real future lies in remaining England's closest but, perhaps because of this very closeness, its sturdily distinctive neighbour.

Two languages are better than one

We're raising the speed limit to ease road congestion.

As train services become faster and more comfortable, so more and more people are using them in preference to their cars. And this in turn helps to take the pressure off our roads.

British Rail will soon be introducing even faster trains capable of travelling at 125 miles an hour and more.

One of them is the High Speed Diesel, which will lop 23 minutes off the London to Cardiff journey, 29 off London to Leeds and

35 off London to Newcastle.

The other train, soon to go on test, is the APT, short for Advanced Passenger Train. So revolutionary is its design that eventually it will be capable of doing 155 miles an hour and more.

Both these trains are designed to run on conventional rail track. And only minor signalling changes will be needed to accommodate them. By the end of the decade, Inter-City should be carrying 50% more passengers than they do now.

All that without creating new lines or using up precious land space.

Urban planners know the value of an efficient public transport system. Without it our roads would be choked and our environment spoilt forever. Investment in British Rail is an investment in all our futures.

A Great British Investment

Books

Father of the revolution?

DR KINSEY AND THE INSTITUTE FOR SEX RESEARCH

By Wardell D. Pomeroy.
Nelson. 491 pages. £4.20.

Did the permissive society start in 1948 with the publication of the Kinsey report on the sexual behaviour of the human male? Dr Alfred Kinsey, who has been dead since 1956, is half-forgotten now that bare nipples are haute couture and on the cinema screen copulation is the cliché that sunset used to be. But this stolid book, written by one of Dr Kinsey's devoted and self-effacing assistants at the Institute for Sex Research at Indiana university, should do a great deal to restore to Kinsey his deserved reputation. It was Kinsey, after all, who made Americans face the simple truth that sexual activity goes on regardless of cultural and religious prohibitions against it.

Some of the charm of this book comes from its flat mid-western accent. With little art or criticism, the author tells what he knows about Kinsey and his work. The facts of his early life are riveting: the Eagle Scout, the church-goer, the serious postgraduate ecological student who pursued gall wasps, the young assistant professor who married the only girl he ever dated, "the one in a million who was as fascinated by insects as he was." Kinsey was a square and therefore, arguably, a bit of a voyeur. But he was also ambitious, serene, sincere and brilliant. These qualities led him into the career he never intended—making the first extensive collection of data on American sexual habits.

In 1938 Indiana university invited Kinsey (who was by then an agnostic biology professor) to co-ordinate an interdisciplinary course on marriage. When Kinsey found how eager the students were to discuss (privately) the facts of their own sexual careers, he became determined "to prove to the world some day that any subject may be a profitable field for scientific research if zealously pursued and handled with objective scholarship." He began to collect what he called "the histories" of as many people as

Kinsey: scientific study?

he could—homosexuals and prostitutes as well as those with more conventional sexual records—and when forced by the university, because of growing controversy, to choose between the marriage course and the research, he unhesitatingly chose the research. In 1940 he got his first grant from the Rockefeller Foundation. He had no problems of financial support until the enormous furore following the publication in 1953 of his second volume, on the sexuality of the human female, caused the foundation (then under Mr Dean Rusk) to back away.

The Kinsey team disdained the methods and attitudes of psychoanalysis. They claimed that basic facts about sexual behaviour were what should be studied, not the feelings and motives of the people involved. In order to get at these facts, Kinsey forbade blacks, women, Jews, or anyone with a strange name to work among his interviewers. Only a bland white middle-American male, he believed, could get straight honest answers from absolutely anyone to questions like: "Have you ever had sexual relations with animals?"

Kinsey was unprepared for the storm that greeted the publication of the first volume on male sexuality. The statistic that shocked the public most was that claiming that 50 per cent of married American men had committed adultery. The book became a bestseller even though it was in fact 804 pages of charts, tables and scientific prose. It was the butt of endless jokes. None the less, Kinsey persisted and brought out the second volume in 1953. Then,

the author suggests, Kinsey stung by the criticism, not only the public but from the academic world, that his health gave way and died three years later.

There are three main criticisms of Kinsey's work, none of which is dispelled by this book. One is that his statistical sampling methods were inadequate. In general, he took the data he could get—much of it from prisoners, psychologists and students. The scientific sample which might have justified the sweeping titles "Sexual Behaviour in the Human Male/Female" had not been taken. Then, hostile to psychoanalysis, he and his team discarded the disturbance they might be faced with their questions (although Pomeroy remembers one man who became sick when his interview revealed the extent of his homosexuality then there was the pretence of objectivity. Dr Kinsey claimed to be objective in his attitude towards sexual behaviour, but his statements on a questionnaire reveal an overwhelming prejudice in favour of sexual freedom and abhorrence of prohibitions against it.

But all such criticism measured against Kinsey's achievement. Without his work, the research of Drs Masters and Johnson on the physiology of sex could never have been done. They, too (in spite of their all-American surnames), have been ridiculed. But whoever chooses to mock must remember that, before Kinsey's work was first published, intercourse before marriage carried a criminal penalty in half of the states of America and private homosexuality did so in nearly every state. Kinsey often said that if the sex laws were enforced half of the population would be in gaol. It is largely to his credit that many of these laws no longer exist.

Imperial England

AN IMPERIAL WAR AND THE BRITISH WORKING CLASS

By Richard Price.
Routledge and Kegan Paul. 256 pages. £3.50.

THE PEERS, THE PARTIES AND THE PEOPLE

By Neal Blewett.
Macmillan. 560 pages. £9.50.

DECISION BY DEFAULT

By Peter Dennis.
Routledge and Kegan Paul. 256 pages. £3.25.

These three books make an interesting group than the disparate subject matter might suggest.

sight suggest; and criticism legitimately can adopt a stance or point of vantage which takes such opportunities into account.

Authors may announce their own fixed terms of reference; but the validity of those terms is itself a concern of criticism. It is one thing for Mr Price to announce that his study is intended only to determine working-class attitudes to imperialism "through the prism of the Boer war" and that the problems of the origins of the war and its impact upon subsequent events "will all be ignored." It is quite another thing to accept that an event as complicated as a war and phenomena as fugitive as "opinion" are susceptible to such restrictedly prismatic interpretation.

The reasons why there was a war in South Africa in 1899-1902 have to do with the attempt to operate a policy designed to rescue Britain from what were alleged to be the consequences of the failures in the Disraeli-Gladstone era. This policy, "imperialism," proposed that the only way of ensuring British survival into the twentieth century as a great power and a successful society was to mobilise the human and economic resources provided by the colonies; and that success or failure in achieving this end would depend upon success or failure in crucial and pivotal South Africa; and hence the need to destroy Kruger's republic.

The question of "imperialism" thus subsumes the great issues as to what sort of power and what sort of society the British people wanted themselves to be. What was the relationship between success as a society and success as a power? In turn, it raises the question of what groups or classes possessed prerogatives and credentials entitling them to make decisions either way. Superficially, Mr Price's book is an analytical investigation of working-class responses to the Boer war. In reality, it is an explanation of why the "progressive" forces of society failed to mobilise working-class enthusiasm against imperialism. Superficially, Mr Blewett's book is a piece of straightforward quantitative psephology. In reality, it is a contribution towards the argument that the "progressive" forces of society—Liberalism and Labour—established convincingly in 1910, as contrasted with the confused state of affairs in 1906, electoral prerogatives and historical credentials for making the decision against the imperialist thesis. Superficially, Mr Dennis's book is about conscription in relation to the

debate about strategic deployment of the British army between the two wars. In reality, it is a study of the consequences of the facts that, first, the "imperialists" were indeed correct in their argument that unless the British could mobilise the human and economic resources of their empire they would cease to be a great power in the twentieth century; and second, that the "progressive" forces delineated and analysed by Messrs Price and Blewett were, in terms of prerogatives and credentials, justified in rejecting the "imperialist" argument on the grounds that, whether in the form of the old, strictly imperial, form of 1899, or the new "balance of power" form of 1914, it was irrelevant to the real needs of the British people. These needs were, in Mr Blewett's words, better represented by "the Radical drive to reform the structures of political power and the social reformer's desire to redress the economic imbalance."

In this perspective, because he deals with consequences rather than causes, Mr Dennis's book is the least controversial. There is, as it were, no grinding of axes heard between the lines. Britain, in rapid decline as a power, had an appropriately wriggling and evasive military policy. It postulated defending an empire beyond British resources to defend, which in any case had been, since the failure to make the old imperial policy a reality in South Africa, not worth defending; and it shrank away from the post-South African "imperialist" recourse of making a weight again in the European balance of power, which had been adopted in 1914 with what were generally agreed to be disastrous effects. At the last moment, in 1939, under intolerable German pressure, Britain made a final lurch towards reasserting its old status as a great power.

With Messrs Price and Blewett the problem is more complicated. The premises sketched here are not admitted. Does this matter centrally? Both books, certainly, are competent and workmanlike enough to stand with monographic assurance. Mr Price perhaps makes too much of a claim to be a fearless challenger of academic orthodoxy. No one, since Henry Pelling wrote on the subject of the working class and imperialism (writing only very glancingly noticed by Mr Price) is going to assert that the working classes were in any general sense jingoistic or imperialist in sentiment. He makes, also, too much of "methodology." But for all his 23 tables Mr Price is con-

fessedly impressionistic in the end: "Lacking as we do any adequate direct evidence it is, in the final analysis, fruitless to try to establish that the working classes were either for or against imperialism." Where objection might be made is to Mr Price's unargued implication that the working classes certainly ought to have been against imperialism.

Unionism stands in much the same position in Mr Blewett's book as imperialism in Mr Price's. The implied and unargued assumption with Mr Blewett is likewise one of rationalist historicism, on "progressive" ideology, with radicalism and Labour bearing credentials and prerogatives which, in an undistorted or "natural" political and electoral system, would be translated into legitimate power to fulfil the tasks of progress and reform appointed by history. Unionist hegemony between 1886 and 1900 was "negatively sustained" by "Liberal deviation" rather than "positively" by clear democratic support. Thus Liberals were "prevented" from establishing a hold on electors who might otherwise have supported them. The point about the election of January, 1910, was that this old distorted system was revealed as having been superseded by a new and presumably undistorted system in which "socio-economic factors" were the determinants: Liberalism, unable to adapt sufficiently quickly to these new circumstances, handed the torch of progress on to its ideological successor, Labour. Mr Blewett's book is useful because of its psephology. It, and Mr Price's book also, would be better if it subjected its premises to the same analytical criticism it applies to its electoral statistics. That means, among other things, being able to make connections between the elections of 1910 and the military debates of the 1930s.

Tin god

PATÍÑO: THE TIN KING
By Charles F. Geddes.
Hale. 416 pages. £3.50.

Simon I. Patiño was a hard worker who struck it lucky by stumbling across the world's richest vein of tin in Bolivia in 1899. He became the wealthiest Latin American industrialist before the first world war. He did all the things industrialists did in those days: built railroads, bailed out his government and moved the heart of his empire out of Bolivia and on to the New York Stock Exchange. But wealth hardly

inspired him to flights of imagination.

Sr Patiño subsequently spread his tin business around the world, with smelters in Europe and mines in Malaysia; he was the founder of the important international tin agreement. But the interest in his life-history lies in what he failed to do. When the Bolivian government nationalised the tin mines the indictment was a harsh one: little of the great wealth that Sr Patiño has extracted from the rich Bolivian mines had worked through to the country's benefit. Most had been filtered off into foreign banks; the present Patiño business is still massive, family-dominated—and with activities entirely outside Bolivia.

Sr Patiño was undoubtedly patriotic about his native land. He gave Bolivia its first two warplanes and supported the government through the Chaco war, at a time when the depression was making a large dent in his profits. But he was seldom there. From 1914 until his death in 1947 he lived mainly in America and Europe. He was no great spender; he lived a quiet life in Paris, keeping a tight control on his mines but not much of an eye on the future.

Mr Geddes, who has worked for the Patiño business much of his life, is as kind to the "Tin King" as possible—too kind to create an enjoyable read. Even so, one can read quite enough between the lines to understand the causes of the recent spate of nationalisation of so much Latin American investment. That makes this book of interest to anyone in the metals industry or indeed to students of Latin American history. Sr Patiño's mine was in fact nationalised 20 years ago: but that, in turn, says a good deal about Sr Patiño.

Patiño: absentee patriot

Horrible conspiracies

THE POPISH PLOT
By John Kenyon.
Heinemann. 312 pages. £3.75.

Restoration England was a credal society, one which believed in the need for a religious establishment. After 1662 that establishment was emphatically Anglican—episcopal, monarchical and Protestant. The church had regained the support of the propertied classes as a guarantee of the traditional ordering of society. English Protestantism was not simply a religion; it stood for a whole way of life which had been built up under the Tudors and early Stuarts.

Such was the investment in the Protestant Ascendancy that any attempt to disturb it was bound to provoke a savage response from the community at large. To rule acceptably, Charles II had to respect the prejudices of his people. Foolishly, he did not. By the late 1670s the monarchy faced a crisis which in severity recalled the events of 1640 and 1641.

Professor Kenyon's study of the "Popish Plot" of 1678 takes a look at the way in which the unscrupulous trade of informing, libelling, and lying converted a deteriorating political climate into a near-revolutionary frenzy. He explores unfamiliar terrain: the twilight world of petty crime, the secret recesses of Roman Catholic organisation, the nightmare imaginings of ultra-Protestantism—all are successfully mapped out. In particular, he gives us a more complete reconstruction of Restoration recusancy than we have yet been given.

Understandably, he concentrates on the arch-villain, Titus Oates. He traces the repercussions of his "discoveries," conducting us through a maze of intrigues, trials, imprisonments and executions. It is neither an edifying nor a diverting tale. The dwelling on wearisome detail, much of it gross invention by Oates and company, makes for dull reading. Not even the colourfulness of the *dramatis personae*, nor the gems extracted from the "State Trials," serve to enliven the narrative.

More should surely have been said of the opposition's record of criticism throughout the 1670s, when the court was repeatedly attacked for harbouring arbitrary and popish designs. After all, some sort of popish plot was suspected before Oates came along. Whatever his version lacked in veracity it more than supplied in credibility, for it exactly fitted the prevailing stereotype of Protestant fear.

Oates: reaping as he sowed

The community's reaction is more crucial than Professor Kenyon indicates. Arguably, this is what made the plot, and endowed it with plausibility. The politics of self-preservation, and the reformation ideology on which they rested, explain the ferocity with which the "evidence" was pursued.

Technology of consumption

NEW COMMODITIES AND CONSUMER BEHAVIOUR

By D. S. Ironmonger.
Cambridge University Press. 200 pages. £6.

The standard theory of consumer demand supposes that a consumer maximises utility; that this is a function of the bundle of goods which he consumes; and that the collection of alternative bundles which he could buy is limited, given the prices of the goods, by the amount he can spend. Nothing is said about what causes goods to confer utility, so very little comes of the theory to explain or predict actual consumer behaviour. Indeed it was once reduced to the proposition that goods are goods, which is true but unhelpful.

A natural development of the theory, notably in the hands of Professor Lancaster, is to say that goods have the capacity of meeting wants and that it is the structure of wants which is given. Each good may then contribute towards the satisfaction of several wants and more of one of them may be bought when it becomes cheaper both because the wants it

meets are now satisfied more fully at the expense of other wants and because it has become a more efficient way of satisfying some of the wants already met. Thus the consumer is viewed as manufacturing want satisfaction by the input of a collection of goods just as the producers manufacture goods by means of inputs of labour, materials and so on. Consumption, as well as production, has a technology.

The intellectual charm of all this is that the theory can cope with new goods (or improvements of existing ones). They provide a new collection of want-satisfying qualities, thus constituting a change in the available "technology" of consumption. How much they are bought will depend on their prices, the collection of qualities they possess, and the structure of wants. Some very elegant theorising has been done along these lines. Yet while it represents an improvement in one sense, it has not actually generated any more useful propositions about consumer behaviour.

It now turns out that in his Cambridge thesis, presented in 1961, Dr Ironmonger was among the first to invent this new theory. The present book merely adds one chapter to that thesis and (inexcusably) refrains from any discussion of the contributions by Professor Lancaster and others which all appeared after it was finished. Perhaps the main difference in the theory is Dr Ironmonger's strong assumption that a consumer's wants are all satiable and priority-ordered. This enables him to use a linear-programming approach to produce more propositions but, even so, none of them is directly testable or intuitively very illuminating.

While his theorising about the demands for new commodities generated no directly testable propositions, it did lead Dr Ironmonger to study their quantitative importance in the growth of consumption between the wars. Using simple statistical measures he classified commodities into new, established and outmoded. The 50 out of 113 which he classified as "new" accounted for just below a fifth of total consumption at the beginning of the period and a third at the end. Such changes, he suggests, have as much to do with the spread of knowledge about the want-satisfying capacities of new goods as with the changes in prices, incomes and population to which the standard theory of consumer demand exclusively directs attention.

True life story

HOAX

By Stephen Fay, Lewis Chester and Magnus Linklater.
Deutsch. 317 pages. £2.75.

A team from the Sunday Times has won the race to tell the full story of Mr Clifford Irving's gigantic confidence trick, his supposed autobiography of America's most mysterious man, Mr Howard Hughes. This almost incredible tale cannot help but make fascinating reading, even though the "astounding revelations" promised on the jacket fail to materialise. What the authors have done—and it is a good deal—is to fill in the gaps and shadowy places in the disjointed newspaper accounts of the time. In particular they make clear the discreditable part played by Mr Stanley Meyer. He was a self-appointed literary agent for the true memoirs of Mr Noah Dietrich, a long-time associate of Mr Hughes. Mr Meyer first alerted the Hughes organisation to the existence of this manuscript, which it wanted to kill as it had killed many other books about its master, and then showed it (and the transcripts on which it was based) to Mr Irving.

The book is extremely charitable to the McGraw-Hill publishing company and to Life magazine. Both refused to believe that they had been hoaxed until the proof was rammed down their throats by three revelations: that the H. R. Hughes who had endorsed their cheques was in fact a woman; that certain passages in the Irving manuscript were identical with those written earlier by Mr Dietrich's ghost-writer; and that Mr Irving's account of his journeyings to see Mr Hughes were, at one point at least, flatly contradicted by geography. (This was the contribution of the United States Postal Inspection Service.)

New York, N.Y.

Dear Mr. McGraw-

The facts placed before me, I find astonishing. I do not understand why it is not possible for your publishing house to possess a complete and accurate record of all the lives and Mr Clifford Irving and Mr. Dietrich, for the publication of my autobiography. I am sure that you will be able to do this.

A take that fooled McGraw-Hill

But in defence of Life and McGraw-Hill it must be said that Mr Hughes was the ideal subject for a hoax. Rich and powerful beyond the wildest dreams, he had an obsession about his privacy. Courts and states called in vain for him to appear in person and the wildest rumours circulated: he might be dying, he might be dead, since only a few bodyguards ever saw him. The Irvings counted on the hermit never to emerge and on his legendary eccentricity. Even when Mr Hughes denounced the hoax on the telephone, the wisecracks smiled and said that that was just what they had expected from Mr Hughes.

Poets at war

OUT OF BATTLE

By Jon Silkin.
Oxford University Press. 376 pages. £5.

This new study stems from a commemorative exhibition in honour of Isaac Rosenberg held at the University of Leeds as long ago as 1959. Mr Silkin was much involved in the preparation of this, and his enthusiasm for Rosenberg's poetry comes across strongly in the chapter devoted to him. There is no special pleading, however, in what is a remarkably comprehensive book. It considers the characteristic work (not forgetting their letters) of some dozen poets who were on active service during the 1914-18 war, but it sets this group in a larger context.

This is an approach that Mr Jon Silkin shows to be well worth adopting. He is as much interested in scrutinising the emotional and intellectual stances of these war poets as in analysing the literary techniques by which their attitudes found expression. He is, needless to say, a perspicacious and subtle reader. His own achievement as a poet would guarantee that. He is also a troubled observer of man's inhumanity to man. He does not isolate these poets of 50 years ago from contemporary life, but reckons that the best of them exhibit a force and complexity in their use of language that should make them significant to present-day writers dissatisfied with the Eliot-Pound tradition.

One of the most interesting poets included in this group is David Jones, seldom associated with it because his "In Parenthesis" was published so long after the actual experiences which fertilised his imagination. Charles Sorley and Ivor Gurney, whose names do not figure so regularly in anthologies of war poetry as those of Edward Thomas or Herbert Read, are given

Loch Ness monster: an average of the apparitions

sympathetic attention. As might be expected, Sassoon, Owen and Rosenberg remain the major triumvirate, but the way in which Mr Silkin both distinguishes and interrelates the poets means that the book in its totality gives a coherent impression of a remarkable corpus of poems. It is not always easy reading, but it repays attention.

Giant swimmers

LOCH NESS MONSTER

By Tim Dinsdale.
Routledge and Kegan Paul. 172 pages. £2.50 cloth, £1.25 paperback.

THE SEARCH FOR MORAG

By Elizabeth Montgomery Campbell.
Tom Stacey. 192 pages. £1.90.

People living on or near the shores of Loch Ness and Loch Morar see the monsters that occupy both of the lakes more regularly than they would like most people to know. Admitting that you have seen the snake-like head or the humpy back break surface invites either corny jokes about your drinking habits or, what can be even worse, the attentions of the little bands of investigators who year after year patiently watch and wait along the shores and fill in the long hours between collating the reports of other people's sightings.

Mr Tim Dinsdale's beat is the length and breadth of Loch Ness, where on his first visit in 1960 he saw and photographed something curious in the water and where, although he has been going now to Loch Ness for 11 years, he has never seen anything since. His account, and his explanation of the research techniques that he pioneered, has been revised and updated in time for the start of his twelfth season. It includes his cruellest disappointment last autumn, when he missed seeing the monster's head emerging 10 feet above a tremendous commotion in the water because the sun was in his eyes.

Where Loch Ness is black and peaty, Loch Morar is crystal clear and it is here that Mrs Elizabeth Montgomery Campbell has done most of her investigating. Like many others, her interest was sparked off by Mr Dinsdale's transparent integrity, and the

Loch Morar team owes much to his methods. The list of monster sightings that have been collected at the Loch Morar investigation station since 1970 is as impressive as anything reported from Loch Ness and, because the water is clearer, includes accounts of big beasts seen basking on the lake bottom by startled fishermen.

Evidence for the presence in both lakes of something bigger than a big eel continues to accumulate, but it is still secondhand hearsay. When all the sightings have been gathered, listed and the last drop of corroborative detail wrung from them, they do not add up in either case to a full-length book. Dedicated monster watchers may not mind, but those merely mildly curious may find both books over-padded and disappointingly slight.

Short list

Nor Shall My Sword by F. R. Leavis (Chatto and Windus, £2.50). Dr Leavis subtitles this desirable collection of his lectures "Discourses on Pluralism, Compassion and Social Hope." They include the famous Richmond lecture of 1962, which brought the serried ranks of Lord Snow's supporters on to his back, and he plainly still feels the wounds; the explanatory postscript added for the original publication and the post-postscript added for the American edition are both included. The other lectures, of at least equal vigour, were given from 1966 to 1971, in universities ranging from Cornell to York; the dedication, rather charmingly, is "to the York students, who gave me a new Blake with clean margins to write in."

The Mature Society by Dennis Gabor (Secker and Warburg, £2.75). This is a careful attempt to present a reasonable sketch of how the western technological world might change for the better. Professor Gabor, a Hungarian-born scientist who came to England in 1934, is a Nobel laureate best known for his invention of holography, the technique for recreating in three dimensions the image of a solid object. Now he has turned his fine mind to questions of society. He believes the major problem is finding goals to work

and hope for in an affluent, secure society and suggests that all production workers have a chance, in middle life, to retrain for a service occupation which would bring them into personal contact with people. He also advocates the encouragement of nonconformism such as communal life and the education and preparation of all people for the use of leisure. There are a lot of utopias about; but Professor Gabor's is unusually down-to-earth and well argued.

Scientific Research in British Universities and Colleges, Volumes I-III (HMSO, £6.50, £6 and £5.50). If you want the expert on concrete structures, organ transplants, dead-beat position servomechanisms, toys for handicapped children, earthquakes in Iceland, education in Jamaica, the psychological effects of obesity, lattice defects in quenched alloys or the implications of Gödel's theorem, this is where to look. Four separate research groups on mapping, six on evaporation techniques, one on scuba diving, four on cats, one on horseradish, two on spelling and two on phenylketonuria, with their universities, addresses and telephones. One of the most useful references put out by the Department of Education and Science.

Business Brief

Keeping money out

In most of the third week since sterling floated on June 23rd, the pound has remained remarkably stable at around \$2.44. The main reason for this relative "strength" is that London is one of the few world financial centres into which a holder of dollars can switch his money and still hope to show a return. Your alternatives if you are a "currency speculator"—whether semi-mythical gnome or wary and weighty company treasurer—are:

(a) To put money at positive interest rates into countries where currencies, although nominally at "fixed exchange rates," are clearly more likely to go down than to go up (such as the dollar or the lira); or

(b) To try to get into currencies whose exchange rates are clearly more likely to go up than to go down (such as the D-mark or the yen or the Swiss franc), but in that case you have to climb a barricade of exchange controls to get into them.

Once upon a time, the main purpose of exchange controls was to lock resident funds in to the currencies of weak countries. Now, in a crazy reversal of roles, their main purpose is to lock foreign funds out of the currencies of strong countries. Many of these controls were imposed when President Nixon first floated the dollar down last August, and many of the stronger countries did not want their currencies to float up too much. Some were re-imposed last February, when it became clear that the "Smithsonian" exchange rates fixed in December were not going to last. Now they have been intensified again.

Three weak sisters

Admittedly, the three weakest countries—Britain, Italy, the United States—still impose controls against capital outflows. In Britain these controls were perversely strengthened when the pound was floated.

Italy has decided to try to maintain an overvalued exchange

rate for the lira, and its intensification of exchange controls is therefore more logical. It is a severe intensification, designed to make it no longer worthwhile to climb the Alps with a suitcase full of lira banknotes. By banning the conversion into foreign exchange (or fully convertible "capital" accounts at Italian banks) of lira banknotes presented by foreign banks, the Bank of Italy has in effect created a separate, unofficial market in banknotes abroad in which the lira will be left to find its own level.

Barricades by the strong

Most of the exchange controls being strengthened today, however, are designed to prevent dollars or lire (or possibly pounds) coming into strong countries: thus increasing their internal money supply, and undermining their domestic economic policies, as well as obliging their central banks to hold currencies that they do not want.

The most dirigiste of these systems of exchange controls consists of flat directives, which simply outlaw certain exchange transactions. This is the policy followed by Japan. Less illiberal are various market mechanisms which change the cost calculations of exchange transactions. The most market-oriented of exchange controls are those operated by France, which splits its exchange markets in two.

Until early May the French government ruled that the official or "commercial" franc could be used only for actual imports and exports of goods, a few related invisibles, and current payments by, or in favour of, governments and public bodies. It has since broadened its rules so that most other commercial transactions (including merchanting trade and payments for services like insurance and transport) can be covered at this rate. But all other transactions—capital trans-

fers, remittances abroad by foreign workers, travel and the exchange of banknotes—must take place through the market for financial francs, now on balance between 5% and 6% more expensive than commercial francs.

Most other continental countries, as the table opposite shows, have settled for hybrid systems, with Germany (at least before Herr Schiller gave way to Herr Schmidt) moving only reluctantly. But the pacesetter in breaking normal liberal banking rules during the past two weeks has been Switzerland, which has been ready to try almost anything and everything. A simple man's guide through the labyrinth will give some idea of just how tight its controls have become.

Swiss francs

Assume you want to swap some suspect dollars into a nice, safe, Swiss franc investment. What would be your choices? Your first thought might be to put your money on deposit in a Swiss bank. You will no longer find this easy.

First, you will have to find a bank ready and able to take your dollars, to convert them into francs and to place them in a freely convertible Swiss franc deposit. The bank must comply with a whole range of interlocking and overlapping requirements—to limit such conversions, to meet a 50% reserve requirement on increases in its net foreign liabilities (over July 31, 1971), to balance at the end of each day its net foreign exchange position. Still,

The exchange control armoury	Austria	Belgium-Lux	Germany	Japan	Holland	Switzerland
No interest on non-resident deposits			•	•		•
Negative interest on non-resident deposits						•
Special reserve requirements on increases in banks' foreign liabilities	•		•	•	•	•
Flat ceiling on banks' net external positions (or 100% reserve requirements)			•		•	•
Specific restrictions on banks' foreign borrowing, repatriation of foreign assets, or conversion into domestic currency of funds borrowed abroad	•	•			•	
Restrictions on the crediting to freely-convertible accounts of funds converted from foreign currency	•				•	•
Limitations on non-resident purchases of:						
Money market paper				•	•	•
Bonds				•	•	•
Quoted shares				•	•	•
Unquoted shares or bonds				•	•	•
Property				•	•	•
Measures to discourage non-bank borrowing abroad (or repatriation of foreign assets)			•	•	•	•
Special restrictions against advance payments for exports			•		•	
Rules to ensure conversion into foreign exchange of loans raised by non-residents on the domestic capital market				•	•	•

*In Belgium such deals must go through the free exchange market (which is similar to, but much narrower than, that of France); in the Netherlands non-residents are not allowed to buy guilder bonds from residents except with the proceeds from non-residents' sales of such bonds to residents (in separate exchange market pool).

How Germany's cash deposit scheme works

Suppose a German company needs to borrow to finance a DM 100m investment. These are the cost calculations it would have to make in deciding where to go for the money.

Choice (1)

Domestic borrowing when the interest rate is 8%:
 Amount that has to be borrowed DM 100m
 Amount that has to be repaid DM 108m
 Effective cost of the DM 100m needed 8%

Choice (2)

Foreign borrowing when the interest rate is 6% and no cash deposit is required:

Amount that has to be borrowed \$31m (DM 100m)
 Amount that has to be repaid: \$33m (DM 106m) if exchange rates remain unchanged
 Effective cost of the DM 100m needed 6%
 if the DM is revalued to DM 3=\$1 \$33m (DM 98½m)
 Effective cost of the DM 100m needed Negative

Choice (3)

Foreign borrowing when the interest rate is 6% and a 50% cash deposit is required:

Amount that has to be borrowed (to meet both the company's requirements and the deposit) \$62m (DM 200m)

Amount that has to be repaid:
 if exchange rates remain unchanged \$66m (DM 212m)
 Effective cost of the DM 100m invested 12%
 if the DM is revalued to DM 3=\$1 \$66m (DM 198m)
 Effective cost of the DM 100m invested Negative

if the bank can immediately reinvest the money you are offering in a matching foreign asset, it may accept it.

But it is at this stage that the new controls bite home. Until the end of June you would simply have had to be willing to forgo any interest return on your deposit (as you would still on accounts with German, Dutch or Belgian banks). Now you will have to be ready to pay, in advance, a commission of 2% a quarter for the privilege of depositing your money with the Swiss.

Too much? If you want to get into Switzerland, you haven't many other choices within the rules. The Swiss have now banned foreign investments (directly or through a third party); not only in money market instruments, but also in Swiss (or Swiss franc-denominated) bonds, in shares, mortgages and real estate. True, you might still raise a loan on the Swiss capital market. But, unless the proceeds were being used to finance purchases of Swiss goods or services, they would have to be converted immediately into foreign exchange. And the Swiss are considering banning issues outright.

Marks and yen

The clamps against would-be foreign investors in Frankfurt were tightened this week. Banks and credit institutions have now been asked not to sell claims against residents' shares in

mutual funds and real estate, or foreign bonds held in their portfolios to non-residents. Nor are they to help arrange (or guarantee) foreign credits of over DM 500,000 for residents.

There is one glaring loophole remaining in Japan's otherwise formidable defences. The foreigner can still purchase yen to buy quoted shares on the Japanese stock market—although he must now produce documentary proof that he

genuinely intends to go through with the deal. This access to the Tokyo market is one of the curious anomalies that has resulted from the long American-Japanese battle over trade and capital flows.

Borrowing abroad

Strong currencies cannot be saved from upvaluing merely by dampening the enthusiasm of would-be foreign investors. Inflows of foreign exchange can also be initiated by residents who find foreign borrowing (or the repatriation of foreign assets) cheaper or easier than raising loans at home.

The banks in strong currency countries can be discouraged from such activities relatively easily. Moreover, reserve requirements (or preferential swap facilities) will increase their incentive to offset increases even in resident deposits with increases in foreign assets. The tougher nut is the non-bank borrower.

Japan and Switzerland have simply slapped straight ceilings or bans on foreign borrowing by companies or individuals. Germany has chosen to discourage such borrowing by increasing its effective cost. As the inset shows, the effect of a 50% cash deposit requirement under the Bardepot scheme is to double the true interest cost of a foreign loan (provided the D-mark is not

upvalued against the currency borrowed before repayment.

None of this, of course, does anything to prevent a massive swing in the leads and lags of normal commercial payments. This can produce an enormous inflow of foreign exchange into a strong currency. The lynchpin of Tokyo's controls is its tightening of the rules on advance payments for Japanese exports.

Will they last?

Can floods of money really be held back by devices of this kind? The answer is that exchange controls are a holding operation, and not necessarily the best sort at that. Modern money managers have enormous sums and sophistication at their disposal. Once they are convinced that a currency is in real trouble—and not simply going through a temporary bad patch—they can normally bulldoze through the most elaborate exchange barriers. When the Bank of Japan tried to pretend last August that it would not upvalue the yen, it was overwhelmed because some \$4 billion flooded into Tokyo in two weeks.

But until he expects a definitive shift in exchange rates in the immediate future, the average banker or corporation treasurer will not gamble expensively. It is this prudence before the brink on which exchange controls depend.

The impact of special reserve requirements

When commercial banks' resources increase because:

• Banks actively seek foreign funds to expand domestic lending

• Banks merely accept (passively) an increase in foreign deposits

• Banks repatriate foreign assets

• Inflows of foreign funds into non-bank sectors lead to increases in resident deposits

And the banks must meet reserve requirements on:

Gross foreign liabilities
 Reduces banks' incentive to borrow abroad (by increasing the effective cost of the foreign funds)

No effect*

No effect*

No effect*

Net foreign liabilities

Reduces banks' incentive to borrow abroad (by increasing the effective cost of the foreign funds)

Increases banks' incentive to match foreign liabilities with foreign investments

Discourages repatriation

Increases banks' incentive to use funds to increase foreign assets (against unchanged foreign liabilities), thus reducing reserves required

*What the reserve requirements will not do can be effected through special "swap" facilities. The central bank can sell spot dollars to the commercial banks and buy them back at rates sufficiently favourable to offset any interest rate differential in favour of employing funds at home (rather than abroad). The central bank bears the cost of purchasing dollars forward at a rate more expensive than the rate at which it sold the dollars to the banks (a price that may be worth it as the manoeuvre can, temporarily, reduce embarrassingly large reserves). The German, Swiss, Dutch and French authorities have all at times offered swap facilities to their banks at preferential rates.

With all the competition around how come Ghana Airways are still on top?

Well, the fact is, if you are going to West Africa, there are some solid reasons why you should travel on Ghana Airways.

To start with every-one of our flights departs from London-Heathrow Airport. If you are bound for Accra, why travel to Surrey first.

Then, we fly the best planes. There is no faster, more leg-stretching, more luxurious way to get to Accra than by VC10. And remember Ghana Airways alone flies the VC10 to West Africa from London Airport. It's still a favourite aircraft with every passenger we meet.

With new airlines springing up every month, Ghana Airways is getting to be one of the veterans. To our way of thinking, this is a major plus. It's eleven years since we first took to the air, and eleven years is a long time in the history of passenger flight.

It means we are a very experienced airline. With very experienced crews. And it's worth mentioning that through all the years we've been operating, we've kept an unblemished international flying record.

There are other ways to get to the West Coast of Africa, of course. But, before you go ahead and choose one, pause for a moment. Ghana Airways fly along the West Coast by jet – not any old jet either but the latest Fokker Fellowship – 28.

If your destination lies inside Ghana, nothing could be easier. There is a super internal service, bus stop-style, by Hawker Siddely 748 prop jets.

There's something else. We wouldn't bother to mention it, but people keep mentioning it to us. It's the nature of the service aboard every Ghana Airways aircraft. When a Ghanaian hostess says 'Welcome', she really means it. It isn't a matter of training, either. You can't instil genuine warmth into a stewardess by training. In our case, we're lucky. It's a national characteristic.

Did we say there were other ways to get to West Africa? Could we suggest you do yourself a favour? Forget them.

Ghana Airways

We make new friends on every flight.

BUSINESS

It's a trade surplus again

The pound thrived on the good trade figures for June. But they may be only a flash in the pan

Until midday on Thursday the pound had been floating serenely for several days close to, or a little above, \$2.44. Then came the trade figures for June. Showing a surplus of £15m, they were surprisingly good, especially coming after a deficit in May of £42m, which had contributed to the pre-float run on sterling. Naturally enough, the pound rose. Thursday's closing rate was \$2.4540, devalued by only about 6 per cent below its old Smithsonian rate of \$2.60½.

Another reason why the pound strengthened on Thursday was that pressures against the dollar were building up again. It was down at its floor against every major European currency. While central banks were not intervening too heavily in spot markets to support the dollar, they were very active in forward markets, which are the more sensitive barometers. And, indeed, despite the good trade news, it is significant that 3-months' sterling is still at a 3½ per cent discount against the dollar.

For there can be no assurance that the jump in exports in June, to £798m, was more than a fluke. In the second quarter as a whole, trade was still in deficit. And it remains dispiriting that the volume of exports has grown no more than the volume of imports since 1967: each has risen by 35 per cent. The advantages of the 1967 devaluation on overseas trading have been destroyed by a massive wage inflation unmatched by productivity gains.

It is true, as the table shows, that the quarterly trade deficit is covered by other current earnings. But Sir Cyril Kleinwort, chairman of the Committee on Invisible Exports, has just reported that Britain's share of world invisible trade fell from nearly 15 per cent in 1964 to around 11½ per cent in 1969 (the latest year for which there are world figures). His committee foresees only slight growth in the present surplus on private invisibles in 1972 and 1973. The vulnerable earnings are those from shipping and travel. Shipping is in a worldwide slump; and the enormous expansion in Britain's tourist trade, triggered by the 1967 devaluation which resulted in a favourable swing of over £100m in the travel account, now seems to be fizzling out.

Last year 7.1m foreign visitors came to Britain, only 7½ per cent more than the year before: this increase was no better than the long-term average around the

Balance of payments

Invisible balance	+21	+59	+56	+49	+50*	

*Official estimate. †Insurance, banking, merchanting, brokerage, etc.

world. This year could prove better than last (arrivals in January-May were up by 15 per cent), partly because the major western economies are in better shape, partly because sterling's float might make Britain's prices marginally more attractive. But there are limits to further expansion: London, the main tourist magnet, is already suffering from an incipient tourist backlash. The tourist boards have been moderately successful in their efforts to spread foreigners to other parts of Britain, and encourage them to come in the off-season; but not as successful as the British package holiday industry in persuading their clients to take off-season holidays abroad. Britain will be lucky to keep its tourist account out of the red in future.

Earnings from invisibles, therefore, cannot be relied on to pay for a trade gap which could well return in the short term, as the effect of the devalued pound shows up first adversely on imports. June's import bill, down by £10m to £783m, because earlier returns had been swollen by the effects of the recovery from strikes and the arrival of several large aircraft, included only a week of the float.

So some people, including some officials in Whitehall, still see the possibility of an exchange rate as low as \$2.20. They say that the floating pound will sink quickly to that level unless Mr Heath's Government hurries to enforce a statutory incomes policy. It might have hurried to enforce one if the trade union bosses on Wednesday

had said a straight no to Mr Heath's invitation to join a working party to plan an anti-inflation strategy. Instead, the union leaders said a sort of yes (see page 62), and so there are to be yet more talks. Cynics may say that the best policy for Britain now might be to wait until these talks break down, or until any "agreement" emerging from them is broken, or until there is a dock

strike or general strike or the next big inflationary wage award; then to watch the pound fall to about \$2.20, and announce that it is to be pegged at that undervalued rate; and then to introduce a statutory incomes policy only after that. For, despite latest trade indications, Britain may badly need an undervalued pound for a while, and certainly cannot afford an overvalued one.

On the comeback trail

The bus, the Cinderella of public transport, is potentially a cheaper and faster form of travel than the railways

Few comparisons have ever been done to see whether the popular myth that trains are cheaper than buses is true. But some up-to-date estimates, by Mr Edward Smith, will appear in the September issue of the *Journal of Transport Economics and Policy*. He shows that, although figures vary enormously from city to city round the world, the average rail car in peak service requires nearly seven staff, whereas buses average only 3.8. Hamburg achieves the unusually low ratio of 2.5 staff per rail car, but even lower figures have been achieved for buses, notably in Atlanta, Georgia. The train needs an enormous back-up staff of ticket collectors and purveyors, station cleaners, signal operators and so on. The traffic staff alone can lose almost all the advantage of having just one driver for an eight-coach train.

Buses have other cost advantages too. British buses cost about £10,000 each, whereas rail cars are over £40,000. The rail car is heavier. This increases fuel costs, and also means that enormous stopping distances are required, which undermines the reputation railways have for a higher passenger capacity than buses. Finally, the buses' ability to share road investment costs with other road users leads to a much lower cost to be attributed to infrastructure. Trains intrinsically require more expensive track supervision than roads. London Transport pays over £10m a year in signal maintenance for the underground alone, whereas maintaining road traffic signals for the whole of London costs only £600,000.

Converting railway tracks into motorways for express buses would be surprisingly cheap. According to the Railway Conversion League, actual conversions by some local authorities have cost as little as one-sixth of normal motorway building. A leading transport consultant firm in the United States, Alan M. Voorhees, in advising Tyneside, has just advocated a rail system, costing £65m. When British Rail wants over £400m to modernise its south-east commuter service in this

decade, converting railways to roads for buses might save a lot of money.

The Tyneside proposal typifies how the system is biased towards railways and against buses. The final choice involved an economic comparison of a £7m bus solution, using existing roads, and the rail rapid transit. Voorhees suggested a net operating benefit on the railways (in lower staff and so on) of £1.3m a year plus other measurable benefits of £5m a year. Against this is set loan charges on Tyneside's quarter share in the capital cost, amounting to £2m a year, producing a satisfactory net return on Tyneside's £18m investment. But what about the Government's three-quarters of the cost of the venture, which it is likely to put up?

Public transport convention must now be shocked by yet another heresy. Most operators would agree that having to provide one labour force for the morning peak and another for the evening is a major cause of high fares (though for political reasons they tend to attack the congestion caused by the motorist). What they fear is the obvious solution. If the licensing system for buses was loosened—the Government intends to introduce legislation that would start this—a new flexibility could be introduced, which would overcome the high labour cost caused by the peak. The local garage could keep a bus, which would be driven by one of the mechanics twice a day.

Ironically, it was one of the Voorhees consultants who told the House of Commons that impersonality was one of the biggest problems of public transport. Locally responsive bus services, run by local people and using express roads, would be the best means of overcoming this. Typical of what small operators can do is the experience in the new town of Reston, a dormitory of Washington, DC. The local bus operators refused to provide a commuter service, so the residents did it themselves and it has expanded rapidly.

Why the bus costs less

A Lloyd's for gilt-edged jobbers?

There is an urgent need for new machinery in the gilt-edged market

The decision by one firm of jobbers, Smith Brothers, to give up jobbing in the gilt-edged market only 14 weeks after going in, and of another, Pike and Bryant, to stop after 12 years of specialisation there, highlights a major organisational crisis in the City of London. Britain's £25 billion a year market in gilt-edged is the second largest in the world. It no longer has a market mechanism adequate for its task.

Some people blame this inadequacy on the new system of monetary control that was sensibly introduced in 1971. The policy of the authorities is now to let the market find its own level. Instead of supporting a falling market to keep it "orderly," as in the old days, support will only be provided when it suits the government's monetary policy. The Bank of England intervened temporarily (but only temporarily), after the speculation against sterling. The theory is to control the money supply and let market forces ration the available credit through the structure of interest rates.

But market forces can only work properly when there is a market; and the market is made by the jobbers, who are prepared to quote prices and deal. Because the government broker no longer supports prices, they fall sharply when sentiment turns bearish, so jobbers must be very nimble indeed. Until February, the new rules were baptised in a strong bull market, but in the past few months gilt-edged prices have fallen faster than at any time since the war. The Financial Times 20-year government stock index fell from its January high of 91 to below 75 in June, before the recent recovery to over 78.

There are now only three main jobbers in the market, capitalised overall at less than £50m, while turnover averages over £100m a day. In America, the jobbing function is done by a group of 20 dealers recognised by the Federal Reserve. They are vast banks such as First National City Bank and Chase Manhattan, and brokers, such as Salomon Brothers and First Boston. They have dealing departments that will quote bid and offer prices, and they manage the government's new issues: not on a tap basis, as with gilt issues in Britain, but on a subscription basis, as with debenture issues here. The backing that these operators can give to the American Treasury bond market is far greater than can be provided by the jobbers in Britain. Yet the amount of active trading in the American Treasury bond market is much smaller than in the British one.

One answer in Britain would be not to have so large a gilt-edged market. *The Economist* has often argued that the government should raise some of the money it needs on "national income equities" (with dividends that would rise as money national income rises), instead of all on fixed-interest terms. This would also make sales of government securities—and thus monetary management—much easier at times of inflation, which is when monetary management is most needed. But there are no signs that the authorities will accept this idea, and so

Government broker Daniell: unsupporting

solutions must be found within the traditional gilt market itself.

There are three ways in which the gilt market could be changed to solve the problem, and enable large deals to go through without wrecking prices. One would be a return to the old system of support from the government broker. This would be quite wrong. Such support often ran directly contrary to the government's monetary policy: falling gilt prices often coincide with a squeeze. The Bank of England, recognising this danger, happily allowed its recent special gilt-repurchase facility with the banks—designed to help them through a difficult period of squeezed liquidity caused by the run on sterling—to elapse on schedule this week.

Another approach would be to abandon the jobbers for all large deals, as sometimes happens with equities, and to resort to private placing instead. This would also be bad. Prices would be set by the smallest deals; and one of the prime requirements of a proper market, information, would be even harder to get. The third possibility is to reinforce the jobbers so that they have adequate reserves to quote prices for even the largest deals that may be contemplated.

The American model is an obvious one, but it would be better to avoid having the resources for jobbers provided by banks. There is an obvious conflict of interest between a jobber and the principals in the market. In America, a bank is not allowed to use its own jobbing department to conduct its own deals. The conflict of interest would be much more serious in Britain with its (proportionately) larger, and much more active, market—particularly as the pension funds and life assurance companies are very important here, while they hardly hold Treasury bonds at all in America.

The solution which we suggest is for the jobbers to be backed by consortia prepared to share the risk, as are the underwriting consortia at Lloyd's. The consortia could include both individuals and companies, like property companies; but should avoid domination by the banks and all big buyers and sellers of gilts.

BUSINESS

Britain

No meant yes, but will actually mean nothing, so let's legislate

At Wednesday's meeting of the Trades Union Congress's economic committee, a group led by Mr Scanlon and Mr Briginshaw wanted to refuse point blank to talk to Mr Heath unless he did the impossible and suspended the Industrial Relations Act. Mr Jack Jones then introduced a compromise resolution that they would deign to talk to the Prime Minister through the usual machinery of Neddy. Some of the union leaders wanted this to be presented as a snub to Mr Heath; but the Prime Minister chose, and under pressure a majority of the TUC agreed, to regard it as an acceptance of his request for joint talks with the unions and the Confederation of British Industry. These are therefore to go ahead next week. They probably will not reach an agreement. Even if they do, the TUC certainly will not keep it. The only real questions at issue are (a) how pitifully long this farce of pretended conversations will continue before a statutory policy is enforced; and (b) what sort of statutory policy it will be. It is difficult to see the proposed conciliation machinery between the TUC and CBI as any serious aid to anti-inflationary policy whatever.

The Prime Minister has already had an assurance from the CBI that it will extend its price restraint policy for another three months. But Mr Heath left the impression on the CBI on Monday that he will require some real progress, not merely pious sentiments, in his talks with the unions. Otherwise it is only a matter of days and weeks before there is some sort of statutory policy.

It may not be a very effective policy. Mr Heath is keeping his options open, but ministers have been floating ideas about how a mixed statutory-cum-voluntary policy might be operated. At the centre would be a "voluntary deal" based on cost-of-living links and a threshold agreement, using set norms. The wages norm would probably be higher than that for prices. A Prices and Incomes Board would be resurrected under another name to arbitrate on special cases, probably compulsorily. Ministers are screwing up their courage to leave dividends out of a freeze, because of the damaging impact of controls on the supply of equity capital; and to continue with their much modified procedure for raising council rents. But, as a sweetener to the unions,

vague promises to curb property speculation will be offered.

The crucial questions are "what sanctions?" and "what rules for the arbitration body?" The Government does not seem to have decided about sanctions, but tax surcharges on workers' national insurance contributions, once the norm is illegally exceeded, are the only ones that make sense. There do not seem to be any new ideas about new rules for the arbitrating body either. Here the Government might be wise to take a leaf from an American book: a clause in the Crippling Strikes Prevention Bill, now before Congress, and applying to America's transport industries. It would require an arbitration board to choose either the union's demand or the employer's offer, but not split the difference in any way. Unions and employers would thus compete to make their offer look the more reasonable; even the miners, faced by a 6 per cent norm, would be unlikely to put in a 25 per cent claim, because then the arbitrator would be certain to choose the employers' figure.

Strikes

Hauliers fight back

Road haulage firms began to fight back this week. Some 120 of them told their men to drive into depots whether they were picketed or not. The employees themselves have formed a Warehousemen and Drivers' Action Group, and the men at the Chobham Farm container depot have already sought its help. Some of them have been allocated to new jobs, which they now say are menial ones, to make way for the dockers the depot agreed to take on. WADAG is also threatening to ask lorry drivers to boycott ports from Monday unless the dockers withdraw their pickets. So the docks now face a possible standstill from two fronts.

This will make the conciliatory gestures of the committee under Lord

CBI's team, helping with inquiries

Compagnie Financière de Paris et des Pays-Bas.

The General Meeting of Stockholders approved the accounts of the fiscal year 1971, the hundredth year of the Company which was founded in January 1872.

• **The report of the Board underlines the outstanding facts of the fiscal year:**

• The conclusion of an agreement with the Compagnie Financière de Suez: PARIBAS acquired 80% of the capital of the Banque de l'Union Parisienne against cession of its participation in the Crédit Industriel et Commercial. The group, which already possesses a substantial interest in the Crédit du Nord, is thus in a position to develop its activities in the field of commercial banking thanks to a network of some 700 branches in France.

• A considerable increase in the results of banking operations in France (an increase in profit of 39%) as well as abroad (for foreign subsidiaries in Belgium, Holland, and Switzerland, an increase of net profit respectively of 15%, 35% and 22%).

• Development of interventions in the international market: The Bank acted as manager or co-manager for 30 issues, totalling 616.2 million dollars, or 17% of total issues.

• New interest: in the banking and financial field, the PARIBAS group acquired an interest in the Credit Martiniquais and, in Gabon, founded both an investment company and a banking subsidiary, the Banque de Paris et des Pays-Bas; in the industrial field, the group notably created the Compagnie de Gestion d'Investissements Internationaux COGEI (an international investments management company).

Total assets of the group went from F.17,337 millions to F.26,695 millions, incorporating the Banque de l'Union Parisienne and its group into the accounts. The consolidated results amount of F.159 n (against F.130.4 millions) for the portic accruing to the Financière. The banking financial activity in France as well as at accounts for nearly 55% of these results; portfolio income for 45%.

The company's Board has decided attribute one bonus share paying dividend of 1 January, 1972 for every five shares and in his address the Chairman indicated current outlook for the 1972 fiscal year allow to maintain a dividend of F.9 on increased capital.

The estimated value per share of the Compagnie Financière de Paris et des Pays-Bas is F.400 (without taking into account any goodwill).

Salient Figures	in thousands of Francs	
	Fiscal year 1970	Fiscal year 1971
Paribas Group (Consolidated)		
Balance sheet total	17,337,000	26,695,000
Net earnings	130,424	159,000
Net earnings per share	F 16.05	F 19.88
Compagnie Financière		
Capital resources	2,119,575	2,119,575
Net earnings	78,658	98,000
Distributed	69,041	85,000
Dividend per share	F 8.50	F 10.00

Copies of the full report (in English) will be from July 24 and may be obtained from the Department, Hill Samuel & Co. Ltd., 100 Waterloo London E.C.2, and also at the Banque de Paris et des Pays-Bas, 80 Cheapside, London E.C.2.

The bank squeeze

There are 227 banks in the City of London. All squeezed into one square mile. Big banks, medium-sized banks, small banks. British banks, European banks, American banks and Oriental banks. Old ones with long traditions, new ones with short traditions.

At Irving Trust we feel you ought to know where we fit in. We are a commercial bank offering full international services.

IRVING TRUST COMPANY

36-38 Cornhill, London EC3 Telephone 01-626 3210 Telex 888851/2
Head Office: One Wall Street, New York

Active in multi-currency loans. At our London Branch you deal directly with international specialists and get access to the facilities of our Wall Street headquarters.

But the nicest thing about us is our size—nearly \$1 billion in deposits in London. We are big enough to give you international service yet small enough to give you personal attention. Let Irving be your *personal* guide to international banking.

Container workers strike back . . . building workers strike selectively . . . with slogans that mislead

Aldington and Mr Jack Jones, the dockers' official leader whose incompetence is at the root of much of the trouble, all the more difficult, especially as there is still no sign that Mr Jones is ready to accept the inevitability of a decline in dockers' jobs.

The growing concern of the hauliers could also help to revive confidence in the rule of law. Sir John Donaldson, the president of the National Industrial Relations Court, said on Monday that the pickets were in breach of their contracts. This means the port employers were, too, for not disciplining them.

The militants seem to be driving some of their own business away. This week there were only 50 ships in the London enclosed docks, the lowest figure for a long time, though at this season the traffic should be building up. The big ships seem to be unloading on the continent, where cargoes are reshipped to the smaller British ports, especially the small east coast ports that do not use registered dockers—and which are doing a booming trade.

The building industry has been hit for the past three weeks by a series of selective strikes called by the new Union of Construction and Allied Trades and Technicians. Ostensibly, the strikes are in pursuit of the union's breathtaking 70 per cent pay demand. But the main cause is inter-union politics.

UCATT came into being in January—from a series of mergers of painters', woodworkers' and other building craft unions. It now has a membership of 270,000, making it number nine in the Trades Union Congress line-up. The majority of the rest of the million building workers in the country are not in any union, but quite a few belong to Mr Jones's Transport and General Workers' Union. Both unions are fighting hard to recruit new

members, and militants within UCATT have been pressing for strikes.

The employers have offered 25 per cent spread over 18 months. UCATT reckons, however, that the offer is meaningless since, in the past, national agreements have borne no relation to the fat pay packets actually dished out on building sites. UCATT wants a deal so worded that it will guarantee specified rises at every building site.

Vat

Untidy edges

The Government cleared up some of the loose ends of the value-added tax during the report stage of the Finance Bill this week. There are two problems for charities: in their general operations they will be "exempt," but will therefore bear Vat on their purchases; while in their trading activities, such as Christmas card shops, they will be treated as ordinary traders. On the second point, the Government said on Tuesday that it will ensure that each shop or local branch will be treated separately, so as to qualify for exemption if the turnover is below £5,000. Above that level, a trading charity will pay Vat to avoid unfair competition. Tax on general operations of charities is expected to be £1.4m a year, but special arrangements may be provided where the burden exceeds the purchase tax and Set now ending.

On Tuesday, too, the art market was reassured that the clause concerned with secondhand goods will be applied in order to charge dealers on their mark-up only (and auctioneers on their commissions). This clause was originally put in to take care of the difficulties of art dealers and used car dealers, so there should be no surprise. But the announcement will put a stop

to campaigning by the art dealers based on the false assumption that the Government intended to charge the full value of each sale, thus causing multiple taxation and the end of the London art market.

Television rental is to be relieved where the television being rented has suffered purchase tax when bought. Capital write-off is about one-third of the rental charge, and the Government is to allow three years' worth of this—allocated so as to prevent disruption of trade, mainly in the first year. The cost of this concession is large: £30m in 1973-4 and £10m-15m in 1974-5. The concession will not apply to other hired goods. Car-hire firms will continue to be double-taxed on cars bought under Vat as well as purchase tax; Vat on purchases of business cars will not be allowed as a rebate, and the hire charges will bear Vat on top.

Drugs

Not to merge

To the Government's surprise, as much as everybody else's, the Monopolies Commission has rejected* both Beecham's and Boots's bid for Glaxo. The commission's "finely balanced" decision turns on the likely effect of either merger on research and development in the British pharmaceutical industry and not on the wider grounds of the "public interest" or the international competitiveness of a larger company. Logically, the Government has accepted the decision. The commission accepted that in the long term there could be some advantage from increased size, especially in the inter-

*Report on the proposed merger of Beecham and Glaxo, and Boots and Glaxo. The Monopolies Commission. HMSO, 73p.

national markets. But it took the view that each of the three companies was large enough on its own to maintain an adequate research and development effort.

This is a much easier decision to accept when considering the Boots' bid. As the commission points out, there is little industrial logic in this merger and it could act against the public interest by tying up not only potential retail outlets but also a strong wholesale chain. And the commission believes that Boots is big enough to support a considerably larger research and development department than now. The report makes it clear, too, that the logic of merging Beechams (which has developed a good new antibiotic), with Glaxo, which is much stronger in international marketing especially in the United States, is outweighed by the same argument.

Meanwhile the drugs industry has risen to the bait held out by Labour's policy proposals, published last week, by issuing a sharp little statement attacking the plan for state control. Nationalisation, the industry says, would lead to the departure of the foreign-owned subsidiaries now active in Britain and the loss of their exports. State-run drugs industries, it claims, tend to be poor at research and the discovery of new products.

The Government already has wide powers over prices paid by the National Health Service to drug manufacturers. Companies can be called on to disclose costs and prices and, where necessary, either prices can be fixed by the Government or the companies can be compelled to allow other firms to manufacture drugs at a price the Government is prepared to pay.

Labour and the City Worries

Drugs are not the only thing on the nationalisation shopping list. And the City faces a far greater interference in its affairs should Labour be returned than anything it suffered in 1964-70.

A Labour study group is now investigating (a) nationalisation of motor insurance; (b) regional state-owned building societies; (c) an investment board into which financial institutions must channel funds.

The nationalisation of motor insurance would be a more damaging blow than a state scheme competing with the existing industry, and more sweeping than the other alternative that has been suggested: the South African system, whereby only selected companies may write third party motor insurance, and then under tight regulation, while other companies are free, in theory, to compete with them for other motor risks (collision, theft and fire). Once a state motor insurance company had come into being, it would soon want to get into other business.

The state-owned building societies would, apparently, have powers to operate as lawyers (for house conveyancing) and estate agents. These advantages might indeed swell the stream of applications, but how far they would be met might hinge in practice on how much the government was prepared to lend the societies itself.

The investment board idea harks back to the bad old days before Mr Harold Wilson reassured the insurance companies in 1963 that no state interference with their investment policies was intended.

Air fares

Half price—if you booked in May

It has become a bit easier to foresee the future shape of the air fares system. The proposals issued on Wednesday by the Civil Aviation Authority are that, instead of charter flying being limited to real or fictitious clubs, a travel organiser should be entitled to book his passengers on to an airline at charter rates provided he has a batch of 40 or more (and their passport numbers please, no fiddling). They must also have been booked three months in advance for round trips only; or, as an alternative idea, two months in advance with the facility available for both round and one-way trips. This system would apply to the North Atlantic and certain other inter-continental routes.

These proposals will now be thrashed around by airlines and governments. Argument will still centre on what length of advance period is appropriate. The American Civil Aeronautics Board is believed to favour a six-month wait period, with a 25 per cent down-payment. Everybody wants to be satisfied that the British proposals will not lead to switching by scheduled passengers to the new-style charters.

The British argument is that studies show that only 2-4 per cent of business passengers book more than two months ahead, and only 10 per cent more than one month; even in these cases there are heavy cancellations and alterations before the time of flight. So there should be no danger of the businessman ceasing to pay, as he now does, for two seats when he only sits in one.

We do more than gobble up coins.

General Telephone operating companies serve 11,500,000 telephones in North America.

And even though we'll admit that has to add up to a lot of phones, we'd like to take this opportunity to remind you that General Telephone is only our first name.

Our last name is Electronics.

And that covers a lot of ground.

It covers GTE Sylvania, which, as you probably know, manufactures everything from flashcubes, flashbulbs, and lightbulbs, to television sets and stereo systems.

But did you also know that GTE Sylvania makes hundreds of electronic components for business and industry?

It covers GTE Automatic Electric, a major manufacturer of telephone equipment in the U.S., whose products include new computerized electronic switching

equipment for telephone exchanges.

And it certainly covers the people who specialize in solving the problem of easy access to computer-stored

information: GTE Information Systems.

And GTE International, not only a world leader in the construction of microwave transmissions systems and satellite communications earth stations, but with manufacturing and marketing operations in 30 countries to meet the demands of telecommunications, lighting and home entertainment markets.

And GTE Lenkurt, another one of our companies that specializes in the manufacture and installation, all over the world, of microwave, multiplex, carrier, and coaxial transmission systems for video, voice, and data telecommunications.

That should give you a brief idea of what we're doing when we're not gulping down all those coins.

And why we'd like to be known by our full name.

Rippon's paper tiger

Brussels

Negotiations are now almost complete to create by 1978 an industrial free trade area between the enlarged European Economic Community and the remaining European Free Trade Association countries (Austria, Sweden, Finland, Switzerland, Portugal and Iceland). But at the last moment, and with incredible ill-timing, Mr Geoffrey Rippon, Britain's chief negotiator, has managed to upset both Britain's new EEC partners and its old Efta trading allies by a sudden attempt to secure increased protection for Britain's paper industry from the Swedes and Finns.

The issue at stake is not a trivial Brussels squabble. Paper earns 17 per cent of Swedish and 41 per cent of Finnish exports, as well as a substantial slice of Austria's. These countries are understandably furious at what they consider a stab in the back. The Danes and the Norwegians resent an unexpected attack on their fellow Scandinavians, and are fearful of the effect that this could have on their own referendum campaigns for EEC

entry. None of the Six has shown any sympathy for the British request for a last-minute change of the rules.

Paper is a sensitive product for which the Six have already demanded an especially long transition period. Tariffs against Efta members will not be finally removed till 1983, although they will go by 1977 for most industrial trade. At present, Swedish and Finnish paper enters the British market duty-free under the Efta convention. The Six have asked Britain to raise its tariff to 4 per cent by 1977, when the EEC tariff will have been reduced from its present 12 to 8 per cent: both tariffs would then be gradually phased out over the next seven years. Britain would, however, be allowed to grant its Efta suppliers a duty-free quota to cover existing trade. The 4 per cent duty on imports over and above the quota would merely be a precaution against trade deflection.

Only a few months ago Britain was castigating the EEC for being too protectionist against Scandinavia. Then, under heavy pressure from Britain's declining and largely inefficient paper industry, Mr Rippon suddenly asked that the British tariff should be raised to 8 per cent by 1977, the same level as the Six. He has now made it quite clear to the Swedes and the Finns that the British Government will have no hesitation about reducing the tariff-free quota, when it deems that this is necessary to protect the British papermaking industry. The Swedes and the Finns could live easily with a 4 per cent duty and a guaranteed duty-free quota to cover existing trade, but the combination of an 8 per cent duty and a reduced quota would wreak havoc with their industries. Mr Rippon's demand runs directly counter to the pledge made by both Britain and the Six that the

enlargement of the EEC would not lead to the re-erection of trade barriers painstakingly dismantled over the 14 years of Efta partnership.

Mr Rippon's undiplomatic tactics have been resented almost as much as the protectionist substance of what he is seeking. Instead of raising the issue when the commission made its original proposals about paper, Britain sent off diplomatic notes to the various governments concerned only at the end of last week. This bypassed both the Efta co-ordinating machinery in Geneva and the system of consultations between the Six and the four new members in Brussels. These tactics have backfired. At their meeting in Brussels earlier this week, the Six listened politely to Mr Rippon but refused to modify their agreed position. They fixed the date for the signature of all the Efta agreements for the end of next week, thus reducing Mr Rippon's margin for manoeuvre. If the Swedes refuse to give Mr Rippon what he wants, is he really going to refuse to sign? Mr Edward Heath should take a hand to stop this protectionist and political move that could jeopardise the creation of an industrial free trade area throughout most of western Europe, a goal which Britain has always insisted is one of the preconditions of the enlargement itself.

Japan

Tanaka's for growth

Tokyo

Given the caterpillar crawl of Japanese consensus politics, it is premature to expect specific new policies to emerge from the first pronouncements of Mr Katuei Tanaka, the new prime minister. One point, however, seems certain: even more than his predecessor, Mr Eisaku Sato, he will be a true believer in that peculiar Japanese fervour to prevent any upvaluation of the yen. The link with his party's financial backbone,

Is it worth a paper-break?

Japan's major exporters, will also preclude any swift departures from the inert foreign trade policies of Mr Sato's regime. When he was minister of trade and industry, Mr Tanaka was, however, an ardent economic expansionist. He will probably plump for a more aggressive use of the country's swollen exchange reserves to buy imports of strategic raw materials and to increase investment abroad, coupled with stronger reflation at home.

Ahead of the American-Japanese trade talks which reopen later this month, finance ministry officials have leaked ambitious proposals to cut \$1 billion off this year's embarrassing trade surplus with the United States, forecast at \$3 billion. This would be done by purchasing an extra \$300m of enriched uranium and \$700m in aircraft and foodstuffs from the United States. But the Americans may call this a one-time fob-off, and press on with protectionism against Japanese imports.

As an avowed fiscal activist, Mr Tanaka is in favour of major tax cuts to boost consumer spending and business investment, as well as substantial increases in government spending to try to get things moving even more quickly than they already are. This is precisely the domestic medicine called for in the report on Japan just issued by the Organisation for Economic Co-operation and Development. But fiscal measures take time to bite and the OECD suggests there will still be considerable slack in the Japanese economy into early 1973 and a surplus on current account for 1972 even larger than last year's record \$5.9 billion. Even during this "recession" year of 1972, Japan's growth is on course to double its real income every 10 years; but the Tanaka government will regard that as not fast enough.

Mid-west for Peking?

United States and Russia Travelling salesman

The grand Nixon tours are paying off. Russia is to buy \$750m of American wheat and corn over the next three years, in the biggest single commodity deal ever arranged. The announcement comes just at the time when this year's American harvest is beginning to look like a bumper crop which could have added embarrassingly to the western world's surplus. It also came conveniently with Russia's recognition that its massive agricultural plan in the Ukraine has failed badly. In the past the Russians have tried to bridge the gap by buying from Canada: after Mr Pierre Trudeau's visit to Russia in 1971 Canada won a contract for 3.5m tons (\$235m) which is still being shipped. But an extremely severe winter in Russia's wheat growing belt this year means that this autumn's harvest will fall short of needs even with Canadian imports.

There are still plenty of details to be worked out. Although Russia has agreed to buy \$200m of wheat in the next year, the credit facilities for a further \$500m have yet to be made. The United States has insisted that the loan should be made at a commercial rate with interest around 6½ per cent, and that Russia should not be given better terms than America's usual customers. There is also the problem of how the two countries should share the shipping contracts; in the past the American seamen's unions have insisted that such shipments should be largely carried in American vessels.

The much more tricky political problem, however, is for the United States to ensure that all the grain does

in fact go to Russia. In past deals with Canada, Soviet ships full of grain have turned round in mid-Atlantic and made directly for Cuba. Russia also likes to export wheat to its east European allies even though this might cause a domestic deficit. Any attempts by east European countries to buy bulk grains from the capitalist world have always been fiercely resisted by the Kremlin, but America may now find that much of the wheat shipped to Russian ports ends up (perhaps with an extra 5 per cent added to the price) among the satellites. But since the deal will increase America's agricultural exports by 17 per cent over the next few years, the State Department is likely to turn a blind eye.

No connection has yet been drawn between the wheat deal and the mysterious sale of \$1.8m of Russian gold to the United States in May, which was made public this week. It is the first such sale in two years. But the grain transaction with Russia opens the way for important American sales to communist China. Last year the Canadians shipped 2.5m tons of grain for export to China, a trade which was always criticised by the Americans. But the mid-west could soon be harvesting for the Peking government. Boeing has been given permission to sell \$150m worth of aircraft to China for the first time. Mr Nixon's trips begin to look like those of the super-salesman.

RENOLD LIMITED

quality power transmission products

Statement by the Chairman, Sir Thomas Robson, M.B.E.

The 42nd Annual General Meeting of Renold Limited will be held on 3rd August at Renold House, Wythenshawe, Manchester. The following is the circulated statement by the Chairman, Sir Thomas Robson, M.B.E.

GENERAL

Manufacturing and trading activities deteriorated in nearly all countries in 1971/2. Most advanced economies in recent years have been subjected to progressively restrictive policies designed to curb the cost/price spiral. Yet even with these restrictions which, aggravated further by stagnation of investment in plant and machinery and a run down in stocks, brought increasing unemployment, inflationary pressures have continued. In addition, the international monetary crisis immediately exacerbated the position and further weakened the prospects of steady growth in world markets. In these conditions, general loss of confidence in economic growth was inevitable. Despite these difficult international trading conditions, the Renold Group came through the year reasonably well. The impact on the United Kingdom companies was more noticeable in the second half of the year where, besides the lower level of demand, profits were also substantially affected by disruptions in production as a consequence of the cuts in electricity supplies following the miners' strike.

In this difficult year the Group has intensified its efforts to improve still further its technical and production efficiencies and to introduce new and improved products. In addition, faced with reduced demand, we have taken the opportunity of increasing our world-wide stocks of finished products in order to locate them closer to the point of sale and make them more readily available for the time when demand increases. This also enabled us to maintain our production programmes for longer than would otherwise have been possible and to reduce the labour force by natural wastage rather than redundancy.

The Group is in very good shape to take advantage of improvements in the economy and this year with the Annual Report we are including a leaflet which illustrates its world-wide manufacturing, sales and service facilities. The Renold international organisation is the largest group in the world of companies devoted exclusively to the manufacture and marketing of high quality power transmission and mechanical handling products.

GROUP TRADING RESULTS

The Group profit on trading for the year was £8,515,000 compared with £9,672,000 last year: this shows a reduction of 12% — both the profits of the United Kingdom companies and those of the overseas companies being affected equally. In arriving at the Group profit on trading, there has been a reduction of £283,000 for additional depreciation arising from the revaluation of properties and equipment. This has been offset by an increase of £115,000 resulting from the stock increase valued on the new basis of full manufacturing overheads. These revaluations are referred to below.

TAXATION

Taxation absorbs £2,976,000 compared with £3,544,000 which was provided last year but this year United Kingdom Corporation Tax is considerably reduced due to the benefit of accelerated taxation allowances which have become available following the re-disposition of properties within the Group. In addition to the normal transfer to Deferred Taxation it has been necessary to make a corresponding transfer in respect of these special allowances and this amount of £1,264,000 is shown as a separate item in the taxation charge.

GROUP NET PROFIT

The Group profit after taxation was £4,180,000 compared with £4,777,000 last year. This represents a decrease of 12% and has the effect of reducing the earnings per £1 ordinary stock from 21.8 pence to

19.1 pence but if the benefit of accelerated taxation allowances on United Kingdom properties is not deferred the earnings per £1 ordinary stock become 25.0 pence.

DIVIDEND

The Directors are recommending a final ordinary dividend of 8.5 pence per £1 unit. This dividend, together with the interim dividend of 4.5 pence, makes a total of 13.0 pence the same as last year.

FINANCE

Whilst I indicated last year that consideration was being given to a funding operation, our expansion expenditure was curtailed in view of the current economic conditions, and the liquidity problems which we expected did not arise. We now regard our resources as being adequate to meet our present plans and any addition to permanent finance, a matter which is under constant review, will depend upon the Group's need and market conditions.

REVALUATIONS

As I mentioned in my Statement last year, in conformity with the practice of revaluing assets from time to time which we have followed for many years, we have again examined the valuation of the fixed assets of our home and overseas companies and have adjusted the values in the accounts accordingly. The surplus of £3,723,000 which has been transferred to reserves has resulted in the increased depreciation charge of £283,000 already mentioned.

At the same time we have examined the basis of valuation of manufactured saleable product stocks which for some years comprised materials, labour and certain factory overheads. It has been concluded that manufacturing stocks and those in the course of manufacture should be valued on a basis which includes full manufacturing overheads in order to ensure that the matching of cost and revenue takes place in the year in which revenue arises rather than in the year in which cost is incurred. This basis of valuation which follows the recently published draft recommendation of the accountancy bodies, would prevent any undue distortion of profits which might result from material changes in products are manufactured primarily for sales from stock.

The change in the basis of valuation of stocks has resulted in an uplift in valuation at the 29th March 1971, of £3,607,000 which has been transferred to reserves and in the main is not subject to taxation. In arriving at the amounts transferred to reserves, allowances have been made, amounting to £860,000 for fixed assets and £278,000 for stock, for the possible effects of rationalisation of product and manufacture. The international currency agreement reached in December 1971 has also affected the valuation of certain overseas current assets with the result that an amount of £168,000 has been charged against reserves — rates. In addition, the re-alignment of currencies reduced the Group profit on trading by £68,000 in respect of net losses relating to the settlement of trading indebtedness of our overseas companies for which in certain cases forward exchange cover was not available. This treatment of these items continues the accounting practice which we have followed in previous years.

SALES

Group sales for the year 1971/2 (excluding sales within the Group) which amounted to £53,297,000 showed little change from last year in value but of course this represented an appreciable decrease in volume. At home, the slowing down in demand which began to appear at the end of 1970/1 continued throughout the year and, consequently, the year as a whole was generally a poor one reaching its nadir by the end of the calendar year. Direct exports from the United Kingdom, amounting to £13,683,000, were similar in value to those of last year.

Group Results

	This Year £	Last Year £
Sales	53,297,000	53,142,000
Profit on Trading for the Year	8,515,000	9,672,000
Profit attributable to Renold Limited	4,130,000	4,721,000
Dividends	2,828,000	2,824,000
Ordinary Stock		
Dividend per unit of £1	13.0p	13.0p
Earnings per unit of £1	19.1p	21.8p

(see below)

Earnings per unit of £1 expressed on the basis of not deferring the benefit of exceptional accelerated taxation allowances on U.K. properties are 25.0 pence in the year 1971/2.

Sales by overseas companies of both United Kingdom and overseas manufactured products were maintained despite the generally downward market trend in business activity and the world-wide effects of the international monetary crisis.

In conjunction with many other companies we gave an undertaking to the Confederation of British Industry supporting their initiative on voluntary price restraint.

PRODUCTION

The manufacturing problem was to maintain efficiency while reducing production from the high levels which prevailed at the end of 1970/1, and was made no easier by the downward trend which accelerated as the year progressed. Moreover, the full effect of cost increases only came in the second half of the year when the reducing volume of activity made them difficult to absorb. Because of the policy of increasing stocks and allowing labour reduction by natural wastage, the only significant redundancy which occurred was at our machine tool factory.

DEVELOPMENT

Research and development in new and improved products have continued strongly and the opportunity has been taken during overall production slow-down to concentrate on new and improved products in the fields of precision chain, worm gears, geared motors, speed variators, sprag clutches, Manesty tableting machines and Parkinson milling machines.

All this interesting, and we expect rewarding, development will enable us to meet the demands likely to expand for products which will in every way be leaders in their particular fields.

ORGANISATION

The final stage of operational integration in the power transmission activities of the Group will shortly be completed. The Holroyd and Crofts Division will be reorganised as the Gear Division with the existing operating companies (i.e. John Holroyd, Crofts Engineers and Carter Gears) becoming establishments of Renold Limited. Products and their marketing arrangements will remain unchanged.

At the same time, the foundry activities of the separate companies will be combined in a new subsidiary, Holcroft Castings and Forgings Limited, which will also be administered within the Gear Division.

EXPANSION PLANS

Our expanded capacity is now estimated to be adequate to meet the likely level of demand which is expected in the near future. Some expansion plans previously authorised have been cancelled in consequence and will be reviewed at a later date. Therefore our plans are more concerned with further modernisation and improvement than with further increased capacity. At Crofts, Bradford, we have completed an extensive and modern warehouse for power transmission products which will considerably improve our ability to supply catalogue products from stock. At Milnrow we are building a new factory separating

Manesty machine manufacture from Holroyd gear making and we are now proceeding with a scheme which will modernise the whole factory and improve the appearance of the surrounding land. This site adjoins the new M62 motorway and we hope that when our scheme is finished and landscaped it will prove to be a noteworthy example of what can be achieved in the older mill towns of Lancashire.

In France the new conveyor chain factory near Lille has been completed whilst in Germany the extension and modernisation of the chain factory at Einbeck is providing not only increased capacity but improved facilities. In New Zealand, through the acquisition of D. A. Wilkie Limited, a small gear manufacturer, we are now better able to support our sales effort in that area. As a further example of our policy of expanding our sales and warehousing facilities throughout the world, we have satisfactorily completed the acquisition of P. J. Starkey & Co. (Pty.) Limited in Cape Town.

Our expansion and modernisation plans are well within our financial resources and we shall also seize every other opportunity in the future for expansion in the right fields and the right places.

OVERSEAS COMPANIES

Whilst the profit on trading of overseas companies of £2,508,000 showed a reduction (£2,823,000 in 1970), the results were nevertheless gratifying, particularly since they were achieved in a year when the economies of the countries involved were hampered seriously by demand restrictions.

All our selling companies continued to perform well and maintained their contribution to the Group profit on trading. In particular sales of United Kingdom manufactured products increased significantly in Holland, Germany, Austria, Spain and the USA. Results in Scandinavia were less satisfactory.

Our manufacturing companies overseas had a reasonably satisfactory year despite difficult trading conditions.

In France the general level of economic activity slowed down, particularly in investment in capital goods although expansion of consumer goods sales was, and still is, at a satisfactory level.

In Germany the economy moved into a state of recession after the boom of recent years. Government measures such as the revaluation of the Deutsche Mark, high interest rates, coupled with import restrictions introduced by the US Government, affected adversely the volume of German exports. This, together with a stagnation of investment in capital goods, depressed the 1971 results.

In Australia and Canada both our Subsidiary Companies experienced very difficult trading conditions, aggravated by low capital investment and a degree of inflation.

In South Africa the economy showed less buoyancy and this was reflected in our results. Towards the end of the year strict import control measures were introduced but the substantial stocks held by our South African Subsidiary Company, together with our local manufacturing facilities, have insulated us from the worst effects of these measures.

PERSONNEL

During a very difficult period we have done everything possible to maintain employment and full-time working. This has undoubtedly cost a little in terms of some under-employment of our work force and equipment and in the financing of stocks but it has not only sustained confidence and morale but has enabled us to maintain a well-balanced organisation adequately staffed and ready to perform even more effectively as demand and activity improve.

Joint consultation and established negotiating procedures have operated well during the year. These well tried and long established methods of ensuring good labour relationships have stood the test of time and we shall do all we can to see that they continue within the framework of new legislation.

Despite lower levels of demand for labour, we continue to follow our established training policies. We know that in the future we shall need the new talent they help to create.

DIRECTORATE AND GENERAL MANAGEMENT

As already announced, I have indicated my wish to retire from the chairmanship of the Board and from my directorship after the Annual General Meeting in August 1972. I am glad to say that it is the intention of the Board to elect Mr. L. J. Tolley as its Chairman and to appoint Mr. C. A. Percival to succeed Mr. Tolley as Group Managing Director. Mr. Tolley became Managing Director of the Company in 1962 and has been Group Managing Director since 1966. Since joining the Company in 1938, as a graduate from Manchester University, Mr. Percival has held various executive positions in all Divisions of the Company and for the past four years has held the position of Holroyd and Crofts Divisional Managing Director. All these changes will take effect on 21st August 1972.

As you will already know, Mr. J. P. Halpin, having reached the normal retirement age, retired on the 1st May 1972, from executive office. He remains on the Board. Mr. Halpin's career with Renold Limited began in 1956 and has been primarily in the field of finance and overseas

subsidiaries. In recent years he has been Deputy Group Managing Director, Group Finance Director and for some time he was also Overseas Divisional Managing Director. Mr. Halpin has been succeeded by Mr. E. B. Jackson as Group Finance General Manager.

GROUP PROSPECTS

Most governments now appear to be committed to reflation of their economies through fiscal and monetary inducements to spending and investment. If economies react in the way intended and it proves possible to maintain a more rapid rate of expansion, then our future is very bright indeed.

However, caution needs to be exercised whilst countries have their present labour problems and their inevitable consequence: inflation. Prosperity will not be achieved until it is accepted by all involved that unrealistic wage increases result in higher prices, inflation and sacrifice of jobs, and that every work stoppage destroys a little more of our ability to compete internationally. As long as these realities are not accepted, management is diverted from its main tasks of improving productivity and reducing costs. Because of this atmosphere, there is, in this country, a disillusionment with manufacture and an increased propensity to import rather than to expand, even by manufacturers themselves.

We do not share the view that the so-called labour shakeout is the reflection of increased efficiency in the United Kingdom. Efficiency and increased productivity stem substantially from capital investment and technical improvement. There has been all too little of either in this country in recent years and the scale of investment will continue to be restricted until industry is satisfied that such investment will be adequately rewarded. Renold, with its international operations and its penetration of overseas markets, is strongly placed to withstand the stress of the current economic conditions in the United Kingdom. For our continued prosperity and growth, however, we depend upon confident and successful customers and a growing economy. There is a long way to go before such conditions are provided in this country.

The financial measures announced by the Government in its Budget cannot but help—but they will take time in coming to fruition. The indications are that the first half of our current year will still be difficult. However, when recovery does take place, we are well prepared to take every advantage which can be exploited through the benefits of an increasingly wide range of transmission products and through our world-wide organisation. Recent international currency movements should benefit the large proportion of our business which is conducted overseas.

As will be seen from my foregoing statement on behalf of the Board this is the last occasion on which I shall have the privilege of reporting to shareholders. I want, therefore, to add a personal note. During my chairmanship I have enjoyed the loyal support of my co-directors and of the members of the management team. We have all worked well together. The progress made by the Group in recent years is reflected in the tabulated summary of past results which accompanies the accounts. Those results are due to the hard work and combined efforts of many at home and overseas. I am most grateful to them for the enterprise and determination with which they have faced difficulties and seized opportunities for advancement of the Group's interests. The Board has adopted unanimously my suggestion that Mr. Tolley should succeed me as Chairman and that Mr. Percival should then take his place as Group Managing Director. The successful development of the Group as shown in the summary of past results is due in no small measure to Mr. Tolley's initiative and leadership and the Board's recognition of this by expression of their intention to appoint him to the chair augurs well for the continuing success of the Group's affairs. To him and to Mr. Percival and to the Company I extend my warmest good wishes for the days which lie ahead. They and our other colleagues have already laid a strong foundation for the future and I look forward with confidence to the prospects of continued progress under their leadership.

described as temporary. It may well be—if sterling is repegged or if everyone else floats too. But over the years the sterling link has come to mean little more than trouble. The Basle guarantees are worth keeping still, but not the window-dressing.

More than half of Hongkong's exports now go to North America and other major outlets, such as Japan, with strong dollar ties. Only 14 per cent went to Britain last year. More to the point, Hongkong would have had little to gain from following sterling's open-ended devaluation. A wide range of the colony's exports are already bumping against quota ceilings. Moreover, the impact of a sizeable devaluation on imports could have been perverse, and certainly socially undesirable. More than half of Hongkong's food supplies come from China, and Peking was determined that there should be no reduction in its foreign exchange earnings from the colony. By constantly devaluing the Hongkong dollar against the Chinese renminbi as the pound floated down, China threatened to push up the colony's cost of living. So, after doing the sums, the colonial secretariat plumped for a compromise, a rate of \$5.65, a devaluation of its old middle rate against the American dollar of just over 1 per cent, and, weighted by the colony's trade, hardly a devaluation at all.

There has been a price tag on the latest sterling episode. The colony's official sterling assets have lost value; moreover, over HK\$300m will have to be paid to the commercial banks which the government promised in 1967 to insure against any future devaluation of the pound. However, the colony's idle reserves have been almost embarrassingly large for a long time. So these costs will not bite too hard, infuriating though they may be. The stock market probably judged it right. After an extremely brief pause on the heels of Britain's decision to change the sterling area rules, it bounded out of sight once again.

Precious metals

Betting against science

The Ford Motor company will fit its American models with platinum catalysts after 1975 to cut down exhaust pollution. Each exhaust pipe will contain one-tenth of an ounce of platinum which will make the hydrocarbon and carbon monoxide fumes less noxious.

Metals more precious

The total order will run around 500,000 oz a year and completely reverses the outlook for platinum. In the past three years the metal's price has dwindled from a high of £75 an ounce down to under £40 as stocks piled up and the production at Rustenburg, in South Africa, the world's major mine, was cut back. But the order from Ford alone will rapidly clear the backlog of platinum supplies and allow the Rustenburg mine to boost its production back to 1m oz a year and continue expansion plans that could take output up to 1.5m oz by 1975, as well as making Lonrho's new platinum mine profitable.

The deal with Ford covers only 60 per cent of Ford's production. If this is increased, or if General Motors also decides that the platinum catalyst is the most effective way of controlling exhaust, the future would be brighter still. And as each catalyst only lasts for 50,000 miles there could be massive replacement orders. In the past few months, as the deal came into focus, the share price of Potgietersrust Platinums, the major shareholders in the Rustenburg mine, soared by 180 per cent, and the free market price of the metal by 27 per cent.

But the future is not as assured as it seems. The motor manufacturers and the big chemical companies are working flat out to find a cheaper catalyst than platinum. In the hope of discovering one, Ford has given itself a complete escape clause from its present contract. Two years ago an announcement by Imperial Chemical Industries that it had found a substitute catalyst sent the platinum price reeling: 30 per cent of the metal mined is used in a chemical process to make nitric acid. So a speculator in platinum or platinum shares is pitting himself against a single scientific discovery.

A safer investment (especially after the recent spectacular rise in platinum) is silver, which at 170 cents an ounce

is still 33 per cent beneath its 1968 high, although there has been a substantial price improvement already this year. Silver still remains primarily a speculative commodity, its main industrial use being for camera films, but many investors who have bought silver over the years of steep decline have either sold out in disgust or are now determined to hold on for a better price. The floating of sterling will certainly help, as does the increasing fashion for commemorative coins and medals. However, even the most bullish brokers do not see the silver price rising above \$2 over the next few years, despite a heavy drop in stocks.

The duller of the precious metals in the past few weeks has been gold, which has failed to react to the present currency unrest, easing back 3 per cent from its recent high of \$67 an ounce. More seriously, the latest quarterly results from South Africa's leading gold mines show that increased running costs have cut deeply into profits that should be better with a gold price which is 60 per cent up on a year ago. Gold shares on the London stock exchange have been correspondingly weak. The fact that mine profits are down shows that most of the recent rise in the gold price has come from a withdrawal of South Africa from the gold market. This means that when South Africa does begin selling again the free market price is likely to drop sharply.

Swiss restrictions

Old lady gnomes

Normally, central bankers wield exchange restrictions only to control the speculative rabble in the exchange markets (ie, the big business houses of the world), not to inconvenience fellow members of their own club. But the Swiss have now decided that their new negative interest charges on increases in the Swiss franc bank accounts of non-residents should apply to the accounts of foreign central banks as well. The commission charge (of 2 per cent a quarter) will apply only to accounts held at Swiss commercial banks, not to those held with the Swiss National Bank. But the National Bank has made it quite clear to the other central banks that it does not wish to see any further increases in their existing accounts, nor will it entertain applications for new ones, unless these can be justified as essential to the smooth financing of current account trans-

BMW

With world sales totalling 166,354 cars and 18,898 motorcycles, BMW can look back on one of the most successful years in the Company's history. Demand continued to exceed production capacity and extended delivery dates at home and abroad could not be avoided. The three-litre six-cylinder models have been particularly successful, together with cars in the two-door four-cylinder range, and car sales rose by 4.7%. Renewed world interest in motorcycles brought an increase in sales of 53.1% over 1970.

Total turnover rose by 10.6% to DM 1,907 million, of which 40.8% was accounted for by foreign sales, but 1971 was again marked by heavy increases in both personnel and material costs. These could only partly be countered by intensive rationalisation and severe cuts in administrative overheads so that price increases proved unavoidable. Earnings were reduced by 5.9% to DM 32.2 million; in BMW's long-term interest, the sum of DM 5 million transferred to the reserves must be regarded as too low.

The fifty-second AGM of Bayerische Motoren Werke AG, held in Munich on July 7 1972, voted a dividend of DM 6 per DM 50 share on the share capital of DM 200 million, equivalent to an unchanged 12%, and DM 3 per DM 50 share on the DM 50 million issued in July last year.

Production

All BMW factories operated under the heaviest pressure throughout 1971. Production of cars rose by 2.2% to 164,701 units and of motorcycles by 52.8% to 18,772 units.

While every effort was made to increase production still further, particular attention was paid to continual improvement of BMW's quality standards.

Sales and Service

The EEC has developed into one huge domestic market, accounting for no less than 71.6% of BMW car production in 1971. Total car sales abroad increased by 11.9%, while 75% of motorcycle

Strong demand continues to outpace production

production was exported to fifty-six countries.

BMW exports are handled by 139 importers and 2,785 dealers. Additions to this network are based on criteria of quality rather than quantity.

Investment

A total of DM 153.6 million was invested in fixed assets, somewhat less than the figure originally planned. On the one hand BMW concentrated on further automation and rationalisation of production, on the other the new test centre north of Munich was completed, one of the most modern in Europe.

Research and Development

Car construction is increasingly influenced by worldwide safety requirements. While BMW continues to keep pace with passive safety regulations on the American pattern, its leadership in the area of active safety will be maintained and extended.

Motor Sport

The continuing flow of successes in rallies and on motor racing circuits around the world confirms the performance potential and advanced engineering of BMW products.

Outlook

Orders, production and sales at BMW in the first quarter of 1972 were all higher than in 1971 and above the average for the car industry as a whole.

Recent capital increases and further careful use of long-term finance have provided a sound base for the realisation of the Company's corporate objectives.

BMW can look towards the future with confidence.

We shall be more than pleased to give you further information about BMW and its performance in 1971. Please write to

actions with Switzerland.

The Swiss have long been trying, less than successfully, to save the franc from being catapulted into the role of reserve currency. The National Bank began checking on the deposits of foreign banks with Swiss commercial banks at the beginning of March, after the Union Bank of Switzerland revealed that about 20 central banks, some of them members of the inner Group of Ten, had accounted for most of the \$1.2m increase in its time deposits in 1971. The Swiss authorities clearly did not like the implication of what they discovered then—or since. Besides raising the spectre of future reserve-currency-role tribulations, the growth in such deposits, by leading to recycling of funds through the Euro-dollar market, could raise immediate problems of multiple counting of central bank reserves and bank credit.

The final straw may have been an inadvertent backlash of Britain's decision to scrap the sterling area when it floated the pound last month. As in 1967, more than one ex-colonial country apparently decided to move money out of sterling even after the horse had plainly bolted; as they had built up big sterling holdings last year, several could afford to satisfy their pique without jeopardising the minimum balances they must hold to keep their Basle guarantees. Some of this money from overseas sterling area central banks apparently wound up in Swiss francs.

Euro-unions

Workers of Europe unite

The International Confederation of Free Trade Unions met in London this week, for its tenth congress since it split from the communist-dominated World Federation of Trade Unions in 1949. The ICFTU devotes most of its energy to passing empty resolutions and encouraging trade unions in developing countries. Since the American unions pulled out, it has had little real power.

However, the European branch, the ECFTU, has become important. It is the focal point for trade union relations with the European Economic Community, with an elaborate organisation in Brussels and a clique of committees covering various industries. It had been assumed that unions from Britain and the other new members would join ECFTU. But at a

Vic's listened to in Europe

meeting in Geneva last month Mr Vic Feather, of Britain's Trade Union Congress, argued that it would be "inward-looking" to confine the new union group to EEC unions alone.

As the TUC will be easily the largest and most powerful national union group, the others agreed; and plans are now being made to include Swedish, Finnish, Austrian and Swiss unions. This sounds broad-minded, but is pointless; 90 per cent of ECFTU's work will be within the common market.

Meanwhile, individual industrial unions are trying to get European multinational bargaining off the ground. Car union bosses have now jointly approached Ford for talks. Wages will not be on the agenda yet, but everything else will be. Nestlé and Dunlop/Pirelli have already had a glimpse of the future.

European unions are split three ways between christian democrats, socialists and communists. The christians are moving closer to the socialists, and may soon be included in the new ECFTU group; but the communists will not easily reach a permanent alliance with the others.

Key indicators: world commodity prices

Jack frost

A sudden but major frost in Parana, Brazil, the heart of the coffee-growing world, has pushed coffee prices up £10 a ton in the past week to around £405. The damage to the 1973 crop has not yet been assessed, but a similar frost in 1969 permanently weakened Brazil's position as the world's leading producer. The frost will hurt high grade arabica coffees, and increase the trend towards cheaper African robustas.

Comecon

Moscow's tune

The deliberations of the Comecon council in Moscow this week centred largely on the programme drawn up in Bucharest a year ago. This bears all the marks of the centralist economic thinking currently recovering favour in Moscow. It clashes sharply with the hopes of Hungary and Poland to allow economic forces greater freedom in determining the allocation of resources.

The Hungarians and Poles want to turn the present Comecon bookkeeping unit, the transferable rouble, into a real currency that the members could use among themselves. The Russians say that this would cause enormous problems. Comecon members all use quite different systems of costing and pricing; even the small move to let Poles and east Germans travel to each other's countries has already led to swarms of Poles descending on the well-stocked shops in east Germany. The prospect of the rouble being made convertible into hard outside currency is even further off, despite optimistic recent talk in Japan about possible rouble-yen convertibility. Yugoslavia's balance of payments problems have helped to make the Russians less keen than ever to allow their economy to be buffeted by the external forces of convertible currency exchange.

The Russians can claim they have the same access to western lenders as Yugoslavia, without being members of either the World Bank or the International Monetary Fund or having to face the perils of convertibility. There are mounting signs that Russia and the United States are approaching agreement on their disputed lend-lease debt. The Hungarian National Bank, has already demonstrated, with a \$50m Eurobond issue, how east European countries can borrow long-term money

ANZ Bank knows all about profitable returns

To make the most of your trading opportunities with Australia and New Zealand, you need the services that ANZ Bank offers.

We can give you the vital information you need in the planning stage. Because we've over 1500 offices covering the entire area, keeping us in day-to-day touch with economic conditions and growth, population trends, wages, prices, trade cycles and the rest.

This means we know a lot of people, too. If you need contacts, suppliers or agents, we can find them and put you in touch.

And we even have a special service—ANZ Travel—to make all your travelling arrangements when the time's right for you to go out and see for yourself.

Any of these services is yours for the asking. Write, (on your company letterhead, please) and find out what we can do for your returns.

BARLOW RAND LIMITED

(Incorporated in the Republic of South Africa)

Quotation on the Paris Bourse

The Board of Barlow Rand Limited announces that a listing has been granted for the Company's 84 million shares on the Paris Bourse.

Barlow Rand shares are already quoted on the London, Johannesburg, Brussels and Antwerp Stock Exchanges.

The introduction to the Paris Bourse was arranged by Credit Lyonnais, Paris, in conjunction with Laurence, Prust & Co., London.

Copies of the Report and Accounts in English or French are available from:

The Registrar,
Thos. Barlow (Holdings) Limited,
16 Stratford Place,
London W1N 9AF.

(Thy wish was father, Harry, to that thought.)
Shakespeare, Henry IV.

As the native Swiss air transportation company that it is, Swissair here publishes an unretouched profit-and-loss statement for the first Jumbo year.

ALMOST everything about the Jumbos was known before they arrived, because Swissair prepared for it all very carefully: the pilots had trained on the big bird, and felt it flew marvelously. The passenger buildings had been enlarged to meet the expected onrush; the maintenance technicians knew every nut and bolt of the Boeing 747B; the chefs were ready to provide larger quantities of meals; the hostesses had grown used to finding their way about the huge passenger compartments; and the financial wizards had made available the funds for the juicy bills to come from manufacturers and maintenance services.

Meticulous analysis on the basis of hypothetical North Atlantic flights with the 747B offered promise of successful operations. But would our passengers really accept the new aircraft to the expected degree?

Well, scarcely were the first two Swissair Jumbos in service before most people desired to fly with them. (Because the 747Bs are so splendidly large and comfortable and one never feels cramped? Because the service is so pleasant, the food so good, the entertainment program so varied? Or simply because it's smart to fly by Jumbo?)

At all events, in the introductory phase it proved possible to avoid any significant difficulties, though certain irregularities in the operational behavior of the engines arose as predicted. Still, the two Swissair Boeing 747Bs turned in some 8500 flying hours by the end of March 1972, equivalent to an average daily flight performance of 12 hours each (almost two hours more than other airlines).

Our two Jumbos increased Swissair capacity by 27%; demand rose by 14%. (Even this was definitely better than the figures of other companies flying the North Atlantic.)

Through the end of March, 158,851 passengers flew by Swissair Jumbo in both directions across the Atlantic—156 passengers per flight.

With 9.6 metric tons of goods and 649 kg (1428 lbs.) of mail per flight, the cargo load factor of the big aircraft was also very satisfactory. The resulting average load factor of 48.3% is above the profit threshold: the two Swissair Jumbos thus operated in the black during their very first year.

And along with our pleasure at the good showing, there's a small anniversary to celebrate: just 25 years ago Swissair began flying the North Atlantic (destinations today New York, Boston, Chicago, and Montreal). And if you look at the chart below, you'll see that the success of the first Swissair Jumbo year fits in perfectly:

Permit us to remark here that the next unretouched profit-and-loss statement will appear in the winter of 1973/74—the figures for the first year of Swissair DC-10s.

Thank you for your kind attention.

from the west—in addition to the short-term borrowing in which they have always engaged.

More significant, the Comecon Bank itself, which settles the short-term rouble payment problems of its members, recently raised three separate syndicated bank loans in the west, totalling \$140m. It is not clear why news of these issues should have been kept from the east European peoples, nor indeed why they have been made at all. Might they be a trial run for a bigger and longer-term issue by the new Comecon Investment Bank, which has been set up to finance projects of east European integration and development? In 1971 the bank lent £80m in roubles and hard currency for 16 projects, none of them in Russia. Eventually, it is expected to be active on world capital markets. But the Russians have recently been telling visiting western bankers that it does not plan to make any issue in the west this year. For the smaller east European countries, one unhappy conclusion from all this capitalist money-raising is that hard currency borrowing for east Europe may increasingly be centralised, along with economic planning, in Moscow.

Lira

Private props

Amsterdam

Dr Guido Carli, governor of Italy's central bank, is a great exponent of the art of using the Eurodollar market to help bolster the limping lira. In 1970 he masterminded the raising of over \$1.5 billion in the medium-term Eurocurrency market by Italian borrowers, who then repaid more than half of the amount, ahead of time, the following year when the lira strengthened.

Now Signor Carli is repeating the same operation for the same reasons. The vehicle for the latest massive fund-raising operation is the Istituto Mobiliare Italiano (IMI), a well-known and respected name among international bankers. First, a small group of New York banks, headed by Morgan Guaranty Trust, is advancing IMI \$250m for three years. The interest rate on this credit is tied to the prevailing London Eurodollar inter-bank rate plus a fixed premium of $\frac{3}{4}$ per cent. It is believed that Morgan offered to provide considerably more than \$250m, but the Italians felt that the premium over the inter-bank rate was too high.

Secondly, Manufacturers Hanover Limited, the London-based medium-term lender and traditional banker

to IMI for such deals, is syndicating among a group of international banks a similar sized loan for the same period. The premium on this loan is $\frac{3}{4}$ per cent. The Orion Banking Group is arranging an in-house deal for a smaller amount: charging even less, $\frac{1}{2}$ per cent.

Montedison

Italy's giant shrinks

Rome

There is going to be a bitter fight over the closure of five of Montedison's 159 factories in Italy. But it had to come and Montedison's chairman, Signor Eugenio Cefis, gave ample warning.

Italy's rambling giant, with interests in chemicals, fibres and supermarkets, is in a bad way. It lost £130m in 1971. One third of that loss came from 40 plants which were singled out for the chop as far back as January. The five factories to be closed employ just over 1,500 people and together lost the company £3.5m in 1971.

The unions have immediately made their members sit in at three of the five factories to be shut down. There are plenty of politicians, of all shades of opinion, who will be on their side too, though they, like the unions, know perfectly well that some stiff retrenchment will be necessary if Montedison is to get over the recession. But since the state is one of Montedison's largest shareholders the company's problems are fair political game. The impact of the closures has been cushioned by the government wage integration scheme, which means that the dismissed workers will get 80 per cent of their wages for nine months.

From another point of view Signor Cefis timed the closure announcements well. Six weeks ago he told shareholders at Montedison's general meeting that the group had to find the staggering figure of £1,860m in the next seven years if it is to stay in the front line of European chemical companies. With Montedison's takeover campaign now over (Bastogi, Carlo Ebra and Snia Viscosa have been absorbed), the crunch has come. Signor Cefis has now demonstrated that he will get on with the less glamorous weeding out and rationalisation process if the government will please give him the money to do the job. The danger is that he might get the money on condition that he does not upset anyone by actually rationalising anything.

Iceland

Fighting fish

Iceland is to extend its territorial waters to 50 miles off its coastline from September 1st, despite a complete failure to come to any compromise with Britain or west Germany about the fishing rights in the disputed waters. The fifth round of talks between the two sides broke down on Wednesday and the British Government, after having its offer to reduce the British catch by 30 per cent turned down, is to resort to the International Court of Justice next week.

Iceland's motive seems overwhelmingly political. There is no sign that the carefully monitored catch around its rich coast is depleting fish reserves, and this is not an argument that even Iceland is pushing hard. The prime intention, springing from the government's strong shift towards the left (the majority of the cabinet are communists) is to assert a nationalist cause.

If British trawlers are barred from Iceland's newly-acquired waters it will knock out 25 per cent of Britain's total catch. Iceland is at present negotiating its trade position with the enlarged EEC in Brussels, and Britain has blocked any agreement until the fishing question can be settled. The community, however, is anxious not to keep Iceland out in the cold, but to allow it to increase its manufacturing industry and reduce its 80 per cent dependence on fish exports. With a little more hard bargaining some compromise still seems possible.

