can afford now to trade off some of the benefits of overseas capital for a greater Australian share of our industry and resources.

If any foreign group makes a formal takeover bid, or acquires 15% of the equity of any Australian company with assets of over \$A1m, or if more than 40% of the equity passes into foreign hands (however dispersed the holding), then the government will be allowed to move in. For the time being, it intends merely to keep a watching brief over most such companies, but it is seeking power to ban takeovers where the victim is "an economically strategic industry leader" or so large that it will make a difference to the "balance" of the

ACROW

26th SUCCESSIVE RECORD YEAR

QUEEN'S AWARD FOR EXPORT ACHIEVEMENT

A statement by Mr. W. A. de Vigier,
Chairman of the Acrow Group

Accounts

From the accounts you will note that the consolidated trading profits amounted to £3,171,359, an increase of £325,721 on the previous year. A final dividend of 10 per cent is recommended by your Directors, making a total of 19 per cent for the year compared with an equivalent total of 17.27 per cent for the previous year. The above results were achieved by reason of a considerable improvement in the Construction Industry, the excellent results of our Materials Handling Division, the profitable growth of our Container Division and the steady improvement on the agricultural side.

Queen's Award

During the year under review your company received the Queen's Award to Industry for export achievement.

Steel Group

In June of this year we acquired The Steel Group Ltd. - Coles Cranes and Priestman Excavators - at a time when they were experiencing a con-

siderable downturn in business. Both Coles and Priestman are now introducing a new generation of cranes and excavators which should greatly help their sales in the years to come.

Overseas

Your associated overseas companies, with the exception of Germany, are all doing well. In New Zealand a new company has been formed called Acrow-Carpenter Ltd. where we are planning to build a new manufacturing unit.

Prospects

The present financial year started with an excellent order book, but our first half year results may be affected for reasons beyond our control - the strike in the Construction Industry, and the dock strike. In view of these circumstances it is difficult to forecast the results for the year. I am, however, quietly optimistic that we shall achieve another record year and pay at least the same dividend as at present.

Staff

We are constantly striving to improve human relations in our Group of Companies. My thanks goes to all Acrovians for their loyalty and efforts and for giving me the opportunity of leading such a great and profit orientated team.

It was all very well
in
grandpa's day

The pace was leisurely then, but today we, like you, recognize the vital need for speed. That's why we developed the kind of software expertise that has been pleasing big finance houses around the world. Backed by 5,500 financial experts interpreting the Japanese industrial scene, our London and European offices are well placed to aid you too.

208299, 208300, 208301, 208302, 208303, 208304, 208305, 208306, 208307, 208308, 208309, 208310, 208311, 208312, 208313, 208314, 208315, 208316, 208317, 208318, 208319, 208320, 208321, 208322, 208323, 208324, 208325, 208326, 208327, 208328, 208329, 208330, 208331, 208332, 208333, 208334, 208335, 208336, 208337, 208338, 208339, 208340, 208341, 208342, 208343, 208344, 208345, 208346, 208347, 208348, 208349, 208350, 208351, 208352, 208353, 208354, 208355, 208356, 208357, 208358, 208359, 208360, 208361, 208362, 208363, 208364, 208365, 208366, 208367, 208368, 208369, 208370, 208371, 208372, 208373, 208374, 208375, 208376, 208377, 208378, 208379, 208380, 208381, 208382, 208383, 208384, 208385, 208386, 208387, 208388, 208389, 208390, 208391, 208392, 208393, 208394, 208395, 208396, 208397, 208398, 208399, 208400, 208401, 208402, 208403, 208404, 208405, 208406, 208407, 208408, 208409, 208410, 208411, 208412, 208413, 208414, 208415, 208416, 208417, 208418, 208419, 208420, 208421, 208422, 208423, 208424, 208425, 208426, 208427, 208428, 208429, 208430, 208431, 208432, 208433, 208434, 208435, 208436, 208437, 208438, 208439, 208440, 208441, 208442, 208443, 208444, 208445, 208446, 208447, 208448, 208449, 208450, 208451, 208452, 208453, 208454, 208455, 208456, 208457, 208458, 208459, 208460, 208461, 208462, 208463, 208464, 208465, 208466, 208467, 208468, 208469, 208470, 208471, 208472, 208473, 208474, 208475, 208476, 208477, 208478, 208479, 208480, 208481, 208482, 208483, 208484, 208485, 208486, 208487, 208488, 208489, 208490, 208491, 208492, 208493, 208494, 208495, 208496, 208497, 208498, 208499, 208500, 208501, 208502, 208503, 208504, 208505, 208506, 208507, 208508, 208509, 208510, 208511, 208512, 208513, 208514, 208515, 208516, 208517, 208518, 208519, 208520, 208521, 208522, 208523, 208524, 208525, 208526, 208527, 208528, 208529, 208530, 208531, 208532, 208533, 208534, 208535, 208536, 208537, 208538, 208539, 208540, 208541, 208542, 208543, 208544, 208545, 208546, 208547, 208548, 208549, 208550, 208551, 208552, 208553, 208554, 208555, 208556, 208557, 208558, 208559, 208560, 208561, 208562, 208563, 208564, 208565, 208566, 208567, 208568, 208569, 208570, 208571, 208572, 208573, 208574, 208575, 208576, 208577, 208578, 208579, 208580, 208581, 208582, 208583, 208584, 208585, 208586, 208587, 208588, 208589, 208590, 208591, 208592, 208593, 208594, 208595, 208596, 208597, 208598, 208599, 208600, 208601, 208602, 208603, 208604, 208605, 208606, 208607, 208608, 208609, 208610, 208611, 208612, 208613, 208614, 208615, 208616, 208617, 208618, 208619, 208620, 208621, 208622, 208623, 208624, 208625, 208626, 208627, 208628, 208629, 208630, 208631, 208632, 208633, 208634, 208635, 208636, 208637, 208638, 208639, 208640, 208641, 208642, 208643, 208644, 208645, 208646, 208647, 208648, 208649, 208650, 208651, 208652, 208653, 208654, 208655, 208656, 208657, 208658, 208659, 208660, 208661, 208662, 208663, 208664, 208665, 208666, 208667, 208668, 208669, 208670, 208671, 208672, 208673, 208674, 208675, 208676, 208677, 208678, 208679, 208680, 208681, 208682, 208683, 208684, 208685, 208686, 208687, 208688, 208689, 208690, 208691, 208692, 208693, 208694, 208695, 208696, 208697, 208698, 208699, 208700, 208701, 208702, 208703, 208704, 208705, 208706, 208707, 208708, 208709, 208710, 208711, 208712, 208713, 208714, 208715, 208716, 208717, 208718, 208719, 208720, 208721, 208722, 208723, 208724, 208725, 208726, 208727, 208728, 208729, 208730, 208731, 208732, 208733, 208734, 208735, 208736, 208737, 208738, 208739, 208740, 208741, 208742, 208743, 208744, 208745, 208746, 208747, 208748, 208749, 208750, 208751, 208752, 208753, 208754, 208755, 208756, 208757, 208758, 208759, 208760, 208761, 208762, 208763, 208764, 208765, 208766, 208767, 208768, 208769, 208770, 208771, 208772, 208773, 208774, 208775, 208776, 208777, 208778, 208779, 208780, 208781, 208782, 208783, 208784, 208785, 208786, 208787, 208788, 208789, 208790, 208791, 208792, 208793, 208794, 208795, 208796, 208797, 208798, 208799, 208800, 208801, 208802, 208803, 208804, 208805, 208806, 208807, 208808, 208809, 208810, 208811, 208812, 208813, 208814, 208815, 208816, 208817, 208818, 208819, 208820, 208821, 208822, 208823, 208824, 208825, 208826, 208827, 208828, 208829, 208830, 208831, 208832, 208833, 208834, 208835, 208836, 208837, 208838, 208839, 208840, 208841, 208842, 208843, 208844, 208845, 208846, 208847, 208848, 208849, 208850, 208851, 208852, 208853, 208854, 208855, 208856, 208857, 208858, 208859, 208860, 208861, 208862, 208863, 208864, 208865, 208866, 208867, 208868, 208869, 208870, 208871, 208872, 208873, 208874, 208875, 208876, 208877, 208878, 208879, 208880, 208881, 208882, 208883, 208884, 208885, 208886, 208887, 208888, 208889, 208890, 208891, 208892, 208893, 208894, 208895, 208896, 208897, 208898, 208899, 208900, 208901, 208902, 208903, 2089

Safra: not parting

sets the price, and London's stock market will follow it. The managers may also effect transactions "with a view to stabilising or maintaining the market price of the shares at levels above those which might otherwise obtain in the open market." In other words, the managers have the power to massage the market. Since the new shares will make up only 16% of the issued capital, there is an overhang of 84% which could, in theory, be dribbled on to the market. But Mr Edmond Safra, whose family has been in banking for a century, has no intention of parting with his 64%; he reckons that the holders of the other 20% will also be unwilling sellers at any price.

The attractions of a London quote are twofold. The glittering price/earnings ratios commanded by banks in London are being reflected in the issuing p/e of 15 at a price of \$16.50 (plus the premium for British residents); this compares with p/es of under 10 for banks on continental bourses. And the hoops that companies have to go through to obtain a quotation help to bridge the credibility gap for what, to many of the new stockholders, will be a hitherto almost unknown banking group. The preliminary prospectus (the issue will not be until October 10th) contains a full accountant's report prepared by a well-known British firm of accountants. Without it, this batch of banks in Geneva, Paris and Panama—supplemented by the 51%-owned Republic National Bank of New York—would have been met with a certain scepticism. With it, the astonishing growth record of the group should ensure success for the issue. Profits,

after tax and minorities, have zoomed from \$1.3m in 1967 to a forecast of \$14.7m for the current year; this is probably a conservative forecast, because it is double the results for the half year to June. Total deposits already approach \$1 billion, and the new money will effectively double the group's capital base.

P&O/Bovis

Are those cargo tanks full of ballast?

Shareholders in the Peninsular and Oriental Steam Navigation are navigating in a dark and foggy sea without a sextant or a chart. The most puzzling phenomenon about their company's bid for Bovis is the discrepancy in the assessment of P&O's worth between Mr Ford Geddes, the chairman, and the dissidents, especially Mr Sandy Marshall, head of the bulk shipping side where most of the £200m investment programme in ships lies. According to the dissidents, Mr Geddes is selling out on the cheap, and virtually admitting his own incompetence to earn sufficient profits from the company's huge investments. Mr Marshall reckons there are good profits to come from the new fleet, but scepticism is always needed when looking at forecasts for shipping profits.

Most of P&O's investment programme has been made against charters or similar arrangements likely to guarantee a revenue from the ships—but this also limits the chances for the revenue to rise to take advantage of a sudden boom in freight rates or to compensate for massive escalations in insurance, bunkering, and labour costs, such as took place last year. Unfortunately, the rate of return on the new ships, originally estimated at 10 per cent before this inflation, and none of it chartered during the height of the boom in freight rates, is subject to downward fluctuations rather than upward. The company's older liner fleet may also suffer a drop in earnings. It normally takes six months for cost inflation in this sector to be recouped in negotiated freight rate increases, because of the sensitivity of governments on the routes concerned.

A forecast of maximum earnings on the 170-ship fleet should therefore not be too hard to make. And it is essential for the takeover panel to unbend and allow a long-term forecast to be made. The panel insists that a profit forecast

should be backed by accountants, who shy away from forecasts of more than two years ahead. But that was designed as a safeguard against chairmen overrating their companies. Nobody is accusing Mr Geddes of doing that; his critics accuse him of doing the opposite. Maybe the forecast would be tentative, but it would at least give investors some figures to argue about.

Eurobonds

Communists need capital

Amsterdam

For the second time in just over a year, Hungary is tapping the long-term international capital market for funds. The National Bank of Hungary, its central bank, plans to raise \$50m for a maximum of 15 years. The borrower may not be able to keep the money for the full term because the bondholders have the option of redeeming the bonds, without penalty, after only seven years; their decision will obviously depend on the level of interest rates in 1979, the state of the dollar, and political feeling about whether communist countries then look a good risk. The indicated coupon of 8½% makes some allowance for political risk. A triple A name like the European Investment Bank is raising a similar amount for the same period at just 7½%.

Since it raised \$25m for 10 years at 8½% in May last year, the National Bank of Hungary, somewhat surprisingly, has not been followed by other Soviet block borrowers on long term. The Comecon bank has raised medium-term loans, but its recently formed International Investment Bank, though strongly tipped as a Eurobond issuer, has still to appear on the market. Its reticence may be only temporary.

Compagnie Lambert

A slight snag

The Belgians do not like contested takeover bids, and on Wednesday night the prime minister himself, M. Gaston Eyskens, told a very few select members of the financial community that he did not want one to start. The ramblings are over the plans of the Compagnie Lambert pour la Finance et l'Industrie to merge with holding companies controlled by the de Launoit family, Cofinundus and Brufina (*The Economist*, last week). Cobepa, a holding company half-owned by the aggressive French merchant bank, Banque de Paris et des Pays-Bas, also has an undisclosed share of Cofinundus and the Brussels financial community reckoned Paribas was going to launch a counter-bid; the shares of Cofinundus zoomed up to FrB5,900, but have now fallen back to FrB4,400. Paribas denied that it had any such intentions, or that it had been buying at such extortionate prices well above the most optimistic estimate of Cofinundus assets per share, of FrB4,400. But it is clear the Paribas thinks that the industrial interests of Cofinundus would fit into the Cobepa stable much better than they would in the Lambert one. Since the votes of 75% of the registered shares will be needed for the merger to go through, and a tiny minority of shareholders register, Paribas is probably in quite a good bargaining position for a deal.

Builders

After the strike

Building shares have plunged lower than most sectors in recent months. They have been hit by the 11-week building strike, and the increasing worry that the tightening of mortgages will produce a downturn in private housing in 1973.

Results from John Laing on Monday indicated that the strike had cost nearly £1m, but half-year profits still doubled to £3.1m. The prospectus for Newarthill, the name given to the Sir Robert McAlpine group which went public this week, also had to scale down the profit forecast by £0.8m, mainly because of the strike. But these figures greatly exaggerate the strike's effect. Both companies only enter profits from contracts when they are completed. Much of the loss during the building strike should be recovered later, as the prospectus for Newarthill

makes clear.

The worry of a downturn in housing is not supported by the figures published by the Department of the Environment on Wednesday. They indicate that new orders for housing are still increasing, so housebuilders' profits should still be rising for at least another year. In any case most of the major companies are now less dependent than they were on housing, and nearly all have big stakes in property. Without its property interests, John Laing at 144½p is on a p/e ratio of only 11; Newarthill is on one of nearer nine at its offered price of 210p. Other shares, like Taylor Woodrow, also look pretty attractive on this basis.

George Wimpey, the biggest builder in the business, published its results on Thursday. They showed a good rise in pre-tax profits. But the real question is what Wimpey is going to do with the £32m in cash it got for its stake in Mr Harry Hyams's Oldham Estates. At the moment the shares still look overvalued, on a prospective trading p/e of about 14.

Canadian markets

Bourse libre

Toronto

Progress towards a centralised securities market in Canada has taken one step backwards. The Bouchard committee, set up by the prime minister of Quebec, Mr Robert Bourassa, to take a look at the securities industry, has obligingly recommended some ways that Quebec can get a larger slice of the business. Or so it seems to think.

The committee comes down firmly in favour of publicly-quoted brokerage houses, but recommends that a minimum of 25% of the votes be held by residents of Quebec, with no one group holding more than 10%. This would pose problems for the many foreign securities firms operating in the province, and hit hard at the Ontario-based ones. Some of them are already reported to be restructuring their operations or acquiring Montreal firms to qualify; but others might pull out altogether.

Giving Europe a Lyons share

Amsterdam

J. Lyons has led the City in a new way of spreading an equity base throughout Europe. It has lodged 2.25m cumulative preference shares with the Amsterdam Depositary Company, which will now issue continental depositary receipts (CDRs) against them to European investors. These receipts will be traded on the Amsterdam bourse as equities, giving J. Lyons the international shareholding that it wants to finance its expansion in Europe. Other British companies are likely to catch on to this idea of CDRs in the next few months.

Depositary receipts merely represent a number of shares deposited in a custodian bank, and therefore have considerable advantages for the European investor. They are anonymous and in bearer form. They avoid the delay of sending share certificates from one country to another. Since the dividends are paid directly by the bank which holds the receipts, payment is prompt and safe. The receipts are easily traded in the secondary market. J. Lyons's offer is broken down into units worth £100. This should attract the small investor. In the past, attempts by companies to drum up an international equity backing have failed because their shares have always enjoyed a slight premium on their national exchanges. But CDRs for Lyons represent preference shares, so

it is unlikely that the equity will merely filter straight back to the London home market.

Dutch investors have traded in depositary receipts of American shares for over 100 years. There are about 40 depositary companies in Holland; and 300 receipts are quoted on the bourse, mostly of American companies. The bottom was temporarily knocked out of the market when the Dutch government put a 2% stamp duty on all receipts brought into the country. The only way around this was for the receipts to be issued in Curacao. But now the duty has been abolished; and the Amsterdam Depositary Company, formed this year by four leading Dutch banks, has been making issues for Japanese companies. More British issues are in the pipeline.

Morgan Guaranty Trust has introduced its own type of receipts, called International Depositary Receipts (IDRs). Since the first issue in 1970, the bank has created IDRs for 311 companies in 11 countries; they are interchangeable with Morgan's American Depositary Receipts, which enable American investors to buy or sell shares in non-American companies, and collect dividends, with no need for stock certificates, coupons or other papers to pass back and forth between countries.

CHAIRMEN'S STATEMENTS

EDBRO (Holdings) LIMITED

(Hydraulic Engineers)

The following are extracts from the circulated review of the Chairman, Mr. Eric W. Tonge, and from the directors' report:

The accounts for the year show sales of £8,197,000 (£7,655,000) and a trading profit of £1,169,745 (£987,065). Profit after tax is £697,511 against £592,232. The directors recommend a final dividend of 4p per share making a total of 5.875p per share (5.625p). A substantial part of the group profit accrued from our recent acquisition, Edbro Europa BV.

In common with most concerns supplying capital equipment to industry, we experienced a considerable falling-off in home market demand for most of our products throughout the year, although export demand showed some increase. I am glad to report a distinct improvement in orders from the home market in the current year, and the present indications are that this will continue throughout 1972/73. The directors' confidence in the longer term is such that we have recently begun work on building further extensions at Bolton which will cost nearly £250,000.

The acquisition of Edbro Europa BV, in which we already had a 50% stake, considerably strengthens our position in Europe, now our largest single export market and likely to continue to be so for a good many years to come. Generally the export order position continues to be good.

Addressing the meeting, the Chairman said:

As I reported in my Chairman's Review, there has been a distinct improvement in the order position since the beginning of the current year. This improvement is still being maintained, both from Home and Export Markets.

In spite of the improvement in the order position, profits for the first 6 months of the year will be substantially below the comparable period of last year. This is a direct result of the go-slow which we experienced in Bolton arising from the National Engineers' wage claim and coinciding with the necessity of building up from short time working which had to take place.

It is difficult to forecast what results will be achieved during the remainder of the year but in the absence of further disruptions they should improve on those of the second six months of 1971/72.

Our present view however is that the profits for the year will remain somewhat below those of 1971/72 taken as a whole.

S. Hoffnung & Co. Limited

Points from the report of the Chairman, Mr Roland Bourne

* Results, as warned, were affected by the deflationary Australian Budget in August 1971, low prices for primary products, a building recession in New South Wales and the warehouse move from Sydney to Alexandria.

* The 1972 Budget was designed to stimulate the economy but it will take time for the effect to be felt. Although it is more difficult than usual to forecast results for the current year, I will be disappointed if I am unable to report renewed progress next year.

	Year to 31st March	
	1971	1972
Group profit before taxation	£1,308,944	£1,303,689
Group profit after minority interests and taxation	£699,522	£650,553
Ordinary dividend	£416,190 (36%)	£427,751 (37%)
Retained in the business out of the year's profit	£266,520	£214,490
Net shareholders' funds	£8,333,566	£8,397,830

For further announcements
see pages 5, 7, 103 to 108

VOKES GROUP LIMITED

Manufacturers of Filtration Equipment, Specialist Engineering Products and Orthopaedic Appliances, etc.

	1972	1971
Turnover	£15,741	£14,290
Profit before Tax	1,072	1,091
Profit after Tax	682	745
Dividend	24%	29%

The following is a summary of the main points of the Statement of the Chairman, Sir Charles Hardie, for the year ended 31st March, 1972.

The year has been a difficult one in the Engineering Industry because of rising costs and the absence of any up-surge in capital investment. The Engineering Companies in the Group have continued to suffer from the recession in their specialised fields but the effect has been almost entirely off-set by increased profits from the Orthopaedic Appliance and Hospital Equipment Companies so that the Group profit is approximately as last year. The reorganisation of BDR Machines Limited is almost complete against a background of depressed demand for its products. As regards the present year, there are, as yet, no signs of an up-turn in the engineering fields in which the Group is involved and in the absence of a sharp recovery in the economy, it would be unwise to forecast increased profits.

For tax reasons, payment of the final dividend has been deferred until 3rd April, 1973. The Board's present intention is to declare an interim dividend of 11% in respect of 1972/73 and as a consequence of deferring payment, a further special dividend of 5%, both payable on 3rd April, 1973.

STUDENTSHIP

St John's College
Cambridge

The Norman Laski Senior
Studentship

St John's College invites
applications for a Norman
Laski Senior Studentship for
advanced study or research in
some branch of Economics,
Land Economy, Engineering,
Mathematics, or related fields
of study, preference being
given to study or research
related to Business or Manage-
ment.

Candidates must at the time
of election be male graduates
of not less than 23 years of
age.

The emoluments of the
Studentship will not exceed
£1,700 per annum.

Full details may be obtained
from the Master, to whom
applications must be sent not
later than 1 February 1973.

APPOINTMENTS

Marketing
Economist

Masson Scott Thrissell
Engineering Limited, one of
the world's leading manufac-
turers of machinery for the
packaging, printing and paper
handling industries, require a
young graduate economist for
their Sales and Marketing
function to work on sales pro-
jections and associated prob-
lems. This is an excellent
opening for a young graduate
who is keen to make a career
in capital goods marketing.
The post is situated at Bristol
with excellent working condi-
tions and would probably
involve some travelling.

Application forms can be
obtained from:

The Company Personnel
Manager,
MASSON SCOTT THRISSELL
ENGINEERING LIMITED,
Easton Road, Bristol BS5 0HE.

La Trobe
University

MELBOURNE, AUSTRALIA

in Economic Theory

Applications are invited from
suitably qualified persons for
two positions in the
Department of Economics in
the following areas: a) Inter-
national trade; b) Microecono-
mics. There will be considerable
scope for lecturing to relatively
small classes at third and
fourth year honours level.

Salaries: Lecturer \$4697-
\$4926 per annum. Senior
Lecturer \$4940-\$411,130 p.a.

Further information and Appli-
cation forms are available from
the Association of Common-
wealth Universities, (Appl),
35 Gordon Square, London
WC1H 0PP (Tel: 01-387 8572),
or from the Registrar, La
Trobe University, Victoria, 3083,
Australia.

Applications close on 23
October 1972.

Government of
The North West
State of Nigeria

Applications are invited for the
following vacancy:

STATISTICIAN

Qualifications: Degree plus at
least two years' experience.

Age limit for all above posts:
52 years at time of application.
Salary credits are given for
relevant additional qualifica-
tions and/or years of experi-
ence.

Attractive salaries and fringe
benefits.

Further information may be
obtained at time of interview
with Recruitment Team in late
October.

The Recruitment Attache,
Nigeria High Commission,
9 Northumberland Avenue,
London WC2N 5BX.
before 7th October.

Wye College

(UNIVERSITY OF LONDON)

Research Post in
Agricultural Economics

Applications are invited for a
research post tenable for three
years at Wye College. The
project is designed to explore
the business aspects of dairy
herd expansion in England and
Wales and to indicate
implications for policy and for
the future structure of the
industry.

Qualifications should include a
first degree in agricultural
economics or economics and
relevant experience since
graduation. Some competence in
linear programming is expected,
together with an aptitude to
develop further quantitative
skills. Preference will be given
to applicants with some
knowledge of accountancy and
dairy farming.

The post offers plenty of scope
for personal initiative and an
opportunity to work for a
higher degree.

The starting salary will be up
to £1,750 per annum, accord-
ing to qualifications and
experience, rising by annual
increments with superannuation
under P.S.S.U.

Further particulars may be
obtained from the Secretary,
(E) Wye College, Near Ashford,
Kent, to whom applications
should be submitted by 14th
October, 1972.

CHAIRMAN'S STATEMENT

KIER

PROFIT UP 60%

FOUR YEAR RECORD

	Years ended 31st March			
	1969	1970	1971	1972
	£000	£000	£000	£000
Turnover	19,200	21,100	23,300	32,600
Profit before Taxation	725	1,034	1,252	2,042
Profit after Taxation	387	561	769	1,213
Earnings per Ordinary Share	7.0p	10.4p	14.6p	23.0p
Dividends (Gross) per Share	4.4p	5.6p	6.3p	7.5p

Salient points from the review of the year to 31st March 1972, made by the Chairman, Mr. Olaf Kier, C.B.E.

The Interim Statement for the year under review indicated Group Profit (before tax) in excess of £1,450,000. The marked increase in Group Profit to £2,042,000 is explained by the fact that certain contracts which were expected to rank as work-in-progress at 31st March 1972, in the event fell to be treated as completed at that date.

This emphasises my contention that, because of the long-term nature of many of our contracts, the progress of the company should be judged over a number of years, rather than on the result of one year.

However, although the Group Profit for the year

under review was increased as a result of the early completion of some contracts, I am confident that profit for the current year should at least be maintained.

A scrip issue of one new Ordinary Share for every five Ordinary Shares held at the close of business on 29th September 1972 is proposed.

A Final Dividend of 15 per cent in respect of the year ended 31st March 1972 is recommended and it is proposed that, having regard to the bridging provisions arising from the changeover to the Imputation system of taxation in 1973, payment of this dividend be deferred until 3rd April 1973. To compensate shareholders for the delay in receipt of the dividend, it is proposed that the new shares will rank *pari passu* with the existing Ordinary Shares, for this Final Dividend.

Copies of the Accounts and Chairman's Statement can be obtained from the Secretary

J. L. Kier & Company, Limited

TEMPSFORD HALL, SANDY, BEDFORDSHIRE

APPOINTMENTS

Social Policy Co-ordinator

SCOTLAND

The Social and Regional Policy Department advises on the social and regional implications of The British Steel Corporation's rationalisation and development, helps to develop, co-ordinate and monitor the implementation of policies designed to assist employees and communities affected by such measures and seeks to promote good relationships between the Corporation and local communities.

The person appointed to the vacancy for a Co-ordinator, Scotland, will be required to carry on the work previously undertaken by an equivalent General Steels appointee in ensuring that BSC social and regional policies are implemented in the various Product Divisions, works groups and works in Scotland to the maximum effect. To this end he will maintain liaison with and advise line and functional managers, including senior divisional and works personnel, concerned in supervising rationalisation measures, will develop and maintain close liaison with outside governmental, regional and local organisations concerned with the consequences of steel rationalisation and will attempt to ensure that the Corporation takes initiatives and manages such situations so as to facilitate and support the work of these official agencies in attracting alternative employment and mitigating the social problems attendant upon industrial rationalisation.

The appointment, being responsible to Head Office, will be at manager level and is likely to be offered to a person with considerable experience in the steel industry (although not necessarily in a personnel capacity), a close knowledge of BSC activities in Scotland and an interest in general social and economic problems in the area. He is likely to be over 40 years of age but applications from somewhat younger candidates will be given serious consideration.

The post will be based in Glasgow, but will entail regular visiting to BSC plants throughout the area, government bodies based in Glasgow and Edinburgh and BSC Head Office in London.

Those interested should write (quoting reference H.O.48) to:-

Personnel Manager (Head Office),
BRITISH STEEL CORPORATION,
P.O. Box No. 403, Grosvenor Place,
London SW1X 7JG.

PROFESSORSHIP

University of Reading

Professorship of Economics

Applications are invited for a Professorship of Economics which will become vacant when Professor J. H. Dunning takes over a Professorship of International Investment and Business Studies. There is no restriction on the field of interest of the candidate, although other things being equal it would be desirable for applicants to have interests in the general area of public sector/environmental economics.

Further particulars may be obtained from the Registrar, (Room 208, Whiteknights House), The University, Whiteknights, Reading, RG6 2AH, by whom applications should be received not later than October 31, 1972.

Universiti Sains Malaysia

PENANG, MALAYSIA

Academic Appointments

SCHOOL OF HUMANITIES

Post of Professor:

The University is looking for a candidate to fill the post of Professor in the School of Humanities. A candidate aspiring to apply for this post should be an established scholar whose qualification is no less than a Ph.D. with extensive experience in a University level scholarship research and teaching and with interest in inter-disciplinary programme.

The School of Humanities at the moment offers courses in:-

Communications
Fine Arts
Geography
History
Literature
Performing Arts
Philosophy

Senior Lecturers/Lecturers:

In addition to the post of Professor, the University is also looking for teaching staff at Senior Lecturers and Lecturers level. For the appointment of Senior Lecturer an applicant should possess a Ph.D. in any of the following fields:

Communications
Fine Arts
Geography
History
Literature
Performing Arts
Philosophy

He should have several years of teaching and research in a University institution together with publications and research papers of academic standing.

An applicant for the Lecturer's post should have at least a Masters Degree (preference to candidates with doctorates) with suitable teaching and research experience in the fields of communications, Fine Arts, Geography, History, Literature, Performing Arts and Philosophy.

SCHOOL OF COMPARATIVE SOCIAL SCIENCES

Post of Senior Lecturers/Lecturers

Senior Lecturers/Lecturers in the following fields:-

ECONOMICS (International Economics, Regional Economics, Mathematical Economics/Econometrics/Economic Statistics, Monetary and Fiscal Economics, Development Planning, Intermediate Economic Theory, Business Administration)

SOCIOLOGY/SOCIAL PSYCHOLOGY (Sociological Theory, Race Relations, Rural Sociology, Industrial Sociology, Sociology of Complex Organisations, Sociology of Professions, Deviance, Urban Sociology, Social Psychology, Industrial Psychology)

SOCIAL ANTHROPOLOGY (Economic Anthropology, Cultural Ecology, Applied Anthropology, Race Relations, Peasantry, Southeast Asian and/or East Asian Ethnography)

POLITICAL SCIENCE (Political Development, Comparative Public Administration, Public Enterprises, Local Government and Urban Politics, Southeast Asian Politics, Asian Political Thought, Politics in Multi-ethnic Societies, Quantitative Political Analysis, Political Parties and Interest Groups)

Those applying for Senior Lectureships must normally possess Ph.D. in the fields mentioned above together with suitable post-doctorate teaching and research experience while those applying for Lectureships must normally have completed their Ph.D.

CENTRE FOR EDUCATIONAL SERVICES

Post of Senior Lecturers/Lecturers in the following fields:-

Educational Methods in teaching Physics, Mathematics
Educational Technology
Curriculum Development
Educational Philosophy (Eastern)
Evaluation (Educational)
Educational Guidance and Counselling
Comparative Education
Educational Administration
Principles and Practice of Education

Those applying for the appointment of Senior Lecturer should possess at least a Ph.D. in fields mentioned together with several years of post-doctorate teaching and research experience for a reputable institution of higher learning while those applying for Lectureships must at least possess a Masters degree in the relevant fields (preference to candidates with doctorates) together with teaching and research experience.

Emoluments:

The appointment of Professor is a very senior academic appointment in the University and as such a candidate appointed would command a salary within the range of \$27,120 (\$3972) to \$38,000 (\$5292) per annum. The point of entry is dependent on the candidate's experience, qualifications and family circumstances.

A Senior Lecturer when appointed should command a salary within the range of \$22,380 (\$3276) to \$30,120 (\$4404) per annum, and a Lecturer within the range of \$18,600 (\$2480) to \$26,580 (\$3888) per annum. The point of entry is dependent on the candidate's experience, qualifications and family circumstances.

Other Benefits:

Provident Fund and free medical.

Initial Appointment:

Successful applicants may be given a three year initial appointment; thereafter, subject to satisfactory service, his appointment may be extended for another three years.

Further information including advice regarding the method of application and on further particulars about terms and conditions of service should be obtained from: The Registrar, Universiti Sains, Malaysia, Minden, Pulau Pinang, Malaysia.

The closing date of receipt of application is on 28th October 1972. The University reserves the right to make appointments by invitation.

Registry.

APPOINTMENTS

Australian National University

Lecturer in Political Science

Applications are invited from suitably qualified persons to take up a three-year appointment as Lecturer in the Department of Political Science. The vacancy has arisen because of the secondment of Mr. I. F. H. Wilson to Nanyang University, Singapore. The appointee will be required to take up duty after 1 January 1973, but not later than 1 June 1973.

The Department's first priority is to recruit a person to present a course to senior undergraduate students on Politics in Contemporary China; it would also be interested in receiving enquiries from people qualified to present a course on Politics in Indonesia.

Salary on appointment will be in accordance with qualifications and experience within the range \$A6804 x \$359-\$9387 per annum.

The University will provide reasonable travel and repatriation expenses. Assistance with housing will be provided for an appointee from outside Canberra. Superannuation is on the PSJU pattern with supplementary benefits.

Further information and the forms which should accompany an application may be obtained from the Association of Commonwealth Universities (Appal), 36 Gordon Square, London WC1H 0PF (Tel: 01-347 8572).

Applications close on 6 November 1972.

Massey University

PALMERSTON NORTH, NEW ZEALAND

Senior Market Research Officer/Market Research Officer

Applications are invited for the position of Senior Market Research Officer or Market Research Officer in the Market Research Centre. An appointment may be made at one of the following levels depending on qualifications and experience.

Senior Market Research Officer \$NZ7,278-9,358
Market Research Officer \$NZ5,880-7,149

Applicants who have had considerable experience in developing and administering research projects are particularly sought.

Applicants should have a University degree. An advanced training in agricultural economics, economics, marketing, business administration, statistics or operations research would be an advantage. Applicants for the senior position should have had practical research experience in at least one of the following areas—commodity projections, international trade, project evaluation and capital budgeting or consumer-oriented market research.

The general conditions of employment and particulars of the University are available from the Secretary-General, Association of Commonwealth Universities (Appal), 36 Gordon Square, London WC1H 0PF (Tel: 01-347 8572).

Applications close for both positions on 30 October 1972.

THE EUROPEAN INVESTMENT BANK

a public institution, founded by the Treaty establishing the European Economic Community, with its headquarters in Luxembourg and constantly expanding its activities is now seeking to recruit staff from the new Member States in view of the impending enlargement of the Common Market.

Applicants should have a perfect command of English, thorough knowledge of French and, if possible, of another Community language.

The Bank offers interesting work and a congenial working atmosphere. It also offers attractive remuneration. The starting salaries given below represent the sterling equivalent of annual net earnings, paid in Belgian francs, for an unmarried member of staff and are based on an exchange rate of 107.5 Belgian francs = £1 sterling. There are family allowances and a good Social Security Scheme with Pension and Health Insurance Funds.

Applicants for the appointments listed below should possess a degree or equivalent professional experience:

1 Manager of the Research Department to advise the Management Committee on the various aspects of the Bank's activity, particularly in the sphere of development financing and aid to overseas countries and territories. He will represent the Bank at various committees and meetings. The Research Department includes the Bank's Documentation Centre and Library. The successful candidate should have had at least 10 years' experience in the field of economic problems. He will have had one or more high-level position with managerial or consulting responsibilities in policy-making in the public or private sector, dealing with the financial aspects of development problems.

Age : 35 to 55.

Approx. Salary: £10,060-£11,555.

2 An Economist with a First or Second Class Honours Degree or a higher degree that includes the study of quantitative economic analysis. He will deal, in particular, with the overall problems connected with the Bank's regional activity in the Community and the United Kingdom. The successful candidate will have had at least 8 years' experience of regional policy problems.

Age : 35 to 45.

Approx. Salary: £8,025-£9,500.

3 An Economist for studies of financial problems of interest to the Bank, capital markets, and general economic problems. He will have had at least 8 years' professional experience, preferably in the research department of a bank, and a sound knowledge of national accounting practices.

Age : 30 to 45.

Approx. Salary: £7,010-£9,500.

4 An Assistant Finance Manager to help with portfolio placing and management. He will have had at least 10 years' experience of banking, with several years as senior staff member in the Treasury Department of a merchant bank or a bank operating in the international field, e.g., as Assistant Euro-currency Banking Manager; long experience in placing and arbitration operations; and preferably good experience in modern treasury management and planning methods, together with an adequate knowledge of banking law and political economy.

Age : 35 to 55.

Approx. Salary: £8,025-£9,500.

5 Financial Advisers or Assistant Financial Advisers, for recruitment at different grades, whose tasks will be to review and to help appraise financing projects. They will have had at least 8 or 3 years' banking experience respectively, preferably in the sphere of medium or long-term credit.

Age : 28 to 45.

Approx. Salary: £4,265-£9,500.

6 An Economist for studies of the African Associated States, their financial and economic position, markets, and appraisal of investment projects. He will have had 5-10 years' experience of African economics and development problems.

Age : 30 to 40.

Approx. Salary: £5,785-£8,370.

7 An Economist, with knowledge of quantitative economic analysis, to take charge of structural and regional studies. He will have had at least 5 years' relevant experience.

Age : 30 to 35.

Approx. Salary: £5,785-£8,370.

8 An Economist to collect and analyse information concerning the capital markets of the enlarged Community. He will have had at least 5 years' professional experience.

Age : 28 to 35.

Approx. Salary: £4,265-£5,025.

9 An Investment Assistant to help with portfolio placing and management and to keep abreast of developments in various money markets. He will have had at least 5 years' experience of banking as a dealer.

Age : 28 to 40.

Approx. Salary: £4,265-£7,000.

Applications, quoting the number of the relevant post and including recent photograph, detailed curriculum vitae and names and addresses of at least two referees, should be sent to:

Head of Personnel Department,
European Investment Bank,
P.O. Box 2005,
LUXEMBOURG.

All applications will be treated in strict confidence.

APPOINTMENTS

The Queen's
University of Belfast

LECTURESHIP IN ECONOMICS

This post is tenable from 1st January 1973 or such other date as may be arranged. The appointment may be subject to a period of probation of up to three years in duration. Initial placing, which will depend on qualifications and experience, will be made at one of the first three points on the Lecturers' scale £1,641 to £1,447 (2)-£1,935 rising to £3,852 (extended to £3,999 from 1st October 1973) (salary scale under review). Applications should be received by 16th October 1972. Further particulars may be obtained from The Senior Assistant Secretary (Personnel), The Queen's University of Belfast, BT7 1NN, Northern Ireland. (Please quote Ref. 72/E.)

COURSE

A SYSTEMS APPROACH TO MANAGEMENT

6-10 November 1972 in WINDERMERE
and
22-26 January 1973 in AMSTERDAM

The courses are intended to give senior management an insight into the application of systems thinking to problem solving in industry, commerce, local and national government. They will draw on the cumulative experience of the Department of Systems Engineering and ISCOL who have conducted over 100 consultancy projects in outside organisations.

The courses are organised by ISCOL in conjunction with the Department of Systems Engineering in the University of Lancaster. The course fee will be £90 at Windermere and £95 in Amsterdam. Details of these and other courses from F. A. Godfrey, ISCOL (Ref. M/1), University of Lancaster, Bailrigg, Lancaster. (Lancaster 65201 extension 4659).

APPOINTMENTS

Housing
Executive

Financial Planning Manager

£5,106 — £5,805

The Northern Ireland Housing Executive is the central Housing Authority for Northern Ireland with a building programme involving an annual capital expenditure of £40 million and an existing housing stock of approximately 140,000 dwellings.

It is intended that the organisation will develop and operate a comprehensive system of financial planning and control which will link up with the Executive's Corporate Planning Department on all aspects of the overall capital and revenue programme.

The Financial Planning Manager will be responsible to the Director of Finance for the development and maintenance of this system and will be expected to deputise for the Director in his absence.

The post requires a professionally qualified accountant with first class experience at a senior level in modern financial planning and management accounting techniques in their widest sense. This will be backed by a sound knowledge of computer applications in this field.

A knowledge of the operation of Planned Programme Budgeting would be an advantage.

Application forms may be obtained from the Personnel Manager, 1 College Square East, Belfast, BT1 6BQ.

Closing date for receipt of applications
11th October, 1972.

Please mark envelope 38/414.

October 7, 1972

Long week

Labour's conference at Blackpool has left Mr Wilson still safely in the leadership of his party, but it has also left Britain with an incredible alternative government, page 11. Our special correspondents report, page 23.

Revolutionary Heath

The Prime Minister's proposed incomes policy would involve a total change in the traditional machinery of economic government in this country, and this is one of its great attractions, page 12. He can give away about £1 billion a year more in order to sweeten the deal for the trade unions, and there are some cunning alternative ways he might do it, page 77.

No secrets

Britain's official secrets act is in a fortunately ludicrous mess, and there is a danger that the tidying proposed by the Franks committee might make it more restrictive by mistake, page 15.

Nine and North

Denmark's referendum has established a European community of the Nine. Norway's rejection leaves Scandinavia with sticky problems on both the political plane, page 14, and the economic, page 74.

Head start

Poor areas need more nursery schools, page 18.

First stop

Nearly 8,000 Asians have been airlifted so far from Uganda. How Britain is dealing with the refugees at the camps, page 28.

Steel's future

The world's steel industry is about to discuss a capacity-limiting agreement, but it will hope that its national anti-monopoly authorities are not listening, page 78.

Letters

Liberal party

SIR—According to your reporter, "the Liberals do not attract really serious politicians" (September 23rd). Perhaps he means "career politicians"?

I joined the Liberal party as an undergraduate nearly 40 years ago because: (1) I believe in the political philosophy of liberalism; (2) I was acutely conscious of the need for economic, social and political change based on liberal ideas; (3) I did not see any likelihood of any such change coming from the Conservative party; (4) I rejected the doctrine of the public ownership of the means of production, distribution and exchange, a cardinal belief of the Labour party; (5) while strongly supporting trade unionism, I thought a political party should not be dominated by one powerfully organised interest group.

Experience has confirmed, not changed, these views. You may well complain that all this is a bit solemn, but it is the attitude of many Liberals and could scarcely be more serious.—Yours faithfully,
House of Lords, SW1 SEEAR

SIR—I beg to disagree with your special correspondent at the Liberal Assembly who states (September 23rd) that "the Liberals do not attract really serious politicians."

There is ample evidence that the Liberal party has attracted "really serious politicians." Men such as Jo Grimond, Jeremy Thorpe and Lord Avebury—as well as local Liberal leaders such as Cyril Carr and Trevor Jones in Liverpool or the late Wallace Lawler in Birmingham—must be judged as dedicated and serious men (to name but a few). Just because they have chosen not to be the captives of two large established conservative parties does not make them any less serious. Each of the individuals I have cited has made a lasting contribution to our society, all of them at local levels and some at national level. They have promoted liberal values, fought for numerous reforms and sought a new role for the politician in the community. All of these things they can best do as Liberals without being restricted by the resistance to change exhibited by other parties. The fact that they have not joined the Tories or Labour is indeed additional evidence of their political seriousness; they have chosen to advance liberalism in politics, not themselves. Your correspondent freely admits some of their recent achievements in relation to "the common market, the problems of the low-paid, devaluation and the floating of the pound, the environ-

ment" Need I say more?—Yours faithfully,
ALAN BUTT PHILIP
London, N5

SIR—There is nothing quite like a holiday abroad to sharpen one's view of one's homeland. Viewed from the serenity of a Norwegian fjord, Britain's industrial relations seem both desperate and ludicrous—a view, I might say, which is shared by our Norwegian friends, especially those who seek to trade with us.

Liberals would say that the law must be obeyed, but it must also be generally acceptable, and that as the Industrial Relations Act in its present form will continue to lead to frustration, bitterness and absurdity, it must be drastically amended.

The Liberal party is the party of partnership, as opposed to those of capital and labour, and is urging that statutory works councils should be introduced, that company law should be changed to give employees the same rights as shareholders, and that tax concessions to encourage profit-sharing should be granted. At the same time, we believe that wage settlements should be made referable to the Restrictive Practices Court to curb union monopoly power and that a new basic standard contract is required for all workers.

Is it not absolutely clear that the old methods are becoming increasingly disastrous as the arteries of industrial dispute continue to harden and that the electorate must turn away from the Conservative and Labour parties if their all-too-familiar problems are ever to be solved?

Incidentally, Norway, like most Scandinavian countries, is expensive. I could have paid 60p for a dozen eggs, 50p for a pint of lager and 40p for a pound of tomatoes. Norway is a country which has remained outside the common market—and there is enormous pressure for it to continue to do so. I have no doubt that our food prices would soon have looked similar even should Britain have not grasped the final opportunity to join the EEC.—Yours faithfully,
PETER SMOUT
Daventry

Private flying

SIR—The only thing absolute in air accident statistics is the number of fatalities (September 2nd). Our Federal Aviation Administration can at best only guess at the number of aircraft operated, number of hours flown and number of flights. Therefore, the fatality rate per 100,000 miles for private flying is a rough estimate. There are indications that the miles and hours could be in error by as much as 50 per cent. Further, the general aviation accident statistics include suicides as well as known hazardous flight activities.

Regarding the report that one-third of the fatal accidents involved pilots who had been drinking alcoholic beverages, this is one of the most misinterpreted statistics to be related to private flying. Dr Stanley Mohler, the medical specialist of the FAA

THE ECONOMIST OCTOBER 7, 1972

who made the report, issued many cautions regarding its interpretation. However, these cautions have never been followed by the news media.

First, the study was based upon autopsies performed on only a portion of the pilots involved in fatal accidents. This was not a scientific sampling of the total. Among this small group, one-third showed evidence of alcohol in the blood system. An FAA physician cautioned, however, that this figure was not to be taken as an indication that all these people had been drinking. Unless an autopsy is performed within a certain time following death, blood sugar in the system can ferment, resulting in a reading of alcohol which can be misinterpreted as coming from drinking.

The National Transportation Safety Board reports that about six per cent of the fatal accidents can be attributed to pilot intoxication.—Yours faithfully,

CHARLES SPENCE
Vice President, Public Relations,
Aircraft Owners and Pilots Association
Washington, DC

Mining

SIR—In the review (September 16th) of the report of the Commission on Mining and the Environment, you state that all of the recommendations which the commission makes "about updating the planning system seem aimed at easing the mining companies' problems," and illustrate your point by suggesting that the commission considers "that it is unnecessary for the existence of exploration drilling to be made public." This is not so.

Under existing law, the minister may give directions to a local planning authority requiring that authority to consult with the authorities, persons or bodies named in such directions before determining any application for planning permission. This proviso underlies all of the commission's recommendations on planning procedures, as they affect exploration drilling, which are: (1) that planning permission should be granted automatically (by deemed planning consent) under a general development order, (2) that drilling should be carried out in accordance with a code of practice approved by ministers, and (3) that the local planning authority should be empowered, following consultation with the appropriate authorities and individuals, to impose additional conditions in particularly sensitive areas.

Amongst the safeguards which the commission suggests should be written into the code of practice are: (i) a requirement that the mineral prospector should give 42 days' notice in writing to the local planning authority before work begins, (ii) that the written notice should include the necessary plans and drawings to describe the proposed drilling programme and identify the area in question, (iii) that the mineral prospector should notify the occupiers and the owner of the land, and (iv)

THE ECONOMIST OCTOBER 7, 1972

MANAGEMENT APPOINTMENTS

£7000 PA AND OVER

Oil Adviser c. £7,000 p.a.

An international financial organisation invites applications for the position of Oil Adviser, who has an extensive knowledge of the industry, including overseas developments and projects. A knowledge of other energy fields would also be useful.

Ideally, he should be between 30/40 years of age. He would be involved in a small department dealing with all aspects of the energy business.

There will be scope for further advancement to a higher level within the organisation.

Salary will be approximately £7,000 per annum, depending on experience, plus a wide variety of fringe benefits available.

Please write in confidence, giving full details of career to: Box No. E 4269 c/o Charles Barker Recruitment Limited, 20 Cannon Street, London E.C.4.

SENIOR EXECUTIVE INTERNATIONAL FINANCE AND TRADE

A major Canadian corporation, located in Toronto, with expanding operations overseas, requires a Senior Executive to direct and develop a merchant banking activity and an international trading company. The position will report directly to the President of the Corporation.

Candidates must have a record of accomplishment, extensive experience in international finance and a knowledge of international trade. They must also have the ability to establish effective relationships with appropriate government officials both in Canada and abroad.

The salary is open but will not be less than £20,000 per annum.

Reply in confidence giving full personal details to File 5205.

Woods, Gordon & Co.

MANAGEMENT CONSULTANTS

ROYAL TRUST TOWER P.O. BOX 253,
TORONTO-DOMINION CENTRE, TORONTO 111, CANADA
A member of the Canadian Association of Management Consultants

Finance Director

for a British industrial giant with a nine figure turnover in world markets.

• THE role is a demanding one in a thrusting young top management team. There is a strong preference for a man under forty who has already achieved distinction, at corporate level, in financial management within a large scale business, operating internationally.

• REMUNERATION will be into five figures; terms include equity participation.

Write in complete confidence to K. R. C. Slater as adviser to the group.

that copies of all the relevant documents should be made available in the locality. These recommendations, if adopted, will strengthen existing controls, and ensure that the public has access to the facts about individual cases.—Yours faithfully,

P. J. NELSON

Secretary to the Commission
London, SW1

SIR—Your note (September 16th) on the self-styled Commission on Mining and the Environment, set up and paid for by Rio Tinto-Zinc and the other big mining companies, says that the argument for mining in this country is that it takes the pressure off the balance of payments by saving foreign currency spending and at the same time creates new jobs.

This has been the key rationalisation of both Rio Tinto and the government to support plonking great open-cast mines down in our national parks. Against it two points need making.

First, once the construction period for these schemes is over the capital intensive nature of the final enterprise means that the number of jobs created is usually very small. Secondly, the two recent major oil strikes, in the North Sea, together with those already made and new strikes which are envisaged, should provide at least 75 per cent of our domestic fuel requirements by the early 1980s. This means that it will simply no longer be necessary to despoil mountains, national parks and other designated areas of natural beauty in order to save foreign currency. The oil finds alone will achieve this comfortably—not, of course, without their own special environmental risks. In other words the government's rationale for allowing large scale mining in Britain and for paying a large part of the costs of exploration out of the taxpayers' pockets now simply disappears.

International Tourism Quarterly

The latest issue of ITQ continues the series of national reports with a study on tourism in ISRAEL, while a report on the BAHAMAS AND COMMON-WEALTH CARIBBEAN ISLANDS surveys an important tourist area.

You do not mention this in your report on the Zuckerman commission and it is a safe bet that Sir Solly and Co did not either. But that's no reason for letting them get away with it.—Yours faithfully,
London, NW3

ANDREW MACK

Bank charges

SIR—The most serious failure of the banks is their continued clamminess over charges—the words come from your excellent article of September 23rd. However hard done the British client may feel, you should perhaps be aware of an astounding attitude taken towards foreign residents concerning charges made for keeping share certificates. The clearing banks have decided to charge 1 per cent of the value of a share certificate received by them for custody and a further 1 per cent for every certificate despatched to the client's stockbroker. This effectively doubles the cost of switching equity stock and bears no relation to the small charge made to British residents for this minor service, nor indeed to the work required.

While my bank has explained that I can avoid this charge by making my purchases through them (to the detriment of my stockbroker on whose advice I act) or by removing the certificates (which I have done), they have flatly refused to explain any reason whatsoever why one class of client should be subjected to such outrageous charges while others are not. After all, there must be very few people who are prepared to add yet another 2 per cent in charges to their stock exchange dealings; so one is left with the view that, on the verge of moving into Europe, the banks are embarking upon a strategy designed to discourage foreign residents from becoming their clients. This particular one is removing his account to the London branch of a continental bank. If others do the same the cold winds of competition within the EEC may yet cause British banks to improve their client relationships.—Yours faithfully,
Brussels

A. L. KING-HARMAN

Uxbridge by-election

SIR—Your note about the pending by-election in Uxbridge (September 23rd) is interesting but when reference is made to the disadvantageous effect of a possible Labour victory at the GLC election upon Conservative chances you are using a generalisation that is not particularly relevant to this constituency.

Uxbridge is among the seats that will be won at the next GLC election. The Conservatives can win Uxbridge and not win the GLC (although this would be a sad day). If reference is made to the statistics on London borough elections (May 13, 1971) compiled under the direction of the GLC, it will be seen that the vote at those elections of electors within the parliamentary constituency of Uxbridge, which is also the GLC consti-

THE ECONOMIST OCTOBER 7, 1972

tuency in 1973, divided equally between Conservative and Labour. At that time (May, 1971) there was a 12 per cent swing in London to Labour from June, 1970. Things have improved since then and will continue to do so.

No, sir, the GLC election in Uxbridge will be a boost for the Conservatives, particularly if the by-election has not taken place by then.—Yours faithfully,

JAMES LEMKIN
Prospective Conservative
GLC candidate for
Uxbridge

Uxbridge, Middx

Inflation

SIR—The Government has been accused recently from various sources of increasing the money supply by too much and hence of stimulating inflation.

It seems to have been forgotten that the object of increasing the money supply is to increase aggregate demand and thus to lower unemployment and that unless a money supply increase raises demand to such a level that suppliers find it hard to keep pace, the money supply increase cannot be inflationary. And demand has not increased much recently, ergo the current money supply increase is not inflationary.

The argument can be illustrated by a hypothetical example: the Government can print as many extra billion pound notes as it likes and give them all to me, but so long as I fail to spend them, there will be no effect on demand or inflation.—Yours faithfully,
Pity Me, Durham

R. S. MUSGRAVE

Iran

SIR—I would like to take this opportunity to thank you for having published my letter (August 26th). I nevertheless very much regret that the last half-sentence of the letter had been omitted.

May I therefore restate what I said in my previous letter, that the advocacy of violence and armed insurrection as proper means to an end contradicts Mr Jabbari's argument regarding democracy and encourages so-called intellectuals to disregard law and order and to live by the law of the jungle.—Yours faithfully,

A. M. SHAPURIAN
Press attaché, Imperial Iranian Embassy
London, SW7

Caravelle

SIR—It is rather unfair of you to describe the Caravelle as "an object lesson in how the French threw away a golden opportunity by incompetent marketing" (September 23rd).

As shown by the accounts of a score of airlines, the Caravelle was never a "golden opportunity" for the simple reason that it was never able to match the seat-mile costs of aircraft which took advantage of more modern technology. Its

THE ECONOMIST OCTOBER 7, 1972

MANAGEMENT APPOINTMENTS

£7000 PA AND OVER

Director of Planning

A post of Director of Planning in the Department of Planning and Transportation has been created following a re-casting of the top management structure of the Greater London Council.

Under the Controller of Planning and Transportation, the Director of Planning will share with the Director of Development and Traffic Commissioner the responsibility for the executive management of the department. His sphere will be the social and economic planning of London at the strategic level. Within that broad context he will deal with the strategic aspects of housing, transportation and employment, and their relation to plans whether formulated for Greater London or for the surrounding region.

He will have close relations therefore with the planning organisations in the London Boroughs, the Department of the Environment, the trans-

port authorities, and with the regional planning machinery, and experience in such relationships will clearly be an advantage.

The post calls for administrative ability of a high order, the capacity for creative thought, skill in the interpretation and presentation of complex issues, and a personality capable of making a direct, understanding and responsive approach to the many interests, both inside and outside the Council, involved in strategic planning.

The normal salary on appointment is £10,383. Progression can be expected to the job maximum of £11,535 with possible further progression on exceptional merit beyond this figure.

Application forms, returnable by 23rd October, 1972, obtainable from Director General (C/JAC/293/—) The County Hall, London, SE1 7PB.

GLC GREATER LONDON COUNCIL

Chief Planner (Strategy)

This is a key post in relation to the Council's role as the strategic planning authority for Greater London, and calls for an ability to make a major contribution to the formulation of long-term strategic policies on a regional scale.

The person appointed will head the Strategy Branch of the Department of Planning and Transportation and have a major and personal part to play in carrying out research into the social, economic and physical needs of the metropolis and formulating and advising the Council's Committees on comprehensive policy options for meeting them. He will be responsible for advising on further development of the strategic policies of the Greater London Development Plan and for monitoring their implementation.

The successful candidate must be able to guide and inspire the work of highly qualified and specialised staff. He should have a marked aptitude in

communication, with an ability to identify essentials and present complex issues concisely and clearly.

The position is intellectually stimulating and demanding, and the establishment provides strong academic, Professional and managerial support accordingly. The Branch has three professional Divisions, each headed by a senior and experienced officer, and dealing respectively with social strategy, economic strategy and policy integration. An application for an engagement on a contract basis could be considered if desired.

The normal salary on appointment is £8,016. Progression can be expected to the job maximum of £8,904 with possible further progression on exceptional merit beyond this figure.

Application forms returnable by 23 October are obtainable from the Director-General (C/JAC/469/) The County Hall, London SE1 7PB.

GLC GREATER LONDON COUNCIL

For further management appointments see page 5

performance was also slightly inferior in most respects. But because of its relatively low capital costs it continued to sell in small quantities until recently.

If the Caravelle is an object lesson, it is in French flair at continuing to market successfully a product which had become technologically obsolete.—Yours faithfully,
London, SW13 JOHN SEEKINGS

Ugandan Asians

SIR—As an Asian from East Africa, I offer my heartiest congratulations and support to *The Economist*, and the liberals of the United Kingdom, on your article "The true voice of Britain?" (September 16th), and at the same time sympathise with you in having to absorb 30,000 victims of naked racism and brutal dictatorship in Uganda.

Uganda's politics of contradiction and the silence of the so-called African intellectuals in Uganda and other independent African countries have left Asians all over East Africa baffled and bewildered. The Ugandan incident has exposed the double standards of African intellectuals and nationalists.

Britain has once more shown itself as the land of fair play and justice, and also magnanimous in alleviating human suffering anywhere in the world. We Asians understand the problems of the British people at this moment, with the high rate of unemployment, housing and schools shortage, increasing population density etc, and we shall try not to be a burden on the British taxpayers.

It will benefit all Ugandan Asians if most of them with substantial capital decide to begin a fresh life in India.

Incidentally, the Ugandan episode also reveals the hypocrisy of the Indian government in not providing any moral and

material support to its own kith and kin while speaking hours unending for Palestinians in the United Nations.—Yours faithfully,
Nairobi VIPINCHANDRA D. SHAH

SIR—Being a Ugandan Asian, I was very much distressed reading the letter written by Mr A. W. Randall (September 23rd).

Mr Randall's point about General Amin being "eminently sane" is debatable. General Amin is the man who has expelled the Israelis, now the Asians, and practically every week a British diplomat, and who further adds that he receives messages from God. I leave you to draw your own conclusions.

As for Mr Randall's point about the Asians filling all the market squares in this country, this is hardly likely. And he gives no evidence to support his statement that the Asians were anti-British and that their hatred for the British will take years to eradicate.

Having lived in India for many years, Mr Randall likes the Asians there "but there they should stay." Why? They were given British passports by the British; why not come here? They are Britain's citizens.

Mr Randall's theory of a half caste population in this country is far-fetched. Admittedly there will be some half castes, but surely this will curb racial problems? He hopes the Asians will not integrate. Why not? If Asians do not integrate, people say this is unsocial; if they do, people like Mr Randall cry out that the country will have a population of half castes.

I suppose it takes all sorts to make the world. It is a comforting thought that not all of Britain's population have the same views.—Yours faithfully,
Ashford, Middlesex A. JAFFER

SIR—I must take issue with Mr R. I. Mackenzie (Letters, September 16th) when he compares the South African racial situation so favourably with that of Uganda under General Amin. When he states that Africans are not being "expelled from South Africa" he conveniently does not reveal that they are continually being expelled from the "white," ie, developed, areas of the country (where they can hope to find employment) into so-called "homelands" which are almost totally undeveloped, desperately overcrowded and which, in any case, under the present government's policy are intended shortly to become foreign states, no longer part of the Republic. Already Africans are given "ethnic" identity documents intended to make them foreigners in the land of their birth. The South African government does not act with quite the crude impetuosity of General Amin: but its racism is as appalling and the ultimate effects of its policies of forced removals of populations no different.

It must not be forgotten that the National party came to power in 1948 on the slogan "Kaffir in sê plek en koelie uit die land" ("the kaffir in his place and the coolie [a common derogatory term for Asians] out of the country"). It has proved impracticable to implement the latter half of this charming philosophy, due chiefly to the infinitely greater number of Asians (all, incidentally, of South African nationality) in the country compared with that in a country like Uganda: but every effort is continually made to force "kaffirs" into their place against all laws of economic necessity and social morality. There is no "progress through evolution" in this country, as Mr Mackenzie, like so many English-speaking and supposedly anti-government South Africans, has apparently been duped into believing by Nationalist propaganda. There is only an increase in the already vast gap in the standard of living between white and black, and an official policy of naked racism hidden, as General Amin's is not, behind a cardboard façade called "separate development," which is in fact designed to perpetuate white domination as far into the future as anybody can see. The chief opposition party in parliament is as firmly committed to this dominance as the Nationalists; only its methods differ. And although an increasing number of white voters are rejecting the two main parties' "baaskap" policies, this number is still less than 4 per cent of the electorate. (Such political voices as are allowed to Africans, Asians and Coloureds are of course irrelevant to decisions made in the white parliament).

The promotion of inter-racial harmony in a country which is probably in greater need of it than any other is scarcely improved by these white political attitudes, and Mr Mackenzie's offensive language, in which he lumps all Africans (including, presumably, the Zulu prime minister Chief Buthelezi, the Transkei's Chief Matanzima and the late Nobel prize-winner Albert Luthuli) together as "children" is not calculated to improve it either.—Yours faithfully,
Johannesburg D. R. S. BOOTH

Terrorists

SIR—You say (September 16th) that "... the international community has no way at present of punishing a country that provides a haven for hijackers."

This seems very odd.

Surely the international community can brand a country as being a harbourer? And then no aircraft of the community will fly to that country? And also no airport of the community will entertain that country's aircraft?

Wouldn't that be possible, and enough too?—Yours faithfully, LINDSAY VERRIER
Suva, Fiji

The Economist

October 7, 1972

Long week in politics

Mr Wilson has lived through one of his more interminable weeks; but at least he will leave Blackpool at the end of his annual party conference on Friday afternoon as undisputedly the leader of the Labour party as he was when he arrived. That is not, to be sure, saying a great deal; but such is the state of Labour politics these days that even the smallest mercies tend to be hailed as the most saving graces. The Labour party has come through its conference looking rather more absurd than at any time in its history. Its temporary salvation is that it is an absurdity which the pro-marketeters can just live with. That may not, and probably will not, mean much in the long run; but for the moment it means that no serious Labour politician will now challenge Mr Wilson for the leadership when parliament returns, and even the silliest among them will think twice about standing against him.

Whether that is any great advance for either the Labour party or British politics generally is another matter. By persuading the conference to defeat the crucial attempt to commit Labour to opposition to the market in principle, even if it was by the slenderest of majorities after a recount (see page 23), Mr Wilson has enabled Labour's marketeters to pretend for a while longer that their cause is not entirely lost. But it can only be a pretence.

Credibility will be needed some day

Certainly, it is true that the conference passed, by a comfortable majority, the executive committee's statement which limits the next Labour government to renegotiating the Brussels treaties over a whole range of issues, the results of which will be put to the British public by referendum or general election. Few people believe that such renegotiation is possible; fewer still believe it possible to reach the terms which the conference, through the resolution from the Boilermakers' Union, regarded as acceptable. If that were merely conference semantics, as some marketeters are kidding themselves, it would not greatly matter. But it is not as easy

as that. The central fact is that there is a rapidly disappearing dividing line between what Mr Wilson says would be acceptable to a future Labour government and straightforward rejection of joining the market altogether.

As the out-and-out anti-marketeters made clear in Wednesday's debate—and Mr Michael Foot got a far more enthusiastic reception than anything accorded Mr Wilson during the week—the common market battle inside the Labour party is very far from over. Mr Wilson only just saved the day, and then at a cost which very many other politicians would have regarded as a loss of their self respect. It was a desperate speech in many ways; and whatever else may be said about Mr Wilson the humiliation which he has now so often demonstrated he is prepared to undergo to preserve some pretence of unity in the Labour party must provoke grudging, even if at times shuddering, admiration. Yet he, too, is faced with a dilemma. The anti-marketeters will not let go, either through conviction or through determination to destroy Mr Roy Jenkins and his friends. But the more Mr Jenkins and his friends, quite properly in the Labour tradition, say they will stay within the party to fight their corner, the more the anti-market Left will be tempted to push them into that corner. At some time the centre and right of the parliamentary Labour party are going to have to stand up and fight for credible policies, and the longer they delay it the more likely they are to hand the next election to Mr Heath on a plate.

Of course, good reasons can always be advanced by politicians why they should not fight, particularly within their own party. Mr Jenkins did not, for example, speak in what was by any calculation a crucial debate on Europe; it was left to two less significant figures, Mr Jack Peel and Mr Willie Hamilton, to put the pro-market case with both skill and courage. The arguments Mr Jenkins's friends used against him taking part were, to some extent, understandable: had the vote at the end gone completely sour he might very well have been blamed for it. The Labour party is not unfamiliar with

the accusation of leaders hawking their consciences around from conference to conference.

But the point that is in danger of getting lost is that individual, sensible Labour MPs, who still make up the majority of the parliamentary party, cannot be expected to stick their necks out while their seniors are so concerned to keep their heads down. That is equally true in the trade unions. There is a political crisis in the Labour party which no one would deny. A tiny minority of left-wing militants control the most powerful unions; and they in turn usually control the party conference—although, as this week has shown, they do not entirely control it when some form of leadership is given. Because there rarely is such leadership, the consequence is a Labour party outside Parliament which is all too ready to adopt total nonsenses, from mass nationalisation with minimum compensation to workers' control and a completely free hand for the unions. That is the sort of rubbish which Mr Benn asks the next Labour government to take seriously; if the country took it seriously, there would never be another Labour government.

The sensible and shamefaced

At the same time, there is a parliamentary Labour party which is inherently sensible, however shamefaced it may be over its shifted stance against the common market. It is that parliamentary party which provides Labour with its respectable lead in the opinion polls. It is a party, moreover, which is still generally accepted as possessing rather more political talent than the Conservative party. But it is also a party which has reached a crisis of confidence in itself.

Only the minority of left-wing MPs believe in what the Labour party as a whole is now doing and saying. The vast majority of the rest are just drifting along. It is arguable whether that is through apathy or demoralisation, but the root cause is clear enough. The party, as it has been represented at the last two annual conferences, is acting as if the last Labour government was in power 20 years ago. Actually, it was in power just over two years ago. The majority of Labour MPs, although they recognise the need to rethink some aspects of party policy, cannot swallow the acceptance of policies which such recent experience has shown to be either patently absurd

or incapable of implementation. Labour's retreat from the realities of government has now gone across the board. Its MPs know that most of it is nonsense, but they are rendered impotent by the fact that the retreat has been led, for a mixture of motives, not simply by Mr Wilson, but by most of the men on the next rung of the ladder who believe that they might have a chance of succeeding him. These men still remember that Mr Wilson let it be known that he would have retired by now if Labour had won the last election.

There was no evidence at Blackpool this week that the Labour party is capable of breaking out of its descending spiral under its present leadership. Mr Wilson did his turn on Tuesday, and his long speech was no better and no worse than in previous years. As usual, he was able to establish some form of fleeting unity by ignoring all the issues which divide the party, and concentrating instead on the common enemy, Mr Heath. Some of his jokes were really rather good.

But there were two points about that knockabout act which deserve attention. The first is that, for all his nine or ten points on what Mr Heath should do to fight inflation, it is quite incredible that the former prime minister of this country felt unable to give a definite judgment on Mr Heath's wages-prices package before the union leaders themselves had delivered their verdict. The second is that, for all the speech's superficial success, it was very difficult indeed to find anyone who believed that it would attract a single person to join the Labour party.

But Mr Wilson is safe for some while yet. It was very clear at the conference that there is no other man of standing with the will or the power to risk splitting the party by challenging him. The Tories will regard that as good news. But they should beware of complacency. All the signs are that the Labour party will grind itself into further trouble in the coming year, but the Tories will not profit by it if they think it is enough simply to sit back and enjoy it. Some of the troubles that sensible Labour men are in stem from Tory failures; there is nothing that enhances the authority of moderate mem-policies. Mr Heath should reflect that when men most like himself are in trouble with the Labour party, so may he be with the electorate.

The silent revolutionary Heath

The prime minister is trying to carry through a total reconstruction of Britain's traditional system of economic management

The Government does not believe that either Labour's blarney at Blackpool or the Trade Union Congress's protestations at Preston have made the next tripartite meeting on incomes at Chequers on October 16th into any sort of a waste of time. What has so far emerged from the Preston meeting of the TUC's economic committee may even be given a cautious welcome. The TUC was bound to indulge in some gazumping and ask for more than the Government could or should concede. The gap

between the three sides to Mr Heath's intended social contract is not yet so wide that it cannot be jumped without someone falling flat on his face.

The result is that when the Conservative party conference gathers at Blackpool next week, breathing fire against the rudenesses uttered in the same hall this week, they are liable to find their prime minister expounding augustly on the theme of one nation. As they trumpet the cry from the Tory grassroots that the trade unions

should be told where they get off, Mr Heath will be self-confidently asking the trade unions to come aboard instead.

It is important to realise that the prime minister is asking the trade unions to come aboard a genuine revolution in the economic management of this country. It may not prove to be the right revolution, but after a decade and a half when Britain has had the worst economic record of any major industrial country, under five prime ministers, it is right to give great latitude of support to any revolution that looks as though it just might come off. The slogan of Mr Heath's economic revolution is to go for 5 per cent annual economic growth, and the necessary condition for his coup d'état is that absolute control over economic policy has already slipped away from the computer-mounted knights of Great George Street, with their endless charges against the dragon of excess demand. A scientific autopsy has revealed that this poor, dreaded and often mythical monster died quietly of old age during the descent into 11m of unemployment in 1968-71, in one of the few postwar periods when he was not even supposed to be under attack; moreover a search of the unpleasant cave from which he barred us has confirmed the oft-suspected truth that it never did contain the lovely maiden of stable prices anyway. It is conceivable that Britain's greatest postwar economic disadvantage has been what was once supposed to be Britain's greatest postwar governmental advantage: namely, the fact that our Mother of Parliaments, created seven centuries ago to vet and delay budgets presented by authoritarian monarchs, is now too antediluvian to vet and delay budgets presented by authoritarian bureaucrats, so that Britain has been the only industrial country where instant policies of demand disinflation have been enforceable every spring (or summer, or autumn) budget-time. This disinflation has enabled us to deal constantly with the shadow of inflation, instead of its substance; at best, it has sometimes made things temporarily better by making them permanently worse.

A social contract in a national plan

The essence of Mr Heath's revolution is that Britain should now adopt the sorts of policy which have been forced by circumstance on lucky countries like France: where weak governments have not been able to introduce instant disinflationary budgets, so the poor fellows have had to go for regular 5 per cent growth, and where some of the lush fruits of this high growth have been wasted in ways of which Treasury knights would never approve, but as part of a social contract that is supposed to help to hold down inflation by permitting just a few extra economic nonsenses in the name of social cohesion.

There are obvious problems in the way of this policy—such as that growth can bring balance of payments troubles (but Mr Heath is ready to meet that by flexible exchange rates, and has said that sterling will return to a fixed parity only "at the appropriate time and at the appropriate rate") and that growth requires some confidence and vision by industrial investors (but Mr Heath

thinks entry into Europe will provide that). The biggest problem is how to make the social contract against inflation stick. In France the task is rather eased by the fact that only about one in four workers is a seriously paid-up member of a trade union.

The social contract at which Mr Heath is aiming takes the form of bringing the unions and Confederation of British Industry into a joint task of economic model-building. The two parties are being told: "This is the increase in money gnp which can be expected with 5 per cent growth and 5 per cent price inflation. How do you propose we should distribute it?" This is a public showing of a national plan of much more dramatic meaning than Mr Selwyn Lloyd's still-life in 1961-62 ("The National Economic Development Council") and Lord George-Brown's two abstracts ("The Statement of Intent" and "The National Plan, circa 1964-70"). But what are the chances of the new Heath national plan not being stopped in its tracks either by a right-wing Conservative party revolt when right-wing Conservatives recognise what sort of national planning is being attempted, or by quiet resistance by establishment forces in Whitehall when they recognise how much power is being taken away from them, or (most obviously) by blunt refusal to co-operate on the part of the trade unions?

Prime ministerial command

The danger of a revolt by the Conservative party is not very great. As Mr Wilson never fails to observe, this Heath Government has already established its right wing credentials with its own supporters in the reform of the tax system and the Industrial Relations Act. Mr Wilson never went so far towards satisfying his own supporters when he was in office. The Conservative Government therefore can afford, politically, to dish out a certain proportion of a growing national income in aiding lame ducks, if that is what the trade unions want; it can offend against the Tory (and Shavian) principle that an Englishman never feels he is being moral except when he is uncomfortable. Moreover, contrary to popular belief, this lack of abrasiveness suits the Prime Minister's temperament. While radical by nature, his time horizon is surprisingly long. He understands that even justified change can be vindictive in human terms if pushed too far too fast. The stowaway has no right to be aboard a ship, but when he is discovered he cannot simply be thrown overboard and told to swim home.

At first sight, the danger of resistance by establishment forces in Whitehall might seem more serious. There is no doubt that Mr Heath's new national plan means that the Treasury, as guardian of the budget and lord of demand management, is to lose its paramount role in the determination of economic policy. This is a change which Lord George-Brown and others vainly sought to achieve by cosmetic changes in the structure of government and so consistently failed. But, in a sense, it was the failure of wage and price inflation to respond to rising unemployment in the late 1960s which broke the Treasury's monopoly, and created a void in Whitehall. We have been ruled by that void ever since, and

there has been great interest in seeing who would eventually fill it.

It has fallen upon the prime minister to take a grip on events, which he has now done in no uncertain manner. In so doing his role has been strengthened far more than could ever have been achieved by any number of think-tanks or special advisers or businessmen. Changes in the machinery of government have their *raison d'être* in changes in responsibility and power within the system, and not vice versa. Events have forced a change in the pattern of government which is likely to endure. From it will develop a new, less blinkered machinery—whether within Whitehall, in the form of a Prime Minister's department, or outside in a bigger role for the National Economic Development Office. And this machinery will have to be effective. It is one thing for the Prime Minister to assume responsibility for an area of policy, and quite another to expect him to deal, unaided, with all the details. It is a measure of Mr Heath that in setting the tripartite system going he recognises its broader implications, sees in it the makings of a radical reform, and will try to implement it with new mechanisms.

And so to the unions

Naturally, the biggest question is whether the unions will wear it. Ministers still seem optimistic. They do not see this as a manoeuvre to wrong-foot the unions with public opinion. They make no threats. They think that the TUC must gradually come to see that for the first time it is being offered a constructive influence over the formulation of economic strategy. This is a big prize, which the unions should not lightly reject. Mr Heath genuinely wants the tripartite arrangements to succeed

and become a permanent instrument for the strategic management of the economy. He can give a lot—up to another £1 billion in tax cuts or their equivalent (see page 77)—to get an agreement. Once a collective approach has been established under a Conservative government, the unions' ability to influence any subsequent Labour government will be vastly enhanced. Future governments would have to be much more open about their thinking on the economy than in the past. No longer could policy be handed down from on high, with a haughty "like it or leave it" attitude, riding roughshod over the wishes of both sides of industry.

If the talks do break down, presumably the Government will have to resort to a statutory policy for a time. Phase one of this statutory policy would not be a complete freeze like Mr Nixon's phase one, but the statutory enforcement of Mr Heath's formula of not more than an extra £2 a week all round. It is also now fairly easy to guess what phase two would be likely to be. All the time during unilateral statutory control, the Government would be saying to the TUC and CBI: "an extra £1 a week for everybody costs about £1 billion a year; we think that the amount that should become available for rises in wages and salaries, as a result of next year's expected rise in money gnp, is £2 billion or £2½ billion or £3 billion. Say approximately how you think that this should be divided, or tell us why you think the £2½ billion figure is wrong." The assumption is that the TUC and CBI could not go on refusing for ever to participate. It is true that both TUC and CBI at present lack teeth, even although that has never stopped them from barking and snapping at successive governments. But they might eventually be fitted with dentures.

The Nine and the North

Mr Krag has quit politics after leading Denmark into a European community that can now hope for other Scandinavian recruits

So, in the end, only one into Ten would not go. Just a week after Norway's "no" to joining the European community, the referendum in Denmark produced an unexpectedly resounding "yes." An opinion poll taken only a month earlier had indicated that, if the Norwegians decided not to join, the Danes would be left evenly divided about entry; but on Monday, when nearly 90 per cent of the electorate turned out despite the fact that it was a working day, the vote was almost two to one in favour of EEC membership. So the enlarged community is to be the Nine.

It will include only one of the Scandinavian countries. This will irk many tidy-minded people, whether they are concerned about the look of the community or that of the Nordic region. But it is a valuable kind of untidiness. If the Danes had let themselves be swayed by qualms about becoming the common market's only Scandinavian member, a deplorably sharp dividing line would have been drawn between western and northern

Europe. Fortunately, the Danes saw which side of the line their butter must be spread on. Their entry into the community will prevent it from developing a habit of regarding all the Scandinavians as remote, irrelevant and even antagonistic aliens. And, with Denmark in, serving as "a door towards Norway and Sweden" in Dr Mansholt's words, the question of eventual Norwegian and even Swedish membership can remain a live one. It should be an objective of all good Europeans to stir it up from time to time.

Denmark's entry will certainly not mean the severing of the ties that now link the five members of the Nordic Council, including Iceland and Finland. Their economies have been drawn closer together by free trade during the Efta years, by free movement of labour under Nordic agreements, and by various other forms of integration (see page 74). They have developed a practice of consultation that includes regular meetings of their heads of government (the next such meeting is due on November

20th, when there will be no lack of material for discussion). Denmark will now be regarded by the other members of the group as the representative of Nordic interests within the EEC. In particular, it will be expected to help with the unscrambling of the mess in which Norway's relations with the common market have been left. The more one looks at that mess, the more one feels that here at last is an area which seems to have wiser politicians than many of its people, fooling themselves with northern myths, deserve. Even if the Danes had said no to the common market on Monday, there would have been no real prospect of a revival of the Nordek plan that the Finns scuppered in 1970. Scandinavian politicians are quite capable of feeling unhappy about some aspects of the EEC's nature and yet accepting its enlargement as a compelling reality. Their Nordic loyalties do not blind them to the inadequacy of their own region as an exclusive economic grouping. Adjustment to the new European scheme of things is now the primary challenge that faces them all.

Why Krag went

Mr Krag's resignation the day after his triumph in Monday's referendum was a reminder that even in Denmark, always the most pro-market of the Nordic states, the reconciling of European policies with domestic politics has called for some skilful and hard accommodations. Once the EEC issue was settled the three non-socialist parties, whose former coalition was only narrowly ousted in last year's elections, were expected to demand fresh elections, in which they could exploit the open rift between the Social Democrats and their anti-market allies of the left-wing Socialist People's party (SF). The new Social Democratic leader chosen on Tuesday, Mr Joergensen, may be better placed than Mr Krag to keep the SF in line and prevent it winning over anti-market dissidents from his own party. But, whatever the outcome of the new party battles, external policy will scarcely be affected. Mr Joergensen is as much of a pro-market, and pro-Nato, man as the likeliest leaders of any new centre-right coalition would be.

Norway, having reined in on the brink of EEC entry, which is still favoured by a strong majority in a parliament that cannot be dissolved until next September, must now teeter on with stopgap governments and stopgap trading arrangements while its friends do what they can to draw it out of this limbo. Sweden, with an acceptable trade agreement with Brussels already under its belt, is not likely in the new circumstances to lose any of its visible interest in acquiring more intimate links with the common market. The Finns have at last got a coalition government capable of signing their agreement with the EEC; their opinion polls indicate strong support for this move; and their communists signally failed, in this week's local elections, to gain ground by opposing it. Iceland, as usual the Nordic group's oddest man out, has hitherto barred itself from accepting a deal with the common market by pursuing its cod war with Britain and west Germany, but the terms offered to it can be netted whenever the fishy dispute is settled.

The shaping of the new relationship between the community and the Nordic states is going to be complicated. There is much laborious work to be done on the job, and exasperated impatience with it will at times resound within the EEC as loudly as the cries of apprehension among anti-market Scandinavians. But Denmark's decision on Monday meant that the job can be pushed ahead without a corroding delay—and that those who might, privately, prefer to see it abandoned have been deprived of an argument for abandoning it. What the Danes' yes did not mean, however, was that Europe could afford to forget why the Norwegians had said no. Norway's present plight may be an object lesson in the perils of indecision for other Scandinavians, but Norway's warning to all Europeans remains clear and vivid. Even in Denmark it is sobering to compare this week's not-quite-two-to-one vote for joining with the nine-week's not-quite-two-to-one vote for joining with the nine-to-one majorities in public opinion polls at the end of the 1960s. The community must learn not to let centralised power ride roughshod over all sectional sensibilities if it is to endure, let alone attract peripheral groups like the Scandinavians.

Messing about with a mess

Britain's present Official Secrets Act is too absurd to do much real damage, and the tidying recommended by the Franks committee could make it more restrictive by mistake

At a time when over one-third of paid activity in Britain takes place in the government sector, it is nominally a criminal offence under section 2 of the 1911 Official Secrets Act to say or hear almost anything about it, down to revealing or knowing the colour of a civil servant's wallpaper. The result is that prosecutions under this section 2 are rarely made, and the act matters much less than newspapers like to pretend.

Since 1945, only 23 prosecutions have been brought under this section 2, and most for offences (eg policemen tipping off criminals) that really do need stopping. Looking

through the record, the only punishments which seem a bit hard have been for petty espionage on defence matters for communist countries, and most of these people would probably have been prosecuted under tougher statutes if section 2 had not existed. But in 1970-71 there was a prosecution against the Sunday Telegraph which had published a secret report by a British diplomat in Lagos, saying how awful and corrupt the Nigerians were; the Foreign Office did not like the Nigerians to know how awful some British diplomats thought they were, but the Sunday Telegraph defendants were acquitted. Neverthe-

less, the cries of "press persecution" rang out to the departmental committee which has been looking into section 2, under the chairmanship of Lord Franks; and have probably influenced the committee towards making the wrong recommendation.

On balance, the best course might well be to leave the present logically indefensible, but therefore rarely used, section 2 much as now; but to introduce a new defence if those accused claim to have acted in (or even not positively against) the public interest. However, and almost inevitably, the Franks committee has been tidy-minded enough to call section 2 a "mess," so the Government will probably push forward to one of the two possible "reforms."

The reform that Franks has rightly rejected is the one that many newspapers wanted: abolish section 2 altogether, undertake criminal prosecutions only for definite espionage, and sack any civil servants who leak to the newspapers in the same way as business would sack inconveniently leaking executives. The newspapers' argument is that the threat of criminal prosecutions terrifies some civil servants into unnecessary secrecy. Civil servants reply with the rather good answer that any damage to the public interest from this is less than the damage which would be done if every British diplomat reporting from Lagos felt that he could only express to the Foreign Office views about the Nigerians that would look unembarrassing in the Sunday newspapers and with the stuffy argument (implicitly supported by Franks) that the nation must be able to punish blabbermouths who damage it even if they have had no malevolent intention. But the strong probability is that both sides are barking up the wrong trees. Our guess is that, diametrically contrary to most newspapers' beliefs, this abolition of section 2 would actually lead to less open government. In practice, it is at present much easier for newspapers to find out and print what is going on in Whitehall departments than in individual businesses, because business executives are frightened of losing preferment (for saying things that civil servants know that no government would be silly enough to prosecute them for). This form of business discipline would be tightened in the civil service if section 2 went.

Open to the public

There remains, therefore, the reform which Franks has recommended: that section 2 should be "replaced by narrower and more specific provisions." By far the best way of doing this would be to give the public a specific right to look at certain changing types of official documents, as in a more liberal version of the Swedish system (which British journalists think allows Swedish journalists to examine all official working papers, but actually makes large and probably too rigid exceptions). It would be good to have a standing committee of press and civil service and welfare organisations in Britain, establishing changing rules about which documents should be absolutely open to public inspection: for example, consumer organisations should certainly be able to look at government experience with different types of mass pur-

chases, and a lot more private Nader-type investigations of particular government agencies are desirable.

Instead, Franks has rather stiffly said that the Swedish system would not fit with the British constitution. It proposes that section 2 should be narrowed so that criminal prosecutions should henceforth be possible only for leakages of official information which relate to defence or internal security, or foreign relations, or sterling's exchange rate and the currency reserves, or law enforcement, or Cabinet documents, or are of information that had been entrusted to the government by a private individual or concern. Franks argues that this narrowing of the scope of section 2 would lead to much more open government. It would be more likely to do the reverse.

More specific means worse?

The trouble is that any narrowing of the scope of the present admittedly absurd section 2 is likely to make government assume that it is less absurd to wield the big stick at matters kept within the reformed section's ambit. But nobody can tell what matters should be removed from secrecy rules in future, and some bans proposed by Franks are surely already wrong. As two examples:

(1) The official figures published for Britain's currency reserves are often lies, and great harm has sometimes been done to the nation by officialdom telling these lies in an effort temporarily to keep up the sterling exchange rate (and thus also to keep up unemployment) above the level that the market was showing to be right. It is usually greatly in the interest of the country if newspapers can pierce this official subterfuge, and it would be regrettable if a libertarian "narrowing" of section 2 made their editors more likely to go to prison for doing so.

(2) Suppose that a drug manufacturing company told the government that there was an outside chance that its newest wonder drug might make a strictly limited number of unborn babies into misshapen monsters, but please don't reveal this as the drug was a good export. At present, some public servants and the press would see that publicity made it impossible for that sort of horror to be kept secret; just conceivably, a new section 2 specifically protecting all "information entrusted to the government by a private individual or concern" might make public servants more chary of doing so.

In practice, pressure would not be pushed to these extremes. The editor of *The Economist* would be unlikely to go to prison after each monthly business note on the gold reserves, and officialdom would not risk maiming babies. But there are gradations in these matters, and Franks's narrowing of section 2 could have bad results at some point somewhere back along them. The two reforms that should be supported are the establishment of a positive right of public inspection of a changing assortment of official documents, chosen by a standing committee; and a new legal defence that any breaching of official secrets was undertaken on behalf of (or was not against) the public interest. If the Government will not legislate on these points, it would do best to initiate a rambling debate over the Franks report, and then quietly forget it.

Nursery schools for some

The best places for any new schools for the under-fives are in the worst areas

The first report by Dr A. H. Halsey on government-sponsored "action-research" in educational priority areas in England was published this week. It has further increased the onus on Mrs Thatcher to say something ambitious about nursery schooling in the catch-all education policy white paper expected from her this autumn. Dr Halsey's is not the only document in her in-tray. Lord James's report on the training of teachers, with his proposals for a two-year higher education course, is undoubtedly the most pressing; there is also the little matter of the universities' programme for the new quinquennium. But Dr Halsey's report adds to the demands of those who most want nursery schooling the claims of those who most need it. He endorses preschooling as the most effective form of "positive discrimination" towards children in deprived areas.

The aim, or creed, of positive discrimination was launched in Britain with the Plowden report on primary education in 1966. The slogan of the 1940s and 1950s—equality of opportunity—had been tarnished by the realisation that poor housing, overlarge families and the cumulative deprivation of city slum life made opportunity a misleading word before children even entered school. Research suggested that the gap between the fortunate and the unfortunate, irrespective of ability, had only widened by the time they left. The slogan that has taken its place—equality of achievement—has an equally beguiling and dangerous simplicity. At its most crass, it becomes an argument for concentrating resources on any group just because it is performing less well than any other group. (Mr Edward Short uses it as a demonstration of class privilege.) At its best, as in the Plowden report, it is a prescription for trying to reduce the under-achievement of children whose home circumstances handicap them at school, in the interests both of social justice and—old-fashioned as this argument now sounds—national progress.

After Plowden

The Labour government's efforts at positive discrimination were the urban programme, the special payments to teachers in certain city centre schools and the special building programme for educational priority areas—all of them launched in the wake of the Plowden report, and then extended by the Tories. By 1976 the present urban programme will have consumed something like £65m. But not all of it is directed towards education (even if the somewhat arbitrary distinction between nurseries and nursery schools is ignored). The results are well short of the Plowden proposals. Some 4 per cent of British children are in schools benefiting from the building programmes and boosts to teachers' salaries (which roughly coincide); the Plowden target was 10 per cent by 1972. Some 18,000 new nursery class places have been created; the Plowden target

was 500,000, admittedly only by 1975. There is nothing that could be graced by the title of a discrimination policy; nothing as precise as a series of priority districts, though the schemes obviously overlap and voluntary societies have been concentrating their efforts in the same urban wildernesses. But four precisely defined districts—in Liverpool, Deptford, Birmingham and the West Riding of Yorkshire—have been made the subject of action-research projects financed by the Government and co-ordinated by Dr Halsey. These were to experiment, discover and provide patterns of special help.

Dr Halsey's teams were beset by the obvious dilemma—not to say in-fighting—implicit in action-research. He indicates, in the slightly prim language of sociology, how much the four teams went their separate ways, and indeed how unlike their different areas turned out to be. He still believes that, despite the difficulties in defining educational priority areas and priority schools, the "epa" provides the best unit for positive discrimination, which inevitably has to be linked to the average of deprivation rather than to individual children. He is sceptical, like almost everyone else, about the value of the blanket, inflexible increase in teachers' salaries, drawing on a London study that showed how this had signally failed to achieve its purpose: there has been no reduction in the depressingly high turnover of teachers in epa schools. He can hardly say clearly enough that the present emphasis on posh building programmes in miserable areas, instead of on getting more teachers into them, may lead to brand new slum schools as it has led to brand new slum housing. But he rightly returns to the criticism in the Plowden report: that too little nursery schooling is provided at too great expense. He outlines schemes for halfway houses between nursery schools and play-groups, which he calls nursery centres. And, though he expends a lot of time and imaginative energy on the ideal of the community school and home involvement (which is less fanciful than it sounds, because one most important indicator of a child's achievement is the parents' interest in its schooling), he is firmest of all on the value of nursery schooling. Against American experience, he argues that the headstart given to deprived children by preschooling is maintained.

One's hope after reading this report is that Mrs Thatcher's new programme will not fall into the politically popular trap of trying to spread a thin layer of state nursery schooling all over the country, but will concentrate new nursery schools in priority areas. It is nonsense to suppose that there is a greater universal need for preschooling than for post-schooling; to be fair, it is not a nonsense that Mrs Thatcher has so far shown signs of believing. What she must, however, show signs of believing are the claims of epa children to an extra helping of social justice, given before the age of five.

The network within the network.

Of the Barclays Group's 3,150 branches in this country, twenty are rather special.

They make up the U.K. regional network of Barclays International, the bank that looks after the overseas and foreign business of the Group (and which has, incidentally, more overseas offices—1,700 with its subsidiaries and associates—than any other bank in the world).

For the customers of Barclays Bank—and for everyone in international trade—they are access points to an unrivalled network that can provide the special financial

services they need, on any scale.

Thanks to its wide spread of offices, Barclays International has its own staff experts in most of the world's major markets, who can give authoritative, locally informed views on the latest commercial and economic conditions.

Thanks to its record of successful expansion into new areas of opportunity, Barclays International is never less than dynamic, forward-looking and inventive when it comes to meeting customers' needs—whether everyday or unusual.

And thanks to its integrated procedures, Barclays International can offer the highest standard of efficiency everywhere it operates—in everything from corporate finance to currency exchange.

Barclays International can offer you a world of banking. Get in touch direct—or through any branch of Barclays Bank.

White Plains, N.Y., U.S.A.

Our welcome is both warm and cool
-depending on your taste.

On board our jets, you'll be offered a warm cup of *sake* by a hostess in kimono. She'll serve it with careful ceremony to complement its ceremonious taste.

Or if you'd prefer something cooler, you'll find she's just as much at home serving champagne - chilled the way you like it.*

And it's this combination of pleasures that makes our service so delightfully different.

As different as a menu that can include Tournedos Rossini and Lobster Thermidor as well as *sushi* and chicken *teriyaki*.

As different as placing a hostess, who

personifies a thousand years of tradition, in planes that are as modern as tomorrow.

As different as taking endless time to make you happy, yet not wasting a moment to make sure you arrive on time.

These are the things that create the big difference between JAL and other airlines.

These are aspects of the two different worlds which only Japan Air Lines combines so skilfully. And which will make your flight a memorable experience.

JAPAN AIR LINES
We bring you
the best of two worlds

BRITAIN

Blackpool platform: all together, now

Europe? It's merely a matter of words

FROM OUR SPECIAL CORRESPONDENTS AT BLACKPOOL

Mr Wilson had his way on Europe by 118,000 votes on Wednesday. What that way is, exactly, remains in doubt, although the verbal price he had to pay for his victory seemed to put his own entry into the common market several light years farther off than it was. Mr Wilson will deny this: much of his speech, nervously and rapidly delivered, made out that, with all the conditions that he had apparently always attached to the exercise, his approach to Europe had never been anything more than an exercise. Since the only terms he was likely to get from this Labour conference were prohibitive terms, Mr Wilson's conviction grew ever firmer that they were the only ones he had ever contemplated. Indeed, he now went so far as to declare that the very possibility of Spain being attached to the market would have meant the deal was off.

That this got a bigger hand from the conference than many other of Mr

Wilson's explanations—the monetary union, regional policies, commonwealth produce—was a measure of the task he had in hand. He understood it well. Labour, he declared, would never be dictated to by an international civil servant like Dr Sicco Mansholt. The Prime Minister's declaration that Britain never broke its treaties had come merely from "the chief whip of Suez." If the press would only print 635 vital words from Hansard there would never have been any doubt about where he had always stood. (This devastating revelation apparently meant that the initial Wilson negotiating position was the last Wilson negotiating position: it says something about the Wilson renegotiating position.) No appeal was left unplumbed; no political debt was left uncashed. And so he got his victory.

It is one that is open to every interpretation under the sun. Market-makers like Mr Willie Hamilton and Mr Jack

Peel said they would take the national executive's recital of impossible conditions as a basis for party unity. The anti-market-makers preferred the boiler-makers' recital, which was also passed. This actually required the complete abandonment of the common agricultural policy and value-added tax; the executive's was not quite so unreal. The chief boiler-maker, Mr Danny McGarvey, whose stentorian voice seemed to be trying to address an Upper Clyde shipbuilder at a distance, admitted that these provisos were such that "some of you may not think very probable" of acceptance. For a clear majority of delegates any words would do that helped Britain to join Norway and stay out of the "European super-club of elite capitalist states" or the "second-rate empire which the Tories instinctively yearn for."

But Labour MPs insisted afterwards that it might have been worse. After all, Mr Hugh Scanlon's attempt to pull out altogether was beaten; Mr Wilson could now move crabwise towards making his peace with Europe; Mr Shore and his friends were in a minority and would remain so as the general election got closer; and the pro-market resolution, proposed by Clackmannanshire, had actually got 14m votes, a quarter of the conference. The market-makers particularly enjoyed Mr Hamilton's paying-off of scores. He had the neck to declare that he had been converted to Europe by none other than Mr Wilson and Mr Benn, and he remained unapologetically in favour of going in. He even said Labour should start selecting the 17 MPs to represent it there.

Mr Michael Foot paused only to say that he wished Mr Hamilton had been as considerate of him in the past as he was ready to be of Mr Hamilton now. His chief concern was to reiterate that the fight against the market would not end on January 1st, for that was when the British public would start paying for the Government's policies. He was a root-and-branch man; the national executive's words he thought "either superfluous or confused." For this incorruptibility, rather than for

any coherent argument, he got a loud and prolonged ovation. Mr Foot is the leader of the decent left; since the left controlled the conference it was fitting that he should get the most genuine cheers of all. But he did not exactly help Mr Wilson then or, it may be thought, in the future.

There followed a desultory debate on defence, with the usual run of left-wing nostrums: Mr Joe Gormley, the miners' leader, replying for the executive, was sufficiently stung by the demands for an early closure to declare: "If you can't spend 10 minutes on the defence of Britain, what else can you spend 10 minutes on?" Through tedium as much as anything, the conference decided not to go unilateralist and withdraw from Nato; there was not even a call for a card vote. It was, however, against American nuclear bases here. To some that may seem a perfect compromise. To others it had a different ring. But Labour had not really met this year to worry about things like that.

What steam the party had on economic policy ran out with Mr Wilson: the party was uncomfortably aware that the TUC meant to take the decisions, and that the little meeting of the TUC General Council down the road at Preston was vastly more important than anything said in the Winter Gardens on Thursday. Mr Norman Atkinson, the left wing's answer to Mr Callaghan, wanted to fix prices and free wages; the exact way of doing this remained obscure, but Mr Atkinson was confident it could be done, and sold to the public, "because we are sufficiently talented as a movement."

Two union leaders, Mr Ray Buckton of the train drivers and Mr Clive

Jenkins, wanted no deal with the Tories at all. Mr Buckton insisted that skills and responsibility had to be recognised in any wages policy; Mr Jenkins flatly believed that any prices and incomes policy in a capitalist society was "a mythical beast" and "an economic illiteracy." Mr Denis Healey sat stolidly through all of this and much more of the same. He had no trouble dealing with it in a bluff, Healey-like way when his turn came. He could reflect that he would have to work much harder when and if he had to speak as a Labour chancellor.

The comrades needed courage

A Labour conference is a very human affair, and nothing gives delegates more simple pleasure than watching the spectacular discomfiture of their friends. They had two choice examples on the opening day. In the morning, Mr Tony Benn, formerly known as Mr Anthony Wedgwood Benn, rose to make his chairman's address. It was innocuous stuff, although Mr Wilson was puffing pretty furiously at his pipe when Mr Benn concluded his usual genuflection to the unions with the thought that if the party (ie, Mr Wilson) had not fallen out with the unions Labour (ie, Mr Wilson) might not have lost the 1970 election.

Mr Benn reinterpreted his interpretation of the relationship between conference and the parliamentary party which had upset many of his colleagues the week before. Of course, he said, conference did not want to dictate to a Labour government, but it did expect Labour governments to take conference decisions seriously and not deliberately reverse or ignore them. He got quite roused on the subject of a referendum on the common market, but it all fell flat at the end. He had had his chairman's massive armchair moved back in order to stand and make his speech, and the only way he could indicate that he had concluded his remarks was sort of to bend double. Some delegates thought he had done himself a fearful injury, others that he had lost the last page of his speech, and there was a perceptible hiatus before everyone realised that it was the signal for terminal applause.

With the exception of Miss Joan Lester, who made a fine speech on the Ugandan Asians, Mr Benn was followed by as undistinguished a flow of oratory from the platform as has ever ground its way through a party day. Mr Ron

Jim: poor programme-seller

Hayward was unveiled as the new general secretary, but few felt they had witnessed the rise of a new political star. He was followed by Mr Jim Callaghan. Mr Callaghan was introducing "Labour's Programme for Britain" and his speech was of a length and tedium commensurate with the document itself. It was the sort of speech that Mr Maudling used to make to Tory conferences when he was at his most offhand, and one can hardly say worse than that.

Still, Mr Callaghan was a suitable curtain-raiser for a tepid, inevitable and familiar little debate on industrial democracy, relations and retraining. The Labour party, surprise, surprise, is now in favour of letting the trade unions do what they like, although it jibs at agreeing that workers' councils should be set up "in all enterprises" to control the management (they wouldn't dare do that in Transport House, for example). Lord Cooper, drawing upon some of his old reserves of courage and commonsense at his last party conference, did inject the home-truth that the attitude of the unions contributed to Labour's last defeat and could do so again.

But nothing gave so much genuine pleasure to so many people as Mr Frank Allaun's winding-up speech on housing in the afternoon. Over the years, the Labour executive has refined a particular form of torture for those of its members whose left-wing pretensions are most irritating: it offers them an opportunity to make a splash by winding up a debate (which they cannot bring themselves to refuse), but only if they urge the rejection of the silliest views which are most dear to them. Poor Mr Allaun: there must have been times on Monday when he wished he had never put himself forward as an expert on housing and had stuck to defence instead.

Mr Allaun's first task was to get the

The chance of a lifetime for your firm?

Read on and find out:

If you are planning to expand your business, you could be eligible for considerable benefits under the Government's new package of financial incentives for industrial projects in Britain's Areas for Expansion. The more generous scale of assistance now available could benefit your firm in many ways.

Where are the areas? The Areas for Expansion have been extended. They cover the whole of Scotland, Wales, and Northern Ireland, Northern and North-West England, Yorkshire and Humberside, some parts of the Midlands and much of South-West England. Whether your firm is planning to expand into, or to expand or modernise within these areas, your project could qualify for considerable benefits.

What are the new benefits? You could qualify for substantial grants towards the cost of new building and, depending on the Area, of new plant and machinery. These grants are broadly for manufacturing, mining and construction activities. They are not tied to the provision of additional employment.

Additional help for projects providing new employment 1. Capital Loans. You could be eligible for these on favourable terms. Or, alternatively, you could get relief on the interest costs of finance from non-public sources.

2. Removal Costs. There are grants which will go a long way towards the costs incurred in moving a business into the Areas for Expansion. (Certain service industry projects may be considered for these two benefits.)

3. Rent-Free Factories. Government factories are available for rent or sale. You could qualify for a rent-free period of two years.

Other benefits Other Government incentives include grants for training new labour and free courses for supervisors and instructors.

The Industrial Expansion Teams—and how they can help you Get in touch with the Expansion Team at the DTI Headquarters in London, or with one of the regional Teams. They'll give you all the facts, sound impartial advice, and valuable on-the-spot assistance in setting up your project.

Fill in the coupon for free copies of the booklets "Room to Expand" and "Incentives for Industry." Or phone the Expansion Team at any of the telephone numbers shown.

Don't breathe

Serious politicians, being professionals, are always prepared to learn from anybody. All English-speaking politicians will therefore take note of a new hazard discovered by Mr Roy Jenkins, during an otherwise impressive speech to a Labour Committee for Europe meeting on Sunday evening. Mr Jenkins chose to open a new paragraph of his speech with the phrase: "I do not believe, myself"—and then injudiciously drew breath. This enabled a particularly alert anti-market heckler to interject: "Neither do I."

At the same meeting, incidentally, Mrs Shirley Williams made the most formidable speech that has been heard from a woman in any party for very many years.

We know how to wrap up rubber plants

Wrapping things up is second nature to Tarmac. Whether we're handling a complete project like building a giant tyre manufacturing complex, or producing millions of bituminous paper plant pots from one of a wide range of roofing felts we make, we've got the matter very much under control. In fact, we're

resourceful enough to wrap up your business in anything from common brick to steel or aluminium wall cladding, from bitumen sheathing to reinforced concrete.

Whatever the project, Tarmac's roots go deep enough to make a healthy success of it. Ask any rubber plant.

Tarmac
THE MEANS AND THE END
TARMAC GROUP, WOLVERHAMPTON, ENGLAND

conference to reject a composite resolution of total incredibility because it included the demand for 1m new homes a year; even at a Labour conference that was easy enough. Where he ran into difficulties was with the engineers' resolution which included, as its first aim, the promise of retrospective relief for any councillor who suffers any penalty as a result of refusing to implement the new housing act. As everyone knew, Mr Allaun believes passionately that that is exactly what the next Labour government should do, but he had to tell them, on behalf of the national executive, that Labour would not promise any such thing and that those "courageous comrades" were on their own. For a while it looked as if Mr Allaun had got away with persuading the conference to accept the resolution with that reservation. But the boys objected, and asked Mr Tony Benn who the hell the bosses thought they were, tampering with their resolutions. Mr Anthony Wedgwood Benn said he would rule next day. Mr Tony Benn did, and gave them a card vote first thing on Tuesday morning. That vote was carried by a ratio of 4:1—which cleared up everything except what the courageous comrades, if any, could expect from a future Labour government.

Tuesday morning saw a higher class of turn from the platform altogether:

Mr Harold Wilson. It was not Mr Wilson's top of the bill act—that was for the common market—but it was as competent a performance as he has produced most years. Unfortunately, it is beginning to wear a bit thin among MPs, who hear it rather more often than the other conference delegates, and it was noticeable at the end that those who sat unenthused ranged from the extreme left to the extreme right. Admittedly they were in a minority, but the speech as a whole did not go down well with the ex-officio section of MPs, peers and parliamentary candidates. Mr Roy Jenkins, who was sitting in the front row, dutifully followed Mr Michael Stewart's lead and stood at the end; but if he was applauding it was not with such vigour that it was discernible to anyone sitting or standing behind him.

Mr Wilson's speech for once preceded the results of the elections to the national executive. The delay was explained when the results of the constituency section were announced. Mr Michael Foot, returning to the fray, easily outran all other candidates, polling 554 votes—the thousands are meaningless—against Mr Benn's 339. But Mr Foot's intervention knocked his fellow Tribunate, Mr Tom Driberg, off the executive. After three recounts it was decided that Mr Denis Healey had won the last place by three votes

over Mr Driberg, with Mr Eric Heffer, another Tribunate, only one vote farther away. The rest of the results, including Lady White's defeat in the women's section, were not particularly noteworthy.

It had been an extremely tame opening to a Labour conference: it was almost as if most delegates simply were not much interested in talking politics. On Tuesday morning, for example, when conference had before it the delightful prospect of demanding the implementation of Clause Four in full and the nationalisation of "the commanding heights of the economy with minimum compensation" for new sufferers (and no compensation at all for anything hived off by Mr Heath), the hall was so empty that Mr Benn appealed through television for the delegates to return from the bars, coffee and elsewhere.

He appealed in vain, as did Mr Ian Mikardo when he asked the conference, on behalf of the NEC, to accept "with reservations" a resolution which, among much else, called for the public ownership of land, the building industry and finance houses, as well as "the democratic control of industry through workers' control and management." Although conference had jibbed at the latter on Monday, it gaily passed it by a majority of more than 1m on Tuesday. It also demanded the nationalisation of the oil industry as well, but that was such an uncontroversial issue that it went through on a show of hands. The phrase about how those the gods would destroy they first make mad was much on the lips of moderate Labour MPs well before the end of the week.

Chairman Benn

Mr Tony Benn did not have a happy week. He faced one considerable difficulty. It is all very well to be in favour of full participation and argue for only selective acceptance of the rule of law: but it makes life a little troublesome if one is also running a major political conference. As the left soon found out to its joy, Mr Benn's past pronouncements made him particularly sensitive to any suggestion that he was riding roughshod over delegates' wishes.

But Mr Benn's greatest failure was his opening address. For weeks his friends had been soliciting advice on what he should say. And at Tiverton last month it seemed that he had finally made up his mind: he was going to demand the political crucifixion of the Jenkinsites. If the conference came out against the principle of membership of the EEC, Mr Benn said, that decision had to be accepted by everyone, including the parliamentary party.

Why did Mr Benn decide to switch his line and make a conference speech that was less than memorable? Almost certainly for just one reason: he got

Benn: the plot that failed

cold feet. He had infuriated the moderate majority of Labour MPs. Fearful threats were being made about what was going to be done to Mr Benn in the shadow cabinet elections. Mr Benn had new thoughts. After the defeat of the ultras on Sunday, he seems to have begun to put into his speech a series of political clichés that could not possibly offend anyone.

Adoption

Children first

Two years ago the departmental committee on the adoption of children published a working paper outlining the proposals it was considering. This week it has published its report (Cmd 5107). It has retained its most far-reaching proposals but has modified some. The committee recommends that a mother should be able to relinquish her child to an adoption agency for adoption in general before specific adoptive parents have been selected. Her consent would be irrevocable, and the procedure would prevent the uncertainty that adoptive parents now have that she may change her mind and claim her child back before

an adoption order is made. But it was pointed out to the committee that many mothers might be reluctant to agree to adoption unless they knew that a particular couple had already been chosen for their child and wanted to have it. So relinquishment would be an alternative procedure. Mothers considering adoption would be asked to choose between it and the existing procedure.

If relinquishment were to become popular it would reduce the number of cases where the court has to decide whether a natural parent is unreasonably withholding consent to her child's adoption by a prospective couple. A House of Lords decision last year clarified the conflict of previous decisions and established that the welfare of the child is to be taken into account in deciding whether a mother is being unreasonable. The committee recommends that this principle should be embodied in statute law and worded more strongly.

Other "tug-of-war" cases have arisen between foster parents wanting to adopt foster children and natural parents. Here, too, the committee has modified its original proposal, which tilted the balance strongly in favour of the foster parents, because of the danger that natural parents would be reluctant to allow their children to be fostered if they felt their rights to reclaim them might be jeopardised. These rights will not, under the committee's new proposals, be affected unless their children have been at least five years with the foster parents who want to adopt them.

It also thinks that guardianship is more suitable than adoption for relatives wanting to give a permanent home to a child. In fact, the committee disapproves of concealment about adoption and calls for more openness about an adopted child's natural parents. Rescinding its earlier view, it now recommends that, as in Scotland, on growing up a child in England and Wales should be entitled to a copy of his original birth certificate. It also suggests that, in giving it, the General Register Office should offer advice on where he might obtain other information which might help to resolve his problems of identity.

Ugandan Asians

A short stay?

By Wednesday this week, nearly 8,000 Asians had arrived in Britain in the airlift from Uganda. About half of

these have gone in the first place to one or other of the five disused forces' camps (and one ex-barracks in Kensington) hastily opened by the Uganda Resettlement Board. The first camp, Stradishall in west Suffolk, was uncomfortably crowded for a while when it reached a peak of over 2,000 refugees, but 600 men, women and children have now moved out, nearly all to join relatives and friends. Very few indeed have yet been found both jobs and homes by the official machine, but this seems to be getting into gear after less than two weeks' experience of continuous airlift. Offers of council houses are now coming through and, with private offers, are now being used as the main basis for job placement. The board has learned the obvious lesson that it is no use finding jobs for the refugees where there are no houses.

As camps go, in the autumn sunshine Stradishall is not a bad place—red-brick married quarters, neat grass, regulation birch trees to shade the throngs of sari-clad ladies chatting in Gujarati. Most people have decent mod cons and privacy. (At some of the other camps they are a lot less lucky.) For tired, distressed and anxious people a spell of enforced idleness in the country may be not unwelcome—provided it is only a short spell. They meet kindness and willingness from busy officials and volunteers, which probably makes up for a degree of chaos in the makeshift administration.

Many inmates are anxiously awaiting news of relatives left behind, and have tales of humiliation and robbery to tell: sometimes worse. One man learned on Tuesday that his brother, left to wind up the family business, had been shot dead in Kampala the night before. He had been due to arrive in Britain a week later. Another brother lay badly wounded in hospital,

The flight was only the first step

leaving no one to care for the widowed, pregnant sister-in-law and the aged father. Three young brothers are safe, settled for the past three years in north London, where two are still at school. The third keeps them and his own family on his wages at a neon sign factory. To this brother's neat little house in Neasden the man and his wife have gone, adding two other names to the "departure" list at Stradishall.

Once at the camp the men draw pocket money from social security and register with the local labour exchange, which has set up shop there and which seems to have risen well to an occasion far outside the usual run in Bury St Edmunds. Jobs can, of course, be tapped from the nationwide Department of Employment network, but for obvious reasons the early successes are likely to be within fairly easy reach. (Free travel vouchers can be had for interviews.) Thetford, Norwich, Bedford and Southend have all provided jobs and homes for Asians leaving Stradishall, and so has Peterborough, which set a good example from the beginning.

One reason why the camps are fuller than the board expected or hoped seems to be the result of its own propaganda. The political desire to prevent the refugees going to the places which have been saying they are too full to want any more Asian immigrants (which extends sometimes as far as refusing free travel vouchers to these so called "red areas") cuts them off from the quickest route to real settlement. Visitors to the camp may be asked wistfully by an Indian how far away Leicester is, or shown an address in Wembley, as though the man were shy of raising the matter with an official.

It is too soon to pass judgment on the resettlement operation, but everyone recognises that its success will be measured by the speed at which it empties the camps. That is still a long way off. Another six military camps may yet be opened; holiday camps might also be called into service. There is no worry really about the most enterprising and best qualified refugees who will soon be creamed off, like the economics graduate at Stradishall who has been interviewed already by the visiting New Zealand representative. But what about large families, or less capable, less literate or not so healthy people? Self-sufficient as most of the newcomers are, there will clearly be a hardcore problem and rural Suffolk is not the place to absorb it.

Immediate block availabilities for European institutions.

When we have a block to buy or sell for a client, all our offices are likely to be brought into action. All our offices—including London.

Since we handle literally thousands of blocks—so many that Goldman Sachs ranks among the top four firms in total New York Stock Exchange commission business—our clients get thousands of opportunities to take institutional-size positions in institutional-quality securities.

They get these opportunities, moreover, the minute the securities come on the market. Through our advanced in-house international communications

network, our international clients can be advised about block availabilities as rapidly as our American institutional accounts.

Realizing the necessity for rapid decision-making in today's markets, and utilizing our capabilities, our clients have helped our international business grow; more than 700 per cent in the last five years.

We consider our international activities an integral part of our overall business. It's another thing that makes Goldman Sachs, Goldman Sachs.

NEW YORK

1. Before the Big Board opens for business, a list of the blocks in which Goldman Sachs and our clients are interested is sent to our London office by telex and facsimile.
2. During trading hours, each new block inquiry is flashed to London via our in-house closed circuit TV system—while salesmen and traders comment over one of Goldman Sachs' permanently open transatlantic telephone lines.

LONDON

A SIGNIFICANT CONTRIBUTION

Since starting on 1 December 1966 SHELTER has:

- 1 Given financial support to housing associations in over 30 towns and cities (1). By this means, produced over 11,000 homes.
- 2 Pioneered the concept of housing aid and now supports fifteen centres in major urban areas throughout the country.
- 3 Engaged in community based housing and rehabilitation projects in Liverpool, Bradford and London.
- 4 Evolved a housing education programme tested for two years in over thirty schools and now universally available.
- 5 Produced reports at various levels on housing need and provided research and information services on housing and the effects of housing policy. These have resulted in a constant dialogue with Government and statutory as well as voluntary bodies.
- 6 Involved thousands of people in a campaign for better housing which has produced £4,000,000 for use in positive and practical housing projects.

THIS PROGRAMME NEEDS MONEY

THE ECONOMIST OCTOBER 7, 1972

The Conservative Party Conference, October 1972.

How will the Conservative Party make the Industrial Relations Act more acceptable?

In controlling inflation will unemployment have to rise?

Neither the CBI, the TUC nor the Government want a statutory policy on Prices and Incomes. Are any of their views likely to change?

Can any further initiatives be expected on Ulster this year?

Etcetera.

The more you think about October, the more you need The Times.

Only one nickel producer in the world ships from three countries.

Control room, nickel-iron
refinery, Canada

Nickel-copper-cobalt
refinery, Norway

Ferronickel metallurgical
complex, Dominican Republic

From Canada... Norway... the Dominican Republic... Falconbridge ships electrolytic nickel, NICKEL 98, ferronickel and iron-nickel pellets to nickel users around the globe.

And 60% more Falconbridge production capacity is upcoming now.

Diversity plus productivity. It adds up to assured nickel supplies today. Tomorrow. And tomorrow.

Falconbridge is ready now with new nickel supplies for steelmakers, electroplaters and other users of nickel, the improvement metal.

Your enquiry will receive immediate attention.

THE WORLD

International Report

Names may change, but Amin's deadline doesn't

In London, New York, Kampala and Mogadishu anxious diplomats have this week been trying to unscramble the international omelette made by Uganda's President Amin during the past two months. But by Thursday there was little to show for their efforts. The foreign minister of Zaïre (formerly Congo-Kinshasa), Mr Nguza Karl I'Bond, had left London in a huff, ostensibly because of a muddle over his hotel accommodation, and his president, General Mobutu, who spent Tuesday in Kampala talking to General Amin, returned to Zaïre with only one trophy: an agreement to change the names of Lake Edward and Lake Albert to Lake Idi Amin Dada and Lake Mobutu Sese Seko.

President Mobutu had gone to Uganda with a view to persuading General Amin to extend the November 8th deadline that he had set for the expulsion of all non-citizen Asians. It was this move that had persuaded Sir

Alec Douglas-Home not to press his call for a debate in the United Nations assembly last week. The British explained that they had wanted a debate only to exert pressure on Uganda to reconsider its deadline and to stop stripping the Asians of all their property. But, although first reports from Zaïre suggested that President Mobutu had won some concessions, on Wednesday General Amin repeated that the deadline was unchanged. On hearing this, President Mobutu declared himself highly indignant.

The diplomatic incident involving Mr Nguza in London on Sunday may have been linked to his president's mission in Kampala. Mr Nguza's visit had been arranged for some weeks, whereas President Mobutu's was a last-minute affair. Possibly General Mobutu felt that his position would be compromised in his talks with General Amin if his foreign minister was junketing in London with the British. The

mix-up at the Carlton Tower hotel which was interpreted by Mr Nguza as a rebuff to his dignity may thus have owed as much to his government's diplomacy as to its hypersensitivity.

On Uganda's other diplomatic front events have moved even more slowly and with equally little effect. The Tanzanian foreign minister, who had been languishing in the Somali capital of Mogadishu since September 27th, was not joined by his Ugandan counterpart (who is General Amin's brother-in-law) until Tuesday, and talks did not begin until Wednesday. The details of the five-point peace plan that had brought the two sides together, after the hostilities unleashed by the invasion of Uganda by rebels coming from Tanzania on September 17th, have not yet been released. But the plan is known to be merely a basis for negotiation, and there are many issues that have yet to be resolved.

This task will not have been made any easier by General Amin's continued insistence that there is still a plan to invade Uganda hatched by Britain, Tanzania, Rwanda, India, Zambia and two other countries. To counter this plan he announced that he had taken over direct control of the armed forces.

But the Ugandans have made no claims of new fighting on the Tanzanian border for a week or more, so there seems to be less cause for concern over the possibility of an outbreak of war between the two countries. The real worry that still remains is the slow rate of departure of the Asians from Uganda: some of the special flights have left this week only half full, and others have been cancelled for want of bookings. Asians living outside Kampala may still be frightened of making the journey to the capital; others may have been hoping for an extension of the deadline. Bookings picked up again on Wednesday when the failure of President Mobutu's mission became clear. General Amin did say then that he would not "maltreat or otherwise oppress any non-resident Asians" who may fail to meet the deadline.

Amin and Mobutu: adamant and indignant

Rhodesia

The twain meet

The talks between the government and some of the leaders of the African National Council (ANC) that took place in Rhodesia during the past 10 days were important for two reasons. First, they have shown that, despite Mr Ian Smith's protestations that the ANC is irresponsible and not to be dealt with, the Rhodesian government is prepared to talk to it if this will improve the chances of reaching a settlement with Britain. Second, they have shown that, despite the British Government's promises last year that if the November, 1971, proposals were rejected there would be no possibility of trying again, it does look as though all hopes of a settlement have not been abandoned.

Britain's decision to use its veto three times in the UN Security Council on September 29th, on resolutions stipulating no independence before majority rule, points to this. So does the presence in Salisbury last week of Mr Jacob Hutter, a member of the Monday Club and the Anglo-Rhodesian Society. Although he is certainly not acting officially for the British Government, he is keeping the Foreign Office informed of his activities. It seems to have been Mr Hutter who brought the ANC and the Rhodesian minister of internal affairs together.

The Rhodesian government would certainly like to be able to tell Britain that Rhodesia's blacks, who earlier this year categorically rejected last November's proposals, have now changed their minds. The settlement would then, presumably, be implemented. But there is no evidence of such a change of heart, and on all important issues—except that of agreeing to talk to each other—the two sides seem as far apart as ever.

Iran

Encircled Shah

FROM OUR TEHRAN CORRESPONDENT

The Shah goes to Moscow on October 10th to make his own assessment of how far Russian policy involves the dangerous encirclement of Iran. He has never doubted the Soviet Union's long-term hostility to his regime. But his refusal, 10 years ago, to allow the construction of American missile bases in Iran paved the way for better relations with Russia. Since these included such vast economic deals as the con-

Farah went east

struction of the Russian-made steel mill in Isfahan in part-exchange for the sale of Iranian natural gas, the Shah assumed that the Russians saw their immediate interests lay in being on the best of terms with Iran. But in the past year or so, all the Shah's old suspicions have been revived by the pace of Russia's advance towards the Indian Ocean and the Persian Gulf.

As the Iranians see it, the milestones on the route have been the Russian treaty of friendship with India, the break-up of Pakistan and the further Russian treaty of friendship with their hostile neighbour Iraq. On his eastern flank the Shah now fears that the Russians, already well established in Afghanistan, might try to take advantage of any further disintegration of Pakistan. On his western flank he fears that the Russians might try to use their position in Iraq as a launching pad from which to exploit instability in the Gulf. And since Turkey was shaken by student violence the Shah has been sufficiently apprehensive of its political future to abandon his former interest in persuading western oil companies to construct a pipeline from southern Iran to the Turkish Mediterranean port of Iskenderun.

The Shah's remarks, both in public and private, have increasingly reflected an uneasy sense of isolation and of enemies lurking round his borders. Characteristic of his new mood, and of a new nationalism, was a speech the Shah made to the Iranian defence academy on September 22nd. His theme was that Iran would die rather than surrender and that, short of nuclear weapons, the armed forces would have the most sophisticated equipment available. His sense of foreboding may also have been heightened by the trouble he has been having with his own guerrilla opposition.

In practical terms the Shah's apprehensions have been most conspicuously translated into an acceleration of arms purchases and into closer ties with the

west. One indication of this came in the communiqué issued after President Nixon's visit last May. Instead of insisting, as Iran used to, that the security of the Gulf was the "sole" responsibility of the littoral powers, the communiqué spoke of a "primary" responsibility, thus leaving the door open to possible American participation in regional security arrangements. Since the Russians established port facilities at Umm Qasr on the Iraqi shore, the Shah has dropped his earlier objections to the Americans doing the same at Bahrain. He let it be known that if the Russians extend the military facilities allowed them in the Iraqi treaty into bases, he would not be averse to the Americans following suit in the Gulf; as a bargaining counter, this was not likely to be effective, since the Americans are unlikely to do any such thing. But it is not only to the west that the Shah has been looking to counter Soviet influence. Empress Farah's visit last month to China was equally meant as a warning to the Russians.

Most western observers, while accepting the Shah's assessment of Russia's long-term ambitions, believe that he is over-dramatising the present threat. They fear that he could damage his position by appearing too much as a stooge of the west. And his present stance is doing nothing to remove the friction between Iranian and Arab nationalism, made worse by Iran's occupation of the Gulf islands last year.

At the same time the Russians themselves seem to feel that they have gone too far in alienating Iran, their second largest commercial partner in the Middle East, without gaining sufficient compensation in the Arab world. In pressing the Shah to go to Moscow they no doubt hope to allay his fears. The visit could result in a new economic agreement. The Iranians are anxious to get a better price for the gas now being pumped from Ahvaz to Astara on the Russian border and they would also like the Russians to participate in exploiting the giant natural gas field at Sarakhs. But the Shah is likely to remain sceptical of Russian reassurances of friendship.

We booked thousands of rooms just so we can be sure you get the one you want.

When you book a room in an unknown hotel you can't be sure what you'll get.

This is particularly true if you book at the last minute or at busy times. And then you may not get in at all!

Join the new Guaranteed Hotel Bookings Club and it's a very different story.

We guarantee to get you into a hotel of good standard throughout the country, at any time of the year, provided you let us know by 6 p.m. of the evening previous to that on which accommodation

is required. (But the more notice you give us the greater the chance of providing exactly the hotel you want).

Just one 'phone call is all that is needed.

We are able to do this because we already have large block bookings in hotels all over the country and the advantage of 25 years experience of booking hotels (our organisation made over 500,000 reservations last year).

The cost of this VIP service to you is £4 a year.

That's all. It doesn't cost you a penny extra on the price of your room.

(Your company can join on a corporate basis if it has at least six people who are regular hotel users).

If your work or pleasure involves you in frequent overnight stays, give yourself, your secretary or whoever does your booking a break from the frustrating business of ringing round for accommodation. Take advantage of our free trial offer now.

You have nothing to lose. And so much to gain.

Complete and return this whole coupon today to Guaranteed Hotel Bookings Club, 4th Floor, 39 Jermyn Street, London SW1Y 6DY.

Egypt and Russia Please, Sir

FROM OUR CAIRO CORRESPONDENT

There is no inconsistency, say Egyptian officials, in their present attempt to improve relations with the Soviet Union. Did not President Sadat, when he announced the expulsion of Soviet advisers in July, call for a meeting to determine a new working relationship between Russia and Egypt? This, they say, is why the prime minister, Mr Aziz Sidki, is going to Moscow on October 16th and why both governments are talking about the possibility of a summit meeting in the near future.

Well, yes. There are other reasons too. The most urgent, and indeed predictable, is the need for spare parts for Egypt's Russian-built aircraft and weapons. In an effort to find alternative sources, Egypt has approached the Indians and this week its war minister, General Sadek, has been visiting Belgrade and Prague. Clearly an agreement with Russia would make life easier. And while there is no suggestion that Egypt wants the Soviet advisers back, or, indeed, that Russia would be willing to send them, Egypt's continuing need for help in military training and maintenance could lead to the return of a few specialists.

Egypt also wants to ensure, if it can, that Russian economic investment will continue as before. There is no evidence that the Russians have tightened the screws on Egypt since July either through trade or economic aid. But the Egyptians had been banking on a major west German commitment to the five-year plan that starts next year, and this was torpedoed by the Palestinian terrorists at Munich and the quarrel between Cairo and Bonn that followed.

Egyptian policy, from July onwards, seems more than ever based in wishful thinking. The Americans did not rush in to replace the Russians—and, given the timing, nobody could have seriously expected that they would. The concept that Mr Sadat can now recover lost ground with Moscow in time to strengthen himself for some problematical, but deeply desired, negotiating table on a political solution with Israel is equally sanguine. So, too, was President Sadat's proposal last week that the Palestinians should form a government-in-exile. His reasons were understandable: he wanted an amenable Palestinian body should negotiations start; he wanted to undermine King Hussein's claim to speak for the Pales-

tinians; and he wanted to free Egypt from the embarrassment of being linked with extremist organisations, particularly Black September. The Palestinian resistance movement, again to nobody's surprise, turned the idea down.

Syria and Russia Pink balloon

FROM OUR LEVANT CORRESPONDENT

A small pink balloon called "Odessa-Damascus arms lift" has been conjured into a great red airship. The Russians, obviously in a hurry to plug some particular gap in Syria's defences against the possibility of another punitive attack from Israel, used four Antonov transport planes a fortnight ago to fly in equipment and experts for three consecutive days. Then the mighty "airbridge," first heralded in a pro-western Beirut newspaper, stopped. But, to the satisfaction of both Russia and Syria, the Americans and Israelis had set the alarm bells ringing.

Mr Melvin Laird, the American Secretary of Defence, claimed that this new move increased tension in the area: a useful point to make when fending off senators trying to reduce America's defence budget. Mr Yigal Allon, Israel's deputy prime minister, said that it pushed the possibility of peace even farther back. True, Russia is supplying Syria with arms, some of them modern, and with instructors—as it has been doing for several years. But this does not amount to a defence treaty or to Russian bases in Syria. And if the much larger quantities of Russian arms in Egypt did not lead that country to take the offensive against Israel why should the effect on Syria be otherwise? Syria is very unlikely to get involved

Assad (left) smoothed Sadat's way

in an attack on Israel unless it gives the Palestinian commandos a much freer hand than it has shown any signs of doing as yet.

But for Russia the contrived alarm was a splendid publicity boost: once more it could be seen to be the Arabs' friend in time of need. Syria, for its part, had new-found importance, and not only as the recipient of sophisticated weaponry; as Russia's confidant it could claim the part of mediator between Cairo and Moscow. And, indeed, in his two-day visit to Moscow at the end of last month, Syria's President Assad probably did try to smooth over Russian-Egyptian differences and so can take some credit for the Egyptian prime minister's forthcoming pilgrimage.

Syria needs Egypt as a counterpoise to Iraq, into whose arms Russia is trying to push it. For although Russia will doubtless go on slowly building up its position in Syria and Iraq to replace its lost outposts in Egypt, working with these two competitive Baathist neighbours presents its problems. When the Russians, attempting mediation, asked the Syrians and Iraqis to state their preconditions for better co-operation, each side promptly asked for the removal of the top two leaders on the other side.

The Yemens

You started it

It would be an exaggeration to describe the fighting between the North and South Yemeni forces as war, but over the past week the border clashes have assumed more serious proportions. So confused and contradictory are the reports of the fighting that it is impossible to know for certain how or why the latest outbreak of hostilities began. Naturally each government has accused the other of being responsible and each has claimed that its territory has been invaded by the other side.

The Yemen Arab Republic (North Yemen) has claimed that the People's Democratic Republic of Yemen (South Yemen) has used tanks and fighter aircraft to attack its frontier towns. The South Yemenis have countered with accusations that the north has refused to respond to their call for a ceasefire. In this atmosphere there is little prospect of the Arab League five-nation conciliation team or the Iraqi mediators in the two capitals making any headway. There is little chance of the Arab team itself reaching agreement since it contains a Libyan representa-

It's something of a tribal war

tive and Colonel Qaddafi has made no secret of his dislike of South Yemen's marxist regime.

Much of the trouble has its roots in traditional tribal feuds. But since 1967, when Britain left Aden and the marxist National Liberation Front beat the Front for the Liberation of Occupied South Yemen in its bid for power, the feuds have tended to assume more political importance. The South Yemeni regime is understandably nervous that its enemies within and outside the country are planning its overthrow. King Faisal of Saudi Arabia and Sultan Qabus of Oman would breathe easier if it disappeared, and there are several thousand exiled southerners in North Yemen dedicated to the same cause.

Although South Yemen has no close supporter among the Arab states the North Yemeni government has forfeited Egypt's sympathy by restoring diplomatic relations with America last July. It now looks as if the North Yemenis may take a leaf out of President Sadat's book by asking their Russian military advisers to leave. The prime minister has alleged that foreign pilots were engaged in this week's air attacks and although he named no names it is obvious whom he had in mind.

China

Nice view, nasty Russians

The Chinese had reason to be pleased with the view as they looked out on the world on October 1st, the communist regime's anniversary day. Mohammeds everywhere (including the empress of Mohammedan Iran) were coming to their mountain. The

Japanese prime minister had just left China after establishing diplomatic relations on Peking's terms, and west Germany, Japan's main competitor in the China trade, had just agreed to do the same. When Herr Scheel visits China next week, his will be the 76th government to recognise Peking, 16 of them since the dramatic day a year ago when Peking replaced Taiwan in the United Nations. Having wooed and won just about every major capitalist citadel, the Chinese are now courting Australia, by dangling the carrot of wheat purchases (a \$60m sale was concluded last week) after three years of applying the stick by buying their wheat from Canada.

Peking claims that other world trends are also going its way. The expulsion of the Russians from Egypt and the enlargement of the common market were both cited by the People's Daily in its anniversary editorial as evidence that "it has become the common demand of the people of various countries to oppose . . . the hegemony of the superpowers." China's deputy foreign minister expanded on this theme at the United Nations assembly on Tuesday.

And China is clearly not letting up on its own struggle against one of the two superpowers. The anniversary editorial was more explicit than ever before in branding Russia as China's enemy number one: "The Soviet revisionist renegade clique . . . is even more deceitful than the old-line imperialist countries, and therefore more dangerous." Moscow's chilly national day message to Peking indicated that the bitter feeling is mutual and this week Russian officials, denying that the Sino-Soviet negotiations over the border and other disputes had produced a settlement, implied that they had virtually broken down.

Despite Peking's confident tone, there was no return to the traditional practice of staging a big anniversary parade (last year's was cancelled because of the Lin Piao affair), so the China-watchers were denied their annual chance to analyse the leadership line-up in the Tienanmen Square. Although there is no major crisis to disguise as there was last year, there may still be some lively tussling for positions at the top.

In the past week, Mrs Mao has been shifted from her former place, next to Chou En-lai, to one place farther down the ladder, below the highest ranking soldier, Marshal Yeh Chien-ying, and then back again. The China watchers are still watching.

France

The centre regroups

FROM OUR PARIS CORRESPONDENT

While the opposition parties, not to add its Independent Republican coalition partners, are already fighting over the inheritance, France's ruling Union des Démocrates pour la République (UDR) this week demonstrated that it is a corpse that refuses to lie down. It took the first steps toward the internal clean-up which recent scandals had made unavoidable: one member of the national assembly named in the Aranda scandal is "voluntarily" abandoning the party label, another not so named but involved in a major commercial bankruptcy has been told he may be thrown out. And on Tuesday the prime minister, M. Pierre Messmer, delivering France's "speech from the throne," announced a programme which is quite frankly electoral, and none the worse for that.

Among M. Messmer's proposals are the creation of a form of ombudsman, help for young people looking for their first job, a non-voting seat for middle management on the boards of large companies, a committee to study, and propose experiments in, working conditions, and the requirement that employers firing workers must give their reason for doing so. Just what this will mean in practice remains to be seen. But it must have both real and electoral value in a society whose most frequent complaint is the disregard shown by those at the top for those at the bottom.

Meanwhile the "reformists" of the centre have been parading their readiness to profit from the massive loss of UDR seats that M. Messmer hopes to avoid. The "reformists" means the alliance of M. Jean Lecanuet's Centre Démocrate and M. Jean-Jacques Servan-Schreiber's Radical party. Although M. Servan-Schreiber is still vigorously critical of the UDR, his approach earlier this year to the Socialists was rejected. He has therefore had to accept the tactic spelled out by his more conservative ally at a joint press conference last week. Provided President Pompidou was ready to consider the necessary reforms, declared M. Lecanuet, the reformists would be ready to take part in *la grande discussion*. In other words, he would be prepared to bargain their support, for the life of the legislature, against acceptance of their ideas, and

Now Redland is in on the Act.

The Deposit of Poisonous Waste Act is now law. And so it should be. But coping with the problems arising from the toughening of the law relating to waste disposal could be difficult. We like to think, though, that the new Redland Purle link-up will make disposal decisions very much easier.

We have incinerators and treatment plants for the processing and destruction of toxic wastes. We have land fill sites for the reception of domestic, trade and industrial refuse. We have a growing fleet of specialised waste collection vehicles on call 24 hours a day.

The Redland Purle network of transport depots and disposal sites cover the country. We are staffed with chemists and technicians qualified to analyse, collect, treat, and dispose of all types of waste.

We can help you with the paper work that the new Act requires. Call us when you need us.

Tomorrow's profit is based on telecommunication

The vast financial empire of Rothschild was formed faster because Rothschild was informed faster. Consequently, he could be ahead of the competition. Today every good businessman knows that his profits depend on fast exchange of information - in a word: telecommunication. And this applies to all forms of business from banking to manufacturing to selling. Take, for example, the supermarket. One central unit connected to all cash registers via modems can keep the businessman informed about what's happening throughout all his branches. He receives immediate and precise information on the speed of turnover, profit and stock. Previously this information was acquired only after months

of costly and laborious inventory-taking. Now, with this information at his fingertips, he can react fast in ordering specific goods, changing the assortment, launching special sales, etc. It all adds up to more profit. Telecommunication will definitely play a major part in accumulating the profits of tomorrow. Today the 12,000 telecommunication specialists at Philips are ready to contribute their skills to better business practises all over the world.

N.V. Philips' Telecommunicatie Industrie,
P.O. Box 32,
Hilversum

PHILIPS

The shortest distance between two points

A great success: Ford's Perpetual Motion.

Perpetual Motion is the name of the vehicle leasing plan we've devised in conjunction with our dealers. And it's taken off like a rocket.

If leasing's something you haven't thought about we can give you some good strong reasons why it can make more sense than buying.

1. A Ford Leasing Dealer will undertake all the day to day running of your fleet. You can drop all the paperwork in his lap, and get out of the transport business and back into your own.

2. You can release a lot of useful capital previously tied up in your fleet.

3. If a leased vehicle breaks down, the dealer will fix it. And, under some plans, if it takes more than a day and a half to repair, he'll replace it. No worry, no cost, no fuss.

4. You can lease 1 or 100 vehicles. Whatever the size of your company, you'll get the leasing plan that is tailor-made for you.

5. Together with our Dealers we've had 50 years' experience in the transport business, more than anyone else in the country. We're the experts.

Perpetual Motion, Ford's vehicle leasing plan. We'll stop at nothing to keep you on the move.

If you think your company could benefit from Perpetual Motion, fill in the coupon and we'll put you in touch with your nearest Leasing Dealer.

To: Ford Motor Company Limited, 1/325 Leasing Department, Brentwood, Essex. Please send me details of Perpetual Motion.

Chemical Bank 5th largest international bank in the U.S.A. or how a small laboratory gave up chemistry to do more for your money.

From palladium.

In 1823 we were called the New York Chemical Manufacturing Company: customers came in to buy a few pounds of palladium. The following year we changed our statutes and obtained permission to enter the banking business. Our reputation as financiers and the number of our clients grew so quickly (we were already doing more for our customers' money) that we had to choose between palladium and dollars. In 1844 we became Chemical Bank.

To dollars.

Today, 128 years later, our total assets exceed \$ 13 billion. We have branches and representative offices throughout the world. And we do business with 60% of the non-American companies with annual sales of more than \$ 2 billion.

To international operations.

Of our business done outside the U.S.A. a good part is in Europe. Our international business is larger than the total resources of most U.S. banks. Whatever the action needed or merely foreseen, maybe a routine transaction such as a foreign exchange operation, or the financing of

projects between Frankfurt and Tokyo, Chemical Bank is in key money centres to give you first-class guidance backed by experience. No wonder our clients consider us top specialists for international deals. 128 years ago we may have switched from chemical formulae to banking formulae but we haven't forgotten the value of research. It leads to discoveries of even more sophisticated methods of international financing. We do more for your money. That's no paper formula, it's plain fact.

How to find us.

London Branches:
10 Moorgate - Phone: 606-8040
13 Davies Street - Phone: 493-2921

Main Office: New York. Branch Offices: Brussels, Frankfurt, London, Paris, Tokyo, Zurich and Nassau. Representative Offices: Beirut, Madrid, Bogota, Buenos Aires, Caracas, Rio de Janeiro, São Paulo, Mexico City, Hong Kong, Manila and Sydney. Correspondent Banks in over 185 nations.

CHEMICAL BANK
We do more for your money.

Lecanuet and Schreiber: shaping up

presumably of their leaders too, although he did not say so, within a reshaped ruling coalition. This offer was promptly welcomed by representatives of M. Giscard d'Estaing's Independent Republicans. But it was notable, albeit natural, given the various views concerned, that their welcome went to M. Lecanuet and his friends. Of M. Servan-Schreiber, not a word.

The centre-right alliance thus shaping could very well prove to be the shape of France's next government. The UDR appears, today, certain to lose its present absolute parliamentary majority. It will therefore certainly need the help of the Giscardiens, and might well choose, or indeed need, to stretch farther out into the centre. The Socialists and Communists may well feel that if they make massive gains, they should be the first people invited to form a government. There is just one obstacle: President Pompidou made it as clear as he could without actually saying so, at his recent press conference, that he emphatically does not agree.

Sauter pour pis reculer

Paris

There is an unhappy feeling in Paris (and a correspondingly happier one in some other European capitals) that the force of French diplomacy may be waning. In the past month France has seen the collapse of its case against holding preliminary east-west talks on force reductions in Europe. The French have been struggling in vain against the American tactic of playing off these talks against the European security conference which France has helped Russia to promote. And a summer of bluff within the European community has ended with President Pompidou allowing the community's summit to be arranged after all for October

19th, not because France has got all it wanted in preparing for the summit (it has not), but because calling it off was, as one Frenchman involved candidly admits, "never credible."

France might, earlier, have withdrawn its invitations to Paris without creating a community crisis that would have had French farmers and industrialists up in arms, but the last time it could have done so was in July, before Europe went on holiday. Instead the French let this moment slip by without gaining any concessions. They were hoping for support for their plan to place a new diplomatic secretariat for the community in Paris, but this subject has simply been dropped. They wanted also to create a new European fund with enough credit from other members to finance future French payments deficits piled up in the pursuit of growth; in the event, a "fund" is nominally to be set up, but without any money. The French can claim that they would not have got even this much without M. Pompidou's menaces, that otherwise the summit would have been used by France's partners to strengthen those community institutions in Brussels and the so-called parliament in Strasbourg which France wishes to keep in check. All this may be true, but the price France must pay for this modest gain in terms of its ability to bluff people in future has been immense.

The demands France was voicing a year ago for a fairly brutal European confrontation with America have also been scaled down, but for the very different reason that President Pompidou has changed his mind. Although he will not say so until the French parliamentary elections next spring have cut gaullism down to size, the monetary events of the last year have clearly shown M. Pompidou the virtues of more flexible, or at least more easily altered, exchange rates, of a diminished role for gold, and of a relatively open system of trade.

French diplomacy now seems to aim at having it both ways, as the prodigal son courted both by the Atlantic community and by the communist one. This week France's foreign minister, M. Schumann, was welcomed fulsomely by President Nixon, while the first secretary of Poland's communist party, Mr Gierek, was received royally in Paris. But what worries many Frenchmen is that M. Pompidou is winning only the residual respect which President de Gaulle earned for France by so often saying "No" and at the likely cost of meeting future defeats.

Germany

The smell but not the substance

FROM OUR BONN CORRESPONDENT

The smell in the air down by the Bundestag building in Bonn is not only of sour caustic soda from the polluted Rhine. It is the smell of ears burning, anger smouldering, political reputations rotting, muck being flung about and the sweat of bodies politic jostling for position before the mid-November elections.

This week has been "corruption" week in Bonn, and it was the chancellor, Herr Willy Brandt, who first made it so by using the word. Although the Bundestag is dissolved the memory of the handful of deputies who provoked the dissolution and the premature election by defecting to the opposition lingers on. A bitterness wells up in the Brandt breast every time the defectors are mentioned. Asked by a weekly magazine whether corruption was involved in the defections, the chancellor replied, "For me there can be no doubt about that." "By whom?" he was asked. "That will all come out in time" was Herr Brandt's response.

The hullabaloo that followed could be heard throughout Germany. An open letter was written to the chancellor by one defecting deputy; others were said to be toying with writs. Herr Brandt qualified his remarks as "subjective," made it clear that he was referring not only to "financial" but also to "moral" corruption, and then referred to "evidence." At this the opposition called upon the chancellor to provide the evidence or to retract his accusations. The Bundestag president, Herr Kai-Uwe von Hassel, now campaigning as a member of the opposition, wrote letters to the chancellor, invoking the reputation of the Bundestag. And, as a result of the two meetings between Herr von Hassel and the chancellor that followed, the Bundestag president felt himself able to state that the accusations were "baseless," but added that the chancellor was prepared neither to substantiate nor to withdraw them. This was a blow to Herr Brandt, who had provided names of deputies who he said were willing to back up his accusations.

So "corruption" week has ended in an impasse, but its casualties are two. First, the chancellor. The opposition is already pointing out that he has

One of the week's casualties

been caught with his political trousers down and accuses him of "reprehensible" behaviour. It is a misjudgment for an experienced politician to be unable or unwilling to make public accusations stick. This failure will be made much of by the opposition in the weeks to come. The second casualty may be the traditional and informal "fair play" agreement between the parties at election time. This agreement says, among other things, that there should be no personal insults or mean invective during the campaign. The opposition has been withholding its signature until the chancellor retracts his accusations.

If this week has been "corruption" week, it needs to be said that a week is a long time in febrile German electoral politics. Next week both major parties, the Social Democrats and the Christian Democrats, have their party conferences. In Dortmund and in Wiesbaden we shall actually get down to the issues.

Ireland

Green light

One of the four expressions of human liberties (along with Magna Carta and the French and American declarations) that adorn the Human Rights Building in Strasbourg is the address of welcome presented to William of Orange at the Glorious Revolution of 1688. The hero of Ulster's Protestants must be turning in his grave at the ruling given on October 1st by the European human rights commission on the Irish government's complaint against the operation of internment and the treatment and interrogation of internees in Northern Ireland. So far, the case has only been

declared admissible: but this, for Dublin, is the major triumph. The main difficulty about invoking the European human rights convention was that the domestic law provided the internees with a domestic remedy, of which some have availed themselves; the complainants had therefore to show that the treatment in question was sanctioned as an "administrative practice." The Irish attorney-general, Mr Condon, was unable to establish that the Londonderry deaths on "Bloody Sunday" last January ranked as such; but he succeeded in persuading the commission that the treatment of internees did.

The Dublin government itself had been hauled before the commission in the 1950s for its own policy of internment of IRA suspects, but it then won its case. Although it now appears that it could make out a strong case on the interrogation procedures, it is unlikely that this case will ever come to court. The complainants are not seeking damages, and the Irish government would obviously prefer to settle the matter without pressing for a ruling on the substance of the case, if it can extract some major concession from London instead. The decision about admissibility was greeted with triumph in Dublin, where it is clearly believed that it will lead to an end to internment or, more importantly, to a seat for Mr Lynch at any new conference table that may be set up by Mr Whitelaw.

Spain

Autumn storms

FROM OUR SPAIN CORRESPONDENT

This is not Spain's happiest autumn. It began with days of torrential rains and now the country is faced with storms on the labour front and in the universities. The soaring cost of living—up 3 per cent in the last quarter—is responsible for most of the current labour unrest but the slightest incident is apt to be politicised by the taurine reflexes of the officials concerned with industrial relations and internal security.

During the past fortnight at Vigo in Galicia up to 20,000 workers have been on strike and crowds of demonstrators, including women and children, have clashed with riot police. This was the outcome of what ought to have been an insignificant dispute over hours of work at the Spanish subsidiary of Citroën. Citroën (España) has even less talent for togetherness than Citroën

(France) but it was the archaic rigidity of "the system," as Spaniards call it, that played into the hands of the few left-wing militants involved and ensured the spread of the dispute to other factories and to the shipyards.

Demands are now being heard in engineering industries in Madrid and Barcelona for a shorter working week. Workers say this is important to them not only because Spanish hours of work are so long (a 10-hour workday is still considered normal, even for women, by most government labour inspectors), but also because they want to be able to keep abreast of rising prices by working overtime or taking additional jobs. If the authorities' only response is yet again to send in the riot police there could be trouble.

"To govern is to see ahead," said an official, unexpectedly, the other day. But he was referring to the universities. He added, "Nothing is more certain to send up the generals' blood pressure and set them talking about the need for another crusade than the sight of students waving red flags." So throughout the summer the government has been looking ahead to this month's reopening of the universities.

It has suspended the statutes of the two Madrid universities, enabling the minister of education to make appointments, impose disciplinary measures and close faculties at will. And in these and other universities loyalty tests are being imposed on teachers and students. On the advice of the secret police the authorities have deprived some 250 teachers of their posts and refused admission to about 200 students. Three rectors, four deans and several teachers and administrators have resigned and the main professional organisation of Spanish university teachers has protested after calling a secret—because illegal—meeting. But the government appears adamant. It has given the Madrid universities new rectors, and it has ordered the police to "impose order" in every faculty.

Chile

The army waits

Chile's marxist president, Sr Allende, has again overruled congress. At the end of last week he vetoed two opposition bills. One of them contained a plan for raising the price of electricity in order to provide finance to subsidise the independent press and broadcasting networks; these have fallen on hard times since the economic crisis and the extension of state control over the

Get 6% a year tax-free from a growing fund

And you'll get a
growing income

With inflation the way it is you need more than a good, secure income from your investment—you need a growing income too.

Tyndall 3-way Fund sets out to give you just that. It spreads your money 3 ways—in equities, in property and in gilt-edged securities. And it adjusts the proportions of each kind of investment to suit changing conditions. So it should provide more secure growth than any single investment alone.

If you want income, you get a tax-free 6% a year paid half yearly. And this is 6% of your investment revalued each year. So if, as is expected, the investment over the long term grows at a faster rate than this, your income grows with it.

The payments are made half yearly and are free of income tax and capital gains tax. If you are a surtax payer, there may be a surtax liability on the gain element in your withdrawal but it would only be a fraction of what you would pay with other kinds of investment.

You can start a withdrawal plan when you first invest or change to one later.

No age limits

The Tyndall 3-way Fund is an assurance fund which gives the investor tax advantages but it is open to anyone without regard to age or health. You can also withdraw your money at any time without penalty.

The Tyndall 3-way Fund opened in March 1971 with units priced at 100p. At the 13th September 1972 Valuation Day the value of the units was 130.6p.

Post off the coupon now to bring you a booklet giving full details of the Fund and how to invest in it.

Tyndall 3-way Fund

Simply good taste.

private sector have dried up advertising revenue. The other bill was originally proposed back in April and should have come into effect on September 29th, but Sr Allende has rejected it, pending "amendments". Designed to curb the paramilitary groups that have sprung up at both political extremes in Chile, it would have given the army the responsibility for control of firearms. Anyone who wanted to keep a gun would have been required to register with the garrison commander in his district, and persons found carrying weapons illegally would have been tried before military tribunals.

It is easy to see why Sr Carlos Altamirano, the secretary-general of Sr Allende's own Socialist party, was so evidently opposed to this bill. It would have brought the army into direct confrontation with the Socialist militias and with extremist groups like the Movement of the Revolutionary Left as well as with right-wing militants like the members of Patria y Libertad. Sr Altamirano's view won out.

It is the influence of this aristocrat-turned-radical over the president—who is always frightened of splitting his party and becoming too dependent on the more cautious Communist party—that largely explains the steady leftward drift of government policy. By his veto, Sr Allende has angered many senior officers who are disturbed by the rising political violence. They are still brooding over the sacking of General Canales Marques a fortnight ago, for allegedly plotting to overthrow the government. Like other wage-earners the soldiers are worried by the rate of inflation, which was up to 63 per cent during the first eight months of the year. The payments deficit will sting even more when the army puts in its request for spare parts for its American equipment early next year.

Canada

Bridging the widest river

FROM OUR CANADA CORRESPONDENT

Mr Trudeau predicted several months ago that his government's language policy would be one of the hot issues in the campaign for the general elections to be held on October 30th. In July some English-speaking Canadians had raised an outcry because, at the Canada Day concert on Parliament Hill, a series of songs had been introduced only in French. Mr Trudeau

made a lengthy apology in parliament about the incident, and announced that the minister in charge of cultural affairs, his old friend Mr Gérard Pelletier, would be moved to another job after the elections. Such uncharacteristic abasement seemed to reflect the prime minister's fear that an anglophone backlash might be translated into opposition votes in the key provinces of Ontario and British Columbia.

There are certainly signs of a backlash against the Liberal government's emphasis on bilingualism. It is most noticeable in Ottawa West, the home of many English-speaking civil servants who fear that their chances of promotion are suffering because they cannot master French. The Conservative candidate there is making the most of this issue; last week Mr Paul Hellyer, the former Liberal defence minister now turned Tory, complained that the government was wasting money trying to teach middle-aged officials a second language when the emphasis should be on teaching schoolchildren; and the New Democratic party leader, Mr David Lewis, has also joined the chorus of complaint about "discrimination."

No doubt some civil servants have missed promotion because they are not bilingual. Under the government's language training system there are four levels of skill, and it may take a student 15 weeks of immersion courses to pass through each level. An official is ordinarily allowed to spend nine weeks a year attending language school; so it can take seven years for a beginner in French to gain his bilingual label. The slow pace of results among anglophones was reflected in last year's public service appointments: of 6,000 posts that were classified as bilingual, 4,900 were filled by people whose mother tongue was French.

Yet, out of 66,000 appointments and promotions in the federal service last year, almost 80 per cent went to people proficient only in English. Complaints may be more legitimate on the other side. French Canadians, who make up 27 per cent of Canada's population, still hold only 18 per cent of the jobs in the federal civil service. Mr Trudeau and Mr Pelletier, who came to power convinced that the federal capital had to become a far more attractive place for young Québécois to work in if they were to be won away from separatism, must feel they have only partially succeeded. Their cabinet colleague, Mr Jean Marchand, has never recanted his

Trudeau wards off the backlash

bitter comment that "the best thing about Ottawa is the train back to Montreal."

Nevertheless, Ottawa has changed after four years of Mr Trudeau. The 18,000 people who have started on immersion courses in French, and particularly the 2,500 who have already graduated, seem to have had more in mind than promotion; many students are awakening to the richness of French Canadian culture. Hull, the capital's poor sister across the Ottawa River, is growing into a more handsome place. An \$80m redevelopment project for it was announced last week. The federal government is locating several of its departments on this Quebec shore, and a new bridge is being built across what the bilingualism and biculturalism commission once called "the widest river in Canada."

But if Hull and Ottawa are closing the linguistic gap, progress elsewhere is slower. Another year's delay is likely before there is any action on Mr Pelletier's proposal to designate 37 areas, including the whole of Quebec and New Brunswick, as bilingual districts where federal services must be provided in both languages. The 1971 census apparently invalidated many assumptions about which districts had a 10 per cent minority language group and should thus be designated as bilingual. While the government delays on this measure, the pressure for unilingualism mounts in parts of Quebec. The language issue may look hot now, but it is feared that it will be still more heated in years to come.

Today, Samantha was given a new head because hers had a hole in it.

It was just one of the little services we like to perform—and Samantha, after all, had brought four guests all the way from England to our Esso Motor Hotel in Cologne.

So, while they enjoyed an early night after a fine dinner in our Wallraf Zimmer Restaurant, we got busy on Samantha in the adjoining Esso Servicenter. Next morning she was waiting for them, fully repaired and ready for the road. (Fortunately, Samantha was born in Germany, so we had a new head in stock!)

People like staying at Esso Motor Hotels for just this reason—when you're in trouble you can still catch our eye. So enjoy the good things of life, friendly style. Our style.

ESSO MOTOR HOTELS

Flanigan fixes things

There is a third reason why the role of Ciep will rarely be that of economic arbiter under this or future presidents. If he is to influence a president in the broad, non-economic ranges of foreign policy, a man like Mr Kissinger needs to monitor only three streams of information as they reach the White House—those from the Departments of Defence and of State, plus the intelligence agencies. In international economic policy on the other hand, many more agencies have to be involved; the Treasury, the economic and European sides of the State Department, the Departments of Agriculture and Commerce, the Offices of the Budget and of the Representative for Trade Negotiations, the Federal Reserve Board, plus the Department of Justice and the many regulatory agencies whose domestic actions often have international impact. There is also the rather welcome influence of the President's long-standing think-tank, the Council of Economic Advisers.

The future of Ciep is thus thickly involved in a discussion which dominates speculation about a second Nixon term. Ciep has so far been less than its originators wanted, but in the last decisive months at least it has started the job of making coherent a foreign economic policy whose distinguishing mark was most often total incoherence in the days when the United States ran a large trade surplus and so did not have to bother. Ciep has done this, however, more by the procedural method of calling meetings inside the Administration, and feeding the presidential point of view into various inter-agency study groups, than by providing the distinct direction on policy which characterises the National Security Council under Mr Kissinger. Ciep could, in short, be easily brushed aside by any of the several possible changes which Mr Nixon may make in his next Administration.

