As IRCI has been adding to its experience and expertise, its role has been expanding. With the recent amendment to Industries (Development & Regulation) Act, a number of units have been taken over and IRCI is being called upon by the Central Government to assist in rehabilitating such units. IRCI's experts have already been associated with the study of 6 such units.

One of the aspects of IRCI's reconstruction assistance needs special mention. As indicated earlier, a portion of IRCI's assistance may include payment for pressing liabilities and also a reasonable payment to trade creditors. Such payment is of definite advantage to the units which are facing financial stringency because of enlarged portfolio of sundry debtors. This is of special advantage to small scale units a number of which have been facing difficulty because of the blocking of their funds with other units. This chain of fund movement has cumulative effect in the strengthening of the finance of a number of units although they have not been directly assisted by IRCI.

Labour Relations

Good labour relations are a sine qua non in any industrial undertaking for its healthy functioning. Before reopening any unit, IRCI helps in promoting negotiations by the management with the workers and their unions. It is impressed upon the workers that while IRCI would take all the measures to provide raw materials, maintain proper inventories and arrange for sales, plugging of the loopholes for any leakages, etc. the workers' cooperation is equally necessary to give the optimum production which would reduce the cost per unit and give

higher profitability. All the important issues relating to the workload, efficiencies in various sections at the plant, discipline among the workers, amenities and recreational facilities provided are discussed in detail and agreement is entered into by the management with the workers either on a bipartite basis or tripartite basis. IRCI officers help to bring amity and better understanding between the workers and the management. The relations with the labour in the IRCI assisted units have so far been cordial.

Working Results of the Year

From the statement of accounts it will be seen that after meeting expenses and providing Rs. 79,863 for depreciation, Rs. 50,000 for payment of gratuity to the staff, Rs. 12,000 for payment of bonus to the staff, Rs. 1,81,028 for creation of Special Reserve under Section 36(1)(viii) of Income Tax Act, 1961 and Rs. 10 lakhs for taxation, a sum of Rs.

4,58,096 has been transferred to General Reserve. This being the first year of IRCI, it has been proposed that no dividend should be declared to the shareholders of IRCI.

Acknowledgements

During the short period of its existence, IRCI has received considerable encouragement from the Central Government as also the State Government of West Bengal and others. The Union Finance Minister paid a visit to the office and this has been followed by visits of high officials of the various Ministries for discussion of the various problems. The Labour Minister of the Government of West Bengal also visited the office. Special guidance and encouragement have been received from the Reserve Bank of India and IDBI and the Governor was kind enough to visit the office of IRCI and hold detailed discussions on the various aspects of its working. The Deputy Governors also visited IRCI's office.

The cooperation received from Chairman, Custodians and other high officials of banks are also worthy of special mention.

While concluding this report, the Board wishes to pay its homage to the first Chairman of IRCI, the late Shri B. B. Ghosh, who expired on the 27th October, 1971.

Sarvashri R. B. Shah and Abhijit Sen resigned from the Board during the period. The Board records its appreciation of the services rendered by them as Directors of the Corporation. The Board also records its special appreciation of the services rendered by the Managing Director, the General Manager and the Technical Advisers and of the devoted and dedicated services rendered by the officers and the staff of the Corporation.

This does not purport to be a record of the proceedings of the Annual General Meeting.

PROGRESS TOWARDS SOCIAL AND ECONOMIC OBJECTIVES

Speech of Sri S. Ramachandran, Chairman, The Minerals & Metals Trading Corporation of India Limited, at the Ninth Annual General Meeting held at New Delhi on 25.9.1972

In presenting the Annual Accounts of the Corporation to you, I am happy to say that the trading results are quite satisfactory. The profit before taxation was over Rs. 16 crores, nearly double of what it was in 1970-71. The turnover was also about Rs. 17 crores more than in the previous year. Judged by various other criteria, you will agree that your Corporation has reason to be satisfied with their performance during 1971-72.

2. Today, I would like to present to you in as direct a manner as possible our efforts to fulfil the social and economic objectives which you have set for us. You had entrusted this Corporation with a monopoly of exporting iron ore, manganese ore and ferromanganese and coal. We have to admit that your Corporation did not have a good year in the matter of exports of these items. The shortfall in exports should be viewed in the context of world-wide recession in steel industry, the like of which has never been known in the history of steel. It caught all the exporting countries of iron ore—both developed and developing—off guard as much by its suddenness as by its magnitude and spread. Even so, the performance of the Corporation in the second half of the year was almost equal to the performance in the latter half of 1970-71. The default in performance was high in the first half of the year when the recession had not set in and this was mainly due to mining and the infrastructural facilities not holding our hands in certain sectors.

3. The senior management of your Corporation is now more & more conscious of the fact that they will be judged solely by the results, notwithstanding the transient setbacks due primarily to the defaults of other associated agencies. Your Corporation is not only a catalyst in the matter of exports but also an energiser and has thus to be constantly

vigilant about how others perform—production units, transport agencies and port establishments. It is seldom that all these agencies function in the optimum manner. I do not propose to tire you at this stage with more details; but sooner or later we shall have to find a new approach to the problems of co-ordination and integrated commitment to larger exports. There is no simple recipe—either organizational or administrative. It is in this context that we welcome efforts such as the setting up of an Iron Ore Board.

4. I may, however, add that we did our best not to inconvenience the mine workers; in fact, we allowed all iron ore to be delivered as usual at loading points in spite of setback in shipment. We carried, therefore, in our stocks as much as 2.1 million tonnes of iron ore on 31st March, 1972 against 1.2 million tonnes at the end of 1970-71. For your Corporation the social consequences of lower intake in this important employment sector seemed more vital than the easy way out dictated by purely commercial consideration—keeping a low inventory.

5. This is by no means the only encouragement that has been given to the mining industry. Many other incentives have been given like tyres for trucks at cost price, explosives, and also financial assistance for modernisation of mines. Your Corporation has maintained continuous watch on the infra-structure and has commissioned several facilities at its own cost such as night-lighting in loading stations, additional sidings, partial mechanisation of ports etc. The Corporation also diversified the markets for iron ore and met with significant success in new markets like Korea and Taiwan.

6. The Corporation did signal service to iron ore producing countries in the developing world by

focussing attention in the Consultative Group of producing and consuming countries, which met in Geneva in February 1972, on the fact that the competition of highly developed countries, who can invest massive sums in mineral ore development, has almost brought the economies of developing countries depending on mineral exports to the brink of disaster. The Consultative Committee was able to persuade the UNCTAD Secretariat to launch upon several studies including the price relationship between iron ore and steel, which may result in fixing a reserve price for iron ore in relation to steel prices. In the III UNCTAD Conference at Santiago also, your representative spoke on behalf of all developing countries.

7. Another depressed sector in which Government desired your Corporation to step in was the mica industry which presented innumerable problems. It was clear that unless a subsidiary was set up, it would not be possible to give sufficient attention to a trade which has ramifications unequalled in other activities of the Corporation. I am glad to report that a beginning has since been made and though a subsidiary has not yet been sanctioned, field offices have been opened in the mica districts of Bihar. The operations have just commenced in a modest way but can be fully developed only after the formation of a subsidiary.

8. Government have progressively canalised imports through state trading agencies, mainly to conserve foreign exchange by economies resultant on bulk buying, and also to ensure that regular supplies are received by industry both in the large and the small sectors, so that there is no setback to industrial production. If we examine the twin-fold objectives in respect of the commodities canalised through the Mineral & Metals Trading Corporation, it will be found that, on the whole, buying by

your Corporation has benefited the country in securing much cheaper prices than those paid by individual importers. In a recent review of metal buying, it was noticed that significant economies had been secured in foreign exchange by MMTC's buying of non-ferrous metals. In regard to fertilizer raw materials we have gone even further. There has been wide recognition that Indian buying has by far been most responsible for keeping down prices in the world.

9. One of the most remarkable features of the recent commercial activity of your Corporation in the matter of imports has been the conclusion of long-term contracts with producers of metals and fertiliser raw materials. Long-term contracts have been concluded for copper and lead on very attractive terms. A major proportion of India's import requirements have been covered by these contracts and the spectre of uncertainty of supply in a market where shortages are beginning to appear have been removed by these long-term contracts.

10. While on this subject of procurement of valuable raw materials for industry, it must be stated that in line with the Government's desire to become self-reliant and be free from the necessity for aid, the Corporation is directing more and more of its purchases towards bilateral trading countries as also countries with which there are trade agreements for balanced purchase of goods. Thus the major proportion of sulphur imports is directed to Poland, Iraq and Iran and more emphasis is being placed on procurement of larger quantities of fertilisers from East European countries. In respect of non-ferrous metals also, there has been significant increase in the quantity procured from East European countries.

11. You are entitled to know how we are serving industry. It would interest you to learn that of late there have been very few complaints about delay in supply. Even the few complaints being received are from firms which have been black-listed or held in abeyance by the Chief Controller of Imports and Exports. The generality of complaints is about prices charged. On this question the only submission that can be made at this stage is that on the bulk of the

supply to actual users, service charges retained by your Corporation are lower than what private indent houses were levying in the pre-canalisation days. We could claim with justifiable pride that we are supplying copper, lead and zinc to exporting units consuming these raw materials, at prices cheaper than their direct imported prices. In certain selected items, where the end consumer has derived no benefit by any reduction in price of the raw material and the manufacturer has been making phenomenal profits, prices have been designed to mop up, to an extent, the high profits of the manufacturers. These prices have also acted as a disincentive to black marketing by certain industrial units who were not using the raw materials for their own production.

12. Further the time-lag between receipt of a release order and supply has been reduced from nine months to a mere two months for actual users and fifteen days to one month in respect of Priority units and this excellent position has been achieved even though the Corporation is maintaining only a month's inventory for industry as a whole—the pipe line supply is so well-timed.

13. Your Corporation is certainly looking forward to much greater achievements. In this effort we are assured of tremendous support from the Ministry of Foreign Trade and from the Minister. This encouragement has given us the confidence to meet new challenges. There has been a silent revolution in the working modalities. There has been a greater awareness of the need for making the Corporation more service-oriented, more responsive to public needs and more conscious of their crucial role in the foreign trade of the country. The training and development of managers and the staff and manning jobs at all levels by technically competent persons have been engaging our attention lately. We hope that by the time we present our accounts for 1972-73, we would be able to tell you how the new experiments in management training and development, re-structuring of the Organization, inducting new blood at appropriate levels and renovating the entire organizational pattern, have succeeded in improving not only the trading results of the Corporation but also the general service to industry in particular and the Indian economy as a whole.

COMPANY AND PUBLIC NOTICES

WOOLCOMBERS OF INDIA LTD.

(Notice under Rule 4A of the Monopolies & Restrictive Trade Practices Rules, 1970).

IT is notified for public information that Woolcombers of India Ltd. intends to invest out of its funds for the purchase of fully paid Ordinary Shares in Swan Mills Ltd. and an application under Section 23(4) of the M.R.T.P. Act, 1969 has been made to the Central Government in compliance with the provisions of the said Act.

Any person interested in the matter may make representation to the Secretary, Government of India, Department of Company Affairs, New Delhi, within a fortnight of publication of this Notice stating the nature of his interest in the proposal.

CAPITAL

(Founded in 1888: Published every Thursday)

CAPITAL is India's most widely-read weekly newspaper dealing with economics, industry and public affairs. It has the mature experience of more than 80 years, and is the oldest journal of its kind in the country. Each week, it brings authoritative and comprehensive coverage of the main problem and events affecting the progress of the economy and the growth of industry. It separates the important from the unimportant; it presents simply, clearly and reliably what all informed observers of the economic scene ought to know.

Readers of CAPITAL are mainly people holding positions of vital importance in Government, business, industry and academic institutions. Many of them are intimately concerned with the framing of the country's economic policies. Many direct and control industrial, banking and commercial institutions. Together they represent a fund of economic opinion and buying power that no advertiser can afford to ignore.

INDUSTRIAL FINANCE CORPORATION OF INDIA

5 $\frac{3}{4}$ % BONDS 1984

PAYMENT OF INTEREST AND REPAYMENT OF PRINCIPAL
GUARANTEED BY THE GOVERNMENT OF INDIA

AMOUNT OF ISSUE : Rs. 10,00,00,000
ISSUE PRICE : Rs. 100.00 percent

REDEEMABLE AT PAR ON THE 23RD OCTOBER, 1984

The Bonds are approved securities under the Indian Trusts Act, the Insurance Act and the Banking Regulation Act, and are also eligible for grant of advances to scheduled banks by the Reserve Bank of India. They are on the approved list of securities of the State Bank of India. They are also eligible for investment of the accumulations of the Provident Funds, exempted as well as non-exempted.

Subscription will be received in cash/cheque at the branches of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Hyderabad, Kanpur, Madras, Nagpur, New Delhi and Patna from Monday, the 23rd October, 1972 but the list will be closed without notice as soon as the total subscriptions amount to Rs. 10 crores, and in any case, not later than the close of business on Thursday, the 26th October, 1972. The Corporation reserves the right to retain subscriptions received upto 10% in excess of the sum of Rs. 10 crores.

The Bonds will have a currency of 12 years, and will be repaid at par on the 23rd October, 1984. They will bear interest at the rate of 5 $\frac{3}{4}$ % per annum from the 23rd October, 1972. Interest will be payable half yearly on the 23rd April and 23rd October and will be subject to tax under the Income Tax Act, 1961.

Copies of the Prospectus and application forms can be had from the Offices of the Reserve Bank of India as also from the Head Office of the Corporation at Bank of Baroda Building, 16-Parliament Street, P.B. No. 363, New Delhi-1, its branches/sub-offices at (i) Jivabhai Chambers, Ashram Road, P.B. No. 4049, Ahmedabad-9, (ii) 22-Mahatma Gandhi Road, P.B. No. 5091, Bangalore-1, (iii) 20-Forest Park, Bhubaneswar-9, (iv) Mehta Mahal (5th Floor), 15-Mathew Road, P.B. No. 3928, Bombay-4, (v) 4-Mangoe Lane (2nd Floor), P.B. No. 2483, Calcutta-1, (vi) G. N. Bardoloi Road, Chandmari, P.B. No. 30, Gauhati-1, (vii) 6-3-631, Zilla Parisad Road, Khairatabad, P.B. No. 11, Hyderabad-4, (viii) Aggarwal Building, Canal Crossing, The Mall, P.B. No. 319, Kanpur-4, (ix) Raji Building (3rd Floor), 147-Mount Road, P.B. No. 1080, Madras-6, (x) 43-Pataliputra Colony, Patna-13 and also from the Delhi Division at No. 5-Parliament Street (Jeevan Tara Building), New Delhi-1.

Arrangements will be made for listing of these Bonds at the Bombay, Calcutta and Madras Stock Exchanges.

Brokerage will be paid at the rate of six paise per Rs. 100/- to recognised banks and brokers on allotments made in respect of applications for the Bonds bearing their stamp and tendered by them.

Raising Procurement Prices

THE decision of the Central Government not to raise the procurement prices of rice beyond the level recommended by the Agricultural Prices Commission, in its report for the *kharif* season, is not only wise but also the right decision. And yet, it is amazing that the decision had to be very nearly forced by the Prime Minister, Mrs. Indira Gandhi, on her Cabinet colleagues, and Chief Ministers, who were in Delhi a few days ago, to consider the A.P.C. report. It seems that but for Mrs. Gandhi's effective intervention, the Chief Ministers might have well reached a consensus in favour of raising the procurement prices by Rs. 6 a quintal, instead of Rs. 2 as recommended by the A.P.C. While it certainly speaks well of Mrs. Gandhi's leadership, it does no credit to her team at the Centre or in the States. Are the Central Ministers and State Chief Ministers so devoid of an economic sense that they cannot comprehend for themselves the adverse implications of a sharp rise in procurement prices unless these were brought to their notice by the Prime Minister? It is indeed a strange type of democracy where every decision has to emanate from a single person!

It is no secret that the Prime Minister is deeply concerned over the present price situation, showing an increase of about 8 per cent in the week ended 9th September, compared with the corresponding period of last year. She evidently realises that the recent decision to give interim relief to Central Government employees and higher minimum bonus to industrial workers would only accentuate the inflationary pressures in the economy. If, in this situation, the procurement prices of rice were also raised substantially, with or without a corresponding increase in the consumer prices, there was bound to be a further deterioration in the price level. The way the bonus issue was bungled by Mr. R. K. Khadilkar,

Central Labour Minister, put the Prime Minister on the alert this time and she successfully stalled the attempt of some States with surplus rice to secure a higher increase in procurement prices. The Chief Ministers accepted the Prime Minister's suggestion that the report of the A.P.C., recommending an increase of only Re. 1 to Rs. 2 a quintal must be approved by them without a murmur. Consequently, the move for a higher procurement target of 4.5 million tonnes of rice, as against 4 million tonnes recommended by the A.P.C., was also abandoned.

Incidentally, it is interesting to note that it is for the first time in several years that the Chief Ministers have accepted the A.P.C. report *in toto* without any modification. In the past three years, the report of the A.P.C. hardly ever received any serious consideration at the hands of the Chief Ministers and the expert body's repeated recommendations for lowering the procurement prices of wheat were consistently ignored by the Chief Ministers as well as by the Centre. It is evidently realised now that it is far better to depend on the wisdom of an expert body than on political expedients, which have so far fashioned the Government's policy on procurement prices. It is to be hoped that when the Commission makes its recommendations on minimum support prices for wheat for the ensuing *rabi* season, the Centre would not once again wobble or yield to pressures from the State Chief Ministers. If expert advice is sacrificed for political considerations, the danger to the economy is obvious.

Even the increase of Re. 1 to Rs. 2 a quintal recommended by the A.P.C. would mean a Central subsidy of Rs. 25 crores on rice procurement and distribution this year, compared with Rs. 20 crores last year. The increase is only of Rs. 5 crores but along with the subsidy of Rs. 120

crores on wheat distribution, the total amount will come to nearly Rs. 150 crores. This will be more or less equal to the amount spent by the Government in the past on food imports every year and, therefore, it would seem that the economy has not really benefited by the record increase in food production in 1970-71. The final estimates of food output for 1971-72 have not yet been officially released, although it is privately admitted that it will be at least 2 million tonnes less than the output of 107.8 million tonnes of the previous year.

In referring to the slideback in food production, the A.P.C. has rightly pointed out that "it is not in the style of nature to bestow its bounty evenly over the year". When the Commission, in its report last year, attributed much of the increase in food output to the "bounty of nature", there was a furore in the Food Ministry and the Commission was accused of deliberately belittling the contribution made by the high-yielding varieties and improved production techniques in ushering in the so-called "green revolution". Without appearing to assert its point of view, the Commission has now emphasised that the "experience of 1971-72 only serves as a rude reminder of the fact that, with an irrigated area still short of one-fourth of the total cultivated area, the agriculture of the country continues to be dependent on the vicissitudes of weather".

It is in this context that the Commission has also stressed the need to build an adequate buffer stock. And in order to bring about a greater balance in its grainwise composition, the Commission has rightly underlined the importance of enlarging progressively the rice and coarse grain composition of the buffer stock. At present, the buffer consists largely of wheat. But as the Commission points out, a buffer stock policy ought to supplement rather than supplant a direct attack on the problem of instability through a re-orientation in the production strategy. The Commission says that since the pay-off from irrigation consists not only in what it adds to production but also in what it adds to stability, it could often be more economic, at the margin, to invest in irrigation than in a larger buffer stock to buy the same measure of additional stability. Of course, this has to be a long-term policy and must form part of the planning strategy as a

whole. If the State Governments can also muster sufficient courage to raise the irrigation rates to levels recommended by the Nijalingappa Committee several years ago, the return on past investments will pay for a part of the new costs.

The Commission's suggestion for a progressive shift in the production of foodgrains from the *kharij* to the *rabi* season also deserves to be given serious consideration. As the Commission says, although there has been no breakthrough in rice production, the high-yielding varieties have been consistently successful when raised as a summer crop. But the limiting factor again in their spread during the *rabi* season is the availability of irrigation water. The removal of this

constraint would not only help achieve increases in the yield a hectare but also impart—as has happened in wheat—a measure of stability to the production of rice. It is a pity that the Chief Ministers did not give even a part of their valuable time to a discussion of these suggestions; instead, the emphasis was on State take-over of food procurement and distribution as though all evils are concentrated at these sources. If production is adequate and still there are shortages, the State must intervene but when production itself is handicapped by several limiting factors, priority attention needs to be given to the elimination of those constraints, and not in disturbing established channels of procurement or distribution.

World Bank: The Aid Perspective

IN a world that sees increasing pusillanimity about aid in general and bilateral Government aid in particular, it is reassuring to find some organisations still hopeful of stemming the trend. Total official and private net disbursements by the member-countries of the Development Assistance Committee have risen from \$10,320 million in 1965 to \$17,210 million (provisional) in 1971. But the annual report of the World Bank group for fiscal 1972 ended June itself observes that it would be rather incautious to interpret this as a change in what seems to have been a gently rising and variable trend over the last few years. "The reasons for caution are to be found in the disappointing distance by which several major members of the D.A.C. still fall short of widely accepted 'targets' for such assistance". Thus while the share of aid in the developing countries' gross national product has hardly improved from 0.77 per cent in 1965 to 0.78 per cent in 1971 (provisional), official development assistance (O.D.A.) has come to account for only 0.33 per cent of the G.N.P., against 0.44 per cent six years ago. The shortfall has been made up partly by larger private and other official flows whose share has gone up from 0.33 per cent to 0.43 per cent during the same period and by the marked step up in the activity of the World Bank group.

When most of the donors are thus failing to even scrape through the tests, the World Bank group alone seems to be scoring very high marks. The group's lending and investment operations in developing countries re-

ached a record annual figure of more than \$3,000 million in fiscal 1972. In 1968, it was only about \$1,00 million. The World Bank sanctioned 72 loans in 40 countries totalling \$1,966 million during this period. The International Development Association approved credits of about \$1,000 million for 74 projects in 38 countries and the International Finance Corporation committed investments of \$116 million in 17 countries. But how long the World Bank and the I.D.A. will be able to retain such steam, it is not clear at the moment. The group expects contributions of about \$800 million during the current year to replenish the badly depleted kitty of the I.D.A. Till June this year, 16 of the 19 richer donor nations had approved of their contributions. If the I.D.A. could maintain its aid programme in fiscal 1972, that was largely because of the move by 15 Governments to put some advance contributions into its nearly dry pipeline. Still the situation has not been described as hopeless. Banking on larger resources mobilisation through borrowing in several countries' capital markets (for which the permission so far has graciously been given by the concerned Governments) and the ultimate good sense of the member-countries, World Bank spokesmen have expressed the confidence that things would turn to be less difficult than they are imagined. When Mr. Robert S. McNamara became the President of the Bank four years ago, he had proposed to double in five years the amount of development financing recorded by the group in the period 1964-68. This will mean a volume of lending nearly equal to the total amount

lent during the previous 23 years of the Bank's operation. And Mr. McNamara has now told the annual Fund-Bank meeting in Washington that the Bank group will not only meet that goal but will surpass it.

But it is not only for the marked rise in investment or lending that the group deserves kudos. Over the last few years, it has extended its lending policy to serve purposes and areas which have so far received rather inadequate attention. The group has thus started taking more interest in such diverse but vital sectors like agriculture, education and population. Side by side, it is seeking to shift its emphasis over a wider geographical base. During its first five-year programme under the presidency of Mr. McNamara, it expects to more than treble its lending to African States over the previous 1964-68 period. For the group of its poorest member-countries — those whose *per capita* incomes average less than \$100—it will quadruple its lending. But Mr. McNamara is obviously unhappy at the trend of official development assistance. He feels that there is very little chance that during the first half of the current decade, it will exceed 0.37 per cent of the G.N.P., or only half of the official second Development Decade target. Such massive shortfall in concessionary aid will hit the poorest countries the most. "Their needs for O.D.A. are the greatest, and their chances for finding feasible alternatives are the least". And these countries account for nearly 64 per cent of the aggregate population of the Bank's entire membership of developing countries. This begs the question of servicing of debts by these countries. The annual debt service of the developing world now comes to \$7 billion on a publicly total guaranteed debt of about \$75 billion. But what Mr. McNamara is most worried about—and this has been the theme of his speech at the recent Fund-Bank meeting—is the relation between economic growth and its social impact. As he says: "Increases in national income—as essential as they are—will not benefit the poor unless they reach the poor. They have not reached the poor to any significant degree in most developing countries in the past, and this in spite of historically unprecedented average rates of growth throughout the 'sixties'".

The aid question apart, the tantrums in international monetary

field have also had their bearing on the economies of developing countries. Attempting an assessment of these repercussions, the report of the International Monetary Fund for 1972 notes that 1971 was a year marked by generally weaker gains in export volume, sagging average prices for primary products other than petroleum, and a very uneven distribution of changes in export values and trade balances. In terms of total value, the exports of developing countries other than oil exporters showed a rise of only 2 per cent, by far the smallest increase since 1967. With the continuing rise in these countries' import prices, the purchasing power of their export earnings apparently suffered an overall net decline. In any case, taking into account all the diverse changes in debt service payments and in the value of outstanding debt in real terms and in other items, the Fund believes that last year's extensive currency realignment may result in due course in an eventual improvement in the collective trade balance of the developing countries by about 2.5 per cent to 4 per cent of the group's com-

bined exports, or roughly \$1.5 billion to \$2 billion.

As for India, there are reasons to feel rather satisfied with the way the World Bank group has treated its needs. India emerged as the single largest recipient of the World Bank group commitments during fiscal 1972 with a total figure of \$472.2 million. These bring the cumulative total of Bank and I.D.A. lending to India to \$3,132 million (gross amount). The I.F.C.'s commitments total \$42 million. Indeed, India accounted for a little over 41 per cent of the I.D.A.'s total commitment of \$999.7 million during the year. But most gratifying has been the entry of the World Bank group for the first time in such vital sectors like population planning and shipping and agricultural marketing. The World Bank and the I.D.A. undertook their first operation in support of fertiliser manufacturing in India's public sector when I.D.A. credits were extended for expansion of Fertilisers and Chemicals Travancore Ltd and the Gorakhpur plant of the Fertiliser Corporation of India.

Lowering the Voting Age?

THE appointment of Dr. Nagendra Singh as the new Chief Election Commissioner of India in succession to Mr. S. P. Sen-Varma, who held the post with great distinction, is welcome. In a vast country like India, elections have always been a difficult process. The sheer magnitude of the electorate which runs into over 250 million makes it difficult for the election authorities to conduct the poll in a peaceful and orderly manner. However, five general elections have been held so far with great success and there have been any number of by-elections in the country, almost all of which have been conducted with dignity. It is this that has impressed the people who know that they have the right to express their opinion on what Government they want once in five years. This periodical holding of elections is the *sine qua non* of democracy which has certainly taken firm roots in the country.

If one were to ask the question as to who of all is most responsible for the proper functioning of the democratic processes so eloquently enshrined in the Constitution, one would unhesitatingly say that it is the Chief Election Commissioner.

The three Chief Election Commissioners whom the country had so far had—Mr. Sen, Mr. K. V. K. Sundaram and Mr. Sen-Varma—did set up certain healthy practices and their reports show the innovations and improvements that have been made from time to time to ensure that elections are held in a free and fair manner. Dr. Nagendra Singh has certainly a difficult task to perform and he has to take up matters where Mr. Sen-Varma has left. One of the more pressing questions that has been engaging the attention of the Chief Election Commissioner is the one relating to the lowering of the voting age to 18 from the present 21. The Government has sought the views of the Chief Election Commissioner on this question, since it is he who, in the ultimate analysis, has to make arrangements for enlarging the electorate. However, Mr. Sen-Varma has already made it known that it would be difficult to manage if the voting age is reduced to 18.

There is no doubt that this single step of lowering the voting age will, at one stroke, increase the number of voters in the country by another 100 million. The entire electoral rolls will also have to be recast. At

the time of the poll, some thousands of extra polling stations will have to be set up to cope with the increasing number of voters. The law and order problem which inevitably arises at the time of elections will also increase. All this leads to a substantial rise in the expenditure involved in holding the poll. The Government will naturally have to decide this issue in the light of all these factors. Already, there is a section of opinion which holds the view that democracy in India is suffering qualitatively because of the large number of illiterate voters. This is true to a large extent, although the malady cannot be defined in specific terms. The lowering of the voting age is bound to add to the problem and it will correspondingly lower the quality of democracy. Mr. Sen-Varma is stated to have advised the Government to go slow with this demand and it is to be seen what will be the final decision.

Equally important is the question of raising the strength of the Lok Sabha and the State Assemblies following the increase recorded in the population. The present strength of the Lok Sabha is fixed on the basis of one representative for every 600,000 or so of the population. On

this basis, the Government has decided to increase the strength of the Lok Sabha to 600 from the present 520. A Bill was to have been introduced in the last session of Parliament but it was deferred at the last moment. There has been adverse criticism of this move on the ground that the Lok Sabha and the State Assemblies will become unwieldy and it will harm the functioning of the Houses. Debate and discussion will become difficult and this may ultimately injure the democratic process itself. There is also the question of increased expenditure this will involve and it has to be considered whether the country can afford this at this juncture. Also, with the family planning schemes going awry, it is doubtful whether the steps that are being taken to check the growth of population will ever succeed. Which means that everytime there is a significant growth of population, there should be a change in the number of members of the legislatures. The Government will be well advised to put a ceiling on the present level itself and not create problems by tinkering with this issue. Dr. Nagendra Singh, who is a distinguished authority on law, could have a fresh look into the matter and advise the Government accordingly.

Britain into Europe : Impact on India

BOTH at his Press conference and in his address to the Indian Council of World Affairs in New Delhi last week, Mr. Geoffrey Rippon, British Minister in charge of E.C.M. Affairs, tried to assuage Indian feelings about the adverse consequences of the U.K.'s entry into the European Economic Community. The main points he made were: a stronger Britain within the Community would be of greater benefit to the Commonwealth; the greater economic strength of the enlarged Community would enable its members to make an increasingly effective contribution to the needs of the developing world; there was no risk of the British aid programme to India being affected by her participation in the Community; and two-thirds of India's present trade with the U.K. would continue to enjoy either zero rates of duty or would be included within the scope of the Community's generalised scheme of preferences. Even so, the enlargement of the Community "will have effects on

India", but it was possible to find "suitable solutions" for particular problems as the Community was committed to do so under the Joint Declaration of Intent. Mr. Rippon also added that India's present trade with Britain would not be affected next year, as Commonwealth preferences were to be phased out gradually over a four-year period ending 1977.

While no one wishes to doubt either Britain's or the Community's offer of co-operation and assistance to sort out the problems of the Asian Commonwealth nations, there is a line of thought even in Mr. Rippon's statements which has sought to emphasise the point that what the Community has already done concerning the reduction of tariff and non-tariff barriers would partly compensate the losses that are likely to be suffered by countries like India. Whatever concessions have been offered by the Community under its generalised scheme of preferences, these have

been done under the forum of U.N.C.T.A.D. to create more favourable conditions of trade for all developing countries. The advantages of some of these concessions are still uncertain. In the case of India, she has always had an adverse balance of trade with the Community, whose exports to this country have been, on average, nearly double the level of Indian exports to the Community. Therefore, it is only reasonable that benefits accruing to India from the Community's preferences scheme should not be treated as compensation for the loss of trading advantages that India will suffer following the U.K.'s accession to the Community. The additional problems which India will face must be seen as such and solutions found according to the needs of the situation.

Mr. Rippon's assurance that two-thirds of India's trade would not be affected by Britain's entry into the Community should also be viewed from this angle. The one-third of trade that will be affected, even according to Mr. Rippon's own admission, consists of goods whose exports are extremely important to India. These include jute, tobacco, coir and textiles. For instance, jute and coir manufactures continue to be excluded from the E.E.C.'s offers under G.S.P. because their inclusion has been made subject to bilateral arrangements between the E.E.C. and the exporting countries. The same applies to unmanufactured tobacco. Nearly 15 per cent of British imports of this item is supplied by India. Since tariff and non-tariff barriers on this item by the Community is already causing concern to India, exports of this commodity to Britain (after she joins the Community) might suffer a setback unless adequate safeguards are provided. It is good to learn from Mr. Rippon that the Joint Declaration of Intent could be invoked to take care of these problems.

Mr. Rippon has offered his country's assistance for concluding a commercial co-operation agreement between India and the enlarged Community, although in his view this was not an answer to all the trading problems of India with the E.E.C. Mr. Rippon's view is that India should not be content with merely protecting her existing trade with Britain and the Community, but should aim at enlarging it. This would be possible because an enlarged Community is expected to be more prosperous. While the truth

of this line of argument cannot be denied, one can only wait and see whether the enlargement of the Community would lead to more

liberal and generous trading policies. Britain has a moral responsibility in ensuring that this does happen when the Community is enlarged.

Indian Iron : The Untold Story

IT is too early to make any assessment of the progress towards the fulfilment of the objectives that led New Delhi to take over the management of the Indian Iron and Steel Co. Ltd for a period of two years; but these may well be achieved in course of time. In fact, there has been a progressive improvement in production since the take-over; the figures will speak for themselves. Even production in the last two weeks of July was better compared with the first two weeks. The average daily production of ingots and salable steel during the period 16th July to 31st July was 830 tonnes and 671 tonnes, respectively, compared with 716 tonnes and 400 tonnes during 1st July to 16th July. The August production was better at 39,219 tonnes of ingots and 29,250 tonnes of salable steel. The September production target was 45,000 tonnes of ingots and 36,000 tonnes of salable steel. But the annual production cannot be taken beyond half-a-million tonnes till the coke ovens and the steel melting shop are in a better shape and the necessary equipment replacement has been carried out. A plant rehabilitation programme for the steel plant is to be implemented, and it is expected that with the completion of the programme, production will reach the annual rated capacity of 1 million tonnes. Steps are also being taken to improve management by incorporating changes at the middle and lower levels and by involving the trade unions in the production process. All these steps are necessary for arresting the decline in production and deterioration in the condition of the plant but what one may pertinently ask here is whether the Government with its majority holding in the I.I.S.C.O. could not have brought about the changes from within, instead of resorting to the outright management take-over?

Sir Biren Mookerjee, who has been intimately associated with the Company for over 40 years and who has "seen it grow from only two small blast furnaces to what it is today with what potentialities there are for its future expansions", has in an interesting pamphlet described the circumstances that influenced the inception of the Company and the developments that occurred after it had reached the

peak of its production and was about to expand still further for higher production and greater efficiency at reduced costs. But Sir Biren regrets that over the last ten years, continued pressure—financial, labour and from other sources—brought about the present sorry state of affairs. After the second World War, the Company drew up its first comprehensive expansion scheme in 1952 and as a large amount of foreign exchange was needed, the Government suggested that it should try to tap the World Bank for the purpose. In December 1953, the World Bank sanctioned a loan of \$31.5 million covering the foreign exchange requirement of the plant. This expansion was completed well ahead of schedule, and the Company was able to effect an economy of \$1.5 million worth of foreign exchange by import substitution. The manner in which the 1953 extensions was executed impressed both the Government and the World Bank so much that they showed great interest in reviewing the 1955 extension scheme. The World Bank sanctioned a foreign exchange loan of \$20 million and the Government of India a loan of Rs. 7.9 crores. There was again a repeat performance of completing the scheme well ahead of time. The two schemes were aimed at increasing the capacity to 1 million tonnes of ingot a year. The new installations reached and exceeded the rated capacity for two consecutive years—1962-63 and 1963-64.

The Company was, however, finding it difficult to maintain the output and quality of steel, mainly due to the poor and fluctuating quality of coking coal and the irregularity of railway wagon movement. The World Bank

urged the Company to increase the output of its collieries in Noonodih, Jitput and Ramnagore and go in for a large-scale development of the Chasnalla colliery property on modern lines. Incidentally, Chasnalla has enormous deposits of very good quality coking coal—perhaps one of the best in the country. The Government took a lot of time to accept the Company's colliery development scheme. Again a loan of \$19.5 million covering the foreign exchange component of the scheme was secured from the World Bank. The object of the scheme is to meet the Company's total requirement of coking coal from its own collieries. The scheme is now nearing completion.

The World Bank was very keen on a scheme which aimed at securing an additional production of 300,000 tonnes of steel a year by introducing modern techniques and equipment. But the Government was not very responsive at the beginning. It took a long time for the Government to approve the fourth World Bank loan for the balancing of the plant project. The loan had to be cancelled by the Bank because of the inordinate delay on the part of the Government to issue import licences. In this context, Sir Biren observed that "if the balancing of plant scheme had gone through as originally planned, the plant would have been rehabilitated and the capacity of the Burnpur plant would have been increased by 30 per cent, i.e., up to 1.3 million tonnes by 1969-70." Asked by the Central Ministry of Steel, the Company submitted an updated report on the expansion scheme to the Government. Later a more detailed report was submitted. While finalisation of this was pending, the management was taken over by an Ordinance. As for plant maintenance and replacement, it will be seen that a drastic cut in the foreign exchange allocation for spares badly affected production. The cancellation of the World Bank loan, rigid steel pricing policy and the devaluation of the

For a nominal charge CAPITAL's
Statistical Department can provide
you with a certificate of share prices

rupee imposed great financial hardship on the Company. So it could not carry out the capital repairs and replacements as and when they became necessary. The labour situation too became so bad since the last quarter

CURRENT COMMENT

W.B.I.D.C.

Many Hurdles

The West Bengal Industrial Development Corporation (W.B.I.D.C.) has been assigned to play a special rôle in the industrial revival of the State. It was reorganised in January this year and was expected to be the main instrument for the implementation of the 16-point programme. But under the existing arrangement, there is hardly much scope for active co-ordination between the State Government and the W.B.I.D.C. And in its absence, the Corporation's activities are naturally hamstrung by usual procedural delays and formalities. One of the major problems the W.B.I.D.C. is reportedly facing is paucity of funds. The S.I.C.O.M. increased its resources by as much as Rs. 6.35 crores in 1971-72 through the issue of equity shares (Rs. 85 lakhs), guaranteed bonds (Rs. 2.2 crores) and unguaranteed debentures (Rs. 3.3 crores). The W.B.I.D.C. also intends to raise Rs. 2.5 crores of market loan this year. But somehow or other, it has been reported, the proposal was not included in the list of borrowing schemes submitted to New Delhi for approval. A last-minute effort is now being made to include it in the programme. Still, within the limitations, the W.B.I.D.C. is trying to help industrialists in setting up new units in the State. It has promised assistance to a number of ventures and is trying to co-ordinate the working of various other agencies concerned with industrial revival in the State. The Corporation has already received letters of intent for factories which are to manufacture cement, nylon tyres and television sets. Similar letters of intent are expected for several joint sector projects for the production of light commercial vehicles, semi-conductors and scooters. The drive it has mounted to break the stagnation in investment is yet to bear fruit in a big way, partly because licensing often takes a pretty long time to fructify. With closer association between the State Government, industry circles and the W.B.I.D.C., there is good reason to believe that the much-talked about industrial regeneration in West Bengal will take a concrete shape.

of 1966 that normal operations became almost impossible. Sir Biren's pamphlet highlights the untold story about Indian Iron, which will prove interesting in the context of the Company's recent State take-over.

The State Industrial and Investment Corporation of Maharashtra (S.I.C.-O.M.), on the other hand, achieved a new high in its lending operations in 1971-72. The total financial assistance disbursed by the S.I.C.O.M. rose from Rs. 3.88 crores in the previous year to Rs. 5.89 crores, or by 52 per cent. The annual report of the Corporation, released recently, also mentions that the assistance sanctioned by it for the underdeveloped regions of the State too has gone up from Rs. 10.34 crores to 108 units in 1971-72, against Rs. 10.91 crores to 131 units in the previous year. And because of the initiative taken by the Corporation to attract more capital to the backward regions, as many as 1,350 units have come forward to invest Rs. 313.57 crores in these areas. Of these, 735 units representing an outlay of Rs. 134.83 crores have either commenced production or are under construction, thus creating employment opportunities for 33,550 persons.

TECHNOLOGY

Indigenous Growth Needed

Addressing a meeting of industrialists and scientists from the National Metallurgical Laboratory in Calcutta a few days ago, Mr. R. B. Shah, president, Indian Chamber of Commerce, emphasised that imported technology was not safe to depend on from the points of view of self-reliance and the country's defence and, as far as possible, India should try to develop its own technology for exploiting its industrial resources. He appreciated the rôle of the N.M.L. in this regard and said that industry could feed the research scientists and technologists with new problems and ideas arising out of the existing processes of production or applications of new techniques so that the latter could search and research for perfecting their discoveries or exploring newer techniques for utilisation on a commercial scale. Mr. Shah said that such a meeting was highly useful for it offered an opportunity to industrialists and scientists to exchange ideas about the need of industry in the field of technology and

also about what National Laboratories could do to meet such needs.

GROWTH

Stress on Social Justice

Speaking at the annual general meeting of the Merchants' Chamber of Commerce, Calcutta, a few days ago, Mr. S. N. Dalmia, president, affirmed that the chamber was in complete agreement with the socio-economic objectives that the Government had set before the nation. He thought that any economic development to be meaningful and enduring must go along with social justice. It was, therefore, necessary, according to him, not only to maximise the growth rate of gross national product, but at the same time to ensure that planning should be oriented towards a frontal assault on poverty and unemployment. The benefit of growth, he continued, must accrue primarily to the masses. This he considered to be the true meaning of socialism. He was sure that business men would consider it an honour and privilege to play a significant part in building such a socialist society in India. For, he considered business men to be better qualified and equipped than most other sections of society to strive for such transformation of society. He, therefore, urged business men to shake off complacency and be prepared to meet the challenge of broad-based economic development.

ENGINEERING

Steel Buffer Stock Needed

Addressing a Press conference in Calcutta last week, Mr. Raunaq Singh, chairman, Engineering Export Promotion Council, said that in view of the non-availability of different categories of steel needed by the engineering industry, it was most important to set up a buffer stock of the raw material with immediate effect. The chairman and the working committee of the E.E.P.C. had earlier discussed the situation arising from a fall in the export of engineering goods. During the first five months of the current financial year, exports have amounted to only Rs. 51 crores, which was less than the proportionate target fixed for the year, or Rs. 200 crores.

Although the Government had taken a policy decision to make steel available either from indigenous or imported sources and Public Notice 56 was issued for this purpose, the exporters

were not forthcoming with their indents for steel because the international prices of steel had considerably gone down whereas the J.P.C. prices had gone up. Because of the high disparity between the J.P.C. and international prices, which in some cases was more than Rs. 410, the exporters were not coming forward with their indents. Another reason was that the procedure involved in getting supplies under Public Notice 56 was time-consuming and complicated. Mr. Raunaq Singh also emphasised the need for higher allocation of indigenous steel. At the moment, the S.P.C. allocation worked out at an average of 20 per cent to 23 per cent of the sponsored effective demand.

BOKARO

First Blast Furnace

The Bokaro project, the first blast furnace of which has been inaugurated by the Prime Minister, Mrs. Indira Gandhi, on Tuesday has got a number of unique features. The first and most important feature of this project is its magnitude both in terms of the quantum of work and the financial investments. Bokaro is an integrated steel plant which will stage, and later, to 4 million-tonne out of which 1.7 million tonnes will be achieved in the first stage. In the first stage itself, a large amount of built-in capacity will be available for expansion to 2.5 million-tonne stage, and later, to 4 million tonne stage. The Government has also agreed in principle to expand the capacity of the plant to 4.75 million tonnes, as it is felt that an additional capacity of nearly 3 or 4 million tonnes of steel can be created with minimum additional capital investment. The second important point is that the design of the Bokaro Steel Plant is based on the latest technical innovations in order to ensure maximum efficiency with minimum consumption of materials, labour and energy. This plant, therefore, stands out from the existing plants not merely from the point of view of its magnitude and indigenous content but also from the point of view of sophistication in design and technology.

EXPORTS

Scope in African Countries

Addressing the participants of the first Export Business Course, organised by the Indian International Trade

Centre, Bombay, a few days ago, Mr. G. B. Bhat, export manager, Tata Engineering and Locomotive Co. Ltd, envisaged a bright future for India's exports to Africa. Countries like Nigeria, Ghana, Congo and Tanzania offered lucrative markets for Indian products as they possessed the necessary purchasing power in abundance. But these countries would buy only such products which could stand favourably in comparison with European standards. Mr. Bhat pointed out that there were instances when the quality of the Indian products were high, but the quality of the catalogues was shabby. Therefore, he suggested that Indian exporters should produce not only quality products, but also beautiful catalogues and attractive packagings. The African countries were willing to pay the price for such products. Mr. Bhat said that there was a big demand for surgical products in Nigeria but, unfortunately, he could not find the quality suppliers from India.

HINDUSTAN STEEL

August Production Figures

The upward trend in the production of salable steel in the three mild steel plants of Hindustan Steel was maintained in August 1972. The aggregate production of salable steel during August 1972 was 240,000 tonnes, as against 235,000 tonnes in July 1972. The production of ingots was, however, lower at 330,600 tonnes, compared with 341,400 tonnes in July 1972. Despatches of salable steel from the three mild steel plants was 243,000 tonnes, against 249,100 tonnes in July 1972. The movable stocks of rolled steel were higher at 83,800 tonnes on 1st September, 1972, against 77,600 tonnes on 1st August, 1972. The performance of the alloy steels plant also improved during the month. The production of ingots and finished steel in August 1972 was 6,200 tonnes and 4,031 tonnes, respectively, compared with 5,882 tonnes and 4,002 tonnes in July 1972. Despatches of finished steel were, however, slightly lower at 4,025 tonnes in August, against 4,117 tonnes in July 1972.

Bhilai's production of salable steel showed a substantial increase from 138,300 tonnes in July to 150,000 tonnes in August 1972. Rourkela's production of ingot steel at 105,516 tonnes is the highest since December 1970. The production of salable steel also went up from 62,500 tonnes in July 1972 to 68,400 tonnes. The production would have been still better but for the restricted power supply from the Orissa State Electricity Board. Production in Durgapur steel plant was affected

due to labour troubles in the first half of the month.

F.I.C.C.I.

Planning for Results

The Federation of Indian Chambers of Commerce and Industry has issued an interesting brochure entitled *Planning for Results*. The brochure forms part of the exercise on planning by the F.I.C.C.I.—an exercise which was initiated right from the time the First Plan was drafted. Starting from the premise that a new approach to planning is necessary immediately to help the larger masses of people, the Federation argues that a mere change in approach by itself would not produce the desired results, unless it is adequately supported by constructive practical measures. These measures have been covered under various subjects, such as pressure of population, employment strategy, sectoral growth and balances, agriculture, industry, infrastructure, balance of payments, overall growth and outlays, economic policy and resource generation. Plan implementation within the scheduled time, with a degree of flexibility and after continuous evaluation, is heavily underscored.

A.R.C.

Expansion of Activities

The annual report of the Agricultural Refinance Corporation for the year ended June 1972 reveals a significant expansion in its activities. No fewer than 269 schemes involving the Corporation's commitment of Rs. 135 crores out of the total financial assistance of Rs. 154 crores were sanctioned during the year, against 100 schemes with the Corporation's commitment of Rs. 54 crores out of the total assistance of Rs. 62 crores sanctioned in the previous year. The amount disbursed to the financing institutions during 1971-72 was also higher at Rs. 34.98 crores, against Rs. 30.62 crores in 1970-71. Besides sanctioning a large number of new schemes of agricultural development, the Corporation actively assisted the eligible institutions (Central land development banks, State co-operative banks and scheduled commercial banks) in the appraisal of schemes based on technical feasibility and economic viability. Following the marked expansion of activities, the Corporation earned a larger net profit of Rs. 40.45 lakhs in 1971-72, com-

pared with Rs. 28.11 lakhs in the previous year.

INDUSTRIAL PRODUCTION

April Index

The level of industrial production in the country in April 1972 rose by 7.9 per cent and 6.9 per cent, compared with the corresponding months in 1970 and 1971, respectively, according to figures issued by the Central Statistical Organisation. The index of industrial production for March 1972 stood at 209.2 and that for April of the same year was 196 (1960 equals 100). The April 1972 index showed a rise of 14.3 points and 12.6 points over the corresponding months in 1970 and 1971, respectively. The revised index for February this year was 196.7. These figures are provisional, unadjusted for seasonality. The seasonally adjusted index for the month of April 1972 stood at 200.4 and that for the preceding month stood at 200.5.

INDIA-YUGOSLAVIA

Good Trade Prospects

The products of both India and Yugoslavia will continue to be more economically beneficial to each other even after the change-over to conver-

tible system of payment from 1st January next year, says Mr. L. N. Mishra, Central Minister of Foreign Trade, writing in the special number of the *Indo-Yugoslav News* of the Indian Chamber of Commerce, released a few days ago in connection with the Zagreb International Autumn Fair now being held in Yugoslavia. Mr. Mishra says that Yugoslavia is fast developing into affluence and that India is in a position to satisfy many demands of Yugoslav enterprises both at the factory production level and consumer level. The existing tripartite co-operation agreement between India, Yugoslavia and Egypt is already playing a significant rôle in these two countries' trade, because of the 50-per cent tariff concession. Mr. Mishra points out that due to the aggressive salesmanship of Indian exporters, it was possible to achieve an export surplus of 300 per cent in 1970 over the last three or four years. Against average exports of Rs. 14 crores a year, in 1970 actual exports touched Rs. 39.4 crores.

RUSSIA

Largest Buyer

The Soviet Union is the largest buyer of Indian goods and occupies the first place in India's export

trade. This was stated by the Central Foreign Trade Minister, Mr. L. N. Mishra, in the course of an interview given to the Tass news agency a few days ago on the occasion of the first anniversary of the signing of the Indo-Soviet Treaty for Peace and Co-operation. Describing the growth of Indo-Soviet trade as phenomenal, Mr. Mishra said that the development of trade between the two countries reflects truly the very cordial and friendly feelings that existed in their political relations.

RAILWAYS

Rise in Earnings

The passenger traffic on the railways registered a rise of 9.2 per cent during the four months ended July 1972, compared with the corresponding period in the previous year. The earnings from the passenger traffic during the same period went up by 9.8 per cent, while earnings from other coaching traffic was up by 8.5 per cent. These figures, however, do not include the traffic from the North Frontier Railway. In the originating revenue earning goods traffic, there was a marginal increase of 0.8 per cent during the first four months of the current financial year over the corresponding period last year. The earnings from the goods traffic went up by 8 per cent. In terms of goods traffic in selected high rated commodities, the volume of traffic during the period went up by 6.5 per cent and earnings by 12.7 per cent over the corresponding period last year. As against 3,849,000 tonnes of traffic with an earning of Rs. 34.22 crores, in April-July last year, the traffic this year during the period was 4,101,000 tonnes and earnings were Rs. 38.56 crores.

MONEY MARKET

Call Rate Down

The short-term money market has remained more or less unchanged this past week. The call rate initially fluctuated between 4 per cent and 3½ per cent. But towards the close, the rate has quoted between 3½ per cent and 3¼ per cent, some stray lots having been done at the latter rate. The demand for remittances has been small. The supply of tea bills has been moderate and that of gunny bills has been small. The pound-sterling has strengthened somewhat against most major foreign currencies during the week.

A Ditcher's Diary

IN RETROSPECT, THE SO-CALLED "Nixon shock" appears now to have been almost a non-event. The Japanese were perturbed, indeed dismayed, to see Mr. Nixon take major diplomatic and financial initiatives without consulting Tokyo; and Mr. Tanaka at least went through the motions of consulting the U.S. President before embarking upon his mission to Peking. But even at Honolulu it was clear enough that the Japanese initiative would not be necessarily within the framework of Mr. Nixon's global diplomacy. In the event, the "Tanaka shock" threatens to invalidate some of Mr. Nixon's basic assumptions. Superficially, the Sino-Japanese accord may seem to endorse the American approaches to China. But although it was the "Nixon shock" which propelled Japan into a major diplomatic initiative of its own, the "Tanaka shock" has left Washington far behind in evolving a new global strategy. The Nixon administration has made appropriate noises of approval; but the dynamism of the Tanaka strategy cannot but be viewed with some unease. There is reason for anxiety also in Moscow; but the Japanese Prime Minister has been quick to emphasise that his next task will be to negotiate a peace treaty with Russia. It cannot be easy to establish closer relations with Moscow without placing the agreement with Peking under some strain. The difficulties, however, will largely disappear if there is a prior agreement

between Russia and China; the London report that a border agreement is imminent may not be entirely speculative. Even if a broader understanding between the three Powers is not immediately reached, the Sino-Japanese agreement itself is going to change a lot of things. Maoists outside China please note: the Chairman has not allowed ideology to come in the way of far-reaching agreements with a country that does not even pretend to have any socialistic aspirations. Chinese references to Japanese militarism ceased as soon as Mr. Tanaka took office, and this had nothing to do with his political beliefs. Mr. Tanaka is a hard-headed business man who is perfectly happy to operate in a thoroughly capitalistic order. Mr. Chou En-lai must have given him much pleasure by making fun of Japanese communists; and the Chinese leader, it may also be recalled, did not hesitate to support Mrs. Bandaranaike in her tough measures against the Ceylonese revolutionaries. Chairman Mao has further pronounced that "people can be real friends only after quarrelling". Is there a hint here for Mrs. Gandhi? Compared with the Sino-Japanese conflict, India's quarrel with China was of small consequence.

THERE IS NOT MUCH EVIDENCE OF Puja gaiety in Calcutta as yet, and I do not think that this has much to do with leftist agitation. Admittedly,

such agitation tends to disrupt normal life; in any case, demonstrations are unlikely to yield any relief. Not infrequently they cause additional hardship. Yet the existing hardship is real enough. If Puja sales are not as brisk as in previous years, the explanation surely lies not in disorderly agitation against high prices but in the price level itself. And Puja selling and buying cannot be promoted by prolonged load-shedding; a dark and stiflingly hot shop is not the most inviting place for choosing a saree. Nevertheless, this week's agitation seemed a fruitless exercise; in the C.P.I.'s case it was also pointless. The C.P.I.(M) is interested in discrediting the present Government; even if politically motivated, its agitation has at least a narrow consistency of its own. I do not think that the Marxists will find it easy to recover lost ground by their present tactics; whatever the failings of the present Government, ordinary people cannot be interested in another spell of disorder in the name of mass protest. Yet the Marxists evidently think that they can regain some prominence by exploiting the present situation; and this may not be entirely illogical in terms of party politics. But what is the C.P.I. trying to prove? It does not oppose the present Government or the ruling Party, and yet considers it necessary to establish its leftist credentials by campaigning against "monopolists" and other "reactionary" forces. Mrs. Gandhi did not spare the C.P.I. when, speaking in Ranchi on Monday, she condemned disruptive agitation by Opposition parties; she may have had the C.P.I. and the Congress radicals in mind when she pointed out that national-

PANACEA FOR HIGH PRICES

HIGH prices enquiries are now the order of the day in most countries. The main fact seems to be that within the last quarter of a century or less, the prices of commodities have increased by about 30 per cent. In other words, we have now to pay Rs. 130 for goods that were ours for Rs. 100 some few years ago. Most people have their own idea as to the cause of this state of affairs. Some are quite certain that the increased output of gold is responsible for our ill-luck; others are positive that the laws of demand and supply as regulated by the world's growing population, fully account for everything; while still others have no manner of doubt that a

mixture of the two exactly explains why our rupees have not the same purchasing power as in the good old days gone by. Of course, it is only right and proper that a go-ahead people such as the Americans should be the first in the field with a panacea for high price troubles. They found out long ago, when prices began to rise, that purchasers quite emphatically refused to rise to the occasion, as it were, and that, when prices were put up in one shop, customers flocked off to another. It does not do to lose customers, so dealers went on selling at old prices and earned the gratitude of a contented people.

sation would not automatically lead the nation into a socialist paradise. But, on the whole, Congress leaders continue to display a certain ambivalence towards C.P.I.-inspired movements and slogans. The Prime Minister herself may have encouraged some irresponsible slogan-mongering by endorsing the allegation about C.I.A. activities in India. The most curious part of her statement was that it was for the C.I.A. to prove that it was not active in India. The C.I.A. may well be responsible for much undesirable activity in this part of the world, as probably are secret services of some other countries. But it is for the Government either to stop all such activity or at least to make it difficult by a clear exposure with specific evidence.

WITH THE PUJAS APPROACHING fast, the nip in the air in early mornings is quietly heralding the advent of the winter which is usually the season of many local art shows attracting both young and old. A number of paintings of Mr. Sunil Das, a young and enthusiastic painter, were exhibited at the residence of Mr. K. Lenz of the Consulate General of the Federal Republic of Germany last Friday which attracted quite a number of celebrated art connoisseurs of the city. The few paintings of Mr. Das that I had the privilege to see gave me the impression that he had the genius of a fine craftsman. With his innumerable solo shows, the young painter has already made a name for himself. And as Mr. Das himself explained to me, he has an abiding fascination for mysterious signs and symbols. A few of his paintings that were exhibited showed his deep involvement with the expressionist school and his equally deep attachment with human emotions such as love, jealousy, hatred, agony and frustration. In a few of his extraordinary paintings, Mr. Das has realistically concentrated on the horrors of Pakistani barbarism in Bangladesh and the torture and terror that the people were subjected to following the Pakistani crackdown on that country. Mr. Das, I see, has bagged quite a number of important awards within a short span of his career; and his paintings, which are due to be exhibited in Heidelberg this month, are sure to create a sensation in West Germany. Although somewhat different in scope, the exhibition of Japanese contemporary prints organised by the Consulate General of Japan at the New South Gallery of

the Academy of Fine Arts in Calcutta will also impress all connoisseurs of art. Japan is famous for the breathtaking beauties of nature, which have always inspired its people to resort to various forms of fine arts, including creative paintings. The contemporary Japanese prints, as the Japanese Consul General in Calcutta said, trace their origin to the Japanese wood block prints of nearly twelve centuries ago. A look at the exhibition will create the inevitable impression that the dedicated Japanese painters are busy investing the traditional art of print with new richness, creativity and variety.

THE RECENT MEETING OF COMMON-wealth Finance Ministers in London was an historic occasion, being as it was the last before Britain joins the European Community. But for my money the most interesting feature of it was the Plumptre report, called after the Canadian economist who compiled it, which set out to make some sense of the current international currency chaos. That is a task which in itself deserves unqualified praise. What I liked particularly about the report was its support for "the link", the linking of international aid with fresh issues of S.D.R.s. Not that there was anything particularly novel in this. Under the name of the Maxwell Plan, it has been around for years. No, what I enjoyed was the way Professor Plumptre placed the concept in a broad perspective. His theme was that to issue S.D.R.s to the developing countries, knowing they would promptly spend them on the exports of the richer nations, would to all intents repeat the process by which

Europe was economically stimulated several centuries ago when gold from the New World enabled mercantilist-minded countries to run payments surpluses to their hearts' content. It was a neat analogy, I thought, with "paper gold" taking the place of the metallic variety. One can only commend Professor Plumptre on his sense of history, a quality much lacking in a world where too many hackneyed ideas are paraded.

ORGANISERS OF THE BERGMAN FILM Session in Calcutta have reason to be gratified. Although *The Seventh Seal*, *Wild Strawberries* and *The Virgin Spring* had been shown in Calcutta before, it was a rewarding experience to see them again; and *The Silence* was a new attraction, not the least because of its controversial nature. Of course, all Bergman films tend to generate controversy. Judging by audience reactions to the four films shown during the past one week, people hereabouts are keenly aware of the thematic and artistic issues involved in this controversy. Bergman may not satisfy certain popular expectations from uncensored Swedish films; the violently explicit rape scene in *The Virgin Spring* does not provide any erotic titillation. But even those who came to see Bergman, for the first time cannot have been disappointed at the absence of any prurient pleasure. The effect is so overwhelming, the disturbance so total, that ordinary expectations are immediately swept aside. And those who know what to expect from Bergman discover something new at every fresh encounter. Much has been written about Bergman's themes and about what he has been trying

to convey. But what struck me once again is not only the power of what he says but also the supreme skill with which he says it. I think that in the general preoccupation with Bergman's meaning sufficient attention has not always been paid to his masterly form. Fellini made an important point when he referred to Bergman's "seductive quality of mesmerising your attention". As Fellini put it: "Even if you are not in agreement with what he says, you enjoy the way he says it, his way of seeing the world with such intensity". This is a point that Indian film-makers of the so-called "experimental" school would do well to ponder. Much of the experimental effort seems insufficiently supported by technical competence. The Film Finance Corporation, which has supported some promising ventures, may also have encouraged much amateurish effort with uncertain ideas; and this trend may be further encouraged if the F.F.C. guarantees screening facilities by setting up a chain of "art theatres" of its own. I should like to see such theatres reserved for the screening of films of outstanding quality from different parts of the world. Why should a Bergman session be an exceptional event? The National Film Archive, which co-operated with the Federation of Film Societies of India in organising this session, has acquired representative works of the acknowledged masters from different countries. Some of these are shown on special occasions. But there is a need for regular facilities for the showing of film classics and outstanding contemporary productions.

The Growing Importance of the Role of Company Secretaries

(By a Special Correspondent)

Company secretaries will be required to play an increasingly important rôle in the changing economic pattern of the country. It is in the fitness of things, therefore, that their status is being elevated in keeping with their growing responsibilities in corporate management.

IN the changing economic and social pattern of the country, the profession of company secretaries has assumed a great deal of importance. This was recognised fully by the leaders of the Government who addressed the first all-India convention of company secretaries in New Delhi recently. To begin with, there was the President, Mr. V. V. Giri, who inaugurated the convention with a speech in which he complimented the organisers for their collective effort to place the profession of company secretaries on a firm foundation in the system of corporate management in the country. He noted that under the Companies (Amendment) Bill now before Parliament, the status of the company secretary was being elevated, the individuality of the office stressed and it was being made obligatory for every company having a paid-up capital of not less than Rs. 25 lakhs, to appoint a secretary having the prescribed qualifications. Two other spokesmen of the Government who addressed the convention had much the same thing to say although, as Ministers, they were more forthright in their exposition of the rôle of the corporate sector in the present context of industrial policy of the Government. The Central Industrial Development Minister, Mr. C. Subramaniam, for instance, was particularly happy that the organisers had chosen the joint sector as an important area falling within the jurisdiction of the future secretary as a professional.

It was left to the Central Minister in charge of Company Affairs, Mr. K. V. Raghunatha Reddy, to elaborate on the real intentions of the Government in bringing forward the Companies (Amendment) Bill. Mr. Reddy said the Government recognised the importance of the corporate sector,

but the latter could not isolate itself from the general economic trend in the country. The public sector would continue to have a dominant rôle and there were bound to be changes in the socialistic structure. It was for the private sector to adjust itself to these changes. Dwelling on the Government's decision to give statutory recognition to the office and rôle of the company secretary, Mr. Reddy drew a distinction between professional management and those practising a profession. In any industry, the "money bags" were important, but the money bags were filled by financial institutions and the common shareholders. Here came the importance of public interest. Once public interest was involved, professional management of the project became necessary. This would ultimately take the shape of techno-structure as far as company management was concerned. This was the purpose and direction in which the Company Affairs Department was functioning. This was also the object of the comprehensive Companies (Amendment) Bill.

A Significant Tool

As pointed out by Mr. R. Krishnan, president of Company Secretaries of India, there could not have been a more appropriate time for such a convention as it took place at a time when the company law had come to stay as a significant tool to fulfil the social and economic policies of the country. He complimented the Government for introducing several reforms in company management through the Companies (Amendment) Bill, but there still remained a vast field in the Companies Act where further amendments were necessary. One of the objects of the convention was to discuss such amendments purely from a professional point of view. A technical session exclusively dealt with these amendments and was presided over by Mr. Raghunatha Reddy himself. The other two technical sessions related to the secretary's place in private, public and joint-sector managements, and the need for disciplined growth of the profession of company secretaries.

A reference in passing is necessary to the papers that were read at the convention. Dr. V. P. Juneja and Mr. R. Kapoor in their papers on the company secretary's place in private-sector management emphasised that, whether it was a private limited or a public limited company, the work of the secretary remained equally onerous. In his paper on the rôle of the secretary in public-sector management, Mr. A. M. Chakraborti of the Department of Company Affairs argued that while both the public sector and private-sector secretaries had to keep company goals uppermost in their minds, "public interest and profitability interchange their position in setting respective goals of private and public-sector companies and, accordingly, the secretary of a public-sector company is to shift his emphasis from profit to public interest in his order of priority".

Dr. (Mrs.) Usha Dar of the Department of Company Affairs presented a paper on the rôle of the company secretary in the joint sector. In this paper, Dr. Dar explained the concept of the joint sector as the result of rapidly changing relationship between business and Government and an explicit recognition of the need for co-operation between them. Given the financial collaboration between the Government and the private sector, and a mixture of business and social objectives, the most important issue was: what should be the nature of managerial collaboration in a joint venture? This was a major question which could not be answered straightaway. But whatever be the final shape of managerial collaboration in a joint-sector project, a key rôle would have to be played by the company secretary as he was a vital link between the board of directors representing different interests and the various levels of management.

The convention suggested a number of amendments to the Companies (Amendment) Bill which are being incorporated in a memorandum to the Government. The convention also pointed out that company secretaries had been fighting for recognition of their due place in corporate management and this recognition was in sight today. What is needed now is the passing of a statute to convert the present Institute into a statutory institution on the lines of the Institute of Costs and Works Accountants and the Institute of Chartered Accountants.

In our little way...

we help India fight its war on all fronts

As India moves towards its goal of all-round development, we make our contribution. On the food front Union Carbide provides pesticides and polyethylene film which help the farmer reap a bigger, better harvest. On the home front we bring to you a variety of household articles ranging from batteries and flashlights to colourful containers made from our polyethylene. We supply raw materials and chemicals essential for the pharmaceuticals, paints,

textiles, iron and steel and rubber industries. On the export front Union Carbide combs the five continents for new markets and its products reach more than 50 countries including the U.S.A. These are but some of the seeds that Union Carbide India Limited has sown to raise the standards of living of the people of India. Yes, in our little way we help India fight its war on all fronts!

sowing the seeds of progress

Will There be Changes in Britain's Aid Policy towards India?

By A. Raman

Although Britain will join the E.E.C., there is no reason why she cannot give increased assistance to the developing countries of the Commonwealth. France has been a member of the European Economic Community for the past 12 years, but is giving considerable assistance to her former colonies.

ABOUT half a pence in each pound of the national income of the United Kingdom goes by way of aid; and Britain's rôle in supplying capital and technical assistance to the developing countries is important even now. In spite of the balance-of-payments difficulties which she may face, Britain has certainly the capacity and the keen desire to provide considerable aid to the developing countries. This is because of certain reasons. First, as an industrial nation, the United Kingdom occupies an important place in economic matters even today. Secondly, in supplying technical assistance, Britain's potentialities are great; and the work done by the British personnel in respect of land reclamation in Guyana, road construction in Turkey, afforestation in Swaziland, survey work in Tanzania, medical care in Laos and the training of nurses in Malaysia—to mention just a few—has been of much value. Thirdly, as the leader of the Commonwealth and as the ex-ruler of many countries in Asia, Africa and Latin America, Britain has naturally her responsibilities for the economic development of these areas. More than 100 countries are receiving aid from Britain.

TABLE I
BRITISH BILATERAL AID

	(In pound million)					
	1965	1966	1967	1968	1969	1970
Commonwealth countries (including dependent territories) of which	158.2	169.5	169.0	170.7	156.9	176.2
Grants	56.7	56.5	57.2	47.8	39.8	36.6
Technical assistance	29.0	27.3	29.5	34.2	34.9	35.5
Loans	72.5	85.6	82.3	88.6	82.3	104.1
Other countries						
Grants	5.4	5.1	6.7	4.3	3.5	3.8
Technical assistance	2.7	3.1	3.9	7.0	8.7	10.1
Loans	12.3	16.0	10.0	9.5	9.6	8.9
Total	178.6	193.7	189.6	191.5	178.7	198.9

Table I shows the amount of aid to the developing countries from the U.K. in recent years.

Out of the total aid supplied by the U.K. Government to the different countries, 22 per cent, i.e., Rs. 884 crores, or £491 million, went to India till September 1971, making her the largest beneficiary of British aid. Among India's aid-givers, the United Kingdom stands second, the first being the U.S.A. It would be correct to say that Britain would be willing to help India more than any other country because of certain reasons. First, the two countries were close to each other for quite a long time. Secondly, India occupies an important place in the Commonwealth. Thirdly, India's potentialities and her capacity to put to good use the aid given to her have been recognised by Britain. Fourthly, Britain has understood the magnitude of India's problems. Although British aid to India is forthcoming since 1951, it is only since 1958 that India is getting significant amounts of aid from the U.K. Table II shows the quantum of British aid to India as in different years after 1958. In 1970-71 and 1971-72, British assistance to India was of the order of £44 million and £54.5 million, respectively.

Originally, Britain was giving aid to India at the market rate of interest. But, since 1956, interest-free loans are granted by her on soft terms repayable over a period of 25 years, without repayments during the first seven years. Since 1968-69, U.K. aid consisted

of both project and non-project aid. A number of projects have been assisted by Britain, such as the Durgapur steel plant, Security Paper Mills in Hoshangabad, Heavy Electricals in Bhopal, Tuticorin fertiliser project and Mangalore fertiliser project. So far, British assistance to the Durgapur steel plant has been of the order of £72 million (Rs. 130 crores). The Heavy Electricals, Bhopal, with which the Associated Electricals Ltd of the U.K. is associated, has, since 1955, received £30 million (Rs. 54 crores) till April 1969.

TABLE II
BRITISH AID TO INDIA
(In pound million)

	Loans	Grants	Technical assistance	Total
1958-59	18.8	—	0.3	19.1
1959-60	33.0	—	0.3	33.3
1960-61	28.1	0.05	0.4	28.55
1961-62	17.2	—	0.4	17.6
1962-63	22.3	—	0.5	22.8
1963-64	26.0	—	0.6	26.6
1964-65	30.1	—	0.8	30.9
1965-66	32.1	—	0.8	32.9
1966-67	43.2	—	0.7	43.9
1967-68	40.9	—	0.7	41.6
1968-69	30.9	2.6	0.8	34.2
1969-70	44.7	0.1	0.8	45.7
Total	367.4	2.8	7.1	377.3

A total sum of £6.1 million (Rs. 11 crores) has been provided by the U.K. for financing the laying down of the long pipeline connecting the oilfields in upper Assam with the Gauhati and Barauni refineries. The expansion programme of Hindustan Cables Ltd, Rupnarainpur, West Bengal, has been helped by British credit to the extent of £0.6 million. Britain's aid has been made available also for the imports of tractors, and a sum of £1.1 million has been provided for purchasing 850 Ford tractors manufactured in Britain. The fertiliser plant in Namrup in Assam constructed by the Fertiliser Corporation of India, sulphuric acid unit in Sindri, the fertiliser complex, Kalol, Gujarat and the Mangalore and Tuticorin harbour projects have all received considerable aid from Britain. For the Mangalore fertiliser project, the U.K. is making available a sum of £10.5 million. So far, for fertiliser plants, Britain has made available a sum of more than £25 million.

Food aid has also been given by Britain although, of course, that offered by Canada and the United States has been larger and more substantial. In March 1969, a sum of £2.7 million was given by Britain for purchasing

TABLE III
BRITISH LOANS TO INDIA, 1966-71
(In pound million)

	1966-67	1967-68	1968-69	1969-70	1970-71
Non-project debt relief	8.4	11.6	7.5	15.0	—
Maintenance goods	27.1	19.4	17.0	27.5	26.5
	35.5	31.0	24.5	42.5	26.5
Capital goods for I.C.I.C.I., I.F.C.I., N.S.I.C. and public-sector enterprises				12.0	17.5
	35.5	31.0	36.0	54.5	44.0

wheat mainly from Argentina; and in July 1969, Britain made available another amount of £1.7 million. As a result of a loan agreement concluded on 17th March, 1972, British aid to the extent of £12 million will be made available to private-sector concerns, public-sector enterprises and firms in the small-scale sector for purchasing capital goods and equipment. Another project to receive British aid is the International Crops Institute for the semi-arid tropics to be set up in India for promoting agricultural research. Britain will also help India in her family planning efforts. Table III shows the loans signed over the years from 1966-67 to 1970-71 by categories.

Technical assistance has also been forthcoming from the U.K. for many projects. The Durgapur steel plant and the Heavy Electricals of Bhopal have benefited through the supply of British managerial personnel, while British specialist Professors have worked in the Indian Institute of Science, Bangalore, and the Indian Institute of Technology, Delhi. The Post-graduate Medical Research Centre, Chandigarh, has also benefited from British aid. The Indian Institute of Technology, Powai, Bombay, has received equipment from the Rolls Royce Ltd of England.

Mention should be made of the rôle played by the British Council. The Council is doing good work by running libraries, organising specialised book exhibitions, improving the standards of English teaching through the Institutes of English Studies for which a lot of assistance has been made available and helping the summer institutes run by universities. The Technical Teachers' Training Institute, Adayar, Madras, is benefiting very much through the British experts working there and the supply of considerable quantity of British equipment; the scheme of aid to the Institute is administered by the Council. The Council makes available the services of British experts to Indian universities and advanced educational

institutions and arranges for visits by Indian scholars and specialists to the United Kingdom to improve their knowledge of their respective branches of study. Mention should also be made of the good work done by British volunteers in the fields of teaching, animal husbandry and agriculture.

A few comments on British aid to India may not be out of place here. First, British governmental aid, although it has not been to the extent of U.S. governmental aid, has done much to improve India's economic condition; and the technical assistance of the U.K. has been invaluable. Secondly, there has been no controversy with regard to British aid. As is well known, some criticisms were put forth against P.L. 480 assistance on the ground that it added to inflationary pressures in the Indian economy. Thirdly, Indo-British trade has declined in recent years; but governmental aid from the U.K. and private investments and technical collaboration have helped the two countries to have close economic relations.

Need for Effective Commercial Publicity Abroad to Boost Exports

(By a Special Correspondent)

The 1971-72 annual report of the Federation of Indian Export Organisations describes various publicity measures undertaken by it to promote exports. But it is not clear to what extent the F.I.E.O. is able to ensure co-ordination among the various export promotion councils in the matter of commercial publicity abroad.

THE annual report of the Federation of Indian Export Organisations (F.I.E.O.) for 1971-72, released recently, describes the various types of publicity undertaken by it with a view to promoting India's industrial

It may be asked as to whether there may not be changes in the trends of British aid to the developing countries in the coming years because of certain reasons. First, Britain will enter the European Economic Community shortly. Secondly, she has sometimes balance-of-payments difficulties; and just now, Britain is managing her economy with a floating pound. Although Britain is joining the E.E.C., there is no reason, however, why she cannot give increased assistance to the developing countries of the Commonwealth. As a matter of fact, France, although she has been in the Community of Europe for the last 12 years, is able to give sufficient assistance to her ex-colonies. Also, the U.K. balance-of-payments position has shown considerable improvement. The Minister for Overseas Development, Mr. Richard Wood, has recently mentioned that British assistance to the developing countries is going to increase in the next few years. In 1972-73, Britain will spend £278 million on aid to the developing countries and this amount is likely to go up in 1973-74 and 1974-75.

India needs foreign assistance in the days to come and she will not be able to dispense totally with overseas aid in the near future. This being so, British aid to India should be significant in the future. That the U.K. Government is happy about helping India is quite evident from the following recent statement of Sir Terence Garvey, British High Commissioner to India: "In so far as Britain is concerned, we will continue to help, within the limits of our economy, when you ask us to do so".

image and export potential. It is difficult to assess to what extent the F.I.E.O.'s efforts have been really successful. But it appears that there is need to conduct this publicity campaign more effectively. For instance, the report says that for the first time, the F.I.E.O. invited to India a team of three journalist-cum-economists from Thailand in March this year. They were selected by the Indian embassy in Bangkok and they represented the three leading newspapers, namely, *Thai Rath*, *Daily News*, and *Siam Rath*. The team arrived on 18th March and visited 19 industrial units in Madras, Bangalore, Bombay

and Delhi in the course of its fortnight tour. The report claims that the despatches of the journalists to their papers "were favourable to India's progress and their visit should prove beneficial to the development of our trade".

It is pertinent to enquire why the F.I.E.O. did not include Calcutta in the team's programme. If the object of the visit was to make the team aware of India's progress and export potential, surely West Bengal should have been included in its itinerary. Conditions in West Bengal in the second half of March this year were certainly not so bad as to warrant its exclusion from the team's visit. It is hoped that in future the F.I.E.O. will give due importance to West Bengal which is vitally important to the country's export trade.

The report reveals that the F.I.E.O. has issued a folder specifically projecting the progress made in the small-scale sector. It says: "The main facts revealed in this folder are that this vital industrial sector of modern India is technologically well advanced, it places optimum emphasis on quality standards, and has economic viability in as much as the products are labour-intensive. Care has been taken to emphasise that this is a well organised sector which can meet overseas requirements at competitive prices". One feels that the F.I.E.O. should be a little cautious before recommending the products of the small-scale industries to foreign countries. For instance, is it correct to say that India's small sector is "technologically advanced" and that it "places optimum emphasis" on quality standards? The fact is that while some small-scale units may be quite competent to produce exportable products, the majority of the units in this sector are severely handicapped due to lack of availability of raw materials of the right type and want of technical guidance. In fact, India's reputation as an exporter has suffered much in many markets of the world because of the supply of goods of inferior quality. Therefore, while doing all that is possible to encourage the small sector to export, the F.I.E.O. should not be over-enthusiastic and should not ignore the limitations under which the units in this sector are working.

The F.I.E.O.'s report says that in 1971-72, it issued three major newspaper supplements on India in Beirut, Nairobi and Bangkok. It also issued a two-page spread on India's

industrial progress and export potential in the Asia edition of the *Reader's Digest* in February 1972, covering Malaysia, Singapore, Hongkong and Japan. It is relevant to ask whether such casual supplements (which should be quite expensive) are really necessary since there are Indian Missions in all these countries and many Indian delegations and numerous business men visit them frequently. It should be more desirable to strengthen the commercial sections of Indian Missions so that they can undertake publicity for export promotion on a regular basis.

It is also not clear to what extent the F.I.E.O. is able to ensure some co-ordination among the various export promotion councils and commodity boards in the matter of commercial publicity. Since publicity abroad involves considerable expenditure of foreign exchange, it is most essential that there should be some

Self-employed Ventures: The Criteria for Success

By V. Raja Ram

The easiest thing for an educated unemployed is to get self-employed by starting an industry or a business. He can always expect full support from the Government and nationalised banks.

THE easiest thing an educated unemployed can do these days is to be self-employed by starting an industry or a business, as he is assured of full support, financial and otherwise, by the Government and public-sector banks. In the recent "Convocation for Jobs" held in Hyderabad in the presence of the Central Finance Minister, Mr. Y. B. Chavan, as many as 2,000 unemployed have received letters of sanction of financial assistance from public-sector banks for their proposed ventures. The enthusiasm to start industries and be self-reliant is certainly a noble aim for any person, whether educated or uneducated, but at the same time this prospective mushroom growth of industries should not merely be a matter of ephemeral existence. The success or otherwise of a venture depends—and a lot of it—on the entrepreneur himself. The efficient running of an industry or a business calls for certain basic skills and attitudes and certain realisations and the big question is how well an entrepreneur is equipped and trained

co-ordination either by the F.I.E.O. or by the Central Ministry of Foreign Trade. The fact that even in regard to a major export industry like tea, foreign publicity has been inadequate and ineffective shows that this problem has not received the attention it should.

The Indian Tea Association has recently pointed out that because of poor propaganda, Indian tea has been steadily losing ground in the traditional markets while rival beverages have been making rapid headway because of aggressive and imaginative publicity. The jute industry has also complained of meagre allocation of foreign exchange for publicising its non-traditional products like decorative fabrics. All this emphasises the imperative need for Udyog Bhavan to review critically the commercial publicity programme and modify it suitably to make it more effective.

for this job. Here are the things which are vital for any entrepreneur in making his venture a success.

In these days of break-neck competition, it is a matter of constant struggle for an industry to remain in business, in the first instance, and then to grow. Darwin's theory of the survival of the fittest is more than a truth in the present-day commerce. No one expects a business man to speak absolute truth and be straightforward. Instead, his integrity consists in keeping up his promises and fulfilling his obligations. No business can be developed if one does not honour one's commitments. A business man must know all about his trade thoroughly and inside out, lest he should be cheated by people working for him. He must keep himself abreast of the market trends, developments in technology, consumers' ever-changing needs, etcetera, so that the business could be adapted to suit the times; otherwise, the entire business could become redundant.

No industry worth the name can be run without credit. At the same time, it pays to realise from the very beginning that credit is meant to be repaid and that the ever accumulating interest at compound rate is an

insidious growth which, if not properly attended to, would eventually eat the whole system. Ready and easy credit, as could be obtained from commercial banks now, might be very tempting to avail of but its price is too deterrent to take more than what is actually needed. If credit is not properly managed and not promptly repaid, the entrepreneur will be running the industry not for himself but for the prosperity of creditors.

There is no business without people. These people may be customers, public or employees working for the business. Customers should be satisfied, for only then a business can grow and, along with it, public confidence. The employees working for the business play an equally important rôle. The business is their source of living, strength and happiness. Their dissatisfaction is manifested in umpteen ways and it may mean, although imperceptible to the naive and nonchalant persons, incalculable loss to the business. People are a pack of mysteries and defy scientific analysis by psychologists, psychoanalysts, etcetera, and it is in dealing with people, an entrepreneur, to be successful, must have an edge over others. His ability to get along with people and get his job done through others is an indication of his success.

The basic objective of any business—let it be put frankly—is to make profit. Eternal vigilance needs to be exercised over the costs relating to all the principal four elements in any business, namely, men, money (borrowed money, particularly), materials and machines. To succeed, no matter in what activity, two things are required: suitability of the activity to one's own temperament and aptitudes and, given that suitability, the determination to succeed backed by hard-work, courage and intelligent planning.

A business has to be built up slowly and steadily and anyone trying to make quick money by questionable methods like duping customers, trading in licences, black-marketing, and speculations will sooner or later find his level. It is all right in lotteries where a lucky person might walk away with a fortune but not in business. There is no substitute for hard work, which alone can make an industry prosper. Business is undoubtedly one of the most rewarding careers to pursue but at the same time it needs to be emphasised that no harvest is reaped immediately after seeds are sown.

Background of the Higher Procurement Prices

(From Our New Delhi Correspondent)

The Prime Minister won hands down last week when she successfully persuaded the Chief Ministers to accept the A.P.C. recommendations on kharif procurement prices. Luckily for the Centre, most of the States are now being governed by the Congress.

THE Prime Minister, Mrs. Indira Gandhi, won hands down last week when she successfully persuaded the Chief Ministers (most of them Congress) to accept procurement prices for kharif paddy and coarse grains as recommended by the Agricultural Prices Commission. The A.P.C. itself had recommended an increase of Rs. 2 a quintal where the price of paddy is Rs. 54 or less a quintal and an increase of Re. 1 a quintal where it is Rs. 55. There is to be no increase where the price is already Rs. 56. In the case of coarse grains, the procurement price of *bajra* will be Rs. 60, *jowar* and maize Rs. 58, *ragi* Rs. 57 and small millet Rs. 50. Last time when the wheat prices were to be fixed the Central Government was in a quandary. The A.P.C. had already recommended that there would be no increase in price which the Central Government was prepared to accept, whereas the Chief Ministers from the wheat-growing areas had insisted that the A.P.C. recommendation be rejected. This was done. Later, when addressing a news conference in New Delhi, the Prime Minister had stated with a feeling of helplessness that the Chief Ministers had "their way".

The respective stands taken by the Central Government and the Chief Ministers were the same this week. Knowing fully well that the cultivator could not be made to produce more foodgrains without incentives (increased production is more important this year with drought and floods in several parts of the country), the Congress Chief Ministers had come prepared to insist on a higher price for paddy than recommended by the A.P.C. The problem for the Central Government was not whether to reduce the price recommended by the A.P.C., but how to make the Chief

Ministers accept this marginal increase. Not that the Central Government did not realise the importance of higher procurement prices, and the consequent possibility of an increase in production, but the naked realisation that any substantial increase in procurement prices as demanded by the Congress Chief Ministers would make it impossible to check the price rise. Already the Central Government is being blamed for increasing the bonus of workers in the organised sector under the mistaken notion that this will help in buying industrial peace.

Reports were in circulation that at the Congress Working Committee meeting, the Chief Ministers had almost prevailed upon the Centre to reject the recommendations of the A.P.C. But Mrs. Gandhi did not show any weakening of the Central Government's view on this point. She immediately summoned a meeting of the Central Cabinet where it was unanimously decided that there should be no substantial increase in procurement prices as demanded by the Congress Chief Ministers since this will make it impossible to check the price rise. Thus, the marginal increase as suggested by the A.P.C. became the Cabinet decision. Now came the question of persuading the Chief Ministers. Mrs. Gandhi made it a point to attend the meeting and keep a watchful eye so that no erring Chief Minister tried to take advantage of the Prime Minister's absence and insist on a higher procurement price.

This was important because in the case of sugar, the Maharashtra Government had refused to fall in line with the Centre. Although this problem too has now been sorted out through a direct discussion between the Maharashtra Chief Minister, Mr. V. P. Naik, and the Central Agricultural Minister, Mr. Ahmed, the precise terms on which this accord has been reached have not been divulged. Luckily for the Central Government, most of the States are now being governed by the Congress. Had this not been so, food procurement prices could have created a good deal of friction.

SPOTLIGHT ON STATES

Wrangle Over Chandigarh: A Realistic Approach Needed

(By a Special Correspondent)

The Chandigarh issue is eluding a solution because both Punjab and Haryana have failed to appreciate the realities. Punjab should take Chandigarh and give Fazilka to Haryana with grace, and the matter should end there.

IT was not long ago that Punjab and Haryana were fighting for every inch of the city of Chandigarh. Today both are saying they do not want it. Haryana says Punjab can take it. Punjab says: "Let the city remain a Union Territory. We can do without it". La Corbusier's "dream city" has now become a nightmare. The Centre too is becoming restless over the city for political as well as economic reasons. Politically, it is a dormant volcano that can become active any moment. Economically, it is a white elephant whom no one wants to feed. Punjab and Haryana have for years defaulted in paying their dues which now run into several crores of rupees in the shape of rents and other charges. The city has no municipality and no taxes on houses. The growth of the city and its periphery has been haphazard. Punjab and Haryana are building their own townships on its fringes against the original plans.

But more important perhaps than the interest of the city and its citizens is the fate of the Centre's announcement of 29th January, 1970. Haryana calls this an "award" but Punjab thinks it is a "decision". Punjab now wants to wriggle out of it while Haryana wants it to be implemented *in toto*. Critics and observers outside the two States seem to be indirectly supporting Haryana on the plea that the Centre's "awards" would lose sanctity and force if the States were allowed to flout them. Their point is that the time for going into the merits of the case is over. It is now the time for action. They blame the Centre for the delay and the resulting confusion which has given the new Punjab leadership the opportunity to unsettle a settled issue. Even now, if the Centre wants to salvage its reputation, it is not too late to make amends, they point out.

The Centre has resisted all these pressures urging it to act. It has also refrained from conceding Haryana's demand for a boundary commission provided in the award and Punjab's plea for a ten-year moratorium on the issue. The Central leadership has even refrained from pronouncing its verdict on the heated controversy whether the announcement on 30th January, 1970, was a "decision" or an "award", since the former is open to re-examination while the latter is binding on both parties. All documents of the time, including statements in Parliament, however, use the word "decision". The Prime Minister, Mrs. Indira Gandhi, reportedly told the two Chief Ministers, Mr. Zail Singh of Punjab and Mr. Bansi Lal of Haryana, to keep quiet and not to exacerbate feelings. But this discipline does not obviously apply to the Opposition parties.

All the noise in the two States and silence in quarters where it is least desirable have tended to complicate what might otherwise have been a simple issue. Briefly, the Centre's decisions of three-and-a-half years ago had three components. These were: Chandigarh, now a Union Territory, should go to Punjab; Fazilka and Abohar towns and some villages in Fazilka tehsil now in Punjab will be transferred to Haryana; a boundary commission will be appointed to examine other territorial disputes. Chandigarh would be given to Punjab by January 1975 while Fazilka would be given to Haryana along with the exchange of areas under the award of the proposed boundary commission. Haryana would get Rs. 20 crores, half of it as loan, to build a new capital. Mr. Gurnam Singh, the then Chief Minister of Punjab, refused to agree to the "barter deal". But at the same time, the Centre's announcement was considered adequate for Sant Fateh Singh to give up his threat of self-immolation. On his return from Delhi even Mr. Gurnam Singh announced that it had been a victory for Punjab since Chandigarh had been awarded to it and he was confident that the other part of the "decisions" regarding Fazilka would be scuttled. There was some

trouble in Haryana but finally the State was reconciled to the decisions.

The intervening period between then and now was one of uncertainty. With the return of the Congress in both Punjab and Haryana, the time was considered propitious for implementing the old decision but, quite unexpectedly, Punjab sought a moratorium. Afraid that it might have to quit Chandigarh by January 1975 without getting Fazilka in return, since a boundary commission had yet to be appointed, Haryana demanded the immediate appointment of the commission and implementation of its award within a year. This precipitated matters and with the Centre keeping quiet, passions ran high in both the States.

The Punjab Government's case is that the Punjab Congress which was then in the Opposition rejected the Centre's "decision" when it was announced. According to it, the areas sought to be taken out of Punjab are really Punjabi speaking but with a Hindu majority. More than anything else Punjab is afraid of the proposed boundary commission since, by the same yardstick, some of its remaining Hindu majority areas in the north may be awarded to the adjoining Himachal Pradesh. This the Punjab Congress leaders, notably the Chief Minister, Mr. Zail Singh, fear would only help create a Sikh homeland in due course. Haryana's case, on the other hand, is that the Shah Commission had awarded Chandigarh and the neighbouring areas of the Kharar tehsil to Haryana but this entire territory was wrongfully denied to it because the Centre succumbed to the pressure of the Akalis. Now if Chandigarh goes to Punjab, Haryana must be compensated in kind. Furthermore, there is substantial evidence of various commissions and census records that the disputed Fazilka area is really Hindi speaking, says Haryana.

A careful study of the situation would show that most of the fears and suspicions of both the States are exaggerated. By losing Fazilka and gaining Chandigarh Punjab does not lose the proportion of Hindus in its population. The State has 56 per cent Sikhs and 44 per cent Hindus. Both the disputed regions have a population of about 200,000 each and in each Hindus constitute nearly 80 per cent. It should also be clear to Punjab that things being what they are, it cannot get both of

them and it concedes as much when it says that Chandigarh can remain a Union Territory permanently, an impossible and unworkable solution. Haryana likewise must realise that a boundary commission cannot give much to it out of Punjab. In fact, some Haryana areas like Kalka and Morni Hills may go to Himachal Pradesh being hilly.

How to End the Crisis of Power Supply in Bihar

(By a Special Correspondent)

Industries in Bihar have been badly affected due to the power shortage. The State can hardly achieve any progress as long as the gap between the planned and actual generation of power remains.

LIKE many other States, Bihar has been suffering from a severe shortage of power resulting in a substantial loss of industrial production. Till now there is little sign of improvement in the situation. The continued power shortage has affected Bihar's industrial development both in the large and small-scale sectors. The growth of medium and small industries has been tardy and many units have to suffer losses due to frequent interruptions in power supply and fluctuations in voltage. Since the demand for power is fast outstripping the supply, the State Electricity Board frequently resorts to load shedding and switching off the supply without intimation or at very short notices. Although a tripping may cause an interruption in power supply for a few minutes only, it takes about 75 minutes to restore normalcy in production in a continuous process industry.

It would appear that the reason for this almost perpetual power shortage is the gap between planned and actual generation and some of the main contributing factors are the unachieved targets and the chronic delay in the execution of power schemes. The fifth annual power survey conducted in 1968 by the C.W.P.C. assessed the loads on the S.E.B. power system in Bihar by the end of 1973-74 as follows: north Bihar 185 megawatts; and South Bihar (excluding Damodar) 642 megawatts. Subsequently, the C.W.P.C. reduced the total to 777 megawatts due to the industrial recession which

The solution would seem to lie in the Centre as well as the two States realising these realities. Under the present circumstances, a boundary commission will benefit no one. Punjab should take Chandigarh and give Fazilka to Haryana with grace and there the matter should be allowed to end for ever by common consent.

followed in the wake of a severe drought in the State. For the period beyond 1973-74, the load survey has been done for north Bihar only but there are indications that the total demand for both north and south Bihar (outside the D.V.C. area) will be of the order of 1,300 megawatts by 1978-79.

Bihar has two agencies for supplying power, namely, the S.E.B. and the Damodar Valley Corporation. The S.E.B. has presently an installed capacity of about 570 megawatts, but it has not been possible for it to achieve a sustained generation of even 250 megawatts. There have been numerous cases of total failures in spite of the fact that the system of the S.E.B. is interconnected with the systems of the D.V.C., Orissa and Uttar Pradesh. Similarly, the D.V.C. with an installed capacity of about 1,100 megawatts is not able to supply on a consistent basis a peak demand of even 550 megawatts. The S.E.B. in Bihar runs two thermal power stations: one in Patratu and the other in Barauni. According to the latest information available, Patratu is generating 148 megawatts against the installed capacity of 300 megawatts. The Barauni station is generating 60 megawatts, against the installed capacity of 145 megawatts. There are various reasons for the slow output.

Patratu units are all coal-based. The coal needed for running these units was to have been made available by the National Coal Development Corporation (N.C.D.C.) by opening a mine close by. For various reasons, the close by mine and washery have not yet been opened by the N.C.D.C., with the result that coal has to be brought from distant places adding to its cost. It may be

mentioned here that the S.E.B. had to enter into a long-term contract with the N.C.D.C. for the consumption of coal from nearby collieries. The coal obtained at present at Patratu units does not conform strictly to the specifications recommended by boiler designers. This leads to serious operational problems and frequent troubles. Light diesel oil is used as a supporting fuel. The Indian Oil Corporation is not able to supply light diesel oil from Barauni refinery mainly due to the paucity of wagons. The oil-burning Barauni units are also not getting smooth flow of fuel oil; in emergency, some of these units can use coal.

Although the two major generating stations have the capacity to meet the present demand, it has not been possible to do so because of mismanagement and inefficiency. The Ranchor Committee mentioned that the inadequacy of transmission facilities has resulted in a power shortage in certain areas on both banks of the Ganga. The distribution system too has not been planned to take care of the expected rise in load during the next few years. It is necessary to provide a reasonable amount of stand by transformer capacity in receiving sub-stations to guard against transformer failure. The frequent revision of tariff by the S.E.B. has adversely affected all types of consumers, particularly heavy industries. A slab on energy charges was available to large consumers till July 1970. The withdrawal of this reasonable concession is neither justified nor desirable in the long-term interest of the State's economic development. Unless Bihar can enhance efficiency of power generation and transmission, there would be little prospect of increasing its *per capita* income.

PEOPLE AND PERSONALITIES

Mr. P. N. Mathur, chairman of British India Corporation Ltd, Kanpur, has been elected president of the Upper India Chamber of Commerce for 1972-73.

Mr. A. Kanoria has been elected president and Messrs B. K. Swaika and D. M. Kothari vice-presidents of the Merchants' Chamber of Commerce, Calcutta, for 1972-73.

Mr. J. V. Dehejia has been appointed Country Manager, India, for I.T.T. Far East and Pacific, Inc.

MONEY AND BANKING

Grave Risks in Opening More Branches Without Suitable Bank Personnel

(By a Special Correspondent)

Branch expansion without consideration of the availability of suitable personnel is fraught with grave risks. But the existing capacity of the training colleges is hardly adequate to meet the annual demand.

FOURTEEN major Indian commercial banks were nationalised in July 1969. For some time earlier, the banking system in India had been subjected to social control and the banks had begun to respond and re-adjust themselves to the new situation. However, the pace of progress was felt to be inadequate and, therefore, nationalisation was considered to be the only means to achieve the desired results. It is now over three years and a balance-sheet of this period should give a fair assessment of the banking situation. Unfortunately, the balance-sheets of banks are for calendar years and figures are not available for the exact periods. *Banking Profile* published by the Reserve Bank of India provides some information up to the end of 1971 but it only seeks to highlight the achievements—the credit side. It does provide a lot of information, but as in the case of a balance-sheet, one has to hunt for hidden facts, and to draw inferences and conclusions to get a full picture.

One should look at the credit side first. The Statewise enumeration of facts and figures, however impressive, is not material. If the States have lagged behind either in development or in promoting the banking network and other facilities, the entire blame cannot be laid on the banking system. The banks could have taken the lead but in the absence of consciousness and awareness among the States themselves, no amount of external spoon-feeding is likely to lead to any perceivable results or spectacular achievements. The primary responsibility in this regard, therefore, squarely rests on the States themselves and they alone should own the responsibility for their backwardness or lack of development. The banking system has but little scope to make any headway unless the States concerned are equally eager to

take fullest advantage of the facilities which are available for the asking.

Banking Profile states that "commercial bank branch expansion has received a great impetus since the nationalisation of the 14 Indian banks in July 1969. No fewer than 4,723 new offices of commercial banks were opened between 19th July, 1969 and 31st December, 1971—2,775 branches by 14 nationalised banks, 1,310 branches by the State Bank group and 638 branches by banks in the private sector". As at the end of December 1971, 1,901 licences were pending, over and above a total of 12,985 branches already in existence. Licences pending with the State Bank group are not indicated; in any case the group enjoys a privileged position in that in addition to the monopoly of Government business and as the agent of the Reserve Bank, it has the added advantage of having an Integration and Development Fund which can be used to make up the losses arising from its new branches. A reference to this was made by one of the custodians some time ago and a demand was also put forth that a similar facility should be made available to the nationalised banks to give a fair view of their performance and particularly of their profitability. The State Bank is reported to have agreed to give up recourse to this fund and the Banking Commission has also recommended its discontinuance. But the fact remains that the progress achieved by the State Bank in the field of branch expansion has not been as spectacular as that of the 14 nationalised banks either before nationalisation, under social control, or even thereafter.

The total deposits of the banking system or the deposits mobilised by the new offices as on 31st December, 1971, have not been given. The Statewise break-up is as on the last day of March 1971. Certainly, the Reserve Bank should be in a position to give relative figures as at the end of December 1971, considering that its profile was published in the beginning of August 1972 (although it does not bear a date). Total deposits of the banking system stood at Rs.

6,855.88 crores as at the end of December 1971, an equally commendable achievement, although it is just around 18 per cent of the national income. But there is considerable ground to cover. Take the case of branch expansion. Despite the fact that as many as 5,311 new offices have been opened during the three years 1969 to 1971 and at least 1,901 more offices would be opened in 1972 on the basis of the pending licences—and this by any standard is a remarkable and commendable achievement—commercial banks in India had not made any serious effort in this direction in the past, as would be evident from the table.

It is necessary to understand and analyse why the pace of expansion was slow and what were the deterrents. The growth was indeed haphazard and there was marked concentration of bank branches at certain centres. The first effort of the authorities in this direction was, therefore, aimed at curbing expansion rather than promoting growth. It is equally necessary to bear in mind that with the enactment of the Banking Companies Act, later amended as the Banking Regulation Act, 1949, banking in India has been controlled and regulated and, therefore, the authorities should bear primary responsibility for the failure or lapses in the system. Having analysed the causes, necessary steps should have been taken to secure the desired results. It cannot be said that the authorities were not alive to this aspect but perhaps they lacked adequate powers or the banking system itself was not alive to its needs and could not bring sufficient pressure to secure reasonable opportunities and facilities conducive to its growth.

It may be remembered that despite the acknowledged achievements, the Indian banking system lacked a pioneering and innovative spirit and a dynamic leadership which could guide it on its onward march. In the absence of such a leadership, it is unfortunate that the official machi-

hery too failed to provide it the necessary direction and guidance. The Reserve Bank did indeed establish the Bankers Training College with aid from the Colombo Plan and over the years the College has done a commendable job. But the little impact it made on the banking system should have awoken the authorities to the fact that no amount of external effort would and could straighten or strengthen the mechanism.

It is worth while to note that before establishing the B.T.C. the Reserve Bank was cautious in permitting banks to open branches without consideration of the availability of adequately trained and sufficiently experienced personnel, paucity of which prompted it to take the lead in settling up the B.T.C. But such seems to be the hurry and anxiety to accomplish miracles that a basic requirement such as availability of suitable personnel would appear to have been totally ignored. Indeed, while introducing social control, the then Central Finance Minister was cautious enough to say that the pace of progress had necessarily to be slow and no miracle should be expected overnight. He appointed a working group to go into the training and long-term requirements of the banking industry. The working group re-

commended the establishment of an apex body to take care of training and developmental aspects.

Accordingly the National Institute of Bank Management was set up in 1968. But this august body with a galaxy of talent recruited from international markets has yet to make any impact on the system. The Banking Commission has gone into this aspect at great length and has reiterated the view of the Adarkar Committee that the Institute should have a good admixture of academic personnel and bankers with experience in commercial and central banking. The annual report of the N.I.B.M. for 1971, however, shows that while its 16-member governing council had three custodians of commercial banks in addition to the chairman of the State Bank of India, the faculty consisting of 24 experts in various areas had only one banker. However, despite the negligible turnover by the training colleges, even with an apex body to streamline the training programmes, banks have been goaded into phenomenal expansion in utter disregard of the availability of personnel to man the branches. Mr. B. N. Adarkar, chairman of the working group which recommended the setting up of the N.I.B.M., in his A.D. Shroff Memorial Lecture last year had utter-

ed a warning that branch expansion without consideration of the availability of suitable personnel was fraught with grave risks and, therefore, the authorities should ensure that the branch expansion programme was accompanied by concurrent training programme. But even a year after this observation was made, the year's target appears to be 2,000 branches, although the existing capacity of the training colleges is hardly 1,000 a year and many of them are not working at full capacity.

The N.I.B.M. has produced two papers, "Manpower Planning in Indian Commercial Banks" and "Long-term Forecasting of Manpower Requirements of the Commercial Banking Industry in India", for the International Conference on Applications of Operations Research in Banking and Finance in Montreal, Canada. But their relevance and application to the industry concerned at home seems to have been underplayed or are these not meant for home-consumption or cannot they bear application? It has also a number of research projects on hand for 1972 but if the fruits of research do not contribute to progress or lead to results or are not applicable, it should prove a futile exercise and lead to waste of energy.

Shares Steadier: Talk of a Pragmatic Approach Helps Sentiment

THE stock markets have presented a steadier front this past week. The start was hesitant, but the markets have later edged their way up. General reluctance to press sales at lower levels, short-covering and replacement buying have contributed in varying measure to the week's rally. With caution still the keynote of trading, interest has continued to be selective and turnover has remained restricted. Net changes over the week have shown a mixed pattern but plus signs have far outnumbered the minus signs and gains recorded by certain counters have been quite impressive. Since the all-India index for variable dividend securities had touched a new low for the year in the preceding week and that this was only some 2 per cent above the lowest point for nearly two years, technical considerations have favoured a rally. But sentiment has also been aided by certain other favourable influences as well.

The news from the corporate front has been encouraging. Orissa Cement, Hindustan Lever, Sylvania and Laxman, Jost's Engineering, Fibreglass Pilkington, Garware Nylon, Enfield India, Great Eastern Shipping and Scindia Steamship—to mention some names—have had a message of cheer for their respective shareholders. The markets appear to be in a mood to respond to favourable news. The signing of the agreement between India and the I.D.A. for two credits aggregating Rs. 118 crores and the Central Finance Minister, Mr. Y. B. Chavan's statement that the Indo-U. S. relations would show a steady improvement over the years have had a steadying influence on sentiment. Reports that the Central Industrial Development Ministry has been planning to liberalise imports of raw materials and components used by priority industries have further aided sentiment as the liberalisation of the import policy has been interpreted as an indication of the Government's earnest desire to boost industrial production. An intensive utilisation of the existing capacity alone can yield quick results.

The stock market seems inclined to the view that if the Government can quickly remove uncertainties

about its economic and industrial policies, it will greatly help the revival of business confidence which has been shaken by too many radical official pronouncements. The deliberations at the forthcoming A.I.C.C. session in Ahmedabad will be watched with keen interest. The recent overall behaviour of the markets suggests that they are reluctant to move lower, but their ability to push their way up will depend largely on a positive evidence that the Government is keen to adopt a pragmatic approach to revive the economy.

Gilt-edged securities have remained steady and turnover has been moderate. The 3 per cent conversion loan 1986 has been quoted at Rs. 59.85. The State Government loans have received selective support. Turnover has been moderate.

The Calcutta stock market has shown a steadier trend on short-covering and replacement buying during the past week. But trading has been cautious in view of a number of imponderables of the economy. The larger outlay proposed for the Fifth Plan, the Government's anxiety to accelerate industrial growth and its reported decision to liberalise raw material imports have apparently helped sentiment. This apart, corporate news during the week has been quite helpful. Among engineering shares, Guest Keen Williams, Escorts, Burn and Electrosteel Castings have improved. Among jute shares, Birla, Ganges and Agarpara have been supported. Among coal shares, East Indian and Sahu Minerals have been transacted. Among paper shares, Tribeni Tissues, Straw Products, Sirpur and Titaghur have been bought. Among miscellaneous shares, Hindustan Aluminium, Rekitt Coleman, Mohan Meakin Breweries, Universal Cable and English Electric have been better. Among tea shares, Hoograuli, Tengpani and Hasimara have been traded.

After a brief spell of hesitancy, Dalal Street has turned steadier with leading equities edging higher on short-covering and fresh support. The volume of business has continued to be small and interest has tended to be selective. While the week's

recovery appears to be essentially technical, buying has also been inspired by the growing feeling that the market has by now discounted most of the bear factors. Gains have been widespread and quite impressive in some cases. Certain shares have received good attention on special considerations. Scindia and Great Eastern Shipping have been marked higher on ideas of a bonus issue. Century Enka, Ceat Tyres, National Rayon, Associated Cements, Century and Premier Constructions have been among the bright spots. Cotton textiles, rayons, engineerings, shipping, cements and chemicals—all sections have ruled steadier. Although quite a few shares have wound up the week with minus signs, net losses have been relatively small.

The Madras stock market has been fairly active this past week. Several shares have attracted better enquiries. Among planting shares, Nelliampathy, Neelamalai and Stanes Amalgamated have been bought while Consolidated Coffee have remained dull. In the textile section, there has been a general improvement in sentiment. As a result, Madura, South India Viscose and Travancore Rayons have improved. There have also been

enquiries for Anglo-French, Radhakrishna and Rajalakshmi due to favourable corporate news. In the miscellaneous section, Aluminium Industries have been supported. Ashok Leyland and Mettur Chemicals have also been favoured. But India Cement have declined on selling pressure. In the sugar section, several shares have attracted better enquiries. Aruna Sugars and E.I.D. have shown a steadier trend while K. C. P. have attracted selling pressure. Bank shares have been quiet. But some business has been done in Indian Overseas Bank.

India Steamship Records Big Rise in Freight Earnings

ADDRESSING the annual general meeting of the India Steamship Co. Ltd held recently, Mr. K. K. Birla, chairman, said that the Company's freight earning during the year ended March 1972 was Rs. 16.97 crores which was considerably higher than the earnings in all earlier years. (A fuller text of the chairman's statement was published in last week's issue of *Capital*.) Thirtysix voyages were completed in the Liner service and eight in the coastal trade, as against 42 round voyages in the overseas trade during the preceding year. After providing Rs. 1.57 crores for depreciation and meeting all other normal charges, a balance of Rs. 1.70 crores is left in the profit and loss account. The directors have recommended the payment of the arrear dividend out of general reserve and also Rs. 1.63 lakhs for distribution as dividend to the preference shareholders and Rs. 24.75 lakhs to the ordinary shareholders at Re. 1 a share, subject to deduction of tax.

The chairman mentioned some of the major problems confronting the shipping industry. He said that in the Liner sector, conditions were far from satisfactory with soaring cost of operations, slower turnaround in various ports, losses due to labour strikes, dollar devaluation and cur-

rency readjustments. The cargo handling costs are rising considerably in the western countries with the industry having no say in the matter. The shipowners are also subjected to the imposition of the bunkering charges. The chairman referred to certain facilities which the maritime countries extend to the shipping companies to help their operations. The absence of such assistance in this country has placed the Indian shipping industry at a disadvantage. The chairman said that the Government's decision to withdraw the facility of development rebate effective from 1st June, 1974, will have adverse effects on the profitability and growth of the shipping industry as a whole.

M.M.T.C.

Satisfactory Results

IN his speech at the annual general meeting of the Minerals and Metals Trading Corporation of India Ltd held recently in New Delhi, Mr. S. Ramachandran, chairman, said that the trading results of the Corporation were quite satisfactory during 1971-72. (A fuller version of the speech was published in last week's issue of *Capital*.) The profit

before taxation has been over Rs. 16 crores, nearly double that of the previous year. Turnover has been also about Rs. 17 crores more than in the previous year. The chairman said that the Corporation did not have a good year in the matter of exports of certain items such as iron ore, manganese ore, ferro-manganese and coal, due largely to the worldwide recession in the steel industry. The Corporation has diversified the markets for iron ore and has met with a significant success in new markets, like Korea and Taiwan. The chairman said that "in a recent review of metal buying, it was noticed that significant economies had been secured in foreign exchange by the M.M.T.C.'s buying of non-ferrous metals". One of the most remarkable features of the recent commercial activity for the Corporation in the matter of imports has been the conclusion of long-term contracts with producers of metals and fertiliser raw materials. In line with the Government's desire to become self-reliant, the Corporation is directing more and more of its purchases towards bilateral trading countries and other countries with which there are trade agreements for the balanced purchase of goods.

ENFIELD INDIA

Sales Rise

THE operating results of Enfield India Limited for the half year ended June 1972 are encouraging. Sales were more than 25 per cent higher at Rs. 3.95 crores, against Rs. 3.14 crores for the corresponding six-month period last year. It is estimated that the aggregate turnover for 1972 will be higher by about 20 per cent at Rs. 8.50 crores, subject to the power cut announced by the Tamil Nadu Government not having any serious impact on production in the last quarter of the year. The increase in sales is due to larger production and demand for both motor-cycles and agro-industrial engines. The Company feels that with a rise in turnover, it will not be difficult to raise its net earnings to a new high level, although not in proportion to the rise in turnover.

The Company has made progress on its new project in Anaikarai-patti. With the completion of its expansion scheme in Thiruvottiyur and commissioning of the new unit, the Company hopes that production

and sales in 1973 would possibly cross the Rs. 10-crore mark. The future prospects are, therefore, promising.

HINDUSTAN LEVER

Interim Dividend

HINDUSTAN Lever has decided to pay an interim dividend of 70 paise a share for the year 1972, subject to deduction of tax. The dividend is payable on 10th November, 1972, to shareholders registered in the books of the Company at the close of business on 23rd October, 1972.

HINDUSTAN WIRE

Profit Declines

DESPITE an increase in sales from Rs. 3.28 crores to Rs. 3.34 crores for the year ended March 1972, Hindustan Wire Products Ltd has earned a lower profit of Rs. 21.53 lakhs (against Rs. 29.64 lakhs), after providing Rs. 6.33 lakhs (against Rs. 4.62 lakhs) for depreciation and Rs. 2.02 lakhs (against Rs. 1.70 lakhs) for reserve for development rebate. An ordinary taxable dividend of 12.5 per cent on the enhanced capital has been declared, absorbing Rs. 4.38 lakhs. This offers a yield of 6.9 per cent at the present price of Rs. 18 a share of Rs. 10 each. Taxation accounts for Rs. 12.25 lakhs (against Rs. 16.90 lakhs) and general reserve gets Rs. 5 lakhs (against Rs. 9 lakhs). After making other adjustments, a sum of Rs. 5,044 is carried forward, against Rs. 14,883 brought in.

BINNY

Profit Earned

IF the results of Binny Ltd for the half-year ended June 1972 are any guide, it can well be said that the Company has turned the corner. For the six-month period, the Company has earned a profit of Rs. 87 lakhs, after providing depreciation of Rs. 63 lakhs and the statutory minimum bonus. This compares with the previous year's loss of Rs. 144 lakhs, after providing depreciation of Rs. 64 lakhs. Sales for the half-year amounted to Rs. 2,503 lakhs, as against Rs. 2,037 lakhs for the corresponding six months of the previous year. The directors say that the trading profit, before depreciation, shows

UNITED BREWERIES

A Good Year

DUE to a substantial rise in profit and sales for the year ended March 1972, the directors of United Breweries Ltd have stepped up the dividend to 12 per cent from the previous year's 10 per cent. The net profit for the year amounts to Rs. 37.94 lakhs, after providing Rs. 20.69 lakhs for depreciation, Rs. 31.60 lakhs for taxation and Rs. 2.77 lakhs for development rebate reserve. This compares with the previous year's profit of Rs. 17.85 lakhs, after providing Rs. 19.12 lakhs for depreciation, Rs. 20.50 lakhs for taxation and Rs. 5.25 lakhs for development rebate. Sales were higher at Rs. 224.65 lakhs (against Rs. 172.04 lakhs). With Rs. 3,272 brought forward, the total sum available for appropriation comes to Rs. 37.97 lakhs. Out of this, taxation relating to previous years amounted to Rs. 1.44 lakhs. The balance of Rs. 36.53 lakhs is transferred to general reserve. The dividend is to be paid out of general reserve.

CENTURY MILLS

Bigger Interim Dividend

THE directors of Century Spinning and Manufacturing Company have declared an interim dividend of 20 per cent (Rs. 20 a share) for 1972, against 16 per cent paid for 1971. The interim payment will require Rs. 70.98 lakhs, against Rs. 56.78 lakhs last time. The Company had paid a

GILLANDERS ARBUTHNOT : DIVERSIFICATION PLAN

THE working of Gillanders Arbuthnot and Co. Ltd for the year ended March 1972 shows that the pre-tax profit has fallen from Rs. 38.46 lakhs to Rs. 36.38 lakhs, after providing Rs. 1.45 lakhs (against Rs. 1.22 lakhs) for depreciation. The taxable ordinary dividend of 12 per cent has been maintained, absorbing Rs. 7.80 lakhs which will be paid out of general reserve. This offers a yield of 13.2 per cent at the present price of Rs. 9.06 a share of Rs. 10 each. Allocations include Rs. 10,275 (against Rs. 3,942) for development rebate reserve and Rs. 19 lakhs (against Rs. 18.06 lakhs) for taxation. A sum of Rs. 6,284 (against Rs. 19,313) has

been transferred from development rebate reserve. After making other adjustments, Rs. 16.33 lakhs (against Rs. 36.36 lakhs) have been transferred to general reserve. Sales rose from Rs. 2.22 crores to Rs. 2.44 crores.

The impact of the cessation of the managing agency of the Indian Copper Corporation on the Company's profitability has been severe. The Company is considering several projects for diversifying its manufacturing activities. It has recently received from the Central Government a letter of intent for manufacturing aluminium slugs, solid containers and tubes.

Simulation of a real dynamic system circumscribed by linear and non-linear equations with constant and variable factors, can be well performed by ANALOG COMPUTER, model MN-18M.

The order of equations done by one computer is up to 10.

The MN-18M control system is suitably employed in an analog-digital system, as well as in a complex of ten MN-18M computers handling multiplex problems.

Space occupied by the computer is mere 0.63 sq.m.

An MN-18M can be coupled, if necessary for supervision or recording of computer findings, to tube digital voltmeter, loop oscillograph, electronic beam indicator, DPR-5 bico-ordinate recorder, or a section of SUSS21-type follow-up system.

V/O ELEKTRONORGTEKHNIKA render assistance to buyers in assembly, alignment and launching of the equipment, in establishing and running the maintenance services as well as in training the personnel.

total dividend of 45 per cent for 1971. The higher interim dividend for 1972 has been in line with general market expectations.

KHATAU MILLS

Bonus Issue Proposed

KHATAU Makanji Spinning and Weaving Company has reported a substantial decline in its profit for the year ended June 1972. Even so, the dividend has been kept unchanged at 12 per cent and the directors have also proposed a one-for-two bonus issue which is subject to the consent of the Controller of Capital Issues. The gross profit has declined by nearly 23 per cent from Rs 130.02 lakhs in 1970-71 to Rs. 100.24 lakhs in 1971-72 even though sales have improved by a little over 5 per cent from Rs. 11.72 crores to Rs. 12.32 crores. The ratio of profit to sales has declined from around 11.1 per cent to 8.1 per cent. After providing Rs. 54.73 lakhs (against Rs. 45.46 lakhs) for depreciation, Rs. 17.84 lakhs (against Rs 13 lakhs) for development rebate reserve and Rs 13.50 lakhs (against Rs. 38.50 lakhs) for taxation, the net profit amounting to Rs. 14.17 lakhs (against Rs. 33.06 lakhs) has been transferred to general reserve out of which the proposed equity and preference dividends will be paid.

UGAR SUGAR

A Prosperous Year

UGAR Sugar Works has turned out substantially improved results for the year ended June 1972 and the dividend has been stepped up from 14 per cent to 20 per cent of which 8 per cent will be exempt from tax in the hands of shareholders. The Company's working has recorded all-round improvement in production, sales, profit and margins. The sugar output has increased from 29,513 tonnes to 34,472 tonnes. While the production of industrial alcohol was only a little higher at 3.68 million bulk litres, against 3.66 million bulk litres, that of potable alcohol rose from 28,638 to 43,962 bulk litres. With sales up by about 45 per cent from Rs. 5.01 crores to Rs. 7.28 crores and the gross profit rising by about 130 per cent, the ratio of profit to sales has improved from around 10 per cent to 15.7 per cent. After providing Rs. 24.43 lakhs (against Rs. 28.13 lakhs) for depreciation, Rs.

32,600 (against Rs. 5.03 lakhs) for development rebate reserve and Rs 74.60 lakhs (against Rs. 2.20 lakhs) for taxation, the net profit for 1971-72 amounts to Rs. 14.89 lakhs, against Rs. 14.50 lakhs in the preceding year. After some important write-backs, the disposable surplus amounts to Rs. 44.31 lakhs, against Rs. 17.61 lakhs in the previous year. A sum of Rs. 15.61 lakhs (against Rs. 16 lakhs) has been transferred to general reserve and Rs. 10 lakhs (against nil) to dividend equalisation reserve. The equity dividend will absorb Rs. 16.81 lakhs (against Rs. 10.08 lakhs).

MIDNAPORE COMMERCIAL

Sales Up but Profit Down

DESPITE a rise in sales from Rs. 16.91 lakhs to Rs. 54.03 lakhs for the year ended 13th April, 1972, the profit of Midnapore Commercial Co. Ltd has amounted to Rs. 6.76 lakhs (against Rs. 7.08 lakhs), after providing Rs. 77,585 (against Rs. 86,123) for depreciation and Rs. 7.90 lakhs (against Rs. 7.80 lakhs) for taxation. The ordinary taxable dividend of Rs. 4 a share has been maintained which will be paid out of general reserve. This offers a yield of 9.5 per cent at the present price of Rs. 42 a share of Rs. 85 each. General reserve is allocated Rs. 6.75 lakhs (against Rs. 7.25

lakhs). After making other adjustments, a sum of Rs. 6,975 is carried forward, against Rs. 6,235 brought in.

SIEMENS

Fuel Cell Battery

SIEMENS has developed a compact fuel cell battery with a continuous rating of 5 kW at 80 V. The current density is then 250 mA/cm² of electrode surface. The output can be raised to 8 kW for a few minutes. The battery consists of two units of 50 fuel cells each and weighs 90 kilograms. The temperature of the alkaline electrolyte is about 80°C.

KANORIA CHEMICALS

A Good Year

KANORIA Chemicals and Industries has raised the dividend for the year ended March 1972 from 8 per cent to 10 per cent which seems well justified by its improved performance during the year. Sales have risen by about 25 per cent from Rs. 3.08 crores to Rs. 3.86 crores and the gross profit by 31 per cent from Rs. 55.66 lakhs to Rs. 72.87 lakhs. After providing Rs. 34.50 lakhs (against Rs. 29.71 lakhs) for depreciation and Rs. 30 lakhs (against nil) for development rebate reserve, the net profit

CHAMPDANY JUTE : GOOD RESULTS

THE working results of the Champdany Jute Co. Ltd reflect the favourable conditions which prevailed during the year ended March 1972. Production was maintained at a high level despite power cuts. The jute crop during the year was satisfactory and the price of fibre was at a reasonable level; these factors enabled the Company to secure adequate stocks of fibre. The Company has made a profit of Rs. 13.14 lakhs, against a loss of Rs. 3.38 lakhs in the previous year, after providing Rs. 21.09 lakhs (against Rs. 18.58 lakhs) for depreciation and Rs. 5.43 lakhs (against nil) for development rebate reserve. A taxable ordinary dividend of Re. 1 a share (against nil) has been declared, absorbing Rs. 2.96 lakhs. This offers a yield of 7.7 per cent at the present price of Rs. 13 a

share of Rs. 10 each. Taxation is allocated Rs. 6.55 lakhs (against Rs. 1,800). After making other adjustments, Rs. 90,204 is carried forward, against a debit balance of Rs. 2.73 lakhs brought in. Sales rose from Rs. 5.01 crores to Rs. 6.97 crores.

The prospects for the current year have to be viewed with caution. The jute crop has been affected by drought conditions in parts of West Bengal and Bihar and by floods in north Bengal and Assam. The State Trading Corporation and the newly set-up Jute Corporation of India have commenced purchases of raw jute. It is hoped that the operations of these Corporations will help stabilise raw jute prices which will be beneficial to both growers and the industry.

for 1971-72 amounts to Rs. 8.37 lakhs, against Rs. 25.95 lakhs in the preceding year. After adjustments, a sum of Rs. 3.29 lakhs (against Rs. 22.45 lakhs) has been transferred to general reserve. The equity and preference dividends absorbing Rs. 12.28 lakhs (against Rs. 10.49 lakhs) will be paid out of general reserve.

The Company produced 18,442 tonnes (against 17,657 tonnes) of caustic soda. It has secured an industrial licence to expand annual capacities of caustic soda by 12,000 tonnes, chlorine gas by 10,641 tonnes, liquid chlorine by 7,250 tonnes and hydrochloric acid by 12,000 tonnes. The I.C.I.C.I. has sanctioned a loan in U.S. currency equivalent to Rs. 58.60 lakhs for the proposed expansion. The Company has also a licence to double the capacity of the B.H.C. plant to 6,000 tonnes a year. The Company has submitted proposals for foreign collaboration for the manufacture of methyl methacrylate monomer, polymer and toluene diisocyanate for which it has a letter of intent.

RUBY MILLS

Better Results

RUBY Mills has reported improved results for the year ended March 1972. Sales have gone up from Rs. 2.88 crores to Rs. 3.36 crores and the gross profit has risen from Rs. 33.54 lakhs to Rs. 39.63 lakhs. The dividend has been kept unchanged at 8 per cent. After providing Rs. 23.56 lakhs (against Rs. 16.39 lakhs) for depreciation, Rs. 7.33 lakhs

(against Rs. 3.29 lakhs) for development rebate reserve and Rs. 4 lakhs (against Rs. 7.40 lakhs) for taxation, the net profit for 1971-72 amounts to Rs. 4.74 lakhs, against Rs. 6.47 lakhs in the preceding year. The equity dividend will absorb Rs. 2.56 lakhs.

F.C.I.

Steel Tube from Britain

NEARLY 300 miles of cold drawn steel heat exchanger tube made by a British firm will be used in a fertiliser plant now being built in southern India by the Fertiliser Corporation of India. The contract placed with the firm—Accles and Pollock Ltd, a T.I. Steel Tube Division Company of Oldbury, Worcestershire—is worth more than £130,000. It involves the supply of a million feet of mild steel tube and half-a-million feet of a higher carbon, higher manganese steel tube. To the plain tube division of Accles and Pollock, which is handling the contract, it represents one of the largest export orders for many years. It was obtained with the help of T.I. (Export) Ltd and its Indian agents, T.I. and M. Sales Ltd.

VAYITRI PLANTATIONS

Loss Incurred

THE Vayitri Plantations Ltd has maintained the dividend for the year ended March 1972 at 6 per cent. The working of the Company for the year has resulted in a loss of Rs. 1.30 lakhs, compared with the profit of Rs. 3,805 in the previous year. A sum of Rs. 46,558 being excess provision is transferred to the profit and loss account along with Rs. 82,200 transferred from general reserve, Rs. 24,000 transferred from dividend equalisation reserve and Rs. 1,645 brought forward from the previous year, making a total of Rs. 1.54 lakhs. Out of this, the dividend amounts to Rs. 24,000. After deducting the brought-forward loss of Rs. 1.30 lakhs, there is a small balance of Rs. 21 which is being carried forward.

WESTERN BENGAL COAL-FIELDS

Encouraging Results

WESTERN Bengal Coal-fields Ltd has produced encouraging results for the year ended March 1972. There has been an all-round improvement in production, despatches and stocks. The various development

programmes of the Company have made further satisfactory progress. The year was marked by the take-over of management of coking coal mines by the Central Government from October 1971 which have since been nationalised. However, the Company has not been affected as all the mines belonging to it consist of non-coking coal. Sales are up from Rs. 3.54 crores to Rs. 4.09 crores, and the profit has increased from Rs. 12.83 lakhs to Rs. 17.04 lakhs, after providing Rs. 18.01 lakhs (against Rs. 17.23 lakhs) for depreciation, Rs. 2.54 lakhs (against Rs. 2.40 lakhs) for development rebate reserve and Rs. 23.65 lakhs (against Rs. 13.22 lakhs) for taxation. In view of the Company's better results, the taxable ordinary dividend has been raised from 8.5 per cent to 10 per cent which will be paid out of dividend equalisation reserve. This offers a yield of 13.7 per cent at the present price of Rs. 7.31 a share of Rs. 10 each. Allocations include Rs. 8.75 lakhs (against Rs. 5 lakhs) for general reserve and Rs. 9.74 lakhs (against Rs. 8 lakhs) for dividend equalisation reserve. There is a carry-forward of Rs. 8,517, against Rs. 11,360 brought in. Production rose from 1,092,843 tonnes to 1,179,386 tonnes and despatches from 1,059,018 tonnes to 1,205,483 tonnes.

MYSORE STONEWARE

Dividend Raised

HE Mysore Stoneware Pipes and Potteries Ltd has produced good results for the year ended March 1972. The directors have raised the dividend to 13 per cent from 10 per cent paid for the previous year. Sales moved up to Rs. 24.10 lakhs (against Rs. 20 lakhs). The profit amounts to Rs. 4.52 lakhs (against Rs. 3 lakhs) after providing for depreciation. Adding to the year's profit of Rs. 4.52 lakhs Rs. 6,600 withdrawn from development rebate reserve no longer required, excess provision of Rs. 2,177 and Rs. 17,500 being provision for bad debts no longer required, there is a total of Rs. 4.78 lakhs. Out of this, provision for taxation is Rs. 2.51 lakhs (against Rs. 1.87 lakhs). A sum of Rs. 8,707 is transferred to development rebate reserve, leaving a balance of Rs. 3,394 brought forward from the previous year, totalling Rs. 2.21 lakhs. Out of this, general reserve gets Rs. 1 lakh (as against Rs. 25,000). The dividend claims Rs. 1.20 lakhs. The balance of Rs. 1,453 is being carried forward.

COMMODITIES

Concerted Action Needed to Ensure Fair Price for Growers, Says J.C.I. Chief

A MULTI-PRONGED concerted action was needed to ensure a proper and fair price for jute growers, observed Mr. Dwaipayan Sen in Calcutta on Saturday. Addressing the first annual meeting of the Jute Corporation of India, a public-sector undertaking, as its chairman, Mr. Sen disclosed that the J.C.I. intended to set up suitable consultative machinery at different levels in the major jute growing States like West Bengal, Bihar, Assam, Orissa, Andhra Pradesh and Tripura to serve growers' interests more effectively. He commended the setting up of "a viable super-structure of marketing institutions in which jute growers and their representatives could increasingly participate and develop their managerial talents and capabilities for undertaking marketing functions from the growers' level to the final stages of marketing". He also emphasised the need for eliminating growers' dependence on traders-cum-moneylenders for meeting their financial requirements.