BUSINESS

Investment

Over a barrel over a barrel

That oil boom is kept waiting

There should not be much trouble over British Petroleum's new merger deal with Standard Oil of Ohio. Sohio, which produces only 50,000 barrels of crude a day of its own, wants to get hold of some of the 1m barrels a day which the Alaskan wells could one day be piping down, once the pipe is built. BP wants to control an American oil company and buy it with crude. The delay to the pipeline caused by the environmentalist lobby has made a nonsense of the two dates in the original agreement: the beginning of 1975, which is when Sohio was meant to start paying dividends on BP's special stock, equivalent to a quarter of the equity; and the beginning of 1978, which is when 54% control should have been purchased by BP with production running at 600,000 barrels of crude a day.

The cost to Sohio of paying dividends to BP would be about \$12m a year, at Sohio's traditional payout rate, on top of the \$36m going to other

shareholders. Since net profits in 1971 were only \$55m, that dividend would look somewhat naked. Sohio's profits in the first quarter of 1972 were 12% down. In common with many other American oil companies it suffered from the slump in prices. If the deal were not renegotiated shareholders and financiers might begin to look askance at Sohio's financial strength in the short term. The share price has fallen to \$60 from the 1971 high of \$92. In addition to spending perhaps another \$200m more of its own cash in getting the wells primed for the time the pipeline is finished, Sohio has 27% of the responsibility for the financing of the Alyeska pipeline consortium. Present signs are that the pipeline will not be finished until three years after the final court decision: with luck that will be by the end of the year.

Another \$140m will be available under one of those production payment schemes that BP has just negotiated in

Britain—once the permission for the pipeline comes through. But the major worry for potential creditors of Sohio was not the cash strain caused by paying out the dividend so much as the possibility BP might stick to the letter of the original agreement over the supply of crude. The gearing of the deal is that the early tranches of crude supplied will buy proportionately higher slices of Sohio equity. BP has already got 25%, and would get 34% if production was running at 200,000 barrels a day by 1978. This is an output worth \$200m or so a year if sold on the open market (using current prices of \$3 a barrel). A further \$200m worth would bring another chunk of 12% of Sohio's equity, but the next \$200m worth would bring only 8% of the equity, leading to the top figure of 54%. The barrelage reached by 1978 would determine the equity stake, and later increases in production would be split 3 to 1 in BP's favour. It might, therefore, have paid BP to forget about gaining control and sell the oil on the market at what should, by then, be substantially higher prices. But BP's long-term strategic objectives are intact, and so the deal has been renegotiated. The details have not been released yet, but the simplest solution would be to tie the changes in control to oil production rather than to inflexible dates.

Warmer without Schiller

Frankfurt

The departure of Professor Karl Schiller means defeat for those who have favoured sterner budgetary policies in Germany, and victory for the proponents of the policy of keeping German industry prosperous by trying to stick to an undervalued fixed exchange rate. This might well put an end to the slide in German stock markets which started in mid-May. The latest dose of controls to stem dollar

One of our projects will be music to your ears.

National and Grindlays Bank Group are constantly lending money all over the world—either from their own resources, or as leaders or participants in syndicates.

One recent loan, for example, was to a leading American piano manufacturer who raised \$10 million and we helped.

Others have been arranged in places as far apart as Japan, Iran and South America.

For projects as diverse as new housing, roads, electrical equipment for atomic power generation and aircraft leasing.

The moral: if you have a money problem, whether it's to do with pianos or process plants, National and Grindlays are willing to listen, and ready to help.

We have offices in Europe, Africa, India, Pakistan, Bangladesh and the Middle and Far East. We offer a full range of international banking services.

Try us soon.

inflows carefully excludes any equity on portfolio investment, the closest being restrictions on sales to foreigners of mutual funds invested in German bonds. There is also plenty of equity-minded German money which can no longer find a profitable home in Switzerland. The money value of Germany's gross national product is expected to grow by about 7½% in 1972 (of which 4% will be inflation); the target for next year is about 9%, which should translate into company profits increases of over 10%.

Within this strongly recovering economy, several companies are still looking underrated by the market even by German standards. This makes them very cheap on Anglo-Saxon price/earnings criteria. The department store group, Karstadt, has good management and a strong balance sheet, and a p/e of 15 at DM483. Most foreign buying in the sector has concentrated on Neckermann, which is heavily involved in travel and mail order besides stores, and has slightly less to offer from the present price of DM 144. An outstanding share for the medium-term is Siemens. Profits (of the parent company alone) for the half-year are up by 50%. Since Siemens has a high break-even point and excellent management, its plans for pushing sales and cutting costs should boost profits substantially. The trouble is that, with typical German caution, the light will be hidden under the bushel of a conservative accounting policy. At DM278, Siemens's prospective p/e is an incredibly cheap 10.

Another good bet may be Mannesmann, the specialist steel and tube makers, who signed another big deal with the Russians last week. Again, at DM207, the p/e is a measly 10. That includes precious little from the now highly profitable operation in Brazil, where the company has a near-monopoly of steel production.

SECTOR ANALYSIS Tobacco is safe

It has been a great year for tobacco shares in London and New York. On Wall Street, the Standard and Poors tobacco share index is up 33% in 1972, against a rise of just 5% in the Dow-Jones industrial index. In London tobacco shares shot up at the turn of the year, and have risen 16% in 1972 against 8% in the Financial Times-Actuaries all-share index.

Tobacco sales are picking up fast in both countries. In the first quarter of 1972 net clearances of tobacco in Britain (that is, tobacco moved out of bond for sale) rose by 9.3%. Over 1972 as a whole tobacco sales are likely to rise by at least 3%. So it was no surprise when Imperial Tobacco, which makes two-thirds of Britain's fags, clocked in with a sharp rise in profits on Wednesday. Pre-tax profits for the first half were £40.5m against £35.8m last year. Imps at 111p are now on a prospective p/e ratio of about 10.3. There is an excellent record of steadily rising earnings every year, as Panmure Gordon, the stockbrokers, point out in a special report on tobacco shares this week. Panmure Gordon conclude that the outlook for Imps and the sector is very good.

Although every reputable analyst has been preaching the virtues of tobacco for years, the trouble is that investors, from fund managers to widows, shake their heads in disbelief. So the great re-rating that ought to come may never materialise, until a British tobacco company can pull off a major success in diversification. The American tobacco firm Liggett and

Myers has shown just how diversifying can transform a company. Within seven years it has increased its non-tobacco profits from nil to 60% of the total.

Despite these prospects, the short-term outlook for tobacco shares is not exciting. Another health report is due soon from a scientific liaison committee set up by the Government. And if there is a price freeze tobacco companies might suffer more than most since their profits rely more on price rises than sales rises.

But in the longer run the shares still look an attractive and very safe investment. Imps is diversifying faster and better than most, and could be the first share to be properly re-rated. Bats is going to benefit a lot from the sinking pound, since all its earnings come from overseas. Carreras, although it has risen by a third since tipped by *The Economist* last February, could go higher if plans for a European link-up with the very successful German firm, Martin Brinkmann, go ahead. Gallahers, however, is still over-concentrated in the slumping plain cigarette market.

Unit trusts

An American connection?

Britain's unit trust managements are not over-excited by their record sales figures in April and May. These included special boosts from two successful launches, with £9m going to Barclays Unicorn Extra Income Trust and £8m to M and G's Second Dual Trust. Something like 25% of new money comes for contractual unit-linked insurance plans. Although the "managed" or "balanced" funds, which are the vogue of the moment, are concentrating most of their new money on units rather than hard-to-find property, their policy could change any time. Hambro Life's Managed Fund is, for example, currently taking in some £8m a month, of which 76% is going into trusts of the Allied Hambro group.

It is possible that small investors have taken note of warnings against buying at what might be the top of the

market. More probably, they will wait for the index to hit dizzy heights before buying their units. They will then proceed to sell when the subsequent downswing is reaching its bottom.

Unless unit holders and their professional advisers become a lot more sophisticated in their buying habits the industry seems doomed to collect a new bevy of disaffected investors at every swing of the cycle. As time goes by, redemptions from the disaffected will be augmented by the sales of wise long-term holders cashing in for their just rewards. Forebodings about this prospect are highlighted by the current plight of the American mutual fund industry. It has suffered a net cash outflow during the first five months of this year of \$715m, with repurchases exceeding sales in every month except January. During the whole of last year

America's 1,250 mutual funds managed a net inflow of only some \$300m between them.

American mutual funds have suffered from an unfortunate coincidence of events. First there are the heavy redemptions by investors who bought in during the bull market of 1967 and 1968 and, disenchanted by their later experiences, are getting out when prices return to former levels. Second, there is a marked diminution of sales effort; sales teams have been reduced during the lean times, and are now selling different product lines such as tax-favoured oil and real estate programmes where the returns to the salesmen are richer. Another severe blow has been the barring of "reciprocity"; brokers who sold mutual funds well were rewarded with the fund's broking business. Hundreds of smaller mutual fund shops have closed their doors. The rot is expected to spread to the larger, diversified brokerages when the sales charges permitted for investment companies are reduced to the levels stipulated by Federal mutual fund legislation. The grim outlook is that brokers may prefer to put clients straight into shares where they are likely to trade more actively than in mutual funds.

The British unit trust industry does

Best and worst records among unit trusts. The offer price ruling at the start of the period is compared with the bid price ruling at July 3, 1972. Net-of-tax income is reinvested. No account is taken of capital gains tax.

not have all these problems to face. Trusts can advertise directly. Their links with brokers are stable. British unit trust sales attract steadily more attention in the press, thanks in part to the interest generated by performance league tables.

As usual, some of the most sparkling individual trust results in our tables are being put up by relatively new and usually very small funds whose managers pursue an active individualistic policy centred on small portfolios by traditional standards. An example is the one-year chart topper, Bridge Income, set up last year by brokers Vickers da Costa, together with Bridge Capital.

Another of the leading trusts over the one-year period, Talisman, is also managed by a member of Vickers da Costa; but its management company, LS Managers, was formed out of a private investment company and is independent of Vickers. To carry on a stage further LS Managers has on its board a director of Portfolio Management which has also pursued this approach to unit trust management with considerable success. The group's Growth with Income trust is among the best performers and its capital trust is not far out of the list.

The new blood of the industry has yet to be proved over the test of long-term performance. Here the older stages inevitably come into their own. M and G's Recovery and Midland and General trusts continue to feature on both long- and short-term tables. These trusts are also characterised by relatively small and closely researched portfolios; they, too, look freely for special situations in "small interesting companies." The same is true of Hambro Smaller Companies which, like London Wall High Income Priority, has brought home the goods

able difference. To take an example: Jessel Property and General, still top of the long-term tree thanks to its specialisation, shows a growth of 143.2% in its offer to offer price over the three years; what the unitholder gets is the 128.1% appreciation shown.

The difference between the two results for a given trust can be even wider than this if the fund has, in the course of the period, begun to calculate its bid price at the lowest possible level allowed by the rules of the Department of Trade and Industry. Normally, when a fund is expanding, trust managements calculate the offer price at the highest level the rules allow for a given underlying portfolio, but buy back at a higher bid price than they strictly need to. If maximum offer and minimum bid prices were used, the gap could be more than 12%; but competition keeps it lower. The crunch comes when the fund is suffering net redemptions. These make it an economic necessity for managers to set their bid price at a minimum. The offer price is then normally fixed at a lower level than necessary, so that the gap between the two quoted prices remains the same, but the unitholder who is caught in this situation is afflicted by the whole of the gap. Sometimes the management takes the unpopular, because more obvious, step of just widening the quoted spread. A prominent example at the moment is Pan Australian where the gap between bid and offer price is about 14%.

About half of Britain's unit trusts are now suffering a net outflow of cash, and nearly all of these will have adjusted their method of price calculation to the minimum bid basis. Most unitholders never find out that this has been done.

COMPANY STATEMENT

MOULINEX

Sales in the second quarter of 1972 totalled Frs. 148,793,103 after tax against Frs. 97,534,690 for the second quarter of 1971.

The sales figure after tax for the first six months of the year reached Frs. 262,041,185, an increase of 53.8 per cent (+39.41 per cent in France and +85.55 per cent in exports).

The profits which will appear in the interim statement as at 30 June, 1972 will show a largely comparable percentage increase for this first half-year.

CHAIRMAN'S STATEMENT

THE INVESTMENT TRUST CORPORATION COMPANY'S ENLARGED BASE

The 84th Annual General Meeting of The Investment Trust Corporation, Limited was held on July 11 in London, The Right Hon. Lord Latymer (the Chairman) presiding.

The following is an extract from the Report of the Directors:

During the year the company acquired the issued share capital of the Rose and Thistle Trust Ltd., the consideration being the issue of £2,304,000 5 per cent. Convertible Unsecured Loan Stock 2000-05 and 2,304,000 Ordinary Shares of 25p.

The gross revenue of £2,145,597 for the year ended 1st May, 1972 includes revenue of Rose from 1st January, 1972 and therefore the figures are not comparable with those of the previous year. However, it should be mentioned that his year we have had no double taxation relief in respect of previous years against £24,000 net received in the year to 1st May, 1971, and the improvement in the exchange rate of the pound against the dollar since last August has reduced the sterling value of U.S. income received by more than £20,000.

Interim dividends totalling 13½ per cent have been paid and your board now recommends a final dividend of 7½ per cent payable on the increased ordinary share capital and making a total dividend of 20½ per cent for the year.

TOTAL ASSETS EXCEED £80 MILLION

The total net assets of the enlarged company at 1st May, 1972 amount to £80,246,515 and after deducting prior charges at redemption values the net asset value of each ordinary share is 227p.

The fall in the proportion of the portfolio in North America from 36.9 per cent to 26.6 per cent is mainly due to the dull performance of the American stock market over the year compared with the British market. During the year the F.T. Actuaries All-Share Index advanced by 41.6 per cent whereas the Dow Jones Industrial Index, adjusted for the alteration in the Exchange Rate and the Dollar Premium, fell by 10.1 per cent. We are hopeful that the U.S. economy will continue to improve and that such improvement will be reflected in the stock market.

We welcome the proposals in the 1972 Finance Bill whereby investment trusts will pay tax at the reduced rate of 15 per cent on realised gains, and ordinary shareholders who sell their shares will receive a tax credit of 15 per cent of their gain which can be set against their liability on that gain. Certificates of apportionment of net gains for past years will be cancelled.

For the current year we expect to see a further increase in dividends from United Kingdom companies, but the current restraint on dividend increases in the United States will allow only a very modest rise from that source.

The report and accounts were adopted.

APPOINTMENTS

University of Strathclyde

GLASGOW AREA SURVEY

Junior Research Officer

Applications are invited for the above post from persons with a degree in any of the Social Sciences including Urban Planning, and experience in SAMPLE SURVEY, field work and computer analysis of survey data. The duties are to

assist the Director of the S.S.R.C.-financed study of Social Trends in Glasgow.

The appointment will be for a period of up to three years.

The commencing salary will be at the rate of £1650 per annum.

Applications in writing, giving details of age, experience and qualifications to The Personnel Officer, University of Strathclyde, Royal College Building, 204 George Street, Glasgow, G1 1XW.

CHAIRMAN'S STATEMENT

THE KULIM GROUP LIMITED

MR P. B. L. COGHLAN'S REVIEW.

The Thirty-eighth Annual General Meeting of The Kulim Group Limited will be held in London on July 19th.

In his circulated Review, the Chairman (MR. P. B. L. COGHLAN) describes 1971 as a year of further progress for the Group. For the third successive year, there had been a substantial increase in net trading profits which, for the first time had passed the £1,000,000 mark. This has been due to a large increase in revenue from oil palms which had more than compensated for lower earnings from rubber. In general, therefore, the Group's results for 1971 had repeated the pattern of previous years with the build-up of profits from oil palms as the plantings continued to advance to full maturity. Mr. COGHLAN observes that whilst these had been more evident features of the year's results, progress had also been made in other directions which, he believes, augurs well for a broader base for future earnings.

Before commenting on these other activities, Mr. COGHLAN refers to the continuing and successful efforts on the Group's Estates in Malaysia to reduce production costs. In addition, the Group's mills and factories had been extended to provide increased capacity and an order had been placed for the installation of a third palm oil processing unit in 1972. This would allow the Group to step up purchases of fruit which, in due course, at full maturity, would amount to approximately one-third of the Group's own production extending to 1980 providing for a fixed margin of profit to the Group irrespective of the price of palm oil and kernels and would, therefore, yield a reliable and increasing source of income.

Referring to other activities, Mr. COGHLAN comments on the Group's participation in hotel development in Tobago. Following the completion of the main block of the Mount Irvine Bay Hotel, bookings had been at an encouraging level and it was evident that the combination of first-class hotel amenities and its adjoining International championship standard golf course in this favoured setting had all the ingredients for success.

In the United Kingdom, the subsidiary group of building contractors was benefiting from the current high level of activity in the building industry and Group's financial resources, valuable shop sites and building land had been acquired in the Haslemere district and plans were proceeding to develop these and other building sites already owned by these subsidiaries. It was confidently expected, therefore, that this interest would, before long, lead to a material new dimension to the Group's activities.

Referring to the forthcoming changes in United Kingdom company taxation and their effect on overseas trading income, Mr. COGHLAN comments: "We had hoped that the Chancellor in his recent budget would have given more generous consideration to companies trading overseas. Under the proposed imputation system of Corporation Tax, due to take effect from the 1st April, 1973, there is little encouragement for such enterprises. The continuation of overspill relief for a limited period, whilst welcome, means very little to our Group or for that matter to many other plantations companies. The fact remains that, assuming 100% of profits is distributed in each case, the dividend that could be paid to the shareholders of a U.K. company operating overseas where the foreign tax rate is 45%, as it is in Malaysia, is only 60% of the amount which local shareholders in an equivalent local company could receive. In other words, we are at a long run this may lead to a considerable disinvestment by U.K. companies in operating overseas. Such action would be quite contrary to the Government's desire to encourage investment in developing countries and it is hoped that the Chancellor will give this matter further consideration before too much damage is done to this country's overseas trade."

After summarising the factors bearing on current and future prospects, Mr. COGHLAN concludes: "It is expected that the Group's gross earnings for 1972 will again be at a satisfactory level although these will be subject to a heavier incidence of taxation due to the comparatively small balance of tax losses carried forward from 1971. Nevertheless, I am confident that with the Group's diverse spread of interests its future prosperity should be ensured."

APPOINTMENTS

University of Papua and New Guinea

Applications are invited for posts of (a) SENIOR LECTURER or (b) LECTURER and (c) SENIOR TUTOR or (d) TUTOR IN DEPARTMENT OF ECONOMICS. Fields of particular interest for the Senior Lecturer/Lecturer appointments are: Socialist economics and comparative economic systems; international economics; entrepreneurship and small-scale business organisation in transitional societies; transport economics; management accounting. Candidates with other main interests will be seriously considered especially those combining good academic records with governmental experience in developing countries. The Department has 8 full-time staff and over 100 full-time students. Appointment to Reader or Associate Professor may be considered. Salary scales: (a) A\$10,015-A\$11,030 p.a. (b) A\$7,200-A\$9,783 p.a. (c) A\$6,362-A\$7,030 p.a. (d) A\$5,134-A\$4,802 p.a. In addition an allowance of A\$360 p.a. is payable to married male appointees (A\$2,143 = £1 sterling). Detailed applications (2 copies) including age, nationality, marital status, academic record, experience, present position, teaching qualifications, publications, names and addresses of 3 referees, a recent small photograph, medical certificate of good health should be sent to The Secretary, University of Papua and New Guinea, P.O. Box 1144, Boroko, Papua and New Guinea. Closing date: 4 August, 1972. Further particulars obtainable similarly.

University of New South Wales

Lecturer

SCHOOL OF ACCOUNTANCY

Salary: A\$6801 range A\$9390 per annum. Commencing salary according to qualifications and experience.

Appropriate high academic qualifications and interests in accounting theory, financial accounting, management accounting or information systems.

Details of appointment, including superannuation, study leave and housing scheme, may be obtained from the Secretary-General, Association of Commonwealth Universities (Apsu), 36 Gordon Square, London, WC1H 0PF (Tel: 01-387 8572).

Applications close in Australia and London on 31 August, 1972.

Staffordshire County Council

COUNTY PLANNING AND DEVELOPMENT DEPARTMENT

Senior Group Leader

Reference No. 36 (S.O.1/P.O.1A -£2283-£3180 per annum)

Applications are invited for the above post in the Research and Industry Section of the Department. The Section has a major role in the preparation of the County Structure Plan in the field of Population, Employment, Industry and Shopping.

The post will carry special responsibility for Population and Employment studies and related needs (eg. Shopping). Applicants should have considerable experience in conducting research projects, evaluating statistical data, and in the preparation of reports.

The commencing salary for the successful applicant will be at any point on any of the grades commensurate with age, qualifications and experience.

Applications (no forms) giving details of age, education, qualifications, present and previous appointments, experience, present salary, and the names and addresses of two persons to whom reference may be made, should be sent to J. H. Barnett, County Planning and Development Officer, Martin Street, Stafford, by not later than the 27 July, 1972.

Relationship to any member or senior officer of the County Council must be disclosed.

University of Glasgow

Latin-American Studies

B.PHIL IN LATIN-AMERICAN STUDIES. Applications for admission to the course leading to the degree of B.Phil. in Latin-American Studies are invited from Arts graduates with good Honours Degrees who are interested in pursuing area studies in this field. This is a two-year course combining study in three of the following subjects: Literature, History, Geography, Economics, Politics, Sociology. A reading knowledge of Spanish and/or Portuguese is required.

SCHOLARSHIPS. Two graduate scholarships at S.S.R.C. rates per annum (plus fees) for two years are offered. These are not restricted to candidates not eligible for State awards.

For further particulars regarding admission and scholarships apply to the Director of the Institute, not later than 31 August, 1972.

Applications are invited for a Research Fellowship in Latin-American Studies tenable in the Institute in connection with one of the Departments of Hispanic Studies, History, Geography, Economics, Politics, Sociology.

The appointment may be made at senior level within the salary range £2082 to £2376 per annum or at junior level within the range £1641 to £1935 per annum. It will be tenable for two years with possibility of renewal for a third F.R.S.U.

Applications, eight copies, should be lodged not later than 31 August, 1972, with the undersigned, from whom further particulars may be obtained. In reply please quote Ref No 5101 U.

ROBT. T. HUTCHESON, Secretary of the University Court.

TENDER

GOVERNMENT OF PORTUGAL

Office of the Prime Minister

GABINETE da AREA DE SINES

CONSTRUCTION OF SINES HARBOUR (FIRST PHASE)

PRE-SELECTION OF CANDIDATES FOR TENDERS

The Gabinete da Area de Sines will accept up to 5 p.m. on July 31, 1972, applications for the preliminary selection of candidates for tenders for the civil engineering works for construction of the Port of Sines.

The port specifications refer to the reception of ships of 28 metres draught at all tides, and an easy expansion to 36 metres draught. The main breakwater is foreseen to reach depths of 45/50 metres.

Either individual firms or groups of firms are eligible as long as they can furnish documentary proof that they have carried out similar works to those envisaged.

The conditions of enrolment, details of the necessary documentation, and any further information required, may be obtained from:—

Divisã do Terminal Oceânico do Gabinete da Area de Sines
Rua Artilharia Um, N° 33-3°

APPOINTMENTS

Economist to make a creative contribution

...and play a positive role in initiating and experimenting as well as responding to requests from others. The appointment, in our Group Planning Service, calls for an economist with experience in a business environment, or the equivalent. He must have a first or good second class honours degree and his experience in applying theoretical knowledge is as important as formal qualifications. A good balance of knowledge, experience and interest between the quantitative and qualitative aspects of this work is essential. His responsibilities will call for him to apply up-to-date analytical techniques to the problems typical of a large, complex company in forecasting, planning, project evaluation and decision making. Top level management may look to him for economic analysis and comment of a general nature. The appointment is based at our Mill Hill headquarters and the salary will be commensurate with experience and qualifications. Please write, quoting reference S16, to:

LAINC

D. O. Best,
Senior Personnel Officer,
John Laing and Son Limited,
Mill Hill,
London, NW7 2ER.

Macquarie University SYDNEY, AUSTRALIA

Applications are invited for an appointment in the School of Economic and Financial Studies as ASSOCIATE PROFESSOR/SENIOR LECTURER in BUSINESS ADMINISTRATION within the fields of marketing or administration/organisational behaviour.

The successful applicant will be responsible for courses in one of these fields for the Master and Graduate Diploma Programmes in Business Administration. The present programmes provide for two courses to be offered in each field.

In addition to appropriate formal qualifications applicants should be familiar with recent research findings and have had practical experience in industry.

The appointee will be encouraged to develop his research interests which may involve participation in sponsored research and higher consultative work.

The salary for an Associate Professor is \$A12,593 per annum and for a Senior Lecturer within the range \$A9667 with five annual increments to \$A11,130 per annum.

Further information about the University and advice regarding the method of application should be obtained from the Secretary-General, Association of Commonwealth Universities (Appl), 36 Gordon Square, London WC1H 0PF (Tel: 01-387 8572) or from the Registrar, Macquarie University, North Ryde, N.S.W. 2113, Australia.

Applications close on 11 August, 1972

The University of Aston Management Centre

Head of Subject Group

Applications are invited for the above post which involves responsibility to the Chairman of the newly established Management Centre for co-ordinating and developing teaching activities within the Subject Group for:

ECONOMICS, ECONOMETRICS, STATISTICS AND MARKETING.

Candidates will be expected to make a personal contribution to teaching at all levels both in the Management Centre and elsewhere in the University.

The post is of professional status. Salary normally in the range £3,850-£5,786 per annum.

Application forms and further particulars may be obtained from the Staff Officer (Ref No. 868-2p), The University of Aston in Birmingham, Gosta Green, Birmingham, B4 7ET, to whom applications should be forwarded by 22 August.

University of New South Wales

Senior Lecturer GRADUATE SCHOOL OF BUSINESS

Salary: \$A9711 range \$A11,234 per annum. Commencing salary according to qualifications and experience.

In the field of business policy. Applicants should have high academic qualifications in a relevant field and experience in business administration, strategic planning, policy formation and the use of problem-solving techniques in business. Teaching experience especially with case study methods advantageous.

Details of appointment, including superannuation, study leave and housing scheme, may be obtained from the Secretary-General, Association of Commonwealth Universities (Appl), 36 Gordon Square, London, WC1H 0PF (Tel: 01-387 8572).

Applications close in Australia and London on 4 August, 1972.

The University of Sussex

CENTRE FOR CONTEMPORARY EUROPEAN STUDIES

Research Fellowship in European Labour Studies

Applications are invited for a Research Fellowship in European Labour Studies, for one year in the first instance, with the prospect of extension. The person appointed will be required initially to study sources of information on trade unions and industrial relations in Western Europe, and to develop the Centre's information output on these two subjects.

Trade union experience and knowledge of a Continental language desirable. Salary £1841-£2082 plus F.S.S.U.

Further particulars and application forms, returnable by 4 August, 1972, are available from the Establishment Section, Office of Arts and Social Studies, University of Sussex, Falmer, Brighton, BN1 9QN (telephone Brighton 66755, ext 663) quoting ref 894/3.

APPOINTMENTS

JAMES MORRELL & ASSOCIATES

leading specialists in business forecasting over a wide field have vacancies for two young

ANALYSTS

Requirements: Good degree in economics or business studies, preferably with bias towards monetary economics; numeracy; ability to write concisely in plain language; facility to communicate effectively; imagination; appreciation of political trends; readiness to work in a team and to develop own specialisations.

Age limit 24; starting salary around £2,000; generous fringe benefits. Applications with full information covering education and example of written work to:

James Morrell,
James Morrell & Associates Ltd.,
1 Paternoster Row,
London EC4P 4HP.
Telephone: 01-248 2228.

For further appointments
see pages 5, 88 to 93

Opportunities in International Banking

The scope of our International Banking Division in Europe is increasing, both through the general development of new business and through our links with the newly-formed Alpha Banks Group. The Division, already making a large contribution to bank profits, is poised for still further expansion, giving rise to these two new appointments.

LENDING OFFICER

A specialist to share responsibility for Eurocurrency lending and syndication. He will travel abroad as occasion demands, using these opportunities to consolidate existing relationships, set up contacts with potential customers and develop new business. Candidates, probably graduates aged 30 to 35, must have substantial international lending experience, and an appreciation of credit analysis. Knowledge of a European language would be an advantage. Ref: S.89.

To ensure that we attract the right men for these positions we have a flexible attitude both to salaries and the scope of the jobs. Salaries, however, will be not less than £4000 for the first post, £3000 for the second. Both appointments are London-based and offer excellent scope and career prospects in this fast-developing area of our business. Benefits include house loan scheme and comprehensive superannuation arrangements.

BUSINESS DEVELOPMENT — Europe

A business-getter to join our European team which is working closely with the six leading banks that constitute the Alpha Banks Group. His key task will be to identify and exploit new banking opportunities with banks and companies, both in the UK and Europe. As lending is the prime purpose, experience in this field is clearly desirable. Ideally in their late 20's/early 30's, candidates must have broadly-based banking experience, perhaps in a merchant bank with European interests. They must be prepared to travel extensively in Europe and should be reasonably fluent in a foreign language — preferably French. Alternatively they should be capable of achieving fluency quickly. Ref: S.90.

Please write giving full career details, quoting the appropriate reference, to: T. P. Lyons, Personnel Director, Williams & Glyn's Bank Limited, 20 Birch Lane, London, EC3P 3DP.

WILLIAMS & GLYN'S BANK

COST BENEFIT STUDIES

REGIONAL PLANNING

ENVIRONMEN- TAL PLANNING

SECOND SYDNEY AIRPORT STUDY

Consultants invite applications from young economists and O.R. scientists to work in multi-disciplinary teams. Interests should be in the regional, environmental and transport fields. Practical experience in these fields desirable but appropriate postgraduate work would also be considered. Initial work would include cost/benefit study of second Sydney Airport both in U.K. and with certain posts available in team in Australia.

Send detailed curriculum vitae to:

D. W. Triptree
R. TRAVERS MORGAN & PARTNERS
Wellington House
Strand, London WC2R 0AR

Atkins Research & Development

Economics and Environment

We are looking for an economist to join our team concerned with assessing the significance of environmental and planning factors within the framework of social-cost-benefit analyses. Members of the team have physics, applied psychology, geography, engineering, acoustics and bio-chemistry, as well as economics among their disciplines, and the candidate will form the focus for the economics content of our work. He will, however, be expected to make a contribution to the overall solution of problems rather than operate strictly in the confines of his own discipline. Interest is essential; experience is not, and the starting salary will be commensurate with the person's capabilities and experience. Prospects are excellent in this

fast developing field of activity. As a member of the W.S. Atkins Group we provide consulting services over a wide range of planning and engineering problems including the justifiable level of investment in roads, the siting of airports, the consequences of change in the urban environment, socially desirable noise standards and the degree to which pollution should be controlled.

Applications with career details should be made to:
Mr. R.A. Waller,

**Atkins
Research and Development**

4 Dorking Road, Epsom, Surrey.

APPOINTMENTS

KENT COUNTY COUNCIL

Assistant Research Officer circa £2,650

Interesting opening for a young Research Officer to work in the Research and Intelligence Unit located in the Policy Management Division of the County Clerk's Office.

Applicants should possess a numerate degree (or equivalent qualification). They should have experience in market research, government survey work, corporate planning or operational research. Initiative must be combined with acceptance of the need for research to result in management action.

Further details and application form from the Clerk of the County Council, County Hall, Maidstone, Kent, reference D2/OS1/286. Closing date 10 August.

Durham University Business School

Applications are invited for a second post of LECTURER IN INDUSTRIAL RELATIONS from 1 October, 1972 or as soon as possible thereafter.

Salary on the scale £1641 to £3999 plus F.S.S.U.

The successful candidate will be expected to participate in the teaching work of the School, which covers post-graduate, undergraduate and in particular post-experience programmes. The Business School has a well-established reputation for in-company highly-participative management courses.

Industrial Relations is a subject in increasing demand at present, and the successful candidate will be expected to help promote this growth.

A good honours degree and relevant industrial or research experience is essential. Teaching experience, while not essential, would be advantageous.

Further particulars from the Registrar and Secretary, Old Shire Hall, Durham, DH1 3HP to whom applications (3 copies), naming three referees, should be sent by 28 July, 1972.

TRANSPORT ECONOMISTS

Colin Buchanan and Partners have vacancies for economists with substantial experience of transport studies, for work in the U.K. and abroad. Numeracy and an understanding of urban transport models are essential attributes.

Those who have already made applications for similar posts will be considered for these vacancies.

Applications, stating qualifications, experience and present salary should be sent to:

Miss J. Sturt,
COLIN BUCHANAN AND PARTNERS,
47 Princes Gate, London, SW7.

STATISTICIANS

with wide-ranging skills

Government statistics provide the basis for decisions and policy-making in every area of national life. As a government statistician your training and skills are given full scope, often in highly professional multi-discipline teams, working on projects of major importance.

HOME OFFICE—Surbiton, Surrey (2 posts)

The Statistical Division provides advice and interpretation on a wide variety of subjects including crime, the penal system, probation and after care, juvenile delinquency, drugs, immigration, and fire statistics. You work closely with policy divisions and research workers.

The second vacancy is also located at Surbiton and is for a Senior Assistant Statistician.

MINISTRY OF DEFENCE (2 posts)

At the Institute of Naval Medicine, Gosport, Hampshire. The Institute conducts an extensive programme of research in such fields as occupational medicine, underwater medicine and pathology. You will provide statistical support for the experimental work undertaken by the

Institute and associated Naval medical establishments. Medical statistics experience will be an advantage. The second vacancy is for work in London on statistics of Service manpower.

Candidates for the Statistician posts should normally be at least 27, whilst those for Senior Assistant Statistician must be 24 or over. An honours degree in statistics, or in another subject involving formal training in statistics, and several years' relevant experience are essential.

Starting salaries: Statistician £3653-£4883 (Inner London), slightly less Gosport and Surbiton; Senior Assistant Statistician £2391-£2899 (Surbiton). Appointments can be either permanent and pensionable or short term (with FSSU). Promotion prospects to posts carrying salaries in excess of £6400 (under review).

Write for full details of these and other current vacancies, and an application form, to the Civil Service Commission, Alencon Link, Basingstoke, Hants, or telephone BASINGSTOKE 29222 ext. 500 or LONDON 01-839 1696 (24-hour "Ansafone" service) quoting reference A/619/S. Closing date 14th August 1972.

APPOINTMENTS

economists, statisticians, operational researchers

up to £3093 plus supplementary London weighting

required in the Strategy Branch of the Planning and Transportation Department. Vacancies exist for numerate Economists, Statisticians & Operational Researchers in:

(1) Studies of the economic structure of London in relation to the region, to forecast levels of economic activity, employment and income, and to help formulate policies for London's economic activities in relation to the Council's employment and welfare objectives.

For a suitably experienced candidate capable of leading a small team working on regional accounting, a salary of up to £3771 plus supplementary London weighting would be offered.

(2) Studies of feasibility and cost effectiveness of various physical, employment, residential and social structures of London and the evaluation of alternative investment strategies for both the public and private sectors, and to help formulate policies for the development of London, and means of financing it.

(3) The development of suites of models of the London and regional economy, and of the physical development of London, and the use of resources and finance to provide the basis of policies for structuring and phasing. In each case there will be opportunities for developing new techniques to deal with the different problems that arise in these fields.

Applicants should be graduates in quantitative economics, statistics or operational research. Starting salary dependent on qualifications and experience.

Application forms returnable by 28th July, from the Joint Director, Department of Planning and Transportation (A/EQ/271), County Hall, SE1 7PB.

Every Toyota passes
an important test...
your test.

Note the red arrow.
That is one of our models.
It's on the highway. But it couldn't have
gotten there without the consent of Toyota's
outstanding technical staff and facilities.
That's where we conduct our grueling auto tests:
wind pressure, exhaust gas analysis, durability,
skid control, crash, high speed (small photo),
just to name a few.
It's all part of the attitude we take towards
the motorist and the car that we sell him.
Nothing leave our hands until it's safe in
your hands.

TOYOTA

Reggie Agonistes

Mr Maudling has wrestled long against his fate and his luck, but his resignation from the cabinet came chiefly from disgust at the treatment he and his family have had from a hypocritical press. The reform that is really needed is in the attitude of those who, wittingly or otherwise, have dragged him down, page 13.

He's happy

Mr Nixon is doing so well with Russia and China that their unending quarrel with each other underlines the coup he has brought off, page 17. And Senator McGovern, try as he will to bring the Democratic party together, hasn't done that either, page 45.

Advise me no more

President Sadat's ejection of his Russian advisers knocks the second big hole in Soviet influence in the Middle East, page 15. Maybe the Israelis can concentrate on their internal arguments now, page 37.

In the toils

The CBI has gone through the motions of prolonging the price freeze for three months and the TUC through the motions of talking about talks on incomes, page 73. Unemployment and wage rates are both going up, and the lorry drivers are determined to close down the docks, page 74.

In the firing line

Sensibly, Mr Whitelaw is still trying to cool things in Ulster, but the Protestants have tied his hands more securely than before in dealings with the IRA. The confrontation at Lenadoon illustrates his dilemma, page 21.

BEA-BOAC

The effective merger of the two British air corporations could make them as big, efficient—and rich—as the American giants, but not if they continue to employ three times as many men, page 67.

Lee did it

With a little bit of luck Lee Trevino won the British Open again; and that was that for the Nicklaus bid to pull off the grand slam, page 28.

Letters

ICL

SIR—In your feature "Buying time for ICL" (July 8th) it was interesting to note your consistent recommendation (February 27, 1971, October 2, 1971) that ICL should acquire American software operations. The feature makes the important point that perhaps ICL has missed opportunities of acquiring a large customer base there by not snapping up the GE or RCA computer operations when they were for sale.

I would like to make two points. The first relates to opportunities in world markets. In Europe, which you write off to IBM, ICL has its greatest chance. IBM's dominant position is probably permanent but a swing of 10-20 per cent of the installations is not impossible. Thus ICL's real challenge is not its hardware or software product (although this must be excellent); it is rather its marketing success. This is surely Mr Hudson's prime challenge, and a serious, co-ordinated, planned and sustained marketing attack on the European market for the next five years must yield sales and profits. You then ignore the market where ICL has done well—eastern Europe. The potential of this economic grouping (and sales to China should not be ignored) can be enormous. Mr Ellis's letter in the same issue emphasises the point.

Further, it seems that an approach by Univac for a minority interest in ICL is acceptable but you do not mention this technique being used by ICL in Japan. Why should it not participate in a Japanese company with great success and with exciting opportunities for exchange of technical knowledge in manufacturing techniques, automation, marketing and software development?

These opportunities exist and there are two main resources required as a basis for success. The first is a large-scale, purposeful and long-term commitment from the British Government both in terms of orders and cash. The second is that ICL will have to take a much more aggressive attitude to its engineering and maintenance service back-up in all the countries where its machines are sold.

My second point is this: acquiring an American software house does not offer ICL a customer base, or necessarily improved management, or improved software. The American software house purchased by a British company will want to be strongly managed and directed, have access to large-scale funds for development and marketing and will not want to be held back by the European pace. A tail-wagging-dog situation is the last thing ICL needs.

It is, I believe, fair to let Messrs Hudson,

Cross and company get on with the job which they have only just commenced. It is also essential that we face this computer problem fully and not in a series of half steps which allows no clarification of our policy or commitments.—Yours faithfully,
ALAN BENJAMIN

Harrow-on-the-Hill, Middlesex

Air traffic control

SIR—I have been following with interest your articles on air traffic control, and the response to date. There are one or two points that need making which, I hope, will clarify the situation for your lay readers.

1. The FAA's air traffic control system in the United States comprises two main parts. This is the national airspace system of en-route air traffic control, using some 20 IBM 9020D systems, together with the automated terminal approach, based on Univac computers, at the 60 or so largest commercial airfields. This represents a massive investment in computer power—some 80-odd computer systems at my reckoning.

2. The IBM 9020D is a complex of commercial computers, with four IBM 360/65 computers as the main computing element, and three 360/50 computers to handle the input/output of the vast streams of data that require to be processed. However, the main problem with a multi-computer system such as the 9020D is that, owing to problems inherent in the "scheduler" programme that makes all these machines work as one, you get a progressive falling off in the useful capacity that is available for the real work of air traffic control. Thus, you have 90-95 per cent of the first 360/65 available to you, 70-75 per cent of the second, and some 40-50 or 60 per cent of the third 360/65. (The fourth is there on standby, not for regular use.) Adding these figures together, and taking the more conservative of these capacity estimates, we can see that, in fact, the main computer element of the 9020D is as powerful as two 360/65s working together.

From this it would seem that your articles have indeed been correct and the CAA wrong, in commenting on the merits of the 9020D versus the newer 370/155s chosen for Eurocontrol. Perhaps you or the CAA's spokesman might have mentioned that the Eurocontrol consortium originally proposed 360/50s—it was only after some 18 months of systems and programming effort that the Eurocontrol realised that they were facing machine capacity limitations, and ordered the newer IBM 370s.

This contrasts very strongly with our United Kingdom experience. The Marconi Myriad computers chosen are undoubtedly excellent machines, and have provided yeoman service in the process control applications for which they were designed. However, it would seem that they were not the ideal choice for a task as vast

as that of air traffic control. What is very apparent from the letter in your columns from the Marconi spokesman (May 27th) is that Marconi had no idea, when they bid for the contract, of the size and scope of the job that they had undertaken. Nowhere in the letter from Marconi is there acknowledgement of this machine capacity problem that has held back the effective computerisation of Britain's ATC system over the past five years.

3. Software. The CAA spokesman claims (Letters, July 8th) we shall benefit from FAA software. I understand that the FAA are providing us, free of charge, with the "scheduler" programme which makes the 9020D work—a programme which would be redundant if we went for the British-built 370s. As for flight plan processing, all countries have marginally different requirements, and I would imagine some tailoring to be necessary before we have a working British FPP system. It would be most interesting to know just what other benefits we hope to achieve—bearing in mind that the NAS en-route system normally feeds data into the Automated Terminal Approach systems on the Univac computers, so that at best we are only getting a portion of the FAA system for our solitary 9020D.

4. The Staran IV. Your article drew our attention (May 20th) to a little known development that has been sponsored by the USAF and Goodyear Aerospace. This is an associative processor, capable of performing in one machine-cycle a series of tasks in parallel. It would seem to be the ideal tool for certain limited kinds of tasks, such as conflict prediction. It is not the sort of computer one would buy for handling payroll—or a routine data-processing application such as flight plan processing, a process which in any case is only concerned with where planes should be, rather than tracking them where they are and performing, automatically, a collision avoidance warning to air traffic control staff.

The FAA has recently conducted an experiment with a prototype Staran computer borrowed from the USAF. This was linked to the automated terminal approach Univac computer at Knoxville, and provided an impressive demonstration of the capabilities of such a "hybrid" system.

It is therefore highly misleading of the CAA spokesman to write concerning Staran that it has not been programmed for FPP, and is too small a machine to perform flight data processing in the United Kingdom. The point about Staran, surely, is that the breakthrough in computer power that it represents makes the traditional FPP approach look obsolete. Surely it is better to track planes where they are in the sky, rather than using a lot of computer power to tell you where planes should be?—Yours faithfully,
Bletchley, Bucks PETER R. WEBB

MANAGEMENT APPOINTMENTS

£7000 PA AND OVER

Group Marketing Director

for the Main Board of the
Wellcome Foundation
Limited in London.

- OUTSTANDING achievement in the planning and direction of world wide marketing operations, concerned with medical, pharmaceutical or chemical products, is the critical requirement.
- TERMS are open to discussion.

Write in complete confidence
to A. Barker
as adviser to the group.

JOHN TYZACK & PARTNERS
LIMITED

10 HALLAM STREET • LONDON WIN 6DJ

DIRECTOR OF PRODUCTION

This is a rare opportunity. It entails joining the top management team for a new venture; it offers the prospect of equity participation. The venture has ample financial backing.

A new factory is being built to manufacture by continuous process a range of products that will serve the furniture, building and allied industries.

The tasks are to commission the plant efficiently (capital value £7m) and thereafter to operate it to stringent cost, time and quality standards.

The job demands quick responses to market pressures—a qualified mechanical engineer who has successfully managed the cost line in a continuous process industry.

For a man aged about 40 the salary element of his remuneration will be about £7,000. A car will be provided.

Letters will be handled in confidence by
Dr A G Roach.

ROACH

A G ROACH & PARTNERS,
26 GROSVENOR GARDENS, LONDON SW1.

For further management appointments see page 7

Insurance supervision

SIR—I wonder whether it is possible to write such a panegyric as Herr Börner has done (Letters, July 8th) with respect to the German method of insurance supervision without either ignoring or forgetting essential facts. It is simply not true that, during the past 20 years, no traffic victims were left without the compensation due to them; on the contrary, there have been at least two companies which had been licensed to do motor-car business in Germany and which broke down, ie, the (Dutch) Brandaris and the American Military International Insurance Association. Still more to the point (although it is doubtful whether somebody not belonging to the inner circle can be aware of it) a few years ago German insurance escaped only by the skin of its teeth: a case which owing to its size would have been comparable with that of the V and G in Britain. Further, Herr Börner has omitted to mention that in 1970 German motor-car insurance produced a total loss of DM1 billion, since the supervisory office refused its (legally necessary) approval of an increase of premiums which the companies had demanded and which would have sufficed to counteract the influence of inflation—in other words, the supervisory office tried not to (or was not allowed to) disturb Herr Schiller's anti-inflationary policy.

In fact, there is little to choose between the British and the German systems. In both of them arbitrary actions of individuals can lead to the gravest consequences—the difference being only who these individuals are. In Britain they are the managers, in Germany the supervisory office and/or the minister of economics. On balance, I think the British system is preferable in so far as it saves the companies a lot of nuisance, the German system involving the approval of the supervisory

office to a lot of things. A good solution of the problem can, in my opinion, only be found if some institution is created which makes it impossible for incompetent people to manage motor-car insurance companies, comparable with what the Institute and the Faculty of Actuaries are doing for life assurance—Yours faithfully,
Dusseldorf WOLFGANG SACHS

Value-added tax

SIR—I am glad that you are in favour of floating exchange rates, but sorry you do not come out strongly in opposition to Vat. It will be expensive to collect, and it is very complicated and hard to understand, which will lead to many anomalies, mistakes and down-right frauds which will be hard to detect. Also the tax is based on a rather absurd fallacy which, incidentally, was believed by Karl Marx. It is that the consumer, bless his heart, can be made to pay more simply by putting prices up. The fallacy becomes clear if you imagine a consumer with, shall we say, £2,000 to spend and you put a tax of 50 per cent on everything. Then he will have to pay £3,000 for what he buys. He won't. He will simply buy less.

This is of course true of all taxation, which is why it should be cheap and simple to collect and administer, which Vat is not. Why not a flat rate of purchase tax, the cost of which will work its way through the chain of manufacture and distribution by economic forces rather than by government interference? This should appeal to a Conservative government and therefore it seems to me possible that if you were to take the matter up you might succeed and add much prestige to *The Economist*.—Yours faithfully,
Angmering, Sussex C. WILLIAMSON-JONES

Martyrs or militants

SIR—Mr Cadbury suggests (Letters, July 8th) that the men opposing the use of containers should be compared with the Luddites. He may be more accurate than he realises.

Nearly all judgments on the actions of the Luddites are guesswork, if only because they left hardly any written testimony on their reasons for acting as they did.

My guess is that the spectacle of big machines taking the place of human labour without being subject to any serious social control for agreed social ends, and which manifested solely the itch of their owners for profit, represented a total threat to people's social structure and the unleashing of giant forces which would be beyond the power of any social structure to control at all.

More than a century and a half later we have lived through two fatuous, wasteful, destructive and utterly needless world wars and, prominent among several dangers that now threaten man's entire social existence, we are confronted with a blank wall of thermonuclear destruction. Who

then will say the Luddites were wrong?—Yours faithfully,
Lusaka, Zambia JOHN PAPWORTH

Pakistan

SIR—Your special correspondent claims (July 15th) that during the national assembly debate on the Simla agreement, Mian Mumtaz Daultana "insisted that there is no reason for Pakistan to make any concessions to India," thereby giving the impression that he did not support the agreement.

Mian Mumtaz Daultana had said that he did not subscribe to the view that Pakistan had ever entertained any hostile designs against India for the past 25 years since independence. He maintained that Pakistan never desired to occupy a single inch of Indian territory. It was in this context that the question of Pakistan making any concessions to India did not arise.

Mian Mumtaz Daultana stressed that the Simla negotiations were correctly handled, and President Bhutto, who did so, should be assured of "our support."—Yours faithfully,
ABDUL QAYYUM
Press Counsellor,
London, SW1 Embassy of Pakistan

Flight from money

SIR—The centre of your July 1st edition contained a "Barclays Bank Briefing," with a map of the United Kingdom, and a graph chronicling the rise in prices of houses and land from 1966 to 1971's end. The graph conveys the impression that land prices, house prices and building costs are, respectively, about 205 per cent, 160 per cent and 140 per cent of 1966 levels. The daily financial press suggests that a further 17 per cent or 22 per cent has been added to house prices in the first half of 1972.

The same dailies speak of a record sale of this or that objet d'art at Sotheby's. At what point may we expect a piece in *The Economist* entitled "The flight from money," for it surely wouldn't take much more to justify such description? We may be not far behind over here.—Yours faithfully, A. HAROLD CAMERON
Dobbs Ferry, N.Y.

McGovern

SIR—From recent editions it strikes me that the pro-McGovern bias of your American Survey writers has gotten completely out of hand.

Perhaps some much needed perspective might be restored if they were required to answer the following question:

Exactly how would the election of an American Allende help America, Britain, or what pitifully little remains of western civilisation?—Yours faithfully,

L. D. KIRKWOOD MARTIN
West Springfield, Virginia

MANAGEMENT APPOINTMENTS £7000 PA AND OVER

DIRECTOR

for

A MAJOR TRADE AND EMPLOYERS ASSOCIATION

An exceptional opportunity for an individual with the appropriate experience to take charge of the national London-based organisation representing the vast majority of employers in one of the country's major capital goods industries.

Applicants for the post should have wide experience of administration and commercial work, including negotiations with Government Departments. Legal training would be an advantage, as would experience of industrial relations including responsibility for conduct of negotiations with trade unions and the preparation and presentation of cases although neither of these qualifications is essential. Salary no barrier for the right type of person.

Applicants should write to Box 2515 giving full particulars of their career.

Reinsurance

- THE group is a world-leader.
- THE role is to underwrite a reinsurance treaty account in the group's London office.
- AN INTIMATE knowledge of the London treaty market and of international reinsurance is required.
- A STARTING salary of around £8,000 is envisaged – it could be substantially more for a man with an exceptional record of achievement.

Write in complete confidence to
Sir Peter Youens as adviser to the group.

JOHN TYZACK & PARTNERS
LIMITED

Islington
Council

Invite applications for the post of

CHIEF EXECUTIVE and TOWN CLERK

The person appointed will be:

- Head of the Council's paid service and its principal adviser.
- Manager of an inner urban authority and will contribute to the solution of its fundamental problems.
- Responsible for the effective implementation of policies, programmes and plans developed by the Council.
- Able to demonstrate proven outstanding ability for top management in Local Government.
- Required to advise on the future development of an evolving pattern of top management.

The appointment will be subject to three months' notice on either side. The salary scale—£8,569 x £198(4)—£9,361 per annum comprises (i) the maximum laid down by the Joint Negotiating Committee for Town Clerks in the appropriate population range, and (ii) a sum (currently £1,390 per annum) in lieu of fees for electoral registration and election responsibilities.

Application forms (returnable by 25th August, 1972) and further particulars are obtainable from the Personnel Officer, Islington Town Hall, Upper Street, London, N1 2UD. Tel: 01-226 1234 ext 300.

For further management appointments see page 5

EIU Quarterly Economic Review Service
Every quarter, 70 reviews cover 150 countries

West Indies

The most recent international monetary upheavals will have a profound effect on the economic realities of the Caribbean, affecting some sectors adversely, but boosting tourism and intraregional trade. Thus, on balance, the latest QER suggests, the economies in the region will benefit.

An annual subscription to one review (4 issues and an Annual Supplement) is £15 (US\$40). Airmail postage £2 (US\$5). Single copies £4.50 (US\$12). Payment with order please.

It's a Barclays world of banking

Barclays, the largest bank in Britain, is also the fourth largest bank in the world. The Barclays Group with close on 5,000 branches, is the world's largest banking network.

Quite a lot of people work in quite a lot of places to maintain and expand this remarkable organisation. In the United States you will find Barclays in New York with three branches, Barclays in California with twenty-three, and Barclays with an office in Chicago.

And around the world: the West Indies; South America; Africa; the Mediterranean; France; Germany and Switzerland; the New Hebrides; Bermuda, Mauritius and the Seychelles; Brussels, Milan, Sydney and Tokyo.

Barclays in 48 countries (including, of course, England and Wales). No wonder Barclays feels at home in the world of banking.

THE BARCLAYS GROUP

The Barclays Group includes:
 Barclays Bank Limited
 Barclays Bank International Limited
 Barclays Bank (London and International) Limited
 Barclays Bank S.A.
 Société Bancaire Barclays (Suisse) S.A.
 Barclays National Bank Limited
 Barclays Bank of New York
 Barclays Bank of California
 Barclays Overseas Development Corporation Limited
 Barclays Export and Finance Company Limited
 Barclays Bank Trust Company Limited
 Barclays Unicorn Limited
 Barclays Insurance Services Company Limited

Associated Companies:
 Bank of Scotland
 United Dominions Trust Limited
 Banque de Bruxelles S.A.
 Banco del Desarrollo Económico Español
 Société Financière Européenne
 Bermuda Provident Bank Limited
 Banco Popular Antillano N.V.
 Investment Bank of Malta Limited

When your competitor starts driving one of these-start worrying.

For he'll be ahead of you all over Europe.

While you are trying to get an airline booking, he'll be taking off.

While you're waiting for a connecting flight, he'll be knocking on your prospective customers' doors.

The Hawker Siddeley 125

business jet is as fast as an airliner. It has the range to cover all Western Europe without refueling. And it can get into more than 250 airfields that the airlines don't serve at all.

If you want to be in the wider markets of Europe and think we could help, write to us or ring Chris

Putler on Hatfield (Herts) 62345.

We'll give you all the information and help you need. Then it could be your competitors' turn to start worrying.

The HS 125 Eurojet.
 One take-off covers the EEC.

HAWKER SIDDELEY AVIATION

Kingston upon Thames, England
 Hawker Siddeley Group supplies mechanical, electrical and aerospace equipment with world-wide sales and service.

THERE'S MORE TO TELECOMMUNICATIONS THAN HARDWARE.

WE HAVE WAYS OF LETTING PEOPLE TALK.

The hardware is not our only concern. We do design and manufacture frequency-division channelling equipment, switching systems, solid state keying devices and the like. We are involved with the integration of solid state systems into computer-based networks, for high-speed automatic message routing.

All these are geared to improving systems for bringing people together.

The expertise we can offer — based on traffic management and operational experience in satellite,

cable and radio communications — is available to solve your network problems.

That's our business. Keeping people in touch, round the world and round the clock. By telephone, telegraph, telex and television.

The Cable and Wireless Group of Companies and Associates, with offices around the world.

who have been passing judgment on Mr Maudling so freely know that Mr Hoffman and Mr Poulson were dicey propositions when he began his associations with them? And if they were so sure of their business nous then why did they not tell him so?

The simple fact is that Mr Maudling was not so much careless as unlucky. It may well be true that he was anxious to build up a capital fund in a hurry. *The Economist* does not know and does not wish to know about Mr Maudling's private affairs; indeed, we believed it was a humiliation for Mr Wilson when he felt obliged to reveal the details of his personal finances after he was criticised for selling his memoirs for what was said to be a large sum. But Mr Wilson's revelations did emphasise the serious financial burdens which are placed on ministers. Mr Wilson was worse off after just under six years of office than when he was in opposition; some of his colleagues also ran up very considerable overdrafts during the same period. When the Conservatives lost the 1964 general election Mr Maudling had been in government for an uninterrupted 12 years. Many Tories of his class and generation with young families to bring up found it difficult to make ends meet during that period; some were lost to government as a result. How badly others suffered was brought home when the will of the late Iain Macleod was published. Would the critics of Mr Maudling and other former ministers who felt obliged to go out to try to earn some money in a hurry after that length of ill-paid public service really prefer other traditions of making ends meet in politics?

The glare of publicity

There was one sentence in Mr Maudling's resignation letter which was particularly significant:

I think I can reasonably claim a respite from the burdens of responsibility and from the glare of publicity which, inevitably, surrounds a minister and, inexcusably, engulfs the private lives even of his family.

It must be hoped that his use of the word respite was carefully chosen, and that he has only opted for a temporary intermission. But it seems to have been difficult for some newspapers to draw attention to that phrase about the publicity which engulfs the private lives of a public man's family. Mr Maudling's daughter, in particular, has had her personal problems, and her parents have affectionately stood by her. But she would never have attracted the attention of the smallest home town newspaper if her name had not been Maudling, and her distress must have been compounded by the knowledge that the newspapers were only using her gratuitously to wound her father. Nothing has been more sickening than what has been written so soulfully about the Maudlings this week in newspapers which have consistently given prominence to such gossip stories. The editors of these newspapers, some with very large circulations, may now sincerely regard it as a personal and political tragedy that Mr Maudling has left the Government. They owe it to him to consider how much they have contributed to his resignation.

It is a tribute to the general integrity of British public life that it only takes a whiff of smoke of a 'miserable

little scandal to touch off a blazing fire of concern about the possibilities of corruption among MPs. Such outbursts are often nonsenses, but they can actually do more damage than they try to mend. There is a case for a general inquiry into some practices in local government, for it certainly seems undesirable that senior officials of local authorities are allowed to pursue outside business interests. It is not unknown, either, for corruption of one sort or another to exist among elected councillors. But it is absurd to pretend that corruption is widespread or remains undetected for long. And what is true of local government is even more true of Parliament.

Of course, it would be equally absurd to pretend that among the 630 MPs there are not a few very nasty characters indeed. But they are known, very well known, to their colleagues and opponents in Parliament and to the senior officials in Whitehall. The laws of libel keep their names (in that respect only) out of the newspapers, but that does not mean they are not kept very firmly out of any real influence in the functions of government, whatever the political complexion of that government. In their meticulousness in keeping up standards there has been nothing to choose between successive leaders of both major parties. Of course, the cynics say that the reason why the British Parliament is so clean is that backbench MPs do not have enough real power to make them worth bribing. That certainly is one of the reasons, and it very largely accounts for the fact that when an MP offends it is usually the result of his relations with a foreign government, which is likely to have an inflated conception of British MPs' importance and influence. Such MPs do not need to be flushed out: however big they might be made to seem in some countries abroad, they are of little consequence at home.

It is certainly unfortunate that many MPs, who could actually do useful work for industry and the City when in opposition, are too often forced to lend their names, if not always a good deal of their time, to public relations firms and consultants who find it useful to have on their payroll a man who can throw cocktail or dinner parties in the Palace of Westminster. Such activities are more demeaning than corrupting. The City and major industrial firms could help to make them less necessary.

From inspection to intrusion

The idea that all MPs should have their business interests open to public inspection has its attractions, but it is rather irrelevant. If such a register were really necessary, which it is not, it could only be plausible if it covered the whole financial means not only of every MP but of every member of their families as well. Such a register would be an intrusion into the privacy of the vast majority of MPs who have nothing to hide, and no obstacle at all to the tiny majority who have. It must be hoped, therefore, that Mr Wilson will not lend his or his party's authority to the demand that some MPs are now making for just such a register. It may be frustrating for the nosey, but the system of each party sweeping its own little bit of muck under its own carpet

has worked, and is still working, pretty well.

This is not a time for Parliament to give in to the muckrakers in fear that if it does not the country will believe that there is much muck to be raked. Instead, it is a time when responsible men in all parties should display the confidence, which they undoubtedly have, in the integrity of their colleagues on their own and the opposite benches. It has been a bleak week in British politics. A few MPs, and rather more Pharisees in the

Sand on their boots

Those advisers have been thrown out because the Egyptians believe Russia has failed them. It isn't doing that well with other Arabs either

By slinging out all Russia's military advisers, President Anwar Sadat will please those Egyptians from whom his regime had most to fear. Officers in Egypt's armed forces, from the war minister, General Sadek, downwards, have made known their rankling irritation at the visible presence of an army of Soviet supervisors. There has long been hushed speculation that one day this boil of irritation would burst, and that would be the end of Mr Sadat and his men. The most logical explanation of the president's seemingly irresponsible and impulsive action in pulling down the pillars of his military temple is that he believed this moment to be near.

But what does Egypt do next? There are at least two conflicting possibilities. The first is that the Egyptians, freed from Russia's restraining presence on the ground, will attempt some blow against Israel. This has been urged by younger men, publicly by students and, more to the point, privately by junior officers who are fed to the teeth by their long pointless years in the frontline desert. But Egypt's senior officers, although they no doubt have more faith than the Russians do in their men's new fighting capabilities, are no less aware than the Russians of the difficulties imposed by geography and inferior weaponry. If they attack or harass Israel, the Egyptians will not only still be without the offensive weapons, in particular ground-to-ground missiles, that they have fruitlessly been demanding from Russia; they will now also be without direct Russian help in defending Egypt against an Israeli counter-attack.

It would be unwise to assume that this loss of Russian help in defence would be decisive. The number of Russian advisers now sent packing is not known but the figure of 20,000, generally cited in the west, is probably a wildly out-of-date exaggeration (although it could be somewhere near the truth if it includes those Russian military men in Egypt who are not engaged on the anti-Israeli front). It presumes that a huge number of Russians are still controlling and maintaining the Sam ground-to-air missiles; but this is work which over the past two years has been increasingly taken over by Egyptians. Possibly the assumption that Egyptians are incapable of operating or looking after sophisticated weaponry is as misguided as that earlier assumption that

press, have contrived to bring down a fine politician. In doing so they have shocked the country, and some of them may even have shocked themselves. Perhaps that shock was required. If their interest is genuinely in the health of British politics there is no doubt where their duty now lies: it is in giving open encouragement to Reggie Maudling so that, however long it takes to clear up the Poulson mess, he will want to return to his natural place on the Conservative front bench.

they would be incapable of running the Suez canal. Even so, and giving all credit to Egypt's ability to learn, the loss of Russian advisers must make its military prospects worse, not better.

The alternative step—towards peace with Israel—is just as dubious. The obvious balance to an anti-Russian move would be to look again towards the United States. But Mr Sadat's trust in the Americans' determination to push Israel towards some kind of political settlement proved one of the main illusions that brought Egypt to its present dilemma. Last year, when hopes for a peaceful solution were much higher than they are now, Mr Sadat promised to send the Russian missile crews home if Israel embarked on the first stage of its withdrawal from Sinai. Now he has dismissed these crews, plus all other advisers, without any indication from the United States, in the middle of its election campaign, or from Israel, prematurely in the grip of its own coming elections, that he will get anything in return.

True, Dr Gunnar Jarring is due to go to New York early next month to find out whether there are any reasonable grounds to encourage him to restart his UN mediating mission. At present there are none. In theory, President Sadat's putsch could open the way for an Israeli initiative but all signs point to the conclusion that Israel's leaders, deeply enmeshed in domestic issues (see page 37), have no intention whatsoever of complicating their lives by resurrecting the question of possible withdrawal. And, at least until well after its election, America will not urge Israel to do anything it does not want to do.

The turning tide against Russia

Given the limits on any positive action, towards war or peace, Egypt may well be forced to carry on much as before—enduring, because it cannot change, the major frustrations of no war and no peace. But President Sadat's action raises questions that go beyond the immediate effect on Egyptian policy. One of these is the future of the cold war strategic operations that Russia has been pursuing from Egyptian territory. Another, linked to the first, is its effect on what some have seen as the rise, and others have felt already to be the decline, of

Russia's position in the Arab world.

Reports on President Sadat's statement on the expulsions, made on Tuesday to the central committee of the Arab Socialist Union, do not explicitly spell out his intentions about those operations that have a great deal to do with the Russian and American fleets in the Mediterranean and little to do with Egypt. Since he has never acknowledged that the Russians have anything more than facilities in Egypt, he cannot very well talk about the dismantling of a base or the expulsion of its personnel. The Russians, however, are reliably believed to have an exclusive base near Alexandria from which they can service and support their own fleet and survey the American one. It can be argued that such goings-on fall within the military co-operation promised in the 15-year friendship treaty signed by Russia and Egypt in May, 1971. Maybe, but Mr Sadat has made it as clear as he can without saying so that Egypt is no longer content to allow such argument; all military installations and equipment, he declared, are to be Egypt's sole property. It looks as if Russia will have to fly home not only the military advisers and experts attached to the Egyptian forces but also the planes, pilots, service crews and as much of the equipment as possible that it has been employing for its own purposes.

The prize of two treaties, first with Egypt and then, a year later, with Iraq; the hospitality given to Russian warships by Arab ports in the Mediterranean and the Gulf; the new flow of military equipment together with advisers into Syria; the major economic activities in Egypt, Iraq and Syria; the inclusion of a couple of communists in the governments of Egypt, Syria and Iraq (though only in Iraq are they officially members of the communist party); the constant tread of high-powered Arab delegations to Moscow; and, above all, the failure

of America to make Israel give an inch—all this and more has seemed a substantial list of achievements to support the view that Russia has been doing extraordinarily well in making Arab friends and influencing them. And indeed it is if one looks back 10 years or so. But even before Mr Sadat rounded on the country that only a few weeks ago he was defending as Egypt's sole friend there have been a number of signs in the past 18 months to suggest that Russia was following Britain and the United States in finding the Arabs a difficult, independent and ungrateful lot.

How the ebb set in

The most dramatic setback was in Sudan. Between General Numeiry's seizure of power in May, 1969, and the unsuccessful communist-inspired coup to throw him out in July, 1971, the Russians were doing fine. Sudan's revolutionary regime began to switch to Russian arms and to Russian trade and barter; Russian experts and advisers were welcomed; Sudan's large communist party, though operating under difficulties, remained effective and well-organised and President Numeiry himself decked out his speeches with the better-known marxist tags. But after the failure of the coup everything went into reverse. The local communists were crushed, their leaders executed or imprisoned. Several hundred Russian advisers hurriedly left the country (about 50 military experts have since returned) and General Numeiry became almost as fervently anti-Russian as Libya's Colonel Qaddafi.

Other failures have been less clear-cut. In north Africa, Algeria is the one regime that the Russians classify, along with Egypt, Iraq, Syria and South Yemen, as "progressive." Certainly, the Algerian government believes in a mainly centralised economy but, in its relations with Russia, it takes the arms and the aid that

it wants while giving remarkably little in return. There are, for instance, no blanket facilities for Russia's warships in Algerian ports; specific requests for specific ships are responded to politely. And the Algerian government has its eyes firmly focused on the need to develop closer relations with the European Economic Community.

Libya is the most obvious example of the fact that a pro-western regime can be violently overthrown without its successor being pro-communist. Whatever has been going on between President Qaddafi and his deputy, and now prime minister, Major Jalloud, during the past two mysterious weeks, the result is unlikely to alter Libya's position significantly. Major Jalloud's pragmatism may, in future, make more headway against Colonel Qaddafi's eccentricity but again Russia will be used only when needed.

Syria tends to be listed as a Russian success but it is significant that Syria's Baathist government has steadily rejected Russian persuasion to follow Egypt and Iraq into treaty relationship. After President Assad's visit to Moscow earlier this month, the joint communiqué recorded the failure of the two sides to agree as plainly as the oiliness of such rituals permits: the position of the two governments was declared to be close on "most" international issues. Syria is getting from Russia its long-wanted dam on the Euphrates, arms, a defence system and expertise on how to operate it. Although President Assad may in time deal as rudely with his experts as President Sadat has done with his, it is early days for the Syrians to have absorbed the knowledge to look after their own equipment.

Russia has made no inroads into the western-orientated Arabian peninsula, except in South Yemen, its shaky tip. The Russians, and the Chinese, are established in South Yemen; the British, doubtless still smarting from a long sad story, are inclined to say that they are welcome to it. Although Aden is strategically convenient (but not as essential as the British once thought it), the Russians are likely to hesitate before shelling out the sort of cash that is needed to build up its installations. North Yemen takes Russian arms, but its quarrels with South Yemen

have driven it steadily into Saudi Arabia's orbit—and Saudi Arabian influence is widely believed to have played a part in President Sadat's anti-Russian decision. Early this month, North Yemen, which had broken off relations with the United States after the 1967 war, became the first Arab state to resume them.

Iraq remains the exception as Russia's major unqualified success story—so far. It is an important exception: although Iraq tends to be dismissed by other Arabs as some kind of maverick, its present regime is probably as stable as that of any other Arab country. And it offers the Russians two gifts of value: oil and an opening to the Gulf. Moreover, Russia is not only getting things that it wants (although it may find itself embarrassed by the amount of oil the Iraqis want it to buy), but is getting them to the direct detriment of western interests. That is a double score. But against this can be set the argument that strong Russian influence in Iraq is, by itself, a reason to make other Arabs fight even shyer.

They think it's all a plot

Egypt, in the same boat itself, could hardly condemn Iraq's treaty with Russia. But the Iraqi liaison exacerbated the anger that many Egyptians felt about their own link—or bondage. Russia's refusal to supply the weapons that Egyptians claim would make all the difference against Israel became, in many Egyptian minds, evidence that Russia, together with Israel and the United States, had an interest in preserving intact a situation in which Egypt sees itself as the principal loser. This, in turn, led smoothly to the theory that during President Nixon's Moscow visit the Russians and Americans struck a bargain over the Middle East that was to Egypt's disadvantage. Russia, rightly or wrongly, became the target for Egypt's limitless capacity for suspicion. So a demonstrative blow has been struck for freedom. It is a blow that will have disconcerted the Russians—unless, wheels within wheels, they know that the Egyptians are set on military action and are only too eager to get their own men out of the way—but it leaves untouched all the causes of Egypt's dangerous frustration.

Arms for the love of Allah

The two at loggerheads

East is Chou and west is Brezhnev, and it's pleasant for Mr Nixon to see that the twain don't look like meeting for a long time yet

Mr Nixon can now concentrate on making sure that he beats Mr McGovern in November without having to worry too much about either of the great communist powers. The embarrassment the Russians have suffered in seeing their advisers summarily ejected from Egypt this week comes on top of the accusations that they are washing their hands of North Vietnam. And Mr Nixon has ensured that the contest that Russia and China were already waging before he entered the White House will remain intense. The missile limitation agreements signed in Moscow in May have taken some of the edge off

Russian-American rivalry in nuclear armaments. The seating of Peking's representatives at the United Nations has opened China's doors not just once for Mr Nixon but repeatedly for his adviser, Mr Kissinger, who looks like becoming a regular visitor to Peking. The Soviet and Chinese leaders have both been forced to swallow, along with the wine they have drunk in Mr Nixon's company, much of their indignation about his actions in Vietnam. He has not needed to envenom the rivalry between them, except by the mere act of softening the antagonisms between his country and theirs. This has initiated a

new rivalry between them in the sector that may be called The American Connection.

True, some people are making a good deal of indications of a certain improvement in Russian-Chinese relations. Trade between the two communist powers has undoubtedly picked up since 1969. No more clashes on the border are reported, and the talks about border disputes that were started more than two years ago are apparently continuing; last month the Chinese named a new delegate for them. Although the Russian forces along the Chinese frontier have been strengthened, and the Chinese have sent reinforcements up too and gone on building vast air-raid shelters, nobody is now predicting an outbreak of war or even a resurgence of border skirmishes. But this is about all there is to put against a compelling amount of evidence of continuing hostility between the two powers.

The megaton war of words

The Russians are the more vocal of the two in public bitterness. Almost every day they find some fresh angle from which to revile the Chinese government. This week Pravda was making play with reports that the Chinese had told recent American visitors that they actually wanted to see American forces remain in the Far East. According to Moscow, China is in favour of that "imperialist monopoly," the European common market, but against the "progressive and peace-loving" idea of a European security conference. The Russians depict China as encouraging Ukrainian separatism while crushing its own minorities; as smuggling opium into south-east Asian countries simply for profit; as anxious to prevent a reconciliation between India and Pakistan, to pit Arab against Arab in the Middle East, to split the progressive movement in Latin America. The red pot has no hesitation about calling the red kettle black; China's living standards, it is said, are low because its rulers spend so much on nuclear and other arms, and its people are subjected to grotesque forms of regimentation. The Moscow press and radio accuse China of blocking the movement of Russian supplies to North Vietnam, of opposing the Soviet project of an Asian security system, even of collusion with America. And they acidly contrast the "so-called policy of self-reliance" preached by China with the "opportunities and advantages" gained by co-operation among members of the Russian-led economic group known as Comecon.

True to their traditions, the Chinese are less wordy, but their words are well barbed. They hew to one main line. Seldom even deigning to distinguish the Russians by name, they just reiterate their charges that the two superpowers are trying to carve up the world, trampling on small states' rights, practising "aggression, subversion, interference, bullying, economic expansion and plunder," and merely pretending to agree on arms limitations while in fact stepping up their preparations for war. However, Chou En-lai, his propaganda spokesmen and his envoys to UN meetings go on to detect growing opposition to the two superpowers' domination in practically every current development: the Indian-Pakistani talks at Simla,

the accord between the two Koreas, the new Japanese government's eagerness to normalise its relations with China—to say nothing of the ousting of Russian advisers from Egypt. In recent weeks, Peking's theme has been faithfully echoed by the exiled Cambodian Prince Sihanouk during a long tour that took him as far west as Mauretania.

The Chinese hardly ever stoop to answer Soviet attacks on them. Indeed, they show a massive ability to say little or nothing about even such major events as Mr Nixon's visit to Russia. But the extent to which their propaganda draws blood is revealed by the stream of defensive statements the Soviet Union feels obliged to put out. It denies that its reinforcement of its far eastern armies poses any threat from the north to China. It denies that it is in collusion with America, and complains that the very word "superpowers" is a term invented in Peking. It protests that its campaign for an Asian collective security system is not intended to encircle China. It accuses the Chinese of trying to turn the North Vietnamese against Russia by misrepresenting Soviet actions and discrediting Soviet aid. And, more overtly than ever, the Russians seem to be making a particular attempt to seduce the Chinese armed services.

This suggests that they have despaired of achieving any real reconciliation with China's present political leadership. They are just hoping that things will change in Peking one day. After all, Mao Tse-tung cannot live for ever; and they may be clinging to the belief that when he dies—or when the Chinese allow it to be known that he has died, which may not be the same thing—the forces within China in favour of coming to terms with Russia, crushed since Lin Piao's disappearance, may yet take control in Peking. Meanwhile they have to concentrate much of their effort on countering the spread of Chinese influence to other countries, especially in Asia. The setback they have met in Cairo is hardly going to improve their credibility in Hanoi. They feel that they have to be friendly to Mr Bhutto now, in order to overlay the memory of the backing they gave India last year, when China sided just as strongly with Pakistan. And it was not a coincidence that, a week ago, when the air in Tokyo was thick with talk about Japan's plans to normalise relations with China and about Chou En-lai's eagerness to receive Mr Tanaka in Peking, the Soviet ambassador lost no time in agreeing with the new Tanaka government that negotiations for the long overdue Russian-Japanese peace treaty should begin by September.

On top of the triangle

All this is further evidence of the coup the Americans have brought off. Each new agreement between the United States and Russia, and each new piece of evidence of the thaw between the United States and China, draws attention to the state of things on the third side of the triangle. The foreign policy of Mr Nixon and Mr Kissinger has manifestly succeeded in putting the United States on better terms with both of its great communist adversaries than they are with each other.

Businessmen often call us "Air Europa."

When you average a flight every 3½ minutes in Europe - day in and day out - you earn the right to be called Air Europa. Particularly when you're based right in the heart of the Continent. And the surprising fact is, our routes through Frankfurt are often the shortest distance between two cities. It's almost a straight line from Geneva to Copenhagen. From Dublin or Glasgow to Athens. From Lisbon to Moscow. The next time you fly anywhere, check with Lufthansa. If we can't take you as well or better than somebody else, we won't sell you a ticket - unless you insist. That's a promise.

Lufthansa

For men who fly to work.

"Chronometer" is the most sought-after title in Switzerland. To get it, you have to go through hell.

Watchmaking is one of Switzerland's biggest industries.

Thousands and thousands of Swiss watches are produced every year. But only a very small percentage can be called "Chronometers." Because before you can call a watch a "Chronometer," you have to submit it to an independent body called the Official Swiss Institutes for Chronometer Tests.

And they guard this name as carefully as French officials guard the names of the wines of France: the appellation of "Chronometer" is very much controlled.

They do it with a series of tests which last for fifteen days and nights. During this time, the watch movement is subjected to temperatures ranging from 4°C to 36°C. On every one of these gruelling fifteen days various accuracy checks are made. And if the movement meets with the extremely high standards of precision which the Institutes demand, the watch can be called a "Chronometer."

Very few watches can meet these standards. But, you may be interested to note, we've won nearly half the chronometer certificates ever awarded even though we're responsible for a mere fraction of the annual production of Swiss watches.

The Rolex red seal (which you can see in the picture below) is your guarantee that the rotor self-winding "Perpetual" movement inside the watch has been approved by the Institutes. So it's not really a watch at all. It's a "Chronometer."

Our craftsmen are very proud of their record with the Institutes. But the movement also has to be protected, otherwise its accuracy would be pointless.

Which is why they invented the Rolex Oyster Case. They have to perform 162 separate operations to make each one because it's carved out of a single, solid chunk of either surgical stainless steel, or 18ct. gold. This means that the case contains no seams: seams can let in water, dirt or dust, which would be

disastrous, obviously.

Another extremely vulnerable point on ordinary watches is the winder. Our craftsmen solved this problem with the Twinlock Winding Crown; an invention we've been able to patent. The Twinlock actually screws onto the case forming an impenetrable plug, rather like a submarine hatch.

We've got hundreds of letters in Geneva, sent to us by Rolex owners who've had good cause to appreciate this kind of craftsmanship. Typical of these, is the following extract from a Canadian deep-sea fisherman's letter.

"In 1963 I was engaged in the salmon operation aboard the vessel 'Haida Girl.' On August 6th, we had unloaded our catch for the day and

had retired for the night. At approximately four in the morning one of the crew members woke up to find that the boat was taking water very rapidly. We had time only to rush up on deck and leap onto the barge which we were tied up to.

"The watch went down with the boat in 35 fathoms. It was submerged for 22 days.

"When the boat was raised, I was there and went aboard to look for my watch. The watch was on the galley floor amongst mud, weeds, etc. I took it on the barge that had raised the boat and washed it off, upon shaking the watch it commenced to go and was none the worse for the length of time it had been under. I continued to wear the watch without taking it to a jeweller."

Having read this, you'll understand why Sir Francis Chichester wore a Rolex on his solo voyage around the world. And you'll know why most of the world's leading Heads of State wear one of our watches, and why Rolex is the official timepiece of Pan American World Airlines. And why racing driver Jackie Stewart wears a Rolex.

All these people get great satisfaction out of owning a Rolex.

Almost as much as our craftsmen get out of making them.

**Owning one is
almost as satisfying
as making one.**

BRITAIN

Willie soldiers on in the front line

Neither the bullets and bombs of the IRA nor the staves of the UDA have budged Mr William Whitelaw from his conciliatory policy in Northern Ireland. Nor has the stab-in-the-back attempt by the Tory right wing: although there are uneasy thoughts in the air, the moderates turned up in strength at the party meeting on Wednesday.

Mr Whitelaw has had to stiffen security in both Belfast and Londonderry, but he is still trying to keep the army's operations in a lowish key wherever he can. He may hope that, if the Provisional IRA is again badly divided about the merits of keeping up an active guerrilla campaign, the shootings and bombings will dwindle enough so that something like a truce prevails in reality for most of the time. And he must be ready to negotiate for a ceasefire—but only on terms which, while again giving the Catholic communities some chance of breaking free from the hold the IRA has on them, will not start the Protestants boiling over.

Faulkner: demanding force

But that is not what the IRA leaders mean when they talk of a ceasefire to Mr Harold Wilson or anyone else. For all the Westminster hopes that Mr David O'Connell is a reasonable man, he is as utterly committed as any IRA leader to breaking the British will to keep the army in Northern Ireland. The IRA has been seeking terms that would humiliate the British Government, discredit Mr Whitelaw and leave its gunmen ruling the roost in the Catholic enclaves and free to conserve and, indeed, reinforce their military strength for another fight, another time. There can be no doubt that the IRA did exactly that during the run-up to the earlier ceasefire and in the period of near-truce itself.

At the moment, there may be no more than 200-odd really active Provisional gunmen in Ulster; but there may be as many as 1,500 ready to fight (split roughly in the ratio of two to one between the Provisional and Official wings) and backed by another 1,500 or so auxiliaries. The potential military strength of the UDA, commonly estimated to have 25,000 men in its ranks, is much higher; but though some Protestants, notably in the Ulster Volunteer Force, have illegal arms and have, indeed, used them, it is not reckoned that at the moment their forces are as well organised and armed as the IRA.

In seeking to drive a wedge between the ordinary Catholic communities and the IRA, Mr Whitelaw has now more reason than before to look over his shoulder at the Protestants. Their barriers have been erected to show him just how little room for manoeuvre he has. Mr Brian Faulkner, the leader of the Ulster Unionist party, expresses the feelings of many Protestants when he says that the communities are not as much at each other's throats as British opinion believes and that the

real obstacle to reconciliation is terrorism, so that reconciliation can become a reality only when the IRA is "forcefully dealt with by the security forces." That, too, is what the right-wing Tory backbenchers who wrote to The Times this week to demand "a new and understandable policy" for Ulster want.

Too many Tories now seem to be as intent on rubbing Mr Whitelaw's face in the mud and the blood as the IRA is. His reply is that if the soldiers were let slip to clear out the IRA gunmen then such an indestructible barrier would be created between the Catholic and Protestant communities throughout Ireland that reconciliation would be impossible. That is why the line Mr Whitelaw is taking at Lenadoon has been so sensibly cautious.

The kid gloves are still on

FROM OUR SPECIAL CORRESPONDENT

Lenadoon Avenue would not look out of place in, say, a Midlands suburb. But it is part of the modern Suffolk housing estate in Belfast, where Protestant families live at one end and Catholic ones at the other. The squabble about rehousing there was exploited, if not deliberately engineered, by the IRA Provisionals to bring the ceasefire in Ulster to an end. It is still littered with the debris of the fighting that followed—broken paving stones, smashed windows, bullet-chipped walls and the earth-mover used as an explosive ram against the army post named Fort Nery by the gunners who manned it. The high-rise flats used by some of the IRA gunmen are not much more than 200 yards from that post.

This is where Mr William Whitelaw met ferocity with ferocity by sending troops in a carefully planned operation to occupy certain vantage points (including the high-rise flats). The aim was not so much to create new firing and surveillance positions for the army as to deny these positions to the IRA.

The profile is still low

It was a limited and controlled tactical move about whose merits and implications the GOC Northern Ireland, Sir Harry Tuzo, and Mr William Whitelaw were in complete agreement. The soldiers were not, for instance, let off the leash to penetrate into the IRA enclave in nearby Andersonstown—or Apache country as some of the troops call it.

But, as has happened before, the IRA leaders were quick to make political capital out of what seemed to be a military setback and on Sunday, in a well publicised protest against the army's action, a good number of Catholic families evacuated their homes in the estate. How many actually left and how many have filtered back since then is so much in dispute as to make the various estimates bandied about meaningless. But sufficient Catholics left their homes and still remain away from them to demonstrate that the IRA commands not simply their sympathy but their loyalty.

Since then, the army has reduced the number of positions it occupies, and negotiations have been opened about the return of the families and the army's evacuation of the remaining positions. There has been talk of a local ceasefire. But when the talks were broken off on Tuesday the shooting started again, though then perhaps as few as three IRA gunmen were involved, as opposed to up to 30 before the weekend. Plainly, Mr Whitelaw would like to delay the pull-back of the troops until many more families have returned to their homes, while the IRA is trying to make their return and a local cease-

fire conditional on the prior evacuation of the occupied positions.

In miniature, Lenadoon illustrates Mr Whitelaw's constant dilemma. The army's initial move delighted many Protestants in Ulster (though they, like some right-wing Tory MPs, still press for much fiercer military action against the IRA). It was noticeable that immediately after the weekend the men of the UDA were manning their own barriers (which, with dustbins filled with concrete and the like, are pathetic militarily but potent politically) in a rather more desultory way than before. But what pleases the Protestants alienates the Catholics and Mr Whitelaw is left standing on the middle of a seesaw. This is just as true in Londonderry (where the troops started to put up barriers around the devastated city centre and then dismantled them) as in Lenadoon.

Intent on his conciliation policy, Mr Whitelaw cannot step off that seesaw. He must seek a general ceasefire (even if it should prove to be as incomplete as the earlier one) and he must hope that Mr Harold Wilson's talks with the IRA Provisionals on Tuesday will have helped him. Military tactics have to be the servant of that policy. If fired upon, the soldiers immediately fire back. They are now wearing the flak jackets they discarded during the ceasefire. They patrol in Saracen armoured vehicles rather than Land Rovers. But the patrols are not much more frequent than before and they are certainly no more provocative.

All the earlier constraints on interrogation, search, arrest and entry are

still very much in force. The effort to localise any conflict and to be impartial in any sectarian dispute is as strong as ever; this was demonstrated in the Divis Street area of Belfast before the weekend. The army reacts, rather than acts. Where it takes any initiative, as in Lenadoon, it does so under almost hour-by-hour political control and direction.

Those tactics will change only if the Government's policy changes. Trained to be aggressive, some soldiers want "to get stuck in." But they are also trained to be obedient, and there is no sign in Ulster that the upper echelon of the army seeks to change Mr Whitelaw's policy nor that the morale of the lower echelon is sagging as a result of the dictates of impartiality and restraint.

Obedience also means that, should policy alter, the army is really prepared to act against the IRA enclaves in Belfast or the Creggan and Bogside redoubt in Londonderry. To be effective, such an action would almost certainly require more troops on the ground than at present. It would require the reintroduction of internment and possibly of interrogation in depth at the now-defunct police holding centres. Totally unlike Mr Whitelaw's conciliation, coercion, as preached by many Unionists in Ulster and a few in Westminster, cannot be conducted in kid gloves.

Courts

Not so gullible?

When powerful and influential voices—like those of the Criminal Law Revision Committee and the metropolitan police commissioner, Mr Robert Mark—are at one in urging changes, then changes are very likely to happen unless someone comes up with some pretty convincing arguments why they should not. The present campaign—and it is scarcely less than that—is for modification or abolition of certain safeguards which exist to protect the innocent against wrongful conviction but which are now, say the reformers, operating too much on the side of the guilty. While the debate is still going on and before he makes any decision, the new Home Secretary, Mr Robert Carr, would do well to take a long look at the results of a study carried out by the Oxford University Penal Research Unit.*

Trust Houses Forte

EUROPE'S LARGEST
HOTEL, CATERING
AND
LEISURE GROUP

Interim Results: Trust Houses Forte Limited

	Half year to 30 April 1972 £	Half year to 30 April 1971 £	Year to 31 October 1971 £
Group Turnover	91,119,000	77,597,000	180,107,000
Group Trading Profit	4,219,000	2,859,000	16,373,000
Financial Charges	2,923,000	2,608,000	5,285,000
	1,296,000	251,000	11,088,000
Minority Interest	(67,000)	(158,000)	421,000
Profit before Taxation	1,363,000	409,000	10,667,000

NOTES: 1 The above figures are unaudited.
2 No tax charge assessment is possible at the half year stage, since the annual tax rate is entirely dependent upon the profitability of the second half of the year.
3 The figures for minority interest reflect the seasonal nature of the companies concerned.

Chairman's Statement

The first half year's figures produce only a small proportion of the full year's profit but as will be seen the turnover is well up on last year and notwithstanding increased expenditure on improvements and maintenance, the profit is well on target. It has already been announced that it is intended that dividends equivalent to 40% will be declared in respect of the current year. It is proposed to increase the interim dividend payable in the Autumn to 10% (previous year 5%).

THORNEYCROFT

Some of the interests that make up Europe's largest hotel, catering and leisure group

HOTELS In Great Britain and Ireland we own over 200 hotels (10 in London) — abroad we operate 26 hotels and have interests in 26 others.

CATERING We operate more than 260 restaurants; 9 motorway/trunk road service areas; catering facilities at 21 airports; in-flight catering facilities for 53 airlines and over 1,600 outside catering contracts.

LEISURE Our interests cover extensive catering and entertainment facilities; caravan parks and holiday flats in the U.K.

Apart from the THF hotel and catering companies some of the famous names in the group include Joseph Terry & Sons, Lillywhites, Gardner Merchant Food Services, Ring & Brymer, Quality Inns, Kardomah, Henekeys, Allways, Fourways (New York), Hickie Borman, Milbanke and Swan (Hellenic)

RECENT ACTIVITY In recent months, we have opened the St George's Hotel, Liverpool; Post Houses in Coventry, Teesside, Norwich and Ipswich; the Scratchwood Excelsior Motor Lodge; a motorway service area at Corley (M1/M6); 20 Little Chef highway restaurants; city centre Big Chef restaurants in Cambridge and Nottingham; an in-flight catering centre at Amsterdam and a new duty-free shop at Heathrow. We have also taken a lease on The President Hotel, Johannesburg. Together with Midland Bank and the AA, we are members of the consortium which has purchased Thos. Cook & Son Ltd.

Put baldly, the case for reform starts from the assumption that, when tried by jury, many who are guilty are acquitted and that professional criminals, in particular, exploit the rules of evidence to get away with their crimes. The task the Oxford unit set itself—with official co-operation—was to examine what happened in 475 cases brought to trial at 30 selected quarter sessions and assize court hearings over a period of more than two years.

Of the 475 defendants, 112 changed their pleas to guilty and 58 were acquitted upon direction by the judge. Another 39 were transferred to other courts, dismissed after hung juries and so on. Of the remainder, 115 were acquitted by juries and 151 were convicted. Most interesting in the context of the present debate is the conclusion reached by the authors—Mrs Sarah McCabe and Mr Robert Purves—about the reasons for those 115 acquittals:

While there were occasional, sometimes glaring, exceptions to this rule, it was generally correct to say that the acquittal of a defendant was attributable to a single cause—the failure of the prosecution (normally the police) to provide enough information, or to present it in court in a way that would convince both judge and jury of the defendant's guilt.

Then follows an attempt to explain, with illustrations, why the prosecution failed to get a conviction by classifying the acquittals. In 44 cases, or 25 per cent of all acquittals (including directed verdicts), the prosecution was brought as a matter of "policy." The authors show their understanding of police work by recognising that in nearly all these cases the police decided to prosecute not in any real hope of securing a particular conviction but as a general deterrent. Another 20 cases are classified as "weak," where conviction was unlikely but where the police pressed charges nevertheless, sometimes to satisfy a complainant, sometimes taking the attitude that it must be left to judge and jury, not detectives, to decide upon guilt or innocence.

Of the remaining 51 acquittals—or 30 per cent of the total—eight are explained by the failure of important prosecution witnesses to support "the burden of proof"; 28 defendants went free because their explanation convinced the jury even in face of a substantial case against them; and 15 fell into the category of "wayward verdicts," where juries, swayed by strong but irrelevant motives, muffled

their minds and even ignored the judge's plain direction. That last classification represents only 9 per cent of jury acquittals.

The study shows, too, contrary to fashionable opinion, that the professional criminal is not the one most likely to go free. True, 51 per cent of those acquitted had previous convictions, but so did 81 per cent of those convicted. And of all those with a record, only 44 per cent were discharged compared with 73 per cent of those with no previous convictions. In the light of the pressure for a widening of the circumstances in which a court should be told of a defendant's record, it is worth noting the authors' sensible observation that defence lawyers usually lay stress on a client's blameless past and keep quiet when he has a record. Juries soon learn the significance of that.

This study, though perceptive, is necessarily limited. What it ought to do, however, is to persuade the Home Secretary of the need for more exhaustive research of a similar kind before yielding to pressure for questionable reforms.

Beaconsfield Tories

It's nice to feel safe again

Mr Ronald Bell, the Tory MP for South Buckinghamshire, had two causes for satisfaction on Monday night. Not only was he chosen as prospective candidate for the new seat of Beaconsfield but he could also claim that the meeting which selected him was a lot more representative than most of its kind. Nearly 1,400 members of the constituency association listened to speeches by Mr Bell and his rival for the candidature and then questioned them before voting. Rank and file party members are usually asked to do no more than formally approve the choice made by their executive.

At one time Mr Bell had hoped to be spared the pleasure of so democratic a selection process. He considered himself—or certainly his supporters considered him—the automatic choice for the new constituency. A large part of it is made up of voters from his present seat. But he got on the wrong side of an influential faction in his local party by voting against the Government on the common market. The chairman of his association actually wanted Mr Bell's resignation. He

Bell: open choice

survived that but he was told he would have to face competition for the new seat. At last month's executive he and Mr Sylvester, former MP for Walthamstow West, gained an equal number of votes. This week's special meeting of the full association—paid-up members only and a strict check on eligibility to vote—was called to make the choice and to end the row.

It would have been regrettable if Mr Bell had been rejected because of his independent and idiosyncratic opinions. He was right to refuse to give a pledge never to be a naughty boy again. But for all the unseemly goings-on his behaviour has provoked among his supporters and opponents there is no harm, for once in a while, in seeing a candidate chosen openly. After all, the reward for a few months' anxiety is the gift of what looks like being one of the safest Tory seats in the country.

Doctors

BMA v. GMC

Usually, annual representative meetings of the British Medical Association appear to be dominated by complaints from doctors about pay and conditions of work. This year's meeting, which opened on Wednesday, has found a new target for abuse—the General Medical Council. The row has actually been simmering for some time, ever since the council decided that the state of its finances demanded extra payments from doctors to keep their

names on the medical register. Formerly, having qualified and completed their pre-registration year in hospital, they paid a single sum which could keep them on the register until they died, unless they were struck off for one reason or another. But, from May, 1970, they have had in addition to pay an annual fee to retain their names on the register, and for many doctors the breaking-point was reached when the GMC announced that this annual fee would be raised from £2 to £5 from May this year.

The sum involved is small (and doctors can obtain exemption from paying it on grounds of age or premature retirement or because they work overseas). It would not have caused resentment had doctors not been dissatisfied with the GMC on other counts. Last year's annual representative meeting of the British Medical Association—which to its chagrin is often confused in the public mind with the GMC and finds itself referred to as the British Medical Council—agreed that the annual fee should be paid on a year-to-year basis until the GMC had been reconstituted and its functions reviewed to the profession's satisfaction. A working party had already examined the council's constitution and recommended among other things a big increase in the number of directly elected medical members—which would reduce the influence of the royal colleges and the universities. But its constitution cannot be revised without a new medical act, and there is still no sign of a bill being introduced this parliamentary session.

Nor, if the bill is confined to the GMC's constitution, will it go far enough. Another report, called for by the BMA as a matter of urgency, has vindicated the GMC's financial management—given its present functions. But the BMA is asking whether those traditional functions—registration of doctors, maintenance of education standards and disciplining errant doctors—have not become so complex with the passage of time as to make the GMC unwieldy. Indeed, the registration of doctors, already complicated by the arrangements for doctors from overseas, will become much more so when Britain enters Europe and registration of specialists eventually becomes compulsory. Similarly, so many doctors now come to work in Britain from elsewhere that it is becoming increasingly hard to maintain standards by the inspection of proliferating medical schools. As for discipline, a BMA panel of young

doctors recently suggested that a doctor's performance should be regularly monitored by an entirely new professional body; after all, a sick, idle or inefficient doctor is more of a menace than an adulterous one.

In May this year, nearly 4,000 doctors had not paid their retention fee and are due to receive a threat of erasure in September. But in the meantime, on Thursday the BMA passed a resolution giving, in effect, the GMC six months to meet the profession's case against it.

Architectural Association In suspense

Any day now the Department of Education and Science will announce whether the Architectural Association's school is to get the money it has been asking for: initially about £41,000, rising to £117,000 a year. The money is needed to help pay the fees for some of the students. As an independent institution, the school depends for income on its fees of £580 per student. Until now, local authorities have footed the bill for any students needing aid—currently some 390 out of a total student body of 490. But they are no longer prepared to pay more than £180 a year, which is roughly what they have to pay in fees for students at universities or polytechnics financed by central government. So the AA has asked the department to bridge the gap.

The local authorities will go on paying the full fees of any students already at the school. But, two and a half months before term begins, 125 young people who have been accepted as new students still do not know whether the DES is going to fork out for them. The Treasury ought to be in favour. The cost to the state of educating an architectural student at a university is £860 a year—and that does not include anything for the construction of buildings and capital costs. The AA does the whole thing for £580. Thus the cost of diverting students to other schools of architecture would be much higher than that of keeping them at the AA. And the AA has promised to keep the fees unchanged for the further five years: it has budgeted to cover cost increases of 9 per cent a year, and reckons to be able to keep out of deficit.

Internationally, the AA school's reputation is high; but domestically its public image has suffered from years of uncertainty and dilly-dallying. It

Boyarsky: architect for the AA

was going to merge with Imperial College and then decided not to and went rushing off in search of other university marriage partners. In the end, it chose to go it alone. In the past year, though, the AA has changed remarkably, thanks in large part to its new director, Mr Alvin Boyarsky. There is now a new sense of direction, a new form of internal government, new financial management—and a strong desire for independent survival.

Survival, however, in spite of all the talk of crises at the AA, is not really the problem. There is demand enough for places from students who can afford to pay the fees out of their own pockets. But should the oldest and most original school of architecture in Britain be open only to the relatively well-off and to foreign students, many of whom get grants from their own governments to go to the AA? The precedents for the DES supporting independent places of education are long established. It is already giving grants to 11 of them: the Royal College of Music, for instance, gets £100,000 a year.

Social security

Healthy balance

The Department of Health and Social Security's report for 1971* carries, after the policy reports of increased capital spending on hospitals and the expenditure programme for the old and the mentally ill, the usual depressing catalogue of statistical increases. In 1971, abortions were up by 50 per cent, children in care by 22 per cent, homelessness in outer London (which showed the sharpest increase) by 22 per cent, claims for unemployment

*HMSO. £2.85.

benefit by 13 per cent and for supplementary benefits by 6 per cent. But there was one quite phenomenal decrease. The number of claims for sickness benefit (including invalidity benefit, which takes over after six months) were down by nearly 2m. The number of claims—8.8m—is lower than that for any year since 1960.

The change in the rules from August, 1971, by which benefit for the first three days was no longer paid (retrospectively), does not appear to have had much impact. Nor does increased unemployment. Those on unemployment benefit theoretically switch to sickness benefit when they become ill, and anyway the increase in claims for unemployment benefit amounted to less than a quarter of the decrease in sickness benefit claims. One might hazard a guess that rising unemployment makes people keener to stay at work through minor sickness, but the evidence could equally suggest that fewer people off work claim benefit: the department's estimate of the number of people off sick fell by much less than the number of new claims.

The most significant pointer is that the number of claims for January, 1971, was less than half that for January, 1970, and the preliminary figures for 1972 are similarly low. In neither of those years were there serious winter epidemics. (The latest period for which the department has separated out the statistics for influenza is mid-1969 to mid-1970, when it accounted for 20 per cent of spells of sickness for which benefit was claimed.) But right throughout 1971 the numbers of claims were well below the figures for previous years, while claims had been rising steadily over the decade.

The net result is that while the cost of the sickness benefit scheme had been rising (in money terms) by about £40m a year throughout the late 1960s, in 1970-71, despite increases in benefit rates, the Government actually paid out £9m less than in 1969-70. It meanwhile paid out £23m more in unemployment benefit, and £151m more on pensions. But £9m, after all, was worth having; for example that was just about the cost of the first part-year's operation of both of the Government's two most important social security innovations of 1971: the attendance allowance for the severely disabled and the family income supplement for low wage-earners with children, which were introduced in May and August respectively.

Housing

Preaching to the converters

Lleyn rural district council in Caernarvonshire has decided not to give improvement grants to second homes. The London borough of Lambeth says it will not give them to "speculators"; Hammersmith borough is also going to vet grant applications to try to weed out people who intend a quick conversion into expensive flats for sale, with a consequent uprooting of poorer tenants. For all of them the principal concern is with trends in the housing market that are of many years standing and are now, pushed by inflation, merely moving faster and farther. With house prices nationally showing a 17 per cent increase in the first six months of this year, both speculative conversions and holiday cottages offer rich pickings. Why should public money be employed to help to do what the market alone makes attractive enough?

Using legislation passed by the Labour government in 1969, the present Government has led a successful campaign to increase the take-up of house improvement grants: those approved last year were worth some £43m. Mr Julian Amery, the housing minister, insists that they are precisely what their name implies: grants designed to improve the quality of the housing stock, never mind who occupies them. But in the Commons last week Mr Reginald Eyre, under-secretary at the Department of the Environment, affirmed the right of local authorities to refuse discretionary grants where they felt the system was being exploited—for instance, in commercial operations that

Amery: it's all improvement

would take place even without a grant. So far, the Government has refused to reintroduce the resale limit for grants which was abolished by the 1969 act. Formerly, grants had to be repaid if the recipient sold the house within three years. That limit would be by far the best way of deterring real speculators. But it would not eliminate the real quandary of the improvement drive—that its effect is often to price out the poor.

As to holiday homes, a more constructive approach would be an extra rate levied on them to help to build new houses for locals. In any event, a derelict cottage, once improved, contributes more to the rates while its occasional occupants demand little in services. And why don't the Welsh nationalists, who are so ready to protest against foreign invaders, turn their attention to the large profits being made by Welsh farmers in the process?

Cities

Inner look

The inner city—shorthand for the old areas between the business core and the suburbs of large towns—is favourite ground for social analysts and activists. It also contains a lot of poor people in poor conditions with poor prospects. That is not a bad banner for the Secretary of State for the Environment to wave as the subject of his department's main effort in the next two years—when it has dealt with odds and ends like regional planning left over from the past two years. But, as Mr Peter Walker is well aware, the group of projects which the DoE is about to embark on will prove once again that almost every branch of government must be involved in the future improvement of these areas.

All these projects amount to so far is that consultants will be appointed to survey the inner parts of three cities, within each of which they will choose a sizeable segment, covering some 40,000 people for further activity over perhaps three years. Three other towns, named recently as Oldham, Rotherham and Sunderland, are to be the subject of shorter projects intended to help the new district councils to make the best use of the powers they will have to manage their own environments, and to make do without some powers they had before as independent county boroughs. To give them prestige all six projects are being assigned steering groups of central and local officials each led by a different minister.