If, for instance, Mr Nixon carries out his intention of concentrating more on economic relations with his allies during a second term, this would bring Mr Kissinger more regularly into economic discussions. Or, a subject of great preoccupation in Washington, Mr Kissinger might transfer to the State Department to carry out the policies which he has started. Alternatively it is still possible that Mr Connally will be appointed to the State Department rather than Mr Kissinger or either of the favourites, Governor Nelson Rockefeller and Mr Elliot Richardson. In that case all bets about the future influence of Ciep, of Mr

Kissinger or of anybody else would be off. But for the moment, at least, as a slightly sour observer in the State Department itself put it some weeks before the IMF meeting, Ciep represents the pulling together of "powerful men in motion rather than any constructive activity; but the motion produces friction, which produces heat, which may in turn one day produce some light." It did.

PoW politics

Neither the North Vietnamese, the leaders of the anti-war movement in America, or the American Administration can take much credit for the treatment meted out to the three prisoners of war who were released from captivity in Hanoi in the middle of September. The North Vietnamese chose to hand over two naval pilots, Lieutenant Mark Gartley and Lieutenant Norris Charles, and an air force pilot, Major Edward Elias, to their families on September 16th—only Major Elias's family decided to stay away—and their escorts from the American anti-war movement who had been summoned to Hanoi specially for the occasion. But the return journey to America did not start for another 10 days—not until the Hanoi hosts had shown off examples of American war damage and the anti-war leaders had arranged a route home which would keep the prisoners out of the hands of the military authorities for as long as possible. Other prisoners (in all 12 have now been released) have been whisked away from the public eye at great speed only to emerge later

making speeches in favour of the Administration's conduct of the war.

In order to allow Hanoi and the anti-war group, led by Mrs Cora Weiss, to make as much as possible of the occasion the prisoners were flown first to Peking, then to Moscow, where the American authorities tried unsuccessfully to persuade them to return home on a military aircraft, then on to Copenhagen and eventually to New York where they arrived almost two weeks after they were first freed. Their escorts insisted that they travel in civilian aircraft and in their own clothes; while the three did not seem too happy about the arrangement—Major Elias wants to continue his career in the air force—they went along with the plan for fear that if they did not they might displease the North Vietnamese and so jeopardise the release of more prisoners. But when they finally touched down in New York they were wearing their official uniforms and, after emotional scenes with their families, they went off to military hospitals as requested.

Nothing about the affair has pleased the Administration and for a period it looked as though the Department of Defence was heading for a clash with the anti-war leaders and the prisoners. It was pointed out that the prisoners were still members of the armed forces and that unless they fulfilled their duty and reported as soon as they were able to the military authorities they could be subject to court martial. Critics of the Administration claim that it is afraid that the prisoners will make anti-war speeches. But there is more than this at stake.

There are about 500 prisoners still in captivity. The three who arrived

home last week—two of whom had been in detention for less than a year—seem well and fit and have handled the stormy return to normal life competently; but others who come after them, some who have been held for eight years, may not react so well. Whatever information the ex-PoWs can give now may be invaluable to the future treatment of those who come after them.

Back to Court

FROM A SPECIAL CORRESPONDENT

The Supreme Court's insistence on racial integration in schools and its past deference to government regulators will be put to severe tests in a new term which opened this week with a docket of 99 cases already set for argument and decision by June. The general philosophical bent of the court is obvious: Nixonian. In a month voters will decide whether the man now in the White House will be granted the prospect of being able to expand his judicial foursome; two more vacancies seem likely in the nine-man court before long.

With four proponents of "judicial restraint" already put on the high bench by Mr Nixon, there is even now a strong possibility that the court will check its once-unanimous thrust towards closer racial integration in education, or even reverse it. The challenge will come immediately in a case from Denver, Colorado, the first from outside the south to receive intensive consideration. This mile-high western city has no background of racial laws; the segregation in some of its schools is largely a reflection of racially separated residential neighbourhoods. The hard question here is whether school segregation is just as official and as constitutionally objectionable as that established by law when it arises only because a board of education has failed to select construction sites for new schools and to draw district boundaries in ways that will ensure racial mixing. If the Justices settle on a narrow interpretation of de jure segregation, white suburbanites will sigh with relief, southerners who have insisted that the north and west would never accept restraints on where their children go to school will say "we told you so" and blacks and hardcore liberals will be deeply affronted.

Matching the Denver case in significance, and also to be heard in the coming week, is an appeal from San Antonio, Texas, in which the issue is

the quality of education poor children are to receive in contrast to that enjoyed by the middle class and well-to-do. Although Washington and the state legislatures provide supplementary funds, the amount of money spent on schools in a particular district depends to a great extent on how much can be raised in local property taxes. A federal court in San Antonio, like courts in a half-dozen other states, declared the system unconstitutional in that it produces an inferior education for children living in poor districts.

The regulatory agencies, long accustomed to their judgments being endorsed by the Court, are bracing themselves meanwhile for the disposition of a number of thorny cases affecting business, labour and consumers. At the top is one testing the authority of the Federal Reserve Board to compel creditors to supply installment purchasers with detailed pricing information. Another concerns strict clean-up obligations imposed by the State of Florida upon people who pollute navigable waters with oil. A third challenges the power of trade unions to fine members who quit during strikes and return to their jobs through picket lines.

Other questions to be decided are whether a private electricity company in Minnesota can be forced to sell power to municipal systems; whether computer programmes are patentable and whether the state of California may prosecute pirates of copyrighted musical recordings. Coming up are two cases in which the Justice Department is attempting to extend the anti-trust laws by challenging mergers that stifle potential competition. Along the way, the Justices are also likely to frame a new definition of obscenity and to decide what kinds of books, magazines and films may be suppressed by federal, state and municipal officials.

McGovern's happier days: at a UAW picnic.

ELECTION '72

Labour's all right

1. No solidarity in Detroit

FROM A CORRESPONDENT IN MICHIGAN

The nature of the audience of about 2,000 people that gathered at the airport in Flint, some 50 miles from Detroit, for a recent speech by Senator McGovern reveals the political convulsion taking place in Michigan. Flint is a General Motors company-town, economically dominated by the Chevrolet production plants and politically dominated by the Democratic-voting automobile workers. Accordingly, for many years, Democratic political rallies in Flint have been filled with automobile workers and their families. But Mr McGovern's airport rally was attended mainly by young people, most of them students, with barely 200 to 300 automobile workers present out of the 70,000 employed by the General Motors Corporation in Flint.

Many of the same workers who refuse to attend McGovern rallies will refuse to vote for him in spite of admonitions from the leaders of their trade union. The United Auto Workers, the most progressive and politically sophisticated trade union in America, is unstinting in its support for Mr McGovern. But the UAW's rank-and-file simply will not follow its leaders this time, opting instead either to vote for Mr Nixon or not to vote at all.

Such defections by working men in this heavily industrialised state have produced a political outlook scarcely imaginable three months ago. At that time, Mr Nixon's own political managers regarded Michigan as, from their point of view, the weakest among the

seven most populous states. Today's polls show Mr Nixon leading in Michigan by 15 percentage points, more than in New York or California. Indeed, by any reasonable measurement, Michigan is lost to Mr McGovern.

Mr McGovern's catastrophe in Michigan has special roots. The white factory workers who live in Detroit's suburbs have been frightened out of their wits by an order from a federal district court that would require their children to be taken by bus to slum schools in Detroit's black ghetto to achieve racial integration; this has outraged even white working-class families who are not directly affected. Mr McGovern, correctly considered

by these workers to be a longtime supporter of busing, tried to blur this impression by declaring in Detroit that this was a matter for the courts, out of his and Mr Nixon's control. But he could not approach Mr Nixon's unequivocal stand against busing. To obscure this issue, the UAW's shop stewards are flooding the assembly lines with campaign literature arguing that four more years of Mr Nixon in alliance with big business would ruin the workers economically. But the present resurgence in the motor industry means that there is plenty of work for union members. Thanks to lush wage contracts negotiated by their union, these factory hands own handsome

suburban homes and weekend cottages at the lake and many have accumulated a substantial net worth. To protect their present status from the spectre of forced racial integration, they are ignoring the advice of their leaders and turning to Mr Nixon.

Having virtually resigned itself to Mr Nixon carrying Michigan, the UAW is concentrating on the campaign of Mr Frank Kelley, the state Attorney General, against Senator Robert Griffin, Republican whip of the Senate. The union's leaders would have preferred the more liberal Mr Jerome Cavanagh, former Mayor of Detroit, as the Democratic candidate for the Senate seat, but they acquiesced in Mr

Courting the barrios

A new political party was born in El Paso, Texas, at the beginning of September: La Raza Unida. The United People are the repressed and impoverished, but increasingly militant and even chauvinistic, Mexican-Americans of the south-west. The party, which was launched on a tiny scale in 1969, was holding its first convention. It is on the ballot in Texas, where it is putting forward candidates for governor, lieutenant-governor, the state legislature and for local offices, in which it already has a foothold. It also plans to run candidates for governor in Kansas and for Congress in California. But if Senator McGovern hoped for an endorsement in the presidential race (in the past most Americans of Spanish descent have voted Democratic) he was disappointed. The more radical leaders of the chicanos, as Mexican-Americans are called, feel that there is nothing to choose between the two presidential candidates and are asking all people with Spanish names to abstain from voting in the national election.

The United People may be a misnomer. A notable absentee at the convention was Mr Cesar Chavez, the chicanos' best-known spokesman, who has been fighting for better working conditions for them. His crime was to have endorsed Senator McGovern back in May; he is also accused of taking too little interest in the new party. But chicano disunity will not worry President Nixon, as long as the creation of La Raza means that fewer Mexican-Americans vote for Senator McGovern. This will help Mr Nixon to carry Texas and California, two key states politically which contain over 4m chicanos. In all, there are about 9m people of Spanish descent in the United States including Cubans (mainly in Florida) and Puerto Ricans (chiefly in New York, New Jersey and Illinois).

Four years ago the President won only about 10 per cent of their votes.

Ever since then and most recently last month when he visited Texas, Mr Nixon has been wooing the Spanish minority, which is second in size only to the blacks. He has appointed 28 people with Spanish names to the high government posts which used to be virtually closed to Spanish Americans and where they are particularly visible. They have been paraded ostentatiously through Texas and California to good effect, although in Los Angeles the group was picketed by poor Mexican-American farm workers who denounced its members as "los vendidos"—the sold-out. Mr Nixon has also been putting pressure on government agencies to

hire more Spanish-speaking people, to give them a larger share of the anti-poverty money and to expand federal requirements and funds for bilingual teaching. Recently federal agencies are said to have been pouring subsidies into chicano projects and both parties have special divisions to look after Spanish-Americans.

But the Democrats have done little for a minority which until recently was overlooked in the country's preoccupation with black grievances. A census study reported last autumn that people of Spanish origin were slightly higher in the income scale than blacks (partly because fewer families are headed by women) but they lag far beyond other whites and share most of the blacks' grievances such as poor schools, bad housing and discrimination in jobs.

Nixon on the Rio Grande

Take the Northern Approach to banking in London

A total systems approach applied with personal attention by technically experienced bankers—that is The Northern Approach to the worldwide financial problems of business.

We offer a full range of financial services, including Eurocurrency financing, foreign exchange transactions, and a wide variety of financial management assistance through our London branch at 38, Lombard Street.

Add the resources and resourcefulness of our London branch to those of our Chicago

headquarters, The Northern Trust International Banking Corporation in New York, our global network of business and correspondent bank affiliations, and our participation in London Multinational Bank—and you have all the facilities necessary for applying The Northern Trust's total systems approach to your financial problems.

Kelley, whose commitment to liberal causes is sometimes cloudy, only because their members obviously preferred him. Since then, he has switched his position on school busing from ambivalent approval to clear opposition. But to Michigan's working men, Mr Griffin's role as leader of the anti-busing block in the Senate eclipses the anti-trade union record which he has built during 16 years in Congress.

Michigan's incumbent Democratic Congressmen, liberals all, reflect what is happening here. To survive, they have openly declared war on busing and tacitly abandoned Mr McGovern's faltering presidential candidacy. The formula for victory among Michigan's Democrats, today and into the foreseeable future, is wholly alien to the progressive ideology at Solidarity House, the UAW's headquarters.

2. Shaky Keystone

FROM A CORRESPONDENT WITH THE CANDIDATE
Pennsylvania, third largest state in the union, is in reality two states. East of the Appalachian mountain chain is farming country, with business and financial centres dominated by Philadelphia. West of the low mountains is the eastern edge of a coal and steel empire that extends through Ohio and even into Indiana and Illinois, reaching almost to the Mississippi river. Politically, eastern Pennsylvania leans right, towards the Republicans, while in the west Pittsburgh and Allegheny County, which surrounds it, have for years, indeed, decades, been mines of Democratic strength.

But for Senator McGovern this political ore is proving hard to dig. One in three voters is Roman Catholic—a statistic which would be meaningless except that the mass of Pennsylvania Catholics are the second- and third-generation descendants of immigrants and are socially and financially conservative. Wherever Mr McGovern has gone, in his frequent visits to Pennsylvania, he has run into questions from trade union leaders and party officials about his disagreements with the American Legion, the highly conservative organisation of ex-servicemen, over his policy of giving amnesty to those who have fled from the United States to avoid being conscripted for service in Vietnam. There are also questions about what are known as "codeword issues." There is "busing," enforced transportation of children away from local schools to obtain a better racial mix, which has overtones of colour prejudice and frustration over poor education and high taxes. There

is "welfare," which means to many voters higher taxes and black militancy, "something for nothing" and the stereotype of the lazy black man.

Unemployment is serious in Pennsylvania—7 per cent for the state as a whole and as high as 15 per cent in some areas and some industries. But, as one Philadelphian put it, "people are not so badly off that they have to vote the pocketbook issue yet. They can still vote for the social issue." In the Keystone State, this is the political heritage of a recession which was not quite a depression.

President Nixon's Committee to Re-Elect the President (which is coming to be known by the unflattering acronym Creep) is fat and happy here. Its leaders, such as Mr Arlen Specter, the former prosecutor for the city of Philadelphia, believe that the foreign-stock "ethnics"—termed "heritage groups" in the new Republican lexicon—are moving solidly in the President's direction. Mr Specter and his associates also believe that Mr Nixon has managed to project himself as a legitimate leader, a solid middle-of-the-road pragmatist and "The President." Mr McGovern, on the other hand, they say, is viewed by voters as a man who would bring higher taxes and radical social reforms.

Mr Specter, however, worries about over-confidence. His own polls show a picture far less flattering than some others for Mr Nixon. The President's lead in this vital state is only about 15 per cent and Mr McGovern's aides consider that margin "manageable at this stage of the game," for their own candidates.

What we have to stress is McGovern's commitment to the working people. That's the core Democratic vote. We've got to get it back or we lose. . .

This from Mr McGovern's state coordinator, who says that the basic issue is "What's your wife paying for chopped beef? What was she paying when Nixon came into office?" In an ordinary year, this would attract Democrats in sufficient numbers to ensure an easy victory for Mr McGovern in Pennsylvania. But 1972, as everyone is becoming increasingly convinced, is far from an ordinary year.

Congress raided

Mr Ralph Nader is embarked on a crusade to revive and reform Congress, the greatest and most controversial enterprise ever attempted by the man who is known as the consumers'

Nader calls on Congress

advocate. He wants to restore to Congress the powers which it has lost to the White House, to special interests and to its own powerful chairmen of committees, to modernise its procedures, and to make it responsive to the needs of ordinary Americans. On Tuesday, before a crowded press conference and a battery of television cameras, he asked Congress to call a special session for late next year—a non-election year. This would have no business to deal with except what Mr Nader alleges is a grave constitutional crisis, the break-down of the separation of powers which (in his view) makes Congress almost impotent, although it is the branch of government which should be closest to the people.

Mr Nader—spare, intense and hollow-eyed from 20-hour days spent on a project which he is financing himself from his earnings as a lecturer—thinks that there is wide support in Congress for reform but that action will come only if public opinion is aroused and informed. This week saw his first blast, a racy, readable paperback, "Who Runs Congress?" by three of Mr Nader's associates,* dealing, in a fairly jaundiced familiar way, with the failings of Congress: its abdication to an almost monarchical presidential establishment; its susceptibility to special interests; its members' dependence on campaign contributions from private contacts; its archaic procedures (Congress has one full-time computer compared with 4,000 in the executive branch); its black-balling of nonconformists.

What members of Congress await with more fear are the profiles of 485 incumbents, which are due to appear on October 16th, just three weeks before the election; Senators and Representatives who are retiring are omitted. These profiles will contain facts about individual members which

*Mark Green, James Fallows, David Zwick. Bantam Books. \$1.95.

many of them might rather not have known: names of their chief supporters, their personal shareholdings and business interests, their votes on controversial issues in committee (quite often different from their public votes on the floor). Many members objected bitterly to the time-consuming questionnaires that they were asked to fill out and argued that it was unjust not to subject their opponents to the same ordeal. But all but a handful co-operated, in the fear that a refusal would suggest that they had something to hide.

Mr Nader has many good ideas. One is for a congressional ombudsman to handle the problems of individual constituents, which take up an inordinate amount of a Congressman's time and trivialise his work; but this service pays political dividends. There is, however, grumbling even in the Nader ranks themselves about what has been a rush job. "Who Runs Congress?" was a hastily produced afterthought which does not reflect the conclusions (not yet published) of teams probing more deeply into problems such as lobbying and campaign financing. The profiles, some hold, have diverted resources and attention from this more important work. If errors of fact have crept in and amateurish methods have been used, Mr Nader now has plenty of critics who will be glad to point them out; the press is much less friendly to him than it used to be.

Bump on Bart

FROM A CORRESPONDENT IN SAN FRANCISCO

The Bay Area Rapid Transit System's first accident last Monday does not seem to have shaken confidence in the computer-run railway that began to serve the San Francisco region three weeks earlier. A flood of travellers have been riding out to the end of the 28-mile line—all that is finished so far—to see where a new carriage ran off the track; five people were injured, but none seriously. "The public seems to understand that a transit system this novel is going to have some problems," says Bart's general manager.

Just what caused the 70-foot long aluminium railcar to speed up as it approached the station, instead of slowing down, is being examined in three different investigations, by the federal government's National Transportation Safety Board, by California's Public Utilities Commission and by Bart itself. The driver of the train, who usually does nothing except monitor how the system is responding to the

computers, can override their operations by manual controls. In this instance the experienced driver, who had been with Bart for two years, is said to have tried to stop the train by every means at his command, including turning off the electric system.

The train was nearing Fremont, the last station on the line at present, at a normal approach speed of 27 mph when the carriage began to accelerate, reaching an estimated 40 mph by the time it ploughed into the mound of sand covering the raw end of the tracks and tipped to the ground beyond at an angle of 35 degrees. Each stub end of track in this partially completed system is protected by a similar embankment of sand and the shaken passengers said that, if the barrier had been concrete or steel, there would have been more injuries.

The carriage was brand new, completing its second run on its first day of service. However, Bart has been plagued by shortages of carriages, as a result of strikes at the plant which makes them, and the company has been rushing out three new carriages a week. These are tested and their dual brake systems are tried thoroughly before they are put on scheduled runs. Whether the fault lay in the carriage itself, its braking system, its electric controls, its reception of signals from the computers along the way or in the master control is what the investigators will be trying to find out. This sophisticated system is obviously still somewhat experimental.

Meanwhile a steadily increasing number of commuters are using Bart to get to work in downtown Oakland and far more sight-seeing journeys are being made than expected. The average number of passengers is now 80,000 a week. Among them recently were President Nixon and his wife; he said that Bart gave him "the smoothest ride I've ever had" and marked his appreciation of the first new rapid transit system that America has had in 30 years by giving Bart an extra \$38 million in federal funds to buy more carriages.

A & P cuts up

The price war in America's supermarkets, which has spread farther and gone on longer than any of its many predecessors, could not have come at a better time for the American housewife. But, while she may be able to offset the soaring cost of beef by paying less for dry groceries and tinned goods, the supermarket industry is not finding it easy to balance its books. Almost

all the major companies, with the exception of Safeway Stores Inc, have seen their profits shrink this year. The worst hit has been the country's largest and oldest chain of food shops, the Great Atlantic and Pacific Tea Company, usually known as the A&P. But it has little cause to complain, although its shareholders may, since it was A&P that started the price war last autumn.

That was when the company realised that, unless it showed more aggressiveness than it had for the past 10 years, it was in danger of losing its lead in the national market to Safeway, long dominant on the west coast. Since then A&P has been following a deliberate but risky policy aimed at increasing the volume of sales by lowering prices. (Last year the company's sales were worth \$5.5 billion and it had 5.8 per cent of the total market compared with 7.5 per cent in 1967.) The method chosen to get ahead of its more up-to-date rivals was to convert its 4,200 supermarkets to new streamlined discount shops, a changeover which is being completed this month. The new WEOs (where economy originates) involve cuts in the number of products that the shops carry, the elimination of frills such as display racks, wrapping service and trading stamps, heavy advertising campaigns to lure customers away from rivals and drastic reductions in prices.

The volume of sales has certainly gone up, by 15 per cent in the second quarter of the firm's year, to a record level of \$1.6 billion. If the situation develops as the management predicts, there will be a smaller loss during the current quarter and a profit during the last three months of the financial year. Some people are afraid, however, that with the lower margins not even a larger share of the market will add up to higher profits. But luckily for A&P it is in a stronger position to carry losses than are most other food retailers. It has no long-term debt and has cash reserves to fall back on.

Its smaller competitors are afraid that A&P will continue to accept losses until it has driven others with less lavish resources out of the market. A&P has already forced them to lower their prices by more than they can afford and to resort to costly innovations such as longer shopping hours. One company is threatening to take the supermarket giant to court for violation of the Robinson-Patman Act, forbidding larger companies from taking actions designed to force smaller competitors out of business.

QUEEN VICTORIA: HER LIFE AND
TIMES, VOLUME I, 1819-61
By Cecil Woodham-Smith.
Hamish Hamilton. 486 pages. £4.50.

Queen Victoria is an unusually formidable subject for a biographer to confront. She was a political figure of first-class importance in an era when the traditional dispensations of church and state were giving way to modern democracy. She was a sovereign who reigned for more than 60 years of important constitutional evolution. On top of this she was a dynast connected inextricably with nearly all the Protestant courts of Europe and some of the non-Protestant ones as well. And finally she was a woman whose life and interests were as much concerned with childbirths, marriages, and family affairs as with cabinets and policy.

A perfectly adequate and definitive biography would have to deal faithfully with all these dimensions. To say, therefore, that Mrs Woodham-Smith's book is unevenly meritorious on these various aspects is no more than to acknowledge that a uniformly high level of achievement is hardly to be expected. Mrs Woodham-Smith is best on the family side; good on the dynastic—especially the Coburg ramifications—aspect; rather weak on politics and constitutional development and foreign policy. It is minor evidence of a lack of sureness of touch to have Lord Palmerston born 10 years too late; it is rather more worrying to come across the opinion that Germany needed the Kiel canal to get access to the Atlantic. And it is completely confusing to find such judgments as that the Queen and Prince Albert "supported Schleswig in the Schleswig-Holstein dispute." Mrs Woodham-Smith is altogether too dependent on such outmoded and unreliable authorities as the "Cambridge History of British Foreign Policy" and the works of H. A. L. Fisher.

The most welcome contribution of this book is to enlarge our knowledge of the circumstances of Queen Victoria's private and even intimate life. The peculiar problems surrounding her lonely girlhood, her difficult

relationship with her widowed mother, the Duchess of Kent, and her mother's recurrent tendency to fall under the influence of unscrupulous and ambitious men such as Sir John Conroy are for the first time accorded full and authoritative treatment. This is true also of the fascinatingly rich and complex relationship between Victoria and Albert. The Queen was increasingly prone to nervous hysterical crises, usually associated with the dreaded and increasingly resented onset of pregnancy (she bore nine children between 1840 and 1857). It is difficult, on the evidence offered by Mrs Woodham-Smith, to avoid the conclusion that in the emotional transactions between Victoria and Albert Victoria built up a large surplus balance at Albert's expense. This is not in the least to suggest anything of the "vampire theme" or even of Henry James's novel "The Sacred Fount"; but unquestionably Albert's increasing emotional debility, his sense of being drained until ultimately he quite openly acknowledged a complete lack of any will to resist illness and fight for life, was in itself an integral and central constituent of the very "success" of their marriage.

Victoria's worship and adoration of Albert had about it an insistent intensity and paradoxical demanding-

1861: Victoria in Albert's last year

ness. And Albert, as it happened, was formed by the nature of his character and personality, as well as by the ambiguous situation of his being consort to a Queen regnant, to supply the demand without having the means of replacing the supply. From the moment of his birth in 1819 (three months after Victoria's) he was shaped for the vocation of being Victoria's husband.

It is essentially in this respect that Mrs Woodham-Smith's version of Victoria is superior to Lady Longford's, published in 1964, which provides inevitably an obvious source of comparison. Lady Longford's is superior in the general evenness of its texture and its surer grasp of the public aspect of things. A good measure of the special superiorities of Mrs Woodham-Smith's scale of treatment is that whereas Lady Longford gives the letter written by Prince Albert to the Prince of Wales on November 16, 1861, about his son's errant behaviour at the Curragh, a mere 20 words, in this book it gets 50 lines; and that depth of treatment certainly justifies itself in the illumination it throws on the very curious psychological state of the Prince Consort shortly before his death.

This volume, and its concluding successor to come, will establish themselves in the canon of serious and worthwhile studies of Queen Victoria. Its shortcomings remind one of the difficulties of such an undertaking. Lytton Strachey was certainly well advised not to venture out beyond the limits of his suggestive and impressionistic sketch.

Light relief

DIDEROT
By Arthur M. Wilson.
Oxford University Press. 935 pages.
£11.25.

DIDEROT'S LETTERS TO SOPHIE
VOLLAND: A SELECTION
Translated by Peter France.
Oxford University Press. 218 pages.
£3.40.

In 1767 the Russian ambassador in Paris, Prince Galitzin, was ordered to leave his post. He was certainly sorry to do so, not only because this meant moving from Paris, but more particularly because it also meant leaving his mistress, a Mademoiselle Dornet. However, almost immediately after his departure he became attached to a Prussian countess and married her. He then felt that he should recover from Mademoiselle Dornet two portraits of himself, and asked his friend, the

Diderot: a taste for farce

eminent "philosopher" Diderot, to help him. Diderot devised a farcical scheme whereby a friend of his would assume the disguise of a famous Turkish physician, make the acquaintance of Mademoiselle Dornet, and persuade her that the two portraits of Galitzin were having a malign influence on her health. Diderot would then appear and offer to take them from her. The plan worked well for some time, but then collapsed.

There is a lot to be learned about Diderot from this story. It shows him to be a man with his share of gaiety, in some ways the most attractive of the *philosophes*. Diderot wrote an account of this deception in dialogue form, and it is typical that it was never published during his lifetime but only discovered a few years ago. Significantly, the realisation that Diderot could play such practical jokes caused some critics to change their minds about him. Even today, Dr Wilson finds it necessary to point out that, even if the plan had been successful, it would not have done Mademoiselle Dornet any harm.

After a certain amount of neglect, Diderot has come to attract both attention and admiration. He was, more than anyone else, responsible for the "Encyclopédie"; he was the author of novels, plays and philosophical dialogues which seem to us to be remarkably modern; as a talker, essayist, letter-writer and personality he is a rich and impressive character. In this realisation of Diderot's true value, the work of Dr Wilson has been most important. He wrote an account of Diderot's early years some time ago; it is now reprinted as part of the completed biography. This is massive, masterly, replete with knowledge and filled with interest. It is skilfully written, the narrative moves briskly, and there is a harmonious division of

attention between the life-story and the writings. Both the specialist and the more general reader will enjoy this book.

English readers may be irritated by Dr Wilson's American analogies. When, for example, he mentions Sophie Volland, to whom Diderot wrote hundreds of magnificent and moving letters, he refers to Dorothy Parker's remark about girls who wear glasses. Is this either apt or clear? At all events Mr Peter France has now produced, for the first time, a translation of some of these letters. This is to be recommended even to those who prefer to read their French literature in French.

Significant tribute

ESSAYS IN HONOUR OF LORD ROBBINS

Edited by Maurice Peston and Bernard Corry.

Weidenfeld and Nicolson. 414 pages. £4.50.

Nineteen prominent British and North American economists, most of them at one time associated with his beloved London School of Economics, present scholarly but intelligible essays to this volume in honour of Lionel Robbins's seventieth birthday: in visible affection for a friend and teacher who has done so much to pass on to so many of today's leading economists a spirit of scientific inquiry, a sense of wide cultural heritage, a tradition of tolerant passion in controversy, and even sometimes the example of his own unusual gifts of organisational competence.

Part one of the volume contains six papers on economic theory and methodology, which will be of main interest to teachers of economics: perhaps particularly Professor Lipsey's argument that Keynes himself might now have recognised at least seven errors in the

Robbins: birthday honour

theory of national income which has been largely inherited from him, but that most of the main elementary and intermediate macro textbooks (including the great Samuelson) cause most economic teachers to go on perpetrating many of them.

Part two contains four essays on the history of economic thought, but seems the least satisfactory part because fashions in this have become too twee. It is nowadays a better service to clear thinking for economic historians to recognise how badly, albeit understandably, even first class nineteenth-century thinkers like Ricardo (let alone poor Marx) often got so many things so wrong, than it is for them to extend today's over-respectful habit of striving to find ever more sophisticated explanations of how they nearly got many things right.

Part three contains nine papers on economic policy and applied studies. Professor Baumol of Princeton is frighteningly convincing in his essay on the dynamics of urban problems, where he shows that in a cumulative deterioration process any short-term anti-market solution (eg, subsidies to urban transportation or to what we in Britain would call other nationalised industries, policies for urban renewal that bring the middle classes back to the cities) may not achieve beneficial long-term results, however large their scale, but may just alter time paths while decay actually accelerates. He is doubtful whether preservation of a city "is an appropriate objective if this can be achieved only at the expense of its inhabitants."

Honourable lady

NANCY: THE LIFE OF LADY ASTOR

By Christopher Sykes.

Collins. 544 pages. £3.95.

Mr Sykes quotes, almost apologetically, the most famous piece of Winston-Nancy backchat of all:

N.A.: Winston, if I was married to you I'd put poison in your coffee.
W.C.: Nancy, if I was married to you, I'd drink it.

In one way it is typical of "Astorisms": it sounds, as Mr Sykes says, like invention, a just-too-perfect expression of the notorious antipathy between Churchill and Nancy, Viscountess Astor, the first woman to take her seat in the British House of Commons. And yet, says Mr Sykes, it is well authenticated. This caution is typical of his admirable biography. He knew her in the late 1950s, when she was old enough to have returned to the role of enfant terrible; he remembers

Nancy, electioneering

being scared (but not mauled, "she was probably on the lookout for bigger game") by her in earlier years. But he stands neither in awe or in protection of his subject; only occasionally does he succumb to chivalry. She "was not monumental"; but she was more than a joke.

In one way the coffee crosstalk was less than typical: in most of the anecdotes Nancy had the punchline. True, these were often of occasions when she crossed swords with lesser men than Churchill; hecklers at election meetings, reporters, the more ponderous of honourable members. But at repartee she scored—though, as Mr Sykes fairly makes plain, it was too often a less than admirable cover for abysmal ignorance. Asked at an election meeting about pensions, by a lady of 66, Nancy replied: "You're much too young and pretty to think about things like that."

But if some of her remarks were tasteless—more so by today's standards—her detractors' behaviour was scarcely more attractive. There was Horatio Bottomley with John Bull, and Clifford Sharp of the New Statesman, running smear stories on the divorce Nancy had obtained in America from Robert Shaw, after she had, with typical courage and misguidedness, opposed one particular plan for reform of the English divorce law. She was quite unabashed by the ordeal of taking her seat in the Commons—a scene Mr Sykes recreates extremely well, and which typically has a good deal of farce in it: Lloyd George and Arthur Balfour, who introduced her, had not rehearsed and were comically out of step. But even the politest male letters of congratulations (such as Salisbury's) were heavy with condescension; the speeches of her political colleagues drip with archness.

Cliveden, and the Astor wealth, was a far cry from the post-civil-war Virginian poverty of Nancy's parents' early married life. Even by the time she was born, on exactly the same day as Waldorf Astor, the Langhorns were over the worst. Nancy's elder, even more beautiful, sister Irene, the original Gibson girl, achieved her own social status. But Mr Sykes quotes the remark by Nancy's old nurse, when shown a picture of Cliveden: "Oh, Miss Nancy, youse sho' done outmarried yo'self." It was a story, typically, that Nancy Astor loved to tell herself.

She undoubtedly also outstayed her welcome in politics; her husband, who remains a shadowy figure, comes sharply into focus in 1945, when he had to persuade her not to stand again. In the 1940s and even the 1930s she did not display to advantage. Mr Sykes treats the Cliveden set without whitewash but with a certain scepticism. But he does not attempt to disguise her by now obsessive prejudices (against Jews, fostered first by Hilaire Belloc, and then—rough justice?—against Roman Catholics) or her dreadful, rambling speeches; Harold Nicolson likened one parliamentary debate with her, in 1943, to "playing squash with a dish of scrambled egg." It is perhaps fortunate, after all, that Mr Sykes knew her even in her last years; then, her prejudices had faded away, her repetitiveness was merely sad, she could no longer hurt even her family and only her wit was left remarkable.

Queer ship?

CAPTAIN BLIGH AND MR CHRISTIAN

By Richard Hough.

Hutchinson. 320 pages. £4.

Even without that extraordinary performance by Charles Laughton in the 1936 film, what happened on the *Bounty* in 1789 would still hold its place in the popular imagination. After all, as Mr Hough puts it in the last sentence of his book, it is "the most celebrated mutiny of all time." But had Laughton not created a new myth about Captain Bligh as a sadistic tyrant, would Mr Hough, the best of the popular naval historians of the present day, have devoted so much care and thought to this curious episode?

Mr Hough has gathered all the evidence together with his usual assiduity—though there is an untypical slip early in the book where in one paragraph one of the seamen, Lamb, is put among the initial group of muti-

HMSO BOOKS

neers and then a few lines later is said to have been standing apart from that group. His narrative then runs as strongly and smoothly to its conclusion as a fine ship before a fair wind.

That conclusion, while in tune with contemporary fashion, is banal. It is that Bligh and Christian had enjoyed a homosexual relationship since their first voyage in 1785 and that it was Christian's refusal to renew the relationship after tasting the heterosexual delights of Tahiti that led to the conflict between the two men and hence to the mutiny. That, as Mr Hough admits, is pure surmise. It is possible. But the evidence is by no means strong enough to make such an explanation probable. It passes lightly over the fact that throughout his career Bligh carried trouble with him, like an albatross slung round his neck.

Brilliant navigator and seaman though he was, Bligh—unlike his mentor, Cook—was a bad commander. In the course of his book, Mr Hough makes that amply plain. He quotes with approval an earlier judgment that Bligh was a nagger, incapable of putting a stop to his own foul tongue. Bligh was not a sadist, as Pigot of the *Hermione*, that other infamous ship of mutiny, was. But he was a bully. In adversity he could drive men, fearful of their own lives, to obedience. In fairer weather, he failed to lead them. The combination of such a commander and an ill-picked crew, who had seen their own paradise lost, is surely explanation enough for the mutiny.

Bligh: bully but not sadist

Obeying the conventions

HUMAN RIGHTS IN THE WORLD

By A. H. Robertson.

Manchester University Press. 288 pages. £3.60.

PROHIBITIONS AND RESTRAINTS IN WAR

By Sydney D. Bailey.

Oxford University Press for Chatham House. 207 pages. £3 cloth, £1 paperbound.

Since the second world war, and partially as a consequence of its excesses, several conventions have come into existence protecting human rights through international organisations: the United Nations Covenants, the American Convention on Human Rights and the European Convention on Human Rights. At present attempts are being made to establish similar conventions in Africa and in the Arab world. Mr Robertson, who is the head of the directorate of human rights of the Council of Europe, has written a lucid account of all these developments. It is some achievement that he has managed to deal with his subject with brevity but not without originality.

Far the most influential international human rights instrument is the European Convention on Human Rights. It provides for an appeal over the heads of the domestic courts on issues which range from the right to liberty and the negative and more precise right not to be tortured to more marginal rights such as freedom of association and the right to property. Britain has been arraigned before the Commission on Human Rights for the non-admission of the Kenya Asians and the complaint of the Irish government in respect of the operation of internment and the treatment of internees in Ulster has just been declared admissible. It is not certain that the delicate task of weighing individual rights against public interest is best performed by a bench of international judges, without democratic mandate, nor even first-hand knowledge of the conditions of the countries concerned. But any forces redressing the balance in favour of individual rights must serve some useful purpose.

Long before the human rights movement was conceived on a supra-national scale, the conduct of combatants in time of war was regulated by a series of international conventions. The most recent were the Geneva Conventions of 1949. These constitute what is called humanitarian law, and Mr

Bailey's book provides a useful summary of its provisions and current proposals for its extension. He examines the background, the evolution of the concept of the just war in Christian ethics and international law. This survey, as well as Mr Robertson's treatment of the subject, emphasises the feebleness of the enforcement machinery. There is no international judicial body charged with implementing humanitarian law, even though it is far less dubious material for international regulation than human rights generally.

Acquaintance and audience

SAMUEL JOHNSON: HIS FRIENDS AND ENEMIES

By Peter Quennell.

Weidenfeld and Nicolson. 272 pages. £3.50.

SAMUEL JOHNSON AND THE LIFE OF WRITING

By Paul Fussell.

Chatto and Windus. 317 pages. £2.50.

These books complement one another. The first can confidently be expected to outsell the second, but it is not intrinsically more valuable. Because Johnson the man is a legendary figure, and Johnson the writer is seldom read, Mr Quennell starts with an immense advantage in terms of a reading public. As might be expected, he provides a series of delightful conversation pieces. Johnson in the bosom of the Thrale family; Johnson as a member of The Club, associating with Reynolds, Goldsmith, Garrick and Burke; Johnson with Fanny Burney and her father; Johnson and his household of pathetic dependants—none of the pictures is unfamiliar. Hume, Sterne and Gibbon are portrayed among those whom Johnson disliked; Horace Walpole as one who voiced a sharp dislike of Johnson. Boswell is accorded less attention than he might have desired, for it is Mrs Thrale whose presence dominates this book. Mr Quennell has drawn copiously on the records she kept of Dr Johnson's participation in the life at Streatham Place. She was a more intimate friend of the melancholy, uncouth, learned sage than James Boswell ever was. Seen in relation to her, her husband, her mother and her children, Johnson seems more life-sized and less the Grand Panjandrum than the figure we meet in Boswell's biography. Mr Quennell writes with practised ease, and the illustrations make the book doubly attractive.

Johnson at Sir Joshua's, with Boswell behind and Burke on his right

Comparatively little attention is paid, in this survey of Johnson's friendships and enmities, to the work he did as a professional man of letters. It is this aspect of his life that occupies Mr Fussell, and he has produced an exceptionally interesting study of Johnson's literary achievements. His versatility is rightly emphasised. Until the romantics established the notion that the need for self-expression is the one valid reason for writing, a man with literary talent could exercise himself in a great variety of genres, and pride himself on the competence with which he could produce a verse satire, a prose fable, a biography, or indeed a periodical essay. Dr Johnson expended his gifts in a remarkable number of literary "kinds," quite apart from his astonishing lexicographical labours. This book underlines the sheer toil entailed in writing for a living. In Johnson's case, the grind was made the more painful by his congenital slothfulness, that melancholy inertia known to churchmen as *accidie*. This engendered a haunting fear lest he should be found an unfaithful servant at the last, who had failed to employ properly the talents entrusted to him. Samuel Johnson certainly comes to life in Mr Fussell's pages, though the reader's attention is focused on what the man of letters actually accomplished. The author's interests range far beyond the eighteenth century, and he does not lose sight of the perennial problems of a writer's motivations. He has an engagingly lively style, and knows what he is talking about.

Europe short list

The guides that will no doubt begin to multiply in English on Eurolaw have been set a high standard of brevity and coverage by Pierre Mathijsen, a professor with experience both of teach-

ing community law and of the European Commission. *A Guide to European Community Law* (Sweet and Maxwell, £2.50 cloth, £1.50 paperbound) is a remarkably comprehensive and professional little book, covering treaties, institutions, the existence and the application of community law, complete with a table of the cases decided by the European court in Luxembourg. The law stated is as it exists now; one can hope there will be further editions on the accession of new member states.

Steven Warnecke is one of the early crop of American academics whose interest has been to follow Europe's halting attempts to integrate. He edits a sympathetic book on the growing problems which Europe will face as Britain joins the common market and as the identity of European interest with America become less clear. The essays contained in *The European Community in the 1970s* (Pall Mall, £6.25) are uneven in quality, but they range wide and at their best—Mr Warnecke himself on Europe's institutions, Mr Andrew Pierre on the challenge of a pentagonal world, Dr Ralf Dahrendorf on possible European foreign policies—they are very good.

The most tangible dispute between the United States and the newly enlarged common market is over tariffs and other barriers to trade. John Evans writes soundly and from long experience on the subject of *The Kennedy Round in American Trade Policy: The twilight of Gatt?* (Oxford University Press, £6.75). His is not a scintillating book, nor is the more concise and analytical work on the same subject, *The Kennedy Round and the Future of American Trade* (Pall Mall, £7.25) by Thomas Curtis and John Vastine. But the world of Gatt is perhaps not a scintillating subject. These two books complement each

other well on a subject which is essential reading for serious students of what the developing battle over free trade in a time of affluence and attempted full employment is all about.

The decline of the old special relationship between Britain and America is one casualty (or cause) of British entry. And the days are probably gone when America responded, in John Foster Dulles's phrase, "like a barometer" to Europe's concerns. Max Silberschmidt has produced an attractive and handy (which means short) summary in *The United States and Europe: Rivals and partners* (Thames and Hudson, £2.25 cloth, £1.25 paperbound), while R. B. Manderson-Jones has a useful little study in *Anglo-American Relations and Western European Unity, 1947-56* (Weidenfeld and Nicolson, £3.25).

Into Europe: The Structure and Development of the Common Market by A. E. Walsh and John Paxton (Hutchinson, £4) is another useful text book on how the whole thing works. *The European Community in the World* edited by P. P. Everts (Rotterdam University Press, Dfl38) is a group of essays from that prolific source of European studies, more for specialists than the general reader.

Burroughs THE B 1700 announces SYSTEMS

POWERFUL NEW SMALL-SCALE COMPUTERS FOR THE BUSINESS MANAGER

... who needs the valuable management information and control capability now available to users of larger systems—

Start into data processing the right way with a system providing comprehensive management information at a cost that the smaller business can afford.

A B 1700 System enables you to develop comparative operating reports, budgets and forecasts ... day-to-day updates of business progress ... analyses of profitability, cash requirements, liabilities ... inventory and production control reports ... current and projected financial statements ... the specific decision-making and control information you need when you need it.

... who needs results without complexity—

Your B 1700 System does not require a professional programming staff, or highly skilled operators, or expensive site preparation. We will train your people to run it. And you can put your B 1700 to work as soon as it's installed by using cost-saving application programs from Burroughs library of Business Management Systems. They're available now for: Wholesalers ... Distributors ... Manufacturers ... Banks ... Hospitals ... Accountants ... and ready soon for Government ... General Contracting ... Credit Unions ... Savings and Loans ... Auto Dealers ... Utilities ... Schools and Universities ... with many others to come!

... who wants more EDP capability today, expandability for the future—

B 1700 fourth-generation technology provides exceptional data processing power and applicational flexibility for systems in the small-scale range. Modular design allows you to expand economically, whenever you need to, without having to change your programs or your operating procedures. Your B 1700 is a responsive management guidance system that can save you time and money, now and for years to come.

The exciting new B 1700 Systems are being delivered now. They demonstrate Burroughs continued success in developing advanced electronic systems that can serve your management information needs more effectively and at a lower true cost!

REVOLUTIONARY

... large system management reporting abilities
... ready-to-use programs from a library of Business Management Systems
... a Master Control Program for system self-regulation and multiprogramming (for the first time in systems of this size)

FOURTH-GENERATION SMALL COMPUTERS WITH

... the ability to process a variety of computer languages at full efficiency
... superior new 96-column card-handling capabilities (as well as 80-column card equipment)
... two new line printers, two new MICR reader sorters, plus two new magnetic data

file subsystems
... simplified operation and system management
... exceptional flexibility in application and responsiveness to change
... new levels of cost/effectiveness!

Burroughs 

Business Brief

Nordic disunion

Denmark's solid "yes" to the common market on Monday will make it the only Scandinavian country to enter the community, leaving its four Nordic partners—Sweden, Finland, Norway, Iceland—outside in varying degrees of cold. On November 20th the Scandinavian prime ministers are holding a summit meeting to discuss Nordic co-operation. But all five know that the economic and political balance between Scandinavia's 22m people has been upset.

Since the war the Nordic countries have been building up a small but successful common market between themselves. It had achieved free movement of both labour and capital long before the EEC has done. Large numbers of Finns work in Sweden. Swedish money has been flowing into Denmark, anxious to get a foothold in the common market. Trade between the five Nordic countries has leapt in the past decade by 170%, compared with a 110% growth within the European Free Trade Association—although Efta membership has helped with this.

Some of the unity has been only skin-deep, and the debate over membership of the EEC has thrown the differences wide open. Each country has been resolutely following its own foreign policy; the five have

been united largely in their shared xenophobia. It took Iceland 10 years to screw up enough courage to join so inoffensive an organisation as Efta. All five countries restrict inward foreign investment. In Denmark foreign investment in shares or in property is tightly controlled. The shares of even the largest Swedish companies are still not readily negotiable by European investors. Anti-EEC campaigns in both Norway and Denmark drummed up fears of an invading flood of foreign capital and foreign influence. Yet Scandinavia's wealth is based largely on successful international trade. With less than 1% of the world's population, the area contributes 5% of the world's trade and a massive 15% of its shipping. As more than three quarters of this trade goes to western Europe, the Norwegian-Swedish swing towards Nordic isolation and against a political stake in the EEC has been less than rational.

Denmark's relief

The Danes did not imitate it. The decisive factor for them was the massive economic advantage of joining the EEC. Almost all their industries are competitive enough to benefit from free trade, which Norway's agriculture and fishing are not. If the referendum had rejected entry, the intention had been

to devalue the krone by perhaps 25% this week. Instead, the foreign exchange markets reopened happily on Tuesday; Danish bank rate was cut; and the prime minister announced that he was going to resign.

Denmark's agriculture will now benefit from higher export prices to Britain, its best customer (which takes nearly half of its total farm exports), and will regain access to rich European markets from which it has been cut off during the past decade. Denmark used to be a large bacon and butter exporter to west Germany, a natural market for its products. But since it was excluded from the EEC markets by repeated French vetoes on British entry—which automatically kept Denmark out too—the Danish economy has been held back.

With a substantial trade deficit year after year, which had mounted to \$500m by 1971, Denmark had run up a foreign debt equal to 15% of its gnp. It was unable to afford much of a foreign policy and its defence spending ran down. Its exports were inextricably tied to Britain with its sluggish economic performance. Monday's referendum will loosen that drag.

Although Denmark's agriculture is probably the most efficient in Europe, it has—like everybody else—been steadily reducing its dependence on farming. Its industry, which has been chronically short of capital and entrepreneurship, should now receive a large investment boost from EEC membership.

Sweden's isolation

How long will Sweden maintain its self-imposed neutrality and isolation from EEC? A growing part of Swedish industry is

pressing for membership. Few Swedish politicians relish the idea of having to use Copenhagen as its spokesman in Brussels from now on; especially on issues such as trade negotiations and monetary union, on which Sweden has always in the past had quite a loud world voice of its own. The European community has made it clear that Sweden, although the largest non-applicant country in western Europe, can expect neither consultations nor influence on EEC decisions without a full membership.

With the highest food prices in the world, Sweden would not have Britain's economic and social and political problems in accepting common market farm prices. As 40% of its exports are from engineering and metal industries, the industrial policy that will be forged in Brussels over the next few years will concern Sweden vitally. Mr Olof Palme's government now has only a year left in power, until the next elections. Faced with increasing prices and unemployment, it may yet reverse its policy.

Norway's plight

The Norwegian decision last week not to join the EEC was met with politely disguised relief in most of the nine countries who were to have been its partners. Norway's application for membership was studded with special pleading. Its farmers, the highest paid and most heavily subsidised in Europe, would have needed exemption from the common agricultural policy; its fishermen, who earn about 8% of the country's exports, refused to accept a common fisheries policy. Any future EEC

Scandinavia's trade

regional policy would have had to spend huge sums on the 10% of the Norwegian population who live in the northern half of the country.

As Norway's elderly farmers and young environmentalists celebrated the decision to reject EEC last week, the country's businessmen, who pay the farm subsidies, were in despair. A new treaty for Norway's trade with the EEC must now be worked out. Norway trusts that the terms will be the same as for other non-applicant Efta countries: free industrial trade by the time Britain, Denmark and Ireland become fully fledged members in 1978. But for Norway the deal might not be so straightforward. The country's two main exports, apart from fish, are aluminium and paper. Both are sensitive products within the enlarged EEC. The nine are insisting on long transition periods before they are given tariff-free access to the community. Meanwhile Norwegian industry is on tenterhooks, suspended between a defunct Efta treaty and a doubtful one with EEC.

Norway's main industrial attraction is its cheap hydro-electric power, which has enabled it to build up the largest aluminium smelters in Europe. But there is a world glut of aluminium: largely because new and inefficient smelters are coming on stream in the EEC and Britain. European industry may now seize the chance to build up protectionist walls against Norway.

An even glummer fear in Oslo is that Norway might not now be able to use its massive oil finds in the north sea to establish its own petrochemical industry. Crude oil is not subject to EEC tariffs, but manufactured products are. Norway will also be badly placed when the EEC starts its common energy policy moving; it will seek to get a special clause written into its trade treaty, as Sweden did, providing for consultations.

Access for Norway's fish catch to Europe's markets is also open to question, and will probably only be solved in the wider context of fishing limits. There is a danger that the blow to Norway's prosperity after the referendum might make Norway decide to extend its territorial waters, as Iceland has done.

Iceland's free trade treaty with the community is being held up in Brussels by the British and the Germans until the problems of fishing limits

are solved. The British should not bully Iceland by keeping it out of EEC markets; but its fish exports could be curtailed if the cod war persists. There is no question of Iceland's tiny 200,000 population ever seeking anything approaching full membership.

Finland's paper war

Most Finnish businessmen—like their Swedish, Danish and Norwegian colleagues—would like to join the EEC. Finland's experience with Efta has proved much more successful than even the most optimistic Finns had predicted. Since 1967, when Finland devalued its currency and introduced what became (at least temporarily) Europe's most successful prices and incomes policy, the country has enjoyed an average annual growth of 5.3% in real gnp, mostly thanks to an export-led boom.

Although Finland is now less dependent on Russia than it used to be, 20% of its trade still goes through the iron curtain, and Russia is keeping a powerful brake on any Finnish desire to enter the EEC. The recent EEC offer of free trade with Finland had only been initialled by the last prime minister, just before his resignation this summer. Finland is particularly disappointed at the long transition period on which EEC is insisting before it removes its tariffs on timber products and paper. The new Finnish government is still canvassing public opinion on the agreement. In all probability, it will be ratified.

Trees provide half of Finland's exports; the proportion would be higher still had the EEC not raised protective tariff walls against paper and timber. Britain, Finland's

largest single market, is already making use of its new EEC membership to hide behind these barriers, protecting its own paper industry which had been feeling the edge of competition as Finnish paper flooded cheaply into Britain under Efta agreements.

This paper war has already caused much resentment between Britain and Scandinavia. Now Britain is directly to flout the rules of the General Agreement on Tariffs and Trade and reintroduce an 8% tariff against Scandinavian paper, to fall into line with the rest of the EEC. There will be extensive duty-free quotas; but Finland, Sweden and now Norway will have to wait until 1982 before they get free access to the British market again.

Although these new economic pressures will not isolate Scandinavia from the rest of Europe, Brussels does intend them to hurt enough to keep the incentive alive in Sweden and Norway to reapply for entry some time in the next 10 years. The political need for Finland to stay neutral is accepted. Finland is the one Scandinavian country with a large communist party, and its ties with Russia have kept it from contributing towards Nordic union. In 1970 Finland had to back out of Nordek, the treaty establishing Nordic economic co-operation.

But the same problems of neutrality do not apply to Norway, which is an enthusiastic member of Nato; nor to Iceland, also a Nato member; nor to Sweden which, although having steered clear of political alliances, has a higher defence budget than strict Swedish neutrality might appear to justify. Political and economic involvement in Europe may become tasty fruit in time.

We've got bacon, timber, fish, ships, cars, but no unity

- •••••
- On the contrary — it's the shortest way.
- •••••
- Yes, I thought so too. But then somebody made me look at a globe — that's the only true picture of the world, as you know. The straight line from here to your place happens to run smack through Copenhagen, and not the way the maps show it.
- •••••
- You're right, it does sound crazy to set out north when I'm going southeast. But you can't quarrel with the globe. And I'll save over a thousand kilometers by going that way.

This long-distance call was from some place in Europe to somewhere in the East. Of places where "the straight line from here to your place happens to run smack through Copenhagen", there are several pairs to choose from. Such as:

Paris and Tokyo
Glasgow and Bangkok
London and Hong Kong

But regardless of where it came from, here is the essence of the talk: The shortest way between western and central Europe and Japan/Southeast Asia/Australia is via Copenhagen. (And to Australia, it is more than that: it's the only way with next-day arrival in Sydney.) Take our word for it, or look at a globe!

BUSINESS

What's Ted got to trade off?

The TUC is not going to accept the Government's prices-and-incomes package just like that on October 16th, not without some extra sweeteners. Mr Heath can probably afford £1 billion of them. Which to choose?

The Chancellor of the Exchequer cut short his Washington trip and was back in London by Monday to start calculating what more the Government could offer to the unions without wrecking its entire incomes package. Not surprisingly, the TUC economic committee showed no inclination to do Mr Barber's work for him and the outcome of its meeting in Preston on Wednesday was the preparation of the sort of counter-claims that horse traders customarily make before sitting down to do a deal. The table sets out the sorts of suggestion that have been going round since the Government's policy was announced on the Tuesday of last week, classified according to whether they are wrecking, helpful or merely cosmetic. £2 a week really must be a sticking point for the

Government. It makes nonsense of the package to go higher. Another £1.50 would add an extra 6½ per cent to the wage and salary bill, giving an increase larger than is at present forecast without the package. With no increase in output, it would also add some 3¼-4½ per cent to costs; either taking the price ceiling up to 8¼-9½ per cent, or crippling company profits to cause the grandfather of all shake-outs. The TUC can, of course, argue that the Government should be aiming at 6 per cent growth and the larger the cake the larger the slices. Perhaps the economy could stand 6 per cent; who today would claim that forecasts are so exact that one can be sure 5 per cent is on but 6 per cent is too much? But surely the unlamented 1965 National

What they might do

Potentially wrecking

£3.50 per week. Averages are tricky things; if some part-timers get less than £2.60 extra a week, some full-timers can get more. The TUC can reasonably comment on the shareout but not put up the total wage bill by this back door.

6 per cent growth target. A nice thought, but like the football pools, don't spend your winnings before you post your coupon.

£2 a week on pensions. Another nice thought, so long as we know who is willing to pay the bill. An extra £2 a week would cost £780m.

In the normal course of events employers' and employees' contributions would each increase to meet 41 per cent of the bill with the Government paying the remaining 18 per cent. Are the unions offering to lose 18-25p out of their extra £2.60 per week in higher contributions, and the same again through higher prices? Or is this the way they would like to see the economy reffated? "Yes" to either question,

and you cease to be a wrecker. Move to "helpful" section.

Potentially helpful

Subsidise basic foods. The common agricultural policy limits our scope, but a ½p subsidy on a pound of potatoes and a pint of milk would reduce the rise in the retail price index by ½ per cent at a cost of £100m.

Postpone local authority rent increases. Would reduce the rise in the retail price index by nearly ¾ per cent, at a cost to the ratepayer or taxpayer of £150m-£200m.

7½ per cent Vat. Would reduce the rise in the retail price index by nearly 1 per cent at a cost to the revenue of £375m.

Better threshold agreements, 30p for every 1 per cent above 5 per cent rise in the retail price index would contribute to curbing inflation if it made the rest of the packet acceptable. But if you say 30p for every 1 per cent over 1 per cent—move smartly to "wrecking."

All prices and charges limited to 5 per cent. Increases in public sector charges could be held back. Steel prices must rise by 15 per cent when we go into Europe. Unemployment jumps in labour intensive service industries, otherwise OK.

Stricter price surveillance. Machinery can be established, but probably not quickly enough.

Cosmetic and political

Repeal Industrial Relations Act. Not a hope.

Dividend restraint. Virtually conceded already.

Reintroduce consumer councils. Why not?

Penal taxation of excessive capital gains. Insignificant in terms of income distribution but a real psychological stumbling block. Hardly worth the administrative work and anyway not directly caused by inflation per se, but it might be possible to do something.

Penal rates on empty offices. See above.

Expand local authorities' house-building. Good.

Plan of Lord George-Brown has taught the danger of consuming hypothetical cake.

The poverty trap is another good reason for not putting the £2 any higher, and an argument for reducing it. The number of people actually caught in the trap has been grossly exaggerated, not that this makes it personally any less painful. At present it is estimated that out of 6m couples with children only 160,000 are likely in theory to be hit by an effective "tax rate" on marginal earnings of over 50 per cent, with another 40,000 suffering a marginal rate exceeding 100 per cent. In practice the numbers actually caught are likely to be smaller; most benefits are not taken away until after a time lag of six months by which time eligibility limits can have been raised. But even if the numbers are small, these unfortunates would gain less from raising the £2 than they lose from the consequent higher prices.

Pensions are going to be increased so that the pensioner shares in the real growth of the community. If the unions want more for the pensioner they must recognise that their members will have to meet the bill through national insurance contributions, prices or taxes. Alternatively the unions can accept the £2 and agree that nearly all the Government's room for manoeuvre should be used to increase pensions.

Direct tax cuts. If, however, the unions are adamant that they must have more for their members, there is one way they might have it without wage costs or prices being increased. The Chancellor could repeat last year's budget almost exactly, giving another £1 a week to all. This would cost £1 billion a year, leaving no room for any other concessions.

Measures which help reduce prices are easier. An improved threshold agreement, within reason; a 7½ per cent value-added tax, or conceivably lower; and arrangements for keeping a watch at least on wholesale prices, present little difficulty. The Government is naturally reluctant to defer increases in council house rents, which would need legislation. It believes the Fair Rent Act gives help where it is most needed. Just the same, if this were all that remained to clinch a deal, the Government would be ill-advised to let it cause a breakdown.

Political cosmetics. Dividend restraint has already been virtually conceded, but, as Mr Wilson and others are quick to point out, this can be meaningless without some limitation on profits. Labour's half-baked scheme for a National Workers' Capital Fund does not yet deserve mention as a concrete proposal but in principle an element of profit-sharing could be conceded. It would certainly be in keeping with the new collective approach. What the Government could do is accept this as a longer term aim which can be examined after the main package has been worked out.

The remaining issues, with the exception of the repeal of the Industrial Relations Act, may be worth examining and could all be the subject of some horse-trading. But they are peripheral to the main issue—how to share out the available resources in a less inflationary way.

The question therefore is: how much room for manoeuvre has the Government got? It has proposed a 5 per cent per annum growth target for the next two years. The

chart shows the gaps between this target and the sorts of figure you get if you project the latest National Institute of Economic and Social Research forecast to the autumn of 1974. It shows the economy as only half-way there. But this ignores the effects of the present proposals which imply a somewhat larger cut-back on prices than on wages, adding perhaps 1 per cent to the growth of demand during the period. Indirectly too, an agreement could be worth quite a lot for faster growth if it produced a turn-around in confidence. Investment, stockbuilding and consumers' spending are all currently lower than would normally be expected given the levels of output and income in the economy. Some manufacturers are holding back expansion plans because of inflation, and there seems to be some precautionary saving by the personal sector. It is also no secret that the Government's forecasters are more optimistic than the institute about the rate at which the economy is now growing. The Treasury maintain that the Chancellor's budget target, also for 5 per cent growth but only to the first half of 1973, is still within reach. De-stocking by manufacturers in the second quarter, when consumers' demand accelerated, has so far held back output. A turn around is inevitable; though its size will depend on how far the drop was involuntary and how far a deliberate shake-out.

For all these reasons the gap which remains is more likely to be put at about half the size shown on the chart. But this is still an awful lot of gravy—worth in crude terms something of the order of £1 billion in tax cuts or their equivalent. Next April, when the present growth surge is running out of steam, would be the time to act.

The choice comes down to this: the I'm-all-right-Jack option is £1 a week off income tax for all. But that leaves nothing for the pensioner, for Vat cuts, food subsidies or anything else. It would be pandering to the greed of the unions, but would not be inflationary. The fairer-shares-for-all option is a bit off Vat, a bit on pensions, a better threshold agreement and some fiddling with rents. The saintly option is to give the pensioners another £2 without putting up contributions; this would put paid to all the other options except, possibly, a Vat cut. If the Government puts these three alternatives before the TUC on October 16th, it will have conceded all that it decently can.

Star [Great Britain] Holdings Limited

Interim Results

Interim unaudited results for the 6 months to 30 April 1972

Net Revenue before Taxation	£ 3,669,057
Taxation	857,467
	2,811,590
Minority Shareholders Interests	622,238
Net Revenue attributable to Holding Company	£2,189,352

Note: Due to the change of accounting date no comparative figures are available.

Net Revenue attributable to the Holding Company for the 12 months to 31 March 1971 was £2,239,352.

Interim Dividend

An interim dividend of 9% will be paid on 1 November 1972 to those ordinary shareholders on the register on 29 September 1972.

Revaluation

A revaluation of the Group's property portfolio is at present in progress and it is hoped to publish the results of this revaluation early in 1973.

Steel's choice

The world's steel leaders must either agree to match investment to demand or face a wild outbreak of protectionism

Officially, the attraction of next week's International Iron and Steel Institute's annual conference will be three days of sessions on market promotion and the latest technology. But that would scarcely be enough to get over 300 of the world's top steelmen to travel half way round the world to London, however swinging a place they may think it to be. What these steel barons are looking for is an opportunity to talk to their opposite numbers about the industry's real problems, in circumstances that will not raise the wrath of anti-trust legislators in Washington, Tokyo or Bonn. Any useful work on the ways to bring back to near balance the supply-demand equation, which has been severely distorted by the rapid growth of the Japanese industry, will take place in private huddles.

The steel industry has faced gluts before, but none as potentially dangerous as the present one. The new factor has been the incredible growth of the Japanese industry since 1960 on the back of massive investment in new, up-to-date plant. This has given the Japanese a considerable competitive advantage in an industry in which technical progress and economies of scale are still important. In the 10 years to 1970, Japan's annual production increased fourfold to 93m ingot tons, while its exports went up by no less than 10 times to the equivalent of 23m ingot tons, much of it to the United States. After many years' pressure, the American Administration finally agreed in 1969 to an arrangement where the Japanese "voluntarily" agreed to limit exports. By 1970, this had been extended into a complex three-way deal involving Europe. Europe's exports to America are controlled now and so are Japan's to Europe.

There are slightly unreal elements in these deals. They have been made, for example, by the American Administration directly with the steelmakers in the other countries over the heads of the local governments. Inevitably, they are accused of being international cartels. (Mr Nader's Consumers' Association is challenging the Administration on these very grounds.) But the American and European governments, including the European commission, have decided to tolerate them as the lesser of several evils, without actually approving them. The other choices most likely to emerge are either a free-for-all (leading to a complete disruption of world steel markets and a collapse of the European and American industries which could not then afford the necessary investment in new plant) or rigid protection through quotas (which would be worse).

In theory, the export deals provide a period of relative stability to allow a more satisfactory long-term scheme to be worked out. But in practice they are fragile and may not last long enough to generate the confidence that will allow the development to happen. Right from the start, the Japanese found ways round the first deal, which only specified tonnages. They therefore switched into

higher-value, higher-profit alloy steels. This has now been prevented, but the boat has been rocked again, this time by the Pentagon. In an effort to sweeten the defence budget, it proposed that all special alloy steels for defence contracts must come from American makers. The French are leading a protest that this amounts to extra protectionism which alters the original voluntary agreement.

Steelmen and governments alike are maintaining a confident front that the challenges to the arrangements will not succeed, especially in an American election year. But, even if the deal emerges unscathed, it will not solve the long term problem. It does not cover the secondary steel trading in ships or cars, for example, which has a considerable influence on steel demand in other countries and hence steel prices. And it does not attack the root of the problem, endemic in this kind of industry and such competitive situations. Periodic bursts of investment which push capacity way ahead of demand are inevitable where those who can't keep up with the latest techniques cannot compete. What is needed is some mechanism, acceptable to international anti-trust laws, that will prevent the enormous surges of investment.

Influence alone, even in the full glare of publicity, is not sufficient. It is in no one's interest to hold back when everyone else charges ahead. The European Coal and Steel Community has tried often and rarely succeeded in gaining anything more than a temporary staggering of investment. The latest examples are the two developments, including wide-strip mills, at Dunkirk and Ghent in Belgium, barely 60 miles apart. Then there is the ill-fated Fos development at Marseilles, which has just been rescued by the normally sensible Usinor. Inflation is a powerful agent working against attempts to smooth investment: it is much cheaper to invest now rather than four of five years hence.

An early move to match investment to demand would have serious implications for the British Steel Corporation (and the British Government which puts up the money). Britain has a backlog of modernisation to catch up with at just the wrong time. A large part, for example, of the major development proposed in BSC's investment options for a 6m tons a year plant at Teesside depends on there being a strip mill to consume that tonnage of steel. The small array of steel plants that an Italian oil consortium has proposed at Hunterston in Ayrshire is kids' stuff in this class; in any case it is added as a sweetener to the serious part of the consortium's plan, which is for an oil refinery that is likely to arouse considerable local opposition. The problem for Britain is the large number of strip mills that will be coming on stream elsewhere in the next five years when Teesside would be taking shape.

There is one hopeful sign. The Japanese government appears to have been taking a stronger line with its industrialists in recent months, mainly because of fears of a substantial revaluation of the yen being forced on it. The Japanese have quietly reduced the expected size of their steel industry in 1975 from 160m ingot tons to around 130m tons. There has coincidentally been an unprecedented turnover in the staffing of the heavy industry division of the Japanese trade ministry. The two events may not be unconnected.

Not to everyone's credit

A nasty little row about export credit is rumbling behind the scenes between Britain and the Six

The basis of the row is the dawning realisation that the EEC's council of ministers has issued a standard set of rules for export credits which could leave some British exporters a good deal worse off than they are now. Agitation has been rumbling inside the Confederation of British Industry for the Government to see that the council does not implement the rules before Britain becomes a member and gets its right to veto them. But since it has taken the commission 10 years to reach the degree of agreement that it has, it is appalled at the prospect of marking time for possibly another decade.

The amount that an exporter pays for a guarantee that a foreign importer will settle his debts is a material element in his costs. Different, but generally more-or-less official, bodies do the guaranteeing: the Export Credits Guarantee Department in Britain (a semi-independent branch of the Department of Trade and Industry), Coface in France, the privately owned Hermes in Germany. They charge premiums that vary from market to market in return for an undertaking to compensate the exporter if his buyer fails to pay up for any of a variety of specified reasons ranging from political intervention and exchange controls to simple welsching. The European commission has always wanted EEC members to move towards quoting common terms. At present, it says, exporters in some countries have an unfair advantage over those in others.

The ECGD in Britain happens to provide a generally better service to British exporters, often at lower premiums, than companies can get anywhere within the Six. It also operates on a much bigger scale, guaranteeing about 35 per cent of British exports, compared with the 7-15 per cent in other EEC countries. It was therefore to be expected that the ECGD's terms are on balance more comprehensive and cheaper than the compromise outline now agreed between the Six and that it does not want to come down to what amounts to the lowest common denominator.

Export credit guarantees fall into the broad categories of those that give less than two years' protection and those that give more. There is no problem over the first. Various private commercial insurance concerns do a good deal of this business (Trade Indemnity is the best known in Britain). The EEC is therefore not making any attempt to standardise short-term premium rates. Export sales with credits for two years and over can be divided between sales to public authorities and sales to private overseas buyers. The EEC plans to standardise premium rates and the amount of cover for both types of customers. Terms for public bodies would not be much different from those British firms pay now. However, for private buyers, they might be 2-4 times as much.

British exporters, particularly of capital goods, yelped when they discovered this, loud enough to prod the ECGD into protesting and digging in its heels. Their

hope is that the EEC will not implement the directives before next January; the new rules have been passed by the council of ministers, but implementation has been postponed because the members have since been quarrelling about premiums.

Much of industry in the Six is not happy about what it has seen of the package. The Italians now enjoy subsidised export credit guarantee rates, and have every reason to postpone the day when these subsidies will have to be dropped. The French are complaining that they would end up paying higher premiums for some classes of business. The Germans and Dutch would admittedly get cheaper premiums than now, but at the cost of switching over to a largely French system which could in many details mean that the cover they got would be less generous than it is now. There is therefore good ground for the fervent British hope that they will still be arguing in January.

Even if they are not, the immediate damage to British exports would not be huge. Guarantees for British contracts of more than two years represent only 7 per cent of ECGD business, or £300m at most. And many of these apply to government purchases anyway, for which there is no problem. What the British Government and British businessmen ought to be protesting about is something quite different. It is that the commission as usual has been far too keen to harmonise things for its own sake. In the process the EEC may chip away some of the better features of the British system when it should be thinking how to get the rest of the EEC to adopt them.

One reason why ECGD's rates are frequently lower now than those in the EEC is that it has a much more adventurous approach to underwriting. Faced with a relatively novel situation, credit guarantee organisations in the Six might react by demanding a high premium or even refuse to give cover at all. The ECGD, which has nannied exporters for years, would be more likely to send one of its men to assess the risk at first hand. There is the same difference of approach to buyers' credits, which were pioneered by the ECGD and are in effect given to banks that finance export sales. Continental institutions are five or more years behind the ECGD here.

The commission wants to iron out these differences on the grounds that they give rise to unfair competition. This is a bad warping of priorities. What Europe needs is an efficient, broadly unsubsidised and competitive system of export credit guarantees that will help its exporters to hold their own in the face of competition from America, Japan and elsewhere. The possibility that one European exporter might be getting his guarantee at marginally cheaper rates than another has no material significance. Flexibility is what counts, not uniformity. The commission could not have picked a worse time to try to force six relatively indifferent systems of export credit guarantee into a common, inflexible framework.

Our London Representative Office Opens October 10.

Men of extensive international trust banking experience staff the new office. Backing them up are the vast resources and expertise of the Free World's 49th largest bank. This winning Mitsui team stands ready to provide a comprehensive range of services. The Mitsui Trust and Banking Co., Ltd., London Representative Office is located on the fourth floor, One Moorgate, London E.C. 2.

Scotland's New Towns THE UNFAIR ADVANTAGE

Labour. Communications.
 Co-operation. Money. Environment.
 Scotland's New Towns have always been able to offer industrialists the best of everything. And, as if those weren't quite enough advantages for one region, we find the biggest oilfield in Europe in our private pond. Hardly fair, is it?
 For a lot of the 550 industries already in the New Towns it's a huge promise of good things to come and, for you, a very important addition to the existing reasons for moving to Scotland.
 Ample skilled and adaptable labour.
 Superb national and international communications for people and products.

THE NEW TOWNS

Real local authority co-operation.
 Generous cash grants for buildings, plant and machinery. Loans for working capital and building costs.
 Special tax allowances, staff training and removal allowances. Advance factories of all sizes. Deep water and container port facilities. Add to these a wonderful working and living environment, high quality housing – both private and corporation owned – and you have the people, the towns and the country where you really make it.
 Sound fair? Contact the General Managers at the Scottish New Towns listed below, or write to The Scottish New Towns, PO Box No 122, Head Post Office, Edinburgh, EH3 6LU.

Scotland's Industrial Revolution

Hydraulics step up the efficiency
of machines enormously.
Linde offers a choice of hydraulic systems for
all kinds of power transmission and control.
But

Linde
means more
than just this*

*Because Linde not only manufactures fork-lift trucks but supplies various kinds of machine tools as well.

In addition to the designing and constructing of chemical engineering plants, Linde supplies industrial gases and manufactures reciprocating and turbine compressors. Linde manufactures refrigeration cabinets and similar shop-fixtures and handles all the many aspects of air-conditioning and refrigeration engineering and also operates cold storages. In addition, Linde offers a wide choice of household appliances.

"I look to the future with increasing confidence"

— Sir John Clark

The time taken to move from recession to expansion and for the vigorous counter-inflationary measures we have taken to become effective, is reflected in the performance of the Company in the period covered by this review.

The trend has been one of progressive improvement from a first quarter's profit before tax 35% below that of the previous year to the final quarter showing a 29% increase on the similar period in 1971. This latter percentage does not fully reflect the trend because the fourth quarter was affected by retroactive adjustments.

The projected improvement through the second half of the year has, therefore, been realised and there are satisfactory signs that the improvement is continuing into the current financial year.

In 1971/72 sales were up by some 10% and profit before tax down by 3%. As I have said in my quarterly statements, prevailing conditions have had an adverse effect on a small number of our businesses, reducing what would otherwise have been a good year.

In the last quarter, loss makers were in four areas: computer memories, now well along the recovery path with an improved order book; numerical controls which, while not in profit, is running at a greatly reduced rate of loss and where there are definite signs of more orders; semi-conductors where our investment is essentially long term; and North America which continues to show a slow but steady rate of improvement. Significant contributions to profits continue to come from South Africa, Australia and Portugal.

At home, the strength and successes of our Telecommunications business continues to be acknowledged in City and business circles.

North America

In the two years or so since the acquisition of our U.S. investment we have taken some hard knocks—the effect on the Company's profits is evidence enough. However, we now have a more streamlined and tightly controlled organisation and we are introducing a widening span of traditional Plessey products, even though to date this has meant further investment in terms of start-up costs.

The formation of Rohr Plessey Corporation, in which the Company

has a 37½% interest, could mark the beginning of a major penetration of the postal mechanisation market. The semi-conductor, material and packaging business in the U.S. has improved in the last six months, but it has not yet recovered to the pre-1970 level.

International Computers (Holdings) Limited

IC(H) was born of a series of mergers, a process which is certainly time, effort and cost consuming and one that is frequently less productive than originally envisaged. It has only now emerged from this evolutionary stage to stand in its own right as a unified entity. If the last eighteen months had not seen a significant slump in the computer industry, the questionmarks over IC(H) would have been considerably fewer. It is inconceivable that a nation such as ours should opt out of this fundamental

The Common Market

In telecommunications, strong nationalistic preferences of the major countries continue to prevail and it will be some time before there is a significant opening up. We have been assiduous in searching out an expansion of our electronic interests and there have been several new and worthwhile marketing associations.

Industrial Relations

I am glad to be able to report that we continue to improve our good relations with employees and their trade union representatives. I would like to acknowledge warmly the contribution made by employees. I continue to believe that industrial relations are essentially a total management responsibility and not something to be left solely to the personnel department. In this context I believe the Industrial Relations Act must be given time and opportunity in which

technology and all that it means to our immediate and long-term future. The positive interest shown by H.M. Government is therefore most welcome.

I am convinced that for Plessey there are good strategic, tactical and technical reasons for maintaining our IC(H) investment. I believe that given proper and efficient direction IC(H) will eventually yield us a return commensurate with our investment.

LNG Landmark

This plant has liquefied and revaporized one billion cubic feet of natural gas per day for ten years with a 99.6% on-stream factor.

The largest known application of cryogenics in an industrial process at the time, it is an outstanding example of Kellogg's ability to execute a highly complex low-temperature project. This record of the National Helium plant is one example of Kellogg's active participation in LNG processing since the 1930s.

Today, Kellogg can provide the full range of services to companies considering LNG as a practical solution to the energy shortage. Kellogg technology and experience can be applied to such areas as natural gas liquefaction plants, LNG receiving terminals, LNG vaporization plants and LNG storage facilities. And Kellogg's capability extends to preparation of economic feasibility studies, help in arranging financing, studies to optimize plant size... any LNG problem.

Kellogg has thoroughly studied and evaluated the

basic processes for natural gas liquefaction—cascade, expander and mixed refrigerant—and has developed the technology for optimization and integration of these processes to achieve reliable, economic designs for specific needs.

In the design of cryogenic plants, Kellogg utilizes its own special skills and experience in the selection and rating of heat transfer equipment. Kellogg pioneered in the design and application of aluminum core (plate-fin) heat exchangers, large spiral wound heat exchangers, the aluminum-stainless transition joint and large-scale cold boxes in liquefaction plants.

And through Kellgaz, a joint venture of Kellogg, Dyckerhoff and Widmann and American Technigaz, Kellogg can provide unmatched expertise in the design, engineering and construction of the safest LNG storage facility yet devised. Kellgaz tanks feature a waffled stainless steel inner membrane and a post-tensioned concrete outer tank.

When you think of LNG, think of Kellogg.

Building a better world is our business.

A PART OF PULLMAN INCORPORATED

One of our projects will be music to your ears.

National and Grindlays Bank Group are constantly lending money all over the world—either from their own resources, or as leaders or participants in syndicates.

One recent loan, for example, was to a leading American piano manufacturer who raised \$10 million and we helped.

Others have been arranged in places as far apart as Japan, Iran and South America.

For projects as diverse as new housing, roads, electrical equipment for atomic power generation and aircraft leasing.

The moral: if you have a money problem, whether it's to do with pianos or process plants, National and Grindlays are willing to listen, and ready to help.

We have offices in Europe, Africa, India, Pakistan, Bangladesh and the Middle and Far East. We offer a full range of international banking services.

Try us soon.

BUSINESS

International

Learning to live with Yamani

Saudi Arabia proposed an oil deal to the United States last weekend whose reverberations are going to be felt for a long time. Saudi Arabia would guarantee a flow of oil to America in return for the lifting of duties on the oil and the right to invest its oil revenues in the American oil industry.

For the present, the main impact of the proposal may be on the negotiations now winding up in New York between the Arab oil-producing countries and the major international oil companies. The issue is participation, which means the gradual takeover by the Arabs of the oil facilities in their countries, something the companies have become resigned to. Apparently, the companies have now been pressured into giving further ground on what was the last remaining major question so far as the Arabs were concerned: the rate at which they would advance from the initial 20 per cent participation to the avowed goal of 51 per cent. The Arabs wanted majority ownership by the early 1980s while the companies had hoped to delay this until at least the late 1980s. Now, it is indeed to be the early 1980s, which means that the companies have given in on just about

everything in the negotiations.

One outstanding question remains, how firm will any agreement be? It was a wish to reassure the companies and the western governments behind them that led Sheikh Ahmed Zaki Yamani, Saudi Arabia's oil minister, to time his proposal for last weekend. Now he is saying that America—and by implication, other major oil-consuming countries—has no need to worry about the security of future supplies. If it will let Saudi Arabia make substantial investments in its oil industry, it will then have the necessary hostages to fortune.

It is a pretty good argument; and the American Administration is going to be more than willing to let Saudi Arabia invest what should soon be a huge surplus of funds (with oil revenues likely to double in the next few years) in the American oil industry and other American industrial activities as well. But it may not be enough to induce the Americans to become dependent on Middle East oil, which they would be by the 1980s on present trends. However, an alternative to Middle East oil can probably only be created by getting the American public and politi-

cians to accept higher prices and lower ecological standards. The difficulty of doing this is what has generated all the talk of America facing an energy crisis. The alternative is to learn to live with Sheikh Yamani.

Japanese payments

Export and pay

Tokyo

Two harsh reminders of what outsiders think of the disruptive strength of Japan's underlying balance of payments surplus have sent Mr Tanaka's planners back into another huddle to produce more measures to avert a further up-valuation of the yen. The first jolt was the American proposal at the International Monetary Fund meetings that countries should be free to levy a surcharge on imports from a chronic surplus country—a suggestion read as a direct threat to Japan. The second has been the renewed pressure on the yen in the exchange markets. While the dollar has strengthened across the board against European currencies (partly as a result of the performances of Messrs Nixon and Shultz at the IMF meetings, and partly as a result of technical factors), the yen has remained stubbornly pinned to its ceiling.

The oft-mooted plan for a Japanese export surtax may now be taken back off the shelf. Up to now it has been blocked by opposition from the Ministry of International Trade and Industry. Miti is not greatly worried

about the likely impact on industry of an export tax, which would be in effect a disguised upvaluation of the yen. But it is very worried at the idea of losing its exclusive control over trade. The desultory efforts to make exporters restrain their exports to America, Europe and elsewhere are the job of Miti, but an export tax would naturally be the job for the finance ministry.

Miti's position has been perceptibly weakened by the new shock the Japanese delegates got in Washington. The prime minister, Mr Tanaka, is now expected to make an early decision and plump for one or more of four possible measures: the export tax; more import liberalisation, extending to such things as integrated circuits; 20 per cent tariff cuts on industrial goods; or still more export restraints. Miti supports the last two.

Few people really believe that such measures, even if implemented, will be sufficient to cut back Japan's current account surplus to Mr Tanaka's target of 1 per cent of gross national product by 1975 (a surplus estimated at \$3 billion). The current surplus for 1972 is still forecast to be \$8 billion. Some day there is going to have to be another and substantial upvaluation of the yen. To this a section of the government and the Bank of Japan are now said to be resigned. While the yen is currently being quoted at Y301.10 to the dollar in spot transactions, in forward transactions it is being traded at around Y290. Some traders are even writing an exchange rate of Y280 into their contracts, which is an effective upvaluation of 10 per cent on the Smithsonian parity. It is not a coincidence that 10 per cent is also the figure being mooted for the proposed export tax.

Shopkeepers strike

Middle-class militant

Brussels

The paralysis that hit the centre of Belgium's cities on Monday and Tuesday of this week was caused by the first-ever strike of the middle class as a class, protesting against "la pollution administrative et fiscale," and particularly against value added tax. It was a strike of the self-employed: shopkeepers, café proprietors, garage owners, cab drivers, who put up their shutters and threatened to smash the windows of the supermarkets and big stores if they did not do the same. As Belgium has a higher proportion of small shop-

It makes a change, don't you know, from filling in Vat forms

keepers and independent businesses than any other European country at a comparable stage of development, this brought the towns to a standstill. It was impossible to buy meat, groceries, newspapers or petrol and difficult to find a hotel bed. The process of buying a drink could mean crouching in a candle-lit bar while the terrified proprietor fretted over whether his windows would be broken first or his bar closed by the police in the interests of public safety. Even households that had been stocking up with tins for days beforehand found that they had forgotten something, usually petrol for the car. The stock exchange, diamond markets and brothels shut too, which saved some a journey.

The Belgian government has made a dreadful mess of Vat. By introducing it at four separate rates to Britain's one, it turned what should have been a simple and equitable way of raising revenue into a form-filling, bureaucratic nightmare. The immediate cause of the strike was the government's decision to levy an advance payment of tax on shopkeepers this December in order to recover some of the revenue lost in January last year when

the changeover was taking place from the old turnover tax.

The small entrepreneurs have other complaints; they have, for example, no right to unemployment pay and they have been campaigning for better pensions and social security. The size of the problem is reflected in the fact that Belgium and Luxemburg are the only two European countries with a separate ministry for the middle classes. Their special type of small shopkeeper, working on low turnover and high margins, is being squeezed by the supermarkets. By 1980 probably 40 per cent of all today's food shops will be closed. For some, Belgium's eccentric version of Vat is the last straw.

EEC competition

Driving for cars

Brussels

Citroën and Peugeot are the latest targets of the EEC commission's drive for freer competition in European business. The commission has fought a long and successful battle against re-export bans. These are clauses manufacturers used to put into their dealership agreements to prevent, for example, their sole

Key indicators: world commodity prices

Copper politics

As expected, the American copper company, Kennecott, is going to the courts to try to stop consumers from buying Chilean copper from its expropriated mines until compensation has been paid. News of a court injunction against a Chilean shipment to France sent copper up to £429 a ton. As consumer stocks are unusually low and industrial use is picking up, any disruption of supply could add another 5% to the price.

dealer in Germany from re-exporting goods to other EEC markets, or back to the home market. These clauses have now disappeared for virtually all branches of European industry and dealers are free to sell goods where they like in the EEC. But they linger in one or two industries, cars being the most notable.

Citroën and Peugeot are refusing to take the re-export clause out of their dealers' sales contracts. They say the French government's price control policy means that they need them. Price controls at home allow only tiny price increases in the French market. So manufacturers re-coup themselves by charging much higher prices (5-20 per cent more) on other EEC markets, notably the German one. This works if German dealers can be prevented from short-circuiting it by buying direct from dealers in France. So French dealers are prevented from exporting, because otherwise, say the two companies, the French price control would be upset.

Brussels can hardly claim that re-export bans have prevented an expansion in trade in cars between members of the EEC. In France, other EEC suppliers increased their share of the market from 1 per cent to 16 per cent between 1958 and 1970; in Germany the figure rose from 7 to 25 per cent; for Italy 2 to 28 per cent and Belgium 14 to 49 per cent. Prices vary considerably from country to country, partly because of local taxes but also because of the pricing policies followed by the manufacturers. The commission naturally has no objection to manufacturers charging different prices in different markets. It argues, though, that these must not be sustained by artificial legal barriers like re-export bans.

Man-made fibres More trouble

The EEC commission's industrial division has also launched an inquiry into the European market for man-made fibres. At the same time, its competition department is studying a request that various companies should be allowed to talk about future investment plans.

The first study was started as a result of a plea by the Dutch government in July; Holland's fourth biggest company, Akzo, is in desperate trouble because of the way man-made fibre prices have plunged in the past year by 40 per cent and more. The second was at the request of the producers

themselves, four-fifths of whom made a formal approach to Brussels in August.

Both are aimed at ending the over-capacity that has grown to a point where there are heavy losses all round in spite of ever-increasing worldwide demand. The manufacturers are particularly anxious about the tough attitude of the competition department, and, in the event, are unlikely to get any joy.

The moves come at a time when, outwardly, things seem to be improving. Prices are moving up again, and some investment pundits are even talking about the shares as potential recovery situations. They are probably wrong.

The critical polyester sector has had recent price increases of 10-15 per cent. But these represent little real ground recovered, and even the small gains are due to factors which could easily disappear or be reversed in six months. In the past six or seven weeks, the Japanese have switched some polyester exports away from Europe to America in response to an upturn in the knitting industry there. But they had cut back on production by a quarter, and although Mr Heath and Mr Davies have been asking them, please, to stay away from Britain, will soon be back into Britain and the continent in strength.

Another recent aid was the seasonal change from manufacturing autumn to spring clothes and with it a comparative switch in emphasis from acrylics to polyester. Also, shops are now restocking in a hurry before prices rise too much. Furthermore, Akzo (which this week came to the London Stock Exchange to get a pre-common market entry quotation) has had to shelve plans to close three continental plants in the face of unexpectedly fierce union opposition. Courtaulds' Ulster plant at Carrickfergus, blown up in April, will be back on-stream by early next year. Courtaulds will then stop buying in, and will probably have some polyester left over to sell elsewhere.

Flick group

Dead hand

Hamburg

Two months before Herr Friedrich Flick died at the age of 89, he tried to rearrange the controlling power in his empire. Now, three months after his death, the family heirs are fighting for influence in the biggest family-owned industrial concern in west

Flick senior, children were a worry

Germany. The Flick empire embraces 300 companies, among them: a 40 per cent stake in Daimler Benz (cars), Feldmühle/Dynamit Nobel (paper and chemicals), Buderus (iron and steel), Krauss-Maffei (lorries), and Maxhütte (steel).

The old man was one of the most influential industrialists in Germany. He never really made anything: he just put companies together. Even in his last years he ruled his empire from his refuge on Lake Constance with iron control. However, one thing he did not seem able to control was his family. The elder of his two sons, Otto-Ernst, now 56, in 1962 challenged his father for control of a large block of shares in the family holding company. After protracted court fights, the son lost. He left the family business in 1966 with a good settlement but amid much bitterness. He was not among the mourners at the funeral. The rest of the inner family circle was: the younger son Friedrich Karl and grandsons Gert-Rudolf and Friedrich Christian Flick, both the sons of Otto-Ernst.

Friedrich Karl now has a two-thirds control of the family holding company, through his own personal stake and two family bequests. This gives him effective control over the company's dividend policy. But before his death the old man signed a legal document giving special voting rights to his two grandsons (nicknamed Mick and Muck). For management purposes voting control of the company is therefore now equally divided between Friedrich Karl and his two nephews.

Friedrich Karl is challenging the legality of the document. He has another problem. At the public reading

of the old man's will, all three heirs were astonished by a new codicil which demanded that Herr Eberhard von Brauchitsch be put into a top job in the holding company and so be able to arbitrate between competing family interests. Herr von Brauchitsch, at 45, now has a top job in the newspaper combine owned by his close associate, Axel Springer. Within 50 days he must decide whether to return to the Flick group, which he left two years ago after constant squabbles with Friedrich Karl.

Wool

Nothing like it

The price of wool is careering out of control. Australian wool prices started the auction season in August already 53 per cent up on last year's opening prices and then proceeded to rise nearly 35 per cent up to last weekend. Then suddenly at Brisbane on Wednesday and Thursday heady Japanese bidding burst the market at its seams and prices went up a further 10 per cent to the highest levels for 20 years, even though the Australian Wool Commission had announced beforehand that it was off-loading 70,000 bales of stock in an attempt to cool things.

The surging prices (now topping 100p a kilo of clean wool) are not being met with jubilation by sheep farmers who recognise in the hysterical buying all the same signs of oversensitivity that had kept prices depressed at unreal levels since 1967. During the past five lean years the industry has been only just breaking even; many farmers have gone under, most have got themselves deeply in debt, and the sheep population has dwindled.

Now the major concern is to bring some order to wool marketing. The twin aims are to reduce the huge price fluctuations, and to improve wool's competitiveness against synthetics by making it easier for buyers to buy larger quantities of wool of standard types and grades. But bitter disagreement centres on how to achieve these aims. In Australia the Australian Wool Commission, founded two years ago, has been supporting prices by buying at auctions. Australian farmers have traditionally disliked any form of intervention. But now the commission has suddenly become popular: its intervention policies have earned an estimated £50m for the industry and contributed to the present boom. So now farmers

Can't stop, got to catch the market

would like to see it buy up the whole wool clip every year and market it centrally. Canberra, however, foreseeing a future when wool prices might be far less buoyant than now, is not keen to be committed to any such thing.

In New Zealand the position is reversed. During the five lean years farming opinion came to favour the idea of a Wool Marketing Corporation to buy up the clip. This year the government therefore introduced legislation. But in the face of the wool boom, enthusiasm for the idea has turned into violent hostility, and the government, facing an election this autumn, has backtracked and emasculated the scheme. The corporation will be set up, but without the powers of compulsory purchase. Meanwhile wool farmers are flourishing again after a lean spell that culminated in subsidies of £22m from the government last year.

Whether or not centralised agencies are set up to buy up the wool clips in both countries, the traditional free market auction system for selling wool is slowly vanishing. Increasingly farmers are selling their clips directly to purchasers by tender. The present excesses on the auction floors will only hasten their demise.

Bougainville copper

It's ours, actually

Port Moresby

Rio Tinto-Zinc periodically congratulates itself for concentrating its mining operations in politically stable countries, but it looks like coming a cropper in Papua and New Guinea. Its massive £200m opencast copper mine has

attracted considerable criticism because of the way in which the deal was sewn up with the old Australian administration. Papua and New Guinea's first home-grown government, after five months in office, is showing signs of pressing for renegotiation of the Bougainville contract. With full self-government due in December next year, followed by independence in 1975 or 1976, RTZ and its partners could be in for trouble. It is already getting a foretaste that must worry it and its partners very considerably.

Australia's administration for Papua and New Guinea negotiated a deal where the PNG government would hold 20 per cent of the equity of the project, with 45 per cent to Conzinc Riotinto of Australia, 22 per cent to New Broken Hill Consolidated plus 13 per cent to some others. Since it came to power the PNG home government has been at pains to welcome foreign investors; but the about-turn in its thinking is believed to stem from an unpublished report on PNG by the United Nations Development Programme, which estimated the operating company's return on its investment at 22-33 per cent and must have made the home government think hard.

So last week the minister for mines, Mr Paul Lapun, who himself represents electors in south Bougainville, announced that the government would not consider itself bound by the existing deal. He complained that other copper-producing countries have better terms; and that two-thirds of the £103m the government should get from the deal would be eaten away by public services and infrastructure needed to support the mine. Other politicians go further and are calling for a 51 per cent state takeover, on the now-familiar model, with the state paying for its share out of whatever dividends it gets.

The chief minister so far has confined himself to confirming that all joint venture agreements with foreign firms should be reviewed as a matter of course as PNG approaches independence. That approach is not likely to be plain sailing. Not the least of PNG's problems is that there is strong (Katanga-style) secessionist feeling in the island of Bougainville itself, where the population is racially distinct from the rest of the territory, and where there are lingering hopes that the copper money could be kept for the island alone. None of this will encourage a kid-glove approach to the mining companies.

The financial services a discount house can offer banks and industry would fill a small book

We've written one

If you're in the market for short term borrowing or lending, you should read our slim volume on 'Short term money market instruments'. Just write or telephone us for a copy. It is quite free.

Our senior management are travelling all the time and will gladly come and talk about your particular problems when next in your part of the country.

There is more inside this aviation package...

Eagle Aircraft Services Limited wraps up everything needed when you own or operate aircraft in one aviation package. From the time you think of acquiring an aircraft to the time you decide to replace it, we will take care of all the problems. We are UK distributors for the famous Beech range of light and executive aircraft and UK, Germany and Switzerland distributors for the four-engined JetStar corporate transport. We will work out the best way for you to buy, lease or hire precisely the aircraft you need. Prepare detailed operational cost analyses, flight plans. Organise finance and insurance. Equip and furnish your aircraft. Recruit flight and operational staff. Act as your own operations division. Service and repair your aircraft, supply spares. Ferry an aircraft anywhere in the world. Act as brokers when the time comes to sell. And, if you aren't ready to buy or lease, we can provide expertly crewed and equipped aircraft for your personal use whenever you want them.

Eagle Flying Services Limited operates a modern charter fleet of Beech aircraft which give all the prestige and convenience of corporate aircraft use without the full involvement of ownership or operation. Together, this company and the three Divisions of Eagle Aircraft Services Limited provide you with the most complete and comprehensive aviation package you will find anywhere in Europe.

BUSINESS

Britain

Wayne...

bought himself a prize packet at Clydebank, and the joker...

was Jimmy Reid

Clydebank: does Mr Harbin want out?

Mr Wayne Harbin, president of Marathon Manufacturing, the Texas firm that in August bought Clydebank from the liquidator of Upper Clyde Shipbuilders, has either made a strange slip, or he wants out. Why else would he be so tactless as to tell the press on Tuesday that he intended to withdraw from the yard, if the workers did not accede to his wishes, saying this before even going to see the workers' representatives? He also said he was disgusted by what was being said by the communist leaders of the yard. He is not alone in his distrust of them; but, since he happens to be the person who needs their co-operation, it was unwise to express it, especially as reports about what they have been saying are mixed anyway.

The trouble is that the antiquated Clydebank yard has to be reconstructed to suit the booming oil rig market Mr Harbin is after. During this interim period many of the 2,000 workforce will not be needed; they would actually be in the way. Mr Harbin repeatedly made his intentions plain, that initially only about a third of the men would be needed, and the agreement signed with the unions in August, which included a four-year no-strike clause, made no mention of the numbers to be employed. But the idea of having over 1,000 men unemployed at Christmas was one which clearly had not been accepted by the shop floor, and the shop stewards quickly reopened the issue.

Mr Harbin went some way to meet them. He agreed to employ another 200 men in the early stages, in return for an agreement on two-shift working, a concession other Clyde shipbuilders have vainly sought for years. The men, meanwhile, continued working, and in Mr Harbin's own words he has "been very impressed by their output." Though the shop stewards say the work-in has never stopped, this is merely rhetorical, since there are no redundancies so far.

The stewards have been preparing for the redundancies none the less, expected to begin at the end of next week, by trying to arrange for the brothers throughout the old UCS group each to pay a 50p a week levy towards the wages of the unemployed. It is interesting that the other shipyards at first turned their request down, indicating how much the communist hold has weakened. But on Monday the levy was finally agreed to. Whether the Clydebank shop stewards intend to deploy the redundant men so as to get in Mr Harbin's way, or simply send them home harmlessly with a pension, remains to be seen.

The expression "work-in" has figured pretty freely throughout, and this has frightened potential clients Mr Harbin hoped to bring to Clydebank. One customer recently switched an order from Scotland to Singapore, even though it means an 18-month delay in delivery. The shop stewards should have stopped the use of the word

work-in, especially as it had become meaningless, but Mr Harbin has added to the distrust of the workforce in making his own anger public.

The mantle of peacemaker once more falls on the union leader who flew to Texas and interested Mr Harbin in the project in the first place, Mr Dan McGarvey, the boiler-makers' general secretary. Both Mr Harbin and the shop stewards flew to the Labour party conference at Blackpool to consult him.

Engineering

What silver lining?

A warning that it is unjustified to expect engineering investment to pick up next year has come from the Engineering Employers' Federation. In its latest economic assessment, published this Friday, the EEF says that inflation at its present level, together with the large amount of unused capacity that still exists, will dampen industry's confidence to put money into new capital projects. It had been hoped that the consumer spending boom would keep going long enough at a high level, so that eventually it would filter through to machine tool makers and heavy engineering firms.

Industry has in any case been waiting to invest, partly to take full advantage of the higher rates of corporation tax expected next April. It has also been waiting to see what largesse was to be had from the new industry act.

This hesitation can be seen in the latest machine tool order figures. The decrease in home orders that had been apparent all last year has stopped, but in the first five months of this year there was no sign of any upturn. The amount of outstanding orders in

Britain's machine tool factories decreased by a third compared with the same period last year, leaving it with at best about four months' work. In machine tool production, that is starvation level.

The EEF believes there are other factors at work. Industry's doubts about the full effect of entry into the common market have been reinforced by the sharp jump in imports of manufactured goods over the past 18 months. A large part of the expansion of consumer spending has been met from abroad rather than by increased output from British factories. Export orders have also been depressed, which is bad news from Britain's largest exporting industry. Much of this can be attributed to the industry's declining international competitiveness.

Wages in the engineering industry have been going up at the rate of 11-12 per cent for the last three years. The 8 per cent improvement in productivity since 1970 is the once-only result of the massive shake-out in which 370,000 jobs have gone in 18 months.

Committee of 20

Jeremy's job

The tailpiece to last week's gigantic financial meeting of the International Monetary Fund in Washington was the election of the Bank of England's Mr Jeremy Morse to the key role of chairman of the committee charged with no less than world monetary reform. But it was not the best of omens that it took so long for the smoke signal to go up.

The new Committee of 20 had only one decision to make: between two candidates for chairmanship of the committee of deputies that will do the groundwork. It split down the middle—10 for Mr Morse, 10 for the Italians' Dr Rinaldo Ossola. It remained locked there until the end of a meeting which lasted into the small hours of Friday morning. It took another meeting, a secret ballot, and goodness knows what else finally to produce the 12 to 8 vote in favour of Mr Morse. One rumour was that the Italians agreed to withdraw support for their candidate if the Americans agreed to back him as successor to Mr Pierre-Paul Schweitzer at the International Monetary Fund.

Mr Morse's qualifications for the job were only one factor. Politics accounted for the rest. The French, as well as the Germans, wanted a British chairman, but this is a very doubtful com-

Jeremy moves on; Kit moves in

pliment. It is generally the economically unimportant countries which supply the acceptable chairmen.

The British voice in the Committee of 20 may even be weakened by holding the chair. Chairmen of international bodies do not act as representatives of their countries. Anyway Mr Morse has always advocated the need to guard against the bias of industrial countries to undervalue their exchange rates and this could sit uncomfortably with the British Government's repeated statements that it believes that strains on the economy should be taken up by the exchange rates, ie by floating sterling down. But tactics for sterling will now be more the concern of Mr Morse's successor at the Bank of England, Mr Christopher McMahon who earlier did so much to strengthen economic expertise at the Bank, when he came into it as a rising young academic economist in 1964. Mr Morse, on the committee, may be more concerned with the Germans. At Washington German bankers were more insistent than ever that the D-mark must not be upvalued. They were complaining that Herr Brandt now seems likely to win the German election; that Herr Schmidt will strengthen his position in the next German cabinet; and that his "left-wing socialism" will send money streaming out of Germany.

Air fares

£60 return

It is something new for British airlines to appear as the pioneers of cheaper fares, but there are signs that, collectively, they may have succeeded at the third attempt in pushing the going rate to New York down from £194 to something more like £60 return. They had seemed on the brink of doing this several times before, so the fact that the International Air Transport Association has unexpectedly adjourned its current session on air fares for three weeks, to give airlines time to consider the implications, does not necessarily signal victory. But it looks close.

The American Civil Aeronautics Board has at last been persuaded to go along with the British view that (a) charter passengers should be allowed to book blocks of empty seats in scheduled aircraft instead of having to have a special jet flight laid on for them; (b) anyone should be allowed to join a charter flight whether they have anything in common with the rest of the group or not, provided only that (c) they book two to three months ahead. Under conditions like these, the British Overseas Airways Corporation would be satisfied to charge around £30 between London and New York, £60 for the round trip.

It has taken time to bring the Americans round to this view. Now that they have accepted it, the American charter airlines, who stand to lose a great deal of traffic as a result, are challenging the Civil Aeronautics Board's decision in the courts. If it is possible to fly on a regular scheduled service for £60 return just by booking a few weeks ahead—finding a group to join is likely to be a mere formality taken care of by the airlines themselves—then there will have to be substantial price cuts to get passengers on to charter flights. Charter fares would have to come down to well below £50 return, which would take much of the gloss off the business.

Against this background, the Civil Aviation Authority's decision to license Mr Freddie Laker to run no-booking flights to New York for £64-£74 return looks less of a breakthrough than it appeared when first announced last week. Mr Laker's proposal is the antithesis of the big airlines' schemes and introduces an element of choice too long missing from air travel. But it is one thing for the British and Americans to propose, and another to carry with them all the small airlines on the North Atlantic who view fare cuts with horror and have vetoed them for years. This is why the Iata meeting has adjourned. If the small airlines use their veto again, when some of them fly only once or twice a week on the Atlantic, then Iata's rules will have to be changed so that they no longer have a veto.

Value added tax

Dumb friends

The National Farmers' Union has produced a useful summary of the value added tax provisions for farmers and growers including what records to keep.

First Pennsylvania Bank is pleased to introduce a major new international bank in Israel.

הבנק הבינלאומי הראשון לישראל בע"מ
the first international bank of israel ltd.

The First International Bank of Israel Ltd. was formed through the merger of The Foreign Trade Bank Ltd. and The Export Bank Ltd. It is the largest bank in Israel in terms of capital base, \$78 million, and fourth largest in deposits, with 34 branch offices throughout the country from Safad in the north to Beer-Sheva in the south. It is a truly international bank financing international trade, accepting foreign and local deposits, offering working capital loans, and participating in real estate, insurance, and the Tel Aviv stock exchange.

The principal owner of the new bank is First Pennsylvania Corporation, whose subsidiary, The First Pennsylvania Banking and Trust Company, established in 1782, is the oldest and 19th largest bank in America. First Pennsylvania Bank

has assets of over \$4 billion, 81 branch offices, and representative offices in financial capitals the world over. It has made its wealth of banking experience and vast financial resources accessible to The First International Bank of Israel in a cooperative effort for mutual growth.

If you are doing business in Israel, or planning to, the facilities, resources and services of a major international bank are now available to you in Israel for the first time. To find out in more detail how this can benefit you, please contact us at either of the following locations: First Pennsylvania Bank International, 1500 Chestnut St., Philadelphia, Pa. 19101. Telex 834278. Cable PENCOPhila. Or, The First International Bank of Israel, 39, Rothschild Blvd., Tel Aviv. Telex 033834. Cable FIRSTBANK.

September 26, 1972.

It is not original, but it is well presented and reasonably cheap.

The NFU, like others, begs one of the more interesting questions: will horses and dogs be zero-rated or not? The relevant provision zero-rates "live animals of a kind generally used as, or yielding or producing, food for human consumption." The difficulty surrounds the word "generally." First, does it apply only to this country? Horses and dogs are generally eaten by humans abroad. Does the word "generally" relate solely to "used as" or does it also apply to "yielding or producing"? If so, horses and dogs would be zero-rated on the grounds that they can in certain circumstances yield or produce food for human consumption. Lastly, how big does the market have to be in order to make usage general? These questions are no doubt being closely studied at Tattersalls, and may have to be settled by a court case. The NFU is probably right to do what it has and take the pessimistic line.

*Farmers' and Growers' guide to Value Added Tax.

Docks

Ask Mr Jones

Liverpool dockers are now probably about to end their six-month-old campaign of blacking the lorries of the hapless Heaton's Transport. But Heaton's will soon be returning to the National Industrial Relations Court to demand compensation for business lost during the summer while the pickets were on. Any bill will, presumably, land on the desk of Mr Jack Jones, leader of the Transport and General

Workers Union, since the House of Lords has ruled that he is responsible for his shop stewards.

Even if Mr Jones agrees to pay, he may soon face another suit. The picketing continues at Midland Cold Storage, the London container firm, which led to the jailing of five dockers in July. The firm has resisted the dockers' demands since May, and is said to have lost more than £50,000 as a result. It has written to Mr Jones to ask what action he plans, because the pickets at the gate now claim that they have the official support of the TGWU. If Mr Jones does nothing, Midland Cold Storage is prepared to return once more to the NIRC, presumably seeking an order directed at the union. In a very tough speech on Thursday, Lord Shawcross said that in his view a lot of recent picketing fell into the category of "unlawful conspiracy," and should have been jumped on by the Government much more firmly than it was.

Lame ducks

Queue up here

Mr Chris Chataway, the Minister of Industrial Development, published guidelines on Tuesday for dishing out aid under the new Industry Act. He has set up a series of regional industrial boards which will handle applications for selective help. Already about 100 firms have applied.

Mr Chataway has established two criteria: projects must either create new jobs or else maintain or safeguard existing employment. This means that the aid will not just be used to coax industry to the regions, but also to

prop up lame ducks already there. Naturally, he insists that all such projects must look salvageable at the outset. But since the Government considers Upper Clyde Shipbuilders to be one such, it is hard to see that the Government's definition of suitable cases for help has any meaning beyond "suitable for propping up."

Aid for projects creating new jobs may take various forms: cheap loans, interest rebates and removal grants. But aid to maintain jobs will only take the form of loans at "broadly commercial interest rates." That would hardly be aid; it must mean somewhat uncommercial interest rates.

Service projects will only qualify for aid if they are "mobile," that is to say have a real choice of location between a region and the rest of the country. This seems silly, since most services are not mobile in this sense, and since they are the one group of genuinely man-hungry industries. It is hard to see why the criteria for service industries should be tougher than for manufacturing, particularly since in recent years they have provided much faster growth in employment.

Mr Chataway must have been slightly embarrassed when he listened to a talk by M. Albert Borschette, the EEC Commissioner, at a conference in London on Tuesday organised by the Financial Times. M. Borschette warned that the new EEC Commission would look closely at the provisions of the Industry Act. He hinted that the commission objected to the opaqueness of the aid and its discretionary nature. He also argued that the regional employment premium might be a distortion, because it was something of a production subsidy.

Key indicators: British economy

Manufacturers' stocks

Revised figures for the second quarter show a much larger fall: this may have been involuntary as demand revived briskly, but could also reflect a stock shake-out.

Retail trade

High volume of sales in August, although slightly down from July's record level.

Consumer credit

Sharp increase in value of credit sales in August.

Reserves

Britain's official reserves fell £1m in September. Overseas sterling area reserves in sterling rose by £189m in the first half of this year.

	Month	Index 1963=100	Percentage change on		
			previous month	three months	one year
Industrial production*	July	131.4	+1.2	+3.3	+4.5
employment*	July	88.7	nil	-0.1	-3.7
productivity*	July	148.1	+1.2	+3.4	+8.5
Export trade*†	August	96	-33	-33	-36
Retail trade*	August	118.4	-0.4	+3.8	+6.6
Unemployment*	September	161.7	+0.6	+1.8	+2.4
Average earnings*	July	206.4	+1.1	+2.9	+11.3
Retail prices	August	159.7	+0.8	+1.8	+6.6
Export prices	July	152	+1½	+1½	+7
Import prices	July	139	+1½	+2	+3½

Export trade, retail trade: in volume terms (value at constant prices).

Unemployment: wholly unemployed excluding school-leavers; latest rate 3.6 per cent. *Seasonally adjusted. †Provisional

The commission may be right to investigate the selective powers under the act, but the Rep is not a distortion; it merely amounts to a small local devaluation. The Government plans to end the Rep in 1974, but it could change its mind and there is a case for doing so, despite M. Borschett.

Reserves

Cheaper to float

Sensibly, the Bank of England seems to have allowed the flurry of pressure against sterling towards the end of last month to be taken almost entirely on the rate rather than the reserves. By the end of September, the pound touched a low of \$2.42, though it has recovered somewhat since.

To allow the market to set the exchange rate is, of course, the point of a float. And in Britain's present circumstances there is in any case everything to be said for securing the biggest effective devaluation. Protecting the reserves is another bonus. The Bank's holdings of gold and foreign exchange dipped a mere \$2m in September, to \$6,089m (or £2,516m at the end-month market rate). And that published figure was probably close to the truth—although a small amount of forward market swaps may have matured before the figure was struck.

Bank lending

Borrowing to buy

Nothing in the latest spate of statistics belies the argument that a consumer spending boom is well under way. The real volume of spending in the shops slipped back slightly in August from its July high, but the seasonally-adjusted index in the past three months taken together shows retail sales up by more than 3½ per cent compared with March to May. Nobody can expect this rate of increase—equivalent to 14 per cent a year—to persist. It reflects the once-for-all impact of larger pay packets resulting from the budget's tax cuts. The figures on instalment credit for August were more buoyant still; new credit extended by finance houses and retailers rose a whopping 14½ per cent to a record £229m after seasonal adjustment.

In September, admittedly, credit sales of cars dropped sharply, but the timing of purchases of new cars at this time of the year is distorted by the demand for the 1972-73 registra-

tion plate. Moreover, hire purchase houses have been losing an increasing amount of their traditional business of lending on cars (especially on used cars) to the banks. In the five weeks to September 20th, domestic lending by the London clearing banks picked up again after its previous month's pause; when the figures are adjusted to exclude seasonal factors and the banks' "wholesale" business, the increase was of the order of £125m. This is less than half the tearaway rate of expansion in June and July,

but quite fast enough for a consumer boom. Lending to the penalised property companies and financial borrowers was down, which should please the government. Lending to the personal sector was not quite so buoyant as earlier in the year, which should not disturb it. That lending to industry should again show only a modest, if fairly widespread, rise is more disappointing. Mr Heath's problem remains to find the key that will translate a consumer spending boom into an investment recovery.

Players pleased

John Player and Sons has finally bought its way into bringing more big-time golf to Britain. After a disaster two years ago, when it offered world-class money but failed to attract world-class golfers, the company last weekend staged a tournament at Turnberry, on the wind-blown west coast of Scotland, that must be counted a huge success. The world's two best golfers, Jack Nicklaus and Lee Trevino, were not on hand, but just about every other top-class golfer was. The result was an exciting tournament played under conditions that humbled some of the most revered names in the game. On the final day, a knife-edged wind sent scores soaring into figures that brought great comfort to club golfers. South Africa's Gary Player, who probably ranks third in the world after Nicklaus and Trevino, handed in an ignominious 85.

For the company, the payoff was 17 hours' British television. This did a lot to spread the John Player name around at a time when there is a ban on TV advertising of cigarettes. It is doubtful if this sort of indirect advertising increases smoking; but it can increase a company's share of the market, and all for the outlay of a

mere £200,000, of which £51,000 went directly for prizes. This outpaid the British Open by £1,000 and made the tournament Europe's richest this year.

Learning from its past experience of two years ago, when a clashing American tournament refused to release the stars of the American circuit for the Player show, the company this year did a financial deal with a tournament in Iowa for the services of nine American regulars, including those fading superstars, Arnold Palmer and Billy Casper. It also paid "appearance" money to many of the stars. Tony Jacklin, Arnold Palmer and Gary Player each got £4,000 before counting prize money. Billy Casper and Jerry Heard shared £4,000 and all the overseas players had their air fares paid to the tournament. With the exception of Jacklin, Britain's only world-class golfer, the pickings were slimmer for the European and British players, but the company guaranteed that the lowest prize for any of the 32 competitors would be £400. A golfer could finish 13th in the tournament and still collect £1,000. First prize, which went to New Zealand's Bob Charles, was a thumping £15,000.

There is always a question about how long it pays a company to sponsor a particular sports event. A change of management can bring a sudden end to such activities. However, John Player seems prepared to persist with this tournament for some time. The company says it will have no further problems with the American circuit, and it was obviously encouraged by the amount of cover the tournament got on television. Future coverage will probably depend on the company's ability to continue to attract the top stars, who are more and more sought after. This week the world's richest golf tournament, with prizes totalling more than £120,000, is being held in Japan; but it is having to get along without Nicklaus, Palmer or Gary Player, and Trevino made it only at the last moment.

Charles, £15,000 the richer

We are pleased to announce that

Mr. Minos A. Zombanakis

has been elected a Director
of The First Boston Corporation

Mr. Zombanakis will be located in London and will be the Senior Officer responsible for underwriting and corporate finance activities in Europe, the Middle East and North Africa.

The future begins here... and now!

Penrhos College is an independent girls' boarding school whose purpose it is to train girls to be able to earn their own living, and become useful members of society. Neither a cramming nor a finishing school, Penrhos is a happily-disciplined place where, by a close and continuous process of personal encouragement and development, the most

is made of every girl's natural abilities: and where, over a period of years, she becomes a poised, thinking individual. Whether or not she graduates into a profession (as many do) Penrhos enables a girl to make the most of life and of herself.

A PENRHOS EDUCATION PUTS A GIRL'S FUTURE IN HER OWN HANDS.

BUSINESS

Investment

Will the next bidder for P&O please step right up now?

The case against Lord Inchcape's bid to take over the Peninsular and Oriental Steam Navigation Company was put most eloquently by Lord Inchcape himself to *The Observer* of September 24th. He said that "I have no wish to be chairman of P&O. A physical merger has not been considered at all. We don't think it will work. We're merchanting, they're ship-owning." There is a suggestion that some of his colleagues interpreted him as having been at least equally explicit in his earlier communications to Mr Ford Geddes, the present chairman of P&O. Why then, has Lord Inchcape, a director of P&O, decided to eat his words? His circular this week said that he had opposed P&O's bid for Bovis because he thought P&O would do better on its own; and now P&O presented "a major opportunity for the shareholders of Inchcape." This depends on whether he is right in assuming that his fellow directors on P&O have been far too gloomy about their prospects.

If the profitability of P&O did threaten to be as bleak in the future as it has been in the past, there would clearly be much logic in the desire of Mr Geddes to buy the growing profits of the dynamic Bovis. If Lord Inchcape wanted something more than a renegotiation of terms, then he had to offer an alternative. Is this a genuine alternative? Or is it a spoiling manoeuvre?

The Inchcape group has a splendid and long profits growth, averaging 20% a year over the past few years; it has a high return on assets. But its net assets are only £35m, compared with the £300m or so of P&O (valuing the property at market and the ships at book), and the Inchcape bid is a mixture of shares and £60m worth of cash. How does a £35m com-

pany get £60m to buy a company worth between £200m and £300m? It gets Hambros, the merchant bank, to arrange a two-year financing. So Inchcape is offering £1 in cash and half a share for each P&O share, making a total of around £230m-odd while Inchcape is at a price of 577p. This is a lot more than P&O's directors seemed to think their own company was worth a short while ago.

But there are three conditions. The directors have to drop Bovis, recommend Inchcape and allow Inchcape to go over the P&O books. The object of this unusual request is to see whether P&O can possibly make at least £16m in profit in the year to 1973. The trouble is that, besides borrowing a mound of cash, Inchcape is issuing 30m shares (giving 59% of the combined group to the P&O shareholders) and it is anxious to avoid dilution. If Inchcape's profits for the current year are around £12m gross, or £7m attributable, then earnings per share will come out at 37p. On this basis, P&O has to make at least £11m—plus the £5m for the interest on that whopping loan. If Inchcape cannot find profits of £16m in P&O in the year ahead, compared with the £8m or so of the year just ended, then the deal seems unattractive to Inchcape—particularly as it would be unable to use P&O's chief asset, its tax allowances. These cannot be used to offset Inchcape's profits, most of which are earned overseas.

Will Bovis sit and wait while the accountants comb through P&O's books? That is doubtful. For it to be inched out by Inchcape would seem something of a humiliation. If Bovis slips away, and then Inchcape turns P&O down, P&O would lose its means of salvation through merger. Unless, of course, any of the other

rumoured takers-over come to light. Among the many mentioned is Mr Y. K. Pao, the owner of more ships in the world than anyone else. But, if he wants more ships, he can surely buy them more cheaply than with the rest of P&O.

The share price of P&O closed at 366p on Thursday. Inchcape fell on the bid's announcement by 16p to 577p. Bovis, left out in the wings, has fallen 10% since Monday to 402p.

Tokyo market

Sun ever rises?

Foreign investors have been missing out on the money being made in Tokyo in the past year, and the question must be whether they may rush into it at the wrong moment. The Tokyo stock exchange is still clearly the world's star performer. Its "new stock exchange index" passed 329 this week, another record and a 81% improvement in a year. The bull market shows no sign of flagging. Turnover is racing ahead. The government estimates that Japan is now back on an appropriately Japanese real economic growth rate of 11.7% per annum. The one suspicious sign is that every Japanese broker now seems to believe that the good days will continue for ever. The ministry of finance has warned the four major security

John Mackay: "It's the little everyday things that make up our happy relationship with Midland Bank"

John Mackay is Chairman and Managing Director of Hugh Mackay & Co. Limited, whose looms have been carrying on the tradition of Durham carpet weaving since 1903. With a turnover now running into several millions, Mackay's still specialise in high quality and bespoke craftsmanship. In 1972 the company was honoured with a Royal Appointment.

As a business customer of Midland Bank, Mr. Mackay values the knowledge that the Midland is always there to help. "In 1969, for instance, a serious fire crippled our Wilton production. At one stage of the re-building programme, the Midland willingly assisted with temporary financial aid...

"In a nutshell, it's a happy relationship made up of little

things—the day-to-day problems they take off our backs. At least 12% of our output goes to export markets — Australia particularly — and the Midland have done a lot for us on this side... dealing with our foreign bills and so on."

Midland service is many things to many customers. It can be a vital overdraft facility — or just a quiet, efficient help with day-to-day routine. Whatever you want from a bank, you'll find the Midland are the people to give it. Your local Midland manager will be happy to show you how.

Midland Bank

A GREAT BRITISH BANK

meets any financial need... anywhere

NO NATION CAN AFFORD A HUNGRY CHILD

The world is divided.

Divided between the filled and the hungry. The nourished, and the starving.

Hunger is our common enemy. Human understanding cannot be built on empty stomachs.

Fortunately, the skills to produce an adequate world food supply are at hand. And, hopefully, the determination.

Increasing food production is a primary business of our company. We've been helping people and countries do so for more than 80 years.

Start with the basics: Soil and Water. We've engineered and built water distribution systems to bring some of the world's most unpromising regions into productive cultivation.

We help growers choose the best seeds for their environment, then provide equipment to prepare the soil and do the planting.

Our agricultural chemicals, power sprayers, and dusters

enable crops to flourish, undiminished by insect or pest.

Our mechanical harvesters enable growers to manage larger areas of production.

We design intricate processing machinery that can do everything from removing fruit pits, peeling tomatoes, or juicing oranges to filling and cooking the product in metal cans.

We manufacture automatic packaging equipment to speed food products into eye-appealing containers of paper, film, or cardboard.

We even manufacture see-through films for the packages.

It is safe to say that no other single company offers so broad a range of capabilities to the world's food-producing industries.

Putting the world into better nutritional balance is not a task of simple magnitude.

But our kind of technology can reduce the obstacles.

FMC has offices in principal cities throughout the world. To learn more about this versatile company, please write for our booklet, "Achievements."

FMC CORPORATION

firms against the market overheating.

Japanese confidence in the stock market is so universally held that any check will be a violent one. The announcement of the Nixon package in August of 1971 knocked 20% off the Tokyo market at a stroke. It would have been logical for foreigners to rush into Tokyo at that moment, because the slump was caused by the rightful recognition that the yen was going to be upvalued (which would make Japanese shares more valuable in foreign currency terms), but a wrong-headed fear that this would hit Japan's internal prosperity. If another Japanese stock market panic is caused by fears of upvaluation, it will be right for foreigners to buy then. It is other sorts of panic that they have to fear, in what is still a very special sort of market.

Although the stock exchange is becoming a more integral part of Japanese industrial and economic life, most big companies continue to circumvent it by their close ties with the banks. There are now 1,600 firms quoted on the Tokyo exchange, with a total market capitalisation of £47 billion. This compares with the 9,000 British stocks traded in London at a value of £150 billion.

This year £1.3 billion will have been raised through the Tokyo stock exchange by floating new equities. But one of the bull arguments is that the supply of stock on the market remains scarce enough for another 15-20% to be added to prices before they need necessarily look excessively high. A better bull point is that Japanese investment institutions are increasing their share of the market. They now hold 35% of the exchange's stock, while the number of individual investors has dropped back marginally to 3.6m. The importance of this is that Japanese investment institutions do not normally sell shares during a panic, because they regard this as unfriendly; it is small personal investors who leap in and out.

During this last year of glorious boom, the foreign-controlled share of the market, far from increasing, has dropped from 2.2% to 1.8%. This is partly because there are still infuriating restrictions on some foreign purchases. Yet the foreign money there is in Tokyo (which is overwhelmingly American and only fractionally British) has been trading more actively than ever before. In August foreign stock purchases touched £105m and sales £79m: both unprecedented.

London market

Oops, we're up

After falling by over 20 points to 461.6 in the five working days to Thursday of last week, the Financial Times index of Industrial ordinary shares had come back up to 488.9 by Thursday's close this week. The market has been going nowhere in particular, reasonably dramatically, but on reduced turnover.

In fact, turnover in all securities in September fell to the lowest level since December, 1970. To some extent this is shown in the number of dealings marked in equities in that month, on the chart. However, dealings marked is a crude and creaking approximation to what is really happening in the market.

The ratchet marks on the chart allow the interpretation that the market will slip again after the next rally, but probably they mainly mean that nobody anywhere has made up his mind. The same mood is reflected in Wall Street, where the Dow Jones index has stood virtually still over the past week, closing on Wednesday at 951.

Thursday's rally in London was interpreted by some as a sign of better things, because it was solidly and safely directed to blue chip stocks. But investment money is still steering well clear of the high fliers of the past year, although most of them are now well below their peaks; this is a measure of how thin confidence is in the market. Gold shares, one of the easiest hedges out of the British economy, have been improving steadily. The bullion price, which fell dramatically just before the meeting of the International Monetary Fund, now seems to be firmly held above \$64 an ounce, so that gold

mines must be making unprecedented profits. Oil shares, the other classic hedge from a domestic freeze, have also been doing well. The best home stocks have been retail stores: led by Marks and Spencer and a recovery in Woolworth, but firmly followed by higher prices among many of the smaller chain stores.

Anglo-Continental

Gentleman Jim and European James

From this week, the net assets of Mr Jimmy Goldsmith's Anglo-Continental Investment and Finance Company are £36m; this is 18 times higher than a few months ago. Wednesday was settlement day for the latest in a whirlwind series of deals that has created a new merchant bank which intends to fulfil the promise contained in its name. But, at only two-thirds of its 1972 high, Anglo-Continental has not resisted the bearishness among financials. Nor have Mr Goldsmith's other companies escaped: Generale Occidentale, the French company that owns 30% of Anglo-Continental—or Cavenham, of which Generale Occidentale owns 28%. Has the Goldsmith touch lost its glitter?

The assembly of Anglo-Continental was rapid rather than brilliant. The market did not find the results impressive. A few days before settlement day, the price of Anglo-Continental was 180p, which was 30p below the price at which Hambros Bank had underwritten the shares that made up half the consideration of the latest triplet deal. The price recovered as the bears saw some support.

If one simply adds up the profits of

the companies acquired in the past hectic few months, annual earnings come out at around £2m. The huge dollops of equity poured out to acquire them mean that the unlimited earnings per share are about 7p, putting the bank on a p/e of around 30. The assets argument is more complex. Part of it is that the investment trusts acquired are cash heavy, and cash to an aggressive bank is a means of acquiring future earnings.

There is another argument: a philosophical one which Mr Goldsmith expounds with much enthusiasm and conviction. Anglo-Continental has insurance broking, which it is in the process of taking into Europe. It is in banking, and is one of the few British banks which has an entrée into, and knows its way around, the closed circles of the continental financial scene. Thus British companies

anxious to move into the common market can be guided by the bank. So can continental companies doing the European thing by coming to Britain. Anglo-Continental is also in property via Argyle Securities—which is the company that might develop a huge chunk of Hay's Wharf, among other things. The three legs of this British banque d'affaires are sturdy; they stand on a firm cash base. It is in a position to fly high over the next three years. The current price looks fair, if not a bargain.

The sceptics point to Mr Jim Slater, who has sold Mr Goldsmith the last six of his deals, thereby getting out of some seemingly unpromising companies; and he has got himself underwritten at above the market prices. But Mr Slater is a very different operator; he is a stock market-oriented operator, who looks pragmatically at the profits on the next deal. Mr Goldsmith is common market-oriented, and would like people to think of him as rather uninterested in share movements, and more concerned with the right long-term strategy. That strategy, at present, is to build up holdings in banking, in foods, and in financial services. On the eve of entry into EEC, it looks a good one.

Levitz Furniture

Falling out of bed

New York

"I don't understand the stock market," said Mr Ralph Levitz, the chairman and chief executive of Levitz Furni-

ture, on being told that shares in his company had fallen \$13½ in the first 23 minutes of last Friday morning. "I'm more interested in fundamentals. I have all my regional managers here with me and we're developing a turn-around programme right now. I'm confident about the results."

Turn-around programme? That was a fairly fundamental word to use in talking about a stock market high-flyer. One does not put a prospective price-earnings ratio of nearly 50 on a turn-around programme. In fact, the market's reaction, which has by now brought the Levitz price down by \$17 to around \$30, was far from esoteric.

On September 7th Mr Levitz said at the annual meeting that the profit engine of his warehouse furniture selling operation would accelerate next year as new outlets got over their start-up period. He told shareholders to bear in mind that the second half of the year is generally far more profitable for Levitz than the first half. The first half profit was 30 cents a share, so Mr Levitz's reassurances were vital if investors were to stick to the consensus earnings forecast of \$0.95 a share which was justifying the high p/e. But now investors are told that third quarter earnings are increasing at a considerably slower pace than in previous quarters; profit margins have, apparently, been adversely affected by an over-ambitious advertising campaign, now discontinued. Given a weak-kneed market and a more level-headed assessment of Levitz's prospects in 1972, investors' treatment of Levitz stock over the past few days seems eminently reasonable. Other high-flyers are likely to be looked at quizzically now that Levitz has fallen out of bed.

Pension funds

Raw deal

A great fuss is made about the performance ratings of unit trusts, but the investor can always vote with his feet and put his money elsewhere. No fuss at all is made about the performance of pension funds, and the only way the disgruntled could grumble is by changing jobs. Or complaining, good and loud. The paucity of information provided by pension funds to their members usually makes a meaningful interpretation of performance hard, and a comparison with other funds impossible. Trade unions and staff associations have acquiesced in this information gap for too long.

Returns on model funds %

Annual rates of return	Average fund	100% equities	100% gilts
1967	18.9	35.0	3.0
1968	25.9	48.5	-1.8
1969	-7.9	-12.0	1.3
1970	0.1	-3.6	1.6
1971	37.8	47.1	24.7
Mean	15.0	23.0	5.8

An important benchmark for comparing funds has been constructed by Phillips and Drew, the stockbrokers, and is published in their October monthly review. They have drawn on the official figures in the Government's Financial Statistics to construct a model of how the average pension fund's non-property portfolio should have performed over the last five years; together with models showing what the performance would have been had all the money been invested in equities, or all in gilts. They are shown in the table. Since property would show a better total return, members of any pension funds that have not done at least as well as the average should start asking for the reasons.

The bugbear in measuring pension fund performance is the effect of new infusions of cash. The annual return a fund makes depends greatly on how long the fund has had the use of the cash. A formula now takes care of most of the difficulty (see *The Economist*, April 8th, page 88). The model performance figures result from splitting the adjusted cash flow into the national average proportions of equity, gilts and debentures; and using the appropriate indices on them, adjusted for the cash flow timing effect. No two pension funds are alike, but everyone should have the right to know how far the differences explain poor performance.

First Boston Corporation

Changing spots

With surprisingly little publicity, one of the top figures in international banking has done a rare thing and changed banks in London. Mr Minos A. Zombanakis, managing director of the London-based offshoot of Manufacturers Hanover Trust, has joined the board of The First Boston Corporation. Mr Zombanakis made his mark by pioneering the medium-term, syndicated credit: that is, a loan of between three and 10 years advanced on a variable interest rate basis by a

group of international banks. During his three-year reign at Manufacturers Hanover Mr Zombanakis arranged over \$2,500m of financing, including substantial deals for Italian and Iranian borrowers.

He is maintaining a discreet silence about the move, but the interesting point is that he is moving from a commercial bank to an investment bank. However much they try to change their spots—and Manufacturers Hanover has altered radically—commercial banks tend to have a somewhat conservative attitude to finance and their customers, be they companies or countries, are becoming much more demanding.

Corporation tax

Now read on

The definition of earnings under the new corporations tax system should be the sum of net dividends and retentions according to the Institute of Chartered Accountants in England & Wales' discussion paper.* This is the definition supported by *The Economist* (December 4, 1971, and June 10, 1972).

The new corporation tax, assumed to be set at 50%, is to be paid in advance on distributed profits. Thus when a dividend payment of £70 is made during the year, net of tax, a further £30 must be paid by the company to the Inland Revenue as "advance corporation tax" (Act).

Eventually this £30 will count as a credit towards the corporation tax the company must eventually pay (the "mainstream" corporation tax). The shareholder, however, will be able to count this £30 Act payment by the company as £30 of income tax

paid on his behalf out of a gross dividend counted as £100. This will equal the 30% income tax rate from next year leaving, for the standard rate taxpayer, no further settlement with the revenue. The Act rate is therefore three-sevenths of net dividend in order to equal 30% of gross dividends. What the institute wants is the £70 net dividends to be entered in published accounts with the Act element in their corporations tax bill separately identified.

Problems arise when a company has foreign income on which it pays foreign tax which is allowed double tax relief against mainstream corporation tax but not Act. So the company has to pay both the foreign tax and the British Act. The table shows how.

	Company profits British 1,000	Foreign 1,000
Taxable profit	—	550
Foreign tax say	—	120
British tax (of which Act) (120)	500	(120)
Total tax	500	770
Earnings	500	330
consisting of dividends (net) retentions	280 220	280 50

The layout is the one recommended by the institute. For companies with a mixture of British and foreign income the position is more complicated because of the mixture of what can be relieved and what cannot. The Institute should have recommended that companies disclose what the maximum coverable dividend is; this cannot be deduced, where there is foreign income, simply by dividing the earnings by the actual dividend.

*Accounting for Corporation Tax under the Imputation System.

INTERIM STATEMENT

Cadbury Schweppes

LIMITED

INTERIM STATEMENT FOR 1972

The Directors have declared an Interim Dividend of 5% (1971-41%) on the Ordinary Stock less tax at 38.75%. In order to secure for the Company the advantages of the forthcoming changes in the taxation system, the Dividend will be paid one month later than last year on 8 January 1973 to Stockholders on the Register of Members at the close of business on 8 December 1972.

	First Half 1972 £000's 24 weeks	1971 £000's 24 weeks
Group turnover	£145,043	£129,661
Group trading profit	11,353	9,203
Share of associated companies' profits less losses	35	32
Investment income	11,388	9,235
	279	113
Interest payable	11,667	9,348
	1,112	1,695
Group profit before taxation	10,555	7,653
Taxation	4,672	3,423
Profit attributable to minority interests	5,883	4,230
	274	156
Extraordinary items	5,609	4,074
Profit attributable to Cadbury Schweppes Ltd	5,609	4,074
Dividends	2,600	2,340
Profit retained	£3,009	£1,734

The interim results for 1971 have been adjusted to bring the treatment of associated companies' results into line with that followed for the full year in 1971.

The Overseas trading results in 1972 have been converted at the exchange rates applicable following the realignment of currencies.

In my Chairman's Statement last March and again at the Annual General Meeting, I said that your Company's progress should provide stockholders with further solid benefits in the current year.

Figures for the half year ended 17 June 1972 show a 23% increase against the same period last year in Group Trading Profit and at the pre-tax level a 38% increase. All Groups within the Company have contributed to this result which was helped at the pre-tax level by lower interest charges.

The benefits of the major programme of reorganisation carried through during the last two years are now being achieved and provided that the United Kingdom economy continues to expand, we should achieve a satisfactory year-end result.

From the sound position that we have now achieved we believe that we can find within the range of our present selling and marketing expertise, useful diversification in the UK and overseas. We have now acquired Slotts Industries AB in Sweden and Cadbury Schweppes Australia Limited has recently made an offer for the well known Australian company Tarax Drinks Holdings Limited. Other possible developments are under study.

The Rt. Hon. Viscount Watkinson PC, CH,
Chairman.

The appointments are for one year from October/November 72 and include six months field work (overseas allowance paid).

Applications with C.V. and referees should reach Administrator Research by 6 October 1972.

INTERIM STATEMENT

Reaches New High

At 1st September 1972 the value of a ROBECO share reached a new high. During the first eight months of the current year the value rose from £1.226 to £1.266, an advance of nearly 18%. Taking into account the 2½% April stock distribution, worth more than £1.6, the actual appreciation was over 20%.

Favourable trends

This result is mainly due to the favourable price trends on almost all stock markets. In the United States the economy has shown a satisfactory growth—as expected. This growth has been enhanced by a major increase in consumer spending and by a continuous rise in government expenditure. As there is still a reasonable labour and production reserve, profits are expected again to show a further rise in 1973. Another favourable development is that this economy revival is accompanied by a decrease of inflation, which has now been reduced to an annual rate of about 3%.

In Europe inflation is the dominating problem. In almost all countries wage and price increases are far in excess of those in the United States. In Germany these increases were further stimulated by the tax refund of DM. 10,000 million, which was meant as an incentive to the economy. There are, moreover, also indications of widening profit margins, so that company profits may show an increase again.

In France, too, the economy has been stimulated by various government measures, which justify expectations of more favourable trading results.

Investment switches

We have again made a few shifts in our portfolio. In view of the historically high level of the London Stock Exchange, and being apprehensive of the value of sterling, we reduced our holdings in the United Kingdom. In the United States we have held back a bit as the trade cycle there is in a more advanced phase, compared with Europe. Prices on the Tokyo Stock Exchange rose so high, that despite our confidence in the future of Japan, we thought it a matter of prudence slightly to reduce our holdings in that country.

Dividend

An interim dividend, payable on 11th October, has been fixed at £1.7 per share. The intention is again to distribute a final stock dividend from the share premium reserve in March 1973, with a cash dividend by way of alternative. At 1st September a total of 15 million shares were in issue. Thanks to the rise in the value of the shares and allowing for the issue of new shares, the Company's assets have increased to more than £13,800 million, a new high in ROBECO's history.

Copies of the Second Interim Report, the last Annual Report, and a descriptive booklet may be obtained from the Company:—

P.O. BOX 973, ROTTERDAM, HOLLAND

CHAIRMAN'S STATEMENT

Peter Brotherhood Limited

(Manufacturers of Precision Machinery)

The following are extracts from the Statement by the Chairman, Mr. W. Gardner, circulated with the report and accounts.

The profit for the year to 31st March, 1972, was £565,854 compared with the year ended 31st March, 1971, of £563,416. This narrowly exceeds the estimate of not less than £550,000 made in April when declaring the interim dividend. At that time the Directors expressed their intention of recommending that the final dividend be maintained at 12½ per cent (or 6-25p per share). Under the provisions of the Finance Act 1972, it is advantageous to defer payment of the final dividend on the Ordinary Shares until 2nd April, 1973, and the Directors recommend this course of action. To compensate for the delay in payment, it is further recommended that the rate of dividend be increased by 1 per cent (or 0-5p per share) to 13½ per cent (or 6-75p per share) making a total of 18½ per cent (9-25p per share). After taxation, £50,382 is left to be added to reserves.

Trading results for the year have turned out to be almost the same as those of the previous year. These were achieved from an insignificant increase in invoiced sales, but with substantial changes in the operation of the Company.

Our order book for steam turbines remains satisfactory and in recent months there has been an encouraging, although small improvement in both enquiries and firm orders for reciprocating compressors. With regard to other industrial machinery, our orders are reasonable in view of the thoroughly depressed state of the capital goods section of the engineering industry. Almost eighty per cent of our current orders are for export.

During the year we were engaged in plant-level negotiations with our workpeople who had submitted a demand for substantially-increased wages and, during negotiations, stoppages of work were suffered. However, a settlement was reached and good progress is now being made in restoring lost production.

It is too early to give any forecast of the results for the year to 31st March, 1973, but that I intend to do when announcing the interim dividend early next year.

Copies of the full report and accounts may be obtained from the Secretary, Peter Brotherhood Limited, Walton, Peterborough PE4 6AB.

APPOINTMENTS

CIVIL SERVICE COLLEGE

Assistant Research Officer Economics

The Civil Service College provides a wide range of management training for civil servants at its three centres in Sunningdale, London and Edinburgh.

The post to be filled, which is under the direction of the Director of Studies in Economics, will be based at the London centre, Belgrave Road, London SW1.

Qualifications: Normally 1st or 2nd class honours degree, or a post-graduate degree, in an appropriate subject. Candidates should have an aptitude for and an interest in the assembling of material from diverse sources and the ability to present written case studies clearly and concisely.

Salary: £1,530 rising to £2,476. Starting salary may be above the minimum. Initial appointment will be for 2 years on a temporary basis with FSSU superannuation.

Further details and an application form to be returned by 26 October can be obtained from The Secretary, Civil Service College, Sunningdale Park, Ascot, Berkshire, SL5 0QE. Please quote reference H/13/6/D.

Economic Consultants Limited

We have vacancies for economists of real ability. Our work is mostly in the following fields:

- REGIONAL AND URBAN DEVELOPMENT**, from town centre studies to regional schemes.
- INDUSTRIAL DEVELOPMENT**: planning "complexes," "growth points," industrial estates etc.
- TRANSPORT STUDIES**: all modes; highways, ports etc.
- MARKET AND ECONOMIC RESEARCH** for firms, in all sectors.
- LOCATION STUDIES**, for offices, factories etc.
- TOURISM**: development studies at home and abroad.

Qualifications: a First or good Second in economics or closely related subject. Fluency in French, German or Spanish an advantage (current jobs in Britain, Europe, Caribbean, S. America, S. E. Asia etc.). We particularly want people with some experience of economic research or applied work. Above all, we want people who are both industrious and capable of producing ideas in research.

Starting salary: by negotiation (young economists in range £1,500 to £2,500; middle level £2,500 to £3,500). Our policy is to give rapid promotion with generous annual increases. Full non-contributory superannuation and life insurance.

Please write to W. F. Luttrell, Managing Director, Economic Consultants Limited, 36/38 West Street, London, WC2H 9NA, enclosing full details of age, education, qualifications and experience, with the names of two referees (one of whom should be from the applicant's university).

University of Liverpool

DEPARTMENT OF ECONOMIC HISTORY

Applications are invited for the post of temporary **RESEARCH ASSISTANT** in conjunction with a S.R.C. financed research project "The Supply of Capital and the Economic Development of Merseyside, 1880-1880." The salary will be at the rate of £1410 per annum and the person appointed will be required to take up the appointment as soon as possible. Applications, including the names of two referees, should be sent to the Registrar, The University, P.O. Box 147, Liverpool, L69 3BX, not later than 23 October, 1972. Quote ref. RV/E/14072.

University of New South Wales

Lecturer

SCHOOL OF ECONOMICS

Salary: \$A6301 range \$A9390 per annum (under review). Commencing salary according to qualifications and experience.

High academic qualifications required. Applications from persons interested in any field of economics will be considered, but preference will be given to specialists in microeconomics.

Details of appointment, including superannuation, study leave and housing scheme, may be obtained from the Secretary-General, Association of Commonwealth Universities (Appts), 36 Gordon Square, London WC1H 0PP (Tel: 01-337 4572).

Applications close in Australia and London on 31 October 1972.

London £5,000+ THE CENTRE FOR BRITISH TEACHERS IN GERMANY

GENERAL MANAGER - U.K.

The Centre for British Teachers in Germany invites applications for the new position of General Manager-UK, who will be based in London.

The Centre, which was established in 1968, selects British teachers for posts in West German secondary schools at the request of the Ministries of Education in five West German States. At present 450 teachers are serving with the Centre. Besides recruiting teachers, the Centre develops teaching programmes, conducts orientation courses, looks after the welfare of teachers in Germany and helps them to resettle in the UK when they return.

The General Manager-UK will be responsible to the Chairman of the Centre for the efficient operation of the UK activities of the Centre. This involves planning the annual recruitment and training programmes, co-ordinating recruitment, conducting interviews and briefing conferences and exercising overall financial control. He will be assisted by six executives and other supporting staff.

Requirements

- * Preferably an honours graduate
- * Good management experience in controlling staff who are required to meet exacting deadlines
- * Age 35 to 45.

Salary will be negotiable from £5,000.

Brief but comprehensive details of your career and salary to date, which will be treated in confidence, should be sent to ME 006, Executive Selection Division.

Eland House, Stag Place,
London, SW1E 5DH

APPOINTMENTS

Sheffield Polytechnic

DEPARTMENT OF ECONOMICS
AND BUSINESS STUDIES

Lecturer II/Senior Lecturer in Managerial Economics

Managerial Economics is an increasingly important element in economics courses taught throughout the Polytechnic.

The department seeks to appoint a suitably experienced graduate to join a team of economists developing the teaching of this subject both within and outside the field of business studies. The person appointed will have substantial responsibility for the subject on existing courses and will be expected to undertake further development work on new courses up to final year undergraduate level.

Salary scales: Lecturer Grade II—£2355-£3083. Senior Lecturer—£3131-£3495 (bar)—£3768.

Application forms and further details are available from the Staffing Officer, Sheffield Polytechnic, Hilders House, Fitzalan Square, Sheffield S1 2BB to whom completed forms should be returned as soon as possible.

New Zealand

UNIVERSITY OF
CANTERBURY
CHRISTCHURCH

Chair of Sociology

The Council of the University invites applications for the Chair of Sociology. The appointee will be required to undertake the direction of teaching and research in the field of Sociology, together with the general administration of the Sociology Division of the Department. Applicants should have proven research and teaching ability in one of the recognised fields of Sociology.

The present salary for a Professor is within the range of \$NZ11,693 to \$NZ14,947 per annum. The commencing or subsequent salary of the appointee may be increased as a result of the review of individual professional salaries which the University makes at the beginning of each year.

Particulars, including information on travel and removal allowances, study leave, housing and superannuation may be obtained from the Secretary-General, Association of Commonwealth Universities (Appts), 36 Gordon Square, London WC1H 0PF (Tel: 01-387 8572).

Applications close on 15 November 1972.

University College of North Wales

BANGOR

Department of Economics

Applications are invited from persons with good Honours degrees in Economics and/or Accounting for the post of LECTURER IN ACCOUNTING or BUSINESS FINANCING. The person appointed should have a special interest in either Accounting or Business Finance; for the former a professional Accountancy qualification is desirable.

The post is to be filled as soon as possible and the appointee will be expected to be responsible for a new degree course in Accounting and Financial Administration for which the first student intake will be in October, 1973.

Salary will be on the scale £1,764-£4,299, according to age, qualifications and experience. Further particulars of this post can be obtained from the Secretary and Registrar, and applications (two copies) giving details of age, qualifications and experience, together with three referees, should be sent to the Secretary and Registrar, University College of North Wales, not later than 20th October, 1972.

University of New England

ARMIDALE, NEW SOUTH WALES

Lecturer in Politics

Applications will be considered from persons with an interest in any of the major sub-fields of the discipline. In forthcoming appointments the Department will be seeking at least one person with specific interests in political philosophy and political theory.

An earlier advertisement gave an incorrect closing date and this further advertisement does not indicate dissatisfaction with original applicants. It will not be necessary for such persons to re-apply as applications will be included with this advertisement.

Conditions include provisions for travel and removal expenses, superannuation, assistance in buying or building a house and study leave. Study leave grants are available and credit may be given for existing study leave entitlements.

Salary: \$A8,607 range \$A9,286 (Base plus 7 increments).

Further information can be obtained from the Secretary-General, Association of Commonwealth Universities (Appts), 36 Gordon Square, London WC1H 0PF (Tel: 01-387 8572).

Applications close on 3 November 1972.

Australian National University

Senior Lecturer or Lecturer in Accounting and Public Finance

Applications are invited for appointment to a Lectureship or Senior Lectureship in the Department of Accounting and Public Finance in the Faculty of Economics. The successful applicant, who will be expected to take up duty as early as possible in 1973, will be required to conduct classes in one or more of the fields of public authority accounting, national economic accounting and public finance.

Salary on appointment will be in accordance with qualifications and experience within the ranges: senior lecturer \$A9619 x \$323-\$A11234 per annum; lecturer \$A6804 x \$360-\$A9387 per annum.

Appointment is for three years in the first instance with provision for re-appointment to age 65 years.

Superannuation is on the FSSU pattern with supplementary benefits. Reasonable travel expenses are paid and assistance with housing is provided for an appointee from outside Canberra. Financial assistance towards leave is available.

Further information and the forms which should accompany an application may be obtained from the Association of Commonwealth Universities (Appts), 36 Gordon Square, London WC1H 0PF (Tel: 01-387 8572).

Applications close on 6 November 1972.

APPOINTMENTS

University of Newcastle upon Tyne

Lecturer Grade I in Economics

Applications are invited for appointment as Lecturer Grade I in Economics (temporary in the first instance). Candidates who should be graduates and preferably have some industrial or commercial experience, will be required to teach Economics to National Certificate and Professional courses.

Salary within the range £1,493-£2,625 according to qualifications and experience.

Further details and application forms, returnable within 14 days, from the Principal.

For further appointments
see pages 5, 7, 114 to 122

Transportation Planners

Economics — Research and Development — Planning Studies

There are a number of posts to be filled in the Transportation Planning Department of Atkins Planning, a member of the W. S. Atkins Group.

The Department undertakes a wide variety of work in urban and regional planning associated with urban transportation and highway planning, airport planning, new town expansion schemes, research studies in urban areas, sub-regional highway network planning and developments such as regional shopping centres.

TRANSPORTATION ECONOMIST

A senior planner to advise on the economic aspects of transportation planning studies and also to fulfil a study management role. Practical experience in the application of economic theory to the planning of highways and public transport is essential. Experience in the economics of transport operations would also be an advantage.

TRANSPORTATION PLANNER (R & D)

To undertake work of a research and development nature. Practical experience or appropriate post graduate work in the transportation planning process is essential together with a knowledge of computer programming.

TRANSPORTATION PLANNERS

To work in teams engaged upon a number of planning studies. A post-graduate qualification in transportation planning would be an advantage and practical experience is necessary.

All applicants should have an honours degree in an appropriate discipline.

Please write, giving details of age, qualifications and experience to:

Mr. R. E. Williams,

Atkins Planning

Woodcote Grove,
Ashley Road, Epsom, Surrey.

JOIN THE GROWING WORLD OF GULF

GULF — PLANNING AND ECONOMICS

Gulf Oil Company—Eastern Hemisphere embraces Europe, Africa and the Middle East and is part of one of the world's largest integrated energy Companies. Its Planning & Economics Department now requires two team members to assist in carrying out increasing responsibilities in economic analysis and long range corporate planning.

Economic Analysis—the man appointed will assist the Manager of Economics in the economic evaluation of corporate problems and projects as well as in economic environment analysis and forecasting.

Planning—this man will assist the Manager of Planning in co-ordinating, analysing and assembling long range corporate plans.

Applications are invited from graduates aged 25 to 30 with at least 2-3 years relevant experience in industry although not necessarily in the oil industry. A good Second Class Honours Degree in P.P.E., Economics, Statistics or related disciplines is essential. An additional qualification in Business Administration or Finance and Accounting will be an advantage. Applicants should have practical as well as analytical ability, initiative and resourcefulness and the personal qualities and presence appropriate to positions involving wide contact with senior executives in an international organisation. The right men will also be looking for promotion. These are important appointments with commensurate starting salaries. Applications in strictest confidence should be sent in the first instance to:

Miss C. Hill,

Employee Relations Department,
Gulf Oil Company—Eastern Hemisphere,
Gulf House, 2 Portman Street,
London, W1H 0AN.

APPOINTMENTS

Industrial Relations Overseas

Assistant Editor for international relations of our Industrial Relations Service. Good English and some knowledge of British industrial relations are essential. He, or she, will have to interpret accurately technical documents in French, and hopefully also German or Dutch. The job has prospects for an applicant now earning at least £2,250 per annum.

Write to Managing Director, Incomes Data Services Ltd., 140 Great Portland Street, W1.

London School of Economics (UNIVERSITY OF LONDON)

Applications are invited for appointment from October 1 1973 to Lectureships in Economics on the salary scale £1,764 x £159—£1,923 x £156—£2,079 x £159—£2,510 x £156—£3,666 x £159—£4,143 x £156—£4,299 a year plus £162 a year London Allowance, with superannuation benefits. In assessing the starting salary, consideration will be given to qualifications, age and experience. There will be vacancies in established and one-year temporary appointments. Candidates interested in any field of economics are invited to apply.

Applications should be received not later than 1 November 1972 by the Administrative Secretary, Economics Department, The London School of Economics and Political Science, Houghton Street, Aldwych, London WC2A 2AE, from whom application forms may be obtained.

University of Salford

DEPARTMENT OF ECONOMICS AND GEOGRAPHY

Applications are invited from Economists with a special interest in Industrial Economics. Particularly well qualified candidates may be considered for appointment at the Senior Lecturer level. Salary Scale: Lecturer—£1,764—£2,079 p.a. FSSU. Senior Lecturer—£2,510—£3,666 p.a. FSSU. Further particulars and application forms may be obtained from the Registrar, University of Salford, Salford M5 4WT to whom completed applications should be returned by 20th October 1972 quoting reference ECON/21/E.

Marketing Assistant

An opportunity awaits a "graduate type" (male or female) as Assistant Statistician in the Marketing Department of one of Britain's leading service industries. The successful applicant will be expected to collate, analyse, and present statistical information covering existing and developing activities, to maintain records covering relative trends in the industry and to assist in research activities by liaising with Data processing agencies and market research organisations. He or she should have a mind which is trained in statistical disciplines, but still capable of original thinking, coupled with enthusiasm and initiative. Benefits include a salary in the region of £1,500, company pension scheme, subsidised dining room, good office accommodation, and a commencing annual holiday of three weeks. Write, giving details to: Mr. P. Benton, Initial Services Ltd., Linen Supply Division, 300 Goswell Road, London, EC1V 7LU.

Executive

University Education. English, French, Dutch and Arabic. Vast and Diversified Experience in Marketing, Promotion and Management. Internationally oriented. Business-Minded and Experienced Negotiator. Seeks Interesting Position. Please write to Box 2527.

WINES

INVEST IN THE 1971 VINTAGE NOW

French and German wines of the small, very high quality. 1971 vintage are very scarce commodities in these days of escalating world demand and rampant inflation. Prices are likely to rise further, particularly as the 1972 vintage does not promise too well.

CLARET

Buy both crus classés and crus bourgeois châteaux by the complete, half or quarter hogshead, lying at the chateau, at as close as possible to 'première tranche' opening prices. The excellent 1970 wines are also available. Chateau bottled claret has proved itself a remarkable investment over recent years and must remain a very safe home for money.

BURGUNDY

An outstanding vintage, the great wines of the Côte d'Or will be very long lasting and should be secured soon, while still in wood, to obtain the best possible prices.

HOCK AND MOSELLE

Probably all round a better year than the historic 1959 vintage. Certainly one of the greatest years of the century. These superbly balanced wines are already attracting great attention.

V.A.T.

Value Added Tax will have the immediate effect of making the more expensive wines yet more expensive still. Now is the time to lay in stocks of fine wines of older vintages.

Write for our detailed booklet on all aspects of investing in claret, burgundy, hock, moselle and vintage port, together with current quotations. Please indicate any special areas of interest.

FRENCH & FOREIGN WINES LTD.

COURSE

LONDON
BUSINESS
SCHOOL

Fourth Business Economics Programme

The London Business School is running a two week specialist programme on current economic applications in industry, commerce, finance and the Government services. The course runs from 15th-26th January, 1973 and is under the direction of the Principal of the School, Professor R. J. Ball.

The Programme is designed to provide an opportunity for practising economists to review the recent developments of ideas and techniques in their profession and to prepare themselves for wider responsibilities. The Programme will comprise four main study streams:

Company Planning and Information Systems
The Economist in the Business Organisation
Quantitative Methods in Business Decisions
The Economic Environment

The course is residential and will be held in the London Business School's premises in Regent's Park. The School has accommodation on the premises with excellent facilities for the presentation of a programme of this kind. The Course is full-time for the two weeks concerned. The closing date for application is November 20th, 1972.

Any further information, copies of the prospectus and application forms may be obtained by telephoning or writing to:

Miss Ann Adams,
Registrar (Business Economics Programme),
London Graduate School of Business Studies,
Sussex Place,
Regent's Park,
London NW1 4SA.

Telephone 01-262 5050.

Guidance by Graduate Tutors. Fees by instalments. Wolsley Hall is Accredited by the CACC. FREE prospectus from Wyndham Milligan, MBE, MA, Principal, Department CA1.

Wolsley Hall
Oxford, OX2 6PR.

Home Study Tuition BSc (Econ) LL.B.

and other external degrees of the University of London. Specially prepared courses for the Federation of Stock Exchanges, for Accountancy, Company Secretaryship, Law, Costing, Banking, Insurance Marketing, GCE. Also many thoroughly useful (non-exam) courses in Business Subjects. Write today for details or advice, stating subjects in which interested. Metropolitan College (Dept. 092), St Albans, or call at 30, Queen Victoria Street, London, EC4. Tel. 01-248 6874. (Founded 1910.) Accredited by the Council for the Accreditation of Correspondence Colleges.

FELLOWSHIPS

The University of Manchester

Hallsworth Research Fellowships

Applications are invited for the above Research Fellowships.