The chairman believed that if jute growers were to be given a fair deal, it was not enough that prices were maintained at a reasonable level. It was also necessary that the quality of their produce was assessed fairly and weighing made accurately. In the present system of marketing, this did not always happen, Mr. Sen complained. He revealed that the J.C.I. had, therefore, decided to establish a direct relationship with growers, operating through their co-operative organisations and its own departmental purchase centres in various jute-growing States. The support prices of jute this season had been placed on a statutory basis and the J.C.I. had been made solely responsible for ensuring that prices did not drop below the prescribed levels. He referred to the various constraints under which the Corporation had to operate and hoped that when the bulk of the crop was released by growers in the coming months, the J.C.I. would be able to overcome the constraints and fulfil its planned purchase targets for the season. He reminded his audience that the J.C.I. was the youngest of several public-sector agencies set up during recent years for "ending the exploitation of millions of farmers in the country as a part of the programme of achieving

democratic socialism". About the activities of the J.C.I. during 1971-72, the chairman said that it was able to export some 96,000 bales of raw jute worth more than Rs. 4.54 crores, making a net profit of Rs. 12.91 lakhs and declaring a dividend of 8.5 per cent. It had paid a bonus to its staff even for the first year of its operation.

Fall in Prices

Concerned over recent reports that raw jute prices have declined to the season's lowest level of Rs. 23 a maund in some remote primary and secondary markets, Mr. L. N. Mishra, Central Minister for Foreign Trade, has directed the Jute Corporation of India effectively to gear up its procurement machinery in the primary and secondary markets of the jute-growing States to guarantee the statutory minimum price of fibre for growers. He has also sought the co-operation of the Chief Ministers of various States to ensure the statutory minimum price of Rs. 43 a maund, f.o.r. Calcutta ready, basis Assam Bottoms and their respective derivative levels for the ultimate growers. He is understood to have expressed the Government's anxiety over this fall in raw jute prices and has said that for guaranteeing the statutory minimum prices, it will be necessary to ensure not only a wide network of procurement agencies in the primary and secondary markets with a sizable volume of turnover but also the selection and appointment of an adequate number of agents and the provision of enough storage facilities and a well co-ordinated and speedy system of transportation linking up the interior markets with Calcutta and mill stations.

In organising these efforts, Mr. Mishra has assured the Chief Ministers that finance will pose no problem, for the Government has agreed to extend a guarantee to the State Bank of India for advancing about Rs. 15 crores to the Jute Corporation of India for financing the seasonal procurement operations. The main difficulty, he adds, relates to an adequate organisational infrastructure for the J.C.I., which cannot be provided without the co-operation of the State Governments. He has, therefore, requested the State

Governments to issue relevant instructions to their officials both in the capitals and in the interior areas to assist the J.C.I. in organising price-support purchase operations speedily and effectively.

Crop Prospects Improve

Assessing an approximate crop of 6 million bales for the current season, Mr. Sree Chand Bothra, chairman, Calcutta Baled Jute Association, has discounted the fears of any fibre shortage during 1972-73. Speaking at the annual meeting of the Association last week, Mr. Bothra observed that a very favourable weather was now prevailing in the Daissee and Tossa districts, where crop prospects had been considered rather bleak earlier during the season. One should not be surprised, he said, if eventually the crop turned out bigger than what he had estimated. Taking account of the usual inflow of 800,000 bales from across the border and 1.6 million bales as the carry-over with the trade, the total availability of raw jute this season could reasonably be estimated at 8.4 million bales. Out of this, the total consumption by mills and the usual

export of 100,000 bales to the Soviet Union would absorb some 7.2 million bales, leaving a carry-forward of some 1.1 million bales for the next season. In view of these facts, he appealed to the Central Ministry of Foreign Trade not to dismiss the issue of fibre exports but to give it serious consideration.

Power Shortage

Jute mills in and around Calcutta continue to suffer unannounced load-shedding, causing heavy loss of production, says the Indian Jute Mills Association in a recent Press note. Between 1st September and 25th September, 50 units, representing about 80 per cent of the industry's productive potential in the State, did not have adequate supply of electricity. The resultant loss of output was about 2,700 tonnes, worth about Rs. 1 crore, bringing the industry's loss on this account from 1st January to that date to some 30,000 tonnes, roughly valued at Rs. 11.10 crores, including some Rs. 6.66 crores in foreign exchange.

Jute Team to Rome

Mr. S. N. Chakrabartee, Jute Commissioner, is leading the three-man Indian jute delegation to the current session of the Jute, Kenaf and Allied Fibres Consultative Committee of the Food and Agricultural Organisation of the U.N.O. in Rome. Mr. B. D. Kanoria, chairman, I.J.M.A. and Mr. N. S. Maini, Joint Commissioner, Central Ministry of Agriculture, are the other two members of the delegation.

Gunnies Erratic

The Calcutta gunny market developed erratic trends during the past week. The initial firm spell was ascribed to brisk short and shipper-covering on the rumour that the floating stocks with mills after the clearance of the held-over August-shipment cargo had been considerably depleted and that the end-September due-date turnover would also be considerable. Besides, intermittent load-shedding caused a continuous loss of production. Pre-Puja bonus disbursement tension among workers also affected overall output. Besides, the D.G.S.D. was reported to have placed a fresh tender for some 6,000 bales of heavy duty sacks for September delivery. In spite of some nervous transactions, total turnover fell much below par for this time of year. The bullish factors soon exhausted their momentum and prices again eased on

a broad front as cautious bulls started booking their profits at the bulges. A near-balance in technical position induced bears to toe a cautious line and refrain from starting a bear-raid. Mills and holders of P.D.O.s were on the alert, taking note of the persistent firmness and slow arrivals in the fibre market. The I.J.M.A. statement on the massive development of the synthetic woven and non-woven P.V.C., heavy-duty and high density polyethylene packaging industry in the country depressed sentiment. Overseas enquiries for, and offtake of, jute goods also continued to be dull. The Government's delay in initiating any remedial step accentuated the industry's disappointment. The continued lack of overseas interest in Indian jute goods was reflected in the shrinkage in recent shipments to east Canada. In view of the coming seasonal holidays, shipping circles were keen on round-the-clock loading and unloading operations, even on Sundays and holidays. But so far they had not received any intimation on the matter. I.J.M.A. despatch statistics for August showed that exports had registered a small decline of 1,100 tonnes over the July-level to 40,000 tonnes. While hessian showed an increase of 800 tonnes to 21,900 tonnes, sacking dropped by 1,200 tonnes to 5,400 tonnes, carpet-backing cloth by 600 tonnes to 7,500 tonnes and miscellaneous goods by a bare 100 tonnes to 5,200 tonnes. The sharp decline in spot and afloat and September and October delivery burlap prices in the New York market by as much as 0.15 cents a yard in course of the past three weeks or so indicated the existence of a selling scare among the holders in the face of stiff buyers' resistance. The internal offtake during August was higher by 3,500 tonnes over July at 38,700 tonnes, solely due to the 3,000-tonne rise in sacking despatches to 29,700 tonnes. Turnover was moderate and the closing undertone was buoyant.

Gains in Fibre

The raw jute market opened pretty firm around the preceding week-end

levels and gradually shot up to the recent high of Rs. 57.50 a maund, f.o.r. Calcutta ready, basis Assam Bottoms, registering a gain of Rs. 2.50 a maund. The report that the Governments of India and Bangladesh had been thinking of completely sealing the long Indo-Bangladesh border, barring half-a-dozen well-staffed checkpoints for the passage of licensed items of trade, including raw jute, was followed by a complete suspension in the movement of fibre along the border regions. Market circles believed that henceforth the movement of fibre of even Indian origin from the border regions would be arrested drastically. The New Delhi report that the Central Foreign Trade Minister, Mr. L. N. Mishra, had asked the Jute Corporation of India to gear up its purchase machinery and extend brisk price support to fibre in some remote pockets in the jute growing States where prices had touched rock-bottom levels accentuated sellers' reluctance to release their holdings in spite of the rising prices. Sustained interest from mills and mill agents in selected grade fibre for ready and forward positions was a stimulant. Taking an extremely bullish view about the ultimate prospects, strong holders who had been operating in a big way were reluctant to entertain enquiries for forward positions. The end-August raw jute position of mills indicated that inclusive of an undelivered quota of 696,000 bales against previous purchases, they had an inventory of 1.52 million bales, showing an improvement of some 80,000 bales over the previous month. They had purchased 623,000 bales in August, against 451,000 bales in July, and consumed 543,000 bales, and 540,000 bales, respectively. Imports in August totalled 2,000 bales. Turnover was small. The closing undertone was bullish.

CAPITAL, 5th OCTOBER, 1972

INDUSTRIAL FINANCE CORPORATION OF INDIA

CHAIRMAN, SHRI C. D. KHANNA'S STATEMENT

Statement made by Shri C. D. Khanna, Chairman, Industrial Finance Corporation of India, at the 24th Annual General Meeting of the Shareholders of the Corporation held on the 28th September, 1972.

Friends,

I have great pleasure in presenting to you the Annual Accounts of the Corporation and the Report of the Board of Directors for the year ended the 30th June, 1972. The printed copies of the Accounts and the Report have been circulated to all the shareholders and I trust I can take them as read.

Working Results for the year

2. The working results for the year disclose a higher gross profit before tax of Rs. 4.84 crores as against Rs. 4.47 crores in the previous year. Out of the profits for the year, provision has been made for income-tax amounting to Rs. 2.17 crores. The total amount of income-tax already paid by the Corporation since its inception and that kept apart as provision for the years 1970-71 and 1971-72, for which assessments have yet to be completed, aggregate Rs. 20.32 crores. This is an indication of the direct contribution which the Corporation has made to the national exchequer.

During the year, additions made to reserves out of the profits aggregate Rs. 1.77 crores. The total reserves of the Corporation, including the General Reserve of Rs. 9.17 crores, now amount to Rs. 16.02 crores, which figure exceeds the paid-up capital by Rs. 6.85 crores. I am happy

to mention that for the second year in succession, the Corporation has declared a dividend of 5% for the year on its paid-up capital, the maximum permissible under the provisions of the I.F.C. Act.

Operations during the year

3. During the year 1971-72, the Corporation approved financial assistance of Rs. 39.16 crores for 68 in-

Shri C. D. Khanna

dustrial projects compared with assistance of Rs. 35.03 crores for 61 projects approved during the previous year and assistance of Rs. 18.44 crores for 47 projects approved in 1969-70.

The aggregate cost of the projects for which assistance was sanctioned during the year is estimated at about Rs. 405 crores. Of the projects assisted, 39 were new projects accounting for about 72.8% (Rs. 28.53 crores) of the total sanctions for the year.

The projects assisted this year cover a wide variety of industries.

Assistance was sanctioned for five projects in the fertiliser industry, six projects in the iron and steel industry, five projects in the paper industry, seven projects in the electrical machinery industry, five projects in the chemical industry and two projects in the synthetic fibre industry. Other industries which received assistance were sugar, cotton textile, automobile ancillaries, rubber products, metal products, glass, etc.

The sanctions were spread over 15 States. Out of the 68 projects, for which financial assistance was sanctioned during the year, 17 projects with net total sanctions of Rs. 14.10 crores (about 36% of the total sanctions for the year) would be located in districts notified by the Central Government as industrially less developed. During the year, the Corporation sanctioned assistance to 10 sugar co-operatives and one textile co-operative, for a total amount of Rs. 9.99 crores which was about 25.5% of the total sanctions. The Corporation sanctioned assistance to one public sector undertaking in Kerala for a project involving the manufacture of caustic soda/chlorine and liquid sulphur dioxide.

The Corporation's assistance has been instrumental in bringing to the industrial field a large number of new entrepreneurs some of whom have already made their mark on the industrial scene. During the year, the Corporation sanctioned financial assistance for 13 projects promoted by new entrepreneurs and technologists.

Assistance disbursed in cash during the year aggregated Rs. 21.99 crores compared with Rs. 17.15 crores during the previous year.

Assistance for Joint Sector Projects

4. The Corporation sanctioned during the year assistance to the extent of Rs. 7.32 crores for seven joint sector projects with a total capital cost of Rs. 142.93 crores. These projects covered industries like fertiliser, mild steel, glass, tractor and iron ore mining. These projects have been mostly promoted by the various State Industrial Development Corporations in collaboration with entrepreneurs in the private sector.

Cumulative Sanctions and Disbursements

5. Over the 24 year period ending the 30th June, 1972, net cumulative financial assistance sanctioned by the Corporation for 565 large and medium-sized industrial projects spread all over the country totalled Rs. 397.86 crores. This assistance comprised rupee loans of Rs. 264.31 crores, foreign currency loans of Rs. 47.20 crores, underwritings and direct subscriptions to shares and debentures of Rs. 34.68 crores and guarantees to the extent of Rs. 51.67 crores.

Assistance of the order of Rs. 259.85 crores was extended for new projects and assistance of Rs. 138.01 crores was extended to existing units for expansion, modernisation or diversification. The total cost of the 565 projects for which the Corporation has so far extended financial assistance is of the order of Rs. 2006 crores, which is an index of the overall resources mobilised for the implementation of the projects. In the case of a development bank like the Industrial Finance Corporation of India, the number and quality of industrial projects financed by the Corporation along with resources mobilised from other sources, rather than the absolute amount of the Corporation's own assistance should, in my opinion, be regarded as the true measure of the Corporation's contribution to the industrial development of the country.

Assistance actually disbursed upto the end of the year under review amounted to Rs. 340.86 crores, constituting about 85.7% of the total sanctions. This could be considered as quite satisfactory having regard to the fact that disbursements are made in line with the progress achieved

in implementing the projects. The repayment record of the assisted concerns could be considered satisfactory having regard to the large operations of the Corporation. In several instances, the Corporation has taken a constructive approach and has evolved schemes for the rehabilitation of sick units keeping in mind their special needs.

Foreign Currency Loans

6. In December, 1971, the Corporation was allocated a further loan of DM 8 million, being the tenth line of credit, under an Inter-Governmental Agreement between the Governments of the Federal Republic of Germany and India. With the allocation of this credit, the ten lines of West German credit to the Corporation aggregate DM 120.50 million. A notable feature of the DM lines of credit is that they can be utilised for the import of capital goods, engineering know-how and services, etc., not only from West Germany but also from other countries, except certain countries specifically named.

Under the U.K./India Capital Investment Loans 1969 and 1971, the Government of India allocated £. sterling 1 million to the Corporation in September, 1970 and a similar amount again in September, 1971, to enable it to finance the import of capital goods from U.K. Though the U.K. lines of credit happen to be tied credits, these are welcome additions to the foreign exchange resources of the Corporation, which are of a limited nature in the absence of any line of credit from the World Bank or any other foreign lending agency except Kreditanstalt of West Germany.

As on the 30th June, 1972, the Corporation had sanctioned sub-loans aggregating DM 114.50 million, U.S. \$26.75 million, FF 13.01 million and £. sterling 1.27 million. While the two lines of credit from the U.S. AID have already been fully utilised, the credits from the Kreditanstalt, BFCE (Paris) and U.K. also stand almost fully committed. The Corporation is hoping that a further line of DM credit from Kreditanstalt would be made available to it for this year too out of the Consortium Aid to Government. A further allocation is also expected out of the Capital Investment Loan 1972, after the relative

agreement is signed by the Government.

Assistance to Industrial Co-operatives

7. An important feature of the Corporation's activities is the substantial assistance being given to the industrial co-operatives and in particular to the sugar and cotton textile co-operatives. Upto the 30th June, 1972, the Corporation had sanctioned financial assistance to 79 sugar co-operatives and 22 textile co-operatives and a co-operative each in the fertiliser, jute and vegetable oil extraction industries, with a total net assistance of Rs. 87.45 crores. This constitutes about 22% of the total assistance sanctioned by the Corporation since its inception.

The total cost of 79 co-operative sugar projects financed by the Corporation was Rs. 152.49 crores, of which nearly one half was contributed by the Corporation as long-term loans. Sugar co-operatives have proved to be a very effective instrument for rural development, for rural employment, for mobilisation of rural savings for productive purposes, for improving the standard of living of the cane growers and lastly for capital formation. Their credit record with the Corporation has been generally satisfactory.

With the current accent on the industrialisation of the less developed regions as also identification of industries which have high employment potential, a sound start for the economic development of such underdeveloped areas can be made with the promotion of sugar co-operatives in selected locations having potential for sugarcane development. The main difficulty in promoting new sugar co-operatives in the less developed States is the collection of initial share capital from the grower members. I suggest that the Central and State Governments should strengthen the institutional arrangements for helping the grower members in purchasing shares of new sugar co-operatives, particularly in less developed areas.

Assistance to the Corporate Sector

8. The Corporation's financial assistance, since its inception, to the Corporate sector amounted to Rs. 310.41 crores in respect of 460 projects covering a wide variety of industries.

Assistance to Industrially Less Developed Regions

9. The Corporation has all along recognised the need for achieving dispersal of industries in the country with a view to help remove regional imbalances in the economy and has played its part in stimulating industrial growth in less developed areas. I would like to present some figures to highlight the contribution of the Corporation in this regard. The Central Government has notified 211 districts and 8 Union Territories as less developed and as such qualifying for concessional finance from public financial institutions. The Corporation's assistance, since its inception, has so far covered 68 such districts and 3 Union Territories with a total assistance amounting to Rs. 107.11 crores spread over 148 industrial projects including 41 co-operative units. This assistance accounts for about 27% of the total sanctions. It must, however, be emphasised that concessional finance alone cannot achieve the objective of industrial development of less developed areas. Provision of adequate infra-structure facilities, especially power, transport and communications, is a pre-condition for promoting industrial activity in such areas.

It might be worthwhile to examine whether development efforts in less developed areas could be channelled through multi-purpose developmental agencies which could promote the integrated economic development of the area keeping in view the special problems of the region and the availability of local resources and local skills. These agencies can make their impact only if they are equipped with requisite technical staff and are assured of adequate resources with the help of Central and State Governments. Commercial banks and all-India financial institutions could also contribute to the resources of these agencies, and more importantly provide technical assistance and guidance.

The Corporation has participated, alongwith other all-India financial institutions, in surveys of the less developed States/Union Territories, which have been sponsored by the Industrial Development Bank of India, with a view to assessing their industrial potential and for identifying projects which could be implemented over the short term. The Corporation is offering assistance to

the various State Industrial Development Corporations and the State Governments in implementing their project ideas, alongwith other all-India financial institutions.

Assistance for Public Sector Projects

10. As you are aware, industrial projects in the public sector are also now eligible for financial assistance from the Corporation on the same basis as projects in the private sector. As mentioned earlier, the Corporation sanctioned during the year, assistance amounting to Rs. 1 crore to one public sector undertaking in Kerala. With this, the Corporation has so far sanctioned financial assistance amounting to Rs. 6.92 crores to six public sector concerns. Under the IFC Act, as it stands at present, only such public sector undertakings as are constituted as public limited companies, are eligible for financial assistance from the Corporation.

Share Capital

11. To augment its resources and increase its borrowing powers, the Corporation issued in June, 1972, 3308 shares (Fourth Series) of Rs. 5,000/- each of the total face value of Rs. 1,65,40,000/- which were fully subscribed. With this issue, the Authorised Capital of Rs. 10 crores stands fully issued and subscribed. I would like to thank our shareholders for extending generous support to our equity issue.

Bond Issue

12. To maintain a steady pace of lending operations, an adequate inflow of funds is required. The main sources of funds for the Corporation, other than its own capital, retained profits, repayment of loans and sale of investments, are borrowings from the market by issue of bonds, loans from the Central Government and foreign credits. The Corporation will enter the market in the third week of October, 1972 with a bond issue of Rs. 10 crores. I trust that, as on previous occasions, the shareholders of the Corporation as also other investors will give generous support to the bond issue and help make it a success.

Additional Offices of the Corporation

13. With a view to render more effective service to our existing and

prospective constituents in various States, particularly in industrially less developed States, and also to be able to participate in a greater measure in the industrial development that is taking place in the country, the Corporation is setting up new offices in different parts of the country. Over the past year and a half, we have opened offices at Gauhati, Ahmedabad, Hyderabad, Bangalore, Bhubaneswar, Kanpur and Patna. The Corporation has also made a beginning in constituting Local Advisory Committees at places where it has branch offices.

National Defence Fund

14. The Corporation contributed a sum of Rs. 5 lakhs to the National Defence Fund in January this year.

Conference of Sugar Co-operatives

15. With the increasing participation of the Corporation in the financing of sugar co-operatives, the question of promoting amongst them a better understanding and appreciation of the criteria, policies and practices followed by the Corporation in the matter of rendering financial assistance was considered. It was felt that this objective could be best achieved by holding a conference of the assisted sugar co-operatives. Accordingly, such a conference was held on April 2, 1972 and it was inaugurated by the Hon'ble Deputy Minister (Cooperation), Ministry of Agriculture Shri Jagannath Pahadia, in the absence of the Hon'ble Minister of State for Agriculture, Shri A. P. Shinde, who could not be present on the occasion. Apart from the representatives of sugar co-operatives, it was attended by the representatives of the Central Government, various State Governments, the National Co-operative Development Corporation and all-India financial institutions. The conference proved to be a useful forum for free exchange of views among the Corporation, the sugar co-operatives and the other interests concerned.

Management Development Institute

16. In my speech last year, I referred to the imperative need for having agencies which would provide training in modern management techniques to entrepreneurs entering industry for the first time and to the professional managers in industry. The Corporation has given thought

to this problem and has taken steps to meet this need to some extent by sponsoring a Management Development Institute. The Institute was registered under the Societies Registration Act, 1860 on the 17th May, 1972.

It has been the experience of the Corporation that finance alone cannot ensure the success of an industrial project. The quality of day-to-day management, executive, financial and technical, is of crucial importance for the success of an industrial venture. The Corporation also felt that an institute of the kind envisaged, would be more useful if it would be sponsored and guided by a financial institution like the Corporation, which has accumulated experience over the last 24 years in the financing of large and medium-sized industrial projects, has enough case material for study and research, and is familiar with the kind of problems which the new entrepreneurs are likely to run into while planning, implementing and operating an industrial undertaking.

Apart from imparting training in modern management techniques to the Corporation's clients, it is also proposed that the Institute would impart training to the staff of the Corporation at all levels as also to the staff of the financial institutions at the State and all-India levels in development banking.

The Institute would be financed out of grants made available to the Corporation by the Central Government from the interest differential funds arising out of the various lines of credit in DM sanctioned to the Corporation by the Kreditanstalt Fur Wiederaufbau (KfW), Frankfurt, West Germany. The funds at the disposal of the Institute would be supplemented with grants from the Corporation.

Third Asian International Trade Fair, 1972

17. The Corporation is participating in the ensuing Third Asian International Trade Fair, 1972, to be held in New Delhi, along with other financial institutions in the public sector.

Silver Jubilee of the Corporation

18. The Corporation, which is the oldest development bank in the

country, has completed 24 years of service to industry. It is now in its 25th year and will be celebrating its Silver Jubilee this year.

As part of the Silver Jubilee celebrations, apart from the establishment of the Management Development Institute, to which I have already referred, it is proposed to institute an annual lecture on development banking. The lecture to be known as "IFCI Silver Jubilee Memorial Lecture" would be delivered by distinguished professionals in development banking. The Corporation is also planning to hold a conference, early next year, of its constituents in the corporate sector. It is also proposed to start work during the year on a housing colony for the Corporation's staff in New Delhi. Land for the housing colony has already been acquired from the Delhi Development Authority.

Some Reflections

19. The country is now celebrating the 25th anniversary of its Independence. Over the past 25 years, the country has achieved marked progress on many fronts and particularly on the economic front. Indian agriculture today is on a sound footing though not entirely free from the vagaries of the monsoon. The industrial sector has now a range and depth which was not there before and is much better served by infrastructure facilities. The economic setting now presents opportunities for industrial investment which were not available in the 'fifties and early sixties'. Today, it is possible to set up projects, in the case of many industries, largely based on indigenous machinery and without foreign technical know-how. If this offers wide investment opportunities, it also presents a number of problems pointing to the need for paying greater attention to project planning in setting up new projects and for the wider use of modern management techniques in the implementation and operation of industrial projects.

During the first two decades of Independence, a large number of industrial projects were set up in the country with the help of foreign collaborators of international repute, who, in addition to technical know-how, brought with them their expertise in modern management tech-

niques of project planning and project implementation. In future, most of the industrial ventures in the country would be planned and implemented by Indian management without foreign technical collaboration. The achievement of self-reliance in management would have real meaning only when we learn the necessary techniques for implementing projects efficiently and on schedule. This ability is all the more important if Indian industry is to undertake on a large scale joint ventures or turn-key contracts in other developing countries, a small beginning towards which has already been made.

Successful implementation of a project largely depends on the availability of plant and machinery, of the required specifications, with a reasonable delivery period and at a reasonable cost. Import of plant and machinery and spare parts from foreign manufacturers of international repute helped in giving a sound start to a new project in the past. If similar results have to be achieved today, indigenous manufacturers of plant and machinery need to pay greater attention to achieving cost economies and to the problem of maintaining a high standard of quality. They should also take steps to establish research and development organisations for improving their products. In fact there is need for greater attention both to quality control and to research and development if Indian industry has to reduce its dependence on foreign technology and know-how.

The viability of a project is more open to question today, as its initial cost is substantially higher than that of similar projects in the past. In industries like sugar, textiles, paper, cement, automobile tyres, aluminium, engineering, chemical industries, etc., the capital cost of establishing new capacity has already substantially increased and is increasing every day. Further, with the greater accent being placed on the control of industrial pollution, projects in the future would also have to provide for additional investment in better affluent disposal and pollution control facilities with resultant increase in the total project cost. With the substantial increase in the capital cost of establishing new projects in these industries, doubts are being raised about the financial viability of fresh investment. Pricing policies may, therefore,

have to be suitably adjusted for encouraging fresh investment in selected industries of high national priority. As the public financial institutions make a substantial contribution to the cost of new projects, they are naturally interested in the project being able to generate adequate surplus for servicing the loans.

The grant of an industrial licence today no longer carries with it an implicit assurance of a ready market. Industrial licensing has been liberalised and with the resultant increase in the number of likely new entrants into industry, a detailed market survey is an increasingly important aspect of project planning.

I have taken this opportunity to stress the need for paying greater attention to project planning and modern management techniques as we in the Corporation have found that the preparatory work done by the promoters, prior to seeking financial assistance from the Corporation, is often not adequate.

It is now an established policy of the Government to encourage new entrepreneurs in the industrial field. The changed circumstances of investment today, which I have mentioned earlier, make it all the more difficult for a new entrepreneur, admittedly unfamiliar with the problems of setting up a project, to make a successful start.

Whereas the Corporation is following a policy of encouraging new entrepreneurs, there are practical difficulties in making this policy truly effective. One of the main problems faced by the new entrepreneurs and technologists intending to promote an industrial project is the lack of resources to be contributed by them as promoters' equity. Today, capital formation with individuals is negligible. Whatever capital formation exists today is with the established and successful companies. Unless a solution is found to this very real problem, the process of encouraging new entrepreneurs and technologists to enter the industrial field is not likely to gain momentum. A project with a capital cost of about one crore of rupees would call for a promoters' contribution of about fifteen lakhs of rupees in the form of equity. This is a reasonable contribution which one can expect a promoter to make in order to

demonstrate his genuine stake and interest in the project and inspire confidence in the general public, who are asked to contribute to the equity share capital of the new company. Similarly, the institutions financing the project would like to assure themselves that the promoter would put in his best efforts to make the project a success. The promoters' contribution to the cost of the project is, therefore, a very important aspect of project financing. The contribution is as important from the financial angle as from the point of view of ensuring the close association of the promoter with the project and thus providing the project with the best attention of the promoter. In order to enable new entrepreneurs with limited resources to set up new industrial projects, it might be worthwhile to examine whether separate institutional arrangements should be made for assisting the new entrepreneurs in contributing promoters' equity to the capital cost of the project.

Changes in the Board of Directors

20. At the last Annual General Meeting held on the 27th September, 1971, Shri C. P. Shah was elected in place of Shri N. Ramanand Rao who retired. At the same meeting, Shri B. C. Randeria was elected in place of Shri N. V. Nayudu, who retired, and Shri Vasant Rao B. Patil was elected in place of Shri P. S. Rajagopal Naidu, who retired after serving two full consecutive terms of four years each. On the 27th March, 1972, Shri Vasant Rao B. Patil tendered his resignation from the directorship of the Corporation consequent upon his assumption of office as Minister of Power & Irrigation in the Government of Maharashtra. His place was filled by Dr. W. C. Shrishrimal who was elected as a director at the Special General Meeting of the Corporation held on the 17th June, 1972.

On behalf of the Board, I take this opportunity of thanking Shri N. Ramanand Rao, Shri N. V. Nayudu, Shri P. S. Rajagopal Naidu and Shri Vasant Rao B. Patil for their valuable services and the keen interest they took in the affairs of the Corporation. I would further like to place on record my thanks to all the present directors on the Board for their valuable co-operation and wise counsel.

Acknowledgments

21. The Corporation is grateful to the assistance extended by Kreditanstalt-fur-Wiederaufbau of the Federal Republic of Germany, Overseas Development Administration of the U.K. Government, the United States of America Agency for International Development and Banque Francaise du Commerce Extérieur of France. Our relations with these foreign friends have been very cordial and we look forward to having still closer ties with them. I also wish to place on record our appreciation of the co-operation and assistance received from the various Ministries and Departments of the Government of India and the all-India financial institutions.

I would also like to express, on behalf of the Board, our gratitude to the members of the Advisory Committees for their expert knowledge and experience placed at the disposal of the Corporation and to the non-official nominees on the boards of directors of assisted concerns, for looking after the interests of the Corporation.

On behalf of the Board, I would also like to express our appreciation of the dedication with which the General Manager, other officers and staff of the Corporation at all levels have worked. The relations between the management and the members of the staff have remained cordial and I would like to thank the staff for their co-operation. I am particularly happy to mention here that this year also the Directors have agreed to transfer Rs. 1 lakh from the profit for the year to the Staff Welfare Fund.

Friends, I thank you for attending the Annual General Meeting and hope the Corporation shall continue to have your co-operation and goodwill in full measure in the years ahead.

RURAL ELECTRIFICATION CORPORATION LTD.

(A Government of India Undertaking)

Third Annual General Meeting

EXCERPTS FROM ADDRESS BY THE CHAIRMAN

SHRI B. VENKATAPPIAH

The following are excerpts from the address by Shri B. Venkatappiah, Chairman, Rural Electrification Corporation Ltd. at the Third Annual General Meeting of the Shareholders held in New Delhi on September 26, 1972.

Shri B. Venkatappiah

Financial Results

The operations of 1971-72 resulted in a surplus of Rs. 150.88 lakhs before deduction of tax and a net profit of Rs. 73.37 lakhs after such deduction. The Board of Directors has recommended that, out of the latter amount, Rs. 15.23 lakhs should be transferred to the Special Reserve and Rs. 45.00 lakhs to the General Reserve. The Board has also recommended that a dividend of Rs. 12 lakhs be paid on equity capital. On doing so, the Corporation will have paid a dividend for the second year in succession, the previous one being Rs. 9 lakhs. It has earned a surplus for the third consecutive year.

Progress

The Rural Electrification Corporation has traversed two financial years in full and two others in part. With-

in this span, however, its active or operative life has been only about 30 months or 2½ years: from March, 1970 to, say, the end of August, 1972. During this period, we sanctioned 279 loans for project-based schemes of rural electrification. Five of these were for Rural Electric Cooperatives. The remaining 274 loans pertained to projects prepared by State Electricity Boards and approved by the Corporation. In addition, we have sanctioned 14 special loans for the electrification of more than 1400 harijan bastis. All these loans aggregate Rs. 166.70 crores. The loans to State Electricity Boards account for as much as Rs. 153.89 crores of this total. The sanctioned projects are usually spread over 3 to 5 years and are today at various stages of progress. Together, they cover more than 26,000 villages, nearly 3.6 lakh pumpsets (out of REC's target of 5 lakhs for the whole of the Fourth Plan) and about 56,000 rural industries. The domestic and commercial connections exceed 11 lakhs in number. Disbursements are made initially on sanction of the project and thereafter in correlation with performance. The amount so far disbursed is Rs. 67.11 crores.

Loan Policies : Backward Areas

I have cited these figures to give you some indication of our total performance. I shall now try to analyse the data with reference to our objectives. There were two aims which governed each of the 274 loans sanctioned to State Electricity Boards. These may be summarised as: (1) economic development of the project area and (2) financial viability of the project investment. The economic development was oriented, firstly, to agriculture—ground water being an important component—and secondly, to rural industry; but, with these as core, the electrification of house, shop and street was also part of the design and content of each project. The second objective of financial viability had specific reference to the project outlays of State

Electricity Boards. In actual application it also took into account the varying degrees of development of different areas and, consequently, the varying periods over which investment could be expected to be remunerative. Thus, specially underdeveloped (SU) hill areas would have to be allowed a longer gestation period than ordinary "backward" (OB) areas and these latter a longer gestation period than ordinary "advanced" (OA) areas, for a given norm of financial return to materialise in terms of the Board's outlay on a particular project. This important consideration was taken into account by the REC in formulating the terms and conditions of its loans to the State Electricity Boards. The more underdeveloped the area, the lower the interest and the longer the period of repayment. For hill projects, for example, the period is as long as 30 years and the interest charged is as low as 4% in the initial years. For backward areas, the corresponding period is 25 years and the interest, 5%. Out of the 274 projects sanctioned by the REC, as many as 122 are for backward and specially underdeveloped areas.

Loan Policies: Less Advanced States

Another aspect needs to be emphasised. If there is disparity between one project area and another in point of development, there is imbalance between one State and another in regard to the degree of rural electrification hitherto achieved. For working purposes, the REC has proceeded on the basis of the average level of all-India village electrification (21.7%) and divided the States—the ones with State Electricity Boards—into those (1) Above the Average (AA), and (2) Average and Below (AB) So classified, there are 9*AA States and 8**AB States. Of

* Andhra Pradesh, Gujarat, Haryana, Himachal Pradesh, Kerala, Mysore, Maharashtra, Punjab and Tamil Nadu.

** Assam, Bihar, Madhya Pradesh, Meghalaya, Orissa, Rajasthan, Uttar Pradesh and West Bengal.

the 274 projects sanctioned for State Electricity Boards, 143 are for the AB (average and below) category of States and 131 for the AA category. In terms of amount sanctioned, AB States account for Rs. 84 crores and AA for Rs. 69 crores, out of a total of about Rs. 153 crores.

Loan Policies : Weaker Classes

The REC's objectives and policies are no less concerned with the weaker classes of the rural population than with areas which are backward or States which are less advanced in village electrification. We have followed a deliberate policy of trying to effect maximum coordination with those rural programmes which are designed for the benefit of the weak and under-privileged sections of the community. Thus, REC projects have already been established in more than half the districts in which the Small Farmers' Development programmes are located, and in more than a third of the districts in which agencies have been set up for the benefit of Marginal Farmers and Agricultural Labourers. Wherever possible, we endeavour to ensure that the projects financed by the Corporation are so located, formulated and operated that they dovetail into and supplement the efforts of the agencies and institutions set up either for the specific uplift of the rural poor or the general development of the rural economy. An instance in point is the coordination between REC projects and the area programmes financed by the Agricultural Refinance Corporation. In order to gain experience, intensive exercises in such co-ordination have been started in some of the relevant project areas of Rajasthan and Madhya Pradesh.

Harijan Basti Loans

Among the weaker classes, the Harijans call for special mention. There are many instances in which the village is electrified, but not the harijan basti. The REC for its part is trying to ensure that this does not happen in the projects financed by it. But a great deal remains to be done which is not only outside the coverage of these projects, but beyond the scope of the project approach enjoined on the Corporation. In such a context, that is to say, where it cannot directly concern itself, the REC can nevertheless act as

agent of Government and render available the services of the technical and field organisation it has built up. In pursuance of such an arrangement, Government have formulated a special scheme for harijan bastis which is financed by Government but operated by the REC. The focus of the scheme is on harijan habitations which have remained without electricity while the main village is itself electrified. For taking electricity to such bastis, the State Electricity Boards can now get loans on concessionary terms from specific funds which the Government of India have made available to the Corporation. The present position, as I have already indicated, is that the REC has sanctioned 14 special loans covering more than 1400 harijan bastis. The assistance involved is, so far, about Rs. 70 lakhs. More such loans are being sanctioned. Government have hitherto provided Rs. 1.00 crore in all for this purpose.

Hill, Desert & Tribal Areas

While on the subject of the weaker classes and the less favourably situated regions, there are developments I should like to mention about the special loan for underdeveloped areas (SU) which hitherto has been confined to certain backward hill areas. The Board has now decided that desert and tribal areas should also be included in this category. As a result, appropriate schemes are under formulation or consideration from Rajasthan, Bihar, Madhya Pradesh and a few other States.

Area Development

The concept of area development, of which one of the corollaries is district planning, is widely accepted to-day. An important feature of the strategy implied in the concept is the development of the infrastructure of the area selected. Another important requirement is the effective provision of the major inputs of the development envisaged. Electricity has the two-fold aspect that it figures both as an important part of the infrastructure and a significant item among the developmental inputs. There are other parts of the infrastructure such as credit and banking, transport and communications, storage and marketing. There are also other important inputs, such as

seed, fertiliser and ground water. In any area development plan, electricity has to take its place—clearly an important place—along with all these. The projects with which REC has concerned itself, therefore, have never been mere electrification projects as such, but area development projects of a versatile character into which electricity fits both as input and infrastructure. Village electrification as a programme, with area development as an incidental—often accidental—aspect, must be clearly distinguished from area development as the primary objective with village electrification as a very desirable, but sub-primary, component of the total project. The usual approach is to brighten the village; the project approach is to heighten its economy. I am stressing this point because I think it is very necessary for the States to concentrate as much attention and effort on making plans as on taking loans for their project areas. A good start has been made. But much ground remains to be covered.

Co-ordination

The REC for its part has been endeavouring to equip both itself and the State Electricity Boards adequately for the three-fold purpose of proper formulation, proper implementation and proper coordination of development-oriented area projects of rural electrification. The question of effective co-ordination—at project level, district level, and State level—has been the subject of discussions with a number of State Governments. In order to bear fruit, the co-ordination has not only to permeate to different levels, but must inform all the relevant processes of project management, including formulation and implementation. Moreover, co-ordination must involve not only the principal development authority of the district—such as the Collector in most States or the executive head of the Zilla Parishad in some—but also the corresponding district or regional authorities responsible for agriculture, animal husbandry, rural industries, ground water and so forth. This is in addition to the appropriate officials of the State Electricity Board. But that is not all. The co-ordination must extend—at the stage of formulation no less than of implementation—to all relevant sectors of the infrastructure of the district,

especially credit in its long-term and short-term aspects; that is to say to the land development bank, the district co-operative bank and the commercial banks. While the principle of co-ordination is the same in all States and by now fairly well understood by most of them, including their State Electricity Boards, the details of the machinery of co-ordination and the frequency and effectiveness with which it is employed greatly differ from State to State and, within a State, sometimes even from district to district. It is earnestly to be hoped that the on-the-spot discussions which my colleagues in the REC and myself have held with most of the States—in many cases more than once—will result in concrete measures for the improvement of the whole process of co-ordination. In terms of the development content of REC projects, optimum results demand optimum co-ordination.

Mini Projects

I have tried to tell you something of the REC's efforts to adapt its loaning policies to the varying requirements of a largely undeveloped and largely unelectrified country-side. Before concluding this part of the account, I should like to mention an innovation which we have just introduced in the shape of the "mini-project" loan. This is a new category which is governed by all the old principles and prescriptions, except in regard to size. It supplants none of the existing categories of loans and is available in addition to all of them. It applies to all States, irrespective of the level of electrification, but is admissible only in such development blocks of any particular State as are classifiable either as backward (e.g. dry, arid or drought-prone) or specially under-developed (e.g. hill, desert or tribal) in the light of the criteria employed in this connection by the Rural Electrification Corporation. The new loan, like the older categories, is project-based and growth-oriented; in other words, it is directly relatable to a specific programme of development in a well-defined area. The difference is that the area, and therefore the loan, are very much smaller than is now the case. Today, the outlay on the typical REC project ranges from Rs. 50 lakhs to Rs. 60 lakhs. The new loan will ordinarily be limited to Rs. 5 lakhs and in no case exceed Rs. 10 lakhs. In today's typical project, again, there may be about 100

villages: roughly the equivalent of a development block in size, though not necessarily co-terminous with it. The mini-project is differently conceived. It will have 5 or 10 villages, and no more, which together form a strip or a cluster. They will be so chosen that one of them—possibly at the end of the strip or the centre of the cluster—will invariably be a specially important village from the point of view of the block as a whole. Thus, it may be a banking or marketing centre for the surrounding area or for the entire development block. Or it may be a primary health centre with facilities, perhaps, for both medical care and family planning. The provision of electricity at growth centres and health centres of this kind is of obvious importance in the strategy of development.

In view of the very large number of undeveloped and unelectrified blocks spread over almost all the States, and since any general programme of electrification of large areas is bound to be gradual, it is hoped that the new facility offered by the REC will help accelerate the advance electrification of economically or socially strategic segments of the backward blocks of the country.

System Improvement and Conservation of Power

I will now turn to another set of measures initiated by the REC. Power is in short supply and likely to be so for some time to come. It is therefore more than ever important to conserve available power. Loss has to be avoided and use made more efficient. The REC has reviewed the problem of line losses, their causes and remedies. Preliminary studies indicate that these losses can be reduced substantially if appropriate measures are taken for system improvement. The measures needed comprise, among other items, the strengthening of the transmission system, the incorporation of devices for correcting the power factor, and the augmentation of inter-connections. These not only help step up the technical efficiency of the system, but improve its economic outputs in terms of electrical energy and rural production. Moreover, system rectification will help to improve the levels of voltage and the continuity of distribution, and thus ensure reliability of supply where it is now lacking. The uninterrupted availa-

bility of power at proper voltage levels is of the utmost importance to rural users since this reduces the incidence of breakdowns as well as of damage to pumps. Measures of this kind are also important to the Electricity Boards since they constitute one of the most practicable ways of effecting a significant improvement of the load factor. In the light of all these considerations, the Corporation has recently approved the introduction of a Special loan for system improvement (SS). The loan is repayable in 8 years and carries an interest of 7% p.a.

A number of State Electricity Boards are formulating system improvement schemes on this basis. We are hopeful that, on these schemes being executed, there will be both a substantial saving of power and an appreciable streamlining of the system.

Standardisation

Finance is no less a constraint than power on the spread of rural electrification. Economies are as necessary in the utilisation of available funds as of available energy. Standardisation of equipment, designs and construction practices can lead to considerable reduction of cost in all the processes involved from manufacture to maintenance. Accordingly, in collaboration with the Central Water & Power Commission on the one hand and the Indian Standards Institution on the other, REC took up the task of standardisation as early as May, 1970. Three specifications covering distribution transformers, conductors and insulators, which account for a substantial part of the cost of materials in rural electrification, have already been issued. Besides, a set of 23 construction standards have also been issued. The work is proceeding and there has been wide support for the role of the Corporation in this regard. The Conference of the Chairmen of State Electricity Boards held in May 1971 unanimously adopted the specifications standardised by REC.

Research and Development

There is much scope for an exploration of the economies which can be effected in rural transmission and distribution. The REC recognises that it has a stake in such research

and believes it has a part to play in its promotion. It has made a beginning in this direction. A research programme has been sponsored in collaboration with the Cement Research Institute of India for evolving an economical design for fabrication of pre-stressed cement concrete poles. These form an important element of the rural distribution of electricity. Secondly, with a view to developing an appropriate standard design for electrically operated motor pump-sets for irrigation, the Corporation has, in collaboration with the Indian Institute of Technology, Delhi, sponsored a research project for assessing the technical characteristics of pumpsets manufactured in the country. Lastly, action has been initiated on a problem of some importance, namely, the wide prevalence of imperfect joints and connections and consequent losses in transmission. Inadequate tools often contribute to this result. The Corporation has, accordingly, launched a project for duplicating a hand-crimping tool which has been found to be effective and is in vogue in other countries. It is proposed to fabricate and supply a prototype of the tool to each of the Electricity Boards.

Pilot Rural Electric Cooperatives

The Corporation took two major steps in regard to the rural electric co-operatives which had been set up as pilot projects in certain States. The first of these was the appointment of an informal working group to study in depth measures to be taken for ensuring member-involvement in the co-operatives. The second was to appoint a Review Committee "to examine all aspects of the formulation, organisation and working of the five rural electric co-operatives, with a view to evaluating their performance, problems and promise and, in the light of such evaluation, to suggest guidelines for the future in regard to the existing co-operatives as well as those which may be promoted with REC assistance in future." The work of this Committee is in progress. In order to provide the necessary data-base for specific aspects of the working of the cooperatives, the Corporation has also organised the conduct of quick studies in respect of all the five societies.

Organisation

I have already referred to the enlargement of the business of the Corporation during the year covered by the Directors' Report. In the context of the project approach which is enjoined on the Corporation, such a large expansion of its operations would not have been possible if the organisational set-up of the Corporation had not been geared to the task. Considerable attention has been paid during the last 12 months to the evolution of an appropriate organisational structure in order that REC might cope with the increasing complexity and volume of its task. A number of steps have been taken to streamline the organisation.

It may be recalled that, with a view to ensuring proper utilisation of the loan funds and timely development of service connections in the area concerned, the Corporation insists on satisfactory performance as a pre-condition to the release of the second or subsequent instalment. The performance is judged in terms of the scheduled programmes of work in respect of high tension and low tension lines as well as sub-stations and, importantly, the service connections for agriculture and industry. In the monitoring work undertaken for this purpose, the Finance Division collaborates with the Technical

Division. The Technical and Finance Divisions in co-ordination have at present, as I have indicated ten teams for field inspection and monitoring. Out of 86 schemes for which the first instalment had been released in the year 1970-71, monitoring of performance has so far been completed in respect of as many as 7 schemes. Thereupon, the second instalment has been released for 5 of these schemes on the basis of the reports of the monitoring teams and the returns of physical progress submitted by the State Electricity Boards. Where the second instalment has so far been withheld, the major shortfall generally pertains to service connections. One important reason for this shortfall was the excessive pre-occupation of some State Governments, and consequently the Electricity Boards with target of village electrification in general, a distinguished from the energisation of pumpsets for agriculture and machines for rural industry. Another reason lay in the lack of co-ordination at the project and higher level between the different authorities concerned with the development of the project area.

Note : The above does not purport to be a record of the proceedings of the Third Annual General Meeting of the Rural Electrification Corporation Ltd.

HINDUSTAN STEELWORKS CONSTRUCTION LTD.

BOKARO STEEL CITY

Speech delivered by Shri R. S. Gahlowt, Chairman, at the Eighth Annual General Meeting of the Company held on 29th September, 1972 at Company's Project Office at Bokaro Steel City.

Gentlemen,

I have pleasure in welcoming you to the 8th Annual General Meeting of the Company in our Bokaro Steel Project Office. It is gratifying to note that the performance of this Company has been continuously improving from year to year. This can be judged from the fact that the turn-over of the Company which was 3.65 crores during 1966-67 increased to Rs. 39.62 crores during the year ended 31st March, 1972. This ten-fold increase during a period of 4 to 5 years is no mean achievement. The Construction Industry which consumes nearly 50% of the each Plan expenditure, has been in the hands of the agencies which are not able to keep pace with the technological developments and the changing working conditions which require harmonious Employer-Employees relations, besides requirement of complete departure from the traditional contracting practices.

The Company has been developing various specializations which cover the complete field of construction including not only Civil Engineering and steel structural works but those of Erection of Equipment, Technological Structures, Electrical Installations and Refractories. Problems in Steel Plant construction gain considerable importance, on account of large volumes covering a wide range of specializations over practically all the facets of Construction Engineering. The period of steel Plant construction extends over comparatively much longer period employing a labour force of the order of 55,000 to 60,000. It is a matter of pride that during a short period of less than 7 years since the Company started its first job of Site Levelling of Bokaro Steel Project, the Company has made its impact in the construction industry. In fact, the Company has stood out in performance in

Bokaro whose First Blast Furnace Foundation was laid on 6th April 1968 by Shrimati Indira Gandhi, our Prime Minister who is now inaugurating the Blast Furnace Complex on the 3rd October, 1972.

At Bokaro besides sophisticated and voluminous erection works of Blast Furnaces our work covers Steel Melting and Rolling Mills Complexes, Out-

Shri R. S. Gahlowt
Chairman, Hindustan Steelworks
Construction Ltd.

door Pipelines, Technological structures, Cable net-work; Electrical Equipment Installations and Refractory Lining etc. In addition to the Steel Plant Construction, the Company has undertaken construction of 10,000 quarters for the township as well as Bokaro's Lime Stone Quarries and Township works at Bhawanathpur. While Bokaro Stage II 4.0 Million Tonnes works have been started, the works of Dalli Mechanised Mines, Second Sintering Plant and 8th Coke Oven Battery and Borodih Reservoir of Bhilai Steel Plant all of which are works of high priority have also been entrusted to your Company and these are to be followed by the Expansion works of Bhilai Steel Plant to 4.00 Million tonnes stage.

In the New Steel Projects at Salem (Tamil Nadu), Visakhapatnam (Andhra Pradesh) and Vijayanagar (Mysore) which were inaugurated by Smt. Indira Gandhi, our Prime Minister in September, 1970, January, 1971 and October, 1971 respectively. Your Company has been associated right from the Site selection stage. It is heartening to note that the Government in recognition of the performance of your Company have decided that HSCL would be the Principal Construction Agency for all the New Steel Plants, as well as expansion works of existing Plants. In line with this thinking and decision, the work of site levelling of Salem Steel Project was started by the Company on 13th June, 1972 with Inauguration by Shri S. Mohan Kumaramangalam, Union Minister of Steel & Mines.

Your Company is working with Socio-economic goals to which the nation is committed. It stands for quality, speed and economy. The works in the Steel Plants as well as all other Projects are being executed at economical rates.

Outside Steel sector, your Company has undertaken a number of Industrial Projects in several states. These include at Allahabad (U.P.) Bharat Pumps & Compressors Ltd. Plant which is in advanced stage of completion, and the Gas Cylinder Plant likely to be taken up shortly, besides the Indian Telephone Industries two factories, the Transmission Factory has already gone in production while the work on the Telephone Instruments Factory is in progress. At Hyderabad the Company has completed the Zircaloy Fabrication Plan (already in production) and the work of Hindustan Cables Factory is in advanced stage of completion. Iron Ore Deposit, Civil Engg. and Structural Works at Baladila were also started during the year besides Bharat Aluminium Co. works at Korba, the Construction of Grain Silos for storage of grains for Food Corporation of India at Delhi besides a number of other works including the Coal Storage, Conveyor units of Power House for Haryana

State Electricity Board at Faridabad, the Dry Dock for Garden Reach Workshops Ltd. at Calcutta and last but not the least the Second Hooghly Crossing works at Calcutta are in hand.

Diversifications in the activities of the Company can be judged from the various projects the Company is executing cover besides large number of Specialisations in the Steel Plant Construction.

The country is facing serious problems of un-employment. Your Company has at Bokaro itself construction workers numbering 45,000 approximately out of which 9,000 are on the Company's rolls and another 10,000 to 12,000 employed direct on piece rated contract basis. In addition the strength employed on outside jobs is 12,000. This number is bound to increase in the ensuing years. In respect of Graduate Engineers and Diploma Holders, the Company has been able to provide jobs to 1100 persons during the last 3 to 4 years. Industrial Relations are receiving our special attention.

The Income of the Company increased from Rs. 32.77 crores in 1970-71 to Rs. 40.28 crores during the year showing an increase of approximately 22.5%. Surplus in the contract account also increased to Rs. 346.10 lakhs as compared to Rs. 291.97 lakhs in 1970-71 and Rs. 197.88 lakhs in 1969-70. The net profit after provision for depreciation and interest during the year was Rs. 79.23 lakhs against Rs. 64.64 lakhs during 1970-71, and Rs. 25.59 lakhs during 1969-70. Your Directors have recommended a Dividend of 20% on the Paid-up-Capital which requires your approval.

The cumulative value of Contracts entered into with Bokaro Steel Ltd. increased from Rs. 195.52 crores to Rs. 229.16 crores besides contracts for Rs. 11 crores for works at Bhilai Steel Plant. In the New Steel Plants even though the value of contract as such is small, your Company undertook and completed all the site investigation works, on the basis of which Feasibility Reports have been prepared by the Consultants.

Outside Steel Sector, the cumulative value of the contract entered increased from Rs. 518 lakhs to Rs. 2,763 lakhs. This does not include works costing over Rs. 1600 lakhs being entrusted to the Company for Korba Smelter Unit of Bharat Aluminium Co. Ltd.

During the execution of Stage-I works at Bokaro, your Company has been able to create new records some of which are:—

- (1) Monthly rate of concreting of over 53,000 M3 achieved in January-March, 1970;
- (2) Continuous pour of concreting in 10,000 M3 single foundation in Hot Rolling Mill slabbing Mill Roughing Stand;
- (3) Structural fabrication pace of over 5000 tonnes per month achieved in December, 1971 and January, 1971;
- (4) Equipment Erection rate of 2500 tonnes already achieved. This is bound to improve as the erection works in the Rolling Mills gain momentum.
- (5) Construction of 180 Metre high R.C.C. Chimney, the highest of its kind in the country.

Your Company has contributed a sum of Rs. 70,000/- to the National Defence Fund as the Company's contribution besides Rs. 5000/- to West Bengal Citizens Council. In addition the contribution of Rs. 1,10,081/- was made to National Defence Fund by our Contractors and employees, the total contribution from the employees being of the order of Rs. 36,000 approximately.

Keeping in view the performance in the year, your Company has sanctioned an ex-gratia payment of 20% to all the employees including daily

rated workers, as has been done in the previous years also.

In view of the heavy steel programmes, your Company is looking to a much better and bright future ahead. The encouragement given by the Ministry, the assistance we are getting from the State Governments of Bihar, West Bengal, Uttar Pradesh, Madhya Pradesh, Tamil Nadu, Mysore and Andhra Pradesh, have given us the confidence to meet the new challenges. We are also grateful to Bokaro Steel Limited, Hindustan Steel Limited and their Consultants and all other Government of India Undertakings with which we are associated.

I am personally indebted to all the Directors on the Board without whose support and active co-operation, it would not have been possible for me to shoulder the heavy responsibilities of the onerous job of a construction Undertaking aiming at opening a new era in the field of construction, discarding some of avoidable practices in contracting of construction jobs, thus establishing new traditions which would enable to meet challenge of the present day. I would specially like to thank Shri J. C. Luther who was actively associated on the Board for more than four years.

In the end I would like to thank all the employees of the Company through whose efforts the acceleration in the Company's performances is being maintained.

THE NATIONAL INDUSTRIAL DEVELOPMENT CORPORATION LIMITED

CHAIRMAN, SHRI K. B. RAO'S STATEMENT

Statement made by Shri K. B. Rao, Chairman, the National Industrial Development Corporation Limited at the seventeenth Annual General Meeting of the Corporation held on 29th September, 1972.

Gentlemen,

I have great pleasure in welcoming you to the 17th Annual General Meeting of the Corporation. I trust that I have your permission to take as read the Report of the Directors and the Audited Accounts of the Corporation for the year ended 31st March, 1972, which have already been circulated to you.

The year under review was a crucial and eventful one for our country. The challenges faced through the influx of millions of refugees and an armed conflict with Pakistan were successfully faced under the able and dynamic leadership of our Prime Minister, Smt. Indira Gandhi and through the united effort of the people of our country. I would like to pay my humble tribute to our Armed Forces for their magnificent achievement and to the single-minded devotion to duty of all the workers in factories, in offices and on farms. The unity and ability to face adversity gives me confidence that we shall soon win the battle on the Economic Front also.

The turn-over for the year under review was Rs. 128.02 lakhs and the net surplus was Rs. 15.02 lakhs.

The Dividend rate of 15 per cent and the Bonus/Ex-gratia to employees at the rate of 20 per cent has been maintained for the third consecutive year.

The Foreign Exchange Earnings during the year amounted to Rs. 12.33 lakhs.

It has been the policy of your Company to retain in business the

profits after payment of reasonable dividend. Ploughing back of such profits has been the main source for meeting requirements of Working Capital. As on 31st March, 1972, the Reserves and Surpluses amounted to Rs. 60.39 lakhs against the paid-up capital of Rs. 10 lakhs.

The primary activity of your Company in providing Consultancy Ser-

Shri K. B. Rao

vices continued to develop and was pursued with great vigour. The phase of initial development of expertise in the highly complicated fields of Engineering Consultancy, Management Consultancy and Economic Development has come to an end and the Organization is now well-set to handle important tasks and large assignments in these fields.

During the year under review, your Company extended its Consultancy Services to the Pulp and Paper Industry and was engaged as the turn-key Consultants for the Nagaland Pulp and Paper Project, in addition to being commissioned to prepare the Project Report for the proposed Assam Paper Project at Nowgong and the Newsprint Plant in Kerala. Other note-worthy Projects on which it was engaged during the year under review included the Bailadilla Iron Ore Project Deposit

No. 5, Pumps and Compressors Project at Naini and the New Cable Factory at Hyderabad.

Consultancy Services of your Company have been steadily gaining more and more recognition overseas and by international Agencies. It is a matter of pride that your Company was selected from amongst a number of world-renowned Organizations from the United States, France and Switzerland by the United Nations to evolve a Detailed Plan for the Development of the Capital Goods Industry in Iran. It was also appointed by the Government of the Libyan Arab Republic to provide turn-key consultancy services for the establishment of a Steel-melting and Billet-casting Plant in that country.

I am happy to report that TECHNOLOG INC., a Consultancy Organization established by the Imperial Government of Iran—through its Industrial Development and Renovation Organization of Iran—for which your Company had been appointed as the Collaborators, has developed in a most satisfactory manner and is to-day one of the leading Consultancy Organizations in that country.

In the type of business in which your Company is engaged, it is inherent that we must always look ahead and gear ourselves to meet the changing needs of the economy. Profit, in itself, cannot be the sole yard-stick for judging the performance of an Organization such as ours. Of greater relevance in the present context of economic development of the country is the ability of an organization to recognize the changing needs of Industry and its ability to meet such challenges.

Your Company has given careful consideration to this problem and is now preparing itself to be in a position to offer consultancy services in non-traditional fields, such as Pollution Control and Traffic Engineering etc. for which the need is now clearly discernible.

Understandably, considerable emphasis is being placed on the need for increasing R & D effort in the country and for greater reliance on indigenous capabilities in the technical sphere. One of the handicaps which indigenous R&D effort has been facing relates to inadequate engineering back-up support for the work being done by our National Laboratories and other Research Centres for the proper and effective exploitation of the fruits of such indigenous research. Your Company intends to immediately institute action to provide the necessary engineering back-up support to such indigenous research work. Essentially, this engineering back-up support is intended to cover the development of the detailed manufacturing processes, tooling designs etc., which normally constitute the manufacturing know-how for an engineering industry. It would also provide the necessary plant engineering support through its already established consultancy activities. With such engineering back-up support, your Company is confident that there will be greater appreciation and more ready acceptance of the fruits of indigenous research, much of which has been languishing for want of this effort.

All over the world, consultancy has been recognized as a profession. This fact has, however, yet to find wide acceptance in India. This is evident from the manner in which Consultants are generally being appointed. The prime consideration in appointing a professional, including a Consultant, is to base judgment essentially on competence rather than on price. I would make an earnest appeal to Government as well as to entrepreneurs that the selection and appointment of Consultants should primarily be based on their competence.

Time is now to set up a Chartered Institute of Consulting Engineers in India for regulating this profession. Only through self-discipline which such an Institute established by law will ensure, can there be a healthy growth of the profession in the country. I would appeal to Government to take early action for the setting up of such an Institute, which has also been recommended by the Venkataraman Committee of the Planning Commission in 1970. One of the first tasks which I would suggest for this Institute would be the codifi-

cation of the ethics for this profession and its acceptance by all practising Consultants in the country.

A subsidiary function of your Company has been to grant loans to the cotton textile, jute and machine-tool industry for their rehabilitation and modernization, although under Government directives your Company has not been entertaining fresh applications for loans since February, 1963.

It has now been decided by Government to transfer this activity to the Industrial Finance Corporation of India and action for completing the formalities of transfer are in hand.

I wish to thank all our clients for the trust and confidence reposed by them in the competence and professional integrity of your Company. I am grateful to the officials of various Government departments and organizations and the many other organizations, institutions and individuals

for their valuable assistance and guidance.

I wish to thank all my colleagues on the Board of Directors for their wise counsel in the management of the affairs of the Company.

The establishment of new plants and equipment, so necessary to the economic progress of our country, are not just the products of steel and brick and glass. They come, mainly, from the imagination and hard work of people. The employees of your Company are deep in experience, knowledge and skill. They have applied themselves with vigour and single-minded devotion during the year to the challenges of the tasks assigned to them. Theirs was a significant contribution to the achievements recorded during the year for which I would request you to join me in paying our tribute to them.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

INDIAN COPPER CORPORATION LTD.

CHAIRMAN, MR. G. D. KOTHARI'S ADDRESS

Working to a common purpose... By generating employment

We have tried, for decades to create and generate employment—directly as well as indirectly.

Today, our total direct employment number 11,000—20% more than in 1967. And when our planned diversification programmes start, over 2,500 new jobs would have to be manned. Additionally, our interconnected concern, Indian Leaf Tobacco Development Company Limited, already employ 25,000 including seasonal labour during the tobacco season.

Employment for 5.5 lakh more has been generated indirectly by our operations. They are the trade in general. They are our suppliers and professional agencies and transport and other tertiary services. They also include the several thousand people in the 110 small scale sector units we have helped to develop.

Further self-employment opportunities have been created by our novel Jai Jawan Stalls Scheme, first started in 1966.

Our efforts indeed are humble : but if they go even a small way towards helping national interests, we shall have served our purpose.

India Tobacco Company Limited
—in pursuit of progress

Address delivered by Mr. G. D. Kothari, Chairman of Indian Copper Corporation Ltd. at the Annual General Meeting of the Company for the year ended 31st December 1971 held on the 29th September, 1972.

Gentlemen,

I welcome you to the 48th Annual General Meeting of the Company.

The accounts for the year ended 31st December, 1971 and the Directors' Report have been in your hands for sometime and with your permission I shall take them as read. From these you will see that the results for the year 1971 were very satisfactory. The working profit for the year under reference increased by Rs. 74,33,562 but the profit before taxation was considerably less due to very high depreciation and development rebate reserve which had to be provided for on account of commissioning of the Flash Smelter on 10th December, 1971, benefit of which could not be derived during the year under reference. It pains me to see that the advantage of installing Flash Smelter and the Sulphuric Acid Plant for which your Company had put in so much efforts and money would no longer be available to its stockholders, as you now the undertaking of the Company has been taken over by the Central Government.

The main objectives of acquiring the undertaking of your Company, as contended by the Government of India, are to ensure the conservation and development of the scarce copper resources of the country by an integrated approach and to increase copper production in the country at a much faster speed. In my view, these objects could have been achieved in a better way without nationalization as we were exploiting copper mines and producing copper strictly in accordance with the guidelines laid down by the Central Government from time to time. We had given an assurance to the Central Government after having discussions with our technical people as well as with the Central Government, that mill-head grade of copper

would be reduced from 2% to 1.8% within three years in order to increase copper ore reserves and keeping this objective in view, steps had already been taken by your Company to implement and fulfil this assurance. In the year 1971 the average grade of copper ore milled was brought down from 1.98% to 1.912% as can be seen from the Directors' Reports. In fact, your Company was considering to bring down the cut off grade from 1% to 0.5% which would have reduced the mill-head grade further to about 1.5% by undertaking an expansion programme of all mines of the Company, particularly of Surda Mines which was being examined by technical experts of your Company when the management of the undertaking of your Company was taken over by the Central Government on March 10th, 1972 and for which your Company had already decided to engage a world renowned mine consultancy firm.

You are aware that your Company had undertaken an expansion programme at the cost of about 9 crores under which the Flash Smelter having an annual capacity of 17,000 tonnes was commissioned on December 30th, 1971. Your Company was also thinking of utilising the old smelter by increasing copper ore production from its own mines and also by treating copper concentrates available from indigenous as well as from overseas sources which would have increased the production of copper by your Company to 26,000 tons per year. Various schemes were submitted to the Government for this purpose. Thus the Company was fully alive to its responsibilities and duties towards increasing copper production in the country and conservation of ore. I am sure that with the co-operation and assistance from the Government of India, we would have achieved these objectives in a comparatively shorter period than what possibly it would take now, if past performances are any guide.

I am grateful to the Minister of Steel and Mines, Mr. Kumarmangalam for giving us the credit of managing the affairs of the Com-

pany efficiently but at the same time it pains me to see that the Company having to its credit a remarkable record of services and achievements has been deprived of its undertakings because it was being run efficiently and it had developed Indian expertise which is very valuable for the future growth of the copper industry in the country. The Company would have been happy to make its humble contribution in the larger interests of the country by sharing its experience and knowledge with any public sector unit in achieving self sufficiency in copper production, had any such indication been given to the Company.

In this connection I would also like to point out that the kyanite lease of the Company, the profit of which was shared between the Government of Bihar and the Company on 60.40% basis was also taken over by the Central Government although this property cannot be linked in any way with the Government objective of the take over of the undertaking of your Company. In my view discrimination has been made against your Company by taking over its kyanite property as other kyanite leases in the country are still in the hands of private parties. This however, should not be construed to mean that I am in favour of the Government taking over the kyanite mines from private parties but what I wish to convey is that in all fairness at least the kyanite property should have been left with the Company.

The Central Government has been paying management compensation to your Company at the rate of Rs. 75,000 per month with effect from 10th March, 1972 and probably this will continue till the date of commencement of The Indian Copper Corporation (Acquisition of Undertaking) Act, 1972. The Honourable Minister of Steel and Mines had stated that the management compensation was determined after taking into consideration the Managing Agency Commission which was being paid to your Company's Managing Agents Gillanders Arbuthnot & Co. Ltd. So far as the Managing Agents are concerned, the commission paya-

ble to them as Managing Agency Commission was their profit whereas your Company has been asked to bear out of this Rs. 75,000/- all expenses in connection with Share Department work of your Company and in discharging all responsibilities and obligations under the Companies Act. Your Company has also been asked to meet all liabilities arising out of retrenchment of clerical and subordinate staff of your Share Department such as gratuity, retrenchment benefit etc. if the Company is wound up. Thus the management compensation paid to the Company was not even sufficient to meet all the aforesaid liabilities.

In accordance with the directives of the Custodian and the Central Government, your Company prepared and submitted the accounts for the period from 1st January, 1972 to 10th March, 1972, the date when the management of the undertaking of your Company was taken over by the Central Government and these accounts reveal the networth of the Company's undertaking at Rs. 16.60 Crores as on that date. While preparing these accounts the Company had changed the basis for valuation of finished and semi-finished stocks such as wire bars, rolled products, concentrates, kyanite etc. Such stocks

were valued in the past at cost price whereas these have now been valued at realisable rates which is appropriate as the undertaking of the Company have been taken over by the Government and these accounts have been prepared mainly for the purpose of determination of compensation. It is indeed very disappointing that a sum of Rs. 7.5 crores is being paid to the Company which is not even 50% of the networth of the Company on the basis of the accounts prepared by us for the period ended 10th March, 1972.

If the compensation had been determined on the basis of the present day replacement value, it would have been in the vicinity of Rs. 75 Crores. For example, it will cost Rs. 90 Crores for Hindustan Copper Limited to create the installed capacity of 31,000 tons of copper per year, whereas the annual installed capacity of both the smelters (new Flash Smelter and Old Reverberatory Smelter) of your Company was about 26,000 tons.

The Company was hoping to make a gross profit in the neighbourhood of Rs. 8 Crores in 1972 and therefore had the compensation been calculated on the basis of capitalisation of earnings, the amount would have

been far far greater than what the Government have proposed.

In view of what I have stated above I am sure you will agree with me that the compensation awarded to your Company is grossly inadequate, unreal and illusory. The Honourable Minister of Steel and Mines has himself admitted that it is about 50 to 60% of the market value of the shares. In our various representations to the Government we had pointed out that out of approximately 24,000 Stockholders of your Company, about 22,500 Stockholders held between 100 to 2000 units of stock and these small stockholders would be adversely affected if a reasonable compensation was not paid, but I am sorry to say that in spite of these representations, the Government have decided to pay a very low compensation to the Company which cannot be justified on any ground. I assure you, however, that your Directors have done their best and will continue to do what they can to safeguard your interests.

I regret to inform you that the Central Government have not approved the recommendation of the Board of Directors for the payment of Dividend at the rate of 10.544% i.e. 20 Paise per unit of stock. Representation was made to the Government for reconsideration in view of the increase in profit but they have expressed their inability to agree to pay more than 8% dividend for the year 1971. This matter is now before you for consideration.

I am fully aware that you are anxious to know the future of the Company, but at this stage it would not be possible for me to spell it out for a number of reasons. Amongst various alternatives your Directors will also examine how soon money can be paid back to the stockholders if it is decided to wind up the affairs of the Company. Your Directors will come up with suitable proposals to you at the appropriate time.

I trust that you will join me in expressing our appreciation of the hard work put in by all workers and members of the staff. I thank my colleagues on the Board for their valuable guidance throughout the year and the difficult period thereafter.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

COMPANY AND PUBLIC NOTICES

INDIA TOBACCO COMPANY LIMITED

37 Chowringhee, Calcutta

GENERAL NOTICE is hereby given to members of the public under Rule 4A of the Monopolies and Restrictive Trade Practices Rules 1970 that the Central Government is to consider an Application by the Company under Section 22(2) of the Monopolies and Restrictive Trade Practices Act 1969 with regard to the Company's proposal to establish a five star hotel each in Delhi, Agra and Madras. Any person interested in the matter may, if he so desires, intimate to the Central Government in the Department of Company Affairs within fourteen days from the date of publication of this notice, his views, if any, with regard to the proposal and also the nature of his interest therein.

Working to a common purpose...

Through research and development

Forty-four years ago we recognised Research and Development as the cornerstone of self-sufficiency. In 1928, we encouraged our interconnected concern, Indian Leaf Tobacco Development Company Limited, to set up a Research Department which is now a fully equipped Research Station. A Training School in Hunsur (Mysore) provides technical personnel to the industry.

Twenty years ago we started our own Research & Development wing in Calcutta in order to achieve self-sufficiency in ancillary materials. Imports were thereby reduced to a minimum long ago.

Our Rs. 40 lakh Integrated Research Centre shortly to be opened in Bangalore will resolve a wide range of problems—from quality tobacco production to product development to import substitution.

Our efforts indeed are humble; but if they go even a small way towards helping national interests, we shall have served our purpose.

India Tobacco Company Limited

Strategy for the Core Sector

IF prices continue to rise at the present rate, another devaluation of the rupee may not be far off. The consequences of this on the Fifth Plan could be very bad indeed. The foreign exchange gap, estimated to be about Rs. 2,000 crores in the Fifth Plan period, would then shoot up as India's imports which are now roughly around Rs. 2,000 crores a year and are expected to mount steadily during the next five years would cost much more in rupees while exports, now placed around Rs. 1,800 crores a year, will fetch much less. The foreign exchange factor would not have been so vital if it had not been made clear in the recent A.I.C.C. session in Ahmedabad that once again the highest emphasis is to be placed on the "core sector" which consists of steel, heavy machinery, power, fertilisers, heavy chemicals, oil, railways, shipping and mining. Experience of the 'sixties has shown that despite all the pious hopes, all these sectors still remain heavily dependent on foreign technology and assistance and will continue to be so for at least a decade or two more.

The exposition by Mr. D. P. Dhar, Central Minister for Planning, of the economic situation at the A.I.C.C. session is very revealing. Mr. Dhar said that the basic cause of the present ills was that the country slowed down on the "core" sector immediately after the Third Plan ended in March 1966 and has continued to do so ever since. As a result, the sinews of growth have weakened and there are acute shortages of almost all the basic materials and power. This constitutes a major bottleneck to progress and even if savings are increased and more money made available for developmental purposes, not much can be achieved until these shortages are removed. Mr. Dhar was highly critical of this lack of foresight during the last five years reflected in the neglect of the core

sector. But he was perhaps glossing over the hard realities of those times. It was a period beset with three difficulties which he would do well to take note of now to be able to avoid them in the future. Just after the 1965 war with Pakistan, western donors, particularly the U.S.A., were dragging their feet about aid as they are doing now. Secondly, the war was followed by two years of severe famine. And thirdly, six months after the war, the rupee was devalued by as much as 36 per cent. This had a traumatic effect on India's dollar earnings.

There are indeed some parallels in the situation that makes it necessary for the authorities to sit up. This year is again a postwar year as 1966 was. This year too the country has had a bad crop, although not so bad as six years ago. Like that time the economy is again passing through a phase of heavy inflation caused by excessive spending during the war year. Industry is once again in the doldrums, this time largely due to the acute scarcity of steel, power, fertilisers and so on. It would thus seem that foreign exchange management in coming years would have to be the hard core of Mr. Dhar's new strategy of developing the core sector of the Plan. Without it, the whole Plan could collapse. To ensure success in this field a number of steps are unavoidable. In the first place, prices must be kept in check. If India has to go through another heavy dose of devaluation of the rupee as in 1966, all the plans would be upset and, despite Mr. Dhar's best intentions, the country may once again have to go on a "Plan holiday" and say goodbye to the core sector for several years with disastrous consequences. Furthermore, foreign exchange will have to be earned as well as conserved. The shaky basis of the figures released by the Central Ministry of Foreign Trade has proved to be a big head-

ache to the Finance and other economic Ministries at the Centre. The impact of the growing trade with the Soviet bloc on the country's hard currency earnings still remains an unanswered question and needs to be examined in all its aspects.

It is also necessary to make a more realistic estimate of the country's foreign exchange needs and take the public into confidence about it. The slipshod way in which the problem is being handled in the Planning Commission is indicated by the projections that have been coming out of the august body. One day an expert group reported that the foreign exchange gap in the Fifth Plan would be of an order of Rs. 2,000 crores. A few days later, another group came out with the finding that there would be no shortfall at all. Although this is a highly unpopular field in the present suspicious climate, it might be worth examining whether the Government can still try to attract foreign private capital in key sectors to meet the obvious shortage of technology, machinery and funds. If there are fears that this would compromise India's ideology or national interest, it would be worth while examining the new developing rela-

tionships between Russia and China on the one hand and the capitalist countries on the other. The Soviet Union is trying hard to attract capitalist Japan to invest in a big way in the development of the vast Siberian tracts. This would obviously involve inviting foreign private capital in the sensitive tract which the Russians have kept sealed from the outside world for half a century.

The Russians are also trying to enter into deals to manufacture cars and other consumer goods in their country with west European countries. Talks with the U.S.A. for technological collaboration along similar lines are already far advanced. China is making efforts of its own to make a breakthrough in importing western capitalist technology. The big question that Mr. Dhar would do well to answer to himself and to the nation is whether in the present fast changing world, ideology should be allowed to stand in the way of importing modern technology, especially even when all the major socialist countries have discarded such inhibitions. In the answer to this question may lie an important element of the solution to the Fifth Plan problems.

Tackling the Economic Challenge

IT is not known on what basis the Prime Minister, Mrs. Indira Gandhi, claims that her Government will be able to tide over the gathering economic crisis, which is becoming all-pervasive day by day. The crisis is essentially due to growing shortages in such vital sectors as power, industrial production and agricultural output. It is obvious that these shortages cannot be made good overnight. Therefore, a certain measure of distribution regulation will undoubtedly help ease the situation. But if the Government imagines that the basic malady lies in distribution and its takeover of wholesale trade in foodgrains will provide the solution, it is sadly mistaken. Unfortunately, however, the authorities at the Centre appear to be making exactly this grave mistake.

Little has been done in the last six months to check the steady rise in prices. But what is more disconcerting is the complacency with which the Government views the price situation. For instance, the

Central Finance Minister, Mr. Y. B. Chavan, told the Consultative Committee of Parliament for his Ministry last week nothing more than what he had to say on the price situation four months ago. Mr. Chavan admitted that prices had "shot up unduly" and added that the Government was fully aware of "the gravity of the situation". The same day, the Central Minister for Power and Irrigation, Dr. K. L. Rao, made a similar statement in regard to the power situation in north India. Even after taking emergency steps to maximise power generation, he said, there would be a shortage of 4 million units a day in the northern region.

The power shortage is, in fact, a more serious matter than the shortages of commodities, which could at least be imported from abroad to meet difficult situations. Already fertiliser production at the Nangal factory has been affected by the power shortage in Punjab. The output in a number of small and big units will likewise be affected by the shortage

in the north and some southern States like Mysore. The obvious solution to this situation is to regulate power supply to industrial units according to their needs and encourage industrial units in States that have not been hit by the power crisis to step up production. But the second possibility can be tried only if there is unstinted co-operation from labour. The Central Labour Minister, Mr. R. K. Khadilkar, who with undue haste committed the Government to raising the statutory minimum bonus in industrial units from 4 per cent to 8.3 per cent, has found to his utter dismay that his call to industrial workers to increase production by working seven days in a week has been totally ignored. If Mr. Khadilkar had linked his bonus scheme to higher production, the result would surely have been different.

All these instances show clearly the lack of concerted thinking in the Government on current economic problems. Price rise is not viewed as a national problem but one of Mr. Chavan to tackle; similarly, the power crisis is considered to be the headache of Dr. K. L. Rao. As a result, there is often no co-ordination among economic Ministries in dealing with problems of national importance. Instead, one hears only of differences between this Minister and that Minister on their approach to economic issues. A classic example of this is the way in which the joint sector concept has been presented to the public by the Central Minister for Industrial Development, Mr. C. Subramaniam, and his colleague for Planning, Mr. D. P. Dhar. While the former is all for defining the concept clearly and writing it down in the Industrial Policy Resolution, the latter is for leaving the concept vague, as it is now, and not making any changes in the 1956 Policy Resolution. And yet, both deny they have any differences!

According to reports from New Delhi, the Prime Minister is believed to have frowned at the manner in which some of her colleagues spoke at the recent A.I.C.C. session in Ahmedabad. She is evidently anxious that the public should not get the impression that Ministers at the Centre are pulling in different directions and working at cross purposes. This can be avoided not by talking to the concerned Ministers alone but by coming to an understanding at the general body of the Congress Parliamentary Party that no member will attack another, especially those

in Government, without first bringing his charges to the attention of the Prime Minister and the Party.

This is essential because the months ahead are going to be even more difficult than those that have passed. Even though the Government has decided to import 50,000 tonnes of pulses and 100,000 tonnes of oilseeds, they will only help to check a further rise in prices and not in bringing down the price level. Higher internal production is, therefore, the obvious remedy. Here the constraints are well known. Besides the vagaries of weather, there are shortages of fertilisers, seeds and water. According to latest estimates, the *kharif* production may be better this year than that of last year but even so, the loss due to drought will be as high as about 11 million tonnes. It will not be realistic to expect the crash production programme for the *rabi* season to make the projected addition of 15 million tonnes in the face of difficulties like power and fertiliser shortages.

On the industrial front too, there may not be any spectacular spurt in output in the coming months. On the contrary, the power shortage may well hit production in several units in the north and may bring down the overall growth rate. Already steel production in Rourkela has been hit by power difficulties and it is obvious that the Government cannot make good the entire shortfall in production and meet the demand of the consuming industries with imports. It is, therefore, clear that shortages in critical sectors will continue for several months to come, in spite of what the Government may do to reduce their intensity.

It is in this context that one has to view Mr. Chavan's disclosure that deficit financing this year may be much higher than the figure of Rs. 225 crores assumed in the Central Budget. The inflationary impact of a large dose of deficit financing—estimated between Rs. 400 crores and Rs. 450 crores—can be dangerous to the economy, already reeling under adverse effects of a very difficult price situation. Mr. Chavan has spoken of financial discipline in the Government and 10 per cent cut in non-Plan expenditure, but if past experience is any indication, such assurances are rarely ever honoured either by the Centre or the States; nor are the credit curbs by the Reserve Bank the only answer. What is needed now is a dynamic policy, designed to promote industrial and agricultural

production by every possible means; otherwise, the glib talk of self-reliance, which is to be the plank for

the Fifth Plan, will neither have any meaning nor credibility with the public.

The Role of I.D.B.I. and I.F.C.

FOR Indian industry, 1971 was not the best of years. Industrial production rose by only 3.1 per cent, against 4.8 per cent in the previous year. But industry's demand for funds did not show any sign of slowing down; on the contrary, it tended to absorb more money. The leading financial institutions like the Industrial Development Bank of India (I.D.B.I.) and the Industrial Finance Corporation (I.F.C.), whose annual reports for the year ended June have recently been published, did more business during 1971-72 than in any previous period. To a certain extent, the rise in assistance has been due to diversification in their lending policies to newer sectors. The I.F.C., for instance, has taken special care to step up assistance to the industrially backward regions and co-operative agencies at concessional rates. (A fuller version of the chairman, Mr. C. D. Khanna's statement was published in the issue of *Capital* dated 5th October, 1972.) In 1971-72, the I.D.B.I. sanctioned assistance of a total of Rs. 168 crores, against Rs. 131.3 crores in the previous year; the extent of assistance utilised also rose correspondingly from Rs. 79.8 crores to Rs. 94.5 crores. The figures for the I.F.C. are equally impressive. The Corporation approved financial assistance of Rs. 39.16 crores for 68 industrial projects, compared with Rs. 35.03 crores for 61 projects in the previous year. Indeed, that has been the pattern for all the term-lending institutions in general; during fiscal 1971-72, these agencies, including the I.D.B.I., I.F.C., I.C.I.C.I., S.F.C.s and S.I.D.C.s/S.I.I.C.s, together sanctioned 36 per cent more assistance, compared with the previous year. To push the assistance programme in such a big way at a time when industry was not exactly racing ahead speaks highly of the dynamism of these institutions.

In spite of this performance, the financial agencies seem to be watchful about their own resources position in the coming months. The I.D.B.I. annual report thus frankly concedes that if disbursements of assistance, both direct and indirect, takes place in 1972-73 as anticipated, it is likely to face a resources constraint. The I.D.B.I. may have to resort to borrowings on a large scale or adopt new

techniques of resources mobilisation. Borrowing from the market has not been considered to be very prospective in view of the larger competing claims by the Government and public-sector undertakings. Two main possibilities are being explored: accelerated repayment of loans by such assisted units as are doing well, and the sale of I.D.B.I. loans in one form or another to banks, the L.I.C. and the U.T.I.; other sources held in view are discounting of machinery bills and export bills and assistance from international agencies like the World Bank. The problem is apparently shared by the I.F.C., more so because defaults both in principal and interest payments at the end of 1971-72 have recorded a disconcerting rise. The Corporation is going to the market towards the end of this month to raise Rs. 10 crores of loans. The fact that some financial institutions like the I.D.B.I. are fearing resources difficulties at a time when some others, notably banks, are flushed with funds can have a significant impact on the pattern of industrial financing in the coming months and years.

The last year was significant for the financial institutions for another reason. During the year, the provision for conversion of their loans into equity under certain circumstances can be said to have come into full play for the first time. Up to the end of June 1972, the I.D.B.I. imposed the conversion clause in respect of 43 cases. The period during which the conversion option could be exercised has not been reached in any case. Similarly, during 1971-72, the I.F.C. included the conversion clause in respect of 35 concerns out of a total of 68 units assisted. Out of these, one concern has declined to avail itself of the facility sanctioned by the Corporation. Loan agreements with the conversion proviso have been executed in ten cases and in the remaining 24 cases, terms and conditions were being finalised at the end of June. It is too early to assess the impact, if any, the conversion clause will have on the demand for funds from these agencies, but the fact needs to be properly weighed in shaping their lending policy for the years ahead. The I.D.B.I., the I.F.C. and other agencies of their nature

are also showing increasing interest in public and joint-sector projects. Last year, the I.F.C. extended Rs. 7.32 crores of loan to seven joint-sector units; the I.D.B.I. sanctioned assistance of Rs. 1.8 crores for the expansion of Travancore Cochin Chemicals Ltd, a Kerala Government project. Aspirants for loans from these agencies have to take note of the consequences that might flow from the preference likely to be shown to such joint or public-sector units.

As the two topmost financial institutions in India, the I.D.B.I. and the I.F.C. have commitments for every part of the country. And nobody can say that they have not tried their best to fulfil the expectations. But unfortunately, the Statewise break-up of assistance granted during 1971-72 shows an askewed distribution of funds. Taking the case of the I.F.C. first, the annual report reveals that among the 15 States covered by the Corporation, West Bengal, not so long the pace-setter for the country's

industrial development, comes last but one in the assistance table. Its share in the total amount of loans and underwritings sanctioned by the Corporation came to a dismal 1.7 per cent, against Maharashtra's 25.8 per cent, Tamil Nadu's 12.5 per cent, Uttar Pradesh's 12.4 per cent, and Gujarat's 11.4 per cent. Similarly, in the case of the I.D.B.I., West Bengal got less than half of the financial assistance sanctioned to Maharashtra, and considerably less than the amount allotted either to Tamil Nadu or Mysore. The law and order situation and a temporary despondency about West Bengal's economic prospects might have influenced the decision-makers. Admittedly, the amount of loans sought by West Bengal parties from the Bank was substantially lower than the corresponding figures of many other parts, but now that the perspective has vastly improved, it is to be hoped that the term-lending institutions will be more liberal about accepting loan applications from the State and sanctioning them.

Public Sector in Britain and India

THE discussions that took place at the British Labour Party's conference held in Blackpool in the first week of October this year on the expansion of the public sector are of considerable interest to India. The consensus of opinion at the conference favoured a vigorous extension of the rôle of the public sector. It was emphasised that if the Labour Party came to power, it would not only undo what the Conservative Party had done in the field of nationalisation but would even go further by taking over many basic industries and trades. Mr. Ian Mikardo told the conference that the next Labour Government would expand the public sector of industry "far and fast". He said that the principle of nationalisation of banks and insurance companies had already been accepted. "We are not considering whether—only considering how to do it", said Mr. Mikardo.

One of the resolutions discussed at the conference called upon the next Labour Government to implement fully the Party's commitment to public ownership. It said that Labour should bring into public ownership "any industry which is essential to the national interest and initiate State industries at growth points of the economy". Among the industries proposed for nationalisation by several

speakers were banks, insurance, building societies, drugs, aircraft production, oil and ancillary industries. The arguments that were advanced in favour of extending the public sector in Britain were more or less on the lines advocated in India. It was pointed out, for instance, that it was only by greater and more effective State control that it would be possible to reduce inequalities in income and wealth. The fact was highlighted that 1 per cent of the population owned 43 per cent of the national wealth while 70 per cent owned only 2 per cent. The private sector of industry was "accused of putting financial fiddling ahead of efficiently organised production".

One speaker at the conference said that the best-paid man in a company today was not a production man but the man who could lay out the company's annual accounts to ensure the highest level of tax evasion. He added that the bright men of the present system were not producers, developers, or creators, but "the merger barons, the take-over merchants, the asset strippers—the people who organised deliberate redundancies". Another argument that was put forward in favour of nationalisation was that a large part of private industry was getting massive doles from the public purse by way of "fantastic grants",

subsidies, subventions, and tax reliefs. Mr. Harold Wilson, former Prime Minister, declared that it was necessary to take into public ownership all the land that was required in this century for urban development. But this alone would not be enough. He referred to "the racket" in agricultural land which enabled people to amass money. He explained that while the money going into capital could increase the supply of fixtures and equipment, and money going into jobs could increase the demand for labour, the money used to acquire land did not produce more land but only increased its price. Mr. Wilson was also emphatic about the nationalisation of mineral resources. "We cannot leave this to private enterprise", he said, and added, "for environmental considerations alone, we believe that the State, and only the State, should decide the balance between mineral development and the safeguarding of our national heritage".

As in India so also in Britain, the working of public-sector enterprises had revealed many gross deficiencies and anomalies and had created complicated problems in relation to various aspects of management. That was why public opinion supported the Conservative Government's decision to hive-off certain sectors of the publicly-owned industries. Nevertheless, the Labour Party wants to go ahead with schemes for further nationalisation. It remains to be seen to what extent the Labour Party's view on this subject would be backed by public opinion. In India also, there has recently been an increasing insistent demand from certain sections of public opinion for a vigorous policy of nationalisation of various trades and industries. The fact that the working of the public sector in India has, on the whole, resulted in large losses and has created an image of inefficiency has not deterred the leftists from persisting in making a demand for further nationalisation. What is surprising is that the Congress Party is also inclined to enlarge the rôle of the public sector rather indiscriminately. As the ruling Party, the Congress has certainly a responsibility to ensure that the existing industries in the public sector function at least with some reasonable efficiency before taking over more industries and trades. The resolution adopted recently by the Congress Working Committee on the economic policy deplores the administrative lethargy. It says that "a modern economy and an antiquated administrative structure go ill together" and that the procedures here are "anchored in an era of leisurely activity".

Yet the Congress seems determined to expand the public sector in a spectacular manner solely on ideological considerations.

In Britain, the administrative machinery is certainly far more competent than in India. Even so, it has not been easy to run the nationalised industries efficiently. Moreover, industrial relations have become greatly strained in Britain in recent years because of inflation and other causes. This is also affecting Britain's exports. Mr. John Heath, Britain's Counsellor (Commercial) in Bonn, recently wrote

Report on Currency and Finance

THE Reserve Bank's *Report on Currency and Finance* has always provided a study in depth of the performance of the economy during a year but what makes the latest one stand out is the admission of policy failure. The report for 1971-72 (July-June) will be found particularly useful because of the presentation of structural transformations that have occurred in recent years as an introduction to the changes during the year under review. The details of monetary and real changes have been fitted in a framework of aggregate savings and investment in the economy. A trend which can hardly be overlooked is the declining proportion of public investment financed by public savings, even though the Government has continued to increase the level of forced savings through taxation. As a result, additions to public investment outlay have come to depend more and more on drafts on household savings and the drafting is done mostly through the financial institutions, including the Reserve Bank. While the flow of household savings into the equity market is now very small, it has become almost extinct in the bond market. In both these markets institutions like the Industrial Development Bank of India, Life Insurance Corporation and the Unit Trust have become the principal operators. Private corporations are now depending more on conversion of reserves and investment by term-lending institutions for equity capital than on new household subscriptions.

Certain features of the tax structure have become distinct over the years. Direct taxes have not exhibited much income elasticity and increases in tax rates do not any longer

offer much scope for enlarging the yields. As for indirect taxes, the ease with which they are shifted makes them partly the instrument of cost-inflation. With the public-sector itself being a large consumer of goods and services, this has meant that the real transfer of resources to the public sector secured by additional commodity taxation has become smaller a unit of normal tax.

Total receipts of the Central and State Governments (revised estimates) rose by 15 per cent during the year, compared with 4.1 per cent in 1970-71; their development outlay increased by 17.4 per cent (against 14.3 per cent) and non-developmental outlay by 19.8 per cent (against 12.1 per cent). The combined overall budgetary deficits of Central and State Governments increased from the originally anticipated level of Rs. 387 crores to Rs. 631 crores (revised estimates).

Despite larger supplies of wage goods and slower additions to development expenditures than envisaged in the Fourth Plan, price increases could not be avoided, although they have been moderated very considerably. As a result of price and output increases, there has been a rapid enlargement of monetary resources in the economy. The increase in aggregate monetary resources in recent years has been faster than the rise in the net domestic product at current prices. The Reserve Bank report says that this is partly due to the lower income velocity of monetary resources. Money supply with the public rose by 13.6 per cent and aggregate monetary resources expanded by 16.2 per cent.

There has been an enlargement of agricultural incomes and perhaps an

increase in income inequalities in rural areas as a result of a shift in relative prices in favour of agricultural producers. The tendency of domestic prices to keep rising has reduced both the incentive effect of many export promotion measures and the deterrent effects of tariffs and other restrictions on imports. It is true that inflationary developments outside India have moderated somewhat the repercussions of domestic price increases on the balance-of-payments position, but as the R.B.I. report points out, the changes that have already occurred could accentuate the pressure on foreign exchange reserves as domestic investment picks up and competition from third countries becomes more intense in the export market. During 1971-72, exchange reserves increased by Rs. 59 crores to Rs. 846 crores.

The far-reaching political and economic changes during 1971-72 could have had a shattering impact on the internal and international balances of the Indian economy, but as things turned out, the economy continued to be in good shape until fairly recently. In the last few months only, some of the consequences of these changes were felt. *The Economic Survey for 1971-72* had placed the growth rate at 4 per cent in the national product, but subsequent developments, particularly the shortfall in foodgrains output, suggest that the actual growth rate was less. In spite of the setback, the Reserve Bank's provisional estimates show that during 1971-72 both domestic savings (10 per cent) and investment (11.5 per cent) constituted larger proportions of the net domestic product at market prices. The growth in public-sector Plan and non-Plan outlays and the unforeseen expenditure incurred by the Government in connection with the war with Pakistan necessitated an increase in budgetary deficits. Increases in Government expenditures are reflected in the rise in the aggregate monetary demand. Smaller increases in both agricultural and industrial sectors contributed to the deceleration in the growth of national product. The industrial growth rate declined further to 2.9 per cent in 1971 from 4.8 per cent in 1970 and 7.1 per cent in 1969. Against this general background, the Reserve Bank's credit policy was operated with two main objectives, namely, the maintenance of restraint on overall credit expansion by banks and provision of adequate credit for legitimate productive purposes in general and for priority and hitherto neglected sectors in particular.

CURRENT COMMENT

LLOYD'S REGISTER

Progress in Shipping

Mr. A. C. Grover, chairman of Lloyd's Register of Shipping, has once again reported record figures in the annual report for the year 1971. The total classed fleet now exceeds 77 million tons gross and last year there was a rise of 21 per cent in the gross tonnage of new ships classed by Lloyd's Register, bringing the figure to well over 6 million tons gross for the first time. There was also a rise, for the fourth successive year, in the tonnage of ships for which it approved plans, the final figure being 10,434,150 tons gross. The number of ships which this represents, 705, is greater than the figure for 1970 but less than that for 1969—an indication of growth in ship sizes in the last two years. In fact the average ship for which plans were approved has gone from 10,350 tons gross in 1968 to 14,772 tons gross in 1971, an increase of nearly 43 per cent in four years. A major contributory factor to this growth, is the development of the V.L.C.C.s for which 300,000 or 350,000 tons dw. is now not unusual. Other trends which emerge are the present eclipse of the standard "Liberty replacement" ship, the decline in demand for new ships, the increase in size and number of liquefied gas carriers, and the expansion in refrigeration, automation and containerisation. Alternating current is being adopted for virtually all new ships of any size.

The current indifference to "Liberty replacement" ships is more due to the lack of demand for dry cargo tonnage than to any aversion to standardisation, which is now being considered for vessels ranging from the smaller bulk carrier up to the tanker of 300,000 tons dw. Tanker building, on the other hand, is booming and there is practically no berth space for large tankers or O.B.O. ships before the end of 1975. Gas carriers share this popularity and those on order total more than 1.9 million tons. While a number of large container ships are under construction or on order, comparatively few new orders are being placed, and attention centres mainly on the building of small container vessels, the conversion of existing ships to carry containers and the growing use of refrigerated containers. This

last coincides with a strong demand for traditional refrigerated cargo ships and it seems there is room for both types in this expanding traffic. It is reported that 66 per cent of new ships classed by Lloyd's Register are automated, compared with 46 per cent only one year earlier.

AVIATION

New Association

Manufacturers and suppliers of specialised equipment to the aviation industry have formed an association to promote this nascent sector. Called Aviation Suppliers and Equipment Manufacturers' Association, it seeks to encourage co-operation among its members to ensure maximum self-reliance in respect of sophisticated items required by national and international airlines. A notable feature of this Association is that the users—the airlines, for instance—have also agreed to be associated with it. This joining of hands is the result of the conviction that India should attain maximum self-sufficiency in the shortest possible time in respect of aviation equipment. The move for import substitution in this field acquired greater urgency and momentum following difficulties experienced in the import of supplies during and after the last Indo-Pakistani conflict. The progress of import substitution since then was so heartening that the national airlines and leading manufacturers and suppliers of aviation equipment thought it logical to form an association to put the industry on an organised footing.

CHEMICALS

Seminar in Bombay

The All-India Manufacturers' Organisation, Bombay, is organising a two-day seminar on research and development in the chemical industry on 2nd and 3rd November, 1972, in Bombay. Mr. C. Subramaniam, Central Minister for Industrial Development, Science and Technology, will inaugurate the seminar. The Director Generals of the C.S.I.R., the D.G.T.D. and other Government departments concerned, leaders from the industry, directors of National Research Laboratories all over India and professors of universities and other educational institutions will take part in the semi-

nar. The main subjects to be discussed are: general aspects of R and D; R and D in National Research Laboratories, Government and public-sector undertakings; private-sector efforts; transfer of technology problems and promotional efforts.

POWER SHORTAGE

Gas Turbine Generators

To enable West Bengal to survive the deepening power crisis for the next 18 months or so till electricity from Santaldih becomes a reality, the Bengal Chamber of Commerce and Industry has strongly recommended the immediate installation of gas turbine generators, among other short-term and long-term measures. In a comprehensive memorandum submitted to the Government of West Bengal a few days ago, the Chamber has argued that the use of plant of this type, even if it may not lend itself to economic generation of power on a long-term basis, has immense possibilities when undertaken as part of the State's power development programme. What makes the proposition even more attractive, according to the memorandum, is that gas turbine generators with an aggregate capacity of about 40 mW can be eventually located in Haldia after use at a number of other places to meet localised deficits. Besides, for a minimum of four to five years after the commissioning of two 120 mW units at the Santaldih power station in 1973-74, there is to be no further increase in the State's conventional generation capability. The addition of a mere 240 mW of installed capacity in that year will hardly be adequate to cover West Bengal's power needs up to 1976-77, not to speak of the urgent and immediate need for additional capacity.

Mr. R. P. Patodia, chairman, Engineering Association of India (Eastern Region), in a Press statement issued a few days ago, has also expressed grave concern over the deteriorating power supply position in West Bengal. He stated that although the Government had finalised several measures to mitigate the difficulty arising out of power shortage, there was undue delay in their implementation. Industries, therefore, continued to suffer. Power was being cut off without any prior intimation, and the duration was also uncertain. The manhours lost was continuously increasing. In some units, load shedding is done up to three times a day during working hours. With these conditions factories were finding it difficult to main-

tain normal production. Mr. Patodia urged the Government to put into effect without delay the suggestions already finalised and approved by it.

EASTERN INDIA

Seminar on Entrepreneurship

A seminar on "Growth of Entrepreneurship in eastern India" is to be held under the joint auspices of the National Alliance of Young Entrepreneurs and the South Calcutta Jaycees on 28th and 29th October, in Calcutta. The Chief Ministers and other Ministers of all the States in eastern India, Mr. C. Subramaniam, Central Minister of Industrial Development, Mr. D. P. Dhar, Central Minister of Planning, Mr. Mohan Kumaramangalam, Central Minister of Steel and Mines and Professor Sidheshwar Prasad, Deputy Minister in the Central Ministry of Industrial Development, among others, have been invited to address the seminar. Several of them have already consented and the consents from others are expected.

MANAGEMENT

Information System

Addressing the annual general meeting of the Institute of Office Management in Calcutta a few days ago, Mr. K. Hartley, managing director, Indian Oxygen Ltd, said that the development of a sound and effective management information system on which successful management so largely depended was something that needed considerable effort and above all knowledge and expertise. The time, effort and the cost of developing such a system should not be considered a luxury. Even in terms of immediate returns on investment the outlay on the development of an effective management information system will yield returns in the shape of higher profitability, improved productivity and smoother internal functioning of the organisation.

In more industrially advanced countries large organisations are more and more making use of the computer to store and to process the information required. Even within this country, the use of the computer for storing, processing and retrieving information is gaining currency, particularly in large service organisations. However, management information systems need not necessarily be computer-based. Any scientific system which will achieve the objectives of making avail-

able the information required and making it available at the right time may be adequate for the organisation concerned even if it does not use sophisticated computers. But inevitably even medium scale organisations in relatively less developed countries like India will need some mechanical devices for the functioning of an efficient management information system. However, those organisations which do not use any data processing machine will nevertheless require the use of methods to ensure the proper flow of information to different levels of management.

TECHNOLOGY

An Important Seminar

The Government of India will hold an international seminar on technology transfer in Delhi in the middle of December with the assistance of the United Nations Industrial Development Organisation. The seminar would be organised by the Council of Scientific and Industrial Research (C.S.I.R.). Nearly 60 countries are expected to participate in the seminar. It will deal with transfer of technology from the advanced to the developing countries; in between the developing countries; and within the developing countries from research laboratories to industries. It will also discuss a number of industrial topics both in the sophisticated and traditional fields, such as fertilisers, steel, drugs and pharmaceuticals, instruments, textiles, leather and food industries.

ENGINEERING

International Convention

Announcing the programme of the international convention on engineering industries being organised by the Engineering Association of India on 23rd and 24th November in New Delhi, Mr. Strya Paul, chairman of the convention, stated in a Press statement issued a few days ago that the convention would be divided into three sessions dealing with (a) engineering industries in developing countries: 25 years of growth and experience; (b) engineering exports: perspective of growth; and (c) development through co-operation: scope for joint ventures and technical assistance. The object of the convention is to enable world business leaders to exchange views on matters of mutual interest relating to development of industries, growth of

trade and joint ventures. An assessment would be made of new opportunities for trade and industrial co-operation in the vital field of the engineering industry. A large number of representatives from both the developed and developing countries are expected to participate in the convention.

TRADE

U.S.-Soviet Accord

Ending a quarter of a century of virtual trade deadlock, the world's two largest economic powers—the United States and the Soviet Union—have signed a historic agreement that could triple their mutual trade in the next three years. They also signed on 18th October an agreement settling Moscow's old second World War lend-lease debt to the United States. This in turn opened the way for President Nixon to grant Government Export-Import Bank credits to firms doing business with the Soviet Union.

Mr. Nixon announced that he will ask Congress to reduce tariffs against Soviet goods on a most-favoured-nation basis. Some opposition has been expressed by several leading Senators who object to the Soviet emigration tax on Jews wishing to go to Israel. The Secretary of Commerce, Mr. Peter Peterson, told newsmen at a briefing that the U.S. Government will pursue "quiet diplomacy" between now and early next year, when the President will send his legislative proposal to Congress. Mr. Peterson also announced that the agreement opens the way to vastly increased trade between the two economic giants.

ELECTRONICS

Seminar in Calcutta

A seminar on electronics in West Bengal, jointly sponsored by the Development Committee for Electronics in West Bengal, the West Bengal Industrial Development Corporation Ltd and the West Bengal Small Industries Corporation, is going to be held on 16th November, 1972, in Calcutta. Professor M. G. K. Menon, chairman, Electronics Commission, will be the chief guest and principal speaker on the occasion. The object of the seminar is to chalk up a definite plan of action for West Bengal. It is being designed to provide the necessary impetus to the electronics industry in the State.

WORLD BANK

Two New Loans

India's capacity to meet the growing demand for transport services from an increasing domestic oil refinery capacity and rising consumption of refined petroleum products will be expanded with the help of a credit of \$83 million from the International Development Association (I.D.A.), an affiliate of the World Bank. The credit will enable India to buy four oil tankers, each of about 80,000 deadweight tons, for carrying crude from the Persian Gulf ports to feed the Haldia and Barauni refineries and two refined oil products tankers, each of 20,000 dwt, for the import, export and coastal distribution of refined petroleum products. The credit is the first direct lending by the Bank group for ocean-going ships in a developing country. The previous direct lending for ships by the Bank was in the Netherlands in 1948 during the post-war reconstruction phase of the Bank's work. The shipping industry in developing countries, however, has been indirectly assisted by Bank group commitments to development finance companies.

Simultaneously, a credit of \$75 million from the I.D.A., will enable

selected Indian industries to expand their production of fertilisers and capital goods essential for the development of key sectors of the economy—agriculture, electric power and transport. The credit will meet 29 per cent of the industries' foreign exchange requirements of about \$258 million during 1972-73 for imports of raw materials, components and spare parts. The following industries were selected because of their priority in India's economic development: tractors and power tillers, fertilisers, pesticides, electric motors, transformers, switch gear, aluminium smelting, commercial vehicles, automotive ancillaries, machine tools and abrasives, and ball and roller bearings. The beneficiary industries employ about 350,000 persons and in 1971 they exported goods valued at about \$60 million.

SMALL LOANS

Liberal Guarantee Scheme

The Credit Guarantee Corporation of India (Small Loans) Guarantee Scheme has been liberalised further with effect from 1st October, 1972, in respect of transport operators and farmers and agriculturists. Credit facilities granted for repairs and renovation of vehicles (including body build-

ing and replacement of parts) and for working capital requirements will also be eligible for the guarantee; at present, only credit facilities granted for the purchase of a vehicle are eligible. The total amount of credit facilities to an operator should not, however, exceed Rs. 1,00,000.

Credit facilities not only to individual farmers and agriculturists but also to joint Hindu families and groups or associations (not being companies or co-operative societies), every member of which is jointly and severally responsible to the credit institution in respect of the entire amount of the credit facility, will be eligible. Credit facilities granted for two farming activities (instead of one) will also be entitled to the guarantee. The liability of the Corporation will be up to 75 per cent of the total amount of the loss, subject to a maximum of Rs. 37,500 or the aggregate of the individual ceilings prescribed in respect of the two activities, whichever is lower.

RAILWAYS

Joint Forum

The Railway Board has decided to set up a joint forum to enable the free flow and exchange of ideas on the running and shaping of the enterprise of railways. To be known as the Corporate Enterprise Group of Management and Labour (C.E.G.), the forum will consist of the chairman, members and additional members of the Railway Board, secretary of the Board and three representatives from each of the two labour federations. The workers will be represented by the president and general secretary of each federation and one member to be nominated by each of the federations. The Corporate Enterprise Group will evaluate the functioning of the railways. It will exchange data and ideas on ways and means of improving the efficiency and viability of the railways.

MONEY MARKET

Easier Trend

The short-term money market has been easier this past week. Borrowers have been scarce and the demand for funds has been poor. The call rate quoted initially at 3½ per cent, and it has come down to 3 per cent towards the close. The market has closed squarish. The demand for remittances has been moderate. The supply of tea and gunny bills has also been moderate. The pound-sterling has weakened against most major foreign currencies during the week.

A Ditcher's Diary

WILL A VIETNAM CEASE-FIRE BE announced before the American Presidential election on 7th November? Past experience tends to make one sceptical about predictions, but the latest reports about some kind of understanding between Washington and Hanoi do not seem entirely speculative. The area of understanding could still be limited; there could still be several unresolved questions but a basis for serious negotiation emerged with the communist proposal for a three-segment interim Government. The communists may have made one or two further concessions since the proposal was first made. In any case, Dr. Kissinger clearly had a possible settlement in mind when he went to Saigon. If Hanoi and Washington were agreed, the concurrence of the South Vietnamese communists could be taken for granted—if only because Hanoi could not have agreed to anything without the consent of the comrades in the south. But, by all accounts, President Thieu suddenly discovered that he had an independent rôle to play. He knows that this is an illusion; what he has really discovered is that he will have no rôle to play if the Americans leave. It is rather late for him to tell the South Vietnamese Press not to distinguish between the North Vietnamese and the Vietcong. Air Marshal Ky had a more interesting formulation. He once said that while the Vietcong was a reality, it was not an entity. To explain, he added that a wife

was an entity but a girl friend was a reality. But Messrs Thieu and Ky ought also to know that a reality does not take long to become an entity; the distinction, even in their own semantics, should have ceased when their representatives agreed to sit at the same negotiating table with the National Liberation Front delegates in Paris. The N.L.F. delegation is no more—or, if one insists, no less—a part of the North Vietnamese team than the Saigon delegation is a part of the American. But these arguments are now purely academic. President Nixon knows this; so does Dr. Kissinger. The question is whether they are ready to accept the consequences that flow from the South Vietnamese reality, and make Mr. Thieu and his men accept them as well. If Mr. Nixon can end the Vietnam war before or immediately after the November election, he may be forgiven for much he has done—in Vietnam itself and elsewhere. Much will at least be forgotten, except of course by the Vietnamese themselves. It is too late in the day to pronounce on the merits of the conflict; what matters now is that the fighting must end. And the Americans cannot end it by staying on in Vietnam or anywhere else in Indo-China.

IT IS PROFOUNDLY DISTURBING TO think how things have changed since Bangladesh was born less than a year ago. Around this time last year,

everybody in that suffering land was waiting for India to act; the millions who had migrated to this country were wondering what Mrs. Gandhi would do in the face of increasing Pakistani belligerency and the world's inaction. At the end of the war in December it seemed that nothing could ever divide the peoples of India and Bangladesh; the expressions of Bangladeshi gratitude were often embarrassing, not the least because even the most effusive seemed wholly sincere. Who could have imagined that anti-Indian slogans would be raised within a few months? Who could have imagined that communal disturbances would occur in less than a year? I have always been inclined to distrust euphoric notions about the future of Indo-Bangladeshi relations. Even so, I never thought that the fund of goodwill would be so severely depleted so soon. When I visited Dacca a few months ago I saw several manifestations of anti-Indian feeling, but this I ascribed to certain temporary factors and to a defensive psychological reaction to the help received from a powerful neighbour. While I did not expect the "bhai-bhai" euphoria to be revived, I did hope that some of the prevailing misunderstanding would be removed and the relations would find a stable basis in common interests. But evidently things have gone from bad to worse; unfounded suspicions have found their confirmation in deep-seated prejudice; frustration and discontent have found a focus in a mythical external monster. This may sound unduly pessimistic; but optimism is not easily sustained by the reports of intense and widespread anti-Indian feeling I have late-

POPULARITY OF TEA IN FRANCE

A CORRESPONDENT writes in Current Coin: Tea-drinking is becoming more and more popular in France and it is marvellous the change that has come over the working man in abandoning the liquor on which he had practically been weaned for the "cup that cheers". In some parts of France, notably in Brittany, cider is the drink of the labouring classes, and being so cheap, a large sized bottle (a litre) containing more than a quart in English measure, costing only a couple of sous, every working man carries a bottle to work with him. In other parts a cheap red wine is equally favoured. Within the last few years, however, tea is to a large extent replacing the national drinks and the only reason why it is not more universally favoured is be-

cause of its cost. It is much cheaper in France to drink liquor than tea, which is retailed at the prohibitive price of four to five francs a lb. The duty on tea in France comes to about a rupee a lb. or a franc and a half, so that the grocer who retails tea makes an enormous profit on the cheap stuff that he gets five francs or over Rs. 3 a lb. A tea planter who has just returned after a long holiday in France was so struck with these facts that he has made arrangements to ship a good quality of tea to Brittany and retail it there at less than the local grocer charges for a much inferior stuff. He is convinced that there is a large field open to any firm that goes in for this trade on a large scale with the increasing popularity of tea in France.

ly received from several dependable sources. Some of the evidence is public. Border trade has been suspended and other trade is apparently suspect. Ordinarily people in Bangladesh are hardly to blame if they become angry when a saree which costs Rs. 6 in India is sold for Rs. 26 in Bangladesh. They do not know that India sold it for no more than Rs. 6; they are not in a position to find out how the price is increased more than four times by commercial interests in Bangladesh aided and abetted by corrupt politicians and obliging, and possibly also venal, officials. The Indian authorities have gained nothing from their policy of not doing or saying anything that might embarrass the Bangladesh Government or the ruling Awami League. It cannot be in India's interest to strengthen forces which are opposed not only to the present regime in Bangladesh but also to India's friendly rôle; yet silence has often helped these forces to hold India responsible for the failings of the Sheikh's Government and Party.

BRITAIN'S CONSERVATIVES MADE much of the two-to-one victory over Mr. Enoch Powell's racial policies they achieved at their annual Party conference recently. The subsequent trumpeting seemed to indicate that from now on we can all regard Mr. Powell as a political has been. But in fact, one gathers, all the evidence points the other way. It seems the voting went against Mr. Powell mainly for two reasons. One was that the organisers contrived to defeat him at precisely the point he is most vulnerable, namely, the question of Britain admitting the Uganda Asians. Few people, whether in the Conservative Party or not, really believe Britain has no responsibility towards these people, and scarcely anybody is interested in the legal question, which Mr. Powell claims does not involve any automatic liability arising from the possession of a British passport. So it was not difficult for the Government to secure a confidence vote on this issue. The second reason was that Conservatives are traditionally loyal to the leadership, at any rate when the public is watching. Thus a large proportion of the votes cast against Mr. Powell were an expression of disapproval at the way he has been openly attacking the Party's leaders, more especially Mr. Heath. But the support accorded the Prime Minister was clearly intended to be dependent on his being able to show

more success with the policies he is now professing—new ones let it be noted, because with the possible exception of joining Europe, he has completely reversed about every one of the policies on which he won the 1970 election. The most important of these fresh initiatives, at the moment, are concerned with Ulster and inflation, especially the latter.

THE RECENT REFERENDUM DECISION in Norway not to join the European Community after all was promptly and joyfully heralded by anti-Marketters both in Britain and Denmark as the ultimate justification for consulting the democratic wishes of the people in such weighty matters. Oddly enough, you might feel, there was no similar enthusiasm expressed about the overwhelmingly favourable vote registered by the Irish Republic in its referendum a few months previously. But such quibbles apart, it must surely be seen that if the Norwegian decision did in fact prove anything at all about the referendum principle, it was that such expedients are wholly inappropriate for settling questions of this importance. For one thing, the margin against was narrow enough to raise serious doubts as to what the verdict might have been had different wording been used to phrase the proposition. Most people interpret a decision not to do something as being in favour of maintaining the *status quo*. But would the Norwegian dissidents have taken quite such a complacent view if it had been put to them exactly what they stand to lose by remaining outside the Community? The Oslo Government had a more balanced picture, and that was doubtless

why it favoured entry. Moreover, the opposition appears to have come overwhelmingly from the Norwegian countryside and the more remote regions to the north. Without entering any plea for the superior wisdom of town-dwellers, it is easy to see that whereas the more sophisticated sectors of Norwegian society, including the business circles, were in favour of joining Europe, it was the more conservative and traditional, not to say reactionary, elements, whose voice finally counted.

THE SOLEMNITY WITH WHICH delegates to the United Nations have been discussing a draft treaty on the moon might suggest that man's time is up on this earth. Speaking for India, Mr. K. C. Pant has proposed that the moon's resources should be declared part of "the common heritage of mankind". As a spectacle that affects different people in different ways, the moon has always been a part of this heritage. What other inheritance can we think of? A lunar settlement might be theoretically possible, but in practical terms it would be sheer lunacy. Besides, even in moments when this earth of ours seems totally unbearable, I am not tempted to migrate to the moon. In fact, even the idea of a short visit does not attract me. And floating in space is not my idea of fun. Even the space people are beginning to feel that they could do with a little more on-flight fun, particularly if they have to spend months or years inside a sealed cabin surrounded by nothing at all. About a month ago came the first hint that love in space might cease to be a bizarre dream. At a conference on space medicine

held in Nice, Dr. Charles Berry, the life sciences director of the U.S. space administration, expressed concern over the psychological effects of a long space journey, say, of a year or more, and said that lack of normal sexual activity might cause a serious build-up of tension, with unsettling effects. He thought that for manned missions to Mars or beyond, "mixed crews must be seriously considered". But he added that the women members must be fully qualified and operating astronauts. Whether women astronauts are the most pleasing female company is perhaps arguable, but a man in space cannot expect much choice. There is also the question of weightlessness in space, which may not be among the ideal conditions for love-making. Perhaps it might be possible to create artificial gravity inside a mating chamber within the spaceship; but the delights seem highly problematical. Yet the novelty itself could be a source of additional pleasure; there's no knowing people's tastes in these matters. Anyway, the idea is interesting, to say the least. There is already some speculation that the first astro-romance might be between an American and a Russian. There are at present no women astronauts in the U.S.A., while several female cosmonauts have been trained in Russia. But the Russians have not yet said that they approve of Dr. Berry's idea of sex in space. Asked to comment, Professor Oleg Gazenko, director of the bio-medical institute in Moscow, said: "A mere man would be advised to obtain the woman's point of view before pronouncing on such a subject".

Role of the Generalist and the Specialist in Indian Management

By V. S. Bhatia

For many years it was accepted as a gospel truth in India that learning a craft makes a man unfit for learning anything else. But experienced managers today hold that the rôles of experts and generalists are interlocked.

THIS column has attracted contributions from those experienced in the art and science of management, including professionals. The bulk of contributions over the last two years was from senior operators on specific rôles of different types of managers, in terms of functions and business operations. The context was invariably foreign, although valuable points were made that are of fundamental importance to any country in today's industrial age. Time and again, the authors emphasised the need to harmonise modern management practices with the dynamics of the Indian situation. Admittedly, this is no easy task, for the Indian management scene is not clearly defined and gives the impression of a confused outlook. Local pulls and pushes, political and economic, tend to take a toll of policies applied in the West. Through no fault of theirs, practising managers in India are yet to establish norms of management behaviour to fit in with the moving situation in business, as administered today in the private and public sectors of the Indian economy. The credibility gap is thus obvious; there is not enough actual application. There is not much debate either on controversial issues. These have been avoided in this column also, although controversy often helps in

building a sound and purposeful background.

Specialist or Generalist

Departing from the general run, it might be useful to select for discussion some aspects of the "new times" in relation to the future. One such area is the relative rôle of a specialist and/or a generalist in management in the situation likely to develop in India. Managers, in the middle sector, i.e., those having five to ten years experience in industry and commerce would perhaps like to know to what extent business administration is a specialised function. How does specialisation arise, and whether it springs from experience alone or from training? As to experience what does it actually mean in practical terms—ten years in one place, or one year each in ten places? What is the worth of job hopping—does this make a specialist or an experienced generalist? How does one rate the performance in finance, sale, purchase or production? Is co-ordination of all these sectional responsibilities the job of a generalist or that of a specialist? A repetitive successful policy-maker can establish the reputation of being an expert, even though a generalist.

Embedded in all the above questions is the need to define what makes an expert, and what is his rôle in the changing Indian economic scene. For many years, it was accepted as a gospel truth in India that learning a craft (including that of Governmental administration) makes a man unfit for learning anything else and this permeated even the thinking of top administrators. It was assumed that there was only one way of doing a job, and nobody could tell the skilled operator that the same way might be the right way to do some other job, let alone there might be other ways of doing any job. In today's situation, it is established beyond doubt by management people that even the most difficult skills can be acquired if taught through programmes and systems.

Knowledge based skills often change, and a really alert manager can be got at through constant training only, right from the day of joining to the day of retirement. Against this background, the rôle of Indian management would assume an entirely different shape, colour and prospect for the future.

Roles Interlocked

Experienced managers today hold that the rôles of experts and generalists are now interlocked; a generalist after a series of runs in different areas builds within himself a specialist core and can become a better generalist, whereas experts are those who have picked up sufficient knowledge and experience of a job or jobs to be able to project that experience for application at other jobs, and compete for a dual rôle of specialist and generalist. This is how management has progressed elsewhere, sometimes in concentric circles. Regrettably, little debate on this subject is encountered in the peculiarly Indian context.

The air is thick with reports about Government's future policy to bear on business and industry, concerning production, distribution and pricing, not to speak of the much-talked-about implication of the joint sector, and acquisition of a share in management of private industry. This sort of situation must be quite novel for the founding fathers of management in India, when there is little comparison offering with other developed economies. The situation is also not helped by ministerial pronouncements. Recently, a senior Cabinet Minister of the Government of India appealed to students at one of the management institutes not to be satisfied with the easy money available by peddling consumer goods, but asked them to prepare themselves to work for the challenge of it for public-sector firms. It is forgotten that even consumer goods would be made by public-sector firms which must compete with private-sector salesmanship, in order to show profit. The homily is, therefore, not understood. Agreed that the future of management in India would depend very much on the complexion of political events, but this does not do away with the need for exchange of ideas for the future. All these are pertinent points, especially for middle managers who will have to bear the brunt of tomorrow's economic activity, and therefore deserve detailed discussion.

For a nominal charge "Capital"'s Statistical Department can provide you with a certificate of share prices.

BOAC's cargo centre in London has 354 different exits.

When you send your cargo BOAC to London we can fly it on to as many as 354 different destinations. That's more than anyone else, naturally.

Our computerised cargo centre handles all cargo, large and small, faster and efficiently.

We can ship your cargo to any city in Europe, Russia, Africa, West Indies, North and South America.

With BOAC's 20 weekly flights (including two all cargo freighters every week) from India to London it won't take long to get our Cargo Centre working for you.

India's Growing Burden of Foreign Debt Servicing: Need for Relief

By Subhash J. Rele

Debt servicing is imposing a heavy burden on India. What the country needs is a drastic reduction of the burden which can be done through a larger measure of debt relief.

LARGELY due to the rising burden of repayment, the actual contribution of foreign aid to the financing of economic development has been markedly reduced in recent years. More than one-third of the foreign loans received are spent on interest and repayment charges. In fact, debt servicing has led to further debts. India has reached a stage where it has to seek foreign loans from the western countries in order to make interest payments. Debt servicing increased sharply from Rs. 238 crores in the First Plan to Rs. 119.4 crores in the Second Plan and further to Rs. 542.6 crores in the Third Plan. In 1966-67, the burden of debt servicing was Rs. 274.5 crores and it has since been increasing year after year. In 1970-71, the burden was higher at Rs. 450 crores and will continue to be at that level in 1971-72 also. The peak will be reached in 1972-73 and 1973-74 and roughly 30 per cent of the country's annual export earnings will be used towards the servicing of past debt obligations. Taking debt servicing into account, the net flow of assistance into the economy has declined from Rs. 863 crores (the peak level since 1961-62) in 1967-68 to Rs. 341 crores in 1970-71 and was expected to decline to Rs. 328 crores in 1971-72.

The debt service ratio, that is, the ratio of debt service to foreign exchange earnings, which was about 5 per cent in 1960 shot up to 16.5 per cent in 1965, 19.8 per cent in 1966, 22.6 per cent in 1967, 20 per cent in 1968 and 22 per cent in 1970. Currently, India is devoting more than 4 per cent of the national income for debt servicing. Mr. Lester Pearson in his report has described the rise in debt and debt service payment of developing countries in the last 15 years as "explosive". He feels that this can jeopardise the development process if developing nations fail to take proper action at

the earliest. But India's policy-makers seem to have hardly bothered to take heed of this warning.

The *Economic Survey* for 1971-72 points out that the debt servicing burden will be as much as 28 per cent of the country's exports and 55 per cent of new aid commitments. India is now faced with interest and principal costs of about \$600 million a year payable in foreign exchange. Thus, a significant share of future Indian income and product, saving and export proceeds that could be more beneficially devoted to domestic development will have to be diverted instead to paying interest and principal as outstanding obligations. According to the mid-term appraisal of the Fourth Plan, total external payments requirements in 1973-74 have been projected at Rs. 2,913 crores as against non-aid foreign exchange receipts of Rs. 1,907 crores. This leaves a gap in foreign exchange requirements of Rs. 1,000 crores.

Most of the assistance received by India has been in the form of interest-bearing loans, only a fraction being in the form of outright grants. The share of grants in overall external assistance fell sharply after the First Plan period and in recent years, has dwindled down to just 5 per cent. Aid does not carry generous terms. For nearly half of the country's loans, interest rates are high and the loans have short maturity periods. The poser is: can India afford the high cost of aid? The amount of interest payable on foreign loans during 1972-73 is estimated at Rs. 168 crores. The burden of debt servicing has been accentuated by contributory factors such as the decline in the proportion of grant to total aid and the increase in tied loans. The burden of debt has vitiated the whole purpose of aid. There is no justification whatsoever for tied aid by countries which do not face balance of payment difficulties.

The Government feels that the present form of debt relief given by the foreign creditors offers no solution to

the problem of ever-rising debt obligations. It is pointed out that the debt relief, in effect, does not amount to rescheduling of debts. The current practice of Aid India Club countries is to allow a portion of their new aid commitments to be utilised for repayment of debts. In its latest report, the World Bank has recommended these countries to allow \$200 million a year of new aid commitments to be treated as "debt relief". The *Approach to the Fifth Plan* document says: "The objective of bringing down net aid to zero implies that gross aid will be required only to the extent of repayments of principal and interest. To the extent that debt rescheduling is available, the requirements of other gross aid can be reduced. Where debt repayments have to be met from free foreign exchange debt relief is in fact equivalent to untied aid. It is necessary to emphasise debt relief more and more as a preferred form of assistance".

What the country needs is considerable lessening of its debt servicing burden, which can be effectively done by affording it a larger measure of debt relief rather than by providing a larger quantum of aid. The following table gives the total amount of debt relief provided during the last few years by the Aid India Club.

TABLE

Year	Million Dollars	Million Rupees
1966-67	34.39	257.9
1967-68	63.20	474.0
1968-69	101.26	759.5
1969-70	124.98	937.3
1969-70	323.83	2,428.7

Source: Government of India, Ministry of Finance.

On the basis of the study of debt relief by the World Bank, the members of the Club provided debt relief for an amount of over \$300 million during the last three years, 1968-69, 1969-70 and 1970-71. The Aid-India Club has in its last meeting in June agreed to the World Bank's estimates of India's needs for 1972-73—\$700 million as non-project aid (including \$200 million in debt rescheduling) and \$500 million as project aid. Experience often shows that actual disbursement of aid falls short of commitment. The question is: how much of this aid will materialise?

It is estimated that in future more than one-fourth of India's export

If 8 out of 10 Indians live in rural areas...

it's time we paid more attention to them !

So UCObANK takes to the country in a big way. Our accent is on service to the nation. Agriculture and rural development have been given top priority.

because a strong rural base means a strong India. That's where UCObANK is putting the nation's money to work. Where it counts. Where more than 80% of Indians live.

Meeting the needs of the people.

earnings will have to be set aside for debt servicing. With the rising trend of debt servicing cost, one wonders if any marginal increase in exports would be of much avail. The country's external debt liability has increased by 84 per cent whereas its exports have increased only by 14

per cent during the last five years. On India's part it must be said that not enough effort is being made to explore the possibility of repayment through exports. There is a case for a lower rate of interest on loans, longer repayment periods and re-scheduling of debt repayments.

a way as to encourage and facilitate smuggling on a large scale. Consider, for instance, the list of commodities that were permitted to be exchanged in the "Rest of Bangladesh and Rest of West Bengal sector", as given in the adjoining Table.

It will be seen that the items that were allowed to be exchanged were these mostly required for the daily use of the common people. But the quantities were indicated in very vague terms. Many commodities, for example, could be carried on "head loads", "boat loads", "cart loads" and "raft loads". Such loose definitions obviously gave scope for smuggling and other malpractices. Schedule B laid down the procedure for persons to cross the border. It said: "Every person holding such a special permit may carry across the border in each sector only such goods and commodities and in such quantities as are specified, in the annexure to this schedule and for this purpose, may cross the border only once a day in each direction on any two specified days of a week and only through such routes as may be authorised in this behalf. If market conditions in a locality justify relaxation of the number of days in a week on which persons holding special permits may cross the border in that locality, the additional days shall be mutually agreed between the concerned competent authorities in the two countries".

The carriage of goods across the border was exempt from import, export, and exchange control restrictions and also Customs formalities. Each person was allowed to carry in cash a sum not exceeding Rs. 100 in Bangladesh or Indian currency when crossing the border from either country into the other. The above provisions do not seem to have been properly implemented. The officials entrusted with the execution of the border trade agreement were given wide discretion but they did not exercise effective vigilance to prevent smuggling and other irregularities.

There is no doubt that the suspension of the border trade is bound to cause hardship to the people living in the border areas. When the agreement was signed in New Delhi on 28th March, 1972, Mr. L. N. Mishra, Central Minister for Foreign Trade, said that the agreement was being dedicated to the common people of both the countries. But the common people have so far derived little benefit from this agreement.