Golf Brief

Trevino stops the grand slam

Never believe your own publicity, runs an American adage. But Jack Nicklaus, who lost the British Open by one stroke to Lee Trevino last Saturday, thus ending his attempt to win all four major golf championships in one year, would have been more than human if he had not been affected by the excessive admiration with which most other golf professionals regard him. Certainly, their fear of Nicklaus's golf had been at least partially responsible for the comfortable margins by which he had won both the Masters and American Open championships earlier this year. So it was easy to see why Nicklaus played cautiously in the first three rounds of the Open at Muirfield, outside Edinburgh. He must have felt that if he were only patient enough his rivals would kill themselves off, as they had so obligingly done twice before.

This time Nicklaus's defensive tactics backfired. Instead of creating a situation where he could march majestically to victory in the final round they produced an improbable melodrama. The main elements were his final-round charge, worthy of Arnold Palmer in his prime, a collapse by Trevino at the next-to-last hole that he reversed at the last moment with a chip shot that ran straight into the hole, and a subsequent collapse by the unnerved Tony Jacklin that, unfortunately for his fans on the course and in front of television sets around the nation, was all too final.

There might never have been such a battle down to the wire, which either Nicklaus or Jacklin could have as easily won given a fraction of Trevino's luck, if Nicklaus had decided to play the tournament aggressively from the start. As well as being a victim of his own presumed superiority, Nicklaus was also misled by his pre-tournament strategy, which assumed that Muirfield would be swept by a stiff sea breeze from the Firth of Forth, as it usually is. Nicklaus had practised under windy conditions for the week before the tournament. He had good reason to think that the breeze would blow away the chances of most of his rivals, giving him, with his powerful, accurate game

and unmatched familiarity with the pressures of major tournaments, an insuperable advantage.

Judged by the scoreboard, Nicklaus's strategy appeared to be standing up reasonably well as the players finished the first 36 holes. He was, along with six others, only one stroke behind the leaders, Trevino, the chattering, colourful Mexican-American, and Jacklin, Britain's favourite son. But the scoreboard was deceiving and Nicklaus was fortunate to be so close. The sea breeze, which had been much in evidence on the first day, had given way to calm, sunny weather on the second. Muirfield, with its fairways dried hard as a bone, was playing far shorter than its 6,892 yards would suggest.

Under such conditions, which persisted for the rest of the Open, the course was vulnerable to any top-class golfer with enough spirit to have a go at it. Scores in the mid-60s were generally expected on the second day, and two players, Jacklin and Doug Sanders, the American who lost in a playoff to Nicklaus at St Andrews two years ago, came within a hair's breadth of achieving them. The brilliant but erratic Jacklin lost his chance to take command when a film camera started clicking loudly as he got ready to take his tee shot on the short 13th. Jacklin, his concentration broken, stepped away from the ball and asked the cameraman to stop. He then hit the ball into a deep sand bunker to the left of the green. As he walked up the fairway, he glared angrily at the cameraman. In the bunker, Jacklin gave the ball a mighty bash, which sent it scuttling across the green into a bunker on the other side. His first shot from that bunker failed to emerge. He was successful with his second attempt but he needed two more putts to get down, giving him a six on the par-three hole.

Sanders, an outgoing man who likes to dress in bright colours, has a very short, unorthodox swing but he is one of the most skilful manoeuvrers of a golf ball, and the Muirfield conditions suited him to perfection. Playing the ball high or low, curving it left or

Trevino: suddenly, the luck

right, pinpointing his tee shots to open up the greens, he scored more birdies than anyone else during the week—he finally finished fourth, three shots behind Trevino—but he also had more holes at which he dropped strokes to par than did the other tournament leaders. The reason was his nerves, which the 38-year-old Sanders admits are not as good as they used to be. As each round wore on, inner pressures forced Sanders to spend an increasingly longer time over each shot. Just the same, on the second day he was leading the tournament by two strokes when he came to the long, difficult 18th hole, which has wrecked so many golfers' hopes in the past. As so often happens on this hole, Sanders failed to land his drive in the narrow opening between the bunkers on both sides of the fairway. His shot out of the bunker landed in heavy rough, from where he overhit the green. His shot back ran into a greenside bunker and by the time he had finished with the hole he had taken a seven. Instead of being two shots in the lead he was one shot behind, along with Nicklaus, who had played raggedly.

While Jacklin and Sanders were showing flashes of brilliance, Trevino was making a quieter, but solid impression. Thinking his way around the course much in the manner of Sanders, he was failing to hole the birdie putts that would have made his score spectacular but one felt it was only a matter of time before they started to drop. Talking incessantly,

THE ECONOMIST JULY 22, 1972

joking with his caddy and spectators, Trevino was also impressive in the way he worked off the pressure that in a major tournament tightens the nerves of even exceptional players. Almost every other golfer tries to steel himself against tournament pressures, although only the toughest succeed in doing so. Trevino, instead of resisting the pressures, tries to flow with them. He usually succeeds and in the process preserves a spontaneity that has probably never been seen in the game before. Although Trevino is thoroughly dedicated to golf—he is known to practise for longer hours than almost any other active golfer—his usual performance suggests something of a boy engaged in a sandlot baseball game.

With Jacklin, Trevino and Sanders all playing well, Nicklaus, though only one stroke behind after the second day, should have started playing aggressively on the third. Since he had failed to take the lead that everyone had expected would naturally fall to him—in both the Masters and the American Open he had either led or been tied for the lead all the way—the other players could only feel encouraged. Nicklaus's aim should have been to hammer them back into line. But on the third day he still held back and it was then, rather than in the dramatic events of the final round, that he really lost his chance.

For while Nicklaus was playing cautiously, Trevino and Jacklin were tearing the course apart and Sanders was almost doing the same. Jacklin's third round was much like his second, except that this time he avoided letting it all slip away on one disastrous hole. He finished the day with a sparkling

Nicklaus: aggression too late

67. Disaster, it should be noted, is never far away at Muirfield, even when the course is playing short. Designed to be a true championship test, Muirfield, with its long rough and numerous sand bunkers, punishes wayward shots severely.

During the first 13 holes of his third round, Trevino played much as he had been playing. Then he exploded. He holed long birdie putts on the 14th and 15th holes, holed a bunker shot on the 16th, picked up another birdie on the long 17th after just missing an eagle putt and chipped into the hole on the 18th after overhitting the green slightly on his second shot. That gave him five birdies in a row and a final score of 66, putting him one shot clear of Jacklin and six ahead of Nicklaus. Sanders played even more fine holes but again on one hole, the 14th, the course jumped up and bit him and he had to settle for a 69.

On the final day Nicklaus had little choice but to pull out all the stops. He was not only six shots behind Trevino and five behind Jacklin, with Sanders in between him and them, he was trailing men who were not going to fall apart unless great pressure was applied to them.

It is indicative of Nicklaus's skill at golf that he was able on the final day to go out and apply this pressure, creating a situation that was nearly too much for any of their nerves to bear. The tension did not come just at the 17th hole where Trevino sank his melodramatic chip. Nicklaus generated the pressure early, winning birdies on three of the first five holes, throwing Trevino and Jacklin, playing two holes behind him, on the defensive. Each reacted by losing a stroke on the very first hole, although Trevino bounced right back with a birdie on the second. Still, with Nicklaus's attack staring at them from the scoreboards, Trevino lost two more strokes to par in the first eight holes and Jacklin one more stroke.

After the fifth, Nicklaus quietened down for a while, but then he was off on another streak, driving the ball huge distances and aiming his approach shots with superb accuracy straight at the pins. He took birdies on three straight holes, the 9th, 10th and 11th, and for a few minutes enjoyed a thin lead over both Trevino and Jacklin. Coming to the long 9th hole, Trevino and Jacklin realised they were the ones who must gamble, which they did, both of them risking all-out drives down the narrow, treacherous fairway. Both were on the green in two shots and both sank their putts for eagles.

If, at this point, Nicklaus had been able to apply a little more pressure he probably would have won the tournament because Trevino and Jacklin, despite the two eagles, were both grim-faced and twitchy. However, Nicklaus had left himself too much to do on this final round and even his game was not up to the strain. At both the 12th and 13th holes he missed eminently sinkable putts for birdies, and that was that for him. For the remaining holes his game sank to a more ordinary level. He lost a stroke to par at the short 16th and failed to make a birdie on the 17th, which, with his great length, is an easy birdie hole for him.

After their effort at the 9th, Trevino and Jacklin quickly ran out of steam. Trevino lost a stroke to par on the 10th but regained it on the next hole. From there on in, he was unable to pick up any strokes on par. Jacklin made a long birdie putt on the 13th to tie him with Trevino but that was largely the end of his effort. He missed a roft putt for a birdie on the 13th hole that would have given him the lead and, really showing signs of strain, missed an easy four-footer for a birdie on the 15th. Both men rallied to save their pars after hitting their tee shots into bunkers on the 16th but both were clearly near the end of their resources. As they played the 17th, they were still tied, one stroke ahead of Nicklaus, who had just finished.

The championship was there for either one to take but then Trevino appeared to destroy his chances. He hit his tee shot into a bunker and could only move his second shot a short distance down the fairway. After being distracted by cameramen, he hit a terrible shot that finished in the left rough well short of the green. He then hit a bad approach shot that flew over the green and settled in an awkward patch of rough. As he said later, when he made the chip that won him the championship, he was playing from instinct only, feeling sure that he had already lost.

Great events often turn on chance, but underlying Trevino's good fortune was a healthy attitude toward Nicklaus, which is all too rare today among the golf professionals. Asked after he had won the Open if he put himself in the same class as Nicklaus, Trevino said no. He thought Nicklaus was simply in a class by himself. He added, however, that even the greatest of champions cannot win every tournament and that in any particular tournament Nicklaus can be beaten. Trevino, for one, will be trying his utmost to beat him again.

Yes, we have bananas.

Yes, we have bananas. And coffee, sugar, cotton and minerals. All large importers of the world already know this. But Brazil, which has grown almost 50% over the last five years is constantly opening new fields. Firmly decided to create new alternatives in an increasingly competitive international market.

Alternatives in products, prices, commercial conditions, in infra-structure, zones of influence, means of transporta-

tion, insurance and freight rates.

So that the world can buy our refrigerators, skins, household appliances, bicycles, automobiles, glass, ceramics, machine tools, precision instruments, guitars, fruit juices, electronic microscopes, computer memories, sewing machines, road building equipment, antibiotics, clothing, shoes, trucks and buses, plastics, television sets, beverages, artificial flowers, building material, stationary engines and many other

Brazilian products.

Between September 5 and 14, hundreds of stands will show all these and more at the Anhembi Exposition Grounds.

Come and understand why Brazil grew 11.3% in 1971. Come and see the "Brazilian miracle" first hand. Come and participate in the potential profits made possible by our export growth of over 15% during each of the past two years. There are 95 million Brazilians waiting for you.

THE WORLD

International Report

Why do today that which can be put off until tomorrow?

Judicious postponement is a technique the common market excels at. In Brussels on Wednesday the foreign ministers of the 10 countries of the enlarged common market agreed to wait until September before making their final decision on whether or not to hold the summit meeting of heads of government that is supposed to take place in October. A day earlier, in London, the finance ministers and central bankers of the Ten published an anodyne list of guiding principles for international monetary reform, conducted an intelligent academic debate about future international reserves and liquidity, and departed for home leaving everything that mattered—the dollar and the present state of monetary disunion—conveniently untouched (see page 68).

So far only the French government has had the nerve to suggest that the week's work does not add up to much. But Europe's finance ministers do seem to have learned one lesson from last year: that when markets are in turmoil

it is not the best time to make inflexible new rules. Similarly, it would be foolish to make a firm decision on the October summit when the seriousness of Senator McGovern's challenge to President Nixon cannot yet be judged, when the politics of at least two of the Ten, Germany and Holland (the Dutch foreign minister, Mr Schmelter, must have been anxiously looking over his shoulder all week), are in uproar, and when the politics of several others, such as Italy, Norway and even France, might by October be in almost as much of a muddle.

The debate in Brussels did show one bit of movement on Wednesday. Britain showed the first signs of pressing hard for the sort of regional policy it would like, which would lead to channelling a share of community funds into the industrially run-down areas of Britain. Both France and Germany have found from recent researches that such a policy will cost them more than they thought. The initial British reaction to this dis-

Schmelzer, Rippon and Schumann will try again in September

covery was to play the tune of regional policy as lightly as possible. But Britain may now instead go for the sort of deal between national interests which is the customary method of bargaining in the community.

On Britain's side of the regional policy argument are the Irish and Scandinavians and—although they are more interested in farming than in industry—the Italians. France, represented in Brussels this week by M. Schumann, has now succeeded in promoting its ambitions for monetary union in Europe to the top of the summit agenda. At the same time the French have in recent weeks started to make concessions to the German wish for tighter co-ordination of economic policies and to the general desire to find some way of mitigating the absurdities of holding European currencies too closely together when their parities get patently out of line.

The deal that can be done at a European summit, whether in October or early next year hardly matters, is therefore becoming pretty obvious. France can be given the commitment in principle to monetary union that it wants from the others, and that they already share anyway. It will also get the satisfaction of seeing Britain fix the pound at a new parity. Germany will get, also in principle, the closer co-ordination of economic policies in Europe that it would like to see, and possibly a skeleton European reserve fund through which it can exercise some control as well. Britain, provided it learns the French lesson of pushing harder than is strictly nice, can get its foot in the door on regional policy.

On one subject France has already done Britain's work for it in advance. After M. Pompidou's manoeuvring there is little talk now of new European institutions, and the contentious debate about a diplomatic secretariat for the foreign ministers looks as if it has been safely dropped. The summit, for what it is worth, is back on the road—the question of exactly when it should be held, despite the unwise optimism expressed by Britain's Mr Rippon in Brussels, being rightly laid aside.

Holland

Party pieces

Netherlands or never-never lands? By the time the Dutch government resigned on Thursday it was hard to say which Holland was. In last year's elections the formerly dominant partnership of Catholic and Calvinist parties and Liberals (that is, conservatives) had lost a lot of ground to the Labour party and its allies. It took more than two months to form a new coalition. In the end the previous partners, who had retained only 74 of the lower house's 150 seats, created a majority coalition by taking in the eight members of the democratic socialist group called DS-70. This group had broken away in 1970 from the Labour party, which it regarded as having swung too far to the left.

The Catholic party and the two main Calvinist ones, the Anti-Revolutionary and Christian Historical parties, had fought the election with promises of increased public spending. But DS-70 had demanded sharp reductions of public spending, except on defence, for which it wanted more, not fewer, funds. Clearly the new coalition was going to have trouble over the shaping of the next budget. Trouble duly came; but not quite the way people had expected.

On Monday, after a long night session of the cabinet, the two DS-70 ministers resigned. They were the party's leader, Mr Willem Drees junior (son of a distinguished former Labour prime minister), and Jonckheer Maurits de Brauw. They had been in charge respectively of transport and higher education. Why did they resign? It emerged that they could not accept the budget cuts that were to fall on their own two ministries; they urged, instead, a reduction of defence spending. Many a citizen, on learning of this strange reversal of roles, must have rubbed his eyes and muttered: "Well, I'm a Dutchman!"

Queen Juliana dashed home from an Italian holiday. The Anti-Revolutionary prime minister, Mr Barend Biesheuvel, tried to patch things up but, seeing it was no good, resigned on Thursday afternoon. There was in fact much more to it than a mere inter-departmental tussle for funds. Mr Drees wants an immediate wage and price freeze, a sharp increase in university fees, and an all-out attack on the rampant inflation that had helped to produce a budgetary deficit of about £400m. It may not be possible to

restore a coalition with an effective majority this side of fresh elections; and elections might well bring further gains to Labour, which with 39 seats is already the strongest single party.

In most things Mr Biesheuvel could count on the support, against Labour, of the eight members who now represent four little right-wing parties that were not taken into the coalition last year. But they, like DS-70, might ask a price that would impel more floating voters to go over to Labour and its allies. With 14 parties already in parliament, and as many more eager to have a go at the next elections, a Dutch prime minister's calculations must anyway have a certain never-never-land character.

Germany

Schiller's lost but not forgotten

Willy Brandt's holiday in Norway will not have been improved by the reports coming from Switzerland, where his former economics minister, Karl Schiller, is taking his own holiday. The full text of Herr Schiller's letter of resignation earlier this month has been leaked to the German press. Herr Schiller asserts—wrongly—that France was about to adopt the Schiller solution of a joint float of European currencies without requiring German controls on flows of capital. In fact, France agreed to consider a joint float only in return for German willingness to impose capital controls, and then only if controls did not succeed by themselves in stemming speculation against the dollar.

No matter. Many will believe Herr Schiller's version of the story, and this may further damage Herr Brandt's campaign for re-election this autumn. Herr Schiller also accuses Herr Brandt's government of dangerous over-spending. Worse still for the chancellor, Herr Schiller refused in a television interview to dispel rumours that he is wondering whether to abandon the Social Democratic party. There are now real fears among Social Democrats that Herr Schiller may join the Christian Democrats.

It would be almost as damaging if, as is more likely, Herr Schiller pointedly refused the many requests now being made for him to campaign actively for Herr Brandt when the electioneering begins in September. In the last federal election, in 1969, Herr Schiller is thought to have swung any-

thing up to 4 per cent of the west German vote, and he could probably do it again. To have Herr Schiller actively campaigning on his side, but not in his government, would be the best of all worlds for Herr Brandt. Herr Schiller knows that too, and the question now is whether he wishes to take part at all and, if he does, what price he will ask for his support.

Italy

Too pure to survive

FROM OUR ROME CORRESPONDENT

Italy is one political party the poorer, or richer, this week. The small but politically important Socialist party of Proletarian Unity, the PSIUP, has splintered itself out of existence. At a winding-up congress held in Rome at the weekend two-thirds of the delegates opted with the executive for joining the Communist party. A small minority decided to go back to the Socialist party from which they came, and a rather larger minority tried to argue that the PSIUP should keep its name and ideals alive.

These decisions are the result of the crushing defeat suffered by the party in the May election, when it lost all its 24 seats in the chamber of deputies and got 11 senators elected only because they joined in with the Communist list. The party was founded in 1964, when a group of left-wing Socialists, with 25 deputies at their head, rejected Signor Nenni's policy of taking the Socialist party into the

The Taj Mahal? It's a new one on us.

We at Inter-Continental are delighted to announce that a brand-new member hotel joined us in July: none other than Bombay's world-famous Taj Mahal Hotel now expanded as twin hotels into the Taj Mahal Inter-Continental.

To the sublime view of the harbour and hills enjoyed by the Taj Mahal is now added a panorama of ocean and far-flung metropolis from the vantage point of the new 22-story tower.

The hotels, located in the center of the city, offer 650 elegant air-conditioned rooms, a sumptuous galaxy of 10 bars and restaurants and the city's liveliest discotheque, the "Blow-up".

Not to mention a swimming pool, saunas and a shopping arcade with everything from baubles and beads to barbers, bankers and a House Astrologer.

For reservations call Inter-Continental Hotels or your travel agent.

Matthew Gloag & Son Ltd., Perth, Scotland. Established 1800

COMPAGNIE FRANÇAISE DES PETROLES

The Company's Annual General Meeting was held in Paris on June 23rd, 1972, and accounts for the year 1971 were approved.

In his address, the President stated that, during the first quarter of 1972, financial results were at a level similar to one fourth of 1971 results with roughly the same volume of crude oil supply.

—**CRUDE OIL SUPPLY KEPT AT HIGH LEVEL.**—The Group's overall crude oil supply was 67.7 million tons, i.e., a 10.7% increase vs. 1970, despite the fact that crude supply from Algeria was cut by half. This stemmed from an increase in the Group's oiltakes from the Persian Gulf made in favourable conditions on account of declining tanker rates. The Company's own crude resources went up from 57.5 to 60.4 million tons, thereby allowing the Group to keep its rank as the eighth leading international oil company.

—**STEPPING UP AND DIVERSIFYING EXPLORATION WORK.**—The Group's exploration operations, carried out singly or on a joint venture basis, covered an overall permit area of 1.1 million sq. km. In Tunisia, the Company started operating the Sidi-el-Itayem field, discovered last year in the Sfax/Kerkennah permit area, where a new oil-strike was made in June 1972. In Indonesia, the Company struck oil off the coast of Borneo in April 1972. In the North Sea, TOTAL has an interest in the large-scale gas discovery in Frigg field. Exploration work has also been undertaken in Angola, off the coast of Senegal, South Africa, the Malagasy Republic, Corsica and Labrador.

—**DEVELOPMENT OF REFINING AND MARKETING.**—In France, completing a new 9 million-ton/year distillation unit by the end of the 1972 summer should increase overall capacity of the Normandy refinery to 23.3 million tons/year. It was also decided to build a refinery in the Dunkirk area, scheduled for start-up in 1974. In foreign countries, the Group pursues its development policy—especially in the area of refining—in Italy, South Africa, the French Antilles and the Netherlands where a 6.5 million ton/year capacity plant is to be erected in Vlissingen (Flushing).

The TOTAL Group's worldwide finished products sales reached 44.1 million tons in 1971, reflecting an increase of 11.4% in France and 6.4% in foreign countries. Despite less favourable economic conditions in the second half of 1971, the results of foreign marketing/refining affiliates reflected a net increase as compared to 1970. As an example, we can mention results obtained by TOTAL OIL (Great Britain) justifying heavy outlay made on the British market.

—**NET INCOME: +11.6%; DIVIDEND: +21.3%.**—1971 net income reached Fr. 452.6 million vs. 403.8 million in 1970 (+11.6%), thereby keeping the Company far ahead of other French companies. Overall dividend distributed in 1971 was Fr. 161.5 million (vs. Fr. 125.4 million in 1970) representing 35.7% of income.

Net dividend per share was set at Fr. 8.00 for already existing shares vs. Fr. 6.80 in 1970, to which should be added a Fr. 4.00 tax credit for shareholders residing in France or assimilated persons. Total income per already existing share thus reached Fr. 12.00. Income for newly created shares bearing interest from July 1st, 1971 was set at Fr. 4.00 plus Fr. 2.00 tax credit.

—**TOTAL GROUP CONSOLIDATED INCOME.**—1971 consolidated sales (excluding taxes), equally split between France and foreign countries, reached Fr. 13.2 billion vs. Fr. 10.8 billion in 1970, i.e., a 22% increase.

The Group's overall capital outlay reached Fr. 2,093.8 million vs. Fr. 2,398 million for 1970—the latter amount reflecting several exceptional expenditure items.

After allocation of income, 1971 self financing reached Fr. 1,706.8 million vs. Fr. 1,452 million in 1970 (+17.50%).

Cash flow went up 18.3% from Fr. 1.6 billion in 1970 to Fr. 1.9 billion in 1971. The Group's net income reached Fr. 702.9 million in 1971 vs. Fr. 587.2 million in 1970, thereby reflecting a 19.7% increase. The parent company's share in this figure is Fr. 537.8 million (+14%).

The Company's 1971 Annual Report in English may be obtained upon request to: COMPAGNIE FRANÇAISE DES PETROLES—Relations Extérieures/Documentation—5 rue Michel-Ange 75781 PARIS-CEDEX 16.

centre-left coalition. The PSIUP then stood for dogmatic revolutionary socialism, more or less as derived from Trotsky, in opposition to the social democratic degeneracy of the Socialists and to the nascent reformist trends appearing among the Communists. It has turned out to be too pure to survive.

In the 1968 election the party polled 14m votes and claimed to stand to the left of the Communists. But it failed to take a leading part in the labour conflicts and the student demonstrations in 1969, when it became increasingly clear that the "space on the left" was being filled more noisily and perhaps more efficiently by the Manifesto group and other movements of the far left. This year its votes dropped to 670,000 and it even failed to muster the 40,000 votes in at least one constituency which the election law requires for allocating seats in the chamber.

The Communists have been criticised for not stretching out a helping hand to save the PSIUP in one or two constituencies and thereby keep it in existence. But it is doubtful whether the Communist leaders, even if they had foreseen what would happen, would have exerted themselves to avert it. The Communist party is stronger alone. Its leader, Signor Berlinguer, is playing a difficult and far-reaching hand and has little time for the dogmatic carping of the extreme left. His aim is to get the Communist party into government not as an alternative to but as the partner of the Catholic party, presumably after the latter has been reconstructed. As things are the Communists have, without any difficulty, taken over the PSIUP almost lock, stock and barrel.

The secretary of the swallowed party says that his followers accept not only the Communists' programme but their methods of internal government, which he euphemistically describes as "democratic centralism." Just how pleased the Communists are about it all is a matter of conjecture. Some of them think that the new recruits are troublemakers, and that their contribution in votes will not be very large. It is possible that a fair number of PSIUP members and voters will rally to the fraction which still hopes to revive the purity of the faith. But the Communist party now seems to stand out even more clearly as the great hegemonic force of the Italian left.

France

Clearing the air

FROM OUR PARIS CORRESPONDENT

To go with its new government, France has got a new broadcasting boss, and a new broadcasting policy—or, more accurately, an old one. The signs are that the state-controlled Office de Radiodiffusion Télévision Française (ORTF), the country's only broadcasting authority, is to revert to serving up government pap. True, there are some people in France who ask when it ever stopped. Yet under the prime ministership of M. Chaban-Delmas progress had been made.

Years of gaullist censorship produced the prolonged strike of broadcasting journalists in the summer of 1968. M. Pompidou, the prime minister for most of those years, is not known for his interest in free broadcasting: he has described the ORTF as the voice of France, and thinks it should behave accordingly. But, once in the Elysée, he allowed M. Chaban-Delmas to loosen the safety-valve. No longer did an interministerial committee decide each day what news was fit to broadcast. Two autonomous television news services were set up, responsible not to the director of broadcasting but to the board of the broadcasting authority itself. One of them, headed by M. Pierre Desgraupes, even achieved a reputation, by ORTF standards, for quasi-independence.

Most of this timid advance is now in the melting pot. Many of M. Chaban-Delmas's party friends never liked it, and the first major retreat came with the "reform" of the authority's structure planned in the last days of his premiership. It was decided to end the

Conte Messmerises the viewers*

autonomy of the news services. They will now fall again into the normal hierarchy, which is headed by a new superboss, M. Arthur Conte.

M. Conte, whose undoubted qualities include a warm admiration for President Pompidou, holds a gaullist seat in parliament. He maintains that the news will remain free, but he also believes there has been too much moaning and groaning on the air, and not enough of the positive side of government action. He too talks of the ORTF as the voice of France, and a brief phrase of his speaks volumes about his conception of political broadcasting: "the government explains, the opposition replies."

At his heels, his party is planning to do its own Mrs Whitehouse and set up an association for truth in broadcasting to ensure that all voices are heard on the telly, particularly those that are representative of the majority of Frenchmen. More significantly, the structure of the new government also reflects a retreat to the past. The junior minister who planned the anti-reform of the broadcasting authority, M. Philippe Malaud, acquires new responsibilities for "information," which will include the ORTF and the Agence France Presse. Abolishing the ministry of information was one of M. Chaban-Delmas's minor achievements.

All this gives ample ground for suspicion that France is in for some pre-election abuse of the broadcasting system. Indeed, it has already begun. On the evening when the members of M. Messmer's government were named, political pressure was brought on M. Pierre Desgraupes to cancel a broadcast discussing it. When he refused the representatives of the ruling parties who were to have appeared abruptly withdrew. Next time round M. Desgraupes will not have the right to refuse. Or rather his successor won't. It is now clear that when the names of the new heads of services are announced next week, M. Desgraupes's will not be among them.

Spain

Franco and Blanco

Any Spaniard still harbouring hopes that a post-Franco government might take on a more liberal complexion has been abruptly disillusioned. On Tuesday, the 36th anniversary of the military uprising which led to civil war and brought General Franco to power, the Caudillo issued a decree that his old comrade-in-arms and closest

collaborator, Admiral Carrero Blanco, who is now 69, would automatically become prime minister on his death or retirement. His choice of the ultra-conservative vice-president, who in practice already fulfils General Franco's role as head of government, is no surprise. It is the last step the general can take before his death to ensure that the regime and its policies will continue.

But the publication of the decrees, laying down that Prince Juan Carlos must be sworn in as king and head of state within eight days of the general's departure, and the naming of the next prime minister do not imply that General Franco is ready to withdraw from the scene. Indeed, the wording seems to confirm the promise he gave last October that he would "remain at the helm as long as God gives me strength and clarity."

One purpose may be to limit Prince Juan Carlos's field for manoeuvre as head of state. Officially, he will have the right to name his own prime minister from a list of three names submitted to him by the Council of the Realm. But if he failed to reappoint the man chosen by General Franco it would create a political upheaval that would get his reign off to a bad start. Prince Juan Carlos has been holidaying with his father, Don Juan, in Portugal. Right-wing circles in Spain are becoming increasingly disturbed that their future king shows signs of being influenced by his father's liberal views and by his belief that Spain's future lies in integration with Europe.

The Spanish foreign minister, Sr Lopez Bravo, is known to be close to Prince Juan Carlos. He is also a strong advocate of Spain's entry into the common market, but in order to placate his doubting colleagues he had said that it will not be necessary for Spain to democratise its institutions to qualify for membership. Some respected Dutch and German voices have contradicted him sharply. This week he was in London for three days on an official visit—and it was Europe rather than Gibraltar that he wanted to talk about. Britain, he hopes, will help Spain into the European community in return for a prolonged truce over Gibraltar.

Had General Franco not nominated the next prime minister, Sr Lopez Bravo would have had some chance of being the choice of the future king. But, at 49, he has a long career ahead. As Spain's growing number of Europhiles get a wider hearing in the country, Senor Lopez Bravo's stock will rise. His day could still come.

Switzerland

You can't do that there here

FROM A CORRESPONDENT IN GENEVA

To some unfriendly foreigners it has always seemed that Switzerland has exploited the modern mushroom growth of international organisations: while keeping many of them at arm's length and refusing to join the United Nations, it has taken full advantage of their bureaucracies, many of which have chosen Swiss soil for their offices. There was therefore some satisfaction abroad at the suggestion that the Swiss might not be immune to that other modern international phenomenon, the urban guerrilla.

The news that a gang of anarchists had been rounded up in Zürich and that they had provided arms and a stolen car for the Baader-Meinhof terrorist group in west Germany seemed to point to it, and the CIA even said as much. But on July 14th the Swiss government poured cold water on the reported suggestion by the CIA that an international office in touch with several different revolutionary movements had been set up in Zürich to foster contacts between such organisations as the Popular Front for the Liberation of Palestine, the Japanese Red Star Army, the Irish Republican Army and the Uruguayan Tupamaros.

Zürich would be an obvious choice for internationally minded revolutionaries, both because of its position in the heart of Europe and because of the sheer cheek of imitating Lenin by hatching plots in the middle of one of

the most thriving capitalist countries in the world. But as the Swiss attorney general, Herr Hans Walder, proudly said at his press conference last week, these impertinent revolutionaries had reckoned without Swiss efficiency. Herr Walder was not so incautious, however, as to confirm whether the Swiss authorities were taking the CIA's theories seriously. There was no confirmation that the Bändlistrasse gang, of whom nine members have been arrested and more than 30 are still loose, were part of a wider international conspiracy directed from Zürich.

The Swiss do not lightly shrug off a report publicly if they think there is a possibility it will subsequently turn out to be true. Newspapers in Zürich, offended at the suggestion that the Swiss might have been even indirectly responsible for the Lydda massacre, terrorism in Northern Ireland and murders of diplomats in south America, have quoted their own police sources as saying that the CIA report should be placed in the files along with reports on UFOs, three-headed babies and other symptoms of the mad summer season.

The Bändlistrasse gang established its contacts with a group of anarchists in Berlin last year and was referred by this outfit to the now decapitated Baader-Meinhof gang. Revolvers, ammunition, machine pistols and a stolen car were passed to the Baader-Meinhof group until the flow was cut off when the Bändlistrasse gang was cracked in May. Police arrested seven young men and charged them with preparing an urban guerrilla campaign against the constitutional order of Switzerland.

And then last week a federal court in Lausanne wound up a trial of Geneva anarchists who had also been caught with a large store of well-kept rifles plus a list of prominent personalities whom it was their declared intention to eliminate. One of the two young ringleaders was sentenced to two and a half years' imprisonment and his accomplice was given a suspended sentence of one and a half years. The court said it passed such mild sentences since it considered the defendants were "amateur revolutionaries rather than professional terrorists."

Perhaps with this thought comforting him, Herr Walder went off for a two-week holiday after his press conference. For the moment, at least, Spartacus in Zürich is an all-Swiss animal and under close, but benign, observation.

Swiss policeman prods peculiar package

East Europe

Politics is still king

Before they get over-optimistic, east-west traders might usefully study last week's summit meeting of Comecon, the economic group comprising Russia, Bulgaria, Czechoslovakia, east Germany, Hungary, Mongolia, Poland and Rumania. Comecon is still hopelessly bogged down in its own internal problems. The real growth in east-west trade in the near future seems likely to come through direct deals with Russia—such as this week's oil and gas agreement between Russia and the maverick American oil conglomerate, Occidental Petroleum (see page 82).

Comecon members' trade with outsiders has been growing by 8-10 per cent a year. But the total is still small. Only 30 per cent of Comecon trade is with countries outside the block; most of the rest is with Russia, which is now screwing higher commodity prices from its partners. And the east Europeans will have to invest substantial sums in large joint projects such as the cellulose plant at Ust-Tjmsk in eastern Siberia, the huge steel plant at Kursk in European Russia, and several others. All this means that there will be less left in the kitty for purchases from the west of modern machinery and consumer goods. No wonder the Soviet prime minister, Mr Kosygin, found it necessary to deny western reports of disagreements among Comecon members.

What certainly exacerbates commercial differences of interest is the fact that Russia uses Comecon primarily for political ends—as an instrument of Soviet hegemony over eastern Europe. That is why even those Comecon integration projects under discussion in Moscow last week which can be justified in terms of economic rationality have a sinister ring for the more independent-minded east Europeans.

The main news from last week's meeting of this supposedly economic organisation was political. The entry of Cuba as a full member is dictated no doubt by Russia's desire to keep a closer watch on Dr Castro. There is also the near-entry into membership of Yugoslavia, which has recently found itself obliged—mainly through its lack of success in western markets—to enter into closer co-operation with Comecon. Politics, not economics, is still king in eastern Europe.

Hanging over all Comecon members

is the growing political problem of how to react to the enlargement of the common market. Rumania has approached Brussels in the hope of being included in Europe's generalised preference scheme. Yugoslavia has a trade agreement with the common market, which is currently being re-negotiated. Poland and Hungary would like to get larger quotas for their textile exports to the community but obviously cannot until Comecon has sorted out the recognition problem. But in a year when the Ten are jointly preparing their approach to the European security conference, and when the Brussels commission is expected to take over the future common commercial policy of the Ten towards eastern Europe, there is an increasing fear that Russia will use the issue of recognition of the EEC to bludgeon its Comecon partners further into line.

Czechoslovakia

Your move, Angela

But for a bright idea, the trial of 13 prominent Czechoslovak intellectuals on charges of subversion, which opened in Prague on Monday, might have remained just another routine instalment in the sad story of the strangulation of Czechoslovakia's freedom which has been going on since August, 1968. But an underground organisation calling itself the Citizens' Freedom Movement has just invited Miss Angela Davis, the militant black American marxist leader, to come to Prague and attend the trial. The purpose of the trip would be, as the open letter to Miss Davis puts it, to help the defendants, who are being "persecuted for having questioned the wisdom of their rulers," but who, unlike Miss Davis herself during her recent trial, were unlikely to be accorded "the elementary right to defence in court proceedings."

It is not yet known whether Miss Davis will respond to this appeal. But even if she chooses to ignore it, or if the Czechoslovak authorities refuse her a visa, the appeal will have performed a useful service. It may have already benefited the 13 who were put on trial this week. Although the Husak regime was clearly determined to make an example of them, the suspended sentences given to some of them on Wednesday were not as harsh as was feared. The offence of some of the defendants is that they were involved in the distribution of anti-regime leaflets

Some would welcome her in Prague, too

on the eve of last November's elections. The leaflets may have helped to destroy the illusion that Mr Husak hoped to create by using the elections to claim that the Czechs were solidly behind him.

There can be little doubt that the publicity surrounding the appeal to Miss Davis and another recent protest by a large group of prominent left-wing western intellectuals—including the philosopher Jean-Paul Sartre and the novelist Graham Greene—have embarrassed both the Husak regime in Prague and the Soviet leaders. The open persecution in Czechoslovakia of right and left alike makes a bad impression on left-wing opinion in western Europe just at a time when some left-wing, non-communist groups appear to be increasingly ready for close political co-operation with the communists in France, Italy and elsewhere in the non-communist world.

Israel

So what's wrong at home?

FROM OUR ISRAEL CORRESPONDENT

President Sadat having surprised even Israel by hoofing his Soviet advisers out of Egypt, the Israelis are devoting themselves to domestic discontent. A period of nagging political crisis stretches ahead to next year's election.

AUSTRALIAN ESTATES

Sir Denys Lowson

on

Satisfactory Cattle and Sugar Prospects

Sir Denys Lowson, Bt., the chairman, in the course of his remarks to shareholders at the Annual General Meeting held in London on 17th July, said:

Total revenue increased from £2,545,653 in 1970 to £2,844,833 in 1971. The increase was due mainly to better results from the sugar division which received higher prices and also produced a record tonnage of sugar at our Kalamia and Pleystowe sugar mills. Increased profit from the cattle division due to record cattle prices in Queensland was absorbed by reduced returns from the sheep division; the sheep division reduced its expenses substantially but this was more than offset by lower returns from the sales of wool and livestock. The agency division maintained its results at about the same level as in the previous year; whilst wool and sheep prices were lower these were compensated by re-organisation of our services and consequent reductions in cost. Overall the substantial upward trend in costs evident in 1970 continued, due largely to increases in wage awards; at the sugar mills these additional expenses were offset to some extent by the new plant installed, and elsewhere costs and services were cut to the maximum extent possible. Depreciation and amortisation of fixed assets increased from £938,972 in 1970 to £1,034,662 in 1971. Although the profit was higher in 1971 Australian taxation was reduced from £450,640 to £358,721; this was due mainly to the investment allowance for the new boiler and installations at Kalamia sugar mill.

In view of the improved results the Directors recommend the payment of a dividend of 10% on the Ordinary and "A" Ordinary shares, compared with 8% last year, which will cost the Company a total

of £315,157. This compares with a cost in 1964 of £258,996 when the Company paid 14% on its Ordinary shares before the introduction of the Finance Act 1965. £100,000 has been transferred to Drought Reserve in a subsidiary and the total amount carried forward in the Consolidated Profit and Loss Account has increased from £1,920,803 to £2,378,813. Under the current system of United Kingdom taxation, income tax on dividends must be deducted from the payments made to shareholders and has to be paid over to the Inland Revenue. The Government are changing the system of company tax as from April 1973 with the effect that, in so far as U.K. companies are concerned, the only taxation liability arising in future will be corporation tax, albeit at a higher rate than at present. Indeed the new legislation will lessen the taxation burden on corporations in a great many cases, particularly companies all of whose profits are earned in this country. It appears however, that the position in the case of our company, whose profits are earned almost entirely in Australia and subject to tax there, is such that it will not obtain any real benefit from the new system of taxation; it will continue to suffer the full rate, either in Australia or here, of taxation on profits with further liabilities in the United Kingdom in respect of dividends paid. Efforts are being made by the company to obtain a proper measure of relief from the ill effects of this legislation.

Sheep Stations

New South Wales properties recorded above-average rainfall during 1971, but the distribution was not always effective and this created some feed difficulties during parts of the year. In Queensland the position was much the same, and at Terrick

Stud and Terrick Flock the feed deteriorated considerably towards the latter part of the year. Sheep numbers at the close of 1971 were 9,000 higher, due mainly to a very good overall lambing of 94% against 85% in 1970. All Queensland stations marked better than 92% of lambs, with Thylungra returning 99%, the highest and best ever lambing for that property; New South Wales properties averaged a little lower at 89%. Sheep mortality was 5%, being 1% less than in the previous year. Cattle numbers on our sheep stations increased by 3,746 in continuation of our policy of assisting the sheep division's earnings. As I said last year a limited number of cattle can be helpful on some of our sheep stations in improving the coarse pasture for our sheep; but it is always necessary to be ready to remove all such cattle at short notice if any dry or drought conditions begin to prevail.

18,000 fewer sheep were shorn, resulting in a reduction in the wool clip of 626 bales compared with 1970; prices averaged 26.52c per lb. (58.44c per kg.) or 1.87c per lb. lower than last year. 12,000 fewer sheep were sold at an average price of \$3.44, this being \$2.26 lower than in 1970; 1,700 fewer cattle were sold, but at an average of \$136 per head compared with \$125; after allowing for cattle purchased there was a drop of about \$750,000 in gross revenue from livestock compared with 1970. Although expenses were reduced substantially the lower returns from wool and livestock produced a loss for the year. Raby and Oolambeyan were represented with good show and sale teams at the February, 1972, Sydney Sheep Show and Sales. Oolambeyan won the Grand Champion Strong Wool Ewe and sold one of its sale team to an Argentinian buyer for \$1,000, and Raby was successful in being awarded the Reserve Champion Strong Wool Ram and sold all of its sale sheep at satisfactory prices.

Cattle Stations

Although the year commenced with Chatsworth and Mt. Howitt drought-stricken and extremely difficult conditions at Granada, splendid rains during February to April restored the situation and were followed by the best general season for many years in north western Queensland and the Northern Territory. Excellent flooding occurred at Mt. Howitt allowing this property to be restocked. Winter grain crops failed at Wainui due to insufficient rain during the growing season. 47,000 calves were branded, compared with 42,000 in the previous year. Improved brandings, reduced mortality and slightly reduced sales were responsible for an increase of 9,000 head in overall stock numbers. The total at the end of the year was 168,000.

Agency

Seasonal conditions in the eastern States of Australia, our main area of operations, ranged from dry followed by floods in the north, to better than average in the south. In Queensland excellent rains early in the year broke the long drought in most areas and resulted in heavy flooding; the dry hot weather which followed baked the ground and hindered both grain growing and cattle fattening. In the second half of the year there was a general improvement and most areas enjoyed excellent conditions throughout the spring and early summer. The year closed with widespread rain to give the State its best general seasonal conditions since the mid 1950s. Victoria and southern New South Wales experienced conditions better than average.

Sales of wool from our stores totalled 186,000 bales compared with 178,000 bales in 1970. Throughout the year wool prices continued to drift down from their already low levels. Whereas the average price of the wool sold by the Company was 33c per lb. (72c per kg.) in 1970, it was only 28c per lb. in 1971. This price was sustained only by the substantial support afforded by the Australian Wool Commission bidding at auction. The 1971 price of 28c compares with a price of 46c in 1960.

The lower wool prices affected sheep prices, and land values dropped in sympathy. The low earnings available to the rural sector of necessity curtailed improvement programmes and all expenditures were cut to the greatest degree possible.

Late in the spring the Commonwealth Government's direct subsidy of wool prices to woolgrowers, combined with the improved seasonal conditions in Queensland, generated an improved outlook and at the end of the year a better trend was apparent in business conditions in the rural sectors but many operations continue to be marginal. This trend has been helped by the improving export meat markets and the overseas demand for Australian wheat and butter. An official estimate of receipts into brokers' stores in Australia is as follows:

1970/71	1971/72	
Bales	Estimated Bales	Percentage Difference
5,044,469	4,758,000	-5.7

Wool sold in Australia for the four seasons, with an estimate for the 1971/72 season, is as follows:

Season	Bales	Proceeds from Sales			Average Price per lb. kg.
		\$A	Million	per lb.	
1967/68	4,967,000	639	42c	(92c)	
1968/69	5,207,000	725	45c	(99c)	
1969/70	5,601,000	652	38c	(83c)	
1970/71	5,134,000	468	29c	(65c)	
1971/72 (Est'd.)	5,046,000	535	34c	(75c)	

Sugar

Australian sugar production in 1971 was a record 2,749,000 tons, of which 2,627,000 tons came from Queensland. All Queensland mills, but one, had a good cane crop available and so were able to take advantage of increased International Sugar Agreement quotas and quota-exempt sales, such as cane invert. Almost all available cane was harvested and the crushing of 18.1 million tons of cane in Queensland was the largest ever known. Pleystowe and Kalamia

Two of Terrick's champion show rams at Terrick Stud, Queensland. This stud won several Championships in Queensland last year.

also both crushed record tonnages of cane, and produced a record total of 219,000 tons of sugar compared with 183,000 tons in 1970. The production would have been slightly larger had not very heavy rains brought an abrupt end to the crushing at Kalamia shortly before the mill had made its full sugar quota. Most of Pleystowe's production was in the form of cane invert for sale to the Australian Sugar Board (as with our other sugar) and subsequent shipment to Japan.

At the triennial review of the British Commonwealth Sugar Agreement in London during the latter half of 1971, the negotiated price for Australia was increased by £6.50 to £50.00 sterling a ton for 1972 to 1974. This was the first increase in the price since 1965. The method of sale of Australia's negotiated price quota after 1974 is not yet established; it will be affected by transitional arrangements with the E.E.C., the re-allocation of I.S.A. quotas, the extension of the U.S. Sugar Act and other developments in the world trade for sugar. The new U.S. Sugar Act, which is of three years' duration until the end of 1974, provides Australia with a similar quota to that under the previous Act at a U.S. consumption requirement of 11.2 million short tons. Australia, however, receives a higher proportion of consumption growth in the U.S.A. than under earlier legislation.

Rapid upward movements in world sugar prices towards the end of 1971 and early in 1972 placed a heavy strain on the International Sugar Agreement, which until that time had worked well. All I.S.A. quota restrictions have been temporarily removed and in terms of the agreement will not be reintroduced until the prevailing price falls to 5.25 U.S. cents a pound, when the Executive Committee will meet to decide on the level at which quotas should be re-established. High world sugar prices, while on benefit to exporters in the short term, deprive the International Sugar Organisation of those economic controls which are essential for long term stability and orderly marketing. It is, therefore, to be hoped that prices will return to more reasonable levels soon. To achieve this it appears that production of sugar should be increased promptly, at least to a level matching consumption, which continues to grow at about

3% to 3½% per annum. We are enlarging steadily the capacity of our two mills, so that we will be able to take our part in producing any additional sugar which may be required in due course; as well as being able to mill a greater quantity of cane at the time of the maximum sucrose content.

General

Following two very good years the real growth rate of Australia's Gross National Product declined in 1970/71 to 3.9% which was somewhat below the average for the past decade. This was due largely to the continued difficulties of the wool industry, higher wages and prices, world monetary and trade problems, and some rise in unemployment. The balance of payments, however, continued to be very strong and at the end of 1971 Australia's international reserves reached the record level of about \$2,800 million. The restrictive monetary policies applied by the Commonwealth Government following the boom conditions of 1970 were eased towards the end of 1971 when grants were made to assist employment in the rural areas, restraints on lending by the banks were lifted, and interest rates were reduced. The 1971 world currency crisis was settled in December and the year finished on a more optimistic note with the Australian economy basically sound and growing strongly.

Although there is some doubt about the short term outlook for minerals, wool prices have shown an encouraging partial recovery in 1972 and meat and sugar prices seem likely to remain buoyant for the present. The major concern of the Australian economy is to curb cost-inflation following continued rises in wages and prices. The Consumer Price Index for the December 1971 quarter rose 2.3%, which was the highest for 20 years and brought the 1971 increase to 7%, or more than double that of two years ago. However, the March 1972 quarter showed a rise of only 1.1%, which was the same as for March 1971, and could mean that the annual rate of inflation may stabilise at lower levels. Confidence in the economy was assisted early in 1972 by the restoration of the 20% investment allowance on manufacturers' new plant and machinery, reduced personal income tax, and higher Social Services pensions. The general outlook of the Australian economy is favourable.

The Company's Bell G5 Helicopter. Tests are in progress for the use of this machine, instead of horses, for mustering cattle.

AUSTRALIAN ESTATES (continued)

Directors and Staff

I referred last year to my visit to Australia early in 1971 for discussions with the General Manager and Staff. Early in 1972 we were pleased to have a visit in London from Mr. G. H. Colman, the Australian Director and General Manager, when many matters concerning the Australian business were considered, and the possibility of some future diversification of our activities was further discussed. Since the close of the Company's year, we and our friends have disposed of the substantial interest, at a satisfactory profit, which we held in the old-established Scottish Australian Company Ltd. We reluctantly decided that under present conditions and with that Company's existing assets it was not possible to make this into a really viable or profitable investment. Time will show in due course if the decision was right. Meanwhile we shall continue to do everything possible to diversify further our activities; and at the present time we have considerable developments planned for our Sugar, Cattle and Property interests.

At the end of December last, Mr. John Grammer resigned as a Director following some twenty-three years' service on the Board. We greatly valued his friendship and wise counsel, which will be sorely missed. It is therefore with a special grief that we have to record his death at the end of April. We welcome to the Board Sir Charles Johnston, who has just completed a most successful term of office as the High Commissioner for Great Britain in Australia. We are hopeful that this appointment will

continue to cement our Anglo-Australian links; and that we shall receive much benefit from his wise guidance, his knowledge of Australia and also his wide experience of international affairs.

Building Project

During the year under review we agreed to purchase 120 William Street, the building next to our head office in Melbourne; a deposit was paid and the balance is payable in 1973. Since the end of the year we have also acquired the next adjoining site (previously owned by the Australian Mercantile Land & Finance Co. Ltd.) in exchange for other buildings already owned in Melbourne. These new sites, together with our existing office premises, provide us with an area of some 20,000 square feet in what has become a key centre of Melbourne's financial and office area. We believe that the development potential and long term income growth of an office project constructed on this site is assured; we are accordingly actively engaged on plans for the construction of an office building, some part of which would be occupied by our head office and Victoria Agency headquarters while the remainder would be available for letting to outside parties; and thus also afford some measure of diversification to our activities.

Current Year

The improvement in the seasonal conditions enjoyed at the end of 1971 faded as the Australian autumn progressed. In Queensland, while on the coastal strip and in the north-east of the State the conditions are satisfactory, in the south-east corner graziers are anticipating the worst winter

on record as there has been insufficient rain to sustain the growth germinated by the January flooding. Similarly in Victoria the smallness of the autumn falls negated benefits of the good summer conditions. Gippsland is facing drought conditions and losses of livestock are occurring. All the company's sheep properties are in reasonable order at present with the exception of Thylungra, which has recorded only 1.65 inches of rainfall this year and has had only minor beneficial flooding. On our cattle properties seasonal difficulties early in the year were again experienced at some properties. Rains in the north-west of Queensland and Northern Territory during March have assured a good general season there. However, some problems remain at Kamilaroi where rain in the area of the homestead has been light, and at Mt. Howitt where although flooding had occurred in the channels to ensure sufficient fattening feed for stock, no rain has fallen locally and the homestead water supply is dry.

All Queensland sugar areas have large cane crops; and sugar production this year is expected to be about the same as in 1971. The International Sugar Agreement quotas are still in suspense, but even if they are re-imposed later this year, it is still anticipated that all available cane in Queensland will be harvested.

It is always difficult to forecast results for the current year. While costs continue to rise we expect a good turn-off of cattle at satisfactory prices and better results from the sugar division; we are also encouraged by the improved tone of the wool market. Overall, at this stage, it seems that 1972 results could well show an improvement over those for 1971.

continued from page 37

The latest outbreaks have been about religion, a subject which raises problems that no Israeli government has ever come to grips with. But such manifestations are beads in the curtain concealing deeper problems: the race to succeed Mrs Meir; the fatigue of a veteran ruling machine that needs overhauling; the lack of common ideological ground in the Labour party's leadership; the thrust of many young people's disaffection with the government's handling of social, economic and moral issues.

Last week the government managed to head off two proposed measures, both of which promised trouble. The Independent Liberals, a tiny group within the coalition, had tabled a bill to introduce selective civil marriage for the 20,000 or so people disqualified by the rabbinate. The issue, over which most of the non-religious parties are divided, is an explosive one as its approval would cause the National Religious Party (NRP) to walk out of the coalition. It needed Mrs Meir's threat to resign, and take the cabinet with her, to hold a vote on this bill in abeyance at least until September.

The second measure, proposed by the ultra-religious Agudat Israel party, was a proposal to harden the provisions of the law defining a Jew. Last week the Knesset voted against this suggestion, but again Mrs Meir had to crack her whip to get the NRP members to abstain. And she was not entirely successful: her NRP deputy minister of education voted with Agudat and has since been dismissed from the government.

Another running quarrel is the open rift between Mr Yizhak Ben-Aharon, the strongly opinionated secretary-general of the main labour organisation, Histadrut, and the other Labour party leaders. This began in the spring when Mr Ben-Aharon resigned in protest after Mrs Meir and Mr Pinhas Sapir, the finance minister, intervened in a labour dispute; he was subsequently reinstated on a wave of popular support. It has continued by way of a public slanging match with the finance minister; Mr Ben-Aharon put forward a radical plan for the economy and was accused by Mr Sapir of advocating marxism Allende-style. As a result of all this, Mr Ben-Aharon is ambitiously consolidating his support among the powerful trade unions and Mr Sapir has become the businessmen's champion.

The sparring among the coalition government's senior leaders could lead

Ben-Aharon's consolidating his support

to a decision to hold elections next spring rather than wait for the autumn. Mrs Meir has declared that she will not stand for another term of office, but an early election would absolve her from this promise and allow her to serve for another year or two. This would enable the Labour party to go into elections under a strong leader, and keep the succession struggle under wraps for later on. The top contenders are still Mr Sapir and Mr Moshe Dayan, with Mr Allon, the deputy prime minister, and Mr Israel Galili in the second line. There is also always the possibility that the party, fearful of a deep split, might choose some compromise candidate. A not-too-delicate reminder of what could happen was provided recently by a public opinion poll which showed 40 per cent support for Mr Dayan should he decide to break away from the party and stand alone.

All the parties are conscious of the need for new blood but this does not mean that any of the veterans are going to step down voluntarily to make room. People are clamouring for solutions to domestic problems, and dislike the classical Labour party method of approaching such problems in the context of party politics. The smaller parties that are provoking the crises can be controlled. But Mrs Meir is capable, at any moment, of suddenly throwing up the sponge.

China

There'll always be an awful lot

There are only two indisputable facts about China's population problem: that there is one, and that the Chinese are now trying to do something about

it. Recent observers of Peking's efforts to encourage birth control have tended to come home euphoric. A Japanese representative of the International Planned Parenthood Federation went so far as to claim that 85-90 per cent of Chinese couples are practising birth control—a record better than that of central London. But some more sober-minded experts are ready to accept his judgment that, for sheer comprehensiveness, China's is "the best family planning programme in the world."

The Chinese are now offering their people every internationally approved method of birth control from free abortion on demand (a method still played down by puritanical propaganda) to loops, condoms, sterilisation for both men and women and two kinds of pill. No other country makes so many techniques so widely available: the Indians and the Japanese do not allow the pill, the Indonesians do not permit abortion and even the abortion-minded Swedes ban vasectomies.

The other unique element of China's programme is its face-to-face approach. When patients do not come to the clinics, the clinics come to the patients in the form of the so-called "barefoot doctors"—health workers who deliver contraceptives to people's homes and even to women working in the fields. Abortion by the simple vacuum aspiration technique (which the Chinese invented, and is fast becoming the preferred method throughout the world) and sterilisations, with acupuncture anaesthesia, are also brought to the peasants' doorsteps by doctors, both barefoot and shod, in the 70,000 local hospitals throughout China.

Chinese birth control is suddenly being "discovered" along with all other things Chinese in the current wave of Sinophilia. But although Peking does seem to be putting greater weight behind its drive today—and the introduction of the pill has plainly made a difference—most of the elements in its family planning programme have been carried over from two earlier campaigns, one in the 1950s and one in the 1960s.

The first birth control campaign suffered from the embarrassment of a sharp policy reversal: in 1949 Mao had proudly proclaimed, "It is a very good thing that China has a big population," denouncing "bourgeois economists like Malthus" who argued that increases in food cannot keep up with increases in population. As late as April, 1956, Chou En-lai was telling foreign visitors that China needed population and therefore did not need birth control.

This announcement appears as a matter of record only.

No more babies for one sterilised Chinese

But then the official line was stood on its head, partly because of rising concern about food shortages and partly because the 1953 census revealed that China's population, at 583m, was much larger than the Chinese leaders had imagined.

On a directive from Peking's ministry of health in August, 1956, Chinese propaganda began to urge the use of contraceptives, mainly the condom and the diaphragm but also formulas derived from traditional Chinese medicine. The most notorious of these was the tadpole technique: 14 live tadpoles swallowed on the third day after menstruation and 10 more on the fourth day were promised to produce five years' sterility. It was two years before this and other unconventional contraceptives including acupuncture were debunked. In the meantime Mao Tse-tung became the first national leader to advocate today's trendy slogan of zero population growth: in a secret speech in February, 1957, he urged that China's population be stabilised at 600m. But a year later Mao had changed his mood and his mind, and the great leap forward—with its creed that men can make miracles—put an end to the birth control campaign.

The second campaign began in 1962. It was more sober and less ideological than the first effort—no more tadpoles and no more Marx versus Malthus—with greater emphasis on the advantages of contraception and late marriage for the health of mother and child. It suffered from the same administrative confusion that had beset the earlier drive and faced the same resistance from tradition-minded peasants and party workers. And it ground to a halt, just as the first one had, with the onset of a new political movement, this time the cultural revolution. It started up again only when the revolution had spent itself in 1969.

The impact of all China's efforts at

limiting its population growth is virtually impossible to measure. For one good reason: China has no nationwide demographic statistics more recent than its 1953 census and the local figures which are offered to visitors are obviously unrepresentative showpieces. The Chinese have only the haziest idea of what their total population is—they use the figure 750m, although Prince Sihanouk has indicated that some people in Peking think it is more like 800m and western estimates range up to 875m. Furthermore, the Chinese have no reliable records of births and deaths. So the only available figures for population growth consist of the estimated difference between two estimates.

Estimates and the experts who make them differ widely. One noted American demographer, Mr John Aird, has concluded that neither of China's first two birth control campaigns had any perceptible effect on the national birth rate and that even if the present drive succeeds beyond expectations it too will have little impact over the next 10 years because of the falling mortality rates. Another American expert, Mr Leo Orleans, is more optimistic: he claims that China has already achieved something remarkable in lowering its birth rate from 43 per thousand in 1949 to 32 per thousand today (both estimates, of course) and that, with luck and determination, this rate could be lowered to 20-25 per thousand—the current level for Hongkong and Singapore—by 1980. But, even then, China will have almost a billion mouths to feed.

North Vietnam

The buck stops at Giap

The fight for Quang Tri city looks like becoming one of the hardest of the whole Vietnam war. If the South Vietnamese win it and North Vietnam's troops are pushed out of the only provincial capital they have captured so far, where will this leave the man who is automatically assumed to have masterminded the whole offensive—General Vo Nguyen Giap?

The recapture of Quang Tri would be an important psychological victory for South Vietnam, not least because it would back up the claim that this time General Giap's talents have failed him. When he committed the North Vietnamese army to a major conventional offensive, heavily dependent on large supplies of fuel and ammunition,

But one more offensive from Giap?

he may not have foreseen the intensity and effectiveness of American bombing on the southern battlefields and against the northern army's supply lines. General Giap's previous guerrilla experience may have blinded him to the difficulty of fighting a conventional war without air support.

But it is doubtful whether he had much choice. A communist push big enough to disrupt pacification, discredit Vietnamisation and embarrass President Nixon in election year could hardly have come from the weakened Vietcong, whose political value is anyway now too great to be squandered on the battlefield. So the North Vietnamese army, whose guerrilla days are past, had to be used instead in an orthodox assault.

Some of North Vietnam's other leaders may well have had doubts about it. But once the decision to launch another major offensive had been taken—perhaps in 1970, when the build-up of men and weapons began—they had little choice but to go along with his plans. Since April there has been scarcely a hint of dissension, indeed scarcely any comment of importance, from the men at the top in Hanoi.

It is too soon to say that the offensive has definitively been defeated. The resistance of the South Vietnamese is still heavily dependent on the help of American air power. It is possible that General Giap has enough supplies to fire the other barrel before the election in November. But if North Vietnam's forces are unceremoniously pushed into the hills of Quang Tri, General Giap could find himself under open attack from his opponents on the politburo. It is not only his present strategy they could turn on, but his whole policy of reorganising and equipping the army as just another conventional force.

Guatemala

The right kills the right

FROM OUR CENTRAL AMERICA CORRESPONDENT

When Oliverio Castañeda Paiz, the vice-president of Guatemala's congress, was assassinated last month, it was at first presumed to be the work of left-wing guerrillas. Castañeda was leader of a right-wing terrorist organisation and was high on the death list of the castroite Rebel Armed Forces. But when the guerrillas neither claimed credit nor were blamed for the murder, new interpretations emerged. And when four of Castañeda's followers were gunned down last week it became apparent that internecine fighting had broken out on the right.

At stake, apparently, is the presidency of Guatemala in 1974. Although general elections are still 20 months away, squabbling has begun among conservatives over the choice of a successor to General Carlos Arana Osorio. The man most determined to win the prize is Mario Sandoval Alarcon, president of congress and head of the ruling Movement for National Liberation. Two years ago, Sr Sandoval picked Colonel Arana as the movement's candidate and therefore expected to be repaid with the president's support in 1974. But the army and the small Institutional Democratic party, which also backed Colonel Arana in 1970, have different ideas. Colonel Arana and the army want another military president, and the Institutional Demo-

They're fighting for Arana's job

cratic party wants anyone but Sr Sandoval.

Castañeda's role in this clash of ambitions was obscure. But in recent months his political allegiance seemed to have switched from Colonel Arana to Sr Sandoval. And on June 15th, when Sr Sandoval was re-elected president of congress, Castañeda was brought in as first vice-president of congress, a move that seemed to imply Castañeda's backing for Sr Sandoval. Ten days later Castañeda was dead.

The police claim to have no clues as to the identity of his assassins. But all signs now point to a decision by people in the government and army to issue a warning to Sr Sandoval by eliminating a close supporter who, in any event, had become too self-important. The murder last week of four provincial leaders of the Movement for National Liberation who were followers of Castañeda was seen as another step to subjugate the ruling party to the army's wishes in time for the next elections.

Whether the opposition parties can benefit from the divisions on the right depends entirely on their ability to unite. The Revolutionary party, in power between 1966 and 1970, is itself divided, and the Christian Democrats and the Revolutionary Democratic Union have little appeal outside the urban middle classes and intellectual groups. Nevertheless, a united opposition candidate would have a good chance of defeating Colonel Arana's chosen successor—so long as the army does not nullify the elections.

Burundi

Window-dressing the butcher's shop

FROM A CORRESPONDENT

After two and a half months of personal rule, President Michel Micombero has given Burundi a new government. It is headed by Mr Albin Nyamoya, a long-time enfant terrible for Belgium, the former administering power in this tiny east African state, and a leading member of the pro-Chinese faction of Burundi's ruling Tutsi tribe. In Colonel Micombero's last government, dismissed on the eve of an attempted coup that set in train weeks of slaughter, Mr Nyamoya held the relatively minor post of minister of agriculture. His elevation to prime minister, the first that President Micombero has appointed during his six years in power, con-

firms the marked shift towards hard-line, strongly left-wing, policies which appeared during the interregnum. As though to emphasise the change, a Chinese technical mission arrived in the capital, Bujumbura, on the day the new cabinet was named. In 1965, when Mr Nyamoya led the royal government of King Mwambutsa, his fall from power coincided with the closure of the Chinese embassy for allegedly fomenting unrest against the monarchy.

The shape of the new government clearly reflects Tutsi nervousness of a repetition of the Hutu uprising. To the Tutsi oligarchy, which makes up about 15 per cent of Burundi's 3½m people, the lesson of the attempted coup was that its physical survival depended on its ability so to weaken the Hutu that no fresh attempt to liquidate its authority could be made in the foreseeable future. Hence the savage reprisals wrought on the Hutu.

In the short term this assessment was probably correct. Burundi's tribal set-up has put the elemental law of kill or be killed in the ascendancy: in the aftermath of the attempted coup some 10,000 Tutsi were killed by rebels and 100,000 Hutu by government troops. Ultimately the numerical superiority of the Hutu must reverse this situation, but the extent and selective nature of the reprisals, which have concentrated on literates and other potential Hutu leaders, make that day look a long way off.

Unlike its predecessor, the new government is devoid of any real attempt at a tribal coalition. All five Tutsi ministers from the last government have been returned to office. Three of the five Hutu ministers in the old government were executed for complicity in the coup attempt, and the fate of the others is not known. Although for appearances' sake three Hutu unknowns have been included in the new 14-man cabinet, control is vested in the militant Tutsi troika of Colonel Micombero, Mr Nyamoya and the foreign minister, Mr Simbananiye.

Today Burundi is quieter than it was, and the curfew in Bujumbura does not begin until midnight. But Hutu refugees returning to their homes from Tanzania, and Hutu schoolchildren travelling to their villages for the school holidays, are still being indiscriminately killed. Little of this is being reported: few outside Burundi are interested in the dreadful, monotonous statistics of a seemingly endless tribal purge.

McGovern rounds up strays—but not Meany

Washington, DC

His nomination secured, Senator McGovern turned on the fourth day of the Democratic national convention at Miami Beach to a string of waiting household chores. Some of these affect his chance of getting elected, some will affect his future authority in the party should he be beaten in November. First had to come the choice of a vice presidential candidate to run with him.

As an office the Vice Presidency is no great shakes, except for one thing about it: should Mr McGovern win the election in November, Senator Thomas Eagleton of Missouri would be elected Vice President with him, and should Mr McGovern then fail to live out his term, Mr Eagleton would become President of the United States. In a way, therefore, the choice of Mr Eagleton was Mr McGovern's first presidential act: time will show if it was his last. The airy talk that had been heard earlier of leaving the convention a free choice stopped abruptly with the presidential nomination.

To all appearances the chance to run for Vice President had never been so eagerly sought: several men campaigned for it around the country or in the hotel lobbies of Miami Beach, and when the time came seven names were actually placed in nomination. In reality Mr McGovern had to scrape around. Politicians have their own careers to consider.

Senator Kennedy said no, Senator Ribicoff (though a faithful McGovern supporter) said no, Governor Reubin Askew of Florida said no—all for different but valid reasons. Congressman Wilbur Mills of Arkansas might have said yes, and his name would have helped to reassure conservatives, southerners and the business community, but the shock to Mr

useful points in a partner for Mr McGovern.

Brought up to politics and trained in the law, an attractive, talented man of 42 with a beautiful, intelligent wife, Mr Eagleton has been winning elections since he was 27 for a succession of offices from district attorney to United States Senator. The convention adopted him as Mr McGovern asked, but not without a deliberate display of independence. One state after another distributed its votes among several candidates and brought in new names of its own choice.

This astonishing convention was, after all, the product of a movement that had upset the established order in party affairs. The moment of Mr McGovern's success was also the moment at which the need to make practical accommodations which would help him in the general election campaign moved from second to first place in the minds of his campaign planners. The enthusiasts who, on grounds of principle and philosophy, have put Mr McGovern where he now is sensed this shift in priorities and were suspicious of it. The foot-dragging over the nomination of Mr Eagleton was only one of several warnings from them.

The Eagletons and McGoverns win on looks, at least

There was also anger at the postponement of the party's new charter, combined with the suspicion that the old party establishment was being helped to keep control of the Democratic national committee which provides continuity. (The party convention is sovereign while it sits but non-existent the rest of the time.) One result of the decisions of the last, calamitous convention four years ago was a proposed new charter or constitution for the national party, which this year's convention was supposed to vote upon.

The proposed charter, when it came, was a radical departure from practice, intriguing to political scientists but alarming to men of affairs. The party powers (among them Mr McGovern's men) agreed on the need for a further study by yet another commission which is to report to a big "national conference on organisation and policy" to be held in 1974. This makes sense. However, some of the McGovern delegates felt that the chance of radical change must be seized at once or might vanish for ever. They smelt compromise.

Enough were suspicious of the compromise to demand a rollcall vote, and while that was in progress the huge delegation from New York left the hall in a body to decide its own position. In its absence the full convention was proceeding to adopt the compromise rules and these gave the New York delegation something to worry about. The rules for the temporary constitution of the new Democratic national committee had been carefully drafted to deprive the New York delegation, elected in last month's primary elections, of full control over the choice of the state's members of the new Democratic national committee. It is to elect only four of the 11. The other seven will consist of three state party officers and four others chosen by the state Democratic committee. The regular party establishment, in fact, has made a comeback.

At stake in the New York dispute was the principle that the composition of the national party committee should reflect the wishes of Democratic voters—the McGovern principle, it might have been called up to last Thursday night. But the compromise, which puts off various novelties proposed by the reform commissions, did allow for a reconstituted, more representative national committee. In fact the new committee that met last Friday was a mixture of old and new, some states having found time to elect their new members, others, including

Running with and around Daley

FROM A CORRESPONDENT IN CHICAGO

If Senator George McGovern is to win the presidential election in November, he is probably going to do so by a very short head and the nose of this head, according to all current political wisdom, will be the state of Illinois. Indeed, no President in modern American history has managed to secure the White House without the blessing of the majority of the 11m citizens of the state.

In the recent past—and there is no reason to assume it is not still true in 1972—the key to the Democratic effort in the state has been Mayor Richard Daley of Chicago, who also controls the formidable machinery of the party in Cook County, which includes Chicago and its suburbs. He was the man who pulled it out for John Kennedy in 1960, by fair means, Democrats say, or by foul, say Republicans who remember the tally from Chicago's black south-side wards coming in early on the morning after election day as if Mr Daley had been waiting to see how many votes Kennedy would need to win the state.

But in the aftermath of the Miami Beach nominating convention, Mr Daley has played the part of a wounded old lion. His own seat as a delegate—along with those of 58 others on his team—was stripped from him by a runaway, McGovern-orientated convention, making him miss his first convention since 1924. For a week, Mayor Daley said nothing.

Finally, last Monday, Mr Daley broke his silence and the result was what one Chicago political writer described as an "underwhelming endorsement" of the McGovern candidacy. "I am a Democrat," Mr Daley told a press conference at City Hall. "I have always supported the nominees of the Democratic party. I will support every candidate on the Democratic ticket—federal, state and county." But he pointedly did not mention Mr McGovern by name, and hedged when he was asked if his doorbell-ringing, get-out-the-vote organisation, still considered enormously powerful even if it was battered in the intraparty elections last March, would be working for Mr McGovern as hard as it could. "You know I never hold anyone in line," Mr Daley said.

The strategy in the McGovern camp was to let things simmer after Miami Beach, to allow Chicago tempers to cool and then to try to heal the breach. In fact, Mr McGovern waited until after Mr Daley's press conference to telephone the mayor to thank him for "a magnanimous move" in his endorsement. The McGovern forces, however, made a decision at Miami Beach not to

put all their eggs in Mr Daley's basket.

No sooner had Mr McGovern's nomination been assured than it was made public that a separate drive to register voters and seek support for Mr McGovern in Illinois would be headed by Mr Gene Pokorny, the brilliant 27-year-old Nebraskan who was the architect of Mr McGovern's victory in the Wisconsin primary in April. Mr Pokorny has been given the task of paying no attention to what Mr Daley does, but rather of setting up a distinct McGovern organisation which will concentrate on the national contest and ignore the state and particularly the county races in which Mr Daley will have an overriding interest.

National Democrats fear not only sloth from Mr Daley's forces, but competition as well. They remember that in 1968 Mr Daley dropped his interest in Vice President Hubert Humphrey to concentrate on the election of Mr Edward Hanrahan as Cook County's prosecutor. Mr Daley faces the same problem this autumn. Mr Hanrahan has an attractive Republican opponent in Mr Bernard Carey. In addition, he is on trial for malfeasance in office for allegedly covering up the part police played in a raid in which two Black Panther leaders died.

When Mr McGovern and Mr Daley met recently, Mr McGovern praised his own organisation as the best political group ever put together in the United States. Mr Daley listened to this description, smiled and said: "second best." Unless some sort of compromise is worked out the results in November will show who was right.

Daley lines up, limply

Sveriges Investeringsbank AB

Sveriges Investeringsbank AB, whose shareholder is the Swedish Government, has a paid up share capital of Skr 900m. and a reserve fund of Skr 110m. In addition thereto the Government has issued a guarantee of Skr 900m. as security for the Bank's commitments.

The bank takes part in the financing of projects aimed at rationalisation, structural adjustment and development of industry. Longer-term export finance is also provided. Its operations comprise the granting of long- and medium-term loans, the issuing of guarantees and, subject to special conditions, subscription to share capital.

The bank also finances foreign investments in Sweden.

The bank is entitled to borrow funds up to an amount of five times its equity capital.

At the end of December 1971 the Bank had granted credits totalling around Skr 2,100m., whereas outstanding loans amounted to about Skr 1,000m. The major part of the balance will be paid out during 1972-1975. The distribution of credits granted, according to branches of industry, was approximately as follows:

	Skr m.
Textile and clothing industries	48
Forest industries	728
Metal and Engineering industries	629
Electric power industries	195
Chemical industries	293
Commerce	31
Communications	189

BALANCE SHEETS AS AT DECEMBER 31, 1970 & 1971 (Skr 1,000=£80=\$208)

Telegraphic address: Investmentbank, Stockholm.
Telephone: 08 24 11 00. Telex: 17839.

New York, not.

Some of these owed their election to the old method, some to the new. Still, there were enough new ones to give Mr McGovern one setback when it came to choosing their officers. Mr McGovern was thought to want the outgoing chairman, Mr Larry O'Brien, to stay on as committee chairman, but his staff was not at one in the matter and there was evidently a failure to agree with Mr O'Brien about what his responsibilities would be. So Mr O'Brien withdrew and the nominee put forward an outright McGovern campaigner, Mrs Jean Westwood of Utah. This the new committee accepted. At stake was a post not crucial in the campaign, but which may be crucial if the election in November is lost by the Democrats and is followed by a struggle for the control of the party organisation. This week Mr McGovern asked Mr O'Brien to serve as his national campaign chairman and Mr O'Brien agreed.

Having accepted Mrs Westwood, the committee then dug in its heels against Mr McGovern's nominee for deputy chairman, Mr Pierre Salinger, President Kennedy's press secretary long ago. At this point the black delegates spoke up for some representation of their own and proposed a black politician from Harlem, Mr Basil Paterson, instead of Mr Salinger. Mr McGovern saw the point, Mr Salinger tactfully withdrew and the national committee had its first woman chairman and its first black deputy chairman.

Mr McGovern's next chore was to patch up his relations with the big trade union federation and particularly with its chief, Mr George Meany, who had fought Mr McGovern's nomination in the last ditch. Since Mr Meany would not even answer the telephone for him, Mr McGovern entrusted the task to Senator Eagleton: the best they hoped for was that the federation might be induced to postpone formally deciding its attitude to the new Democratic presidential candidate until tempers had had time to cool. The normal time for a decision would have been late August. But Mr Meany, bent on rushing things, called a special meeting of his executive council for Wednesday, and Mr Eagleton's efforts met with failure. The council decided to withhold support from Mr McGovern and President Nixon impartially. This is a grave setback to the Democrats' presidential campaign.

Since the merger of the two rival trade union combinations in 1955, the federation has never until now failed

Firsts for Westwood and Paterson

to endorse a Democratic candidate for the Presidency. This year a sequence of unusual feats of self-deception by Mr Meany and his political subordinates has ended in their standing aside in impotent rage: they will, however, use their ample political funds to support friendly candidates for Congress and for other offices.

They launched a plan last year to increase their influence at this year's Democratic convention by getting about 600 union delegates elected. Failing to realise that the voters would want to vote for delegates supporting particular presidential candidates, they started out by running uncommitted candidates. The error of this strategy was demonstrated as early as February, but the labour leaders reacted with another error, distributing their delegate candidates among the lists of several presidential rivals. Had they made up their minds to support Senator Muskie they might have got a nominee reasonably to their liking.

Most of their candidates got defeated. Even after that, Mr Meany and his colleagues indulged themselves in the illusion that they could engineer a coup to deprive Mr McGovern of 151 of his California delegates. They failed utterly. Naturally they feel rebuffed and insulted. Mr Nixon's expectation of re-election, already good, has taken a sharp upward turn.

Iron curtain up?

The two superpowers got down to serious trade negotiations this week. Mr Peter Peterson, Secretary of Commerce and American chairman of the joint commercial commission,

created at the summit meeting in May, led a delegation to Moscow for the first of a number of meetings, some of which will take place in Washington. It is President Nixon's hope that a trade agreement will be worked out at the end of the year which will promise the Russians—Congress willing—most-favoured-nation tariffs for their goods and government credit and will hold out to American businessmen a promise of exciting opportunities—someday.

There is an old stumbling-block and it is being tackled first this week. This is the Soviet lend-lease debt. Without agreement to repay this debt with interest Congress is unlikely to grant most-favoured-nation treatment or the government to grant any credits beyond those arranged by the Commodity Credit Corporation a fortnight ago for Soviet purchases of American grain, amounting to at least \$750m worth over three years. The credits outstanding are not to exceed \$500m at any time. Apart from the vital question of credits a maritime treaty is also in the works. This is likely to open 40 ports in each country to the other's ships and provide that Soviet and American ships will carry equal amounts of the traffic, with a certain proportion—perhaps a third—left to ships of other countries. American dockers and maritime unions, impressed by the number of jobs to be created, are said to have dropped their demands for 50 per cent of the trade to be carried in American ships.

There will be other questions on the table—of arbitration of commercial disputes, patents, business facilities taxes—which will take longer to deal with. And beyond them lies the study of a glittering prospect: possible joint projects in the development of Soviet resources such as oil, natural gas, nickel, chrome and platinum. The Soviet Union is rich in all of these raw materials, which are in increasingly short supply in the United States.

But as Mr Peterson was at pains to make clear before he left, the issues raised are so complicated and unprecedented, the sums of money involved in some of these projects are so great, that "very early" agreement is not to be expected. Anyone who has done business with the Soviet Union would agree heartily. It is true that the chairman of an American firm, the Occidental Oil Corporation, announced this week what seemed like a sweeping agreement with the Soviet Union to provide technical expertise in exchange for Russian

Peterson has a long road to travel

raw materials such as natural gas. But his announcement was notably short on facts and in the United States there were some doubts about Occidental's technical and financial resources. Barter deals, too, can be tricky.

Nevertheless, there is a real challenge to both governments to build up Soviet exports, since in all projections for the future, the United States seems destined to enjoy a large favourable balance of trade. It has done so regularly for many years, although total trade has not exceeded \$200m a year. Happily, the prospect of a vast new market is likely to ease American farmers' worries over protectionist practices by the European economic community (at the very least grain exports are to increase 17 per cent under the agreement with the Soviet Union). Other businessmen are also beginning to see a wider economic frontier opening in the east.

Votes in Congress

Time is short but the list of important legislation pending in Congress is long. At this stage in an election year Congressmen are anxious to cut their workload. But if they do not act on the formidable pile of legislation before them in the 10 weeks or so that are left of this Congress the Democrats know that they will be handing President Nixon a good weapon to use against them in the elections this autumn. The President's new assistant in charge of congressional affairs, Mr William Timmons, was let loose on the warpath only days after he succeeded Mr Clark MacGregor in the job. (Mr MacGregor left to take

command of the President's re-election campaign.) Mr Timmons has already accused Congress of spending too much money and holding up the President's programmes.

Congress may also prove to be a testing ground for the new leader of the Democratic party, Senator George McGovern. He has already taken a strong stand on almost all the major issues—Vietnam, defence spending, welfare reform, taxes—that are due to come up for debate in the next few weeks. The Democrats are badly divided on all these issues and their votes will give some indication of the strength and following Mr McGovern commands within his party.

When it reassembled this week after the Democratic convention the Senate was confronted with another in the long series of moves against the war in Vietnam. The present amendment would require the withdrawal of forces from South Vietnam by the end of August—Mr McGovern wants them out by April of next year at the latest—and the termination of hostilities in south-east Asia, provided that the prisoners of war are released. The Senate must also act on the military procurement bill which includes the President's controversial request for new weapons. Senator McGovern has indicated that he is against this but other Democrats are more inclined to accept the President's argument that America still needs a strong system of defence even after the initial success of the first stage of the strategic arms limitation talks.

On the domestic front the scene is no less controversial. The President wants a moratorium on busing children to schools outside their neighbourhoods to achieve racial balance. In their platform the Democrats said that under certain conditions busing is an acceptable way of putting an end to racial segregation in schools. Then there are the President's proposals for the reform of the present system of public assistance. These have passed the House of Representatives but are now stuck in the Senate. So far Mr Nixon has rejected any compromise that would make the plan more acceptable to liberal Senators.

The programme that has the most chance of success is the one to return a part of the federal revenues to the state and local governments. The House, which was under heavy pressure from the governors and mayors who are badly in need of more money, has passed the general revenue-sharing plan which will give the states and

localities the fixed sum of \$30m over the next five years. The President had wanted the volume of revenue to be tied to the total level of individual taxable income. The House has also decided, contrary to the President's wishes, that more money should go to the cities and to the counties than to the states. But the President won a major victory over the powerful Democrat, Representative Wilbur Mills, when the House decided that there should be virtually no restrictions on how the money should be used. Senators, with an eye to the votes at home, are not expected to make major changes in the bill.

Needham's exchange

New York

Mr James Needham, one of the five members of the Securities and Exchange Commission, has some surprising views for the new chairman-designate of the New York Stock Exchange. In a hard-hitting address to the New York financial community last March he argued, as he had on other occasions, that all existing stock exchanges should be abolished and merged into a single central marketplace. Moreover, he proposed automating the entire market process, a development which would mean doing away with exchange trading floors if it were to materialise. In other words, should Commissioner Needham follow his words with action when he assumes his new NYSE duties on about September 1st, he might soon find himself presiding over the liquidation of the New York exchange—a final solution that neither he nor many others probably want.

The choice of a new chairman was the first order of business of the exchange's new streamlined 20-member board of directors at its maiden meeting a week ago (although the exchange did not reveal Mr Needham's remuneration, he is expected to receive \$200,000 a year up sharply from the \$38,000 dollars he gets as a member of the commission). The reorganised board is made up of 10 representatives of the general public and 10 from the securities industry, in contrast to the industry-dominated 33-member board of governors which it replaced. Mr Needham has served as an SEC commissioner since 1969 and is the first practising accountant to hold that post. He was appointed by President Nixon

AQUITAINE

The Annual General Meeting of Société Nationale des Pétroles d'Aquitaine was held in Paris on 9 June, 1972 under the chairmanship of M. Pierre GUILLAUMAT.

The accounts for the year were adopted, as was the distribution of a net dividend of Frs. 12 per share of Frs. 50 nominal, a total income of Frs. 18 per share including tax previously paid of Frs. 6 (tax credit) for shareholders resident in France or in countries where a tax agreement has been signed.

At an Extraordinary General Meeting which followed, the capital increase from Frs. 343,098,000 to Frs. 411,717,600 by the capitalisation of reserves was approved. This increase will result in a scrip issue to shareholders at the rate of one new share of Frs. 50 nominal for five old shares. The new shares will rank for profit as from 1 January, 1972.

BUSINESS RESULTS (in Frs. m.)

	1971	1970	Change
SNPA only			
Turnover	1,284	1,181	+ 9%
Gross profit (1)	622	566	+10%
Net profit (1)	336	304	+10.5%
Consolidated Aquitaine Group			
Turnover	1,836	1,639	+12%
Gross profit (1)	789	762	+ 3.5%
Net profit (1)	407	396	+ 3%

(1) Does not include the appreciation of assets brought into the business and of transfers: Frs. 118 m. in 1970; Frs. 45 m. in 1971.

The Chairman pointed out that the turnover and the consolidated gross profit for the first four months of 1972 amounted to Frs 521 m. and Frs 289 m. respectively, in increase of 12.5% and 18.7%. These figures no longer include Aquitaine-Total-Organico in which Aquitaine has a holding of nearly 50%.

Turnover, investments and consolidated profit.
(in Frs. m.)

This announcement appears as a matter of record only.

and rapidly gained a reputation for careful study and understanding of industry matters. Moreover, in the year and a half since Mr William Casey joined the SEC as chairman, the two men have developed a close rapport and working relationship. It has not been lost on leaders of the securities industry that continuation of such a tie may not be harmful to the interests of the New York exchange.

Mr Needham will continue to confront two major unresolved problems of the industry when he moves to the sixth floor of the New York exchange building at 11 Wall Street. One is the still elusive matter of reaching agreement on guidelines and procedures for setting up an effective central market system—thus far an exercise in frustration that has moved the commissioner to blunt public speaking. The other, perhaps even more controversial, is the long-simmering dispute over granting financial institutions, such as insurance and investment companies, limited exchange membership. The SEC has proposed allowing such institutions to have access so long as at least 80 per cent of the volume of their subsidiary brokerages' business is with public customers and if the institutions refrain from using their seats to recapture commissions. Both the New York and American exchanges, which have long banned institutions from membership, endorse this approach.

However, its implementation under a central market system would mean that regional exchanges which give institutions free rein would have to stiffen their rules and probably unseat most present institutional members. One of these exchanges, the Philadelphia-Baltimore-Washington market, has given notice that it will sue to block the SEC's proposal. Some kind of adverse action, moreover, is expected from one or both of the committees in the Senate and House of Representatives that have been studying the securities industry's problems.

Less free press?

American journalists and broadcasters think of themselves in an adversary relationship to government and lately several events have led them to believe that they are losing some of their traditional freedom. The Supreme Court has decided by a vote of five to four that journalists do not have a constitutional right to protect their confidential sources when they are asked for information by a grand jury. President

Russos and Ellsberg face the press

Nixon has stifled the growth of the Corporation for Public Broadcasting (the national non-commercial television organisation) because he believes that too much centralised control of the network is in hands of liberal Democrats. The trial of Dr Daniel Ellsberg, who gave the Pentagon Papers to the New York Times, has begun in Los Angeles, and could result in an American version of the British official secrets act. Until now the press has relied on government officials willing to pass on documents marked confidential as a regular source of news.

Mr Nixon showed his disapproval of the direction that public television is taking by unexpectedly vetoing a bill which would have given the Corporation of Public Broadcasting \$155m over two years. Since the non-profit-making corporation was founded by Congress in 1967, it has had to make do with annual appropriations and annual questioning from Congress. The two-year appropriation, approved by both houses of Congress this year, would have been the first step towards longer-term financing and, it was hoped, insulation from politics.

But Mr Nixon lost patience with CPB when it helped to found a National Public Affairs Centre for Television, to provide public affairs programmes for the entire network, and when it appointed the Democratic-leaning commentator, Mr Sander Vanocur, as one of its heads. The Nixon Administration's view is that public television must not compete with established commercial television, must avoid politics and must stay local. The CPB will have to get through the current financial year on about \$35m to \$45m.

The American press establishment is watching the progress of the Ellsberg trial with apprehension. Dr Ellsberg and his former colleague at the Rand

Corporation, Mr Anthony Russo, have been charged with offences that might be applied in future to journalists who pass confidential material to the public. The defendants are accused of conspiring to defraud the government by preventing it from carrying out its lawful function of controlling classified documents; they have also been charged with grand larceny (because the Pentagon Papers, some 40 volumes of research on the origins of the Vietnam war, are declared to be worth more than \$1,000) and with violating the national espionage act. All of these charges are novel. The defence intends to produce a number of high-ranking officials who will admit having given secret documents to the press and who will say that most secret labels are ludicrous.

Hides and seek

In spite of the current populist fancy for wearing shoes made of cork, rubber and canvas, the Nixon Administration is sufficiently alarmed about the prospect of a rise in prices of real leather shoes to have slapped controls on the export of cattle hides. The controls, which are the result of studies undertaken by the Department of Commerce in April, will prevent the producers of hides from sending more than 1.35m hides a month out of the country. The level of permitted exports is not low—it is that at which hides were exported last year, which broke all previous records. But the new restriction will prevent a further increase in exports. Unchecked, this rise could have driven up the price of shoes by 10 per cent this year.

The surge of exports and domestic hide prices has been caused by an abrupt drop in the number of cattle slaughtered in Argentina. Between them, the United States and Argentina supply 80 per cent of the world supplies of shoe leather, even for the Soviet Union. But last year Argentina decided to re-build its cattle herds and limited its own hide exports, depriving the world market of about 3m hides a year. World demand then turned to the United States just at a time when dollar devaluation made American prices even more attractive. As a result, the cost of hides has doubled. Because hides are agricultural products, they have not fallen under the Nixon Administration's price controls. But shoe prices do and the prospect of sharp rises there led the Administration to act.

Business can be a pleasure in Park Lane.

The Inn on the Park – one of London's newest luxury hotels could provide a truly memorable setting for your next sales conference or company meeting. At the fashionable end of Park Lane, with its own car park, the 'Inn' has three luxurious air-conditioned conference rooms, seating from 40-400 as required. Every business facility can be provided, from closed circuit TV to secretarial services... and incidentally the best cuisine in the business. All the bedrooms are large and superbly furnished and some of the executive suites are positively palatial. Today, more and more companies are finding these suites ideal for holding intimate business meetings and for entertaining. In such surroundings business indeed becomes a pleasure.

Points from the statement by Sir Alec Ogilvie, Chairman.

1971/72 – a record year with all main objectives achieved: a year of recovery in Hy-Mac and of real progress in many group activities.

Particularly good results achieved by Timber and Builders' Merchants, Overseas Trading and Quarries Divisions.

Liquidity improved following receipt of £6.1 million from sale of Group headquarters in City of London.

Acquisitions of Whitlock Bros. and Sheppard Equipment in current year add strength to Group's engineering activities.

The future: in the words of the Chairman, "the success of 1971/72 is a stimulus for all of us to continue the momentum in the current year. We have set ourselves a tough but, I believe, achievable target."

Books

Stato misto

CULTURE AND SOCIETY IN VENICE, 1470-1790

By Oliver Logan.
Batsford. 344 pages. £4.50.

In Dr Logan's three centuries the greatest part of the sinking city that the world streams out from the Terraferma to see was built and gilded, though glad confident morning and Levantine adventures were both dissolving. (As early as the 1620s, Carleton, the English ambassador, wrote that the passion for luxury increased as trade declined). In that period Venice passed from "international emporium" to the nucleus of a province; from a Mediterranean power to a north Italian one; and from aggressor to victim, as the Habsburg grip on the Italian peninsula tightened.

This, then—roughly the second half of Venice's independent history—is by far the most complex and the most interesting period. Bounded by the renaissance and the eighteenth-century harvests of art and architecture, Dr Logan could have buried himself in culture and forgotten society altogether. He would still have produced an excellent book; the chapter notes testify to the catholicity of his research and his curiosity, on subjects as diverse as Titian's "mannerist crises," sixteenth-century art collections and the use of Venetian dialect in comic literature, appears to be insatiable. But it is his

chapters on Venetian society, on continuity and change and most of all on the Venetian myth that lift his book from particular to general value. He is detailed and precise. For example, he charts the numerical decline of the Venetian nobility (a legally-defined group) from 2,500 at the beginning of the sixteenth century to only 1,000 in 1797 (even though 127 new families were allowed to buy their way in, in the eighteenth century). That is fairly commonplace information: but from Dr Logan we learn how, without primogeniture, the family structure of this curious hereditary elite really worked and also how it failed. He quotes with faint amusement various testamentary pleas for family unity. So we learn not only how Venice gained the reputation of a *città galante*, but how this display was put on for the benefit of distinguished visitors like Henry III of France: "a feather-brained northerner who would be impressed by such show." Venetians' extravagance, Dr Logan points out austere, was "lavished on their palaces rather than on the adornment of their persons."

So, too, the exact causes of Venice's economic decline are traced to their starting-points in time: not, as has often been assumed, in the sixteenth century, though by the 1590s Venetian shipbuilding was, significantly, suffering. Rather, Dr Logan believes Venice did not recover from a general European decline into economic stagnation

Venice: extravagance was for palaces, not people

in the second quarter of the seventeenth century. But Dr Logan enjoys himself most of all, perhaps, in tracing the birth of a mythology which started among the Florentines, after their own signal failures to devise a satisfactory system of government, and which then ossified, crumbled into nostalgia but spread abroad: of the *stato misto*, *Venezia stato di libertà*, of Wordsworth's "eldest child of liberty"—as out of date as most widespread reputations.

Dr Logan's book would be no good at all as an introduction to Venice. He does not provide background, origins or even conclusions. There are no topographical descriptions. One does not catch the smell of the sea, or the sewage; the Rialto does not even figure in the index or, for that matter, in the illustrations; the doges are treated with scant ceremony. But the people, the power and the intellects of the Serenissima—the Grimani, the Pisani and the Contarini—walk abroad in his pages.

On human capital

THE POLITICAL ECONOMY OF EDUCATION

By John Vaizey with Keith Norris and John Sheehan.

Duckworth. 307 pages. £5.45.

SOCIAL INDICATORS AND SOCIAL POLICY

Edited by Andrew Shonfield and Stella Shaw.

Heinemann Educational. 164 pages. £2.50.

In 1962 Professor Vaizey published an introduction to "The Economics of Education"; its arguments were treated with reserve by people he now describes as "some extremist free market economists." In this new book he works out these themes in detail. The result is a monumental, important and highly sophisticated piece of research carried out with the help of two younger economists on a Gulbenkian research grant. Anyone seriously interested in education should undoubtedly take the trouble to wade through it, to cope first with the algebraic treatment of the cost-benefit analysis of education, the economic theory of human capital and the investment analyses in order to get to the clear waters of international comparisons and the formidable amount of work that has gone into improving these. It is impossible to overemphasise the value of them. The chapters on the socio-economic consequences of increases

expenditures on education, on trends in resource use and on international comparisons of unit costs are straightforward and can be digested on their own.

Professor Vaizey still writes against received wisdom: the divergences are refined and developed. The authors' strongest attack is on the notion of the "productivity of education." They also criticise exercises—becoming increasingly common—which purport to show simple relationships between education and income; they believe long-term manpower forecasting is a dubious tool for determining educational policies (though agreeing that it is possible to be precise in some particular fields); they believe that the determinant should still be social demand, though this tool is in need of a reinterpretation on which they lavish a great deal of effort. Just the same, they conclude that not enough information is available to enable social demand to be predicted with confidence. Not that they are deterred by this; the aim is to deepen the discussion: "lack of finality," adduces Professor Vaizey in his introduction, quoting Pieter Geyl with approval, "strikes me as both unavoidable and natural." Too much theorising depends on "faint memories of personal happenings"; "we all know too much about schools because we have all been to schools." The point is to get beyond the glib, the superficial, the easy observation, "which is more prevalent than it would be in a more recondite field—nuclear energy, say."

Most efforts to do so have, in practice, not gone much beyond the development of simple "social indicators"—like, for example, those used in the choice of educational priority areas in England. The collection of essays edited by the former chairman of the Social Science Research Council, Mr Andrew Shonfield, and a member of its staff, Miss Stella Shaw, adds up to a most useful survey of their history, availability and use; the most interesting paper provides a matrix of primary indicators for education, and there is a good essay on criminal statistics. Mr Richard Rose's concluding paper is disappointing, based on the proposition, expressed in rather high-flown formulae, that social indicators will be used by policymakers "when their utility is greater than the cost of using them." But a cost-utility comparison of social indicators rings with echoes of the formidable problems of a cost-utility analysis of education; which brings one back to Professor Vaizey, and what can deservedly be called a magnum opus.

Amenable linkman

VICTORIA'S HEIR

By George Dangerfield.
Constable. 345 pages. £3.

This is a reprint of a book first published 30 years ago. It then represented an effort, as its author puts it, "to write serious history in an entertaining manner." He goes on to say, rather disarmingly, that he failed. The function of history is not to entertain but to "engage and even to delight the intellect." "Victoria's Heir" is thus "not a work of history." Few will disagree with this self-inflicted judgment. But what then, precisely, is it? It is not biography. Albert Edward, Prince of Wales for nearly 60 years until he succeeded his mother in 1901, figures in the text essentially as a linkman: "One could," as Mr Dangerfield himself puts it, "bring him in to almost anything." "Victoria's Heir" is interesting as a specimen of a literary genre.

Mr Dangerfield, fresh from Cambridge, had already in 1936 made a stir with "The Strange Death of Liberal England": "that book of somewhat melodramatic prose," as it has been kindly described—and he launched himself therewith on to a remunerative market for what the blurb here correctly defines as "witty, closely peopled, skilfully constructed" books about amenably picturesque sub-historical themes. Lytton Strachey had shown what could be made of it; Philip Guedalla had pushed the style almost to the point of absurdity; but they sold well. Possibly this republica-

Albert Edward: package tour

tion is designed to float on the current wave of Strachey revival. After Strachey's "Queen Victoria," what more obvious recourse than to "do" Albert Edward, flamboyant and ripe for packaging to a generation hungry for easily digested Victoriana?

There seems to be no doubt about the digestibility: two printings in 1942 and now a reprinting at a hefty price. In the circumstances, to assess its merits as history would be superfluous. One might perhaps express a certain anxiety that the innocent youth of today, bred up on the hard tack offered by respectable professional historians, could be misled into taking Mr Dangerfield's seductively expressed opinions on such matters as "corn and classes" seriously. But on the whole it is non-toxic and if it gives readers pleasure and its writer and publisher profit, what harm? Mr Dangerfield himself adopts a robustly defiant and unrepentant posture: "I should no doubt deplore the belletrist and unprofessional character of this book; but to do so would be merely ingenuous; for the truth is that I have never, for one instant, regretted having written it." Like Liberace, Mr Dangerfield's most effective response to unsympathetic critics would be to cry all the way to the bank.

Daughter at home

MARIA EDGEWORTH: A LITERARY BIOGRAPHY

By Marilyn Butler.
Clarendon Press: Oxford University Press. 531 pages. £6.50.

Maria Edgeworth's novels and short stories are due for a revival. Her place on the literary-historical map has now been staked out by two excellent studies, issued in quick succession by Oxford University Press. A few months ago, her "Letters from England," edited by Mrs Christina Colvin, gave a most attractive impression of this once famous authoress in her later years. Now we have what will certainly be her definitive biography, which fulfils the promise of its subtitle by paying a great deal of critical attention to her literary output.

Mrs Butler reminds us that from 1800, when her "Castle Rackrent" was published, until 1814, when Scott's "Waverley" appeared, Miss Edgeworth was "easily the most celebrated and successful of practising English novelists." She did not at first think much of the novels of her younger contemporary, Jane Austen,

Maria (left) with just some of the Edgeworths

and would probably have been amazed (though she was not a vain or complacent woman) had she known that these have never ceased to be popular while her own more ambitiously conceived works have fallen into neglect. The pedagogic writings that she produced in partnership with her redoubtable father, Richard Lovell Edgeworth, have their place in the history of English education. Some of the tales written for 10-year-olds, such as "Rosamond and the Purple Jar" or "Simple Susan," have given pleasure to generations of children. But the resurrection of her reputation depends largely on the mass of personal documents that the Edgeworth clan left to posterity.

Maria's father married four times, and fathered 22 young Edgeworths. She was one of the first batch, and was only five when her mother died. She suffered acutely in her early childhood, but by the time she was 13 or so a strong alliance had begun to develop with her father. He was a man not much loved, in later life, outside his family, and indeed not all his offspring could tolerate his assertiveness. At Edgeworthstown House, their Irish home, Maria's life was bound up with the ever-growing family, but she became incessantly busy with writing as well. Mrs Butler effectively demolishes the legend that her father (who ceaselessly busied himself in suggesting, correcting and editing whatever she produced) was to blame for the more didactic and tedious passages in her work. Maria adored him; but it says much for her own vitality and independence of mind that after his death she became the main-

stay of the family, developing an acumen that had never been called for previously, and winning for herself in England as well as Ireland almost unqualified liking and respect.

Sugar, sugar

PURE, WHITE AND DEADLY

By John Yudkin.
Davis-Poynter. 164 pages. £2.25.

Doctors have at various times condemned tobacco, drink and butter as potential killers. The maverick professor of nutrition at Queen Elizabeth College, John Yudkin, has a different target: sugar. He attacks it as contributing to:

fatness	heart disease
diabetes	ulcers
indigestion	gall stones
poor eyesight	bad teeth
dermatitis	gout
early puberty	premature ageing

and, just possibly, some forms of cancer. The only obvious omission appears to be the common cold.

Professor Yudkin is no crank, although a list of this length might suggest that he was. He admits that the connection between sugar and some of these diseases is tenuous, but so was the connection between smoking and lung cancer in the early stages of research. The big difference between smoking and sugar eating is, however, that a smoker's consumption of tobacco is directly under his own control; the sugar eater's consumption is not. Of the 100 lb of sugar eaten by the average person in this country in a year, more than 40 lb turns up in various forms of manufactured food.

It turns up, obviously, in sweets, soft

drinks and ice cream. But it also lurks in packaged soup and baked beans; in sauces; pickles; tinned and frozen vegetables; and even canned meat. It is very difficult to avoid eating a great deal of sugar in a normal day. We develop a taste for sweetness because there is so much of it about. Manufacturers then increase the sugar content of food to cater for the demand. Substitutes like cyclamates have been banned on what Professor Yudkin considers very shaky scientific evidence; he reckons he could produce equally nasty results by giving comparably massive overdoses of sugar to laboratory animals.

Should we care? Yes, says Professor Yudkin, because sugar is not a normal source of carbohydrate, like bread or potatoes; it acts chemically on the body in quite a different way so that a diet that drew the preponderance of its carbohydrate from sugar rather than starch could have some disconcerting consequences. So it is back to bread and butter and, if it is any consolation, Professor Yudkin denies butter has any connection with coronary disease. Sugar, he says, paves the way for that sort of trouble. Like all zealots, he is easy to ridicule. But this is a profoundly uncomfortable book.

The war effort

WAR, POLITICS AND FINANCE UNDER EDWARD I

By Michael Prestwich.
Faber. 317 pages. £5.

Historians of medieval warfare have too often confined themselves to unprofitable wrangles over tactics—based on inadequate sources—or vague surmises on the political consequences of particular victories and defeats. In this book, on the other hand, Dr Prestwich presents a thorough and carefully-researched account of the total relationship between the war effort of Edward I (in Wales, Scotland and on the continent) and the operations of government, with all the consequences for society which flowed from it. From his investigations there emerges a picture of a nation mobilised for war on a scale which constantly suggests modern parallels. The book as a whole is firmly analytical in its treatment of the wars and their consequences, and gains immeasurably in clarity as a result. Where Dr Prestwich diverges from received opinions his arguments are convincing, and where he accepts them his reasons for doing so are good. His style is lucid, if somewhat staccato, and his book is a genuine contribution to knowledge.