Australian National University

FACULTY OF ECONOMICS Research Fellowship in the Centre for Research on Federal Financial Relations

Applications are invited for the post of Research Fellow in the Centre for Research on Federal Financial Relations, Faculty of Economics. The Fellow will be expected to undertake and report the results of economic analysis. Research experience in the field of public finance is desirable.

The Centre for Research on Federal Financial Relations, which is being financed by means of a special research grant from the Commonwealth Government, is attached to the Department of Accounting and Public Finance and is directed by the Head of that Department (Professor R. L. Mathews). The Centre will undertake and sponsor research on all aspects of Australian federal financial relationships, provide opportunities for post-graduate study and publish the results of research. It is expected that the work of the Centre will be especially concerned with intergovernmental financial relations (including the problems of local government), with special reference to the following main areas: (a) expenditure functions; (b) intergovernmental co-operation; (c) taxation; (d) grants; and (e) constitutional issues affecting financial relationships. Salary on appointment will be in accordance with qualifications and experience within the range \$A6804 x \$504-\$9324 per annum. Appointment is for three years in the first instance with provision for re-appointment to a maximum of five years.

Superannuation is on the FRSU pattern with supplementary benefits. Reasonable travel expenses are paid and assistance with housing is provided for an appointee from outside Canberra. Further information and the forms which should accompany an application may be obtained from the Association of Commonwealth Universities (Appl), 36 Gordon Square, London WC1H 0PP (Tel: 01-387 8372). Applications close on 6 November 1972.

Paisley College of Technology

Research Fellowship

Applications are invited for a RESEARCH FELLOWSHIP. This post is sponsored by the Highlands Development Board and is tenable for 14 months at Paisley College. The project to be undertaken concerns the feasibility of establishing new businesses based largely on expenditure by tourists in the Highlands and Islands.

Candidates should have a good Honours degree in Economics or a related discipline. Statistical training is essential and evidence of successful independent research advantageous. Salary £1,500 per annum.

Closing date for applications October 20th, 1972.

Full particulars and application forms from The Head of Department, Department of Social Studies, Paisley College of Technology, High Street, Paisley PA1 2BE, Renfrewshire.

Oxford Management Centre

Applications are invited for a Senior and a Junior Fellowship in FINANCE AND MANAGEMENT ACCOUNTING. Fellows are expected to contribute to the Centre's teaching activities and to undertake research.

Programmes include the Senior Managers Development Programme, work with senior executives in leading companies, and teaching for the Oxford University B.Phil in Management Studies.

Salaries are related to the University Scale from £1,788-£4,291 depending on age, with the possibility of supplementation, plus P.S.U. benefits.

Applications to: The Director, Oxford Centre for Management Studies, Kennington, Oxford OX1 3NY

The Economist Binding cases

Binding cases for The Economist are available from Easibind Ltd. The binders (see illustration) are bound in strong black leather cloth with a black leatherette lining. The spine, which is specially reinforced, is embossed in gold and red. Each binder holds 13 issues of the main edition or 18 issues of the air edition, with quarterly indices. The cost per binder, post free throughout the world, is £1.25 (US \$3.50). Orders, stating clearly which edition, the years required and enclosing payment, should be sent NOT to The Economist, but to EASIBIND LIMITED (Dept. E) Eardley House, 4 Uxbridge Street, Kensington, London W8 Telephone: 01-727 0688 (3 lines). Copies of the quarterly indices (£2.80 pa) are available only from The Economist, 25 St. James's Street, London SW1A 1HG.

Recommendations of:

- 1 Jan. 1971 — Sell on near term advance. Weakness will follow.
- 2 March-April 1971 — Broad downward trend. Buying opportunity around mid-year.
- 3 July 1971 — Expect selling on approach to 4.5¢.
- 4 Aug.-Sept. 1971 — Only moderate further weakness. Add to purchases on weakness. Long term trend up. Maintain long positions.
- 5 Oct.-Nov. 1971 — Long term trend up. Maintain long position.
- 6 Jan. 1972 — New Highs expected first quarter 1972 followed by downward trend in second quarter. (this advice was first given in Aug. 1971.)
- 7 Feb. 1972 — Significant price depression in March.

For over a quarter of a century, our basic research has enabled us to anticipate well in advance a major reversal in the price trend. It is indicative of the commodity work performed by us for many large corporations in industrial and agricultural commodities.

GOLD... for two years we have remained broadly bullish on gold!

The wasteland of Ulster

BRITISH INFORMATION SERVICES (INDIA)
150-A, MOUNT ROAD, MADRAS-2.

Seen by Seen:

the common pasar

Europe has a Common Market known principally for its economic bonds. South East Asia has a common "pasar," the Indonesian - Malay word for market place. Called the Association of South East Asian Nations - and comprising of Indonesia, Malaysia, the Philippines, Singapore and Thailand - the common pasar is a composite of modern and historic Asia. Come to Bangkok, Djakarta, Kuala Lumpur, Manila or Singapore, and wander through the un-commonest group of countries anywhere, any time. From the hustle and bustle of Manila, and Singapore to the idyllic villages on Java and the East Coast of Malaysia, from the sun-splashed resorts of Bali and Thailand's Pattaya Beach to the cool, quiet mountain lodges in the Malaysian Highlands and the Philippines' famed Baguio area. Here, some of Asia's oldest civilizations - influenced by Buddhism, Christianity, Hindu and Islam - live side by side to offer the traveler, seasoned or novice, a true package holiday.

October 21, 1972

On to the wasteland

The Protestant gunmen have opened fire on British troops in Belfast, and things will never be the same again. Both the UDA and the IRA are apparently getting ready for a fight to the finish in the Ulster wasteland, page 9. How the hall porter declared war on the army, page 17.

The countdown

The Government's next round of wage talks with the unions moves to No. 10 on Thursday, with Mr Frank Chapple's electricians apparently doing their best to bring on compulsion, page 11. The unions are still divided about a deal with the Tories, although Mr Jack Jones' may have an olive branch, page 73. Wages are roaring ahead by 17 per cent a year, but unemployment is coming down at last, page 92. Sterling fell below the magical-mystical \$2.40 line on Thursday, chiefly on rumour, page 85.

Vote, vote, vote

Election outlooks in Canada, page 28, Germany, page 35, and New Zealand, page 31, and busy days for Irish electors too, page 31.

Golda hits first

Why Israel now plans to retaliate in advance, page 14. Its new line in rabbi, page 36.

Beyond the summit

Europe's Nine have new, realistic targets to aim at, page 12. Their regional policy task, page 70. Their battle with inflation, page 85.

Uganda's unluckiest

There will be only a small residue of the Asians who are classed as stateless, and Britain can take it, page 13. There's too much red tape in the camps here, though, page 21.

Superwho?

The trouble with big golf is that there are too few superstars to go round nowadays, page 103.

Economy

SIR—I am puzzled by your leading article of October 7th.

You seem to think that by simply floating the pound and declaring "let there be 5 per cent growth," the Government will dispose in an instant of all the problems which have prevented successive governments from achieving 5 per cent growth before.

The chief of these is, of course, the balance of payments. The act of floating the pound (or rather—let us call a spade a spade—devaluation) is not a magic spell which suddenly spirits that problem away. On the contrary, over the short term it makes it worse. After the 1967 devaluation it was universally accepted that we needed to "dig a hole," to create the capacity for "export-led" growth, and very tough budgeting measures had to be taken to that end: even so, we had appalling deficits for a year and a half. Since the June devaluation, we have had a consumer boom, a continuing high rate of inflation, virtually no rise in employment and a low (and declining) rate of investment. And now you advocate giving the home consumer a further £1 billion.

Something will have to give somewhere and it will obviously be the balance of payments (soon to be further burdened by our common market contributions). Your faith that a willingness to accept "flexible exchange rates" (ie, further devaluations) will automatically and painlessly dispose of all such trying inconveniences is touching but scarcely persuasive: for a further devaluation, or a decline in the floating rate, will of course only make necessary still further domestic adjustments like those introduced so painfully in 1968-69.

If a floating rate could really make possible uninterrupted growth without tears, as you suggest, it is surprising somebody did not think of it before. It has certainly not worked that way in Canada, now suffering record unemployment. Can it be that a philosophy not unlike that of Mr Maudling in 1964 is going to leave in the lap of the next Labour government precisely the same kind of disaster?—Yours faithfully,
EVAN LUARD
Oxford

Vat

SIR—Several months ago it was suggested to HM Customs and the Treasury that the simplest method of protecting retailers, and thus the public, from the effects of double taxation on the introduc-

tion of Vat would be to allow purchase tax on stock held on All Fools Day to be treated as a Vat input. The idea was rejected since, to quote from a letter from HM Customs: "They had to discard any repayment or rebate schemes based on the purchase tax element in retail stocks because they could not be adequately controlled." A further difficulty was that all retailers could not be expected to take stock on March 31st.

To overcome these difficulties a scheme has been designed (Purchase tax: goods on sale or return, approval, or similar terms). Notice No 77SOR, HM Customs and Excise, whereby retailers store separately and discreetly all stock bought prior to Vat and liable to purchase tax on sale or return, retain records for two years and report stocks individually and separately to each manufacturer or supplier on December 31st and March 31st and on any other date when purchase tax changes.

As anyone who has ever taken stock (even in a metaphorical sense) will appreciate, to take stock for each supplier separately is more time consuming than to take stock in bulk, and to do it a minimum of twice will take longer than doing it once. Perhaps a million shops are, or will be, affected and most deal with a lot of suppliers. When it is realised that this scheme has been designed by a Government which was elected on a promise to reduce the number of civil servants and to cut prices at a stroke, and at a time when the same Government is straining every nerve and sinew to restrain inflation to 5 per cent, one is reminded that those whom the gods would destroy they first drive mad.—Yours faithfully,
C. J. FELL
Newport, Essex

Flexible working

SIR—I liked your article on the four-day week and flexible working (September 30th), but in saying that "schemes do not always catch on," citing a company with 54 per cent of its employees participating, you imply that such a proportion is not enough to treat it as a success. Surely this cannot be right? Any flexible time scheme must be potentially advantageous, both to employer and staff, as apart from anything else improved productivity invariably follows higher morale, and workers coming and going to suit their personal circumstances must be happier people.

It is probably no exaggeration to say that if the major finance houses, banks and the civil service followed the recent lead taken by the insurance industry, the reduction in daily travelling combined with staggered arrival and departure times could solve the transport problems of London and other major cities for years to come. Many have endured a morning and evening nightmare for decades past. The sight of a tube train unable to move until a porter has succeeded in pushing a mass of living creatures closer to each

other than is decent to get the doors closed is disgusting.

Four-day working and flexible time is long overdue. Let there be no further delay in bringing it to reality.—Yours faithfully,
B. B. FOSKETT
St Annes on Sea, Lancs

Road safety

SIR—Your article "No place for children" (August 26th) talks about how safe it is to be in a car in Britain, but how dangerous for people, especially children and the elderly, on the streets and highways.

This is an interesting discussion which goes into detail about signs, lights, instructions to children about play and crossing, all sorts of improvements in criss-crosses, zig-zags, etc, but it doesn't mention one imperative aspect—the speed of the motorist.

I have been in London several times. As I step from the door of the Park Lane, the cars are whizzing by at express train speed down Piccadilly. Crossing, even at the marked sections, is taking one's life in one's hands. I am neither a child nor elderly: I am healthy, vigorous and aware and don't wear glasses. But I shudder when I approach a street crossing. I have visited many large cities in the world, including Tokyo, Rome and Paris (where everyone drives as though he were handling a fire truck) and London still beats them all for pure, unadulterated speed!

How about working on this angle—this is the way you are going to save lives in the streets—and the motorist certainly shares in this. Despite all the protests the curtailment of tempo would bring, it is the one serious factor which, if acted upon, might improve your traffic analysis.—Yours faithfully,
Washington, DC HARRIET S. DANNENHAUER

Jugoslavia

SIR—You seem to forecast a gloomy future for Yugoslavia—if my interpretation of the article "King Tito at home to the Queen" (October 14th), is correct. But is it?

In corroboration of your view you refer to the political trials now being held. A few months ago it appeared to me that the authorities in Yugoslavia had tended to overreact to the Croat events. Having followed reports in the Yugoslav, British and even Comecon press I am not so certain now. I would concur with you that there were justified economic grievances in Croatia (and some that were unjustified and utterly selfish, such as complaints that Croatia's contribution towards the development of Yugoslavia's underdeveloped regions was excessive). The students, the intellectuals, the "supposedly wicked and dangerous nationalists" considered no violence. But there were links, there were flirtations—intended to be innocent—with intellectuals abroad who were equally opposed

MANAGEMENT APPOINTMENTS

£7000 PA AND OVER

Business Development and Innovation

Letraset are looking for a Business Development Executive to lead a currently active programme of diversification. We believe he will have the vision to identify and objectively assess profitable ventures which will significantly enlarge the Company's operations. He will need to think creatively and be capable of pioneering new business opportunities through all the planning stages including incorporation and subsequent development. Depending on the nature of the new business the Business Development Executive may continue his involvement by directing the venture activity as a new company or division.

Letraset International operates globally with its highly successful graphic arts products being marketed through a network of subsidiary companies and agents. Currently exports represent 70% of the Company's business. Letraset also operates internationally in the sign, industrial marking and printed toy markets.

Candidates should be graduates with a tangible record of success in marketing, corporate or financial planning. The preferred age range is 30-40 and the person appointed will be based in London.

The salary will probably be in the range £7,000-10,000. The Company operates a share option scheme and other benefits. Please send a complete career resumé or ask for a special application form and more information about the Company from the Group Personnel Manager.

Letraset International Ltd.,
195, Waterloo Road,
London, S.E.1.

Letraset

Corporate Financial Controller Europe

London based

c£10,000+car

Our clients, a large US corporation in the entertainment and publishing field with overseas sales of around \$120m, seek to appoint a qualified accountant to the new position of Corporate Financial Controller for their extensive operations in films, records, publishing and cable TV.

In addition to his main Controller tasks of consolidating, interpreting and acting on European divisional operating statements, he will fulfil European Treasurer functions; rationalise EDP systems, advise on tax situations and conduct acquisition investigations.

Applicants, in the age bracket 30 to 40, with some relevant experience and flair for international financial management should write enclosing career details to:

A YMS

Jeffrey F. V. Henu,
Arthur Young Management
Services, Moor House,
London Wall,
London, EC2Y 5HP.

UK Treasurer for an International Operation

in a major international Group with wide interests in Light Engineering, Finance and Services. Present capital employed in the UK exceeds £150m.

The UK Treasurer will play a vital role in the Group's growth target by ensuring continued effective use of assets. His responsibilities will include investigation of investment opportunities, including acquisition and diversification. He will also be concerned with cash forecasting, credit control, fund raising, currency dealing, and supervising the investment of pension funds exceeding £20m.

An accountancy qualification is required, with wide professional finance experience in merchant banking, commerce or a large international company. A detailed knowledge of the 'City' is essential, coupled with the ability to maintain sound business relationships with banks and other financial institutions. Applicants will ideally be graduates aged 35-45 years.

Salary and a broad range of benefits are in keeping with a position of this level. It is unlikely that anyone currently earning less than £7,000 p.a. will have the experience required. The opportunity can be expected for further career progression, nationally and internationally.

Write with full personal and career details to T. C. Mallott, Director, Austin Knight Limited, 20 Soho Square, London W1A 1DS. Applications will be acknowledged and forwarded to the client concerned. Organisations who should not receive your application should be indicated in a covering letter.

to violence, though a shade more hostile to the Yugoslav system, and they in turn were linked, once again in good faith, with the activists, the terrorists, the assassins who derived encouragement from the contacts, and against the will of the intellectuals translated them into action.

In fact, those now being tried were accessories before the fact—unwittingly so—but there was a chain reaction and the Yugoslav authorities could well be right in stopping it. So far, it seems, justice has been tempered with mercy—bearing in mind the violent activities of the more extreme antagonists of the Yugoslav system.

I know it may not be de rigueur to refer in a political review, which *The Economist* has become, to economic matters. But your statement that "the independence of economic enterprises is to be curtailed" is astonishing. Day by day, almost tediously so, the Yugoslav press quotes leading men and women pressing for a strengthening of the self-management of enterprises. Day by day it calls for more action in this respect and less lip service. There are, it is quite true, restraints, particularly the prerogatives of a new authority, the Social Accountancy (*Društveno Knjigovodstvo*) which is supposed to withhold licences for new capital projects if there is no proof of adequate funding and economic justification. But this is a safeguard against inflation which, as you rightly indicate, is a vexing problem.

You declare—as if it was a certainty—that "indirect voting is to replace the direct election of members of the national assembly and local councils." It is quite true that this matter is under discussion. During a speech in Mostar, Edvard Kardelj referred to this proposal in some detail, making it quite clear that this was neither a firm decision nor a cure-all. He argued that "the delegate system"

could help establish closer links between voters and their representatives but he warned that it might also strengthen a bias towards particularism. However, in his speech he rejected quite unequivocally any return to an "etatist-centralist system." He also rejected tendencies becoming occasionally apparent, as he put it, of identification of the League of Communists with the governmental and economic management apparatus.

This brings me to the conclusion that centralising tendencies which may have become temporarily attractive to some Yugoslav quarters earlier this year are now being rejected, though after the Croat events followed by a wave of terrorist incidents there will be, again to borrow a phrase from Edvard Kardelj, "not a firm hand but a firm Socialist democracy." This process which, I think, is desirable for Yugoslavia could be expedited by understanding abroad. —Yours faithfully, KURT WEISSKOPF
Brighton, Sussex

Vietnam

SIR—On the evidence presented in your article "North Vietnam votes Republican" (October 14th), the North Vietnamese appear simply to be assuming that it is no good waiting for Senator McGovern to be elected (since they believe he is unlikely to be elected), and consequently constructively negotiating with Nixon, via Kissinger. I don't understand how you can call this "voting Republican," which implies that they would prefer to have Nixon in the White House.

Similarly, I doubt that you could justify the distinction in short and long term effect between:

North Vietnam thinks it might bulldoze the Americans into something "much more like surrender" before November 7th than it will be able to do after it, and

It has decided that "peace on some acceptable terms" is now in its interests, and that, as President Nixon is going to be re-elected anyway, it might as well earn his gratitude by holding its first stage of the vital talks now. (My quotation marks.)

While I enjoy your journal, I find an occasional tendency towards muddled thinking which diminishes my feeling of respect for it.—Yours faithfully, DAVID OSER
London, SW19

Riot police

SIR—Mr George Short draws attention (Letters, September 16th) to a serious gap in our existing police force system, namely the absence of mobile riot police squads.

There is no doubt that such a specially-trained and equipped force is now urgently needed to deal with the serious challenge presented by the violent picketing methods recently employed by the miners and the

building workers—and in the future who else?

Our existing police force does not have the equipment and training to deal adequately with the vicious picketing tactics now being employed to halt our economy. Maybe, if we had such a force, Coal Board and other office girls would not be kicked and spat upon by hooligans.—Yours faithfully, C. NORMAN
Leicester

Soviet Festival of Music

SIR—I am writing to you today, to try to persuade you to stop the forthcoming festival of Soviet music in London.

As a former refugee from Czechoslovakia in 1939, whose family were totally annihilated by the nazis, I feel horrified at the present acts of persecution and anti-semitism in Russia; and I feel that it is morally wrong to extend hospitality to such a country.

I do hope that you will give my plea some earnest thought.—Yours faithfully, LILLY POLLOCK
Cardiff

SIR—As a British subject who has for a long while been concerned with the human rights of all nations, I am appalled that this country is to welcome a group of artists who will represent the Soviet Union at the forthcoming Soviet festival of music.

Our recognition of them in this official capacity (rather than as individual gifted artists) is surely an acknowledgement that the British people are indifferent to the harassment that many Russian people are suffering.—Yours faithfully, SHEILA LEVY
London, NW11

Banking and insurance

Because of a printer's error the mail paragraph became garbled last week in the letter from Mr T. L. F. Royle, managing director of Hogg Robinson and Gardner Mountain (UK) Ltd. It should have read:

As the operational company concerned in the Staplegreen group, in respect of your reference to my group and its personal insurances I was considerably surprised to note that you should have allowed such a statement to be reported. I am sure that you would be the first to appreciate that if our group had employed 1,000 staff to handle personal insurances, far from making £1,000 profit, we would probably now be out of business altogether. The wage bill we do have a large portfolio of personal insurances principally linked to our commercial clients, the maximum staff that we have ever employed on such business amounted to 68 and this number has been or three years. Even so it is extremely difficult to get any sort of proper return in profit terms and such business is run in conjunction with our industrial and commercial accounts where our specialisation in depth can be used to fullest advantage.

PROPERTY

Small space sublease from Standard Oil Company (New Jersey)

1,500 to 15,000 square feet of high quality offices on upper floors of the Standard Oil Company (New Jersey) New Headquarters Building—1251 Avenue of the Americas (50th Street) Rockefeller Center, New York. 5-year sublease. An excellent opportunity.

51 East 42nd Street, New York, N.Y. 10017

On to the wasteland

What is happening in Northern Ireland looks like a milestone on the road to ruin. The hard men of Protestant Ulster who sent gunmen and petrol-bombers to attack the British army in Belfast this week have finally managed to make themselves the mirror-image of the IRA. They started out by copying the IRA's uniforms and pseudo-military chain of command; now they are trying to show that, by a combination of provocation and black propaganda, they too can manufacture martyrs and so rouse the feelings of a whole community against the British army. They have built on the fear and frustration of the little people of the Shankill and Sandy Row who have survived three years of violence and are now persuaded that it is only by using violence themselves that they will ensure their escape from the great bog of a united Ireland. This is so much against the interest of ordinary Protestants that Mr Sean MacStiofain could hardly have planned it better, and, indeed, he may even have helped to plan it.

By the time the Ulster Defence Association agreed to cool things off on Wednesday evening, in return for the army leaving it to control the Protestant strongholds, enough damage had probably been done to ensure that Protestant relations with the army would never be the same again. Now that Protestant gunmen have fired on British troops they are likely to find pretexts to go on doing so. The Tartan gangs have been encouraged to go on rioting. It is now Protestant families that condemn the army for their children's deaths and promise that revenge will be sweet.

A few more bloody nights like Tuesday's in Belfast and the army would find itself in an impossible position, hopelessly overstretched, unloved and beleaguered on both sides. The IRA Provisionals, who have lost ground since Operation Motorman in August, would then seize the chance to present themselves to the Catholics of the Ardoyne and Andersonstown again as community defenders, and enough Catholic churches and schools

would have been burned by hooligans to make the part seem plausible. With the army strained and demoralised, and with the whole province on the brink of civil war, there are those in Ulster who consider it would not be impossible for the British Government to be tempted to shrug off the burden of Ulster, either by announcing a deadline for the withdrawal of British troops or by concocting some kind of formula for an Irish federation that would probably be almost as unpopular with Mr Lynch in Dublin as with the loyalists of Sandy Row. That would leave the forces at work within the province to fight it out between themselves.

The men who want the British out

Such a scenario would suit the IRA, because it counts on pulling the whole of Ireland into a protracted civil war in which it might just conceivably emerge as a real power in Dublin as the moderates were pushed to one side. It would also suit the UDA, since its leaders seemingly calculate that they would survive the battle with Catholic Ireland and that Ulster would continue, slightly shrunken, as a kind of Protestant Israel in the north-east, swept clean of republican contagion. The withdrawal of British troops would leave the hard men of the UDA, and those politicians like Mr Craig who have hauled themselves on to its bandwagon, with the chance of grabbing power for themselves within the kind of Protestant republic that they now more or less openly advocate. Mr Craig and his Vanguard followers have always been adept at turning a blind eye to the economic cost of UDI; a recent Vanguard pamphlet even makes out that Ulster could survive the loss of British subsidies by a mixture of currency devaluation and higher trade barriers.

So the latest clashes in Belfast may stem from the fact that the ex-warrant officers and hotel porters who run the UDA, and their friend Mr Craig, have got the scent of power in their nostrils and may be ready to pursue it as far as a unilateral declaration of independence. If

so, the great majority of Ulster Protestants, who regard themselves as British and want to remain British, should realise what is being done in the name of loyalism and where it could lead. But nothing ever boils down to a simple explanation in Ulster. There was something almost accidental about the start of the conflict between the army and the Protestants, which really got under way when a patrol picked up a member of the UDA's inner council as he was drunkenly waving a gun about at 3 o'clock one morning. Some of the later incidents have been the work of a hooligan fringe unconnected with any of the major Protestant organisations.

The UDA itself is by no means monolithic, and at the very moment that Mr Tommy Herron, its vice-chairman, was proclaiming war on the army on Tuesday morning some of his company commanders were privately assuring the army that they did not want the clash to go further. It should be possible to weed out the extremists within the UDA without alienating rank-and-file members who are concerned with defending themselves against the prospect of a future civil war but do not want to precipitate it. That was why the talks between Mr Whitelaw, the army and the UDA this week were so important. The UDA must be dealt with by negotiation and the arrests that are made must be highly selective, involving only those actually guilty of criminal offences. The success of this approach will depend very much on the men on the ground—above all the army battalion commanders and company commanders who are in a position to talk to local UDA leaders.

What has to be done now

It is ironic that the Protestant community should have broken out at a moment when the army has had some substantial success against the IRA. Perhaps the apparent lull in the Provisionals' campaign actually has something to do with the UDA's attacks on the army; there are now some scraps of evidence (see page 17) to suggest that there has been some collusion between extremists on both sides. The bombings that the UDA claims to have carried out across the border may serve to blunt the Dublin government's will to be tougher with the IRA, which had the Provisionals rooted out of their safe haven in Buncrana.

The confrontation between the Protestants and the army will not wait on lengthy political talks or Mr Whitelaw's long-awaited green paper, or even on the availability of parliamentary time for introducing necessary new legislation—that stock excuse for putting off urgent measures. The time available for the Government to stop the slide must be counted in weeks or even days. Whatever the truth in the UDA's allegations against the army, a continued conflict between soldiers and Protestants is bound to cost lives and might well be waged with a kind of desperate fury—the fury of two groups fighting those they least wanted to do battle with. There are several things that now need to be done to save the situation:

(1) The date of the referendum on Northern Ireland's constitutional future should be brought forward. It is

hard to understand why a plebiscite designed to take part of the tribal element out of Ulster politics by giving people a chance to vote on whether or not to stay British should have been timed to come after regional elections that are now likely to be completely irrelevant, since several major parties are going to abstain from them. The postponement of the referendum until next spring has given the Protestant extremists the chance to pretend that the British Government is about to rat on the Ulster majority, and they have found ready believers.

(2) The Government must go on being tough against the IRA. In particular, the system of special courts (in which normal rules of evidence would be suspended for political detainees) that is now being studied by the Diplock commission must be introduced as quickly as possible. The policy of phasing out internment had a sensible political objective: to separate the IRA from the majority of the Catholic community. But there are some worrying indications that at least 150 Provisionals have returned to active IRA membership. Most of the Provisionals released from behind the wire were given a fortnight's holiday in the south, but when they got back to the ranks of the gunmen. The army must be allowed sufficient men to ensure that the IRA is not given the chance to re-establish the no-go areas in Londonderry, where soldiers policing a basically hostile community are very much dependent on manpower. An effective military response to the IRA will remove the Protestant argument that organisations like the UDA are necessary to compensate for the army's omissions.

(3) The inquiry into the death of John Clarke and other incidents that the UDA or other Protestant leaders have attributed to army excesses (and has been promised by Mr Whitelaw) should go ahead.

(4) Every effort must be made to maintain close liaison between the army and the leaders of the UDA at all levels to head off further violence.

What sort of Ireland do they want?

Some of these measures will draw the criticism that the Government is making concessions to violence—exactly the same kind of thing that was said when direct rule was introduced and the decision was taken to phase out internment. The facts must be faced squarely. A full-scale campaign of terror by the Protestant extremist groups would make the army's position untenable, and it does little good to talk about deploying more troops or mobilising the Ulster Defence Regiment, although both those steps are now necessary. What must be done at once is to demonstrate to the majority of Protestant Ulstermen that the violence of the UDA is as unnecessary as it is misguided, and can only lead to the kind of Ireland Dr Conor Cruise O'Brien has warned of—an Ireland divided between two nasty little authoritarian republics. Ulster has become a place where a militant majority is aping the style and the tactics of a militant minority. That road leads to the wasteland. It will only persuade more people in Britain that the tribes had best be left to fight it out among themselves.

Countdown from Chequers

Mr Frank Chapple's electricians seem set on pushing the Government towards some sort of statutory wage controls

The countdown for the tripartite moon rocket began at Chequers on Monday. Next Thursday, 10 days later, will see either lift-off from the No. 10 launch pad or disintegration. There are nasty malfunctions in the works, although enough progress has been made in the talks between the Government and the leaders of the Trades Union Congress and Confederation of British Industry on the collective approach to the problem of inflation for the countdown still to be taken seriously. Indeed, Thursday cannot come too soon. The August index of hourly wage rates is up 17 per cent on a year ago. Negotiations on the big claim by Mr Frank Chapple's electricians (see page 73) cannot be stalled much longer. Mr Chapple seems bent on pushing the Government into statutory controls, much to the Labour party's delight.

Monday's meeting at Chequers was largely devoted to discussing the arithmetic of pay ceilings and the control of prices. By all accounts it was a curiously unrealistic affair. The statement afterwards spoke of discussion of the TUC's concern that the prices side of any package agreement would not be effective. Little mention was made of the CBI's concern, or anyone else's, that the pay side would not be effective—although the CBI's proposed monitoring system did cover incomes as well as prices. So we had the spectacle of the TUC demanding the statutory enforcement of price restraint, the principle of which had already been both accepted voluntarily by the CBI and retailers and successfully tested over the past 15 months as far as the CBI was concerned. By rights the discussion ought to have been on whether statutory wage control is necessary wherever the principle of voluntary restraint has not been accepted. Instead it has been left to individual union leaders, like Mr Chapple and Mr Clive Jenkins, to raise this issue. As Mr Jenkins said on Sunday, when his Association of Scientific, Technical and Managerial Staffs came out against any TUC agreement on wage restraint: "We decided the TUC had no power to settle wage increases on our behalf and to tell the TUC that they would not be our agents in this matter of salary bargaining."

The arithmetic of a flat-rate pay ceiling was merely rehearsed at Chequers, with the TUC and CBI stating their opinions in turn. The TUC's men still subscribe to this principle as a way of helping the low-paid, which was originally their idea, but there was no hard bargaining about the precise figure they might accept. Most of the meeting was taken up with the discussion of the CBI's proposal for a monitoring machinery, and a protracted argument developed between the TUC and CBI on whether it should be given statutory teeth to deal with retail prices. Basically the TUC wants some form of price control to sell any deal for wage restraint to the majority of its members, while the CBI declares

that any controls would be impossible to administer. The upshot of the Chequers talks was that two working parties were given the jobs of looking further into these things, and the three sides will meet next Thursday "to agree on proposals which would meet their common objectives and provide a satisfactory basis for economic management over the coming 12 months."

The Government will have to prepare at least two packages. The first will be the one on which it would hope to get voluntary agreement, leaving some room for negotiation on the day. This could even include some carrot on the Industrial Relations Act to clinch the deal. The second will be the package which Mr Heath and Mr Barber will have to impose if the talks break down. It is anyone's guess which way things will go. But at least a clear pattern is emerging now. As the inset shows, the Government is trying to escape from the horns of a dilemma. Its objective is to isolate and defeat the union militants. It is therefore trying to organise against them all the other sectors of the community.

A little algebra

The tripartite negotiations can be considered as a simple problem involving the values of five elements:

V = a voluntary package,
C = a compulsory policy of wage-price controls,
T = official trades union support,
P = public opinion,
M = militants.

1. **The Problem:** To beat inflation some combination of V or C, T and P must be found with a combined value greater than M. So far the Government has been trying to put together V + T + P
2. **But:** (a) Even V + T + P may be less than M: the electricians or any other union may have the industrial power to break a voluntary system.
(b) V + T is impossible if M is large: the majority of unions can hardly agree to voluntary restraint if a significant minority are determined to grab all they can.
(c) V + T, while possible if M is small, can only be achieved by reducing the values of V and P: Government capitulation to get agreement at any price makes a voluntary policy ineffective in reducing inflation and loses public support.
3. **Therefore:** Replace V by C.
4. **But:** C + T + P does not exceed M. Statutory controls, even backed up by public opinion, are unlikely to overcome the resistance of a united trades union movement.
5. **The Solution:** C + T + P is greater than M. This can only be achieved if C is the statutory enforcement of V.

This approach has three weaknesses. First, even full agreement on a voluntary package may not beat the militants; secondly, agreement on voluntary restraint is unlikely if a strong minority opposes it; and thirdly, if the Government concedes too much to get an agreement it is not likely to reduce inflation and may lose the support of the employers and public opinion. Thus a purely voluntary policy with union support looks likely to be ineffective. On the other hand, a compulsory policy would fail against united trade union opposition,

even if it had general support among a public that has been too long-suffering.

To escape from this dilemma the Government must engineer what is, in essence, a voluntary deal but one that is made effective against rogue elements by some form of symmetrical statutory powers. This will emerge next week either as a voluntary deal with fall-back controls or as a statutory policy with a wide measure of voluntary support. The way things are going, the second seems more likely.

Europe is in business

It is not sublime mysticism and nonsense but strictly practical stuff that has been occupying the great men at the EEC summit in Paris this week

The next year or two in Europe will be its test: a test to see whether a certain sort of intelligent Europe made up of different peoples has the nerve to bring itself alive. No need exists now or during the coming years for much else, least of all for that mystical, fluffy Europe which enthusiasts in the cause shout loudest for when they are least sure what it is they want. To find Europe's sensible next steps has been what this week's summit meeting of the Nine in Paris has been about. It is what the royal assent and, it is to be hoped, the last of the votes in Parliament this week were also about: an enlarged European Economic Community of common sense in which all members have a say, and yet know when to give way for the common good.

The snag, as the summit has also shown, is that nine countries do not always quickly agree, and at such moments rhetoric tends to outrun performance. What has been achieved in the old unenlarged EEC so far is:

- A partial freeing of industrial trade by removal of tariffs.
- The prevention of fruitless over-investment in steel, and the relief of some of the social problems caused by the decline of coal.
- A common farm price structure, supported by a common fund, to relieve the aches of a social revolution in the countryside.
- The not-yet-convincing early steps which might one day lead to fuller monetary and economic integration.
- The nearly complete conversion (Italy has still to take the plunge) to a roughly uniform system of indirect taxation by value-added tax.
- A necessarily uneven enforcement of anti-trust laws against cartels, monopolies and those national state aids to industry which are judged to undermine competition.
- A decision-taking set-up which allows national governments to control this rather limited economic community, but which also gives a fair chance to a fledgling European government of the future.
- The joint negotiation of most tariff and trade matters with outsiders.
- Special trade arrangements with countries outside the EEC—the neutrals in Europe, countries in the Mediterranean, Africa and farther away.

What the EEC had added before the summit to these contractual achievements (all but one of them fore-shadowed by the Treaty of Rome) were various informal ways of holding together on matters of common interest—consultation on monetary reform in the world at large, on foreign policies, and more recently on the roaring progress of inflation in Europe (see page 85).

What the Nine have been trying to do in Paris is twofold. They have tried, first, to write down a new set of concrete targets which might, if reached, put more balance into the list of deeds already done. Europe needs a regional policy to spread the wealth which integration brings (see page 70); it needs, as Herr Willy Brandt in particular perceives, a more real social policy to catch those whom the harshness of an entrepreneurial society lets fall; it needs to present a more open face to the outside world. All these things Europe can well afford.

Second, the summit has, in the things said but not written down, tried to set general attitudes which will remedy the bad sides of present policies. To take only the two largest examples, a more flexible approach is needed, notably in German political life, to the future course of farming policy, and in current French thinking (at least at the top) about taking changes in exchange rates more calmly than in the past.

These two summit aims—new policies written down, attitudes to old ones not written down but easily acknowledged—will provide the base of fact on which all the good intentions, the declarations leapfrogging one another in Paris, the possible progress one day into a defence community and who knows what else, can be built. This will to get on with it goes back, in a way not foreseen before it happened, to the vote against entry in Norway on September 25th. That little shock has persuaded Herr Brandt and Mr Heath and M. Pompidou, for the time being at least, that if Europe is to succeed it must gain more public support. What has been done and discussed in Paris this week may look more worthy than glamorous, but at least what might have been a lackadaisical summit has given Europe the bare chance to reach its next way-station during the coming few years.

State of the stateless

It looks as though the Ugandan Asians with British passports will get out all right, but what will become of the stateless ones?

First the good news, then the bad. It now seems almost certain that all Ugandan Asians who possess non-Ugandan passports can be airlifted out of the country before President Amin's November 8th deadline. That will leave behind two categories of Asians: those who have successfully established their right to Ugandan citizenship, and those who are now classed as stateless. The stateless ones can look only to a horizon bounded at best by refugee camps and at worst by oblivion. Now that the deadline is little more than a fortnight away, a solution to their problem must be sought urgently.

The natural country to turn to first for a solution is Britain. As the former ruling power in Uganda, Britain was responsible for all its people before it became independent 10 years ago. After considerable prevarication and some painfully publicised misunderstanding, the Foreign and Commonwealth Office announced on Monday that Britain would accept stateless Ugandan Asians of only one kind—those who had renounced British citizenship in favour of Ugandan, but then found this withheld because the renunciation had not been properly formalised within the allotted time-limit. These, with their dependants, are thought to number about 1,900, and probably half of them will settle in India, leaving only about 1,000 to come to Britain.

In Kampala, the British office is now issuing entry certificates to the British wives and children of stateless men; this may help about 1,000 people. But the Government refuses to give citizenship to the stateless husbands of British passport-holders, even though it gives citizenship to the stateless wives of British husbands. The strict application of this rule now will have the effect not just of splitting families, but of separating the wage-earner from his dependants. What chance is there of an immigrant mother being able both to work and to look after her children in Britain? To deny entry to her husband is to condemn her to dependence on social security handouts.

No one knows just how many stateless Asians will be left in Uganda at the end of the sorting process. There will probably be several thousand Asians who had duly renounced British citizenship within the time-limit but still had Ugandan citizenship denied to them or withdrawn by virtue of some technicality. Their position is being made even more difficult because it is proving impossible to verify that they are indeed stateless. The Ugandan authorities will not help here, because if it is established that the Asians are truly stateless they become Uganda's responsibility in international law.

By far the biggest group of stateless Asians is going to Canada, which may take 3,000 or 4,000. America has promised to take 1,000. Up to 200 will be able to go to Switzerland. India has so far issued 500 emergency

travel documents. Australia expects to take about 170 people. On Tuesday Belgium announced that it would accept 30 families. Other countries may follow suit. But all this will still leave a residue of 3,000 or 4,000.

General Amin has said that if they stay in Uganda they will be put in camps. Harassment of the Asians has diminished over the past fortnight. But paranoia still abounds, and anxiety about Uganda's ailing economy will intensify the hunt for "economic saboteurs," a hunt that will further imperil the Asians.

It is against this background that the rest of the world should view the situation. So far the only relevant international agency that opened up for business in Kampala is the Intergovernmental Committee for European Migration. But the ICEM cannot actually resettle anyone until it receives authority either from the United Nations High Commissioner for Refugees—who, in turn, cannot act until a UN member state has agreed to accept the stateless people, either temporarily or permanently—or from the International Committee of the Red Cross. And the Red Cross has twice been refused permission to send a mission to Uganda. But the immediate problem of the deadline could be overcome if foreign countries would offer transit facilities to get the stateless out of Uganda.

It would hardly be too much for us

It seems probable that most of the people now being treated as stateless have, in fact, a sound claim to Ugandan citizenship; the present government of Uganda may deny it to them, but this denial is not founded in law or reason. However, if General Amin goes beyond the call of reason, the rest of the world must not ignore its obligation to help. The British Government feels it has done its bit by accepting so many British citizens: the Home Secretary, Mr Carr, repeated in the House of Commons on Wednesday that the stateless were not Britain's responsibility. The Government has, indeed, behaved honourably and courageously. But had it not accepted its own citizens, it would, as Mr Carr himself indicated at Blackpool last week, have disgraced itself.

It now seems that, instead of having to take in 55,000 or more of the Asians as the Government at one time expected, Britain will have to digest only about 20,000. That figure represents about half of last year's net emigration from Britain. The real problem about these particular immigrants is not that they are intolerably numerous but that they are not white. If this country had to find room for as many as a quarter of a million white Rhodesians, it might be discovered that the problem was not insuperable. There should be no real problem in taking a share of the small residual number of the stateless Asians.

Retaliation in advance

Mrs Meir has made it very clear that Israel's pre-emptive raids on Lebanon and Syria herald a new stage in its war on terrorism

Israel has served notice, first with bombs and then with words, of the arrival of a new stage in its war against the Palestinian guerrillas and the Arab countries they live in. In the past its raids on Lebanon, Syria and Jordan were, at least ostensibly, all executed in retaliation for some specific action by guerrillas operating, or being directed, from these countries. But the air raids on four targets in Lebanon and one in Syria last Sunday came out of the blue. The suspicion that Israel had moved on from its customary policy of retaliation, of 10 teeth for one tooth, was confirmed on Monday by Mrs Golda Meir herself. In her words, Israel now has "no choice but to strike at the terrorist organisations wherever we can reach them," without waiting for them to attack.

The raids on Sunday were discriminating ones. Specific commando targets, including a small harbour and a vehicle depot, were attacked, and civilian casualties were light. But the raids to come—and the Israelis have announced their intention, and claimed the right, to attack where and when they decide it to be in their interests—are likely, on past experience, to kill or injure large numbers of civilians. Even if the bombing is accurate, this new war on terrorism could lead the bombs to targets buried deep in the Palestinian refugee camps or, indeed, in Lebanese towns and villages.

The explicit aim of Israel's earlier air and land attacks on Lebanon was to force the government to clamp down on the activities of the guerrillas on the Lebanese-Israeli frontier. This had worked. Since the last major attack on Lebanon a month ago there had been a complete freeze on guerrilla action. True, last Saturday's mutiny by one Fatah commander against the moratorium ordered by Mr Yasser Arafat could spread now that it can no longer be argued that Lebanon needs peace on the frontier to protect itself from Israeli attack. But long before Israel spelt it out, the frontier situation had ceased to be the main issue.

The Israelis cannot hope that their "preventive" raids will pinpoint the men responsible for the outrages carried out by the Black September group. Even if they hold, as they do, that Black September is directly controlled by the umbrella Palestinian Liberation Organisation, and that every Palestinian working for the resistance movement is ipso facto a terrorist, there are more direct methods of counter-terrorism. One of these is fighting terrorism with terrorism. Witness the assassination of a Fatah agent in Rome on Tuesday; the letter-bombs sent to Palestinians prominent in the resistance movement; and the placing of dynamite or time-bombs in Palestinian offices, as was done in Beirut last week. Most Arabs firmly believe that Israeli agents are behind some or all of these attacks; the Israelis equally firmly deny it.

When Mrs Meir spoke of striking at terrorist organisations before they could strike at Israel, she was not,

presumably, referring to this sort of direct action. The action now threatened by the Israeli government is also directed against the guerrilla movement, but at one remove. The aim would seem to be to force the Lebanese and Syrian governments to clamp down totally on all Palestinian resistance activity, as has been done in Jordan. The Palestinian offices in Beirut and Damascus are now the nerve-centres of the resistance movement. If the Lebanese and Syrians had the will, and the means, to shut them down, there might indeed be no longer a concerted, or roughly concerted, movement; but unless one fully accepts the Israeli equation between resistance and terrorism, the effect on smaller groups intent on carrying on terrorism from farther afield would be less calculable.

Perils of simplicity

From Israel's point of view the destruction of the Palestinian resistance movement would be straightforward gain. The Israeli government is not now thinking in terms of a peace settlement that has a realistic chance of being accepted by any of the present Arab rulers; it has never thought in terms of a settlement that might be accepted by a majority of Palestinians, let alone the relatively small hard core of resistance fighters and planners. Before the "war on terrorism" was set off by Black September's outrages, few of Israel's leaders believed the Palestinians to be of serious military or political consequence. There are always dissenting voices in Israel, but the majority view there tended to be dismissive of what all Palestinians and most Arabs believe to be a just cause even if an inconvenient one. This attitude towards the resistance movement makes it easier now for the Israelis to slip into two deceptively simplistic ways of thought: first, to brand all its supporters as terrorists; second, to underestimate the importance to other Arabs of upholding the Palestinian cause, if only in principle.

This could lead the Israelis to believe that the Lebanese, in particular, will now put their own self-interest and safety first by doing all they possibly can to suppress any form of Palestinian activity. Since the Lebanese government would have to be restrictions on political and publicity activity, on free movement and free expression. Certainly there are many Lebanese who might like to take this action; but it is very unlikely that they are strong or numerous enough to do it effectively. Few outsiders question Israel's right to protect its citizens from terrorist attacks. Many may question the effectiveness of a policy apparently meant to scare the Lebanese into enforcing controls that might or might not hamper determined terrorists but would almost certainly wreck Lebanon's own open, and vulnerable, society.

Action Japan

Kobe Port

Economic boom continues. Move in now with the Hongkong Bank.

The legendary Japanese boom is far from over. Gross National Product may be the second largest in the non-communist world but per capita income gives Japan only fourteenth place in the same league. That means there's still considerable consumer buying power to be generated, more exporting opportunities yet to emerge.

And Japan can still surprise. A country of over 100 million people, the world's largest shipbuilders, yet a country where 16% of the working population work in the primary industries of agriculture, fishing and forestry.

The Hongkong Bank Group

are on the spot in Tokyo, Osaka, Kobe, Yokohama, Nagoya and have branches in 35 other countries. Their knowledge of the Japanese scene is comprehensive and up to date. Now they have

packaged the facts in a concise 20 page economic profile of that country. No manufacturer or exporter can afford to ignore Japan. Send for your free copy of the booklet now – and get your briefing from experts.

THE HONGKONG BANK GROUP

THE HONGKONG BANK GROUP
9 Gracechurch Street, London EC3V 0DU

With nearly the whole of the British Isles to choose from, why should you choose Cumberland?

There are so many powerful arguments in favour of Cumberland as an area for industrial expansion that it would be quite impossible to do justice to them in one large, wordy advertisement. However, here are a few basic facts and figures which can give you food for serious thought. Cumberland is the ninth largest county in England but there is ample room for expansion and ample living space, and there is still a readily available labour force of tough adaptable people who keenly await the opportunity to work and work hard. The County has a unique environmental advantage; the juxtaposition of land ideally suited to planned industrial development and land long since planned by nature for healthy, civilised living. Add to this the hard cash benefits of maximum development and training grants, factories and sites at

realistic rents, house property values roughly half of their equivalents in the Home Counties, and you begin to appreciate the all-round advantages which Cumberland offers to you and your personnel. Communications are excellent in every direction and swiftly improving (see table). Finally, to get the remarkable Cumberland story in full you should complete and post the coupon below.

When the hall porter declared war on the army

FROM OUR SPECIAL CORRESPONDENT

It looks as if the leaders of the Ulster Defence Association, after charging towards the brink, have decided to pull up at the very edge. The question now is whether the promise to "cool it" that Mr Tommy Herron, the vice chairman of the UDA, gave to Brigadier Sandy Boswell, the commander of the 39th Brigade in Belfast, on Wednesday, is going to be respected by all of the men that his movement is supposed to control. But much of the damage has been done anyway. Now that Protestant gunmen have fired at the army, some of them will be ready to do so again—especially if Mr Herron can be believed when he claims that the sniping was "freelance stuff."

The UDA is said to have about 50,000 members, most of them in the working-class districts of Belfast, Londonderry, Portadown and Mr Bill Craig's home parish of Larne. The leadership is a 13-man council run by Mr Jim Anderson, a shopkeeper with a do-it-yourself store down the Crumlin Road (his door was accidentally painted green by the army during its recent clean-up campaign in which UDA and IRA slogans were removed from walls),

and by Mr Tommy Herron, a former hall porter at the Conway Hotel who talks in an almost marxist style about socialism and the wickedness of the establishment. Two members of the council were recently placed under arrest, and a third resigned in dissent from the anti-army campaign by the leadership.

Under the umbrella of the United Loyalist Council, chaired by Mr Craig, the UDA is linked both to the Vanguard movement, which is now more or less openly backing the idea of a unilateral declaration of independence (UDI), and the proscribed Ulster Volunteer Force. But it is essentially a movement of the Protestant back-blocks, at odds with the middle-class politicians who dominate the Unionist party and without significant backing in rural Ulster where, as one army colonel put it, "the squire, not the ex-warrant officer, is the man."

For several months, the UDA had looked like coming apart at the seams. There is considerable support for the Rev. Ian Paisley within the movement, and Mr Paisley has taken a public stand against both the idea of UDI and a Protestant campaign against the army. At a local level, leaders of the UDA were negotiating with army commanders in an effort to head off major clashes at the very moment on Tuesday morning that Mr Herron was declaring war on the military. But on the other hand, the UDA now includes a sizeable hooligan element (which appears to have actually usurped the leadership in Portadown, where several leaders have been arrested on criminal charges such as possession of stolen liquor). It was that element that came to the fore in incidents like the attempt to burn the Lady Mercy Catholic school to the north of the Ardoyne on Monday night, when two soldiers were

burned by petrol bombs.

The reason for the attack on the army was partly accidental. The rift with the 1st battalion, the Parachute Regiment, which has now become the prime butt for UDA anti-army propaganda, as it was formerly for the IRA, can be traced back to the arrest of Mr Samuel Doyle, a member of the UDA council. The Paras, stationed in the Shankill as well as in Ballymurphy, were known to be on fairly good terms with the UDA. They met them in drinking clubs, and Mr Doyle is said to have been drinking with the Paras a few hours before he was picked up. Since then, the Paras have been responsible for several major arrest operations, and are charged by the UDA with the Newtownards "massacre"—the death of two Protestants after snipers opened fire from at least six positions on an army patrol in the Newtownards Road. The reason why the "Paras out" campaign has been so industriously developed by the UDA is plain. It is not just that the UDA is apeing the methods of the IRA; its leaders are worried that the Paras know too much about them.

The Secretary of State, Mr Willie Whitelaw, said in the Commons on Tuesday that he had no evidence of meetings between the leaders of the IRA and the UDA. Certainly, firm evidence of collusion between the two groups is hard to come by, although army sources insist that they staged a meeting in Belfast about a fortnight ago. A scrap of paper that was found by the security forces in a locker in Long Kesh may provide a further clue. It is a note attached to an article written by Cyril Canning, a member of the Londonderry Provisionals who is a regular contributor to the IRA paper, the Volunteer. The article warns against "collaborators and informers" within the IRA but is mainly devoted to militant Protestant groups like "the notorious UDA who openly flaunt themselves in front of the army." The note is mostly a commentary on the behaviour of individual internees inside Long Kesh, but contains a postscript:

Craig: UDI for UDA?

Harry, I was told after I wrote my article not to slag the UDA as the boys outside don't want it to happen. So in my article would you please change UDA to Unionist Extremists (sic). I don't know why this is. Maybe you know more about it than I do, but word was sent from Belfast about it. The note has to be regarded with scepticism. It is typed in red, unlike the rest of the material, and merely hints at a link between the IRA and the UDA that is not explicitly mentioned. But it does provide some extra reason for thinking that there may be substance to the reports that some members of the two groups had agreed to keep off each other's turf while attacking the army.

The UDA's campaign against the army may prove to have undermined the solid gains that have been achieved against the IRA. The decline of the Provisionals is directly related to Operation Motorman and the physical presence of soldiers in the streets. It has become much easier for Catholics to come forward with information about the IRA without jeopardising their own lives, and routine patrols and car-checks in what were formerly no-go areas account for many of the important captures—probably for about half of the 29 IRA men picked up in Londonderry since Motorman, for example.

In Londonderry itself the IRA leadership in the Creggan and the Bogside has not so much been rooted out as transformed into a commuter command: Martin McGuinness, Sean Keenan and others move in and out of the city from across the border to organise specific operations, although life is becoming rougher for them now that the Irish police have cracked down on the IRA in Buncrana. Army officers are concerned that the projected rundown in troop levels in the city will give the IRA the chance to put up the barricades again and recreate the no-go areas.

All the same, the rate of attrition among the Provisionals in Londonderry has been impressive and the same applies to most Catholic areas in Belfast, with the exception of the 2nd battalion of the IRA in the Falls Road area. In Andersonstown, for instance, as a result of detailed screening of suspects and the physical presence of troops in what was formerly a no-go area, three successive company commanders of "F" company of the 1st battalion, IRA have been arrested on criminal charges over the past three months, together with two other company commanders. Even in the

Ardoyne, a close-knit Catholic community where support for the Provisionals is related to family ties, the army has made considerable inroads since Motorman. Last week Neil Alexander, the commander of "A" company, 3rd battalion, IRA, and a released internee, was picked up. He went with the soldiers readily enough, but when they got to the Crumlin Road and were about to cross it, he showed fright at the thought of crossing into Protestant country.

The biggest question now is whether the Protestant extremists are going to make a direct attack on the Catholic areas of Belfast. There are plenty of potential flashpoints. Take the unoccupied houses around Horn Drive, on the western fringe of the Andersonstown area. Three months ago, about 150 houses were unoccupied here, since their owners (like dozens of householders in Ballymurphy and other districts) had fled from the crossfire. Now all but 55 have been occupied by Catholics moving down from Andersonstown or Protestants moving up from Sandy Row.

The UDA has closely controlled the Protestant squatters, who have settled in the east, up against the fringe of Andersonstown, as well as in the west. The local army commanders are concerned that the UDA or a similar organisation might decide to send truckloads of squatters in to take over the remaining empty houses and to push Catholic squatters out of the isolated houses along the southern fringe of the area.

Or take the Cliftonville area, on the eastern border of the Ardoyne, where intimidation has worked the other way in the past. Here Protestants have suffered from Catholic attempts (partly co-ordinated by the IRA) to occupy houses around Old Park Avenue and create a "green belt" linking the isolated Ardoyne—a traditional Republican area entirely surrounded by Protestant territory, including the heartlands of the UDA in Woodvale and the Shankill Road—to the Catholic New Lodge area. At the start of the year, only a tenth of the householders in Old Park Avenue were Catholics. Today, the figure is about 85 per cent, and a Provisional gunman who had moved into this street was picked up by the 2nd Light Infantry.

The middle-class Protestants who live on the other side of the Cliftonville sports ground complain of constant intimidation from IRA gunmen and crowds of stone-throwing children. They have asked the security forces for

protection, but the army does not have the manpower to deal with that kind of problem. So the local Protestants are starting to respond in their own way, by pressuring Catholics to leave the local club and perhaps eventually by asking the UDA to help to evict some of the unwanted new residents.

This kind of situation is only a sample of the scope that exists for communal conflicts in Belfast if an organisation like the UDA chooses to give the word. It is in those mixed areas, where houses have been left empty as a result of the sniping and stone-throwing, that the idea of a peace-line is hardest to preserve. It is here, if the anti-army campaign is continued or is developed into an attack on the Catholic ghettos, that the army would be most severely under strain.

Parliament

Back where they've been before

Just what the Labour shadow cabinet had hoped to achieve by picking on the common market for the first debate in the Commons when it returned from the summer recess on Tuesday was never adequately explained. True, the royal assent to the European Communities Bill was signified on that day, but the vote on Tuesday night was on the technical motion that the House should adjourn, and even if the Government had lost that it would still have kept its European act. It was hardly surprising, therefore, that the debate itself had all the freshness of an argument in the 29th year of the Thirty Years War.

Mr Wilson spoke for 47 minutes, which was something of an accomplishment given the fact that he had delivered virtually the same speech on an almost interminable number of previous occasions. He even attempted to breathe new life into that hoary quotation from Mr Heath about it being impossible to take Britain into the common market against the wishes of the British people.

But at least Mr Wilson had one or two rather good jokes, which was more than could be said for the Foreign Secretary, Sir Alec Douglas-Home. Every dismal old quotation from Mr Wilson and Mr Callaghan was again paraded before an increasingly bored and restless House. At the end of the debate there were another couple of fairly tedious front bench performances,

There's a reward for catching this bird.

It's yours on Iran Air's superjet route through Europe to Turkey, Iran, the Persian Gulf, Afghanistan, Pakistan and India.

Thousands of years ago, according to legend, the 'Homa' brought good fortune to Cyrus the Great, King of Persia (now Iran). You can see its majestic profile on the tail of every Iran Air jet. The rewards for catching this fabulous bird are many and marvellous. They begin when you join Iran Air's jet set: Boeing 707s, 727s and 737s whose mighty wings lift you from the major cities in Europe to Tehran, the Persian Gulf and beyond in a

matter of a few smooth hours.

Then there's the food: always deliciously fresh (never frozen). And there are the smiles which say sincerely, 'I'm glad to be of service'. Cushions to make you comfortable. Pilots who are specialists in trans Europe/Middle East and Eastern routes. And a warm welcome from the whole Iran Air family who keep up the national tradition for hospitality which goes back thousands of years.

Two flights daily from Heathrow, one on Saturday. Non-stop Tues. and Thurs. For more about the fabulous 'Homa' and all the rewards that come with it, see your Travel Agent.

Iran Air, 135 New Bond Street, London W1X 7DB. Tel: 01-629 4417.

Reservations: 01-581 2051.

Pentland: in the running

one from Mr Shore, who was rude about Mr Heath, and the other from Mr Rippon who, with rather more gusto, was rude about Mr Wilson.

It is difficult to see how even the most fervent anti-marketiers on the Labour side could have believed that they had done their cause any good. There was only one speech of any quality in the entire debate, and that came from Mr Jenkins. Mr Jenkins told his own side bluntly that he considered that he had now done his duty to his party, and henceforth he did not intend to vote on any question which raised the substance of Britain's entry into the community. Despite his firmness, Mr Jenkins received a surprisingly warm reception from the Labour benches when he sat down.

For the moment it looks as though the sensible centre of the Labour party has had its fill of disputes over Europe; but it is still far from clear whether it will assert itself in the forthcoming battle on whether Labour should join the all-party delegation which is due to go to the European parliament in Strasbourg.

It may be that the mood of the party will become clearer when Labour MPs vote over the weekend for the new chairman of the parliamentary party. Although Mr Wilson has been re-elected unopposed as leader, as have Mr Mellish as chief whip and Mr Short as deputy leader, the left wing is backing an anti-market right-winger, Mr Norman Pentland, in his challenge to the existing chairman of the PLP, Mr Douglas Houghton. Last year Mr Houghton only just beat off Mr Pentland's bid to replace him. On any judgment of the qualities of the two men, Mr Houghton would win decisively, but not only has he shown a sturdy disinclination to recant his pro-market views, he is also 74. The present betting at Westminster is that Mr Houghton will once again win by a short head, but some of his friends fear the worst.

Ugandan Asians

Red tape round the camps

By the beginning of this week three-quarters of Britain's intake of Ugandan refugees had arrived—for the final figure expected, if the Government maintains its rigid attitude towards the stateless ones (see page 13) has shrunk to about 20,000. But of the 15,000 or so arrivals, 8,500 were still in reception camps, and the proportion is expected to grow in the last stages of the airlift. If half the energy, warmth and ingenuity, which make the bleak forces' camps into something a bit more than mere shelter for stranded families, were to go into the effort to get them out of the camps, there would be nothing to worry about. For instance, Greenham Common, in Berkshire, open only two weeks, already has a full-time school and several Asian children will take their "O" levels locally in December.

This is not to decry the hard work of the civil service resettlement teams at the camps; yet their operation trails red tape. For example, each camp is allotted a clutch of local authorities who have offered houses for the Asians; but these may not be the ones nearest to the camp in question. So Oxford can be sent refugees from West Malling in Kent but not from Greenham Common, only 30 miles away—or not without a series of complicated "swaps" within the machine.

Although the latest official policy is, rightly, to get Asian families quickly into houses and leave them if necessary to find jobs afterwards, the process seems to be slowed by attempts to match up the two before people leave the camps. Perhaps things will speed up once more if the local authority houses on offer are actually made habitable. But there is an even slower take up of private offers, and the goodwill may be lost.

So Asian resettlement in Britain is still being carried almost entirely by the existing East African communities. Some of the wealthier members have said they would willingly join in any scheme to finance refugee businessmen. The Uganda Resettlement Board is talking with the big banks about private loans for this purpose, but has not got very far yet. If the money is not forthcoming without the Government standing surety for loans, it

should do so. Its anxiety to avoid seeming to give special favour of this kind simply means more people will stay too long in camp at public expense and to their own discouragement.

By-election

Does Mr Smith go to Westminster?

It is the burly and genial Mr Cyril Smith who is the real challenge to Labour's chances of holding Rochdale in next Thursday's by-election, and not the Liberal party that he claims to represent. Of course, Mr Smith believes in the Liberal ideas of co-ownership and profit-sharing in industry; he actually practises them in his Rochdale metal spring factory. But Mr Smith does not flaunt his party label on his posters or in his literature; nor does it always become manifest in the door-to-door canvassing. It is Mr Smith, the benefactor who identifies himself with every worthy local cause from brass bands to guide dogs for the blind, who counts.

The Liberal party likes to pretend otherwise. All its MPs, except for Mr Jo Grimond, will have come to support their candidate by polling day, and a smart team of party professionals has put some beef into the decrepit local organisation. But some Liberals still have doubts about Mr Smith's party credentials.

Until 1966, he was a Labour councillor in Rochdale, but he resigned from the party in protest against a party whip to keep down council house rents, which he wished to raise. Two years later, Mr Smith rejoined the Liberals he

Smith: bigger than his party?

had left in his youth, and in the 1970 general election he got 14,076 votes for his new party and relegated the Tory to the bottom of the Rochdale poll. But most of Mr Smith's reactions are well to the right of centre. He believes that violent offenders need a good thrashing; he wants to stop scrounging on the welfare state; a champion of firm discipline in the home and at school, Mr Smith blames television for the erosion of family life. And he wants to withdraw grants from student agitators who "do not work at their desks." He has nothing but contempt for Westminster party discipline because "I don't like jumping when little bells ring."

The Labour candidate, Mr Francis Cunliffe, is a dour and earnest mining engineer from nearby Farnworth. He talks of the "buffoonery" of the Liberal campaign, for with Rochdale's unemployment rate standing at 4.9 per cent he wants to concentrate attention on economic questions. There is a supposed threat, in Labour's eyes, to the well-being of the town's 6,000 cotton spinners (textiles still provide work for a third of the town's labour force) next April with the lifting of duties on cotton yarn imports.

Labour hopes a short, sharp campaign will ensure that there will be no increase in the 5,000 Labour defectors who it believes went over to Mr Smith in 1970. Its chief worry is what Tory voters intend to do. Mr David Trippier is a young and able enough Tory candidate, but the Tories are running a low-key campaign. Many of the 12,000 who voted Tory two years ago might take the view next week that one maverick Liberal at Westminster is not only better than another loyal Labour MP, but might also shake up the Government into the bargain.

Stirling

Scots on the rocks

It would be impossible to set up a scene more calculated to inflame public opinion against students than one in which half-drunk bearded shout obscenities at the Queen. Assault a cabinet minister, shout down an elderly university chancellor's commemorative oration, invade a principal's study, and the public's disgust will be well diluted with disinterest. But display even a moderate dose of what has become pretty run-of-the-mill behaviour of a fringe of student demonstrations before Her Majesty and, as the students of Stirling univer-

sity seem to have been too politically naive to appreciate, you will find yourselves universally execrated, not only by the bourgeoisie whom you set out *épater*. (Lord Annan, the vice-chairman of the vice-chancellors, had the wit to see that he even had the National Union of Students over a barrel for not condemning the methods of its—non-affiliated—brothers.) But once the reaction to the rowdy scenes at Stirling last Thursday has taken its course through apologies, reassurances and questions in the House of Lords on the Queen's security, is there anything more to be said?

Unfortunately, there is. The police obviously showed great restraint. The wife of Stirling's vice-chancellor, Dr Tom Cottrell, pushed back one demonstrator herself: she has said since that she thinks that if the police had done so there would have been a free fight. But who is in charge of order on a university campus, police or dons? Students themselves, in the mid-1960s, began to challenge the authority of their teachers to act in *loco parentis*; many universities were only too glad to abdicate that responsibility, and the lowering of the age of majority to 18 made a reason for doing so. Students (and junior lecturers) charged before both courts and university disciplinary committees then complained that they were being tried twice for the same offence. Most have preferred to be charged for minor offences—though not for more serious ones like the Cambridge riot—in the courts, where the standards of proof are high and the penalties are likely to be less than expulsion or loss of a job. (No doubt the same dreary arguments against university disciplinary action, which is promised at Stirling, will be dragged out there.)

So, logically, police restraint should be preferred to university sanctions. But, of course, these are not logical situations; and the police are as reluctant as they would be on any

Cottrell: he was not amused

private property to behave as if it were Trafalgar Square. University vice-chancellors must have authority over what happens in their territory. But then again, with trouble-makers or rowdies restraint at the time is better than solemn sanctions and martyr-making afterwards. The dismal course down which the Stirling students took a step last week was towards the sort of campus police forces that have been deemed necessary in America. For counterpoint, a postscript is due to King's College, London, whence a chemistry professor pointed out this week that the Queen had recently opened a new building to a courteous reception and conversation with students—and that nowhere, except in the two court columns in the daily press, had that received any attention at all.

Nursing

Radical treatment

One of the most useful achievements of the Committee on Nursing,* under the chairmanship of Professor Asa Briggs, is the demolition of myths. It not only examines critically the myths fostered by fiction and television programmes that nursing is all drama and romance. More importantly, it also, like Mr Enoch Powell 10 years ago when he was Minister of Health, repudiates the oft-repeated statement that there is a grave shortage of nurses.

Recruitment has not fallen off. The number of nurses and midwives employed in health service hospitals increased by 31 per cent in the 10 years 1959-60 to 1969-70. Moreover, the growth in numbers both in hospitals and in the community took place when the total labour force was contracting and the number of 18-year-olds, from whom nursing used to draw most of its recruits, was beginning to fall. Nor is the increase wholly or even mainly accounted for by nurses from overseas. In Great Britain as a whole they make up 8 per cent of the nursing staff in acute hospitals, 11 per cent in psychiatric hospitals and 8 per cent in other hospitals. But 46 per cent of them are concentrated in the four metropolitan regions—which explains the myth that the health service is largely dependent on coloured nurses. Possibly most interestingly of all, the Briggs committee, although deploring the number of recruits who fall out during training,

*HMSO. £1.90.

Teaching a girl about Hertz is teaching her to say Yes.

Before every new Hertz girl meets her public, she has to learn to always say Yes to a customer.

It's easy when you work for Hertz because there's no limit to what Hertz has to offer. In fact, it takes us six weeks to fill her pretty head with all the facts and figures.

We start off with the easy ones: Yes, you can rent a Ford or other fine car.

Yes, we'll deliver it to your office. Yes, that's free of charge within

five miles of any of our 130-plus UK branches.

Yes, you can charge it to your Hertz Credit Card.

The tricky requests are just as easy to answer:

Yes, you can have a chauffeur-driven car.

Yes, you can rent a car in London and leave it in Manchester.

Yes, you can set up special credit arrangements with Hertz.

What we don't spell out in the book,

we know a Hertz girl can handle naturally. We choose her because she's the kind of girl who enjoys solving all the little things that don't seem very little at the time.

Yes, I'll phone your wife to tell her you'll be late.

Yes, I'll find the briefcase you left in the car.

Yes—I'll sew the button on your coat.

The next time you want to rent a car, ask a Hertz girl. You'll see how well she's learned her lessons.

We rent more cars than anyone in the world.

This announcement appears as a matter of record only

found that the wastage rates are somewhat lower than the turnover rates of young women at work.

Why then did the Royal College of Nursing open its annual report for 1971 with the words "all is not well with nursing"? Partly because there is an undoubted shortage of nurses in some long-stay hospitals and in some parts of the country. Moreover, nursing reflects the changing face of medicine, and the profession's leaders are rightly anxious about the effect of the increasing demands made on it as a consequence of medicine's scientific advances. They are also anxious about the effect of the forthcoming changes in the organisation of the health service. There have been many investigations into the state of nursing before this one, but only the Briggs committee, as it points out, has been asked in its terms of reference to review the role of the nurse to meet "the needs of an integrated health service." As the largest single body of health service staff, and the most expensive item of hospitals' current expenditure, an efficiently organised nursing service is essential for integration to be successful.

Also unlike its predecessors, the Briggs committee has decided that even major tinkering with the existing system of training is not enough. Such tinkering in the past produced two methods of entry into the nursing profession. Student nurses, after three years' training and passing the necessary examination, become state registered nurses—a career grade for top posts. But recruits who want a year's less training and less theoretical work, and who may be unable to satisfy the General Nursing Council's not very high entrance stipulations, are called pupil nurses and can qualify for enrolment. This distinction can lead to bitterness and friction, especially as enrolled nurses are often given work more properly carried out by a registered nurse. The main recommendation of the Briggs committee is to abolish the distinction. All entrants to the profession, who would reflect a wide range of intelligence and need not have any "O" levels, should take an 18-month course leading to a certificate of nursing practice. The more able students would then have the chance to do 18 months' more training and to become registered. The ablest of all would have the chance to add to registration a higher certificate in a particular branch of nursing. The committee also recommends that a carrot of higher status and more pay should be offered

Briggs: prescription for nursing

to ward sisters who do not want to leave clinical nursing. Under the new Salmon staffing structure they are said to feel demoted—though this too may be largely a myth.

In its radical proposals the committee has certainly done its best to bring the different branches of nursing together, by a single system of training, a single register and a single central body responsible for professional standards and education, to match the integration of the whole health service. Whether the system it proposes will encourage nurses to work in the unpopular services for geriatrics or the mentally handicapped, which really are understaffed, is far from certain. There may first have to be a change of attitude in the medical profession.

Probation officers

Powers behind the bench

If the evidence of a limited survey* can be taken as typical of what is happening in courts throughout the country then probation officers are influencing, even determining, sentences passed on convicted persons to a degree many laymen will find surprising.

Mr Peter Ford has taken samples of social inquiry reports—reports written by probation officers to help courts to decide how to deal with particular offenders—for the three years 1960, 1964 and 1968. He took 100 from each

*Advising Sentencers. Basil Blackwell. 75p.

year in Oxford and 50 for each year in London. The Oxford ones were for juvenile and magistrates' courts as well as quarter sessions, and for county as well as city; the London ones were for the inner London sessions, but the reports came from all over the country. What Mr Ford was concerned with were the recommendations at the end of those reports, where the probation officer gives his opinion, however respectfully phrased, on what the sentence of the court ought to be. He checked each recommendation with the decision of the court and found that roughly 80 per cent of all recommendations were accepted.

The practice of probation officers advising magistrates and judges about sentencing has grown up since the war and is now widely accepted. Most reports do end with a recommendation. But the range of the advice is wider than some authorities would like—and some magistrates resent any recommendation at all—and is likely to go on spreading. It is not confined to whether an offender should be placed on probation, as the Morison committee in 1962 said it should be. Sometimes it takes the form of a specific recommendation of imprisonment, which goes beyond what even the Streatfeild committee had advocated in 1961, when pushing the idea of a closer relationship between probation officers and those responsible for sentencing.

If, in four cases out of five, the recommendation of a probation officer, contained in a report which is not normally read aloud in court or seen by the press and is not subject to the laws of evidence, is to be accepted, then certain requirements ought to be met in future. The Home Office should lay down much more explicitly than now the form these reports should take and the limits within which the probation officer is expected to give his advice. Second, although the probation service is staffed by men and women of outstanding dedication and humanity, whose experience must be of value to any court, they have not been given any special training to fit them for this onerous function, a gap that should be closed. Third, as Mr Ford points out, there is need, in clarifying the probation officer's role in sentencing, to try to resolve the conflict many of them feel between their statutory duty to "advise, assist and befriend" the offender and the objectivity, the recognition of the wider, social interest, which their new function seems to demand.

Park: the fans portray him North Korean-style

Tanks to the rescue of Korean democracy

For the second time in a year, President Park Chung Hee has invoked a threat to South Korea's democratic system in order to tear that system down. Last December he claimed that increasing incursions from North Korea required a declaration of national emergency. The emergency regulations are still in force although some months later the alleged aggressors were sitting down with President Park's envoy to discuss national unification. But then these very unification talks—by creating delusions of detente—proved a new and more insidious threat. So on Tuesday, President Park declared martial law, dissolved the national assembly, suspended all political activity, banned public meetings, instituted formal press censorship and closed all colleges and universities. The aim of all this, the president explained, was to make Korean democracy "a truly viable system."

The next phase in President Park's

self-strengthening movement comes on October 27th when he will announce his proposed amendments to the Korean constitution to replace those sections which were suspended this week. A month later these amendments will be submitted to a national referendum. South Koreans will then have a chance to veto what will almost certainly be a plan to increase President Park's centralised power at the expense of their own democratic rights. But there is a catch. The president has said that he will regard the referendum as a judgment on his moves toward unification. This means that people who might otherwise vote against more power for Mr Park may hesitate to do so if it is tantamount to rejecting the dialogue with the north.

President Park's new measures clearly stem from a sense of insecurity. But of what kind? In his declaration of martial law, the president cited the profound changes in the balance of

power around the Korean peninsula and expressed his fear that "the interests of third or smaller countries might be sacrificed for the relaxation of tensions between big powers." The South Koreans have had nightmares about being abandoned by their powerful allies ever since President Nixon announced his visit to Peking. Japan's recognition of China last month may well have been the final straw which convinced President Park that his best defence against external enemies lay in a fortress state—hence the move toward open authoritarianism.

It was, of course, this same fear of abandonment—likewise felt in the northern capital of Pyongyang—that induced the two Koreas to start talking a year ago. A year of meetings between Red Cross representatives has led to two full dress sessions on reuniting divided families, with a third scheduled for next Tuesday. And last week, the first of the high-level conferences on unification was held at Panmunjom. In spite of martial law, the talks are to go on and in time they may actually result in a relaxation of tension. But so far they seem only to have provided President Park with another reason to batten down his hatches.

During the Red Cross session in Seoul last month, the North Koreans indulged in a characteristic tirade, complete with the usual extravagant references to their revered leader, Kim Il Sung. The South Korean man in the street who had turned out in the street to greet the visitors from outer darkness reacted violently. Since then the North Koreans have resumed their regular radio polemics, which were toned down for two months after the July communiqué on unification; last week, for example, they called President Park "the most despicable war servant of the American imperialists." And in South Korea there have been unpublicised mutterings about the unwisdom of the whole policy of detente with the north.

Such reactions threaten President Park in two ways—the talks themselves may break down in failure or popular opposition to them in the

south may grow. Either would reflect unfavourably on the sponsor of the detente, who gives every sign of wanting to stay in power a good while longer. So this week President Park staved off the second possibility by the simple expedient of eliminating at a stroke both his political opposition and freedom of speech. Ironically he took this step at a time when the opposition is doing the job for him by splitting into warring factions. The president has no potential rival in sight, except perhaps his chief envoy to the north, Mr Lee Hu Rak. But this kind of logic has never convinced rulers who are feeling insecure.

Vietnam

The knowing know-nothings

FROM OUR SAIGON CORRESPONDENT

About the only source of hard information in Saigon about the current peace offensive is "Radio Catinat," the coffee-shop rumour mill on Saigon's once elegant but now sleazy main street, where political pundits interview each other and with the help of extrasensory perception are able to state categorically what is happening behind the closed doors of President Thieu's palace as well as in Paris, Washington and Hanoi. Peace will break out this week, next week, or after the American elections, or not at all, according to what your interlocutor's servant heard in the market this morning, or his reading of Mr Thieu's horoscope. Senators and congressmen remark knowingly that the negotiations have reached a very delicate stage; and in Chinatown you can buy tickets in a sweepstake on the date of a ceasefire.

It's all great fun unless you happen to be Vietnamese, in which case it is partly a disguise for the growing anxiety that accompanies hope. The desire for peace is outweighed only by the fear of it. Every Vietnamese knows that, regardless of any peace agreement that might exist on paper, the actual struggle cannot be switched off like a tap. As was reported by *The Economist's* special correspondent last week, the communists are preparing for a ceasefire in which the "little guns" would carry on killing after the big ones had been silenced. This week the Saigon government showed a film on the military television network giving instructions on what to do in the event of a ceasefire, which might come,

it was explained, because the communists were getting tired. One of Saigon's more respected elder statesmen expressed a widely held view when he said: "A ceasefire could be very dangerous. I am afraid that, even if no agreement is reached, the communists will unilaterally declare a ceasefire. I am very concerned."

That the government should talk seriously about the possibility of a ceasefire is interesting in itself, because President Thieu has been at pains to squelch such speculation in recent weeks, partly in order to prevent splinter groups rushing off to make private deals with the communists. But, despite the renewed expectations aroused by Mr Henry Kissinger's sudden visit to Saigon on Wednesday, Mr Thieu still appeared to be firmly in command on the political front. And the few sources in Saigon who deal in facts rather than clairvoyance offered no intimation that a breakthrough was close.

Canada

David calls the Goliaths bums

FROM OUR CANADA CORRESPONDENT

The Canadian federal election campaign has been anything but a straight two-party fight between Mr Pierre Trudeau's Liberals and Mr Robert Stanfield's Conservatives. Nearly all the running has been made by the oldest party leader, Mr David Lewis, and his left-of-centre New Democrats. An opinion poll taken three weeks ago showed the NDP as having gained six percentage points since August, and it looks as if its climb will continue until

Two challengers: Stanfield (left) and Lewis

polling day, Monday, October 30th.

New Democratic candidates explain their apparent success by saying that the party has produced the one lively issue of the whole campaign. It has kept up a sustained attack on the Liberal government's new tax reforms. Mr Lewis has named about 130 large firms and corporations that have made lucrative use of the concessions on capital cost allowances and of grants from the government. His researchers have been thorough, and his figure of \$3,200m of taxes that the corporations have deferred paying has not been challenged. The fact that many of what he has picturesquely called the "corporate welfare bums" are subsidiaries of American companies has provided additional electoral appeal in a year when Canadian nationalism has run high. It has certainly helped voters to forget how badly split the Ontario NDP was during the summer, when Mr Lewis's son Stephen, as provincial leader, was ordering the extreme nationalist section or "Waffle" group out of the party.

Mr John Turner, Mr Trudeau's finance minister, has argued that the new fiscal incentives have been crucial in attracting investments for the exploitation of Canada's mineral resources, and his minister of state, who hails from Calgary, has suggested that northern and western Canada would be turned into "an economic desert" if companies making such investments were fully taxed from the outset. The Liberals have also been on the defensive about unemployment, which rose to more than 7 per cent of the labour force in September. Mr Turner claims that more than 1m jobs are provided directly and indirectly by the mining and petroleum industry.

No1 with No1 Britons.

Of Britain's four quality dailies The Daily Telegraph is the one more top Britons prefer. So much so that it outsells The Times, Guardian and Financial Times combined by half as much again.*

Its quality readership of 3.6 million is unique†, but then so is the British market. Unlike most other European countries, newspapers in Britain have a national distribution.

And national distribution means large circulations. That's

why The Daily Telegraph has such a good coverage of businessmen – it reaches 46% of all of them.‡

When it comes to advertising to the rich and successful sector of the British market, no other quality daily or Sunday paper is as economical as The Daily Telegraph. Nor as influential either because, as we said, we're No. 1 with No. 1 Britons.

October 1972

Mr Stanfield has mustered a stronger attack than he could in the 1968 campaign, when he was the Tories' new leader, just transplanted from Nova Scotia. He has scored points by accusing the Liberals of running deep into the red with unemployment insurance benefits, and of demoralising the civil service by employing armies of consultants. But his criticisms have been levelled mainly at methods of administration, and he has opened up few substantial differences in policy. Both to cartoonists and to ordinary Canadians, Bob Stanfield is still a symbol of slow-spoken integrity—and an unexciting alternative to Pierre Trudeau.

The prime minister himself has staged an odd campaign. Predictably, he has philosophised about national integrity and the strength of Canada. Unpredictably, he has departed from his 1968 tactics by suddenly releasing a flood of pre-election promises, including, for example, grants to be used to help transform Toronto's warehouse area into a waterfront park.

These last-minute promises may help the Liberals to hold their metropolitan fortresses in Montreal and Toronto and not lose more than a few of the 147 seats (out of 264 in the House of Commons) that they held at the dissolution on September 1st. Mr Trudeau is expected to return as prime minister, although he may find himself heading a minority government. But the big question is whether the New Democrats, who in the last parliament held only 25 federal seats, may displace the Conservatives, who had 73, as the largest opposition party in Ottawa. The NDP already controls three provincial governments.

New Zealand

Marshall plan

Beating the Australians to it by a week, New Zealand will hold general elections on November 25th. Some of the opinion polls have shown the National and Labour parties as running neck and neck. So much has changed, even during the short three-year term that is all that is ever allowed to the House of Representatives in Wellington, that the outcome seems unusually wide open. Sir Keith Holyoake's long reign has ended. In February, after 11 years as prime minister, he bowed out (but retained the foreign affairs portfolio). The contest for the leadership of the National party government was decisively won by Mr John Marshall,

who trailed clouds of glory after his performance as trade minister in pressing New Zealand's case for special consideration after Britain's entry into the common market. But the enlargement of the EEC is only one of the new factors that make the country's future course uncertain.

From the other side of the globe, New Zealand may still look like a big farm embedded in superb scenery. But in fact two-thirds of its 3m inhabitants are now townsmen. Only about a tenth of the working population are still on the farms. The trade unions have acquired considerable leverage in the tight labour market that has become a marked feature of the new industrialised society. The Labour party has shrewdly avoided the kind of excesses and consequent rifts that have kept its Australian counterpart in opposition since 1949. It has shaped a moderate image; it has found a vigorous leader in Mr Norman Kirk; the election as its vice-president of a distinguished Maori has strengthened its links with the minority community, which has become more politically conscious and had some reason to feel that the Holyoake government was neglecting its interests. And, of course, Labour has not joined in the chorus of praise for Mr Marshall's feats during the common market negotiations, so it may stand to gain in November from the qualms that a good many New Zealanders still feel about the enlarged EEC—particularly now that the tendency the Six had developed to dump heavily subsidised dairy surpluses in Pacific markets may be intensified by Denmark's admission to the community.

Mr Marshall's chances of victory in the approaching elections are, however, rated in some quarters as considerably better than those of Mr McMahon's government in Australia—largely because of the New Zealand prime minister's own qualities. The tactical skill and formidable charm that he had displayed in Europe last year appear to have been used again to good purpose since February. The finance minister, Mr Robert Muldoon, had made a strong bid for the succession to Sir Keith Holyoake; he was favoured by many people in the National party who acknowledged the superior Marshall charm, but wanted to see the Muldoon pugnacity given fuller scope, particularly in dealing with the wage claims that they saw as the main cause of the surging wave of inflation. With apparent ease, Mr Marshall reconciled the two factions, took Mr Muldoon into

partnership as his deputy prime minister, put paid to previous complaints that he himself lacked decisiveness by imposing a comprehensive freeze on wages, prices and dividends, and then gave Mr Muldoon the chance to play Father Christmas. In June (New Zealand's mid-winter) the finance minister announced a budget packed with income tax cuts, funds for farmers, increased family and investment allowances and pensions—something for everybody, it seemed, except, in an election year, the opposition. Mr Kirk called it "an election bribe." Mr Muldoon preferred to speak of "a massive injection of purchasing power," but it could still add up to a lot of votes for the National party on November 25th.

Ireland

A great year for the voting

FROM OUR DUBLIN CORRESPONDENT

The sight of violent confrontation taking shape between the British army and the militant Protestants of the Ulster Defence Association in the streets of Belfast has done nothing to raise spirits in Dublin. There, only a few days earlier, the news that the UDA was claiming to have raided an IRA arms dump on the republic's side of the border had coincided with the closing by the police of the Dublin offices of the Provisional Sinn Féin, the political wing of the Provisional IRA. Meanwhile the people of the republic are also coming to realise that they face a rather crowded political timeable, parts of which are closely linked with the turbulent situation in

Dev: born 1882, still going strong

the north. In the next 12 months the republic's voters will face at least one more referendum, local elections, a presidential election and possibly a general election. The referendum may come upon them in only a few weeks' time.

It had already been agreed to hold at an early date the referendum that is constitutionally necessary to put through the lowering of the voting age to 18. The prime minister, Mr Lynch, has now decided to make this the occasion to test the public reaction to a further constitutional change. The electorate will therefore be simultaneously asked to approve the deletion from the constitution of the article that recognises the special position of the Catholic church. With support from all the political parties and from the Catholic hierarchy lined up in advance, this should prove easy enough. The result will help the government to gauge public feeling about the more delicate constitutional changes (such as removing the ban on divorce legislation) that are seen as steps toward eventual Irish unity.

A presidential election is due next June, when Mr de Valera, who was 90 on October 14th, will complete his second seven-year term. Mr Lynch has been unable to find an agreed candidate for the office. Fine Gael will almost certainly put up Mr Tom O'Higgins, the party's deputy leader, who gave Mr de Valera a very close run in 1966. And a general election must also be held before mid-1974. Earlier this year Mr Lynch had seriously considered going to the country; he decided not to after his victories in the EEC referendum in May and the Mid-Cork by-election in August.

The cloud on his horizon is that the main opposition parties, Fine Gael and Labour, are about to begin talks about an arrangement that would permit them to go into the next election with an agreed policy. There will be major differences to bridge (the two parties were, for instance, on opposite sides over the EEC). But the coalition move could represent the first real threat to the ruling Fianna Fáil party in 15 years.

As recently as last May, Mr Liam Cosgrave, Fine Gael's leader, told its annual conference that Labour must put its house in order before any deal with it could be contemplated. But a few weeks later Labour offered a new coalition, and Mr Cosgrave instantly accepted the offer. The parties agreed to help each other during the Mid-Cork by-election. On present indications, however, a general election is unlikely

before June at the earliest.

Two by-elections will soon be pending. The death of a Fine Gael front benchman has just left the South Tipperary-West Waterford seat vacant. And Mr Patrick Hillery, the foreign minister, will soon abandon his Clare constituency to join the European Commission. Mr Hillery's successor as foreign minister is almost certain to be Mr Brian Lenihan, the present minister for transport and power. His main rival is Mr Desmond O'Malley, the minister for justice, who has wanted to take a firm line against the IRA.

Basques

Uprooting the acorns

FROM OUR SPAIN CORRESPONDENT

The French government's crackdown on the ETA took this militant Basque group by surprise. Yet since last winter it had been ignoring too many of the rules of its own game. Its members were virtually commuting across the Spanish frontier, and using isolated farms and "safe houses" in France for meetings, for rests between operations in Spain, and even (exceptionally) for training. Now all this is to stop, and Spanish refugees who support the ETA and other extremist groups have been ordered to leave the border department of Pyrénées-Atlantiques for some less bracing part of France.

The outlawing of the ETA (the initials are those of the Basque words that mean "Basque country and freedom") is generally attributed to a confluence of Spanish pressure on France and of President Pompidou's desire to strengthen relations with

Spain. Left-wingers in France are muttering about "appeasement" and suggesting a national subscription to buy the president a Neville Chamberlain umbrella. But there is more to it than that.

The three Rs in the French Pyrenees are Rugby football, Radicalism and Religion. The Basques on this side of the frontier generally preferred mass to political meetings; the French authorities subsidised their photographic folklore; tourism flourished; and young men who didn't want to be farmers, waiters, priests or pelota-players "emigrated" to Paris or Toulouse. But in 1968 events south of the border, and General de Gaulle's Canadian exploits, focused attention on a fourth R: Regionalism. The French Basques suddenly realised that the boom that was transforming most of the rest of France and northern Spain was bypassing their no-man's-land, and semi-skilled workers and entrepreneurs discovered better opportunities in the Spanish Basque provinces.

A small regionalist group calling itself Enbata (ocean wind) began attracting students and middle-class romantics with its denunciation of the frontier between the two halves of the Basque country as "a crime against nature, and a wall of shame like the one dividing Berlin." Since dancing, singing and pelota served the French tourist trade, Enbata called for a "folklore strike" on the main Basque holiday, Aberri Eguna. The Basque flag, hitherto seen mainly in souvenir shops, on scarves, ashtrays and candy boxes, began to appear in demonstrations. But, being Basque, the demonstrators preferred to sing and dance rather than to shout slogans.

The authorities were not seriously worried until the ETA established loose links with Enbata and began assuring the French Basques that their "liberation" would soon follow that of their Spanish cousins. One ETA spokesman told French journalists: "When the Spanish Basque country becomes independent, and no longer has its wealth siphoned off by Madrid, it will be an irresistible pole of attraction for the French Basques." A Basque priest told this correspondent: "The ETA is planting the acorns from which the forest of Basque freedom will grow during the next generation."

The French authorities are now determined to uproot as many of the acorns as possible on their side of the border. They are helped by the split

Business can be a pleasure in Park Lane.

The Inn on the Park — one of London's newest luxury hotels could provide a truly memorable setting for your next sales conference or company meeting. At the fashionable end of Park Lane, with its own car park, the 'Inn' has three luxurious air-conditioned conference rooms, seating from 40-400 as required. Every business facility can be provided, from closed circuit TV to secretarial services... and incidentally the best cuisine in the business. All the bedrooms are large and superbly furnished and some of the executive suites are positively palatial.

Today, more and more companies are finding these suites ideal for holding intimate business meetings and for entertaining. In such surroundings business indeed becomes a pleasure.

Britain's offshore oil makes Dogger, Bann, Chas & Manhattan

The company looking for oil fields in the North Sea needs a bank with its feet on the ground. That's where Chase Manhattan's feet have been since 1935, when we got the idea that the petroleum industry—which was pretty big then—was going to get even bigger.

We saw it as an industry that in the future would be needing experienced bank financing. So we got experienced.

We started Chase Manhattan's Petroleum and Energy Division, and we staffed it with financiers, engineers, economists and technicians.

And that future we were looking forward to is here now. North Sea petroleum and natural gas.

And right here, on your doorstep, is the bank with 37 years of petroleum expertise in every aspect of the industry's requirements.

Let's put it this way. You find the off-shore oil fields...we'll find the on-shore funds. The Chase Manhattan Bank N.A., Woolgate House, Coleman St., EC2 and 1 Mount St., W1 01-600 6141.

in the ETA's ranks between its "military" wing and a revolutionary left. The "military" and mainly Catholic wing is supported by many young priests, and is strongly nationalist: it is interested only in violent action, and only in the Basque country. The revolutionary wing—which is supported by orthodox communists as well as by maoists and libertarians—believes that political agitation can now achieve more than guerrilla action, and urges that the Basque fight for freedom should be waged as part of "the general revolutionary struggle."

Germany

The price and police issues

FROM OUR BONN CORRESPONDENT

What are the real issues to be decided by the west Germans when they go to the polls on November 19th? The politicians themselves were asking this question with some vehemence at the two main parties' recent conferences, where the favourite slogans provided rather simplified answers. At their beautifully stage-managed, debateless conference at Wiesbaden last week the Christian Democrat-Christian Social opposition proclaimed: "We are building the future on stability." The pack of attendant journalists then drove 200 miles up the autobahn to Dortmund to hear the Social Democrats assert: "Willy Brandt must remain chancellor." As cool as that.

Since 20 per cent of the electorate is thought to be still uncertain which way to vote, both the major parties are fighting hard for the middle-of-the-road voter. Thus some of the issues

may need to be blurred. But others remain relatively clear: inflation and the state of the economy, to name two. The opposition is concentrating its attacks on the "disastrous" economic policies of the Brandt government. In this it is being helped by Herr Karl Schiller, until July the government's economics and finance minister, who has now resigned from the Social Democratic party. Herr Schiller has gone into print with *schadenfreude* to defend his former free-market financial policies and to attack the current economic stance of the government. Meanwhile he is allowing himself to appear on CDU election posters side by side with the former CDU economics minister and chancellor, Herr Ludwig Erhard, the author of the postwar German "economic miracle." Significantly, it was Herr Erhard who got the biggest ovation at the Wiesbaden conference for his all-out attack on the Social Democrats for leading the country into an inflationary situation. (The cost of living index has risen 6.2 per cent during the past year.)

The opposition is also attacking the government on law and order issues (with the case of the Baader-Meinhof group providing much of the ammunition) and is alleging that the Social Democrats have moved, are still moving, and if re-elected will move farther, to the left. It sees Herr Brandt and his government as soft internally and soft on communism, and regards itself as the true inheritor of traditional German values.

The Social Democrats, at their conference in proletarian (steel and beer) Dortmund, reflected the confidence of their new-found power. No one actually said, "we are the masters now," but the inference was there.

Both Chancellor Brandt and Herr Helmut Schmidt, Herr Schiller's successor as economics minister, in speeches that must rank as the best of their careers, took the opposition accusations, chewed them over with distaste and proceeded to spit them out, one by one. Herr Schmidt repeated his dictum that a 5 per cent increase in prices was better than 5 per cent unemployment. German inflation was merely part of the uncertainty attaching to the western monetary system—and the chancellor was going to try to do something about that at the Paris summit. Moreover, German inflation was much less than in most other countries, and the mark was the hardest currency in the world.

On law and order, the Social Democrats were quite willing to get tough with criminals but thought that the opposition often confused criminality with left-wing political opinion. Chancellor Brandt, who is successfully keeping the radical young socialists in political check, went out of his way to say that questing doubt was a healthy phenomenon in a democratic society. To the opposition's charges that they are a bunch of lefties at best and crypto-marxists at worst, the Social Democrats reply that the Christian Democrats cannot understand democratic socialism. Indeed, to an outsider, a socialist party which does not include among its stated aims such things as the capture of the commanding heights of the economy, or even the establishment of a state health service, looks an unlikely target for accusations of "creeping communism."

In the absence of clear issues (and that is how the ruling Social Democrats want to play it), the emphasis is inevitably on personalities. The socialists are puffing Herr Brandt for all they are worth, while the CDU/CSU is plugging "Rainer Barzel and his team"—in which the CSU leader, Herr Franz-Josef Strauss, seems to loom as large politically as he does physically. The attitude of the man in the street tends to confirm that this will be a very domestic election, much concerned with the prices of food, beer and cigarettes. In general terms conservatives say that a socialist government has made workers lazy and let the economy lag. The socialists regard the conservatives as reactionaries harking back to a past which has little relevance today. They demand that the Brandt government should be given a chance to accomplish those social reforms which it had no time to carry out in the past three years.

Barzel (centre) and colleagues think they see the issues

Austria

Sign warfare

Austria's Chancellor Bruno Kreisky has an awkward problem on his hands which threatens to sour his government's relations with Yugoslavia and to lose it support at home. The row is about road signs, in both German and Slovene, which were put up last month in 205 out of 2,900 villages and towns in Carinthia, the southern province where most of Austria's 25,000 Slovenes live.

The erection of the signs, which the Vienna government sees as a belated fulfilment of Austria's 1955 state treaty guaranteeing equal treatment to minorities, has provoked a violent outcry among the German-speaking majority in Carinthia. There have been protest meetings and marches; some signs have been torn down and others have been painted out. The campaign, which is believed to be led by the right-wing Heimatdienst (Fatherland Service) movement, appears to enjoy the support not only of the opposition parties, but also of some local supporters of Austria's socialist government. The protesters are demanding that the two-language signs should be erected only where 20 per cent or more of the population show, in a referendum, that they want them.

This demand has infuriated the local Slovenes and angered the Yugoslav government, which has already protested against apparent police passivity. Herr Kreisky has now appealed for self-restraint and drawn attention to Austria's own national minority in Italy's south Tyrol. But unless the campaign stops soon, he may have to order the police to enforce the law in Carinthia, which will damage him politically.

Hungary

Fingers crossed

FROM OUR SPECIAL CORRESPONDENT

Last week's preliminary agreement on the settlement of Hungary's debt to the United States is quite a feather in Mr Kadar's cap. Under the agreement, which was signed in Washington by senior officials and still needs the two governments' full approval, Hungary will pay the United States some \$20m. This will be compensation for American property nationalised by Hungary after the war and for unpaid Hungarian prewar debts. But the American Administration will in return lend its support in Congress to Hungary's request for most-favoured-nation treatment. This has so far been given to only two communist countries, Poland and Yugoslavia.

The real importance of last week's package is that it may help pave the way for Hungary's eventual admission to the International Monetary Fund and the World Bank. Rumania has just applied for membership and other communist states, notably Hungary and Poland, are said to want to become members too, though they are being understandably discreet about it. The main advantages of membership are good technical and management advice, from which Yugoslavia has benefited a great deal, and hard currency loans. Perhaps the greatest advantage to a country like Hungary, which lives by foreign trade, would be the boost that membership of those two bodies would give to its efforts to expand its exports to western markets through various co-operation agreements with western firms. In pursuit of such co-operation, the Hungarian government has just brought in more liberal regulations which envisage the formation of joint companies with 49 per cent participation by the foreign partner. With special government permission, even joint production companies could be formed.

But like much else in Hungary at the moment, these new regulations have been given very little publicity in the Hungarian press, and officials in Budapest are at pains to assure visitors from the west that co-operation will continue to be mostly with communist, rather than with western, countries. Similarly, any idea that Hungary's economic reforms at home might contain any radically new elements is discounted. Mr Kadar went out of his way two weeks ago to say that his country would remain fully committed

to the principle of "socialist central planning," and would even extend it.

This resolve may be connected with the long-awaited visit which Mr Brezhnev is expected to pay to Hungary in the near future. Even allowing for the possibility that the row with Moscow earlier this year was only about how much oil and gas Russia would deliver to Hungary in the next 20 years, the visitor senses an atmosphere of well-suppressed nervousness. It is as though the Hungarians still feel themselves to be on probation in Moscow. The faces may be smiling, but the fingers still remain visibly crossed.

Israel

New blood too late

FROM OUR ISRAEL CORRESPONDENT

Just as Israel has never satisfactorily solved the riddle of who is a Jew, so it has never come to grips with defining the precise relationship between religion and the state. Thus the election last Sunday of its two chief rabbis had as much political as religious meaning. The actual powers of the rabbinate are defined by law as embracing all matters concerning the personal status of Jewish Israelis, but their prestige and authority are largely determined by the personalities of the office holders.

Over the years their prestige has been corroded. Most Israelis are non-practising Jews. No clear-cut answers have been found to the problems created by modern statehood and mass immigration, and the chief rabbis themselves have been too hidebound to rise above the stringent tenets laid down in another age. Both of the outgoing chief rabbis, Yehuda Unterman, aged 86, and Itzak Nissim, aged 74, had tended to turn their backs on the liberal mood of the 1970s. Nor did they face up to the real suffering caused by the strict application of marriage and conversion laws which had been designed to protect a Kingdom of Judah from Ba'al worship or to prevent assimilation in medieval Polish ghettos. Today a mixed couple from Russia or America, or a Cohen (that is, a descendant of a priestly family) wishing to marry a divorcee, can fly to Cyprus for a Gretna Green-type ceremony, but they still condemn their children and their children's children to a dubious marriage status.

Anomalies have multiplied, and critics on both sides have found plenty of ammunition with which to keep

When your competitor starts driving one of these-start worrying.

For he'll be ahead of you all over Europe.

While you are trying to get an airline booking, he'll be taking off.

While you're waiting for a connecting flight, he'll be knocking on your prospective customers' doors.

The Hawker Siddeley 125

business jet is as fast as an airliner. It has the range to cover all Western Europe without refueling. And it can get into more than 250 airfields that the airlines don't serve at all.

If you want to be in the wider markets of Europe and think we could help, write to us or ring Chris

Putler on Hatfield (Herts) 62345.

We'll give you all the information and help you need. Then it could be your competitors' turn to start worrying.

The HS 125 Eurojet.
One take-off covers the EEC.

HAWKER SIDDELEY AVIATION

Kingston upon Thames, England
Hawker Siddeley Group supplies mechanical, electrical and aerospace equipment with world wide sales and service.

Gases are indispensable for industry,
the trades, research and medicine.
Linde supplies industrial gases, rare
gases and gas mixtures.

But

Linde
means more
than just this*

*Because Linde not only designs and constructs chemical engineering plants but also manufactures reciprocating and turbine compressors. In addition to the designing and constructing of refrigeration systems and shop-fixtures, Linde operates cold storages and handles all the many aspects of air-conditioning and refrigeration engineering. Linde manufactures fork-lift trucks, produces hydraulic units and supplies various kinds of machine-tools. In addition, Linde offers a wide choice of household appliances.

What to do when your office rent goes up 300% overnight.

If you've got a rent review coming up, we've got bad news for you.

Over the past few months, we've seen firms from E.C.4. to S.W.1. with the same sad story. Overnight, they've had to pay 3 to 4 times more rent.

As there's a limit to what you pass on that's money that comes right out of profits.

You could be paying anything from £7 to £10 per square foot.

When you consider that an office worker needs about 120 square feet to live in, that's a lot of money.

But out of town, £3.50 a square foot is a high rent (we can show you good premises at 70p a sq. ft.)

So, out of town, you can save thousands of pounds on rent alone.

Before your rent review comes up, come in and see us. Talk to us about your business needs and we'll tell you the best places to look over.

We'll tell you about rents, communications, staff, housing and anything else you want to know (since we're independent we'll tell you without bias).

At the end of it all, we'll help make moving offices smoother than moving house.

The Location of Offices Bureau.

Another world.

A Canon calculator's beauty is more than skin deep.

No matter what else a calculator may have going for it, it has to be designed right in the first place. Inside and out. Like Canon's. We think you'll agree that they're the best looking of them all. And their beauty isn't only skin deep. Part for part — from the smallest to the largest — they're engineered to perform to perfection. We design them and redesign them until we know they'll give you the best performance possible.

And we make the calculators that customers want. Every kind — special, scientific, office, personal — of every description. Some are big, some are small. Some are sophisticated, some are simple. But all of them have in common the incomparable performance that only comes with Canon design.

In other words, we're as particular about our calculators as we are about our other products. If you're as particular as we are, so much the better. Inside and out, the chances are, you'll find Canon calculators the best buy of them all.

The Canola MP142R is a 2-memory, 14-digit calculator with all the features of the MP141 and, additionally, a root function, a percent function, and a sum operand function.

The Canola MP141 is a 1-memory, 14-digit calculator with a two-color print out system. A non-add key lets you insert such entries as dates, slip numbers and so on even in the middle of a calculation on the leftmost side for easier readout. An add-mode function (+) automatically divides the keyboard entry by 100 so that the last two digits are printed as decimals.

Continued from page 36

the government and the religious establishment under permanent siege. Those seeking to separate religion from the state have threatened the coalition of the Labour party and the National Religious party (NRP) by trying to introduce civil marriage for people who are pronounced unmarriageable by the rabbis. At the other end of the scale the ultra-orthodox groups have taken advantage of the rabbis' indecisiveness by provoking demonstrations and even riots over such issues as transport on the Sabbath and the performance of post-mortems.

The Labour party has long wanted to see new blood injected into the chief rabbis, but in the end it agreed with the NRP on two compromise candidates. The Ashkenazi was the chief rabbi of Tel Aviv, Shlomo Goren, aged 56, who had proved a dynamic newsmaker as chief army chaplain. Although irreproachably orthodox and a celebrated scholar, he is in close touch with the world as it is. The Sephardi candidate backed by the two parties was the incumbent chief rabbi, Itzak Nissim, who was thought to have the support of the oriental communities. The surprise of the election was his defeat by the highly popular Sephardi chief rabbi of Tel Aviv, Ovadia Yosef, who is only 51. Now the Israelis and world Jewry are looking to the two new men to restore the once legendary spiritual authority of the rabbis of Israel.

But in one respect the changes may have come too late. The independent liberals, who are also in the government coalition, have refused to waive their demand for civil marriages, and the Knesset will have to tackle the issue when it reconvenes. The left-wing Mapam, another coalition partner, is committed to support the measure. The NRP is equally com-

mitted to walk out of the coalition if the measure is passed. This is quite possible if the Labour party vote splits. If Labour wants to salvage its alliance with the NRP, which has hitherto been a constant factor in Israeli politics, the government will have to call an early election. Such an election will largely be fought on the inflammable religious issue, and the new chief rabbis will have come on to the scene too late to avert what nobody wants.

The subcontinent

Is the pen as mighty as the bat?

Journalists, like ping-pong players, can sometimes acquire semi-ambassadorial status. Two Pakistani journalists who stopped over in Delhi this week on their way to Bangladesh's capital, Dacca, were reported to have said that a meeting between President Bhutto and Sheikh Mujibur Rahman would be a good thing. Now it seems that the purpose of their journey may be to arrange just such a meeting.

If so, it will come none too soon for a Pakistani government increasingly anxious about the trials of Pakistani prisoners for alleged war crimes now getting under way in Dacca. On October 7th Mr Malik, the former governor of East Pakistan, and his former cabinet colleagues appeared in court for a preliminary hearing; their full trial awaits only the preparation of their defence. If this were to be followed by similar trials of senior Pakistani officers, it would be very difficult for Mr Bhutto to recognise Bangladesh. This in turn would block the return of the 93,000 Pakistani prisoners in India, whose situation is getting increasingly parlous. On October 13th six Pakistanis were shot dead in their Indian prison camp, bringing the total killed in Indian camps since last March to 12.

But one other ray of hope in the subcontinent is the fact that Indian and Pakistani military commanders may at last be close to agreement on the delineation of a line of control in Kashmir to take account of the changes wrought by last December's war. The talks recently broke down when all but two small areas in the 500-mile line and 21 out of 25 maps had been agreed upon. What evidence there was seemed to indicate that it was Pakistan that was digging in its heels. Now the talks have been resumed this week on Pakistan's initiative.

Pakistan of course stands to gain by an early and successful delineation of the Kashmir line because the Indians insist that only when this is done can the mutual troop withdrawals begin. And Indian troops are still sitting on some 5,000 square miles of Pakistan's Punjab and Sind provinces. The withdrawal of these Indian troops would also help Mr Bhutto to divert attention from his pressing internal problems, in particular that of framing a new constitution. This week Mr Bhutto has been meeting Pakistan's opposition parties in an effort to reconcile his desire for a presidential system with their demands for a federal, parliamentary one. Even so it will probably be next spring before a constitution sees the light of day. Bangladesh, by contrast, produced a draft constitution of 153 clauses on October 12th.

Iran

One way to broaden the base

FROM OUR TEHRAN CORRESPONDENT

Although the Shah of Iran remains as anxious as ever he was for popular participation in government, all the signs are that the country is moving towards a one-party state. Last week's local elections confirmed the trend and underlined the fact that there is a long way to go if the Shah's intention of 10 years ago to create a two-party system is to be fulfilled. One stumbling block has been public apathy towards parliament and the local councils because effective power is seen to reside with the Shah and his nominees. Another has been apathy towards the parties amongst a public which sees no real difference between them.

The background to last week's elections for urban and provincial councils and regional educational committees shows the difficulties of trying to create a two-party system that gives a wider area of public debate while at the same time working within the framework of the regime. In late July the secretary-general of the opposition Mardom party, Mr Alinaqi Kani, was removed from office. Appointed only last year, he took the job seriously enough to make a number of heated attacks on the government of the prime minister, Amir Abbas Hoveyda. In one of them he asked the Shah to end "the rule of a handful of profiteers, egotists and contemptuous enemies of freedom."

By Iranian standards this was heady

Goren's in touch

Hoveyda sustained some heated attacks

stuff, and it struck a sufficiently popular echo for the authorities, already harassed by urban guerrilla groups, to fear that Mr Kani's oratory might be an incitement to further subversion. He quietly bowed out of the party and with him went all interest in the campaign. The opposition's share of seats dropped by 10 per cent from the 21 per cent it won in 1970, and the figure would have been lower if the ruling New Iran party had not deliberately left the field open to its opponents in certain areas.

But the Shah would still like to widen the base of power, both as a guarantee of present stability and as a means to ensure political continuity when he quits the scene. He knows that over the next 10 years he will have to face the expectations of the growing and often frustrated army of technocrats and university graduates, who will demand more open discussion of politics and priorities. The regime's response to this, as it seems to be emerging, goes only some way down the road towards greater popular participation in government. The Shah is gambling that his decision to go all out for economic growth will make Iran's wealth so great and so widely distributed in another 10 years—the beginning of the era of what he terms “the great civilisation”—as to muffle dissident voices.

New laws passed before the local elections were designed to further the process of decentralisation and to allow the councils to be consulted a little more about local affairs. At the same

time the ruling party, with its vast organisational network, is being increasingly used as a vehicle of political instruction among the masses. If the formula does not prove totally successful the Shah should still have the resources—and the security forces—to contain any tensions that might emerge while he is still actively leading the country.

Cuba

Four more

Cuba is getting some of the broken fences in its Caribbean backyard mended for it. Guyana, Trinidad-and-Tobago, Jamaica and Barbados have decided on an early resumption of diplomatic relations with Cuba. These four thereby join Chile and Peru; Mexico never broke relations in the first place. There are, however, still 17 out of 23 “active” members of the Organisation of American States (OAS) that have no relations with Cuba, its “non-active” member, excluded in 1962.

Cuba is wooing Ecuador and Panama, which it regards as showing “progressive” tendencies—that is, contesting American interests. Cuba backs Ecuador's claim of 200-mile territorial waters and President Torrijos's new assertion of sovereignty over the Panama canal. Both Ecuador and Panama supported a Peruvian proposal made in the OAS in May that would allow any member to resume relations with Havana at whatever level it deemed appropriate. It was defeated by 13 votes to 7. But there is no prospect of Cuba actually re-entering the OAS, even if it was invited to do so. Dr Fidel Castro said in July that he still regarded the organisation as a “sewer” and a “trash heap” because it was American-dominated. And there are no signs of a thaw in Cuban-American relations.

Cuba's entry into the Soviet-dominated economic group, Comecon, as a full member in July was only an official recognition of the part which the communist block has played in the island's economy. But the Cubans seem worried that Latin America might take it amiss. One Cuban minister, commenting on the fact that Cuba was the first Latin American country to join Comecon, said “we are absolutely sure that the second and third countries will appear in the very near future.” Even if he was referring to Chile, and possibly to Peru, it seems pure wishful thinking.

Madagascar

Five years for the general

Everybody loves a soldier. Well, perhaps not in Uganda, but in Madagascar they seem to. With a huge majority, the former chief of staff, General Ramanantsoa, romped home in the referendum of October 8th, giving him full powers to rule without parliament for a five-year period in which he has promised to carry out a programme of social and economic reform.

Mr Tsiranana, who ruled Madagascar for 14 years until he felt compelled to hand over full executive powers to his chief of staff during the student *événements* of May this year, has now also resigned as head of state. Having advised voters to reject the referendum, he could hardly do otherwise. Indeed the impressively large vote in favour of General Ramanantsoa—which seems to have been less suspicious in its magnitude than some majorities in previous Malagasy elections—probably owes as much to a rejection of the former president as it does to enthusiasm for the general.

It is true that the new ruler has proved much less conservative than many people expected: he has already released political detainees, rejected dialogue with South Africa and raised the minimum wage. But the opposition parties which supported his proposals in the referendum have differences of opinion both with the new government and among themselves. Their unity in the referendum rested largely on their common hostility to Mr Tsiranana.

Democracy—never conspicuously strong in Madagascar despite its multi-party complexion—has certainly gone out of the window for five years or more. But political parties are not banned—as they are, for instance, in Nigeria where there is also a military government. And the general has also promised to consult the people in the future through use of the referendum. Whether such appeals will count for much as the memory of his predecessor fades and his own popularity correspondingly diminishes remains to be seen. The problems created by a bad harvest are the first the new president will have to face; then he may turn his attention to taking a 51 per cent share in the largely foreign-controlled economy. This could further strain relations with France, whose friendship has already cooled with the removal of its protégé, Mr Tsiranana.

President above Congress

Washington, DC

Tell it to Congress's leaders: Scott (R), Albert (D), Nixon, Mansfield (D), Ford (R)

Massive, opulent and authoritative, the campaign for the re-election of President Nixon makes for the most part only incidental mention of the Republican party and pays, with some exceptions, little heed to the efforts of Republican candidates to get themselves elected to the Senate or the House of Representatives. In 1966 when the Republican party was virtually leaderless after the Goldwater debacle, Mr Nixon barnstormed the country on behalf of Republican candidates for state offices and congressional seats. In the ebb tide of the Johnson presidency they did well and Mr Nixon got the lion's share of the credit. Once President, he made, or at least allowed to be made, one further effort to build up Republican strength in Congress. The mid-term election campaign of 1970 saw a Republican drive to get control of the Senate and cut down further the Democratic majority in the House of Representatives. But the strategy was misconceived and the effort failed.

The idea that the opportunity which was muffed in 1970 might be seized in 1972 was much discussed in the spring and summer, but by now the steam seems to have gone out of it. A net gain of five seats in the Senate would

put the Republicans in a position to assume the role of majority party, with the help of the Vice President's casting vote, and take control of the committees. To achieve the majority position in the House of Representatives the Republicans would need a net gain of 39 seats—a more difficult feat, but still one that might have been thought worth the effort. Committee chairmanships in Congress are position of power and the Republican Senators and Representatives would dearly love the chance to take them over. What is not altogether clear is whether this normal political objective means as much to President Nixon and his staff as it does to Republicans in Congress.

But now, after a period of complaint and lamentation about lack of help from, and pre-emption of funds by, the Committee to Re-elect the President, Mr Nixon's rich and powerful organization is sometimes willing to lend a hand. There is still time, though barely, for things to change in favour of the congressional Republicans. It is, however, curious to see a conservative Republican publication, Human Events, trying to explain to the White House why it matters that the Republicans should be able to control the next Congress; the pivotal argument

is that a Republican Congress would support the President in his efforts to restrain public spending and abolish the deficit on the budget, whereas a Democratic Congress would not.

While there is something in this in a general way, what has been going on between President Nixon and the present Democratic Congress is not so much a struggle about how much money shall be spent, as a struggle for possession of the banner of thrift and fiscal restraint as a campaign issue. No politician facing re-election wants to be identified with high public spending and more taxes, inevitable and indeed necessary as these may be. Thus it was understandable that the House of Representatives, all of whose members face re-election on November 7th, should surrender to President Nixon's demand for power to cut spending at his discretion in order to keep federal outlays to an arbitrary limit of \$250 billion, while the Senate should put up more resistance, as it did. Only a third of the Senators face re-election; the other two-thirds were in a position to worry about the constitutional implications of Congress surrendering the control of public spending in large part to the executive branch.

They worried to such an extent that the 92nd Congress's last hours were spent in a bitter conflict with the White House. A compromise had been worked out which would have given the President authority to cut spending very much, although not entirely, at his discretion to keep outlays under his ceiling of \$250 billion. But on Tuesday the Senate rejected this and the House resigned itself to the loss of the ceiling. Both houses then passed the bill to which the ceiling had been attached, an unavoidable measure raising the limit on the federal debt. Once his budget ceiling was rejected the President vetoed as far too costly a water pollution bill which he had requested but which Congress had added to. The Senate over-rode his veto immediately and the House followed its example. So while Mr Nixon sustained defeats, he was presented with a handy campaign issue—

congressional extravagance. Perhaps more important he now has an excellent excuse for asking next year for the necessary new taxes which he had earlier promised not to seek.

In spite of all this, Mr Nixon, not intensely concerned with domestic reform or with domestic policy in general, can look back with reasonable satisfaction on the record of his dealings with the Congress now expiring. It is true that his reorganisation of the executive departments was blocked by forces of inertia which reside not only in Congress, but in the executive branch itself. His reform of the public assistance system came to nothing, but that was partly because the Administration's attachment to its own proposals became increasingly ambiguous.

When the President needed a new economic policy, even though it put huge powers of regulation of prices and incomes with the executive branch, he got it. He was frustrated in his first two appointments to the Supreme Court, but they were particularly provocative choices, and this setback has not prevented him filling four seats on the Court with men of his own way of thinking. The Senate killed his proposal to interfere with the jurisdiction of the courts over racial segregation in the schools, but he is better off without that interference; the defeat of his bill leaves him free to appear before the electorate as the opponent of busing children to distant schools and that is all that he really needed.

To the general surprise, a majority did form in Congress in favour of the President's proposals for sharing a portion of the federal revenues with the states and localities and this has been passed. Congress tended to vote more money for education, nutrition, public housing and employment policies than Mr Nixon wanted voted, but it did not push its opposition to extremes when the Administration adopted a policy of simply impounding the funds which it judged excessive.

President Nixon got his foreign treaties ratified, his requested appropriations for defence were passed regularly without any grave reductions and a succession of attempts to attach firm restrictions on the uses that might be made of the funds in controversial theatres of military action, especially in Vietnam and the rest of South-East Asia, came to nothing, one after the other. At the end of Mr Nixon's first term, which opened amid a popular cyclone of anti-war feeling, the war-making power is as firmly in the

President's hands as ever. These things are what matter to Mr Nixon.

The truth is that, interesting as the formal control of Congress is to the congressional veterans on either side, the working control of Congress has been fairly settled in Mr Nixon's hands for at least the past two years. The aggressive campaign which he organised against the liberals and the other dissidents in 1970 did not produce a formal change of majority in either house, as this year's campaign probably will not, either. It did, however, set off a stampede for the hills among southern moderates and also among liberals in some of the northern states where the incumbent politicians felt out of tune with the mood of their constituents.

Mr Nixon, unless all the signposts have been turned round the wrong way, is about to enter his second and final term as President—a term in which he will be able to afford to attend to the matters he cares about (which are matters of foreign policy) while the domestic condition of the country is viewed with philosophical detachment and the future of his party is left to the exertions of those Republicans who are still eligible for elective office. For a political leader in such a situation, numerical majorities for his party in the Senate and the House are not of the first order of importance. Against many expectations, Mr Nixon's first term has seen the presidential power (in relation both to Congress and to the Supreme Court) increase. In these circumstances, the maintenance of a Democratic majority in a Congress which is manageable and amenable may well seem as interesting to the President as a Republican sweep that might displace the existing committee chairmen and open up the unknown.

Pals with Russia

The signing of a detailed reciprocal trade pact with the Soviet Union had been expected soon—but not quite so soon. However, on a quick look it does not appear that the Americans made concessions in order to reach agreement in time to polish up the Administration's election image. The United States has done fairly well out of the Lend-Lease settlement—\$722m to be repaid by mid-2001—given the need to get this sticking-point out of the way before normal trading relations could begin. Now credits can be made available and Congress can be asked

to grant most-favoured-nation treatment to tariffs on Russian imports; it will probably do so early in 1973. The agreement settles other technical questions and as a result it is forecast that trade between the two countries will treble during the three years of the agreement, reaching a total of \$1.5 billion. To begin with the balance will be greatly in America's favour, as Mr Peterson, the Secretary of Commerce, was quick to point out.

He also expects thousands of new jobs to open up in the United States as the Russians will, he thinks, be buying chiefly manufactured goods. The jobs to be created on ships and on the waterfront were also Mr Peterson's great selling-point for the shipping agreement announced a few days earlier—the "indispensable first step" into the "new era of expanded commerce with the Soviet Union." Trade is to be shared equally, with one third of the shipments being carried in Russian vessels and one third in American, leaving one third for other countries. This was the price charged by the dock workers' leaders for their co-operation. Strongly anti-communist, they have in the past refused to allow their men to service Soviet ships, which have not called at Gulf or East Coast ports, which will now be open to them, since 1963.

But at the last minute the American negotiators, luckily for them, realised that there was a snag in this arrangement, arising out of the sharp increase in world cargo rates as a result of the heavy Russian purchases of wheat in the United States. Originally the Russians had agreed to pay \$8.05 a ton for transport of grain in American bottoms; but as rates went up, it developed that the Russians would be getting a bargain when using American ships. Since the difference between what they pay and what it costs to run an American vessel has to be made up by government subsidy (around \$10 a ton at present), this would obviously have caused the Administration much embarrassment, especially when it is already being accused of having fallen into a similar trap in connection with the export subsidies paid on the Soviet purchases of the wheat itself. With a co-operativeness that suggested that they must be desperate for the grain, the Russians have now agreed to pay \$8.05 a ton or 110 per cent of the market rate, whichever is higher, and also to reduce their unloading costs. So if they bought their 17m tons of wheat cheap they are paying a premium to get it home.

All these securities having been sold, this announcement appears as a matter of record only.

ELECTION '72

Two Republicans

1. Unwanted Senator

Durham, N. Carolina

President Nixon's decision not to endanger his own appeal to Democrats by campaigning for Republican candidates for Congress relieves him of the need to take up the political cudgels for Mr Jesse Helms, the Republican choice for the Senate in North Carolina. Mr Helms may snuggle up to the President (one of his campaign stickers reads "Nixon needs Helms") but there is no answering warmth from Washington. A victory for Mr Helms would be a step toward Republican control of the Senate but, apart from that, he would be a grievous embarrassment.

Mr Helms is far to the right of the President. As election day approaches he is moderating his tone but, as an accomplished broadcaster of some influence in the state capital, he is firmly on record as attacking the President for selling out to the "murderous Chinese communist regime" and he has accused the President of waging a "no-win" war in Vietnam. Mr Helms has already been responsible for a full-page advertisement, accusing his Democratic opponent, Mr Nick Galifianakis, of indifference to drug-addiction and the crime which flows from it. Less brazenly, but still with an unpleasant undertone, Mr Helms pleads "vote Helms—he's one of us." North Carolina has probably the lowest proportion of recent immigrants of any state and Mr Galifianakis, though the son of an immigrant from Crete who sold hot dogs in Durham, was born and educated in North Carolina.

His long name is a stumbling-block (his stickers say "Pick Nick," or "Nick for the Senate") but Mr Galifianakis has been a member of the House of Representatives since 1966, speaking for one of the handful of really liberal districts in the south; it includes Duke University and Durham, where blacks have been voting since the 1930s. Naturally Mr Helms has tried to tag the former college professor with radical beliefs; a recent Helms advertisement was headed "McGovern-Galifianakis." But the Democrat is stating the literal truth when he argues that his position is closer to that of President Nixon than is the Republican candidate's.

Boycott on the ballot

FROM A CORRESPONDENT IN CALIFORNIA

In the curious way that election year politics have of affecting unlikely segments of daily life, the American public tends this year to divide into lettuce-eaters (usually Republican) and non-lettuce-eaters (usually Democratic), depending on attitudes to the nationwide boycott of lettuce which has been inspired by the United Farm Workers' trade union. At the presidential nominating conventions, the Democratic viewpoint was dramatised when Senator Edward Kennedy addressed his "fellow lettuce boycotters!", while six weeks later Californian Republicans paraded signs with their party symbol boasting "Elephants eat lettuce!"

The struggle over labourers in the lettuce fields began in 1970 just after most grape-growers had capitulated to Mr Cesar Chavez, the leader of the Mexican-American farmworkers, and signed contracts with his trade union. He is now trying to force growers of lettuce in California and Arizona to do the same; they produce about 90 per cent of the iceberg, or head, lettuce eaten in America (a product which has long been boycotted by gourmets for its lack of flavour). The situation is confused because at one point a number of lettuce growers signed up with the International Brotherhood of Teamsters instead.

About 15 per cent of the growers, however, have already signed contracts with the UFW. Their lettuce is in great demand from people who will not cross the picket lines set up by the farmworkers. They have strong support all across the country; the Roman Catholic Archbishop of Washington, DC, recently urged everyone to back the boycott. But in the state where it all started, the UFW is in a fight for its very existence, threatened by an initiative, proposition 22 on the ballot, which is being put before the voters on November 7th. The controversy over a measure intended to regulate the farmworkers for the benefit of the growers has broken the apathy which surrounds the presidential election campaign, stirred up tempers and attracted heavy spending on publicity.

The measure itself, which would become law if approved, circumscribes the farmworkers' right to organise by requiring them to be employed on a single farm for a long period before they qualify for union membership, something which the seasonal worker cannot normally achieve. Strikes at harvest time could be nullified by restraining orders and consumer boycotts would be banned. The initiative was organised by the California Farm Bureau Federation and other growers'

groups after the measure had been rejected by the State Legislature. It is being claimed that thousands of the 325,000 signatures needed to get the initiative on the ballot were obtained by canvassers who hid its real purpose and told potential signers that it would bring down the price of food. California's Secretary of State, who is responsible for election procedure, has gone to court arguing that "widespread fraud" justifies the removal of the initiative from the ballot; but apparently nothing will happen until after the election.

Most of the falsification seems to have been done in black districts, taking advantage of the ignorance of voters there. This has outraged black leaders, who are strong politically in California and have identified themselves closely with Mr Chavez and his crusade for the poor. Thus, as a result of this initiative, more blacks as well as more Mexican-Americans than usual in California are likely to vote in November; drives to register voters are meeting with a good response in both communities. Not only minority groups but also the churches, the consumer movement, the Democratic party and particularly the other trade unions have reacted to this threat to the migrant farmworkers and their famous leader.

To Mr Chavez it is "a direct vicious attack on our union. If it is not defeated, it will wipe us out." But agricultural interests consider that the measure is a much-needed protection against strikes at harvest time and against boycotts by consumers. The Californian initiative is very similar to a law passed in Arizona last May which has given rise to similar political excitement there, threatening the Republican dominance of the state and also the tenure of the Republican Governor.

Chavez pleads with New York

Mr Galifianakis has never been as progressive as the nature of his constituency would have allowed him to be and a couple of years ago, with his eyes on the Senate, he began edging further right. He appeals particularly to voters in the cities and suburbs of the industrialised centre of the state. But the contest may be decided by followers of Governor Wallace of Alabama, who won this year's Democratic presidential primary election in North Carolina; they are particularly strong in the rural, impoverished coastal strip. These people would seem to be natural supporters of Mr Helms, whose most recent television spots have appealed to farmers and to parents frightened of racially integrated schools. But the Democrats seem confident that Mr Galifianakis will do well in Wallace country.

They also dismiss the idea that the big vote which President Nixon is expected to win will drown their candidature. The splitting of votes among candidates of different parties for different offices is a growing habit among North Carolina's more politically sophisticated voters and it is easy; there is a separate ballot for the presidential contest. In spite of his relative lack of campaign cash, Mr Galifianakis is running about 20 per cent ahead of Mr Helms in statewide polls. Blacks have no choice but to vote for Mr Galifianakis and he has a vigorous ally in Senator Ervin, the state's distinguished upholder of personal liberty. Mr Ervin would lose his committee chairmanship if the Republicans took control of the Senate.

2. Renegade Representative

New York

While the polls indicate that many Democrats will be voting Republican in next month's elections, two prominent New York politicians, both once Republicans, will be countering this prevailing trend. One is Mayor John Lindsay, whose political future seems uncertain since his poor showing in the Democratic presidential primaries. The other, Mr Ogden "Brownie" Reid, congressional representative for a large part of suburban Westchester County, is running for re-election on the Democratic-Liberal ticket in a district that he has held for almost 10 years as a Republican. If he manages to win in what promises to be a Republican year, his future as a Democrat could match his ambitions.

Both Mayor Lindsay and Con-

Reid: party switcher

gressman Reid are liberals who felt increasingly isolated in the ranks of the Republicans. They were opposed to the Nixon Administration's domestic policies and perturbed by Governor Rockefeller's shift towards conservatism. With the Governor in firm control of the party in New York State, they had no place to go. So Mr Lindsay, who has had a running personal feud with Mr Rockefeller, made his switch to the Democrats last year. Mr Reid, who had even more impressive Republican credentials—his grandfather was a founder of the party, his family owned the now defunct Herald Tribune, the voice of moderate Republicanism, and he himself had served as President Eisenhower's ambassador to Israel—waited until March; he switched when he was threatened with a battle for renomination in his district by Republicans furious over his lack of support for the Administration.

Mr Reid is a former member of the Governor's cabinet as well as a personal friend, and has incurred Mr Rockefeller's wrath by his break with the party. The Governor is providing strong financial support and deploying the party's machinery to aid Mr Carl Vergari, chosen to try to hold on to the district for the Republicans. But defeating Mr Reid will not be easy. In the past two elections, he has won close to 70 per cent of the total vote, running far ahead of President Nixon in 1968. His support, it is plain, has run across party lines. His district is surprisingly varied in its ethnic and economic composition. Westchester, which adjoins New York City, contains some of the richest citizens of the United States, but it also has a substantial urban population—in Mount Vernon, Yonkers, White Plains—of poor and lower middle-income

residents. Over 40 per cent of the district's voters are Roman Catholic, including a large number of conservative Italians; about 20 per cent are Jews, mostly liberal in their politics; and some 10 per cent are blacks.

Mr Reid, aged 46, is attractive and hard working. He has built a considerable personal following as a result of years spent cultivating his constituency and possesses the advantages of being well known and having an experienced staff that stem from his long incumbency. In his present campaign, he is stressing his independence and his own record in Congress. He has endorsed Senator McGovern but in his appeals to voters he prefers to discuss his own plans for tax reform, help to the aged and stronger support for education and mass transit, all important issues to his constituents.

He also faces some formidable obstacles. A majority of voters in the district are Republicans and Mr Reid's campaign managers fear that the tie of tradition may prove particularly strong this year. Mr Vergari is not a polished campaigner, yet he is an established vote getter in his own right, winning very handily (also running well ahead of Mr Nixon) in his earlier races for the District Attorney's office. He has ethnic appeal for the big Italian block and may be attractive to voters concerned about the rise of 170 per cent in Westchester's crime rate over the past five years, much of it the result of drugs. Mr Vergari is focusing on Mr Reid's apostasy rather than on his own programme, although he is a hawk on Vietnam and favours reduced spending on social projects. Informed observers think that the race will be close.

Fixing the Mob

According to popular legend members of the Mafia are either too careful or too influential to fall into police traps. Yet this week in New York large numbers of mobsters fell in head first. The trap was a surprisingly simple one. Acting under court orders police bugged a caravan standing in an unusually neat and well guarded junk yard in the heart of Mafia territory in Brooklyn. They also tapped telephone conversations coming from it.

This, it seems, was the society's headquarters. Although the New York families have been fighting it out among themselves—18 gangsters and two innocent by-standers have been murdered since April—they still have

Headquarters of organised crime

business interests in common. According to the evidence of the police the mobsters used the caravan to discuss their operations; these involved narcotics traffic, extortion, counterfeiting, prostitution, gambling, insurance, fraud and other crimes.

So far subpoenas have been served on 677 people who used the junk yard at one time or another over the past year. Their comings and goings have been recorded in 54,000 still photographs and on 36,000 ft of film. Some 100 policemen have also been issued with subpoenas. All of them will have to appear before a grand jury which is investigating organised crime. It is also reported that 200 businesses plus politicians and judges were named in the recordings on 1.6m ft of tape.

The swoop is a major triumph for Mr Eugene Gold who has been the prosecuting attorney for Brooklyn since 1969. In the past Brooklyn has been a safe haven for the Mafia. Now Mr Gold has proved that this is no longer so. He has also cleared himself of the implications contained in the recent report by the Knapp commission that New York City's five district attorneys were incapable of dealing with police corruption in their areas. But Mr Gold still has a long road ahead. Another popular legend about the Mafia is that it is difficult to put its members behind bars.

Although the federal government has no jurisdiction in this case the latest crackdown on crime will please President Nixon. Last weekend he gave an election speech on the radio in which he claimed that his Administration was well on the way to keeping the promise that he made in 1968 to

restore law and order. He pointed out that the latest figures showed that violent crimes increased by only 1 per cent in the first six months of this year compared with 7 per cent for the same period last year. He also drew attention to the sharp drop in the crime rate in the District of Columbia where he has made a specially concentrated effort to control crime. Crime has also been on the decrease in other cities.

But the President was selective in his use of statistics. As Senator George McGovern has pointed out—law and order have also become one of his campaign themes—violent crimes have risen by 30 per cent since Mr Nixon took office. While such crimes as robbery and car thefts have gone down incidents of rape have gone up by 14 per cent. Crimes in the suburbs and rural areas are rising much faster than ever before and there are twice as many drug addicts as four years ago. Furthermore Mr McGovern claims that a large part of the \$1.5 billion that President Nixon has spent on his Law Enforcement Assistance Administration is still tied up in red tape or has been squandered on useless projects.

ELECTION '72

Voter, go home

Next month more Americans than ever before who live abroad will be voting by postal ballot for a President and Vice President. More, but by no means all, in spite of the liberalised terms of

the voting rights amendment act of 1970. Voting in the United States is a procedure handled separately and variously by each state. There is no national ballot. As a spokesman of the American Embassy in London puts it simply, "you have to come from somewhere." And to qualify as a resident of a state, a citizen must swear that his absence is only temporary—difficult for someone who has been out of the state for years.

There are 1.5m to 2.5m Americans living in other countries. While many of these are servicemen, business executives, civil servants or students with clearly defined periods of absence, many others have settled down abroad, with no idea of going home. Senator Barry Goldwater, who led the movement to reform the voting act, wanted "to clear away a barrier of outmoded technicalities" that deprived millions of Americans, most of them within the United States, of their right to vote because they had moved from one place to another and could not meet residency requirements in their new states. So far as the ordinary mobile American and the businessmen abroad are concerned, Senator Goldwater has achieved his objective. But as for the literally stateless Americans, he has not and it is not easy to see how he could.

There are two obstacles. One is that the states retain the right to define for themselves what constitutes residency. Already in this year's pre-election months, it has become clear that one state's resident is another state's foreigner. New York and California have been particularly disdainful about recognising claims sent from abroad. The other is that states like to levy income tax on their residents. Some states are happy enough to reclaim a long-lost resident and send a bill for accumulated back taxes along with the absentee ballot. (American citizens living abroad for more than 18 months are, in general, exempt from federal income taxes but no one is sure whether this exemption extends to state taxes.) In spite of the uncertainties, however, the American Embassy in London received thousands of queries about absentee ballots, before the recent deadline. Presumably the interest was created not only by the reformed law but by the concerted efforts of the overseas committees behind each of the major presidential candidates. As Americans become even more mobile and the margin in elections continues to narrow the importance of procedures to catch the voter on the move will increase.

Chase slips

New York

The abrupt changing of the guard last week at Chase Manhattan Bank, which was once the biggest of New York's major financial institutions, draws attention to the dominant role now held by its rival, First National City Bank. In recent years, Citibank has been outstripping Chase in many aspects of banking and other big banks, like Manufacturers Hanover Trust and Morgan Guaranty, are also providing increased competition. Acknowledging the slipping role of Chase last week, Mr David Rockefeller, its chairman and chief executive officer, announced the resignation of Mr Herbert Patterson, aged 47, who had been its personable president only since 1969, and his replacement by Mr Willard Butcher, aged 46, who had been its equally personable vice-chairman.

It is doubtful whether this change can close the gap between Chase and its chief rival. Under the able and aggressive Mr Walter Wriston, Citibank has built up an impressive array of managerial talent. This has enabled it to advance in traditional banking areas, particularly abroad, and to undertake profitable new ventures, from management consulting to a full range of financial services. As a result, Citibank has moved well ahead not only in its operations but in the acclaim of investors; Citibank's shares sell at 20 times earnings, Chase's at 11. Apparently Chase has neither the tough leadership nor the depth in management to do battle on anything approaching equal terms. Mr Butcher may be more of a goad than his predecessor, but his promotion appears to be the treating of a symptom rather than a positive cure.

In the view of many outsiders, Mr Rockefeller is to blame for the shrinking of profits and the recent departure

Rockefeller: largest shareholder

of skilled personnel that have lost ground for Chase. The job of chief executive officer appears to be too big to be carried out part-time, especially when his most important rival, Mr Wriston, does little else. So, unless Mr Rockefeller is prepared to shed his multiple outside activities—philanthropy, public service, politics—and devote more time and energy to the bank he controls, the prospect is that Citibank will hold or increase its lead. Chase, under Mr David Rockefeller's rather diffident, publicly-oriented guidance, may have gained more friends through its policies of helping to find jobs for members of minority groups and through its statesmanlike practices. Citibank, however, has won more customers and profits. Clearly, Mr Rockefeller has the breadth of experience and the qualities of leadership needed to give Citibank a hard fight for banking supremacy. But has he the will?

Fish clammed up

FROM A CORRESPONDENT IN BOSTON

Under the gilded dome of the eighteenth-century Massachusetts State House in Boston hangs the Sacred Cod, a large gilt replica which signifies the dependence of the Commonwealth—and that of its neighbouring states in New England—on the sea for food and commerce. But for two weeks last month that commerce plummeted because a ban was placed on digging softshell clams, called in New England "steamers" (because that is the best way to cook them). The ban was lifted with the disappearance from the ocean of the red tide of algae that had poisoned clams and mussels. But the confidence of the public in all types of fish had been poisoned also and is still at low ebb. Producers and sellers of seafood believe that the losses to Massachusetts, Maine, New Hampshire and Rhode Island will ultimately amount to as much as \$200m.

Only some \$250,000 of that sum came from stocks destroyed when the public health authorities in the various states ordered clams to be dumped. The marine organisms called dinoflagellates were found in only one area—a 50-mile stretch of the Atlantic coast just north of Boston. But from Newport, Rhode Island, down to Eastport, Maine, on the Canadian border, a complete halt was called to "digging the tide down" for clams as the water recedes. Clam-diggers, a hardy breed who rise before dawn and work in water too chill for anyone but child-

ren to swim in, blame over-zealous and inexperienced state officials for the all-encompassing ban and their charges are echoed by the sellers.

The publicity given to the ban has meant that people have stopped buying all kinds of seafood in shops and restaurants—and seafood restaurants are a feature of New England's coastal resorts. As many as 100 may close their doors in Massachusetts alone because of the shattered public confidence in eating even those ocean products, such as fish, oysters, shrimp and even hard-shell clams, which were in no way infected by the algae. A Massachusetts official estimates that sales of unharmed seafood are down by 50 to 70 per cent.

Retailers and processors of clams are eligible for loans from the federal government's Small Business Administration to help them over the lean times. But diggers, because they are self-employed, could get no federal aid until President Nixon, under pressure from the Governors of Maine and Massachusetts, declared the region a disaster area. This entitled the diggers to approximately \$47 a week in emergency payments—roughly the food bill for a family of four. The seafood industry and the Commonwealth of Massachusetts are putting into operation a national advertising campaign to help promote consumption of fish. But the harvesters, processors and sellers of New England's great, self-replenishing natural resource believe that it will be a long time before the area recovers from the economic flotsam of the red tide.

SONY WANTS TO SELL U.K. PRODUCTS IN JAPAN

We at Sony believe that there is an excellent market for many British products in Japan.

Japan, of course, is a foreign country to U.K. businessmen. However, it is a domestic country to Sony and we know both its market and its potential.

We believe that this presents an opportunity for our company to work with British manufacturers to our mutual benefit.

Therefore, we would like to offer the use of our sales force and our

knowledge of the Japanese market to firms whose products will find ready acceptance by Japanese consumers.

Sony's sales network in Japan is organized for consumer durables. Japan has the customers. Do you have the product?

With this in mind, Sony has created the Sony Trading Corporation whose exclusive business will be the import of products from all over the world into Japan.

Mr. Masakazu Namiki has been appointed as representative in the United Kingdom. Write to him at Pyrene House, Sunbury Cross, Sunbury on Thames, Middlesex.

MOULINEX

Sales in the first 9 months of the financial year 1972 reached Frs. 386,805,762 as against Frs. 255,890,814 during the same period in 1971, a rise of 51.16 per cent.

Exports account for Frs. 143,302,729 of the total compared with Frs. 82,732,647 in 1971—a growth of 73.21 per cent.

For this same period the staff, which had numbered 7,857 on 1st January, 1972 reached 8,751 by the end of September, representing an increase of 11.38 per cent.

This spectacular advance in sales had been made possible only because a number of investments, concerning which a decision had been made at an earlier date, had been completed since the beginning of the year.

A new two-year plan has been drawn up as well, which has as its aim the programming of fresh growth at a faster pace to cater for the demand from France and, more particularly, from abroad.

The FRESNAY-SUR-SARTHE plant has been doubled in size and fully integrated since 1st September with this end in view.

As from next month a new plant at VILLAINES-LA-JUHEL in Mayenne, which was acquired last July, will be in production and will be progressively tooled up and equipped to carry a labour force of 500 people.

During 1973 the SAINT-LO, FALAISE, ARGENTAN and MAMERS plants are to be enlarged and equipped to provide for a substantial expansion in output.

The erection of a plant at TRAPPES is envisaged at the end of 1973.

In conclusion, between now and late 1974 plants will be set up in the Lower Normandy area.

We are also able to confirm that no approach for further capital subscriptions from shareholders will be required to finance these investments.

Books

Great wit and madness

VIRGINIA WOOLF: A BIOGRAPHY,
VOLUME TWO: MRS WOOLF, 1912-1941

By Quentin Bell.

Hogarth Press. 312 pages. £3.

The second volume of Mr Quentin Bell's admirable life follows the principles of his first (*The Economist*, June 17th). It is pure biography, with no literary criticism. He is frank, where frankness is needed; he does not shrink from judgment, even where (as so often happens) his own parents are concerned; and his thumb-nail sketches of subsidiary characters are a delight. It is well written and concise. But he has a very different story to tell from last time. This volume covers the period of her marriage and of the publication of all her books. The shadow of madness grows deeper and deeper; her serious novels brought her to the edge of a breakdown, and sometimes over the edge. The second volume also differs from the first in another way: there is much more quotation, since Mr Bell is able to draw on her diary, all unpublished except for the passages on her writing that appeared in "A Writer's Diary."

The central theme during this period was her marriage to Leonard Woolf. All the dice seemed to be cast against it. Mr Bell tells us (no surprise) that sex meant nothing to her; also (a great surprise) that when Woolf married her he had no idea how severe her attacks of madness were. She longed for children, but accepted her husband's advice that, with her background of mental instability, they ought not to have any. He had to see her through recurrent and sometimes very long periods of madness. Yet a more devoted marriage could not be imagined. The last words of the note which she left for him when she went out to drown herself were: "I don't think that two people could have been happier than we have been." That was no exaggeration.

The second theme that runs through this volume, as it did through the last, is her close relationship with her entirely different sister Vanessa: the lucky one—until her son Julian was killed in Spain—who took life easily,

Virginia Woolf: darkness lightened

did what she wanted and was wholly sane. The third, of most public importance, is the writing of her books and her reaction to the task and its reception. Thanks to the publication of "A Writer's Diary," this is the most familiar part of her life.

Virginia Woolf remains, not surprisingly, a mystery. Much is clear: her beauty, her sense of mischief, her curiosity, her capacity for affection, her wit and sense of mirth. Leonard Woolf guarded her from visitors in her black periods; in the light ones, their memories are of laughter. All these qualities, which were not merely superficial but which she allowed to be seen, were known to everyone: her friends revert again and again to them in the recently-published "Recollections of Virginia Woolf." But deep down, the key is more difficult to find. There were the hidden times of darkness. There was the exercise of her talent which she kept to herself and her diary. And there were certain reactions which, if not abnormal, seem exaggerated, such as her intense preoccupation with personal motives and causes, overriding all public issues: witness her total incomprehension of what drove her nephew to go to Spain, knowing what

torture his decision was to his mother. At the end, one can only echo a remark of Mr Bell's:

Virginia's mind was so constituted that it is very hard to know what would have been supremely important to her.

But he, who knew her so well and yet remains objective, gives one as many clues as can be found.

Germany's conscience

HELMUTH VON MOLTKE

By Michael Balfour and Julian Frisby.

Macmillan. 400 pages. £5.95.

Mr Michael Balfour and Mr Julian Frisby are to be warmly thanked for having compiled so sensitive, authentic, and full a record of the cosmopolitan German aristocrat whom Mr George Kennan singled out as "the greatest person, morally, and the largest and most enlightened in his concepts, that I met on either side of the battle lines in the second world war," adding:

The image of this lonely, struggling man, one of the few genuine Protestant-Christian martyrs of our time, has remained for me over the intervening years as a pillar of moral conscience and an unfailing source of political and intellectual inspiration.

Mr Balfour and Mr Frisby duly amplify that impressive tribute.

The outstanding part played by Helmuth von Moltke in confirming German resistance to Hitler has been discussed by several contemporary historians, most notably by a Dutchman, Mr Ger van Roon, in his study of the Kreisau Circle (*The Economist*, August 7, 1971). But it has never been treated before in such intimate detail as it is now. The authors have derived much of their material from 580 of the 1600 letters that Moltke wrote to his wife Freya between 1929 and 1945, over 400 of them in the course of the war. The last was written from prison on the eve of his execution. They convey with memorable vividness not only the hopes and misgivings of Moltke and his friends but also the flavour of day-to-day private and public life in wartime, both in Germany and occupied Europe. A staff officer specialising in international law for military intelligence, Moltke was comparatively free to travel. He tells, for instance, of a "fantastic dinner" with the commanding officer in Belgium, General von Falkenhausen, at a restaurant in a Brussels park in August, 1940:

... caviare, ham in burgundy, duck, crêpes. The drink was obviously out of this world ... the only people really sober were Falkenhausen and myself. He was "irritated" by being offered

Moltke: martyr's memorial

such lavish fare in a country on the verge of starvation, and "bothered because I didn't want to be rude and yet didn't want to seem to be giving the proceedings my blessing." While the others guzzled themselves into stupefaction, Falkenhausen and Moltke exchanged heretical confidences into the early hours of the morning.

Moltke was not one of those Germans who sided positively against the nazi regime only when disaster was seen to be inescapable. He opposed national socialism consistently from the moment of its emergence as a force. Convinced that Hitler and his accomplices would be overthrown sooner or later, Moltke devoted his energies to planning the kind of constitution and government he deemed would come nearest to satisfying the worthiest aspirations of the German people as a whole. He recognised that persons like himself were not qualified to carry out a coup. "It would go wrong, we would make an amateur job of it." But as resistance grew he came to associate increasingly with conspirators resolved to stage a coup. Long suspect to the nazi security service he himself was already under arrest when they struck ineffectively against Hitler on July 20, 1944. Most of them preceded him to the gallows. Moltke followed as late as January 23, 1945. "Right to the end," reported Hans Lilje, the future bishop of Hanover, who was in prison at the time, "he was completely free in soul, friendly, helpful, considerate, a truly free and noble man amid all the trappings of horror."

The daily dose

MEDICINE TAKERS, PRESCRIBERS AND HOARDERS

By Karen Dunnell and Ann Cartwright.
Routledge and Kegan Paul. 204 pages. £3.25.

Other studies have shown that the people who feel ill at any one time by no means correspond with the people seeking medical advice at any one time. There is a so-called clinical iceberg, which has obvious implications for health service planning and for medical education. This book, from the Institute for Social Studies in Medical Care, gives the most comprehensive picture yet available of the extent to which British people diagnose and treat themselves—and their children.

Based on a sample of 1,412 adults living in 14 areas selected at random, the study sought to find out how people rated their health, and their children's, if they had any living with them, how this opinion corresponded with any symptoms they subsequently admitted to, what action, if any, they took about these symptoms, the pattern of medicine taking, whether prescribed or not, and how this pattern is affected by the doctor-patient relationship. A smaller sample of doctors was also interviewed, in an attempt to find out how far the professional attitude to self-treatment coincided with the patient's and whether doctors felt that a more sensible attitude to medicine taking could be encouraged by health education.

Though full of tables, the book is not heavy going. Perhaps it is not quite so readable as Dr Cartwright's earlier studies in medical care—there are, for instance, fewer verbatim comments from patients—but it is certainly full of interesting material. A few of its findings may be mentioned here. One of the most encouraging is that there has been a dramatic fall in the dosing of children with laxatives in the past 10 to 20 years. Another finding is that the middle class does not, as so often alleged, make more use of the health service (at least, the general practitioner component of it) than the working class, and, though more knowledgeable about health matters, it is just as likely to take over-the-counter medicines—in fact, it has a bigger store of them. But, as regards prescribed items, doctors are more likely to give their middle class patients than their working class ones sedatives or sleeping tablets. The study also confirms that a great deal of

prescribed medicine is wasted—either hoarded or thrown away.

Possibly the most reassuring general finding is that British people are not so hypochondriacal as is sometimes made out. They may like dosing themselves, but two-thirds of the adults in the survey rated their health as excellent or good, even though they subsequently reported an average of three symptoms in the fortnight before they were interviewed. And the health of nearly half the children in the sample was rated by their parents as excellent and of over a third as good.

Watered marsala

PRINCES UNDER THE VOLCANO

By Raleigh Trevelyan.
Macmillan. 553 pages. £6.

It is difficult to decide just what Mr Trevelyan was about in writing this book, and to judge from the nervous tone of his prologue he is not quite sure himself. Uncertainty has produced a deplorable vagueness and clumsiness in his use of language, which can be illustrated from his title. Sicily, the scene of the action, in 1841 boasted 127 princes (not to mention lesser ranks) and Etna is of course the greatest of the Italian volcanoes. Yet "Princes Under the Volcano" is not about Sicilian princes but about expatriate English mercantile families, and it centres not on Etna, or even Messina, but on Palermo, which is a hundred miles away at the other end of the island. Then the book is far too long, and confidence in Mr Trevelyan's scholarly accuracy is severely shaken by the astonishing statement that in 1836 Martin Van Buren challenged Andrew Jackson for the presidency of the United States.

"Princes" will have a certain charm for those with happy memories of the Conca d'Oro, and for admirers of "Il Gattopardo." Mr Trevelyan's merchants—Inghams, Woodhouses, Whitakers—made a great deal of money in post-Napoleonic Sicily, chiefly from the export of marsala, and their descendants spent it as leaders of Palermitan society. Consequently the book will be useful to anyone studying the background of "Il Gattopardo" or the life of its author. But it is less Lampedusa than Firbank whom Mr Trevelyan unconsciously resembles. At times, indeed, he provokes the thought that the author of "Cardinal Pirelli" was a mere social realist:

Last week we had a visit from Maude Valerie White, composer and author of popular songs, including "Home Thoughts

from Abroad," "Ye Cupids," "Soft Lesbian Airs."

The book is infested with royalty, aristocrats (English and Sicilian) and Whitakers—so many that they remain mere names, without faces or voices. A reader only gathers, vaguely, that most of the women were beauties, most of the men homosexual, and that nobody ever got married.

The trouble is in the sources. Mr Trevelyan had at his disposal the surviving business papers of Benjamin Ingham, Sicily's greatest businessman in the first half of the nineteenth century, and the diary of Mrs Tina Whitaker (1858-1957), who married Ingham's great-nephew. The two materials—iron and mother-of-pearl—simply do not match. The Ingham papers would be of considerable interest to economic historians, who have indeed begun to use them; the Whitaker diary is of little interest to anyone except as a source of mildly interesting anecdotes about the rich and famous. To shape this heterogeneity into a satisfying oneness is necessarily beyond Mr Trevelyan's art.

Nevertheless it must be admitted that, thanks to its author, this book does have one virtue: it is full of the sort of information that the writers of travel-books can use. For instance, we are told that the Sicilians believe that Anne Boleyn, no less, is paying for her sins underneath Etna, like Enceladus himself. This is just what the makers of books about places love to learn and report. In the future those of them who tackle Sicily will have reason to plunder Mr Trevelyan's pages, and to pledge his health in marsala.

Relationship unspecialised

PRESIDENT KENNEDY AND BRITAIN

By David Nunnerley.
Bodley Head. 254 pages. £2.50.

The 1000 days of John Kennedy's presidency were also the Indian summer of the special relationship between Britain and the United States. Rooted in wartime co-operation, it flowered again in 1961 and 1962 because of President Kennedy's "temperamental rapport" with Mr Harold Macmillan, then Britain's prime minister, and President Kennedy's complete confidence, based on old and close friendship, in Sir David Ormsby-Gore, then British ambassador to Washington and now Lord Harlech. Their help and advice was, as this book makes clear, invaluable to the young, untried president catapulted

Kennedy and Mac: rare rapport

into a series of explosions abroad—the Berlin wall, Cuban missiles and Congo crises. But to John Kennedy what really mattered, both at home and abroad, was the reality of power and, as he gained experience, he realised that to single Britain out was a luxury America could no longer afford.

Dr Nunnerley begins by quoting Mr Dean Acheson's contemptuous indictment of December, 1962: Britain's "attempt to play a separate power role—that is, a role apart from Europe, a role based on a special relationship with the United States . . . is about played out." The outrage this provoked in Britain only showed how right Mr Acheson was. The final proof came shortly after, with the confrontation, confused by an almost unbelievable breakdown in communications, over Skybolt, the American missile which was to have kept Britain in the nuclear club but which Washington decided was not worth having. Dr Nunnerley gives a clear, well-written and pleasantly brief account of all this and much more. His readable book is based on interviews with the best-informed people although, since many of them required anonymity, there are no direct quotations. This certainly makes the story flow more easily. But the editors should have checked the exuberance of the author's exclamation marks.

Irresistible satire

THE CALL GIRLS

By Arthur Koestler.
Hutchinson. 192 pages. £2.25.

One of Mr Koestler's characters "cannot help thinking of Juvenal. 'Why do I write satire? Say rather, how could

I help it?'" On the chosen subject of his first novel for years, an academic cross-culture symposium in the Alps in the out-of-ski-season months, Mr Koestler did not even need to load his pen. Heaven knows, there are plenty of self-satirising conferences in real life. The dialogue between the director and chairman, in which they choose a conference title, should be pinned up in every foundation board-room:

" . . . We can't call a symposium just SOS, full stop. . . . It's undignified, sensationalistic, unacademic, apocalyptic, we might as well call it 'The Last Trumpet.'"

"Or 'The Four Riders'. That would convey the idea of the circus."

"For Chris' sake be serious for a moment. How about 'Strategies for Survival?'"

"No. It sounds like computer-war-games about second strikes and overkill. Call it 'Approaches to Survival.'"

"Fine. Make it 'Scientific Approaches.'"

"I don't know what 'scientific' means. Do you?"

Nor did Mr Koestler need much imagination—only wonderful wit, intelligence and memory—to compose the professorial contributions: the brilliant puffballs of opinionated pseudo-erudition that conceal and reveal his own opinions. These are a

NINE LIES ABOUT AMERICA

Arnold Beichman

Foreword by Tom Wolfe

"A sprightly, timely book . . ."

The Economist

" . . . it vanquishes its adversaries by the force and clarity not only of its argument, but also of its style. This is the final distinction of a vitally important message to all who care about the survival of our system of life."

Kingsley Amis
in the Daily Telegraph

"It is wise, civilised, witty, erudite, succinct . . . aimed at destroying humbug, hypocrisy and hysteria. Only George Orwell could have done a better job."

Peregrine Worsthorne
in the Sunday Telegraph

£2.95

Alcove Press

59 St. Martin's Lane, London WC2N 4JS
Tel: 01-838 4194

treat. Stereotyped attitudes are exposed—never burlesqued. Mannerisms, antipathies and academic politicking are tucked into them, but the speakers read believably sensible-silly papers, bow to recognised gods (Professor Skinner, for example), and altogether show that Mr Koestler is not a novelist who needs to use tricks of characterisation to hide the fact that he knows even less about what they are discussing than his mouthpieces.

But the theme is not, in the end, politics, but people; and that, in a way, is a pity. It is not so much that the characters are lightly drawn as that they have to be, if the book is to serve its satirical purpose. Once they have been put through their hoops, providing Mr Koestler with examples of the close-to-the-president man, the protagonists in the nature-nurture battle and all the other academic performers on what he calls the call-girl circuit, we have really seen enough of them. It adds nothing, for example, to learn from one American behaviour theorist that his son is a dope addict and his daughter makes plaster casts of pop stars' phalluses; it is just a bit too obvious that the children of these symbols should be symbols themselves.