Dacca and New Delhi should ponder carefully as to what exactly has

gone wrong in the past six months in the implementation of the agreement not merely with reference to the border trade but in other respects also. The agreement expressed the view that the objective of benefiting the common people "can be best secured by organising trade between

the countries on a State-to-State basis as far as possible". State trading obviously has failed to deliver the goods to the common people. But will New Delhi and Dacca be prepared to admit this frankly and agree to make suitable changes in the trading strategy?

whatsoever. Economic policy is so directed as to provide both managerial freedom and operational infrastructure to the maximum extent possible so that the total pool of activity concentrates towards securing an actual growth of the economy. Unless a chain of new investments is made and the existing investments allowed to proliferate, the momentum of growth cannot be sustained with the result that stagnation soon overtakes the economy and does not allow it either to expand or diversify. Various experiments and combinations apart, unless this basic principle is followed, any attempt to circumvent the normal process of growth is bound to make the economy founder on the rocks of its own premises.

Much the same thing happens in India today. The industrial landscape, as it appears after a quarter century of planning, does not hold any significant promise of making up the loss, far from materialising any plan for economic growth. The industrial policy which originally stipulated a mixed economy, has of late developed a marked bias towards broadening the scope for the public sector and throttling the growth of the private-

Need for Pragmatism in Promoting Rapid Industrial Growth

By Amar Nath Dutta

In order to avoid the pitfalls of the past, the Government should pursue a pragmatic industrial policy. What it should remember is that in the present circumstances, no strategy other than a realistic one can promote industrial growth.

THE question of changing the Industrial Policy Resolution of 1956 came up at the recent Ahmedabad session of the All India Congress Committee. But the detailed deliberations could do little to indicate what exactly the Government has in mind on this issue. The Central Planning Minister, Mr. D. P. Dhar, spoke against any need to change the resolution; the idea of a mixed economy as conceived by Mr. Jawaharlal Nehru and embodied in the 1956 document still held good. On the other hand, Mr. C. Subramaniam, Central Minister for Industrial Development, who has been speaking for some time of the necessity of amending the policy, reiterated the plea at the conference. Evidently, they were not speaking on the same wavelength, although Mr. Subramaniam loudly denied that there was any difference of opinion between him and Mr. Dhar on this issue. The same vagueness came to the surface also on the question of the much-talked-about joint sector. Mr. Dhar said that the Government has not yet accepted the joint sector as an instrument of policy.

The twin evils of inflation and unemployment have plagued the country's economy for more than a decade. Inflation has already eroded the value of the currency by as much as 42.4 per cent during the last 20 years. The wholesale price index has kept on leap-frogging, particularly during the last two years. The annual increase registered a new high of 8 per cent in the current financial year (up to 9th September), compared with 4 per cent in the last year with 1970-71

as the index. Food and raw material prices continue shooting upwards indicating a similar rise, if not more, in industrial cost. Whether such a rise is due to heavier doses of deficit financing or a failure of monsoons or a decline in labour productivity remains a moot point. But the down-to-earth truth is that inflation has become a serious problem to reckon with; its unbridled growth will not only aggravate social discontent but also largely depreciate the value of planned investments over a long span of time.

If inflation is the direct offshoot of a shortage economy, the other and the more baffling problem lies with unemployment. Economic planning in this country started with creating more employment as one of its major premises, but consistently failed to reach anywhere near the prescribed targets. On analysing the spread of unemployment overtaking the last two decades, it is found that the backlog of unemployed far surpassed the new entrants in the employment market and this process repeated itself with a growing momentum. Thus with more than 20 million jobless people in the country today, including educated unemployed, the policy-makers are now finding themselves unable to come out with any strategy that could effectively cope with this gigantic problem.

The clue that leads to a better understanding of the related problems of inflation and unemployment lies in a common concept of optimum utilisation of capacity in the economy. The optimum concept is again based both on the most favourable product-mix on the one hand and a liberal, very often a persuasive approach on the part of the Government, on the other. What is implied here is that the Government would always see to it that there is no wastage in the economy in any form

Suspending Border Trade between India and Bangladesh

(By a Special Correspondent)

The suspension of India-Bangladesh border trade has come hardly as a surprise to many people. In a larger perspective, the move seems to suggest that State trading between the two countries has failed to deliver the goods to the common man.

THE suspension of the border trade between Bangladesh and India has come hardly as a surprise to those who have been closely watching the implementation of the trade agreement between the two countries. In fact, the agreement itself provides for the suspension of the border trade in certain circumstances. Schedule B to the agreement, which relates to provisions for the border trade, says: "These arrangements shall be subject to review after a period of six months to consider whether they should be extended or amended in any way. If, even before the expiry of this period of six months, either country feels the need to withdraw or

modify the facilities under this agreement, it would enter into immediate consultations with the other country, taking such measures as it may consider necessary".

The agreement provides for the border trade in six sectors as follows: (1) Mizoram-Chittagong Hill Tracts sector; (2) Khasi Jaintia and Garo Hills-Sylhet Mymensingh sector; (3) Cachar-Sylhet sector; (4) Tripura-Bangladesh sector; (5) Rangpur (Bangladesh)-Assam (bordering district) Cooch-Bihar Jalpaiguri (West Bengal) sector, and (6) rest of Bangladesh—rest of West Bengal sector. The facilities for border trade were available only to persons living in areas, other than municipal areas, within 16 kilometres of the land Customs frontiers and holding special permits issued by their respective competent authority.

The provisions in the agreement were unfortunately laid down in such

sector enterprise. The result has been distressing indeed. The balance-sheet of most of the public-sector units today is dipped in the red with little prospect of early recovery. On the other hand, the Government seems to be indulging in a reckless venture of frequent take-overs and well without notice of the existing undertakings. Now that the problem has grown more acute and made planning policies more vulnerable to doubts, the Government is having fresh thoughts on bringing out another industrial policy.

The impediments for the existing industrial units are many and varied. An operational infrastructure is singularly lacking which could have been most effective in delivering the goods. An equally serious problem is the negative industrial policy which does not in any way help industries to do their bit in this critical hour. The maze of restrictions and controls over the licensing of new units and expansion of the existing ones, restriction on profits and dividends, withdrawal of development rebates and an acute dearth of financial assistance have all put the corporate enterprise to a quandary. Again, the policy of conversion of loans into equity is another way of securing a compulsory control over the existing management in that it makes representation of the Government on the board of directors mandatory with every loan exceeding Rs. 25 lakhs. Even this would not have fettered the existing management had it not synchronised with the Government directing the day-to-day administration.

In fact, such odds are so commonplace as do not also escape the notice of the Government. Thus with a view to avoiding the pitfalls of its own policy the Government now seems inclined towards having a new idea, the joint sector approach, which seeks to combine the professional expertise of the private sector with the financial facilities of the public sector. But the official policies continue to be vague enough on many issues like "dominant undertakings", "large industrial houses", "normal expansion", "joint-sector participation", and "minimum economic level". Also the Government's policy of exclusive reservation of some areas for small industries seems to be a wrong approach because in countries like Japan and West Germany where small industries flourish no restrictions are imposed on the large ones.

Some Crucial Issues Before Mrs. Gandhi

(From Our New Delhi Correspondent)

Mrs. Gandhi's visit to Darjeeling has been described as a working holiday. This is because she is expected to utilise this opportunity to take decisions on several outstanding issues.

THE Prime Minister, Mrs. Indira Gandhi, has been away from the capital for a week, of which five days are to be spent in Darjeeling. This period of absence from New Delhi will give Mrs. Gandhi an opportunity to examine in a calm atmosphere the many political, economic and administrative problems that have been held up for decision for long. These include the proposed reorganisation of the Congress Party (as indicated by her at the A.I.C.C.'s Gandhinagar session), the formulation of the strategy for the Fifth Plan in the light of the A.I.C.C. economic resolution, and the baffling personnel problem to man several gubernatorial, diplomatic and key administrative posts that have or are due to fall vacant in the wake of the impending retirement of many I.C.S. officials. Mrs. Gandhi's stay in Darjeeling has been described in official circles as a "working holiday". The Prime Minister's Principal Secretary, Mr. P. N. Haksar, has accompanied her to Darjeeling to be available for consultations on the crucial questions.

Each one of the pending issues is urgent. For instance, the appointment of Governors cannot be delayed since Uttar Pradesh and Orissa are having their Chief Justices as acting Governors while those in Kerala, Haryana and Jammu and Kashmir are due to retire soon. Since the next annual conference of Governors is taking place on 1st December, Mrs. Gandhi is reported to be anxious that the new Governors should be named soon so that they get reasonable time to acquaint themselves with their responsibilities before the conference. Similarly, from the Cabinet Secretary downwards a number of key official posts are lying vacant, besides chairmanships of many public-sector undertakings. In all, it has been

estimated that the Prime Minister has to choose suitable incumbents for seven posts of Governors, ten posts of Ambassadors, 16 posts of Secretaries of various departments and over half-a-dozen chairmen of statutory commissions and corporations.

Then, on the economic front, the Gandhinagar A.I.C.C. decisions have to be translated into action. In doing so, she has not only to take care of the radical elements in the Party who are becoming increasingly critical of the present leadership, but also of the reality of the economic situation following the suspension of U.S. aid and the need for economic growth to carry out the promise of *garibi hatao*. In other words, she has to evolve an Indian road to socialism, steering clear of the extreme solutions and also keeping in mind the need for self-reliance in the context of having to go without foreign assistance of the dimensions that were available for the earlier Plans.

According to Yojana Bhavan sources, the Planning Commission has sent the draft of the approach to the Fifth Plan to the Prime Minister before she left for Darjeeling so as to give Mrs. Gandhi, who is the chairman of the Commission, about a week's time to apply her mind on the proposed Plan strategy, which is based on self-reliance as its principal objective and "growth with equality" as its operational strategy. A full meeting of the Commission is scheduled to be held on 30th October to discuss and approve the draft approach. The Plan strategy for employment spells out that "reduction of inequality principally through expansion of employment opportunities and of social consumption and investment oriented to meeting essential needs of the masses must be the second prong of the attack on poverty". It further says that the employment policy must aim at expanding both wage employment and self-employment and raising productivity. The emphasis on "self-employment" is significant.

Where on our planet do you need a Foreign Exchange Expert?...

Wherever you do,
Bank of Baroda
can help you

Foreign Exchange is only one part of our service to you. Foreign Trade is another. We provide you with credit information on prospective buyers abroad; help you with the problems of export-import business...or foreign travel.

Whatever your need,
come to Bank of Baroda.

You've obvious advantages: the largest number of Foreign Branches among Indian banks, and Correspondents in every major trade centre of the world. Backed, of course, by years of experience. So, visit your nearest Bank of Baroda branch, today!

Thou shalt forever be prosperous with
Bank of Baroda

A network of over 650 branches in India and abroad—in U.K., East Africa, Mauritius, Fiji Islands and Guyana.

Planning in India : The Lessons for the Future

The Indian Economy under Planning. By Nabagopal Das. (Published by the World Press Private Ltd, Calcutta. Price Rs. 18, pages 140.)

More than two decades have passed since economic planning began in India and the country is now on the threshold of the Fifth Five Year Plan. Looking back to what has happened in the past, particularly where it has achieved success noticeably and where it has failed dismally require to be spotted in clear terms, so that the future plans take adequate account of the failures of the past. Mr. Das's assessment in this context is welcome for several reasons. It is a highly readable exercise highlighting the country's aspirations, the constraints and problems in realising them, planning—how it has been done and with what effect—the problem of population, the “green revolution”, the public and private sectors, business-Government relationship, foreign capital and other important aspects of the economy. Secondly, it raises various issues which require serious consideration in the formulation of the Fifth Plan, particularly concerning taxation, resource mobilisation, need for sponsoring and nurturing entrepreneurship, price rise, etcetera.

The author points out: “While the objective of social justice should certainly be pursued, the basic importance of growth must not be lost sight of. Growth is an organic, self-generating, multiplying process. Growth alone can create the conditions necessary for the achievement of distributive justice; mass poverty and mounting unemployment cannot be tackled without a higher rate of economic growth.” The author is right in emphasising the importance of economic growth. He quotes the experience in other countries where the concentration of economic power has been far greater than in India. True, a rapid economic transition makes it almost a concomitant that economic power tends to get concentrated as the economy takes off from a certain stage of development to another. What, however, is the optimum point between growth and social justice is yet to be found and in this respect the book does not offer a concrete solution. However, in a short compass, the author has ably dealt with the problems of the Indian economy. It should be read with interest and profit by students of planning and the planners and policy-makers.

Parliamentary Privileges

The Law of Parliamentary Privileges in U.K. and India. By P. S. Parchuri. (Published by N. M. Tripathi Private Ltd, 164 Samaldas Marg, Bombay 2. Price Rs. 45, pages 507.)

This book exhaustively discusses the law of parliamentary privileges in India. Article 105 (3) of the Constitution lays down that the powers, privileges and immunities of each House of Parliament and of the Committees of each House of Parliament shall be such as may from time to time be defined by Parliament, and until so

defined, shall be those of the U. K. House of Commons and its members and Committees at the commencement of the Constitution. For this one has to look to May's *Parliamentary Practice* which gives the main principles without detailing the precedents out of which the law has developed. In this book the author's researches bring out these cases. He also discusses the cases on the subject in India. The treatment of the subject is scholarly, though diffuse, and the book might have been shorter.

The author discusses the question of codification of the privileges and other problems like whether any rules of natural justice are binding on the legislatures while determining the question of breach of privileges, whether a counsel should be allowed to appear on questions of breach of privileges, to what extent the Press should be allowed to report the happenings in the legislatures, etcetera. An important problem discussed in the book after referring to decided cases is the potential area of conflict between the legislatures and the courts, which delicate subject the author has treated with skill and concludes that a gradual awareness has been dawning and in the near future the area of conflict would be reduced to the minimum and the relations between the legislatures and courts, in the field of privileges, would be established on the same basis of mutual trust and respect on which they exist in the U. K. today.

Management Gap

Management Gap in a Developing Economy. By Dr. M. S. Gosavi. (Published by Progressive Corporation Private Ltd, Jehangir Wadia Building, 51 Mahatma Gandhi Road, Bombay 1. Price Rs. 16, pages 140.)

Principal Gosavi's is an interesting exercise in an area in which everybody believes that there is a management gap in India's developing economy but no one knows its extent and behaviour; more important, everyone appears to be indifferent to the ways in which the gap could be bridged. In a short compass, the author grapples with some formidable issues. The presentation is effective. The stress on the need for strengthening the marketing function and the need for the public enterprise to act as a model

employer is apt and timely. The frame of enquiry suggested by him should be seriously considered in formulating the national policy.

Inventory Management

Inventory Management in India. By R. S. Chadda. (Published by Allied Publishers (Bombay), 17 Chittaranjan Avenue, Calcutta 13. Price Rs. 15, pages 126.)

The second edition of this fairly well-received book is a welcome addition to the literature on the subject of inventory management which has gained considerable significance in recent public discussions on the performance appraisal of public-sector units. The Indian context adopted by the author has brought into lime-light some of the characteristic features of inventory management in this country. Large inventories carried by many public-sector units have obviously affected their profitability and call for a scientific approach to the problem. The author has discussed the various techniques of inventory management succinctly and the case studies given have good practical relevance. The study will be found useful by students and managers as an introductory exercise.

P. CHATTOPADHYAY

Taxation of Agriculture

Taxation of Agriculture in India. (Published by the Indian Merchants' Chamber, Economic Research and Training Foundation. Pages 115, price Rs. 20.)

This is a study of the rôle which agricultural taxation should play in the economic development of India. It is common knowledge that the agricultural sector does not make contribution in relation to its capacity to the exchequer. The rise in prices has rendered land revenue completely out of alignment with the current economic situation while agricultural income-tax which is levied in some States makes a minimal contribution to the State revenues. The work discusses various proposals which have been made for the taxation of the agricultural sector, which has a dominant place in the economy, and shows

some broad directions in which solutions should be sought. It points out that there has been a shift in the public opinion which is now inclined to the view that the agricultural sector should bear a reasonable burden imposed in the process of implementation of massive development programmes. The experience of countries like Japan, China, Mexico and Taiwan in levying taxation for transforming the age-old mono-cultural economy is cited.

The study suggests that States which have not so far imposed taxes on agricultural incomes, should evolve steps to tax these incomes. Some States like Maharashtra have high exemption limits and it is suggested that the limit should be lowered so that all sections of society bear their share in the cost of development. As for the proposal to merge agricultural income-tax with general income-tax, the study says that although it is an ideal proposal, it is difficult to implement in the present constitutional position. It is pointed out that the importance of land tax has declined. Proposals for the imposition of surcharge on land revenue are supported and while it is conceded that there is justification for the abolition of land revenue on un-economic holdings, it is urged that States which do away with land revenue should be called upon to make up the loss of revenue by devising alternative measures. Finally, it has

been emphasised that taxation is a powerful tool but with limitations. Tax measures would succeed provided there is co-ordination and co-operation among the taxing authorities, the States pursue complementary policies, and taxes are levied in a way which would provide incentives. The study is a useful addition to the literature on the subject.

Salmond's Jurisprudence

Summary of Salmond's Jurisprudence. By A. K. Sarkar. (Published by N. M. Tripathi Private Ltd., 164 Samaldas Marg, Bombay 1. Pages 194, price Rs. 9.50.)

Jurisprudence has been aptly defined as the study of fundamental legal principles with their historical, philosophical and sociological bases and an analysis of legal concepts. Some concepts in the field of jurisprudence have undergone a change since Salmond wrote his book, particularly because of the impact of social philosophy and economic theory. But Salmond's book still remains the standard classic on the subject after seven decades. The summary of Salmond's work is well written and will be a useful adjunct to the students in the study of the original work.

THE RESERVE BANK —LOOKING BACK

This fascinating book is about the first sixteen years of the Reserve Bank of India. How the Bank came to be set up, what it did in the formative years, and how it dealt with the problems of war financing (1939-45), reconversion to peace-time economy (1945-47) and partition (1947-51) are vividly described, with plenty of background material and extensive extracts from official papers. The study is preceded by a comprehensive record of developments in money, banking and exchange in India for about a century.

Some copies of the 860-page book are now available for sale at Rs. 50 (postage extra). A discount of Rs. 10 per copy will be allowed on bulk orders for ten or more copies. A concessional price of Rs. 30 is offered to educational institutions, teachers and libraries.

Copies can be obtained from :

The Administrative Officer, Economic Department, Reserve Bank of India, Post Box No. 1036, Bombay 1.

Do Fiscal Policies Run Counter to Reserve Bank's Monetary Measures?

By Suhas Joshi

There are many instances when the fiscal policies of the Government had run counter to the Reserve Bank's monetary measures. As a result, the Bank had been unable to contain the inflationary pressures generated mainly by the deficit financing resorted to by the Government.

THE Reserve Bank of India, in its annual report for the year ended 30th June, 1972, published recently, has expressed grave concern over the fast deteriorating economic situation in the country. This is quite contrary to the note of optimism struck by the Bank while assessing the prospects for the year 1971-72 in its previous annual report. On the basis of favourable circumstances like improvement in foodgrains production and in investment both in the public and private sectors, the last year's annual report concluded that "the economy is in a better position than ever before to attain a high sustained rate of growth", provided a reasonable degree of price stability in the economy is maintained and a reasonable degree of balance is achieved between increases in money supply and the increases in real income. Of course, the Bank cannot be blamed for creating such a situation for two important reasons. First, there were the unforeseen circumstances like the influx of Bangladesh refugees and the Indo-Pakistani war in December 1971. Secondly, right from the inception of the Reserve Bank, the Government and the Central Finance Ministry, in particular, have assigned the Bank a subordinate rôle in controlling the monetary situation in the country.

The Reserve Bank has been asked to keep a vigilant watch over the economic situation without at the same time possessing the necessary powers to make its impact felt. The Bank has been reduced to a watchdog without teeth. In fact, there are many instances when the fiscal policies of the Government had run counter to the Reserve Bank's monetary measures, with the result that the Bank had been unable to contain

the inflationary pressures generated mainly by the deficit financing resorted to by the Government. The advanced countries are today witnessing a trend towards strengthening of the central bank's authority over the domestic situation, making them more independent to implement boldly their policies in the national interest. West Germany has recently provided a classic example, where the Minister for Finance had to resign in his struggle with the chairman of its central bank—Bundesbank. It is interesting to note that the economic policy group of the right-wing Conservative Party in power in Britain is recently reported to have made a demand for "denationalisation" of the Bank of England.

If the Reserve Bank would not have acted as another banking de-

partment of the Ministry of Finance, it would have been free to pursue a more appropriate credit policy and could have acted with the Central Government with the same boldness with which it deals with the State Governments concerning their overdrafts. The annual report for 1971-72 states that the Bank has successfully pursued its new policy in respect of States' overdrafts and that since 1st May, 1972, no State Government has overdrawn its account with the Bank continuously for a period of more than seven days, and even within this period, the amounts actually overdrawn from time to time were marginal. This fact proves that the Bank has been able to improve financial discipline among the different States.

The Bank's annual report for the year 1971-72 has adopted its traditional technique of narrating the economic events and the measures undertaken. While reviewing the trends in the money supply, the report has emphasised two notable changes—first, the currency component (as revealed in Table 11 on page 19 of the report) in the increase in money supply had declined significantly from 71 per cent in 1968-69 to 47 per cent in 1971-72.

UBI IN THE LIFE OF WEST BENGAL

Assistance to Agriculture

In West Bengal UBI plays the leading role in taking banking facilities to people and in giving assistance to agriculture and small-scale industry.

Take the case of assistance to agriculture. As in December 1971 all commercial Banks together had 29,547 agricultural loan accounts. Of them UBI's share was 18,679 or 63 per cent. Again, the amount advanced by all commercial Banks stood at Rs. 10.50 crores. UBI's share was Rs. 3.38 crores or 32 per cent. This means loan per borrower is relatively small in UBI. There is ample reason for it. Of all the farmers assisted by UBI about 83 per cent are small farmers having less than 5 acres of holding.

UBI's special schemes of assistance also cover paddy growers, cotton and mulberry cultivators, vegetable growers, fishermen, poultry farming, besides ordinary farmers. The emphasis of UBI's farm financing is to assist the smaller man to improve his economic position.

CAPITAL, 26th OCTOBER, 1972

and that of bank deposits increased from 28.7 per cent to 53 per cent during the same period. The Bank has, however, taken advantage of this situation to pay tributes to the extension of banking habit among the rural community following the nationalisation of 14 major banks in July 1969. The whole analysis falls to the ground if 1967-68 is taken as the base year and not 1968-69 as selected conveniently by the Reserve Bank. Since 1967-68, the currency component had actually increased from 44.8 per cent to 47 per cent in 1971-72 and that of bank deposits had declined from 55 per cent to 53

per cent. It is difficult to explain this trend as the currency component had shown erratic variations since 1961-62.

The second notable change pointed out by the report is the growing proportion of savings deposits to current deposits. The Bank has ascribed this again to the spread of banking habit. "Simultaneously, and again in the rural areas particularly, a section of the population, which was accustomed to keep its savings in the form of currency, has apparently developed the banking habit". The Reserve Bank is quite sugges-

tive in attributing this spread in the banking habit to nationalisation because the report further adds: "Whether this is attributable more to the feeling of security engendered by the nationalisation of banks than to the attraction of interest yields, it is difficult to say. Perhaps both have contributed to this change of habit and require to be borne in mind in the formulation of banking policies". It must be pointed out here that if the feeling of security has been a factor in the growth of savings bank deposits, it ought to have been engendered through the scheme of deposit insurance, much prior to nationalisation of the 14 major banks.

Although the impact of vigorous branch expansion programmes launched by the nationalised banks on the growth of savings deposits cannot be denied, one wonders whether this factor can bring about such a rapid result. In fact, barring the year of 1971-72, the percentage proportions of current and savings deposits in the total money supply have been more or less the same in 1969-70 (24.8 per cent and 24.7 per cent) and 1970-71 (25 per cent and 27 per cent). It is true that since the abolition of interest payment on current deposits by banks, the growth rate in current deposits has slackened and that of time deposits including savings deposits has spurred mainly because the Reserve Bank has allowed a hike in the interest rates. Another potential factor contributing to the growth of savings deposits has been the liberal withdrawal facilities offered by banks to savings bank account holders. Although some banks have introduced restrictions on savings bank accounts, they are not strictly enforced. Savings bank accounts have been virtually operated as current accounts with the additional advantage of earning 4 per cent rate of return.

Finally, the Reserve Bank is happy over the self-reliance achieved by commercial banks in respect of meeting the busy season credit needs much ahead of the country in regard to foreign aid. The Bank derives satisfaction particularly from the low credit-deposit ratio of banks and the substantial rise in their investment portfolio. Actually, the surplus funds with banks seem to reflect the failure of the Reserve Bank to give guidelines much in advance for the full and productive utilisation of banks' resources.

Improving the Basic Facilities for Tax Administration

(By a Special Correspondent)

The Wanchoo Committee has made a number of recommendations for improving the basic facilities for tax collection and administration. It is hoped that the Government will soon implement these in order to enable the Income Tax Department to function more efficiently.

THE problems of tax evasion and black money have received a great deal of attention in this country in recent years. But, surprisingly, the Government has not cared to provide the Income Tax Department with the basic facilities which are so essential to cope with its responsibilities. The Direct Taxes Enquiry Committee, headed by Mr. K. N. Wanchoo, a former Chief Justice of India, has referred to the general complaint about the inadequate office accommodation and furniture. Forms, stationery and manual aids are said to be in short supply and, in some cases, "totally wanting". The committee was informed by the Board of Direct Taxes that on the basis of the existing staff strength, there was a shortage of office accommodation to the extent of 248,852 square feet. It has recommended that the Board of Direct Taxes should give top priority to the construction of adequate office accommodation at all places and the provision of suitable furniture and other essential facilities and aids for work.

Does it not seem strange that a high-powered committee has to tell the Government to provide its Income Tax Department with forms and furniture? India has long ago acquired the reputation of being one of the highest taxed countries in the world. Successive Central Finance Ministers went on adding to the tax burden but no one has bothered to find out whether the Income Tax Department has been equipped with the elementary needs to do its job with reasonable efficiency. "The Department has not yet taken to modern aids to work", says the Wanchoo Committee. The committee does not favour all-out mechanisation or automation, but it has recommended that simple mechanical aids like calculators, tabulators, addressographs, numbering machines, copying ma-

chines, and electronic typewriters be provided in adequate numbers to the tax officers. It points out that electronic equipment like computers can be used for processing statistics, checking tax deduction statements, matching information, and similar bulk jobs.

Another significant disclosure made by the Wanchoo Committee is that the field staff in tax recovery units are not provided with any vehicle or given any conveyance allowance. It is, therefore, hardly surprising that the officers are unwilling to move out and unable to do their work properly. The lack of adequate storage facilities for the distrained goods has been another handicap to the efficient working of the Income Tax Department. The committee has suggested that the Government should provide strong rooms and safes in sufficient numbers to ensure safe custody of the distrained goods; and it has also recommended that adequate funds should be given to the Tax Recovery Officers to meet the expenses of the defaulters' stay in the civil lock-up.

The Income Tax Department has been facing difficulties in undertaking recovery work because of its need to requisition the service of the police, when necessary. It has not always been possible for the Department to anticipate correctly when it will need the assistance of the police; nor is the latter readily available in view of its preoccupation with routine work. The Wanchoo Committee has, therefore, suggested that the recovery units of the Income Tax Department should be provided with their own *sepoys and havildars* on the lines of the Central Excise Department. The committee has also recommended that the officers and inspectors doing the work of recovery, searches, and seizures should be provided with fire-arms.

The Government of India should examine how soon and to what extent it can effectively implement these recommendations of the Wanchoo Committee in order to provide the Income Tax Department with the necessary equipment and facilities. It is to be hoped that narrow considerations of

finance will not deter the Government from doing this. It is worth recalling that tax arrears in the country have assumed almost scandalous proportions. It is estimated that in India while the net collections from income-tax in 1969-70 amounted to Rs. 786.85 crores, the outstanding as on 31st March, 1970, was Rs. 840.70 crores. The Wanchoo Committee has said that the magnitude of the problem of tax arrears in India has "no parallel elsewhere".

The Central Finance Minister, Mr. Y. B. Chavan, may have political and other difficulties in implementing some of the major recommendations of the Wanchoo Committee such as the reduction of the maximum marginal rate of income-tax. But Mr. Chavan should promptly and effectively carry out the committee's proposals to improve the basic facilities for tax collection and administration, which had been neglected during all these years.

PEOPLE AND PERSONALITIES

Dr. S. Ramachandran, an eminent metallurgist, has joined Hindustan Steel, as General Manager, Research and Development.

National and Grindlays Bank has announced that Mr. H. D. Cayley had retired as a director of the bank on 3rd October, 1972; this is the 50th anniversary of Mr. Cayley joining the National Bank of India, the name at that time of National and Grindlays Bank. Mr. Cayley served with the bank in Madras, Calcutta and Bombay. From 1939 to 1948 he was seconded to the Reserve Bank of India where he acted as the Deputy Controller of Foreign Exchange. Mr. Cayley was appointed Chief General Manager in London in April 1964 and was appointed a director of the bank in April 1966. He retired as Chief General Manager in May 1969.

Lord Ballantrae (formerly Sir Bernard Ferguson) has been appointed chairman of the British Council in succession to Sir Leslie Rowan who died earlier this year. He will take up his appointment next month. Lord Ballantrae is a former Governor-General and Commander-in-Chief of New Zealand.

Mr. K. C. Balakrishnan has been appointed Sales Director, Tyres, of Dunlop India Ltd, with effect from 1st October, 1972. He was till recently General Sales Manager of the Tyre Division.

Mr. Chavan's Threat to Broaden Taxation Base Depresses Equities

AFTER pushing their way further up during the earlier part of the fortnight under review, the stock markets have turned hesitant and have staged a small retreat. Net changes over the fortnight have, however, shown widespread gains. The early improvement was in the nature of continuation of the rally which had been in progress for some weeks. While the rally was mainly the result of heavy short-covering and scarcity of offerings, there were also reports of cautious investment buying. At their best level, the markets had recovered nearly 40 per cent of the ground they had lost during the decline after April. With anxious short-covering nearly completed and bulls reluctant to follow the rise, being more inclined to cash available profits, the markets have developed a slightly reactionary tendency during the second week.

The corporate news has been good and plentiful, and it has had an impact on the markets. Operators have also derived some satisfaction from reports of a rise in industrial production and exports during the first six months of the current year. The Prime Minister, Mrs. Indira Gandhi's statement that the economy has turned the corner has also seemed to impart a measure of steadiness. Particularly welcome has been her statement that poverty cannot be banished merely by shouting radical slogans and that the nationalisation of private industries cannot be of much help in taking the country forward. The impression has somehow been gaining ground that the economic situation has deteriorated so much that a change for the better has become inevitable. The growing awareness on the part of the Government of the difficult economic situation and also of the need to accept appropriate practical measures to boost production, both in farms and factories, has encouraged hopes that the Government will try to be more practical in future.

Deliberations at the A.I.C.C. session in Ahmedabad have been on a far more sober note than many had anticipated. Apart from the takeover of the wholesale trade in wheat and rice and a stricter control over a few other

essential articles, the ruling Party has given no other shock to the markets. As the takeover had been widely anticipated, the economic policy resolution has been welcomed as it recognises the right of the private sector to exist and utilise its resources, although to meet the changed social objectives. The list of industries, which have been permitted to increase their licensed capacity, has been expanded. While there are indications of a welcome change in official thinking, the revival of the economy will call for strong positive action. In view of the setback in agriculture because of the failure of the south-west monsoon and a serious power shortage in many States, the economic outlook appears to be far from promising. Nor can the stock markets dismiss lightly the Central Finance Minister, Mr. Y. B. Chavan's statement that there was no scope for reduction in indirect taxation and that the taxation base will have to be broadened in order to raise massive resources for financing the Fifth Five Year Plan. How the additional tax effort will affect the corporate sector, it is difficult to say. No less disturbing is the price situation. The inflationary spiral has intensified social tensions which are having an adverse effect on industrial relations. Under the circumstances, the outlook for equities must remain uncertain.

Gilt-edged securities have remained mostly steady, although turnover has been moderate. The 3 per cent Conversion loan 1986 has been quoted at Rs. 59.85. The State Government loans have received selective support. Turnover has been restricted.

After long Puja holidays, the Calcutta stock market opened on Tuesday. Prices have been narrowly irregular because the economic outlook appears to be still hazy in view of the conflicting policy pronouncements made by some Central Ministers. The Central Finance Minister, Mr. Y. B. Chavan's statement that the taxation base might have to be broadened has disturbed operators. Among engineering shares, Guest Keen Williams, Bihar Alloys and Kumardhubi Engineering have been transacted. Among jute shares, Agarpara and Nellimarla have been sup-

ported while Birla have been quiet. Among coal shares, Amalgamated, Pench Valley and South Karanpura have been traded. Among paper shares, Seshasayee, Sirpur, Ballarpur and Tribeni Tissues have been done. Among miscellaneous shares, English Electric, G.E.C., Reckitt Colman, Hindustan Aluminium and J. K. Synthetics have been supported. Among tea shares, Bishnauth, Grob and Seeyok have changed hands.

Dalal Street has presented a livelier appearance during the earlier part of the fortnight under review. Buyers dominated the scene in the first week and equity prices scored widespread gains. The rise was impressive in shares where some special influences were at work. Higher levels have, however, attracted a fair amount of corrective profit-taking and buyers have turned hesitant. Despite the all-round setback in prices during the second week, most counters have wound up the fortnight with plus signs. Cotton textiles have continued to rule firm despite some anxiety about the new cotton crop and the cut in power supply. Century, Mafatlal Fine and Standard have been the bright spots. Rayons too have displayed a steadier tone, although the best levels have not been sustained due to profit-taking at higher levels. Steel and engineering

COMPANY REPORTS

Reports relating to the following companies appear on later pages of this section :

Anderson Wright
Crompton Greaves
Heavy Electricals
Hindustan Teleprinters
Indian Aluminium
Indian Hume Pipe
Megna Mills
N.I.D.C.
Punalur Paper Mills
Siemens
Tata Chemicals
Textool
Unit Trust
Universal Steel

shares have hardened on short-covering and moderate selective buying. Among shipping shares, Scindia have staged a good recovery from the setback following the sharp upswing. Great Eastern have fluctuated irregularly with a steady undertone. Cement shares have ruled fairly steady despite the uncertainty about the interim price increase. Among chemicals, Bayer (India), Synthetics and Chemicals, N.O.C.I.L., Polyolefins and Gujarat Fertilisers have continued to attract steady support. Among miscellaneous counters, United Carbon have recorded a sharp rise on an optimistic assessment of the Company's prospects. Hindustan Aluminium, Indian Hume Pipe, Hindustan Motors and Zuari Agro-Chem have been the other firm features.

The Madras stock market has remained steady this past week. Operators have been closely watching the new trends in Tamil Nadu politics and the birth of a new party. But they believe that the present Government will be able to tide over the crisis to establish a stable administration in the State. In the planting section, Consolidated Coffee, Peria Karamalai, Stanes Amalgamated and Annavarai have received support. In the textile section, Madura, South India Viscose and Travancore Rayons have met with demand. Among sugar shares, Cauvery Sugar have risen while Deccan Sugar, K.C.P. and E.I.D. have also been supported. In the miscellaneous section, Mettur Chemical, India Cement, Binny

and United Breweries have been supported while Aluminium Industries have declined on selling pressure. Among bank shares, Indian Overseas have attracted support.

CLEARED SECURITIES IN CALCUTTA

[The following list shows the range of price fluctuations in clearing shares in the Calcutta stock market during the past week. The figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing date a year ago. The last named is shown in parentheses. All quotations are in rupees.]

Attractive Share Offer from Punalur Paper Mills

PUNALUR Paper Mills Ltd, which is an old integrated paper mill in the country, has entered the market with an attractive share offer of 1,016,472 equity shares of Rs. 10 each and 50,000 9.5 per cent redeemable cumulative preference shares of Rs. 100 each, both at par. The subscription list, which opened on 26th October, will be closed on 4th November or earlier at the discretion of the directors but not before 30th October. Applications must be for a minimum of 50 equity shares or multiples thereof and in the case of preference shares five shares or multiples thereof. As for the terms of payment, Rs. 2.50 an equity share and Rs. 25 a preference share are to be paid on application and on allot-

ment Rs. 2.50 an equity share and Rs. 25 a preference share are to be paid. The balance in both cases are to be paid against a call to be made by the board of directors after three months from the date of allotment. The authorised capital of the Company is Rs. 4 crores made up of 3,000,000 equity shares of Rs. 10 each and 100,000 preference shares of Rs. 100 each. The issued and subscribed capital is made up of 983,528 equity shares of Rs. 10 each. The Company is to raise Rs. 1.52 crores from the present issue which are to be utilised for financing its capacity expansion to 100 tonnes a day. There is no doubt that the response to the share offer will be extremely good since the progress of Punalur since

1966-67 has been tremendous. During 1971, the Company's gross profit was Rs. 58.25 lakhs.

Addressing a Press conference in Calcutta a few days ago, Mr. L. N. Dalmia, chairman, said that since he acquired the Harvey group shares in 1967, the Company's production had shown a steady improvement. Not only has production increased from 6,000 tonnes to 10,000 tonnes but the production pattern has also been changed to those varieties which were imported in the country. The Company developed sack kraft, a very strong paper used for making bags for the export of cement and packing of chemicals and fertilisers. Punalur's one machine out of three is running only on this variety but still it is not able to meet the entire demand. As a result, sack kraft continues to be imported. Similarly, Punalur has developed base paper for emery and sand papers, some speciality posters, match papers, insulation papers, etcetera. The chairman said that increased production and the new production pattern changed the complexion of the Company. From a losing concern it has become a profitable one. After wiping off fully old debts and losses, the Company embarked on expansion and modernisation in 1969. Till now about Rs. 2 crores have been spent from Punalur's own cash generation. An analysis of the working during the last three years will show that Punalur can be well compared with the country's leading paper mills in terms of profitability, return on capital employed and quality.

The present estimated cost for putting up a paper mill would be around Rs. 13,000 a tonne. On this basis, the cost of a 100-tonne-a-day mill would come to about Rs. 40 crores whereas the cost of the 100-tonne-a-day plant at Punalur would be about Rs. 7.50 crores. The gross profitability—after the completion of the present expansion—is expected to be more than Rs. 325 lakhs a year. The gross earning on equity capital of Rs. 2 crores will thus work out to 160 per cent approximately when the factory attains its full capacity during 1974. The gross earning on the working of 1973 is expected to be 100 per cent. The chairman is confident that even without all this the Company will be able to maintain a dividend of 10 per cent on the enlarged capital, including the present issue, on the basis of its present production and profitability. No doubt this dividend will increase gradually.

CAPITAL, 26th OCTOBER, 1972

UNIVERSAL STEEL

Satisfactory Progress

ADDRESSING the annual general meeting of Universal Steel and Alloys Ltd held recently in New Delhi, Mr. Raunaq Singh, chairman, said that notwithstanding the shortages of various construction materials like cement and steel, satisfactory progress had been made towards implementation of the project. The share capital was raised through public subscription during October 1971. The term loan by the Industrial Finance Corporation of India was sanctioned during August 1971 and the first instalment was disbursed in June 1972. The construction of factory building is now nearing completion. The chairman is confident that commercial production will commence by December end or early January. Another eight-ton electric arc furnace is proposed to be installed by the middle of 1974. The Company also approached the Government of India for grant of an industrial licence for a continuous casting plant, a rolling mill and wire drawing plant. Permission has also been sought to manufacture alloy and special steels. As soon as the letter of intent is issued, steps will be initiated to complete the expansion programme within 18 months. This will enable the Company to roll the ingots into sections, flats, wire rods, and eventually wires. Mr. Singh said that the acute steel shortage in the country has been responsible for inhibiting production and, indeed, in bringing down the rate of industrial growth itself.

HEAVY ELECTRICALS

Good Performance

ADDRESSING the annual general meeting of the Heavy Electricals (India) Ltd recently held in New Delhi, Mr. V. Krishnamurthy, chairman and managing director, said that the performance of the Company during the year 1971-72 had been encouraging. (A fuller version of the speech was published in *Capital* dated 12th October, 1972.) The Company's production targets set for the year had been substantially achieved. A finished output, including major assemblies, of Rs. 35.96 crores had been achieved against the target of Rs. 36.18 crores. The total value of turnover is Rs. 4,243 lakhs, against Rs. 2,890 lakhs, registering an increase of 46 per cent. Production targets have been kept up in switchgear, capacitor, traction and industrial machines. In

CAPITAL, 26th OCTOBER, 1972

the case of transformers, the targets could not be maintained because of the scarcity of steel and the delay in receipt of materials and imported components. As for turbines and generators, the progress has been slow. The first MW turbo-generator—the largest yet produced in India—has been built and satisfactorily tested in the factory. The erection and commissioning of 30 MW turbo-generator set at Parli thermal power station and 15 MW Hydro generators in U.B.D.C. and Bassi hydel power stations have been completed.

The Company's operating results show a loss of Rs. 142 lakhs. The chairman said that if account were taken of the receipt of Rs. 231 lakhs relating to the earlier years, there would be a net surplus of Rs. 89 lakhs during the year. He said that this presented a considerably improved performance over the previous year. The Government of India has examined in detail the financial structure of the Company through the Bureau of Public Enterprises. It is hoped that on the basis of this analysis, the Government will extend the necessary financial relief to

the Company. The Company has done a fair amount of export business. At the end of the year the export order book has been at about Rs. 138 lakhs.

INDIAN ALUMINIUM

Bonus Issue

THE board of directors of Indian Aluminium Co. Ltd has declared an interim dividend of 75 paise on each fully-paid ordinary share. The dividend will be payable to shareholders on record as on 2nd November, 1972, and will be subject to tax. The approval of the Controller of Capital Issues having been received, the directors have also declared a bonus issue of ordinary shares in the proportion of one new fully-paid ordinary share for every two fully-paid ordinary shares held. Holders of partly-paid ordinary shares whose calls are in arrears as on 22nd December, 1972, will not be entitled to participate in the bonus issue.

The directors state that sales for the first six months of the year at

UNIT TRUST : SALES UP

SALES of units by the Unit Trust of India during the first quarter of the current year (July-September) have been appreciably higher than in the same period last year—Rs. 13.16 crores, against Rs. 8.84 crores. The major part of this increase is accounted for by the encouraging response to the "special offer" during July when sales totalled Rs. 10.94 crores, against Rs. 7.83 crores in July 1971. The increase in the dividend by $\frac{1}{2}$ per cent to 8.25 per cent, the reduction in the spread between the sale and repurchase prices of units from 4 per cent to 3 per cent and the uncertain outlook for equities seem to have turned investors' attention towards units. It needs to be noted, however, that sales of units during July-September 1970 were still higher at Rs. 13.65 crores.

Of the current year's July-September total sales of Rs. 13.16 crores, Rs. 17.40 lakhs have been invested by non-residents under 176 applications and a sum of Rs. 31.71 lakhs has been invested under the children's gift plan.

Despite the reduction in the spread between the repurchase and sale prices, units repurchased during the first quarter amounted to Rs. 71.30 lakhs, showing only a small decline over the previous year's corresponding figure of Rs. 74.56 lakhs. The total number of unit holders registered with the Trust on 30th September, 1972, stood at 467,000 and the total amount invested in units was Rs. 116 crores. The unit-linked insurance plan is stated to have made fair progress. New business of about Rs. 32.71 lakhs was done in the first quarter of the current year involving 406 new applicants.

The Trust's investment portfolio is being reshuffled with a view to making units more remunerative and attractive. The Trust invested about Rs. 5 crores in equities in the first quarter of the current year, compared with Rs. 2.2 crores in the same period of the previous year. It hopes to invest at the rate of about Rs. 1.5 crores a month in the remaining part of the year.

NOW TOWARDS ECONOMIC FREEDOM

GOLDEN TOBACCO COMPANY LIMITED
WHOLLY INDIAN

• ownership • control • management • know-how

Tobacco House, Vile Parle
Bombay-56

GT(SP)-23

Twenty-five years of freedom have rolled by. Now let us resolutely set out to achieve economic freedom. And that in full measure. ■ Rally round the inspiring banner of complete economic freedom. Revive and spread Swadeshism as a way of life, not as a fine sentiment or a slogan alone. Contribute to the national crusade for hundred per cent self-sufficiency in our needs. ■ Economic domination by foreign companies and other vested interests, open or in Indian guise, in any form or in any field, tends to corrode our political freedom. Political independence, only when strengthened with economic independence, will ensure and enhance our national respect in the eyes of the world. ■ Golden Tobacco, for its part, has played a humble but dedicated role in the drive for self-reliance in the cigarette industry, all the while facing and fighting a formidable foreign cigarette monopoly.

Rs. 21.85 crores were Rs. 2.05 crores higher than in the comparable period of 1971. The significant expenses related to the start-up of the new Rs. 15 crore Taloja sheet-rolling mill and the 10,000 tonnes capacity expansion to the Belgaum smelter together with higher raw material and labour costs affected the increase in earnings. The profit before taxes and development rebate was Rs. 5.03 crores in the first half of 1972, compared with Rs. 4.72 crores in the last year's first-half. The net profit after taxes and provision of Rs. 62 lakhs for development rebate reserve was Rs. 2.34 crores, compared with Rs. 2.3 crores for the first half of 1971. The Company has recently received an industrial licence for further expansion of the Belgaum smelter from its present level of 40,000 tonnes annual capacity to 60,000 tonnes.

ANDERSON WRIGHT

Loss Incurred

ANDERSON Wright, Ltd has suffered a setback in its working during the year ended December 1971. The Company has incurred a loss of Rs. 1.28 lakhs, against a loss of Rs. 1.89 lakhs in the previous year, after providing Rs. 2,310 (against Rs. 2,608) for depreciation. In view of the Company's loss, the dividend has again been skipped. After making other adjustments, the debit balance of Rs. 2.87 lakhs is proposed to be carried forward. Sales rose from Rs. 85.61 lakhs to Rs. 87.17 lakhs.

HINDUSTAN TELEPRINTERS

Diversification Plans

IN his recent chairman's speech at the annual general meeting of the Hindustan Teleprinters Ltd, Mr. G. U. Menon, said that the Company continued to maintain its progress during the year ended March 1972. (A fuller version of the speech was published in the issue of *Capital* dated 12th October, 1972.) The Company has produced 4,779 units of teleprinters against 4,911 units in the previous year. The slight decrease in production has been due to labour unrest resulting in stoppage of work in the factory for more than two months during September-December 1971. The board of directors has fixed a production target of 6,000 units of main machines and spares for 1,200 unit machines of the value of Rs. 60 lakhs for the current year. The chairman

is happy to say that till the end of August 1972, the Company has produced 2,600 units of teleprinters which is 100 units more than the proportionate targeted production for the period and nearly 500 units more than the production during the corresponding period of the previous year. The Company's despatches have amounted to 4,836 units of teleprinters with a total sales of Rs. 335.22 lakhs. Although the Company's turnover during 1971-72 has been Rs. 335.22 lakhs, against Rs. 345.49, the profit before tax is Rs. 136.40 lakhs, against Rs. 126.24 lakhs. The chairman said that this increase is on account of reduced consumption of raw materials, components and stores, better operating efficiency, lower interest charges and depreciation and increased interest receipts. A dividend of 12½ per cent on equity capital has been recommended as in last year.

The chairman said that the main growth-oriented development will be in the field of telex services. With the growth of commerce and industry and the increasing awareness of the utility of the telex service, the demand for this service is bound to grow. The Company has taken up certain diversification projects like the manufacture of regenerative repeaters, power plans for telex and other exchanges, various types of line units, teleprinters and ancillary equipment operating at higher speeds. The Company will be taking

up development work on data printers and also the manufacture of certain peripheral equipment for use with computers. Prototype machines have been made and these are undergoing trials. The Company will commence production of electric typewriters by the end of this year.

INDIAN HUME PIPE

Results Impress

THE preliminary statement from Indian Hume Pipe on the Company's working results for the year ended June 1972 shows an appreciable improvement over the previous year's performance. The shareholders have been rewarded with a higher distribution of 12 per cent, including a bonus element of 2 per cent, against 10 per cent paid for the previous year. As against an increase of about 9.4 per cent in sales and work bills from Rs. 5.77 crores to Rs. 6.31 crores, the gross profit has recorded an impressive rise of 34 per cent from Rs. 54.09 lakhs to Rs. 72.47 lakhs. The ratio of profit to turnover has improved from around 9.4 per cent to 11.5 per cent. After providing Rs. 24.92 lakhs (against Rs. 27.06 lakhs) for depreciation, Rs. 1.54 lakhs (against Rs. 1.41 lakhs) for development rebate reserve and Rs. 22.40 lakhs (against Rs. 15.25 lakhs) for taxation, the net profit amounts to Rs. 23.52 lakhs, against Rs. 10.37 lakhs in the preceding year.

TATA CHEMICALS : DIVIDEND STEPPED UP

TATA Chemicals has raised the dividend for the year ended June 1972 from Rs. 1.50 to Rs. 1.70 a share (Rs. 10-paid) and, in addition, the directors have proposed to issue rights shares on a one-for-five basis at a premium "as may be approved by the Controller of Capital Issues but not exceeding Rs. 5 a share". The proceeds of the rights issue, estimated around Rs. 1.50 crores, are to be utilised to finance partly the Company's expansion programme aimed at raising the soda ash capacity from 600 tonnes to 1,000 tonnes a day.

The preliminary figures released by the Company show a further improvement over its previous year's encouraging performance. Margins, however, have been eroded by the rise in production

costs. With sales up by about 15.6 per cent from Rs. 13.38 crores to Rs. 15.47 crores and the gross profit higher by 9.8 per cent at Rs. 3.87 crores, against Rs. 3.60 crores, the ratio of profit to sales has moved down from around 27 per cent to 25 per cent. After providing Rs. 96.06 lakhs (against Rs. 86.92 lakhs) for depreciation, Rs. 40 lakhs (against Rs. 55.50 lakhs) for development rebate reserve and Rs. 1.12 crores (against Rs. 1.04 crores) for taxation, the net profit for 1971-72 amounts to Rs. 138.60 lakhs, against Rs. 113.85 lakhs in the preceding year. The entire surplus has been transferred to general reserve. The equity dividend absorbing Rs. 88.20 lakhs (against Rs. 77.83 lakhs) and the usual preference dividend amounting to Rs. 4.28 lakhs (same) are to be paid out of general reserve.

SIEMENS

Electrical System for Zuari

TO meet the ever growing needs of a wide range of mixed and nitrogenous fertilisers, the Birlas have set up Zuari Agro Chemicals, a large fertiliser plant in Goa. Built mostly from indigenous equipment, Toyo Engineering Corporation, a Japanese firm, has put up this complex plant in a record time. Almost all equipment for the electrical system is supplied by Siemens India. Keeping in view the importance of maintaining a continuity of supply in a process plant like this, Siemens has supplied motor control centres, so designed that in the event of main power failure, important feeders are automatically switched on to the supply from the emergency generator. In such an eventuality, the light circuits in strategic locations are also automatically transferred to a battery supply. Safety is a prime consideration in a chemical plant, as there is the danger of explosion due to likely concentration of inflammable gases and vapours. To safeguard this, Siemens has supplied indigenously manufactured increased safety flame proof motors.

N.I.D.C.

Good Progress

AT the annual general meeting of the National Industrial Development Corporation Ltd recently held, Mr. K. B. Rao, chairman, said that the Company's turnover for the year ended March 1972 was Rs. 128.02 lakhs and the net surplus was Rs. 15.02 lakhs. (A fuller text of the

statement was published in the issue of *Capital* dated 5th October, 1972.) The income of the Company has increased from Rs. 32.77 crores in 1970-71 to Rs. 40.28 crores during the year under review showing an increase of approximately 22.5 per cent. Surplus in the contract account has also increased to Rs. 346.10 lakhs, against Rs. 291.97 lakhs. The net profit after provision for depreciation and interest has been Rs. 79.23 lakhs, against Rs. 64.64 lakhs. The directors have recommended a dividend of 20 per cent on the paid-up capital. As in the previous year, the Company has sanctioned an ex-gratia payment of 20 per cent to all the employees, including daily rated workers.

The chairman said that consultancy services of the Company have been steadily gaining recognition by overseas and international agencies. The phase of initial development of expertise in the highly complicated fields of engineering consultancy, management consultancy and economic development has come to an end and the organisation is now well set to handle important tasks and large assignments in these fields. The Company has extended its consultancy services to the pulp and paper industry and has been engaged as the turn-key consultants for the Nagaland pulp and paper project, in addition to being commissioned to prepare the project report for the proposed Assam paper project in Nowgong and the newsprint plant in Kerala. The chairman said that it is a matter of pride that the Company has been selected from among a number of renowned organisations from the United States, France and Switzerland by the United Nations to evolve a detailed plan for the deve-

lopment of the capital goods industry in Iran. It has also been appointed by the Government of the Libyan Arab Republic to provide turn-key consultancy services for the establishment of a steel-melting and billet-casting plant in that country. The Company is now preparing itself to offer consultancy services in non-traditional fields, such as pollution control and traffic engineering.

CROMPTON GREAVES

Results Disappoint

CROMPTON Greaves has turned out poor results for the year ended June 1972. Sales at Rs. 28.21 crores are down by about 10 per cent from the previous year's figure of Rs. 31.14 crores and the gross profit has shrunk by nearly 20 per cent from Rs. 2.79 crores to Rs. 2.22 crores. The working results were adversely affected by labour indiscipline, strikes and lock-outs in some of the Company's works between October 1971 and April 1972. Despite poor results, the directors have proposed to keep the dividend unchanged at 10 per cent.

After providing Rs. 52.11 lakhs (against Rs. 45 lakhs) for depreciation, Rs. 13.60 lakhs (against Rs. 4.75 lakhs) for development rebate reserve and Rs. 15 lakhs (against Rs. 6.60 lakhs) for doubtful debts, the surplus of Rs. 1.41 crores (against Rs. 2.22 crores) has been transferred to general reserve out of which the tax liability, estimated around Rs. 81 lakhs (against Rs. 107.25 lakhs), will be paid. The unchanged dividend will claim Rs. 48 lakhs.

TEXTTOOL

Sales and Profit Up

THE working results of Texttool Company for the year ended April 1972 show a marked improvement over the previous year's performance. Sales have increased by nearly 34 per cent from Rs. 1.54 crores to Rs. 2.06 crores and the gross profit has risen by a little over 28 per cent from Rs. 35.45 lakhs to Rs. 45.44 lakhs. After providing Rs. 3.88 lakhs (against Rs. 4.35 lakhs) for depreciation and after some adjustments, the surplus amounting to Rs. 41.56 lakhs has been utilised to reduce the outstanding debit balance to Rs. 147.39 lakhs which is carried forward.

COMMODITIES

I.J.M.A. Urges Withdrawal of Export Duty on Jute Goods

EXPRESSING concern over the slump in the overseas offtake of jute goods, the Indian Jute Mills Association has urged the Central Government to take immediate remedial measures, including the "withdrawal of the export duties which make the final export prices of Indian jute goods uncompetitive to overseas buyers." Explaining the industry's plight, a Press note issued by the Association on the eve of the recent Puja holidays says that the industry has been in the vortex of a crisis, resulting from intermittent power-cuts, labour unrest and a severe recession in offtake. Frequent and unannounced power-cuts between January and 25th September caused a loss in output to the tune of 30,000 tonnes, worth some Rs. 11 crores.

The tripartite settlement of 7th May, entailing an additional annual wage burden of Rs. 22 crores, failed to "buy peace" and labour relations have deteriorated. Between 8th May and 2nd September, strikes, resulting in the complete closure of ten mills for 80 days, caused a loss of 5.5 million manhours and a production cut of 6,500 tonnes, worth Rs. 2.5 crores. The present lack of demand has made the future of many jute goods manufac-

turing units "dangerously uncertain". The main difficulty with them is the high costs which render them unable to market their end-products in competition with synthetics and those offered by their counterparts in Bangladesh. As a result, the industry's exports and production have shrunk gradually, while their inventories have shown a disproportionate increase during the four-month period ended August 1972.

Fall in Exports

Exports of jute goods during the period registered a decline of 12 per cent over the figure for the corresponding period of 1971 and of as much as 22 per cent over those for January-April 1972. Production totalled 361,000 tonnes for the four months, against 366,000 tonnes and 398,000 tonnes for the respective periods. The dip in exports and production has been followed by a large increase in the stocks of end-products by as much as 38 per cent over the end-April level to 105,000 tonnes at the end of August.

The most alarming development, runs the Press note, has been the loss in the production and exports of

carpet-backing cloth—the principal item of shipment to north America—for a recession in this item upsets the entire economy of the industry. A reference to the statistical position reveals that production of carpet-backing cloth, the biggest dollar-earner, dropped from 19,000 tonnes in April this year to 17,000 tonnes in May, 15,000 tonnes in June, 14,000 tonnes in July and 13,000 tonnes in August. The average of 15,000 tonnes a month during the four-month period ended August compares poorly with 17,000 tonnes for the same period in 1971 and 19,000 tonnes for the first four months of 1972. Exports of the construction during the four months were down to 45,000 tonnes from 74,000 tonnes in the previous four months and 66,000 tonnes during the corresponding period of 1971. With inventories mounting steadily since January last, the industry carried a stock of 29,000 tonnes of the variety at the end of August, against 12,000 tonnes a year ago.

Rise in Minimum Price

The Central Government was likely to raise the statutory minimum price of raw jute to Rs. 50 a maund "in order to make it remunerative to the growers", said Mr. L. N. Mishra, Central Foreign Trade Minister, at Patna to Press men a few days ago. In the context of the enhancement of the minimum support price of fibre to Rs. 50 a maund at the growers' level by Bangladesh, a corresponding increase in fibre prices was imperative for India, he added. The Government

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base : August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to September 1972. As compared with August, the September indices for Food and Clothing show

risers of 1 point and 48 points, while those for Fuel and Lighting and Miscellaneous remain unchanged at 482 and 402 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 6 points during September 1972.

Middle Class Cost of Living Index Number for Calcutta. Prices in August 1939=100

MEGNA MILLS : SATISFACTORY RESULTS

THE working of the Megna Mills Co. Ltd for the year ended March 1972 shows a marked improvement over the results of the earlier year. But these results cannot be considered satisfactory in as much as the Company was not able to obtain the full benefits of the favourable trading conditions that prevailed during the year due to the increased demand for jute goods that followed the disruption in the Bangladesh jute industry and a favourable crop. Sales are up from Rs. 6.68 crores to Rs. 10.08 crores. The Company

has earned a profit of Rs. 41.65 lakhs, against a loss of Rs. 62.86 lakhs in the previous year, after providing Rs. 22.75 lakhs (against Rs. 25.90 lakhs) for depreciation. The dividend has been skipped. Sums of Rs. 3.50 lakhs and Rs. 11.25 lakhs have been written back from provision for taxation and development rebate reserve, respectively. After making other adjustments, Rs. 44.40 lakhs is transferred to general reserve and Rs. 223 is carried forward, against a debit balance of Rs. 9.49 lakhs brought in.

CAPITAL, 26th OCTOBER, 1972

was worried over reports of a slump in prices to some Rs. 30 a maund in scattered interior pockets of Darbhanga, Purnea and Saharsa districts, despite the sharp decline in the State's seasonal output. The Minister reiterated that he would not allow jute prices to crash and indicated that the Jute Corporation of India had been asked to absorb at least 600,000 bales of fibre in Bihar through Government agencies. The State Government, he said, had already appointed a chief marketing manager. Mr. Mishra urged the Pandey Government to set up a network of jute purchasing agencies in the three affected districts.

Gunnies Firm

Trading was interrupted in the Calcutta gunny market during the past fortnight by the long Puja holidays. Earlier during the period, the trend was firm following brisk short- and shipper-covering mainly in ready and near-delivery goods for shipment on board the end-September loaders in respect of which the close-out date had been extended by about a week by the shipping companies. Besides, there was hectic hessian business with Russia for November-March delivery as sellers were worried over the rather lean floating stocks of the construction. Sentiment in the fabric was also propped up by reports of sizable enquiries from Egypt and the Sudan. Heavy goods, however, lacked interest and suffered an appreciable setback on the talk that the D.G.S.D. might release more heavy goods, requisitioned earlier for extended deliveries. In the absence of fresh enquiries and bookings, anticipations of broadening off-take by the major internal industries, like cement, sugar, fertiliser and

cereal and oilseeds storage and distribution trades, were belied, accentuating the bearishness in the construction. The I.J.M.A. Press note, issued on the eve of the holidays, on the sharp slump in bookings and off-take of jute goods in general and carpet-backing cloth in particular by the major overseas consumers and the gathering competition with synthetic substitutes and end-products from Bangladesh sparked off tired long liquidation, causing prices to retreat on a broad front. The 4,000-tonne increase over the August level in end-September inventories with mills to 109,600 tonnes, against a 2,900-tonne rise in output to 91,700 tonnes, failed to produce any perceptible impact, for overall despatches too had risen by 9,000 tonnes to 87,700 tonnes during the month. The handsome increase in carpet-backing cloth exports during the month by 5,700 tonnes to 13,300 tonnes, against a 200-tonne rise in production to 13,000 tonnes, was particularly welcome. While the hessian output rose by 2,600 tonnes over August to 28,800 tonnes, despatches expanded by 1,800 tonnes to 28,300 tonnes. Sacking production rose by 1,200 tonnes to 40,500 tonnes and despatches by 1,700 tonnes to 36,800 tonnes. The output of miscellaneous goods receded by 1,100 tonnes to 9,400 tonnes and despatches by 200 tonnes to 9,300 tonnes. The maximum rise of 3,700 tonnes over end-August stocks to 50,500 tonnes in sacking at the end of September reinforced the earlier rumour that the off-take by Central Government agencies and semi-Government bodies which had substantially cushioned the adverse impact of a gradual recession in exports of the construction during the past few seasons, might slump sharply following the installation of captive high density polyethylene packaging

manufacturing units by the gigantic fertiliser plants and the increasing substitution of gunny usage by woven and non-woven polyvinyl chloride packaging materials. Yet another factor, causing a positive worry to the export trade was the announcement of a fresh freight increase by the Bay of Bengal/Brazil and River Plate, W.C.S.A., East Africa and West Africa Services from the forthcoming January loaders. Since the resumption of trading after the holidays, prices continued to be high and sentiment firm, although activities were mostly of a squaring up nature. Both mills and holders were reserved and reluctant to extend their commitments, mainly in view of the tight technical position and the exceptional firmness in fibre prices. Turnover was meagre for this time of the season. The closing undertone was firm.

Buoyancy in Fibre

The raw jute market ruled exceptionally firm throughout the fortnight and turned buoyant after the holidays due to the reluctance of holders to release their slender stocks except at a heavy premium over the quoted prices. The price upsurge was triggered off by the reported statement of the Central Minister of Foreign Trade, Mr. L. N. Mishra, in Patna on the eve of the Pujas that New Delhi was thinking of raising the statutory minimum price

I.J.M.A. STOCK FIGURES FOR SEPTEMBER

The Indian Jute Mills Association reports the total stocks of jute goods at the end of September as follows:

Description	30th September, 1972		31st August, 1972		Increase over (+) or decrease from (-) last month		30th September, 1971

CAPITAL

(Founded in 1888: Published every Thursday)

CAPITAL is India's most widely-read weekly newspaper dealing with economics, industry and public affairs. It has the mature experience of more than 80 years, and is the oldest journal of its kind in the country. Each week, it brings authoritative and comprehensive coverage of the main problem and events affecting the progress of the economy and the growth of industry. It separates the important from the unimportant; it presents simply, clearly and reliably what all informed observers of the economic scene ought to know.

Readers of CAPITAL are mainly people holding positions of vital importance in Government, business, industry and academic institutions. Many of them are intimately concerned with the framing of the country's economic policies. Many direct and control industrial, banking and commercial institutions. Together they represent a fund of economic opinion and buying power that no advertiser can afford to ignore.

of fibre at the growers' level to the Bangladesh floor price of Rs. 50 a maund and also his instructions to the J.C.I. to absorb at least 50 per cent of the reduced Bihar crop forthwith. Both industry and trade circles could not secure any corroboration of Mr. Mishra's statement that in scattered pockets of Darbhanga, Saharsa and Purnea districts, fibre prices had receded to even Rs. 28 a maund despite the availability of adequate financial resources with the J.C.I. to carry on

price-support operations, the resolution of transport bottleneck and an adequate supply of wagons. The circulation of the story of a price crash somewhere in Bihar by interested parties and the issue of immediate instruction to the Jute Commissioner to absorb a moiety of Bihar's slender crop of 1.2 million bales forthwith produced the desired impact of raising fibre prices further to prohibitive levels. The temporary suspension of border trade between India and Bangladesh

created a fresh complication for the industry in India. So far, Clive Row had been thinking that the J.C.I. or the S.T.C. had already moved in the matter of procuring raw jute from Bangladesh and Thailand in order to cover the shortfall in the the season's crop. Now it was learnt that New Delhi had just started talks with Dacca to settle the price of fibre to be imported against the standing April-March Rs. 7.5-crore bilateral agreement. Turnover was small. The closing undertone was 'buoyant.

Working to a common purpose... Through distribution of revenue

We recognise that one of the means of securing social justice is by increasing the Gross National Product through planned growth.

In the last ten years, our gross income has increased fourfold, with corresponding increases in customs and excise and corporate taxation

payments to the National Exchequer. Dividends have also risen in the same 10 years.

Our planned system of growth

has sustained our pursuit of progress, for we believe that the more income that we are able to generate, the more there will be to share.

Our efforts indeed are humble: but if they go even a small way towards helping national interests, we shall have served our purpose.

Fifth Plan: New Approach Paper

THE new approach paper on the Fifth Plan, which was finalised at a full meeting of the Planning Commission on Monday, is nothing but old wine in a new bottle. A brief resume of the approach paper, released to the Press after the meeting, is an essay in vagueness and marks no major departure from the earlier paper prepared under the aegis of the former Central Planning Minister, Mr. C. Subramaniam. Even the present Planning Minister, Mr. D. P. Dhar, admits that there is no basic difference between the two documents. The only welcome feature of the new approach paper is the greater accent it places on growth. In his paper, Mr. Subramaniam had found fault with the previous Plans and observed: "In elaborating our strategy of development in earlier Plan documents, we seem to have assumed that a fast growth rate of national income will by itself create more and fuller employment and produce higher living standards for the poor. We also seem to have assumed that, for reduction of disparities in income and wealth, the scope of redistributive policies is severely limited."

This line of thinking does not find adequate backing in the new approach document. The Prime Minister, Mrs. Indira Gandhi, who presided over the full meeting of the Commission, even went to the extent of saying that "there was nothing wrong with our earlier Plans and policies". What had happened was, according to her, that goods and services intended for the poor and the backward did not always reach them. That is why Mr. Dhar has underplayed the rôle of redistributive policies in his approach paper and taken the stand that "growth and reduction in inequality are both indispensable to a successful attack on mass poverty". Barring this difference, which can be meaningful only when policies attuned to accelerated growth are formulated, the new document is as sloppy as the old. Mr.

Dhar's private criticism of the earlier document was that it was "slogan-oriented"; unfortunately, his own document is no improvement on that, although he has tried to avoid the use of such slogans as "garibi hatao". An approach paper for a Five Year Plan cannot be taken seriously unless it gives at least an inkling of the policies to be pursued for achieving the lofty objectives spelt out.

The two professed aims of the Fifth Plan are to reduce poverty and promote self-reliance. For the removal of poverty, the approach paper says, measures for providing larger employment and income to the poorer sections of society will have to be supplemented, up to at least certain minimum standards, by social consumption and investment in the form of education, health, nutrition, drinking water, housing, communications and electricity. For this purpose, the paper envisages a National Programme for Minimum Needs on which an investment of Rs. 3,600 crores is proposed. While Mr. Subramaniam had sought an allocation of another Rs. 6,000 crores to Rs. 7,000 crores for meeting the minimum needs in specific fields, Mr. Dhar has proposed dovetailing them into the Plan programmes under these heads. This is undoubtedly a welcome change.

According to the approach paper, an investment of Rs. 51,165 crores will be necessary in the Fifth Plan period to secure an overall growth rate of 5.5 per cent. This investment has been estimated at 1971-72 prices which will have to be suitably modified in the light of the recent spurt in prices. The outlay proposed includes Rs. 5,850 crores for financing the current development programmes in the public sector, which may spill over into the Fifth Plan period. The balance of Rs. 45,315 crores has been estimated as available for financing new investment. Of this, Rs. 29,745 crores will be available for the public sector and

Rs. 15,570 crores for the private. This gives a ratio of 65.6 to 34.4 between the public and private sectors, as against 60:40 in the Fourth Plan period.

On the crucial question of financing the Plan, the approach paper is conveniently vague. While estimates of tax revenues, to be raised by the States and the Centre have been drawn up—it is claimed that these estimates are on the basis of studies made by the Planning Commission—the approach paper fails to throw light on the new means by which the required resources are to be mobilised. Even on the question of deficit financing, it does not go beyond saying that any increase in money supply will not be such as to exert an undue pressure on prices. Those who are familiar with ministerial pronouncements on deficit financing will refuse to be taken in by this kind of assurance. It seems as though the planners have fixed the overall outlay without a deep study of the resources position.

As for self-reliance, the approach paper declares that the "goal must be carried a step further during the Fifth Plan period by reducing net aid to zero in the terminal year, 1978-79." To this end, it adds, the Plan proposes to consolidate self-sufficiency in food-grains, to increase production of cotton and oilseeds, to step up the output of steel, non-ferrous metals, fertilisers, crude oil, petroleum products, engineering ancillaries and basic chemicals. But how are these objectives going to be achieved when the performance of the economy today is even lower than at the time of the mid-term appraisal? There is, for instance, a growing power crisis which is bound to cripple production in a wide range of industries, not to talk of agriculture. Transport is another major problem, the inadequacy of railway wagons being responsible for slower and lower offtake of essential raw materials like coal and ore by major industries.

It is surprising, therefore, that the approach paper is blissfully silent on the built-in constraints to achieving a higher growth rate in industry and agriculture, arising out of the present policies of *ad hocism* in the Government. One may not agree with the Prime Minister that there is nothing wrong with the present policies of the Government but one cannot but share her view that much of the malaise today is due to the inept implementation of policies. The approach paper, no doubt, talks of the need to "improve the performance of the administrative

apparatus, to avoid delays, to cut out waste and to stop leakages". But why blame only the administrative apparatus when there are indecision and inordinate delays even at the highest level?

It would appear, therefore, that the approach paper has been drawn on the basis of what is desirable than what is possible. To that extent, it certainly lacks realism. For instance, it puts

The Vietnam War and After

THE end of the war in Vietnam will mark the beginning of a new era in world history. All mankind seems to share the hope that the sufferings of the unfortunate people of Vietnam will never have to be borne by any nation. The two decades of war in Vietnam have shattered the economy, social structure, political attitudes and even the geography and ecology of that war-ravaged nation. Sociologists may find that in many respects a great number of people in the two Vietnams—particularly those in the South—may have been virtually dehumanised. This is not unnatural after exposure to wars of such intensity for such a long duration. Their concepts of family life, kith and kin, love and hatred, justice, democracy and religion must have been rudely shaken. They will need help, all that mankind can give and more to become a human society again in material terms.

For the Americans, too, it has been a traumatic experience. Whatever the rights and wrongs of the war and whoever the aggressor and the aggressed only history will decide. But no one can deny that the Americans too have suffered. Their wounds too will not heal easily. Their material sufferings, as compared with those of the Vietnamese, have been negligible. The number of Americans killed and wounded in the war is also much smaller. But the war threw the entire American nation into a state of moral turmoil. The world's mightiest nation was locked in what seemed to the whole world to be an unfair battle with one of the smallest. It smote the conscience of many, particularly the youth who had to do the dirty job in Vietnam, and they revolted against it and forced their Government to sue for peace. But the tasks of peace are often more difficult than those of war. This applies in this situation to both America and Vietnam. The prob-

lem has many facets. Through all these years violence has become a way of life in Vietnam. The youth in Vietnam which will inevitably constitute the most powerful force in that war-ravaged country has never known peace. It will take a long time to adjust to the slower rhythms and mores of peace.

The huge war machine with 500,000 men in arms under the Saigon regime and an unknown number of soldiers on the rolls of the Vietcong will have to be slowly disbanded. But before this is accomplished the territorial claims and counter-claims between the two groups will have to be resolved without recourse to arms. For quite some time, the national Government must be formed under the terms of the peace agreement will be a hotchpotch of conflicting interests. It is not necessary that the new political set-up that may emerge after the proposed elections would be more homogeneous. Nor is it clear how far international supervision will be able to ensure fair and free elections in the present charged atmosphere in which each side will try to use all the forces at its command to edge out the other party. The chances of a lasting truce undisturbed by skirmishes that could lead to a major conflict between the Saigon forces and the Vietcong are not too bright either.

The first and foremost task for all the parties and in fact for the international community is to stabilise peace in Vietnam for some time. It has to be ensured that this does not repeat the illusory peace which followed the signing of the Geneva Agreement in 1954 when an International Control Commission presided over by India was to keep the combatants apart on the two sides of the 17th parallel. The truce lines will be far less distinct and not easy

to mark on the map this time. The redeeming feature is that all parties seem clearly exhausted by war and have a stake in peace. It is as much in the interest of the communists as of their opponents to allow things to settle down and enable a national consensus to emerge. The transition to peace in Vietnam will take a long time and the world will have to wait and watch patiently for normality to descend on the unhappy land.

The brief mention about Laos and Cambodia in the agreement is not very reassuring. North Vietnamese troops are still there in South Vietnam in two divisions and some unspecified numbers may be operating in Laos and Cambodia. While American withdrawal can be assured, there can be no similar guarantee about North Vietnamese withdrawal. Does it mean that the U.S.A. has quietly agreed to let things take their own shape in these two countries or, in other words, it has agreed to let the two countries slip quietly under the communist forces. Will it eventually mean the return of Prince Norodom Sihanouk to Cambodia? These are some of the vague and possibly disturbing aspects of the agreement and may explain why President Nixon has been anxious not to sign it before the Presidential election on 7th November. While in the U.S. withdrawal from Vietnam there is some face-saving appearance of give and take, in Laos and Cambodia the U.S.A. seems to have given in without taking much in return except a paper promise with no means of enforcing it.

Another question to which only the future will provide an answer is: who will fill the vacuum to be created by the American withdrawal from south-east Asia? For the present there are three powerful contenders. They are China, Japan and Russia. The U.S.A. will, of course, keep its economic presence in the region as long as possible. Communist forces in the whole region will continue to draw active support in varying degrees from Russia and China. The rivalry between the two communist powers will only help the extremists in this region to get support from both. Japan and the U.S.A., on the other hand, will continue to provide moral, economic and military help to the forces of democracy and free enterprise. So, in a way, the battle is still on, although one hopes it will never take the sinister shape of another armed conflict. Communist influence will no doubt increase in the region but this does not neces-

sarily mean that the other countries of south-east Asia will fall like nine pins before its advancing forces.

The future of this area, it seems, will continue to be uncertain for many years.

New Shipyard in Haldia?

THE speech of Mr. S. Balakrishna Shetty, chairman of Hindustan Shipyard Ltd, at the annual general meeting of the Company held in New Delhi recently, should be of considerable interest to the Government and the people of West Bengal. The need to set up a shipyard in the State has been under the consideration of the Government of India for the past several years but there does not seem to be any sense of urgency in implementing the project. It is true that some studies have been made and reports submitted on the feasibility of the project. But unless New Delhi moves in this matter in right earnest, not only West Bengal but the entire country will suffer.

"I am firmly of the view", said Mr. Shetty, "that our shipbuilding industry has to be developed with much greater speed and determination than has been the case hitherto". He did not refer to the proposal to set up a shipyard in West Bengal. But it is obvious that if New Delhi is to take his speech seriously, it can hardly afford to go slow in this matter. Mr. Shetty highlighted the fact that during the last 15 or 20 years, new entrants like Poland and Yugoslavia had stolen a march over India in shipbuilding. In India there are only three shipyards, two of which have until very recently been concentrating on repairing and are only now being equipped with facilities for shipbuilding. A fourth shipyard is being put up in Cochin. While strongly pleading for setting up new shipyards, Mr. Shetty also emphasised the need to expand the capacity of the existing ones.

Even if New Delhi takes a firm decision to locate a shipyard in Haldia, it will take several years before it starts functioning. Apart from the inevitable delay involved in completing the agreement with the foreign collaborator, there is the problem of arranging for the adequate and regular supply of raw materials required for building ships. Mr. Shetty's speech shows that even Hindustan Shipyard is facing many difficulties in procuring raw materials. Mr. Shetty said: "The procurement of materials in shipbuilding has been the weakest segment in the scheme of things currently obtaining in the country. This

is basically due to the acute shortage of foreign exchange which has to be conserved to the maximum extent possible and the problems arising from a transitional economy in respect of import substitution. The procedures relating to imports have now been streamlined with the assistance of the Government and a steering committee has been appointed by the Ministry of Transport and Shipping to deal with the Shipyard's requirements of import. In addition, a certain amount of foreign exchange in free resources is kept at our disposal to meet unforeseen contingencies—a step which will go a long way to obviate hold-ups for want of small but vital items."

Mr. Shetty disclosed that even in getting raw materials from indigenous sources, there have been many difficulties and uncertainties. He observed: "The problems relating to indigenous supplies still continue to persist. We are compelled to depute frequently our technical officers to the works of indigenous manufacturers for purposes of chasing and to ensure the production and supply of materials in time and this has lately proved to be a major distraction for us." It is, therefore, essential that both the Centre and the West Bengal Government should do a great deal of preparatory work if the shipyard in Haldia is to have a smooth career. Mr. Shetty revealed that shipbuilding could be carried out efficiently and economically only if the order-book of the shipyard was kept full at all times. Even in advanced countries like Japan, a minimum of two years is necessary for effective planning before keel laying.

Meanwhile, Admiral Nanda, Chief of the Naval Staff, has suggested the need for a separate Ministry at the Centre for shipbuilding. Speaking at the three-day seminar on "indigenous production of equipment for warships and the shipbuilding industry" held recently in Bombay, Admiral Nanda said that separate Ministries of Shipbuilding were existing in several countries where this industry flourished. But what India needs more urgently today is not a separate Ministry for Shipbuilding but effective co-ordination among the various economic Ministries at the Centre. In the absence of

such co-ordination, not only shipbuilding but the progress of other industries will suffer. The Government of West Bengal should impress on New

Delhi to implement the scheme for a shipyard in Haldia. This will strengthen the State's economy and create vast scope for employment.

Expanding the Monopolies Commission

WITH the appointment of Mr. Justice Alagiriswamy as a judge of the Supreme Court, the Company Affairs Department has got an unexpected opportunity to reform the Monopolies and Restrictive Trade Practices Commission whose chairman he was ever since its inception in August 1970. It is a known fact that serious differences of opinion have often arisen in the three-member Monopolies Commission in regard to a few cases from big business houses referred to it, particularly the one from T.E.L.C.O. for expansion of its heavy truck production capacity. In fact, judging from such of those reports of the Commission as have been made public (not officially by the Government, which is generally reluctant to make such reports public), unanimity has been achieved by the Commission only in two or three cases, all of them relatively trivial merger proposals having no relevance to either the problem of concentration of economic power or monopolisation of markets. In each of the other cases involving substantial expansion proposals with significant implications for concentration and/or monopoly, the Commission has been divided, two of the members supporting and one opposing the proposals. With Mr. Justice Alagiriswamy's elevation to the Supreme Court, the Government is likely to hasten the selection of his successor, as otherwise the Monopolies Commission will become inoperative without a chairman. The Commission now consists of a chairman and two members and, under the M.R.T.P. Act, a minimum of three members have to be present to constitute a sitting of the Commission.

Perhaps by the time this appears in print, the Government may have taken a decision on the choice of a new chairman. At this writing, according to informed sources, Mr. V. R. Krishna Iyer, a member of the Law Commission, and former Law Minister, is likely to succeed Mr. Justice Alagiriswamy as chairman of the Commission. There is, however, no indication as yet whether the Government also intends either to increase the membership of the Com-

mission from the present three to five or seven, or to bifurcate its dual functions of curbing the concentration of economic power and checking restrictive trade practices. The question of expanding the membership of the Commission has been in the air for some time. This started at a meeting of Parliament's Consultative Committee for the Department of Company Affairs when, in response to a suggestion by the late Mr. C. C. Desai, Mr. Raghunatha Reddy agreed to consider the expansion of the Commission. However, he later clarified to newsmen in an interview that this was in the nature of "loud thinking". By then, probably, he had received a communication from the then chairman, Mr. Justice Alagiriswamy, welcoming the proposal, but pointing out that certain innovations had to be made in the Act itself before embarking on the expansion of the membership. There was no reply from the Minister to this communication (again, according to Press reports). But from the clarification of the Minister to newsmen that the proposal was only loud thinking, it appeared that Mr. Justice Alagiriswamy's suggestions about some preliminary steps had either appealed to the Minister or had embarrassed him so much that he decided to shelve the idea of expansion for the time being.

The "radicals" in the Congress had, of course, jumped at the idea of expansion of the Commission but this was for very different reasons. They had been feeling embarrassed by the nature of the verdict of the Commission on each of the case referred to it. While Mr. Justice Alagiriswamy and Mr. D. Subramaniam were inclined to take a strictly legalistic view of the issues involved, the third member, Mr. H. K. Paranjape, took an ideological view which was more in tune with the "social objectives" of the Party in power. The Central Cabinet is free to accept or reject the Commission's verdict but, as far as the Commission is concerned, the majority report is the verdict of the Commission. In other words, Dr. Paranjape's is, for all practical purpose, a minute of dissent. The radicals, however,

thought that if the membership of the Commission was expanded from the present three to five or seven, the entire complexion of the Commission would change and Mr. Justice Alagiriswamy and Mr. D. Subramaniam could be reduced to a minority. This would save the Government of the embarrassment of having to reject any verdict of the Commission.

But is there a real need for the Government to increase the membership of the Commission, taking advantage of the exit of Mr. Alagiriswamy? The present workload of the Commission does not seem to justify such an expansion. Although it is true that if any one of the three members happens to be sick or on leave, the Commission cannot take a decision, this has hardly affected its working. Ever since the Commission was set up in August 1970, only 28 cases were referred to it, of which 20 have been disposed of. It is possible that the Government itself did not think it necessary to refer too many cases to the Commission. Now that the A.I.C.C. has decided that there is no question of modifying or abridging the principles underlying the 1956 Industrial Policy Resolution with a view to enlarging the scope of private enterprise, the chances are that the number of applications from "monopoly houses" will become fewer. But even before the Gandhinagar A.I.C.C. resolution, the Commission was not, at any rate in the Government's view, confronted with a heavy workload. Otherwise, Mr. Alagiriswamy would not have been granted two months' leave without hesitation, which meant that the Commission did not take any decision during this period.

These considerations may not, even now, restrain the Government from expanding the Commission. But one thing seems to be certain. Even if the Government decides to increase the membership of the Commission or to bifurcate "restrictive trade practices" from its "monopoly" function, this will be done for reasons other than the workload of the Commission. For bifurcating the Commission's functions, the M.R.T.P. Act will have to be amended, since the present law envisages a unified Commission. It is only in the U.K., from where the Government of India has presumably borrowed the concept of the Monopolies Commission, that there is a bifurcation of the Commission's functions.

Mergers and Equity Investment

THE merging of companies into bigger and fewer units has been discussed from various angles; so has investment in companies' ordinary shares. But mostly the discussions have been separate, or equity investment has been considered in relation to mergers only in so far as they affect the quality of particular shares. Suddenly (or so it seems, in the long time-scale involved in such matters) the City of London has become aware that the whole basis of equity investment in Britain will be changed—even that the share market itself may disappear—if the recent years' rate of merging continues through this decade and into the next.

The trend towards "bigger and fewer" may be specially conspicuous in Britain, but it is a worldwide trend. Many Governments (including the British) are groping for a rational policy on the structure of private enterprise, both national and multinational; some (most obviously, the American, by its anti-trust laws) have retarded the trend for a long time. But industrial economists who have studied the trend have almost unanimously deduced that, however national—and possibly international—policy may develop, the process of consolidation will continue. Consideration of its effects on the capital markets, on the procedures for distributing savings into productive use, is overdue.

The simplest question is whether there will be enough separate companies to sustain a conventional share market. Industrial economists' predictions that within 10 to 15 years about a 100 groups will operate 80 per cent to 85 per cent of the world's private sector and about a dozen will operate a similar proportion of Britain's may leave room for a large number of "ungrouped" companies, but in the residual 15 per cent to 20 per cent of the private sector most of them would be too small for the massive investments of such financial institutions as insurance companies, and most small savers who invest individually incline towards big ("blue chip") shares. In London, for example, a market that dealt in a dozen or so "majors" and an assortment of "minors" of various quality would not be the kind of market that the City knows, and it would not require

the present complex mechanism of the Stock Exchange.

Current thinking is not concerned only with this numerical aspect of the trend. It is concerned equally, or more, with the implicit change in the character of equity investment. Either an admirer or a detractor of the present social system might point to Unilever as an example of a giant that had become more profit-conscious in recent years, and suggest that Imperial Chemical Industries was moving in the same direction. But in general there is plenty of evidence that big companies—while acknowledging that they need adequate profits to finance development, and perhaps to maintain or restore their shares' "market rating" so that they can issue new shares on satisfactory terms—are becoming more interested in satisfying their employees and in dealing with such social problems as pollution and less interested in gratifying their shareholders.

Another idea is that megalomania compels big business men to maximise their groups' sales, and that maximised sales are incompatible with maximised profits. A variant of this idea is obsession with costly, and not properly rewarding, technology. In so far as these accusations are valid (it should be observed that some big groups have ruthlessly eliminated unprofitable products and reconsidered the economics of technology), their implications are unfavourable to ordinary shares.

If the number of companies in which investment through the market is practicable is rapidly diminishing and "the crude profit motive" is being replaced by "a new social ethic", the conventional concept of equity investment will soon, indeed, be outmoded. There is no reason to doubt that financial institutions will still provide capital to "majors", but the character of their investments will change. They will still provide capital to some "minors", but the environment in which these firms operate will be more specialised and restricted.

Britain, on the threshold of her venture into the Common Market,

is specially conscious of "European-scale" companies, and of the supposed need to consolidate her own industries so that they will compete more effectively in the Market—including its British sector. But the European Community Information Service in London is campaigning against the idea that, "either deliberately or at least indirectly and by implication", the Community favours big business. "In reality", it says, "a stronger and enlarged Community is the last chance given to the Europeans to preserve their diversity."

This "diversity" will certainly be preserved, if only because huge groups are not interested in low-volume and low-value production and small firms are, therefore, needed to complement their activities. But when the European Community Information Service cites examples of "smaller firms" that have operated more profitably than their giant rivals it exposes itself to the comment that some of these firms are by ordinary standards very big and that Gerald Newbould and Andrew Jackson (whose much-discussed book on "multimerging", *The Receding Ideal*, was published in Britain this year) regard such firms as destined to be merged with the giants.

Truly small firms, with specialised functions and agile management, will be viable in any foreseeable circumstances; but few such firms have ever been involved in equity investment through the market. It is among the medium-size firms—even among the giants themselves—that opportunities for selective investment are being rapidly reduced by "multimerging". It seems likely that "big money for big business" will gradually impel financial institutions into some kind of partnership with industrial and commercial institutions (as they can now be termed). It may be doubted that this process will maximise returns on capital invested, but if that is the system's prospective form one should prepare for it.

For a nominal charge "Capital" 's Statistical Department can provide you with a certificate of share prices.

CURRENT COMMENT

ESSO

Offer to New Delhi

Esso's offer of 76 per cent equity participation to the Government of India or if that is not found acceptable, the total sale of its business interests in the country has created a big stir. Mr. A. G. Neff, General Manager of Esso in India, said that the decision had been an excruciating one for the Company considering its long association with the country. But the Company could not operate in a situation, as Mr. Neff said, where it was not wanted. Mr. Neff further complained that the Company had been denied the right to growth with the market and various controls on price and profit had reduced its profitability to inadequate levels. It is with all this in view that Esso has offered two alternatives to nationalisation of its business. Thirtv months ago, the best that Esso could offer was majority participation to the Government in the ratio of 51: 49. The Company has now made an important concession concerning its right to procure crude from sources of its own choice. It has suggested a system of global tender with the Company having the right to make a matching bid at the lowest global offer. Mr. Neff said that Esso would not insist on preferential right or obligations whatever. While the Company believes that crude supply rights will have a different connotation in the future because of the anticipated tight supply position in crude, the Government holds a different view.

Esso's assets in India totals about Rs. 40 crores and its net worth is Rs. 30 crores. The purchase price, Mr. Neff said, would be a subject for negotiation. If the Government were to accept the majority equity participation offer, the management of the Company would be run by a board of directors composed on the basis of proportional representation. Mr. Neff denied that he had ever shown a "take-it-or-leave-it" sort of attitude to the Government or that any threat was implied. Esso expects that the Government will take a quick decision on the matter facilitating the full use of its refinery capacity. The Company has no doubt gone a long way to meet the Government's demand. There is also a note of despair in its present offer. A pertinent question is why Esso chose to make the offer now.

The Company knows that it would be able to regularise the excess capacity it had created if it could become a junior partner of the Government. The participation of the Government would also enable Esso to build up pressure for further expansion of its refinery capacity. The Company may not stand to lose by offering majority capital participation to the Government, if the anticipated rise in business—particularly in the western region—would increase its share of profit in absolute terms. The Central Minister for Petroleum and Chemicals, Mr. H. R. Gokhale, said that Esso's proposal for equity participation was being considered by the Government. But the idea of nationalisation has not yet been abandoned. The Minister said that Esso's proposal involved big complications and a decision could not be taken in a few days.

RE-ROLLERS

Supply of Billets

In a memorandum recently submitted to Mr. S. Mohan Kumaramangalam, Central Minister for Steel and Mines, Mr. D. R. Goel, vice-president, special sections, Re-rollers Association of India, has stated that recently some rolling mills in the country have made arrangements for rolling special and difficult sections so as to ensure economy in the use of steel materials which are already in short supply in the country at the present moment. These special and difficult sections are being rolled by some of the re-rolling mills registered with the State Directorates of Industries apart from those registered with the B.R.C. Unfortunately, however, while there has been a regular supply of billets to the re-rolling mills registered with the B.R.C. against their requirement for the manufacture of special and difficult sections, in the case of the re-rolling mills manufacturing similar sections but registered with the State Directorates of Industries an utterly apathetic attitude has been shown by the Government by depriving them of any allocation of billets, heavy rounds, etcetera. He has, therefore, urged the Government to do away with this discrimination against a particular section of the re-rolling industry which has been quite conspicuous by its humble and sincere contribution to the economy.

TAMIL NADU

Task for S.I.P.C.O.T.

At the recent annual general meeting of the State Industries Promotion Corporation of Tamil Nadu, Mr. Thiru M. G. Raja Ram, chairman, said that only last year the Corporation was set by the Government of India to quicken the rate of growth of the backward areas of the State. So far the Corporation has decided to assist nine industrial projects, two of which are large-scale ones and the remainder medium-scale. Term loans have been sanctioned to four projects for an aggregate amount of Rs. 24 lakhs and other cases are being processed. The Government of Tamil Nadu has approved the Corporation's proposal for a credit guarantee scheme for medium-scale industries with a view to protecting commercial banks in respect of term loans advanced by them to medium-scale industries. S.I.P.C.O.T. has taken up the task of identifying viable and profitable projects and preparing feasibility studies which will be available to entrepreneurs free of cost. The Corporation is actively considering the question of developing a few growth centres by providing the necessary infrastructure facilities. These centres are proposed to be selected in consultation with the State Planning Commission. The Corporation is examining a proposal to set up a consultancy organisation in collaboration with other term lending institutions and leading industrial houses.

BANKING

A Useful Manual

That the lending policies of institutional agencies (co-operative or otherwise) providing finance for agriculture should be so designed as to help production and at the same time ensure proper utilisation of the moneys lent has been emphasised by the Reserve Bank in the manual on *Production-oriented System of Lending for Agriculture* brought out by it. It is important, the manual says, that the credit needs of agricultural producers are assessed on a rational basis, taking into account the quantum of outlay required for each activity and their repaying capacity so that proper and efficient utilisation of the meagre resources is ensured. The manual sets out broadly the policies and procedures governing the sanction of short, medium and long-term loans for agricultural production purposes. It also contains a few new *pro formae* for

assessing the repaying capacity of borrowers, feasibility of investment, valuation of land and the like. The appendices included in the manual on "Crop Loan System" brought out by the Reserve Bank in 1966 have been considerably simplified as recommended by the All-India Rural Credit Review Committee.

FOREIGN INVESTMENT

German Incentive

For another year the West German Government has granted tax concessions to German business men in case they invest their money in developing countries. The Development Assistance Tax Law which was introduced in 1963 has just been extended for one year. These tax incentives cost the West German Government about 200 million deutschemarks (Rs. 46 crores) a year. West German total private investment in developing countries comes to 6.3 billion deutschemarks (end of June 1971). A sum of 637 million deutschemarks has been invested in Asia. Among the Asian countries, India has the major portion of the German private capital investment of 131 million deutschemarks.

NATIONAL AND GRINDLAYS

Conference in Calcutta

The Overseas Banking Division (O.B.D.) of National and Grindlays Bank Ltd is holding a conference in Calcutta from 30th October to 3rd November to discuss the concept of "planning" within the division. Some of the subjects being discussed are the problems of implementing the concept of planning in the field, the changing rôle of the branch manager in the future and a look ahead over the next five years. Delegates attending the conference include from India Mr. H. M. Jackson, general manager in India, and regional managers and their planning officers. Delegates from the management in London of the bank groups include Mr. Alastair Thomson and Mr. Peter Jefferys, group deputy managing directors, and Mr. R. S. Rees, deputy to the managing director, O.B.D.

CO-OPERATIVE CREDIT

Rise in Working Capital

The total working capital of co-operative credit institutions (all

types) increased by Rs. 618 crores to Rs. 4,869 crores during the year ended June 1971 and membership from 43 million to 45 million, according to the *Statistical Statements relating to the Co-operative Movement in India, 1970-71: Part I: Credit Societies*, published by the Reserve Bank of India a few days ago. As at the end of June 1971, there were in all 182,460 co-operative credit institutions—25 State co-operative banks, 341 central co-operative banks, 27 industrial co-operative banks, 19 central land development banks, 865 primary land development banks, 160,780 primary agricultural credit societies, 15,346 non-agricultural credit societies and 5,057 grain banks.

The number of primary credit societies declined from 162,700 to 160,780 in the course of the year. The owned funds of the agricultural credit societies stood at Rs. 265.3 crores on 30th June, 1971, a rise of Rs. 26.5 crores. The deposits at Rs. 69.5 crores formed barely 6 per cent of the total working capital. Borrowings from central financing agencies, however, increased from Rs. 576 crores to Rs. 635.4 crores as on 30th June, 1971, while loans granted by them went up from Rs. 540.1 crores to Rs. 577.9 crores. The overdues rose further from Rs. 268.2 crores in June 1970 to Rs. 322.4 crores in June 1971, accounting for 41.1 per cent of the total loans outstanding, against 37.7 per cent a year before.

DEVELOPING COUNTRIES

World Bank Chartbook

Developing countries have made substantial gains in broadening education and improving nutrition in the last two decades, according to statistics in the fourth edition of *Trends in Developing Countries*, just published by the World Bank. In addition, the total gross national product has risen significantly, although the increase has to a great extent been offset by accelerated population growth. The gross national product *per capita* in developing countries increased by about 25 per cent between 1960 and 1969 despite rapid population gains. At the same time, the external debt of these countries as well as costs of servicing this debt have risen, while their share in world exports have declined.

The chartbook includes a new section on socio-economic indicators.

Data in this section indicate that education, as measured by the ratio of first and second level school enrolments to the school age population, gained rapidly. The ratio in Africa rose from about 15 per cent in 1950 to more than 30 per cent in 1967; in Asia from more than 25 per cent to almost 50 per cent; in Latin America from just under 40 per cent to well over 60 per cent; and in the Middle East from just under 20 per cent to more than 40 per cent.

The estimated total population in the developing world rose from about 2 billion in 1960 to some 2.5 billion a decade later. Projections of the figures, however, indicate that the present population of developing countries may double by the year 2000. In contrast, the total population in more developed regions—which increased from 1 billion in 1960 to 1.1 billion in 1970—is projected to rise to about 1.5 billion at the end of the century. The picture is even more startling in the case of urban population, which is expected to increase in developing countries by more than threefold during the same period. The data indicate that the external debt of developing countries rose sharply, from \$37.5 billion to \$59.3 billion between 1965 and 1969, while the debt service as percentage of export earnings increased from 8.9 to 10.4. During the same period, their share of world trade decreased from 20 per cent to 18 per cent.

U.N.D.P.

Fresh Aid for India

The Governing Council of the United Nations Development Programme has recently approved financial and technical assistance to the tune of \$50 million for the next five years for India's country programme. With its accent on science and technology, the Indian country programme envisages U.N.D.P. assistance of \$88 million for a seven-year period covering the remaining two years of the Fourth Five Year Plan and the entire Fifth Plan, but in accordance with the U.N.D.P. policy decision, assistance was approved for the present for the next five years.

In the past, U.N.D.P. assistance was on a project-by-project basis. The new long-term country programme has been evolved on the basis of the recommendations made by Sir Robert Jackson to the then

U.N.D.P. Administrator, Mr. Paul Hoffman, for improving the U.N. development assistance system to handle more efficiently a greater volume of funds. The new system also enables developing countries to plan sufficiently in advance in an integrated manner, taking into account other foreign aid programmes. According to the U.N. authorities, country-programming represents a logical step forward in building the most productive partnership possible between the U.N.D.P. and the developing countries. The new U.N.D.P. Administrator, Mr. Rudolf Peterson, who recently visited India, has evolved effective procedures to implement the policy.

AGRICULTURE

U.S. Assistance

India has been by far the largest recipient of U.S. agricultural commodities under Title I, Public Law 480. The first Title I agreement with India was signed on 29th August, 1956. Since then nine additional agreements and 35 supplemental agreements have been signed. The agreement signed on 20th February, 1967, was the first with any country under the Food For Peace Legislation. The new agreement included

a section describing the self-help measures which the Government of India was undertaking to increase food production and promote economic development. Since the first agreement in 1956, P.L. 480 commodities have constituted a large portion of India's agricultural imports. While the major emphasis has been to supply foodgrains during deficit periods, other agricultural commodities were supplied to supplement Indian production and maintain price levels. More than 59 million tons of wheat, grain sorghum, corn, and rice have been imported under P.L. 480—mainly during drought years when domestic foodgrains were in short supply.

Cotton has been an important P.L. 480 import as domestic production does not meet the demand of India's large cotton textile industry. Increasing quantities of vegetable oils have been imported to meet demands of the *vanaspati* industry and stabilise prices of domestic edible oils. Tallow imports have supplied an inexpensive source of fats for the soap industry, releasing high priced vegetable oils for edible purposes. Imports of tobacco have provided high-quality leaf needed for premium cigarettes during a period when foreign exchange resources

were particularly scarce. Relatively small quantities of dairy products—non-fat dry milk, whole dry-milk, evaporated milk, and cheese—have been supplied at various times to supplement local production. At the special request of the Government of India, a small quantity of canned fruit was also included in the programme.

MONEY MARKET

Easier Trend

The short-term money market has been easier this past week. The call rate initially shot up to 3½ per cent but it has later come down to 3¼ per cent, with small lenders over. The demand for remittances has been moderate. The supply of tea and gunny bills has been fair. The pound-sterling has weakened against most major foreign currencies during the week.

The latest statement of the Reserve Bank of India for the week ended 20th October, 1972, shows a drop of Rs. 10.13 crores in deposits of scheduled commercial banks with the Reserve Bank to Rs. 271.89 crores, compared with the previous week. Their borrowings from the Bank have declined by Rs. 1.86 crores to Rs. 4.86 crores, of which advances against usance bills have amounted to Rs. 50 lakhs, against the same. Balances held abroad by the Reserve Bank in the Banking Department show a drop of Rs. 2.44 crores to Rs. 152.45 crores.

FOOTPATHS IN CALCUTTA

A CORRESPONDENT writes in Current Coin: As long as the Improvement Trust confines itself towards opening up congested areas such as it has already picked upon, there is not much chance of any newly-paved paths being broken up to any considerable extent. Whether it be the Calcutta Corporation or its Chief Engineers, who have to choose the streets to have their side-walks pave, it is imperative, therefore, that they should confine themselves entirely to the main thoroughfares with which the Improvement Trust is not likely to deal for ages to come. The question of footpath paving raises also the other common experience in this city of the paths being dug open to lay cables and pipes. It would be impossible to avoid this

altogether, but somebody should be responsible for a little more judicious discernment in granting permission to dig open an entire street walk, as was done recently along Government Place and Old Court House Street. There should be hard and fast rules laid down regarding this matter, as for instance that not more than a limited distance, say, a hundred feet or a hundred yards, should be "up" at the same time. Further either the District Engineer or the Ward Commissioner should make it his duty to see that after opening up a path the same should be properly closed up again by the company responsible. The prevailing customs appears to be to heap up the earth over the opening and leave the pedestrians who use the path to do the levelling.

A Ditcher's Diary

AT THIS TIME OF YEAR, DEAR reader, I am not ashamed of approaching you with my begging bowl. As the autumn bids a quiet adieu and the winter sneakily announces its advent through a mild nip in the air, the day is not quite far off when the whole world will go gay on Christmas day. There are innumerable poor children whose life will remain as dreary and miserable as ever before. But can't we kindle a happy smile on their undernourished faces, however momentary it may be, by a token gift of a toy? I know well enough that a gift of this nature will not help redeem their misery for the whole of the year, nor will their poverty be banished through a small gesture of this kind. I also know well enough that there are thousand causes which clamour for your charity at a time when the inflationary pressures are eroding the real value of the rupee and the Finance Minister, Mr. Y. B. Chavan, is constantly casting his rapacious glances at your purse, no matter how depleted it might be. But let me tell you straightaway that our readers had been quite generous last year in contributing to *Capital's* Christmas Toy Fund, even though times were very hard indeed as the whole nation was busy fighting a war with Pakistan and Mr. Chavan had siphoned off as much as Rs. 500 crores by imposing a back-breaking burden of taxation. In our own humble way, we offered our hand of succour to refugee children who crossed the border with nothing but a firm faith

in our charity. And the meaning of charity, as you know dear reader, is love. This year too, we want to do the same good work for the poor, hungry and neglected children in our own humble way; let me remind you that in doing this, we will follow our traditional practice of ignoring all considerations of race, religion or creed. A lion's share of this year's contribution will be utilised in giving small gifts to poor, destitute children in city streets, to Mother Teresa's Missionaries of Charity and other such deserving causes. But in doing this, we shall not certainly deprive the usual beneficiaries of your munificence. An illustrious predecessor of mine fixed the maximum contribution at Rs. 10 more than sixty years ago. And I need hardly remind you that the value of Rs. 10 is not even one-tenth of what it was six decades ago. But let me not fix any definite amount for your contribution. I know well enough that readers of *Capital* are all intelligent and enlightened people to appreciate its crusade for a good cause. Cheques (preferably crossed), cash or toys—all are welcome, and should reach the *Capital* Christmas Toy Fund, 19 R. N. Mookerjee Road, Calcutta 1.

HANOI'S INSISTENCE THAT A CEASE-fire agreement must be signed on 31st October was clearly intended to force Washington's hands, but I did not think that the tactic would succeed. If Dr. Kissinger had agreed to signing on this date, the North Viet-

namese were perfectly justified in their insistence. But could they afford to conceal the agreement if Washington failed to observe an agreed time-table? They warned that the Nixon administration would be responsible for the "consequences" of such failure; but surely the threat was not credible enough to stampede the administration. It did not even sound particularly dire. The North Vietnamese had not lost their good humour, and said that Dr. Kissinger was welcome to meet them before or after 31st October—to drink champagne on the eve of the signing ceremony or to discuss questions that would "interest the two sides" after the signing. But Dr. Kissinger had to contend with Mr. Thieu who was in no mood for such pleasantries. The draft agreement, going by the text released by Hanoi, cannot have brought him the slightest comfort. Whatever guarantees there may be against a "communist take-over", he must be reconciled to a future when there will be no American forces to prop him up while nothing will be done to dislodge the North Vietnamese from their positions in the South. Phnom Penh and Vientiane may be stricken by graver uncertainties. Even if Washington is irrevocably committed to the reported agreement, it must go through the motions of persuading its allies in Indo-China that all is not lost. Nor is it certain that Washington itself is prepared to lose everything; the agreement will not necessarily mean total American disengagement from the region. However, at least a cease-fire agreement can now be taken for granted; and the signing cannot be much delayed if the pattern of control by the two sides in

To the world's largest marine surface coatings organisation, the world seems, somehow, to get smaller. But it's not mere size that makes our world shrink. It's our International outlook.

SUBSCRIPTIONS ARE PAYABLE IN ADVANCE

Concessional rates are offered to students

Available from leading book-sellers in all important cities or direct from the publishers.

South Vietnam is not to be greatly disturbed. Paris would be an appropriate venue for the signing ceremony; the French will recall their own experience in Indo-China and note, perhaps with some satisfaction, that the Americans learnt little from it. Another ceremony in Geneva would have been singularly inauspicious after what had happened to the 1954 accords. These agreements, as well as those of 1962, are still mentioned by Hanoi and Washington with formal deference, but this may be no more than a diplomatic ritual. I am not surprised that the existing I.C.C. is considered inadequate in the new context; and India need not be inconsolable if she is not included in a new and larger commission. An international rôle, which is not necessarily rewarding even in the best of circumstances, may not be the nation's most urgent need at this moment.

THE FULL STORY OF WHAT HAPPENED in Assam does not seem to have been told as yet; and some reports suggest that the story itself may not be complete. Even if there is no further trouble, what has already occurred must cause grave disquiet. A comparison with the language riots of 1960 is perhaps an exaggeration; and, in any case, some of the recent disturbances were apparently communal in character. From a distance it is hard to say at what point and in what manner the language agitation sparked off communal violence. (It is a curiosity of Indian semantics and an irony of our social legacy that the word "communal" refers only to religious communities.) Perhaps there was no direct link; perhaps there were dark, unnamed forces to "take advantage of the situation". It may not be entirely fanciful to suspect some unseen hand at work behind the recent communal tension in Bangladesh and some parts of India. But there is also much that is clearly visible, and the language controversy in Assam can be discussed without reference to any sinister external plot. The starting-point in any such discussion must be an analysis of a certain intolerance in the Brahmaputra valley. The intolerance is not entirely without an explanation. The majority community in the Assam plains has been trying to assert a distinctive Assamese ethos, which it considers threatened not only by equally strident tribal assertions but also by the presence of large linguistic communities from other parts of the country. These communities are seen either as symbols of economic exploi-

tation or as obstacles to cultural integration. But to recognise the psychological origins is not to accept that they are healthy. Much of Assam's trouble in recent years has been due to the Brahmaputra valley's refusal to face facts. Prejudice and obduracy in the valley widened the gulf between the hills and the plains. There is now little to be salvaged from the hill areas for the greater glory of Assamese chauvinism; and another form of intolerance has apparently been revived. But the problems arising from Assam's ethnic and linguistic variety will not disappear even if the Bengalis of Cachar are separated from the mainstream of the State's life and those elsewhere obliged to submit to majority dictates.

THOSE WHO SAY THAT BUSINESS men are not sentimental do not know what they are talking about. They are, as was amply proved, according to reports, at 11.45 a.m. on Thursday, 12th October, in the City of London. This was the time and date when, for the first time "since the memory of man runs not to the contrary", there was no announcement of Bank rate from the Bank of England. No tears were shed; those are nowadays reserved for Britain's ailing economy. But there was a feeling of nostalgia at the abrupt passing of an era which dates back no less than 270 years. Some apparently welcomed the change; others deplored it mainly for the reasons it was made. These were represented by the British authorities as belated adjustment to modern realities. But everybody knows that the real reason was, quite simply, that the Bank was anxious to raise its own lending rate without causing the kind

of panic which a sharp increase in the more psychologically-significant Bank rate would cause. Pure financial wizardry, in other words. In fact, the new rate—the minimum lending rate, as the Bank of England has named it—was quoted for the first time on the following day at no less than 7½ per cent, compared with the 6-per cent level at which Bank rate expired. How's that for monetary slight of hand? The "Old Lady" would do well at poker. Of course, Bank rate is not to disappear altogether. It will still be available for use in emergencies, whatever those might be.

THIS IS NOT THE FIRST TIME THAT a film by Mrinal Sen has provoked a controversy, and Mr. Sen has every reason to be gratified. For any serious artist, it is more rewarding to be provocative than inconsequentially pleasing. And *Calcutta 71* has done more than start an academic or sectarian debate; evidently it has created a lively interest even among those who are not particularly concerned with points of cinematic form or details of the film's political content. The Press reviews have not been uniformly flattering; but by all accounts the film remains a big box-office draw. In fact, the controversy over some of the points made in the reviews may have generated a wider and more passionate interest in the film. I do not wish to join this controversy; but I have no hesitation in saying that it is an important film. It is also clear that it has made an impact, even if the nature of the impact is seemingly varied. The film carries a social commentary, and even the critics will agree that the commentary is forceful. I consider it

highly reassuring that the Bengali audience remains acutely responsive to serious social commentary. To respond is not necessarily to agree; and, as Mr. Sen himself shows with heavy banter, the power "to react" can be easily and fashionably feigned. But the general response to the core of *Calcutta 71* is unlikely to be feigned. The genuineness of such response can be seen in different contexts, some far less controversial than Mr. Sen's film. Last week, for example, I was delighted to see how keenly the audience responded to the social satire in Utpal Dutt's play *Tiner Talwar*. Of course, Mr. Dutt's play has little in common with Mr. Sen's film. Apart from the differences arising from two distinctive art forms, the two works are wholly dissimilar in temper. Mr. Dutt's work, too, contains a fairly explicit social commentary; but, above all, it is a highly entertaining drama. A significant period in the history of the Bengali stage has been re-created with brilliant effect; and in re-creating it Mr. Dutt has also touched upon our social, economic and political history with a kind of merciless merriment. His own performance is predictably impressive; but far more impressive is the way in which he has organised the whole.

A WAG IN CALCUTTA DEFINED technology the other day as "what goes from the notebook of the professor to the notebook of the student without passing through the brain of either". The Minister of Science and Technology, Mr. C. Subramaniam, who stressed the need for a larger allocation for technology the other day, may please note.

Management Executives: Trend Towards Professionalisation

By V. Krishna

Head of General Line Container
Division (Eastern Region),
The Metal Box Co. of India Ltd

Executives in India are now passing through a phase of steady professionalisation. In future, they will rely less on product and operational know-how and more on their professional management expertise.

THE term "executive" derives from the Latin word meaning "to do". However, the primary responsibility of an executive is to formulate guidelines on organisational policy and make decisions. This does not mean that an executive cannot be involved with the implementation of decisions and policies, but rather that in most organisations the stress would be on relieving him from day to day matters so that he can devote his time to formulation of corporate policy and decision-making. The executive in an industrial organisation is associated with the establishment of the long-term goals of the company and formulation of policies and guidelines for facilitating the achievement of these goals. This necessarily means his close involvement in long-range and short-term planning, periodic control and evaluation of performance, initiation of changes in organisational structure, evaluation of mergers and acquisitions, market penetration and new product developments, etcetera. On the other hand, the rôle of the manager, as opposed to that of an executive, is more routine in nature, in that the manager must operate within the broad policy guidelines as set by the executives of an organisation. He will be more concerned with implementation, evaluation, and appraisal of the goals and objectives of the organisation. In Indian industry the term "executive" is a misnomer and is often used loosely to mean almost anyone who has completed his management training with the concern and has been absorbed as a member of the company's management team.

Having defined the scope of responsibilities of an executive, it be-

comes necessary to identify his functions in an organisation. Even though the functions of an executive would vary depending on his area of responsibility within the business, there would, however, be broad similarities in the scope and nature of his functional responsibilities. An executive in an industrial organisation would be responsible for performance of a number, if not all, of the following functions in his area of responsibility: (a) establishing company objectives; (b) conversion of the objectives into long-range plans; (c) development of short-range plans to facilitate achievement of the long-term plans and appraisal and control of short-term performance; (d) development of a suitable organisational structure to facilitate implementation and achievement of the short-term and long-range goals; (e) selection and grooming of executive personnel and managers, and initiation of programmes for their development; (f) evolving policy on the conduct of Research and Development, with a view to developing new technology and products; and (g) evaluation of acquisitions.

To direct and control the functioning of an organisation requires the formulation of corporate objectives. The corporate objective formulation process for an organisation should be such that the formulated policy objectives are achievable from a practical standpoint. Formulation of corporate policy must take into account the organisation's aspirations as to its share of the market, product diversification, return on investment, new product development, technological leadership, dividend policy, policy on labour turnover and work force deployment, etcetera. No organisation exists for the fulfilment of one sole objective—it has a multiple set of objectives some of which could very well be in conflict with one another. Furthermore, various organisations give different weightage to the multiple goals.

An executive must actively participate in the formulation of corporate objectives. He must see to it that the objectives which he evolves in his area of responsibility are realistic. In evolving corporate policy, the executive would be in touch with divisional managers and representatives, and once he has formulated his recommendations these must have the approval of the chief executive and the board of directors. Once the corporate objectives have been formulated they require to be integrated in the long-range plans of the organisation. Corporate objectives and long-range planning are very closely linked to each other and often corporate objectives may require to be modified once an attempt is made to convert them into specific plans.

Although the time horizon for long-range planning varies, mostly it is between three years and seven years, with quite a few concerns adhering to the five-year planning cycle. The process of long-range planning could originate at the bottom of the organisation and go up to the top. This would mean that divisional and regional managers would first formulate the plans, while the involvement of top management would come at a later stage in such a planning process. In organisations where the central staff is functionally responsible for long-range planning the process could be the other way round. However, in practice, there is considerable overlapping and plans are modified based on feedback obtained either from the top or lower echelons of the organisation.

Marketing Capability

The long-range planning process requires an estimation of the marketing capability of an organisation, which is then converted into a capacity plan. The preparation of a capital investment programme is based on such plans. The next step is to tie these up with the divisional plans, which can then be converted into projected profit and loss statements. Underlined in the long-range planning process are the corporate objectives—areas in which the company is to concentrate, the market share and growth rate to be achieved, development and introduction of new products, return on investment, etcetera. As the survival and growth of an organisation depends on the fulfilment of company objectives, an executive's participation in long-

Big saving in Industries

ange planning is a vitally important function for him.

To facilitate achieving the long-range organisational plans and with a view to exercising control, the long-range plans require to be translated into short-term plans. This facilitates the executive to delegate responsibility to the manager for routine operation of day to day business. The executive cannot, however, absolve himself from the responsibility of achieving the long-term goals based on inadequate performance in the short-term. He must make periodic reviews of short-term performance and must initiate corrective action wherever the performance significantly falls below the targeted level. The budget is a powerful tool for exercising control by making monthly or quarterly reviews of budgeted performance against actual performance. The executive must take corrective action whenever substantive controllable variances from budgeted or targeted performance occur.

So that the long-term goals of the organisation do not have to await fulfilment due to the lack of an adequate organisational structure, the executive must make decisions as to the organisational pattern. Factors such as centralisation or decentralisation of company operations fall in this realm. Different types of organisational structures exist in various companies, each suited to the specific needs of that organisation and its people. No text has yet been able to throw light on the "best" structure for an organisation. Not only must an executive evolve, change, and define a company's organisational structure with a view to facilitating efficient operation and control, but he must also be able to establish responsibilities and appropriate means of communications for the various functions of the organisation.

Personnel Selection

For an aggressive organisation the achievement of its corporate objectives would require infusion of competent and creative individuals at various echelons. The organisation must also provide facilities for development and training of its promising individuals so that they can discharge their responsibilities efficiently and are ready to assume higher positions, as and when vacancies arise. The executive must lay down guidelines for recruiting outside personnel, from time to time, to in-

ject new blood in the organisation. He must initiate programmes for evaluation and review of performance so as to spot the potential executives and managers. Incumbents must be encouraged to line up their successors and adequate exposure to various aspects of management should be systematically provided by job rotations and development programmes, both within and outside the organisation.

An important rôle of an executive is to assess the magnitude and importance of the Research and Development effort of an organisation. The Research and Development effort may be vital in terms of maintaining the leadership and image of an organisation, giving the organisation a competitive position through new product development, ensuring a satisfactory rate of growth by product diversification, and sustaining or improving the profitability by cost reductions as a consequence of development of specific technologies. The expenditure on research and development and the avenues in which this activity should be undertaken are some of the areas on which corporate guidelines require to be developed. The evaluation and selection of Research and Development projects is also a matter of close concern to the executive.

With the increasing competition and the squeeze in profits—not to mention the Government policies on corporate taxation and the restrictions on concerns controlling a substantive share of the market, and/or concerns with foreign collaborations—the larger organisations are under pressure to make acquisitions in areas somewhat, although not directly, related to their mode of business. This will be more true of organisations which are facing a profit squeeze due to governmental regulations and competition. To enhance their overall profitability acquisitions may be desirable. Organisations which control a substantive share of the market in their "bread and butter lines" may not normally find it profitable to make acquisitions in related product lines. However, such organisations could invest in areas which are not directly related to their main product lines. By selection of the appropriate area for investment, a concern must be able to maintain or improve its level of profitability in the long-term and also ensure growth rate which may not be possible if it were to concentrate only on its existing range of products. The

executive must decide on the broad policy for acquisitions and product diversification of a concern.

The Changing Role

Rapid developments are taking place in the sphere of Indian management. Coupled with the increased emphasis on the consumer and the presence of competition between organisations producing same utility products, the rôle of the executive has become more demanding. The concept that managerial and executive traits are inborn in an individual and cannot be acquired through preparation and educational discipline is rapidly becoming outdated. More emphasis is now placed on the executive being able to grasp the new developments and approaches relating to the performance of his functions. This is bringing forth the professionalisation of the executive function and the Indian executive of the future will rely less on product and operational know-how and more on his professional management expertise. This trend has already manifested itself in the increased executive turnover at present in Indian industry.

The development of disciplines such as marketing research, operations research, industrial engineering and data processing has made a definite impact on the decision-making processes of organisations. Previously, decision-making in organisations was largely subjective because of non-availability of adequate information and the absence of a methodical framework for decision-making. With the emergence of new disciplines and the importance which will be placed on management information systems, this will no longer be true. Executive decision-making is becoming less subjective and is characterised by a greater emphasis on the availability of relevant information and the prediction of various alternative courses of action. This has definitely brought forth refinements in the process of long and short-range planning, the evaluation and selection of investment proposals, the introduction and development of new products and technologies, and other executive functions. However, this change in the rôle of the executive has not modified or altered his responsibilities. Any future changes in the rôle of the Indian executive are also expected to be in the mode of execution of his functions rather than in the scope of his functional responsibilities.

How to Make Small Savings More Attractive

By Shyamal Banerjee

The present interest rates are not enough to cover the loss in the purchasing power of money. If small savings are to be attracted, the interest rates would have to be made more attractive.

AT a recent seminar in Calcutta, the Finance Minister of West Bengal, Mr. Shankar Ghosh, and the Central Deputy Finance Minister, Mrs. Sushila Rohatgi, emphasised the need for accumulation of small savings to make a large dent into India's national investment portfolio. It is very necessary in this context to make a fundamental analysis of how, through improved motivation, the national savings programme can be made a self-expanding, self-sustaining cycle.

The classical motives for any saver, after Keynes, are three-fold. A saver puts away a part of his earning for security in the future. Savings are more attractive to the saver if the same can be retained in a liquid or semi-liquid form. The closer is the form of saving to cash which is the most liquid form of asset, the greater is the incentive for such savings. Keynes identified a third motivation in the "speculative" instinct of an individual. In the context of the business section of people who save, in a small or moderate way for security and liquidity, the "speculative" motive is relatively weak. On the other hand, even the small investor is keen that his investment should grow through the earning of interest and that the purchasing power of the capital saved does not suffer an erosion. From this brief analysis one can identify some of the weaknesses of the various small savings schemes which are now operated through different institutional channels, including post offices.

First, currently a savings scheme which gives a reasonable interest, say, 6 per cent or above, is usually a fixture as far as the investor is concerned. It blocks the saver's money for three to seven years or longer. The saver has little or no access to the money put away by him in such a savings scheme until it becomes

due for repayment. Secondly, for the ordinary investment, in the postal savings bank, for example, which retains the liquidity of the savings, the interest offered is between 4 per cent and 4½ per cent which is not sufficiently attractive. Thirdly, the capital erosion due to the diminishing purchasing power of money is so substantial that the interest rate which is less than the average rate of inflation is unable to compensate for the capital loss. The small investor who necessarily calculates his earnings against the loss in the purchasing power of money, invariably argues that a long-term deposit or saving is hardly attractive. In the last two or three years, the value of gold has gone up by 30 per cent or 35 per cent. Any saver three years ago, if he had invested in gold, had earned a return of no less than 10 per cent a year. Even a not-so-careful investor does not fail to notice this big difference. Any fixed deposit or small savings scheme is, therefore, at a significant discount in this economic computation.

In this article it is proposed to discuss two innovations which seem harmless but would completely change the present system of small savings scheme. As usual, in many other fields, the old concept and philosophy in formulating the savings scheme is being continued without analysing the inhibitions underlying the scheme and also without enquiring whether within this system of the economic rationality, the schemes can be so moulded as to make them attractive and worth while for the investor.

The concept of current deposit and term deposit—in the conventional banking system—has been adopted in various national savings schemes. Under this principle, there is a short-term or current earning with a small rate of interest. On the other hand, a long-term deposit such as 3 years, five years or longer fetched a higher rate of return. The argument for this arrangement was that a bank had to be ready to honour any demand for withdrawal from depositors. The bank, therefore, had to maintain a

portion of the deposits in liquid cash. The liquid cash held by a bank cannot be invested by it to earn a good return. Therefore, a bank, depending on its total assets and small credit, had to keep at least 10 per cent or 15 per cent or even 20 per cent of its deposits in liquid form. Also, the method of bank financing, before the nationalisation of banks, was basically in short-term or medium-term investments. After nationalisation, there has been a shift in the banking system from short-term to medium and long-term investments.

After the banks were nationalised, the fear of a run on a bank is no longer there. Moreover, since depositors' confidence in a nationalised bank ought to be as good as their confidence in the Treasury or the Reserve Bank of India, the run concept in the operation of the banking system and formulation of the banking philosophy is a thing of the past. Secondly, bank finance can now be diverted, barring the average need for cash, to long-term and medium-term institutional financing, thereby earning a much larger interest. The basic assumption only has to be that the investment of deposits of the banking system will be on sound and profit-earning investments. The same principle can be applied to postal savings bank deposits. Basically, they suffer from no relative disability *vis-à-vis* the long-term changes in the various small savings schemes operated by the postal department. Thus, if on average the entire postal system needs 10 per cent or 15 per cent of the savings bank deposits to meet the day-to-day demands of depositors for withdrawal, 85 per cent or 90 per cent of all deposits can be switched over to more rewarding medium and long-term investments.

Given an efficiency of the investment portfolio and the market rate of return on capital for the deposit money through investment in trade and industry, and also given an efficient and economic administration of the banking and savings bank services, an increase in deposit interest is quite possible. Once the rate of interest is enhanced on current deposits, whether in a nationalised bank or in the postal savings bank, three things will happen:

(1) The liquidity of the deposit will be guaranteed. There will be no need to divert the bulk of the small savings of the middle class, lower middle class and the poorer

sections of the community to long-term deposits. This will itself generate a strong motivation for the saver to put whatever money he may collect or earn into the banking or savings bank system.

(2) Since the inflationary erosion from year to year so far is around 4 per cent to 6 per cent, an interest rate of between 6 per cent and 7 per cent on current deposits would assure the saver that his earning from the money saved will at least compensate the capital erosion due to the fall in the value of money.

(3) This will immediately enhance the "security motive" of investment since the saver would be sure of three things, namely, (a) the money would be saved in a nationalised institution; (b) the money would be available whenever it is needed; and (c) the money would not lose its value out of all proportion, considering the return on the money saved.

As a result, an increasing proportion of the people's savings, instead of flowing into the acquirement of gold and other fixed assets, would become available for productive purposes.

In an underdeveloped economy like India's, the thrust on consumption fluctuates in incremental income, especially in the lower income groups. The hypothesis of Keynes, namely, that a part of all incremental earning is saved is not realised by a large section of the people. In this sphere of subsistence or near-subsistence living, the Duosenberry hypothesis has a greater field to play. According to it, in the lowest income groups, a small increment in income will be entirely used up in consumption and, in fact, may lead to dis-saving. It is common knowledge that, in a family where children are not sent to school, if the earning goes up, the parents may decide entirely to set apart the added income for the schooling of children. In the process it may also happen—which is very likely—that if the added income falls short of the added expenditure on schooling, some money out of the provident fund or some other saving may be diverted to supplement the schooling expense. The same is true of any other essential expenditure, such as social obligations, medical expenses, housing and even the basic comforts in life.

It follows that for not only the same absolute amount of saving, but

even the same proportion of saving to added income, the intensity of motivation required in this country has to be enormously stronger than in a developed country. Therefore, the latest saving power, which today is inactive and dormant, will come into play once the co-efficient of motivation crosses the neutral level.

Can Trade Union Unity be Achieved in India?

By M. R. Meher

At a recent seminar in Bombay, participants felt that the multiplicity of trade unions has come to stay in the country. This opinion may seem to be rather surprising in view of the steps recently initiated to forge some degree of unity in the trade union movement.

AT a seminar held recently in Bombay under the auspices of the Bombay Management Association to consider the question whether trade union unity is feasible, there was a consensus among the participants that the multiplicity of unions has come to stay in India and that the country must learn to live with it. The fact that inter-union and intra-union rivalry had strong political overtones was referred to and there was general agreement that in the present socio-political set-up, there is no likelihood in the near future that trade unions will close their ranks and develop a united trade union movement.

This view may seem surprising, having regard to the steps taken in the recent period to forge some degree of unity in the trade union movement. It is, therefore, necessary to examine whether the negative aspects of trade unionism are diminishing or are becoming accentuated. It is well known that for long inter-union and intra-union rivalry have been a bane for the trade union movement. The rivalry has been intensified because of politicisation of unions. Almost every political party is having its trade union wing. Unhealthy rivalry in trade unionism has divided workers, led to wasteful application of scarce leadership, lack of loyalty to trade unions among their members, complication of the issue of union recognition and has hampered the development of collective bargaining. Furthermore, existing legislation has encouraged the multiplicity of unions by allowing as few as seven persons to

If by the above steps, mainly by improving the liquidity and the earning rate of small depositors, the motivational level can be taken beyond zero point, the complexion of the small savings is bound to change overnight beyond recognition and beyond the dream of the planners and administrators.

form a union and allowing any union to raise an industrial dispute and have its demands referred to adjudication.

There have been cases in a number of industries, e.g., jute, tea and cotton textile in West Bengal and the steel industry in India, in which unions of all shades have formed negotiating bodies and worked together for evolving a common line of approach and have attained success in collective bargaining with employers. Experience has shown that, at all events, a limited degree of trade union unity has been feasible, and while in the foreseeable future it may not be possible for the working class in India to unite in one trade union organisation, as in the Trades Union Congress in the U.K., it would be unjustified pessimism to regard a degree of trade union unity in this country as a mirage.

Reference may be made to the strenuous efforts made by the Central Labour Minister, Mr. R. K. Khadilkar, during the last year and a half to secure unity in the trade union movement. At the conference of trade unions convened by him in May 1971, there was general agreement that multiplicity of unions hampered collective bargaining and that the main problem was one of the method of determining the bargaining agent for the workers, which would have sufficient authority to influence the relationship with the employer. At the instance of the Labour Minister, the three principal trade union centres, the I.N.T.U.C., A.I.T.U.C. and H.M.S., formed a working party to evolve some agreement on the formula for determining the recognised union in an industry or establishment. The working party came to a tentative agreement on the formula, but the agreement was not finalised on account of difference of opinion between the representatives of the three organisations on the application of the

UBI

IN THE LIFE OF WEST BENGAL

Assistance to Small-Scale Industry

In West Bengal UBI plays the leading role in taking banking facilities to people and in giving assistance to agriculture and small-scale industry.