Edward's wars required not only a vast expansion of the machinery of government but also the establishment of an administrative capacity to supply and support large armies in the field for long periods. Dr Prestwich shows how as financial stringency increased in the later part of the reign, Edward's campaigns were hampered at every point—as the king's own impa-

Edward I: modern parallels

tient, and usually uncomprehending, complaints bear witness. The sums of money required amounted to a significant proportion of gross national resources. Dr Prestwich's figures and estimates on specie in circulation, as compared with rates of taxation, are of particular interest. Royal "ordinary" revenue was hopelessly inadequate, so an elaborate structure of credit finance had to be created, relying largely on Italian banking houses. Dr Prestwich demonstrates most convincingly that Edward did exceedingly well out of his somewhat dubious transactions with the Frescobaldi and others.

Although the Scottish campaigns of the later years dimmed the glories of Edward's career, there can be no doubt that his wars were an overall success. Dr Prestwich shows that this was the fruit of steady and maintained application of resources, rather than of tactical brilliance. He confirms that Edward's armies were of unprecedented size, even though the usefulness of the infantry, so much stressed by earlier writers, needs to be reassessed in the light of high rates of desertion and methods of recruitment which were, from the purely military point of view, haphazard.

There was a price to be paid for warfare on so generous a scale. Socially, it was not disastrous, but it undoubtedly disrupted trade, and politically it weakened Edward. Dr Prestwich suggests that the unwillingness of some of his greatest magnates to serve for pay, and their eagerness to revert to the traditional forms of feudalism, may represent a degree of impatience with monarchical control. The effect of war on the development of representative institutions is plain for all to see, and Edward I left a political *damnum hereditas* to his son.

Eminent Victorian

SCIENTIST EXTRAORDINARY

By Cyril Bibby.
Pergamon. 220 pages. £2.95.

The subtitle of this book is "The Life and Scientific Work of Thomas Henry Huxley, 1825-1895." It is slightly misleading. Dr Bibby has already written an excellent life of Huxley, and this book is its counterpart: an account for the ordinary reader of his scientific and public work, with biographical detail cut to the minimum. It is well worth reading.

Huxley's intellectual life was something of a miracle: he had two years' schooling, ending at the age of 10, and

then, later on, less than four years at medical school, without ever qualifying. From this background emerged not merely a first-class scientist, recognised from the start and a Fellow of the Royal Society before the age of 26, but an intellectual, deeply read in many languages and philosophically inclined, a marvellous stylist, and a man who never forgot or failed to work for the social benefits of science. One is filled not merely with awe at his capacity, but also with affection for his nature and constant laughter at his wit.

Green light

LETTERS TO MOLLY: JOHN MILLINGTON SYNGE TO MAIRE O'NEILL
Edited by Ann Saddlemyer.

Harvard University Press; London: Oxford University Press. 362 pages. £5.25.

THE POLITICS OF IRISH LITERATURE

By Malcolm Brown.
Allen and Unwin. 431 pages. £6.75.

A PALER SHADE OF GREEN

By Des Hickey and Gus Smith.
Leslie Frewin. 253 pages. £3.30.

A character in one of John Millington Synge's plays, an old man from the Aran Islands off Galway, concluded that Irish studies must be the chief occupation of the outside world. In the literary world, this utterly Irish thought has a foothold in reality. For Ireland, a small island of little more than 4m not particularly well educated souls who are not remarkable for their general human performance, has produced a disproportionate share of the great English writers of this century: Shaw, Joyce, Yeats and Synge himself should perhaps head the list.

Much has been written of Synge and scholars are now stringing out the minutiae. He died of consumption in his 30s. He was engaged to a young actress in the Abbey Theatre, Maire O'Neill, who played leading parts in his plays, and Miss Saddlemyer's collection of 400 of his letters is a record of their friendship.

Mr Brown argues that Ireland's impressive literature was brought to birth by nationalist politics. He seeks to place it back in its historical context. For this purpose he reviews the history of Ireland in the second half of the nineteenth century; he interpolates his account with an examination of the political and historical observations of Irish writers, mainly Yeats and Joyce and a little George Moore. It is all

Synge: now the minutiae

most erudite but somewhat confusing, and clothed in obscure literary jargon. Undoubtedly, romantic nationalism was a potent artistic aphrodisiac; but in the end Mr Brown reaches no more profound conclusion.

The Irish artistic inheritance is one of imaginative language inherited from their own native tongue. This imaginative quality gave English literature a rich and generous bounty. Literature is perhaps less appreciated in Ireland than elsewhere and the literary and artistic community resents this. Ireland, said Yeats, rocked the cradle of genius. It would be truer to say that Ireland's geniuses rocked the republic's; but the child that grew out of it was not that dreamt of in the Celtic twilight.

"A Paler Shade of Green" is a collection of interviews with Irish literary and theatrical figures. No Irishman is ever frank about his generally over-dramatised relationship with Mother Ireland. Most of those interviewed have left the old country as a result of some slight for which they hold it responsible or in search of greater prizes. There are a few who have stayed at some apparent sacrifice to themselves. Yeats was such a person. Cruise O'Brien and Michael MacLiamóir are the most distinguished now living. Mr O'Brien has produced first-rate writings on history and literature. Mr MacLiamóir has spent his life trudging the length and breadth of Ireland trying to maintain the theatre among an unreceptive public. Not until his one-man show on Oscar Wilde was the outside world awakened to his quality. The best part of this book is the chapter on Mr MacLiamóir, who argues the case for Irish nationality generally and the Irish language in particular. "That's my opinion" he says "and nothing to do with the truth." It is a plea for the soul of Ireland by one with much faith.

Short list

The Government and Politics of West Germany by Kurt Sontheimer (Hutchinson, £2.50 cloth, £1 paperback); West German Politics by Geoffrey K. Roberts (Macmillan, £2.50 clothbound £1.25 paperback). Both these relatively simple guides through the maze of contemporary west German politics can be recommended to would-be explorers with little time at their disposal. Herr Sontheimer is professor of political science at Munich university, Mr Roberts a lecturer in politics in the department of social sciences and economics at Loughborough university of technology. Both present potted versions of German political history along with potted accounts of today's political setting and processes of government and administration. Both have reassuring words to say about west German democracy, for all its much-publicised failings. What a pity Professor Sontheimer's translator has such little feeling for the English language.

Selected Essays on Employment and Growth by Richard Kahn (Cambridge University Press, £4.40). Professor Lord Kahn is one of those brilliant but constipated intellects who is famed as much for the acknowledgements he has been given in Cambridge prefaces as for his own writings. A fair fraction of the latter are now assembled in this, his first book. They start with his justly celebrated paper of 1931 on the multiplier and finish with a recent one on the growth of firms.

The Economics of the Common Market by Dennis Swann (Penguin modern economics, 40p). Mr Swann has brought up to date his handy definition of what the common market actually does, and he makes a good attempt to explain how the common market's existence affects the pattern of trade. British entry and the terms of entry are neatly included. The scheme for monetary union, though well laid out, gets rather lost among descriptions of more theoretical activities of the commission.

Manual of Political Economy by Vilfredo Pareto (Macmillan, £10.50). Pareto's classic, now available in this handsome translated version, makes most modern books on economics look like rough lecture notes. He devotes as much as 100 pages to introductory

material before tackling utility theory and pricing, and the mathematical appendix at the end is equally long. The text is replete with elegant taxonomies, and the learned footnotes range from Greek philosophy to white slavery. Those with the necessary leisure to enjoy the book will both make the acquaintance of a great creative intellect and come across many things which are now embodied in standard textbooks, their origin forgotten.

Evolution of World Enterprises by Arvind V. Phatak (Allen and Unwin, £6.60). An intelligent Indian, now lecturing in an American university, has held in-depth interviews with top management executives in 26 European and 13 American companies engaged in worldwide operations. He asked them the right questions, and has got snippets of useful answers, but has not codified them very interestingly.

Competition, Collusion and Game Theory by Lester G. Telser (Macmillan, £6.50). Hitherto, the theory of the core has been accessible only to mathematical economists. Professor Telser now explains it for quasi-mathematical economists. Since the two final and empirical chapters scarcely use it, the non-mathematical economist who values theory for its usefulness rather than for its novelty or elegance may conclude that, despite its authoritativeness, he can leave it to others to read.

Understanding Company Financial Statements by R. H. Parker (Penguin, 60p). Mention a balance sheet and most people throw up their arms in horror. Professor Parker's concise book would keep them more fruitfully employed. In just 100 pages of short chapters and sections he translates the financial statements of two companies picked out as examples into comprehensible prose, and shows not only how to read a balance sheet but also what investors should look out for. He has even found the space to discuss the effects of inflation on conventionally drawn-up accounts which, by using historic costs, ignore it. And all without a mention of the dreaded debit and credit: the mechanics of double entry book-keeping are relegated to an appendix. The accounts of the two companies discussed are then reproduced, and there is a useful glossary of financial terms. Highly recommended.

I'm Linda.
Fly my 747's to the
Sunshine States of
America, the easier
way.

A lot of people think a trip from Europe to the States has to mean a trip through congested New York. But there's a better way. I'll fly you nonstop from London to Miami.

Even if you have another reservation, you can change it (a lot of people are) at no charge. Just call your travel agent or National Airlines.

Fly Linda. Fly National Airlines.

London: 81 Piccadilly (01-629 8272). Paris: 102 Champs Elysées (225-6475/256-2577).
Frankfurt: Wiesenhüttenstr. 26 (232101). Rome: Via Bissolati 54 (478-030).
National honours American Express, Barclaycard, Carte Blanche, Diners Club, UATP, and cash.

And in Miami, I've got great connections across the Sunshine States of America. Florida, New Orleans, Houston, California. Even the Caribbean. And Latin America.

Make (or change) your reservation now. Telephone National Airlines direct or ring up your travel agent.

“There’s a place in every man’s portfolio for the investment that’s as safe as houses”

You need look no further than the Halifax. Halifax investments give consistently good interest whilst having the added advantage of being easily realisable.

Together, we chose a Rover 3½ litre.

“The governor thinks I like to get my head under a bonnet that means business.

But the truth is, I never even have to think about her

Power-assisted steering so I can park in the city with one finger on the wheel.

Thick leather armchair, which makes long waits something to look forward to.

And she's so quiet I can hear him snore at top speed.

He doesn't know it, but we got it to prove that a chauffeur's lot is an easy one.”

“Forbes, interested as ever in my image, must have thought she'd be a suitable symbol of my promotion.

Well, it is the finest bit of four-wheeled prestige I've sat in what with its wood-panelled interior and noiseless grace.

But he doesn't know about my weekend secret.

Just let me get at that wheel and a 184 bhp engine with servo assisted brakes to show that this company can impress all sorts of company.

Besides, it must be pretty good value for money, for the firm to let me have a chauffeur.”

The Rover Company Limited, Solihull, Warwickshire.

Business Brief

Shipbuilding: slump ahoy

Japan, with half the world's shipbuilding capacity, has won orders for only 19 ships in the past three months. Shipping is going through a recession that has brought charter rates down 60% from their 1970 peak. The slump is already 18 months old, and is unlikely to end before 1975, if then. But so far as the shipyards are concerned, that all lies in the future. At the moment they are working to capacity, building the large tonnages ordered in the last shipping boom, and those orders will see them through the next couple of years. But when this extra shipping capacity comes on the market it will keep freight rates down, at a time when the natural increase in world trade would otherwise be bringing them up again. And this will offset the shipowners' otherwise normal passion for buying boats. The shipbuilders themselves therefore predict that, by 1975, about half the capacity for building the giant tankers which increasingly dominate the industry will be idle.

Yet both shipbuilders and some of their governments are

now bravely talking of a revival in the competitiveness of European shipbuilding. Their hopes are based on three factors. One is last year's yen revaluation, which has at least temporarily wiped out Japan's price advantage in dollar terms. The second is the trend in Japanese wages, which are now overtaking those in many European countries. The third is the hope that, with governments pumping in the necessary investment, European shipbuilders may be able to copy Japanese methods just as the Japanese originally copied theirs.

Comparisons of the efficiency of different yards are fraught with difficulties; three-fifths of the cost of a ship usually goes on bought-in supplies, but the proportion can vary, and productivity figures in the yards themselves can accordingly be adjusted to prove almost anything. A study just published by a Paris-based research firm, Euroeconomics (Shipbuilding in Western Europe and Japan to 1980, £150), avoids the labour productivity yardstick, and this leads it to confirm the industry's own belief that there are opportunities for building ships competitively in Europe. But only under certain conditions.

Japan's main advantages, on this argument, are the low cost of steel plate and the high degree of integration between shipbuilders and their suppliers. Most Japanese shipbuilders are vertically integrated with steel-producers. In Europe such links are less common; where they do exist, as in Germany, they are generally with manufacturers in the wrong end of the steel business. Before last year's currency shifts made price comparisons almost impossible, heavy steel plate in Japan cost 35% less than in Europe—and steel makes up as big a share of the cost of a ship as wages. This advantage was only partly lost by the yen revaluation, since raw materials are mostly paid for in dollars. So the trend towards larger vessels using even more steel is

You've got to think big in this business

also in Japan's favour.

Until a few years ago Japanese shipbuilding was heavily dependent on imported sub-assemblies and components, but now it is a net exporter of them. The profit margins on steel and sub-assemblies are generally higher than on the finished ships, which again gives the Japanese extra leeway. They integrate not only ship construction, but carry the principle right through the industry, from engine building to pumps, compressors and deck machinery.

Japan's plus points

Between half and two-thirds of the items which in Europe are bought-in are manufactured in Japan within the same organisation. The six leading Japanese shipbuilders also manufacture marine engines to their own design or under licence. Shipowners are offered standard designs on a take-it-or-leave-it basis, where most European yards still cater for individual whims. But the more Europe concentrates on the shrinking tailor-made end of the market, the fewer the opportunities for standardisation, which alone can bring down the price. This has now sunk in. However, unless Europe also goes all out for vertical integration the benefits of standardisation are limited to less than half the price of the ship.

Even where production is not integrated, Japanese suppliers are more willing to meet the shipyards' specifications. Thus Japanese steel producers make plate in bigger sizes, which saves welding costs on tankers that can be a third of a mile

long. And since Japan's main shipbuilders are individually larger than most European countries' shipbuilders are collectively, they can negotiate contracts tailored to their individual needs which still give big enough production runs to enjoy economies of scale.

In Britain, the rationalisation of the industry has proceeded along the lines of the Geddes report (until the Heath Government did a couple of about-turns on shipbuilding policy). That report contained the built-in error of advocating horizontal rather than vertical integration, and, at the very least, largely ignored the role of the industry's suppliers in deciding just how competitive it could ever be. It is a common fault. Most European countries are trying to rationalise the assembly work done on ships in the yards, while doing little about the costs of bought-in supplies. Yet every 1% saved on the cost of materials is worth 3% off the cost of labour.

Until recently, European shipbuilders blamed their problems largely on wages and cheap Japanese labour. But the rate of annual wage increases in Japanese shipbuilding has risen fourfold since 1965. The basic wage this year is 230% that of 1965. The most recent increase, this spring, was 17.5%. The Japanese are now aiming to reduce the labour cost of steelwork on the largest ships to a mere 5% of total cost of the ship, but whether they can do this remains to be seen: European shipbuilders are sceptical of some of the figures put out by the Japanese.

Some European yards are now catching up on Japanese

rates of output. Kockums of Sweden launched five vessels, totalling 1,275,000 deadweight tons, in 1971 and delivered six, totalling 1,530,000 tons, which is a European record and about as good as any Japanese yard. But achieving this kind of output requires a higher investment than in Japan. Euroeconomics calculates that

The lower domestic price of steel and of plant erection in that country results in an underestimate of the real needs in west Europe in order to achieve the same result; this would imply roughly a doubling of the rate of investment in many European yards.

Even that might be conservative. In 1970, the average fixed assets per employee in British shipyards were worth £825, in west Germany £950-£1,000, and in Italy £1,200. Modern yards need around £3,000-£4,000 per man.

Economic nationalism

The British Government believes that investments of this order are justified in some yards to keep the industry going and save jobs in traditional shipbuilding areas. Thus £55m is being pumped into the old Upper Clyde Shipbuilders and £49m into Harland and Wolff, sums which would each be large enough to build completely new modern yards from scratch on greenfield sites. The argument for the patching and cobbling is that if Europe were to let economic events take their course Japan might be left with a monopoly of world shipbuilding by the end of the decade, which would be in the interests neither of shipowners individually nor of trading nations as a whole.

Of the 200 giant tankers in service, 120 were built in Japan and 80 in Europe, but 140 of

them are trading with Europe and only 60 with Japan. Japanese shipowners never order outside Japan. European shipbuilders are now keen to see the same buy-at-home policy applied in Europe—unless Japanese shipbuilders can be persuaded to cut back plans to expand their capacity, and so take off some of the competitive pressure. Although Japanese prices have, until recently, been the most competitive in the world (and are likely to become so again), Japanese shipyards' order books depend less on their domestic orders than do most European shipyards—which suggests that some European shipowners have behaved nationalistically.

In Britain, Mr John Davies, Secretary of State for Trade and Industry, has promised an early reply to pleas from the domestic shipping and shipbuilding industry for incentives to encourage British shipowners to buy at home. British yards are shorter of orders than any other major builder apart from Germany; and the Germans have special problems because of last year's D-mark revaluation.

But further protection for the British will only exacerbate the glut of world shipping. The Organisation for Economic Co-operation and Development, in the latest of its useful annual reports on maritime transport (£1.22), has a section on flags of convenience which shows that British owners have no strong fiscal incentive to use such flags because they get sufficiently large tax concessions at home. Because of their low profits in the past and the 100 per cent free depreciation they get on the cost of their ships, it will be a long time before many of them pay corporation tax. Admittedly,

British shipowners are ordering even fewer ships—in relation to the size of their fleet—than shipowners in other countries. But this is because they are getting more commercially-minded at last, and are trying to avoid investments that fail to show a decent return.

The future of many yards depends on what happens to ship prices, which in turn is closely bound up with the state of the market. Euroeconomics points out that ship prices increased at a moderate 2.3% a year through most of the 1960s, but in mid-1969 suddenly accelerated to an annual rate of increase of 30%, so that the price rise over the past 10 years is 75%. The recent jump is partly because of a sudden inflation in both wages and steel prices, but more because of the growing time lag between orders and delivery, now about 2½ years.

Price slowdown

As order books run down, Euroeconomics predicts there will be a slowing down of price rises to 5%-7½% a year, with a sharper temporary slowdown this winter. This may be an underestimate. Shipbuilders are no longer operating in a sellers' market. Harland and Wolff, in Belfast, in its submission to the Northern Ireland government for aid in its investment plans, reckons that prices will actually drop. Euroeconomics assumes that prices are based on the costs of the less efficient shipyards, and that the efficient ones then make fat profits. This is true in a boom, but arguably not so in a slump. As the report points out, Japanese shipbuilders have just enjoyed a short period of large profits, but had previously gone through a long one of only moderate earnings in relation to their

massive capital investments.

What chances are there of restoring prices? Japanese yards would like an international cartel to enforce minimum prices, but their own fair trade authorities have warned them off this, and the system would probably be impossible to enforce anyway. As an alternative, they have mooted the idea of an agreement among shipowners to pay minimum prices, but this looks even more improbable.

The only real hope is to cure the permanent trend towards over-capacity. Talks within the common market and at OECD have resulted in a call for the abolition of shipbuilding subsidies, which governments have pledged themselves to observe by 1974. Yet there is likely to be increased pressure for protection as the industry slides into recession around 1975. Although the world's demand for ships could be satisfied by relatively few yards of outstanding efficiency, no one has yet had the courage to let the less efficient close, even though the Japanese government has recently told its smaller shipbuilders to cut their plans for constructing new yards to a maximum capacity of 150,000-ton ships.

The shipping market is so volatile that forecasting demand is unusually risky. The OECD draws attention to this. It cites the difference between the level of American oil imports in 1980 as projected by the National Petroleum Council and as forecast by the department of the interior. This adds up to the equivalent of 100 tankers of 250,000 tons on the Middle East to American east coast route. It is the inextinguishable hope that something will crop up to confound the pessimists that keeps the shipyards going.

Who builds ships

Shares of world output

Who's busy

% of yards in each country with orders to keep them working to at least 75% of present capacity, until 1974

Bouygues move up.

A dynamic management. A first-rate technical team. An ability to think ahead. A commitment to client service. These are the things that—in a mere twenty years—have put the Bouygues Group among the top three in France's construction industry.

Profits rise by 28%

Turnover for 1971 was over £75,000,000—an increase of 24% over the previous year. This was accompanied by new orders worth more than £80,000,000. Net cash flow reached nearly £4,000,000. Consolidated net income was up 28% to £1,340,000.

Outstanding construction projects

1971 saw the Group involved in more major projects than ever, many of them of exceptional size and international importance. For example, the celebrated Parc des Princes Sports Stadium in Paris, Ford Motors' first French factory (at Bordeaux), the 53-storey Fiat Tower at La Defense and, in collaboration with others, the building of the new Autoroute de l'Est.

Housing horizon opens up still further

Housing—especially public housing—accounts for 61% of the Bouygues Group's activities, both as builders and as developers. It is predicted that France's target of 500,000 dwellings—already exceeded—will reach 535,000 in 1972. So Group prospects in this sector look very healthy.

How the Bourse assesses us

When Bouygues went public in June 1970 it was quoted on the Paris Bourse at 390 francs. Today—just two years later—the price has risen to around 600 francs—a level which is directly attributable to the steady increase in profits. Based on 1971 results the price/cash flow ratio is five times.

The future is bright

It has always been the Group's policy to win over its clients by quality of projects and work that goes into them. And our aim has always been to lead both in techniques and prices in the face of competition. In realising these aims, it is our objective to be among the top five construction companies in Europe by 1980. But we don't intend to overreach ourselves in the process. We plan to consolidate still further our strong domestic base in the civil engineering, property development and housing sectors. At the same time, however, we plan to diversify—structurally and geographically and are therefore actively seeking opportunities to co-operate in major projects outside France.

Estimated consolidated turnover for 1972—
up 25% at almost £100 million.

BUSINESS

Taking good care of them

The decision to merge the two British air corporations under a single management clears the way for an overdue and probably painful rationalisation

The effective merger of the two airlines was announced by the British Airways Board and approved by the Government on Monday, and everyone was anxious to say that, while it would produce one of the biggest airlines in the world, nothing else would materially change. Were that true, the changeover would not have been worth the bother. Neither airline is in particularly good shape. Financially, both have been living on past fat accumulated during the good years of the 1960s and, at least for British European Airways, on Government compensation for buying British rather than American aircraft. These reserves are running out; in spite of savings already made on administration, the two airlines will have worked miracles if they manage to break even this year. They are facing a period when fares are falling sharply in practice if not in theory; the British Overseas Airways Corporation's loads on some routes have gone up 40 per cent this summer, but revenue has gone up hardly at all because almost all the extra passengers are travelling at, or close to, half fare. In conditions like these, the two corporations have no option but to trim costs, and there is plenty of scope in both for doing so.

Unlike some other airlines, neither corporation is overburdened with too many aircraft, although BEA has too many different types. But they both have too many staff. In any other country the cure would be obvious: staff would be slimmed until productivity approached levels reasonable for an airline of this size. But in Britain this is the one solution that no one, not even an airline, is able to mention in public. The unions were on the telephone protesting to Mr David Nicolson, chairman of the British Airways Board, almost before his merger plan (*HMSO*, 13p) was published. Mr Nicolson, in his public statements, confined himself to saying that he hoped natural wastage would run numbers down for him, while rising traffic would raise the productivity of the remainder. There are a whole lot of reasons why this cannot work, as Mr Nicolson probably knows.

At this stage he has merely set up a management framework, with a single executive board and various divisions working beneath it, which turns the two air corporations into something resembling Trans World Airlines in America, but only two-thirds of its size. BOAC's capacity has been the biggest among western airlines

outside America for some time, just as BEA has had the biggest network inside Europe. The two together now rank somewhere between seventh and eighth in a world league that is headed by Russia's Aeroflot, followed by the five American giants. After that it becomes a toss-up whether the new British group or some of the medium-sized American domestic airlines are the bigger. In round terms, the two air corporations together must be in the 4 billion ton-miles-a-year class. They employ, however, something like 50,000 people.

To do the same range of work, the far bigger TWA gets by on not many more than 35,000 staff. This, admittedly, is after an economy drive that led to the sacking of nearly 5,000 in one year, the sort of operation that Mr Nicolson could hardly dare contemplate. But it means that the productivity of individual TWA workers, measured by numbers employed for each unit of capacity, is something of the order of 190,000 ton-miles of flying a year, against 97,000 for BOAC and not much more than 34,000 for BEA in their most recently available figures. This gives an average over the network of the two corporations of less than 66,000 ton-miles, and suggests that if staff were working to maximum efficiency the combined BEA-BOAC network could be run with one-third the present staff.

There are a few reasons why it takes more people to run an airline on this side of the Atlantic than on the other, but there are not many of them. Foremost is the lack of streamlining on the ground, starting with the cumbersome checking-in procedure still used in Europe and including the immigration formalities involved in short hops between countries, which keep aircraft on the ground for a longer time between flights than they would be on domestic routes of the same length inside America. The tendency is, therefore, to say that it is the political fragmentation of Europe which is at the root of the trouble and to shrug off overstaffing as inevitable.

But the causes lie deeper than that. Overstaffing begins in an airline when the productivity of its aircraft increases faster than the traffic. This happened when the jets were introduced, and it is happening again with the new wide-bodied aircraft. Fewer staff are needed to handle the same number of people, and the airline finds

BOUYGUES

381 Avenue du Général de Gaulle, F 92140 Clamart, Paris, France.

Copies of the full Report and Accounts, in English, can be obtained from Direction Financière, Bouygues, 381 Avenue du Général de Gaulle, F 92140 Clamart, Paris, France.

HOUSING · CIVIL ENGINEERING · PUBLIC WORKS · PROPERTY DEVELOPMENT

that it is suddenly employing too many round the place. It holds on to them, in the hope that the normal, yearly increase in traffic will soon have them busy again. But the traffic rises only gradually, and, in the meantime, staffs' own ideas of what constitutes the right number of people to do a job undergoes a gradual change, until overstaffing becomes the accepted norm. Privately-owned airlines that have either to make profits or go out of business go through periodic economy drives in which staggeringly large numbers of people are sacked without any visible deterioration in standards of service. The 5,000 dismissed by TWA last year left hardly a gap. But big, nationalised air corporations, hamstrung as they are by increasingly militant unions, find this impossible to do in anything but the most abnormal conditions. From pilots downwards, both BEA and BOAC have too many staff. As wages are one of the few items of cost directly under an airline's control, this is probably the only place where savings can be made.

It will not be easy for Mr Nicolson. He has a series of special groups studying every aspect of the merger from aircraft needs down to computers. He has already saved £1.5m a year merely by combining the insurance of the two fleets. Further savings should be possible when the eight different types of aircraft flown by the two corporations, with several variants of each, are reduced to more manageable numbers (not that TWA does that much better as it is now flying six different types). The obvious advantages of a merger also involve pooling sales offices, engineering, maintenance and a good deal of administration. But realising any of these savings in full has to involve some cuts in staff. Even in a good year, traffic grows at only 15 per cent.

Simply marking time

At Mr Barber's summer party, the Germans said they will keep the mark within common market bounds until after their general election. But what then?

Herr Karl Klasen, president of the Bundesbank, was the star turn at this week's meeting of European finance ministers and central bankers in London. After all, their summer holidays seem less at risk since he promised the German cabinet that exchange controls will bring four or five months' peace on the currency front: or so they think. He returned to Germany more determined than ever to make good his promise, if necessary by buying dollars up to the sky or by imposing even more controls. Next day, the dollar came off the floor.

It now transpires, however, that Herr Klasen's prescription alone did not bring the dollar round. It also needed the help of the Americans who sold marks on Wednesday. Then came the important announcement that the Americans have brought back into play their enormous network of reciprocal currency credits with other central banks. Something in excess of \$9 billion can now be flung into the game of temporarily underwriting the Smithsonian currency agreement. This may be costly to the Americans. Although the swaps are negotiated bilaterally,

The management reorganisation has stopped short of a full merger of the two corporations mainly because that would have required legislation, and who knows when parliamentary time could have been found for it. Also, at this stage, it is not strictly necessary. A great deal can be done internally while still leaving the two corporations their separate identity in public. Their two chairmen now become respectively full-time deputy chairman (under a part-time chairman) and chief executive of a management in which BEA and BOAC will be demoted to operating divisions along with several others (helicopters, local domestic airlines, labour management). What the new board now wants is freedom to get on with its own internal business without government interference. Whether it gets it is another matter.

The number of brushes that have already taken place between Mr Michael Heseltine, in charge of aviation in the Department of Trade and Industry, and members of the British Airways Board (the holding company for the two airlines) is reflected in the exceptional stress laid in Monday's document on the need for "a clear definition of the working relationship between the board and the Government" which the board wants "to pursue with the Government at an early date." When those talks take place, Mr Heseltine may expect to be told where and when he should mind his own business. When the board says that it must be free to conduct its affairs on commercial lines this means, among other things, freedom to plan its own capital expenditure within limits agreed with the Government, but without having to get approval for every contract placed of more than £1m. It must also mean freedom to cut staff, and the Government may not like giving it that.

ally, they all carry what is in effect a gold guarantee; the countries that make these swaps will be compensated by the Americans for their losses in the swaps when there is eventually a change of parity.

President Nixon ran scared that another devaluation of the dollar might look bad at election time. So a creaky international monetary framework is supposed to be propped up until November at a wrong pattern of exchange rates, primarily to aid political manoeuvres in America and Germany. The discussions under Mr Barber's chairmanship this week were yet another useless exercise.

But when will these gentlemen learn? They will persist in ineffectual meetings during troubled times when the inevitable rumours light up the foreign exchanges. This time it was wrongly suspected that they would agree to a joint float of the common market currencies. Instead, the formal discussion had nothing to do with such immediate matters as the pound's float or the mark's strength, but with far-away international monetary reforms. A German delegate described it as "a helpful

discussion about what we will need to know in 1975." A Frenchman put it more acidly: "It's like discussing the sex of angels when the Turk is at the gate." Perhaps, to be fair, it should be said that such a convincingly calm discussion of the sex of angels has indeed persuaded the Turk (or dollar speculators) to go away now.

But for how long? Even Herr Klasen is not looking beyond the west German general election on December 3rd. The anger with which German businessmen would greet a revalued or up-floating mark leaves Herr Brandt with really no political choice at present but to resist a float, joint or otherwise, of the common market currencies. But Herr Klasen himself is not against a joint float as such after the election, provided it is regulated dirtily by adequate European capital controls. Moreover, as implied by Dr Schiller's letter of resignation as Germany's economics minister, published this week, the French have been persuaded that the Germans are introducing enough controls to prevent a joint float getting out of hand. In French minds, and Herr Klasen's, joint floating and capital controls must go together and a float would only come if controls alone proved insufficient.

They may well do. But the Organisation for Economic Co-operation and Development, in its half-yearly Economic Outlook published on Friday, demonstrates how difficult it is to marry even reasonably sensible principles about the management of any fixed exchange rate system with the hard realities of market pressures in a world in which vast sums of liquid capital can move at a moment's twitch of nerves. The well-worn tenet, reiterated by the finance ministers in London this week, that while exchange rates should be changed more frequently adjustments should be made only in line with underlying payments trends, may not be workable. It is true that the direction of sterling's float in June met that basic requirement: the OECD reckons that had sterling remained skewered on its old Smithsonian peg Britain's surplus on its current overseas account would have virtually disappeared by the first half of 1973. The argument for upvaluing the yen is equally clear cut. Even though Japan's growth should be restored to an annual 8½ or 9 per cent, in real terms, by the end of

this year, this will not take up enough of the slack to bite into its enormous current surplus, which may still be running at an annual rate of over \$6 billion in the first half of 1973.

By comparison, Germany's current surplus, running down rapidly as its economy strengthens, seems modest. The OECD's calculations, made before the pound floated, actually suggest that Germany could even have a small deficit before the year is out, by which time its economy should be moving to a 4½ per cent growth rate. But any deficit will be marginal, and owe something to cyclical factors. Germany's current payments situation at any one point of time is not the main barometer for speculators. On a more dynamic view more than one expert would argue that a crawling upvaluation of 2½ per cent a year would be needed to keep the strength of Germany's payments in check. Germany will continue to attract funds so long as its economy is seen to be run better than most.

The OECD forecasts hold out little hope that the remaining Smithsonian exchange rates will last long even though, at the time, the OECD subscribed to the view that "there were no winners and no losers" in the settlement. For the OECD believes that the American economy is set firmly on a 6 per cent, or 6½ per cent, growth track, an upswing well ahead of those of its major competitors and one which implies a current account deficit in the first half of next year as high as \$2½ billion at an annual rate, after a record one of about \$4 billion this year. Far from achieving the kind of surplus that might eat into the dollars which now glut the world's reserves and markets, the United States will be pumping out still more dollars well into 1973. How long will the Japanese and the Europeans (the Germans in particular) still prove able and willing to absorb them? While it may be argued that the dollar is no longer blatantly overvalued commercially, it remains overpriced as a commodity. So Herr Klasen may have his work cut out and, if he does, one can only hope that he will fail. For to resort to ever more exchange controls makes a mockery of some of the high-minded doctrines being propagated in London this week.

The European divide

Another meeting of the community finance ministers is scheduled for early September in Luxembourg. But it is already clear that there will be no agreed common market view on the long-term reform of the world's international monetary system, which will be the subject of the International Monetary Fund's annual meeting in Washington from September 25th to 29th. Two points in particular divide the community:

(1) **Convertibility.** The Germans and French favour consolidating the existing dollar balances through bilateral deals: individual countries would agree with America the terms on which they

would freeze their dollar balances. The British and Italians favour an issue of special drawing rights (SDRs). The Italian scheme would include an incentive to the Americans to run a surplus; if this surplus exceeded the amount of dollars brought forward for conversion, the United States would be rewarded by additional SDRs. But if the United States were in deficit it would have to buy dollar balances brought forward with primary reserve assets, a penalty which it will not agree to lightly.

(2) **Role of gold.** Italy's Signor Giovanni Malagodi plumped for a degolded SDR as the pivot, or numeraire, of the system, arguing that to switch

from gold to SDRs is mere window-dressing so long as SDRs have, as they do now, a gold content. The Belgians were outspoken in their belief that SDRs must be expressed in gold. The French, needless to say, would like currencies fully linked to gold. The Germans, worried by what seemed a cleverly unstated renewal of the French insistence on the gold role, might go some of the way with France in favour of a higher gold price, provided gold is used as only one element in the backing of SDRs. There are some dangerous overtones, but the Germans are resolutely opposed to raising the gold price if France uses the debate about the numeraire to try to define the value of currencies in gold.

They don't want to know

One of the largest bank loans ever negotiated—£360m for developing British Petroleum's North Sea oil finds—will be signed early next month. Only two British clearing banks have gone in with vigour

The financial opportunity opened up by the oil under the North Sea has not stirred the enthusiasm of all British bankers. Quite the contrary. What has emerged about the £360m which British Petroleum has raised from a banking consortium to finance the exploration and exploitation of its Forties field is that less than 40 per cent of the money was put up by British banks. It had been hoped that at least 50 per cent would have come from Britain, but, despite the selling efforts of the three managers of the consortium, the reaction of two of the clearing banks ranged from over-caution to outright hostility.

When the Government has appointed a firm of consultants to investigate the opportunities for British industry thrown up by the North Sea discoveries—and when there is a strong rumour that the Shell-Esso partnership has made a major discovery—it is discouraging to find that financial support for the North Sea opportunity is so doubtful. The costs of developing the North Sea will be enormous, perhaps £2.5 billion over the next decade, and all the banks are going to have to get their feet wet in it one day.

It is true that half the banks who are interested are British, and half the money is in sterling. But it was the Americans and Canadians who were really eager to get into the consortium. It is also true that, considering their size, the merchant banks and the London-based overseas banks acquitted themselves well. But substantial medium-term sterling lending of the BP sort will have to be carried on the backs of the clearing banks.

Since last year's policy document on competition, the banks have been free to go outside the traditional range of loans; they can lend longer and for more unusual projects. The BP loan was the first big test of their willingness to expand their horizons. National Westminster (BP's banker) has taken close to 10 per cent of the commitment. But then it is one of the three managing banks, together with Morgan Guaranty Trust of New York and Lazard Brothers. The other clearing bank which has intelligently taken the plunge is Barclays. The Scottish banks, like the National and Commercial group and the Bank of Scotland, are prominent. The Clydesdale Bank, the Scottish subsidiary of the Midland, is in the consortium but the parent company is not.

The attitude of Lloyds Bank is that the kind of risk that the banks are being asked to run is an equity one; that clearing banks should not run it, certainly not for such a derisory reward; and that the loan sets an unfortunate precedent. Lloyds must have given a great deal of thought to the argument because Shell banks with it, and so its conclusions must be treated with respect. Lloyds's 55-per-cent-owned subsidiary, Lloyds and Bolsa, has taken an independent line and gone into the consortium.

Reduced to basics, the loan is simple. The banks lend money to a company, which will probably be called Norex, which buys oil from British Petroleum before it has been pumped above water. The loan, and the interest, is paid off as the oil is delivered. The interest will be $1\frac{1}{2}$ per cent above the three-month interbank rate until 1979, and will then rise to $1\frac{1}{2}$ per cent if repayments are not finished by then. The figuring on the interest rate is that British Petroleum, a prime borrower, could get money at $\frac{3}{4}$ per cent above the interbank rate, and the extra risk is worth another $\frac{1}{2}$ per cent.

What worries some of the banks is precisely that risk. In the United States, schemes like this have long been used to raise money for mining and oil production. But they usually operate after the oil has begun to flow and not before. The exceptional difficulties of getting oil out of 420ft of turbulent sea make the initial work extremely expensive, and so the banks are being asked to provide the money nearly two years before the first oil deliveries.

The ingenious formula worked out to get round the difficulty is to remove from the banks all risks attached to the actual winning of the oil. They simply have the risk that it might not be there in sufficient quantity. An independent firm of oil experts, Butler, Miller and Lents, has said that, in its judgment, there are 4.4 billion barrels of oil in the Forties field, and around half of it can be lifted economically by British Petroleum, giving BP an accredited 2 billion barrels of usable oil (a small corner of the field belongs to Shell-Esso). The amount of oil required to pay off the loans, at \$3 a barrel, comes to roughly 400m barrels. Thus the cover given to the banks is a factor of five. Even if there is only a fifth of the oil that everyone thinks is there, the banks will still get repaid out of the proceeds. If oil prices rise above the current average \$3 a barrel, the debt could be paid with even fewer barrels.

There are subsidiary risks: of epic disasters to drilling platforms and pipelines, of unexpectedly high drilling costs, or even (terrible thought) that BP goes bankrupt. The assets of BP's North Sea company, probably to be called BP Oil Development, are charged to Norex, and Norex has a special share in the company entitling it to take over the operation in the event of any default. One of the problems was over the oil production licence, given by the Department of Trade and Industry to a named operator: but the DTI recognises Norex's rights should the worst come, improbably, to the worst. But disasters on this scale look very unlikely, and those clearing banks that stayed out of the scheme ought now to be re-examining their reasons to be sure that they were not based, to some extent, on lack of enterprise.

Is Europe thirsting for a leader?

Despite the national pride which countries tend to feel in their particular drinking habits, it seems probable that Europe will become more and more international in this respect, and many others, as the economic community develops. In beers, for instance, will one overall European 'brand leader' emerge as time goes on? Questions of this kind, in many different product fields, are difficult to answer, but it is important for the businessman to be able to make such forecasts, even in fields other than his own. They involve the whole future fabric of European life.

Much of the information which a man needs to form his business decisions he finds in his chosen newspaper. But how about the international information – the

birdseye view of an industry, taking in the whole of Europe and the world? The Financial Times does not claim to tell you more about other countries' business than those countries' own leading journals. It does claim, however, to give you an international viewpoint.

Perhaps this is one reason why, according to a recent survey, *41% of senior management throughout Europe already rate it essential reading, and why more and more international companies find it an important advertising medium.

If you would like to judge the Financial Times for yourself by letting us send you, or any of your executives, free copies each day for two weeks, please complete the coupon and send it to us.

PILKINGTON

"A year of real progress; I am more confident than for three years"

says Lord Pilkington in his review of 1972

Shareholders Up from 8,000 to 13,500, including former Triplex Holdings shareholders.

Management Important changes; strength in key posts still outstanding.

New Ventures Formation in Australia of Pilkington ACI Ltd; option for holding in Societa Italiana Vetro.

Currency Fluctuations Currency changes cost £1m. before tax; stability in next year unlikely.

CBI undertaking No further ready acceptance of such rigid restraint.

Depreciation Acceptance by industry and City of "current cost" depreciation is anticipated.

Research and Development Direct expenditure on R & D about £6m.

A year of Progress More confident than for three years; good results from overseas.

Prospects Year has begun well; profits should increase, but inflation high everywhere.

Dividend Recommended final of 5½%; total for year ¼% better than forecast at 10½%.

Acknowledgements Thank you from shareholders and board to 30,000 employees in more than a dozen countries whose efforts have contributed to our results.

Summary of Group Results

	1972 £000	1971 £000
Sales, profits and dividends		
Sales to outside customers	135,612	123,180
Group profit before taxation (including licensing income and technical fees of £9,614,000; 1971—£8,623,000)	18,016	13,940
Group profit for year after taxation and after deducting minority shareholders interests	9,576	6,340
Extraordinary items	(227)	547
	9,349	6,887
Dividends to shareholders of Pilkington Brothers Limited	6,006	4,300
Profit retained in the business	3,343	2,587
Assets employed		
Assets employed before deducting bank overdrafts	183,926	174,322
Ratios		
Trading profit before taxation to sales	6.1%	4.8%
Profit before taxation and interest to assets employed	11.2%	9.0%
Earnings after taxation per ordinary share (before extraordinary items)	16.8p	10.6p
Gross dividends per ordinary share	10.5p	7.5p

Facts about the Pilkington Group

- One of the world's leading glassmakers, selling to over 100 countries
- Exports and licensing earned £31 million in foreign currency, and many more £ millions of glass were exported in British motor vehicles
- Britain's largest supplier of glass fibre and optical glass
- The float glass process is licensed to 21 manufacturers in 12 countries, with 38 float plants in operation and a dozen under construction or planned
- Approximately a third of the group's main manufacturing assets are overseas, accounting for almost a third of group sales
- Main glass supplier to British motor and building industries, and a major supplier to these industries in Canada, Australia, Argentina, South Africa, New Zealand and Sweden
- Over 30,000 employees worldwide, 34 active subsidiary and 11 associated companies in 14 countries

Copies of the Chairman's Review and Report and Accounts are available on application to the Registrar, Pilkington Brothers Limited, Prescott Road, St. Helens, Lancashire, WA10 3TT.

BUSINESS

Britain

So Rothschild was right

The victor in the war of words that rocked the British scientific establishment earlier this year proves to be Lord Rothschild, whose proposals for reducing the powers of at least three of the great scientific research councils have been accepted by the Government in principle, even if it is not prepared to be quite so brutal towards them as Lord Rothschild might have wished. In a white paper published on Wednesday (Cmnd 5046), the agricultural, medical and environment research councils were told that a proportion of their income will be taken away from them over a period of three years and transferred to government departments, which will then tell the councils what work they want done with it.

Lord Rothschild suggested this in his original proposals last November (Cmnd 4814) because, in his view, backed by first-hand experience of running one of the councils, they had carried scientific autonomy to the point where they were not necessarily doing research of value to anyone but the investigators. Conversely, they were ignoring some work that the departments wanted done. He suggested that they should still have a small budget for academic research

done at their own discretion, but that applied research should in future be commissioned and paid for by government departments. It should no longer be left to the council's discretion. This insult to the soundness of their scientific judgment was contested by the research councils. The scientific establishment sprang to their defence.

The Government has not been impressed. It has left the three councils with more of their own money to spend than Lord Rothschild had proposed, but will still cut their independent budgets substantially;

The cuts compared (£m)

	Present budgets	Rothschild cuts	Government cuts
Agriculture	18.7	14.5	10
Medicine	22.4	5.6	5.5
Environment	15.3	7.6	4.5

The Government has not explained why it should have accepted Lord Rothschild's principle but not his figures. There seems to be a belief that to take as much away from, for example, the Agricultural Research Council as he had suggested would be to reduce it to below the threshold size for an independent research organ-

isation. That might not have mattered. The future of the research councils was first questioned because it had been proposed to place the Agricultural Research Council within the Ministry of Agriculture and Food, as road research had been transferred to the Ministry of Transport and other engineering laboratories to the Department of Trade and Industry. The Government reprieved it, not entirely because it had been impressed by either the arguments or the efficiency of the ARC, but because the ARC does some key research on biology that would sit uneasily inside the Ministry of Agriculture. A new research council might have had to be created to accommodate this biology work if the ARC had folded. So it survives until it dawns on someone in the Government that biology could properly become the responsibility of the Medical Research Council.

Not that this in-fighting is material. What the Government has done is to breach the principle that science is something only scientists can appreciate. Some of the mandarins will resent this, but until science is incorporated further into daily administration there is not much hope for Britain as a technological nation.

CBI

More of an ice-cube

Through a series of entirely predictable meetings this week, various undertakings that had been given privately to the Prime Minister by the Confederation of British Industry and the Trades Union Congress were publicly endorsed. At the National Economic Development Council on Tuesday, with Mr Heath in the chair, the TUC agreed in a vague sort of way to consider discussing incomes policy, and the meeting was somewhat put out when the Prime Minister suggested they should all turn up again on Thursday to do just that. Because so many of those present pleaded other engagements, the date

Chairmen Baskett (ARC), Beverton (environment), Gray (MRC) breathe again

was put off until next Tuesday, but it was embarrassingly plain afterwards that no one but the Government really wants to turn up. The Government has even threatened to table a discussion paper to prevent the debate from settling into its familiar, comfortable round of clichés.

The Ned meeting cleared the way for the CBI's announcement on Wednesday of its much-leaked three-month extension to the present 5 per cent price freeze, due to expire at the end of the month. It is more of an ice-cube than the freeze proper that the Government had bargained for at the time of the budget. Industry refused to contemplate another year at 5 per cent, and went on to reject the CBI's compromise proposal for a six-month extension. The extra three months merely carry the CBI to the other side of the TUC's annual congress, at which industry thinks, misguidedly, that there could be some drift towards a moderating of wage demands. The terms of the freeze are marginally tighter than they had seemed likely to be even two weeks ago. Industry has realised that if August 1st was regarded as the start of a new freeze year, so that companies that have only recently raised prices would then be free to raise them again, the steel industry for one was going to push through substantial increases. The only way to tie down British Steel was to say that the freeze should apply to all prices within any given 12 months.

The CBI has had great difficulty getting support even for the three-month extension. Industry is not afraid of the effects or earnings of freezing prices until the end of October. What does worry it is the prospect that the Prime Minister could slap on a statutory price freeze as the voluntary agreement is about to come to an end. His temper at the Ned meeting on Tuesday suggested to some of those present that something statutory was not inconceivable.

Unemployment

Not too bad

The path from stagflation to boomflation is not proving to be well mapped all the way. But after the sharp falls in unemployment in recent months, it is not surprising that Thursday's figures were disappointing. The Department of Employment's track indicator (the seasonally adjusted wholly unemployed) actually went up by 5,000 this month, after June's fall of 36,000. And what with the complications of students, Scottish school-leavers (they break up

earlier than English ones) and the horrid weather of the early part of this month, the raw count of the jobless in Great Britain and Northern Ireland on July 10th was 868,000, up 34,000 from last month. But this one month's reverse may mean little.

Unfortunately there is no similar uncertainty on the wage inflation front. The index of basic hourly rates for manual workers jumped by over 1½ per cent last month alone. The Confederation of British Industry may have persuaded its members to extend their price restraint for three months, but their obligation applies only to domestic sales. British export prices have risen by 7½ per cent in 12 months, import prices by only 3 per cent. This is what the textbooks would call an improvement in our terms of trade. But when the volume of British exports has dropped over the same time by 4 per cent, while the volume of imports has risen by 8 per cent, the lesson is obvious. Britain is once more in real danger of pricing itself out of world markets.

Trade unions

Blackballed

Mr Clive Jenkins received a polite letter from Mr Vic Feather on Wednesday morning. It told him that the Trades Union Congress had decided to suspend his union, the 250,000-strong Association of Scientific, Technical and Managerial Staffs, because it had registered under the Industrial Relations Act. Seven other union leaders, representing another 600,000 members, got similar letters.

So a battle is now under way within the TUC which is likely to boil over at its conference in Brighton in September. Mr Feather himself was plainly unenthusiastic at the general council's decision to deliver these blackballs, and no wonder. But Mr Jack Jones and Mr Hugh Scanlon seemed delighted that their line had prevailed. If other unions which come up for TUC judgment next week (which include don't-knows like the 420,000-strong Electrical and Plumbing Trade Union) get the same treatment TUC membership will be cut by 15 per cent. Many moderate union leaders, like Mr Alf Allen of the shop-

TUC scorecard

	Unions	Membership (mn)
Registered	29	0.8
Deregistered	99	8.3
Don't know	9	0.9

workers, Mr Bill Hogarth of the seamen and Mr Frank Chapple of the electricians, will presumably be unable to stand for election to the general council. The hardliners will therefore enjoy an even bigger majority than they do now.

The irony of the situation is that some of the offending unions' leaders are against registration, but have failed to win support from their own members. Mr Jenkins, for example, got one in the eye from the ASTMS conference which failed, by a margin of under 1 per cent, to give him the required majority to deregister.

Dockers

The backlash

The union leader most out of touch with his members is Mr Jack Jones of the Transport and General Workers' Union. He has refused for weeks to have anything to do with the increasingly bitter dispute developing in the docks between the lorry drivers and the dockers, most of whom are paid-up members of his union. The shop stewards of the lorry drivers who were picketing the Royal Albert Dock on Thursday, moderate and relatively quiet-spoken men in comparison with the dockers, complained that they had been driven to start picketing only because Transport House had turned down repeated requests over the weeks to come down and arbitrate in what began as a relatively trivial matter. Mr Bernie Steer and his activists among the dockers had turned down requests for talks too, but that is

Thursday's Royal-blackening day

rather less surprising.

If Mr Jones does not think the dispute worth either his personal attention or that of union headquarters, what does he think the proper functions of the general secretary of a trade union are? This particular piece of trouble began at Hay's Wharf container depot, which was being blacked by the dockers. The lorry drivers did not cross the picket lines because good union members do not get across other members' pickets. Their firm was blacked, just the same, as forcefully as if they had. The drivers appealed to the dockers to talk it over, then to their union, and got nowhere with both. So, in exasperation, they adopted the dockers' methods and began picketing container depots at Tilbury on Tuesday, held a mass meeting on Wednesday to discuss their considerable success, and extended their blacking and picketing to the Royal group of docks on Thursday. This got them publicity that had previously been the monopoly of Mr Steer and his friends, and although the dockers were calling them scabs and a variety of other names, and held them in growing contempt because some of the drivers were rumoured to be getting paid leave of absence from work while picketing, some other dockers were genuinely surprised that their own leaders had repeatedly refused to talk to the drivers. But what the drivers had still failed to get, by Thursday evening, was the attention of Mr Jones.

There is no sign that this dispute will settle itself. The majority of dockers take the line that it is not worth discussing and that they could not care less, although one did ask:

Where is it going to end? The land-

ladies will be picketing the drivers next for sleeping in their cabs.

The reaction of both the port employers and the haulage companies was to step up pleas for a settlement by the committee trying to sort out the docks crisis under the joint chairmanship of Lord Aldington, chairman of the Port of London, and Mr Jones (who else?). Their interim report is now promised on Monday.

About 500 dockers' jobs can be saved by giving them jobs stuffing containers. A further group of men can be rationalised out of the industry by extending the generous voluntary severance payments, especially to sick men: for this, it is hoped, the Government will cough up the money. Other assistance is likely to be offered for retraining.

But this is unlikely to be enough to satisfy the dockers when they meet next Wednesday. They are still determined, among other things, to get rid of the unattached register which pays unemployed dockers £23 a week.

Farming

How corny can you get?

Mr James Prior, the Minister of Agriculture, came back from his talks with fellow farm ministers in Brussels with an agreement to take all restrictions off trade in cereals within the European Economic Community by next February. Since subsidies for cereals absorb about 25 per cent of the entire community budget, and the cereals themselves are Britain's largest food import, the details are important. Mr Prior thinks that they represent a tech-

nical negotiating success.

The prices of wheat and barley grown in this country will be phased up to the higher community levels by 1978. Until then all trade with the community will be evened out by payments to EEC exporters, primarily France, to compensate for the difference between market prices in Britain and the Six. This means that from next year European producers will have free access to the cereal market in Britain, which has usually made up its deficit by importing cheap cereals at world prices from Canada and the United States. M. Jacques Chirac, the French minister of agriculture, has already launched an export-to-Britain campaign among French farmers. Britain needs to import 45 per cent of its wheat and about 20 per cent of its animal feed grain; by 1978 a lot of this could be coming from France. It is the dowry that we bring to the community.

In the Brussels negotiations Mr Prior tried to keep wheat prices down, both to help food prices at home and to limit the import bills. He has done this to some extent by refusing to allow Britain to be treated as what the community defines as a "deficit area," and, therefore, one where prices will be universally high. The country is being split into two. In the inland east, where the large British wheat and barley men are, the minimum wheat price is being fixed at a relatively low level of £26.50 a ton; in the west, around Liverpool, Glasgow and Belfast, where less wheat is grown, the minimum price will be as high as £28.31. This is academic to British farmers now getting a

CIBA-GEIGY

1971 was the first full year of business for CIBA-GEIGY Limited, following the merger in October 1970 of CIBA Limited and J. R. Geigy S.A. Despite losses due to the changes that took place in the monetary exchange rates, a noteworthy increase in sales was achieved. At the same time the integration of the merged activities and organisation has progressed satisfactorily. The results achieved during the year were a positive step forward both with regard to sales and profits and also to the structural organisation of the undertaking.

Investment, earnings, sales, personnel
Capital expenditure in 1971 reached £82 million, an increase of 6.5% over 1970, despite the general trend of cut backs in investment in the chemical industry. Switzerland played a decreasing part in overall investment owing to shortage of labour and space, with its consequent environmental complications. However, ecological considerations represent an increasing proportion of the total capital expenditure.

Cash flow amounted to £87 million and has, after deduction of dividends, furnished the majority of the finance required for the high level of investment.

Group sales were £763 million, an increase of 10% over 1970 taking into consideration the currency realignment, which caused a 3% reduction in sales value when stated in Swiss francs.

At the end of the year over 70,000 people were employed; approximately 20,000 in Switzerland, 11,000 in the UK and 9,000 in the USA.

Pharmaceuticals
Sales increased by 11% to £223 million, with the USA again accounting for a large proportion. However the organisation in the USA saw extensive changes in order to comply with the anti-trust laws. The Consent Decree required an important range of products to be divested and these were relinquished to USV Pharmaceutical Corporation in return for one of their established products and an appropriate sum in cash.

The establishment of Group companies in Singapore, Malaysia and Thailand has strengthened our position in the Far East, and our agency agreement with Pliva, a leading Yugoslavian pharmaceutical company, has been extended to cover construction of a joint manufacturing facility.

Dyestuffs
Despite prevailing economic trends, sales of the Division exceeded those of the previous year by 7% and reached £196 million.

The most important structural change in the dyestuffs organisation was the sale of the existing CIBA dyestuffs business in the USA to Crompton and Knowles Corporation. This was also made necessary as a result of the Consent Decree. The immediate result was a substantial fall in sales revenue. In the long term however the divestment will simplify the problems of organisation and rationalisation brought about by the merger.

During the year the range of dyes for polyester-cotton blends was greatly extended

and additions were made to the polyamide and reactive dye ranges.

Agrochemicals
With sales of £169 million, an increase of 13% over 1970 was achieved, with noteworthy growth rates in Europe and the USA.

Crop protection products continued to be the main contributors to these successes, and a number of new products were introduced, chiefly for the US market. These included a herbicide for use in cereals and an extension of the range of products for weed control in vineyards and orchards.

Promise has been shown by a herbicide under development which should open up a further section of the cotton market, and certain insecticides with favourable properties were placed on international field trial.

New production facilities were constructed at Kaisten and Monthey (Switzerland) and Goa (India), and the herbicide plant at St. Gabriel, Louisiana, came into year round production.

Plastics and Additives
This Division has three separate trading operations: Plastics, Pigments and Additives. Total sales for all three amounted to £117 million, 11% up on 1970.

In Plastics, which accounts for about one half of the Division's sales, the *Araldite* products continued to be the leading line, and development of new epoxy resin moulding powders suitable for injection moulding will further extend the broad range of products. In Pigments, the successful marketing of high quality specialities resulted in above average growth rates, despite the slow growth in the PVC field. The Additives sector introduced a number of new products including a novel ultraviolet absorber for polyolefins and an antioxidant for polyacetal resins. Sales developed very satisfactorily with the UV absorbers and antioxidants in strong demand.

New production facilities included a formaldehyde and wood glue plant in Canada and a modern epoxy resin works in Japan. Capacity for UV absorbers was also increased in Switzerland and the USA.

Photographic
The Photographic Group comprises Ilford Limited in the United Kingdom; CIBA-GEIGY Photochemical Limited, Fribourg (Switzerland); and Société Lumière S.A., Lyons (France). Gretag Limited, Regensburg (Switzerland), which is not integrated into the Photographic Group, is a leader in the photographic equipment field, especially photofinishing equipment.

Sales of the Group were reduced by divestments (sales of Ilford's Zonal and Britannia Works) and by foreign exchange and tariff measures that hindered exports. Nevertheless the turnover of £38 million is an improvement on 1970. New products launched included the *Ilfochrome* process film and the warm-tone *Ilford* paper.

Consumer Products
This is our newest Division and positive progress was made during the year. Sales were £21 million, an increase of 14% over 1970.

Household insecticides and garden products showed satisfactory growth and the cosmetic business continued its good rate of progress. New product introductions were generally successful, the *Nubril* range of floor-care products in France being worthy of special mention. New and further developments in garden care and household products were carried out and a number of projects in toiletries and cosmetics were initiated.

Britain's Share in a Year of Positive Progress

As a result of the merger of CIBA and Geigy in the United Kingdom, which became effective at the beginning of 1971, the CIBA-GEIGY group in this country now consists of:

CIBA-GEIGY (UK) Limited
CIBA-GEIGY Chemicals Limited
The Clayton Aniline Company Limited (75% owned)
Ilford Limited

The United Kingdom companies recorded a turnover in excess of £100 million for 1971

CIBA-GEIGY (UK) Limited
CIBA-GEIGY (UK) Limited is the British subsidiary of the multinational research based chemical company, CIBA-GEIGY Limited of Basle, Switzerland. The British company, which forms an integral part of the international group, constitutes a major force in the British chemical industry.

CIBA-GEIGY (UK) Limited is a combined holding and operating company and has seven operating divisions which offer a highly diversified range of quality products.

These divisions are: Agrochemical, Dyestuffs, Plastics, Pigments, Industrial Chemicals, CIBA Laboratories and Geigy Pharmaceuticals; the Plastics, Pigments and Industrial Chemicals divisions form the UK Plastics and Additives Group. In addition to the operating divisions the Consumer Products business was established in 1971 for the marketing of garden care and household products.

For this company, 1971 was primarily a year of integration, of gradually welding together the component parts of the new organisation. The results underline the success of the integration with consolidated sales, which include those of CIBA-GEIGY Chemicals Limited and The Clayton Aniline Company Limited, increasing by 12% to reach £72,855,000.

The exports—more than £2 million up on the previous year—stood at over £18 million at the end of 1971, almost one quarter of company turnover. In spite of the general trend towards cutting back investment in the chemical industry, capital investment also increased to reach £5.5 million.

In addition, 1971 saw the issue of £10 million Convertible Loan Stock. This was an unprecedented move by a Swiss-based company, since the stock is convertible into participation certificate shares in the parent company. The issue was over-subscribed, and rapidly went to a

CIBA-GEIGY

premium. The funds raised by the issue will be employed as working capital in Britain to assist the UK group's continued growth.

During 1971 the Divisions of CIBA-GEIGY (UK) Limited, whilst in many cases carrying through extensive re-structuring of their marketing organisations, were able to continue to increase the volume of their business and to introduce a number of successful new products.

The turnover increase of 12% which these activities produced is a highly gratifying figure when viewed against the background of industrial recession, the company's involvement in perfecting its merged organisation and the voluntary price initiative the company executed by signing the CBI Undertaking of August 1971.

Subsidiaries and Associates

CIBA-GEIGY Chemicals Limited, Grimsby, further increased its contribution to the worldwide group since taking over its share of the relocation of pharmaceutical intermediates production from Switzerland. Further diversification has contributed to the company's most successful year ever.

The Clayton Aniline Company Limited enjoyed a year of growth, and continued its vital role as a major supplier of dyestuffs, intermediates and technical application products for the UK market and overseas.

Ilford Limited has become the centre of the world CIBA-GEIGY Photographic Group as a result of a major re-organisation in the latter part of 1971. The members are listed in the international section of this review. UK investments included a new £5½ million coating plant at Brentwood, Essex, which made a substantial addition to the output of high-quality colour and monochrome film.

"Growing demand for financial advisory services."

Alexander Stone, Chairman, British Bank of Commerce Limited, in his review for the year to 31st March 1972.

	1972	1971	1970
Profit before tax	£1.6m.	£1.1m.	£0.7m.
Dividend	15%	12%	10%
Deposits	£22m.	£12.9m.	£6.6m.
Assets	£34.4m.	£22.6m.	£14.5m.
Advances	£18m.	£14.7m.	£7.3m.

Annual General Meeting will be held in Glasgow on 11th August 1972.

Some of the main points from the Chairman's review are:—

Competition & Credit Control "Our flexibility has enabled us to compete effectively with other lending institutions".
Financial Advisory Services "There was a gratifying increase in the demand for these services".
"There is every indication that this demand will continue to grow".

Capital for Agriculture "Was launched to offer a comprehensive range of services to meet the financial and advisory needs of the agriculture industry".

Leasing and Hire Purchase "Satisfactory progress".

Other Interests "Record year by printers, Aberdeen University Press Limited and metal brokers, Henry Bath & Son Limited".

Bonus Issue "It is proposed to increase the authorised share capital from £4m. to £8m. and to capitalise part of the reserves by a capitalisation issue to shareholders of one new ordinary share for every two ordinary shares held".

Prospects "Since 31st March 1972 activities throughout the Group have continued at a satisfactory level and the indications at present are that the Group will achieve increased profits in the current year. Provided no unforeseen circumstances arise, it should be possible to maintain the same rate of annual dividend of 15 per cent on the increased capital of £5,250,000, subject to the effect of imputation on dividends paid after 5th April 1973.

Copies of the Annual Report can be obtained from the Secretary.

Continued from page 75

guaranteed price of £34.40 a ton; but, as all prices move up during the transition period, the differential between east and west could be important.

A mildly protesting Mr Prior was obliged to agree to raise the price of barley, which merely means more profits for British farmers who are already growing all that the country needs. His main aim should be to narrow the common market's price differential between wheat and barley. Even after the accession of Britain the EEC will probably have an embarrassing surplus of wheat by 1978, but still be short of animal feeds. Since 60 per cent of Britain's farm production is in livestock, for which there is a huge export demand in Europe that we hope to cash in on, we clearly do not share the French interest in seeing wheat become more expensive every year. Britain wants a switch to more barley and other feed grains.

Plastics

Stuck in the mould

The little neddy for the chemicals industry reported on Monday (HMSO. £1.60) that there are too many British companies engaged in turning raw plastics into useful products. It recommended that some of them should combine, although how they might do so is an open question. For the neddy to recommend that the British Plastics Federation

should arrange for specialist advice to be made widely available to processing companies interested in mergers, acquisitions or joint ventures

is to ensure that there will be little impetus behind any rationalisation. The BPF serves a useful function now, but it is no marriage broker nor should it be turned into one. But unless concentration does take place there is little chance of the plastics industry keeping pace with the rest of Europe.

Already, British output is falling behind, as is consumption, but that is largely the result of poor marketing and inadequate research and development. The industry says, and the neddy repeats, that successive governments' stop-go attitudes to the motor and building industries have discouraged manufacturers from exploring new bulk uses for plastics as actively as they might have done. Far more plastic panels could be put into car bodies, but manufacturers say disingenuously that they have not wanted to commit themselves to heavy capital

investment and development to supply so erratic an industry as cars. If they did not think that the motor industry was a growth industry, then how would they define one?

Anglo-Soviet trade

Credit available

The affair of the 105 "spies" expelled to Moscow last October is no longer to impede Anglo-Soviet trade. The British Government has agreed this week to provide an ECGD credit of at least £200m for some 5-8½ years, at the internationally competitive rate of 6 per cent. This should give British exporters a chance of winning their share of capital equipment orders as Russia increases its placing of them in line with the normal pattern of its five-year plans. The current plan began in 1971. So far the Russians have been occupied sizing up the equipment on offer and deciding how much they will import with the hard currency they have. Now they are placing orders. The lack of long-term cheap credit could have crippled Britain's chances of winning some of the business.

Steel

Looking dear

Comparisons made by both steel-makers and users of the prices actually paid for steel show that normally EEC prices are significantly below British ones. The difference varies from product to product, but on average it is 8-10 per cent. If this is really so—the British Steel Corporation denies being anything like so uncompetitive—it has serious implications for BSC's long-term investment plans. The floating of the pound appears momentarily to have offset the price difference, but projecting known price trends, especially BSC's intention to raise prices sharply on January 1st, it looks quite probable that BSC will be overpriced again next year.

The published list prices for steel show something completely different, but list prices mean different things here and in the EEC. In Britain, with some minor exceptions designed to help car exports, the list shows the selling price to the buyer. But in the EEC the steelmaker is allowed to depress, or align, his prices to those of his competitors, and when demand is slack, as it is now, even greater discounts are permitted.

The BSC still thinks it can beat the

competition. It has, according to reports, already joined the European import limitation scheme. It hopes for much greater price freedom once in the community. Cheaper imports can be fought off by going down to competitors' prices. This, however, ignores the havoc that will be wrought upon the corporation's profits. The BSC has been unable to contemplate its massive investment programme, even in its present protected home market, without equally massive Government aid, although it has been doing better than expected recently. Next week it will report that its deficit for the last financial year was just under £80m instead of the £100m budgeted for, and, as new plant comes on stream, it hopes to maintain this improvement. But now it would seem there is every prospect of a large jump in imports.

The Minister for Industry, Mr Tom Boardman, faces a tricky balancing act. He hopes to announce the BSC's financial target before the end of this parliamentary session. But he also has to examine the corporation's proposals for its next round of investment which will reach him in the next few weeks. These will almost certainly include a £700m expansion project which would take the industry's capacity from the present 25m ingot tons to nearer 36m ingot tons by 1980. This would now seem to be potentially too ambitious. The Government's own view, expressed in the strategic review, was that there could be a burst of imports without an offsetting increase in exports. This led civil servants to suggest an industry nearer 28m tons without a major single investment project.

QER Special No.12

LNG

The development of ocean transport for natural gas has revolutionised a whole industry. In liquid form natural gas—no longer limited to local consumption—has been opened up to a world market. QER Special No.12 LNG: Marine Operations and Market Prospects for Liquefied Natural Gas, 1972-1990 examines carrier capacity and financing and the problems of gas delivery from wellhead to consumer.

A single copy of QER Special No.12 is £5.50 (US\$15). £4.50 (US\$12) to QER subscribers. Airmail postage extra outside Europe (£0.40 US\$1), payment with order please.

BUSINESS

International

Don't worry, nobody's really stealing your sovereignty

Protesting Britons: only a nibble

This week's rumpus over German questioning—started, in fact, by a not-so-high official in Bonn—of British aids to industry, free depreciation for all business investment and regional assistance ended unhappily for the anti-market lobbyists. The EEC commission is cooling fast. And, as Mr Christopher Chataway told the Commons on Tuesday, there is nothing in Britain's regional development policies that can be faulted as distorting competition or as infringing the new guidelines for regional aids worked out by the community in 1970. Free depreciation is a straight tax matter, over which the commission has no jurisdiction anyway; nor does it seem to exceed the 20 per cent investment grant (or equivalent) that is the maximum incentive to invest-

ment that countries are supposed to give, outside development areas, under the guidelines.

Yet British sovereignty did suffer a small nibble last weekend. The European Court of Justice in Luxembourg upheld the fines for concerted pricing imposed on the European dyestuffs manufacturers by the commission in 1969. Four of these manufacturers were based outside the community, including Imperial Chemical Industries in Britain. Britain said the community had no powers to penalise outside companies for things they did that had "effects" inside the EEC, and, further, objected to the way notice of the fine on the parent company was given to ICI's subsidiary in Germany. The court has rejected both arguments.

Unfortunately, the "effects doctrine" has long been a vexed issue between the American and European governments. The Federal Maritime Commission has periodically attacked the workings of the shipping conference system, claiming that goods like whisky can be shipped to America on more favourable terms than in the other direction. It has ordered European companies to produce documents; the British, German, Dutch, Belgian and Scandinavian governments have replied by passing laws forbidding the documents to be produced. The First National City Bank of New York was ordered in 1968 to produce documents held at its German branch (in connection with anti-trust inquiries into the affairs of some of its customers), even though doing so would make it liable under German law. It refused, and was held to be in contempt of court. The 10-year proceedings against the Swiss watchmakers' semi-government-inspired export cartel provoked the Swiss government to intervene directly. It briefed counsel to appear in court and later protested to the State Department about the infringement of Swiss sovereignty.

The Luxembourg court has now given the whole process a big push forward. In future, America will certainly be readier to extend its shipping or anti-trust regulatory work to cover things done abroad either legally (as in the Citibank case) or not (as in the case of the quinine manufacturers, who, having been fined by the commission for price-fixing, were then promptly fined by the Americans for the same thing). The sooner there is some sort of international agreement the better.

The other point to emerge from Luxembourg is even more interesting. The court, in effect, regarded ICI and its local subsidiary as a single entity, and the same with the Swiss companies involved. A multinational company is a single economic entity but in law it is supposedly composed of numerous separate entities that happen to be connected by shareholdings. Multinational companies like to have it both

Announcement by Iraq Petroleum Company Limited

With reference to the matters in dispute between the Government of Iraq and this Company, culminating in the dispute arising out of the enactment by that Government on 1st June 1972 of Law No. 69 of 1972, and in response to an initiative from OPEC at its meeting in Beirut on 9th June 1972, contacts are now to be renewed under the joint mediation of Dr. Nadhim Pachachi and Monsieur Duroc Danner.

It is hoped that this mediation will lead to negotiations on all outstanding disputes between the Government and the Company and its Associates. This procedure would be entirely without prejudice to the respective legal positions of the Government and the Companies.

The Company notified the Government on 7th June 1972 that it contends that the Government's actions constitute breaches of the Company's agreements with the Government and violations of international law and that the Company's rights, including its rights to crude oil from the Kirkuk, Jambur and Bai Hassan oilfields continue to exist and remain unaffected. At the same time the Company notified its intention to take all legal action necessary to protect such rights.

In view of this mediation the Company announces that it will, without prejudice to such rights, abstain from commencing legal proceedings in relation to oil from the said oilfields lifted prior to any declaration by one or both of the mediators regarding the status of the mediation.

A declaration will be made not later than 12th October 1972. If this or any other declaration states that mediation has failed, the Company will be free to exercise its full legal rights.

Iraq Petroleum Company Limited
33 Cavendish Square, London, W1M 0AA

the conference cartel of European and South African shipowners who have traditionally carved up the traffic. The South Africans, advised by the American consultants Arthur D. Little, want containers; the Europeans, raw from the losses they have sustained on the boxes so far, do not; and the South Africans do not want to upset the conference by acting independently.

The American Sea-Land line, which is the world's largest container ship operator, is not so squeamish. It has spare ships that could be diverted to the run. They would need container cranes at the South African end; but the port of Lourenço Marques in Portuguese-occupied Mozambique, which would be an excellent transshipment point for both Johannesburg and Durban, now plans to buy some. This would allow Sea-Land to begin a service in a year's time, with ships bought before 1969 when shipbuilding prices had not yet gone through the roof. The British and South African companies on the route now would then be at the disadvantage of having to buy new ships, which would probably not be delivered before 1975.

Containers have helped to hold freight rates steady at a time when shipping costs have been soaring. Like airlines, the shipping conferences fix rates collectively, and have been able to recoup much of the cost of containerisation from conventional ship-

ping. It is therefore hard to say whether containers are as cheap to operate as they should be in theory. Many shipowners are letting their older ships live on rather than undertake the capital investment for containers.

Middle East oil

The third force

West Germany, Japan, Spain and Austria, dependent on international companies for the bulk of their oil supplies, have formed an alliance that they hope will allow them to obtain their own sources of crude oil in the Middle East. Called the Zurich Group, because it has held a number of secret meetings in Zurich, the alliance could grow to be an important factor in the confused Middle East oil picture.

The group emphasises that it bears no hostility towards the oil majors. Even so, its best chance of winning its goals will come from the friction between the companies and the Organisation of Petroleum Exporting Countries. In the next major Middle East oil crisis, which could come at almost any time, the Zurich Group could offer the OPEC countries a way of marketing their oil without settling with the companies or being driven into the arms of the Russians.

This would not be as unacceptable to the companies as it might appear, provided the members of the Zurich Group are willing to pay a good price. Many of the major oil companies feel overcommitted in the Middle East and they would welcome the cash that would flow to them from any such deals—in the form of royalties or whatever. They face mounting exploration and development costs elsewhere in the world.

The Zurich Group is made up of west Germany's Deminex, the Japan Petroleum Development Corporation, Hispanoil of Spain and the Austrian group, Österreichische Mineralöversorgung AG. Both as a group and

individually, these companies have already been talking about possible deals with some of the Middle East countries, although Deminex has now definitely pulled out of its plan to take a stake in British Petroleum's concession at Abu Dhabi. They have figured prominently in speculation about the Iraqi situation, both over the nationalised Kirkuk field and undeveloped oil concessions in the south of the country.

German subsidies

They've ducks too

Germany's new minister for transport and posts, Herr Lauritz Lauritzen, has been in office for just two weeks (he is still housing minister, too). He is already finding his seat uncomfortably hot. Both the big nationalised industries for which he is responsible are making thundering losses, with prospects of worse to come. With an eye on next December's general election, he has promised that there will be no passenger fare increases on the railways this year. This has infuriated the railways board, which during the past few weeks had been carefully leaking the news that it was planning a 20 per cent increase in them. The railways' losses last year were around £300m; they will probably top £350m in 1972, including the interest the railways have to pay on their accumulated past losses of £2 billion. The federal government is also statutorily obliged to reimburse the railways for losses that arise out of ministerial directives on how to run services—like instructions to keep commuter fares cheap—but is usually slow to pay up. This year alone state subsidies will run out at £750m.

The post office is in no better shape. It lost about £200m last year, even though charges were raised then and again (by 11 per cent on average) this month. Last year's rises actually reduced revenue from the items that suffered the steepest increases. Ordinary letters, left alone last year, went up by as much as a third this month; consumer resistance may now slow traffic down. The post office's best hope is probably to concentrate future increases on telephones; the service is already expensive, but demand seems to be near-insatiable and 1m potential subscribers are still on the waiting list. Perhaps Mr Chataway should ask the Brussels commission about all these subsidised German lame ducks?

Try Atlas's amazing 27,000-lumen cocktail

More sparkling than a Horse's Neck, more complex than a Straits Sling, more freshly natural than a Sunshine, warmer-hearted than a Kentucky Gentleman, cleaner and clearer than a Gibson and as good to have around as a Gloom Chaser, Atlas's unique cocktail is called the °Kolorarc. Switch to it, and you're hooked.

The Atlas °Kolorarc is the unique metal halide lamp that makes all other industrial and commercial mercury lamps look a little blue. 27,000 amazing lumens of light the °Kolorarc pushes out, and every lumen has the natural glow of a soft summer morning.

°Kolorarc contains what Atlas call a 'cocktail', a subtle blending of vapourised metals that balances its lumen output happily along the spectrum, producing a light uncannily close to daylight.

Just like Harry, Charlie and the Senator.

Only Atlas know how to mix metal vapours to get the °Kolorarc cocktail. Just as only Harry of Ciro's could shake an authentic

Monkey's Gland, just as no one but ol' Senator Fairbanks ever grasped what you do with Noyau and Vermouth to achieve a Fairbanks Cocktail, just as it took Charlie at the Racket Club to conjure the H.P.W. out of what ought to have been a Gin and It, or Sidney of the Cecil to realise you could graft Grenadine to Dubonnet and come up with a Rose, so you'll have to go to Atlas and °Kolorarc if you want to look at a mercury lamp and see daylight.

ILLUMINATING FREE 2-BOOK OFFER. This coupon gets you the Atlas Atlas of Cocktail Recipes. Plus the Atlas Kolorlume leaflet describing a brilliant new fitting for the Kolorarc lamp. Post now to Thorn Lighting, Thorn House, Upper Saint Martin's Lane, London WC2H 9ED.

BUSINESS

Investment

Well, of course, a meeting makes all the difference

The London stock market suddenly went up 12.1 points on the Financial Times industrial ordinary share index on Wednesday, apparently because of a jolly meeting between Mr Heath and the men who represent both sides of industry. They decided to have more meetings and talk about how to cope with inflation. Then the Confederation of British Industry had a meeting and said that, as its contribution to keep inflation down, it would hold to its price restraint policy for another three months. The market, convinced that something was actually happening, jumped for joy. But on Thursday it wilted a little, closing 4.7 points down at 513.9.

European stock markets have been picking up a little from a few weeks of relapse after the British started to float. They were not disturbed by the foreseeable fact that the London meeting of finance ministers came to no conclusions. But there are cautious voices abroad worrying that either new

controls or a dirty joint float by Europe could curb the free flow of equity money from one bourse centre to another, and stultify the markets.

The real curiosity—or exemplar—is Switzerland. Foreigners cannot buy equities at all in Switzerland (though they have been buying a few held outside and quoted on the London and Paris markets), and yet the market has recovered half the previous fall. If Switzerland, why not Germany? Investors seem to be on a bonanza to nothing in Germany. Herr Brandt says there will be no revaluation until after the election, and that is comforting for companies. After the election, there might be a revaluation, and that means an instant gain for some outsiders. British investors will reap this gain if they have bought through the investment dollar pool, where the premium is still at an effective level of 17% (against the quoted rate of 24%). If they have borrowed local currency then the gain on the asset is lost on

the liability.

The outlook for the German economy is a lot better than for that of the Netherlands, which has a bad dose of British stagflation and a government crisis to boot. Still looking spruce and fit is the Paris bourse, though for the whole of August the market there will go entirely to sleep. There are two firm European trend lines to report: the European markets are still looking cheap beside the Anglo-Saxon ones, and the latest currency upset is not going to determine which way they are going to go. What is also true is that the influence of New York is an important factor affecting the European markets.

Bank profits

Clearing a tidy return

The interim results of the London clearing banks, the first of which are just appearing, ought to be reasonably satisfactory—even though the full benefits of the upswing in interest rates from May onwards and the incipient recovery in industrial borrowing are yet to come. The top favourite judged by the p/e form, Barclays Bank, romped home on Thursday with profits up to £54m from £49m in the previous half-year. The price moved up 15p to 485p.

Throughout most of this year, admittedly, the clearers were still operating against a background of falling interest rates (in January-June the banks' base rate averaged only 4.56% against 5.8% in 1971). However, bank earnings are now less sensitive to swings in money market rates, partly because (with base rates now severed from Bank rate), the banks can adjust their own lending rates more finely, and partly because they have to pay interest on more of their deposits. Well over half of the clearers' gains in net deposits this year have come from wholesale sources of funds; their issues of CDs alone have more than doubled. The banks' deposit accounts now virtually match their current

I am you.

Like many people in many parts of the world, I depend on mass transportation. I ride the subway to and from work. I travel by train on business and on holidays.

I'm lucky, because Japan's public transportation system is very good. But it'll have to get better. Like many other heavily populated areas, we need more subways, more and even faster long-distance trains.

As a transportation engineer at Hitachi, I helped develop a new device that will make subways and trains cooler, more comfortable and more economical to run.

It's called a thyristor regenerative chopper controller. What it does is control trains electronically. And that's a good idea. Because an electronic controller can do a lot of things ordinary ones can't.

For instance, it lets extra electricity be returned to the power line for other trains to use it. So less electricity is wasted. And there's less heat built up.

It's more reliable than ordinary controllers. And cheaper to service.

But I think the biggest advantage is that it gives the passengers a lot smoother ride.

Thyristor controllers are already on the subway line in Tokyo. I think there'll be more in the future.

Like me, there are millions of people around the world who want safe, dependable, low-cost public transportation.

And since that's what I'm working for at Hitachi, I'm working for all of you.

Because my work benefits me. And I am you.

accounts.

Working in the clearers' favour in this awkward half-year was a rapid rise in the money supply (net deposits jumped 14% in the six months to June alone), an aggressive expansion of the banks' wholesale business, and their new freedom to concentrate their retail lending on high-margin advances to personal borrowers and property companies in the face of sluggish industrial demand. Barclays benefited from higher profits from its Barclaycard. National Westminster has probably got some more mileage out of the rationalisation of its branch network begun last year. Moreover, under the new regime of wider margins, those banks with competent dealers and international departments should also have made good money on their foreign exchange business.

There is another side to the coin. The very rapid recent rise in money market rates undoubtedly squeezed margins. More important, last year the banks made money on gilts, but this year they will be making losses. As their excess liquidity has been whittled down, the banks have been selling gilts on a falling market. And the pace here has accelerated since the pound was floated—despite the Bank of England's emergency repurchase measures to help the banks over the worst of the liquidity crunch that followed on the flight from sterling in late June.

It will be some time before the full cost to the banks of the sterling episode will be known. But one result is painfully clear. The fall-out in the money markets has been a level of interest rates which had left the banks' base rates behind, despite the two June adjustments. A smart company treasurer could still make a turn by taking up an overdraft at 7% and placing the funds on the interbank market at 7½%-8% or more. The

banks could not live with that sort of thing for long. National Westminster led the pack by raising its base rate on Thursday from 6 per cent to 7 per cent.

Boise Cascade Conglosses

New York

Boise Cascade, the giant Idaho-based producer of building materials and paper products, did not let its geographic remoteness keep it from hopping aboard the conglomerate bandwagon in the late 1960s. Among other things it acquired the prominent engineering consulting and design firm Ebasco, jumped into the recreational land development boom and speeded up its mobile home and on-site housing construction activities. In 1970 and 1971, however, some of its real estate and construction operations soured, resulting in write-offs last year totalling \$48m before tax, which came on top of a \$31m operating loss. In the wake of these reverses the once high-flying stock plummeted from a high of \$80 in late 1969 to a range of \$15 to \$20 earlier this year.

In the past few days Boise's shares dropped to as low as \$10 on news that it is considering a further write-off against 1972 income that could run as high as \$200m to accelerate its withdrawal from the recreational land development business. It would be one of the largest single corporate write-downs in recent years. A decision is due by the end of the month.

Boise's recreational land activities have been troubled for some time. The climax came last autumn when a number of lawsuits were filed against three subsidiaries in connection with land sales mainly in Contra Costa

County outside San Francisco. The subsidiaries have been accused by the state of California and the county government of misleading representations in selling lots between 1967 and 1969. Boise states that although the lawsuits are "unwarranted," sales at its California projects have not come up to expectations. In addition to the land hassle a portion of the write-off would be to provide against certain shaky investments it has in several Latin American countries.

A number of major American corporations have taken substantial write-offs in the past year or so, reflecting either setbacks growing out of the 1970 economic recession or over-reaching by conglomerates or simply poor judgment or bad luck. The biggest single write-off in 1971 was that of RCA, which charged off \$490m when it went out of the computer business. Next in size was a \$347m charge-off by the Anaconda company following the Chilean government's seizure of two of its copper mines. In all it is estimated that American companies sustained a total of \$2 billion write-offs last year, most certainly a record.

Hotels

Rooms at inns?

The prospect of overcapacity in the hotel industry hangs as something of a pall over the good sets of interim results this week from Trust Houses Forte and Associated Hotels. Estimates of its seriousness vary. Our chart on page 90, based on forecasts, by brokers Hedderwick, Borthwick, gives one view of how occupancy rates might fall. Hedderwick, Borthwick estimates that a 1% drop in occupancy brings about a 3% fall in profits; hoteliers

ITALCABLE

Servizi Cablografici
Radiotelegrafici
Radioelettrici S.p.A.
Seat in Rome —
Via Calabria 46/48

On 26th June, 1972, the General Meeting of Italcable Shareholders was held at the Company's seat in Rome. Italcable, a part of the STET Group—Telephone Holding Company, of I.R.I., is the concessionaire in Italy for a portion of the international telegraph services, and for intercontinental telex and telephone services.

The Report of the Board of Directors to Shareholders, after an ample outline of the telecommunications in the world, a field under unaltered progress offering ever better and updated facilities, passed on to the illustration of the outstanding marks of 1971 activity.

The services fulfilled by the Company have, in their whole, recorded a satisfactory evolution, even exceeding expectations. In order to meet the increasing demand of services forecast for the years to come, the Company has worked out a programme which provides for an even greater availability of transmitting facilities, ranging from the traditional short-wave radio media to modern satellite and submarine cable systems, and for the modernisation and the extension of its existing plants.

In the first sector—the transmitting facilities—the via satellite connections are secured to Italcable by the modern plants of the associated Telespazio Company, a member of the International Consortium INTELSAT. For its services via submarine cable, Italcable avails itself mainly of the TAT5/MAT1 System connecting Italy with the United States—a system in which the Company has ownership-interests—and follows with keen interest the most important world-wide achievements in this field, at times participating directly in the realisation of the enterprises, at times purchasing IRU's (indefeasible rights of use) on the same.

In 1971 Italcable was seriously committed in the enlargement of its installations and plants: to the Radio Transmitting Station of Torrenova and to the Cable Station of Palo—the Italian terminal of the TAT5/MAT1 system, the new Radio Transmitting Station of Torvaianica was added, while the construction of the new Radio Receiving Station of Cimino is in progress. The major commitment of the Company is represented by the realisation of the New Operating Centres of Acilia where the whole telephone service is handled, and to where the transfer of the telegraph service is underway. Both services were previously accommodated in buildings sited in the historical centre of Rome.

For all these plants the most updated projects have been worked out, providing for an advanced automation. In the coming years Italcable will be fully engaged in carrying on, ameliorating and completing the above projects which will give the Company a prominent place in the field of international telecommunications.

The General Meeting has then approved by unanimous vote the Report of the Board of Directors, the Balance Sheet as at 31st December, 1971 and the distribution of a dividend of 1,260,000,000 liras, in the ratio of 140 Liras—inclusive of taxes—for each of the 9,000,000 shares of 2,000 Liras nominal value.

Immediately after completion of the General Meeting, the Board of Directors convened and confirmed Dr. Carlo Enrico Martinato as President, Dr. Pasquale Chiomenti as Vice-President and appointed Dr. Paolo Pugliese, who already holds the office of Director General, as Managing Director of the Company.

Morgan-Grampian Limited

Another year of record earnings growth

Highlights from the Annual Accounts:

- Turnover £5½ million, up 55 per cent
- Profit after taxation, up 91 per cent
- Earnings per ordinary share 8.5p, up 93 per cent
- Dividends per ordinary share 3.8p, up 73 per cent and covered 2.2 times

Prospects from the Review of the Year:

- The Board is confident that in 1972-73 the company will continue on the path established over recent years
- The current year will include the profits from recent acquisitions
- There will be the benefit of finance derived from the property link with The Imperial Life Assurance Company of Canada

The Annual General Meeting will be held at the Connaught Rooms, Great Queen Street, WC2 on 9 August 1972, at 12 noon.

Copies of the Report and Accounts can be obtained from the Secretary, 28 Essex Street, London WC2.

MG

What was that about too many hotels?

have limited scope for cost-cutting in response to falling demand.

The impact will not be evenly dispersed over the hotel groups. London hotels and luxury hotels would be in more trouble than Trust Houses Forte, which has a broad geographical spread, hotels in many different price ranges, and is strong in the profitable motorist service area. THF's interim figures suggest it may beat that contentious £14.4m profit forecast for the year; they show a sharp rise in turnover and trebled pre-tax profits in the first half (which is admittedly an insignificant period in relation to the summer tourist half). The price of 246p does not make the shares look expensive; they can be called cheap if there are any grounds to hope for the return of Allied Breweries as a bidder, especially since Mr Maxwell Joseph swallowed Watneys.

In 1973 there may be empty hotel

rooms, not just in London, which has the most publicity, but in many provincial centres too. A lot of comfort is being drawn from the boom so far this year in foreign tourism, but April and May last year also showed growth of around 15%; this tapered off later, so that the annual increase was less than 10%. Devaluation should help, but Vat will hinder. Many tourists are now complaining about pricey London in the way they used to moan about pricey Paris.

Diversification has been proceeding so fast that the hotels sector is losing its identity. The leader of diversification is that long-term Jeremiah of overcapacity, Mr Maxwell Joseph. Grand Metropolitan Hotels is now a diversified brewery. Associated Hotels is a diversified private police force. Its Securicor interest, through the company's 53%-owned Kensington Palace Hotel subsidiary, contributed some 81% of the £3m interim pre-tax profit in the non-tourist first half; Securicor showed 23% growth against 10% in hotels. In the whole year Securicor may make up 67% even of the annual earnings of Associated Hotels, but over 80% of the earnings of KHP; this makes the latter the more attractive buy.

Overcapacity may hit the luxury London bracket the hardest, putting Savoy Hotel group in the draught. Perennial takeover rumours are reflected in its exaggerated 27 p/e at 410p. At the other end of the spectrum, Centre Hotels, with its concentration on provincial centres and lucrative conference facilities, has fewer problems

than most. Although it is by no means invulnerable to competitive strains, and its Old Kentucky pancake chain cooks in an overcrowded kitchen, the group has an exceptional growth record and a coherent management policy. This is reflected in its p/e of 24 at 220p.

Broken Hill Proprietary Steeling away profits

To invest in Broken Hill Proprietary is to invest in Australia. Over the past three years that has been a bumpy ride and the journey is now out of the sterling area. The annual results of Australia's biggest company show no sign that things are becoming any smoother. Although earnings were up 10% on last year at £37.5m, the future still seems too murky for the shares to be valued much above their present \$A12.30, still 47% down on their 1968 high. For while BHP is able to boost profits with the oil and gas that it is bringing in from the Bass Strait, the company is still tied to steelmaking and there it is in trouble. Last year oil and gas operations made an extra £6.7m, steel and minerals earnings dipped £3m.

When will Australia's steel mills turn the corner? Perhaps they never will. Steel has become a political pawn in Australia, as it has long been in Europe and the United States. And although BHP raised its steel prices in February by 5%, making a 13% rise in the last year alone, this has still not been enough to cover increased expenses. The federal government, facing an election year, is not going to permit prices to go any higher. BHP's steel production last year actually fell because both the export and domestic markets were weak. Even when production does pick up BHP will still face the unprofitable problems of the industry everywhere in the world. The investor should not count on any real profits growth from the company's steelmaking: his major hope should be only that it can stem any further setbacks.

BHP's exports of iron ore, however, could pick up rapidly now that the Japanese economy is on the rampage again. When the Japanese defaulted on their long-term contracts this made a sudden impact on BHP's profits. Even more significant was the fact that the contracts were foolishly fixed in dollars

rather than in yen.

BHP is rapidly transforming itself into an oil company. Last year the revenue from oil and gas sales grew rapidly, earning £17.5m, on most of which no taxation has to be paid immediately, although provisions have been made. As new oil and gas strikes are popping up all over Australia there can be little doubt that though oil profits are still smaller than those earned by the company's steel and mineral business, oil will be the moneyspinner through the 1970s. The way things look now it will need to be.

Biba

Growing up

The darling of swinging London shoppers, and of shareholders in Dorothy Perkins, the trendy and exotic Biba boutique, will be turning into a fully-fledged department store in September, 1973. Dorothy Perkins added a 75% stake in Biba to its more conservative fashion chains three years ago. It must be crossing its fingers that the massive expansion from 9,000 cluttered square feet on one side of Kensington High Street to 100,000 square feet of opulence in the House of Fraser store, Derry and Toms, over the road will not destroy that certain something which makes Biba such a magnet that what used to be the staid High Street is never going to be quite the same again.

Dorothy Perkins's stake cost £225,000, and Biba made something like £300,000 pre-tax profits last year out of the group total of £1.2m—accounting for much of the 37% profits jump. It clearly feels that the

Trendy and exotic

The return of electronics

The electronics industry seems to have come out of its bad patch and a report from Hichens, Harrison, the stock-brokers, highlights a number of interesting situations. After two unhappy years there are signs that the decline in Plessey's profits bottomed out in the financial year just ended, thanks partly to the better trading climate in America. The price war in micro-electronic components, which badly affected the profits of Alloys Unlimited, its American subsidiary, is petering out. The market is still competitive, but profits can be earned.

Some of the best prospects are to be found among the medium-sized companies. Aerialite will benefit from a continuing and strong demand from the consumer electronics market, while the building upsurge will further increase demand for its cabling and wiring accessories. The shares have never been highly regarded by investors, but with the likelihood of a record year they are looking attractive.

Louis Newmark imports and distributes wrist-watches—and is in the aerospace industry, a combination which the market has puzzled over. But the watches seem Japanese competition-proof and in aerospace the company's involvement is in an area unaffected by the downturn in the industry. Increasing consumer expenditure is helping Royal Worcester, another rum mixture of fine china and consumer electronic

components which seems to work.

Of the glamour stocks in the medium-sized range BSR and Racal have probably still got good long-term prospects, but as trading stocks they seem fully valued at present. However, Bulgin is still attractive, with a consistent record of increasing profits and high liquidity. This cash availability might tempt Bulgin into the market for some of the multitude of small unquoted companies which could complement its product range. Enfranchisement of the non-voting shares would give the company a lot more appeal.

Fidelity Radio has proved that when it comes to making radios and record players it can hold its own with the Japanese. The company only came to the market towards the end of last year and is not yet fully accepted, although the results for the year to end-March should have dispelled any doubts. Pre-tax profits jumped from £347,000 to £820,000, and are expected to top the £1m mark this year.

An electronic batch

	Price p	p/e
Aerialite	130	13.8
BSR	580	19.1
Bulgin	27	16.2
Fidelity Radio	200	16.5
Louis Newmark	235	12.5
Plessey	150	21.8
Racal	216	26.5
Royal Worcester	170	15.0

goose needs more room to lay its golden eggs: catering, furnishings, wallpaper and even coloured refrigerators will be added to the traditional Biba range of fashion accessories and the odd exotic item of furniture. Ultimately it hopes Biba will spread into the whole 200,000 square feet available in the store. If it works, Biba could soon swamp the 318 traditional stores in the group. Unless the golden goose dies of indigestion.

Sindona

He's popped up again

Officials of Franklin National Bank insist they do not know exactly why Signor Michele Sindona, the Milan financier, laid out \$40m for one million shares, or an 18.4% interest in the holding company, Franklin New York Corporation. The bank, with \$3.3 billion assets, originated in, and continues to be dominant in, Nassau County, Long Island, adjoining the

city. The officials note that the transaction was strictly between Signor Sindona's Fasco International Holdings and Mr Laurence Tisch, chairman of Loew's Corp, and a Franklin director. Mr Tisch received \$8.25 more a share than the market price on the day of the sale, and this inevitably has given rise to some scepticism about the transaction in the New York banking community.

For its part Franklin National is working hard to build up its international division and is hopeful that Signor Sindona will help to open doors for it abroad, with banks or corporations. Signor Sindona already owns sizeable interests in three American companies, Oxford Electric Corp, Argus and Interphoto. For the past year and a half Franklin has registered declining earnings, and it welcomes the Sindona show of confidence, no matter how obscure. A few months ago, Signor Sindona was spreading the word around that he had money to spend in the United States, and, with his plans for Bastogi in Italy thwarted, he is now spending it.

APPOINTMENTS

Economist

ESSO PETROLEUM COMPANY's Operations Coordination and Planning Department wishes to recruit an Economist for its Corporate Planning & Economic's Division. The Department is concerned with the planning of supplies of crude oil and products for the Refineries, with transportation problems and with the formulation of broad corporate objectives and plans.

The Division's economists advise both the Department and Company management on general economic trends, provides forecasts of energy and oil demand which serve as a basis for planning and participates in general corporate studies.

The successful candidate will probably be aged between 22 and 28 and either already working as a Business Economist or able to show high potential for this kind of work. He will be offered good opportunities for career development in the Company.

Replies, giving brief details of experience, should be sent to Head of Recruitment, (Ref: 2865)

Esso Petroleum Company Ltd,
Esso House, Victoria St.,
London SW1E 5JW

Wye College

(UNIVERSITY OF LONDON)

Research Assistant in
Agricultural Economics

Applications are invited for the above post from graduates (or other suitably qualified people) in agriculture, economics, estate management or similar disciplines. The successful candidate will be appointed for two years and will be closely involved with the design of a national survey of farm buildings, the collection of data and its analysis. Experience of survey work is desirable.

Salary will be in the range £1,200-£1,500 per annum with superannuation under the P.S.S.U.

Further particulars may be obtained from the Secretary, Wye College, (TE/22), Nr. Ashford, Kent, to whom applications should be submitted by 2nd August 1972. It is hoped that the appointment will begin on or as soon as possible after 1st September 1972.

Government of
Guam

AGANA, GUAM

DEPARTMENT OF
COMMERCE

Price Index Specialist

Immediate opening for Statistician and/or Economist with training and experience in design and maintenance of consumer price indices to assume position as Head, Cost of Living Office (a section within the Economic Research Center) concerned to maintain Guam Consumer Price Index.

Two year contractual appointment with negotiable salary offers recruitment and fringe benefits including round trip transportation for employee and family, thirteen (13) days annual leave per year, thirteen (13) days sick leave per year, subsidized government housing, subsidized life and hospital insurance, shipment of household effects (1,250 lbs. single, 2,500 lbs. family), and workman's compensation.

Interested applicants apply through curriculum vitae sent via air to:

John D. Gilliam
Chief Economist
Economic Research Center
Department of Commerce
Government of Guam
Post Office Box 687
Agana, Guam, U.S.A. 96910.

The University of
Manchester Institute
of Science and
Technology

The Frank Thomas Chair
in Industrial Relations

The Councils of the University and of the Institute invite applications for the Frank Thomas Chair in Industrial Relations in the Institute which is the Faculty of Technology in the University of Manchester.

The U.M.I.S.T. Department of Management Sciences is one of the oldest and largest centres of management education in the United Kingdom. It has 49 members of staff, including 5 Professors and is an interdisciplinary Department teaching more than 300 undergraduates reading for an honours degree in Management Sciences. There is a substantial research school with some 120 postgraduate students and a number of industry sponsored research projects.

The Frank Thomas Chair in Industrial Relations is one of the 5 Professorial appointments in the Department and applications are now invited from candidates who may be suitably qualified in Labour Economics, Institutionalized Collective Bargaining Systems, or Behavioural Sciences.

Salary within the Professorial range with superannuation under P.S.S.U.

Further particulars and application forms may be obtained from the Registrar, U.M.I.S.T., P.O. Box 88, Manchester M60 1QD, to whom completed forms should be returned as soon as possible.

COMPANY STATEMENT

Results to 31st March 1972 – Prospects for current year

- Turnover rose 29.9 % to £61.3 m (1971 – £47.2 m).
- Group Profit before tax rose 17.8% to £4,517,000.
- Taxation amounted to £2,049,000 leaving Group Profit after taxation of £2,468,000.
- Total ordinary dividends – 18% – cost £1.3m against 17% – £1.1m.
- The growth and development of the Company has been achieved by concentrating on instant detection and positive protection in relation to fire and crime.

“The outlook for the current year, on an over-all view of both home and overseas operations, is encouraging. With our worldwide spread of interests and the opportunities thus presented we are confident of another successful year's trading.”

LORD HAYTER, Chairman

Copies of the Report and Accounts can be obtained from the Secretary, Chubb & Son Limited, 14/22 Tottenham Street, London W1P 0AA. Telephone: 01-637 2377.

Further particulars and application forms may be obtained from Mr. J. E. Reilly, Cornwallia Building, The University, Canterbury, Kent. Completed applications (three copies) should be received not later than Friday 11th August, 1972 (Quote: A15/72).

CHAIRMAN'S STATEMENT

Mercury Insurance HOLDINGS LIMITED

The Annual General Meeting was held on July 18. The following are points from the circulated statement of the Chairman, Mr. Charles F. Hughesdon.

- Net retained brokerage for 1971 reached a total of £6,661,233, against £6,075,139 for 1970. Group pre-tax profit reached £2,051,966, against £1,988,745, and successfully maintained our unbroken record of higher turnover and higher profits in every year since the Company acquired the Stewart, Smith Group.
- A final dividend of 5.25p per share is recommended (1970-5p). This raises the total to 9p per share on the new capital as increased by the 1-for-7 scrip issue last year. The amount distributed to shareholders by way of dividends represents an effective increase of 17½%.
- A new subsidiary, Associated International Insurance Company, has been formed in the USA, initially with a capital and surplus of \$2,500,000, which will operate under the experienced management of the successful Transport Underwriters Association of California. In Canada, we are increasing the capital of the Coronation Insurance Company of Toronto, which is also under our control. The Company, which currently underwrites only in Ontario, will then apply for a Federal licence to operate throughout Canada.
- The growth of our overseas Companies continues to be most encouraging. Some 87% of our total income arises abroad or in foreign currencies, the greater part of which is outside the Sterling Area.
- Regarding the proposed merger with Matthews Wrightson Holdings Ltd., our two insurance broking operations are highly compatible, and a merger will have the effect of marrying two great insurance broking organisations, namely Stewart, Smith and Bray Gibb Wrightson, resulting in a large and powerful combination.
- I should like, on behalf of Mercury Insurance Holdings and the entire Stewart, Smith organisation, to pay tribute to Mr. George J. Stewart who retired from our Board at the end of 1971 after almost 50 years of leadership and inspiration as Chairman. I am glad to say he has agreed to become the Company's first President and in that capacity his unique experience and counsel will continue to be available to the whole Group.

Copies of the full report and accounts may be obtained from the Secretary, Mercury Insurance Holdings Ltd., 1 Seething Lane, London, EC3.

APPOINTMENTS

Industrial Consultant

Management Consultant required for major industrial group in the building products, construction and related fields.