The collaborators

CHINA AND JAPAN AT WAR, 1937-45

By John Hunter Boyle.
Stanford University Press; London:
Oxford University Press. 430 pages.
£8.25.

Mr Nixon's visits to Peking and Moscow, and Mr Tanaka's to Peking, give this book a topicality the author can hardly have foreseen when he planned it. We have here a perennial reminder that there is a third power hovering over China. The postwar eclipse of Japan was not likely to endure.

Most modern historical literature about China dwells on the rise of communist power; even studies of the Nationalist regime tend to see in Chiang Kai-shek nothing more positive than wrongheaded obstruction of China's destiny. Historians have neglected the third China, of the collaborators with Japan. It led nowhere, of course, because of the death in 1944 of the third Chinese leader, Wang Ching-wei, and because of Japan's defeat in 1945; but in the late 1930s collaborationist regimes constituted an alternative in Chinese politics of equal weight with the regimes headed by Chiang and Mao.

Mr Boyle has interviewed several of

the surviving politicians of the period, both Chinese and Japanese, and has built up an unusually dispassionate record of their motives and relationships. He points out that just as in wartime France the *collabos* vastly outnumbered the *résistants*—even French communists courted the nazis in Paris—so collaborationists in south-east Asia were actually honoured after the war because they were also anti-colonialist. To Wang Ching-wei, collaboration with Japan presented itself as a traditional national policy of smiling to the one of China's three enemies (or friends) which threatened it least. On the Japanese side, although there was hesitation over policy and rivalry between army and cabinet—even the ultimate enemy was Soviet communism, the immediate and implacable one the Nationalist regime: Chiang, more than Mao at that time, blocked the road to economic development of China by Japanese interests. Wang was talked into presiding over a puppet regime (the initiative came from Tokyo) for the duration of Japan's war in south-east Asia. Premier Tanaka's ritual apology to Premier Chou for the war (to which, ironically, the latter owed his premiership) no doubt heralds a new phase in China's triangular strategy. Mao, or his successors, will forge the links with Japan which they used to revile Wang Ching-wei for contemplating.

Via Dolorosa

RUSSIAN LITERATURE UNDER LENIN AND STALIN, 1917-53

By Gleb Struve.
Routledge and Kegan Paul. 470 pages. £3.75.

This would be a most depressing book, if the author had not promised us a sequel. Dedicated to "the memory of Osip Mandelstam, Isaac Babel, Boris Pilnyak and all other Soviet writers who were 'illegally repressed' and died 'unrehabilitated'," it traces with scholarly precision the destruction of Russian literature under Stalin. The turbulent and variegated streams of Russian literature in the revolutionary years peter out in the arid monotonous desert of the Zhdanovshina, the witch hunt of Stalin's last years when the rule for the writer was "denounce or be denounced."

Although few of the pre-revolutionary writers stayed on after the revolution and fewer still sympathised with the Bolsheviks, the lively literary movements of late tsarism, symbolism

and futurism competed with new revolutionary "isms," cosmism, constructivism, *proletkult* and Agitprop poetry. Blok in his famous poems "The Twelve" and "The Scythians" and the symbolist Bely reflected the eschatological excitement of the revolution. Mayakovsky and then Esenin, both soon to commit suicide, dominated the poetic scene. Controversy was violent and bitter as the proletarian writers tried to impose a uniformity which their colleagues and Lenin's cultural dictator, Lunacharsky, rejected.

From 1925, despite a party resolution laying down that "in a class society there can be no neutral art," the so-called fellow-travellers took over literature. The result was perhaps the most interesting period of the Soviet novel with such writers as Fedin, Kaverin, Olesha, Leonov, Pilnyak and Zamyatin publishing varied and stimulating works. But it did not last. In 1929 RAPP, the Russian Association of Proletarian Writers, took over and sought to mobilise the writers as the "shock workers" and "artistic brigades" of the Five-Year Plan. Pilnyak and Zamyatin were the first to suffer denunciation for the very modern offence of having books published abroad. Pilnyak made a characteristically ironical and ambiguous apology. Zamyatin, the author of "We," the forerunner of Orwell's "1984," resigned from the writers' association declaring Solzhenitsyn-like that it was "impossible to belong to a literary organisation which albeit indirectly takes part in the persecution of a member." He managed, without sycophancy, to get permission from Stalin to emigrate; just in time, for the writers' Via Dolorosa was just beginning.

In 1932 Stalin proclaimed the obligatory style of "Socialist Realism," denouncing "rotten bourgeois formalism" and describing writers as "engineers of the human mind." Engineers can be charged with sabotage and in the late 1930s and 1940s hundreds of writers were to perish or disappear in camps and prisons. The war, with the encouragement of more spontaneous patriotic writing, was a brief respite on the road to Calvary. By the death of Stalin in 1953 the destruction of Russian literature was, to all outward appearances, complete. But the signs of resurrection were there beneath the surface too.

From the earliest days of the revolution the more perceptive writers recognised the threat to their freedom

—"not," as Alexander Blok put it just before he died, "the childish freedom of being a liberal," but "the freedom of creation, the secret freedom. And the poet dies because he can no longer breathe. Life has lost its meaning." Similarly Zamyatin—"Heretics are the only (bitter) medicine against the entropy of the human mind"—and the Serapion brothers, some of the most lively young writers of the 1920s, demanded only one thing:

... that the tone be not false. That we may believe in the work whatever its colour.

It will be a long time before any Russian writer can again publish such heresies in Russia. But as Mr Struve shows, the stream of Russian literature flowed on underground later to surface in the great works to be published abroad by Pasternak, Akhmatova and Solzhenitsyn, whose Nobel prize lecture is a splendid testament to those who perished in Stalin's camps. The author's sequel will be eagerly awaited. Meanwhile, the present book, although with its wealth of detail it does not make easy reading, is an indispensable work of reference, worthy in its combination of devotion and objectivity of a place alongside Mr Walter Kolarz's "Religion in the Soviet Union." The publishers are to be congratulated on issuing such a work of scholarship at an unfashionably reasonable price.

Short list

Inside Number Ten by Marcia Williams (Weidenfeld and Nicolson, £3.95). Mrs Williams, who was for many years Mr Wilson's secretary, was the most influential personal political adviser any British prime minister has had since 1945 with the possible exception of the late Lord Egremont. She was not liked by many in the civil service (largely because her influence was so feared); and in this book she indicates her own lack of

Marcia, with Balogh and Kaldor

enthusiasm for some of the officials who advised the last Labour government. Neither are altogether fair to the other. Certainly Mrs Williams is still underestimated by many in her own party. She had better judgment than anyone else specially recruited into No. 10 or into the cabinet office during the Labour government's period of office. Mrs Williams is rather charitable in her judgments on ex-colleagues. It is just possible that if she tries her hand at another book after Mr Wilson has retired from politics, the next may be rather rougher.

The United States and the Industrial World by William Diebold (Pall Mall, £5.75). This is a scholarly, thoughtful and detailed study of the foreign economic policy of the United States—at a time when the policy that America put together during and just after the second world war (in a form that was "reasonably clear-cut and fairly consistent") is fading away; and when there might be some danger that an unequalled 25-year period of international economic co-operation could be replaced by an era of economic nationalism. Mr Diebold hopes, and on balance believes, that there has become engrained a "rationality in the pursuit of ends and enlightened self-interest," but he is under no delusion about the strength of the forces working the other way.

Moshe Dayan; The Soldier, the Man, the Legend by Shabtai Tevet (Weidenfeld and Nicolson, £3.95). This is just about as detached a biography as one could expect of Israel's famous general from an Israeli journalist and war correspondent while his subject is not only still very much alive but minister of defence. It is a serious piece of work, well-researched and crisply written, with clear accounts of his campaigns and only occasional lapses into sentiment. The story of Dayan's early life is fascinating.

The International Who's Who, 1972-73 (Europa Publications, £10). Only slightly more expensive than last year's, this new edition must still be one of the most useful reference books for anyone needing quick and authoritative information on the leading personalities of the day. A large number of Japanese businessmen make their appearance among the 1,000 new entries and the editors have been quick to include such VIPs as Huang Hua, China's United Nations representative, and the President of Bangladesh, Abu Sayeed Chowdhury.

CHATHAM HOUSE JOURNALS

International Affairs

This journal contains articles on matters of broad international interest and an extensive book section reviewing a wide selection of British and foreign publications on international affairs. Published quarterly.

The OCTOBER issue includes:
Sources of Strain in Transatlantic Relations

by Miriam Camps

Britain in Europe: the Impact on Foreign Policy

by Kenneth Younger

The United States and Vietnam 1945-1965 Part II

by Geoffrey Warner

Chinese Society and Chinese Foreign Policy

by Wang Gungwu

Quarterly £3.50 pa post free
(USA and Canada \$10.00)

The World Today

Authoritative and objective, this journal not only deals with international problems but also includes articles on internal political and economic conditions in individual countries, written by authors with first-hand knowledge. Published monthly.

The OCTOBER issue includes:
British Ugandans

by J. E. S. Fawcett

The political economics of European monetary integration

by Fred Hirsch

America's presidential election

by Nancy Balfour

Prospects for Soviet dissidents

by David Bonavia

Soviet maritime policy in legal perspective

by W. E. Butler

Monthly £3.25 pa post free
(USA and Canada \$10.00)

Business Brief

Propping up Europe's regions

Britain's immediate problem in Europe, at the summit in Paris and after, is to get a proper European regional policy. Britain needs help for its rundown industrial areas, and creating new jobs on Tyneside and in the west of Scotland would be the most useful way of sweetening entry to the common market. Besides, such a policy would help to recoup some of the foreign exchange cost of paying for the common agricultural policy. Neither of these arguments by themselves are likely to pull much weight. But the EEC's ambitions for economic and monetary union (Emu) could provide a lever.

The Hague summit of the Six nearly three years ago set a target for the complete union of the EEC currencies by 1980, to be achieved in stages. Europe is in the middle of the first troublesome stage this year, with the second coming in 1974. In a full economic union capital moves easily to the more favoured areas, leaving such unprofitable places as the west of Scotland, South Wales, West Virginia and Northern Indiana.

So when the British, Irish and Italian prime ministers left for the summit, all three were determined to bargain over Emu in return for a serious crack at setting up a European regional policy. The Italians submitted a rude memorandum to the council of ministers last summer, lambasting the failure of the EEC to deal with the problems of the Mezzogiorno, but no action followed. The commission did submit some new ideas on regional policy last May, such as a regional development fund to provide grants and interest subsidies for regional investment, which would be run by a committee staffed by the commission and individual governments. It also wants to exploit the agricultural fund as an instrument of regional policy, using money from the fund to attract new industry to poor farming regions.

The commission suggested a budget of \$50m a year for each of these; but this was peanuts compared with the \$1,500m or so Britain alone spends on regional aid now. Even so, when the council discussed the plans, the French and the Germans opposed a fund from which grants could be made direct to the regions and insisted that what money there was be used merely to reimburse national governments for what they had spent. If this is allowed to happen, every government will demand back as much money as it has put in, and the new fund will get no further than the old Social Fund (see below). The French also wanted the regional fund to be administered by the European Investment Bank because they are not keen to see any more power given to the commission. But to most of the others the idea of having bankers take major political decisions is even more distasteful than letting bureaucrats do the job.

Industrial slums

The emphasis in any emerging EEC regional policy is still on helping poor agricultural rather than declining industrial regions, which are not really a problem yet to the present Six. Under the commission's present plan not only the agricultural but also the new regional fund could be used to channel money to needy agricultural areas. Outside some rural areas in Northern Ireland, this would be of virtually no use to Britain. However, Ireland would benefit considerably: the proportion of the population in the west that works on the land is even higher than that of farmworkers in the south of Italy.

Britain is in a difficult position because, although unemployment in some British regions is among the highest in the EEC, in terms of income per head its regions are not too impoverished. Scotland is still nearly twice as rich as southern

Borschette's in charge now; Thomson next?

Italy, so Britain may have trouble convincing the rest of Europe that more money is needed in, say, north-east England than in either the Mezzogiorno or western Ireland. Britain can argue that because one fund already exists specifically to help the agricultural regions, the other should be used exclusively to help the declining industrial ones. Britain will certainly be pressing for a much larger regional fund than the commission has in mind, and for a date to be set for the introduction of a regional policy. Both the French and the Germans are worried that a European regional policy might cost them a lot of money, and will therefore be reluctant to go along with any elaborate British ideas. But they realise that they will have to make some concessions, if only as a quid pro quo on further progress towards monetary union.

The EEC's record on regional policy is not striking. The European Investment Bank has provided large loans for regional development. Among other projects, it has financed much of the autostrada network in southern Italy. But as these loans have been made at commercial interest rates, they do not readily fall into the aid category.

The European Coal and Steel Community has given substantial aid to such regions as southern Belgium and northern France, where coalmining has run down rapidly. The money has been used to compensate redundant workers, rehouse them and attract new investment. This policy has been outstandingly successful, and could serve as a model for future regional policy.

The Social Fund is designed

to help unemployed workers, mainly by financing training schemes. Until this year, it merely reimbursed member governments for part of what they had already spent. Now that it has its independent budget of \$50m a year, which the commission hopes to raise to \$500m by 1975, it should be able to intervene directly, politics permitting. Money from the fund can be used to help workers either in depressed areas or in industries which are suffering under the impact of other EEC policies. But its effects will probably continue to be fairly limited. The British are not too enthusiastic about it. The fund is likely to be administered on a basis that treats each declining industry as a separate emergency, calling for redundancy and training schemes tailored to the need of the moment—which is roughly what the French do now—while Britain prefers to operate redundancy and retraining schemes that are standard for all parts of the country. The Department of Employment, working out how much money it ought to be able to claim back from the EEC, is not at the moment planning to set up new projects specially to qualify for aid.

Finally, Feoga, the agriculture fund, has been used to help farmers in depressed regions.

The commission has done its best to prevent countries from outbidding one another in an attempt to attract new investment to their sick regions. Last year, the council of ministers agreed on a code of practice for regional aids which laid down that investment incentives in the "central" areas of the EEC should not exceed 20 per cent of the value of any investment.

The Mezzogiorno, south-western France and Germany's eastern border region were excluded from this rule. The ceiling did not matter very much because, France and Italy apart, most countries had been keeping inside it anyway. What did matter was the general agreement that if there was no regional problem there was no justification for aid of any kind.

The commission, which has the job of enforcing this policy, has clashed with the Belgians, the Germans and the French who have tried to introduce investment incentives in some of their prosperous areas. The Belgian government planned in 1971 to give aid to 41 out of the country's 43 regions, mainly because it was bending over backwards not to discriminate between the Flemish- and French-speaking areas. The commission decided that the Belgians were justified only in giving help to 28 regions, and got the plans modified.

The Germans wanted to give aid to a depressed patch of the Ruhr, but the commission queried this on the ground that unemployment in the area as a whole was trivial. The Germans did not give way, so the commission has for the first time applied to the European Court of Justice to get its policy enforced. The French came under fire because they amended their regional aids without explaining why. Talks with them are still going on.

For Britain, agreement has not yet been reached on which areas of the country fall within the definition of "central," but it may be the whole of England and Wales. The 20% ceiling will not be a big problem. Whitehall calculates that existing incentives in most regions add up to less than that. But two other features of British regional policy will come under sharp attack from the commission. First, the new selective aids under the Industry Act are not, in the commission's jargon, "transparent"; ie, they are not clear and predictable. The British Government's first use of these powers has been to induce an American company to set up in Manchester rather than in Belgium. If the British want to get positive help for their regions they will have to accept restraints on this kind of poaching.

Second, Britain's regional

employment premium is considered unacceptable in Brussels. This measure effectively cuts wage costs in the regions and has been a success in encouraging employment. The Government is committed to phasing it out by 1974, but is having second thoughts. M. Albert Borschette, the present commissioner in charge of regional policy, has publicly disapproved of the premium, claiming that it is a production subsidy rather than an investment subsidy. The commission's view is that aid to get industry into an area is permissible, but permanent subsidies to uneconomic industries to go on producing there are not. Yet in parts of Scotland and southern Italy, where it will always be more costly to operate than in the centre of Europe, permanent subsidies may be the only alternative to depopulation or high unemployment.

Free marketeers vs interventionists

If Britain's new commissioner, Mr George Thomson, gets the regional portfolio in Brussels, he should be able to press the British view more effectively. There is a conflict at the moment within the commission's regional policy department between the free marketeers who run the negative, no-poaching side of policy and the more interventionist-minded officials, who are working on the positive side. The tide now seems to be running in favour of the interventionists.

When the British sought tacit approval from the commission for the Industry Act, they discussed their plans only with the interventionists, who had little quarrel with the act. Now that the Queen has signed the Treaty of Accession, the free marketeers are likely to become more vociferous in condemning Britain's selective intervention. Mr Chris Chataway, the Minister for Industrial Development, may have to overhaul the Industry Act to fit in with a European framework.

The eventual aim of a European regional policy will be the gradual replacement of aid financed nationally by aid financed at the European level. Rich countries with few regional problems, like Germany and Holland, will have to accept that such a policy will

be very costly but that it is the price of monetary union. The commission's present plans look reasonable, but the projected budgets for the first five years are hopelessly inadequate. At \$50m a year, the European regional budget will be about 30 times smaller than the current British regional budget alone. The aim should be to raise the European regional budget to something like \$1 billion by 1975.

At the moment, the European fund recognises four kinds of depressed area: agricultural, industrial, border and peripheral. But since nearly all the peripheral areas are agricultural, and the border area is purely a German political problem, the

list can be reduced to two: agricultural and industrial. It seems more sensible either to incorporate the aid under the agricultural fund into the main regional fund, or to exclude agricultural aid from the main fund entirely, concentrating on the declining industrial regions. Over the next decade other European countries may have to grapple with British-style regional problems in industrial areas, and it would help them then if these had high priority. The British should oppose the French and German view that the regional fund should merely reimburse national governments. European aid should be a genuine addition to national aid.

One of our projects will be music to your ears.

National and Grindlays Bank Group are constantly lending money all over the world—either from their own resources, or as leaders or participants in syndicates.

One recent loan, for example, was to a leading American piano manufacturer who raised \$10 million and we helped.

Others have been arranged in places as far apart as Japan, Iran and South America.

For projects as diverse as new housing, roads, electrical equipment for atomic power generation and aircraft leasing.

The moral: if you have a money problem, whether it's to do with pianos or process plants, National and Grindlays are willing to listen, and ready to help.

We have offices in Europe, Africa, India, Pakistan, Bangladesh and the Middle and Far East. We offer a full range of international banking services.

Try us soon.

BUSINESS

No rush to volunteer

Wage inflation is now running at 17 per cent a year, but the unions are still split on the need for any wage restraint at all. Mr Jack Jones, however, may have got the message

The Government's proponents of a voluntary incomes policy should be grateful that Mr Frank Chapple is delaying his plans for an electricity strike for 10 days or so. On Wednesday the Electricity Council refused to make any pay offer and the union threatened to strike. But the union executive will not meet as a whole until next week, so an official strike will not be called before the next round of talks at No. 10.

The council workers who want 43 per cent were told on Thursday that they must wait, too, and the police (who want 20 per cent) got the same message on Tuesday. The police are patient men and the council workers may be ready to wait a bit, but the electricians are in a hurry. If they are going to strike they want to do so before the weather and the public grow cold.

The figures published on Wednesday (see page 92), showing that wage inflation has rocketed by an unbelievable 17 per cent in a year, mean that the wage issue cannot be ducked or postponed any more. But the trade unions have still not admitted that there is a major crisis. Many of them are happy to believe arguments (like Mr Powell's) that wages do not cause inflation. The TUC itself published a paper this week which argued that British wages were rising no faster than abroad, but prices were; so that blame should be put on rising profits.

The majority of the TUC still seems hostile to any kind of incomes policy. Partly this is a result of the Industrial Relations Act and other Conservative measures, but the Labour party, which has promised to repeal these, has not been able either to extract even an agreement in principle from the TUC that an incomes policy is necessary. The unions fear that any anti-inflationary

package will restrain wages more than prices, and they are convinced that this happened under Mr Wilson.

They also suspect that an effective incomes policy might make trade union leaders redundant. The main job of an individual union leader is to improve the wages of his members, and this will not be necessary if wages are determined jointly by the Government, TUC and CBI. If individual unions cannot influence wages, union membership may begin to drop. Indeed, the non-unionised may find it easier to evade an incomes policy. Ever since 1900, trade union membership has grown fastest when inflation was high.

Only three members of the TUC general council are so opposed to any wages deal that they want to call off any talks with the Government: Mr Alan Sapper (filmworkers), Mr George Doughty (engineers) and Mr Richard Briginshaw (printers). Mr Jones and Mr Hugh Scanlon have repeatedly condemned the idea of an incomes policy on broad ideological grounds, but Mr Jones's position is changing fast. At the Chequers meeting this week he came up with the unexpected suggestion that instead of discussing an increase in the basic wage rate it might be better to think in terms of a flat-rate bonus to be tucked into the wage packet after the week's pay had been made up. This would prevent overtime and other bonuses from being calculated on a basic wage rate that had already been increased by whatever sum is finally agreed (if one ever is), and it obviously hits Mr Scanlon's engineers, whose earnings consist of a complicated series of additions and percentages on top of their basic rate. The Government itself had calculated that the result of all this would be to turn its original £2

Still militant Scanlon (engineers), Daly (miners), Fisher (dustmen), Jenkins (staffs). Doubtful Jones (transport), Chapple (electricians)

Mainly moderate Cooper (general), Allen (shops), Anderson (local govt), Crawford (mines), Jackson (post), Britton (teachers)

offer into something more like £2.60, and to some engineers it would actually have meant £3-£4 in all.

Mr Jones's suggestion opens the door to a higher offer by the Government without loss of face and without contributing too much to inflation at the same time. Even more significant, it suggests that Mr Jones is beginning to be ready to think seriously about some form of wage restraint, and to side with the moderates. Several other union leaders, such as Mr Dan McGarvey (boilermakers), would only do that if the Government conceded their very stiff terms.

The rest of the TUC is more willing to consider a deal, but is worried by practical problems. There are those unions who have claims pending in the next three months and fear that any deal will mean that their members will be worse off than the builders, the engineers or the busmen who got big wage rises during the summer. Among these are the electricians, the council workers, the farmworkers, the miners and the teachers. Others are afraid that if they agree to wage restraint they will lose control to the militants in their union. Mr George Smith of the construction workers, a moderate, found himself outflanked by his militants during the building strike and Mr Jones had the same trouble during the dock strike. Other union leaders are worried that the same thing could happen to them, including, in particular, Mr Chapple.

The better-paid workers fear wage restraint will narrow differentials (which is inevitable if the low-paid are to be paid more) and these include the technical and managerial staffs and the railway drivers, both of whom may be more inclined to flout a deal agreed by the TUC because they have no representatives on the general council. They also include the teachers and the civil service unions. All the public sector unions fear that any deal will bear most heavily on them, since the public sector is the easiest for the Government to enforce wage restraint: in theory there is less room for evasive productivity deals which helped much of private industry to circumvent the Wilson wage restraint policies, although after Lord Wilberforce went to work this year and last it might be hard to believe so.

These practical problems give almost every union leader on the general council some reason to want to avoid a deal with Mr Heath. The only leaders who have a clear individual reason for backing a deal are those who represent low-paid workers in under-unionised industries, such as Mr Alf Allen of the shopworkers or Mr Reg Bottini of the farmworkers. Other moderate unions tend to be those who do not enjoy very powerful

bargaining positions (ie, cannot do much damage by going on strike), such as the postmen, the local government officers, the clerical workers and Lord Cooper's all-important General and Municipal Workers' Union.

Lord Cooper will soon be retiring, but the other two GMWU men on the TUC general council are likely to continue his long record of moderation. Mr Alex Donnet was brave enough to say at the TUC at Brighton that double-figure wage increases were madness if they were not accompanied by increased productivity.

The rough TUC arithmetic at the moment is that there are about 11 men on the general council who are ready for a deal; 14 who have serious doubts but would agree if the terms were right; 10 who seem likely to oppose anything that Mr Heath might be ready to consider; and 3 who will oppose any deal on principle. The critical men, who might swallow the principle but not the terms, are the ones Mr Heath has to win over, and to do that he must have Mr Jones and, if possible, Mr Scanlon on his side.

Yet even if an agreement is reached at No. 10 next Thursday, this will not necessarily end the prospect of power cuts. Mr Chapple is moving towards the moderate camp, but remains more afraid of his own militants than he is of the Government and the TUC, so it cannot be assumed that he would go along automatically with any agreement the TUC struck. One by-product of the Industrial Relations Act has been to make a strike in the power stations legal, which previously it was not.

There are three other major unions in the power industry besides Mr Chapple's, even before counting the various staff associations: the Transport and General Workers, the Amalgamated Union of Engineering Workers and the General and Municipal Workers. If any of these backed a deal, they might find it awkward then to turn round and back an electricity strike. But Mr Chapple's men are numerous enough to shut the power stations down on their own with less chance this time that the 30,000 electrical engineers who kept the turbines running last time would do so again.

The electrical engineers, in fact, have grown more militant in the past two years and are at this moment getting hot under their white collars, threatening a one-day strike on Thursday, although the power stations could probably get by without them for 24 hours. Rumbling disturbances of this sort, with overtime bans and go-slows that just stop short of disrupting the economy to a degree that would qualify for a cooling-off order from the National Industrial Relations Court, are what the Government has to prepare for over the next few weeks.

What shall we do with IBM?

The American Justice Department has called once more for the break-up of International Business Machines, but its nerve could be weakening again

The Justice Department's failure to recommend any specific line of action annoyed the judge who is presiding over this particular anti-trust case and started a fresh round of speculation about there having been political pressure from Washington to slow it up. The Nixon Administration is already thought to be soft on business—one of many illustrations being the settlement highly favourable to the International Telegraph and Telephone Company in another anti-trust case.

But the Justice Department deserves a little sympathy. IBM is a complex company and computer-making is a complex industry; while almost everyone agrees that IBM should be broken up, no one is particularly forthcoming with ideas about how to go about it. To swing in, Lizzie Borden-style, is all very well, but who picks up the bits? After six years of studying it, the Justice Department is, blushing, as much in the dark as ever. Also, it has complicated matters for itself by introducing some fresh issues, the most important of which is the inclusion of IBM's overseas business in the lawsuit.

IBM's public defenders point to its profitability, efficiency and service to customers, but not all these arguments stand up well under scrutiny. No one will contest that IBM is one of the most profitable large industrial corporations the world has yet seen, and this is all the more remarkable in that it operates in an area of high technology, where losers tend to be more numerous than winners. Efficiency is another matter, depending on whether you mean IBM is efficient in reaching its own goals or efficient in helping its customers attain theirs. The company's goals are high sales and high profits, and it achieves these all right: \$8 billion of sales last year and \$1 billion of profits on them, after tax. But when it comes to the customers something seems to be wrong, for business firms, which make up the largest group of computer buyers, are woefully inefficient in using the expensive machines that IBM and the other computer companies sell to them.

The manufacturers, including IBM, predictably blame the customers for continually overestimating what computers can do and for failing to allow for the changes that must be made in their organisations before computers can usually be installed. Computer consultants are full of tales about getting the sack for telling a customer that the computer scheme on which he is about to spend millions of pounds is an unmitigated disaster. Salesmen for IBM and other manufacturers cannot be blamed for exploiting their clients' naivety in the process of notching up some tidy commissions for themselves. The trouble is that the salesmen sometimes do not only go along with their customers' illusions: they have had much to do with creating them in the first place. IBM is probably no more to blame for this than other manufacturers: it just happens to be more successful at it, as its sales figures attest (by value, IBM in 1971 won 57.4 per cent

of the market for new computers in America and 45.50 per cent of the market outside it, according to EDP Europa Report, one of the industry's newsletters).

Customers are oversold because computers are not yet capable of doing many of the things that companies need to have done, or at least are not capable of doing them reliably and economically. Much more work is needed on the design of computers and the way they are programmed. This is where IBM's near-world monopoly becomes dangerous. Huge amounts of money need to be spent on research and development to explore the many possible solutions to the computer's problems. Yet probably only IBM, with an annual research and development budget of roughly \$500m, has enough money to spend. In fact, it probably has several times more than it can properly make use of. But while IBM has money to burn for research, every other computer company is scratching around for pennies, and has nothing like the funds that a full research programme requires. Honeywell, the second largest company in the industry, spends only \$50m annually on computer research and development. Britain's International Computers Limited is even worse off. Its annual research budget is just \$41m and it has needed help from the British Government to maintain even this rate of expenditure. It is estimated that ICL will need \$250m to develop a new range of computers.

Consequently the technical choices made at IBM exert a strong influence over the decisions made by every other computer company which must spend much of the budget simply keeping up with IBM, never mind investigating fresh paths. IBM's competitors are also inhibited from striking out on their own by another aspect of the IBM monopoly. If they come up with computer systems radically different from IBM's for a market that has largely been conditioned and educated—some would say brainwashed—by IBM's salesmanship they are going to have a harder time selling the new idea than if they had copied IBM designs. The outcome is less progress in computer design and engineering than there probably should be. Occasionally one manufacturer does break for freedom; the current example is Burroughs, which in the past few years has carved out a distinctive share of the market with computers that are utterly unlike anything made by IBM. But it was hard sledding for a long time, as every Burroughs executive knows.

When it comes to customer service the situation is not as simple as it might first appear. IBM's service to customers is probably better than any other company's but the general standard is not that high. IBM may be the best there is but that still leaves it a long way from ideal, and customers often stay with it out of fear of what might happen if they came to depend on another company that could decide to get out of the business well before its service contract had run out (this has happened). IBM's very size is partly responsible for the

quality of service it gives and if some of its operations were hived off to some of its competitors, making them bigger, then their service might improve too.

It is no wonder, in these conditions, that the Justice Department is having trouble recommending what to do with IBM. Past American anti-trust actions offer little guidance because their situations were so different. Still, after six years of study you would expect the Justice Department to have worked out some plan of attack.

Other men's Enochs

What happens to industry when politicians succeed in banning immigrants and foreign workers is happening now in Switzerland

At Zürich's newest hotel, the Nova Park, guests shift their own luggage, using a cart labelled "Don't tip me." This, in a country renowned for smothering its guests with hospitality, shows the state to which the Swiss economy is now being reduced by the policy of "stabilising" the number of foreign workers. The hotel industry is one of its main victims; one out of every six jobs is said to be vacant, and the hotels could use 30,000 more foreign workers immediately if only they could get in. But an even greater sufferer is manufacturing. The official figures show that all the unemployment in Switzerland could be accommodated on a couple of buses; the few thousand job vacancies listed are meaningless, since employers do not bother to register at the labour exchanges vacant jobs they know cannot be filled. Between 50,000 and 100,000 additional foreigners, on a conservative estimate, could probably find jobs in industry if the authorities would let them in.

This the authorities dare not do. During the industrial boom of the early 1960s Switzerland followed a liberal immigration policy and 112,836 foreigners arrived in 1961 alone; now, just over 1m foreigners account for 16 per cent of the population, a figure unequalled (and unlikely to be tolerated) in any other country. Retribution came at the end of the decade. Switzerland's Enoch Powell, Herr James Schwarzenbach, campaigned, single-minded and virtually single-handed, to call a halt. The referendum he instigated showed that he was supported by a dangerously large minority of the population. Now he plans another referendum which may reveal that his minority has become a majority.

A sizeable chunk of the Swiss population is fed up with having to compete with Italians, Spaniards, Yugoslavs and Turks for lower-priced housing, hospital beds, seats on the trains and trams; and with classroom teaching time being hogged by large numbers of foreign youngsters who often do not know the local language. So now Switzerland is committed to stabilising the foreign element in the population. The number of foreigners is actually dropping. Only 40,000 new residence permits are issued every year, and every year twice that many foreigners leave Switzerland.

The number with work permits in June was 611,600, compared with 624,400 a year earlier and a peak of 720,901 in 1964. In particular, the proportion of Italians

Small, medium and large computers are almost three independent markets, so these operations could be split up into separate companies. Or IBM's activities could be divided according to the different industries they serve. Customers might then be offered products better tailored to their particular applications. One trouble with the present set-up is that it encourages IBM to produce general-purpose computers for customers whose interests have not that much in common.

is declining, having fallen from 60 per cent of the foreign labour force in 1969 to under half in June. It is the Italians whose religious and social habits grate most on the two-thirds majority of German-speaking Swiss.

Swiss industry is feeling the pinch. There are empty work bays at big metal and machinery firms, such as Brown-Boveri and Sulzer, and even premium pay rates will not persuade people to do dirty foundry work. The tourist industry admits to having lowered standards by charging for room service (where room service is still provided) and by replacing the boot boy with a shoe-cleaning machine and the concierge with an automatic vending machine. Industry accepts the political expediency of stabilisation. But it needs foreigners, because the Swiss themselves can afford to choose, in an over-employed society, what work they do and they have been deserting industry in droves for white-collar jobs. Nine out of every 10 school-leavers opt for jobs in service industries.

Obviously, a large number of Swiss industries have already learned to live with a smaller labour force, and for this reason the government's gamble in setting a ceiling on foreign labour will probably pay off. However, much grief might have been avoided had the authorities acted earlier by, say, imposing a head tax on foreign workers early in the 1960s—paid by employers and spent on infrastructure. This idea has since been picked up by Herr Schwarzenbach's followers. Had action been taken earlier, industry would have been able to rationalise gradually, without the present panic.

Even under panic conditions, a good deal has been done. The 16 per cent drop in employment in the textile industry since 1966 has been met by increasing capital investment fivefold, up to the present level of £50,000 a head. British supporters of a tight curb on immigration might seize on this as a way of stimulating investment in new plant and machinery in British factories too. But would they feel quite the same about the switch of production abroad? Swiss textiles are going to countries like Spain and Portugal; other industries are investing heavily in Italy, Greece, Singapore and elsewhere. Giants like Nestlé, Ciba-Geigy and Brown-Boveri have always done this, but now medium-sized businesses are doing it as well.

The more Taylor Woodrow you use, the less it costs.

The new pharmaceutical plant for Beecham Pharmaceuticals (Pte.) Ltd. in Singapore.

The new semi-synthetic penicillin plant for the Beecham Group in Singapore is a prime example of the big advantage of using Taylor Woodrow's integrated design and construction service.

The £4½m project was completed within 18 months of receiving the Client's design brief and despite continually rising prices and increasingly stringent local building regulations, within budget too.

The reason for this remarkable achievement is simply that using Taylor Woodrow for the whole operation allows significant savings in time and money to be made. Close co-operation with the Client from the outset on process plant design, co-ordination in the worldwide purchase of specialist plant and its subsequent shipment, local sub-contracting, and speed of commencement of the operation through to mechanical commissioning—all are important factors made possible by the use of one designer/contractor team.

Consider Taylor Woodrow teamwork for your next project; you will find that the more of our resources you use, the less it ultimately costs in time and money.

TAYLOR WOODROW

The world-wide team of engineers and constructors

If you would like to know more about us, please contact Robert G. Smith, Taylor Woodrow Construction Limited, 345 Ruislip Road, Southall, Middlesex (Tel: 01-578 2366. Telex: 24428); or for overseas, Emil R. S. Coppock, Taylor Woodrow International Limited, Western House, Western Avenue, Ealing W5 1EU (Tel: 997 6641. Telex: 23503).

Bring us a problem.

How do you use your bank? If you tend to sort out your company's financial problems, and then go to the bank with your solution, you either have the wrong bank, or you're making the wrong use of it.

Telling your bank manager what you want is a bit like telling your doctor which prescription to write.

Your Barclays manager is much more at home if you bring him the problem rather than the solution. He is a businessman who specialises in finance, and however expert you are he will be happy to suggest a dozen different answers—and recommend the one (or ones) he thinks best. (Depending on what business decision you have made, your problems could be solved by leasing or factoring; or by an insurance deal; or by export expertise; or adjusting your cash flow situation; or many other ways, all of them at your service through your Barclays manager.)

Most bank managers do not see themselves as innovators, or problem-solvers. How can we be so sure that, when you meet a Barclays manager, he will be different? There are three reasons:

1. Recruitment We actually look for imagination and inventiveness

right from the start—as well as the ambition to become a highly paid businessman.

2. Training Good managers evolve with experience. True, but even so, every technical business needs training, and we are good at it. Even after becoming managers our people are not at all ashamed to go back for training courses. Your Barclays manager has so many different services at his command (142 at the last count!), and until he knows his way around them all he can't deploy and exploit them properly for you, can he?

3. Example Your Barclays manager works for the company which initiated Barclaycard, and launched it in a massive risk-taking operation, which runs one of the most successful banks in America; which has been first with a whole string of personal banking services like Barclaycash; which is the only bank to have received the Queen's Award to Industry. Innovation is in Barclays bloodstream.

That's why we look on any financial problem as a real challenge: a challenge for us to turn it into an opportunity for you. It's good business, and it can bring profitable results. And that, after all, is what both of us are in business for.

BARCLAYS

Banking means Barclays

We'll turn it into an opportunity.

The oldest Bank associated to the Province of Angola and also in full operation in Metropolitan Portugal.

A full range of services is available to businessmen interested in trading with either Territory.

How good is your judgement?

The success of any responsible person in business or industry depends on the confidence others have in his judgement.

Which in turn depends to a large extent upon how reliably he keeps himself informed about what is going on in the world.

Most people with responsible positions in life turn to The Economist each week for a balanced and authoritative interpretation of events as well as for the facts.

If you haven't been reading The Economist regularly you will be surprised by the width and depth of its coverage of everything from international affairs and their effect on business to the whole business of living in general.

Make sure of your personal copy of The Economist by taking out a subscription now.

It's good Newsweek!

**1973 Atlantic Rate Base
reaches 200,000 mark.**

1972 1st half ABC Statements show a substantial circulation bonus and this healthy growth will continue in 1973 - with no reduction of readership quality. Newsweek International announces a worldwide rate base of **375,000** effective January 1, 1973 - up 4.2% over 1972.

Newsweek's circulation objective continues to be the achievement of steady quality growth in areas of the world which are especially important to the marketing strategies of multi-national advertisers. For example:

Rate Base

Edition	1972	1973	% Increase
Atlantic	190,000	200,000	+ 5.3
Europe	140,000	153,000	+ 9.3
Continent	108,000	116,000	+ 7.4
Scandinavia	20,000	22,000	+10.0
British Isles	32,000	37,000	+15.6
Japan	40,000	45,000	+12.5
Asia (ex Military)	106,000	116,000	+ 9.4
Malsinghong	15,000	22,000	+46.7

Newsweek International should be considered as an essential element in your media planning for 1973.

**Newsweek

Hoechst

keeps thinking ahead

Hoechst research beats the weather

Outdoor events are very much affected by the caprices of the weather. Rain-sodden sites, with the bedraggled participants about as enthusiastic as fifth formers during a history lesson, have hardly ever given rise to memorable occasions. Not infrequently, the event has had to be cancelled altogether, hardly to the delight of the organisers.

In collaboration with famous architects, Hoechst research has now developed a temporary cover that renders outdoor activities independent of the weather. Sports arenas, for example, holding up to 100,000 spectators, or swimming pools, can be protected in this way. The flexible cover is a coated fabric in Trevira high tenacity, a material of extreme strength. Rot-proof and tear-resistant and yet light-permeable and so flexible that it can be erected quickly in bad weather. A new form of architecture has arrived. Trevira high tenacity takes sports arenas under its wings in all weathers to the benefit of all sports lovers.

Ahead through systems thinking

Trevira high tenacity for large scale covers – the result of Hoechst knowledge and experience in many fields: man-made fibres where Hoechst has an immense amount of know-how in production and processing; plastics where Hoechst is equally expert in manufacturing and laminating techniques. Thus, Hoechst is the forward-looking partner of architects and the building industry. Systems thinking is the Hoechst strategy. Research, development and product experience in many areas are concentrated on the solution of specific problems. Interdisciplinary thinking, systems analysis and systems technique to bring success.

To keep thinking ahead – to solve the problems of today and tomorrow – Hoechst employs more than 10,300 people in research and development with a research

investment this year of more than £60 million.

Hoechst in Britain

Hoechst UK Ltd is an independent company within the international Hoechst group. Its British staff know their country, its problems, its people; and they realise where Hoechst know-how can inject into Britain's economy the experience gained by the parent company during more than a century in chemistry.

In textiles, for example, where 'Jersey Man', evolved in collaboration with leading UK knitters and based on Trevira Jersey cloths, is introducing an entirely new concept into male fashion. In agriculture, where Flavomycin, the non-therapeutic growth-promoter, is helping to raise the weight gain of chickens, turkeys, pigs and calves for the same amount of feedstuffs. In resins, where Mowilith, 'the raw materials with a thousand uses', is helping to preserve and restore works of art such as the priceless lace and gobelins in Karen Finch's Ealing workshop. Or in pharmaceuticals, where construction has recently begun of a new research centre for nuclear medicine to develop new diagnostic techniques and to speed the evaluation of new preparations. Whether your problems are in plastics or paint raw materials, dyestuffs or pigments, fibres or pharmaceuticals, agrochemicals or films, graphite products or offset printing plates, Hoechst UK can help you promptly and efficiently.

BUSINESS

International

Before the storm?

It is playtime again for foreign exchange dealers. It only needed a top-level international meeting for the starting signal to be given. On Thursday, as the great men gathered for the opening of the common market summit in Paris, the pound fell out of bed and dropped through its psychological floor of \$2.40, the rate that, rightly or wrongly, most observers believed Mr Heath has had in mind for his eventual refixing. At one point it went as low as \$2.39, but closed above its worst at \$2.39½, after the Bank of England had come in to steady the rate, although it was not thought to have been buying heavily.

That sterling broke through the \$2.40 mark even before the Chequers saga was over demonstrated how vulnerable it remains, though rumours, almost certainly ill-founded, that the pound would be repegged at the summit gave the final jolt: figures of \$2.20-\$2.30 were being bandied about. Major sellers on Thursday were thought to be the Scandinavians, who tend to use the London market as a substitute for broad domestic money markets. A good deal of that money may have simply

gone home. But some funds were also flowing into Germany, partly reflecting the pull of hardening interest rates there, partly the widely held belief that the D-mark is always a safe bet. German bankers, however, reject with one voice any argument that their currency is undervalued; they say that the mark will become a weak currency if Herr Brandt is re-elected.

Although probably not much money got into Tokyo, that the yen will be upvalued, sooner or later, is taken as a fact of life. European bankers reckon that the Bank of Japan has recently been picking up something like \$40m-\$50m a day (or \$1 billion a month) on the Tokyo market in the attempt to keep the rate from breaking through its Smithsonian ceiling. Then, on Wednesday, a Japanese official revealed that, but for investments in longer term securities and funds placed with foreign and Japanese commercial banks, the country's reserves would be over the \$20 billion mark, instead of \$16.5 billion. But the pressure on the yen has come largely from the strength of Japan's overseas accounts, from shifts in the leads and lags, and from pur-

chases by foreigners of Japanese company securities. The inflow of straight speculative short-term capital has been limited by Tokyo's tight exchange controls.

The dollar weakened in sympathy with sterling but by Thursday had not come into the direct line of fire. Still, especially with the long holiday weekend for Veterans' Day looming, no one was willing to bet heavily on the dollar.

EEC

Frozen food

Brussels

The finance officials of the Nine will meet to discuss inflation next week, with a rather lower profile than the summiteers, followed, on October 30th, by the finance ministers. Ringing in their ears will be the swansong from M. Raymond Barre, the commissioner for economic affairs, who presented his fellow commissioners at Strasbourg last week with his plan to fight inflation at community level: by freezing farm prices and cutting tariffs.

The original French idea was that all should agree to hold down public spending. But this found little favour with the Germans and Dutch, both with elections pending, and, indeed, Germany's federal system makes it difficult for public spending to be cut at a stroke. Hence M. Barre's suggestion for a farm price freeze. Food prices in Europe have soared since the previous two-year freeze was relaxed in 1970. Next he proposed cutting the EEC tariff on certain manufactured goods by 15 per cent, equal to an average cut of 1½ per cent in the prices of imported manufactured goods, which would help to hold domestic prices down. It might, incidentally, also help the Americans in their fight to get the Japanese to upvalue the yen or open wider the door to imports.

A freeze on farm prices would also go down well in Washington. The Nixon Administration has now taken the point that the EEC will not allow the common agricultural policy to be dragged into the 1973 trade talks as

Strains around Smithsonian

such, just as America will not allow its own system of subsidising farmers to be discussed. So the present Washington thinking is that the best way to blunt the protectionist character of the EEC system is to press for European farm prices to be held down.

The commission will not wear M. Barre's ideas as they stand, although if they were suitably watered down they might be acceptable. If they were, it would be the first attempt by the commission to use the EEC's external tariff and its farm price system as a weapon against inflation, and would even be its first try at a credible anti-inflation policy at all. But, farther up the pecking order, the council of ministers will almost certainly jib, however great the dilution. Bonn will scotch any talk of pegging farm prices this side of the election. M. Pompidou, too, has even assured French farmers that they will not be the victims of any anti-inflation measures. Most important of all is the feeling that a tariff cut would be a free gift to America and Japan, which ought preferably to be saved for bargaining in next year's trade talks.

Where M. Barre gets most support is among senior staff of the commission, including those dealing with agriculture. Even the competition department of the commission did its bit this week by repeating its doubts about export limitation deals between industries in Europe and Japan. It wants these to be registered so that they can be studied. It dislikes the feeling that they are fixed up between businessmen in Europe and Japan. It equally dislikes their impact on the community's free competition rules, and—most topically just now—on price levels within the EEC.

Bye-bye, budget

Britain has been in on the inflation talks from the start, and when the full

council of finance ministers meets on October 30th will also be in on discussions about the annual report on the economic situation in the community, which is, in effect, the equivalent of a Chancellor of the Exchequer's review of the economy at budget time. The report's guidelines for 1973 at present cover only the original Six. Nonetheless Britain will probably be asked to step into line, giving it its first real taste of what it means to be part of the movement towards economic co-operation which has been gathering momentum in the community since the Hague summit of 1969. It is not generally recognised in Britain what a radical change this will mean for the way in which the economy is traditionally managed.

From January 1st quite a number of the British Government's economic secrets will have to be revealed to the commission and its staff in Brussels. This will be part of the consultation procedure laid down by the council of ministers on February 9th last year as the first stage in the development of economic and monetary union. But this obligation to reveal forecasts and consult on tax changes is not as dramatic as it appears. Governments cannot be forced to be very forthcoming. The forecasts can be "normative"; ie, what a government would like to see happen. They are not used neat, but diluted to become the commission's views, which actually see the light of day. The section of the commission dealing with economic and financial affairs is pretty leak-proof, and that is something of an exception in Brussels.

More important is the fact that the community's procedures are geared to a very different form of budget. The Six have all harmonised their fiscal years on the calendar year; Germany and Italy have had to come into line. Their budgets are announced in the autumn, debated, voted upon, and only then implemented from January 1st each year. The annual report is

intended to give a community dimension to national budget debates. The British budget, with all its ceremony and secrecy, is presented as a fait accompli each March or April. By 1980, at the latest, this will have to change.

But other pressures are moving Britain towards the European model. Economic management by fiscal dictat has already been undermined by its failure to deal with the balance of payments and inflation. Britain, through the Chequers talks, is already moving towards a more open, social-contract approach to economic management. Tax changes are increasingly discussed in advance—in green papers and the press. Chancellors can seldom spring surprises. Nor, judging from European economic performance, is prior announcement of tax changes prejudicial to the national interest. It is a fair bet that the traditional British budget, like Bank rate, will soon pass into the pages of history.

Japan

Sony'll sell for you

In the increasingly frenetic scramble to prevent another upvaluation of the yen, Japan Inc.—as disgruntled rivals call the powerful partnership of government and business in Tokyo—is hooked on the new game of import promotion. That star exporter, Sony, has jumped in with an offer, made first to the Americans and now to the British (and next month to be extended to continental Europeans as well), to put its 8,000 domestic retail outlets at the service of would-be importers.

It could suit both sides. British manufacturers with suitable products will be able to deal directly with the final retailer, instead of having to go through one or more of Japan's 14 big general merchanting houses or one of the thousands of smaller ones.

Sony, on its side, will get its commission, increase the variety of goods in its shops, and, with luck, take some of the heat out of protectionist lobbies abroad. But British manufacturers of, say, colour television sets (who watched Japanese sales in Britain jump more than threefold in the first six months of this year) are unlikely to be much impressed by new opportunities to sell cookers to Tokyo. Sony wants to handle only imports of high-class household goods that will

Key indicators: world commodity prices

Breaking new ground

The Economist commodity index at 155.2 has reached a record high. Although metal prices continue depressed, the copper glut does not help, there have been rapid rises in the other components of the index. Wool, which has gone up 80% since September, has boosted the fibres index. Food is unusually high because of the huge Russian grain purchases, while rubber seems at last to be recovering.

	Index 1963=100		Percentage change on

complement its own domestic lines. Since the scheme was launched a month ago in America, Sony has got 1,000 proposals from American suppliers, of which it has so far accepted two, one for refrigerators and freezers, one for saucepans, etc.

Selling through Sony will therefore not make much of a dent in Japan's massive trade surplus, now running at \$10 billion a year. Nor will the government's own import-boosting schemes. Faster domestic growth will help, but pen has not yet been set to paper on Mr Tanaka's plan to cut tariffs on industrial goods by 20 per cent. And now the EEC commission, for quite different reasons, is talking about proposing a cut in its own external tariff by nearly as much. As for non-tariff barriers, even if there were the best will in the world, in Tokyo (which there isn't), it would take time to unravel the tangle of legal, administrative and cultural triplicords on imports into Japan.

Last week Mr Tanaka ruled out an export surtax as anything but a last resort. He is holding another ministerial meeting on Friday. Japan's export drive will not be held back sufficiently by the present panoply of voluntary pacts and cartels, which are often leaky, always suspect and now increasingly under fire in Japan as "monopolistic." The Keidanren, Japan's version of the CBI, is beginning to argue that flat legal ceilings, under a foreign trade control ordinance, may be the only other way to slow down sales. Japan's exports over the past six months have been growing at an annual rate of 15 per cent. Even if Japan's imports rose at 30 per cent, more than twice the average of the past decade, it would still take two years, at the current rate of exporting, to wipe out Japan's huge surplus on current and long-term capital account.

Bearings

Sunrise in Düsseldorf

Japan Inc. has gone on to the offensive on another front in the meantime. The first Japanese manufacturing operation in the Six was opened on Wednesday at Mettmann, near Düsseldorf, by a subsidiary of the Toyo Bearing Company. The highly-automated £3m plant will turn out up to 12m bearings a year, in the most profitable standard size ranges. A large

part of the bearings are to be made in Germany, including the high-precision bearing rings. It is planned to import from Japan only the balls or rollers on which the bearings run and some other small parts. So the boost to Japanese exports will be slight.

This should allay some of the fears of rival European manufacturers. They had believed that the plant would only assemble imported parts, brought in under the existing tariff barriers and adding to the growing wave of Japanese bearing imports. The Japanese have not agreed to limit exports to European countries as they have for Britain. During the past few years, they have carved out large chunks of the market in west Germany and in France. Although for the past two years Germany has been a depressed market there are signs that it is now turning up again. Italian bearing makers have not been reassured by the news from Mettmann at all. Rigid import quotas had excluded virtually all made-in-Japan bearings from Italy, but these quotas are not designed to keep out bearings made elsewhere in the EEC.

The new plant will settle once and for all whether the Japanese have been successful in selling bearings in Europe because their wages and their costs were lower at home, or whether they are just so good at manufacturing that they can absorb even European rates of pay. The plant will be coming into production when European companies like SKF and FAG are commissioning their own new automated lines designed specifically to compete with Japanese imports.

Flying Russian

What's the risk?

The crash of Aeroflot's Ilyushin 62 outside Moscow last Friday probably killed 172 people: if this is ever officially confirmed it was the worst accident in the known history of civil aviation. The Russians will have to start paying attention to their safety record if they wish to attract passengers from the west. Aeroflot has recently been advertising its London-Tokyo air services as one of the cheaper ways of getting to the Far East, and it has also been making a bid for more of the charter business. But Friday's was the third major accident on Aeroflot this year of which news has leaked through to the west. Add the crash of another Il 62 in August, flown by an east German charter company, and some-

thing like 540 people have been killed in these four alone.

Elsewhere in the world, more than 1,100 people have been killed since the beginning of the year in something like 25 separate air accidents. Three, with a death roll of nearly 130, were caused by sabotage. Known crashes to Russian-built aircraft have therefore accounted for a third of the victims so far this year, although the Russians carry only a sixth of the world's air passenger and freight traffic. Aeroflot might agree that the (known) number of accidents to Russian aircraft is roughly in line with what one would expect. The record only looks bad because at least 100 died in each of them. But it could just as easily be argued that the record of the rest of the world looks worse than it is because it includes the large number of accidents to relatively small aircraft in Latin America where facilities are primitive, or in and around South Vietnam where civil operations are not exactly normal.

Anything from three to six Russian-built aircraft crash every year outside the Soviet Union, where the majority are flown either by small airlines, or under difficult conditions in the Middle East, or both. But the crashes reported to date this year have been on major air routes to presumably major airports. Aeroflot itself, as the biggest airline in the world, cannot be happy to have chalked up three big crashes in six months.

Zanussi

Washed-up

Italy's Zanussi is the largest manufacturer of domestic appliances in Europe. On January 1st it is to cede to Germany's AEG-Telefunken a 25 per cent share in its domestic appliances division, from which 75 per cent of its turnover comes. It insists that this will not mean any dilution of control, but its shop stewards do not believe it. They recently visited Frankfurt, to meet their colleagues in the German metalworkers' union, and were told what has been widely rumoured in Italy: that AEG is pushing for a complete takeover. Zanussi's management is resisting, but is in a weak position to do so. In 1971 Zanussi lost £13m, as home demand slumped. It is now heavily dependent on exports—both of its own brands and on its own-brand agreements with Hoover, British General Electric, ITT, Sears Roebuck and AEG. But even on exports, profits

have been cut to the bone.

Zanussi was hit badly by substantial wage increases in 1969, and has had as much labour troubles as other Italian employers ever since. Now the engineering wage agreement is again under negotiation. Since 1969 Zanussi has been sorting out and rationalising its former rival Zoppas, which had previously absorbed another ailing rival, Triplex, and got bad tummy-ache as a result. Zanussi has bought breathing space by a £35m loan from a consortium of Italian banks, headed by the Istituto Mobiliare Italiano.

This will have to be repaid. The hope is that the money will be raised by offering 49 per cent of Zanussi's shares to the public. At present almost all of its shares are held by the Zanussi family, who no longer play any part in running the firm. Conditions on the Italian stock markets have ruled out any such solution for the moment. This must increase the likelihood of an eventual German takeover, following the earlier pattern of Ignis, Zanussi's largest remaining competitor, which was bought by Philips of Holland this summer. This would mean the end of one of the brightest stars in the Italian economic miracle of the 1950s; ironically, the pieces would be picked up by an established manufacturer of electrical goods that probably suffered as much as anyone from the invasion of low-price appliances from the upstart Italian firms led by Zanussi.

Oil

How much trouble?

As expected, Saudi Arabia's partners in the oil participation talks are not rubber-stamping the agreement negotiated two weeks ago with the oil companies by Sheikh Ahmed Zaki Yamani, the Saudi oil minister. Assuming that Iraq would object, whatever the deal, that leaves Kuwait, Abu Dhabi and Qatar to be squared.

How to do it was the central question on Thursday as Mr George Piercy of the Standard Oil Company of New Jersey, the chief negotiator for the companies, met Sheikh Yamani in Riyadh, to discuss the countries' objections to the deal. It had been expected all along that the countries would want to negotiate the details themselves since none of them is in quite the same position as Saudi Arabia, for whom the agreement was tailored. However, the noises that came out of a preliminary

I'm as good an Arab as anyone

meeting last Sunday between the oil-producing states indicated much more serious differences.

Kuwait, Abu Dhabi and Qatar may simply be going along for the moment with the Iraqis and Libyans, but they could have fundamental objections of their own. No one is sure yet. Sheikh Yamani is still confident that he can deliver Kuwait, Abu Dhabi and Qatar, but there remain the Iraqis—and the Libyans, although not represented by Sheikh Yamani in these negotiations, are dramatising their demand for immediate participation to the tune of 51 per cent by bringing pressure on the Bunker Hunt operations in their country.

The Kuwaitis are at the centre of the riddle. They like being friends with everyone and, in particular, would not want to offend the Iraqis. They may be merely waiting for the Iraqis to let off a little steam before they sign. That is what the oil companies are hoping anyhow.

Paris property

Let them rise

European property developers were delighted by President Pompidou's announcement on Monday that he would not object to a "forest" of skyscrapers overlooking the Arc de Triomphe. It was a bolt from the wide, blue yonder that conservationist Parisians are fighting so hard to keep wide, blue and unscraped.

Office development in Paris has always been difficult and things have worsened with the furore over the few office towers that have been permitted. The reluctance of official planners to allow fresh developments, and high value-added rates in certain areas aimed at pricing new buildings off the

market, have often left companies restricted to refurbishing old properties.

Foreign developers (most of whom are British) face the additional problem of raising finance locally. Here things have eased recently. British banks and other institutions are now offering five- and even ten-year loans. In consequence, British developers have been swarming aboard the bandwagon. The British estate agents Weatherall, Green and Smith, with a big Paris office, recently counted 45. So with elections due in the spring, it was feared that when President Pompidou did pronounce on the high-rise controversy it would be to introduce greater curbs and heavier taxes on developers. Instead, he confirmed existing official policy and told *Le Monde*:

We cannot chain ourselves to the past. Paris is not a dead city. It is not a museum to be maintained.

The occupants of office blocks are essentially international these days. Without the buildings to house their corporate images, multinationals will not choose Paris for their European headquarters. Paris rates particularly badly with the Americans and Japanese.

The big multinational concerns say they are not only swayed towards London by the advantages of the City and the English language, but are put off Paris by the cost of staff, the shortage of modern offices and the high key money that has to be paid when they are found. City rents, averaging £11 or £12 a square foot, are only slightly above those in the Champs Elysées. Priorities for choosing a site can differ widely. Brussels was selected by Mr Harold Geneen of ITT because there is nothing else to do there except work. The advisers of another company had to choose London because top managers wanted good golf courses.

Family considerations matter too. London, Brussels and Frankfurt are reckoned to have the best American schools. Paris can offer only flats, or terrible travelling problems for those who take a house outside, but Amsterdam is highly rated for housing. The Japanese also like Holland because of its advantages as a distribution centre, and the convenience of having head offices on the same spot. Geneva used to be another favourite, but difficulty over work permits has made it less attractive now. PA Management Consultants has recently recommended Switzerland to a client for a holding company, because of the tax advantages, but with the management services company in Holland. The second choice for both was Luxemburg.

BUSINESS

Britain

That rescue had better be quick

If the Government does pull off a deal on wages and prices next Thursday it will be only in the nick of time. Figures released on Wednesday show that wage inflation has already begun to rise again viciously. On September 30th the weekly wage rate index was up 16.7 per cent on a year earlier, while the hourly index was up 17 per cent; these figures compare with 14 per cent and 14.3 per cent respectively at the end of August. The September figures were heavily influenced by the building and engineering settlements, but these had to come into some month's figures; and the quarterly comparisons in our chart, which iron out the monthly bumps, show a decided upward trend.

An acceleration of price inflation was always expected this autumn, but in the summer forecasters were hoping that wages would be slow to respond. The National Institute of Economic and Social Research, for instance, in its August Economic Review, forecast that average earnings would rise by 12 per cent a year through both 1972 and 1973. The latest average earnings figures, also released on Wednesday, show only a 10.9 per cent rise on a year ago, but they relate to August and not September. With wage rates rising so fast it is hard to believe that earnings will not soon be rising much faster than the National Institute anticipated.

Wage rates are not the only factor, of course, that affects average earnings. When the economy picks up, less short-time working, more overtime and extra wage drift all push them up too. The consumer boom began to be reflected in higher production from midsummer onwards; now the latest unemployment figures, for mid-October, confirm this spurt in activity in no uncertain way.

Between mid-September and mid-October the number of wholly unemployed (seasonally adjusted) fell by a record 39,000. On the raw count, not fiddled with statistically, there was an even sharper drop of over 70,000, bringing the jobless total to 807,000 (3.6 per cent)—or 845,000 when Northern Ireland is included. There was also a welcome improvement in the relative position of the development areas, Scotland, Wales and the north-west. Unemployment generally reflects the level of activity in the economy three to nine months earlier. These latest figures, therefore, following three months in which unemployment rose, are another sign that the economy is on the move again.

The wild fluctuations of unemployment in individual months—down 36,000 in June, up 5,000 in July—reflect this year's innumerable strikes and their aftermaths, when employers were in no hurry to fill vacancies while their production schedules were being disrupted. But taking the figures on a moving average, the underlying trend has been for the number of unemployed to drop by 10,000 in each of the past three months, bringing the total fall over the past 12 months to 80,000. And although employers are not crying out for labour, at least there has been a steady, small increase in the number of jobs on offer in Britain throughout the past ten months. Another indicator of expansion is that there were only 15,000 redundancies recorded last month, compared with 24,500 in September, 1971.

That is the good news. But on present forecasts, and in the absence of any check to inflation, the revival of economic activity is likely to prove short-lived and unemployment would then start rising again from next year. But in the meantime, at least, this

winter should be a big improvement on last, and the Government is now being assured that the spectre of the unemployed at the beginning of 1973 has faded. That should give it more confidence, if it needed it, to make next Thursday's talks at Downing Street decisive in the way it wants. It may also help the union moderates.

Docks

Almost a truce

A serious shortage of dockers is now likely before the end of the year. Of the 9,600 men eligible for the Government's voluntary severance pay, 5,500 have applied for it, at an average of £3,800 a head. Only 1,500 have actually left so far, but already shortages of men are developing. By the end of the year Manchester, the Clyde, Tees and Hartlepool, South Wales, Grimsby and Inningham, Bristol and the south coast ports will probably all be short.

Giving universal incentives to leave the industry, so as to cure the problems of London, Hull, and, to a lesser extent, Liverpool, has turned out to be all the more absurd because the men leaving are mostly fit and experienced; only about 10 per cent of the unfit seem to be applying.

However, this abundance of jobs has

Think Bank

When it comes to banking and business on an international scale, Sanwa thinks enough about you to think differently about you. After all, your problems are different from anyone else's. And different problems mean different answers. That's exactly what you get at Sanwa. Which is something you should think about.

The future begins here... and now!

Penrhos College is an independent girls' boarding school whose purpose it is to train girls to be able to earn their own living, and become useful members of society. Neither a cramming nor a finishing school, Penrhos is a happily-disciplined place where, by a close and continuous process of personal encouragement and development, the most

is made of every girl's natural abilities; and where, over a period of years, she becomes a poised, thinking individual. Whether or not she graduates into a profession (as many do) Penrhos enables a girl to make the most of life and of herself.

A PENRHOS EDUCATION PUTS A GIRL'S FUTURE IN HER OWN HANDS.

PENRHOS COLLEGE

COLWYN BAY NORTH WALES

Recognised by the Department of Education and Science

made labour relations easier. There have been few volunteers for picket lines, and Mr Cornelius Clancy, leading the pickets at Midland Cold Storage, in east London, has sometimes only had one colleague to back him. Even the negotiations for reviewing London's productivity deal, due at the end of the year, are in a low key, with one observer suggesting that this is about the only sector of industry likely to go along with Mr Heath's £2.

The National Ports Council should now play fair by the little ports in the report on them it is supposed to make by the end of the month. The report was commissioned because the militants accuse these ports of taking their jobs away by using scab labour, and even the employers have suggested the small ports should pay a levy to the bigger ones. But the fears of unemployment are now groundless, and the small ports survive because they are giving a service the big ones do not provide. Indeed, London has raised its charges in a way that can only be regarded as an attempt to drive away small vessels. But Mr Jack Jones, general secretary of the Transport and General Workers' Union and also vice-chairman of the NPC, does not want to go to the dockers empty-handed.

Meanwhile blacking continues, although the jobs shortage that started it no longer exists. Here again it is a time to be tough, as Heaton's of Liverpool has done with more success than in the summer. Heaton's threatened to go to the Industrial Relations Court a week ago if the dockers did not stop their blacking, and the dockers complied (the management had great difficulty in dissuading its employees from going to the court off their own bat, without even allowing the dockers a 48-hour ultimatum). Further minor problems exist at Heaton's which may yet need recourse to the court. As for Midland Cold Storage, 27 employees have been given redundancy notices. When this was announced a truce was called. But Mr Clancy seems quite determined to serve another prison sentence.

Retail banking

Competing on telly

Presumably with good reason, each of the big banks reckoned that so long as it could count on its rivals staying off the box it could stay off as well. Now the one big maverick, the Co-op Bank, which has never been a club member, has decided to think again.

It is launching a test press and telly campaign in South Wales and Bristol which, if translated to a national level, would cost a cool £250,000, the first such television advertising by a single bank for eight years.

Admittedly, the Co-op is rather special, being very much a retail bank concentrating on small account-holders and the still-untapped fringe of potential customers who have no bank account at all. It also has some unique carrots to offer. It has long been one of the few banks in Britain to publish its charges for cheque accounts, one very good reason being that they are so competitive. Moreover, the great majority of its 4,000-plus banking points in Co-op stores stay open throughout normal shop hours, including Saturdays.

The clearers may not stampede after the Co-op in television advertising. But if the extra publicity given to the Co-op's services, coming on top of the challenge by newcomers like the United Dominions Trust's money centres, helps to persuade the giants to publish tariffs on charges and to return to Saturday openings, then hurrah.

Thalidomide

Private enterprise

The campaign to get compensation for the 370 10- and 11-year-old children deformed by the doses of thalidomide that their mothers took in pregnancy more than a decade ago moved out of the courts this week and on to the hoardings. The first four of a promised series of at least 16 anonymous posters began to appear calling for a boycott of the Distillers Company's gin, whisky and vodka until the company, which had manufactured the drug under licence from the German patent holders, pays big damages.

Distillers can hardly feel happy about the turn of events; articles about the thalidomide affair in the Sunday Times have been suspended only by the writ issued by Sir Peter Rawlinson, the Attorney-General, and the Speaker postponed until Friday morning a ruling on whether the Commons could discuss the subject.

The complaints against Distillers seem to come down to two. First, the time that it is taking to settle—to which a fair answer would be that much of the delay takes place while 370 deeply-distressed families try to agree among themselves on a common course of action. Second, the size of the sum

Pillorying Distillers

offered. The 62 families that settled with Distillers out of court four years ago got awards made up of compensation for loss of earnings and loss of amenities: one of the biggest came to just under £20,800 for a child wholly without arms or legs, but some did not, apparently, reach five figures.

These sums, the parents of the remaining 370 children think, are likely to be the guidelines for any settlement offered to them. On Thursday a girl blinded at school and with a modicum of sight now restored in one eye was awarded nearly £80,000 damages by a High Court judge.

Herbert Ingersoll

A happy solution

The former Herbert Ingersoll machine tool plant at Daventry, which was put in the hands of a receiver in June, has been sold to the Cummins Engine Company, the British offshoot of the American diesel engine manufacturer. Initially, the plant will be used to machine high-tolerance parts for large diesel engines of more than 200hp and carry out some tooling work for the company's two other plants at Darlington and Shotts. This work will at first only occupy about half the capacity and employ around 100 men. But later the plant will be used to manufacture prototype and experimental engines, starting with a new range of large engines the company has on the drawing board. As it stands, the plant is almost ideally equipped for machining large engine parts and will only need some small new machine tools to make it perfect. It failed as a machine tool plant because its builders were over-

optimistic about the amount of work that would be available to keep the original capital of £4.5m working economically. Cummins will have a much better control of the workflow and will have to support less than half the capital overhead.

Cummins is believed to have paid the receiver around £2m for Daventry, which was cheaper than investing in comparable new machinery elsewhere, let alone paying for a building to put it in. The purchase has avoided a capacity problem which was beginning to appear, although its most immediate effect will be to postpone some new investment at the company's American plants, which have been undertaking sub-contract machining for the British operation.

Steel

Hirschfield's hobnails

A fine row is expected when the Department of Trade and Industry publishes the findings next week of an inquiry that has been carried out by Lord Hirschfield into complaints that the British Steel Corporation has been using its market power unfairly.

The private steelmakers said that BSC has been squeezing margins by increasing the price of billet while leaving alone the price of the product made from it. This was particularly noticeable last April, when billet went up by 7 per cent, while the rods and

section prices lists were left untouched. The Secretary of State for Industry, Mr John Davies, agreed there was apparently a problem and set up the inquiry; but he must be rueing his decision now.

Lord Hirschfield is believed to have supported the complaints, especially on three or four products. Two are singled out in his 60-page report: low carbon wire rods and reinforcing bar. There is also strong criticism of BSC's pricing policy on some sizes of narrow hot rolled strip and some sizes of steel sections. What Lord Hirschfield is in effect saying is that these products already need a price increase and probably well over 4 per cent. The Government will regard that as badly-timed advice, but it would be wise to take

What they didn't show at the motor show

Britain's motor industry really needs to do better than the glorified car park it unveiled at the motor show on Wednesday. Lord Stokes, who announced that next year British Leyland will launch a new model, or major facelift, every two months, made a virtual admission of the inadequacy of his present range. The two most interesting exhibits, cars of the future designed respectively by GKN and Mr Rowland Emmett, the cartoonist, are not on sale anyway.

It is fair enough to explain that manufacturers no longer hold new models up until they can be unveiled at motor shows, but what was disappointing was the lack of imagination with which they displayed their wares. The theory is that by letting the motorist clamber round the car you initiate

the process that eventually drives him to buy it. But he no longer needs to go to the motor show to do that, and modern cars are actually a lot newer than external appearances show. Manufacturers are continually introducing changes which aim at improving the performance, make maintenance easier and so on. This is the sort of thing they should present to a public that is increasingly value-for-money conscious. Indeed, one sales director admitted he had wanted to do this by displaying a range of working durability tests such as every engineers' workshop abounds with, but he could not get the idea off the ground in time. One stand devoted to that sort of thing would have stolen the limelight.

Motor shows are really more help to

importers, who have probably fewer retail outlets than the home industry. The British, for example, do very well at foreign motor shows. But they do now need some new cars to show. It cannot be coincidence that the biggest importer into Britain, Renault, has seven new models. Or that British Leyland, which has been struggling against labour troubles to get its one swan, its new Jaguar, on to the roads, has seen its share of the market drop 7 per cent. On the same argument, if Lord Stokes keeps his promise of a new car every two months, 1973 could be British Leyland's year.

The British manufacturers make a lot of excuses about why imports have risen in two years from around 10 per cent to nearly a quarter of the market, and most of them are justified. The current level is more in line with continental markets, they say, and has been partly spurred by a halving of the import duty. Britain has also become the world's fastest-growing car market: with some other markets rather disappointing this year, continental firms have switched their sales efforts here. The British companies, for their part, had grown used to a stable home market of 1m cars a year since the mid-1960s, and were not ready to meet a 70 per cent rise in demand when the Chancellor suddenly took the brakes off.

Strikes have caused a loss of output of up to 150,000 cars this year. Typical is the unofficial strike by 230 maintenance electricians which by Wednesday had made 6,000 of the Lucas work force idle, just for another £1 a week pay increase on top of the £4.25 the rest of the company has settled for already. Actually, most of the British car industry is quite well placed to avoid being hit by this one, at least for the moment, but only by expensive insurance measures.

You like that publicity, comrade?

This announcement appears as a matter of record only.

Struggle and survive. Holland's history (and DSM's too)

It is not all plain sailing in the world, and certainly not in the world of chemistry. Competition is uncomfortably keen.

But to struggle and survive is the main theme in Holland's history. The Dutch have learned to keep the sea out and to resist counter currents.

Qualities which pay today.

Take DSM. It widens its scope by producing more and better. By making new products. By introducing new activities, exploring and tapping new sources.

So total sales will soon reach an amount of almost \$ one billion (£ 400 million).

DSM  **Holland**

DSM, Information Service, P.O. Box 65, Heerlen, Holland

To illustrate:

The third naphtha cracker is in operation: capacity 350,000 tons of ethylene a year. Ethylene is the starting material for making the plastic polyethylene used for domestic articles, toys, cable insulation and coating of paper.

A new ammonia plant, one of the biggest in the world, is on stream. Ammonia is a raw material for the preparation of fertilizers, melamine (the lacquer for your car, for instance), caprolactam (for a downy overcoat, but also for bolts and nuts), acrylonitrile (for a smooth sweater or a warm blanket).

A plant has been started up for the production of polyvinylchloride. For garden hoses and tubes, for sheets and profiles used in the building industry, for handbags and boxes.

A unit has been commissioned for the production of butadiene. Butadiene is used as a primary for several rubbers and plastics, such as in tyres, fenders for ships and bridges and for foam rubbers.

In production is a second plant for synthetic rubber. For radiator hoses, gaskets, roof covering. And for a few hundred other applications.

Production capacity of high density polyethylene has been doubled. Plastics for bottles and tubes, netting and sheeting, cables and so on.

A new plant for the production of carbon dioxide has come on stream. Mainly used in soft drinks and fire extinguishers; also in refrigeration.

Besides: units for the manufacture of argon and helium, inert gases, used, inter alia, as a protective gas in welding and in the generation of electricity by nuclear power.

DSM, makers of new matter

note of it. When Britain is in the common market, it will be against EEC rules for a large steel company to abuse its market power in this way.

Blight and compensation

Not falling on deaf ears

Much of the sting should be taken out of living near urban motorways, airports and the rest by the Government's proposals, put forward on Tuesday, for better compensation to those who suffer. Tenants will benefit, as well as homeowners, and the proposals are generous about many of the things on which governments have been mean in the past, such as noise, planning blight, compensating those still living next to the motorway for loss of property value as well as those whose homes are actually demolished, meeting removal costs of up to £1,500, and priority for local authority mortgages. The estimated cost of £60m-£70m a year will not be large enough to make road improvements prohibitively expensive, assuming they are well planned, and with new car sales going through the roof extra capacity is all the more needed.

It is increasingly difficult politically to resist cries for compensation, and it will be harder still now that the French government has apparently capitulated to the demands of those living near Paris's new, fourth airport. This is likely to set a precedent that other countries could find themselves obliged to follow. There is no doubt that the French made a great mess of planning the airport, and, under pressure from

Even airport noises sound sweeter accompanied by the rustle of cash

the locals at Roissy-en-France, the government has half-promised to pay compensation to those most affected. M. Robert Poujade, the environment minister, has said that any necessary legislation will probably be put to parliament before the end of the year. But what has not been revealed is who exactly will foot the bill, and how much it will be.

The site was chosen in 1964. Since then, both private and public building has been allowed to proceed without any reference to the carefully-prepared noise maps which established three "decibel zones," covering over 40,000 acres along the axes of the different runways. A new hospital was begun in 1969 which will be, in 1974, directly at the end of a runway. Earlier this year, the authorities stopped all new construction in zones B and C, which are the farthest away from the airport. The 21 communes that fall within the three zones are asking that somebody

pay: first, for rehousing residents of zone A (the noisiest); secondly, for sound-proofing houses in the other two zones; and thirdly, for lifting the building ban, as 150,000 people live in the area and some necessary public works must go on.

If the French government does pay it will set a precedent that will undoubtedly be quoted by residents near other airports. The financing of such large-scale compensation has hardly been thought about. In theory, money could be raised by higher taxes on the companies that are installing themselves around Roissy, from the villages that will benefit financially from the land boom in the area, and from an increase in landing fees. When it opens, Roissy will handle 6m passengers a year, but it will gradually be expanded to at least 30m before 1990.

Needless to say, the airlines are not pleased to think that some financial responsibility may devolve on them.

I am you.

Like you, I worry about cancer and heart disease. I know people who suffer from arthritis, arteriosclerosis and glaucoma. Like you, I catch colds and I worry about diseases my children could catch.

I have no cures. But as an engineer at Hitachi, I've helped develop a scanning electron microscope that's three times as powerful as any before it. It will help scientists in their search for the secrets of disease. And maybe even in their search for the secret of life.

Using this electron microscope, researchers have already studied and photographed the double spiral structure in the hereditary gene and a virus on the surface of a blood cell. Things no man had ever seen before!

I live in a family of four. But I also live in a world of over three billion. And when I work at Hitachi, I work for all of you. Because my work will benefit me. And I am you.

HITACHI
Resourceful people

Key indicators: British economy

Unemployment

Record drop of 39,000 this month strongly reverses recent upward trend.

Average earnings

A rather more modest August gain but only because of the building strike. Earnings in the docks and railways were still moving up fast.

Steel

A weekly average output of 536 tonnes in September was the highest for two years.

	Month	Index 1963=100	Percentage change on		
			previous month	three months	one year
Industrial production*	August	130	-1.8	+1.7	+3.4
employment*	July	88.7	nil	-0.1	-3.7
productivity*	July	148.1	+1.2	+3.4	+8.5
Export trade*‡	September	155	+67	-1	-1
Retail trade*	August	118.4	-0.4	+3.8	+6.6
Unemployment*	October	154	-4.7	-3.6	-4.8
Average earnings*	August	207.6	+0.6	+2.7	+10.9
Retail prices	August	159.7	+0.8	+1.8	+6.6
Export prices	August	156	+21	+4	+6
Import prices	August	141	+2	+4	+6

Export trade, retail trade: in volume terms (value at constant prices).

Unemployment: wholly unemployed excluding school-leavers; latest rate 3.6 per cent. *Seasonally adjusted. ‡Provisional

Our air freight business isn't all in planes.

Heathrow seems to be the end of the road for most airlines. They seem to think their job is done once they get your goods to London. We know you want your cargo closer to home.

That's why we're in trucks as well as planes. It's all part of the BOAC Cargo service. In fact, BOAC is the only airline that links 11 major centres in Britain with 5 major UK airports. When your BOAC flight lands, your cargo, still

in bond, is transferred to a BOAC truck which then speeds to your local airport, where within a matter of hours your cargo is cleared through customs and ready for you to collect. That way we can save you time and trouble. Money too because in most cases the trucking charges are part and parcel of our freight rate.

the best way here

When money no longer talks

The number of big-money golf tournaments keeps growing but the supply of golfing superstars remains inelastic. There are only two right now: Jack Nicklaus and Lee Trevino. Without them no tournament can be called top-drawer, something that spells trouble for events like the Piccadilly world match-play championship, held at Wentworth last week.

Last year the Piccadilly had Nicklaus but not Trevino, even though Trevino had won the American and British Open championships. This year the Piccadilly had Trevino but not Nicklaus, even though for a good part of the season Nicklaus dominated the world of golf with his ambition to win all four of the world's major championships (of which he won the Masters and American Open, but finished a stroke behind Trevino in the British Open). He didn't need the Piccadilly's money. So although the tournament produced probably as magnificent a golf match as has ever been played—the semi-final between Trevino and Tony Jacklin in which Jacklin played the last 18 holes in 63 shots, 11 under par, and still lost on the last hole—the tournament as a whole seemed flat, especially in the final when Trevino lost a lacklustre match to the long-hitting but otherwise colourless Tom Weiskopf.

The Piccadilly, which started in 1964, was not always this way. In its first year, the field, always eight in number, included Nicklaus, Arnold Palmer and Gary Player, then the Big Three, as well as Tony Lema, who that summer had won the British Open. Nicklaus dropped out the next

year but in 1966 the Big Three were all on hand again, as well as Billy Casper, who many people then thought ranked with the best of them. Down through the years the fields also included Peter Thomson, Roberto de Vicenzo, Bob Charles, Bruce Devlin and Gene Littler, all formidable men. Some selections were criticised but not many, and in 1970 Nicklaus, Player, Trevino, Casper and Jacklin all took part.

This year not only was Nicklaus missing, but the selectors had to turn to two young golfers, Grier Jones and David Graham. True, Jones stands fifth on this year's list of money winners on the American circuit and Graham, an Australian, won an American tournament earlier this year, but neither has yet carved a big name for himself. Both lost on the first day.

What can the Piccadilly organisers do to attract the top stars? One idea would be to apply to the governing bodies of the game for official recognition of the tournament as the world's match-play championship. The field would probably have to be expanded to at least 16 and strict qualifying rules laid down, but otherwise the idea has merit. The tournament is one of the few match-play events around and is unique in demanding 36 holes of golf a day from each competitor. More tournaments need to be recognised as major championships. As matters stand now, there can be only a few superstars at any one time since superstardom seems to depend on winning two or more major championships within a season or two. Since there are only

The game needs more big winners

four major championships annually, only a few golfers can achieve this. If there were, say, eight major championships a year there should be more superstars, assuming that Nicklaus and Trevino did not win them all anyhow.

Of course, true championship conditions must apply and the best golfers must compete year after year. However, the governing bodies of the game could influence the situation mightily. They should take into consideration that interest in golf is rising rapidly in many parts of the world and that in not too many more years there is likely to be much resentment at the fact that all the present major championships are American and British. The Pacific Masters, held in Japan two weeks ago with £123,000 in prize money, attracted only one true star, Trevino. With this thought in mind, it might make sense to establish major tournaments both in the Far East and on the European continent.

Tourism

Losing packages

Is the package tour industry about to go broke? The terrible news that Clarksons, one of the market leaders, is likely to make a loss "much worse" than last year's thundering £2.7m, sets the seal on a pretty tough year for the travel trade. Although some operators insist that they have done average-to-good business in 1972, many others have found bookings slow to get going, customers choosy when they finally did show up, and costs rising very fast (in a trade where basic prices are fixed 18 months ahead).

Even so, after a wave of mergers and takeovers during the past few years, no one seems to want to get out of the business. Clarksons may

look in bad shape now, but it is unlikely that its parent company, Shipping Industrial Holdings, will allow it to go to the wall; nor would any of the other operators like to see it go, because a crash would lower confidence in the industry generally. Clarksons had been expanding very fast, and some of its troubles were probably caused by management problems. But insufficient margins have become common throughout the industry, so major price rises of 10-20 per cent have become inevitable.

It is too early to tell whether the customers will wear this. If the new cheap advance booking fares spread from the North Atlantic and Caribbean to other routes, some people may be tempted to strike out on their own; the new rules have certainly caused nervousness in the travel trade. Several

operators are now trying to trade up the market, offering something a little more luxurious at a higher price, rather than going for bulk in the cut-throat, fortnight-to-Mallorca market. The idea is that profit margins on the classier holidays are more attractive, and that as people's living standards rise they will want something more than just sun and sea. But the more people pay, the less they will be prepared to put up with the kind of petty misrepresentation in holiday brochures of hotel facilities, proximity to beaches and the like. Over the past few weeks these have led to successful prosecutions under the Trades Descriptions Act, the £125 damages awarded against Swan Tours on Wednesday follows a spate of cases that have involved Clarksons and Thomson, as well as other firms.

BUSINESS

Investment

When Nixon became president the Dow was 949.47. How now Dow?

New York

What bug has got into Wall Street? America's production, productivity, profits and real incomes are all expanding like a Republican candidate's lovely dream—and have been doing so for a full year now. There is a remarkable consensus among the Street's economists that 1973 will be another excellent year in which a continued upsurge in consumer spending, a large rise in business outlays and a very stimulative government fiscal policy will add about \$110m, or around about 10%, to America's mighty money gnp of \$1.1 trillion. Even those who think that another bout of inflation is unavoidable, and say that a stop-go policy will have to be reintroduced, do not foresee the real tightening of monetary or fiscal policy before late 1973 at the earliest. Next year's rise in real gnp, therefore, is expected to be about 6½%.

Yet the stock market grows more and more morose. By Monday's close the Dow Jones industrial average had shed 30 points in four trading

days, to touch its lowest for nearly three months and 7½% off that elusive high of February, 1966. Although it rallied 5 points on Tuesday and another 6 on Wednesday to 932.34, it was, pathetically, only trying to take a little heart from yet another peace mission; nobody was chancing his arm much.

Why not? There is, of course, the Vietnam war, and the attendant hopes and disillusionments created by Mr Henry Kissinger's "secret" movements. There are the ripples from the Watergate affair, and the allegations of corruption and dirty practice in Mr Nixon's Administration and campaign. The presidential election, however predictable its outcome, is a stay-away signal for some—although, as the chart shows, American elections seem to have no effect on the Dow.

Some of the gloom springs from technical factors. The leading newspapers now publish the price/earnings ratios of listed securities—and many investors are scared at seeing how expensive some of their favourites really

are: Disney is on a p/e of 67, and SS Kresge on 48. The prospective Dow p/e is only about 15, but the bears are remembering the 1950s, when it was nearer 10. While the smaller savers are withdrawing from stocks and mutual funds into bonds and safe old savings and loan (building society) deposits, the flood of new equity issues continues unabated; another \$13 billion will probably be the total for 1972, about the same as last year, but a huge increase on the \$2 billion or so a year in the early 1960s. Some brave bulls, who have borrowed to stay in the market, are having to find the cash to maintain the required margin with their brokers; investors are only allowed 30% of the market value of their securities for a continuing loan, and many pay 1½% over prime rate, or 7½%. Since the volume of margin loans total \$7.8 billion (together with another \$2.8 billion of bank loans for securities), margin calls have nasty effects.

The malaise is compounded by a change in the pattern of trading. The big institutions have been flocking from one stock to another in great confusion. The stocks that form the indices have, in fact, performed less badly than the market as a whole. Since the first of April, the Dow Jones has fallen 2% and the Amex index 8%. Investors' liquidity has been hit by the volatility of particular shares. All brokers say

The White House and Wall Street

Metropolitans go regional

Some of the fastest-growing companies in the United States are, as one would expect, in the fastest-growing regions. They are quoted on the local stock exchanges, or on the over-the-counter market, but the only way the Wall Street brokerage houses are going to be able to find and follow them is by cultivating the regional brokerage houses. Thus in such places as Atlanta, Dallas, Chicago and Los Angeles the slickers from New York are listening instead of talking, and are buying local research, particularly in boom areas like the south-eastern states, centred on Atlanta.

A typical local brokerage firm is Dain, Kalman and Quail in Minneapolis. In the past five years its research staff has trebled from four to 12—still

one-third the size of an established Wall Street firm. It follows 86 locally-quoted companies, all of which have net earnings of more than \$1m and many of which rank in size with the more substantial stocks on the London exchange. Wall Street would usually keep only a distant eye on about 20 of these companies, though the larger firms are now building up their own teams of regional analysts, especially for the west coast.

Recently the Atlanta, Baltimore and Chicago Regional Investment Trust raised £3m in a float in London with the idea of investing principally in fast-growing companies in the centres from which it takes its name. As one Wall Street broker put it, "the provinces investing in the provinces."

that trading volume by small investors is disappointingly low.

The relatively few economists among the bears say that they are worried about inflation. They think that, during Mr Nixon's second term, the authorities will feel bound to continue to keep controls on prices, and that companies will then run up against their profit-margin ceilings. They point out that interest rates are rising. But this is more a sign of growing activity than that the squeeze is due to begin: it is unlikely that the first half of next year will see a very restrictive monetary policy in the United States.

As Professor Paul Samuelson once said, Wall Street has signalled 10 out of the last four business downturns. Once the election is out of the way, it still seems logical to expect the Dow to rise. A surge in productivity should keep manufacturing prices under control, and produce the profits. By next year, the guidelines on prices and margins should be loosened to allow the companies to show these profits instead of spending them, as is fashionable at the moment, on buying executive jets.

Special situations

Go for Giltspur?

The London market is drifting. The Financial Times ordinary index closed on Thursday at 484.9; 4 points down in a month. Brokers have already begun reading significance into daily changes of only a fraction of a point. Trading has dried to a trickle and their clients have vanished. Most people

agree that the market could shed 30 points as readily as it could climb back past the 500 mark again. Maybe it will decide which to do after next Thursday's "decisive" meeting on incomes (including dividends) policy, but maybe not. Individuals and institutions with cash are keeping it firmly on deposit, regardless of inflation.

But for the investor who cannot keep away from the market the equities to go for are carefully chosen special situation stocks: the ones the market has got totally wrong, or where a bid is in the offing or whose merits have simply been too little noticed. In September it would have been nice to have noticed the potential bid victim, Associated Leisure, which in the past three weeks has improved by 62% to 43p. That fire is now out. From time to time, we will be looking at other possible "special situations"—ie, gambles it seems worth going for.

One of the best tips in these dull days could be Mr Maxwell Joseph's

Giltspur Investments. At 168p, Giltspur is on a prospective p/e of 11, which is pretty low for a company that has reported a 50% increase in earnings for each of the past three years. Giltspur is spurned by institutional buyers because at least a third of its earnings come from the bookmaking business through its stake in J. Coral. Money made on the turf is still not considered quite respectable by unit trusts and pension funds; some will probably turn more horsey soon, especially as there presumably won't be price control on bets.

The more solid part of Giltspur's earnings comes from its industrial holdings—especially in transport, motor distributing and exhibition display. These are now contributing profits which should push this year's earnings beyond the £3m that has been forecast. Mr Joseph, who started the company as a stockpot for the acquisitions that could not be easily moulded into Grand Metropolitan Hotels, has begun to take renewed interest in Giltspur. A policy of acquisition is already under way, and is almost certain to accelerate.

Giltspur's assets at the moment are valued at about 75p a share; but 30p should be added next month when the merchant bank, Robert Fraser, in which Giltspur has a 20% stake, is reintroduced on the market. By the time of the annual results next March Giltspur at the present 168p would then be on a prospective p/e of less than 10; a price of nearer 200p seems more likely, even if the rest of the market recedes.

Cavenham

Société Générale de Goldsmith

Unless there are any last-minute snags, Mr Jimmy Goldsmith's Cavenham will be announcing a major deal soon after *The Economist* appears on the bookshelves. The deal is with that giant European octopus, the Société Générale de Belgique. Together they will share control of Sanders International, a Luxembourg-quoted food and pharmaceuticals company with major interests in France, Spain and Belgium; and they will co-operate on food developments in Spain and Benelux.

Mr Goldsmith has again demonstrated his talent for being more Roman than the Romans. Much of European industry is controlled by interlocking family shareholdings and holding

It was all very well

company stakes. The only way for a foreign company to break into these industries in a sizeable way, and in a way that prevents resentment, is to enter into an alliance with the major domestic merchant banks in each country. This is difficult in Germany, which has not got any major merchant banks, and in which Cavenham therefore is not active. By making an ally of Belgium's générale, Mr Goldsmith has got himself some powerful friends.

His new deal means that he is establishing closer relations with one tentacle of the great octopus, with which he was already holding hands. One of the générale's holding companies, the Compagnie Financière du Katanga, already controls Sanders International; and Cavenham already has a stake in Sanders's French subsidiary. Cavenham will be taking a large slice of a new rights issue to be made by the Sanders company, which in turn will increase the capital of its subsidiaries. The groundwork is being laid for another series of food companies. Sanders's Spanish partner is the Banco Urquijo, a domestic near-merchant bank.

Yet another deal is due to be announced next week, which hardly gives anyone time to catch up with the current deal, or the one before that: the sorting out of Cavenham's French interests promised in its accounts. Cavenham's 66%-owned subsidiary, Fipp, is selling its trading interests to Générale Alimentaire, and will emerge with nearly half of a food group with annual sales of £100m and expected annual profits, once GA's poor diversifications have been eradicated, of around £8m. The results for the first year of the merged operation, 1973, will be poor, which could provide an opportunity for buying GA shares cheap. Another way into GA is

through the Goldsmith ultimate holding company, Générale Occidentale, which owns 20% of GA. Anyone who can sort his way through the typically continental profusion of names and initials in the Goldsmith empire should probably make a portfolio of Goldsmith company shares. The British ones are: (1) Cavenham, which has cash and near cash of £70m and whose profits this year could be over £15m, putting the shares on a prospective p/e of 18 at 276p; and (2) Anglo-Continental Investment and Finance, which has bought so many companies this year that its last accounts are no guide to its size. Recently, however (October 7th), we estimated Anglo-Continental's profits at £2m after tax, which was arrived at in the following way:

Banking	£m
Insurance	1.5
Property Argyle (highly geared)	1.8
Investment trusts (now mostly cash, £33m worth)	nil
	2.5
Loan stock interest	5.8
	1.8
Pre-tax profits	4.0
Tax and minorities	2.0
	2.0
Earnings (7p per share)	2.0

At 164p the shares are therefore on a prospective p/e of 24. This is just about in line with the other ex-glamorous financial flyers.

Jessel Securities

Oliver's conglomerate

The trouble with Jessel Securities is that it is neither fish nor fowl, and does not pretend to be either. Most merchant banks are growing upwards and outwards into all kinds of things. Mr Oliver Jessel's outfit does not have a bank which takes deposits and makes loans and could justify the title.

Nimbler than he looks

But it competes with merchant banks in some financial services; it provides advice, runs an insurance company, runs a large unit trust management group, does insurance broking. It is not an industrial holding company of the Thomas Tilling type; some of its long-term holdings are sold for short-term profits, and it makes a lot of money out of share-dealing. But its rag-bag is a profitable one, and the latest figures prove it. Profits before tax for the year to the end of June were £6.3m, against £4.2m in 1970-71; at the per share level, this is 21p against 13½p. The p/e at 313p is an unfancy 15p.

The confusion between fish and fowl is made more muddling because the Jessel figures do not break the various activities down in any sensible way. We make an attempt below to guess where the profits came from:

	£m
Life insurance	nil
Unit trust management	.2
Franked investment income	1.0
Insurance broking	.3
Share dealing profit	1.5
Fees	.3
Share of associated companies	1.5
Industrial subsidiaries	1.5
	6.3

Since Mr Jessel is a lot more nimble than he looks, it is hard to forecast what the group will be doing in a year, or how its profits will grow. But they are likely to multiply. Since the year-end the group has borrowed £5m, in addition to the £5m capital injection just before. Thus its "long-term" investments in associated companies, and in other equity situations, are probably now nearer to £20m, which should mean that investment income will just about double in 1972-73. Part of the increase should come from reinvesting the £5m capital profits made during the year, half from dealing profits which did not go into the profit and loss account, and half from the floatation of Newhome-Veritas.

Next year should see the insurance subsidiary start to make profits, after 10 years of build-up; the life funds are at £100m and the actuaries should see their way to allowing a profit of £½m a year on that from now on.

An increase in dealing profits will cause the stock-watchers to bring up the old question about the quality, not just the quantity, of Jessel's earnings.

Unit trusts: Pan Australian's growth over five years is 117.6% and not, as was stated in last week's survey, 43%.

This argument is beginning to look old-fashioned; the quality of the gritty industrial products made by the Richard Johnson and Nephew subsidiary, 53% owned, did not prevent a profit slide from £2.8m down to £1.3m last year. Surely it is easier to make money on the stock market than out of wire-drawing?

Those who prefer Jessel's expertise to its Securities should buy the Overseas Unit Trust. This was bottom of the league table in our unit trust survey last week, and we recommended it on the ground that Mr Goldsmith's Anglo-Continental Investment and Finance company had bought the management company. This week the management company has been sold to Jessel Britannia, and that star of the unit trust field, Mr Mark St Giles, has been appointed managing director.

British Lion

Best for Shepperton

In the next week or so the chairman of the National Film Finance Corporation, Mr Robert Clark, will pronounce on the fate of Shepperton studios. British Lion, which is lumbered with the studios, is now controlled by Barclay Securities and Mr John Bentley, who is called an asset stripper by some and an industrial reorganiser by others. He wants to rename the company Lion International and turn it over to outdoor posters and cinema publicity films, with feature film interests very much on the side. The financing of the new Lion is heavily dependent on realising the property potential, estimated at £4m, from Shepperton's 60 acres in stockbroker-belt country.

The NFFC is lumbered with an obligation. In 1964, when British Lion was re-created, the NFFC made British Lion promise to continue to provide finance, distribution and studio facilities for British independent film producers (so far as the condition of the market permitted). In addition, the NFFC was given a special £1 share with powers to veto the disposal of Shepperton unless film-making there could only continue at a loss and unless alternative studio space could be found. Attention has been unduly focused on the studios, to the detriment of the more important point: the continuance of finance for British films.

British Lion has proposed several schemes to the NFFC, which rely on sharing Rank's Pinewood studio. They

would free the company to divert the £4m realised from Shepperton out of films. This is the point that the film industry should concentrate on. Most sensible people (which does not include the film union) realise that studios are not only unnecessary but an actual drag on the film industry's overheads. Shepperton is not needed; films can be made in the streets, which look more like streets than studio streets anyway. But money is very much needed.

The solution that is fairest to all is that Lion should be free to do what it likes with Shepperton, provided that any money it gets for the studios is invested in film production and distribution over the next five years. Under this plan, Lion would get the use of the money for much of the period and could revalue the properties in the balance sheet (important for the new Lion group's financial structure); more films would be made; the union would get more jobs, and the NFFC would discharge its obligations honourably.

Discount stores

Unstatic Status

Paint and wallpapers are the latest goods to benefit from discounting, at least in the Midlands and north where Status Discount has its stores. Status came to the market on Thursday with 2.8m shares at 115p, raising £2.9m for the sellers of the shares and £320,000, less expenses of £76,000, for the company.

Status learned many of its tricks from the Kwik Save Discount Group, whose shares have trebled since the beginning of 1971, and seven of its 41 sites are together with Kwik Save. The tricks of discounting are: aggressive pricing, small numbers of big-selling lines of goods, minimal service, car parking

space (out of town), and tight management control over stocks and sales.

Although Status's profits have quadrupled to £880,000 in two years, the question is whether its supernormal rate of profits (12% on sales) and its turnover growth can be kept up much longer. The pioneers of this retailing revolution will soon be joined by many competitors, who can learn the tricks of the trade without too much sweat. Comet Radiovision Services, which is applying the techniques to hi- (and lo-) fi equipment, came to the market in July, and Allied Carpet Stores arrived last year. Their prospective p/ces are 12 and 15, compared with Status's 11 on 1973 profits of, say, £1.4m, so the issue price wisely does not make Status out to be too exceptional.

Status does have a special status thanks to the leisurely ways of the wallpaper industry. Retailers normally buy in May, issue pattern books in September and withdraw all patterns after a year. Status orders a few good sellers from the manufacturers' new patterns in May to freshen up the previous year's range, but does its main buying in November when it has had a few weeks to see which of the new patterns are going well from other retailers. So it does not need to carry plenty of dud patterns, and sells paper direct, rather than from a pattern book, so that there are no ordering delays for the customer. In paints, Status has been increasing its margins by selling its own brand, now 35% of sales. Future growth will come from more stores—175,000 sq ft are to be opened in 1972-3, which compares with total space of 213,000 sq ft now—and a wider geographical spread. A move into kitchen furniture will extend the range, with concentration on do-it-yourself units. But how many people are going into do-it-themselves discounting?

CHAIRMAN'S STATEMENT

Atlantic Assets Trust Limited

Outstanding Record of Asset Growth

THE SIXTIETH ANNUAL GENERAL MEETING OF ATLANTIC ASSETS TRUST LIMITED will be held on 9th November, 1972 at the registered office of the Company, 1 Charlotte Square, Edinburgh.

The following is the Review of the Chairman, Sir Alastair Blair, K.C.V.O., W.S., which has been circulated with the Report and Accounts for the year ended 30th June, 1972.

Our annual meeting this year will be our 60th and it is perhaps an appropriate moment to take stock of the progress made in the past and the prospects for the future. As regards the past, we should perhaps confine our thoughts to the eight years which have elapsed from the time when our shares were offered to the shareholders of British Assets Trust Limited and Second British Assets Trust Limited with an asset value equivalent to 13½p per today's share. This compares with our asset value at 30th June 1972 of 100p per share taking Edward Bates at cost or 140p per share taking Edward Bates at 20 times net earnings.

This growth of assets per share has been achieved through taking a long view and being prepared to make significant investments in areas which seemed to have outstanding growth possibilities.

Important Tax Concessions

The 1972 Finance Act contains important tax concessions for investment trusts and unit trusts which have effectively reduced the rate of tax on capital gains for the trusts to 15 per cent and have also reduced the capital gains tax for shareholders selling investment trust shares to 15 per cent. The Government have thus removed the element of double taxation which previously existed and have restored investment trusts to a position where they are an ideal form of investment for individuals. The Finance Act has also quite rightly tightened up the rules for a company qualifying as an investment trust. One of these is that ordinary shares of an investment trust must have a quotation; it will, therefore, be necessary for the ordinary shares of The Independent Investment Company to have a stock exchange quotation and we have plans to achieve this by offering new ordinary shares of Independent to Atlantic shareholders.

Most Successful Investment

We also have plans to carry out a similar exercise for Edward Bates which has been our most spectacularly successful investment of the last year. For the year to 31st March Atlantic's

share of the Bates after tax profits increased from £95,000 to £547,000 and this momentum has continued into the current year.

The Accounts this year are considerably more complex in that the consolidated accounts include the figures attributable to Atlantic of a number of associated companies. This results from the wish of our auditors to comply with the directive of their Institute regarding the principles of consolidation of accounts.

You will notice that we have valued our holding in Save & Prosper at £20 per share, which reflects the progress made by that company. It also effects a change in the geographical distribution of our investments. This revaluation, together with the fall in the dollar premium, and the relatively flat American stock market, has resulted in a considerable rise in the proportion of our investments invested in the U.K.

During the year we acquired 50 per cent of the ordinary shares of Mount St. Bernard Trusts Limited, a property group which has concentrated on the development of large 'Euroway' sites at important motorway intersections. With the changing pattern of distribution dictated by motorways in the United Kingdom and Europe we see great opportunities in this company in the future but I would stress that like other Atlantic investments it is essentially long term and will take time to mature.

The Future

Your Board take the view that shareholders are looking for a continuation into the future of the growth we have enjoyed over the years and they believe that this can best be achieved by continuing to seek out the kind of investment opportunities which we have found so successful. Atlantic has, however, grown into a large company and, to be significant, investments have to be of a correspondingly larger size. The Directors are, therefore, considering some possible changes in the pattern of management to meet these requirements.

The final commitment to entry of the United Kingdom into Europe and the floating of the pound sterling must rank as the two most outstanding events of the year. Both will have a profound effect on our business but we believe that the opportunities for successful investment are as great as ever and we hope that Atlantic can continue to occupy a special place in the investment trust movement in the future as it has in the past.

APPOINTMENTS

Volunteer Economists required to serve as District Development Officers in Botswana. Apply to I.V.S., 91 High Street, Harlesden, NW10 4NU. Tel: 01-965 1446.

University College London

APPOINTMENTS

Academy of the Social Sciences in Australia

The Academy wishes to appoint a full-time EXECUTIVE DIRECTOR at a professional level for a period of five years in the first instance. Present salary (September 1972) \$A15,369 p.a. and is under review. The present part-time Director wishes to retire early in 1973. Terms of appointment could be the subject of negotiation and provision would be made for superannuation. For further information apply to:

The Secretary, Academy of the Social Sciences in Australia, National Library Building, CANBERRA, A.C.T. 2600. Closing date for applications: 30 November 1972.

University of Reading IN COLLABORATION WITH THE Swiss British Centre

SEEKS

Director of Agricultural Studies to take charge of a Centre for European Agricultural Studies, which is being established at Durrenäsch in Switzerland. Candidates should (preferably) be bilingual (English/German) and should have suitable university qualifications and experience in agricultural economics. The director will be responsible, under the guidance of University of Reading, for developing and organising courses in the structure of European agriculture suitable for university students. Initially the director will be stationed in the University Department of Agriculture, University of Reading, but it is expected that he will take up residence in Switzerland during the early part of the summer 1973. Salary according to age and experience, will be based on British lecturer/senior lecturer scale with a generous overseas allowance.

Applications, including the names of two referees, should be sent to the Registrar, University of Reading, Whiteknights Park, Reading RG6 2AH.

House of Commons Library

RESEARCH DIVISION

Permanent post of Higher Library Executive in the Statistical Section for man or woman age 21 or over. The person appointed will be concerned primarily with the maintenance of the Library's statistical collection. Candidates must have good educational qualifications to at least 'A' level; a degree or library qualification or relevant statistical experience would be an advantage.

Salary £2,271-£2,984. Non-contributory pension.

Write for application form and details to:

Establishments Section, House of Commons, London, SW1A 0AA. Closing date 13th November.

TRANSPORT ECONOMISTS

Hoff & Overgaard, planning consultants, Copenhagen, seeks experienced transport economists for transport and regional planning studies in developing countries. Previous overseas experience necessary. Qualified applicants can expect interesting work and high salary. Please send application with detailed curriculum vitae to:

HOFF & OVERGAARD
47 KOBMAGERGADE
1150 COPENHAGEN K
DENMARK

CHAIRMEN'S STATEMENTS

LOUIS NEWMARK LIMITED

The Chairman, Mr. Herbert H. Newmark reports:—

The Board are delighted to report pre-tax profits of £1,119,486, showing that the important milestone in the Company's progress of £1,000,000 profit (forecast last January) has been passed comfortably.

Manufacturing and Merchandising Activities: These continued to expand in turnover and profitability, but the rate of profit growth in 1971/72 must be regarded as exceptional as we were fortunate in experiencing an unexpected increase in turnover in the last months of the financial year.

The policy of heavily depreciating existing plant and machinery and investing in new equipment whenever possible has been continued.

Group Balance Sheet: Group Capital and Reserves are augmented by £378,000, so that they now for the first time exceed £4,000,000.

Dividends: Your Board recommend a Final Ordinary Dividend of 17% (against the forecast of 14%) making a total of 25% for the year compared with 18% and 15% for the two previous years.

Prospects for Current Year: I am confident that, subject to the usual provisos as to unexpected adverse economic conditions, profits will be comparable with those for the year 1971/72. Figures for the half year will be published in January when I shall assess again the prospects for the full year 1972/73.

Domestic Matters: I would again extend our thanks to all members of the staff of all Companies for their work during the year. Shareholders will be pleased to hear that we have been able to improve materially the pension facilities provided for a wide cross-section of employees and will continue to keep these under review.

THE ANTOFAGASTA (CHILI) and BOLIVIA RAILWAY CO. LTD.

At the Annual General Meeting of The Antofagasta (Chili) & Bolivia Railway Co. Ltd., held in London on 12th October, 1972, the Chairman, Mr. W. T. Caulfield said that a new Commission had been appointed last week to consider the question of the future of the Railway and that in response to a request from the Chilean Government the Managing Director had flown to Santiago. The first Meeting was held last Monday, 9th October, when it was stated that the Commission possessed wide terms of reference and that the ultimate objective was to arrive at firm proposals for the sale of the undertaking to put before both the Chilean Government and Stockholders. It was however too early to predict the future course of events. Meanwhile the current operating situation was difficult, with recent inflationary surge, and the Company was faced with the possibility of a strike at the end of the month through its inability to meet increased wages then due. An application for increased tariffs had already been submitted but might not become effective until mid-November.

APPOINTMENTS

University of Leicester

Appointment of Registrar

The University invites applications for the post of Registrar, which will become vacant on the retirement of Mr H. B. Martin on 30 September 1973.

The Registrar is the senior member of the administrative staff under the Vice-Chancellor, and exercises general supervision and control over the whole administration of the University.

The post will carry a salary in the upper professional range (not less than £8,528) with contributory pension rights under the F.S.S.U.

Further particulars may be obtained from the Vice-Chancellor to whom applications are to be sent by name not later than 20 November 1972.

Fraser Noble,
Vice-Chancellor.

The National Farmers' Union

Has two vacancies in its Economics Division both offering interesting and varied work.

(1) **ECONOMIST**: To analyse the economic developments in the Common Agricultural Policy and participate in the formulation of the Union's EEC policy. He/She would also be involved in work covering international trade negotiations and commodity agreements and be expected to keep in touch with FAO and OECD developments.

Applicants, who should preferably be aged 30 to 40, should have a good knowledge of French and have worked on international trade problems.

(2) **ASSISTANT ECONOMIST**: Aged 21 to 25 with a good degree to assist in all aspects of the Division's work. Salaries are negotiable, and the working conditions are congenial. Application forms to be completed and returned by not later than 4th November 1972, are obtainable from the Personnel Director, The National Farmers' Union, Agriculture House, Knightsbridge, SW1X 7NJ.

London School of Economics

(UNIVERSITY OF LONDON)

Applications are invited for appointment from 25 early a date as possible to a Research Officer in the Centre for Urban Economics at the London School of Economics in connection with a project on the economics of physical planning with special reference to the evaluation of urban renewal. Candidates should be trained economists and able to handle data; preference will be given to those experienced in research. The appointment will be for 18 months and will be at a starting salary of £1,764 a year rising after one year's service to £1,923 a year, with the addition of London Allowance at the rate of £162 a year and superannuation benefits.

Applications should be received not later than 10 November 1972 by the Administrative Officer (Room H410), London School of Economics and Political Science, Houghton Street, London WC2A 2AE, from whom application forms should be obtained.

Economic Models Group of Companies

An expanding economic consultancy based in London, Peterlee New Town and New York and specialising in the use of quantitative techniques requires a consultant economist.

Candidates should have high academic qualifications in economics and experience in the application of quantitative analysis to economic and/or social problems. Of particular interest will be experience in the management and development of econometric forecasting models.

Applications setting out qualifications, details of experience and income required should be sent to:

Managing Director, Economic Models Limited, 19, West Eaton Place, London, SW1X 8LT.

APPOINTMENTS

ROBERT GORDON'S INSTITUTE OF TECHNOLOGY

SCHOOL OF BUSINESS MANAGEMENT STUDIES

LECTURER IN ACCOUNTING

Applications are invited from persons able to make a positive contribution to degree level teaching in the field of financial accounting.

Candidates must be qualified Chartered Accountants and preferably possess a university degree. Relevant business, professional or research experience would be an added recommendation.

SALARY SCALE (under review)—£1482-£3309. Initial grade and salary placing according to experience and qualifications. Assistance with removal expenses.

Details and application form from Director, Robert Gordon's Institute of Technology, Schoolhill, Aberdeen, AB9 1FR.

Numerate Beavers

With computer connections

A leading international technical organisation in the City providing sophisticated advisory services to an engineering industry urgently needs two Senior Technical Computing Specialists to spearhead its central technical computing unit.

Essential Requirements:

A good relevant degree
Experience of Computers in structural analysis
Knowledge of technical computing languages
Beaver attributes of inventiveness, total involvement and "business whiskers"

A powerful computer is available and additional facilities will be installed as required. The users are sophisticated and the challenge is to ensure optimum utilisation of the equipment.

Salary obviously depends on qualifications and experience—probably in the £3,000/£4,000 range.

Please do not write a book. Just tell us briefly how you would match up to this unusual challenge.

JMB Associates Limited,
20/21 Princes Street,
Hanover Square,
London, W.1.

AFRICAN DEVELOPMENT BANK

The African Development Bank, an international institution with headquarters in Abidjan, Ivory Coast, invites applications for interesting and challenging positions in its Operations Department which is involved in the preparation, and evaluation of projects, the negotiation of loans, and their supervision. Qualified candidates are needed in the following fields:

— Economists

Advanced degrees, M.A. or equivalent, are required. General economists must be able to evaluate the economic prospects and financial position of member countries. Project economists specialising in agriculture, transport and public utilities must be familiar with the techniques for forecasting demand, evaluating policies, measuring benefits and costs, and calculating the economic rate of return on projects.

— Engineers

A university degree, B.Sc.(Eng.) or equivalent, is required. Specialists in power, highway construction and railway operations are needed. Experience in the preparation and execution of projects, including the evaluation of proposed techniques, cost estimates, construction schedules and procurement practices is essential.

— Financial Analysts

Specialists in agriculture, industry, public utilities and transportation are needed. Candidates must have basic training in accounting, finance and economics and preferably have a degree in Business Administration. Experience in preparing and analysing financial statements, forecasting financial results, and evaluating the adequacy of financial systems is essential.

Applicants must be of African nationality, between the ages of 28-50; proficient in English or French with preferably a working knowledge of the other language; have a minimum of 3 to 5 years of recent and relevant experience and an ability to write clear and concise reports. Salary will be commensurate with qualifications and experience. Benefits include medical coverage, home leave privileges, and allowances for housing, dependants and education. Salary and benefits take into account that staff members are exempt from income tax. Interested persons should send their curriculum vitae and photocopies of diplomas and degrees, as soon as possible, to the Personnel Officer of the African Development Bank, B.P. 1387, ABIDJAN, Ivory Coast.

Crown Agents

The posts described are partly financed by Britain's programme of aid to the developing countries administered by the Overseas Development Administration of the Foreign and Commonwealth Office.

THE MALAWI GOVERNMENT

have vacancies in their Economic Common Service for

A SENIOR ECONOMIST

to advise the Secretary for Works and Supplies in the economic aspects of the Ministry's operations, with special reference to road construction.

A Degree in Economics is necessary plus either a civil engineering qualification or at least 5 years' experience in that field.

Salary up to £3,045+Gratuity. M3A/720941/EN

AN INDUSTRIAL ECONOMIST

to advise the Secretary for Trade, Industry and Tourism on economic matters generally, including internal and external trade, price trends and industrial and tourism development.

A Degree in Economics is necessary plus at least 2 years' post graduate experience in Commerce, Industry or Economic Research.

Salary up to £2,826+Gratuity. M3A/720942/EN

Free passages are offered with liberal leave, interest-free car loan, appointment grant, subsidised housing, etc.

Apply to: CROWN AGENTS, M. Division, 4 Millbank, London, SW1P 3JD for application form and further particulars stating name, age, brief details of qualifications and experience and quoting the relevant reference number.

A Different Challenge for Systems Salesmen

Reuters Economic Services are the principal suppliers of news to business throughout the world, specialising in distribution of fast information on finance, commodities, industry and trade. Its clients are bankers, brokers, traders, and industrialists.

The executive salesmen we want to interview have to be high level achievers. They will be selling sophisticated information services—mainly computerised data retrieval and up to the minute news services—at top management level.

Candidates will be professional salesmen who have thrived in a competitive environment. They are likely to have a degree, preferably in economics or science, and experience of data handling for business.

These positions, based in London, will interest those capable of earning around £4,000 a year. They will be given the opportunity to develop their abilities, expertise and initiative in a company whose policy of developing talent to maximum advantage ensures good career development.

Please write or phone for an application form to:
Brian Heywood, Reuters,
85, Fleet Street, London E.C.4.
Tel: 01-353 6060

APPOINTMENTS

University of New South Wales

Applicants for the positions of lecturer and senior lecturer should hold appropriate academic qualifications. Teaching and/or relevant professional experience advantageous. For the position of tutor applicants must hold appropriate degree; initial appointment is for one year with prospects of annual renewal. Applicants for the position of teaching fellow must hold appropriate honours degree; the successful applicant will undertake research for a higher degree and have some teaching duties. Initial appointment is for one year with prospects of annual renewal for a further two years.

Salary: \$A9771 range \$A11234 per annum (senior lecturer), \$A6801 range \$A9390 per annum (lecturer), between \$A4011 and \$A5406 per annum (tutor), between \$A4200 and \$A5821 per annum (teaching fellow). Commencing salary according to qualifications and experience.

Details of appointment may be obtained from the Secretary-General, Association of Commonwealth Universities (Apsus), 36 Gordon Square, London WC1H 0PF (Tel: 01-387 8572).

Applications close in Australia and London on 30 November 1972.

Dublin

Salary negotiable

FINANCIAL CONTROLLER

Córas Iompair Éireann, Ireland's national transport organisation, operates railways, buses, road haulage and hotels with an annual turnover in excess of £50m. and a current labour force totalling twenty thousand.

A recent management restructuring, designed to equip C.I.E. better to fulfil its commercial and social objectives, has given rise to the need for an outstanding accountant to fill the position of Financial Controller.

He will be responsible to the General Manager for the development of C.I.E.'s financial control and management reporting systems as well as for the more traditional accounting functions. As a member of the top management team, he will be expected to play an important role in the formulation and execution of policies and plans as well as having a particular responsibility for negotiations with the Government on investment grants and other financial matters.

Candidates should have had extensive relevant experience in one or more large commercial organisations, not necessarily in the transportation or public sectors. Proven management ability and sound commercial judgement are more important than age, although it is unlikely that candidates under the age of 35 will have acquired adequate experience.

Initial salary will be negotiated to attract candidates currently earning more than £5,000.

Interviews can be arranged in either Dublin or London.

Brief but comprehensive details of your career and salary to date, which will be treated in confidence, should be sent to MEO10, Executive Selection Division.

Cooper Brothers & Co.,
Fitzwilliam House,
Wilton Place, Dublin 2.

ECONOMIST

Salary £4,800 — £6,000 p.a.

Required by international consultants in January 1973, to take up duties in English speaking central African country with relation to urban development programmes. The work will cover all phases of the programme for the completion of Master Development Plans; this embraces complete infrastructure, diverse residential areas and community centres.

The successful applicant will have a minimum of FIVE years post-graduate experience including work in this or a related field; and experience in the writing of reports.

The initial contract will be for ONE year with free passages for employee and family. Other benefits include free accommodation and interesting incentives.

Please write, giving full details of age, experience and qualifications to:

Nottinghamshire

Statistician

£2565-£2994

Applications are invited for this new post in the County Treasurer's Department which is in a small team under the direction of the Principal Technical Assistant. The work will involve overall responsibility for the investigation, preparation and dissemination of statistical information and contributing towards the development of longer term financial planning.

The successful candidate will also be expected to help promote developments in the use of analytical techniques to produce more effective, and more efficient, solutions to resource allocation problems. There is likely to be some involvement also in research into the use of computer models for financial planning. Candidates are required to hold a degree in Statistics or associated discipline and/or be members of a relevant professional body such as the Institute of Statisticians. In all cases they should have had substantial practical experience, preferably in the financial planning field. For the right candidate there may be a prospect of an alternative post graded £2994-£3324.

Applications, stating full relevant details and giving the names of two referees should be sent to the County Treasurer, Nottinghamshire County Council, County Hall, West Bridgford, Nottingham, NG2 7QP, by 1st November, 1972. Please quote reference 759.

APPOINTMENTS

University of Essex

Department of Economics

Applications are invited for two posts of

Lecturer in Economics (£1764-£2143) from 1 October 1973, in any field of Economics or Economic History.

Applications (six copies, quoting reference SS/27/E) must reach the Registrar, University of Essex, Wivenhoe Park, Colchester, Essex, CO4 3SQ, from whom further particulars are obtainable, by 3 November 1972.

Thames Polytechnic

LECTURER IN MARKET RESEARCH

Applications are invited from graduates with relevant experience to teach the subject to undergraduate and post-experience students.

The post is available at Lecturer II grade or, for applicants with extensive practical research experience, at Senior Lecturer grade.

The appointment is tenable from 1 January 1973 or as soon as possible thereafter.

Salary: Lecturer Grade II £2355-£3083, plus £118 London allowance; Senior Lecturer £3131-£3495 (bar)-£3768 plus £118 London allowance.

Application forms and further particulars can be obtained from the Secretary, Thames Polytechnic, Wellington Street, London, SE18 6PF, to be returned by 8 November 1972.

For further announcements
see pages 5, 110 to 114

Economic Consulting

The Economic Studies Group of a leading British management consulting firm has further opportunities for outstanding economists to work on challenging and important assignments in the U.K. and overseas.

Successful applicants will have good honours degrees and several years' experience in one or more of the following types of study:—

- Regional and urban planning
- Transport
- Tourism
- Industrial development
- Project evaluation
- Corporate planning and P.P.B.S

Of particular interest will be applicants with experience of leading major projects in developing countries.

Starting salaries will be negotiated in the range £4,500-£6,000 and there are excellent prospects for career development in this rapidly expanding field.

Applications, giving details of age, qualifications, experience and salaries to date, should be sent to Position Number ACE 3340, Austin Knight Limited, London W1A 1DS. Applications are forwarded to the client concerned, therefore companies in which you are not interested should be listed in a covering letter to the Position Number Supervisor.

Recommendations of:

- 1 March 1970 - BUY.
- 2 August 1970 - BUY.
- 3 December 1970 - lower prices first quarter 1971.
- 4 February 1971 - make major commitments around 287 - 290.
- 5 June 1971 - prices above 340 soon.
- 6 August 1971 - BUY late October early November.
- 7 September 1971 - prices at 285 undervalued.
- 8 November 1971 - BUY. Significantly higher prices.

For over a quarter of a century, our basic research has enabled us to anticipate well in advance a major reversal in the price trend. It is indicative of the commodity work performed by us for many large corporations in industrial and agricultural commodities.

GOLD... for two years we have remained broadly bullish on gold! Your inquiry on your corporation letterhead is requested addressed to:

United Europe: the impossible dream?

Next Thursday, in the week following the Paris summit, Roy Jenkins and Raymond Aron have an hour to air their conflicting views on the future of Europe in Thames Television's discussion programme, *Something to Say*.

Jenkins believes that the long term aim for a united, outward-looking, socially responsible Europe is a realistic one.

Aron would like to agree with him, but remains sceptical in the light of his own reading of Europe's history.

The discussion is chaired, as usual, by Bryan Magee.

Yesterday

Today

Tomorrow

Ever since the day we began making autos 40 years ago
Toyota has faced one fact we can never get around.
Our home country is one of the most densely populated in the
world. So right from the start we've had to meet the consumers'
demand for a good small car.

Our philosophy has remained the same to the present day. Everything we have goes into satisfying the world's need for a safe, reliable, well built small car. And the way we've been accepted in over a hundred and twenty countries tells us we've been on the right track all along.

In the days to come Toyota plans to concentrate its extensive research and development facilities on solving the problems we are all aware of. Because if we don't use yesterday's experience to overcome today's difficulties no one can have a decent tomorrow.

TOYOTA

When you go multinational, so do your problems. Royal-Orion financing is a global solution.

"The Royal"

Royal-Orion? It's a combination of banking know-how, financial expertise and that very vital know-who that transcends national boundaries. First, it's The Royal Bank of Canada, one of the world's largest commercial banks, with branches, representative offices, affiliates and subsidiaries around the world. Second, it's our partnership in the London-based Orion Banking Group, with five of the world's largest banks, formed to extend our range of financial services, including long-term loans and international bond and equity issues. A call to the Royal, anywhere in the world, puts all of these combined resources at your service. So call us. See how helpful we can be.

The inflation nation

The high and the mighty met at No. 10 on Thursday and talked on into the night. The semantics were important for public opinion, but the real solution for the inflation nation remains a statutory incomes policy, page 11.

How did Britain get into its present mess? By 20 years of continuous economic mismanagement by both parties and a weak Treasury, page 71.

The power station unions made it apparent on Thursday that they meant to fight for their full wage claim, black-outs or not; and in the motor industry settlements are being struck at £5 or more. The inflationary scene, pages 75 to 78.

The stock exchange marked time, distrusting the unions, page 97. The pound slumped again to yet another lowest-ever, page 90.

Hope at the summit

Mr Heath did well at the EEC summit in Paris, but then so did President Pompidou, and so did the European cause; but there are still going to be plenty of fights in Brussels next year, page 13. What happens now in trade, currencies, regional policy and the commission itself, pages 85 to 94.

The pressure's on

The communists in Hanoi are intent on branding President Thieu as the man responsible for preventing an early and easy peace in Vietnam. But although his stiff-necked rejection of the terms is unpopular with his American allies, he is right not to encourage a sell-out, page 16.

That non-campaign

Senator McGovern has failed to bring President Nixon to battle, and the swing away from the Democratic party by many of its white working-class supporters of past years suggests that the President may, indeed, win a landslide victory, page 14. How the campaign is going in the South, in key congressional contests and among the farmers of Wisconsin, pages 47 to 55. Baseball's world series has been more exciting, page 57.

Art goes boom

The international art market promises to lurch upwards in the coming year beyond the experts' forecasts. Some of the signs to follow, page 104.

Bank rate

SIR—Upon reading your strictures against the abolition of Bank rate (October 14th), I was mildly surprised to find them based on your admiration for the demonstration effects of changes in Bank rate. Is it not at least possible that these effects are sometimes perverse?

Certainly a rise in Bank rate may inhibit investment, with a lag of up to two years, but this seems hardly anything to cheer about. Presumably you have in mind the balance of payments. In this respect, however, the demonstration effect may be simply to advertise the crisis, without convincing anyone that anything is actually being done about it. Hence, a fall in the value of the forward pound, a decrease in the margin on inward covered arbitrage, and an outward flow of funds.

One may not dispute the importance of demonstration effects, but one would be well advised to consider just which way they work.—Yours faithfully,
Oxford

JOHN V. HATCH

Ireland

SIR—Mr Harold Wilson, and those English who think like him, must decide on whether there is a United Kingdom or whether there is just England with Scotland, Wales and Northern Ireland, not to mention the Irish Republic, as appendages. Why should it be assumed that the Northern Ireland question can be settled without profound changes in the rest of the United Kingdom and, indeed, the whole British Isles?

Northern Ireland is of strategic importance to the whole island group. A Northern Ireland UDI with a consequent offer of facilities to Russia in exchange for financial assistance would, undoubtedly, be viewed with concern elsewhere within the group. Again, if a rabid nationalism, with the demand that citizens of the Irish Republic be expelled from England, were to develop amongst the English Mr Lynch would find himself confronted with a very serious problem. He should be publicly reminded of this, as should certain persons be reminded of the other.

The United Kingdom as constituted is somewhat untidy, and many Ulstermen behave as Northern Irish first and British second, as many Englishmen behave as English first and British second; but scolding and threats will not help the situation. It seems to me that as the British Isles—which title includes the Irish Republic—are economically and socially integrated, recognition should be given to this fact by the establishment of a common council

for the whole British Isles. The council would be concerned with common social and economic issues, and the reconciliation of sometimes conflicting interests which cannot be easily reconciled at Westminster. It might also help the English to realise that they do not govern the other British, but that they govern with the other British.—Yours faithfully,
Khartoum

W. A. MILLER

Consensus Ted

SIR—Thank you for your perceptive and thought-provoking leader (October 14th) on Mr Heath. The militant fish are certainly swimming, and those best placed to drain the pool by pulling out the plug are managers.

When all staff are treated as partners and not just as hired hands; when they are led by example; when managers accept that part of their job is to release and ignite the best in all around them; when both workers and managers have a common purpose bigger than the private aims of either; then both may realise how much they need each other.

And the militant fish will be gasping for air.—Yours faithfully, M. A. CAMERON
Haywards Heath, Sussex

SIR—Your anodyne editorial on Consensus Ted (October 14th) gives the view of a party which is not genuinely a conservative one—but that of the middle. The divorce between the leaders of the party and its voters, now denied, will eventually be disclosed when the election finally takes place.

I predict that millions will abstain because they like neither the right of the Labour party nor the left of the Conservative. These are now meeting in the middle with the soft bump of foam plastic against plastic foam, and when the sticky mass combines—what then.

Mr Heath will get a surprise all right and he will not even have to go to the woods like the teddy bears. And it won't be a picnic.—Yours faithfully,
London, SE1

CHARLES DAWES

Bank charges

SIR—The letter from Mr A. L. King-Harman which appears in your issue of October 7th followed correspondence between him and one of our branches.

I have examined the correspondence and find that the branch was at fault on two counts. First, they were wrong to say that the charges for security work for foreign residents were the result of an agreement between the clearing banks. There was such an agreement some time ago, but none exists now and each clearing bank is free to quote whatever terms it feels appropriate. Secondly, the quotation of 1 per cent of the market value of the security as the charge for the receipt or delivery of certificates was a typographical error; the

THE ECONOMIST OCTOBER 28, 1972

correct quotation is 0.1 per cent of the market value.

I am asking our branch manager to explain the correct position to his customer.—Yours faithfully,
J. B. REES
Deputy Chief Accountant,
Lloyds Bank Limited
London, EC3

Iran

SIR—I feel that a misleading passage in your article on Iran (October 7th) needs to be elucidated.

The passage in question must have led your readers to assume that the very foundations of Iran are being undermined by a small band of terrorists and guerrillas. The gang of terrorists and murderers originally numbered a little over one hundred, the majority of whom have since been dealt with by the laws of the land. I am certain that those who keep abreast of events in Iran would not believe that the remaining few could be of any threat to the stability of a country like Iran.—Yours faithfully,

A. M. SHAPURIAN

Press Attaché,

London SW7 Imperial Iranian Embassy

Ecology

SIR—Mr Nelson's letter (October 7th) explaining the recommendations of the Commission on Mining and the Environment on exploration drilling confuses rather than clarifies the points at issue.

At the moment exploration drilling is subject to planning control and an application for planning consent is obligatory. The commission proposes that it should be classified as permitted development under the General Development Order, 1963, for which no planning permission is required, unless the minister or the planning authority should direct that an application is submitted under article 4 of the order. Such a direction by a planning authority requires the approval of the minister.

Experience in the past has shown that the Department of the Environment, and its predecessor the Ministry of Housing and Local Government, is reluctant to confirm such directions, yet without one the planning authority cannot refuse a deemed planning consent. It can only refuse a planning application. The commission's proposals mean, therefore, that whatever the consultations exploration will go ahead unless the company can be required to obtain planning permission. There is also no legal backing to any special conditions which may be agreed between the parties to deemed planning consent.

Before accepting that *The Economist* (September 16th) was wrong in saying that it would be "unnecessary for the existence of exploration drilling to be made public" one would need to know how the commission proposes that the information would be made public. To say that copies of the relevant documents would be made available in the locality

THE ECONOMIST OCTOBER 28, 1972

MANAGEMENT APPOINTMENTS

£7000 PA AND OVER

Experienced Banking Executives

Following a rationalisation of structure and methods an indigenous Nigerian bank is to make two appointments at a very senior level. The environment within the bank is such that firm direction and control are needed from the senior management functions. Scope will be given to ensure that each appointee may make his impact upon the organisation. The appointments, details of which are given below, will be on a contract basis for a period of 2/3 years. Should the appointees be Nigerian nationals the contracts could be renewable under terms and conditions which are mutually acceptable.

Managing Director

This is a challenging and demanding Board appointment. Considerable experience in controlling and directing banking operations at a senior level is a necessity. The man appointed must, in addition to appropriate qualifications, show above average powers of leadership and management capability in the widest sense, particularly in relation to the direction and control of a large central clearing bank. The chief executive will be responsible for the expansion and development of the bank's activities, both domestically and internationally. In so doing, he will enjoy the support of a young and enthusiastic management at middle and junior levels. Apart from his responsibility for the profitable expansion of the Bank's activities, he will also be expected to develop the managerial resources of the Bank. As a minimum the successful applicant will have had seven years experience at, or near, general management level in a major banking organisation.

Director of Finance

Candidates for this position should be well qualified and experienced in banking affairs generally with the emphasis on accounting and financial control.

As part of the rationalisation exercise already referred to, systems and procedures are to be introduced to improve the quality of managerial control in the bank. The Director of Finance will be involved in the introduction and implementation of these controls. In co-operation with his Board colleagues, the Director of Finance will participate in the future development of the bank and its resources during a period of change and expansion. The person appointed must be able to demonstrate a record of achievement in a similar position.

Terms and Conditions

Subsidised accommodation for the appointee and his family

Home leave and air fares/Re-location expenses

Educational allowances & children's passages during school holidays

Medical insurance cover/Terminal grant upon completion of contract.

Car provided/Life Insurance cover

Total emoluments will not be less than £7000.

Candidates for these appointments should submit career details clearly showing how each requirement is met and describing the contribution they would expect to make to the profitable development of the Bank. Applications which will be treated in the strictest of confidence should be sent to:

(Ref JGH/E)

The Economist Intelligence Unit Ltd
Spencer House, 27 St James's Place, London SW1A 1NT

Chief Executive £10,000

Our client, a member of an international Group, seeks a Chief Executive for its credit finance activities which involve large numbers of personal finance and hire purchase accounts. Given success this appointment could lead to an international career if so desired.

He must have a successful record of management and organisation of complex headquarters, data processing and field activities and will be currently earning around £7,500 p.a.

The appointment calls for determination and real ability and his formal background is not paramount. He could be aged 38 to 45, the deputy in a substantial banking or computer-based financial group and possibly blocked from bigger opportunities in his present situation, would welcome this chance to demonstrate his top management skills.

Please write with full details of personal and business history. Your letter will be forwarded direct to our client and should there be organisations by whom you would NOT wish to be considered please list these separately: R. Llewellyn,

MSL ADVERTISING SERVICES,
17 Stratton Street, London, W1X 6BD.

For further management appointments see page 7

is not really sufficiently specific and could mean anything.

One can only ask, therefore, who will benefit from the commission's recommendation. It will not be the planning authority, who will have to go through the rigmarole of getting an article 4 direction if they do not like the proposals, and it can therefore only be the mining companies who will benefit from being saved a possible planning inquiry with its attendant delays. Certainly the CPRE is totally opposed to the extension of deemed planning consent for exploration drilling.—Yours faithfully,

A. F. HOLFORD-WALKER
Secretary, Council for the
Protection of Rural England
London, SW1

SIR—There are two rather novel solutions to the problems besetting those prophets of impending doom of the "pollution-is-going-to-see-off-mankind" and the "we-are-going-to-run-out-of-everything" varieties in your issue of September 23rd.

First, in an advertisement (Brazil survey, page 65) a large American bank predicts the coming of a perfect environment in which cities would be enclosed by gigantic transparent domes. If we design it right, maybe each such dome could be made of resonant material so that we could all be deafened before we become asphyxiated by the traffic fumes and the exhalations of homes and power-stations.

And, secondly, Mr Derek Ezra of the British National Coal Board calls for the maintenance of British coal output at its present level in order to avoid an American-style energy crisis in the late 1970s ("Ezra stirs a crisis"). Has the NCB secretly developed a stunning process by means of which a non-renewable resource can best be saved for the future by consuming more of it than we

need now? This is something that the Club of Rome should be told about.—Yours faithfully,
IAN THOMSON
Caracas

Sir John Betjeman

SIR—Though popular, Sir John Betjeman's appointment as the new poet laureate has not had the acclaim its appropriateness deserves (October 14th). Wherever modern life jars upon the nerves you will find a line or a stanza in one of his poems to perpetuate the feeling. In the fine and very poignant "Remorse" you will even find something as relevant to today as this:

Protestant claims and Catholic, the wrong and the right of them
Unimportant they seem in the face of death.

Shelley described Coleridge as a "hooded eagle among blinking owls" and even if not everyone shares my belief that this fits Sir John Betjeman in relation to living contenders two unique achievements are undeniably his. First, he rescued English poetry from becoming a sort of echoing chamber of literary allusions and, secondly, he has not budged an inch towards the bogus, towards today's trashy values. Rather the mountain of media publicity has moved to Mohammed's own undiluted and delightful ego.—Yours faithfully,
G. REICHARDT
Poole, Dorset

Ido

SIR—You write of the difficulty of finding translators for international conferences (September 23rd). This was to be expected because for a man to be able to translate a speech whilst it is being delivered, a speech which may deal with abstruse or technical subjects, he must be a real Mezzofanti in linguistic ability.

It is not surprising that men have dreamed of the use of one secondary language for everybody; and we in England have hoped it would be English. National pride, however, stands in the way of the acceptance of any national language. Moreover, although English has the easiest grammar of any European language, its pronunciation seems specially designed to confound foreigners.

The solution then seems to lie in the use of a constructed language which offends no national prejudice. Esperanto was a brave attempt, and deserves to be called an effort of genius. It was, however, the work of one man, and it suffers from many imperfections; it retains the accusative, which even most national languages dispense with; it makes adjectives agree quite unnecessarily with nouns, and its many accented letters give it an outlandish appearance to most Europeans. For some years past, however, we have had Ido, a reformed Esperanto. Ido was chosen by a delegation of over 200 British and foreign learned societies and academic bodies who considered all the

language projects, including Esperanto. Ido offers an object lesson in how little grammar suffices to enable language to convey thought precisely.

Business, of course, asks: "What use is Ido to me? How many people speak Ido?" If the early users of the telephone had stopped to ask such a question, telephones would never have come into general use. Can we not look beyond our short noses? Many of us spent long hours learning French at school, at an age when we were able to learn as easily as a young duck takes to water. How many of us could today discuss in French any one of *The Economist's* articles? Precious few. Yet if we had devoted a twentieth of the time to learning Ido, we could now discuss any subject that interests us, not only with Frenchmen but with those people of all languages who had sense enough to use the new invention.—Yours faithfully,
HENRY MEULEN
London, SW19

Negative income tax

SIR—The proposed tax credit system (September 30th) is excellent and should be put into effect as soon as possible.

The reason other countries (or at least Canada and the United States) cannot easily use tax credits is that they have no standard rate of tax. The rate goes up by a succession of relatively short steps, like surtax. As a result it is not possible to quantify the value of exemptions and allowances—the value varies from one tax bracket to the next.

This was intended to produce a delicately balanced progressivity. It has not worked noticeably better than the English system in providing progressivity, and serves mainly to make calculations of marginal rates a little more difficult.

One of the more esoteric benefits of a speedy and successful application of the system is that it may show other countries the advantages of a standard rate that covers a substantial range of incomes, combined with a tax credit system.—Yours faithfully,
TREVOR LLOYD
London, N6

Concorde

SIR—You say (Business Brief, October 14th): "the steel members that run through Concorde are as thick as tree trunks." And, presumably, as long as a piece of string?

There are no steel members running through Concorde. Admittedly Concorde, like all other supersonic aircraft, has a lower payload/all-up weight ratio than a subsonic aircraft of comparable size but this disparity is due to its proportionately heavier fuel load to cope with the "shock wave on the end of its nose," not to any marked difference in structure weights.—Yours faithfully,

E. H. BURGESS
British Aircraft
Corporation Limited
Bristol

MANAGEMENT APPOINTMENTS

£7000 PA AND OVER

Managing Director

Our clients a large insurance broking group wish to appoint a Managing Director to their finance subsidiary. He will be required to revitalise the company to carry on activities similar to those of a merchant bank. He will have the support of the Group companies, but must accept the challenge of making the company grow from small beginnings.

He should be:—

Aged between 30 and 40.
Experienced in merchant banking type activities.
Experienced in negotiating, particularly with provincial industrial and commercial companies.
Capable of identifying profitable propositions.

Skilled in either:—
property finance and development or
industrial finance and management.
The salary offered would be in the bracket of
£8,000-£10,000 (plus pension scheme)
depending on experience.

Please write giving details of career to date and naming any Companies to whom you do not wish your application to be forwarded to Recruitment Division.

Stewart & Jefferies Associates Limited,
Old Court House, Old Court Place,
Kensington, London W8 4PD

Finance Director DESIGNATE

• THIS is a top appointment in a £25 million turnover City Group with an unusually interesting range of industrial and commercial activities. Responsibility is for all group financial operations including performance assessment of subsidiaries and valuation of potential acquisitions. The next step should be to succeed the Group Financial Director who is due to retire shortly.

• A CHARTERED Accountant is required with industrial or commercial experience, preferably including a spell at the centre of a holding company.

• INITIAL SALARY is negotiable above £7,000. Preferred age: 35 to 45.

Write in complete confidence
to P. G. Oates as adviser to the group.

JOHN TYZACK & PARTNERS
LIMITED

10 HALLAM STREET • LONDON WIN 6DJ

Director Designate Principal Accountancy Consultant

A leading City-based firm, growing world-wide at 15% p.a., requires a qualified accountant as Director Designate responsible for the continuing expansion of its accounting consultancy business. Dealing mainly at Board level across a full range of industry and commerce, he will actively contribute to this development by securing and scheduling new assignments and by ensuring the efficient management of his professional team. Candidates, chartered accountants aged 35 to 40, must have several years' industrial experience, followed by a senior position with a major consulting firm with a diverse client list. Extensive knowledge of systems work is required as is a full awareness of management information needs. Please write or telephone 01-629 1844 (at any time) – in confidence – for further information. Every day, our 747 flies non-stop to Chicago.

Every day connections leave Chicago, for over 150 US destinations.

Not even New York can match Chicago when it comes to internal US flights.

Chicago boasts 1141 of them. Every day. 32 to Minneapolis alone. 27 to St Louis. 24 to Pittsburgh. 19 to Kansas City. 19 to Kalamazoo. And flights to over 150 other places in the USA.

Now you can fly non-stop to Chicago in the comfort of a BOAC 747.

Take off from London at 2pm, any day of the week. Sit back and enjoy a good film, or listen to your favourite music*. Land at Chicago at 4.25pm—

in time for flights to most American cities.

This is just one of many ways we lead across the Atlantic.

No other airline, for instance, flies direct to so many major North American cities. No other European airline offers you a choice of 80 flights a week to North America. And no other airline offers you a choice of flying 707 or VC10 or 747.

In fact no other airline in the world serves America better than BOAC.

Not even the Americans.

We'll take good care of you.
BOAC

The
Economist

October 28, 1972

Five minutes to twelve

Representatives of the Government, the Trades Union Congress and the Confederation of British Industry were still meeting in Downing Street when this issue of *The Economist* went to press. It was not yet known whether Britain was to have a nominally voluntary incomes policy (which will have to be buttressed by statutory policy eventually), or an admittedly statutory policy (based on Mr Heath's intended voluntary package). The country waited on Thursday night for the answer, but as usual concentrated on the questions (such as whether Mr Feather will indicate that he is satisfied or dissatisfied) which really will not very greatly matter. The real difference will be between either of these possibly effective statutory policies and a non-policy that will leave Britain drifting to disaster.

A non-policy could come about either through the Government and trade unions pretending that they have in some manner agreed, but saying that they will be "flexible" in interpreting individual cases (which would be the worst outcome, probably leading to more than 20 per cent per annum wage inflation this winter before a statutory policy is finally enforced); or through the Government admitting that it has not agreed with the unions, but saying that it hopes private sector employers will join voluntarily with the nationalised industries in pretending to enforce the Heath formula regardless (although in practice both would then compromise with it).

Under each of these four possible outcomes, there will have to be eventual confrontations. And it is those eventual confrontations that will matter. The Government is probably right in assuming that it will have more chance of winning them if the TUC says it agrees with some fixed formula, even though a lot of unions will then give notice that they intend to ignore it. Recent experience suggests that a union which is striking against the public but still retains some sympathy among the stricken (eg, the miners last winter) nearly always wins

a wildly inflationary award, while a striking union which retains no public sympathy (eg, the electricity supply unions the winter before last, and presumably any union that struck this winter for more than the TUC had said was justified) only sometimes wins a wildly inflationary award. The Government on Thursday was trying to buy the TUC's signature on a piece of paper—and paying it a fairly high price in terms of a lot of uneconomic distortions—in order to get into a position where, so long as incomes policy remains "voluntary," the nation would only lose some confrontations with militant unions instead of all of them. This is not a sufficient aim, especially since the loss of some battles would soon escalate into the loss of more and more of them. The loss of a battle in the electric power stations would be the most serious of all. It would be another step on the long road to the economic scrapheap that both major political parties and a weak Treasury have condemned Britain to over the past 20 years (see pages 71 to 78).

Methods of enforcement

The determination has got to be to proceed now either to the installation of some fall-back controls behind a voluntary deal, or to the enforcement of a statutory policy with a wide measure of voluntary support. The aim should be that a union which started a strike to try to get an award above the Heath maximum should know that it would not merely be courting unpopularity, but might actually make its members poorer than they would otherwise be. How?

Let it be said at once—and, once said, forgotten—that the best supporting statutory method of containing wage rises would be through the sort of tax surcharge that has often been suggested in this paper: whenever a firm's wage payments per man rise by more than an agreed norm in the year ahead, the whole of the excess could be taken back by a surcharge on workers' weekly national insurance payments in that firm, subject to appeal in

certain cases, but with a provision that the appeal would not be considered if the excess over so much a week had been gained after any strike action. The reason why there is no point in detailing again this argument is that the cries from Government against it bear all the hallmarks of politicians retreating into a technician's impermeable shell: it is said that such a scheme would be "too inflexible," and that "opposition to it might bring the whole mechanism of taxpaying into disrepute." Probably, therefore, any eventual statutory system will have to be one of two broad types.

First, some sorts of "fall-back controls" might be imposed, perhaps in conjunction with the monitoring system which the CBI has proposed for both price and wage increases. Some independent body could look at any increases which that monitoring system showed to be excessive, and could roll back any excess price increases, preferably with a penalty surcharge on the firm that had temporarily enjoyed them. And it could order that groups of workers who had enjoyed excess wage rises should not be allowed another wage rise for much more than another year, preferably with a penalty element in the ordered time lag if the excess over the norm had been achieved by any strike action. The relative attraction of such a scheme to the Government—and the relative disadvantage to the nation—is that the Government could choose discreetly which offenders to pursue through this mechanism, and which to run away from.

The tougher sort of enforcement would be through a statutory freeze of the 1966 Wilson type, mitigated by saying that this freeze would not be enforced against anybody who got only the norm in his pay packet during the coming year, although presumably with some mechanism for appeals. This would be very similar in effect to the 100 per cent excess surcharge on workers' national insurance contributions: except that there would not be any self-enforcing correctional mechanism, so that the Government would presumably have to shrimp through the monitoring system to try to find offenders to sue, although with the thankful remembrance that during the Wilson freeze there weren't any. There would be an equivalent freeze on all rises above 4 per cent in manufacturers' prices or 5 per cent in other prices.

Cost of controls

The Government, or its successor, will have to move to some variant of one of these types of control in the end. That prompts two questions. First, when? The answer here is: the sooner, the less disastrous. Secondly, which? The milder fall-back version that the Tory managers seem to prefer or the tougher freeze?

There are some serious arguments against a tough freeze, especially a long-lasting one. Logically, controls should be imposed only against price and wage rises that would not have taken place in a free market (ie, only against monopoly-determined prices and trade-union-enforced wages). It had better be realised that any 4 or 5 per cent limit on price rises is going to drive into bankruptcy (and into sackings) a haphazard cluster of

firms. A similar policy five years ago would by now have decimated the number of newspapers (many of which have doubled their prices since then) and would have savagely cut back some labour-intensive services (eg, many postal deliveries) which the public likes to have even at today's hoisted charges. A regime of price control makes most profitable the production of things which are so inessential that the price controllers do not really bother to run after them, or things which are unbranded so that tiny and unnecessary changes in their quality can lead to the pretence that they are entirely new products. Controls on things like retail food prices either have to be tight enough to drive small retailers out of business, or loose enough to give the big supermarkets a luscious killing.

Similarly, a limit on wage rises might cause a labour shortage in some jobs that are growing increasingly unpopular: often jobs which require inconvenient working hours, rather than "dirty jobs" (the unpopularity of these is a fastidious middle class delusion). The Heath formula of "concentrating on helping the lower-paid" sounds humanitarian in principle, but in practice it could have the effect of America's statutory minimum wage in pricing the least employable 10 per cent of the population out of jobs. It will not push registered unemployed up to the 10 per cent that would gravely embarrass politicians, because many of the least employable tenth are elderly ladies who then do not register, plus the one-fifth of most disadvantaged teenagers (especially from black or poor white families) who may then drop out to start unregistered employment as muggers. There are obvious long-term dangers in Mr Heath's grand strategy of tacking his boat to whatever wind the TUC favours at regular meetings, which are also attended by Mr Campbell Adamson's team from the CBI: this could be a strategy for guiding economic policy by the whims of an envious, cost-benefit-unconscious and change-resistant pressure group, as balanced by another conservative and unrepresentative one.

Cost of inaction

And yet it is necessary to say again why the toughest possible statutory enforcement package will be right, and why anybody who says that instead he "must fight a corner for his own people" is a fool playing with fire in a powder keg. The time in Britain is already five minutes to twelve. Hourly wage rates are now 17 per cent higher than a year ago. Unless there is statutory restraint, the earnings indicator will go into an annual rise above 20 per cent some time this winter. The eventual level of price inflation associated with that must be something like 14 per cent, going up. When prices are inflating at 14 per cent per annum, the professional man who retires on a pension at 60 will find that each £1 of his pension is worth only 6p if he lives past his 82nd birthday. All history suggests that countries which rip their social fabric with that sort of inflation go to political extremes to root it out. Britain is still a sufficiently class-ridden society for the usual rulers in a Latin American Britain to be more probably Enochite than Allende-like.

There is a danger that the government of Britain in the 1980s might then be a conservative populist one, seeking scapegoats in immigrants, long-haired leftist students, all trade union pickets, although no doubt interspersing the sport of trendy-liberal-bashing with occasional confiscations from the rich and successful, just to keep the flames of populism alight. If the nasty left did win the battle with the nasty right, to which a continuance of present inflation could soon lead Britain, the results would be equally unsalutary. The decent and

moderate trade union leaders, who have been planning to cut Britain's electricity again in order further to hoist their members' wages which have already risen by a third in two years, have not understood the dragons' teeth they are sowing. If Mr Heath enforces his package plan, the consequent checking of inflation will be abundantly worth the billion pounds or so a year of emollient economic sillinesses that look like being attached to it. If he does not enforce it, he will have led this inflation nation down another few fatal steps of its descent.

A summit of lively deadlines

Mr Heath did well in Paris. So did President Pompidou. So did Europe. But there are now going to be some momentous battles of Brussels during a very big year ahead

Europe's summit in Paris last week, as Holland's prime minister mournfully said at the end, was a success. True, it did not kindle much public fire. But then it was not a meeting about the sorts of project that fire people's minds. Even Herr Willy Brandt's too many words could not make them sound as if they were going to. Add to this the filibuster the Dutch staged over direct elections to the European assembly in Strasbourg, a cause they knew they could not yet win, and even the public relations of this summit, muffed in its beginning by boring speeches and lack of contact between politicians and press, were muffed magnificently in its end.

Yet the fact remains that, in its own terms, the summit was a success. The Nine have now marked out areas of action which, while they will not set the Thames on fire, may soon warm the water a bit on the Clyde, and will certainly light flames under a lot of negotiators' bottoms. The list of subjects that were discussed in Paris is examined in more detail on pages 85 to 94. This was a summit of deadlines. In one year's time, if Britain is still fighting the good fight, a European regional policy that benefits Britain, Ireland and Italy should be nearly in place. A year from now the embryo of a federal reserve bank will be in place, and shortly to have its resources enlarged. A year from now a deadline will be approaching that ought to concentrate Europe's mind after years spent dithering about how to pull its industries and technology together.

Just over a year from now, with all these things done, the Nine will enter the "second stage" towards economic and monetary union. All anyone yet knows about this second stage is that it will come after the first. We may not learn much more from the meeting of the Nine's finance ministers next Monday and Tuesday in Luxemburg. But the probability is that, after much wrangling, and thanks especially to pressure from Holland and Germany, this second stage of Emu will eventually include a set of community checks and powers that should (together with the projected European central banklet) take the Nine's economic policies a little bit further out of purely national control. Similarly, by the end of 1973, flannelly good intentions for a grander social

policy, an environment policy and so forth may be halfway towards meaning something more concrete than they do today.

In less than a year's time the Nine will have decided how better to pull their foreign policies into line, including an attempt at coping with the external effects of what the EEC does within its own borders. The foreign ministers will start straightaway to meet four times a year, twice as often as hitherto and in addition to the umpteen times a year they will see each other at the formal sessions of the EEC council of ministers. It seems likely that the formal links between the foreign policy functions and the council functions of Europe's ministers will be becoming increasingly blurred during 1973. A year from now the Nine's intention of bargaining as one on international monetary reform will have been put to the test at next September's IMF meeting in Nairobi, and the invitation sent out from the summit to reach a joint EEC position on trade negotiations in Gatt will have been either taken up or rejected. The European security conference—in which western Europe is still unsure how much it should work together—will in a year's time be either in full swing or moribund. The Commonwealth sugar agreement and the EEC's Yaoundé association agreements will both by then be coming up for renewal, so that the entire complex of Europe's preferential policies, including the Mediterranean ones, will be in the melting pot.

Setting the targets

So 1973 in Brussels will, one way or the other, be a pretty astonishing year—one of constant negotiation over an array of subjects. This makes the notion that there were those who won and those who lost in Paris last week seem rather silly. The single most important point is that Europe used the Paris summit to jerk itself beyond old policies towards the possibility—no more than that at this stage—of new ones. In the process the Nine have set themselves a grander target still, the "intention to transform the whole complex of their relations into a European union" by 1980. How much more this will mean than the "union sans cesse plus étroite" which the Six said they were aiming for 15 years ago in the

first phrase of the treaty of Rome has intelligently been left open to doubt.

If 1973 is to be such a slog, who will come out best? Mr Heath did well in Paris, and it is tempting, but wrong, to draw either of two conclusions about the future from his success. One wrong conclusion was promptly drawn by Mr Wilson in the House of Commons last Monday: that Paris produced nothing more than promises, and that Britain will sag back again once the real fight starts in Brussels next year. The equally wrong reaction, from many of the British newspapers, was the orgy of congratulation for Mr Heath, as though Europe were a lottery in which only one participant can win. Provided that nobody actually believes them, newspaper stories along such lines as "Heath batters market: French crumble" may be permissible fanfare blowing after the 15 less happy common market years which have gone before. But the facts of power are different.

Mr Heath did well in Paris because of the strange balance of mutual gain which the common market is about, and which Mr Heath knows so well. He did not, in the first place, get all that he asked for. His wishes on Europe's trade policy were, perhaps fortunately, toned down. His idea for helping poor countries, namely reducing the burden of their debt repayments, got lost.

The price Britain paid

Mr Heath only won agreement for what Britain needed by narrowing his ambitions to what was essential. The price paid for his success, therefore, was the sight of Britain sitting on its hands about subjects like the European parliament, in which its European friends (other than France) believe Britain has the largest contribution to make. This at a time in Europe's fortunes when two not altogether happy rules apply. The first is that Europe's smaller member states get a rough deal whenever they do not have one or more of the big boys on their side. The second is that the tacit understanding between Britain and France that has been maintained since May,

1971, and the tolerant view of their behaviour that the Germans have been obliged to adopt, are for the moment allowing Mr Heath and President Pompidou together to guide this stage in Europe's ascent pretty much as they want.

For France, too, did well in Paris. True, it gave away more than it meant to on the future principles of a European regional policy; when they heard about this, France's finance officials gave their foreign ministry colleagues on the drafting committee a severe wiggling. But M. Pompidou himself let this happen, with his eyes fully open to what he was getting in return. France had got in advance nearly all that it wanted on monetary union as a condition for holding the summit at all, and it got a little bit more in Paris itself. It had Britain's help in seeing that the debate about the EEC's future institutions moved nowhere pretty slowly. And M. Pompidou was able to shape Europe's policy towards outsiders, notably towards North America, into the sort of hard-nosed enlightenment which has become his particular hallmark in recent months.

So Britain did not somehow outFrench the French. Nor was it outFrenched itself. Deeper realities underlie the deals done in Paris. At present, small countries, even the bellicose Dutch, remain willing to fight and lose because they are the ones who gain most anyway from belonging to the bigger European union. Equally, the regional and other policies which may now be Europe's emergent last week not from a sour power play, but because the needs of its new members are so clearly Europe's needs if economic union is to succeed. Anyone who still thinks President Pompidou was unhappy about the outcome of Paris should listen to his partners. Even the Dutch, whom he squelched, were singing his praises as chairman of a summit which could easily have gone wrong. A happy foundation of real common interests underlies Europe's furious internal haggling. This is why Britain can and should march firmly into the battles of Brussels in 1973.