Take the case of assistance to small-scale industry. As in September 1971 all commercial Banks together had assisted 6,202 small-scale industrial units in the State. Of them UBI's share was 1,775 or 29 per cent. Again, the amount advanced by all commercial Banks stood at Rs.45.30 crores. UBI's share was Rs.11.65 crores or 26 per cent.

Last year UBI assisted on an average more than one small-scale industrial unit each day of the year. UBI has also assisted 1,135 transport operators, 5,796 retail traders and small businessmen and 1,013 professional and self-employed persons in the State up to 30th June 1972. A large number of people belonging to various classes and professions, from graduate engineers to cobblers or bamboo craftsmen, have become self-dependent with UBI's assistance.

United Bank of India

formula to the States where statutory provision for determining the majority union by verifying the paid membership is already in existence.

It is understood that the Central Government would be bringing in a comprehensive legislation on industrial relations in the next session of Parliament in the light of the above-mentioned discussions between the three central organisations, the report of the National Labour Commission and the discussions in the last State Labour Ministers' conference. It is likely that the general formula referred to above may be adopted for determining the recognised union in industries and establishments. The question of application of the formula in the States where the system of determining the majority union by verification of membership prevails under State laws may have to be left to the States, since labour is a concurrent subject.

The proposed legislation providing for determination of the majority union as a bargaining agent would be a step in the right direction, but may not solve all the problems that have arisen from union rivalry. For example, there may be situations where the bargaining agent may not be able to perform efficiently and deliver the goods. A minority union may endeavour to embarrass the majority union and make it ineffective by inciting workers against it or inciting them to break agreements with the management made by it. However, experience in the working of the formula may show the way of dealing with such situations.

Reference may be made to some other recent developments. Some time back, the three principal trade union centres, viz., the I.N.T.U.C., A.I.T.U.C. and H.M.S. set up a national council with the object of providing a platform for better understanding and closer co-operation between these major trade union organisations. It was hoped that in due course other trade union federations would also join this agency and that the formation of the council would pave the way for the ultimate unity of the working class in the country. The formation of the national council was hailed by the Central Labour Minister as a "historic agreement" which would have far-reaching effect on the labour movement in the country. However, the national council has so far met once, at which the demand for increasing the minimum bonus from 4

per cent to 8½ per cent was made. Since then, the council has not met.

Meanwhile, this move for unity appears to have received a setback. The C.I.T.U., H.M.P. and a few other trade union organisations have recently formed a rival "united council of trade unions" with the ostensible purpose of bringing about working class unity. The leaders of this rival organisation have appealed to the A.I.T.U.C. and H.M.S. "to retrace their steps of staying away from the path of unity and dissociate from the

national council of trade unions" and further urged them to "join in the mass action to secure the legitimate rights of workers." This move by militant Marxist and other extremist unions, which appears to be motivated by political and trade union rivalry, is calculated to exacerbate disunity, instead of promoting unity in trade unionism. It is learnt that the national council formed by the three central trade union organisations is to meet shortly and it is to be seen how the situation created by the emergence of the new organisation develops.

The Criteria for Installing Computers in Industrial Undertakings

(By a Special Correspondent)

The Committee on Automation has laid down the criteria that should govern the installation of computers by industrial undertakings. But the use of computers should not be unduly discouraged, for that will only slow down the modernisation of the economy.

THE criteria laid down by the Committee on Automation for the use of computers in India deserve a critical analysis in the context of the need to modernise industry rapidly and to increase employment opportunities. The committee was set up by the Government of India in July 1969 under the chairmanship of Professor V. M. Dandekar, and it submitted its report in May this year. The full text of the report is not yet available. But its recommendations relating to the installation of computers have been circulated by the All-India Organisation of Employers among its constituents to ascertain their comments. The committee had been asked to recommend the criteria for the determination of any specific areas and fields in which the introduction of automation, including computers, may be permitted or restricted with due regard to the need for raising efficiency and productivity in industry and trade, especially in export-oriented industries; the requirements of scientific research and development; the need for the timely tabulation, analysis and study of the large masses of data that arise in modern industry, trade and transport; and the need for restricting the import of foreign equipment for automation and for encouraging the use of such equipment manufactured in the country.

The committee has made a distinction between the use of computers by the educational, scientific and research institutions, statistical organisations of the Central and State Governments and defence establishments; and commercial and industrial establishments whether in the private or public sector, including consultancy services. It has proposed that the use of computers should be generally permitted in educational, research and similar institutions subject to reasonable provisions to protect employment and working conditions. But in regard to the use of computers in commercial and industrial establishments whether in the public or private sector, including consultancy services, certain criteria have been laid down.

The criteria proposed are as follows: (a) All proposals for installing computers should be examined and scrutinised, case by case, by two experts. They are to be selected jointly by the management and workers and they should have sufficient knowledge of the computer technology; (b) the use of computers for unapproved purposes and underutilisation of computer installations should be prevented; (c) as far as possible, the need of computer use should be met from computer facilities to be created preferably in the public sector; and (d) in all cases, the use of computers should be subject to a prior agreement with the workers.

The committee is certainly right in urging for a cautious approach in regard to the use of computers. But this should not be overdone. If the use of computers is deliberately discouraged in various ways, it will slow down the

SET UP YOUR INDUSTRY IN MYSORE'S DEVELOPMENT AREAS

MSFC has your industrial finance programmed for you

Industrial expansion in Mysore's eleven Development Areas is a sound economic proposition. Industries located here qualify for maximum grants, resources and co-operation from the State Government. Financial incentives and assistance from the Mysore State Financial Corporation include:-

- 10% subsidy of the total capital cost of the project, by the Government of India, in selected areas.
- Concessional rate of interest subsidised by the State Government by 1%.

For further details contact:

Mysore State Financial Corporation

1/1, 2nd Main Road, Malleswaram, Bangalore-3. Phone: 71169

Since 1959, MSFC has assisted over 1000 industries with finance totalling Rs. 15 crores. And also underwrites capital issues of companies. MSFC's industrial finance program is specially mapped out for new and expanding industries; in collaboration with the Mysore Small Industries Corporation and the Small Industries Service Institute which offer added facilities like locating sites and buildings, project evaluation and obtaining licences for your industries.

Split in the D.M.K.: A Threat to Its Supremacy in Tamil Nadu

(By a Special Correspondent)

The split in the D.M.K. has been the result of personal rivalry between Mr. M. Karunanidhi and Mr. M. G. Ramachandran. Will the split give the Opposition parties the opportunity to remove the D.M.K. from power?

THE D.M.K., which is the ruling Party in Tamil Nadu, is going through a crisis. The happenings in the Party have attracted nationwide attention mainly because it is the only non-Congress Party that is in power in the whole country. Secondly, non-Congress Governments have one by one been toppled as, for instance, in Orissa and much earlier in Uttar Pradesh. It is now being asked whether a similar thing will happen in Tamil Nadu following the trouble within the D.M.K. and the formation of Anna D.M.K. by Mr. M. G. Ramachandran. Since 1967 the D.M.K. has been the ruling Party in Tamil Nadu. When the State went to the polls in 1971, it was thought that the Organisation Congress would inflict a crushing blow on the D.M.K. But that did not happen; the D.M.K. had, in fact, improved its position. This was a frustrating experience for the Opposition parties which are waiting for an opportunity to avenge the defeat. Will the present split in the D.M.K. give them the chance to displace the ruling Party?

To understand the position in the proper perspective, one must realise that the D.M.K. is a well-knit organisation which has come to power after a good deal of hard political work among the masses. But it must also be noted that the Congress Party too had a solid mass base and, therefore, the victory over it was not easy to achieve. If the D.M.K. is a corrupt body as is sought to be made out, how does one explain its success at the polls? But what has given credence to the oft-repeated charge of corruption against the D.M.K. is the fact that Mr. Ramachandran has said in public that corruption does exist. He was a responsible member of the Party and had been its treasurer till his suspension the other day. His demand was that all Ministers and members of the D.M.K. executive council should

declare their assets. But the leader of the Party, Mr. M. Karunanidhi, did not see any need for this. It was not very difficult for him to understand that what M.G.R. meant was that there was large-scale corruption on the part of Ministers and important functionaries of the Party and that the disclosure of their assets would reveal the extent of the riches acquired by them.

On the face of it, the demand made by M.G.R. looks innocuous and even reasonable. The Chief Minister and his supporters have, however, come out with the explanation that in the name of fighting corruption, M.G.R. was actually trying to disrupt the Party and create dissensions where there were none. Even if there are some discontented elements, it is the view of the top leadership of the Party that this must be settled internally and not by open disclosures and public statements. But it is not as though the demand made by M.G.R. is without its parallel in other parties. Only recently, a big controversy arose over the statement made by Mr. K. Hanumanthaiya, former Railway Minister, that he was launching a movement to cleanse the Congress Party in Mysore. The point to be noted is that to imagine that the D.M.K. will be badly shaken by M.G.R.'s resolve is almost like believing that the Congress Party in Mysore would fall asunder by Mr. Hanumanthaiya's attempts to purify it.

There is no gainsaying the fact that much of the controversy that has now

arisen within the D.M.K. is due to the personal rivalry between Mr. Karunanidhi and Mr. Ramachandran. Many leaders, not excluding M.G.R., were not reconciled to submit themselves to the commands of Mr. Karunanidhi. It is also true that Mr. Karunanidhi who was prepared to listen and take advice from his colleagues in the initial stages of his career as Chief Minister is now well entrenched in his position and, therefore, is in a position to lead and dictate. Naturally, this irked leaders like M.G.R. who were anxious to put Mr. Karunanidhi in his place. M.G.R. has chosen the plank of corruption to indict the Government but Mr. Karunanidhi has cleverly used his supreme position in the Party to curb this. When the decision to suspend M.G.R. from the Party was taken, it had the full support of the council.

M.G.R., having been suspended from the Party, realised that he had no other option but to form his own Party. He has called the new Party Anna D.M.K. The name of Anna-durai still has a charm and M.G.R. is trying to gain public support by using it. It is not yet clear what the new Party stands for and whether it will be any different from the D.M.K. M.G.R. had, much earlier, established associations in various towns comprising his admirers and these "Manrams", as they are called, will now form the nucleus of the new Party. It is reported that four or five legislators belonging to the D.M.K. have joined his Party though only one member of Parliament has agreed to align himself with M.G.R. However, some of the Central D.M.K. leaders who were expected to show sympathy with the cause espoused by M.G.R. have now pledged their loyalty to the Chief Minister and this only goes to prove that the support which M.G.R. might get from the legislators or M.P.s will be only marginal.

Truth About the Rags Scandal

(From Our New Delhi Correspondent)

The rags scandal has been highlighted by the Press in the past few weeks. During the ensuing winter session of Parliament, all members, whether belonging to the ruling Party or the Opposition, should try to find out the whole truth about it.

THE Central Foreign Trade Ministry appears to have done it again. This time over woollen "rags". For over a fortnight now, the Press has been publicising all aspects of this scandal and yet the whole truth has not come out. One should hope that since the winter session of Parliament is not far off, the members, both of the ruling Party and the Opposition, will try to elicit as much information as possible so that the public will know how this came about and who is responsible for it. From the facts so far known, it appears that the Central Foreign Trade Ministry having thrown open the flood gates, the Customs authorities were asked to plug the loopholes. This seems to be the unsavoury truth about the import of "wearables" under the garb of "rags" for which import licences were issued by the Central Foreign Trade Ministry.

"Rags" have been imported into India for several years in the past, but their quantity was insignificant and, therefore, they did not attract much attention. With the export of hosiery increasing in recent years, the replenishing imports, too, have been considerable. However, this year perhaps sufficient care was not taken to ensure that the import licences were given only to actual users. Consequently, the licences went into the hands of importers who have no facility of their own to convert the rags into shoddy yarn. This has resulted in the "rags", which were mostly "wearables", finding their way into the consumer market on a large scale. It is pointed out that the licences for the import of "rags" are normally issued on three conditions: that the importers are actual users, that the rags will not be sold in the domestic market as "wearables", and that the rags will be turned into shoddy yarn by the importing

shoddy spinning mills themselves. As the report goes, there has been slackness in respect of all the three conditions and, consequently, these wearables have found a ready market in northern India where the winter is setting in.

The Central Foreign Trade Ministry has not said much on whether the licences were issued only to actual users. But when it came to the notice of the Government that the rags were being sold as wearables, the Central Foreign Trade Ministry woke up, but only after the Customs had seized 12,000 bales. Normally, nothing comes to the notice of the Government on its own. Some one affected must always make a representation to the Government. In this case, when the wearables were being sold so cheap, there was no market for the new knitwears being produced by the mills, particularly in Ludhiana and elsewhere. And, when these mills protested, the bales that could be caught hold of were seized by the Customs. Then came another kind of protest—the shoddy mills for which they were meant were not getting their raw material and, consequently, they were lying idle, throwing a number of people out of employment. So, word went from the Central Foreign Trade Ministry to the Customs that the bales should be released, after ripping the rags open and making them "unwearable". Now, who is to do this job? The Customs authorities cannot be expected overnight to set up a machinery to rip open thousands of bales of rags, hydraulically-compressed, which is a colossal task. So, they were allowed to be sent to the mills "on bond" and were to be ripped open by them in the presence of the Customs authorities. At this stage, it is possible there was collusion between some Customs people and the unscrupulous importers.

The amount involved in the import of rags is not considerable—just about Rs. 5 crores, but it is large enough for this particular commodity. Hence Parliament cannot be expected to gloss over what appears, *prima facie*, to be a grave scandal.

modernisation of the economy. It is relevant to point out that, so far, India has been going very slow with the introduction of computers. Mr. Naval H. Tata, Mr. Babubhai Chinai and Mr. B. D. Somani have the following estimates: "In general, only companies having a paid-up capital of Rs. 1 crore or more can afford to have their own computer installations. Since the number of such companies registered under the Companies Act as on 31st March, 1968 was 445, and assuming that 50 per cent of these companies would install their own computers, the total number of computers to be installed would be 223. Of these 94 have already been installed. On the basis of the number of employees affected by the introduction of computers so far, i.e., about 16 per computer, it will be seen that the total number of employees that would be affected would be about 2,064, and that too over the next decade and more. The above figures are not intended to be precise estimates, but to indicate the magnitude of the so-called unemployment that is likely to result even if the introduction of computers is permitted without any check or hindrance."

Even though the fears of unemployment arising from the use of computers may seem exaggerated, it will be prudent on the part of managements to take the workers into confidence before installing them. But the workers and their representatives should approach this question not solely from their own point of view but in the interest of their establishments as well as of the economy as a whole. If the country is to make rapid strides in import substitution, export promotion, and in the modernisation of agriculture, the country should readily avail itself of the latest developments in the field of science and technology. Ultimately, such a policy will help to create more employment and improve the standards of living of the common man. This has been the experience of many developed countries. Labour leaders should, therefore, adopt a realistic approach to this problem.

The committee has referred to the underutilisation of the computers that have been already installed. It says that, in many cases, the underutilisation is mainly due to the fact that the computers have been installed without sufficient justification, thought, and adequate preparation and planning for their legitimate use. But underutilisation is not confined to computers. It prevails in many sectors of the economy due to unimaginative planning.

Political Rivalries in Kerala: Threat to Economic Progress

(By a Special Correspondent)

The political scene in Kerala today is marked by intense rivalries among the parties. But without political stability, it will not be possible to maintain the State's economic progress.

AN economist normally does not bother much about politics. But modern trends emphasise the need for keeping track of political as well as economic developments as only then a correct appraisal of the general situation is possible. Against this background, politics in any State and in the country has now become a primary concern for economists, administrators and even for the common man. Investors and industrialists know well the possible impact of changes in the political weather on the economy. The emerging political weather in Kerala needs a closer watch, as political rivalries whenever they are allowed to go beyond a point, will produce an adverse effect on economic development. The recent pronouncements by leaders of political parties in Kerala have given an impression that the present rivalries may lead to undesirable consequences. Kerala is moving ahead economically. More and more employment is being created in the State. But Kerala needs not only industrial peace but also continued political stability.

The emergence of political violence started with the murder of a Marxist leader in Trichur. The reaction of the C.P.I.(M) to this incident was understandably harsh. Mr. E.M.S. Namboodiripad is now much in the picture of Kerala politics and he has levelled many accusations against the opponents. The allegation of Mr. Namboodiripad was that certain extremist organisations were working in alliance with the Congress in some parts of the country. On the contrary, opinion in Congress circles and among members of the ruling alliance underlined that the Marxist leader was trying to capitalise on certain recent developments in Kerala. The general feeling outside the C.P.I.(M) seems to be that the present posture of the Party might be a prelude to a shift towards violence. It appears from the pronouncements of important political parties in Kerala that there has been a shift in thinking towards extremism, if not violence. The charges and counter-charges do not indicate the prospect of political stability unless the present trend is checked. The C.U.C. (the Communist Unity Centre formed in May 1972 by the amalgamation of extremist groups) and the C.P.I.(M) have now assumed a mutually competitive or antagonistic posture.

What is, however, interesting from the national angle is the change that is visible in the political atmosphere in Kerala. The warning given by the C.P.I.(M) about stepping up its struggles and reviving the agitation for grabbing land from 1st November has added to the vulnerability of the political situation. Evidently, this "land-grab" agitation is considered mainly in its political perspective. It has little economic significance. At any rate, economic upliftment is not to come from any political agitation. If this is realised by the political parties, there will be less tension in the State.

All-India Farm Convention

The all-India convention of the Farmers' Federation of India held recently in Bangalore discussed

the problems facing agriculture. The discussions centred on the present trend of agricultural legislation, the position of agriculturists and the national importance of maintaining the tempo of agricultural production in order to sustain the "green revolution." It is significant to note that the convention was the first of its kind to be held at the national level. What is more, the convention decided to convert itself into the first National Council of the Farmers' Federation of India. The Federation has to chalk out an action programme and recruit volunteers to take part in peaceful and non-violent agitation which might be launched for the protection of the democratic rights of the agricultural community. The voluntary corps are also expected to be utilised for rural development work.

Particular attention was focussed on the Mysore Land Reforms Amendment Bill. In the opinion of the convention, the land reform legislation in Mysore was "too drastic in nature" and would affect the incentives for increased production. Furthermore, it was feared that this legislation would convert many small land-owning families into land reforms refugees. The convention also expressed the view that residential and income restrictions, were "unfair and harmful" because they were in the nature of depriving the peasants of their right to own land even it was within ceiling limits. The compensation was also viewed as very insignificant. The convention decided to submit a memorandum to the Government of Mysore pointing out the difficulties that would flow from the operation of the proposed measures.

PEOPLE AND PERSONALITIES

Mr. Keshub Mahindra has succeeded Mr. H.V.R. Iengar as chairman of the board of directors of Indian Aluminium Co., Ltd. Mr. Mahindra has been a director of Indal since 1962.

A four-member delegation from the Federal Republic of Germany is visiting India from 1st November to 4th November. The delegation is headed by Dr. F. Wien, member of the board of directors of the Deutsche Messe-und Ausstellungs AG, organisers of the world-renown Hanover Fair.

INDUSTRY

Developing Merchant Shipping to Earn More Foreign Exchange

(By a Special Correspondent)

Although the foreign exchange earning capacity of the shipping industry has not yet been fully explored, it already contributes a large amount to the Exchequer. The industry certainly deserves a more sympathetic consideration from the Government in acquiring new ships.

DEVELOPING countries confronted with the problem of adverse balance of payments have been adopting various schemes of export promotion to overcome this difficulty. India, too, has been in the throes of this vexatious problem since 1947. The Government has invested considerable sums in pursuing various policies of import substitution and export promotion; research on various merchandise and markets abroad has been conducted to find avenues of earning more foreign exchange, but due attention has not been paid to invisibles, including shipping. This is in spite of the fact that while for the export of goods international co-operation is essential, the initiative for the expansion of shipping must lie with the country itself. The neglect of shipping is, however, a phenomenon common to all developing countries.

The Third World countries have now started considering investment in merchant shipping. It is now realised that investment in shipping influences the export potentiality of a country to a very great extent; a fact evidenced by the direct relationship between a country's exports and the size of its merchant fleet. At present, a significant portion of India's foreign trade is carried in foreign ships. In so far as the freight in either direction is being paid for by its own residents, the substitution of national for foreign ships means a saving of foreign exchange. In addition, the freight earned by Indian ships from shippers of foreign countries means foreign exchange earning. If substitution takes place in cross trades—voyages not involving call at home ports—then presumably the entire freight earned is net contri-

bution to foreign exchange earnings. Thus the whole of the revenue in both directions, whether in cross trade or not, becomes a gain to the balance of payments.

No official study has been undertaken locally of the present and potential foreign exchange contribution of merchant shipping, particularly when developed to the optimum. It is, however, important to know the exact position of shipping in this respect. The U.N.C.T.A.D. Secretariat report submitted to the conference held in New Delhi analysed the available data concerning the contribution of merchant marines to the balance of payments of certain developing and developed countries between 1961 and 1965. The study shows that of the gross freight earnings of the fleet, the net contribu-

tion to balance of payments was between 44 per cent and 63 per cent.

The earnings from shipping in 1971 amounted to Rs. 150 crores. Out of these nearly 50 per cent, i.e., Rs. 75 crores can be taken as the net foreign exchange earning. This is the net figure for 1971 when Indian vessels carried only 20 per cent of the country's overseas trade. The position becomes clear when one sees that the gross foreign exchange earning from shipping will be to the tune of Rs. 330 crores a year (net Rs. 165 crores) when the share of Indian tonnage in overseas trade will be 50 per cent.

It is argued that the replacement of foreign ships by national ships may not bring much additional foreign exchange; when national ships replace foreign ones, there will be a loss of foreign exchange formerly earned by provision of port services and levy of port charges on foreign ships. This apart, Indian ships will have to pay for port and repair charges in foreign exchange at ports abroad. There is a measure of truth in this argument but it will be more appropriate to measure the marginal change in the balance of payments with a given addition to

the national fleet. It will, of course, be impossible to know the exact contribution of a unit of shipping to the balance of payments but still it can be said that the marginal addition will definitely be there. National shipping may not only help in earning foreign exchange through freights but boost exports through provision of direct links with foreign markets, quick delivery of export cargoes at destinations and saving national shippers from exploitation by foreign conference lines.

A comparison of the shipping industry with other export industries will reveal that the former is capable of earning more foreign exchange with a smaller investment in much less time. The cost structure of Indian shipping is competitive because of cheap labour and low repair costs as the Indian fleet is young. Secondly, to establish any export industry there is a gestation period of at least three to four years, but ships start earning as soon as the delivery is taken. Moreover, it is possible to get second-hand ships at any time. Thirdly, investment in the shipping industry can

earn more foreign exchange with lesser amount of State help. It has been worked out by Dr. S. N. Sanklecha, Secretary and Deputy Manager of the Great Eastern Shipping Co. Ltd., that to earn foreign exchange worth Rs. 100 lakhs, the shipping industry needs a subsidy of Rs. 4.4 lakhs while other export industries require Rs. 21.4 lakhs.

The most intricate problem concerning investment in shipping in India is the foreign exchange required to purchase ships. If the country is to purchase them from foreign shipyards, the immediate result will be a large outflow of foreign exchange. This difficulty can be overcome by building ships at home; the country knows its limitations in this regard. Indian shipbuilding is restricted to two and a half ships of 15,000 d.w.t. a year. Purchase of ships on deferred payment terms has somewhat eased the problem. Under this scheme the down-payment requirements could be financed by raising foreign exchange loans from banks against rupee payments and instalments could be paid out of foreign exchange earnings of the ships.

According to the calculations of the Shipping Corporation of India, a vessel costing Rs. 3 crores when employed on a profitable route would pay back all its price in six or seven years and then earn an additional Rs. 6.10 crores for the country during the remainder of its sea-borne existence. Even in the most unfavourable situation, when the profitability is low, a ship would pay back its price in about ten years and yield another Rs. 3.13 crores during its remaining maritime career. Of late, due to the boom in the world shipbuilding industry soft credit terms are not easily available and the deferred payment terms are difficult to get.

Besides the foreign exchange earning capacity of Indian shipping in all its manifestations, its direct net contribution of Rs. 150 crores a year is considerable. Only two visible exports—tea and jute—earn a higher amount than shipping in terms of foreign exchange. Does not this industry, therefore, deserve a more sympathetic treatment in the release of foreign exchange, grant of cheap loans and levy of taxes?

MONEY AND BANKING

Some Basic Limitations of the Concept of Rural Banks

(By a Special Correspondent)

The Banking Commission has strongly recommended the establishment of co-operative rural banks as a measure to spread the banking habit. But co-operative banks, which generally do not follow commercial banking principles, have some very serious drawbacks.

ONE of the terms of reference of the Banking Commission was "to review the working of co-operative banks and to make recommendations with a view to ensuring a co-ordinated development of commercial and co-operative banks" having regard in particular to the extension of the "geographical and functional coverage of the commercial banking system". The commission has dealt with the issues concerned in chapters 8, 9 and 10 of its report. In its recommendations for the field level organisation, it has outlined the "steps that need to be taken to improve the structure of banking institutions at what might be called the field level". According to the commission, "the starting point for these improvements is the strengthening of the primary credit societies in such a way that they are able to provide not only adequate credit but develop the banking habit in rural sector by providing it with a wide range of banking services as well as certain closely allied non-banking services. In short they have to become rural banks".

The commission was keen to provide a solution "to the problem of extending the geographical coverage of banks". It examined the three methods being tried out for the purpose, viz., (1) opening of branches by commercial banks, (2) financing of a group of primary agricultural credit societies by commercial banks, and (3) the village adoption scheme tried out by the State Bank group. The commission felt that "opening of branches by commercial banks or village adoption can develop the banking habit and provide the full range of banking services to the rural sectors" but it was afraid that "at the same time, they can result in the extinction of the co-operative endeavour

in the field of credit institutions". "The method of financing primary societies by commercial banks can strengthen the co-operative institutions provided satisfactory solutions can be obtained to the various difficulties" experienced by commercial banks in this connection. And it went on to say: "It is doubtful whether all these three methods will suffice to give adequate geographical coverage of the rural sector in the foreseeable future". The commission was, therefore, prompted to suggest establishment of rural banks.

An outline of the scheme of rural banks is given in paras 8.48 to 8.65 of the commission's report. A rural bank is "a primary banking institution set up to serve a compact group of villages generally, working as a co-operative bank or as a subsidiary of a commercial bank". Its object is to provide at one place the special type of credit and banking facilities and other related services needed by agriculturists and other rural producers. The commission regards rural banks as a further development in the institutional framework for the provision of rural credit. They are simplified types of banking undertakings tailored to the needs of the rural community. A rural bank is defined "as a notified co-operative bank or a licensed subsidiary bank of a commercial bank, functioning or set up in a rural area for the purpose of providing banking and credit facilities in that area". "It is intended that a rural bank should cater to the full credit needs of all medium and small cultivators", and where there are other needs beyond the capacity of the rural banks they should be met by commercial banks.

The commission has taken great pains to provide necessary details for the implementation of the scheme but there would appear to be something basically wrong with this approach to the problem. Banking is a mechanism which pools the resources of the community and provides credit to various productive efforts. India has two types of banking institutions; com-

mercial and co-operative. In the case of commercial banks, resources for lending are derived mainly from deposits from the public. Borrowings from the Reserve Bank of India are only marginal in volume intended to meet seasonal requirements. Co-operative banks, on the other hand, derive resources for lending, in a substantial measure, by way of borrowing from the Reserve Bank of India at concessional rates. On the whole, except the urban co-operative banks, the co-operative banks are less dependent on deposit mobilisation as compared with commercial banks. Having thus distinguished the structure and differences between the operations of commercial and co-operative banks, it is rather surprising that the commission should have failed to locate the drawbacks in the co-operative structure and make suitable suggestions to make them self-supporting and self-sustaining like the commercial banks rather than go the whole hog in feeding the co-operatives even in the matter of suggesting new institutions such as rural banks. It would appear that the whole approach has been faulty from its very conception and if the various steps taken from time to time over the years have not raised the stature of the co-operative to the level of commercial banks, despite the official patronage and discriminatory policy pursued so far in their favour, something radical has to be thought of

and that certainly should not lead to supporting and sustaining a structure which has miserably failed to prove up to expectations.

In other words, the co-operatives must be made to adopt and follow commercial banking principles; their management should be professionalised, and they must be made to mobilise resources to keep themselves alive. The employees should be paid commensurate emoluments and the rôle of the Reserve Bank should be restricted to that of the lender of the last resort as in the case of commercial banks. It would not perhaps be uncharitable to say that it is the official patronage which has spoiled the co-operatives. One would have in the circumstances expected that the commission would be bold enough to recommend the merger of the co-operatives into the mainstream of commercial banking, a logical consequence now that the State owns over 85 per cent of the banking system and the goals of both the systems are now the same, viz., to meet in an increasing measure the credit needs of every productive sector or effort, be it in the large scale or the small scale, in the priority or non-priority sector.

The commission has spelt out the functions of the rural banks in great details. However appealing and impressive these may be, it is perhaps too tall an order. Banking in this country has grown out of agency houses and the experience of the past would appear to have awakened the authorities to restrict and curtail the activities of banking institutions. Over the years, the Indian banking system has gained in stability and strength by the various measures taken by the authorities from time to time out of sheer necessity following various ills that had shaken public faith and confidence in it. The commission was not indeed unaware of all these but yet it is surprising that it should have succumbed to the temptation to make banking something utopian, which in the prevailing circumstances and in the light of past experience would seem to lead to undoing of all the good work done over the years.

What then is the alternative method to secure geographical coverage of the commercial banking system? Mr. V. T. Dahejia, a former chairman of the State Bank of India, had expressed the view some years ago that the mini-

mum need of this country would be of the order of 50,000 branches. Although the commission does not appear to have expressed its views on the subject, its advocacy of rural banks would place it near about it. Whether it is extension of commercial bank branches or the establishment of rural banks, the banking needs of the country cannot be met all too in a hurry. It has necessarily to be a slow process and at the current rate of expansion, the entire country would be covered by bank branches within the next 15 to 20 years—certainly not too long a period to wait.

The country should not seek to achieve a miracle or experiment with ideas which cannot be translated into practice, if past experience is any indication. The first task is to build up the necessary infrastructure, the personnel to deliver the goods; and these issues cannot be treated on a different footing, separate from the mainstream. The commercial and co-operative banks cannot have two standards, nor can necessary enthusiasm be created under those circumstances. The pace would be slow—and it better be slow rather than rushing into wilderness and inviting chaos.

Role of the L.I.C. in Promoting the Growth of the Public Sector

(By a Special Correspondent)

Through its judicious investment policy, the L.I.C. has promoted the growth of the public sector. At the same time, it is the largest single holder of equity shares of public limited companies in the country.

THE Life Insurance Corporation of India has been rightly described as the "pace-setter" for public-sector undertakings in the country. The Corporation is keen on canalising savings towards the public sector. It is also carrying the message of security to the remotest villages. For the socio-economic development of the country, the Corporation has already invested substantial amounts in industrial estates, rural electrification, housing, water works and drainage schemes. Till March 1971, the L.I.C. invested more than Rs. 707 crores in the form of subscription to Government loans to assist India's planned development. Incidentally, the total book value of its investments stood at Rs. 1,952.66 crores as on 31st March, 1972 (i.e., an increase of Rs. 235 crores over 1970-71) and out of the total investments in India of the Life Department, 74 per cent (Rs. 1,375 crores), 10.9 per cent (Rs. 201 crores), 0.2 per cent (Rs. 4.42 crore

and 14.9 per cent (Rs. 277 crores) were in the public, co-operative, joint and private sectors, respectively.

In this context, Mr. K. R. Puri, chairman, said that the pattern of investment had undergone significant changes over the years. In fact, social-oriented investments now receive the foremost attention of the Corporation. Which is why loans for housing, rural electrification, urban and rural water supply schemes and sewerage schemes of municipalities now get special consideration. In short, social investments of the L.I.C. now claim a "preponderant" share. Investment under these heads in 1971-72 amounted to over Rs. 117 crores, against Rs. 18 crores in 1963-64.

It is interesting to note here that investments of the Corporation mainly constitute stock exchange securities and loans to companies or statutory bodies or house property or land. For instance, about 69 per cent of its total investments, according to an estimate, was in stock exchange securities at the end of 1970-71. And under the statute, a minimum of 50 per cent of the Corporation's investment must be in Govern-

ment or other approved securities. But in effect, investment in such securities has invariably exceeded 70 per cent. Investment in the public sector is vital in the sense that it helps to develop the nation's infrastructure besides promoting industrial growth. But the Committee on Public Undertakings in its fourth report on L.I.C. while appreciating the investment in Government and other approved securities has observed that "it does not mean that the funds of the Corporation . . . should be invested in them beyond the statutory minimum of 50 per cent." It has also pointed out that the Corporation is expected to work on business principles and further the interest of policy-holders.

The Corporation has not been indifferent to the private sector either. In fact, it is the largest single holder of equity shares of public limited companies in the private sector. And the total investment of the Corporation in large business groups constituted 64 per cent of investments in the private sector at the end of March 1971 and its investments in the leading ten business groups represented 37 per cent of investments in the private sector. In addition, a study by the Reserve Bank of India has concluded that within six years, the ownership of shares in Indian joint-stock companies has proved that the proportion of share capital held by the L.I.C. has increased from 5.8 per cent to 9.2 per cent. Again, but for the L.I.C.'s huge investment in the nation's infrastructure, the growth of the private sector itself would have been inhibited.

To sum up, one has to concede that the investment of the Corporation in the public sector has so long been directed to develop the nation's infrastructure and then to promote industrial units. Through its sound investment policy, the Corporation not only helps in developing the nation's infrastructure but also ensures the proper utilisation and safety of funds. The present bias of the Corporation towards the public sector shows that it believes in the philosophy that the people's money must be invested for the people's good. To quote Mr. Puri in this context: "The more we invest, the greater is the demand reflecting the increasing hunger of the people for early satisfaction of their needs. We are happy about this and propose to give electricity, housing and water supply our continued support."

Shares Quiet : Lack of Fresh Buying Affects Sentiment

THE stock markets have displayed a distinctly easy tone this past week, with equity prices recording all-round losses which have been quite marked in certain counters. Sellers have dominated the scene most of the time, although the pressure has not been heavy except in a few speculative shares. With fresh support lacking, even small selling has been enough to depress prices. The markets have become thin, and they respond quickly to small buying and selling orders. But for steady institutional buying, they would have performed much worse than they have done. Individual investors have continued to adopt a very cautious attitude, but they seem always willing to subscribe to new issues with good prospects. A number of new issues will be on offer during November and December, and this may affect the demand for old shares.

Equity prices have moved down, even though the week's corporate news has been quite pleasing. Union Carbide, Excel Industries, Saurashtra Cement and Chemicals, Indian Aluminium, Hindustan Brown Boveri, Special Steels, Motor Industries, Kirloskar Oil, Khatau Mills and Crompton Greaves—to mention some names—have had a message of cheer for their respective shareholders, whether by way of higher dividend, bonus issue, improved results or promise of a brighter future. Trade figures for the first five months of the current fiscal year have been encouraging in that they show a surplus of Rs. 56 crores, against a deficit of Rs. 125 crores in the same period last year. Industrial production also has shown a fair improvement during the same period. The appointment of an expert committee by the Planning Commission to go into the short-term steps required to improve the power supply is welcome in that it shows that the authorities are fully seized of the gravity of the situation. The Commission is also reported to be examining whether industrial production could be given a boost by encouraging industrial units to plough back profits.

If the stock markets have continued to rule easier despite these favourable influences, it is perhaps because they fear that the countrywide acute shortage of power will hit industrial produc-

tion in the months ahead and that even the much-talked about crash programme for stepping up agricultural production during the *rabi* season is likely to prove a flop because of the acute shortage of water and electricity. With industry and agriculture performing poorly, the price situation is likely to worsen further, thereby aggravating social tensions.

Trading in gilt-edged securities has remained restricted, although prices have been steady. The 3 per cent Conversion loan 1986 has been quoted at Rs. 60.20. The State Government loans have received selective support. Turnover has remained restricted.

The Calcutta stock market has remained quiet this past week due to a large number of imponderables in the economy. The prospect of deficit financing, estimated at Rs. 225 crores in the 1972-73 Budget, increasing by about twice the figure, the need for a massive mobilisation of resources for making the Fifth Plan a success and the aid outlook remaining uncertain—all have dampened the enthusiasm of operators. Among engineering shares, Guest Keen Williams, Calcutta Steel and Bihar Alloy have been quiet. Among jute shares, Budge-Budge Amalgamated, Anglo-India, New Central and Nellimarla have changed hands. Among coal shares, Western Bengal, South Karanpura and Katras Jherria have been traded. Among paper shares, Titaghur, Ballarpur and Orient have receded. Among miscellaneous shares, English Electric, Incheek Tyres, G.E.C., Metal Box and Reckitt Colman have weakened. Among tea shares, Sapoi, Mothola and Rydak have changed hands.

The reactionary trend noticed on Dalal Street during the preceding week has gathered fresh momentum during the week under review. Equity prices have suffered sizable losses all-round and very few counters have closed with plus signs. With buyers reserved, even small selling has been enough to push prices down. The volume of business has been small and interest has tended to be selective. The firm features include Motor Industries, Kohinoor, New India Assurance, West Coast Paper, Tata Chemicals, Richardson Hindustan, Excel Industries and

Camphor and Allied Products. The spurt in Motor Industries is attributed to the announcement of a fresh proposal for a one-for-one bonus issue and a rights issue at a premium of Rs. 90 a share. New India Assurance have been marked higher following the declaration of an interim dividend of Rs. 6 a share. Cotton textiles shares have ruled easier on reports that the festival offtake of cloth has been uninspiring. Forecasts of a much smaller cotton crop have also affected sentiment. Rayons have been subdued and only National Rayon have kept steady on speculative support. Steel and engineering shares have displayed an easier tendency due to the lack of support and light selling. Voltas have managed to keep steady. Automobile shares have been dull and subdued. Barring a few counters, chemical shares have encountered light but persistent selling. Shipping shares have eased on profit-taking. Tyre company shares have also been distinctly easy. Only Madras Rubber have been marked higher.

The Madras stock market has met with selective support this past week, although trading, by and large, has been restricted. In the planting section, Peria Karamalai, Consolidated Coffee, Coorg Tea and Kil Kotagiri have received support. In the textile section, Mettur Beardsell, Coimbatore

Motor Industries Proposes to Issue Bonus and Rights Shares

THE board of directors of Motor Industries Co. Ltd has declared an interim dividend of Rs. 10 an ordinary share of Rs. 100, fully paid up, for the year 1972. The dividend is subject to statutory deduction. It is payable on 5th December, 1972, to members of the Company whose names appear on the register of members on 1st December, 1972. It has been decided to capitalise Rs. 3.75 crores out of general reserves and issue 375,000 equity shares of Rs. 100 each as bonus shares in the proportion of one share for one existing share, subject to the Government's sanction.

It has also been decided to issue 95,588 equity shares at a premium of Rs. 90 each, subject to the Government's sanction. Of these shares, 48,000 will be reserved for the financial institutions which will exercise their option to convert their debentures out of privately placed debentures of Rs. 3 crores to be issued to them against a loan of like amount. The balance of 47,588 shares will be issued to shareholders other than Robert Bosch GmbH in the ratio as far as possible of three shares to 20 existing shares. An extraordinary general meeting of the Company for the capitalisation of reserves and the issue of further shares

as indicated earlier is being convened on 27th November, 1972, in Bangalore.

GOLDEN TOBACCO

Rise in Turnover

THE directors of Golden Tobacco Co. Ltd have maintained the dividend at 10 per cent on the increased capital for the year ended June 1972. Out of general reserve, the dividend will be paid on Rs. 3.5 crores of the capital for the full year and on the increase of Rs. 1.5 crores in the capital (issued in March 1972) for three months. The total disbursements on account of dividends will amount to Rs. 38.75 lakhs. During the year, the Company's turnover increased to Rs. 40.79 crores (against Rs. 39.60 crores). The gross profit was slightly lower at Rs. 161.60 lakhs (against Rs. 164 lakhs), but the net profit increased to Rs. 55.76 lakhs (against Rs. 51.56 lakhs).

The directors have allocated Rs. 26.22 lakhs (against Rs. 32.12 lakhs) for depreciation, Rs. 62,000 (against Rs. 80,000) for development rebate and Rs. 79 lakhs (against Rs. 80.10 lakhs) for taxation, leaving a balance of Rs. 55.76 lakhs (against Rs. 51.56

lakhs). Adding thereto the tax credit certificates, development rebate for earlier years no more required, adjustments for excess provision for expenses, transfer from bad and doubtful debts and excess provisions and refund of taxes for previous years, the net amount is Rs. 76.08 lakhs. Out of this amount, after deducting share capital issue expenses of Rs. 11.95 lakhs, the directors have transferred Rs. 64.10 lakhs to general reserve. The Company's total general reserves now stand at Rs. 188.26 lakhs.

BHARAT GEARS

A New Venture

BHARAT Steel Tubes Ltd and Raunag and Co. Private Ltd are jointly setting up a new project, under the name and style of Bharat Gears Ltd, for the manufacture of automobile gears. The Government of India has granted permission for the establishment of the new project in Maharashtra for the manufacture of spiral bevel, straight bevel, spur and helical and worm gears with an annual capacity of 1,000 tonnes. These transmission gears are required for all types of vehicles from small cars, passenger cars and tractors to heavy commercial vehicles. Mr. Raunag Singh, president of Bharat Steel Tubes Ltd and chairman of the Raunag group of companies, has said that the required land has already been purchased near Thana on the Bombay-Poona Road, where the plant will be located.

The total cost of the project is estimated at about Rs. 4.6 crores which will be raised by the issue of share capital of Rs. 1.9 crores and term loans from financial institutions of Rs. 2.66 crores. The financial institutions, namely, the Industrial Credit and Investment Corporation of India, Industrial Development Bank of India, Industrial Finance Corporation of India, Life Insurance Corporation of India and the Unit Trust of India, have already sanctioned term loans of Rs. 2.66 crores, including a foreign currency loan of Rs. 1.46 crores. These financial institutions and some insurance companies have already agreed to underwrite the equity capital of Rs. 72 lakhs and the entire preference capital. The promoters have also finalised arrangements for underwriting the rest of the equity capital. The promoters themselves will be investing about Rs. 64 lakhs by way of equity capital. The Company proposes to enter the market for the issue of shares to the

public during the second week of this month.

Gear manufacturing equipment will be supplied by the Gleason Works of the United States. Orders for other equipment have also been finalised with well known reputed manufacturers. The civil construction work has already commenced. The plant is expected to be commissioned by December next year. The board of directors of Bharat Gears includes Dr. Bharat Ram, Mr. A. N. Haksar, Mr. J. B. Dadachanji and Mr. S. C. Trikhia.

INDO NATIONAL

Share Offer

INDO National, which proposes to set up a plant in Nellore (Andhra Pradesh) for the manufacture of "Hyper" and special grade "Hi-top" dry cell batteries, is expected to enter the market some time this month to raise Rs. 20.83 lakhs in equity shares of Rs. 10 each to meet part of the cost of the project. Matsushita Electric Industrial Company, the largest manufacturer of dry cell batteries in Japan, is collaborating in the venture. The Company has been licensed to manufacture 60 million dry cell batteries a year. If all goes well, the plant is expected to go into commercial production about the middle of next year. Starting with a production of 20 million in the first year, the Company expects to achieve full capacity in 1975-76—the third year of production. The project is estimated to cost Rs. 1.63 crores which is proposed to be met by the share capital of Rs. 62.50 lakhs (all in equity shares) and rupee and foreign currency loans from financial institutions. The cost of imported plant and machinery is placed at around Rs. 50 lakhs for which the necessary import licence has been obtained. The Company expects to receive an import licence for some of the raw materials which are not available from indigenous sources.

Marketing is not expected to pose any problem as demand far exceeds the supply. It has been estimated that the demand for dry cells will be around 1,350 million pieces a year in 1975. The total licensed capacity until recently was 557 million. An additional capacity of 650 million has been allowed to be set up, but out of the new licences issued only Toshiba Anand Batteries having a capacity of 60 million has

gone into production. Against the estimated demand of 787 million pieces, the actual production in 1971 was 481 million pieces. The Company is required to export, in terms of the approval of the foreign collaboration agreement, 5 per cent of its total production for a period of five years. The promoters are hopeful of exceeding the minimum export obligation. Barring unforeseen circumstances, the Company expects to be able to declare a maiden dividend of 10 per cent for 1975-76 when its gross profit is estimated to exceed Rs. 1 crore.

BARIUM CHEMICALS

Results Disappoint

BARIUM Chemicals has reported disappointing results for the year ended June 1972. Although net sales have gone up by nearly 22 per cent from Rs. 29.50 lakhs to Rs. 36.09 lakhs, the year's working has resulted in a loss of Rs. 2.31 lakhs, against a profit of Rs. 95,000 in the preceding year. The working was adversely affected by the eight-week strike lasting from 7th April to the end of May. Production declined from 1,826 tonnes to 1,527 tonnes. No provision has been made for depreciation amounting to Rs. 10.44 lakhs and arrears of depreciation amount to Rs. 20.58 lakhs. Together with the previous losses, the total deficit carried forward amounts to Rs. 23.84 lakhs.

The Company has changed over from coal to petroleum coke and this has increased production. The directors state that the Company's

plant will become profitable only with considerable increase in production. The Company needs balancing equipment worth about Rs. 15 lakhs to step up the production of barium salts from 2,000 tonnes to 5,500 tonnes. An application has been made to the I.D.B.I. for a loan.

TRIMURTI CHEMICALS

Share Offer

TRIMURTI Agro Chemicals will be offering for public subscription at par 150,000 shares of Rs. 10 each towards the end of November to raise part of the finance required for its fertiliser project. The Company proposes to set up a Rs. 75-lakh N.P.K. complex fertiliser project employing the wet chemical granulation process. The plant, which will be located in Mangrol, a sea port in Junagadh district (Gujarat), proposes to manufacture ammonium polyphosphate and other highly concentrated fertilisers and it will have an annual capacity of 50,000 tonnes. The cost of the project is proposed to be met by the share capital of Rs. 25 lakhs and loans from financial institutions. Equity shares worth Rs. 10 lakhs have been taken up by the promoters and their associates. Special arrangements have been made for technical consultancy from the Tennessee Valley Authority which has supplied the design. The plant, to be procured indigenously on a turn-key basis, is expected to go into commercial production by September 1973 and the promoters hope to be able to declare a maiden dividend for 1973-74.

PREMIER AUTOMOBILES: BIG RISE IN PROFIT

THE working results of Premier Automobiles for the year ended June 1972 show an impressive improvement over the previous year's unsatisfactory performance. While sales at Rs. 40.33 crores show an increase of only 7 per cent over the 1970-71 figure of Rs. 37.62 crores, the gross profit has shot up from a mere Rs. 35.80 lakhs to Rs. 195.22 lakhs, indicating a marked improvement in margins. The ratio of profit to sales has gone up from less than 1 per cent to 4.7 per cent.

Together with the price difference arrears collected for cars sold during the earlier year (Rs. 24.30 lakhs), tax refund (Rs. 74,000) and the

previous year's surplus (Rs. 86,000), the total disposal surplus amounts to Rs. 221.12 lakhs. Out of this, the Company has provided Rs. 102.69 lakhs towards development rebate, Rs. 97.05 lakhs for depreciation in respect of previous years and Rs. 15.33 lakhs for unserviceable items of inventory, leaving a balance of Rs. 6.05 lakhs to be carried forward. While all arrears of development rebate have been cleared, no provision has been possible for depreciation for 1971-72 amounting to Rs. 135.85 lakhs. With arrears of depreciation exceeding Rs. 7.60 crores, shareholders will have to wait patiently for a return on their investment.

A.C.C.

Another Disappointing Year

THE chairman of the Associated Cement Companies, Mr. N. A. Palkhivala, has stated in a circular letter to the shareholders that the year ended July 1972 has again been a "disappointing" one because of the cumulative adverse impact of a fixed price, rising costs and inadequate transport facilities—factors completely beyond the Company's control. While the chairman has been at pains to explain at considerable length the various factors responsible for the poor performance, he has not given any indication of how badly the Company has really fared. The omission can give rise to avoidable speculation.

The cement output during 1971-72 is placed at 5.15 million tonnes, against 5.38 million tonnes in the previous year, with the capacity utilisation down from 81.2 per cent to 77.3 per cent. The wagon shortage has been a major factor behind the shortfall in production and des-

patches. The loss in production was 142,000 tonnes (against 30,000 tonnes) due to power shortage, 134,000 tonnes (against 17,000 tonnes) due to strikes and 197,000 tonnes (against 296,000 tonnes) due to major repairs and the balance due to other reasons.

In order to reduce the impact of wagon shortage, the management increased despatches of cement by road. During 1971-72, the Company despatched 1.60 million tonnes of cement, or about 30 per cent of the production, by road against 1.32 million tonnes in the preceding year and 1.23 million tonnes in 1969-70. Despite larger despatches by road, the total despatches of cement declined from 5.40 million tonnes in 1970-71 to 5.32 million tonnes in 1971-72. The loss in despatches due to wagon shortage was over 800,000 tonnes, against 700,000 tonnes in 1970-71. The percentage of wagon supplies to those indented came

1970-71 and 66.8 in 1971-72.

Referring to the Company's prospects for growth, the chairman says that its applications for the establishment of a new factory in Rajasthan and extension of Bhupendra and Wadi factories have been turned down by the Government as "we were a large house and a dominant undertaking". Mr. Palkhivala has, however, assured the shareholders that with a view to improving the Company's profitability, the management is exploring new paths within the purview of the Government's policy.

RICHARDSON HINDUSTAN

Profit Declines

RICHARDSON Hindustan has turned out disappointing results for the year ended June 1972. Despite a rise of some 8.4 per cent in net sales from Rs. 4.83 crores to Rs. 5.24 crores, the gross profit has shrunk by a little over 27 per cent from Rs. 83.39 lakhs to Rs. 60.65 lakhs, pulling down the ratio of profit to sales from 17.2 per cent to 11.6 per cent. Even so, the equity dividend has been raised sharply from 10 per cent to 18 per cent. Margins have been eroded by the rise in costs of production. After providing Rs. 18 lakhs (against Rs. 16.68 lakhs) for depreciation, Rs. 1.60 lakhs (against Rs. 1.20 lakhs) for development rebate reserve, Rs. 25.50 lakhs (against Rs. 33.50 lakhs) for taxation and after making some adjustments, the surplus of Rs. 16.90 lakhs (against Rs. 31.29 lakhs) has been transferred to general reserve. The proposed dividend absorbing Rs. 12.60 lakhs (against Rs. 7 lakhs) will be paid out of general reserve.

KELVIN JUTE

Loss Incurred

TRADING conditions of the Kelvin Jute Co. Ltd for the year ended May 1970 continued to be adverse during the year. The industry as a whole was forced to curtail production of carpet-backing cloth due to the lack of overseas demand and consequently the Company was not in a position to utilise its productive capacity to the full. Sales are down from Rs. 8.44 crores to Rs. 6.33 crores and the Company has incurred a loss of Rs. 49.80 lakhs, against a loss of Rs. 7.06 lakhs in the previous year, after providing Rs. 18.77

depreciation. Writing back Rs. 55.13 lakhs (against nil) on account of a change in the method of calculating depreciation, Rs. 34,256 (against nil) being excess tax provision, Rs. 33,446 (against nil) from development rebate reserve and making other adjustments, there is a balance of Rs. 6.01 lakhs. A net deficit of Rs. 23.74 lakhs is carried forward, after adjusting a debit balance of Rs. 29.75 lakhs from the previous year.

NATIONAL AND GRINDLAYS

Acquisition of Gillespies

NATIONAL and Grindlays Bank Ltd has purchased Gillespie Bros. (Holdings) Ltd and its subsidiaries from a group of private shareholders and Charterhouse Development Ltd (a member of the Charterhouse Group). Gillespie Bros. and Co. Ltd is an established confirming house and the principal subsidiary of Gillespie Bros. (Holdings) Ltd. Gillespies have customers in the Caribbean, east and central Africa in addition to the Far East. National and Grindlays has purchased the business of Gillespies in order to broaden its U.K. base and to develop the range of services available to international customers. It is the intention to maintain Gillespies as a separate entity under the existing management but at the same time making available to them the financial resources and expertise of the group. It is hoped that Gillespie's activities can be expanded into new areas and particularly those areas where the National and Grindlays Bank group is represented.

BANARHAT TEA

Profit Declines

BANARHAT Tea Co. Ltd has not fared well during the year ended December 1971. Climatic conditions were generally unfavourable with a drought early in the year followed by heavy rainfall which adversely affected leaf growth. Road and rail communications were disrupted by heavy floods resulting in a serious dislocation in tea movements. Tea despatches were held up and there was a consequential delay in the receipt of sale proceeds. After providing Rs. 8.50 lakhs (against Rs. 8.82 lakhs) for depreciation, the profit has declined from Rs. 15.53 lakhs to Rs. 5.57 lakhs. A taxable ordinary dividend of 4 per cent has been declared

paid out of general reserve. offers a yield of 5.6 per cent at present price of Rs. 71.50 a share of Rs. 100 each. Taxation receives Rs. 1.05 lakhs and general reserve Rs. 3.19 lakhs. Total crop has declined from 29,844 quintals to 28,749 quintals and the average price realised was Rs. 6.47 (against Rs. 6.41) a kilogram. Estimates for the current season have been framed for a crop of 29,350 quintals.

MORARJEE MILLS

Bonus Issue

THE directors of Morarjee Goculdas Spinning and Weaving Company have raised the dividend for the year ended June 1972 from 10 per cent to 14 per cent and, in addition, recommended the issue of bonus shares in the ratio of one share for every four shares held by capitalising a sum of Rs. 37.35 lakhs out of general reserve. The last bonus issue

The preliminary statement from the Company on its working results shows that it has fared better than in the previous year. Both sales and profit are higher. Margins, however, have been under pressure. While sales have gone up by 18.6 per cent from Rs. 10.14 crores to Rs. 12.03 crores, the gross profit has risen by only 7.7 per cent from Rs. 100.22 lakhs to Rs. 107.71 lakhs. Appropriations of profits include depreciation Rs. 43.60 lakhs (against Rs. 37.53 lakhs), development rebate reserve Rs. 14 lakhs (same) and taxation Rs. 21 lakhs (against Rs. 20 lakhs), leaving a net profit of Rs. 29.18 lakhs, against Rs. 28.71 lakhs in the preceding year. The equity and preference dividends will absorb Rs. 22.04 lakhs (against Rs. 16.06 lakhs). The Company continues to pursue its programme of modernisation and rehabilitation. Additions to plant, machinery, etcetra, made during the year were valued at Rs. 93.65 lakhs, against Rs. 92.44 lakhs in the preceding year.

BHARAT BIJLEE : IMPRESSIVE PERFORMANCE

BHARAT Bijlee has done exceedingly well during the year ended June 1972 and the equity distribution has been stepped up from 10 per cent to 15 per cent, inclusive of the bonus element of 3 per cent. The entire dividend is tax-free. The preliminary figures show a rise of 20.7 per cent in net sales from Rs. 4.20 crores to Rs. 5.07 crores. With the gross profit registering an impressive rise of 152 per cent from Rs. 30.93 lakhs to Rs. 78.16 lakhs, the ratio of profit to sales has improved from around 7.4 per cent to 15.4 per cent. The improved results are attributed mainly to the encouraging performance of the transformer division in terms of higher production and better price realisation. The pending order position for transformers is good but the directors state that it is difficult to be sanguine about the level of the demand for motors from the rural sector because of the uncertainties about the availability of power and because of drought conditions in many States. The Company has recently entered the business of manufacture, installation and maintenance of lifts. This new activity is expected considerably to augment turnover and profits of the Company. The Company has got

its manufacturing licences for electric motors and transformers endorsed for increased capacity following the liberalisation of industrial licensing for stepping up capacities in a number of industries.

After providing Rs. 10.80 lakhs (against Rs. 11.05 lakhs) for depreciation, Rs. 37,000 (against Rs. 1.13 lakhs) for development rebate reserve and Rs. 3 lakhs (against nil) for taxation, the net profit for 1971-72 amounts to Rs. 63.99 lakhs, against Rs. 17.75 lakhs in the preceding year. After writing back refund of Rs. 35,000 (against Rs. 18,000), the surplus of Rs. 64.34 lakhs (against Rs. 18.93 lakhs) has been transferred to general reserve. The proposed equity and preference dividends absorbing Rs. 11.79 lakhs will be paid out of general reserve. A sum of Rs. 34.83 lakhs, being the excess realisation arising out of the sale of land and investments, has been taken to capital reserve. The directors have pointed out that the small tax liability in 1971-72 is because of carried-forward losses, unabsorbed depreciation and development rebate and the relief available under Section 80J of the income Tax Act.

NOTICE

UNION CARBIDE INDIA LIMITED

IN TERMS OF RULE 4A OF THE MRTP RULES, 1970 IT IS HEREBY NOTIFIED THAT UNION CARBIDE INDIA LIMITED, 5 PARLIAMENT STREET, NEW DELHI-1 HAVE GIVEN NOTICE UNDER SECTION 21 OF THE MRTP ACT TO THE DEPARTMENT OF COMPANY AFFAIRS, NEW DELHI IN REGARD TO ITS PROPOSAL TO ESTABLISH MARINE PRODUCTS' PROCESSING FACILITIES WITH AN ANNUAL CAPACITY OF 10,000 MT AND INVOLVING AN ESTIMATED INVESTMENT IN LAND, BUILDING PLANT AND MACHINERY OF RS. 1.5 CRORES. FOR THE YEAR ENDED 25TH DECEMBER 1971, THE TOTAL SALES OF THE COMPANY WERE OVER RS. 57 CRORES AND TOTAL ASSETS OVER RS. 33 CRORES.

ANY PERSON INTERESTED IN THE MATTER MAY, IF HE SO DESIRES, INTIMATE TO THE CENTRAL GOVERNMENT IN THE DEPARTMENT OF COMPANY AFFAIRS, WITHIN 14 DAYS OF THE PUBLICATION HEREOF HIS VIEWS WITH REGARD TO THE PROPOSAL CONTAINED IN THIS NOTICE AND ALSO THE NATURE OF HIS INTEREST THEREIN WITH A COPY OF THE SAME TO THE UNDERSIGNED.

V. P. ARYA
Secretary,

UNION CARBIDE INDIA LIMITED.

October 23rd, 1972

Export Duty on Carpet-backing Cloth Reduced

AFTER keeping the jute industry and trade on suspense for a long time, the Government of India has finally reduced the export duty on carpet-backing cloth. The impost has been cut down from Rs. 700 a tonne on carpet-backing cloth weighing nine ounces or more a square yard to Rs. 300 a tonne. The duty on secondary varieties of the cloth, however, remains unchanged at Rs. 700 a tonne. The new rate becomes effective from Wednesday. The lower duty will come as a relief to the industry which has long been complaining of the high incidence of the levy. Carpet-backing cloth has been one of the principal foreign exchange earners for the country and has been the mainstay of India's jute exports, particularly to the United States. In the face of a relentless onslaught from cheaper syn-

thetic substitutes, backed by a massive promotional drive by international companies, the use of jute cloth in the tufted carpet industry has been rapidly shrinking. Industry circles have been expressing alarm at this trend. It now remains to be seen whether, and if so, how soon, New Delhi makes a similar gesture for hessian and sacking which have also been losing ground because of uncompetitive prices.

Import from Bangladesh

A formal contract for the export of jute worth Rs. 7 crores from Bangladesh to India against the trade agreement signed by the two countries in March 1972 is likely to be concluded soon. The deal is to be made between the Bangladesh Jute Corporation and the Jute Corporation of India—the jute selling and purchasing organisations of the two countries. At the recent high level talks between Indian and Bangladesh delegations in Dacca, an accord was reached on the terms of trade—the gradewise export prices, the grades to be exported, the types of baling and related issues. Details relating to the prices, grades, and quantum to be bought and the import schedules have been kept a closely-guarded secret by either side. Well-informed sources believe that while Bangladesh has allowed some discount over its earlier quotations, and waived the export duty on fibre, India has agreed to forgo the regulatory duty on imports. A bulk of the jute to be exported to India, it is learnt, will be of good quality and mostly of tossa and white varieties. India needs these most for her sophisticated types of jute products. The setback to the seasonal crop, particularly in Assam, Bihar and West Bengal, has widened the demand-supply gap in respect of these grades.

It will be recalled that India has already bought Rs. 60-lakh worth of raw jute which had been lying in the interior northern districts of Bangladesh. Due to disruptions in road, rail and river communications, Dacca could not manage to move

these stocks to the port cities or industrial concentrations like Narayan-ganj, Chittagong and Chalna either for internal consumption or for exports. Against the deficit of about a million bales of high grade jute in India this season, the import of the negotiated lots, however, will produce only a marginal impact on the operation of the industry. With the reopening of the Hardinge Bridge and the resumption of the Cachar-Sunderbans steamship service linking Assam to West Bengal through Bangladesh territorial waters, jute stocks from northern parts of Bangladesh have already started moving to the country's main jute trading and export centres in the south from where Bangladesh will be able to move its exports to India both by rail and river.

Recovery in Gunnies

After opening on a shaky note on hectic liquidation by nervous bulls, the Calcutta gunny market witnessed a subsequent reversal of the trend, partially erasing the earlier losses during the past week. The initial hesitancy was induced by the continuing lack of interest from major overseas and internal buyers, including Government and semi-Government agencies and the reported postponement of the bulk Syrian tender on an extended delivery schedule. The market was also in an overbought position. Holders of P.D.O.s were scared by the talk that the Forward Market Commission had been initiating a scrutiny of the records relating to the disposal of P.D.O.s as in the previous season and might impose deterrent penalties on black sheep. The prevailing stringency of credit and the forthcoming pre-Diwali settlement of accounts also accentuated such nervous offerings. Reports of an agreement with Syria for substantial lots of hessian, and further sales to Russia and east European countries also reinforced the rising price trend. Furthermore, the announcement of the despatch figures for September dispelled the earlier pessimism and induced the belief among operators that being booked to capacity levels for pretty long positions, the industry in Bangladesh had little to offer for ready and near deliveries. The statement showed that export shipments from Calcutta had improved from 40,000 tonnes in August to 44,600 tonnes in September, and the internal offtake from 38,700 tonnes to 43,300 tonnes. In the hedge market,

trading followed the pattern of the spot goods market. Operators were keen on squaring up their outstanding positions on the eve of the October and pre-Diwali settlement of accounts. Fluctuations were narrow and turnover moderate. The closing undertone was firm.

Fibre Steady

The raw jute market ruled exceptionally firm during the past week in spite of the reluctance of mills to follow the rise and enter into long-term commitments at the prevailing rates. Notwithstanding the heavy demand for funds for the ensuing festive season, holders too were not keen on selling for forward positions. They believed that in spite of the planned bulk imports of fibre from Bangladesh, a wide demand-supply gap in fibre in India would linger. Besides, they thought that inclusive of the handling charges by the Jute Corporation of India, imported fibre was unlikely to be cheaper than the indigenous varieties. Strict vigilance on either side of the India-Bangladesh border had reduced the clandestine flow of fibre, accentuating the unseasonal shrinkage in upcountry arrivals. These factors reinforced the market men's belief that the remnant of the season's fibre had been lying with strong holders and affluent growers. The availability of an adequate supply of fibre in appropriate qualitative combination also posed a serious problem for the industry. In the absence of precise details, mill and fibre trade circles were unable to make an estimate of the quantum, grade combination and respective prices of fibre India would be able to import from Bangladesh against the trade agreement. Assuming the average export price of cuttings and fine quality long jute at Rs. 50 a maund, the J.C.I. could at most import some 300,000 bales of 180 kilogrammes each out of the Rs. 7-crore quota. With a carryover of 1.523 million bales of fibre from the 1971-72 season and a reduced seasonal crop of 5.5 million bales, total imports of 303,000 bales (inclusive of the Rs. 60-

lakh of fibre purchased earlier in the season from the northern areas of Bangladesh on the other side of the Indian border), a total of some 7.326 million bales of fibre was likely to be available to the industry this season. Out of this, the average monthly consumption of 550,000 bales, on the basis of the trend for the first quarter, would leave an extremely meagre carryover of some 725,000 bales for the next season. The end-September stocks with mills was adequate for 2.949 months at the September level of intake, while a month ago the stocks had been enough for 2.8 months on the same basis. Turnover was small and the closing undertone was bullish.

Cotton Textile Exports Record an Impressive Rise

SHIPMENTS of mill-made cotton textiles in September are provisionally placed at Rs. 14.36 crores, against Rs. 11.91 crores in the previous month and Rs. 9.36 crores in September 1971. Only once before has the monthly performance been better this year and that was in March when exports were valued at Rs. 15.33 crores. Exports of piecegoods, however, at 45.5 million square metres (valued at Rs. 9.12 crores) are the highest since January 1971 and the unit price realised at Rs. 2 a square metre is an all-time high, reflecting a change in the pattern of exports. There has been steady increase in exports of high-priced printed fabrics.

The cumulative figure for the first nine months of the current year (January-September) comes to Rs. 102.1 crores, against Rs. 76.7 crores in the same period last year and Rs. 84.3 crores during January-September 1970. All items have fared better. Exports of piecegoods are valued at Rs. 57.1 crores, against Rs. 47.4 crores during January-September 1971. Yarn exports have risen from Rs. 8.02 crores to Rs. 14.6 crores, apparel from Rs. 8.67 crores to Rs. 14.6 crores, "other manufactures" from Rs. 12.3 crores to Rs. 15.2 crores and hosiery from Rs. 25 lakhs to Rs. 39 lakhs.

Zonewise, exports of piecegoods have shown marked improvement in Europe and America. The Asian countries also have taken larger quantities of Indian fabrics. But exports to the African zone have

GONTERMANN-PEIPERS (INDIA) LIMITED

SPEECH OF THE CHAIRMAN, MR. G. BASU

Presiding over the Fifth Annual General Meeting of the Company held at its Registered Office in Calcutta, on the 27th October, 1972, the Chairman, Mr. G. Basu said:

Gentlemen:

I have much pleasure in welcoming you to this the Fifth Annual General Meeting of the Company.

The audited Statement of Accounts and the Director's Report for the year ended 30th April, 1972 have been in your hands now for some time and I am sure you have perused them at your leisure.

From the Directors' Report you must have observed that the Company has increased its turnover during the year from Rs. 151 lakhs to Rs. 176 lakhs and earned a net profit of Rs. 18.63 lakhs as compared to Rs. 16.85 lakhs of the previous year. The percentage of net profits over turnover remains constant at about 11%. This is so inspite of increased output because of growing increase in the cost of materials, labour and other operational expenses. The Company has been able to maintain uniform progress inspite of wide variation in the circumstances under which such operations had taken place.

The Directors have every hope that the performance so far achieved will be maintained and when the expansion scheme now on hand are completed they will provide the Company with better facilities for earning increased quantum of profits.

We are happy that the year saw a significant change in the industrial climate in our State and although full impact of all the measures our State Government has taken is not yet apparent, it is undoubtedly clear that the present State Government by its strenuous efforts have been able to make good a considerable amount of vacuum that existed in this State in the industrial field.

The rising cost of raw materials, irregular supply of them and frequent load shedding by electricity generating units have disturbed the flow of

our operations. We are set for larger output if these handicaps could be overcome.

It is needless for me to state that in the existing circumstances prevail-

Mr. G. Basu

ing in the State we should not complain but should lend our co-operation and support to the efforts which the Government is making to secure uninterrupted production in the industry.

Our Factory is located in a rural area of 24 Parganas and I am happy to state that our employment policy has enabled about 75% of our employees, mostly non-technical, being employed from among the local people.

We have not neglected export possibilities and have already exported our products to Egypt, Thailand and Kenya, and we are now negotiating with East African and Middle East Countries. Bangladesh also is in our mind.

The products we manufacture are sophisticated backed by international quality control and we are experiencing increased appreciation by our constituents of our products. Our Order Book at present is satisfactory and we do not anticipate anything which is likely to interrupt our flow of operations.

Our present rated capacity has been increased from 3,000 tonnes to 3,600 tonnes per annum and when the next

phase of expansion, which has been taken in hand, is completed we hope to reach a target of 5,040 tonnes per annum.

Our arrangements for the infrastructure for the increased production have been completed.

May I conclude by thanking our workers, officers, Financial Institutions, Bankers and our Collaborators for their continued co-operation and support in our achievements.

This does not purport to be a record of the proceedings of the Annual General Meeting of the Company.

COMPANY AND PUBLIC NOTICES

THE ORISSA MINERALS DEVELOPMENT CO. LTD.

THE Board of Directors of the Company has recommended a final dividend for the year ended 30th June, 1972 at 7½% on the Ordinary Shares subject to deduction of tax for declaration at the Annual General Meeting to be held on 22nd December, 1972.

By Order of the Board
(R. SONDHU)
General Manager

UBI

IN THE LIFE OF WEST BENGAL

In West Bengal UBI plays the leading role in taking banking facilities to people and in giving assistance to agriculture and small-scale industry.

As in December 1971 all commercial Banks together had 377 branches in rural and semi-urban areas. Of them UBI's share was 127 branches or 34 per cent. Out of the total number of 734 commercial Bank offices in the State, UBI's share was 190 or 26 per cent. UBI's share is larger in rural and semi-urban areas than in urban and metropolitan areas. It indicates UBI is striving to take banking facilities to people who were denied these before.

As regards assistance to agriculture all commercial Banks together had 29,547 agricultural loan accounts as in December 1971. UBI's share was 18,679 or 63 per cent. Again, the amount advanced by all commercial Banks stood at Rs. 10.50 crores. UBI's share was Rs. 3.38 crores or 32 per cent. As many as 83 per cent of the farmers assisted by UBI are small farmers having less than 5 acres of holding.

Take the case of assistance to small-scale industry. As in September 1971 all commercial Banks together had assisted 6,202 small-scale industrial units. Of them UBI's share was 1,775 or 29 per cent. The amount advanced by all commercial Banks stood at Rs. 45.30 crores. UBI's share was Rs. 11.65 crores or 26 per cent. Last year UBI assisted on an average more than one small-scale industrial unit each day of the year.

Dispute Over Delineation

TWO views can be taken of the recent lull in talks between the Pakistani and Indian commanders on the delineation of the line of control in Jammu and Kashmir—the particular and the general. The two are naturally interlinked. In fact, the specific problem is but a reflection of the wobbly nature of the broad policy. At both levels, the failure is more deliberate than consequent upon the actual circumstances and the responsibility for it can be squarely placed on Pakistani shoulders. At best, an apologia can be put together for Mr. Z. A. Bhutto personally but that is neither here nor there. General Tikka Khan who is very much on the negotiating scene is trying to delay the successful conclusion of talks for all he is worth. General Manekshaw, on the other hand, is the very picture of sincerity with the spirit of give-and-take necessary to speed up a settlement. It looks as if he is at the moment cast for the rôle of the gracious giver as long as it does not prejudice Indian honour. The contrasting tone of the correspondence between the two Generals proves it beyond doubt. Thus after having insisted on the signing of the territorial arrangement agreed upon earlier, General Manekshaw had been unbending to the extent of being prepared for further discussions on the current bone of contention provided an accord on the basis of 19 maps was formalised about the remaining portion of delineation preparatory to withdrawing troops from the occupied sectors.

Mr. Bhutto may have wept for the Pakistani refugees longing for a return to their lands before the winter sowing begins. But to the Pakistani commanders, time seems far from being of the essence in carrying the talks through to a happy end.

General Tikka Khan most positively put his foot down and the resumption of talks at Wagah does not dispel the gloom. Whether progress results remains to be seen. On the face of it, the dispute seems hardly worth all the big fuss. Neither strategically nor politically the 1½ square mile tract over which the talks foundered can mean anything material to Islamabad. Although it seems more than likely that legality makes not a scrap of difference to Mr. Bhutto and General Tikka Khan, even that line of enquiry will put Pakistan in the wrong. Whatever difficulties Pakistan may have made in the beginning, the principle at least has been accepted that troops will be withdrawn from both sides of the international frontier. Thakur Chauk which has given rise to the dispute is a feature of the international boundary as distinct from the line of control in Jammu and Kashmir and that Pakistan should vacate as a matter of course. In any case, General Manekshaw has thrown the subject open to discussion. But Mr. Bhutto's spirit of accommodation about the Lipa Valley posts has found no echo in the Pakistani attitude at the present juncture.

If General Manekshaw has been reasonableness itself, Mr. Swaran Singh may be said to have gone one better. Making what may be a choice specimen of understatement to the effect that India is not wanting in patience, he has indicated that should military talks fail, a political discussion may be started to smooth things over. It is arguable that points of legality had better be thrashed out at a political level. In any event, this overture is a sufficient indication of India's keenness on a prompt settlement. It does not take any great perspicience to grasp the essential

point. Whatever may be the pace of the meandering parleys between the commanders, what really matters is the interplay of higher political forces behind the scenes. It will be helpful to cast one's mind back to the beginning of the dialogue. Mr. Bhutto's sweetness and light had emanated then from the realisation that internationalising the outstanding problems would not do him any measure of political good. He came to Simla with something of a low-key profile and with Mrs. Gandhi determined to bring a durable peace in the sub-continent, the peace-making moves at Simla went satisfactorily up to a point. Mr. Bhutto's acceptance of the principle of bilateralism was no mean triumph. Unfortunately, however, the sequel was not as smooth going as the start. Mr. Bhutto has shown his superb mastery of the art of wriggling out of commitments; carrying conviction, of course, is another matter. He has so far stalled the recognition of Bangladesh, although more than once he has let on his acceptance of the fait accompli. He has tried to lump different issues together to obscure all of them. In consequence, he has failed miserably in achieving anything except a fruitless expenditure of time. How to stay in power against such odds is not easy to answer.

To what extent Mr. Bhutto is personally responsible for the present difficulties in the prolonged talks is not entirely clear. General Tikka Khan may not be playing the second fiddle as far as the latest operation of throwing a spanner into the works is concerned. Mr. Bhutto is no longer the same man with a firm grip on the source of power. He has overcome minor squalls but there may yet be the last uncontrollable storm. His policy of survival is based on concessions to the extent of giving in to a Westminster-style Government and an increasing dependence on men who are even more ultra than the President himself. He has to do a balancing trick between two extremes. The Frontier is a sensitive spot which he has to handle gingerly. On the other hand, he can never play too soft lest he should rile the hawks who still dominate his bastion of strength—Punjab. The job becomes increasingly tricky as time passes without the President bringing the P.O.W.s back home or doing anything about the decision of Dacca to go ahead with the trial of war criminals. From this dismal scene, Mr. Bhutto probably expects to divert attention by dragging his feet over

the talks with India. Even if he has other ideas, the army will not let him act on them. And it seems the Pakistani army has to a great degree lived down its inglorious debacle in the eyes of the local people.

The straws in the wind may be even more alarming. The Government of India is disinclined to pay serious attention to the renewal of sabre-rattling by the Pakistani spokesmen presumably briefed by Islamabad, but it is happening all right. The Pakistani propaganda machine which for a while assumed

a gentle air has become something of its old self. Accusations against India are acquiring increasing acerbity and the old practice of playing up on an international level minor incidents at P.O.W. camps and similar alleged Indian wrongdoings is back with considerable venom. All this gives rise to the suspicion that Peking is pulling the strings behind a lot of goings-on in Islamabad after casting the U.N. veto on the admission of Bangladesh. If that is the case, New Delhi has a good deal more on its hands than the temporary breakdown of the eighth round of talks.

Youth Unrest Again

STUDENTS in the whole of northern India from Punjab to Assam seem to be in a state of turmoil. Youth agitations are also brewing in Tamil Nadu and Andhra Pradesh and there are signs of commotion in Orissa. The issues in each State are different, but there is a marked similarity in the response of the youth everywhere. Burning of buses, destroying public property, raiding cinema houses and abstaining from classes are some of the expressions of revolt. What is perhaps most disturbing is that at times there are no issues at all and students run amuck on mere non-issues, as if they were only looking for an excuse to go on a smashing spree. Long experience has convinced them that college students enjoy some kind of immunity from the law not enjoyed by ordinary mortals when they go out in the streets to destroy public property. While no one would grudge the young people the right to revolt, it is doubtful whether that right could be extended to cover acts of vandalism. In their extreme anxiety not to alienate the sympathies of youth, most of the States have shown an indulgence that has blurred the distinction between the right of dissent and licence to destroy. This kind of rebelliousness for its own sake is hardly the right training for the citizens of tomorrow.

In Delhi, the students have been time and again holding the city's entire transport service to ransom and causing inconvenience to hundreds of thousands of commuters to press their demand for privileged treatment. While there are any number of examples of misbehaviour by the bus

conductors and drivers, it is also true that quite often the fault of the conductor is no more than his insistence that students like every one else should carry tickets or passes. It is not often that students demand that the conductors respect their self-assumed right of free travel. And, of course, the students are always right as long as they can present themselves as a mob. The matter is hushed up, the erring conductors are publicly admonished and the whole affair is given the appearance of a fight on principle to get a better bus service for the students.

In Punjab, the students very nearly paralysed the machinery of the State Government and forced the army to appear on the scene to control an agitation over the issue of concessions for them in cinema houses. At their command, police officers were suspended or transferred and even a Deputy Commissioner was transferred before a judicial enquiry ordered by the Government to sift the blame for the shooting incident had begun its work. In the storm that ensued all the political parties, including the ruling Congress, backed the students and no one dared to question their "right" to cinema concessions or their State-wide violent response to the shooting incident in Moga. Nor was there any condemnation by the political parties of burning of buses, railway property and cinema houses by student mobs. Much the same symptoms have been in evidence in U.P. and Bihar where any provocation, real or imaginary, seems to suffice to bring about the closure of colleges and ugly demonstrations on the streets.

All this leads to but one question. Why are students so keenly averse to their main occupation, studies? Why are they always looking for an opportunity to disrupt their normal academic routines? The answer is not very difficult. In the whole history of college education of the western style in India, academic life in a great majority of colleges was never so devoid of content. True, there are many institutions that maintain high standards of education and extra-curricular activities but their number is very small indeed. Overcrowding and lack of minimum facilities for study and living makes education a nightmare for the students.

Added to the problem of numbers and breathing space in the colleges is the question of language. Thanks to the irresistible craze for the regional languages, the students are unable to comprehend anything in English and there is hardly any worthwhile reading material in their own languages. The result is a vacuum in the lives of students. It is of a kind that politicians and educationists who frame policies for schools and colleges have never experienced in their lives. The whole idiom, imagery, mode of life and psycho-social associations of the student of today have been changed by this single fact of language. A vital source of contact with the modern world has been withdrawn from the colleges and its replacement may take several decades. Till then the student must live in a closed world of his own.

Another equally important factor is economic. It is often forgotten that the student too is a consumer and perhaps a very sensitive consumer. Within the meagre resources placed at his disposal by loving but hard-pressed parents the student does his best to enjoy the good things of life. But even elementary necessities like a cup of tea are gradually entering the realm of luxuries in the student's life, thanks to the rising cost of every ingredient that goes into the making of tea—that is sugar, milk and tea leaves. Largely due to the undiminished avarice of the State Governments to tax entertainment to the maximum, rates of cinema tickets are becoming prohibitive, more so because of the rampant black-marketeering in them. Then the student does wish to wear some clean clothes that are not torn and most of the time his ambition is frustrated by the ever-rising prices. While in view of the rampant unemployment the future is admittedly bleak, there is little in the

present which an average youth can describe as enjoyable.

To add to his unhappiness the student has to cope with a highly repressive society where even innocuous contacts between boys and girls are frowned upon by the teachers and elders. The impact of such repression on the mind of youth cannot be measured quantitatively or qualitatively. But social psychologists the world over are convinced that repression of this kind can be very damaging to the healthy growth of not only individuals but of whole communities and nations. It makes India a nation of morons, a people who are unable to grow beyond adolescence.

And finally, the youth are apt to revolt against the injustices being daily meted out to them in their in-

stitutions by their superiors. The examination system is the worst enemy of peace in the campuses not because the students dread the examinations but because they are made victims of numerous malpractices. Allegations of manipulations of all kinds in the examination results are heard all over the country. Examinations have become merely a means of money-making for the academic community. Leakage of papers to favourites, setting unfair conditions for appearing in the examinations, mass copying, submitting to bullying or bribing, accepting money or other favours to increase marks and special consideration to girls are some of the complaints heard in every university against the academic community. The teacher's robe no longer commands respect. To bring order on the campuses, the authorities have to try to right all these wrongs.

Takeover of Grains Trade

IN a desperate move to hold the jumping price line, the Government has now decided to take over the wholesale trade in rice and wheat. The decision has been taken not on the basis of any conclusive evidence that prices are marked up only at the wholesale level but rather on a vague assumption that State entry into the field will somehow foil the machinations of an "unscrupulous" trade. But the approach is too simplistic. Nobody denies the capacity—and the practice—of the wholesaler to manipulate prices to make quick money, particularly in a difficult food year like the present. But to believe that control at this point only in a long chain of agricultural marketing will do the trick is at best naïve and at worst misguided. What precisely gives the men in power such confidence that Government takeover of the wholesale trade will push down prices of foodgrains has not been explicitly spelled out yet, but the public, by and large, have not been enthused by the move. In any case, if the measure is to yield any concrete result, it would not be before another full year or so, and by that time prices may tend to stabilise on their own. It is surprising, however, that few Ministers have said anything much about the follow-up action on the takeover move, even though quite a few weeks have passed since the A.J.C.C. session took the decision; those who have, have mainly tried to raise excuses or alibis.

Nearly the biggest challenge that the administration would face is that

agriculture in India has remained outside the pale of organised marketing. Transactions take place not strictly according to the forces of demand and supply but along channels that have come in existence and have been found workable for a long time. Nobody should favour the continuance of such a system which mostly acts against the interest of growers but somehow it has lingered on. To make an inroad into this tradition-bound sphere will perhaps prove to be the main problem for the Government. Procurement of the marketable surplus from big and small farms is not a matter of expertise or finance only but of personal relationships which would be difficult to develop overnight. Even after so many years of operation, the Food Corporation of India buys, according to the Parliamentary Committee on Public Undertakings, only 0.1 to 3.4 per cent of its total purchases directly, the rest being provided by co-operatives and middlemen. In other spheres also—like banking—and in other agricultural crops—like jute and cotton—Government agencies are facing the same handicaps. In some cases, even after takeover, the actual trade is run by erstwhile agencies while the State undertaking merely charges a commission from them for allowing its name to be used. One hopes that the fate of the wholesale trade in rice and wheat will not prove to be as dismal as that.

Indeed, if New Delhi is determined to make an impact on foodgrain prices it has got to take up the challenge

with a greater sense of commitment than it has done in the past. The wholesale trade in rice and wheat will require elaborate and extensive plans for the transport of farm produce, warehousing, distribution over numerous retail outlets and inventory control. Several Chief Ministers have noted the inadequacy of the existing organisational structure to cope with such onerous operations. A number of States are going ahead with plans to set up their own food corporations. But how far these institutions alone will qualify them better to discharge the functions associated with the foodgrains trade remains to be seen. Besides leading to duplication at the State level of a machinery that is already in existence at the Central level, the appearance of these agencies may conceivably retard the process of covering the entire country as one single food zone.

One of the major dangers that the Government will have to guard against is the high cost of operation. The F.C.I.'s experience shows that many items of cost—particularly labour—have tended to rise following State takeover. Unless extreme vigilance and economy are exercised at every point, the cost of operation may go up and this may conceivably set at naught the high hopes that lie behind the move. Since retail trade continues to remain in the hands of private business, the consumer price may still be widely manipulated; if over and above this, prices tend to be unduly marked up at the wholesale level, the purpose of helping the poorer sections of society may be totally lost. The Federation of Indian Chambers of Commerce and Industry evidently has such misgivings; it feels that the takeover would entail 10 per cent to 15 per cent additional cost to consumers directly by way of higher foodgrains prices or by way of higher taxes. To maintain a big inventory of grains—the total marketable surplus in rice and wheat in an average year comes to about 25 million tonnes—a substantial volume of credit will be locked up. And the F.I.C.C.I. is not sure that such diversion of development finance to mere inventory-holding would be wise. About the employment aspect of the takeover, no clear picture is yet available; nearly 5 million people, according to one estimate, are likely to be affected, although some of them might be reabsorbed.

The pitfalls that lie ahead of the Government are many. Still, for the sake of argument, let it be assumed that they have been averted. But will the takeover of foodgrains trade alone

achieve the desired purpose? Will it give the much-needed relief to the poorer sections of the community? The fact is that most of the people below the poverty line switch from rice and wheat to coarse grains when the inflationary pressures mount, and little has been done so far either by way of procurement or public distribution of these items. Besides, even if cheaper rice and wheat are made available to the poor, how many of them have the purchasing power to buy

Compulsion in Industrial Housing ?

THE Government of India is reported to be considering a proposal to enforce compulsion on industrialists to build houses for their workers. It has expressed its disappointment at the "half-hearted and tardy efforts" made by employers to provide accommodation to their workers and it feels that something positive must be done in the matter. The Government is said to have carefully studied the impact of such a legal compulsion on capital formation, industrial development, employment and the price of end-products. New Delhi, of late, has come to believe that the country's economy can be developed quickly by compelling people to do various things. But such a policy will not produce the desired results. It will, surely, be more realistic if the Government relies on persuasion and incentives than on compulsion and threats to achieve its objectives.

The Government should have examined why employers have not been enthusiastic in building houses for their workers. Without making such a thorough study, to compel employers to build houses for workers will have adverse consequences on the industries concerned, and on the economy. Apart from the acute shortage of cement, steel and various other building materials as well as railway wagons, there have also been many practical difficulties felt by employers in building houses for workers. It is true that under the subsidised housing scheme for industrial workers, introduced in 1952, an employer who wants to build houses for his workers is entitled to financial assistance from the Government to the extent of 50 per cent loan and 25 per cent subsidy. The remaining 25 per cent of the cost is to be met by the employer from his own resources. But, unfortunately, the employers have had to face serious difficulties of various types in getting the subsidy from the Government.

them? As any rationing authority will say, even in suburbia many cardholders cannot just draw many items because they do not have the money or draw them only to sell again. Wheat and rice prices should be reduced by all means, but if it is believed that such a step alone will improve the lot of the poorer people, it is taking too narrow a view of the inflationary problem. No better method to check inflation has yet been invented than increased production.

The scheme has been administered by the State Governments who have not been able to implement it with speed and sympathy. There have been cases where the applications submitted by industrial units under the industrial housing scheme more than three years ago are still kept pending by the State Governments concerned. Therefore, unless the State Governments are able to dispose of promptly the employers' applications for loans and subsidies for construction of houses for workers, the scheme is unlikely to make any progress. Employers have complained that the overall ceiling costs fixed for the various types of tenements have become unrealistic on account of the sharp increase in the cost of building materials. They had represented to the Government of India to revise the ceiling costs realistically on the basis of the existing prices. But New Delhi does not seem to have accepted this suggestion.

Employers have also pointed out that there is no statutory provision to permit an employer to evict an ex-employee from the house that has been allotted to him at a low rent. There have been numerous instances of workers being unwilling to vacate their houses even after they have been legally discharged. How does the Government expect employers to become enthusiastic about building houses for workers when they are faced with this kind of difficulties? Official statistics show that even the meagre Budget allocations for the subsidised housing scheme are not being fully spent. In West Bengal, for example, for 1969-70, the amount earmarked for loan and subsidy for employers was Rs. 7 lakhs but only Rs. 3 lakhs were spent. For 1970-71, the expenditure was Rs. 2.5 lakhs out of Rs. 20 lakhs that was allotted for the purpose. For the plantation industry, the money earmarked for loan and subsidy for 1969-70 and 1970-71 was Rs. 5 lakhs and Rs. 15

lakhs, respectively. But the expenditure was about Rs. 2 lakhs and Rs. 28,000, respectively.

Perhaps in a few cases, the applications submitted by the tea companies were not satisfactory or complete in all respects. But this factor by itself does not explain the lapse of large sums of money. The fact is that the plantation labour housing scheme has not been conceived realistically. Under the rules of the subsidised housing scheme for plantation workers, employers were expected to provide accommodation for at least 8 per cent of their workers every year till the latter were adequately housed. Two types of houses were to be provided, namely, normal two-roomed houses and small two-roomed houses. The employers were also enjoined to give adequate attention to the construction of roads, drainage, lighting, and other facilities. But even after several months after the scheme came into force, neither the Tea Board nor the tea industry seemed to have a clear and correct idea about its implications. For example, it was not clear whether loan and subsidy were to be made available to all types of tea estates or only to those which are financially weak.

Currency Reform : The Task Ahead

AS though to remind overoptimists of the kind of problem that the reformed monetary system would be required to avoid, and of the difficulty of agreeing the system, a critical disagreement within the Japanese Government on methods of correcting the country's payments surplus erupted just after the International Monetary Fund's meeting in Washington. Conflict of opinion is healthy at this stage if it clarifies the problems and ideas for solving them, but if we spend much time on individual issues, the expectations of real progress at the I.M.F. meeting in Nairobi next year will be disappointed. The meeting in Washington was rated positive, if only because the Americans were more accommodating and the French were more co-operative than usual. Observers felt that moods and attitudes boded rather well for agreement; and if there was a distinct difference between what Mr. George Shultz, U.S. Treasury Secretary, and Mr. Anthony Barber, U.K. Chancellor of the Exchequer, envisaged for Nairobi—"main outlines" of a new system in the former's view, "operative decisions" on monetary reform in the

latter's—it could be attributed to the diplomatic low profile of the Americans, whose proposals were explicitly "not a blueprint" for next year's negotiations. The I.M.F. executive directors' report, which preceded the meeting, was likewise not presented as "a blueprint". It was a broad statement of the problems, with some alternative ideas for solving them, but no declared preference for any particular idea. Most noteworthy was its frank acknowledgment that the disparity between the official and the free prices of gold had virtually immobilised official holdings of gold (roughly a third of reserves)—national authorities will not release gold at the official price when it is worth much more in the market—and that Special Drawing Rights and reserve positions at the Fund, both valued in terms of official-price gold, could be affected similarly. One is so accustomed to the dispute on gold—whether to enhance it in or to phase it out of the system, at what level to price it officially—that one may easily assume that it can be left for settlement some time in the vague

future. But for real progress in Nairobi "some time" is not soon enough; for it is difficult to imagine even the outlines of a new monetary system in which the status of gold is not established. The central issue is not the price but the permanence of official gold. The argument for demonetising the metal is that non-monetary requirements absorb virtually all current production, leaving no appreciable supply for the monetary system, and that money-linked gold is intrinsically unstable because speculators anticipate changes in the link. The counter-argument is that price rather than quantity determines the value of available gold, and that any artificial "numeraire" is intrinsically less stable than gold because it can be artificially created. A "new" monetary system in which the "numeraire" against which currencies are valued has not been agreed is only a temporary expedient.

A drastic idea for replacing gold by Special Drawing Rights (it was argued recently by Mr. Xenophon Zolotas, former Governor of the Bank of Greece, in the *London Times*) is to sever the link between gold and S.D.R. denominate currencies in terms of S.D.R., and let the official gold price float. Central banks (whose gold reserves would fluctuate in value—but so do their dollar reserves) could use their gold for international payments at the market price. Discussion of procedures for demonetising gold is, however, academic unless it is agreed that demonetisation, involving substitution by S.D.R., is the right objective; and there is no evidence that France (particularly) is moving towards the American position in this matter. Extending flexibility of exchange rates (against whatever "numeraire") is less controversial. There is a question of principle involved in Mr. Shultz's proposal that a supranational authority should be empowered to compel countries to restore equilibrium in their overall payments, by adjusting exchange rates, imports, and/or domestic demand; but any country that subscribes to an orderly system yet objects to authority to keep it orderly puts its sincerity in doubt. Collective regulation of national monetary policies is not strictly in the currency system's field, but it could usefully be considered an important factor in the equilibrating mechanism.

The American plea for maximum possible freedom of capital movements is superficially unanswerable. But critics who have looked below the surface have perceived that a com-

bination of free capital movements and compulsorily-adjusted payments accounts could maintain one of the most inequitable characteristics of the old dollar-dominated system. That system, in which the dollar has been a privileged reserve currency, has allowed the U.S.A. to acquire a huge total of assets abroad in exchange for inconvertible paper. In the new system envisaged, the chronic payments deficits that the acquisitions have largely caused will disappear and (when payments generally are properly balanced) dollars will be convertible. But the obligation to maintain balance not on current account but on current and capital accounts combined implies that non-American countries could be obliged to offset a chronic deficit in the U.S. capital account by deficits in their

current accounts, balanced by surpluses in their capital accounts from the flow of U.S. capital. One method of financing American acquisitions is not necessarily as bad as another, but a plan that provides this kind of facility should be—and undoubtedly will be—carefully scrutinised. In the deliberations before Nairobi, it will certainly be emphasised that smooth functioning is only the mechanical quality required of the new system. An inequitable system that functions well is some improvement on an inequitable system that functions badly, but it is not good enough. In the proposals presented in Washington there was not enough inclination to make the new system serve less-developed countries, which have certainly not been well served by the old one.

CURRENT COMMENT

COLOMBO PLAN

British Contribution

Britain spent \$10,601,700 on Colombo Plan technical assistance in 1971. This amount included \$4,062,000 for students and trainees, \$2,774,400 for experts, and \$1,226,500 for equipment. These figures are included in the latest report on technical assistance given under the Colombo Plan. The report has been published by the Colombo Plan Council for Technical Co-operation in south and south-east Asia in connection with the twentysecond consultative committee meeting of the Plan which started in New Delhi on 30th October.

The report also reveals that in 1971 Britain provided 835 new places for students and trainees from the Colombo Plan region, bringing the total number of places offered by Britain to 11,507 since the beginning of the Plan in 1950. During the year, 124 British experts went out to the region, bringing the total assigned since 1950 to 1,451. Most trainees and students came from India (178), followed by Sri Lanka with 136 and Malaysia with 103. Other countries were Afghanistan 17, Burma 62, Indonesia 47, Korea 20, Laos 5, Nepal 48, Pakistan 44, Philippines 47, Singapore 34, Thailand 66 and Vietnam 16.

TEXTILE MILLS

Take-over Ill-advised

Referring to the recent Ordinance taking over 46 textile mills in the country, Mr. A. R. Kanoria, president, Merchants' Chamber of Commerce, in a representation to the Prime Minister, Mrs. Indira Gandhi, and also to the Central Minister for Foreign Trade, Mr. L. N. Mishra, has stated that this decision has been extremely hasty and ill-advised. He feels that apart from other adverse effects on the economy, it will seriously affect the investment climate. Mr. Kanoria has pointed out that quite a good number of mills taken over were properly functioning, while some have made requisite arrangements for resuming production. He has, therefore, urged the Government to re-examine the whole issue and to exclude the mills which were doing well from the purview of the Ordinance so as to ensure a healthy investment climate.

I.D.B.I.

More Assistance Sanctioned

There was a 12 per cent rise in the effective sanctions of assistance by the Industrial Development Bank of India under direct assistance to industry, refinance of industrial loans and rediscounting of machinery bills during the first quarter (July-September) of 1972-73, compared with the

corresponding quarter of last year. The total assistance sanctioned was Rs. 19.46 crores, against Rs. 17.37 crores. The marked rise in assistance greatly offset the decline of Rs. 3.74 crores in direct loans for exports and refinance of export credits, so that the aggregate effective sanctions of assistance (excluding guarantees) during the July-September 1972 quarter were marginally lower at Rs. 20.26 crores, against Rs. 21.16 crores in July-September 1971. The sanctions include subscriptions to the shares and bonds of financial institutions amounting to Rs. 75 lakhs, against nil. Sanctions under direct assistance to industry other than for exports were substantially higher at Rs. 3.78 crores during the three months ended September 1972, against Rs. 1.05 crores a year before.

FOREIGN INVESTMENT

Rôle of Global Concerns

Addressing the annual meeting of the International Association for the Promotion and Protection of Private Foreign Investments held in Munich a few days ago, Mr. William S. Gaud, executive vice-president, International Finance Corporation, said that perhaps more alarming to the developing countries than the scale and character of modern foreign private investment had been the size of the companies making those investments. Of the 100 largest economic entities in the world today, only 50 were nation States. The other 50 were giant corporations—the so-called multinational corporations—and of these two-thirds were owned in the United States. Put in another way, it means that the sales of General Motors last year—more than \$28 billion—exceeded the gross national product of all but 14 or 15 countries in the world. Of course, not all these global corporations were American. In fact, other international companies with famous names might be said to have blazed the trail and set United States corporations an example.

It is sometimes said that, in terms of the so-called third world, these giant corporations are more effective instruments for economic development than earlier and smaller-scale forms of private investment—that they can provide more capital, more entrepreneurial, management and technical skills and deploy them more effectively. This may be so. But there is no denying that, given their scale, the activities of these giant corporations have inevitably attracted wide-

spread attention—in the industrialised no less than the developing countries. And the attention they attract is not always favourable.

INFLATION

Suggested Remedies

In a Press statement issued a few days ago, Mr. A. R. Kanoria, president, Merchants' Chamber of Commerce, Calcutta, has said that the phenomenal rise in price level is eating into the very vitals of the economy. The immensity of the problem will be evident from the fact that the wholesale price index in the last decade has more than doubled. In other words, the general level of wholesale prices has risen at an average compound rate of 7.5 per cent a year. In the long run, the remedy of the situation lies in reducing the quantum of deficit financing, pushing the production of mass consumption goods; imposing income-tax on agricultural income to curb excess purchasing power generated in the rural areas, and merging the sales tax and the excise duty. As a short-term remedy, supply of mass consumption goods should be ensured through the existing distribution channel.

COMMUNIST BLOC

U.S. Trade Prospects

Nixon administration officials hope that the willingness of Russia and the People's Republic of China to make sizable agricultural purchases, mostly grains, from the United States signals a desire for continuing and expanding East-West trade relations, coupled with a lessening of political tensions. In a recent radio speech, President Nixon referred optimistically to the recent sale of more than \$1,000 million in grains, largely wheat, to the Soviet Union, and announced that in the past few days China had signed a contract with a private U.S. exporting firm to obtain 300,000 tons (or 12 million bushels) of corn (maize). The more than \$17 million maize purchase is relatively small in as much as the total annual U.S. production of maize is 5,300 million bushels. "We have opened new markets in communist bloc countries," Mr. Nixon said, "by lifting restrictive ocean shipping regulations of the last administration. This action led to last winter's \$150 million sale of foodgrains to the Soviet Union,

and then to the three-year grain sales agreement which we signed with the Soviets in July—the biggest peacetime transaction of its kind in history."

SOUTHERN INDIA

Company Registration

In the southern region comprising the States of Tamil Nadu, Andhra Pradesh, Mysore and Kerala and the Union Territory of Pondicherry, company formation during the quarter ended 30th September declined slightly as only 116 new companies (12 public and 104 private) were registered, against 123 (12 public and 111 private) registered during the preceding quarter. However, the aggregate of authorised capital of the registered companies was Rs. 20.43 crores, or higher than that of the companies registered in the preceding quarter. Of these new registrations, seven are big or giant sized companies each having an authorised capital of Rs. 50 lakhs and above. During the same period, eight companies with an aggregate paid-up capital of Rs. 40.74 lakhs went into liquidation and eight companies with an aggregate paid-up capital of Rs. 99,000 were struck off the register pursuant to Section 560 of Companies Act, 1956, in this region.

I.D.A.

Credit for Farm Education

The International Development Association, an affiliate of the World Bank, has announced the Group's first operation in India's education field—a credit of \$12 million to develop two new agricultural universities in Assam and Bihar. The project, when completed in 1979, will enable the two new universities to consolidate their constituent campuses and to become more cohesive and effective institutions. They will be able to produce better trained graduates to contribute to agricultural development in the two States. With increased responsibilities for research and extension, the two universities will provide increased institutional support to the technological demands of the "green revolution." India's strategy for agricultural development seeks to establish innovative agricultural technology through the introduction of new, high-yielding varieties of foodgrains and efficient application of other inputs, such as fertiliser, credit, water and pesticides.

The success of this strategy depends upon efficient service institutions, including agricultural universities. The Government, through the Indian Council for Agricultural Research has supported the development of agricultural universities on the American land-grant model in many States. Those in Punjab, Uttar Pradesh and Mysore, for instance, have been able to produce a new breed of well trained graduates motivated toward rural development. The Assam Agricultural University and Rajendra Agricultural University in Bihar will follow this pattern.

PAINT

Prospects in South India

Inaugurating the Southern Regional Committee of the Indian Paint Association a few days ago in Madras, Mr. I. M. Malkani, president of the Association, pointed out that the industrial development of the southern region had been taking place rapidly and vigorously. In the coming years, there was going to be further momentum in the industrial progress of this area. The paint industry also could look forward to fast expansion in the region as the demand for various types of paints in the south was bound to grow rapidly due to the development of agriculture as well as engineering and numerous other industries and the consequent rise in the standard of living of the masses. The formation of the Southern Regional Committee, therefore, was quite timely. Mr. Malkani mentioned that regional committees of the Association had already been functioning in Calcutta, Bombay and Kanpur.

VOCATIONAL TRAINING

Regional Service

A feasibility study is now taking place in 11 Asian countries into the creation of a regional service to support national vocational training schemes. It is being conducted jointly by the International Labour Organisation (I.L.O.) and the United Nations Development Programme (U.N.D.P.). A three-man mission has already visited Thailand and India. It will now visit Indonesia, the Philippines, Japan, Korea, Malaysia, Singapore, Sri Lanka, Pakistan and Nepal for further discussions with the Governments and institutions in the vocational training fields. It will re-

port its findings to the U.N.D.P. and the I.L.O. in December. The proposed regional service would be designed to support national vocational training schemes—which have been set up in most Asian countries often with I.L.O. and U.N.D.P. assistance—by pooling experience and providing specialised services and information in such fields as planning, organisation, cost reduction, training materials and training methodology.

U.S. AID

Share of Developing Nations

The developing nations of Asia, Africa and Latin America are competing for and winning a greater share of U.S. foreign aid contracts in their respective areas as a direct result of President Nixon's policy of "untying" programme loans to the less developed countries. This finding is based on the recent data released by the U.S. Agency for International Development which indicates that the developing nations are now averaging monthly sales of about \$2.2 million under U.S.-financed procurement contracts. In October 1969, the Nixon administration exempted the Latin American countries from the requirement that purchases financed by U.S. aid be made only in the United States, thereby enabling them to buy from other developing countries. This privilege was extended to the Asian and African countries the following year.

The developing countries were somewhat slow in responding to the opportunity for new business, since most of them had neither the quantities nor specific types of goods required for export to a primary market consisting of other less developed countries. As a result, it was not until May 1971, that the Nixon policy began to show positive results. By September of that year, the developing countries had won U.S.A.I.D.-financed contracts totalling about \$1 million; in November, they received \$1.5 million in orders, \$2.6 million in December and orders totalling \$3.3 million in January 1972. As of 30th June, 1972, the cumulative U.S. expenditures for procurement from the less developed countries amounted to about \$21.4 million. Countries whose export industries benefited from this U.S.A.I.D.-generated business were India, Taiwan, South Korea, Zambia, Singapore, Liberia and Brazil, while Nigeria, Indonesia, India, Uruguay, Columbia and Ghana were among the principal recipients of contracts sales. Product areas in which the developing countries have competed most successfully are textiles, fertilisers, non-ferrous metals, leather goods, rubber and essential oils.

S.D.R.

Drawings in September

Drawings of currencies from the International Monetary Fund totalled

the equivalent of 36.3 million units of special drawing rights (S.D.R.s) in September, including the equivalent of S.D.R. 20 million drawn by the Philippines and of S.D.R. 10 million drawn by Sudan. Bolivia, Indonesia and Nigeria drew the equivalents of S.D.R. 2.8 million, S.D.R. 1.8 million and S.D.R. 740,000 under Fund arrangements permitting drawings to help finance contributions to buffer stocks under international commodity agreements, in this case the International Tin Agreement. Repurchases of previous drawings totalled the equivalent of S.D.R. 47.7 million, including a repurchase of S.D.R. 28.9 million by Colombia, S.D.R. 5 million by Indonesia and S.D.R. 5 million by Pakistan. Net drawings outstanding at the end of September were the equivalent of S.D.R. 3,645.7 million.

MONEY MARKET

Call Rate Firm

The short-term money market has been slightly more stringent this past week. The call rate initially quoted at $\frac{3}{4}$ per cent, but due to the shortage of funds, the rate has firmed up to $\frac{3}{4}$ per cent and the market has closed squarish. The demand for remittances has been moderate. The supply of tea and gunny bills has been moderate. The pound-sterling has remained steady against most major foreign currencies during the week.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations for the 1972 Fund:

- Rs. 100**
Paschim Banga Charitable Society
- Rs. 50**
J. C. Swift
- Rs. 20**
R. N. Chaki
- Rs. 10**
P. T. Dustoor
- Rs. 5 each**
Raouf M. Gangjee and Sabeeka M. Gangjee

The Fund totals Rs. 504.41, including a carry-forward of Rs. 314.41.

A Ditcher's Diary

I SAW NO POINT IN SPECULATING ON THE American Presidential election. A Nixon victory seemed a certainty long before the latest public opinion polls. Not that pollsters have always been right, but it is difficult to accept Mr. McGovern's wish-fulfilling conclusion that they have misread "the mood and mind" of the 1972 American electorate. I am writing on election day, and surprises may be in store; but nothing short of a miracle is likely to vindicate the Senator's optimism. This is not because Mr. Nixon was invulnerable on every issue. Charges that he has been tolerating a corrupt and inept administration have grown; but somehow the impression seems to have gained ground that Mr. McGovern is not quite the man for the White House. Yet the Senator seemed genuinely confident even when public opinion surveys were showing a 26 per cent lead for his rival. The imminence of a ceasefire in Vietnam did not shake this confidence; indeed he thought that a settlement before the election would help him because it would show that he had been "right all along about the possibility of ending the war". The war did not end by Tuesday; but Mr. Nixon seemed to have created the impression that it had—and there was no sign that this had helped Mr. McGovern. Could the Republican Administration be accus-

ed of deliberately misleading the electorate? According to public opinion surveys last week-end, it was widely believed that the President had kept the pledge he had given four years ago to end American involvement in the Vietnam war. But what the U.S. Government did over the week-end was to rush more warplanes to South Vietnam in "the highest military aid effort of the war". This does not necessarily mean that the search for a settlement is going to be abandoned; but a settlement does not seem as imminent as it did a fortnight ago. I hope Mr. Nixon will not go back on the draft agreement after re-election. It is one thing to ask for a further meeting for clarification, even for minor changes in the draft; quite another to re-open any of the main issues. It appears that Washington now wants to persuade Hanoi to withdraw some 35,000 troops from the Quang Tri area in South Vietnam. These troops are established in this area following this year's communist offensive; apparently the North Vietnamese troops who had entered the South earlier would be permitted to stay. I cannot see Hanoi readily agreeing to this "partial withdrawal", which would undo its most important gain from the offensive. If further rounds of tough bargaining were to follow, it could be weeks rather than days before final agreement was reached.

THE PUJA SEASON CAN BE SAID TO have ended with *Diwali*. No more work was done during the past three or four weeks than is customary at this time of year. The custom is particularly pleasurable in West Bengal. For about a fortnight all work seems to cease; and this is preceded by a week of anticipation and a week of recuperation. I enjoy it all, even though there is hardly any respite for the Press. It is nice to see everyday so relaxed and carefree; Bengalis seem to take a holiday even from politics. I cannot think of any other place in the world which allows itself such a long period of general rest and recreation. However, let me not strike a puritanical note immediately after the seasonal festivities. It would be more appropriate to note that the seasonal mood this year has been particularly joyous. The community Durga Pujas were less noisy than they often are; even the collectors of Puja subscriptions were less menacing. The Kali Puja, unfortunately, was not quite so restful; and the incessant cracker bangs were decidedly a torture. This is one reason why I am a little relieved that the whole thing is at last over. Which, of course, also means a return to the daily grind, to the problems that seem never to leave us. Normal supply of electricity was creditably maintained during the festive season. Is there now going to be

CALCUTTA IMPROVEMENT TRUST

A CORRESPONDENT writes in Current Coin: The fourth scheme of the Calcutta Improvement Trust, which was published last week, is one which will interest European residents of this city more than the three which preceded it. For one of the chief objects of the scheme is to widen the northern end of Russa Road and thereby provide an approach to the city of 100 feet in width. The motorist knows well the narrowness and inadequacy of the approaches to the city, and must heartily welcome the excellent intentions of the Trust to remove

these deficiencies. Roads such as Russa Road and Bentinck Street with their narrow pavements and double tramlines are a disgrace to the city and a great danger to the poor people who live in them. In Russa Road when the road has been widened to 100 feet, the tramlines will run down the centre, a wide footpath will be provided on either side, trees will be planted and the road for a distance of 1,800 yards will be a very fine one. It is to be hoped that steps will be taken as soon as possible to continue the same breadth of road right out to Tollygunge.

SUBSCRIPTIONS ARE PAYABLE IN ADVANCE

Concessional rates are offered to students

Available from leading book-sellers in all important cities or direct from the publishers.

C-2

a return to load-shedding? I am keeping my fingers crossed; I am prone to be excitable on this subject. Meanwhile, friends returning from other parts of the country tell me that things are not necessarily better managed elsewhere. I have heard shocking accounts of the mess at the Asian trade fair in New Delhi. Apparently, what the Prime Minister opened was a spectacle of confusion. Even now, a great deal is unfinished. I do not see why we had to make such an international exhibition of our incompetence. And, from what I hear, it is not a question of inefficiency or mismanagement alone; there are many complaints of dishonesty. Charges of corruption are not always specific; but there seems little doubt that all the money spent is not being properly utilised. I hear that the fair is going to cost more than Rs. 70 crores; and there is already much speculation on the amount of what is euphemistically called waste. Even if there had been no such waste, I would not be sure if the money had been well spent. To what extent does a show of this kind actually promote trade?

THE WORLD IS DIVIDED INTO TWO kinds of people, or so they say; those who admire M. Jacques Rueff, and officials of the U.S. Treasury. The latter, one gathers, are apt to foam at the mouth if his name is as much as mentioned. But whatever one may think about ex-President de Gaulle's monetary *éminence grise*, there is no denying his courage, nor, after his recent proposal for a Marshall Plan "in re erse", his originality either. He made the suggestion at a conference on the international rôle of gold held in London towards the end of October, and as far as I can see it did not get the publicity it deserved. Not that what he proposed was altogether new. Briefly it amounted to doubling the price of gold from its current official \$38 an ounce, which is what he has been advocating for years, and lending the increment to the U.S.A. on a long-term basis at a low rate of interest. The exercise would, M. Rueff contends, provide the U.S. gold reserve with an extra \$31,000 million, which, when added to the increment in America's own gold holdings, could guarantee the repayment of \$41,000 million of dollar balances. Neat, practical and wholly ingenious you might say; and so it is. But to call it a Marshall Plan in reverse is surely just the kind of feline touch calculated to cause apoplexy in the U.S. Treasury. But it does offer

about the only answer to the world's present monetary problems which is both complete and simple in concept. It may go diametrically opposite to modern fashions of world "paper gold", and evoke criticism about "old shibboleths". But with the prosperity of the western world, not to mention the rest of us, so obviously threatened by inflation, it has the unique advantage of being soundly based on an asset in which everybody except the most extreme economic theorists has complete confidence.

AT THE TIME IT WAS ANNOUNCED 18 months ago, the Dunlop-Pirelli merger was represented as a pioneering example of all those cross-frontier industrial tie-ups which will follow the enlargement of the European Economic Community. It was not defensive, everybody was at pains to point out; the idea was to improve competitiveness in preparation for expansion. Yet now it is on the rocks, or anyway near enough to being; and certainly there will have to be changes in the financial arrangements originally laid down. The trouble lies with the Pirelli half of the merger, or more accurately with the Italian economy in which Pirelli mainly operates. Inflation, labour anarchy, slower growth of demand, mounting imports in the face of an over-valued currency—all the usual ingredients are there. But in Italy's case they seem to have reached the level of the worst in western Europe, although Britain, of course, is catching up fast. The result is a massive loss for Pirelli and various other Italian industries besides, and according to many of Italy's industrialists

the situation is now becoming critical. We all know what Mr. Micawber would have said about that kind of situation. Yet it is not uncommon in Italian industry. Some people are once again predicting a communist takeover. They could be right. It is an intriguing point that in this modern world the communist system is the only one that has so far proved capable of holding down workers' expectations to the level at which they can be satisfied.

SATYAJIT RAY'S "ASHANI SANKET" should be ready early in the new year, and it promises to be another major creation. Although the novel by Bibhutibhushan Bandopadhyay is not as well known as the Apu story, it provides Mr. Ray with the kind of material he can work upon with memorable effect. Most of the film has already been shot—in a village near Santiniketan; the shooting is expected to be complete in about a week's time. A few scenes, however, have also been shot in a Calcutta studio, where I watched an afternoon's work last week. It is always instructive to see Mr. Ray at work—not merely because of the sensitive imagination with which he conceives a scene but also because of the astonishing care he devotes to every detail. Those who work with him must feel the strain imposed by his exacting standards; yet they seem to bear it cheerfully because not for a moment does he spare himself. And surely they find the experience immensely rewarding. It must be more interesting to see him at work on location; but studio shooting, too, has its special technical interest.

Those who have never seen a film being shot may, however, be a little disappointed to see that what goes into the making of a film is quite different from the finished product. The proceedings are likely to seem fragmentary, disjointed and painfully slow. What was shot in more than three hours last Thursday afternoon is unlikely to take more than a couple of minutes' screening time. While I watched the exhausting work for two small scenes, it was also a pleasure to look at the beautiful face of Babita—not the popular Hindi star but a girl from Bangladesh who is making her first Indian appearance in this film. She is well known in Bangladesh; but in spite of her professional career she has managed to retain a natural loveliness that is absolutely bewitching. I hope nothing will make her lose or shed this exquisite natural charm; no art can improve upon it. Of course, this ecstatic appreciation has nothing to do with any judgment of her performance in the Ray film; obviously, no judgment is possible at this stage about any aspect of the film. The theme, about the shadow of a famine over a rural area, has a stark quality which Mr. Ray can be trusted to explore in depth; that the film is being made in colour should have nothing to do with its tone or temper. But what will be Mr. Ray's next film? He has not decided yet; as he told me, one does not have a wide range of ready material to choose from. But sometime or other—he does not know when—he intends taking up Tagore's *Ghare Baire*, perhaps also a story by Buddhadeva Bose.

Should Workers Participate in Company Management?

By K. K. Rai

It is primarily through the teamwork between management and workers that a concern can thrive. It is only by workers' participation in management that an atmosphere of trust can be created in an organisation.

THERE has been much talk recently of workers' participation in the management of a company. In India, the public-sector units, most of whom have unfortunate records of chronic labour unrest, have been asked by the Government to have workers' representatives in the board of directors. In Norway, legislation

making workers' representation on the board of directors of every company compulsory is being considered. In the communist countries, which claim to have a Government of workers, labour unions and company executives have joint consultation, especially on problems of production and discipline. It would be interesting to scratch beneath the surface to find out the extent to which such participation took place in the various cases and to reflect on this phenomenon.

In the public sector in India, every corporation unfortunately has a mul-

tiplicity of unions. There was a time when the senior executives believed in divide and rule and felt that the best policy would be to keep the various unions at logger heads. Every head (chairman or managing director) had his protege in one union or the other and such a protege often got selected ironically as workers' representative in the board. In such cases, the head never really did or does believe in the principle and takes it sometimes as a gimmick of the Government or at others as a necessary evil.

Enforcing Discipline

In the communist countries, unfortunately, the union is a wing of the Party and, therefore, of the Government, and functions primarily for the enforcement of discipline and increasing working hours without additional wages if production targets are not met. In Norway and other countries, where workers' participation has been experimented with, results have varied depending upon the attitude of the two parties and in no case has there been any significant achievement where such participation has been brought about solely under Governmental pressure or because of any legislation.

It is not necessary to seek far for the reasons. Traditionally, labour has been treated as a resource like raw materials, money, machinery and power to be "exploited" for larger production and profits. Today, one cannot any more ignore that labour is human and, therefore, the traditional concept must be changed. Till this is done, one would be approaching the question on fallacious premises and from a wrong direction. With the traditional approach, whether it is consciously admitted or not, there does remain the feeling that differences in the attitudes of workers and owners are inevitable and that there can be no identity of interests of labour and management. Therefore, from the beginning the objective of any consideration of the question is a compromise which under the circumstances is accepted by both parties. No compromise can ever be a principle. It is reached under duress by both parties, because that appears to be at that time the most advantageous thing to do. Therefore, by its very nature, a compromise is short-lived. It causes resentment of one party against the other

Working to a common purpose...

Through self reliance

Since we started our operations over 60 years ago, we have pursued the ultimate goal of self-reliance.

Our manufacturing plants were established as early as 1942 and for replacement needs we helped a host of small scale independent

ancillary industries who meet our requirements. Today, machinery and spare parts imports are really negligible and no cigarettes have had to be imported for domestic

consumption for over three decades. Self-reliance in ancillary materials was achieved by 1952.

Our efforts indeed are humble: but if they go even a small way towards helping national interests, we shall have served our purpose.

and sows the seeds for future confrontation and conflict.

The Widening Gulf

The importance and growth of the personnel managers in industry has been a corollary of the widening gulf between management and labour. Specially in this country, and more so when a large industrial unit is considered, in any meeting across the table neither the personnel manager represents the management nor the union official represents labour. Mr. Tank Neilson from Norway's biggest industrial complex says (as reported in *International Management* of August 1971) regarding workers' representation on the board of directors: "It is right and fair. On the board today, you have only representatives of shareholders, and there are none for the 7,500 people who are devoting their lives to the company. But the employee must act on the board as a full-fledged board member, and he must be the right man. The trouble is that in the past the wrong men were often chosen to serve on the boards."

It has to be accepted that an industrial organisation is a partnership of the owners, shareholders, managers and workers; and here its day-to-day working is concerned, it is primarily teamwork between the management and workers. Once this is accepted, it is not difficult to see that the interests of workers and managements can be identified and an atmosphere of trust created. With this change, frequent consultations between the two main partners in the day-to-day running of the company would start, without the help of any Government legislation. I am very certain that till there is such a change of attitude or outlook, employer-employee relations will continue to cause anxiety. Against this background, it is not difficult to understand why "wrong men" were chosen to serve on the boards. Till a climate in which the interests of all partners can be identified with each other, the question of workers' participation in management would remain controversial, and any attempt at effecting such participation, whether under pressure of public opinion or in response to legislative action, would remain a farce.

In all justice and fairness, even solely in the interests of investors in

industry, it is necessary that there is whole-hearted participation of workers in management. This has to start from the bottom. The following excerpts from Messrs W. R. Hayward and G. W. Johnson in *The Story of Man's Work* are worth quoting: "There is one principle that has held good ever since the day when savage men still dwelt in caves. That is the principle that the work goes forward most easily and swiftly, when and only when, all hands co-operate earnestly and willingly. That held good when the two hairy apemen moved the stone, when all the people, noblemen, yeomen and serfs joined to raise the medieval cathedrals. It holds good today, when in some giant corporation, with scores of factories and hundreds of thousands of workmen, all the managers, all the directors combine to turn out some product." To ensure that all work together towards the objectives of the organisation, it is necessary that workers also become shareholders in the company. The various incentives and schemes at profit-sharing motivate the workers; they may also tend to be a retrograde step, taking one back to the piece-rate system.

PEOPLE AND PERSONALITIES

Mr. Howard L. Clark, chairman of the board of the American Express Company, and Mr. James Robinson, III, president of American Express International Banking Corporation, were in India in late October. They are on a world business trip. In India they visited Bombay, Delhi and Calcutta and investigated the industrial fields where they are helping to finance expansion with rupee or hard currency loans. They also studied ways in which tourism to India can be increased through the American Express Company.

Mr. Anthony Royle, Parliamentary Under-Secretary of State at the Foreign and Commonwealth Office, will visit India next month in the course of a 17-day eastern tour.

Mr. A. Ray of Metal Box Co. of India Ltd has taken over as the Custodian of the Indian Iron and Steel Co. Ltd. from 6th November at the invitation of the Government of India.

The Future of British Private Investments in India

By A. Raman

Britain once accounted for the largest share of private investments in India. But these are likely to decline in future since she now finds that the investment climate elsewhere is far more favourable than in this country.

BRITISH private investments in the different countries of the world, both developed and developing, have had a long history; and these investments have been made in a number of spheres, such as manufacturing, petroleum, services, plantations and mining. But U.K. private investments are to be found more in countries such as Australia, South Africa and Europe, when compared with the developing countries. For example, in 1966, the U.K.'s private overseas investments amounted to £276 million; of them, investments in the developed countries were of the order of £216 million. In 1965 and 1964, the developed countries attracted £194 million and £191 million out of £308 million and £263 million, respectively. But this does not mean that British private investments in the developing countries are not significant.

As the National and Grindlays Bank pamphlet on *Private Overseas Investment (1969)* observes, the importance of U.K. private foreign investments can be looked at from two angles, namely, in relation to the overseas assets of the United Kingdom and secondly, the importance of these same U.K. assets in relation to the total foreign investments within the recipient countries. These investments take the following forms: (1) portfolio investments, that is, investments in overseas securities, including the loans raised by the overseas countries on the London market; (2) the setting up of subsidiary companies abroad; and (3) the acquiring of an interest in the overseas enterprise. Direct private investments of the U.K. are dependent on certain factors. One of them is the taxation policy of the Government. The flow of British private investments, for example, went up substan-

tially between 1961 and 1965. But, in 1966, there was a decline partly due to the Finance Act. The exchange control regulations of the Bank of England also influence the flow of British investments abroad.

British private investments in India have been in existence for well over a century; and before the attainment of independence, British capital was flowing freely into this country. In June 1948, British private investments were of the order of Rs. 206 crores or 80.5 per cent of the total investments. American investments were just 5 per cent of the total of foreign investments. At the end of March 1967, British private investments amounted to Rs. 587 crores or 47.7 per cent of the total investments. The position regarding U.K. private investments in India in different spheres is as follows:

	(In Rs. crores)	
	1964	1968
Plantations	105.9	121.0
Mining	4.7	6.3
Petroleum	97.5	106.0
Manufacturing	151.4	278.5
Services	73.5	113.7
Total	433.0	625.5

Even now, the U.K. is the largest single investor in India and she accounts for 45 per cent of the total overseas private investments. The investments of the U.K. in manufacturing, petroleum and the service industries account for 45 per cent, 17 per cent and 18 per cent, respectively. In plantations, the U.K. investments account for 25 per cent of her total investments and no other country has interests in plantations. Apart from plantations, there is in the oil industry the Burmah Shell, whose importance has, however, declined with the development of Indian Oil. The important British concerns such as the Imperial Chemical Industries, the English Electricals the Levers, and Leylands have their concerns in India; apart from them, English firms, such as the Parry and Co., Binnys, Shaw Wallace and Gordon and Woodruffe, just to mention

a few, are functioning for so many decades.

In recent years, the climate for British private investments is not attractive for India; and certainly, there is the feeling that India is not a suitable country for overseas investments. A number of factors are responsible for this. First, the tax rates in India are extremely high; and companies are subjected to the maximum rate of 55 per cent. The return on capital invested in India is, therefore, very low; and it works out to 4 per cent in a favourable year, compared with 19 per cent in the African countries and 16 per cent in the U.K. In Malaysia and Singapore, the rate of return is very favourable. At one time, the rate of return on British capital in the U.K. was considered to be low; but now it is quite high. When this is the case, British private capital is unlikely to flow into India, where the rate of return is unfavourable.

It is very difficult for the overseas concerns to expand their activities in India; there are the restrictions on the expansion of the 70 top companies (with a view to preventing monopolistic tendencies) and they are also applicable to the British companies incorporated in India. It takes easily three years, if not more, for an overseas company to complete all formalities and start its activities in India. But, in Malaysia or Singapore or Hongkong it becomes possible to start business within 18 months from the initiation of the proposal. It is true that in India raw materials are available and that this is an advantage. But, at present, raw materials can be obtained at competitive rates and hence, this is not an insurmountable difficulty. The royalty rates in India in the case of projects with foreign collaboration are very low; and they work out to less than 4 per cent. In many other countries, they work out to more than 10 per cent. It is a fact that the British private investor or, for

For a nominal charge
"Capital" 's Statistical Department can provide you
with a certificate of share prices.

that matter, any other country's investor, when investing his money overseas, would like to earn as large an amount of profit as possible and this is understandable. But the climate in India certainly stands in the way of overseas investments. The constant threat of nationalisation is another factor retarding overseas private investments.

The question might be asked as to whether the flow of British private investments will be influenced by the extent to which British personnel are employed. It is a bit difficult to answer this question. It is true that for a long time, the British-owned firms gave employment to a large number of British personnel. After the attainment of independence, the Government of India urged that there should be rapid Indianisation of the top posts in the British firms in this country. Of late, however, the pace of Indianisation has been quite fast and the number of British personnel employed in the British firms or British banking institutions in India is very insignificant. This, however, might be due to a number of reasons other than the desire of the Central Government for Indianisation. First, the rates of personal taxation in India are very high. Secondly, the salaries offered to the British executives are not as attractive as they were before. For example, in the Far East, the salaries offered to company directors are fabulous and they run to even Rs. 3 lakhs a year. Besides, life in Singapore or Hongkong has its variety, which is not to be found in India. Hence, British directors of executives may not very much prefer India. Nevertheless, the need for expertise in business should be recognised and talented British personnel can certainly give their best for the development of industries in this country. The employment of British personnel should certainly not be discouraged.

What about the future of British private investments in India? As already explained, the climate is far more favourable for British private investments in Hongkong, Malaysia and Singapore than in India and hence, more investments may be made in those countries in future. Also, fresh opportunities are available now for Britain (because she is joining the E.E.C.) for investing her resources in Europe. So, one may reasonably feel that British private investments will decline rather than increase in this country.

U. S. Accord on Debt Relief

(From Our New Delhi Correspondent)

It is all to the good that the U.S.A. has now agreed to the Aid-India Club's proposal to grant debt relief to India. The country is expected to get the same amount of foreign aid during the current year as was given to it last year.

THERE is good news from Washington over the week-end that the United States has agreed to join the World Bank Consortium in granting India debt relief. This relief, sought by India, was thrown into turmoil last June when the Aid-India Club met in Paris and the U.S.A. suddenly refused to accept the formula agreeable to the Aid-India Club members. The World Bank, it will be recalled, had suggested a total of \$200 million as debt relief for 1972-73 and the absence of a U.S. stand on this question had turned out to be a major hitch in the consortium countries in arriving at an early decision. The total flow of foreign assistance in the current year is expected to be the same as last year (Rs. 600 crores), and before the U.S. decision to accept the World Bank's formula was known, the net aid (after repayment) was expected to be between Rs. 120 crores and Rs. 150 crores. The net aid will now be increased to the extent of the debt relief by the Consortium countries about which a communication is expected to be received soon.

India's next concern is about the International Monetary Fund working out a formula for the continued creation of Special Drawing Rights (S.D.R.) over the next two years. A decision on this should be available next month. India and other developing countries had urged at the recent annual meeting of the I.M.F. that there should be no vacuum in the creation of this additional liquidity facility which is a matter of immediate practical concern to the developing countries. The other vital question—a link between the Special Drawing Rights and development finance—depends on the U.S. willingness to restore convertibility of the U.S. dollar into other acceptable assets. The U.S.A. suspended on 15th August last its obli-

gation under the Bretton Woods system to convert the dollar or any other currency of a country into gold, S.D.R.s or any other assets acceptable to other countries.

The impression in official circles is that the U.S.A. will not concede to restore convertibility unless other countries agree for refunding or consolidation of the past dollars held by them, which are estimated to total about \$60 billion. This is a difficult question which is unlikely to be solved in a year or two as part of the world monetary reform.

Meanwhile, a full meeting of the Planning Commission has approved the approach to the Fifth Five Year Plan proposing a total outlay of Rs. 51,165 crores at 1971-72 prices, including Rs. 35,595 crores in the public sector, to achieve an overall annual growth rate of 5.5 per cent. The approach document emphasises that the goal of self-reliance must be carried a step further during the Fifth Plan by reducing net aid to zero in the terminal year 1978-79.