The consultant would be required to examine the monthly figures of all subsidiary and associated companies and advise the companies concerned, and the Group. This is an important London based appointment in a wide salary range with long term future prospects after the initial settling-in period.

Please write giving full particulars, including details of past experience, present salary and salary required, stating any organisation to whom you do not wish your application forwarded to: Whites Recruitment Limited (Incorporated Practitioners in Advertising) 72 Fleet Street, London EC4Y 1JS attention of P. A. Watts (Ref. 6057) (EC) Interviews will be arranged by the principal in London.

LONDON SCHOOL OF HYGIENE
AND TROPICAL MEDICINE
Incorporating the Ross Institute
(University of London)
Keppel Street, WCI

Centre for Extension Training
in Community Medicine

Teaching Post in Health Economics
Salary according to experience

The Centre, under the direction of Dr. Roy Acheson, and closely associated with the Public Health Department of the School, will be concerned in the first few years with the retraining of doctors now engaged in medical administration for their role within an integrated health service. In the longer term it is expected that the Centre will provide continuing education for specialists in community medicine in the National Health Service.

This new post at the Centre will provide a challenging opportunity to help to rebuild the Service. The applicant must have been trained in economics; experience in the health field though desirable is not essential. Good facilities for research will be available. The appointee will be based in the London School of Hygiene and Tropical Medicine but will also be expected to participate on a regular basis in some of the activities of the Department of Social Administration in the London School of Economics.

Appointments can be for up to five years in the first instance and may, in suitable cases, be, or become, permanent. Superannuation under the FSSU scheme.

Applications, with the names of 2 referees, should be sent by Monday 14 August to the Dean. Personal enquiries to Dr R. M. Acheson.

Australian National
University

Chair of Administrative
Studies

Applications are invited for appointment to the foundation Chair of Administrative Studies in the Faculty of Economics of the University. It is hoped that the appointee can take up duty early in 1973.

The Professor will be expected to plan and implement a course of study leading to a new master's degree in Administrative Studies. The proposed degree, which is intended to give graduate instruction in management at an advanced level, will be oriented towards the needs of both the public and private sectors but will have special reference to the former. The University expects that the course of study for the degree will be concerned with a wide range of quantitative and behavioural academic disciplines and their application to government and business; the emphasis will be on the processes of decision-making and the use of economic analysis.

The salary for the post is \$A15,369 per annum.

The University provides reasonable travel and removal expenses and assistance with housing. Superannuation is on the FSSU pattern with supplementary benefits. Financial assistance towards study leave is also available.

The University reserves the right not to make an appointment or to make an appointment by invitation at any time.

Further information and the forms which should accompany an application may be obtained from the Association of Commonwealth Universities (AppU), 36 Gordon Square London WC1H 0PF (Tel: 01-387 8572).

Applications close on 18 September 1972.

APPOINTMENTS

Government Statistics provide the basis for decisions and policy-making in every area of national life. As a government statistician your training and skills are given full scope in highly professional multi-discipline teams, working on projects of major importance.

Candidates should normally be aged at least 27, with an honours degree in statistics, or in another subject involving formal training in statistics. They must have had several years' relevant experience. Starting salaries could be above the minimum of the Inner London scale quoted. Appointments can be either permanent and pensionable or short term (with FSSU). Promotion prospects to posts carrying salaries in excess of £7450.

Write for full details of these and other current vacancies, and an application form, to Civil Service Commission, Alencon Link, Basingstoke, Hants., or telephone BASINGSTOKE 29222 ext. 500 or LONDON 01-839 1696 (24-hour "Ansafone" service) quoting reference AA/619/S. Closing date 14th August 1972.

Ministry of Posts and Telecommunications

As a member of a small team of specialists covering all aspects of Post Office business, you will be analysing trends and demand-forecasts, considering efficiency indicators and advising the Ministry in its dealings with the Post Office. Experience of econometric model building would be an advantage.

ECONOMIC STATISTICIANS

£3653 — £4883

Department of the Environment

You will head a new branch concerned with estimates of the future demand for the resources required by the construction industry. This research will involve the development of long-term forecasts of construction activity and of relevant input/output relationship. You will work in close association with a steering committee of statisticians and economists and with research bodies and other organisations. You would need to have experience in econometric research.

STATISTICIAN

c. £4,200

We are a research team set up by an international group of companies to work on a variety of projects associated with crop research. A vacancy has arisen for a Statistician to work in this team, in particular with regard to sampling problems.

We are looking for someone, aged between 25 and 35, preferably with a good honours degree in mathematics and a post-graduate qualification in statistics, who ideally should have had

some experience in applying statistical techniques to agricultural problems. He or she should be interested in field work, experienced in programming computers and innovative in designing statistical experiments.

The appointment is initially for one year only, but there is a possibility that this will be extended. It will be based in the Home Counties within easy travelling distance of London. The salary will be around £4,200 but could

be more for a really exceptional candidate, and there is a 15% gratuity on completion.

In the first instance please write or telephone, quoting reference K7338/EC, for an application form. Completed forms will be forwarded direct and in confidence to the client unless addressed to our Security Manager listing companies to which they may not be sent.

PA ADVERTISING LIMITED,
2 Albert Gate, London SW1X 7JU. Tel: 01-235 6060

For further
appointments
see pages 5, 7, 92 to 96

Wye College

(UNIVERSITY OF LONDON)

Lecturers in Applied
Statistics (two
appointments)

Applications are invited from qualified graduates in Statistics or Mathematics with Statistics for the above appointments. Duties include teaching and advisory work in Statistics to undergraduates, graduates and research workers in Agriculture and Horticulture. Applicants should have teaching experience and an interest in applying statistical techniques to problems in the natural and social sciences. Salary, according to qualifications and experience, within the scale, £1641 to £3852 with F.S.S.U.

Further particulars from the Secretary, Wye College, Nr. Ashford, Kent. Closing date, 12th August, 1972.

Our jets don't move any faster. Our passengers do.

Our passengers are a step ahead of the rest. They're taking the lead in the development of a rich, expanding, wide-open continent: Africa.

To Africa, from Africa and within Africa, they fly Air Afrique. The only airline with the size and speed they want.

Like 84 flights a week. To 34 African cities. And every flight has one thing in common. Efficient, courteous, unobtrusive service.

Which we mean to expand still further. For instance, we're just about to introduce the first three giant DC10's the continent has ever seen.

At Air Afrique, we can't afford to hang around. Nor can our passengers.

THOMSON-CSF

The Annual General Meeting of the Company under the Chairmanship of Monsieur Paul Richard, was held on June 22, 1972.

The accounts for the financial year 1971 resulting in a net profit of Frs 33,592,916 after depreciation of Frs 69,126,000 and provisions of Frs 31,250,000 were adopted. The meeting approved a total dividend of Frs 4,875 per share (compared with Frs 3,75 the previous year) consisting of Frs 3,25 dividend distributed and Frs 1,625 tax already paid to the Treasury (tax credit).

The Board's report stresses the satisfactory overall expansion in the Company's activities during 1971 with the exception, however, of the Components Division where difficult trading conditions prevailed. Appropriate action taken earlier did, nevertheless, mitigate their effects whilst, in many other fields, the positions attained in the forefront of international competition were being maintained or improved.

The Company's own turnover reached Frs 2,329m including tax of Frs 2,077m after tax, against Frs 1,764m and Frs 1,566m respectively in 1970, the increase being 33%. Export sales contributed 38% with Frs 793m against Frs 530m a year earlier. Orders received during the year were up by 35%, the increase in export orders alone having reached 42%.

The consolidated turnover for the Group amounted in 1971 to Frs 3,823m including tax, Frs 3,404m tax deducted against Frs 3,369m and Frs 2,973m respectively in 1970, which is 13% higher.

The Electronic Equipment Division continued to make good progress and was particularly successful in markets abroad. Its turnover, tax excluded, has gone up a further 30% compared with 1970 and the orders booked are up by 35%. At the year-end, the order book exceeded Frs 3,300m of which over half was for the export markets. In his statement, the Chairman pointed out that the orders placed continued at a high level and that despite severe international competition, substantial contracts were in process of negotiation.

On the Components front, studies are in progress with a view to eliminating current losses and maintaining the Group's technical expertise. In the colour television section, an important agreement has been signed with an American company, the Radio Corporation of America.

In the field of Data Processing, the signing in August 1971 of the second "Convention Plan Calcul" is evidence of the Government's aid in favour of Compagnie Internationale pour l'Informatique—C.I.I., for the financing, in particular, of technical research. The prospects here as well as those opened up by the protocol of co-operation signed by C.I.I. and Siemens early in 1972 for rationalising and marketing their products, can be considered as a very favourable pointer regarding the C.I.I.'s future development.

Tom's job bit the dust when the pit closed

That was three years ago.

Since then, he's completed a training course and become a skilled tradesman—a Drilling Machine Operator. Tom is happy with his job—happy with the prospects that lie ahead.

In Irvine New Town, there are many people like Tom. Men who, having lost their former livelihood through redundancy, have retrained and are now skilled workers in industry.

And there are many more, eager to retrain once the demand for them increases. Once you bring your industry to Irvine.

Why don't you?

We've a lot to offer. Besides willing, trained staff, you'll find ample housing and well-appointed factory sites, prestige office blocks, convenient sea and air ports. And SPACE. Space to move to breathe. To expand.

Lots of it.

You'll find all that—and more—in Irvine New Town. But find out all the facts.

Rules of what?

The law lords have given the Industrial Relations Act a chance to work; but most of the establishment have interpreted the past week as necessitating further surrenders to mob violence. This is the tragic road that Britain may now tread, page 11.

The Aldington-Jones proposals for the docks are not a real solution; Mr Jack Jones's ineptitude is confirmed by the way that his dockers have called a national strike to reject them. The strikes in sympathy with the jailed dockers were far less crippling than a newspaperless Britain was led to believe, pages 57 to 63.

A public opinion poll warns Labour that twice as many Britons may broadly support Mr Heath as broadly support the unions, page 21.

Did he mean it?

Ulster's Protestants want real action against the IRA's strongholds, and they believe Mr Whitelaw has promised it to them, page 13. How other governments have dealt with their urban guerrillas, page 38.

Goodbye, Europe

If Mr McGovern did take more than half the American army out of Europe he might turn the clock back to John Foster Dulles's now quite implausible threat of massive nuclear retaliation, page 15.

The McGovern-Eagleton ticket is in bad trouble anyway, and there is growing Democratic pressure to get another vice-presidential candidate, page 42. Mr Nixon will run again with Mr Agnew, but could anything happen to Dr Kissinger?, page 41.

Sand in his eye

Mr Brezhnev is going to get criticised in Russia for the trouble his foreign policy has run into in Egypt and elsewhere, but he's not about to follow Khrushchev out of the door, page 16. Quite a lot of Russians are staying in Egypt, anyway, page 30.

Now the Olympics

What the Munich Olympics mean to athletics—and to Munich, page 54.

The economy

SIR—The *Economist's* espousal of a statutory incomes policy enforced through confiscatory surcharges on workers' national insurance contributions is probably the most effective of any of the schemes the Government must be considering. Your latest proposals for the conduct of the revived and renamed prices and incomes board arbitration body along the lines of the American transport legislation before the Congress is especially incisive. But, as you have already suggested, ministers must be trying to formulate a policy that is at once both economically effective and politically neutral, if not favourable. This means they must attempt to curb prices as well as wages at the same time when the depreciating pound sterling float will assure sustained price rises for many months to come. Because Mr Heath regards some form of price restraint as a political imperative, and with the breakdown of the CBI freeze in the coming months, it is desirable that we consider what forms of price control can be imposed that will make a statutory incomes policy more palatable politically, but at the same time doing little economic damage.

As you have noted, the Government should make maximum use of the Monopolies Commission's powers to enforce price competition but, beyond that, it may be advisable for them to act against management when it concedes pay increases beyond the established norm. Last summer the Treasury was considering this in the form of tax penalties against employers granting inflationary wages, but this alone, without the necessary sanctions against labour, could be relied upon only to swell tax revenues and prices, quite the opposite from what was intended. But, as a part of the statutory incomes policy which restrains wages through the tax system, the arbitration body could be empowered to prohibit price rises stemming from wages granted above the established norm. This would place equal burdens upon both labour and management to moderate wages since both would be penalised for exceeding the wage norm and would, with the other provisions already described in *The Economist*, provide the type of equity that incomes policies require to gain political effectiveness, without unduly undermining business confidence and profits necessary for new investment.

Finally, any statutory incomes policy must be followed up by a renewed look at the nationalised and lame duck industries and the subsidies that so expensively and inefficiently sustain them. As the

economy expands, the incentives for the Government's continuing of this unfortunate practice hopefully will be lessened and this sector can be put on an economic, subsidy-free level of operation.

If the Tories act wisely, for once they may find that correct economic policies coincide with their political fortunes.—
Yours faithfully,
OLIVER FISKE
Washington, DC

Gilt-edged market

SIR—The dilemma in which the gilt-edged market finds itself (July 15th) can be clarified by distinguishing between the jobbers' need for ordinary working capital and their need to finance the large occasional losses which can result from providing marketability in large lines of stock in a falling market.

The jobbers at present have few problems financing their normal business from internal sources and the risk capital they can now raise from outside companies with limited liability. The problem is in finding the resources to deal with the situation produced by the authorities' withdrawal of support and the losses that can result from the sharp movements in prices that sometimes follow.

I feel there are three possible solutions, in addition to that of reverting to the old system.

1. The market could become more like the equity market. The jobbers would restrict themselves to dealing in relatively small amounts and thus avoid developing extreme positions. Large lines of stock would be placed outside the market at a negotiated price and put through the market. The major disadvantage is that marketability would contract and the institutions become less willing holders, with a resultant increase in interest costs. This objection should not be overstated, however, since marketability would still be greatly superior to that in other fixed-interest markets.

2. The jobbing firms should be further opened to outside capital so that losses can be more easily borne. This solution would require greater profitability in good years and thus greater official generosity in the handling of the taps during bull markets.

3. A variation on the suggestion made by your newspaper could be adopted. This would involve some form of official insurance against losses made in a bear market and would enable the jobbers to lay off part of the risk of taking large net positions. This would protect marketability, thus avoiding the higher interest costs involved in 1, whilst it would leave the amount of stock held in the private sector unchanged and thus protect the new monetary policy.

Whatever the solution adopted, there seems no way of avoiding an increase in the cost of servicing the debt. Wider swings in gilt-edged prices and a greater potentiality for jobbing losses inevitably result from the emphasis now placed on

money supply. Some method of sharing the cost with the Exchequer will need to be developed if the authorities are to continue to enjoy the apparently incompatible advantages of easy marketability in their debt and the avoidance of wild swings in the monetary aggregates.—
Yours faithfully,
J. J. H. WORMELL
London, SW6

Ireland

SIR—I read once more in your newspaper a reference to members of the Ulster Defence Association as "UDA thugs" (July 15th). This continual use of this phrase implies either a continual lack of understanding or a deliberate attempt to mislead your readers into thinking "UDA = IRA." The Ulster Protestant working class is disgusted by the fact that the men responsible for blowing up its homes and its jobs, for murdering its menfolk and its children, are no longer hunted down and captured.

The UDA is needed to defend Ulster if no one else will; the Ulster Protestant working class knows the misery of the past three years, even if the liberals of *The Economist*, who walk a middle path when there is no middle path, do not.—
Yours faithfully,
BRIAN J. WATTERSON
Newtownabbey, Co. Antrim

SIR—Your article "Stabbing at Willie" (July 15th) makes some useful predictions about the fate of the Protestant extremists in a purely Irish battle, following a possible withdrawal of British troops from Ulster. But it could have posed two more questions that stem directly from these predictions.

If, after 50 years of partition, Ulster has not integrated its minority community, as is evidenced by the civil rights movement, then why should the Dublin government be any more successful in integrating a Protestant minority into a united Ireland? Secondly, the article does not explain why a smaller Irish army should succeed against extremists when the British army, by implication, may fail. Moreover, what would then be the legal status of thousands of Irish people who live and work in this country, not to mention those who are in the armed forces of the Crown?

I believe that the Cyprus situation has a certain relevance to this issue. In 1964 I visited the "no-go" areas in Limassol and Ktima following the breakaway of a Turkish Cypriot administration from the Cyprus government. Despite the comparative peace of the past eight years those Cypriot "no-go" areas are still there. The division of communities on racial and religious lines is a fact of life, however much one may regret its existence.

If, at some future date, the British Government is obliged, for whatever reason, to withdraw British troops from Ulster and public opinion in this country accepts the abdication of responsibility for part of the United Kingdom, then, by the same token, it cannot reject the pro-

MANAGEMENT APPOINTMENTS

£7000 PA AND OVER

Opportunity to exercise a high degree of autonomy—prospects exist to advance to the Board in the short/medium term

INVESTMENT ANALYST

—FOREIGN

LEADING INTERNATIONAL MERCHANT BANK

The requirement is for candidates aged 25-32 who have been trained in investment analysis and have a thorough knowledge of the U.K. market. The successful candidate will have been responsible for advising on investment policy and assisted in the management of sizeable funds. Further experience will have been gained overseas in investment in European and Foreign markets. He will have established contacts with foreign institutions and companies. He will be required to advise on investment overseas primarily in Europe, Australasia and Japan and will be expected to handle a sizeable portfolio (of several £ millions). Up to 35% European travel is likely. Languages are essential. Candidates must have the necessary mix of forcefulness, leadership and tact to contribute effectively as an authority in this field. Initial salary negotiable up to £8,000; contributory pension scheme; free life assurance; free B.U.P.A.; housing and personal loan facilities; assistance with removal expenses if necessary. Applications in strict confidence, under reference, IA3246/E to the Managing Director:

Campbell-Johnston Associates (Management Recruitment Consultants) Ltd., 35, New Broad Street, London, EC2M. Tel. No. 01-588 3588 or 01-638 0553.

DIRECTOR

for

A MAJOR TRADE AND EMPLOYERS ASSOCIATION

An exceptional opportunity for an individual with the appropriate experience to take charge of the national London-based organisation representing the vast majority of employers in one of the country's major capital goods industries.

Applicants for the post should have wide experience of administration and commercial work, including negotiations with Government Departments. Legal training would be an advantage, as would experience of industrial relations including responsibility for conduct of negotiations with trade unions and the preparation and presentation of cases although neither of these qualifications is essential. Salary no barrier for the right type of person.

Applicants should write to Box 2515 giving full particulars of their career.

Chief Executive (DESIGNATE)

Suva, Fiji c. £12,000 in local currency equivalent
House & car provided

The local sugar industry is the largest contributor to the economy of Fiji and raw sugar accounts for about two-thirds of total exports from the islands. Next April the Government assumes a majority shareholding in the company operating the milling and processing of all the sugar produced. A Chief Executive is required to join the board as soon as possible. He will be responsible to the board for the direction of all milling and processing activities, cane research and growers extension services.

The person appointed must be of outstanding character and experience. He should have the ability to lead an organisation which is acknowledged to be efficient and to secure the willing co-operation of the staff and work force. He should have the capacity and energy to establish satisfactory relationships with Government, growers and international buyers. Considerable experience of management at top level within a significant commercial or industrial enterprise and a firm sense of financial responsibility are mandatory.

Knowledge of the sugar industry would be an added advantage.

Age ideally early 40's.

Write in confidence, quoting reference 1120/E to: R. G. Birch,

Peat, Marwick, Mitchell & Co.,
Management Consultants,
Suite 401, Salisbury House,
Finsbury Circus, London,
EC2M 5UR.

For further management appointments see page 7

posal that the United Nations is approached to assume that responsibility. There may be enormous difficulties in funding and recruiting a peacekeeping force but in Ulster as in Cyprus, where there is still a UN presence, a political solution may take decades. But does it matter if a UN presence is of indefinite duration, like the civil police force of any country, so long as people are not being killed?—Yours faithfully,
I. M. PHILPOTT
Halton, Bucks.

Traffic

SIR—No one can fault the substance of your article (July 15th) on London traffic. However, it does make some surprising statements. In what sense does a moving car take up 12 times as much road space as a parked vehicle? This can be interpreted in a variety of ways, none of them particularly relevant to the topic of traffic management. It, nevertheless, does seem to lead on to your next conclusion: "Surely the person who parks his car most of the day, instead of moving on every hour, should be encouraged?"

Such arguments typically follow from the use of physical engineering criteria to decide the optimum use of road space: a moving car occupies 12 times as much road space as a parked vehicle, therefore parked vehicles should be encouraged! An engineering-economist views it in a different light: you encourage those journeys which produce the highest surplus of value over cost. That is what road pricing is all about. By raising the perceived user cost of each journey the price gradually discourages marginal users (those whose surplus of value over cost—and hence whose willingness to pay—is less than the price) until the optimum volume and distribution of traffic is reached.

The length of journey and duration of parking are only indirectly relevant to this process. The surplus of value over cost is generally a function of the effective alternative means of transport. Long-stay parkers are mostly commuters for whom such alternative means usually exist (although the level of discomfort on most London commuter services greatly reduces their attractiveness). Short-term parkers are more heterogeneous: they include salesmen, mothers taking children to the dentist, visits to people in hospital, other personal business and recreational trips, and—particularly in London—circular rather than radial journeys which are not served by commuter rail lines. The net result is that the short-term parker, who either does not find or does not consider any other means of transport an "effective alternative," is usually the person who derives the highest surplus of value over cost. That explains why so many local authorities, contrary to your own advice, penalise long-term parkers.

One final point. You argue implicitly that parking controls (charges) are less efficient than road pricing. In London this is doubtless true. But there is great

danger in generalising from London premises to national prescriptions. For example, in Oxford, and I suspect the same is true of most small- to medium-size provincial towns, the 1966 traffic survey showed that over three-quarters of the vehicles in the central area stopped and parked. It is doubtless more now that the by-pass and the Marston Ferry link have been completed. Considerable control can, therefore, be exercised over moving vehicles by levying charges on stationary (parked) vehicles. For on-street spaces this requires little more than "pay and display" equipment (which avoids the need for elaborate "street furniture") supplemented, perhaps, by books of daily tickets and season tickets. Public off-street spaces present no problem; private off-street commuter and short-term spaces could be dealt with by giving local authorities the power to raise local taxes (rather like rates) on such spaces.

Since any "efficient" method of regulating urban traffic must deduct the cost of implementation and enforcement from the net benefits attributable to the reduced traffic flows, it may be that a fully fledged road-pricing system does not always represent the most efficient solution outside the major conurbation areas. I would, therefore, argue that a practicable balance between different forms of transport in an urban area can be achieved quickly and efficiently by means of parking charges, without having to wait 10 or 15 years until an elaborate system of road pricing is introduced.—Yours faithfully,
IAN G. HEGGIE
Oxford

Tourism in Britain

SIR—I was rather surprised to read in your article "It's a trade surplus again" (July 15th) that the British package holiday industry has been successful in persuading its clients to take off-season holidays abroad. I am inclined to think that one of the effects of a devalued pound would be a decrease in travelling abroad; this will at least be the case if the exchange rate goes down as low as \$2.20.

On the other hand, a devaluation following a period of floating will draw more foreign tourists to England. I can, however, very well understand why this might lead to an incipient tourist backlash. Being at present one of your foreign visitors, I take your point that London is full of tourists and that the tourist boards have been only moderately successful in their efforts to spread foreigners to other parts of the country.

However, I fail to see why. I spent last week in High Wycombe, only an hour away by train or car from the main shopping centres in London. The countryside is extremely beautiful, there are many interesting places to visit, hotel rooms are easily available at a much lower cost than in London, and the air is less polluted. Oxford, Henley, Marlow, Maidenhead and Windsor Castle are within easy

reach but, nevertheless, you will not find a single foreign visitor in this part of the country.

It stands out a mile that your tourist boards are not clever enough. With a better information service, better advertising and by making the agencies of British airlines and travel bureaux in foreign countries more effective and informative, I personally have no doubt that you will succeed in spreading tourists to other parts of the country and make Britain much more attractive to foreign visitors.

This adds up to the conclusion that because of the increasing costs to Britons of international travel and the decreasing costs for foreign tourists in Britain, your tourist account could be kept out of the red in future.—Yours faithfully,
ODDVAR SVENSDSON
High Wycombe, Bucks.

Bus v. train

SIR—The Tyneside Passenger Transport Executive is responsible for the development of an integrated system of public transport for the area. It was, therefore, with interest that I read your article (July 15th) about the comeback of the bus and the statement about bias in analyses that have been carried out by or on behalf of ourselves.

The bus plays a very significant role in Tyneside today and all of our studies have demonstrated that it must continue to do so in future. However, in all large urban areas there are corridors with high density movements which are especially well catered for by reserved track systems, particularly as traffic congestion increases in the next two decades.

Tyneside already has an existing rail system, which, however, needs to be improved by the addition of links in the central area in order to provide the standard of accessibility necessary as a publicly acceptable alternative to the car, and to tackle its particularly difficult river crossing problem.

This conclusion was not reached without a thorough examination of the alternatives available, starting with a land-use/transport study which recommended a strategy for the future. In this study the balance of investment between road and public transport was carefully examined. The executive nevertheless felt it necessary to satisfy itself that the most appropriate public transport technology would be adopted. Both all-bus and reserved track bus systems were examined by our consultants, Alan M. Voorhees. Although they have recommended such systems in a number of cities in various parts of the world, this was not the case in the particular circumstances of Tyneside. It is not helpful to make sweeping generalisations about the appropriateness of a particular public transport system without detailed examination of local conditions, any more than it is about the balance of investment between roads and public transport.

Tyneside having developed a strategy and the executive having assured itself

MANAGEMENT APPOINTMENTS

£7000 PA AND OVER

Prospective Partner—City Chartered Surveyor

c. £7,500 p.a.

A leading Partnership of Surveyors, Valuers and Estate Agents has expanded steadily in recent years. They continue to expand and now wish to fill a senior position from outside the Firm. The man appointed will be responsible for extending their existing practice in the City of London. He will be of such a calibre that he can expect to be offered a Partnership after demonstrating his ability in the appointment. Candidates must be experienced in handling shop and office properties; be thoroughly conversant with the City and have held a senior appointment

in a City firm for several years. They are likely to be Chartered Surveyors and will probably be over 30 years of age. Salary will be negotiated and is unlikely to be less than £7,500 p.a., with other benefits.

All applications will be treated in strict confidence and no information will be disclosed to our Client without permission. Please write to us giving details of current salary and appointment and how you meet our Client's requirements, quoting reference PP/3261/E on both envelope and letter.

Urwick, Orr & Partners Limited Selection Division
2 Castle Lane London SW1E 6DL

**Islington
Council**

Invite applications for the post of

CHIEF EXECUTIVE and TOWN CLERK

The person appointed will be:

- Head of the Council's paid service and its principal adviser.
- Manager of an inner urban authority and will contribute to the solution of its fundamental problems.
- Responsible for the effective implementation of policies, programmes and plans developed by the Council.
- Able to demonstrate proven outstanding ability for top management in Local Government.
- Required to advise on the future development of an evolving pattern of top management.

The appointment will be subject to three months' notice on either side. The salary scale—£8,569 x £198(4)—£9,361 per annum comprises (i) the maximum laid down by the Joint Negotiating Committee for Town Clerks in the appropriate population range, and (ii) a sum (currently £1,390 per annum) in lieu of fees for electoral registration and election responsibilities.

Application forms (returnable by 25th August, 1972) and further particulars are obtainable from the Personnel Officer, Islington Town Hall, Upper Street, London, N1 2UD. Tel: 01-226 1234 ext 300.

For further management appointments see page 5

of the appropriate technology, a further analysis was carried out to ascertain the return on the total investment to which you refer. This return was most attractive, particularly when compared with a number of similar investments in other cities. It confirms the wisdom of developing urban rapid transit on Tyneside as part of a comprehensive transport system, which is the conclusion that many other metropolitan areas in the world have reached. Furthermore, this return was calculated on the total investment and not on Tyneside's share alone, as implied by you.—Yours faithfully,

TONY M. RIDLEY
Director-General,

Tyneside Passenger Transport Executive
Newcastle upon Tyne

SIR—I read with interest your article entitled "On the comeback trail" (July 15th).

Residents of the eastern suburbs of Ottawa found themselves in the same position as those of Reston, although in Ottawa's case the distance involved was a mere seven miles from the suburb to the central business district.

The community associations failed to obtain a suitable service proposal from the Ottawa Transport Commission and a group of transport engineers and economists organised their own bus service using standard North American school buses. With no stretch of the imagination can these buses be considered luxury equipment, as they are designed for carrying children, yet the service proved tremendously successful, carrying 63 people on the first day of operation in July of 1971 and building very rapidly to over 600. The ridership is still increasing after over a year of operation.

After less than six months the service to and from downtown Ottawa had a working profit of \$3,500. After that time the weekly surplus was used to provide

off-peak services in and around the community. The off-peak service is now extremely popular and almost self-supporting.

The secret of the success lies in the fact that the riders consider it their service and most of them know the driver's Christian name. When a person is late at the stop the bus waits, and when the bus breaks down, as has happened on occasion, riders understand the situation and accept it cheerfully.

I, too, am concerned about the Voorhees recommendation for Tyneside. As an undergraduate in Newcastle I worked as a conductor on bus routes north of the Tyne and, following graduation, was a member of the team that carried out the first transportation study of Tyneside. Before committing large amounts of money to upgrading the railway network, perhaps the consultants should come to Canada and examine our service. It is indeed ironic that Americans are giving the Tyneside PTA bad advice while expatriate British are showing North Americans how to run a profitable bus service.—Yours faithfully,

PETER F. WICKENDEN

Ottawa

SIR—While London Transport agrees that the case for buses is sometimes understated, it cannot reconcile with its own figures the diagram (July 15th) purporting to show bus/underground costs. Nor can it accept that "London Transport pays over £10m a year in signal maintenance for the underground alone"—the real cost is but a fraction of this figure. Add to this the fact that the ratio of staff to buses and trains on the London Transport system is rather closer than that for the world "average" quoted, and it becomes difficult to understand why London Transport was chosen to illustrate the thesis that in economic terms the bus scores over the train. In London Transport's view, both bus and rail have a part to play in creating economic efficiency and a satisfactory environment.

In any case, there is little question of buses replacing Underground trains.—Yours faithfully,

F. E. WILKINS

Chief Public Relations Officer,
London, SW1 London Transport

Hospital insurance

SIR—I recall that a few months ago Dr Wyndham Davies accused you of not having read a book of his before you reviewed it. I am quite sure that he has not read either your comment (June 10th) on the hospital cash schemes or the advertisement for these schemes. Otherwise he would have realised (Letters, July 15th), first, that your criticisms were rightly directed solely at the effect of the schemes on health service patients; secondly, that the money paid out under them, whether to health service or private patients, does nothing to help "an ailing" health service, as he calls it. The tax-free cash goes straight into the pockets of the

patients admitted to hospital. It is not intended as insurance against the cost of private medical care in hospital, for which, of course, it is grossly inadequate. The publicity for the BUPA scheme made this distinction perfectly clear, and I am surprised that Dr Wyndham Davies, who evidently regards himself as knowledgeable in this field, has not grasped it.—Yours faithfully,

ANN GEORGE

London, SW1

Mayor Daley

SIR—In the Illinois primary election this spring, the insurgent candidate for governor and the ex-Daley candidate for state's attorney both won clear victories over Mayor Daley's "machine." Perhaps the Democratic party is merely more in tune with the voters than even the usually realistic analysts at *The Economist*, in excluding the mayor from the convention.—Yours faithfully,

B. L. ROCKWOOD
Blairgowrie, Perthshire

Currencies

SIR—On page 105 of the July 1st issue you suggest that an effective dollar premium of around 10 per cent would be little different from the 8 per cent premium at which the finance franc in France is quoted above the commercial franc.

The purposes of the two rates—and therefore their effects—are quite different. Britain puts a premium on foreign currencies, but France on the franc!—Yours faithfully,

WERNER ROSENMEYER

London, EC2

O1

SIR—In editorials of the issue of *The Economist* dated July 15th references are made in opening sentences to the IRA, the UDA and the IMF without previous statement of the names in full. Happily these initials are not unduly cryptic. Yet as a newly-registered OAP (by no means a VIP or a DBS) recently returned to the UK (neither by BEA nor by BOAC but by VW) from the country in which BAOR is stationed, I am sometimes confused by the plenitude of initials that we are all supposed to understand instantly.

Would it be cheek to remind a paper with an international circulation such as yours has that in Germany, for instance, the initials MCC stand first for the Mainz-Carneval Club and BBC for Brown, Boveri, et Cie? I think your own EIU would confirm this.

But you are by no means the worst offenders. I like to think that this letter may be noted both at PHS and the HQ of the FT.—Yours faithfully,

KR (NHS NR ZH 4711866 N)

Stogumber, Somerset

P.S. Have just addressed a letter to my son, who works at a place known traditionally as Cheltenham but now further identified as GL50 4RQ.

PROPERTY

A choice of superb office accommodation available in King Street, Manchester.

The two buildings available are situated in the financial district of the city. One building, number 82, is the former Bank of England building dating back to 1845. It has been cleaned and modernised and offers a superb banking hall and offices

totalling 9,000 sq. ft.

The second building, Edward House, is adjoining. It is a prestige 9 storey block with air conditioning and two high speed lifts. The total office area is 42,000 sq. ft.

Rule of what?

The British people need to recognise the nature of the industrial, social and political crisis that has been confronting them in the past week. Unless we learn and apply the lessons of it, the same crisis is going to occur again and again and again.

The key industrial point is that imprisonment was always the least desirable sanction to use against the dockers' leader, Mr Bernie Steer, and the other four mock martyrs who so eagerly sought their four days in Pentonville jail. In any sensible industrial system the right sanction against the likes of them is not jug, but the sack. If they persist with their unlawful industrial practices, they should be dismissed from the trade union whose rules they will be flouting, and then from the docks where they will be steadily rendering all jobs uneconomic: arguably with due compensation for the loss of those jobs, but more arguably not.

The question now before the country is whether the one happy event of the week—the law lords' reversal of the decision by the court of appeal that had temporarily crippled the sensible working of the Industrial Relations Act—will be sufficient to bring the restoration of some system of this kind. If it does not, if the abiding memory from this week is merely going to be the release of the unrepentant Mr Steer amid tunes of glory, then the country will have passed in these past days from the rule of law to the rule of something very undesirable indeed.

Continuing crisis

This is what the continuing social and political crisis is about. It is not about whether a further emotional split has been created between the apostles of Mr Steer and the implacable middle-class haters of trade unions (although both these minorities have grown this past week). It is not about whether the Conservative Government has been made to look bumbling or hard-faced, or whether the Labour party has been made to look the toady of the shop stewards who control its paymasters

(see page 21). It is about whether Britain is to be governable under any democratically elected administration, with the courts protecting the weak; or whether the real powers of decision are to pass to marauding protection rackets which successive governments, and then gradually courts of law, will consider it "realistic" not to oppose.

If those who use mob violence to break laws they dislike are confirmed in real power, there will be three further results. First, everybody knows that they will become more violent and corrupt—and in a personal and venal sense, not merely their present power-seeking one. Secondly, British governments will keep on yielding to something worse than the present rate of inflation, which is already on course to make the value of the pound less than the value of the penny during the average adult lifetime. Thirdly, Britain will implement any new industrial methods, at a time of breathless technological change, only at the pace approved by those who are operating the old methods. Just as Britain led the world into the nineteenth-century industrial revolution because it was the first to overthrow the protectionist squires in favour of the free trading merchants, so it may have been deciding this week that our children's income will fall behind that of all the rest of the industrial world in the new technological revolution because we are now ready to cede power to the protectionist trade unions.

Politicians of both parties are disguising the extent of this crisis from themselves and from the public by what can politely be called deliberate muddles, but can more accurately be called popular lies.

Nothing to do with the act

On the Labour and trade union side, the most deliberate muddle and most popular lie is that Mr Steer was imprisoned because of the Tory Government's Industrial Relations Act, and that everything will be all right when it is removed. This is the reverse of the truth, because action would have been taken against Mr Steer and his companions under the law in any country; as Mr

Justice Megarry intimated in the Chancery Division last week, an injunction would actually have been enforced more promptly against them under the law as it operated before the Industrial Relations Act came into effect. Under any system of law we would all soon be asked to move on if we tried to stop all tradesmen entering the house of the Archbishop of Canterbury, on the argument that we personally felt that we were better suited than he to fill his job; and Mr Steer's pickets had no greater right than that as they stood all this summer outside the gates of Midland Cold Storage, a workplace where they had never been employed. The peculiarities of the British system are that members of Mr Steer's army were drawing full fallback pay under Lord Devlin's dock labour scheme of 1967 even while they were on these marauding picket lines; they were thus forcibly financed by the timorous port employers from whose industry they were trying to debar the most efficient method of packing. They were also threatening angry lorry drivers with nationwide blacking under the aegis of the trembling Transport and General Workers' Union which was paid equally, not merely by the dockers, but supposedly also to protect those lorry drivers and some of the unfortunate container depot workers whose jobs they were trying to pinch. The five dockers' imprisonment when they refused to obey the judge's order to cease this picketing was not the result of the Industrial Relations Act, but a symptom of the unique British mess and the weakness of British trade union leadership that the act was passed to try to clear up.

Lord Denning's hiatus

The real charge against the act was that it was apparently sufficiently obscurely drafted for Lord Denning and other learned judges in the court of appeal to believe that it had not laid down what its advocates during its parliamentary passage had always proclaimed was its main purpose: namely, to make it possible to fine large trade unions until they dismiss from membership—and therefore, in union-shop industries, from their jobs—those who persist in calling unconstitutional strikes or other unlawful industrial actions. On Wednesday, Lord Wilberforce and four other law lords unanimously decided that the act fortunately had always ruled what its authors had always said. This gives the act a chance to work in the way originally intended, but after a hiatus in which the atmosphere has been made more difficult by Lord Denning's caution. Some Conservatives have started running for cover, and the forced surrogate sanction of marching the martyrs in and then out of jail has made the past week appear to be a triumph for all the glib forces of defeatism again.

Not so much a strike, more a way of life

How British industry reacted to the week of protest strikes and, outside the docks and Fleet Street, carried on with its holidays—and sterling didn't even notice, pages 57 to 63.

The Conservative Government now wants to suppose that a lasting solution will be found through such fashionable seekings for a consensus as the report that has been jointly sired by Lord Aldington and the leader of the TGWU, Mr Jack Jones. One part of that report is to be welcomed, although it is typical lame dockery that the Government is to pay the bill. Since the economics of containers will make it logical to cut the number of Britain's dockers by about another half during the coming few years, it is right and humane to offer large severance pay (see page 57) to ailing and older dockers who will voluntarily depart. But two other Aldington-Jones proposals are typical of the country's most recent mistakes. First, the report seeks to end the "unattached register," on which idle dockers have hitherto rested with reduced fallback pay, by promising permanent employment to all dockers even if they are not really needed; this will allow the grossly underemployed men who slope off to join Mr Bernie Steer's marauding pickets to draw even higher pay while doing so in future. Secondly, this promised retainment of surplus men is matched by an even more undesirable half-promise of the retainment of surplus land. Within a few years cargo handling should have been totally removed from the big cities like London and Liverpool, and the vastly underutilised acres around the ports should be diverted to scarce housing. But the Aldington-Jones report plans to collect singularly inappropriate new industries on these sites, rather than to require generously pensioned-off dockers to take a fivepenny bus ride to other sorts of jobs.

A nation of rearguards

On Tuesday, when the television and radio news was talking of near-paralysis, some 80,000 workers were taking industrial action in sympathy with the five men in Pentonville; 24½m other workers were not. The Trades Union Congress's reaction was merely to authorise a one-day sympathy strike next Monday which would have been a fairly painless way of taking a long summer weekend. One-day strikes are a way of doing one's thing without seriously disrupting much; providing the TUC would give more notice, they might be an inexpensive European habit to pick up. But the composition of the 80,000 who took sterner and earlier action was interesting. The two biggest groups were two distribution foci which, like the docks, must soon be moved out of the central cities: Fleet Street, from which the machining and distribution, as distinct from the writing and composing, of daily newspapers must surely be switched within the next two decades; and the Smithfield and Covent Garden markets, which are likely to be replaced by a collection of telephone lines and a computerised master-distribution plan even earlier. The other workers voting for early sympathetic action with the docks included some mainly marginal coal mines, London's loss-making but not unanimous busmen, parts of the aircraft and airport industries, parts of Rolls-Royce. . . .

It is natural that the embittered rearguards of dying industries should become the sullen vanguard of protectionist trade unionism. But reformers should be very

careful about supposing that there is anything progressive in marching in step with them. The dockers are now being built up into a privileged and undismissable hereditary class who will be paid about one-third more than the average industrial wage even when they are not wanted; they pass this hereditament from father to son in a system that reeks of nepotism, and in London offends against such things as racial discrimination legislation; they are now being further rewarded for breaking the law and trying to steal poorer workers' jobs.

Mr Reg Prentice, Labour's shadow employment minister, who knows how many non-martyrs make five, courageously said last week that Mr Steer and his companions "had been looking for martyrdom for weeks and did not deserve the support of the workers." He was promptly contradicted by Mr Wedgwood Benn and Mr Tom Driberg. To nobody's surprise, Mr Wilson and Mrs Castle then straddled between the two camps. Mr Vic Feather told Mr Heath that he was "not prepared" to keep his word to talk to the Government about incomes policy last Tuesday, because this was obviously "absolutely impossible" while any trade unionists were in jail. Mr Feather often is "not prepared" for a lot of things, and habitually does find it "absolutely impossible" to keep his previous promises about anything. That is why it always seems futile to pretend that an incomes policy can be based on any voluntary agreement with him. There is now so much manoeuvring by both the unions and employers to try to avoid any direct responsibility for a compulsory incomes policy that the Government should recognise how little it can expect from either, and hurry the inevitable statutory policy along.

Unfortunately, the probability is that it will still try to do the opposite. Mr Heath came in with many good intentions, which he has done his best to make good. But the record now shows one retreat after another in the face of the implacable conservatism of the British unions. The unrepeatable moment of opportunity for the Heath Government came in the winter of 1970-71 when Mr Robert Carr should have torn up the first Wilberforce report which pretended to recommend a rise of around

12 per cent for the beaten and hugely resented electricity supply workers, but on a formula which all except the wilfully blind could see would mean something like 20 per cent. Mr Carr could have changed the history of the Government if he had stood before Parliament and declared that he utterly rejected that men who had killed old people by interrupting electricity supplies should be rewarded in this way. Instead, he thanked the court of inquiry for what it had done; and the course was set for the cruel inflation, unemployment, Government surrenders and union violence that have disrupted British society ever since. The miners learned for the next winter that it would pay to interrupt electricity and other vital supplies, and the railwaymen prepared to do so too.

Rent strikes next?

The fear must be that this latest confrontation over Mr Steer will be widely interpreted as another defeat. This could still be averted if the law lords' decision caused both nationalised and private employers to press forward determinedly to draw damages from unions unless they discipline those who run unconstitutional strikes. But it is rather more probable that this week's further retreat will lead to further debacles. As an example, the Housing Finance Bill is due for implementation in the winter. Some Labour-controlled councils may now refuse to raise council rents even for richer tenants; when action is taken against them, there may be calls for rent and rates strikes, which it may become popular to obey; and another lurch will have been taken towards ungovernability in Britain under any sort of government. The awful fascination this week has been to see the British public once again kissing the rod that they so love to lay in pickle for their own backs. The national press was shut down, but television predictably talked of "new hope" when the Official Solicitor appeared and of new dangers when the law lords fined Mr Jones; stock market prices rose as the dangers of surrender rose, and receded as they temporarily receded. Perhaps when the gods would destroy a country they first make its communicators and financiers mad.

They want action

Ulster's angry Protestants want to know if Mr Whitelaw meant what they thought he meant about destroying the IRA

Many Protestants in Northern Ireland say they are waiting hourly for the army to recover the Bogside and Creggan areas of Londonderry as well as dominating and searching the Catholic districts in Belfast which have been sheltering the Provisional IRA. They like what they hear about the discovering of explosives, although they wonder why the army was not searching before; but they insist that even more drastic action is their due after the 27 explosions in central Belfast last Friday, which killed nine civilians and injured 130. They say that even street-fighting in Londonderry would be under-

stood by many Catholics in the north and accepted in the republic because people everywhere in Ireland were horrified by what the IRA did. They say, above all, that this is what Mr Whitelaw has promised them. In the Commons on Monday Mr Whitelaw declared:

No one can deny that the Government have now an unchallengeable right to ask this House, this country and indeed the whole world for their support in an absolute determination to root out the IRA and destroy their capacity for further acts of inhumanity. Mr Whitelaw was also understood to say something else

which the Protestants are not going to forget. When the Unionist leader, Captain Orr, asked for an undertaking

that neither he nor his ministers, nor his advisers, nor any emissary on his part will ever again sit down with representatives of the Provisional IRA,

Mr Whitelaw was heard to reply

You can have that now.

These are very strong words; they express Mr Whitelaw's disgust for what the Provisionals had done, once more, to ordinary people in Northern Ireland, but were they words of the moment, heartfelt at the time but not committing him to a dramatic change in policy? In short, did Mr Whitelaw really mean what the Protestants think he meant?

The chance to go in

People in Britain and Ireland alike have been repelled by the Belfast bombings; noticeably more than they were after the Abercorn restaurant went up in Stormont's day. Few have tried to justify the Provisionals: certainly not Mr Lynch in Dublin, not the Labour left wing, not Miss Bernadette Devlin. Mr Whitelaw himself knows that the Provisionals who are now in charge have had only one aim: to discredit and nullify him. So, the Protestants argue, there could have been no better time for the army to go into the Bogside, or anywhere else that the bombers are harboured, than last weekend. It may be that the army will still go in, that the patrols which the IRA has not troubled to fire on are the serious beginning to such an operation, not a public relations exercise to convince some Protestants that the army actually has things under control. But if the army delays much longer the Protestant reaction is likely to be that the opportunity to carry out Mr Whitelaw's promise has been missed because he got no support in London.

If the army does not go in, then the Ulster Defence Association and other militant Protestant groups are themselves committed to take action. And if they do it will be the first stage in a civil war. Some Catholics have always affirmed that the UDA does not have the arms to take the IRA on. But it may have that potential (or could readily acquire it) and, as a working-class movement, it could probably count on greater British sympathy, especially in the Labour party, than the Vanguard movement, which the UDA despises because it is run by Stormont politicians. The UDA, by refusing (like Mr Brian Faulkner) to go along with Mr William Craig's rent and rates strike, has improved its political standing in London: eventually, if it plays its hand right, it could even eclipse the Rev. Ian Paisley in the trusting estimation of English politicians of all parties. But a settling of scores in the Bogside would not be the way to achieve that. So far the UDA is saying no more than that it will start to operate an economic blockade, something that the Protestants have regularly called for from the authorities. If it were to look even partly successful the IRA would be bound to retaliate.

Against this, the conciliators say that the IRA's bombings have finally appalled the Social Democratic and Labour party, so that it has agreed to talk to Mr Whitelaw without insisting on the release of all the interned first (see page 22). This is a useful step forward, and the SDLP's brave condemnation of the Provisionals is particularly helpful. But this sort of step, although it would have been invaluable to Mr Whitelaw just three weeks ago when his first initiative still seemed to be making headway, may not be enough to satisfy the Protestants. There is very little real political life in Northern Ireland since Stormont was shut down; that is why the initiative has passed to those in the streets, like the UDA, who depend on force for their authority and support.

The British Government was so committed to conciliation and a low military posture right up to the Belfast bombings that it is still difficult to envisage a radical change in tactics now. A Government that attaches importance to getting on terms with the SDLP may not wish to jeopardise things by risking widespread Catholic resentment, even by authorising too many assiduous searches for arms, far less by going through the Creggan. This is a matter of judgment about the feelings of the majority of the Catholic community in Northern Ireland. It is also a matter of judgment about feelings in the Lynch government and the republic generally. Mr Lynch and the other party leaders in Dublin have no love of the IRA at all, but how would they react to what would be presented as the suffering of harmless Catholic families? Even more, could Mr Heath risk a situation in which he might have to present himself at the gates of Europe on January 1st at war, or something like war, with another member of the community?

The risks grow greater

It seems that the army has been told to do enough to make life difficult for the IRA again, and especially to pick up suspects who may or may not be ready to sing to the authorities but who will be supposed by their colleagues to have done so. If this is made evident enough it may just keep the Protestants content to stay on the defensive themselves. It may not alienate the whole of the Catholic community or Mr Lynch. So something can be built up slowly in reviving a form of political life in Ulster and preparing the way for the consequences of both Irelands joining Europe together. But the risk of Protestant action is now much greater than it was a week ago—precisely as the IRA intended. If the Protestants do try anything they will lose what new, temporary British sympathy they have acquired since the bombings. That, too, is what the IRA wants. If the army had gone in immediately last weekend the political fallout would have been nasty but perhaps tolerable. Mr Whitelaw knows better than anyone that if the army goes in now and a bloody battle ensues then it will be something the Provisionals and their reviving apologists will use, with all the parade of heroes and martyrs and innocent victims, in the next round. But it may be necessary one day, just the same.

John Foster McGovern?

The trouble with Mr McGovern's ideas about defending western Europe is that they could take us back to the days of massive retaliation

President McGovern, if that is what he ever manages to become, is not going to cut the number of American troops in Europe from 300,000 to 130,000 at a stroke. That was the figure he gave to the Senate in January, and he repeated his arithmetic to a congressional committee as recently as June 16th. But at least in June he did say that the withdrawal would be done gradually, and would need consultation with the European allies, if not exactly their consent; and since then he has seen the Democratic convention draw up a platform which carefully avoids specifying how big the cut should be, and he has said in accepting the Democratic nomination that he will keep the American armed services strong enough to "meet any danger" to "our old allies in Europe."

The saving grace that pulls politicians back from unconsidered promises as election day approaches is already at work on Mr McGovern, and it will very likely extract further qualifications from him by November. Yet the fact remains that his own commitment to that figure of 130,000 has not yet been retracted; that the promise to withdraw more than half the American army in Europe apparently does not depend on the Russians cutting their forces, or the west Europeans making good the difference; and that, on any examination of what such a unilateral American withdrawal would do, it is hard to believe that Mr McGovern has thought this business through.

That is why, if those west Europeans who spend any time at all thinking about the problems of defence had the vote in November, most of them would be voting for Mr Nixon; and that probably includes most members of Europe's social democratic parties, who would otherwise find a lot to attract them in Mr McGovern's attempt to make the Democrats into something more like their own sort of party. Of course, self-interest comes into it too. It is very comfortable for Europeans, even if it is also increasingly unfair, that the three main countries of western Europe should be spending less than 4 per cent of their combined gross national product on defence when the Americans are spending more than 7 per cent of theirs. But even if you assume that defence budgets, like income tax, should be raised on a progressive basis—the richer you are, the more you contribute—there is no longer any reason why the United States should be that far up in the supertax bracket all by itself. The European members of Nato have already started to show that they feel embarrassed about it. They are putting up an extra \$1 billion for defence this year, and although much of that will probably go on the rising cost of new weapons and soldiers' pay it should do something to redistribute the burden between Europe and the United States. Who knows, it might even be possible to provide a bit more money in the shape of offset payments, that rather bogus arrangement by which the Europeans claim to be covering

most of the foreign exchange cost of the American forces in Europe by buying American goods (most of which they would probably be buying anyway) or by lending money to the American government—at interest, of course.

The trouble is that no amount of playing about with money would repair the physical gap created by the removal of 2½ out of the 4½ American divisions now stationed in Germany, which is what Mr McGovern says he would do. It is highly unlikely that the other countries with troops in Germany could find the necessary extra men. For Britain to make any serious contribution—apart from returning the equivalent of 4 or 5 battalions that it has taken out of Germany for use in Ulster, and no one can see when that would be possible—would mean bringing back conscription, which is virtually inconceivable in the present state of British politics. The French are certainly not going to help. For the Germans to make up the difference would mean putting back up their just-lowered 15 months' conscription for an army that already has probably the worst morale problem in western Europe. Well, then, the Belgians, the Dutch, the Canadians? But they are all looking for convenient excuses to put less into the defence effort, not more. No one else has troops in Germany. There remains the armchair strategist's resort of borrowing, say, three Turkish or Italian divisions to replace the departing Americans.

Those few days of grace

The probability is that an American withdrawal on this scale would make it even harder for European politicians to argue, against the tide of public opinion, that the western end of the continent should seriously try to provide for its own defence. But it would also have an immediate military effect. Those four and a bit American divisions in Germany play a major part in the western alliance's ability to put up what is known as a "flexible response." This is the calculation that, if the Russians did attack, Nato's forces would be able to go on fighting against them for a few days without having to call for the use of nuclear weapons. No one knows exactly how long this pre-nuclear battle could be kept up; it might be as little as two days, it might be as many as seven. To a layman it sounds like arguing about how many minutes an angel could dance on the rim of hell. But to the men who would be responsible for trying to prevent a nuclear cataclysm—above all, to the President of the United States—every few hours won in this way, and thereby made available for negotiating on the hot line before the nuclear missiles go off, would be worth a year's gross national product.

The withdrawal that Mr McGovern is proposing, if it were not matched by the Russians or made up for by

the Europeans, would make this period of grace much shorter, and might even abolish it altogether. There are barely enough troops under Nato's command at the moment to make even half a week's non-nuclear resistance look very credible; some people believe that in fact they would not even last a couple of days. The removal of two of Nato's better divisions could come very close to making it impossible. This is why Mr McGovern's claim that he would keep six American-based divisions ready for use in Europe, and that some of them could be flown back there "well before the first 30 days of fighting had been completed," is less of a comfort than he seems to think. By then, unless the Russians courteously gave enough advance notice of their intentions, there might be no airfields to fly into, and maybe no defenders left to reinforce. In fact, the likelihood is that the McGovern withdrawal would destroy the strategy the western alliance has been working on since John Kennedy's time, and leave it no alternative but a return to John Foster Dulles's old, brutal and now thoroughly implausible threat of massive retaliation: you just cross the line, and we let fly with everything we have.

That will not worry people who believe that the Russians no longer present any sort of military problem for Europe, or that the west need not bother to conduct its affairs on the assumption that they might. It should worry Mr McGovern. It is a criticism of Mr McGovern that he does not seem to realise the resemblance of his strategic ideas to those of Mr Dulles, and that the people who have been advising him so far have not realised it either; but it is not because he is incapable of thinking, or caring, about these things. It is much more likely that he has just not had time this year to take a proper

look at the meaning of some of the things he has been saying. All the more pity that he has declined to come to Europe before November; he ought to talk to Herr Brandt and Mr Heath and M. Pompidou, and to the social democrats of France and Britain.

Where realism comes back in

He is not, on present evidence, an isolationist. The force he does seem to represent in America today is a rather self-conscious revival of what is believed to have been good old-fashioned American idealism. There is a lot of myth about the role of idealism in American politics: the men who ran the cities of the United States in the nineteenth century were no idealists, and even the township politics of the eighteenth century were perfectly familiar with compromise and back-scratching and the pork barrel. But there is a recognisable strand in the American tradition which insists that ends should be answerable to the moral judgment, and that means should be kept as pure as ends. Mr Nixon would not disagree with the first part of that: he is a moralist too. Where the forces of McGovernism may be ignoring the American experience of this century is in thinking that the exercise of power—which is, after all, the pursuit of the ideas one believes in—can be undertaken without having to make difficult moral decisions, without ever using unpleasant means, without sometimes paying an unwelcome price now for a still hypothetical future benefit. For Europeans the trouble about Mr McGovern's present position is not that he does not feel genuinely committed to the protection of western Europe, but that if he became president he would apparently remove most of his ability to carry out that commitment.

Tough at the top

The fact that there are now several visible punctures in Leonid Brezhnev's diplomatic balloon does not mean that he cannot keep aloft for a good while yet

Mr Brezhnev's trouble is that when things go wrong for Soviet policy, as they have done in Egypt, they make people wonder whether he will be made to carry the can. That is what a cult does. The man who succeeded Khrushchev, the successor of Stalin, as first secretary of the Soviet Communist party has also followed his predecessors' examples by authorising the launching of a campaign of personal adulation. As usual, this follows a period of several years of lip-service to "collective leadership" and deprecation of "the cult of personality." But in May Mr Brezhnev took pains to make it very clear that he was President Nixon's principal host in Moscow. The Russian-American agreements on strategic arms limitation were signed, on the Soviet side, by Mr Brezhnev alone—a constitutionally bizarre departure, since in theory he is not a member of the government. Now it is becoming normal for, say, Moscow radio commentators to dwell on the great significance of "the

large-scale foreign policy programme that Comrade Leonid Brezhnev presented at the 24th party congress." Absolute power not only corrupts. It also pins total responsibility on to the absolutist ruler. If Soviet foreign policy is indeed Mr Brezhnev's personal policy, then he alone is answerable for setbacks such as the Russians have just encountered in Egypt.

If, having ousted Khrushchev in 1964 partly on the ground that he had fouled up Russia's relations with China, Mr Brezhnev now has to admit that those relations are worse than they were in Khrushchev's time, and that the Chinese and Americans have short-circuited Russia by getting together without it, then it is clear whose policies have produced this situation. If Herr Brandt is defeated in this year's west German elections, it is to Mr Brezhnev that Russians must put the question whether the whole project of Russian-German rapprochement is going to be jeopardised. The buck stops at the

Brezhnev desk.

His large-scale foreign policy does not look too good just now. Lavish official whitewashing of the news from Cairo cannot wholly disguise the fact that Russia's position in Egypt has been sharply undercut. True, this is to some extent offset by the creation of a stronger Russian position in Iraq. Baghdad, being nearer than Cairo to the Gulf oilfield regions and to Russia itself, may be a more logical *plattsdam* (a handy Russian port-manteau word for a jumping-off place, military base, or political pivot) for Soviet penetration of the Middle East. But Mr Brezhnev may be asked why, that being so, he had put so many eggs into the Egyptian basket, where some of them have now cracked.

He may also be asked why he had shown such demonstrative goodwill to Herr Brandt—receiving him, for instance, in shirtsleeved informality at his Crimean palace—if he was not prepared to go a bit farther and make concessions that would help the German chancellor to prevent the Christian Democrats regaining power in Bonn. Their bid for a link with China, symbolised by Herr Schroeder's visit to Peking, must worry not only Herr Brandt but also Mr Brezhnev, who, moreover, can hardly expect a Christian Democrat restoration in Germany to improve his chances of bringing about a European security conference. Mr Brezhnev has been calling for such a conference for three years, and it is still not quite in the bag.

Even his triumphant co-starring with Mr Nixon in Moscow in May was marred because it was so obvious that his American guest's visit to China in February had forced Mr Brezhnev's hand. Whether Russia had encouraged the North Vietnamese to launch their offensive in April with the tanks and guns it had supplied, or whether it had vainly tried to discourage them, was of little importance. What stuck out a mile in May was that Mr Nixon, having just been to Peking, had to be cordially received in Moscow despite his having reacted to North Vietnam's offensive by mining its ports and bombing its supply lines. What has stuck out ever since has been the failure of its offensive—against a background of recriminations between China and Russia, each accusing the other of betraying their friends in Hanoi. And Hanoi's faith in Moscow as a dependable patron cannot have been increased by President Sadat's revelation this week that it was the Russians' excessive "cautiousness" that had led him suddenly and spectacularly to oust large numbers of them from Egypt.

The odds on survival

But these difficulties are probably not going to prove fatal for Mr Brezhnev. Although in some respects it is more humiliating for a power such as Russia to have to yield to a prod from Egypt than to back down from a confrontation with another great power, Mr Brezhnev has still not suffered any defeat as spectacular as Khrushchev's in the 1962 crisis over the Soviet nuclear missiles in Cuba. And it took two years after that debacle before Khrushchev's rivals felt able to bring down the man who had laid himself wide open to charges of being both "adventurist" and "capitulationist." It seems

unlikely that Mr Brezhnev will ever face such charges. It was Khrushchev's ebullience and unpredictability that alarmed other members of Russia's ruling few. The Brezhnev style is as ponderously colourless as the man, and this must reassure even those of his fellow hierarchs who have doubts about his policies.

Anyway, the axiom that foreign policy seldom determines the fate of a ruler or a government applies to Russia as to other states. But there are at least two riders to this. One thing that must be added, for any regime that does not rest on the consent of the governed, is that it must keep its army happy. In Russia this is traditionally done mainly by giving the officer corps astonishing privileges. But the marshals also have an effective power of veto over any foreign policy move that would dismay or embarrass them. Will they stand for it if, for instance, Mr Brezhnev decides that he must hand back the southernmost Kurile islands to Japan, in order to match China's new bid for Japanese goodwill? No Soviet territory has been ceded since March, 1918, when a desperate Lenin surrendered the whole Ukraine to Germany.

But he's given China a handle

The second rider is a political one. Whereas democratic politicians usually regard any advance towards peace as a vote-winner, rulers of autocracies usually find it easier to keep their subjects quiet when international tension is fairly high. Too much detente, for a ruler of Russia today, involves risk of mutiny among his client states, of restiveness among minority peoples in the Soviet Union itself, and of troublesome demands even from some Russians for civil liberties, democracy, freedom to travel and all that. Mr Brezhnev's current approach to this problem seems to be to offset the dangers inherent in a policy of relative relaxation in the west by preaching the "yellow peril." Czechs, Ukrainians, Jews and dissident Russian intellectuals are warned that they must toe Mr Brezhnev's line not because of any real threat from Mr Nixon or Herr Brandt, who are quite nice chaps with whom he can sign all sorts of treaties, but because of those 750m Chinese, led as they are by the evil progeny of Genghis Khan and Dr Fu Manchu.

One snag in this, for Mr Brezhnev, is that both east Europeans and Soviet minority peoples may come to see China as a lever they could use to extract concessions from him. The Chinese are now happily forging special links with Rumania and Yugoslavia as well as Albania, and they are also, if Moscow's bitter complaints are to be believed, backing the latest upsurge of Ukrainian nationalism. Another snag, with less immediate significance, is that Mr Brezhnev's acceptance of personal responsibility for the arms limitation deal with the United States, and for the subsequent boom in Russian-American trade, may some day enable his rivals to denounce him as the man who tried to deliver the country into the Americans' hands. But no such denunciations will be heard until they have got him down; and that day still looks a long way off, for he guards his flanks more cautiously than the boisterous Khrushchev did.

No job for Herod yet

British families seem to be shrinking nearer to the replacement level of only two children for 9 out of 10 couples. Draconian measures to cut population growth are not needed just now

One thing can be said in favour of the report from the ginger group, Population Stabilisation, which was introduced by two MPs and Baroness Gaitskell on Wednesday: it is a sight less coy than the select committee of their fellow MPs which has been crying indecisively for a population policy for Britain. Only Mr Neil Kinnock was, on Wednesday, prepared to stand by the report's most controversial recommendations: for the abolition of family allowances, tax allowances and maternity benefits for third and subsequent children. But this is the first time such a proposition has received even this modicum of parliamentary recognition. It is another indicator of the growth in the belief that a (usually unspecified) form of social engineering to check population growth is both feasible and necessary.

The doom-calculators' case is quite simple and can be illustrated graphically: that by the end of the century the United Kingdom will contain more than enough extra people to fill another Greater London, and that the United Kingdom will be correspondingly more unpleasant to live in. The calculations of the danger are based on family size. The difficulty is that it will not be possible to calculate completed family size for the average couple marrying now until within a few years of the year 2000. So the pollsters estimate intended or "ideal" (which is rather different) family size. In a government survey carried out in 1967 and published last year, the mean of families' ideals was 2.5 children. A much more recent but smaller survey in Hull produced a mean of 2.23. The mean family size by which the British would just replace themselves (without allowing for net outward migration) is at present estimated at 2.1.

But if, as the government's statisticians did, one asks couples how many children they would have if they had no money worries, they give a much higher figure: the mean was 3.4. Does the birth rate depend on prosperity? The rate has been falling throughout the late 1960s, against government predictions. In 1970 it levelled off. When the first quarter's figures for England and Wales were released in May, they were a startling 9 per cent below the corresponding figures for 1971. For some reason, figures for the January-March quarter always do vary particularly sharply, and the comparable figures for 1971 had been unusually high. But it is now possible to calculate the change for the full first half-year of 1972. They still show a drop of 8 per cent.

It would have been quite understandable if the demand for a population policy had gained momentum in the early 1960s. Then, Britain was achieving a rate of natural increase of 355,000 a year. But natural increase for 1972 could be as low as 100,000. It has been almost ludicrous to watch the doomwatchers' case shrink in their hands, as estimates of Britain's population in the year

2000 shrank from 74m (the government actuary's guess in 1965) to 63m (the latest estimate, released by Sir Keith Joseph last week).

It can be argued that a population growth of 100,000 a year (against which one must set off net outward migration) is still too great for the United Kingdom's countryside to sustain. Another argument is that the recent drop in births is only temporary; that just as unemployment and economic depression were blamed for the low birth rate of the 1930s, so births will pick up, when the economy revives; that families will increase to nearer their worry-free "ideal" of 3.4 children. That is an uncomfortable possibility. But the argument ignores both the fact that the birth rate has already fallen below the very low level in the 1930s, and the fact that few people ever think they have no money worries.

Think of a policy

There is another reason for the latest rush of propaganda against overpopulation, although it sounds misleadingly trivial. Britain now possesses a minister responsible for population (Mr Robert Carr, wearing his hat of Lord President of the Council) who can be called to give evidence or criticised for apathy and inaction. It also has a population panel, albeit very part-time, to whom pressure groups can submit reports.

In the early 1960s, the struggle was to spread the knowledge of birth control and change the law on abortion. It is not over: Britain still, with criminal stupidity, does not offer a comprehensive system of free family planning, because what is known as the "permissive" act of 1967 gave local health authorities the power, but not the duty, to provide this service. The drive still continues to eliminate unwanted pregnancies (variously estimated at about 30 per cent of all pregnancies). But this campaign was centred on the individual; population control was very much a secondary consideration.

The danger inherent in a population policy is that the emphasis shifts from eliminating pregnancies unwanted by the parents to discouraging pregnancies unwanted by the state. Of course, people do already try to discourage poor families from having huge broods of children; but the emphasis is still on the welfare of any one particular family. Mr Kinnock argued cogently that he only supports disincentives now as an alternative to harsher measures later; that education was the primary aim of a population policy. But it was heady talk on the unintoxicating trend of a declining birth rate. Mr Carr, who has been promised a report from his population panel by the end of the year, is unlikely to be stampeded into the sort of fierce financial measures proposed this week. But there is always a danger that ministers will say anything because they are expected to say something.

The Trans Siberian Express

It's the short way—cutting 2,150 miles off our previous shortest route to Tokyo (via the North Pole).

It's the straight way—check on a globe, and you'll see that it really is straight.

It's the civilised way—even the schedule is worked out to keep you human in spite of crossing time zones. Those who have been East by other routes will know what we mean.

For the SAS Trans Siberian Express you catch a convenient Saturday morning flight to Copenhagen. At midday you leave

Copenhagen and just 13 hours later (including a 70 minute stop in Moscow) you're in Tokyo. Local time is 9 a.m. on Sunday so you've the whole day to adjust to the 8 hour time shift and you're fresh for business, or pleasure, on Monday.

Coming back we leave Tokyo at 11 on a Sunday morning arriving home the same day—with daylight all the way.

All this—plus Scandinavian hospitality and Scandinavian hostesses. The SAS Trans Siberian Express really is the most civilised way to Tokyo.

Fly the civilised way to Tokyo

If a giant like Ford can handle metrication, isn't that the green light for you, too?

When Ford of Britain decided that metrication was a necessary step to greater efficiency, the problems of implementation seemed vast. But hear what their metrication programme head has to say.

"We approached it with trepidation. But experience has shown that our fears were groundless. Planning the changeover well in advance was a key factor.

"Going metric gave us opportunities for rationalisation. For instance, we reduced our types of fastenings by 75%. This alone could eventually save us millions of pounds.

"We planned for benefits like this and discovered that they multiplied into extra

advantages as we progressed. It was a bonus we hadn't expected.

"Staff training has not presented difficulties. For most there's not a lot to learn and what there is they find easy enough.

"Metrication has also enabled us to build a number of improvements into our products. So our customers are also gaining from the change to metric."

Your business may not be on the same scale as Ford's. But if you are responsible for your company's future, are you sure you're not missing the opportunities offered by metrication? Many are already benefiting from the changeover.

**Business is
ten times simpler in metric.**

Labour isn't exactly sure what to think about the dockers, or the law

It was the Labour party and not the Government which was chiefly on the spot during the angry Commons debate on the industrial crisis on Tuesday. Mr Wilson did his best to paper over the cracks, but he could not hide completely the Opposition's divided state of mind on how it should respond to the imprisoning of the five dockers in Pentonville.

There was complete agreement on the Labour benches, naturally, that the cause of all the trouble was the Industrial Relations Act, and Mr Wilson inevitably pledged that a Labour government would immediately repeal what he called "the most expensive and irrelevant judicial bauble in history." There was plenty of Labour enthusiasm, too, for some of Mr Wilson's repartee. The Government he described as "a bench of right honourable Franksteins" who had become the prisoners of the "monstrosity" they had created. Mr Heath's face had "stopped a thousand ships" (Tory groans). The Government could only wait for that "fairy queen," the Official Solicitor, to get it out of difficulties of its own making.

Mr Wilson did say, and he repeated it under Tory pressure, that the law should be obeyed, even if he did think that this particular law was "manifestly bad." But unlike Mr Reg Prentice, he did not criticise the jailed dockers. He declared that the law of contempt should not have been invoked but he was reminded by Mr Carr that even the 1966 Prices and Incomes Act, like any other law, had carried the penalty for contempt for those people who threatened to ignore it.

It was Mr Heath, in a counter-attack which won him a standing ovation from Government backbenchers, who exposed the ambiguities

of the Labour position. How could the Opposition justify a firm being put out of business and union members being thrown out of work because of blacking and picketing which were in defiance of official trade union authority? No one had the right to pick and choose what laws he should or should not obey. A similar action for contempt could have been brought against the dockers under the 1906 and 1965 Trades Disputes Acts. Mr Wilson had denied that his government's proposals, "In Place of Strife," in 1969 had carried any threat of imprisonment, but what if a striker who faced restraint on his earnings had simply decided to ignore the law? Would not such a person have found himself in contempt? Mr Heath asked whether employers would have had any justification to defy the Restrictive Practices Act just because they disliked some of its provisions. He reminded the House that on three separate occasions during the last Labour government injunctions had been taken out by the courts against pickets for "wrongfully interfering with contractual relations." On those occasions the men had complied with the law.

To the Government, Mr Heath said, the issue was not one between the Industrial Relations Act and the unions, but a clash between "conciliation and persuasion" on the one side and "bullying and disruption" on the other. He asserted that if the Labour party divided the Commons it would be voting against the "constitutional authority of the trade unions," against "the rule of law."

After Mr Thorpe had suggested that the act had changed the climate of opinion towards the courts and questioned the choice of Sir John Donaldson to head the Industrial Relations Court, most of the rest of

Prentice: one just man

the short debate degenerated. It was Mr Norman Atkinson, the burly MP for Tottenham and a member of the engineering workers' union, who breathed the most root and branch defiance. His declaration that "we should be selective in the laws we accept" went down well with his left-wing colleagues. He appeared to believe the TUC's old policy of non-co-operation with the act meant disobeying the law. On Monday in the Commons, Mr Tom Driberg, MP for the dockland constituency of Barking, had claimed that it was "an establishment myth that bad laws should be obeyed." In his opinion they "should be resisted and defied."

Such bellicose talk was not confined to the left. Mr Wedgwood Benn, this year's party chairman, took the opportunity of a fraternal message to a commemorative meeting at Tolpuddle on Sunday to give another display of opportunism. "Millions of people, whatever they may think of the rights and wrongs of the dockers' action," would, he claimed, "in their hearts respect the men who would rather go to jail than betray what they believe to be their duty to their fellow workers and the principles which they hold." On Tuesday night, on television and far from the Tolpuddle martyrs, he suggested it was a matter of individual conscience whether a person obeyed or broke the law.

At the Tolpuddle rally, Mrs Barbara Castle, forgetful as ever of her own proposal of three years ago, claimed that the act was "just the latest in a long lineage of repressive laws." On Tuesday, the former Labour attorney general, Sir Elwyn Jones, called the act "a piece of political mechanism which had been infiltrated into the system of justice."

Only Labour's frontbench spokesman on employment, Mr Reg Prentice, spoke out in criticism of the dockers in prison. He told the Commons that he did not retract his initial remarks that they had been "looking for martyrdom for weeks" and that they did not deserve the support of other workers. In his opinion, "the Industrial Relations Act is a bad law, but it is the law and nobody can claim to be above it." A poll by the Opinion Research Centre for Independent Television News, taken in the midst of the troubles, has raised the awful suspicion for Labour MPs that Mr Heath may be speaking for twice as many of the British people as they are. Only 24 per cent of respondents to that poll thought that the unions were "mainly" or "completely" right in their recent actions, while 50 per cent thought the Government was; the other 26 per cent did not want to say.

Northern Ireland

The bombs get the SDLP talking

Much of Ulster's heavy industry was at a halt on Wednesday, but this had nothing to do with the five dockers in Pentonville. The Ulster Defence Association called a national day of mourning for those killed and mutilated by the Provisional IRA's bombs in Belfast on Friday last week. The bombings have led not merely to a more determined army response to the gunmen and bombers (see below), they have stiffened the resolve of the Social Democratic and Labour party to make the break with the Provisionals and to meet Mr Whitelaw for talks on Ulster's future.

In the Commons on Monday Mr Whitelaw won general support for his dual policy of rooting out the Provisionals and continuing to work for a reconciliation between the communities. Once again Mr Merlyn Rees, from Labour's front bench, promised his party's general support for what the Secretary of State was doing. The left wing's Mr John Mendelson

Hume: ready to talk

attacked the mass media for romanticising the gunmen, and Miss Bernadette Devlin suggested that the IRA was "fighting British imperialism in the wrong way."

Naturally, some MPs wanted a clearer indication of what Mr Whitelaw had in mind for further military measures. Unionists like Mr McMaster and Mr Kilfedder wanted martial law, while Captain Orr declared that the Ulster Defence Association was a fine body of men who only wished to serve the Queen. Mr Reg Paget, the lone Labour hawk, wanted capital punishment for convicted gunmen and bombers. He thought that conciliation was just "a trendy word for appeasement."

There was more comfort for Mr Whitelaw from the Rev. Ian Paisley, who condemned talk of a Protestant rent and rates strike, and repeated his hostility to any further internment without trial. He suggested that if the ordinary processes of the law no longer worked in Ulster then a special military court should be set up under an Order in Council, which was renewable every 30 days.

The most refreshing and cogent speech came from a Labour MP, Mr John Mackintosh, who was blunt enough to aver that no amount of discrimination against Ulster's Catholics could ever have justified "one broken leg." A persistent supporter of moderate reform in Ulster, Mr Mackintosh believed it was impossible to meet the IRA demand that the British army should be used to force a million Protestants into a united Ireland which they had no wish to join. His answer was what he called "a Sudetenland solution" with the separation of Catholic majority territory along the

border with the Irish Republic and the removal, if necessary by force ("appalling though it might be in its brutality"), of Catholics from their enclaves in Belfast. Such a suggestion is unlikely to find many supporters yet at the top of the Government.

There is now some chance of political talks getting under way in Northern Ireland. After two days at a hide-away in Co. Donegal, the SDLP decided to end its 12 months in the wilderness since its MPs walked out of Stormont last July; it agreed to join in discussions with Mr Whitelaw. It looks as though Mr John Hume and Mr Gerry Fitt have found a common approach at last, even though there are doubts about whether the SDLP counts for as much as it did in the Catholic community. And the Republican Labour party, which has also kept away from normal politics over the past year, also decided to talk to the Secretary of State at Stormont Castle. Its leader, Mr Paddy Kennedy, seems to have dropped his affection for the Provisionals.

The Unionists have liked Mr Whitelaw's tough talk of rooting out the IRA. Mr Brian Faulkner pledged his support when he met Mr Whitelaw on Tuesday. Even when Mr Bill Craig of the Vanguard movement called for a rent and rates strike by loyalists because of what he believed was a deteriorating security situation the Ulster Defence Association and the Loyalist Association of Workers lost no time in denouncing any such thing. A UDA spokesman suggested that such a strike "would help to disrupt Ulster and result in unemployment."

No more than tougher?

In their indiscriminate bombing attacks in Belfast on Friday last week, the IRA Provisionals were presumably hoping to bring the UDA out raging in the streets. They failed and, in the event, the precautions the army took that Friday night against inter-sectarian fighting were not needed. Instead, these bombs produced, first, an intensification of the army's operations against the Provisionals (still kept however, in a comparatively low key), and, second, a statement from Mr William Whitelaw in the debate on Monday that the IRA Provisionals would be destroyed (still, however, without any clear directive of how, when or where).

So far, the army has not been let

We kept our promise to Alfred Giles.

Four years ago we asked if we could lay a pipeline under Alfred Giles' fields. To bring natural gas from the North Sea to more and more people in Britain.

Mr. Giles was outraged at the prospect. He was sure it would ruin his pasture.

But we promised him, "In two years' time you won't know the pipeline's there".

Here's what the pasture looks like today. A promise kept.

We had to cross a lot of people's land in the course of laying over 1700 miles of mains, and we have to admit that on the odd occasion in the depths of a damp winter our name was mud.

But now there's peace along the pipeline.

If you can tell where it is!

GAS-THE NATURAL FUEL.

Selection Trust Limited

International Mining Finance and Exploration

Statement by the Chairman Mr A Chester Beatty at the Annual General Meeting

Results for year ended 31 March

	1972 £	1971 £
Revenue less expenses	5,438,000	7,792,000
Profit after tax	4,441,000	5,680,000
Dividends	3,672,000	3,664,000
Net assets at valuation	102,736,000	120,641,000

During the course of his statement to shareholders at the Annual General Meeting of Selection Trust Limited in London on July 19, 1972, the Chairman, Mr A Chester Beatty, said:

Our profits for the year which ended last March were lower than expected, largely due to the considerable reduction in dividends from our investment in Tsumeb Corporation. However, despite the fall of some £1½ million in our net profit after tax, we feel justified in recommending a final dividend for the year of 11½p which maintains the rate for the year at 18p per share.

Looking at our revenue possibilities for our current year to March 1973, I do not see any significant change in the dividends we will receive, but an important item is, of course, the profit that we make from share dealings. The results in this context so far this year have been most satisfactory as market conditions, particularly in relation to gold shares, have been favourable.

You will have seen from our annual report that during the past year arrangements were made for a bank borrowing of £10 million in this country, for general purposes, and another in Australia, equivalent to just over £2 million, to finance current activities in that country. In the past I have pointed out our strong asset position, with virtually no debts outstanding. We decided therefore, that we could give ourselves the flexibility considered desirable at this time by arranging these borrowing facilities.

At present £7½ million of the £10 million loan facility arranged in this country remains uncalled and, additionally, our cash balances have been improved, giving us total cash resources of some £15 million at this time, after allowing for the final dividend due to be paid. In view of this we do not expect to be asking shareholders for funds in the foreseeable future. Our eventual needs will, of course, depend on our conclusions about our various current activities, particularly the Agnew prospect in Western Australia and I should like to turn to that subject now.

Agnew Developments

The developments during the year at Agnew, which is situated some 250 miles north of Kalgoorlie in Western Australia, have been extremely encouraging.

As you know, we have so far outlined an orebody in which No. 1 shoot has nine million tons with an average grade of just over 2 per cent nickel, taking a cut-off grade of 1 per cent nickel.

Our work has also shown that there is a second and deeper shoot and I can now tell you that drilling has already indicated some fourteen million tons averaging about 2 per cent nickel in this body. It varies in width and is still open in depth and strike length and we have yet to establish its extent. Our work at Agnew is therefore directed at defining No. 2 shoot and this will require

months of deep drilling. I am optimistic that this work will add substantially to the tonnage of reserves.

The supply of water at Agnew is of vital importance and I am happy to report that our studies on this in co-operation with the Western Australian Government clearly indicate that sufficient water to meet all reasonable needs will be available in the general area.

While we are drilling to establish further reserves at Agnew we are also examining the economics for a mining operation. We have already done a lot of work on this aspect but we have a lot more to do. It is therefore, at this stage of our studies too early to come to any conclusions on what would constitute the optimum scale of operations.

There is every reason why we should all be highly satisfied with the results of the work done at Agnew in the short time we have been there and we consider that the whole of the 300 square miles of land held by our subsidiary company, Western Selcast, merits intensive investigation. We are thus basing most of our Australian exploration in this current year in that area.

Development for the mining of nickel ore in the Spargoville area by our Australian subsidiary, Selcast Exploration, has been proceeding. There have been some delays, including difficulties in sinking the shaft, and we do not now expect production to start until early in 1974.

Further Exploration

The operation at Spargoville will be small but in deciding to start mining there we had in mind that this would also provide the most effective way of exploring the immediate area of the known deposits for further mineralisation, particularly at depth.

This consideration also influenced us in deciding to bring into production our South Bay mine in Canada. Since the mine has been opened up a small tonnage of ore has been added to reserves and exploratory drilling from underground is continuing.

The first year of operations at South Bay resulted in an operating profit of C\$2 million but after depreciation based on the presently proven ore reserves there was a loss of C\$1 million. The current year is, however, expected to produce a modest profit.

In Iran, we were unable to come to any agreement with the Government of Iran for the development of the San Cheshmeh copper deposit, but we have been assured that the work done by our Group will be recognised. I hope the position will be clarified as soon as possible.

Copies of the Statement and of the Annual Report may be obtained from The Secretary, Selection Trust Limited, Selection Trust Building, Mason's Avenue, London EC2V 5BU.

Tuzo: pastures new

very far off the political leash in its operations against the gunmen. It has been allowed (or ordered) to conduct more searches for arms and explosives and has turned up some important finds; it has arrested more people on suspicion, releasing many soon afterwards but holding a few in RUC custody; it has put patrols for just a few hours into the Bogside and Creggan districts of Londonderry; and it has patrolled more openly and knocked down Catholic barricades in Belfast.

Its operations have all had the stamp of a tightly controlled, minimal response, reflecting a political desire not to alienate the Catholic communities on which the Provisionals batten (and which they often intimidate). But it may not be surprising in Northern Ireland that rumours should fly around that the forthcoming promotion of the GOC, Sir Harry Tuzo, to being a full general in command of BAOR, is a sign that the army is at odds with the politicians and is pressing for much more vigorous action against the IRA. (That promotion is, in fact, very fast but it is no less a recognition of merit.)

As the army did not immediately sweep through the IRA enclaves in Belfast and Londonderry after last Friday's bombings, it has to be assumed that either further military escalation is still being ruled out or that the latest operations (including the establishment of a fourth brigade headquarters in Ulster) are a run-up to far more wide-sweeping searches and arrests by the security forces (which would make Mr Whitelaw's promise stand up). But where would an active, positive policy against the Provisionals end—at something less than the reintroduction of internment or not? The Government may be hoping that the arrest, interrogation and subsequent release of IRA suspects will be enough to discredit them in the eyes of their fellows.

Crime

Cautionary tales

Those who seek signs that every day in every way the world is becoming a nicer place to live in should steer clear of the Criminal Statistics* for 1971. As usual, they clock up a new record total of indictable offences known to the police: 1,646,081, an increase of 5.8 per cent over 1970. The trend continued in the first three months of this year compared with the same period in 1971; the rise has been slightly less sharp—5.3 per cent—but it would need an invincible optimist to find much comfort in that. Murder statistics are never quite what they seem to be on the surface, but the most acceptable comparison puts the number of murders known to the police in 1971 at 176 as against 138 in 1970. Last year's total is by far the highest of those for the past five years. But the number of murders classified as "normal" is actually one down on 1970.

Violent crime went up sharply again, although there was a small drop in sexual offences. Burglary and robbery, receiving and various forms of theft all registered substantial increases. The overall picture in England and Wales is similar to that in London, on which the metropolitan police commissioner reported last month. But there is one interesting variation. In the capital more and more indictable offences were attributed by the police to young people under 21 and the commissioner's report told of gangs of young criminals at work. Nationally, the under-21s were responsible for a slightly lower proportion of all indictable crime. The comparison must not be taken too far because the metropolitan figures are for arrests, whereas those for the country are for convictions, but as the London statistics are contained within the national ones, it is reasonable to suppose that youngsters—especially those under 17—are less criminally minded outside the capital than within it. On the other hand, the national figures show that the police were much readier last year to give young people a caution as an alternative to prosecuting them for indictable offences. Cautions to boys under 14, for instance, went up from 21,816 in 1970 to 27,389, and those to the under-17s from 14,317 to 20,160. Another table then adds the number of cautions to the number of convictions and

*HMSO. £2.05.

shows that the total for 1971 is well up on 1970. "It is desirable to notice the effect" of this exercise, says the report. But is it? It cannot be significant unless, improbably, it is assumed that all those cautioned would have been found guilty if prosecuted.

Of the total of the male population, one out of 76 was found guilty last year of an indictable offence, and there is a better than one in three chance that a person given a suspended sentence of imprisonment will within the period of suspension commit another offence for which he can be sent to jail. Suspended sentences have had some effect in reducing the numbers who would otherwise be in prison—as did the releasing on parole of a higher proportion of prisoners—though not enough to prevent the prison population also reaching a new record of 40,470 during the course of last year. (It was 20,000 in 1950.) The population did fall by nearly 3,000 in the later part of the year but, not surprisingly, the annual report of the Prison Department says the prison service must continue to plan on the basis of more and ever more prisoners. Fortunately recruitment of prison officers has been going so well that special arrangements had to be made to cope with the numbers entering the service. The only disappointment was in recruiting medical and nursing staff, who will be needed no doubt to deal with a new problem in boys' remand homes. Because of the fashion for long hair, "infestation with head lice has now become not uncommon."

There are paragraphs in the department's report, however, of a much more hopeful kind. An experiment, relaxing the censorship of letters at Appleton Thorn open prison, seems to have gone well and will be repeated elsewhere. Of 22 prisoners at Wakefield and Albany taking part in the first Open University degree courses, two gained distinctions and 15 passes in their end-of-year examinations. Nearly 3,000 prisoners took "O" and "A" levels and achieved a 68 per cent pass rate, an achievement which one or two expensive schools might envy.

Labour party

Taverne goes down

The story of Mr Dick Taverne's fight to keep both his conscience and his seat in the Commons as MP for Lin-

Taverne: unfair dismissal

coln has ended as lamentably as it began. On Wednesday, Labour's national executive committee rejected his appeal against the Lincoln party's decision to disown him. Mr Taverne's crime in the eyes of his local party—or of a powerful ruling faction in it—was to stick to his principles on the common market issue. That, it seems, was also the predominant factor in the minds of the NEC, for it is hard to offer any more charitable gloss on its repudiation—by 12 votes to 8—of its own organisation committee's recommendation.

That committee had the job of looking into the circumstances in which Mr Taverne was sacked. It recommended that the party's rules should be amended so that a constituency party wanting to get rid of its MP must tell all affiliated and party organisations of the decision to hold a special meeting. Mr Taverne was denied the opportunity to have his case discussed by the whole constituency party; the decision to demand his retirement was taken—on a vote of 75 to 50—by a special delegate meeting of the general management committee of the Lincoln party.

Implicitly, the NEC's organisation committee decided that the Lincoln decision was unrepresentative and Mr Taverne's appeal should be upheld. By voting to dismiss his appeal, the national executive has sanctioned the power of the local caucus. Mr Taverne will cease to represent Lincoln, where he has been MP for 10 years, at the next election. His hopes of finding another winnable constituency cannot be high. Labour is not only likely to lose one of its most able younger ex-ministers; it has also demonstrated once more just how destructive and intolerant its left wing can be when it is riding high. Mr Benn, the party chairman, can be relied upon, however, to discover a more palatable explanation which will satisfy him, if no one else.

Housing

What the bill will do—or not do

The Heath Government's main piece of social legislation, the Housing Finance Bill, made its positively last appearance in the House of Commons on Tuesday night. It becomes law two weeks after the royal assent, but that still leaves little time for local authorities to introduce the first stage of the new "fair rents" for council houses and the accompanying national rebate scheme by October 1st. And Labour councils have discovered 101 ways of delaying implementation quite legally: talk of illegal defiance is dwindling, although Birmingham, Liverpool and the London borough of Camden continue it.

Right up to the last minute the Government was unwilling to give any estimate of the bill's average effect on council rents, although opposition had centred on this very point. Earlier this year the Government had clearly surprised itself when it discovered how near to supposed "fair rent" levels many council rents already were. It had to carve a huge loophole through the clause in the bill which imposed a £1 a week average rent increase in October on councils which had not already raised rents for 1972-73. Authorities which could show that more than two per cent of their dwellings would thereby rise above the likely fair rents were to be allowed smaller increases. So far four authorities have received advance permission for this. Mr Walker has said that only one in five council tenants will pay as much as £1. All this muddle might have been avoided if the Government had not chosen what seemed the easy political option of fair rents as defined in Labour's 1965 rent act.

The loophole, if fully exploited, should meet most of the objections of people who saw the progression to fair rents as too steep, although there will still be sharp effects on people at two extremes. Modern council blocks in attractive locations could in theory attract rents indistinguishable from the private sector, with the rebate system inadequate to cushion most of the occupants. At the other extreme, tenants in areas of traditionally low rent council houses (mainly old industrial Labour strongholds) will suffer now for the indulgence they or their predecessors have enjoyed in the past. Many of these areas have had no experience

hitherto of rent rebates.

Rent rebates (or allowances) will now be available for both council tenants and unfurnished private tenants. The Government believes that about 2.5m will be eligible, though of course this must vary with the level of rents charged and the rate at which incomes continue to increase. But what is still less certain is the level of take-up, which may well be low, as it is with existing rebate schemes even in high rent areas. For local authorities means-testing on this scale represents a major new function which few are equipped to cope with.

The philosophy behind the bill—"subsidising people not houses"—is expressed on the one hand in the rebate system and on the other by the rapid withdrawal of existing building subsidies to councils and their replacement by a series of complicated deficit subsidies, with a diminished exchequer share over the years. A growing portion of the exchequer contribution will be matched by payments from the surpluses on local housing revenue accounts produced by fair rents—after certain deductions, half of any surplus must be paid to the central government. But the arithmetic of the bill, which aims to hold central government housing subsidies (including the share paid through supplementary benefits) down to the 1971-72 figure of £350m appears to depend on a faster increase in rent income than now seems likely.

Architectural Association

The lady says no

Mrs Margaret Thatcher, the education secretary, has refused to give the Architectural Association's school the fairly small amount of annual grant it requested (*The Economist*, July 22nd). She is unwilling to fill the gap between the school's fees of £580 and the £180-odd that local authorities pay in fees for students at schools of architecture maintained by central government: local authorities must continue to pay the full fees for students already at the AA, and are asked to be generous to those hoping to go this autumn, but are released from the duty to support subsequent applicants. She is "satisfied that existing schools of architecture could absorb future students."

The students are not. They apply in droves to the AA in preference to other schools of architecture. And the cost to the state of keeping a student at a university department of architecture is around £860 a year.

Hoechst keeps thinking ahead

10,300 people in research and development with a research investment this year of more than £60 million.

Hoechst in Britain

Hoechst UK Ltd is an independent company within the international Hoechst group. Its British staff know their country, its problems, its people; and they realise where Hoechst know-how can inject into Britain's economy the experience gained by the parent company during more than a century in chemistry. In pharmaceuticals, for example, where Lasix — the modern diuretic — has revolutionised therapy. In the textile industry, where Trevira polyester fibre has brought an entirely new concept to fashion. And where membrane structures from Trevira high tenacity fabric have at long last rendered outdoor events independent of the weather. Or in dyestuffs where experiments are proceeding to make the grass look greener in football stadiums and other sports arenas. Whether your problems are in plastics or paint raw materials, in dyestuffs or pigments, in fibres or pharmaceuticals, in agrochemicals or films, Hoechst UK can help you promptly and efficiently.

HOECHST

Hoechst research beats the weather

Outdoor events are very much affected by the caprices of the weather. Rain-sodden sites, with the bedraggled participants about as enthusiastic as fifth formers during a history lesson, have hardly ever given rise to memorable occasions. Not infrequently, the event has had to be cancelled altogether, hardly to the delight of the organisers. In collaboration with famous architects, Hoechst research has now developed a temporary cover that renders outdoor activities independent of the weather. Sports arenas, for example, holding up to 100,000 spectators, or swimming pools, can be protected in this way. The flexible cover is a coated fabric in Trevira high tenacity, a material of extreme strength. Rot-proof and tear-resistant and yet light-permeable and so flexible that it can be erected quickly in bad weather.

A new form of architecture has arrived. Trevira high tenacity takes sports arenas under its wings in all weathers to the benefit of all sports lovers.

Ahead through systems thinking

Trevira high tenacity for large scale covers — the result of Hoechst knowledge and experience in many fields: man-made fibres where Hoechst has an immense amount of know-how in production and processing; plastics where Hoechst is equally expert in manufacturing and laminating techniques. Thus, Hoechst is the forward-looking partner of architects and the building industry.

Systems thinking is the Hoechst strategy. Research, development and product experience in many areas are concentrated on the solution of specific problems. Interdisciplinary thinking, systems analysis and systems technique to bring success.

To keep thinking ahead — to solve the problems of today and tomorrow — Hoechst employs more than

Sasebo sets new standards

Shipping operators favour ever-larger ships because they are more economical to run. Many are showing great interest in Sasebo's new series of standard 250,000 and 270,000 dwt tankers which are being built in the No. 4 dock at Sasebo. Building the perfect hydrodynamic shape for maximum speed with minimum water resistance could be a very costly exercise, so Sasebo has come up with a simplified bow which is relatively easy and inexpensive to construct.

Sasebo's twist is to carefully balance the benefits of the lower costs of construction against the advantages of hull configuration to produce the best shape for economic operation. The standard 250,000 and 270,000 dwt tankers are Sasebo's answer to the call for low cost bulk oil transportation. And they are designed with the owner's pocket book in mind.

Sasebo's engineering techniques also extend into the various fields of machinery-making, industrial plants and steel structures. Sasebo is ready to work for you...building, repairing, jumboizing and providing after-service for ships of every description.

THE WORLD

International Report

The last red fruits of April are falling from the tree

FROM OUR SAIGON CORRESPONDENT

South Vietnamese troops at last fought their way back into the citadel of Quang Tri this week, and seemed about to remove from North Vietnam its biggest prize in this year's offensive. The storming of Quang Tri's fortified citadel coincided with a new counter-offensive farther south which brought two of the three lost districts of Binh Dinh province back under government control. North Vietnam now has very little indeed to show for its enormous effort and immense sacrifices of men and equipment over the past four months.

But it is still too early to say the battle is over. Even as paratroopers re-entered the Quang Tri citadel the communists kept up a determined

resistance, fighting from deep bunkers which had remained impervious even to concentrated air attack. At the same time communist strength in the province was being reinforced by troops moved from the now quiescent Kontum battlefield and from North Vietnam and Laos. It is one thing to regain control of the flat coastal plains of Quang Tri province, quite another to drive the North Vietnamese out of the inland mountains to the west, from which they will continue to pose a threat to both Quang Tri and Hue, 35 miles farther south. In fact this week saw renewed communist pressure on Route 1 south of Quang Tri, and on the western defences of Hue.

The few civilians who remained in Quang Tri under communist control say they were reasonably well treated but that food was strictly rationed. The communists were evidently too busy preparing their military defences to get their announced revolutionary administration functioning very effectively.

The recapture of the districts of Bong Son and Tam Quan in Binh Dinh province was achieved with greater ease than expected, and South Vietnamese officials were confident of quickly regaining the last communist-held district, Hoai An. It will take very much longer for Binh Dinh, a longtime communist stronghold, to be thoroughly repacified, but the reassertion of government control there means that no politically significant areas of the country now remain under the red flag. President Thieu is well on his way to fulfilling his pledge to regain all territory lost in the opening weeks of the offensive—providing, of course, that the North Vietnamese do not pull another surprise just when everyone believes they are becoming less and less capable of it.

An unknown factor in the situation is just how badly the North Vietnamese have really been hurt. There can be no doubt that they have suffered appalling losses; some estimates put them between 50,000 and 60,000. But units that have been badly mauled by B-52 attacks have apparently been able to replenish their ranks from manpower pools held in reserve in Cambodia, Laos and North Vietnam. On the southern side it is just as difficult to obtain completely reliable figures. The published casualty estimates—about 12,000 killed since April 1st—are thought to be too low. But even allowing for errors, there can be no doubt the North Vietnamese have had the worst of it. And South Vietnam's own manpower reserves are still far from exhausted.

On the waterfront

There have been fresh accusations this week that North Vietnamese dikes are being systematically bombed by the Americans. Mr Kurt Waldheim, the UN's secretary-general, and Mr Eugene Carson Blake, the secretary-general of the World Council of Churches, have both appealed to President Nixon to stop bombing the dikes. The United States denies any deliberate and systematic bombing of dikes and considers both men to have been taken in by North Vietnamese propaganda. Indeed, Mr Waldheim, just back from a visit to Moscow where he was given his information, admitted on Tuesday that he could not verify the claims.

But some people have seen damaged dikes. They include Miss Jane Fonda, the American actress, and other rather more objective observers. How many places they are talking about is difficult to tell because only a French journalist has given exact locations—three in all. Given the closeness of many dikes to military targets, some damage is not surprising. In some areas dikes form the only firm platform for anti-aircraft guns, and many dikes carry roads and even railways. There may

The going's tough on Route 1

The Red river capillaries

also have been some slap-happy letting go of bombs on unauthorised targets. But if their new laser-guided and television-aimed bombs are as accurate as the Americans have been claiming, only a very small proportion of these should fail to hit their targets.

If the dikes were bombed, as Mr Nixon said at the end of June, "the results in civilian casualties would be extraordinary." Nearly three-quarters of North Vietnam's 22m people live in the Red river delta, protected by more than 2,000 miles of dikes. The mud washed down with the seasonal rains has over the years raised the level of the Red river and its tributaries to 40 feet above the surrounding area in some places and to 20 feet above Hanoi itself. Any breaching of the dikes can therefore cause widespread destruction. On Tuesday Hanoi radio was claiming that "our dikes are now big, high and solid"—the implication being that any flooding will be the result of bombing. But in view of past statements of concern about the bad state of the dikes since last year's floods, this seems meant for external consumption.

World Council of Churches

Out of one side of its mouth

By appealing publicly to President Nixon to stop bombing dikes in North Vietnam, Mr Eugene Carson Blake, the secretary-general of the World Council of Churches, may have earned the applause of Mr Nixon's critics, but he has also raised questions about the council's conduct in world affairs. Mr Blake had convinced himself on the basis of some Swedish television films and a French newsman's reports from Hanoi that—despite strenuous denials

from Washington—American bombers were deliberately being used to destroy dikes in the heavily populated Red river delta. He asked for a personal interview with the President and when Mr Nixon could not—or would not—see him Mr Blake decided that publicity was the only channel left to him to raise "an issue of supreme urgency and moral import."

Nobody would question Mr Blake's right as an American to tackle his President on any issue of American domestic or foreign policy. The fact that he did so in his capacity as chief executive of a world-wide religious body, without as much as hinting at North Vietnam's present offensive against South Vietnam, was an act of partiality which will do little for the reputation of the council's present leadership.

Under its 1948 constitution, the World Council of Churches, which officially describes itself as a fellowship of more than 200 Protestant, Anglican, Orthodox and Old Catholic churches in more than 80 countries, may not control its member-churches, or legislate for them. It may take action on their behalf only in such matters as one or more may commit to it. Many Christians whose churches belong to the council have in recent years been disturbed by the apparent readiness of the council's top policy-making body, the 120-man central committee, which meets every year, to speak for the member-churches. In the non-communist world determined minorities of militant activists have increased their influence in bodies which select delegates for the council's main body, the world assembly, which meets every four years and picks the central committee. The influence of these militants is even stronger in various commissions set up by the council to study current problems.

One of these commissions recommended in May that the council should officially adopt a policy of helping Portuguese deserters—just as various church-sponsored organisations in Canada and Sweden help American deserters and draft-resisters. Another proposal, which will also be put before next month's WCC central committee meeting in Utrecht, is for all foreign investment to be withdrawn from South Africa. It is not clear yet whether the central committee will accept these ideas, but it is a fact that the WCC is already giving material assistance, albeit very small, to revolutionary movements in southern Africa and elsewhere.

Few practising Christians, with the exception perhaps of members of the Dutch Reformed church in South Africa, would quarrel with the World Council's condemnation of apartheid and other forms of racial discrimination. But quite a few would disagree that violent revolution is for Christians the best or the only way to get rid of racial discrimination. Anyway, the council remains very silent on the subject of various forms of political and religious persecution in the communist countries. It is easy to see why: many churchmen representing churches from communist countries are strictly government-controlled and will not let any condemnation of their governments' policies get past the council.

Egypt and Russia

Some gone, more staying

On Wednesday, after a week of stunned silence, the Israeli government applauded the expulsion of Soviet military advisers from Egypt. If this was indeed the hour for change, said Mrs Golda Meir in a speech to the Knesset, it should not be missed. She suggested that she and President Sadat should now sit down together to discuss a peace settlement and said rather generally that the present ceasefire lines need not be the permanent frontiers. The trouble is that the Egyptians have stood out against direct talks with the Israelis because they say that as a defeated people they would come out of them badly.

It is gradually becoming a little clearer what has happened. The exodus of Russians from Egypt would seem to be less momentous than Mr Sadat made it sound in his announcement on July 18th. True, the Soviet military experts attached to Egyptian units, probably around 4,000-5,000, have left or are going. But about twice this number of Russian military men are believed to be in Egypt engaged mainly, though not necessarily exclusively, on anti-Nato operations. The signs are that they are not being turned out—as yet.

President Sadat's words were precise: military installations and equipment established on Egyptian soil after the 1967 war were forthwith to be considered Egypt's private property and to be operated by Egypt's own forces. But on July 22nd Mr Mohammed Zayyat, the minister of state for information, told a press conference

Now...from the Dominican Republic... nickel for world markets

La Española was discovered by Christopher Columbus back in 1492. It became the isle he loved best. His tomb is enshrined in a cathedral in Santo Domingo, the country's picturesque capital.

And only 50 miles from the great discoverer's shrine, in the hills of the Yuna Valley, Falconbridge has just unlocked nickel ore deposits that have lain undisturbed for countless centuries.

It was 1955 when Falconbridge became interested in the Yuna's promising nickel-bearing deposits. From a miner's standpoint, they were easy to extract; from a metallurgist's, there was no known process that would permit

economic recovery of the nickel.