America's non-campaign

This year's presidential election was supposed to offer the United States a real choice but it has not worked out that way

As the American election enters its final week, President Nixon is still unbeatably far ahead, by 25 points at least—and more, according to most of the national opinion surveys. He is now hoping, it is said, to carry all 50 states, leaving only the District of Columbia, the nation's capital and his present home town, for the Democratic candidate. Only if the polls are completely wrong can Senator McGovern win. He continues to insist that they must be. After all they were last winter when he was campaigning for the Democratic nomination; moreover even they now show that he has been gaining on Mr Nixon a little recently. Mr McGovern

knows his cause to be righteous; so surely it must prevail as it did last spring.

But a national campaign for the Presidency is quite different from a series of state campaigns for a party's presidential nomination. From March to June, from New Hampshire to New York, Senator McGovern was fighting fellow Democrats who represented his party's establishment. He was the outsider, the underdog, who attracted all the protesters—the anti-war groups, the women's libbers, the drug legalisers, the students and many more. With the help of his efficient young organiser and of the reforms in the Democratic party's convention

procedures, they gave Mr McGovern his presidential nomination—but only just. And in the process they lost him the support of the main body of the party—the men who run the city machines, the trade union leaders who provide the money and muscle.

What's wrong with McGovern

To win the Presidency Mr McGovern had to woo these people back to work for him. In this he has had some success but not enough; many, but by no means all, of them are helping him out of party loyalty but few of them are doing it with real devotion. And in wooing them he turned off the activists for special causes who had backed him earlier and now felt that he had compromised with their ideals for the sake of political gain. For this Mr McGovern should be grateful. It was the belief that he supported these radical interests—amnesty for deserters, abortion on request, drugs without penalty, racial redistribution of pupils in schools, equalisation of incomes—which had driven so many of the traditional Democratic voters away from him. In fact Mr McGovern is no advocate of extremist policies and has made this clear again and again. But all that he has achieved by this is to shake the confidence of the activists without restoring that of the blue-collar workers, the Roman Catholic Italians, Poles, Hungarians who are increasingly conservative nowadays, increasingly afraid of losing what little social stability they have accumulated. The 80 per cent of blacks who are, as always, solidly behind the Democratic candidate do not make up for the loss of these ethnic voters. They are the people who voted for Mr George Wallace in 1968 and who, from present indications, are going to vote for President Nixon this year. His 60 per cent of the polls is the combined total of his and Mr Wallace's support in 1968; Mr McGovern's 34 per cent is slightly above the then Vice President Humphrey's figure at this stage of the 1968 campaign.

To gather back these alienated Democrats, the party bosses and union leaders as well as the rank and file, has been the task of Mr Sergeant Shriver, Mr McGovern's vice-presidential running-mate, a Kennedy brother-in-law who has brought much of the political charisma of his wife's family and his own energy and charm to bear on the problem. On the other side is Mr John Connally, the ex-Governor of Texas and ex-member of Mr Nixon's cabinet, who heads the Democrats for Nixon. Mr Connally has certainly succeeded in adding to the President's overflowing campaign fund but how many doubtful Democratic voters he has captured will not be known until after November 7th. While many of the people who now tell the pollsters that they are still undecided are probably Democrats at heart, the general view is that many of them will simply stay at home on election day, unable to bring themselves to vote for either presidential candidate.

Apathy is reported to be widespread in the United States this autumn, perhaps largely because the voters feel that the outcome has never been in doubt. But there has also been an absence of serious political debate. This year there is hardly any of the cathartic educational con-

frontation of opposing views which a presidential election is supposed to provide. This is because the challenger, preoccupied with his shortage of money and incompetent organisation, has found himself on the defensive most of the time. His campaign has never really got going, although he has been flying around the country indefatigably. Senator McGovern has been drawing larger crowds lately and financial contributions are coming in better, although mostly in small amounts. But the crowds are composed mainly of his supporters. Organisation rather than enthusiasm also explains the crowds which have been greeting President Nixon now that he has condescended to come down from the White House into the campaign mud. But even now he is not deigning to tell Americans what he proposes to offer them during his second term of office. He is standing on his record, particularly abroad, in China, Russia and the Middle East, and using all the opportunities which his presidential office provides to see that the best side of that record comes out.

Even if Mr Nixon does not achieve actual peace in Vietnam next week (and this now looks unlikely, see page 16), the continuous round of negotiation reminds the voters of how successful he has been in running down the war. They do not seem to mind that he has not ended it, although Mr McGovern constantly recalls that his opponent promised to do so when he took office four years ago. Unemployment may still be at 5.5 per cent of the labour force and the cost of living may have gone up again last month, but so did industrial production. Profits and earnings are rising too and this is more important, at least to most voters, than the fact that last year Mr Nixon broke his undertaking not to control prices and wages.

From all reports the average American still does not trust Mr Nixon; it is just that Mr McGovern is distrusted even more and he is an unknown quantity as well. On economic matters, particularly, people are frightened of what he would do in the White House. His early ill-thought-out plans for the redistribution of incomes, although abandoned long ago by him, have not been forgotten. Americans realise that a lot of things are wrong with their country—the welfare system, the health services, the transport facilities, the schools, the slums—but they are not yet reconciled to drastic change. Even when it comes to the Vietnam war, people seem to think that Mr Nixon would be able to end it more satisfactorily than Mr McGovern, although his presidential campaign was originally inspired by his opposition to that war.

So it's Nixon again

What it all adds up to is that Mr Nixon seems to be a better manager than Mr McGovern and a manager is

The campaign

Our correspondents report on the Republicans' hopes in the South, key congressional races in New York, Massachusetts and Rhode Island, and the campaign in the farm state of Wisconsin, pages 47-57.

what is wanted in the White House nowadays rather than an innovator. The Senator began badly, by making a mess of his vice-presidential choice and of his campaign organisation. Nothing that he has done since has convinced Americans that he could run their country efficiently. It is still possible, however, that Mr Nixon will be damaged by the well-authenticated stories now circulating about the wheat deal with Russia and the tapping of telephones at the Democratic party's headquarters by men allegedly connected with the White House. Mr McGovern has naturally gone to town with accusations of corruption which in the past would have caused the voters—or at least the more sophisticated of them—to rise up against the President.

But nowadays these are matters that seem to concern only a few liberals of distinctly anti-Nixon hue. The country seems either not to care or else to believe that politics has always been dirty and cannot be changed. This has actually been encouraged by Mr Nixon's method of government; he has reduced interference from Washington to a minimum (which is not altogether a bad thing). So the political activists are

concentrating in this election on local issues that they can influence, working for candidates for Congress and the State Legislatures whom they know, for bond issues to finance schools or sewage systems, for referenda on clean water or capital punishment. And the students, or most of them, are going to their classes instead of filling the gap left by the defection of the trade unionists who can normally be counted on to get out the Democratic vote.

Mr McGovern has offered, in a series of television addresses and position papers, a constructive alternative to President Nixon. But little attention has been paid to these proposals even by those who approve of them, because Mr McGovern's chances are so poor; moreover many people doubt whether he would be able to keep his promises if he were elected. Indeed, his reputation for changeability and inconsistency is so strong, probably unjustifiably, that few people even believe that he would want to keep his promises. This conscientious, high-principled, ambitious man has failed to provide a focus for America's genuine concerns. And so Mr Nixon looks like winning a second term by default.

Putting the heat on Thieu

It is not just Mr Thieu, but the whole non-communist majority in South Vietnam, that has to be taken into account at this stage in Mr Kissinger's negotiating process

President Thieu is being told on all sides, and not only from the north, that he is the one remaining obstacle to an easy and immediate peace in Vietnam. The North Vietnamese insist that an agreement has already been reached with the Americans, and they say they are ready to sign next Tuesday. It is very embarrassing for President Nixon. Mr Kissinger agrees that peace is within reach, although he does not see things quite the North Vietnamese way. But President Thieu's fighting talk last Tuesday has certainly gone down poorly with many of his American allies. This may do him an injustice. His stiff-necked stand may be a nuisance to Mr Nixon on the eve of the American election but Mr Thieu believes firmly that he is stopping a sell-out.

What he said really only amounted to what was until very recently one of the orthodoxies of the Nixon Administration. He said that there was no point in having a ceasefire unless the North Vietnamese, as well as the Americans, were required to pull their forces out of South Vietnam. He argued that the truce should apply to the whole of Indochina. And he insisted that free elections, rather than an imposed coalition including the Vietcong, should be the basis for determining South Vietnam's political future.

Mr Thieu's refusal to give an inch is being contrasted with the apparent readiness of the men in Hanoi to clamber out of their diplomatic trenches and advance a bit into no-man's land. Hanoi radio said on Thursday that North Vietnam's agreement with the Americans involved a ceasefire, the exchange of prisoners and the

withdrawal of all American forces from Indochina. Then Mr Thieu threw his spanner into the works. This was nicely calculated to encourage even more simulated shock over Mr Thieu's failure to see reason. But how much have the North Vietnamese and their clients actually conceded?

What Kissinger has got

It looks as if Mr Kissinger may have jollied three concessions out of the communists. They now seem ready to negotiate a ceasefire in advance of a political settlement. Second, they may be willing to accept Mr Thieu's friends (and possibly Mr Thieu himself) as partners in a three-sided coalition in Saigon. Third, they have said now they are ready to accept a six months' interval between the formation of a coalition and the holding of free elections in South Vietnam. This is an advance, since the communists have hitherto been reluctant to agree to any deadline for elections, presumably because they would really prefer not to have elections at all. Clearly, they would like as much time as possible after a ceasefire to infiltrate their strong-arm men into the 90 per cent of the country (in terms of population) which they do not hold and to eliminate their enemies through a campaign of terror and assassination.

But they have refused to budge on the principle of a coalition government, to be composed of the Vietcong, Mr Thieu's supporters and a neutralist "third force." This is unacceptable to Mr Thieu. The judgment of the rest of the world should depend on whether a coalition

BUSINESSMAN WISE PROSELYTIZE WITH **impAKT** LETTERHEADS

- pre-printed in 4 colours
- ready for IMMEDIATE use
- over 100 designs and slogans to choose from.

Ideal for putting punch into sales letters, direct mailing shots, news bulletins and promotion campaigns.

If you want action get it fast! Impakt letterheads motivate! Over 100 clever slogans and drawings in full colour to cover every kind of business communication. Already over 5,000 firms have had the wit to use ours—to bubble-up their sluggish sales, to get stockists stocking-up. Impakt letterheads are pre-printed, raring to go. Order any quantity (Minimum 100), delivered by return post.

would be merely a grouping designed to administer the country during a relatively short period before new elections are held, or a system that is supposed to set the pattern for the government after the election too. The former should be acceptable, and the latter should not be.

The dangers in a coalition

The magnitude of the danger that a coalition would turn into the latter animal would hinge on three things:

(1) The balance of forces within the coalition. The communists cling to the thesis that there are two administrations and two armies already in existence in South Vietnam. So they may therefore ask for an equal share in the coalition with the present government's supporters. Since no one believes that the Vietcong could get more than 20 per cent of the votes in a free election, and since the communists control less than 10 per cent of the country's population, they are patently not entitled to an equal share in a coalition. Mr Kissinger's peace plan appears to envisage that the "neutralists" should be separately represented. The idea of a third force in South Vietnam is largely illusory. Mr Thieu certainly has enemies among the country's political establishment—including some living in comfortable retirement in Paris. But nobody inside the country can really be neutral between the alternatives of a communist or a non-communist government. The idea of a three-sided coalition has been used by the communists to exploit the rifts among their opponents: witness the fate of the "neutrals" in Laos after the 1962 Geneva compromise. There may therefore be a better argument for making the coalition a two-sided one, with President Thieu's party and the communists each including some "neutrals" in their own representation.

(2) Who gets what jobs. It would be fatal for everyone else in Vietnam if the communists or their friends were to get operational control of the army or the police for even six months.

(3) Most important of all, the lifespan of the coalition. The only logical role for an imposed coalition whose members were picked arbitrarily, without any reference to the electorate, should be to hold the ring while preparations were made for an election that would reveal the true distribution of support inside the country. That election would have to be held as quickly as possible (the delay should not be longer than six months), and the government formed after the polling should emerge through a process of free bargaining between the groups that had proved their popular support by democratic means. The government after the election should consist of a combination of those groups that believe that they can work together effectively, provided only that this combination represents a majority of the electorate; and the minority that is left out of the government should be given a guarantee that it will be free to play the normal role of a democratic opposition. It would be both wrong and unworkable to prescribe in advance that any particular group should have a place in the post-election government irrespective of its voting strength.

It is doubtful if the communists are willing to swallow this interpretation. They know that a genuinely free election would expose the fact that they enjoy only

minority support. Although they are now saying that they would be ready to take part in some sort of election soon after the setting up of a coalition, they want the voting to provide the basis for a constituent assembly rather than for a future government. This would permit them to continue in power for an indefinite period and destroy the system from within. It is not in the interests of either Mr Thieu or Mr Nixon to give them that chance.

Even if the Americans (in the hope of producing a spectacular "agreement in principle" before November 7th) are determined to push ahead with a plan for an imposed coalition, Mr Thieu has now made it clear that he will not play along with them. This toughminded politician, so long derided as a puppet, has shown that he is not going to dance to anyone's string-pulling. And he has one or two tricks up his sleeve. While the North Vietnamese insist that they will not free their American prisoners of war unless captives held in South Vietnam are also freed, Mr Thieu has the power to prevent Mr Nixon winning timely applause by bringing those particular boys home. Of course, his personal survival and the survival of the whole regime depend on massive American military aid; and it could be suspended if he refused to play ball. But it is doubtful whether Mr Nixon would go as far as that in pursuit of a settlement that would hold very few advantages for his South Vietnamese allies, and which, despite his electoral preoccupations, he does not seem to need in order to beat Senator McGovern.

Something less than peace

There is unlikely to be any grand settlement of the war in these last 10 days before Mr Nixon faces the polls. But there could be a lesser agreement that would please American electors without exciting too much anger and alarm in Saigon. It might consist of an agreement on a standstill ceasefire coupled with some (suitably vague) assurances about future talks between the South Vietnamese and the Vietcong. A ceasefire that halted the American bombing, but left the North Vietnamese free to move their men about inside the areas they hold in the south, and to move supplies and reinforcements through Laos and Cambodia, would certainly be no famous victory for the men in Saigon. It would serve Mr Nixon's electoral purposes, not the military needs of the South Vietnamese. If it included the release of some of the American prisoners it would be joyfully welcomed by many Americans; but it would reduce, rather than increase, the capacity of the South Vietnamese to avoid losing their war.

No truly viable settlement can be negotiated and implemented over the heads of the South Vietnamese themselves. Mr Thieu is not the world's most democratic, or popular, president, but he has won a lot of support this week, even among his political rivals, by showing that he is prepared to stand up to his patrons. He has said he is ready to step down in order to hold free elections. The Americans fell once before for the delusion that, by casting aside a South Vietnamese president, they could find a solution for the war. It did not work with Diem in 1963, and it is even less likely to work now.

In 1971, 81.1% of BEA flights arrived on schedule.

If you've a spare moment, read why your Captain hasn't.

Ever wondered, while you sip your duty-free drink, just what the Captain's doing up there on the flight deck? Well, among other things, he's constantly: Checking and controlling the aircraft's flight path; Operating the radio navigational equipment; Receiving meteorological reports; Assessing fuel consumption; Interpreting the weather radar; Supervising his co-pilots;

Logging engine readings; Transmitting reports to Air Traffic Control; Ensuring, via the Chief Steward and the Stewardesses, the comfort of you and your fellow passengers. In short, making every effort to ensure that you arrive at your destination happy, relaxed and on time. Because your Captain believes in devoting all his time to making sure you don't waste a minute of yours.

Your Captain wishes you a pleasant flight.

BRITAIN

The other side of the Hill

Now that the House of Commons has once again voted against any experimental televising of its proceedings, the broadcasters of the land can devote even more of their energies to their other two favourite pastimes—forming consortiums to bid for commercial radio stations (particularly the London all-news station) and guessing who Mr Heath might appoint as the next chairman of the BBC. These are early days in the commercial radio struggle, but the indications are that vastly more people are interested in running radio news for a profit than in succeeding Lord Hill at the BBC for a pittance—although none of the people who have been reported as turning down the BBC job has actually been offered it.

In the opinion of some senior members of the Government there is a very direct connection between the Commons rejection of the television cameras by 191 votes to 165 and the top management of the BBC. At the Tory party conference, a week before the Commons rejected the television experiment, some senior ministers who had access to the whips' reports on backbench feeling were predicting, in private, that the motion would be lost. This prediction, which was surprisingly confident,

considering that the motion to have a closed circuit experiment had been lost by only one vote when it was debated in 1966, was based upon the widespread distrust of the BBC which they knew existed among Tory backbenchers, and particularly among the younger Tory MPs.

It is true that this distrust was not voiced during the Commons debate on Thursday of last week; the opposition then came very largely from the older generation of parliamentarians who were afraid of the effect that the television cameras might have on the character of the Commons. Yet the BBC and its supporters would be deluding themselves if they took that as evidence that such misgivings about the present conduct of the BBC are not widespread and did not play a considerable part in persuading many MPs on both sides either to vote against the television experiment or stay away from the debate altogether.

To follow Sir Hugh Greene, the former director-general of the BBC, on this issue is to be misled. In his recent Granada lecture on the future of broadcasting, Sir Hugh admitted that there seemed everywhere to be an "instinctive feeling that something is not quite right with the BBC." But Sir Hugh, while acknowledging there are quite genuine grounds for it, reckons that feeling can easily be cured by Mr Heath appointing a chairman who would persuade the governors to resume the old, passive role of not interfering with the professionals' prerogative of deciding which programmes should be broadcast, and restricting themselves merely to considering after the event, if necessary, whether the professionals had been right or not.

It is unlikely that Sir Hugh Greene's successors will ever see such halcyon days again, for the nature of the serious

political criticism of the BBC has changed drastically. That some in the Labour party believe the BBC is anti-working class and some in the Tory party believe it is pro-Labour is not very important; it is the feeling that too many BBC people and programmes are biased against the present party and parliamentary system which concerns many of the leaders in both major parties. Mr Heath, like Mr Wilson before him, regards television as too powerful a medium for the BBC to be headed by a man who is content to regard the chairmanship as little more than a dignified position.

But an interventionist chairman does not have to be a politician. Indeed, among those politicians who recognise that journalism is about criticism Mr Hugh Cudlipp, who is leaving the chairmanship of IPC Newspapers, would be an acceptable choice. Under Mr Cudlipp, the Daily Mirror has perfected the art of pungent, and sometimes thumping, criticism of governments and parties without bringing the whole political system into question (Mr Cecil King's aberration in that respect cost him his job). And some Conservative backbenchers, in particular, are canvassing support for Mr William Deedes, who has been both a Tory cabinet minister and a working journalist. Mr Heath is keeping his own counsel, if indeed he has yet made up his mind. What is certain is that Lord Hill's successor will be more a shirt-sleeved chairman than a stuffed shirt.

Labour party Shadow play

Although nominations for Labour's new shadow cabinet do not close until next week, the candidates' election campaigns are already well under way. Yet despite the fact that this year the struggle will be even rougher than last time, it will be surprising if there are many changes.

The reason for the vigour of this year's campaigns is that there are likely to be significantly more candidates, particularly from the centre and right.

Hill: Greene is far away

of the party. Last year, the pro-marketeters produced a slate of only nine candidates for the 12 seats on the shadow cabinet, and partly because of this succeeded in electing four of them—Mr Edward Short, Mrs Shirley Williams and the two who subsequently resigned with Mr Jenkins in April, Mr George Thomson and Mr Harold Lever.

Now that Mr Short has already been re-elected as deputy leader, the marketeters have only Mrs Williams's seat to defend and no one doubts that she will win easily; indeed there is an outside chance that she will come top of the poll (she was third last year). But it is clear that the marketeters are making no serious attempt to keep down their number of candidates. Men who last year stood aside so that a short slate could be produced quite reasonably believe that they have done their duty to the cause once, and that they must now be allowed to run.

As a result, it is rather unlikely that the marketeters will make any gains. Last year, Mr Cledwyn Hughes was the highest unsuccessful pro-market candidate, but although he will probably do rather well again it is difficult to see him winning. On the other hand, if Mr Harold Lever ultimately decides to stand—and this is a strong possibility—he may just squeak in.

The most likely casualty is once more Mrs Barbara Castle. Last year, she lost her seat, and retained her place on the front bench only because of Mr Wilson's generosity to an old friend. She eventually won her seat back after the Jenkinsite resignations had created three vacancies. The other member of the shadow cabinet under pressure is Mr Reg Prentice, a moderate anti-marketeter who has taken up that position largely, though not exclusively, for third-world reasons.

He is a man of moderation and determination, qualities which led Mr Prentice, who is shadow employment secretary, to speak out strongly against the militants in the docks earlier this year during their confrontation with the courts; a line which required considerable courage if one was also an East Ham MP. The Tribune group has neither forgotten nor forgiven Mr Prentice for such provocative behaviour, and a great deal of work will have to be done among the moderate majority of the parliamentary Labour party if he is to keep his seat.

Once again, Mr Eric Heffer seems

Prentice: immoderate pressure

destined to do fairly well. Last year, he obtained the same number of votes as Mrs Castle—and was then defeated by her in a run-off election following the resignations. It is difficult to see why he should do well on any rational grounds. Mr Michael Foot, Mr Callaghan, Mr Peart and all the others will hold their seats with ease, and so will Mr Healey, despite his disappointing showing as shadow chancellor.

There has been a great deal of huffing and puffing about Mr Anthony Wedgwood Benn. Awful threats of retribution have been made against him by a number of trade union MPs, but it is hard to believe that he is in serious trouble. What is all too easily forgotten is that last year he did remarkably badly, coming only 18 votes above Mr Healey, who was at the foot of the list of successful candidates. As only a handful of moderates voted for him then, why should anyone expect that he will do all that much worse this time?

As the shadow cabinet election campaigns opened, the marketeters were greatly cheered by the news of the re-election on Monday of the parliamentary party's chairman, Mr Douglas Houghton, who beat his opponent, Mr Norman Pentland, by 16 votes, compared with his majority of only seven last year. Mr Pentland received strong left-wing support, despite the fact that he is on all issues other than the common market to the right of Mr Houghton. But then, as Mr Jack Peel discovered to his cost in the elections to the general council of the Trades Union Congress, those on the left are prepared to vote for any candidate, however right-wing, if they believe that they can remove men of vigour and courage who disagree with them.

Ulster

For those who will still listen

Moderates are thin on the ground in Ulster nowadays, but the few there are may have something to cheer about next Monday when the Government unveils its consultative document on the province's future. This green paper is not going to spell out exactly what Mr Heath and Mr Whitelaw have in store for Ulster; that must await the promised white paper, which may be out before Christmas. But it will lay down the limits within which a sensible political settlement might conceivably be worked out, if there were enough commonsense in Ulster. This could help inject some realism into the present war of words.

Many Protestants refuse to believe that a reunified Ireland is not one of Westminster's policy options, even though Mr Whitelaw has repeated in almost every speech since he became Northern Ireland secretary that the province can stay British so long as its majority want it that way. The green paper is certain to repeat that undertaking, but it is also going to make it quite clear that there can be no possible return to the old system of Stormont government which was suspended in March, and that complete integration with the United Kingdom is not the answer for Ulster, either.

That should then provide an opportunity for Mr Brian Faulkner to mend his fences with the Government and take a grip on what is left of the Unionist party. It is very likely that the ultra-Protestant leaders like Mr Bill Craig and Mr John Taylor will reject whatever proposals appear in the green paper. That is the only conclusion to be drawn from their talk of the bloodshed to come in their fight for an independent British Ulster if Stormont is not returned intact with security powers firmly in Protestant hands. If they do reject the green paper, then the Vanguard movement may well decide to desert the Unionist camp and set up a new political party of the right on the twin pillars of the Ulster Defence Association and the Loyalist Association of Workers.

Ever since direct rule, Mr Faulkner has attempted, with more and more difficulty, to steer a middle course. He brought Mr Craig into the Unionist policy committee, and he tried to get Mr Craig to join the party's delegation to the Darlington con-

Bradford: no pipe dreams

ference. The result has been to disenchant those moderate men in the party, like Sir Robert Porter, Mr Robin Bailie and Mr Roy Bradford, who took a leading part in the implementation of the old reform programme. Mr Stratton Mills, the Westminster MP for North Belfast, would like the Unionist standing committee to expel Mr Craig and his estimated 10,000 party followers in Vanguard and so would many other moderates. But whether Mr Faulkner could risk a decisive showdown with Vanguard at this stage is another matter. He would not have a majority party left if the Protestant working class hived off into a movement behind Vanguard and the UDA.

It was Mr Bradford who made most sense this week when he argued that the postponed referendum should not be a mere yes or no to the perpetuation of Ulster's border with the Irish Republic, but should face the Protestants of Ulster with the reality of either accepting whatever the Government finally proposes as a solution for the province or going it alone. In Mr Bradford's words, "to talk about negotiated independence which gives us the benefits of the United Kingdom without Westminster control is a pipe-dream."

Immigration

Rules for Europe

New immigration rules will, from January 1st, permit the free movement of EEC workers into Britain. This does not bring full rights of citizenship such as are available to "patrials" as defined in the 1971 Immigration Act, but it does place immigrants from common market

countries at greater advantage in finding jobs and bringing their families to live with them than immigrants from the Commonwealth or from foreign countries outside the EEC who were not already settled in Britain before the passing of the 1971 act. But the EEC commission may still require publication of the rules in a more positive form than the present Home Office standard instructions to immigration officers.

Although no one expects Britain in its present economic circumstances to be much of a magnet for EEC workers (the reverse is more likely to be true), these can if they wish come to Britain to seek work or set up business quite freely for an initial six months. If they succeed, they can then get a residence permit for five years and after four years here in business or employment no further permissions will normally be necessary. Up to that point an EEC national will still be required to register with the police as other foreign nationals are; and he would be subject to the same deportation rules. It is possible, however, that these may prove too stringent by EEC standards.

To allay fears of scroungers, residence permits will not be given to common market workers who live off public funds in their first six months and may be withdrawn from someone who does so while able to support himself. The point has been made that citizens of the Irish Republic, though they too will be in the EEC, will remain exempt from these and other residence rules—and there are very good reasons, politically as well as practically, why that should remain so. But deportation orders may be made for the first time against the southern Irish, unless, like Commonwealth citizens, they are exempt by reason of being "patrials" or by length of residence. But there is really no way of stopping Irish deportees coming back.

Commonwealth citizens who are "non-patrials"—ie, who cannot claim the right of abode in Britain by birth or descent, as defined in the 1971 act—will be admitted on a much narrower basis. They must, as at present, have work permits for specific jobs and these only, in the first place, for up to 12 months. The Department of Employment must approve if they wish to stay on after that. Apart from the fact that they will not have to register with the police they are more or less as restricted as foreigners from non-EEC countries in their job and residence rules. Neither, incidentally, may

be brought in from overseas to do a job which has not first been advertised for 18 days to EEC workers, but once in the country they will have the same priority as the resident labour force in job applications. More questions will be asked about dependants whom they wish to bring over than in the case of EEC workers. Commonwealth citizens who were resident in Britain before the passing of the 1971 act are less restricted, but they may go back to square one if they leave this country for more than two years and then wish to return.

The immigration rules make it clear that black Frenchmen or Dutchmen, who are French or Dutch only because of their birth in an appropriate colony, are not to be admitted as EEC workers unless they have some stronger connection with an EEC country. Similarly, Commonwealth citizens cannot seek jobs in other EEC countries unless they are patrials.

Jurors

Well, what about Parliament?

It was quite inevitable that the lowering of the voting age should have made MPs awfully hard to convince that anything should be denied to 18-year-olds—even something as burdensome as jury service. Last Friday, Mr Mark Carlisle, minister of state at the Home Office, failed to convince enough of them that the minimum age should remain at 21, even though the householder qualification was at last being abolished. An amendment to the Lords amendments to the Criminal Justice Bill was passed which lowers the limit to the new voting age. Mr Carlisle opposed it sitting as near to the fence as he could; and on Tuesday the amendment travelled unrejected through the House of Lords.

The Commons debate was not one of Parliament's finest hours. MPs put forward four arguments for lowering the age. First, consistency (but since it is unnecessary to apply for jury service, it hardly matters if the public is uncertain as to the minimum age); Second, that if 18-year-olds can take and risk life in Ulster they ought to be allowed to take away a man's liberty (but in Ulster, after all, they are presumed to be under order); Third, that the odds are against their being more than one or two teetotal on the jury, and these could not be challenged (which boils down

How to create 235 miles of Superhighway without anyone noticing it

It's still possible to create a Superhighway without at the same time devouring vast acreages of countryside. British Rail have provided a high speed transport system, not by building new track, but by electrifying the lines already in existence.

In fact, they're doing just that at the moment with the 235 miles of track between Weaver Junction north of Crewe and Glasgow

Central. Once this line has been electrified, the transformation of Britain's rail backbone will be complete.

By 1974, a great Superhighway system will have been created linking many of the country's major cities. Experience shows that extra passengers soon make up for the cost of the new fast electric services. Since the introduction of 100 mph services

on the Euston to Manchester and Liverpool runs, custom has more than doubled. Hardly surprising when you consider that journey times have been reduced by up to a third.

Quiet, clean and unobtrusive, the railway has an essential role to play in modern transport. By continuing to invest in it, we shall also be investing in our environment.

And that's something you can't put a price on.

British Rail

A Great British Investment

the argument that it will not do much harm). Fourth and most oddly, that the ancient right to trial by one's peers implies that the sizeable proportion of defendants who are under 21 should have the chance of being judged by people in their age-groups. The logical conclusion of that argument, as one MP acidly pointed out, was 15-year-old magistrates on the juvenile bench. And no MP seemed bothered by the rights of any old-age pensioner who finds himself in court, though everyone over 65 is barred (or, as it used to be put, released) from jury service.

The speeches by the amendment's opponents were so watered down by a reluctance to offend teenagers that they were hardly more impressive—though the point was made that 21 is still the age of majority so far as the prison system is concerned. The conclusions of the Morris committee on jury service, whose report appeared back in 1965, were quoted in their support by both sides. That recommended a minimum age of 21 (and spent a long time convincing itself that it should not be higher) but, as two ex-members of the committee pointed out, there was then no real question of lowering the legal and voting age of majority. But no one thought it worth remembering that only three weeks ago a Government committee reported that it had been persuaded that there should still be a minimum age for would-be adopters, and it found no difficulty in deciding that that age should be not 18 but 21. That is almost the only restriction left on teenagers—except that MPs still preserve their House of Commons for the over-21s. When the members of the new Speaker's conference on electoral law get round to discussing that, they might remember that some people would think teenage MPs a much less risky innovation than teenage jurors.

Housing land

County companies?

Local authorities have recently been urged by the Government to use compulsory purchase on sites which are holding up urgent housing. A Government working party* this week goes further and says that widespread compulsory purchase orders may be necessary in the growth areas of the home counties if large-scale expansion

*Local authority/private enterprise partnership schemes. HMSO. 47p.

schemes are to be achieved at reasonable cost. (The point of the CPO procedure is that the price paid, even if eventually by agreement rather than compulsion, discounts the extra site value caused by the planned scheme itself.) But at present rates of land inflation this would deal with only part of the problem. So would other ideas put forward by the working party, though they are all worthy of consideration. Joint companies with land-owners, developers or other interests, should be considered and laws introduced to give local councils a general power to enter into this kind of scheme. The point would be to save the public purse from large-scale land acquisitions when, in planning terms, ownership of key sites might do the trick, and to enable some public works, such as sewerage, to be carried direct by private developers.

The working party was asked to consider new ways of promoting large-scale private housing schemes; the snag, of course, is that there are many large-scale sites, even in the prosperous south-east, where council houses are just as badly needed. If town centre schemes, where local authorities and private developers have joined hands, are to be taken as the example, there is good reason to fear that social factors will get too little consideration under the kind of arrangements envisaged. But the working party recoils from the obvious solution of giving local authorities in large-scale growth areas powers equivalent to those of new town corporations.

Fanfare for Europe

Joking apart

Lord Goodman could not have hoped to be taken too seriously when he said at a press conference on Tuesday that Fanfare for Europe, a national festival to mark Britain's entry into the European community, is non-political. Lord Goodman knows a thing or two about politics and he knows better than that. Fanfare has been conceived as an exercise in political public relations with the object of making British membership of the common market a cause for celebration, not lament or indifference. That is why the Government is paying for it, up to a maximum of £350,000.

There is no need to be defensive about it. Of course, as Lord Mancroft, Lord Goodman's co-chairman in organising the festival, admitted, some local authorities have felt too opposed

Goodman, Mancroft: just fun and games

to the European idea to join in. More surprising perhaps is just how many have decided to play a part to make Fanfare a festival for the whole country, not just London, and for all tastes. The celebrations last from January 3rd to 13th and by the time they come to an end most people will have had a chance to enjoy some part of them.

The committee headed by Lord Mancroft has had the job of organising the non-cultural events which, given the time of year, cannot have been easy. But the programme looks imaginative, ranging from a two-day conference on the implications for industry of Britain's entry and an essay competition for all schoolchildren within the community, to a fashion show, a Miss TV Europe contest, a vintage car rally to Brussels and all manner of sporting events. Not the least achievement will be the staging at Wembley of a soccer international between the Three (Britain, Ireland and Denmark) and the Six; choosing the Three's side will start Britain's membership of the EEC off on a nice rowdy note.

If, on second thoughts, Lord Goodman might hesitate before describing a European shopping fair in Birmingham, or a "Britain into Europe" project in Leeds, or a "Housewives and the common market" exhibition in Plymouth as non-political, he is entirely justified in commending the cultural festival planned by his committee for London and the rest of Britain. In particular, the music to be offered in the capital during Fanfare, both in the quality and the extent of it, is worth boasting about.

THE WORLD

International Report

At this rate, somebody is going to get killed

No, the British navy is not going to get pinned down off Iceland as seriously as the British army has been pinned down in Ireland. But it was announced on Monday that a second frigate, *Phoebe*, was joining *Achilles* on station just outside the 50-mile sea zone now claimed by the Icelanders; and it has been made clear that these warships will be ready to enter that zone if Icelandic gunboats make any further attacks on British trawlers there. And on Tuesday Mr Heath held a special meeting of the cabinet's defence and foreign policy committee, which was attended by the chiefs of staff of the armed forces as well as by the Minister for Agriculture and Fisheries. The new "cod war" launched by Iceland at the beginning of September has started to escalate.

Nobody has been killed yet, but that has been largely a matter of good luck. After a month-long lull, Iceland's gunboats resumed on October 16th their harassing of the 70-odd British trawlers in the disputed area, cutting their trawl wires (an action that in itself can cause fatal casualties), firing warning shots, and, according to the trawlermen, attempting to ram at least one vessel. The Icelanders claim that the trawler *Aldershot* was holed on October 18th while it was itself trying to ram their gunboat *Aegir*, but the trawlermen say it was taking evasive action when it was struck, and the fact that it was holed in the stern is suggestive. Even the most pugnacious trawler skipper might hesitate before trying to ram an armed vessel, both faster and larger than his own, by backing into it.

The Icelanders are no longer stressing their anxiety to avoid clashes. Their prime minister, Mr Olafur Johannesson, who had formerly shown more restraint than his communist

minister of fisheries, Mr Ludvik Josefsson, has called the cutting of trawl wires a necessary "police" action and has accused the British trawlermen of "criminal" resistance to authority. Mr Josefsson himself has derided the ban on the handling of Icelandic cargoes at British ports that the Transport and General Workers' Union dockers imposed last weekend in support of the trawlermen, and he is probably safe in doing so; in the first half of 1972 British sales to Iceland were worth about 60 per cent more than imports from Iceland, which now sends less than 13 per cent of its exports to Britain. There was no sign of readiness for compromise in the statement issued after the cabinet meeting held in Reykjavik on Tuesday.

On the same day the new Norwegian government headed by Mr Lars Korvald said in the Storting that it is going to consider extending the country's fishing limits beyond the present 12-mile line. There was, however, no real element of support for Iceland in this move. Mr Korvald himself indicated that Norway could wait until the next United Nations general conference on sea law meets toward the end of 1973—which is what the

British had been urging the Icelanders to do. And the Korvald government is a sorry stopgap, formed by the anti-EEC minority in the Storting after last month's abortive referendum on common market membership. It cannot actually do anything serious without the consent of the pro-market majority, who would block any move that further impaired Oslo's relations with Brussels. A unilateral extension of fishing limits would shut Norway off from access to the enlarged common market under a trade agreement, just as it is doing in Iceland's case.

Britain has invited the Icelanders to resume negotiations. It is willing to accept limitations on fishing in the area newly claimed by them since September 1st, although without recognising their full sovereignty over this part of the high seas. It can cite the 1961 agreement in which Iceland promised that it would not extend its claims beyond the 12-mile limit if the International Court at The Hague upheld an objection to such an extension; it can now also cite the court's interim ruling, given in August, which directs Iceland not to interfere with British trawlers outside the 12-mile limit. But none of this seems to have any effect on the coalition government in Reykjavik, which is now visibly being wagged by its communist tail. Mr Josefsson has sought, and looks like achieving, a "confrontation" drama in which big brutal Britain can be depicted as bullying gallant little Iceland.

Phoebe sails to join Achilles

Italy

What Valpreda means

FROM OUR ROME CORRESPONDENT

Italian justice seems to be grinding to a halt. It is now close on three years that Signor Pietro Valpreda and three other anarchists have been in prison awaiting trial, but no assize court has yet been found willing and competent to judge them. The southern town of Catanzaro, in Calabria, which was most recently chosen for the unwellcome job, has now asked to be excused on the grounds that it is not equipped to cope with such an important trial.

Signor Valpreda and his comrades are accused of setting off bombs in Milan and Rome on December 12, 1969, when 17 people were killed. The evidence against them was slender from the start, and much has now come to light which suggests that the outrage was in fact the work of members of a group of fascist terrorists. Two of these, Signor Franco Freda and Signor Giovanni Ventura, have actually been arrested on this very charge, and the case against them is being prepared. None of this, however, can help Signor Valpreda and his friends unless they are brought to trial. The case has been shifted from one court to another, each move delaying the start of the trial. And, under Italian law, one can be kept in jail without trial for four years.

The case was switched from Milan to Rome and back again to Milan on a legal cavil. The question was finally settled in favour of Milan, and the trial could have been held there this autumn had not the Cassation judges accepted an objection that disturbances were likely to occur which might disturb the serenity of the court. The judges therefore ordered the trial to be moved south. They must now decide whether to impose it on Catanzaro or transfer it elsewhere.

The law's delay is by no means the only unpleasant aspect of the affair. The judge who is preparing the case against Freda and Ventura has now accused three high ranking officials of the ministry of the interior (one of them is the deputy chief of police) of holding back information which would have thrown a different light on the Valpreda case. This information concerns the dispatch cases in which the bombs were left to explode. It now appears that the four cases were bought in Padua by Signor Freda, and that the one alleged

A long wait for Valpreda

to have been placed by Signor Valpreda was originally (before it was charred) brown—not black as the witness against Signor Valpreda alleged. It has also been ascertained that a number of clockwork timers similar to those used to set off the bombs had been bought by Signor Freda. The inference behind all this is that the police decided from the outset to fasten the crime on the anarchists and more or less deliberately held back evidence which could have put the magistrates on to the fascists. There is also the matter of Giuseppe Pinelli, another anarchist who was arrested immediately after the 1969 bombings. He fell to his death from a window in the Milan police headquarters while being interrogated. The police tried at first to suggest that he had confessed.

The social context in Italy has changed somewhat since 1969. The neo-fascists made big gains in the general election last May. The towns are plastered with their slogans and manifestos and the bookstalls are piled with apologetic literature on the fascist era. But they are not finding it easy to thrust themselves as allies upon the Christian Democrats and the other government parties, and they are spoiling for trouble. This week bombs were put under a train which was carrying workers' delegates to a big trade union rally in Reggio Calabria. Train bombings in 1969 which the police at first tried to fasten on the anarchists have now been proved to be the work of fascists.

The atmosphere today is less tense than in 1969 but much more wary, and the most influential part of the

press has given up anti-communist witch hunting and is giving warnings that the biggest danger is now from the fascists. Signor Valpreda is a sick man and, it is said, has given up hope of proving his innocence or even of being brought to trial. But there is a widespread feeling that this case must be properly sifted if democracy in Italy is not to go under. It is considered a test case for the government to show that it is stronger than any high bureaucrats who have been shielding fascists. It is also a test case for the magistracy.

Germany

Meanwhile, back home

FROM OUR BONN CORRESPONDENT

The good President Heinemann, entertained this week by the Queen at Windsor and Edinburgh, is well out of it. Back home it is all go. In Berlin on Thursday the four victorious powers in the second world war met for the second time in the week to try to decide what their "rights and responsibilities" are for Germany as a whole. In Bonn this week the west German state secretary, Herr Egon Bahr, met his east German counterpart, Herr Michael Kohl, for the umpteenth time in an effort to complete a general relations treaty for the two Germanies.

All sides agree that completion dates are unimportant compared with the magnitude of the tasks that confront them. But it has escaped nobody's attention that the preparatory meeting for the European security conference is scheduled for November 22nd in Helsinki. That is just three days after the west German general election. So it might be good for all concerned if things were sewn up before November 19th and some precise notion of what Germany is and what it is not is agreed upon before the election date.

Both sets of talks are taking place against a background of extreme political uncertainty. The junior partner in the Brandt coalition government, the Free Democrat party, has this week suffered losses in local elections. They lost ground in both Hesse and Lower Saxony. The chancellor, Herr Willy Brandt, needs the Free Democrats to survive if he is to have any real chance of forming the next government. The party needs to get more than 5 per cent of the total vote if it is to be represented in parliament. In the 1969 election it got 5.8 per cent; it will be pressed to do it again.

The chance of a lifetime for your firm?

Read on and find out:

If you are planning to expand your business, you could be eligible for considerable benefits under the Government's new package of financial incentives for industrial projects in Britain's Areas for Expansion. The more generous scale of assistance now available could benefit your firm in many ways.

Where are the areas? The Areas for Expansion have been extended. They cover the whole of Scotland, Wales, and Northern Ireland, Northern and North-West England, Yorkshire and Humberside, some parts of the Midlands and much of South-West England. Whether your firm is planning to expand into, or to expand or modernise within these areas, your project could qualify for considerable benefits.

What are the new benefits? You could qualify for substantial grants towards the cost of new building and, depending on the Area, of new plant and machinery. These grants are broadly for manufacturing, mining and construction activities. They are not tied to the provision of additional employment.

Additional help for projects providing new employment 1. Capital Loans. You could be eligible for these on favourable terms. Or, alternatively, you could get relief on the interest costs of finance from non-public sources.

2. Removal Costs. There are grants which will go a long way towards the costs incurred in moving a business into the Areas for Expansion. (Certain service industry projects may be considered for these two benefits.)

3. Rent-Free Factories. Government factories are available for rent or sale. You could qualify for a rent-free period of two years.

Other benefits Other Government incentives include grants for training new labour and free courses for supervisors and instructors.

The Industrial Expansion Teams—and how they can help you Get in touch with the Expansion Team at the DTI Headquarters in London, or with one of the regional Teams. They'll give you all the facts, sound impartial advice, and valuable on-the-spot assistance in setting up your project.

Fill in the coupon for free copies of the booklets "Room to Expand" and "Incentives for Industry." Or phone the Expansion Team at any of the telephone numbers shown.

Tokai is the capital of Japan.

When you get acquainted with Tokai Bank, you'll necessarily become acquainted with Japan's Tokaido megalopolis. That's where Tokai Bank maintains the lion's share of its over 200 domestic offices.

The Tokaido megalopolis in the heart of Japan, with Tokyo on the northern end and Osaka on the south, is an industrial/financial/shipping region unparalleled in any other country. It is as if New York, Pittsburgh, Chicago, Detroit, Birmingham and Southern California were all located within 400 miles of each other.

Not only did Tokai Bank get its name from the Tokaido region, it's also where we get our capital. We are most active in the most active part of Japan.

Which is a fine thing for you to remember the next time you have dealings in Japan. We know Tokaido like no other bank. Which means we know Japanese business like no other bank.

TOKAI BANK

Jugoslavia

Now Serbia too

FROM OUR EAST EUROPE CORRESPONDENT

First Croatia, now Serbia? The resignation last weekend of the Serbian communist party leaders, Mr Marko Nikezic and Mrs Latinka Perovic, looked at first like a dose of the same draught that shook up the Croatian party last year. But there is a fundamental difference between the changes last year in the Croatian party and the present Serbian crisis. Whereas the Croats were accused of pursuing a policy of nationalist chauvinism which threatened the political stability of the Yugoslav federation, the campaign against the Serbs is rooted in their disagreement with President Tito over his contention that a *laissez faire* economic policy has divided the nation into two—the rich and the poor—to a greater extent than national differences.

President Tito now takes the view that the economic boom of many Yugoslav enterprises is creating an ever larger class of affluent, privileged managers at the expense of the labour force. Over the years of burgeoning prosperity, he has come to feel that the manifestations of a ripaway socialist market economy are incompatible with the continued power of the party. When he insists that the only people who have not benefited from Yugoslavia's economic miracle are the workers, he has something of a case.

The average Yugoslav working man is undoubtedly better off than he was 10 or 15 years ago, but he has been left choking in the exhaust fumes of a gigantic middle-class take-off. Moreover, as one Yugoslav put it, you cannot expect much in the way of discipline at a lower level when there is so much graft, embezzlement, tax evasion and speculation higher up. Some 42,000 new country and coastal holiday villas and thousands of two-car and three-car families bear testimony to the new prosperity, but even professional families who stick closely to the rule book find themselves living four persons in a minute two-roomed apartment.

The Serbian leaders agree that the party should galvanise itself but insist that it should "guide not control" national affairs, and should not reimpose itself in the manner of other communist countries. This, President Tito has said, is not his intention—he is merely looking for "higher moral standards." The error of Mr Nikezic

and the other Serbian leaders is that they have continued unswerving on the course of economic liberalism which President Tito once espoused but now rejects. Politicians come and go in most systems and it is perhaps a sign of maturity that these differences in Serbia are now being sorted out publicly, in contrast to disagreements in other communist countries.

Turkey

Alive, and kicking

The four Turks who held ransom the passengers and crew of a Turkish airliner at Sofia airport for 40 hours at the beginning of this week failed in their attempt to bring about the release of any urban terrorists imprisoned in Turkey. After long and tense negotiations they surrendered on assurances that they would be given political asylum in Bulgaria. The Turkish government was as adamant in its refusal to meet any of the hijackers' demands as it was during an almost identical event last May.

But once again the Turkish People's Liberation Army, which seems to be the umbrella organisation for diverse terrorist groups, has succeeded in showing that despite the draconian security measures the Turkish government has taken over the past 18 months the underground opposition is very much alive. This latest episode will strengthen the Turkish security forces' determination to retain martial law in the 11 most populated provinces and to push the government to move faster in getting various amendments to the constitution through parliament. One of the proposals is to set up special courts to deal quickly and effectively with those accused of subversive activities.

But the prime minister, Mr Ferit Melen, is not finding it any easier than did his predecessor, Mr Nihat Erim, to persuade the political parties to co-operate in passing the legislation the service chiefs have been demanding since they took a hand in political affairs in March, 1971. He still maintains it will be possible for a general election to be held next autumn, but since the reforms are opposed by the conservative Justice party—the largest in Turkey's parliament—it seems less and less likely that the election will take place then. Mr Melen has denied that he is about to follow the example of Mr Erim and throw in the sponge, but it would be understandable if he felt tempted to do so.

Canada

Two keys to the kingdom

FROM OUR CANADA CORRESPONDENT

Monday, October 30th—polling day in the federal elections—will resound with the exhausted sighs of the pilots of chartered aircraft. The rival party leaders have sped from province to province in apparent attempts to be in all places at once. The jet chartered by the Conservatives has carried Mr Robert Stanfield the equivalent of five times round the world during the campaign. One reason for the frenzied shuttling has been the parties' awareness that Quebec, with its 74 federal seats, and British Columbia, with its 23, can tip the balance in the 264-seat House of Commons. The Liberals do not expect to make inroads into the Conservative fastness of the maritime provinces, where in 1968 they took only seven of the 32 seats. Mr Trudeau may gain a little ground in the Prairies and thus offset likely losses in Ontario. But if he is to retain his outright parliamentary majority (the Liberals went into the campaign with 147 seats) he has to hold his party's 56 seats in Quebec and its 15 in British Columbia.

There are problems for the Liberals in both places. Four years ago the Conservative standard-bearer in Quebec, Mr Marcel Faribault, showed little popular appeal, and he also promoted a "two nations" concept of Canada which suggested that the Tories were somewhat split on federal principles. This year Mr Stanfield has recruited an impeccable federalist who claims a strong personal following, Mr Claude Wagner. On the face of it the Conservatives should greatly improve on the

Wagner: one conservative convert

four Quebec seats they took in 1968; indeed, their spokesmen lay claim to at least 15.

Yet suddenly it is Mr Wagner rather than Mr Trudeau who seems to be in trouble. This is mainly because his conversion to the Conservative party was made public only in August. He had been Quebec's justice minister, a post in which he won a tough reputation, in the Liberal government of Mr Jean Lesage in the mid-1960s. Mr Wagner and Mr Stanfield were roughly handled by students at Chicoutimi last week, and instead of striding around Quebec like a conqueror Mr Wagner has had to concentrate on securing his own seat. He may harvest some votes from Quebec's English-speaking Canadians, but the net result of his campaigning could be a reduction of the Social Credit rather than the Liberal vote, and thus in some three-way battles the Liberals may capture some of the 14 rural seats which Mr Réal Caouette's men took in 1968.

Quebec's separatists have been asked by their leader, Mr René Lévesque, to show their strength by going to the polls and spoiling their ballots; their Parti Québécois is not contesting these federal elections.

While Mr Trudeau can enter his Quebec meetings to the strains of "Jesus Christ Superstar" and quote Hamlet from a Winnipeg theatre stage, in the far west he faces a sobering situation. In the five federal elections before 1968 the Liberals took on average only four seats in British Columbia. It is hardly likely that they can hold the 15 they won in that province in the first bloom of "Trudeaumania," especially since two of their best MPs there, Mr Douglas Howarth and Mr David Anderson, have left federal politics.

Mr Stanfield has gained some ground among the pioneer-minded westerners by attacking the large payments the federal government has made this year under unemployment insurance and suggesting that this has encouraged thousands of young people to laze at the taxpayers' expense. For his part Mr David Lewis has worked to build on the spectacular victory that the province's New Democrats won over its long-lived Social Credit government in August. The NDP leader has also wooed the elderly people who have retired to the warmer west coast with promises of higher pensions. Mr Trudeau found a bride in British Columbia last year, but his romance with the rest of the province seems to have withered.

Uganda Non-summitry

FROM OUR UGANDA CORRESPONDENT

Wearied by nearly two years of break-neck leadership, exasperated by "good friend and brother" Julius Nyerere, and bothered by a recurring throat ailment—the result, so the uncharitable have it, of an excessive devotion to the spoken word—President Amin took to his bed this week, leaving Ugandans to learn to live with the unaccustomed sound of silence. Whether the fiasco of last weekend's non-summit in Somalia with Tanzania's President Nyerere was really an important factor in his retreat to hospital is doubted—probably it was not—but it is one of the problems General Amin should now be rethinking in the calm of his hospital room.

Much of the blame for the way events fell out at Mogadishu must attach to the unfortunate Somalia, which took immense pains to narrow the divide between General Amin and Mr Nyerere, only to drive them apart again by trying too hard to achieve instant reconciliation. Sincere and disinterested though Somalia's President Siad clearly was in his mediation efforts, he erred by giving General Amin the impression that Mr Nyerere would be willing to meet him on neutral Somali ground. He then erred again, when Mr Nyerere smelt a rat and decided to call off his visit to Mogadishu, by persuading him that General Amin was unlikely to go to Mogadishu.

The result was that when the great day came, and General Amin politely

applauded the Tanzanian president as he entered the pavilion they shared to watch Somalia's revolution day parade, Mr Nyerere refused to be introduced and flew home early feeling that the Somalis had tricked him. The affair has made General Amin think that Mr Nyerere is not going to co-operate, peace agreement or no. So much of the good that was done by the peace agreement engineered by the Somalis earlier in the month is now in danger of being undone.

From his bed General Amin has been able to watch the final round of the expulsion of Uganda's non-citizen Asians. With virtually all those eligible for British entry now processed—about 26,500 at the last count, of whom it still appears only about 20,000 will settle in Britain—the Uganda government and the United Nations are on the verge of agreeing on practical arrangements to fly out the stateless Asians who remain. The United States is taking 1,000 stateless Asians, Holland and Norway about 300 each and Switzerland 200; Denmark will receive 40 handicapped stateless Asians. If due allowance is made for the numbers going to Canada, India and Australia—and for the substantial numbers who have entered Britain as dependants of passport-holding Asians—that should leave just over 3,000 people who have nowhere to go.

The plan now being discussed here by Mr Robert Gardiner, the secretary of the UN Economic Commission for Africa, who has been acting as the United Nations' special envoy, is that either the International Committee of the Red Cross or the UN

Behind the smile an ailing throat

Saudia is the only airline in the world.

SAUDIA is the only airline in the world to fly between all these places and to twenty one cities in Saudi Arabia as well. So if you've got business in any one of them, it makes sense to start with us—and stay with us all the way.

SAUDIA is the only airline in the world to fly from London to Saudi Arabia 5 times a week, twice non-stop (with BOAC). So even starting with us is easier for you.

SAUDIA is the only airline in the world to operate the domestic routes within the Kingdom, where we fly a fleet of the world's most advanced Boeing 737-200s. SAUDIA is the only airline in the world with a Business Advisory Service in Jeddah, to help you make the most of the very big business opportunities in Saudi Arabia and the Middle East. We'll help you with market information, potential agents, introductions, itineraries and visas.

If you've got business in Saudi Arabia, the Gulf or the Middle East—SAUDIA is the only airline!

Only one nickel producer in the world ships from three countries.

Control room, nickel-iron refinery, Canada

Nickel-copper-cobalt refinery, Norway

Ferronickel metallurgical complex, Dominican Republic

From Canada . . . Norway . . . the Dominican Republic . . . Falconbridge ships electrolytic nickel, NICKEL 98, ferronickel and iron-nickel pellets to nickel users around the globe.

And 60% more Falconbridge production capacity is upcoming now.

Diversity plus productivity. It adds up to assured nickel supplies today. Tomorrow. And tomorrow.

Falconbridge is ready now with new nickel supplies for steelmakers, electroplaters and other users of nickel, the improvement metal.

Your enquiry will receive immediate attention.

FALCONBRIDGE
TORONTO CANADA

72-1-9R

High Commission for Refugees (UNHCR) should issue emergency travel documents, and that the stateless should be flown out to staging camps in Austria, Belgium and Italy. There they would become automatically a UNHCR responsibility. Uganda has already agreed in principle and all being well, the operation should get off the ground this weekend—10 days before the November 8th deadline. The UN is coming prepared, however, to move up to 6,000 stateless Asians, on the assumption that a high proportion of Ugandan citizen Asians may choose to lose their passports rather than miss this opportunity of getting out.

South West Africa

The UN's Lord Pearce

FROM OUR SOUTH AFRICA CORRESPONDENT

After more than a quarter century of fiery resolutions and international court actions stubbornly rejected by South Africa, the United Nations is making its first serious attempt to negotiate rather than scrap with South Africa over the disputed territory of South West Africa—or Namibia as the UN calls it. This is the purpose behind the present visit to the territory of a special UN envoy, Mr Alfred Escher, and two aides.

Armed with a security council resolution calling on him to "initiate contacts with all parties concerned" to establish conditions for Namibia's independence, the UN secretary-general visited the territory last March and met the South African government. His purpose was to assess whether there was any potential common ground between Pretoria's plans to balkanise South West Africa into 11 tribal bantustans and lead these towards separate independence, and the UN's own goal of unitary self-determination.

This preliminary exploration is now being followed by a more detailed study by Mr Escher, who is in effect trying to conduct a kind of Pearce commission task in the territory. He is spending 18 days there meeting as many people as possible to hear their views on the government's bantustan proposals and their own hopes for the future. He has also met leaders of the exiled South West Africa People's Organisation (Swapo) in Geneva before leaving.

The obvious danger, expressed by the Swapo leaders, was that opponents

of the government's plans would be too intimidated to come forward and that Mr Escher would therefore receive a distorted impression. As with the Pearce commission in Rhodesia, however, the dissenters have been surprisingly bold. Everywhere Mr Escher has gone he has been met by groups protesting against apartheid and urging the UN to free them. Even the tribal councils appointed under the bantustan system have been sharply critical—mainly on the ground that the government has cheated them in its allocation of land. The Damara council of headmen, for example, complained that the area mapped out for their proposed homeland was no more than "a chicken run." On the other hand a number have expressed their willingness to accept independence on the bantustan pattern provided the government meets their land demands.

Out of this Mr Escher will have to assess whether there is indeed any potential common ground when he presents his report to the secretary-general on November 15th. As he said on October 20th: "It is indeed a difficult task I have, as the starting points between the various groups are so very far apart." He also made it clear that if his mission failed that would be the end of this dialogue with South Africa.

Morocco

At the court of King Hassan

The Moroccan public is being given no chance of putting the two attempts to kill King Hassan out of its mind. The trial in Rabat of 12 well-known Moroccans, including six former min-

isters, for being involved in corrupt dealings is an aftermath of the attack on the king's birthday party at Skirat in July, 1971. The senior army officers involved in the attempt were in part prompted to act by the king's refusal to deal firmly with corruption in high places. It was only after the Skirat affair that the purge against corruption was seriously pursued.

But the Rabat trial has now been overshadowed by the intriguing revelations coming from the military courtroom at Kenitra where 220 officers and men of the Moroccan air force are being tried for complicity in the plot to shoot down King Hassan's aircraft on August 16th. Almost all the personnel of the Kenitra air base are facing the military judges, and although the evidence presented so far suggests that only two or three officers knew what was afoot, none of the accused can feel confident about the outcome. One of King Hassan's first acts after the suicide of General Oufkir, his defence minister, on the night of August 16th, was to dismiss the officers who had tried the young soldiers for shooting up his birthday party for being too lenient.

The first drama in the trial was the plea by the defence counsel that Colonel Ahmed Dlimi, chief of the king's aides de camp and now one of his closest confidants, should not be among the judges. It was argued that since Colonel Dlimi was on the aircraft with the king when it was attacked he was himself an intended victim, and that furthermore he was himself an important witness to the events of August 16th since he was present when General Oufkir died. The court did not accept the argument and Colonel Dlimi remained to hear Lieutenant-Colonel Mohammed Amokrane, a former commandant of the Kenitra airbase, who after the abortive attempt to shoot down the king fled to Gibraltar, allege that General Oufkir had told him that Colonel Dlimi approved the plan to kill the king.

Colonel Amokrane, who has admitted his part in General Oufkir's plot to get rid of the king, went on to name others whom General Oufkir had told him were party to the conspiracy. Among the officers who were to form the "revolutionary council" was General Belarbi, who is also one of the judges at the trial. The colonel alleged that the former director of the royal cabinet, Mr Driss Slaoui, and one of the leading political opponents of the king, Mr Abderrahim Bouabid, had both been

Dlimi: confidant and judge

involved in putting General Oufkir in touch with two Moroccans living in exile in France.

Colonel Amokrane said he did not think it odd that if Colonel Dlimi and Mr Driss Slaoui were involved they should have been in the plane when it was attacked. Observers at the trial are in two minds about whether the colonel is unbelievably naive or whether, knowing his fate is sealed, he is deliberately trying to sow further doubts in King Hassan's mind about the loyalty of those about him.

Egypt

Chewing sand on the canal

FROM OUR CAIRO CORRESPONDENT

Egyptians seeing no way out of their no-war no-peace impasse still argue that time must be on their side. But how much time does President Sadat have? Egyptian officials do not deny the simmering unease, a compound of frustration and humiliation, spread throughout the country. The army captain who took three armoured cars to the Hussein mosque on October 12th and harangued the crowd may have been mentally deranged, as the army now claims after exaggerated reports of an attempted coup emanated from Beirut. But he reminded his superiors that they cannot expect to keep 300,000 armed men "chewing sand along the canal" indefinitely without some of them demanding to know when the action is going to start or when they can go home.

The young officer's strong religious motivation is in keeping with the times. Many Egyptians have reacted in this way to the 1967 defeat and its long

aftermath. Under Mr Sadat's liberal regime there has been a proliferation of societies and sects for the propagation of Islam, and the Moslem Brethren, jailed and suppressed under Nasser, are active. This nationalist, religious reaction to the Nasser period is blurring the very real political confrontation between right and left. In an emotional atmosphere there is a feeling that anything could happen.

Egyptian security men are convinced that Israeli and American agents are trying to exploit the situation by stirring up unrest, particularly between Copts and Moslems, with the aim of provoking a right-wing coup to bring in a regime that would settle on Israel's terms. The government was sufficiently perturbed by the clashes between Copts and Moslems to recall the People's Assembly from its vacation in August to pass a law for the protection of national unity. But many Egyptians believe it will be the university students, who regard the unity law as aimed at them rather than at the religious groups, who will decide how much time Mr Sadat has.

Wall posters complaining of government inaction and vacillation appeared on the first day of the students' return on October 14th. Although the students have been warned that their political freedom is limited to university precincts, some groups, probably the marxists, are expected to step up the agitation when the month-long Ramadan fast ends at the beginning of November. In themselves the students are not a threat to President Sadat. What security men fear is their catalytic effect on industrial workers and young graduates in the army.

Gaza

Between devil and sea

In step with their efforts to give life in the occupied Gaza strip as normal a look as possible, the Israelis a year ago persuaded one of its more distinguished citizens, Mr Rashid Shawa, to become mayor of Gaza city. On Sunday they sacked him in circumstances that confirm the strip's total abnormality.

The immediate reason was Mr Shawa's refusal to extend the city's municipal services to the huge refugee camp beside the harbour on the grounds that this would prejudice the camp's refugee status. The Arabs suspect that the prime consideration

behind Israel's attempts to integrate the refugees is neither security nor improvement of the horrible living conditions in the camps; they see it as leading to the eventual integration of Gaza with Israel. If they are right in believing annexation to be the final target, the question of who now collects the camp's garbage is a lot less piffling than it sounds.

Mr Shawa has been working towards a very different target: the eventual integration of Gaza with the West Bank in line with King Hussein's declared policy of some kind of Jordanian-Palestinian federation after Israel's withdrawal. During his year in office he has established new links between Gaza and Amman, including the provision of 3,000 Jordanian passports for some of Gaza's 400,000 stateless Palestinians. Not all the Palestinians appreciate his efforts: for many of them King Hussein is the devil to Israel's deep blue sea, and Mr Shawa narrowly escaped assassination at the beginning of September.

Being mayor of smouldering, caged-in Gaza is one of the least inviting jobs in the world. When he took the job on Mr Shawa was as aware of this as anyone could be: his brother, who was mayor during Israel's previous occupation of the strip in 1956, was later imprisoned by the Egyptians for collaboration and died shortly afterwards. The Israeli military governor has now reappointed the Israeli official who held the post before Mr Shawa took over. Which just about sums up the normal peaceful conditions prevailing in the strip.

BASF

Where do we go from here?

Power-Gas is a major international process engineering contractor.

Our total engineering and construction service provides plants for petroleum, petrochemicals, industrial chemicals, rubber and plastics, polymers, fertilizers, fuel and industrial gas and non-ferrous metals.

We started out in 1901 and thirteen years later we had installations in no less than 50 countries.

Today, it's difficult to find a country where a Power-Gas plant of one kind or another can't be found.

We have executed contracts for some of the world's most important companies.

Esso, ICI, British Petroleum, and Laporte amongst them.

In the face of severe competition from experienced U.S. firms we've also broken into the U.S.A. process engineering market in a big way.

Securing contracts for the design of plants for methanol, formaldehyde, hydrogen and synthetic natural gas.

For this, we have been awarded the Queen's Award to Industry for 1972 for our export achievement.

Call us when your company needs a plant – and where we go from here could well be up to you.

LNGC tomorrow. The way it's going to be.

The boom is on, and the boom is going to continue.

The world LNG tanker fleet of 1980 is estimated at 22 times the size of today. The global carrying capacity will be in the neighbourhood of 6.5 million cubic meters. An average tanker will carry about 120,000 cubic meters.

The reason for this fantastic expansion is easy to see. The demand for energy — especially nonpolluting energy — is growing faster than ever. At the same time the conventional sources of energy are becoming more difficult to find and more expensive to develop.

Of course, liquefied natural gas won't pump itself into a storage tank for nothing. More millions than you can count are going to be invested in systems for moving the gas from places where it exists but isn't needed to places where it's needed but doesn't exist.

The system will include computers, and every variety of analyst, and whatnot, but its core will be a basic means of transportation: ships. Since two-thirds of the total outlay for transportation is related to capital investment, construction costs have to be kept as low as possible. Reliability must be built-in and guaranteed; if the ships stop, everything stops.

So who's going to build these ships? There isn't a qualified shipyard in the world that wouldn't jump at the chance, but some of them have a better chance than others. The ones with experience. Like us.

We've already built the two biggest LNG carriers in existence, the LNGC Polar Alaska and the Arctic Tokyo.

And we've improved since we built them. Kockums is always improving.

Mind you, we're still using the Gaz Transport membrane technique; for the moment nothing can touch it in terms of cost-efficiency. Self-supporting tanks, for instance, would cost at least 20% more. We've also learned how to use a thinner, Invar steel. Cost is down, capacity is up.

We even invented an improved technique for the trickiest part of the job, 80,000 meters of seam-welds.

Most important of all, for the last two years we've been able to follow the day-to-day performance of our two LNG tankers.

Nobody knows the ins and outs of big LNG's the way we do, because we've built the biggest.

We're not saying we're going to build the world's LNG tanker fleet all by ourselves. But we won't need much help.

Things are christened when they are young. Often before anyone can see how they will grow. We pioneered refuelling in flight and it was only natural to call the company Flight Refuelling. The name stood us in good stead: we became the world authority on the subject. We still are. But we haven't stood still. We've developed into other fields. At first they were associated with flight refuelling. But now we cover subjects as diverse as filtration and

opto-electronics. The name is no longer descriptive. Change it? We are not anxious to lose the name which made us famous, the name that, however irrelevant, is your guarantee of impeccable engineering. So please bear with our sentimental attachment to our name and remember that we do lots of other things as well. And do them as efficiently as we refuel aircraft in flight: very efficiently indeed.

Chile

The middle class on strike?

Last Tuesday was a day of silence in Santiago, in two senses. The opposition parties, as a demonstration of sympathy with the lorry drivers who have been on strike since October 11th, asked their supporters to stay away from work, and this gave some of the middle-class suburbs like Providencia the atmosphere of ghost towns. At the same time, the government closed down three radio stations in the capital that had refused to obey the order to broadcast only the programmes put out by the official network. The wave of strikes in Chile over the past three weeks resulted in the tightest censorship (at least for radio stations) that the country has seen since President Salvador Allende came to power.

The conflict also showed up how Chilean society has been polarised by the economic crisis and the government's inroads on the private sector. The National Transport Federation, with 40,000 members, first declared a strike when the governor of the southern province of Aysén tried to set up an official trucking company to take over from the owner-drivers who handle most of the goods that travel by road in Chile. This followed a declaration from the economics minister that "the business of transport is too important to be left in the hands of the private sector."

Two days later the shopkeepers' syndicates joined the strike. Their leaders complain of draconian price controls, shortage of basic commodities, and the "favouritism" of the state distribution agency, Dirinco. Over the past fortnight other groups also joined in: unions of professional men like the lawyers, doctors and engineers; pilots and bus drivers; bank employees and students; and peasants belonging to the Christian Democrats' agricultural confederation. In contrast, most factory and mine workers stayed at work, and so did state employees in the railways and ports.

In a sense, the lines of battle in Chile were drawn out clearly between the social groups opposed to the Allende regime and those that feel they have gained from it. But despite Dr Allende's attempts to characterise the protest movement as a "middle class strike," its class origins were rather more complex. The truck drivers' leader (who was sent to jail along with four other union leaders) is Sr Leon Vilarín, a former Socialist party militant who responded tartly when Sr Altamirano, the party's secretary-general, called him a "traitor." "I was already a socialist," he declared, "when Sr Altamirano was a lawyer employed by a north American company to defend its interests against those of Chile."

The truck drivers and shopkeepers were still on strike on Thursday, despite the order issued by General Héctor Bravo, the officer entrusted with the maintenance of order in Santiago under the emergency decrees, that their shops and lorries can be

"requisitioned" by the state. Dr Allende has never had to face a movement of civic protest on this scale, and he has resorted to exceptional measures to contain it. At one stage, the army was entrusted with the administration of all but one of the country's 25 provinces. It is significant that a marxist president has been able to count on the loyalty of the men in uniform during a political crisis of this kind.

How far the strike movement will go remains to be seen. The Christian Democrats have promised to follow it through to its "ultimate consequences" and on October 21st a committee representing almost the whole of private business tendered a list of demands to the government which included the restitution of companies that have been nationalised since August, an end to radio censorship and the expulsion of foreign extremists. Many small businessmen clearly feel that they are fighting a last battle for survival.

Pakistan

Bhuttostan?

The Pakistani constitutional agreement reached on October 20th does two things. By making no provision for the former eastern wing of the country, it gives—perhaps unwittingly—another piece of de facto recognition to Bangladesh. Equally important, it gives the four remaining provinces of Pakistan a federal, parliamentary system for the first time. This is what the opposition parties have been clamouring for, in particular the National Awami party which has at intervals during the past year threatened to turn the two provinces it controls—Baluchistan and North West Frontier—into another Bangladesh. But even Mr Wali Khan, the party's leader and the most vociferous champion of provincial autonomy, who was in London for medical reasons during the talks, has welcomed the agreement.

The federal element is provided by an upper house with equal representation for all provinces; the parliamentary element by reducing the president to a constitutional figurehead and creating a prime minister as chief executive who is, none the less, responsible to a 200-member lower house. There seems little doubt that President Bhutto will choose the prime ministership for himself. At first sight it looks as if Mr Bhutto has given up the idea of a gaullist type of presidency—which he was known to be hankering after

With modern industry getting more and more complex, material-handling is becoming a crucial problem. IHI has a well-earned reputation in this field. We produce material-handling equipment for almost any need. For instance, we've recently delivered an 8,000 t/h ore shiploader to the Mt. Newman Mining Co., Pty., Ltd. of Australia. It's one of the world's largest. We are clearly a leader in loading ore.

The Earth. Whatever helps people span it, develop it, live on it, IHI is involved in it.

But we don't take a backseat to anyone about unloading ore either. We've recently completed the world's largest 2,500 t/h double cantilever type iron/ore coal unloader for Nippon Steel Corp. We have discussed only part of IHI's unique engineering capacities, as a development of its varied experience. With these elements of capability and experience, IHI stands ready at all times to help solve your material-handling problems.

and which so displeased the opposition. But in the small print are a number of special provisions which should shield him from the normal hazards of a parliamentary system. Votes of no confidence need a two-thirds majority of the lower house, cannot be moved during budget sessions, can come only at intervals of six months or more. In what looks like a leaf out of the west German constitution the agreement also stipulates that a vote of no confidence cannot be moved against the prime minister unless the same resolution also names his successor. The chances of Pakistan's heterogeneous opposition parties agreeing on such a man are slim.

Mr Bhutto can reasonably argue that these measures are essential to ensure political stability. Pakistan's last proper experiment with democratic government before 1958 was not a success. But the opposition parties may yet have second thoughts about something which gives them the form, but not really the substance, of parliamentary government. There is plenty of time for such thoughts. Clause by clause thrashing out of the constitution will probably continue until next March or April.

Malaysia

Guerrillas again

There are signs of life among the communist guerrillas who were driven up into the northern provinces of Malaysia at the end of the emergency in 1960. The government has announced that, from early next year, three more army battalions will be stationed in Kelantan, the sleepy, devoutly Moslem state in the north-east up against the Thai border, and some landowners in the area have complained of having to pay "taxes" to the rebels. But there has been little fighting around the border over the past year. The followers of Chin Peng, the communist leader who withdrew into southern Thailand in 1960, are pursuing a very opportunistic policy.

In Kelantan the Chinese communists have tried to win over Moslem Malays by kneeling in their mosques and buying their produce at fair prices. Over on the west coast the racial element in the conflict is clearer. Here there is a running feud between poverty-stricken Malay coastal fishermen and the more prosperous Chinese deep-sea trawlermen. The Chinese are told by the

communists that the government's programme for the economic advancement of the Malays will be paid for by them, in one way or another. The communists also play upon the fact that the Malaysian army contains very few Chinese. The under-officered Royal Malay Regiment bears most of the responsibility for counter-guerrilla operations both in Sarawak and in west Malaysia, and its relations with the Chinese community are hardly rosy.

The real worry for the government is that, in a situation where the Malays hold a virtual monopoly of political power and are using it to improve the economic conditions of their own people in relation to the more affluent Chinese community, some Chinese will come to regard the communists as "community defenders." The government has tried to promote Chinese interests by making Mr Lim Keng Yaik, a forceful young man from one of the favourite guerrilla stamping-grounds, minister for the new villages. These were the resettlement areas created by the British during the 1948-60 emergency and their residents have been more or less left out of development schemes since then. Mr Lim had an opportunity to wean the new villages away from hostility to the government but he has suffered from the jealousy of the established Chinese politicians of the Malaysian Chinese Association (MCA), which is part of the ruling coalition. Tun Tan Siew Sin, the MCA leader and finance minister, seems to view Mr Lim and his youthful, but not always tactful, friends as a threat to the vested interests of his party within the government. Whether the enthusiasm of the new guard, and the affection Mr Lim inspires among many of the poorer Chinese, will be sufficient to overcome both MCA opposition and Malay suspicion remains to be seen.

Chin Peng in emergency days

Papua New Guinea

Looking to the Japanese

FROM OUR CANBERRA CORRESPONDENT

With little more than a year to go to full self-government, Papua New Guinea is already casting around for new trading partners to challenge Australia's dominating position in the country's economy. And to whom would it be more natural for a Pacific island to turn than to the Japanese? So it came as no surprise to learn that at the meeting of Japanese and Australian ministers in Canberra a fortnight ago the people of Papua New Guinea were also represented. And it seems that their chief minister, Mr Michael Somare, and the two other ministers who accompanied him did not come away empty-handed. The Japanese seem to be most interested in any development which will increase the flow of basic materials such as timber and minerals to Japan.

The Australian government does not want Japan to have an economic monopoly, but is aware of its own present position as the one source of external aid to Papua New Guinea and of the interest which Japan is showing in Pacific island economies in general. The proportion of Papua New Guinea's imports from Japan has trebled in the past decade (it is now approaching 18 per cent) and Japan is taking a similarly increased proportion of exports (nearly 12 per cent), mainly timber, copra and fish. Japan is now expected to buy most of the copper from the great new mine on Bougainville when that is fully established.

Political leaders in Papua New Guinea seem to view the increase in Japanese participation equably, and even gladly. New Guineans do not have the same reservations about the Japanese as Australians have. At the same time they recognise what a small state Papua New Guinea will be by international standards and what a small part it will play in Japanese calculations. At present it accounts for less than 1 per cent of Japanese imports and exports. Papua New Guinea will probably want Australian support in negotiations with Japan even after independence. Australia, although also heavily dependent on Japan, is a rich and growing market which the Japanese want to cultivate. This will give it extra bargaining power to add to Papua New Guinea's.

These Chemical Bank money managers have travelled 10,000 miles to do more for your money.

International money management.

These men are Chemical Bank's international money management group. A team of experts with responsibilities for finance wherever money circulates. On this occasion, they have come together from their own countries to meet in Zurich. The purpose? To discuss in detail many different aspects of international finance. Rates of interest, exchange rate tendencies, exchange control, capital movements, and financing, for instance. All factors which affect a customer's interests.

Teamwork.

That's why Chemical Bank places such importance on teamwork. At these international money management meetings, New York, for example, can, and does, help Brussels solve problems and vice versa. In this way, profound knowledge of finance is backed by up-to-the-minute information. It makes a powerful combination. It is also one more way in which Chemical Bank does more for your money.

How to find us.

London Branches:
10 Moorgate - Phone: 606-8040
13 Davies Street - Phone: 493-2921

Thoroughness.

Meetings like this one in Zurich are typical of the thorough approach Chemical Bank takes to the handling of money. Today, when finance is in a state of perpetual change, these men all realise that even the smallest effect on money could have far-reaching, vital consequences for their customers.

Main Office: New York. Branch Offices: Brussels, Frankfurt, London, Paris, Tokyo, Zurich and Nassau. Representative Offices: Beirut, Madrid, Bogota, Buenos Aires, Caracas, Rio de Janeiro, São Paulo, Mexico City, Hong Kong, Manila and Sydney. Correspondent Banks in over 185 nations.

At stake in the South
on November 7th

Not everyone likes Nixon, even in Atlanta

Republicans look to the South

Birmingham, Alabama

Governor Wallace still flies the confederate flag from the dome of the state capitol at Montgomery, Alabama, relegating the stars and stripes to his backyard. But when the "Battle Hymn of the Republic," the northern anthem during the Civil War, can be played at a football game in Alabama and when a Republican President is about to sweep the South, the War between the States seems truly over. Eisenhower won in seven southern states in 1956, Senator Goldwater took five in 1964 and Mr Nixon seven in 1968 (Governor Wallace captured all the rest except Texas); but this year President Nixon seems almost certain to carry all 13 southern and border states. Unless all the prophets are wrong, he will do so by an immense majority, ranging between 60 and 70 per cent of the votes. He may do better in this solidly Democratic region than he does in traditionally Republican areas.

The wedge driven between southern Democrats and the rest of the party in 1948, when the Democratic convention first took up the cause of the blacks and many southerners walked out, has been hammered home by Senator McGovern. Even yellow-dog Democrats ("I'd vote for a yellow dawg if he was a Democrat") are deserting him while Mr Wallace's followers, with their leader still too paralysed to campaign, are turning

naturally to Mr Nixon. The Democratic convention deeply shocked the South which, with its multitude of churches and church-goers, is the squarest, least permissive part of the country. The very openness of the convention was its undoing. Southerners saw on their television screens a parade of homosexuals demanding their rights, long-haired students, abrasive women's libbers from the North and blacks speaking in the name of Mississippi. They concluded that their party had been taken away from them by alien radicals and they were ready to believe the Republican charge that Senator McGovern stands for abortion, acid and amnesty for conscription-dodgers. "The three As are killing us," mourned a McGovern worker in Kentucky.

The South Dakotan's flat prairie voice, the absence of the rhetoric and drama southerners love, his plan to cut the defence budget (southerners have a long military tradition and there are many defence installations in the area) tell against him. It is estimated that up to 80 per cent of the votes counted for the Senator in the South will be cast by blacks. This will not be because President Nixon is loved in the South—he is not—but because Mr McGovern is feared and hated, just as was Al Smith, an Irish-Catholic boy from the New York sidewalks, in 1928; Hoover took seven southern states that year,

splitting the South for the first time.

With a Republican presidential landslide of immense proportions all but in the bag in the South, Republicans have been looking hopefully to its 12 senatorial contests—the largest number in any region—for some or all of the net gain of five Senate seats which, with Vice President Agnew to break a tie, would give them all the advantages that come with control of the Senate and its committees. Four of these seats are held by Republicans (Texas, Kentucky, South Carolina, Tennessee), the rest by Democrats. There is also a good chance that the Republicans may gain some seats in the House of Representatives from the South.

The calculation has been that a number of the eight Republican aspirants to Senate seats now held by Democrats would be carried into office on the Nixon surge. Just possibly this dream may come true. Ticket splitting on a huge scale would be required if the South is to vote for a Republican President and Democratic members of Congress. In rural areas many unsophisticated voters are said to fear that splitting their votes would invalidate them. Even in Virginia where ticket-splitting is mechanically simple and where the Democratic incumbent, Mr Spong, a good, hard-working Senator, would normally be in no trouble, Democrats are uneasy. In other states, such as Kentucky, Democrats may be hoist with their own petard. In the days of their dominance they introduced a single lever to enable people to vote, in one easy movement, for all the Democrats, from President to local dog-catcher. Now it may be the Republican master lever which is

pulled most often. This may defeat the Democratic candidate for the Senate in Kentucky, although he is ahead in the polls in spite of the Wallace vote going to the Republican.

Against this disadvantage is the fact that in the South, under the present Republican presidential wave, there is a nearly impregnable Democratic structure, built up over a century. Its lynch-pin is the great power of southern governors, far greater than that of state governors elsewhere; but the cement consists of patronage, favours given and received, control over local governments and personal relationships (party loyalties have generally come second to personalities in the one-party South). Two small examples show how this power can be used. In Charleston, South Carolina, the polling-booths are placed inconveniently far apart in the Republican suburbs, while in Alabama the presidential electors, normally at the top of the ballot, are now at the bottom to improve the chances of the incumbent Democratic senator. And this year southern senators who do not have to face the voters (only one-third of the six-year senatorial terms expire biennially) are out campaigning to save the committee chairmanships which the South would lose if the control of either house of Congress passed into Republican hands.

A fortnight or so ago the White House let it be known that President Nixon would not endanger even an iota of his own tremendous lead by pressing for the election of Republican congressional candidates and thus offending the Democrats for Nixon. This above-the-battle stance should be taken with a grain of salt. Mr Nixon has already descended on Atlanta, Georgia, in a cloud of machine-made confetti and it surely did Mr Fletcher Thompson, the Republican candidate for the Senate, no harm to be seen parading down Peachtree Street in the President's wake. This week Mr Nixon was scheduled to speak in Ashland, Kentucky, a state in which there is a nip-and-tuck race for the Senate seat occupied since 1956 by a Republican, the internationally-minded Mr John Sherman Cooper who is retiring. To lose it in a great Republican year would be a humiliation; moreover, the Republican candidate, a former governor, Mr Louie Nunn, is well thought of in the White House. If Mr Nixon is going to intervene personally where Republican-held seats are in danger, he may pop up in Texas to help Senator Tower and, just conceivably, in Tennessee, where Senator Howard Baker, a moderate Republican, is being

hard pressed by a racist Democrat.

One Republican who thought he could count on a presidential visit is Mr Winton Blount, once in Mr Nixon's cabinet as Postmaster-General, who is campaigning with great energy and endless money to give an overdue retirement to 72-year-old Senator Sparkman; he has represented Alabama in the Senate since 1946. Mr Blount

has been aided by a flock of so-called presidential surrogates—Mrs Tricia Nixon Cox, Vice President Agnew, the President's brother—but there is no sign of Mr Nixon. Republicans are said to fear that if the Democrats hold on to their control of the Senate, and Mr Sparkman is defeated, his successor as chairman of the important Banking Committee would be the indefatigable,

Shoestring campaign

Columbia, S. Carolina

When 24-year-old Mr Billy Keyserling, nephew of the distinguished economist, Dr Leon Keyserling, began work as the co-ordinator of the McGovern campaign in South Carolina, the polls reported that 84 per cent of the voters were for President Nixon and only 11 per cent for Senator McGovern in what used to be a one-party Democratic state. Mr McGovern has an official fund-raiser who, to date, has raised \$300. Thanks mainly to Mr Keyserling's own efforts, this has gone up to the princely sum of \$7,000 for a state with a population of 2.6m. Yet the McGovern workers are now convinced that 40 per cent of the vote will go to their candidate. How has it been done on a shoestring so short as to be almost invisible?

The thrust of the young McGovernites has been toward registering new voters, most of them black. If they all go to the polls on election day, the Republicans are in for a surprise. Mr Keyserling, who wears a mop of flaming red hair, an emerald shirt and shabby jeans, naturally turned, too, to the young. He has had experience registering new voters in Massachusetts and in canvassing up north, where young volunteers turned out in great numbers. They turn out in South Carolina, too, though few

have any experience of how a modern campaign is run and it can be a bit scary to be for a "radical" like Senator McGovern.

The trouble is that although there are plenty of volunteers to send out mass mailings, there is little or nothing to mail to the voters. A box of 1,000 McGovern stickers was greeted as though it had been a box of \$1,000 bills. There is literally no money to secure commercial printing. More illustrative of Mr Keyserling's desperation—and his resourcefulness—is the problem of the state fair. He wanted a publicity booth but had no money to pay for one. A trailer might do, but none was forthcoming. What about a hearse, provided by a black undertaker? Or at least a funeral tent to cover the tables and banners if it rained? That had to do.

The desperation, and the economics, did not end there. There was no money for a proper headquarters, so Senator McGovern's representative in South Carolina rented an old house for \$25 a month—and the promise that volunteers would paint the whole place before they left it. Happily a scandalised sympathiser, thinking that the official Democratic candidate for President deserved something better, offered \$425 a month to rent adequate offices on Blossom Street. People who do not give money—which would have to be reported if the contribution was over \$100, and hence would become public knowledge—help in other ways.

The telephone company, burned more than once, is adamant in refusing credit, so a telephone credit card is of the greatest value. Someone else lent a credit card for petrol. Other people offered the use of a printing machine. If you get your office supplies from a local firm, you can also ask for the loan of used office furniture which is lying idle. Then at least you have typewriters, desks, chairs. Luckily Mr Keyserling is a native South Carolinian; he knows people and how things can be done in one of the poorest, and proudest, states in the South. But it is a far cry from the millions of dollars being spent elsewhere.

Tricia was at the fair, too

Norsk Hydro a.s

Oil, Gas, Fertilisers, Magnesium, Plastics, Laminates and Aluminium

North Sea Oil Prospect

It was resolved at the general meeting of Norsk Hydro a.s., held on October 20, 1972 in Oslo to split the company stock into three for one, whereby the nominal value of the shares was settled at N.Kr. 60. At the same time the articles of association were amended to increase the number of ordinary shares to 6,491,856 and of preference shares to 75,006. It was also resolved at the general meeting to pay a dividend of six per cent on ordinary shares and eight per cent on preference shares.

The following is an extract of the directors' report and the accounts for the financial year July 1, 1971 to June 30, 1972.

Financial Results

The consolidated accounts for 1971/72 show an operating profit before depreciation of N.Kr. 196m compared with N.Kr. 257m the preceding year. Ordinary depreciation accounted for N.Kr. 120m compared with last year's N.Kr. 138m, and operating profit declined from N.Kr. 119m to N.Kr. 76m.

Profit before taxes amounted to N.Kr. 44m as compared with N.Kr. 63m in 1970/71, the reduction being principally due to rises in wages, social security costs, and taxes on electricity and oil consumption.

The sales of the companies included in the consolidated accounts totalled N.Kr. 1,321m as against N.Kr. 1,220m the preceding year. The calculated share of the sales of other companies in which Norsk Hydro holds major interests amounted to approximately another N.Kr. 700m.

The number of employees on June 30, 1972 was about 7,200.

Operations 1971/72

Regardless of the persistent influence of over-production on the fertiliser markets, production of fertilisers continues to be Norsk Hydro's main and most remunerative activity, although profit has dropped despite further streamlining in the manufacturing and transport sectors. Complex fertilisers are still our most important product group, in terms of both sales and volume, amounting to some 950,000 tons as compared with about 910,000 tons the preceding year. Complex fertiliser capacity will be expanded by approximately 150,000 tons from the end of 1972. The market for light metals has been adversely affected by poor demand and low prices during the year under review, and the profits of the Magnesium Division were therefore lower than last year. As in the case of the aluminium industry as a whole, 1971 was a difficult year for Alnor Aluminum Norway A/S. Production was about 84,500 tons of primary aluminium – slightly up on last year's figure – but higher operating costs led to a lower result. A modest improvement in marketing conditions has been observed recently.

North Sea Oil Interests

Norsk Hydro's involvement in the oil sector has considerably increased in the year under review. One important event was the

announcement in April, 1972 that the Frigg structure could be commercially developed. The company immediately exercised its option to increase its participation in this and other Petronord licences. Norsk Hydro thus became the major participant of the Petronord group with a probable share of 32.87 per cent in the Frigg field. This structure contains a gas concentration of major dimensions extending into the British sector of the North Sea, the development of which, given favourable circumstances, can be put into operation in 1976. A new gas field, Heimdal, was discovered south of Frigg in the summer of 1972.

Present production at Ekofisk equals approximately 6,000 tons a day. A gradual increase in output is planned from the end of 1973, which at Ekofisk alone is expected to reach some 15 million tons a year from the commencement of 1975. The additional commercially valuable structures in the Ekofisk area could bring production up to twice this figure. If production is to be increased according to plan, however, it is essential that the oil transportation pipeline be laid as soon as possible.

The oil refinery at Mongstad near Bergen is scheduled to become operative at the beginning of 1975. Total costs are estimated to be around N.Kr. 1,000m, and the financing of this large investment is ensured through a U.S. \$ 100m loan abroad recently raised by Rafinor, the refinery company. The two partners, Norsk Hydro (60 per cent) and Norsk Braendselolje (40 per cent), will subscribe a total share capital of N.Kr. 150m, in addition to which Rafinor will have access to raise a long-term loan of N.Kr. 140m on the Norwegian market.

Participation in the Phillips' discoveries will provide Norsk Hydro with approximately two-thirds of the 2.4m tons of crude oil to be refined on our account by Rafinor. In addition to supplying its own plants with petroleum products, Norsk Hydro is also to sell a considerable quantity of refinery products on the Norwegian market, for which the necessary distribution system is now being built up.

The Current Financial Year

Events of vital importance to Norsk Hydro's oil interests are continually occurring. Operating conditions in the current financial year for the company's other branches of activity appear on the whole to be the same as last year. Production is expected to show some improvement, and the marketing of our merchandise is somewhat easier. The slight increase in prices registered sporadically is, however, inadequate to balance rising manufacturing costs. It is anticipated, therefore, that profits will be on a level with last year's figures.

The director's report was compiled before the national referendum rejected Norwegian membership of the European community. It had stressed particularly that if Norway failed to join the community, the going ahead for Norsk Hydro would be much heavier and that it would be more difficult to realise new plans.

much more liberal Senator from Wisconsin, Mr Proxmire.

Mr Sparkman has been a distinguished Senator; he has brought benefits to Alabama, he is a courtly southerner, not a crude self-made millionaire, and he has been moving steadily rightward to appeal to Governor Wallace's following—as indeed have most southern Democrats running this year. Now Mr Sparkman has secured the vital endorsement of Governor Wallace and he is nearly out of the woods. Moreover, Alabama's 350,000 blacks count politically—as black votes do all over the South since the voting rights Act—and although they are reluctant to vote for Mr Sparkman, because of his conservatism on racial issues, Mr Blount has made it impossible for them to vote for him by plastering the state with racist posters: "A vote for Blount is a vote against welfare free-loaders". Like Republican candidates everywhere Mr Blount is trying to fasten the label of McGovern radicalism on his opponent, but in Mr Sparkman's case this is ridiculous.

A weakness of the Republicans in the South is the inferior calibre of a number of their senatorial candidates. This is true in Virginia, where Representative Scott is a negative-minded nonentity; in Georgia, where Mr Thompson has shown himself an inept member of the House of Representatives; and in North Carolina, where Mr Jesse Helms is almost out of sight on the far right. Purely as a politician Senator Strom Thurmond of South Carolina is a notable exception—but then he is a Democrat turned Republican. South Carolinians are saying unkindly that he has neglected nothing to secure re-election; he has even just become a proud father at the age of 69 for the second time. From a longer-term point of view, it is a pity that so many Republican candidates feel that to be elected they must be even more racist than their opponents. If a real two-party system is to be created in the South, the Republicans need a broader base; parties are not made from the top down or in country clubs.

Will Congress pay?

In a lightning campaign trip to New York on Tuesday President Nixon laboured home the point that the Democratic Congress was spending too much money, that it was his Republican duty to bring this trend to a halt

Bills for signing: Secretary of the Treasury considers the vetoes

—and that, if the voters want to avoid a tax increase, they should elect a Republican Congress on November 7th. Meanwhile it makes little difference that the departing Congress rejected the President's request that a ceiling be put on government spending; he will simply refuse to sign for anything over the limit of \$250 billion a year that he has set. The Administration estimates that the legislature has appropriated \$258 billion in federal funds for this year. So far Mr Nixon has not been specific about which other bills he will veto; he has already refused to sign a measure to clean up the country's waterways which both Democratic and Republican members of Congress then passed over his veto. But if the President fulfills his threats the record of the Congress that has just adjourned will look even thinner than it does at present.

There is a long list of measures that came to grief during the rush to get home—and to campaign for re-election. There were bills to reform the present system of health insurance, for a higher minimum wage, for an independent agency to protect consumers, for reform of private pension funds, for control of guns, for federal regulation of car insurance, for settlement of strikes in transport and other key industries. All these fell by the wayside. The prospects looked better for the bill providing federal funds for building roads; this included an extra \$3.4 billion for the development and operation of mass transport. But at the last moment the whole measure fell through when there was no quorum left in the House of Representatives.

This will be one of the problems facing the new Congress again early next year. Pressures will be brought to bear

for quick action by those states which are running out of money to build roads and by those who are fighting for money for public transport to be released from the well-endowed highway fund. The old bogey of foreign aid will also come up early in the new session. Because of the usual conflict over which countries should get aid and how it should be allocated Congress was only able to agree on a stop-gap measure to continue appropriations until February 28th at the present level of \$3.6 billion a year; this is lower than the Administration requested.

As they left for home Democratic Representatives also faced the prospect that those who return in January may have to elect a new man to head their party in the House. The present leader, Mr Hale Boggs of Louisiana, has been missing in Alaska since October 16th. He was out helping a fellow member, Mr Nick Begich, win re-election when their private aircraft disappeared on a journey between Anchorage and Juneau. There has been a massive search but so far without success.

ELECTION '72

After the gerrymanders

1. Ladies' race

New York

The only congressional race in New York City that is generating any excitement at all pits Representative Bella Abzug against Mrs Priscilla Ryan, the widow of William Ryan; he had won with surprising ease over Mrs

Bella v. Priscilla

Abzug in the primary election for the Democratic nomination last spring. When Mr Ryan died in September, the district's Democratic leaders, after considerable debate, chose Mrs Abzug to run in his place. Subsequently, the Liberal party, which exists only in New York and usually supports candidates from the group of reform (or left-wing) Democrats in the city, selected Mrs Ryan. So now the 20th district is witnessing a bitter fight between two progressives who are allied on most issues but are at loggerheads over personality and power.

Representative Abzug, a vociferous activist, is the controversial and abrasive personality in the race. When the boundaries of her own district in lower Manhattan were redrawn in a fashion clearly designed to victimise her, Mrs Abzug decided to oppose Mr Ryan, whose new district, spanning the west side of Manhattan and the Bronx, included a portion of her old constituency. There was a great deal of resentment among local Democrats who had been well served by Mr Ryan, a dedicated liberal, and they gave him a two-to-one victory.

Leaders in the Democratic party, however, consider that Mrs Abzug had justifiable claims to succeed Mr Ryan. Her record in opposing the war in Vietnam and in battling for civil rights and other issues important to reformers led many prominent Democrats to conclude that they could not withhold his seat from her. But she has also made enemies, especially in the ranks of the teachers' trade union, who were incensed at her championing of local school boards during the protracted teachers' strike of 1968. When Mr Albert Shanker, the powerful head of the union, promised to provide financial support for an opposition candidate, the Liberal party agreed to back Mrs Ryan. In doing so, they are also hoping to win sufficient votes to exercise influence over the Democrats.

The new district is heavily liberal Democratic in its composition. Jews

form the biggest single block of voters, with over 50 per cent of the total, while blacks and Puerto Ricans account for a third of the remainder. Although the economic range is wide—from welfare clients to those in the highest income brackets—the district is considered among the most politically active in the country, partly because of the proximity of Columbia University, but even more because it is the home of many leaders of the peace movement, women's liberation and other reformist or radical causes. In all, five candidates are in the field, including two other women running on the Republican and Socialist Workers' tickets, and a sole male, a Conservative. But it is freely acknowledged that the race is between Mrs Abzug and Mrs Ryan.

Since the district is so strongly Democratic, it is probable that the fight between reformers will also get more voters to the polls for Mr McGovern. But Mrs Abzug will have a tough time of it. While she is campaigning as vigorously as ever, she is also seeking to moderate her often strident personality in an effort to win over Democrats who have been hostile to her. Her campaign is stressing her incumbency (although she has served only one two-year term), her indefatigable activity and her endorsement by Mr McGovern. Mrs Ryan, who worked closely with her husband, is emphasising that she knows the district much more thoroughly and works effectively with people rather than for causes. Given the overwhelming lead in registrations held by the Democrats over the Liberals, it is probable that Mrs Abzug will keep enough of them to emerge as the victor. But the rancorous conflict is dividing New York's progressives still further.

2. Ivy League contest

FROM A CORRESPONDENT IN BOSTON

One of the closest election races in the United States this year is in the 12th congressional district of Massachusetts. A varied area, it covers prosperous Boston suburbs on the South Shore, the old whaling city of New Bedford and the summer resorts of Cape Cod, Martha's Vineyard and Nantucket. Staunchly conservative for years, the district has only once been represented by a Democrat. But recently, New Bedford, which long ago became a manufacturing as well as a fishing town, together with a growing independent vote along the South Shore, have made the 12th district a tempting one for Democrats. In 1970, a five-

term Republican Congressman, Mr Hastings Keith, won by only "a whisker," narrowly defeating his challenger for the Republican nomination, a lawyer named Mr William Weeks, who was then a state Senator, and taking the election itself by only 1,520 votes from the Democratic candidate, Mr Gerry Studds, a former teacher at St Paul's School in New Hampshire. When the district was gerrymandered (had its boundaries redrawn) to remove his own town and other Republican strongholds, Mr Keith chose not to run again.

Back to the fray this year came Messrs Weeks and Studds, both unusually upper-class for such a scrappy political contest. Mr Weeks, 46 years old, a graduate of Harvard College and of the University of Virginia Law School, is the son of the late Sinclair Weeks, President Eisenhower's Secretary of Commerce. Mr Studds, aged 35, went to both Groton and Yale University and had worked on John Kennedy's White House staff and on Mr Eugene McCarthy's New Hampshire primary campaign in 1968. When he returned to his old family home in Cohasset two years ago, Mr Studds built a strong organisation and nearly unseated Representative Keith by an anti-war, pro-workingman campaign.

Since 1970, Mr Studds has also learned Portuguese, the language of large numbers of New Bedford factory people. But his anti-war companion on the ballot this year is Senator McGovern, who does not appeal to all the Democrats in the 12th district. Mr Weeks was well behind until Mr McGovern came along. Now, linking Mr Studds's name to Mr McGovern's at every opportunity, Mr Weeks hints that Mr Studds, like Mr McGovern, is too radical. Several anti-McGovern Democratic leaders are supporting Mr Weeks and the most recent independent poll now shows him ahead—though by a mere 3 per cent. Mr Weeks urges voters to "be selfish" and elect him; Mr Studds urges them to be idealistic and choose him.

Yaleman Studds is supported by Senator Edward Kennedy; Harvardman Weeks has the help of Senator Edward Brooke; both Senators have summer homes in the district. Mr Studds has a host of volunteers, but Mr Weeks has nearly twice the campaign funds to spend on television. With 69,000 registered Democrats, 63,000 Republicans and 101,000 independents among the voters, the race in the 12th district will be decided by the independents.

Now you can stay in one of the best hotels in New York -for free

If you have a week to spare fly with us to New York this winter.

We'll fly you over on one of our 747s. Put you up in one of the best hotels in New York (you have a choice of three). You'll have a single or double room with your own private bath. We take you sightseeing. And then after a week we fly you back again.

The all-inclusive tour prices start from £117—even that's a saving of about 30% on the

normal economy airfare available for a one-week tour. The rest is on us. (Prices based on 7/8-day winter group inclusive tour fares effective Nov. 1st to Dec. 14th, 1972, and Jan. 5th to Mar. 31st, 1973, for groups of 10 passengers. You don't have to form a group yourself. Your travel agent or Pan Am will do it.)

So, if that sounds like a nice thing to do, your travel agent can tell you more, or send for our brochure for full details.

Pan Am.

(for 7 days)

Suddenly, you're somewhere else.

To Pan Am, P.O. Box 700, London SW4

Please send me your free brochure of Pan Am's winter bargain tours to the U.S.A.

DELTA: Better and cheaper.

Delta has been effectively going about its business of launching satellites for over 12 years. During that period, it has been continually improved through orderly, evolutionary changes to satisfy ever-increasing mission requirements with reliability.

Today, Delta can launch 15 times the payload weight it could in 1960. It has a new inertial guidance system. And it's now available with a 2-44 metre diameter fairing and with up to 9 strap-on solid rockets for even greater payload flexibility.

Delta has successfully orbited 84 of 91 low Earth orbit, synchronous orbit and space probe missions. It has, in fact, launched more

scientific and civil applications satellites than any other system in the Free World. Already used by ESRO, the United Kingdom, Canada, and NATO, Delta has more international launches scheduled through 1975.

Delta is available today, as it will be through the decade, to answer the payload planner's request for a low-cost, reliable and flexible space transportation system. Delta will do the job better.

MCDONNELL DOUGLAS

The first nine-solid, inertial-guided Delta launching the ERTS (Earth Resources Technology Satellite) for the National Aeronautics & Space Administration.

Pell challenged

Providence, Rhode Island

Mr John Chafee, a Republican who used to be Governor of Rhode Island, is contesting one of the state's Senate seats this year with the Democratic incumbent, Senator Claiborne Pell. Mr Chafee dwells persistently on the similarities between Senator Pell's views and those of Senator George McGovern: "political Siamese twins," he called them. Mr Pell rejects the comparison; he has said that he will vote for Mr McGovern himself, but that is as far as he will go. Democratic solidarity is in conflict with the need to survive. Thus he has criticised Mr McGovern's hypothetical defence budget, which "cuts too deeply into our defence muscle."

Rhode Island is one of the states where the Republicans hope to win a Senate seat from the Democrats in the November elections. But not much is said about this idea in the campaign. The thought of a Republican-controlled Senate would not fire the voters of Rhode Island with any enthusiasm. They regularly elect Democrats to most offices with large majorities.

But they are, for the most part, Democrats of a not very liberal stamp. Founded as a colony of English Calvinists, Rhode Island has since filled up with Roman Catholic industrial workers from Italy, Ireland and French Canada. The state is also heavily dependent on the navy. So the popularity which Senator McGovern enjoys in neighbouring Massachusetts comes to an abrupt halt at the boundary.

The flight from Mr McGovern does not mean that President Nixon or his Administration are popular. They are not: it is just that they are there, and in charge, and that a vote for Senator McGovern is regarded as a leap into the unknown. Mr Nixon is therefore expected to join General Eisenhower as one of the two Republican Presidents to

carry Rhode Island since Mr Coolidge pulled it off in 1924. Naturally the Republican candidate for Senator is counting on some coat-tail effects.

The reasons why Mr Pell faces the most formidable challenge to his political career are, however, more individual and personal. He is an enlightened, agreeable, diligent Senator but as a campaigner he is without distinction and the popular touch is not his thing. Mr Chafee has a natural talent for electioneering. He is also well known in the state, and well thought of, from his four years as Governor in the 1960s, a time when the navy grew, industry was fully employed and the state prospered.

This fact helps Mr Chafee to overcome the association of the Nixon Administration with a slack economy and high unemployment. He has also another association which helps him further: he was President Nixon's Secretary of the Navy until he left to challenge Mr Pell for the Senate seat. Thus, while Mr Pell carefully exempts the navy from any budget-cutting proposals, Mr Chafee can talk about naval power and navy yard employment with conviction and experience. Yet he is not particularly a Nixon man and his support does not extend to the Vietnam war.

The political currents of the day are adverse to Senator Pell. But his previous majority was huge and the erosion needed to defeat him would have to be spectacular. The trade unions, which are not giving Mr McGovern any perceptible help in Rhode Island, are backing Senator Pell as an old and trusted friend. For the electorate to dismiss a Senator who does his job, is not senile and has not done anything wrong is not usual. Mr Pell may also count on a kind of guilt factor to help him, in that, as the regular Democrats of this anti-McGovern state party are hoping, voters who vote for President Nixon against their habit may compensate by voting Democratic for other offices.

There is, however, another guilt factor which may work in Mr Chafee's favour. He lost the governorship in 1968 simply and solely because, as Governor, he was obliged to propose a state income tax. His Democratic opponent, Governor Licht, won the election and was re-elected two years later on the basis of a promise not to impose a state income tax. But the tax was in fact necessary, Mr Licht had to impose it after all (and has now been dropped by his party) and Mr Chafee emerged as an honest man vindicated.

Chafee v. Pell

Against the grain

FROM A CORRESPONDENT IN WISCONSIN

Along the banks of the Wisconsin river in the southwestern part of the state, the dairy farmers, traditionally conservative and numerically powerful, are angry. The object of their open hostility is the Republican Administration's handling of sales of grain to the Soviet Union which, in the view of many of the residents of this green and pleasant area, allowed a few farmers and exporters who had advance notice to make huge profits. Mr Lee Leffler, an organiser for the powerful National Farmers Organisation, says that, in the opinion of many of the smallholders (400 or 500 acres is a good size for a dairy farm in this area), "something dirty went on there. A lot of people lined their pockets." Mr William Wanek, who milks 45 Holstein cows in the rolling pasture country on Blue river, says that farmers are angry about this whether or not they are Republicans (as most of them are). But neither Mr Wanek nor Mr Leffler is willing to say whether this anger, which has been directed against the federal government for some time, can be translated into votes against Mr Nixon and for Mr McGovern.

Mr Nixon won the state by comfortable margins in both 1960 and 1968, because the farmers and the residents of the small towns which dot the state can, when enthusiastic about a candidate, outvote the residents of the cities which are clustered in the southeast. But this is 1972 and the McGovern forces in Madison, the state capital and home of the sprawling university of Wisconsin, believe that this year they can win the state, although not by much. "Things are humming," says the Democratic Governor, Mr Patrick Lucey, who is a hard-working campaigner for Mr McGovern. Registration of voters is high and some 70 McGovern headquarters have been deployed across the state. Also the Committee to Re-elect the President does not seem to have been busy so far.

As is true elsewhere in the United States, Mr Nixon appears to have few devoted and fanatical supporters in Wisconsin this autumn. But if Mr Nixon seems to have little but a hard core of voters in his corner, the same applies to Mr McGovern. In the cities where lies the basic Democratic strength the trade unions are not working for the Democrats as hard as they did for former Vice President Hubert Humphrey in 1968 or for President Kennedy in 1960. There is a

widespread feeling in both Nixon and McGovern camps that a large number of voters are still in the process of making up their minds. What the McGovern organisers are hoping for is that the issue of the grain deal, political espionage and general dirty work by the Republicans will combine to inflame these undecideds and move them into the McGovern camp. In addition, they say that they have reason to believe that Mr McGovern's telethons—paid broadcasts in which he answers questions telephoned in by viewers—have given him a favourable image as compared with Mr Nixon's rare public appearances.

GM strikes again

The United Automobile Workers union has struck at a bad time for the General Motors Corporation. Its new 1973 cars are just coming off the production lines, they are selling well and the dealers are clamouring for more supplies. But employees in six factories have been out on lightning strikes already this month and the union has given notice to other assembly lines that their turn will come.

The real target is the new and hated General Motors Assembly Division which has taken over the operation of 10 of the corporation's assembly lines from the more easy-going managements of the Chevrolet and Fisher Body divisions. The directive from headquarters to the new unit was to make the plants more efficient. This meant consolidating managements which had previously worked independently and renegotiating the contracts that each had with the local branches of the union, cutting costs and speeding up the production. In most places this came down to producing more cars with less labour. At the St Louis plant which has already been out on strike the UAW claims that 1,600 men were laid off work last year but that more cars are being produced.

The first protests against the new regime came earlier this year when the Lordstown factory in Ohio went on strike. This was followed by a long strike at Norwood, Ohio, which ended last month after 175 days. The stoppages did more harm than good to both the union and the men off work. The Norwood strike cost the men \$19.2m in wages and the union \$3.5m in benefits. General Motors itself seems to have suffered little.

These are not the sort of figures that the UAW can afford when it is trying to build up its much depleted

reserves for nationwide bargaining on a new contract next year; it has still not recovered financially from the strike in 1970 to support the last round of negotiations. It is for this reason that short stoppages are now replacing long ones. Lightning strikes do little damage to the bank balance; the union does not have to pay benefits to its members until they have been out on

strike for a week. It is also hoped that the men will be able to make up their lost wages with overtime work. In its efforts to cut costs GMAD tries to keep overtime to a minimum but this may no longer be possible if the company is forced to make up production that it has lost during the strikes. But will the new strategy upset GM's production schedules enough to hurt?

Hitting for base

Crackerjacks and hot-dogs may be the fare at baseball games but it is apple pie that is conjured up in an all-American mind whenever the game is mentioned: baseball is very much a part of the American heritage. In spite of the ever-growing popularity of football and ice hockey, in spite of the ever-dwindling numbers going through the baseball entrance gates, the World Series—the annual contest between the champions of the rival American and National Leagues—usually manages to evoke enough nostalgia to bring out the crowds and revive interest in the ball game.

Few had expected the American League's Oakland Athletics to fare well against the National's Cincinnati Reds in the 1972 World Series which ended last weekend. Fewer still believed it when the As won the first two games in Cincinnati's own territory; they went on to win the Series, four games to three. That the betting was initially heavily in favour of the Reds is understandable. Cincinnati is regarded as one of the strongest offensive teams in baseball. Oakland, both the city and the team, are overshadowed by San Francisco and the Giants across the bay. The team is used to being the underdog and some of its best players were injured and out of play before the series began. Besides the Reds were

a solid, sane team, a safe bet. Not so the argumentative As.

The team resembles a band of gypsies, not only in their wanderings—in 1968 they came to Oakland from Philadelphia via Kansas City—but also in their dress—a gold and green uniform. In a fit of promotional enthusiasm, the owner, Mr Finley, offered the players a \$300 bounty to grow moustaches and to these have been added beards and sideburns. He has committed some other breaches of orthodoxy as well, such as offering \$5,000 in what he calls retroactive salary increases (bonuses are illegal) to three Oakland players for game-saving feats during the series; this is a generosity that the commissioner of baseball will find it hard to overlook.

It is now being said that there is not enough room in the San Francisco Bay area for two major league baseball teams: either the Giants, who went west from New York in 1958, or the newly arrived Athletics will have to go. Ticket sales for the two teams combined are on the decline and add up to less than that of the Cincinnati Reds. In spite of the As clinching of the series and the crowd of 150,000 that welcomed the victors on their return in Oakland, it is the As who are expected to move on. Mr Finley's hockey and basketball teams will probably be going to New Orleans and the ball players may make it a trio.

The Reds are winning 8-1 in the sixth game

INDUSTRY GROWS IN SCOTLAND

Scotland has the factories—S.I.E.C. has already built 28,000,000 sq. ft. of modern, well-designed production space for 400 expanding companies and more units are under construction. Scotland also has the labour, the power supplies, the communications, the recreational facilities—and the expertise gained from years of satisfying manufacturers demands. Very substantial Government financial concessions are available in most areas. Visit us and discover the benefits for yourself.

For those who care
about their appointments

The Desk Diary

makes keeping appointments a pleasure. This truly handsome, craftsman-made volume has long been the highly treasured possession of connoisseurs all over the world.

It is the incomparable desk-top work of reference for people of affairs.

It contains ☐ 100 pages of valuable facts and figures specially distilled from international research surveys and official statistical analyses covering public affairs, commerce, industry and the professions. ☐ Special sections on U.K., U.S.A., E.E.C., World. ☐ New in the 1973 edition, a totally revised 60-page, fully indexed world map section, including special highly informative statistical maps and charts and 16 street plans of important world city centres. ☐ A loose, durable, six-year calendar. ☐ Two blue heavy silk markers to find those reference sections you use most and ☐ 117 superbly designed diary pages. ☐ Beautifully bound in rich red leather with its title, and your initials, embossed in real gold. The Economist Diary has been designed to be used as a permanent personal or business record and makes the ideal Christmas gift for even the most difficult to please.

The Pocket Diary

This slim pocket diary, delightfully practical to use, has been designed to keep its immaculate appearance the whole year.

☐ Luxuriously bound in red leather. ☐ Specially stressed covers finished with gilt metal corners. ☐ Pages edged with gold and a blue silk marker to add an extra note of distinction. ☐ The same sensible day-to-day layout of the Desk Diary, a three-year calendar, world times and public holidays to meet all essential needs. ☐ Tear-out slips of blank paper for notes and messages. ☐ Gold embossed blue Duplex end papers to 'gild the lily'. The Pocket Diary is a justifiable extravagance for those who care about quality. Order one for yourself and give others to your nearest and dearest.

Let us add your initials—or name—embossed in gold leaf.

We will be happy to dispatch The Economist Diaries in attractive gift sleeves, with your card enclosed, to anywhere in the world.

The

Books

Revolutionary tourism

SMALL EARTHQUAKE IN CHILE
By Alistair Horne.
Macmillan, 335 pages. £3.95.

Soon after Dr Allende came to power and violence started to break out in the Chilean countryside, one native of Santiago had the bright idea of setting up a company to promote "revolutionary tourism." Why not charter a plane to fly left-wing students or political voyeurs from the United States and Europe to take a look at a guerrilla camp in the Andes, the seizure of a farm by landless Indians and get a whiff of the world of the *momios* (the local nickname for well-heeled conservatives) before it was torn to pieces? Of course, the scheme never came to anything. But Alistair Horne's book provides a sort of substitute for armchair voyagers.

Written with the author's habitual eye for detail and his masterly prose, his latest book will help to open up the Andean countries for many Anglo-Saxon readers. What Mr Horne has done is to write up the diary of a jaunt he made through the Andean foothills in the company of the dragonfly columnist, William F. Buckley Jr, and a mysterious Chilean lady whose name seems to pop up every few pages. He has talked to plenty of people, of all tendencies, and he quotes their remarks and drops their names with a nonchalance that will embarrass some of his sources. He has been up to Liquiñe (early last year) to see Comandante Pepe, the would-be Fidel of the Chilean Movement of the Revolutionary Left, and has talked with Bolivian generals, CIA chiefs and beachside playboys as well.

The end result is a book that captures a great deal of the colour and individualism of the "southern cone" and gives a fleeting impression of a society caught up in the currents of social change. Perhaps the most serious criticism to be levelled at it is that Mr Horne has not sufficiently explored what underlies the pressures for change in South America. Apart from a few hurried statistics on Chilean inflation and copper prices (which are now out

of date as the economy goes teetering along its Weimar course) there is nothing in his book about economics, and very little about broader social problems like the distribution of land or income. Equally, he is rather at sea when it comes to interpreting communist strategy in the Andean countries—although he rightly stresses the rivalry between the traditional Moscow-liners and the revolutionary “new left” as one of the keys to present political developments.

Mr Horne's very subjective bent sometimes leaves one wondering whether the actions of the leaders he writes about are not merely a kind of exotic ritual dance. The fact that so much of the book is given over to conversations with those who were the first to lose out when Dr Allende came to power in Chile—the very rich—might also lead some of his readers to believe that the old stereotype of Latin America as a continent of nasty oligarchs treading on miserable peasants is actually valid. That would be a pity, since recent events in Chile (where shopkeepers, peasants and truck drivers have come out against a marxist government) shows the reality to be rather more complex.

Mr Horne is aware of this. His book leaves many of the big questions about Chile unanswered, but after the heated ideological debate in France that has thrown up several marxist interpretations of Allende's progress, it is refreshing and succeeds in a more modest task: to bring part of South America to life for a public that has always tended to go to sleep at the very mention of that continent.

The equivocator

KENYATTA
By Jeremy Murray-Brown.
Allen and Unwin. 381 pages. £5.50.

Jomo Kenyatta has always been an enigmatic man. To the modern generation of Kenyans, most of whom had not been born at the time of the emergency in 1952, he is "Mzee"—the old man, patriarchal, authoritarian and conservative. It is hard to believe that 20 years ago he was regarded as a

Kenyatta the conservative

dangerous communist whose influence in Kenya was wholly evil. Many of the white settlers who were then muttering that all would be lost if Kenyatta should take over are those who are today muttering that all will be lost when he goes.

The context in which President Kenyatta is now most often mentioned by foreigners is the macabre but fertile one of who should succeed him when he dies. It is therefore a refreshing change to be able to read about the circumstances of his life, which has already been long and eventful, rather than of his death. Mr Murray-Brown, who has carried out a great deal of research, tells the tale with fairness and good judgment. His success in conveying so much of the circumstantial detail and atmosphere of his subject makes the book both informative and enjoyable to read.

The underlying continuity of Mr Kenyatta's extraordinary and disjointed life has been the strange coexistence of purposeful single-mindedness and equivocal ambiguity. It was his determination to be educated that made him leave the district in Kikuyuland where he was born for the Scottish mission at Thogoto, and the same determination that led him into politics, inevitably to jail and ultimately to the presidency of Kenya.

But it was his equivocal nature that got him into such trouble. People—at least Europeans—never quite knew where he stood. Was he for female circumcision (the centre of a great row in the early 1930s), or against it? Was he behind the Mau Mau (for which he was convicted in 1952) or did he have no part in it (as he claimed)? Regarded as a communist by the settlers, likened to Hitler by Elspeth Huxley, he was

bafflingly ambiguous. Even today it is hard to judge whether he is more at home in his garden of English roses or at a Kikuyu tribal ceremony.

This book only covers his life up to Kenya's independence in 1963. His early life, his visits to Russia, his 16 years in Britain (during part of which he lived in Sussex with an English wife, horsed around in the local pub and passed himself off to bewildered bystanders at bus stops as an Eskimo), his return to the Kenya of the Mau Mau and the emergency, and, finally, his six years in jail are all described here. Another book will be needed for the later years, but, for a non-Kikuyu at any rate, Mr Murray-Brown has done a fine job on what went before.

Angola's agony

IN THE EYE OF THE STORM:
ANGOLA'S PEOPLE

By Basil Davidson.
Longman. 355 pages. £3.95.

Scarcely a week goes by without the publication of a book, pamphlet or article about Rhodesia, and scarcely a day goes by without a similar publication about South Africa. Perhaps that is as it should be. Yet it is strange that so little energy in the English-speaking world has been channelled into writing about the other white-ruled countries of Africa—the Portuguese territories. As far as black opposition is concerned, Rhodesia and South Africa are in a permanent state of coma, occasionally relieved by spasms. Angola, Mozambique and Guinea-Bissau are, by contrast, in a state of war.

Mr Basil Davidson has been at pains to publicise these half-forgotten wars for many years. There is probably no Englishman who knows as much about the three Portuguese territories as he does. In this book he draws on this knowledge, particularly where it concerns the developments of the past 10 years or so. But the book is mostly about Angola, that vast area of land—five times the size of Britain—that acts as a buffer on Africa's west coast between the black north and the deep white south.

Half the book is devoted to Angola's story before the uprisings of 1961 that set the match to the bush fires that have burnt ever since, not just in Angola but in Mozambique and Guinea too. Angolan history, where it concerns contact with the white world, makes pretty grim reading. Slavery, forced labour and general ill-treatment

seem to have been the rule rather than the exception. But the whites, though they have been established in some form or other on the coast for over 400 years, made little impact on the interior of the country until very recently. Mr Davidson, besides being an expert on Portuguese Africa, is an authority on African precolonial history and his knowledge of early Angola is skilfully applied.

The second part of the book concerns the struggle that has been waged since 1961 by what the author terms "the national movement." Interesting and authoritative, it provides one of the best-informed and most readable accounts of the war yet published in English. But there are still many large gaps to be filled in, and Mr Davidson's viewpoint is certainly not the only one. The Portuguese government will undoubtedly be at odds with him. So too will some of the African guerrillas, for one of the difficulties about the "national movement" is that in an important sense it is not national. Mr Davidson fully explores the rifts in the lute, but he is partisan to the extent that his sympathies lie strongly with the Popular Movement for the Liberation of Angola, led by the poet and doctor, Agostinho Neto.

As so many young African countries have dashed the hopes of their expectant admirers, the eyes of the incorrigibly hopeful turn toward countries still in the making. There seems to be a relationship between the length of the pre-independence struggle and the effectiveness of the government that finally comes to power. If this is so, Angola, Mozambique and Guinea may well have something to teach us. Mr Davidson believes they already have. He makes a convincing case, and in the process tells an interesting story with considerable skill.

Unpromising material

GEORGE IV: PRINCE OF WALES

By Christopher Hibbert.
Longman. 352 pages. £3.95.

George IV was the most unpopular monarch of England since James II. From the time he reached adulthood his spendthrift ways, his love life and his association with the political opposition of the day led the general public to look askance at him. His long relationship with Mrs Fitzherbert brought him no credit: he "married" her secretly, well knowing that the ceremony was invalid under the Royal Marriage Act of 1772, renounced her

George, Prince of Wales, with a "lady of quality"

to marry the more suitable Princess Caroline, went back to Mrs Fitzherbert but took another mistress. His treatment of Caroline, whom he hated, became the leading scandal of the age. His untruthfulness alienated his friends, as when he induced Fox to deny, to a sceptical House of Commons, that any form of marriage with Mrs Fitzherbert had taken place. When he became regent and subsequently king he betrayed the political friends of his early years, the Whigs, by refusing to entrust them with office; in consequence he delivered himself into the hands of the Tories, and despite frequent blustering enjoyed little of the authority wielded by his father.

What does Mr Hibbert make of this unpromising material? To his credit, he does not succumb to the occupational disease of biographers, that of whitewashing his subject. The present work, which is intended as the first of a two-volume biography, handles the Prince of Wales sympathetically but firmly. Although the narrative stops at the eve of the regency, the main lines of the Prince's career already emerge. Mr Hibbert deals in detail with the "Delicate Investigation," egged on by the Prince in 1806, which probed into the Princess's alleged extra-marital activities and adumbrated the full panoply of the Caroline Case of 1820. He brings out too the effect of this early investigation on the Prince's relations with the Whigs. Though anxious enough to please him, they could not bring themselves fully to endorse the investigating body's adverse report on Caroline's way of life; indeed one of their number, William Windham, to his eternal credit came out openly on her side. The Prince of Wales's dissatisfaction

at the Whigs' equivocal attitude was an important constituent of his later quarrels with them.

On the whole the author is more interested in the Prince's personal life than in his politics, an appropriate approach to the man who, in effect if not by intention, presided over the final withdrawal of the crown from the nation's government. George's role, as Prince of Wales, in the society of his day is well brought out.

Open-ended quest

THE FACE OF DEFEAT

By David Pryce-Jones.
Weidenfeld and Nicolson. 179 pages.
£2.95.

Some 3½m people, living in exile or under occupation, might have become lost voices in a world that absorbs and forgets greater tragedies. The Palestinians, by fair means and recently some foul ones as well, have forced remembrance of their cause. Knowledge or understanding are harder to come by: the Palestinians have in common their undiminished awareness of the injustice done them when they lost their land; otherwise the difference and difficulties of their circumstances leaves outsiders groping for an authoritative Palestinian viewpoint. Mr Pryce-Jones's search for the truth leads him from interview to interview—in Jerusalem, Nablus, Beirut, Amman—but the trail breaks off inconclusively.

As a good reporter, he was in a number of places at the right time: Jerusalem during the 1967 six-day war, Amman before and after King Hussein's crack-down on the guerrillas, the West Bank when allegations of Israeli torture during interrogation

were widely prevalent. He doggedly tries to get at the reality behind the myths, in particular over the torture allegations, and is objective to the point sometimes of blandness. The Israelis he talks to come through as well-meaning and slightly baffled; the Palestinians as men with all passion spent. Name after name is mentioned but, as often as not, the author seems to be burrowing his way through cotton wool.

There are illuminating sketches but the end result is too episodic and fragmentary to suggest any conclusions. Mr Pryce-Jones is helpful on one or two specific subjects but his journalist quests do not really amount to the theme for a book or to any significant advance in our knowledge of a complex people.

Yours, disgusted

THE PSEUDO-REVOLUTION

By David Holbrook.

Tom Stacey. 202 pages. £2.80.

Mr Holbrook has complained lately of a hidden censorship, saying that liberals, being afraid to seem out of the fashion or ridiculous, have declined to publish his pieces against pornography. Fortunately, however, he has not been muzzled, and now we have his argument at book-length.

He started to be alarmed, quite suddenly, when "Oh! Calcutta!" played the London stage with sexy scenes, to few complaints and more voices rejoicing at how the frontiers of sexual liberation had been forced back. Deeply stirred, he seems to have collected newspaper cuttings of reviews, and then accounts of the Danish sex fairs. These two achievements of the entertainment industry in 1970 dominate the book, being referred to on nearly every page in tones of disgust. Pornography is seen as only a pseudo-revolution, and Mr Holbrook, as one who hoped for a more humane movement of sexual reform, points out the betrayal felt by the revolutionaries of his stamp. Pornography is seen as sadistic, full of insults, debasement and hatred against men, against women and against love. A true release would be humane, life-enhancing, private rather than orgiastic, and never on the stage. Real love would shrivel at the approach of commercial exploitation (assumed to be behind the pornography wave). Splitting sex from commitment of the whole personality is, says Mr Holbrook, a severe sign of schizoid personality disturbance (he

includes references to psychoanalytic writers which match badly with the hasty journalism of much of the book).

Few of us regard pornography as sensitively life-enhancing or a credit to our civilisation, and moreover now, a year or two later, we can see the tide receding a little out of boredom and hope we have passed the peak. Yet the book can only be described as a sorry business. The tone is miserable complaint, on and on about "Oh! Calcutta!", and there is personal hatred of Mr Kenneth Tynan. Love breaks through with a quotation from Lever-tov; almost the only occasion. There are signs of haste and many misprints, surely painful to a poet. Is the author manically fashionable himself? His publisher lists this as his sixth book in 1972. It comes nowhere near to filling the great need for a thorough exploration of the implications of sexual permissiveness for our culture. "In Bluebeard's Castle" and "Extra-Territorial" showed that Mr George Steiner is interested, and we know he writes beautifully; perhaps he could provide us with it.

A poor shepherd

FLEEING THE LAMBS

By Christopher Elias.

Pitman. 256 pages. £2.50.

It was high noon for the securities industry in the late 1960s. Not just because share prices rose—that benefits everybody, so long as it lasts—but because trading volume accelerated. In Mr Elias's opinion: "If all the money Wall Streeters made out of this bonanza had been converted to dollar bills . . . they literally could have wallowed in their gains."

Whatever they actually did with it, many broking firms did not use it to underpin their back offices, where the actual exchange of securities takes place. Trading so far outran their ability to settle up that at one stage over \$5 billion of securities were behind on delivery. The problem is far more daunting in New York than it ever could be in England, because the piles of paper slithering down behind the filing cabinets are bearer bonds, documents of immediate value, rather than registered certificates. It is temptingly easy to pick them up and walk off; a temptation by no means always resisted.

No doubt there is here the makings of a compelling book on the ambivalence of the New York Stock Exchange and the writhings of those brokers

overwhelmed in the aftermath of the bull market. Unhappily, it is not the book which Mr Elias has written. Here was matter, one would have thought, for a thoroughgoing exposé, so often well done by relays of journalists. But Mr Elias is short on detail and perfunctory in style, and his assertions come across with the urgency of last month's newspapers. Besides, he is suspiciously emotional, having lost his job as editor of the exchange's official magazine because of this book. But what alternative was there, other than the satisfaction of resigning, when he calls its members greedy, incompetent, shortsighted and dishonest? So they may be, some of them, but we still await an account worthy of that theme.

Short list

Participation in Urban Planning: The Barnsbury Case by John Ferris (G. Bell £1.75). Resentment at the middle-class "takeover" of a poor but elegant district in the London borough of Islington focused on the elaborate traffic management scheme sold to the council by a group of professional residents who formed the influential Barnsbury Association. The author helped to form the rival Barnsbury Action Group, whose members were mainly small shopkeepers and tenants, and whose existence at least proved that fashionable terms like "participation" and "amenity" mean different things to different people. Though partisan, Mr Ferris gives a convincing account of how politicians and officials reacted to pressures.

The New Government of London: the First Five Years edited by Gerald Rhodes (Weidenfeld and Nicolson, £10.50) is an assessment by the Greater London group of the London School of Economics, a team of academics formed to influence the formation of the new system prior to 1965. For performance, 1965-70, it gets a beta plus. The weaknesses are the Greater London Council's ill-defined roles in planning and housing, where it is hard to see how any satisfactory solution can be reached without amending the act to give the GLC more power. But this looks unlikely through a fundamental problem discerned by the authors: the system was not designed to cope with the political tensions arising from it.

Local Government Reorganisation: the first years of Camden by Enid Wistrich (London Borough of Camden

Libraries and Arts department, £1.50 plus 25p postage) is a subsidiary study. Though somewhat uncritical—the author is a local councillor—it is better value for money and more up-to-date than the main study, and because it deals with particular local conflicts it is also more readable. Camden counts as one of the successes of reform, and there is no harm in saying so.

Twentieth-century Coventry by Kenneth Richardson (Macmillan, £3.50 cloth, £1.50 paperbound). Mr Richardson has steered clear of the controversies over piece-work and measured day work in his account of Coventry's phenomenal growth. He provides a wealth of detail on every aspect of Coventry life, from its impressive housing record to its popular rugby union team, from its efforts to spread culture with the aid of the Belgrade Theatre to the churches, centring on Sir Basil Spence's new cathedral. He writes with a proper sense of filial piety. The best chapters deal with the giants who built up Coventry's wealth: men like Sir Alfred Herbert, Meyer Bettman, and Sir John Siddeley. There is also an interesting account of that parallel twentieth-century development in Coventry—the rise of the Labour party.

Business Brief

What deal for consumers?

A new deal for consumers will be announced by Mr John Davies, Secretary for Trade and Industry, in the debate after the Queen's Speech next Tuesday—almost exactly two years after the Government's decision to kill the Consumer Council. Two weeks ago Mr Davies told the Conservative party conference that "the Government means to arm itself to deal with those who persistently show a shoddy performance in goods or services, and we mean to take powers to intercept those who seek by abusive practices to gain unjustified profit from the public." He returned to the subject in a speech to the Advertising Association on Tuesday, without filling in any more details.

The betting is on a new semi-independent watchdog body, perhaps on the lines of the Monopolies Commission, to be set up under a new Minister for Consumer Affairs. He would take over the diffuse consumer functions now scattered among a number of ministries, but could himself work under the general aegis of Mr Davies's DTI.

During the discussions with the Prime Minister about inflation, the Trades Union Congress had been demanding the immediate re-instatement of the old Consumer Council, and now the new legislation will probably produce something like the old council

but not so large. When the Government scrapped the council in 1970, it argued that, since the establishment of the council in 1963, the consumer's interest had become more adequately represented by private organisations, so that, by implication, the £240,000 a year grant the council was getting from the Treasury was a waste of public money. The Government may also have been worried that under its director designate, Des Wilson of "Shelter," who was due to take over from Dame Elizabeth Ackroyd, the organisation might have taken a more radical Ralph-Nader-type line.

During the council's eight years of life it made remarkably little impact, partly because its brief was too restricted, also because its budget was pitiful. When it did try to give sensible advice, particularly on the drafting of legislation—where it was in a position to make a useful contribution—Whitehall generally brushed its representations aside. It was not a happy experiment; translating leaflets about dangerous nighties into Urdu and Punjabi is doubtless helpful but not what the staff of the Consumer Council thought they would be doing when they joined it.

Some civil servants, as well as incoming Tory ministers, thought the council had been more well-meaning than effective; but the truth was that it

had never been given the chance, and did not know how to make one for itself.

When the Government axed the council, it was expected that the private and independent Consumers' Association, publisher of "Which?" magazine, would take over some of its functions. But the association had neither the money nor the organisation. Its £2m turnover a year is entirely generated by the 600,000 subscriptions to the magazine and by the sale of other publications. The CA would be quite happy to accept government money for narrowly defined projects, such as research on common market entry, but it is very anxious to preserve its independence in its main function; the comparative testing of products.

Acts in support

Since the war, several acts providing safeguards for the consumer have been amended and some new ones added. But one of the most important pieces of legislation covering consumer transactions is still the 1893 Sale of Goods Act, which obliges the seller to supply goods which are "reasonably fit" for the purpose required, and of "merchantable quality." This means that a pair of boots should protect the feet and not fall to bits immediately. This provision covers only the immediate buyer of the article, and not the third person who may eventually use it. The buyer can be—and frequently is—deprived of his legal rights by being fooled into signing them away, usually under the guise of a guarantee which can take away more rights than it offers.

The wisest course for anybody who is asked to sign any guarantee for an electrical or other appliance, stating that he agrees not to be covered by

the Sale of Goods Act in consequence, is to delete or insert the word "not" in the appropriate part of the small print before signing. The issuer of the guarantee often will not notice this.

The 1963 Weights and Measures Act makes the giving of short measure a criminal offence for a shopkeeper. It also lays down the quantities in which certain goods may be sold. Thus, prepacked tea or coffee must only be offered in packets containing 1, 2, 3, 4, 8, 12, 16 or 24oz, and multiples of 1lb; but biscuits can be packed in any quantity the manufacturer likes, which leads to a lot of 7½oz packs trying very hard to look like 1lb packs. The Act will have to be amended fairly soon to prepare for the introduction of metric measurements. The opportunity should be taken to tighten it up considerably; and cut out, in particular, the very liberal allowance made for packing and wrapping. The act is enforced by local weights and measures inspectors who make spot checks on shops and garages.

Since 1968, these inspectors have also been responsible for enforcing the Trade Descriptions Act which was introduced in November of that year. This Labour measure, and the Act to get rid of resale price maintenance, introduced by the Conservatives in 1964, have been the two major pieces of consumer legislation passed in the last eight years. The Trade Descriptions Act makes it illegal to give a wrong or misleading description, either in writing or orally, of goods or services offered for sale. It has had a major impact in certain fields where previously there had been a lot of abuses, particularly secondhand car dealing (see chart).

Since 1968, there have been several hundreds of thousands of complaints under the Trade Descriptions Act, and over 3,000 convictions. Up to end-March this year, fines of more than £200,000 had been imposed and two people were given suspended prison sentences. The powers of the Act are very wide. They embrace misleading descriptions in advertising and of services such as holidays (where there have been several big fines for travel firms over false descriptions recently), laundries or banks as well as goods. They cover false descriptions of prices, to deal with spurious "4p off" claims in shops. But some shops now seem to be evading this rule by persuading manufacturers to supply them with two sets of recommended prices.

Other important consumer measures include the 1955 Food and Drugs Act, which makes it an offence to sell food that has become unfit for human consumption, and the 1961 Consumer Protection Act, which is concerned with the safety of goods such as oil heaters. A bill insisting that imported goods must be clearly marked with their country of origin went through Parliament earlier this year.

Too many cooks

At present, responsibility for consumer protection is spread among too many nannies. The Department of Trade and Industry looks after the Trade Descriptions Act; the Home Office after consumer safety; the Ministry of Agriculture after the Food and Drugs Act. The new consumer minister should be put in charge of all of them. He may also be able to push consumers' interests more forcefully, and should certainly be urged to implement the overdue reforms in

consumer credit, that were advocated by the Crowther committee 18 months ago. It wanted legislation to abolish the present confusing distinctions between different types of consumer credit (such as bank loans and hire purchase); and to make mandatory the declaration of the true annual rate of interest for the loan offered. Although the Government welcomed the proposals at the time, and promised to take action on them, there is no certainty that legislation will be introduced during the coming parliamentary session.

The Government also wants to arm itself with wider powers to deal with abuses in doorstep selling and pyramid selling of which Britain has suffered several bouts lately. It might be able to get them without going through a lengthy legislative process. A new minister might also put some steam behind ideas like open dating of food (putting non-coded information about the freshness of the article on the pack) and unit pricing (putting a price per pound on the pack, to make comparisons between prices of different weights easier). Retailers such as Marks and Spencer and Sainsburys are now starting their own voluntary schemes; the new minister might make others follow them.

There is a need for more local advice centres where shoppers can go for information and to take their complaints. Some of the more active local weights and measures offices provide a service of this kind, but they are still in a very tiny minority. Some local councils are now opening advice centres on the model of the "Which?" centre in Kentish Town in London. Half a dozen of these, run with the help of the Consumers' Asso-

Caught by the Act

Total convictions under the Trade Descriptions Act: 3294 (Nov 30, 1968—April 30, 1972)

ciation, will be open by the end of the year.

A month ago, a group of Conservative backbenchers, in a report called "Square deal for consumers," urged the Government to set up a network of comprehensive Consumer Advice Centres; made up of the weights and measures inspectorate, a citizens' advice bureau, an inland revenue information office, a legal aid centre and somewhere to complain about the services of the nationalised industries. Another useful reform might be a small claims court where complaints involving sums of up to £500 could be taken without incurring great legal expense, and without plaintiffs being intimidated by the aura of an ordinary court.

A major task for the new consumer minister will be liaison with the European

Economic Community. Mr Albert Borschette, the Brussels commissioner in charge of consumer affairs, intends to allocate over \$8m of the community's budget next year to help consumer organisations to analyse the effects of common market legislation on the prices and quality of goods. Individual countries in Europe have consumer organisations of varying quality, but there is no adequate liaison between them and the EEC. The Consumers Liaison Committee, which was set up in 1962, folded last February, mainly for lack of funds. In its ten years of life, it had not managed to find an office, a telephone or even a part-time official in Brussels. If Britain, as a new member, sets itself up as an active champion of the consumer, it could improve the quality of work done all over the EEC.

BUSINESS

How did we get into this mess?

The latest and greatest British inflation was on the operating table in Downing Street throughout Thursday and well into the night, with the success of the operation continually in doubt. The illness is the result of 20 years of economic nonsense

Anything emerging from Thursday's talks will need to be good to deal with wage rates rising at 17 per cent a year and prices at 8 per cent, with more to come. But how- ever did we get into this mess? Demand is not excessive; unemployment is still near to record levels; output is expanding rapidly; real incomes, as the Chancellor observed last week, are rising faster than at any time since the war; and taxes are coming down. The answer is that the present rampant inflation is the pay-off for some 20 years of unmitigated economic bungling.

Inflation, in essence, is the heat generated in the scramble between the different sections of the community for a share in the available real income. It owes its present intensity to distortions in the distribution of resources which were allowed to emerge when too much of a too slowly rising national income went to personal consumption in the 1950s and early 1960s, and to the crude and over-rapid readjustment in the second half of the 1960s when personal consumption was squeezed too hard for three years. The great British inflation falls neatly into five phases stretching over nearly 20 years, but with the tempo steadily increasing.

Phase one was the long gestation period in which imbalance was allowed to emerge. It began on July 26, 1955, when Lord Butler, then Chancellor of the Exchequer, committed the Conservative government of the day to the maintenance of a fixed \$2.80 parity for the pound. He did so to end a sterling confidence crisis. This decision followed a long semi-secret debate in White-

hall, later described by J. C. R. Dow as "like the cavorting of an elephant under a dustsheet." Britain relapsed into slow growth and stop-go policies to "cure inflation" and "make the pound strong." In this period of Mr Macmillan's boast that "you've never had it so good," however, personal living standards were allowed to advance—at the expense of investment, public spending and the balance of payments.

Phase two began exactly six years after phase one on July 26, 1961, when Mr Selwyn Lloyd, dealing with another sterling crisis, announced proposals for the formation of the National Economic Development Council. Widespread awareness of slow growth, and some resentment of "public squalor," caused economic planning to come into vogue. But planning made matters worse. Both the Neddly plan and Lord George-Brown's national plan spawned ambitious public expenditure programmes while doing nothing to create the resources they were to pre-empt. Maintenance of sterling's parity at \$2.80 remained the number one priority, to which economic growth was again to be sacrificed.

Phase three began five years later, on July 20, 1966, again in the teeth of a sterling crisis. Mr Wilson's freeze and squeeze began the readjustment process, but the amount required had become both massive and urgent. Over the following three years readjustment was indeed achieved, but at considerable cost in terms of the pressures and tensions it created in the economy. The tax system, and subsequently devaluation, were used to

Up they all turned: DTI's John Davies, Vic Feather with a last word, CBI's Campbell Adamson, Jack Jones, quite the elder statesman

Clapham was there, and Scanlon on his birthday

switch resources from private spending to public spending and the balance of payments. While costs and prices were pushed up to achieve this switch, wages and manufacturers' prices were held down by statutory controls; all in the context of a relatively stagnant economy and a consequent doubling of the level of unemployment. For three consecutive years, real personal disposable income per head rose by barely 1 per cent a year.

This savage readjustment destroyed the delicate balance upon which the stability and manageability of the British economy had rested. When taxation was increased, in Keynesian style, to make marginal adjustments to the level of total demand, it raised costs and prices directly—but still, on balance and in the medium term, reduced inflation through its effect on the pressure of demand and the level of unemployment. But when the tax system was used to make a major redistribution of expenditure within a given total of demand, cost-push inflation was increased whatever the level of unemployment.

Moderate trade unionists, who went along with the Wilson incomes policy on the promise of jam tomorrow, were both disappointed and discredited. This led to a growth in union militancy, at a time when the bargaining power of both organised and disorganised labour was on the up and up. Meanwhile cost inflation, combined with economic stagnation and price controls, made severe inroads into profits. As the chart shows, the share of company profits in the cost composition of final output fell almost exactly in line with the rise in indirect taxation.

Phase four can be said to have begun on June 18, 1969, when Mr Wilson abandoned his Industrial Relations Bill. This capitulation to union pressure advertised the collapse of his incomes policy; there was a rush of what, at the time, seemed very large settlements of some public sector pay claims, detonating the open inflationary explosion. But while devaluation and tax increases are relatively efficient—in the sense that quite a small rise in prices secures a large shift in resources away from the private sector—wage inflation is very inefficient at grabbing them back. The initial impact of wage increases is to cut company profits; the wage-earner gains only until prices catch up, and even this immediate gain is whittled away by taxation. Income tax always takes an increased share of rising incomes; which is why at the present rate of wage inflation the whole of the £1 billion a year

reduction in tax rates in Mr Barber's last budget will have been offset by tax buoyancy within little more than one year. He should now have about another £1 billion a year to give away.

The struggle by the wage-earner to regain the ground lost during the Wilson squeeze in the late 1960s resulted in a rapid speeding-up of wage inflation. In 1970-72 this has been temporarily successful in pushing up real wages, but it also led directly to mounting unemployment. Faced with a new squeeze upon their depleted profits, which they were powerless to resist, companies were unable to recoup all the new costs in higher prices. Some industries—including engineering, machine tools, petro-chemicals, electronics, and textiles—suffered a cyclical slump in home and export demand coincident with the wage explosion. The results were to be seen in the epidemic of closures, redundancies and some bankruptcies which swept Britain in 1971.

Government policy, in this phase, was at best neutral. Demand was expanded sufficiently to prevent the emergence of a real slump, but not soon enough or dramatically enough to change the nature of the problem. Mr Jenkins did not realise that re-expansion was essential—indeed, he actually claimed credit that his pre-election budget was not a giveaway one—and Mr Heath did not act in time. Rapid reflation through tax cuts in 1970 could have eased the pressures on the economy, and during a period of 5 per cent economic growth perhaps de-escalation might have succeeded. Instead, the Treasury's hesitant orthodoxy won the day; and the new Heath Government, in pushing ahead with its longer-term structural reforms, often desirable in themselves, added a new dimension to the distributional problem and to the confrontation with the unions.

The result was that the fourth phase ended with inflation taking off from economic reality and developing its own momentum. Expectations of rapid price increases became the cause of large wage claims, thus providing their own justification. Every major wage bargain became a political exercise in confrontation.

Phase five began on September 26, 1972, when Mr Heath presented his £2 a week package deal. Here, for the first time in 20 years, the issue of resource allocation was faced squarely. The Prime Minister's doctrine was that inflation can be beaten only with the informed consensus support of all elements of society.

We help in all sorts of wild projects.

East Africa, 1971. With a beautiful climate, hordes of wild animals, and a burning need for foreign currency.

The answer—develop the rich potential tourist market. The problem—raising funds to provide the facilities.

National and Grindlays Finance and Development Corporation helped by making finance available.

It won't be the last time that National and Grindlays—with branches, subsidiaries and associates in the Middle and Far East, India, Pakistan and Bangladesh, and all over Africa—help the developing countries, by providing vital funds in the places where they can do most good.

If that's wild, we're proud of it.

Living with inflation

When the lights go out again

The Government's troubles with the unions do not begin or end in Downing Street. On Friday, the day after the tripartite talks, the four major unions in the power industry were scheduled to decide what industrial action they should take to support their 37 per cent pay claim. Mr Frank Chapple's men in the Electrical and Plumbing Union, who are the bulk of the electricity workers, have already announced in advance that they intend to vote for trouble.

Britain may therefore face the disruptions that it experienced in December, 1970, when the electricity workers worked to rule, or, in the absence of many rules, made up their own to go-slow by. The electricians may just try to hit factories, but whatever they do the engineers who worked so hard to keep the power stations humming in 1970 are now also dissatisfied. On Thursday they called some of their men out on a one-day strike, mainly office staff and engineers on building sites; the men in the power stations turned up for work as usual. If the other unions called an official strike, the engineers would probably not join it, but neither would they step in and shovel the coal as they did before.

The unions certainly do not seem anxious yet to start anything as drastic as a go-slow. They could simply ban overtime. That by itself would not do much damage since overtime averages only two hours a week. The danger in such a ban is not its immediate effect, but the risk that it might spark off much more damaging unofficial action. Another, presumably, is selective strikes, which would only be felt in particular areas.

The main reason for thinking that Mr Chapple may go for only a moderate sort of disruption, which shows his strength without making his men too

unpopular with the public, is the almost universal belief that the Government will pay up, somehow or other, in preference to an expensive showdown that it is advised it can only lose. Troops cannot run modern power stations. There is growing Government talk of postponing the showdown yet again until the dustmen come into the firing line. Troops can shift rubbish and unblock drains. But that cannot happen before any voluntary incomes policy has gone down the drain first.

The weather will play a part in the power strike, but the full severity of the cuts will depend on how often the stations break down. Their operation is largely automatic until something goes wrong, and the power workers are there mainly to put it right. The older power stations, with their small turbines, have a higher manning ratio than the large new ones. It follows that in any go-slow they are likely to get back into commission more quickly than the newer stations with their massive generators, simply because there will be more men around to work—even to rule—on them. Something like 35 per cent of the country's electricity is produced by power stations with turbines of more than 500 megawatts, so you can draw your own conclusions.

On September 30th *The Economist* warned that it was time to start buying candles, but most shoppers seemed to have left it until last week. Industry learned more of the lesson of 1970, and from the post office downward has been buying stand-by generators all this summer.

Virtue unrewarded

The sad story of the past two years is that nearly every strike has paid off. The chart shows how strikers have outpaced everyone else. They have had an average rise in earnings of 29 per cent over the past two years, which is 5 per cent more than the industrial average. The electricity workers top the bill, which is why they seem quite willing to take industrial action again. Only the postmen failed to gain from a strike.

Increases in the state old age pension have been comfortably bigger than the rise in the cost of living (which was 17 per cent during the same period). But some occupational pensioners have been very hard hit. Most large employers have voluntarily raised the pensions of those who have already retired, but plenty have not.

Wage-earners seem to have done better than most managers. According to figures supplied by Associated Industrial Consultants, a typical manager has had a rise of only 20 per cent over the past two years, so his real before-tax income has risen a paltry 3 per cent. Civil servants have actually had a marginal drop in real income, and so

Strikers do best

Chapple knows what pays

have nurses. The better-paid wage-earners tend to be more unionised and more militant than the low-paid, so the gap between them has widened in the past two years. Shopworkers, farm-workers and textile-workers have done worse than average.

In terms of wealth, the gainers have been those who have held real assets like houses or paintings, whose value has increased much faster than inflation. The losers have been those who have held money assets.

£5-plus men

In the motor industry wage deals are being struck in a hurry and great secrecy for around £5 a week. The unions in the past fortnight have been settling for that because they are afraid of being caught by a wage freeze if they drag the talks out any longer. The threat of a £2 freeze had a remarkable effect on, in particular, the shop stewards at British Leyland's Longbridge factory, one of the motor industry's worst trouble spots.

They had refused even to discuss the new pay system that the company was introducing plant by plant because it would have reduced shop floor power; the sweetener was a sharp increase in wages. Two days after Mr Heath's £2 offer, they were round the negotiating table. For the past 12 days they have been shut away with the management at the Chateau Impney hotel in Worcestershire, bargaining for all they are worth. The signs are that the deal is now settled except for a few dots and commas. The men are expected to move from their present piece rates on to a flat 40-hour week for £45, rising to £48 in two years. This is £5 on their present average earnings; but if they had not been argy-bargy over piece rates—to an extent that lost Longbridge 2m man-hours, 60,000 vehicles and 90,000 engines—their earnings would have averaged nearer £43. So perhaps the deal is not quite as bad as it looks. But Mr Chapple is likely to take note.

British Leyland is justifying the huge rises it has been giving all this year by saying that the industrial peace they and the new flat pay scales bring mean that the deals will more than pay for themselves in higher productivity. But Chrysler was the first company to try this system in Britain, on similar grounds. And what is Chrysler doing now? Why, introducing an incentive bonus at Ryton to make up for the lack

of the incentive that piece rates provided. In other parts of the company Chrysler's toolroom men have just won themselves another £3 a week, along with better holiday and sick pay, by the relatively new device of acquiring staff status. Toolroom men are an aristocratic group of specialists, and there are not many of them; but all this shows how unwise it is ever to assume that there might be an end to car workers' demands.

6%-plus prices

One man's wage increase is another man's price increase. But that does not mean that prices are affected only by wages: two other significant influences are Government action and the price of imports. Both have been benign for the past year. But the Government has been schizophrenic: while its short-term palliatives have been helping hold down prices its long-term policies are tending to push them up. The long-term policies on Vat, rent, food and so on, were not conceived in terms of an inflationary situation: they were intended to increase economic efficiency, albeit by altering the distribution of income in the process.

In the 13 months since July, 1971, when purchase tax was cut and the Confederation of British Industry pledged most of its members to price increases of less than 5 per cent, Government policy has operated, on balance, to keep down the prices, particularly of goods subject to purchase tax and products of nationalised industries, while continuing to exacerbate the inflation of food prices. The results are apparent in the table.

The problem about controlling food prices on the lines promised by retailers on Wednesday is that they all sell the same basic foods at wildly differing prices and the ceiling that allows one

Eating money

% increase July 1971-Aug 1972

All prices, including food*	6.4
Food*	8.1
Items liable to purchase tax	5.2
Nationalised industries	6.1

*excludes highly seasonal items.

man just to stay in business is an excessively high margin to another. That, after all, was why Mr Heath in an earlier government fought to get rid of resale price maintenance.

But in the next year or two the picture could be different. Import prices are bound to start hurting as sterling slides further and further from the old \$2.60 rate. Government policy is at present billed to be inflationary in terms of: food prices (the common agricultural policy takes over from import levies as the bete noire); rents, although the Housing Finance Act has been diluted; and indirect taxes if value-added tax is levied at 10 per cent. The outlook for the nationalised industries' prices is not clear; they will presumably have to be brought on to an economic footing sometime, so that subsidies keeping back the retail price index by nearly 1 per cent will be removed, but the present policy could be kept up for as long as the Government is prepared to go on forking out £500m a year, and even reinforced if larger subsidies are thought tolerable.

It is the prospect of an acceleration of prices from now on that has made the deceleration of prices in the past year so ineffective in restraining union demands. That deceleration was, anyway, always more pronounced on prices than on wages. Even with subsidies, nationalised industries' prices have practically kept up with the average.

One essential measure for the Government will be to set the Vat rate at 7½ per cent. This is not a step that will reduce inflation, but it is necessary simply to stop Vat adding to it. At 10 per cent, Vat will add about 1 per

CBI hasn't come out badly

cent to consumer prices, according to the National Institute of Economic and Social Research. This is not only because it will raise £100m in extra revenue, but because its impact will be more on consumer, and less on business, spending than purchase tax and selective employment tax; and because businesses are expected to pocket about 60 per cent of the Set that they are relieved of. A 7½ per cent Vat would cut out this 1 per cent extra on consumer prices.

Consumer spending is buoyant, having been rising by a 6 per cent annual rate for more than a year now. The latest figures, for the third quarter, confirm this. It has been a selective boom.

Pity poor dad

Living standards have improved sharply in the past two or three years despite inflation. The chart opposite shows the contrast between now and the second half of the 1960s when the consumer was being squeezed to free resources for exports and for the Wilson government's public spending. But a major factor in this spectacular improvement has been tax cuts. Between 1960 and 1970 the proportion of personal income taken in tax and social security contributions rose with rising incomes, from 14 per cent at the beginning of the decade to over 20 per cent by its end. This steady, progressive rise was arrested in 1970 and then dramatically reversed by Mr Barber in his 1972 budget. But unless tax rates are further reduced next year the ground gained will soon be lost.

Total personal income is currently running at £13,000m a quarter, with average tax and national insurance deductions at 18 per cent. But at the margin, the tax and insurance deductions on an extra £1 of income are about 35 per cent. At these rates a simple calculation shows that personal incomes have only to rise by as little as £1,530m, or 17½ per cent, for the average tax and insurance payments to return once more to 20 per cent without any change in tax rates or insurance contributions. But insurance contributions have already gone up to pay higher pensions. Thus, within little more than a year, Mr Barber's tax cuts will have been eroded by tax buoyancy, fiscal drag, call it what you like, but the simple fact is that as people's money incomes rise, they pay more taxes unless tax rates are cut.

The wage-earner, when putting in a pay claim, is not only interested in how much extra he will get in his pay packet, but also in how much it will buy. The impression that it is necessary to run fast just to stand still has some substance. Take a single man earning the average industrial wage over the past 10 years:

The hole in your pocket

% increase in	wages	take-home pay	what it bought
1961-64	+18.0	+15.4	+5.4
1964-67	+18.0	+13.7	+2.5
1967-70	+31.2	+25.0	+4.6
1970-71	+10.2	+11.0	+1.5
1971-72	+12.0*	+15.3	+7.3

*estimated

Comparing gross pay with net spending power gives a wage claim multiplier of sorts which suggests that to earn £1 extra in real purchasing power his gross pay would have had to go up by £3.33 in 1961-64; and by between £6.80 and £7.20 between 1964 and 1966. The poor old dad with two children did a great deal worse; a rough illustration suggests that in the latter half of the 1960s he might have had to earn £11 extra to improve his family's living standard by £1 a week.

Recently the tax cuts have begun to bite and, together with the relatively slower rise that has been taking place in prices, they have gone a long way to put the record right. Another £1.64 on wages now (or at almost any time in 1971-72) would increase real purchasing power by at least £1 for a single man. But it is no use telling that to the unions that have had the best part of a decade in which to learn the opposite, and who see prices now rising at 8 per cent a year or more and no immediate promise of further tax cuts to offset them. The multiplier must be rising again; it is anyone's guess by how much, and it is possible to see some circumstances in which it could be running for some people at close to 10. In these circumstances it is small wonder that those who put in 40 per cent wage

claims do not think they are acting unreasonably.

Virtue rewarded

One act of anti-inflationary virtue in the past year has won its own reward. Most members of the Confederation of British Industry turn out to have made a painless gesture by the past year's price freeze. The table shows the movement of unit labour costs, import costs and manufacturing prices in the 12 months since it began in July, 1971. Since labour costs for manufacturing industry are about twice as important as import costs, a figure for combined costs can be calculated and it shows that prices outstripped these combined costs while staying within the 5 per cent limit. So most of these companies have built up profit margins as well, though from a low level.