The week also witnessed the signing of three trade agreements, all of them with socialist countries. Turnover of trade with Czechoslovakia under the protocol is of the order of Rs. 130 crores in 1973 and that with the German Democratic Republic Rs. 69 crores. The agreement with Yugoslavia is for the continuation of India's trade relations on the basis of payment in convertible currency from next year. The agreements with the east European countries have been based on rupee trade, but Yugoslavia, which was among the first to come to such arrangement has now opted for a free convertibility system, probably because in the past it turned out to be heavily a one-sided affair, India importing more than she exported to Yugoslavia. When Yugoslavia suggested the free convertibility system, it was feared that this may well prove to be the end of rupee trade since this system is in vogue only with the socialist countries. However, the signing of two more protocols with Czechoslovakia and the German Democratic Republic has disproved this fear.

Road safety is a matter of light or death.

Philips have the widest range of lamps and fittings for the light that's right for your road.

Every year municipalities all over India are making roads safer for night traffic. They are using Philips lights. Today thousands of kilometres of road have been lit by Philips.

World leaders in road lighting.

Philips have been lighting up the busiest roadways in the world. And they have the lamps and fittings to give your roads bright, glare-free, colour-corrected and evenly distributed light.

The right light for every road.

You have a wide range to choose from to suit any kind of road. Mercury vapour lamps of 80, 125, 250, 400 and 1000 watts. The widest range in the country. With fittings to suit all your public lighting needs; be it of a busy junction, a main road, a residential street, a park or a public monument.

Philips also have the brightest range of tubelights in the country with specially designed fittings for streetlighting.

Keep death off the roads with Philips light.

Maharashtra : Maximising the Tempo of Relief Work

(By a Special Correspondent)

Maharashtra has been a victim of droughts for three years in a row. The State Government deserves compliments for the efforts it is making to bring maximum relief to the affected people.

SCARCITY conditions for the third year in succession have seriously hit the *kharif* crop in a number of districts in Maharashtra. The prospect for the *rabi* crop also is not bright as the failure of the monsoon and the dry and hot weather has driven the sub-soil water deeper and deeper. A scarcity relief committee has been set up with the Chief Minister, Mr. V. P. Naik, as its president and the president of the Bombay Pradesh Congress Committee as its chairman. The Government spent Rs. 43 crores on scarcity relief works last year. This year it has, up to the time of writing, spent over Rs. 21 crores and the total amount required to be spent may go up to Rs. 80 crores. Already some 1.5 million people are taking advantage

of scarcity relief works. The Government is also investigating a scheme for the supply of protein food to the affected people. The spectre of scarcity of drinking water for men and cattle and of fodder for cattle is also looming large.

Addressing a meeting of industrialists and business men in Bombay recently, Mr. Naik called for maximum efforts to raise a fund of Rs. 5 crores from the urban areas, mainly from Bombay, to provide relief to the scarcity-hit people. This amount would be in addition to the Government funds that would be available. It was suggested that donations of Rs. 3.50 a family should be collected from 1.5 million families and that professional men should donate ten days' income to the fund. The industrialists and business men present offered their full co-operation. The representatives of the film industry also agreed to arrange special shows and such other programmes in aid of the fund and to ask those working in the industry to make contributions to the fund. An appeal was also made by the Chief Minister at another meeting to trade union leaders. Some of the trade union leaders agreed to call upon the workers to contribute a day's wage in a month to the fund and also to work on an additional day for making further contributions to the fund. The Opposition parties in the Maharashtra Legislature have also agreed to extend their full co-operation to the State Government to meet the scarcity conditions, despite some differences between them and the Government.

Lokayukta Appointed

The Maharashtra Government has set a good example by appointing a Lokayukta (Ombudsman) for the State. Mr. S. P. Kotwal, who recently retired as Chief Justice of Maharashtra, has been appointed to this very responsible post. Any member of the public can make a complaint to the Lokayukta against any Government servant, including the Ministers, but excluding the Chief

Minister. The complaint may be about corruption, misconduct or even a grievance not amounting to misconduct caused by maladministration or negligence. The Lokayukta is an independent authority who would, if the complaint has any substance, investigate it. For this purpose, he is authorised to summon any person to give evidence or to produce whatever official documents are required. He would then make his recommendation for remedial action to the Government. It is hoped that the creation of this new post will help in rooting out the evil of corruption.

Agitation in Vidarbha

At a meeting of the representatives of the C.P.I.(M), C.P.I. and certain other small parties it was decided to agitate "not to allow" the Maharashtra Legislature's session scheduled to be held in Nagpur from 20th November. The decision is supposed to have been taken as a protest against the failure of the Government to check the steep rise in prices, growing unemployment, etcetera. The Centre and the State Government are fully aware of these grievances. The holding of the session of the Legislature periodically in Nagpur is a privilege to Vidarbha, and it is difficult to see how the stopping of the holding of the session in Vidarbha, which would mean holding it in Bombay, would serve any useful purpose except as a political stunt.

Separate University

The decision of the State Government to set up a separate university for four districts of Vidarbha, viz., Amravati, Akola, Buldana and Yeola, has been welcomed in the region. Educational circles are awaiting with keen interest to see whether it will be a mere examining university, or a university with affiliated colleges doing undergraduate teaching and the university itself organising post-graduate teaching and research. The view has been expressed that it should be the latter and something more, i.e., that it should concern itself not only with the teaching of students after passing the school leaving examination, but should also take up the work of teaching of adults of all ages by extension courses of education as in some of the universities abroad where extension work is recognised as a useful bridge between universities and society.

Central Policy towards West Bengal : A Study in Depth

The Agony of West Bengal: A Study in Union-State Relations. By Ranajit Roy. (Published by New Age Publishers Private Ltd, Calcutta 12. Price Rs. 19.50, pages 170.)

The book's main contention is that West Bengal has received less than its due from New Delhi during the last 25 years. This is not the first time that such an allegation has been made. But where the book scores is in backing up the charge with a formidable array of facts and figures culled from different sources. The author has not indicated the political rationale that might or might not have underlain such a Central approach, and has been content with enumerating the economic consequences that have flowed from such a move. But he has left enough suggestions that unless the trend is reversed and the agony of West Bengal is properly attended to, the situation may deteriorate fast. In the last paragraph of the last but one chapter, he writes: "It is time for India to take a lesson from the happenings in Pakistan. Unity of the country can be preserved by a 'strong' Centre with the help of the police and the Army in the short run. The other method—the one that the Congress preached until before independence—is to acknowledge that the country is a varied one and that the autonomy of the States should not be fake as under the present Constitution but real, with requisite financial and political powers, and guarantees against Central interference, open or hidden". The second enlarged version of the book, which already seems to have kicked up controversy in many quarters, has been enriched with the addition of a few more interesting chapters.

Central Excise

Central Excise and Salt Act 1944. By B. C. Mitra (Published by Eastern Law House Private Ltd, 54 Ganesh Chandra Avenue, Calcutta 13. Pages 486, price Rs. 40.)

The author is one of the leading legal luminaries in the country and has to his credit quite a good number of important law publications. His

penetrative insight into the legal implications and consequences of the various provisions in the different statutes is well known. Central excise which originally constituted a very nominal element in the revenue resources of the Government, has assumed great significance today because of the total amount of revenue collected by the Government through this source, as also its coverage. The Central excise duty has become all pervasive and as a matter of fact, there is hardly anything in one's daily life which is not touched by it. Naturally, the number of litigations arising out of the Central Excise Act is large these days and it is, therefore, in the fitness of things that an authoritative publication dealing exhaustively with the various provisions of the Act and the rules framed thereunder along with authoritative interpretations thereon should be available to the practising lawyers as also to persons with commercial interest. Mr. Mitra has dealt with the subject in details. A special feature of the publication is that the author has taken pains to get hold of various other Acts, having direct or indirect bearing on the Central Excise Act.

H. R. Bose

Business Directory

Indian Business Directory—Exporters and Importers 1971. (Compiled by the Indian National Committee of the International Chamber of Commerce in co-operation with the Federation of Indian Chambers of Commerce and Industry. Price Rs. 35, pages 168.)

With the expansion of trade and commerce and establishment of trade relations with new countries, there has been a growing demand for up-to-date trade information. This directory is a standard reference book. It contains information of about 1,000 exporters and importers. The directory is divided into four sections. Section one gives the general survey of the economy, export-import trade control, arbitration facilities and guidelines for foreign collaboration. Section two gives the alphabetical list of exporters with their addresses and commodities

three gives the alphabetical list of importers and the commodities which each firm has been importing. Section four gives lists of Chambers of Commerce and other trade associations in India and abroad, export promotion organisations and other information useful for exporters and importers. A commodity index is given at the end.

The Compact Edition of the Oxford English Dictionary

The full text of 13 volumes reduced micrographically to 2 volumes

at £32 (Rs 640)

— with a reading glass

The *Oxford English Dictionary*, unrivalled in its accuracy and comprehensiveness, is the supreme authority on the usage and history of English words. It is the nucleus of any serious library, and the arbiter in any difference of opinion on the English language. But its price, £100, has put its 13 volumes beyond the reach of many libraries and most private buyers. The new *Compact Edition* offers the complete text of the *OED* for less than a third of the cost of the 13-volume set.

'There is no dictionary in the world to compare with it.'

WILLIAMSON MAGOR & COMPANY LIMITED

(Incorporated on 8th March, 1954 under Indian Companies Act, 1913)

(Registered Office : 4, Mal Lane, Calcutta-1.)

ACTIVITIES OF THE COMPANY

The principal business of the Company at present are tea garden owners, planters, cultivators, producers, sellers and exporters of tea. The Company now owns five tea estates, namely, Soraipani, Seajuli and Dufflaghur in Assam and Lingia and Glenburn in Darjeeling with a total tea bearing area of 1326 hectares producing approximately 16,25,700 kgs. of tea per year.

The Company also acts as agents in India for seventeen tea companies incorporated in the United Kingdom and having tea gardens in India. The Company's agency business also includes the selling agencies for tea chests linings produced by India Foils Limited and timber products of Andaman Timber Industries Limited.

The Company has the following subsidiaries, namely, The Bishnauth Tea Company Limited, The Nagri Farm Tea Company Limited, The Soom Tea Company Limited, The Dimakusi Tea Company Limited and The Gohpur Tea Company Limited.

With a view to expanding its business the Company has agreed to purchase from The Romai Tea Company Limited of the United Kingdom land comprising Romai Tea Estate situated in Upper Assam together with its buildings, plant and machinery (hereinafter called "the said tea estate"). The said tea estate has a total leasehold area of 574 hectares approximately of which 246 hectares approximately are under cultivation of tea. The said tea estate produces approximately 3,60,000 kgs. of quality tea per year.

Third Asian International Trade Fair

Asia 72 : A Concrete Step Towards Unity

(By a Special Correspondent)

Asia 72 tries to capture the spirit of a resurgent continent. What it attempts to do is to spread the message that there is much scope for the Asian countries for give and take.

WITH the exception of Expo 70, there has been nothing like the Asia 72 International Fair in Asia before. Spread over a sprawling area of 160 acres in New Delhi, close to the historic ruins of Purana Quilla, the third Asian International Trade Fair tries to capture the spirit of a resurgent continent. And it has done that to a remarkable degree. When the fair closes in mid-December, Asia in a narrow commercial sense will most likely remain the same, but the message of Asia 72—that there is so much scope for these countries for give and take—will not be lost. And that will be something.

Indeed, it is on this aspect of closer economic co-operation among the Asian countries that the Prime Minister, Mrs. Indira Gandhi, laid the stress when inaugurating the fair on 3rd November. Asia has too long been exploited by the rich countries. A time has come for the countries of the continent to shake off their dependence on the developed economies of the West and to forge closer ties among themselves to improve the lot of the teeming masses. That has also been the original idea behind organising such fairs every three years under the sponsorship of the United Nations. And as Asia moves ahead in the economic field, the fairs have also become more varied and exciting. The first such

fair was held in Bangkok in 1966 and 30 countries participated. The second was in Teheran in 1969 where the number of participating countries rose to 39. In New Delhi, the tally has gone up further—to 47. In addition, 19 firms from abroad have set up pavilions.

Asia 72 coincides with the year-long silver jubilee celebrations of India's independence. For the Central and State Governments, public-sector undertakings and private industry, it thus affords a big opportunity to show to the world the best of their achievement during all these years. Fifteen Ministries of the Government of India and 19 State Governments and two Union Territory Governments are participating in the grand spectacle. More than 40 industrial organisations in the public and private sectors have also set up pavilions.

But the impressive part of Asia 72 is not the attendance roll call. Fairs of such a massive scale do not distinguish themselves by the number of participants but by the quality of exhibits. And here Asia 72 can be said to have established a high water mark, not only by Indian or Asian standards but by world standards. The *piece de resistance* of the show is the Theme Pavilion. In two auditoriums, fitted with weird looking electronic equipment, it tries to capture India's march through the ages. Using the latest techniques, the panorama of India's odyssey through history with all its notes and nuances has been sought to be reproduced in 30 minute shows of light and sound, all blended together. Produced by the National Institute of

Design, Ahmedabad, and a team of experts from the Art Centrum of Prague, led by Professor Jaroslav Fric, the programme is an exhilarating experience. If it is a marvel of modern science, it is also a testimony of man's creativity.

Equally impressive, although its appeal is of a different type, is the Hall of Nations, the tallest building in the fair site. In this structure are displayed the choicest exhibits of a large number of nations. Architecturally, the building itself has been regarded as a remarkable one, based on detailed mathematical calculations done by computers. It is believed to be the first structure of its kind attempted in India. The Hall of Nations forms the nucleus of the permanent complex of Asia 72 covering an area of 40 acres. The other constituents of this complex are the Hall of Industries, the textile pavilion (textile is the theme of Asia 72), Nehru pavilion, Theme pavilion, an open air theatre, a cinema-cum-theatre and an international restaurant. This permanent complex, which will remain after Asia 72 has closed down, will enable New Delhi to become a member of the International Union of Trade Fairs with whose permission trade fairs are organised all over the world. Among Asian cities, Tokyo is the only other member.

The response to the fair has been satisfactory although not entirely devoid of political overtones. Among India's neighbours, China has been a conspicuous absentee. In a project of such a scale, some delays are of course not unexpected, and after a rather slow start, the fair has now got going in a brisk manner. Fair authorities hope that deals worth several crores of rupees between participants would be struck during the exhibition. Still, its true success will lie not on how many transactions have been clinched but how far it is able to spread the message of Asian unity of which Mrs. Gandhi has spoken.

CAPITAL, 9th NOVEMBER, 1972

Australia at Asia 72 : Looking Forward to Profitable Trade Ties

(By a Correspondent)

Australian business men with their own product exhibits at Asia 72 are looking forward to meeting Indian parties to discuss trading arrangements. Trade between the two countries is now mostly limited to traditional products.

AUSTRALIAN business men and their agents with their own product exhibits in the Australian "Namaste" Pavilion at Asia 72 are looking forward to meeting Indian business men and women and are ready to discuss mutually-profitable trading arrangements. Products of interest to trade visitors range from wool textiles and the latest processing techniques, radio-telephone systems, agricultural machinery and electronic hardware to the latest Australian-made motor-cars and agricultural aircraft. These exhibits are part of Australia's overall display at the fair which depicts aspects of Australia's development and how it is co-operating in the development of India and other countries in the region. A trade enquiry counter will be staffed continuously to handle enquiries. This is in addition to a general information counter located at the entrance to the pavilion. Trade and business visitors interested in Australian products which are not on display in the pavilion are requested to provide full details so that the Australian Trade Commissioner and his staff can process these daily for on-forwarding to Australia on their behalf. Facilities are provided for this purpose.

While there is a great deal of general interest to see in the Australian pavilion, the visiting business men from Australia and their agents are particularly keen to take this opportunity of expanding business contacts. Trade between Australia and India is mostly in traditional products (Indian jute goods, tea, cashew-nut kernels, cotton piecegoods, coir, mica and handicrafts, and Australian wheat, wool, zinc, lead, iron and steel), but there is potential for greater diversification. New Indian items which have found a market in Australia include steel pipes, machine tools and other manufactures; while from Australia have come passenger cars for the India Tourist Development Corporation, shipments of rice,

concrete pumps, nickel and copper, and phosphate rock.

Other ways of developing stronger trade relations between India and Australia include joint venture arrangements, in which there has been increasing interest in recent years. With exports and imports representing some 13 per cent of gross national product, Australia is very much a trading economy. It now sends 43 per cent of its total exports to Asian countries, compared with 14 per cent two decades ago. This significant trend in the direction of Australian exports in the past 20 years has been accompanied by dramatic growth in manufacturing industry and in exports of manufactures. Australia believes that its own experience as a developing nation in the geographical Asian region makes it a logical source of supply for specialised machinery and equipment and the technical skills needed to help the development of its Asian neighbours.

Australian products on show in the industrial court area of the pavilion have some outstanding features which will be of interest to trade and business visitors.

The Agricultural Machine that Flies: When Transavia Corporation Pty. Ltd of Sydney set out to design the Airtruk it was with the objective of developing an aircraft which can distribute more tonnage at lower operating cost and cover a larger area in less time than any other plane of similar size and power. It has many unique design features.

A Seed Planter that Jumps Obstacles: A seed planter which can operate as a single or multiple unit drawn by a tractor, and jumps over any obstacle in its path, is being exhibited by Frigrite Pty. Ltd of Melbourne. The Company is also showing refrigerated tanks for bulk storage of milk, using refrigeration-condensing units—a product of 30 years' specialisation, research and development.

The Sparkle of Precious Gem Stones: Australian opals, sapphires and gem-stones have been exhibited by Daddow's Gems of Brisbane which

has developed markets in Asia, Europe and the U.S.A. Australia supplies 95 per cent of the world's opal market. The opal's fiery glint is in the heart of the stone with colours ranging through red, orange, green, blue and purple.

The World's First "Fluid Action" Camera: This Australian invention by R.E. Miller Pty. Ltd of Rushcutters Bay, which ensures smooth panning and tilting of film cameras, is now in use around the world. It is also used in conjunction with telescopes and electronic equipment where smooth action is required. The Company is also exhibiting a range of the latest photographic equipment.

Computer Designed for Student Training: This Australian-designed and relatively low-cost unit from Electronic Associates Pty. Ltd of Sydney is primarily an educational system, but its sophistication and flexibility of the analog and logic sections also make it suitable for research and industrial use. The computer has attracted international interest and has been sold in many countries.

Simple and Adaptable Radio-Telephone: This product developed by Amalgamated Wireless (Australasia) Ltd of Sydney, one of the largest Australian-owned electronics companies, functions like a normal household telephone, and can link areas 50 kilometres from post office telephone facilities to a national telephone network. A.W.A. is exhibiting a range of the latest communications equipment.

Seed-Sower which is also a Cultivator: A linkage disc drill which can over-sow existing pasture, sow all cereal crops in prepared ground and can be used also as a cultivating implement, is exhibited by Connor Shea and Co. Pty. Ltd of Sunshine, Victoria. The Company has developed a range of tillage and seeding equipment for use in both rugged and cleared country.

Latest Australian-designed Motor Cars: From the Ford Motor Co. of Australia Ltd and from General Motors Holden's Pty. Ltd, the nation's two leading motor vehicle manufacturers, are certain to attract a lot of interest. Each Company has two cars on display. These models are popular in Australia and are exported to many countries.

A section of the Australian pavilion is devoted to a colorful display featuring important aspects of the country's rôle in the development of Asian countries and India in particular. The development of close ties between Australia and her neighbours has resulted, in many cases, from the former's active membership of regional organisations, such as the Economic Commission for Asia and the Far East (E.C.A.F.E.). Australia has been a member since the Commission's foundation in 1947.

Until the second World War, Australia's ties were mainly with western Europe. But the events of that war, particularly the engagement of Australian troops in Asia and the Pacific, emphasised to Australians the geographical proximity of Australia to Asia. The postwar emergence of many new and independent Asian and Pacific nations led to the development of an outward-looking policy aimed at establishing closer and more meaningful relations between Australia and her close neighbours. The efforts of this policy have now become obvious in many aspects of Australian life.

Australia's trade with Asia has greatly increased; thousands of Asian students attend Australian educational institutions or come to Australia for technical training; Australia's bilateral external aid programmes are largely concentrated on the E.C.A.F.E. region; Australians visit Asia in ever-increasing numbers; cultural and sporting links are being constantly extended and Australian business men are becoming more aware of potential economic opportunities in Asia.

Australia's first 17 years of E.C.A.F.E. membership were as a non-regional member. In 1963 Australia decided to identify more closely with the countries of the region by applying for regional membership. This application was readily accepted. The then Australian Foreign Minister, Sir Garfield Barwick, said at the time: "I think our request was understood by the people of Asia not as a wish to obtrude or to take advantage of our geographical situation in the Far East, but as an expression of our desire to help tackle with them the problems of the region. We face common problems and we need to concert together in seeking solutions."

This Australian policy objective has been steadily maintained since 1963.

Like many Asian countries, Australia faces difficulties of climate and topography and the need to transport materials and machinery over long distances. Like many Asian countries, Australia has needed to invest large amounts of capital on other essential infrastructure—airways, shipbuilding, electric power, irrigation, health, education and housing. And like many Asian countries, Australia is unable to find all the capital she needs from her own

resources and must import additional capital from abroad.

Australia has found that her experience in finding solutions to some of these problems has been of use to many of her neighbours. But this has not been a one-way road, for Australia has also been able to learn from the experiences of other members of the E.C.A.F.E. Through her membership of the E.C.A.F.E., Australia has sought to co-operate in every way with the countries of Asia in their struggle to overcome the obstacles impeding their economic growth.

Asian Trade Fair : Round the Pavilions

Tyre Industry's Pavilion

The automotive tyre industry of India is putting up a pavilion in the Third International Trade Fair: Asia 72 in Delhi, which is expected to attract many prospective buyers of tyres from overseas. The industry already exports a wide variety of tyres, including tyres for trucks, buses, cars, aeroplanes, large earthmoving machines and tractors, to 90 countries, including the U.S.A., the U.K. and Russia. Elaborate arrangements are being made at the tyre industry pavilion to receive overseas visitors who will have an opportunity to see and examine various types of tyres now being manufactured in this country and discuss export possibilities. It is said that the pavilion at the Asian Fair "is the largest ever put up by the Indian tyre industry" to attract foreign buyers. The various interesting displays and exhibits in the pavilion will highlight the tremendous progress made by the industry to make the country self-reliant and also boost exports.

Heavy Electricals at Asia 72

Heavy Electrical (India) Ltd, Bhopal, is participating in the Third Asian International Trade Fair in New Delhi. The two-storey pavilion, covering an area of 1,984 square metres projects the

activities of the factory in the building up of equipment for generation, transmission and utilisation of power—the much needed electric power for the advancement of a nation. In line with the overall theme of "Asia 72", i.e., "Peace and Progress for Asia through Economic Co-operation", the H.E. pavilion's theme is "power for powerful Asia". The theme is woven round a well-knit story which projects to the visitor the rôle Heavy Electricals plays in making available "power" for the service of India and other developing countries.

The exterior of the pavilion is symbolic of the heavy and sophisticated equipment being built by the factory. The two circular forms, mounted on pillars, with vertical vanes all around, represent the stay ring of a water turbine symbolising hydro-power equipment. Sandwiched between the two cylindrical forms is a dam representing tapping of power from water with the aid of turbines. The cylindrical rings on the extreme ends represent large motors—another product of the H.E. factory for utilisation of power. One of the two motors provides the exit for the visitors. In the H.E. pavilion, the visitor enters through the dam, walks through the turbines and goes out from one of the motors.

The interior of the pavilion unfolds to the visitor the story of Heavy Electricals woven round the "How" and "Why" of the multifarious activities of the factory. India's first and largest heavy electrical equipment factory in

OUR EXPERIENCE—YOUR BENEFIT

Bhopal is supplying basic power plant and equipment to different nooks and corners of the country and other developing nations to help build economic power. This is how the factory is introduced with the aid of different techniques of display. Subsequent display depicts activities of the factory in different spheres followed by emphatic projection of the men who man the factory. On the ground floor of the pavilion actual equipment representing the wide range of manufacturing activity of the factory have been displayed.

Ashok Leyland's Participation

Ashok Leyland's display includes the mighty Hippo Dumper capable of taking a load of 16 tons of heavy materials, such as iron ore and bauxite, and operating in difficult terrains and off-the-highway. A modern luxury bus built with 98 per cent indigenous materials, which is expected to attract the attention of foreign visitors to the Fair, is also being exhibited. Ashok Leyland will also depict its varied products and social contribution by photographic display. In the pavilion, complicated castings produced by its sister concern, Ennore Foundries, which are used in automobiles, engines and tanks and also the high precision spare parts used on Ashok Leyland vehicles will also be displayed.

Hall of Nations

One of the elements of the Permanent Complex, the 107-foot high Hall of Nations will be the tallest building in the 120-acre Fair Complex. For its size, it is the biggest spaceframe in R.C.C. anywhere. It is made of insitu concrete members, with triangular frames of 16 feet sides. The frame analysis was done with the help of computers. Over 350 mathematical equations had to be solved to arrive at a proper structural design, requiring about 24,000 memory locations of the computer. The analysis was also repeated for static loads, wind and seismic loads and for various construction stages. At a height of 22 feet from the floor level, the Hall of Nations has an L-shaped mezzanine. Inclusive of it, the Hall of Nations will provide an exhibition area of 120,000 square feet. Over 20 nations participating in Asia 72 display their goods and manufactures here.

Defence Pavilion

The theme of "self-reliance in defence production" has been projected in the Defence pavilion through a display of aircraft, defence engineering and communications equipment, guns and ammunitions, heavy transport vehicles and logistic equipment. The 4,185 square metre plot, situated south-east of the Hall of Nations, has a built-in area of 1,800 square metres. The pavilion has two columnless parabolic structures. The surrounding wall of the pavilion is a tapering curve standing about 17 feet at its highest and 10 feet at its lowest.

The exhibits within the covered area and outside of it include sophisticated defence stores and equipment entirely designed and fabricated in India. Among them will be the Vijayanta tank with its crew demonstrating its operation. The *Gnat*, I.A.F.'s celebrated fighter jet, is also on display along with the trained pet aircraft *HJT-18*. Among the sophisticated fire-arms are the radar-controlled anti-aircraft gun. Other exhibits include electronic and radar equipment, steel, armour and alloy castings of high specifications, ammunitions and general stores, clothings, machine tools and earth-moving equipment.

Czechoslovak Pavilion

The Czechoslovak pavilion in Asia 72 not only depicts that country's economic and industrial strides but also brings into focus the Czech contribution to the development of basic industries in India. Built on a 2,200 square metre plot, the graceful pavilion has been designed by Raj Karer and Associates. It houses machine tools, textiles and leather-making machines, printing machines, tractors, farm machinery and models of industrial plants.

Maharashtra Pavilion

Maharashtra is a major participant in the States sector in Asia 72 with a plot of 2,300 square metres close to the Nehru Pavilion on one side and the Administration Block on the other. It covers an exhibition area of 1,165

square metres. As many as 6,000 products are on display. The pavilion has a pond in the front and decorated panels and paintings inside. Maharashtra's tourist potential has also been highlighted. The theme of the pavilion is "Peace through Prosperity."

Mysore Pavilion

The pavilion depicts five decades of the State's industrial traditions. The highlight of display is a 14 feet dried up sandal tree which was on view in Expo 70 in Osaka. Conceived as a series of three octagons with self-supporting roof, the pavilion houses the export industries of Mysore, like N.G.E.F. and R.E.M.C.O. The State's participation in Asia 72 is estimated to cost Rs. 15 lakhs.

Punjab Pavilion

The Punjab pavilion depicts the State's "struggle for modernity." Using pure geometric forms, it reveals the people's love of life and nature. The pavilion has a display area of 10,500 square feet. Designed by Mr. Surjit Singh and Mr. S. S. Bains, the pavilion displays a variety of industrial goods and products now being manufactured in the State.

India 72 Pavilion

India has entered the twentyfifth year of freedom. Two years ago, when the E.C.A.F.E. was approached with a request to host the third Asian fair in New Delhi, it was decided to organise Asia 72 as a complement to the twentyfifth year of freedom. Now the dream has taken a concrete shape. Twentyfive years of endeavour and achievement are finding their embodiment. The construction work commenced on 14th November, 1971. Eleven elements of the Permanent Complex, 15 pavilions of the Central Ministries, 19 of the State Governments, 14 of the 48 public-sector undertakings and four times as many of the private-sector industries along with a score of foreign countries have risen on a 120-acre expanse. For the first time, the nation is going to acquire a permanent complex of exhibition struc-

tures. More than 35,000 labourers, drawn from different parts of the country, have worked round the clock to fulfil the Prime Minister's directive to make the Fair "an impressive image of what India is today and what it hopes to be tomorrow."

The richest tribute to the years of freedom has been paid in the theme pavilion, India 72. This mosaic in moving images is a rediscovery of India and will remain on view outlasting the Fair. There will also be special days dedicated to the children and youth of a free nation. Daily fireworks displays by the lakeside will add gaiety and charm to the celebrations of the freedom anniversary.

Indian Steel Pavilion

The Indian Steel Pavilion faces one of the principal entrances to the Fair. Designed by Mr. Ranen Ayan Dutt, the pavilion depicts the theme: "Steel for Development." The display is organised in two geodesic domes designed as spaceframe structures with tubular sections resting on elevated pinpoint foundations. The crown of the first dome rises to 40 feet and that of the second to 54 feet from the road level.

An architecturally novel and visually exciting subway ushers in the visitor to the Steel Pavilion and leads him on to the first of the two domes. The first exhibition dome projects the rôle of steel in a country's development whether in the field of industry, defence, agriculture or in the day-to-day life of man. It also reflects the pioneering efforts of those men of vision who introduced modern steel industry to India in the earlier part of this century. The second dome, which is two-tiered, tells the story of the birth and growth of the Indian steel industry in the Government sector and its impact on the socio-economic life of the nation and the future of the industry. The pavilion has its own auditorium where films on steel technology are to be shown. At the exit of the pavilion there is a giant mural depicting the country's heritage in steel making and its promise for the future. Participants in the Indian Steel Pavilion are: Hindustan Steel Ltd, Bokaro Steel Ltd, Mysore Iron and Steel Ltd, Central Engineering and Design Bureau, Hindustan Steelworks Ltd and Construction and Engineering Projects (India) Ltd.

Machine Tool Pavilion

Indian Machine Tool Manufacturers' Association has organised the Machine Tool Pavilion in the third Asian International Trade Fair. The pavilion has been set up in the Hall of Industries under the auspices of the Engineering Export Promotion Council, which has sponsored the exhibition of major engineering industries in India, which includes industrial machinery, automobile ancillary industries, air-conditioning and refrigeration equipment, electrical products, pumps and other engineering items. The total area allotted to the Machine Tool Pavilion is about 7,500 square feet in which 17 machine tool firms are displaying a range of 65 metal working and metal forming machine tools, small tools, foundry equipment and accessory items. The Machine Tool Pavilion affords a valuable opportunity to the visitors and particularly to the foreign delegations to have a close look at the various types of machine tools made in India by reputed firms.

The Soviet Pavilion

Russia is a major international participant in Asia 72, with the largest plot—4,700 square metres, in the international sector of the Fair. The year 1972 marking the quarter century of Indo-Soviet co-operation, the Soviet pavilion in Asia 72, within a covered exhibition space of 1,550 sq. metres, mirrors not only the Soviet Union's social, economic, cultural and technological progress but also the steady growth of Indo-Soviet co-operation for development. Of particular interest is the participation of five Central Asian republics of the Soviet Union, namely, Uzbekistan, Kazakistan, Tajikistan, Kirghizia and Turkemanistan.

The goods on display range from machine tools to consumer goods. Representatives of the Sovexport are on hand in the pavilion for negotiating business deals. Documentaries on life in the Soviet Union are being shown in an auditorium in the pavilion. A total of 26 export organisations of the Soviet Union has been represented.

Korean Pavilion

The Consul General, Mr. Shin Yong Lho, on 28th July, performed the

groundbreaking ceremony of the Korea pavilion. Mr. Lho said that Asia 72 was the most significant of all the 20 fairs his country was participating in during the year. He said Korea was the first foreign importer of Indian freight cars and steel products and India was the first importer of Korean chemical fertilisers.

G.D.R. Pavilion

The theme of the G.D.R. pavilion is bifocal: "G.D.R.—A Reliable Economic and Trade Partner" and "G.D.R.—For Worldwide Trade and Progress". Participating in the pavilion are four State-owned foreign trade enterprises of the G.D.R. representing the entire range of industries there. The exhibits to be displayed have been carefully selected to be in tune with India's needs. Some of the major exhibits are: a harvesting combine E 512, silo equipment and seed dressing equipment—from Transportmaschinen; printing equipment and allied industries—from Polygraph Export; models of ships—from Schiffs-commerz; and cameras, raw film and photo chemicals—from ORWO. Many of these products are already well known in India.

Kuwait's Participation

The star attraction of the Kuwaiti pavilion is going to be the "Boum", the traditional ship which was used for pearl-diving, fishing and marine trade between the Indian Ocean area and the Arabian Gulf in the past centuries. The rest of the pavilion will depict the strides of the oil-rich nation in the fields of education, health and community welfare. Among the industrial exhibits will be the products of the oil and petrochemical industries for which Kuwait has already earned a name in the world markets. Manufacturing industries like steel pipes, copper utensils, aluminium sections and windows and asbestos pipes and fittings will also be on display. Among the other products to be exhibited will be melamin household items, fibre glass, boats and tanks, erosol products, foodstuffs, confectioneries, biscuits and macaroni. In all about 18 firms and three Ministries of Kuwait are represented in the pavilion.

Value of bringing out SUPPLEMENTS in CAPITAL

Proclaimed as India's leading and most widely read weekly newspaper devoted to economics, industry and public affairs, CAPITAL is considered indispensable by those who constitute the bulk of buying power. They include, among others, people holding important positions in Government departments, public and private-sector projects and undertakings, and commercial establishments of all descriptions.

CAPITAL is a unique medium for bringing out sponsored supplements and features.

Your advertisements in **CAPITAL** supplements symbolise silent propagation of your goods and services throughout the country. Their impact may not be visible immediately, but they do yield handsome dividends in the long run.

Tame Trading in Moorat Session : Economic Situation Causes Concern

MOO RAT trading put through in the stock markets on Sunday evening ushering in the new Samvat year 2029 turned out to be a very tame affair. The markets did wear a festive look and crackers also boomed to celebrate the occasion but that could not hide the underlying feeling of despondency, reflecting the growing concern over the deteriorating economic situation. Bulls and bears performed the ritual but they kept their business to the minimum. Institutional investors did not behave very differently. Enquiries with stock-brokers revealed that institutional orders were much smaller than in the past. The Unit Trust purchased some shares and also sold some shares. The price pattern at the close of the special Moorat session was mixed with minus signs outnumbering the plus signs.

Trading during the earlier part of the week was characterised by small turnover and narrow fluctuations and the undertone was distinctly subdued. The overall behaviour of the stock markets suggests that while there is a general reluctance to press sales at lower levels, confidence to follow the rise is also lacking. The decline in floating stocks of good shares due to persistent purchases by institutional investors, who have more funds than they can easily invest in equity shares and the steady flow of good corporate news have prevented bears from assuming an aggressive posture. But there is little enthusiasm to follow the rise as the economic prospect is far from pleasing. Agricultural production, which had suffered a small setback in 1971-72, is likely to show an appreciable fall in the current year. The drought has played havoc with the *kharif* crop and the acute shortage of water, power and also of fertilisers is not conducive to an increased output of *rabi* crops.

The setback in agriculture is bound to affect industrial production adversely and the general economic tempo. Not many observers expect the increase in industrial production noticed during the past few months to be maintained in the months ahead because of the shortage of critical raw materials and power. The labour situation also remains

unsatisfactory. The price situation continues to worsen despite various measures taken by the Government to hold the price line. Exports have no doubt recorded an improvement in recent months, but here again the future outlook is not considered promising. How can exports be expected to show any significant rise if agricultural and industrial production does not improve and prices continue to rise, thereby undermining the competitive position of Indian goods in the overseas markets?

There have been some hopeful signs of a change in official attitudes. It is now being increasingly realised that social welfare cannot be achieved without a significant breakthrough in production in farms as well as factories. But unfortunately good intentions are not yet properly supported by suitable action. And words are no substitute for firm action. Most observers expect the economic situation to worsen further before it starts improving. How exactly the situation will develop is difficult to say. In the circumstances, the prospects of any big recovery in equity prices cannot be regarded as encouraging. Investors will have to be very discriminating in future.

The prices of gilt-edged securities have remained steady. The 3 per cent Conversion loan 1986 has been quoted at Rs. 59.85. The State Government loans have received selective support. Turnover has remained restricted.

The Calcutta stock market has remained quietly steady this past week. Prices have firmed in the special Moorat trading where both cleared and cash shares have shown a moderate rally. Sentiment has apparently been helped by the reported acceptance by the U.S.A. of the World Bank's suggestion of debt relief of \$200 million to India. Among engineering shares, Indian Iron have improved while Texmaco and Guest Keen Williams have been subdued. Jute shares have met with little business except Birla which have improved. Among paper shares, Orient have been maintained while Titaghur and Ballarour have improved. In the miscellaneous section, Indian Aluminium have been held while

Hindustan Motors have receded. Among other shares in this section, India Tobacco, G.E.C., Hindustan Aluminium, Union Carbide, Universal Tyres, Woolcombers of India and India Steamship have been transacted.

Dalal Street has displayed a distinctly subdued tone almost throughout this past week. Activity has remained at a very low ebb. Equity prices have registered small to moderate losses all-round on scattered selling and lack of fresh support. The market would have fared much worse but for the steady support extended by institutional investors, more particularly by the Unit Trust. The shares purchased by the Unit Trust last week included Associated Cements, Tata Steel, Tata Oil, Premier Automobiles, Surat Electricity, Phalton Sugar and Hindustan Lever. Business put through during the special Moorat session in shares was of a ceremonial nature. But fairly large business was transacted in Government securities. Cotton textiles have turned easy on fears of a cutback in production because of the power shortage. The cotton supply position also will not be as comfortable as in the last season. Rayons have fared no better. Steels, engineering, chemicals, shipping—all sections have displayed a more or less similar pattern. Prices have tended to recede for want of fresh support and emergence

COMPANY REPORTS

Reports relating to the following companies appear on later pages of this section :

American Express
Audco India
Bhilai Wires
Crompton Greaves
Deccan Sugar
Gontermann-Peipers
Jubilee Mills
Madras Oxygen
Mangalore Chemicals
Scindia
Spencer
Standard Motor
Travancore Sugars

of selling pressure on the rise. Most counters have finished at around the week's lowest levels. Very few counters have managed to close with plus signs. Despite the diffident mood of the market, new issues which will be on the market shortly are expected to evoke satisfactory response. This is because the supply of new shares has still to catch with the growth of investible fund.

The Madras stock market has remained steady but dull during the past week. In the planting section, Peria Karamalai and Manjushree have improved but Consolidated Coffee, Kailash Rubber and Pullangode have declined on selling pressure. In the textile section, Coimbatore Cotton have been bought while Mettur Beardsell, Radhakrishna Mills, Anglo-French and Madura Mills have been done. In the sugar section, Deccan Sugar and Cauvery Sugar have been firm on dividend news. In the miscellaneous section, Ashok Leyland and India have been wanted but Mettur Chemical and Chettinad Cement have been easy. Among bank shares, Andhra Bank has been supported.

CLEARED SECURITIES IN CALCUTTA

Mangalore Chemicals : An Attractive Share Offer

MANGALORE Chemicals and Fertilisers Ltd is offering for public subscription 7,299,870 equity shares of Rs. 10 each and 150,000 9.5 per cent redeemable cumulative preference shares of Rs. 100 each, both at par. The entire public issue has been underwritten. The subscription list will open on 14th November and will close on 30th November or earlier at the discretion of the directors but not before 16th November. Applications must be for a minimum of 50 shares or multiples thereof in the case of equity shares and five shares or multiples thereof in respect of preference shares. As for the terms of payment, Rs. 2.50 an equity share and Rs. 25 a preference share are to be paid on application and on allotment Rs. 2.50 an equity share and Rs. 25 a preference share are to be paid. The balance in both cases are to be paid against two equal calls each to be made simultaneously on both equity and preference shares by the board of directors within 12

months of allotment but with an interval of not less than two months between the calls. The proceeds of the issue will be utilised to finance the huge fertiliser project that the Company is setting up in Mangalore. The total cost of the project is estimated at Rs. 57.50 crores, of which the foreign exchange component is Rs. 20.84 crores. The foreign exchange cost is to be met out of credits advanced to the Government of India by the U.K. and the Netherlands.

The Government of Mysore has been associated with the project since its inception. The Mysore State Co-operative Marketing Federation Ltd and the Mysore State Agro Industries Corporation Ltd are the present promoters of the Company. At present the promoters hold equity shares worth Rs. 450 lakhs and preference shares worth Rs. 150 lakhs. The Company's agreements with Humphreys and Glasgow Ltd., U.K., and Stamicarbon NV, Netherlands, have been approved by

the Government. Based on naphtha the M.C.F. plant will produce 217,800 tonnes of ammonia a year, a major portion of which will be utilised in the production of 340,000 tonnes of urea which, in terms of plant nutrients, equal 178,000 tonnes of nitrogen a year. The plant has an annual excess capacity of 19,300 tonnes of ammonia for the setting up of complex N.P.K. fertiliser/calcium ammonium nitrate manufacturing facilities at a later stage. The Company has carried out detailed market surveys in order to justify the capacity of the plant, the product mix and the salability of products. Work on the project has already started and the directors expect that the erection of the plant will be completed by May 1974. Commercial production should begin from October 1974. According to the directors, the Company will start earning profits from its financial year 1975-76, that is, the second year of commercial production. A maiden dividend of 10 per cent on equity capital is likely to be paid for 1976-77. The dividend for the following year is expected to be raised to 12½ per cent and it may be 15 per cent for 1978-79. The Company will not face any difficulty in marketing its products since the consumption of fertilisers in the country—particularly in Mysore—is at present very low. Considering all these factors, it is expected that the present issue will evoke a good response from the investing public.

GONTERMANN-PEIPERS

Progress Maintained

IN his chairman's speech at the annual general meeting the Gontermann-Peipers (India) Ltd recently held in Calcutta, Mr. G. Basu said that the Company had maintained uniform progress during the year ended April 1972. (A fuller version of the speech was published in last week's issue of *Capital*.) The Company's turnover has increased from Rs. 151 lakhs to Rs. 176 lakhs. The net profit for the year is Rs. 18.63 lakhs, against Rs. 16.85 lakhs. Mr. Basu said that the operations of the Company had been affected by the shortage of raw materials, rising costs and frequent load shedding. The export performance has been good. The company has already sold its products to Egypt, Thailand and Kenya. It is now negotiating export business with other east African and Middle East countries. The Company manufactures sophisticated products backed by international quality control.

The Company's order-book position is satisfactory. As for the employment policy, about 75 per cent of employees, mostly non-technical, are from the local people. With the completion of expansion schemes, the Company's performance will improve. The rated capacity has been increased from 3,000 tonnes to 3,600 tonnes a year. The next phase of expansion, which has been taken in hand, is to take the capacity to 5,040 tonnes a year.

AMERICAN EXPRESS

New Records Set

FOR the nine month period ended September 1972, the consolidated net income a common share of American Express Company increased 22.5 per cent, to \$1.25 a share, compared with \$1.02 a share. The total net income amounted to \$89.2 million, as compared with \$72.5 million in the 1971 period. For the third quarter, the consolidated net income a common share increased 21.4 per cent, to \$.51 a share from \$.42 a share. The net income totalled \$36.4 million, up from \$29.7 million.

For the nine months, the net operating income of travel and financial services (other than insurance) increased 18.4 per cent, to \$40.2 million from \$33.9 million. For the third quarter, the net operating income increased 19.4 per cent, to \$18.6 million from \$15.6 million. The net operating income of insurance subsidiaries for the nine months increased 28.3 per cent, to \$41.2 million from \$32.1 million. In the third quarter, the net operating income increased 26.2 per cent, to \$15.4 million from \$12.2 million. The three months' and nine months' results of insurance services were achieved despite an approximate \$10 million strengthening of disability reserves in the third quarter of 1972. For 1971, the nine months' results reflected a \$2.5 million strengthening of disability reserves in the second quarter, (supplemented in the fourth quarter by a further strengthening).

In reviewing these results Mr. Clark said, "The card division experienced earnings improvement, growth in volume, a continuation of the strong increase in the number of cardholders and a reduction in credit and fraud losses." The Fireman's Fund American Insurance subsidiaries continued to show good performance in premium income and

earnings, particularly in the property and liability company. Underwriting results, aided by the absence of any major catastrophe in the third quarter, improved for virtually all lines of business, and there was a steady gain in net investment income.

CROMPTON GREAVES

Bonus Settlement

THE management and the workmen of Crompton Greaves Ltd have recently signed a long-term settlement before Mr. Bhagwat, Deputy Commissioner of Labour. This provides for a minimum bonus of 10 per cent for four accounting years starting from 1970-71 to 1973-74 inclusive. Except for this minimum bonus, the payment of the bonus will be in accordance with the provisions of the Payment of Bonus Act. The settlement also makes a detailed provision for the procedure to be adopted for setting off the amount of bonus paid in excess of the allocable surplus in any year. Any dispute on calculation of bonus will be resolved by adjudication. The settlement further provides for the workmen an interim relief of 15 per cent of their basic wages from 1st July, 1972, and that the union/workman will not resort to any agitation in pursuance of the issues covered by the settlement. The parties have also expressed a desire to continue their negotiations and arrive at a comprehensive long-term settlement covering wages, dearness allowances, classification, etcetera.

Loading of Tea

MR. T. K. Sarangan, Director (Transport), Ministry of Foreign Trade, paid a visit to 4 King George's Dock in Calcutta a few days ago where Scindia's M. V. *Jalapankhi* was loading considerable amount of tea for U.K. He was accompanied by Dr. Subramaniam, Director, I.S.I., New Delhi; Dr. Banerjee, Director, I.S.I. Calcutta; Mr. Brocar, deputy chairman, Tea Board; Mr. Rikhye, tea trade representative; Mr. Gibbs and Mr. Raghavan, chairman and deputy chairman, respectively, of India-U.K./Continental Conferences and Mr. N. M. Trivedi, Scindia's Calcutta Manager. They inspected the tea pallets with iron hoop bands and nylon straps, and also the general quality of plywood used for tea chests. Certain conclusions were reached with a view to improving the standards of plywood and the pallets, and it is hoped that as a result of these discussions there will be some improvement in the general standards of tea packing being exported from Calcutta.

AUDCO INDIA

Promising Outlook

THE outlook for Audco India Ltd, which manufactures valves of British and American designs, is promising. This is because of the expansion in the demand for the Com-

SPENCER : PROFIT AND SALES RISE

THE directors of Spencer and Co. Ltd have maintained the equity dividend at 20 per cent for the year ended June 1972. Both profit and sales have recorded an improvement over the previous year. The profit amounts to Rs. 13.98 lakhs, after providing depreciation of Rs. 9.25 lakhs, development rebate of Rs. 35,000 and taxation of Rs. 16.25 lakhs. This compares with the previous year's profit of Rs. 11.63 lakhs, after providing depreciation of Rs. 9.47 lakhs, development rebate of Rs. 1.50 lakhs and taxation of Rs. 10 lakhs. Adding to the year's profit a sum of Rs. 3.85 lakhs brought forward from the previous year, Rs. 64,332 being profit on sale of sundry assets, Rs. 15,000 being excess provision for development re-

bate and Rs. 5.18 lakhs transferred from investment reserve, there is a total of Rs. 23.80 lakhs. Out of this the interim dividends on "A" and "B" preference shares absorbed Rs. 1.91 lakhs. The final preference dividend on "A" and "B" preference shares will claim Rs. 1.91 lakhs. The proposed ordinary dividend of 20 per cent will account for Rs. 8 lakhs. A sum of Rs. 64,332 has been transferred to capital reserve. The amount written off from investment in shares of Spencer and Company (Pakistan) Ltd amounts to Rs. 5.18 lakhs. The balance of Rs. 6.16 lakhs is being carried forward. Sales for the year amounted to Rs. 20.53 crores (against Rs. 15.64 crores).

pany's products from various industries. One significant feature is that its valves are produced to international standards from indigenous materials. These pipeline valves vary in size from 1/4 inch to 20 inches and are essential components of the petroleum, petro-chemical, fertiliser, steel, aluminium, cement and many other industries. Audco India Ltd is a joint venture of Audco-Serck Ltd of the United Kingdom and Larsen and Toubro Ltd, Bombay.

MADRAS OXYGEN

Loss Incurred

THE directors of Madras Oxygen and Acetylene Co. Ltd. in their annual report for the year ended March 1972 state that there has been a steady improvement in sales from March 1972 onwards and the figure for August 1972 touched a lakh of rupees. The directors point out that this achievement is creditable in the context of the Company not possessing cylinders. The Company made an application to the Government in March 1968 for an import licence, but it was granted as late as December 1971, for Rs. 8.45 lakhs. Out of this the Company placed orders for Rs. 6.45 lakhs. For the balance of Rs. 2 lakhs, the Company could not avail itself of the licence since no rupee country was able to supply acetylene cylinders. The Company has approached the Government to permit it to import cylinders from the general currency area. Against the

Company's second application for cylinders it has received a licence for Rs. 4.41 lakhs for import from Poland. For the year ended March 1972, the Company has incurred a loss of Rs. 6.36 lakhs, after providing depreciation of Rs. 2.04 lakhs.

TRAVANCORE SUGARS

Profit Earned

TRAVANCORE Sugars and Chemicals Ltd. has reported encouraging working results for the year ended April 1972. The equity dividend has, however, been skipped. The profit, before taxation, amounts to Rs. 8.32 lakhs, compared with the previous year's loss of Rs. 91,514. After deducting Rs. 3.14 lakhs (as against Rs. 1 lakh) being provision for taxation, there is a net profit of Rs. 5.18 lakhs from which is deducted Rs. 2.24 lakhs being the loss brought forward. This leaves a profit balance of Rs. 2.93 lakhs. Out of this, development rebate reserve sets Rs. 13,103 and the preference dividend amounts to Rs. 97,500. The balance of Rs. 1.83 lakhs is being carried forward.

DECCAN SUGAR

Big Rise in Profit

DECCAN Sugar and Abkhari Co. Ltd's declaration of a final dividend of 10 per cent for the year ended May 1972 has caused satisfaction

among shareholders. The total dividend, with the interim dividend of 6 per cent, amounts to 16 per cent, against 3.4 per cent paid for the previous year. The gross profit, before depreciation, amounts to Rs. 131.99 lakhs (against Rs. 17.28 lakhs). The provision for taxation is Rs. 90.55 lakhs in spite of the carried-forward deficit. The available profit for disposal is Rs. 41.44 lakhs from which the brought-forward debit balance of Rs. 15.94 lakhs has been deducted. A sum of Rs. 3.99 lakhs is transferred to development rebate reserve while dividend equalisation reserve gets Rs. 3.64 lakhs (against nil). A sum of Rs. 6.02 lakhs (against nil) is transferred to general reserve. The final dividend will be paid out of general reserve.

JUBILEE MILLS

Setback Suffered

THE brief preliminary statement from Jubilee Mills on its working results for the year ended June 1972 shows a substantial setback, with the gross profit declining to Rs. 27.74 lakhs from Rs. 32.97 lakhs in the preceding year. The dividend, however, has been kept unchanged at 10 per cent. After providing Rs. 17.41 lakhs (against Rs. 16.29 lakhs) for depreciation, Rs. 3.20 lakhs (against Rs. 6.40 lakhs) for development rebate reserve and Rs. 3.86 lakhs (against Rs. 4.55 lakhs) for taxation, the net profit amounts to Rs. 3.27 lakhs, against Rs. 5.73 lakhs. After adjustments, a sum of Rs. 4.60 lakhs has been transferred to general reserve out of which the proposed equity and preference dividends will be paid.

STANDARD MOTOR

New Model

STANDARD Motor Products of India Ltd has manufactured a new modified model of Standard Herald Mark III Saloon known as Standard Gazel. The new features are: complete new front grille and a new rear look, five to six seater, more leg room in the front as well as back, doors fitted with sturdy frames and redesigned locks, bonnet locking arrangement operated from inside, and rigid rear axels with coil springs. The Company hopes to produce 10 cars by January and to step up to 2,000 cars in the next year. The price is Rs. 22 1/2 on the road.

COMMODITIES

I.J.M.A. Considers Export Duty on Sacking an Anachronism

AFTER an assessment of world market conditions and of the relevant economic factors, the Indian Jute Mills Association considers the export duty on sacking an anachronism and has urged the Central Government and the industry to plan a collaborative approach for stepping up the country's exports of heavy goods. In view of the disruption in production in and exports from the former East Pakistan in 1971, the Indian industry was called upon to meet the essential world demand for sacking and India exported as much as 100,000 tonnes of the product, earning about Rs. 27 crores in foreign exchange. For the 1971-72 jute year, the export offtake was much higher at 149,200 tonnes, in spite of the resumption of shipments from Dacca since the emergence of an independent Bangladesh.

An I.J.M.A. Press note issued during the week-end recalls that the Indian industry had been cut off from its principal sacking markets as a result of persistent price cutting by the jute industry in the erstwhile East Pakistan through the export bonus voucher scheme. The revival of demand for sacking since 1971 has enabled India to establish many excellent trade contacts and renew some old links. The Press note refers to the abolition of the discredited bonus voucher system by the friendly Bangladesh Government immediately after assuming the reins of administration and deems it vital in the Indian industry's interest to continue nurturing these contacts on an enduring basis.

Sacking Export

The I.J.M.A. estimates that on the basis of the average monthly export of heavy goods from India during the first three quarters of 1972, the annual export offtake this year will be 120,000 tonnes. It believes that with proper planning and a measure of stability, it should be possible for India to share the world sacking market with Bangladesh on an expanding basis. The Association feels that it would not be too optimistic to aim at an average annual export of 200,000 tonnes, or half of the mid-'fifties' figure of 400,000 tonnes which, in the face of aggressive com-

petition from the former East Pakistan, had dipped to the rock bottom level of 48,000 tonnes in 1969.

Another important reason for urgent action to step up sacking exports, continues the Press note, is the pronounced downward trend in Indian offtake of the product which, in the face of a high level of production, has been acting as a drag on the market, tending to depress its prices. By way of illustration, the note cites the 20.8 per cent decline in the internal offtake of sacking during the five-month period ended September over the comparable figure for the preceding five-month term to 144,800 tonnes. The availability of a higher tonnage of goods for exports, maintains the Press note, "is not too unwelcome a development, for, in the present difficult foreign exchange situation, the country needs to allot a precedence to exports over internal consumption."

Simultaneously therewith, contends the I.J.M.A., the jute industry can have no future without a stable raw materials base. The overriding consideration for increasing the export of sacking stems from the assured outlet it would provide for the lower grades of jute and mesta which predominate in the Indian crop. Concluding, the Press note urges the Government of India to readily see "the utter irrelevance of the export duty of Rs. 150 a tonne of sacking, which has clearly outlived its purpose in the present jute world, already manifesting an increasing elasticity of demand."

In an earlier Press note issued last week, the I.J.M.A. expressed its positive disappointment over the inadequate fiscal relief of Rs. 400 a tonne on exports of only primary carpet-backing cloth. Although it "welcomed the long-awaited decision as a step in the right direction," it considered the official action to be "rather meagre to arrest the rapid incursion of synthetics into the carpet-backing sector." The withdrawal of the additional export duty, ostensibly imposed as a revenue measure in mid-December 1971 to finance the war with Pakistan, would not produce any material improvement in the competitive position of primary carpet-backing cloth because

of the continuing burden of a levy of Rs. 300 a tonne.

Considerable Price-differential

Polypropylene backing was cheaper than jute primary backing by six cents a square yard. Even after the latest relief, the Press note added, considerable price-differential to the detriment of jute would continue. Analysing the current trend in the consumption of backing cloth, the I.J.M.A. said that jute's share of all primary backings used by the U.S. tufted carpets industry had come down from 81 per cent in 1963 to a bare 46 per cent in the second quarter of 1972. While by now synthetics had already taken 54 per cent of the market, its share might increase to 60 per cent by the end of 1972. The Association failed to find out as to why the authorities had made a distinction between primary and secondary backing and deprived the latter of any fiscal benefit. Synthetics had made a heavy intrusion into the sphere of secondary backing as well, resulting in a decline in jute's share from 71 per cent in 1968 to 62 per cent in the second quarter of 1972.

BHILAI WIRES : SHARE OFFER

BHILAI Wires will be offering at par for public subscription some time in December 315,000 equity shares of Rs. 10 each to raise part of the finance for its project for the manufacture of various types of wires—high tensile, medium tensile and mild steel. The plant which is being set up in Bhilai will have an initial installed capacity of 42,000 tonnes of steel wire (32,000 tonnes of mild steel wires and 10,000 tonnes of high tensile steel wire). The project is estimated to cost Rs. 97.50 lakhs. Besides the share capital of Rs. 52.50 lakhs (including Rs. 21 lakhs already taken up by the promoters), the Company will receive a loan of Rs. 20 lakhs from the Madhya Pradesh Financial Corpo-

ration and Rs. 25 lakhs from M.P. Audyogik Vikas Nigam. The plant, fabricated indigenously according to a Japanese design, is expected to go into commercial production in July 1973. Production during the year ended June 1974 is estimated at 8,800 tonnes, sales at Rs. 2.49 crores and gross profit at Rs. 24.56 lakhs. For 1974-75, production is estimated at 12,690 tonnes, sales at Rs. 3.87 crores and gross profit at Rs. 51.63 lakhs. The Company expects to produce 28,800 tonnes in the fifth year. The management hopes to be able to declare a maiden dividend of not less than 10 per cent for 1973-74 and 15 per cent for subsequent years.

The Central Government has issued an industrial licence in favour of a private firm for the manufacture of synthetic woollenised jute fabrics in Malda, West Bengal, in technical collaboration with Jute Technological Research Laboratories, Calcutta. The new venture will be the first of its kind in India and will provide employment opportunities to about 1,200 persons. Designed to serve as a substitute for wool in the manufacture of blankets, wrappers, suitings and knitwear, the scheme for the manufacture of woollenised jute has been developed at the Central Government-run J.T.R.L. Incidentally, it may be mentioned that a few days ago, the Jute Technological Research Laboratory in Bangladesh claimed to have developed JUTON fabrics after batching 30 per cent jute fibre with 70 per cent cotton and combination blankets with 15 per cent wool and 85 per cent jute.

Gunny Prices Rise

Despite dull and inactive conditions, the Calcutta gunny market was in the grip of a hectic price upsurge last week. Even the disappointment over the inadequate fiscal relief in respect of primary backing alone and the virtual absence of major internal and overseas buyers from the market could not arrest the unwarranted buoyancy. Market circles ascribed the price rigging to sustained bull support in a market where sellers were difficult to locate. The impending Moorat trading on Sunday and the soaring costs of fibre were the additional stimulants. Bulls took an unusually buoyant view of the ultimate outlook for the market and went on absorbing any offer at

quoted prices. The unwary shorts and shippers had to follow the rise in covering their open positions, lending additional support to the rising market. The Moorat trading on Sunday night was a tame affair in terms of turnover. But as for prices, there was no relenting on the part of the bulls who appeared to have held control of the entire market. The leanness in overseas interest in Indian products, despite capacity bookings by the industry in Bangladesh, was ascribed to the lower price ranges offered by Dacca, positively inducing the ultimate consumers to hold over for the time being. Internal consumers, including Government and semi-Government agencies, also showed an inclination to reduce their bookings in view of the rising premiums charged on forward bookings. Clive Row was disappointed over the meagre duty relief in respect of a commodity which was not in keen demand from the U.S.A. The off-take of the item by other developed countries was rather nominal. The retention of export duties on other items and the cheaper price ranges offered by Dacca ruled out prospect of any broadening of overseas demand. Taking note of the disappointing outlook on the export front and the pronounced deceleration in the internal off-take of sacking, the I.J.M.A. renewed its appeal for the abolition of the prevailing export duty on sacking. In the hedge market, sentiment was governed by the trend in the spot goods market. Operators took keener interest in February delivery futures contracts in B Twills. The outstanding open positions in respect of November-delivery contracts were mostly squared up or converted into February-delivery deals. Turnover was small. The closing undertone was buoyant.

Latest available quotations (in rupees) were as follows:

Fibre Steady

The raw jute market ruled exceptionally steady during the past week due to the virtual absence of declared sellers. Taking note of the meagre allocation of imports from Bangladesh out of the Rs. 7-crore quota,

industry circles were scared as to the fibre supply prospects. The fibre trade was inclined to believe that much higher prices likely to be paid by the J.C.I. on its imports from Dacca, would cause a flutter in the Indian jute market as well. Although the mills had been holding a comfortable fibre position for the time being, they had been experiencing difficulty in maintaining the pace of their purchases in Calcutta and in the upcountry markets. The unusual feature of an absence of nervous offerings during the Puja and Diwali seasons corroborated the conclusion that the remaining stocks had been lying with strong holders and affluent growers. Arrivals in the upcountry markets and also in Cossipore were meagre. Keen on absorbing available stocks of fibre of selected grades, mills and mill agents agreed to rising premiums over the quoted rates. The closing price revealed a sharp rise of Rs. 4 over the preceding week-end level to Rs. 63 a maund, f.o.r. Calcutta ready basis, Assam Bottoms. Turnover was meagre. The closing undertone was buoyant.

TEA

Fair General Demand

A Special Correspondent writes: The offerings at last week's tea auction in Calcutta amounted to 69,320 packages for which there was a fair general demand. C.T.C. brokeners were slightly easier, especially the better kinds, but fannings sold at around the previous week's levels. Orthodox B.O.P.s me with selective enquiry and eased further in value while there were very heavy withdrawals. Orthodox fanning were also slightly easier except for few selected lines and the better liquoring kinds. Whole-leaf grades were easier except for the poorest sorts.

THE DELHI CLOTH & GENERAL MILLS CO., LTD.

CHAIRMAN, DR. BHARAT RAM'S REVIEW

The following is the speech delivered by Dr. Bharat Ram, Chairman, Board of Directors, The Delhi Cloth & General Mills Co., Ltd., at the 84th Annual General Meeting of the Company held on Thursday, the 2nd November, 1972 at its Registered Office at Bafa Hindu Rao, Delhi.

Ladies and Gentlemen:

I have great pleasure in welcoming you to this 84th Annual General Meeting of your Company. The Directors' Report and Audited Statement of Accounts of the Company for the year ended 30th June, 1972 were sent to you sometime ago. The results, as you will notice, are satisfactory. As reported last year, replacement of 35 thousand spindles and 4 hundred looms at the new textile mill at Dasna has been completed. The factory has started working, although because of untrained labour and other teething troubles, it is not yet working with full efficiency. It is hoped that within the next few months this Mill will be running to its expected efficiency.

The Company has already received permission from the Government and the various formalities have been cleared to expand the fertiliser plant by 50 per cent. The work on construction has already commenced and every step is being taken to expedite the implementation of the increased capacity.

Your Company has started production of Electronic Desk Calculators. From the test reports obtained from some sample users, the product appears to be an excellent one. It is a matter of satisfaction that these Desk Calculators have been produced entirely by indigenous know-how developed in the Company.

Satisfactory as the working results of your Company have been during the year under review, we can not ignore the larger social milieu in which we are operating, the clamour of competing demands and doctrines and the approaches of Government to forge a synthesis between political and economic democracy.

We are living in an age when events crowd and every year has some special significant features of its own. Since we met last year, the poignant drama

Dr. Bharat Ram

of the influx of 10 million refugees from Bangla Desh completed its full cycle: A war was thrust upon India by Pakistan and, happily, it was successfully over within a short time. The refugees have gone back to their homeland. It is a tribute to the stability of the country that the Indian economy was able to withstand the great stresses and strains of this period and our Defence Forces and people as a whole revealed, cool courage, and quiet discipline.

In a democracy, however, attitudes switch with incredible rapidity, and despite the fact that this year marks the Silver Jubilee of Indian Independence, the mood is not joyous. Unfavourable monsoons have given a sharp spurt to prices, particularly of food articles. Industrial production, by and large, continues to be sluggish. Every section holds the other responsible for the malaise. Apart from mutual criticism, private grouches and slender provocations tend to blow up into law and order situations.

Inasmuch as the present is the product of the past and will fashion the future, it is necessary, I think, that we dispassionately consider the strength and weaknesses of our national poli-

cies. Statistics reveal an impressive list of achievements and an equally formidable list of failures in the economic field. There has been growth in various fields like power generation, heavy machinery building capacity and several other sectors. Yet, there is acute shortage of power and critical raw materials; the burden of our debt service payments abroad continues to be heavy.

National accounting must also bring out the qualitative change in the environment which is certainly for the better. In the eyes of the world, India is no longer looked upon as a hewer of wood and drawer of water. We have emerged from a backward to an intermediate stage of development with clear potentialities for a rapid and sustained advance. Notwithstanding the immense increase in population, potential has been generated to create resources to increase employment, produce goods and improve the standard of living of the people.

There are some people in India and abroad who want us to believe that our policies have been all along wrong and short-sighted. To them may I ask a question? If our policies have been all wrong, how is it that India in spite of so many problems, economic, social and political, maintained a healthy democracy and economic development. When we look round the world, there is hardly any country, developed or developing, which has not its own problems, ranging from political instability to group neurosis, from monetary crises to religious cleavages. It is wise to count our blessings not in a spirit of complacency, but with humility.

I have no doubt in my mind that the political will, as developed and manifest in our Prime Minister Shrimati Indira Gandhi, is strong enough to make such changes as are necessary to translate the long-spelt Economics of Promise into Economics of Results. She has committed the nation to bigness that will not be and should not be reversed. But the challenges are many; chances are inevitable; some crises, probably, cannot be avoided. A major responsibility is cast on all, particularly leaders, old and new, in all walks of life.

CALCUTTA - 1.

In the recent past there has been a good deal of discussion on the present economic situation. May I express some thoughts in respect of the required changes in the techniques and management of the national economy? To start with, it is upto the policy makers to think in more positive terms. This will have a salutary influence on public opinion. During the thirties, when depression overtook Europe and the American continent, the fundamentals of capitalism, as then known, were boldly questioned and the concept of a mixed economy emerged. We are living in days when those politically aware all the world-over are also busy analysing and probing what is wrong with Socialism. It is clear that we should not allow the dead hand of either Adam Smith or Karl Marx to row the national boat. We must full use of the enhanced knowledge that is available, and keep our doors open to new ideas, technology, processes, management and organisation. Secondly, policy at all levels must be so re-oriented on the principle that men will operate best if they are given chance to operate at full capacity. This applies equally to administrators, entrepreneurs and managers of enterprises. Thirdly, committed as we are to development in a big way, big enterprises should be looked upon as national agents of speedy growth instead of viewing them with distrust and placing them in strait jackets. They should be permitted to vigorously function subject to regulations that will take care of restrictive business practices or such other activities which are harmful to the interests of the people. Small and medium industries will grow round the large ones.

Citizens, in their turn, have to reassess their thinking. Everyone has to shift his focus to the national rather than personal or group welfare. The tendency to test wits will have to be replaced by honest hard work on the part of each. We, in business, must not only accept but welcome reforms ap-

propriate to the removal of exposed abuses both in letter and in the spirit. Had we done this earlier, perhaps, private enterprise would not be in the same defensive position as it is today. Reaction is as bad as rebellion, for both repudiate the presumption that there is scope for peaceful change.

The question of raising the living standards and opening out to the people new opportunities for a richer and more varied life has many facets and implications—political, economic, social and moral. Each of them by itself, more so in combination, firmly points out that we have to step up our economic development. There are in our country a large number of pockets, where poverty is in a very intense form. I believe that there must be a concerted drive on the part of larger enterprises to establish new industries in these centres. Fiscal incentives apart, which may be necessary, the biggest incentive could be the availability of Power. The planners must, therefore, concentrate on quickly developing Power and other infrastructural facilities, and even here private enterprise may be able to contribute its bit.

There is a very important point to which I would like to refer, though with some hesitation. It concerns the leadership provided by our trade union friends. Time was when the industrial worker required all the support of legislation. Today, those who are working in the organised industry are in an advantageous position when compared to the other sectors of the working class. The demand that are made on their behalf and by them are often more out of habit or political motivation rather than through real necessity. This is not all. Cessation of work for one cause or another is not quite uncommon. The public sector enterprises are no less affected than the private sector. It is, to say the least, surprising that trade unions which are keen for nationalisation of industries should ill-treat those indus-

tries which are already being run by the State. Strikes and lock outs in today's society is an exploitation of the consumer and a crime against the nation.

This brings me to the question of emoluments of industrial labour. In my view, while an industrial worker may as an incentive be paid more than his due, he must work to earn this through his output. For historical reasons, his pay packet is currently composed of many elements. In addition to basic pay, there is the dearness allowance related to the cost of living index numbers, statutory cum gratia payment related or unrelated to earned profits, gratuity, employers' contribution to the Provident Fund, ESIC, miscellaneous allowances and customary fringe benefits. Bonus is the most controversial component. It has become a source of constant friction. Partly through semantics and partly through pressure, the minimum bonus has been increased from 4 per cent to 8½ per cent and it is payable even by units which incur losses. I do hope and trust that some rational principles will soon emerge to determine our wage policy, and that bonus is firmly related to production and profits.

I have not referred to so many policies of the Government which affect economic development of the country but have only referred to a few important aspects. In any case, whatever the policies of the Government may be, it is most important to expedite the administration of these policies in a positive manner so that they result in increased production and industrial peace.

I have always been an optimist and feel certain that with the dynamic leadership of our Prime Minister Shrimati Indira Gandhi, the country will forge ahead. As the Prime Minister herself said, we have only a few years in which if we do not show quick economic results for the large masses, the country may be overtaken by unforeseen forces. In the country's great endeavour, your Company will always play its role.

Finally, on your behalf and mine, I would like to place on record sincere thanks to all the workers and staff of the Company who have spared no efforts to produce such outstanding results.

Note : This does not purport to be a record of proceedings of the Annual General Meeting.

CAPITAL, 9th NOVEMBER, 1972

COMPANY AND PUBLIC NOTICES

THE AUCKLAND JUTE COMPANY LTD.

AT a meeting of the Board of Directors held on 27th October 1972 the following Dividends have been recommended for declaration at the Annual General Meeting of the Company to be held on 29th November 1972, payable on or after 12th December 1972.

On the Cumulative preference shares @ 7.15% for the year ended 31st March 1972.

On the Redeemable cumulative preference shares @ 5.85% for the year ended 31st March 1972.

Final Dividend on the Ordinary shares @ Rs. 2/- per share for the year ended 31st March 1972.

By Order of the Board.
THE AUCKLAND JUTE COMPANY LTD.
R. N. DUTTA
Secretary.

CAPITAL

(Founded in 1888: Published every Thursday)

CAPITAL is India's most widely-read weekly newspaper dealing with economics, industry and public affairs. It has the mature experience of more than 80 years, and is the oldest journal of its kind in the country. Each week, it brings authoritative and comprehensive coverage of the main problem and events affecting the progress of the economy and the growth of industry. It separates the important from the unimportant; it presents simply, clearly and reliably what all informed observers of the economic scene ought to know.

Readers of CAPITAL are mainly people holding positions of vital importance in Government, business, industry and academic institutions. Many of them are intimately concerned with the framing of the country's economic policies. Many direct and control industrial, banking and commercial institutions. Together they represent a fund of economic opinion and buying power that no advertiser can afford to ignore.

DARKNESS AT NOON

For many of us in the fixed income group, the month begins with a bang. A spending spree or just that wee bit extra pressure on purse follows..... And the days start limping to that far-away destination—the next pay-day. But we cannot avoid spending on festive occasions, guests, social obligations and what have you. They are no respecter of the state of our purse either.

Here's the UBI way out of the impasse. Open an account with UBI. Deposit your pay-packet right at the beginning of the month; withdraw money when you need it. This practice will gradually lead to some savings. Sure enough, you will be able to meet any unforeseen expenses on your own and without worry.

Keep your money secure with UBI. Cash at home has the peculiar tendency to evaporate quickly even under normal circumstances !

The Nixon Victory

IT would be wrong for the people in this country to imagine, as some do, that high on the list of priorities of President Richard M. Nixon on his re-election would be the objective of settling old scores with India by making his country tilt further towards Pakistan. Such fears betray a lack of self-confidence as well as a poor understanding of international affairs. The decisive victory which President Nixon has won against Senator George McGovern, the first of its size since the re-election of President Abraham Lincoln in 1864, suggests that the people of the U.S.A. overwhelmingly endorse his policies. This belief is strengthened by the fact that President Nixon's victory is largely personal since the Republican Party has lost more ground in the elections to Congress and to the offices of Governor. He is known to have no personal charm about him for the average voter. His is not a charismatic vote-catching personality of a Kennedy, Eisenhower or a Roosevelt.

An important feature of President Nixon's character loudly commended even by his erstwhile critics was his refusal to hasten too fast towards peace in Vietnam for the sake of popularity at home. This has been interpreted by many as placing national interests above his own. The same streak in President Nixon's character was evident in his dealings with Peking and Moscow. Although for a time Dr. Henry Kissinger's secret dash to Peking last year seemed like a sudden and dramatic move, it was evidently the result of long months of patient preparation and prior agreement. The same can be said about the Nixon visit to Moscow. These are some of the events that should give to people in India a clue to the American President's character. If these are any indication, it would seem that his personal prejudices and predilections, if indeed he has any against India, are unlikely

to play a decisive part in determining the U.S. policy towards India.

In retrospect it seems more likely that support to Pakistan and alienation of India were all part of the grand Nixon design to befriend Peking and pull out of Vietnam. The U.S.A. is now entering the most crucial phase of postwar diplomacy. Past equations and alignments are rapidly changing. The picture that may emerge is not clear at all. The U.S.A. is still walking on a tight rope between China and Russia. The possibility of the two communist giants eventually making up with each other cannot be completely ruled out. Furthermore, the U.S.A. is rapidly losing friends in Asia and cannot as yet be too sure of Chinese friendship. The Arab countries are positively hostile to the Nixon administration. The Japanese are becoming increasingly suspicious of it. All the erstwhile American allies in south-east Asia now have a feeling of being let down. Ever since the Bangladesh war India has become cold towards the U.S.A. Even in Pakistan there are strong murmurs of discontent against the Americans.

In the face of all these uncertainties why should the Nixon administration go out of its way to alienate India completely? If it is in India's interest not to lean too heavily towards Russia, it is equally in the interest of the U.S.A. not to write off India as a total loss. With their shrewd business instinct, the Americans might like to look back upon their considerable investment in this country and examine how the relations can be improved again. And if the Americans are prepared to undertake such an exercise, there is no reason why India too should not make a more pragmatic reappraisal of the world situation and try to come to a better understanding with President Nixon than has been possible so far. In a give and take of

this kind it is really immaterial who gives more at a particular time. What really matters is the result.

India cannot for ever remain bound by the passions and prejudices of the Bangladesh war. There is no one in this country with a grain of patriotism in him who does not condemn the U.S. rôle in that war as being hostile not only to India but to the whole of humanity. The U.S.A. was guilty of condoning barbarity and genocide. It was guilty of supporting a ruthless dictatorship at the cost of the world's largest democracy. It was guilty of sacrificing human rights for the sake of expediency. But so was China. The communist regime in Peking was guilty of all the crimes committed by the U.S.A. in the Indo-Pakistani war over Bangladesh. Yet New Delhi is keen on joining the race to Peking while it still has an aversion to making a similar gesture towards the U.S.A.

It is not India alone which has to take a second look at the alliances forged after the Bangladesh war. Already many of the euphoric suppositions built in the wake of that war—like the everlasting bonds of blood between India and Bangladesh—are proving illusory. The hard realities of the economic situation in both countries are now asserting themselves and the best India and Bangladesh can aspire to is a good-neighbourly relationship. Similar limitations are becoming evident in India's relations with Russia. It is obvious that no power in the world, leave alone Russia, can underwrite the gigantic technological effort that will have to be made to revive India's economy. Some strains as a result of India's exaggerated expectations from Russia are already becoming apparent in the economic discussions between the two countries.

India would also do well to remember that the current phase in international diplomacy is unique in the sense that it cuts across ideological barriers. The E.E.C., Japan and China are emerging as giant independent entities that defy any ideological line-ups. What is even more to the point, Russia and the U.S.A. have suddenly discovered that they need each other urgently for mutual security and economic development. The Russians have approached the Americans for the largest grain deal ever transacted in the world. They have also asked the Americans to help them explore their highly stra-

tegic oil reserves in Siberia and in the foreseeable future Russian oil may be shipped to the U.S.A. in large quantities.

With such tremendous new possibilities in international diplomacy and trade, it would be tragic if

A Reprieve for the Pound

IT was not seriously to be expected that Britain's new prices and incomes freeze would produce an immediate and spectacular improvement in the value of sterling. The announcement was certainly welcomed by the foreign exchange markets, as indeed by the City of London. But the reception was far from enthusiastic, because too many doubts inevitably remain. Is the new initiative going to be in time to save the British economy from the inflationary collapse? Will it prove adequate to meet a situation already left to deteriorate for too long? Can it succeed in the face of all the technical and political problems that are bound to be encountered? Such questions are unlikely to be answered much within a year. The actual freeze, after all, is only the first stage in a continuing struggle against inflation which must somehow be developed into a permanent feature of the British economic scene. There is just no guarantee that this can be done under a Conservative Government whose reputation for efficient economic management is now probably even worse than that of its Labour predecessor. There are undoubtedly some factors which are in favour of the new policy succeeding. But the overwhelming weight of evidence still points to its being a failure. The foreign exchange markets are acting wisely in reserving their judgment—at least for the time being.

On this question of success it has already become fashionable to compare the Heath experiment with that made by Mr. Nixon in August 1971. It is an exercise which can easily be carried too far. Put simply, Britain is not the United States. An American President enjoys more executive power and much greater national prestige than a British Prime Minister. In the United States the trade unions are not as strong, or as prestigious as they are in Britain. The British economy is an open one, and therefore much more responsive to international influences than is the

India remained tied to its traditional ideological inhibitions or outdated notions of relative permanence of relations between nations. This is an age of change and no one can afford to stand in the same position for long. Everyone has to keep moving forward.

American. Admitted that Mr. Heath must have had Mr. Nixon's example prominently in mind when he decided to abandon his former belief in the efficacy of market forces for containing inflation, just as he had Mr. Wilson's failures to deter him from too enthusiastic a conversion. But the fact remains that Britain's circumstances are altogether different from those which existed in the U.S.A. around the summer of 1971, and that the policies chosen for dealing with them could turn out differently as well. What has happened to the dollar since then need not be repeated by the pound.

To doubt the likelihood of the Heath policy succeeding is not to deny the thoroughness and imagination with which it was launched. In Britain, where the electorate is so equally divided, the key to effectiveness for any such policy is public opinion, and that is something the Prime Minister went to great pains to cultivate. Doing something against inflation is a popular enough rallying call with the British public; exactly what ought to be done is another matter. For this reason the "tripartite" talks which preceded the announcement of the freeze, although so obviously a political exercise, were wholly necessary. They were virtually bound to fail, at any rate the first time. But they had the great value that they showed the Government in a reasonable and co-operative light, something which it has so far contrived to avoid. It can thus be taken for granted that the next stage will be the culmination of yet another round of tripartite talks, and devised with the same objective in view. This is, briefly, to ensure that the public always puts the blame for inflation where it rightfully belongs, namely, on the shoulders of the trade unions.

It was clear all along that the T.U.C. regarded the tripartite talks as a trap, as indeed they were. Whether the unions were, therefore, as responsible for the breakdown as

the Government has made out, is another matter. What the unions sought was a statutory control of prices unmatched by any restraint on wages. But this was a bargaining position and undoubtedly a compromise could have been reached if the Government had been prepared for the necessary concessions. But the Government claimed all along that it was working to an economic model which simply could not be adapted to what the T.U.C. was demanding. Whatever the merits of the different arguments, the fact remains that it is the unions that have taken the major share of the blame for the failure of the talks, and that they are likely to do so again unless they can contrive to represent themselves to the public as being more co-operative. It can justifiably be looked at as the beginning of a long-term political process of pushing the unions into a position where they must take appropriate responsibility for the power they undoubtedly wield in the British economy. It is on the failure or success of this policy, essentially a political one, that the entire future of Mr. Heath's anti-inflationary campaign depends. Again it is little wonder that the foreign exchange markets find little excuse for optimism.

Apart from instilling some sense of responsibility into the trade unions, it has long been accepted in Britain that a freeze policy cannot succeed unless it is effective in controlling prices, and is seen to be fair as between all groups in society. These two criteria raise formidable problems. It is interesting to note that up to the moment the freeze was announced, the Government was publicly proclaiming that comprehensive price control was impossible. It should soon be clear whether or not it was correct. The range of controls required is surpassed only by that which existed in wartime Britain. The technical problems involved are staggering. Yet even these pale by comparison with the difficulty of holding down wages. One of the main factors in modern inflation is the joint interest which management and labour find in conceding pay demands in exchange for uninterrupted production runs. The danger is that they could still do so even under freeze conditions, and that the two sides of industry will in effect conspire to wreck the whole policy.

This possibility highlights yet another factor essential to the success of an anti-inflationary initiative for Britain, namely, the control of the

money supply. It is indeed a crucial factor, because it arouses political differences within the Conservative Party. When Mr. Enoch Powell accused Mr. Heath in Parliament of having "taken leave of his senses" by adopting *dirigism*, he was offering as the alternative a pure form of Friedmanism which enjoys considerable support among Conservative backbenchers. The answer to this argument, of course, is the simple one that in fact there is no real choice between the two policies; they will both have to be run together. It can be said with some confidence that unless Mr. Heath backs his freeze with strict control of the money supply, it has no chance at all of working. Indeed, this fact is among the main reasons for suspecting that things have anyway been left too late. So far this year the expansion of the money supply has been so great—up to 30 per cent on a yearly basis—that it is bound to cause considerable strains in prices whatever the legal controls on them. If the Bank of England were now to get some belated control over the money supply, reducing its rate of expansion to, say, 6 per cent or 8 per cent a year, there might be a fair chance of the second stage of the policy working. But so much damage has already been done that it is going to be extremely difficult to implement the freeze stage.

The Raj Committee Report

THE immediate reaction to the report of the Raj Committee on taxing agricultural holdings may be to wonder whether it is worth taking all the steps, enumerated in the report, to net a revenue of just Rs. 200 crores a year. And when this amount is divided among the States, the average a State will be only between Rs. 10 crores and Rs. 12 crores. Viewed purely as a revenue-raising measure, the new agricultural holdings tax, recommended by the Raj Committee, may not appear worth acceptance. But that certainly will be a short-sighted view, for the philosophy behind the need to tax every sector as equitably as possible will have no relevance if tax proposals are accepted or rejected merely on the basis of their revenue potential. In fact, as the Raj Committee itself points out, it may be possible to raise an additional Rs. 200 crores by introducing a greater degree of progression in existing indirect taxes or even levying new ones. But again as Dr. K. N. Raj has rightly observed, commodity taxation has serious limitations as an instrument of resource

The British example is well worth study by the international community as to how inflation can be dealt with. The first lesson it underlines is the importance of the money supply. The second is the dangers which too powerful a trade union movement can present to the delicate balance between price stability and full employment in an industrialised economy. Yet a third is the importance of public opinion, which in a country like Britain can be too easily divided between its sectional and its national interests. Finally, there is the lesson to be learned from what is probably the only factor working for the success of an anti-inflationary policy in Britain today—the rate of growth. What is believed to have doomed such experiments in that country is the slow rate of economic expansion, the fact that real as distinct from monetary incomes have lagged so far behind those in other countries. It is hoped that with the British economy now expanding at an annual rate of around 5 per cent, the growth of real incomes will to a large extent relieve the anxiety to secure higher monetary ones. It remains to be seen whether this happens. But on it depends the health of sterling, the economic wealth of an important international market, and indeed the entire economic, social and political future of the British people.

mobilisation, since it is more easily shifted and very often leads to unintended cost escalations. For an equitable distribution of the burden, it is essential to use direct taxation to the maximum extent possible for resource mobilisation. At present, the direct taxes on agriculture, in the form of land revenue, cesses and surcharges, are very low and account for just 1 per cent of the net domestic product from agriculture.

In devising a system of direct taxation for agriculture, the Raj Committee has proceeded on the basis of three important criteria. First, it has proposed that the agricultural holdings rather than the income from them should be subject to the new tax. Secondly, it has recommended the introduction of an element of progression in levying the tax so as to make it more equitable. And thirdly, it has favoured the partial integration of agricultural and non-agricultural incomes for determining the rate of tax on the latter and clubbing the incomes of husband, wife and children for

assessment of the total tax liability. The first criterion is unexceptionable and avoids the pitfalls inherent in defining agricultural income and determining the same in respect of each holding. The Committee has, therefore, recommended that the tax should be levied on all agricultural holdings of a ratable value of Rs. 5,000 and above. The Committee has spelt out an elaborate procedure for determining the ratable value of each holding on the basis of its size and productivity, besides its crop pattern. While the basis recommended by the Raj Committee sounds scientific, its adoption throughout the country on a uniform basis bristles with practical difficulties in view of the lack of proper maintenance of records and other necessary data in village societies. It is, therefore, clear that a lot of preliminary work for levying the new tax will have to be done by the States before they embark upon this experiment; otherwise, revenue from this source may remain elusive.

The scheme of partial integration of agricultural and non-agricultural incomes, recommended by the Raj Committee, is a compromise between the constitutional rights of the States to tax the rural sector and the Central anxiety to prevent leakage of revenue that results from persons with large agricultural incomes not paying any tax either to the States or the Centre. The complete integration of the two sources of income, as desired by the Centre, has not been favoured by the Committee as that will require an amendment of the Constitution. Furthermore, that will mean an abridgment of the rights of the States and will not, therefore, receive their support. The Committee has made it clear that the integration of agricultural and non-agricultural incomes should take effect only if an assessee has taxable income exceeding the minimum exemption limit laid down for the levy of the Central income-tax.

As for progression in levying the new tax, the Raj Committee admits that the proposed ceilings on land holdings have greatly reduced the scope for progressive taxation. Even so, the Committee believes, there will be incomes earned from agriculture large enough to come within the purview of progressive tax. This belief is based on the assumption that the size of operational ceilings would not necessarily be limited by the proposed physical ceilings on land. Perhaps, the Committee could have examined the desirability of imposing stiffer doses of taxation above a particular ceiling so that the purpose of having physical

ceilings is also achieved by the new tax system. However, since the recommendation is for a tax on the ratable value of a holding rather than on income, the scope for mischief is reduced as none will gain by deliberately depressing the return from his land.

Another far-reaching recommendation of the Committee is for clubbing the incomes of husband, wife and minor children and making the family as the unit for the levy of all direct taxes, including income-tax and wealth tax. This recommendation runs counter to the findings of the Wanchoo Committee which had not favoured such a move. The Wanchoo Committee was of the view that the greater complexity of assessment, arising from such a clubbing of incomes, would impose a new burden on the tax authorities at a time when they were unable to cope with the existing workload. The conflicting views of the two expert committees are only indicative of the complexity of the problem and whatever decision the Government may ultimately take on this question, it should be based on the principle of equity and fairplay.

The report is not voluminous but the recommendations are such that they need to be discussed in public and Parliament before any decisions are taken on them. According to the Raj Committee, the States seem to be enthusiastic about the new tax pro-

posal, evidently because it will add to their revenues on a progressive scale. Since the measure is to apply initially only to holdings of a ratable value of Rs. 5,000 and above, it will not also be politically unpopular. However, the States would do well to remember the Committee's suggestion that they should consider the issue of extension of the tax to holdings of a ratable value of less than Rs. 5,000, as and when they find it convenient.

Dr. Raj and his colleagues on the Committee have, on the whole, made a good case for taxing the rural sector, not only on an equitable basis, but also on a scientific one, which can be rendered foolproof only to the extent that State administrations plug the known loopholes and keep a vigilant watch over the implementation of the measure, once it is accepted. The yield may not be very high initially but acceptance of the measure will mark a beginning in taxing rural incomes and it is only reasonable to assume that the revenue in the coming years will be proportionate not only to the productivity and incomes of agricultural holdings but also to the efforts of the State Governments to tighten tax administration in the rural areas. If it is admitted that no section of the community should be completely immune from direct taxation, as the agricultural sector is today, then the Raj Committee report deserves to be taken more seriously than reports of expert bodies in general.

Take-over of Textile Mills

THE take-over of units in various sectors of the economy has become a style of the Government's operations of late. The Central Foreign Trade Ministry, particularly, has been a major exponent of this style, notwithstanding the doubtful benefits of canalisation of many items of trade through public-sector bodies like the S.T.C. and the M.M.T.C. Therefore, the take-over of the management of 46 textile mills caused little surprise. The management of these mills has been entrusted to the National Textile Corporation, which is already looking after 57 other mills in various parts of the country. With the additional responsibility for 46 more mills, nearly one-sixth of the total of about 600 mills in the country will come under the purview of the N.T.C. Thus quietly but deliberately the Government has brought under the public sector a sizable chunk of the cotton textile industry. With the decision to

set up a Textile Export Corporation, the Government's active participation in this sector will increase in the years to come.

The reasons given for the take-over should sound familiar by now: mismanagement, declining production and threat of unemployment to 100,000 workers. Moreover, most of these mills produce medium and coarse varieties of cloth; since these are consumed by the weaker sections of society, it is necessary to ensure that the supply is not suddenly disrupted. While there may be justification for Government take-over in the case of particular units, the mass take-over is difficult to understand. It is not that the management of 46 mills had suddenly become lax and inefficient. There may be other reasons than mere mismanagement for the decline in production and closure. The lack of funds for modernisation has been one of the

major factors for the inefficient working of some of the units. But the Centre, which is now so much concerned about the health of the industry, had not cared to initiate a concrete programme for the modernisation of mills. To put all the blame on the management for the poor state of affairs in the 46 mills is hardly fair.

The Government's *ad hoc* approach to the industry's problems is obvious from the latest annual report of the National Textile Corporation. The chairman announced in July last that the Corporation had prepared modernisation programmes in respect of 33 of the 57 mills already under its control. The cost was estimated at Rs. 14.5 crores and the entire amount was expected to be consumed in the current financial year. Against this estimated expenditure of the Corporation the total funds allotted to it during the current Plan period was only Rs. 17.5 crores. The Corporation had, therefore, asked the Government that the Plan provision be raised to at least Rs. 34.5 crores. These estimates of the cost of modernisation have not been prepared by the former inefficient management of the mills; the Government's own Corporation has arrived at these figures. While one can understand the Government's difficulty in making more money available, the fact that must be faced is that it is in a position to spend only a fraction of the money needed to restore health to the mills. If this is the case with the 57 units already under the N.T.C., its difficulties in coming years to modernise over 100 mills can very well be imagined.

There is little point in going into the merits of a step the Government has already taken. But it would be worth while for the Government to remember that unless it ends some of the uncertainties caused by its action of mass take-over, the future development of this key industry might be at stake. It was hoped that the take-over of 46 mills would prove a "deterrent" to further closure of mills. Unless the Government is cautious, instead of proving a "deterrent", its action may have exactly the opposite effect. With the Government having established a strong base in the industry, with repeated demands for the wholesale nationalisation of the industry and with the Government's declared intention to take over the export trade progressively, even the best managed mills might become chary of investing more money. It may be easy for the Government tomorrow to blame the industrialists for not modernising their mills, forgetting completely that it is

responsible for the continued nationalisation. If the continued growth of the industry is to be maintained and its share of the world market increased, then the Government must come out with a clear-cut policy. Since "sickness" is a vague term, any mill can come under this category at

West Bengal: A Big Break in Planning

THE Government of West Bengal deserves to be complimented for drawing up its Fifth Five Year Plan in a bold and ambitious manner. In the previous Five Year Plans, West Bengal's outlay was quite meagre, as compared with other States, due to the chronic political instability which prevented the State Government from giving proper attention to problems of planning. Mr. Siddhartha Ray's Ministry, therefore, gave top priority to the formation of a Planning Board for the State. The Board has now prepared an approach paper to the State's Fifth Plan, involving an outlay of Rs. 4,790 crores, inclusive of the costs of the projects sponsored by the Government of India to be implemented in West Bengal. The full text of the approach paper is not yet available. But from the summary that has appeared in the Press, it seems that the broad approach of the State Government to the Fifth Plan is well-conceived. Agriculture has been rightly given the largest outlay—Rs. 1,804 crores. The allocation for irrigation and other activities allied to agriculture has also been substantial. While irrigation (including flood control) has been allotted Rs. 558 crores, for schemes like land reforms, fisheries, dairy, animal husbandry and co-operatives, a sum of Rs. 118 crores has been set apart.

In recent years, there has been a great deal of discussion about the stagnation in West Bengal's economy. But it is not properly appreciated that there has been considerable progress in West Bengal's agriculture. The area and yields have shown a significant improvement. The area under foodgrains in West Bengal increased from 5,615,200 hectares in 1966-67 to 5,866,800 hectares in 1968-69, production from 5,377,200 tonnes to 7,162,300 tonnes, and the yield a hectare from 958 kilograms to 1,221 kilograms in the same period. The area under high-yielding paddy rose from 26,000 hectares in 1966-67 to 567,000 hectares in 1969-70, the target for 1970-71 being 729,000 hectares. West Bengal now holds the first position among the rice-

lic sector. The present atmosphere is not conducive to the healthy growth of the industry. Finally, there is a limit to which the Government and the National Textile Corporation can stretch their resources and management talents.

producing States of India, having achieved a record output of 6.35 million tonnes in 1969-70. Wheat production in the State jumped from only 28,000 tonnes in 1964-65 to 400,000 tonnes in 1969-70. The Fifth Five Year Plan for West Bengal has, therefore, done well in giving the maximum emphasis on the development of agriculture. The Plan makes substantial provision for fertilisers, pesticides, improved seeds, implements, irrigation pumps and tubewells. It is expected that the vigorous development of agriculture will give a strong stimulus to the growth of industries, especially those which produce the various inputs required by farmers.

The Government has allotted Rs. 1,035 crores for the development of industry and minerals. How exactly this amount is going to be invested in the different industries is not known. But, obviously, West Bengal needs massive investment in industry and also in minerals in order to exploit effectively the State's vast resources and provide more employment. The major industries in the State have been mostly of the traditional type which have little growth potential. It is, therefore, essential that the State should now concentrate on the development of those industries which have excellent prospects for growth, such as petro-chemicals, electronics, automobile ancillaries, transport equipment, and so on. The Government has allotted Rs. 605 crores for investment in power generation, including Rs. 200 crores in the Central projects. It has been estimated that the planned activities in the State during the Fifth Plan are likely to generate a demand for 3,700 M.W. of power. The approach paper refers to attempts at integration by "merging of the power generation units of the Durgapur Projects Ltd into the W.B.S.E.B. (West Bengal State Electricity Board) system, complete taking over of the C.E.S.C. (Calcutta Electric Supply Corporation) system by the W.B.S.E.B. or maintenance and distribution control by the W.B.S.E.B., and co-ordination of the

system with the integrated W.B.S.E.B. system”.

The emphasis on planning for more power is, indeed, welcome. In recent months, the power shortage has seriously crippled industrial production and expansion. But it is not clear how exactly the State Government is going to ensure that the power plants are maintained in perfect condition and that they produce to the maximum capacity. Almost simultaneously with the release of West Bengal's approach paper, it was reported that the West Bengal State Electricity Board's Budget for 1972-73 has been substantially cut. The Budget has now provided only Rs. 23.34 crores which is Rs. 8.60 crores less than what was required by the Board. It is feared that this cut, caused mainly by the lack of resources, will affect the development schemes relating to power generation. If this happens, the Fifth Plan's implementation will be retarded. The Government, therefore, should go more deeply into the power problem and take effective measures to ensure its adequate availability to industry, agriculture and other consumers. In fact, without proper attention to all aspects of power supply, the Fifth Plan will have little chance of success.

The approach paper proposes resource mobilisation of Rs. 867 crores, including Rs. 262 crores from additional revenue receipts, Rs. 255 crores from shared taxes and Central grant, and Rs. 350 crores from capital receipts. The capital receipts are inclusive of Rs. 100 crores from small savings, Rs. 150 crores from market borrowings and institutional finance, and Rs. 100 crores from Central non-Plan loans. But no indication is given of how about Rs. 4,000 crores will be mobilised to meet the cost of all the projects. West Bengal, of course, can look up to New Delhi for massive financial assistance in various forms. But how effectively this will be utilised will depend mainly on the extent to which the State Government succeeds in mobilising the resources from within West Bengal.

The success of West Bengal's Plan will depend not merely on the Government's ability to raise resources or obtain assistance from New Delhi but on the extent to which it is able to attract private investment on a massive scale. The State Government has done a great deal to revive the climate for investment by reorganising the West Bengal Industrial Development

cessions and incentives to entrepreneurs, and by improving the infrastructure. But, regrettably, there is no indication yet of entrepreneurs coming forward to invest in West Bengal in a big way. New Delhi's vacillation over the industrial policy, especially in respect of the approach to the joint sector, is to some extent responsible for the lack of adequate interest on the part of entrepreneurs to invest in West Bengal. Mr. Ray's Ministry, therefore, should press the Central Government to create such conditions as will facilitate a large flow of private investment which is so essential for creating employment opportunities in West Bengal.

Soon after it was formed, the State Planning Board expressed its intention to associate the private sector in drawing up the Fifth Plan. It was proposed to set up a number of Committees, Working Groups, Task Forces, and Cells to make in-depth studies of various problems relating to agri-

so on. But these bodies have not even started functioning. Meanwhile, the Planning Board has already submitted its approach paper to the Planning Commission. In view of the magnitude of the investment proposed, the Board would do well to take into confidence the various representative organisations in the State so that the Fifth Plan can be finalised and implemented smoothly to produce the desired results. The efficient working of West Bengal's administration is also of crucial importance to the success of the Fifth Plan. Mr. Ray's Ministry has taken certain steps to tone up administrative efficiency. But a great deal has yet to be done in many directions to ensure that the machinery of the Government is fully geared to the needs of development. There have been many instances in the past when West Bengal had to surrender the funds allotted by the Centre. Will West Bengal, therefore, be able to spend effectively as much as Rs. 4,970 crores in five years?

CURRENT COMMENT

COLOMBO PLAN

Focus on Indebtedness

The Consultative Committee of the Colombo Plan at its twenty-second meeting in New Delhi last week highlighted a problem that is assuming alarming proportions in the case of some developing countries: the problem of indebtedness and rising debt service burden. As the Committee noted in its final *communiqué*, the problem had arisen because some developing countries, in order to achieve a tolerable level of economic growth, had to borrow money from donor Governments and commercial sources on terms which were too hard. The concessionality element in aid was not very high in the past and both the developed world and the developing countries took too narrow a time perspective within which they had hoped that the latter would attain self-sustaining growth. This did not happen and the developing nations were faced with a mounting debt service burden every year.

The Committee went into this question in depth and took the view that the problem could be mitigated if the developed countries took two types of measures. The first step suggested was for the developed world to open up more of their markets to the products

of the developing countries. This was necessary because unless the developing nations' export earnings increased progressively, they would not be in a position easily to undertake repayment as well as debt service obligations. As Dr. I. G. Patel, Secretary, Department of Economic Affairs, Central Ministry of Finance, pointed out at the meeting, nearly 30 per cent of this country's export earnings were now devoted to repayment of debt, both amortisation and interest charges. Therefore, one way to enable developing countries to earn more foreign exchange was to help them export more.

The second line of action suggested by the Committee was increased availability of soft aid finance, particularly grant aid. Since the heavy burden of indebtedness has been caused because of the "too hard" terms under which loans were given in the past, one way to prevent too heavy an accumulation of debts was to soften the terms under which it was given. Among the aid givers, Canada, Britain and the Scandinavian countries have already made the terms of aid more generous by not only doing away with interest but by stretching the repayment period by over 30 years. Dr. Patel made a few valid points on the question of indebtedness of the developing world that was not reflected in the Colombo Plan Committee's final *communiqué*.

CAPITAL, 16th NOVEMBER, 1972

The first was with regard to interest-free loans. If the principle of interest-free loans was acceptable to donor nations in future, he did not see any reason why the same principle should not be applied to past loans. His second point was that when the debt burden became intolerable, "people will throw it off." He referred in this context to the recent U.S. decision that convertibility of the dollar into gold cannot be maintained. "The world community will have to accept the fact that it cannot be maintained and it need not be maintained," Dr. Patel added. The implied meaning of Dr. Patel's warning, one hopes, will be taken note of by the rich nations of the world.

I.R.C.I.

Helping Sick Units

The Industrial Reconstruction Corporation of India has been playing a major rôle in helping sick and closed units back to health. It has been without a chairman for quite some time; now Mr. R. C. Dutt, a former Secretary to the Central Ministry of Information and Broadcasting, has assumed charge of this important agency. Addressing his first Press conference as the I.R.C.I. chairman in Calcutta last week, Mr. Dutt said that 20 industrial units which had been helped by the Corporation had already started earning profits. Sixteen other establishments similarly financed by the I.R.C.I. were yet to earn profits. Assistance to 24 other units had already been officially sanctioned. A total sum of Rs. 15 crores has been allotted for these 60 units. Of this amount, the I.R.C.I. has provided Rs. 9.63 crores; the rest has come from banks. Mr. C. T. Das, managing director of the Corporation, told reporters on the same occasion that since its inception the I.R.C.I. had received 380 applications for assistance. Of these 55 had been rejected while 73 parties had been directed to approach banks and other financial agencies. In all, 60 applications had been approved.

CONSULTANCY SERVICES

Seminar in Bombay

A seminar on "Consultancy Services in India", organised by the Industrial Credit and Investment Corporation of India, was inaugurated by the Central Finance Minister, Mr. Y. B. Chavan, in Bombay a few days ago. Mr. Chavan laid stress on the development of indigenous technology which could

reduce the country's dependence on imported know-how. Attended by over 300 delegates comprising representatives of consultancy firms, industry, financial institutions, banks, as also the Planning Commission and the concerned Government departments, it was spread over three sessions lasting one-and-a-half days. While the consultancy profession has developed fairly rapidly during the past decade, the growth has been haphazard functionally as also geographically. With increasing responsibilities and the accent on self-reliance, the question of quality of consultancy profession has become important. Besides, the question of functional specialisation has become equally important as most of the consultancy firms claim to provide a full range of services. This, desirable though it may be from the point of view of better utilisation of scarce technical skills, presents difficulty in ascertaining the capacity of consultancy firms for different types of specialised jobs.

CORPORATE SECTOR

Social Responsibility

A seminar on "the Corporation And Society Today," sponsored by the American University Centre in Calcutta, was held at its premises a few days ago. Speaking on "Corporate Social Responsibility" Mr. L. N. Birla, a well-known industrialist, said that the cold calculation of profit alone was not the motivating factor behind an entrepreneur's success. Rather, it was the creative joy and the benefits to society that were responsible for a business corporation's expanding production and its efforts to establish new ventures. Mr. Birla stressed the need for corporations to remain economically viable. He also pointed out how governmental measures were restraining the growth of large enterprises. Notwithstanding these constraints business enterprises should, in his view, not only associate themselves with increasing production but also be concerned with community problems—city planning, slum clearance, environmental restoration, education, mass transportation, crime prevention etcetera.

Mr. R. S. Pande, managing director of Tata Iron and Steel Co. Ltd, stated that industry had an equal responsibility not only to its own employees and shareholders but also to society at large. Employers need not boast that they were providing so much to their employees. If they were doing this, he pointed out, they were only doing

their duty. If they did not do it, they had no right to be in business. According to him, the corporate sector should let the people know that it was genuinely interested in their problems. It should prove that it was not a self-centred corporation working only for the benefit of its shareholders. "That is the view that we have got to inspire in the present system", he declared.

HINDUSTAN STEEL

Record Production

The aggregate production of salable steel from the three tonnage steel plants of Hindustan Steel amounting to 266,800 tonnes is the highest achieved so far, against the previous best of 266,000 tonnes in March 1972. Production of ingots was marginally higher than in the previous month, being 337,100 tonnes and 336,000 tonnes, respectively. Despatches of salable steel from the three plants during October 1972 were 266,800 tonnes, being 28,000 tonnes more than in the previous month. Despatches could have been better but for the inadequate availability of wagons. The movable stocks of salable steel went up from better but for the inadequate availability to 46,400 tonnes at the end of the month. At Bhilai, the production of ingot steel was higher by 14,000 tonnes than in the previous month, although it continued to be affected due to problems relating to pouring refractories and mould trains in circulation. Salable steel production was also slightly higher than in September. At the Durgapur steel plant, production of salable steel picked up well during the month, being 13,000 tonnes higher, even though ingot steel production was marginally lower than in the previous month. At the Rourkela steel plant, production of ingots and salable steel was lower than in September, mainly due to the lower availability of pig iron. In the alloy steel plant production of both steel ingots and finished steel was below the previous month's level; power-cuts and restrictions in the D.V.C. supplies continued to affect production.

POWER UNITS

Take-over Threat

In a communication to the Government of India, the Indian Chamber of Commerce, Calcutta, has expressed

ed surprise and concern at the reported proposal to take over the private power supply undertakings. The Chamber has said such a move will be ill-advised and harmful to the consumers of power as well as to the country's economy. The Chamber has pointed out that the present critical situation in regard to power supply has been largely due to the shortfall in the generation of power by the public-sector undertakings and technical defects in the transmission line network. Against this background, the take-over of the private power supply undertakings will only aggravate the shortage and create more difficulties. Electricity undertakings in the private sector have been operating efficiently and their power tariffs have also been lower. In regard to West Bengal, the Chamber says that if the private-sector undertakings had been allowed to expand their generation capacity, the supply position today would have been far better. It has suggested that instead of nationalising the private-sector undertakings, an opportunity should be given to them to expand further and supplement the power resources of the State electricity undertakings.

STATE GOVERNMENTS

Financial Position

The gap of Rs. 168 crores in the Fourth Plan resources of State Gov-

ernments and their enterprises is unlikely to be bridged in 1973-74 (that is, the last year of the Fourth Plan), unless the agricultural sector is subjected to larger direct taxation than in the first four years of the Plan. This is one of the conclusions reached in the study of the budgetary operations of State Governments, prepared by the Division of Fiscal Analysis (Economic Department), Reserve Bank of India, published in the September 1972 issue of the *Reserve Bank of India Bulletin*. The measures adopted by State Governments and their enterprises during the first four years of the Fourth Plan are expected to yield about Rs. 930 crores, whereas the scheme of financing the States' plan outlay envisages the raising of additional resources totalling Rs. 1,098 crores. There is, according to the study, considerable scope for raising resources through improved operations of departmental undertakings; it should also be possible to reduce the continuing losses of multi-purpose river valley schemes and irrigation (commercial) through revision of water rates and betterment levies. Meanwhile, the revised estimates of State Budgets for the year 1971-72 show an overall deficit of Rs. 246 crores, as against the Budget estimate of Rs. 154 crores. The larger deficit was due to the fact that, while aggregate receipts rose by 13.4 per cent over the Budget estimate, disbursements went up by 14.7 per cent.

BEAUTIFYING CALCUTTA MAIDAN

A CORRESPONDENT writes in Current Coin: English annuals are now beginning to make their appearance in the gardens of Calcutta and before many weeks are over their gay fresh blossoms will make a happy picture for English eyes. The flowers in the Eden and Curzon Gardens during the cold weather always provide a beautiful scene of dainty colour, but there is certainly room for more flowers on our broad Maidan. It has often been urged that the beauty of the Maidan would be much enhanced if the little plots of ground round the statues of Lords Dufferin, Mayo, Sir James Outram and others were laid out with flower

FROM

CAPITAL

21st November, 1912

beds. The only opposition to such a scheme is raised in the statement that it would interfere with the grazing contracts in connection with the Maidan. This is a very poor reason that could be easily overcome, and with little expense the appearance of the chief roads on the Maidan could be made very pretty indeed during the greater part of the cold weather. The matter is one that should concern the P.W.D. and gives them the opportunity of compensating Calcutta residents to some extent for the distress to which their officials recently put them by allowing the Maidan to be enveloped in a dust fog for some days.

CHEMICALS

Power Cut Hits Units

In the context of the fresh power cut proposed by the West Bengal Government, the Indian Chemical Manufacturers Association has sent a memorandum to the Minister for Power, Government of West Bengal. The memorandum reiterates the need for uninterrupted supply of power to the chemical industry as most of the units in this sector work on continuous processes. Earlier, while proposing the staggering of working hours the Government had assured the Association of continuous supply of power to the units working in continuous processes, but the industry was not spared from frequent load-shedding. Chemical manufacturing units in the State incurred losses from 20 per cent to 50 per cent in terms of actual production during the last three months stemming from unforeseen load-sheddings. The I.C.M.A. has requested the Government to see that the chemical units in the State get uninterrupted supply of power.

MONEY MARKET

Call Rate Steady

The short-term money market has been active this past week. There has been good demand from outside but local demand has been small. The call rate has been quoted at $3\frac{1}{4}$ per cent, with lenders over. The demand for remittances has been moderate. So has been the demand for tea and gunny bills also. The pound-sterling has remained unchanged; if at all, it has strengthened slightly.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations for the 1972 Fund:

Rs. 100

Bell Punch (India) Private Ltd

Rs. 51

Dhanuka Education and Welfare Trust

Rs. 10 each

Hardip Grewal and Rupinder Grewal

The Fund totals Rs. 675.41 including a carry-forward of Rs. 504.41.

CAPITAL, 16th NOVEMBER, 1972

A Ditcher's Diary

BEFORE PARLIAMENT MET FOR ITS winter session the Prime Minister appropriately summed up things at a meeting of Congress M.P.s. I am not surprised that she did not sound cheerful. She need not have reminded anybody that "life is not going to be easy for us". It has not been easy during the past one year; it is not easy now; and Mrs. Gandhi ran little risk of being proved wrong when she said that the coming year was going to be "extremely difficult". Although she seemed to be thinking mainly of difficulties in India's relations with her neighbours, things are unlikely to be easier at home. I wish I could be fully reassured by her view of the economic crisis as "a temporary phase"; nor is there much comfort in the thought that the high prices are a price for "celebrating a victory". Nearly a year after the war of last December, are we in a mood to celebrate anything? Of course, the Prime Minister disapproves of defeatism; she seemed even to defend the level of our performance in putting up the Asia 72 show. It is good to have a leader who is not overwhelmed by difficulties; but when she spoke of a difficult year ahead she could not have been thinking of international problems alone. Some "Big Powers" may be up to no good at all; but Mrs. Gandhi possibly finds some small internal forces equally perverse. And a variety of small things are adding up. At the Utkal Congress general body meeting in Bhubaneswar on Sunday, someone spoke of a "descending Indira

graph". The phrase may not be particularly felicitous nor wholly warranted in its implication; but the Prime Minister has reason to be a little concerned over the by-elections in Ahmedabad and Mysore, the impact of the Mulki rules in Telengana and of the language agitation in Assam, and the general Opposition campaign over the Government's failures on the economic front. And what happens in Cuttack could have wide-ranging repercussions. I am not suggesting that the election result is a foregone conclusion, but I do not see much warrant for Mrs. Nandini Satpathy's confidence that her Government remains "strong and stable". Now that the Utkal Congress has been formally revived, some of its members may leave the Congress camp even if she wins the by-election. If she loses, defections from the enlarged Congress could topple the Government. And she cannot be certain of winning against a formidable and growing combination of Opposition forces, which may be abetted—if not openly aided—by some people in her own Party. Things would have been different if Congress leaders had been able to win over Mr. Biju Patnaik. Once again, Mr. Patnaik is on top of things. He has little to lose, and possibly a great deal to regain.

THE ASSAM GOVERNMENT HAS bought peace at a not inconsiderable price. Virtually all demands of the militant students have been conceded,

at least in substance. Although the State Assembly will not be reconvened specifically to rescind the 23rd September resolution, the students have been left in no doubt that rescission will be effected when the Assembly meets again in due course. Assamese will now be a compulsory subject in all non-Assamese secondary schools in the State; at the university level, the future of English as an alternative medium seems uncertain. There has been mention of a compromise solution, but I do not see any in the arrangements announced so far. Nothing has been done to safeguard certain minimal rights that linguistic minorities enjoy in other parts of the country. It is no one's case that Assamese should not be the main language in Assam; nor is it unreasonable to expect the State's non-Assamese population to learn it. But the Assamese chauvinists cannot wish away the State's multi-lingual character; and it needs to be pointed out that they do not really constitute such a large majority as they often claim to do. Their dominant position owes more to certain historical, and currently political, reasons than to the actual spread of the Assamese language. Yet they are not content with this dominance; their intolerance of other communities in their midst seems sometimes to border on paranoia. The ugly and dangerous manifestations of this mental state ought to be very firmly dealt with. But the Assam Government has not always been sufficiently energetic in attempting this; indeed, chauvinistic belligerency may have occasionally been promoted by official timidity, if not by plain abetment. During the recent disturbances the Calcutta

newspapers did well to play down the potentially inflammatory news from the Brahmaputra valley. I do not know if the Assam Press showed similar maturity. In any case, now that the situation seems to be under control, some objective accounts of what happened may be wholly in the public interest. The *Ananda Bazar Patrika* has already published two detailed reports from a senior correspondent who made an extensive tour of the troubled areas to study the situation at first hand. If I have no means of judging the accuracy of these reports, I have no reason to suspect deliberate misrepresentation either. The reports are highly disturbing, and they will remain so even if one chooses to allow for some circumstantial inaccuracy or unconscious bias. Other reports, too, have suggested much of what this correspondent has specifically stated.

THOSE WHO, LIKE ME, HAVE OFTEN found themselves wondering how on earth Britain has contrived to get herself into the mess she is in, must have concluded at one time or the other that not all the blame can be attached to the politicians. Some of it must be shouldered by the civil service, because even in Britain it is just not true that the mandarins are the neutral, disinterested, ever-loyal tools of their political masters that legend would have us believe. It is inconceivable they should be, human nature being what it is. When that truth dawned on me some time ago I began to ask myself how long it was going to be before some discredited politician attempted to excuse his own adequate blunders by blaming his civil servants? But I must admit that so far none has tried. It is a fact which could be ascribed to the inherent sense of responsibility among British politicians, although it probably has more to do with the long-established tradition that civil servants are not attacked in public because their position prevents them from hitting back. Such conventions are only defied in Britain at considerable peril, at any rate for anybody wishing to continue in public life. Yet one detects the beginning of an onslaught on the civil service in a book published recently by, perhaps significantly, a woman, Mrs. Marcia Williams, who was and still is Mr. Harold Wilson's Personal and Political Secretary. I have not read Mrs. Williams' book, and the reviewers appear to have been somewhat inhibited in their comments by the necessity of holding it at arms length between thumb and index finger while apply-

ing a handkerchief to the nose. But it is not necessary for a woman to behave like a gentleman, and Mrs. Williams' eagerness to whitewash Mr. Wilson is obvious. She does not hesitate to blame the civil service for frustrating the policies of the Wilson Government when it was in office. That could, of course, have been of inestimable benefit to Britain, but it does nevertheless confirm that there has been a conflict of opinion in high places which must inevitably, over time, lead to confusion and weakness in a nation's life.

WHEN THE EGYPTIANS EJECTED THE Russians from their territory, so precipitately last July, I volunteered the opinion that they might be thinking of seeking a closer association with the enlarged European Community. It was after all a reasonable assumption to make, and I was not the only one to whom the idea occurred. But now that the Russo-Egyptian love affair seems to be on again, I feel I owe it to myself not to make the same mistake of attributing too much deliberation and foresight to Egyptian motives. Surely, it is simple desperation which is motivating President Sadat rather than the careful consideration of strategic alternatives. Be that as it may—and I cannot help but wonder what those inveterate political chess-players the Russians are really up to in Egypt—there is much truth in the conviction that President Sadat would not have been able to get much response from the Europeans even if he had seriously tried. At this stage in the Community's development it just does not have the centralised political means to formulate a collective international approach, even to an area as

vital for its interests as the Middle East. This fact was, after all, brought out at the recent European summit meeting in Paris, and appropriately deplored by most of the countries concerned. I doubt though that the deficiency can be made up in the foreseeable future; attitudes within the enlarged Community are still too diverse. In the meantime policies will continue to be based on a combination of national interests and the defensive reactions of N.A.T.O. It is not only in Cairo where this kind of ineffectiveness is likely to be regretted.

THE CONGRESS PHILOSOPHY HAS always been a bit bizarre so far as alcohol is concerned; but the latest interpretation of its prohibitionist doctrine beats anything I have seen before. Although much alcohol has flown—often down thirsty Congress-site throats—since Prohibition was declared a directive principle of State policy, the Congress ideology is yet to repudiate the view that drinking is essentially evil. But apparently it is far less sinful to spread the sources of corruption than to allow them to corrupt oneself. This, in any case, seems to be the view of the Maharashtra Pradesh Congress Committee, or at least of its president, Mr. P. K. Sawant. The P.C.C. executive, Mr. Sawant revealed last week, had considered whether a liquor vendor could become an active Congress member, and concluded that he could if he remained a teetotaler himself. But a person who imbibed, however worthy his other occupations, would be denied membership. How is the Congress to know whether or not someone drinks in private? Evidently the matter has

come up after the Maharashtra Government's decision to issue drinking permits to all who ask for them; it is now easy to know, and anyone with a permit is disqualified for Party membership. (Apparently Mr. Sawant had no satisfactory answer when a reporter asked him about people drinking without a permit. Perhaps the Congress has no reason to suspect evil where it sees none, or is not obliged to see any.) Mr. Sawant explained that no special favour was being shown to liquor vendors, for the owner of a textile mill or a seller of mill-made cloth, too, could become an active Congress member if he was a "habitual khadi wearer". So, you may encourage and assist others to stray from the straight and narrow path so long as you do not allow yourself any such deviation. It is hard to think of a more cynical view of one's moral obligations; it could even be invoked in defence of a brothel-keeper who refrained from enjoying (or, perhaps, merely buying) what he sold to others. By the same token, there should be no punishment of traders who sell adulterated food if they do not eat it themselves. Mercifully, the laws of the land make a little more sense. Mr. Sawant would perhaps say that I am being facetious and irresponsible, that there can be no comparison between selling liquor and selling adulterated food, let alone keeping a brothel. Of course, there isn't; but the contradiction has nothing to do with degree. I do not suggest that a liquor vendor should be denied Congress membership; but then I do not see anything intrinsically wrong in drinking, which the Congress does.

Assessing the Performance of Managers Working in Overseas Units

By Chander Bal

As more and more Indian ventures are being set up abroad, it becomes increasingly necessary to evaluate the performance of managers working in such units. Profits alone will, however, be a poor indicator of their executive competence.

ONE of the greatest economic wastes that management may incur is due to the ineffective and inadequate appraisal of executive performance. In spite of the development of quite a few techniques in this area, most companies still face difficulties in measuring, objectively and factually, the performance of their executives. The result invariably is unsatisfactory

performance even in key positions, and loss of unrealised potential in many of their executives. This is perhaps the most important factor which contributes to the scarcity of competent, forward looking and experienced executives for the recently established Indian ventures abroad. These ventures have enormous stakes abroad and their investments will continue to grow with the passage of time. The intricacies of successful operations in foreign markets make the corporate managements peculiarly dependent on their managers abroad. There is thus the need for accurate indications of the extent to which each of these managers is best serving the corporate objectives.

Almost without any exception, they follow one of the three courses of action, none of which, it is felt, fulfils the real needs. The most common approach is not to consider performance while taking decisions for promotion, compensation or transfers of the executives. This approach is the rule in the paternalistic types of enterprises, where decisions are taken on the basis of relations with the bosses, tenure, seniority, location or similar considerations. One thing is common: these decisions are taken without considering the individual executive's accomplishments. Here the executives have little hope that their outstanding performance will get rewarded. The second approach is to gauge the accomplishments of the executives by subjective impressions. The overall performance appraisal is done by the top managements on the basis of executive qualities—creativity, tact, aggressiveness, maturity, comprehension, imagination and courage.

Subjective Ratings

Such an appraisal has no link with the actual performance or its measurements, with which these qualities can be directly associated. Such subjective ratings can vary with the passage of time, as well as with the changes in the likes and dislikes of the rater. The most common method adopted here is

an annual performance review. The top management perhaps does not have the idea of the problems faced by the executives in a foreign market, nor is it aware of the steps taken to overcome those problems. Clearly, managements need to adopt reliable techniques for motivating the executives and accurately measuring their performance.

The most common approach is to take the reported operating results at their face value. This ignores the fact that they very often do not reflect the contribution of the local management. Moreover, the most critical factors like volume of production or product mix are controlled by the top management in the home country. And so, even though an executive supervises a fully integrated unit abroad, he does not control its profits. Financial and legal factors like exchange rates, currency conversion rules, amortisation and depreciation regulations and a host of other legal factors continually influence the pattern of operations and the overall profitability of a venture. Thus, the reported profits in such cases will be a poor indicator of the foreign-based executive's accomplishments.

Effective Performance Appraisal

Effective performance appraisal is possible only if the superiors know how effective the operating executive is doing the things he is supposed to perform and how far he is able to achieve the overall objectives set by the top management. Ordinary reporting systems fail in the case of multinational enterprises, because they do not distinguish between the executive's actual accomplishments and all the other influences that come to bear upon foreign operations. Instead, they indiscriminately combine results of the executive's actions and the effects of logistic and financial decisions beyond the executive's control. The ordinary system falls short in another respect; it helps in the measurement of only current profit and loss, but not of the activities that have repercussions on future success or failure.

A sound system of executive's appraisal based on tangible elements of accomplishments can be developed for any foreign-based enterprise. It involves two elements. First, the system must include qualitative measures along with the existing system of reporting. Secondly, operating units'

Working to a common purpose... By assisting the small scale sector

We believe that in the growth of the small scale sector lies our own development.

To this end, we have, over the last 25 years helped to set up 110 small scale units by providing them with technical guidance for ensuring quality, guaranteeing offtake to the extent of lifting their surplus production at the cost of increasing our own inventories and assisting in various other ways. These units today provide employment to nearly 4,000 people and have an annual turnover of over Rs. 12 crores.

We plan a continuing acceleration in the future, of the programme of assistance to small scale industries, specially concentrating on those which have export potential and are labour intensive.

Our efforts indeed are humble : but if they go even a small way towards helping national interests, we shall have served our purpose.

India Tobacco Company Limited
—in pursuit of progress

ITC/PR-22

profits must be analysed to identify the major influences on the operating results. The measurement of concrete elements of performance other than profits is a little more complicated for any foreign-based operating unit than for a local enterprise. Reliable guidelines that can be developed for critical factors in this area are as follows:

Market share. The market share of a product can be easily measured. Estimates for any period can be made by calculating the relevant share levels with the appropriate transition probabilities then assumed to be operative. The fact that these probabilities will typically change over time increases the need of setting up a continuous monitoring system in this area.

Distribution. Distribution can be accurately determined in any part of the market. The number and quality of retailers, wholesalers, or

agents are reliable guides for judging the accomplishment or failure of an enterprise in a foreign market.

New Product Development Innovations. Record of new product development or innovations by the foreign-based enterprise is a very reliable evidence to indicate the quality and vigour of the executives in charge of these operations.

Index of Productivity. The fact whether the overall productivity of the enterprise set-up abroad is improving or not should be periodically measured. In case some improvement is noticed it need be assessed whether the rate of improvement is in line with that of the competitors.

Accuracy. Record of deliveries, returns and rejects of the various products manufactured and marketed by

a foreign-based enterprise gives a readily measurable index to identify those influences over which an executive lacks control.

The Basic Step

With little extra efforts and managerial prudence even profit performance of overseas units can be measured. The basic step is to bifurcate the total decision process into two segments: the results for which the executives can be held accountable and the results which lie outside their control. Keeping in view this classification, the profit results of an operating unit are affected by the following factors: (i) decisions taken by the local executives; (ii) logistic decisions of the top management; and (iii) financial decisions of the top management.

When accurate cost data are available, the profit results can be analysed in terms of these factors. An analysis on these lines will identify the areas and direct the attention of the top managements to the relevant factors for which local executive can be held accountable. To make this appraisal analysis effective, the top managements must link compensation to results achieved. An outstanding performance must be suitably rewarded, if the top management expects maximum future efforts from the executives working in difficult foreign environments. The failure to achieve the objectives and meet the targets should similarly be followed by suitable penal measures.

PEOPLE AND PERSONALITIES

Mr. Siddhartha Ray, Chief Minister of West Bengal, and Mr. Sankar Ghose, State Finance Minister, had a meeting with the delegates attending the conference on planning held recently by the overseas banking division (O.B.D.) of National and Grindlays Bank Ltd. The Ministers were welcomed by Mr. N. J. Robson, vice chairman, and Mr. H. M. Jackson, general manager in India, on behalf of the bank.

Professor Peter Robson, a British expert in microwaves, is arriving in India shortly for a ten-week visit.

SPECIAL ARTICLES

Significance of the Supreme Court's Verdict against Newsprint Policy

By M. B. Lal

The Supreme Court's verdict against the Government's newsprint policy has placed the whole gamut of Fundamental Rights of a citizen on a sound footing. It confirms the oft-repeated view that liberty has to be guarded by the people by repeatedly testing the validity of the Government's action.

THE Supreme Court's verdict against the Government's newsprint policy will go down in the history of Indian jurisprudence and constitutional studies as a classic document on the dimensions of Indian democracy as outlined in the Constitution. It reveals for the first time the real intentions of the Constitution makers on the freedom of expression. The Indian Government by its actions and statements so far seems to have taken the view that freedom of speech and writing in India is not so unfettered as it is in some Western democracies, notably the U.S.A. and Britain. The Supreme Court has set the record straight by emphasising the vital necessity of giving the widest birth to this freedom in the interest of India's democracy.

In this context, the restoration of the cut in the number of pages of the larger newspapers is only one of the smaller gains from the judgment. The most important advantage from the point of view of those who cherish the freedom of the Press is that henceforth the Government will have to think twice before bringing in its threatened moves to regulate the ownership of newspapers. If, according to the Supreme Court, restrictions on the freedom of the Press are not in keeping with the spirit of the Constitution, it is doubtful whether any move to regulate or control the ownership of newspapers so as to debar a particular section of the Indian community from owning them would pass the scrutiny of the same Court. It is significant that soon after the announcement of the Supreme Court verdict, the Central Government has extended by several months the time for the submission of the report by the committee set up to go into the economics of newspapers. The Government obviously needs time to retrace its steps and take a more

logical and constitutional stand in its dealings with the Press. If this is the intention it is all to the good.

It needs emphasising that despite all the recent suspicions and misunderstandings that may have arisen between the Government and the big newspapers, these papers still remain the best friends and supporters of the established order. They are the ones least likely to indulge in petty black-mailing of politicians. Nor are they easily susceptible to cheap pressures from men in authority anxious to suppress information that does not suit them. It should also be remembered that in almost all the major disturbances in the country it is the big newspapers that have kept their heads cool and given a national perspective to the situation. But perhaps the most important contribution of the major newspapers whom the Government erroneously wished to throttle is towards the noble objective of national integration. The big papers have a readership in far-flung States and their outlook on men and matters is also essentially national. They bring to the readers through the dispatches of their special correspondents in the States the distinctive flavour of the different parts of the country and thus help in stimulating a daily understanding between the States and their peoples.

The Supreme Court was doubtless conscious of these and similar other virtues of the big newspapers derived purely from the rights of freedom of expression given to them by the Constitution when it warned the Government against any abridgment of Press freedom under any garb. In its desire to encourage the maximum freedom of the Press as permitted by the Constitution and clear any cobwebs that may have gathered in bureaucratic minds on the subject, the Supreme Court also released the newspapers from certain irksome restrictions under which they have been suffering all these years under the mistaken belief that these were constitutional. Thus the Court made it clear that there can be no restriction on group newspapers having new units. Also they could

interchange newsprint between their different units and editions.