Falconbridge research evolved the answer, a patented pyrometallurgical process that made economic production of ferronickel from these ores technically feasible.

International financing was arranged, and in 1969 Falconbridge Dominicana, C. por A., commenced work on the huge \$180 million mining and smelting complex, the largest industrial undertaking in the history of the Dominican Republic.

First commercial production ingots were poured and shipped in December, 1971. And on June 21 this year at inauguration ceremonies, the Dominican Republic officially joined the ranks of the world's nickel producing countries.

Falconbridge... an international group of companies mining, smelting, refining and marketing worldwide...

FALCONBRIDGE
Toronto Canada

Sadek and Shazli got tired of saluting Russians

that the decision to get rid of the advisers would not affect the facilities afforded to the Soviet navy. The complication here is that the "facilities" which the Russian Mediterranean fleet looks for from Egypt go well beyond normal harbour use. Without aircraft carriers, the Russian navy has been using Egyptian airfields, including an area in Alexandria that is believed to be under exclusive Russian control, both for air support and for reconnaissance. Presumably Russia will still have the use of these.

A further watering of Mr Sadat's original words is the distinction, made by Mr Zayyat among others, between "instructors" and "advisers." Russian instructors are to remain until they have fulfilled their contracts. This can be interpreted as broadly as the Egyptians want, and the Russians allow: it could include the men controlling Egypt's relatively new Sam-6 missiles against low-flying planes, possibly some other missile crews (the Sam-2s and most of the Sam-3s are already under Egyptian control but it is reckoned that Egypt may still need instruction on maintenance problems), and no doubt a fair number of pilot trainers. These exceptions to the rule mean that Egypt's air defence system will be less suddenly exposed than it initially appeared to be. Egypt's claim on Monday, denied by Israel, that its missiles had brought down an Israeli Phantom over the canal front was a rather too obvious demonstration that all was as good as, and even better

than, before.

President Sadat's long speech marking the 20th anniversary of Egypt's July 23rd revolution confirmed the speculation that he had been forced by domestic discontent into a demonstrative gesture against the Soviet Union. A report that the timing of the gesture was imposed on the president by an ultimatum from his senior military officers, including the war minister, General Sadek, and the popular chief of staff, General Shazli, makes sense of what seemed senseless: a bold anti-Russian move at a time when the Americans, preoccupied with their election, could not respond. The whole business looks more and more like a temporary expedient designed to carry Mr Sadat through until some hoped-for new stage after the American presidential election.

The Russians have reacted with noble public forbearance: their version of the affair is that Soviet military personnel have by common agreement completed their mission in Egypt. This saves face and dignity; it also suggests that the Russians have struck, or are hoping to strike, a deal with Mr Sadat about their extracurricular activities in Egypt. But Russia must now be even more keenly aware than before that if America, after its election, responds to the changing scene in Egypt by applying genuine pressure on Israel to reach an acceptable agreement, the Russian forces, equipment and installations, if still in Egypt, constitute President Sadat's bartering power.

Egypt

Copts and Moslems

FROM OUR CAIRO CORRESPONDENT

A snippet in President Sadat's speech on Monday has caused an untraditional religious fuss in Egypt. Appealing for national unity, the president spoke of leaflets coming from the United States designed to stir up trouble between Egypt's Moslems and its Christian group, the Copts. The religious leaders of the two communities, Grand Sheikh Mohammed el Fahham and Pope Shenouda III, promptly denounced all treasonable, Zionist-inspired efforts to create dissension.

There have been no serious disturbances between the two communities since 1949-50 when there was trouble, attributed to the Moslem Brotherhood, in Suez and upper Egypt. But there have recently been some stone-throwing incidents in Alexandria. These were apparently provoked by the conversion of some Moslems to Christianity: an event which outraged one or two of the more sensitive Moslem societies. The Copts say that these conversions were not sought by them but took place at discussion groups organised by young, university-educated priests. In fact neither community engages in proselytising, but Moslems say that Copts sometimes convert to Islam in order to divorce their wives, and Copts say that Moslems sometimes become Christian in order to get a scholarship in America.

According to official statistics there are 3.5m Copts in Egypt's total population of 34m but many Copts say that the true figure is closer to 5m. A group of young Copts recently wrote to Mr Sadat protesting that their community was inadequately represented in the cabinet and in other government bodies (there is one Coptic minister). This shows an unusual boldness but hardly constitutes a threat to national unity.

Ireland

Mid-Cork and beyond

FROM OUR DUBLIN CORRESPONDENT

The Irish prime minister, Mr Jack Lynch, has moved on two fronts to avoid being outflanked by developments in Northern Ireland. At home, he has accepted an opposition challenge, meant only to embarrass the government, to hold forthwith the

by-election in Mid-Cork which he had earlier announced would not take place until the autumn; polling day will be August 2nd. In doing so, he has dared the IRA, through its political Sinn Féin organisation, to subject itself to a test at the polls. Not surprisingly, both the Provisional and Official wings of Sinn Féin refused to run the risk of an electoral defeat which would have shown that they lack any real public support.

However, Aontacht Éireann (the Irish Unity party), founded by the ex-Fianna Fáil minister, Mr Kevin Boland, is putting up a candidate for the by-election. Mr Lynch hopes the poll will show how little claim the IRA has to justify its pretensions to negotiate the political future of Ireland with Mr Whitelaw or Mr Wilson. But he is throwing all his own weight into the campaign for another reason. The Mid-Cork election will be the first public trial for the new Fine Gael-Labour coalition arrangement. Between them, these two opposition parties polled 22,633 votes at the 1969 general election against the ruling Fianna Fáil's 16,700. A Fianna Fáil win this time would be a large political advantage for Mr Lynch.

His second move to keep ahead of events in the north is to increase the pressure on the British Government to bring his own government in on the negotiations for determining the future of Northern Ireland. Last Friday's meeting between Mr Patrick Hillery, the Irish foreign minister, and Mr Whitelaw was the first of the ministerial meetings Mr Lynch now plans in order to keep his government in the picture. Mr Lynch is likely to seek another Chequers meeting even before the more informal meeting with Mr Heath planned for the EEC summit in October.

As events develop to a possible crisis, Mr Lynch, with typical caution, is elaborating his own approach. Although he has unveiled no very new proposals, he is pressing the British Government to speed up the pace of its decision-making. The most urgent step, he believes, is the holding of constitutional talks on Northern Ireland. These, he thinks, should be on two levels, the first involving only the elected representatives of the Northern Ireland people, the second involving the British and Irish governments.

He is also bringing diplomatic pressure to bear on the British to abandon, or at least postpone, the plan

for an autumn plebiscite in Northern Ireland on the area's constitutional future. He opposes it on principle—in his view, all Ireland is the appropriate constituency for such a plebiscite—and for the practical reason that, in his view, the minority will boycott it and the pre-plebiscite campaign would heighten community tensions. But Mr Lynch recognises the British Government's need to mollify the Unionist majority and he is resisting pressure at home to mount a similar plebiscite in the republic on the same day to show world opinion that the majority of the Irish people favour unity.

Switzerland

The priest at the door

FROM A CORRESPONDENT

Another of Switzerland's little oddities may soon be coming to an end. Last year the Swiss boldly decided to grant their women, so long voteless, the right to vote in federal elections. Now the government has published the text of a constitutional amendment which, if approved by the people, will remove from Switzerland the distinction of being the only nation that refuses—officially, at any rate—to tolerate the Jesuits.

The proposed amendment would abolish the articles in the constitution which since 1848 have banned the Jesuits from Switzerland and forbidden the establishment of new monasteries and convents. That part of the constitution was the result of the civil war of 1847, fought between the Sonderbund of mainly Catholic, rural cantons and the mainly Protestant big cities. The immediate cause of the war had been the decision of the government in Lucerne to invite the Jesuits to take over higher education in that canton. After the war the Protestants banned the Jesuits from the country, and also took reprisals against the monasteries, which were accused of abetting the rebellion.

In modern times the ban has not been strictly enforced. Monasteries and nunneries now flourish and last year there were 164 Jesuits in Switzerland, of whom 121 were priests. They are free to publish and to broadcast, to work in hospitals and youth organisations. But they are still forbidden to preach in church, or teach in school.

The amendments will be submitted

to the electorate in a referendum, probably early next year. Most people believe these constitutional sanctions should be abolished. Yet one meets some Swiss, liberal and well educated, who resent the tolerance already extended to the Jesuits. Some Protestant extremists still claim to fear an organisation whose members, they claim, represent an authoritarian interpretation of religion, based on absolute loyalty to the Pope. Paradoxically, there are others who see the Society of Jesus as a left-wing Trojan horse; one newspaper has spoken of "maoists in priests' clothing." But their opposition seems unlikely to prevail.

Spain

Europe's odd man out

FROM OUR SPAIN CORRESPONDENT

The original six-member European Economic Community posed Spain a tricky enough problem, so the switch in French policy that opened the way for Britain's admission was about as welcome as rain during a bullfight. Worse still was last Saturday's agreement between the enlarged EEC and the rump of the European Free Trade Association which established a 16-member free-trade area in western Europe from which only Spain is excluded.

Spain's predicament can be summed up in a few statistics. In 1969 Spanish exports earned \$1,900m. Over 31 per cent of these went to the common market countries and 18 per cent went to Efta. By 1971 Spain was exporting goods worth \$2,900m, of which 37 per cent went to the EEC. Exports to Efta rose less fast, but the combined total of trade with the two European trading blocks accounted for over 53 per cent of all Spanish exports.

Being so dependent on a club of

Lopez Bravo needs a friend

which it is not a member adds to Spain's trading worries. A dangerously high proportion of Spanish exports to north America, which jog along at about 15 per cent of the total, are dependent on increasingly uncertain political goodwill in the form of the willingness of the American government to resist lobbies demanding protection for shoemakers, olive stuffers and other deserving campaign-contributors. Changes in governments or cabinets during the coming year—in Spain or in America—could disturb Madrid's present cosy relationship with Washington.

Exclusion from Europe is potentially more dangerous even than this. It is not only that Spanish wines, fruit and vegetables are going to face slightly tougher competition in Britain and Scandinavia from Italian, French and Israeli products. More worrying is the possibility that Spain's vital industrial revolution may be compromised by continued exclusion. Since the devaluation of the peseta in 1967 exports of manufactures have soared, and they are now earning half as much again as agricultural exports. The biggest and fastest expanding market for these industrial exports was the EEC.

Understandably, leading economists and bankers are worried, and scarcely a week goes by without chambers of commerce, study groups and professional associations passing resolutions urging Spanish membership of the EEC. In 1970, after eight years of haggling with the common market, the best the government could achieve was a somewhat disadvantageous trade agreement which its propagandists tried unsuccessfully to pass off as equivalent to association with the community. Sr Lopez Bravo, the foreign minister, wants to reopen negotiations for association and ultimately full membership. But he insists that it will not be necessary to democratise Spanish institutions first.

Some distinguished Dutch, Belgian and German voices have contradicted him on this point, and Sr Lopez Bravo now hopes that diplomatic support from Britain, France and Germany will enable Spain to disregard EEC "doctrinaires." Britain, he believes, will help Spain into the community in return for a prolonged truce over Gibraltar. The French government wants Spain in as a Latin counterweight to the EEC's new Nordic members. France, Britain and Germany are also well aware that some of their major industries have a large and growing stake in Spanish prosperity.

But on the other side Spanish democrats are urging their political friends in the EEC to insist on substantial liberalisation inside Spain as a precondition of its entry. The Treaty of Rome describes the furtherance of "peace and liberty" as one of the set aims of any member or would-be member of the EEC. Until now the Dutch and others in Europe who are hostile to the Spanish regime have successfully relied on this wording to keep Spain at arm's length from membership or full association with the community. Opponents of General Franco inside Spain want it to continue that way.

Holland

Perils of purity

Proportional representation, as is well known, inevitably produces a mass of little political parties and disastrous instability. Inevitably? No, not really. In Sweden, the effect has been to keep the Social Democrats in power, either alone or with smaller coalition partners, for 40 solid years. Over those same four decades, politics in the Republic of Ireland have been dominated almost as continuously by Fianna Fáil. And nobody accuses the Irish of being as politically stable as the Swedes. Neither in Sweden nor Ireland nor Germany, to name but a few, has PR produced a parliament full of tiny splinter groups. So what is it about the Dutch?

The 13th government of the Netherlands since the second world war fell on July 20th, after only one year in office. Two days later Queen Juliana asked the outgoing prime minister, Mr Barend Biesheuvel, to try to form a new government. It is widely predicted that anyway fresh elections will be held soon. The last elections, held in April of last year, had produced a lower house in which 14 parties were represented. After two months' hag-

gling, Mr Biesheuvel emerged last summer at the head of a five-party coalition with a visible lack of coherent unity. Its members could not agree on the shaping of a budget that would adequately meet the country's severe inflationary problems, and the withdrawal of one of the five parties left the coalition with only 74 of the lower house's 150 seats. Hence the new crisis, and hence, also, the current speculation about an attempt being made before the next elections to form a single Christian Democratic party out of the Catholic party and the two main Calvinist ones, the Christian Historicals and Mr Biesheuvel's Anti-Revolutionaries.

Such a fusion would go right against the tendency to fission that has marked recent Dutch politics. New parties have been springing up so thick and fast that some of them have felt obliged to distinguish themselves by the dates of their birth: for instance, D-66, a group formed in 1966 that has aligned itself with, but not joined, the Labour party, and DS-70, the group that broke away from Labour in 1970, joined the centre-right coalition last year, and broke with that coalition earlier this month. If this trend continued, there would soon be splinter parties labelled by the month of their origin—August Catholics, September Radicals, October Anti-Revolutionaries and so on. Already there are six parties of the left in parliament, while on the far right the voter faces a puzzling choice between the Liberals (who are really conservatives), the Reformed Political and Political Reformed parties and the Middenstands Partij.

The formation of a single Christian Democratic party could transform the political pattern, but only if it did not set off a further proliferation of splinter groups. A more basic problem is the apparently excessive purity of the country's PR system. If, as in west Germany, parties failing to win 5 per cent of the total vote were barred from parliament, only seven parties would have got in last year: the five coalition partners, Labour and D-66. True, the Swedes managed without such a "threshold" until 1970 and then they set it at only 3 per cent; the Irish do not have one—but they have reduced the purity of their PR, which was never all that pure, by increasing the number of constituencies and thus reducing the number of seats to be shared in each of them. The Dutch might do worse than take a look at the Irish system, if they really want to make their own more stable.

Will Biesheuvel try again?

Tokai is the capital of Japan.

When you get acquainted with Tokai Bank, you'll necessarily become acquainted with Japan's Tokaido Megalopolis. That's where Tokai Bank maintains the lion's share of its over 200 domestic offices.

The Tokaido megalopolis in the heart of Japan, with Tokyo on the northern end and Osaka on the south, is an industrial/financial/shipping region unparalleled in any other country. It is as if New York, Pittsburgh, Chicago, Detroit, Birmingham and Southern California were all located within 400 miles of each other.

Not only did Tokai Bank get its name from the Tokaido region, it's also where we get our capital. We are most active in the most active part of Japan.

Which is a fine thing for you to remember the next time you have dealings in Japan. We know Tokaido like no other bank. Which means we know Japanese business like no other bank.

Jugoslavia

Mopping up operations

Monday's official announcement from Belgrade that a group of Croat extremists, which had crossed over into Yugoslavia earlier this month with the intention of starting a popular uprising, has been tracked down and destroyed ends three weeks of anxious speculation in Yugoslavia. The Yugoslav government's assurance that only two out of the original 19 terrorists are still at large, apparently trying to escape across the frontier, will be reassuring for many people outside Yugoslavia as well. So will the fact that the group was apparently operating alone, and not as part of a larger guerrilla army. An outbreak of serious guerrilla conflict in an ethnically heterogeneous state like Yugoslavia could easily push this strategically important country into full-scale civil war and, very likely, Soviet armed intervention.

Nevertheless, the fact that it took the Yugoslav troops three weeks to kill or capture these men—a group of wild ones calling themselves the Croat Revolutionary Brotherhood—must worry the authorities in Belgrade. So must the fact that the terrorists were able to inflict a number—so far undisclosed—of casualties on government troops. The Yugoslav leaders were clearly relieved by the lack of support which these would-be revolutionaries met in the predominantly Croat areas of Bosnia-Herzegovina where they had apparently hoped to stage their popular uprising. Quite clearly, they had misread the mood of the Croats, which certainly does not appear to be revolutionary.

But that could change, especially if the present seemingly endless series of purges and trials of students, intellectuals and party officials associated with the popular Croat leaders who were deposed by President Tito last December continues to give the impression that the government has got it in for all Croats, and not just Croat nationalists. Another bunch of guerrillas in a few months' time might then stand a better chance of holding out longer—with appalling consequences for everybody in Yugoslavia. Sophisticated arms and equipment which are now hurriedly being provided for the Yugoslav security forces will certainly help against this danger, but only if they are reinforced by moderate internal policies.

Everything's going Tanaka's way

Japan

Tanaka's flying start

FROM OUR TOKYO CORRESPONDENT

For Mr Kakuei Tanaka the first few weeks in office could hardly have been better. He has been invited to confer with President Nixon—and this time the rendezvous is to take place in Hawaii, roughly half-way between Tokyo and Washington. He has also received signals that he is welcome in Peking, although the details of a visit to China still have to be worked out. Even the opposition parties are playing ball.

Signs of a Chinese-Japanese rapprochement are now appearing at every turn. Early last week a Japanese Socialist leader, Mr Kozo Sasaki, reported that in a conversation he had with Mr Chou En-lai the Chinese leader had said that Mr Tanaka would be welcome for talks in Peking and that this should be regarded as an official invitation. A few days later the foreign minister, Mr Masayoshi Ohira, met two Chinese officials in Tokyo: the first on-the-record contact between Japanese and Chinese officials. This week the trade ministry approved the first export-import bank loan to China, and it was announced that a delegation from the China-Japan friendship association would pay a three-week visit to Japan next month. And, in addition to a troupe of international beauty contestants, the Japanese have also been playing host to a visiting Chinese ballet company.

The grand announcement of Mr Tanaka's visit to Peking is yet to come; the prime minister and his

advisers first want to be more sure of their footing. Before they start negotiating the conditions the Chinese will finally insist on as the price of normalising relations, officials in the foreign ministry want to eliminate—or at least greatly reduce—the previously essential role played by unofficial intermediaries like Mr Sasaki. The ministry also wants to lay the groundwork for Japan's retention of economic and cultural ties with Taiwan.

Taiwan is likely to take up much of the discussion on China at the meeting between Mr Nixon and Mr Tanaka on August 31st and September 1st. The Americans are still committed to defend Taiwan, and the front-line troops and planes they would need for that unlikely contingency are stationed on the Japanese island of Okinawa. But Mr Nixon and Mr Tanaka will no doubt want to range over the broad question of the power balance in east Asia, for both men will be assuming that the other will be in power over the next four years.

Sanctions against Rhodesia Still in action

Apart from the world of ballet, in which they excel, white Rhodesians are notable outside their own borders only in the world of sport. And if, as now seems likely, sanctions against Rhodesia fail to keep its sportsmen from the Olympics in Munich next month, all those many Rhodesians whose normal garb is blazer and shorts will feel especially pleased. But an invitation to Munich does not herald the general collapse of sanctions.

Two months after the publication of Lord Pearce's report on the acceptability of Sir Alec Douglas-Home's attempted settlement, there seems to be no detectable relaxation in the enforcement of sanctions. Britain has reported prima facie evidence of 170 breaches of sanctions to various governments over the past four years—which, incidentally, have led to only four prosecutions. But notification by Britain of such breaches has continued at much the same rate over the past two months as it did before, suggesting that sanctions are observed with about as much, or rather little, rigour as in the past.

Rhodesia is probably still able to export as much as, but no more than, it has been doing recently, which is very nearly as much as it exported in 1965. But its export earnings still constitute the main constraint on imports. So long as sanctions deny Rhodesia

access to the world's money markets and so to foreign capital it can still import only what it can pay for in cash. Since much of Rhodesia's capital equipment now needs replacing, the demand for foreign exchange is building up very heavily. The dearth of Scotch whisky reported in Salisbury's shops is reflected much more seriously in the scarcity of new tractors in the countryside and the shortage of new machinery in the factories.

Yet the war to intensify sanctions is not exactly being waged with vigour in London or at the United Nations in New York. The United States, which has been importing Rhodesian chrome under a Congressional amendment passed last autumn, has now also imported a shipment of nickel, for which there is no justification similar to that used over chrome, namely that strategic requirements demand it. But no protest has been made either by the UN or by Britain. The UN's Security Council sanctions committee met in May and made various proposals for strengthening sanctions, and the Commonwealth sanctions committee did likewise last month. But neither the General Assembly nor the Security Council as a whole has debated Rhodesia in the past two months. It now seems likely that this will not happen until September, when the Assembly next meets and when a China supposedly sympathetic to black Africa will preside over the Security Council for the first time. White Rhodesians may not fear this day, but it will be a reminder that their battle is not yet won.

Nigeria

Time to stop

The public execution in Nigeria on July 22nd of 14 men, convicted of armed robbery, brings the total to be shot by firing squad to 150 in the past two years. To counteract the crime wave that broke upon Nigeria at the end of the civil war in January, 1970, military tribunals were set up with power to sentence armed robbers to execution by firing squad. Most of the executions that have since taken place have been public, many of them deliberately held on a Saturday to draw the maximum number of people. Crowds of 30,000 are common, and sometimes—as in Ibadan in June, 1971—the audience has numbered 100,000.

There is no evidence to suggest that these public executions have had an appreciable deterrent effect on

Just one of 150

Nigeria's potential armed robbers: the crime wave, and the rate of execution, continue much as ever. The roots of the problem probably lie in a combination of unemployment and the postwar availability of weapons, coupled with disillusionment about unpunished corruption in military and government circles. Nigeria's military rulers have enhanced their stature abroad by their generally magnanimous treatment of the Biafran rebels. The continuation of public executions detracts from this high reputation.

Australia

The aborigines lose their tent

FROM OUR CANBERRA CORRESPONDENT

"The Aboriginal Embassy" is gone. On July 20th the Canberra police removed a few tents which had been standing on the lawns opposite parliament house for many months housing the aboriginal "diplomats." And a further attempt to put up the tents was frustrated by the police last Sunday. The government says it recognises that aborigines should have some visible presence in Canberra and is trying to provide space, but a Canberra court ruled that the "embassy," which was an embarrassing feature of Canberra for so long, had no legal right to its camping site. It was a symbol of aboriginal protest and its removal is being treated as symbolic too.

The aboriginal question in Australia, like the Indian question in the United

States, is that of the neglect of a small minority that has had little chance of putting its case and has not had an integrated case to put. Aborigines constitute less than 1 per cent of the Australian population and are grouped in three sorts of areas with different problems. A minority of fullbloods live in tribal conditions in the far north and the distant interior. A majority, of mixed blood, live on cattle stations and are fringe dwellers in outback towns. But a growing number of these have been coming to the cities, especially Sydney, to form an urban group whose members have begun to demand changes to give them equality with whites. Young Australians at universities, shocked at their parents' lack of concern for the aborigines, have taken up the cause with fervour. An alliance of urban aborigines and student radicals lay behind the "embassy."

There are too few aborigines for them to swing elections anywhere in Australia, but state governments could possibly lose some support for not showing increased interest in them. Responsibility is divided between the federal government in the Northern Territory and the state governments, especially those of Queensland and Western Australia. The federal government could take control of the whole aboriginal situation if it wished, but prefers to encourage the states with money and persuasion. Anyway, it is divided within itself about whether the aborigines should be merged into the general population as quickly as possible or whether special efforts should be made to preserve their culture.

The one issue on which public discussion has been sharply focused is that of land rights. Aboriginal leaders maintain that they should be given tenure of tribal lands and of other formerly tribal lands—some of them in the Northern Territory owned by big British companies—which are not now being actively developed. The official reply is that this cuts across the whole established system and that development would be impeded if aborigines could establish a claim on the basis of past occupancy. Active discrimination in such matters as drinking is disappearing, but the legacy of being despised and rejected for nearly 200 years lies heavily on the aborigines' shoulders. The whites are sympathetic in general terms but often impatient in particular cases. The "embassy" was an attempt to shame the politicians into taking bigger steps; its disappearance will not remove the sense of shame which many of them already feel.

The other guerrillas

How the others handle the gunmen

It is depressing to have to say that the IRA has been more successful than any other urban guerrilla group in recent years. That does not mean that it has much more hope than the Palestinian commandos or Uruguay's Tupamaros of achieving its final goals through violence. But it has shown an undeniable survival capacity; it has steadily increased the cost (in cash and in human lives) of maintaining order in the province of Northern Ireland; and it has sabotaged the prospects for a political settlement. Perhaps one of the greatest sources of strength of the Ulster gunmen has been the weakness, in military terms, of a democratic society that has to respond to the menace of organised violence.

In a functioning democracy, the government has to secure popular consent for the actions of the security forces, which sometimes means that effective measures have to wait upon a general mood of revulsion. After Belfast's "Bloody Friday," when nine people died and 130 were injured in a wave of bombings organised by the Provisionals, the climate in Britain—and even in some quarters of Dublin—has changed. Students of earlier urban terrorist campaigns may remember how the FLN bombings in the European sector of Algiers enabled General Massu to launch his tough clean-up operation in the Casbah in 1957; or how the slaughter of a trainload of innocent day-trippers by Venezuelan guerrillas in 1961 provided the pretext for the use of sweeping emergency powers by President Romulo Betancourt; or how the Baader-Meinhof group's merry month of bombing and killing in west Germany in May created a mood that allowed the police to mount massive search operations that led to the break-up of the terrorist cells.

Have we reached a similar stage in Northern Ireland? However Mr Heath finally decides to play his cards, it is worth examining the ways in which other governments have dealt with urban guerrillas to see whether we have something to learn from them. The strategy that Mr Willie Whitelaw was

sent to Belfast to apply was based on the first principle of all counter-insurgency operations: that victory hinges on isolating the rebel from his civilian supporters.

But it is very doubtful from past experience whether it is possible to isolate a terrorist organisation by purely political measures once it has already built up strength and established its grip over a section of the population. In most of the other countries where important terrorist movements have flourished over the past couple of years, governments have used quite a lot of force. In Uruguay, for example, the government of President Bordaberry has achieved some notable successes against the Tupamaro guerrillas since the army took charge of counter-insurgency operations and persuaded congress to declare a state of "internal war" early this year.

The Tupamaros have life in them yet. This week they bumped off Colonel Artigas Alvarez, the chief of civil defence and the brother of the man in charge of counter-guerrilla operations. But over the past months a galaxy of guerrilla leaders have been

They go hooded in Argentina too

rounded up, hostages have been freed from the "people's prison," the Tupamaros' underground medical service has been destroyed, and important caches of arms and supplies have been confiscated. According to the Uruguayan army's critics, the reason is simple enough: the army has not scrupled to use very rugged interrogation methods designed to make up for its initial lack of intelligence (which was compounded by the fact that the guerrillas had infiltrated the police) and to make mass arrests that pulled in liberal intellectuals along with marxist extremists. It is officially admitted that there are some 1,600 people in jail.

So at present Uruguay is saddled with yet another political crisis on top of its security problem, with the opposition attacking the army and a powerful group of officers attacking congress for mounting an inquiry into the death of a civilian under interrogation. Some people are even talking about the possibility of a "Brazilian solution" for Uruguay under a tough military man like General Gregorio Alvarez. So, wherever else they may have failed, Uruguay's urban guerrillas did succeed in dragging the security forces into politics for the first time since policemen staged a coup in 1933, and in provoking the kind of backlash that the late Carlos Marighella saw as the trigger for civil war. Maybe the only lesson we can learn from this is the danger of leaving effective action so late that a right-wing protest movement will have time to grow into just as serious a menace to democratic institutions as the terrorists who got the snowball rolling.

The problems of tiny Uruguay, marginal to the world economy and the balance of power, are relevant only as a disheartening example of the problems that can confront a liberal democracy with a declining economy that has to contend with a disciplined urban guerrilla movement. Some people will argue that the force of the backlash in Uruguay shows up the dangers of adopting a "tough" approach to urban terrorism. But the new vehemence of the Uruguayan army, like the new strength of the Protestant militants in Ulster, grew out of the failure of moderate governments to deal effectively with the problem of organised violence. Neither can be justified, but both could have been foreseen.

How have other governments tackled the military problems that confront the British army in Ulster? It is possible to single out four key issues: the border problem, the control of the

The first thing in Gaza was to open it up for the patrols

civil population, the legal framework, and intelligence-gathering.

The border problem. The importance of the IRA's sanctuary south of the border is hotly disputed, but there are said to be between 200 and 300 northern gunmen who are in the south for "rest and recreation." Since it is clearly impossible to seal off the border completely by physical means, the British Government has preferred to angle for greater co-operation with the security forces in the republic. The Israelis, faced with an even more serious border problem, opted for much more drastic methods. They laid electronic sensors and booby-traps along the west bank of the Jordan river and sent their patrols across the border into Jordanian territory when they were fired upon from the other side. Although the Israelis were able to claim by early last year that only one in five Palestinian raiders got back alive from a mission into Israel, they provided an additional deterrent to those who played host to the guerrillas by making retaliatory strikes over the border.

Population control. The Israelis' attempts to winkle the Arab terrorists of the Popular Front for the Liberation of Palestine (PFLP) out of the crowded ghettos of the Gaza Strip were based on two principles: tight control of the movement of population, and collective punishment. They drove wide roads through the Gaza refugee camps in place of narrow alleyways where only one man could walk,

making them easier to police. They enforced night curfews and sealed off areas containing as many as 27,000 people (the Shati camp) or 40,000 (the Jabaliya camp) in order to make thorough searches lasting for several weeks. The second part of their policy, collective punishment, involved the destruction of houses used by the terrorists. It is a method that inspires some unsettling memories, and it is arguable that its long-term effect is to unite a minority group in resistance to the authorities.

The legal framework. A lot of emotion has been expended over the introduction of internment in Northern Ireland, but most governments have been prepared to accept that you cannot deal with urban guerrillas as you deal with (say) shoplifters. Unless the security forces are allowed to exercise some exceptional powers, society is exposed to the risk that dangerous gunmen will be immune to punishment because of the lack of evidence or the intimidation of witnesses.

Intelligence-gathering is in a way the whole art of counter-insurgency. The British displayed themselves in colonial situations as the masters of "exotic" methods of intelligence-gathering: the use of double agents, informers, and counter-gangs. In Malaya, they also proved the effectiveness of a proper "rewards system" and of a very flexible approach to defectors. Rehabilitated terrorists often make the best intelligence sources. But in the absence of sufficient inside sources pro-

viding tactical intelligence about the movements and location of the terrorist cells, the security forces are obliged to resort to less selective and politically more unpopular devices: large-scale search operations, mass arrests, and detailed interrogation of prisoners.

In west Germany, these methods led to the destruction of the Baader-Meinhof group, but through a series of events that at first seemed entirely fortuitous: a policeman would flag down a speeding car that turned out to contain two young terrorists, for example. In Brazil and other Latin American situations, the use of torture as a means of interrogation and regular mass arrests have probably injured as many innocent civilians as genuine guerrillas, although in Brazil the successes of the security forces have forced the remaining terrorists to go underground or migrate to the jungle.

If there is one lesson from the experience of other countries in handling urban guerrillas, it is that it is totally wrongheaded to march out with a shopping list of military techniques and try to apply them mechanically. How can you compare Ulster and Brazil, or west Germany and Israel? But there are two general points that can be made. The first is that the problem is fundamentally political. The real battle is for minds, and government response to a terrorist campaign must be geared both to the state of public opinion and to a painstaking evaluation of the real nature of the threat.

The second point may seem to contradict the first. It is that there is not always a political solution for the problem of organised violence. How many contemporary urban guerrilla groups really reflect the just grievances of oppressed minorities—or that entity of platonic abstraction, "the people," in whose name they so often profess to act? The weakness of most urban guerrilla groups has stemmed from their isolation as predominantly middle-class rebels inspired by a half-digested theory of global revolution, without allies in the major left-wing parties or the union movements. At least in western societies, they have to be dealt with as armed gangs, not as partners in a political dialogue. Even where, as in Northern Ireland, a terrorist group has managed to find roots in genuine grievances, it must be remembered that a guerrilla movement has its own character and serves its own ends. It is not just a symptom of a social malaise that will miraculously fade away when the government administers a soothing lotion.

21st July, 1972.

THE WORLD*American Survey***Agnew stays, but what about Kissinger?**

Washington, DC

Mr Nixon, when he had to choose the Republican nominee for the Vice Presidency in 1968, presumably felt comfortable in considering first the kind of election campaign he wanted to wage, secondly the need for a subordinate compatible with himself and only thirdly and lastly the implications (at that time fairly remote) for the succession to the Presidency. He chose Mr Spiro Agnew. Their 1968 campaign succeeded, though it was a close call. Vice President Agnew has served President Nixon well, and Mr Nixon has decided to choose him again.

Mr Nixon, who was Vice President as long as anybody, himself had to face some contention and dispute when the question of his renomination came up in 1956. This was because the age and medical record of the then President, Mr Eisenhower, made it seem more than normally likely that the Vice President might succeed to the highest office through the President's death.

President Eisenhower lived through his second term and well beyond it. Re-election as Vice President did, however, make Mr Nixon practically unchallengeable as candidate for the Republican presidential nomination four years later. This time there are no particular facts of age or health to cast doubt on Mr Nixon's survival through a second term. But what about the national leadership in 1976, when Mr Nixon will be disqualified from succeeding himself? Renomination this year gives Mr Agnew an excellent chance of the Republican nomination for President. That he is interested in seeking the Presidency there is no doubt: he said in an interview not three weeks ago that it would be "rather ridiculous to seek re-election as Vice President" if he were not. At 53, Mr Agnew is full of health and vigour and not empty of ambition.

It is this train of thought that makes some Republicans, particularly those of the moderate or liberal kind, feel that the choice of Mr Agnew for a second term is some concern of theirs. Whatever Mr Agnew's inner feelings or convictions, and whether from his own choice or not, he has taken on the role of conservative champion in the Republican ranks. He has performed eloquently in that role, with what looks very like enthusiasm, denouncing the young, the intellectuals, the press, the dissenters and the unconventional with great dash and attack.

In adopting him out of deference to the President, are the Republicans committing their party to a future right-wing course, not only in political but also in cultural and sumptuary questions, and cutting themselves off from the young? Considerations of this kind caused liberal Republicans such as a Senator Javits of New York and Senator Saxbe of Ohio to urge the President to think twice before selecting Mr Agnew again. But their pleas only decided him to make his choice known early, to put a stop to contention, and

thus to deprive the Republican national convention of what little suspense it might have had.

Half a dozen Republicans had been briefly talked about as alternatives should the President decide against keeping Mr Agnew on. But the only name around which speculation revolved persistently was that of a Democratic politician, the former governor of Texas, Mr John Connally. The only time Mr Agnew let himself show feeling about the future of the Vice Presidency was at a news conference in May, when somebody asked him what he thought of Mr Connally taking his place. He answered that he did not see "how anyone can seriously believe" that a man who was a registered Democrat in May could be the Republican nominee for Vice President in August. Mr Agnew, as it turned out, was right, but the idea that Mr Connally has a future in Republican politics is still very much alive.

On two occasions, in 1960 and 1968, Mr Connally played some part in denying to President Nixon the presidential electoral vote of Texas. To the general surprise he joined the Nixon cabinet early last year as Secretary of the Treasury. His 15 spectacular months in the post brought complete reversals of home and foreign economic policy and earned him some signal marks of Mr Nixon's rarely-bestowed friendship. Many people supposed that if Mr

Kissinger seems unworried as Nixon turns to Connally

Nixon were worried about carrying Texas this year he might adopt Mr Connally as vice-presidential candidate. Mr Connally never showed any public sign of expecting this himself. How much hold he still has over the voters of Texas is not entirely clear but is not likely to be tested so long as Governor George Wallace does not re-enter the campaign as an independent candidate. His call on Texan money, in case the President's campaign needs any, is still strong.

Mr Connally got back from a world-wide tour on the President's behalf in time to denounce Senator McGovern's policies when the Democratic convention ended. The President had him to dinner on July 22nd to tell him of the announcement about Mr Agnew to be made on July 23rd. Last Sunday, the 24th, Mr Connally spoke on television of his willingness to help in Mr Nixon's re-election: he was talking to Democrats around the country, he said, and a "Democrats for Nixon" organisation might result.

Mr Connally is not ready to turn Republican yet and insisted that he was interested in the Nixon-Agnew campaign alone: his organisation would do nothing to get Republicans elected to Congress, but would spend its money on teaching voters how to split their tickets—that is, vote for a Republican President and Vice President and elect Democrats to lesser offices. Thus his eventual political intentions remain ambiguous, but his attachment to President Nixon does not.

Mr Connally is 55, gifted, energetic, ambitious and strong-willed. What he had in mind when he left the Treasury in May remains mysterious. But the likelihood that Mr Nixon (assuming his re-election) will want Mr Connally back is great. Since he is not to be Vice President, he might come back as Secretary of State. The trouble with that idea is that Mr Connally would be temperamentally incapable of being anything but a strong Secretary of State. With him in charge of it the decline of the State Department would be arrested and indeed reversed, but this would involve a large change in President Nixon's method of conducting foreign policy.

The personality of the President's assistant for national security affairs, Dr Henry Kissinger, is one reason why the foreign policy of the Nixon Administration is managed in the particular way it is. Dr Kissinger does not like to share responsibility, his intellectual grasp and his capacity for

Nasty shock for McGovern

Senator McGovern must by now be wishing that he had done at Miami Beach what Mr Adlai Stevenson did at Chicago in 1956 and left the Democratic convention a free choice of the vice-presidential candidate. The choice of Senator Thomas Eagleton has become a grave embarrassment; it certainly seems to have been made without a full knowledge of the facts. Senator McGovern's staff lacked the time, it is said, to vet all the vice-presidential possibilities.

Mr Eagleton, with Mr McGovern at his side, disclosed on Tuesday that he had had three spells in hospitals between 1960 and 1966 for psychiatric care, including on two of the occasions electric shock treatment for "nervous exhaustion and fatigue and the manifestations of depression."

Americans resort to the psychiatrist more freely and with less embarrassment than do probably any other people and they have been told more often than most people to think of mental illness as simply a kind of illness. Some Americans may accept this as a sufficient explanation, but many others are unlikely to do so—and the ticket is going to suffer badly.

Electric shock treatment was used more indiscriminately 10 years ago than it is today, but even then first-class doctors, such as Mr Eagleton had, would not have used it for anything less than a severely depressed condition.

Mr Eagleton claimed that he was fully restored and had been perfectly all right since 1966 and the observation of people who know him, including political associates and opponents in his state of Missouri, support him in this. No reason exists for supposing that he is not fully fit now and Mr McGovern, once he had been told the

Washington, DC facts, declared him "fully qualified in mind, body and spirit" to be Vice President and, if necessary, President.

All the same, when Mr McGovern asked Mr Eagleton to be his candidate for the Vice Presidency he also asked if there were any problems in Mr Eagleton's past that were worth talking about and Mr Eagleton said there were not. The facts came out when an anonymous caller telephoned the Detroit Free Press (a newspaper which belongs to the Knight chain) claiming to be worried that the Republicans might make use of them.

Mr Eagleton has admitted to reporters that the fear of having his medical history known had nagged at him for years. He and his wife, he added, had decided that if he were selected for the vice-presidential nomination a spontaneous disclosure would be best.

But he failed to make it. A forced disclosure was the result. That done, Mr McGovern and his campaign advisers had to wait to observe the impact. They did not want to drop Mr Eagleton from the ticket, but it could still be done. In that event the Democratic national committee would have to be called together to select a new nominee in Mr Eagleton's place. That would be a fresh test of the effect of the current party reforms.

By Thursday the impact was visibly both greater and more adverse than Mr McGovern can have expected. A new allegation also became public—that Mr Eagleton had a history of drunken and reckless driving in Missouri in the 1960s. Mr Eagleton will have damaged the coming McGovern campaign whether he withdraws or stays a candidate, but it had become evident that he would do less harm by withdrawing.

Tom, why didn't you tell me?

Come back, all is forgiven.

It's quite safe.

The British are actually welcome at tea parties in Boston these days. And if you're thinking of establishing a subsidiary in the U.S.A., well—the Americans couldn't be more delighted.

But things have changed since Washington crossed the Delaware. So it wouldn't be a bad idea to have someone looking after your interests who knows the American financial scene like the back of his hand.

Someone, also, who's familiar with the problems we British face once we cross the Atlantic.

Chase Manhattan, naturally. One of the largest corporate lending banks in the United States.

And, by the way, one of the oldest U.S. banks in Britain, going back all the way to 1887.

Obviously the people to give you a hand with short and long term credit facilities, deposit services, transfer systems, financial counselling and merger and acquisition advice.

The kind of hand they already give so many of the top thousand UK companies with interests in the U.S.A.

So come back—but have a word with Chase first. You'll find they're just your cup of tea.

 **Chase Manhattan acts, while other banks talk.**

THE CHASE MANHATTAN BANK N.A., WOOLGATE HOUSE, COLEMAN ST., LONDON E.C.2. AND 1 MOUNT STREET, W.1. 01-600 6141.

work are quite unusual and his confidence in his own judgment is exceptionally solid. Mr Nixon's confidence in Dr Kissinger's judgment appears to be no less than Dr Kissinger's own, or the President would hardly have allowed the control of what he considers the most important aspects of foreign policy to be so rigidly centralised in Dr Kissinger's hands.

Still, the elevation of the National Security Council's staff, and the consequent continuous seepage of control away from the State Department, does also flow naturally enough from Mr Nixon's view of the Presidency and of foreign affairs. The management of subjects that Mr Nixon cares deeply about has to be orderly and visibly systematic. He cares most deeply about foreign affairs. But his interest is not a general interest in foreign peoples, economies, societies or cultures; it is concentrated on the limited areas of foreign policy that involve global strategy and the greatest powers. It is these areas that have been made the monopoly of the National Security Council's staff. They are also the areas in which Mr Nixon wanted to make changes, notably the new China policy and the overtures to the Soviet Union. Dr Kissinger's staff is the agent of change, while the State Department is the repository of continuity in foreign relations.

Things go wrong under this system when a subject which has been thought to be marginal turns out to involve global strategy (as it did in Bangladesh), or sometimes when the President's desire for a spectacular, surprising, perhaps sudden result causes the need for consultation and explanation to be neglected, as it did when he decided to go to Peking. The State Department and the foreign service contain most of the officials who could save things from going wrong in those ways, and it is bitter for them to be bypassed and ignored as they are.

The thought of Mr Connally as Secretary of State putting up with this kind of thing, as Mr William Rogers patiently does, is as unlikely as the thought of Dr Kissinger leaving relations with Moscow or Peking to Mr Connally. One or other would have to go. A decision to bring Mr Connally to the State Department would be, in effect, a decision to conduct foreign policy in a different way. There is no sign that President Nixon is thinking of any such thing. December and January, when (and if) he is assured of his second term, would be the natural time for him to consider changes.

Glorious growth

This has been a joyful week for the President and his economic advisers. The good news came pouring in, after years of doubt and hope. In real terms the gross national product rose by 8.9 per cent in the second quarter (at seasonally adjusted annual rates), the biggest expansion in over six years. Revised figures also show that economic growth in the preceding two quarters had been faster than had been reported. Moreover, in June the consumers' price index went up by only 0.1 per cent and stood only 2.9 per cent above the level a year earlier. Not since 1967 have prices risen by less than 3 per cent in a full year.

Real earnings of the average family were 4 per cent higher than they had been a year earlier, the biggest June-to-June rise on record. People are saving less and spending more, which is good news for the shops and factories. Profits are looking bright. Mr Herbert Stein, the chairman of the President's Council of Economic Advisers, called the figures on the gnp and on prices "the best combination of economic numbers to be released on any one day in a decade—I won't say in the Christian era," he said, poking gentle fun at Mr Nixon's fondness for hyperbole.

The growth in incomes and numbers of jobs has benefited the budget for the fiscal year 1972 which ended on June 30th. Receipts, from both corporate and individual taxpayers, were higher than expected and the budget deficit—the fourth of an Administration dedicated to fiscal prudence—some \$3 billion less at \$23 billion. But there the good news ran out abruptly. The Secretary of the Treasury, Mr Shultz, pointed out that the budget for the new fiscal year, 1973, could be well above the estimated \$27 billion; some analysts talk of \$30

Percentage changes in GNP
quarterly at seasonally adjusted annual rates

billion to \$40 billion. The executive departments are now being shorn mercilessly by the head of the Office of Management and Budget, Mr Caspar Weinberger. But it is Congress which worries Mr Nixon and on Wednesday, in a special message, he called on it to fix a ceiling on expenditures of \$250 billion. If it persisted in spending which was damaging to the economic interests of Americans, he promised to meet its extravagance with presidential vetoes.

Monetary good will

Washington, DC

The decision of the central bank, the Federal Reserve System, to intervene in the foreign exchange markets for the first time in the postwar period has primarily symbolic importance. The United States has not become like all other countries, with the obligation to defend its own currency's exchange rate and lose reserves in doing so. That could come in a new world monetary system, but it is not the case yet, as the Treasury was at pains to point out after the fact of the Federal Reserve's sale of German marks last week became known. Intervention will be only to combat "speculation" and thus help, in that sense, to preserve existing exchange rates.

But the symbolism involved has some real importance. Above all, it is a signal by Mr Arthur Burns, the chairman of the Federal Reserve Board, that the United States wants to show at least the spirit of co-operation in maintaining an orderly monetary world during the long transition period between the Smithsonian agreement on exchange rates and negotiation of a new set of monetary rules. This was the spirit that Mr John Connally, the former Secretary of the Treasury, more or less explicitly rejected, for reasons that were not based on simple nationalism.

Mr Connally and Mr Paul Volcker, the Treasury Under Secretary, have felt that monetary reform stood no real chance of success unless other nations came to grips intellectually with the real problem, as they saw and see it—namely, that the world must again tolerate a very large American trade surplus and that other nations must understand the consequences of this for the future course of currency exchange rates, including probable periodic upward revaluations of strong currencies. The two men have felt

that symbolic gestures of co-operation would only paper over the cracks.

Mr Burns, supported by most bankers, felt otherwise. It was he who played a major part last November in persuading President Nixon to overrule Mr Connally and accept a symbolic increase in the price of gold in order to help win international agreement on a new set of exchange rates. Now Mr Burns has clearly taken the lead in a new American gesture at a time when, in fact, the United States did not have to do anything. The dilemmas—to take in more dollars, to float upward or to impose more controls—were all the problems of other countries and the United States seemed to have nothing to lose by keeping quiet and doing nothing.

Now the gesture has occurred. Its longer-run significance remains in doubt, in monetary terms, but the important point may be that the President approved it and so did Mr George Shultz, the new Secretary of the Treasury—and that it was backed by the reactivation of the Fed's swap network (see page 74). Whether a better monetary world is to be built upon gestures is debatable, but at least the United States—in the words of one private banker—has "rejoined the human race."

Labour's divided

Mr George Meany, head of the big trade union federation, succeeded last week in pledging its executive council to strict impartiality in the race between President Nixon and Senator McGovern. But he succeeded only by demanding a vote of confidence in his leadership and by agreeing that, once he had it, individual trade unions could endorse whom they pleased.

Already several unions which are members of the federation have declared for Mr McGovern and during the next month or two many more are likely to fall in line formally, not only because many trade unionists detest Mr Nixon, but also because their leaders and members do not share Mr Meany's passionate support for the Vietnam war or his alarm over Senator McGovern's intention of cutting spending on defence. The machinists, the third largest trade union, are virtually pledged to Mr McGovern; so are the communication workers. Even the steelworkers are in some doubt although their president, Mr I. W. Abel, attacked Mr McGovern and his record viciously at the Democratic convention, saying that ordinary working Americans were

Fitzsimmons repays his debts

sick and tired of hypocritical candidates "who tell us they're for the workers and then turn around and vote for right-to-work [anti-union] laws and against minimum wage programmes." This probably helped to bring Senator McGovern hot-foot from South Dakota to vote for a higher minimum wage than Mr Nixon wants. But his record as a whole is notably pro-labour and some strong voices are being raised for him inside the steelworkers' union. Outside the federation Mr Leonard Woodcock of the big automobile workers' union is trying to set up a fund-raising organisation for the Senator, although it cannot hope to rival the funds of Mr Meany's Committee for Political Education.

Thoughtful trade unionists fear that Mr Meany has not only damaged his own reputation but has splintered labour unity so badly that it will take years to mend. Mr Nixon is assiduously widening the cracks, as, indeed, he has been doing for years with his wooing of the "law and order" unions—those of the police and firemen—and of workers in the maritime and dock unions by his support for a larger merchant marine. The unions in the building trades also lean his way. But the largest juicy plum fell into his lap last week when the biggest union of all, the independent Brotherhood of Teamsters, endorsed him as labour's true friend and a man of "vision and experience."

Many people saw a blatant bargain with the teamsters when the White House, in turn, announced that it was no longer pressing for early passage of controversial new legislation to deal with damaging strikes in the transport industries, since Congress seemed disinclined to approve it in the time left this year. But the wooing of the teamsters' president, Mr Fitzsimmons, is of long standing; he even obtained the

release of his former leader, Mr James Hoffa, from prison and he has enjoyed many White House favours.

Nobody, not even Mr Meany, pretends that trade unions can control how their members vote. If they could, there would certainly not have been the outpouring of votes that there has been in the primaries—the intraparty nominating elections—for Governor George Wallace, the unions' bete noire. But in this example there may not be much consolation for Senator McGovern; many of those Wallace votes seem likely to fall to Mr Nixon.

Safe at any speed?

It was only a small defect in the shoulder belts but the Ford Motor Company offered to check 4m cars for this fault rather than risk any bad publicity from Mr Ralph Nader and the crusaders for safety on the roads. Ford is in good company. The General Motors Corporation has already called back its small car, the Vega, three times this year—once for defects in the fuel and exhaust system, once for trouble with the carburettor and once for faults in the rear axle. The Chrysler Corporation has ordered repairs to be done on 100,000 of its cars. In all 11m cars have been called in for repairs in the past 12 months, a figure which makes many people highly suspicious of the standards of efficiency in the industry. But Mr Nader has had his setbacks too. Last week the Department of Transportation released a painstaking study which claims that, contrary to the allegations of Mr Nader which hit the headlines in the mid 1960s, the Corvair car made by the General Motors Corporation was at least as stable as other models of the same period. It was as a result of Mr Nader's insistence that the Corvair was both unstable and unsafe that GM discontinued the model.

Some people are now beginning to wonder how much the public actually benefits from these free repairs known as recalls. They make the roads only marginally safer; mechanical failures account for a small fraction of the 55,000 deaths on the roads each year. Some people dispute the theory that calling back cars helps to keep the owners' bills down and the customers happy. A large number of motorists ignore the manufacturers' offers to put defects right and it is argued that it is the owner who is out of pocket in the long run because the makers of cars just add the cost of recalls into their prices. A Senate committee plans hear-

ings to throw light on the matter.

One thing is certain: it is the customer who will have to pay the price for safety on the roads. For example, the stronger bumpers, able to resist a collision at 5 mph, which may be required by law after July, 1973, are supposed to save car owners both the cost of repairs and a certain amount on their insurance premiums. But those new bumpers with which the manufacturers have already fitted many of next year's models may cost a buyer an extra \$100 or more.

Car manufacturers also claim that the air bag, a controversial device which is meant to inflate immediately on heavy impact, providing a cushion between those in the front seat and the windscreen, will be very expensive to install and may not be all that effective. They may push up car prices by about \$300 apiece.

Suspect police

FROM A CORRESPONDENT IN CHICAGO

Within the past few months, there have been many charges of brutal treatment of black people by the Chicago police. In that city, however, these abuses of authority were considered to be fairly normal for a force of 13,000. But Chicagoans were startled out of their usual lethargy recently when it was revealed that five or more policemen were under investigation for involvement in the murders of seven black men shot to death last winter.

All seven were killed in the same fashion: they had bullet wounds in the head and their bodies had been dumped in the Chicago river or the Sanitary and Ship canal on the city's southern outskirts. Most of the victims were relatively wealthy, drove expensive motor cars and had been known to be carrying large sums of cash. By mid-June, reports circulated around police headquarters that the victims had been pushers of heroin and other narcotics and that they had been killed—or at least some of them had—because they had threatened to stop paying bribes to the police to avoid arrest and prosecution.

The first official confirmation came when the Superintendent of Police, Mr James Conlisk, conceded that four officers, all, it seems, black men, were balking under questioning. He said that they would be suspended if they failed to co-operate. Even more of a sensation was created when another top police official disclosed that a sergeant implicated in the investigation was mis-

Will Conlisk follow his leader?

sing, amid reports that he had been seen entering a car at pistol-point. However, a few days later the police said that the "kidnapped" sergeant had telephoned in the report of his abduction and taken it on the lam. Two other police officers were recently jailed indefinitely when they refused to answer a grand jury's questions.

Mayor Richard Daley, at a press conference, was as firm as a mayor could be in backing Mr Conlisk. But Chicagoans wondered whether the "bad old days" had not perhaps returned and whether a new superintendent of police was in the offing. Mr Conlisk was appointed in 1967 to succeed a noted reformer, Mr Orlando Wilson, with whom he had worked in cleaning up the department. One reason for the periodic scandals was that local politicians had the power to veto officers chosen to command police headquarters in their districts.

After the "Summerdale scandals" in 1960, when a ring of policemen was found to be abetting burglaries, Mr Wilson, an austere former policeman who had become dean of criminology at the University of California's branch at Berkeley, was brought in. He stood the force on its head, retired many beefy old-timers growing rich on graft, improved recruitment and training and insisted on professionalism. But he came up against the politicians and went back to Berkeley. Political influence returned to the police force in spite of Mr Conlisk's efforts to keep it out. Recruits once again needed political sponsorship (which often meant paying for an appointment). Standards and morale fell. Recently eight policemen were indicted for extortion, two of them have been convicted. Respect for the police has almost disappeared.

Commercial space

How practical it is is anybody's guess, but an earth-mapping, resource-photographing satellite has been put into orbit by the National Aeronautics and Space Administration. The Earth Resources Technology Satellite (ERTS) circles the globe every 103 minutes, taking photographs with its three television cameras and devices for sensing temperature and radiation. Its range and orbit are such that as the earth turns it will scan the entire surface of the planet, apart from the extreme polar regions, every 18 days. Because the photographs produced by ERTS may contain commercially valuable information, Nasa is for the first time making them available to the general public at the same time as to the scientists involved in the project.

Sceptics say that a satellite costing \$78m is an inefficient and expensive way of collecting generalised data and that high-flying camera-carrying aircraft, working toward specific objectives, are a better buy. But ERTS is popular with Congress and the enthusiasm of its backers, the Department of the Interior chief among them, is almost unbounded.

Because the satellite will photograph the same areas repeatedly, it will record the variations caused by the seasons, by changes of temperature, by the melting of ice and by the movement of wild animals, crop diseases and pests. It may even be of some use in census-taking, in so far as it can show alterations in the use of land from residential to commercial and from agricultural to industrial. Its spying potential is negligible—it cannot see objects smaller than 300 feet in width.

That even the clean-cut all-American boys within Nasa are not immune from desire for money has been demonstrated once again with the scandal of the Apollo-15 astronauts. The crew of three, acting without permission, took about 600 stamped envelopes to the moon and back last July. The journey added about \$1,500 to the value of each letter, to judge from the prices paid for some which were sold in Europe. The astronauts confessed that they had expected to be compensated in the form of trust funds for their children but also said that they had changed their minds, even before the story was made public. Such trouble is endemic at Nasa, which may forbid future astronauts to carry personal belongings on the last moon flight.

Books

Social arithmetic

TRENDS IN BRITISH SOCIETY
SINCE 1900

Edited by A. H. Halsey.
Macmillan. 604 pages. £4.95.

One kind of trend-hunting—making absolute comparisons between then and now—makes for heady reading: since 1900, the British have become larger, longer-lived, richer, more extensively educated, more leisured and have acquired a clutter of televisions and fridges and cars. Or rather, they have been replaced by other larger, richer Britons who spend longer at school and leisure, run cars and watch television. Society is not immortal; its continued, if changing, existence is a convenient linguistic convention.

Is it more of an entity at one moment in time? Social scientists measure "cohesion" in a society, by which they usually mean conformity or uniformity. The other kind of trends that are picked out by Messrs Halsey and company, along with innumerable other social statisticians, show not the changes in society as a lump—the progress of the average Briton, so to speak—but rather the expansion or contraction in the distance between the two extreme Britons: the best-off and the worst-off. This is a familiar tool for demolishing complacency, used in this book to great effect. Figures for declining infant mortality are punctured by statistics which show persistent class differences in mortality rates; statistics of expanding higher education by those which show how class representation at university has become even more unbalanced; accounts of increasing affluence by figures that show how the share of the nation's wealth held by the richest 1 per cent had only declined from 65.5 per cent in 1911-12 to 42 per cent in 1951-56.

This is an entirely legitimate method. It does not always tell a regressive or, at best, neutral story. In their chapter on the economic environment, for example, Messrs Bacon, Bain and Pimlott demonstrate a marked redistribution of after-tax incomes in the middle years of the twentieth century. But it can be misleading. It is no sur-

prise that taxes on wealth do not greatly affect the distribution of wealth, because the money is taken from Peter, not to put capital in the hands of Paul, but to put income in the hands of the Exchequer. That does not mean that the taxes are not biting. One can quarrel more fiercely with the contention that class representation at university is more unbalanced than ever, and not just because this is still consistent, as Messrs Halsey, Sheehan and Vaizey fairly point out, with a marked improvement in a working-class child's chances of getting to university. Other authors, notably in the Fabian society's recent "Labour and Equality," have demonstrated convincingly that class representation has become more equal. It is more than right to emphasise the continuing class difference in infant mortality, but the absolute reductions at both top and bottom do modify the significance of this. The range between the top and the bottom shrank from over 40 deaths per 1,000 births in 1921-23 to 8 in 1964-65.

The authors do not, to be fair, wed themselves to the comparative approach. The bulk of this book consists of tabulations from which one can draw one's own conclusions. It is a formidable and valuable collection, bare of such frills as graphic representation. There is not a pie chart to be seen. The economy, welfare and education are covered at some length, but it is, ironically, these basic chapters that are the least satisfactory, for no other reason than that they cover familiar terrain which has been frequently worked over at a higher level of sophistication. In the chapter on the economy the authors eschew Lorenz curves, for example, in the interests of simplicity and brevity, contenting themselves with providing a bibliography (which was, incidentally, compiled too soon to include a highly technical and useful study, "The Distribution of Personal Income in the United Kingdom, 1949-63" from Cambridge University Press, £4.60).

In his introduction, Dr Halsey lists the "functional prerequisites" of society as five institutional systems: of production, reproduction, authority and power, ritual and communication.

By far the best part of this book deals, curiously, with reproduction and ritual—in the chapter on population, which is ample and satisfying, but also in the chapters on crime, immigration and Dr Halsey's own short chapter on leisure. But by far the best is on religion. The range of the copious statistics is unique. They are manipulated with skill and interpreted with intelligence. From this chapter one can discover not only the predictable difference between Northern Ireland and the rest of the United Kingdom (in Ulster the proportion of marriages which are celebrated in church has actually increased this century to about 96 per cent of all marriages in 1967; in England the figure had by then fallen to 66 per cent and even in Scotland to 75 per cent). But Messrs Currie and Gilbert also quantify the extraordinary recovery of the Church of Scotland. While Church of England communicants declined from 2.4m in 1926 to 1.9m in 1966, Church of Scotland communicants increased from 762,000 to 1.2m. The authors discuss the connection with nationalism; point out that there has been no comparable upsurge in Wales; discuss surprising latent similarities (in England) between the trends in Protestant and Catholic allegiances; cover the rise in minor churches and estimate "densities" of worship. That is the stuff that raises this book above the status of a useful compendium of standard social arithmetic.

The last of the galaxy

THE POUND ERA

By Hugh Kenner.
Faber. 620 pages. £8.50.

It is notoriously difficult to recognise degrees of pre-eminence among one's near-contemporaries. We talk now of the age of Donne, a label that would have seemed bizarre to Ben Jonson. Will "The Pound Era" seem an appropriate designation, 50 or a 100 years hence, for the epoch we think of as "modern"? Mr Kenner's brilliantly written book establishes an excellent case for supposing the answer to be "Yes." Even if he had not devoted the major part of his study to demonstrating and elucidating Ezra Pound's achievement as a poet, the dominance of this extraordinary man asserts itself in the sheer energy of his association with other experimental, innovating artists of his time. And not only writers; Gaudier-Brzeska and Wyndham Lewis, besides Eliot and Joyce, appear as significant figures.

Portrait of a co-innovator: Pound, by Wyndham Lewis

All of them were young at a time of intellectual ferment. The principle of relativity was in the process of being established; philologists were proclaiming the organic nature of language; ancient artefacts of extreme beauty were being disclosed by archaeologists, and objects of primitive art by anthropologists. Freud was opening up the psychopathology of everyday life. In "Ulysses," in "The Waste Land," as in "The Cantos," one sees how the minds of their receptive and sensitive makers responded to the innumerable stimuli.

Pound's capacious intellect, less scholastic than Joyce's or Eliot's, was equally apt to assimilate impressions and notions. He was not, to start with, particularly eccentric. Mr Kenner points out that plenty of other people at the beginning of this century were interested in Dante and his precursors, in Provençal poetry, in Italian quattrocento art. The impact of Fenollosa is very fully explored, and the fascination of the Chinese ideogram expounded in much detail. Why Pound took so readily to the ideas of Major Douglas is also made plain. A chronological scheme underpins Mr Kenner's wide-ranging survey, and he does not ignore biographical facts—such as Eliot's first marriage or Pound's incarcerations—that bear on works of art.

At the very end of the book (which contains many valuable illustrations) there is a shadowy photograph of Ezra Pound in old age, the one survivor of the galaxy. His leonine head is inclined forward, as if in profound thought. Whatever his follies during the fascist years, it is the head of a sage. The chances are that, with expositors like Hugh Kenner and Christine Brooke-Rose and many another, the idiosyncratic "Cantos" will eventually become no more impenetrable than "Ulysses."

Chinatowns

CHINA AND THE OVERSEAS CHINESE

By Stephen Fitzgerald.
Cambridge University Press. 280
pages. £5.90.

After Gestapu—that thwarted, sinister-sounding coup in Djakarta in 1965, which led to the fall of Sukarno—it was alleged that 250,000 Chinese in Indonesia perished in provincial pogroms. The epidemic of cruelty spread from germs of jealousy and fear. After the establishment of People's China, newly independent south-east Asian governments—socialist Burma as much as the capitalist Philippines—took Peking's radio broadcasters at their belligerent word. They feared that the overseas Chinese (whose labour supported these governments' exchequers) would become China's fifth column for future aggression.

Dr Fitzgerald considers whether the domestic evidence from the Chinese side confirms these apprehensions; he concludes (with several buts) that it does not. On the contrary, he believes that the overseas Chinese, especially the ones who have gone home (with their bourgeois standards), have been an embarrassment to Peking, even if remittances from those who have stayed put have been worth having. He has researched a long list of communist publications, and has been to China, but still does not escape the debt for materials, incurred by most writers, to the American consulate-general in Hongkong. He shows that Mao did continue Chiang's possessive ("colonialist") attitude to the overseas Chinese at first. The change came in about 1955 with such developments as dual-nationality negotiations with Indonesia at the time of Bandung. Dr Fitzgerald attributes it to a sincere wish

to "decolonise" the overseas Chinese rather than to the Khrushchev international line; but subversion, after all, is the art of the possible.

In the event, there has been no apparent fifth-column activity. But then there has been no war. Treatment here of the nearest thing to a war, the Malayan emergency, is skimpy. There is, for instance, no mention of the late Mr Tan Kah Kee or his Singapore newspaper, which was suppressed. So, too, the treatment of the Cultural Revolution demonstrations in Macao and Hongkong is scanty and occasionally naive. This book is not a survey of available knowledge on its subject, but rather a student's thesis on limited if reliable sources. It lacks maturity of presentation and judgment. Yet its grand format is modelled on the Harvard East Asian Series from the other Cambridge.

Hurd without Osmond

TRUTH GAME

By Douglas Hurd.
Collins. 254 pages. £1.50.

Douglas Hurd is Mr Heath's 42-year-old political secretary at Downing Street, now the prospective candidate for a safe Conservative

seat, and a very probable future British cabinet minister. With Andrew Osmond, formerly of Private Eye, he was also the author of three light-hearted, deliberately quick-moving, but in a subtle way very sophisticated "political thrillers" about imagined future crises in Rhodesia, Hongkong and Scottish nationalism. This is Mr Hurd's first solo venture in the genre.

"Truth Game" is the story of how a Conservative government is defeated in a future general election because it is inveigled unwillingly, at just the wrong moment, into sending British troops unsuccessfully to try to fulfil Britain's treaty obligations to Dr Lall, the Indian and capitalist president of the Indo-Arab island of Rajnaya, who is overthrown in a bloody coup d'état by the Cambridge-educated Johnnie Revani, an Arab and a revolutionary. The unfashionable feature of the story is that Dr Lall, although not always a strong character, is thoroughly decent, democratically elected, and has built up his country's prosperity with great devotion, honesty and good sense. But the bloodthirsty Revani is made to appear the more liberal to the British public by the great inanity (and small corruption) among trendy British lefties,

Hurd: his own thing

by television and newspaper reporters of the "study-in-depth" type who are out for a good story, by some ill-timed accidents, and by Labour political opportunism at election time.

Compared with the three joint products of Hurd and Osmond, this book gains something in cohesiveness of style, which helps to make the wit even more pointed. It loses in not having so large an intermingling of so many bright ideas, with the result that a possible gain in readability in the middle is outweighed by a loss of the outstanding brilliance of denouement shown by the

THE BANKER

FIFTY PENCE LONDON JULY 1972

The Banker—London's international journal for bankers, economic advisers, multinational company managers and everyone interested in economic, banking and monetary affairs. Now in a new attractive format, it provides each month:

1. Review and comment on what has happened in London and overseas
2. Contributed articles by experts on a wide range of topics
3. A survey of a special subject or financial centre
4. Special attention to the Common Market, the United States and Japan

In the JULY issue—the Eurobond market today; the floating pound; medium-term financing; Rhodesia; control of the smaller company account; legal decisions; special survey—Amsterdam.

In the AUGUST issue—Paul Bareau on the death of the sterling area; UK monetary policy now; bankers and secrecy; the end of the Schiller era in Germany; investment in Malta; special survey—the Pacific Basin.

Subscription rates, including postage—£7.00 UK and any part of the world by seamount; airmail—U.S.A. & Canada \$45.60; Europe £12.00; Far East £18.00; other rates on application.

earlier three books. Obviously, however, its biggest change is in political bias, with the caricatures of Conservatives slightly (although not obtrusively) more kindly, and the caricatures of trendy lefties much more cruel. Since the object of reading the book should be enjoyment, this bias should be an annoyance only if Mr Hurd falls into one of two traps: if he makes his caricatures unbelievable (which he doesn't), or if he spoils his readers' pleasure by a snarling sense of morbidly-enjoyed bitter frustration at the end. There is a touch of this latter fault, and it makes the book just slightly less fun than the previous three.

A cell in every office?

HOW TO BE AN EFFECTIVE SECRETARY

By Lance Secretan.

Pan. 249 pages. 30p paperbound.

SECRETARY: AN ENQUIRY INTO THE FEMALE GHETTO

By Mary Kathleen Benét.

Sidwick and Jackson-New English Library. 172 pages. £2.50 cloth, 40p paperbound.

According to the Shorter Oxford English Dictionary, a secretary is "one whose office it is to write for another; especially one who is employed to conduct correspondence, to keep records, and (usu.) to transact other business, for another person or for a society, corporation or public body." That would cover anyone from the most junior of copy typists to the company secretary, but it is misleadingly anodyne. The word has acquired its own antipathetic, anti-lib image of mindless Hermes-scarved efficiency at doing someone else's job for him, and both of these books are doing their bit to contribute to it.

One wonders what Miss Benét would have to say about Mr Secretan's views; and vice versa. Presumably both would become apoplectic. The blurb describes the book by Mr Secretan, the so-aply named managing director of Manpower, as "sound and practical advice, easily understood, which will help you meet the challenge of being an effective secretary." The advice (only too easily understood) ranges from "Broadening Your Outlook" to "The Telephone: Terminating Calls." If Mr Secretan had been a little less free with it, this book would have been informative without being irritating: there are good sections on grammar, spelling, proof correcting and so forth, which many would-be secretaries would be the bet-

ter, if crosser, for reading. But every minute detail of a secretary's working day is covered, even her nights:

Of course, we all need time to relax and to socialise, but too much time spent butterfly-flying about can be wearying and a waste. Wouldn't you be happier if some of your off-duty hours were involved in something more productive than watching the late night film on television?

Miss Benét's highly-charged "Secretary: The Female Ghetto" is an effort to rouse apathetic and bored secretaries to full-blooded revolt. Miss Benét panders to their discontent, and barely acknowledges that plenty are in fact fulfilled and happy in their work, or that the great demand for their services has given an upward impetus to girls' social mobility:

At the moment, although secretarial work is still an opportunity for many girls, it is a trap for many more. And it is composed of all the various traps that women now complain about. The vicious circle is all too familiar: lack of education and training comes about because a girl is not expected to have to use such things; job opportunities are closed because of this lack; low earning power makes marriage attractive; and the existence of the dependent housewife confirms the theory that women don't need careers of their own. . . . The secretary has the power to get out of this trap, but she doesn't yet know how to use it.

Ironically, Miss Benét sounds quite as patronising as Mr Secretan. Of course, there is the major category of misfits (or girls who think they are misfits) in the secretarial world: graduates who embark on a degree course with no thought of what they will do with their final qualifications, take a secretarial course as the fastest and most easily available means (faster even than teacher training) to secure a well-paid job, and are resentful that their specialist knowledge can rarely be put to good use in an average secretarial post. They join the same ranks as the complaining graduate housewife: bitter about a situation which they have themselves to blame for. At least, they should blame their schools or universities—who kept the knowledge that a dozen essays on Beowulf or Gide were poor preparation for job-hunting from them until the last minute—but not their employers.

The real irony is that both Mr Secretan—in the interests of efficiency—and Miss Benét—in the interests of equality—are reinforcing an unattractive image at a time when there have never been more or better-paid secretarial jobs. Is that the trouble? Is it the unoriginality, when the dullest soul longs to be different, of being a secretary that leads Miss Benét to wail about drudgery and Mr Secretan to design a prig?

Danger: modern medicine

PRIVATE AND CONTROVERSIAL

By Robert Platt.

Cassell. 188 pages. £3.50.

Lord Platt was president of the Royal College of Physicians for five years and professor of medicine at Manchester University for 20. So one is brought up sharply when one sees that he has headed a chapter "Modern Medicine and How to Avoid it." But that chapter sets the tone for the whole of this book. It is part-memoir and part-musing, and his musing ranges in detached and ironic fashion—though lightly—over his profession and its controversies: transplant surgery, human experiment, euthanasia, abortion, the health service, private medicine—the lot. His dictum in the chapter referred to, "Never have anything investigated until you know what it is," sums up perfectly the whole matter of over-doctoring, of being submitted to a procedure not because it is necessary but because it is technically feasible.

Although Lord Platt is critical of medical scientists who do not count the cost of their investigations and treatments, he is in favour of one of medicine's new tools—statistics—provided it is used correctly. He has an interesting chapter on this subject, another on the Royal College of Physicians, on common misconceptions about the medical profession (like equating Harley Street with good doctoring) and on smoking. On Harley Street, as on over-enthusiastic medical scientists, he writes that the protection of the public lies in the hands of the good general practitioner, who must not be allowed to die. Outside his profession he writes knowledge-

Platt: support your GP

ably and warmly about music. And he has a deeply personal and rather curious last chapter about ageing, depression and—apparently—the break-up of his marriage on his initiative. He admits to a certain amount of vanity, which is occasionally a little obtrusive in these pages. But on the whole they reveal a humane and enlightened physician.

The rocks remain

THE FIRST TIGERS

By Alan Hankinson.

Dent. 214 pages. £3.

This is an extraordinarily nice book about happy men: a bunch of late Victorians who, scrambling up and down the rock faces of the Lake District and Snowdonia in tweeds and with a thoroughly unsafe system of roping themselves together with washing line, started the vogue for a sport which has grown steadily in popularity throughout the twentieth century. Rock-climbing was, as Mr Hankinson says, junior to mountaineering both in years and status; the Victorians had been killing themselves falling off the Matterhorn long before they turned to their English crags, and the rather different sport of climbing off snow. Wordsworth had made the Lake District popular, but only Coleridge hauled himself up the rock faces. Mr Hankinson places the "golden age" of rock-climbing in the 1880s and 1890s.

The barn door traverse

WHICH confidential publication is read by ten presidents, twelve prime ministers, two reigning monarchs, ministers, diplomats, businessmen and investors the world over?

● The answer is the **FLEET STREET LETTER**—Britain's oldest weekly news-letter. For over thirty years it has been essential reading for those who must be really well informed.

● It provides inside information about what is really happening in Britain and the world—information not found in mass circulation newspapers.

● It has acquired an unrivalled reputation for detecting apparently insignificant items of news which lead to major developments. As a result, subscribers are ready for the news before it breaks.

● Its sources occupy high places in Whitehall, the City and world capitals. To protect them the right is reserved to cancel the subscription (and repay the unexpired portion) of anyone who fails to respect its confidential nature.

● Costs (Europe) £15 a year (US airmail \$50)—soon repaid many times over by its share recommendations. Quarterly reviews of buy signals. Answers to questions on particular shares Portfolios reviewed and managed.

● As a special introductory offer the Letter will be sent for three weeks to those interested absolutely **FREE** and **WITHOUT OBLIGATION**. Just fill in the coupon below.

he coped with the death of the fourth republic and the birth of the fifth. He found de Gaulle as he had found Churchill: humanly magnificent but politically exasperating, and ultimately futile. By 1957 the implications of British decline as a power, as revealed at Suez in 1956, converted him to a fervent advocacy of British participation in a European community. He has since devoted himself to this cause.

Paradoxically, in retirement Lord Gladwyn has found himself in many ways more at home in the pro-Europe movement. By nature he is a politician rather than an officer of the civil service. Constantly in these memoirs there is the refrain: "The only trouble was that when I was given a chance I could only express myself in what I suppose might be called 'political' language. It was my nature and I could not help it." His speciality at the Foreign Office was as supremely fertile

"ideas" man; a one-man think-tank. His great opponent in the UN days, Malik, rebuffed his rather apologetic efforts to assert that he (Jebb) was just as much a good Foreign Office man as William Strong or Ivone Kirkpatrick: No, said Malik, "kindly but firmly," "I would not regard you as a *chinovnik*."

No doubt this was one reason why Lord Gladwyn never got the top job in the Foreign Office; but it is also why, of all the Office men, he has exerted more effective influence on the shape and course of British policy in his time than the mass of the *chinovniki*. He has the gift, by reason of an extraordinary range of cultural sympathies, to deepen the two-dimensional technical and diplomatic aspects of things into a profound three-dimensional insight into the British predicament in the post-empire and post-special relationship world.

Wilful intelligence

JAMES BURNETT: LORD MONBODDO

By E. L. Cloyd.

Clarendon Press: Oxford University Press. 212 pages. £4.50.

Anyone of a speculative turn of mind living today, when the bulk of ascertained knowledge is so overwhelming, must sigh with envy at the thought of the liberty enjoyed in the eighteenth century by men of intellectual curiosity. Polymaths now are very rare, but in those days a Scottish law lord could write copiously and with a show of authority on ancient history, metaphysics and the origin and progress of language. Lord Monboddo was, by any standards, a learned man, and the topics which fascinated him are still exercising the wits of linguists, anthropologists, theologians and philosophers. His ideas often struck his contemporaries as outrageous, and his eccentric behaviour did nothing to recommend them.

Miss Cloyd's examination of some of his theories, however, shows that Monboddo's independence of mind really was worthy of respect. This book gives a balanced and lively account of a man of powerful, wilful intelligence. Most readers will be content to pursue Monboddo no further, for the bulk of his published works is formidable; but should they be browsing in Boswell and encounter his name, they will have the satisfaction of feeling that they have more than a nodding acquaintance with a truly remarkable personality.

Economics and industry short list

Industrial Relations by Richard Lowndes (Holt, Rinehart and Winston, £2.45). This is a useful, up to date textbook whose chief value is a detailed account of the recent plans for reforming British industrial relations. The material is not original, but well presented and mercifully free from jargon. It does not quite match Professor Clegg's standard and now enlarged work, *The System of Industrial Relations in Great Britain* (Basil Blackwell, £4), for detail on how unions and employers actually operate; but it is probably the best and cheapest textbook available which explains the various schemes to reform the law.

National Income, Expenditure and Output of the United Kingdom, 1855-1965 by C. H. Feinstein (Cambridge University Press, £10). This is the sixth and last volume in a series of studies of national income which, for one reason or another, have taken over 30 years to complete. These have been done jointly by the National Institute of Economic and Social Research and the Cambridge Department of Applied Economics. This final volume will be the most used since not only does it put together, although with less detail, estimates contained in the earlier volumes but it also extends them further back. Here you can look up estimates of gdp, income from employment and company trading profits back to 1855; and of consumers' expenditure (at current and constant prices) back to 1870—to pull out a few examples. The book offers a feast for research workers; and presumably some political ammunition, too.

Distributed Lags by Phoebus J. Dhrymes; **General Competitive Analysis** by K. J. Arrow and F. H. Hahn (Oliver and Boyd, £7 and £6.50). Both these books are in the publisher's series "Mathematical Economic Texts" and the task of reviewing them at length can be left to other periodicals. One notes with interest, however, that the former includes an investigation of the asymptotic distribution of the maximum likelihood estimators in the autoregressive errors model and that Messrs Arrow and Hahn's discussion of stability has "no results to report on what most economists would agree to be more realistic constructions."

Extracts from the Statement of Mr. John A. Ryan, Governor, Bank of Ireland

The Accounts

These are the first to have been prepared on the modern basis of disclosure proposed some years ago and are also the first to be presented by the new Bank of Ireland, comprising since 31st March, 1972, the unified undertakings of Bank of Ireland, The National Bank of Ireland Limited and The Hibernian Bank Limited. They disclose balance sheet totals of £713 million including £32 million Revenue Reserves and £3 million Capital Reserves.

Advances to customers and other accounts, less provisions, at £277 million covers not only our business in the Republic and Northern Ireland but also our operations in London. These London advances were built up in the last quarter of the year and have not, therefore, materially added to profitability for this accounting period.

Profits

The operating profit is almost £8 million and the Directors view the results as satisfactory.

Developments Overseas

The start of operations in London and New York has taken place and has been encouragingly successful and very well received. I believe that in the future both operations will have a worthwhile effect, not only on the profitability of the Bank but also on the Irish economy.

With the experience of our Shepherd's Bush Branch in London, we have been able to plan the opening shortly of further branches in Manchester and Birmingham, and additional openings in England are intended. These developments depended on the support of staff, who have been outstandingly successful in their roles overseas.

Dividend

Having considered the results for the year the Directors have recommended a Final Dividend of 11½%, making a total of 15½% for the year ended 31st March, 1972, compared with 17½% for the fifteen month period to the 31st March, 1971—equal to 14% for one year.

I have confidence that the progress reflected by this year's accounts will be continued.

18th July, 1972.

Bank of Ireland

Business Brief

The Olympics business

The Olympic fire will be lit in Munich in just under a month. It means money. Between August 26th and September 10th anything up to 1m visitors will crowd in. Munich has been busy for the past six years preparing for the games, and in spending over £250m has set a new record in Olympic investment. Has it all been worth it?

There has been plenty of competition for the 1972 games. Montreal, Madrid, Hamburg and Düsseldorf were all serious contenders (Montreal has been chosen for the 1976 games, in preference to Moscow and Los Angeles). The Germans were particularly keen to get the nod because memories of Hitler's Berlin Olympics in 1936 still linger. Countries which have recently played host to the Olympics, or which have done it more than once (both London and Paris have had two games), are not really in the running; and some of the poorer countries cannot afford the spending which seems to have become a *sine qua non*, although Mexico demonstrated in 1968 that a third-world country could put on a good show.

Munich was chosen because it offered an ideal site, close to the city centre and with first-class communications. The

games will further seal the city's reputation as Germany's secret capital. It is already Germany's fastest-growing city; its population of 1.3m is expected to increase by another 500,000 over the next 10 years. Heavy industry is expanding rapidly, to the delight of the Bonn government which has been trying to divert industry from the concentrations in the north and west. But since Munich was already prospering, it did not really need the extra jobs created by the games. In an already tight labour market, the preparatory work unleashed a severe bout of inflation. Building wages rocketed. The 5,000 men absorbed on Olympic building work made it that much more difficult to get labour for other sites.

Irritations

The locals had other grouches too. The city centre has been in a mess for the past five years while the new underground railway was being built, and the townspeople picked their way under ladders, across trenches and through clouds of dust. Some of the more conservative Bavarians see the Olympics as part of the slow strangulation of their culture by modern Germany. A popular car sticker translates as: "Come back King Ludwig II, and to hell with the Olympics."

It is probably a minority view. Anyone who works it out for himself can see that, temporary inconvenience apart, Munich is going to do nicely out of the Olympics. The city has to find only £22m of the £256m total cost. In return for this, it gets:

- Finance from Bonn for massive improvements in its transport system. The city centre has been redesigned to eliminate all traffic from the main shopping area. The traffic is syphoned off into a new inner motorway ring. Suburban fast train services have been extended and improved. Most important, an underground railway has

Preparations were a bit messy

been built.

- A lavish new stadium, which after the games will be used by the local football team, plus a whole range of other sports facilities, a cycle track, a boxing hall and a swimming stadium among them. Munich has been short on facilities of this kind.

- A beautiful new park, the site of the main Olympic events, which was a derelict airfield notable only as the place where Mr Neville Chamberlain touched down in 1938.

- Plenty of economic spin-off. Many of the Olympic contracts have gone to local firms. Some 1m-2m extra visitors are expected and hotel building has been booming even more than in London. Capacity has quintupled since 1966; a Hilton has just opened. Restaurants and taxi-drivers are anticipating a rich haul along with all the other service industries. A minor row has already broken out over the proposed prices for refreshments at the Olympic park: a cup of coffee will be 25p and a glass of beer over 50p, which local consumer organisations consider outrageous.

- International prestige—though this may not last all that long. Not everyone remembers St Louis or Melbourne because they had the games there.

The Olympic planners have taken great care to see that the buildings will still be useful after the games are over. The stadium has a capacity of only 80,000, which is small for the Olympics, because a bigger one might subsequently have become an expensive white elephant. The Olympic press centre will

become a sports training centre, and the Olympic village, which will house the athletes during the games, will provide 4,500 flats, half of them for students. The village has been built by private enterprise at no cost to the organisers.

The transparent roof over the stadium and the adjoining sports complex has been a big worry to the organisers. The final cost, £18m, is well over eight times the original estimate. The roof was copied from the German pavilion at Expo '67 in Montreal, but the Olympic design was 10 times larger and produced a host of new problems. A much more expensive type of plastic had to be substituted at the last moment, at twice the cost. No builder was willing to take on the job at a fixed price, so every rise in wage costs was passed on in full. But everyone agrees the final result looks impressive.

Olympic host cities are getting better at turning the inevitable building work to their own advantage. Rome got a new international airport and a major—and very necessary—road out of the 1960 Olympics, although not all the sports facilities are fully used now: the large covered stadium, in particular, has proved a bit of a flop. In Tokyo the city planners took the chance of streamlining the city for decades ahead. Nearly £130m was spent on the city's infrastructure, more than six times the sum for the sports facilities. This massive investment paid for four new motorways (part of a 40-mile new road network), 25 miles of new underground

railways, a monorail to the new airport and the famous fast train track to Osaka. In retrospect, the Tokyo planners rather wish they had spent even more. Montreal, too, is hoping for some spin-off from its 1976 games, but since the Canadian government poured a lot of money into an underground railway for Expo '67, it is unlikely to be over-generous next time round.

Germany's gains

The gain to Germany as a whole from the Olympics is less easily measured, but German business is doing well out of it. Virtually every major German construction company has had a hand in the building work, and altogether 400 different building firms have been involved. Siemens, the German electronics giant, got £8½m worth of orders out of the Olympics, ranging from the floodlighting (bright enough to be indistinguishable from daylight) to facilities for the 60 television stations that will be covering the games directly.

Siemens's biggest single prize was the computer system, which the company won in the face of competition from International Business Machines. The computers will be programmed with data on every single Olympics since 1896. Visitors will be able to call special terminals in Munich and elsewhere in Germany and put questions direct to the computer. Siemens claims that on this particular order it will only just break even, and that many of the other contracts are not particularly profitable. But it is plainly happy with the

free publicity.

Although the Munich games will cost five times more than those in Rome 12 years ago, the financing has been planned so thoroughly that nobody, it seems, will be vastly out of pocket. Only a third of the bill will be footed by the taxpayer. The Olympic Organising Committee has dreamed up some fancy money-raising schemes for much of the rest. The most important is the sale of special Olympic coins, which will be legal tender but are more likely to be kept as souvenirs. Demand for the coins has far outstripped the forecasts, and profits are now expected to run to £83m. Over 100m coins are being issued (more than twice the number planned) which means their chances of becoming rare and valuable are slim. However, the first set of coins, issued in the spring of 1970, has already appreciated by 230%. They were stamped "Olympic Games in Germany," words which drew strong protests from the east Germans. Later series carry the more innocuous version "Olympic Games in Munich," so the first sets now have a rarity value.

The second big money raiser is a levy on every national lottery ticket, with extra prizes to match. This surcharge has been levied since 1966 and will remain until next year. It should bring in £32m. Then there is the revenue from tickets and television rights. Since all the tickets were sold some time ago, the touts have now moved in, asking for a premium of anything from 200% to 400% over face value. A ticket for

But now everything's looking just dandy

the opening ceremony can now cost as much as £70 on the black market. Local people claim that companies with unlimited funds to buy complimentary tickets for their clients have forced up prices out of all proportion.

Government funds

The remaining gap in the Olympic finances, £89m, was originally scheduled to be split three ways between the Bonn, Bavarian and Munich city governments. But Munich's whizz-kid mayor, Herr Hans-Jochen Vogel (who played a key role in bringing the Olympics to Munich), insisted that a third share was still too much for his city. After some tough bargaining, the Bonn government agreed to carry half the cost; Munich and Bavaria are sharing the rest with the help of a small contribution from the regional government of Schleswig-Holstein and the city of Kiel, where the sailing

events will take place. Sadly, Herr Vogel will not preside as mayor at the Olympics; after 12 years in office, he recently left his post.

One of the Bonn government's economists calculates that the extra tax revenue generated by the business springing directly or indirectly from the Olympics will bring in an extra £49m, more than offsetting the large federal spending on the event. Perhaps this figure should be taken with a pinch of salt.

The Munich games will almost certainly set a number of new records; athletic standards seem to be improving all the time. Munich must be fervently hoping to avoid the now traditional Olympic row, either over amateurism (rules to exclude professionals were drawn up in 1904, and have been causing trouble ever since), or some political issue (black power in Mexico). It might just be the lucky one.

One of our projects will be music to your ears.

National and Grindlays Bank Group are constantly lending money all over the world—either from their own resources, or as leaders or participants in syndicates.

One recent loan, for example, was to a leading American piano manufacturer who raised \$10 million and we helped.

Others have been arranged in places as far apart as Japan, Iran and South America.

For projects as diverse as new housing, roads, electrical equipment for atomic power generation and aircraft leasing.

The moral: if you have a money problem, whether it's to do with pianos or process plants, National and Grindlays are willing to listen, and ready to help.

We have offices in Europe, Africa, India, Pakistan, Bangladesh and the Middle and Far East. We offer a full range of international banking services.

BUSINESS

It wasn't a general strike after all

The British public and the economy rode with admirable phlegm through what it was told all week was a great crisis in industrial relations but it turned out to be the same old dock strike

The Government's attitude throughout the week was remarkably relaxed and it was plain that Mr Heath had decided this was not going to be his general strike week. By Wednesday it was clear why. The House of Lords handed down its long-awaited ruling on whether trades unions were, or were not, responsible for the actions of their shop stewards. It decided that yes, they were. The National Industrial Relations Court then concluded that this completely changed the role of the five dockers who had been in jail for contempt of the NIRC's orders since the weekend, and ordered them to be let out. The dockers picketing the court cheered; the Official Solicitor, Mr Norman Turner, came down the steps all smiles; and the weather forecasters promised a fine weekend for anyone still considering taking the Trades Union Congress's advice—also given on Wednesday—to make a long weekend of it by turning next Monday into a 24-hour strike. The dockers, however, were not going to be bought off so easily, and at lunchtime on Thursday voted 38 to 28 for a national dock strike starting on Friday.

It had been a remarkably good-natured crisis, which must have been a surprise to anyone who believed the BBC radio's commentators who had promised industrial chaos and armageddon each morning, safely knowing that much of the public was not getting its usual newspapers. Tuesday's big march of dockers and other unions to Pentonville, there to stand vigil in sympathy with the five martyrs inside, was a disciplined and largely cheerful affair in which the students, maoists and others were not allowed to join and were roughly handled by the marchers when they tried. Even Miss Bernadette Devlin was forcefully told her presence was not wanted.

The one long face was Mr Jack Jones's. The House of Lords decision puts him back where he was a few weeks ago, liable to pay fines of £55,000, and now costs of £25,000, because his members have violated court orders to stop picketing such depots as Midland Cold Storage, Heaton's, Craddocks, and Panalpina.

Now the blacked and beleaguered companies are free to sue Mr Jones and the Transport and General Workers' Union instead. Both are easier targets than Mr Bernie Steer and his mates. The decision has wide implications for all unions that continue to stay off the official register, but Mr Jones happens to be the first general

secretary who has to face up to them. Small wonder, then, that he has been earnestly endorsing, and advising his members to accept, the report that he and Lord Aldington prepared on what to do about the growing redundancy at the docks, published on Monday*. After a day's consideration Mr Tim O'Leary, who acts in the docks for the TGWU, was advising acceptance.

It was a downcast Jack Jones who, having gone in person to Thursday's dockers' meeting to speak for the report, saw it voted down. The dockers want everything it has to offer, but as usual, they want more. They argued that with the economy in its present state, any man under 63 who gave up his secure job in the docks in order to take the bait of £4,000 severance pay was buying a ticket to unemployment for the rest of his working life. Their prey is still the container depots, and they are not going to be bribed off their quarry.

The report is a gamble and stores up much trouble, but the Government believed it was the only card that could be played against the clock to avert a prolonged national dock strike. For all the public support it has received, deep reservations are being voiced privately. Some employers feared they were being rushed into something that could cause lasting difficulties.

The report is full of good intentions, if you believe it is right to buy industrial peace at the cost of boosting the dockers' confidence in their bargaining power by increasing still further the unusual privileges they enjoy compared with other workers. It is vague on many matters of implementation and open to different forms of interpretation, which, on the past record of docks negotiation, will be exploited by the unions to drive the best possible bargain. But also it will involve complex bargaining between the employers themselves, inside and outside the docks industry. There is even a fear that the proposal to extend the dockers' sphere of work will accomplish by behind the scenes pressure what the pickets failed to achieve by naked force.

Many of the employers were against taking any decisions on Tuesday at all, for fear that, without having fully understood the report, they would make the wrong decisions, but they were pressed to because the dockers were due to meet on Thursday to decide whether they

*Interim report of the joint special committee on the ports industry.

would endorse it too. In the end the employers agreed to support the report in principle, on one important condition: that it would not cost them any money. Significantly, the long-suffering chairman of the employers, Mr Bill Tonge, who had been wanting to retire for some time but was also known to believe in standing up to the dockers, resigned at the Tuesday morning meeting and handed over to Mr Donald Redford, a member of the Aldington-Jones committee.

The report makes three basic proposals, the most important of which is much better compensation for those leaving the industry voluntarily. Maximum severance for the unfit and over-55s goes up temporarily from £2,300 to £4,000, with the Government footing the bill. This will save the employers money, and create a surplus that can go towards the second proposal: to abolish the register of temporarily unemployed dockers, who at present get £23 a week, by distributing them among employers who, presumably, have no work for them to do. The employers on the committee inserted in the report the words

men now fully employed will make an appropriate contribution to the additional costs that result from the employment of an abnormal number of surplus men. Mr Jones, questioned about what this meant, at first denied that there was any such thing in the report. This could spell further trouble. The third proposal is that container packing should be rationalised, to give more of the jobs to dockers.

Research into the £20m spent so far on voluntary severance suggests that it may have been counter-productive, by getting rid of men who are actually needed, or who would leave anyway through natural wastage. This could make it more difficult to thin the ranks when the next docks crisis comes along: the report keeps politically quiet about the estimates of large reductions in men that will be needed over the next few years, even after this shake-out is over.

The committee pins a lot of faith on getting rid of a lot of dockers fast in the next few months. It could happen, but many employers feel the committee's second main proposal could counteract the attraction of the new severance terms by making it even more attractive to stay in the docks. The men now getting £23 a week

will get nearer £40 a week if Mr O'Leary has his way. Not only would the expected rundown then not materialise, but there would be little money left to provide the higher pay to be distributed to those who are not needed in the industry but have to be kept on. On the other hand, most men in the industry will probably now be paid slightly less than at present, and there are still some hopes that the Government would meet any difference between the money saved by the employers from severance payments and the cost of hiring extra men. Otherwise more firms could go out of business, adding to the surplus to be supported by the few remaining firms, so putting more of them out of business.

If this eventually led to just one employer in each port, it would probably help labour relations, and has been wanted by the Labour party for some time. Indeed, talks are taking place in both London and Liverpool about putting most of the men under one employer.

Then there is the issue of how container handling is to be given, on a greater scale, to dockers. The hauliers and warehousemen especially fear one proposal for implementing this that is being mooted: that ports would refuse to accept cargo stuffed and unstuffed by certain firms. The ports might meet difficulty in doing this because they have statutory obligations to accept cargo, but they might get round that by insisting that, for safety reasons, cargo had to be restuffed inside the ports, so effectively making it uneconomic to stuff outside. The hauliers argue that container stuffing by dockers sometimes costs up to twice as much. A study done for the committee, however, suggests that a major reason for this is unnecessarily high administration costs inside ports, rather than the allegedly high pay and low productivity of dockers.

But this gives rise to another fear. Dockers are only half the workers inside the ports, and the size of this other half is expected to fall just as fast in the next few years as among the dockers. If the ports' administration is so unexpectedly inefficient, then the forecast staff reductions must be revised upwards still further. And these non-docker port workers receive little mention in the Aldington-Jones report. They are likely to feel they deserve the same treatment as the dockers, as other groups of potentially redundant workers may feel too.

We marched to Pentonville, with a bit of clowning,

and threw out the hangers-on

—including Bernadette

Doing without the dockers

A short national dock strike is more an embarrassment to shipowners than to the balance of payments. For shipowners the strike has cost nearly £500,000 a day: £1,000 a day per ship for between 400 and 500 ships now in British ports. This strike was particularly difficult because the lock-keepers were out in sympathy with the dockers, and so ships already in port were literally locked into their berths. Normally, a ship with part of its cargo destined for Britain, and part for the continent, would have been whipped off to Rotterdam and got that half of its work over.

International agreement between dockers in Europe has existed for some time not to handle ships destined for a strikebound country. But there are ways round this. For example, if a ship has London and several other ports listed as optional destinations on its charter contract, it can hurriedly change to one of the other options.

Operators of scheduled freight services are especially hard hit by a strike. One company had 10 ships caught in British ports this week. These will have a backlog of cargo and their schedules knocked awry, so their owners have to charter extra ships at the end of the strike, which could push up freight rates. The cost of the strike to the ports is about half what it is to shipowners, and to stevedoring companies even less, as most of their costs are dock labour and they were not having to pay the wages. If the strike went on for a month, however, it would put the ports' finances back into the red, and the fear that the Government would probably not help them out encouraged them to go along with its plans.

The general lack of panic to ship urgent cargoes was seen in the quietness of the air freight market, which usually goes berserk in a real crisis. There was virtually no extra business, just a lot of inquiries. As one broker said: "A lot of childish minds ring us up, and we ring up the airlines, who think us equally childish, think of a number and double it, and then our party goes back and licks his lost pride." One charter for a freight plane to Amsterdam, which would usually have been quoted at £1,600, was quoted at £3,400, for which you could normally get as far as Athens. At this time of year there is little spare capacity in the airline business. So no one worried much when half of Heathrow was shut down on Wednesday.

Sympathy strikes

What chaos?

Even continental fruit and vegetables were managing to get into the country surprisingly easily. How? A Covent Garden official said: "Mind your own business." It was thought the porters would probably not have gone on strike had it not been for the presence at their mass meeting of some boisterous printers and dockers. As it was, at 5 am and 6 am, company directors were seen carrying the fruit and veg round the garden, and, when the greengrocers arrived, they simply loaded the goods themselves. Some firms were heard to say business was easier without the porters.

As for the lorry drivers—there are about 1.5m drivers of commercial vehicles in Britain—only a small proportion of them were on strike, largely

those closely involved in docks traffic, some of whom had been picketing the dockers the week before and had perhaps been troubled by the dockers' accusations that they were not being brotherly.

If the numbers actually taking time off is anything to go by, there was not all that much sympathy for the five jailed dockers. The best estimate from the Department of Employment is that in the three days from Monday to Wednesday a maximum of 150,000 workers outside the docks were in any way affected. It was probably less than that: some of those counted were sent home because they had no work once their colleagues came out. There were even 46 brave registered dockers who turned up at the London enclosed docks, seven of whom were given work.

The reason for the lack of militancy seems to have been holidays. In many areas plants were shut anyhow. Many of those working were just about to go on holiday and had little wish to lose their last pay check. If they had not found themselves without newspapers, few Britons living outside dockland would have known anything unusual was on.

Apart from the dockers and the lorry drivers delivering there, the most sympathetic workers were apparently on the London buses: although not all the 24,000 busmen stopped work on Wednesday, early morning travellers about London were inconvenienced. The jet-set was also hit: a lack of ground handlers at Heathrow meant that aircraft could not be refuelled. The rest of the sympathy strikers were largely to be found in traditionally militant areas like South Wales, where 9,000 miners had closed nine pits by Wednesday and 1,400 blastfurnacemen had stopped iron-making at BSC's already strike-hit Port Talbot plant.

The numbers might have risen con-

He stopped a bottle.

Vic snubbed the PM.

Heathrow struck for a day,

and it was do-it-yourself Cunard

siderably as the week wore on had the five not been released. Many more miners, steelmen and railway workers (especially on the Southern Region) had announced their intention of taking off either Thursday or Friday. But the early indications on Thursday were that most of the protests had fizzled out. The national stoppage for next Monday, endorsed by 18 of the TUC's general council (7 voted against and 15 were apparently missing) would have just about shut the shop, but one-day strikes are a very useful way, as the French have found, of letting off steam without doing any harm. What remains to be seen is how many unions outside engineering and the printing industry will still take it off. The printers on Thursday were still saying that they will and, since Monday will be the first day back to work for many engineering workers, they can be expected to take it off too.

In the markets

What crisis?

True to fashion, both the foreign exchanges and the London stock market behaved quite irrationally this week, reacting to any moves that seemed to promise a give-away settlement by going up, and vice versa. But in the end, it all amounted to very little. Dealers played a wait-and-see game, mostly convinced that the Government's clash with the unions would not upset its general economic policy. Anyway, August and holiday-making are nigh and markets are thin.

In the foreign exchanges, spot sterling closed on Wednesday at \$2.4491, virtually unchanged from what it had been three dealing days before, last Friday. And London equities moved in parallel: the Financial Times industrial ordinary index at Wednesday's

close was 504.0, compared with Friday's 503.6. On the news of Friday's dock strike, sterling came back only a little, to \$2.4475; while brokers marked share prices down in a thin market.

In the courts

Back to jail?

Although the release of the five dockers temporarily cleared the air, the problem is far from solved. The picketing of container depots continued, even before the dockers voted to throw out the Aldington-Jones report on Thursday. This means that Midland Cold Storage and other container firms are much as they were before, but with the added complication of a national strike.

The firms are ready to take action against Mr Jack Jones's Transport and General Workers' union and the other unions to which the pickets' leaders belong. If such suits were to succeed, Mr Jones would probably be asked to discipline the shop stewards involved. If he did not, the TGWU could be fined again. (It has already had to cough up £75,000 after the House of Lords ruling.) Should the TGWU not pay up, all its possessions can be taken over. No one would have to go to jail.

State of the law

Will the act be changed?

There are not likely to be any early changes in the Industrial Relations Act, despite the alarums of this week. The act emerged in rather better shape at the end of the week than it was at the start, thanks to the House of

Lords ruling. It means that there are not likely to be many more actions brought against individuals. In future, employers will aim their fire at the unions themselves which is what everyone had originally hoped.

If a union is fined and does not pay, its assets can be sequestered. The House of Lords ruling is also likely to put extra pressure on unions to register. The Lords pointed out that the blacking in the docks could only have been legal, if authorised by a registered union. So the advantages of being registered will not now simply be bigger tax relief, as many unions have been thinking.

The Industrial Relations Act has only caught the public eye in the docks and railways disputes. But of course the bulk of the act is not concerned with strikes. Its less controversial sections have been doing small amounts of good quietly.

There have been 186 complaints under the act's provisions for workers' rights and over 2,500 workers have appealed against unfair dismissals. On Wednesday morning the National Industrial Relations Court sat in private to hear an appeal by the leader of the unofficial strike at Pilkingtons two years ago. He claimed that he had been thrown out of his union and his job for taking part in the strike. No judgment has yet been given, but the hope is that merely bringing the case to court means those concerned will reach agreement among themselves.

The sending of the five dockers to jail was not material to the act. They were jailed for contempt rather than any offence committed under it. It seems clear that Midland Cold Storage could have got an injunction against the five men under normal civil law without the Industrial Relations Act.