Industry's costs: 2nd quarter, 1972

100=2nd quarter, 1971	
Unit wage costs	104.6
Import costs	100.6
Imports and wages	103.3
Prices	104.9

This does not detract from the courage of the CBI members in making the pledge, since they could not know any of this in advance. Import costs have been made even more unpredictable than usual by the fluctuations of the sterling exchange rate. The other main factor restraining costs has been the growth of manufacturing productivity. Output per man rose by 7 per cent in the period, reflecting heavy sackings more than increased output itself (up less than 2 per cent). As was to be expected, price restraint without wage restraint led mainly to higher unemployment.

One of the Government's fears is that any further big rise in wages, and for some industries, even the Government's original £2 proposal, would lead to a further shake-out of labour and worse unemployment this winter.

Barber gave it back

How they froze in the past

Too much money

"There is no monetary policy which will simultaneously stimulate expansion and moderate inflation." In so concluding his Mansion House address the governor of the Bank of England, Sir Leslie O'Brien, might be supposed to have slapped the monetarists down. But they would argue that there is at least a neutral policy: one that scrapped short-term discretionary manipulation of the money markets in favour of simply keeping the growth in the money supply in line with that in money national income. That rule-of-thumb would mean 12 to 13 per cent a year on present trends, or closer to 10 per cent on Mr Heath's target of 5 per cent real growth with 5 per cent inflation. In practice, the money supply in Britain has been growing at over 20 per cent a year in 1971-72. One does not have to be a convinced Friedmanite to agree that this has added to Britain's troubles. Indeed, Sir Leslie said quite frankly that he was unhappy about it, pointing to the froth in the housing market as merely the most blatant symptom.

The implication of his remarks was that, belatedly, the growth in the money supply will now be curbed. This also means that interest rates will have to go up, however much the Bank tries to fudge the issue by renaming Bank rate. Although short-term interest rates did move up very sharply between end-May and end-July (base rates by 2 full points and other representative money market rates by 3½ points), since then base rates have stuck and, Treasury bills apart, most other money market rates have actually

cased by nearly a full point.

The necessity for another rise in interest rates might cause a major political row when and if a prices and incomes policy does come into effect: especially as a report from the Nationwide Building Society has just shown that its 11,000 new borrowers between last March and May were on average already spending 23 per cent of their incomes on mortgage repayments (ie, mortgage repayments are by far the largest single expense for a large part of the population). But if you make money cheaper than it ought to be you make goods dearer than they ought to be; this is a tautology which the TUC might unfortunately think is a paradox.

Cripps's ghost

In several ways the prices and incomes policy Mr Heath has been trying to achieve most strongly resembles the one Sir Stafford Cripps operated with great success from February, 1948. Using hangovers from the wartime controls, which still covered 50 per cent of retail spending, and on the back of above-average 4 per cent per

annum economic growth, Sir Stafford imposed what he saw as the fairness of austerity-for-all through a total freeze. With TUC support, it even survived the 1949 devaluation for a time. It finally collapsed at the 1950 Trades Union Congress.

There have been seven other attempts to achieve a balance between prices and incomes since then, six of them covering almost the entire 1960s. The weakest was the Macmillan policy of persuasion of 1956. This relied on pronouncements from on high by the three wise men of the Cohen council. The unions were unimpressed.

Another effective period of restraint came in 1958-60, following Mr Macleod's successful confrontation with the London busmen in the spring of 1958. Even though there was no formal policy, retail prices barely went up by more than a point during this time. It was also a period of rapid growth following three years in which output had been static. This experience clearly influenced the new Conservative government in 1959 to want to go for continuing economic growth and pay de-escalation. The table shows what happened then.

O'Brien on the brakes

He runs off to Rio with the profits and where does that leave you?

It doesn't happen often, but a lot of silly things can affect shares just when you want to sell.

That's why, if you're wise, you will have invested at least part of your portfolio in the Leicester Permanent.

Where it's safe as houses; earns 5½% interest - with income tax paid by the Society; and is readily available when you need it - no matter what the world's coming to.

Modern consumer habits call
for appropriate shops of all kinds.
Linde offers everything required.
But

Linde
means more
than just this*

Because Linde not only operates cold storages but handles all the many aspects of
air-conditioning and refrigeration engineering.

Linde designs and constructs chemical engineering plants, supplies
industrial gases and manufactures reciprocating and turbine compressors.

Linde manufactures fork-lift trucks, produces hydraulic systems and supplies various kinds of
machine-tools. In addition, Linde offers a wide choice of household appliances.

According to one estimate, Merrill Lynch handles 10% of the total Euro-security after market. In 1971 it handled more than one billion dollars worth of bonds; for the 8-month period ending August, 1972 the figure has exceeded the 1971 volume of one billion. Merrill Lynch's traders and their back-up staff not only make a market

in these issues, but act as brokers in hundreds more. And because this is Merrill Lynch, they are part of a system which distributes both bonds and information on a scale unequalled anywhere.

Any international investor can gain ready access to "the Merrill Lynch

market". Just call any of our 29 Offices in 18 countries listed below. Our high speed communications system puts them in direct contact with our Euro security traders. They'll get you a firm quote in a matter of minutes. And execute your order while you wait. It's just another way Merrill Lynch serves international investors.

BUSINESS

After the summit

Let's eat cake and have it too

There was an undercurrent of intrigue at the Paris summit about which jobs should be given to which of the 13 commissioners who will start work in Brussels on January 2nd. France has since nominated its two commission members. M. Raymond Barre, vice-president in charge of economic and monetary affairs, is due to leave. But France's junior commissioner, M. Jean-François Deniau, had hoped to stay on, be promoted, and so become president of the commission. This job is scheduled to go to a Frenchman for 1973 and 1974.

Paris, however, has decided that the former minister, M. François-Xavier Ortoli, is to fill the top job ; and M. Pompidou had some difficulty in persuading M. Deniau to carry on. It would have been inconvenient if M. Deniau had left. As probably the liveliest wire in the whole commission, he was put in charge of the negotiations with Britain and other members to enlarge the EEC. His job now is to handle relations with associate members, including the African territories. His brother, incidentally, is minister responsible for the overseas territories and dependencies in the French government. M. Deniau delayed the announcement of the French commissioners by almost a week.

When M. Ortoli takes over the presi-

dency France will have to give up one of the two commission jobs it has monopolised since the EEC began. It wants to hold on to M. Barre's old economic affairs portfolio: M. Ortoli, supported by some figures in the French government, therefore lobbied Mr Heath last week to back the idea that he should oversee that economic affairs portfolio as well as being president. In exchange, France would back Mr George Thomson for the job of running regional policy. This would mean that the British would have two important commission jobs; the other one being the external relations portfolio, which is virtually certain to go to Britain's senior member, Sir Christopher Soames, who will succeed M. Ortoli as president in 1975.

Mr Heath seems to have fought shy of any such deal, and President Pompidou himself kept out of it. Other member countries would have been furious; especially Germany which obviously has the best claim to take over the economic portfolio, but cannot appoint its commissioners until after its own elections.

The external affairs portfolio includes two departments, external relations and external trade, which may now be welded into one. But Sir Christopher, or whoever is in charge,

Who does what now

Sicco Mansholt (Netherlands)	President
Raymond Barre (France)	Vice-president ; economics and finance
Wilhelm Haferkamp (Germany)	Vice-president ; harmonisation of laws ; energy
Carlo Scarascia Mugnozza (Italy)	Vice-president ; agriculture
Albert Borschette (Luxemburg)	Competition ; regions
Albert Coppé (Belgium)	Social ; transport
Ralf Dahrendorf (Germany)	External relations ; external trade
Jean-François Deniau (France)	Aid
Altiero Spinelli (Italy)	Industry and technology

will have to work closely with M. Deniau or whoever has the portfolio for relations with the associates. The next two years will see the opening of the crucial Gatt trade talks, where the community's policy of preferential trade deals with Mediterranean countries and its African associates will come under strong attack from America and the Latin Americans. There will also be the renewal of the Yaoundé convention itself, the renegotiation of the Commonwealth sugar agreement and the question of relations with British Commonwealth countries in Africa and Asia.

Now that Britain has successfully elevated regional policy to high priority in the community's action programme, Mr Thomson will not be the only commissioner to want it. Ireland's chosen commissioner (its present foreign

EEC's new president Ortolí, disappointed Deniau, Britain's hopeful Chris and George, and Ireland's Hillery,

Changes for Luxemburg's Borschette, Italy's Spinelli, Germany's Haferkamp and Dahrendorf, and, perhaps, Italy's Scarascia Mugnozza

minister, Dr Patrick Hillery) does too. So do the Italians. At present, the Luxemburg commissioner, M. Albert Borschette, runs two departments. One has responsibility for the community's nearly non-existent regional policy. The other is the competition department, covering monopolies and restrictive practices. This also vets government aids to industry and is run by the very vigorous German director-general, Herr Willy Schlieder. One solution would be to split M. Borschette's responsibilities into two. Mr Thomson could take over regional policy and government aids. M. Borschette, who is staying on, would keep the anti-trust job and the expanding field (specifically mentioned in the communiqué) of consumer protection. If, however, a German commissioner ended up in charge of competition Herr Schlieder himself would have to be shifted, because of the rule that each director-general must be of different nationality from the commissioner he reports to. With Britain coming in there will anyway be some able and not so able director-generals who may now find themselves pensioned off.

What happens now to social policy, with its present Belgian commissioner leaving, is anyone's guess. A second best bet for Mr Thomson himself, maybe? Neither of the two British members is likely to bid for industrial and scientific affairs, or energy policy, even though Britain is pressing for action in both sectors. The Italian commissioner for industry and science (including protection of the environment), Signor Altiero Spinelli, may stay on. But he is notoriously uninterested in industrial matters and might prefer to move over to social affairs, for which he is better suited.

The department for industrial affairs works closely with the oddly named internamp market department. This is responsible for harmonisation of national legislation, ranging from company law to barriers to trade inside the EEC caused by varying govern-

ment regulations. This department is at present run by the German trade union leader, Herr Wilhelm Haferkamp, who has used his position to push the idea of worker participation. If Herr Willy Brandt wins the German elections Herr Haferkamp might well stay, but he will presumably have to give up one of his departments. The other German member, Herr Ralf Dahrendorf, might also stay if Herr Brandt survives, as he is a member of the Free Democrats, the junior partner in Herr Brandt's coalition. But he will probably have to leave the external affairs job to make way for Sir Christopher Soames.

The last major portfolio is agriculture. This was Dr Sicco Mansholt's personal domain for 14 years, until he became president last spring. Since then it has been run by the capable but not particularly distinguished Italian vice-president, Signor Scarascia Mugnozza. Denmark, backed by the French, wants it, since a farm-minded Dane might be more likely to preserve Dr Mansholt's legacy from sabotage by the British. Whether the Italians will give way, however, is another matter. Signor Scarascia Mugnozza looks like staying on. And Italy is getting increasingly fed up with being a net contributor to the farm fund, despite having severe agricultural problems of its own.

Tough trader Ted

The summit communiqué reflected the approach the community will adopt to next year's trade talks with the Americans and others. Oddly it was the British who were most keen to take the tough line, and had to be calmed down by their partners. At first Mr Heath seemed to be demanding a sector by sector approach. This would have been disastrous. No American Administration could then have got trade expansion legislation through

Congress. If industries are taken one by one, lobbyists and special pleaders in Washington get fullest rein.

But what Mr Heath really wanted was an across-the-board approach—covering tariffs and non-tariff barriers together—although with special attention paid to particular items about which Britain feels shirty. British civil servants, with memories going back to the Kennedy Round, are determined to assault some of the formidably high tariffs that America still maintains on some goods.

All that came out in the communiqué was "une conception d'ensemble." After everyone had gone home on Saturday night this was hopefully translated into "a global approach covering all aspects affecting trade," which seemed to go a little further. Germany, advocate of the soft line, failed to get the special committee it wanted to liaise with the Americans. But Mr Heath was talked out of demanding a semi-deadline for the start of the Gatt talks by July next year. This would have made life difficult for an American Administration trying to wheedle a trade mandate through Congress.

Mr Heath did get away with writing into the communiqué a demand to everyone to get the trade talks wrapped up by 1975. This, too, is intended to help an American president, and it is influenced by memories of the Kennedy Round, when everyone sat on their hands for five years until very near the deadline set by President Kennedy's trade expansion act before agreeing to anything. Unfortunately on this point Europe is not in tune with American thinking. Washington now favours a trade negotiation with deadlines set within a long overall negotiating period. This is the system that has been used, with success, in the strategic arms limitation talks with Russia.

On farm policy the Nine gave nothing away to their trading partners. The EEC's farm policy is no longer the Americans' main cause of bitterness.

MOËT-HENNESSY

The annual general shareholders' meeting, held in Paris on September 19, 1972 and chaired by Comte Robert-Jean de VOGÜÉ, approved the accounts and the balance sheet for the financial year which came to a close on June 30, 1972.

A net dividend of Frs. 6.60 per share was fixed for the financial year in question, to which is added a tax credit of Frs. 3.30, giving an aggregate dividend of Frs. 9.90. The dividend was paid out as of September 30, 1972, in return for coupon number 17. It is recalled that this dividend equal to that paid last financial year applies to a share capital increased by 20% due to the distribution of free shares.

The meeting also renewed, for a period of six years, Comte Robert-Jean de VOGÜÉ's service contract as well as that of Mr. Alain CHEVALIER, for which the co-option had been previously ratified.

Following the Annual General Meeting on September 19, 1972, the Directors of the Company held a Board Meeting.

Comte Robert-Jean de VOGÜÉ, the Chairman, informed the Board of his decision not to solicit his re-election to that office on account of his age.

Having reluctantly accepted his decision, the Board thanked Comte Robert-Jean de VOGÜÉ for all he had accomplished as head of the Group, to the formation of which he had so largely contributed, and they unanimously elected him Honorary Chairman. He retains his seat on the Board.

At the unanimous wish of his colleagues, Comte de VOGÜÉ invited Mr. Kilian HENNESSY to become the new Chairman of MOËT-HENNESSY, which appointment he accepted.

At the proposal of Mr. Kilian HENNESSY, Comte Frédéric de BRIAILLES was re-elected as the Vice-Chairman. He and Mr. Alain CHEVALIER were also reappointed as General Managers of the Company.

Comte Robert-Jean de VOGÜÉ remains Chairman of CHAMPAGNE MOËT & CHANDON.

Both now realise that the best way to lessen its protectionist character is to peg farm prices and gradually introduce income support payments. This also happens to be the best way for Europe to help its poorer farmers without adding more fuel to inflation.

Foggy in the Med

The EEC's controversial Mediterranean policy cropped up in the summit communiqué, but the Nine carefully fudged the aspect of it which most annoys the Americans. France and others have been pushing in Brussels for a policy that would convert the network of preferential trade agreements with the Mediterranean countries into a comprehensive free trade area. The Americans dislike the "reverse preferences" by which the EEC's exports already get preferential tariff treatment in these countries (even though many of them have no prospect of ever joining the EEC), and have protested that under some sort of free trade system EEC goods would presumably enjoy even greater advantages. American hostility extends to the preferences to EEC goods given by French ex-colonial countries in Africa, who will shortly be joined in the club by Britain's ex-colonies in Africa and the Caribbean. Unsurprisingly, therefore, the reference to a Mediterranean policy in the Nine's communiqué does not say whether it is to include reverse preferences or not.

Clear to the east

By contrast, the community's east European policy has been brought more sharply into focus. Hitherto France has preferred to play the lone ranger and cultivate the east Europeans on its own. But it has now been agreed that the EEC will operate a common commercial policy towards east Europe from the start of 1973, as planned. This will cover things like tariffs, but will exclude the sort of industrial co-operation deals that France has just made with Poland and that figure in most east-west trade in Europe.

France made a point of backing the principle of a joint negotiating approach by the EEC to the European security conference, even though it has always opposed "block to block" negotiations in the past. When this all-European jamboree does finally

take place next year, it will plainly be concerned with trade, commerce and such intensely political economic matters as recognition by Russia and the other east Europeans of the EEC itself. Although the Rome treaty says the commission is supposed to speak for the EEC on trade matters, the east Europeans will probably not allow this at the security conference. But, as happened in the drafting committee at the summit itself, the commission will probably now be allowed the decisive role of chairing meetings whenever the Nine are finding it hard to work out a common line for the security conference.

Gone slumming

Mr Heath was well satisfied with the agreement reached on regional policy, and obviously regarded it as the most successful British achievement at the summit. The Nine agreed to set up a regional development fund before the end of next year, to be financed from the community budget and also acknowledged that Britain's industrial slums have as much claim for help as the rural slums of the present Six.

But there was no talk about either the size of the fund or how it will be operated. On Monday, Mr Heath came under fire from Labour MPs when he refused to answer questions about the fund's size. Mr Wilson wanted to know if Britain would get as much back from the regional fund as it would contribute to the agricultural fund. Initially, it obviously will not. But regional problems are likely to outlive agricultural ones. The sole indication of the size of the fund is the \$50m budget suggested by the commission last May. But this was designed only for the Six not the Nine.

The other big argument to be resolved is how the money will be spent. The French and the Germans have favoured using it just to reimburse national governments for part of their own regional spending. The British half-prefer this too. It keeps control over spending in governments' own hands; money given directly by community institutions like the coal and steel community means bureaucracy and delay. But it does mean rather more money is spent by rich countries on behalf of poor, so that there is a real transfer of resources within the community. If the regional fund is to do this, it will have to be able to take the initiative in channelling funds to

Where Britain could do with the cash

areas of greatest need, rather than just being an agency to reimburse part of what governments choose to spend, and with the contributions to each matching what is put in.

No further restrictions of investment aids in the so-called central areas are likely until the commission has produced its report. Eventually there will be a ceiling for aids to the peripheral areas too, although at levels high enough not to interfere with any government's policy. The commission may, however, begin asking embarrassing questions about the (British) Industry Act's selective aid provisions sooner than London expects.

Emu plus sense

France got a bit more at the summit on economic and monetary union than many expected. Before the summit began there seemed little chance that Germany, Holland, Britain and the rest would ever put any money into the "European monetary co-operation fund." But France managed to get agreement in Paris on two reports to be made next year: one by the end of September to update the arrangements on short-term support for out-of-line community currencies; another, possibly more potent, by the end of December, 1973, "on the conditions for progressive pooling of reserves."

This means that France's efforts may indeed give rise by 1974 to a fledgling federal reserve bank whose first jobs as from April, 1973 (when it will be born "by solemn instrument"), will be:

(1) to concert central bank action to keep the Nine's currencies within their narrower bands;

- (2) to run the short-term support deals made between central banks;
- (3) more important to balance out central bank debts and credits inside Europe at the end of each month;
- (4) to take over the so-far-never-used \$1.4 billion of short-term credit which the Six agreed to put together two years ago.

All these arrangements are more palatable than they once would have been. No more talk now of irrevocably fixed exchange rates. Indeed, the Paris communiqué reasserts that community parities within or without the snake should be fixed "but adjustable," and that only this and "ending disparities between regions" would provide the "essential basis" for future union. During the last preparatory sessions in Brussels before the summit, France's foreign ministry officials tried to strike the words "but adjustable" out and it has been comforting to see M. Pompidou's own men and M. Giscard d'Estaing combining to tell the Quai d'Orsay to stop being silly. This Pompidou-Giscard d'Estaing alliance on monetary matters explains why there was not a murmur from the French in Paris about returning the pound to a new parity.

Next, the fund's function of keeping a ledger, balancing out wherever possible each month the credits and debts incurred in keeping Europe's currencies within the snake, will soften the rigour of the present bilateral repayment arrangements by which each country must repay its Ecu debts in packages of assets in proportion to the various assets in its reserves.

This commonsense spilled over into admitting the need for regional transfers and aligned economic policies, though to have called for "precise measures" against inflation from the finance ministers meeting in Luxembourg next Monday and Tuesday was probably rash. Finally, the Nine made nice noises about America's attempt to start monetary reform, with President Pompidou taking a notably soft line on gold.

Sterling on the scree

If any of Britain's European partners had wrongly supposed Mr Heath might have been stampeded into prematurely refixing the pound at \$2.40 during the summit conference, they should now be thanking their lucky stars that he was not. At its lowest ever close of \$2.3445 on

Thursday, the pound had shed over 6 cents in just over a week. It was 10 per cent down on its old Smithsonian parity. And it had plunged outside the limits of fluctuations allowable under the Smithsonian rules around a \$2.40 central rate, and so would have left the EEC snake behind within a week of rejoining it.

Ostensibly, the fresh trouble for the pound this week came because Germany's leading economic research institutes—which prepare a sort of economic survey for the German

government at this time of the year, in preparation for Germany's budget—had proffered the opinion that sterling would still be overvalued if repegged at \$2.40. But the markets also had their eye on the tripartite negotiations in Downing Street. If Britain does not quickly achieve an incomes policy, it is not only foreigners who will talk of \$2.20 or \$2.25 as a realistic rate, but some inner circles in Whitehall, too.

The real surprise, perhaps, was that the Bank of England this week wisely let the rate go, at most stepping in

Countdown to a rising yen?

The untidy package to "defend the yen" now being elaborated by Mr Tanaka's ministers is Tokyo's third in less than a year and a half. Because it is being released in dribbles, it sometimes seems like the third in a week and a half but that is unfair counting.

Mr Sato's ill-starred eight-point programme in the summer of 1971 ended with the Smithsonian refixing. Then came the seven-point programme of May which was swamped by the hard statistics: by September, Japan's trade surplus had soared to an annual rate of \$8 billion-\$10 billion and the country's true reserves had in reality (though not in the officially published figures) broken through above the \$20 billion mark which most Japanese had previously agreed would be the psychological point of no return in the battle to avoid a second revaluation of the yen. Now we have another five-point programme. Eight, seven, five... zero? Most observers were writing off last Friday's package as a failure even before the government had time to put flesh on the bare bones. What details were available by mid-week gave no grounds for revising the judgment.

Broadly, the five points are: (1) to reduce tariff, quota and certain financial and procedural barriers to higher imports (nearly three-quarters of Japan's tariffs are to come down 20 per cent, to bring the average rate of duty on manufactures down closer to the levels ruling in most other advanced economies; most quotas are to go up by 30 per cent); (2) to limit the expansion of Japanese exports, primarily through administrative measures, although certain remaining tax perks are also to go; (3) to promote greater outflows of Japanese capital, particularly outlays on foreign aid; (4) to liberalise the rules governing foreign direct investment in Japan (especially where such investment is deemed important in facilitating import penetration), but, at the same time, to close the loopholes in the

rules that have allowed foreign speculators to get into yen (foreigners will no longer be allowed to increase their total investment in Japanese stocks and shares, now amounting to about \$4.7 billion); and (5) to underwrite faster growth at home, with the accent on social welfare, through a supplementary budget.

This is all very well as far as it goes, but it is painfully obvious that it does not go nearly far enough. It is not merely that many of these measures are hedged around with qualifications and ambiguities, will require legislation, and then will take time to bite. The tariff cuts are expected, at best, to add just \$340m to the import bill in the year to March, 1974. The fatal flaw is that nothing convincing has been done to curb Japan's steamroller export drive.

Having rejected both a straightforward appreciation of the yen and the halfway house of an export surtax, Mr Tanaka has decided to activate this Friday the old Foreign Trade Control Ordinance (which has been on the books ever since 1949), to impose selective restrictions on specific exports. The administration of this will be in the soft-gloved hands of the ministry of international trade and industry. Miti officials have already hinted that they will tend to use their powers only in those cases where exports have been rising at annual rates of over 20 per cent.

So far only ball bearings, tape recorders and, possibly, black and white television sets have been singled out as candidates for immediate restriction. By early next month restrictions may also be put on cars and steel—exports of which rose by more than 80 per cent in the first half of this financial year (April-September) and now account for over a fifth of Japan's total sales abroad. But they may not be very tough restrictions. Small wonder the yen has remained pinned to its ceiling.

FRANCE GARANTIE

Object:

France Garantie manages a portfolio which includes bonds approved by the investment regulations for institutional investors. For this reason the Assurance Section at the Ministry of Economic and Financial Affairs ranks the France Garantie share on a par with these bonds. It appeals especially to those companies engaged in assurance or reinsurance business in France, and who wish to be relieved of directly managing a portfolio of French bonds. In this connection bonds approved by the regulations may be exchanged for France Garantie shares without charge.

Tax Aspect:

It is now definite, following a recent decision, that the part of the France Garantie dividend which represents income from bonds shall enjoy the same tax advantage as French bonds.

occasionally to smooth the slide. While the pressure on the pound up to Thursday morning was not unbearably heavy, certainly by the standards of June, selling was widespread and business very much one-way. The Bank did not try to make a market. Indeed, at one point a giddy rumour was circulating in Switzerland that the Bank was actually selling sterling. Strategically, this decision to stand back made the best of sense. It would be madness not to take the leeway provided by clean floating to approach Europe with a competitive rate. Tactically, it took some guts—and not only because of the danger of rocking the Downing Street boat.

The international repercussions were already being felt. Late on Tuesday South Africa announced that it was cutting the rand loose from sterling and repegging it at R29.75 per fine ounce of gold, roughly halfway between the operative dollar rate struck after the Smithsonian agreement and the rate to which the rand had unwillingly dropped after sterling was set afloat. From Britain's point of view this move can only be welcomed; in effect, it amounts to an upvaluation of the rand against the pound of 4 per cent, and South Africa is one of our largest export markets.

One embarrassment is that the pound has now fallen well under the \$2.38 line below which Britain is committed by the Basle guarantees to compensate overseas sterling area countries for losses on 90 per cent of their sterling reserves. At the end of June balances covered by the guarantees were put at £2.9 billion, though Malaysia's decision unilaterally to withdraw from the arrangement when sterling floated may have trimmed that total by as much as £100m. It is not yet clear whether the Bank of England will have to pay out compensation, point by point, on the whole of these balances or simply convert eligible pounds at \$2.38 as they are sold to it. Either way the sterling cost of making good the Basle guarantees will be cheap compared with the foreign exchange (and straight economic) cost that would be entailed by any attempt to support an exchange rate judged unrealistic by the market.

Up to Thursday anyway, sterling's slide had not badly rocked other major currencies. The French franc and the lira felt ripples, but the dollar was buoyed by the Vietnam news. Upward pressure on the yen lessened. On both Friday and Saturday of last week the Bank of Japan had to pick up more

than \$100m in the Tokyo exchange market as rumours that the foreign minister, Mr Masayoshi Ohira, had been severely ticked off by the Americans for Japan's failure to curb its huge payments surplus coincided with the widespread judgment that Mr Tanaka's latest "yen defence" programme justified the complaint. However, by this week, as still tighter foreign exchange controls began to bite, the Bank of Japan's intake of dollars dropped back at first, although by Thursday pressure was increasing again. The betting is still that a modest upvaluation (5 or 10 per cent?) of the yen is on the way. This would be of only modest aid to America's balance of payments. A yen upvaluation of 7 per cent would just offset the impact on the dollar of sterling's post-Smithsonian plunge.

UnUnctaded

At the Unctad conference in Santiago Dr Sicco Mansholt promised that relations between the community and the less-developed countries would head the summit agenda. In fact they did nothing of kind.

Given that the community is now supposed to be feeling its way towards a comprehensive policy for all less-developed countries, France's main aim was negative: it wanted to ensure that the 18 French-speaking Yaoundé associates of the EEC and the Mediterranean countries linked to the EEC by preferential trade treaties all maintained their present privileged status. Britain did not challenge this selfish view of the EEC's role towards the less-developed countries. What it did do was to make sure that the final communiqué referred not just to the Yaoundé convention as such, but to the policy of association as laid down in Britain's treaty of accession to the EEC. This is much wider. It covers the Yaoundé 18 and also the various Com-

monwealth states of Africa and the West Indies who are eligible for association, even if they choose to keep out of the Yaoundé grouping. British spokesmen also emphasised that India, Pakistan, Bangladesh and Sri Lanka could hardly be ignored.

The commission pushed hard for a commitment to definite objectives on both aid and trade policy for the less-developed countries. But the Nine did not want to know. It was, indeed, the virtuous British who blocked any reference to the Unctad target of 0.7 per cent of gnp for official development assistance although we would have swallowed a commitment to increase imports of manufactured foods.

Tell us more

The section of the communiqué on industrial, scientific and technological policy contains a predictable mixture of aims and ideals, together with a deadline, January, 1974, by which time a programme should have been drawn up. What remains to be seen is where the emphasis will lie in the work the commission puts in hand. Britain left little doubt what it thinks ought to come first. In order "to seek to establish a single industrial base for the community as a whole," London wants harmonisation of company law to help the movement of investment funds, and the creation of Europe-scale enterprises.

This has proved difficult enough in the past. The commission has concentrated on trying to harmonise bits and pieces of company law here and there, without really getting to grips with the grisly part of the problem, which is that the amount of financial information required of companies in many EEC countries is pitifully inadequate for investors to make intelligent investment decisions. This will be more glaring after the admission of Britain, with its high standards of financial disclosure, its highly developed capital

Key indicators: world commodity prices

Stirred by sterling

Prices of most commodities grew firmer on the London exchanges this week as a direct result of sterling's weakness. Commodity buying is the easiest legal hedge against a currency's collapse. Silver and copper, the most common hedge commodities, both came back with profit-taking, although sentiment in copper, bullish after a drop in world stocks, is growing.

market, and a company law that reflects these differences by (eg) the greater protection it gives to shareholders.

So the need now is to map out the means to create a system that Britain can be fitted into because no one here is likely to accept a reduction in the strictness of the regulations to which we have become accustomed. This means improved standards of disclosure and auditing in many continental countries. Whose principles of accounting, cherished British or unfamiliar continental ones, are used is of secondary importance.

Britain seems to have gone much slower on industrial policy. Everybody wants non-tariff barriers to trade like food, pollution and health rules harmonised. Everybody in theory wants to see an end to the favoured home contractor system of government and local authority contracts. The Danes and the Germans are most prepared to put these good intentions into practice, with France and Britain probably the least so. There was muttering about the need to ensure that benefits are reciprocal, meaning that the Germans do not wipe the floor with everybody else. No doubt, too, hints were dropped about the awkwardness to Britain, with its present high level of unemployment, if contracts for generating plant and other equipment for utilities were suddenly to start going to German or French firms. Similarly, both the British and the French are doubtful about any sort of high-flying technology policy for the community in the abstract; it obviously makes more sense to talk about particular industries, especially problem ones. The old, Wilsonian technological community is not heard of so much now that hard business is being discussed.

They want soul

While the British were pressing for a regional policy as their price for

agreeing to economic union, the Germans concentrated on social policy. Herr Willy Brandt submitted a memorandum on the subject, which read like domestic election material.

It looked as if it had been written by the German trade unions since it included all their ideas. It suggested that the EEC create a policy for employment and vocational training (ie, that the existing social fund should be given more money); should push for more action on industrial safety; that workers' participation should be introduced throughout the EEC and, more surprisingly, that the EEC should welcome wage deals at the European level.

Everyone agreed that it was time the EEC moved its emphasis away from dull economics to social policy, with wider public appeal—particularly given the popular suspicion of the EEC in Britain and Norway. The French were as keen as the Germans to sound progressive; M. Messmer weighed in with a high-sounding statement all about relieving the tedium of production line jobs.

Most of the German points were accepted, although it is most unlikely that workers' participation will ever be made compulsory throughout Europe. Only the Dutch share the German enthusiasm for it. All the non-communist unions in the existing Six are in favour of participation, but Britain's TUC and the French and Italian communists are still hostile, which is enough to block it. However, the Germans are insistent that the planned European Company Statute should include some provision for participation. Conceivably, the rest of the EEC will agree to this provided it is not extended to all public companies.

The Germans also argued that the commission should start trying to harmonise aims and structures of social security and social policies. They want all countries to have similar provisions for sickness, accidents, pensions, etc,

even if the levels vary. But no agreement was reached on this or another German idea to give wider powers to the Standing Committee on Employment. This committee was set up last year, and has proved a great success. It is the only institution where unions, employers and ministers meet face to face. It has quickly developed into a much more useful body than the older Economic and Social Council, which key people no longer bother to attend.

Power pessimists

Even energy policy, one of the great non-events of the common market so far, popped up in the communiqué. This again was in deference to Mr Heath, who is admitted by British civil servants to have a bee in his bonnet about the matter. His visit to Japan, frighteningly dependent on foreign oil, has turned Mr Heath into an energy shortage man; as much as 91 per cent of western Europe's oil came from Africa and the Middle East last year, and most of the rest from Russia and eastern Europe. With Germany, Britain has the largest energy consumption per head in the common market.

Once the North Sea is in production, Britain will soon be much more happily placed than its partners. But this apparently only persuades Mr Heath that Britain has something to offer to a common policy and that it therefore ought to be worked out soon. Even with the North Sea, a recent commission forecast reckoned that 88 per cent of Europe's oil will still be coming from the Middle East and Africa in 1980, a surprisingly pessimistic figure if Britain's and Norway's resources are taken into account but one which reflects the fear that the United States might eventually come into the world oil market for anything up to half its oil needs during the next 10 years—something it might not necessarily do either.

You could say it all went off rather well, actually

BBA is all for a clean, quiet life

Suddenly everyone is very worried about pollution to our environment. And quite rightly so. But BBA has been concerned in getting rid of noise and dirt for many years. The Group makes glass fibre which is used, amongst many other things, for sound insulation and air filtration.

Versil Limited, a BBA subsidiary, makes glass fibre for car silencers and for air filters. The Company supplies to many leading manufacturers of these products in Britain and abroad.

Regina Glass Fibre Limited, another BBA subsidiary, specializes in glass fibre tissues which have an enormous number of applications throughout industry. To give just one big example, Regina tissues were used to insulate buried gas pipeline against corrosion in the vast £600m IGAT project recently completed in Iran.

BBA is big business in many languages. The Group has subsidiary companies all over the world with total sales which have tripled over the

past nine years and are now running at more than £36m a year.

BBA's activities are so diversified that it is well protected against big fluctuations in market demands. BBA products include brake and clutch liners, non-friction reinforced plastic bearings and bushes, conveyor and drive belts, mechanical handling equipment and asbestos fibre for flame-resistant applications.

BBA companies are well known but the Group name may be less familiar. So we have produced this advertisement to help put that right.

Needed by every industry

Is it possible for the TUC to reach an agreement and keep the support of its members?

Is the TUC's bonus plan workable and acceptable?

Will the Government consider offering the TUC any concessions on the Industrial Relations and Housing Finance Acts?

Will the TUC insist on statutory price controls?

Etcetera.

The more you think about October, the more you need The Times.

BUSINESS

Investment

Over to Downing Street to stop inflation taking the hedge out of equities

There has been a deathly hush in the market since Chequers I led to Chequers II and Downing Street I. Through it all the market has been fundamentally sceptical of the willingness and, indeed, ability of the TUC to enforce any contract. While waiting, trading has been almost non-existent, and the market has been moving hardly at all. On Thursday it closed at 479.0, 0.5 up on the day but 5.9 down on a week before.

The ravages of inflation ravage the stock market too. The notion that equities are a hedge against inflation is only true over the long term if the time-scale is chosen carefully. In the chart below we have taken the Financial Times-Actuaries all-share index and adjusted it for changes in retail prices. The 100 line measures the position at which the investor has neither lost nor gained in real terms from holding the 650-odd leading equities that make up that index, starting from when the index was concocted in April, 1962. For five years until 1967 the investor would have lost out slightly. But then, in the next year

and a bit, he would have become 40% richer in real terms (before capital gains tax). Only at the height of the current bull market would he again have reached that peak in real terms, even though the unadjusted index went to 228 in May, 1972, compared with 181 in January, 1969. Over the 10 years as a whole, inflation has doubled the index in money terms, and put it up 26% in real terms. Clearly this line of reasoning can be attacked: for the artificial starting point in 1962, and for the notion that investors all do as badly as the index. It is possible for a lot of people to have made more money than the index—the index measures average prices not average portfolio performance—but unlikely. In the end, real growth in equity prices has been something short of the real growth of the economy over the period, which perhaps reflects the declining share of company profits in gnp.

Over the relatively short period, money supply and monetary things influence the direction of the market, but over the longer period the cor-

relation is with company profits. The many factors that have created an inflationary climate in Britain also have a bearing on the ability of companies to carry on making adequate profits. Unless the rules of the economic game are rewritten to allow companies to make real profits, investors had better give up the notion of the equity as a hedge against inflation.

Wall Street

Utility rally

New York

Vietnam peace prospects were not the only electrifying element in Wall Street this week. In spite of President Thieu's disavowal of the peace plan, the market held firm in the apparent belief that a ceasefire will not be long in coming. The Dow Jones industrial average closed on Wednesday at 951.38, up almost 20 points from the opening last Friday when the new peace rally took shape.

Electric utility stocks, after languishing for years, have sparked an especial revival of their own. They began to attract attention when markets were weaker, as the bank trust departments and other institutional investors felt that they had better focus on quality growth issues with highly predictable earnings. Utilities with steady earnings and price-earnings ratios of only 10 to 11 (down from their peak of 20-22

in the early 1960s) appealed to the safety-minded institutions as stocks with minimum downside risk.

They also began to attract because, at depressed prices, they were already yielding on the average about 5-5½%, and were registering earnings growth in the area of 6-7%, producing a combined return in the 11-12% range. Economics have been breaking right lately for the electric utilities. They are voracious users of capital funds to finance additional power plants and transmission grids, as well as frequent applicants for rate increases to keep up with rising operating costs. Longer-term interest rates have stabilised recently at around 7½%; and conceivably will continue to hold steady, largely because of the diminished liquidity needs of industrial corporations.

There has recently been a more sympathetic attitude to the utilities' rate requests by rate-making authorities in more and more states. The sterner states—with utilities to avoid—include Michigan, Missouri and New Jersey. But analysts expect smoother sailing for utilities with relatively few deteriorating cities and more freshly expanding suburban industrial areas in their territories. A good example of a utility company in just such a situation is Florida Power and Light, which on Wednesday closed on the New York stock exchange at \$39½, up \$1½ for the day and \$3½ for the week, equal to a p/e of 13 on each occasion. Houston Lighting, which is the same sort of stock, recorded a \$½ increase on Wed-

	Share price	p/e
Virginia Electric and Power	19½	10
Florida Power and Light	39½	13
Middle South Utility	23½	13
Southern California Edison	27½	11
Southern Co	19½	11
Houston Lighting and Power	51½	16

nesday to \$51½, a p/e of 16. However, all utilities are at the mercy of money costs and of regulatory whim. Signs of a reversal in either respect could switch the boom in their shares off very suddenly. They no longer have that minimum downside risk.

Insider trading

Naming names

The takeover panel is to disclose the names of the sinners who misuse insider knowledge to buy and sell shares during the course of takeover bids. It will also disclose the names of those who refuse to help the panel discover who the real sinners are. The Stock Exchange Council will presumably have to use the same weapon of public disclosure against those who abuse the privilege of insider knowledge in non-bid situations.

Lord Shawcross, chairman of the panel, in making the announcement, said that the creation of a strong public opinion hostile to abuses of insider trading is the best way of stopping it. But he is also the chairman of Justice, the society that recently published a report which recommended that insider dealing should be treated as being illegal as well as immoral. At present it is not a criminal offence, and ordinary shareholders would be hard put to find legal grounds for getting compensation out of their better-informed colleagues who unfairly used that better information.

However, public disclosure and the use of the law are complementary rather than alternatives, and this first step is to be welcomed. There is some worry over whether the publication of names, however neutrally done, would constitute grounds for a defamation or libel case by those named. This is a risk the authorities are prepared to run, in the interests of clearing up what they think is a small amount of such wrongful trading.

No one, obviously, knows how much of it there is. The chances of detecting it will be higher when (if ever) the stock exchange computer gets up steam. On the New York stock exchange all trades are fed into the computer by house reporters stationed at each trading post. These go out on the ticker, but any significant price movement is automatically signalled to officials who can immediately investigate the reasons. Three or four cases a week usually require further probing, and if there is a prima facie case the evidence is handed

over to the Securities and Exchange Commission.

In London the quotations department monitors price movements but it, or the council members on the floor of the house, are sometimes contacted by traders who smell a rat. The threat of disclosure is now likely to heighten their sense of smell.

Birmingham Small Arms

The show will go on—but how?

If Birmingham Small Arms is to carry on in business, and it is sure it will, it needs another £5½m of capital: £1½m for retooling and developing a Wankel-engined bike, and £4m to cut the overdraft from £6.3m to about £2m. It has been having discussions with the Department of Trade and Industry, which might produce the £1½m under the Industry Act (the preliminary statement emphasises the company's position as an exporter). The other £4m will have to come from selling off some assets unless it is taken over or finds a partner: the company is at present having discussions with both an American and a British company.

BSA's motor bikes missed the market in the United States again this year, and the result is another round of losses, though not so bad this time. After poor shipment figures through the spring and early summer, July's export total was 10,000 over-250 cc bikes, about twice the summer monthly figure in a normal year. These bikes will be very difficult to sell, as nearly all go to America; riding bikes in winter is bad enough in Britain where the weather is comparatively mild. And the company has announced a new range of bikes making these obsolete. The operating loss is £452,000 (compared with £2.5m), but there is a further special loss of £2.9m compared with the £5.7m of extraordinary loss last year. Unsold stocks are over twice the normal level, which is about 6,000 bikes.

The real questions surround the cash position. Sales of stock may involve paper losses, but they also raise cash, and the overdraft has been cut from last year's £9.5m to £6.3m; it needs to be cut again to £2m, since July is the best time of year cash-wise: all through the winter and early spring the overdraft piles up while production goes ahead but not sales. A bad case of Hard Rider.

Keyser Ullmann

Lending Bankers

We are well known for our specialized services. But we also lend substantial amounts to industrial and commercial companies on banking terms and can provide acceptance credits for suitable borrowers at fine rates.

The complete merchant bank

French banking

Old faces, new facts

One more veil dropped from the tangled world of French banking when the Campagne Financière de Suez, France's largest non-state bank, issued its first set of consolidated accounts, Price Waterhouse style. In 1971 Suez gained control of the country's largest privately-owned deposit bank, Crédit Industriel et Commercial, from its rival Paribas, which itself then got a controlling stake in two smaller deposit banks, Crédit du Nord and Banque de l'Union Parisienne. Since then Suez has been on the merger trail, buying a merchant bank, Union Financière et Minière, and after a long, unseemly wrangle with the insurance company Paternelle this summer, a majority stake in Banque de l'Indochine, with which it will merge fully eventually.

From all this manipulating Suez has emerged almost twice the size of Paribas and, despite the dilution caused by its acquisitions, expects a 10% increase in earnings, which were up to £20m in 1971 from £15m. Its shareholders, who have seen the share price grow from Fr280 to Fr390 in the past year, can also be happy that the days of secret share swaps are now, it is hoped, over. For the foreign investor, who wants to know what is going on inside his company, this makes Suez an attractive buy. The market value of the shares stands at a 35% discount to the net asset value. Although this makes it expensive for the company to issue its own equity when making acquisitions, there is plenty of liquidity around for future purchases, backed up by the giant American insurance company

INA, which has a 10% stake in Suez.

The financial sector in general remains the best investment on the Paris bourse despite a strong rise in the past year. For the more exciting high fliers, however, like Locafrance, Europe's largest leasing company, or the hire purchase credit firm, Cogefimo, both of which are selling at expensive p/es of more than 17, a purchaser needs to have an optimistic confidence in the bourse. One stock to be avoided is Paribas, which has serious management problems that have prevented the company from merging its two deposit banks, Crédit du Nord and BUP.

In the industrial sector the movement towards consolidated accounts got a boost this week when Ciments Lafarge, France's largest cement manufacturer, decided to seek a quote in London and produced accounts consolidated retrospectively. It is the first French company to come to the London exchange for 10 years. At Fr246, the company is valued at £97m and is on a p/e of 14: fair considering a 60% growth in profits in the past four years, though this has mostly come from acquisitions.

Gulf+Western

Thank you, Godfather

The awful trouble with being a conglomerate is that the market has a long memory and a thick credibility filter. In spite of Gulf+Western's record profits of \$69m, compared with \$56m for the year earlier, the market is not prepared to give it a higher p/e rating than a shade over 10 at \$34.

One reason for both the profits boost and the scepticism is The Godfather, made by G+W's subsidiary, Paramount

Bluhdorn: bubbling

Pictures. This is, correctly, treated as a movie freak; having cost \$6m, it received \$50m in rentals for the company in the period from the opening in March to the end of the financial year in July. On the back of The Godfather, the share price has risen 22% this year, but has fallen back with the market. Part of the mystery of G+W's results is how little they reflect the profits earned from that film; even if distribution costs are assumed as high as 30% of rentals, the film should already be \$29m in profit after knocking off production costs.

Perhaps G+W is practising creative accounting in an unusual direction, and is doing everything possible to bury profits this year and allow them to come through gradually so that in the future the company attains an image of steady growth and respectability. There is certainly a faction in the company which argues the need for this approach, to counteract the image of bubbling buoyancy projected by Mr Charles Bluhdorn, the chairman, which finally had the result of making Wall Street think that G+W was as bad as most of the other conglomerates. When the balance sheet comes out it may be possible to see whether there have been any special write-offs and provisions and whether the share is as cheap as it now looks.

The problem with conglomeration is that diversity of interest leads to investor bewilderment. Transamerica Corporation, which has returned to a steady growth rate, has fared worse in the market than G+W; its film distribution subsidiary, United Artists, has had a huge success with Diamonds Are Forever, the James Bond film, but there will have to be several more to whittle down the film inventory.

A quiet place to go after work.

The inside of a Rover is a great place to relax after a hard day.

Orthopaedically designed seats hold you firmly from three directions. De Dion rear axle suspension gives an unusually smooth ride and the instruments are scientifically arranged to minimise eye movement. There's wonderfully soothing sound insulation and, of course, a wealth of deep pile carpeting and rich upholstery.

One motoring correspondent described the sensation of driving a Rover as 'wearing it'.

And a very comfortable fit it was, too.

Passenger Protection

The strength of a Rover springs from an all-steel base unit which carries all the mechanical parts and cocoons the passengers' compartment in a high-tensile protective steel cage.

When the AA awarded Rover the first-ever gold medal for safety it was, you can be sure, no accident.

Confidence.

Rover gives you more than safety and comfort.

It gives you confidence, the confidence that comes from control: when you put your foot down in a Rover, on accelerator or brake, things happen smoothly, quietly, at once (that's having all-round servo-assisted disc brakes plus power to spare under the bonnet).

It's this special brand of confidence that promotes a refreshingly tolerant attitude towards other road users and makes you a nicer person to drive with.

There are five versions of the Rover to choose from, ranging from the elegant 2000 to the all-powerful V-8 3500.

Take a quiet drive in one soon.

Travel First Class.

When you say you're flying Lufthansa and will arrive at 8:05, you will be expected at 8:05.

What a reputation we Germans have. Okay, so we are a little nutty about being punctual. That's not so bad when you're trying to get to an important appointment. Certainly it's possible that something may happen to keep us from being on time 100%, but you can bet we're trying. If you're a little late checking in, you'll still see a smiling face. If we're a little late taking off, you'll see a red face.

Lufthansa
the more you fly

Transport

P&O should go amphibious

Source: Norwegian Shipping News

The apparent firmness of freight rates adds slightly to the arguments for P&O staying independent; certainly the new terms for the takeover of Bovis, though simpler, will not sway anyone who has not been swayed already. A mite more of the equity stays with the P&O shareholders. The financial advisers recommend the merger—as they recommended the previous two.

The gap between the value of P&O's offer for Bovis, now worth 524p per share, and the Bovis price of 409p, shows that the market thinks it is a dead duck. The lack of faith shown by P&O in its independent future has turned the market away from the shipping sector. The rise in freight rates would, in normal times and in normal markets, have led to a further rise in the sector, which has already done quite well early in the year. Investors (and P&O) might well turn their eyes to other forms of transport, and to other countries' shipping companies.

Freight rates were bound to rise. At the abysmal levels of early summer it paid owners to keep their ships in mothballs. However, any further rise will be steadied by the enormous amount of laid-up tonnage hungry for charters. Besides, present charter rates are nothing to cheer about, and are still unprofitable for some types of ship. Barring a severe winter, or some other unseen bonanza, the surplus of ships is likely to last through 1973.

However, continental stock markets are as liable to under-value their shipping shares as London is to over-value its. A good example might be

the Nederlandsche Scheepvaart-Unie, whose business is rather similar to that of Ocean Steamship. Although the shares have doubled in the past year, they could have further steam in them at Fl130: the p/e is a third of Ocean's, and the price/gross cash flow ratio one-fifth. Despite a forecast of a slight drop in profits for the year, the turnout is likely to be a modest earnings improvement, thanks to the freight rate recovery. Future growth should come from the large orders for new ships, and from using surplus cash for acquisitions.

In these days of containers rolling off ships and rolling on to lorries, there is much to be said for adopting the concept of a total transport company. The inland transport business has taken a hard knock from inflation and keen competition. But companies are now offering more specialised services in which they can corner a niche, and are generally improving management. One such company is Transport Development Group. Last year a tenth of the fleet was idle and profits fell by 40%—but there should be a nice turnaround this year, and scope for acquisitions on the continent. That is a sensible direction for P&O to follow.

Goldsmith

GO goes HO

Mr Jimmy Goldsmith's appetite for doing deals is beginning to give the market indigestion. This week's is with Hambros Bank, London's largest merchant bank in terms of deposits and second largest in terms of capital employed—after Slater, Walker Securities.

Hambros, which underwrote the latest acquisition of Mr Goldsmith's Anglo-Continental Investment and Finance Company at 210p, is already the owner of 10% of the ultimate Goldsmith holding company, Générale Occidentale. It is selling a third of a Dutch investment trust to GO and buying a third of a French one from GO. The Dutch one, Hambro International (to be rechristened Hambro Occidentale), was selling at Fl81 on the Amsterdam market before the announcement and the deal was done at net asset value of Fl96 for a total amount of £3.5m. GO will finance the acquisition out of the rights issue and loan stock issue which gave it £14m a few months ago. The French investment trust is a tiddler whose capital is being tripled to £3m.

Why do Hambros Bank and GO

want to share a brace of continental investment trusts? Both have expertise in the banking and investment banking areas on the continent, but would seem to offer as much, or as little, in tandem as solo. If the investment trusts are to be used to build up strategic stakes in continental companies which will then be offered to marauding British companies, there could be trouble over which bank then services the client—Hambros or GO.

Perhaps the logic will emerge, ex post. The overall strategy of the Goldsmith empire—to expand banking, investment banking, and food manufacturing in Britain and the continent—is clear, but the tactics are sometimes hard to follow.

Howard Hughes

A public figure

Unless the prospectus filed for registration at the Securities and Exchange Commission is a hoax, Mr Howard Hughes is selling off the foundation stone of his empire: the oil-well drilling-bit part of the Hughes Tool Company. Although Mr Hughes will own no shares in the company, it will have his name; the rest of Hughes Tool will be christened the Summa Corporation.

The flotation will raise about \$140m for Mr Hughes, and is being handled by Merrill Lynch, Pierce, Fenner and Smith, which also handled the sale of his interest in Trans World Airlines to the public for \$546m in 1966. It is thought that there is a connection between the two deals. The Supreme Court is expected to rule soon on a 10-year-old anti-trust damage suit brought by TWA against Mr Hughes, and a judgment fixed by a federal court now stands at \$165m.

This is no longer small change to Mr Hughes. The profits from Hughes Aircraft go into the kitty of the Howard Hughes Medical Institute. The casinos and hotels in Las Vegas incurred a deficit of \$6m in 1971 and Hughes Air lost \$2½m. There are other lawsuits to face, arising out of the Nevada misfortunes. Mr Noah Dietrich, his former financial adviser, is suing him for \$51m for defamation of character.

Mr Hughes might need the money for his newer ventures. In July he bought 25% of Nicaraguan Airlines. Trade sources report that he is thinking of using this as a base for a world air-cargo operation, using \$1 billion worth of Lockheed TriStars.

Arts Brief

The market goes boom

The international art market appears to be enjoying one of those periodic boom periods which arrive suddenly, and for no apparent reason. The characteristic feature of such periods is not that there are necessarily very high prices for great works of art, but that anything, from the most humble piece of brokendown furniture or cracked porcelain plate to a Rembrandt painting, fetches considerably more than any expert had forecast. In other words, the whole price structure of the art market seems to take an unexpected, and almost inexplicable, lurch upwards.

In 1968, the last time such a phenomenon occurred, there were obvious financial reasons—devaluation followed by a two-tier gold price created severe anxiety about currency, and as a hedge art was “taken up” as an alternative to the usual forms of investment. The results were somewhat catastrophic. A new breed of investor-collector appeared, looking for quick turnovers and healthy profits. By the end of 1969, when money was extremely tight, such people put their purchases of the previous year on to the market, and many of them made extremely unhealthy losses.

All this tended to shake the belief in the art market as a reasonable alternative method of investing, although those most closely connected with the art market have never advocated the purchase of works of art purely as investments, to be bought and sold like so many shares. With certain categories of art, such buying can work—early Chinese ceramics would almost certainly have made considerable profits if bought and sold at a yearly interval between 1968 and 1972—but this is more a matter of luck than a consistent pattern. Art, compared with stocks and shares, is a slow grower, five to 10 years being the minimum period necessary to make anything approaching a satisfactory capital gain.

The present boom would seem to be of an entirely different character to the one which occurred four years ago. There appears to be a lot of money available for buying art, but although

the general level of values is higher now than it has been since 1968, prices for minor, mediocre or damaged works of art have not reached the same lunatic proportions as they did then. Although prices in minor sales are high, money is being spent with much greater discrimination; the market is not being abused.

The auction season in London, Paris and New York opened at the beginning of October. Although the first two months of a new season are usually quiet, with the great sales being held in December, Sotheby Parke-Bernet in New York held a series of extremely important auctions of Americana in mid-October, and at the same time held one of the most important sales of Japanese prints within living memory. In London, Sotheby's held an equally interesting sale of 19th and 20th century prints on October 10th. The Sotheby Parke-Bernet oriental sales have highlighted one aspect of the present-day art market which has had more than a little to do with the current level of prices. Up until the end of the 1960s buying was completely dominated by American collectors and institutions; in Europe only a very few German and Swiss private buyers and museums were prepared to pay anything like the same sums as were lavished upon their collections by Americans. In England, where the record of collecting in the present century has not been a happy one, there are very few people prepared to go to almost any lengths to form a fine collection—although it should be pointed out that in the past 10 years one of the greatest private collections of Dutch painting anywhere in the world has been formed by an English merchant banker.

In 1968, however, a new force began to make itself felt—Japan. Although the Japanese have not made tremendous impact, as yet, at the top end of the picture market—that is, paintings selling for upward of £100,000—there can be no doubt that in the £10,000 to £50,000 range they have been very heavy buyers in the past two or three years. They have been solely concerned

Ming vase: £220,500

with 19th and 20th century pictures, and they have what might be described as old-fashioned taste, not altogether surprising in view of the fact that they have been virtually cut off from the western art market since the 1930s. They are mainly interested in decorative pictures—good Barbizon landscapes, Renoir landscapes and, more especially, nudes and the works of the School of Paris artists such as Modigliani, Utrillo, Derain, Vlaminck and Dufy—they are not yet attuned to the more advanced aspects of 20th century painting, cubism and abstractionism. It is in the field of oriental ceramics and works of art that the Japanese, not surprisingly, have had the most decisive effect. There can be no doubt that in the postwar period no category of the market has increased so much in value, with the possible exception of impressionist and modern paintings. Whereas the Japanese presence has not been vital in the latter category, it has been in the former. It would be no exaggeration to say that any fine piece of Chinese pottery or porcelain has increased in value at a theoretical rate of about 75 to 100 per cent per annum over the past five years.

Outstanding pieces of Sung and T'ang pottery, which in the mid-1960s were fetching £3,000 to £4,000, would now almost certainly make between £15,000 and £20,000, while last March a group of six pieces of Ming blue and white porcelain which had been purchased by a Swiss businessman at auction between 1969 and 1971 for £23,000 was sold for a total of £52,000. Last June, Christie's sold a 14th century Ming blue and white jar with coral-red panels, severely damaged around the rim, for £220,500.

by far the highest price ever paid at auction for any ceramic item. Needless to say, this, like so many of the most important pieces of oriental art sold recently, was bought by a Japanese dealer.

The sale of Japanese prints belonging to Hans Popper held at Sotheby Parke-Bernet on October 6th was extremely interesting for a number of reasons. It was probably the finest collection of its kind offered at auction this century, and it raised the price structure for Japanese prints to an entirely new level; no fewer than 10 woodcuts realised more than the previous auction record, while the auction record set in 1969, £2,453 for a print by Toshusai Sharaku of the actor Matsumoto Koshiro IV as the fish seller Sanya no Sahanoya Gorobei, was exceeded by 25 of the Popper prints. Four prints by Toshusai Sharaku himself, equal in quality to the example quoted above, fetched between £4,400 and £6,800, while a record £14,800 was paid for Kutagawa Utamaro's breathtaking woodcut portrait of Ohisa, the Takashima-ya waitress. One interesting comparison was Hokusai's famous print of the “Great Wave of Kanagawa,” from the series called the “Thirty-six Views of Mount Fuji.” A superb impression fetched £1,000 in 1968 at Sotheby's, then one of the highest prices paid at auction for a Japanese print; an example of similar quality in the Popper sale realised £5,400.

What was particularly significant, however, was that not one of the most important woodcuts was purchased by a Japanese bidder. Indeed, a high proportion of the sale was bought by American dealers and collectors. Japanese prints, of course, have had a decisive influence on the development of western painting and have been seriously collected in Europe and America for close on 100 years, far longer than any other Japanese art form. Thus there are several magnificent and well-established collections in the west, and even the Japanese, who have amazed everyone recently by the prices they are prepared to pay for their own art and for that of China, appeared somewhat bemused by the enormous sums bid by Americans for the finest pieces in the Popper sale, although they too must have realised that this was an opportunity not likely to occur again in the foreseeable future.

The market in modern European prints has been subjected to no outside influence in the recent past. There

has been, however, an interesting psychological change in attitude towards prints in general in recent years. Hitherto, they have been considered by many people as the poor man's painting; quite erroneously, they have been thought of as reproductions rather than as original works of art. The change has in part been brought about by the fact that fine paintings of the modern schools are beyond the reach of all but a few millionaires, so that to own a Renoir, Toulouse-Lautrec or Picasso is an impossible dream for most people. It suddenly dawned, however, that if a Picasso painting or drawing of any quality was unlikely to make below £5,000 at auction, a lithograph or etching by the same artist could be purchased for as little as £150. Naturally, the more people realised this, the greater became the competition, so that the prices for the finest prints are themselves now beyond the reach of the average collector. Nevertheless, it remains true that a print is still the only work of art by a great master which most people have any chance of owning.

In Sotheby's sale of modern prints on October 10th, it was noticeable that bidding was careful and selective. Collectors and dealers were prepared to go to extremely high levels for rare things, but good prints of no great scarcity fetched only slightly better than average—although this is in itself a good sign. The exceptions were lithographs by Matisse, which made very good prices, as they have been doing for the past year, even though they pass through the salerooms with great frequency, and an impression of Picasso's “Le Repas Frugal” in the second edition. Although this is considered the artist's greatest graphic

Picasso print: £5,600

work, it is a reprint, pulled in 1913, nine years after the artist had printed the first few impressions, which are now extremely scarce. The particular example sold at Sotheby's fetched £5,600, as opposed to £4,200 for an identical one sold in April, 1971. It is worth pointing out that an example of the first edition fetched £21,000 in a Swiss auction two years ago. The highest price in the sale, £9,500, was given for Edvard Munch's lithograph of 1896, “Das Kranke Mädchen.” In the past three years, lithographs and etchings by this artist have proved, on average, to be the most expensive of all modern prints. The finest examples, of which “Das Kranke Mädchen” was one, regularly make over £6,000 at auction; they are, of course, of some scarcity, although a new collector with very large funds should be able to assemble a magnificent group.

Another price of considerable significance was the £3,000 paid for Rodolphe Bresdin's bizarre lithograph of 1861, “Le Bon Samaritain.” Together with Gustave Moreau and Odilon Redon, Bresdin is one of the triumvirate of 19th century French symboliste artists, although probably the least known. Ten years ago it would have been extremely unlikely for this particular print, the artist's masterpiece, to have fetched much above £150, and only two years ago £1,500 was considered a very high price. The sale also included a group of cubist etchings by Georges Braque. They are of considerable rarity, but it is possible that the presence of so many in one sale may have suggested to collectors that they were not so scarce as they had thought. Although prices ranged between £950 and £1,800, it must be admitted that other examples of most of the prints offered had fetched as much, if not more, in the recent past.

The sales of major importance that have taken place so far suggest that the 1972-73 auction season may prove to be the greatest since the war. Auction records have been tumbling with monotonous regularity, and most recently an American 19th century painting by Thomas Anshutz fetched as much as £100,000 and an 18th century mahogany desk from Newport, Rhode Island, reached £50,000. Sales of unique importance are scheduled for the near future, including the complete collection of coins belonging to the Metropolitan Museum, New York, which is to be sold by Sotheby's in Zurich. It is going to be a season of rising prices.

An Investor's Guide to Art & Antiques

Christie's International Auctioneers

Christie's sales turnover at home and overseas has increased in the last ten years from £3.1 million to nearly £25 million. This leap forward has been brought about by reorganisation at home and a fresh approach on a world wide scale to the auctioning of works of art.

Christie's are established now not only in the Americas and Canada, but also in Japan, Australia, France, Switzerland, Italy and this year West Germany. Our experts are able, therefore, to value, advise and sell for collectors all over the world. We also have a special department to advise on Estate Duty and Capital Gains Tax problems.

Christie's have been acting for foreign collectors ever since the eighteenth century—including such exalted clients as Catherine The Great. Turning to the present day, a recent example was our Impressionist sale on June 27th. Of the 105 paintings and bronzes auctioned by us, 64 came from the United States of America and Canada, 18 from the Continent, 9 from Switzerland, and only 14 from the U.K.

Sales such as these are a measure of the confidence placed by foreign collectors in Christie's. They also make a worthy contribution to the millions of pounds earned each year in foreign exchange by the London art market, benefiting not only Christie's and collectors but Britain as well. Thanks to the concessions recently granted, V.A.T. will not apply to imports of works of art and London's competitiveness will remain unimpaired.

Is Jewellery an Investment?

RICHARD OGDEN, International Jeweller,
answers:

Certainly, an investment in lasting beauty
of international value with pleasure of
possession as a bonus.

Q: And in monetary terms?

A: This is like asking "Are shares an
investment?" Obviously, anything
beautiful and rare always appreciates in
value and in particular fine emeralds,
rubies and sapphires which have doubled
in value during the last two or three
years. Good antique jewellery has
appreciated by a minimum of ten per
cent a year.

Q: This is all very well, but how does one
buy jewellery knowing little or nothing
about it? At least at the Stock Exchange
one has some experience.

A: Just as it is necessary to find a good
broker, doctor or lawyer and put your
faith in him, so too is it necessary to find
a good jeweller who is honest and a real
expert on gems and current market
values.
We are specialists in the field of
investment jewellery and have a highly
satisfied clientele.

Q: Suppose one needed to realise the money
invested in jewellery?

A: We are also happy to sell clients'
unwanted jewellery at retail prices for a
selling commission of fifteen per cent and
we insure it gratis whilst it is in our
possession.

APPOINTMENTS

La Trobe University MELBOURNE, AUSTRALIA

Lecturer/Senior Lecturer in Economic History

Applications are invited from suitably qualified persons for a position in the Department of Economics. Applicants should have a sound background of Economic theory. While preference will be given to those who have specialised in the area of new Economic history, applications will also be entertained from persons without special skills in the area.

Salaries: Senior Lecturer \$A8644-\$A11234 p.a.; Lecturer \$A6801-\$A9390 p.a.

F.S.S.U. type superannuation is available. Travel and removal costs on appointment and on return after three years if desired will be paid by the University.

Further information and application forms are available from the Association of Commonwealth Universities (Apu), 36 Gordon Square, London WC1H 0PF (Tel: 01-387 8572), or from the Registrar, La Trobe University, Bundoora, Victoria 3083, Australia.

Applications close on 4 December 1972.

Derbyshire County Planning Department

Appointment of Graduate

Applications are invited for the appointment of a Graduate with a good degree in Economics, preferably with Statistics. This post is within the Information Group supporting the Structure Plans team.

The post is graded A.P.3/4/5 (\$1,803-\$2,561) and starting salary will depend upon qualifications and experience (if any). Subsequent acceleration through the grades will be reviewed periodically.

In view of Local Government reorganisation and, if all other things are equal, preference may be given to candidates employed in Local Government in Derbyshire.

Where appropriate, assistance will be given towards removal and lodging expenses.

Application forms, returnable by 8th November, forwarded upon request to the County Planning Officer, County Offices, Matlock, Derbyshire DE4 3AG. (Tel: Matlock 3411 Ext. 140).

Monash University MELBOURNE, AUSTRALIA

DEPARTMENT OF ECONOMICS

Teaching Fellows/Senior Teaching Fellows in Economic History

Applications are invited for the above-mentioned positions. The successful applicants will be required to conduct tutorials in the first-year course, which surveys a long period of European and Chinese economic history (a prior knowledge of Chinese economic history is not necessary). Depending on staffing arrangements, the persons appointed may be offered some teaching in other courses in which they have special competence. Time is available for research and recent graduates will be encouraged to enrol for a higher degree.

Salary range (presently under review): Senior Teaching Fellow: \$A5,441-\$A6,558 per annum; Teaching Fellow: \$A4,465-\$A5,300 per annum.

Benefits: Travelling expenses for appointee and family, removal allowance, repatriation after three years' appointment if desired; temporary housing for an initial period.

Further general information and details of application procedure are available from Mr J. D. Butchart, Academic Registrar, Monash University, Wellington Road, Clayton 3168 Victoria, Australia, or the Secretary-General, Association of Commonwealth Universities (Apu), 36 Gordon Square, London, WC1H 0PF (Tel: 01-387 8572). Enquiries about the Department to Professor J. W. McCarthy, Department of Economics, in the University.

Closing Date: 30th December, 1972, with a view to starting work if possible by 1st March, 1973.

The University reserves the right to make no appointment or to appoint by invitation.

Polytechnic of Central London

DEPARTMENT OF CIVIL ENGINEERING

Lecturer II in Transport

£2,473-£3,201

This appointment is in the Transport Studies Group which is concerned with the MSc CNA degree course in Transportation Planning and Management and with related research programmes.

The lecturer will be expected to direct a course in the "Economic Appraisal of Transport Investments" and also to contribute in one or more of the following areas: Quantitative Methods; Transport Economics; Transportation Management; The Economics of Road Haulage.

Applicants should have a good background in economics together with a postgraduate degree or substantial research or industrial experience in a relevant field.

Details and application form to be returned as soon as possible from The Establishment Officer, The Polytechnic of Central London, 205 Regent Street, London, W1R 6AL. Please quote reference 159.

CHAIRMAN'S STATEMENT

EAST ASIATIC RUBBER ESTATES

The annual general meeting of East Asiatic Rubber Estates, Limited was held on October 24 in London. In his circulated statement, Mr. H. T. Karsten (Chairman) reported that the Company again had a very good year due mainly to the increased dividend of 40% (30%) received from their subsidiary, Teluk Merbau Plantations Ltd. This together with the increased franked income arising from the further investment of surplus funds in quoted Commercial and Industrial securities was sufficient to offset the reduction in income resulting from the lower rubber prices throughout the year. Profit before taxation amounted to £292,630 compared with £305,558 for 1970/71 and the same dividend of 40% was recommended.

Addressing the Meeting the Chairman referred to the current year and said: There has been a small rise lately in the price level of both rubber and palm oil but one cannot be very optimistic about any consistent improvement, especially for rubber. The profit for the current year will, in any event, be lower but I do not expect any serious decline in the dividend for this Company for the current year.

APPOINTMENTS

GLASGOW COLLEGE OF TECHNOLOGY

DEPARTMENT OF BUSINESS ADMINISTRATION

SENIOR LECTURER IN ECONOMICS AND FINANCE

an economist with a special interest in financial studies at the level of the firm.

SENIOR LECTURER IN LABOUR ECONOMICS/ INDUSTRIAL RELATIONS

with a special interest in studies of the labour market. These posts offer opportunities to lead small groups of specialists in the development and teaching of courses in business studies to Honours Degree level.

Facilities are available for the initiation and direction of research projects in these and in related areas in which it is hoped to develop particular expertise within the Department.

Salary Scale Up to £3882 per annum, depending upon experience, plus £117 per annum for approved teacher training.

Application forms and further particulars should be obtained from The Director, Glasgow College of Technology, North Hanover Place, Glasgow, G4 0BA, and should be returned by Wednesday 8th November, 1972.

ECONOMISTS

Forward Planning Studies

BP requires two young graduate economists to join the Forecasting Division at its head office in London. Their prime responsibility will be to help plan the company's growth for up to 10 years ahead by evaluating the effect of economic factors on energy demand.

Candidates, aged under 25, must be numerate and hold an honours degree in economics. They should have a knowledge of statistical techniques as well as an interest in the problems of the operation of a large organisation. One of the appointments of a large organisation must have a working knowledge of, and interest in, this activity, covering such areas as the interpretation of company balance sheets.

The company offers a progressive salary and excellent social and recreational facilities. Its size ensures a demanding job, and a varied and interesting career with excellent promotion prospects.

Please write, quoting reference S.444, giving brief details of age, qualifications and experience, to the Manager, Central Recruitment, The British Petroleum Company Limited, Britannic House, Moor Lane, London, EC2Y 9BU.

BRITISH & INTERNATIONAL SHIPPING GROUP

with a fleet of various types of vessels wishes to acquire:

- 1) Existing Shipping Brokerage Company
- 2) Ship Management Company

Possibility also of combined brokering and ship managing company.

Companies interested to apply with full details of activities, financial statement and all relevant information to: BOX 2532.

CITY OF SHEFFIELD Research and Intelligence Unit RESEARCH ASSISTANT (Corporate Planning) £1,530-£2,388

according to qualifications and experience

A lively and determined person is required to provide assistance in setting up a corporate planning system in Sheffield Corporation. Qualification to degree level and/or experience in corporate planning or PPBS in public service or industry is desirable. Duties will include servicing the programme area teams that will be set up and analysing issues that arise from examining objectives and output measures.

Further details can be obtained from the undersigned and applications giving full personal details, including age, present and past appointments, and qualifications together with the names of two referees should be submitted to the Town Clerk, Town Hall, Sheffield, S1 2HH, by 30th November, 1972, quoting ref E.

Share in the future of Britain's gas

ECONOMIST

Planning

over £3,500

Location London. Will help to formulate and carry out the planning exercises on which the Gas Industry's longer range business strategy is based, and report on them to senior management. An honours degree, preferably in economics but perhaps in some other numerate discipline, is essential, together with wide planning model experience in competitive business or industry. Responsible experience in engineering or marketing functions and knowledge of public sector planning procedures would be an advantage. Salary will be at least £3,500 p.a. but could be more where experience and ability justify it. Application forms can be obtained from the Personnel Manager, The Gas Council, 59 Brynston Street, London W1A 2AZ, quoting reference EP/142/274/E. Closing date for applications 16th November.

GAS COUNCIL

BUSINESS ANNOUNCEMENT

Result of the take-over bid

Heineken N.V. for La Brasserie de l'Espérance

On 16th October, 1972 the Stock Exchange Committee published in Paris the result of the take-over bid made by the Banque de l'Union Européenne on behalf of Heineken N.V. for the shares of the company Brasserie de l'Espérance. The number of shares presented by shareholders for the purpose of this take-over bid represents 98% of the company's capital.

Freezing soon

The long talks at Downing Street aimed at a voluntary incomes policy broke down on Thursday night. The Government will now have to impose a compulsory one, page 11. Some of the muddles at the talks, and in continuing wage inflation outside them. Good prospects for growth, shaky ones for sterling, pages 77-82, and stock markets go merger mad, page 103.

My Government's speech

A scanty Queen's speech before a hard session, page 13, with an Ulster plebiscite and oddments, pages 47-48.

Got away with murder

The Germans think they saved lives by their surrender to Arab hijackers last weekend, but history will sadly show that they have sacrificed far more of them, page 15.

Nixon's the one

Next Tuesday a rather unpopular President Nixon may win the biggest landslide victory in American history, which shows that something very odd is happening in world politics, page 12. Special reports from across the United States set the scene for this unusual election, pages 25-40.

Peace in Vietnam?

There is a chance to end Vietnam's long agony, but Dr Kissinger must not yield on principle, page 16. A report from Saigon, page 54. Peace has broken out between Britain and China, as our special correspondent reports from Peking, page 54, where Yu might now pip Yao to succeed Mao, page 56.

A star's eclipse

Why Canada's Trudeau and Stanfield ran neck and neck, amid some slightly disturbing signs of English-speaking backlash in their divided country, page 53.

Letters

The economy

SIR—I would be very grateful if you could explain in what way the conclusion of the Mansion House address by the Governor of the Bank of England, in which he pointed out that there is no such thing as a monetary policy which will at once stimulate expansion and moderate inflation, "might be supposed to have slapped the monetarists down."

The point which the Governor was making is one which many of us who believe that no policy will work against inflation which does not include a strong element of responsible monetary restraint have been trying to draw to the attention of Bank and Treasury for the past 15 months. It is the Governor, and not we, who has argued that the incompatible objectives of stimulated expansion and moderated inflation can be harmonised by an "incomes policy." He still does—he was at it again at the Mansion House. We shall see.—Yours faithfully,

J. BRUCE-GARDYNE
House of Commons, SW1

SIR—In your columns you have repeatedly warned the people that with little or no growth in gnp England was falling steadily behind its neighbours and competitors. If proof of this were needed one has only to refer to a pertinent remark made by M. Giscard d'Estaing a few days ago in the course of his introducing his budget proposals:

... en 1961 le niveau moyen de vie d'un Français était inférieur de 10% d'un Britannique. En 1972 il lui est supérieur de 25%.

Twenty-five per cent is not only quite a lot—it is, in fact, enormous. But, what is even worse is that the difference is getting greater. Nevertheless, 95 per cent of the people in England still smugly look upon "those foreigners on the continent" as inferior beings. And if you try to make them understand the real state of affairs they merely look at you with undisguised pity, and wonder who on earth let you out of the asylum.—Yours faithfully,
Cannes, France G. S. CHAMBERS

SIR—Could not an organisation be set up to break strikes which threaten and blackmail the nation?

In spite of modern technology it should be possible to recruit enough volunteers to mine some coal, operate some power stations and run transport, even slowly.

There must be many unemployed and many retired people, including myself, who would surely volunteer.—Yours faithfully,
C. S. A. TOOTAL
Hildenborough, Kent

Lincoln by-election

SIR—Your interesting article on the Lincoln by-election (October 14th) asserts that former MPs who stand against their former parties in their old constituencies always lose (except for Mr S. O. Davies).

In 1945 Hammersmith was contested by the former sitting Labour member, Mr D. N. Pritt, as Independent Labour; he headed the poll, with about six times as many votes as were cast for the official Labour candidate from Transport House. The circumstances were no doubt exceptional; circumstances in politics always are.—Yours faithfully, M. R. D. FOOT
London, W1

Ireland

SIR—Mr W. A. Miller (Letters, October 28th) and like-minded Englishmen should realise that Ireland is not a British isle in any sense of the word and is not inhabited by British people. The northern Protestants are typically Irish in their rejection of compromise and formation of splinter groups. If all the people in Britain from this side of the border came home, what would happen to your hospitals, building firms, police forces, public transport, armed forces, road-making firms, medical practices, trade unions, etc?—Yours faithfully,
Dublin PATRICK J. N. BURY

SIR—I feel I must comment on your crassly unsympathetic and unhelpful treatment of the Protestant side of the Northern Irish situation (October 21st).

Written with a bloody English superciliousness of the "tribal Irish," it shows complete lack of imagination of their plight, and for any Northern Irish who may happen to read the articles it must first re-emphasise the sense of isolation. If that is all the sympathy that can be expected from fellow British, from an English Parliament (the Northern Irish are a small minority) and an English (and at times, Scottish) army, what could be wrong with UDI?

I put it to you that the Protestants have been against the wall for four years now, despite the British money being poured into the situation; it is those people who are facing the terror, and the lack of a solution. The army was to sort it all out and give protection against the IRA, and have they done so—have they hell? They cannot stop the IRA and they want to hold the Protestants even more firmly against the wall for continuing persecution.

The IRA bomb almost with impunity; internees are released to swell the ranks, but if the Protestants want even self-defence they must first take on the army. And it must feel very like an English army, possibly imbued with your anti-Irish ideals and captained overall by a man who has not distinguished himself with much success. He makes feeble promises and is terribly English about it all, hoping the IRA will stop being beastly.

THE ECONOMIST NOVEMBER 4, 1972

Memories are doubtless short in your sector as well. Eire is at best neutral, and at second best unfriendly, providing a wartime base for German spying activities, and always harbouring terrorists. Yet Eire nationals have British passports and run the country at will, fund-raising and the rest. May I remind you that if it had not been for quite a few Northern Irish helping against a certain "little house-painter," some others might not be in the happy position of derogating worried and desperate people by classing them by their occupations. Even a hall porter might be a good man for a' that! —Yours faithfully, G. H. BOYN
Galashiels, Selkirkshire

Flexible working

SIR—The correspondence in your columns about flexible time has not, so far as I am aware, explored the far greater dividend to be derived from the flexible week.

Against the quite minor benefits to be expected from extending the rush "hour" to a nominal two and a half, morning and evening, a cut from 20 per cent of total commuter travel each day of a five-day week (universal Monday to Friday week) to, at best, 14.3 per cent (everybody works an optional five days out of seven) must surely go much further towards lightening the travel burden than getting up at 5.30 in mid winter!

It also goes further towards relieving one of the major scandals of our present time where highly expensive office blocks, schools, university buildings, railways, telephones, telex, roads, car parks, and all manner of other amenities are crowded and deserted by turns in deference to a rhythm of life developed in an environment by whose limitations we no longer need to be confined.

As for all the churches...!—Yours faithfully, J. P. RICHARDSON
Durham

Immigration

SIR—Your statement that black Frenchmen would not be admitted to this country as of right under community rules unless naturalised French (October 28th) needs to be supplemented by the observation that there are vast numbers of naturalised coloured people in France and Holland, and that the 14m inhabitants of Martinique, Guadeloupe, La Réunion and Guyane have the same status as metropolitan Frenchmen in every way. It may be added that French policy for these overseas departments is emigration rather than development. In addition, from 1976 or so, all 40m Turks will have as much right in this country as we have. You may be right in supposing that Britain in the market will be too depressed to attract many Europeans apart from Sicilians, but it will not, for some time, be too poor to attract Turks and people from the other areas named.

It would be interesting to have the

THE ECONOMIST NOVEMBER 4, 1972

MANAGEMENT APPOINTMENTS £7000 PA AND OVER

Life Assurance Opportunity

MANAGING DIRECTOR £15,000+

Our Client, a major U.S. Life Assurance Group, is planning the formation of a United Kingdom Life Assurance Company. Consistent with the scale of development envisaged initial capital funds of £3 million will be provided and additional resources are available.

At this stage the Client is seeking a Managing Director who initially will be responsible for building up his own management team and developing marketing strategy and product lines.

Considerable technical assistance is available. The position calls for an energetic and ambitious man, age at least 35, with a marketing or financial background combined with management experience in the life assurance industry or related financial businesses.

Applicants should write to the undersigned, enclosing career details. All replies will be treated as strictly confidential. Qualified applicants will be invited for a preliminary interview in London at an early date.

Tillinghast & Company Inc.,
3400 Peachtree Road, N.E., Atlanta, Georgia 30326 U.S.A.

DEPUTY MANAGING DIRECTOR INTERNATIONAL MERCHANT BANK (London)

He will be responsible to the Managing Director for the operations of Brown Harriman & International Banks Ltd, which include:

- Short and medium term loans in sterling and Euro-currencies.
- Dealing in foreign exchange and deposits.
- Advice to international companies on corporate finance.
- Underwriting and selling of Euro-securities and secondary market transactions.

He will be expected to play a leading part in policy making, growth and profitability. He should have a successful all-round banking experience, probably in a leading Merchant Bank or Financial Institution

in the City or other Centre. Knowledge of both sterling and international banking is required as well as considerable experience in the money and foreign exchange markets. He would have management responsibility for these activities. Experience of corporate financial advice and business development would be an advantage. Preferred age 35-45.

A substantial salary is negotiable in five figures.

Please write in confidence to:

P. D. Maud,
Vice-Chairman,
Kiernan & Company Inc. (U.K.) Limited,
73/75 Mortimer Street,
London WIN 7TB.
as adviser to the Bank.

views of Jonathan Guinness and our other anti-coloured immigration pro-market experts on this.—Yours faithfully, *Ilford, Essex* K. T. MOORE

Ugandan Asians

SIR,—In your report on the Conservative party conference (October 14th) you refer to an addendum concerning immigrants from Luton East which you rightly describe as vicious.

May I be allowed to make it clear that this addendum was submitted by an individual representative to the conference and was never discussed, let alone submitted, by this association. Indeed my chairman has written to the secretary of the National Union specifically dissociating the Luton East constituency from the addendum and from the other amendments standing to our name in the supplementary agenda.

We have also asked that the executive committee of the National Union should consider some change in procedure so that in future it is made quite clear that amendments or addendums submitted by individuals do not necessarily represent the views of this constituency.—Yours faithfully, ROY D. BAND

Secretary and Agent
Luton Conservative Association
Luton, Beds.

SIR—Your article on Ugandan Asians (October 21st) makes only a passing reference to a factor which, in my opinion, deserves more attention—namely that these immigrants are neither white nor European. Before the cry of racialist is raised against me, may I point out the significance of this factor?

Immigrants are inclined to congregate in particular areas and to maintain their own language, customs, food, dress and so on. For people in a foreign land this

tendency is a hindrance to integration. These groups should disperse as the need and desire for better education, employment and accommodation outweighs their natural fear of a strange land. If the incentives to disperse are removed by over-anxious helpers, the segregation continues. Is kindness killing integration?

In East Africa adversity appears to be nearer achieving integration. The Asians I met on a recent visit to East Africa ate, spoke and dressed as the indigenous population did, while practising their own customs on special occasions. There was none of the paraphernalia we have which seems to encourage a return to the way of life these people forsook in the 1890s. Why can't we accept that Asians are Asians and to live in harmony they must change—if they try as hard to integrate with us as we do to integrate with them, life would be much easier.

Let's keep Britain for the British and Asia for the Asians—culture and tongue make people British, not their origins or skin colour. Make Britain multi-racial but still British!—Yours faithfully,

CHARLES A. R. GILLIAMS
6th form, Whitgift School
South Croydon, Surrey

Jugoslavia

SIR—Mr Kurt Weisskopf (Letters, October 21st), has befogged the issues clearly stated in your admirable article: "King Tito at home to the Queen." He challenges its correctness.

First of all, the issue in Croatia was not as naive as he seems to believe on the part of "intellectuals" abroad (as well as those at home). Some of those "innocent" intellectuals have proved time and again to be the rabble rousers and exponents of the genocide of the Ustasha State during the last war and of the slogan prevailing in Croatia in 1971: *Srbe na vrbe*, "Hang the Serbs by willow trees." The assassins and terrorists referred to by Mr Weisskopf are the avant garde for those so-called "intellectuals" who, as it were, hoped to assume leadership in Croatia under the auspices of the Soviet Union. Has he forgotten that some of these "intellectuals" abroad had ridden into Zagreb in 1941 on Hitler's and Mussolini's tanks, and last year they hoped to ride in on the Soviet ones! To this end the late Dr Branko Jelic ("the leading intellectual" abroad) has conducted a "foreign policy" of both wings of the movement—at home and abroad—and has granted generous sea and air facilities in Croatia to Russia in exchange for support to set up an "independent" Croatia—a monster state like the one under Hitler's and Mussolini's overlordship of 1941.

Secondly, Mr Weisskopf should not be astonished at your statement that "the independence of economic enterprises is to be curtailed." He should have read Tito's speeches and threats in the recent weeks addressed to the Serbian party

leadership by accusing them of introducing capitalism in the economy. And if he is acquainted at all with the Yugoslav "self-management" system he should have been aware that, despite some progress it has made, it has become for a decade at least a refuge for many former disgruntled members of the system and many factions, for various reasons, and each paying lip-service to it for its own reasons. As the slogan of "brotherhood and unity" has died, the lip-service paid to self-management has provided a cover for practising abuse and corruption.

Finally his interpretation of Kardelj's speech at Mostar does not advance his thesis one iota: it is merely wishful thinking. The purges instituted by Tito earlier this year and by now in full swing leave no doubt as to where they lead to. Evidently they lead to re-stalinisation of the chief aspects of administration of economic and social life. Tito calls for "democratic centralism"—and those acquainted with communist terminology and practice read this for what it is: to upgrade the demoted UDBA (the secret police) two rungs up the hierarchical ladder and restore it to its "rightful" place. The purge in the party rank and file, called for by Tito, cannot be achieved without fully employing the UDBA.—Yours faithfully, STANIŠA R. VLAHOVIĆ
Birmingham

Road safety

SIR—My reaction on returning to England after ten years in Canada and the United States was similar to that of your correspondent, Miss Harriet S. Dannenhauer (October 21st). It is the pure unadulterated speed of vehicles here which is so alarming.

The average driver of a Detroit product knows full well that his vehicle is capable of greater speed than he is ever likely to need. Many drivers in this country seem bent on proving that their smaller and frequently less stable cars will perform at much higher speeds than those for which they were designed.—Yours faithfully, R. S. S. DICKINSON
Tunbridge Wells, Kent

Japan and China

SIR—I just happened to read Mr McGrath's opinion on Japan and China (Letters, October 14th), and am very scared if there are any more people like him. Japan and the people here are not trying to project "the threat of an expansionist aggressive force in Asia," as he claims. I was born after the second world war and did not experience our recklessly aggressive war, but I have learned that we should not repeat the same tragedy. Most of the Japanese favour a new Japan-China tie-up because it has marked an end of our miserable past and has symbolised a fresh start of full communication between the two people.—Yours faithfully, Eiji WAKIYAKA
Tokyo

Why manage a pension fund portfolio by yourself when National Westminster has a department that does nothing else? If you're running an office and a pension fund,

one of them's going to suffer. And if the pension fund suffers, a lot of people suffer. So, if you'd like our experience working on your pension fund portfolio, call Michael Corlett, 01-606 6060, extension 3413. And listen to the voice of experience.

National Westminster Bank

SAVE P & O

Stop this Madness!

The following facts are no longer in dispute:—

1. Not one single independent commentator has said that P & O has done a good deal.
2. The new terms mean that the assets attributable to P & O stockholders fall from £306,000,000 to £206,000,000. The balance of £100,000,000 is being given away to Bovis shareholders, whose assets rise from £27,000,000 to £127,000,000.
3. Bovis would also receive as a gift a participation in P & O's huge cash flow and tax benefits.
4. The Chairman has ignored public opinion, the dissenting directors, the Inchcape company's bid and the McInsey report and P & O has lost £1,700,000 on Bovis shares which it has purchased and a huge sum on expenses and underwriting.

Jessel Securities Limited and Associates, the largest stockholders in the company, believe that P & O could and should be highly successful as an independent organisation. They believe that the dissenting directors alone could achieve a tremendous improvement. Although stockholders were informed that the future of the company was to be decided at a meeting on the 9th November, the Chairman has now decided to embark on "a wholly-fresh exercise"—"contortion" would be a better description. Many stockholders are inclined to await the results of this meeting, but if they do so it may be too late and they will have given away £100,000,000—over £1.60 per share.

It is imperative, therefore, that everybody should complete the new proxies that are being posted by Morgan Grenfell & Co. To be effective, these proxies must be posted by November 12th.

The Economist

November 4, 1972

The kidding had to stop

The death of the attempt to secure a voluntary incomes policy is something much less than a national tragedy. There should be muttered condolences, rather than banshee wailing, across its grave. Exchange and stock markets, please note. During most of the latest long days and longer nights, the question ostensibly being discussed at the meetings was a farce. The Chancellor had said on Monday that the choice then lay between (a) "a completely voluntary system which relies on trust"; or (b) a system backed by statutory powers. The parties were pretending that they were aiming at system (a)—the system which relies on trust—but everybody, including its own members, knew that the Trades Union Congress was not to be trusted.

Any document signed by Mr Feather and his colleagues would in practice have been dishonoured by the unions as rapidly as was the TUC's previous "declaration of intent" to Lord George-Brown about holding down wage claims after 1964, or its "solemn and binding undertaking" to Mr Wilson to reduce strikes in and after 1969. This is not because of malevolence, but because union militants were boasting openly that they would bulldoze past a norm, and moderate trade union leaders would quickly feel bound to follow suit out of fear of not remaining trade union leaders. A voluntary policy may succeed in restraining prices because any manufacturer who is publicly castigated for excessively raising prices probably loses custom, but it cannot restrain collectively-bargained wages because any union leader who is advertised as having excessively raised wages wins votes. The crucial message from the long unsuccessful talks is simply this: the Government must now proceed to statutory enforcement of an incomes policy, and with no delay. The Government's hope as the talks drew to their end was that the public would at least see that it had tried to be fair, patient, consensus-seeking and would leave the unions looking shamefaced rather than militantly indignant, and thus with less danger of red revolution (as well, incidentally, less danger of blue revolu-

tion by Powellite MPs who might join with Labour in trying to block the passage of any compulsory wage and price freezing bill through the Commons).

The counter-tactic of the TUC's militants last week was to try to secure breakdown of the talks on some ground which they thought would bring them more popularity. Hence what Mr Barber properly called their "manifest humbug" in demanding the most rigid sort of statutory controls on prices, while insisting that there must be no statutory controls on wages. When a caravan is proceeding along the road at a dangerously breakneck pace, it really is not the safest policy to keep your foot on the accelerator in the towing car, and apply the brake only on the trailer at the back; and the sensible majority of the British people ought to be able to see that it is not.

Not crystal clear

That sensible majority includes the more moderate members of the TUC delegation, with the result that what the newspapers called the "great debate of the nation," which was supposed to be settling all our economic futures, proceeded through an incredible smog of muddled embarrassment. Sometimes it was put on public view. Here is part of the on-the-record transcript of the press conference late last Monday night:

Q: The alternative before the TUC on Wednesday is to either have statutory powers on wages and prices or a voluntary agreement on both... Which does Mr Feather favour?

FEATHER: Well it's no secret, we've been talking about a statutory—and I think if I can stick to the script and quote the words, because we've been talking about an effective limitation of increases in prices and particularly in retail food prices and if you look, John, at the statement, if I can read it, so that I'm not getting it wrong myself, or anybody else is getting it wrong, "TUC representatives reaffirmed their view that statutory arrangements were required to ensure an effective limitation of increasing prices and particularly in retail food prices." In other words, we weren't talking about wartime

controls or utility garments or anything of that kind; we're just stating as it says here in the communiqué.

If that was the level of discussion at the council, it is not surprising the negotiations ran through many midnight. It is also a relief if the nation's economic policy really is not going to be settled in a continuing conference of circumlocution of this sort.

The damage all this must cause to sterling is less than it would have been in any other crisis; indeed, it may even be of benefit to the balance of payments that these long drawn-out talks have caused sterling to float lower. Those who once said that a floating of sterling would lead to unmanageable chaos at any time of crisis now have their answer. It is the floating that has allowed the tripartite diners of Downing Street to spend those nights and days together. If sterling had been at a fixed rate, the Government would have felt obliged to rush to a probably wrong decision in a matter of hours. There is more cause for worry that the delay has allowed some excessive wage offers to creep in under the wire, beginning with the farm workers and then on to the dangerous electricity supply award; but as the authorities were going to surrender to the power workers anyway, it would have been even worse if they did so just after, instead of just before, any new policy.

Back-up or back-down?

The biggest worry, however, is that some of the machinery devised as a result of these late-night dialogues of the deaf is likely to play a part in ruling the country for some years to come. The machinery that seems to be emerging is put under scrutiny in an article beginning on page 77, and there are parts which do not stand much

of it. It looks as if the eventual compulsory powers may be of the appropriately named "back-up" sort. Last Monday's communiqué talked of the possibility of the Government taking enabling powers, which could be activated by an order laid before Parliament by a minister, in order to roll back any wage or price increases, which were considered to be in "significant breach" of any agreed norms.

The trouble about this system is that the Government would have discretion to decide which issues to confront and which to run away from. Every moderate trade union leader could then feel it a challenge to his virility (and a challenge from his militants) to take on the Government at a game of chicken. The incentive for each union faced by a weak employer would be to go for the largest possible (or, rather, impossible) wage increase, and then the Government would have to decide on a confrontation to roll it back. It would be better to put the onus of confrontation the other way round. Under the sternest policy, the Government might be wise to declare a freeze of the Nixon "phase one" type for a very short period; then increases up to the norm should be automatically allowed, with those who sought to go beyond it having to appeal to some arbitrating body for a right to negotiate to do so. No doubt some unions would challenge this with strikes, and those strikes would simply have to be beaten. The difference is that under a "back-up" statutory system the Government would have to decide to lead the charge against wage offers already made, while under any sterner system the unions would have to organise the charge in support of claims already illegal. The latter and better system is the one that the nation now surely requires.

Freezing hasn't hurt him

Mr Nixon's road to his expected landslide victory still looks bewildering, but others, especially Mr Heath, may learn increasingly from it

Unless the public opinion polls are even more wrong than they were at the last British election, President Nixon is likely to be re-elected on Tuesday by the largest majority in America's 200 years of history. By what alchemy of past record or present exciting inspiration is the misdoubted and close-shave president of four years ago riding to this historic achievement? The remarkable answer is that Mr Nixon's most distinctive policies in his first term (devaluation of the dollar, rigid price-wage controls, rapprochement with Red China) have been erratic zigzags in a direction broadly opposite to what most Republicans had expected from him, and that he is not telling anybody what he intends his distinctive policies in his second term to be (probably because he has not yet thought of them). Across the rich one-fifth of the world, something very odd is happening to our politics, and it is desirable for politicians of both right and left to ponder professionally on them.

First, the electoral attractiveness of incumbent govern-

ments has been increased because the two main things that most people are used to demanding from government—freedom from major war and a steady rise in the standard of living—have, at least temporarily, become rather easy to deliver. We can avoid major wars because the top decision-making echelons in all the countries capable of waging them now have a comfortable enough life not to want to risk losing it in a nuclear holocaust (since the defeat of its cultural revolution, this happily includes China as well as Russia). We can avoid real economic recessions because of the technical accident that a loosening of restrictions on the supply of credit has been proving a sufficient weapon for restimulation of home demand, even in countries (like the United States) where constitutional absurdities make proper timing of a Keynesian fiscal policy impossible, and because all countries are now at last willing to vary exchange rates rather than allow rigid rates to dictate rigid stop-go policies. Democratic oppositions therefore have to find

new focuses for the electorate's concerns.

Many of them have not done this very well, especially liberal and social-democrat oppositions whose middle class morality has impeded them from recognising the second muddling political change in the past few years. In most big industrial countries some of the middle classes (who generally provide the main constituency of the righter-wing party) have probably moved slightly to the softer left, but more of the working classes (who provide the main constituency for the lefter-wing party) have more often moved slightly to the harder right. In the United States the lefter-wing party has campaigned on the issues which the middle classes think that the working classes ought to feel concerned about: ungentlemanly conduct by government and big business, equality, concern for the very underprivileged, moral disgust at the war in Vietnam, Naderite safeguards for consumers, the environment. They have found that the working classes do not give a damn. In Canada (see page 53) the defeated Mr Trudeau also talked over the top of the average Canadian's head.

Politicians, keep out

What people most want from government nowadays is that it should not allow disturbances to the even tenor

of their private lives. This is why President Nixon's single biggest election-winning achievement has been the ending of conscription for war service in Vietnam. The other things that can disturb the even tenor of private lives are violence, strikes, sordidness in one's neighbourhood, possibly really rampant inflation, possibly a sense of national humiliation. But it is not certain whether reaction against the first two of these always hits against the government of the day, or always against the lefter-wing party.

Mr Heath can learn from the United States that a right wing government does not need to show a narrow consistency in its policies, that it can win trade union votes even while freezing wages, but that it should always strive to look as if it is acting with national gravitas and in sober search for consensus. The measured tread by which consensus Ted is moving against inflation suggests that America's most widely supported President since George Washington is the political model that he now has most in mind. If Mr Heath between now and the next election soared to the 25 point lead in the public opinion polls which Mr Nixon holds over Mr McGovern, then there would be over 500 Conservative MPs, against less than 100 Labour ones, in the next House of Commons.

What the Queen didn't say

If the Tories thought they were in for a quiet session, they're going to be disappointed. So it is best to get the pain over quickly

Mr Wilson described it as thin, and the 14 acts and three measures which the Queen announced on Tuesday as the Government's main legislative intentions during the new parliamentary session did not sound much like a burdensome year's work for Parliament. But that brought relief rather than criticism. After two exhaustive and divisive sessions, enacting the industrial relations and common market bills, both sides of the Commons were hoping for exactly the sort of worthy but undramatic parliamentary programme that was read out (see page 48). Indeed, the Labour frontbencher who said that the most controversial statement in the Queen's speech was her announcement that she and her husband were actually looking forward to their visit to Australia was widely regarded as having made a rather good joke. But the coming political year is not going to be like that.

It is going to start with a messy and very bitter winter. That is inevitable whether the Government decides to bring in compulsory powers to back up its wages and prices policy early, as it should, or later, as it will then have to. It is really rather absurd for anyone to pretend that it could be otherwise, for even if all three sides of the tripartite talks in Downing Street ever did turn out to be bands of repentant and very wise angels, which seems an improbable transubstantiation, there would still

be one considerable, unrepentant and far from angelic band left out in the cold—the Labour party. However doubtful the exact outcome of those talks may at times have seemed, there is one consequence which has never been doubted by a single member of Parliament. If Mr Heath's wages and prices policy wins acceptance in the country, a Tory victory at the next general election is likely; if it is successful, its victory is guaranteed.

It is true that the more powerful trade union leaders barely attempt to disguise their contempt for the leadership of the political wing of the Labour party. But however much they lack ostensible political gifts themselves (and there is not one who could demand a place in a Labour cabinet on merit), the Scanlons and the Joneses of the TUC are political animals first and trade union leaders second. There are few Tories who have ever doubted that. Indeed, it has often been their first charge against the trade unions, and some of them have not been very convincing in their attempts to persuade themselves that such men might at least acquiesce in a policy which would be to the political advantage of a Tory government, however much it was in the national interest as well. One of the few good self-persuaders is the Prime Minister.

Mr Heath has not given the participants in the Downing Street talks any cause to doubt his sincerity

in making the attempt at a tripartite solution to inflation. He has, if anything, shown rather more naivety than cynicism. But politically—and probably nationally—he was right to make the attempt at this point in his Government's life, if only to destroy once and for all his distorted image as a pig-headed, doctrinaire enemy of trade unionism. His tolerance towards the unions has startled his own right wing, and his patience has come as a revelation to his closest colleagues. Mr Heath has done himself no harm with either the press or the public, both of which are still unduly sentimental about the unions.

But some of the Government's supporters are in danger of being carried away by the rare spectacle of their leader receiving such a widely good press. The impetus for great shifts in public opinion does not come from the media, whatever journalists who work on newspapers or in television might wishfully think, but from politicians (who sometimes wrathfully think the opposite). The politicians have not yet got down to picking apart the squalid breaches and compromises which will inevitably occur in any pre-compulsory stage of Mr Heath's prices and incomes policy, and the tacit parliamentary coalition which will exist between the Labour party and Mr Enoch Powell and his friends could be even more damaging.

Paying for past mistakes

The majority of Tories rather like the different Mr Heath who has appeared to emerge this summer. They, like the country generally, are naturally more comfortable with a prime minister who is seeking a consensus. But they must get it out of their heads that the Labour party is going to do anything to help him find it. Mr Wilson's gibes against Mr Heath's incomes policy are going to win nearly united support on the Labour benches, and not entirely on just-acceptable party political grounds. One of Mr Heath's mistakes of the past, for which he will pay rather dearly this winter, is the personal bitterness which is still felt by many Labour ex-ministers, including some of the most moderate and sensible men, about the tactics Mr Heath pursued against them when they were embarked on a similar enterprise. Rather different personal feelings will give Mr Powell's activities an extra edge, too. Even combined, they will not be able to deny Mr Heath whatever legislation he wants. But it would be sanguine to underestimate the effect those two reactionary forces could have on working class opinion.

Mr Heath must act upon the assumption that the present goodwill in the country, generated by his tripartite package, is a very fragile advance. It will not be maintained except by the most intense and skilful handling on his part, or (which sounds more plausible) the most bovine handling on the part of his opponents. There is always the possibility that the Labour party's present desire never to be far out of step with the largest unions, plus the weaknesses and internal tensions of its own leadership, will succeed in alienating more electors than it arouses by its campaign against a Tory incomes

policy. It can certainly be argued that the Rochdale by-election result (see page 51) showed that many thousands of Labour voters are prepared to demonstrate their disenchantment with their party when given a reasonable alternative. But against that possible advantage must be offset the built-in corrosive element in the package itself.

In purely electoral terms, politicians on both sides are telling themselves that the success of the package will mainly depend on its apparent effectiveness on the cost of living. They are probably wrong, for the effect on the standard of living may be much more important. At present, although the Tories do not seem to be very popular, the standard of living (ie, real disposable income per head) is a record 8 per cent higher than a year ago. There is no prospect under the Heath package of a similar rise in 1973, except for one small and unrepresentative group.

The flat rate increase for everybody which the package proposes is a neat way of avoiding the setting of a norm, which soon becomes a minimum target, or a total freeze, which would be highly unpopular. But the justification for the flat rate increase, as Mr Heath and his colleagues repeatedly affirm, is that it will push much of the relative gain from higher living standards in the year ahead towards the low paid. Such an improvement was not only highly desirable in itself, but it also put the pretensions of concern for the low paid by some major trade union leaders to a severe public test. Unfortunately, not very many people are really greatly interested in raising the relative position of the low paid, except the low paid themselves. And there are not enough of them to make the political difference.

Grumbles to come

That is not an issue which will be argued about in public by either party, for neither could defend its own supporters' attitudes. It is probably not yet a conscious grumble by many voters; but some ministers, at least, are as aware that it will increasingly become so as Mr Wilson, when he was prime minister, was aware of how relatively unpopular increased family allowances were with both his own party members and the electorate as a whole. Because of that, Mr Heath's package has only a short popular life. And that could not be extended by any delay in bringing the package before Parliament to make it compulsory.

There is nothing in the Queen's speech more urgent than that. Indeed, one of the virtues of the Government's legislative programme is that, with the exception of the quick bill to hold a plebiscite in Northern Ireland in the new year (see page 47), the country will not suffer unduly if any of the announced measures are delayed for a couple of months. The Tories must give up any hopes of a quiet session while Britain settles into Europe. They must face instead the painful reality of enacting some form of compulsory powers on wages and prices. But like going to the dentist, they will find they are better off for it. They need to equip themselves with a new set of teeth.

Getting away with murder

The Germans have let Arab terrorists get away with murder, not only last Sunday, but repeatedly during the past three years. This will lose lives, not save them

The German record on hijacking is not one to be proud of. On Sunday morning, three Palestinians were in jail in Bavaria waiting trial for their part in the murder of 11 Israeli athletes and one German policeman during the Olympic Games last September. By Sunday evening, they had been freed and flown out of the country by the national airline, Lufthansa, in response to the threats of three teenage terrorists holding a hijacked Lufthansa airliner over Zagreb. Herr Willy Brandt's government appeared to think that it had done the right and honourable thing, in rushing with indecent haste to comply with the young blackmailers' demands. What it has done is to condone murder, diminish justice, and pile up a host of future trouble for itself.

Not every criminal or suspected criminal in Germany is treated so gently. In June, the Stuttgart police rushed the flat of Mr Iain Macleod and shot him dead at point-blank range on suspicion of being a terrorist, which he was not. Last week, his mother was offered £13,000 in compensation. But in February this year, the German government paid Palestinian guerrillas £2m not to blow up another of Lufthansa's jets—money that must have done much to finance the subsequent outbreak of guerrilla activities. What Herr Brandt needs to explain is why his government operates one set of rules for dealing with Arabs, and a stricter set for the rest of us.

The rot can be stopped

The world has had five years to decide how to deal with Palestinian attacks on aircraft, which are something apart from the usual wave of hijacking. The attacks began in 1968, with the hijacking to Algeria of an Israeli airliner; and the Israelis have nearly, but never quite, been caught that way again. The Palestinians switched their attacks to Israeli aircraft on the ground, first at Athens, then Zurich. One group of them—possibly a splinter group—airmailed bombs to addresses in Israel, which disastrously got transferred to Swiss and Austrian aircraft instead—blowing up one in mid-air and badly damaging the other. The Palestinians who had posted the bombs were later traced to addresses in Frankfurt, but by then they were safely away. The Germans' first taste of Arab activity on their own territory was in February, 1970, when a gun battle took place in Munich airport in which one bystander was killed and 11 injured before the police arrested two Arabs.

By this time, Arab gunmen were in various jails in Athens, Switzerland and Germany: either for planting bombs on, or trying to plant them on, various Israeli aircraft. Two were even imprisoned for a short time in Syria for hijacking and blowing up an American jet. So in September of 1970 the first concerted attempt to release them was made when five jets, one British, one Swiss, two American and one Israeli, were hijacked in

quick succession. Only the attack on the Israeli aircraft failed. There was a gun battle on board which ended in the death of one hijacker and the depositing of the second, the by then famous Miss Leila Khaled, into the far from gratified arms of the British police after the jet had landed at Heathrow. Altogether, the Arabs held more than 300 passengers as hostage.

To the somewhat shocked astonishment of the British and Swiss, the German government was reportedly in favour of giving its prisoners up immediately, anxious to wash its hands of the affair. This inevitably weakened the negotiating position of the other governments, but in the end none of them released any Arabs until all the hostages were released first. The aircraft were destroyed. The hijacking of a Greek airliner also secured the release of Arab gunman held for attacks on Israeli aircraft and airline offices in Greece.

It could be argued that in 1970 the west was not really aware of what it was up against, and had not worked out a method of handling the new type of hijacker who had discovered that it was probably easier to negotiate demands while holding the aircraft and its passengers hostage on the ground than it was in the air. The same cannot be said today. Two separate techniques have now been developed, and repeatedly proved over a number of abortive hijacks. There is the violent shoot-out favoured by the Israelis, as when a hijacked Belgian jet was landed at Lydda airport last May by Palestinians demanding the release of 300 of their colleagues from Israeli jails. The American police have used this method too, with success.

The other, even more effective, technique was demonstrated successfully only a few days ago by the Bulgarians, when they talked four young Turkish guerrillas into a state of exhaustion. The Turks, like the Palestinians, were asking for the release of prisoners. They did not get it, and an earlier group of Turks who had also tried the hijack-to-Bulgaria technique did not get their way either. Croats who arrived with a hijacked jet in Sweden were shunted round Europe in an aircraft of limited range until they, too, gave up from exhaustion and without harming anyone. Japanese placated hijackers by a member of the government offering himself as hostage. The Germans, however, have never even tried to talk the Palestinians into the ground.

Herr Willy Brandt has preferred to take all their menaces at face value; to assume that they will automatically do everything they are threatening to do if thwarted, as if every young man with a gun in his hand has the nerve and sufficient disgust with life to use it against both himself and other people. The Turks said, after they surrendered, that they could not have killed or even harmed their hostages. Is Herr Brandt arguing that Arabs are more brutally insensitive?

German officials were saying privately this week that they were sick and tired of being dragged unwillingly into the Arabs' quarrel with Israel; were secretly glad of any excuse to be rid of the Olympic Village gunmen, and blamed Israel anyway for advice that directly contributed to turning the Olympic fiasco into the massacre that it was. But if they believe that this is the last that they will hear of the Palestinians, the Germans are almost certainly wrong. They are likely to hear of other terrorists, too. Lufthansa's jets and passengers could become the target for every crook, gunman and crackpot who needs either money or a friend to be sprung from jail. For the brutal calculus the Germans have invited

needs plainly to be set down. Henceforth if you are a member of a group which wants to assassinate or kidnap-for-ransom any foreign potentate, statesman, diplomat, greedy capitalist, inconvenient socialist, trade rival, crusading journalist, immigrant leader, Irishman, Arab or Jew, you would seem to have every incentive to wait until he visits Germany. Then, like the Munich terrorists, you can expect to be freed within six weeks, provided one of your friends holds anything that looks like a live grenade at a Lufthansa pilot's head. Herr Brandt may think he has shown calm unflappability just before the German elections. Not in the eyes of any distinguished prospective visitors to Germany, he hasn't.

Vietnam's prospect of peace

If peace does come, the Americans should show magnanimity to their opponents, but they should not relax their hold on essentials at the last moment

It has been its own sort of war from the start, and it is staying in character right to the end. Even when the basic terms of a settlement have been published by both sides, no one is quite sure whether the Vietnam war is over, or who has won if it is. That is a measure of the failure that has dogged public understanding of this war. But it does look as if North Vietnam has at last crossed the dividing line, and it is doubtful whether it can draw back over it again.

The North Vietnamese might even now decide to tear up the whole deal. They have looked increasingly nervous as election day approaches in the United States, and there has always been a tendency among them to call down the darkness if they do not get their way. But that does not seem to be the advice they are now getting from Russia and China, and even if they did announce their withdrawal from the negotiations they are probably not going to be believed. Their own publication of the concessions they offered on October 8th has made their weakness visible. On October 8th they dropped the demand for the removal of President Thieu. They abandoned the idea that their own friends should be put into positions of executive power in the Saigon government as the condition for a ceasefire, even though a good deal of the western press was wrongly reporting, long after October 8th, that the Americans were ready to give them just that sort of coalition. They stopped calling for the end of all American aid to South Vietnam. Having once made those concessions, and made them public by its own choice, North Vietnam is going to find it hard to persuade people that it can cancel them.

Indeed, it looks very much as if North Vietnam's negotiators may have outfoxed themselves. They seem to have let themselves be persuaded that by breaking secrecy over the agreement reached after October 8th they would put the squeeze on President Thieu. Within limits, that is true. Mr Thieu now has to bargain within the framework of the terms as Mr Kissinger has described

them, and the South Vietnamese cannot ask for some wholly new condition that lies outside those terms. But there is nothing to suggest that President Nixon thinks Mr Thieu is just being obstructive when he says that the terms are unsatisfactorily vague on two points, or that the Americans are not prepared to wait until North Vietnam clears up these two obscurities. And by deciding to open up the results of the negotiations to public view the North Vietnamese have in fact made it easier for the Americans to wait for that to happen.

A shift in the Senate?

The evidence that peace is as close as that may have already helped to give Mr Nixon a good many extra votes next Tuesday, including, perhaps, extra votes that will put more Republicans into the Senate and thereby reduce senatorial opposition to the financing of the war. If that should happen, the last major constraint on his Vietnam policy would have been removed. This is the price that North Vietnam has paid for its revelations. It is the squeezers who have been squeezed.

The first of the two obscurities that have to be cleared up is the part to be played by that "National Council of Concord and Reconciliation," and this may not be as difficult as all that. The North Vietnamese wanted a form of words that would not require them to admit that they had dropped the coalition idea, and the United States will be right to be generous with words. Mr Kissinger has said that he is prepared to call this body an "administrative structure," if that is what North Vietnam wants. But it needs to be made certain that both sides understand that this organisation is not intended to be a substitute for, or a potential alternative to, the present government of South Vietnam.

It has to be accepted that the present government will stay in office until it is replaced by a new one chosen by methods acceptable to Mr Thieu and his colleagues, as well as to their rivals; that the main job of the council

Who cares about technological revolutions?

Send as much money as you can. We need it urgently both to continue the projects we have started and to tell others in this country about some of the problems which poor countries face.

In return we'll send you a copy of *A Kind of Caring* — a report by five journalists on Oxfam's work in the field.

We believe this is the kind of revolution you approve of.

It's up to you to prove us right.

OXFAM

Room E, Oxfam, 274 Banbury Road, Oxford OX2 7DZ

We do. Here are two. Concorde can knock 200 minutes off the time it takes to move 100 people from London to New York.

It has a sonic boom and it costs about £20 million.

An old oil drum on wheels can knock 48 hours and 200 miles of fetching and carrying off the time it takes to move a day's supply of water from well to village.

It doesn't have a sonic boom and it costs about £1.

Oxfam spends the money you give to provide, among other things, simple revolutionary pieces of equipment like this water carrier to help poor people help themselves.

If you feel that this is the kind of technological revolution which is really worthwhile, please do something to help.

Give us your time. Contact your local Oxfam organiser via the phone book or by writing to the address below.

Tokai Bank Ltd.

THE DESK DIARY makes keeping appointments a pleasure. It is the incomparable desk-top work of reference for people of affairs. It contains 100 pages of valuable facts and figures specially distilled from international research surveys and official statistical analyses covering public affairs, commerce, industry and the professions. Special sections on U.K., U.S.A., E.E.C., World. A totally revised 60-page, fully indexed world map section, including special highly informative statistical maps and charts and 16 street plans of important world city centres. A loose, durable, six-year calendar. Two blue heavy silk markers to find those reference sections you use most and 117 superbly designed diary pages. Beautifully bound in rich red leather with its title, and your initials, in real gold.

THE POCKET DIARY

This slim pocket diary, delightfully practical to use, has been designed to keep its immaculate appearance the whole year. It incorporates the same day-to-day layout as the Desk Diary, a three-year calendar, blue silk marker and many other features. Luxuriously bound in red leather, finished with gilt metal corners. Order one for yourself and let us add your initials—or name—in gold leaf.

Obtainable only from The Economist

Price including inland and surface postage: Desk £5.00 (\$12.50).
Pocket £1.75 (\$4.40).
Gold-blocking: initials 40p (\$1) names 75p (\$1.90) extra per diary.

Our jets don't move any faster. Our passengers do.

Our passengers are a step ahead of the rest. They're taking the lead in the development of a rich, expanding, wide-open continent: Africa.

To Africa, from Africa and within Africa, they fly Air Afrique. The only airline with the size and speed they want.

Like 84 flights a week. To 34 African cities. And every flight has one thing in common. Efficient, courteous, unobtrusive service.

Which we mean to expand still further. For instance, we're just about to introduce the first three giant DC10's the continent has ever seen.

At Air Afrique, we can't afford to hang around. Nor can our passengers.

Continued from page 104

Jones average moved up by nine points, amid brightening prospects that the North Vietnamese did not look too indignant at the passing of the October 31st deadline. On Wednesday the index went up another 13 points to close at 968.54; turnover shot up to 21m shares. Once the election is out of the way, brokers expect the market to respond to the underlying economic forces (as brokers are wont to do when the fundamentals look good). They certainly hope that trading will be well above the recent 15m-odd shares a day. Brokers are one section of the community that has not been enjoying anything like economic recovery, and the share prices of the publicly quoted brokerage houses have slid nastily. In other sectors of the economy the indications are fine. Corporate earnings in the third quarter have been especially good despite economic controls. Gross national product, industrial production and personal incomes have all continued to grow, though a bit more slowly than earlier in the year. This slowdown is welcomed by the professional optimists on the ground that it suggests the economy is less likely to overheat next year.

The big game on Wall Street this winter is to anticipate the companies and sectors which the bank trust departments (who are nowadays the dominant institutional investors) are likely to favour in a pure economic environment. With the bank-favoured blue chips now bid up to ultra-high price-earnings multiples, one common guess is that their attention may focus on cyclical and secular growth industrials, such as chemicals, machinery, paper and drugs. Meanwhile, investor interest has been drawn to such low p/e groups as utilities, savings and loans institutions, and life

insurance companies. A difficulty in trying to second-guess the trust departments is that they might not try to milk the secondary level stocks. They could just stay with the quality growth issues, bidding them up to impossible heights. Everyone is guessing what the trust departments think. Perhaps they don't?

Japanese market

Nip on budding investment

The ban on foreign investment in Japanese securities provides excellent ammunition for a further rise in the Japanese market for anybody who can find a way to get into it. When the new exchange controls were announced on October 20th, the Tokyo index fell only slightly—and it has since recovered momentum and gone on to even giddier heights. On Wednesday the market closed at another new record level of 335.0.

Last December's revaluation of the yen set the starting traps for the

current phenomenal bull market, and the next revaluation, which is surely signalled by the succession of desperate attempts to avoid it, will be accompanied by further measures to switch resources from exports to home output. Foreigners will continue to try to get into the stock market, and a yen premium market will almost certainly provide the pricing mechanism to cope with that demand.

The new controls take the form of a general rule that purchases by non-residents must, until further notice, be balanced by non-resident sales. The modus operandi is that every broking house is obliged to ensure that purchases on behalf of foreign clients do not exceed sales by foreigners over a six-day trading week, although with one or two minor concessions. In practice, this means that brokers have to keep an eye for a match on each transaction, or else they might have to "induce" some foreigners to sell to balance the books at the end of the week. Official Japanese spokesmen are complacent about the arrangements, and argue that profit-taking will prevent any premium going very high. There are still some legitimate ways of beating the controls, for instance by buying convertible Japanese Eurobond issues. These have already moved up.

International fund managers are as unhappy as one would expect. So are Vickers da Costa, the British stock-brokers, who have just opened a branch office in Tokyo. It will have to do more selling of British equities—just as the ever-growing number of Japanese brokers in London (six, and more on the way) will have to start buying. The latest controls are on top of others which, for example, require that the proceeds of sales of securities have to be exported or reinvested within a month.

Offshore funds

Come onshore, and go mutual?

For the private investor, the advantages of buying into offshore funds are gradually being whittled away. The tax situation of onshore funds in Britain has been improved; in the United States, the Securities and Exchange Commission has recommended legislation that would tempt foreign buyers onshore. The international approach of offshore funds is being copied by many onshore funds in Britain and America; in continental Europe investment funds have always been international in outlook. Although it is impossible to quantify, much of the new British money going into offshore funds is probably wholesale—from domestic investment and unit trusts, and insurance companies and pension funds which find offshore funds the most tax-economical way of getting international diversification.

The private investor, if he judges that New York's time is bound to come after the election, might do better to buy an American mutual fund, instead of an offshore fund specialising in the United States. Although the offshore funds in our table are, to the best of our knowledge, audited, some of them have quite hefty management charges. Mutual funds are far more closely regulated. The best offshore funds follow the best practice of domestic funds, but there

is more danger of not buying the best.

The tax disadvantages of investing in an American mutual fund rather than an offshore fund are:

(1) Long-term capital gains tax is paid by domestic funds when gains are reinvested instead of being distributed to fundholders (and only the American resident receives a tax credit for his share of the tax paid by the fund). An offshore fund pays no capital gains tax at all. Note that this disadvantage on capital gains tax applies only to switching within a domestic fund, not to sales of units.

(2) When dividends and interest are paid to foreign non-resident investors by a domestic fund, they bear withholding tax at 30% (or less if the relevant double taxation agreement so dictates). Offshore funds pay their dividends gross.

(3) When short-term capital gains (under six months) are distributed by domestic funds, the foreign non-resident investor has to bear withholding tax on this gain. An offshore fund need not distribute these gains, and anyway would be exempt from the tax if it did.

(4) American estate duty does not apply to an offshore fund. It does apply on all but the first \$30,000 of a deceased foreign non-resident's portfolio of American securities; but this

is probably not very significant as a foreign investor with that kind of money is likely to be sophisticated enough to avoid this liability by holding the shares in a nominee name.

These appear to be the only obvious tax disadvantages of investing in an American mutual fund. On the other hand there is full disclosure of portfolios (which is more than the British unitholder gets) and regulation by the SEC. If American mutual funds continue to suffer their present heavy flow of net redemptions, they will begin to call for the tax advantages the SEC wants, and go after the foreigner in a big way (especially the Japanese?).

In June, funds based in the outer sterling area suddenly found that they would no longer have to pay the dollar premium on their investments in America and elsewhere outside the former sterling area. More significantly, they no longer had to surrender 25% of the premium on sale of a security. Where these funds did not avoid the premium via back-to-back loans or by channelling their investments through feeder funds (and most of them did), the change has been of benefit to them. But British investors now have to pay the dollar premium in buying their shares in these offshore funds, although the 25% surrender rule does not apply. The premium has been rising as investors have fled from London towards Wall Street and elsewhere. The premium, quoted at 34% on \$2.60, is effectively now 21% on \$2.36.

Our table, compiled from figures provided by Seiden and de Cuevas International, shows the league table of performance over the past year (and over two years, where applicable) of major offshore funds. Once again the funds specialising in Japan show the best all-round performance: not surprisingly since the Tokyo mar-

ket was up a healthy 75% in the year to end-September. The Far East provides tricky markets, and few of these funds beat their relevant index; but the individual investor in Japan would probably have done worse. A special difficulty in Tokyo has been the extra zoomy performance of lower quality stocks—an index of higher quality stocks would probably have risen by only about 40%.

The American market is strewn with unrequited optimists. As Wall Street showed very little change in the year to end-September, defying all the hopes of the bulls, funds with high gearing have done badly. At the bottom of the American list, First Investors American has gearing to the heart-rending tune of 185%. If one feels that now really is the time for the American market to make up for

lost time, then this could be the fund to be aboard. A steadier performer in the American market has been the Centenary Fund. The managers avoid the cyclicals, and try to pick the long-term performers.

At the top of "American" funds, the Frobisher Fund, up 47% over the year, managed by Cazenove, the London brokers, is an object lesson in keeping to high quality growth situations while aggressively exploiting market opportunities, wherever they crop up. There was a big move into oil-orientated stocks, particularly in the North Sea, and into American regional banks, and a well-timed move into Europe. They avoided Germany—where shares march monotonously backwards and forwards, all in step, like a platoon of Prussian infantry—and picked some whizz stocks in

France.

The most striking fact that emerges from the list of international funds is the marked improvement in the Australians. Pan Australian External, which was only 20.7% up at the year to end-June, has now risen by 70.1% for the year to end-September and gone to the top of the league. Sales of units are now picking up after a slight hiccup when Australia left the sterling area, and are probably aided by the performance of its onshore sister fund. An added attraction of investment in Australia is its dollar might be upvalued when currency rates next change. That applies even more obviously to investment in Japan, but only to those investors who are lucky enough to be on the inside of the prohibition of new buying from foreign sources.

Offshore and overseas funds performances

Growth records of the funds, calculated on net asset value including income, over 12 months to end-September 1972 (and two years to the same date, where applicable). Only funds over \$5m. No real estate funds.

COMPANY STATEMENTS

London Merchant Securities Limited

Results for year ended 31st March, 1972

Progress of the group continues. The net profit before taxation rose by over 50% and the net assets increased by £5 million to almost £48 million. A current estimate of the net asset figure, valuing quoted investments at market prices, would be substantially in excess of £60 million. The final dividend of 6% will bring the total distribution for the year to 10% on the Ordinary shares.

GROUP RESULTS (£000)	1972	1971
Net profit of group before taxation	4,199	2,721
Net profit attributable to LMS	1,869	1,380
Dividends	995	893

International investment counselling

Managing international investments requires the establishment of *Policy*; the formulation of *Strategy*; and the execution of *Tactics*.

These elements are *indivisible*! If you are an investor with too little time to review continuously and adjust each to your needs, you might like to consider professional help.

At Lionel D. Edie International, we help you to arrive at a *Policy* considering your goals; we continuously appraise the economic outlook of major international market areas to advise on *Strategy*; and we provide experienced Counsellors with ample time to adjust *Tactics* to changing markets and changing developments.

If you would like more information about Edie's services contact Edouard Iselin, our Executive Vice President in Geneva. He will be glad to discuss *Policy*, *Strategy* and *Tactics* and explain our fee structure.

ANNOUNCEMENT

SYRIAN GENERAL COMPANY OF PHOSPHATE & MINES S.A.R.

Announce the sale of a quantity of rock phosphate production extracted from khnefis mines in accordance with the following conditions:

1—Quantities:

The yearly quantities available to be sold of the rock phosphate produced from khnefis mines are 150-250 thousand metric tons.

2—Specifications:

% P ₂ O ₅	30.7—32.5 (68—71 BPL)
% CaO	45—51
% SiO ₂	2.5—4
% F	2—4
% CL	0.15—0.25
% Fe ₂ O ₃	0.2—0.5
% Al ₂ O ₃	0.1—0.60
% MgO	0.2—0.5
Losses of Ignition:	7.5—11
Humidity	5—9 percentage max

3. Delivery and Reception as from the signature date of the contract. Buyers should receive and sellers should deliver at Tartous port a monthly quantity of not more than 2,500 metric tons and not less than 8,000 metric tons plus or minus 10% according to the captain's option.

4. Loading Conditions: As from the signature date of the contract sellers accept to sell and to deliver, and Buyers accept to buy and receive the rock phosphate quantities sold under the contract on F.O.B. Tartous Basis, and at a daily loading rate of 2,000-2,500 metric tons, which will be loaded by the conveyor belt belonging to GECOPHLM on vessels whose capacity should not exceed 8,000 metric tons maximum within 1972-1973, but after this period the daily loading rate will be 1,000 metric tons per hour and the vessel's capacity will be up to 25,000 metric tons maximum. - Demurrage and despatch money will be calculated on the daily loading rate basis, which will be agreed upon between both parties, but any other loading conditions will be discussed later between both parties, to be agreed upon according to Africanphos Charter parties' conditions. - Draught at Tartous port is 10.5 metres and acceptable vessel length is 300 metres maximum.

5. Payment Conditions: Participants should be engaged by the following payment conditions:

- The value of the contract should be paid by an L/C opened to G.P.H.O.M.I.C.O. through the Commercial Bank of Syria; such L/C should be confirmed by C.B.S.
- The A/M L/C should be opened by the nomination total value of the contract, and should be, revolving, renewable automatically to cover the value of each shipment, divisible, and payable by U.S. against the presentation of documents required to the bank which the L/C opened through.
- All expenses charged on the L/C should be paid by the Buyers.

6. Expenses and Dues. All expenses and dues charged on rock phosphate in S.A.R. will be paid by sellers who should deliver the merchandise free from any dues or expenses including the stowage and trimming fees, but not the maritime services and dues which should be paid by the owners represented by the captain, the maritime agent, or the buyers.

7. Contract Validity: The validity of the contracts, which will be arranged as a result of the offers presented, may well be a year, or more than a year, as the selling of a part of the quantities is acceptable by sellers.

8. Bank Letter of Guarantee: Buyers should present a bank letter of guarantee representing 10% of the contract value to guarantee the good execution of the contract. Such a letter of guarantee should be issued by the Commercial Bank of Syria, or by a bank accepted by C.B.S., providing that it should be confirmed by C.B.S.

9. Buyers' Representative. Buyers have the right to nominate representatives on their behalf to present the weight, loading, sampling operations, but sellers should arrange the whole necessary facilities to those representatives, which permit them to execute their obligations required. - In case Buyers want to nominate an inspector company, so the expenses will be charged to the Buyers.

10. Disputes: Any dispute that may arise between both parties should be settled amicably, or by arbitration in accordance with the rules of the International Chamber of Commerce in Paris, or in any other locality that is agreed upon between both parties.

11. Closing Date for Presentation of Offers: Offers will be accepted at the latest on 20th November, 1972, taking into consideration that any suitable offer will be reconfirmed to the participant within ten days, as from the presentation date, otherwise the unacceptable offers will be kept up to the closing date, while being compared, and reconfirmation will go to those who submit the highest price and best conditions, especially to those who attach to their offer a preliminary deposit, representing 5% of the offer's total value.

12. Offer Validity: The validity of any offer submitted should not be less than ten days, but in case the offer is not suitable, so it will be kept up to the closing date, and we will ask the participant to extend the validity of his offer which should be valid for ten days after the closing date to obtain the General Company of Phosphate & Mines, to discuss, the ratifications of Syrian authorities. Whatsoever, those who are interested to participate for purchasing any quantity of Syrian rock phosphate should present their offers to the following addresses referring on their envelope (Phosphate Calling Offer):—

- The mail address: Ministry of Petroleum Electricity and Mineral Resources (Commercial Directorate) Damascus Mutanabbi Street.
- The cable address: Petrol Ministry Gecopham Damascus
- The telex No. 20006 Petsyria.

APPOINTMENTS

Heriot-Watt University

DEPARTMENT OF ECONOMICS

Lecturer

Applications are invited for a lectureship in Economics, with particular reference to the economics of the public sector, including the nationalised industries and the appraisal of public programmes. The appointment will take effect from October 1973 or an earlier date if possible.

Salary on the scale £1,764 to £4,299 per annum with F.S.S.U.

Further particulars and application form may be obtained from the Secretary, Heriot-Watt University, Chambers Street, Edinburgh, EH1 1HX, to whom applications should be lodged not later than Monday, 20th November, 1972, 32/2/3049.

Laurentian University

SUDBURY, ONTARIO, CANADA

Academic Vacancies

Possible openings in the department of Economics. Ph.D. preferred. The department will also consider applications for one-year visiting appointments. This might interest a University economist who would like to take a year's leave from his present position. Salary and rank appropriate to qualifications. The University would make substantial contribution to travel costs. Joining date: September 1, 1973.

For more information write to S. J. Gilani, Ph.D. (London), Chairman of the Department of Economics, Laurentian University, Sudbury, Ontario, Canada.

Economic Models Group of Companies

An expanding economic consultancy based in London, Peterlee New Town and New York and specialising in the use of quantitative techniques requires a consultant economist.

Candidates should have high academic qualifications in economics and experience in the application of quantitative analysis to economic and/or social problems. Of particular interest will be experience in the management and development of econometric forecasting models.

Applications setting out qualifications, details of experience and income required should be sent to:

Managing Director, Economic Models Limited, 19 West Eaton Place, London, SW1X 8LT.

Confederation of British Industry

has a vacancy in its Taxation Department for a Taxation Economist. The duties will cover economic aspects of all the Department's work. Responsibility will also include work on Budget Representations, EEC tax policy, "Taxation in Europe," etc.

Ability to write well and handle figures is important. The successful candidate will be expected to keep closely in touch with the other parts of the Directorate where work on related subjects is in progress.

The duties and salary will depend largely on the abilities and background of the successful applicant. A good degree in economics is essential; previous experience of taxation work would be an advantage.

Written applications should be made to: The Personnel Officer, CBI, 21 Tothill Street, London, SW1H 9LP.

CHAIRMEN'S STATEMENTS

G.I.S. GROUPEMENT DE L'INDUSTRIE SIDERURGIQUE Paris, France

The Annual General Meeting of G.I.S. was held in Paris on June 22, 1972 under the chairmanship of Mr. Jacques Ferry.

EXTRACTS FROM THE CHAIRMAN'S ADDRESS

Although the position of the World Steel Industry showed a decline throughout the year 1971, the French steel production totalled 22.8 million tons, a decrease of only 3.8% compared with 1970, and the turnover reached Frs. 18,770 million as against Frs. 19,020 million in 1970. The achievement in exports (8.95 million tons) demonstrated the commercial dynamism of the French companies which tried to compensate for the decrease in orders from the national market.

Investments reached a record level of 59.7% over the previous year with Frs. 3,290 million for which Fos accounted for only Frs. 275 million.

Industrial results for the whole of the steel activities showed a decrease of 54% compared to 1970 whilst financial results decreased by 64%. Gross results after allowing for interests on loans, taxation and dividends paid to shareholders totalled Frs. 1,000 million or 5.3% of the year's turnover against Frs. 3,075 million in 1970 which represented 16.2% of the turnover. Whilst cash flow and miscellaneous proceeds financed 70.4% of the total charges in capital for the year 1970, they accounted for only 25.7% in 1971.

Long and medium term liabilities of the steel companies totalled Frs. 12,035 million against Frs. 10,448 million at the end of 1970, an increase of 15.2%. In percentage terms of turnover, these liabilities rose from 55% at December 31, 1970 to 64% at December 31, 1971.

EXTRACTS FROM THE BOARD OF DIRECTORS' REPORT

At December 31, 1971, G.I.S. commitments—guarantees and bond issues—amounted to Frs. 7,061 million, an increase of 7.8% over 1970. For the first time, two G.I.S. loans were issued during the year: Frs. 300 million in March and Frs. 425 million in September.

The Company's shareholdings in its four subsidiaries: ACIER-INVESTISSEMENT, LOTRA-SID, SIDECO and Société Immobilière BOISSIERE represented Frs. 203,275,000 in stocks.

ACIER-INVESTISSEMENT'S Annual General Meeting was held on May 25, 1972, and the Profit and Loss Account showed a profit of Frs. 10,312,179. Net dividends distributed amounted to Frs. 4.92 per share.

The capital of ACIER-INVESTISSEMENT was raised to Frs. 175 million in May and divided into 1,750,000 shares of Frs. 100 face-value.

SECOND BROADMOUNT

TRUST LIMITED

Expanding Revenue Higher Dividend

The Chairman, Mr. E. B. Montesolo, J.P., at the meeting recently held, said:

For the year ended 14th September, 1972, gross revenue at £135,370 showed continued growth and the net profits were correspondingly increased. A detailed valuation amounted to £4,359,250 compared with a book value of £1,037,048. Giving effect to this value each 5p ordinary share was represented by 52.3p of assets.

The reduction in the number of securities from 518 to 489 resulted, in the main, from takeovers and mergers, which continue without cessation.

Your Board recommends a final ordinary dividend of 15 per cent, making in all 23.5 per cent for the year—an increase of 2.5 per cent. A balance of £58,049 has been carried forward.

The days ahead are fraught with commercial and other troubles and future dividends must depend upon actual results.

APPOINTMENTS

University of Cambridge

Assistant Director of Development Studies

Applications are invited for a University teaching office of Assistant Director of Development Studies in the field of politics and administration in developing countries. The successful candidate will be responsible for designing and teaching a specialised option in this field as part of the Cambridge Course on Development, which is primarily for serving officials from the lesser developed countries.

The appointment will be for a period not exceeding five years, with stipend to be determined in the pensionable scale £2715-£4614, and will be from the beginning of the academic year 1973-74, or an earlier date to be agreed.

Applications for this appointment, giving particulars of qualifications and experience, together with the names of two referees, should be sent to the Secretary, Overseas Studies Committee, c/o University College, Selwyn Gardens, Cambridge CB3 9BB, by not later than 15 January 1973.

University of Western Australia

PERTH

Applications are invited for the following appointment:
Agricultural Economics
LECTURER in the Department of Agricultural Economics, Institute of Agriculture. Candidates should be graduates with experience or interest in regional or national agricultural planning, national and international agricultural marketing, or agricultural finance and credit. The appointee will participate in both the teaching and research of the Department.

The salary ranges are: Lecturer—\$A6,697-\$A9,286 p.a. Benefits include superannuation similar to FSSU, fares to Perth for appointee and dependent family, removal allowance, study and long service leave, subsidised temporary accommodation and housing loan scheme.

Applications for this appointment, giving full personal particulars, qualifications and experience should reach the Registrar, University of Western Australia, Nedlands, Western Australia, 6009, by 2 December 1972. Candidates should request three referees to write immediately to the Registrar.

The University of Manchester Institute of Science and Technology

Applications are invited for the following vacancies in the Department of European Studies and Modern Languages.

LECTURER IN EUROPEAN STUDIES (POLITICS) (Ref. ES/193/AD)

A preference will be given to applicants whose teaching and research interests lie in the field of French Politics and Institutions.

LECTURER IN EUROPEAN STUDIES (HISTORY, ECONOMICS OR ECONOMIC HISTORY) (Ref. ES/194/AD)

A preference will be given to candidates whose teaching and research interests lie in any of the following fields:—

- (1) Economic development of modern Europe;
- (2) Social history of modern Europe;
- (3) Economic policy in Europe.

Commencing salary, according to qualifications and experience within the scale £1,764 to £4,143 per annum (£4,289 in October 1973) with P.S.S.U.

Requests for application form and conditions of appointment quoting appropriate reference number should be made to the Registrar, U.M.I.S.T., Sackville Street, Manchester, M60 1QD, to whom the completed form should be returned by 30th November, 1972.

For further
announcements
see pages 5 and
114 to 121

University of Malaya

Faculty of Economics and Administration

Applications are invited for the posts listed below which are now vacant and new posts expected to be available early in 1973. For all posts, subject to suitable professional/academic qualifications and experience, preference will be given to candidates who are competent in Bahasa Malaysia (Malay). Candidates should have high academic and/or professional qualifications and wide experience in teaching and research in their respective fields.

CHAIR IN LAW STUDIES (Industrial Law, Commercial Law, Income Tax Law and Constitutional Law in the relevant areas of Malaysian Laws)

CHAIR IN ACCOUNTING

CHAIR IN ANALYTICAL ECONOMICS (Micro Economics, Theoretical Economics)

CHAIR IN PUBLIC ADMINISTRATION

ASSOCIATE PROFESSORS (3 new posts) and LECTURERS/ASSISTANT LECTURERS (several posts) in any of the following fields: Accounting; Economics; Business Administration; Public Administration; Rural Development.

For the Lectureships/Assistant Lectureships, candidates should have at least a good Honours degree with suitable teaching or research experience in addition to the special qualifications indicated in the further particulars. For appointment as Associate Professors, high academic and professional qualifications together with wide teaching and research experience are required.

Emoluments (approximate sterling equivalents per annum) are:

- (i) Salary Scales:
Professor: There is a range of basic salaries, to a point on which a Professor is appointed, depending on his qualifications and experience. These are: £2919, £3032, £3146, £3259, £3373, £3486, £3600.
- Associate Professor (Senior Lecturer): £2277 x 89-2414/RP/2019.
- Lecturers: £1524 x 73-1963/2035 x 81-2441.
- Assistant Lecturers: £1330 x 65-1460.

(ii) In addition, a Variable Allowance is at present payable at the following rates: 35% of basic salary subject to certain maxima depending on marital status: minimum £243 per annum, maximum £848 per annum.

(iii) Supplementary Housing Allowance: £503 per annum.

Medical benefits are provided under the Medical Services Scheme of the University.

Further particulars, details of superannuation and application forms are obtainable from the Association of Commonwealth Universities (Appal), 26 Gordon Square, London WC1H 0PF. (Tel: 01-387 8372).

The closing date for the receipt of applications is 30 November 1972.

SOCIAL SCIENCE RESEARCH COUNCIL

ECONOMICS

The Economics Committee of the SSRC supports a wide range of research programmes and projects in UK universities, polytechnics and independent research institutes. It promotes the development of economics in a number of ways—e.g. by sponsoring research seminar groups and by publishing (in conjunction with the Royal Economic Society) review articles in applied economics. The Committee also allocates postgraduate studentships in economics.

An economist is required as Committee Secretary to help the Committee in its work. The successful candidate will have a good honours degree in the subject, and possibly a postgraduate qualification. He or she should have experience either in teaching or research, and might be at present working in higher education, government or industry. Secondment will be considered.

Salary Scale £2,639-£3,658. Starting salary may be above the minimum. Superannuation arrangements under FSSU.

Applications stating age, qualifications and experience, and giving names and addresses of three referees should be sent to The Establishment Officer (SSO/E/2), SSRC, Room 1135, State House, High Holborn, London WC1 not later than 20 November 1972.

Assistant Statistician

Liverpool

c. £3,250

A leading insurance organisation is seeking a statistician to join its expanding management services activity.

Attractive terms of service will be offered including a non-contributory pension scheme and mortgage facilities at advantageous rates. Reporting to the chief statistician responsibilities will be concerned with assisting in the supervision of a small team concerned with:

- examination of new statistical systems proposals,
- provision of statistical advice to management,
- support activities for a computer operation,
- controlling statistical sampling activities.

Candidates, aged 28/35, should hold an honours degree in an appropriate discipline and have had supervisory experience in computer based statistical work.

Write, in confidence, quoting reference 1767/E, to: E. W. Cornford,

Peat, Marwick, Mitchell & Co.,
Management Consultants,
Suite 401, Salisbury House,
Finsbury Circus,
London, EC2M 5UR.

APPOINTMENTS

The
Economist

European Sales Manager

This is a new appointment which offers a remarkable management opportunity to an exceptional man (aged 25-35) who will report to the Circulation Manager, and be responsible for increasing the sales of The Economist in Europe profitably. He will be expected to spend a minimum of 100 days a year in Europe and be capable of establishing and supervising a wide range of sales programmes to develop both subscription and bookstall sales.

A significant amount of his time will be spent selling The Economist directly to senior management in large organisations. It is essential that he can produce evidence of success in selling to businessmen. He should be fluent in French and German.

The sales targets are ambitious. Comprehensive promotional support will be available. He will be expected to contribute to marketing policy and be capable of creating and leading a team of part-time representatives in Europe.

The salary will be negotiable according to experience and qualifications. A car is provided. There is a contributory pension scheme.

This is an unusual career opportunity with excellent prospects for the man who meets the challenge.

Applicants should send a typewritten curriculum vitae with a handwritten letter of application, outlining their eligibility to:

Graham Billington,
Circulation Manager,
The Economist,
25 St James's Street,
London SW1A 1HG.

Applications should arrive by November 26th.

Community Relations Commission

Principal Administrative Officer and Secretary to the Commissioners

The Commission invites applications for this new senior post. The Principal Administrative Officer will be responsible for:-

- (i) All establishment matters covering a staff of over 80 including recruitment, pay, grading, conditions of service, promotion structure and day to day management;
- (ii) Financial accounting and financial control covering a growing annual budget standing at present at about £700,000;
- (iii) The secretariat functions to the Commission.

The Principal Administrative Officer will be concerned with future planning and policy as well as day to day affairs but his main task will be to manage the main activities described above efficiently yet harmoniously with the other parts of the organisation.

Applicants should have experience in staff management, financial accounting, financial control and knowledge of secretariat work. They will need sound judgment, tact, patience and the ability to work well in a multi-racial organisation. A degree or professional qualification is desirable but not essential. Preferred age 35-45.

Commencing salary is £3478 plus £175 London Weighting per annum (on the National scale £3478 to £4708). Exceptionally a higher starting salary might be arranged. Contributory pension scheme. Appointment on a 2 or 3 year period of secondment would be possible.

Please send a large self-addressed envelope marked 'PAO' for further particulars and application form to Establishment Officer, Community Relations Commission, 10/12 Russell Square, London WC1B 5EH. The closing date for completed application forms will be 17 November 1972.

University of Warwick

Centre for Industrial
Economic and Business
Research

There is a vacancy for a Senior Research Fellow, of post-doctoral or equivalent status, to initiate and pursue research within the above areas: the Centre is closely connected with the Department of Economics and the School of Industrial and Business Studies. Salary will be within the scales £1764 x £158/159-£4143; as from October, 1973 the scale will rise to £4299 p.a. with P.S.U. The appointment will be for a period up to 30th September, 1974. Further particulars of the Centre and application forms may be obtained from the Academic Registrar, University of Warwick, Coventry CV4 7AL, quoting ref. no. 12/L/72. Closing date 17th November, 1972.

WINES

YOU ENJOY WINE? Order the November issue of "About Wine" 10p. from W. H. Smith or other newsagents. Sample copy from About Wine, 36 Southampton Street, W.C.2. 01-836 1147.

University of Tasmania

Applications are invited for the following appointment:

OVERNIGHT SUCCESSES

are exceptional anywhere, except in Romania's booming petrochemical sector where CHIMIMPORT-Bucharest is trading from the action centre. Exports of carbon black and synthetic rubber, for example, have doubled in five years. Check our export range now:

CARBON BLACK:

"Carbodus 50" (FEF) . . . "Furnal R 300" (SRF-1) . . . "Rebonex-I" (ISAF) . . . "Rebonex-HI" (ISAF-HS) . . . "Rebonex-H" (HAF) . . . "Rebonex-HS" (HAF-HS).

PLASTICS AND SYNTHETIC RUBBER:

Polyvinyl chloride powder (Rosevil and Oltvil brands), suspension and emulsion types . . . High-pressure (low-density) polyethylene (Ropol) . . . Polystyrene, standard and impact proof. Butadiene-styrene rubber, types 1500, 1502 and 1712 ("Carom" Brand).

INORGANIC SUBSTANCES:

Sodium bichromate, sodium bicarbonate for pharmaceuticals or food-

stuffs, aluminium sulphate, calcium carbide, calcium chloride, aluminium chloride (catalyst for Friedel-Crafts reactions), magnesium oxide and magnesium carbonate.

ORGANIC INTERMEDIATES AND SOLVENTS:

Phenol, trichloroethylene, perchloroethylene, carbon tetrachloride, isobutanol, octanol (2-ethylhexanol), phthalic anhydride, maleic anhydride, acetone, synthetic fatty alcohols, cuts C12-C14 and C15-C18.

ALKYLAMINES:

Monomethylamine, dimethylamine, trimethylamine, monoethylamine, diethylamine, triethylamine, isopropylamine.

Representatives for United Kingdom:

[illegible]

The ice cometh

Eskimo Ted

The freeze will probably be obeyed by the big trade unions until the end of February, but the whole future of British society may depend on a confrontation with one or more of them in 1973, page 13.

The likely impact of the new policy on economic growth, the balance of payments, tax rates, interest rates, industries, the shops and wage bargains, pages 77-85.

Uproar greeted the bill in the Commons, and a touch of malice, page 25.

Stock markets took it quietly, but dropped when the Bank of England slightly tightened monetary policy, page 107.

Back on his own

Mr Nixon's runaway success, and the Republican party's failure, mean that his majority is still just a temporary coalition; but what he does in the next four years could spell even worse news for the Democrats, under Senator Kennedy or not, in 1976, page 15.

Mr Nixon's majority reveals an America no longer divided about essentials, and less tempted to crawl into its shell, page 18.

America's vote against change, the state of the Congress, how Senator McGovern took defeat, why Massachusetts stayed Democratic, campaign spending, youth's first election and the view on the box, pages 31-40.

You've got to hope

Egon Bahr for the west and Michael Kohl for the east have signed their two-Germany treaty: the theory is that a satisfied east Germany will be a more civilised one, page 18. The west German election, pages 50 and 53.

Autumn books

What with bookbuses, book-weeks and bookmilitancy all round, what should the modest bookworm be reading at this autumnal season? Guidance in a special supplement, after page 68.

We've got stacks of good cases

Storage and handling problems that have been solved by using the right equipment, in the right place, at the right time.

It takes experience to do that successfully. Lots of it. Take a look at our printed case studies and see the sort of thing we've done.

Handling in the food industry; the brewing trade; in a china factory; in a dairy or most of the countless industries there are in the world. Lansing Bagnall trucks are hard at work. In fact just getting the best and most efficient use from storage space.

But that's what we're doing all the time. (We're helped of course by the fact that we've got the most comprehensive range of electric trucks in Europe.)

Drop us a line and we'll put them through their paces in our specially designed demonstration theatre, or take them to your own premises so that you can see them working in your conditions.

Clip the coupon and we'll send you a selection of case studies - they can make very good reading.

To: D. G. Caswell, Home Sales Division, Lansing Bagnall Ltd., Basingstoke, Hampshire. Telephone: Basingstoke 3131. Telex: Bagnall Bstke 85120. Please send me a selection of your case studies.

The freeze

SIR—The degree of tired cynicism to which *The Economist* has fallen is illustrated by your article on an incomes and prices policy (October 28th). Rather than admit that there is any principle at stake, eg, yet another massive step forward in government control and regulation of the economy, you restrict yourself to a discussion of how "effective" the measure would be. The whole attitude of the magazine is one of short-sighted pseudo-realism on this issue. Even if temporarily successful, such panic measures, as shown as far back as the late Roman empire, are never successful in the long run. The whole repulsive set up, based on fear, is reminiscent of communist methods.—Yours faithfully, *Ramsgate, Kent* NICHOLAS G. BOGG

SIR—Your lead article "Five minutes to twelve" (October 28th) identifies the eco-political problems conspicuous in America and the United Kingdom but your proposed solutions will only temporarily mitigate the symptoms. In the last paragraph on page 12 you settle on "the toughest possible statutory enforcement package" as the means to avert economic-social disaster.

The real problem is the symbiotic relationship between monopoly unionism and state monopoly production through the nationalised industries. The unions preclude any rational bidding for labour for those industries and competitive bidding between nationalised and private industries. This is facilitated by the state employer which by its inherent power has excluded competition in production for the market, and which can set prices at will as a consequence, and has no reason to be efficient or mindful of its customers for the same reason. The state monopolies will not permit anyone to compete with them.

Your chart on page 75 clearly indicates the problem: your economy has been forced to the abyss by the nationalised industries and their employees who are protected by law from their customers and any competition.

In America inflation has been most noticeable in similar circumstances—the construction industry, substantially union-dominated, also subsidised by Federal building contracts, loans, subsidised bank credit, the tax deduction for individuals' interest payments, etc.—food prices after 70 years of fantastically expensive agricultural subsidy and control programmes—numerous other industries (eg, textiles) protected from their errors by duties that exclude foreign competition. Now, more

than ever, complaints mount against the post office monopoly.

Now, more than ever, America and the United Kingdom do not need more controls by Mr Nixon or Mr McGovern or Mr Heath or Mr Wilson, and the solution is the de-politicising of the economy.—Yours faithfully,

D. F. JUDIN, JR
Battle Creek, Mich.

SIR—The yearly dramas of midnight discourses on wages and prices policy are not only nonsense but do not hide the enemy the Government really fears is deflation as much as inflation.

That symptom of inflation and distrust of the Government's credit, the bigger yield from government stock than from shares known as the reverse yield gap, must be turned around. The Prime Minister has it in his power to issue immediately a statement to the effect that an examination is to be made as to the wisdom or not of the institutions and pension funds being required to put a fixed proportion, say 30 per cent of their funds, into gilt-edged. This would mangle equity prices that very day as the institutions liquidated shares (which are far too high except in inflationary terms) but would raise the price of gilt-edged as they rushed to switch, making money cheaper, equity yields more generous and real organic investment in industry more attractive. The grossly inflated property market would start to fall as institutions were seen no longer to be net buyers but also to be withdrawing some of the support they provide present property levels as lenders.

Such positive action would show the unions and their members that the Government is unfrightened at striking at the root of our main problem more equitably than through a prices and incomes policy.—Yours faithfully,
London, WC1 H. D. F. CREIGHTON

SIR—Perhaps your writer's review of events, "How did we get into this mess?" (October 28th), began too late. Long before his "first" phase (1955) the economy was irrecoverably committed to the path leading the country to the present impasse.

In the light of experience since the end of the Victorian era, and including observer duties over the world financial scene, I would contend that the first phase dates precisely from August 4, 1914, when the Bank of England court suspended its Royal Charter and ceded to the executive control of the money supply. By that act, sterling, then the pre-essential public utility of the mercantile world, was stripped of its vital fiduciary content. After that, not policy but a process took command of events. So much was manifest in the next phase when Baldwin tried and failed to restore sterling: he learnt—as Mr Heath is about to discover—that you cannot, even by statute, do better than set up the shadow

of stability until the fiduciary substance is restored. Keynes soothed that generation's anxieties with the assurance that the process was beneficial: he explained everything, except—alas for us!—what to do when you reach the inevitable "mess."

Historically typical too is the plight of the executive today: reliance upon wasting money has diluted its authority over vital aspects of the economy now subject to the veto—a negative role and, therefore, unhelpful—from the magnates of organised labour, whose objects and loyalties, divergent from the nation's present needs, must frustrate Mr Heath's power to rule effectively, just as, in a like case, it made nonsense of the central power under King Stephen and Henry VI. The dilemma is not new: but history teaches that it cannot be subdued by expedients. The first to try to stem currency debasement by statutory price controls was the Emperor Diocletian: it failed, and in despair he divided up his world empire and quit public life. His successor, the Yorkshireman—Constantine the Great—whose example Mr Heath would do well to follow—applied the only feasible remedy: he imposed a ruthless regime of trusteeship over the currency. It remained the main prop of his successors for 1,000 years.

Or more briefly, sir, I contend that it is fatuous to suppose that "inflation" can be contained while the money supply is watered by 25 per cent annually.—Yours faithfully,
London, SW1 JOHN LOMAX

Ugandan Asians

SIR—Please refer to Mr Vipinchandra D. Shah's letter (October 7th), in which he criticised Ugandan intellectuals for keeping quiet about the Ugandan Asian issue.

I was amazed to read that this Asian who lives in Nairobi, and is therefore in a good position to know, could write this because he ought to know that any intellectual who dared to criticise the government's actions, whether on moral or intellectual (or both) grounds, would almost certainly disappear at the hands of kidnappers who happen to be General Amin's soldiers.—Yours faithfully,
Nairobi W. M. MUKONE

SIR—I never buy *The Economist*, but sometimes if I have access to a copy gratis I glance through its pages to see if there has been any change in the peculiar left-wing policy which you follow, a very odd trait in a journal supposed to be guide and mentor to the investor and capitalist. Nothing could persuade me to take your advice on investment of any kind.

On a recent journey by air I happened to have a copy of your journal thrust upon me and turning to the letters from readers page was amazed to see that you had published the views of those who disagree with your policy of admitting Asians to Britain. The views as expressed

MANAGEMENT APPOINTMENTS

£7000 PA AND OVER

Johannesburg

R.20,000+

GENERAL MANAGER

LEGAL AND GENERAL ASSURANCE SOCIETY LIMITED requires a general manager to head its operations in Southern Africa in succession to the present incumbent who is retiring in 1973. The General Manager reports directly to the Chief Executive of the Society in London and is a member of the local Board of Directors. He will be based at the Society's principal office in Johannesburg and will be responsible for directing about 900 staff at that office and at branches in the main cities of the Republic and Rhodesia. The present level of business is of the order of R.25m. premiums covering all classes with total insurance assets of around R.175m.

The ideal applicant will be

- A graduate or the holder of an appropriate professional qualification
- In the age range 40-45 years
- A manager with good experience of controlling a large staff engaged in a wide range of activities
- A man with a demonstrable record of success in his career
- A mature individual with the ability to participate in top management of the Society.

Although preference will be given to applicants who have an insurance background, the man appointed should be a good administrator with experience of controlling the financial performance of business activities. Great emphasis will be placed on the candidate's abilities as a leader and an innovator.

The main interviews for this post will be held in London but candidates resident in Southern Africa will be asked to attend preliminary interviews in Johannesburg.

Brief but comprehensive details of career and salary to date, which will be treated in strict confidence, should be sent to ME972 Executive Selection Division.

Cooper Brothers & Co. Limited,
Management Consultants,
Shelley House, 3 Noble Street,
London, EC2V 7DQ. England.

Financial Controller

for a large British manufacturing company with nine figure turnover and numerous overseas subsidiaries.

- RESPONSIBILITY is to the Finance Director for consolidation of group accounts and associated tasks.
- A qualified accountant is needed with a knowledge of international tax and exchange regulations and experience of UK and foreign financial operations. This may have been gained either in industry or in the profession at a senior level.
- SALARY negotiable but is unlikely to be less than £7,000. Car provided.

Write in complete confidence
to Dr. W. M. Dixon as adviser to the company.