In memorable words the Court said: "The faith of a citizen is that political wisdom and virtue will sustain themselves in the free market of ideas so long as the channels of communication are left open. The faith in the popular government rests on the old dictum: let the people have the truth and freedom to discuss it and all will go well". The Court clearly felt that this was also the meaning of the freedom of expression in the Indian Constitution and anything that militated against this interpretation should not be permitted. It felt that "in the garb of distribution of newsprint the government has tended to control the growth and circulation of newspapers".

In the same spirit the Court also struck down another provision of the newsprint policy under which small papers were allowed to increase their pages by 20 per cent and could get more newsprint than the big newspapers. It felt that "the effect and the consequence of the impugned policy upon newspapers is directly controlling the growth and circulation of newspapers. The direct effect is that newspapers are deprived of their area of advertisement. The direct effect is that they are exposed to financial loss. The direct effect is that freedom of speech and expression is infringed". It would not be wrong perhaps to infer that in future too whenever these interests of the Press enunciated above are infringed by any Government directive, it would be a fit case for reference to the Court.

An observation of the Court which goes far beyond the issue of Government-Press relations is its verdict that the Government cannot suppress Fundamental Rights of the citizens in all cases under cover of the Emergency. It said: "Executive action which is unconstitutional is not immune during the proclamation of Emergency. During the proclamation of Emergency Article 19 is suspended. But it would not authorise the taking of detrimental executive action during the Emergency affecting the Fundamental Rights in Article 19 without any legislative authority or in purported exercise of power conferred by any pre-emergency law which was invalid when enacted".

This places the whole gamut of Fundamental Rights of a citizen on a sound footing even during the Emergency and places the additional safeguard of "legislative authority" bet-

ween the Executive and the people to prevent the misuse of the Government's arbitrary powers in the name of the Emergency. This is an additional relief for which the average citizen should be doubly grateful to the Supreme Court. It confirms the oft-repeated view that liberty has to be zealously guarded by the people by repeatedly testing the validity of

the Government's action. Otherwise there is every danger of its degenerating into some kind of authoritarianism or even dictatorship. The danger of this happening is even greater today when in the name of development and security the Government has an increasing tendency to make inroads into the daily lives of the citizens.

Colombo Plan: Outcome of the New Delhi Conference

(By a Special Correspondent)

Of the issues that were discussed at the recent New Delhi session of the Consultative Committee of the Colombo Plan, the problem of indebtedness of the developing nations was of particular interest to India. A redeeming feature is that the attitude of the donor countries was favourable.

THE Delhi session of the Consultative Committee of the Colombo Plan for co-operative economic development in south and south-east Asia has been a success in many respects. Although Pakistan refused to participate in it, for obvious reasons, Bangladesh was brought in and many donor countries, including the United States, added lustre to the session. The entry of Bangladesh did not create much of a problem for the reason that South Vietnam alone tried to oppose its admission on the flimsy ground that enough time had not been given to that Government to consider the issue. Pakistan had also opposed the entry of Bangladesh on the ground, as it stated in its communication to the Colombo Plan headquarters, that its views on Bangladesh "are well known". Had Pakistan's representative been at the Consultative Committee meeting, perhaps he would have made some more noise.

The Consultative Committee exchanged views on four major issues which are of concern to the Colombo Plan countries. These relate to the economic and social implications of drug abuse, international co-operation in agriculture, development of an appropriate technology for utilisation of human resources and the problem of indebtedness of developing countries. These were items which were identified and discussed thoroughly by the member-nations. Of these, the two items which were of particular

interest to India were the development of technology and the problem of indebtedness. On both, the Prime Minister, Mrs. Indira Gandhi, who inaugurated the meeting, gave an appropriate lead by calling for the application of science and technology to development and the importance of self-reliance. The Consultative Committee met under the chairmanship of the Central Finance Minister, Mr. Y. B. Chavan, but it was at a meeting of senior officials of member-Governments that the hard realities of the developing nations were discussed.

The attitude of the donor countries on the indebtedness of developing countries was fortunately very conciliatory. The leader of the British delegation, Mr. Wood, for instance, gave facts and figures to show how serious a problem it had assumed and gave a valid reason for it. This relates to the earlier loans having been contracted on terms which were not as concessional as the developing countries would have liked them to be. There was, as in the case of India, a certain urgency about going ahead with development and, at that stage, the need for concessional credit was not so well appreciated around the world. Consequently, one had to obtain loans on such terms as helped one to get them.

In the case of India, as Dr. I. G. Patel, Secretary to the Development of Economic Affairs, Ministry of Finance, pointed out, it was only a very short period since 1958 that this country started borrowing abroad in a significant manner and yet by about 1968-69 India had already reached the situation where something of the order of 30 per cent of her export earnings had to be devoted to the repayment of debt, both amortisation and interest charges. Today, more than three-

fourths of the aid that India gets in a given year are given back in terms of repayment. India now gets about \$800 million of foreign aid and her repayments are already of the order of \$625 million. This is the magnitude of the debt problem which India is facing.

This is why Dr. Patel pleaded with the donor countries for two major concessions. One related to the formulation of a mechanism for net transfer of resources which will include some element of debt relief. The other related to a blunt proposal for interest-free loans. As Dr. Patel put it, "the aid which carries no rate of interest is the most desirable because it avoids that arithmetical monster of having to borrow more and more every year in order to maintain the same set of resources". He sought to improve his suggestion by pitching one more modification: "Please make all your loans interest-free and make all your past loans interest-free. If you accept the principle that loans in future should be interest-free, I do not see why loans in the past should not be interest-free. Otherwise, it would not be concessional aid".

The response from the British Government to this plea was prompt, although it went only half way in the sense it applies one to the future loans. In the two agreements that Mr. Wood signed in Delhi the next day, totalling Rs. 78 crores, both were made interest-free and one was even untied. The first loan is for Rs. 47.42 crores, covering the import of non-project goods, including raw materials, spare parts and components. The other is for Rs. 30.35 crores and is intended to finance the import of goods and services required for certain large projects. Among them are three fertiliser plants under construction, three bulk carriers, also under construction, and three 120 mW boilers, to be built in Durgapur, for the Damodar Valley Corporation and the Madhya Pradesh Electricity Board.

Although an announcement is yet to come, the U.S.A., too, appears to have anticipated and agreed to fall in line with the World Bank proposal for a moratorium of India's repayment debts. The U.S. concession, although valid for the present for only one year, will even offset the suspension of economic aid ordered last year, to the extent of \$80 million. A Japanese industrial delegation is currently in Delhi and it remains to be seen how this team, sponsored by the Japanese Government, is going to respond to India's plea for both interest-free loans and substantial economic aid.

CAPITAL, 16th NOVEMBER, 1972

India's brightest tubelight. It won't come to a black end.

Philips 40 and 65/80 watt tubelights with the triple coil and anode ring give more and longer-lasting brightness than the others. And they don't blacken at the ends.

The triple coil and anode ring construction. Ordinary tubelights have coiled coil electrodes at the ends. Philips tubelights have a thrice coiled coil—the triple coil. Around the triple coil is another unique element—an anode ring. Together they give you better fluorescent

lighting than any other tubelight. **Brighter, longer-lasting light.** Tests prove that Philips tubelights are brighter. And they stay brighter longer than other tubelights. Their lumen maintenance is higher.

No end blackening. Ordinary tubelights blacken at the ends, absorbing useful light. The triple coil and anode ring construction prevents end blackening.

Good colour rendition. Philips lamps balance brightness with good colour rendition. So you

see things in the right light. **Modern integrated factory.** Every component of a Philips lamp is made in the Philips factory—the largest and most modern integrated lamp factory in Asia outside of Japan. So quality control is complete.

The next time you need a tubelight, buy the better tubelight, Philips.

Also from Philips: The TLF Reflectalite, a tubelight with a built-in reflector.

Progress of I.D.B.I. : Need to Mobilise More Resources

By A. Raman

The I.D.B.I. has not faced any resources constraint so far, but the situation cannot be expected to continue. It might become necessary for the Bank to mobilise funds through newer sources like public deposits and debenture issues.

THE Industrial Development Bank of India was thought of as "a central co-ordinating agency, which ultimately will be concerned directly or indirectly, with all problems or questions relating to the long and medium-term financing of industry and will be in a position, if necessary, to adopt and enforce a system of priorities in promoting future industrial growth". It provides direct assistance to industry in the form of loans, underwriting of shares and debentures, guarantees for loans and deferred payments, refinances the term loans provided by the commercial and State co-operative banks, State financial corporations and the other institutions for term financing, rediscounts usance bills, refinances export credits and direct loans, subscribes to the shares and bonds of the State financial corporations and other institutions for term financing, and co-ordinates the activities of the different industrial financing institutions. Apart from undertaking these functions, it also takes up techno-economic studies and investment and marketing research and provides administrative and technical assistance to any industrial concern. Thus, the activities and functions entrusted to the Bank are impressive and important.

The Bank started its operation in July 1964; and its working will be evident from table 1.

TABLE 1

Type of assistance	(In Rs. crores)	
	July 1964-December 1971 Assistance sanctioned	Assistance disbursed
Direct loans to industrial concerns other than for exports	169.4	94.4
Underwriting of and direct subscriptions to shares and debentures of industrial concerns	34.8	20.5
Refinance of industrial concerns	139.7	130.8
Rediscounting of bills	113.0	96.4
Refinance of export credits	26.2	19.8
Direct loans for exports	31.8	20.8
Subscriptions to shares, bonds and debentures of financial institutions	28.7	25.7
	543.6	408.4

In supplying capital to industry, the rôle of the Industrial Development Bank of India is certainly important; and the trends in the operations of the I.D.B.I. will be evident from the figures given in table 2.

TABLE 2

(In Rs. crores)			
1964-65 to 1970-71 (July to June)		Sanctions	Disbursals
1964-65	...	48.6	28.0
1965-66	...	62.5	51.1
1966-67	...	59.1	59.3
1967-68	...	39.8	44.7
1968-69	...	63.1	48.7
1969-70	...	62.3	52.3
1970-71	...	131.3	79.8
1971-72	...	168.0	94.5

A number of industries have been assisted by the Bank. The manufacture of machinery including electrical machinery has claimed 37.7 per cent of the disbursals of the Bank so far. The shares of textiles (including jute), fertilisers and basic metal industries are 11.7 per cent, 11.2 per cent and 9.1 per cent, respectively. Industries connected with the manufacture of machinery including electrical tools, textiles (including jute), fertilisers and basic metals have taken about 70 per cent of the Bank's assistance. The I.D.B.I. also refinances term loans; and in 1964, it absorbed the Refinance Corporation of India set up in 1958. The refinance assistance of the I.D.B.I. is given in table 3.

In order to be of greater assistance in refinancing, the I.D.B.I. has of late liberalised its rules. Generally speaking, fixed assets are financed by these loans. The refinancing of industrial

loans was done to the extent of Rs. 71.4 crores between July 1964 and 31st December, 1971. In financing exports, too, the Bank has played its rôle. Medium-term export credits are refinanced by the Bank which also provides direct export finance. These credits are for periods of six months to five years. Direct finance is also supplied by the Bank as a result of the participation arrangements with the commercial banks. These have been to the extent of Rs. 30.7 crores till 31st December, 1971.

TABLE 3

(In Rs. crores)			
1964-65	...	21.2	11.6
1965-66	...	21.4	12.5
1966-67	...	19.5	21.2
1967-68	...	10.8	24.0

As the apex institution for long-term financing, the Industrial Development Bank has taken an interest in strengthening the resources position of other finance corporations for industry. To the share capital and bond issues of the State financial corporations, the Bank is authorised to subscribe. It has also contributed to the debentures of the Industrial Credit and Investment Corporation to the extent of Rs. 15.7 crores till December 1971; apart from this, its contribution to the share capital of the I.F.C.I. and the Industrial Reconstruction Corporation of India Ltd amounts to Rs. 4.2 crores and Rs. 2.75 crores, respectively. The Bank is also conducting surveys in collaboration with the Reserve Bank of India, the Industrial Credit and Investment Corporation of India, and the Industrial Finance Corporation of India for identifying the industrial potential in the backward territories.

At present, when there is so much emphasis on the industrialisation of the backward States, the finance corporations should make available as large a quantum of funds as possible to these States. As for the operations of the I.D.B.I., a major portion of the assistance has so far gone only to the more developed States such as Maharashtra, Gujarat and Tamil Nadu. Out of a total of Rs. 424.59 crores disbursed by the Bank till the end of June 1972, Maharashtra's share is nearly one-third, being Rs. 140.76 crores. Gujarat and Tamil Nadu have received Rs. 47.17 crores and Rs. 58.35 crores, respectively. The share of West Bengal is Rs. 40.22 crores. But, the backward or underdeveloped States have not been com-

it has sanctioned nearly 25 per cent of its total assistance to Andhra Pradesh, Bihar, Himachal Pradesh, Madhya Pradesh, Meghalaya, Orissa, Rajasthan, Uttar Pradesh, Assam, Jammu and Kashmir and Nagaland. It should, however, be possible for the I.D.B.I. to provide more resources to the backward States in the future.

What will be the future rôle of the Bank? The activities of the I.D.B.I. will certainly depend on the economic climate. With the emphasis on industrialisation, one may reasonably expect an appreciable rise in the finances supplied by the term-lending institutions. The Industrial Development Bank of India as the apex industrial financing agency can expect to play an even more important part in this sphere. With the emphasis on the provision of more export credits, the I.D.B.I. would also provide export credits on a larger scale.

With the increased demand for accommodation, it is very likely that the Bank will feel a shortage of funds. So far, the Bank has depended on two sources for funds, viz., (1) borrowings from the Central Government and (2) borrowings from the National Industrial Credit (Long-term Operations) Fund of the Reserve Bank of India. A kind of revolving funds has been built up by the Bank out of repayments of loans by concerns which had taken them; and this has been of much help in the operations of the Bank.

No constraint of resources has been faced by the Bank so far. But the same trend cannot be expected to continue. With a stringent budgetary position of the Central Government, one can expect only the Reserve Bank of India to supply the funds needed, through the Long-term Operations Fund. Certainly, it might become necessary for the I.D.B.I. to mobilise more resources through diverse and new sources of funds. It can raise public deposits or it can borrow in the open market through the issue of debentures. There is no reason why the concerns which have received assistance from the Bank should not subscribe to these debentures. The Bank can also think of rediscounting of machinery bills with the Reserve Bank and of export bills with the Reserve Bank and foreign exchange banks and also borrow from international institutions such as the World Bank.

Parliament : More Heat from the Winter Session ?

(From Our New Delhi Correspondent)

The winter session of Parliament promises to be an exciting one. This is because a number of unfavourable developments have occurred and these will enable the Opposition parties to make scathing criticism of the ruling Party.

THE winter session of Parliament, which began on Monday, promises to be quite an exciting one. Internally, the prices of essential consumer goods have shot up so much that people in every walk of life feel the pinch. Among the State problems which have raised their heads are the Mulki Rules in Andhra, the language disturbances in Assam, the election reverses for the Congress in Gujarat and Mysore, and the possibility of a neck-to-neck fight in Orissa where the Chief Minister, Mrs. Nandini Satpathy, is pitted against a formidable Mr. Biren Mitra, a former Chief Minister of Orissa. The developments in Tamil Nadu are heading towards an explosive situation because of a split in the ruling D.M.K., while the Opposition has planned to make a bold bid to expose the Centre's softness towards Mr. Bansi Lal, Chief Minister of Haryana, against whom over 150 M.P.s have signed a memorandum levelling charges of corruption.

All these, if debated with skill and determination, can create an awkward situation for the Congress at the Centre. The feeling among the Opposition parties, at any rate, is that the Congress Party and the Governments at the Centre and in the States have fed the people with slogans and it is time to exploit their frustration over the economic situation which has led to high prices, lack of employment opportunities, language riots and other parochial interests.

The Prime Minister, Mrs. Indira Gandhi, has begun to realise this and is accusing the Opposition of exploiting the situation. The Opposition parties feel it is their business to exploit any situation which is favourable to them. They are not there to help the Government to tide over its problems. They also make

a point that the Emergency is being continued for the sake of putting down real opposition, although they seem to overlook the fact that the Indian and Pakistani armies have yet to withdraw from combat positions on the western border. But Mrs. Gandhi also realises that if the country is to achieve anything positive, there must be peace all round and people must work hard. Hence, her statement recently that the days of slogans and demonstrations are over. Of course, she was telling her own Partymen and supporters and also the Opposition that they must not make it difficult for the Government to achieve real progress on the economic front.

Peace in the sub-continent is still a far cry. Pakistan has yet to agree on delineation of the borders which alone can lead to a withdrawal of the forces. Then there is the question of return of the prisoners of war to Pakistan and recognition of Bangladesh by Pakistan. It is only after all these are achieved that there can be normalcy in the sub-continent.

Politically speaking, the absence of normal situation in the sub-continent can be both an advantage and a disadvantage for Mrs. Gandhi. The advantage lies in the fact that Mrs. Gandhi can take shelter under it for inaction or ineffectiveness on the economic front. The disadvantage is that parties like the Jana Sangh will continue to argue that the Simla agreement is unworkable, that Pakistan cannot be taken on its face value and that India should not withdraw from the areas occupied by it until Pakistan gives up its claim on Kashmir, withdraws the dispute from the United Nations and recognises Bangladesh.

Two factors that are on the side of Mrs. Gandhi are that her leadership in the Congress Party is unassailable, and in Parliament and in most States (with the possible exception of Orissa), the Congress Governments have such an overwhelming majority that they cannot be shaken by adjournment motions and no-confidence motions.

Andhra Pradesh : Finding a Solution to the Mulki Rules Crisis

(By a Special Correspondent)

The Telengana leaders have started an agitation following the Supreme Court's judgment upholding the Mulki Rules. But they should remember that their intransigence might provoke a backlash in other regions of Andhra Pradesh.

SERIOUS efforts are now being made to solve the Mulki Rules problem which got revived following a recent Supreme Court judgment upholding their validity. A piquant situation, in fact, has arisen and a whole controversy which was looking like dying down has once again assumed fierce proportions. After the failure of mediation by New Delhi, the ball is again back in the court of Hyderabad. The sub-Committee of four Andhra Pradesh Ministers—two from either region—may have succeeded in reducing the area of conflict, but the statement promising a solution "within the framework of united Andhra Pradesh" has been in anticipation of a continued deadlock. The crux of the problem is that under the Mulki Rules every person holding a Government job in the Telengana region, including Hyderabad city, must be a Mulki, i.e., one with a 15-year residence qualification. In other words, no one who has not been in the region for this period cannot be a Government servant. These rules were framed over 50 years ago by the Nizam as part of a scheme for the protection of the citizens of his Dominion. This is another version of the "sons of the soil" theory that is now being propounded in more than one State in the country.

But during the last 50 years, several important changes have taken place. The Hyderabad State itself has ceased to exist and chunks of it have been added to other States like Mysore and Maharashtra. The entire political complexion has undergone a transformation beyond recognition and the Telengana portion of the erstwhile Hyderabad State is now an

integral part of the linguistic State of Andhra Pradesh. Hyderabad is the capital of the State and during the last 18 years or so, the city has attracted people from all over the State for valid reasons. It is necessary to remember this background for a proper appreciation of the Mulki Rules.

Even when Telengana was merged with Andhra Pradesh, the people of the region had their own misgivings. There were apprehensions that the more progressive people of Andhra would dominate and consequently their interest would suffer. It was for allaying these fears that a gentleman's agreement was entered into between the leaders of Andhra and Telengana regions under which several safeguards were offered to the latter. It was also agreed that these safeguards should last for a definite period after which they would cease to exist. The assumption was that by then there would be complete integration and the people of Telengana would no more need any preferential treatment. A Telengana Regional Committee was also set up to take care of the problems.

In 1959, the Central Government enacted the Public Employment Act giving statutory recognition to what had been inscribed in the gentleman's agreement. In any case, all this has clearly proved that the Mulki Rules as they stood then should not have any applicability because of the new political situation. Furthermore, by its very nature the Rules would cause hardship to the thousands of Andhras who would come to Hyderabad. There was, therefore, no point in insisting on the Mulki Rules which would in effect mean that no Andhra could be employed in Government offices in the capital. The Act envisaged that up to the post of Tehsildar, the people of Telengana would be preferred to others within their region. In regard to other posts and in the capital for all posts, the ratio of two to one would be maintained between the

Andhras and those of the Telengana region.

Meanwhile, the emotional integration that was expected to take place between the two sections did not come about. This led to a violent agitation three years ago when the people of Telengana demanded separation. Prominent leaders of the region argued that there was no point in keeping the two regions together and Telengana being a viable region could very well become a separate State. The Telengana Praja Samithi demanded separation. However, Prime Minister Mrs. Indira Gandhi, and then Home Minister, Mr. Y. B. Chavan did not accept the demand and a series of discussions took place following which an agreement was reached whereby special protective measures were offered to assuage the feelings of the people of Telengana. It was at this stage that sections of the Public Employment Act were struck down by the Supreme Court as being discriminatory. This complicated matters a little but the Prime Minister evolved an eight-point plan for the development of the region.

During the mid-term poll the Samithi declined to join hands with the Congress Party in fighting the elections but later there was a merger. It looked as though everything was going to be normal. But all of a sudden a new situation has developed with the Supreme Court giving a verdict that the Mulki Rules were valid. Now a fresh agitation has commenced demanding that the Mulki Rules should be implemented in toto which in effect means that the Andhras must be driven out of the capital. This certainly is an untenable position and the Andhras have rightly interpreted this demand as a clever move to force separation on them. The Telengana leaders should remember that such intransigence might provoke a backlash in other regions of the State.

The Chief Minister, Mr. P. V. Narasimha Rao, has held several rounds of talks with prominent sections in the State. He himself is a person from Telengana and, naturally, he is anxious to see that he does not take a partisan attitude. He has said that it is necessary to elucidate the position regarding the applicability of the Mulki Rules in the context of the reorganised Andhra Pradesh with a view to taking appropriate action.

PHILIPS INDIA LIMITED

(Incorporated under the Indian Companies Act, 1913). REGISTERED OFFICE: 7 JUSTICE CHANDRA MADHAB ROAD, CALCUTTA-20.

The existing equity shares of the Company are listed on the Calcutta Stock Exchange; an application for listing the shares now being issued will be made to the said Stock Exchange.

Persons interested in full details may obtain copies of the Prospectus and Application Forms from the Managing Brokers, Brokers and Bankers to the Issue mentioned below.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON MONDAY, DECEMBER 4, 1972 AND CLOSE AT THE CLOSE OF BANKING HOURS ON WEDNESDAY, DECEMBER 13, 1972 OR EARLIER AT THE DISCRETION OF THE DIRECTORS BUT NOT BEFORE THE CLOSE OF BANKING HOURS ON WEDNESDAY, DECEMBER 6, 1972.

SHARE CAPITAL

Authorised	
1,00,00,000 equity shares of Rs 10 each	Rs 10,00,00,000
Issued, Subscribed and Fully Paid up	
54,60,000 equity shares of Rs 10 each	Rs 5,46,00,000

PRESENT ISSUE

13,30,000 equity shares of Rs 10 each at a premium of Rs 15 per share	Rs 1,33,00,000
---	----------------

OUT OF THE PRESENT ISSUE

2,94,000 equity shares of Rs 10 each at a premium of Rs 15 per share will be issued and allotted for consideration other than cash, subject to approval of the Reserve Bank of India, to N.V. Philips' Gloeilampenfabrieken, Eindhoven, Holland, in conversion of their foreign currency loan to the Company

Rs 29,40,000

4,20,000 equity shares of Rs 10 each at a premium of Rs 15 per share have been offered for subscription in cash to those Members (resident in India) whose names are on the Register of Members of the Company at the close of business on September 27, 1972, in the proportion as nearly as circumstances admit of one equity share for every four existing equity shares held on that date (fractions if any of an equity share issuable on this basis being disregarded) provided that any equity shares not taken up by any of them will also be available for meeting applications from the public

Rs 42,00,000

92,400 equity shares of Rs 10 each at a premium of Rs 15 per share are reserved to be offered for subscription in cash to the whole time Indian Directors and Indian employees of the Company provided that any equity shares not taken up by any of them will also be available for meeting applications from the public

Rs 9,24,000

NOW OFFERED FOR PUBLIC SUBSCRIPTION IN CASH

5,23,600 equity shares of Rs 10 each at a premium of Rs 15 per share	Rs 52,36,000
TOTAL	Rs 1,33,00,000

TERMS OF PAYMENT

The entire amount of Rs 25 per share (Rs 10 on capital account and Rs 15 on premium account) is payable on application.

APPLICATION FOR SHARES

Applications must be made on the prescribed form only and strictly in accordance with the instructions contained in the form and will be liable to be rejected if not so made. Applications may be made only by residents in India and must be for a minimum of fifty equity shares or multiples thereof.

Applications should be in SINGLE names only and NOT in joint names. Applications in joint names and multiple applications by the same applicant are liable to be rejected.

BRIEF HISTORY AND DEVELOPMENT

The Company was incorporated on January 31, 1930 as a private company and was converted into a public company on October 31, 1957.

In its early years the Company engaged itself in selling electric lamps, radios and other products manufactured by N. V. Philips' Gloeilampenfabrieken, Holland and their associates. In order to ensure its long-term interests and continued growth, the Company realised the need and importance of establishing local production facilities for its range of products. Thus today the Company has in different parts of India seven modern and well-equipped factories and a strong marketing organisation. Integration of production processes and progressive import substitution aided by research and development have been the keynote of the Company's policy over the decades.

The Company's sales, profits before tax, profits after tax and dividend paid per equity share of Rs 10 for the last five years were:

Year	Sales	Profits Before tax (Rupees in Lakhs)	After tax	Dividend per equity share of Rs 10 (Rupees)
1967	2340	450	158	1.90
1968	2655	486	192	2.00
1969	3021	530	221	2.30
1970	3768	673	270	2.00
1971	4656	1157	400	2.40

An interim dividend of Rs 1.20 per share for the year 1972 was declared by the Board of Directors on October 2, 1972.

The Company's growth can be attributed to its policy of selling quality products. Its products now include incandescent lamps, fluorescent lamps, starters and fluorescent powder for fluorescent lamps, burners for gaseous discharge lamps, tungsten and molybdenum wire and tungsten coils, glass shells and glass tubings for lamps, lighting fixtures, light-fitting accessories like ballasts, lamp holders, etc.; radio receivers both mains and transistor models, record players, a wide range of electronic components, electronic measuring apparatus, quality control equipment and scientific instruments, transceivers, public address systems, communication systems, simultaneous interpretation systems, welding electrodes and medical systems.

The Company's products are in good demand and are sold throughout India to buyers both in public and private sectors. The Regional Offices of the Company are situated in Bombay, Calcutta, Madras and New Delhi. The Company has a network of dealers for the distribution of its products on a national basis and also a well organised service set up for rendering after-sales service.

The Company has over the past six years built up and developed markets in Europe, the Far East and the Middle East for many of its products. The Company's success in exporting sophisticated articles to advanced countries can be attributed to its ability to maintain international standards and to keep pace with modern technology and to the assistance it has received from its Parent Company, N. V. Philips' Gloeilampenfabrieken, Holland.

The Company has recently submitted to the Government of India at their request a comprehensive industrial plan indicating the areas in which the Company proposes to enter in the next few years and the products involved. The plan envisages substantial new investments incorporating greater diversification particularly in the area of professional electronics covering materials, components and equipment. As and when approved by the Government of India, the plan will enable the Company to introduce in India new technologies while at the same time providing expansion of its existing activities.

What is Holding up an Early Government Decision on the Esso Offer ?

(By a Special Correspondent)

An early Government decision on the Esso offer is unlikely since it cannot be considered in isolation. Whatever the decision, it has to be applied to the other two oil companies operating in the country.

IN its modified proposal to the Government of India, Esso has clearly pointed out the problems the foreign oil companies are facing in their operations in India and put forward two alternatives intended to resolve them. If a mood of desperation is discernible in the Esso offer, it is partly caused by the drift in the Government's oil policy. Thirty months after the Company made its first offer, the Government is still talking about consideration of the three alternatives: equity participation by the Government, modification of the refinery agreements and nationalisation. The examination is still on and no one knows how long it will take to arrive at a decision.

Meanwhile, as far as the companies are concerned, the noose has been tightening around their neck. As a result of the increase in crude prices following the Teheran agreement of February 1970, the companies had sought an increase in refinery product prices also—basing their estimates on the recommendation of the Shantilal Shah Commission. Whether one agrees with their demand or not, the increase in product prices granted by the Government works out to only 50 per cent of what the companies had demanded. Secondly, the foreign exchange alloca-

tion to the companies for the import of crude is still based on a lower price than what has been demanded. This has meant lower crude imports, lower refinery runs and consequently a lower volume of products in the market. The Government will naturally take the stand that the companies are themselves to blame for the fall in their refinery throughputs. But the companies maintain that the combination of low product prices, high crude costs and low crude runs is having a bad effect on their profitability. Esso feels that its refinery will lose money this year for the first time. And with no immediate prospects of a reasonable assurance of growth, the Company has naturally come to the conclusion that "it cannot operate in an environment where it is not wanted."

Although no official reaction is yet available—which is not surprising in the present state of affairs in the Petroleum and Chemicals Ministry—there have been subtle suggestions that the Esso style has not been palatable to the Government. When the Company says that it cannot operate in an environment where it is not wanted, it is stating its difficulty as a business organisation. With the continuous onslaught on the larger industrial houses, many leading Indian firms must be sharing Esso's feelings. But being Indian, these firms will have to operate within the constraints of the country's politics. Esso has the option to get out when the chips are down. But before taking that drastic decision, the Company has made one more effort to see whether it can operate in India fruitfully. Its latest offer is simple: anticipating New Delhi's preference for selective participation, it has offered 74 per cent equity to the Government; it is also prepared to give up its right to import crude from its own sources and will be content with an opportunity to bid for crude, should the Government decide to invite tenders. This means virtually scrapping the refinery agreement. If the participation proposal is not found acceptable, then Esso is prepared to negotiate the total sale of its business interests in the country.

By offering 74 per cent equity to the Government, Esso is no doubt making sure that it will be not only compensated for past investment but assured of a fair amount of return on its left-over investment in India, as the new company, being in the joint sector, would be allowed to expand its operations. A firm is bound to adopt this line of approach, as business is the *raison d'être* of its operations. In considering the offer, the Government should bear this fact in mind. But the Esso offer cannot be considered in isolation. First, whatever the Government decision, it has to be applied to the other two oil companies also. Secondly, with the expertise built up in the construction of refineries and their management, the Government must decide whether it can now dispense with foreign interest in this key sector. If it decides in favour of ending foreign capital investment in refineries, that will eventually affect the present capital structure of the Cochin and Madras refineries. Thirdly, even if it decides to end foreign capital participation in refineries, the dependence on foreign sources for crude imports will continue.

International oil companies' connections with the sources of crude supplies are known to the Government. After deciding to end their operations in India, the Government cannot expect the oil cartels to take a benevolent view, should it become necessary tomorrow to go to them for crude. The outright purchase of the oil companies' interests will be influenced not only by the final negotiated price but the terms of payment in view of the meagre foreign exchange resources at the disposal of the country. A decision on the future operations of the oil companies will also have to be viewed in the context of its possible impact on future private foreign investment in India.

As things stand now, an early decision on the Esso offer is unlikely. There may be advantages in allowing the oil firms to continue to have limited but progressively growing operations in India. The decision on the Esso offer will be both political and economic. Which aspect will weigh more with the Government will be known to some extent as and when the new economic policy is announced. Even after the announcement of the new policy, there is no guarantee that a decision will be taken soon after. But at least one will know which way the wind is blowing.

CAPITAL, 16th NOVEMBER, 1972.

why do we research tobacco

We do not grow tobacco. Yet we have the oldest and possibly the best leaf tobacco research and development establishment. Costs us Rs. 16 lakhs a year. Why?

Tobacco today is a source of livelihood to nearly half a million people. And a major earner of foreign exchange. All this is the result of pioneering research. Further improvement of yield and quality must follow. So we take research as a primary responsibility. We produce pure seeds for farmers, breed and select plants to evolve disease resistant varieties and new strains of tobacco. Determine fertiliser mixture compositions. Analyse water and soil. Two of the best export varieties, Spl FCV and "16/103" were evolved by our research. We also introduced virginia tobacco and the flue curing process.

There must be someone to do this kind of continuous research.

if we don't grow it?

Will There Be a Change in Banks' Credit Policy in the Busy Season?

(By a Banking Correspondent)

Any relaxation in the credit control measures for the 1972-73 busy season by the Reserve Bank is ruled out. Its policy seems to be to utilise banks' excess funds for investment in gilt-edged securities and to help the Government to cut down its deficit financing.

THE conventional slack season has come to an end on 31st October, 1972, and as the 1971-72 busy season was a "slack" busy season, it is no wonder that the 1972 slack season proved to be the "slackest". The banking trends during the first five months of this slack season revealed the traditionally important characteristic of a slack season, i.e., a credit contraction to the tune of Rs. 22 crores. Since the 1969 slack season, an unusual contra-seasonal rise in bank credit has been witnessed during the slack period but the current slack season proved to be an exception at least till the end of the fifth month. However, in the last month of the slack season, a marginal rise in bank credit was witnessed due to a spurt in credit demand on the eve of Divali festival. The contra-seasonal expansion during the 1972 slack season has been only Rs. 36 crores, against Rs. 613 crores and Rs. 226 crores during the slack seasons of 1971 and 1970, respectively. In fact, although the 1972 slack season has been described earlier as the slackest season, it is pertinent to remember that by the middle of July 1972 the level of bank credit reached a record level of Rs. 5,438 crores, indicating a contra-seasonal expansion of bank credit to the tune of Rs. 250 crores, compared with a contra-seasonal expansion of Rs. 190 crores during the corresponding two and a half months of the 1971 slack season.

Another interesting fact revealed from the analysis of slack season trends is the self-reliance practised by banks. In the previous two slack seasons, banks used to borrow substantially from the Reserve Bank to meet the contra-seasonal surge in credit needs of the economy, particularly of

the food procurement operations although their overall indebtedness to the Reserve Bank was repaid gradually during the slack seasons. In order to enable banks to meet the expected unusual rise in credit demand for food procurement operations during the 1971 slack season, the Reserve Bank assured the banks of providing adequate refinance facilities. The Reserve Bank decided to provide refinance at Bank rate irrespective of a bank's net liquidity ratio up to 75 per cent of the increase over the base date of October end, 1970, till the end of July 1971, (instead of June 1971), up to 60 per cent of the increase in August 1971, and up to 50 per cent of the increase thereafter. For the 1972 slack season, the Reserve Bank did not feel the necessity of providing such refinance facilities in view of its expectation that banks would be flushed with return flow of funds during the slack season. The expectation came true so much so that banks were unable to utilise their idle funds for either to augment their lending operations or to invest in profitable avenues. It is interesting to note that when banks supported a contra-seasonal rise in credit of Rs. 250 crores by the middle of July 1972, the level of their borrowings from the Reserve Bank touched perhaps the lowest level ever reached in the past few years. The level of their indebtedness to the Reserve Bank was only Rs. 2.10 crores, against Rs. 23 crores at the beginning of the slack season, i.e., at April end, 1972. The level of banks' borrowings at the end of the slack season was only Rs. 16 crores, compared with Rs. 191 crores at the end of the 1971 slack season.

This comfortable resources position of banks was due to two main reasons—first, an impressive performance of banks in respect of deposit mobilisation and, secondly, the slackened rate of growth in credit demands for food procurement operations. The Reserve Bank seems to have given up the practice of publishing its forecast for deposit accretion and credit expansion for the 1972 slack season, as its forecast for the 1971-72 busy season went completely astray, even though the

Bank had an opportunity to revise them at the time of the mid-busy season review in the light of the trends during the first half of the season. However, financial circles put the return flow of funds to the banking sector in the form of deposit accretion during the 1972 slack season at Rs. 600 crores and this has been proved more than correct. As a result of this substantial flow-back of funds of over Rs. 684 crores against a slackened rate of growth in credit, banks are making frantic efforts to invest their idle funds in Government securities or even in units.

It is expected that the rate of deposit growth may not be sustained in future as banks' enthusiasm to mobilise deposits is likely to weaken with the accumulation of idle funds with them. Secondly, in view of less encouraging crop prospects and famine conditions in certain parts of the country, banks would not be able to mobilise more rural deposits. However, if they foresee a continuation of slackened demand for their credit even in the ensuing busy season of 1972-73, they have no cause to worry over the declining rate of growth in bank deposits.

The credit-deposit ratio at the end of the slack season stood at a low level of 66.2 per cent, compared with 73 per cent at the end of the 1971 slack season. This excess liquidity compels banks to make frantic efforts to change their attitudes and to search for more lucrative investment and lending avenues. Banks in the country are exactly in the same position where British clearing banks were on the eve of the new credit control policy, introduced in 1971, which removed all quantitative restrictions on them and ushered in an era of competitive banking. But the Indian banks are not free like the British banks to introduce new deposit and lending schemes. Any relaxation in the credit control measures in the ensuing 1972-73 busy season by the Reserve Bank is also ruled out. The Reserve Bank's annual report has already established a case for a continuation of the restrictive credit policy. The Governor of the Bank recently said in Madras, "I wonder whether there should be any change in policy often and on". The Reserve Bank's line of thinking seems to be to utilise banks' excess funds for investment in Government securities and to minimise the Government's resort to deficit financing, thus helping to contain the accentuation of inflationary pressures.

Raising Labour Productivity through Incentive Schemes

By M. R. Meher

It has been seen that incentive schemes go a long way in raising labour productivity. But in devising incentive schemes, the problem that has confronted all concerned relates to the sharing of the gains of productivity.

IT is generally accepted that wage incentives by relating wages to output elicit greater efforts from workers than under the time rated system, and that in the conditions in India, with a high cost economy and in many cases low productivity of labour, properly planned incentive schemes would benefit both the employer and workers. However, in devising incentive schemes the problem that has confronted all concerned relates to the sharing of the gains of productivity. While there is no dispute that the employer, workers and the community also should share in the gains of increased productivity, there is often an apprehension by trade union leaders and labour that while higher productivity can be obtained by greater efforts from workers, a disproportionately higher share out of the gains of productivity may go to the employer.

The National Labour Commission has in its report stated that labour productivity and changes therein are difficult to measure and that the main difficulty in measuring labour productivity arises due to the output being not an exclusive product of labour. Capital, technology and other factors contribute to it along with labour and these seldom remain constant. In consequence, increases in the *per capita* output cannot be attributed to labour alone, much less the total output. Valuation of the physical product presents another set of problems. Having recognised these difficulties, the N.L.C. recommended a formula for sharing the gains of productivity, which was suggested by the National Productivity Council, as essentially sound.

The formula briefly is that after making a provision in the interests

of consumers, which should not exceed 20 per cent wherever this is necessary, out of the balance of the gains of productivity, labour will receive half in those industries where their wages correspond to a fair or living wage except that (a) where the wages are at a level below either the fair wage or the need-based wage, the share of labour will be larger, to be decided by mutual agreement; and (b) where the industry has clearly built up a large free reserve, the share of labour will be higher than 50 per cent. Of the share thus available for distribution, after a provision for consumers and labour has been made, a portion will be reserved for the development of the industry and the rest for remunerating capital.

Apart from the difficulties set out by the N.L.C. itself, referred to above, and the vagueness in the formula as to when the wages can be agreed to be fair or need-based, the formula is too artificial. The question of sharing the gains of productivity between the employer, workers and consumers does not lend itself to determination by mathematical formula or by any formula that would generally be applicable. Apart from this, it has to be borne in mind that payment to workers by the time rate is more suitable in industries in which the work cannot be measured in defined units or is subject to considerable interruptions or where quality is more important than quantity.

In the most recent publication by the National Productivity Council, *Sharing the Gains of Productivity*, there is a more practical and flexible approach to the subject. It is recognised that it is not easy to devise an overall national formula for sharing the gains of productivity. Sharing should be regarded more as a philosophy of industrial relations than as a statistical technique or a mathematical formula for distributing the gains. On the basis of a report by a tripartite committee representing

the Council, employers and trade unions, the National Productivity Council has suggested certain guidelines for sharing the gains of productivity, supported by illustrative models. It is stated that in compiling these models due care has been taken to make them representative of the schemes commonly in use, so that with suitable modifications these could be applied under a variety of industrial situations. These models can serve as a basis for starting negotiations for arriving at agreements on incentive schemes and productivity gains.

The prerequisites to introducing the proposed model schemes are stated to be that (a) the model should be simple and understood by all; (b) all concerned should be made familiar with the model before its introduction; (c) it should be introduced only by mutual agreement with workers' representatives unions; and (d) the beneficiaries of the model should be able to calculate the models by themselves. As far as possible, all regular employees—direct and indirect—clerical staff and supervisory personnel working in the organisation should be covered by the scheme. While employees in the direct category should be paid bonus according to their performance, the other categories might be paid a proportionate amount of the bonus paid to the direct category as mutually agreed upon by the management and the trade union. As far as possible, the scheme should be developed on the basis of work measurement, capacity utilisation and break-even or cost analysis. Wherever possible, the economic importance of such factors as output, quality, material utilisation and material usage should be taken into account.

However, work measurement and other data should be treated only as a starting point for evolving a suitable scheme through mutual negotiations between the management and the trade union representatives. The norms of productivity could be established on the basis of past performance, or past costs, or standard time data, and based either on single factor or multiple-factor production. Where the scheme is based on individual or group performance, the use of work measurement techniques is imperative for determining the existing level of performance. The bonus payment should commence at the 75 per cent level of performance in the

0-100 scale, or at 100 per cent. in the 100-133 scale or at 60 per cent in the 60-80 scale. The 75 per cent level of performance in the 0-100 scale means a steady, deliberate and unhurried performance of an operative who is not under any financial motivation and does not intentionally waste time. The 75 per cent level of performance should not be considered equivalent to 75 per cent efficiency of the machine or the plant.

In most cases, however, the bonus payment may have to start even at lower levels of performance, depending upon the existing level of performance and mutual agreement between the management and workers' representatives. In such cases the bonus is paid at a lower rate till the operatives reach the 75 per cent level of performance and thereafter at a progressive rate, either uniformly or in progressively increasing slabs. Situations, however, exist in industry where bonus is paid at a higher rate to bring the operatives to the 75 per cent level of performance, and at a lower level thereafter with the purpose of achieving immediate gains by making the bonus payment initially attractive. The bonus payment should be linked to the basic wage and the whole or a substantial part of the dearness allowance, particularly where the basic wage is considerably lower than the dearness allowance. The standard wage for the purpose of linking the bonus payment could be determined by taking

a mid-point in the wage scale plus D.A. for all employees in that category of wage scale, or mid-point in the wage scale plus D.A. for the highest skilled category of employees, with a weightage of 80 per cent, 60 per cent, etcetera, to the other categories of employees. For purposes of bonus payment, overtime work, period of absence and poor quality performance beyond a specified limit are not to be taken into account.

The report goes on to state that effective administration of the model is as important as its designing. Slackness in its administration or delay in redressal of employees' grievances would not only make the entire scheme ineffective but might even cause a deterioration in industrial relations. Before and during the application of the scheme, the management should take all possible steps to improve the production process, lay-out of the plant equipment and the procedures concerning production planning and control, systematic maintenance and quality control. During the non-production periods caused by shortages of materials and services or an inadequate flow of orders, the management should ensure guaranteed wages to the employees. There should be a grievance procedure for dealing with the complaints of the employees and these should be handled expeditiously by the personnel department or the joint labour-management committee. In certain

cases disputes could be referred to an arbitrator, acceptable to both the management and the union, but resort to the Government machinery of conciliation or adjudication should be avoided. The basis of the scheme should not be changed without sufficient and valid reasons which could arise on account of changes in specifications and quality of material, changes in methods, processes, equipment, design of product, etcetera.

The models proposed for giving workers shares in the gains of productivity have been worked out on various bases, such as gains of productivity linked to the sales value of production, gains linked to monthly productivity index, gains linked to multi-factors of production, gains measured by saving in standard time, gains by group and plant performance, and gains measured by overall performance index of plant. For example, the incentive plan linked to sales of the company is, briefly, as follows: The break-even point a month for the preceding year in terms of sales for the preceding year is determined on the basis of the existing strength and equipment. Based on an intensive market survey, the potential annual sales in terms of money are estimated. When the sales value of the monthly production exceeds the break-even point, a certain percentage of the excess production value is distributed among the employees in proportion to their wages/salaries. This percentage is arrived at after taking into account the profit margin on the sales and as agreed upon between the management and the trade union representatives in advance.

Productivity bargaining has made great strides in the U. K. where trade unions have recognised that in the long run labour can get better wages and conditions of service only from increased productivity. In India, there have been a number of such agreements between managements and unions which have, on the whole, worked out satisfactorily, and employers who have once introduced an incentive scheme have seldom wanted to scrap it as uneconomical. There is more scope for such agreements. Where union rivalry has not affected the environment in the factory and there have been reasonably good industrial relations, productivity bargaining can make a significant contribution to the prosperity of the industry and the people who work in it.

INVESTMENT

Shares Subdued : Operators Inclined to Mark Time

THE stock markets have remained off colour during this short working week. With operators inclined to mark time, the volume of business put through has been quite small and the general tone has been subdued. With fresh support virtually confined to stray institutional buying, equity prices have tended to drift lower on light selling which has been more in the nature of tired bull unloading than bear pressure. While trading has generally been characterised by narrow irregular fluctuations, not changes over the week show wide-spread losses. Indeed, very few counters have managed to wind up the week with plus signs. Of the two major markets Lyons Range has performed a little better than Dalal Street.

That the stock markets should continue to present an uneasy look is understandable. Corporate news, although still favourable on the whole, was thin and it contained little which could enliven trading sentiment. Individual shares have responded to special influences but the response has been mild because of the growing belief that the economic prospect is far from promising. Captains of industry are feeling concerned about the deteriorating power supply position and raw material shortages. That explains why reports from New Delhi that the priority list is being extended to enable more industries to take advantage of the liberalised licensing policy have failed to cheer the market.

Reports of a possible stoppage of term lending by financial institutions to the private sector have also had an unsettling influence as the prospects of the private sector raising its own finances under the present conditions appear somewhat dim. While the economic prospect has been clouded by shortages of raw materials, power famine and the setback in agricultural production, developments on the political front also are being viewed with some concern. The re-election of President Nixon has induced fears that the already strained Indo-U.S. relations would be further affected. Many observers are inclined to the view that Pakistan's attitude is likely to harden further as a result of President Nixon's re-election.

Not all news, however, has been bad. India and Britain have signed two agreements under which India will get project and non-project loans worth about Rs. 78 crores. There is a feeling that in respect of debt relief, the British Government would follow the U.S. line. The market may also take some comfort from the thought that the Government is now very keen to step up production both in farm and factory. There are reports that the Central Ministry for Industrial Development is thinking of initiating in-depth industrywise studies to locate the causes for the continuing under-utilisation of capacity in many units. All in all, the outlook for equities remains uncertain and it appears that the market would continue to move up and down indecisively with the undertone remaining subdued.

Gilt-edged securities have been steady, but turnover has been small. The 3 per cent Conversion loan 1986 has been quoted at Rs. 59.95. The State Government loans have also been steady but turnover has remained restricted.

The Calcutta stock market has remained quietly steady this past week. The failure of the ninth round of talks of border delineation, the rise in the price level by over 10 per cent in one year, and the Prime Minister's warning that next year will be rather difficult for the economy have dampened the enthusiasm of operators. Among engineering shares, Guest Keen Williams, Burn, Indian Standard Wagon and Bihar Alloy have been supported. Jute shares have met with little business. Anglo-India, Nellimarla and Ganges have been transacted. Among paper shares, Ballarpur have been firm while Orient, Tribeni Tissues and Titaghur have been done. In the miscellaneous section, Indian Explosives, Union Carbide, Electric Construction, Indian Oxygen and India Tobacco have been traded.

Dalal Street has displayed an easier tendency this past week. Equity prices have suffered an all-round setback on light but persistent selling and lack of fresh support. Activity has been at a low ebb. Interest was selective with popular speculative counters

sional short covering and some institutional buying produced small rallies but the undertone remained distinctly subdued. Sentiment was unsettled by reports of a further cut in power supply in the State. Among cotton textiles, Standard and Century were particularly weak and registered sizable losses. Svadeshi and Khatau were among the steadier spots. Rayons also ruled easier. National Rayon and Century Enka encountered considerable selling. J. K. Synthetics and Garware Nylon held steady. Among steels, Tata Steel eased further due to lack of support, while Mukand Iron ruled steadier. Cement shares were subdued and shipping shares fared no better. Engineering shares made a mixed showing. Larsen and Toubro and Zenith Steel were steadier while Voltas and Tata Engineering displayed an easier tone. Chemicals were subdued. N.O.C.I.L., Bayer, Indian Dyestuff, Synthetics and Chemical and Polyolefins were among the weak features, while Excel Industries, Herdilia Chemicals and Tata Chemicals closed with small net gains. Among

Some of our readers might prefer to have CAPITAL while it is still fresh. If necessary, why not ask us to mail a copy to your residence? For subscription rates and other details, please write to "CAPITAL", 19 R. N. Mookerjee Road, Calcutta 1. Or ring up: 23-5825 (3 lines).

tyres, Ceat were marked lower while Premier Tyres held steady. Paper shares were steady with West Coast and Sirpur recording fair gains. Among miscellaneous counters, Motor Industries and Tata Oil were easier but Camphor and Allied, Bombay Oxygen, Premier Construction and New India Assurance showed small to moderate gains.

The Madras stock market has remained mostly steady this past week. In the planting section, Badra Coffee, Kailas and Peria Karamalai have been supported while Manjushree have declined on selling pressure. In the textile section, Mettur Beardsell have met with support. In the miscellaneous counter, business has been put through in Premier Fertilisers, Mettur Chemical, Madras Rubber and Carborandum Universal. In the sugar section, Deccan Sugar and E.I.D. have been traded while Mysore Sugar have attracted support. Among bank shares, Indian Overseas have been traded.

An Attractive Share Offer from Williamson Magor

WILLIAMSON Magor and Co. Ltd is offering for public subscription 20,000 9.5 per cent redeemable cumulative preference shares of Rs. 100 each at par. The entire issue has been underwritten. The subscription list will open on 23rd November and will close on 28th November or earlier at the discretion of the directors but not before 27th November. Applications must be for a minimum of five shares or multiples thereof and must be accompanied by payment in full. (Details of the issue appeared in last week's issue of *Capital*.) The Company is an important tea garden owner, planter, cultivator, producer, seller and exporter of tea in the country. It now owns five tea estates, namely, Soraipani, Seajuli and Dufflaghur in Assam and Lingia and Glenburn in Darjeeling. The total tea bearing area is 1,326 hectares and the annual production is about 1.63 million kilograms. Williamson Magor also acts as agents in India for 17 tea companies incorporated in the U.K. and having tea gardens in India. It has selling agencies for tea chest

linings produced by India Foils Ltd and timber products of Andaman Timber Industries Ltd. The Company has a number of subsidiaries. With a view to expanding its business, Williamson Magor has agreed to purchase from the Romai Tea Co. Ltd of the U.K. land comprising the Romai tea estate located in upper Assam together with its buildings, plant and machinery. This tea estate has a total leasehold area of about 574 hectares of which nearly 246 hectares are under cultivation. Its total production is about 360,000 kilograms of quality tea a year. Investors are looking forward to the share offer with keen interest.

STRAW PRODUCTS

Sales Rise

THE interim report of Straw Products Ltd on its working results for the nine months ended September 1972, compared with the corresponding period last year, shows that

the production of paper mills is slightly down at 15,670 tonnes, against 16,207 tonnes due to power shortages experienced since April 1972 and longer annual maintenance shut of the mills. The sales of paper and boards increased from Rs. 6.23 crores to Rs. 6.67 crores, a rise of about 7.1 per cent. The production of M. G. tissues, poster, kraft and other speciality papers was higher by 257 tonnes. The papers and boards produced by the Company continue to enjoy a high reputation in the market.

There has been an all-round increase in the cost of production; still the gross profit for the year is expected to be maintained at last year's level. The Company has introduced various economy measures. The installation of balancing equipment for increasing the production capacities of paper mills by 3,000 tonnes a year and of board mills by 2,000 tonnes a year is expected to be completed by the end of 1973. The Company has already obtained an industrial licence for the paper mills' expansion and the licence for board mill's expansion is expected shortly.

DHRANGADHRA CHEMICAL

Half-yearly Results

THE preliminary statement* from Dhrangadhra Chemical Works on its performance during the half-year ended September 1972 shows a setback in production as well as sales. The Company produced 21,100 tonnes of caustic soda during April-September, against 22,800 tonnes in the corresponding period of last year. The decline is attributed to the shortage of graphite and imposition of power cut. Soda ash production was lower at 23,200 tonnes, against 25,000 tonnes, as a result of the shut-down of the plant for about 25 days in April-May this year for repairing the lime kiln and overhauling the plant. The production of export-oriented upgraded ilmenite ore was better at 8,700 tonnes, against 7,200 tonnes. The Company expects improved earnings through higher exports of this product in the second half of the current year. The output of liquid chlorine, calcium chloride and ammonia bicarb has been higher. Because of the fall in output of caustic soda and soda ash, the Company's sales during April-September total Rs. 5.01 crores, against Rs. 5.22 crores in the same period last year. The trend of working in the second half of the current year is uncertain because of the cut in power supply.

BOMBAY BURMAH

Bonus Issue Proposed

BOMBAY Burmah Trading Corporation's working results for the year ended May 1972 show a setback, although the gross profit has registered only a modest decline in relation to the fall in turnover. Gross receipts have come down by about 16.5 per cent from Rs. 4.84 crores to Rs. 4.05 crores and the gross profit is lower at Rs. 1.83 crores, against Rs. 1.88 crores in the previous year. The fall in trading receipts is attributed mainly to the very low coffee crop and closure of the Bangalore tea packaging unit. After providing Rs. 17.37 lakhs (against Rs. 17.15 lakhs) for depreciation, and Rs. 1.30 lakhs (against Rs. 2.24 lakhs) for development rebate reserve and after meeting other liabilities, the net profit for 1971-72 amounts to Rs. 72.44 lakhs, against Rs. 80.43 lakhs in the previous year. After certain adjustments, the surplus amounts to Rs. 132.94 lakhs, against Rs. 86.44 lakhs.

Despite lower profits, the directors have stepped up the dividend from 17 per cent to 20 per cent, including a special non-repeatable extra dividend of 2 per cent. In addition, the directors have also proposed a one-for-five bonus issue. The directors state that the higher dividend has been recommended "after full consideration of the accounts and an examination of the resources and reserves which may be needed to finance possible developments in current and future years". They have also expressed their intention to recommend, subject to unforeseen circumstances, payment of a dividend at the rate of 15 per cent on the increased capital after the bonus issue. The chairman, Mr. Pratapsinh M. Vissanji, has pointed out that the extra dividend of 2 per cent has been recommended mainly on account of good results of the Corporation's overseas interests, coupled with satisfactory results in south India and also by way of "partially franking" the forthcoming bonus issue. The chairman has visualised fair prospects for the current year. The recession which affected the Malaysian timber companies has abated slightly and prices have shown some small improvement in the last few months. The Corporation's estates in south India are expected to show a higher production of tea and coffee which will offset the burden of enhanced wages. The Corporation has, however, been unable to make any headway in

respect of its diversification programmes. The soda ash project has been dropped.

GLAXO

Results Impress

GLAXO Laboratories (India) has turned out encouraging results for the year ended June 1972. The shareholders are being rewarded with a higher distribution of 17 per cent, against 14 per cent paid for the preceding year. This has been done through an increase in the final dividend from 8 per cent to 11 per cent. Not only has the Company improved upon its 1970-71 sales and profits but margins too have widened. With sales up by nearly 10 per cent from Rs. 29.47 crores to Rs. 32.46 crores and the gross profit higher by about 39 per cent at Rs. 4.85 crores, against Rs. 3.49 crores in the preceding year,

the ratio of profit to sales has improved from around 11.8 per cent to 14.9 per cent. Appropriations of profits include depreciation Rs. 50.98 lakhs (against Rs. 41.57 lakhs), development rebate reserve Rs. 4.70 lakhs (against Rs. 14.50 lakhs) and taxation Rs. 2.58 crores (against Rs. 1.56 crores), leaving a net profit of Rs. 1.71 crores, against Rs. 1.37 crores. After adjustments, a sum of Rs. 1.35 crores (against Rs. 96.30 lakhs) has been transferred to general reserve. The interim dividend absorbed Rs. 43.20 lakhs (same). The final dividend will be paid out of general reserve.

T. MANEKLAL

Excellent Performance

THE working results of T. Maneklal Manufacturing Co. for the year ended May 1972 show a further

TATA CHEMICALS : EXPANSION PLANS

TATA Chemicals is further expanding its manufacturing facilities. Its current programme to expand the soda ash capacity to 360,000 tonnes a year is well under way and it is scheduled to be completed in early 1974. Meanwhile, the Company has received another letter of intent to further expand its capacity to 500,000 tonnes. The Company seems hopeful of getting the Government's approval for the creation of additional caustic soda capacity and utilisation of co-produced chlorine towards the manufacture of phosphoric acid and phosphates of sodium.

The Company is seeking permission to enlarge facilities for the design and manufacture of complete soda ash plants. Meanwhile, it is engaged in increasing its capacity in respect of refined sodium bicarbonate from 14,400 tonnes to 18,000 tonnes a year with a view to relieving the present acute shortage of the chemical. The Argentine Government has revived its interest in installing a soda ash complex in Argentina and is currently negotiating with the bidders. The Company has reassured the Argentine Government about its continuing interest to participate in the establishment of the soda ash complex.

Uncertainty, however, continues in regard to the Company's fertiliser project. The directors state that the Government modified and extended the letter of intent for the fertiliser project and this has now further reduced its scope to the manufacture of only ammonia, urea and ammonium chloride. The modified letter of intent is valid only until 20th November, 1972. The directors regret that in the absence of the Government's decision on the choice and the pricing of the feedstocks and related matters, positive progress towards compliance with the conditions stipulated in the letter of intent has not been possible and, on the other hand, a great deal of work which the Company has carried out in this project has become infructuous.

Several capital works programmes, aimed at the modernisation and rehabilitation of the facilities in Mithapur, are under implementation or have been defined. These programmes, which are expected greatly to strengthen the Mithapur base and are economically justifiable, would require additional finance. The directors have, therefore, decided to issue rights shares which will also strengthen the equity base of the Company for its growing activities.

appreciable improvement over the previous year's encouraging performance. Sales have increased by 11.2 per cent from Rs. 3.56 crores to Rs. 3.96 crores and the gross profit has risen by 12 per cent from Rs. 62.72 lakhs to Rs. 70.25 lakhs. Margins have been more or less maintained at the previous year's level. The dividend, payable on the capital enlarged by the one-for-nine bonus issue, has been kept unchanged at 20 per cent.

After providing Rs. 19.01 lakhs (against Rs. 13.37 lakhs) for depreciation, Rs. 4.45 lakhs (against Rs. 2.14 lakhs) for development rebate reserve and Rs. 29.20 lakhs (against Rs. 25 lakhs) for taxation, the net profit for 1971-72 amounts to Rs. 17.58 lakhs, against Rs. 22.19 lakhs in the preceding year. After adjustments, the surplus of Rs. 17.55 lakhs (against Rs. 24.72 lakhs) has been transferred to general reserve out of which the proposed dividend absorbing Rs. 12 lakhs (against Rs. 10.80 lakhs) will be paid. The management expects the current year's sales to touch Rs. 5 crores; sales in the first four months are placed at Rs. 1.25 crores, against Rs. 1.08 crores in the corresponding period last year. After the successful execution of the trial defence order for a vital component, the Company has received further orders. The Company exported machinery worth Rs. 45 lakhs during 1971-72 and it expects to do well in the current year.

INDIAN DYESTUFF

Sales and Profit Decline

INDIAN Dyestuff Industries has maintained the dividend for the year ended March 1972 at 14 per cent, but its working results are not satisfactory. According to the preliminary figures, net sales at Rs. 9.88 crores are down by about 6 per cent from the previous year's figure of Rs. 10.53 crores and the gross profit has declined by as much as 35 per cent from Rs. 2.19 crores to Rs. 1.43 crores, indicating a diminution of margins. After providing Rs. 91.82 lakhs (against Rs. 76.33 lakhs) for depreciation, Rs. 26.47 lakhs (against Rs. 5.25 lakhs) for development rebate reserve and with no tax liability for which Rs. 83.30 lakhs had been allocated in the preceding year, there is a net profit of Rs. 24.90 lakhs, against Rs. 54.17 lakhs. The equity dividend will claim Rs. 42 lakhs and the preference dividend Rs. 3.22

lakhs. Nearly half of the proposed equity dividend will thus come from past reserves.

DUNLOP

Lock-out at Calcutta Offices

FOR some time inter-union rivalry has been persisting in the head office and the Calcutta district sales office of Dunlop India Ltd. The unions concerned are Dunlop India Ltd Employees' Union (recognised union), the president of which is Mr. Bishnu Banerjee, president, I.N.T.U.C., West Bengal; and Dunlop Staff Union (unrecognised union), the working president of which is Mr. Samir Roy, who is a member of W.B.P.C.C. Labour Cell, says a statement issued by Dunlop India Ltd's management recently. While negotiations for an amicable settlement were progressing with the help of the State Government, the unrecognised union resorted to mass demonstrations with the help of people who are not Dunlop employees, and *gheraoed* the Company's offices on 31st October. The demonstrations and the *gherao* were lifted

in the evening only after the intervention of the State Government.

Furthermore, in spite of Government intervention and while the matter was under discussion, the unrecognised union resorted to an illegal strike on Wednesday, 1st November. On this occasion a large number of people who are not employees of Dunlop, collected in the area of Dunlop offices and employees were prevented from approaching and entering the offices. A number of Dunlop employees, including a director, were manhandled. In view of this and in the interest of the safety of the employees, the management of Dunlop India Ltd has declared on 2nd November a lock-out of its head office and the district sales office in Calcutta until normalcy is restored.

GOODYEAR

Contract from Boeing

WHEN Boeing delivers the first 707s to the People's Republic of China, they will be equipped with wheels and brakes built by Goodyear Aerospace. The contract has been awarded for equipping ten Boeing

DELHI CLOTH MILLS: RESULTS IMPRESS

IN his chairman's speech at the annual general meeting of the Delhi Cloth and General Mills Co. Ltd recently held in Delhi, Dr. Bharat Ram said that the working results of the Company during the year ended June 1972 were satisfactory. (A fuller version of the speech was published in last week's issue of *Capital*.) The chairman said that the replacement of 35,000 spindles and 400 looms at the new textile mill in Dasna had been completed. The factory has started working. But because of the untrained labour and other teething troubles, it is not working to full capacity. It is hoped that within the next few months the plant will reach its expected capacity. The Company has received permission from the Government to expand the capacity of its fertiliser plant by 50 per cent; the various formalities have been completed. The construction has already started and every step is being taken to expedite the implementation of capacity expansion. The Company has started the production of electronic desk cal-

culators; these are found to be excellent. It is a matter of satisfaction that the desk calculators are produced by know-how developed by the Company.

The chairman referred to the social milieu under which the Company has been operating. There has been both achievements and failures. The generation of power and the heavy machinery building capacity have been substantially increased. There has also been growth in other sectors. But prices have risen substantially. Industrial production, by and large, continues to be sluggish. The acute shortage of power and raw materials are proving to be great handicaps. The chairman said that business men must not only accept but welcome the reforms appropriate for the "removal of exposed abuses both in letter and in the spirit." To remove poverty, there must be a concerted drive on the part of larger enterprises to establish new industries in the backward areas.

707s. Goodyear will begin delivering the items in March 1973. It is expected that Boeing will also use three other Goodyear items on the 707s. The components—centre wing section, passenger windows and tail radome protective covering for microwave antenna—are no longer in production, but the Boeing has ready stocks. Meanwhile, Goodyear has received \$4.9 million in military contracts for aircraft tyres and other aviation products.

ALUMINIUM INDUSTRIES

Results Improve

THE performance of the Aluminium Industries Ltd in recent years has not been quite encouraging, although the year ended 31st March, 1972, provides indications of recovery from the earlier depression. The chairman, Mr. S. Narayanaswamy, has regretted the inability of the Company to resume the payment of dividend. Mr. Narayanaswamy was keenly aware of the need for a reasonable return to the shareholders in these days of spiralling prices. The profit before depreciation for 1971-72 has improved from Rs. 39.84 lakhs to Rs. 81.03 lakhs. The chairman expects results to improve further in the current year. The total sales at Rs. 11.18 crores (against Rs. 9.73 crores) is a good achievement and out of this figure bare conductors have contributed 72 per cent. This indicates that the Company's mainstay is bare conductor. The chairman referred to the disadvantages that went with the selling of public utility goods to statutory bodies, as against the selling of consumer goods in the market.

HASTINGS MILL : SATISFACTORY RESULTS

HASTINGS Mill Ltd has turned out satisfactory results for the year ended March 1972 in line with the jute industry's overall satisfactory performance. Production was maximised to meet the international demand as the overseas markets mainly depended on Indian goods due to the dislocation of the manufacturing activities and exports from Bangladesh. Sales are up from Rs. 9.24 crores to Rs. 9.83 crores. The Company has made a profit of Rs. 2.20 lakhs, against a loss of Rs. 22.60 lakhs in the previous year, after providing Rs. 23.48 lakhs (against Rs. 23.85 lakhs) for depreciation. The taxable ordinary

Obviously, the profit margin is lower in this line than in other consumer industries. The Company has brought down fixed deposit liabilities from Rs. 90 lakhs to Rs. 63 lakhs, apart from reducing the rate of interest on such deposits.

In the machinery division in Hyderabad the order-book position is considered satisfactory and sales are expected to be stepped up substantially in the current year. Sales of the switchgear division amounted to Rs. 52 lakhs. The performance would have been still better but for the delay in the arrival of some imported components. One significant feature is that the Company has achieved a high degree of import substitution in this division. The consultancy division which commenced work in Madras in 1970 has been able to erect and commission one small-scale unit in Hyderabad and is now commissioning another unit in Kerala. The Company was able to export goods worth Rs. 36 lakhs, out of which export of cables to Russia amounted to Rs. 21 lakhs. In the first five months of the current year export sales have touched Rs. 26 lakhs. The chairman is happy with the performance of the Company during the current year.

CARONA SAHU

Dividend Skipped

DESPITE a modest improvement in sales from Rs. 6.33 crores to Rs. 6.55 crores, the gross profit made by Carona Sahu during the year ended April 1972 at Rs. 10.15 lakhs shows a decline of about 32 per cent

dividend has been maintained at 1 per cent, absorbing Rs. 80,000 which will be paid out of general reserve. This offers a yield of 1 per cent at the present price of Rs. 102 a share of Rs. 100 each. A sum of Rs. 2.85 lakhs (against Rs. 2.38 lakhs) and another sum of Rs. 14.60 lakhs (against Rs. 40,000) have been transferred from dividend rebate reserve and the debenture sinking fund. After making other adjustments, Rs. 4.49 lakhs (against Rs. 5 lakhs) and Rs. 15.18 lakhs (against nil) have been transferred to the debenture sinking fund and general reserve, respectively.

from the previous year's Rs. 14.78 lakhs. After providing Rs. 13.07 lakhs (against Rs. 13.30 lakhs) for depreciation, there is a net loss of Rs. 2.91 lakhs, against a profit of Rs. 1.48 lakhs. The poor results are attributed to the increase in labour costs, dislocation of the market for the Company's products resulting in increased inventories and more interest charges and keen competition. The dividend has been skipped, against 5 per cent paid for the preceding year.

In his annual statement to the shareholders, the chairman, Mr. Sriyans Prasad Jain, points out that there has been a change in the market demand from traditional footwear made of canvas, rubber and leather to P.V.C. footwear. But even in P.V.C. footwear, prices slumped on account of keen competition and unhealthy marketing practices adopted by some of the small-scale units. Sales for the first four months of the current year have shown a marginal increase over the figure for the corresponding period of the previous year and this trend is expected to be maintained for the rest of the year. The management is reshaping its marketing policy, keeping in view the prevailing market conditions and the need to secure a reasonable margin of profit.

RAMESHWARA JUTE

Sales and Profit Rise

THE Rameshwara Jute Mills Ltd has fared well during the year ended March 1972. Sales are up from Rs. 3.48 crores to Rs. 4.32 crores and the profit has risen from Rs. 12.57 lakhs to Rs. 29.76 lakhs, after providing Rs. 4.90 lakhs (against Rs. 11.07 lakhs) for depreciation. In view of the Company's improved working results, a taxable ordinary dividend of 5 per cent has been declared (against nil), absorbing Rs. 1 lakhs which will be paid out of general reserve. This offers a yield of 4.3 per cent at the present price of Rs. 11.56 a share of Rs. 10 each. Taxation gets Rs. 25 lakhs (against Rs. 10 lakhs) and development rebate reserve Rs. 1.70 lakhs (against Rs. 1.38 lakhs). After making other adjustments, Rs. 3.13 lakhs have been transferred to general reserve. The prospects for the current year will largely depend on the steps the Government takes to import raw jute and grant fiscal relief.

ASSAMBROOK ESTATES

Profit Declines

ASSAMBROOK Estates Ltd has not done well during the year ended June 1972. It was a disappointing year for a number of tea companies, particularly in Assam. Stringent control has made it possible to avert a loss and make a small profit. Irregular climatic conditions marked by continued wet spells and the lack of adequate hot and humid weather also affected the crop considerably. The profit has declined from Rs. 4.80 lakhs to Rs. 2.69 lakhs, after providing Rs. 5.97 lakhs (against Rs. 5.61 lakhs) for depreciation and Rs. 1.49 lakhs (against Rs. 3.95 lakhs) for taxation. In view of the Company's unsatisfactory working results, the ordinary dividend has been cut from 10 per cent to 1 per cent. This offers a yield of 1.6 per cent at the present price of Rs. 6.25 a share of Rs. 10 each. A sum of Rs. 49,000 (against Rs. 41,500) has been transferred to reserve for development rebate and allowance. There is a carry-forward of Rs. 8,176, against Rs. 5,399 brought in.

PERIA KARAMALAI TEA

Severe Competition

ADDRESSING the annual general meeting of Peria Karamalai Tea and Produce Co. Ltd, the chairman, Mr. H. C. Lakhani, referred to the present position of the tea industry in the country. He said that world production of tea during the year had recorded a higher figure so far. The supply position has outstripped the demand, resulting in severe competition throughout the world. He pointed to the high cost of production in the tea industry which is constantly moving up. This rising trend of costs has affected the developmental works. In the absence of a substantial increase in production, costs in the industry are bound to be high, compared with other countries. This cost inflation has already affected tea exports. The chairman was apprehensive of a fall in exports in the coming years, unless drastic remedial measures were taken.

The chairman said that the Government at the Centre and in the States had agreed to exempt plantations from the purview of the Land Ceilings Act, in order to avoid fragmentation of land. This exemption has been given as far as planted areas are concerned. But, with regard to unplanted

land, the Tamil Nadu Government has fixed a limit whereby plantations are allowed to retain land only up to 20 per cent of the planted average. In effect, this limitation has put an end to the replacement and extension of areas under plantation crops. The Company's tea is fetching satisfactory prices. While the chairman expressed difficulty in making a forecast on future tea prices, he hoped that the Company's teas would realise fairly good prices as it produced quality teas.

SUNGMA TEA

Profit Earned

THE profit of Sungma Tea Co. Ltd for the year 1971 has amounted to Rs. 26,763, against a loss of Rs. 1.89 lakhs in the previous year, after providing Rs. 1.39 lakhs (against Rs. 1.13 lakhs) for depreciation, Rs. 5,000 (against Rs. 57,000) for taxation and Rs. 10,272 (against Rs. 26,613) for development rebate reserve. The taxable ordinary dividend has been reduced from 5 per cent to 3 per cent, absorbing Rs. 46,875 (against Rs. 78,125). This offers a yield of 5 per cent at the present price of Rs. 6.06 a share of Rs. 10 each. After transferring Rs. 20,000 (against Rs. 2.60 lakhs) from general reserve and making other adjustments, there is a balance of Rs. 4,842 which is carried forward, against Rs. 4,954 brought in.

WEST COAST PAPER : BONUS AND RIGHTS SHARES

WEST Coast Paper Mills has turned out poor results for the year ended June 1972. While sales at Rs. 8.96 crores show an increase of about 10.2 per cent over the previous year's figure of Rs. 8.13 crores, the gross profit has declined by 10.8 per cent from Rs. 2.03 crores to Rs. 1.81 crores. Production was a little higher at 43,098 tonnes, against 42,651 tonnes, despite a shut-down of machines to install the balancing equipment. The dividend has been kept unchanged at 13 per cent. In addition, the directors have proposed to issue 60,000 equity shares as bonus shares on a one-for-four basis and an equal number of equity shares as rights at a premium of Rs. 40 a share or at such premium as may be

KIL KOTAGIRI TEA

Profit Declines

KIL Kotagiri Tea and Coffee Estates Co. Ltd's profit of Rs. 4.63 lakhs for the year was Rs. 1.88 lakhs less than in the previous year. The fall in profit was attributed to lower crops due to a prolonged drought. The lower realisation for the coffee crop and also an increase in costs affected the profit. The tax provision was Rs. 2.20 lakhs. In spite of a lower profit the dividend has been maintained at 12½ per cent on ordinary shares.

PARASEA COLLIERIES

Loss Incurred

THE working of the Parasea Collieries Ltd shows unsatisfactory results for the year ended December 1971. Raisings declined from 426,130 tonnes to 375,048 tonnes and despatches from 410,713 tonnes to 369,795 tonnes. The Company has incurred a loss of Rs. 12.74 lakhs, against a profit of Rs. 1.67 lakhs in the previous year, after providing Rs. 5.85 lakhs, against Rs. 5.96 lakhs for depreciation. In view of the Company's poor performance the dividend has been skipped. After transferring Rs. 50,095 from adjustments relating to the earlier year, Rs. 515 from excess provision for reserve for doubtful debts and after making other adjustments, there is a debit balance of Rs. 13.33 lakhs which is carried forward. Sales were shown at Rs. 1.22 crores, against Rs. 1.38 crores.

prescribed by the Controller of Capital Issues and agreed to by the board. The rights shares will rank for dividend from the financial year commencing July 1974.

After providing Rs. 66.90 lakhs (against Rs. 62.10 lakhs) for depreciation, Rs. 31 lakhs (against Rs. 8.25 lakhs) for development rebate reserve and Rs. 36.50 lakhs (against Rs. 78.50 lakhs) for taxation, the net profit for 1971-72 amounts to Rs. 46.75 lakhs, against Rs. 54.06 lakhs in the preceding year. After some write-backs, a sum of Rs. 53.43 lakhs (against Rs. 78.57 lakhs) has been transferred to general reserve out of which the proposed equity and preference dividends amounting to Rs. 38.22 lakhs will be paid.

I.J.M.A. Urges Immediate Import of Bangladesh Jute

HARDENING raw jute prices with the advance of the season confirm the industry's fear, also shared by the Government, about the 1972 Indian jute crop falling short of the normal inventory and consumption requirement of jute mills at the current rate of production, says a statement issued by the Indian Jute Mills Association earlier this week. The price of the fibre, basis Assam Bottoms delivered in Calcutta, is ruling around Rs. 62 a maund, against Rs. 52.50 in January 1972 and Rs. 48 at this time last year. November and December are traditionally the peak marketing months for raw jute when heavy arrivals of the fibre tend to exert a downward pressure on prices. The movement of jute prices in the opposite direction for the last few weeks is reason enough for anxiety on the part of the industry, which is already battling against rising costs under different heads of the production process. There would, however, be real cause for alarm if the prospects of production itself were to be clouded by uncertainty about sufficient availability of raw jute during the second half of the 1972-73 season.

The situation lends urgency to the industry's plea to the Government for expeditious import of 1 million bales of jute, which will go a long way towards safeguarding the interests of mill workers and consumers of jute goods by ensuring the maintenance of the industry's current level of operation. The State Trading Corporation has already purchased 200,000 bales of Bangladesh jute for immediate import and allocation to mills. A delegation, it is understood, is shortly to visit Dacca to negotiate the purchase of another 200,000 bales to 300,000 bales. The jute price and supply situation in India warrants the finalisation, with the least possible delay, of arrangements for import of the balance 600,000 bales of the total 1 million bales which the industry has asked for to meet the deficit in Indian domestic crop.

The sharp deceleration in the consumption of burlap since the beginning of this year cannot be ascribed to any single or dramatic

development, says the New York correspondent of the Indian Jute Mills Association in his latest dispatch. A combination of factors leading to the continuing high price levels and disruption in supplies have led to a rapid attrition in specific market areas. Developments in these areas and their impact on the Indian jute industry can bear repetition at this juncture, he warns. The single largest market for standard constructions of burlap—the packaging of commercial feed, agricultural produce, fertilisers and similar products—is fast moving into polypropylene, polyethylene, and bulk handling. The one common direction appears to be away from burlap.

U.S. Buying Policy Reversed

For its P.L. 480 Title II purchasing programmes, the U.S. Department of Agriculture has almost totally reversed its buying policy. In the earlier months of 1972, it purchased only 500,000 burlap bags, against 2 million for the comparable period of 1971. The offtake of polypropylene bags, however, rose to more than 2 million over 600,000 for the same period last year. In respect of commercial feed, the same period witnessed the almost total conversion of the largest manufacturer in the world to polypropylene. This event also marked the advent of the polypropylene bag as a viable re-use container, thus discounting the very positive advantage enjoyed alone by burlap so far.

Automotive Carpeting

The introduction of a polyester substrate in the automotive backing market has allowed larger automobile manufacturers to specify an increasing percentage of automotive carpeting to utilise this polyester and the earlier, fully acceptable nylon substrate. It has been of particular concern to note that the availability of a substitute for burlap can evoke such a response from an actual user. It can, of course, be argued that if burlap were available at reasonable prices and had been in steady supply, such insistence on the use and development of a domestic synthetic-based substitute would have been unneces-

sary. Flammability requirements in this area favour synthetic materials and it seems a strange sequence that the enforcement of such requirements has coincided with the advent of acceptable fire-retardant substitutes. It is indeed of grave concern that the efforts of the north American office of the I.J.M.A. and the I.J.I.R.A. to retain at least a share of this market may well be foiled unless the basic prices of burlap were brought to realistic levels.

The announcement of carpet production for the first quarter of 1972 by the U.S. Bureau of Census confirms the misgiving about the future of the jute industry. The immediate future of jute backings does not appear to be encouraging. The second quarter of 1972 produced a lull in the tufting industry, following heavy shipment of goods from India and the revival of the industry in Bangladesh. The immediate impact was that tufting mills went about trying to sell their stocks of high-priced jute backing. Inventories of both jute and synthetic backing started piling up, particularly the former. While tufters have been under no pressure to pick up the jute-based fabric they have ordered, they have taken most of the polypropylene that has been offered. Having been put on allocation by the synthetics manufacturers during the scarcity of jute, most tufters are unwilling to refuse supplies of the synthetic product for fear of losing their quotas, should scarcity of jute crop up again.

The disruption of supplies from the erstwhile East Pakistani industry, the resulting burden placed on India to meet even the sagging north American demand and the consequent escalation of prices led to an acceleration of interest in and acceptance of synthetics, polypropylene—woven and non-woven—polyester, nylon, synthetic rubber and others for packaging, industrial and carpet backing markets. Large lots of available production were released, the production capacity fully utilised, and still supplies continued to lag behind the demand. Tufting mills, bag converters and industrial users were put on quotas till further supplies were available.

Recession in Gunnies

The Calcutta gunny market suffered a sharp recession during the past week on tired long liquidation in a predominantly buyers' market. Trad-

ing was interrupted due to a number of festive holidays and the virtual absence of genuine enquiries from and offtake by major overseas and internal consumers. The recent reduction in the export duty on primary carpet-backing cloth did not appear to have produced any appreciable impact on its demand and bookings. The last loader for east African destinations lifted about 5,000 bales of end-products, while buyers in the River Plate region and west Africa were reportedly leaning still heavily on Bangladesh supplies. Shipper circles were inclined to believe that the absence of overseas interest was also due to the hopes of substantial reliefs in the remaining export duties on Indian jute goods. Although the industry had almost reached normal levels of production in Bangladesh, it had by now been well-booked practically for the entire season. The simultaneous operation of all these bearish factors as also the credit squeeze unnerved the bulls and they emerged as nervous sellers in an unwilling market. Taking advantage of the downward trend, bears also indulged in a lot of aggressive short-selling, taking care to cover their open positions at the dips. This bull-bear tussle helped in curing the technical imbalance. By the weekend, the elimination of most of the weaker bulls and the clearance of some overload paved the way for arresting any further recession in prices. Mills were also cautious, for the high fibre prices and difficulty in getting adequate lots of suitable grades thereof obliged them to refuse lower offers for goods. Operators were led to believe that leaner and leaner enquiries from traditional buyers overseas and their keener interest in supplies from Bangladesh would ultimately canalise Indian exports of such products to countries with which India had developed standing bilateral trade arrangements. The recent Press note by the I.J.M.A. urging the immediate abolition of the anachronistic export levy of Rs. 150 a tonne on sacking was interpreted as a pointer to the industry having reconciled itself to the co-existence of the synthetic substitute industry in India. In the hedge market, the trend appeared to be subdued in sympathy with the behaviour of the spot goods market. In spite of the impact of rising competition from the fast-recovering industry in Bangladesh and the additional burden of export levies which tilted overseas' preference to Dacca, comparative statistics relating to production, exports and internal offtake showed an appreciable improvement during the

period, notwithstanding the heavy setback to the shipments of carpet-backing cloth and hessian. The hectic price upsurge was followed by the manifestation of stiff consumer resistance and substitution by synthetics even from official and semi-official agencies in India. Consuming a total of 5.015 million bales of raw jute during the nine-month period ended September this year, against 4.687 million bales in the same period last year, the Indian industry produced a total of 850,300 tonnes of end-products, against 796,200 tonnes—245,700 tonnes, against 232,800 tonnes of hessian, 375,000 tonnes, against 359,000 tonnes of sacking, 148,300 tonnes, against 232,800 tonnes of carpet-backing cloth, and 81,300 tonnes, against 60,000 tonnes of other goods. While total exports rose by 27,000 tonnes over the 1971-level to 466,900 tonnes, hessian exports showed a drop of 1,000 tonnes to 202,500 tonnes and carpet-backing cloth of 11,900 tonnes to 130,800 tonnes. Sacking exports showed a satisfactory increase of 21,100 tonnes to 89,000 tonnes due to brisk despatches against bilateral trade agreements. Turnover was small. The closing undertone was hesitant.

Fibre Firm

Despite a sharp recession in the jute goods market, raw jute continued to rule pretty firm during the

past week. The absence of internal or overseas enquiries and business, however, depressed the morale of the industry. Although it had so far absorbed all offers of suitable grade fibre even at a premium to maintain the optimum level of production, the increasing burden of inventories in the finished goods warehouses accentuated the stringency of funds to finance further fibre purchases. Still, mills went on absorbing better grade jute at quoted prices which ruled steady but unchanged during the week. The drastic enforcement of restrictions on border trade prevented the movement of clandestine fibre supplies from Bangladesh. The commencement of river traffic on the Cachar-Sunderbans service through Bangladesh territorial waters was welcomed by the tea and jute industries in both the countries. If the service were run regularly, it would help in the smooth movement of jute from Assam and Bangladesh to Calcutta, reducing the pressure of traffic on the North Eastern Frontier Railway. Arrivals in the upcountry agencies were small. Turnover was nominal and the closing undertone was quietly steady.

EXTRACTS FROM THE REVIEW BY THE CHAIRMAN, MR. SACHINDRA CHAUDHURI AT THE 75TH ANNUAL GENERAL MEETING HELD ON 10TH NOVEMBER, 1972 AT VICTORIA HOUSE, CALCUTTA

In the year under review India has witnessed great human tragedies including War and mass migration of refugees. This migration with all its intensely sorrowful accompaniments stretched into areas within which your Company operates. On the other hand, under the leadership of her Prime Minister, India has won a decisive victory, with little loss of Indian life, over the soulless military machine of Pakistan, and has helped the emergence of an independent democratic State. She has also given comfort and asylum to the large migrating population unprecedented in history and has helped them to return to their homes and to rehabilitate themselves. The State of West Bengal has been to the polls and a Government has been elected which commands strong support both in the legislative assembly and in the State. Confidence in the future of the State and its economic growth and stability has returned and law and order have been restored. Your Company has been fully active in the generation and supply of power needed for development of the State but for causes beyond its control it has been unable fully to play its required part. I shall revert to this question later in this Review. I, however, express my deep regret that our consumers have suffered great inconvenience caused by interruption of power supply and I thank them for their understanding and forbearance. I like to emphasise that in this crisis of power your Company has stretched itself to the utmost to maintain its supply to Industries, other organisations and domestic consumers.

Board of Directors

Our active operative Board is completely Indian though the interests of our British Stockholders are constantly kept in view and are especially looked after by Sir Owain Jenkins and Mr. J. W. Gauntlett who are always available to our Stockholders on our English Register, to answer questions and give information.

Sales of Electricity

I am pleased to report that the units sold and maximum demand as shown above have at last risen above the static figures of the last three years. But the small increases (less than 4%) do not adequately reflect the improved industrial conditions to which I have referred because restrictions were imposed by Government order on certain H.T. Industrial Consumers and because there has been frequent "load shedding" for reasons explained later.

Capital Expenditure

Capital Expenditure at cost less provision for depreciation and change in the Rupee and Sterling rates stands in the Balance Sheet at Rs. 3970.8 lakhs, Net Expenditure during the year totalling Rs. 313 lakhs. Although this was considerably more than in the previous year it was, as was predicted, less than was provided in our Development Budget. The main items of expenditure were on modifications to the coaling plant at Mulajore Generating Station and the EHV Cables for the Princep Street 132 KV Receiving Station.*

*N.B.—Fourth 132 KV Receiving Station to receive power from the WBSEB

Electricity (Supply) Act and Tariff Policy

In the Directors' Report we point out that the Clear Profit for the year was Rs. 138.9 lakhs or some Rs. 80.3 lakhs less than the Reasonable Return to which the above Act entitles the Company. This profit included about Rs. 23.1 lakhs (net of tax) of interest really extraneous to the business of electricity supply and so the deficiency of operating profit was something more like Rs. 103.4 lakhs.

This again underlines the urgent need for an increase in the Company's revenue to match its increased costs. Stockholders will be aware that for over two years now we have been endeavouring to implement a comprehensive revision of our rates designed to bring the Clear Profit more nearly into balance with the Reasonable Return. I regret again to have to report that in spite of our endeavours the support of Government which we can reasonably expect has not yet come. A reluctance in Government to give ready assent to an increase in the price of such a basic commodity as electricity is understandable. I must point out, however, that such a policy can have dire results. The present condition of the Electricity Supply Industry in West Bengal is a stark reminder of the consequences of starving the Industry of finance. So far as the consumers are concerned, I am quite convinced that their interest is best assured by being served by an undertaking which is viable and efficiently run with due regard to the supply of future demands. This Company can meet these criteria only if it is allowed to earn its Reasonable Return which enables it just to service its capital and have some margin to spare to augment development finance. The framers of the Electricity (Supply) Act had this economic position in mind and enacted strict rules as to Reasonable Return. Irreparable damage will be done to the Company and with it to consumers in Calcutta if its right to earn the return which the Electricity (Supply) Act entitles it is thwarted.

Operations

Stockholders resident in Calcutta will unfortunately need no reminder of the drastic power shortage which was referred to by my predecessor in his Review last year and which, to our regret, still persists. In fairness to the Company's operational and planning staff, if for no other reason, I would state categorically that the blame for this power crisis cannot be laid at the Company's door. This is because some 20 years ago, when the Company sought the necessary consents from Government for the construction of a large new generating station in the Calcutta area it was advised that these would not be forthcoming as Government had decided to assume responsibility for the expansion of the generating capacity in the State and that the Company would thenceforth have to take all its additional power requirements from Government Agencies. The Company's present failure to meet in full the demands of its consumers is due not to any defect or operational failure of its own plant, the performance of which during the year has not only maintained in terms of utilisation factors rarely equalled elsewhere in India but has also shown an improvement over that of the previous year. The utilisation factors of the two of our principal power stations installed in 1940 and 1950 were respectively 87% and 94% of the installed capacity. Quite simply, it is due to the inability of Government Agencies—the West Bengal State Electricity Board and the Damodar Valley Corporation—to supply the Company with the full amount of power to which these agencies are committed by agreements with the Company. Had the State Electricity Board and Damodar Valley Corporation been in a position to perform their obligations under these agreements there would have been no power cuts in Calcutta in the recent past nor would there be any today.

It appears that the Government Agencies' existing firm generating capacity is inadequate and the present ex-

tremely unsatisfactory state of affairs will persist until that capacity is materially enhanced either by an improvement in the performance of the existing plants or by the commissioning of additional plant. In terms of conventional steam generating plant, the latter is, of course, a lengthy business and the State is not likely to see any further augmentation of its capability, in relation to needs, for a minimum of four to five years after the commissioning of the two 120 MW units at Santaldih P.S. in 1973/74. The addition of a mere 240 MW of installed capacity in 1973/74 can hardly be considered adequate to cover the needs of the State up to 1976/77, not to speak of the urgent and immediate need for additional capacity to implement an overdue programme of maintenance for restoration of all power plants in the State to good working order. Quicker relief measures such as the installation of gas turbine generators may be considered by the authorities.

Administration

Although the number of employees remained virtually constant throughout the year there was a very substantial rise in salaries and wages. The new agreement referred to last year resulted in an increase in emoluments to our workers totalling approximately 150 lakhs of rupees during the year under review. The Company has always recognised the social responsibilities of an employer and has been just and fair in its dealings with its employees. It appreciates that only the satisfied employees give the best service to consumers. A similar rise occurred in 1968 when the previous revision of pay was made after which the average annual wage curve tended to level off. We expect this to happen again during the current agreement. Despite the sharp rise in rates of basic pay the amount paid for overtime was maintained at about the same level as last year by dint of strict supervision combined with the introduction of incentive schemes. Unfortunately, some sections of our labour force continue to resent the restriction of overtime within reasonable limits.

Although we have still been unable to instal a modern computer because of the "no automation" policy of the unions, some of the older billing machinery have now been replaced by newer machines with enhanced speed and the output of monthly bills is being kept up to date. Allocation of expenditure is still done manually and is consequently much in arrear.

For the convenience of our consumers in the southern part of our area the Company last month opened another Regional Office in a new building on Gariahat Road.

Staff

I am sure you would wish me on your behalf to express the Company's appreciation of the tasks that have been performed by your executive staff and the workers who have helped maintain supply in difficult circumstances and made it possible for the Company to render efficient service to our consumers.

(N.B.—This statement does not purport to be a report of proceedings of the Annual General Meeting referred to above)

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS
ANNOUNCEMENT REGARDING ISSUE OF 3,57,130 EQUITY SHARES OF RS. 10/-
EACH FOR CASH AT PAR

Persons interested in full details may obtain copies of the Prospectus and Application Forms from the Underwriters, Managing Brokers, Brokers and Bankers to the issue mentioned below:—

Application will be made to the Calcutta Stock Exchange for permission to deal in and for quotation of the Equity Shares in the Company.

The Subscription List will open at the commencement of Banking Hours on 27th November, 1972 and will close at the close of Banking Hours on 5th December, 1972 or earlier at the discretion of the Board of Directors of the Company but not before the close of Banking Hours on 29th November, 1972.

J. STONE & COMPANY (INDIA) LIMITED
 (INCORPORATED UNDER THE INDIAN COMPANIES ACT, 1913)

HISTORY AND BUSINESS

The Company was incorporated on the 15th January, 1931 as a company limited by shares pursuant to the provisions of the Indian Companies Act, 1913 and was converted into a public company on the 25th October, 1972.

Upon its incorporation in 1931 the Company took over as a going concern the business of selling agencies or branches of the then J. Stone & Co. Ltd. (a company incorporated in the United Kingdom) carried on at Calcutta, Madras, Bombay and elsewhere in the then Empire of India and in Ceylon and also established a workshop in Calcutta to undertake the manufacture of various items of train lighting equipment, such as, Kent Couplers, Junction Boxes, Light Fittings and Carriage Fans.

The principal business of the Company at present is the manufacture, sale and service of train lighting equipment and other related equipment including dynamos, switchgear and alternators, pantographs for electric locomotives and electrical multiple units, superheater elements for locomotive boilers, ball end joints, return bends and brake regulating equipment for railway rolling stock, fractional horsepower motors, complete air-conditioning/refrigeration equipment for railways and buses, control panels, stators, rotors and traction motors. The Company also manufactures certain classified equipment for the Government of India.

The Company has a well equipped factory at Taratolla Road, Calcutta on a land admeasuring 10.3 acres approximately held under lease from the Commissioners for the Port of Calcutta which will expire in June 1977 but the Company has an option of renewal for a further period of 60 years. There is sufficient space at the factory site for expansion of the Company's factory.

The Company has branch offices at New Delhi, Bombay and Madras.

The Company proposes to set up a factory at Bombay and to acquire a suitable site for the purpose, negotiations for which are expected to be finalised early in 1973.

EXPANSION

The Company has considerable manufacturing capacity, technical resources and expertise and it is proposed to utilise these facilities for expanding and diversifying the Company's activities. With this end in view the Company proposes to undertake the manufacture of the following items:

- (1) Marine Navigational Aid equipment.
- (2) Air brake equipment for locomotive, freight and passenger stock.
- (3) Brushless alternators and control gear for train lighting and air-conditioned passenger coaches.
- (4) Automatic door gear for Railway and Road Buses.
- (5) Rotary Switches & Systems Relays.
- (6) Submersible pumps and spares.

The Company has already obtained from the Government of India an Industrial Licence being Licence No. L/5(4)101/LEE/72, dated 22nd August, 1972 for the manufacture of navigational aids namely, major equipment for lighthouse, paraffin vapour burning type, electrically operated type complete with lantern house, generator plant and associated switchgear, beacon lanterns, mains and battery operated apparatus and associated housings including structures and buoys and accessories and spares therefor.

The Company has received from the Government of India a Letter of intent No. 6-7/68-MEI, dated 15th July, 1969 as amended by Government of India's letter dated 22nd February, 1972 for the manufacture of 6,000 sets per annum of air-brake equipment for locomotive, freight and passenger stock.

The Government of India has by its letter No. E.E.I.-13(35)/71, dated 20th May, 1972 amended the Company's existing Industrial Licences Nos. L/19/10/53, L/5LD/57 and L/5(T)N-47/59, dated 8th December, 1953, 19th September, 1957 and 8th October, 1959 permitting the Company to manufacture brushless alternators and control gears.

The Company has applied to and is negotiating with the Government of India for Industrial Licences for the manufacture of electrically operated door gear for railway coaches and road buses, rotary switches and systems relays (used for control of electrical equipment, such as industrial motors and circuit breakers) and submersible pumps and spares therefor used for industrial, agricultural and municipal purposes.

COLLABORATION

The Company is a wholly owned subsidiary of Stone-Platt Overseas Limited, U.K., and will continue to be a subsidiary of that company even after the present issue of share capital.

The Company is an important member of the Stone-Platt Group with its worldwide connections which makes available to the Company valuable technical assistance for the manufacture of train lighting and air-conditioning equipment. It is proposed to enter into new Agreements with the Stone-Platt Group for the manufacture of submersible pumps, rotary switches and systems relays.

The Company has recently renewed its Technical Collaboration Agreement with Svenska Aktiebolaget Bromsregulator for the manufacture of brake regulating equipment for the railway rolling stock.

The Company also has a Technical Collaboration Agreement with Messrs. L. Faiveley of France for the manufacture of pantographs for electric locos and electric multiple unit coaches.

THE TITAGHUR JUTE FACTORY COMPANY LIMITED

INTERIM STATEMENT

THE Directors have considered the results for the half year ended 30th June, 1972. These results, together with the comparative figures for the corresponding half year in 1971 and for the year ended 31st December, 1971, are as follows:

	Half Year ended 30.6.72	Half Year ended 30.6.71	Year ended 31.12.71
	£	£	£
Group Profit after all charges including Depreciation ...	1,073,560	537,863	1,273,337
Less: Special provision for retirement gratuities in respect of past service ...	—	—	679,658
Taxation ...	1,073,560	537,863	593,679
	534,407	165,634	140,558
Group Profit after Taxation ...	539,153	372,229	453,121
Profit attributable to minority interest ...	3,091	1,337	2,528
Profit attributable to members of The Titaghur Jute Factory Co. Ltd. ...	536,062	370,892	450,593
Dividends paid—			
Preference Stock ...	13,950	13,950	27,900
	(3%)	(3%)	(6%)
Ordinary Stock ...	Nil	Nil	128,495
			(9%)

Figures for the half year ended 30th June 1972 are unaudited.

When referring to prospects earlier in the year it was indicated that profits for the first half of the current year were expected to be maintained at the satisfactory level achieved during the second half of 1971 and, as will be seen from the above figures, they have in fact actually turned out substantially better. This has been mainly brought about by the profitable trading conditions consequent on the disruption of the industry in Bangladesh.

At the beginning of the current year the Indian Jute Industry to some extent enjoyed a monopoly of the world markets but as conditions in Bangladesh gradually stabilised the Mills there once again emerged as powerful competitors largely due to the considerable price advantage which they enjoy because of the heavy export duties levied by the Indian Government. Demand from overseas centres has also fallen off, influenced by rumours of pending reductions in or removal of those export duties. Furthermore, the conversion costs of Indian jute goods have been inflated by a sharp increase in wages effective from 15th April this year and by the inability of Government to maintain regular power supplies to the Mills.

On account of the adverse factors mentioned, results for the third quarter of the year show a considerable drop in profitability and the outlook for the remaining months is not favourable.

In view of these circumstances, the Directors consider it prudent to defer consideration of the question of the dividend on the Company's Ordinary Stock until the accounts for the full year are available, when the matter will be considered in the light of trading conditions and the Group's financial position at the time.

By Order of the Board
A. CLARK
Secretary.

Meadow House,
Dundee, 10th November, 1972.

CAPITAL

(Founded in 1888: Published every Thursday)

CAPITAL is India's most widely-read weekly newspaper dealing with economics, industry and public affairs. It has the mature experience of more than 80 years, and is the oldest journal of its kind in the country. Each week, it brings authoritative and comprehensive coverage of the main problem and events affecting the progress of the economy and the growth of industry. It separates the important from the unimportant; it presents simply, clearly and reliably what all informed observers of the economic scene ought to know.

Readers of CAPITAL are mainly people holding positions of vital importance in Government, business, industry and academic institutions. Many of them are intimately concerned with the framing of the country's economic policies. Many direct and control industrial, banking and commercial institutions. Together they represent a fund of economic opinion and buying power that no advertiser can afford to ignore.

Established 88 years ago, The Titaghur Paper Mills Company Limited are pioneers amongst India's manufacturers of papers and Boards. TPM have maintained the lead through constant research and introducing new manufacturing processes. TPM are presently making special papers of different varieties thus substituting certain imported grades. TPM know more about the problems of the market and therefore know more about the demands for specialised papers and boards—and how to meet them.

MYSORE HAS THE PERFECT INDUSTRIAL CLIMATE

and finance from MSFC keeps it equable

Industrial finance from the Mysore State Financial Corporation is available to industries engaged in • the manufacture, processing and preservation of goods • the hotel, cold storage and transport business • the generation or distribution of electricity • the development of a contiguous area of land as an Industrial Estate. MSFC advances 75% of the project cost to small industries and up to 50% to others (relaxable up to 10% in special cases). In March 1972, MSFC's total

investment in some 1000 industries located throughout the State was well over Rs. 15 crores. Stimulating greater industrial development and production, MSFC's integrated finance program is specially mapped out for new and expanding industries; in collaboration with the Mysore Small Industries Corporation and the Small Industries Service Institute which offer facilities like locating sites and buildings, obtaining licences and project evaluation for your industry.

For further details contact :

Mysore State Financial Corporation

1/1, 2nd Main Road, Malleswaram, Bangalore-3. Phone: 71169

- Low cost power, water, labour.
- Industrial sites.

State of the Economy

THE twenty-fourth meeting of the Central Advisory Council of Industries, held in New Delhi on Saturday last, was useful at least in one respect: it helped to clear ideas on the state of the economy. As for industrial production the outlook was "more cheerful than last year", said Mr. C. Subramaniam, Central Minister of Industrial Development. The captains of industry demurred. Neither Mr. Madanmohan Mangaldas, president of the Federation of Indian Chambers of Commerce and Industry, nor Mr. J. R. D. Tata shared the Minister's optimism. Mr. Mangaldas said there was need for a note of caution because the improvement in industrial production could not be considered significant due to several reasons. Mr. Tata painted a more gloomy picture and expected that the growth rate would sharply decline in the very near future. He argued that the "investment famine" since 1968 would have its effect on the economy soon. Mr. A. N. Haksar, president of Associated Chambers of Commerce and Industry, did not specifically refer to the state of the economy but by drawing pointed attention to the "inherent contradictions" in implementation of the industrial licensing policy, he made it clear that unless these problems were cleared, a faster rate of industrial growth would be difficult to achieve. When the debate ended, Mr. Subramaniam did not exactly share industry's view about the bleak outlook, but had to admit that the country would be facing a difficult situation next year. To the extent industry was able to make the point that all was not sound with the state of the economy, the meeting was a useful exercise.

The meeting brought forth no policy pronouncements and none was expected while Parliament was in session and while some discussions were taking place within the Government about some aspects of the industrial policy. But the tremendous gulf between the Government and industry on certain

basic issues was only too obvious. Mr. Haksar said there was an atmosphere of mistrust and this ought to be removed in the overall interest of the country. Stating that the recent amendments to the Constitution had caused a sense of insecurity among investors, Mr. Tata quite bluntly added that "in the name of socialism, we have now entered an era of downright confiscation and expropriation." That some policy constraints were standing in the way of investment in some core sector industries was also obvious when the Council discussed fuller utilisation of capacity in heavy machine building units. Referring to the lack of orders for complete cement plants, Mr. Subramaniam sought the Council's advice on what could be done to remedy the situation. But no practical suggestion came up. The reason was obvious: in the context of withdrawal of one incentive after another, and in the absence of a clear assurance about a stable pricing policy, entrepreneurs were reluctant to take a plunge.

One suggestion was, however, made by Mr. M. M. Suri, Adviser to the Planning Commission. Explaining that the main problem was who would place orders with the heavy machinery manufacturers, Mr. Suri ventured to suggest that one possible way to utilise the idle capacity in the heavy machinery manufacturing industry would be for the Government itself to place orders for a certain number of plants and if industrialists did not come forward to buy them, they would be used to set up units in the public sector. If the Government was unwilling to remove certain policy constraints, there would be no other way left to ensure fuller utilisation of capacity in some key industries. Mr. Subramaniam's remark that industry would ultimately learn to make adjustments might be a good point to score in a debate, but clearly reveals a complacent attitude. If this complacency continues, not only will the problem of under-utilisation of capacity never be solved, but serious

shortfalls in capacity will develop in many more industries to the detriment of the country as a whole.

As Mr. Tata pointed out, the Government has wasted enough time in trying to split the economy into this or that sector. In view of the Government's mounting burden of non-developmental expenditure like defence and relief and the possible decline in revenues due to the shrinking investment in the private sector, there was a limit to what the Government can undertake in the way of new projects. Thus, although the principal rôle in the country's future development may rest with the Government, the private sector could still perform a useful task. But the Government must decide whether there should be a private sector or not. If all the incentives are removed one by one, there will be none left to persuade private industry to make fresh investment. To think that even in the absence of all incentives, industry will make peace with the Government is a bit naive.

Mr. Tata and Mr. Haksar are not the type of men who enjoy criticising the Government's policies for the sake

of criticism. When industry complained about transport bottlenecks, Mr. T. A. Pai, Central Railway Minister, intervened to throw a challenge—that the railways would move everything movable that industry produced. Mr. Pai also pointed out that industry had the habit of using wagons as storage space, and added that this was not going to be permitted any more and those who persisted in this bad practice would have to pay a heavy price in the form of increased demurrage charges. But he promised to move everything they produced. Mr. Pai had a limited problem to solve and, therefore, perhaps it was easy for him to take a practical view. But when it comes to industrial licensing, Mr. Subramaniam is not his own master and he could not possibly give the sort of undertaking Mr. Pai gave. Nonetheless, that is the sort of challenge that will take the country forward. Let the Government clearly lay down the rôle industry has to perform. If it does not deliver the goods, it will have no reason to complain. One can only hope that the pragmatic view exhibited by Mr. Pai in public could be followed by the Government as a whole towards the shaping of industrial policy.

Crisis on the Price Front

NOBODY in his senses would have expected the censure motion of the Opposition in Parliament last week on the price issue to get through. At the same time, it cannot but be conceded that but for this Opposition move, the nation may have continued to be in the dark about the real gravity of the situation. The Central Finance Minister, Mr. Y. B. Chavan, however, did not mince words and made a clean breast of the factors leading up to the present crisis and even warned that the situation in the coming months might get worse. But what is amazing is the ineptitude of the Government in handling a situation that is certainly not the result of unexpected developments in the economy. It is, therefore, surprising that Mr. Chavan should still be looking for some alibi.

As the Finance Minister himself admitted in his statement to Parliament, it was a little over three months ago that he made a statement in the Lok Sabha expressing the Government's concern over the 'steep rise in the prices of essential commodities' since May this year. It cannot, therefore, be claimed now

that the Government was not aware of the gathering crisis or that it had expected the crisis to blow over. Even at that time, it was well known that the food production in 1971-72 would be less than that of the previous year, that *kharif* production would again be much less than expected and that the situation would have to be tackled by drawing on the food reserves and strengthening the public distribution system. While the buffer stock of 9 million tonnes of foodgrains has been drawn by 4 million tonnes, it has had no perceptible impact on the price situation; on the contrary, there has been a further rise in food prices in the last three months. In this situation, it seems a little ridiculous for Mr. Chavan to contend that the Government is not responsible for the present crisis on the price front.

Mr. Chavan's statement makes it abundantly clear that the gravity of the situation was not adequately realised even in the Government, in spite of his earlier statement expressing concern over the steep rise in prices. Even now, he only talks of the steps proposed to be taken and

has little to say of the steps already taken to meet the situation. According to the Finance Minister, a steep rise in the prices of food articles has been the major cause of the increase in the general price level. During the 12-month period ended 12th October, 1972, the index of the food articles group went up by 16.5 per cent whereas the non-food group recorded only a moderate increase of 4.8 per cent. Mr. Chavan was evidently led to believe by his officers and advisers that the increase in price since May was only "seasonal" and the prices would start coming down after September. In his statement also, Mr. Chavan speaks of the "usual seasonal increase" between the months of May and September but forgets that even in this period, the rise this year was higher than usual. What is more, the normal seasonal decline in prices from September to December was not in evidence this year until mid-October. If Mr. Chavan hopes that the declining trend will now have a stabilising effect on prices of cereals, one could only wish him well.

In a situation like this, it is the short-term measures, rather than the long-term ones, that are important. But Mr. Chavan has spoken more of the Government's long-term measures, such as growing new varieties of oilseeds and pulses. The immediate problem is to step up the availability of food articles through imports and ensure their regulated distribution among the people. On this point, Mr. Chavan still talks of what the Government proposes to do. For instance, he says 100,000 tonnes of rapeseed are to be imported from Canada of which only the first consignment has so far arrived. Import of palm oil is also being undertaken to feed the *vanaspati* industry and 50,000 tonnes have already been obtained from Malaysia. Even so, the Government has not been able to keep the prices of *vanaspati* down and, in fact, the immediate provocation for the debate in Parliament on the price situation was the recent increases allowed in the prices of *vanaspati* and sugar.

The shortfall in sugar production is again attributed to the poor cane crop in 1971-72 but a deeper analysis of the cause would certainly reveal that the delay in the Government's announcement of an increase in cane price was really responsible for the poor crop. Even the industry had suggested to the Government to announce a timely rise in cane price but this was not done. The sugar indus-

try may also have fared better but for the most irresponsible talk of nationalisation by ruling Party members every now and then.

The situation today is so grave that Mr. Chavan sees a need to resume the import of foodgrains, mainly rice and wheat. He did not indicate the quantum of imports planned but the Central Minister of State for Agriculture, Mr. Annasaheb Shinde, told the Rajya Sabha that the imports would be "marginal" and would not in any case exceed the export of 900,000 tonnes of foodgrains to Bangladesh plus the quantity used to feed the refugees from that country. Only a few months ago, Mr. Shinde had spoken of the possibility of India entering the export market in wheat. It is time that Ministers talked with some restraint and a sense of responsibility; otherwise, their credibility with the public will be reduced.

Mr. Chavan has again spoken of credit curbs and other anti-inflationary measures. He announced that the Reserve Bank had decided to raise a new loan of Rs. 100 crores in order to reduce money supply and thus curb inflationary pressures. So far so good, but credit curbs alone do not provide a solution to the price problem. What is more important is a climate conducive to higher production, both in agriculture and industry. Unless the requisite priority is accorded to programmes designed to step up industrial and agricultural output, prices will continue to rise, especially in a developing economy with an expanding population. It is absolutely essential to take a hard look at the existing policies.

Take, for instance, the question of excise duty. Because it is a rich source of revenue, the Centre has been putting up the levy on all goods without consideration of its impact on prices for the common man. The other day, Mr. K. R. Ganesh, Central Minister for Revenue and Expenditure, accepted for consideration a suggestion that the excise duty on sugar be reduced to provide relief to consumers but at the same time, he argued that since the Centre was bound to make good to the States their loss—as they forgo sales tax on sugar, textiles and tobacco—by levying additional excise duty on these items, it might be difficult to implement the suggestion. Excise duty should not be viewed merely as a revenue-raising measure. It cannot

be claimed that Indian sugar sells at competitive prices abroad. There is, therefore, no sense in levying such stiff duties, the yield from which often goes to finance non-essential items of expenditure and thus release new inflationary pressures.

The Government will do well to review its entire pricing policy and make such changes as are necessary to encourage growth in industry and agriculture and keep down the cost of essential items of common consumption. Even the examples of the socialist countries, with which

Credit in the Busy Season

THE credit policy for the 1972-73 busy season, as announced by the Reserve Bank Governor, Mr. S. Jagannathan, last week dwells more upon what is probable than what is possible. It could have been possible, for instance, to deploy the surplus bank funds as a lever for industrial acceleration. Industry has been complaining of paucity of funds and increasing cost of capital, and it could have been given an opportunity to prove its contention by making the lending terms liberal. Instead, what the policy has now done is merely to maintain the *status quo*. Excluding food procurement, bank credit during the last busy season went up by Rs. 426 crores out of a deposit accretion of about Rs. 650 crores. And Minto Road would apparently be happy to maintain more or less the same position this year also. It has made a provision of Rs. 475 crores to Rs. 500 crores for meeting the current busy season's demand. The Reserve Bank is aware that the momentum of industrial recovery might pick up and that agriculture, export and other priority sectors might pose a bigger demand, but all this has to be accommodated within a margin of Rs. 50 crores or so of additional credit.

As the central bank of the country, the Reserve Bank's keenness to check the spiralling inflationary pressure is understandable. The modifications now being made in the armoury of selective credit controls covering advances against foodgrains, oilseeds and oils thereof, *vanaspati*, cotton and *kapas*, sugar, *gur* and *khandsari* have to be seen in this context. Any leakage of funds which brings grist to the mill of profiteers should be plugged at any cost, but a fight against price rise is as much a mone-

India's relations have greatly improved in recent years, should provide some clue to the Government on the lines in which action needs to be taken. Let it not be imagined that take-overs, whether it be of an industry or trade, provide the ideal solution to every economic problem. It is to be hoped that the move for taking over the wholesale food trade and the decision to entrust the wholesale trade in sugar to the Food Corporation of India and other public agencies will not lead to a further worsening of the price situation in the coming months.

tary issue as an administrative one. Since the credit controls are generally adopted with the most unscrupulous in mind—who incidentally can always get the better of them with the help of the "parallel (black) economy"—they hit the more honest ones the hardest. So, unless strong executive action supplements the monetary measures, their effectiveness can only be severely restricted.

Banks are now flush with funds. Deposits rose by a record 20.4 per cent during 1971; the current year's projection is a little lower. On 27th October this year, aggregate deposits stood at Rs. 7,891.5 crores and bank credit, excluding food procurement, at Rs. 4,910.1 crores. The credit-deposit ratio was recorded at 73.1 per cent at the beginning of the last busy season; it has come down to 66.2 per cent when the current busy season began on 27th October. Banks have consequently reduced their borrowings from the Reserve Bank to a paltry figure of Rs. 6.7 crores. And, but for some unexpected developments, banks are unlikely to face a situation when they will have to make much use of the Reserve Bank's refinance facilities which have, however, been continued. The Reserve Bank has also not changed its past practice of treating, on the merits of each case, applications from individual banks for discretionary accommodation at Bank rate.

The new policy contains guidelines about how to use the surplus funds in the banking system. Banks have been asked to raise their liquidity requirements from 29 per cent to 30 per cent of aggregate liabilities with effect from 17th November. Simultaneously, the minimum net

liquidity ratio relevant for determining the rate of borrowings from the Reserve Bank has also been raised from 34 per cent to 36 per cent. These steps will strengthen the viability of the banking system, but that has actually ceased to be much of a problem, particularly since the nationalisation of banks. But the main use of the surplus funds will be, as in last year, to underwrite the Government's budgetary operations. Banks have already emerged as one of the biggest subscribers to Government loans, and New Delhi is clearly in favour of pushing the public borrowing programme as far as possible to limit the extent of deficit financing. Its latest decision to float for the third time this year a Rs. 100-crore loan has evidently been influenced by the comfortable resources position of the banking industry. Banks' investment in Government and other approved securities has gone up from Rs. 2,027 crores on 29th October, 1971, to Rs. 2,892.1 crores on 27th October this year.

The banking system has thus been assigned to play a major rôle in the transfer of resources from private sources to the Exchequer. But what makes such a policy questionable is

that in its eagerness to help the Government, banks do not seem to mind to keep some of their other customers a little short of funds. If the Government incurred deficits because of excessive productive investments and if bank funds were used to bridge the gap, the matter would have been different. The fact is that much of the Government deficit arises because of unproductive commitments and banks are being asked to foot the bill. From this standpoint, large investment of bank credit in food procurement may not also satisfy the criteria of optimum utilisation of resources. Procurement of foodgrains is no doubt important, but locking up of useful bank funds in this operation when these could have been used far more profitably and productively elsewhere does not seem to be sound economics. In the last busy season, bank credit for food procurement declined by Rs. 71 crores; but during the current season it is expected to rise by Rs. 100 crores. For banks, as much as for any other industry, investments have to be based strictly on cost-benefit analysis; had the new busy season policy been entirely dictated by such an exercise, it would have, in all probability, been different.

Assam: Restoring Peace

THE decision by the executive committee of the All-Assam Students Union to temporarily suspend the language agitation, which for six weeks held parts of the State in the grip of senseless violence, is a welcome development, but peace is yet to return everywhere in the Brahmaputra valley. The hapless Bengali minority still continues to suffer from a fear psychosis. It has been made clear by the A.A.S.U. that the agitation will be kept alive "in principle" till the State Assembly rescinds its September 23 resolution. The resolution says that English should co-exist with Assamese as a medium of instruction and that the demand for a university in Cachar district should be conceded. But the A.A.S.U. under the spell of linguistic chauvinism set its face against the resolution. The June 6 resolution of the Academic Council of Gauhati University disallowed the use of Bengali as a medium of instruction but it permitted a student to answer his question papers in Bengali. The June 12 resolution was more retrograde in character since it barred the Bengalis

from using their own language while answering questions. The Supreme Court, however, struck down the June 12 resolution, but this was to give little comfort to the Bengalis since they again fell prey to a new wave of violence.

The Centre's announcement that English must continue to be an alternative medium of instruction could hardly reassure the Bengalis. They are all the time expecting that the Centre will break its rather queer silence on the fate of their mother tongue. As is only to be expected, New Delhi's position has already been interpreted as condoning the Assamese demand. The Chief Minister, Mr. Sarat Chandra Sinha, has also done little to reassure the Bengali minority. It is not clear from his recent statement whether English will remain as a medium of instruction at the university level for an indefinite period. But he has specifically said that Assamese will be introduced as a compulsory subject in all non-Assamese secondary schools. Moreover, the recommendations of

the Academic Councils of Gauhati and Dibrugarh Universities regarding the medium of instruction at the university level will be accepted.

A compromise between the Government and the leaders of the language agitation became possible because both sides were ready to go to some extent to accommodate each other. But in the process, the Chief Minister had to concede more; the A.A.S.U. agreed to suspend the movement only after it had the State Government's assurance that the September 23 resolution would be placed before the next Assembly session. The original position of Mr. Sinha was that it was not necessary to rescind a resolution which was not going to be implemented in any case. Mr. Sinha could, however, say that he did not concede the students' demand that the Assembly must be reconvened specifically to abrogate the resolution. Will the Assamese students become a little more reasonable and tolerant of the minorities after the rescission? It is only to be hoped that normal conditions will soon be restored to facilitate the search for a solution to the language problem.

The Government of Assam should assure the Bengalis living in the State that they are not going to be left in the lurch. They should be given the minimum time for a smooth switch-over from one medium of instruction to another. In Assam the Assamese do not constitute more than 42 per cent of the population; any demand, therefore, that Assamese should be the only medium of instruction betrays a kind of linguistic chauvinism. A doctrinaire application of the Kothari Commission's recommendation will not be good for Assam because of its complex ethnic and linguistic character. The Assamese students should have remembered that the continued use of Bengali could not pose any threat to the dominance of the State by the Assamese. Moreover, the Bengalis have contributed in no small way to the economic development of the State. It is unfortunate that language riots have visited upon the State six times since independence. Economic backwardness and lack of emotional integration are the main problems of Assam today. And both these problems can be effectively tackled when the majority community gives a more effective demonstration of tolerance. The Assamese language has everything to gain and nothing to lose from a co-existence with English and Bengali.

A New Trade Plan?

THE reported offer of the Central Ministry of Foreign Trade to some of the Persian Gulf countries to sell them Indian consumer goods at a concessional price so that they could re-export them for a reasonable margin is nothing but pernicious. It is strange that the Special Secretary in the Ministry of Foreign Trade should have sought to give premature publicity to his offer at a time when important nations of the world are in New Delhi to participate in the Asian International Trade Fair. And with what face can India really ask the richer nations of the world to give up their "restrictive trade practices", if she herself resorts to what is a glaringly "unfair" gimmick to raise foreign exchange earnings?

It is rather odd that the Special Secretary, who is also in overall charge of the Asian Fair, finds nothing wrong in India making this kind of offer to the oil-rich countries of the Gulf area. His argument is that these countries have a lot of wealth and are in a position to buy and sell freely, with no foreign exchange restrictions coming in their way. India can take advantage of this situation to boost her export trade by routing her goods through these countries, which will also gain from these transactions because of the margin they can make in buying from India at concessional prices and selling in world markets at higher prices.

To suggest that this is any different from the "switch trade" that is being indulged in by many rupee-payment countries of the east European bloc is to rationalise the irrational. It is true that the east European countries earn free foreign exchange by re-exporting Indian goods sold to them for rupees and to that extent they deny India the opportunity of selling directly to the hard currency countries. The present offer to the Gulf countries, it is pointed out, stipulates that India will be selling her goods against free foreign exchange and there is, therefore, no "switch trade" of the kind indulged in by the rupee-payment countries. It must be noted that merely because India receives foreign exchange for her initial exports to the Gulf countries, the new trade plan does not acquire any more respectability than the "switch deals" of the east European countries. Furthermore, there is an implied admission in the plan that the Indian rupee is overvalued and Indian goods

cannot sell abroad except at a discount. In other words, if the new trade plan is ever accepted by the Government, it will amount to a virtual devaluation of the rupee, although not directly. Above all, any plan of this kind is a sad reflection on the marketing methods, sales promotion devices and export expansion schemes of Indian trade and Government as a whole.

It will be a sad day for India if she should be driven to the desperate state of dependence on the small but rich countries of the Persian Gulf area to promote her exports. In the long run, it may well result in Indian goods being wiped out completely in world markets and her goods being sold in foreign countries under totally different brand names and labels. Is the country's foreign exchange position so bad that it must resort to gimmicks of this kind? It is only to be hoped that the Special Secretary was only airing his personal views and not expounding a policy of the Government.

The damage that such statements can cause to the image of India, especially at a time when an international fair is being held in the capital to display to the world what the country is capable of, is only too obvious. What is surprising is that the Special Secretary should have talked of such a scheme so soon after the Prime Minister, Mrs. Indira Gandhi's call to the rich nations of the world to mend their trade policies and end unfair practices. Both at the inauguration of the Asian Trade Fair and at the opening session of the Colombo Plan Consultative Committee, Mrs. Gandhi made a fervent plea to the advanced nations to give up their restrictive trade policies so as to help the developing countries expand their trade. She rightly pointed out that developing countries were even in the past subjected to economic hazards, such as fluctuating prices and inelastic demand for their primary products, adverse terms of trade and limited access to the markets of developed countries. Now the situation had been rendered worse by the instability in the international monetary situation. While India is pressing on the developed nations for remedying this situation and bringing about a measure of stability of major currencies, it seems only logical to suggest that any attempt to find her own remedies by negotiating deals of the kind now proposed by the Special Secretary will add to her problems in foreign trade. The world

markets should be won on the basis of competitive prices and quality of exports rather than by dubious devices that will never yield long-term and sustained results.

The Asian Trade Fair has opened on a promising note and already reports are current that contracts worth several crores of rupees have been negotiated. Facilities have been provided at the Fair for Indian buyers of capital goods and machinery to select their import needs from among the goods on display and buy them on the spot. The necessary foreign exchange is being released by the Fair authorities. The Government has provided a sum of only Rs. 4 crores in foreign exchange for meeting these requirements but it is hoped that this amount will be raised, if the terms of such transactions are to India's advantage. In fact, the Fair organisers are already thinking in terms of having more such fairs, at least one or two every year in Delhi, in order to meet the basic import needs of industry at competitive prices.

The Fair has undoubtedly provided an opportunity to foreign visitors to see for themselves the progress that India has made since independence and the variety of goods that is being produced here. This is bound to promote Indian exports. At the same time, it is also an occasion for Indian industrialists and the Government to learn from the Fair what more they can do to equal, if not excel, other countries in the production of sophisticated goods at competitive prices and quality. While Indian industry has to make a special effort to know the advanced production techniques of the developed nations, the Government will do well to find out what special policy inputs have contributed to the growth of industry in countries like Japan, West Germany and even the socialist countries of eastern Europe. If the Fair helps to break the ideological clog in the Indian economy, it will have been worth all the labour and expenditure.

Mrs. Gandhi knows only too well that the bargaining strength of any nation is in direct proportion to the inherent strength of its own economy and its political stability. Fortunately, India is blessed with the latter in abundant measure today but that can also sustain itself only if the nation's economy is put on an even keel. The alternating phases of depression in agriculture and industry can end only by pursuing policies of pragmatism, with the sole aim of promoting accelerated growth and social justice.

CURRENT COMMENT

TAMIL NADU

A Piquant Situation

The action of the Speaker of the Tamil Nadu Assembly in adjourning the House till 5th December within minutes of its being convened for the winter session and the subsequent proroguing of the Assembly by the Governor have raised several important issues. Ever since the split in the D.M.K. in Tamil Nadu following which Mr. M. G. Ramachandran formed a new party called the A.D.M.K., things have not been easy for the ruling Party. Although only a few legislators have joined the new Party, the D.M.K. is in a somewhat uncomfortable position and the Chief Minister, Mr. M. Karunanidhi, has been having a difficult time. But the climax was reached on the day the Assembly met for the winter session. The leader of the A.D.M.K. demanded that the Chief Minister must seek a fresh mandate from the people in view of the fact that the ruling Party has lost the support of the masses. The Speaker also upheld this contention and advised the Chief Minister to go to the polls. Mr. Karunanidhi declined to accept the suggestion. Meanwhile, the Speaker announced that a no-confidence motion pending against him would be taken up the next day. However, when the A.D.M.K. members still continued to demand that the Chief Minister must resign, the Speaker, on the ground that there was confusion in the House, adjourned the sitting to 5th December.

Naturally, the question has arisen whether a Speaker has the power to adjourn a House without sufficient provocation. Of course, this is not the first time that the Speaker of a State Assembly has taken recourse to such a step. It has happened in West Bengal and Punjab much earlier. The point is whether the Speaker would pursue a similar course of action when the Assembly meets again. Constitutionally, there is nothing to prevent him from doing so which only means that it is open to a Speaker to thwart the functioning of parliamentary institutions if he takes it into his head to do so. According to the rules of procedure, as long as the Speaker is present in the House, no one else can conduct the deliberations and as such the Speaker is in a position to create a deadlock by adjourning the House everytime the Assembly is reconvened.

It must be noted that the Speaker is only a presiding officer entrusted with the onerous responsibility of conducting the proceedings of the Assembly in an orderly manner. He is not the person who can question the competence of a Ministry or of a Chief Minister to continue in office. This is a matter which will have to be tested on the floor of the House. The Speakers' conference in 1968, when it met in the wake of the events in the Punjab Assembly, decided that the Speaker cannot decide how long and for what purpose the House should sit. It was also said clearly that he cannot adjourn the House for as long as he wants. This should be decided by the House itself.

The Governor of Tamil Nadu has subsequently prorogued the Assembly which only means that the House can be reconvened earlier by the Governor who acts on the advice of the Chief Minister. But the basic question is what should be done if the Speaker again adjourns the House the minute it meets. In Punjab, this difficulty was overcome by the Governor issuing an Ordinance specifying the order of business and stipulating that the House cannot be adjourned until the programme was fully gone through. A similar Ordinance can now be issued in Tamil Nadu. Ultimately, however, the Governor may have to report to the President that there is a breakdown of constitutional machinery and the Centre should intervene. This is what exactly the A.D.M.K. wants. This is, however, a political question to be decided by the Centre.

MULKI RULES

The Controversy Lingers

The Mulki Rules controversy has now taken an ugly shape leading to large-scale violence in Andhra Pradesh. As it happens elsewhere, railway property has been the target of attack. The issue has now been hanging fire for several weeks. The Supreme Court judgment validated the Mulki Rules more than a month ago and it observed that it is for the Government to see how to avoid the complications that might arise thereby. One of the courses the Government could have adopted was to ask the Centre to repeal or amend the Mulki Rules by an Act of Parliament. Prolonged talks are now

going on by various sections in the State, each rigidly adhering to its own stand. The leaders of the Andhra region want complete scrapping of the Rules, while those from the Telengana region want them to be applied *in toto*. Naturally, the two sections have not been able to come to a compromise.

The controversy has become complicated for another reason. The Chief Minister has given full freedom to his colleagues to propagate their respective viewpoints with the result that the Cabinet is somewhat divided. Mrs. Indira Gandhi, the Prime Minister, has a tremendous following in Andhra and the people are willing to abide by her verdict. It is not known when she will personally intervene in the matter, but it has become evident that the problem cannot be solved any more by mutual negotiations. The point at issue is for how long the Mulki Rules should operate. The Andhras want the time factor to be finalised. The leaders of Telengana are against fixing any rigid target date. This certainly is negotiable and it is now for the Prime Minister to bring the parties together and fix a reasonable deadline after which the Rules will cease to have force.

SOUTH KOREA

Trade Prospects

A new trade treaty between India and South Korea is expected to be signed before the end of this year. Mr. Shinyong Lho, Consul General of the Republic of Korea, told newsmen in Calcutta last week that an Indian delegation is expected to visit Seoul shortly to hold discussions in this connection. The new agreement is expected to step up the trade turnover between the two countries, already going up fast, by a marked extent. South Korea's exports to India totalled over \$2.5 million and imports over \$9.8 million in 1971. The Consul General was optimistic of widening the economic ties between the two countries by the inclusion of newer items and expressed the hope that it should be possible to balance the trade. South Korea, he hoped, should be India's second largest market for iron ore next to Japan. It is already importing substantial quantities of heavy rails from India and can supply, in turn, fertilisers, among other things. He also saw vast possibilities of developing closer technical and industrial co-operation between the two countries.