As the Prime Minister pointed out in the Commons on Tuesday, there

THE BRITISH & COMMONWEALTH SHIPPING COMPANY LIMITED

Group's strong and expanding base of activities

Sir W. Nicholas Cayzer Bt., reports on 1971

- **Gross revenue** up £9.4 million to £79,500,000
- **Profit after taxation** £4,477,000
- **Ordinary dividend** raised to 17%
- **Profit from shipping** raised from £989,000 to £1,892,000
- **Tour and Travel Companies'** promotion has caused losses of £699,000. With the tour companies now being organised under a single management, benefits should become apparent in 1973.
- **Aviation profit**, with increased contribution from Bristow Helicopter Group, has increased to £802,000
- **Net investment income** continues in the main to meet the whole cost of dividends.
- **Container ship interests.** With the introduction of the Far East service, Overseas Containers Ltd. will require at least a further year before a surplus is earned. With the increase in trades, the Group's interest has been reduced from 15.24% to 7.62%.
- **Air Holdings.** Acquisition of shares by British Air Transport (Holdings) Ltd. has resulted in the Group's interest being increased to 89.57%.
- **Portfolio Investments.** Valuation at 31.12.71 £64,051,000.
- **New Investments** include 12.6% interest in City Offices Ltd. and an 84% interest in Tasmanian Board Mills.
- **Future Prospects.** In spite of vulnerability of shipping to circumstances outside our control, there should be an improvement in other trading activities so that overall trading position should be reasonably maintained with some modest increase in investment income through new monies invested.

The following is a summary of comments made by Sir Nicholas Cayzer at the Annual General Meeting on 26th July, 1972.

The floating of the pound would lead to increased costs. O.C.L. would face the same problems, in addition to the greater cost of servicing foreign loans. The fall in the value of the pound had been brought about by fears that industrial unrest and exaggerated wage claims might price us out of export markets. It would be in the best interests of Unions and others alike first to secure a stable economy from which to move to real growth.

Sir Nicholas said "I feel strongly about this issue for I think many good ships have either been driven off the seas before their time, or been forced to operate in other areas because they are no longer economic when operating within our price structure".

New moves by the company included increased portfolio investments, an increased stake in property, a new hotel at Lanzarote to be opened at the end of the year, and the Wellington Hospital due for completion in the Autumn of 1973.

Unless the present unrest in the docks was quickly resolved it would have an adverse effect on shipping profits.

The Chairman concluded with a tribute to two directors Mr. Bloxam and Mr. Munton, both shortly retiring, who had given long and valued service to the company.

For a copy of the Report and Accounts which includes the Statement in full, telephone 01-283 4343 (Ext. 239) or write to the Company at Cayzer House, 2-4 St. Mary Axe, London, EC3A 8BP.

were three occasions during the Labour Government's period of office when companies successfully got injunctions against wrongful picketing. In each of them, if the orders had not been obeyed, the men might have been jailed for contempt.

Those five

Coming out

There was great jubilation in Chancery Lane on Wednesday evening when the crowd of printers and dockers heard the news outside the National Industrial Relations Court. The crowd believed that, somehow, the trade unions had defeated the Government and forced the court to release the five dockers in Pentonville.

But the court's president, Sir John Donaldson, was emphatic that its decision had not been influenced by the Government. Nor was he prepared to release the dockers simply to avoid sympathy strikes. He said the rule of law was too important to be tampered with just to ease industrial relations difficulties. He also icily rebuked Mr Harold Wilson for describing the Official Solicitor over the weekend as a "fairy godmother."

The dockers had been jailed last Friday for contempt of court. They had failed to obey a court order to stop picketing until the dispute had been resolved. Just the day before the dockers were released, it seemed there was no way even the ingenious Official Solicitor could take action to get them out of jail. When men are committed to jail for contempt in cases like this, the Official Solicitor has a duty to re-apply to the court as soon as he thinks there is a chance that the court might consider releasing them.

At that moment, there were only two grounds on which the Official Solicitor

could ask the court for an order to release the men. He could argue that they had purged their contempt merely by having spent five days in jail, or he could argue that the publication of the Aldington-Jones report on the docks seemed likely to solve the underlying dispute and so remove the source of the original complaint by Midland Cold Storage.

When the Official Solicitor appeared on Wednesday, his counsel made both these points, but the court did not regard either of them as sufficiently weighty to justify releasing the dockers. The key factor was the House of Lords' judgment on an earlier docks' blacking dispute, involving Heaton's Transport and others. The issue at stake was whether unions could be held responsible for the actions of their shop stewards. The appeal court had held that in this case they could not. But a third possibility was presented when, on that same Wednesday, the Lords, under the chairmanship of Lord Wilberforce, reversed the appeal court's ruling.

This gave the Official Solicitor an opening. His counsel put it to the National Industrial Relations Court that if the Lords had made this ruling earlier, things would have been quite different. Midland Cold Storage might never have proceeded against the five dockers, but instead might have sought injunctions against the TGWU.

This argument tipped the balance, Sir John Donaldson agreeing that the Lords' ruling entirely changed the situation. He observed that the union's job of trying to end the blacking would be "immeasurably increased if they are, at the same time, subject to the emotional pressures generated by the continued imprisonment of these men . . . The cause of law will not be advanced by placing an avoidable burden upon the unions."

Jack and Tim smiled for a moment.

the dockers were ecstatic.

and godmother grinned

Newspapers

The fragile press

While the nationals and the London evening papers were out, a group of freelance journalists working for a news agency jumped into the breach with the London News, a hastily-assembled daily eight-page sheet selling for 5p. The print order jumped from 25,000 on Monday to 75,000 on Wednesday, and after the first couple of days advertisers were buying space. The organisers reckon to spend £500 a day in production costs, and hope to clear a small profit from the operation. But they will not carry on competing once the other papers are back to normal. Almost all the provincial newspapers continued to print normally; their staff showed no inclination to follow the London unions' example.

Four days without newspapers was not long enough to precipitate casualties, but it did remind the papers how vulnerable they are. They can never catch up on lost production and some of the advertising—particularly the profitable classifieds—will not wait either. There is also the nagging worry that after a prolonged strike people may not go back to their old paper.

But Fleet Street, for once, was pretty relaxed about it all, although circulation figures in the first half of this year have been mixed. The Daily Express, Mirror and Mail were all down slightly on the previous six months, but have been picking up again recently. The Mail is quite pleased with its performance in its new guise, and reckons to break into profitability in about a year's time. The Sun has put on over 4m, and is now up to 2.6m. The quality dailies have done quite nicely, with The Times, Financial Times and Guardian all up in circulation.

BUSINESS

Britain

They don't like the way the pump is primed

For governments to bale out major industries and major companies in trouble is now accepted practice even in America; and a Commons expenditure sub-committee which has been taking evidence since the beginning of last year on the way this is done in Britain does not question the rightness of the principle. But what hugely annoyed the committee and got under the skin of the normally equable chairman, Mr William Rodgers, were the excuses with which successive governments wrapped up straight-forward salvage operations. In its report published on Wednesday (House of Commons paper 347) the committee commented on how

too often over-optimistic commercial assessments have been used to justify decisions made largely on other grounds, and it is argued that when a future government decides to bale out another company in the same plight as Upper Clyde Shipbuilders, it should say frankly that the decision has been taken in order to save jobs in an area of excessively high unemployment and not pretend that it has any hopes of profit

coming out at the end of it. Likewise, when a government embarks on a project as speculative as Concorde, it should not continue to pretend to the Commons that its cost can be worked out on anything but the most notional basis:

It is wrong to treat the estimates for this type of project, either for decision-making purposes or for public presentation, as if they bore the same degree of reliability as those for a motorway or a hospital.

What does come out of the report is the need for any government in the 1970s to plan on the assumption that emergencies will arise from time to time and to have its policy worked out in advance so that it knows how to react to them. The committee looks at the way both Conservative and Labour governments have handled successive crises in the aircraft industry, shipbuilding, machine tools, the motor industry and the regions and decides that snap decisions were taken without anyone having clearly thought through the consequences. This is a terrible comment on the way that Whitehall

works, but it is almost certainly true.

Then the committee looked at organisations like the Industrial Reorganisation Corporation, and at pump-priming techniques like investment grants, and listened to witnesses from the City and industry taking refuge behind anodyne clichés rather than say anything that might even mildly reflect on a working colleague's soundness of judgment. Only the first managing director of the IRC, Mr Ronald Grierson, was bluntly critical of the way it had worked, and only Lord Stokes was prepared to say just how much it had cost British Leyland (£58 on the price of each lorry) to go to a development area in order to get the grants that went with it. Everyone else, including the Department of Trade and Industry, preferred to pretend that it was impossible to work these figures out.

It also appeared impossible to give meaningful answers to such awkward questions as the effects of investment grants, of regional policies, of mergers, or even of the cost of Concorde, and the committee got increasingly angry as witnesses flannelled and flatly refused to provide the information for which it asked. If the committee was unjust to Whitehall and to the Government in concluding that it did not get its answers because no one had thought through the consequences of any particular pump-priming operation, nor indeed bothered to follow them up,

the various government departments have only themselves to blame. They were also blamed—and harshly—for the carelessness with which money was advanced to companies that demonstrably had no internal financial control. Rolls-Royce and Upper Clyde Shipbuilders cannot, the committee suspects, be unique in this respect. So what precautions are being taken for the future? It is a report that is going to confirm some of the worst fears about the way that direct government aid to industry is being handled. Before the Government takes its Industry Bill any further, it should give serious thought to how these criticisms are going to be answered.

Nuclear power

Confusion, as usual

The usual confusion of political and commercial concerns was present in full force on Wednesday when the Commons committee on science and technology questioned Mr Tom Boardman, the Minister of Industry, about the nuclear power programme. This is an industry the expenditure committee did not touch on in its inquiries because it was already being investigated. Because several members of the committee are politically opposed to Britain building an American-type power reactor under licence, a powerful but specious commercial argument for going ahead with the competing steam generating heavy water reactor, of purely British design, was allowed to stand unchallenged.

It was claimed by committee members, including Mr Arthur Palmer, the chairman, that the SGHWR is attractive to countries with relatively small electricity grids because the SGHWR can be built economically in smaller sizes than other reactor types. But this is a dubious proposition because the SGHWR has been offered to many countries over the years without much interest ever having been aroused. Australia, the one strong foreign prospect, finally shelved its project indefinitely. The truth is that most small countries, especially the developing ones, have not much interest in any kind of nuclear power reactor. The lack of sizeable transmission grids is only one problem. Most small countries do not have the industrial infrastructure needed to accommodate nuclear power stations.

Mr Boardman told Mr Palmer's committee only a small portion of what it wanted to know, saying he was bound to silence on Government decisions about nuclear power until a statement is made to the Commons, which should be soon, probably before the summer recess. However, he indicated that the statement would offer a new structure for the industry, as well as announcing which type of reactor the Government wants to build next. Besides the SGHWR and the American light-water reactors, there are two others in the race: the advanced gas-cooled reactor, the kind Britain is already building, and its high temperature version, which would be a continuation of the AGR line.

Mr Boardman said he thought the Central Electricity Generating Board has now modified its opposition to the unification of Britain's design and construction groups. However, he denied reports that the new group will be led by Sir Arnold Weinstock, the head of General Electric. This is in line with what is heard around Whitehall where many apparently feel that Sir Arnold holds quite enough industrial power already.

Steel

Rosy spectacles

The British Steel Corporation will soon submit to the Government the latest of a long and frequently modified series of plans for the industry's long-term future. It will ask this time for a single, massive piece of investment built around one of the corporation's existing sites and aiming at a greatly increased capacity towards the top of the 28m-36m ingot tons a year range, which is the maximum conceivable size that a joint study by the Department of Trade and Industry and the corporation thought that it could possibly reach. The corporation has learned its lesson; it now realises that no government is going to approve the creation of an entirely new, greenfield steel complex if that means a large part of the existing industry would need to be shut to make room for it. It now wraps its schemes in a politically much more acceptable way around existing facilities, and offers a brownfield scheme that at least gives the illusion of creating new jobs beside the old. Even so, it will be at least three months before the corporation gets its answer.

In his annual report this week, Lord Melchett emphasised that delay will cause him and his colleagues much

heartburn, for they have not much time left to make good deficiencies in the industry's investment plans before finding themselves inside the EEC. Nevertheless, the report provides several good reasons why the Government should take its time, not least the fact that turnover in the year ending March, 1972, was 11 per cent down at £1.3 billion and gross trading profit was a mere £53m. After tax and other charges, this meant that the corporation made a loss of nearly £78m, and all it had to set against this were profits of £9.5m from holdings in associate companies. Another ominous piece of evidence was the extent to which the corporation was losing some of its home market to imports, which were 44 per cent up. It is no good arguing that the corporation in its turn did well in foreign markets; the 3.6m tons of steel it exported represented a 28 per cent increase, but at depressed prices.

The Minister for Industry, Mr Tom Boardman, has to conjure up a sensible policy for steel that will somehow balance the industry's present unprofitability—it is still running at the same rate of loss—against its future optimism. He is trying to set a financial target for its rate of return on capital before the summer recess, bearing in mind that it is rationalising, that it cut manpower in the past year by around 10 per cent and that it will cut it a great deal more under the plan to be submitted to the Government. But rationalising is an expensive process. To slim to the extent that the industry did last year cost it nearly £18m, or not far short of £1,000 for every man who left. Cheap at the price, but, together with the effects of a few more months of observing the Confederation of British Industry's price freeze, it must temporarily hurt the corporation's earning power.

Dog-in-the-manger?

Then there is the BSC's attitude to the privately-owned rump of the steel industry. It has shut down numbers of small steel plants across the country rather than sell them even to willing buyers in private industry, and a very small rolling mill at Birchley earmarked for closure is becoming a cause célèbre in the west Midlands. The mill employs only 227 men, and there are two possible local buyers for it. But the corporation refuses to sell. Its argument is that plants like Birchley

are being scrapped as part of a rationalisation programme that transfers their output to other, existing plant and so improves productivity. To sell even so small a mill as Birchley to private industry would defeat the object of closing it, and increase capacity in a sector of steel production in which there is too much capacity already.

Mr Boardman will have to think carefully about whether he is prepared to go along with this argument, because it is easy to see it being scaled up into an objection to any new investment by anyone else in the steel industry—and this includes the several big European steel companies that have shown signs of being interested in setting up plants in Britain once it is in the EEC. The DTI showed that it is sympathetic to the problems of the private steel industry when it asked Lord Hirschfeld last week to look into complaints that the BSC had been competing unfairly.

Avonmouth

Time to be ashamed

Only a handful of people, the company doctor among them, emerge with credit from Sir Brian Windeyer's inquiry into lead pollution from Rio Tinto-Zinc's modern lead-zinc smelter at Avonmouth (Cmd 5042), which was published on Wednesday. Complacency lay at the root of things, and is proving terrifyingly hard to dispel. Inefficient air cleaning and dust collection equipment, aggravated by breakdowns on other equipment like conveyers, released sufficient lead-laden fumes and dust into the atmosphere to give the plant a consistent record of sickness since it opened in 1968. In the

Avonmouth: the doctor was right

four years to 1971, lead poisoning was certified in 40 men; another 99 were taken off work and moved to other parts of the plant. It was not until the unions cut up rough that an official inquiry was started and the plant shut for two months while the air cleaners were rebuilt. Even so, Sir Brian warns that it will need "unremitting efforts" to keep contamination to safe levels.

How could this have been allowed to happen? Mainly because cleaning and filtering plant that had worked perfectly well in smaller factories was put into a much bigger installation where it could not handle the throughput. Top management was constantly being switched by the original owners, Rio Tinto-Zinc (the plant has since been sold to Australian Mining and Smelting), in an effort to get the smelter to show a profit. With hindsight, the lead monitoring devices were inadequate; the inquiry calls for better monitoring to keep lead levels down to the permitted 0.2 milligrams per cubic metre of air. At Avonmouth, sampling was periodic rather than continuous, but even so showed that well over half the readings in the sinter plant in a single month were above the prescribed threshold and rose on one occasion to the alarming level of 45 milligrams, or more than 200 times what it should have been.

The company's doctor is given the credit for keeping the sickness and pollution levels as low as they were. His position cannot have been easy because, as well as being a company employee, he was the official physician appointed under the 1911 legislation to supervise the monitoring of lead pollution. Together with the factory inspector, he complained repeatedly about the condition of the plant: but with apparently little effect until the affair blew up into a national scandal. RTZ was content to rely on such precautions as respirators for men in danger zones.

Only after there had been cases of poisoning did it install changing rooms in front of the canteen entrance. A mobile canteen with no washing or changing facilities remained in regular use until the end of last year, although admittedly in one of the less contaminated areas.

There will continue to be a great deal of argument about the interpretation of the lead contamination figures. No British worker in the past few decades has been so grossly contaminated that he has shown the classic symptoms of lead poisoning. Sir Brian says that none of the Avonmouth men is likely to suffer lasting harm. But the effects of absorbing lead up to the safe limit of 80-100 micrograms per 100 millilitres of blood vary with an individual's state of health. The assessment has to be made by a doctor using other tests. The same is true about levels of lead in the air. In his report on industrial safety generally, which was published last week (Cmd 5034), Lord Robens called for much more comprehensive powers over all forms of pollution and much stricter penalties for violations of the safety rules; the average fine last year was a mere £40. Lord Robens also proposed that there should be a much greater reliance on voluntary safety codes. The Avonmouth inquiry raises serious doubts whether this would be any good at all.

Inflation

Pushing up again

The most worrying aspect of the acceleration in price inflation is that it has come before some of the most excessive wage settlements have had their full impact on the cost of living. Even without them the official index of retail prices went up 0.7 per cent last month; more significantly, when seasonal rises in lamb, fresh fruit and vegetables are excluded, the underlying rise was at an annual rate of 6.8 per cent, compared with 5.2 per cent in January. It has been a steady and consistent deterioration.

How did this happen in a period which included a cut in purchase tax of £135m a year when the Confederation of British Industry was holding the line on price restraint? It seems that every manufacturer who had not already put his prices up by the CBI's 5 per cent hastened to do so before the agreement expires on July 31st. But, in particular, gas and electricity charges, fares, personal services such as hairdressing and the cost of eating out

In 1901, Power-Gas discovered that it could take coal worth 6/- (that's 30 pence) and turn it into gas worth 9/- and ammonia sulphate worth 10/-.

The good news spread and by 1911 there were Power-Gas installations in no less than 50 countries.

In 1972 it's difficult to name a country where a Power-Gas plant of one kind or another cannot be found.

In fact, we're now one of the major international process engineering contractors. Offering a total engineering and construction service.

Supplying complete plants for petroleum, petrochemicals, industrial chemicals, rubber and plastics, polymers, fertilizers, fuel and industrial gas and non-ferrous metals.

No matter where you are – U.K., U.S.A., U.S.S.R., or beyond – be sure and call us when your company needs a plant.

POWER-GAS LIMITED

all went up by between 3 and 5 per cent in the five months January-June; as, too, did clothing and drink. Some things went up more, notably beef, rent and rates. Cheaper butter and sugar, and the usual seasonal decline in eggs, have not, therefore, stopped the housewives' grumbles about almost everything else; and with some more beer prices going up, the wives are not alone.

It is always arguable how closely the official price index reflects what is happening to any individual family's budget. But at least the Department of Employment, which compiles the figures, is trying to be trendy. Since it last published, in 1967, a full list of the items it prices, it has added, among other things, yoghurt, night storage heaters, nylon shirts, subscriptions to motoring associations, paper handkerchiefs and launderette charges—and it has discarded, among other things, plain flour, hake, beetroot, prunes, liquid coffee essence, fully fashioned nylon stockings and cycle tyres. It's all a matter of progress.

Non-trade barriers Cloven hoof

Countries have become much more willing to discuss the lowering or abolition of tariffs on industrial goods since they have found that less unpopularity attaches to other, equally effective ways of keeping them out. Two studies*, published this week, discuss what ought to be done about them. The Geneva headquarters of the General Agreement on Tariffs and Trade has a list of 800 ways of keeping out unwanted exports by means other than tariffs, of which 30 are serious enough for Gatt to have decided to try to tackle them at the rate of one a year, drawing up international codes of conduct that are meant to deal with the worst abuses. But countries then either ignore the code, as America has ignored Gatt's anti-dumping code, or switch immediately to other non-tariff protection.

The top half-dozen are:

- Quotas, including voluntary restraints by exporters;
- Anti-dumping duties;
- Artificial methods of valuation, like the American Selling Price system;
- Deliberate government discrimination in favour of home suppliers;
- Health regulations; and
- Safety standards that deliberately differ from those of other countries.

Dr Brian Hindley describes Britain's stance as generally well-behaved on dumping, but a bit naughty on public sector contracts for computers, aircraft and electrical equipment. His paper was completed before this country's

*Britain's Position on Non-tariff Protection. By Dr Brian Hindley. Global Assault on Non-tariff Barriers. By Professor and Mrs Gerard Curzon. Both from the Trade Policy Research Centre. £1 each.

lapse into protectionism for the paper industry, so he sees nothing particularly sinister in the other recent falls from grace when restraints were put on textiles and Japanese goods. Such restraints, Dr Hindley argues, can be self-defeating. Unlike tariffs, some of these other barriers can end up by doing more good to the exporting country than to the one trying to keep imports out. The voluntary restraints that the European steel producers put on their exports to America keep up the price of steel inside the United States, which must be bad for American steel users. In the short term it means that there are fewer jobs and less investment in steel in Europe than there might otherwise be. But, at the same time, it makes exporting steel to America a profitable business, and it helps big steel-using industries in Europe to boost exports to America.

The solution, he suggests, is the listing of non-tariff barriers much on Gatt's lines, followed by a general trade-off between countries which would bring about the barriers' gradual abolition.

Practical ways of doing this are proposed by Professor and Mrs Gerard Curzon, who blame the weakness of Gatt on its lack of any machinery of enforcement. They would give it power to fine members who break the rules and even to suspend the Gatt trading terms if they persist in violating them. But, they say, it is necessary to understand why countries protect their industries in the first place. It could be (a) to boost their competitiveness in the home market; (b) to ease the process of running such industries down in the face of foreign competition; or (c) to prevent that run-down from taking place. They consider that the first two objects should be respected.

BUSINESS

International

The Japanese and Americans agree to hate Europe

Tokyo

Officials in Tokyo are now dashing cold water on speculation that a special tax might soon be imposed on some of Japan's more disruptively competitive exports in a bid to trim the country's trade surplus and avoid another upvaluation of the yen. They admit that any remaining export tax privileges should go, but they are dubious about the wisdom or practicality of discriminatory taxation against the country's most efficient exporters. None the less the rumours persist that the initially "stubborn" Ministry of International Trade and Industry has "yielded" to a Ministry of Finance recommendation for the institution of just such an export adjustment tax.

Under the reported plan, the tax would affect those companies whose exports rose by more than 50 per cent in a year—a criterion that could catch manufacturers of such key items as cars, televisions, tape-recorders, mopeds and bicycles. The Ministry of Finance is supposed to be pressing for the tax because the mere dismantling of existing export tax privileges would throttle back exports by considerably less than \$100m in a year—small beer when measured against the trade surplus of over \$7½ billion expected for 1972. The sceptics point out that Miti's acceptance of any such plan would be a political volte face, of the sort which that ministry always dislikes, and that the partial upvaluation such a tax would imply might only fuel further speculation on a formal revaluation of the yen.

The sceptics could still be proved wrong. It would be intriguing to know whether the Americans raised the point during their trade talks with the Japanese this week. By Wednesday, with two days to go, these sometimes heated discussions had led only to

agreement to disagree on everything except the two countries' approach to their one common enemy, the enlarged common market. Both Japan and America fear that, as non-members, they could face growing discrimination against their exports. The United States has now accepted a Japanese proposal to work towards multilateral safeguard arrangements, in place of the bilateral safeguard clause—aimed at Japanese exports—that the EEC is pressing for in its trade talks with Japan. A multilateral safeguard arrangement, which would require a change in Gatt's rules, would presumably allow a country to put a clamp on a given category of imports only if it satisfied an international watchdog that its total imports of that category had risen intolerably; a country could not just impose emergency restrictions against imports from an individual country, as many governments try to do now. America and Japan also exchanged sympathetic moans about the spread of preferential trade agreements between the EEC and Mediterranean and African countries.

Italy and EEC

Stretching rules

Sceptical and not-European-minded Britons could learn a lot from the Italians about how to stretch the Rome Treaty's rules, and the commission's patience—at least on past performance. But maybe there is always an end to patience. The commission has put its foot down and said no to the Italian government's request for a renewal of the special rebates of part of the social security charges paid by small and medium-sized Italian firms—and all Italian textile firms, big and small.

These were introduced in Italy a year ago, when the commission approved them as falling within one of the four categories of industrial aids which the Rome Treaty allows: temporary aids when a particular country is passing through a sticky patch. (The other three are: regional aids, subject to the limits the community agreed in 1970; aids for particular sectors of industry in hard times, subject to community rulings; and other types of aid specifically approved by the Council of Ministers.)

The rebuff must come as a surprise to Italy, both because its economic recovery has not gone very far yet and because it operates such a multiplicity of types of aid to industry, not least through the semi-obscure activities of the numerous state-holding companies, of which Iri is only the best known. A possible way out would be for the Italians to be allowed to maintain the rebates for small and medium-sized firms (which is where the political sensitivity is greatest), but to scrap them for the rest of the textile industry (meaning the likes of Montedison). The commission has already been pushing the idea of dismantling EEC textile tariffs to slim the industry down and divert resources into more advanced industries; but has met a predictable hostility from all European textile manufacturers, who are plagued with over-capacity.

In fact, the commission faces a formidable problem. Belgium, for instance, used to provide various aids to industrial investment. When the commission began to protest, it reclassified them as regional aids, although they applied almost everywhere in Belgium. Now that the rules for regional aid have been laid down, Belgium has had to backtrack and scrap some of them. But as fast as the commission closes one loophole, the more acute governments find another. Whitehall will have to learn this game of being one jump ahead; for instance, when the Industry Bill comes into effect, which may provide help to some industries outside the already extensive development areas in Britain.

Key indicators: British economy

Retail prices
Rise accelerating.

Money stock
Increased in the past three months at an annual rate around 30%.
Big increases in deposits and in lending to private sector.

Cars
Record registrations in June after allowing for seasonal factors.
Production for export only about half that for the home market;
total output 10% up on a year ago.

As a final tour de force, the Italian senate this week approved the plan to postpone yet again the introduction of value-added tax, this time until January 1, 1973, or three years later than the EEC's deadline. An exasperated Brussels grudgingly approved this further postponement, on the grounds that Italy was undergoing its familiar prolonged process of forming a government in the wake of its May elections. But it stipulated that Italy should at least modify its export rebates—of the business turnover taxes it operates instead of Vat—to the extent that they are excessive and exceed the indirect taxes actually borne by the exports. Italy complied. But it also juggled with the classification of goods to such a degree that an infuriated and suspicious commission complained that effective subsidy to exports remained much as it was before.

French economy

Just a worry or two

Paris

While 3½m Parisians have already left on their summer holidays, to be followed next week by thousands more when the city's motor and engineering factories close, some anxious faces are still to be seen at the ministries concerned with running the economy. Their worries are that industrial investment is not responding to the economic upsurge; export competitiveness is threatened; and the Bank of France this week reported some shortages of skilled labour and some production bottlenecks, despite high unemployment and general under-utilisation of industrial capacity.

Because French wages are now rising at an annual rate of about 11 per cent, faster than those of most of France's competitors, the government knows that it will not be able to count for much longer on manufacturers' co-operation even in the present limited restraints on their pricing. M. Jacques Ferry, long the powerful spokesman for the steel industry but now also the president of a new grouping of 20 of France's largest industrial firms, complained bitterly a week ago that costs were rising much faster than productivity and that French industry would lose against other European competition if it remained unable to fix its prices freely and so restore its profitability.

Certainly, squeezed profit margins

could account for some of the lacklustre prospects for investment plans. But the government is plainly not anxious to inflame wage demands by taking off what surveillance it still has on consumer prices, already increasing at a rate of 5.8 per cent a year. It sets much store, in theory, on annual contracts with the unions that would guarantee real wage increases in exchange for productivity gains. In practice, wage increases are now effectively linked to retail prices, which does not deter the unions from pushing hard for additional claims.

What surveillance of pricing remains does not, of course, extend to exports. The competitive edge that French exporters have enjoyed since the 1969 franc devaluation could become blunted. But so far France's economic growth continues to be strongly exported and the OECD, for one, is still foreseeing increases in real terms this year of 5 per cent in France's gdp and 9 per cent in exports. Not bad going. If, as is widely expected, President Pompidou calls a spring election next year, he should be able to count on several months' boom beforehand. But this means taking a calculated risk with inflation, and the French public is growing increasingly sensitive to the sharp price rises in food and services.

EEC competition

Sweet life for some

Brussels

Under the spur of Herr Willy Schlieder, the director-general in charge of competition, the EEC commission is intent on proving that there are teeth in the Treaty of Rome's rules on the subject. Its new accusation is that the com-

munity's sugar refining industry carves up the national markets of the Six in a cosy cartel that keeps prices unnecessarily high. The 22 firms concerned have two months to refute the charge, or else face fines of up to 10 per cent of their turnover. The case is almost certain to be fought in the Luxemburg court, where it could drag on for years. But the commission has just secured a judgment there upholding the fines levied on European chemical companies for fixing prices of dyestuffs. The shape of European anti-trust law is becoming steadily clearer.

The commission's suspicion that the sugar market was not free was aroused in 1968 when a brief breakdown in the Dutch cartel sent prices reeling by 20 per cent. Later the Belgian refining company, Tirlmont, was fined for refusing to give information on its marketing arrangements. The commission has also found that although sugar prices vary considerably within the community there is remarkably little growth in cross-frontier trade. This is because the leading sugar producers in each country tightly control their national markets; any intra-community trade is arranged almost entirely between the producers themselves, enabling the importing firm to keep its domestic price levels unruffled by outside competition. Even distributors and food-processing industries can buy sugar from another community member only at the price prevailing in their own markets. And sugar producers in the two countries with surplus supplies, France and Belgium, are alleged to have a joint policy designed to maximise their export subsidies from the EEC agricultural fund.

The sugar industry enjoys such comforts throughout Europe. Last month in Britain the Public Accounts Committee

At the root of Tirlmont's trouble

of the House of Commons uncovered an agreement which effectively divided the domestic sugar market at the housewife's expense: Tate and Lyle (with 60 per cent of the market) was working in close agreement with British Sugar (with 25 per cent). Prices were being pushed up to guarantee profits without regard to competition. Tate and Lyle also has a substantial share in Europe's largest sugar refiner, formed by the merger this month of two French companies, Beghin and Say. But then Tirlemont and the Italian Eridania also have stakes in the French firm. The commission has a lot to unravel.

Italian television

Colour politics

Rome

Officially M. Pompidou was due to talk about the European summit, the European security conference and monetary union in Rome on Thursday and Friday of this week. But unofficially he is likely to have had a good deal to say about colour television, and the particular virtues of the French system of transmitting it.

For three or four years the French have been pressing Rome hard to opt for their system, Secam (which is also used in east Europe) rather than the German system of Pal (which is used—or something very like it) across northern Europe and which is more or less identical with the American system from which it evolved.

Pal started as the odds-on favourite for Italy. In 1966, RAI-TV, the Italian state television monopoly, came out in favour of Pal on technical grounds, and bought some expensive hardware for experimental transmissions. Since then there has been silence, broken only by periodic announcements of an imminent decision and bursts of press speculation. Italian television manufacturers are increasingly impatient.

Four months ago, after the Italian manufacturers had boycotted the annual European radio and television exhibition in protest, Signor Andreotti, the prime minister, assured the industry that a choice really would be made. But the stakes are high. Italy's decision could swing countries like Spain and some Arab states. Even the Chinese are reported to be waiting to see how the cat will jump. Juicy carrots have been offered to the Italians to opt for the French system, including joint Italo-French companies to push Secam in other markets, joint Secam production companies in Greece and Spain, and

aid for Italian electronics firms. The Secam lobby claims its system is technically on a par with Pal. In most circumstances it is, but among Italy's mountains the Italian television authorities felt happier with Pal. Most Italian set makers are also pro-Pal, and many are already making colour sets for sale in Germany. At the centre

of the battle is the new post and telecommunications minister, Signor Giovanni Gioia. His lack of practical ministerial experience ought to be offset by his years in the rough and tumble of Sicilian politics. Attempts to find a compromise formula have foundered on opposition from both lobbies. In the end, cash and high politics will decide.

That American swap network

So oversold was the dollar when President Nixon suddenly reversed his hard-nosed policy of leaving surplus countries to buy all the dollars offered on the market (on pain of otherwise seeing their exchange rates float up) that even minor repurchases of dollars by the New York Federal Reserve Bank have been enough to produce a sharp recovery in the dollar's rate against the major European currencies. The world has seemed momentarily stunned by the reminder that America can, again, underwrite any active defence of the dollar by its vast swap network which had been immobilised since August 15th.

The network is a series of reciprocal currency credit lines, negotiated by the Fed with 14 other central banks (plus the Bank for International Settlements), under which either party can draw, on demand, up to an agreed maximum of the other's currency. If all the lines were clear, the Fed could draw over \$11.7 billion, the bulk of it in the currencies of the enlarged common market, Switzerland and Japan. From this must be deducted its debts. Despite a further rundown in its sterling debts since March (the last date for which figures were published), the Fed probably still owed roughly \$2½ billion to its partner banks. Awkwardly, the bulk of this (over \$2 billion) was concentrated in Swiss and Belgian francs. Size apart, the network's beauty is its flexibility, its low cost and (from the point of view of the strong currency countries), its built-in protection against exchange risks. If the Americans want \$100m worth of D-marks, the Fed activates its stand-by credit with the Bundesbank by drawing DM317m (at the ruling exchange rate) and credits the Bundesbank in return with \$100m; simultaneously both banks agree to reverse the swap (in effect the Americans agree to repurchase their own currency) at a specified date, at a specified rate of exchange. A 3-month credit could be rolled over indefinitely.

So long as the Fed simply held the D-marks thus acquired, the swap would be virtually interest-free, both banks receiving the same return on invested balances. But the Fed could obviously choose to use its D-marks (or the Bundesbank its dollars) to intervene in

the exchange markets or to finance transactions with other central banks. Intervention in the markets to mop up surplus dollars would not only buoy the dollar rate against the D-mark; in effect it would substitute exchange-guaranteed dollars (under the swap) for outright holdings of ordinary dollars in Germany's reserves.

Drawings under swap lines are supposed to be made only to finance swings in short-term capital flows that can be expected to reverse themselves quickly. Until the beginning of 1970 most transactions did conform to this rule, more or less. There was then a change; a pointer to August, 1971. In those intervening 20 months the Fed found that almost none of its own swap drawings proved reversible through market transactions. Increasingly, debts had to be cleared through issues of special foreign-currency securities, drawings on the IMF, and even the use of America's dwindling primary reserve assets.

This was not surprising. Swaps were being used simply to provide a straight devaluation cover for the swelling dollar reserves of surplus countries. The last big drawings made by the Fed (\$1,000m in Swiss francs, \$750m in sterling and \$135m in Belgian francs), on August 12th and 13th, just before the axe fell, were made at the specific insistence of these loss-conscious partners. The dollar's devaluation then probably cost the Fed some \$200m in swap debts still outstanding after mid-August. Yet the Fed is apparently prepared to play the game a second time round.

Egypt

Spare a rouble

Goodbye Boris and Sergei

Now that a fair number of Russia's military advisers have been ejected from Egypt, the future of Soviet economic aid is in the balance. The Russians will not do anything so drastic as to sever all their links. There was a noticeable slowing down in Soviet credits in 1971 while Mr Mahmoud Fawzi was premier. But once he had been replaced by Mr Aziz Sidky in January, the timetable for the iron and steel complex at Helwan, just outside Cairo, was advanced, so that a third blast furnace should be operating next January, six months ahead of schedule. The Russians may slow down the flow of new aid while they watch political developments, but are unlikely to turn it off altogether. Egypt is a principal shopwindow for communist economic aid. The Russians will hardly throw away the kudos of their investment. Thus on July 14th, after the Russians had been told that their advisers were to go, Mr Sidky got them to agree to talks on a new economic co-operation agreement, linked to Egypt's 1973-77 development plan.

Russia is by far Egypt's largest trading partner. The total trade between them was £300m in 1971; trade exchanges with Germany (the second largest) were £60m. Russia is financing 102 projects in Egypt, half in the energy, or energy-producing, industries. The Aswan dam is the biggest (£100m, of which Egypt has paid back £43m). Helwan will account for £310m, including development of the iron and

coal deposits at the Bahariya Oasis. In the 10 years to March, 1971, Egypt had drawn total foreign industrial credits of £210m, of which £130m came from Russia, and most of the rest from other east European countries. In that month Russia offered a further £170m, none of it used yet, including £60m for an aluminium plant and £66m for a phosphorous plant, both using Aswan power, and with work due to start this year and next.

Pakistan

It's hard to adapt

Rawalpindi

Industrial output in Pakistan fell by nearly 6 per cent in the year ending June 1st. But there are signs of a recovery as exporters find new outlets to replace the captive market that turned itself into Bangladesh. May's devaluation of the rupee helps; it gives yarn manufacturers 8.5 rupees to the US dollar (after export duties), compared with the previous 7.7 rupees, and even higher margins on other exports. Textiles, the principal industry, has been boosted by a bumper cotton crop and higher world prices.

But devaluation has given a push to the already acute domestic price inflation, which President Bhutto's government is trying to check with subsidies and tax reductions. A 14 per cent rise in the cost of living over the year had already touched off violent strikes in Karachi in which 14 people died, although this turned out to be kids' stuff compared with the language riots a month later. Workers have been battling with managements all over the country to safeguard their jobs and maintain real wages. Firms taken over in President Bhutto's brief nationalisation spree have not been immune. In one chemical plant, government-appointed managers had to be replaced after workers evicted them from the premises.

Table shows the cost, in Britain, of goods which could have been bought from other countries for £100 at Smithsonian central rates. The method was explained on page 90 of The Economist for July 1st.

Key indicators: world commodity prices

Iced coffee
The effect on Brazil's coffee harvest of a frost in Parana on the night of July 8th is only beginning to be assessed. At least a fifth of the 1973-74 crop has been destroyed including all top quality arabica coffee. Arabica prices have soared 25 per cent in the past few days to 62 cents a pound. Robusta coffee, not grown in Brazil, has climbed 13 per cent. These gyrations are almost certain to break the international coffee agreement.

BUSINESS

Investment

Suddenly, it's really summer in Wall Street

New York

It took one official release to jolt Wall Street upwards. But what a good one it was, bringing the news that America's gnp grew in the April-June quarter at an annual rate of 11.2% in money terms and 8.9% in real terms. It was the sharpest real gain since the fourth quarter of 1965, when the country was beginning to step up production for Vietnam and exceeded by over 1 percentage point most expectations, certainly those of the Organisation for Economic Co-operation and Development presented at the same time. Not least of the sweetness was the confirmation that inflation had been curbed: to an annual rate of only 2.1%, less than half the pace in the previous three months. So although growth in dollars was marginally less impressive, real growth was much more so, up from 6.5%. Moreover, to Wall Street's delight, it had been propelled by private investment.

The sun shone. On Monday the Dow Jones industrial average went up 14.9 points (after putting on 10 points the previous Friday, when the news was being leaked) to 935.4. A batch of reports on corporate profits helped the uptrend, since they pointed to increases of around 16% in after-tax earnings in the second quarter of 1972 over the year before. Inevitably there was some profit-taking on Tuesday, when the Dow slipped 0.90, and a little more on Wednesday, when it shed 1.8 points. But that meant the market had held on to nearly all of its remarkable gain, the index closing on Wednesday at 932.6.

In this hopeful glow other problems, such as Senator McGovern's anti-business bias, seemed to be falling into place. Brokers said investors appeared to feel better about the international monetary situation, comforted by the Federal Reserve's newly proclaimed policy of intervening in foreign

exchange markets to help to defend the dollar. With its confidence restored, the market moved emphatically to favour companies reporting good earnings, in contrast to indifference under similar circumstances only a few days earlier.

But one stock the rally did not help was Occidental Petroleum, long a speculative favourite. Oxy spent the previous week running up \$3½ to the year's high of \$18½ on news of its broad business accord with the Russians. Late that week, however, the stock was hit by a deluge of selling after the Secretary of Commerce, Mr Peter Peterson, was quoted in Moscow as saying it was premature to consider the deal commercial. Even in the best markets accidents will happen.

London market

While Fleet Street slept

The day the Londonpudde martyrs went to jail, the Financial Times industrial ordinary share index fell 10.3 points to 503.6. When they came out five days later, the index was a fraction higher. On Thursday morning the index recovered a bit of steam, and went up 0.9 points to 504.9 by midday. The main effect of the industrial dispute was for buyers to halt buying while they worked out what was going on. The City found that without newspapers it was almost impossible to gauge the nuances of the situation, and that the stark facts and hotly contrasting opinions of the television screen did not give them enough ammunition for the delicate sifting of sentiment that moves the market one way or the other. A few stockbrpkers, like Phillips and Drew,

issued a daily newsletter. But turnover on the market fell even further than the already low levels reached since the trouble at the docks started. On Wednesday there were only 6,700 bargains marked, the lowest figure for years.

The company news has, however, been fairly cheering. The Dowty Group went better in the second half, to produce profits of £4.3m against £3.1m after tax for the year, but one of its customers, Vauxhall Motors, reported a loss of £2.5m back to the parent, General Motors, in Detroit. The best news in the heavier end of industry came from Davy-Ashmore with a 58% rise in profits on turnover which hardly moved. The p/e of 8½ at 60p does not quite do credit to a company engaged in a sweeping modernisation programme (which cost £3m in extraordinary items).

The better-than-expected results of Redland (up from £7m to £12m pre-tax) and Taylor Woodrow, up slightly at the half-year, brought some movement to the building and construction sector. But the long tussle by Consolidated Gold Fields for the Amey Group, and by Amey for British Dredging is still unresolved. The attacked directors advised their shareholders not to make a move; until higher bids materialise, this advice is probably right.

There was good cheer in the fags and foodstuffs sectors on Wednesday with results from Gallaher and

ETIBANK

Etibank, which was set up as a State Economic Organisation in 1935, has achieved tremendous progress in recent years and has increased its capital to 2 thousand million Turkish pounds. With its production of substances such as mercury, chrome ore, blister copper, sulphur, copper pyrite, colemantite, tincal, lead and zinc concentrates, sulphuric acid, borax, boric acid, ferro-chrome and floatation pyrite, Etibank is a large contributor to the economic life of the country. In addition, the units which will be commissioned for the mining and chemical works of the Organisation will further enhance the scope of its function.

Etibank, whose banking activities were only limited during the early stages of its establishment, has, in subsequent years, expanded its operations in this field and by 1955 started to provide all normal commercial banking facilities. At present Etibank operates 49 branches in the larger centres and new ones will shortly be added to these.

Unigate. Gallaher was the big surprise; its interim profits rose by 12% to £12.2m. Only three months ago the company was making sour noises about needing to do something (raise prices) to restore margins, which were 4.7% at that stage. In the second quarter they have suddenly improved to 5.7%, their highest for a long time. The shares responded by going 10p better to 200p.

Unigate's big efforts at reorganisation—its large capital spending programme, its promotion of profitable dairy products, the rationalisation of its grocery business, and the reorganisation of the transport and engineering division—have attracted keen eyes for some time. The share price has risen 50% over the past year. It rose again this week to 178p after the year's 24% profit rise to £13.3m.

Finally, Madame Tussaud's profit for the first half of 1972 has zoomed up to £206,000 from £132,000. They also boom who stand and wait.

Clearing banks

Where there's money, there's money

All the big four clearing banks have submitted their interim profit figures. National Westminster, last to report but first in size (on some criteria), came out with good figures on Tuesday. These followed lousy ones from Lloyds, fair ones from Midland and excellent ones from Barclays. The moral is simple: some banks are going to do better than others at certain times.

The ending of the cartel means that managements take a different view of the situation and actually compete, as

the latest moves on interest rates show. That the banks' base rates had to go up again was obvious: the run on sterling squeezed their liquidity precisely when the cost of marginal funds in the money markets was being pushed sharply upwards and a more sustained rise in industrial loan demand was being added to buoyant personal, property and financial borrowing. NatWest took the plunge in pushing its base rate to 7%; Lloyds was the last of the four to fall in line. All four have narrowed the margins between their blue-chip lending rates and their deposit rates on seven-day money, from the 3% customary since 1969 to 2½%-2¾%. Moreover, none of the banks has raised the already-high charges on their fixed-interest loan schemes for personal and corporate borrowers. But while NatWest, Midland and Lloyds have raised their seven-day deposit rates 1½ points to 5½%, Barclays has taken an even bigger gamble, marrying a 1-point rise in base rates to a full 1½-point rise (to 5½%) in its deposit rate. If the extra carrot offered does succeed in attracting more deposit funds, it will be cheap at the price—recourse to the money market for extra funds would cost much more.

The difference in management dynamics shows up particularly perhaps in a comparison of NatWest with Lloyds. NatWest enthusiastically backed the British Petroleum financing (July 22nd, page 70), and Lloyds opposed it. NatWest shows continuing profit increases and forecasts a "satisfactory improvement" over last year; Lloyds actually turned in less profit at the per share level for the six months, and forecasts no improvement for the year. NatWest has been lending more aggressively and to the more profitable sectors, like property development and personal loans. Lloyds has

not been adventurous with its advances, and is still more tied to the less-generous returns of traditional industrial lending. It will be interesting to see from the annual reports how well they compare on handling the portfolio of gilt-edged securities. Lloyds is thought to have taken something of a caning. However, Lloyds's relatively poor showing could be the prelude to a rapid turnaround. When banking profits were first revealed, Lloyds was a star.

The fundamentals for banks are good: secure profits on very moderate price/earnings ratios in an industry which is bound to grow. But the institutions have been very heavy in bank shares and are now sitting on vast profits. The trend of profits in the first half, which shows much stronger increases over a year ago than over six months ago, has led them to think that the best of the goodies may now be over and that it is time to cash some of their holdings. They are also worried what will happen to margins, as banks bid in the money market to fulfil the growing (one hopes) industrial demand for loans. Probably not enough to dent profits—but the time to buy bank shares is after the shake-out is over.

Sime Darby-Clive Holdings

Gilts and ginger

Quite unexpectedly, Sime Darby, the successful Far Eastern merchant, has bid for the City's sixth largest discount house, Clive Holdings. The price tag of £25m is the equivalent of 257p a share: a 44% mark-up on the pre-bid price.

Never before has a discount house been taken over by an outsider. Only the most gentle mergers, watched over

by the Bank of England, have ruffled the rarified atmosphere of the discount market. What can Sime Darby, whose profits are generated entirely in the East, do with its new acquisition? Little in the short run. The tightly regulated rules of discount business cannot be tampered with. This side of Clive's business must remain isolated from the rest of Sime Darby's activities. It will clearly help in the discount market to have the £160m capitalisation of Sime Darby backing Clive's positions: discount houses have always been under-capitalised. But where Sime Darby will gain is in developing Clive's growing money-broking business. This will not merely give the trading house much better access to London's money markets but could, in time, enable it to develop a merchant banking operation of its own.

That will be a long pull, however. In the meantime the main benefit of the acquisition must be that it gives Sime Darby a profit base in Britain, where 70% of its ownership is. But profits from the discount business are very volatile, and with rising interest rates Clive will have trouble matching last year's bumper profits with any regularity in the future.

The deal is the most spectacular yet engineered by the Rothschild Investment Trust. RIT already has a 7½% holding in Sime Darby, bought for £1½m odd and now worth £7½m, and 20% in Clive, acquired for about 66p a share.

The takeover of Clive comes after a frenetic year for Sime Darby. It has taken adept advantage of the booming Hongkong stock exchange (now at its all-time high and 80% up on a year ago); and has made almost a dozen acquisitions. After the offer of 11 convertible shares for every five ordinary shares of Clive, Sime Darby shares moved up by 9p to 145p in London: a price which is still at a considerable discount to the Hongkong stock exchange's quotation. Since this puts the shares on an absurdly high p/e of well over 50, Clive shareholders might wonder quite how to value the bid if the Hongkong market recedes.

This was the strongest argument used last year by Seaford Rubber in its unsuccessful fight against Sime Darby. Ironically, since that time Seaford's plantations have not been turning in the expected profits, because of the low world rubber price. This is undoing Sime Darby's forecasts for 1972. That is perhaps one reason why it wants to shift to London.

Rank Organisation

More and more

If the profits were not quite so good one could almost feel sorry for Sir John Davis, chairman of the Rank Organisation, and his board. He wants to diversify, but the shareholders simply want the Xerox profits to roll in. And roll they do. This week's interim figures show Rank's earnings per share up by a huge 30%—and all the big rise, once again, comes from the Xerox concession: the share of Xerox profits is up 25% to £19m. Sir John's report sensibly says of these figures that "they speak for themselves."

It is of almost academic interest how the rest of the company is doing. Profits there have, however, improved to £6.8m from £4.6m in the equivalent period last year. But more important than this eventual take-off of Rank's conventional business is the prediction that the next six months will be better than the last. This means that Rank's Xerox pretax profits should top £40m for the year, well justifying the share at £10.50: 10% up on a week ago.

De La Rue, for whom Rank bid almost £4 a share in 1968, must be looking forlornly at Rank's results. Four years after getting the Government to prevent the bid, De La Rue's shares are valued at only 25p. After long years of unfulfilled promise, the first quarter results do show a substantial improvement. Pre-tax profits are up 53%. But this is no real guarantee of a sustained increase, and earnings per share are only up by 9.5%. In an attempt to find a solution to the recent undistinguished performance the company is doing yet another management reshuffle, the

last being less than two years ago. The stock market will have to wait another year to be convinced. But even then many shareholders must be sore at their management for having rejected Rank.

Stores

Some are doing fine

The recovery in retail sales since the autumn is underlined yet again—but from an unusual source—by the latest results from Great Universal Stores. Gussies are chiefly noted for their steadiness, so the 14.8% rise in profits to a record £60m, on turnover up 13% to £½ billion, should put heart into the enthusiasts. The key figure is that of £6.8m worth of deferred profits, showing a tenfold increase on last year. These are the profits on outstanding hire purchase contracts which are brought in gradually as payments are made, living proof of what the durables boom has meant to a prominent High Street trader. While renewed credit controls can never be discounted entirely, GUS's historic p/e of 21 at 320p looks undemanding.

The interim results from F. W. Woolworth were inevitably a bit of an anticlimax after the excitement of the first quarter figures when outstanding profit and sales rises were distorted by the timing of the Easter trading period. The second quarter was much quieter and the combined profit rise was 21% over the very dull January to June of last year. The slight shading of margins in the second quarter was depressing, but the hope is that the accelerated store improvement campaign will help later figures as they have hindered these.

PROGRESS IN SEEKING OUT AND LAYING THE FOUNDATION OF NEW ACTIVITIES AT HOME AND OVERSEAS.

★ A final dividend of 23% is recommended making 30% for the year covered 2.6 times compared with 19% for the previous nine months. Earnings per ordinary share of 5p are 3.71p.

★ We believe that the future prosperity of your group will be ensured by our traditional business at home and overseas, augmented by new work in connection with the discoveries of oil and gas in the North Sea and the growth areas of pollution and environmental control.

★ Your group has orders in excess of a year ago and we have every reason to think the latter half of the year will show a marked improvement which will continue into 1973 and beyond.

DIVIDENDS—Preference	20,071	20,109
—Ordinary	183,125	170,043
RETAINED	176,751	288,021

Group profits for 1971 have not continued the trend of record profits achieved annually over the previous ten years. This is the result of difficulties in certain of our world markets, which are receiving our close attention, and your directors hope and expect that the profit reduction is only temporary. Results were also affected by exchange adjustments arising out of currency revaluations. However, the directors recommend an increased final dividend of 19% making 28% for the year (1970—26%). A 1-for-2 bonus issue is also proposed.

The music publishing division increased its sales and also benefited from higher royalty revenue. Sales of musical instruments were satisfactory and the demand for Hammond organs continues to be strong.

The directors are hopeful that for 1972 they will be able to maintain both profits and dividends, adjusted by the proposed bonus issue, at the 1971 level.

Thanks are expressed to employees throughout the group.

we expect another
good year.

Mr. H. Kretzman *Chairman*
Sir John E. Cohen *Life President*

The benefits of further streamlining operational costs, together with increased sales in the Home 'n' Wear and Fresh Food Departments, have further increased our margins on sales to 5.5% (1971 5.3%).

We are pressing ahead with a programme of super stores in central locations, and have just received planning consent for three major units totalling 135,000 sq. ft. selling area at Gloucester, Mansfield and Weston Favell.

We are now having discussions which could give us a launching platform to the Continent.

CHAIRMEN'S STATEMENTS

COALITE and CHEMICAL PRODUCTS LTD

55th Annual General Meeting

The following points are taken from the Statement
of the Chairman, Mr. Francis L. Waring

- ★ Given normal external circumstances, the successful commissioning of new batteries at Grimethorpe and the new Works at Rossington, would have been duly reflected in the financial results for the year. Instead, we have a reflection of the serious effects of coal shortage over a protracted period due to the labour dispute in the mining industry.
- ★ Profit before tax totalled £3,122,336 compared with £4,611,898. The tax charge of £1,265,131 compares with £1,611,207 last year. Depreciation continues to increase and totalled £1,761,700 compared with £1,071,489. This, together with the net profit of £1,857,205 gives a cash flow of £3,619,045 compared with £4,072,180.
- ★ A final dividend of 8% is recommended making a total of 15%, the same as last year.
- ★ Expenditure on capital additions during the year totalled £9,349,162 easily a new record. The new Works at Rossington was virtually completed on 31st March. The various extensions and additions required at the Central Refinery to permit the treatment of the additional liquid crudes forthcoming from Rossington have also been completed.
- ★ It is proposed that £5,786,250 of the amount standing to the credit of General Reserves should be capitalised and applied in the issue of one new 10p share for each share held.
- ★ To conserve coal, throughput at each carbonising plant was substantially reduced even before the end of December 1971 and more drastic reductions and battery closures followed when the miners overtime ban evolved into a national strike. The position was gradually restored as coal supplies were resumed and, with the exception of Rossington, the return to full throughput coincided closely with the end of the financial year on 31st March, after nearly four months of continuous disruption.
- ★ Although many local authorities continue to push ahead with clean air drives, there is still a large number of others reluctant to proceed. An expected shortage of domestic solid smokeless fuel can no longer be used as an excuse for further delay.
- ★ Whilst we have not completely avoided the difficulties with which the chemical industry has had to contend during recent times, those products derived from the liquid by-products of Coalite manufacture continue to perform strongly in relatively shortage-type markets.
- ★ Provided there are no unpredictable influences over which we have no control, it is expected that the results this year will revert to a more normal pattern.

INTERIM STATEMENT

ANGLO-INTERNATIONAL
INVESTMENT TRUST LTD.

INTERIM STATEMENT

REVENUE FOR HALF YEAR

Gross revenue for the six months ended 30th June 1972, amounted to £108,280 against £108,717 for the same period of 1971.

INTERIM DIVIDEND UNCHANGED

An interim dividend of 1p per Dividend Share will be paid on 8th September, 1972, to Dividend Shareholders on the Register on 11th August, 1972.

ASSET VALUES HIGHER

On 30th June, 1972, net assets were £5,220,000 equivalent to 179p per Asset Share (end 1971—156.60p) not taking into account tax liability on unrealised capital gains and with full dollar premium. On the same basis the break-up value of the Dividend Shares would have been 27.4p. All figures are unaudited.

The Chairman, Sir Hugh Fraser, Bt., in his Statement with the Accounts for the year to January 29, 1972, comments:

Turnover shows an increase of over 15% and this is mainly responsible for the extremely satisfactory results.

The policy of the Board of disposing of uneconomic units and of improving and expanding profitable ones has been of benefit to the Group.

During the first four months of the current year turnover and profits have continued to increase.

The Directors recommend a one-for-one bonus issue of Ordinary Shares and it is proposed to increase the authorised capital of the Company to £50,000,000.

I should like to thank all members of the staff for their magnificent co-operation which has resulted in the excellent results now submitted.

APPOINTMENT

UNIVERSITY COLLEGE GALWAY

Industrial Liaison Officer

Applications are invited for the above post from suitably qualified University graduates, to assist in the promotion of co-operation and interaction between University College, Galway, and industry (including agriculture, fisheries, etc.) particularly in the fields of Science and Technology.

SALARY within the range £3,296-£3,836

Further information may be obtained from:

SECRETARY-BURSAR,

UNIVERSITY COLLEGE, GALWAY,

to whom completed applications should be returned not later than SEPTEMBER 15th, 1972.

APPOINTMENTS

ROBERT GORDON'S INSTITUTE OF TECHNOLOGY

SCHOOL OF BUSINESS MANAGEMENT STUDIES

LECTURER IN ACCOUNTING

Applications are invited from persons able to make a positive contribution to degree level teaching in the field of financial accounting. Candidates must be qualified Chartered Accountants and preferably possess a university degree. Relevant business, professional or research experience would be an added recommendation.

SALARY SCALE (under review)—£1,482-£3,309.

Initial grade and salary placing according to experience and qualifications. Assistance with removal expenses. Details and application form from Director, Robert Gordon's Institute of Technology, Schoolhill, Aberdeen, AB9 1FR.

New Zealand University of Canterbury CHRISTCHURCH Chair of Accountancy

The Council of the University invites applications for a Chair of Accountancy which is the second established in the Department. The appointee will take up his position on 1 February 1973 or at such later time as may be arranged. Applicants should have wide experience in both teaching and research in any of the main areas of accounting but preference may be given to applicants qualified in management accounting, business finance, or management information systems and computers.

At present the salary for a Professor is within the range of \$NZ11,698 to \$NZ14,947 per annum. The commencing or subsequent salary of the appointee may be increased as a result of the review of individual professional salaries which the University makes at the beginning of each year.

Particulars, including information on travel and removal allowances, study leave, housing and superannuation may be obtained from the Secretary-General, Association of Commonwealth Universities (Appts), 36 Gordon Square, London WC1H 0PF (Tel: 01-387 8572).

Applications close on 31 October 1972.

University of Aberdeen

Lectureship in Political Economy

Applications are invited for above post. An interest in Micro-economic Theory would be an advantage. Salary on scale £1541-£3852 with appropriate initial placing. Superannuation (F.S.S.U.) and removal allowance.

Further particulars from The Secretary, The University, Aberdeen, with whom applications (3 copies) should be lodged by 19 August, 1972.

University of Sydney

F. H. Loxton Post-Graduate Studentship or Scholarship in Agriculture

Applications are invited from male graduates of any Australian or overseas university for an F. H. Loxton Post-Graduate Studentship or Scholarship tenable in the Faculty of Agriculture. The value of a Studentship is in the range of \$A2,000 to \$A3,000 per annum. The stipend of a Scholarship is in the range of \$A3,200 to \$A4,150 per annum. Whether an applicant is awarded a Studentship or Scholarship will depend on his qualifications and research experience. The award is made for one year in the first instance, but may be renewed for a second or third year and, in exceptional circumstances, for a further year. The applicant may be of any age.

Further information and application forms may be obtained from the Registrar, University of Sydney, Sydney, N.S.W. 2006, Australia, with whom applications close on 30 September 1972.

University of Queensland

AUSTRALIA

Salary: \$A6,697-\$A9,286 per annum (Base plus 7 increments).

Conditions include provision for travel and removal expenses. In addition, superannuation is available, together with assistance in buying or building a home and study leave. Study leave grants are available and credit may be granted for existing study leave entitlement.

Further information can be obtained from the Secretary-General, Association of Commonwealth Universities (Appts), 36 Gordon Square, London WC1H 0PF, (Tel: 01-387 8572).

Applications close on 19 August 1972.

University of New South Wales

Wollongong University College

Professor of Accountancy

Professor of Geography

Applications are invited for appointment to the above chairs. The professors will organise and participate in teaching and research. The College will become an autonomous University by January, 1975.

Salary—\$A15,368 per annum. Salaries are under consideration.

Details of appointment, including superannuation, study leave and housing scheme, may be obtained from the Secretary-General, Association of Commonwealth Universities, 36 Gordon Square, London W.C.1. Applications close in Australia and London on 31st August, 1972.

NEW HOLLAND

DIVISION OF SPERRY RAND CORPORATION require

MARKETING RESEARCH ANALYST

for their Brussels office:

to plan, devise and implement marketing research studies on the European agricultural and machinery market.

Minimum requirements are: Bachelor of Science degree, fluency in English and, preferably, a second language.

An attractive salary will be paid together with the usual Belgian fringe benefits.

Applicants should write and send their curriculum vitae in English to:

NEW HOLLAND, European Division, Marketing Research Dept, 148 Chaussée de Charleroi, B-1060 Brussels, Belgium.

Senior Economic Advisers (£5525 - £7451)

Department of the Environment

To head a team of economists advising those in the Department who are concerned with environmental protection—including water and sewage, clean air and pollution issues. You will be involved in economic aspects of water supply and sewage disposal in the light of proposals for major reorganisation of these services; anti-pollution policy, including international work; and study of future world trends in, for example, economic growth, resources and environmental effects.

Candidates, aged at least 34 (or at least 32 if exceptionally well qualified), should normally have a degree with first or second class honours, or a higher degree, in economics or a closely related subject, and preferably have published work to their credit. They must have experience in an economics advisory capacity, or in research or in teaching advanced economics.

Starting salary could be above the minimum of the scale shown. Appointment could be on an established basis or for a

HM Treasury

To head a Division in the National Economy Group responsible for providing Ministers and senior officials with an intelligence and briefing service on the UK economy. The work is wide-ranging but is orientated towards parliamentary debates and questions and towards consultations with, and meetings of, international organisations. You will be called upon to brief Ministers and to undertake representational visits abroad.

period. There are prospects of promotion to posts carrying salaries in excess of £8425. Location, London.

Fuller details of these appointments may be obtained by writing to the Civil Service Commission, Alencon Link, Basingstoke, Hants, or telephoning BASINGSTOKE 29222, ext. 500 or LONDON 01-839 1696 (24-hour "Ansafone" service) quoting reference A(3)/623/S. Closing date 21st August, 1972.

CIVIL SERVICE COMMISSION (NORTHERN IRELAND)

DEPUTY ECONOMIST

Applications are invited for the pensionable post of Deputy Economist in the Manpower Intelligence Service of the Labour Affairs Department of the Ministry of Health and Social Services.

QUALIFICATIONS

Candidates must have a First or Second Class Honours degree in Economics, including statistics, together with at least three years' practical experience in economics or statistics.

DUTIES

The work will involve:

- 1 (a) Analysis and interpretation of the results of the Census of Employment;
- (b) the linking of the employment series created from the Census of Employment with the existing system and the reconciliation of employment data from other sources;
- (c) the introduction of geocoding and the transfer of the present manual system to a computer (some experience in the use of computers would be an advantage but is not essential).
- 2 (a) An examination of the problems to be solved in the proposal to introduce Computer techniques into the Employment Service;
- (b) reporting on various surveys carried out by the Manpower Division and such other manpower intelligence duties as may be assigned.

SALARY SCALE

£2,798-£3,873. Entry point will be related to experience and qualifications. Application forms and further particulars obtainable from the Secretary, Civil Service Commission, Clarendon House, Adelaide Street, Belfast, BT2 8ND. (Tel: Belfast 44300 Ext. 26.) Completed application forms should be returned by 16 August, 1972. Please quote SB 138/72/60.

APPOINTMENTS

THE POLYTECHNIC, Huddersfield

Readvertisement

SCHOOL OF BUSINESS AND MANAGEMENT STUDIES

Applications are invited for the post of **SENIOR LECTURER/LECTURER II** in **ECONOMICS** in the Division of Business Studies. Applicants should hold a degree and/or a professional qualification.

Salary scales: Senior Lecturer £3,131-£3,495 (bar)—£3,768. Lecturer II £2,355-£3,063.

Applications (8 copies) should be lodged not later than 15th September, 1972, with the undersigned, from whom further particulars may be obtained. In reply please quote Ref. No. 3215 U.

ROBT. T. HUTCHESON,
Secretary of the University Court.

The Open University

POST EXPERIENCE COURSES

Statistician

Applications are invited from persons with knowledge, experience and interest in the use of economic and social data sources to develop and write a course on *Statistical Sources for presentation by correspondence, radio and television*.

The post will be tenable from October 1972, for one or two years. Salary on the scale: Lecturer: £1,641-£3,852 per annum or Senior Lecturer: £3,852-£4,734 per annum according to qualifications and experience.

Further particulars and application forms are available from the Secretary (SP4), The Open University, Walton Hall, Walton, Bletchley, Bucks. Closing date: Friday 11th August 1972.

INTERNATIONAL ORGANISATION

seeks for Geneva Switzerland

1°) FOOD TECHNOLOGIST

With University degree in chemistry or equivalent experience in food fermentation technology or chemistry or similar industrial experience in food industry. Fluent English required, working knowledge French or Spanish.

2°) ENGINEERING DRAFTSMAN

with high technical or industrial school, Diploma and industrial experience mechanics. Fluent English or French; working knowledge other language.

Write to Box n° 587—TRISERVICE RUFENACHT
28, avenue Victor-Hugo, 75—Paris 16° (France)

Australian National University

Lecturer in Geography

Applications are invited for appointment to a vacant post of Lecturer in the Department of Geography in the Faculty of Arts of the University. The appointee will be required to take up duty early in 1973.

Preference will be given to a well-founded economic geographer capable of handling teaching in that field. Scope exists for the development of regional interests in East Asia or Australasia, and for advanced teaching in urban, applied and theoretical geography. An applicant's secondary interests could however be in other fields.

Salary on appointment will be in accordance with qualifications and experience within the range \$A6804 x \$A369-\$A9387 per annum.

The University provides reasonable travel and removal expenses and assistance with housing in the case of an appointment from outside Canberra. Superannuation is on the FSSU pattern with a supplementary benefit. Financial assistance towards study leave is also available.

Further information and the forms which should accompany an application may be obtained from the Secretary-General, Association of Commonwealth Universities (Appts), 38 Gordon Square, London WC1H 0PF (Tel: 01-387 8572).

Applications close on 18 September 1972.

APPOINTMENTS

University of Salford

Lecturer in Management Studies

Applicants should have a good honours degree. A relevant post-graduate qualification, together with appropriate teaching, research or industrial experience is desirable.

The post is concerned with a range of courses including the MSc in Management. It may be filled in one of the following fields:

- (1) Marketing, with special interest in consumer-buyer motivation and behaviour, or
- (2) Organisation Behaviour/Industrial Relations.

Salary scale: £1,641-£3,999 p.a. FSSU.

Further particulars and application forms may be obtained from the Registrar, University of Salford, Salford M6 4WT, quoting reference SOC/43/TE. Applications should be returned by 1st September 1972.

Oxford Information Department

seeks Economics graduate to join team of three. One or two years' experience in development or industry/commerce useful but not essential.

Write for details and application form to Personnel Officer, Oxford, 274 Banbury Road, Oxford OX2 7DZ quoting reference E.8.

The University of Sheffield

DEPARTMENT OF POLITICAL THEORY AND INSTITUTIONS

Applications are invited for a Lectureship in Political Theory and Institutions with special reference to the politics of one or more West European countries and the relations between the West European States. Salary in the range £1,641-£3,999 with F.S.S.U. provision. Further particulars from the Registrar and Secretary to whom applications (4 copies) should be sent by 18 September 1972. Quote Ref. R.65/C.

Finance Executive £7,000+ International Hotel Group

The European Hotel Corporation is a consortium of five international airlines and five banking houses, formed with the objective of building a chain of economy class hotels in Europe.

A Finance Executive is now to be appointed to be responsible to the Board, through the Chief Executive, for the direction and control of the Group's resources and financial policy. He will be particularly concerned in feasibility studies and negotiations for the financing of new projects on an international basis, in dealing with the exchange and taxation problems involved and in the introduction of the most modern techniques and practices in financial and management accounting.

The position calls for a man aged around 40 with a recognised accounting qualification and/or a degree including accounting, business or economics and he should have considerable experience of international accounting and financing at top level. Preference will be given to candidates who speak at least one European language in addition to English.

Starting salary will be at least £7,000 per annum and will include pension and other benefits.

Although based at the company's executive offices near Heathrow Airport this executive will be involved in quite a considerable amount of travel by air.

Applications will be treated as confidential and should be addressed personally to:

The Chief Executive,
EHC Hotel Services Limited,
Airport House, Bath Road,
Hayes, Middlesex.

EUROPE —

ADVERTISEMENT REPRESENTATIVE

The Economist

THE ECONOMIST, Britain's world newspaper, is looking for someone between 25 and 29 to fill a key post in its foreign advertisement sales team.

A good knowledge of German is one major qualification which the successful candidate will need to offer. Others will include an excellent education, fluency in perhaps one other European language, proof of ability to sell at all levels, and proper motivation.

He will be competent to take responsibility for a major European territory, including Germany (both parts) after only a few weeks' preparation. He will be based in London but will need to travel abroad fairly frequently, usually by car.

This rewarding post offers excellent promotion prospects and a full career opportunity.

Please write or telephone for an interview application form to: Miss Sarah Priestman THE ECONOMIST, 25 St. James's Street London SW1A 1HG. Tel: 01-930 5155.

UNITED NATIONS Cadre of Young Economists

The United Nations is initiating the establishment of a Cadre of Young Economists to assist the least developed countries in the field of development planning. For this purpose the United Nations invites applications from highly motivated young men and women up to 30 years of age who believe in the principles and ideals of the United Nations and who possess a Master's degree (or equivalent) in economic specialization in development planning and/or statistics. Some practical experience in these fields of activity and fluency in more than one language are highly desirable.

The programme envisages an initial appointment period of one year with possible extension for an additional three years subject to a satisfactory performance in the first year of service. During the first year, the programme will include briefing at United Nations Headquarters, work at the seats of a United Nations Regional Economic Commission and of a Regional Institute for Economic Development and Planning and field assignments in one or more of the developing countries. Suitable openings are expected to arise exceptionally competent candidates for further re-assignments with the United Nations.

First year salary would start at about \$U.S. 9,000 of income tax, exclusive of cost of living and allowances.

Application forms and additional information may be obtained by writing to: Technical Assistance Recruitment Service, Office of Personnel, United Nations, New York 10017. The communications should be clearly marked "Cadre of Young Economists."

FUTURES RESEARCH

Our client, a nation-wide public corporation, is inviting an experienced Researcher to join the organisation to assist in the field of long range studies. He will have several years' research experience, preferably leading a small research staff in the general field of communications in urban and inter-urban environments. He will have worked on urban studies and possibly on problems of transportation. He will need to have sufficient understanding of communication patterns to be able to initiate research programmes designed to help identify the manner in which demand for telecommunication services is likely to develop. Alternatively, he may have had experience of forecasting and planning in a larger service industry and be business-school trained. He will not be required to have a detailed knowledge of telecommunications but rather to appreciate the likely role which they may fulfil in relation to communication and transportation systems in the future. He will be operating on a time scale up to 30 years ahead.

The appointee will be between 25-40 years of age (preferred age 28-35), with a good Honours degree. He must be prepared to manage or execute studies stemming from his recommendations. He may be in touch

with other international futures research organisations. Collaboration with European organisations is probable.

The successful candidate will have a unique opportunity to study and analyse problems both in the business and residential sectors. He will be responsible for study programmes which contribute towards setting the longer term objectives of the Corporation. He must be able to state his case clearly and carry conviction with his colleagues in a multi-disciplinary team.

The salary range is £3,910 with steps of £229 till £5,055. The starting salary will be by agreement. The office is located in the centre of London. There is a contributory pension scheme, starting after two years of service. Transfer and settling-in allowance will be given if appropriate. Please write to: Mr. S. Smith, A K Appointments, 20 Soho Square, London W1A 1DS, or telephone 01-734 6404 (day) or 01-734 2476 (after 5 p.m.) for an application form, quoting the reference number C/375S/EC. Your identity will not be disclosed without your permission.

AK APPOINTMENTS

PROFESSIONAL AND MANAGEMENT SELECTION

APPOINTMENTS

The University College of Wales

ABERYSTWYTH

Department of Economics

Applications are invited for the post of JUNIOR RESEARCH OFFICER to examine the economic and social impact of tourism on predominantly rural communities. The study is financed by the Welsh Tourist Board.

The successful applicant will commence duties on 1st October, 1972 or on such earlier date as may be arranged.

You can bank on the man-on-the-spot®

Our World-wide Services. Industrialists trading with North America naturally think of the Bank of America as a good bank to use. And, of course, they are perfectly right. But, in fact, our home ground is the whole wide world, and we are as familiar with the globe as you are with your own back garden.

If you wish to improve or to expand your operations abroad or if you're entering the international field for the first time, we have a man-on-the-spot right where you need him. He will give you every banking service that you require. He knows local businessmen, bankers and government officials, economic conditions and trade regulations. He will be glad to advise you about foreign exchange and currency, and will provide you with business introductions.

And yet, for all our size and the impressive range of services that we offer, you will find us friendly and understanding people for whom no trouble is too much.

The moderates' hour

There are better prospects for a return to political life in Northern Ireland now that the Bogside and Creggan no-go areas have been recovered, but it's still touch and go, page 11. The mood, and the doubts, in the province, page 17. Mr Lynch has won the day for common sense in Mid-Cork, page 26.

Sapping the will

The British establishment has already agreed to lose the dock strike on terms that will bring more violent strikes elsewhere later, page 12. The state of emergency, and the moves for peace, page 75. The huge wage offer to the building workers shows why the new TUC-CBI conciliation body will merely pour fuel on a raging fire, and price policies are going wrong too, page 77.

World money

Fred Hirsch, formerly of the International Monetary Fund, and before that of *The Economist*, sets out his own proposals for international monetary reform, pages 55-68.

Exit, pushed

The way in which Senator McGovern dropped Senator Eagleton has aroused further doubts about his political capability, page 14. The old Democratic stalwarts and money-raisers want no part of McGovernism anyway, page 37.

Goodbye to all that

China pays its official farewell to the long-dead Lin Piao, and brings back the men the cultural revolution kicked out, page 15.

But westward, look

It's hard for Mr Brezhnev to combine holding east Europe down with trying to persuade western Europe to vote communist, page 16. The French communists attack the Prague trials, page 29. The repression widens in Russia itself, page 30.

It might even happen

Egypt's so big, Libya's so small, that the latest go at Arab unity could upset all precedents and just possibly stick, page 25.

European summit

SIR—In your report on the Brussels meeting of foreign ministers preparing for the summit conference (July 22nd) you imply that Britain shares France's objections to strengthening European institutions and to the establishment of a political secretariat. Whilst it is true that Britain's views on the development of the European community have been mooted whilst we are still outside, it is odd that you should assume that Britain's interests lie with gaullist ideas of ultimate national sovereignty. Your assumptions are hardly confirmed by the Prime Minister's clear call for Europe to speak with one voice in world affairs, or informed press reports that Mr Heath was firm in resisting the French president's demands that the political secretariat be established outside the community framework in Paris.

In the face of America's almost certain reduction of her military presence in Europe after the presidential elections, and the need to evolve a common policy in preparation for next year's security conference with the Soviet block, the establishment of effective European machinery to develop a common foreign policy is becoming urgent.

Delaying the summit is no answer to these problems, or, for that matter, in ensuring that, once the community is enlarged to 10 members, the existing institutions do not grind to a standstill for want of a more effective way of reaching decisions on progress in the economic and monetary spheres.—Yours faithfully,

London, SW1 ERNEST WISTRICH
Director,
European Movement

Handling the gunmen

SIR—In your wide-ranging survey of how other governments have dealt with their urban guerrillas (July 29th) you omit one essential element in continental experience of postwar subversion—namely riot police. I suggest that the big error in Northern Ireland from the security angle was the recruitment of the military Ulster Defence Regiment instead of using the same volunteers, from both communities, as riot police.

The function of any kind of police is different from that of troops. It is the function of police to think in terms of arrests. As it is the function of troops to be the ultimate deterrent, it is axiomatic that troops should never be brought into contact with a civilian crowd.

Two events have led directly to most

serious consequences: January 30th in Derry, and the recent trivial incident on the Lenadoon Estate, which led to the ending of the truce. Both could have been avoided if there had been a riot police force in between the ordinary police and the army.

I cannot imagine a French riot police commander ordering his men in on that fatal day in Derry. In fact, Chief Superintendent Lagan of the RUC told the Widgery tribunal that he advised against the use of troops. But what can the generals do if London has habituated them to making arrests a police function, even when martial law has not been declared?

The Lenadoon affair was fantastic. Troops should not have been involved in anything so trivial. Riot equipment is police equipment, not military. The presence of troops merely enabled the ancestral bogey of the oppressive British army to be conjured up again.

One final point. From the point of view of naval strategic defence, Northern Ireland and western Scotland form one unit, as they did, in another sense, in St Columba's day. The North Channel, like a river, unites rather than divides. The effect of all the trouble is to weaken the defence of the Western Approaches—and, simultaneously, our Rhine frontier, as units have to be brought over from Germany.—Yours faithfully,

Manchesters GEORGE A. SHORT

Dock strike

SIR—At my last T&GWU branch meeting I put forward a resolution supporting the efforts of the general secretary and other union officials to end the dockers dispute, and called for the withdrawal of membership from the militants' leaders for causing unnecessary public conflict between brother workers in haulage and the docks. No other person in the branch was interested, so we all passed on to a discussion about the different kinds of communism in Ceylon.—Yours faithfully,

London, SW8 PETER BOTTOMLEY

The two McGoverns

SIR—One facet of the Nixon-McGovern contest has been overlooked: McGovern's geostrategic inconsistency in proposing to abandon south-east Asia but doing "even more for Israel."

South Vietnam is directly vital to an Asiatic power balance, while Israel is only indirectly critical to the European equilibrium. In 1941 your military chiefs concurred with ours on that score prior to Pearl Harbor.

In Vietnam there is almost no likelihood of a ground-force confrontation with Russia or China. Russia is not contiguous. Below the 17th parallel China is unable to send substantial ground forces in combat-ready condition in the face of American naval and air superiority. But in Israel the risk of confrontation with Russia is substantial, in the air, on the

ground, and on the water.

Also Vietnam, like Korea, is the apple of discord, the bone of contention, between the major Pacific powers—China, Russia, Japan, India, Indonesia—that fear any other regional potential enemy controlling it militarily. Both have their counterparts in Europe—the Low Countries and Switzerland.—Yours faithfully,

New York CHARLES WEIL

Gold

SIR—You write (July 15th): "a thumping rise in the gold price . . . will get no one very far." But surely a big enough rise would enable the United States to resume convertibility of the dollar, to the accompaniment of a vast sigh of relief in London, Paris, Frankfurt and Zurich. True, the relief would persist only until the rising tide of production, and the consequent demand for increased bank reserves, beat up against the new gold price; but then we can consider a further rise.

The Economist is a strong advocate of floating exchange rates. Every argument for such a float applies equally strongly to the price of gold. Only a floating gold price will ensure that bullion moves smoothly and automatically to those quarters where demand is strongest, and that there will always be enough gold bank reserves to effect the exchange of any volume of goods that future industry may be able to produce.—Yours faithfully,

London, SW19 HENRY MEULEN

Sand on their boots

SIR—It must have been galling for the Russians to see you (July 22nd) swallow the Egyptian propaganda line hook line and sinker. You echo Egyptian accusations that the Russians have delivered "inferior" weapons while failing to supply "offensive" ones. As every military analyst knows, there is no such animal: weapons are offensive or defensive according to the manner of their deployment.

In fact, the Russians have supplied an impressive canal-crossing arsenal to the Egyptians:

—1,500 artillery pieces for direct fire support and shallow interdiction (0-10 miles from the canal bank);

—200 close-support aircraft (Mig-17s) for fortification-busting and rear-area interdiction (0-100 miles from the canal bank);

—110 strike aircraft (Su-7s) for interdiction in depth, excellent supersonic aircraft with the range to hit targets anywhere in Israel;

—1,500 battle tanks for penetration.

This array of "offensive" weapons is covered on base (east of the canal) by the thickest anti-aircraft system in the world: more than 130 Sam batteries and several hundred radar-guided AA guns. (This is more than adequate for an airspace of 100 miles by 200 miles.) In addition, for the air-air defence of Egyptian aircraft operating over Sinai and

MANAGEMENT APPOINTMENTS

£7000 PA AND OVER

Chief Executive (DESIGNATE)

Suva, Fiji c. £12,000 in local
currency equivalent
House & car provided

The local sugar industry is the largest contributor to the economy of Fiji and raw sugar accounts for about two-thirds of total exports from the islands. Next April the Government assumes a majority shareholding in the company operating the milling and processing of all the sugar produced. A Chief Executive is required to join the board as soon as possible. He will be responsible to the board for the direction of all milling and processing activities, cane research and growers extension services.

The person appointed must be of outstanding character and experience. He should have the ability to lead an organisation which is acknowledged to be efficient and to secure the willing co-operation of the staff and work force. He should have the capacity and energy to establish satisfactory relationships with Government, growers and international buyers. Considerable experience of management at top level within a significant commercial or industrial enterprise and a firm sense of financial responsibility are mandatory.

Knowledge of the sugar industry would be an added advantage.

Age ideally early 40's.

Write in confidence, quoting reference 1120/E to: R. G. Birch,

Peat, Marwick, Mitchell & Co.,
Management Consultants,
Suite 401, Salisbury House,
Finsbury Circus, London,

see pages 92 to 97

Controller BUSINESS PLANNING EVALUATION

• THIS is an unusual appointment offering a springboard for future career development and a unique opportunity to work at the heart of central government for about three years and to play a substantial part in the development of corporate planning in relation to a range of nationalised industries.

• THE role is to establish a small specialised unit to aid ministers and senior officials in the overall appraisal and in the financial evaluation of the plans of the individual industries. The unit will also monitor progress against the agreed plans.

• THE need is for an accountant or an economist, preferably with a qualification in business administration, with comparable experience gained at the centre of a major industrial group which has applied successfully advanced business planning techniques.

• PREFERRED age late 30s. Starting salary around £7,000. Terms for secondment would also be considered.

Write in complete confidence
to P. A. R. Lindsay
as adviser to the client.

JOHN TYZACK & PARTNERS
LIMITED

10 HALLAM STREET • LONDON W1N 6DJ

Israel, the Russians have supplied 200 Mig-21 interceptors to the Egyptian air force as well as a further 120 (J-H-G versions) with their own pilots; these aircraft could fly top cover to protect the Su-7s and Mig-17s from Israeli fighters. (The latter would be heavily outnumbered.)

If this impressive and well-found inventory is not sufficient to allow the Egyptians to plan an invasion of Sinai with any confidence, it is certainly not the Russians' fault. The heart of the matter is the inability of the Egyptian air force to deploy an integrated team of pilots, ground staff and operational controllers that can beat the Israeli team ranged against them. It is men the Egyptians lack, and not weapons. Ground-to-ground missiles are virtually useless unless they have nuclear warheads. With median accuracies of 1,500 ft CEPs, their half-ton or one-ton warheads (Shaddock, SS-4 etc) have a much smaller effective punch than one quarter of a strike-fighter payload. The Russians have already supplied the Egyptians with some G-G missiles: they are strictly for parades.—Yours faithfully, EDWARD LUTTWAK
Jerusalem

SIR—I believe you will find that your statement (July 22nd) regarding North Yemen being the first Arab state to resume relations with the United States is incorrect. When I was in the Islamic Republic of Mauritania last summer I found that they had resumed relations with the United States during the first part of 1971.—Yours faithfully,
London, W1 NEVILLE S. LONG

Bus v train

SIR—In your article "On the comeback trail" (July 15th) the figure of £10m given for signal maintenance on the London Transport underground is clearly an error and is not from my paper. This cost in 1971 was £2,329,000, but the point is still valid that maintaining the signalling for the underground is many times as expensive as for all the road traffic in London.

The operating costs shown in the diagram accompanying your article accurately represent the figures in my paper. However, it should be mentioned that these figures represent the economic cost to the community—not the accounting cost to London Transport—with eight-car trains and large buses, both one-man-operated.

The staffing figures exclude train guards and bus conductors. On this basis the London Transport railway staffing is 6.2 staff per car in peak service and the bus staffing is 4.7. London Transport constantly complains of a staff shortage but, in fact, the staffings of both the railways and bus operations are more than twice those of Hamburger Hochbahn (2.5) and Atlanta Transit System (2.2), even excluding London Transport's train guards and bus conductors. Nevertheless, London Trans-

port costs are comparable with those of the best foreign undertakings because London wages are so much lower.

Often more important than the operating cost is the track cost, for which it is necessary to distinguish (1) new track, (2) existing track with an opportunity cost, and (3) existing track with no opportunity cost. Where urban railway and express bus proposals both require new track, the construction cost for the railway is likely to be six times the cost of new road capacity needed by equivalent buses, giving a total cost for the railway (using discounted cash flow) three times that of the express bus service. This might seem good reason never to build a new urban railway without properly examining the best bus alternative. However, neither London Transport nor the GLC nor the Department of the Environment examined an express bus alternative before approving the first stage in the expenditure of £90m (plus alarming escalation) for the Fleet Line. And to the cost of the Fleet Line must be added the lost opportunity of converting most of the Stanmore branch of the Bakerloo Line into a road.

Better use of existing railway assets could be achieved if public bodies were required to pay into the Exchequer interest on the opportunity cost of all transport facilities owned. This would give a picture of the railways' true costs and politicians would be better able to judge whether railways are worth their deficits.

The benefit to commuters of express buses running on urban motorways has been demonstrated by the many services operating successfully in North America and Japan. And yet no account of the motorway's value to buses has been taken in the design and evaluation of the motorway network proposed for London.

My paper is now expected to appear in the Journal of Transport Economics and Policy in January rather than September.—Yours faithfully, EDWARD SMITH
Beckenham, Kent

SIR—Dr Tony Ridley in his letter (July 29th) claims that the conclusions of the Tyneside transportation study were reached after a thorough examination of the alternatives. In fact the busway alternative was effectively killed by an arbitrary decision, unsupported by any evidence and taking no account of operating experience, to insist on a 30ft-wide formation for it, although it will be carrying at most a trickle of 34 buses per hour each way. A two-track rail formation is amply wide enough for a busway.

In this country buses operate on narrow overcrowded roads, 80 per cent of rural roads are less than 20ft wide and traffic lanes in city streets seldom have a width of more than 10ft, yet the safety record for their passengers is, according to the Road Research Laboratory, slightly better than British Rail's. There can be no doubt that with a design more fitting for its purpose the busway would have shown a

vastly more favourable rate of return on investment.

The busway system was expected to be the most effective in attracting riders from their cars initially. The buses would run on the city streets to distribute passengers in the town centre and it was thought that increased traffic congestion on these streets in the 1980s would negate the busway's advantage in this respect. That the correct solution might be restraint measures to prevent the congestion was not considered. The introduction of the proposed light railway system would mean diverting direct bus services to act as feeders to it. The resulting compulsory change of vehicle in the course of quite short journeys could hardly be bettered as a way of encouraging commuters to stay in their own car seats. It is to be hoped that more realistic proposals are evaluated in future studies of this type.—Yours faithfully,
Chertsey, Surrey ANGUS DALGLEISH

Wales

SIR—May I compliment Felicity Bryan on the comprehensive résumé of factual information contained in her special survey on Wales (July 15th). But may I sympathise with her in her lack of understanding and in her naivety in believing official pronouncements.

I am a nationalist and my comments, of course, are biased. But so are those of writers who descend on us from England. The difference is that they do not realise they are biased and the worst bias of all is to imagine that one is impartial and then to look at a problem entirely from one's own perspective!

It is "plain folly," we are told, to require a knowledge of Welsh for certain jobs in Wales. It drives young people away. They leave not because they are anxious to go or because of the language, but because the political establishment has failed to create enough jobs. In any case, is Felicity Bryan seriously suggesting that in a bilingual country a knowledge of one of the country's languages should not be a requirement for any jobs whatsoever?

Felicity Bryan is quick to quote the Welsh Broadcasting Council's estimates for an all-Welsh TV Channel, adding that they were "more than enough to demonstrate how ill-considered the proposal was." Was she unaware of the fact that their estimates were dictated by political motives, and that the engineers and technicians' union produced a counter-report to show the project was feasible at a fraction of the cost put forward by the Broadcasting Council?

With a similar gay naivety, Miss Bryan says that Treasury figures published last September refute claims that Wales could survive as "an independent economic unit." The Treasury figures, in fact, whatever other politicians might try to make of them, prove how right we are. It is true they show a deficit for Wales, but a deficit produced by the scores of millions of pounds which we are forced to contri-

The AKAI VTS-110 DX does everything a portable tape recorder should do. It also takes live television pictures.

It's true.

The Akai VTS-110DX is a complete, portable video tape recording system.

When we say *complete* we mean there's a camera, recorder, monitor — everything you need to shoot professional quality picture and sound simultaneously, play them both back instantly.

When we say *portable* we mean the whole thing, complete, weighs just 18½ lbs — about the same as your weekend travelling bag weighs.

One man, entirely alone, can shoot and tape television pictures in the boardroom or the back garden, on a mountain top or on the shop floor.

And if you can push a button you can master the whole system in five minutes.

Cine film — THE END

The Akai VTS-110DX video tape system makes ordinary cine film seem about as useful as a magic lantern.

With the Akai video tape system you get instant playback on the 3" monitor — and if you don't like what you see you just shoot again over the same piece of tape. You can also playback through an ordinary TV set.

You can operate on mains or battery (one battery loading gives you 1 hour recording).

You enjoy the low-cost, economy benefit of ½" tape. And each tape gives 24 minutes recording time.

You have a system that's complete in itself — but that can also be integrated in a bigger video set-up if you want it to.

You can record sound simultaneously with picture. You can also dub sound on at a later stage.

You can stop the tape at any point during playback if there's any particular image you want to study.

You can focus easily and accurately — and there's a 6:1 zoom lens to give you creative flexibility.

And you can use the VTS-110DX for hundreds of different uses. Teaching, demonstrations, presentations, once-only events, sales training, security — make your own list to suit your own line of work.

And while you're thinking what an amazingly useful and versatile system the Akai VTS-110DX is, just send off the coupon below. In return we'll send you some more detailed information and the name of your nearest Akai dealer — he'll be glad to show you the system in live action.

To: Akai Video, Rank Audio Products, P.O. Box 70, Great West Road, Brentford, Middlesex TW8 9HR.

Please send me more information on the Akai VTS-110DX video tape system — and the name of my nearest dealer.

After the Tupamaros

SIR—You describe (July 1st) the Tupamaro urban guerrillas as now running down a blind alley. With only four months in office, our new President Bordaberry has certainly got two great achievements to his credit, namely the virtual collapse of the Tupamaro movement, except for sporadic sharpshooters, and the national agreement among the traditional political parties to give him a parliamentary majority.

But this good work may be completely undone by the disastrous economic policy of his government guided by Sr Forteza, whose one object seems to be "grind the people and private business down to provide funds for the increasingly inefficient and expanding bureaucracy and state corporations." Rigid wage controls are giving the workers just enough to buy food—a 20 per cent wage increase in April against a 40 per cent rise, which has gone up another 20 per cent at least since that date. In Argentina, Krieger Vasena successfully clamped on a wage freeze which held for many months until his policy exploded with bloody revolutions in Cordoba and Argentine cities.

Faced with the practical impossibility of raising more taxes, devaluation of the

Uruguayan peso is the method being used to filch more money from the whole population. In March, 1972, the government cut the official value of the peso in half by devaluing from 250 to 500 pesos per dollar; raw materials and other imports, thus costing 100 per cent more, jolted up the cost of living, but huge surcharges were imposed on exports so that primary producers shouldn't profit from the devaluation—the government coffers taking the difference. Since April, mini-devaluations, on the Brazilian model, have taken the rate to 572 pesos, and there are more to come, at roughly 5 per cent per month. In effect, this method of taxation through continuous devaluation is a form of robbery, stealing part of every peso note or cash deposit and affecting the poor—in their wages and cash savings—nearly 100 per cent while the middle class or rich feel it on a reducing scale, because real assets owned by the two latter groups move up in price with the inflation. Strangely enough, the trade unions don't seem to have realised yet how these devaluations are heavily weighted against workers.

President Bordaberry is not an economist, but he must apply his undoubted common sense to economic policy, and not leave it to his ministers. Otherwise, the tragedy of our small but lovely country will be deepened.—Yours faithfully,
EDUARDO ERICA
Montevideo

Norway's economy

SIR—You are wrong (July 1st). Our government's white paper presenting the results of the negotiations with the EEC to parliament states explicitly that it is not possible to calculate the economic effect with any precision. An example of what a reduced rate of growth of 1 per cent might mean is given as an illustration, not a prognosis.

The government's assertion that growth will increase as a result of membership is, by the way, strongly disputed by Norwegian economists.—Yours faithfully,
Stortinget, Oslo GUNNAR GARBO, MP

Iranian troubles

SIR—Mr Dehnavard's reference (Letters June 24th) to "dead old Dr Mossadeq and his fossilised National Front" tells us a great deal about the kind of persons who support the Iranian regime and the type whom Persian intellectuals are determined to challenge once and for all. In the 2,500 years of our history, Dr Mossadeq's government was the only democratic regime that ever came to power. The military coup d'état, backed by foreign governments and supported by internal reactionary groups, which led to his overthrow in 1953, installed a military dictatorship whose evil and oppression are unmatched in our long history.

The young intellectuals who are martyred every day in front of the firing

squad, unlike what Mr Dehnavard thinks, are not "burdened with a sense of failure," as a close examination of their educational backgrounds will reveal. They are "burdened" with the "failure" of the regime to comply with the Persian constitution, which allows for freedom of thought and expression of every Persian citizen. They are "burdened" with the "failure" of the regime to listen to their lawful demands for returning the political power to its rightful owners, the people. When such demands are met with extreme oppression in the forms of kidnappings, mass arrests, torture and executions they see no alternative but to pick up arms and fight in order to restore democracy.

I must admit, as an economist, that this is a rather painful and inefficient way, but in the face of the present situation it is the only way.—Yours faithfully,
St Louis, Missouri AHMAD JABBARI

Who's who in Sind

SIR—Your special correspondent (July 15th) categorically asserts that "at least 40 per cent of the 14m people in Sind are Urdu-speaking." The true facts as recorded in the Government of Pakistan Census Report, 1961, Volume I, Table VII, are as follows: Sindhi-speaking: 8,459,538 or 82.4 per cent; Urdu, Gujarati, Punjabi and Pushtu etc, speaking 1,757,261, or 17.6 per cent.

Revised calculation of the basis of the last census show that at present the Urdu-speaking population in Sind stands at around 19 per cent as against 81 per cent Sindhis.—Yours faithfully,
Woodford Green, Essex MAZHAR S. KAZI

Illinois and the Presidency

SIR—You say (July 22nd): "Indeed, no President in modern American history has managed to secure the White House without the blessing of the majority of the 11m citizens of the state." This is in error. In 1916 Woodrow Wilson won the Presidency although losing Illinois to the Republican, Charles Evans Hughes. Illinois was, I think, the third largest state then, behind New York and Pennsylvania, which Hughes also carried.—Yours faithfully,
New York IVAN N. KAYE

The Tokyo sound

SIR—I was startled by your report (July 8th) of Mr Tanaka's "grunting and modulating . . . raspy voice" and its comparison with "ordinary Japanese in everyday conversation."

In experiencing the calm restraint and etiquette of the ordinary Japanese firsthand and the extraordinary respect and modulated tone of all Japanese I have met I must say the only rude grunt I have heard is that of *The Economist*.—Yours faithfully,
New York DONALD F. X. FINN

A choice of superb office accommodation available in King Street, Manchester.

The two buildings available are situated in the financial district of the city. One building, number 82, is the former Bank of England building dating back to 1845. It has been cleaned and modernised and offers a superb banking hall and offices

totalling 9,000 sq. ft.

The second building, Edward House, is adjoining. It is a prestige 9 storey block with air conditioning and two high speed lifts. The total office area is 42,000 sq. ft.

The shy man who matters in your life

Robert Carr is the Quiet Man of the Heath Government. If you met him at the bus stop, you probably wouldn't recognise him. But he's moved from a factory floor to the pinnacle of political life. He is one of Heath's inner circle. A man who has now held three major posts in the cabinet. The man who piloted the Industrial Relations Bill through Parliament, and is now in charge of the Home Office. That means he makes decisions which will affect the lives of millions of people - decisions about immigration, the police, drugs, licensing laws, Ulster, demos, civil defence.

What made Robert Carr? What shaped this shy man's political thinking? The answers are in an authoritative series on the new Home Secretary by Geoffrey Parkhouse, in the SUNDAY EXPRESS, starting this Sunday.

You're in good company with the Sunday Express.

The revolt of the moderates

The army's recovery of the Bogside and Creggan in Londonderry in the early hours of Monday morning, done without creating martyrs, is a great success for Mr Whitelaw and his policy. Of course, the IRA Provisionals will have to do something in reply, and since Ulster is a place where men go to bed at night in one mind and wake up next morning in another, the Catholic community's acceptance of the troops is unlikely to last. The shooting and bombing are going on, and it is particularly disturbing that there have been upwards of 30 assassinations of Catholics in recent weeks; even although there have also been Protestant deaths that is not a wound that any community, far less the Belfast Catholics, can endure without retaliation. It is politically wise that the army is now searching Protestant as well as Catholic streets. Even so, and after all that has happened since direct rule, it is actually possible now to talk more plausibly of a return to political life in Northern Ireland than it has been for a long time.

By sending the troops into the Bogside Mr Whitelaw has removed the most obvious of the Protestants' irritations. But he has done more than just that: he has kept his promise that he would do so. That is an important step in recovering the confidence of moderate Protestants who had become increasingly unhappy as the Provisionals seemed to be getting away with murder. He has done this at a time, after Bloody Friday in Belfast, when moderate Catholics have had enough of the IRA, and when the Irish prime minister, Mr Jack Lynch, and the Dublin newspapers have been ready to agree that the gunmen had to go. Mr Lynch has been rewarded by a stunning by-election victory (see page 26), a remarkable vindication of his moderate policy. Naturally there has been a row in the Social Democratic and Labour party, which Mr Lynch has done his best to resolve (see page 17), and any new Catholic accusation against the army might make the SDLP draw back from Mr Whitelaw's invitation to talk, but that has not happened yet. It may even be that the moderates have begun to rebel at last against the horrors of Ireland.

It is too early to tell. The troops cannot stay in the

Bogside and Andersonstown in strength for ever. They are not trained to be policemen, and the Royal Ulster Constabulary are not, and are never likely to be, accepted as policemen in a number of Catholic districts (although the chief superintendent in Londonderry has won respect ever since his evidence to the Widgery tribunal). Mr Whitelaw, who lives on the switchback of Ulster's moods, knows better than anyone that in his job the hardest part is always just beginning. But Mr Brian Faulkner is talking to him again, Mr Gerry Fitt is ready to talk and even the Ulster Defence Association is prepared to go into politics.

Get the referendum over

Mr Whitelaw is now committed to holding an early referendum on Northern Ireland's constitutional future. The result is a foregone conclusion (which is why the Protestant politicians want it and some Catholic ones do not), and the cohesion of the Protestant majority on the border issue since direct rule has been such that it is not going to be shaken in a hurry; to some people's surprise there even seems to be a Catholic silent majority that does not want to be cut off from Britain, although how it votes when the time comes is another matter. Given the inevitability of the result this time, and Mr Lynch seems to accept it, then the sooner the vote is held the better. Until it is taken both communities will coalesce around their political hard cores, individual moderates will not get a hearing and moderate parties will not pick up many members. Since the aim must be to try to get a new political life going, the referendum should be out of the way by November, and the local elections delayed for at least two months afterwards, so that voices other than the old tribal ones can be heard in them.

Looking farther ahead, if he dares to do so, Mr Whitelaw has to decide about an Ulster assembly, from which some form of provincial government could emerge, and the type and timing of the elections for it. The Northern Ireland parties' views on this differ

appallingly. The Sinn Feiners and the old Nationalists want union with the south and might not even participate in a body that accepted the border, the SDLP is talking of a condominium (however that might be run), the Alliance party would seem to prefer something like the assembly that Mr Heath and Sir Alec Douglas-Home once promised the Scots with as little governmental tophammer as possible, Mr Faulkner's mainline Unionists want the old Stormont back, and so on.

Add to that the complications of running some type of proportional representation system, which successive British governments have been thinking about for Northern Ireland and which the Ulster parties have accepted in principle at one time or another, and the party balance that could emerge becomes almost unreckonable. Many of the toughest fights would not be between the old extremes but between parties with much in common. The SDLP and the Alliance, for example, will be at odds for the moderate Catholics (the Alliance appears to be doing well today in the newer Catholic housing estates), and the Northern Ireland Labour party will also have to settle accounts with both the UDA's new party and what will remain of the Rev. Ian Paisley's working class support. Yet it is precisely on the composition of such an assembly that any formal way of running the administration of Northern Ireland and organising the relations between the communities will depend. Against those who say that the sooner Ulster gets back to parliamentary business the better, there are

those who want a lengthy run-up to the election to enable the moderates to be heard. Against those who say that a profusion of parties will help coalition and even community government, there are those who think any such coalitions would be unstable and irresponsible. It is hard to be dogmatic, but these all appear to be arguments to let a fair amount of time elapse before the election to allow the divided groups either to become serious parties or melt away.

A lot to hope for

It is encouraging that people are speculating about such things in Northern Ireland again, but it will all collapse like a house of green papers if the Provisional IRA can resume its campaign with a more effective tactic than indiscriminate bombing. Under that bombing the Protestant community stood together, as people do stand together under aerial bombardment, too. The Protestant backlash happened and set up its barricades and did its occasional murders and shootings, but it did not go as far as taking out Catholic streets or even carrying arms openly. So the moral and political effect of Bloody Friday was the reverse of what the IRA intended. If the army is not provoked into some mess or other in the next few weeks, if Mr Lynch can keep the IRA in check in the south, and if, above all, political nerves do not break all round, more time still can be won for talking. It is a lot to hope for, but it is less impossible than it was.

Sapping the will

How are we to deal with the growth of violence that will follow the eventual settlement of a dock strike that the British establishment has already agreed to lose?

Of course, the great current debate should be about violence, and about the encouragement to law-breaking by some foolish public men. But this debate is muted, because it is so embarrassing to admit that Britain is caught in another strike which the forces of reason have already agreed to lose.

It would be well worth resisting a national dock strike in order to re-establish some major point of social order (such as that notices of dismissal from work in the docks can at last be handed to Mr Bernie Steer and other contract-breakers), or in order for once to expedite, instead of resist, what must happen one day (such as hastening the transfer of most dock work from the hopelessly uneconomic docks in big cities with congested, narrow streets like London and Liverpool, towards efficient and therefore profitable new-style ports on greenfield sites like Felixstowe). There should then certainly be generous severance pay for London and Liverpool dockers who had to move to other jobs.