JOHN TYZACK & PARTNERS
LIMITED

10 HALLAM STREET • LONDON WIN 6DJ

STOCKBROKING

Fixed-Interest Partner

A major opportunity now exists in a firm of institutional stockbrokers for a man of high calibre to be appointed head of its fixed-interest department.

Applicants must, of course, be fully conversant with all aspects of the fixed-interest market but should, in addition, have a proven record of achievement, the necessary personal qualities to manage the department, and the ideas and initiative to supervise the future development of this side of the firm's business.

The man who is appointed will almost certainly already be earning a five figure income and will be given every opportunity and all the support needed to achieve success and the early offer of a partnership.

Box 2544

by Mr Randall (September 23rd) I can vouch for, having worked for 30 years with Indians and Africans. But if Mr Randall thinks that his remarks, however accurate and based upon experience, will influence the parochial minds of those who live in and around Fleet Street he will be disappointed and, indeed, it is quite surprising that his letter ever got into print as the views of the silent majority in Britain are stifled by the national press whether it be on immigration, the common market or other important national issues; however, acres of space can be afforded left-wing cranks and agitators, "do-gooders" and the clergy and, of course, journalists.

As for Mr Randall's suggestion that the British people should note and remember the names of those who have been responsible for this and earlier invasions of Britain by alien people, he might have added that to the names of the politicians responsible should be joined those of some journalists and most of the clergy; they will make a pretty collection if and when the day comes for the British people to settle accounts with them. It happened at Nuremberg!—Yours faithfully,
Nassau, Bahamas J. H. THOMAS

Watergate ripples

SIR—Surely the many differences between American and English usage do not include referring to the ugly and sinister action of Mr Nixon's paid henchmen at Watergate as a prank (October 14th)?—Yours faithfully,
Palo Alto, California JAMES A. CURRAN

Vietnam

SIR—The tragedy of Vietnam is that world opinion is so much concerned about the need for elections in South Vietnam, but nobody seems to remember the fact that the North Vietnamese never had a chance to elect anybody.

May I suggest that together with the elections in the south some in North Vietnam should also be held, giving its citizens the right to vote and to dissent? Or are there two standards of world justice: one for the regimented north and another for the incipient democracy of South Vietnam?—Yours faithfully,
Caracas EDUARDO DARON BUDA

Irish Vat

SIR—Your comments on Irish Vat (November 4th), while entirely accurate, missed two most important points.

First, that owing to the diabolically awkward rates implementation of the tax is proving cumbersome and fearfully costly in terms of re-equipment and the sheer immensity of the man-hours involved in dealing with the tax. The inflationary spiral (already worse here than in the United Kingdom) is getting a gratuitous boost. Scarce wonder that

many of us are beginning to believe our rulers' Irish eccentricity has gone a bit too far.

Secondly, this is a small country and the total disregard for public opinion, the difficulties they are creating for the trading community, the severity of the impact on the weaker elements in our society of Irish Vat have not gone unnoticed in the north. Whatever else people may argue about, the Dublin authorities have effectively widened the economic gap between north and south in a most blatant way. Despite pious protestations, once again Dublin has done nothing to allay northern fears about the consequences of coming under its rule.

As one bar room cynic remarked: "Ah, but sure won't this Vat be a great boon for the smugglers?"—Yours faithfully,
Dublin M. HARRIS

Art collecting

SIR—An article on the current art market (October 28th) contains the statement: "In England . . . the record of collecting in the present century has not been a happy one." Indeed! Consider achievements such as those of Sir Percival David, Sir Chester Beatty, Count Seilern, Denis Mahon, Samuel Courtauld, Sir Robert Sainsbury, Sir Karl T. Parker, Sir John Pope-Hennessy or those of the seemingly limitless succession of comparable names. What other nation can boast such diversity of interest and such consistency of quality? You continue: "there are very few people prepared to go to almost any lengths to form a fine collection." Greatness in collecting results from the discernment which identifies excellence while it is still available and still modestly enough priced to be acquired in depth. Generally those who must go to extreme lengths are too late, paying too much for too little. They find compensation in the publicity their extravagance provokes.—Yours faithfully,
Cambridge, Mass JOHN COOLIDGE
Fogg Art Museum

Ireland

SIR—Mr G. H. Boyd (Letters, November 4th) mentions northern Irishmen in the last war. Most of these were Roman Catholics (which I am not, incidentally). Orange parades were banned for the duration in case visiting English politicians and journalists asked awkward questions about so many able-bodied men of military age still not in uniform. Roman Catholics, refused the dole at home (where Protestants or Englishmen or Scots got preference for jobs) unless they tried to find work in Great Britain, were conscribed like the rest when war came. This did not earn most of them any official gratitude at home when peace came.

Some stay-at-home Protestant with a small family would be more likely to get a house or a job than would a Roman Catholic ex-serviceman with a large

family. If the former now is "against the wall" (although he can own a firearm and neither police nor army have the guts to disarm him), what about the Roman Catholics during the pogroms between and before the two wars?

The British flag (called "the butcher's apron" by some Roman Catholics up there) is, to northern Protestants, a mark of their own ascendancy. But many of them now flourish the red hand of Ulster.—Yours faithfully, PATRICK J. N. BURY
Dublin

SIR—The whole Irish question seems to me to be bedevilled by a total lack of logic and realism. The green paper is the final culmination of this muddleheadedness and, if put into practice, will set a most dangerous precedent, dangerous because it is opposed to the basic principles of parliamentary democracy.

Parliamentary democracy requires power to be vested in the political party which wins in a free election, and does not permit the losers to share in such power except through a freely agreed coalition. Coalition is not possible in Ulster since the minority does not wish to govern. It wishes to hand over the state to an outside power.

Why should the British Government propose that the minority ought, as of right, to exercise such a share in administration when it would scarcely welcome, for instance, Mr Harold Wilson as Minister for Europe in the present cabinet? Yet what the green paper proposes is, in essence, just such a principle.

Obviously a minority has only to shout loudly and plausibly enough, at the same time using or threatening violence, and the democratic principle is the first casualty.—Yours faithfully, A. McDONOUGH
Exeter, Devon

"Give my company one good reason for spending half a million on your business jet."

The mere act of entering the EEC isn't going to bring Europe any closer; nor will it automatically increase your market share there.

You'll still find yourself kicking your heels in airline terminals, waiting for—or missing—connections, wishing some of your most promising customers weren't so far off airline routes.

What you need is some company transport that brings Europe into your own back yard. That can take a sales team to

Stockholm or Madrid in the kind of time you now take to get from London to Leeds. The Hawker Siddeley 125 business jet.

The HS 125 flies as fast as a jetliner, tackles any weather the jetliner can. Its range is big enough to cover the whole EEC and more, without time-wasting refuelling. And it can get into more than 250 European and British airfields that the airlines don't serve at all.

Suddenly, you have a new home market. All Europe. Beat that for a reason.

If you'd like even more reasons, write us or ring on Hatfield (Herts) 62345 and ask for any information you want.

We won't pressurise you—we don't work that way. We'll just give you all the help you need.

The HS 125 Eurojet. One take-off covers the EEC.

HAWKER SIDDELEY AVIATION

Kingston upon Thames, England
Hawker Siddeley Group supplies mechanical, electrical and aerospace equipment with world-wide sales and service.

A record year for British debt.

Another record year for British Debt Services.

Chairman, Mr. J. Bentham, announces in his annual statement exceptional company profits for the period ended 30th June, 1972.

Profits have risen from £330,754 last year to a record £461,815, an increase of 40 per cent. The payment of the final dividend will be increased by 2½ per cent.

The main reason for this result is an increase in consumer spending. This stems from the removal of hire purchase and credit sale restrictions in July of 1971, followed by the Chancellor of the Exchequer's measures and the new policy of the Bank of England. Collectively these factors generated an increase in business which is still continuing.

New services have been introduced and existing ones have been extended and modified, so that the company will be able to expand and continue its growth when the present surge in consumer spending finds its level.

A new Commercial Status Reporting Division has been established which provides international services to clients requiring information on commercial organisations.

A new debt recovery company has been formed in Scotland in association with Jack Lewis and Son Limited. Their experience in this field should improve efficiency and bring greater profitability in this area.

A new Regional Credit Bureau has been opened in Cardiff and with its opening, a network of bureaux covering the whole of Great Britain has been established, duplicating the credit information stored in our National Bureau in Manchester.

The service of providing clients with confirmation of residential stability from the electoral registers has been in such demand that it has been extended to all the regional offices.

An ICL 1902A Computer has recently been installed for the Debt Recovery Divisions and when operational will be the only 'in house system' designed for the recovery of debts in the United Kingdom. This facility will allow additional volumes to be handled and improve the company's management accounting.

The Report of the Younger Committee on Privacy was published in July. It commented favourably on our credit reporting activities and contained nothing which could cause the company to change its existing policies.

This report would not be complete without a reference to the efforts of our staff, who have made these results possible and who during the power emergency maintained our services to clients under trying conditions.

JOHN BENTHAM,
Chairman

Toronto Dominion. Look carefully and you'll see a well-established European bank.

In Canada you just couldn't miss us.

With over 800 branches, we're pretty well everywhere.

In Europe you won't see us on every corner. But if you're looking for a major bank in the field of wholesale finance, you'll find we're in all the areas that matter.

Airlines, industrial plant, harbours, roads and projects of every kind are financed by Toronto Dominion.

Look at us in this way and you'll see that we're not just another Canadian bank, but a truly great international bank as well.

Ask for our help. We'll be pleased to show you the full extent of our specialised financial services.

TORONTO DOMINION BANK

where people make the difference.

Economist

November 11, 1972

The ice cometh

In careful copy of President Nixon's successful policy in 1971, the Government has chosen the right first weapon: a 90-day freeze, during which it will bring in legislation to try to establish permanent pay-vetting machinery. These next few months will require cool heads and stout hearts. It has been obvious for at least the past two years that Britain can avoid South American-style inflation only by enforcing a statutory incomes policy, despite the public passions it may arouse and the economic distortions it will create. The object of policy must be to avert those passions and minimise those distortions. The first of these tasks is by far the most important, because the delay from 1970 to the autumn of 1972 has allowed the entry into British industrial relations of the canker that is the most frightening feature of our times.

Everybody should recognise that canker, because this is the real enemy against which we now fight. The canker springs initially from the most honourable natural emotions. The first stage is usually that nearly everybody supports something which sounds decently liberal (such as that "British miners deserve good wages for their nasty job"); then the gentle centre starts tacitly to excuse unforgivable methods of attaining it (such as violent picketing), while those who think they will gain from such methods fall into abetting them because of solidarity or greed or fear; and then the next stage is ungovernability.

There have been so many examples of this progression in the past decade and a half: from the humanitarian support for civil rights demonstrations in America and Ulster at the beginning of the 1960s to the hell of demolished law and order in their city centres by the end of them; from the understandable guilt-complex about colonialism in the 1950s to the disgraceful excuses made today (by liberals who don't have to live under them) for so many cruel one-party or no-party tyrannies in Africa; from fascination with some brave new ideals of youth to permitted terrorisation of elderly liberal or

conservative academics on university campuses. Some of these processes of deterioration have been turned back in the past four years, particularly from their 1968 high spot in America, which is a main reason why President Nixon has partly deserved his landslide triumph.

Five acts to confrontation?

But in Britain the canker was invited into the trade union bargaining system after the Wilberforce surrender to the power go-slow in the winter of 1970-71. This was a huge area of national life for it to be allowed to infect, and uncontrolled inflation must be expected to be one of the fastest-breeding forms of ungovernability; which is why the past two years in Britain have been a frightening period. The object of the new incomes policy must be to turn back this process of deterioration. Nobody can be certain of the course ahead, but there will eventually have to be some confrontation which has simply got to be won. One can guess at a possible scenario in five acts:

(1) The first act has already passed: a quickie which took place in the 90 hours up to 3.30 last Monday afternoon, when the knowledge that wage rises would shortly be forbidden wonderfully concentrated a lot of outstanding claims (dustmen, busmen, etc) into settlements. Most of the settlements were bigger than they ought to have been, but smaller than the 20 per cent that they would probably have reached after strikes and without Mr Heath's clampdown; this new norm of around 11 per cent was the freeze's first, partial, prenatal success.

(2) The second act will be of total freeze from now until 90 days after Parliament passes the present instant mini-legislation (ie, probably until end-February). Everybody said that this sort of order would not be obeyed, but it may well be. The hope is that big union leaders will not want to risk large fines on their unions by forcing unwilling members into loss of pay during strikes which the Government simply cannot allow to be rewarded.

by wage rises before end-February anyway. Some shop stewards will seek eager martyrdom by calling such useless strikes, but workers may not obey them.

(3) What the big unions will do is to negotiate toughly for pay increases which they will want employers to agree to pay them straight after end-February, and with some retroactivity. A lot of people think that the major confrontations could come when the post-February machinery tries to roll one or more of these back next March and April.

(4) In March and April themselves, however, there may be compromises. In America the pay board in Mr Nixon's phase two rolled back "tail-end" wage awards (ie, those which referred to the wage round begun before the freeze) only to the levels approximately reached in pre-freeze negotiations, and enforced their new guidelines (equivalent to Mr Heath's £2.60 formula) only on new contracts for the next year (equivalent in Britain to wage claims in the winter of 1973-74). It will not be awfully surprising if the same sort of thing happens here.

(5) Nevertheless, some time a union is going to get grossly more than this 11 per cent which may now be tacitly set as the norm for the remaining claims (miners, etc) for fiscal 1972-73, or else grossly more than the £2.60 which may be set as the norm for fiscal 1973-74. The confrontation must be expected then.

Not an easy battleground

The Government's hope is that this confrontation will be damped because Mr Heath's sweet reasonableness during the tripartite talks is supposed to have reduced tensions within the unions, and because public opinion is supposed to be on the Government's side. Both hopes require qualification.

The newspapers are now saying that Mr Heath has travelled a million miles away from Selsdon man; but since Selsdon man was always a mythical figure invented by the media, they will eventually invent another one (like "Eskimo Ted"?) to replace it, and the unions will soon think that they are being frightfully progressive bitterly to resist him in his new image.

Public opinion probably supports the freeze in the sense that an illegal and futile and damaging strike during these next 90 days might lose Labour millions of votes, and Mr Heath could conceivably sweep back to power in a snap election then in which the Conservatives might win 150 more parliamentary seats. But during the subsequent Parliament of 1973-78, with a large Powellite right wing, and with the Conservatives constantly losing by huge majorities by-elections in natural Labour seats like Hackney that they had accidentally won during the 1973 general election, it is difficult to believe that the Government's hand would be greatly strengthened to meet the long haul for incomes policy; and it is the long haul that is going to matter. Anyway the expectation, to repeat, must be that the crunch confrontation will not come in the next 90 days, but after (perhaps well after) next February; and be fought on a Government attempt to roll back some pay award which the relevant employers and unions are both pre-

tending is within the £2.60 or some other formula, but really is not. It is not at all certain that public opinion will be on the Government's side in any such confrontation. Another monstrous electricity surrender last week was presented by the electricity authority and the unions as being more or less within the Heath formula; and public and press were as eager as open-mouthed codfish to swallow it.

The 90-day freeze will probably be effective because the unions should know that they can gain nothing by strikes to break it. This is why the enforcement machinery after the freeze will be so important. It must be said yet again that the one really effective method would be by surcharges on workers' national insurance contributions whenever a firm's wage payments per head rise by more than £2.60 a week compared with a year ago. The Government is not going for this method, but seems to prefer fines on inflation-accepting employers and inflation-demanding unions instead. It is a typically out-of-touch Tory delusion that workers would be deterred from militant action by the thought that heavy fines might then help to drive their firm into bankruptcy; tell that to the horse marines on the Upper Clyde. The idea of fining the unions once seemed more hopeful, but the financial mess with which Mr Scanlon's engineering union is threatened through mishandling one of its members does not seem to have softened it, and the device of fining Mr Jones's transport union has not stopped the illegal blacking of several container firms. If the new incomes policy is disobeyed as blatantly as the Industrial Relations Act is disobeyed in the docks, then the canker of ungovernability will spread faster through the land. And that, quite seriously, could mean a Weimar situation in Britain.

Price controls are nonsense

Beside this threat to the fabric of British society, the economic distortions of a freeze hardly matter. But it is worth saying again that the proper accompaniment of restraint against collectively bargained wages is merely restraint against collectively determined price rises—there is a case for permanently banning all price recommendations made by trade associations—and that this week's extension of price control to competitively-determined prices is an economic nonsense, designed to buy acquiescence in an incomes freeze by pandering to the ignorance of the public, Mum's army included. Lasting price controls at the retail stage will more often keep prices up than bring them down; this is because margins will be fixed at a level that maintains small shops in being, and the supermarkets may gradually stop competing in order to rest on this soft featherbed (it is noteworthy that the European countries, like France, with durable price controls). When price control does keep particular goods below their proper market price, the results will be either a lack of investment in making these things that people most want, or the bogus renaming of old products as new products, or under-the-counter black markets.

Lasting wage controls could have some of these same distorting effects if they are used for any purpose of

resisting market forces (as distinct from that of restraining union monopoly power). In particular it is an economic nonsense to try to make an incomes policy redistributory in favour of the lower paid, because this will increase unemployment by pricing some of the lowest paid out of jobs that are at present on offer only because they are low paid. The proper way to help the low paid is through budgetary action, such as the £90m of extra stimulation of demand which Mr Heath almost casually pumped into his package this week by the promised bonuses to pensioners and others. There may well be room for considerable extra stimulation by tax and other reliefs, see page 77, because in the year ahead Britain might be able to afford a growth rate well over 5 per cent. There is a prospective awkwardness here, because the year of record growth may well be the year into which the wages freeze will partly intrude. In later years, when today's underemployed resources are used up, growth will be lower, and therefore the norm for wage increases should logically be lower too. It is not

going to be easy to enforce that.

The history of incomes policies has often been that of unexpected immediate effectiveness, followed by unnecessary eventual collapse. When sterling was devalued in 1967, about 10 years late, this newspaper was uncertain whether to hail this most loudly as an overdue change that would put the balance of payments to rights (which it was clearly going to do) or to give warning that it was an insufficient step towards floating rates (which was also obviously true). In the week of the new incomes freeze it is difficult to know whether to hail this most loudly as an overdue effort to regain control (which it is) or to criticise it for the nonsenses attached (such as the use of the wrong machinery for enforcement, and the absurdities of price control). The trouble is that inadequacies this time might have much more serious results, because time is now so short. We could be approaching the hurricane belt for the whole future of British society, and are supposed to welcome that Mr Heath is at last carrying an umbrella.

Nixon's best four years

The election in the United States gave an unloved President a landslide victory — on his own

President Nixon has won another term in the White House by an overwhelming victory that is as satisfactory for the pollsters and the journalists as it is for the President himself. Everything has come out as forecast: the Democratic challenger carried only one state, Massachusetts, and the District of Columbia, but in both houses of Congress the Democrats have held on to their majorities, actually gaining a couple of seats in the Senate. This paradox is being taken as proof that Americans were not voting for Mr Nixon on Tuesday but against Senator McGovern. Certainly they were frightened of Mr McGovern, feeling that he lacked the competence, decisiveness and judgment that are essential for a President. But equally the voters were expressing their satisfaction with Mr Nixon's first term in the White House. The size of his majority makes it seem unlikely that any Democratic candidate could have booted him out this year.

The turning-point came in 1971 when the President opened up contacts with China and took firm hold of America's economic difficulties at home and abroad. Luckily for him both these manoeuvres were successful. Then came the nicely timed readiness of Hanoi to negotiate an end to the Vietnam war at last. The United States was thus well on the way to the peace and prosperity that Mr Nixon had promised and few people saw any point in making a change; this was particularly so when the change Mr McGovern proposed might have upset the comfortable lives that the great majority of citizens were leading and revived the fires of social disruption that had been banked down by Mr Nixon. So only the blacks and the Mexicans, the poorer whites, the students, the committed liberals and the hard-core

Democrats—and by no means all of them—voted for Mr McGovern.

What the paradox of a Democratic Congress and a Republican President does suggest, however, is that the voters distrust the power of the Presidency and want to limit it. They are disillusioned with Washington and this election campaign has added to that disillusionment. This is all part of the growing tendency for people to do things themselves at local levels and contract out of national politics altogether. The voters' expression of confidence in the Democratic Congress will encourage the legislators in their efforts, already especially evident in the Senate, to circumscribe the authority of the executive. The election will have done nothing to soften either side in the confrontation over spending which developed in the last days of the 92nd Congress. On the other hand, peace in Vietnam, which seems almost sure by the time the legislators return in January, will remove what has been a source of bitter friction between the President and the Congress over many years. And the new Congress contains a good share of those conservative Democrats who are more ready than many Republicans to support the President's proposals.

What will he do?

Not until January, if then, will the substance of these proposals be known. Mr Nixon set himself 10 goals in the last of his pre-election radio addresses, but they were extremely vague. However, after the first—"a world at peace"—they did refer to America itself. So perhaps in his last four years of office Mr Nixon will spare some attention, for reordering affairs at home, from what has been his very effective preoccupation with reordering them

abroad. (The following article discusses what may now be done there.) He would be well advised to study Mr McGovern's ideas for dealing with tax reform and economic problems; some of them were most interesting once they were worked out in detail. The majority of Americans may be fairly satisfied with things as they are at the moment, but a new wave of dissatisfaction, a desire to put things right, could build up during the next four years. The country has shown this week that it does not want social revolution but this does not mean that reform would be unacceptable. So far, Mr Nixon's record on social welfare and racial discrimination has been far from constructive and civil liberty has hardly flourished under his Administration.

His actions, or lack of actions, on these matters during the past four years have certainly been influenced by his fear of alienating his right-wing supporters and thus of endangering his own re-election. This at least he does not need to consider any more, since he is prohibited by the constitution from a third term in the White House. What he is likely to consider is how to continue building up that permanent majority behind a Republican President that he made a start on this year. Obviously at the moment it is only a temporary majority and partly at least merely an anti-McGovern one. Nevertheless the Democrats' old Rooseveltian coalition has been melting away at the edges for some time.

In his domestic policy at least President Nixon is likely to be considering how best to speed up this process.

The steadying of America

The size of Mr Nixon's victory is evidence that the Americans are coming back on course again in the world

The re-election of Richard Nixon should be the end of one myth about America. For the past eight years, since angry blacks started breaking up American cities in 1964, it has been an article of the conventional wisdom that the United States was a country so bitterly divided against itself—by race, by the Vietnam war, by the generation gap—that it could no longer play a major part in the leadership of the non-communist world. General de Gaulle used that belief to justify the sort of foreign policy he wanted to run anyway; it has helped to shape Mr Heath's ideas, and a lot of other people's. For a time, in 1968 and 1969, it almost seemed that the conventional wisdom was right, although even then things were not quite as bad as they looked to those who thought they knew America if they knew the upper middle class of Manhattan and Washington and Cambridge, Massachusetts. Now Mr Nixon's victory has shown the resilience of the other and much bigger America. The size of his majority, the issues that gave it to him, and the fact that a wet day and a moderate turnout probably actually helped Mr McGovern, are all evidence of how far the United States has pulled itself together again.

The real division has turned out to be inside the Democratic party. The faction that took over the party

At least that is what the politician that he has been so superbly up to the present would be likely to be considering. But maybe now that he has been confirmed so triumphantly in his life's ambition, purely political considerations will no longer weigh so heavily with Mr Nixon. Maybe now he will feel confident enough to be honest with the American people, as Mr McGovern asked him to be. So, maybe, as the President promised on Tuesday night, the next four years will indeed be the best in America's history.

1976 is coming

If they are, the man who gets the Democratic nomination in 1976 may be hard put to it to defeat whomever the Republicans choose to succeed Mr Nixon. While conservative Democrats are naturally claiming that the McGovern disaster was a defeat for liberalism, the Democratic candidate in 1976 seems almost certain to be a liberal nevertheless. After all, Senator Edward Kennedy is politically a good deal to the left of Senator McGovern. But Mr Kennedy also has a healthy respect for faithful party workers, whichever way they lean, and a readiness to compromise for the sake of being elected; Mr McGovern learned about these necessities too late. By 1976 the Democratic party should have digested the internal reforms which nearly exploded it this year. And by then the Republicans, faced with finding a new presidential candidate, may be tearing themselves apart in a similar internal conflict.

at the Democratic convention in July thought the country wanted to wash its hands of south-east Asia, and would be willing to support the withdrawal of half the American army in Europe; it believed that people were ready for radical changes at home, to deal with what Mr McGovern's supporters thought of as the still unsolved problems of economics and race; and it calculated that the young would vote overwhelmingly for these things even if the middle-aged did not. It was a colossal misjudgment, and it gave Mr Nixon what could well turn out to be the biggest margin of victory in the popular vote in American history.

A large majority of Americans, including a large part of the Democratic party, do not believe that the retraction from the world Mr McGovern called for is necessary. They do not believe that the problem of the blacks cannot be dealt with on the basis of the reforms of the 1960s. They do not believe that pollution cannot be controlled by the better technology provided by a growing economy. They are probably right on all these counts, and the striking thing is that the reluctance of the under-30s to believe what the left invited them to believe is hardly less marked than that of the over-30s from whom they were supposed to be unbridgeably separated. There are temptations,

and therefore dangers, for Mr Nixon in this overwhelming vote in favour of keeping America steady on its present course: some of the things that need to be done inside the United States do require radical action (see the previous article). But for the rest of the world, and particularly for America's allies, the important thing is the steadiness itself, and the fact that the very size of the majority for steadiness will now carry the recovery of American self-confidence a stage further.

The period of calm he has bought

It was Mr Nixon's foreign policy that made him unbeatable, and his foreign policy has probably given the Americans the few years of peace and quiet they need to complete the recovery. The very special character of that policy is only just becoming fully apparent. For all the glitter of his negotiating style—the descents upon Peking and Moscow, and Mr Kissinger's virtuoso performance as an airborne peacemaker—the aim of Mr Nixon's policy has been essentially defensive. He has seized the opportunity given to him by the quarrel between Russia and China, and by the fact that both of them need economic help from the west, to persuade the two great communist powers to suspend their argument with the western world. It cannot be more than a suspension of the argument. The governments in Peking and Moscow are both governments of old men, and the next four or five years will almost certainly see new leaders taking over in both capitals. Sooner or later, when that has happened, one or the other of them is going to ask whether it is good marxism to go on letting the west benefit from the private quarrels of communists; and the unique opportunity that has made Mr Nixon's policy possible may start to come to an end.

Nevertheless, those four or five years—and it could be longer, if Russia's and China's obsession about each other survives their change of governments—will have done what they were intended to do. They may have saved South Vietnam. They will have given the enlarged European community a chance to settle down into business. They will have provided the time needed for American defence policy to adjust itself to an all-volunteer army. Above all, they will have given the Americans that much longer to recover from the interlocked crises of war and racial conflict and self-laceration they went through in the 1960s.

No doubt a price will have been paid for all this; part of that price, for instance, looks like being the abandonment of any serious attempt by the west to make the Russians give a little more freedom to the countries of eastern Europe. But then the whole basis of the truce that Mr Nixon has arranged in the great ideological war of our time is an understanding that the dividing lines between the major powers' spheres of influence should remain where they are while the truce lasts. The Nixon doctrine that was set out on Guam in 1969 was never a formula, as some people thought it was, for a camouflaged retreat by the United States from its own zone of influence, in Asia or Europe or anywhere

else. It was a way of making it possible for the Americans to go on playing their part in defending the frontiers of the non-communist world without bearing quite as much of the financial and psychological burden as they had found themselves carrying in the 1960s.

This is the largely completed jigsaw into which Mr Nixon's victory on Tuesday has now been slotted. Of course, it does not mean that the relationship of the United States to the rest of the world is about to return to where it stood in the 1950s. Too much has changed for that. The United States is a relatively much poorer country than it was then: with gold and foreign exchange reserves of only \$13 billion today, compared with west Germany's \$24 billion and something like \$20 billion for Japan, it cannot afford to go on providing for ever almost the entire nuclear strength of the non-communist world and most of its strategic reserve of tanks and infantry too. It has learned how to put self-interest first in its commercial dealings with Russia and western Europe, partly by watching how its friends do it; Mr Nixon's government has sometimes managed to be simultaneously brutal and sanctimonious in matters of trade. And for the countries that depend on American military power there is always the nagging fear that the weak point in American opinion which broke under the strain of a difficult war in 1968 might break again in similar circumstances, and try to excuse its defection by explaining that the war had turned out differently from the way it expected. For many reasons, the United States cannot become again what it was in the high days of the 1950s.

Still the two great rivals

But it should also be clear that the balance of power in the world is no longer what it seemed likely to be even a couple of years ago. Mr Nixon's own oversimplified talk of a world of five great powers has begun to look curiously unreal.

If Mr Nixon's policy has purchased a few years of relative calm in international relations, western Europe is likelier to spend those years in sorting out its internal problems than in any real attempt to define a joint foreign policy. Japan will do much the same: Mr Tanaka's new government is going to concentrate on its plans for making Japan a pleasanter place to live in, rather than using its economic power for political purposes abroad. And so long as Chou En-lai is the effective ruler of China he will make it his chief business to get China's elephant of an economy off its knees. It looks like being a period when three of those five supposed great powers are going to be more concerned with their own affairs than they were expected to be, or than the other two are. It will not be exactly the old bipolar world all over again, and in matters of trade the weight of Germany and Japan will continue to make itself felt. But the odds are that for most of the rest of the 1970s the Soviet Union and the United States will be the main contenders for political power; and after Tuesday the United States seems a more plausible contender than it did before. In a way Mr McGovern did not intend, America has come part of the way home to being itself.

Closer through separation?

The hope has to be that Egon Bahr's treaty, by formalising east Germany's separate status, may eventually bring the two Germanies together

Relations between the two Germanies will not become "normal" if their new treaty goes into effect. The death strip that the east Germans have created all along the border, with its minefields and machine-gun towers, will remain, as will its extension through the heart of Berlin, the wall built in 1961. West Germans will be able to cross the line more freely, but east Germans will get very little extra freedom. Opponents of Herr Brandt's whole Ostpolitik still like to call east Germany the Soviet occupation zone, and, at bottom, that is what it still is. No amount of international recognition of east Germany is going to change these bleak facts.

But no amount of ostracism of east Germany seems likely to change them, either. And its communist masters have obtained many tactical advantages from the situation that has so long prevailed, in which western refusal to acknowledge formally the east German state's existence has jarred with western interest in its trading potential, and with growing acceptance of the need to include it in such practical matters as anti-pollution agreements. East German trade missions and tourist offices have proliferated in western capitals (and trade between the two Germanies has most particularly boomed); at all sorts of international gatherings, the Russians have been able to make western representatives squirm by raising the question of east German participation. Many a western diplomat will welcome the prospect of no longer having to make laboured explanations of a policy that had come to look ineffectual.

The saving of diplomats' blushes, however, would hardly be an adequate justification for the conceding to the Russians of an objective they have long sought. Particularly since 1968, when Mr Brezhnev marched his troops into Czechoslovakia and brutally asserted Russia's right to dragoon its so-called allies, regardless of their formal sovereignty, his aim has been to make the western governments formally accept the accomplished fact of Soviet dominance of Europe east of the Elbe. His campaign for an all-European "security" conference has been a prominent part of this strategy; and he has insisted that east Germany must attend this conference on equal terms with all other participants, its international acceptance being thereby clinched.

The best of a bad job

On the face of things, Mr Brezhnev is picking up all the prizes. West Germany has already, in the treaty with Poland that was ratified in May, accepted the Oder-Neisse frontier. This week a treaty, in which it accepts east Germany as an equal, has been initialled by Herr Brandt's government and, with elections due on November 19th, the Bonn opposition has had to muffle its criticisms, and the government's grip on the treaty has improved its

chances of winning the elections (see page 50). On November 22nd preliminary talks about the European security conference are to begin in Finland, whose government, as an enthusiastic host, will do all it can to smooth east Germany's path into this new multinational assemblage. From other capitals, offers of diplomatic recognition will doubtless pour into east Berlin now that the dam has gone. And east Germany may even draw level with west Germany in obtaining observer status at the United Nations before both are admitted to full membership of the world organisation.

The evident popularity of the new treaty in west Germany is understandable enough, simply in the light of the communist concessions about border-crossing that began to multiply even before the negotiations were completed. But the prospect of a limited increase in the number of German family reunions across the dividing line is not the only reason why this agreement may be counted as making the best of a bad job. Nor need one fall back on the vague idea that all international agreements make for a more peaceful world (there have been, in our time, a good few that didn't).

Essentially, what is being conceded to the communists is the formal recognition of a state of things that cannot be wished away. This concession itself deprives them of chances of making propaganda about western reluctance to settle Europe's unfinished business. But it is not only a matter of more easily brushing off crude accusations about "revanchist Bonn." The prospect ahead is also one of the east Germans no longer looming like reproachful wraiths over international meetings but having to come into the open, and face questioning, at such meetings. East-west talks about mutual and balanced force reduction in Europe, to take one obvious example, ought to stand more chance of being realistic if east Germany, where the most menacing armed force in central Europe happens to be stationed, is fully drawn into them.

The unnaturally strict discipline and seclusion of the communist world depend largely on the maintenance of artificial tensions. If the western participants in an all-European conference are to prevent it from simply becoming a communist propaganda circus, they must put their weight firmly on the argument that Europe cannot achieve real tranquillity until Europeans are free to visit one another and learn about one another's circumstances and opinions. The more Germans are able to do this the better, not only for the Germans but for other Europeans too; if Germans can do it, the communist case for forbidding other Europeans to do it becomes less tenable. It must be hoped that acknowledging the separateness of east Germany will in the end prove to be one step towards making the two Germanies, and the two Europes, less separate.

It takes, on average, 15 years training to become a BEA Captain

"Your BEA Captain is personally responsible for every aspect of your flight"

PARA 1.2. "The Captain shall at all times look to the care and comfort of passengers and the well-being of crew."

PARA 14.9. "The Captain must check that all timepieces used by his crew are synchronised and correctly set."

PARA 22.1. "The Captain must be fully conversant with all local laws and regulations affecting the flight."

PARA 29.3. "At the end of each flight the Chief

Steward will report to the Captain full details of any defects in the passenger cabin."

PARA 32.4. "The Captain must ensure that he has complied with the regulations covering the carriage of Diplomatic Mail."

PARA 1.4. "In addition to setting and maintaining a high standard of discipline for himself, the Captain must ensure that his crew reach an equally high standard."

BEA
Your Captain wishes you
a pleasant flight.

How much business can you do with Sweden?

The holiday cottages lining the Swedish coast are clear evidence of Swedish purchasing power: one family in two owns a second home.

Car ownership and telephone density are the highest in Europe. TV ownership the highest in the world. And Swedes spend more money on holiday travel than anyone else.

Industry is strong, too, and sells 10% of its production abroad. Altogether exports account for 20% of Sweden's GNP. Which means, in other words, that the rate of imports is among the highest in the world.

With only 0.2% of the world's population, Sweden in fact accounts for 2.0% of international trade.

Now, international trade does come in larger shares than that. But the Swedish 2% can be more rewarding than most.

Sweden has by tradition a free-trade, low-tariff country. And distribution channels are highly developed.

To do business with Sweden, the first thing you need is a good bank.

Like Skandinaviska Enskilda Banken.

We can give you all the facts you need on Sweden: on economic conditions, the market situation, price trends, taxes. We can tell you what regulatory policies you face. We can help you find and evaluate contacts, partners, agents and suppliers. As well as put you in touch with first-class consultants and legal advisers.

And, not least important: we'll explore with you the full range of financing possibilities.

There are other banks that can offer you similar services. But they can hardly offer the same experience.

Our Bank resulted from the consolidation of Sweden's two leading international banks, each with more than a century of foreign experience.

We now handle more than half of all the foreign business conducted by Swedish banks.

And are the largest bank in Scandinavia. Admittedly, our total assets of US \$4910 million do not make us one of the world giants. But when it comes to international operations and foreign exchange business, we are well up among the leaders.

We have an office in every significant centre

of population and industry in Sweden. More than that: we have the people you need. Both in Sweden and throughout the world.

If you really want to find out how much business you can do with Sweden, why not start by writing on your company letterhead for our publication "Some Data about Sweden"? That will give you a lot of clues.

After that, all you need is a bright idea or two. Maybe we can help you there, too.

Skandinaviska Enskilda Banken, S-106 40 Stockholm, Sweden.

Offices, affiliates and participations worldwide, including Geneva, London, Madrid, New York, Paris, São Paulo, Tokyo, Zürich.

Skandinaviska Enskilda Banken

SOME PEOPLE BUY WATER BY THE CUP

In arid regions the water-vendor is a familiar tradesman.

A coin for a cup. Scarcity makes water a precious commodity. Don't be careless with it.

There are careless people, though — people who live where water is so plentiful that they've taken it for granted. Let it run to waste. Polluted it. Mismanaged it.

The needs are urgent. Where water is scarce, it must be provided. Where endangered, it must be rescued.

Water needs to be managed as expertly as money, or homes, or businesses.

Helping regions and nations harness, conserve, and protect their water resources is a very important part of our company's business.

We have engineered vast irrigation projects that have brought major areas of desert land into fertile cultivation.

We design and build waste treatment systems to process the sewage of a small community, a sizeable town, or a city of millions of people. And, in the process, make waste-water re-usable.

We manufacture pumps that can irrigate a farm, a golf course, a municipal park, or, indeed, an entire province. Pumps to put out fires. Or to move millions of gallons of water in giant flood control projects.

We also build treatment systems to reclaim water at industrial plants, refineries, and factories.

We think water deserves a high priority on the human scale.

And our kind of technology can be very useful to those who agree.

FMC has offices in principal cities throughout the world. To learn more about this versatile company, please write for our booklet, "Achievements."

FMC CORPORATION

San Jose, California 95106, U. S. A.

A VERY USEFUL COMPANY

All roads used to lead to Rome.

Times have changed. Today, Frankfurt is the hub of European commerce. It's in the center of the European Common Market and a gathering point for international banks, insurance companies and trading groups. And right in the middle of the greatest vacation paradise the world has to offer — Europe.

To Lufthansa, it's home.

Most of all, Frankfurt is Europe's major take-off point, with roughly 300 departures daily to everywhere. Even Rome. Just in case.

the more you fly

BRITAIN

They weren't quite so polite in the Commons

Uproar, hilarity, verbosity and malice greet the bill

The Government had a mildly hideous week in the House of Commons over its decision to impose a statutory freeze. There were just too many quotations lying around for even the present Opposition to miss such a collection of sitting targets. But it could have been a great deal worse.

On Monday, for instance, after Mr Heath's announcement, Mr Wilson was so verbose, and so ineffectual, that it looked as though Mr Heath was going to get away with it almost unscathed. But that did not suit Mr Enoch Powell, who rose with quiet menace and delivered his lines with malicious relish. He had every intention of getting his views into the following day's headlines and of course he succeeded; no sub-editor could possibly pass up that splendid punch-line: "Has my right hon. friend taken leave of his senses?" For the first time in the afternoon there was a full-throated bellow from the Opposition benches.

And then there was Mr Jenkins. He

waited until the cross-examination of the Prime Minister was petering out again and then slid in his simple, deadly question; had Mr Heath now abandoned his constantly reiterated view that a statutory policy could only make inflation worse in the long run, or did he now regard the short-term situation as so disastrous that he could no longer afford to think about the long run?

Tuesday's debate on the economic situation was a pretty messy business; but at least it did not quite achieve the farce contrived by Mrs Sally Oppenheim, the Tory MP for Gloucester, who at question time had all-too-innocently asked Mr Heath whether housewives were to be allowed to make transferred charge telephone calls to the government offices which were monitoring prices. The Labour party howled with laughter.

But there was not much to laugh about in Mr Healey's speech when he opened the debate for the Opposition.

It was an adequate speech—better than anything Mr Healey has done since his appointment as shadow chancellor. But it was made to look rather better than it was by Mr Heath's frequent interruptions, none of which did him a great deal of good. Mr Barber followed with half a serious speech, but this was followed by his old eve-of-poll speech to the good people of Altrincham and Sale. They are clearly not a very demanding lot.

The Speaker then decided to reduce the temperature and called Mr Douglas Jay, who did the job superbly; by the time it was clear that he was going to make yet another of his awful anti-EEC speeches the chamber had nearly emptied. There were a couple of rather good backbench speeches; one from Mr Peter Tapsell, who has campaigned for months for a statutory policy (and made himself thoroughly unpopular with ministers as a result), and the other from Mr William Rodgers.

Then came Mr Powell, and the House rapidly filled. Nevertheless it was a rather arid performance. The whole crisis could, apparently, be left to the money supply. Unhappily this might mean some transitional unemployment; at this point his old allies of the Labour left realised that their hero had, after all, feet of clay.

On Wednesday Mr Barber moved the second reading of the bill tolerably well, and Mr Wilson was given his second chance. Once again he muffed it. The sad fact is that Mr Wilson now seems incapable of inflicting damage on the Government. The spark is just not there any more. Whereas the Mr Wilson of 1963-64 would have demolished the Government, the Mr Wilson of 1972 hardly marked it.

In the evening the Government got its majority without any difficulty, and on Thursday Mr Prior announced that the Government intended to guillotine the committee stage of the bill to enable it to reach the statute book swiftly; the Opposition reacted in the predictable manner of all oppositions, and the week ended as noisily as it had begun.

Shuffled pack: Walker, Rippon, Howe and Prior

Government changes

Walker going strong

The most important of Mr Heath's cabinet changes brings the rumbustious entrepreneur (and therefore skilled politician), Mr Peter Walker, to replace the trained business diplomat (and therefore rather bullable politician), Mr John Davies, at the vast sprawling Department of Trade and Industry; while Mr Davies goes off to become Mr Europe, to replace Mr Geoffrey Rippon, the politician who became a skilled diplomat *malgré lui*, and who is now allowed to go to head Mr Walker's old and almost equally sprawling Department of the Environment.

The 40-year-old Mr Walker, a self-made (or perhaps Jim Slater-made) millionaire before he was 30, is thought by many good judges, possibly including himself, to be a likely next-prime minister-but-two. He would be an unusual sort of prime minister, which is why he may not quite make it. But at the DTI, now given the absurd but apparently popular job of administering most price controls, Mr Walker will be a very interesting minister. He has displayed a considerable zest and capacity for organising and administering a department. He gives the impression of still having energy to spare. He will have a more confident touch than Mr Davies in dealing with Opposition toughies. If Mr Walker was still looking for a place to win yet more spurs, Mr Heath has found just the place for him to win them and dig them into somebody.

A major innovation is to give Mr Walker's department a second cabinet minister by appointing Sir Geoffrey Howe to look after trade and consumer affairs. His work on drafting and piloting in the Commons the Euro-

pean legislation has made Sir Geoffrey a distinguished Solicitor-General, something which cannot be said for many of his postwar predecessors in that office. His major task now will be to carry through the Commons the promised new legislation on monopolies, competition and consumer credit. By leaving a law office and accepting a wholly political one, he moves into the reckoning as a possible very senior minister indeed; one test may be if he hitches his wagon to Mr Walker's rising star, or disengages it rather quickly.

Mr Rippon, still aged only 48, now runs his first major department, and will probably become an increasingly important man. Mr Davies, shorn of a department but given a lot of work to do in handling detailed business at Brussels, may not be. The 45-year-old Mr Jim Prior, one of the Prime Minister's friends, moves from agriculture to take over the leadership of the House of Commons. His first duty was to announce the second reading of the artlessly-named Counter-Inflation Temporary Provisions Bill, which was rather bad luck.

The other changes are not exciting. Mr Joseph Godber becomes Minister of Agriculture, which many people expected him to be in 1970. Two new MPs in 1970 get jobs: Sir Michael Havers because he is the sort of lawyer who looks like a solicitor-general, and Mrs Peggy Fenner because she is the sort of woman who looks like a junior minister (she will watch over food prices). Mr Peter Kirk leaves his job as under-secretary for the navy to become leader of the Tory party's delegation to the European Parliamentary Assembly: a welcome sign the Government means to take community affairs seriously. At defence, Mr Ian Gilmour's abilities have been recognised by making him minister of state, and giving him not just his present responsibilities as minister for defence procurement but also those of

Lord Balmiel, the former minister of state, who goes to the Foreign Office at the same level. The second minister of state there is Mr Julian Amery, whose job as housing minister is taken over by Mr Paul Channon. With promotion for Mr van Straubenzee and Mr David Howell, the Northern Ireland office gets an additional minister of state, which Mr Whitelaw badly needed. Replacing Mr van Straubenzee as parliamentary under-secretary at the education department, Mr Norman St John Stevas is given some responsibility at last; just how much depends on his minister, Mrs Thatcher, who did not lean very heavily on his predecessor. Another man who must wait to see whether he has really got a job or just a title is the personable former professional broadcaster, Mr Geoffrey Johnson-Smith, who was a parliamentary under-secretary at the Ministry of Defence and will have the same rank in the Civil Service Department.

Labour party

The pleasures of moderation

The shadow cabinet election results, announced on Wednesday, were in all the circumstances fairly remarkable. First, because Mr Harold Lever, who resigned with Mr Jenkins in April, won his seat back with the greatest ease, and, second, because of the drubbing handed out to some of the more intemperate anti-marketiers. Mr Lever polled only three votes fewer than Mr Peart and was well ahead of Mr Wedgwood Benn, who did even worse than last year.

It always seemed likely that, if there were any casualties, Mrs Barbara Castle would be among them, but no one expected her to be so humiliated. Running as she did 24 votes behind the lowest successful candidate marks the virtual end of her career on the front bench. Mr Wilson may again give her a job in order to save her face, but Mrs Castle is finished politically, and she must know it.

There were other significant features of the results. There was, for instance, the triumph of Mr Reg Prentice, the shadow employment secretary, and Mrs Shirley Williams, the shadow home secretary. Both are cordially detested by the left, Mrs Williams because of her strong pro-market views, and Mr Prentice because he spoke out bravely

Action Thailand

Television Studio

Faster growth than in almost any developing country...Your company can share in it...Let the Hongkong Bank Group tell you.

"The King and I" seems a world away in modern Thailand. Though three quarters of the 35 million population still live off the land, two imaginative Development Plans have effectively sponsored a peaceful industrial revolution.

Growth has been impressive. During the period of the First Plan (1961-66) the Gross Domestic Product increased at a rate of over 7% per annum, a figure that far exceeded the target, and which has subsequently been made the target for the Second Plan which ends this year.

Industrialisation in Thailand is just ten years old. But by 1966 six motor assembly plants were already in action and the petroleum industry is one of many that is scheduled for rapid expansion in the seventies. The Government's investment incentives offer a wide range of guarantees, land concessions and tax exemptions.

It is this governmental nurturing of domestic markets that makes Thailand of such interest to expansion-minded exporters. The Hongkong Bank Group know Thailand and the opportunities which it offers. Their Bangkok offices keep day-by-day tabs on

the way the economy is moving. Their experience is summarised in a 12 page booklet which offers you the most concise and up-to-date economic profile of Thailand in print. Write for your free copy now—and get your briefing from experts.

Prentice: moderate victory

for the rule of law at the time of this year's confrontation in the docks—and when some of his more senior colleagues decided to keep their heads below the parapets. Mr Prentice and Mrs Williams shared joint top place, coming just ahead of Mr Anthony Crosland, who did rather better than last year.

However, the joy of Labour's moderates became wholly immoderate when they learned that partly because of the victory of Mr Merlyn Rees, the party's Northern Ireland spokesman—and a close friend of Mr Callaghan—Mr Peter Shore and Mr John Silkin had tied for the last place on the shadow cabinet, and that there would therefore have to be a runoff election between these two vehement anti-marketisers. This caused the left temporary embarrassment; but Mr Silkin soon announced he would withdraw.

Analysis of the voting for some of the candidates in the three shadow cabinet elections that have taken place since the general election is particularly instructive. Mr Prentice, for instance, obtained 76 votes in 1970, 95 in 1971 and 154 this year. Mrs Williams's record is also impressive: 122 votes in 1970, then 137 and 154. Mr Cledwyn Hughes (a moderate who did not quite make it) received 57 votes in 1970, then 81 and 91. At the same time, Mr Benn has moved rapidly in the reverse direction: 133-122-106.

The Labour moderates did not have it all their own way this week, though. On Tuesday, the left defeated Mr Joe Gormley, the president of the mineworkers, in his bid to be re-elected chairman of the Labour executive's international committee. Mr Gormley was suspected of having secret pro-market sympathies, so he was replaced by Mr Ian Mikardo, who can be trusted to attempt to frustrate any softening of the party's attitude towards Europe. And just to make the point even clearer the left-wing majority on

the committee appointed a delegation of hardline anti-Europeans to go to the Socialist International. All this will guarantee that the Labour party's relations with its sister parties in Europe will become even more poisonous; but Mr Mikardo is not the sort of man to worry too much about that.

Ulster

A question to be asked

Many people in Ulster persist in the illusion that the Government in London is stonily indifferent to their plight after over three years of violence. Mr Heath's two-day visit to the province next Thursday and Friday should do something to dispel such thoughts. Last Christmas, the Prime Minister spent merely a few hours in Ulster talking with the troops. This time, he wants to get about and meet as many people as possible, not just politicians and soldiers, even if this does demand tight security. Such a tour is going to be more than an exercise in reassuring the doubters. It is intended to help the Government to discover how much support really does exist in both Protestant and Roman Catholic communities for Mr Whitelaw's consultative document on Ulster's future.

The province's politicians prefer to declaim and not to argue. Only a general election in Ulster is going to find out whether they speak for many people any longer. The Protestant extremists, under the protective shelter of the United Loyalist Council, poured scorn on the green paper this week. Their leader, Mr Bill Craig, repeated his tired old refrain that unless Britain restored the old Stormont system of government Ulster was going to have to prove its loyalty with a unilateral declaration of independence. It is Mr Craig's opinion that such a drastic step would not impoverish Ulster because countries other than Britain would fork out financial loans at low interest rates. Apparently the ultra-Protestants even believe that Ulster's heavily subsidised shipyards could stay open if the province went it alone.

Such fantasy stems from feelings of frustration. At the same time, Mr Craig is clearly drawing near to a permanent break with the Unionist party with his public support for armed raids by the Ulster Defence Association across the border into the republic. All this is dangerous bluster, but that is the way they talk in Belfast these days. On

Monday, a fanatic goaded Protestant shipyard workers in Harland and Wolff by trying to blow up the giant crane which towers above the East Belfast skyline. In a matter of hours, a Protestant gang went up to the Lenadoon estate, where the IRA Provisionals' truce broke down in July, and burnt three Roman Catholic families out of their homes.

At the same time, the main Roman Catholic opposition—the Social Democratic and Labour party—heaped some faint praise on the Government's consultative document, even though its leaders felt that it “lacked honesty.” The SDLP looks as though it might be ready to talk around a conference table just so long as the Irish government gets a seat at any final round of discussions. But Mr Gerry Fitt, the main SDLP leader, had nothing but criticism for this week's appointment of a three-man commission of judges to start work on the cases of those suspected of involvement in terrorist activities. Many Roman Catholics see the new system as merely the continuation of internment under a new disguise.

The commission is intended to be a temporary arrangement until Lord Diplock's commission reports later this year on how to try terrorists without resorting to internment under the Northern Ireland Special Powers Act. The commissioners will hear cases in camera and the normal rules of evidence will not apply. They are to possess wide powers to deal with not just the active terrorists but also those who are involved in the planning and direction of acts of violence as well. Detention orders will no longer be a matter of executive decision, but Mr Whitelaw is going to retain the power to decide whether to discharge or release anybody served with a detention order by the commission.

It is hoped to safeguard the rights of both the accused and possible witnesses. A person will be given a written statement showing what he is going to be charged with not less than three days before his hearing. No suspect can be held for more than 28 days unless a chief constable has referred his case to the commissioners. A detentions appeal tribunal will scrutinise the complaints of those who insist on their innocence after their trial. Those 284 men still behind the wire at Long Kesh camp will have their cases sifted by the commission.

Such a measure is unlikely to cause much dissent at Westminster, but there could be a spot of trouble next week in the Commons when the bill for hold-

ing a plebiscite on the border issue comes up for its second reading. Many Labour MPs believe that even if the plebiscite is an unfortunate necessity to reassure Ulster Protestants, the bald question stated in the ballot paper—asking whether the people of Ulster want to stay in the United Kingdom or join the Irish Republic—will divide and inflame opinion. By the time the plebiscite is held early next year the Government's specific plans for Ulster should have appeared, so why not ask the people of Ulster instead whether they agree with what the Government has in mind for them?

Ugandan Asians

They got here, anyway

Britain's intake of Ugandan Asians was virtually complete by November 8th, General Amin's deadline. By then 26,000 had arrived (about half the number first predicted), of whom 12,500 were still in the 17 emergency camps set up by the Uganda Resettlement Board. While the national response to the immediate shelter problem has been swift and generous, this large remnant worries the board and some people even talk in terms of years rather than months for clearing the camps. That may be too gloomy. There will be long-term hard cases, but the psychological security of the camps will diminish as more and more move out—as, despite suggestions to the contrary, most are keen to do. A reluctant minority may be pushed by the rather tougher line now being taken—eg, no one who has once stopped living in a camp may return.

But the most effective way of getting the refugees on their own feet would be a Government guarantee for commercial loans to Asian businessmen setting up here. Figures from Uganda show that 28 per cent of the first 6,000 workers to apply to come to Britain were in business or management; the final figure could be as high as 40 per cent. Businessmen, of course, have lost most economically, and seem to have suffered most from Ugandan army brutality and harassment (which, to judge by conversations with refugees, seems to have been under-reported). Swift action could help restore their confidence as well as their fortunes.

Managers may find it still harder to regain their status here. Apart from the prospects generally, it is well known

that coloured people of any origin find most discrimination in managerial jobs, as a report published this week on seven firms surveyed by the Department of Employment makes clear. Meanwhile, things like the large vote won by the anti-immigration candidate at the Rochdale by-election only feed refugee fears of finding hostility outside the camps, in contrast to the friendliness within.

For the first year, local authorities can claim back in full from the Government many special costs they incur for the refugees, such as employing language teachers and refurbishing houses. Leicester (which claims to have received over 3,200 of the refugees) argues that it needs to have more support for spending after the first year. There are indeed problems; but they would be better solved by means of stepping up grants through, for instance, the urban programme rather than continuing to single out the Ugandans for long-term aid, when there may well be other groups of people, including other immigrants, who also need extra help in the local areas concerned.

Television

Open door

The British are so conditioned to professional control of television and radio that, initially, the idea of anyone being allowed to say just what he wants to say is quite shocking. Some of the things particular groups who take advantage of the BBC's experiment in public access television may want to say could be pretty shocking, too.

The experiment is to start next year. Once a week, BBC2 will hand over a slot to, in theory, any group that asks for the use of it. There will be neither political nor moral censorship; the only conditions are that there should be no breaking of the law or incitement to others to break it and no appeals for money. The BBC will provide help and facilities to any who want them but will otherwise leave the non-professionals to get on with it in their own way. The intention is to try to achieve a balance of propaganda over the course of the first year's transmissions. Mrs Mary Whitehouse, while giving a cautious welcome to the notion of wider participation, has said in effect she will believe the bit about balance when she sees it for herself. The man who is to be head of the new community programme unit, Mr Rowan Ayers, has been editor of “Late Night

Ayers: propaganda line-up?

“Line-Up,” which not even its best friends would accuse of political balance.

It would be wrong to see “Open Door”—as the new project is provisionally called—as nothing more than a judicious sop to Wedgwood Bennery. There is a genuine awareness at the BBC that unorthodox views do not get a hearing at all or are heard only within a context dictated by a producer. It is also recognised that there is a tendency in current affairs programmes to limit appearances to those who have proved they can be relied on to give a good performance: the established, the articulate and the show-offs. Coloured people, especially, complain that on the rare occasions when the immigrant viewpoint is solicited, television will wheel on one of its stage-army blacks: someone who, precisely because he is educated and eloquent, is unrepresentative. To carry that argument to its absurd extreme would mean broadcasting only inarticulate, incoherent, ill-informed opinions, a little of which can go a long way. But access ought not to be so limited a privilege.

In the United States, the Federal Communications Commission has ordained that there should be a nationwide experiment in public access television (see *The Economist*, June 3, 1972). In Boston there is a half-hour programme, called “Catch 44,” every evening, whose users have included the Society for Krishna Consciousness, the Polaris Revolutionary Workers' Movement and Gamblers Anonymous. The American experiment is altogether more ambitious than the BBC's, but then the Americans have cable television with channels in search of programmes rather than the other way about. Ultimately it is the political control of broadcasting which has made it an exclusive a medium. Only when there is political sanction for more channel (ie, cable television) will much wider public participation become a real possibility.

You won't find our biggest asset on our balance sheet

One glance at our statement of condition will tell you a lot about Security Pacific Bank's financial status.

Over the last three years, for instance, we've shown a growth of three billion dollars. And in 1971 our assets passed the nine billion dollar mark.

But the one thing you most need to know about a bank is the one thing a column of figures won't show you.

Its most valuable asset of all. Experience. We got ours in California. One of the world's fastest-growing economies.

For over a hundred years we've followed California's phenomenal expansion, in every aspect of its economic life, from industry to international trade. And we've grown ourselves. To be one of the ten largest banks within the USA. And financial partner to 90 of America's top 100 corporations.

So when it comes to medium-term Euro-currency loans we're in a rather special position to understand your problems. Because we know about expansion. At first hand.

Although our head office is in Los Angeles, our international network covers the most important financial centres of the world, from the Far East to Australia, from South America to Europe. Last year alone we opened five new offices outside the USA.

Each one of our international offices has a working inside knowledge of the economic climate of its own country. But it also carries through the imaginative approach to banking that California's dynamic economy has taught us.

When you do business with us, for instance, we act fast. Because we know that any delay in drawing up a contract may mean loss of opportunities and money for you.

And once we've arranged financing we'll continue to counsel with you. To make sure you get the best possible return on your investment. Because when you borrow money from us, you're borrowing something special.

Our most valuable asset of all.
Our hard-earned experience.

SECURITY PACIFIC BANK
OUR EXPERIENCE IS SOMETHING SPECIAL

UNITED STATES

Election Survey

McGovern the missionary, Nixon the manager—and one election issue

"...RIGHT OUT OF MY TEETH!"

Vote against change

President Nixon remarked a little after midnight on Tuesday that he had never known a national election when he could go to bed earlier. A comparison of this week's result with the state of the opinion polls in August suggests that, for any effect the campaign had on the public mind, both candidates might as well have retired to bed three months ago. In that way they would have saved nobody knows quite how much money, but certainly at least \$70m.

Mr Nixon's fifth, last, and most restless campaign for national office has brought him into the tiny company of Presidents elected by more than 60 per cent of the popular vote: Harding in 1920, Roosevelt in 1936, Johnson in 1964. None of the three terms so inaugurated can offer Mr Nixon any reassurance that a huge majority presages a happy Administration or a country easy to govern. And he, accordingly, responded on Tuesday night with gravity and little outward jubilation to the news of his resounding success.

Just why his success was so huge will be long pored over and disputed about. Admittedly the voter turnout was not high, about 55 per cent of the eligible voters and only 2m or so more than the turnout in 1968, though the electorate has expanded by nearly 20m since then both by natural growth and by the admission of young people between 18 and 21 to the franchise. The low vote could be explained by Democrats, unreconciled to Mr McGovern as their party's presidential candidate, staying away from the polls. But this does not account for the rather successful performance of the Democratic party in resisting, and even making some headway against, Republican inroads on its strength in the two houses of Congress and its hold on the state governorships.

When the electorate, those who do turn out to vote, give the Republican President an overwhelming majority and then go on to vote for Democratic Senators, Congressmen and Governors, the most likely inference is that the voters positively wanted Mr Nixon to

continue as President. Why would that be, when his lack of human charm or personal magnetism is widely admitted—among others, implicitly, by himself through his decision to hold aloof from personal campaigning—and when restlessness, apprehension and discontent appear to mark the popular mood?

The answer may be that the restlessness and the discontent generate an opposite and more than equal reaction. Senator McGovern attained the nomination by organising and representing—in the most brilliant way, a thing which his hapless failure in the general election makes it easy to overlook—the forces of dissent and for change within the Democratic party, which is their natural home. He failed completely to translate that success into a movement for change in the country. On the contrary, the idea of social change and the prospect of a government experimenting on lines which the candidate was never able to expound in any complete, lucid or consistent way filled the voters with apprehension. Apprehension was reinforced by the style of the McGovern movement, suggesting as it did the self-conscious adventurous minority: "We few, we happy few, we band of brothers," an approach which normally exerts little

Our correspondents report on the results of Tuesday's elections.

pull on those outside. As the polls have all along suggested, and the election result has made plain, the prospect of social change calls out more Americans interested in slowing it down than in speeding it up.

Mr Nixon perceived this fact and made use of it, not always too scrupulously or in ways best calculated to enlighten the public. For example, although he himself in his first year as President urged upon Congress a more generous and more rational way of administering public assistance for the poor, his speeches dwelt persistently on the evil of idleness and the right of honest working men to hold on to their own. When racial differences were at issue, Mr Nixon as President might have done something to help the public to understand why the courts have been obliged to order reorganisations of school districts and extensive busing of children to distant schools because of the failures of public authorities, from Congress down, to meet their responsibilities as regards social integration themselves. He chose a different course, knowing that protests against school busing were often a front for fears of racial intermixture in residential districts and that this particular fear of change held large electoral possibilities. When a challenger like Senator Goldwater in 1964 or Governor George Wallace in 1968 tries this kind of thing it brings him a block of minority support but no more; he is seen as a danger. When a President in office does it, he is perceived as the preserver of

the existing order; at least Mr Nixon was.

It is not accidental that Mr Nixon fared worse on Tuesday in the only one of the country's electoral units which has a black majority—his own capital, the District of Columbia. He got 22 per cent of the vote in the District, to Mr McGovern's 78 per cent. Together with Massachusetts, which Mr McGovern carried by 56 per cent to Mr Nixon's 44, this gave Mr McGovern his 17 votes to Mr Nixon's 521 in the electoral college whose members were in fact being chosen by the voters on Tuesday.

Mr Nixon has been in the public eye long enough, and in high office long enough, to be associated with continuity and authority in the general mind. People may not love him but they know who he is and they accepted the assurances against uncertainty and precipitate change that he offered them. Mr McGovern they did not know and his tireless exposure of himself, in a remorseless campaigning routine which took him from end to end of the country unrelentingly until election eve, did not correct the difficulty. People who were aware of his personal qualities could feel that, if elected, he would have made a good President. But he never succeeded in conveying to the majority what, as President, he would really be like.

In his acceptance speech at Miami Beach on July 14th Mr McGovern described Mr Nixon as "the fundamental issue of this campaign" and one

had to wonder at the time if he was serious. Most probably he was expressing a feeling, not a calculation. As he perceived, the issue was the challenger, not the man in charge. So Mr Nixon campaigned as the man in charge, offering certainty as against the unknown, asking only to be allowed to get on with his important work. He even underlined the point by sending others out to travel the country and do the speaking for him, a strategy which naturally roused the political commentators to complaint, but which turned out to work at least as well as any other strategy could have done.

Misgivings about Mr Nixon's campaign strategy concern not its demonstrated efficacy as an election-winner, but the legacy of obligations and misunderstandings which it may have left to burden the second Nixon Administration. Laid far ahead, and organised along the formal, rather bureaucratic lines which Mr Nixon likes, with timetables and sub-plots to meet every contingency that could be thought of, Mr Nixon's re-election plans went on relentlessly unfolding long after it had become plain enough that their sum total was more than was required. Had he done without some of the overkill he might have spared himself future embarrassments and prepared the ground more auspiciously for his second term. He might, for instance, have refused to permit the creation of the special fund for secret campaign operations and the secret agents of his Re-election Committee would not then

have been caught red-handed in the offices of the Democratic National Committee. Mr Nixon, it is true, may have known nothing personally of the unsavoury things that were done on his behalf but, on that assumption, if he had not permitted the secret fund, he would have been better placed to retain control.

Having fought his last campaign, Mr Nixon may be looking forward to his second term as a period almost of trusteeship above the squalls of political life. But he cannot insulate Congress from politics and the way he planned his campaign, giving the re-election of the President a total priority over the election of Republicans at all other levels, did nothing to produce a Congress responsive to his wishes. Nor did it leave him or his assistants immune to criticism or inquiry.

Same goes for Congress

Not quite lost in the mists of time are the days when a President's landslide victory could be counted on to bring a large accretion of strength to his party in Congress. President Eisenhower's triumphant re-election in 1956 had no such effect, but President Johnson did do it for the Democrats in 1964. President Nixon's re-election this week is a landslide by any standard, but the accompanying change in Congress is undramatic. The Democrats have lost, very nearly, what they gained two years ago in the House of Representatives and have gained, very nearly, what they then lost in the Senate. For the Republicans the next Congress, the 93rd, will be the tenth in a row in which they have been in the minority in both chambers.

The likely configuration after this week's elections, give or take an independent here or there, is 57 Democrats to 43 Republicans in the Senate and 244 Democrats to 191 Republicans in the House of Representatives. Two of the Democrats elected, Mr Boggs of Louisiana (the leader of the Democratic majority in the House) and Mr Begich of Alaska, were lost in an air mishap last month and will probably have to be replaced in special elections. The relative party strengths, however, cannot change appreciably before 1974 and no great reason exists to suppose that they will then change in favour of the Republicans. While the Republicans may grumble, in some places with justice, that President Nixon might have done more to help them, the

Campaign dollars

One of the mysteries of the presidential election is how the candidates of the two major parties raised and used the record sum of about \$70m they budgeted between them for their race to the White House. Until the beginning of this week the Republican party refused to disclose any of the sources of the funds, estimated at over \$10m, that it amassed before April 7th; this was the date when the new law came into force which requires the disclosure of all contributions over \$100. Then under the threat of a law suit which was scheduled to begin before the election the Republicans agreed to reveal the donations, but not the expenditure, made before March 9th on condition that the case was postponed until a later date. It is now known that 283 people gave approximately \$5m to the Republican presidential candidate up until March. It is still not known how much was raised and how it was spent during the critical month before the cut-off date of April 7th when the President's fundraiser, Mr Maurice Stans, was at his busiest and when large contributions are thought to have made their way to Republican headquarters by very devious means. Nor have the Republicans accounted for a special fund—reputedly worth \$350,000—which Mr Stans is alleged to have kept in cash in his office for secret assignments such as spying on Democrats.

Senator McGovern's campaign has also come up with its own surprises. Only a month before the election the candidate was so desperately short of money that he himself was reduced to pleading for funds. Then soon after he made his televised statement of policy on the war in Vietnam small donations started to arrive at the rate of about \$500,000 a day. With few exceptions the money did not come from the sources of financial power—rich businessmen and the trade unions—on which the party has relied in the past. Mr McGovern's finance chairman, Mr Henry Kimelman, estimates that three-quarters of the contributions came from people who gave less than \$100. The few big sums, most of which came from young heirs to large fortunes who are new names on the list of Democratic contributors, arrived in the form of loans. These were gradually being paid back as the small donations accumulated. The old financial stalwarts of the Democratic party who had no faith in Mr McGovern reacted in several ways. A few added to the flood of money pouring into the Republican coffers. But most of them either kept their money to themselves or put it in separate funds to help Democratic candidates for Congress.

The Republicans' accounts looked very different from those of their rivals. They relied mainly on large donors, or fat cats as the Democrats called them—in contrast to their own skinny cats. This year the largest gift was \$1m from a Chicago businessman who made no secret of the fact that he wanted to be the next ambassador to Great Britain. Nor did the budget for the Republican presidential candidate have much in common with the Democratic candidate's. According to the most recent reports which cover the period from the beginning of April to the end of October, the President's campaign cost \$32m—the fund-raising target was \$45m—and Senator McGovern spent \$17m. But these figures do not take account of what was going on before April nor of what happened in the last few days of the campaign when the candidates usually step up their spending. The report on the latter period will not become public until January.

Much of the money has gone on television broadcasts but neither candidate is expected to have spent anywhere near the \$14m each of them is allowed for all types of advertising. This year both parties spent much more than usual on direct mailing and the Democrats were expected to put a great deal into their last-minute drive to get people to the polls.

Not the least of the surprises this year was that the Democratic campaign for President should break even; four years ago it ended \$9m in debt. The balanced budget is in part thanks to astute management, in part to subsistence diets of peanut butter sandwiches and coffee and meagre salaries for all McGovern workers and in part to new policies brought in by the airlines, hotels, and telephone companies; this year unlike in 1968 they would not give credit.

THE VOTE THAT REALLY COUNTS

failure to produce a change this year is not entirely his fault. The Republican Party has not offered enough attractive candidates or addressed the voters on matters which concern them enough.

Concealed in the humdrum totals of Senators and Representatives is a great diversity of human events. In the Senate contests the Republicans gained seats in North Carolina, Virginia and Oklahoma and their man in Texas, Senator Tower, defeated a strong challenge by gathering in a very much bigger vote than he has ever won before. These results together with some others—for instance, that in Texas a Republican very nearly defeated the Democratic candidate for the governorship, an unheard-of event suggests that Mr Nixon's success in the South was accompanied by a Republican current there. The other Republican gain was in New Mexico, where the success of Mr Pete Domenici is probably chiefly the product of personal qualities.

Elsewhere things were very different. A Democratic Congressman in Maine, Mr William Hathaway, committed an error of judgment last winter when, believing that the Democratic presidential candidate was going to be Senator Muskie of Maine, he resolved to give up his seat in the House and contest the other Senate seat with a Republican lady believed to be invulnerable in any other circumstances—Mrs Margaret Chase Smith, who is an elegant 74. To the general astonishment Mrs Smith has been beaten after 24 years in the Senate and Mr Hathaway is to be Senator after all. Mr Nixon, however, got 62 per cent of the vote in Maine against Mr McGovern.

A similar error of judgment committed by a Polish-American Congressman from Chicago, Mr Pucinski (who had in mind that Mr Muskie was a Polish-American too), did Mr Pucinski no good whatever. His opponent, Senator Charles Percy, succeeded in proving that he could get more votes in Illinois than President Nixon himself. But the voters of Illinois refused re-election to their Republican Governor, Mr Ogilvie. At the same time as it put a Democratic Governor, Mr Daniel Walker, in the state house Illinois reduced the number of its Democratic Congressmen from 12 to 10 and increased its Republican congressional delegation from 12 to 44. This was the product of an ingenious re-drawing of constituency boundaries.

In Delaware, an industrial preserve which is supposed to be a safe place if there is one anywhere, its Republican Senator, Mr Caleb Boggs, was defeated

by a Democrat, a peace candidate and anti-industrial conservationist, Mr Joseph Biden, who will become eligible to sit in the Senate upon his thirtieth birthday later this month. Colorado was another state where the Republican Senator, Mr Gordon Allott, was thought safe from challenge. Somehow Mr Allott's prospects of re-election became involved with the controversy about having the next winter Olympic Games in the mountains of Colorado. That idea was dropped and so was Mr Allott. The next Senator from Colorado is Mr William Haskell, a liberal former Republican who turned Democrat in 1970 in protest against Mr Nixon's appointments to the Supreme Court and against the incursion into Cambodia. President Nixon, on the same day, got 63 per cent of the Colorado vote for his re-election.

Mr Nixon carried Ohio by a much bigger margin than he has had there before, 60 per cent to Mr McGovern's 39. His conservative Republican opponent of the primary election campaigns, Mr John Ashbrook, was, however, re-elected to the House of Representatives. Mr Nixon did better in California than some people had expected, winning with 55 per cent of the vote; but Mr Nixon's Republican anti-war opponent from the primary campaigns, the liberal Mr Paul McCloskey, was elected to Congress once again.

Beaten, unbowed

As Senator George McGovern conceded his stinging defeat to the President late on Tuesday night, he made it perfectly clear that he intended to continue as the head of the loyal opposition. "We do not rise to the support of policies we deplore," he told a screaming, cheering mob of followers packed into the Coliseum in Sioux Falls. "but we do love this

country and we will continue to beckon it to a higher standard." Indeed, his congratulatory telegram to President Nixon, stripped of the customary courtesies, was almost curt in tone.

I hope that in the next four years, you will lead us to peace abroad and justice at home; you have my full support in such efforts.

To his followers, his message tried to instil a sense of victory because, he said,

If we pushed the day of peace just one day closer, then every minute and every hour of this campaign was worth the bone-crushing effort.

Mr McGovern had been resigned to defeat for some days, although the faint hope lingered even in private that the polls were wrong and that he would be vindicated. But aboard his campaign jetliner, the "Dakota Queen II," in the last 48 hours of the struggle, a change came over him. He became calm, almost serene—he had done all he could, was the way an aide described the mood—and now, while he continued to fight with rising scorn and defiance of Mr Nixon ("this man Nixon"), he was no longer shrill. He drove early Tuesday from Sioux Falls, a small prairie town evocative of Sinclair Lewis's "Main Street," across 75 miles of farm country to vote at a church in his former home in Mitchell. Then he returned to await the returns in his hotel suite. He slept for two hours and, when he awoke early in the evening, he and his staff decided not to prolong the agony, to concede the election and get it over with.

In his statement, he pleaded with the young voters who had begun their political involvement with this campaign not to abandon the system. The Democratic party was improved because of the reforms they—and he—had instituted. So was the United States, he said, "because we never once gave up the battle to renew its

ideals." As a leader of the young, new voters in the Democratic party, Mr McGovern's future was assured. But how he would fare with the older, establishment politicians was another question.

The first test is scheduled for December 9th, when official posts in the party's national committee will be reconsidered. The McGovern faction, which won control of the party at the nominating convention in July, will find itself severely challenged at these elections, particularly in the case of Mrs Jean Westwood of Utah, whom Mr McGovern chose to become the first chairwoman in history. His Senate seat does not have to be contested until 1974, so he has two years in which to try to recapture his sagging power base in South Dakota, needed if he is to maintain a national platform in the years to come. As to running again for President in 1976, the answer, Mr McGovern said on Tuesday, was "No. I really mean that."

Governors gain

The races for 18 governors have brought the Democrats some consolation. While losing North Carolina and Missouri, they gained Vermont, Delaware and Illinois. In Illinois and Delaware it was really the question of state taxes that brought both Republican incumbents down. Mr Sherman Tribbitt's promise to the voters of Delaware to be more fiscally responsible was enough to give him the edge in a close fight with the incumbent Republican, Mr Russell Peterson.

In Illinois the tax issue was also behind the narrow victory of the Democrat Mr Daniel Walker over the Republican incumbent, Mr Richard Ogilvie. Mr Walker's victory is remarkable because he is in no sense a friend of Mr Richard Daley, the Mayor of Chicago who is one of the most powerful Democrats in the state. Mr Walker

was the author of the report that described the troubles in Chicago during the Democratic convention in 1968 as a "police riot." Vermont was perhaps the most unusual of the Democratic gubernatorial victories because Mr Thomas Salmon was an avowed McGovern liberal and it is difficult for any Democrat, let alone a liberal one, to get elected in this conservative state with its long history of voting for Republican candidates.

But in the South Mr Nixon's coat-tails do seem to have had an effect on the governors' races. In North Carolina the Democratic candidate, Mr Hargrove Bowles, ran a well financed and efficient campaign, stressing all the right issues and promising no new taxes, while dissociating himself from the unpopular Democratic governor who was unable to run for another term and from Senator McGovern. But the Republican, Mr James Holshouser, who trounced Mr Bowles in this race, seems to have succeeded in making people believe that Mr McGovern and Mr Bowles "are like two peas in a left-wing pod." Missouri now has in Mr Christopher Bond not only its first Republican governor since 1940 but, at 33 years old, its youngest ever.

The closest race of all was in Texas, where the Democrat, Mr Dolph Briscoe, just scraped in with 48 per cent of the vote from the Republican, Mr Henry Grover, with 47 per cent of the vote. Mr Briscoe thought himself so far ahead that he scarcely did any campaigning until the last two weeks. Part of the reason for this near upset was the emergence of a Spanish-speaking candidate, Mr Ramsey Muniz, of the Raza Unida party, who got 5 per cent of the vote—much of which would have normally gone to the Democrats. Another reason for the poor showing in this traditional Democratic bastion was the "Democrats for Nixon" movement led by the Texan Mr John Connally. Some of these Democrats may have gone on to vote the whole

Republican ticket, although Mr Connally did not urge this.

In this disastrous year for their party's presidential candidate conservative Democratic governors who were running for re-election increased their majorities. Governor Dale Bumpers of Arkansas won a second term with nearly 80 per cent of the vote and Mr Calvin Rampton of Utah and Mr Robert Docking of Kansas also increased their majorities.

Two races which were expected to produce upsets and did not were in Washington and West Virginia. In the former state, the Republican incumbent, Mr Daniel Evans, a liberal, was accused by his Democratic challenger and former governor, Mr Albert Rosellini, of allowing the numbers of those employed by the state to double and of raising taxes. But in September Mr Evans took clever evasive action by asking for a constitutional amendment to limit property taxes and calling for a task force to monitor state spending and efficiency. So—with perhaps a bit of a ride on those Nixon coat-tails—Mr Evans has been returned for another term. In West Virginia the most spectacular, and certainly the best financed, bid to oust a Republican governor failed. Mr Jay Rockefeller went down to the Republican incumbent, Mr Arch Moore.

Lone hold-out

Long before Massachusetts went to bed on Tuesday night it knew that it had earned a lonely distinction: it was the only state to deny President Nixon its electoral votes and its only company was the nation's capital, the District of Columbia. Sophisticated Democrats wondered with a shiver whether the new Nixon Administration would make the state pay for its recalcitrance by slowing down the flow of federal funds—something which the Republican Governor, Mr Sargent, was quick to deny and something which the easily re-elected Republican Senator, Mr Brooke, will do his best to prevent. Mr McGovern did much less well in Massachusetts than Mr Humphrey did in 1968, carrying it by only about 200,000 votes compared with a majority of 700,000 for the Democrats four years ago.

Mr Nixon never counted on carrying Massachusetts—he called it Kennedy country. But the reasons why the Bay State stuck obstinately to the Democratic presidential candidate go deeper than that. Massachusetts has been the most militant anti-war state

in the country. The state's longstanding opposition to the war flows naturally from the fact that its greatest industry is education. Its hundreds of universities and colleges gave the peace movement its leaders and the Democratic party its volunteer workers, drawn from among staffs as well as students. Their "sign it now" placards as Mr Nixon sought more time for negotiation with Hanoi showed that they remained unconvinced that he was determined to end the war.

What is more striking is that so many regular Democrats and voters from ethnic groups—the Italians, the Irish, the Poles—found their way back to the McGovern standard after their initial alienation at the time of the Democratic convention. Mr McGovern carried Boston by a smaller margin—two to one—than did Mr Humphrey in 1968, but he won support from the Irish, the Italians and the Poles in the city and he carried most of the smaller cities and big towns. The urban vote is almost the whole story in Massachusetts and there the unions were helping Mr McGovern. Mr Nixon's "Catholic strategy" worked in many places but it failed in Massachusetts, which is just over half Roman Catholic. Some of the working-class ethnics stuck with Mr McGovern for economic reasons (joblessness is running nearly 2 per cent above the national average in Massachusetts), some from Democratic habit. But the peace issue was apparently the strongest element in their decision.

First voters

This was the year when 25m voters between the ages of 18 and 24 were allowed to have their first say in how they wanted America run. The young gave a higher percentage of their vote to Senator McGovern than their elders. But they are by no means the left wing radicals of popular belief. Those who went to the polls voted equally for the Democrat and the Republican. Senator McGovern's support came from college students. While they are heavily outnumbered by the more conservative, wage-earning young they are thought to be more conscientious about registering to vote and going to the polls. A correspondent in Michigan reports on Mr McGovern's student followers:

While the polls showed that Senator McGovern still had the support of a majority of college students his organisation had difficulty in recruiting the student volunteers who were expected to be the bedrock of his campaign. Students at large well-

Young people get their first ballots

known activist colleges like the University of Michigan turned out in droves for Mr McGovern's infrequent visits to campuses but they did not flock to work for him.

During the fight for the Democratic nomination it was not unusual for the McGovern campaign to organise busloads of students from several surrounding states to converge for a weekend on one key city in a state where a primary election was being held and do a blitz door-to-door selling job while being put up and fed by friendly local residents. The door-to-door canvas remained the focus of the McGovern efforts and student volunteers were needed more than ever since the traditional suppliers of manpower in a general election—the trade unions and the local Democratic party organisations—were sitting on their hands in many communities.

But young volunteers did not come forth in large enough numbers. The word was that "the students don't want to spend time when they think McGovern is going to lose." But it was not simply the losing image which hurt Mr McGovern in the colleges. He was damaged by his national advisers' deliberate attempt to blur his image as the radical champion of youth, the image which turned the students on in the first place. Said one member of the McGovern staff in Michigan bitterly: "George McGovern isn't a sexy hero any more to the students. Now he's just another politician."

A lingering part of his problem on the campuses was the sympathy of students for his deposed vice-presidential candidate. Other complaints frequently heard were that Mr McGovern lost his purity

by associating with old-line politicians like Mayor Daley of Chicago and by modifying some of his social welfare proposals in order to deradicalise himself. Perhaps most important, the war in Vietnam had ceased, even before the latest peace moves, to be the burning issue at colleges that it was when Mr McGovern drew cheers on innumerable visits to universities during the two years of his lonely pursuit of the nomination.

Some McGovern organisers argue, however, that it would have made little difference if the Senator had hewn harder to some of his more controversial proposals like amnesty for those who evaded conscription or grants to provide a minimum income. They feel that he was a victim of the abrupt decline in activism at college, reflected in the eagerness shown by first- and second-year students to turn their backs on the turmoil of the 1960s.

Yet, in spite of this apathy some students did sign up to work for Mr McGovern. Furthermore the majority of the full-time paid McGovern campaign organisers in Michigan—and elsewhere—were in their early or middle twenties, indicating that young people are very likely to play a large part in the future of Democratic party politics even though Mr McGovern has lost.

Message from the medium

Television was more important in this presidential campaign than in any previous one, since only through it could the relatively unknown and much misrepresented Senator McGovern hope

New heads of state: Walker, Holshouser, Bond, Briscoe

to spread his name and his true, far from radical, image into every voter's home. His half-hour paid television programmes had, on occasion, up to 30m viewers, according to Broadcasting magazine, while probably not more than 1m altogether saw the candidate in the flesh as he criss-crossed the country. But his travel schedule was planned to ensure that he appeared on as many news programmes, local as well as national, as possible each day.

Even so Mr McGovern's managers felt that television's news coverage had been biased and unfair to him. So they made desperate attempts to do with bought time what could not be done in free news time and counteract the dismal effect of the opinion polls which showed the President to be so far out in front that there was no real contest.

Indeed there was no real contest so far as television was concerned. Wisely Mr Nixon refused to appear in debate with Mr McGovern. The general result was that Mr McGovern seemed to be forever on the screen while the President's appearances were nicely timed to give the impression that he was too absorbed in national and international affairs to have any interest in campaigning. But such affairs could be arranged, to ensure that he was seen on television whenever he wanted.

So far as paid political broadcasts were concerned, Mr Nixon himself concentrated on radio, broadcasting a series of half hour-long "white papers" on matters of policy. Even if few people actually listened to these, they were always fully reported in the newspapers. Until the last weekend of the campaign, when Mr Nixon did take to the television screen, he left that type (and most other types) of campaigning to his "surrogates." They could attack Mr McGovern more harshly than would be becoming from a President.

Senator McGovern began by trying

A cat may look at a candidate

to hit three separate television "markets" a day. Then this exhausting strategy was changed for mass rallies with crowd drawers like Senator Humphrey or Senator Kennedy alongside on the platform; but the cameras tended to focus on them rather than on the candidate. So then Mr McGovern began to stride, laughing and confident, through large out-of-door assemblies. This time the cameras showed the masses to be mostly blacks, Mexican-Americans and young people and the commentators pointed out unkindly that this was holding the hands of the faithful rather than grabbing converts. After that Mr McGovern switched to half hours of "fire-side chat" in prime viewing time.

He also undertook a series of "telethons," question and answer sessions tailored to local interests and viewed only locally or regionally. Viewers telephoned in their questions which were filtered through the Senator's staff. One purpose of the filtering was to suppress questions which were obviously easy or friendly and to pass on to the candidate questions about matters on which he felt that he was being misrepresented. The local campaign organisers felt that the telethons were more helpful to them than the reports and addresses prepared for the entire country.

In addition to the half-hour programmes, shorter commercials (very short in Mr McGovern's case) were put out both on the networks and on individual television stations by the national campaign organisations. The accepted view this year has been that the Madison Avenue approach only alienates voters. The new criticism is that the election commercials have now become too much like documentary films and news reports.

The Committee for the Re-election of the President was responsible for a series of six or seven minute programmes, showing Mr Nixon visiting China and Russia or looking after the environment, ending with the punch line: "That's why the country needs President Nixon." Democrats for Nixon, however, rejected this positive line and in their hard-hitting commercials attacked Mr McGovern directly. Mr McGovern's own commercials began by being low-keyed, often showing the candidate explaining his views to a small group of factory-workers or other voters. But in the desperate last days of the campaign another producer was responsible for a new series of McGovern spots, aimed sharply at the President.

A vote for death

Voters in Colorado do not want to have the 1976 winter Olympic Games in their state. In Michigan they decided not to permit abortion and in California an overwhelming majority want the death penalty back again and want the smoking of marijuana to remain a crime. These are just a few of the numerous issues that shared the ballot on Tuesday along with the candidates. Voters in 44 states had a chance to show their feelings about such things as raising money—never popular these days—a cleaner environment and education; they also had their say about new and old taxes, lotteries, judicial and constitutional reforms and the liberalisation of liquor laws.

In California the voters were faced with 22 propositions, the largest number in any state. A correspondent there writes about the campaign to reinstate capital punishment:

Last February, California became the first state to abolish the death penalty as an "impermissibly cruel" and "unusual" punishment in the light of contemporary standards. But during the summer police, district attorneys, sheriffs and prison guards, encouraged by Governor Reagan, successfully banded together to get more than 1m signatures on a proposition putting this question before the voters. This was a backlash against the ruling of the state's supreme court which in February took 107 people off death row and gave them life sentences instead. Law enforcement men campaigned vigorously to restore the death penalty on the grounds that it is an appropriate penalty for those who kill and that the threat deters crime.

A majority of the American Supreme Court ruled this summer that by today's standards of decency the death penalty is too cruel and unusual a punishment to be acceptable under the Constitution. But the various and complex opinions handed down—there were nine in all—appear to permit capital punishment when it is a mandatory penalty and not one left to the discretion of juries. California police contended, therefore, that the state could restore capital punishment as a mandatory penalty for such crimes as the murder of a prison guard by a man who is serving a life sentence. The California proposition now opens up the door to drafting such laws. There were few who fought against the restoration of the gas chamber and they were poorly financed.

Now an extra dimension in travel when you fly KAC.

Introducing ON BOARD THEATRE* to give you a nice 'n'easy flight—plus individual six channel music.

You can fly like this to Kuwait and then Abu Dhabi, Aden, Baghdad, Bahrain, Bombay, Delhi, Dhahran, Doha, Dubai, Karachi and Teheran.

And you'll enjoy every restful minute of it.

**World industry comes to Ward
for all kinds of
plant and machinery**

From showrooms like this throughout Britain, Ward serves the world with all kinds of plant and machinery. Each Ward showroom carries large stocks of new, rebuilt and used equipment – available 'off the shelf' to satisfy immediate factory and production programme needs. Ward is able to supply – by sale or hire – modern machine tools, machinery and plant of many different types – from giant lathes to guillotine shears, from generating sets to press brakes. Rebuilt and used equipment undergoes rigorous reconditioning and testing; all equipment is backed by the world-famous Ward service.

World industry comes to Ward for plant and machinery – and for many, many more of its vital needs.

*A single source of supply for much
of industry's needs*

{ Good things come in threes. }

Our first DC-10-30, the HB-IHA 'St. Gallen', starts service to North America in mid-December.

You owe
this advertisement entirely to the fact
that **Swissair** is the first European airline
to get a **DC-10**.

AS FOR SWISSAIR'S having ordered 6 DC-10s, McDonnell-Douglas owes it to the simple fact that they developed a long-range version, the DC-10-30, for the joint needs of the KSSU group (KLM, SAS, Swissair, UTA).

In the United States the DC-10 was the most popular plane model within a few months of its first introduction: passengers unanimously called it the most comfortable aircraft.

That's why Swissair is delighted on its own behalf and that of its passengers with the new machine: it's completely tailored to the needs of civil aviation, worked out to the last detail for passengers' comfort and the efficient movement of cargo.

The 249 passengers (22 first class, 227 economy) have 7 galleys and 8 toilets available. Each seat

has its own console for light, service, musical program selection, volume control for music and films.

The DC-10-30 has one less row of seats than the Boeing 747B; but since the passenger space is only 16" narrower, it gives an even more spacious effect. And a more generous one: the DC-10 has the biggest windows ever installed in a passenger plane.

Technology and service planning rely on our experience with the 747B; a completely novel computerized navigation system takes the plane along a programmed route to its destination; cargo and luggage are palletized; each of

the three engines is powerful enough to move and land the DC-10-30 alone, if needs must.

The most agreeable feature of the Swissair DC-10-30 is that the engines are not merely the most powerful ever installed in a passenger plane, but also by far the *quietest* (for instance 50% quieter than a DC-9) and those with the *lowest exhaust gas* (a recycling unit has been attached for incompletely burned fuel). Our best thanks to the General-Electric engineers!

And this will surely delight the neighbors of our Swiss airports even more than it does the passengers who want to fly from there to North America, Africa, the Middle and Far East merely because they're anxious to travel by our DC-10s.—Merci.

Engineering data of the Swissair DC-10-30:

Overall Wing Span	50.39 m	Economy Class	227
Height	17.70 m	Cargo Space	127.10 cu. m
Tail Span	21.69 m	Engines	3 General-Electric CF6-50A
Overall Length	55.55 m	Maximum Thrust	3 x 22,226 kp = 66,678 kp
Maximum Take-off Weight	251,750 kg	Average Cruising Speed	886 kmph
Maximum Payload	40,000 kg	Tank Capacity	138,236 l
Number of Passengers	249	Maximum Range (at full load)	9,340 km
First Class	22	Price incl. Spare Parts	sFr. 105,000,000

Why every investor should put his money behind the latest revolution in South America.

The greatest revolution ever to take place in Latin America is happening in Brazil.

It's a business revolution. An economic miracle.

And anybody with money to invest really owes it to his bank balance to find out a little more about this economic explosion.

And how the European Brazilian Bank has been newly-formed to help Europeans take advantage of the tremendous investment opportunities.

An economic explosion.

Brazil is the stablest country in Latin America.

The present government has controlled the destiny of Brazil, unchanged, for over 8 years.

What have they achieved besides political security?

A growth in the National Economy of almost 50% over the last 5 years.

What's more, it is a steady growth (1971 saw an 11.3% rise).

Exports are booming. Last year they jumped by 17%. They are confidently expected to maintain the same rate of expansion this year. And next year. And the next decade.

Brazil sells watches to Switzerland.

Instrumentation to West Germany.
Shoes to Italy.

Computer parts to the U.S.A.

Investing in Brazil today is as shrewd as your Great, Great, Grandfather investing in England at the start of the Industrial Revolution.

The European Brazilian Bank Limited - London.

The European Brazilian Bank opened in London in April 1972.

Shareholders: Banco do Brasil S.A., Brasilia, Bank of America Limited, London, Banque Ameribas S.A., Luxembourg, Deutsche Bank A.G., Frankfurt, Union Bank of Switzerland, Zurich.

Capital: £4,000,000. £2,000,000 Paid up.

It's objective is to help and advise investors interested in taking advantage of the booming economy in Brazil.

All you need to commit is time.

Obviously, Brazil is a lot more than coffee beans and Pele.

And, obviously, you will want a lot more specific advice and information on Brazil.

Why not 'phone or write to Rik Verhagen, Managing Director of the European Brazilian Bank for an appointment. Tel. 01-623 8281.

At this stage, all it will take up is an hour or so of your time.

It could be the wisest (and most profitable) hour you ever spent.

The European Brazilian Bank Limited.

(Shareholders: Banco do Brasil S.A., Brasilia, Bank of America Limited, London, Banque Ameribas S.A., Luxembourg, Deutsche Bank A.G., Frankfurt, Union Bank of Switzerland, Zurich).

International Report

The end of the long, long trail awinding from Uganda

FROM OUR UGANDA CORRESPONDENT

With the help of a piece of semantic jiggery-pokery engineered by the United Nations, General Amin's deadline for the expulsion of Uganda's non-citizen Asians was met at midnight on Wednesday. Two days earlier, faced with the impossibility of all the Asians leaving in time, the Ugandan authorities agreed that the UN should set up so-called departure centres, where those who remained would stay under UN protection until flights became available. On Thursday morning, while Asians who are Ugandan citizens reported for a head-count, about 1,500 stateless Asians waited patiently in two hastily converted Sikh temples and a Hindu community hall, bedecked with UN flags. United Nations officials explained that, so far as the Ugandan authorities were concerned, technically they had already left.

Several factors were responsible for the final bottleneck. General Amin's announcement that Asians who are Ugandan citizens would have to leave their homes in the towns and live among the African peasantry in the villages led about 1,000 to discard their citizenship and plead statelessness in order to get out. There were delays in aircraft movements, and on the eve of the deadline a public holiday was declared for the Moslem feast of Id el-Fitr. There was even last-minute confusion over when the deadline actually fell, the result of an error in official arithmetic. But all these problems were of less importance than the seeming unconcern of the international community.

In the week that followed the appeal by the UN Secretary-General, Mr Kurt Waldheim, for transit facilities for stateless Asians from Uganda, Austria agreed to provide temporary accommodation for 1,200, Italy for 1,500 (later reduced to 940), and

Belgium for 300. Britain, India and Pakistan, which after Uganda itself bear the largest share of responsibility, have remained conspicuously silent, waiting, no doubt, for other smaller countries with fewer resources and more compassion to come forward and help—as in the end they did. But it was not until a few hours before the deadline that Malta offered 400 places, Spain 500, Greece 100 and Morocco 300. Austria and Belgium had meanwhile increased their earlier offers. The German embassy in Kampala had resolutely resisted the suggestion that the Olympic village might make an ideal transit centre, and there was no offer from France, which, with Portugal, is the only west European country not to give assistance in any shape or form. Apart from the situation of these

stateless Asians, the final stages of the exodus proceeded smoothly, although there is as much confusion as ever on the statistical side, mainly because a sizeable group of Asians took out several options. A British Asian, for instance, may have had entry documents for as many as four countries—Britain, India, Canada and Australia—and some of them did. None the less it appears that about 24,000 Asians have settled in Britain—the majority requiring entry certificates but some travelling on exempted passports. Another 3,500 British Asians went to India and Pakistan, and perhaps 2,000 to Canada. Perhaps 500 more have gone to Australia, Malawi and the United States.

Canada has also taken some 1,500 stateless Asians, the United States 800, India about 300, and Switzerland 200. Smaller numbers have gone elsewhere, and several thousand have travelled out as dependants of British and Indian passport-holders. The signs of their leaving are everywhere to be seen. In Kampala alone, three-quarters of the businesses are now closed. On the main street, Kampala Road, there are places

Stateless, in Switzerland, in transit. To where?

We have changed our name in order to eliminate any confusion with other oil companies which use the "Standard Oil" name.

We have also changed our name so that we can have one common name for our principal operations and products within the United States.

Outside the United States, companies that are affiliated with Exxon will keep the Esso name. And, of course, Esso affiliates will continue in the 90-year tradition of responsible operations that has helped make Exxon the world's leading supplier of petroleum.

EXXON CORPORATION

where one can walk along virtually deserted pavements for two or three hundred yards past an unending facade of barred shop-fronts. Over 1,000 formerly Asian-owned businesses have now been advertised in the Ugandan press, with a combined value of some £20m. The government, giving warning of "temporary difficulties" to be overcome, has ordered meetings at a local level throughout the country to decide how they shall be parcelled out. Where the money and knowledge to operate and pay for them will come from has not been disclosed.

If there is doubt about the future of the businesses the Asians have left behind, there is scarcely less uncertainty about the future of the Asians who have remained. It is estimated that 2,000-4,000 who are Ugandan citizens may have stayed, and perhaps the same number of non-citizens exempted by virtue of their professional qualifications. At Thursday's head-count, those holding Ugandan citizenship had to indicate to which villages they wished to be sent. Their rustication, explained a Ugandan spokesman, was necessary "in order to achieve unity, understanding and co-operation among all Ugandan citizens... regardless of their origin." Quite what form the rustication will take has yet to be made clear, but it is expected that when it is the great majority will leave for India.

The final stages of the Asian exodus and General Amin's new moves against Uganda's Asian citizens have temporarily overshadowed other developments affecting Uganda's 8,000 Europeans, and in particular the British. The general has promised that the future of British expatriates will be made clear at a meeting with some 300 representatives of the British community to be held in 10 days' time, but in the meantime it seems certain that he is not contemplating any mass expulsion such as he inflicted on the Israelis in April and the Asians more recently. General Amin's relationship with Britain is too equivocal for that. At the same time there is little doubt that British-owned tea and coffee estates here will be Ugandanised in much the same way as the Asian-owned businesses, and the same fate may ultimately await most British and other foreign-owned companies here. In the end this could have much the same result as the wholesale expulsion of Britons. But events are unlikely to move that far unless the British Government retaliates, and General Amin lets that be his excuse to force the pace.

Germany

Neat from any angle

FROM OUR BONN CORRESPONDENT

It was no accident that a general relations treaty between the two Germanies was initialled in Bonn on Wednesday afternoon—just 11 days before the west German elections. Many a hand had been laid on the collective heart of the government to call the opposition and the electorate to witness that the election date had no bearing on the manner and the speed of the negotiations. But November 19th seems mightily to have concentrated the minds of those veteran negotiators, Herr Bahr of Bonn and his east German counterpart, Herr Kohl, not to mention the ambassadors of the four "occupying" countries, whose agreement last Sunday in Berlin provided the requisite umbrella for the treaty.

The Soviet Union and east Germany wanted the treaty in the bag before the possible takeover in Bonn of the Christian Democrats, who have no loyalties to Herr Willy Brandt's notions of Ostpolitik. And the treaty is all of a piece with the Soviet policy of maintaining the political status quo in Europe by a steadily growing patchwork of agreements. For Herr Brandt's Social Democratic government the intra-German treaty is the culmination of the Ostpolitik and a mechanism whereby German may speak peace unto German. The opposition finds the concept bizarre when people still get shot trying to escape from the east.

The treaty, with a short preamble and 10 articles, simply attempts to establish a modus vivendi between the two Germanies in the absence of a

peace treaty. It provides for the entry of both states into the United Nations (the west German application is likely to be in January), and also for the exchange of "representation" without actually saying what the men doing the representation will be called: the east Germans have been pressing for ambassadors, and the west Germans want just representatives. The vexed question whether Germany is two countries or two states within one nation has evidently been shelved for the time being. The preamble makes reference to different views on the national question, as well it might. Clearly, west Germany's hope of eventual reunification that is embedded in its constitution and east Germany's insistence on its own complete sovereignty have proved impossible to reconcile. The west German government hopes to persuade the Bundestag to swallow this by presenting a letter to the east German government laying down its eventual aim of reunification. This the east Germans will apparently accept.

The treaty, if and when ratified by the next Bundestag, will certainly help those living in districts on the border, which has now been declared inviolable. People in 56 districts severed by it will be allowed to cross from west to east nine times a year for a total of 30 days. There are to be four more border crossing points in addition to the existing five. Even while the treaty was being negotiated, there were improvements at the human level. The east Germans proclaimed a progressive amnesty to begin on November 1st for both political and criminal prisoners. As many as 30,000 people may eventually be involved, with the promise of some 2,000 to arrive in the west by the end of this month. Hundreds of people have been able to leave the east to rejoin their families

The French, Russian, British and American ambassadors provided the umbrella

The Peninsular and Oriental Steam Navigation Company, P & O Building, Leadenhall Street, London, EC3V 4QL.

The Directors of The Peninsular and Oriental Steam Navigation Company (other than the Earl of Inchcape, Mr. D. D. Brown, Mr. A. B. Marshall and Mr. C. J. Nancarrow, who have previously indicated their dissent from the Offers) have taken all reasonable care to ensure that the facts stated and the opinions expressed in this advertisement are fair and accurate and they jointly and severally accept responsibility accordingly.

Some banks can get a little myopic about investments outside their dollar portfolio.

Some banks still seem to think that the centre of world-wide investment lies a couple of miles west of the Greenwich meridian.

How do you see international portfolio management?

Bankers Trust believe that international portfolio management means giving you accurate perspective in terms of world markets, or it has nothing to sell.

We don't have to brag about our intimate knowledge of the US scene. You probably know that Bankers Trust is one of the largest dollar portfolio managers in the world.

You may not be as familiar with our information capabilities elsewhere. We have adapted the disciplines we use

to look at the US market to the rest of the world's exchanges, from Tokyo to London.

We have our own people in Zurich, Frankfurt, Tokyo, Brussels, and Paris.

Not to mention our team here in London. If you see investment portfolio management the same way as we do, give us a ring. 01-236 5030.

Ask for Tom Woolley or Peter Mackie.

You'll find an international banker at Bankers Trust

NEW YORK, LONDON, PARIS. Representatives in: Manchester, Brussels, Frankfurt, Rome, Zurich, Bogota, Buenos Aires, Caracas, Mexico City, Sao Paulo, Beirut, Bangkok, Hong Kong, Manila, Sydney, Tokyo.

in the west, and 25 east German fiancées have been reunited with their betrothed in west Germany.

Russia, moreover, saw fit this week to dangle its own particular carrot in front of the march of the Ostpolitik. The Soviet Union has promised that 1,800 ethnic Germans are to be repatriated. An advance party arrived this week. These are from the number of so-called Volga Germans, who settled on the banks of that river in the time of Catherine II and who, in a subsequent century, were sent to Siberia by Stalin.

Perhaps Herr Brandt, like some latter-day Peter the Great, operating in the reverse direction, has "pierced a window to the east." The Christian Democrats do not much like what they see through that window nor the allegedly hasty manner, in a very brittle electoral situation, in which it was put into place. Herr Barzel, the opposition leader and alternative chancellor, is already pointing out, with memories of the passage through the Bundestag of the Moscow treaty still fresh in his mind, that a treaty can be "improved" between initialling and signature.

The signing will take place only after the newly-elected Bundestag has convened, and by then Herr Barzel could be chancellor. He must surely recognise, however, that if he tries to renegotiate or "improve" the treaty the east Germans have a consummate ability to sit on their thumbs. The treaty is a bad electoral wicket for the opposition, since it cannot condemn outright an improvement in intra-German relations and certainly not the release of so many people from the east. It can only continue to hit the government where it hurts most—inflation and the economy.

For the Social Democrats, the treaty brings a new twist to their whole election strategy. The elections can now be presented as a plebiscite to endorse the Ostpolitik in general and the east-west Germany treaty in particular. The treaty was a neat move, whichever way you look at it.

Barzel woos the Ruhr

FROM OUR SPECIAL CORRESPONDENT
Düsseldorf

As might be expected, electioneering in the heart of the Ruhr is aimed mainly at "the working man." But just who he is, how he may vote, and what the rival parties are offering him, remain

Wir bauen den Fortschritt auf Stabilität CDU

Barzel and friends get the treatment

tantalisingly obscure. Communist posters invite him to vote on November 19th for "social progress, democracy and peace, against big capital"; Social Democratic ones offer "secure jobs and healthy finances"; and, with even briefer imprecision, the Christian Democrats dangle the carrot of "stability." The Free Democrats are emitting such mousey squeaks that one understands Herr Willy Brandt's fear that his junior coalition partners may fail to get back into the Bundestag and so perhaps deprive him of a majority.

The party strategists unanimously agree on the importance of this stretch of Germany between Dortmund in the east and Cologne in the west. Here trade unionists, employers and Catholics are unusually thick upon the ground—the trade unions with millions of votes, the employers with millions of marks, and the church conferring or withholding an incalculable divine blessing on human enterprise. So this week Herr Brandt's sole challenger for the chancellorship, Herr Rainer Barzel, came to the Ruhr to show his paces and explain himself. Thousands of curious voters cheered or booed the Christian Democratic leader at an efficiently staged rally in Essen on Monday night and at another in Düsseldorf on Tuesday.

Herr Barzel catered calmly and dexterously for his variously minded listeners. They were mostly young, sombrely dressed in keeping with the weather. But all sorts were conspicuously there—bosses, foremen, office and manual workers, clergymen, housewives, and a lively seasoning of students of both left and right. Unusually strong contingents of police, with pistols and dogs, watched outside for trouble that never came.

As the conservative alternative to

Herr Brandt, Herr Barzel was at a disadvantage and admitted it. He handled Ostpolitik gingerly since, he rubbed in, he did not know at the time of speaking the text of the general basic treaty between the two Germanies which would probably be initialled by the end of the week. Similarly, pleading involuntary ignorance of the true state of the country's finances, he declined to give details of the Christian Democrats' cure for inflation. Instead, he concentrated on exposing current threats to the sensitive young plant of west German democracy and to the freedom of the individual. The Christian Democrats' "social market economy"—fostered by Herr Erhard and now publicly supported by Herr Schiller, Herr Brandt's former minister for economics and finance—preserved essential liberties whereas socialism eventually destroyed them, he claimed. Further, German freedom would be made safer, he said, through strengthening existing ties with the west rather than by dealing obscurely with the communist east.

All in all it went down well. And Herr Barzel raised the loudest applause when he hit out at the wild, young left-wingers, who, he said, were being encouraged to proliferate at the universities and preach disruptive class warfare. One thing was sure, he added, apparently to everybody's delight: nobody wanted his children to be taught by marxists.

Ireland

Lynch pays out his line

FROM OUR DUBLIN CORRESPONDENT

The government of the Irish republic is now moving on several fronts with the declared aim of contributing to a solution of the Northern Ireland problem. A referendum will be held next month to change the republic's own constitution; new legislation intended to curb IRA activity is being drafted; and a positive response to the British green paper is in the making.

The referendum, to be held on December 7th together with one on the lowering of the voting age to 18, will seek to remove from the constitution clauses that recognise the "special position" of the Catholic church and name other denominations that are permitted full religious freedom. Although the existing constitutional provision confers no practical advantage on the Catholic church, whose status here is

environmental rather than legal, it is resented by liberals who oppose special recognition of any church and by those who feel that it offends northern Protestants. The removal of the provision is supported by all political parties and is not opposed by the Catholic hierarchy. The prime minister, Mr Lynch, is taking no risks in putting it to the people. Both the referendum proposals are expected to obtain overwhelming majorities on December 7th.

Tougher legislation against the IRA had already been promised by the minister for justice, Mr Desmond O'Malley. In a radio interview given last weekend he forecast that it would probably be introduced before the end of November. A number of potential convictions have been frustrated in the past simply because suspects had no incriminating evidence, such as IRA membership cards, on them at the time when they were arrested. The minister may now be planning to bring such people before the existing special courts, offering circumstantial evidence and transferring the onus of proof to the defendants. Meantime he is, to use his own word, "harassing" the IRA and Sinn Fein organisations. Mrs Moira Drumm, the vice-president of the Provisional Sinn Fein, has been arrested and charged with inciting

people to procure arms.

On the political front Mr Lynch is developing a new approach to northern Unionists, seeking to convince them that they would have more power in his "new Ireland" than Britain is likely to offer them in the forthcoming white paper. In a characteristically restrained speech last weekend he welcomed the British green paper as "a constructive contribution to public discussion." He argued that the paper's suggestions about the form of a future assembly in Northern Ireland and about control of security being retained in London would provide only limited power to Northern Ireland, whereas, in contrast, "the people of Northern Ireland could have a very powerful and positive role in an Irish context." The choice for Northern Ireland, he contends, is between having "a small political voice in a United Kingdom context" and obtaining "a positive and major role in the affairs of Ireland."

Mr Lynch sees the proposed all-Ireland council as the main institutional channel through which the northerners would be given this role. At first, the council would confine itself to economic and social matters, but it could go on to acquire wider functions; and since its decisions would require the separate

agreement of both north and south, it would give the north a real voice in decision-making.

Mr Lynch declared his readiness for "negotiations" with the British Government and for "discussions" with the political parties in Northern Ireland. The distinction between "negotiations" and "discussions" was deliberate. In response to northern sensitivities, Mr Lynch is apparently moving away from his former proposal of four-sided talks between the London and Dublin governments and representatives of Northern Ireland's two communities, which could be seen as interference in Northern Ireland's internal affairs. He now envisages decisions being taken by the two sovereign governments after discussions at a more local level with the Northern Ireland parties.

The indications in Dublin are that Mr Lynch will lend his weight to the developments foreshadowed in the green paper. He will also urge the Social Democratic and Labour party in Northern Ireland to co-operate more fully with Mr Whitelaw, although the growing tension between the SDLP's leader, Mr Gerry Fitt, and its chief whip, Mr Paddy Devlin, and its approach to Sinn Fein for discussions may make him wary of too close an identification with it. Mr Lynch will

also want to play down his support for the green paper to avoid Sinn Fein charges of collaboration with the British and to avoid identification with the proposed plebiscite on the border issue.

The plebiscite is regarded by the Dublin government as unnecessary and dangerous, although it is recognised that it may be the price Mr Whitelaw has to pay for progress in other directions. So far, Mr Lynch is resisting demands that a similar plebiscite should be held in the republic on the same day in order to show that there is a majority against partition in Ireland taken as a whole.

The opposition parties in Dublin broadly support Mr Lynch's views on Northern Ireland, but they feel left out in the cold. They would like the prime minister to set up an all-party committee to develop an agreed policy, and both Fine Gael and Labour spokesmen are calling for more substantial constitutional changes than those proposed in the forthcoming referendum. Mr Conor Cruise O'Brien of the Labour party has also accused Mr Lynch of using the Northern Ireland developments to distract the attention of the republic's people from what he describes as the highest rates of inflation and unemployment in Europe.

Turkey

The Republicans walk out

The main casualty of Turkey's latest political crisis turned out not to be the government of Mr Ferit Melen but the Republican People's party which set it off. By Wednesday 25 of the party's representatives in both houses of parliament had followed the example of their former leader, the veteran Mr Ismet Inonu, and resigned from the party. Among them were four of the five Republican ministers in Mr Melen's cabinet.

The RPP decided on November 4th that it would no longer support Mr Melen's government and ordered its five ministers to resign. The party leader, Mr Bulent Ecevit, accused the prime minister of being too much under the influence of the right-wing parties in his coalition, particularly in his measures against left-wing intellectuals and in his attitudes to economic and social reforms. Although Mr Melen could still command a majority in parliament, the RPP's move knocked a hole in what was supposed to be a national government.

The following day Mr Inonu, who had been party chairman for 34 years until he was replaced by Mr Ecevit in May, expressed his disapproval by leaving the party. On Monday 100 of Turkey's senior generals met to decide what should be done. It was this expanded military council which in March, 1971, ordered the prime minister, Mr Demirel, to resign and gave warning that unless a national government was formed to tackle the country's problems the generals would take over themselves. It was widely expected that this second meeting of the military council might decide that the time to do that had now come, and people waited for the generals to move.

But the generals, realising that Mr Ecevit's instructions to his party were not going to be unanimously obeyed, stayed their hands. They did no more than repeat their previous exhortations to the politicians to get on with the job of implementing reforms. Mr Melen did not resign and the government survived once more.

The affair has shaken the Republicans, since Mr Inonu's reputation throughout the country remains high, but although he has now indicated that he may be a candidate for the presidency when President Sunay's term expires next year he cannot be

The world under Peking's streets

FROM OUR SPECIAL CORRESPONDENT IN CHINA

The teeming narrow lane called Ta Sha La is the Bond Street of Peking. It was once the centre of the capital's theatre district and still houses two cinemas and an opera. Another old theatre, framed by a wall of elaborate iron grillwork, has been turned into a department store. Because the products of Ta Sha La—like embroidered satin jackets and whole young goats in jars—are often unavailable elsewhere, the street is always crowded. Besides its 1,800 workers, 8,000 shoppers may be strolling through the doors of its 45 establishments at any one moment. The pace is usually slow and unhurried. But if a signal be given, all 10,000 people could be evacuated in five minutes.

This disappearing act—which has been rehearsed seven or eight times—is evidence of China's fear of Russia. It depends on props hidden in every place along the street. In the Chienmen clothing store, the secret weapon is an indistinguishable square of worn pink tiles behind a glass counter which, at the press of a button, suddenly pulls back to reveal a flight of stairs leading to an underground tunnel. There are two miles of such winding tunnels under and around Ta

Sha La. These connect with similar spider webs under other Peking streets and together form one of China's answers to what it perceives as the threat of war from the Soviet Union.

The tunnel system has been designed chiefly to disperse urban populations to the suburbs in the event of conventional bombing. The Chinese say that the deepest tunnels—26 feet below street level and on average seven feet high and five feet wide—can withstand a direct hit from conventional bombs, although the shallower and narrower tunnels that were dug in the first experimental period can withstand only shock waves. Nobody pretends that the tunnels are a serious defence against direct nuclear attack although the guides claim that they can already offer some protection against radiation, and more anti-radiation equipment will be installed in time.

Peking's shelter programme is not a unique effort to protect the government servants of the capital; rather it is a model for similar systems in all the large and medium-size cities of China. In Shanghai digging below shop floors is clearly visible from the street; fewer than 100 yards from the main tourist

hotel passers-by have to leave the pavement to avoid huge mounds of newly excavated earth. Digging is still going on in Peking as well; concrete half moons piled along the roadside are the clue that there is underground activity nearby. Officials say that the tunnels can now serve more than 3m of the capital's 4m population. The plan is to expand it until there is a trapdoor in every office, shop and residential courtyard and underground standing room for every resident of Peking.

The tunnelling under Ta Sha La street began in December, 1969—that is, four months after the last of three serious border clashes with the Russians. It was only later that the Ta Sha La workers learned that 13-foot-deep tunnels would not provide adequate protection. At some point the army moved in, under the authority of the municipal civil defence office, to lend advice and manpower and volunteer workers were replaced by full-time tunnellers. The deeper tunnels also required materials the shopworkers could not find or fabricate such as steel, cement and lime, so they bought these out of the profits of the shops. In other parts of Peking, where there were no tills to tax, the state paid the bill.

The Ta Sha La tunnels are incomplete but they already contain a number of home comforts, such as a

loudspeaker system which plays favourite revolutionary songs, white enamelled toilets (ladies and gents separate) and sewage wells, kitchens with running water and pump wells, telephones, first aid stations and an experimental centrifugal blower for ventilation.

Electricity for the shelters is currently provided by Peking's municipal grid. But if all goes according to plan, underground generators will eventually be built to provide independent sources of power. There is no plan to deepen the shelters—in Ta Sha La this would be impossible because of underground water—but they will be extended by connecting them with Peking's new subway system.

China's air raid shelters, like so many of its products and projects, are a purely homegrown affair. Officials say they have heard about foreign shelter systems but have neither seen nor studied them. They seem unconcerned about suggestions that the whole shelter concept—abandoned by America some years ago—may be outdated and irrelevant in a nuclear age. This has led some foreigners to speculate that the shelter-building programme is largely a device for hammering home the official line of Russophobia.

Clearly mass participation in shelter-building is a potent means of dramatis-

ing the Russian threat. But a government as skilled in propaganda as the Chinese could undoubtedly have got its point across in other, cheaper ways. There are no figures available about the cost of the shelter system in money or scarce resources but, even allowing for free labour, it must be

considerable. In conventional cost-effectiveness terms, the value of shallow tunnels as a defence against a nuclear-armed superpower might not rate very high. But for the Chinese, who have watched the experience of North Vietnam these several years, tunnel-building must make eminent good sense.

Peking's shops hold secrets beneath the counter

Record of World Confidence in Swedish Ship Builders as of 1972.

Orders for more than one hundred and fifty ships. Of various shapes and sizes. For all kinds of duties.

Plus an impressive number of conversions, repairs and engines.

That's the kind of confidence the shipping world's showing in Swedish shipbuilding abilities.

Shouldn't that make us worthy of your confidence too?

We've put together a new brochure with facts and figures on the fifteen shipyards that make Sweden the world's number two shipbuilder. We will gladly send it to you if you mail the coupon.

The Swedish Shipbuilders' Association

expected to play an active part in the country's life for long. He is now 88. Mr Ecevit has taken the defections from his party calmly. He maintains that the party's grass-root support has not been damaged and that the RPP can project a clearer image of being a radical reforming party now that its right wing has broken away. But whether this will be put to the test in elections next autumn is by no means certain. The final decision on the elections is in the hands of the generals.

Vietnam

The price of a ceasefire now

One of the effects of the Nixon landslide may be to change the terms on which a Vietnam settlement can be achieved. President Nixon is no longer a man under pressure; the moment when he might have cracked came late last month, when some people thought that the action of the North Vietnamese in making public the terms of a draft agreement might have stampeded him into signing on their dotted line before the election. Instead, he successfully stalled for time and it is now the turn of the North Vietnamese, who have gambled heavily on getting an early ceasefire, to be asked for more concessions.

North Vietnam's leaders have made it plain that they still want to talk, despite their apparent threat last month to call off negotiations unless the United States agreed to sign by their deadline of October 31st. Last weekend Mr Xuan Thuy, the chief of

the North Vietnamese delegation at the Paris peace talks, made it known that his side would be ready to go on bargaining with the Americans after the election. He formally rehearsed the demand that the Americans should sign the North Vietnamese draft. But he also said that "we do not have a rigid attitude to another meeting." It is probable that Mr Nixon will send Mr Kissinger back to Paris to meet his North Vietnamese counterpart, Mr Le Duc Tho, within the next fortnight.

There is not much chance of peace breaking out at the next meeting unless one of two things happens. The first would be for Mr Nixon, anxious to get the Vietnam issue out of the way at the start of his second term, to decide to ride roughshod over President Thieu's opposition to the obscurity of some of the terms of the draft agreement. Mr Thieu is currently saying that a ceasefire would make sense only if the North Vietnamese agreed to pull all of their 145,000 troops out of his country, and that the idea of a three-sided commission to organise new elections is merely a front for a coalition government that the communists would try to take over. The other possibility is that the men in Hanoi, anxious to gain a respite from the bombing, will be prepared to give a bit more away in the negotiations—although it is inconceivable that they would agree to the virtual terms of surrender that Mr Thieu is proposing.

Mr Kissinger has said that there are still several points in the draft treaty that need to be clarified. This is not just a question of semantics. There are three key issues still to be decided that would largely determine the survival

or collapse of a non-communist government in South Vietnam:

1. The supervision of a ceasefire. A standstill ceasefire over the whole of Vietnam would be very difficult to enforce, since the country would presumably be broken up into a patchwork quilt and a team of foreign observers (probably drawn from Poland, Hungary, Canada and Indonesia, and perhaps France) would have trouble keeping check on every hamlet. A document shows that the communists were planning to pursue a campaign of assassination and selective terrorism after a ceasefire with the aim of eliminating pro-government leaders at village level. This would be the hardest thing of all to guard against.

2. The North Vietnamese presence. Assuming that the North Vietnamese will not agree to withdraw the regular units that they have never publicly admitted sending into South Vietnam, the Americans have to search for a compromise agreement that might involve, for example, the withdrawal of the 35,000 North Vietnamese stationed just south of the demilitarised zone and the confinement of the rest to carefully defined zones in the central highlands and the delta.

3. The functions of the electoral commission. The draft agreement provides for the setting-up of a "National Council of Conciliation and Concord" to organise new elections. It is crucial to get explicit recognition from the North Vietnamese that this would in no sense function as a governing body, and that Mr Thieu's administration would last until the new elections were actually held.

It is doubtful whether the North Vietnamese will agree to this kind of "clarification," and equally uncertain whether Mr Thieu could be brought to accept the new version if they did. There is in fact no reason why Mr Thieu should welcome a standstill ceasefire at this stage. For the moment, his government is in a position of military superiority. The communists have taken heavy losses in the small-unit fighting that has raged across the country over the past few weeks and recently came within a few miles of the capital. These local incidents were almost certainly part of a strategy of gaining control of as much of the country as possible in anticipation of a ceasefire that may or may not happen. There is no good reason either why Mr Nixon should not share many of Mr Thieu's doubts—apart from sheer fatigue with the war or an acquired taste for diplomatic coups.

The last few steps can drown a man

Canada

Is it David's day?

FROM OUR CANADA CORRESPONDENT

Canadian politicians are fond of consoling themselves after a setback with the words from the ballad of Sir Andrew Barton: "I'll but lie down and bleed awhile, and then I'll rise and fight again." Mr Trudeau might have followed the example set after earlier elections by such other party leaders as Tommy Douglas and John Diefenbaker, by resorting to this medieval recitation when the electorate dealt his Liberal party a staggering blow on October 30th, but his literary style does not run to balladry and melodrama. So he lay and bled silently for three days, and then went on the television networks to say in matter-of-fact words that he and his diminished band of Liberals would indeed fight on. The real battle will begin in a month's time, when parliament reassembles. In the meantime Mr Trudeau is licking his wounds and calculating how best to secure support for Liberal legislation from among the other three parties.

The party standings may alter slightly in the interval, as judicial recounts follow ordinary recounts in constituencies where the margin of victory is fewer than 25 votes. Already, in ordinary recounts, the Conservatives have yielded one seat to the New Democrats in Saskatchewan, and the Social Credit party surrendered another in Quebec to the Liberals when the trade minister, Mr Jean-Luc Pepin, was reinstated. Present standings are, therefore: Liberals 109, Conservatives 108, New Democrats 31, Social Credit 14 and independents two. Counting has been complicated by the large number of rejected ballots, which have run into thousands in several constituencies. The rejections were highest in Quebec, where the separatists spoil their ballots as a means of expressing their disapproval of the whole thing, but high also elsewhere because of confusion over an unfamiliar ballot form.

Whatever minor changes may yet emerge, Mr Trudeau will still be faced with the need to ensure the support or at least the neutrality of the New Democrats. He cannot squeak by with just the support of the Social Credit group from Quebec, as Mr Lester Pearson used to in his less straitened days of minority government. Nor will Mr Robert Stanfield be in a mood to give the Liberals any extra lease of life if his Conservatives can find any respectable occasion for bringing them

Trudeau: still there, still trendy

down. Mr David Lewis can thus wield more influence in present circumstances, with his 30 New Democrat colleagues behind him, than he would be able to if his party held many more seats but faced a government with an overall majority. During the past week Mr Lewis has been quietly spelling out the terms of his group's readiness to sustain the Liberals in office.

He has trimmed his original list of demands so that it no longer includes such items as a firmer stand against foreign ownership of Canadian businesses than Mr Trudeau had taken during his last administration. Instead he now puts the emphasis on action to minimise the effects of unemployment this winter, when it may well rise above the present 7 per cent rate, and on an immediate increase in old age pensions. Whereas the finance minister, Mr John Turner, sought in his budget last May to create jobs by incentives and tax concessions to manufacturing firms, Mr Lewis wants the government to make a plan for more direct job creation. Whereas Mr Stanfield won votes by attacking the unemployment insurance commission for spreading its benefits lavishly among "loafers," Mr Lewis is calling for an overhaul of its machinery so that cheques are issued more promptly.

It is too early to say whether the Liberals will accept these conditions. The government's first post-election move was the somewhat illiberal action of tightening immigration regulations to prevent visitors from applying for

immigrant status while they are actually inside Canada. Since 1967 some 105,000 people have used this facility, but it has recently been abused by charter flight parties from the Caribbean and India. An anti-immigrant backlash, capped by the publicity given to the welcome extended to 6,000 Ugandan Asians, is being blamed for the defeat in Toronto of Mr Ian Wahn, the Liberal chairman of the Commons external affairs committee.

Chile

Cabinet of incompatibles

There's nothing like a general to stop a strike. Last week President Allende of Chile appointed the army commander-in-chief, General Carlos Prats, as his new minister of the interior. On Monday, after 10 hours of hard bargaining, General Prats persuaded the leaders of the shopkeepers' and truck-drivers' syndicates to call off the strike that had lasted for more than three weeks and cost the country (according to government figures) more than \$170m. The government conceded some of the strikers' key demands by suspending a plan to set up a state trucking authority in the province of Aysen, by agreeing to return shops and lorries that were requisitioned during the strike, and by giving a formal assurance to stop the illegal seizure of private companies by left-wing extremists.

For the second time this year Sr Allende has turned to the armed forces

6th November, 1972

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LIMITED

(Incorporated in the Republic of South Africa)

Extracts from the Chairman's Review by Sir Albert Robinson

Economic Conditions

Since the beginning of 1972 the domestic economy has been showing clear signs of revival. During the second half of 1971 the world demand for commodities began to improve and prices rose. This firmer trend is being maintained. Of special importance to Johnnies is the fact that the prices of diamonds and of the metals in which we are particularly interested have risen. Provided international monetary instability does not cause another decline in world trade, South Africa's exports of primary goods should continue to benefit, both in terms of value and volume, for the foreseeable future.

Accounts

Despite adverse business conditions in South Africa, Johnnies' dividend income from its industrial and financial investments increased during the year. Income from diamond and gold shares also improved. The improvement in the platinum and antimony markets, however, came too late and income from these sources was badly affected. The reduction in the rate of dividend paid by Rustenburg Platinum Mines Limited in September, 1971 and the passing of that company's interim dividend in February, 1972, resulted in Johnnies' income from this, its largest single investment, being reduced to 28 per cent of the amount received in the preceding year. The dividends declared by Consolidated Murchison Limited were also substantially down.

The net effect on dividend income was a reduction from R12.69m to R11.24m. The latter figure is equivalent to 161 cents per Johnnies' share. Our interest in the undistributed after-tax earnings of the companies in which we are invested was 105 cents per share, giving a total of 266 cents per share. The comparable figure for the previous year was 340 cents per share.

The Board is confident that there will be an improvement in our dividend income in the current year. It was for this reason that the dividend distribution was raised from the 85 cents per share paid in 1971 to 90 cents for the year ended 30th June, 1972, despite the decline in profits. The net surplus from the realisation of investments amounted to R4.28m compared with R3.22m in the previous year. This surplus arose largely from switching operations in our gold portfolio.

The sale of our London office building at 10/11 Austin Friars in the City of London for a net amount, after charges, of R11.65m, produced an abnormal capital profit and helped materially to improve the company's liquidity.

Exploration

In recent years we have intensified our exploration efforts and have assigned to them substantial sums of money, high calibre personnel and the best technical aids possible. During the year under review, for instance, the net amount charged to profit and loss account in respect of expenditures on exploration was R1.86m.

Our geological teams have discovered two potential mines and these are currently being subjected to exhaustive technical and financial evaluation.

Platinum

I am pleased to report a notable recovery in the affairs of Rustenburg Platinum Mines Limited since the occasion of my last review. Profits, before tax, increased from R23m to R33m. This recovery has been caused by an energetic international marketing campaign which has coincided with a resurgence in demand for the metal. The stronger demand for platinum is in large measure a reflection of improved economic conditions.

Rustenburg's policy at the present time is to ensure that the needs of its industrial customers will be met in full while at the same time continuing its efforts to promote the use of platinum group metals by the automobile industry. The extent to which the total capacity of the Rustenburg mines will be expanding will largely depend on what new business ultimately eventuates. We must assess with caution the possible benefits that may flow to the platinum producers from this new market.

Gold

The South African Reserve Bank is at present selling on the free market only a portion of the gold mining industry's current production. The unsold portion is being retained by the Bank as part of its reserves. As the gold withheld is valued at the official price of \$38 per ounce, the gold mines have not received the full premium for their output as reflected by the free market price. The rising industrial demand and the continuing role of gold in the international monetary system have contributed to the current price, which is of the order of \$65 an ounce. There is little likelihood of its reverting to \$38 an ounce. Accordingly, I am of the opinion that the gold mining industry can with good reason request the Government to review its pricing policy in respect of the gold taken into reserves so that the industry will receive a more equitable portion of the premiums that result from the higher free market price.

Inflation and productivity

Many views have been expressed as to what action should be taken to curb inflation. In a broad sense, one way is to curb consumption, and the other—the area to which I believe most attention should be directed—is to increase the productive capacity of the community as a whole. However, we will not be able to increase productivity in South Africa generally, and in the mining industry in particular, unless more efficient use is made of the available labour. It has been said before—and its validity is not lost by the frequency with which it is said—that it is of the utmost importance that the official restraints on the extent to which African labour can be employed should, at least, be eased.

A challenge that still confronts the country is how to improve the wages and salaries of the less privileged to the maximum extent that is economically feasible. In this connection Johnnies is endeavouring to play its role. As a first step, and as part of a long term policy, we have recently completed a survey of the work undertaken and the wages paid to African employees at our Head Office. As a result, significant wage increases are being effected over the next six months, to bring their wages to levels well above the scales which various recognised authorities have recommended as necessary to maintain reasonable living standards. In addition all African employees on our mines have received increases in minimum wage rates during the past year.

Proposed share purchasing scheme and increase in share capital

Your Board is of the opinion that it will be in the interests of the Company if the full-time directors and full-time employees primarily responsible for its management are given an opportunity of acquiring a shareholding in the Company and thereby an additional incentive to contribute to its continued growth and profitability. The Board accordingly proposes recommending to members that they approve the establishment of such a scheme.

Johannesburg,

9th November, 1972

A copy of the full speech can be obtained on request from The London Secretaries, 27 Austin Friars, London EC2N 2EY.

to help him ride out a political crisis. At the end of May the high command refused an offer to join the cabinet. This time a top man from each of the three services has entered the government. Admiral Ismael Huerta took over the ministry of public works and air force General Claudio Sepulveda became minister of mines. All of them are regarded as basically non-political officers, but it is worth noting that they agreed to join a cabinet that now also includes Sr Rolando Calderón, a left-wing Socialist who was recently elected secretary-general of the trade union federation (Cut). He took over from Sr Jacques Chonchol as minister of agriculture. The other new ministers are Sr Luis Figueroa, the Communist president of the Cut, who will now combine the jobs of union boss and minister of labour (a combination of powers that may worry those concerned about the right to strike), Sr Fernando Flores, a civil servant who was made minister for the economy, and Sr Sergio Insunza, the new Communist minister of justice.

Sr Allende's new government looks very much like a cabinet of incompatibles, with the Communists and Socialists still feuding behind the scenes and conventional military men taking their seats beside Sr Calderón, a self-proclaimed revolutionary who is said to have helped to organise violent land seizures in the south. The opposition parties hope that the presence of service chiefs in the new cabinet will serve as a brake on the process of state takeover of farms and private companies. But Sr Allende may be taking a risk if he goes ahead with his plan to make a 12-day trip to Cuba, Mexico and the United Nations in New York, starting around November 20th. In his absence General Prats will run the country, since the minister of the interior acts as vice-president under the Chilean constitution. Not many Latin American presidents have that much faith in their commanders-in-chief.

Argentina

Perón names the day

Waiting for Perón has been rather like waiting for Godot. For the past year, the political gossips of Buenos Aires have played their game of daisy petals: will he come back or won't he? This week it was finally announced that the 77-year-old former dictator will fly back from Madrid on November 17th. It

The real Perón will now stand up

is not clear how long he plans to stay in Argentina, or whether he is planning to run as a candidate in the presidential elections scheduled for next March. In theory, he is disqualified, since he failed to register before the deadline last August, but in Latin America rules are made to be bent. The Justicialist party has announced that Sr Perón will be its official candidate.

What is certain is that his return will provoke a highly emotional response from both old supporters and old enemies. Simply to whisk him in and out of the airport without running into an assassination squad or a violent demonstration will be a major technical exercise. President Alejandro Lanusse must view Perón's return with very mixed feelings. It is still possible that he might refuse to let him into the country. The main obstacle to Sr Perón's return has been his refusal to accept the present military regime as a legitimate government and his insistence that General Lanusse should agree to a set of prior conditions. In mid-October, Sr Perón presented a 10-point programme as the basis for a future political settlement. He said he was ready to fly back to Buenos Aires if the army agreed to the plan; otherwise, he claimed, the country would face the prospect of civil war.

Although General Lanusse agreed to the principle of negotiation, he replied that Sr Perón must return to Buenos Aires in order to talk things over. In fact, there are several points in the ex-dictator's plan that the high command would find it impossible to accept. The plan calls not only for radical social, economic and constitutional changes, but for the repeal of all

anti-terrorist laws and the release of all political prisoners. At a moment when Argentina's urban guerrilla movement (which includes self-styled "revolutionary peronists") has emerged as a serious threat, it is inconceivable that the generals would agree to this. Last month the guerrillas chose the 27th anniversary of Sr Perón's release from prison in 1945 as the occasion to bomb the Sheraton hotel in Buenos Aires and the railway line in the industrial city of Rosario. Sr Perón's plan also calls for "the rejection of the dictates of imperialism" (which, in economic terms, appears to mean a break with the World Bank and the confiscation of some foreign investments) and, predictably, the award of the massive wage increases demanded by the peronist-dominated trade union federation.

If the military government wants the peronists to take part in the elections next March, further concessions will have to be made to Sr Perón's demands. It is clearly undesirable to continue to exclude from the political system a movement that commands the support of 30 per cent of the electorate. But Sr Perón has repeatedly snubbed General Lanusse and his cabinet and tried to deal directly with the armed forces. In response, General Lanusse has made some testy speeches about Sr Perón.

If Sr Perón does come back, probably in the company of both his present wife and the embalmed body of his dead wife Eva, it will probably not solve many of Argentina's problems. But it would at least help to separate the man from his myth.

Brazil and Africa

With the rabbits, or the hounds?

FROM OUR GHANA CORRESPONDENT

Brazil is up to something in Africa. That is the only firm conclusion to be drawn from the fact that the Brazilian foreign minister, Senhor Gibson Barbosa, is currently making a tour of eight west African countries, accompanied in his special air force plane by representatives of all Brazil's major newspapers. But it is not yet clear just what Brazil is hoping to achieve in black Africa at a time when it is known to be pressing its trading interests in the Portuguese territories of Angola and Mozambique and in the neighbouring white-ruled countries of South Africa and Rhodesia.

Is Brazil, a former Portuguese

colony, trying to mediate between Africa and Portugal and, if so, in whose interest? Senhor Barbosa's visit to Ghana last week showed the nature of the tightrope that Brazil has chosen to walk in its relations with the continent. A vague communiqué was signed after his talks with his Ghanaian counterpart, Major-General Aferi, but, strangely, the Ghanaians refused to sign a technical co-operation agreement which would have opened the door for Brazilian experts of all kinds to work in Ghana. It is true that Ghana's military rulers are stressing the philosophy of self-reliance, but it seems that the Ghanaians' reluctance to sign the co-operation agreement stems from a fear that Brazil might be playing a role which Ghana itself attempted to play under its last government—that of promoting dialogue between black and white in Africa.

Senhor Barbosa himself, a seasoned diplomat who came to know African feeling on Portugal's colonial wars while representing his country at the United Nations, did nothing to allay the Ghanaians' fears. At a news conference he maintained that Brazil would not judge between Portugal and Africa and, when challenged by a questioner, refused to choose between "the murderers of Africans and their victims." He won more sympathy in this cocoa-producing country by emphasising that, contrary to some expectations, Brazil is strongly in favour of the international cocoa agreement reached in Geneva last month and is taking steps to ratify it. But whatever agreements he signs in Ghana, or in the other west African countries on his itinerary, Senhor Barbosa is unlikely to forget that it has traditionally never been easy to run with the rabbits and hunt with the hounds.

Morocco

Hassan's dilemma

Morocco's wound is grave enough: don't make it deeper. This final plea for clemency, made on behalf of the 220 officers and men of the Kenitra air base who were accused of being involved in the plot to kill King Hassan by shooting at his aircraft on August 16th, fell on deaf ears. On Tuesday a military tribunal sentenced 11 officers to death and 32 others to prison for between three and 20 years. Nor were the military judges moved to mercy by hearing, as they left the court to consider their verdict, all the accused shout out together "Long live

Osman didn't like the answer he got

the king."

The officers who now face execution include Lieutenant-Colonel Amokrane, the former deputy chief of the Moroccan air force, who escaped to Gibraltar after the failure of the assassination attempt. He and Major Kouera, the commander of the Kenitra air base, pleaded guilty to plotting the death of the king, but explained that they had been misled by General Oufkir, the minister of defence, into believing the royal regime to be "disolute and corrupt." They now knew, they said, how wrong that judgment was. Seven young pilots who strafed the airport and the palace at Rabat, killing eight people and wounding over 50 others, are to face the firing squad, as are two officers in charge of the control tower and security at the Kenitra base.

Whether the death sentences are carried out depends on King Hassan. If he allows the executions to take place he risks further alienating the armed forces; if he shows mercy he risks encouraging others to try to rid the country of his rule. The decision on the fate of the air force officers must be taken at a time when the king has again been rebuffed by the two main political parties, Istiqlal and the National Union of Popular Forces. Since September King Hassan has been sounding out the party leaders on their readiness to join a government of national unity. They did not commit themselves but made it plain that any government they joined must be ready to make radical social and economic reforms.

On November 3rd the king appointed his brother-in-law and director of his secretariat, Mr Ahmed

Osman, as prime minister and charged him with forming a government including the political parties. Since Mr Osman had been acting as intermediary between the king and the political leaders it was presumed that they had agreed to work with him. Far from it. Istiqlal's veteran leader, Mr Allal el Fassi, refused to co-operate, saying the country needed a homogeneous and responsible government headed by a political figure, and the leaders of both factions of the National Union of Popular Forces (the party split in June) made it equally clear that they would not join any government on the terms offered by the king. The impasse between the palace and the politicians continues.

Papua New Guinea

The gardens die

FROM A CORRESPONDENT

Port Moresby

The fledgling Papua New Guinea—due to become fully independent in December, 1973—is suddenly faced with a crisis it can ill afford. Some 75,000 highland villagers, whose food gardens have been destroyed by a combination of frost and drought, are now entirely dependent on rations supplied by the government. By Christmas their numbers are expected to double. So far as is known malnutrition has not yet caused any deaths, nor has there been any widespread outbreak of disease, but the villagers are dazed and abject.

The logistic problems of mounting a famine relief operation in the wild central mountain ranges, over country 5,000-8,000 feet above sea level, are awesome. And with the current slump in world prices for tropical cash crops, Papua New Guinea's economy is not sufficiently buoyant to sustain a relief operation of this scale indefinitely. So far it has cost over £1½m. Some £400,000 has been raised in response to a famine relief appeal, and the Australian government has contributed by making available aircraft and men from its armed forces. But Papua New Guinea's chief minister, Mr Michael Somare, insists that the territory must become self-reliant and bear the bulk of the burden itself.

The famine may continue for several months. It will certainly be a year or more before the ravaged food gardens are fully restored. If his government can sustain the relief operation for as long as that Mr Somare will emerge as a truly national leader among his fragmented peoples.

Fido

You know how it is? You get him when he's just a bundle of fur and you give him a name. How were you to know he'd grow the size of a Shetland pony? Something like that happened to Flight Refuelling. At first that's all we did. We refuelled aircraft in flight. We pioneered it and we are still the world's experts. We could have rested on our laurels but we didn't. We moved into other fields, fields as diverse as electronics and nuclear engineering. Now the bundle

of fur we called Flight Refuelling is quite a small part of our activities; albeit an important part. The name is misleading. We could change it but we don't think we will. So when you want a contaminometer or a flexible coupling, or any of the many things we make, and discover the best people to approach are Flight Refuelling Limited, don't be surprised. Just remember Fido when he was eight weeks old.

Look what a new exchange can do

Let's suppose you're a doctor. This is how the new Philips PRX telephone exchange can help you. Transfer your calls from home to hospital and vice versa, automatically. Allow you to use three-digit numbers for frequently needed multi-digit connections. Signal on a busy line that you're waiting. Give you a no-dialling hot-line facility with the ambulance service. Even wake you up in the morning.

These are a few of the features that can be made available to all subscribers, once a new Philips PRX exchange has been installed. Advanced today, still modern in 2003.

We're ready when you are

THIS WINTER ALL COMPANIES WILL AGAIN HAVE POWER CUTS

(It could be quite a shock for your computer).

Well, that's our theory. And if you take notice of what's being said in the press lately about pay demands and threatened action, you'll probably agree.

Which means your company will once again be left in the dark.

Everything grinding to an almighty halt.

Causing that expensive computer of yours to make expensive errors, malfunctions or processing interruptions.

But everything's not lost. We have a little box of tricks called Accupower.

An uninterruptable power supply, which completely isolates the computer power from all voltage and frequency irregularities on the mains supply.

It has a storage battery and an inverter to give your computer continuous power.

It also corrects a lot of disturbances that, unless you have

expensive monitoring equipment, you'll never be aware of.

Such things as a fault at a sub-station, or line switching, or even a lightning strike.

You may never know about them, but your computer will. They cause computer chaos regularly, unless you have Accupower.

We admit Accupower is comparatively new in the UK, but we've been selling it elsewhere, especially in the States, for about ten years now.

Of course, sales over here went bounding up last Winter, and it looks like it's going to be repeated this year.

So it would pay you to immediately start talking to:

Borg-Warner Controls,
Division of Borg-Warner Limited,
Elgin Drive, Swindon, Wiltshire.
Tel: 0793 24121. Telex: 449101.

If you don't, when the next black-out comes your bright new computer may not be too bright after all.

BORG WARNER

Accupower is a registered trade mark

Autumn books

The *Economist's* autumn book survey appears, suitably enough, in National Book Week. There have been some less orthodox apparitions. The National Book League is displaying "the world's most expensive book" (well, modern book): a single parchment copy of St John's "Apocalypse", completed in France in 1961 and valued — on the basis of a Japanese offer to the publishers — at £400,000. Contributors to the text and its case include Jean Cocteau and Salvador Dali.

A double-decker bookshop-bus, with a face on the front and flapping ears, has been touring Scotland in search of child customers. Belfast, the original destination, has been crossed off the tour; Bristol will be visited mid-month, for one-half of the Children's Book Show — an annual event that has this year split amoeba-like into two places. The London show is on this week. In Edinburgh, the girls have been displaying bookweek tee-shirts; in Luton, there has been a "readership survey". The purpose of both has been to enhance the distribution of the National Book League's most ambitious celebration: the publication of 150,000 free copies of a special paperback.

"Serendipity" is made up of 20 extracts from published books — whose publishers paid £110 for the privilege. Publishers and printers donated most of the printing costs; the NBL had to find a mere £500. The authors range from Norah Lofts to Solzhenitsyn, via Norman Mailer, Leslie Thomas, Hunter Davies, Arnold Toynbee and other strange bedfellows. Will the result help create the 125,000 "new readers" that the NBL's bookweek organiser is optimistic enough to hope for? One author — Frederick Forsyth — is featured twice. Perhaps such eminence, or responsibility, is only his due. As the first review in this survey argues, he is undoubtedly the best British practitioner of the popular but difficult business of writing political thrillers.

Britain

Romantics and insiders

RULE BRITANNIA

By Daphne du Maurier.
Gollancz. 318 pages. £1.90.

THE ODESSA FILE

By Frederick Forsyth.
Hutchinson. 320 pages. £2.

THE HEART'S GROWN BRUTAL

By David Brewster.
Angus and Robertson. 218 pages.
£1.95.

The political novel is an enjoyable art form in America: probably because Washington is a small company town of government, so that any novelist who lives there can work out broadly how decisions are made. In Britain, by contrast, the least bad political novels in recent years have been written by temporary insiders or journalists (Hurd, Osmond, Snow, Fienburgh, Clark), and sometimes their amateurism as novelists shows up: eg, they are often revealingly bad at describing characters older or less clever than themselves, and their seduction scenes are sometimes as unstimulating as a sudden farmyard view of two grunting pigs rutting. Meanwhile, however, too many major British novelists, who can write, seem to live in social circles which are totally divorced from any understanding of the current political or industrial scene. This is a serious reason why we have not had a good novel involving a cross-section of British society (as distinct from waxing contemptuous or romantic about particular groups) since the shared experience of war. The first of these three books is per-

haps the most frightening example yet of this divorce between the real world and the British romantics'.

In Miss Daphne du Maurier's "Rule Britannia," after the collapse of the common market, a coalition government bounces Britain into union with the United States, because Miss du Maurier supposes that a common currency with the dollar will help greedy merchant bankers (although it will be hard on the pensioners, like that dreadful decimalisation). The local resistance in Cornwall to the American occupying forces is led by a famous retired actress who embodies what the authoress regards as all the virtues (extreme environmentalist, gracefully patronising to the lower classes, does noble social work by adopting disturbed boys, even including an "ebony-skinned" piccaninny).

The Americans are initially church-going, and talk about "meaningful relationships," but they want to encourage tourism into Britain (which is a bad thing) and business takeovers (which are worse); moreover they are unreasonably cross when one of the disturbed boys murders one of their marines, and turn nasty like Miss du Maurier thinks they are in Vietnam. An eccentric but lovable Welshman kills 200 of their sailors by blowing up a warship, at which we are supposed to cheer (as "the dark waters of the bay turned streaky red"), and our cheers swell to a crescendo when the lovable Welshman announces that "the boyos have landed"; which means that the fanciful Miss du Maurier has conscripted poor Prince Charles to land in Wales and lead what can only be called the British hick-fascist revolt. Meanwhile Prince Andrew is rousing the clans in Scotland. The Americans then naturally run away,

and the book ends triumphantly with "the helicopters flying eastward into the sun," and with even the merchant banker agreeing that Britain must follow an economic policy first expounded by the most illiterate of the disturbed boys: "community living. Our neighbours support us, we support them. We don't need any money, we can live without it. If everyone did this, throughout the country, there wouldn't be any need for trade outside."

No book can be quite as awful as this perfectly accurate summary makes it sound, especially as Miss du Maurier still writes like a major novelist even while thinking like Little Noddy. But her theme is the decay of Britain's traditional values, and perhaps the fact that Gollancz presumes it profitable to publish this particular rubbish unconsciously proves her point.

Mr Frederick Forsyth, master researcher and most imaginative of journalists, stands at the opposite extreme. He attained considerable fortune and some fame with "The Day of the Jackal," his first novel, an electrifyingly realistic story of an attempt on the life of de Gaulle. Now he has completed another book that many of his readers will think is largely a documentary, although they cannot know. The Odessa is the Organisation der Ehemaligen SS-Angehörigen—ie, the old boys' club of Himmler's SS. The thesis is that in 1944-45 they moved large funds into accounts guarded by the complacent and self-righteous bankers of Zurich, and by 1963 were drawing heavily on them to finance the building of rocket missiles in Egypt which were to rain bubonic plague and nuclear waste on to Israel, "thus ensuring an eternally grateful Middle East, a safe and sure home for our people [ie, SS refugees] for all time, and the final destruction of the Jew-pig State." Mr Forsyth peoples his story of how this plot was foiled with famous small-part players (eg, Erhard, Sadat) and more obscure larger-role players who often do or did exist; there is enough fire behind his smoke to keep libel actions at bay. While the chilling attraction of the jackal was that the author made the motives of both de Gaulle and his would-be assassins intelligible, it is almost impossible even for Mr Forsyth to write about Odessa without committing one common journalistic fault: forgetting that while it is fun to write hate it is uncomfortable to read it (which is why nearly all newspapers risk losing circulation when writing their usual thing about South

Africa or Mr Wedgwood Benn). Surprisingly, one finds in parts of this book that this unreasonable sense of being put off can even be true in reading hate about nazis. Mr Forsyth's second book therefore seems unlikely to sell as hugely as his first one; but both are the two best political novels on postwar continental Europe. It is to be hoped that his next will be about his native United Kingdom.

The obvious area for a political novel is Northern Ireland. Mr David Brewster, the pen-name of a journalist on the Ulster beat for three years, attempts this, but it doesn't quite come off. For three-quarters of his book, stereotypes seem to be sitting around over drinks explaining why they are on each side (with the IRA provo sounding uncannily like Miss du Maurier). Only towards the end, with the death of the trendy liberal drunk who has been helping the IRA, but then finds that the south doesn't want Ulster anyway, does the book suddenly soar above conventional reportorial stuff, and unexpectedly touch a sort of beauty. While Mr Forsyth has convincingly worked out what makes his characters do certain strange and sometimes horrible things, Miss du Maurier and Mr Brewster would be shocked if they ever really worked out what makes them say certain conventional and initially decent-sounding things. And perhaps that is the difference between successful and unsuccessful political novels.

And what could poor Arthur do then?

WELLINGTON: PILLAR OF STATE

By Elizabeth Longford.
Weidenfeld and Nicolson. 492 pages.
£3.95.

"I have," Wellington once remarked ruefully, "been much exposed to authors." Lady Longford is the latest in a long line. But much the greatest volume of Wellingtoniana has been on the military campaigning side. A distaste, indeed, has often been expressed about the Duke's post-Waterloo career, compounded, as the allegations have it, of reactionary politics on the one hand and Horse Guards ossification on the other. The orthodox sentiment is generally that between the age of 46, when he won Waterloo, and death at the age of 83 in 1852, the Duke failed to live up to the level of his performance in the first half of his career. The tendency has been to be apologetic when not dismissive.

But times and taste have changed.

Wellington: ambition spent

When Philip Guedalla produced his biography in 1931 he established a more just scale of treatment, devoting almost as much space to post-Waterloo as pre-Waterloo. Too much, however, of the latter part was coloured by his peculiar weakness for archness, overwriting and devotion to the anecdotal and quaint. This was the full blossoming of the Duke as a bluff English character at a time when the Regency and Victorian eras had become chic and when Englishmen, battered by war and slump, needed an artificial stimulus of nostalgia for the inventor of the stiff upper lip. The Duke was reduced to being amusing. The tone was, for all Guedalla's good intentions, false.

Still, Guedalla's book marked a decisive point as giving the Duke a life seen steadily and, more or less, whole. Lady Longford has the distinction of being the first student of Wellington's life to add what must be described as straightforwardness. All the anecdotes, of course, are here given their due weight; but they are not oppressively pushed forward. With this book, following on from "Wellington: The Years of the Sword," both the balance and the tone are right for the first time. And the handling is fuller and surer because, for the first time, also, the intimate and domestic aspect of the Duke's life gets authoritative and sympathetic though not uncritical treatment.

One is aware throughout all the material bearing on Wellington's exasperation with Kitty Pakenham's shortcomings as a wife and a duchess that Lady Longford is not a Pakenham by marriage for nothing. Wellington's gallantries are likewise dealt with in a convincing mixture of tolerant frankness and sensible scepticism. His relationships with his wife, his children, and his difficult brother Richard Wellesley are now rescued from the

obscurities of rumour, hearsay and legend. The upshot of all this private aspect of things comes down to the same problem that oppressed the public Wellington: he was a man, humanly speaking, of very strong but essentially rather simple and limited talents and capacities who found it extremely difficult to find a satisfactory way of reconciling the strengths which imposed upon him the unwelcome roles of hero and oracle with the limitations which constantly exposed him, both domestically and politically, to painfully unheroic and unoracular predicaments. Old age relaxed but did not really resolve this tension.

It is the major strength of Lady Longford's biography to give this theme a proper centrality. It has not sufficiently been appreciated how difficult Wellington's problem was after 1815. Napoleon, born contemporaneously, had only six years to live and had a clear and dramatic role to play: Prometheus bound to the rock of St Helena, a martyred victim of British vultures. He had in any case already won the mythological battle of Waterloo: almost no one, then or now, goes there to buy Wellington mementoes. Wellington had nearly 40 years of life to live without any sure idea of what the appropriate style or functions of such a life should be. He had no ambitions. He had reached the summit of achievement open to anyone not actually aspiring to royal or sovereign status. He was several times a duke and prince, a grandee of Spain of the first class, addressed by kings as "cousin." He was a knight of every great European order. He was a field marshal of every allied army. His honorific posts and colonelcies were more than he could remember.

Wellington's greatest problem was that there was nothing very much that he wanted to do. He did not want to fight any more battles. He had no great projects for organisational military reform and even if he had there was no money available to him to implement them. He certainly did not want to be prime minister, a position he filled reluctantly, out of a sense of duty, in 1828-30. Unlike Wallenstein he had no schemes to carve out a kingdom for himself; even Bernardotte's throne at Stockholm he regarded as a tedious fate. Unlike Eugene or Marlborough he had no diverting interest in art or architecture: he was content with Stratfield Saye, a mediocre country house full of mediocre furniture, and Apsley House in Piccadilly, rather more of a showpiece but very modest by the

Du Maurier and Forsyth: fantasy—and fiction?

MANAGEMENT DIAGNOSIS

R. O. Boyce and H. Eisen

Prevention is better than cure. Within every organisation exist problems which if not detected at an early stage can cause the organisation's collapse. Management is so busy dealing with existing problems that it does not look consciously for symptoms of future ones. This is a practical guide covering marketing, finance, organisation, planning, control and personnel—with case studies and illustrative material. 274pp published September £4.95

MANAGING THE MULTINATIONAL ENTERPRISE

John M. Stopford and Louis T. Wells Jr.

Organisation of the firm and ownership of subsidiaries. The rapid growth and increased diversification of multinational enterprise presents organisational problems. What optimal strategies should be followed? Do specific strategies lead to predictable organisational and ownership responses. Based on a massive research programme undertaken at Harvard under the direction of Raymond Vernon. 223pp publication November £4.95

INTERNATIONAL ECONOMICS

M. A. G. van Meerhaeghe

Presents the basic concepts, theories and policies implicit in international economics. A straightforward presentation suitable for students seeking an introductory text, or for the reader interested in getting a broad insight into international economics. 258pp publication November £4.95 limpbound £2.95

RISK IN BUSINESS DECISION

Peter G. Moore

A book about formal methods for making business decisions where areas of uncertainty exist—whether launching a new product, building a new factory, drilling an oil well etc. Numerous examples and exercises at appropriate points, based, wherever possible, on real decision situations. 365pp publication November £4.95

MANAGEMENT STATISTICS

E. J. Broster

Statistics play a central role in management and control and it is ever more essential that managers at all levels be as numerate as they are literate. A practical guide to those statistical techniques found to be useful in business management. 333pp publication November £6.75

Longman

contemporary standards set by George IV. He had no positive ideas about political development beyond deprecating change on principle. As a politician he was, as on the battlefield, sensible and pragmatic and knew how to beat a swift retreat when confronted with overwhelming opposition. He was not even particularly interested in being an agriculturalist or in hunting and shooting, which he did rather in the manner of political duties ritually undertaken by virtue of his station in life. He disliked clubs and clubmen.

His greatest recourse was in simple solitariness. Lady Longford points to the extraordinary lengths he would go to, to protect himself from himself—or rather, from the unresolvable perplexities of being the Duke of Wellington—by contriving to be independent of personal obligations, intercourse, services. No trait is more striking throughout his long life than “the will to walk or stand alone.” Sometimes during his solitary rides he would knock on the steps of Ripple Mill and call: “That the miller?—come down and talk.”

The only moderate

THE AUTOBIOGRAPHY OF TERENCE O'NEILL

Hart-Davis. 174 pages. £2.25.

The downfall of Captain O'Neill at the end of April, 1969, after just over six years as prime minister of Northern Ireland, seemed to many British politicians to mark the end of Ulster's last chance to move towards a decent, just society without violence from one religious community or the other. The disappointment at his departure was, therefore, greater at Westminster than it was at Stormont. There was also an undercurrent of resentment as it became painfully clear to Westminster MPs that they were about to become embroiled once again in the insoluble Irish question.