NUTRITION

Workshop in Calcutta

Mr. A. L. Dias, Governor of West Bengal, launched a marketing workshop based on a food habits survey of Calcutta this week. He stressed that poverty was the base of all thinking on nutritional foods. Nutrition education was an important facet of the problem of improving food habits and a campaign in Calcutta should be given full support by the Government. Dr. V. Kurien, chairman of the Protein Foods Association of India, referred to the serious food situation in the country and stated that it was imperative that all agencies, whether Government, private industries, co-operatives or international agencies, work closely together to relieve the staggering food problem which the country was facing.

The survey has been conducted by Hindustan Thompson Associates Ltd, Calcutta, under a contract with the United States Agency for International Development (U.S.A.I.D.) as part of an agreement with the Government of India. The findings of the survey have been incorporated in a useful book, *A Study of Food Habits in Calcutta* which was released on the occasion. The study shows, among other things, that the principal meals of the day include rice, *chapati*, *dal*, vegetables, etcetera, so much so that over 80 per cent of Calcutta households consume these items at least once a day; that tea is another item which is consumed in adequate quantity by nearly 95 per cent of the households; and that the average Calcutta citizen consumes about 909 grammes of different foods a day. It also reveals that 61 per cent of the population get only 750 grammes of foods a day a person. This quantity does not provide adequate nutrition. Hence, any attempt to enrich the staple food nutritionally should be directed towards dishes like rice and *chapati*.

U.K.

Two New Loans to India

Agreements for loans allocating a total of nearly Rs. 78 crores (£41 million) of British aid to India were signed in New Delhi a few days ago. The British Minister for Overseas Development, Mr. Richard Wood, signed the agreements on behalf of the U.K. Government, and Mr. K. R. Ganesh, Minister of Revenue and Expenditure, signed for the Govern-

ment of India. The first loan (U.K./India Maintenance Loan, 1972) is for Rs. 47.425 crores (£25 million), covering the import from Britain of non-project goods. Among these are raw materials, spare parts and components required to service India's agricultural and industrial production. The second loan (U.K./India Mixed Project Loan, 1972) is for Rs. 30.352 crores (£16 million). It will finance the import from Britain of goods and services required for certain large projects agreed by the two Governments. This loan is a part of the project aid totalling £72 million (over Rs. 136 crores) which the British Government indicated it would commit to India in the four financial years 1970-71 to 1973-74.

Projects which have already been agreed by the British and Indian Governments include three fertiliser plants at present under construction. They are the Indian Farmers Fertiliser Co-operative in Kandla and Kalol in Gujarat, the Southern Petrochemical Industries Corporation at Tuticorin in Tamil Nadu, and Mangalore Chemicals and Fertilisers at Mangalore in Mysore. Other projects under way include the construction in Britain of three bulk carriers for the Shipping Corporation of India and the Scindia Steam Navigation Company and a mixed products tanker for the Great Eastern Shipping Corporation, the naphtha cracker plant of Indian Petrochemicals Ltd in Gujarat, and components for three 120 mW boilers to be built by A.V.S. Boilers, Durgapur, for the Damodar Valley Corporation and the Madhya Pradesh Electricity Board.

PUBLIC HOLIDAYS

Plea for Reduction

The Indian Chamber of Commerce, Calcutta, has suggested to the West Bengal Government the need for reducing the number of holidays to increase production and productivity and to improve the competitive position of the State. The West Bengal Government has announced 23 public holidays for 1973, against 21 in 1972. The Chamber has pointed out that even the Supreme Court had observed the need for reducing the number of holidays which is very high in the country, compared with other developed countries in the world. In fact, some States in India are taking steps in this direction. For example, the Government of Maharashtra declared 17 public holidays in 1972 and 16 in

1973. The Chamber has, therefore, urged upon the West Bengal Government to increase the number of working days both for industrial and commercial establishments to increase production and to encourage faster economic growth in the State.

FOUNDRY

Problems Highlighted

In a Press statement issued a few days ago, Mr. J. R. Seksaria, chairman of the Indian Foundry Association, highlighted the main problem of the industry—the difficulties in getting the supply of coke. In view of the poor movement of hard coke in piecemeal wagons the Association, at the specific suggestion of the State Government, started bringing the material in rake-load for distribution to the member-foundries at fixed prices. The Association had been doing this job satisfactorily for over one-and-a-half years. After distribution of the material the Association regularly submits a return to D.P.L. with copies to all concerned departments. The Association had been requesting the authorities to increase the allocation of coke so as to enable the member-foundries to meet their requirements. Instead of increasing the allocation of the material, all of a sudden from October onwards the Association's rake has been stopped along with those of the middle men. Mr. Seksaria has expressed his surprise as to why the Association has been equated with the middlemen. The Association has been distributing the material at Rs. 224 a metric tonne on a no profit no loss basis whereas the middlemen are selling the material at much higher prices than those fixed by the Association. He fears that if immediate arrangements are not made to restore the Association's rake, the foundries would have no alternative but to close down their factories. It is hoped that the Government would take immediate steps to restore the Association's rake.

F.I.C.C.I.

Talks with Japanese Team

The Japanese Study Group for Industrial Collaboration, led by Mr. Junji Hiraga, held discussions with the representatives of the Federation of Indian Chambers of Commerce and Industry at a meeting presided over by Mr. Charat Ram, vice-president, F.I.C.C.I., a few days ago in New Delhi. In a free and frank assessment of the economic scene in India, the

group expressed guarded optimism about the possibilities of establishing closer industrial and trade relations between the two countries. It was stated that Japan had been watching the recent developments in India with interest, and while positive signs of improvement in the economic situation were visible, there were certain aspects which did not present a very hopeful picture. In this connection, it referred to the operation of the licensing system for industrial collaboration, high tax rates on royalties and dividends, increasing trend of nationalisation of private enterprises, restrictive import policy which made the operation of joint enterprises difficult, etcetera. Doubts were also expressed about the attitude of the Government relating to the introduction of foreign investment including technology.

SUGAR

Last Season's Figures

According to a recent Press release of the Indian Sugar Mills Association, the total sugar production in the month of September 1972, the last month of the 1971-72 season was 28,000 tonnes, against 20,000 tonnes during the corresponding period last season. This brings the total production during the season 1971-72 to 3.112 million tonnes, against 3.740 million tonnes du-

ring the 1970-71 season. The offtake of sugar from factories during September 1972 was about 296,000 tonnes for internal consumption and 4,000 tonnes for exports, against about 425,000 tonnes for internal consumption and 31,000 tonnes for exports in the corresponding period last season. The total despatches during 1971-72 season was 3,796 million tonnes for internal consumption and 129,000 tonnes for exports, as against 4,025 million tonnes for internal consumption and 390,000 tonnes for exports during the last season. The total closing stock of sugar with the factories on 30th September, 1972, was about 592,000 tonnes, against about 1,405 million tonnes in the same date last season.

R.B.I.

Officers for Backward Areas

With a view to facilitating flow of credit from State Financial Corporations and commercial banks for a rapid and healthy growth of small-scale industries in the industrially less developed States, the Reserve Bank has decided to post officers of the Industrial Finance Department (I.F.D.) in these States. Officers of the rank of Assistant Chief Officers have been posted at Patna in Bihar, Trivandrum in Kerala and Jaipur in Rajasthan, while an officer will be posted at Indore

in Madhya Pradesh shortly. They will function from the premises of the Reserve Bank's Department of Banking Operations and Development in the respective places.

BUCKET MANUFACTURERS

Supply of Sheet Cuttings

In a recent letter addressed to the Iron and Steel Controller, Mr. N. L. Chowdhary, chairman of the Raw Materials Sub-committee of Bucket Manufacturers Association of India, has pointed out that the Association has been protesting for a long time against the discrimination against the bucket units in the small-scale sector, compared with the large-scale units registered with the D.G.T.D. He has stated that it is unfortunate that in spite of the sincere wish of the Iron and Steel Controller, no relief so far has been afforded to the small bucket units, and the situation remains as much the same as before. Recently, Mr. S. C. Mukherjee, Deputy Iron and Steel Controller, advised the J.P.C. to arrange supply of defectives and cuttings to the bucket industry through producers' stockyards. But if a bucket unit in the small-scale sector lifts sheet cuttings from the producers' stockyards and produces buckets, the net cost would be very high.

MONEY MARKET

Call Rate Down

The short-term money market has recorded small business this past week. The call rate has declined from 3½ per cent to 3 per cent. Demand for remittances has been small. Supply of telegraphic transfer bills has also been restricted. The pound-sterling has remained unchanged.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations for the 1972 Fund:

Rs. 100

Union Carbide India Ltd

Rs. 10

Narottamdas N. Parekh

The Fund totals Rs. 785.41, including a carry-forward of Rs. 675.41.

Also a doll presented by an anonymous donor.

A Ditcher's Diary

I DON'T THINK THERE WAS MUCH rejoicing in South Block at Mr. Nixon's landslide victory. Is he now promising a pleasant surprise? Of course his re-election must have been known to be certain, but there might have been some hope that a narrow majority would chasten him a little. In the event, the size of his victory showed that the electorate had taken little notice of Senator McGovern's criticism of the Nixon administration's conduct of foreign affairs, particularly in relation to Vietnam and the Indo-Pakistani conflict over Bangladesh. The re-elected President, therefore, had no immediate compulsion to correct his pro-Pakistani "tilt". The prospect was depressing, which may have been partly responsible for the insistent stridency of Indian charges against the U.S.A. Washington was indirectly blamed for discouraging a settlement in this sub-continent; and the C.I.A. was directly blamed for a variety of India's internal problems. At the same time, the door was kept open for any American initiative to improve relations; and at last there is some hope that the U.S.A., too, may be willing to forget the past and "make a new start". It is too early to say what Mr. Nixon's message to Mrs. Gandhi precisely implies; it is possible to exaggerate the "significance" of anything said in the course of a message of thanks and felicitations. But New Delhi "observers", who may not be far removed from official circles, may not be mistaken in considering the message more encouraging than anything that

Mr. Nixon or any of his aides has said during the past one year. If this reading is correct, the President probably feels that he can afford to be less petulant with four more years of unchallenged power before him. Perhaps he thinks that he can afford even a little magnanimity. But what India asks for is not any magnanimous gesture; she would be wholly content with a mature, businesslike relationship. Happily, Mr. Nixon's message avoided the usual platitudes about special ties between the world's largest democracy and the most powerful one; all it envisaged was "a sounder relationship based on understanding and respect for mutual interests". The interests cannot always be identical; and much irritation and frustration can be avoided by accepting this fact of life. But so long as one's own interests are not threatened, the other's can be respected all the same. Mr. Nixon showed no such respect last December or thereafter; but, hopefully, it's never too late for a new start.

THERE ARE MANY REASONS WHY newspapers bring out special supplements, not the least being the attraction of substantial advertisement revenue. This is not always easy to organise. There must be a plausible occasion or a subject of some public interest; also some reading matter, not necessarily readable, to balance the advertisements. The advertisers must be assured that the supplement, even if not preserved as a literary possession of per-

manent value, will at least be glanced through by a large number of people. This is not all. After the advertisers and the writers, who are occasionally the same people, have been lined up, one starts worrying about newsprint. Apparently none of these problems stood in the way of a Calcutta newspaper bringing out a 40-page supplement on Mrs. Indira Gandhi's 55th birthday last Sunday. What I found interesting was some of the advertising "copy". The Prime Minister herself may have been a little embarrassed to see industrial or business houses buying advertising space to congratulate her on her birthday; it was even more curious to see Governments or Government undertakings doing the same. Need all of us demonstrate our loyalty to "our beloved Prime Minister" in this fashion? For that matter, was it necessary for State Chief Ministers or Mrs. Gandhi's colleagues at the Centre to demonstrate their loyalty in the columns of a newspaper supplement? Apart from other qualities, Mrs. Gandhi is a person of fine sensibility and taste; and she cannot have greatly enjoyed the touch of sycophancy that tends to creep into messages extolling her varied achievements. "Sycophancy" is a word also used by Professor Hiren Mukherji when opposing a proposal to name a central university in Shillong after the Prime Minister; and, for once, I found myself in complete agreement with him. Like Professor Mukherji, I have high regard for the Prime Minister's personality and am aware of her immense popularity; but a "cult of personality" has done nobody any good. Professor Mukherji may have discovered this after the 20th Party Congress in Moscow; and the

A GOLD CURRENCY FOR INDIA?

OUR London Correspondent writes in Current Coin: Now I am quite certain that up to the time I left India three years ago there was no hunger for a gold currency in any part of India. I am convinced from what those recently arrived from India have told me that though gold may have become more easily exchangeable in the form of sovereigns, it has not displaced or rendered less acceptable the silver rupee as a medium of barter; that, in fact, no greater preference is shown now for gold coins than before. The protagonism of a gold currency for India has nothing but sentiment to support it, a sentiment not shared in by the masses of the Indian population, who would be most affected by a sudden change. It is surely the duty

of India's rulers to consider expediency and economy before a sectional sentiment, however noble that sentiment may be. If tokens larger in value than the rupee and of less value than the sovereign are wanted, what can be more suitable and economical than currency notes? A gold currency is a very expensive luxury, and it is difficult to reconcile the present agitation, if it can be said to amount to that, with the much more usual complaint that India is a poor country and cannot bear any further burdens. It does not appear to be recognised by the currency champions that the reserve to maintain a gold currency in India would have to be much larger than is adequate to preserve the gold standard value of the silver rupee.

Maoists may be discovering it only now. But many others have always felt uneasy about "sycophantic adulation" of any person in any form. I am not suggesting that we are anywhere near what obtained in Russia in Stalin's time or in China in recent years; and if an advertisement last Sunday quoted a touching couplet from Ghalib in wishing Mrs. Gandhi a thousand years of life, no parallel need be drawn with posters in Peking wishing a thousand years to the "Great Helmsman". But we seem to have already allowed much that seems to be in questionable taste.

LOOKING AHEAD TO THE NEXT U.S. Presidential election, so soon after the last one, would appear to be just about the most futile exercise imaginable. Yet it is something I have been unable to deny myself, because the scene for 1976 is already so predictable. If you cannot believe me, then look at the facts. We all know that President Nixon cannot stand again, so that puts him out of the running. Moreover, his recent victory was a personal one and no triumph for his Party; so the inference would seem to be that despite appearances the political pendulum is already swinging away from the Republicans. But Senator McGovern says he is not going to stand again either, and although it is not necessary to pay too much attention to how he feels at the moment, his performance this time does suggest that from now on the Democrats will be seeking a stronger candidate, one without the stigma of an historic defeat. There are no prizes for guessing who that might be: why, Senator Edward Kennedy, of course, who else? Personally I have never been numbered among the more enthusiastic admirers of the Kennedy family, and the Senator has always seemed to me about the least admirable member of the entire tribe. Particularly since that drowning incident a few years ago, when his behaviour revealed a despicable combination of panicky reaction and a ruthless determination to protect his personal interests irrespective of the cost, he has never in my eyes even looked like good Presidential material. However, one cannot but admire his political instincts, and throughout the recent election campaign he has not put a foot wrong. He said from the beginning that Nixon was unstoppable, and his support for the luckless Senator McGovern, while enough to deliver Massachusetts and so avoid antagonising the Party, was not such as to

place his original prediction in any doubt. Perhaps that would not have been possible anyway.

IT IS GETTING CLOSE TO A DECADE since the late Nikita Khrushchev was ousted from office because, among other things, he had not made a success of his "virgin lands" policy. Yet now it seems that without at least some contribution from his pioneering efforts in this direction the Soviet Union would be even more short of food than in fact she is. One can only hope that the present inhabitants of the Kremlin have the honesty to acknowledge the debt, although I doubt they are going to. When we in India might be facing a food crisis ourselves it hardly seems appropriate to be blaming the Russians for theirs. But unless they stop bidding up the price of the world's wheat, their misfortunes could vitally affect us during the next few months. It really is an appalling comment on communist agriculture that more than half a century after the revolution a country as well endowed with cultivable land as the Soviet Union should be a potential competitor of India in the world wheat markets. One is well aware of all those problems involved in cultivating so much of the virgin lands, although they must surely be child's play to a country that can send rockets to the moon. But the fact is that the main problem is not technical at all; it is ideological. Collectivisation never has worked properly, and still shows no signs of ever doing so. This was bad enough when the main consequences of failure were felt by the Russian people themselves, when it was only they

who were threatened with death in their millions. But when we in India stand to be affected as well, then it is surely time the Russians modified their addiction to ideological purity in the wider interests of under-fed humanity.

UNLIKE MANY OTHER VISITING economic experts, Professor Hicks (which sounds more natural than Sir John) had no ready solution for India's economic problems when questioned by a Calcutta correspondent last week. But he made one interesting suggestion: we should find something which we can produce well and which the world is willing to buy. I have since been thinking what we can make better than others; but the snag is that there must also be a world-wide demand for this product. Professor Hicks gave the example of Japanese shipbuilding. I cannot see India wresting the lead in that area. Nor even in manufacturing railway engines or wagons. As for other means of transport, we had better not try to sell our motor-cars, certainly not at anything like their prices in the domestic market. I am told that there is a demand for Indian-made bicycles, but this is hardly a big enough item for an economic breakthrough. The Japanese have also done very well with their cameras and electronic goods. We have nothing to offer in the photographic field. Indian-made radio sets compare well with foreign products; even so, it is difficult to visualise the Indian electronics industry beating the Japanese or the German. Where then are our specialities, present or potential? We cannot earn un-

limited foreign exchange by selling the *sitar* and the *sarod* to American admirers of Ravi Shankar and Ali Akbar Khan; and, much though I admire the *saree*, I cannot see it being accepted as the universal feminine apparel. Neither the *saree* nor the *kurta-pyjama*, which some trendy young visitors from the West seem to fancy, is likely to protect anyone in a non-tropical climate. What remains then? A German business man was so fascinated by Indian toys on display at the Asian Trade Fair in New Delhi that he immediately placed an order worth Rs. 50,000. But can we sell toys worth, say, even Rs. 50 million a year? No, I cannot immediately think of anything which we can produce particularly well and which the world is ready to buy in large enough quantities to transform our economy. Could we try our hand at some totally unconventional lines of export? Such as Indian talent? The demand for Indian doctors in Britain or Indian scientists in America has not been increasing; and General Amin seems to have no use for Indian business expertise. The demand for Indian holy men is unpredictable; and there seems to be none for Indian politicians, which is particularly unfortunate. I have really drawn a blank; but the search may not be given up, and we do excel in producing hair-brained schemes.

A FRIEND OF MINE RECENTLY HEARD at a bar in a Bombay hotel the husband telling his wife: "Come dear, let's go to Calcutta and feel ten years older."

Impact of Technological Changes on the Pattern of Management

By K. K. Rai

Deputy General Manager,
Davy-Ashmore (India) Ltd

Technological changes have made a deep impact on the pattern of management. The real power in organisations has shifted from an individual to an almost anonymous group of technocrats.

MAN is adding to his knowledge at a breathtaking pace. In certain spheres of technology, more knowledge has been acquired in one decade than had been done in the whole of history. A second phenomenon has been the decreasing time gap between acquisition of knowledge and its application. These technological advances have been made possible by the increasingly large amounts made available for research and development. Allocations made by the U.S.A. and Russia for space research are simply massive. Industry has also been investing heavily in R and D. As R and D programmes have become more and more complex, they have also been taking longer to yield tangible results. Thus, R and D has become a serious contender with the owner or owners of an industry for the surpluses generated by the industry.

Change in Management Outlook

There have been other simultaneous changes. One has been a revolutionary change in the outlook of management. Since R and D programmes require heavy investments of both time and money, managements have had to look into the future, rather than manage the routine. Large investments of time and money and deployment of costly human skills have, in addition, required control of larger sources of wealth generation. These have resulted in significant changes in the function, pattern and aim of management, with increasingly severe penalties for those organisations, which either fail to realise the trend of changes and, therefore, do not take necessary steps or, even if they do, cannot overcome their inertia and effect necessary adjustments, or do so in time.

There have also been emotional changes. The "father figure" indus-

trialist is gone or going. The loyalties of management of an organisation have had to change—shifting from individual industrialist or entrepreneur to the avowed objectives of the organisation. The real power in the organisation has shifted from an individual to an almost anonymous group of technocrats. The interaction of the changes and trends has been complex and very often its import has not been realised even by those who are in the thick of it. This impact has invalidated many of the economic and motivational theories, which had held their sway unchallenged for so long. It has changed the role of the market as the regulator of commerce and has reduced it from a sovereign balancer of supply and demand to its being controlled by planners and co-ordinators of industry.

Take the source of money or finance. Banks and other financial institutions would not invest in R and D, and even if they do, their cautiousness and controls on expenditure seriously affect the use in R and D. R and D requires a source of finance which does not fetter its progress. Such a source can be industry itself. Therefore, under one management there must be a sufficiently large industrial base to generate, and put into the hands of the management, large surpluses. In other words, industrial units must increase in size. Secondly, management must have the independence to allocate the surpluses put in its hands for R and D. That is, the individual industrialist or the entrepreneur must either forgo his claim on such surpluses, or he himself must go by natural evolution.

Growth of an organisation tends to increase its inertia and compromise the effectiveness of its management, as long as one thinks in the terms to which one has been hitherto accustomed, or in other words, as long as one thinks of the reins being in the hands of a central body. This would seriously compromise flexibility and dexterity essential for survival today.

This has led to the emergence of a federation of autonomous units and autonomous divisions in successful industries of today, with the central body concerning itself with the functions of planning and co-ordination. Increasing knowledge and consequent complexity of industrial operations have resulted in yet another fundamental change. There has been of necessity specialisation of skills. This specialisation has meant that no single individual will be in possession of all knowledge to take detailed and complex decisions. Very often dynamic decisions have to be taken which means that the decisions in the implementation of their numerous stages have various alternatives, and a particular alternative will be chosen on the basis of the results of implementation of previous steps and many other factors then present.

This increasing complexity has forced a change in decision and policy-making process. An individual at the top has been replaced by a body of technocrats. For this body to work effectively, quickly, and with one purpose, it becomes necessary that in addition to team spirit, the persons are capable, that they are devoted and that they are motivated by the objectives of the organisation they work for. This is congruent with the identification of individual aspirations with the organisation's objectives as referred to earlier. In the U.S.A. and other western countries, industrial organisations have grown to such proportions that they have come to control the market.

The Situation in India

In India with very low wages paid to workers, the poor performance of giant industrial undertakings mostly in the public sector, the dependence on borrowed technology by continuing foreign collaborations, limited allocations for R and D and the wastage of a major portion of such funds because of lack of co-ordination between R and D organisations and industry, the utilisation of advancing technology and the consequent advantages to the people have been throttled. And yet the technology that has seeped in, has caused many changes, although the significance of these has not yet been grasped and in many cases not understood. In India instead of debating which sector of the economy will have control over industry, the people's thinking, talent and energy should be devoted to improving the operation of industrial organisations so that more resources are generated for heavy investments in R and D.

There are only three freighters a week from India to London direct.

All three belong to BOAC.

If your cargo problem is a big one, BOAC can take a load off your mind. Elephants, earthmovers, any cargo goes.

Your cargo agent will tell you how BOAC can cut your big cargo problems down to size.

Because only one airline has three freighters to London every week.

BOAC.

We'll take good care of you.

Will Indo-U.S. Relations Improve After the Nixon Victory?

(By a Special Correspondent)

Will India's relations with the U.S.A. improve during President Nixon's second term in the White House? Perhaps an indication will be found when the next American Ambassador in this country is appointed.

THE re-election of Mr. Richard M. Nixon as American President, in what has been described as a landslide victory, was certainly expected although at one time it was speculated that the Democrat candidate, Senator George McGovern, might cause a big surprise. In fact, barring a single instance, a ruling President who sought re-election has never been defeated. In every country, a person in power has always an advantage over others and this has happened in the United States too. The new American foreign policy which resulted in an improvement of relations with Russia and China and the Vietnam peace moves, which have very nearly succeeded, have been significant contributing factors in President Nixon's impressive re-election. One of the more important aspects of the election is the return of the Democrats in a larger majority in Congress over which they now hold a firmer grip than before. This certainly will make it difficult for President Nixon to push through his ideas and programmes. The entire working of the Government in the United States is conditioned by a powerful scheme of checks and balances and there are in-built provisions which should enable a President to

go ahead under conditions of the type that has now arisen. In any case, the success of the Democrats in Congress elections does not diminish the importance of the votes obtained by President Nixon.

It is, however, said that the American people have voted for President Nixon and not for the Republican Party. The victory is personal. Mr. Nixon as the highest executive of the land can now shape and formulate policies for the next four years without fear or favour. Although he had already initiated several unorthodox moves to place the foreign relations of his country on an enduring basis, the fear of the election had acted as a severe limitation on his freedom of action. Even so, President Nixon had achieved what his predecessors could not. All this shows that the American public has confidence in him and it will be wrong to imagine that Mr. Nixon got through just because he was the President in office. It is true that because of his preoccupation with foreign affairs, President Nixon has not been able to devote full attention to domestic problems like unemployment and inflation. The success of the Democrats in Congress as well as to the offices of Governor could be attributed to the President's inattention to the domestic issues.

The World reaction generally has been favourable and there is a feeling that President Nixon's success will en-

able him to maintain continuity in foreign policy. For, any change at this stage in policy would have meant a good deal of dislocation leading to undesirable consequences. There is no reason why Dr. Henry Kissinger will not continue in his present capacity for another four years. But he may succeed Mr. William Rogers as the Secretary of State. What this means to India is yet to be watched. Hanoi too was adopting a stiff posture in the belief that President Nixon may not get the mandate, but now that he has been re-elected there would certainly be a change in its attitude to the whole concept of peace talks. There is no gainsaying the fact that when once peace is established in Vietnam, the whole American policy in Asia would undergo a remarkable change. China has already expressed the hope that President Nixon would not seek hegemony in Asia. But it is nobody's expectation that America would completely get out of this part of the world. The perpetual tug of war between the two communist powers gives plenty of scope to the United States to continue in south-east Asia.

Here in this country, it is debated as to what President Nixon's triumph implies. India's relations with the United States have been really strained since the Bangladesh war. What President Nixon did to India and the highly inimical attitude he adopted towards the whole issue of Bangladesh are too well known. He was positively unhelpful and he defied the more intelligent sections in his own country who fully supported India's intervention. The rôle of the Seventh Fleet is also a black chapter in the history of Indo-American relations. Mr. Keating, advised the President not to adopt a pro-Pakistani attitude, but his counsel did not prevail. It will be interesting to watch who is appointed the next American Ambassador in this country.

It is certainly in India's interest to take the initiative now that it is known that President Nixon will continue in office for the next four years. There is already a feeling in this country that India has become subservient to Russia although the Prime Minister, Mrs. Indira Gandhi, has been trying to erase this impression. If relations with the United States are normalised, the people will have their faith restored in non-alignment. The Prime Minister has done well in greeting President Nixon on his re-election and expressing the hope that the friendly relations between the two countries would be strengthened.

What Will Be the Impact of the Foreign Exchange Bill on Exports ?

By H. R. Bose

Some of the provisions of the Foreign Exchange Regulation Bill are likely to affect the growth of the country's export trade. The Government will, therefore, do well to take a fresh look at these provisions.

THE Government of India appears to be anxious about the reported large-scale leakage of foreign exchange through some dubious methods. The leakage is adversely affecting the economic interest of the country. The apprehension of the Government seems to be based on estimates of foreign exchange leakage worked out by various authorities. According to one estimate, India loses foreign exchange worth over Rs. 300 crores on average every year on account of illegal transactions like over- and under-invoicing, smuggling and through various other manipulations. According to the Kaul Committee, which studied in depth the question of leakage of foreign exchange through invoice manipulations, the total leakage is placed at Rs. 240 crores a year. It has mentioned four main sources of the illegal supply of foreign exchange. These are: sales proceeds of goods smuggled out of India like silver, narcotics, jewellery, precious stones, antiques, deflection of inward remittances to unauthorised channels, foreign currency obtained from tourists and manipulation of invoices relating to the import and export trade.

All these figures are mere estimates and their accuracy is anybody's guess. However, if the intention of the Government is to plug the loopholes responsible for the large-scale leakage of foreign exchange, there cannot be any objection to the same from any quarter. But from a close examination it will appear that a major portion of the foreign exchange leakage is accounted for by smuggling and other manipulations of the exchange transactions which have nothing to do with invoices. As such, it is doubtful whether the apprehension of the Government that a large-scale leakage of foreign exchange is taking place because of the under- and over-invoicing is justified. But in taking any legal measures in this direction, one has to assess beforehand the benefits that are likely to accrue from such measures vis-à-vis the disadvantages that will

flow from them. Foreign exchange plays a vital rôle in the economic growth of a country and, therefore, it is desirable that all possible measures should be taken for the conservation and the best use of the same. In this context, it has to be seen how far the Foreign Exchange Regulation Bill will result in saving the country's foreign exchange and how far it will affect the export trade.

Against this background, it is proposed to discuss some of the provisions of the Bill having a close bearing on the foreign trade of the country. Clause 8(3) of the Bill provides that any foreign exchange acquired by any person, other than an authorised dealer or a money-changer, for any particular purpose or where any person has been permitted conditionally to acquire foreign exchange, should not be used otherwise than for the specific purpose for which it was acquired. In this connection it may be pointed out that normally the foreign exchange sanctioned to a person going abroad is barely enough to cover his hotel and other incidental expenses. However, people going abroad try their best to make all possible economy in their expenses and the foreign exchange so saved is generally utilised for making purchases. In terms of the present provision of the Bill, this type of use of foreign exchange will be banned. But this will not in any way result in the saving of foreign exchange as people will no longer be interested in economising in the use of their foreign exchange.

In sub-clause 4 of clause 8, it has been provided that if a person acquires foreign exchange for sending or bringing into India any goods but sends or brings no such goods within a reasonable time or sends or brings any goods of a kind or quality different from that specified by him at the time of acquisition of the foreign exchange, such person shall be presumed not to have used the foreign exchange for the purpose for which it was acquired. Evidently, it has been presumed that for all supplies of goods not conforming to the items for which the foreign exchange was sanctioned, the importer is responsible. But it is not always possible for the importer to satisfy himself that the goods supplied against an order placed by him with a foreign

party are exactly of the kind or quality for which he placed the order and for which the foreign exchange was acquired by him. It will, therefore, not be quite fair to penalise the importer for a thing for which he is not responsible.

In clause 17 and its sub-clauses the Reserve Bank of India has been empowered to exercise wide discretionary powers over the export and import trade, with a view to ensuring that the full value of the goods exported or the value which has been declared by the exporter is received in time. The Bill empowers the Bank to issue directives to exporters to comply with certain specified conditions in respect of exports to any destination or any class of goods. The Bill also proposes to prohibit export on consignment basis of any goods or class of goods to any particular destination if the Bank thinks that the export value in full will not be brought into India in a specified manner and within a specified time. This provision will make it difficult for the exporter to compete effectively in the foreign markets. As a matter of fact, the export of both traditional and non-traditional items will suffer if the Reserve Bank is to implement the provisions of the Bill in its present form.

Tea exports, for instance, will be particularly affected by this measure. As at present, a large part of Indian tea is exported on consignment basis for sale in London auctions at prices which are influenced by market conditions. It is not possible for the exporter to know in advance what price the tea exported will actually fetch. The export of non-traditional goods will also suffer to a considerable extent if their export on consignment basis is to be restricted in the manner proposed in the Bill. Many new items of Indian produce are now being introduced in the world market and they have to be sold on consignment basis, particularly as the demand for them has to be created and developed in the foreign markets. The proposed restrictions will be a serious handicap to this type of efforts. This apart, the power proposed to be given to the Reserve Bank is quite unrealistic which will be evident from the fact that when an exporter wants to sell his goods for a value less than the value declared, he will have to wait for 60 days to get the Bank's permission.

Clause 28 lays down that a person shall not, except with the permission

of the Reserve Bank, employ in India a foreign national on payment of salary, wages, commission, honorarium or remuneration or compensation in whatever form and by whatever name called. This implies that in the matter of any collaboration for setting up new industries or industrial undertakings there will be an additional hurdle to be crossed. Under sub-clause 9 of clause 30 it has been proposed that no person shall, without the permission of the Reserve Bank, remain outside India beyond the date or period of travel to any place outside India other than such place or places specified in his passport or on the permit

for foreign exchange granted or on his application for booking the passage, as the case may be. This restriction will create undue difficulties for the persons travelling abroad but without any corresponding benefit to the Government.

It will, therefore, be seen that some of the provisions of the Bill are rather too harsh and will seriously impede the expansion and diversification of the country's export trade and before putting this Bill on the statute book, the Government should carefully examine how far it will be advisable to introduce such rigorous measures.

The Fifth Plan: Success Depends on Many Imponderables

By Amar Nath Dutta

A growth rate of 5.5 per cent during the Fifth Plan, if attained, would mean little for the growing needs of the people. But the assumptions on which the objectives of self-reliance, social justice and a higher growth rate are based seem to lack pragmatism.

THE employment-oriented Fifth Plan has raised the public-sector outlay to Rs. 35,595 crores and the total outlay to Rs. 51,165 crores with a view to achieving an annual growth rate of 5.5 per cent. The "people's plan" will compete against varied objectives of removing poverty, achieving self-reliance, structural modification of the manufacturing sector and social justice all at the same time. Such a bold Plan is quite likely to arouse interest in the minds of all people, experts and laymen alike. Planning in this country has unfortunately remained only a political exercise because a Plan document has become a collection of budgetary estimates for five years. The entire gamut of planning operations has not reduced the poverty of the people while committing the country to a high-cost economy which has knocked out the prospects of increased export and has created increasing unutilised capacity in different sectors of the economy. Although in the Fourth Plan, a growth rate of around 6.2 per cent a year for the Fifth Plan and up to 1980-81 was considered "feasible", it has now been lowered to a little over 5 per cent.

It is estimated that the gross outlay for the public sector would be Rs. 35,595 crores while allowing Rs. 5,860 crores for current development outlay. This will provide stimulus to the economy since increased depreciation allowances constitute additional resources for development. But an increase in gross financial outlay in this respect *prima facie*, implies a change in social accounting rather than a quantitative change in the stock of physical capital. Admittedly, therefore, the financial outlay of the order envisaged may not reflect a sizable step-up of physical resources since over the coming years the real content of the planned outlay will be considerably reduced. The Central Finance Minister, Mr. Y. B. Chavan, earlier admitted of a 30 per cent erosion of the real value of money over the course of the last two decades.

Against the announced growth rates of 3.5 per cent, 4 per cent and 2.8 per cent envisaged in the first three Plans, actual growth rates were 0.9 per cent, 7.3 per cent and 7.7 per cent, respectively, at 1948-49 prices. *Per capita* income increases were still more insignificant because of the large increases in population. It rose by only 1.6 per cent in the First Plan, 1.8 per cent in the Second and 0.6 per cent in the Third. In real terms, both the total rate of growth and the increase in the *per capita* income during the current Plan will be much smaller because of persistent inflationary pressure that shows no

signs of abating. In this perspective, the decision to have a growth rate of a little over 5 per cent during the Fifth Plan would, if attained, mean little for the growing needs and pent-up subsistence demand of the people.

The strategy of attaining self-reliance *vis-à-vis* a higher rate of growth *vis-à-vis* social justice has been viewed as an integrated process within a growth-oriented framework. The 5.5 per cent targeted growth rate is derived from certain sectoral growth rates designed to help the "lowest 30 per cent of the population to attain a more satisfactory level of living". The major political assumption behind this new approach is that consumption among the top 10 per cent of the population can be reduced when that category embraces both the middle class and the working population with a monthly income in the range of Rs. 300 to Rs. 400 and when such a redistribution could imply disruption of production and employment in the so-called luxury goods sector. But the philosophy behind such a colourful objective seems to lack pragmatism.

Much the same can be observed in respect of the ideal of self-reliance. A major part of the public-sector investment of Rs. 27,745 crores will be used to achieve self-sufficiency in foodgrains and cash crops and stepping up production of steel, non-ferrous metals, fertilisers, crude oil, petroleum products, engineering ancillaries and basic chemicals (or what has come to be known as the "core sector"). The present state of the economy reveals near stagnation. Following the projections of the National Council of Applied Economic Research, foodgrains production in 1972-73 is likely to be 2 million tonnes to 3 million tonnes less than the 1971-72 production of 106 million tonnes, itself 2 million tonnes less than the production in 1970-71. *Kharif* production this year may fall short of last year's figure by 6 million tonnes. Sugar production is not likely to exceed 3.7 million tonnes, considered a bare normal, and the oilseed situation continues to be "precarious".

Crash programmes to step up output may be taken up but how this can be put through in the absence of a substantial increase in the availability of essential inputs like fertilisers, water and power continues to be a big question mark. Matters concerning long-term ideology have no relevance to problems at hand. Pro-

why do we develop cultural practices

We do not cultivate tobacco. Yet we have done nearly everything to modernise the management of tobacco crop. Why?

Tobacco is a major cash crop. The farmers want to know how to take care of it scientifically. Telling them is the primary responsibility of all who can.

We do. We have developed a package of cultural practices to suit variations in crop pattern, soil condition and rainfall in different areas. Result? The farmer knows how to fertilise the soil, get healthy seedlings. He appreciates the benefits of raising successful seedbeds, correct planting, weeding, judicious topping of the crop, picking the leaves, proper methods of curing and handling them. He knows how much barn space he should have for the acres planted and how to rotate the crop.

This is the kind of training and attitudes that make him one of the most progressive farmers in the country. He still needs someone to turn to, if he wants guidance.

if we are not tobacco farmers?

ILTD at the root of scientific tobacco farming

U-11-C-7

viding basic inputs apart, the system of floor prices and procurement will have to continue, provided first floor prices are fixed for all principal grains, including sugarcane, cotton and oilseeds, and provided they are related to the cost of production to eliminate the present combination of surpluses and scarcities of competing crops at the same time. New grounds have to be explored to translate research findings into a definite strategy and a bureau of agricultural costs and prices should be set up to cater to the needs of warehousing, procurement and forward purchases and related activities. Significant gaps exist in agriculture and so the programme as drawn up in the *Approach Document* leaves much to be desired.

Along with the core sector approach, reliance is also placed on a massive increase in the production of consumption goods for meeting the minimum needs of the people and expanding employment opportunities. But what is equally important is the initiation of bold measures which would accelerate the expansion as also the production of industries producing mass consumption goods. Industry is now in a shambles. It not only registered a less than 3 per cent increase during 1971-72, compared with 9.6 per cent in 1962-63, but is also failing to utilise even half the capacity in many industries. There is so far no examination in previous Plans and in the *Approach Document* of the factors responsible for the growing sickness of industries. The nation also faces increasing difficulties because of the current year's drought and a sharp increase in prices in recent months.

The price rise has an adverse impact on the country's trade. On account of price differentials alone, individual items like steel tubes and pipes, to name only two among others, are being priced out in markets abroad. The plan for the export trade should be to restrict exports only to surpluses, and that too on a payment and not a barter basis. Imports should be cut down to the essentials of industry's requirements, and on capital account the loans should be just enough to cover amortisation of previous loans. Temptation to opt for an unrealistic growth rate or wishful import substitution should be resisted. The planners would do well to consider all these policy imperatives, evolve a rational strategy for the Plan and list the priorities to cater effectively to the needs of the people.

Last Week in Parliament (From Our New Delhi Correspondent)

The winter session of Parliament opened with the entire Opposition making strong criticism of the Government for the steep price rise. It was left to the Central Finance Minister, Mr. Y. B. Chavan, to argue out a bad case.

THE winter session of Parliament opened last week with a bang by the Opposition on the Government on the issue of prices—an issue which should have defied party barriers, but it did not, as far as the ruling Congress was concerned. The Congress has become, as a rule, allergic to adjournment motions which are in the nature of a censure of the Government. But this time it was helpless. At the very outset, the Speaker, Dr. G. S. Dhillon, made it clear that although he had ruled out an adjournment motion on the same subject in the previous session, the situation was not the same now. There was a sudden and unprecedented rise in the prices of essential commodities and the subject called for an immediate and thorough debate. The debate was thus held in all solemnity, the Opposition accusing the Government of following wrong economic policies, and the Government finding it difficult to defend itself. It was left to the Central Finance Minister, Mr. Y. B. Chavan, to argue out a bad case. He did this with consummate skill. Mr. Chavan denied charges of economic mismanagement while seeking the co-operation of the people in tackling “a national calamity” caused by a “natural calamity”.

As was expected, the Opposition attributed the steep and continuing price rise in essential commodities to a faulty fiscal policy and warned the Government that the people's patience was at an end as was evidenced by acts of violence in different parts of the country. Mr. Chavan, however, did not want the Opposition to take an alarmist view of the situation. While he promised that the Government would not hesitate to import rice, pulses and even wheat to meet the essential needs of the people, he expressed himself against total nationalisa-

tion, a plea constantly made by the leftist parties and the radicals in the ruling Party as the “cure all” for the economic ills of the country. One important announcement Mr. Chavan made related to curbing inflation. He said the Reserve Bank of India had agreed to the proposal to raise a further Rs. 100 crores public loan which he expected would add to the constraints on inflation. On the Government's part, he undertook to stick to the budgetary limit of deficit financing.

The rejection of the adjournment motion by the Lok Sabha was expected, but what was important was that the motion had the support of the entire Opposition. After this debate, it appeared that the Government had succeeded in letting the steam out of the Opposition without much injury to the ruling Party, but the pause may be short-lived. Already, the Opposition is at work on another issue—the corruption charges against the Haryana Chief Minister, Mr. Bansi Lal. This is bound to explode before Parliament adjourns, for the Government, according to the Prime Minister, Mrs. Indira Gandhi, herself, is expected to announce its decision before long. The memorandum against the Haryana Chief Minister has been submitted by nearly 150 Opposition M.P.s and this cannot be taken lightly. If the Government rejects the allegations as of no consequence, there will be another uproar in the House. If, on the other hand, the Government agrees to the setting up of a commission of enquiry, this will be a feather on the Opposition's cap.

In taking a decision, the Government has to keep in mind what is happening in Tamil Nadu, where, too, the Opposition (particularly, the Anna D.M.K.) has levelled similar charges against the Karunanidhi Ministry. Whatever decision the Government takes on the Bansi Lal issue will have its impact on Tamil Nadu. This is a predicament which the Centre will find difficult to surmount if, for political reasons, it decides not to proceed with Mr. Bansi Lal and, at the same time, wants to bring down the Karunanidhi Ministry on this score.

SPOTLIGHT ON STATES

A Joint Programme for Promoting Tourism in South India

(By a Special Correspondent)

The States in the south have decided to undertake a joint programme for promoting tourism. Its successful implementation will give a boost to the States' tourist industry.

THE Ministers and officials in charge of the Department of Tourism in the southern States have decided to undertake a joint programme for promoting tourism in Kerala, Tamil Nadu, Mysore and Andhra Pradesh. The decision was taken at their second zonal meeting held in Trivandrum recently. Making suitable publicity campaign in other places about the facilities and opportunities available and the proposed development scheme in these States is one of the items of this joint programme. It has also been decided to declare as national festivals Onam of Kerala, Dessara of Mysore, Pongal of Tamil Nadu and Sankranti of Andhra Pradesh and to send four journalists from each of these States to the neighbouring States. The campaign will also be made in foreign countries to attract tourists on these occasions. Another decision is to develop the sea coasts of Varkala, Quilon and Ezimala of Kerala, Mahabalipuram, Elliot Beach and Point Calimere of Tamil Nadu, Malpe, Karwar and Arga of Mysore and Bimlipattam, Bardai and Manganipuri of Andhra Pradesh into tourist centres.

The inter-connected wild life sanctuaries, namely, Wynad of Kerala, Muthumalai of Tamil Nadu and Bandipur of Mysore will be enlarged and in this connection a draft plan has also been drawn up. For this purpose, it is proposed to acquire 344 acres of land in Wynad at a cost of Rs. 75 lakhs, 1,200 acres in Bandipur costing Rs. 107 lakhs and 320 acres in Muthumalai costing Rs. 91 lakhs. Some financial aid is expected to come from the U.N. An inter-State package tour programme would be formulated for the convenience of pleasure trippers and the number of inter-State tourist taxi permits issued by each of these States would be increased from 20 to 100. The meeting further authorised

the Director General of Tourism to approach the railway authorities for getting railway concession fares allowed for tourists.

The joint programme when properly carried out will no doubt stimulate the tourist industry of southern States. It may be pointed out that there is ample scope for further exploitation and there are enough opportunities available in the south, especially in Kerala, a variety vacation land. Scenic beauty, rest and recreation, wild life photography, arts and crafts, dance and music, golf and boat race, accommodation in excellent tourist bungalows—all these promise a memorable holiday for the traveller. In its long stretch of coastline, set against rows of coconut palm trees, Kovalam and Thirumullavaram beaches are of great scenic beauty and rank among the best in the world. Varkala is another coastal town famous as a pilgrim centre with the Jahardhana temple. High cliffs, mineral water springs and the Varkala Tunnel are the other attractions. Cape Comorin, now falling within the boundaries of Tamil Nadu, is already well known as a tourist centre. The panoramic view of sunrise and sunset and the Vivekananda Rock Memorial projecting out in the midstream add scenic beauty and sanctity to the place already graced by the Kanya Kumari temple standing on the shore.

Trivandrum, the capital of Kerala, is an ancient city of palaces, temples, churches and mosques. The Napier museum and zoo, Sri Padmanabha temple, Chitralaya art gallery and the aquarium are special attractions. In the Chitralaya art gallery many of Raja Ravi Varma's immortal oil paintings are on view. Quilon, an important commercial and industrial centre with the Indo-Norwegian fisheries development project nearby, and the pleasant hill station-cum-health resorts of Ponmudi and Munnar are worth visiting. So also is Kaladi, on the outskirts of Alwaye, renowned as the birth place of Sri Sankaracharya the great Advaita philosopher. Cochin,

the harbour city, has many places of interest for the tourist, such as a unique Jewish synagogue, the former Dutch Palace with its ancient murals and a modern harbour.

Peermade is another hill station with a tourist bungalow and a golf course on the Kottayam Kumali highway leading to the wild life sanctuary at Thekkady. A 27-mile drive along a mountain road winding through rich tea plantations takes the traveller to the Periar lake surrounded by the wild life sanctuary which is a must on every traveller's list. The lake is an artificial one made by damming the Periar, Kerala's longest river. Wild animals, including elephants in herds of 15 or 20, from veteran tuskers down to baby toddlers, sambur, bison, deer and sometimes a tiger or a leopard can be seen in their natural habitat. It is an excellent opportunity for wild life photography. One can find here excellent accommodation facilities. The numerous lakes and canals along the coast give the visitor a chance to travel by a motor launch or a country craft. Forgetting the tedium of earlier journeys he feels completely relaxed under the cool shades of the coconut palm along both the banks of canals which make the waterway a cool green retreat. Equally enjoyable is the motor drive from Cochin to Trivandrum along the coastal highway.

For shopping and souvenir hunting Kerala with its fine handicraft goods offers ample scope. The State holds pride of place in ivory work. Metal mirrors made in the village of Aranmula and the gold and silver brocaded fabrics of Kottar are the finest among curios. Kathakali, the pantomime dance drama, and other folk dances, boating events like the famous snake boat processions at Aranmula, Ambalapuzha and Kottayam and the boating facilities available at Cochin, Periar, Malampusha and Neyyar dams are excellent diversions for the tourists. And a chain of tourist bungalows are available for accommodation.

PEOPLE AND PERSONALITIES

Mr. Paul H. Leman, president of Alcan Aluminium Ltd, the world's largest international aluminium company, is on a brief visit to India. He will represent Alcan at the inauguration of Indal's new sheet-rolling mill at Taloja, near Bombay, on 25th November.

How to Improve the Administration of Wealth Tax

By C. R. Thiagaraja Varma

The Public Accounts Committee believes that there is much scope for improving the administration of wealth tax. The implementation of its recommendations will go a long way in streamlining the procedures of valuation and reducing the arrears of assessment.

THE fiftieth report of the Public Accounts Committee (fifth Lok Sabha) on chapter V of Audit Report (Civil), Revenue Receipts, 1970 and the report of the Comptroller and Auditor General of India for the year 1969-70, Central Government, revenue receipts relating to direct taxes other than income-tax, throws much light on some of the areas of tax administration which call for improvement. This report was presented to Parliament in August 1972. The report is the outcome of the Public Accounts Committee's (P.A.C.) consideration of those paragraphs of the audit report and the Report of the C. and A.G., which deal with the administration of super profits tax, wealth tax, gift tax,

estate duty and arrears of demand and assessments under these Acts. The audit paragraphs bring out various omissions on the part of the tax authorities with reference to particular assessments and point out the areas of difficulty and other lacunae. The P.A.C., after considering the report as well as the replies and other submissions of the concerned Ministries and authorities, gives its own findings on the matters raised therein together with suggestions for improvement.

The P.A.C. feels that there is scope for improving the wealth tax administration, especially to ensure that all the assesseees liable to pay wealth tax are included in the books of the Department. With this in view, the committee has suggested that income-tax returns of all assesseees having business income of over Rs. 15,000 a year should be reviewed to see whether all of those having taxable wealth are submitting returns of wealth. The fact that as against 294,000 income-tax assesseees (excluding companies) hav-

ing business income of over Rs. 15,000 as on 31st March, 1970, the number of wealth tax assesseees was only 128,635, underlines the need for such a review. Of course, to a certain extent, the variation is explained by the factors that firms and associations of persons are not liable to wealth tax, that the exemption limit of wealth tax for Hindu undivided families is Rs. 2 lakhs and that there is a large number of exemptions under Section 5 of the Wealth Tax Act. However, as pointed out by the committee, it can be reasonably presumed that to earn an income of Rs. 15,000 a year a person should have wealth of not less than Rs. 1 lakh.

After analysing the various cases of omissions and lapses pointed out in the audit reports, the P.A.C. has formed the impression that there is a fairly large-scale omission to correlate wealth tax assessments with income-tax assessments. In fact the committee has observed such omissions with reference to income-tax records and gift tax returns also. It has suggested that the Central Ministry of Finance should undertake a review of all cases where disclosures of concealed income were made under the two Finance Acts, 1965, to see if there was any escape from wealth tax. The suggestion has been accepted by the Ministry. With a view to facilitating the correlation of income-tax returns with those of gift tax of the assesseees, the committee has suggested that a provision should be made in the income-tax return form to indicate whether any gift was made and, if so, the nature and value thereof.

The committee has also considered many cases involving mistakes in the computation of net wealth, omission on the part of the Wealth Tax Officers to assess various kinds of assets declared by the assesseees in the wealth tax returns, short levy of wealth tax, omission to levy or incorrect levy of additional wealth tax on urban immovable properties and incorrect exemptions and deductions allowed to assesseees.

The committee has said that the internal audit has not been giving sufficient importance to the check of wealth tax assessments. It has urged that the quantum of check by the internal audit of various categories of wealth tax assessments should also be laid down specifically in consultation with the statutory audit. The committee has also impressed upon the Ministry the need to give prompt replies to audit paragraphs forwarded to it before their inclusion in the re-

port of the C. and A.G. The internal audit should be specifically instructed to look into the levy of additional tax on urban immovable properties in the course of their check in view of the large-scale omission which has been brought to the notice by statutory audit.

In this context, it may be pointed out that although the Wanchoo Committee has also broadly approved the present organisation and functions of the internal audit, it has pointed out the need for the exercise of greater vigilance and check over the accounts of the Department. In fact it has suggested that the internal audit should not merely act as a watch-dog of revenue but also protect the taxpayer's interest by looking into cases where credit for taxes paid was not given or refunds were delayed. It should also comment on the adequacy of forms and procedures and send its suggestions to the Directorate General of Organisation and Methods. The Wanchoo Committee has suggested that the Inspecting Assistant Commissioner (Audit) should conduct studies and investigate the causes of mistakes commonly committed and offer suggestions to the Director of Inspection (Audit) for remedial measures.

The P.A.C. has also made a pertinent suggestion concerning the practice of the Department to arrive at what may be called "agreed assessments" with the assessee acquiescing to be assessed on certain income, which would have little chance of being sustained but for such acquiescence. It has been suggested that suitable guidelines should be written into the income-tax laws in order that there may be no scope for abuse on either side.

As for valuation, several cases of incorrect valuation of shares resulting in undercharge of wealth to the extent of Rs. 33.63 lakhs were considered by the committee. It has suggested the need for simplification of the present complicated rules concerning valuation of unquoted shares. The lack of uniformity in the matter of valuation of shares has also been noted. The present arrangement of valuation of shares of the same company by different Wealth Tax Officers assessing the shareholders is also responsible for the lack of uniformity. The committee has recommended that some workable system should be evolved to ensure uniformity in valuation of shares and with this in view it has pointed out that it is worth while considering whether the work of fixing value of shares for taxes could be

centralised either in the I.T.O.'s/Commissioners' charges assessing these companies or in the board for all the companies whose shares are not quoted, with arrangements being made to inform all Income Tax and Wealth Tax Officers of it periodically.

The P.A.C. has also reiterated its earlier observation contained in its 117th report (fourth Lok Sabha) that it is necessary to make concerted efforts to bring down the arrears in assessment and that the procedures of valuation will have to be streamlined as the increase in wealth tax revenue has not been even two-fold with a four-fold increase in the number of assesseees during the past nine years. The arrears of assessment of wealth tax in terms of number of cases as on 31st March, 1970, were 130,248 involving tax of approximately Rs. 1,033 lakhs. The total number of assessments completed during the year 1969-70 was 169,572 and the approximate amount of demand raised was Rs. 1,694 lakhs. The heavy accumulation of pending wealth tax assessment has considerably distressed the P.A.C. It has stressed the need for clearing the arrears as early as possible under a targeted programme.

According to the Report of the Central Board of Direct Taxes on Direct Taxes 1970-71, the numbers of wealth tax assessments disposed of in 1969-70 and 1970-71 were 186,206 and 190,205 respectively. During this period, there has also been a 23.7 per cent increase in the number of wealth tax assesseees, from 135,975 to 168,136. In fact, in terms of percentage, there has been a 429 per cent increase in the number of wealth tax payers during the period 1962-63 to 1970-71.

According to the Central Finance Ministry, there were 318 persons with assessed wealth above Rs. 25 lakhs at the end of 1970. The number of such assesseees was the largest in Bombay (93) followed by Gujarat (52) and West Bengal (41). According to a news report, wealth tax receipts fell short of the anticipated Rs. 30 crores by Rs. 5 crores in 1971-72. The collections at Rs. 25.89 crores, however, showed a rise of Rs. 10 crores over the previous year's total. Wealth tax collections are estimated at Rs. 43 crores in the current year, taking into account the extension of wealth tax to agricultural wealth. The process of collection of wealth tax on agricultural wealth, which was introduced from 1970-71 but could not be implemented for over a year until the Supreme Court held the levy valid, is yet to make headway.

Nationalised Banks Give More Advances to the Priority Sectors

(By a Special Correspondent)

Advances by nationalised banks to the priority sectors have risen sharply in the last few years. But the problem is that priority sector advances are less profitable for banks.

AMONG many other objectives behind the nationalisation of 14 major commercial banks on 19th July, 1969, the principal one was the diversion of bank credit to the desired sectors of the economy. The reason why nationalisation had become essential was that banks were not giving credit to the desired sectors, or what were recognised as the priority sectors. It was customary under the social control over banks, then operative, to set targets for major bank lending to the

priority sectors, such as agriculture, small-scale industries and exports. The progress achieved was measured in quantitative terms of lendings to these sectors and reviewed periodically during the short-lived social control period. The achievements were found short of the targets fixed for lendings. This pitfall on the part of the major banks culminated in a major step forward, i.e., nationalisation of the major 14 banks.

In the initial period since nationalisation, the assessment of lendings to the priority sectors was based on a level higher than that ever achieved in the period of social control. However, since then, the progress of nationalised banks in respect of advances to these crucial sectors of the economy had to be compared with those banks which were already in the public sector, that is, the State Bank of India and its subsidiaries. It was obvious that increasing attention was paid not only to these sectors in general but to the direct beneficiaries also. In advances to the agricultural sector, greater attention had to be paid to direct lending to farmers. It is no wonder, therefore, that the focus of attention now centres around the small farmers rather than the big ones even at the cost of a little more administrative expense.

With a view to assessing the progress made by all the public-sector banks, the available statistics are com-

piled in the table below. The table shows that the public-sector banks have increased their advances to the priority sectors very sharply both in respect of the number of accounts and the amount. However, the average amount for each account appears to be declining. This trend is believed in banking circles to be the result of the consolidation of small accounts from the viewpoint of their usual criteria for lending rather than covering them in the priority sector portfolio as was done in the initial period of nationalisation. That is to say, banks are becoming conscious of the creditworthiness of their borrowers and are, therefore, inclined to apply the norms for lending. It is thus possible to anticipate a rising trend of such advances for each account over a period of years.

It is heartening to find that the priority sector advances, which formed 14.5 per cent of the total in June 1969, has since risen sharply to 23 per cent in December 1971. This significant progress has no doubt been the result of smooth deposit growth. Had banks been not in such a liquid position, they would hardly have been able to sustain the increase in advances to the priority sectors. This is evident also from the declining credit-deposit ratio of the public-sector banks which was as high as 78 per cent to 80 per cent and has fallen to 73 per cent by the end of 1971. Banks have been faced with the problems of priority and non-priority sector advances on the one hand and profitable and less-profitable advances on the other. It is a fact that priority sector advances are less profitable and hence need to be held in their portfolio because of the social objective. Thus, a differential rate of interest system has been at work and it needs to be applied with consideration of profitability and social objectives. It is no wonder that priority sector advances are receiving due attention of banks but need greater attention in future.

PUBLIC-SECTOR BANKS' ADVANCES TO PRIORITY SECTORS

	June 1969	June 1970	June 1971	December 1971
I. Total priority sector advances:				
(a) No. of accounts	282,203	928,167	1,188,718	1,304,514
(b) Amount (Rs. crores)	438.5	760.8	896.6	961.0
(c) Amount an account (Rs.)	15,539	8,197	7,542	7,367
II. Total advances (Rs. crores)	3,016.8	3,553.7	4,048.8	4,172.1
III. I(b) as percentage of II (per cent)	14.5	21.4	22.1	23.0
IV. Total deposits (Rs. crores)	3,871.4	4,397.4	5,190.2	5,742.0
V. Credit-deposit ratio (per cent)	77.9	80.8	78.0	72.7

Raising the Volume of Exports by Air Transport

(By a Special Correspondent)

India has immense scope for exporting her products by air. So efforts should be made to popularise this mode of transport.

ACCORDING to a study, exports by air from India have doubled between 1954-60, 1960-66 and 1966-69 and that in a particular year 4.5 per cent of India's total exports were air-flown. For instance, gross foreign exchange earnings through total freight revenue from civil aviation in India have increased from Rs. 7.4 crores in 1965 to Rs. 15.84 crores in 1969. Again, in 1969, of the overall foreign exchange earnings of Rs. 180 crores from civil aviation, India exported goods by air worth about Rs. 80 crores, against Rs. 50 crores in 1967.

It is pertinent to note here that Indian products exported by air mainly consist of commodities like pearls and precious stones, textiles, pharmaceuticals, imitation jewellery, mica and minerals, perfumes and oils, human hair and movie films. And in terms of value, more than half of the air-flown exports constitute pearls and precious stones. Incidentally, Japan, Hongkong, Kuwait, Nepal, Thailand, Afghanistan, Australia, West Germany, the U.S.A., Russia, the U.K., African countries and many other countries in Europe and west Asia are importers of India's air-flown products and about one-third of such exports is directed to the U.K.

Interestingly, Santa Cruz airport in Bombay tops the list as far as air-lifted exports are concerned. For instance, in a particular year, about 62 per cent of the total air-lifted exports were flown from Bombay, against 13 per cent, 11 per cent, 7 per cent and 7 per cent from Madras, Calcutta, Delhi and other smaller airports. Maybe, the southern region, especially Kerala, offers vast scope for air traffic potential for commodities like packed cashews and frozen shrimp. But then in the immediate past, non-availability of space in aircraft in Cochin resulted in transporting chemicals and lemon grass oil to Bombay and Madras airports by surface transport for export.

To enjoy facilities of moving commodities by air, industries now prefer to establish themselves near airports. Again, civil aviation has made it possible to hasten the growth of industries in cities like Poona and Baroda. The reasons are simple: even if high freight often makes air consignments costly, the high speed and avoidance of unnecessary inventory, warehousing, packaging, labour and insurance costs in case of air consignments cannot be overlooked. Besides, air consignments ensure fast delivery or sale, guaranteeing thereby quicker return on investments. Which is why the study by the Operations Research Group, Baroda, has concluded that immense scope exists for exporting goods by air from India.

Indeed, air transport in India not only creates new demands for products and services but also helps industries to flourish. Again, never before the demands for air freight consignments in Assam, Tripura, Manipur, Kerala or north Bengal were so great as they are today. Similarly, the far-eastern parts of India, like Gauhati, would have been separated from the rest of India but for Indian Airlines which transports goods to every part of the country. And with the introduction of palletised consignments, cargo revenue in India is bound to increase.

For cheaper outlets of air cargo to satisfy overseas demands, the need is to devote more and more resources, talent and ingenuity, besides air freight subsidies, to render the kind of services that Indian exporters desire from airlines. In this context, major adjustments, in the opinion of some aviation experts, are to be made to avoid backward slides by the aviation industry, as the present concept of air cargo services has reached the optimum level. To illustrate: many shippers are often disillusioned on account of growing delays in handling and clearing of cargoes at the airports and the consequent gap between promise and performance. Again, there is no all air-cargo planes in India as cargo loads are only carried in mixed passenger and cargo planes. Logically,

Indian exporters point out from experience that airlines should ensure that all export cargoes should reach their respective destinations well within the delivery deadline. Some of them are pessimistic about filling up the capacious Jumbo and predict that air cargo will pose a serious threat to the aviation industry in the 'seventies unless urgent steps are taken to make this transport system popular.

The speed of cargo handling in the advanced country may be mentioned in this context. At Pan Am's cargo centre in New York, two jet freighters can be loaded and unloaded in 20 minutes for the movement of 45 tonnes in each aircraft. Similarly, the average incoming shipment is available for pick-up and delivery in less than two hours after a jet freighter has landed. And this indicates the leeway India has to make up.

SWISSAIR

Tourist Programme

The Swiss cities Zurich, Geneva, Basle, Berne, St. Gall and Lausanne have conjointly launched a programme named "Switzerland in the bag". The programme offers to overseas tourists at no charge a number of services in the season from 1st November, 1972, to 31st March, 1973. Visitors of the six cities will be granted, by courtesy of the local tourist offices and in co-operation with Hertz Rent-a-Car, free rides on public transport for one day, a rental car at no base fee. Moreover, they will be invited to a typically Swiss meal and a drink. No entry charges will be levied in museums and night clubs. In their common effort to promote winter tourism, the six cities will furthermore give a gift to their overseas guests and, according to availability, offer free city sight-seeing trips, excursions, visits to the zoo, games in bowling alleys, or provide a pair of skis or a skibob for a day.

For a nominal charge "Capital" 's Statistical Department can provide you with a certificate of share prices.

Shares Steady : Operators Holding Back Fresh Commitments

THE stock markets have on the whole been steadier this past week. If there have been some hesitancy at times it has not assumed serious proportions, and by the time the week has come to a close, sentiment has improved, if only marginally. Absence of selling pressure has been a general feature and enquiries of any nature have received more than proportionate attention. Dalal Street, although yet to come out of the post-Moorat trading sluggishness, has still a slight edge over Lyons Range in overall performance. The takeover inhibitions, which have held operators captive for a long time, have been stoked by fresh reports of a move to transfer the management of sick or closed tea gardens to the Government. The terms under which the gardens are to be taken over have not yet been spelt out but market circles hardly expect them to be any different from the usual takeover-followed-by-nationalisation pattern. The move, if it materialises, will mark the first Government entry into the tea industry.

The shades of gloom have also deepened at developments on the price front. The Lok Sabha debate on prices has little to cheer the market or inspire confidence. The plans of attack that the Central Finance Minister, Mr. Y. B. Chavan, unfolded have not assured operators of yielding tangible results immediately. But, the price rise is having a dampening effect on consumption. Mr. Chavan's statement that, if necessary, the Government would import foodgrains to tide over the situation has been welcomed. But it has also been seen as a slight, but significant, weakening of the Centre's optimism to meet the food crisis through local efforts. Operators have wondered if a substantial food import bill will not induce New Delhi to become more strict about other imports for industry.

In spite of disparate and often discordant views on industrial policy expressed from different forums, market circles have noticed a growing awareness on the part of the authorities to remove the roadblocks to accelerated industrial growth. The accent on fuller utilisation of capacity has been seen as a hopeful sign. There

are also indications that private investment is slowly thawing its freeze although larger drafts have to be made from public financial institutions. The resumption of river transport between Calcutta and Assam towns through Bangladesh is also a welcome development. But the political outlook, particularly the vicissitudes of India-Pakistan relations, has remained disturbingly uncertain.

Gilt-edged securities have ruled quietly steady. The 3 per cent Conversion loan 1986 was quoted at Rs. 60. State Government loans have also been steady but turnover has been moderate.

The Calcutta stock market has closed this past week on a steady note. Selling pressure has been about normal. Turnover has been moderate. Reports of substantial institutional buying have exercised a favourable influence. But operators have preferred to play safe rather than go out for high stakes in view of the continuing uncertainties of Government policies. The Central Finance Minister, Mr. Y. B. Chavan's statement that, if necessary, foodgrains would be imported, has been welcomed. Investors are also keenly waiting for some sort of advance notice of U.S. attitude towards this country following President Nixon's re-election; the Washington decision to fall in line with other donor countries to allow larger debt relief to India has been welcomed but it is not clear if the move can be interpreted as a clear straw in the wind. Among engineering shares, Guest Keen Williams, Textile Machinery, Electrosteel Castings, Jay Engineering, Simon Carves and Shri Ram Bearing were steady. Among jute shares, Agapara have been a shade better while Birla and Nellimarla have maintained. Among coal shares, East Indian, Bengal, South Karanpura and Pench Valley have changed hands. Among paper shares, Ballarpur have been firm and Straw Products and Sirpur transacted. In the miscellaneous section, Dunlop India, Jayashree Tea and Industries, Kesoram Industries, Hindustan Motors, General Electric, Indian Explosives, Williamson Magor, India Tobacco, Union Carbide and Phillips India have been supported.

Dalal Street has maintained steady conditions throughout the past week. In a few scattered equities, there have been suggestions of slight gains. But turnover has remained restricted as operators have preferred not to take any hasty move. Mr. Chavan's warning that difficult days are ahead have exercised a dampening effect. There has been an inclination to see in it the possibility of further tightening of controls and other restrictions. Corporate news has not been bad although the setback reported by A.C.C. has had an impact on the market. Among textile shares, Standard registered a substantial rise, but Century has not done so well. National Rayon has also been noticeably better. Indian Dye-stuff, Scindia and Great Eastern have been supported. Reports of a good sugarcane crop next season have improved sugar shares. United Carbon have moved ahead impressively and

UBI NOW INTRODUCES

Monthly Income Fixed Deposit Scheme

ENJOY INTEREST INCOME
EVERY MONTH AT
FIXED DEPOSIT RATES

All you have to do is to deposit with UBI Rs. 3,000/- or above for a minimum period of 3 years. You start getting the benefits from the very next month.

This
is how
it
works

- ★ Draw interest every month; no more waiting for longer periods.
- ★ Ensure regular income month after month...
- ★ Supplement your income.
- ★ Enjoy fixed monthly income keeping your principal intact.

DEPOSITS	MONTHLY INCOME ON DEPOSITS FOR		FIXED DEPOSIT INTEREST RATES
	3 YEARS	ABOVE 5 YEARS	
Rs. 3,000	Rs. 16.25	Rs. 18.12	3 years... 6 ¹ / ₂ % p.a.
Rs. 10,000	Rs. 54.17	Rs. 60.42	3-5 years... 7% p.a.
Rs. 50,000	Rs. 270.83	Rs. 302.08	Above 5 years... 7 ¹ / ₄ % p.a.

United Bank of India
(A Government of India Undertaking)

Philips India
Pullangode Rubber
Ranga Vilas Mills
Sarvaraya Textiles
Saurashtra Cement
Tamilnad Cardboards
Thamarapally Rubber
Travancore Chemical
Velimalai Rubber

there have been fair improvements in Gujarat Fertilisers, Century Enka and N.O.C.I.L.

The Madras stock market has been rather subdued this past week. Good corporate news has been a plus factor, but the various problems faced by industry have marred the outlook. Sugar shares have behaved well. E.I.D. have moved up on expectations of a possible interim dividend next year. Business has been done in Deccan, and K.C.P. have had good demand. In the planning section, Peria Karamalai have continued to be in demand while Manjushree have been steady. In the textile section, Mettur Beardsell, Madura and Travancore Rayons have met with enquiries. Among bank shares, there has been not much of a change. In the miscellaneous section, business has been done in Mettur Chemical, Chemicals and Plastics and Tubes and Malleables. Ashok Leyland have recorded a small fall due to the announcement of a cut in dividend.

CLEARED SECURITIES IN CALCUTTA

[The following list shows the range of price fluctuations in clearing shares in

the Calcutta stock market during the past week. The figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing date a year ago. The last named is shown in parentheses. All quotations are in rupees.]

Philips India : An Attractive Share Offer

PHILIPS India Ltd which is a household name in this country and a pioneer in the field of electronics will be soon offering 1.33 million equity shares of Rs. 10 each at a premium of Rs. 15 a share. Out of the proposed issue, 294,000 shares will be allotted to Philips Holland in conversion of its loan to the Indian Company, subject to the approval of the Reserve Bank, and 420,000 shares will be allotted to those resident members in India whose names appear in the Company's register on 27th September, 1972, in the proportion, as nearly as circumstances admit, of one equity share for every four shares held. The number of shares reserved for subscription by the Indian directors and employees is 92,400. The Company is now offering for public subscription 523,600 equity shares. It is an offer for which the investing public has been waiting with keen interest for quite some time. There is no doubt that the response will be tremendous and there is every possibility of the shares being oversubscribed many times. The entire amount of Rs. 25 a share—Rs. 10 on capital account and Rs. 15 on premium

account—is payable on application and an application must be for a minimum of 50 shares or multiples thereof. The subscription list will open on 4th December and will close on 13th December or earlier at the discretion of the directors but not before 6th December. (Details of the issue appeared in last week's issue of *Capital*.)

The present issue will raise the Indian participation in the Company's equity capital to 40 per cent. The funds raised through this issue will be used in the business of the Company and to finance the expansion projects for which it holds licences and letters of intent. Philips India's sales and profits have shown a marked improvement in recent years; during 1971 sales amounted to Rs. 466 crores and profits, after tax, were Rs. 4 crores. It paid a dividend of Rs. 2.40 a share for 1971. An interim dividend of Rs. 1.20 a share was declared by the board of directors for the current year. The Company's growth can be attributed to its policy of selling quality products. Philips India has over the years developed markets in Europe, the Far East

and the Middle East for its radios, lamps and electronic equipment. Conformation to international standards, introduction of modern technology and the assistance received from the parent Company have enabled Philips India to sell its products abroad. It is hoped that the demand for the Company's products will continue to grow both in this country and abroad. The directors are of the opinion that subject to unforeseen circumstances the Company will make sufficient profits to pay a satisfactory dividend on the equity capital as increased by the present issue.

INDIAN CABLE

Sales Rise

SALES of the Indian Cable Co. Ltd for the year ended March 1972 show an increase from Rs. 18.80 crores to Rs. 20.71 crores. This increase, achieved under most trying conditions in the country, was made possible by improving the Company's internal efficiency. The demand for electrical cables did not materialise to the extent it was anticipated due to financial stringency throughout the country. The drop in margin of profit due to intensified competition and the rising cost of materials and services caused the pre-tax profit to fall from Rs. 1.99 crores to Rs. 1.80 crores, after providing Rs. 39.38 lakhs (against Rs. 34.68 lakhs) for depreciation. The taxable ordinary dividend of 15 per cent has been maintained, absorbing Rs. 62.16 lakhs which will be paid out of general reserve. This offers a yield of 7 per cent at the present price of Rs. 21.50 a share of Rs. 10 each. Development rebate reserve is allocated Rs. 12.70 lakhs (against Rs. 3.90 lakhs) and taxation Rs. 93 lakhs (against Rs. 1.03 crores). After making other adjustments, a sum of Rs. 74.55 lakhs (against Rs. 92.52 lakhs) is transferred to general reserve.

A one-day seminar on "Developments in Covered Copper Conductors", organised by the Indian Copper Information Centre, was held in Jamshedpur a few days ago. Mr. A. K. Kahali, Managing Director of the Indian Cable Co. Ltd, inaugurated the seminar and Mr. M. S. Padmanabhan, General Manager of Heavy Electricals (India) Ltd, was the chief guest. Five papers, mostly discussing the manufacture and applications of continuously transposed conductors and the developments in insulating materials for use in the covered con-

ductors, were read. This seminar is expected to have a far-reaching significance in relation to the manufacture of the continuously transposed conductors by the Indian Cable Co. Ltd at its Jamshedpur works. Commissioned in March 1972, I.N.C.A.B.'s new C.T.C. plant is the only one of its kind in all Asia apart from Japan.

TRAVANCORE CHEMICAL

Margins Eroded

DESPITE an increase of about 10 per cent in sales from Rs. 2.75 crores to Rs. 3.02 crores, the gross profit made by Travancore Chemical and Manufacturing during the year ended June 1972 is down by 7.6 per cent from Rs. 49.33 lakhs to Rs. 45.66 lakhs, indicating a pressure on margins. The dividend, however, has been raised from 25 per cent to 27.5 per cent made up of 15 per cent final and 12.5 per cent interim. After providing Rs. 5.09 lakhs (against Rs. 5.43 lakhs) for depreciation, Rs. 52,000 (against Rs. 42,000) for development rebate reserve and Rs. 25.76 lakhs (against Rs. 27.60 lakhs) for taxation, the net profit amounts to Rs. 14.29 lakhs, against Rs. 15.88 lakhs in the preceding year. The equity dividend will absorb Rs. 11 lakhs. The Company's performance so far during the current year is reported to be satisfactory but its profitability is likely to be adversely affected by inadequate supplies of imported copper scrap.

JAM MILLS

Better Results

THE preliminary figures released by Jam Shri Ranjitsinghji Spg. and Wvg. Company, popularly known as Jam Mills, show an appreciable improvement in its working results for the year ended June 1972. The dividend payable on the capital enlarged by the one-for-two bonus issue has been maintained at 10 per cent. The gross profit at Rs. 19.87 lakhs shows an increase of about 36 per cent over the previous year's figure of Rs. 14.53 lakhs. After providing Rs. 8.20 lakhs (against Rs. 9.07 lakhs) for depreciation, Rs. 87,000 (against Rs. 3.19 lakhs) for development rebate reserve and Rs. 3.73 lakhs (against nil) for taxation, the net profit for 1971-72 amounts to Rs. 7.07 lakhs, against Rs. 2.27 lakhs in the previous year. A sum of Rs. 2 lakhs has been transferred to general reserve. The proposed dividend will absorb Rs. 4.66 lakhs, against Rs. 3.10 lakhs.

RANGA VILAS MILLS

Good Rise in Sales

THE outstanding feature of the working of Sri Ranga Vilas Ginning and Weaving Mills Ltd for the year ended December 1971 is the substantial rise in sales to Rs. 1.77 crores, against Rs. 80.84 lakhs in the previous year. But the working has resulted in a loss of Rs. 2.80 lakhs, after providing depreciation of Rs. 4.38 lakhs. This compares with the previous year's loss of Rs. 4.34 lakhs, after providing depreciation of Rs. 3.82 lakhs. Adding to the year's loss of Rs. 2.80 lakhs a sum of Rs. 52,687 being expenses for

the previous year and also Rs. 58,844 being gratuity relating to the previous year, there is a loss of Rs. 3.92 lakhs. Deducting from this a sum of Rs. 25,800 being the amount transferred from development rebate, there is a deficit balance of Rs. 3.66 lakhs which is being carried forward.

SARVARAYA TEXTILES

Dividends Skipped

THE directors of Sarvaraya Textiles Ltd have skipped the dividend on both ordinary and preference shares for the year ended

J. STONE : AN ATTRACTIVE SHARE OFFER

J. STONE and Co. (India) Ltd will shortly enter the capital market with an issue of 357,130 equity shares of Rs. 10 each at par. Out of the present issue, 17,856 shares have been reserved for subscription by the directors and employees of the Company provided they are all Indian nationals. The remaining shares are being offered for subscription by the public. The subscription list will open on 27th November and will close on 5th December or earlier at the discretion of the directors but not before 29th November. The Indian public is being invited to participate in the equity share capital of the Company to the extent of 40 per cent. The proceeds of the issue will be utilised partly to finance the expansion programmes and partly to repay the loan of Rs. 14.90 lakhs to the holding Company. (Details of the issue appeared in last week's issue of *Capital*.) Addressing a Press conference in Calcutta a few days ago in connection with the share issue, Mr. P. E. Axon, chairman, said that the time was now ripe for the Company to diversify and expand its activities and to broaden its shareholding by the sale of shares to the Indian public. This is an important step in the Company's development and one which the chairman thinks should increase its importance in this country.

J. Stone (India) is an important member of the electrical division of the Stone-Platt Group with its worldwide connections in railway, marine, aviation and textile engineering. The Company has to its credit a number of "firsts" in its own specialised field of engineering.

Negotiations with the Government of India on the various schemes and projects have already resulted in letters of intent being issued in some cases and manufacturing licences being granted in others. The main projects in hand cover the manufacture of (a) air brake equipment for railway rolling stock and locomotives; (b) brushless alternators and control gear; (c) marine navigational aid equipment; (d) rotor switches and systems relays; (e) submersible pumps and motors; and (f) automatic door gears for the railways and road passenger vehicles. All the above projects are of a highly specialised nature and would constitute in most cases manufacture in India for the first time. All these projects have substantial export potential.

The Company in recent years has shown a sustained growth both in sales turnover and profitability. The year 1971 has shown a growth of 13 per cent in sales and 22 per cent in profit over the previous year. Similarly, 1972 has shown substantial growth over 1971 in both sales and profit for the first half of the year. The Company's order-book for products currently manufactured is full up to the end of 1973, and with the implementation of the schemes of expansion and diversification, a further increase in turnover and profitability is expected. Barring unforeseen circumstances, the directors should be in a position to recommend payment of a dividend of not less than 10 per cent on the equity capital (as increased by the forthcoming issue) for the period ending 29th December, 1973.

March 1972. But the working results for the year are more encouraging than before. The Company has earned a profit of Rs. 4.58 lakhs, after providing depreciation of Rs. 6.07 lakhs, as compared with the previous year's loss of Rs. 4.97 lakhs, after providing depreciation of Rs. 6.50 lakhs. Adding to the year's profit a sum of Rs. 5,473 being excess provisions written back, Rs. 10,000 transferred from development rebate reserve and Rs. 1.49 lakhs transferred from general reserve, there is a total of Rs. 6.22 lakhs. After adjusting this profit against the brought-forward loss of Rs. 6.95 lakhs, there is a deficit balance of Rs. 73,000 which is being carried forward.

DHANALAKSHMI MILLS

Profit Declines

DHANALAKSHMI Mills Ltd has reported a decline in its profit for the year ended December 1971. But the dividend has been maintained at 10 per cent. The profit is Rs. 12.62 lakhs, after providing depreciation of

Rs. 11.82 lakhs. This compares with the previous year's profit of Rs. 22.95 lakhs, after providing depreciation of Rs. 10.19 lakhs. Adding to the year's profit of Rs. 12.62 lakhs a sum of Rs. 2.42 lakhs being excess provision for gratuity, Rs. 33,031 being refund of excise duty and Rs. 4,213 being income-tax refund, there is a total surplus of Rs. 15.42 lakhs. Out of this, donations amounted to Rs. 28,213 (against Rs. 15,100). The balance bonus for the previous year accounts for Rs. 1.08 lakhs. Development rebate reserve gets Rs. 2.90 lakhs (against Rs. 85,000). Provision for taxation is Rs. 4.25 lakhs (against Rs. 15 lakhs). The balance of Rs. 6.90 lakhs (against Rs. 6.44 lakhs) is transferred to general reserve. The equity dividend amounting to Rs. 4.86 lakhs will be paid out of general reserve.

ARYODAYA MILLS

A Good Year

ARYODAYA Ginning and Manufacturing Company has raised the dividend for 1971 from Rs. 12 to Rs.

16 a share. This follows a marked improvement in the Company's performance during the year. While sales have increased by 14 per cent from Rs. 3.96 crores to Rs. 4.52 crores, the gross profit has gone up by 36 per cent from Rs. 22.10 lakhs to Rs. 30.09 lakhs. The ratio of profit to sales has improved from around 5.6 per cent to 6.7 per cent. Important allocations include depreciation Rs. 8.55 lakhs (against Rs. 8.52 lakhs), development rebate reserve Rs. 2.20 lakhs (against nil), bonus Rs. 7.57 lakhs (against Rs. 2.62 lakhs) and general reserve Rs. 11 lakhs (against Rs. 9.50 lakhs). The dividend absorbing Rs. 2.77 lakhs (against Rs. 2.08 lakhs) will be paid out of general reserve.

THAMARAPALLY RUBBER

Results Improve

THE working of Thamarapally Rubber Co. Ltd for the year ended December 1971 has resulted in a profit of Rs. 1.36 lakhs, after providing Rs. 13,829 for depreciation and Rs. 1.20 lakhs for taxation. This compares with the previous year's profit of Rs. 65,686, after providing depreciation of Rs. 13,113 and taxation of Rs. 50,000. The total surplus available for appropriation is Rs. 1.52 lakhs, including the brought-forward sum of Rs. 15,742. Out of this, the preference dividend absorbs Rs. 4,905 and the equity dividend of 15 per cent (against 12½ per cent) claims Rs. 1.25 lakhs. The balance of Rs. 22,174 is being carried forward.

VELIMALAI RUBBER

Dividend Raised

THE working of the Velimalai Rubber Co. Ltd for the year ended February 1972 has resulted in a profit of Rs. 3.91 lakhs, after providing depreciation of Rs. 59,360. This compares with the previous year's profit of Rs. 3.59 lakhs, after providing depreciation of Rs. 68,033. Sales amounted to Rs. 16.42 lakhs (against Rs. 17.36 lakhs). Adding to the year's profit a sum of Rs. 41,234 brought forward, there is a total of Rs. 4.35 lakhs available for appropriation. Out of this, provision for taxation amounts to Rs. 1.75 lakhs (against Rs. 1.60 lakhs). General reserve gets Rs. 10,000 (against Rs. 12,500). The preference dividend absorbs Rs. 17,500 and the equity

dividend at 16 per cent (against 12 per cent) claims Rs. 1.92 lakhs. The balance of Rs. 40,776 is being carried forward.

The rubber crop for the year amounted to 284,910 kilograms (against 279,917 kilograms). The average price realised for rubber during the year was Rs. 5.07 a kilogram. The estimated crop for the current year is 290,000 kilograms. During the year, the Company issued bonus shares amounting to Rs. 1.4 lakhs.

PULLANGODE RUBBER

Dividend Skipped

THE directors of the Pullangode Rubber and Produce Co. Ltd have skipped the equity dividend for the year ended March 1972. The profit for the year amounts to Rs. 3.55 lakhs, after providing for depreciation. This compares with the previous year's profit of Rs. 5.13 lakhs. After providing Rs. 2.44 lakhs (against Rs. 3.67 lakhs) for taxation, there is a net profit of Rs. 1.11 lakhs. Adding to this profit Rs. 3,661 brought forward, Rs. 4,657 unclaimed dividends, Rs. 1.30 lakhs being excess tax provision and Rs. 60,000 transferred from general reserve, there is a total available surplus of Rs. 3.09 lakhs. Out of this, Rs. 3 lakhs (same) are transferred to rubber replanting reserve. The preference dividend absorbs Rs. 9,197. The balance of Rs. 734 is being carried forward.

MALANKARA RUBBER

Bigger Crop

THE directors of Malankara Rubber and Produce Co. Ltd. have declared a dividend of 30 per cent for the year ended March 1972. The Company has harvested a higher rubber crop for the year, compared with the previous year. But the selling price of rubber was lower than in the previous year. The profit for the year amounts to Rs. 5.26 lakhs, after providing depreciation of Rs. 45,823 and taxation of Rs. 10.32 lakhs. This compares with the previous year's profit of Rs. 5.68 lakhs, after providing depreciation of Rs. 46,574 and taxation of Rs. 10.53 lakhs. The total available surplus comes to Rs. 6.01 lakhs, including Rs. 74,823 brought forward from the previous year. Out of this, the dividend

claims Rs. 5.40 lakhs; the balance of Rs. 61,235 is being carried forward.

NEELAMALAI TEA

Dividend Maintained

THE directors of Neelamalai Tea and Coffee Estates Ltd have maintained the equity dividend at 10 per cent for the year ended June 1972. The profit amounts to Rs. 6.93 lakhs, after providing depreciation of Rs. 2.83 lakhs. This compares with the previous year's profit of Rs. 8.89 lakhs, after providing depreciation of Rs. 2.99 lakhs. The total surplus available for appropriation is Rs. 9.42 lakhs which includes Rs. 16,188 brought forward and Rs. 11,500 being excess development rebate. Out of this, bonus provision amounts to Rs. 2.62 lakhs (against Rs. 1.65 lakhs) and tax provision accounts for Rs. 1.71 lakhs (against Rs. 3.30 lakhs). Development rebate reserve gets Rs. 33,600 (against Rs. 12,700). The preference dividend absorbs Rs. 99,000 and the ordinary dividend claims Rs. 3.60 lakhs. The balance of Rs. 16,402 is being carried forward.

NATIONAL ROLLING

Results Disappoint

THE National Rolling and Steel Ropes Ltd has produced disappointing results for the year ended June 1972, although there was a sub-

stantial increase in turnover from Rs. 74.92 lakhs to Rs. 1.44 crores. The rise in turnover has not increased the profit due to a rise in the costs of raw materials, stores, etcetera. The Company has incurred a loss of Rs. 1.18 lakhs, against a loss of Rs. 2.71 lakhs, after providing Rs. 1.89 lakhs (against Rs. 1.81 lakhs) for depreciation. In view of the Company's poor performance, the ordinary dividend has been skipped again. A sum of Rs. 610 (against Rs. 1,385) has been transferred from development rebate reserve no longer required. After making other adjustments, there remains a debit balance of Rs. 1.18 lakhs which is adjusted against general reserve.

COCHIN MALABAR ESTATES

Bigger Dividend

THE directors of the Cochin Malabar Estates Ltd have recommended a slightly higher dividend of 18 per cent for the year ended February 1972, against 17.5 per cent paid for the previous year. The profit, before taxation, amounts to Rs. 27.62 lakhs, after providing depreciation of Rs. 2.28 lakhs. This compares with the previous year's profit of Rs. 28.29 lakhs, after providing depreciation of Rs. 2.19 lakhs. After providing Rs. 17 lakhs (same) for taxation, there is a net profit of Rs. 10.62 lakhs. Adding to this profit Rs. 3,723 brought forward, the total comes to Rs. 10.66 lakhs. Appropria-

C.E.S.C. : BETTER PERFORMANCE

AT the recent annual general meeting of the Calcutta Electric Supply Corporation Ltd, Mr. Sachindra Chaudhuri, chairman, said that the performance of the Company during 1971-72 had shown an improvement over the previous year. (A fuller version of the chairman's speech was printed in last week's issue of *Capital*.) Total sales of the Company's electricity have increased from 2,564 million units to 2,661.4 million units and the maximum demand met in megawatts has increased from 520 million units to 533 million units. The gross revenue is placed at Rs. 34.89 crores, against Rs. 32.68 crores. The profit, after taxation, has been Rs. 1.12 crores, against Rs. 79.2 lakhs. The chairman said that the units sold and the maximum demand had risen above the static figures of the last three years. But the small increases do not adequately reflect the improved industrial conditions because of the restrictions imposed by the Government on certain H.T. industrial consumers and due to frequent "load shedding."

The chairman said that the clear profit of the Company had been less than the "reasonable return"

to which the Electricity (Supply) Act and Tariff Policy entitled the Company. He stressed the urgent need for an increase in the Company's revenue to match its increased costs. The Company has been endeavouring to implement a comprehensive revision of its rates designed to bring the clear profit more nearly into balance with the "reasonable return", but the Government's support is yet to come. Mr. Chaudhuri said that the Company could meet the interests of the consumers only if it were allowed to earn a "reasonable return". The Company's present failure to meet the full demand of its consumers is due to the inability of Government agencies—the West Bengal State Electricity Board and the Damodar Valley Corporation—to supply the Company with the full amount of power to which these agencies are committed. It appears that Government agencies' existing firm generating capacity is inadequate and the present extremely unsatisfactory state of affairs will persist until that capacity is materially enhanced either by an improvement in the performance of the existing plants or by the commissioning of additional plants.

BROOKE BOND : A GOOD YEAR

THE working results of Brooke Bond India Ltd for the 53 weeks ended 1st July, 1972, show an appreciable improvement over the previous year's performance. During the year the war in Bangladesh, coupled with a drought in east Africa, caused a decline in the world tea crop outside India. Conversely, the Indian crop showed some increase. This combination resulted in an unusually strong export demand for Indian tea which resulted in increased exports and higher prices in the Indian auctions. Sales revenue for the year was Rs. 95.79 crores, an increase of Rs. 2.25 crores over the previous year, and after providing Rs. 38.31 lakhs (against Rs. 38.90 lakhs) for depreciation, the profit has increased to Rs. 4.90 crores from Rs. 4.59

crores. A taxable ordinary dividend of Rs. 2 a share has been declared, the same as in the previous year, absorbing Rs. 1.34 crores and this payment will be made out of general reserve. This offers a yield of 7.8 per cent at the present price of Rs. 25.75 a share of Rs. 10 each. Taxation accounts for Rs. 3.07 crores (against Rs. 2.71 crores). After writing back Rs. 2.50 lakhs (against Rs. 85,000) from development rebate reserve, there is a balance of Rs. 1.86 crores (against Rs. 2.01 crores) for appropriation. Allocations include development rebate reserve Rs. 2.50 lakhs (against Rs. 5.50 lakhs), capital reserve Rs. 87,895 (against Rs. 1.85 lakhs) and general reserve Rs. 1.83 crores (against Rs. 1.94 crores).

tions include rehabilitation reserve Rs. 4.32 lakhs (against Rs. 1.97 lakhs), development rebate reserve Rs. 5,000 (against nil) and general reserve Rs. 35,000 (against Rs. 3.57 lakhs). The preference dividend absorbs Rs. Rs. 5,000 (against nil) and general accounts for Rs. 5.81 lakhs. The balance of Rs. 4,328 is being carried forward.

The rubber crop for the year amounted to 1,499,643 kilograms (against 1,472,259 kilograms). All-in-cost of production a kilogram amounted to Rs. 4.28 (against Rs. 4.06). The average price realised for rubber was higher at Rs. 5.76 (against Rs. 5.54) a kilogram. The crop for 1972-73 is estimated at 1.5 million kilograms to be produced at an all-in-cost of Rs. 4.83 a kilogram.

INVESTMENT CORPORATION

Results Improve

THE Investment Corporation of India has reported improved results for the year ended June 1972. The gross income is higher at Rs. 64.15 lakhs, against Rs. 61.22 lakhs in the preceding year and the pre-tax profit has risen by nearly 24 per cent from Rs. 28.50 lakhs to Rs. 35.29 lakhs. After providing Rs. 5.67 lakhs (against Rs. 4.55 lakhs) for taxation, the net profit of Rs. 29.62 lakhs has been transferred to general

reserve. The unchanged equity dividend of 9.5 per cent and the usual preference dividend absorbing Rs. 21.66 lakhs (same) will be paid out of general reserve.

ENGINEERS INDIA

Agreement with British Firm

AN agreement for the designing, manufacture and marketing of a British firm's range of valve trays for fractionating towers has been signed with Hydronyl Ltd of the U.K. by Engineers India Ltd, New Delhi. Three senior engineers of the Indian firm, a wholly-owned Government Company, spent three months at the Hydronyl works in Stoke-on-Trent, where they gained first-hand knowledge of "hy-contact" valve tray design and manufacture. The new agreement will extend the availability of Hydronyl products to the expanding chemical, petrochemical and processing industries in India.

TAMILNAD CARDBOARDS

Loss Incurred Again

THE directors of Tamilnad Cardboards and Paper Mills Ltd in their report for the year ended March 1972 state that there had been practically no activity in the factory during the year except for three months. The Company has incurred a loss of Rs. 4.17 lakhs, compared with the loss of Rs. 3.65 lakhs in the previous year. It is pointed out that the loss for the year is mainly due to standing costs such as interest. The chairman of the board of directors negotiated and finalised the purchase of 10,171 equity shares of the Company by T.T. Investments and Trades Private Ltd, from the individual shareholders of the Company. It is also mentioned that the management of the Company was taken over by the nominees of T.T. Investments from 15th December, 1971. The Company hopes to be able to achieve production of about 3,000 tons during 1972-73.

G. G. DANDEKAR

A Good Year

G. G. DANDEKAR has reported better performance during the year ended June 1972. Production, sales

and profits are higher than in the preceding year and the equity dividend has been raised from 9 per cent to 10 per cent. The new shares are entitled to a *pro rata* dividend on the amount paid up at the end of June 1972. Sales at Rs. 141.57 lakhs are up by about 15 per cent from the previous year's figure of Rs. 123.11 lakhs and the gross profit has risen by nearly 20 per cent from Rs. 15.54 lakhs to Rs. 18.60 lakhs. After providing Rs. 4.69 lakhs (against Rs. 4.66 lakhs) for depreciation, Rs. 37,000 (against Rs. 1.22 lakhs) for development rebate reserve and Rs. 8.40 lakhs (against Rs. 6.20 lakhs) for taxation, the net profit for 1971-72 amounts to Rs. 5.14 lakhs, against Rs. 3.46 lakhs. General reserve gets Rs. 5.15 lakhs (against Rs. 3.45 lakhs). The Company has developed a dall mill in collaboration with N.R.D.C. and a fin-type heat exchanger for the paddy drying unit.

SAURASHTRA CEMENT

Profit Declines

SAURASHTRA Cement and Chemical Industries has declared a final dividend of 8 per cent for the year ended June 1972 which, together with the interim payment of 8 per cent, makes a total of 16 per cent, against 12 per cent paid for 1970-71. The dividend has been stepped up even though the gross profit made by the Company is down from Rs. 143.05 lakhs to Rs. 136.80 lakhs. After allowing Rs. 54.08 lakhs (against Rs. 52.67 lakhs) for depreciation, Rs. 4.78 lakhs (against Rs. 43.26 lakhs) for development rebate reserve and Rs. 31 lakhs (against Rs. 14.75 lakhs) for tax liability (estimated), the net profit amounts to Rs. 46.94 lakhs, against Rs. 32.37 lakhs in 1970-71. After making certain adjustments the disposable surplus amounts to Rs. 53.53 lakhs (against Rs. 39.91 lakhs). Out of this, the total dividend (inclusive of the interim payment) will claim Rs. 36.75 lakhs.

The Company's production of clinker was higher at 425,000 tonnes, against 412,000 tonnes, cement output was 427,000 tonnes, against 416,000 tonnes, and despatches 439,000 tonnes, against 413,000 tonnes. Production and despatches could have been higher but for power cuts, poor receipt of coal and gypsum and inadequate supplies of railway wagons. The Company's application for importing a complete soda ash plant from Rumania has been rejected by the Government, so also its application for the manufacture of industrial explosives.

CAPITAL, 23rd NOVEMBER, 1972

COMMODITIES

Indo-Bangladesh Move for a Common Export Strategy for Jute Goods

INDIA and Bangladesh being the only two exporters of jute goods, the two Governments had been trying to evolve ways and means of eliminating mutual competition and expanding their export shipments, stated Mr. M. R. Siddiqui, the Bangladesh Commerce Minister, in New Delhi last week-end. A four-man Indo-Bangladesh committee had already been working out the details of the common export strategy for jute goods in the international market on the lines of the Indo-Ceylon Tea Agreement, he added. Some jute products from Bangladesh, particularly jute carpets, displayed at the Bangladesh pavilion in the Asia 72 fair, had attracted the attention of overseas buyers. He further indicated that jute mills in his country had already reached the pre-war level of production and jute goods had been moving smoothly out of Chalna and Chittagong ports. Since the clearance of mines from the approaches to the Khuna inland port, a Hongkong firm had been engaged for salvaging the sunken ships from the Bhairab river bed.

Worry over Fibre Smuggling

Concerned over reports of the regular smuggling of large quantities of Indian raw jute across the Bihar border into Nepal for ultimate export to China, the Indian Jute Mills Association has urged the Government to take immediate and effective steps for

policing the Bihar border with Nepal, particularly along the Kishanganj subdivision. The quantum of clandestine outflow, it is said, is far in excess of the consumption needs of the mills in Nepal and the surplus is believed to be re-exported to China along the overland route. Unless the clandestine traffic is held in check, the I.J.M.A. warns that the scale of smuggling will inevitably increase. Traders and dealers in Nepal are reportedly offering an alluring premium of up to Rs. 20 a maund over the Indian prices. The Association further points out that the contraband trade has been accentuating the shortage of raw jute and helping prices to shoot up. Besides, it has been causing a needless loss of foreign exchange which the country could have earned otherwise by processing the smuggled fibre into end-products for the export market.

Recovery of Hessian Markets

Simultaneously with the steps to sharpen the competitive edge of carpet-backing cloth, the Indian Jute Mills Association has emphasised the need for initiating a broad-based and well-concerted, short- and long-term plan of action for safeguarding and, if possible, expanding India's traditional export trade in hessian. The Association has urged the authorities to relieve the fabric of the entire export levy of Rs. 600 a tonne to enable the industry to evolve and operate a hessian

recovery plan. Explaining the case for the abolition of export duty, a Press note, issued by the Association last week, has emphasised that despite the massive contraction in trade in recent years, hessian still retains its pivotal importance on the industry's export front. For, the fabric has a far wider and almost global coverage as a heavy-duty packaging material. Besides, the versatility of jute fabric, its strength, long life, resilience, flexibility and its diversity of weights and weaves, ensuring adequate protection to the produce in storage and transit, its salvage and re-use value have won the perennial attraction of packers the world over. In spite of a substantial shrinkage in its offtake, hessian is still the biggest single item of export for the industry. The note admits that hessian had been somewhat neglected since about the early 'sixties due to the diversion of the industry's attention to carpet-backing which happens to be a new product with a relatively high unit value.

Resulting from the simultaneous operation of a number of adverse factors, continues the note, Indian exports of hessian have nearly halved from 488,000 tonnes in 1964 to 288,700 tonnes in 1970. Notwithstanding the sharp decline in shipments from the erstwhile East Pakistan during 1971, Indian exports of the fabric, instead of recording a rise, as in the case of other items, suffered a further drop to 275,109 tonnes, "owing exclusively to the industry's inability to produce the needed quantum of fabric", for its capacity had virtually been engaged for meeting the pressure of a high and sustained demand for carpet-backing cloth. Leaving aside the abnormal circumstances which distorted the demand-supply position in 1971, the per-

I.J.M.A. STOCK FIGURES FOR OCTOBER

The Indian Jute Mills Association reports the total stocks of jute goods at the end of October as follows:

Description	31st October, 1972		30th September, 1972		Increase over (+) or decrease from (-) last month		31st October, 1971	
	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)
Hessian cloth and bag	8,42,74 (9,22)	24.3 (23.9)	7,81,11 (8,54)	22.2 (21.8)	+61,63 (+68)	+2.1 (+2.1)	10,96,54 (11,99)	33.8 (33.2)
Sacking cloth and bag	11,25,64 (12,31)	48.9 (48.1)	11,51,04 (12,59)	50.7 (49.9)	-25,40 (-28)	-1.8 (-1.8)	13,66,81 (14,95)	61.1 (60.2)
Carpet-backing	2,50,89 (2,74)	26.3 (25.9)	2,71,65 (2,97)	28.6 (28.2)	-20,76 (-23)	-2.3 (-2.3)	1,53,44 (1,68)	16.7 (16.5)
Others		9.0 (8.9)		8.3 (8.2)	+0.7 (+0.7)	+0.7 (+0.7)		7.5 (7.4)
Grand Total (000 Tonnes/Tons)		1,08.5 (1,06.8)		1,09.8 (1,08.1)		-1.3 (-1.3)		1,19.1 (1,17.3)

Note: All figures are at bale-point.

N.B.—These statistics are based on replies received and represent all members of the Association, and New Central and Shree Hanuman. The figures in brackets are in British measures.

sistent downward trend in hessian off-take since 1964-65 has mainly been ascribed to the drastic drop in imports and consumption by the U.S.A., the largest single market for hessian.

Gunnies Close Steady

After opening about steady around the previous week-end dips, the Calcutta gunny market receded to recent lows despite the reluctance of mills to discount prices any further during the past week. The elimination of the weaker bulls and the emergence of a near-poised technical position around mid-week, combined with the announcement of a minor fall in end-October stocks over the previous month's levels, induced brisk covering by shorts and shippers against their immediate open positions and accelerated a reversal of the earlier downward trend. Genuine fresh enquiries and business from major overseas and internal consumers were few and far between until the week-end. But inter-bazaar activities were brisk, indirectly confirming the speculators' grip on the market. Around the close, reports of a 13,000-bale sacking deal with Syria, in addition to hopes of some spill-over business from the Middle East, reinforced the bullishness. Reports of sustained bookings and offtake of cotton

I.J.M.A. PRODUCTION FIGURES FOR OCTOBER

The Indian Jute Mills Association reports the total production of jute goods at the end of October as follows:

(000 metres and 00,000 yds.)			
	Oct. '72	Sept. '72	Oct. '71
Hessian	8,32.51	9,31.76	8,38.32
	(9.10)	(10.19)	(9.17)
Sacking	7,83.98	8,87.78	8,31.11
	(8.57)	(9.71)	(9.09)

bagging for delivery extending to July next were refreshing news for the mills specialising in the line. The forthcoming visit of the Polish trade delegation also aroused hopes of an increase in exports of Indian jute goods to that country. Hence shippers turned keener on completing their near-shipment schedules and started absorbing ready delivery goods at rising premiums. Industry and trade circles welcomed the news of the setting up of a joint committee for devising ways and means of developing a common Indo-Bangladesh jute and jute goods export strategy. They also hailed the resumption, after seven long years of suspension, of the Calcutta-Dhubri and Calcutta-Karimganj steamer services through Bangladesh ports for the movement of both Indian and Bangladesh cargo and thus reducing the bottleneck in goods transport. The production and stocks statements of mills for October confirmed the direct impact of the waning interest from buyers, finally leading to a substantial decline in output by 12,000 tonnes over the preceding month's level to 79,700 tonnes. The large number of festive holidays, causing a decline in working hours by 24 to 184 for the month, also contributed to the shrinkage in production. While sacking output dropped by 5,200 tonnes to 35,300 tonnes, miscellaneous goods by 2,600 tonnes to 6,800 tonnes and hessian by 2,400 tonnes to 26,400 tonnes, carpet-backing cloth dipped by 1,800 tonnes to 11,200 tonnes—a record low in recent years. Overall despatches also showed a decline of 6,900 tonnes to 81,000 tonnes, with hessian receding by 4,100 tonnes to 24,300 tonnes and other goods by 3,000 tonnes to 6,100 tonnes. Sacking despatches were maintained at around 37,100 tonnes and carpet-backing showed a minor increase of 200 tonnes over the end-September level to 13,500 tonnes. End-October stocks revealed only a minor fall of 1,300 tonnes to 108,500 tonnes. While sacking inventories registered a drop of 1,800 tonnes to 48,900 tonnes, and carpet-backing of 2,300 tonnes to 26,300 tonnes, hessian rose by 2,100 tonnes to 24,300 tonnes and other goods by some 700 tonnes to 9,000 tonnes. In the hedge market, sentiment moved in sympathy with that in the spot goods market. Operators appeared to be keener on squaring up their outstanding positions in November-delivery hedge contracts in B Twills which were due for impending settlement. Transactions were mostly of a conversational nature. The drastic rigours on trading hampered the free play of market forces. Turnover was moderate. The closing undertone was steady.

Raw Jute Firm

The raw jute market continued to rule firm during the past week on sustained interest from mills and mill agents in ready delivery fibre of selected grades both in Calcutta and in the upcountry agencies. Upcountry market arrivals hovered around 125,000 maunds a day, while imports to Cossipore and the mill stations were restricted due to the inadequate allocation of railway wagons. The appreciable decline in the floating stocks induced the sellers to turn reserved. Although industry and fibre trade circles were not apprehending any fibre shortage later this season, they feared that the carry-over to the next season would be negligible, and the qualitative imbalance would be serious. They were awaiting the import and allocation of 200,000 bales of fibre already contracted for by the S.T.C. with Bangladesh. The I.J.M.A. renewed its earlier appeal for the total import of a million bales to stave off the fibre crisis in the offing. Due to the scanty availability of floating stocks in Cossipore, mills and mill agents concentrated their purchases in the upcountry centres. Towards mid-week, the I.J.M.A. reported large-scale smuggling of choice Bihar jute from the Indian side of the Kishanganj subdivision to Nepal and finally to China and urged the authorities to clamp rigorous border checks to arrest the clandestine traffic. Turnover was small. The closing undertone was bullish.

COMPANY AND PUBLIC NOTICES

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE

THE Custodian has to-day decided to pass the dividend on the Ordinary Share Capital of the Company for the year ended 31st March 1972 in view of the loss revealed by the Profit & Loss Account for the year in question and also due to the heavy strains on Company's cash resources.

The balance standing to the credit of the Profit & Loss Account after provisions of Rs. 5,63,89,184 for Depreciation, Rs. nil for Taxation, Rs. 91,13,387 for Statutory Reserve and transfer of Rs. 2,26,11,698 from Reserves and Provision of earlier years is Rs. 17,54,700 which will absorb the Preference Dividends. For the previous year the Net Profit was Rs. 17,54,700 after provisions of Rs. 5,60,54,522 for Depreciation, Rs. 46,00,000 for Taxation and Net Transfer of Rs. 3,05,21,244 to Appropriation Reserve (Rs. 1,75,44,262 to Statutory Reserve).

The Register of Members for Ordinary Shares will be closed from 15th December, 1972 to 29th December, 1972 both days inclusive. Applications for registration of transfer should be lodged at the Registered Office of the Company sufficiently in time before the closing date. Applications received by post on or after the 15th December, 1972 will ordinarily be returned without action but where the transfer instruments remain valid after the aforesaid Register re-opens on the 30th December, 1972 these may be retained by the Company at its discretion for processing on or after the 30th December, 1972. The Annual General Meeting for the year has been convened for Friday, 29th December, 1972.

By Order of the Custodian,
T. B. JOHRI
Secretary.

Registered Office:
12, Mission Row,
Calcutta-1.
21st November, 1972.

NOTICE

UNION CARBIDE INDIA LIMITED

IN TERMS OF RULE 4A OF THE MRTP RULES, 1970 IT IS HEREBY NOTIFIED THAT UNION CARBIDE INDIA LIMITED, 5 PARLIAMENT STREET, NEW DELHI-1 HAVE GIVEN NOTICE UNDER SECTION 21 OF THE MRTP ACT TO THE DEPARTMENT OF COMPANY AFFAIRS, NEW DELHI IN REGARD TO ITS PROPOSAL TO EXPAND LOW DENSITY POLYETHYLENE MANUFACTURING FACILITIES TO ANNUAL CAPACITY OF 20,000 MT INVOLVING AN ESTIMATED INVESTMENT IN LAND, BUILDING, PLANT AND MACHINERY FOR RS. 2 CRORES. FOR THE YEAR ENDED 25TH DECEMBER, 1971, THE TOTAL SALES OF THE COMPANY WERE OVER RS. 57 CRORES AND TOTAL ASSETS OVER RS. 33 CRORES.

ANY PERSON INTERESTED IN THE MATTER MAY, IF HE SO DESIRES, INTIMATE TO THE CENTRAL GOVERNMENT IN THE DEPARTMENT OF COMPANY AFFAIRS, WITHIN 14 DAYS OF THE PUBLICATION HEREOF HIS VIEWS WITH REGARD TO THE PROPOSAL CONTAINED IN THIS NOTICE AND ALSO THE NATURE OF HIS INTEREST THEREIN WITH A COPY OF THE SAME TO THE UNDERSIGNED.

V. P. ARYA

CAPITAL, 23rd NOVEMBER,

CAPITAL

(Founded in 1888: Published every Thursday)

CAPITAL is India's most widely-read weekly newspaper dealing with economics, industry and public affairs. It has the mature experience of more than 80 years, and is the oldest journal of its kind in the country. Each week, it brings authoritative and comprehensive coverage of the main problem and events affecting the progress of the economy and the growth of industry. It separates the important from the unimportant; it presents simply, clearly and reliably what all informed observers of the economic scene ought to know.

Readers of CAPITAL are mainly people holding positions of vital importance in Government, business, industry and academic institutions. Many of them are intimately concerned with the framing of the country's economic policies. Many direct and control industrial, banking and commercial institutions. Together they represent a fund of economic opinion and buying power that no advertiser can afford to ignore.

Railways on the Right Track

JUDGED by some of his recent statements, the Central Railway Minister, Mr. T. A. Pai, seems to be moving on the right track in order to improve the railway administration and operations. It is true that the problems facing the railways are not capable of immediate solution, for some of them at least have tended to become chronic and require drastic treatment. For instance, there are quite a good number of lines that are uneconomic but they cannot be scrapped because of objections from State Governments. At the same time, the State Governments have done little in the last decade or so to set up industries in areas served by these lines and promote larger traffic. On the contrary, in several cases they have contributed to the worsening of the earnings of the railways on some of these lines by allowing competition from road transport.

Possibly because he is not a politician in the sense in which his predecessors were, Mr. Pai has been able to bring a refreshingly new approach to the problems facing the railways; how far he succeeds in ultimately translating his ideas into positive measures will again depend on the extent to which Parliament and his own Party members support him. For example, Mr. Pai has rightly pointed out that passenger amenities cannot be improved without a corresponding increase in fares. In a country where every party is out to exploit any situation in the name of the common man, a statement of this kind will certainly be decried. But anyone who has some basic knowledge of economics will readily concede the point made by the Railway Minister. At present, freight transport subsidises passenger traffic to the extent of Rs. 56 crores in a year. The inequity in this was also well brought out by Mr. Pai when he stated that the loss made by a transport system like the

railways is borne by the people who do not generally travel by the railways.

Mr. Pai's statement is certainly an indication that fares in his maiden Budget next year may well be raised substantially, at least to cover a large part of the loss. He has already spoken of the increasing financial burden of the railways, not only because of the higher operational costs but also because of the need to pay wages according to the Mia-bhoy award and the commitment arising out of the interim relief recommended by the Pay Commission. On the freight side, the Railway Minister has shown a real awareness of the crippling problem of wagon shortage. His decision not to condemn wagons this year in the usual way is a sound one, for every year nearly 5,000 wagons are condemned in a routine manner without consideration of the desperate needs of the economy. Instead, he has proposed that wagons which are overdue for repairs should be sent to workshops in time. The capacity for repairs at workshops is also proposed to be raised. Secondly, Mr. Pai has done well in raising the target for orders with private wagon manufacturers, as well as in stepping up the production targets for railway workshops. While orders have been placed for 40,000 wagons, they will be available over a period of three years. It is, therefore, obvious that the shortage will be relieved only over a period of time.

The initiative that Mr. Pai has taken is welcome, for the position would have otherwise become worse even with a marginal improvement in industrial production. If the railways have difficulty in making wagons available even when industrial production is low, it is obvious that the situation will get worse when production in vital industries like steel, fertiliser and coal picks up.

Mr. Pai's assurance to industry at the recent meeting of the Central Advisory Council of Industries that "if you produce goods, I shall provide the wagons for moving them" has certainly been a morale booster. Mr. Pai's performance will, however, be judged by the actual results and not by his assuring words alone.

There is, however, no reason to doubt Mr. Pai's sincerity, for even in the few months that he has been in office, he has taken a few measures that have contributed to the improvement in railway efficiency. Between April and September this year, the railways have moved nearly 2 million tonnes more of freight, compared with the corresponding period of last year. In the month of October alone, the extra freight moved was 1 million tonnes more than in the same month last year. Mr. Pai's contention is that he can do better if there is no misuse of wagons by industry. He has a point here, although his proposal to raise the wharfage and demurrage charges from Rs. 140 to Rs. 250 a wagon a day may be received with mixed feelings. Even genuine cases of hardship may not escape the penal rates. On the other hand, his idea that the Railway Act should be amended so that bailing, which is the responsibility of the railways, is reduced from 30 days to seven days, is on the right lines. According to Mr. Pai, the railways earn annually about Rs. 13 crores by way of wharfage and demurrage, but as he rightly points out, this cannot be considered a source of income. If wagons are released in time, the resultant increase in railway earnings may be even higher. What is required, especially in the present position of wagon shortage, is a better turn-round of wagons. That alone will improve their availability and raise the railway earnings too.

Mr. Pai has also made a sensible point in stressing the need to rationalise coal movement. Similarly, unnecessary movement of cement between the north and the south could be curtailed through a proper system of meeting the needs of different regions from their own output. Such an arrangement would also release wagons for better uses. In a contingency, the railways are even called upon to move fodder and drinking water, as it recently happened at Ahmednagar in Maharashtra. As Mr. Pai says, industry can certainly co-operate with the railways

in ensuring that there are no abuses of the system of wagon booking. For example, in Gujarat alone 80,000 registrations were recently cancelled on one day as soon as the railways started offering wagons to those who had registered for them. That is certainly a very deplorable state of affairs and the railways should even think of levying a stiff registration fee to reduce the number of such cancellations. It is evident that registration in all these cases was done merely to corner wagon capacity, should there be a shortage and sell it at a premium. The increase in

wharfage and demurrage from 1st December and the reduction in the period of bailing responsibility of the railways should lead to an improvement in the availability of wagons for industrial users. If Mr. Pai follows up these measures with a rationalisation of commodity movement and revision of freight tariff on the well-accepted principle of what the traffic can bear, there is no reason why the railways should not be out of the red before long. In any case, Mr. Pai is on the right track and if he is not derailed by his own Party-men, he may well succeed in his task.

Indo-Bangladesh River Transport

THE reopening of the river transport service from Calcutta to Bangladesh is yet another step forward in the history of Indo-Bangladesh relations. Its significance cannot be measured in terms of immediate gains. As far as West Bengal is concerned, however uncertain its share in the proceeds in the near future, the new bond extends beyond the realm of commerce and goes through the magic casements of the mind. The importance of the river in the mental composition of the average East Bengali has been emphasised time and again by writers before and after Partition. Many a township in the region drew sustenance from the adjoining river. Not only were the boatmen's lives traditionally built around the river and their concern for their means of livelihood (the saying that "the fortunes of boat and wench alike depend on the make-up" about summed up their philosophy, as Nirad C. Chaudhuri wrote); ordinary people engaged in other pursuits also often found themselves dependent on the rivers. The situation has not altogether changed in the quiet corners of Bangladesh, the tremendous upheavals in the last 25 years notwithstanding. Even if the rôle of the river has dwindled on the whole, it is still a powerful factor in that country's economy and the renewal of the steamer link with India can be a major aid to its full utilisation. Similar exploitation of rivers can be seen in the West too—the Rhine and the Danube are the lifelines of central European commerce.

From the point of view of India as well, the river transport service to Bangladesh has great possibilities, although for the present, the advantages remain limited. Ever since Partition, trade with the former East Pakistan, especially by the river route, had been steadily shrinking. The lines of

communication which had been established as early as 1844 seemed pretty nearly dead by 1960. During the five-year period between 1956 and 1959, India received only 340,000 tons of goods from East Pakistan by the river. The downward trend continued till the Indo-Pakistani war in 1965 snapped the link with what looked like finality. Fortunately, Bangladesh has remedied the Pakistani folly and a Protocol for the next five years came into effect on 1st November.

The Protocol may not have fulfilled all Indian expectations. Bangladesh has its own reasons to proceed with caution, especially as the unfortunate sidelines of the now suspended border trade had already given a handle to the growing forces of opposition in Dacca which are not overly fond of New Delhi. But the agreement achieved has been put into effect with commendable speed. Two Indian steamers are now chugging up the Bangladesh riverway and everything seems under control. The agreement for the time being stipulates that steamers will ply along two routes—Calcutta to Dhubri via Goalanda and Calcutta to Karimganj via Bhairavbazar. The new service serves a twofold purpose. It connects West Bengal with Bangladesh as well as with Assam. India is interested in operating two other routes. The objection to the proposed Farakka route is that the passage there is silted up. As for transshipment at Ashuganj to provide a link with Tripura, the scheme has to wait for some time since a riverport at Ashuganj is yet to be built. The latter project is very much in India's interest as it is expected to save five days of steaming time and thus be a boon to Tripura.

The steamer service will now be confined to the carrying of cargoes. The

Central Inland Water Transport Corporation is in charge of operations on the Indian side and, consequently, all negotiations and transactions are to be conducted on a strictly State-to-State basis. In conformity with the spirit of political goodwill subsisting between the two countries, all procedural complications are expected to be sorted out quickly. Bangladesh has already given evidence of its accommodating attitude. Both countries will provide conservancy and pilotage, handle supply of bunkers and offer all kinds of facilities to each other's vessels. In one respect, Dacca has already proved itself more reasonable than Islamabad ever was. Indian vessels will be allowed to carry radio-telephones which they could not do under the Pakistanis. Customs checks will be carried out by Bangladesh officials at the entry and exit points. That should be an effective way of ensuring the absence of unfair practices without causing undue harassment.

One function of the river service at present will be to carry on inter-country trade with Bangladesh which, in the interest of fairness, will be on an equal tonnage basis—approximately 600,000 tons of Indian and 500,000 tons of Bangladesh consignments. The two countries have set their sights fairly high. The total value of trade is targeted to reach Rs. 2,000 crores. In the first three months, India expects to receive a supply of Rs. 7.50 crores worth of jute alone. While Bangladesh will deal mainly in jute, India will reciprocate with coal, cement, building materials, iron ore, foodstuff, medicine, salt, machinery and so on. The first shipment of pig iron to Narayanganj is now on the way. The second function is to carry cargoes to Assam. When the C.I.W.T.C. vessels will be performing this job, they will pass through Bangladesh without unloading goods or engaging in any transactions at the transit stations. The C.I.W.T.C. is keen on putting its full strength into operation. It has currently in its fleet 15 powered vessels and 15 barges to which it intends to add 15 tugs and 60 barges of 500 tonnes. Both Assam and West Bengal will be called upon to contribute towards the cost of stepping up the programme.

While goods acquire mobility, a yearning for passenger steamers heading for Bangladesh inevitably arises. Sentimental memories apart, passenger steamers will have an eminently practical value. Parts of Bangladesh are pretty well unapproachable by land, especially during the rains when the

ivers swell and spill over the banks. Steamers are the only effective means of transport for men of business during that period. What is more, the re-

sumption of passenger service by water will open up a new area of tourist activity, particularly if the steamers can bring back the old-style catering.

The Victory of Willy Brandt

PSEPHOLOGISTS have once again been proved wrong. It is never easy to make a correct assessment of the prospects for parties in West Germany's parliamentary elections because of the two-vote system—one to a local candidate and the other to the regional party list—and in the recent frenetic race for Chancellorship when the main issues before the country got somewhat obfuscated due to vicious campaigning against personalities, the pollsters' task became more difficult. In fact nobody said that Herr Willy Brandt would sweep the polls to take the Social Democratic Party to a position where it could form a Government of its own. It was also feared that the premature parliamentary election might again lead to the impasse to break which Chancellor Brandt dissolved Bundestag. He had no other choice as the steady erosion of the coalition's strength led to a parliamentary deadlock.

As for the junior coalition partner—the Free Democratic Party—it was said that it might or might not secure the minimum 5 per cent of the total votes to secure representation in Parliament. The makers of Chancellor Brandt—as the Free Democrats are euphemistically called—have actually rolled up about 8 per cent of the votes to improve their strength in Bundestag. Three factors are said to have helped them in the election. First, the Party leaders impressed upon the candidates what the F.D.P. was for and what was expected of them if they got elected. Such an exercise was extremely necessary after the Party had purged itself on both the right and the left. This impressed the electorate. Secondly, the Free Democrats made a convincing case of their independence from the S.P.D.; at the same time it was emphasised that the difference between the two was not such as to make the coalition unworkable in future. Thirdly, many Germans wanted to vote for the coalition without voting for the Socialists.

Perhaps it is the present mental make-up of the German people rather than straight issues like the management of the economy and the *Ostpoli-*

tik which decided the election outcome. The Christian Democratic Union and its Bavarian partner, the Christian Social Union, are known to be the faithful inheritors of old German values. Their victory would have meant the restoration of the Adenauer era. As against this, the Social Democratic Party under the dynamic leadership of Herr Brandt has come to be accepted as the agent of change. The people expect from the Social Democrats a new, more equitable social order and a foreign policy which, while improving relations with the eastern neighbours, will maintain the leadership of Bonn in the European Economic Community. The election results leave no one in doubt that the Germans—particularly the 4.8 million new voters—do not want a return to the "policy of strength" *vis-à-vis* the communist States and a domestic order which abhors intellectual dissent.

As was only to be expected, the Social and Free Democrats wanted the people's mandate to complete a process which is now half way through. The S.P.D. focussed the electorate's attention on the foreign policy where by any yardstick the Brandt Government had achieved tremendous success. The Federal Republic of Germany has been set on an entirely new course. The initialling of the treaty with the German Democratic Republic was the culmination of a process which began in 1969. And this happened a few days before the poll. Herr Brandt said that he would go to East Germany to sign the treaty. He, however, did not want to make the historic treaty an election issue but the irrepressible Herr Rainer Barzel criticised the Government for not properly informing the people well in advance. The C.D.U. in fact offered to renegotiate the treaties with Poland, Russia and East Germany and secure for the country better terms. But that failed to impress. The controversy between the two Germanys on the issue of sovereignty had always looked futile but it was an issue which could have sparked another world war. The two countries have now recognised each other's territory and also agreed to differ on the subject of a single German State. The treaty has enabled them to participate in the preparatory

sessions of the European Security Conference; in the absence of the treaty the ambassadors of the two Germanys would have refused to sit at the same table. Bonn's relations with its western allies have also continued to improve. In Herr Walter Scheel the Chancellor has found an effective Foreign Minister. While he was in Peking recently he successfully followed up the establishment of diplomatic ties with the laying of a solid "political" foundation for trade.

The Government which has done so well in foreign policy matters has, however, a vulnerable domestic front. The rate of inflation has increased in three years of Herr Brandt's rule from 2.7

per cent to 6.4 per cent. And this is in a country where memories of galloping inflation under the Weimar Republic are yet to die down. Herr Barzel made it a point to harp on "creeping socialism" and "creeping inflation" to scare away voters from the S.P.D. But his Bavarian cohort, Herr Franz-Josef Strauss, overdid it by raising the spectre of the Third Reich which was not there. The electorate, however, could not have missed the fact that West Germany was still having the lowest rate of inflation and unemployment among all west European countries. The Government maintained that it was better to have inflation than a high rate of unemployment. The electorate agreed.

Electronic Goods : Export Prospects

TWO conventions held in New Delhi in the last few days have served to highlight the opportunities India has had to step up exports of electronic and engineering goods. The convention on electronics was organised by the Trade Development Authority (T.D.A.). In the range of products selected by T.D.A. for intensive export development, electronics ranks first. There are good reasons for according such priority because the electronics industry in India has made rapid strides in the last few years in terms of quality, quantity and diversification. As Mr. L. N. Mishra, Central Foreign Trade Minister, pointed out while inaugurating the convention, the value of production of electronic equipment and of components rose from about Rs. 30 crores in 1964-65

to about Rs. 180 crores in 1970-71. As far as exports of electronic goods were concerned, last year they were valued at Rs. 4.5 crores, compared with a negligible amount in 1968-69. However, the volume of export still constitutes an insignificant portion of total production in the country and as a proportion of world trade in electronics, estimated to be about \$3 billion, it is practically nothing.

Since world trade in electronics is growing at a rapid pace, there is considerable scope for securing a reasonable percentage of this turnover for India if immediate steps are taken. Countries like Taiwan and South Korea are already way ahead of India in this respect. It is estimated that if India could get even 1 per cent of the U.S. market for consumer elec-

tronics and components, the country's export could reach a level of \$100 million a year, to start with. It is with this objective in view that the Government has recently cleared the Santa Cruz electronics processing zone, a project sponsored by T.D.A. The latter's estimate is that apart from providing employment to 50,000 people, the project could reach an export target of \$100 million in the next four years.

Several excellent papers were read at the convention, but a few points raised need careful consideration by the Government. The first is the undue emphasis sometimes given on trading under bilateral arrangements. India might get into a few markets in this way, but they may not be sizable. Since the major importers of electronic goods are the developed countries, it is necessary to plan the export strategy on a competitive basis. This will also make the industry conscious of the need to produce quality goods at competitive prices. The compulsion to keep prices competitive will also lead to a more dynamic approach to keep pace with new designs. Another point on which too narrow a view should not be taken is the size of the projects. In electronics, there is scope for both large and small units to co-operate and co-exist. Since research and development is very important in this industry, this can be ensured if the units are at least of an economic size. This is equally important when it comes to marketing goods abroad. One hopes, therefore, that the Government will adopt a practical approach in this respect so as to boost the export of electronic goods.

The second convention was devoted to the engineering industry. The factors standing in the way of a higher rate of growth in this industry are too well known. Some units are unable to produce more because of lack of orders and others are unable to utilise their capacity to the full extent because of shortage of raw materials. There are no easy solutions to some of these problems, but the question of excess capacity can be resolved to some extent through diversification. Diversification can come either through catering to new demands in the domestic market or through sub-contracting arrangements with foreign countries. The President, Mr. V. V. Giri, in his address to the convention, stressed the need for increasing

self-reliance in respect of design engineering. He was not against closing the doors to technological changes taking place all over the world, but wanted the industry to

develop indigenous technology which would help the country not only to keep pace with advances abroad but to contend with the problem of obsolescence at home.

Doing Without Bank Rate

ONE of Britain's peculiar rituals, which originated some 270 years ago, was performed for the last time on 5th October, 1972, when the traditionally-attired Government Broker, Sir Peter Daniell, announced Bank rate to the London Stock Exchange. On the morning of that day, as on any other Thursday morning, the Court of the Bank of England had gone through the motions of "deciding" Bank rate and had imparted its "decision" to Sir Peter, who had walked the short distance to the Stock Exchange and synchronised his announcement there with the posting of the rate at the Bank. The City was unaware that before the following Thursday Bank rate would be abolished. Sir Peter was reported as saying that the loss of a traditional ceremony was "sad"; and for the directors of the Bank that loss was as symbolic as Bank rate itself had been—although less recently than in former years. But the new generation of Britain's commercial bankers prides itself on modern attitudes as well as on modern practices, and it could not regret the implicit acknowledgment that the clearing banks' base rates had superseded Bank rate as the standard of short-term interest rates in London. From the Treasury's point of view, it was necessary to abolish Bank rate, and to substitute a Minimum Lending Rate (announced, unceremonially, each Friday afternoon) that would move automatically with changes in the market, because Bank rate had become not only unserviceable but obstructive. Yet some moral courage was needed—in a City so conscious of tradition—to abandon a centuries-old practice that the world persisted in regarding as significant. Mr. Anthony Barber, who, as Chancellor of the Exchequer, was formally responsible for the change, deserves credit for it.