But the present strike is being fought through on the familiar British formula where the public interest is on a hiding to something slightly more damaging whatever happens. The Aldington-Jones proposals—put to the

dockers before the strike started—are that port employers, who are already employing about 10 per cent more dockers than they need, should take on another 3 or 4 per cent of men for whom they have no real jobs, and should agree never to get rid of them. As this will drive a lot of port employers into bankruptcy, starting with those in the outdated ports like London, the next Aldington-Jones recommendation will be that efficient and profit-making ports like Felixstowe should pay a levy to keep their inefficient competitors alive.

With this copper-bottomed surrender in place, at least that the dockers will get, a national dock strike has been safely started which will follow either of two scenarios. One is that the strike may continue for a long time if the well-rewarded communist organisers (who are now in full charge of the stoppages) deliberately want to cause disruption for political or other reasons. It is quite possible that they will. A long strike in the docks is easy to organise nowadays. A lot of the men have become used to moonlighting in outside jobs since Lord Devlin's "reforms" allowed them to draw some pay from the docks without actually working there.

The second possible scenario is that the Aldington-

Jones team will secure an ending of the strike by winning for the dockers a dozen or so extra jobs at each of the small container and refrigerator depots they have been picketing, at the ultimate expense of the unfortunate and less militant workers at present employed there. Since there are not more than 200 or so stripping and stuffing jobs at all the inland container bases in the country, this would be economically irrelevant in an industry where around 6,000 surplus dockers will soon be subsidised in £42 a week non-jobs anyway. But the supporters of Aldington-Jones think that this concentration on the places that have been picketed might be "psychologically important" and greatly please Mr Steer and his immediate comrades. This is because the wide advertisement of success from violence is an important and deliberate objective of the militants now. They know that the 20 per cent wage rise handed out as a reward for the electricity go-slow in the winter of 1970-71 led directly to the miners' interruption of electricity supplies in the winter of 1971-72, and that the rewarding of the miners' violent picketing then led directly to the picketing of the container depots this summer. A spectacular rewarding of this will make it easier to arrange tougher picketing in whatever strikes are billed as the next stage in the class struggle, probably again in the power industry. Yet this is the bait which Lord Aldington and Mr Jones are busily trying to provide, as supposedly the cheapest way of buying the dock strike off. In reality, it is the most expensive thing the country could do.

Hounds eat hares

Theirs is not just a recipe for national economic decay, but for social breakdown in Britain. The leadership of successful and violent mobs, to whom these surrenders are made, will quickly pass out of the hands of men who are actually employed at these places into the hands of men who will gain mobsters' excitement or political glory, and then personal protection racket money, from leading such displays of force. And all the time excuses for the slide will be made by public figures who will increasingly prefer to run with both hare and hounds. The institutionalisation of this running is now to be vested in a special "conciliation body" which the Trades Union Congress and the Confederation of British Industry have this week jointly agreed to set up. And Mr Heath's incomes policy is temporarily and vainly to be based on an almost permanent conference with such hare-and-hounders, designed to secure an agreement with Mr Vic Feather, which Mr Feather will then break.

Mr Jack Jones, of the Transport and General Workers' Union, is a more considerable union figure than Mr Feather, because by now he probably does recognise the fruits of his own incompetence. His whole philosophy as leader of the transport union has centred on encouraging a "democratic devolution" of decisions to the shop floor. In a union whose constitution was tailored to fit Ernie Bevin, this has meant that he has lost his trousers to the best organised of the disruptive groups, whose nous is sometimes underestimated by the press. The Sunday Times has argued that, although Mr Steer is a prominent communist, so was one of the leaders

of the lorry drivers who first organised a transport union picket against the dockers (thus embarrassing Mr Jones) and who then withdrew the picket with full television publicity after Mr Steer's arrest because all workers were "united now"; this convinced it that if there was a "communist conspiracy, it must have been singularly poorly organised." Why?

Are there any roads out of the mess? If the dock strike did last for a long time, a wise Government would not use its state of emergency to bring in many supplies by troops unloading in the big city ports; it would be much better to use protected and volunteer civilian black-leg labour, working through the efficient greenfield ports, showing that London could be permanently closed. But there is no prospect of the Government doing this.

Not through parties

Conservatives lay more emphasis on the argument that a long dock strike, accompanied by more and more violence—or else the very violent next strike that will come over whatever is chosen when Aldington-Jones have spectacularly rewarded Mr Steer—might turn public opinion so fiercely against the trade unions that Mr Heath could win a landslide victory in a sudden general election. Not everybody will be comforted by this thought. It is not clear why the country would be better served then by re-electing a Tory Government that has sometimes spoken out against trade union bullying, but has constantly run away from it: rather than electing Labour which has knuckled under appallingly to the trade unions in most of its recent utterances, but which in all but the last year of its last government did not run away from them quite as fast as the Tories have done.

It may have to be from outside the ranks of government that the least hopeless chances of rescue come. One counter-action would be if big industries—preferably led by the nationalised industries—started to make it clear to the trade unions that they must either be free to sack shop stewards who lead breach-of-contract strikes (with full and expressed union backing for such sacking) or they will sue the unions under the Industrial Relations Act. It would be worth risking some strikes for that.

Another need is that the ordinary public must become readier to cross picket lines. At present this is left to little girl clerks who go to work in picketed industries, and who get precious little police protection when they are spat on for doing so. The ordinary man whose immediate earnings are not at stake tends to duck away from picket lines, because he thinks it more tactful to avoid certain vituperation and sometimes something worse. When a lorry driver tragically ran over a member of an intimidatory miners' picket, when he was accosted coming out of (note, not going into) a previously unpicketed power station, Labour MPs in the safety of the House of Commons instantly accused him of murder; at the subsequent inquest the coroner specifically absolved the driver from all blame whatsoever, but the MPs made no amends. It would certainly be right for thinking people selectively to withdraw support from individual politicians who have disgracefully pandered to violence in this way.

The Eagleton affair

In shooting down his vice-presidential nominee Senator McGovern may have winged himself as well

Senator Eagleton has been squeezed out of his nomination for the Democratic party's vice-presidential candidacy, a sadder and a wiser man, but by no means a defeated one, after a week of unprecedented pressure from both his party and the press. He may be correct to think that sympathy for him, obviously widespread, would have made up for any votes lost by the revelation of his mental illness and that, anyway, the whole affair would have been forgotten long before November 7th. But that will never be known. Senator McGovern decided he could not afford the risk of keeping his unfortunate running-mate; he felt that he had to put an end to an argument which was obscuring the real issues. Much as Mr Eagleton has suffered in the past week, Mr McGovern has probably suffered more.

There have always been people, independents as well as devoted Democrats, who recognised that Mr McGovern had what it took to become his party's presidential nominee this year but doubted whether he had what it would take to govern the United States for the next four years and, in particular, to lead it through the painful changes which lie along his chosen road. These doubts have grown with his mishandling of the Eagleton affair. Mr McGovern seemed to have been hasty and lacking in judgment when making what could be the most important choice of his career—that of the man who might have to succeed him as President. He now seems to have been indecisive and unfair in getting rid of Mr Eagleton—or else too kind to him. There are excuses for both lines of conduct—lack of time when choosing the vice-presidential nominee at Miami Beach, desire not to hurt an enthusiastic and promising young senator last week. And certainly Mr Eagleton should have told Mr McGovern of his health history before accepting the nomination. Nevertheless Mr McGovern comes out of it all with his armour tarnished and his white horse mud-spattered.

Part of the blame is also attached to Mr McGovern's famously efficient staff who should have saved him from at least some of the mistakes of the Eagleton affair. So it has strengthened the impression that these bright, but inexperienced and over-confident, young people, who organised his campaign for the nomination so effectively, may not do so well in the presidential contest. One of Mr McGovern's most urgent tasks is to lay down lines of authority and divisions of responsibility for their future efforts.

This should have been done during his two weeks of post-convention retreat at home in South Dakota, time that instead had to be spent coping with Senator Eagleton. Perhaps more important, this has also delayed consideration of the detailed policy papers which are now at last being drafted for Mr McGovern by teams of expert advisers, to replace the vague and contradictory promises on defence spending, welfare benefits and tax payments

which he offered during the primary elections. It may be a political error to make definite commitments during an election campaign but for Mr McGovern this is unavoidable since he has based his appeal on issues, not personalities. "Come home, America," he declares, and so must tell America what it is to come home to.

All this means that the McGovern campaign is still stuck in its post-convention mud instead of starting to roll well before the Republican convention, which opens on August 21st, puts President Nixon on the path to what now seems almost inevitable victory. Particularly depressing for Mr McGovern are the latest Gallup polls, showing no improvement in his position immediately after the Democratic convention, an almost unbelievable standstill for a newly-nominated candidate. Only 37 per cent of those surveyed favour Mr McGovern while Mr Nixon's share has risen from 53 per cent before the Democratic convention to 56 per cent after it. Perhaps even more serious, Mr Nixon is also gaining among the younger voters, although there he still lags behind Mr McGovern. It is on the new young electorate, the 18 to 24-year-olds who vote for the first time this year, that the new Democrats depend to counter their candidate's expected loss of some of his party's traditional support in labour, Roman Catholic and ethnic groups and even more in the southern states.

The miracle he needs

Mr Eagleton was chosen as Mr McGovern's running-mate because he would keep at least some of these people from going over to the Republicans this year. The same considerations enter into the choice of his successor; he must be someone who can unify the party, smooth away the bitterness and divisions that have been accentuated by the affair (these are discussed further on page 37). But above all he must be someone well-known and experienced in national politics, about whom there can be no doubts or suspicions. Among those being discussed Senator Muskie comes first, followed by a long list of possibilities, most of whom were also under consideration at Miami Beach. All are Roman Catholics, all are liberals, all are experienced politicians with good contacts in the party's local organisations. Whoever it turns out to be, the choice seems sure to be confirmed by the Democratic National Committee next week.

Mr McGovern can still build a victory on the most unpromising start that any presidential campaign has yet known—if the luck turns. It seems unlikely that either the economic tide or the Vietnam war, both now flowing in the President's favour, will change before November. But Mr Nixon normally does himself more harm than good as he goes out among the voters, while Mr McGovern does just the opposite. He is likeable, Mr Nixon is not. And Mr McGovern has nowhere to go now but up. If he can avoid disillusioning too many

of his original idealistic followers in his efforts to broaden the base of his support; if he can restore his famous credibility; if the "new coalition of people dissatisfied with the status quo" extends through all classes and all regions and is not confined merely to the new

Democrats who nominated him; if the revulsion against politics as usual is nationwide: then, just possibly, Mr McGovern may repeat the miracle of the primary elections and become the next President of the United States. But the odds are still lengthening against him.

The resurrected soldiers

Now that China has announced what everybody else had guessed about Lin Piao, it is bringing back more of the men who opposed the cultural revolution

The Chinese are putting a brave face on their revelations about the apostasy of Lin Piao. Mao Tse-tung himself chose to drop the first private confirmation a month ago that his former closest comrade-in-arms had tried to assassinate him and then died in an escape flight to the Soviet Union last September—even though the Lin saga casts a humiliating reflection on his own judgment of men and, indeed, on his whole political philosophy. And this week, in the wake of worldwide reports of Mao's disclosures, the Chinese celebrated the 45th anniversary of what used to be Lin's army with due pomp and the claim by the remaining ranking soldier, Yeh Chien-ying, that "our army is now more united and more powerful than ever before." It was a fine show of bogus confidence. The evidence of the military men who lined up for army day in Peking this week suggests that Mr Yeh was indulging in wishful thinking. Eleven months after the fatal Trident crash, the People's Liberation Army is still leaderless and divided and China is just beginning to sort out the consequences of the Lin Piao affair.

The army was an inevitable casualty of Lin Piao's clash with Mao not only because other officers were implicated with Lin in the attempted coup but because, as Mao told the French foreign minister, M. Schumann, last month, a disagreement over the role of the army was the basic cause of their conflict. Mao chose Lin Piao as his successor at the start of the cultural revolution in 1966 in the belief that Lin was a uniquely political soldier who would put Mao and maoism above any vested military interests. And Lin himself may well have thought he fitted this image at the time. But by 1969, after helping to set hundreds of heads rolling in the cultural revolutionary purges, Lin had probably come to realise that even his formal endorsement as heir-apparent in the party constitution could not guarantee him the succession. The only way he could be certain of sitting in Mao's chair would be through the support of the army, and then only if the army retained the dominant position it had assumed during the cultural revolution. So Lin dragged his feet in implementing Mao's orders to rebuild a civilian communist party; he continued, in Mao's words, to "infiltrate" his men into key positions of power; and he opposed Mao's decision to start negotiating with the United States.

Mao did not reveal to his foreign confidants whether

Lin Piao ever actually attempted to carry out his coup or whether the plot was foiled in advance; rumour has it that Lin's daughter gave the game away. Nor did he explain why the Trident crashed, who else was on board and who else was implicated in the conspiracy. But the military lineups since September, 1971, give a measure of the extent of Mao's counter-attack. More than a third of China's 300 most senior officers have failed to appear since September, including four politburo members. The fact that almost none of them has been replaced indicates great uncertainty about how the army problem is to be handled. On the other hand, it was fascinating on army day to note the rehabilitation of a number of military leaders who have not been seen since they were attacked by the Red Guards five or six years ago. The most unlikely Lazarus is Chen Tsai-tao, the former commander of Wuhan who defied Mao in July, 1967, by kidnapping his envoys and pitting his local troops against the forces sent in to suppress him. And next to Chen but one on the rostrum was Yang Yung, the former Peking commander who had been denounced in June, 1967, for opposing Lin Piao.

Yes, it did go wrong

A common link connecting at least 10 of the resurrected soldiers is their association with one of China's grandest old soldiers, Marshal Ho Lung. Ho himself was accused during the cultural revolution of plotting a coup against Mao. Soldiers who had served with him showed a significantly higher mortality rate in the purges than any other faction of the Chinese army. The reappearance of a block of Ho Lung's men this week must represent an attempt to return to the safe old policy of maintaining a careful balance between the army's five main field armies as one means of helping the soldiers to regain their shattered morale. It is also, along with the depersonification of Lin Piao, an admission that the cultural revolution went badly wrong.

Mao may have rid himself of Lin Piao and hundreds of his "revisionist" supporters. But he is still far from achieving his goal of putting the party back in charge of the gun. The army is as powerful as ever within local party committees and the only way Mao is likely to unseat it in the short run is by another extended purge. And that would set China rocking all over again.

The prisoners of Prague

Mr Husak needed these political trials in Czechoslovakia, but they could torpedo what Mr Brezhnev is hoping for in western Europe

No doubt the sentences that Czechoslovak courts have been handing out to some of Mr Husak's opponents in the past three weeks will do what he wants them to do: they will stop the embarrassing demonstrations of continuing public opposition to his regime. Seven political trials, involving more than 30 people, have taken place so far. That will make any would-be protesters think twice before deciding to publish another illegal leaflet or slip some more information about the way things are going in Czechoslovakia into the briefcase of a sympathetic visiting Italian communist. Those appear to have been the main charges against the most senior politician to have been tried so far: Milan Hübl, the former director of the party college and once a good friend of Mr Husak. Mr Hübl was sentenced to six and a half years' imprisonment on Tuesday.

But even if the trials manage to buy Mr Husak a trouble-free fourth anniversary of the Soviet invasion of Czechoslovakia on August 21st, they will have done so at a price. To start with, there is that broken promise of Mr Husak's. Ever since he came to power in 1969 he has gone on saying that he would have no political trials like the stalinist ones in the 1950s, of which he too was a victim. But it is perfectly clear that the present trials are political ones: people are being jailed for nothing more than trying to get their views known. The leaflets distributed on the eve of last November's election by some of the men who have just been sentenced merely informed voters of their right to cross names off ballot papers or not to vote at all. To make that illegal, even under Czechoslovak law, the prosecutor had to invoke article 98 of the 1961 penal code against "actions calculated to overthrow the social and state order." Even the French communist party (see page 29), not to mention the assistant secretary of the relatively open-minded British one, says it was really no crime.

Indeed, the reaction the trials have caused in the west is a major problem not only for Mr Husak but for Mr Brezhnev too. It is the open criticism of the left that will worry him most. Czechoslovakia's brief experiment with "socialism with a human face" in 1968 appealed to many communists in Italy and France because it seemed to show that communism could recover from what Stalin did to it. It seemed to be the long hoped for first flower of democratic communism. The people to whom this needed to be demonstrated were not only some doubting communists but also the sceptical electorates of western Europe. The invasion of 1968 apparently confirmed all the doubts and all the scepticism. It was a blow to the strenuous attempts of the Italian and French communist parties to present themselves as genuine democrats firmly wedded to the principle of political pluralism.

Now the renewed protests about the trials in Czechoslovakia may do even more damage to the com-

munist prospects in Europe, which in some ways have never been so good since 1945. In France the communists managed at the end of June, for the first time since the 1930s, to forge an effective electoral alliance with the socialists. This policy, known in the communist vocabulary as the tactics of the "united front," sees close collaboration with social democratic parties—normally the communists' bitter rivals—as a means not only of winning power but probably of bringing these other parties under communist control. In Italy the communists are closer to taking part in government than they have ever been since 1947. It is no longer impossible that the communists will come to power in Italy and France in the 1970s as part of a left-wing electoral alliance which their superior discipline and sense of purpose could eventually enable them to dominate.

The fact that last week, after 10 days of silence, the French communists decided to issue an admittedly mildly worded condemnation of the Czechoslovak trials shows how seriously they regard the threat to their new relationship with the socialists. A few days earlier the Italian communist paper *Unita* had condemned the trials much more forthrightly. If the persecution of the opposition in Czechoslovakia continues, the west European communists will find people becoming increasingly suspicious about their own public commitment to pluralism in politics. They will be asked, yet again, the old question. If a communist party comes to power in an election will it submit to the will of the electorate, and go back to opposition, if the vote turns against it? There is no comfort for anybody in authoritative documents from Moscow, like the article in the March issue of *Kommunist*, which say that under socialism there is no ground for the existence of opposition parties.

The western parties matter now

Ever since Stalin's days, the Soviet Union's leaders have put the needs of the western communist parties pretty low on their list of priorities. But Mr Brezhnev's present policy in Europe, which is based on the bland argument that Soviet power has ceased to be a problem for the western half of the continent, gives the Soviet Union a new interest in the western communists' chances of coming to power. It would be very welcome for the Russians if at some future European security conference the delegations from western Europe included a number of left-wing coalitions with communists in them. It would be a long step towards the neutralisation of western Europe which has so far always eluded them. This is the hope that the trials in Czechoslovakia endanger. Mr Brezhnev may well decide, once again, that discipline in eastern Europe matters more than anything else; after all, that is his real power base. But it will not be an easy choice.

BRITAIN

Ulster: the troops go in, and Jack lends a helping hand

So far, the army's occupation of Ulster's former no-go areas has helped the chances of getting talks going this month on the province's political future. The Unionists are not now likely to put up any objections. Mr Brian Faulkner lost no time in saying he approved of what the army had done and he pledged his support for Mr Whitelaw. There was a welcome, too, from moderates in the Alliance party and the New Ulster Movement. And even the Ulster Defence Association sounded co-operative. Men of the UDA helped soldiers to dismantle the barricades they themselves had put up in the past two months. The UDA, in combination with Mr Billy Hull's Loyalist Association of Workers, is intent on having a seat at any future conference table. Neither body had much left in the way of formal ties with Unionism but now they have both broken away completely to form their own political party, based on the Protestant working class.

Popular Catholic reaction in Ulster to the army's occupation has been subdued. The troops may not have been welcomed as liberators, but they did not have to put up with much in the way of stoning or abuse either. Just the same, their arrival was condemned by the multifarious republican clubs. The response of the IRA Officials stopped short of violence; they called on the Catholic community to ostracise the troops. After two of its MPs, Mr John Hume and Mr Ivan Cooper, had spoken publicly of their grave doubts, the Social Democratic and Labour party, the main Catholic opposition, issued a statement accusing Mr Whitelaw of "playing a dangerous game" and of "turning Roman Catholic areas into occupied zones."

Then Mr Lynch, the Irish prime minister, gave the SDLP a helping hand and saved it, perhaps, from casting itself again into the political wilderness. Late on Tuesday night, he flew some of its leaders down to Dublin by heli-

copter for talks with his top ministers, Dr Hillery and Mr Colley. The Irish government does not want to see the SDLP boycotting future political talks in the north. The SDLP and the Irish government plan another meeting in the next few days (see page 26).

The British Government is likely to experience renewed diplomatic pressure from Dublin in the coming weeks, but there are no plans for Mr Heath and Mr Lynch to meet before the EEC summit conference in October. The Irish government wants Mr Whitelaw to promise Ulster's Catholics that there will be no return of the old Stormont regime. It is also worried about the rising number of openly sectarian murders in the north and about the large number of guns and rifles held there legally. Mr Lynch's decision this week to call in all arms over .22 calibre might stimulate the British Government into similar action; Mr Wilson voiced Labour's anxiety in the Commons on Monday. But what matters most to the Irish government is that it should build a close enough relationship with London to make sure its voice can be heard in any future political talks.

The Labour party, with very few exceptions, backed up the Government's decision to go into the no-go areas, although such frontbench spokesmen as Mr Merlyn Rees and Mr Roy Hattersley have doubts. The Government got Commons acceptance of an Order in Council to enable this autumn's Ulster district council elections to be held under proportional representation, and it appears to have postponed the promised referendum on the border issue until later in the year. But a return to normality is still a long way off. Policemen may be seen again in the old no-go areas, but the Irish government and the Labour party are questioning whether there is any future for even a reformed Royal Ulster Constabulary as the main law enforcement body in trouble spots like the Bogside and Creggan. Yet any prospect of the alternative—a permanent army garrison there—could write off any political talks succeeding.

That was a no-go barrier, that was

Ford introduce Perpetual Motion.

Perpetual Motion is the name of the vehicle leasing plan we've devised in conjunction with our dealers. We don't just sell vehicles; 50 years in the transport business has shown us various ways of solving different transport problems.

Have a look at these reasons for leasing vehicles rather than buying them, they may surprise you.

1. A Ford Leasing Dealer will undertake all the day to day running of your fleet. You can drop all the paperwork in his lap, and get out of the transport business and back into your own.

2. You can release a lot of useful capital previously tied up in your fleet.

3. If a leased vehicle breaks down, the dealer will fix it. And, under some plans, if it takes more than a day and a half to repair, he'll replace it. No worry, no cost, no fuss.

4. You can lease 1 or 100 vehicles. Whatever the size of your company, you'll get the leasing plan that is tailor-made for you.

5. Together with our Dealers we can claim to have more experience in the transport business than anyone else in the country. We're the experts.

Perpetual Motion, Ford's vehicle leasing plan. We'll stop at nothing to keep you on the move.

If you think your company could benefit from Perpetual Motion, fill in the coupon and we'll put you in touch with your nearest Leasing Dealer.

To: Ford Motor Company Limited, 1/325 Leasing Department, Brentwood, Essex. Please send me details of Perpetual Motion.

I am _____ (position)
in a company running a fleet of _____ (number)
_____ (vehicle make/model)

All fall down

Where once the IRA was cock of the walk the army now dominates, following its swift and highly successful sweep early on Monday morning. The warning sirens wailed in "Free Derry" as the Centurion bulldozers and the soldiers moved in but the people stayed indoors, as they did in Belfast. There were no more than a few shots. Operation Motorman went off very quietly, as Mr William Whitelaw hoped it would.

The Provisional IRA was given warning of what might be in store by the establishment of a fourth brigade HQ, the sending of 4,000 more troops (bringing the number up to 21,000) and Mr Whitelaw's warning on Sunday evening. He was as careful and deliberate in his actions as President Nixon was when Haiphong was mined. He wanted no IRA martyrs. Some of the better-known members of the Provisionals, it seems, slipped across the border while the younger gunmen tucked their arms and explosives away and faded back into the crowd. Since then, there have been a few shooting incidents and explosions; some arms and explosives finds; some searches (including some Protestant streets in Belfast); and some arrests. But in all their actions so far, the army and police have tried not to cause resentment, let alone retaliation and riot.

What the army might have to do next turns on what the Provisionals may manage to do. The Provos could concentrate their attention on the border, but that may not be as easy as it was now that the army has the equivalent of nearly three armoured car regiments in Northern Ireland. Tip and run forays over the border would put the onus on Mr Jack Lynch to do something more in cracking down on the IRA in the republic. The Provisionals cannot afford to abandon their tactics of violence and intimidation in the urban areas to try to revive the active support of their Catholic sympathisers in new riots or in the kind of walk-out which occurred in Lenadoon Avenue last month.

So the army will have to be seen to be here, there and everywhere in large numbers (which means that the present garrison cannot be much reduced for several months yet), and its tactics will have to continue to be tightly disciplined, cool-headed and unprovocative. It will have to seek to express an apparent contradiction—a low profile with a big presence.

Carr: middle man

Industrial relations

Two men, three voices

It needed no particular skill in political divination to see in a weekend speech by Mr Robert Carr, Home Secretary and Leader of the House, a clear hint of the Government's wish to cool the industrial situation and to draw back from a collision with the unions.

For the most part Mr Carr's speech was sensible and ruminative, if unsurprising. His theme was "One Nation" and he directed the thoughts of his Young Tory audience to the need to hold the middle ground of politics, inhabited by the great majority of voters. He saw no need to placate the "infra-reds" and "ultra-blues," the "loud-voiced minorities of the extreme left and right of the political spectrum who create a sound and fury out of all proportion to their insignificant numbers." He took a neat knife to Harold Wilson and derided a Labour party which "has convinced itself that politics is the art of the plausible."

But, while proclaiming the need for a strong and well enforced framework of law which would apply to trade unions as to everyone else, his tone was moderate and conciliatory. He wanted much more thought to be given to the role of law "as a constructive rather than as a mere constraining influence." In industrial relations, as in economic affairs and in Ireland, the Government must develop a long-term strategy and stick to it; but not, he added, "stick to it in every detail with the pig-headed obstinacy of the weak." Stick to the essentials of the strategy, yes, but be prepared "to modify the detail in the light of new experience."

Mr Vic Feather, the general, secre-

tary of the TUC, was much less pacific in his weekend speechmaking. On the Industrial Relations Act, he was heard to say that while the unions had always respected the law of the land and had never refused to accept a judgment of the High Court,

we do not accept that this Act is the law of the land. It is part of the political dogma of the Tory party to shatter the trade union movement in this country.

The next day Mr Feather complained of having been misreported. But his explanation of what he had really meant did not make it sound much better. He did not regard this act like other acts, he said, because it was uniquely directed against one section of the community—an argument which could be cited as a reason for defying all progressive income taxes and most specific indirect taxes, all nationalisation proposals or factory acts. Not for the first time, he had got himself into a mess in trying to sound just as bellicose as the union bully-boys.

Mr Feather annoyed a lot of people, especially Tory MPs. They are wrong, though, if they allow themselves to get too angry with him. As Tuesday's talks between the Government, employers and unions seemed to suggest, what Mr Feather feels he really must say in public and what he may say in private can be two very different things.

National Health Service

Fourth time final?

Ever since the bill setting up a national health service for England and Wales was introduced—26½ years ago—the tripartite structure of hospitals, local authorities and general practice laid down for the service has been criticised. The division is historical; and the health service would probably never have got off the ground in 1948 had its historical roots not been preserved. But in 24 years those roots have produced three trees.

One—the hospital service—is enormous, growing too fast for its own strength. The second is the local health services, whose growth was held back but which, though still small, are now progressing steadily. The third—general practice—which was nearly allowed to die from neglect in the 1950s, is at last showing sure signs of recovery. Functionally, the three parts of the service have been coming together in recent years, particularly the general practitioners and local

services, but the administrative and financial divisions remain an obstacle to planning and efficient operation—and the real needs of the patient are only too likely to be overlooked.

Sir Keith Joseph's white paper (Cmnd 5055), published on Tuesday, is not the first attempt to abolish these divisions. Mr Kenneth Robinson produced a sketchy green paper in 1968, Mr Crossman a fuller one early in 1970, and Sir Keith himself in May, 1971, a "consultative document" on which the new proposals are based. One can assume that legislation embodying them will be passed next session, to enable the integrated health service to come into operation at the same time as the reformed local authorities in April, 1974. Joint liaison committees are already at work in some parts of the country, composed of representatives of the three branches of the health service; they have the task of assembling the information on needs and resources necessary to ensure a smooth transfer to the new area health authorities.

These authorities, which will be appointed in shadow form as soon as the legislation has been passed, will be the key bodies in the new service. They will be responsible for planning all the health needs, not just the hospital needs, of the population of their areas (which will be coterminous with the new local government areas) and for seeing that they are met. Their functions will comprise some of those now exercised by hospital management committees and regional boards and nearly all the health services of local authorities. They will also take over the school medical and dental services.

The future of the child guidance service is left vague in the white paper—deliberately so, perhaps, as there is something of an intra-professional wrangle about whether it should be the responsibility of the health or education service. There is also something less than full integration for general practice. Because family doctors, like dentists, pharmacists and opticians, have insisted on retaining their status as independent contractors, the area health authorities will have to set up family practitioner committees (taking the place of the existing executive councils) to administer the contracts. These committees could be an obstacle to integration, but fortunately the area authority is to have full responsibility for the development of health centres, which doctors are at last coming to see can benefit them as well as their patients.

Joseph: a healthier service

In Scotland, whose health service reorganisation bill is virtually through Parliament, ombudsman and all, and in Wales, the area health authorities will be in direct relationship with their central departments. Only in England is a regional tier to remain. The regional health authorities, whose boundaries will be nearly the same as those of the regional hospital boards, adjusted to allow for the local government changes, will have some planning functions and some executive and supervisory ones. From what the white paper says about them, it looks as if their functions will be heavily weighted on the hospital side, particularly as they will be closely associated with the medical schools and the teaching hospitals. This imbalance may be unfortunate, since it is the regional authorities that are to be responsible for allocating resources to the areas and the community health services may feel that the hospitals are getting more than they deserve.

As in Scotland, the day-to-day running of the area authority's services will be based on districts, the number depending on the size of the authority but each with a population of 200,000 to 500,000, and containing a district general hospital. They will not be a separate administrative tier below the areas, but will be the place where the integration of services will be most clearly seen in action. A body to be known as the district management team is envisaged, highly professional and probably overweighted with doctors, one of whom will be that shadowy figure, the community physician.

To the complaint that the consumer—the patient—has no place in the new organisation, Sir Keith Joseph points to the community councils, one for each district. They will be composed of local people, and half their membership will be appointed by the local

authority. They will have the right to be consulted, to visit and to publish reports. But to be really effective they ought to be given more independence of the area authority, which will appoint the other half of their members and will be their sole source of income.

Some other welcome reforms promised in the white paper are the integration of the teaching hospitals within the health service, a modern budgeting and accounting system and—what successive health ministers, including Sir Keith, have always said was impossible—the right of health authorities to carry over unspent balances so that there will no longer be the mad rush by hospitals to spend money in the last months of a financial year. But there is still a lot of unfinished business. For instance, the area boundaries in London have still to be determined, and the report of the study on the detailed management arrangements in the new health service has still to be published. But at least the reformed health service will have one advantage over the reorganised personal social service departments (the Seeborn services), which came into being in April, 1971. Unlike them, it will not be undertaking new tasks with new people and discovering new needs. The hope is that the known, but now poorly served, needs—like the sick old, the mentally ill and the chronic sick—will get a fairer share of what is available to treat them.

Welsh courts

Free speech?

The crowd which turned up to demonstrate its Welsh nationalism to the Lord Chancellor when he went to Bangor to speak to the Magistrates' Association on Saturday had been aroused by a recent remark on Welsh protest in Lord Hailsham's customary colourful style; but they had two specific legal bones they wanted to pick with him. At the 1961 census, only a quarter of those living in Wales claimed to speak Welsh, and a survey carried out five years later suggested that not much over half of those could do so with any fluency. (It will be interesting to see if the resurgence of middle-class interest in the language, and the overactive encouragement given in 1969 by Labour's last education secretary, Mr Edward Short, to Welsh language primary schooling, have affected the 1971 census results.) To the nationalists' anger, there has

With all the competition around how come Ghana Airways are still on top?

Well, the fact is, if you are going to West Africa, there are some solid reasons why you should travel on Ghana Airways.

To start with every-one of our flights departs from London-Heathrow Airport. If you are bound for Accra, why travel to Surrey first.

Then, we fly the best planes. There is no faster, more leg-stretching, more luxurious way to get to Accra than by VC10. And remember Ghana Airways alone flies the VC10 to West Africa from London Airport. It's still a favourite aircraft with every passenger we meet.

With new airlines springing up every month, Ghana Airways is getting to be one of the veterans. To our way of thinking, this is a major plus. It's eleven years since we first took to the air, and eleven years is a long time in the history of passenger flight.

It means we are a very experienced airline. With very experienced crews. And it's worth mentioning that through all the years we've been operating, we've kept an unblemished international flying record.

There are other ways to get to the West Coast of Africa, of course. But, before you go ahead and choose one, pause for a moment. Ghana Airways fly along the West Coast by jet—not any old jet either but the latest Fokker Fellowship—28.

If your destination lies inside Ghana, nothing could be easier. There is a super internal service, bus stop-style, by Hawker Siddely 748 prop jets.

There's something else. We wouldn't bother to mention it, but people keep mentioning it to us. It's the nature of the service aboard every Ghana Airways aircraft. When a Ghanaian hostess says 'Welcome', she really means it. It isn't a matter of training, either. You can't instil genuine warmth into a stewardess by training. In our case, we're lucky. It's a national characteristic.

Did we say there were other ways to get to West Africa? Could we suggest you do yourself a favour? Forget them.

Ghana Airways

We make new friends on every flight.
12 Old Bond Street, London W1. Tel: 01-499 0201

Actions speak plainer than Welsh

been a steady decline in Welsh-speaking recorded in the censuses this century. A minute, unidentified fraction of Wales's inhabitants is monoglot Welsh: but it is obviously right that these and other bilingual Welshmen should be entitled to speak Welsh in their courts, and a well-meaning piece of Westminster legislation, the 1967 Welsh Language Act, sought to make this plain. It is a perfectly good nationalist technique, therefore, to insist on speaking Welsh in court both in the north (where the majority is Welsh-speaking) and in the county boroughs of the south (where only 3 per cent claimed to be so in 1961). It is up to the courts to provide interpreters.

Some Welsh nationalists go further and demand that legal proceedings should be carried out entirely in Welsh. Under the 1967 act, however, if anyone is entitled to speak Welsh if he wants to, so is he entitled to speak English. That applies to judges (though a fair number, right up the judicial hierarchy, can speak Welsh) but most important of all to juries. The law does not permit juries to be selected only from among Welsh-speakers.

But Lord Hailsham has also been wrestling with a few magistrates in the north who were reluctant to fine members of the Welsh Language Society guilty of protest offences. The most blatant example came recently when Welshmen who had refused to pay their television licence fees, because the BBC put out so few programmes in Welsh, were given an absolute discharge. The BBC provides an average of one hour's Welsh-speaking programmes every day: even to do that it has to suffer the complaints of those deprived of preferred programmes going out on the rest of the network, and it frequently resorts to English

subtitles. The amount of Welsh language broadcasting has trebled since 1959. All this is, of course, beside the point. Non-payment of the licence fee is a peaceful sort of protest, but Lord Hailsham must be right that magistrates who do not want to enforce the law should stop being magistrates.

Covent Garden

The lady vanishes

Have the Covent Garden protesters thrown out the baby with the bath-water? Lady Dartmouth resigned last week as chairman of the Greater London Council's committee which is steering through the proposed 96-acre comprehensive development area. Her reasons were that she no longer felt that so much massive rebuilding was justified in view of the total lack of public support. She proposed, but the committee rejected, that they should ask Mr Peter Walker, the environment secretary, to grant them powers only over the 15 acres being vacated by the produce market. Her resignation coincided neatly with the submission to Mr Walker of his inspector's report on last summer's inquiry into the CDA proposals, and may well encourage him to reserve judgment until he has received the report of the strategic planning inquiry (the Layfield committee) into the Greater London development plan. He is also expected any day now to announce a public inquiry into the notorious Piccadilly scheme.

Comprehensive redevelopment has never had a worse name than at present. The Covent Garden Community Association, though, now says that it is not against it, but simply wants a bigger say. The logic of Lady Dartmouth's stance is that the plun-

sites outside the immediate market area should be redeveloped individually, there should probably also be some new council house building, and the rest should be left much as it is—unless the GLC still succeeded in getting permission to plough a new main road parallel with the Strand.

The logic of the community spokesmen's stance is that nothing should be rebuilt unless the people who happen to live in the neighbourhood agree. Would they apply this to, say, suburbanites who resist council estates in their midst? But the Covent Garden area is changing anyway. It should surely be possible to retain some of the advantages of the CDA system without the elephantine character of the present proposals—although the net cost to GLC and exchequer would most likely be more.

Careers

Advice, please

There are some 19,000 students at art colleges in England and Wales. Their courses and qualifications—particularly the Diploma in Art and Design—have been the subject of a lot of criticism, not least from the students; and there have been reasonable and growing doubts about the employment prospects for this huge phalanx of specifically-educated students. Surprisingly, a report from the Government Social Survey*, which tried to question every student who completed an art course in 1967-68, makes quite cheerful reading, though a survey carried out now might well present a sorer picture. Of those who responded, three-quarters were in "activities" (which includes further courses as well as jobs) connected with art or design some 20 months after their course had ended; 6 per cent were unemployed and 14 per cent were in unconnected jobs. Only 11 per cent had not been involved in some art or design activity at some time since they finished their courses, and it seems that the majority of those made very limited attempts to find a connected job.

The college leavers were remarkably practical: their principal complaint was that their courses had been insufficiently related to commerce and industry. Their employers agreed. The students would have liked more careers advice; this is a theme that comes out strongly, too, in a curious report published this Friday by the National Foundation for Educational Research†. This is an offshoot of a project carried

out for the vice-chancellors' committee, for which it became necessary to trace all those who had been second-year sixth-formers in October, 1967, and had not gone straight from school to university or college after taking "A" levels.

It is difficult to know how much weight to give this report, because though the total of completed questionnaires amounted to well over 9,000, and about half the respondents had taken the opportunity to comment on school, further education or the gap between them, the report is based on a random sample of only 1,000. But individual criticism of career, exam and course guidance, and in particular the strong support for a year's break between school and higher education, make significant reading.

Helicopters

Down from the clouds

Up in the Cheviot Hills the British army has just completed a trial with helicopters which could be as important for its future as the exercises it conducted with tanks and motor vehicles in the late 1920s. The aim in both was the same: to combat the dominance of fire-power on a modern European battlefield by speedy movement. The lessons the Americans have learned about helicopters in Vietnam are not all directly applicable to Europe. There, for one thing, Nato's helicopter-borne troops would be used to fight a defensive battle and, for another, the threat to them would come largely from the air and not from the ground as it does in Vietnam.

At the "we'll get by" level, the Sky Warrior trial in the Cheviots suggests that the problems associated with moving troops by helicopters and refuelling and servicing those helicopters in the field are being solved and that those arising from inter-service co-operation are solvable. At the "what happens next?" level, the trial has confirmed that:

- To avoid enemy attacks from the ground, the helicopters of a defending army must fly over friendly territory (that is, the rear areas).
- To avoid radar detection, they must fly low (not much more than 50 feet) and hug the contours of the ground.
- So flying, helicopters in flight are not so exposed to aircraft attack as is commonly supposed, but they must guard themselves against such attacks at landing, pick-up and fuelling points.

Helicopter policy is still in the air

● To counter-attack enemy paratroopers or helicopter-borne infantry who have seized a vital position in the rear areas (such as a bridge or a road junction), the defending helicopter-borne troops must have some aircraft or artillery support immediately available to them.

● To block and delay an enemy armoured column which has broken through to the rear areas, such troops must not only have time to take up their battlefield positions, make demolitions, lay mines and the like in close country (such as a wood or a town); they must also pack enough punch on the ground (as well as in the air in the shape of light helicopters carrying anti-tank missiles) to force the enemy to deploy and attack, rather than simply skirt round them.

To move troops by helicopters in threepenny packets may well be right, but to fight in tuppenny packets would be disastrous. That means the army and the RAF have to look beyond the Sky Warrior trial (in which infantry battalions with some gunner and engineer support were moved 50 km or 80 km) and even beyond another big air-mobile exercise planned for Germany next year. They must consider how over the next few years they can build towards the creation of a fully fledged helicopter brigade. Economy will suggest that they should do less than this. Military considerations suggest that this is the least they should do.

The budget for such a brigade would have to extend well beyond the purchase of more helicopters. The ground troops, for instance, ought to be armed with surface-to-air weapons (possibly

in the form of hand-held Blowpipe missiles) and a new generation of anti-tank weapons (relying possibly on infra-red or laser-beam guidance). Their artillery and engineer units ought to have the power of making something more than a nuisance of themselves (which could possibly point to a more extensive use of mines and to the use of lightweight rockets or even artillery rounds that could engage armoured vehicles by scattering small cluster bombs or mines in their path).

All that would be a part of the total bill. The rest concerns the helicopters themselves. They ought to have first-class communications systems and, so as to fly low at night or in thick weather, navigational aids. Above all else, more helicopters are needed. The ideal backing for an air cavalry brigade can be reckoned at two squadrons of medium-lift helicopters (such as the Sikorsky CH 53) and four squadrons of support helicopters (such as the Puma), with each squadron made up of 15 helicopters. At the moment Britain has no medium-lift helicopters and only two squadrons of Pumas. Britain has too few helicopters of the right kind. But with new helicopters just coming into service and with the RAF faced with a massive re-equipment programme for combat and transport aircraft over the next 10 years, more and possibly different helicopters for army support are not likely to figure prominently in any planner's priorities.

The best need not, however, be the enemy of the good. The additional helicopters—and the other bits of kit they and the troops they carry need—do not have to be all bought at once. But, if Britain is not to lag increasingly behind west Germany and France—to say nothing of the United States and Russia—in the military use of helicopters, three immediate decisions must be taken. The first is to make sure that inter-service training in this kind of warfare is more frequent than it has been in the past. The second is to resurrect the order for about 30 medium-lift helicopters (which have a variety of military tasks to perform other than carrying troops and which would be a boon in many sorts of civil emergencies). The third is to make the creation of a helicopter brigade over the next decade a declared aim of British defence policy. If Britain does not, then it will go on playing half-heartedly with a new concept of war—just as it did, with dire results, with armoured warfare in the 1930s.

Standard and Chartered Banking Group

Sir Cyril Hawker reports

GROUP RESULTS

The form in which the Group accounts are now presented represents a major change that I believe shareholders will welcome. For the first time your Company has not taken advantage of the dispensation to make undisclosed transfers to Group reserves. Consequently the accounts before you show the actual strength of your Company and reflect the true profits for the year ended 31st March 1972.

In the light of these results your Directors recommend a final dividend of 8 per cent making, with the interim dividend paid last January, 14 per cent for the year. (Last year 12 per cent for the equivalent period of 12 months.)

PROFITS FOR THE GROUP	1972 £000	1971 £000
Profit before tax:		
The Group	33,343	28,876
Share of Associated Companies	2,331	1,874
	<u>35,674</u>	<u>30,750</u>
Less: Taxation	15,211	13,563
	<u>20,463</u>	<u>17,187</u>
Less: Additional provision for Doubtful Debts (less tax)	1,500	—
	<u>18,963</u>	<u>17,187</u>
Less: Minority Interests	912	811
	<u>18,051</u>	<u>16,376</u>

Group profit before tax is arrived at after making provision for bad and doubtful debts calculated by reference to the experience of the current and four previous years. Following a review at 31st March 1972 the Directors have considered it prudent to provide a further £2.5 million — mainly in respect of doubtful debts in South Africa and Nigeria. In this connection after allowing for taxation relief the net sum of £1.5 million has been charged against the profits for the year.

GROUP DEVELOPMENTS

Standard Bank and Chartered Bank are gradually merging those activities in the United Kingdom which can benefit from the coming together of their separate skills and experience and the streamlining of organisation structure. International Division of Standard and Chartered Banking Group Limited, formed from the International Banking Divisions of the two banks, as foreshadowed in my report last year, became effective from the 4th October 1971. The services offered by the new Division cover the provision of international finance in foreign currency for both commercial and industrial purposes, the taking of currency deposits, including the issue of certificates of deposit, and all foreign exchange operations. The new Division has been most successful and has contributed substantially to the Group's profits.

The Corporate Development Department of the Standard Bank was earlier this year established as a direct department of Standard and Chartered Banking Group Limited. The Department will evaluate proposals for new corporate investments and banking services and will be responsible for the Head Office relationship with the associated companies of the two banks and the Group.

It is becoming increasingly obvious that for a Group such as ours, with its extensive operations in Africa, Asia and the Middle East, a strong position in Europe is desirable. Europe's trade and investment links with these areas are increasing all the time and with the entry of Britain into the Community, the opportunity for using the services of the Group to strengthen these links will become even greater. The Standard Bank and the Chartered Bank are already represented, either directly or through associates, in Hamburg, Paris, Milan, Zurich and Rotterdam but a reinforcement of our presence is necessary. Group plans for expansion to develop the potential of the European connection are well advanced.

A most important area of expansion also is the United Kingdom itself. By widening our geographical scope here we see a good potential for acquiring new business from firms trading with our areas of operation in Africa, Asia and the Middle East. In April of this year a new branch was opened in Birmingham, and representative offices are to be established in Leeds and Glasgow. With our long-established branches in London, Liverpool and Manchester, the services of the Group will then be available in Scotland and in most of the key centres in England. Further selective expansion on a regional basis is being considered.

GROUP PROSPECTS

Shareholders and others who have followed the fortunes of the Standard Bank and the Chartered Bank for the last two decades or so will be aware that the emphasis in our operations and prospects has changed significantly.

While maintaining a substantial presence in Africa south of the Sahara, and in Asia and the Middle East, with increased profits from these areas, we have become more and more internationally orientated. The United Kingdom, Europe, the United States and Japan have become more prominent in our outlook. We have become more involved in international money and capital markets. We are putting together consortia to finance projects, medium and even long-term, for multi-national companies for the benefit of trade and investment in developing and other countries. An increasingly important part of our profits now originates in London and the United Kingdom in connection with our international operations. We expect these areas of profit to increase in importance while maintaining vigorously our activities in the traditional sphere of our overseas associates.

THE WORLD

International Report

A marriage has been arranged between an elephant and a flea

When their radio plays patriotic songs it is time for Egyptians to get worried. Songs in praise of Arab unity provided a hasty preparation for the announcement from Benghazi on Wednesday that Presidents Sadat and Qaddafi had decided to merge Egypt and Libya into a single state by September 1, 1973. A couple of weeks or so ago this development would have seemed at least as improbable as the expulsion of Russian military men from Egypt. Now Mr Sadat has pulled both surprises, the second following logically enough from the new fighting talk about Arab self-reliance and the galvanising of pan-Arab effort.

More logical, at a guess, than popular—in either country. The merger will be gradual: a "joint political command" is to set up seven joint committees that will plan the union. Possibly the final result will not involve very much more than a tightening of the tenuous federal links that have officially united Egypt, Libya and Syria since last September. Maybe the Sep-

tember, 1973, date is another deadline for Mr Sadat's postponing. On the other hand, outsiders, clinging to what looks to them like common sense, can easily be thrown by the whole business of Arabs and their unity.

Arab unity is a concept that nearly all non-Arabs dismiss as the stuff that dreams are made of. And with reason. It has never been demonstrated that the Arabs' desire for unity can prevail over national self-interest. The only full-blooded union in modern times was the disastrous merger between Egypt and Syria in 1958 which broke up in 1961 with each side bitterly convinced that it had been fiendishly exploited by the other. Other less ambitious permutations among the larger Arab states have, in the past, dissolved even more quickly; the seven tiny Gulf sheikhdoms which are gathered together as the Union of Arab Emirates have more obvious, and maybe more lasting, need of each other's company. But any visitor to an Arab country becomes quickly

aware of the strength of local nationalism and the indifference, suspicion or antagonism felt towards other Arab states. And nowhere are such feelings less disguised than in Egypt.

Arabs will argue that although some or all of this is true the conclusion is false. Past failure does not preclude eventual success. And the Egyptians, despite the contempt they feel towards other Arabs and the dislike they inspire, are the focal point for any union. This is partly because Egypt is bigger and stronger than the others, partly because it is in the forefront of the conflict with Israel, partly because of the legacy left by Gamal Abdul Nasser. Colonel Qaddafi's speech on July 23rd urging union was an ode in praise of Nasser. But while Nasser started this particular ball rolling by signing the Tripoli declaration in December, 1969, it is improbable that Nasser, with the failure of the Syrian experiment burned into his soul, would have tried it again.

True, a union of Egypt and Libya makes better economic sense than the Egyptian-Syrian merger. (Syria, as the third party in the federation, has formally welcomed the new move but it is still not known what it will do about it). Egypt and Libya are contiguous and, to an extent, complementary. Egypt is poor and has too many people, including trained and professional people. Libya, with an estimated population of 2.2m against Egypt's 35m but lots of oil, has more money than it knows what to do with and a shortage of every kind of expertise. There are grounds here for thinking that, if Colonel Qaddafi's enthusiasm lasts until the union is implemented, the enormously greater size of Egypt, and the attractions Libya presents to Egypt, will combine to make the Egyptians see to it that Libya stays digested.

But then the straight swop of money for talent has been going on under the federal arrangement; Libya has been giving Egypt considerably more than the fixed subsidy promised at Khartoum immediately after the 1967 war with Israel, and nearly

Sadat and Qaddafi: how long can a handshake last?

100,000 Egyptians are already employed in Libya. It is still easier to see the dangers than the benefits of the move from federation to union.

One clear danger rests on the supposition that Colonel Qaddafi is way ahead of his fellow Libyans in his passion for union. He appears still to have the authority and magnetism to hold the Revolutionary Command Council, and the country, together but these qualities may not be enough if the Egyptians start absorbing Libya and Libyan money without much regard for Libyan sensibilities. A union based primarily on one man's passion is less than stable, especially when that man is as impulsive and as odd as Colonel Qaddafi.

Another tangible disadvantage for Egypt is the likelihood that Colonel Qaddafi will be even more reluctant than before to be treated as Egypt's treasurer without having a commensurate say in Egyptian policy. This applies particularly to Egyptian policy towards Israel. In his speech on July 23rd Colonel Qaddafi announced that he disagreed with the Egyptian and Syrian battle plan: a disagreement that he qualified in his next sentence by saying that "perhaps because of geographical distance" he had no knowledge of their battle plan. Anyway, he was all for action. Egyptians, smarting under their military limitations and wondering anew about diplomatic possibilities, were not amused by his battle rhetoric claiming that he would fight the Israelis with stones or, if he had none, with his teeth and hands.

To offset this, there would seem to be few real advantages. There have been hints that the Egyptians are again thinking hard about Arab oil as a political weapon: Mr Sadat has told Mr de Borchgrave of Newsweek that American interests in the Middle East would "shortly" become part of the battle but he added a cautious rider about the complexity of the oil business. Egypt has two American companies producing its own oil and may well find itself trying to hold Colonel Qaddafi back rather than urging him on. As for weapons, there is good reason to believe that Egypt is already in a position to get what Libyan weapons it needs; a formal union will have the counter-effect of making it harder for the French government to continue maintaining that its embargo on arms for the embattled states does not apply to Libya. But all this is seeing the new move through western eyes: it could still be that this is one time when Arab unity sticks.

Ireland

Breathing-space

FROM OUR DUBLIN CORRESPONDENT

Mr Jack Lynch, the Irish prime minister, can look with satisfaction on the results of the Mid-Cork by-election, which were declared on Thursday evening. His ruling Fianna Fáil party had mounted the largest by-election campaign in its history in an effort to hold the seat. In the event Fianna Fáil pulled off a remarkable victory against all the odds, thus consolidating Mr Lynch's own position inside and outside the party, and getting the better of the first trial of strength with the newly allied Fine Gael and Labour parties. The temptation for Mr Lynch to go to the country in the autumn will now be very strong.

But Mr Lynch has had to turn his attention beyond Mid-Cork this week. Admittedly the Irish objections to the military operation in the no-go areas of Northern Ireland on Monday were largely ritualistic. Taking their cue from Social Democratic and Labour party leaders like Mr John Hume and Mr Ivan Cooper, the news commentators in the republic referred to the operation as an "invasion." But Mr Lynch, although he criticised it as an "escalation," was relieved that the operation went so smoothly. He recognises that unless the log-jam surrounding Mr Whitelaw's political initiatives is broken the danger of a civil war involving the republic will be very great. For that reason Mr Lynch lodged no formal protest against the move. He strongly believes that unless the interested parties in Northern Ireland itself get round the conference table immediately the time gained by

Hume is told to keep talking

Mr Whitelaw's gamble will be thrown away. For his own part he has undertaken to "act in every constructive way open to achieve a reasonable political solution."

To this end, he is strongly advising the SDLP leaders to abandon any hardline attitude they may be tempted to take. He sharply rebuked Mr Ivan Cooper for declaring he would not take part in talks with Mr Whitelaw if the no-go areas were entered. "Elected leaders should not say that talks are unlikely," Mr Lynch declared. And to press his views on them he brought Mr Hume and three other SDLP leaders to Dublin on Tuesday (see page 17). Mr Lynch will also seek Mr Heath's agreement to a separate, but related, series of talks at governmental level. He wants the Irish government to be fully consulted in any matters concerning political changes in Northern Ireland, and his foreign minister, Dr Hillery, will convey this message when he meets Mr Whitelaw on Friday.

At home, Mr Lynch and his minister for justice, Mr O'Malley, are concerned about the influx of Provisional IRA men flushed out of Northern Ireland by Mr Whitelaw's operation. The migration will pose an additional problem for the Irish security forces, especially if the IRA resort to bank robberies in the republic to replenish their funds or if they mount hit-and-run raids from republican territory. It was, no doubt, fear of this that prompted Mr O'Malley on Wednesday to order the surrender of all guns other than shotguns and .22 rifles privately held in the republic.

EEC

Hands across the Mediterranean

FROM OUR SPECIAL CORRESPONDENT

Brussels

The Eurocrats in Brussels have left for their holidays more confident than they have been for some months that the meeting of the common market's 10 heads of government may after all take place in Paris in October. Such optimism is founded on little more than a judgment that France may at last have satisfied itself that the summit agenda has been narrowed to the point where there is almost no risk of the affair getting out of hand. This, after all, has been the single aim of France's European diplomacy since President Pompidou's referendum on British entry turned sour in April.

We'll answer all your questions about Yen. Even if you're not sure what your questions should be.

Don't feel badly if you don't know much about Yen. Because the international money market has never been as complicated and confusing as it is today.

That's why you need as much information about Yen as you can get. And we'll be glad to help you in any way we can.

We're Sumitomo Bank. One of Japan's biggest. We have branches in cities around the world. And fifty years experience in international transactions. Which puts us in a pretty good position to assist you.

We'll give you all the background information on Yen. Then we'll tell you about such things as Yen finance, Yen quotations, Yen accounts and Yen transactions. And we'll do more than just tell you about them. If you want us to, we'll handle them for you.

And then we'll go a few steps further than that. If you'd like, we'll help you borrow Yen. We'll help you open a business in Japan. Or establish a joint venture. And if you're already doing business in Japan, we'll help you do more.

In short, we'll do everything for you that we've done for our domestic clients for years.

So please contact the Sumitomo Bank nearest you. If you have a million questions about Yen. Or if you can't even think of one.

The Sumitomo Bank Ltd.

Pompidou had a couple of things to offer the Italians

France reckons that it gave the final turn to its screw last week when M. Pompidou visited the Italians in Lucca. At that meeting Italy had its tail heavily tweaked. For example, Italy's enlightened central bankers, who have long pressed for a reduction in the part to be played by gold in the world's monetary system, found that they had been burdened with a large part of the French wish to raise both the price and the importance of gold in any new system (see page 80).

By injecting gold into the debate, by bringing Germany round to capital controls, and by helping to reach a fairly anodyne general approach to the reform of the monetary system in London last month, France has succeeded in promoting its version of monetary solidarity to the top of the summit agenda. At the same time it has managed, with the tacit agreement of Mr Heath, and now of the Italians, to demote any radical discussion of new institutions for Europe.

M. Pompidou offered Signor Andreotti two enticements in exchange. He was able, first, to sound hopeful about the community regional policy which Italy so badly wants and which M. Pompidou knows France will have to concede some time after Britain's entry. He recognised the Italian preference for a regional policy for rural areas in the south which would cost France less than the sort of regional policy to help depressed industrial areas which is what Britain wants.

Second, and this could matter for the future of the European community, France used the occasion to push the notion of a real European policy in the Mediterranean. This follows a rather vague French offensive in

Brussels during recent weeks to rationalise most of the common market's hotch-potch of trade agreements with the southern and eastern Mediterranean countries into a single global arrangement which would go beyond the selective trade preferences practised at present. Such a global arrangement would be over and above the association agreements the EEC has with Turkey and Greece, and would almost certainly cause further trouble with the United States.

For this reason and because the Mediterranean countries mostly sell products that the French and Italians do not want—fruit, wine and tobacco—the French tactic in Brussels is likely to bog down the detailed trade negotiations between these countries and the EEC. But the sight of France taking up the Mediterranean cause in such political terms could prove very useful to all of Europe, and particularly to the French. The promise of stronger links across the water will help European industry, notably French and Italian oil companies and French arms contractors, in the pursuit of concessions and contracts in the Arab countries. It may encourage the Arabs in their present resolve of keeping Russia at arm's length and turning where possible to Europe instead.

What matters most to France is the fact that the political process of getting a Mediterranean policy off the ground will emphasise what France likes to call the Latin aspect of Europe, which is aimed at offsetting the influence of Britain and the other northerners who will be joining on January 1st. This is mainly a weapon in France's struggle to hold open against northern resistance the door to Europe for its odd man out, Spain.

Italy

Stopped press

Throughout July the Italian press had a sporadic existence as printers and journalists took it in turn to hold 24-hour strikes and walkouts. Their quarrel was with the newspaper publishers' association over terms for Sunday work. Although a settlement was reached on Tuesday, the long-term costs for an already ailing industry may be worse than newspaper proprietors like to admit.

Until June the printers' unions had used their bargaining power—together with a 1934 law which restricts Sunday working—to make newspaper owners pay three times the normal daily rate for Sunday work. Faced with declining revenues, the owners eventually felt obliged to announce that, from June this year, Monday editions of their newspapers would cease. The printers were first off the mark with a four-day stoppage in protest against this from June 25th. When the owners responded with temporary shutdowns, the journalists came into the fight. In the weeks that followed the printers and journalists made sure that newspapers could never be certain of coming out from one day to the next.

Tuesday's settlement was a compromise. Monday editions will continue, but rates for Sunday work will now be only 80 per cent above normal rates and regular Sunday work will fetch an extra three hours' pay a week on top of that. So neither side has done too badly.

But Tuesday's settlement may not be the end of the affair, for several reasons. First, all national newspapers in Italy are suffering from falling revenues as advertisers trim their budgets to meet the double threat of inflation and a stagnating economy. In terms of production costs, labour-intensive industries like the printing industry are especially threatened, since wage bargains struck during the boom years up to 1969 have added about 50 per cent to wage costs during the past three years with no corresponding increase in productivity.

Second, the Italians are a nation of fickle newspaper readers, with nothing like the loyalty to their usual daily given by the British. With unemployment rising and the entire economy in the doldrums, the daily newspaper is one of the least important items in the family budget. With the exception of the sports news, the contents of the

Italian press are almost as bleak as their British counterpart's: strikes, and more strikes. Newspaper owners, printers and journalists may discover over the next few weeks that those readers who had to do without a daily paper for most of July began to like it that way.

Germany

Too many friends

When Willy Brandt comes back from his Norwegian holiday he may find himself landed with a problem so awkward that it could become an issue in Germany's autumn election campaign. Gerhard Schröder, the Christian Democrat who is chairman of the Bundestag's foreign affairs committee as well as a former foreign minister, has just returned from a trip to China with the suggestion that Bonn and Peking should establish diplomatic relations as soon as possible. Herr Schröder, who was given red carpet treatment as the first senior west German politician to visit communist China, emphasised on Monday that all the Chinese leaders he had seen, including the prime minister, Chou En-lai, were anxious to have a direct diplomatic link with west Germany, China's second most important trading partner.

This is going to embarrass Herr Brandt because Herr Schröder's trip has already been attacked by Izvestia in Moscow and by the main east German party paper, Neues Deutschland. They have accused China of trying to sabotage the forthcoming European security conference and described Herr Schröder as a spokesman for the "imperialist".

Schröder's brought back a Chinese puzzle

forces in west Germany which are supposedly resisting the idea of better relations with the Soviet Union and its allies. If Herr Brandt were now to pursue Herr Schröder's suggestion to start talks with China without delay—which means before Germany's general election, still expected to be on December 3rd—he could bring the Russians' displeasure down on his head.

Russia and its allies could interpret the exchange of ambassadors with Peking as an unfriendly act and retaliate by making fresh difficulties for Herr Brandt in at least three areas of his Ostpolitik: the negotiations for a treaty with east Germany, the negotiations with Czechoslovakia over the Munich agreement of 1938, and the normalisation of relations with Poland. In all three of these fields progress has been very slow lately, a fact which is likely to be made use of by Herr Brandt's Christian Democratic opponents in the election campaign.

But if Herr Brandt decides to wait he will expose himself to the charge that he is doing so because he is already too beholden to the Russians. A Christian Democratic deputy has already made an attack along those lines this week. The chancellor could try to play for time. But there seem to be no obstacles in the way of an immediate exchange of ambassadors. No wonder the foreign minister, Herr Scheel, is temporising until his master gets back from holiday.

French nuclear tests

All that fuss

So were the protests unnecessary after all? When France announced a series of above-ground nuclear tests on the atoll of Mururoa in the south Pacific some people sailed a yacht into the area and others threatened to parachute into it. Now the series seems to be over, after a third test that is believed to have taken place on July 29th (there were two confirmed explosions at the end of June). Orders are reported to have been sent out to French ships to return from the testing area to Tahiti, and on Wednesday the ban on flights over the area was lifted.

Were the tests dangerous enough to justify all the efforts to stop them? The devices that were tested were not large ones: what the French have been trying to perfect is only the atomic trigger for the thermonuclear bomb they hope to have in service later in the decade. So far the British monitoring team on Pitcairn island reports

no significant changes in the level of radioactivity in the air. Some radioactivity has been detected at Perth in Western Australia and in New Zealand—but only "just above the level of detection," and the level of detection is way below any hazard to health. Most people, except in the immediate vicinity of Mururoa, could do themselves more harm by having an ordinary hospital X-ray.

President Marcos of the Philippines has blamed the tests for his country's recent typhoons, but that is Mr Marcos's equivalent of cursing the French because English cricket has had a lousy summer. The Latin American countries that border on the Pacific, in the past vociferous in their complaints, have remained quiet. Peru, which threatened to break off diplomatic relations with France, has not yet done so. And there are no signs that Latin American hostility to the testing is denying France a valuable arms market; Venezuela was reported last week to have ordered \$60m worth of French tanks and artillery.

Of course, it takes time for all the radioactivity to come down to be measured. And anyway France will probably want to do more testing next year. It looks as if the real cost to France of the nuclear deterrent, the money cost, will remain high for some years to come.

Communism

One step towards the centre

FROM OUR PARIS CORRESPONDENT

It may have cost them an effort, but they did it. France's Communist party has got round, mutedly maybe but unmistakably, to condemning the political trials in Czechoslovakia. Of course, it did not do it unaided. Last month the young gaullist movement pointedly asked when the newly allied Socialist and Communist parties were going to speak up about Prague. It was a fair question, considering that their joint programme promises respect for personal liberties that do not exist in Czechoslovakia and indeed—as it points out—are not unchallenged in France.

It was also a deeply embarrassing question, since the credibility of such communist promises is a major issue for non-communist Frenchmen who might desire a change of government. And it was especially embarrassing for M. François Mitterrand. He had the choice between failing to condemn

what the whole of his Socialist party condemns, and risking a breach with his new-found allies. Inevitably, he took the second alternative, in last week's issue of the Socialist weekly *Unité*. Not quite so inevitably, the Communist party chimed in, just as the gaullist paper *La Nation* was delightedly remarking on its continuing silence.

On July 25th, the party declared, its political bureau had already discussed the subject, and had come to these conclusions: that the Czechoslovak government certainly had the right to use the law against the enemies of socialism when the latter were genuinely subversive or resorted to violence or sabotage, but that these conditions were not met in Czechoslovakia. What was happening there was political and ideological opposition, which should have been met by political and ideological means.

The French Communists had another reason to speak out. Early this year one of their leaders, M. Roland Leroy, visited Czechoslovakia, and came back affirming that Mr Husak had promised that there were not and would be no political arrests and trials. Whether or not he meant it—and the French party has carefully avoided discussing the possibility that he did but could not keep his word—the promise was now patently false. And even a good communist is subject to the human dislike of being shown quite so rapidly to have endorsed a lie.

Russia

The net widens

Is Mr Brezhnev abandoning his policy of selective repression of the Soviet Union's dissidents and replacing it by one of full-scale repression? That seems to be the view of the dissidents themselves and their sympathisers, to judge by an open letter which 52 Russians addressed to the Communist party politburo last week. The 52 signers, who include Professor Andrei Sakharov, the physicist who founded the unofficial committee for the defence of human rights in the Soviet Union, cite as their main evidence the arrest on June 21st of Peter Yakir, the 49-year-old historian and one of the most prominent dissidents.

Mr Yakir, who has spent 17 years in Soviet labour camps, has until recently enjoyed a relative freedom from police harassment. The letter calls his arrest "one more step along

the road towards the restoration of stalinist methods." Mr Yakir has been charged with conducting anti-Soviet propaganda, an offence which carries a penalty of up to 10 years in prison.

The theory that a new and tougher policy may be under way against all forms of dissent in Russia is at least partly borne out by reports that Valeri Chalidze, another member of the human rights committee, has been subjected to increasing police harassment and may be about to be arrested. Mr Chalidze and the rest of the committee have deliberately refrained from overt political dissent and have concentrated instead on studying ways in which "socialist legality" in the Soviet Union could be brought more into harmony with international conventions on human rights signed by the Soviet government. But even that is controversial in Russia.

A particularly disturbing practice, which the committee, and Professor Sakharov personally, have consistently opposed, is the incarceration in psychiatric hospitals of well-known dissidents such as General Peter Grigorenko. It appears that General Grigorenko, who has been in a psychiatric hospital since 1969, is to stay there for at least six more months. Further evidence of a harsher climate comes in the reports of numerous arrests of dissenters in the Ukraine and Lithuania.

Maybe Mr Brezhnev just wants to tighten discipline at home on the eve of the European security conference, in order to discourage hopes of a detente in domestic policy to follow the one in foreign affairs. But a simpler explanation may be that there are now too many dissenters of all kinds in Russia who have been encouraged by the Jews' relative success in getting international publicity for their cause.

Jugoslavia

How they got them

FROM OUR EAST EUROPE CORRESPONDENT

The incursion of a Croat guerrilla group deep into Bosnia, treated as a bit of a farce when it became known in July, turned into a major gun-battle claiming 32 lives. That is the official Yugoslav account, at any rate, and if it is true this was the worst political bloodshed in Yugoslavia for 25 years. Certainly there is little doubt that there are extremists who are prepared to go

a long way to further their cause of a separate Croatia.

But the curious feature of the latest operation is the apparent amateurishness with which it was carried out, and the fact that it took the authorities more than a month from knowledge of the group's arrival to announcing that all of its 19 members had been "liquidated" at the cost of 13 dead troops and policemen. Nobody has yet explained why all the guerrillas, who claimed to represent the "Croatian Revolutionary Brotherhood," were killed when it would have been manifestly more useful for some of them to be captured. Presumably the Yugoslav government would like to know more about what was supposed to be a planned rebellion, masterminded by émigré groups, for the re-establishment of an independent Croatian state.

At all events, the story goes that the group, trained in Sweden and Australia, used the occasion of a public festival in the border town of Maribor to mingle with the crowds and cross undetected from Austria. Then, without the precaution of dispersing, they stole a lorry and, in solid phalanx, trundled several hundred kilometres southwards into central Bosnia. There, in the region of Bugojno, a mountain town north-west of Sarajevo, they contacted relatives in search of aid and information.

It was apparently one of these relatives, disagreeing with the whole thing, who tipped off the militia. The group was eventually encircled by the security forces and knocked off in a brisk exchange of fire as it attempted to break out. A statement from the government of Bosnia and Herzegovina named 13 soldiers and policemen who had lost their lives "valiantly defending the peaceful life and secure development of the self-governing socialist system and fighting against international banditry."

It is virtually impossible, with several

million foreign tourists pouring into Yugoslavia every summer, to seal the borders completely against incoming terrorists. Some new security checks have now been instituted, particularly on airline traffic and on holders of Swedish passports of obvious Slav origin. Since the west German government took strong measures against Yugoslav extremists in Germany some appear to have decamped for the more permissive climate of Sweden. The Swedish and Australian embassies in Belgrade were both involved recently in exchanges with the Yugoslav foreign ministry about the free rein allegedly given to Croat groups in the two countries. It is all one more sign of the nervous temper prevailing in Yugoslavia this summer.

Britain and Bangladesh

It's worth an appendix

Sheikh Mujib, the prime minister of Bangladesh, lost a gallstone and his appendix in London at the weekend, but they may have helped him to gain a friend. There is no reason to disbelieve the official explanation that Sheikh Mujib came to Britain for medical reasons; there is also no reason to think that during the two weeks or so while he is convalescing he will not be talking about politics, and in particular about the foreign policy of Bangladesh.

The new state of Bangladesh has an interest in finding a friendly foreign power that will help to counterbalance the overwhelming influence of India and Russia in its affairs; and Britain has an interest in seeing to it that either Britain itself, or the European community, should perform that service. Bangladesh was brought into being by the Indian army, and Sheikh

Mujib (left) is welcome

Mujib's present government is largely composed of men who were in exile in India while he was in prison in Pakistan. To this layer of Indian influence the Russians are trying to add a layer of their own, through the operations of the pro-Soviet National Awami party, which formally supports the government but would dearly like to take it over. This is too narrow a range of patrons for the comfort of any nation as small and weak as Bangladesh. Sheikh Mujib cannot look to the United States to restore the balance until the Americans climb out of the hole they fell into by their support of Pakistan in December's war. So why not Britain, and perhaps through Britain the European community?

Sir Alec Douglas-Home went to Bangladesh in June, and Britain has promised it £17m in help this year. It can hardly be coincidence that Sheikh Mujib's decision to fly home from his Pakistani jail by way of London in January is now followed by his decision to come to London for his operation in preference to the rival medical facilities of the Soviet Union. There are other leaders of small countries, such as King Hussein of Jordan, who find that an occasional visit to the London Clinic is no bad way of checking their political health.

Australia

The oil's moving, the system's stuck

FROM OUR CANBERRA CORRESPONDENT

Australia got a bad fright this week, and realised just how dependent it is on oil. A strike by little more than a thousand maintenance men at refineries in Sydney, Melbourne, Brisbane and Adelaide brought the four main states almost to a standstill. States of emergency were declared, service stations ran out of petrol, schools and government offices went unheated and industry began to lay off workers.

Apart from revealing how powerful a few key men can be, the strike highlighted differences within the trade union movement, the changing relations between workers and employers in Australian industry, and the equivocal position of the federal government about industrial disputes. The oil workers were striking because the employers had taken the case to the Conciliation and Arbitration Commission instead of settling it by direct

negotiation, as they have in recent years. The commission provided an interim award which the men would not accept. Chaos was averted on Thursday, when the strikers agreed to go back to work after a surprise initiative by Mr Justice Moore, of the commission, who put forward new proposals which suggested that negotiations might proceed on something like the basis the unions wanted. There had already been pressure by other unions to get the men back.

It is being widely stated that the oil companies' decision to go to arbitration owed much to pressure from the federal government, which had two objectives—to curb inflation, and to return the arbitration system to the central place it used to have in Australian industrial relations. The government is said to have reasoned that if big employers in capital-intensive industries were to go on negotiating wage increases directly these increases would be greater than the arbitration system would have provided and would encourage other unions to seek similar increases. The government has reportedly been leaning on the oil companies for months to persuade them to go to arbitration. The same may have been happening with airline companies (also troubled by a strike this week) and perhaps the metal trades and stevedoring industries. If these stories are true there may be a series of strikes to test the government's resolve and the employers' solidarity with it.

Politically the oil strike has done no one much good except possibly Bob Hawke, the highly charged president of the Australian Council of Trade Unions. The Labor party, which wants to win the election in November, has been keeping its head down. The government has not said it has been trying to get the employers back into the arbitration system but has loudly insisted that arbitration must be upheld. The prime minister, Mr McMahon, threatened both deregistration of the union and a dramatic recall of parliament, but was stopped by Mr Justice Moore's announcement.

The direct powers of the Australian federal government over industrial relations are few and uncertain: it has to use indirect pressure to influence the system at all. To cap it all, the union most involved has an aggressively militant leadership which is at odds with the Labor party and Mr Hawke. A lot of petrol will be stored in backyards and garages in case the whole thing happens again.

Vietnam

Waiting for phase two

FROM OUR SAIGON CORRESPONDENT

The North Vietnamese offensive now seems to be leaving its first stage, which fell considerably short of achieving its objectives, and moving into its second and possibly decisive phase. Until the outcome of the new campaign is known, it is considered in Saigon that the North Vietnamese are unlikely to have any real interest in serious peace negotiations. As South Vietnam's President Thieu said this week, the communist aim is still quite obviously to win a clear-cut battlefield victory.

The assumption has always been that the second phase would precede the American election, although its exact timing would have to depend on a number of factors, including the results of the opening phase. During the past week or so new military developments have confirmed that, far from disappearing into the jungle to lick their wounds, the communists are positioning themselves for another period of heavy fighting. Whether it will be more successful than the first is very much open to question.

Communist documents suggest that the main objective of the first phase was to destroy South Vietnam's main fighting units by luring them into bloody confrontations with North Vietnamese forces. Meanwhile the local Vietcong were under orders to prepare intensively for the second offensive, which would be on a wider scale and would include "popular uprisings" and attacks on Saigon. In the event, South Vietnam's army did not fall apart as predicted, and the North Vietnamese

had bigger losses than they expected. So it is doubtful whether the first offensive succeeded in laying the groundwork for the second phase. Yet the basic strategy is irreversible, the goal of victory is sacred and the North Vietnamese remain confident.

President Thieu predicted on Tuesday that the main targets of the new offensive will be Hue and Saigon. A recent increase in communist activity along the main highway linking Saigon with the Mekong delta was seen as part of a scheme to strangle Saigon's supply line and create economic and social problems in the capital. The president's speech came only hours after an extensive rocket attack on Bien Hoa air base, 15 miles north-east of Saigon. It was the first significant communist attack near Saigon since the offensive began. The barrage of Soviet-made rockets was apparently launched from a wilderness north of the base. A similar attack on Saigon itself would be more difficult, although military commanders expect rocket attacks before long, followed by the long-expected campaign of terrorism and sabotage.

Information on communist plans and capabilities is scarce, and all predictions are about half guesswork. Some military officials are concerned that South Vietnam's army may over-extend itself. Three of its best combat divisions in the north are under great strain as a result of President Thieu's order to recapture Quang Tri while still defending Hue against North Vietnamese forces as large now as when they launched their invasion. And in coastal Binh Dinh province, South Vietnamese troops who recaptured three districts are now fighting hard to hold their ground. The communist meat-grinder is still at work.

There were still civilians with flags in Quang Tri

Ghana

Still controversial

FROM A CORRESPONDENT IN GHANA

Six months after it toppled Mr Kofi Busia from power in Ghana, Colonel Acheampong's National Redemption Council is still surrounded by controversy. When it was announced a month ago that there had been an attempted coup against the new regime it came as no surprise to Ghanaians to hear the government lumping together "disgruntled businessmen" and officials of Mr Busia's Progress party as the instigators of the plot. Since the identity of the alleged plotters has not been released it is not yet known whether the new government's decision to take a majority shareholding in certain companies engaged in the extractive industry played any part in the attempted coup. But even before the news of this decision came to the surface, it had become clear that the business community was disturbed at the direction in which the government was moving.

Investigations into the liberalised import programme that had contributed to Ghana's massive trade deficit had caught several companies with their pants down. It was discovered that the "open general licence" system was being used not so much to bring goods into Ghana as to transfer money abroad, where firms and individuals kept illegal credit balances in foreign exchange. And it emerged that various companies had colluded with corrupt port officials in a number of ways to evade normal foreign exchange controls.

All this was happening at the same time as Ghana's overseas creditors were exerting pressure on the balance of payments by refusing to give any real relief on the medium-term debts that had built up over the years since Nkrumah's days in the early 1960s. The government's first reaction was to repudiate some of the external debts outright and reschedule the rest according to a programme that it considered realistic in terms of Ghana's external earnings. Then—and this was the rub—it froze the assets and bank accounts of all the companies that its investigations into invoicing procedures had shown to have a case to answer.

The government has also ordered all those companies in agriculture-based industries which had obtained tax concessions on understandings which they have failed to fulfil to show

evidence in six months that they are now going to be self-dependent. The regime put teeth into its order by cutting down hard on the import programme—from a level of £130m in 1971 to just over £75m. Retaliation from abroad to the government's measures has come in the form of the withdrawal of export credit insurance from goods intended for Ghana by Britain and the common market countries, and the virtual stoppage of aid to Ghana by the west.

In response to these measures the government has launched an "operation feed yourself" campaign, aimed at increasing food production as quickly as possible. The country's students, much taken with the new government's desire to stand up to the giant western "exploiters," have rallied to the support of the programme and are not only planning to grow their own food on campus farms but have also taken part in sugar-cane harvesting sprees à la Fidel Castro, on the state-owned farms at Asutsuare and Kommenda.

Although Ghana's new military rulers turned out Mr Busia's democratically elected government they have undoubtedly won some popular support as a result of the work of the committees investigating the assets of Mr Busia and his colleagues. Mr Busia himself, who was regarded at the time his Progress party won power in 1969 as an other-worldly intellectual, has been assessed before the Taylor Assets Committee as being worth over £4m in real estate and cash.

But the Government has yet to show the extent of its support. Of the 1,301 people detained in January, 256 are still in jail. Their early release would be a sign of Colonel Acheampong's self-confidence.

Central African Republic

Getting a reputation

On Sunday three robbers in the Central African Republic had their right ears chopped off. On Monday another 146 were beaten with wooden clubs by soldiers under the personal supervision of General Jean-Bédél Bokassa, the president of this former French territory. These events are part of the president's campaign "jealously to preserve the reputation of the Central African Republic, which has been sullied by the increase in thefts."

General Bokassa has decreed that

thieves convicted of a first offence will be punished with the loss of an ear; a second offence will mean the loss of the other ear; a third will mean the amputation of a hand; and a fourth, public execution. The beatings, which continued for 10 minutes with a soldier to each victim, were carried out in front of members of the government led by the president, who had sanctioned the soldiers to beat until death. Three of those beaten did in fact die, and the survivors were put on public display in the capital on Tuesday.

The incidents will confirm in their views those who think that General Bokassa is off his rocker. Erratic and volatile, he has autocratically led the Central African Republic along a meandering and aimless path since he seized power in 1965. Relations with France oscillate unpredictably, the president's periodic denouncements sometimes giving way to emotional declarations of affection and, once, to a copious effusion of tears at the tomb of General de Gaulle. Just over a year ago, on Mothers' Day, he ordered the release of all the women in the country's prisons and, simultaneously, the execution of all men convicted of murdering their wives. More recently, in March, he became president for life.

Chile

Who's for sweet-and-sour turkey?

FROM OUR SPECIAL CORRESPONDENT

Chinese restaurateurs, curiously enough, seem to have better black market contacts than most other people in Santiago. A week ago it was possible to choose between sweet and sour turkey (but not duck, chicken or pork) and some rather dubious beef in chili sauce. It is hard to find meat even in the best hotels in Santiago today, and the Chileans, traditional meat-eaters, have not waxed enthusiastic over President Allende's advice to switch to fish.

The food shortage has triggered off a kind of consumer revolt in Chile. It has also worsened the balance of payments deficit, which is expected to rise to \$395m this year. According to figures produced by the industrialists' association, Sofofa, the Chileans will have to spend nearly \$390m on food imports this year in order to maintain pre-July levels of consumption. The government is directly responsible for the situation since production has dropped alarmingly on farms that have been subject to state takeover or the

These canning workers say no

activities of the Movement of the Revolutionary Left (Mir) and other extremist groups.

The opposition parties are hoping that the economic crisis will help them to pull in two-thirds of the votes in the congressional elections due to be held in March, and enable them to block any further extension of state control over the private sector of the economy. But in the meantime Sr Allende has defied a hostile majority in congress and gone on taking over private companies. Of the list of 91 companies scheduled for expropriation at the start of the year, two-thirds are now in the hands of state managers, and the Mir is trying to hustle the process along by organising illegal seizures of factories. In mid-July, for example, five big canning factories were seized by workers organised by the Mir. Some businessmen are vesting their hopes in the *gremialista* movement, which has encouraged workers to resist state takeovers.

The government seems to be winning the struggle for control of the economy, but it still has to contend with the rifts in its own camp. A fortnight ago military intelligence officers discovered a plot by an extremist group called the National Liberation Army to attack Sr Allende's personal residence. The group included members of the president's own Socialist party as well as several foreign exiles. The cautious Moscow-line Communists, now firmly in control of the administration of the economy, may seize the chance to take tougher action against the wild men on the left—although, at a lower level, some Communist prefects have helped the extremists.

The Advance Airmaster Service

A fresh atmosphere—all day long

The Airmaster Service keeps the air fresh, sweet and a pleasure to breathe—in offices, reception areas, meeting rooms, kitchens, changing rooms, toilets and many other places.

Every fifteen minutes, strategically sited Airmaster units inject a metered spray of ultra-fine aerosol mist into the air that you and your staff breathe. There are aerosols for a variety of needs: a specially formulated toilet freshener, an odour neutralizer, air fresheners, a sanitizer to control airborne bacteria, a safe and highly effective insecticide.

Advance call regularly each month to re-load your Airmasters and replace the batteries when necessary.

The Advance Airmaster Service is aimed at making life pleasanter and healthier and raising staff morale at minimum cost. Like Towelmaster and other Advance services, there's no capital expenditure involved. Just a single weekly charge that covers everything.

So send the coupon for full information. Use the Freepost address without a stamp—breathe fresh air all day long.

Please send me full information on the Advance Airmaster Service.

(*"DIE WELT"*)

Thanks WE ARE INVITING EVERYBODY TO SEE FOR THEMSELVES.

Come and see for yourself.

The Brasil Export 72 Fair was created to show what this great country has to say to the world. And to those who read the news and are interested in knowing about the "Brazilian miracle".

Hundreds of stands, in an area of 150,000 square meters, will present a huge variety of products.

Besides coffee, sugar, cotton, cocoa and minerals, we will have household appliances, skins, bicycles, automobiles,

glass, ceramics, machine tools, precision instruments, guitars, fruit juices, electronic microscopes, computer memories, sewing machines, road building equipment, antibiotics, clothing, trucks and buses, shoes, plastics, television sets, beverages, artificial flowers, building material, stationary engines. Over 5,000 items in all.

You will see the result of the efforts of a country whose economy grew 11.3% in 1971.

And almost 50% over the last five years.

You will understand the enthusiasm with which 95 million Brazilians are working on the creation of an infra-structure of ports, highways, insurance, banks, communications and everything that guarantees continuity and security to an exporting country.

That is why Brazilian exports are growing 15% a year.

Come and share our profits.

Anhembi Exposition Grounds in São Paulo, largest in Latin America. (Over 150,000 square meters)

THE WORLD

American Survey

Divided but still Democrats

Washington, DC

While Senators McGovern and Eagleton were approaching the end of their unhappy affair, some 75 prominent Democratic politicians and businessmen lunched on Capitol Hill on Monday to form a new Committee to Re-elect a Democratic Congress. As its title indicates, the group's overt purpose is to raise campaign funds (they aim at \$1m) to prevent Mr McGovern's expected defeat sweeping in the first Republican-controlled Congress in 20 years. But the committee's more important function was to provide a shelter for traditional Democrats repelled by the McGovern takeover of the party and unwilling to work in his campaign, but equally unwilling to join President Nixon's apostate Democrats.

The committee is typified by its chairman, Mr Robert Strauss, the conservative lawyer from Dallas who has just completed two years as the Democrats' national treasurer and somehow succeeded in avoiding outright bankruptcy for the party during that time. Mr Strauss enjoyed a fate similar to that of other established Democrats following the triumph of McGovernism at Miami Beach. He was dumped as party treasurer without

benefit of either thanks or apologies from Mr McGovern and was unable even to make telephone contact with the candidate on the day after his nomination to tender a perfunctory offer of help. Such brusque treatment as much as any ideological difference inhibits Mr Strauss from lending his formidable fund-raising talents to the McGovern campaign. But neither does he want to follow the course of his close Texas friend and former patron, Mr John Connally, who as national chairman of Democrats for Nixon has undoubtedly left the party for ever.

The other 45 businessmen at the Capitol Hill luncheon were in the same category. Mr Arthur Krim, show business millionaire from New York who was President Johnson's chief political fund raiser, wants no part of Mr McGovern. Mr John Brown, Jr, of Louisville, the young businessman who collected several million dollars by organising the "telethon" appeal over the weekend before the convention, was rebuffed by the McGovern high command when he tried to offer help in Miami Beach. Mr Eugene Wyman of Los Angeles, perhaps the party's leading fund-raiser in recent years, has been ignored by the McGovern command; but he rejected an invitation to become finance chairman of Mr Connally's Democrats for Nixon.

Similarly, the politicians at the luncheon represented the congressional leadership that had been so little in evidence at Miami Beach. Indeed, some of the congressional barons rounded up by Mr Strauss had successfully avoided public appearances at party occasions for years. They included Mr Wilbur Mills, chairman of the Ways and Means Committee of the House of Representatives, who had been expected to lapse back into non-participation in party matters following

his dismally unsuccessful bid for President this year. A still more surprising guest was Mr George Mahon of Texas, chairman of the House Appropriations Committee, whose connections with the Democratic party over the past generation have been nominal.

This new Strauss committee represents the other Democratic party—more conservative, older, richer, more dominated by males and whites than the majority at the Miami Beach convention. Besides the wealthy businessmen and elderly congressional committee chairmen rounded up by Mr Strauss the committee consists of trade union leaders, heads of the party's organisations in big cities and governors of southern states. In effect there are now two distinct and separate Democratic parties: the new McGovern party embarked on a desperately difficult attempt to defeat President Nixon and the old party deposed from power at Miami Beach and now attempting to retain Democratic control in Congress and at the state level.

But with few politicians outside Mr McGovern's inner circle giving him much chance to win, the real struggle between these two Democratic parties points to 1976 and beyond. Mr Strauss and most of his colleagues who attended Monday's luncheon feel that the McGovernite triumph of 1972 was a transitory event, an aberration produced by an inattention to detail by traditional Democrats that will not be repeated next time. The unspoken premise of the Strauss committee is that they will attempt to regain power after November.

The goal is shared by less public organisations. The anti-McGovern coalition which was formed tardily just before the convention at Miami Beach intends to keep meeting clandestinely throughout the campaign and afterward with the intent of eventually recapturing the party machinery from the McGovernites. Prominent in the coalition are southern moderates, trade union leaders and old-line liberals—the losers at Miami Beach.

Also in the works is the formation of a new national organisation composed

Strauss: alienated fund-raiser

of liberal intellectuals who, unlike many of Mr McGovern's followers, advocate a strong defence policy and an internationalist foreign policy and want a more moderate domestic policy than he proposes. Just as the Strauss committee provides a haven for businessmen and politicians, the proposed organisation would shelter intellectuals such as Mr Norman Podhoretz of Commentary magazine and Mr Irving Kristol of The Public Interest quarterly who cannot conceive of themselves supporting Mr McGovern but have rebuffed invitations to embrace Mr Nixon.

Governor George Wallace, having finally announced his long-formed intention not to run as a third party candidate for President, is playing much the same game. While he will not make even a *pro forma* endorsement of Mr McGovern, Mr Wallace is attempting to re-establish his credentials as a Democrat—never too valid and very nearly totally expired after his 1968 foray as presidential nominee of his own American Independent party. To the extent that his health permits, Mr Wallace plans this year to campaign for Democratic candidates for congressional and state office who ask his help to immunise themselves against what they think will be the fell effect for them of Mr McGovern's presence on the ticket. Mr Wallace's intention is to pick up a body of Democrats who owe him favours, much as Mr Nixon did with Republicans in 1964 and 1966, and thereby obtain a better base for a more serious pursuit of the Democratic presidential nomination in 1976.

All these non-McGovern efforts to build for the future make a conscious effort not to be overtly anti-McGovern. The first meeting of the Strauss committee went through the motions of professing no disloyalty to Mr McGovern and went to the length of having Mrs Jean Westwood, Mr McGovern's handpicked new chairman of the national party, in attendance. The purpose is to avoid the reproach after November by the McGovernites that their candidate was stabbed in the back by the party's old guard.

Recriminations there will be, however, in any event. Moreover, the non-McGovern Democrats' prospect of regaining control of the party after November is not nearly so bright as they now imagine. Just as Senator Goldwater's nomination in 1964 moved the Republican party permanently rightward on the political spectrum in spite of the devastating thoroughness of his defeat, so must it be assumed

that the McGovern takeover will leave its mark on the philosophical position of the party no matter what happens in the general election. It also remains to be seen whether the traditional Democrats can in the future improve on their shoddy record in 1972 at the precinct (ward) level when organising for the local conventions and primary elections; these are all-important under the party's new reform rules and in them the McGovernites devastated the old guard this year.

Nevertheless, the efforts of the non-McGovern delegates represent a schism in the Democratic party that transcends normal factionalism. For

Challenge coming?

Senator Eagleton's formal letter of resignation went to the Democratic National Committee and whomever Senator McGovern chooses to succeed him will have to be confirmed by that committee. This may not be entirely automatic. At its first meeting, immediately after the nominating convention at Miami Beach, this year's committee showed a tendency to defy Mr McGovern and now there is a plan to renominate Senator Eagleton; but it seems unlikely that he will allow his name to go forward.

There is also still doubt about the make-up of the committee and the credentials of some members are likely to be challenged before the nominating session which is scheduled for Tuesday afternoon, although one would think that the Democrats have had enough—for this year—of internal dissension. Like the convention itself, the national committee is now governed by new, more democratic rules which provide for extra members, in addition to the traditional two from each state, to represent the larger states. Altogether there will be 271 members from the 50 states and the territories and some of these have not yet been chosen; until last week the matter did not seem particularly urgent. In some states, including some large ones, there are also disputes about who has the right to sit on the committee.

In addition there may be argument over the exact procedure to be followed in choosing a new national candidate, an unprecedented activity for the committee and one which has its own special rules. Under these each state has the same number of votes as its delegation had at the convention, a number that depends on its population. Thus New York's national committee persons will be casting 278 votes, that is 27.8 votes each if all 10 members were present. But New York is one of the states that has not yet picked all its members.

the first time since the nomination and defeat of William Jennings Bryan for the Presidency in 1896, there are two identifiable Democratic parties, one devoutly, if covertly, counting on the defeat of the official nominee for President.

The unhappy Eagleton affair has made matters worse. In his brief tenure as vice-presidential nominee Mr Eagleton was a useful emissary to the non-McGovern Democrats. The way in which he was sacked is only one reason more for the party regulars to resent the McGovern campaign. Mr Delton Houchens, the party chairman in Mr Eagleton's home state of Missouri, announced on Tuesday that he would have nothing more to do with the McGovern campaign but would stick to his local election fights—a public announcement of a decision made privately by many other state party leaders. In sum, the formation of the non-McGovern Democratic groups tends toward an institutionalisation of the schism that developed at the party's turbulent national convention of 1968 and has not been truly healed since. This presents a golden opportunity that the Republicans may or may not have the wit and skill to seize.

Amending the war

It is an old argument that, if Hanoi believes that it will get a better deal later, it will not bother to talk now. But this time Congress does not seem to be paying much attention to President Nixon's repetition of the plea that the peace negotiations should not be jeopardised. In its strongest move yet the Senate voted last week in favour of an amendment to the foreign military aid bill that would cut off the use of all funds for the Vietnam war except those needed to withdraw all troops within four months of the passage of the bill, on condition that the prisoners of war were released. This is the first time that the Senate has voted to cut off funds; in the past it has merely expressed its wish—which does not carry the force of law—that the war should be ended.

The vote was a particular set-back for the President because it was Republican Senators who put forward the amendment after a somewhat more moderate measure proposed by the Democratic leader, Mr Mike Mansfield, had been defeated. And in the end the President was only able to save the day at the expense of his

THE MAGAZINE OF MONEY

PEACE WITH A PURPOSE

A Proposal for the Nobel Peace Prize

As courage and competence beget esteem, President Nixon's drive for peace with a purpose has put him in place for world recognition of his extraordinary personal effort.

FINANCE MAGAZINE joins with Senator Hugh Scott of Pennsylvania to initiate the Nixon nomination for the Nobel Peace Prize.

Never a man to sit in a game with a weak hand, our President has put it all together. What the world has witnessed this year was the sudden conversion of an idealistic vision of peace into a more realistic version of working together instead of fighting wars.

The credit for such courage in the subtle but always dangerous game of great power politics with such unlikely and unpredictable partners as Russia and China should be marked for the historic record through the Nobel Peace Prize. There is no doubt that President Nixon commands global respect as a statesman who can deal convincingly with foreign affairs. And there should be no doubt that he has put world welfare ahead of political concerns.

When a president, or any person, pursues peace as an end in itself, not as a current achievement but as a carefully built system of stability for the years to come, he deserves the supreme recognition for his personal genius at home and abroad.

At home, we can prove our understanding and appreciation at the polls where we have the opportunity to show we know the difference between rhetoric and reality. *Abroad, we can spread the word that Richard Nixon and the United States stand for peace with a purpose.*

Our great President has said it for all of us, "In seeking to prevent war, we seek also to make possible those advances in human well-being, in the arts and science and philosophy, in the enriching of human experience, that define man's highest destiny here on earth."

Brief Books order form

This background series of 28-page briefs, illustrated with maps, charts and photographs, looks at some current world problems and isolates the real issues.

The next 40 years

The survey "The Future of International Business," which appeared in The Economist dated January 22, has been republished as a 48-page booklet. Norman Macrae, the deputy editor of The Economist, has tried to turn himself into a futurologist. He has forced himself to make the best forecast he can of a logical course for international trends and organisation in 1972-2012 and especially 1972-1992. He has come up with some highly unconventional views.

Industrial Relations—Britain's battle for reform

Industrial Relations in Britain today is still a hotbed of political controversy. The Industrial Relations Act is a landmark in the battle for reform, but the argument does not end there. How do British Unions work and did they need reform? How will the new Act work? What problems does it leave unsolved?

Jane makes a personal appeal

foreign aid programme. Rather than accept an amendment to end the war the Republican loyalists combined with the Democrats, who dislike giving military aid to foreign governments, to vote down the whole bill. Luckily for the President some of the severest opponents of the war, such as Senator William Fulbright, are also opponents of foreign aid. But those Senators who are against the Administration's policies were undaunted by pressure from the White House. They have now attached an almost identical amendment against the war in Vietnam to the military procurement bill authorising \$20 billion for weapons which passed the Senate this week, but can still be changed in conference with the House.

But the House of Representatives is also giving the Administration a difficult time. In a break from its past somewhat passive attitude the Foreign Affairs Committee has now also voted in favour of an anti-war amendment to the foreign aid bill. It is a more moderate measure than the one passed by the Senate and still has to be voted on by the full House sometime later this month. But if the amendment succeeds, then the President will be faced with the nasty choice between again sacrificing foreign military aid or putting a brave face on an anti-war directive.

The Administration is also bothered by a fresh spate of criticism of the war outside Congress. It is easy enough to ignore Miss Jane Fonda and foreign journalists when they say that Americans have been bombing dikes in North Vietnam. But it was too much for Mr Nixon when the Secretary General of the United Nations, Mr Kurt Waldheim, also voiced his fears for the country's extensive system of flood

control. Not only did the President send in the Secretary of State and the ambassador to the United Nations to deny that the Americans were bombing the dikes intentionally—in fact Mr Waldheim never claimed that the damage was intentional—but Mr Nixon himself also went into the attack. He may have been hoping to raise a cheer from his more conservative supporters who are always game for a kick at the United Nations when he said that Mr Waldheim was naive to believe such enemy propaganda.

Poor wages

The approach of the elections may help to explain why the worker who is paid substandard wages is suddenly on many consciences. Late last month the Senate voted to raise the minimum wage for most non-agricultural workers from \$1.60 an hour to \$2 an hour this year and to \$2.20 an hour two years from now. Domestic servants and employees of federal, state and local governments would be covered for the first time. Six million workers would receive immediate wage increases. But in the eyes of the Administration both these generous gestures go too far. It favours the bill passed by the House of Representatives in May, which would go no higher than \$2 an hour and would not expand the coverage of the law. The House is digging in its toes, too. This week it refused to send its bill to a conference between the two houses—a most unusual step. Republicans want more upholders of the House's bill to be included on the team which will hammer out an agreed version with representatives from the Senate.

When the Administration's Cost of Living Council decided last week to be more generous, it had no such obstacles to overcome. It simply announced that wages controls would no longer apply to workers who earn less than \$2.75 an hour, a big jump from the \$1.90 an hour which it adopted as the level of exemption when the President's economic stabilisation plan was new. Originally it was Congress which insisted that wage controls should not apply to the working poor, but it did not say how poor they had to be. Recently a federal judge ruled, in a case brought by a trade union, that \$1.90 an hour was too low to have been what Congress had in mind. This definition, plus the exemption from all controls granted to small firms, left free the wages of 39 per cent of the

employees of private, non-farm enterprises. Now the figure goes up to 56 per cent, or about 32.5m wage-earners, most of them labouring in the service industries or in shops, banks and insurance companies. They may now enjoy annual increases in wages of more than the 5.5 per cent which is set as the guideline—if they can get them.

Fortunately for the stabilisation programme, it is not these lowly-paid workers who demand or are militant enough to get outside increases in their pay. It is the construction workers, the car workers and such like who call the tune. The Pay Board, whose job it is to see that wage settlements do not exceed the guideline, claims that approved increases in wages since November, when the three-month wage and price freeze ended, have averaged only 4.9 per cent. But last week Dr Arthur Burns, the chairman of the central bank, told Congress's Joint Economic Committee that the guideline must be brought down closer to the long-term increase in productivity—3 per cent a year—if a new round of wage inflation was to be avoided next year. Then a larger number of trade union contracts will be up for renegotiation and a big budget deficit would probably be adding fuel to the inflationary fires. In fact, productivity rose by 6 per cent, at an annual rate in the second quarter, and unit labour costs fell; but this is usual when the economy is expanding rapidly.

Tankers ahoy!

The Nixon government's shipbuilding programme has been a disappointment to its architects and the reason suggested in official circles is that it coincided with the downturn in freight rates. Nevertheless, the warm front of protection is once again moving Washington's way. Early last month President Nixon delighted American shipyards, and startled foreign maritime industries, by announcing nearly \$300m of subsidies for \$660m worth of ships to be built in the United States—in California, Maryland, New York and Maine. What has particularly surprised observers both at home and abroad is that the subsidies amount to 43 per cent of building costs, whereas the Maritime Administration had been boasting that the cost differential between American and foreign yards was now only 41 per cent. The contracts were hurried through before the 41 per cent figure became effective.

This move to favour domestic ship-

building is part of the growing concern about how to get the fuel that the United States needs to the American shore. It is estimated that by 1985 oil imports will require the equivalent of 500 supertankers of 250,000 tons each, 14 of them calling at an American port every day. A bill has been discussed in Congress which proposes that half of these should be American-built and American-operated ships. The experience of becoming dependent on foreign supplies of energy is traumatic enough without becoming dependent on foreign ships to carry them too.

Those who regret that the merchant fleet under the American flag has dwindled to practically nothing point out that foreign crews have sometimes refused to take supplies to South Vietnam. But the differential in cost between American and foreign shipping will put a substantial burden on those involved. The American Committee for Flags of Necessity argues that if half the oil imports had to be carried in American flag tankers this would increase transport costs by up to \$5 billion by 1980.

Besides oil, another critical cargo is liquefied natural gas. Here the cost differential between ships built in the United States and on the open market is about 30 per cent. The American Administration has so far fought off pressure to start a special building programme for these tankers; anyone building them can qualify for a subsidy already. Besides, these ships require a highly skilled labour force, which puts the United States at an advantage: safety requires complete confidence in construction being carried out correctly.

One important issue is where the 14 supertankers a day that will be required are to be unloaded. There are only three ports in the United States with a big enough draft to take such ships. One idea is to use the opportunity to promote new development areas, attracting population away from the over-populated and over-polluted parts of America, as some European countries have done. But local residents in places like South Carolina do not want to take in other people's pollution; moreover an oil terminal requires hardly any labour. Another possibility is to build an island in the ocean to receive the oil; a study has just been published by the Maritime Administration advocating this. Although the cost of such a terminal to take tankers of up to 350,000 tons would be over \$1 billion, such an increase in the size of tankers from the present 65,000 tons would reduce the cost of shipping oil by over 25 per cent.

Shuttle landed

California and the North American Rockwell Corporation have won the prime contract for the space shuttle, the reusable hybrid which will rocket men and supplies up to space stations but which will return to earth like a conventional aircraft. It is expected to be the civilian and military workhorse in earth orbit for the next 20 years and to make space flight relatively cheap and routine. The contract calls for five shuttles and the total cost over the next six years will be a bit over \$5 billion (by 1990 it will be \$8 billion). But the savings over the use of rockets on the 440 missions that are planned should exceed \$10 billion. The first of these missions is scheduled for 1979.

North American's surprisingly low (and possibly unrealistic) bid of \$2.6 billion helped to clinch the deal; a cost of \$3.5 billion had been expected. So did its experience as the prime contractor for the Apollo programme and as builder of the Apollo command module. Of its three competitors only the Grumman Aerospace Corporation of Long Island, New York, had good reason to think that it might win the contract—the biggest space award for the past 10 years and perhaps for 10 years to come. Not surprisingly there are suspicions in New York that the importance of the aerospace industry to California—and of California to President Nixon's re-election—had something to do with the choice, although the National Aeronautics and Space Administration insists that this is not so. North American had already won a \$450m contract for the shuttles' engines.

Just over 50 per cent of the dollar value of the prime contract is to be divided up among firms all over the country. Naturally Grumman, whose own work on Apollo is ending, and which started to lay off men this week, is bidding for the lion's share of the subcontracts. But the tentative allocation for New York is only about

How it should look

\$300m.