Although Captain O'Neill had failed in the general election two months before to get a liberal majority in the parliamentary Unionist party at Stormont, he had failed only very narrowly, and there was the feeling that a Harold Wilson or an Edward Heath (but not an Alec Douglas-Home) would probably have stayed on and fought. Perhaps they might have done, but even if either man had possessed all the political skills, breadth and willpower of the other it is still doubtful whether they would have succeeded very much better than Captain O'Neill. For what soon became so violently obvious was that Captain O'Neill did not fail

O'Neill down south, with de Valera

because he lacked either skill or determination but because there were simply not enough people in Ulster who wanted him to succeed, and it is probably true to say that no life peerage has been more warmly welcomed than that which was given to him.

What will surprise many readers of Lord O'Neill's autobiography (apart from its slimness and punctuation, which is very Irish) is not so much that he failed in his self-chosen task of trying to reconcile the Protestant and Catholic communities of Ireland but that he ever got the chance of trying to succeed. Neither bigot nor dogmatist, he always seemed the sort of man Ulster needed, to everyone except the majority of the Unionists he ostensibly led. Lord O'Neill does not go in much for denunciation, but it would require saintliness to obliterate all his bitterness at the less than straight dealing that he got from many of his colleagues.

Lord Brookeborough, for example, his immediate predecessor, did not recommend Lord O'Neill to succeed him (although he said he did) in case his chosen successor ran into difficulties. And, anyway, how do you go about succeeding a man who was not only opposed to recognising trade unions (in the 1960s!) but who, “In 20 years as prime minister . . . never crossed the border, never visited a Catholic school and never received or sought a civic reception from a Catholic town.” Lord O'Neill could visit a Catholic school (a month after becoming prime minister), cross the border and have it crossed by the republic's prime minister; he could give the outside world an image of moderate Unionism which his party neither possessed nor deserved; but, in the end, although he could get more trust from the Catholics than any other

A Study of History

ARNOLD TOYNBEE

Completely revised, splendidly illustrated, and condensed into a single readable volume: Arnold Toynbee's monumental analysis of the rise and fall of the world's civilizations. 507 illustrations (90 in colour) 23 maps and charts £8.50

The New Oxford Book of English Verse 1250-1950

Chosen and edited by

HELEN GARDNER

This completely new anthology selects a wider, more balanced range than its predecessor, and fully represents English poetry over seven centuries. £3.25

The Complete Poetical Works of Percy Bysshe Shelley

VOLUME 1 1802-1813

Edited by NEVILLE ROGERS

Neville Rogers's new edition of Shelley, based on twenty years' study of his manuscripts, presents a radically revised and augmented text. This volume, the first of four, covers Shelley's Godwinian phase, culminating with *Queen Mab*. Frontispiece £5

Elgar

A Life in Photographs

JERROLD NORTHROP MOORE

This splendid picture book of family photographs, contemporary postcards and newspaper illustrations makes a vivid, moving portrait of a great composer's life. £3

OXFORD
UNIVERSITY PRESS

Concise Flowers of Europe

OLEG POLUNIN

This shortened version of *Flowers of Europe* is especially for the amateur flower-hunter: the plants are arranged according to flower colour and marginal symbols show at a glance the flower shape and where it grows. 192 colour plates paper covers £1.95

A Concise Pronouncing Dictionary

of British and American English
J. WINDSOR LEWIS

Records British English in its (Southern) Received Pronunciation form and General American; also common alternatives. 4 text figures £1.40

Kings, Beasts, and Heroes

GWYN JONES

Three famous works of literature—*Beowulf*, *Culhwch and Olwen*, and *King Hroth's Saga*—are here explored by the author of *A History of the Vikings*. 21 plates 3 text figures illustrated endpapers £3

D. W. Griffith

His Life and Work

ROBERT M. HENDERSON

Traces the rise and fall of the flamboyant artist who transformed the movie industry from a novelty to a powerful entertainment medium. 145 photographs £3

American Popular Song

The Great Innovators 1900-1950

ALEC WILDER

This is a thorough yet engagingly informal study of the American popular song and its writers—Jerome Kern, Irving Berlin, George Gershwin, Richard Rodgers, Cole Porter, Harold Arlen, and many others. Musical examples throughout £6.75 OUP New York

Unionist politician he could not get enough Catholics and Protestants to trust each other.

Lord O'Neill rightly remarks that although his colleagues and successors adopted, under pressure from London, the most urgently needed reforms, the Catholics never believed that the Unionists really accepted the need for them. The same lack of trust is now being shown by the Protestants towards the British Government's declaration that partition will not be abolished unless a majority in Ulster desires it. There is not much politicians can do when communities are determined not to believe them.

It might be thought that for someone who has been in Lord O'Neill's position it is carrying modesty too far to compress his autobiography into a mere 154 pages of text. That is largely because the author is content to await the eventual publication of his cabinet's minutes of crucial periods during his term of office rather than attempt to justify his actions now. Such propriety is part of the man. Nevertheless, the book will help the rest of us towards a better understanding of the problems facing the reformer in Ulster. And nowhere should it be more widely read than in Ulster itself.

Bombs gone

THE LEGACY OF LORD TRENCHARD

By H. R. Allen.
Cassell. 239 pages. £3.50.

One might suppose it to be impossible to maintain a bad temper for six years. Yet this is what Wing Commander Allen appears to have done in the time it took him to compose this attack on the strategic air offensive against Germany, on the air staff and on the father of it all, Lord Trenchard. This is a noisy book, where the original shouts and whispers mingle with their echoes, so that the arguments become confused, bewildering and, on occasion, contradictory. The bomber offensive often has this effect on its chroniclers.

This is a pity, for the author's central thesis has much to commend it. It is that the air offensive, as conducted in the area attacks by Bomber Command, was a gross waste of resources and that its origins can be traced to the confusions in "Boom" Trenchard's mind which produced the doctrine that an independent air strategy had to be preached (even in the face of strong tactical evidence to the contrary) in order to preserve the inde-

Trenchard: under fire

pendence of the RAF.

The author makes a number of shrewd hits, even though he deploys his arguments in the manner that Bomber Command scattered its HEs and incendiaries across Germany. But he fails to provide a satisfying answer to why Sir Arthur Harris had things so much his own way, why Sir Charles Portal failed to control him, why Sir Winston Churchill remained ambivalent about the bomber offensive and why such an intelligent infighter as Sir Alan Brooke and such an old seadog as Sir Alan Cunningham let the air force get away with it. The reason is, of course, absurdly simple: it was the only weapon with which Britain could hit directly at Germany and, despite all the costs and casualties, this is what the British people wanted to happen. The bomber offensive was an unnecessary waste of resources; but it was also, in the circumstances, an unavoidable one.

Guilds and girls

LONDON STREET NAMES

By Gillian Bebbington.
Batsford. 384 pages. £4.50.

"The most famous street name in the world" is Mrs Bebbington's unhesitating claim for Piccadilly. So much for Broadway, the Champs Elysées and all other potential competitors, which in London itself might include Whitehall and perhaps even Fleet Street; yet it is true that Piccadilly is famous in its own right, not because of an association with theatres, parades, government or the press. This fascinating book reminds us how London's peculiar richness in street names reflects the successive phases of the city's long history. London Wall evokes the Romans, Walbrook the Celts, Aldersgate, Fleet Street and Old Palace Yard the Saxons, and Aldwych the Danes. Cornhill was named before 1066, and

Newgate was probably renamed when the Normans rebuilt a gate first built in Roman times. Early medieval markets bequeathed us Bread Street, Milk Street and Poultry; Count Peter of Savoy left his name in London in the thirteenth century, while St James's originated as a leper colony as far back as the eleventh.

Blackfriars, Charterhouse Square and St John's Wood were so named long before the dissolution of the religious orders that owned them. Until the sixteenth century, St Mary Axe treasured an axe with which, it was believed, one-third of St Ursula's 11,000 virgins had been beheaded, and Undershaft annually raised its equally treasured maypole. The transition from medieval to modern may be exemplified by the way that Earl's Court, so named because the de Veres held it for 500 years after the Norman Conquest, passed in the seventeenth century to the Hollands and their relatives of the Edwardes family (who sprinkled it with Welsh names).

It is with the arrival on the scene of the great estate-developing families that Mrs Bebbington really—if the phrase is apt—goes to town. Derivations of many of the older London place names have been examined by other authors, but here at last is a comprehensive guide to all the streets of inner London (extending to Kensington and Hampstead, and including parts of Southwark and Islington), with maps that show the boundaries of the big estates, and family trees that admirably supplement the basic alphabetical arrangement. Look up Harley Street, for instance, and see how Marylebone's streets came to bear such names as Bentinck, Cavendish, Holles, Oxford, Wigmore, Mortimer, Wimpole, Welbeck, Portland, Devonshire, Weymouth, Scott-Ellis, de Walden, Mansfield and Woodstock. The marriages of those Cavendish girls in the seventeenth and eighteenth centuries left as much of a mark on London as did the medieval guilds and monasteries.

But the reader must beware of leaping to conclusions about similar names. Cannon Hill in Hampstead was indeed the work of a Mr Cannon (Queen Victoria's dyer), but Cannon Lane was named after two old cannons, Cannon Row after the canons of St Stephen's, and Cannon Street after the candle-makers who worked there at least 800 years ago. London's street names, like the streets themselves, are still a confusing maze in which one needs a good guide. Here it is—and it is also a very entertaining book.

Praeger Special Studies

THE POTENTIAL FOR JOINT VENTURES IN EASTERN EUROPE

ROBERT S. KRETSCHMER, Jr.
& ROBIN FOOR

An invaluable guide for Western firms considering, or already engaged in, joint ventures in Eastern Europe. 184 pp, tables, charts, appendix. \$15.00/£6.25.

YUGOSLAVIA'S FOREIGN TRADE

A Study of State Trade Discrimination

RYAN C. AMACHER

Examines the different institutional frameworks for East and West and reveals price discrimination against Comecon countries. 202 pp, tables, figures, appendix, bibliog. \$13.50/£5.75.

THE INDIAN OCEAN: ITS POLITICAL, ECONOMIC AND MILITARY IMPORTANCE

Editors: ALVIN COTTRELL
& R. M. BURRELL

Experts assess the future of the Indian Ocean, considering all of its principal littoral states, and discuss the implications of British withdrawal from the area. 486 pp, maps, tables, charts. \$25.00; UK Jan 12, £10.50.

SIBERIA AND THE PACIFIC

A Study of Economic Development and Trade Prospects

PAUL DIBB

A sector analysis, using Russian data, of the economy of Eastern Siberia and the Soviet Far East, covering Japan's attempts to become involved in Siberian development. 320 pp, tables, bibliog. \$17.50; UK Nov 21, £7.25.

SOVIET SEAPOWER IN THE CARIBBEAN: POLITICAL AND STRATEGIC IMPLICATIONS

Editor: JAMES D. THEBERGE

Examines recent Soviet naval and maritime expansion in the Caribbean, relating it to Soviet global diplomatic and military policies. 188 pp, maps, charts, tables, bibliog. \$13.50/£7.25.

LABOR MOVEMENTS IN THE COMMON MARKET COUNTRIES

The Growth of a European Pressure Group

MARGUERITE BOUYARD

Studies the relations among the unions in the countries of the EEC, and shows how the establishment of the EEC inspired the creation of new labour organisations. 304 pp, tables, figures, appendix. \$17.50; UK Jan 12, £7.25.

THE EUROPEAN COMMUNITY IN THE 1970s

STEVEN J. WARNECKE

Considers economic and political developments in the EEC to 1980, anticipating future problems in the Community's relations with the US. 250 pp, index. \$15.00/£6.25.

WEAPONS TECHNOLOGY AND ARMS CONTROL

W. F. BIDDLE

Foreword by Lord Zuckerman

Explains, in terms clear to the non-scientist, the technical problems involved in effective arms control; and outlines the role control can play in military strategy. 368 pp, charts, glossary, bibliog. \$20.00; UK Jan 12, £8.50.

CHINA'S TRADE WITH THE WEST

A Political and Economic Analysis

Editor: ARTHUR A. STAHNKE

Argues that Chinese trade with non-communist countries has fluctuated for commercial rather than political reasons. 246 pp, tables. \$16.50/£7.00.

EAST AND WEST GERMANY: A COMPARATIVE ECONOMIC ANALYSIS

MARTIN SCHNITZER

Analyses the general characteristics of the economic and political systems, organisations of industry and agriculture, money and banking and labour unions in the two Germanies. 470 pp, tables, charts. \$22.50; UK Feb 16, £9.50.

MANAGEMENT EDITIONS

(DIRMAS S.A. GENEVA)

More than just a new book club!

A COMPLETE INTERNATIONAL INFORMATION AND SELECTION SERVICE FOR BUSINESSMEN

Books about business often make exciting reading. Many have become best sellers and have added new concepts to our language. But the best of them can take some finding.

DISTINGUISHED PANEL

Management Editions [Europe], a new book club, based in Geneva, has an international selection panel including leaders of industry like Mr. L. Rice, Chief Executive of the Burton Group and Dr. de Soet, Vice President of KLM Royal Dutch Airlines, top consultants like Mr. John Humble of Urwick Orr & Partners (of "Management by Objectives" fame), academics and authors like Prof. G.P.E. Clarkson of the Manchester Business School and Dr. Robert Mager of Mager Associates Inc. California.

Members are offered monthly selections with alternate and additional choices and they may stop at any time.

FREE NEWSLETTER

Every month a free newsletter is sent to members, with information about the current selection plus news of alternate and future choices.

TAPES AND FILMS

Cassettes and films, often convey more than the printed word because they also transmit emphasis and personality. Management Editions [Europe] will offer members access to all these modern information media.

FREE INSPECTION

The books described in our launching offer and all subsequent ones are yours on Free Approval. If you are not wholly satisfied you may return them within 7 days and you will owe nothing.

BONUS POINTS

Every book club edition you buy will entitle you to two bonus points worth 25p each towards future selections.

To mark the launching of Management Editions [Europe] you are invited to enjoy a special money saving offer which gives you two remarkable books for the price of one of them if you act now.

INTERNATIONAL LAUNCHING OFFER! 2 BOOKS FOR THE PRICE OF ONE!

A new book which promises to become a best seller among people whose time is precious and, for you to select, one of two modern business book classics. Two books for only £3.95 (plus postage and packing) - less than the published price of one of them.

YOUR FIRST SELECTION: THE TIME TRAP

by R. Alec Mackenzie deals with a man's most limited irreplaceable asset: TIME. You are doomed to spend it, sixty seconds every minute, night and day. You can't accumulate or increase it. You can't turn it on and off. Alec Mackenzie devotes his book to studying how to make the most of it.

PLUS ONE OF THESE FREE! THE MONEY GAME

by 'Adam Smith' - a pseudonym used by a man who is able to give a unique view of Wall Street, the 'Money Game' and its players. Outrageous, witty revelations about investments, investors and how they behave.

OR... UP THE ORGANISATION

- or "How to stop the corporation from stifling people and strangling profits" by Robert Townsend. A plan for having fun while making it all work better than before and better than anyone else. "If you're not in business for fun or profit, what the hell are you doing here?" asks this successful and very articulate tycoon.

EUROPE

"Don't overdo it, dear—otherwise you may find yourself liable for Value Added Tax." 23.iii.72.

Theatre in the Flat by Osbert Lancaster (John Murray, 80p). "Wholesome and unrepentant," writes Mr Lancaster in his introduction, "it is clearly high time that I was pulled down and redesigned by Sir Basil Spence." No one who enjoys his cartoons on the front page of the Daily Express would ever agree: his personal antipathies have become as well-loved as the dramatis personae who appear regularly on his small stage. Sadly, though Maudie and her husband and daughter are well represented, Father O'Bubblegum seems to have been eclipsed by the Rev. Trendy—a splendid invention in himself—and the scene is perhaps too full of women's lib brawn.

Europe

End of a legend

LAW AND SOCIETY IN THE VISIGOTHIC KINGDOM

By P. D. King.
Cambridge University Press. 318 pages. £6.60.

The legend of the Dark Ages dies hard; even among historians there are

still to be found some who view the period between the collapse of the western empire and its revival by Charlemagne as an epoch of dimly-discerned chaos, hardly worth investigation. The appearance of works which challenge this interpretation is the more welcome, and Dr King's study of the Visigothic kingdom of the sixth and seventh centuries AD is one such. It is an extremely thorough, and, for the most part convincing, attempt to reach back to the reality of a social organisation through the law codes which survive from it.

Dr King is well aware of the pitfalls of this approach to history. Law may represent the aspirations of a society, but rarely the achievements. It is only by treating a corpus of legislation as a unity, considering the light thrown by individual enactments on the operations of others, that one can arrive at any estimate of the effectiveness of the whole. This Dr King does with great skill. He highlights the Visigothic kings' concern to hedge round their own officials, military, political, and judicial, with the kind of inducements and deterrents which would suffice to give them a greater interest in performing their proper functions than in succumbing to all the temptations of fear, favour and corruption endemic in primitive society. He shows that the Visigothic legal system was designed to be self-righting, counterbalancing severe punishment for the guilty with hardly less severe penalties for false accusation. In all, the level of subtlety and ingenuity in making provision for enforcement is most impressive.

Of course, a great deal of Visigothic legislation was a heritage from the immense sophistication of the empire, but Dr King shows how it was adapted to embrace the customs of an alien people, and to fulfil the needs of the particular conditions of Spain. The Roman emphasis on personal responsibility in law was largely retained, for instance, but the sovereign authority of the paterfamilias was considerably toned down. When it comes to making detailed deductions about society from the laws themselves, Dr King shows a very proper scholarly caution, which, one fears, may not be appreciated by all his readers. Some things emerge unmistakably—the immense exalted role of the king, the subordination of the church, a streak of savage antisemitism, and the acceptance of a highly stratified society, in which, none the less, men might progress from one class to another without too much difficulty.

The most remarkable feature of the

WHY DID YOU KILL YOUR PRESIDENT?

The Book of the Century

The best Christmas Present for Believers & Atheists

This is the most monumental and controversial book published in the English language since the Bible. The Bulgarian writer Kyrill Goranoff deals via the prism of humour and satire with all social problems, calling a spade a spade. It costs less than LSD trips and provides more knowledge, mental strength and objective information than all religious charlatans and the Establishment can offer.

Kennedy's assassination, the Warren Report, Jackie Kennedy's infidelity, Pope Paul, the Pill and Celibacy, the Profumo Affair, Numerology (Isotope 13 unmasks racketeers in Religion, Politics and Economy), Birth Control, Pollution, Harold Wilson and Khrushchev, Lenin and Stalin, Stalin and Napoleon, War & Cold Wars as means for Employment & Big Profit, Narcotics, Whores, Pimps, Hippies, Students, Jahova & Homosexuals, Jesus & Homosexuals, the Mafia of the Homosexuals are some of the topics. The reader laughs or he gets furious. Free thinking distributor for the USA wanted. The socio-political stage play OLYMPIADE of MENTAL COMPETITION will appear soon.

This luxurious edition, 4 volumes of 400 pages each, illustrated, a rarity for Bibliophiles, is obtainable from HATCHARDS, 187 Piccadilly, London W1V 3DA; BOWES & BOWES, 1 Trinity Street, Cambridge CB2 1SX at £3.20 and from Librairie Internationale, 17 Rue Soufflot, Paris 6, at \$7.50 per volume. If ordered direct from Publishing House K. Goranoff, 1 West Berlin 37, Argentinische Allee 20, the books are mailed post free at £2.80 per volume, Europe; and \$7.50, overseas.

The Merchant Adventurers

Edited by Ralph Davis, Professor of Economic History at Leicester University, this series will be of particular interest to readers of economic history and British maritime history. The first two titles have just been published: Far Eastern Trade 1860-1914 by Francis E. Hyde will appear in February.

Latin America and British Trade 1806-1914

D. C. M. PLATT

The growth of this trade is described with special reference to foreign competition in Latin America and to the effect on the eastbound traffic of Britain's imperial obligations. £4.25

The Wine Trade

A. D. FRANCIS

A complete picture of a trade which played a vital part in the spread of English commercial influence, and by its very nature attracted more than its fair share of characters and eccentrics. £4.25

ADAM & CHARLES BLACK

laws themselves is the sheer scope of their provisions. Whatever one may feel about their success, it is clear that Visigothic kings were prepared to legislate in an attempt to control virtually all the activities of men's lives—not least the economic ones. Such codes would not be acceptable in more developed societies, but it is arguable that in an earlier stage of civilisation they are not merely useful but vitally necessary. Dr King's book is a most useful contribution to thought, as well as to knowledge.

Something in the air

BELLE EPOQUE: PARIS IN THE NINETIES

By Raymond Rudorff.

Hamish Hamilton. 365 pages. £4.15.

The reader may be forgiven for thinking at first that Mr Rudorff had taken the easy way out and opted for a catalogue of Gay Paree, 1890. He begins with the Moulin-Rouge and the Elysée-Montmartre: two inches of bare feminine flesh between stockings and frilly knickers, La Goulue ending her act with a "callypygean display of her behind." We have Aristide Bruant and Yvette Guilbert, brothels of the utmost luxury, the first strip-tease (said to date from 1893) and the amazing Joseph Pujol, known as Le Pétomane, whose aspiring anus allowed him to take in air through his posterior and to break wind at will, thereby reducing audiences to hysteria and causing the King of the Belgians to make a special trip to Paris.

FOLIES-BERGÈRE

Cultural centre?

But Mr Rudorff soon points out that there was more to Paris than gaudy night-life; he sets out to explain the various artistic revolutions which were taking place, the political ideas of anarchists, the issues raised by the Dreyfus affair, the discussions of decadence. The end of the 1890s is typified by the story of President Loubet in the Palace of Painting at the Exhibition of 1900. When he came to the room which had been reserved for the impressionists, his guide barred the entrance and cried, "Go no further, Monsieur le Président, here France is dishonoured." It was, says Mr Rudorff, a brave but futile gesture. The impressionists had become respectable. Paris had accepted experiment. It was the most stimulating cultural centre in the world. And in 1900, some would say, the real Belle Epoque had only just begun.

Perhaps there was something in the air of Paris in the 1890s that encouraged adventure and debate. As a Dutch writer, Willem Bijvanck, put it, what would pass unnoticed in another city became prominent and significant in Paris; or as the hoaxing journalist Léo Taxil said, "The slightest lie, sparked off in a corner of the most obscure paper, immediately blazes into flame throughout France like a powder-train catching fire." There was an alertness and an awareness, a self-consciousness which caused the inhabitant of the Latin Quarter to think of the world north of the Seine as an alien city, whilst the right-banker revelled in the gracefulness, richness and distinction which was every day spreading farther westwards. Much of this excitement, movement and fantasy has been captured in this lively book.

I do believe her

LYING WOMAN

By Jean Giraudoux.

Gollancz. 230 pages. £2.50.

Since "Maurice" so diluted the concentrated excellence of E. M. Forster's *oeuvre*, one is bound to approach another posthumous book by a youthful idol with trepidation and a fastidious distaste for the flavour of wet clay in the well-kissed shoes. It is therefore possible that the extravagant gratitude with which one greets the publication of "La Menteuse," a whole generation after its author's death, is somewhat exaggerated by relief that it can do nothing to harm a reputation.

"La Menteuse" was written in 1936 and reflects, nobody can now say how far, Giraudoux's own experience while

engaged as a diplomatic inspector in the Americas—which is no doubt why we have had to wait so long to see it. Such a book, so concerned with the minutiae of lovers' thoughts and feelings, with nuances too fine to be distinguished through writing talents of longer focal length, could not be written today, and more's the pity: the secret (one of those belonging to what Giraudoux's Nelly calls "the Superior Powers of Earth," who run the lifts at the Crillon and grand motor cars in the Bois) has been lost.

There is, in particular, something like sorcery in the way Giraudoux (and he is fortunate in the excellence of his translator) can provide a deeply serious commentary on the meaning of truth beneath a mask of witty superficiality, a story of tragic stature out of the common ingredients of farce. As Nelly's ordinariness is exalted, by her reliance on lies, to a real grandeur outshining her technical advance to the nobility as the Marquise de Fontranges; as Reginald's grandeur is humbled to ordinary, puzzled humanity through his rigid attitude to truth; as each scintillating image illuminates another facet of this jewel of a book, one succumbs without struggle to the proposition that Giraudoux, too, was of the superior powers. It is not often that one finds a book that exceeds in value the claims made for it in the publisher's blurb: this one is more than "an enchanting novel," and it is unreservedly recommended.

The most unpopular country

THE RARE AND EXTRAORDINARY HISTORY OF HOLY RUSSIA

By Gustave Doré, translated by Daniel Weissbort.

Alcove Press. 207 pages. £4.95.

For the best part of the nineteenth century, Europe did not much like Russia. France, deeply humiliated by Napoleon's defeat in 1812 at the hands of that "Kalmuck Prince," Alexander I, liked it least of all. This russophobia was at its height during the Crimean war, when the 22-year-old Doré produced a pictorial history that fed on every scrap of unfavourable information available. Ironically, Russia became, just over two decades later—after the French humiliation at Prussian hands in 1870-71—a very cherished and desirable ally. But when Doré was working on this book, perhaps the most unpopular man in France was Emperor Nicholas I, "Europe's gendarme," who had sup-

Doré: assuaging humiliation

pressed the Polish uprising in 1830-31 and the Hungarian one in 1849 and was as much of a threat to foreign nations as he was to his own subjects.

That, certainly, was the view of the Marquis de Custine, whose book on Russia in 1839 served as a basis for Doré's work. Custine's in many ways inaccurate, and downright bad, book had one redeeming quality: a certain intuitive understanding of the deeper and darker realities of Russian life, which has led George Kennan to observe that while it might be a bad book about Russia in 1839, it was a very good book about Russia under Stalin.

Doré used the information gleaned from Custine and exaggerated it to the point of the grotesque. The book is so rude about the whole of Russian history and so unfair in every respect to the Russians that it would be difficult to see a similar work being produced anywhere these days, except perhaps in Russia itself at the height of the cold war a few years ago. But the shrill anti-Russianism is relieved by the universal validity of some of Doré's savage satire, which is passionately directed against every form of despotism. There is a cartoon on page 139, for example, showing actors in the theatre sitting on the stage and watching the real performance, the adulation of the emperor by the servile audience, which could easily have been an audience of Soviet party officials paying court to Stalin—or for that matter, any group of frightened sycophants with any number of other dictators anywhere in Europe.

GUNNAR HAGGLOF

Memoirs of a Swedish Envoy Diplomat

'Gunnar Hagglof's memoirs make clear for the first time all that is required of those who direct neutrality. . . . It is an enthralling story.'

America

Indian summer

THE ART OF THE OLD WEST

By Paul A. Rossi and David C. Hunt.
Collins. 335 pages. £8.

THE INDIAN HERITAGE OF AMERICA

By Alvin M. Josephy.
Cape. 398 pages. £5.

Lovers of the American West are well-served by the publishers these days. They will welcome (if they can afford) Messrs Rossi and Hunt's spectacular evocation in a large, beautifully-designed art book. The profuse, marvellously reproduced illustrations are drawn from the collection of the Gilcrease Institute at Tulsa, Oklahoma, and reflect great credit on its founder, the late Thomas Gilcrease, a part-Indian oil millionaire. He must have been a remarkable man, with a super-American flair for collection. He acquired numerous specimens, good, bad and indifferent, of the work of every artist of any importance who ever concerned himself with cowboys and Indians. "The Art of the Old

West" is his memorial, and a splendid advertisement for his foundation.

The editors have an ethnographical bias, but perhaps their work is most interesting for the opportunity it gives its readers for their own aesthetic judgments.

Indian work is scarcely represented. Otherwise, there is a wide field, from which stand out the landscapes of Albert Bierstadt, the Indian paintings of Alfred Jacob Miller, the drawings of W. R. Leigh, and the drawings of birds, beasts and Indians attributed to Charles Bécard de Granville (1675-1703). Bierstadt's intensely romantic views have a sensuous quality all their own; Miller, combining Rowlandson's verve with something of Turner's flair for watercolour, easily outshines the more celebrated George Catlin; Leigh's meticulous pencil-studies have a sincerity missing from his paintings; the Granville drawings are as enchanting as Edward Lear—they look like sketches for a new "Book of Nonsense." By comparison with these works the backward-looking statuettes and canvases of more recent artists such as Remington and Seltzer seem on the whole pedantic and, in their attempts at humour and human interest, as

Sioux heritage: the reservation

corny as Norman Rockwell. Perhaps in time they, like Rockwell, will acquire a certain period charm.

As a source of instruction and information "The Art of the Old West" is useful, but cannot compare for eloquence or excitement or intellectual bite with an older picture-book, "The American Heritage Book of Indians," edited by Mr Alvin M. Josephy Jr. Nor, except as to bite, can Mr Josephy's new book (which unfortunately bears much the same name). It has a different purpose. Where the former work was designed to fascinate—which it triumphantly did—the present one is soberly planned: to include as much information as possible on all the Indians from the first crossing of the Bering land-bridge to the present day, from the Arctic Circle to Patagonia. It is astonishing that Mr Josephy has been able to succeed so well.

His range and lucidity are prodigious. He seems to be master of a dozen disciplines, and to have read everything. Yet he is never arrogant. He is as up-to-date as possible, even when this means admitting that a controversy is not yet settled or that a new one has opened. His bibliography alone is worth the money, for it is well-arranged and truly comprehensive. His only fault, in fact, is his use of "thrived" for "throve," "dove" for "dived," and "pled" for "pleaded." Against that must be set all the out-of-the-way information he finds room for. He tells us that the Navaho incest taboo forbids a man to talk to, or even to be in the same room with, his mother-in-law. Ah, that savage wisdom....

The weight of the nation

AMERICAN CIVILISATION

Edited by J. Boorstin.
Thames and Hudson. 352 pages.
£8.40.

There is always a danger with large and glossy books that combine illustrations and text that the pictures will steal the show—especially when the text is in small cramped print on yellowish paper. But in this simply enormous volume—14 inches by 10½ inches—the essays win. There are 13 of them, with such daunting titles as "Freedom and Faith," "Society, Inequality and Manners," "Teaching the Nation," "Written Words," "Missionary and World Power." But the distinguished experts chosen by the editor, Dr J. Boorstin, to tackle the formidable and elusive subject of American civilisation have succeeded for the most part in knocking their themes into shape. They have avoided the vague generalisations that are too typical of such amorphous topics as civilisation. Their arguments are clearly defined and firmly pinned to historical fact. Professor Nathan Glazer traces the successive waves of immigration into the country and the influence that they have on the new nation. He pursues the "melting-pot" versus the "nation of nations" argument through the twentieth century, and shows how internal and external events shaped these attitudes and lent them popularity. Professor Marcus Cunliffe, the only contributor who is not American, has given a lively and comprehensive account of the ideals that shaped American education and how they have been tempered by reality.

Professor Frank Freidel gives a clear and precise résumé of the development of popular politics and political parties.

Civilisation—well, almost

Professor Ernest May has managed to write dispassionately and objectively about the Vietnam war and succeeds in putting the conflict into historical perspective: no mean feat when its final chapter is still unwritten. He concludes, on a somewhat optimistic note, that the end of the Vietnam war may see the return of a more idealistic and positive concept of America's world role.

This book is much more than an historical guide. The tone is enlivened by essays on manners, entertainment, art and literature. A picture of the American way of life and how it has been shaped emerges clearly from these pages. This is partly because the same fundamentals recur throughout the essays—religion, idealism, independence, self-reliance, immigration, the speed of change and the ability to adapt to new situations. But above all there is a feeling of optimism and confidence—a feeling that appears to be shared by the authors themselves.

America! America!

WALK DON'T WALK

By Gordon Williams.
Hodder and Stoughton. 284 pages.
£2.40.

THE ASSASSINS

By Elia Kazan.
Collins. 319 pages. £2.25.

Where is hell? Where but across that Styx to which the jet aircraft (*facilis descensus Averno*) has narrowed what used to be the wide Atlantic? Were the timid shade to judge only from these two infernal Baedekers, he would take his obol directly to the travel agency that entirely excluded from its list of limbos the very name of America. On the testimony of Mr Williams and Mr Kazan—the one a transient, the other resident in the unconsuming fires—over there in the Dis-United States Giant Despair has wed not Mrs Diffidence but Mr Money-Love; and over there the pair of them tear limb from limb the Pilgrims and the Mr Hopefuls who fall into their hands.

Mr Williams's pilgrim to the springs of fame is Graham Cameron, an autobiographical *figura* not made less Williams by the coincidence of his quest—"plugola" for a novel—with that of his author a few years back, or by this book's habit of dropping into the first person and historic present at moments of emotional pressure. Not that puzzles of identity need worry the reader of this funny, serious and cor-

The War Hitler Won

Nicholas Bethell

£4.00

Political Theory and Practice

Bernard Crick
£3.50

This is a closely and vividly written account of the vital weeks after Hitler's troops invaded Poland on 1 September 1939, when for a time it seemed that, treaty or no, the West would do nothing to help the Poles. Nicholas Bethell's research follows the opening of the State Papers for the period. The behind-the-scenes manoeuvres in Moscow and Berlin are fully described, the political purposes behind Roosevelt's public statements, the bargaining between Paris and London, and the heroic, terrible story of the Poles themselves.

These essays have two broad themes: the nature of political ideas, and institutional reform in Britain. Among the subjects discussed are tolerance, ideology, sovereignty, tyrannicide, violence, power and the individual, participation and planning, student influence, politics in schools, patriotism and pluralism.

The European Parliament

Procedure and Practice

A unique work of reference, which has been prepared under the direction of the Clerk of the House of Commons to assist Members of the United Kingdom Parliament in their work in the European Parliament. The study covers the structure, rules and practice of the European Parliament, and will enable Members and observers—civil servants, staffs of other parliaments and academic students to understand the framework within which the Parliament operates in the European Communities. It will also be of interest to businessmen and others who want to know the way the Parliament makes resolutions on Community regulations.

Mercury House Waterloo Road
London SE1 8UL

rosively embittered book: as a picaresque fiction, with its roots in soil as diverse as "Portnoy" and "Tom Jones," it flowers splendidly in its own right, and bears fruit in the mind long after its due season. The chronicle of Cameron's chaotically drunken and ultimately bootless odyssey from cultured east to far-out west amuses, engages, glitteringly reflects what smug Europeans, blind and deaf to the disintegration of their own traditions and culture, have ever believed were their justified prejudices about life and letters in the United States.

Cameron, his soul large with love of an America built out of old movies of which nobody in real America seems ever to have heard, is set awheel on the chat-show circuit holding for support the hand of a publisher's minion whose frigidity (she is—is she?—female) would make Mary Poppins look lickerish. His disorientation in this truly foreign place drives him at last to the edge of the endemic schizophrenia and to the escape, via good old BOAC, to Dullsville. But oh, how sweet the name of Heathrow sounds...

Mr Williams's style mirrors (or meers, as his Americans say) the incipience of schizophrenia of which his hero is warned. It is allusive, dense with fragments of old movie dialogue, joyfully or groaningly playing with and on words, as if he had misread the epigram and thought that genius was, after all, but an infinite capacity for making puns—as if S. J. Perelman had grown fangs and ferocity to match. This weapon—it is no mere tool—Mr Williams uses on his sometime hosts with all the mercy of the serpent's tooth, his outraged innocence harrowing their hell.

Quite apart from this success, Mr Williams has to be taken seriously as a writer on the strength of his previous books (there are seven, and one of them was runner-up for the Booker prize last year). Mr Elia Kazan, on the other hand, is a well-known director of plays and films and in that role has enjoyed well-merited success and great reward—sweets that further showered on him for his first venture into written fiction, "The Arrangement," and presumably set him to the making of this new map of hell. On the evidence available he is no writer but a one-book man; and "The Assassins" is not that book. It is, indeed, really rather bad—confused, windy, ill-constructed, unredeemed by its conscious vulgarities and its spurious if intermittent identification with the dropped-out young and their idiom.

(There are actually a great many more once-unprintable obscenities in "Walk Don't Walk" than in "The Assassins," but being in the first what practical criticism used to call "organic" devices they do not attract attention there; in "The Assassins," where they are scattered, like stock cubes in a stew, for the sake of beefing up the dialogue, their taste is vile).

And yet, irritatingly as it is indeed written, "The Assassins" has something to tell us about the American condition. The theme of the book is the polarisation of American society under the pressures of new ideas and new conventions: an Air Force sergeant, Cesario Flores, cold-bloodedly pistols the hippy who has alienated his daughter Juana, is tried for his life but (it cannot spoil any surprises) is acquitted by a jury prepared, one and all, to have done likewise had their daughters been corrupted. There are opportunities here, certainly, and all are taken, but so clumsily that small insights slip through the mind's fingers and are lost; so dimly that no light is shed by the torch this woolly liberal carries for all American convictions, old or young, past or present, anarchic or conservative; so earnestly that it is impossible to take him seriously. One does not expect a point of view to assail one from a novel, but one does ask for a consistency of stance, of feeling—some indication that the author believes something and that his material means something.

Where Britain lost

THE TRUTH ABOUT FORT FUSOCKS

By Richard Akerman.

Eyre Methuen. 204 pages. £2.50.

BLAZE OF GLORY: THE FIGHT FOR NEW ORLEANS, 1814-15

By Samuel Carter.

Macmillan. 368 pages. £3.50.

THE DAWN'S EARLY LIGHT

By Walter Lord.

Hamish Hamilton. 320 pages. £3.95.

From now until 1976 American towns, counties and cities will be wrestling with the problem of how best to celebrate the bicentenary of the United States. The prospect of a central commemoration in Philadelphia came unstuck when it proved impossible for Philadelphians to agree on a suitable site. Mr Akerman might have had some fun with the city of brotherly love but instead he has let his imagination loose on his own creation, Regina County, vaguely placed somewhere near Baltimore, and on the tribulations

Jackson: the British were beaten

of Mr Peterloo Screugh, a teacher of history who is given the task of tape-recording and preserving for posterity an uncensored account of the deliberations and machinations of its bicentennial committee. Regina County possesses the ruins of an old British fort, the legend of an obscure patriot, Jeremiah Postgate, who died throwing the British out, and the patriot's home, Brandon Hill, now owned by a rural Dr Strangelove, General Alonzo "Bang-bang" Braddick (Retd).

Mr Screugh has also been entrusted with a fourth precious possession, a manuscript in code written and hidden by a British agent who came to a sad end in the war of independence. The manuscript, which holds the secret of whether the British or the Americans won the battle of Fort Fussocks, is decoded bit by bit as the battle of 1974 rages over who is to have the credit—and the profit—of commemorating this nebulous bit of history. After a rather slow beginning both plots catch fire. And in the end the truth is buried to let the bicentennial celebrations proceed.

In "Blaze of Glory" a recounting of the battle of New Orleans, there is no doubt that the British were defeated; they were beaten back by Andrew Jackson, who thus revenged the burning of the Capitol and paved his own way to the White House. This is a handsome book, physically, and the story is engrossing. Mr Carter's style is somewhat romantic but with the accounts of eye-witnesses to draw on and an interest in every detail, he has written a book which is hard to put down. There are remarkable descriptions of Jackson's rag-tag-and-bobtail force—hunters from Tennessee and Kentucky, Baratavian pirates, Creole aristocrats, Choctaw Indians and blacks. A most interesting chapter concerns the arming of the slaves and the "men of

colour," the free Negroes who abounded in New Orleans. (Louisiana seems to have been the first part of the continent to use black militia, in spite of the endemic southern fears of a slave rebellion, and this caused some embarrassment when it was sold to the United States.) This ill-assorted army mowed down Wellington's veterans. Most of the deaths occurred after the peace had been signed, thousands of miles away.

New Orleans provides a chapter for Mr Lord's book, but he is largely concerned with tracing hour by hour, field by field and street by street the attack on Washington, its burning (quite selective it turns out) and the British repulse at Baltimore. Mr Lord ties it all up in a neat parcel, addressed to an American audience. But in Britain it is salutary to be reminded that "The Star-Spangled Banner" celebrates a British failure.

"I'd Be Glad If My Dollars Would Just Settle Down To Floating"

Herblock's State of the Union by Herbert Block (Simon and Schuster, \$6.95). "The news from Washington is bad," announces Herblock, as he begins his latest book. It covers the four years of the Nixon Administration in words as pointed, as witty and as bitter as his cartoons, drawn regularly for the Washington Post, which make up about half the volume. President Nixon has superseded the hydrogen bomb as, in Herblock's view, the most dangerous threat to the liberties of the United States. His view is hardly unbiased, but would he be America's most honoured (and most beloved) cartoonist if it were?

Business

Tricks with tractors

HARRY FERGUSON: INVENTOR AND PIONEER

By Colin Fraser.

John Murray. 294 pages. £3.50.

When his wife found Harry Ferguson dead in his bath in the autumn of 1960, stuffed full of barbiturates, he was 75 years old and had survived a wretched childhood, a grisly series of business setbacks, a six-year lawsuit in America, and breaches with almost all his close friends to achieve a degree of world recognition that few inventors are lucky enough to see in their lifetime. And he had also made a fortune. For Harry Ferguson was the man who turned the ordinary farm tractor from a mechanical horse, and a dangerous one at that, into a precision machine tool for farmers.

It took him from around the start of the first world war to close on the opening of the second world war to develop what he liked to call the Ferguson System; and it was Henry Ford senior, who still liked to boast that he had one foot on the land, who put it into mass production for him. What makes the story such an odd one is that Harry Ferguson was a dour, austere, parsimonious, ungracious, bigoted and largely unknown Ulsterman at the time, in a very small way of business; yet Ford was willing to build the tractor for him on the basis of a handshake.

How did such an unattractive personality ultimately win so much support? Mr Colin Fraser, who was for five years a Ferguson instructor in the old man's declining years, credits him with two qualities that do not always go together. Harry Ferguson was a first-class engineer who had the rare ability to get other good engineers to work for him even while he treated them abominably; his tractor with its hydraulically-operated implements was a superb piece of designing. He was also a salesman without parallel, and could charm the birds off the trees if he put his cranky, craggy mind to it. The Ferguson tractor was small, light and cheap, looking like a grey Shetland pony besides the other tractors of its day, but it could only work with its own, specially-designed implements. This was quite a package to sell to farmers already suspicious about such a small machine's ability to do its job and Ferguson had a sure feeling for the kind of gimmicks that had to be

Ferguson and Ford: handshake contract

built into any demonstration to convince them. He performed most of the crucial displays himself.

Success and recognition were both a long time coming, and even when Ferguson tractors were rolling out of factories in Britain and America the boardroom rows were such that one company after another decided that it would prefer to do without Harry Ferguson's business. The historic six-year court battle with Ford made others chary of dealing with him. In his 70s, he sold out to, and was in turn turfed out by, the Canadian Massey-Harris company, leaving him with only his dream of a four-wheel-drive car to sustain him. The fits of depression that had always periodically overwhelmed him grew worse.

Mr Colin Fraser permits himself a sentence of speculation about whether, if Ferguson had been a more sociable man, he might not also have been a happier one. But a less obstinate man could well have succumbed to the repeated business disappointments that preceded success; in which case there would never have been a Ferguson System, and an important slice of industrial history would simply not have happened.

It pays to advertise

THE MARKETING OF PROFESSIONAL SERVICES

By Aubrey Wilson.

McGraw-Hill. 210 pages. £3.50.

Professional services are traditionally surrounded with a special mystique which has effectively ruled out the kind of selling methods appropriate for, say, baked beans. The 1970 Monopolies Commission report on professional services did its best to debunk the myth, recommending a complete review of such practices as restrictions

on entry and advertising, and price-fixing. The professions, predictably, took issue with this judgment and even with the commission's competence to make it. But the old taboos are beginning to be broken down. Mr Wilson's book wisely steers clear of the most sensitive issue, the relationship between the professions and the individual user—doctor and patient, for example—and concentrates on the most likely area of expansion: in the professional services bought by industry and institutions, such as accountancy, of course, or management consultancy.

Mr Wilson leaves no doubt that professional services need skilful marketing in the same way that tangible products do, but details the fundamental differences between the two selling operations. The quality of a service cannot be demonstrated before it is rendered. There is no possibility of a sample; no help from packaging and display. A professional service must make a direct contribution to reducing the uncertainty involved in running a business; it must come to grips with the fundamental problems of the business which is buying the service; and it can only be bought from specially qualified people. Allowing for these differences, the book then considers what should be done by both buyers and sellers; there is a 10-page checklist ranging from strategic considerations to pricing. The book could be an eye-opener for those professionals who up to now have relied on being sought out by, rather than seeking, their clients—even if Mr Wilson's fondness for paradigms, classifications and definitions makes for rather heavy reading.

Sweet bird of youth

THE FUNNY MONEY GAME

By Andrew Tobias.

Michael Joseph. 172 pages. £2.

Wall Street might seem an unlikely locale for chain letters to flourish. But three or four years ago, even the most illustrious of banks, brokers, accountants and downtown law firms were busily handing them round. They weren't called chain letters, of course. Their key phrases were corporate identity and creative accounting, growth of earnings per share and, above all, synergy, which means $1+1+1+1=7$. But in one important respect the result was the same. Wealth was in no way created, but it was very effectively transferred.

Mr Tobias's account of this illusory world is slanted from an interesting angle: inside the soap bubble itself. His was an unusual career, at least by English standards, though it seems common enough in the United States. When he arrived at Harvard, a high school trip to Russia had left him with an interest in Slavonic literature and a self-image, he tells us, well to the left of nasty businessmen. However, to pick up a little money, which he did not really need, he went to work for Harvard's student-run corporation, and ended up, in his senior year, as its president. The next step, logically, was across the river to Harvard's business school but, following conventional wisdom, he decided on a couple of years in the real world first.

Reality, after a tentative start, turned to be the National Student Marketing Corporation where Mr Tobias, at 21, was director of campus businesses, with salary and stock options to match. NSMC was the corporate expression of a simple idea, that a single company could specialise in catering for the needs of young people, a \$45 billion market. Wall Street took to this concept, to its personable young president, Mr Cort Randell, and to the mesmeric nonsense pumped out by its public relations departments, as though to the sweet bird of youth itself. There seemed to be no limit to the urge to be in with the now generation (the ageing president of a college book-cover firm, to impress his youthfulness, did 20 excellent press-ups as part of the merger negotiations). At their giddy peak, the shares traded at 100 times earnings, or twice the multiple accorded to IBM. Yet in fact it was a jumble of poorly assorted businesses, strung together on a necklace of gimmicks. Most of the earnings were coming, at the time, from clothing and insurance, for which a 15 times multiple would have been ample.

Physically, Mr Randell seems to have had difficulty with digestion and, corporately speaking, it was altogether beyond him. He was washed away on a tide of red ink. Mr Tobias soon followed, back to Harvard, where he could ponder, in tranquillity, on lessons which his business school professors could have taught him in the first place. But he could also write this book—engaging, scurrilous, shrewd and funny. It can be commended to anyone who has a taste for this kind of thing—except creative accountants. For them, it should be compulsory reading.

Mafia Business

Much has been written on the violent crimes of the Mafia, the current headlines on underworld deaths and indeed the enormously successful *Godfather*. However little has been written on the nature of the Mafia family. A *Family Business* provides a remarkable assessment of the Mafia in the United States and Italy observing their daily behaviour from the large family weddings to local family life. From armed crime in the USA to firearms control in England and Wales. The author of *Firearms Control*, a serving policeman, recommends radical changes in attitudes to the control of firearms to reduce the burden on the police.

Two timely books by Campbell Balfour. One on *Industrial Relations in the Common Market* was described by *The Economist* as 'crisply written . . . covers everything from labour law to industrial democracy.' *Incomes Policy and the Public Sector* puts the reader in touch with 'real economic situations' in discussing the realities of collective bargaining. An important contribution to the topic.

EMPLOYMENT, INCOMES AND EQUALITY

A Strategy for Increasing Productive Employment in Kenya

Here is the report of the first inter-agency mission to visit an African country under the ILO's World Employment Programme. Under the leadership of Professor Hans Singer and Professor Richard Jolly, both of the Institute of Development Studies at the University of Sussex, the members of the mission endeavoured to find ways of solving Kenya's three major employment problems: the problem of the abysmally low income of the working poor; the problem of finding jobs for school-leavers and frustrated young persons; and the more general problems of the under-utilisation and low productivity of the labour force.

This report presents the mission's proposals for tackling these three major problems, and shows how they cannot be solved without first setting right the fundamental imbalances that characterise many aspects of Kenyan life. Thus greater equality, increased satisfaction of job aspirations, continued growth and expanded production in every sector form the cornerstones of the mission's recommended plan for increasing productive employment in Kenya. Thirty-one technical papers prepared for the mission are appended to the report.

To be published 15 November.
XX + 593pp; map, charts and numerous tables.

Cloth bound: £4 [also available in a student's paperback edition: £3]

Other Employment Mission Reports:
MATCHING EMPLOYMENT OPPORTUNITIES AND EXPECTATIONS
A programme of action for Ceylon. Set of two volumes; 240 + 260pp. £3.

TOWARDS FULL EMPLOYMENT
A programme for Colombia. 471pp. £2.

Also published by the ILO:
FISCAL MEASURES FOR EMPLOYMENT PROMOTION IN DEVELOPING COUNTRIES
This volume shows how fiscal measures can increase employment, through influencing the product mix and the choice of production techniques.
342pp. £2.40.

AUTOMATION IN DEVELOPING COUNTRIES
A round-table discussion on the manpower problems associated with the introduction of automation and advanced technology in developing countries.
246pp. £2.

ESSAYS ON EMPLOYMENT
Nine contributions selected and introduced by Professor Walter Galenson.
191pp. £1.20.

INTERNATIONAL LABOUR REVIEW
Articles on employment, economics and social topics affecting labour (monthly).
A free specimen copy is available on request. 1973 subscription: £4.

YEAR BOOK OF LABOUR STATISTICS 1971
Brings together world-wide data on labour and conditions of work essential to a proper understanding of trends and developments.
XXIV + 800pp. Paper bound: £5.

Pleasure

It's a knock-out

HENRY COOPER: AN AUTOBIOGRAPHY
Cassell. 190 pages. £2.50.

The British, Empire and European heavyweight boxing champion, the man who floored Muhammad Ali (or plain Cassius Clay as he then was), came from fighting stock. Grandad George had died in 1926, before Henry Cooper was born—he burst a blood vessel singing at a wedding; but his reputation around the Elephant and Castle, in south-east London, lived on. And Grandma was a useful ally in a rough-house, too:

In those days if any family had a row they went out and had a stand-up fight. Grandad used to fight like a man and my Gran wasn't like most women, scratching and pulling hair; she could punch like a man. She used to roll up her sleeves and stand up and box. If two families had a row my Grandad would fight the other old man and my Gran would go and fight his wife.

Henry was an Elephant kid, and at heart he still is. His tastes have not changed and he does not try to pretend they have. He remembers with relish the food his mother made: bread pudding, suet pudding, date pudding, shin-bone soups. This book is plain and simple—Henry Cooper talking aloud. It is lively, gutsy and affectionate, with no airs and graces, no side. One would have to be a boxing addict to follow him through every detail of his fights, but the book is interesting as an honest picture of what a professional thinks about his job. This man enjoyed boxing. He was good enough at it to make a living out of it; lucky enough to have a manager as straight and shrewd as Jim Wicks, and sensible enough to save for a rainy day. He was in the fight game for the money. He fought as many fights as seemed worthwhile financially; he took no pleasure in going into the ring on behalf of the inland revenue. That meant, when he was at the top, never more than four fights a year. One year, he says, he earned £36,000 and the taxman took £29,000. No wonder he and his manager campaigned—unsuccessfully so far, it seems—for boxers to be allowed to spread their earnings for tax purposes.

There is not much here for those who see boxing as a dangerous sport. Mr Cooper reckons that Baroness Summerskill must have based her opinions on the bad old days when a boxer like Jimmy Wilde could have 600

'Enery's 'ammer

fights in his career. In nearly 17 years of professional boxing Mr Cooper had 55 fights and he considers the risks of serious injury to boxers in Britain—he certainly would not say the same for those in America—are not great:

Risk-taking ought to be a calculated thing. No boxer will get seriously injured if he goes into the ring properly matched, fit and trained up. Fighters know it. Tragedies happen when they are not 100 per cent fit or have shirked their training. Sometimes they may be hiding an injury, perhaps from themselves. A brain haemorrhage is an exception. But that's a basic weakness which is put at risk unknown to the boxer. He could just as easily suffer the haemorrhage by banging his head on the cupboard under the stairs or against a lamp post. . . . The British Boxing Board of Control must always be kept up to the mark by the press and the public, though I do firmly believe that boxing in Britain is the best run in the world.

Henry Cooper is known as a good sportsman, but he makes clear that when he was in the ring he was there to win at all costs. He knew all the tricks of the trade when he was in a clinch and on the blind side of the referee. If his opponent got a cut eye, he did all he could to make it worse. Champions, he says, must have the killer instinct. Henry Cooper had it and his chief weapon was his left hook —'Enery's 'ammer, as it was known in the trade. But he also knew occasionally what it was like to be on the receiving end of a knock-out punch:

The good punches you never see coming. You feel no pain at all. It's like being in a room with the lights on and someone coming in and turning them off and it's pitch black. All you remember is coming to, just waking up. There's no pain, no soreness with a really good knockout blow. It's as if someone had just turned the lights on again. You get a similar sensation when they give you pentathol in hospital.

That's the way it is: you can take Henry Cooper's word for it.

Golden Miller: grand national hero

Photo finish

THE HISTORY OF HORSE RACING

By Roger Longrigg.
Macmillan. 320 pages. £6.50.

THE GRAND NATIONAL: AN ILLUSTRATED HISTORY

By Clive Graham and Bill Curling.
Barrie and Jenkins. 196 pages. £5; £6.50 after 31st December.

For racegoers who want something else besides the latest Dick Francis novel, here are two rather splendid recommendations. The first, by the estimable Roger Longrigg, is fascinating all the way from Diomedes to Piggott, both good at lifting a horse over the line; the illustrations, from a variety of centuries and courses, will keep many an unlucky owner spellbound and hopeful. It is a pity, though, that two of the idols of recent years, Arkle and Nijinsky, are execrably represented.

The second book has some of the best black-and-white pictures ever over the sticks, and pays proper respect to the one and only Golden Miller (Arkle fans, of course, needn't buy). Each of the great occasions is recounted in detail, not forgetting the Foinavon (444-1 on the tote) fluke five years ago. The words are by two fellows calling themselves Clive Graham and Bill Curling, which are merely pen-names for The Scout and Hotspur, and that should be recommendation enough.

Women and song, beware

"Next to the pleasure of drinking wine come the pleasures of discussing and thinking about wine" says the dust-cover of Denis Morris's *Daily Telegraph Guide to the Pleasures of Wine* (Collins, £1.95) and the latter is all this reviewer can provide until it is decided to impregnate the pages of *The Economist* with the bouquet of

vintage Chateau Lafite (a development that is only being held up by some tricky technical problems). Of all these books it is the *Wine and Food Bedside Book* selected by Claude Morny (David and Charles, £3) that most easily puts this pleasure across. This is a collection of articles written for *Wine and Food*, the journal of the International Wine and Food Society. Some five of the 12 articles in Part 5 are entitled "Memorable Meal," three of them written by the late André Simon. An example of these was one enjoyed in 1939 by M. Simon himself: the food was what he chose to call simple, but the wines were La Riva Marchanudo Fino, Blandy's 1792 Madeira (supplied to Napoleon in St Helena but not drunk, on his doctor's advice), Zeltinger Rotlay Auslese Moselle of 1934, two clarets from Chateau Ausone, 1899 and 1892, Tokay Essence of 1811, bottled in 1840 and discovered in 1925 after being walled in during the 1849 revolution, and some 1830 Bisquit Dubouché cognac.

Nor is Mr Morris much concerned with modest wines (guides to chateau plonk are certainly needed, but perhaps hardly in book form) and after a couple of introductory paragraphs he launches into champagne. Following with sherry, madeira and aperitifs, he then goes through dinner fairly systematically, but grouping wines by country: there are five chapters on France, followed by Germany and the rest. He inserts a useful chapter on mulled wine: this is a good book for the less-than-gastronome.

The Gazetteer of Wines by André Simon (David and Charles, £5) is virtually an encyclopedia. It contains descriptions of the major wine-producing areas of the world, including Turkey and Australia as well as the likes of France and Germany, an alphabetical gazetteer of wines and 40 maps of the wine areas—a comprehensive work of reference. *The Wine Trade* by A. D. Francis (Adam and Charles Black, £4.25) is a history of it; largely a British history, as Britain has been the main importer of wine. Although there has always been a good flow of sherry and claret (much of the latter to Scotland—the lubrication of the auld alliance), the main story is about port. Not until Gladstone's chancellorship were the duties on light wines reduced to a level that enabled them to compete effectively. But those who think that the growing taste for wine in Britain is a modern phenomenon can learn of the devotion of Englishmen to wine in the early

A satisfied customer?

Victorian shopping (David and Charles, £5.95.) A facsimile edition of Harrods' May, 1895, price list (all 1,510 pages of it) cannot now help but provide endless entertainment. From Abdominal Belts to Zymine tabloids, via Camphorated Chloroform, Monumental Masonry and Winker Watering Bridles, fun can be had at any number of different levels: masochistic marvelling at decent claret for 15s for a dozen bottles and "stylish silk tea gowns" at 4½ guineas; nostalgia for an upper middle-class world of summer tents and canopies; plain amazement at the number and variety of potions, lotions, lozenges, patent inhalers and the like on offer; sudden insights into the small discomforts of Victorian domestic life. Then there are the illustrations: page upon page of drawings of objects that would send any Portobello Road bargain-hunter into a glazed trance of delight.

Fantasy

Royal road

DREAMS ABOUT HM THE QUEEN

By Brian Masters.

Blond and Briggs. 144 pages. £2.

Freud said that the study of dreams was the royal road to the subconscious; Mr Masters gives us royal dreams as the road to the subconscious. He mainly recounts his collection of dreams about the Queen and the royal family,

sent to him by loyal subjects all over the world. None is portentous, none is sexy; many are trivial, including those dreamed by intelligent people; many are dreamed by people who go out of their way to add that in waking life they have no interest in the monarch; some are delightfully zany. Nearly all the dreams read as if Her Majesty was on the sort of private escapade invented in the popular tabloid press, but do we not get all our information about her from such sources anyway? Royalty condescends, yearning to get lost in the city incognito, and is invited to the dreamer's home for a nice cup of tea. Incredibly, half of all the dreams, with the whole world of unfettered fantasy open to them, include the sharing of a nice cup of tea. This fact is all that remains in the mind after reading the book, and is a tribute to tea as the ultimate and infallible social lubricant in England.

Only this remains, for the book is slight and ephemeral. The breathless discussion of interpretation in the final chapter is down-to-earth, commonsense and debunking—and none the worse for that—but superficial. It is probably confusing to the undemanding reader, at whom the book appears to be aimed, but a pointless scratch at the surface if the work is serious. The author had a bright idea, made his collection, wrote it up lightly and deftly, and barely stretched it to book size. The book can be read in just about a couple of hours and it palls towards the end. That, of course, is fitting for a bedside book.

Suitcase of sex

THE EROTIC WORLD OF FAERY

By Maureen Duffy.

Hodder and Stoughton. 352 pages. £3.50.

Reading this book is rather like unpacking a suitcase into which far too many things have been crammed, and a gallimaufry of things at that. Miss Maureen Duffy is obviously an enthusiast, who cannot bear to leave out anything that strikes her fancy. She has chosen a vast subject, nothing less than the supernatural in English literature; for the inhabitants of her world of Faery include angels, devils, ghosts, witches, mermaids, satyrs, elfin knights, demon lovers, goblins, minuscule fairies—anything, in fact, that the human fantasy has ever thought up to embody the fears and desires repressed by the inner censor. Particularly, in her view, these non-natural creatures represent forbidden erotic impulses.

The inevitable mushroom

Miss Duffy has worked out her thesis with zest, and in the main it is a tenable one. Within a chronological framework—from Anglo-Saxon spells to Walt Disney and science fiction—she exhibits at breathtaking speed a succession of examples of the faery element in English poetry. And not only poetry: she cannot bear, for instance, to omit the Lilliputians and Brobdingnagians, and one wonders why Apollyon and Giant Despair have not been shoved in as well. Her chapters on "A Midsummer Night's Dream" and "The Tempest" are especially interesting, for in them she brings considerable literary erudition to bear on the themes, as well as the omnipresent freudian formulae. She is also a Spenser enthusiast, and is a good deal more enlightening about "The Faerie Queene" than she is about "Paradise Lost." This might, indeed, have been considered outside her terms of reference, as she begins by excluding from Faery supernatural beings within the Christian fold. However, she has a hunch about Milton being madly jealous of his younger brother, as well as father-fixated, so off she goes. And she does make some excellent comments on the influence on Milton of the Baroque paintings and sculpture that he encountered on his visit to Rome.

Among the most valuable features of this book, incidentally, are the illustrations; a very varied selection, some pretty certainly unfamiliar to the majority of readers, and all pertinent

to the author's main theme. This book does not, of course, set out to be a learned academic treatise, though a wide range of reading underpins it. But she allows herself too many ridiculous generalisations, and she discerns masturbatory fancy, penis-envy or incestuous longings behind every poem with a supernatural element. True, one does not wholly reduce the poet's artistic achievement by analysing all fantasies in freudian terms. The work of art still exists. But freudians seem always to find what they are looking for: the discoveries become either hilarious or monotonous, according to the reader's temperament.

Having begun by complaining that too much has been crammed into this book, it is ungracious to end by complaining about what has been left out. But there is one bare mention of "The Ancient Mariner"; no consideration at all of Coleridge; and no reference to Tolkien's "Lord of the Rings."

Founded on a fraud

THE MAGICIANS OF THE GOLDEN DAWN

By Ellic Howe.

Routledge and Kegan Paul. 334 pages. £4.50.

Mr Ellic Howe's ramble through the arcane corridors of the occult revival of the 1890s is interesting as a footnote to English literary history, since the 25-year-old Yeats was one of the first members of the Hermetic Order of the Golden Dawn, together with Florence Farr, who was then the mistress of that least irrational of men, George Bernard Shaw. The whole movement, it turns out, was founded on a fraud; a London coroner turned part-time occultist invented a female "Secret Chief" in Germany and forged letters from her licensing him to set up his own lodge in England.

The complex rituals and cabbalistic lore of the new order were largely the invention of an impecunious would-be magician called MacGregor Mathers, who patched it all together out of his somewhat confused notions of alchemy, astrology, black magic, freemasonry and Hebrew tradition and "invented" a cipher. Mr Howe solemnly informs us that the coroner and his friend were not swindlers "but occultists and therefore liable to confuse illusion and reality." But the mass of documents he has dug up provides a guide to the "system of correspondences" behind some of Yeats's poetry, as well as the occasional amusing vignette of life in the theosophical underground.

COLIN SIMPSON Lusitania

An explosive book which reveals facts about the real nature of the cargo and equipment of the Lusitania, and which shows how the ship's sinking, seen in the light of the truth was a totally justified act of war. "A remarkable piece of detailed research." Hammond Innes — THE SUNDAY TIMES. Illustrated £2.95

BASIL DAVIDSON In the Eye of the Storm

The well-known writer on African affairs tells the story of the rise of the nationalist movement against the background of the country's colonial history and the parallel movements in Guinea-Bissau and Mozambique. Illustrated £3.95

MOLLIE PANTER-DOWNES London War Notes 1939-45

"To anyone who lived through the period, the letters bring it all back, as though one caught the whiff of brick dust and was transported to the smell after an air raid." C. P. Snow.

£3

CHRISTOPHER HIBBERT George IV: Prince of Wales

"Hibbert's treatment of this picturesque princely career is detailed; spirited and judicious; it is excellent value... we can look forward with pleasure to his sequel on his regency and reign." J. W. Burrow — THE TIMES. Illustrated £3.95

Longman

An attractive exterior

middle ages, when England had the good sense to own half of France.

Moselle by O. W. Loeb and Terence Prittie (Faber, £4.50) and Sherry by Manuel M. Gonzalez Gordon (Cassell, £4.50) are both thorough surveys of their subject by experts. Dr Loeb and Mr Prittie's chapter on the future of Moselle contains a catalogue of groans about the future of fine wines in Britain. But if there is one commodity for which demand increases more than proportionately with higher living standards it is good wine. The authors hark back to the increases in duty imposed by the Labour government, but wine consumption is now booming again, without any reductions in duty. Sir Manuel Gordon, Marqués de Bonanza, who is over 80, goes back much further in his chapter on the medicinal virtues of sherry, which appears to have saved his life when he was four. (The days when protection of the liver was popularly thought to involve avoidance of sherry are long gone.)

Victorian Public Houses are justly celebrated, particularly in London, and Brian Spiller has produced a good and well-illustrated guide (David and Charles, £2.95). One would appreciate slightly more detailed guidance about how to get to some of them: this reviewer found himself crawling in the wrong direction once or twice. Mr Spiller is more interested in the outside than the inside; but the shock of one or two terrible interiors was more than assuaged by the Crown in Maida Vale—an extravaganza with marble bar, vast marble fireplace and elaborate ceiling, and a billiard room with two full-sized tables.

Elephant's diary

A DICTIONARY OF MNEMONICS
Eyre Methuen. 93 pages. £1 cloth, 45p paperback.

This is an admirable, unpretentious little book in which the publishers have still been decent enough to use up three pages acknowledging their sources. Not, of course, that their informants were necessarily the inventors: mnemonics go back at least to the ancient Greeks, and were heavily relied on in the middle ages. This dictionary includes a mnemonic for the diatonic scale, designed in the eleventh century to depend on the first syllables of familiar hymns. That is not going to stick in the mind very easily nowadays, but there are plenty of mid-twentieth century examples for balance. How about "You'd much better not by car" for the first six motorways (to Yorkshire, the Medway, Basingstoke, Newport, Birmingham and Carlisle), for example, or, just right for metrication, "Kippers hardly dare move during cold months" (kilometre, hectometre, dekametre, metre, decimetre, centimetre, millimetre)?

There is an ample, but not excessive selection on Latin and French grammar; and of course plenty of mathematical and scientific mnemonics. Medical students seem to have the raciest: "Lazy French tarts lie naked in anticipation" (for the nerves in the superior orbital tissue). The best mnemonics make sensible sentences or words: skill, for example, for the excretory organs (skin, kidneys, intestines, liver, lungs). The worst are awkward strings of words: "Peter's tiny vole sings very tenderly" would be tiresome to remember for one of the thermodynamic relationships. With some, one could have done with a little more explanation: it takes a moment or two to work out how "To remember a number is to be a strong or hardy person. I always do" can be a mnemonic for the coefficients of

$$\begin{aligned} \text{? } U_t dt &= (.28U_0 + 1.62U_n + \\ &2.2U_{3n} + 1.62U_{5n} + .56U_{6n} \\ &+ 1.62U_{7n})n \end{aligned}$$

The rule is the same as for the mnemonic for pi (3.141592653589793238462643383279):

Que j'aime à faire apprendre ce nombre utile aux sages. Immortel Archimède antique, ingénieur. Qui de ton jugement peut sonder la valeur? Pour moi ton problème eut de pareils avantages.

But not all are so sophisticated. There are the schoolchild's history memory-aids ("Willie, Willie, Harry, Stee..."), a jingle for the books of the Old Testament, the knuckle trick for the

number of days in the month and a complete code of mnemonics for Morse. Most homely of all is one for checking that your children are presentable: "Hideous fools and morons, keep silent!" (Hair brushed? Face washed? Middle held together? Knees clean? Shoelaces tied?).

Back to nature

What takes over from ecology in publishers' lists? Natural history, apparently, with a revival of the old-fashioned, didactic, everything-you-need-to-know-about sort of book. Not many range as widely or as eruditely as *The Leaping Hare*, a compendium of folk lore, mythology, cookery and tape-recorded accounts of hare watching, trapping and coursing put together by George Ewart Evans and David Thomson (Faber, £3.50). Why hares should at various times in history have been associated with the moon, with witches, with virtue and with practical jokes, and why these beliefs should have been more or less universal from Wales to Kyoto has never been clear, and is not that much clearer by the end of the book; but at least one is prepared by then to agree with the authors that hares, whether in fact or fiction, are remarkable animals, and to feel mildly ashamed at having up to that point known so little about them.

Henry Williamson's *The Scandaroon* (Macdonald, £1.95) does not inflict the same sense of guilt, partly because a taste for even the most bizarre of homing pigeons is really acquired only by pigeon fanciers and partly because much of this book is in the "Yesmye, thaccky li'l ole cat knaws" vernacular. But that aside, it is a pleasant, very professional exercise in Williamson-type nostalgia for a time when the gentry were gentler and the locals freer with their strychnine than either are now.

Not quite in the crib class is *The Concise Flowers of Europe* (Oxford University Press, £1.95) which is Oleg Polunin's scaled-down, paperback version of his original, monumental reference work; and since the original weighs all of 3lb, the need for something closer to pocket-size is obvious. The colour illustrations, like passport photographs, help identification but hardly flatter the sitter, whereas Herman Heinzl's paintings for Richard Fitter and John Parslow's paperback, *Birds of Britain and Europe* (Collins, £1.50), are more birdlike than any photograph is going to be at this price, and if the illustrations in John Leigh-Pemberton's neat little *Wildlife in*

Britain (Wills and Hepworth) are not quite up to the same standard, at 15p that's hardly surprising.

In a different category altogether is *The Complete Cat Encyclopedia* edited by Grace Pond (Heinemann, £4.75), which is neither a paperback, nor a quick reference book, nor cat lovers' goo but a solidly researched account of the 27 recognised long-haired and 37 short-haired breeds of cat, including the relatively new Sphynx, and it is claimed to be the first and only one of its kind. There they all are, eight kinds of tabby, six kinds of siamese, two kinds of curly-coated Rex cats—not to mention the Havana brown—in frozen poses that show off such points as their wedge-shaped heads, the set of their ears and the pattern of their backs. Macavity would have hooted with derision, but the big old Abyssinian tomcat on page 197 might well have been a match for him.

The same care for detail marks out *Deer of the World* by G. Kenneth Whitehead (Constable, £5); the only other book of its kind is 70 years old, out of print and changing hands at £100 a copy. But there are times when care, accuracy and great depth of knowledge are not altogether enough. Were deer extinct today, we would be marvelling at the eccentricity of a species that grew huge prongs of bone on its forehead up to golb (the Giant Deer that did so actually is extinct), and which, the bigger they grew, became more of an ornament and less of a weapon. Nor is that superstructure the work of a lifetime; the silly brute sheds it at the end of each season and starts all over again the next year. The strain on the physique of a big stag must be phenomenal. But because these extraordinary creatures are roaming the earth throwing off and growing antlers before our very eyes, we and Mr Whitehead take them almost too much for granted.

Some readers may, however, prefer the cool Whitehead to the unlimited enthusiasm of Dr Geoffrey Fraser Dutton, whose account of underwater exploration in *Swimming Free* (Heinemann, £2.75) has obviously been ghost-written by a large and powerful codfish. Not for Dr Dutton the warm and exotic waters of Jacques Cousteau-land; he swims flippered, rubber-suited and snorkled in the freezing waters around Britain (Scotland, mainly) among seaweed forests, seals and angry seabirds, and strongly recommends for a holiday break a quick flip down the river beds

of Britain, among the young salmon and the trout. An unusual man, with unusual ideas about replacing swimming pools with aquatic parks that deserve to be taken seriously. But should your taste run more to exploring underground than under water, then there is always *Field Archaeology in Britain* (Methuen, £3.50) and John Coles to tell you how to go about it, in another of those books that assume that readers' interest has already been sparked off elsewhere and all that remains is to fill in the gaps.

Picture books

The Pin-Up by Mark Gabor (Deutsch, £5.50) is sub-titled "A Modest History," but its most strikingly modest feature is the paper on which it is printed. With £5.50 on the dustcover, the price is not modest and with full frontals on the inside pages, nor is the content. The illustrations are accompanied by a pretty absurd text (example: "Although nude art photography can be a valid, meaningful form of creative expression...") and an even more absurd introduction by Ms Nicholson, the editress of *Do It Now*, who gives "a feminist view of the packaging of rape" (example: "Even among homosexuals, lesbians tend to seek a total relationship with other human beings while male homosexuals tend more to objectify their sexual partners"). For old-fashioned male chauvinists who don't mind the flannel of the prose or the flannel on which it is printed, there is still an uncheap thrill to be had from some fairly saucy photographs.

The International Encyclopedia of Film edited by Roger Manvell

An uncheap thrill?

(Michael Joseph, £7). This is a very fat book, a very big book, and one with many hundreds of interesting entries on all kinds of things related to the movies. There are also plenty of excellent pictures of pictures. But it is not an encyclopedia, far less an international one, of film. The Hollywood companies that were, after all, responsible for churning out a goodly portion of the films whose directors and stars get into the book do not even rate an entry each to themselves. Since there is no general index, you will have to look diligently to find a mention of other film production names like British Lion. But a film encyclopedia to please all the film buffs would have to be 10 times bigger and better researched, and in the meantime this one will provide a quick flip answer to many of the questions prompted by the late late movie on the box.

'Someone at least is getting ready for the Common Market'
Evening Standard

THEMES AND CONCLUSIONS

By Igor Stravinsky.

Faber. 328 pages. £6.

Only a few days, it seems, since that bizarre funeral of Stravinsky's in San Zanipolo in Venice, Russian rites amid a setting from the doges. Actually, it happened on April 15, 1971. Death had defeated him (having tried hard before) when he was 88. By odd coincidences, the remembrances are tumbling out, written, printed and published within the space of 18 months—something indeed to rival the maestro's own energy.

Stravinsky, by Picasso

Of Miss Libman's book, Madame Stravinsky has let it be known that it is anathema, while "Mr Horgan's is the most faithful and exact picture of my husband in action in his later years"; not, curiously, Mr Robert Craft's book. But in years and in range his will remain the most important consecutive account of Stravinsky's life and work, at least since 1948 when Craft first became the adopted son and literary and musical collaborator of the master; and until the definitive biography comes to be written.

Miss Libman worked with Stravinsky from 1959, first as personal manager and press representative and then occupying the privileged positions of lawyer, guardian, cook, valet, seamstress, chauffeur, companion and even nurse. She has set down a warm and totally unbitchy account of the Stravinsky circle, despite his widow's vetoing of quotations from the composer's correspondence. But she does show some of the warts, in any case fairly familiar: his love of money, his calculation of tax deductions, his belief in the restorative power of Scotch whisky. And she does query how much of the *echt Stravinsky* has emerged, in literary and recorded output, from the close collaboration between the composer and his amanuensis over the 23 years of their working together.

This is a fair question, but one that is impossible to answer for anybody who was not part of the intimate circle and household. It is difficult on the evidence to suppose that Robert Craft did not add a dimension to Stravinsky's own literary output. Stravinsky acknowledged that his "arch-disciple"

not only put an occasional word into his mouth, but indeed sustained his creative life in his last years. "Themes and Conclusions" is a one-volume edition of Stravinsky's two earlier books, and carries a significantly elided title, for Craft has "corrected, cut and expanded" the volumes that it supersedes. It is marvellously vital, sometimes uproariously funny, sometimes undeniably nasty. But to establish the source of its ideas, or even of the wise-cracks, would require a formidable amount of research.

There were rifts, according to Miss Libman's account, in these *maitre-fils* *adopté* relations that bring into question the absolute authority of the "Stravinsky conducts Stravinsky" recordings that, whatever the provenance, form one main glory of the master's later years. Not that this should matter, in this modern age where tapes can be spliced and where the truly important achievement is a recording of impeccable quality. But the essence of the controversy, which was in the air long before Stravinsky died, is how much of the master has emerged unmodified, unprocessed and *sui generis*. Clearly, a very great deal; yet, one must suppose, something short of the whole person. There he was, aloof, suspicious of being managed, yet accepting a considerable deal of help from good and knowledgeable collaborators.

Mr Horgan's is an uncommitted but loving book. But the others are loving, too. His is objective and rather less personally involved, elegantly written and deeply felt. Mr Robert Craft's chronicle requires at many places a good dictionary (pendunculates, ecchymotic and cerebrotonics all on one page). The first section, "Squibs," in "Themes and Conclusions" is a brilliant introduction to the rest. And Miss Libman, who starts with the epilogue of death and the funeral, must be read by anybody who wants a second (or is it a third?) opinion about one of the geniuses of this century.

Arctic art

SCULPTURE OF THE ESKIMO

By George Swinton.

C. Hurst. 256 pages. £8.40.

A never-ending stream of primitive art by ever-smiling northern natives? No, Eskimo art is not that, according to Professor George Swinton, of Manitoba university, who is a leading authority on the subject. Two decades of close study of the Canadian Eskimos and their art (especially sculpture) have

A speaking likeness

convinced Professor Swinton that it is a coherent body of original work by well-differentiated individual artists such as Tiktak, Johnnie Inulpuk, Peter Ahllooloo and many others represented in this splendid monograph.

The art of the *Inuit*, as the 17,000 Canadian Eskimos call themselves, is based on the concept of *sananguaq*, or likeness-making, which creates new reality. Not surprisingly, in a nation of hunters whose mythology centres on man's relationship with the animal world, those likenesses are mostly of bears, whales, seals, penguins and other animals. This remains true even of contemporary Eskimo art, which is of course increasingly secularised.

That art received a big boost from the Canadian government's deliberate effort in the late 1940s to encourage sculpture in Eskimo communities as a means of livelihood, even survival. Production en masse, which was the (temporary) result of this policy, is deeply repugnant to the anthropologists and others who tend, according to Professor Swinton, to romanticise the Eskimo past and the purity of its cultural and artistic tradition. But out of it has emerged the new and noticed contemporary school of artists.

What has this new art in common with the traditions of the past 5,000 years? Extreme simplicity and directness of approach, a certain tendency towards massive bodies and small heads and, most important of all, a great skill and ingenuity in handling

materials. The raw, inhospitable Arctic—the Eskimos call it *Nunassig*, the Beautiful Land—offers few enough of those: ivory, bone, antler, wood and stone. As ivory becomes rarer, stone is being used increasingly, with marvellous skill and dexterity. Like all people living close to nature, the Eskimos have a highly-developed intuition about the potentials of the raw material, which they exploit to the full—as the best of these illustrations show. This book is much more than a guide to modern Eskimo art: it is also a comprehensive compendium of Eskimo history, culture and customs, with a wealth of excellent illustrations and a good bibliography. It is a fascinating, enjoyable and useful book.

Better than ever

THE ART OF JEWELLERY

By Graham Hughes.

Studio Vista. 248 pages. £8.

Mr Hughes, the art director at Goldsmiths' Hall who mounted such a fine exhibition of twentieth-century jewellery, has now given us a splendid survey of the whole craft, which has survived the ups and downs of civilisation in every continent.

Already the author of standard works on modern jewellery and silver, Mr Hughes has turned historian in order to trace the evolution of jewellery-making. He has written a fluent and authoritative account that is the product of much scholarship and a well-nigh exhaustive knowledge of the jewels themselves. The text is supported by an excellent set of illustrations, many of them novel and all of them carefully labelled.

The profusion and sheer beauty of the pieces with which he deals are breathtaking. There are Sumerian amulets, agates and carnelians from ancient Persia and the multi-coloured beads of pre-Columbian America; Hellenistic diadems, Roman earrings, Etruscan *fibulae*, and gold chains from Ptolemaic Egypt; finely modelled torcs from bronze age Ireland, visigothic buckles, and Indian necklaces that display all the intricacy of Mogul art; Limoges enamels, stone-studded reliquaries, and the elaborate hat badges of the high middle ages. Burgundian orders of chivalry, renaissance portrait medallions, rococo sword-hilts, knobs from eighteenth-century walking sticks, and, but by no means finally, those ensigns of a decayed domestic tyranny, the chatelaines on which were once suspended countless keys.

Gold bra: for exhibition only

But the kaleidoscope of fashion is not the only aspect covered in this work of reference. A chapter on the "artist-jeweller" unfolds the story of present-day manufacture, and touches on the remarkable revolution which, since the 1950s, has transformed the market and stimulated the design of much of the best and some of the oddest jewellery; the gold bra, for example, designed as a showpiece but never completed.

It is gratifying to find that in at least one art form our standards are as good today as they have ever been. Thorough chapters on technique—including the recent development of electroforming—on the discovery of the lost treasures of Mycenae, Knossos, Thebes and Ur, on the major world collections and on the criteria of value complete the survey. But anyone who regards beauty will derive pleasure from this book.

Statues in a frame

ARCHITECT AND SCULPTOR IN
CLASSICAL GREECE

By Bernard Ashmole.
Phaidon. 218 pages. £5.50.

This handsome and lavishly illustrated book comprises the Wrightsman Lectures which Professor Ashmole delivered in New York (by an odd omission when he did so is not to be discovered from text or blurb), with a wonderful set of photographs, each set at exactly the right place in the text, which presumably correspond to the slides which he showed. The theme is a double one: the development of the practice and technique of inserting sculptural ornament into the confining framework of the only places in a Greek temple where it could be put (he has little to say about the great cult statues, since they have not sur-

vived in the cases which he treats); and the development of the sculptor's art when so employed. This is illustrated by studying three cases only: Olympia, the earliest; then the Parthenon; and finally the Mausoleum, which was not a temple in the ordinary sense, but presented the same architectural and sculptural problems and opportunities. This covers the 150 years, more or less, of the finest Greek sculpture, from the end of the Archaic to the beginning of the Hellenistic.

Professor Ashmole gives most space to Olympia and least to the Mausoleum (probably because the material is so shattered). Yet one feels that his sympathy is with the transitional periods and less with the stationary point of the Parthenon. The statues of Olympia show an astonishing leap forward from Archaic techniques, and a capacity to show emotion in features which was lost for a time in the idealising tendencies of the next generations. The Mausoleum shows many faults, and (to a modern eye) its general structure must have been horrible. But its ornamental sculpture had passages of the greatest beauty. Rather surprisingly, and certainly not acceptably to neoclassicals (if any such remain), he describes a shattered torso of a dying Amazon—features, lower belly, limbs, nipples all gone—as "perhaps the finest female nude that has survived from classical antiquity."

In all three cases he describes, most interestingly, what can be deduced about the technique of construction: where and at what stage the sculptures were inserted into the temple and what was involved, in time and money, in bringing the marble to them. This detail is omitted for Mausolus, since a successful autocrat could afford anything in his own honour. The result is a delightful book, highly instructive and easy on the amateur.

Art catalogue

The Age of Rembrandt and Vermeer by J. M. Nash (Phaidon, £6). Why, for heaven's sake, another book about Dutch painting? The answer—or excuse—is that art interpretation is comparatively new, and it is being continuously rewritten as new evidence comes to light. Mr Nash (of Essex university) tells us in his introduction, for instance, that so little is known about the great Frans Hals that only recent research has made certain that he was acclaimed as a portraitist in his own lifetime. Of the 178 illustrations,

48 are reproduced in colour (but sometimes unfaithfully, particularly noticeable with the Vermeers); the interest in the selection for those who know Dutch painting is in the details.

The Drawings of Watteau by Malcolm Cormack (Hamlyn, £2.50). While the charm and delicacy of the paintings are still there, Watteau's drawings have a spontaneity and realism which may seem preferable to the oversweetness of some of his compositions. Indeed, some of his contemporaries thought more highly of him as a draughtsman than as a painter, although Watteau seems to have considered his drawings only as working material for his paintings. A 13-page introduction by one of the staff of the Fitzwilliam Museum, notes on 132 drawings and the reproductions themselves make up this attractively-priced book.

The Restless Century by William Gaunt (Phaidon, £6.50). Mr Gaunt has worked his way from Hogarth to Turner: now he covers the vast span of imaginative painting encompassed in the nineteenth century. The choice is excellent; the introduction simple and informative; the result admirable. No mood dominates this book, though it is hard to deny to the pre-Raphaelites their present popular lead, which has dragged even such neglected painters as Arthur Hughes into the limelight and established the better-known, such as Burne-Jones, on a pinnacle of fame.

Merlin beguiled, by Burne-Jones

Now you can stay in one of the best hotels in New York -for free

If you have a week to spare fly with us to New York this winter.

We'll fly you over on one of our 747s. Put you up in one of the best hotels in New York (you have a choice of three). You'll have a single or double room with your own private bath. We take you sightseeing. And then after a week we fly you back again.

The all-inclusive tour prices start from £117—even that's a saving of about 30% on the

normal economy airfare available for a one-week tour. The rest is on us. (Prices based on 7/8-day winter group inclusive tour fares effective Nov. 1st to Dec. 14th, 1972, and Jan. 5th to Mar. 31st, 1973, for groups of 10 passengers. You don't have to form a group yourself. Your travel agent or Pan Am will do it.)

So, if that sounds like a nice thing to do, your travel agent can tell you more, or send for our brochure for full details.

Pan Am.

(for 7 days)

Suddenly, you're somewhere else.

NOW AIRPORTS CAN EXPAND WITHOUT GETTING BIGGER.

CABLE AND WIRELESS SHOW THE WAY.

It's not the length of runway that limits the capacity of modern airports. It's baggage and passenger handling.

Cable & Wireless are the pioneers of LOPAC—a new system for dealing with this problem. LOPAC (Load Optimisation and Passenger Acceptance Control) marries computer and communications technology to increase passenger throughput. Automatic issue of boarding passes, increased information availability at check-in mean less time spent on documentation, more time available for service to passengers.

How many on standby? Who gets a vegetarian dinner? LOPAC keeps track of all the interdependent detail that only electronic data processing can handle simultaneously. Up to 100 flights can be handled at the same time, with separate and confidential data for each airline. And

modular construction makes the system really flexible and remarkably easy to install.

This is the kind of expertise we offer—based on traffic management and operational experience in satellite, cable and radio communications. It's available to solve your telecommunication problems.

We bring together the things that bring people together. By telephone, telegraph, telex and television.

The Cable and Wireless Group of Companies and Associates, with offices around the world.

Business Brief

Two pensions for all

If all goes according to plan, and no general election supervenes, Sir Keith Joseph's state pensions plan will be safely on the statute book by next autumn, and come into force in April, 1975. Now that the Social Security Bill (and explanatory memorandum, Cmnd 4755), has put flesh on the skeleton unveiled 14 months ago in the white paper (Strategy for Pensions, Cmnd 4755), the pluses and minuses can be spelt out.

Like his Labour predecessor, Mr Richard Crossman, Sir Keith intends to put pension contributions on a straight payroll tax basis, in place of the present hotchpotch of flat rates and graduated contributions. Up to a ceiling equal to one-and-a-half times average earnings—which means up to £48 a week at present—every employee will pay 5½% of his earnings into the state pension fund, and his employer will pay 7½% of those earnings into

that fund. This means that the money to pay higher pensions will rise automatically as earnings inflate.

Unlike Mr Crossman, though, Sir Keith has not tried to offer wage-related pensions as well. State pensions will remain flat rate, but they will be escalated annually in line with prices or wages. This means that Sir Keith's scheme will be even more redistributive than Mr Crossman's, and so perhaps even more unpopular. Further, there is no question of generous pensions being promised to today's working population at the expense of future contributors.

Electoral, the Government hopes that criticisms on these points will be more than offset by two definite attractions: the scheme is divinely simple; and it gives a positive inducement to occupational schemes. The aim is that the large majority of British workers will be protected in old age by having a

good occupational pension as well as the state pension.

But a large minority of the work force are not suited by occupational schemes, either because they change their jobs too often, have long breaks away from work (eg, married women), or for other reasons. So Sir Keith has tacked on a reserve scheme, which will run like a state occupational scheme. For any month that a man works without belonging to an occupational scheme, he will pay contributions of 1½% of his earnings into this reserve scheme and his employer 2½%; the money will go into a fund, invested and managed independently of the government. When the time comes, the man will draw a pension from this fund determined entirely by how much he has paid in and (subject to a guaranteed minimum) the investment performance of the fund. A young man paying his 1½% contributions on £48 a week at age 21 is promised an inflation-proof pension of nearly £20 a week (ie, £20 in terms of the year 2016's prices) when he retires.

To be exempt from paying into the reserve scheme, a worker must belong to a "recognised" occupational scheme, which must meet various standards (more stringent, one hopes, than hitherto) of security, management and so on. But it must also guarantee pensions of a prescribed minimum level. It was on this point that Sir Keith and Mr Paul Dean, the junior minister responsible, in their white paper of September, 1971, came very close to defeating their own purpose of stimulating occupational pension schemes.

The flaw in 1971

The hope was that, faced with the prospect of paying into the reserve scheme, numerous small employers would prefer to set up their own schemes. Experience shows that once an employer has taken the plunge, on however mean a scale initially, persistent pressure from employees forces him to improve the scheme again and again. The sprats grow into respectable fish.

So, to qualify for exemption from the reserve scheme, the employer was told, in the white paper, that his scheme must give a pension equal to 1% of pensionable earnings for each year's service. To produce pensions of this size the employer would need to pay in about 5% of salary a year. And this, naturally, would produce better pensions than the 4% that would otherwise have to be paid into the reserve scheme. Cunningly, the cost would be about the same. The employer might have to pay 2½% either way; the employee would pay 1½% (no tax relief), if he were in the reserve scheme, or 2½% (less tax relief) if the employer set up a barebones scheme with a 5% contribution. Quite obviously, employees would have demanded that employers set up their own schemes, because they would produce better value.

The logic looked impeccable, but unfortunately it contained one small flaw. Very few people stay with the same employer all their working life. In future the average worker may well have six or seven different employers between 16 and 65. And for the man who left a recognised employer's barebones scheme after 10 years, on change of job at age 35, the frozen benefits would be nothing like as big as those that would have accrued to him under the reserve scheme.

This is because the reserve scheme is a money-purchase one: you get out what you

Crossman proposed . . . Sir Keith should dispose . . . and the old will eventually benefit

pay in, plus interest. So the contributions paid in by a young man, with accumulated interest, would buy him a much bigger slice of pension than identical contributions paid in by an older man. These would also be bigger than the 1% of total earnings the employer's scheme would have to provide. Although at the end of a normal working life the pension from the employer's scheme would be bigger than the reserve scheme would give, it is clear that younger employees would kick up a fuss. They would say that the bits of pension bought by their contributions to the employer's scheme must be jacked up, to well above the level of 1% of earnings, so that they at least equalled what they would get in the reserve scheme. The employer would meet this demand and then find that the cost of his pension scheme would be a good deal more than the 5% of payroll needed to produce pensions of 1% of total earnings. He would then say "to hell with it; put them all into the reserve scheme instead."

New rules

Fortunately, the Government has taken this point, which the insurance companies hammered home at the time of the white paper. Sir Keith Joseph's bill contains a new "test" of recognition. As an alternative to the 1% rule, the employer may now choose to set up a money purchase scheme himself, on just the same lines as the state reserve scheme, but on a slightly bigger scale. The employer will have to pay total contributions of 5% of payroll into this (against 4% for the reserve scheme); and he will have to guarantee

pensions that correspond to this figure. There will also be a third optional "test," for employers with schemes which make pensions a set percentage of final salary.

Sir Keith has thereby made it likely that even rather poor employers will now set up occupational pension schemes for all but the most mobile of their employees. Those in the prime of their working life now can expect a basic state pensions scheme, with pensions escalated at least annually, when they retire, financed in an inflation-proof manner by a straight payroll tax collected through Paye—and a mixture of occupational schemes and a state reserve scheme, to bring everybody's pension, eventually, up to about half pay, when the system has had time to build up.

Sir Keith has also set proper and adequate standards for the death benefits (where the man dies before retirement)

and widows' benefits (where he dies afterwards) that occupational schemes must give. Most bravely of all, he has grasped the nettle of preservation, and said that all pension rights in occupational schemes must be preserved for employees who leave.

This is a real advance. But it still leaves a lot of uncompleted business—and it is easy to see what reforms will be required from future ministers of social security. Although Sir Keith's scheme envisages that occupational schemes will have to push up pensions after retirement to counter inflation, they can get away with doing so only in a modest way. There will be no open-ended commitment to maintain the real value of approved occupational pensions or preserved pensions of employees who leave.

Most unfortunately of all, little has been done about what will be the most serious remaining weakness of occupational

schemes, now that preservation of benefits is to become compulsory. It is an obvious nonsense, in the case of a final salary scheme, for the preserved pension rights to be based on that man's salary when he left, at, say, age 35—without taking into account that, had he stayed, his salary would have risen steadily with inflation and promotion. The new system will only require a 3% annual up-rating to allow for possible inflation.

The Government's defence against these criticisms is that you must not make employers do too much at once. Sir Keith's immediate aim is to get nearly all employers to set up some scheme, and to give preserved benefits compulsorily (which they do not now need to do).

Sir Keith is certainly right to decide that pensions above the basic level can better be provided by the private sector than by the Government. This is more desirable economically (because savings are generated), politically (because it avoids concentrations of power), and socially (because occupational schemes are flexible and can be adapted to the varying needs of different occupational groups, most notably those who retire early or whose earnings peak early on). That does not mean Sir Keith need appear in the Commons debates as chief apologist for private pension schemes. His bill will extend them to wider numbers of employees and set higher standards for them. But those standards will need to be edged up bit by bit several times in the years to come.

Figures based on October 1972, proportions may have changed when the new scheme starts in 1975

These are the Areas for Expansion.

They could be the chance of a lifetime for your firm

This map shows Britain's Areas for Expansion. If you are planning to expand your business, the Government's new package of incentives under the Industry Act 1972 means that your firm could be eligible for considerable benefits in these areas. The more generous scale of assistance now available could be the chance of a lifetime for your firm.

Where are the areas?

The Areas for Expansion have been extended. They cover the whole of Scotland, Wales, and Northern Ireland, Northern and North-West England, Yorkshire and Humberside, some parts of the Midlands and much of South-West England. And remember that now, whether your firm is planning to expand into, or to expand or modernise within these areas, your project could qualify for considerable benefits.

What are the new benefits?

You could qualify for substantial grants towards the cost of new building and, depending on the Area, of new plant and machinery. These grants are broadly for manufacturing, mining and construction activities. They are not tied to the provision of additional employment.

Additional help for projects providing new employment

1. Capital Loans. You could be eligible for these on favourable terms. Or, alternatively, you could get relief on the interest costs of finance from non-public sources.

2. Removal Costs. There are grants which will go a long way towards the costs incurred in moving a business into the Areas for Expansion.

(Certain service industry projects may be considered for these two benefits.)

3. Rent-Free Factories. Government factories are available for rent or sale. You could qualify for a rent-free period of two years.

Other benefits

Other Government incentives available include grants for training new labour and free courses for supervisors and instructors.

The Industrial Expansion Teams—and how they can help you

Besides all this financial help, there are teams of people to help you find the best possible location for your project. Get in touch with the Expansion Team at the DTI Headquarters in London, or with one of the regional Teams. They'll give you all the facts, sound impartial advice, and valuable on-the-spot assistance in setting up your project.

Fill in the coupon for free copies of the booklets "Room to Expand" and "Incentives for Industry." Or phone the Expansion Team at any of the telephone numbers shown.

BUSINESS

In the freezer

A man you'd buy a freezer from?

Mr Heath's incomes policy depends on convincing a sceptical public that there are other ways of raising living standards than by pushing for ever bigger wage increases. What prospects for prices, sterling, tax cuts, interest rates?

If the Government is to deliver the goods, Britain will have to push its output up fast enough for consumers to begin to feel the benefit before too many unions have become too restive under the wage freeze to hold back their demands any longer. As his critics took great pleasure in reminding Mr Heath this week, the pent-up pressure of frustrated wage demands wrecked previous attempts at incomes policies by both Labour and Tory governments. But it is at least arguable that what built that pressure up to uncontrollable proportions was the tangible, uncomfortable feel of real living standards actually falling, as each government in turn attempted to squeeze resources from private consumption at the same time as it was attempting to hold wages down.

Mr Heath's gamble is to try to increase growth during the freeze so that real living standards will rise even though wages do not. More than a decade before Mr Wilson's and Mr Selwyn Lloyd's unhappy experiments, there was one postwar Chancellor of the Exchequer who got away with a price and wage freeze for the best part of 2½ years, and that was Sir Stafford Cripps. Arch-exponent of austerity though he was, output grew during his iron rule at a respectable rate; and, although only a third of the increase went to consumption, real living standards did keep rising. But Mr Heath has got to deliver at least that 5 per cent of real economic growth a year.

The freeze and the consumer

The freeze itself makes the immediate task of securing 5 per cent growth a little harder. So far growth has been consumer led. It was scheduled to remain so. As much as three-quarters of the growth in demand next year was expected to come from private spending—the result of incomes rising faster than prices. A successful freeze for up to six months would cut into this rise in consumption. The more so if, as suggested on page 83, it is less than fully effective on food prices. Earnings can go up faster than prices during a freeze, but only if there are factors, other than consumers' spending, pushing up output. Awkwardly, Mr Heath's promise of

5 per cent growth has always looked a bit thin outside the consumer sector.

But while the freeze itself is deflationary, the way it has been imposed is not. Many of the wage settlements which just beat the gun were in the public sector (see page 84). These have not been reflected in prices. They will push up money incomes while adding to the public sector deficit instead of prices.

The freeze and the balance of payments

The arithmetic of the freeze does not end with the consumer. While Britain's prices are held down, prices abroad (particularly in Europe) will continue to rise. The common market countries' attempt to tackle inflation looks less realistic than Mr Heath's. Britain's exports ought therefore to rise relative to its imports, giving a welcome and well directed boost to demand—particularly to the heavy end of British industry. But the freeze is for a maximum of six months. It generally takes a year or more for a change in relative prices to have a big impact on the volume of trade. Moreover all this depends upon sterling not rising again, although a rise would help to curb prices. Fortunately, the market seems reasonably happy with a rate of around \$2.35 for sterling; and Mr Heath, wisely, still seems in no hurry to re-peg it.

Most freezes hit growth

Growth in domestic output

The freeze and investment

The freeze will do little directly to encourage manufacturing investment, but it should, through confidence, help it indirectly. If inflation moderates, the dangers of a return to "stop-go" cycles will recede. With faster growth in productivity, the first constraint on the growth of output is likely to be a shortage of capital. Without higher investment, it may be difficult to reduce unemployment very far or very fast. But another important factor is the prospect for interest rates, which will be influenced by the growth in the money supply and the public sector deficit.

The freeze and the public sector

The public sector deficit will bear the main burden of the freeze. A lot of the workers in the public sector have beaten the wage freeze while the price increases that would have paid for their wages have been blocked. On Mr Heath's original £2 a week arithmetic, restraining public sector price increases to 4 per cent would have cost £240m in extra Exchequer subsidies to nationalised industries this year and £280m next. Zero price increases for the next six months may add £200m to this bill, and last weekend's and this week's settlements above the £2 to many public sector workers (electricity workers, busmen, industrial civil servants, dustmen, Uncle Tom Cobbleigh and all) will add a lot more. The lump sum payment of £10 to 7½m pensioners, together with the other sweeteners, will cost about £100m in the year

ahead. On top of that, the less rapid rise in incomes will mean a less buoyant tax revenue.

Altogether the gross cost to the Exchequer could be of the order of £600m to £700m in the year ahead. The net cost will be perhaps half this, as the public sector should gain elsewhere from the wage-price stability. Until investment or exports take up the running, the growth of demand and output will have to be pushed along by public sector spending or tax cuts, which inevitably means a large public sector deficit. One fear is that this deficit, through expanding the money supply, could be storing up inflation for the future.

The freeze and the money supply

Many people, not just Mr Enoch Powell, argue that it is the runaway growth in the money supply that should have been stopped. As Thursday's call for £220m (or 1 per cent) into special deposits underlines, its present rate of growth is certainly too fast. But monetarists rarely explain precisely (a) how we can best go about shortly reducing it; (b) the mechanics by which they think the money supply affects prices; or (c) what their targets would be for interest rates and unemployment.

Control of the money supply basically means managing three variables: the amount of public sector debt being created; the amount taken up directly in the form of gilts sold to persons and companies, instead of being financed indirectly through intermediaries such as banks;

Prices and Charges

The freeze applies to all prices and charges for goods and services on the home market.

All business enterprises must absorb cost increases and pass on cost reductions.

Businesses in difficulties may apply to the Government to increase prices.

Wholesalers and retailers need permission to raise prices and may not increase their cash mark-up.

Perishable foods and imported raw materials exempt.

The freeze applies to prices of nationalised industries.

Employment incomes

The freeze applies to all increases in pay as well as conditions of employment, ie, hours and holidays.

Piece work earnings from increased output are unaffected. Nor will the freeze apply to genuine promotion increases and travel and subsistence reimbursements.

Exemptions

Existing agreements and arbitration awards are allowable if completed and operational on or before November 6th. Otherwise not.

Wage councils and boards increases may be implemented if the starting date of the last increase was at least 12 months before the freeze.

Rates

Local authorities asked to moderate increases.

Rents

Council rent increases from October 1972 under the Fair Rents Act will not be rolled back.

The date when tenants of private unfurnished accommodation move from control to regulation will be postponed. The rents of other private tenants within the fair rent system, and rents of business premises and land, will be frozen.

Dividends

Cannot be more than the previous year.

Timing

Freeze to last 90 days from Royal Assent of the Act. Possible extension of up to 60 days by Order in Council.

Mechanics

Government is taking the power to make orders freezing wages and prices at November 6th levels and to roll back any unjustified increases.

Penalties

A criminal offence to ignore and resist orders, punishable by a fine of up to £400 on conviction.

and the conventional ratios determining how much credit the intermediaries can create with any given deposit base.

If the Powellite prescription is that the public sector deficit should be cut, this would mean higher taxes or lower public sector spending, both of which add to costs and prices in the short run. Moreover the long run effect on prices would be through slower growth and higher unemployment. This would be a sensible counter to demand-pull inflation, but not to the present cost-push inflation.

If the Powellite prescription is that money supply should be curbed without tougher fiscal action, this would mean allowing the gilt-edged market to tumble to encourage more direct private sector purchases, and reducing the banks' ability to extend credit by calling in still more special deposits. That would mean a sub-

stantially larger rise in interest rates than the ½ per cent or so which the call for special deposits may cause. But interest rates are already at a high enough level to hinder investment at a time when a recovery in it is essential.

A successful freeze actually helps the Government to control the money supply without the same risk of dangerously sharp adjustment in interest rates; for the simple reason that it reduces actual or anticipated inflation and increases the real level of interest rates without any change in nominal rates. This can produce a virtuous circle making it easier for the authorities to sell gilts directly to the private sector at any given nominal level of yields. Indeed, the authorities may be able to get the growth in the money supply back under control during the freeze without interest rates being pushed very much higher.

Rescue by index-linking?

Phase two of the incomes policy will start about budget time. Might Mr Heath go for index-linked wage bargains?

When Mr Heath first proposed his £2 a week package we suggested he might clinch a deal with the unions by using what leeway he had to reflate demand to reach the 5 per cent growth target. This we estimated at the equivalent of £1 billion a year of tax cuts. Since the talks broke down on the principle of wage restraint it never really came to that, but the task of boosting demand remains. The form it should now take must depend upon whatever new incomes policy takes over when the immediate freeze ends.

It looks as if that stage two of the Government's incomes policy will begin about budget time. Nominally, it should begin at the end of February, but the Government has to about the end of January to decide whether to take up the option of a further 60 days, which would extend the freeze to the end of April, a maximum of six months.

The decision about the option will depend upon how complicated the legislation for stage two needs to be. The Government wants it to follow the lines of Mr Heath's original £2 package. The legislation could be relatively simple if the unions relented and agreed to co-operate. But in the more likely event that they will do neither, then the legislation will become very complex. The Government may therefore need all the extra time.

Last September's £2 package will look rather flyblown by next April. Its ability to help the low paid and redistribute incomes, which could have been spectacular had it been running throughout this winter, will look much less satisfactory coming at the end of a six month freeze that will have caught some, but been escaped by others. Its element of rough justice will have been undermined—a double dose for some and nothing for others. Industry may be less able to keep to a 4 per cent price target after the freeze. The question therefore is how the Government should use its room for manoeuvre to put together a new and fair package in April's budget. One possibility that the Government could consider is

a move towards the fairly widespread use of index-linking for wage increases, pensions and other welfare benefits. This has its dangers, but it could clarify the real income element in wage bargaining. Bogus claims to pre-empt price increases are shown up for what they are, one union's attempt to grab a larger share in the available real income of the community. Stage two of an incomes policy, if it included a mechanism for index-linking, could have built into it a maximum flat rate increase in all wages that would share out the available growth in real incomes in favour of the lower paid. The original £2 a week package would, under this system, give £1 a week to everyone, plus 1 per cent for every 1 per cent increase in prices.

Index-linking carries the only too well-known effect of building inflation into the system. But when claims are put forward, as they are now, on the basis of exaggerated estimates of what will happen to prices, it may be the lesser evil. And it might make the package acceptable to the unions, which is a factor that the Government cannot ignore. It has to give Mr Feather a twig or two to hold on to as he tries to climb back off the limb on to which Mr Scanlon and his friends have pushed him.

Technically it should not involve any greater problems than are implicit in threshold agreements which the Government had been prepared to give the TUC. It is, after all, a threshold agreement based on a zero price rise. All that changes is the arithmetic. This does not mean that it would be administratively easy, but it would be no more difficult than what the Government is already contemplating. It could be got off to a good start because the remaining room for reflation could be used for such things as a 7½ per cent Value Added Tax instead of the proposed 10 per cent. The index-linking system would then see that such cuts in indirect taxes were passed on in lower industrial costs setting up a virtuous circle, and one in which the wage earner could not lose.

BUSINESS

In the freezer

When it comes to prices, the ice looks a bit thin

The Government set out to create an impression this week of a price freeze mechanism extending down to the most obscure village store—and here it was helped by a credulous press—but its ability actually to enforce such a freeze on all but the biggest manufacturers is more apparent than real. That is not necessarily a bad thing. Control of retail prices has always been impractical because no single price is fair to all shops; one man's barely adequate margin is another's excessively high profit, and to impose the same ceiling on them all would more likely put up, rather than reduce, the cost of living. The Government has left many retail prices to look after themselves.

Given the present rudimentary machinery in Whitehall it is unlikely to be in a position to pick up every small manufacturer of double-ended grommets who attempts to slip a price increase through this winter. What the freeze mechanism rests on is the assumption that, provided the Government can keep an eye on the published price lists of the bigger companies, which will be mainly those which had already been following the Confederation of British Industry's 5 per cent freeze, they will deal in their turn with the grommet makers and their ilk.

Prices up

Fast movers

There have been a few early signs that something of the sort is happening. Big companies that had already been notified of increases in the prices of bought-in components have written back refusing to pay, now that they can no longer expect to pass those increases on in turn to their customers. It is far from clear how many of the

price rises rushed through between the ending of the CBI's voluntary freeze on October 31st and the introduction of the Government's freeze on November 6th are going to stick.

The Government was approximately a week too late to catch the really fast movers in industry who had been ready to raise prices as soon as the CBI agreement that they had signed so reluctantly ran out. Enough kites had been flown since the Prime Minister gave his ultimatum to the unions on October 27th to choose between a voluntary and statutory incomes policy to warn manufacturers that compulsion was on the way, and many had letters ready and waiting to be posted to customers on November 1st announcing that, to their great regret, costs had gone up so much that prices would have to be raised by between 8 and 9 per cent. They reminded their customers how for the past 15 months they had stuck to the 5 per cent freeze, and remained theirs faithfully. The increases followed no recognisable pattern and came from various industries led by electrical components, plastic moulding and sub-contract machine shops. Many of the companies were small.

Apart from building bricks, the price of which went up by 5 per cent in October (the second increase in three months), aluminium is the main basic material whose price has been going up recently, not because costs were rising but because demand was. The aluminium industry publishes price lists that are meaningless and then proceeds to do business at prices well below. Rather more realistic list prices were put out last May and since then actual selling prices have gone up gradually in Britain from £220 to £230 a metric ton. This is already 4 per cent, and so far very little of this increase has

worked through into the selling prices of goods made of aluminium. Aluminium fabricators are just hoping that the Department of Trade and Industry is going to take a charitable view and let prices go up proportionately because the price of ingot represents 50 per cent of the cost of aluminium extrusions and 80 per cent of the cost of sheet. World ingot prices are likely to keep on rising now that they have started, but the selling prices of the British smelters are, presumably, caught in the freeze.

Prices caught

Ouch!

Some manufacturers and importers of consumer durables were fast away with their price increases before last weekend. Dynatron colour television sets and Sony hi-fi equipment were among them. But others, like Hoover and Philips, were caught by a matter of hours. Philips published a new price list on Monday, which means that it just missed the boat. Pay rises were allowed through up to the moment that the Prime Minister spoke in the Commons in the afternoon, but the price freeze was retrospective to Monday morning.

There is uncertainty about the prices of consumer durables that are manufactured abroad but sold under British brand names. A chain like Currys, which retails a lot of imported equipment, is going to pass on price increases which it knows are going to take effect in the new year. But British manufacturers who put their own labels on the goods before they are sold will have to go through the process of clearing changes with the DTI; this shows every sign of being a tedious ordeal.

Many industries are protesting that they had well-merited price increases in the pipeline. They will probably have to whistle for them while the freeze lasts. The most heart-rending complaint comes from glassmakers who gave a 15 per cent wage award six weeks ago, poor things. They were

Is this any way to enter Europe?

There seems to be an attitude abroad in the nation that if one ignores the Common Market for long enough it'll go away.

How wrong can you be?

For better, or worse (according to your views), we will become part and parcel of the E.E.C. on January 1st 1973.

Bar Britain sinking beneath the waves before then, or some cosmic disaster, we're going to need to know just what we're letting ourselves in for. And how we can best shape our future.

The European Movement was founded for this very purpose.

Some of you may shy away from us, suspicious that

we're some kind of lay arm of the government.

Your suspicions are totally unfounded.

We're an independent movement with just the one ambition, namely that of making sure that the entire European venture is a success.

If you decide to join us you will automatically get a free subscription to 'New Europe', the monthly magazine written by leading authorities on European affairs both in this country and across the Channel.

You'll also receive all the publications, pamphlets and leaflets issued by our various affiliated groups and committees.

There are lectures and seminars for you to attend all over Britain and on the continent.

The seminars will give you the opportunity for informed discussion. You'll find it a refreshing change from the prejudice and jingoism so common on the European issue.

If you have the time and inclination, we'll also help you set up a local branch of the Movement.

For more detailed information drop us a line at the address below.

Nothing ventured, nothing gained as they say.

The European Movement,
Europe House, 1a Whitehall Place,
London, SW1

"There must be a lot of P & O shareholders who cannot resist a niggling irrational question mark at the back of their minds."

City Editor, Sunday Times, 29/10/72

Jessel Securities and Associates, the largest stockholders in P & O, believe that the facts below will help you rationalize the doubts expressed in the quotation above.

1. The Board of P & O, by bidding for Bovis, have tacitly admitted that changes are necessary at P & O. There is no dispute on this point. The proposed solution will provide new management, but at a cost to P & O stockholders of £100,000,000!
2. The Board of P & O were far from unanimous in mounting a bid for Bovis. The four directors who publicly dissented from the original offer have remained firm in their conviction despite revised terms.
3. The very fact that Bovis are so firmly in favour of being taken over indicates that they are well aware of the advantages that they have negotiated for their own shareholders. It is the existing P & O stockholders who will suffer.
4. Positive alternative proposals have been made. Acceptance of the proposals set out in the Morgan Grenfell circular should considerably enhance the value of your shares—as opposed to giving away the equivalent of £1.60 on every share you hold.

We, the largest stockholders, have no doubt that the bid for Bovis is wrong. Your interests are the same as ours. Unless you are wholeheartedly convinced that the bid for Bovis is in your best interest as a P & O stockholder, you must vote against it.

Complete the blue proxy card sent by Morgan Grenfell and post without delay, but in any case by 12th November at the latest. By doing so you will cancel automatically any form of proxy you may have signed earlier.

Save P&O-tell Bovis NO!

hoping to pass this on (labour forms almost half total costs) as an 8 per cent price increase early next year.

On one point Whitehall has been quite clear: price rises will not be allowed merely because wages have gone up. If companies cannot absorb higher wages in higher productivity, they must put up with what the Government calls a "self-inflicted hurt."

The cement makers are also feeling sorry for themselves. They last had a price increase in April, 1971, but it was a staggering 18 per cent and the fourth rise in 18 months. Many newspapers had been counting their chickens before they were hatched, and had been banking on raising advertising rates in the new year; the top people's daily paper had even announced the amount and taken contracts on that basis. Among their suppliers, the paper makers started shouting even before they were hurt. They had expected to jump on a hardening market and lift newsprint prices by around 8 per cent, in anticipation of a price increase for mechanical pulp from Scandinavia of between 5 and 8 per cent.

The chemical industry has quite different problems. A few months ago, prices were high enough to show a reasonable return on investment. Then a lot of plants came on stream simultaneously and price cutting became the order of the day to shift the surplus output. If the industry's prices are frozen at what it considers to be distress selling levels, while world prices recover to more normal ones, chemical companies were saying this week that they will have no option but to export as much of their output as they can (which they should be able to do because British prices would then be very competitive), and leave British industry to import its requirements. The only guidance here is the advice that the DTI has already given to

retailers; if they were running special offers on November 6th, they are not going to be frozen at that level. But if they regularly sell below manufacturers' recommended prices, as most supermarkets do, then they cannot use the recommended price as their freeze price. If that is any comfort.

The computer industry is not too bothered about a price freeze. It works on relatively long-term contracts covering computer, peripherals and programs. Each contract is individually tailored and individually priced for the customer. But it is probably the best example of the effects of a wage freeze on a mobile and young labour force. During the 1966-67 freeze, computer staff were changing jobs up to four times in a year to get pay rises. During the recession which hit the industry in 1970-71, many companies pruned their labour forces to the bare bones; they have kept the remainder happy with twice-yearly salary increases and merit bonuses. Companies are very worried that the merry-go-round of quick labour turnover will start again, with disastrous results.

To a lesser extent, job-hopping could also develop in the electronics industry.

Cars

Well away

Ford, Chrysler, and Vauxhall win first prize for brazen price increases, with the 5 per cent hike they slipped in between the end of CBI controls on October 31st and the introduction of a statutory freeze on November 6th. British Leyland also deserves a special mention. It refused to join the three-month extension of CBI controls, and raised prices in August: a tactically shrewd move, since customers are less resistant to price increases in August than in November, when the market is moving into its seasonal lull. All that Mr Barber gave away in purchase tax cuts on cars has now been snatched from the public in inflation. Ford has raised prices 18 per cent in two years—and the manufacturers' list underestimates the true cost to the customer. It has become harder to arrange discounts, and some dealers have rationed supplies by lowering the trade-in terms on old cars.

Two main excuses are offered by the industry. First, changes in specifications. Cars for the British market tend to have lower specifications than the same cars built for European customers. Now that the home market is at last boom-

ing, manufacturers have taken the opportunity to add more of the cigar lighters, rear window heating, and other extras, on which profit margins are higher. For the next 90 days, that sort of price increase will be banned under the freeze.

The second excuse is inflation. General wage inflation has not been sufficient to justify the kind of price increases made, averaging 11-12 per cent so far this year.

The trouble has been the industry's willingness to grant extra large wage awards, such as the Longbridge deal struck on the eve of the freeze. The industry's component suppliers met the challenge of the CBI initiative by keeping price increases within the 5 per cent limit, but the entire advantage of this was lost to the motor industry by its higher wages.

Component manufacturers have been making little noise about inflation. They have evidently kept it at bay by the preferred technique of improving productivity. Indeed, Associated Engineering actually reports cost savings sufficient to improve profit margins.

Food prices

Going up anyway

As far as seasonal food prices go, the freeze could hardly have been worse timed. Fresh fruit and vegetables are at their cheapest in the autumn; from now on price increases must be the order of the day. Tomatoes, to take one example, will probably have gone up by 40 per cent by February and 80 per cent by next May, which is fairly typical. Other foods likely to go up sharply in the winter are English lamb, fish and eggs. The 25 per cent cut in prices of Israeli grapefruit on Wednesday is not going to affect the issue. Together these seasonal foods account for only 4 per cent of the retail prices index, but they make up a sixth of the average food bill. It is going to be difficult to convince the average shopper that retail prices are being frozen.

Then there are the imports. A

The food bill:

% of total weekly expenditure

Weekly income of household	All households		
	£10-£20 %	Over £50 %	%
One adult	25	16	24
Married couple	31	20	24
+ 1 child	33	18	25
+ 2 children	31	24	28
+ 3 or more	39	24	30

A mountain to climb

Average seasonal pattern over last 3 years

quarter of our food comes directly from abroad and another quarter is manufactured in Britain from imported raw materials. So about half is subject to the twin effects of fluctuations in world commodity prices and in exchange rates, including such basics as meat and bacon (a third is imported), butter (85 per cent), sugar (69 per cent), cheese (51 per cent) and wheat (49 per cent), not to mention tea and coffee.

Altogether, almost two-thirds of the average food bill is outside the freeze, and prices are likely to rise quite sharply in the next few months.

People who live on their own and are reasonably well paid spend only about 16 per cent of their income on food and they can expect to find that their total weekly spending has gone up by $\frac{1}{4}$ per cent by February and by $\frac{1}{2}$ per cent by April. But large, poor families spend nearly 40 per cent of each week's budget on food and they are likely to find that their food bill is up by well over 1 per cent by April. Pensioners will have their lump sums to help them, large families will get bigger family income supplements but there will be complaints of having been taken for a ride.

Dividends

Not too bad

The dividend freeze applies to dividends declared after the start of the standstill, and any declared before, and notified to the stock exchange and the press, will be allowed to stand, contrary to some City rumours. Some companies announced increased dividends for shareholders in return for putting off payment until the company year that straddles the changeover to the imputation system of corporation tax (April 5, 1973). This postponement enables the companies to avoid some tax by taking advantage of the transitional provisions. Shareholders of Imperial Chemical Industries and Woolworths can breathe again. The first company was ordered to cut its dividend on Thursday.

Since the freeze will last five months at most, some companies will miss it altogether: dividends are usually declared half-yearly, but sometimes yearly. Where a particular dividend is caught, it may be possible to make up the increase after the freeze. But this depends on what happens under the permanent prices and incomes policy to be worked out in the interim. If dividends are restrained, like

prices, to 5 per cent growth, their share of profits will be cut, not increased, since profits will probably increase at least as fast as the 10 per cent projected in the Chequers £2 package for money gnp (5 per cent each for real growth and prices). Even if dividends are allowed 9 per cent growth like wages, their share will go down.

Wages up

The winners . . .

More than a million workers snatched wage deals from the jaws of the freeze. Last week the worldly-wise Mr Frank Chapple showed that he understood a last minute, bargain basement, Government offer of a sell-out when he saw one. He left the Electricity Council with a deal worth about 16 per cent. The council had clearly been authorised by the Government to pay his price to avoid an electricity strike. The Government had reckoned that the power stations were not the place for a showdown.

The Electricity Council said the deal was worth just 10.2 per cent, with all the precision of an organisation whose public guesses at the cost of previous deals have been wildly wrong. The cash awards alone will add 11 per cent to earnings in the next year, plus the equivalent of 2 per cent from extra holidays and 3 per cent from productivity hangovers from the 1971 Wilberforce deal. If it is true that the wage bill is expected to rise only 10 per cent, that would imply that the council is expecting to get rid of about 6 per cent of its workers in a year.

The local council workers were preparing for a long drawn out fight, but moved fast once they got wind of the freeze. They settled, with minutes

to spare, for an average 11 per cent rise, although some got up to 13 per cent. This is about 2 per cent less than they might have accepted if no freeze had been pending. The 200,000 industrial civil servants, who work in such places as naval dockyards, were delighted when an arbitration panel gave them 11 per cent on Monday, instead of the 8 per cent originally offered. London Transport says it wrapped up a deal with its busmen last Friday, although both sides kept it secret till Tuesday. Country busmen stretched the credibility of the freeze still further by apparently reaching a still more secret agreement on Saturday not announced until Thursday.

The Government white paper made a special reference to wage councils, the joint groups set up to fix minimum rates in low-paid and under-unionised industries. The Government is prepared to exempt from the freeze proposals made by wage councils for rises that were processed before November 6th, provided that the workers have not had a rise for 12 months. On this basis, eight groups, ranging from toymakers to milkmen, will beat the freeze too.

Wages frozen

. . . and the losers

Mr Heath got a sad letter from Mr Mills, of the bankworkers, on Wednesday. Last week, Mr Mills negotiated an 8 per cent deal for his members, now frozen because it was not due to take effect until January. Mr Mills pointed out how rough it was that his union, which had co-operated so wonderfully with the Industrial Relations Act, should be the first to

The beat-the-freeze game

Winners*	Men involved 000s	Deal %	Losers in the freeze	Men involved 000s	Losers in phase 2	Men involved 000s

			Water-works	27		

*deals between September 1st and November 6th

be frozen by his fellow Balliol man.

Most of the unions hit by the freeze are those with claims yet to be settled, but a few who thought that they had already settled will also be hit: like the luckless farmworkers. Only last week, they were rubbing their hands because they had beaten the freeze and won a 20 per cent rise. But the rise was not due until January.

Workers in hospitals and the gas and water industries usually settle on the same terms as the local council men, but this time they could not. Militants in some hospitals have called for a one-day strike on November 17th.

Postmen, civil servants, other electricity workers and food shop assistants will all lose out, but none will consider striking. The first major challenge may not come until after February, when the miners' deal expires. The miners met on Wednesday to discuss their claim, but they have not yet put a final figure to it. At the moment, the feeling seems to be less militant than at their summer conference in Morecambe.

If the freeze is still on in March and April, as it possibly will be, there might then be a really major clash either at Fords, Vauxhall or on the railways. Phase two will not be as peaceful. Last year, of the wage deals reported by the Department of Employment covering 11m workers, over half were struck in the three months during which the 90-day freeze is likely to be operative. So although few big unions will negotiate in that period, perhaps a third of the workforce will have wage rises postponed.

America's freeze

It worked, just

President Nixon must be amused, but hardly surprised, that Mr Heath has shifted ground just as he did, and is now trundling along behind him on the incomes policy road. It was all too noticeable how many of Britain's top economic brass visited Washington this autumn to "study" the American system. In the event, the British programme for controlling inflation (first stage) copies the American phase one almost slavishly, down to the precise 90 days for the initial freeze.

Even the different policy over dividends is more apparent than real. Mr Nixon acted on August 15, 1971, under the authority of the Economic Stabilisation Act of 1970, which made

no provisions for regulating dividends; he could, therefore, ask only for voluntary compliance on this front. Most American companies were only too happy for an excuse not to shell out money.

Practically unanimous support has also been given to President Nixon's post-freeze request for dividend restraint, to the delight of Dr Arthur Burns, the governor of the Federal Reserve System, who chairs the committee on interest and dividends and was one of the initial advocates of the controls programme. The upward pressure on American interest rates, which worries Dr Burns, would have been even stronger but for the \$2 billion or \$2½ billion added to companies' cash flows this year through their savings on dividend pay-outs.

The American freeze on prices, like the new British freeze, exempted raw agricultural products and imports. Seasonal increases in prices were allowed. Altogether, about 10 per cent of the items in consumer spending were unaffected by the freeze. Most of the other 90 per cent seem to have been caught. Wholesale prices, which had been rising at an accelerating pace, actually declined at an annual rate of 0.2 per cent during the freeze. Although the increase in consumer prices slowed by no more than half, leaving it still at an annual 1.9 per cent, that understated the effectiveness of the controls because some earlier price changes were reported during the freeze.

The searching question for the Nixon Administration at the start of its freeze, was what to do about pay settlements due to come into effect during the freeze period. It was argued at the time that such contracts have a sanctity which must be respected: but the Administration decided otherwise and deferred the lot. (The British white paper, leaning on this experience, has already announced the deferment of such awards, with minor exceptions.) The annual rate of increase in hourly earnings in America, previously running at 7 per cent, dropped to 1.9 per cent between August and November, 1971. But the catch-up in pay afterwards (see below) was pronounced.

The principle of America's phase two, which runs to next April 30th, is a series of anti-inflationary guidelines enforced by mandatory controls to keep price increases to 2½ per cent and wage increases generally to 5½ per cent. Policymaking is in the hands of top Administration officials representing

the President's direct interest; day-to-day decisions come under committees on which outside interests are represented. Only the largest firms (those employing about 10 per cent of American workers) have to get advance approval for any changes in prices or wages; medium-sized firms have to report them, but the bulk of firms are only subject to monitoring and spot checks. The smallest among them have been exempted altogether in phase two.

Its aftermath

And phase three?

As the Nixon Administration found with its freeze, it found again with its follow-up. The real ball game centres on pay claims. The first major settlement to be reviewed by the Pay Board after the freeze related to soft-coal miners, following a six-week strike. (A glum precedent for Britain?) The board let through a 15 per cent first-year increase as part of a 30.9 per cent increase over three years, hardly a promising beginning. It then managed to clip back a 12 per cent settlement for aerospace workers to 8.3 per cent. But its real test came on the waterfront. Last spring the Pay Board rolled back the earlier west coast longshoremen's settlement of 20.9 per cent to 14.9 per cent; this excess above the 5½ per cent guideline was "justified" on grounds of "catching-up" and dramatic productivity gains.

During the months immediately after the freeze, the Pay Board allowed through quite a lot of such claims, on the grounds that awards referring to the period immediately before the freeze had shown a "big bump," and that the new 5½ per cent guideline should apply only to wage awards for the new contract period, starting later in 1972. Between November, 1971, and February, 1972, hourly earnings in the United States therefore rose at an annual rate of 10 per cent, only afterwards settling down around 5½ per cent.

The Nixon Administration has not yet indicated what it will want after April 30th. One school of thought, well represented in the Federal Reserve System, is that controls should continue indefinitely, and even that the wage guideline should be trimmed to 4½ per cent. Others, represented in the Treasury and Council of Economic Advisers, argue that the purpose of controls was to combat inflation psychology, and that it may be self-defeating to perpetuate them.

BUSINESS

International

Phillips believes it has a real North Sea gusher

You heard what I said, it's an underwater oil tank

Phillips Petroleum thinks it will eventually produce 42m tons of oil annually from the Ekofisk complex in the Norwegian sector of the North Sea. This is a lot of oil by anyone's standards and yet another indication that estimates of total North Sea oil reserves are still over-conservative. Next to Ekofisk, the two biggest discoveries so far in the North Sea are British Petroleum's Forties field and Shell/Esso's Brent field. From these, annual production rates of 20m tons and 15m tons, respectively, are predicted, but it was not so long ago that such figures were being quoted for the Ekofisk complex, which includes Ekofisk itself and smaller associated fields: West Ekofisk, Tor, Cod, Eldfisk and Edda. There is a good chance that predictions for Forties and Brent will rise considerably when they are as far along in their development as Ekofisk, which was discovered before them. There is also a possibility that the Ekofisk estimate might rise still higher. The pipeline Phillips wants to lay would have a capacity of 50m

tons a year. These figures are going to cause a good deal of argument in the oil industry but if Phillips revises them at all it is likely to be upwards.

Ekofisk also contains huge quantities of natural gas. Phillips says it will be able to pipe away as much as 1.2 billion cubic feet per day from the Ekofisk, West Ekofisk, Tor and Cod fields and that other nearby fields will boost that considerably. Phillips is now planning to build facilities capable of moving 2 billion cubic feet per day.

Oil production of 42m tons, which probably would not be reached until 1976 or later, compares with current British consumption of approximately 100m tons annually. It is about the same amount of oil that flowed last year from Abu Dhabi or Indonesia, both of which are rated major oil producers. The prospective gas production compares with the 3 billion cubic feet per day now flowing from the British sector of the North Sea.

Oil and gas in such quantities influence their own fates, or so Phillips hopes. The company is still

awaiting approval from the Norwegian government to pipe the oil from Ekofisk to Teesside, where it owns a refinery jointly with Britain's Imperial Chemical Industries. However, many Norwegians also want the oil to come to Norway, despite the deep trench between the oil field and the Norwegian coast. Most oil men think the trench is too formidable for current technology but this is not enough of an argument to convince some Norwegians. They would be willing to wait until technology is equal to the task.

Such a wait might be tolerable since a huge underwater oil storage tank Phillips plans to put in place next year will make it possible to produce more than 5m tons of oil annually. However, no natural gas can be sold until a pipeline for the oil is laid. Before any natural gas can be piped away, a considerable amount must be reinjected into the wells to help to pump out the oil. Until the amount necessary for this is established no one can say precisely how much gas can be sold.

Phillips has been negotiating to sell the gas for some months to either Britain's Gas Council or a continental consortium made up of Gasunie of Holland, Ruhrgas of west Germany, Distrigaz of Belgium and Gaz de France. The negotiations have been complicated by the lack of precision in estimates about how much gas is involved. Just the same Phillips is confident it will have a deal signed before Christmas, contingent, of course, on the oil pipe being laid. With that card in its hand, Phillips hopes it can do business with the Norwegians, who have proved themselves tough bargainers about their North Sea resources. They were expected to announce conditions for the next round of North Sea exploration licences this Friday. The industry, which has a hungry eye on many promising structures in the Norwegian sector, is praying that the price demanded by the Norwegians would not squeeze all the profits from the yet undiscovered oil.

Sir Edward Lewis to shareholders 1971

DECCA LOOKS FOR INCREASED PROFITS

Decca reports increased profits in 1972

"... we look for results for the full year much better than anything we have achieved in the past..." *Sir Edward Lewis*

Twelve months ago, we anticipated a satisfactory improvement for the year to 31st March last and we have been able to produce results that have exceeded our most optimistic expectation.

Consolidated turnover improved by 22 per cent to £81,800,000 with £44,000,000 from overseas sales, including direct exports of £20,100,000. These exports increased by 22 per cent over the previous year and represented 35 per cent of the turnover of the U.K. companies.

Pra-tax profit amounted to £7,063,000, an increase of over £4,000,000.

RECORDS, TV and AUDIO

Whilst all divisions contributed to the year's earnings, the record side of the business remained the largest single profit earner, despite continuing difficulties in the U.S.A., offset, however, by the excellent results of our Canadian subsidiary. I can record an improvement in the U.S.A. and Canada since the beginning of the current year.

Following the removal of credit restrictions in July 1971, sales of colour television and audio equipment became buoyant with a substantial increase in turnover and a satisfactory profit. The high quality of these products has been maintained. During the last few months our Bridgnorth colour tv factory has been mechanised and we believe we now have one of the most modern and efficient colour television plants in the country. As a result, a further increase in capacity has been achieved.

NAVIGATOR

Two years ago I expressed confidence in the beneficial effects of changes of policy in the Navigator company, then in course of implementation, believing that there would be a substantial rise in the profits of the Navigator company by the year ending March 1972. The confidence shown at that time has been justified by the success of last year's Navigator operations. The increase in Navigator group turnover of 20 per cent was spread over the main sections, marine, aviation, survey and the sale and construction of navigator transmitting chains.

RADAR

The re-organisation of the Radar production unit, for which

a comprehensive programme was started at the beginning of the financial year, resulted in higher output and efficiency being achieved. This made a contribution to the improved results of the Radar Division. Our programme, which includes introduction of computer-assisted manufacturing systems and increased investment in machine tools and electronic automatic test equipment, will be completed during the current year.

CURRENT YEAR

During the current year our consumer business has been buoyant and good results for the first six months are assured. Substantial advances have been made in the sales of records, tape cassettes and cartridges, colour television and audio equipment and there is every indication that this strength will be maintained.

The capital goods side will also show improved results for the first 6 months with good prospects for the remainder of the year.

From these remarks you will gather that we are optimistic about the future and, subject to factors beyond our control, look for results for the full year much better than anything we have achieved in the past.

Perhaps, in conclusion, it is not inappropriate to mention that this is our 140th year in business.

SUMMARY OF RESULTS FOR THE YEAR ENDED 31st MARCH, 1972

	1972 £000	1971 £000
Group turnover	81,800	66,700
Exports from the United Kingdom	20,100	16,400
Trading profit	11,633	7,247
Depreciation	2,694	2,707
Interest	1,321	1,076
Profit before Tax	7,063	3,004
Profit after tax and special items	3,858	1,548
Ordinary and 'A' Ordinary Dividends at 11p per share (previous year 9½p)	2,025	1,590
Net cash flow	4,488	2,816

Now an Inter-City express leaves London for Birmingham every half-hour

This new service combines the fastest times with the highest Inter-City train-frequency in Britain. All day, between 0740 and 2010 Mondays to Fridays, you can be certain a train will leave Euston for Birmingham within half an hour. (Later departures at 2110, 2310 and 0010.) And the 112-mile journey takes as little as 92 minutes. Three services bring you the latest in coach design, fully air-conditioned and exceptionally comfortable. Catch the 0740 and arrive Birmingham

0912—or the 0810 arriving 0942. With timings like these, you can plan your Inter-City trips to Birmingham for short business meetings and for whole or half days there.

You'll travel in true Inter-City style. Start the trip with a hot breakfast or buffet snack; or with lunch (you'll still manage a full afternoon in Birmingham).

The new homeward-bound service offers you a fast train from Birmingham every half-hour up to 1915, followed by special late departures at 2015 and 2115.

A CAR TO MEET YOU

Ring the Godfrey Davis Rail Drive Kiosk at Euston (01-387 9710), before you go, or call in on your way through the station. You'll have a car waiting for you when you arrive.

Inter-City's new London-Birmingham service offers one of the best business refresher courses in Britain. Try taking it regularly.

For full details of train services and availability of tickets, ask at principal British Rail Stations, Travel Offices and Appointed Travel Agents.

Inter-City is for you

Take it in comfort

The oldest Bank associated to the Province of Angola and also in full operation in Metropolitan Portugal. A full range of services is available to businessmen interested in trading with either Territory.

Air-conditioning is best for both man and machine. Linde has had full experience of all types of air-conditioning.

But

Linde

means more *
than just this

*Because Linde not only manufactures refrigeration cabinets and similar shop-fixtures but handles all the many aspects of refrigeration engineering and also operates cold storages.

In addition to the designing and constructing of chemical engineering plants, Linde supplies industrial gases and manufactures reciprocating and turbine compressors. Linde manufactures fork-lift trucks, produces hydraulic units and supplies various kinds of machine-tools. In addition, Linde offers a wide choice of household appliances.

A few words about the machinery of banking.

Time was when lending or borrowing money was practically all that banks seemed to talk about.

Now you can come into Barclays and we'll talk about leasing, factoring, insurance, estate management, pensions, payrolls, unit trusts—we have a growing range of services at our disposal. And yours.

Our managers take a creative approach to finance. They don't respond only to a demand. Rather, they come forward to your problems and try to work out the right solution.

Your Barclays manager can be a rare bird.

An innovator.

A risk-taker.

An entrepreneur.

Sometimes he may seem part-magician. That's because he often has a happy way of turning problems into opportunities.

So if you want to expand your business or improve your cash flow, he's the man to see. After all, he's in business, too.

Call in and see him soon.

BARCLAYS

Banking means Barclays

Lockheed's L-1011 shrinks the noise area around airports 92%.

The U.S. Federal Aviation Administration says the L-1011 TriStar with its Rolls-Royce engines is the quietest big jet in the world.

And that's good news for people who live near airports.

A plane affects people when its sound rises noticeably above the familiar sounds of the city. With TriStar that occurs during take-off over an area of almost 5 square miles. Older four-engine jets affect an area of about 62 square miles. The noise diagram at right shows the difference between the L-1011 and older jets.

Even if you live or work within that 5 square miles, the L-1011 still brings welcome relief. Because it generates less than half the annoying jet noise of older jets (according to acoustical annoyance studies published in U.S. Government reports).

What helps make the L-1011 TriStar such a good neighbour are the Rolls-Royce RB.211 engines.

They simply have fewer noise-making parts.

And much of the noise that couldn't be eliminated is muffled and absorbed inside the engine, while noise that escapes as high-velocity exhaust is insulated in a shroud of low-velocity air.

TriStar entered airline service as the quietest big jet in the world. Today, Eastern and TWA are flying L-1011s. Soon, Air Canada, British European Airways, Delta, PSA, and Court Line, the British tour carrier, will be flying the quieter TriStar.

Watch for TriStar. It's hard to hear.

Takeoff noise pattern of older four-engine jets.

Takeoff noise pattern of the L-1011.

Siberian oil East or west

Tokyo

A year ago it seemed that the massive oil and gas wealth of Siberia would fall neatly into the hands of Japan. Not merely would Japan take the fuel it urgently needs from the rich fields at Yakut and Tjumen, but Russia would spend the hard currency it earned from these exports to buy industrial and consumer goods from Japan. That was the hope. But, six months ago, Gulf Oil asked to be allowed to come into the 1,800-mile pipeline that would take fuel from western Siberia to the eastern Soviet port of Nakhodka. Then Esso asked to be included too. The scramble began. This week's announcement that the United States is negotiating to drill and buy up to \$40 billion of Russian fuel has convinced the resentful Japanese that they have lost out on the bulk of Siberian oil, together with its tied trading market. They point out, bitterly, that it was American pressure that kept them from negotiating for the oil years ago.

The huge Russian deal with the United States is still early in the negotiating stage. But it now seems almost certain that the United States and Japan will share the approximate \$5 billion cost of developing and exploring the natural gas of the Yakut field—and that of building a 2,500-mile pipeline to the coast, where a \$750m liquefying plant will freeze the gas ready for shipping in a fleet of tankers. Ten of these tankers are to be built by the three countries to ship the gas to the United States and Japan. Delivery is scheduled to start in 1979, and expected to continue for 20 years.

The Japanese are even more annoyed about American participation in the crude petroleum fields at

Tjumen. The original project for these was a strictly bilateral Soviet-Japanese deal. Now both Esso and Gulf Oil will be taking a share of the 40m tons of oil that will be piped from western Siberia. The Japanese government is being asked to clear a \$1 billion loan to Russia to help construct the pipeline for this field. It has run into some difficulty, as the pipeline, which would have a highway running alongside it, will skirt close to the Chinese border. Peking is indicating that it does not like that.

Switzerland

Gnome of a crisis

When the Swiss President and Finance Minister, Mr Nello Celio, presented his budget this week, its built-in deficit caused widespread horror in his country. The deficit is only £22m, but the president is holding tripartite talks with management and labour to limit wages and prices. What the Swiss regard as their worst-ever inflation is still running at about 6 per cent per annum, despite earlier efforts to curb it. Last year's upvaluation of the franc was designed to dampen an export boom which had generated too much liquidity, but in the first eight months of 1972 exports totalled £1.8 billion, up another 10 per cent.

Mr Celio has no intention of relaxing either the ban on non-residents buying Swiss securities and real estate, or the 8 per cent negative interest rate on new foreign deposits in Swiss banks. But foreign money continues to pour in. Last year, foreigners admitted to laying out £78m to buy land, villas and flats in Switzerland; they really bought far more through Swiss "front men," or via foreigners already living in the country. The subsequent building boom has also been fuelled by foreign firms in Switzerland, which have always been able to bypass the voluntary

restrictions on lending by the Swiss banks through their recourse to the Eurodollar market.

The agreement Switzerland has signed with the European common market for free trade in industrial goods is due to be ratified by a referendum in three week's time. Quite straightforwardly, one of the strongest arguments being deployed for a "no" vote is that the loss of customs revenues would drive federal and canton budgets into deficit. Mr Celio, who is expected to keep his job as finance minister after his year's term of office as president expires next month, says he plans to meet this loss of revenue by an increase in both direct and indirect taxes, including value added tax. But, as these are measures which will require time to take effect, he is asking industry and the trade unions to back voluntary wage and price limitation in the meantime. Given the Swiss propensity for gentlemen's agreements, which are usually observed, he may get a polite answer.

EEC

Glancing south

Brussels

The EEC's ambitious proposal to negotiate free trade agreements with all the countries of the Mediterranean basin looks like being a non-starter. It was knocked on the head by the British and the Germans at this week's ministerial meeting in Brussels. Britain, represented by Sir Alec Douglas Home, was anxious to avoid giving the impression of sabotage by using the classic commission trick of delay; but he weighed in heavily about the political objections.

The Mediterranean policy is essentially political. All nine capitals, as well as Herr Ralf Dahrendorf, the commissioner responsible for the community's external relations, have been under diplomatic pressure from the United States not to hand out trade preferences too generously. It was those countries farthest from the Mediterranean that voiced the American objections most clearly in Brussels this week.

The United States is willing to allow special trading relations between the community and such countries as Greece, Turkey, Spain and Portugal, where the community's links have always been strong. But Washington has always held that there is no justification for bilateral agreements

Key indicators: world commodity prices

Sisal surge
Although sisal, which goes mainly into binder twine, is rapidly being replaced by synthetics, its price has increased sharply, putting on 7% in the past week. The best East African sisal is now £115 a ton. The last crop was ruined by drought. To remain competitive with synthetics, a price nearer £80 is needed. Even with high prices, plantations are likely to go out of business.

*provisional

with the Middle East and the developing countries of North Africa. If trade concessions are to be made to these countries, the United States argues they must be given to everybody, under the rules of the General Agreement on Tariffs and Trade.

The French and the commission disagree. They point out that trade between the developing countries of the Mediterranean and the United States is so small that to complain of being 'shut out of any special agreements is pure State Department spite. Washington realises this but keeps the objection tabled none the less, in order to have one more grievance to trade off with the community in the world trade talks next year.

The only American interests that would be hurt by the EEC's Mediterranean policy are the citrus producers who are discriminated against in the community in favour of Spanish, Israeli and North African producers. The United States is

already pressing the EEC to reduce its tariffs on citrus fruit to zero. But this is unacceptable to the Italians.

The compromise reached in Brussels nevertheless implicitly accepts the distinction between the European and non-European countries of the Mediterranean made by the Americans. So far as the European countries are concerned (disregarding Yugoslavia which has a non-preferential agreement, and Albania which has shown no interest) it has been confirmed that economic relations should be based on industrial free trade with some concessions on agriculture, as in the agreement with Portugal. The chief beneficiary of this will be Spain which has only a limited preferential trade agreement at present. The non-European countries will not necessarily get the advantage of reverse tariff preferences.

It had been hoped that the free trade agreements would come into force in line with those of the non-applicant countries in Britain's old trading club, the European Free Trade Association. Despite the delay, the commission has been told to be prepared for the negotiations to begin next year.

East Germany

In from the cold

Herr Willy Brandt, who faces his election in west Germany on November 19th, hopes to have wooed his floating voters by Wednesday's treaty with east Germany. If he is beaten at the poll, it is in danger of being renegotiated. If not, the western world will finally be able to have normal trading relations with the wealthiest nation in the Comecon block. But whether the countries which on west Germany's insistence have refrained from attacking this market will be happy with the trading position that they find after more than 25 years of restraint is doubtful. West Germany has used that time to build up a thriving trade with the east Germans that it has denied to others. How strong it has grown can be shown by the fact that, apart from Russia (which takes the lion's share of the 67 per cent of east German trade done within Comecon) no communist country matches west Germany. West Berlin alone does more business than any western country.

Even the Japanese, who are set to triple their exports this year, having been especially favoured at the last Leipzig Fair, will only do a third of the £50m worth of business done

East Germany's trade—£m

	Exports		Imports	
	January-June 1971	January-June 1972	January-June 1971	January-June 1972
France	12.0	16.0	13.2	29.9
Benelux	14.9	18.4	12.0	19.6
Italy	8.1	9.1	4.8	5.3
US	2.2	2.2	5.3	3.9
Switz	2.7	2.9	4.4	4.5
Japan	2.6	2.2	2.6	8.1
Britain	9.8	9.8	8.9	7.1

through west Berlin. The French have been doing well of late, but their doubling of exports is more due to cereal sales following a bad east European harvest than anything else. British companies have been losing out, particularly in machine tools and heavy machinery, where they once held a large market share.

The west Germans have never released trade figures with the east, claiming that their aim of restoring Germany to one nation prevented them. Figures published by east Germany, however, show that west Germany last year sold £390m worth of goods and bought £366m and things can only get better. The April traffic agreement, which preceded the treaty, enabled west Germany to send barges into east Germany, and even on to Poland and Czechoslovakia. From next year a regular rail container service will run from east Berlin to Warsaw.

The east Germans have always stressed that they have "friendlier" relations with France and Italy than with Britain. Now, belatedly, the Department of Trade and Industry is taking over discussions about quotas from the Confederation of British Industry. The future may be largely determined by who recognises the GDR first. The treaty itself says that east-west German trade will continue on its present duty-free basis, but with a new long-term agreement making west Germany's position even stronger.

EEC transport

A load off nobody's mind

The common market has failed yet again to agree on maximum axle-weights for lorries. The Six stuck to the 11-ton compromise between the 13 tons the French want and the 10 tons proposed by Germany, Holland and Italy. The Six are pledged to reach a decision before the three new members, who are fighting a rearguard defence of the 10-ton limit, get the power to vote. Another meeting has been called for December.

Interest rates harden

Since the common market talks at Luxembourg on fighting inflation, central banks in France, Germany, Britain and Holland have all moved to tighten money—the rise in American rates providing the necessary leeway.

The Bank of France hiked its discount rate by $\frac{1}{2}$ point to 6 $\frac{1}{2}$ per cent and is expected to follow up this move by using its new discretionary powers to raise, from 15 per cent to as much as 50 per cent, the maximum reserves which banks and credit institutions must deposit with it against their loans. The Bundesbank raised its discount rate by $\frac{1}{2}$ point to 4 per cent and its Lombard rate (for loans against securities) by a full point to 6 per cent. Holland followed suit, raising its bank rate from 3 to 4 per cent. The Bank of England has made a call to special deposits. The exception to this pattern of hardening rates in Europe was, not surprisingly, Italy whose economic recovery is still less than full blown.

Invest in the daytime with Southern

A new marketing opportunity will become available to advertisers on Southern Television this Autumn with programmes now starting at mid-day. Well-established Southern features, like HOUSEPARTY and OUT OF TOWN, are among a strong line-up of network programmes with maximum housewife appeal which are being scheduled during the daytime.

Recent M.A.S. surveys in the Southern Television area show that 62% of all housewives in the area already watch Monday-to-Friday daytime television, and that as many as 43% of all men are home at some time during the hours of daytime viewing.

The potential market for the advertiser is enormous.

And capital cost is exceptionally low. The rate for thirty-second spots is only £110, and they can be supplemented with Guaranteed Audience packages, giving a minimum coverage of 625,000 homes, at a maximum cost of 48p per thousand.

For campaigns which need longer commercials to demonstrate product advantages daytime is an ideal opportunity for the advertiser to employ the proven power of television. And Southern has comprehensive video tape recording facilities which can help to keep production costs to a minimum.

Underwriting Trend

Fire business in the U.K. continues to be profitable. Motor business shows some improvement although still unprofitable and there is a marked deterioration in the liability classes. The results in the U.S. continue to show an improvement and the statutory operating ratio for the nine months was 95.5% compared with 99.3% for the same period last year. Australia and Africa show substantial losses, largely due to the exceptional items referred to in the statement in respect of the first six months. In Western Europe, Austria and Germany have

shown substantial improvement but this has been offset by a number of large fire losses in other European countries.

Insure with Commercial Union Assurance

Taming the lorry requires a mixture of measures, including rules on noise, power-weight ratios, exhausts and routes. But it is over the more solidly economic issue of axle-weights that the fight is on. Britain claims that an 11-ton axle would mean £20m a year in road repairs alone. Many roads are so cheaply made that a single overweight lorry can damage them, and keeping the axle weight down is the easiest way to protect them. In Michigan stiff axle-weight restrictions mean that trucks with 10 axles are quite a common sight.

But the commission has done its own figures, based partly on the work of the Highway Research Bureau in the United States, which suggest that the 11-ton limit would add only 2 per cent to the cost of paving a road—and, of course, nothing to the cost of land. The expense of reinforcement, it argues, rises only slightly between 10 and 11 tons, and then very steeply, and anyway, because of the difference between long and imperial tons, the British limit is already over 10 continental tons.

But is a compromise the thing to go for? The French have their anti-lorry campaign too, and France is having to reinforce its roads at the rate of about 2,000 miles a year. The commission has not studied British roads, and should at least have the courtesy to listen to British experts who have. Meanwhile it has been asked to study the possibility of restricting the heavier lorries to certain routes. But there are few warehouses that can be reached in Europe without using at least some low standard roads.

Dutch terrorists

Held to ransom

When Mr Jan Bavinck, a member of the board of the Dutch Philips company, backed out of his garage last month he found a 3 lb time bomb under his car. This was not a complete surprise. It was the company's eighth bomb since February. The senior management has been the target for a barrage of threatening telephone calls, and has been living under more or less constant police protection.

The first seven bombs, planted in various offices and factories, were all small; two of them failed to go off. It was said that the bombs were a protest against Philip's defence contracts. The bomb in Mr Bavinck's car was of a different order. It was bigger, plainly intended to kill, and

They paid up for Van de Panne

the Department of Justice at The Hague does not think it was planted by the same group of people. A group describing itself as "the tribunal" claimed responsibility and asked for £6,000 to call off its attacks. Rather bigger bombs, containing up to 4½ lb of explosive, have also been found in a hotel, a bank and another factory: none of them associated with Philips.

In September, Philips's chief executive in Argentina, Mr Jan Van de Panne, was kidnapped by Peronist guerrillas. The company paid immediately the £160,000 demanded for his release, rather than see him murdered as Fiat's local executive, Dr Oberdan Sallustro, was after he had been kidnapped and the Argentine government had forbidden Fiat to negotiate. There may be no connection between this and the recent bomb attacks in Holland; but, from October onwards, Philips has had at least 20 increasingly menacing letters and telephone calls, the most recent of which said that the last warning had been given and the "next phase of action" was about to begin. And so, apparently, it did.

France

Few strikes, but fewer steaks

Every autumn since the spectacular events of May, 1968, the French unions have threatened sound and fury. And every autumn nothing much has happened. Already this season there have been a few rather poorly supported "days of action," culminating in a wave of 24-hour strikes called for next week. The railway system is one of the targets for disruption, together with the docks, the post office, and a wide range of government services. But next day almost certainly everyone will go peacefully back to work.

The whole process has become a

ritual: to enable the unions to demonstrate to the government and probably to themselves that they are not just a talking shop. At the national level, the important activity now takes place in the conference room. In spite of their comparative weakness on the shop floor, the unions have made solid advances in the past few years, both in terms of wages, which have risen by a steady 10-11 per cent a year (allowing an annual gain of about 4 per cent in real terms) and working conditions. Genuine bargaining now takes place. Before 1968, say the unions, it needed a strike to get employers even to talk.

This year, with next spring's elections uppermost in their minds, both sides are walking even more delicately than usual. The unions are nervous of endangering the chances of the electoral pact between Communists and Socialists. The government is continuing to play one of its main themes over the past few years: greater social harmony through negotiations with the unions and help for the poorer sections of society.

At the end of October the government raised the national minimum wage, or SMIC, for the second time this year; it thus went at least part of the way towards fulfilling one of the unions' main demands at the moment, for a minimum monthly income of £84. The SMIC affects about 600,000 workers, many of them in farming; but if raised to £84, it would bring another 2m-3m of the lower paid into the net. Although the government has not gone this far—calculated on an average working week, the minimum wage is now about £75 a month—it can argue that over the past year the real increase for the poorer French workers has been around 12 per cent. Differentials are therefore being narrowed fast between the lowest paid (including pensioners) and the average worker.

The main threat to this programme of social peace comes less from the unions themselves than from the accelerating cost of living. France, which a year ago was rather less inflationary than the average industrialised country, is now rather more. Prices at the last count were rising at an annual rate of 6.3 per cent, with food prices growing more rapidly. Meat has soared by 18 per cent in a year. The consolation is that real national income is still rising by nearly 6 per cent a year. But if the government cannot stabilise the price of steak, tempers, and the gaullists' potential majority, will be frayed.

BUSINESS

Britain

Coal digs its head in

For all its talk of wanting to raise productivity, the National Coal Board is resisting the adoption of a new piece of machinery that could increase output by 8 per cent in a majority of its pits. The key device, which has been developed by the NCB's own research engineers, is a radioactive sensor which steers the coal-cutting machines automatically and far more precisely than they can be directed by hand. It would reduce the amount of rock and dirt the machines produce when they cut through the seam.

It has been tested for the past three years at production coalfaces. The NCB's research engineers claim that all technical snags have been eliminated. But they are finding it hard to get colliery managers to use it. Ten commercial versions are on order and no one knows where they will be installed when they arrive or even if they will be installed.

The economics are favourable enough. The device adds about £10,000 to the non-automatic part of the cutting machines, whose prices range from £5,000 to £10,000, ie, it doubles the cost. However, one pit has used the equipment and calculated after

tests that, for an outlay of £50,000 on the necessary adaptation to five machines, annual output could be increased by £400,000. A side benefit would be the improved relations with the Central Electricity Generating Board that cleaner coal would create. One persisting headache for CEGB engineers is the varying proportion of debris that NCB coal contains. Often there is as much rock and dirt as coal, although where this happens regularly some of the rubble is washed away as a matter of routine. But this is expensive.

The NCB's reluctance to adopt the automatic steering device has several roots. One is organisation. To get new equipment accepted, research engineers must convince each individual colliery manager in turn that it is worth using, and colliery managers are notorious for not being able to see further than the 18-month production periods on which they are judged. The NCB lacks a headquarters committee that could evaluate new devices independently and approve or reject them for general use throughout the country. Another problem is the low morale of the industry after years of running down the labour force, with more redun-

dancies probably to come. The automatic steering device rubs a sensitive nerve here. It would be just a short step from an automatic steerer to an automated coalface.

Automation must come because young men are increasingly put off by the thought of going down the pit to earn a living. However, this is at present an unpopular notion when the industry's ageing miners are so worried about their jobs. Then, too, the political problems associated with the miners tend to absorb the attention of NCB executives, who seldom have time to study ways of actually increasing productivity, as distinct from making empty speeches on the subject. This is unfortunate because rising oil prices could lead to improved opportunities for the industry in the late 1970s or 1980s, provided it is then efficient enough to take advantage of them. Coal's revival has already started in the United States where sharply increased production is confidently being predicted. Output is seen rising to 1 billion tons by 1985, compared with the less than 600m now produced.

Union elections

Basnett's the one

As expected, Mr David Basnett won Tuesday's election for the £7,000-a-year-job as leader of Britain's biggest moderate trade union, the General and Municipal Workers. Although he had a 60,000 margin over his nearest rival, he only won 29 per cent of the total vote. The surprises were that the distinctly new-look Mr Derek Gladwin came close to beating the old-timer, Mr Alec Donnet, into second place and the right-winger, Mr Jack Eccles, won 14 per cent of the vote.

One of Mr Basnett's first jobs is to reform the absurd election process which took him to the top. He may introduce canvassing and try to eliminate the block vote by which the handful of branch members who turned up to meetings can bespeak the votes of the entire branch. He might even introduce a postal ballot. Mr Basnett, who

Within two months we shall be in the European Community

Many are ready. Are you?

If you have managerial responsibility in industry, commerce, banking, transport or local government —

If you are a farmer or trade union representative —

If you are a lawyer or are engaged in one of the other professions directly and immediately affected —

YOU will want to ensure that you are fully informed about Community policies, practices and law — and the transitional arrangements for our entry — which are likely to affect your work in the future.