Bank rate had performed two functions: as the rate at which the Bank of England would act as "lender of last resort" to the money market, and as an indicator of monetary policy. Before the restruc-

turing of Britain's credit system last year, its main practical function had been to determine the commercial banks' rates for advances and deposits, which were related to it by a conventional (not an official) formula. When the banks related advance and deposit rates to base rates that they themselves deemed appropriate (base rates that are usually in practice but not necessarily in principle all the same) Bank rate could be—and was—left in a futile position where the official "penal" rate for lending was below the top short-term rates in the market. But the simple adjustment of Bank rate to a level where the control mechanism of a "penal" rate could be used was impracticable, because Bank rate was still regarded as an indicator of monetary policy, and even an unintentional indication of "tighter money" would have obstructed the official policy of economic growth. October 1972 was not, of course, the first month in history when it would have been opportune to abolish Bank rate, but in a time-scale of centuries the authorities acted relatively promptly. In that month (indeed, earlier) a rise in Bank rate from 6 per cent to 7 per cent or more would have been technically appropriate but psychologically inopportune. By substituting Minimum Lending Rate (which is related by a formula to the average discount on Treasury Bills at the weekly tender) the authorities achieved the technical effect of a rise in Bank rate to 7½ per cent within the month, and the psychological effect of the rise was nil.

Attributing credit for this important modernisation of technique is not simply a matter of interest. Chancellors of the Exchequer are politicians, not monetary technicians; so the credit attributable to Mr. Barber is not for initiating changes in the credit system but for responding to technicians' advice. But which technicians—the Bank's?—or the Treasury's—have been most progressive? The Bank, which is responsible for operating the monetary

regulators, is obviously concerned with techniques; its mentality, as well as its status, has been transformed since the notorious occasion in the 'twenties when Governor Montagu Norman changed Bank rate without even notifying the Chancellor of the Exchequer, Mr. Winston Churchill, of his intention. But the Bank is still regarded as traditionalist, inclined more often to resist than to initiate change. Most credit for the whole new system of monetary regulation has been awarded to the Treasury—even if the so-called Treasury Knights (whose supposed concept of a "proper" Chancellor of the Exchequer is one with no ideas of his own, and amenable accordingly) are not everyone's idea of progressives.

The authorities (principally, in this case, the Bank) were not simply clinging to a vestige of tradition when they included in the Minimum Lending Rate scheme a provision for departing from the formula. The domestic psychological effect of a (necessarily upward) change in Bank rate would have been inopportune in recent conditions, but it may be opportune in some future conditions. If the authorities intend a dramatic shock, or (less likely) a dramatic stimulus, a ritualistic announcement of Minimum Lending Rate fixed without reference to Treasury Bill rates could be even more effective than a ritualistic announcement of changed Bank rate. A (temporarily) "independent" Minimum Lending Rate would be avowedly "political", and only the Chancellor of the Exchequer could be responsible for it. In fact, as the Radcliff Committee on the working of the monetary system observed in its famous report in 1959, the decision of Bank rate itself lay "with the Chancellor of the Exchequer, not with the Bank", and the committee recommended that "this should be made explicit by the announcement being made in the name of the Chancellor and on his authority". The committee found it "difficult to believe" that the prevailing "veneration for Bank rate" could "persist" if scepticism of the power of interest rates developed. In the following 13 years that veneration was perceptibly diminishing; but it was still necessary to abolish the venerated object itself. The British authorities may not have agreed among themselves how their instruments of control should be used, but they have symbolically demonstrated that they are dealing not with symbols but with realities.

CURRENT COMMENT

CENTRAL LOANS

Year's Third Issue

For the third time this year, the Central Government is floating a loan of Rs. 100 crores on 1st December, with a provision to retain oversubscription up to 10 per cent. With banks flush with funds, New Delhi is keen to utilise the full potential of the borrowing programme which has a strong anti-inflationary content. In the new fiscal policy, of which so much is being heard nowadays, public debt is posed to play a leading rôle. The comfortable resources position of the banking industry and of other public financial institutions ensures success of the new loan scheme. The amount is to be raised through two issues: 5 per cent Loan 1984 to be issued at Rs. 99.50 per cent and 5.25 per cent Loan 1988 to be issued at Rs. 99.50 per cent. They are in effect reissues of two of the previous loans.

The 1972-73 Central Budget had made a provision of Rs. 215 crores of net borrowing during the year. The two earlier flotations have already collected a net amount of Rs. 323 crores. The gross amount raised from the market already exceeds Rs. 620 crores. The public borrowing programme can be a useful method for transferring resources from private hands to the Exchequer. Faced with increasing budgetary deficits, New Delhi is plainly keen to deploy this measure to narrow down the resources gap. And as on the previous two occasions, it can safely look forward to being equally lucky third time also.

ENGINEERING

Findings of a Survey

The results of the ninth survey of trends in the engineering industry, covering the industry's experience during April-August 1972 and the prospects for September 1972-March 1973 have now been compiled. They summarise the views expressed by 138 companies of varying sizes representing different sectors of the engineering industry. Contrary to the optimism expressed at the time of the previous survey in April 1972, the engineering industry appears to be less optimistic regarding the general business situation in the country. Against 67 per cent of the respondents who had expressed opti-

mism in the last survey, there are 38 per cent in the present survey. Presumably, continued uncertainties in official policies and the constraints of raw materials, power and transport which have assumed serious proportions in recent months, have made the industry more cautious in its expectations of the future. But industrialists do not apparently consider their difficulties insurmountable, and feel that business will eventually look up. Their investment intentions have not, accordingly, shown any appreciable fall. In the earlier survey 59 per cent had indicated that they would authorise more capital expenditure during the year following the survey; at present 55 per cent have expressed such intentions. This is also substantiated by the fact that in the last 12 months 30 per cent of the respondents obtained industrial licences for expansion of their plant capacity or for setting up of new plants, and another 24 per cent for taking up new lines of manufacture. Many others have applications for licences pending with the Government—38 per cent for expansion or for setting up new plants and 30 per cent for manufacture of new articles.

CO-OPERATIVE CREDIT

Big Rise

The total advances made by central co-operative banks went up by Rs. 576.29 crores over the ten-year period ended June 1971, from Rs. 290.10 crores in June 1961 to Rs. 866.39 crores in June 1971. The advances made by State co-operative banks have in turn risen by Rs. 552.52 crores from Rs. 195.07 crores to Rs. 747.59 crores. These figures have been given in a handbook, *Selected Statistics Relating to Co-operative Credit in India*, published by the Reserve Bank of India. Over the same period, the number of offices of central co-operative banks increased from 1,445 to 3,775. There was also a marked increase in the working capital of both the central and the State co-operative banks—from Rs. 318.32 crores and Rs. 227.06 crores to Rs. 1,081.41 crores and Rs. 685.21 crores, respectively. The increase in working capital was substantially due to the increase in the deposits which rose from Rs. 112.02 crores to Rs. 438.55 crores in the case of central banks and from Rs. 72.33 crores to Rs. 278.70 crores in the case of State banks.

COMPANIES ACT

Misgivings over Changes

Addressing the annual general meeting of the Travancore Chamber of Commerce, Alleppey, a few days ago, the outgoing chairman, Mr. K. Joseph George, said that corporate managements had been perturbed by the provisions in the Companies (Amendment) Bill, 1972, which, if enacted, would arm the Government with vast and sweeping powers to control the corporate sector, severely curbing management initiative and stifling the growth of companies, especially small and medium ones. While it may be advisable that companies should subserve social obligations and public purposes, and while there can be no two opinions that unwholesome practices are to be curbed, it would seem that the amendments proposed covering a wide spectrum of the activities of companies in the private sector are too wide and are unlikely to encourage development and entrepreneurial talents.

The Companies Act amendment must have for its object the control of questionable practices in companies and should not alter the very basis of private companies and their working. The amendments seem to negate in many instances the concept of a democratic and co-operative process, which has been built into the working of the private sector so far. The proposals which give extensive scope for Governmental interference in day-to-day administration on such varied matters as appointments, declaration of dividends, appointment of auditors, transfers from reserve, control of transfer of shares and appointment of any number of directors, are likely to inhibit the further growth of responsible companies.

NAGALAND

Paper-making Plants

A £2 million contract to build two complete paper-making plants in India has been awarded to a British firm—Walmsleys Ltd of Bury, Lancashire, the world's largest manufacturers of paper-making equipment. The plants are to be built for the Hindustan Paper Corporation jointly with the Nagaland Government. The consultants are the National Industrial Development Corporation (N.I.D.C.). A spokesman of the British firm said they regard

ed the contract as extremely important because it was one of the first steps in the Indian Government's plan to increase the country's paper-making capability. One of the two plants will produce specially finished printing and writing paper at the rate of 60 tons a day, and the other will make kraft paper at the daily rate of 40 tons. The order includes the supply of stock preparation and finishing equipment. The contract was gained by the Company's export organisation, Beloit-Walmsley International C.A., in collaboration with Jessop and Co. Ltd of Calcutta.

CONSULTANCY SERVICES

The I.C.I.C.I. Seminar

The recent two-day seminar on consultancy services organised by the Industrial Credit and Investment Corporation of India Ltd came to the conclusion that for proper and efficient development of the consultancy profession, it was necessary to promote either a statutory or a voluntary organisation of consultants. Earlier, Mr. M. S. Pathak, member, Planning Commission, had assured the seminar that in the next few weeks the Government would constitute an expert panel to examine this issue. The seminar was inaugurated by Mr. Y. B. Chavan, Central Finance Minister.

Much of the discussion centred around the reports of the five panels on different aspects of consultancy profession. The panels on "Functional Specialisation" came to the conclusion that a certain specialisation in the profession was necessary, although in the present stage of industrial development such specialisation could not be too narrow. The panel on "Capabilities and Professional Standards" emphasised the need for promoting high standards as well as for development of a code of ethics both on the part of the profession itself and users of this service. The panels on "Promotion of Small Scale Industries and Backward Regions" emphasised the important rôle that consultants could play in this area. It was also mentioned that tax incentives as well as liberal assistance and intermediation of finance institutions could make the association between consultants and the small-scale sector more fruitful, particularly in the backward regions.

CALCUTTA

An Interesting Seminar

At a recent seminar held in Calcutta, varying views on the city's future were expressed. The theme—Calcutta 2001 A.D.—revealed a number of unavoidable problems which the city would have to face at that time. Mr. B. B. Chatterjee of the All India Institute of Hygiene and Public Health said that the greatest problem of Calcutta 2001 A.D. would be the population explosion. The essential needs of the population, such as water supply, sewage and garbage disposal, will be impossible to meet, he said. Mrs. Sunanda Mazumdar, a Calcutta housewife, referred to the lack of extra-curricular activity in the city and urged future planners to keep this in mind so that the next generation could have an all-round development of the mind and body. Mr. K. C. Sivaramakrishnan, a key official of the C.M.D.A., speaking as an individual, said that it was easy to be cynical and predict doom. No city, he said, had changed drastically unless, like London or Dusseldorf or San Francisco, it was hit by natural calamities such as fires and earthquakes. "A city that does not dream is a city that is dead", he said. Calcutta "will live because its people want it to live; it will live because it has a tremendous amount of creativity in its people", Mr. Sivaramakrishnan concluded.

EXPORT

New Course

Inaugurating the Export Business Course, organised by the Indian International Trade Centre, a few days ago, Mr. P. A. Bhat, managing director, Asian Electronic Ltd, stressed the need for creating the necessary exportable surplus for boosting exports from India. He said that Indian industrialists can utilise the talents and services of 70,000 unemployed engineers for manufacturing various products. In this connection, he pointed out that the electronics industry can alone export goods worth Rs. 150 crores a year. Mr. Bhat was of the opinion that Indian exporters should not depend too much on export incentives alone. It will be necessary for them to produce goods at competitive prices. He urged the participants to take a new look at the export promotion efforts. Mr. G. B. Bhat, export manager, T.E.L.C.O., noted that there is tremendous de-

mand for Indian products in south-east Asia. However, he wanted the Indian exporters to take a leaf from the experience of the Japanese exporters who have captured some of these markets. Mr. Dinesh Mashruwala, assistant export manager, Hindustan Lever Ltd, was of the opinion that it would be necessary for Indian exporters to approach export marketing on a scientific basis. As a matter of fact, they should adopt a military strategy to capture world markets. Nothing will be achieved by undercutting other Indian exporters in the foreign markets. He felt that the export houses could do a lot in this connection.

FOOTWEAR

Supply of Leather

The leather footwear industry and manufacturers of leather products in India are facing a severe crisis at the present moment and are threatened with a serious setback in production and consequent unemployment problems. This is due to non-availability of hides and their very high prices on account of abnormal demand caused by a sudden increase in the export of semi-processed hides. During the last few months, there has been a spiralling increase in prices—as much as 250 per cent—in the cost of raw hides. At the current levels of raw hide prices, production costs of leather shoes would increase by approximately 20 per cent. Such increase will adversely affect the export of shoes from India. The Calcutta Hide and Skin Arathdars' Association in a recent statement has, however, denied that hides are not available and that their prices have gone up by 25 per cent. It feels that there could not be any adverse effect on the export of shoes and other leather exportable items.

SHALIMAR YARD

Expansion Plans

Addressing the members of the Merchants' Chamber of Commerce in Calcutta a few days ago, Mr. G. S. Saldanah, general manager, South Eastern Railways, said that expansion of the Shalimar Yard was going to be taken up next year to make available about 30,000 square feet of additional area to users. He was of the opinion that quick releases of the wagons by prompt lifting of consignments would enable the consignees to get rid of much of the trouble for inadequacy of space in the yard that

was often complained against. Referring to the present rates of demurrage and wharfage, he said that unless these rates were made really prohibitive, effective relief could not be made available to genuine consignees. He hinted that unless unloading position improved the rates might have to be raised further.

TELECOMMUNICATIONS

I.D.A. Credit to Bangladesh

A credit of \$7.3 million from the International Development Association (I.D.A.), an affiliate of the World Bank, will help finance a \$12.1-million project for the development of telecommunications in Bangladesh. The project includes the installation of microwave systems between Dacca, Mymensing and Bogra, and between Dacca and Sylhet, the construction of co-axial cable systems between Kushtia, Natore and Rajshahi and between Bogra and Rangpur and the provision of multiplex equipment. The credit replaces part of the telecommunications credit extended to Pakistan in March 1969. With 0.07 telephones for every hundred of the population, telecommunications facilities in Bangladesh are inadequate to the needs of the economy. The long-distance and international services are overloaded and the quality of transmission is poor. Many of the existing facilities were further disrupted during the March-December 1971 hostilities. The project being assisted by I.D.A. is an important part of the Government's programme to restore and develop the telecommunications facilities. It will provide added traffic capacity and help to improve the quality of service. The project is expected to be completed in June 1975.

lities in Bangladesh are inadequate to the needs of the economy. The long-distance and international services are overloaded and the quality of transmission is poor. Many of the existing facilities were further disrupted during the March-December 1971 hostilities. The project being assisted by I.D.A. is an important part of the Government's programme to restore and develop the telecommunications facilities. It will provide added traffic capacity and help to improve the quality of service. The project is expected to be completed in June 1975.

POLLUTION

All-India Conference

A three-day all-India conference on the abatement of environmental pollution will be held in Calcutta from 14th December. The conference is to identify and assess the critical problems of preserving and improving the human environment of the country. Accordingly, the central theme of the conference will be "Our Environment—the Extent of Pollution." The preservation of the natural environment along with economic development is the greatest

challenge before the country today. The developed countries are paying a big price for the rapid industrialisation which did not take much care of preserving the environment. But the developing countries can avoid the mistakes committed by the industrialised nations. It is encouraging to note that in this country there is already sizable activity in the general area of environmental pollution. The conference which will be an interdisciplinary one will have five technical sessions. The focus will be on the eastern region. Bangladesh, Bhutan, Nepal and Sikkim have been specially invited to participate in the conference.

MONEY MARKET

Steady Trend

The short-term money market has been steady this past week. The call rate closed at $3\frac{1}{2}$ per cent with small lenders over. The demand for remittances has been small. Turnover has been rather restricted. The supply of gunny and tea bills has been normal. The pound-sterling has remained steady against most major foreign currencies.

The latest statement of scheduled commercial banks for the week ended 10th November, 1972, shows a rise of Rs. 45.42 crores to Rs. 5,337.05 crores in advances, compared with the previous week. Deposits have increased by Rs. 21.20 crores to Rs. 8,547.70 crores. Banks have reduced their borrowings from the Reserve Bank by Rs. 4.12 crores to Rs. 5.91 crores and their investments by Rs. 21.95 crores to Rs. 2,214.35 crores.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations for the 1972 Funds:

Rs. 5

M. M. Bhagat.

Re. 1

A. K. Dhar

The Fund totals Rs. 791.41, including a carry-forward of Rs. 785.41.

Also a package of toys presented by Devika Bose and Sanjoy Bose.

CAPITAL, 30th NOVEMBER, 1972

A Ditcher's Diary

ONE AHMEDABAD, EVEN AFTER ONE Mysore, does not make a political winter: this must be the confident conclusion reached by Congress leaders in Delhi and Bhubaneswar. Whatever charges may now be made against the Congress election strategy, the Party has been given a shot in the arm; and it can afford to ignore the many complaints made. And it is salutary to remember that the public at large does not have a great deal of time for a loser's grievances. The campaign was not entirely peaceful; but allegations of intimidation or violence were made by both sides, and it may not be easy to decide which side was more at fault. Not everything said in the Congress campaign was perhaps politically fair; many questioned the propriety of the main theme that only a Congress Government in Orissa could secure for the State adequate help from the Congress Government at the Centre. This was not merely implied; at an election meeting in Cuttack last Thursday Mr. Chavan specifically said that a Congress victory would improve Centre-State relations, that Mrs. Satpathy enjoyed the Prime Minister's confidence and would therefore be able to redeem her promises, that the Centre would back Mrs. Satpathy's Government "in full strength" in speeding up development activities in the State. Perhaps all that was left unsaid was that Delhi would not be so generous to a non-Congress Government in the State. The average voter was unlikely to be concerned over any im-

propriety in this kind of election rhetoric; if Mrs. Satpathy could get things done, why not vote for her? In his time Mr. Biju Patnaik had got a lot of things done, and everyone knew Mr. Biren Mitra as "Dada"; but hadn't things changed all over the country? If Cuttack has proved anything, it is that the idea of change and of its potential for good has not yet lost all its magic. Whatever had been lost in Orissa during the past few months was possibly reintroduced by Mrs. Gandhi's reassuring portraits; and the ordinary voter could not care less whether she was making an appeal as Congress leader or as Prime Minister. Indeed, on the eve of the by-election the people of Cuttack had not only been promised change but also seen a little of it. Work had begun on extending power supply to slums and suburbs which had never known electric lighting; the Municipality had suddenly got busy with some repairs; tenders had been called for a Rs. 40-lakh scheme for road improvement; even food prices had fallen. I am sure the good work will continue even after the election. Mrs. Satpathy has won a battle; but she cannot, to change the metaphor, rest on her oars for long.

JUST OVER A MONTH AGO, IN THE overcrowded and overheated Press room of the White House, Dr. Henry Kissinger solemnly announced: "Peace (in Vietnam) is at hand", and

even the most cynical correspondents were electrified. Within minutes the news was all over the world. Of course, it was not altogether unexpected. Hanoi had already published a summary of the draft agreement worked out in Paris; and private hints had apparently prompted the French to start preparing for the signing ceremony. Even when it became clear that no formal step would be taken before the U.S. Presidential election, French workmen went on putting the finishing touches to an extra-special table for the final peace meeting; and the North Vietnamese delegation in Paris was reportedly ready with bottles of champagne for a pre-signing or post-signing celebration with Dr. Kissinger. American statements suggested that the preparations were perhaps a shade premature; but few people doubted that the end had already begun. I found it difficult to retain my habitual scepticism about emphatic peace predictions; but it was not long before my doubts were revived, and when Dr. Kissinger flew to Paris I was far from sure that he was going for the last round of negotiations. Now scepticism is much more widely shared; when the talks were adjourned last Saturday, nobody said that the round beginning next Tuesday would be the final one. The White House comment should discourage predictions of this sort; Mr. Ronald Ziegler has said that President Nixon is prepared to take the time necessary to get a lasting settlement. So the charade may go on for quite a while yet; and once again it is less than certain that the answer will be peace. There has been much speculation on what exactly is hold-

CO-OPERATIVE SOCIETIES AND CREDIT BANKS

BETWEEN Russia the huge and Mysore the small no general comparison could be profitably instituted. Nevertheless, there are in respect to certain institutions in the Russian Empire and the Mysore State points at which comparisons appear to suggest themselves. Some of these might even be described as points of resemblance, notwithstanding the widely different conditions of country, climate, race, and life. For example, Russia has her peasants' credit associations, which are not unlike Mysore's agricultural banks and which, curiously enough, are of even more recent origin than the latter, the law authorising and regulating them having been passed in 1905. There were agricultural co-operative societies before then, but these never appeared to command the confidence of the people. They were organised on the principle of limited liability.

FROM

CAPITAL

5th December, 1912

The several members were only responsible as far as their respective small contributions and, in case of failure, there was nothing to cover the deficit beyond the very primitive office furniture. The peasants' credit associations, however, receive considerable support and attention from the Government, which aims at utilising them as a means of helping the peasant communities as farmers by providing a responsible, better organised and properly controlled credit institution, that may supply its members with seed and farm implements and assist in the sale of the produce of their farm or of their home industry. Thus, these credit associations might be almost as well described as "Co-operative Societies", and they are more easily comparable with the co-operative societies in Mysore than with the agricultural banks established in that State.

To the world's largest marine surface coatings organisation, the world seems, somehow, to get smaller. But it's not mere size that makes our world shrink. It's our international outlook.

ing up a revised agreement, but clearly the basic problem is the degree of revision now demanded. I am not sure that this degree is determined by Mr. Thieu's obduracy; American officials themselves have pointed out that he will have no option but to fall in line if Mr. Nixon really makes up his mind. If Washington cannot accept the October draft agreement without substantial modifications, it is curious that Dr. Kissinger agreed to the draft even tentatively. The President is not known to have chided his aide for being hasty; on the contrary, he must have been kept informed of everything that his man in Paris was saying or doing—outside, of course, the hours of rest and recreation. And Dr. Kissinger continues to enjoy full Presidential confidence. Mr. Nixon is said to be particularly pleased with his emissary's ability to keep the negotiations on the main track: presumably a track that is designed to go on and on.

FROM ALL ACCOUNTS THERE IS STILL remarkably little public enthusiasm in Britain at the prospects of her joining the enlarged European Community on 1st January next. Or revulsion either, for that matter. At the moment there is altogether too much preoccupation with the problems of inflation to leave much interest for anything else. But one doubt about European membership which the British do not seem to have, or indeed have ever had, is that the English language will speedily, if not promptly, become the leading one in the Community. It just does not seem to have entered British heads that this might not be so. Needless to say, they hold a different view in Paris. There it is pointed out that whereas French is the second language throughout western Europe including Britain, English is second mainly in West Germany and Holland. Furthermore, France is firm that her tongue must retain the precedence which it currently enjoys in all Community deliberations, and against that kind of entrenched determination the British are likely to find it difficult to make headway. However, on the side of English, is the fact that it is already the main commercial language in Europe, and certainly in Europe's dealings with the United States. In France, of course, this latter fact is regarded as a drawback rather than a recommendation. So it all adds up to a sizable linguistic struggle ahead for the enlarged Community, and one that

might have to be settled someday by making a deliberate official choice between French and English. If such had to be made now, or so the theory goes, France would positively insist, on the threat of withdrawal, that her language must be the one to prevail. She may well be in a position to do that just now. But the longer the time that elapses without a deliberate decision being made, the more likely is the choice to be English. This follows from the fact that the Community is, after all, primarily an economic grouping, and that the growth of English as the trading language must proceed in proportion to the Market's prosperity. It is going to be an interesting tussle.

IT MUST BE COUNTED HIGHLY UNlikely that Britain's economic sanctions against Rhodesia will survive much longer. The Parliamentary majority in favour of continuing them for another year was impressive enough on paper. But it required all the prestige and sweet talking of Sir Alec Douglas-Home, plus a number of "humanitarian" concessions, to persuade the Conservative Party to go on supporting the official line, and the message was clear enough that this might be the last time. The fact is, I gather, that both sides in British politics, the right and the left, are losing interest in Rhodesia. The left is tending to preoccupy itself with other things, such as entry to Europe and its relations with that Frankenstein monster, the trade unions. The Rhodesian problem is these days resented by the left rather than regarded as still demanding urgent solution. On the right, of course, there has never been much

enthusiasm for sanctions, especially in collaboration with the much-despised United Nations. The prevailing view there has usually been that if force is ruled out, then all responsibility should be renounced. I must confess it is an opinion with which I can sympathise. Surely nothing could be more pathetic for a once-great nation than to be forced to enlist world support—which is chronically hostile to it as an ex-imperialist—for an ineffective policy hopelessly aimed at disciplining a handful of rebels whose only recommendation is their defiant spirit.

THE FILM SOCIETY MOVEMENT IN India has survived two distinct hazards: one arising from distrust in commercial circles and the other arising from some adolescent highbrowism within the movement. The interests commercially or even professionally involved in the film industry took little interest in a movement that could expose them to new ideas and influences; and many within the movement tended to ignore the realities of the Indian situation in their uncritical appreciation of every foreign vogue. The gap between the unabashedly philistine and what is often pseudo-intellectual has never been closed. But while this is generally true, there has been a most rewarding interaction in a few areas. The Calcutta Film Society, which is celebrating its 25th anniversary this year, has reason to recall with some pride that among those associated with its founding was Satyajit Ray; others included Chidananda Das Gupta, Harisadhan Das Gupta, Bansi Chandragupta and Radhamohan Bhattacharya. In recent years, the

association may not have been equally close; but, very appropriately, the silver jubilee number of the Society's journal *Chitrapat* begins with a long interview with Mr. Ray. Others interviewed include Mrinal Sen, Ritwik Ghatak and Rajen Tarafdar. Mr. Ray was questioned mostly about his own work, particularly *Ashani Sankeet*, but he had many incisive things to say about general trends and problems. Mr. Sen has recalled his experience of this year's Venice Film Festival, where his *Calcutta 71* was shown. Both Mr. Ghatak and Mr. Tarafdar have lately been shooting in Bangladesh, and are touchingly sentimental in their reminiscences. Asked why he was making his latest film in colour, Mr. Ray had no hesitation in acknowledging that a commercial consideration was also involved. Apparently, a film in colour fetches a much better price in the foreign market than one in black and white. This, of course, is not the only consideration; Mr. Ray seems to have found an exciting new field in the creative possibilities of colour, as also in the discipline that it demands. And while he does not have any interest in making a film in Hindi, he might do one in English in the future. But the situation would be truly Indian; the characters would be speaking English only because they must, since they are from different parts of the country thrown together at a particular place. There might be a love *motif* too, and it would be enormously interesting to see how the relationship develops when the mother tongue has to be abandoned for a language to which neither person was born.

Accountability in Management: Some Basic Guidelines

By A. G. Kulkarni

Accountability in management is a matter of paramount importance. As a broad principle, it is not advisable to make one person accountable to too many masters.

EVERY individual in an organisation occupies a particular position, which helps him to know as to where he stands in the hierarchy, what is his status and what are his responsibilities. Similarly, an individual should know in advance to whom he will report with respect to carrying out his duties, or, in other words, to whom he will be accountable. Accountability in management is of paramount importance, because if it is applied in its true sense and spirit, it will fetch benefits and reduce costs; and if it is used otherwise, it will result in confusion and delay.

A person working in an organisation must report to one superior only and he should not be accountable to too many masters. This will facilitate the particular person to accept instructions from his direct superior, and he will be able to accord the necessary priority for the jobs. For example, if Mr. B is accountable to Mr. A, then he will accept instructions from Mr. A. However, if any other person, say Mr. C, would like to give instructions to Mr. B, then it is advisable that he should do so through, and with the concurrence of, Mr. A, so that Mr. A is fully kept informed of the matter. A superior, to whom a subordinate will be held responsible, must be an extremely capable and confident man and senior as well, so that he can effectively issue the appropriate instructions and keep control on them. While deciding about the question of accountability, the status of both the persons, the superior and the subordinate, in an organisation should be taken into consideration.

Reporting to Many People

If in business a person is actually reporting to two or more people at a time, then it will have its own repercussions, which can be seen in the

immediate future and in the long run too. Let Mr. X be the superior and Mr. Y the subordinate. When Mr. Y is accountable to Mr. X, in addition to, say, Mr. Z, he will keep on receiving instructions from Mr. X and Mr. Z. Such a situation will lead to the following ill effects:

(1) Mr. Y will not be able to apportion his time properly for carrying out the work of Mr. X and Mr. Z. Similarly, Mr. X and Mr. Z may not be knowing the workload of Mr. Y at a particular time. The remedy for such a situation is to have better co-ordination between Mr. X and Mr. Z, a possibility which is normally considered as a remote one.

(2) Since Mr. Y is accountable to Mr. X and Mr. Z, his work assessment will also be made by both of them. On the one hand, Mr. Y might carry on certain jobs promptly and with grace, of which, perhaps, either Mr. X or Mr. Z may not be aware; and on the other, Mr. X and Mr. Z may not be mutually aware of the capabilities of Mr. Y. This may lead to a wrong assessment of Mr. Y.

(3) Considering the position from the superiors' side, Mr. Y can twist Mr. X and Mr. Z, saying that he has got work from Mr. X and/or Mr. Z, thus not doing the job of either of them.

(4) Sometimes Mr. Y may receive contradictory instructions from Mr. X and Mr. Z on a subject and sometimes he may not get any instructions at all. This will lead to confusion and if it unfortunately becomes a recurring feature, there will be unhealthy atmosphere in the office.

(5) Since Mr. Y's services are being utilised by Mr. X and Mr. Z, it is possible that there may not be smooth flow of communication between Messrs X, Y and Z. Also, lack of co-ordination on the part of Mr. X and Mr. Z, with respect to the share of Mr. Y's services to them, will become a recurring feature.

(6) In such a situation, Mr. Y has to work on a time schedule basis. Timely adjustment of work will not be possible on the part of Messrs X, Y and Z. There will be watertight compartments of work for the above three individuals.

(7) Mr. Y will be at a loss not knowing whom to report when he would want to inform the management about certain things. This will be so in view of the fact that such a communication has to be processed through both Mr. X and Mr. Z, a time consuming procedure.

Too Many Masters

Taking into consideration the above background, it is not advisable to keep one person accountable to too many masters. It will just not be in the overall interest of the organisation. If the principle of accountability is handled with care and sense, it will help to reap the benefits and success will follow. On the other hand, the organisation will suffer if this principle is not understood and implemented properly, in which case there will be loss of time, energy and money. It is quite possible that at one and the same time a particular individual may be reporting to more than one executive. This is because he may be asked to carry on an additional assignment on an acting basis, apart from his usual day-to-day functions. In such a case, he may report to more than one person.

PEOPLE AND PERSONALITIES

Mr. S. Ranganathan, till recently Comptroller and Auditor-General of India, has joined the board of directors of Sandoz (India) Ltd as vice-chairman.

Mr. Ernie Carroll, manager, India and Sri Lanka, BOAC, is to be appointed to the new position of cabin service product manager. He will take up his new appointment early next January. Mr. Tim Kelly till now manager, central and south India, will succeed Mr. Carroll as manager, India and Sri Lanka.

Mr. R. R. Kamani has taken over as chairman of the Kamani Group of Industries. The boards of directors of Kamani Engineering Corporation Ltd, Kamani Metals and Alloys Ltd and Jaipur Metals and Electricals Ltd have recently unanimously elected him chairman of their respective Companies.

Working to a common purpose... By increasing exports

For nearly four decades we have carried on an intensive drive to develop export markets.

Our interconnected concern, Indian Leaf Tobacco Development Company Limited, started tobacco exports in 1933, and our efforts in this direction have helped make unmanufactured leaf tobacco a traditional export item today. Our earnings have averaged over Rs. 10 crores annually.

Exports of cigarettes—a non-traditional item—started in 1947, and today several of our brands have gained a foothold in international markets—proof of the international quality of Indian manufacture. As far as other non-traditional items are concerned, we started diversifying our export activities in this field over a year ago. In 1971-72 these exports which included cigarettes, reached a high of Rs. 2.33 crores.

Our efforts indeed are humble: but if they go even a small way towards helping national interests, we shall have served our purpose.

India Tobacco Company Limited
—in pursuit of progress

Need for Framing a Realistic Oil Policy

By M. B. Lal

Considering that India cannot wholly rely on the Middle East countries for the supply of oil for political and other reasons, she should keep her options open between them and the western oil companies. In framing her oil policy, India should keep out ideological considerations.

THE threat by the foreign oil companies to withdraw from India comes at a time when the country is passing through the throes of the worst power crisis in its history. The demand for oil has been growing at the rate of 1 million tonnes a year. Its share in India's commercial energy supply has increased from 14 per cent in 1951 to 23 per cent now. Yet in global terms India's use of oil is negligible. India uses less than 1 per cent of the world's oil produce of 2.5 billion tonnes. With 16 per cent of the world's population India will obviously claim an increasing share of the earth's oil resources. The country's oil policy is still in a nascent state. It would be a good idea to take an overall look at the entire supply and demand position of energy in India over the next 20 or 30 years. This country's attitude to the oil companies can only be a part of such a policy.

There are many questions that India will have to consider before taking a decision. The first will be the pattern of energy consumption. Oil and natural gas account for over 70 per cent of the energy resources of the non-communist world as a whole. But in India more than 70 per cent of the commercial energy supply comes from coal and lignite. And non-commercial uses of power, mainly in domestic fuel, account for almost half the total energy supply in the country and are met by cow-dung, fuel wood and husk. Thus, in the overall total of energy consumed in India oil accounts for only 12 per cent and coal for nearly 37 per cent. Surprisingly, hydro-electric power, over which so much fuss is made all over the country, provides less than 2 per cent of the nation's

energy resources. Atomic energy is still an insignificant fraction.

Besides the consumption pattern, it is necessary to study the energy resources before preparing a practical plan for the future. India's proven resource of hydro-electric power is 4 billion kilowatts, or roughly about 400 times the potential already explored. The reserves of coal are 110 billion tonnes. This is more than a thousand times the quantity annually mined at present. Against this, India's proven oil reserves are still small and two-thirds of the quantity consumed has to be imported.

On the basis of information so far available it is obvious that if, like the advanced countries, India's future energy uses have to be predominantly oil based, the bulk of the fuel will have to be imported. This is not an entirely impractical proposition when one considers that western Europe has less than half per cent of the world's proven reserves of oil although it is, next to the U.S.A., the largest consumer of the fluid in the world. If gigantic tankers and pipelines can convey all the ever increasing oil needs of Europe from the Middle East in the years to come, similar supplies should be possible to India. This country is not far away from the Middle East countries which have two-thirds of the world's proven reserves of oil and are currently responsible for a quarter of the global production. Saudi Arabia and Kuwait share equally 40 per cent of the world's reserves of oil, and Iran and Iraq have similar large quantities.

The recent Indian move to have joint ventures with Iraq in steel, refining and petro-chemicals heralds a major breakthrough in this direction. If India can help Iraq set up a steel plant with capital machinery and ore from this country and obtain in exchange Iraqi crude which may be refined in Indo-Iraqi refineries in India, it would be an ideal arrangement for both. Such joint ventures could be multiplied if the two countries for their mutual benefit. Similar

relations could be established with other oil producing countries of the Middle East which have no particular reason to be totally committed to the western countries for their entire trade. Initially, India's share in the Middle East oil trade will be a mere flea-bite but it should increase in due course.

Closely allied is the question of tankers. About 95 per cent of the tanker tonnage of the non-communist countries is owned by the oil companies (25 per cent) and shipping magnates (70 per cent) of the western countries, including Japan. India's capacity to trade with the Middle East in oil will be heavily dependent on the combined pressure of the oil and shipping cartels of the world. This can be avoided by two methods. One is that India and the Middle East countries should build their own fleets of tankers. The other is that they should build a pipeline to India through Iran and Pakistan.

At present both solutions are beset with difficulties, the first with economic problems and the second with the imponderables of international politics. Building a tanker fleet needs colossal investments over and above the heavy investments earmarked for shipping by India. It will take decades before India can find the money for it. In the long run pipelines may be more economic. But this will need a radical change in the current politics of the sub-continent. When Indo-Pakistani relations improve both countries could share the costs and benefits of such a pipeline and release themselves from their dependence on western sources for a basic raw material, oil, which is essentially an eastern product. In this context Mr. Brezhnev's plan for collective security in Asia seems to have more economic benefits than political, although both are interlinked. Ironically, the plan is not essentially of Russian origin. Before Russia and China fell out the western powers were interested in such an arc, extending from Turkey to Vietnam, through the mechanism of C.E.N.T.O. and S.E.A.T.O., for the containment of both the communist giants. Perhaps the countries of the region could now evolve a similar mutual security and co-operation plan of their own without the assistance of either of the two power blocs.

Indian's hopes of obtaining oil from Russia may prove illusory. Currently Russia produces barely 300 million tonnes of crude of which at least 90 per cent is consumed within the communist world. It would like to trade

INDAL's Taloja sheet mill

Inauguration

Today, at Taloja, Indal inaugurates a new aluminium sheet-rolling mill that marks a further milestone in India's industrial development.

The new mill, a part of Indal's ambitious Rs. 460-million West Coast Project, will be inaugurated by Shri Shah Nawaz Khan, Minister of State, Ministry of Steel and Mines, Government of India. Shri V. P. Naik, Chief Minister of Maharashtra, will preside.

The Rs. 150-million Taloja mill will roll 11,500 tonnes of aluminium sheet annually—the fastest, most modern aluminium rolling complex in India. Taloja will provide new products to satisfy the expanding requirements of an increasingly sophisticated market.

INDAL—most experienced in aluminium

INDIAN ALUMINIUM COMPANY, LIMITED

1 Middleton Street, Calcutta 16

the rest with Europe for hard currency. Means of transport between India and Russia are extremely difficult. This leads to one conclusion. The most vital limiting factor in India's dependence on oil as her primary fuel would be that almost the entire supply will, willy-nilly, have to come from the Middle East. Even if this is an economically viable proposition, India would have to consider whether it is also politically sound.

One way of overcoming the political complications could be to have multiple sources of supply, not only in terms of countries but also companies. If, as is not inconceivable, all the oil producing countries of the Middle East turn their back on India for political, religious or economic reasons at a moment of crisis and decide not to give her any oil, the oil cartles may still keep their commitment. This was proved during the recent Indo-Pakistani war over Bangladesh when the western oil companies fulfilled their obligations despite the anti-Indian stance of their parent nations. It suggests that in ensuring the constant supply of such a vital source of energy, it may be in India's interest to keep her options open between the Middle East Governments and the western oil companies. Ideological inhibitions need not stand in the way since even Russia and China, the two most powerful socialist countries, are now seeking the help of these cartles to explore and develop their own vast oil resources. In this field the economic and political interests of India have to be delicately balanced and there should be no dogmatic adherence to a particular mode of supply.

But this answers only one part of the question of increasing oil supplies to India. The other part, as to what proportion of the country's power needs should be met by oil, will also need careful examination. On the face of it, it seems evident that India will be foolish to follow the western countries and draw three-fourths of her energy needs from oil. India's basic energy source must lie in coal and hydro-electric power both of which are more than abundant in this country. It is interesting to note that the annual *per capita* consumption of petroleum products is 65 kilograms in Maharashtra, 55 kilograms in Gujarat and 33 kilograms in Tamil Nadu. In all the other States it is around or below the all-India average of 25 kilograms. This suggests that while oil could well be an important fuel in the western coastal States, it may be uneconomic in the rest of the country. In Punjab,

which has the largest *per capita* income, the figure is barely 20 kilograms.

This suggests that the country could perhaps profitably be divided into three distinct regions for its fuel needs. The west coast States of Maharashtra, Gujarat and Kerala and the oil bearing State of Assam could have an oil-oriented energy pattern. The coal bearing States of Madhya Pradesh, Bihar, Orissa and West Bengal could rely predominantly on coal for fuel. The northern States of Jammu and Kashmir, Punjab, Haryana, Himachal Pradesh and U.P. may lean heavily on hydro-electric power. Rajasthan which falls between the three zones may have a balanced mix of all three fuels, together with atomic power. The southern States of Andhra, Tamil Nadu and Mysore may have a mixture of coal and oil in their energy use pattern. For a huge country like India, with diverse sources of energy, a uniform nationwide energy pattern may be highly waste-

ful for several obvious reasons. The best course would be to have as many internal and external options as possible and then, if possible, to integrate them in one super-grid to make up for periodic shortfalls in any region.

Energy is today the world's single largest source of wealth and its biggest industry. The *per capita* consumption of energy in the world's richest country, the U.S.A., is 55 times that of India. Nearer home, the West Asian countries are growing rich at a fantastic rate. The oil earnings of the sparsely populated region of the Middle East leaped by \$4,500 million in 1971. India must learn a lesson from this and rapidly develop her own energy resources. New methods are fast developing to convert coal into oil. Once this becomes an economic process, India could well join the race to prosperity. But even before this, this country's coal and hydro-electric resources offer vast opportunities of growth.

Is the Government-Industry Dialogue Entering a New Phase?

(By a Special Correspondent)

Ever since Mrs. Gandhi's landslide electoral victory in 1971, industrialists have generally been careful not to criticise the Government too severely. But the recent meeting of the Central Advisory Council of Industries has marked a noticeable departure.

THE recent meeting of the Central Advisory Council of Industries has brought out in all its vividness the stresses and strains that have arisen and are gathering momentum on account of either a wrong emphasis or faulty implementation of policies by the Government. The common objective of both the private sector and the Government, however, remains that of speedy industrial development on a self-reliant basis. For those who have attended the earlier meetings of the Council it was a refreshing experience to find that the captains of industry were no more going to be silent spectators to governmental policies which are dictated by political considerations rather than by economic realities. Although the Central Industrial Development Minister, Mr. C. Subramaniam, had in the past been talking

of a drastic revision of the Industrial Policy Resolution of 1956, he had lately calmed down due to pressure from the Party. This was evident at Gandhinagar where the All-India Congress Committee met to consider the approach to the Fifth Plan.

Therefore, no one expected that Mr. Subramaniam would come forward with the formulation of a new policy objective at the recent meeting of the Central Advisory Council. Mr. Subramaniam knew his own limitations and was hard put to explain that the said Resolution and the licensing policy of 1970 "have been and will continue to be our basic policies". These, in a nutshell, were to give the public sector pride of place as the principal instrument for promoting growth in a large number of industries, for increasing the public ownership of the means of production, and as a curb to concentration of economic power. Other objectives include balanced regional development and accelerated development of backward areas. Mr. Subramaniam claimed that positive measures have also been taken for the promotion of small, medium and new entre-

preneurs so that the sources of growth are widely tapped and the fruits of growth are widely shared.

Mr. Subramaniam, however, unhesitatingly agreed that within this framework, there was "need and scope" for making the policy and administrative instruments "more coherent in their impact and less time-consuming in their application". He called for fruitful discussions on how such "improvements" could be made provided they were all agreed on the basic objectives. This was the signal for the captains of industry to mount an attack on the Government's industrial policies and to make it clear that unless there was a radical change in the attitude towards the private sector, the future was gloomy. The attack was spearheaded by Mr. J. R. D. Tata who sharply assailed the Government for embarking on nationalisation under the garb of "socialism and social justice" and resorting to "downright confiscation" of private property in which the victims were not only the wealthy but also many small shareholders. According to Mr. Tata, the twenty-fifth amendment of the Constitution had given "a chronic sense of insecurity" to investors. He excitedly asked if the time had not come for the authorities to make up their mind "whether we want the private sector at all in this country."

Disagreeing with the optimistic assessment of the Government of the industrial scene, Mr. Tata drew a picture of gloom at least for the next two years and asked the Government to stop splitting the economy into two warring groups and taking decisions on political grounds. Mr. Tata's outburst was pretty embarrassing for the Government. Mr. Subramaniam pointed out that industry could not always expect to function under "ideal conditions" but should know how to function under "given conditions". To this, Mr. Tata's retort was: "You might as well say, self-given conditions". The two other spokesmen of industry—Mr. Madanmohan Mangaldas of the F.I.C.C.I. and Mr. A. N. Haksar of the Associated Chamber of Commerce and Industry—were no less critical of the Government. After listing the constraints placed on the private sector Mr. Mangaldas bluntly asked where were the "positive measures" to stimulate industrial growth and investment. Mr. Haksar referred to a number of contradictions in the Government's policy and said it was a pity that controls were being used to inhibit production instead of applying

them for achieving equitable distribution.

Ever since Mrs. Gandhi's landslide electoral victory in 1971, industrialists have generally been careful not to criticise the Government too severely. But the Council's recent meeting marked a noticeable departure. If this was intended only for a frank exchange of views, the discussions should contribute to the evolution of a public policy on realistic lines for the attainment of the common objective of speedy industrial growth on the basis of economic self-reliance. There is nothing to suggest that the contrary was the object.

Will Indo-Japanese Business Talks Help Promote Closer Ties?

(By a Special Correspondent)

The joint meeting of the Business Co-operation Committees of India and Japan will soon be held in New Delhi. It is hoped that some concrete suggestions for strengthening the economic relations between the two countries will emerge from the meeting.

THE proposal of the Japanese Government to cut import tariffs on manufactured goods by 20 per cent across the board is of considerable interest to India. Tokyo is resorting to this step as part of its programme to save the yen. It is estimated that the tariff cut would lead to an increase in imports during the next fiscal year of about \$340 million. In recent years, India has been making special efforts to increase and diversify her exports to Japan. But these attempts are yet to meet with success. India's exports to Japan continue to consist predominantly of a few traditional items like iron ore, oilcake and meal, and animal casings. India at present is Japan's fourth largest trade partner, the first three being the U.S.A., Russia and the U.K.

There has never been a dearth of delegations and study teams going from India to Japan; and they have made many recommendations to increase exports and attract more Japanese investment and technical skill into this country. It is estimated that last year alone about 40 Indian groups had visited Japan. But it seems that the observations and recommendations of these delegations and study groups have not received the attention they

As the discussions entered specific areas like the constraints on fuller utilisation of installed capacity and the supreme need to develop science and technology within the country, the response from the private sector spokesmen was both prompt and co-operative. Mr. Subramaniam himself acknowledged this spirit while winding up the discussions. He said he had no doubt that industry would adjust itself when it knew what was going to be the Government's policies. "I have absolute faith in the industrialists' wisdom and pragmatism" he said, adding that in a difficult situation the private sector's co-operation was absolutely necessary.

deserve either from Udyog Bhavan or from other departments of the Government of India. This becomes clear from the remarks made by the trade delegation, sponsored by the Engineering Association of India, which visited Japan this year. In its report released in August, the delegation said: "The image of industrial India in the eyes of the Japanese is, indeed, dim. Barring larger sized enterprises, the picture of India among Japanese firms is that of the 'sacred cow and the *sari*'. The resurgent modern India has not yet been able to make any impression on the minds of the Japanese firms".

Among the more important recommendations of the delegation are the following: (a) The Government of India should persuade Tokyo to send a high-powered delegation to visit this country; (b) the Government should try to organise a scheme of training and contacts on the lines of the Indo-German Project (popularly known as the Vollarath Plan) which would provide for training of Indian commercial and technical executives in Japan; (c) the Government should invite a number of teams from Japan to visit the Asian Trade Fair and take them to important industrial centres and show them India's mass production systems which are run on modern lines; (d) special supplements in English and Japanese language newspapers on India's industrial achievements should be brought out by the Government; (e) A wholly Indian exhibition of engineering products should be organised in Japan; and (f) the Government should expeditiously con-

sider establishing a free trade zone near Calcutta airport and Haldia.

Some of these recommendations are under the active consideration of the Government. For example, the Government is considering the proposal to set up a free trade zone near Calcutta airport although nothing is being done about a similar scheme in Haldia. But no one knows how soon the project is going to be finalised. The Trade Development Authority of the Government of India seems to be keen on expediting it. But unless the West Bengal Government also pursues this matter in right earnest the progress is unlikely to be fast.

The Japanese economy in recent months has shown distinct signs of buoyancy. Indian manufacturers and exporters should be able to take full advantage of Japan's growing demand for imported goods. But it is not immediately clear what exactly are the items on which the tariff cuts will be applicable. The Government of India should ascertain the list of goods on which the cuts will be applied and make it available to export organisations. It is reported that the various economic Ministries in Japan are not agreed about the items whose imports are to be liberalised. Meanwhile, Japan's Tariff Council is said to have advised the Government that the proposed concessions should be cancelled as soon as it becomes clear that the import of any product is hurting the indigenous industry.

The *Financial Times* has also pointed out that there are "peculiar and elusive difficulties in the way of breaking into the Japanese market". Even so, Indian goods should be able to do much better in the Japanese market. What stands in the way of larger Indian exports to Japan is not so much Tokyo's tariff or non-tariff barriers as this country's inability to produce enough exportable surplus.

The joint meeting of the Business Co-operation Committees of India and Japan is going to be held in New Delhi on 7th and 8th December. The meeting will discuss the economic situation in India and Japan, scope for promoting trade and joint co-operation in investment and technology in India and in third countries, and the prospects for the development of agricultural and fishery products and mining and infrastructural facilities. It is hoped that this meeting will be able to arrive at some concrete suggestions for strengthening the Indo-Japanese economic relations.

Last Week in Parliament

(From Our New Delhi Correspondent)

Parliament was preoccupied last week with the controversies over the Mulki Rules in Hyderabad and the proposed Indira Gandhi University in Shillong. Both issues are very delicate and they seem to have put the Government in an embarrassing position.

A PART from the delineation question which has defied a solution with Pakistan, two other issues which kept Parliament and the Central Government preoccupied last week related to the Mulki Rules in Hyderabad and the proposed Indira Gandhi University for the north-eastern region of India. At this writing, the end of the controversies that surround these two issues is not in sight. The Mulki Rules controversy has shaken Andhra Pradesh as never before. The people of this State are quite often compared with the people of West Bengal, for both are emotional. Therefore, the solution of any problem affecting them is extremely difficult. The Mulki Rules controversy threatens to break up the State into two—Andhra and Telengana—although such a contingency is dreaded both by the Central leaders and the leaders of the State.

But the pattern of developments taking place in that State over the Mulki Rules is the same as one had witnessed before the State was created. There was first the destruction of public property, the railways in particular, which is being repeated now. Then an Andhra leader, Mr. Potti Sriramalu, sacrificed his life for the creation of the State. The then Prime Minister, Mr. Jawaharlal Nehru, who only three days earlier had rejected the demand for a linguistic State, had to announce on the floor of the Lok Sabha of the Government's decision to concede the demand for a separate State for Andhra. Today, the Central leaders are saying the same thing—that the separation of the State into Telengana and Andhra would create more problems than are sought to be solved. There is a great deal of relevance in what the Prime

Minister, Mrs. Indira Gandhi, says, but when feelings in the State have been roused to such a pitch, what is the way out? Now the State Cabinet has entrusted the task of finding a solution to the Centre and has agreed to abide by the Centre's verdict, which apparently means that the verdict will have to come from Mrs. Gandhi. It is difficult to foresee how a solution formulated by the Centre is going to be accepted by the people of the State as a whole. The issue at stake affects the common man so much that if the Centre's verdict happens to be in favour of one region, the people of the other region are bound to start an agitation later, if not now.

The latest controversy over the proposed Indira Gandhi University also has some resemblance of regionalism. It was the Assam legislature which in 1965 had recommended to the Centre the establishment of a Central University in Shillong to cater to the needs of the hill areas. Now that a Bill to give effect to this recommendation has been introduced in Parliament, the Assam leaders are having second thoughts. The Chief Minister, Mr. Sarat Chandra Sinha and 11 M.P.s from that State have met the Prime Minister and told her that it would be "politically inexpedient" to proceed with the Bill which some people feel is an attempt to revive the idea of a separate university for Cachar district. The Assam leaders now argue that unless their State is kept outside the jurisdiction of the proposed university in Shillong, a law and order problem might again arise in the Brahmaputra valley. In other words, the State Government is asking the Centre to ignore its earlier recommendation. If this is the type of problems that Congress leaders are going to create in the States, the Centre may soon find itself unable to cope with the situation. Whatever decision the Centre takes on behalf of the State Cabinets will be acceptable to some and unacceptable to others in the same State. This is a situation which the Centre would like to avoid but can it when the same Party is in power at the Centre and in the States?

why do we search for new styles of tobacco

We have exported flue cured virginia tobacco for years at a steady level. Yet we are speeding up our search for new varieties of tobacco. Why?

To respond to international competition.

We treat it as a primary responsibility. New sources of tobacco have emerged overseas.

At the same time the consumer's taste has changed. So far the emphasis was on

brightness in colour. It favoured

our flue cured virginia tobacco in the world market. With the swing towards filter tips, international customers now prefer

ripe, open-grained tobacco with more

positive characteristics and filling qualities.

To satisfy this new taste we are developing alternative areas for tobacco cultivation in

Andhra Pradesh and Mysore. Soon this search for new varieties should bring results.

Meanwhile our export—currently a third of the country's total tobacco exports—

must resist the pressure of overseas

competition. There has to be

someone to face it.

if we export traditional varieties successfully?

Industrial Development in Madhya Pradesh Gains Momentum

(By a Special Correspondent)

The industrial climate in Madhya Pradesh has improved with the offer of attractive incentives to entrepreneurs. Indications are that soon the rate of industrial growth will further quicken.

IN order to speed up industrial development in Madhya Pradesh, various facilities have been made available in recent years to the units being set up in the State. These incentives have created a favourable industrial climate in the State and a number of entrepreneurs from all over the country have come forward to set up industries. Among the new concessions are financial assistance at concessional rates, establishment of an iron and steel stockyard at Raipur, and supply of raw materials from

a stockyard in Nagpur. The Bhilai steel plant, the Nepa newsprint plant and the Heavy Electricals factory at Bhopal have received licences for expansion of their production capacity, and their expansion programme is going ahead. Letters of intent have been issued to Nepa mills for production of caustic soda and chlorine, and also to D. H. Sheron Electrodes, Indore, for production of welding electrodes. A letter of intent has also been issued to Moolchandani Electricals and Radio for expansion of production of electrolytic capacitors.

The Cement Corporation has established a cement factory at Mandhar in Raipur district with an annual capacity of 200,000 tonnes and intends to increase it to 380,000 tonnes. The Korba project of Bharat Aluminium for the production of 200,000 tonnes of alumina and 100,000 tonnes of aluminium a year is also going ahead with a total investment of about Rs. 125 crores. The Central Finance Ministry is going to establish a currency press at Dewas. A decision to set up a new ordnance factory to produce explosives with an investment of Rs. 40 crores has just been taken. Shree Synthetics of Calcutta is establishing a nylon yarn manufacturing plant near Ujjain. The Chief Minister, Mr. P. C. Sethi, is keen to have a new steel plant at Bastar; the district can immediately provide raw materials for a large newsprint plant.

The growth in the small-scale sector has been phenomenal. There were only 2,141 registered small-scale industrial units in 1965; the number exceeded 16,000 in 1971 indicating an eight-fold increase during six years. Up to June 1970, under the hire-purchase scheme, machines worth Rs. 1.43 lakhs have been supplied to small-scale units in the State by the National Small Industries Corporation. Under the State Aid to Industries Act of 1958, loans used to be granted to small-scale industries from the departmental Budget; now, in-

stead of it, financial aid is being provided by the Madhya Pradesh Financial Corporation and the nationalised banks. The State Government also grants 2 per cent interest subsidy to all small-scale industries on loans raised from such institutions. The subsidy is 4 per cent for industrialists belonging to the backward community.

Development of ancillary units in the State also deserves mention. H.E.I.L., Bhopal, has helped to set up a network of ancillary units. There are 29 ancillary units around it and it is expected that the total orders placed with ancillary units would exceed Rs. 1 crore a year. Hindustan Steel's Bhilai plant has agreed in principle to have ancillary units and very shortly such units will come into existence in this area as well. The Nepa mills has also agreed to have ancillaries and it would not be long before these are developed. The Madhya Pradesh Government is rendering assistance to unemployed engineers in the State. A scheme has been sanctioned to impart in-plant training to them. Financial assistance for purchase of books and other equipment by approved units is also being provided.

The trend of industrial development in Madhya Pradesh is encouraging. In order to provide facilities for industries to come up, there is a plan to establish industrial areas at 25 places in the State, out of which work has already been in progress at 12 places. In addition, 19 industrial estates have been established so far and new industrial estates will be developed at Bina and Neemuch during the current year. The Planning Commission has declared 33 districts in the State as industrially backward areas. These areas would be getting concessional finances from the financial institutions. The Audyogik Vikas Nigam in the State has also announced bigger concessions for the backward areas and it is expected that the Madhya Pradesh Financial Corporation would also be taking similar steps shortly. A proposal to undertake an extensive and detailed survey of the backward areas in order to ascertain the feasibility of possible industries there and to provide this knowledge to entrepreneurs has been mooted. The Fourth Plan allocation for industries has been revised upwards to Rs. 13.3 crores and it is expected that the pace of industrialisation in the State will soon be quickened.

HOT-FACE INSULATING FIREBRICKS

For all types of reheating and forging furnaces.

- * Reduce fuel consumption
- * Help maintain a constant temperature inside the furnace
- * Ensure rapid heating resulting in larger output
- * Help distribute heat evenly

HIGH-TEMPERATURE AIR-SETTING FIRECEMENT

ACCOSET-50

Excellent for jointing, repairing and patching * Bonding and laying firebricks of any shape * Monolithic and rammed linings * Gunning * Protecting furnace walls and floors.

High-temperature ramming mass — ACCOSET SUPER is also available.

CASTABLE REFRACTORIES

FIRECRETE AND FIRECRETE SUPER

Can be used for repairs of furnace linings. They can be cast in any shape and size: are strong and durable, resist spalling, abrasion and thermal shocks.

Tailor-made castables to suit customer needs can also be supplied.

ACID-PROOF CEMENT

ACCOCID

An excellent bedding and jointing cement for acid-proof bricks and tiles and acid-resisting natural stone slabs for construction of acid storage tanks, reaction vats, acid towers, fume stacks, etc.

Supplied in two parts — a powder, and a mixing liquid.

ACC OFFERS SPECIAL PRODUCTS FOR INDUSTRIAL USE

HIGH ALUMINA REFRACTORY CEMENT

CALUNDUM

Hydraulic setting and rapid hardening basic refractory cement for manufacture of castable refractories.

ACC

Your guarantee of top quality products.

Economic Development in South Asian Countries

Economic Development in South Asia. Edited by E. A. G. Robinson and Michael Kidron. (Published by Macmillan and Co. Ltd, Madras. Rs. 70, pages xxii plus 585.)

An integrated approach to the question of economic development of the south Asian countries may ultimately prove much less costly for them than if they indulge in a sort of free for all. An interchange of experience gained so far may substantially contribute to the emergence of such a unified approach. The book under review may help significantly to understand the courses that economic development has taken in different countries in this region, particularly in India, Pakistan and Ceylon (now Sri Lanka). It incorporates the papers and proceedings of a conference held by the International Economic Association in Kandy, Sri Lanka, in June 1969. The discussions of many of the common problems encountered by these countries in the process of their economic development since 1947 did not lead to any firm conclusion—and in an occasion like this, one does not look for a consensus. In all, 28 papers were presented at the conference. The frank and forthright manner in which the issues were presented in the papers and in the discussions is a treat for the reader.

Every issue that was raised was fought tooth and nail, with only a few economists, notably Dr. K. N. Raj, taking a more sober attitude. Sides were taken not on behalf of any country but on particular issues and every weakness in every proposition was sought to be dissected to show the strength and weakness of particular points raised. This was all to be expected. In spite of the heavy-going subjects, including both theoretical and empirical analysis, the presentation of the papers and the discussions thereon were of a high intellectual order. Anything loose was not only caught for weeding out but alternatives were proposed and discussed threadbare. On such an occasion, the intellectual rigour would brook no perfunctory treatment of any issue dealt with. The volume thus presents heavy materials in such

a manner that never allows the reader to feel bored. On the other hand, the vividness of the picture presented make the reader feel almost like participating in the discussion itself.

The volume is a must for economists and policy-makers in India, Pakistan and Sri Lanka as also in other countries. Cases of particular approaches to economic development in the context of agriculture, industry and other sectors of economy would provide good case material, both for theorists and students alike. The editors have done a highly commendable, professional job in presenting almost the entire mood of the conference.

P. CHATTOPADHYAY

Japan in South-east Asia

Japan's Relations with South-east Asia, 1952-1960. By K. V. Kesavan. (Published by Somaiya Publications Pvt. Ltd, Bombay. Price Rs. 30, page 243.)

In this book the author has made a very thorough and comprehensive study of Japan's relations with two important south-east Asian countries, i.e., the Philippines and Indonesia, covering the period from 1952 to 1960. A question may naturally be raised as to why only these two countries have been selected. The author himself has given the answer. These two countries which attained sovereignty during the 'fifties represented two typically different ideologies. While the Philippines was a staunch ally of the western bloc, Indonesia scrupulously followed a policy of non-alignment in international relations. It would thus be interesting to examine how Japan, being herself an ally of the western bloc, conducted her relations with these two new-born south-east Asian countries after the end of Allied occupation. The period is especially significant because during this time Japan made a cautious and persis-

tent effort to be friendly with the nations in south-east Asia which she had subjugated during the second World War.

According to the author, Japan's position differs from that of India and China in that her cultural base in that region has almost been nil, and till the outbreak of the second World War, her relations with the region were confined only to trade and immigration. It is against this background that the author has projected his study of Japan's relations with the Philippines and Indonesia. The re-emergence of Japan as an independent sovereign nation in April 1942 was an event of great importance in Far Eastern politics. But Japan's image was affected by two factors. First, the devastations of the second World War had left intense bitterness in the region. The second factor was the cold war politics. Being composed of developing nations, the region became a major area of East-West conflict after the end of the war and both the power blocs tried to extend their influence in this area.

During the period under review, Japan's effort was mainly confined to winning the confidence of south-east Asian countries and there was no direct Japanese involvement in the outstanding political questions of the region. She was content with playing a rôle in the economic field consistent with her resources and was interested in increasing her economic involvement. The author has made a masterly study of the political background and the subsequent developments in the context of Japan's relationships with the Philippines and Indonesia. The book will be a valuable source of reference to students engaged in the study of the socio-political development of the south-east Asian countries.

Common Law

The Common Law in India. By M. C. Seralvad. (Published by N. M. Tripathi Private Ltd., 164 Samalda Marg, Bombay 2. Pages 251, price Rs. 11.)

This is a reprint of the English edition published in 1960, with some corrections. These learned and excellent lectures, published under the au-

pices of the Hamlyn Trust, were delivered at Lincoln's Inn by the author, well known as an eminent jurist and a former Attorney General of India. The lectures give an excellent bird's eye view of the development of the statutory civil and criminal law of India, as well as those parts of the law which have been evolved by decided cases founded on the principles of justice, equity and good conscience, which were interpreted by judges to mean the principles of English law as applicable to Indian society and circumstances. The book also deals with the broad features of the Indian Constitution, the rights secured in it, judicial control over legislation, administrative tribunals, etcetera. The author deals with the question of how independent India looks upon the system of laws created by the collaboration of great English and Indian minds, and points out the service it has rendered as a great influence welding the country together. Although the political ties have altered, the Indian legal system based on English law still endures. The author goes on to say that with the ever-growing expansion of Indian legal thought, there is bound to be a greater interplay between legal minds in India and elsewhere in the world of Anglo-Saxon jurisprudence. As judges and lawyers in India resort freely to English decisions, so may, in course of time, the English courts recognise Indian contributions to legal thought and principles.

M. R. MEHER

Secretariat Practice

A Manual of Secretariat Practice. By S. N. Sarkar. (Published by S. C. Sarkar and Sons Pvt. Ltd, 1-C Bankim Chatterjee Street, Calcutta 12.)

The book is divided into three parts. The first part deals with the secretary—his office organisation and management. The types of secretaries—the all-powerful secretary to the Government, the statutory company secretary to private secretaries, whose importance depends on their employer's dependence on them—and their various duties are clearly described. The chapter on secretary's office will introduce the student of secretarial practice to an unknown domain. The maintenance of records, office lay-out and equipment, maintenance of relations and appointment and reference to sources of information will help not only B.Com stu-

dents of different universities but will also provide an introduction to any young man who enters a mercantile office.

The second part dealing with company law and procedure will help the student preparing for the B.Com degree in preparing for his examination. It is much more. Anyone who wishes to know the salient provisions of the complicated Companies Act, 1956, will find them summarised here in simple, lucid English, rearranged subjectwise. Important judicial decisions are cited at appropriate places. To those who are not directly dealing with this subject but to a layman interested to know how a company is formed, what is a memorandum and articles of association, what is a prospectus, what is underwriting and brokerage, what is a share, what are the rights and obligations of shareholders, how meetings of company shareholders and directors are organised, how the minutes are recorded, how directors are appointed, how a company is managed and amalgamation and winding up, the book will be useful, for all these features are explained in simple English.

Part III deals with commercial correspondence. What a commercial letter should and should not contain, and models of different forms of letters are given. The author has brought to bear on this book his erudition, his experience as a lawyer dealing with company law matters. The index at the end has been compiled with great care. The book should find a place in all libraries and will act as a guide to students and those interested in secretarial practice, company law and commercial correspondence.

Education in Maharashtra

Progress of Education in Rural Maharashtra. By A. R. Kamat. (Published by Asia Publishing House, Bombay, for Gokhale Institute of Politics and Economics, Poona 4. Pages 348, price. Rs. 25.)

After reading this research study, one is not left in doubt that literacy and education have both grown in rural Maharashtra during the last 20 years at an accelerated rate. Education is making inroads among those sections of the population who had no

background of education in the past, although women's education is still relatively backward. But Professor Kamat brings out that the spread of education during this period in rural areas has been very uneven as far as different socio-economic sections of society are concerned. Rural Maharashtra has three caste-groups, Marathas, Mahars (the scheduled castes) and the backward class communities. "During the post-independence period, the Marathas have made considerable educational progress, often a very rapid one. The progress of scheduled castes has a slower pace. And the progress of the backward class communities is the slowest; in certain areas they are just making a beginning. Both because of their numerical superiority and greater advance, the Marathas and allied castes have now emerged as educationally the most dominant section of the rural society." (Page 128).

In economic terms, peasant farmers, often with their own lands, are pushing ahead in rural education very rapidly. But the agricultural labourers are relatively backward. In terms of the size of landholdings and incomes, it is the more affluent sections of society that have registered greater progress in education. If a village has irrigation or a cash-crop economy, it has gone forward with education. Professor Kamat's book is a useful sociological document, full of data and statistics; it brings out the point that progress in agriculture results in the ancillary effect of the spread of education.

Country Profiles

Trading with the World—Country Profiles. (Published by the Indian Institute of Foreign Trade, H-24 Green Park Extension, New Delhi 16. Price Rs. 40, pages 721.)

The first edition of this publication was published in 1968. The enlarged second edition incorporates profiles of the 100 countries which featured in the first edition, besides adding nine more, namely, Bahamas, Bangladesh, Barbados, China, India, Ivory Coast, Malta, Qatar and Surinam. Particularly useful is the information on import policies, exchange systems, trade agreements, trade prospects and investment opportunities for Indian investors. Tariff concessions offered under the Generalised System of Preferences have been highlighted.

Should Banks Have a Central Policy for Recruitment?

(By a Special Correspondent)

It is desirable that banks should have a central recruitment policy. The policy should preferably be on a decentralised basis so that recruitment can be made on an areawise pattern.

THE Indian banking industry presents personnel problems of various types. One of the areas where special attention has to be immediately given is recruitment of appropriate persons at all levels of the industry. Till nationalisation, individual banks had been recruiting their own staff. The recruitment was guided by two considerations: one, locationwise requirement and, secondly, the particular requirement of the job. Since nationalisation, the situation has been changing, and it has become desirable to have a uniform pattern of recruitment. This will immediately involve certain problems, one of them being whether individual banks should go in for their own recruitment or whether it should be made on a national level on a corporate basis, centralised or decentralised.

A central recruitment policy is perhaps the most desirable, and the banking industry should formulate such a scheme. When one speaks of central recruitment, it automatically gives the impression of a recruiting agency similar to the Union Public Service Commission or certain other central recruiting organisations of large corporations. Although for the present such a single recruitment centre, might be considered suitable, perhaps the best thing to have would be a central recruiting policy decentralised on

a zonal basis. The central organisation should have four or five zones, which should be based at important centres like Bombay, Calcutta and Delhi.

The recruitment policy should be decided on the basis of the job requirement, which is still vague in the banking industry. While job analysis is quite possible, the nature of requirement may vary with individual banks. But if it is studied in depth, a general pattern will be found. At the last rung of recruitment, or the base, the basic requirements are probably good precis writing, composition, proficiency in mathematics and general knowledge coupled with an alert mind. Specialists should be recruited at a higher level. The problem of industrial relations that the banking industry faces has been due largely to the recruitment policy. Most of today's hierarchy is composed of persons who have worked their way up but in terms of attitude, education and temperamental bias, the requirement has not always been fulfilled and the performance suffers automatically. While formulating a central personnel policy, this aspect should be taken care of and applicants with a broader outlook should have preference. In future years their progression should match with their acquired specialisation through both experience and additional educational attainment.

While a central recruitment board would be working on a zonal basis, it should have more or less the same members: a personnel specialist, a management service specialist and also

personnel from the bank management, who know banking thoroughly. Over the years, while written tests and thereafter formal interviews have been the method of recruitment, there is no denying that personality test has so far not been a very important factor as far as recruitment is concerned. So, while it is quite important that proficiency and merit based on educational performance are necessary, it is equally necessary to understand an applicant's personality. It would thus be desirable to have in such a board some psychologists, who have specialised in staff selection and who can throw some light on the particular aptitude of the applicant.

When a central recruitment policy has been formed and general aspects or methods of recruitment have been established, it will naturally be easier to call for interviews within a short time. It has often been noted that a waste of time has been caused only through non-decisions even after applications have been called for. If a time schedule is adhered to, recruitment becomes easier, and it also psychologically helps the candidates who have applied for jobs.

What is being suggested is that the banking industry may take up central recruitment as a policy but on a decentralised basis, i.e., recruitment being made for the banks on an areawise basis. It is also desirable that a "pool-selection" is made for all the banks by a single local board and the members are placed in different banks according to particular requirements. In the service board, there should be people with experience in the banking industry, personnel specialist and also psychologists, who should be able to give some guidance as to the suitability of the candidate or otherwise. In the case of specialised recruitment, one or two specialists of the particular functional area should always be included. While making the selection, the board should decide what percentage of the recruits will eventually be promoted to higher rungs from the base points, because qualifications, etcetera have to be standardised accordingly. Again, it is very important that while evolving a detailed procedure for such recruitment, a time limit is observed between the date the advertisement is published and the final selection of the candidates as well as placement. A central recruitment board has become absolutely necessary because of the changed situation in the banking industry. Inter-changeability of personnel from one bank to another is another idea that remains to be examined in future.

The Pros and Cons of Raj Committee Report

By M. R. Meher

The Raj Committee's proposal for levying tax on agricultural holdings bristles with administrative difficulties and other complications. Even if the States accept the committee's recommendations, it is doubtful whether they can be implemented effectively.

THE Raj Committee report on the taxation of agricultural wealth and income has been brought out in record time, considering the time usually taken by committees. It is understood that the report has been welcomed in official circles and by the Planning Commission, as the committee's recommendations would greatly help in mobilising resources for the Fifth Five Year Plan. However, in regard to the committee's principal recommendation on the need for compelling the agricultural sector to make its due contribution to the much-needed Governmental revenues and to the requirements of economic development of the country, it is doubtful whether it will secure the objective.

The committee's view that while indirect taxation has an important rôle in the fiscal system, it has serious limitations as an instrument of resource mobilisation, that the incidence of direct taxation should be broadly the same on comparable incomes and wealth, and that in taxing agriculture it is necessary to ensure that the better-off sections pay proportionately more out of their incomes and wealth so that there is a reasonable degree of progression in the tax, would command general assent. There is at present no proper principle of progression in land revenue. Agricultural income-tax which is levied in some States has been a failure and has made only minimal contribution to the States' revenues. As pointed out by the committee, direct taxes on agriculture levied by the States, viz., land revenue cesses and surcharges based on land revenue, crop cesses and agricultural income-tax, account for barely 1 per cent of the net domestic product from agriculture and the proportion varies from State to State. The committee has referred to the constitutional and other difficulties of a completely inte-

grated system of income-tax on agricultural and non-agricultural incomes.

Its proposal for tax on agricultural holdings is broadly as follows: The country should be divided into a sufficiently large number of climatically homogeneous districts with more or less the same type of soil so that differences having significant influences on productivity are taken into account. For each district/tract norms of output of different crops a hectare for each year should be worked out on the basis of estimated yields for the previous ten years. These should be valued at the relevant average harvest prices for the preceding three years. The norms would thus be derived from the ratable value of a hectare of land growing different crops in different districts/tracts. From the value of the gross output of the crops, allowance should be made for the costs of cultivation other than expenses of irrigation, and also for depreciation of assets other than livestock. The schedules of ratable values should be revised every year by the State Governments, taking into account yields of the preceding ten years.

To provide for the costs of development a development allowance should be given to all agricultural holdings at the rate of 20 per cent of the ratable value, subject to a maximum of Rs. 1,000. Tax on operational holdings should be levied on the basis of a family (husband, wife and minor children). The implementation of the tax is to be made in two phases, in the first phase on holdings of the ratable value of Rs. 5,000 or more. In the second phase it is to be extended to holdings below this value. To facilitate the determination of the ratable value of holdings, a system of crop inspection and recording of crop acreages should be evolved. To ensure uniformity over the country it is proposed to have an all-India committee on agricultural holdings tax to be appointed by the Planning Commission which is to undertake every year a *post facto* review of the tax in all the States, consult the State Governments where significant departures are found from the desired uniformity and

submit an annual review to the Planning Commission.

The proposal, which has been very briefly summarised above, appears administratively very difficult and complicated, would involve the setting up of centralised machinery for collecting colossal data, evaluating records and working out norms for districts and tracts. Even if the States accept in principle the highly complicated proposals, having regard to the experience so far obtained in the States of land ceilings legislation, it is doubtful whether they can be effectively carried out and whether the results will be altogether satisfactory. An ideal solution for raising resources from the agricultural sector is not practicable in the present circumstances. Perhaps, a simpler method for making the agricultural sector contribute more towards its due share to the much-needed revenues would be a short-term one for each State: to rationalise and increase the existing rates of land revenue or surcharges, exempting small holdings, and graduating the increases on the basis of soil conditions and types of crops.

The land revenue is still a convenient form of tax and, if made progressive along the above lines, may yield the States more revenue than the tax proposed by the Raj Committee. The farm sector continues to be heavily subsidised, as is illustrated by the losses suffered in irrigation works. It has been estimated that if the water rates for rice, wheat and sugarcane are suitably increased in the States, their receipts from this source alone would go up ultimately to over Rs. 130 crores. As for agricultural income-tax, it is necessary that the States which have not imposed it should evolve steps to tax agricultural incomes and the exemption limits of the tax as at present levied in some of the States should be lowered.

The proposal for amending the Income Tax Act, so as to aggregate the agricultural and non-agricultural income of the assessee for the purpose of determining the rate of tax on the non-agricultural portion of the income, is reasonable. In computing the income from agriculture for the purposes of this partial integration, items of expenditure allowed under the Income Tax Act in the computation of income as in the case of business or progression, including depreciation of machinery and tools used in agriculture, have been rightly proposed to be deducted from gross receipts. The proposal of the committee would not only result in some equity but also check evasion.

Assessing the Impact of Higher Minimum Bonus on the Economy

By M. Kutumba Rao

The Government has raised the rate of minimum bonus without first establishing some kind of relationship between wages, profits and production. Employers are naturally concerned about the possible impact of the decision on the economy.

THE revision of the statutory minimum bonus upwards from 4 per cent to 8.33 per cent in case of all public and private undertakings, barring departmental undertakings like the railways and Post and Telegraphs and the units not covered by the Bonus Act, whether making profit or not, has raised more issues than it has solved. Will this enhanced minimum bonus adversely affect the growth prospects of the economy? Will the marginal industrial units be compelled to close down? How far the decision will impede the expansion of the corporate

sector? Will the measure bring in the much-needed durable industrial peace? An attempt has been made here to answer these basic questions.

Bonus has been the subject of controversy between the working class, the employers and the economists for long. However, the origin of minimum bonus could be traced back to 1954, when a number of employers and labour unions signed long-term agreements incorporating the concept of a minimum bonus. The hope that this sort of arrangement would promote industrial peace was, however, falsified, mainly due to inter-union rivalries. Nevertheless, such agreements introduced a new element and that was minimum bonus irrespective of profits. This changed the concept of bonus and its direct link with profit and productivity. Bonus payment has been made statutory with the enact-

ment of the Payment of Bonus Act in 1965. The Bonus Commission recommended in 1965 that a minimum bonus was payable to workers even where employers incurred a loss. But the measure did not produce the expected result. Instead of creating industrial harmony, the Bonus Commission's formula aggravated conflicts and hence the latest enhancement of bonus to 8.33 per cent.

While labour has every reason to hail the enhancement of minimum bonus, industry has been critical of this "counter-productive" step and its "dangerous spin". It is not that employers are sore because of the rise in the quantum of bonus, but they are worried about its effect on the spiralling prices. They are also concerned about the likely effect of the new bonus formula on the marginal and weak units, which constitute nearly a third of the industrial undertakings. A recent study by the Reserve Bank of India shows that 23 per cent of the 1,500 undertakings covered have paid bonus at the minimum rate only (i.e., 4 per cent). Since the minimum has now been raised, the percentage of concerns which will be forced to pay bonus at 8.33 per cent is sure to form the majority. This may lead to the

Strengthening the grass-roots of the economy

closure of many weak units, aggravating the unemployment problem.

Since wages are an important component of industrial costs, any rise in wages or bonus will naturally mean a costlier end product. All industrial manufactures, particularly the export manufactures, will be hit hard. More liquid cash in circulation will only shoot up prices in an economy of shortages. Should the consumer be penalised for pacifying labour? How far the series of traditional measures, including the opening of fair price shops, announced by the Labour Minister to arrest the price rise will fructify is anybody's guess. It has become a vicious circle, more wages leading to higher prices and higher prices leading to more wages. The authorities had had no success in breaking this vicious circle. The Government instead of extinguishing the fire of inflation is adding fuel to it.

The higher bonus would bring down profits and a steep and continuous decline in profits would mean drop in investment and consequently retard the growth of the economy. In other words, entrepreneurs would be afraid of taking risks with the general level of profits going down. In this way,

the problem might resolve itself into a clash between a few millions who are employed and the countless unemployed and underemployed. What will be the impact of higher bonus on public-sector units, especially those which are in the red? To cite one example, Hindustan Steel Ltd, which has not fared well in recent years, will have to raise, according to one estimate, Rs. 6.5 crores to pay bonus at the new rate. The new bonus formula would create social disparities, as the organised labour which represents only 5 per cent of the total working class in the country is assured of a minimum bonus, when millions are either unemployed or underemployed.

If the Government thought that by dangling the offer of a higher minimum bonus at this juncture it could pave the way for industrial peace, then it would soon be disillusioned. Bonus has often been the cause of industrial disputes over a decade. It may be interesting to note that the percentage of industrial disputes on account of bonus has increased from 9.9 in 1965 (the year in which the legislation was passed) to 13.2 in 1966 (the year that followed the year of bonus legislation). It should be noted that the units and departmental

undertakings excluded from the purview of the Bonus Act have already begun to hoist their flag demanding the extension of that boon to them also. What will be the total bill in case the Government concedes their demand? If the trade union leaders could assure that there would be no more work stoppages, then the community at large would deem the extra burden worth bearing. But could they do so? Mr. Naval H. Tata, president of the Employers Federation of India, has observed that "this new minimum bonus again will lead to a demand for higher maximum bonus resulting in a fresh round of industrial disputes".

From the above analysis, it appears that the new bonus is a sheer political concession made by the Government without making any prior effort to establish some kind of relationship between wages, profits and production. Such *ad hoc* decisions are not to raise investment and production. It is unfortunate that the Government has yielded to the pressure tactics of labour leaders. The labour leaders too should, instead of demanding periodical hikes in labour emoluments, pressurise the authorities to tackle effectively the inflationary situation.

INVESTMENT

Encouraging Corporate News Keeps Shares Steady

SHARE prices on the stock exchanges have continued to rule fairly steady this past week. Technical considerations apart, the sustained flow of encouraging corporate news in the shape of higher equity distributions and profits has provided the main driving force and the closing rates of a good number of shares have recorded moderate to impressive gains on balance. At times, precautionary bull unloading at improved levels has caused a little erosion of top gains but the overall undertone has been steady. The volume of business has been restricted partly due to a portion of funds seeking investment being siphoned off to new issues and partly because of a general shortage of high yielding shares. Lyons Range has gained a little edge in performance over Dalal Street.

The stock markets have had to contend with both good and bad news. The unabated rise in the prices of essential commodities, the lingering uncertainty on the food front notwithstanding the Central Food Minister, Mr. F. A. Ahmed's assurance that the situation has now turned for the better, shortages of raw materials, the continued power famine which has already resulted in a loss of production of nearly Rs. 48 lakhs in eight States for the nine months ended September this year and fears of a widening of the tax base in the next Budget to raise resources to finance the massive outlay envisaged in the Fifth Plan have acted as restraining factors. But the adverse impact of all these has largely been outweighed by a spate of helpful news. Marketmen are inclined to believe that the Government will be more realistic in formulating its joint-sector concept in view of the urgent need for stepping up production and creating fresh employment opportunities. Meanwhile, the Centre is entering the market on 1st December to mobilise Rs. 100 crores by way of loan floatations. It has reserved the right to retain 10 per cent in excess of the amount notified. This means that the net amount which can be mobilised is Rs. 110 crores. The twin objective of the floatation is to siphon off the excess liquidity in the economy and reduce the quantum of

deficit financing being resorted to by the Government.

Operators have also welcomed the signing of the recent Indo-Soviet trade protocol envisaging an increase of about 20 per cent in the trade turnover to Rs. 410 crores in 1973. It is also reported that the World Bank Group is considering assistance to India of the order of \$200 million for four new projects, negotiations for which are likely to be completed before the end of February next. Meanwhile, financial institutions in the country have formulated schemes for extending monetary assistance on concessional terms to small and medium industries in the backward districts and areas identified by the Planning Commission. They have decided to extend loans to units falling under the scheme at a concessional rate of 7 per cent interest, against the normal rate of 8.5 per cent.

Gilt-edged securities have been steady but turnover has remained rather restricted. Price variation has also been minimal. The 3 per cent Conversion loan 1936 has been quoted at Rs. 60. There has been little change in State Government loans.

Lyons Range has remained quiet this past week. Corporate news on the whole has been favourable but operators are still in the dark as to how Government policies are going to shape up. The last meeting of the Central Advisory Council of Industries has failed to generate confidence about any major change in the Government's industrial licensing policy. Market circles are thus in a mood to wait before making fresh commitments. Among engineering shares, Electrosteel Castings, Shriram Bearings and Guest Keen Williams have been supported. Among jute shares, Gourepore and New Central have changed hands. Among tea shares, Grob has been transacted. Among paper shares, Bellarpur have been firm and so have been Straw Products and Seshasayee. Business has been done in Cawnpore, Dunbar and Jayashree among cotton shares. In the coal section, Bengal and South Karanpura have been transacted. Among miscellaneous shares, Indian Explo-

sives, Indian Oxygen, Union Carbide, Gwalior Rayon, Philips India and Universal Electric have hardened.

Dalal Street has developed a softening tendency, particularly in the early part of the past week. In initial dealings, equities have suffered an all-round setback on persistent selling pressure and lack of fresh enquiries. Activity has tended to decline with attention being confined only to a few selected speculative counters. Towards the close, however, share prices have staged a moderate recovery. Earlier, the warning raised by Mr. J. R. D. Tata that the economy is heading for a severe crisis with the prospect of a sharp decline in growth both in the industrial and agricultural sectors during the next couple of years has produced an unsettling impact on sentiment. Among textile shares, Century, Standard, Indian Dyestuff and National Rayon have attracted buyers at higher rates. Sugar and shipping shares have also been marked up. Great Eastern Shipping, Scindia Steam, Phaltan Sugar and Maharashtra Sugar have received good enquiries to improve smartly. In steel shares, Tata have met with renewed buying support induced by the Company's latest proposal for the expansion of its capacity by another 2.5 million tonnes while T.E.L.C.O. have rallied up on the permission for its expansion for the manufacture of commercial vehicles by 50 per cent over the existing level to 36,000. Among others, Hindustan Brown Boveri, Kir-

COMPANY REPORTS

Reports relating to the following companies appear on later pages of this section:

Alkali and Chemical
G.K.W.
Gramophone Company
Hindustan Copper
India Tobacco
Indian Aluminium
Indian Iron
Phaltan Sugar
Sakthi Sugars
Valley View Breweries

Ioskar-Cummins, Siemens India, India Organic Chemicals, Polyolefins and E.I.D. Parry have enjoyed preference.

The Madras stock market has maintained a firm trend this past week. A few selected equities have met with some enquiries. Labour situation in the south has been a disturbing factor, but operators in general have been hopeful of good prospects ahead. Among sugar shares, Deccan and Aruna Sugar have moved up. Kothari Sugar have improved on dividend news. Among planting shares, business has been done in Pullangode Rubber and Peria Karamalai but Consolidated Coffee have remained easy. In the textile section, Madura have improved and interest has been shown in Coimbatore Cotton. In the miscellaneous section, Mettur Chemical have improved. Ashok Leyland and Aluminium Industries have been transacted. United Breweries have changed hands and W.S. Insulators have marked up on expectations of good corporate news.

Gramophone Company Produces Good Results

THE Gramophone Co. of India Ltd has shown satisfactory working results for the year ended June 1972. Turnover for the year was Rs. 6.06 crores (against Rs. 5.13 crores), an increase of Rs. 93.26 lakhs or 18.2 per cent. The increase in sales was mainly in gramophone records and record playing equipment. The Company has earned a higher pre-tax profit of Rs. 70.91 lakhs (against Rs. 56.84 lakhs), after raising the provision for depreciation from Rs. 3.16 lakhs to Rs. 3.86 lakhs. In view of the Company's better performance, the taxable ordinary dividend of 17½ per cent has been maintained which will be paid out of general reserve. This offers a yield of 6.6 per cent at the present price of Rs. 26.50 a share of Rs. 10 each.

The holders of 150,000 ordinary shares issued in terms of the Company's prospectus dated 2nd December, 1971, will be entitled to dividend at the aforesaid rate for the period from 1st January, 1972 to 30th June, 1972. The total amount of dividend payable will absorb Rs. 11.81 lakhs. Taxation accounts for Rs. 45 lakhs

(against Rs. 36.10 lakhs). Writing back Rs. 2.39 lakhs (against Rs. 4.78 lakhs) from provision for taxation no longer required and Rs. 1.06 lakhs (against Rs. 47,370) from adjustments relating to previous years, and after making other adjustments, there is a balance of Rs. 29.59 lakhs (against Rs. 25.68 lakhs) available for appropriation. Allocations include Rs. 1.34 lakhs (against Rs. 1.40 lakhs) for development rebate reserve, Rs. 21 lakhs (against Rs. 19.50 lakhs) for general reserve, Rs. 2.38 lakhs (against Rs. 2 lakhs) for deferred taxation reserve, Rs. 33.158 (against Rs. 27.502) for doubtful debts and advances reserve and Rs. 4.40 lakhs (against Rs. 2 lakhs) for staff retirement gratuity reserve. There is a carry-forward of Rs. 13,369, against Rs. 50,050 brought in.

It is reported that the letter of intent for the manufacture of stereo and compatible pick-up cartridges has been converted into an industrial licence permitting the Company to manufacture 350,000 pick-up cartridges and 300,000 stylus a year. Work under this project is well under way and it is

expected that production will start from 1st January, 1973. The total value of export sales for the year at Rs. 52.02 lakhs (against Rs. 58.77 lakhs) showed a decrease of Rs. 6.75 lakhs or 11.5 per cent. The decline was mainly due to import restrictions imposed in some of the Company's export territories.

INDIAN IRON

A Difficult Year

THE preliminary statement of accounts of the Indian Iron and Steel Co. Ltd for the year ended March 1972 shows that the Company has incurred a loss of Rs. 2.08 crores after providing Rs. 5.64 crores (against Rs. 5.61 crores) for depreciation, Rs. 91.13 lakhs (against Rs. 1.75 crores) for statutory reserve and nil (against Rs. 46 lakhs) for taxation. In view of the Company's loss and also the heavy strains on its cash resources, the Custodian has decided to pass the dividend on ordinary shares. A taxable ordinary dividend of 6 per cent was paid in the previous year. Transferring Rs. 2.26 crores (against nil) from reserve and provisions for earlier years, there is a surplus of Rs. 17.55 lakhs which will absorb the preference dividends. The net transfer to appropriation reserve was Rs. 3.05 crores, including the statutory reserve of Rs. 1.75 crores in the previous year.

ALKALI AND CHEMICAL

Final Dividend

THE board of directors of the Alkali and Chemical Corporation of India Ltd has recommended a final taxable dividend of Re. 1 an equity share for the year ended September 1972. This, together with the interim dividend already paid at 75 paise a share, will bring the total dividend for the year to Rs. 1.75 a share (17.5 per cent). The dividend declared last year has thus been maintained. A brief statement of the trading results of the Company for the year indicates that although sales improved to Rs. 26.97 crores, compared with the previous year's figure of Rs. 24.77 crores, the profit before tax was reduced from Rs. 269 lakhs to Rs. 248 lakhs. The after-tax profit at Rs. 78 lakhs showed a marked decline, compared with Rs. 104 lakhs for the previous year. The drop in the profit is attributed mainly to increases in salaries and wages and improved welfare amenities arising from a five-year agreement with the Company's Rishra works unions, enhanced rate of

import duties on certain key raw materials, increase in the costs of indigenous raw materials and transport, and partly to the enhanced tax liability of Rs. 170 lakhs, compared with Rs. 164 lakhs for the previous year.

HINDUSTAN COPPER

Significant Progress

IN his statement at the annual general meeting of Hindustan Copper Ltd, recently held in Khetri Nagar, Rajasthan, Mr. D. K. Dhaon, chairman, said that the Company had achieved significant progress in the construction of its various projects during the year ended March 1972. The Khetri project is in the construction stage. The total mine development has been about 58,000 cubic metres, against 22,000 cubic metres. The cost of mine development has also come down by about 30 per cent. When completed, the project will include two mines—one in Khetri and the other in Koliha—a concentrator, a smelter and electrolytic refinery and an acid-cum-fertiliser plant. The concentrator plant is expected to be in operation by the end of March next, while the smelter is scheduled to go into operation towards the end of 1973 or early 1974, along with the refinery.

The Daribo copper project is one of the small but promising deposits which is now being developed to yield 250 tonnes of copper ore a day. The concentration of the ore is to be carried out at the site itself and smelting and refining in the Khetri complex. As for the Agnigundala project, the chairman said that a detailed project report would be submitted to the Government shortly. The detailed project report on Chandmari deposit has been submitted involving processing of the ore in Khetri. A preliminary feasibility study has been submitted for the Malanjhand project and as this is a promising deposit the Company has requested the Government to allow it to take advance action pending the preparation and sanction of the detailed project report.

The Indian copper complex in Ghatasila—recently taken over by the Government and handed over to Hindustan Copper Ltd—is situated in the Singhbhum copper belt which includes Rakha deposits. Since the take-over, the rate of production has steadily increased. The chairman said that the old reverberatory furnace in Ghatasila, which was closed down consequent upon the commissioning of the flash smelter plant in 1971, had been put back into operation. The combined

capacity is expected to meet the needs of integrated mining operations in the Singhbhum belt. The Rakha copper project is among those which will be benefited by the take-over. The first phase of this project is on schedule and the Company hopes to work the concentrator plant at the rate of 1,000 tonnes a day by early 1974. The second phase of development of the Rakha mines is now under consideration. The Company has decided to appoint a Canadian firm of mining consultants for the preparation of the project report for mining operations.

G.K.W.

Pavilion at Asia 72

THE G.K.W. pavilion at Asia 72, among the first to be ready in time for the inauguration, is a simple and elegant three-cubed structure which explains the theme of G.K.W. as "The Engineers' Engineers". The story starts with the steelmaking activities of G.K.W. and then goes on to describe how steel is converted at G.K.W. into various sophisticated

components that go to meet the needs of priority sectors of the Indian economy. Steel to G.K.W., it is said, is what stone is to the sculptor. By transforming the quality, shape and size of steel, its functions are multiplied and it is transformed from mere metal to sophisticated components. The four operating divisions of G.K.W. making and converting steels are highlighted in the pavilion with the help of colour translites, murals, display units and a working model of the G.K.W. steel plant, complete with commentary. The moving sculpture outside the pavilion and the mural on the exterior of the central cube are among the other interesting features of the pavilion.

INDIA TOBACCO

Donation to Relief Fund

INDIA Tobacco Company Ltd has made a contribution of Rs. 3.27 lakhs to the Prime Minister's National Relief Fund a few days ago. The amount represents a donation of Rs. 2 lakhs by I.T.C. and its interconnected concern Indian Leaf Tobacco Develop-

VALLEY VIEW BREWERIES : SHARE OFFER SOON

VALLEY View Breweries Ltd, which is setting up a brewery with a capacity of 50,000 hecto-litres a year in Chakradharpur (Bihar), will enter the capital market some time in December with a public issue of Rs. 49 lakhs comprising 390,000 equity shares of Rs. 10 each and 100,000 9.5 per cent redeemable cumulative preference shares of Rs. 10 each. The Company has an authorised capital of Rs. 1 crore (Rs. 80 lakhs in equity shares and Rs. 20 lakhs in preference shares). The issued and subscribed capital is Rs. 3 lakhs in equity shares. Further equity shares of Rs. 38 lakhs will be subscribed by the promoters, directors and their associates. The Company has obtained all the necessary licences, including one for importing machinery and equipment which are not available indigenously.

The brewery has been planned with a view to future expansion to 100,000 hecto-litres. The Company has been investigating various offers of plant and equipment which are being manufactured in this country at present with foreign technical collaborations. Negotiations are also well advanced with Simon-Carves (I)

Ltd for a complete plant with technical collaboration of Truman Breweries, a renowned firm of brewers in the United Kingdom. It is expected that negotiations for the manufacture of British type of beer will be completed and the Company will finally decide soon which foreign know-how will be made use of. The Company will also introduce canned beer for the first time in the country. It expects that its product will not only create great internal demand but will also be sold in the export market.

The Company has also received a letter of intent for setting up another brewery of 100,000 hecto-litre capacity in Purulia. Yet another letter of intent for setting up a malt mill for the manufacture of breakfast and milk food, beverages, etcetera, has been received, from the West Bengal Government. This unit will be the first of its kind in the eastern region. For both the brewery and the malt mill, the Government has decided to settle 40.97 acres of vested land in Purulia. For the above two projects in West Bengal, the Company will enter the capital market in the near future.

ment Co. Ltd and the proceeds of the I.T.C. Sangeet Sammelan recently organised by these Companies in New Delhi.

SAKTHI SUGARS

Bonus Issue

SAKTHI Sugars Ltd has produced excellent working results for the year ended June 1972. There has been a substantial rise in profit as a result of a larger crush, better recovery and higher production of sugar. The directors' decision to raise the dividend to 15 per cent from the previous year's 12 per cent and, in addition, to issue

bonus shares in the proportion of two for every five shares held has been greeted by the shareholders. The profit for the year, before depreciation and taxation, is Rs. 135.34 lakhs (against Rs. 55.06 lakhs). Provision for depreciation is Rs. 29.89 lakhs (against Rs. 20.05 lakhs). Development rebate reserve gets Rs. 13.50 lakhs (against Rs. 7.22 lakhs). A sum of Rs. 12.95 lakhs (against Rs. 10.56 lakhs) is transferred to dividend reserve. The gratuity fund gets Rs. 6.50 lakhs for the first time. A substantial amount of Rs. 72.50 lakhs (against Rs. 17.19 lakhs) is transferred to general reserve. There is no separate provision for taxation, as the estimated tax liability of Rs. 50 lakhs will be met out of general reserve.

GOVERNMENT OF INDIA

5 PER CENT LOAN 1984 TO BE ISSUED AT RS. 99-50 PER CENT AND REPAYABLE AT PAR ON 1ST OF JUNE 1984.

5½ PER CENT LOAN 1988 TO BE ISSUED AT RS. 99-50 PER CENT AND REPAYABLE AT PAR ON 1ST OF JUNE 1988.

Subscriptions to the above loans will be received simultaneously and will be limited to a total of Rs. 100 crores. Subscriptions may be in the form of cash/cheque. Government reserve the right to retain subscriptions upto ten per cent in excess of the notified amount.

2. If the total subscriptions received for the loans exceed the notified figure plus the amount of ten per cent retainable as aforesaid, partial allotment will be made in respect of the subscriptions received and the balance refunded in cash as soon as possible.

3. Interest will be paid half yearly on the 1st June and 1st December. Interest on the loans now issued together with interest on other previous Government securities and income from other approved investments will be exempt from income-tax subject to a limit of Rs. 3,000 per annum and subject to other provisions of Section 80L of the Income-tax Act, 1961. The value of the investments in the loans now issued together with the value of other previous investments in Government securities and the other investments specified in Section 5 of the Wealth Tax Act will also be exempt from the Wealth Tax upto Rs. 1,50,000/-.

4. Subscription lists will open on the 1st of December 1972 and close on 4th of December 1972 or earlier without notice.

Applications for the loans will be received at:—

- Offices of the Reserve Bank of India at Ahmedabad, Bangalore, Bombay (Fort and Byculla), Calcutta, Hyderabad, Kanpur, Madras, Nagpur, New Delhi and Patna;
- branches of the subsidiary banks of the State Bank of India conducting Government treasury work except at Hyderabad; and
- branches of the State Bank of India at other places in India.

5. For full particulars please apply to any of these offices or branches.

INDIAN ALUMINIUM

The Taloja Project

INDIAN Aluminium Co. Ltd's Taloja project was conceived as the final stage of Indal's West Coast Project—an industrial complex consisting of a smelter and alumina plant at Belgaum in Mysore and the rolling mill which was inaugurated last week. Taloja marks the completion of the first stage of Indal's West Coast Project. On the drawing boards since 1964, West Coast Project construction started in 1967 over almost virgin territories—in Kolhapur district in Maharashtra for the bauxite mines, in Belgaum in Mysore for the integrated smelter, and at Taloja for the rolling mill. The Rs. 267-crore investment at Belgaum and Kolhapur was completed in 1969. With Belgaum now at 40,000 tonnes capacity, Taloja will process more than a quarter of Belgaum production, and in turn feed foil stock to Indal's nearby Kalwa foil plant. Taloja sheet will be consumed by a wide range of industries—in rail and road transport, in defence, in buildings, in packaging, in new coinage, to name but a few. Taloja holds out a wide potential to many other related and ancillary industries.

Built on a 40-hectare site 65 kilometres from Bombay, the Rs. 15-crore plant at Taloja will roll 11,500 tonnes of sheet products annually. Its mills are India's most sophisticated. Sheet-rolling is centred around the hot mill which can roll down 5-tonne ingots into hot-rolled coils 1,830 m.m. (6 feet) wide.

PHALTAN SUGAR

Joint Venture in Malaysia

PHALTAN Sugar Works Ltd has achieved the distinction of being the first Indian concern to establish a sugar project abroad. A joint venture collaboration agreement between Negeri Sembilan (State) Development Corporation of Malaysia and Phaltan Sugar Works was recently signed in Seremban, Malaysia. Under the agreement, Phaltan Sugar will act as consultants and provide know-how for cane plantations and sugar production. The Company will also invest Rs. 1 crore in the project. The total capital outlay on the project will be approximately Rs. 15 crores. The total export of Indian machinery will be around Rs. 4 crores. The crushing capacity of the factory will be 2,500 tonnes a day and will be producing refined sugar.

COMMODITIES

I.J.M.A. Underlines the Need to Frame a Jute Policy

WRITING editorially under the caption "Wanted: A Jute Policy", the latest issue of the *Jute Chronicle*, the bimonthly journal of the Indian Jute Mills Association, emphasises that the jute industry needs all assistance that the Government can afford for the simple reason that in it the country possesses a rare asset. With its vast resources of equipment, manpower and expertise, indigenously based raw material and excellent international trading contacts, it can make the largest impact on foreign exchange earnings in the quickest possible time at the minimum cost. Considering the various measures being explored by the Central Government for accelerating exports by the removal of unnecessary procedural and other bottlenecks, the *Chronicle* says that "world buyers of jute goods have begun entertaining serious doubts as to whether or not India really means business." This growing cynicism stems from an apparent Government indifference to the long-continuing stagnancy in the country's jute goods export due to the virtual absence of any "positive and forward-looking policy to aid an aggressive export drive during the past two decades." This neglect seems rather inexplicable

in view of the fact that jute still remains the largest single source of foreign exchange earnings for the country.

Stating that the jute world is at a loss to assess the precise reasons behind the Central Government's persistent reluctance to abolish the fiscal imposts on jute goods, the I.J.M.A. journal reiterates that far from improving the country's terms of trade, the imposts have been positively harming the industry's interests and now netting in dwindling revenues for the Exchequer. An export duty flourishes when both domestic supplies and external demand are inelastic. Since such inelasticity of demand has, in most cases, been overestimated and the potential threat from competition and substitution underestimated, the imposts have misfired quite frequently. With normality returning to the industry in Bangladesh and competition from synthetics steadily becoming more and more fierce, the demand for Indian goods has been becoming increasingly elastic. The basic object behind the levies was to mop up the windfall profits which would have otherwise accrued to the manufac-

turers and shippers in a predominantly sellers' market. Since such conditions do not exist any longer, the article concludes that there is no case now for the continuance of the duties. The partial reduction in the impost on primary carpet-backing cloth, announced on 31st October, is unlikely to help broaden the export oftake of Indian jute goods.

J. C. I.'s Plans

The Jute Corporation of India has decided to make bulk purchases of 25 per cent to 30 per cent of the country's annual output of fibre directly from the farmers from the next season for "the benefit of the growers", said Mr. L. N. Mishra, Central Minister for Foreign Trade, recently in Patna. Briefing newsmen after the meeting of the J.C.I., he said that the price of fibre in the primary markets had risen from Rs. 32 to Rs. 35 to Rs. 40 to Rs. 45 a maund, largely due to the timely price support purchases by the Corporation in a sagging market. In view of the absence of a suitable sales organisation for the growers, the J.C.I. endorsed a proposal to encourage the setting up of jute growers' co-operatives on the lines of the cotton growers' co-operatives in Gujarat, Maharashtra, Andhra and other States. It also decided to organise its own purchasing, grading and storage arrangements. While the number of centres in Bihar was to be increased from four this season to 40 next season, 50 such centres were

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base : August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to October 1972. As compared with September, the October index for Food shows a rise of 2 points,

while those for Fuel and Lighting, Clothing and Miscellaneous remain unchanged at 482,752 and 402 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 1 point during October 1972.

proposed for West Bengal. The Corporation also intended to raise its own cadre of about 100 purchasing officers.

Good Quality Fibre

A Central committee of experts has approved the West Bengal Government's programme for raising the production of quality jute by providing special irrigation facilities. The plan has been incorporated in the State's overall agricultural plan. Endorsing the need for stabilising jute production, particularly in the *olitorius* tract, the team has emphasised that production can only be stabilised by the provision of adequate irrigation facilities at sowing time, as also during the period of early growth of jute plants in drought-prone areas of the State. Since both surface and ground water is abundant in the *olitorius* area, the team has opined that two or three irrigations will be enough for the production of *olitorius* jute of good quality. Earlier sowing of jute with irrigation, it continues, will help timely inter-culture, thus providing full employment to about 60,000 persons at 250 mandays a year.

Gunnies Harden

After opening on a shaky note and losing substantial ground during the first two days, the Calcutta gunny market witnessed a moderate reversal of the trend, which helped to erase most of the initial losses. The earlier hesitancy stemmed from the report that a Syrian tender for some 13,000 bales of sacking on an extended delivery schedule had been bagged by Bangladesh against an appreciably lower quotation. The pessimistic report of the five-man industry-Government delegation which recently visited major overseas markets on the brisk substitution of jute goods by synthetics also induced caution. The team has laid stress on the need to reduce the price of the end-products, and also to maintain steady availability at stable prices by holding adequate buffer stocks of goods, preferably in the major consuming markets. As there was little scope for reducing the cost of production, the team impliedly suggested the removal of the heavy fiscal imposts. Despite the buoyant trend in the fibre market and the reluctance of mills to extend their commitments at the declining levels, sentiment continued to be further depressed on the report that the heavy decline in overall despatches from 87,900 tonnes in

September to 80,800 tonnes in October was due to a slump in the export offtake from 44,600 tonnes to 39,500 tonnes and a moderate setback in internal consumption from 43,300 tonnes to 41,300 tonnes. But since mid-week there was a marked reversal of the trend following the elimination of a number of weaker bulls and the clearance of the market load. The reserve shown by the mills and the further hardening of fibre prices, combined with hopes of bagging the second Egyptian tender reportedly for sacking, and the emergence of a more balanced technical position were the stimulants, helping prices to harden appreciably. Business, however, continued to be more or less of a speculative nature. A bleak fibre supply outlook during the remaining period of the season highlighted the prospect of a production cut. While hessian scored only minor gains, heavy goods made a more comfortable recovery. The bullishness was also propped up by a moderate extent of short and shipper-covering against the forthcoming due date settlement of accounts. Besides, chances of a reduced availability of outward-bound loaders for the second half of December induced most exporters to complete their end-December and early-January shipment commitments ahead of schedule. In the hedge market, B Twills futures contracts for November delivery were duly closed on 22nd November. February delivery contracts were briskly transacted thereafter. Turnover was moderate and the closing undertone was bullish.

Fibre Buoyant

Notwithstanding the erratic fluctuations in finished goods, the raw jute market ruled exceptionally buoyant during the past week due mainly to an appreciable shrinkage in the floating stocks and the virtual absence of declared sellers of acceptable grades of fibre. Mills and their agents showed keen and sustained interest in suitable grade fibre in spite of rising prices both at Cossipore and in the uncountryp agencies. The

report that the Jute Corporation of India could purchase only 25,320 bales of 180 kilograms each up to 8th November highlighted the bleak chances of adequate fibre supplies from that source. The comparative raw jute statement of mills reporting to the I.J.M.A. indicated an increase in the arrival of fibre to mill stations to 2.129 million bales for the first four months of the season from 1.795 million bales for the comparable period of 1971-72 and also in fibre consumption from 2.073 million bales to 2.12 million bales, while outstanding deliveries against earlier purchases at the end of October slumped from 1.115 million bales last year to a bare 671,000 bales this year. Even chances of much larger imports failed to curb the runaway price trend, for the world fibre market was likely to rule buoyant well above £112 a tonne f.o.b. Chittagong/Chalna, the indicative price-range for Bangladesh jute recommended by the F.A.O. Turnover was moderate. The closing undertone was buoyant.

TEA

Good General Demand

A Special Correspondent writes: At last week's tea auction in Calcutta, the offerings amounted to 54,190 packages for which there was a good general demand. C.T.C. teas were readily taken up. Plain and medium fannings sold at firm rates while the few good liquoring varieties were dearer. Broken, however, were barely steady. Clean plain orthodox broken were a strong feature and were generally dearer while the fannings were firm. Assam orthodox received better support at last rates. Darjeeling teas, particularly the stylish and good liquoring varieties, received better support.

Need explosion-proof lighting fittings for your factory?

Here are 6 good reasons why *Baliga* explosion-proof fittings ensure safety best.

Thorough knowledge of your needs:
Baliga are fully in tune with your requirements right from the planning stage.

Expert designing:
Each item is designed with greatest care by experts to ISI specifications.

Quality Control:
At every stage, from selecting raw materials to finishing—and every item is tested before it leaves the factory.

Proven durability:
Their durability has been proved by the numerous users throughout India and overseas.

Wide range:
Baliga have a wide range of lighting fittings and accessories to choose from.

Tested and approved by the Central Mining Research Station, Chief Inspector of Explosives and DGFAS.

For further details, please write to:
BALIGA LIGHTING EQUIPMENT PVT.LTD.
Medavakkam Road, Kovilambakkam, Madras-43.

Value of bringing out SUPPLEMENTS in CAPITAL

Proclaimed as India's leading and most widely read weekly newspaper devoted to economics, industry and public affairs, CAPITAL is considered indispensable by those who constitute the bulk of buying power. They include, among others, people holding important positions in Government departments, public and private-sector projects and undertakings, and commercial establishments of all descriptions.

CAPITAL is a unique medium for bringing out sponsored supplements and features.

Your advertisements in CAPITAL supplements symbolise silent propagation of your goods and services throughout the country. Their impact may not be visible immediately, but they do yield handsome dividends in the long run.

CAPITAL, 30th NOVEMBER, 1972

CAPITAL

(Founded in 1888: Published every Thursday)

CAPITAL is India's most widely-read weekly newspaper dealing with economics, industry and public affairs. It has the mature experience of more than 80 years, and is the oldest journal of its kind in the country. Each week, it brings authoritative and comprehensive coverage of the main problem and events affecting the progress of the economy and the growth of industry. It separates the important from the unimportant; it presents simply, clearly and reliably what all informed observers of the economic scene ought to know.

Readers of CAPITAL are mainly people holding positions of vital importance in Government, business, industry and academic institutions. Many of them are intimately concerned with the framing of the country's economic policies. Many direct and control industrial, banking and commercial institutions. Together they represent a fund of economic opinion and buying power that no advertiser can afford to ignore.

The tiny seed 'P & D' planted about 15 years ago has today grown into a mighty spreading banyan tree, casting its indispensable influence over an ever widening area.

From the nucleus of a group of dedicated scientists and technologists, P & D has, within the short span of its existence, grown into a comprehensive multifunctional integrated organisation with extensive modern physical, chemical and agronomical research laboratories. It has also developed the various disciplines needed for the setting up of fertilizer plants: Planning, Process Design, Engineering in all its aspects and Project Coordination. Today, P & D employs over 3 000 persons and the projects in hand involve a capital outlay of over Rs. 8,000 million.

In the light of the target set for the production of fertilizers in the country there is immense leeway to be made, and P & D is fully geared to meet the challenge.

After Delineation What?

ALL is well that ends well. The prolonged negotiations over the delineation of the line of control in Jammu and Kashmir have at last been brought to a satisfactory conclusion. The spirit of give and take proclaimed by Mr. Swaran Singh and symbolised by the Simla agreement has been vindicated once again. Pakistan has withdrawn its claim to the disputed three square kilometres of territory at Thako Chak and in return India has paid a certain compensation in the form of minor adjustments. The details of the adjustments have not yet been revealed but clearly nothing has been done to prejudice Indian interests. After all, New Delhi had long been talking of rationalisation of the line of control.

The settlement does not, however, altogether clear up the mystery behind why Pakistan had been dragging its feet so long. The failure of the talks at the military level from August to December was deliberate policy on the part of Pakistan. In terms of territory, Islamabad has gained nothing at all. On the other hand, it has lost on more than one count. Mr. Bhutto wanted the five hundred thousand Pakistani refugees to be back home before the sowing of the *rabi* crop. That has not happened. And understandably, because of the delay over delineation, the resolution of other outstanding issues remains unaccomplished. The withdrawal of troops to the international frontier has not taken place. India has seen no reason to vacate 5,200 square miles of Pakistani territory in its occupation. And although some welcome steps have been taken in repatriating stranded civilians, the 91,000 Pakistani prisoners of war who are a liability to India remain in the Indian camps. Yet, Mr. Bhutto has time after time expressed his anxiety to get these barriers to peace out of the way.

Not everything can be explained away as a reflection of Mr. Bhutto's divided mind. That of course is there.

With a brazen lack of consistency, he talks of the need for normalising relations with what he calls Muslim Bengal—the name is just to sweeten the bitter pill for the militant groups—and at the same time openly declares his intention of doing every thing possible to block Bangladesh's entry into the U.N. Nevertheless, the Pakistani stalling tactics were based on somewhat deeper calculations. The territory in question was of no great consequence, as Mr. Bhutto has himself indicated. But he found it necessary all the same to make the fictitious claim that it had long belonged to Pakistan. There was in every objection raised by the Pakistanis a clear design to buy time. To what purpose is, however, open to speculation.

It can be argued that Mr. Bhutto's playing for time—it has by now been revealed that the Pakistani dilatoriness was not thrust by the military top brass upon an unwilling President—was in the main the result of his anxiety to see Bangladesh kept out of the world body as long as possible. Islamabad can always count on Peking's help in the matter although as to who is leading whom there is no clear answer. It is important to Pakistan that Bangladesh gets no entry, for the latter's admission will cause its total diplomatic isolation. There is also the view that Mr. Bhutto was holding up a settlement to wait for the opposition to the Simla agreement in his country to lose its bite and to consolidate his position in the face of the threat from the Jamiat-i-Islam, the Qayyum Muslim League, the Punjabi members in the Pakistan People's Party and the rehabilitated army leadership. One may wonder, however, if the opposition can be so disarmed and what has happened at this particular moment that has induced Mr. Bhutto to accept a settlement that he could have obtained months ago.

It was totally unconvincing that Generals discussing maps could be at variance with one another on points

of legal import. Islamabad gave the world to understand that the dispute over Thako Chak arose out of the interpretation of the Simla agreement. While India had taken its stand on the basis of Clause 1 which said that the Indian and Pakistani troops would be withdrawn to their side of the international border, Pakistan conveniently sought refuge in Clause 2 which spoke of respecting the line of control resulting from the cease-fire of 17th December last year. It is absolutely clear that this issue was pure eye-wash. Pakistan never meant to stick to that line for it could have cost it areas of far greater strategic value than Thako Chak.

Now that the Generals have agreed, the big question is what next? Will the course of peace-making in the sub-continent run smooth? There will be no trouble from the Indian side; Mr. Swaran Singh had shown the extent of India's accommodating attitude when he expressed willingness to thrash out the Thako Chak dispute at a political level. The Prime Minister, Mrs. Gandhi, has already talked of another summit meeting in the fulness of time. In a way it is good that the dispute has been settled at the military level but still its consequences will be chiefly political. The Kashmir situation has acquired a new complexion because of the agreement. Now the old cease-fire line has become obsolete and a case can be made out for requesting the abolition of U.N. supervision. One of the reasons Pakistan was making difficulties was that it did not wish to create a precedent. Whether or not India ever turns it to account, a precedent, no doubt, has now been created.

There is in any event good reason to be sceptical about Mr. Bhutto's future contribution to peace-making. Common sense demands Islamabad's recognition of Bangladesh. But Mr. Bhutto's position in his homeland is not all that unassailable, despite what some foreign correspondents may say, and he has to prepare his people, the more impressionable and potentially the more influential sections, for this acceptance of reality. Islamabad has complicated the position by tying up the issue of recognition with other matters which it is not possible for Dacca to take up until it is formally recognised. In the meantime, Pakistan goes on shopping for arms and having a military build-up. That, together with the Chinese connection, raises doubt about Mr. Bhutto's intentions. His talk of revenge may not be

just heroics. Pakistan is obtaining arms and military equipment from China, Libya and even private arms dealers. Two new divisions have been raised after the December debacle and it is thought that militarily Pakistan will be by the middle of next year better off than it was before last year's war. The emphasis on defence

may be incompatible with the need for reviving the sagging economy but it has political benefits. The belligerence appeals to certain elements, both at home and abroad. Whether that attitude will be ultimately of benefit to Mr. Bhutto himself, uneasily placed in a still unformed civilian regime, is another matter.

Mulki Rules: A New Turn

A NEW dimension has now been added to the Mulki rules issue in Andhra Pradesh with the decision of nine Andhra Ministers to quit the Cabinet. The Ministers have handed over their resignations to the Congress President, Dr. S. D. Sharma, after informing him that in the present circumstances, it would not be possible for them to continue in the Ministry. Obviously, they are dissatisfied with the five-point formula announced by the Prime Minister, Mrs. Indira Gandhi, in Parliament to solve the Mulki rules problem. More than their own disappointment with the formula, they have told the Congress President and, later, the Prime Minister that the people of their region have totally rejected the formula and as such it would not be possible for them to stay in the Government in the face of public resentment against the solution offered.

The circumstances under which Mrs. Gandhi announced the formula are well-known. For weeks, the leaders of Andhra Pradesh had been unable to agree among themselves as to how the problem posed by the validation of the Mulki rules by the Supreme Court should be resolved. They were not in a position to offer a solution which would be acceptable to the people of both the regions. The Chief Minister, Mr. Narasimha Rao, who hails from Telengana, too failed to present a formula on behalf of his Cabinet. The Andhra Ministers, on the one side, demanded complete scrapping of the Mulki rules, especially in the capital city, while their Telengana counterparts on the other would not countenance any such move. The Chief Minister could not just bring the two sides together but tempers meanwhile in both the regions ran high and found expression in violence. In the Andhra region, the main target of attack was railway property. Although the agitation was not so intense in Telengana, the situation there was also quite explosive. And

all this has intensified the demand for dividing Andhra Pradesh into two States.

It was at this stage that the Centre intervened. The Prime Minister and some of her colleagues made genuine efforts to make the two parties agree to an amicable solution. But when this too failed, the Prime Minister had no other option than to announce her formula to solve the issue. Its main point is that the Mulki rules will end in the capital city of Hyderabad by 1977 while in the rest of the Telengana region they will cease to operate with effect from 1980. Thus, two different deadlines were fixed. Secondly, it was made clear that during this period, the Mulki rules will apply only to particular categories of jobs in Government and not at all levels. Thirdly, Hyderabad city will have a common police force so as to ensure security and safety for all sections of the people. This became necessary because during earlier agitations, the life of the Andhra citizens in the capital was sometimes alleged to be insecure. Fourthly, the Mulki rules are made inapplicable in all offices like the secretariat which have common jurisdiction. Finally, it was agreed that in composite offices, the ratio of two to one as between the people of the two regions should be maintained in matters of employment.

The Prime Minister had clearly stated in her announcement that she was offering the solution in the absence of any agreement among the leaders of the State and there was no question of imposing any formula from top. Another point that emerged was that there could not be any division of the State into two to satisfy the extremist sections in the two regions. Here again, the Prime Minister pointed out that any division would only create more problems not only in Andhra but also elsewhere. She was obviously referring

to similar regional demands in Maharashtra, Bihar, Uttar Pradesh, etcetera. If the demand for division in Andhra is conceded, it will have a snowball effect and set at nought the wholesome principle of "one language one State" on which basis the country was divided several years ago into linguistic States.

But ever since the announcement of the formula, there has been a systematic campaign against its acceptance. The leaders of the Andhra region are thoroughly dissatisfied with it because the deadline for abolition of Mulki rules has been extended from 1974 to 1977. In the Public Employment Act which was later struck down by the Supreme Court, the Mulki rules were to operate only until 1974. So the question is asked as to why the Government should now have thought it necessary to give a fresh lease of life to the rules for three more years. Mrs. Gandhi explained to the leaders that this extension became necessary since for three years nothing was done in pursuance of this Act to protect the interests of the people of Telengana. But this explanation apparently has not carried much conviction with them.

The crux of the matter is that a large section of the Andhra people is now in favour of separation. In 1969 when the Telengana agitation was at its height, the people of the Andhra region resisted all moves for a division. But now they seem to feel that it would be better for the people of the two regions to part ways rather than live in one State under perennial mutual suspicion. And it is difficult to dismiss this argument lightly. There has hardly been any emotional integration between the peoples of the two regions so far, thanks to the separatist institutions that have been set up in the State like the Telengana Regional Committee, separate Telengana Budget and so on. These have only helped to accentuate the differences. To these is now added the Mulki rules under which all those who are not resident of the region for a continuous period of 15 years will be disqualified to hold jobs in the Government or secure admission to colleges in the region. The Andhras feel unhappy about this measure. Hyderabad city is the capital of the entire State and just because it is part of the Telengana region, the Andhras argue, it would be ridiculous to make any distinction between a "Mulki" and "non-Mulki."

It is not yet clear as to how the Centre will assuage the feelings of the people of Andhra. The five-point formula certainly deserves to be given a fair trial. Meanwhile, New Delhi should also give an assurance that all separatist institutions too will cease to operate by a fixed date so that the process of emotional integration, which is conspicuous by its absence now, can be initiated. This is exactly what the Andhra Ministers too

Battling with the Baby Boom

THE Government of India is reported to have decided to discontinue financial assistance to private organisations for undertaking family planning work. The reasons for this decision have not been explained officially. It is presumed, however, that the Government has come across gross irregularities and abuses on the part of certain organisations which have been carrying on family planning activities with grants from official sources. The Government, of course, will be justified in withdrawing financial support from organisations which deliberately and persistently indulge in irregularities. But it will surely be wrong and unfair to withhold or reduce financial assistance from all private organisations which have been engaged in family planning work.

Many respectable bodies, including some well-known chambers of commerce, have been doing commendable work in propagating the message of small families, especially among industrial workers. For example, the Family Planning Unit of the Indian Chamber of Commerce, Calcutta, has been rendering useful service among industrial workers in this State. Between 1966-67 and 1971-72, this unit has performed over 19,570 vasectomy operations. It claims to have achieved considerable success in persuading workers to use conventional contraceptives. Through seminars, conferences, film shows, and exhibitions, it has been able to motivate a large number of workers to adopt birth control techniques. The Indian Merchants Chamber of Bombay has also been encouraging industrial organisations to undertake family planning work. The Federation of Indian Chambers of Commerce and Industry is understood to be receiving grants from some international organisations to take up family planning activities in the

would want. They have made it known that they do not desire a division of the State but their plea is for creating conditions under which the operation of an integrated State will not become a farce. The future of the Telengana Regional Committee, which was actually set up as a forum for discussion of matters pertaining only to the Telengana region, has now thus become a major issue.

country. Such organisations should be encouraged to continue this activity subject, of course, to constant vigilance on the right use of funds.

The need to enlist the active co-operation of the private agencies in implementing the family planning programme will become clear when the magnitude of the problem of population growth in India is fully realised. India at present has about 200 million more people than at the time of independence. The population in 1971 was 547 million, compared with 439 million in 1961 and 361 million in 1951. It is obvious that if the current rate of growth is not checked effectively, there is little prospect of an appreciable improvement in the living standards of the great majority of the people. At the meeting of the Central Family Planning Council held in Hyderabad some time back, Mr. D. P. Chattopadhyaya, Central Minister of State for Health and Family Planning, revealed that it was proposed to perform 10 million sterilisation operations and 5 million I.U.C.D. insertions, and enrol 10 million users of conventional contraceptives in 1972-73 and 1973-74. He suggested that while promoting the sterilisation programme it was necessary to encourage spacing of births among the younger age groups of couples by means of I.U.C.D. insertions and conventional contraceptives. It is obvious that such a programme cannot be carried out successfully merely by the efforts of the Government. Sincere and whole-hearted co-operation of voluntary organisations is not only desirable but very essential.

In the recent years the Government of India has been spending colossal sums of money on family

planning. In the Fourth Five Year Plan, the allocation for family planning was Rs. 315 crores while it was only Rs. 25 crores in the Third Plan, Rs. 2.2 crores in the Second Plan, and Rs. 14 lakhs in the First Plan. The objective is to reduce the birth rate from about 38 for each 1,000 at present to 25 by 1980-81. But the present programme has not been quite effective. As the Federation of Indian Chambers of Commerce and Industry recently said in a study: "Those susceptible to easier motivation have been brought within its net. The hard core, however, remains untouched. It is, therefore, necessary that any programme which has to reach India's population effectively, must be larger than the present one. Increased attention also needs to be paid to communication, education and motivation aspects of

the programme. All efforts have to be made to rehabilitate the I.U.C.D. programme which remains the only known cheap and reversible method. There is also an urgent need for a thorough and continuous evaluation of the present sterilisation programme and for adequate arrangements for systematic feed-back of findings. Demographic significance of sterilisation has also to be carefully assessed". So, while the Government's anxiety to avoid malpractices by private agencies is understandable, it is necessary to emphasise the need for official organisations to ensure that they do the job efficiently and honestly. There have been numerous complaints from various parts of the country about large-scale corruption and coercion resorted to by official bodies which have been entrusted with family planning work.

Refixing the Pound

THE pound had been floating for rather more than three and a half months when Britain's Chancellor of the Exchequer, Mr. Anthony Barber, said last October: "We intend to return to a fixed parity as soon as conditions permit, which I hope will be before 1st January." Subsequent official statements omitted any reference to 1st January, which was evidently recognised as incompatible with "as soon as conditions permit". Britain was committed to the European Community from the beginning of 1973, and the Community's system required fixed parities; but even its French element could see that fixing the pound at random would defeat the purpose of fixing it at all—which is (as far as the Community is concerned) to unify and stabilise the system. When Mr. Barber uttered that statement in October the British Government's efforts to negotiate a voluntary system of controlling prices and wages had not yet failed. It is possible that a voluntary agreement would have restored the pound to the region of \$2.40 and that it could have been realistically fixed at that "pre-Nixon" rate before the year-end. But the development of the two-phase statutory system of controls, extending well into 1973, was one of the "conditions" of a realistic parity. An additional complication—in that hapless 1972—was a nationwide dock strike that invalidated relevant statistics for many months. The underlying trends of Britain's balance

of payments and (particularly relevant) of her export prices were confused by the interruption of trade, in a period when the clearest possible view of such trends was required for refixing the pound.

One essential fact that international statistics have shown is that by the first quarter of 1972 (when the Smithsonian Agreement had recently fixed the pound at slightly above \$2.60) all the so-called "competitive advantage" of the devaluation (to \$2.40) in November 1967 had been lost. As the pound was manifestly overvalued before that devaluation, much of the so-called "advantage" was in fact the correction of a disadvantage. The "Smithsonian" revaluation was soon recognised as unrealistic (although the £-\$ parity alone was no longer an accurate measure of the pound's international valuation), and it was widely assumed that the floating pound would revert to \$2.40 and be fixed there. Five years after the last formal devaluation the £-\$ rate seemed to have found "an area of stability"; around \$2.35, not \$2.40. The British authorities' intervention to regulate the floating rate had been rare and on a modest scale; "market forces" had indicated that devaluation by some 10 per cent from the "Smithsonian" rate was generally considered appropriate. But in a previous "area of stability", before the price/wage crisis, a much smaller devaluation had been indicated. As there is

not much room for such changes of opinion (and so of "market forces") when parities are fixed, the authorities could not "return to a fixed parity" until they were reasonably sure that opinion was stable.

There is an apparent escape, from what could be a long-term predicament, in the accepted policy of "fixed but adjustable" parities. But Britain's partners in Europe would not allow frequent adjustments in the years before unification, and any adjustment soon after Britain's entry into the Community would be (to put it mildly) disconcerting. There would be no sense, anyway, in an experimental parity, when the purpose of the whole floating operation was to find a rate that would be (as far as parities can be) permanent. Letting the pound "find its own level" before venturing into Europe seemed not only inevitable—in the circumstances—but also sensible. In retrospect, however, it seems that a better procedure would have been to value the pound more "realistically" in December 1971, so avoiding (it may be assumed) the crisis of June 1972, and to take the fixed pound into Europe for a period of testing. An appropriate rate established in the conditions of 1972 (if it could be established) might be a very inappropriate rate in the conditions of 1973 and after, when the unpredictable influences of the Common Market were operating on the currency. The proper environment for a lasting adjustment of the pound is (Britain's partners permitting) inside Europe. And the process needs time.

The basic cause of the sterling crisis last June was Britain's inflation; the immediate causes of it were—as usual—transfers of short-term capital and "leads and lags" in payments. The crisis demonstrated that the pound was still vulnerable to those short-term factors, although its rôle as an international currency was diminished. A "realistic" rate is, of course, the essential of stability; but it must also be recognised as "realistic", or as an under rather than an over-valuation. Even if the inflation is effectively controlled, the confidence factor will incline the British authorities towards moderate under-valuation. But the European partners may strongly resist such a policy. Of course, any arrangement for an individual currency is provisional, as a new international monetary system may change it. The Americans have favoured a scheme for automatic adjustment of currencies

that are (by some agreed standard) maladjusted. In such a scheme it would seem not only possible but obligatory to correct a serious error in the refixing of the pound. But the scheme itself is controversial, and even if it were adopted in general it would evidently not be applicable to relative values within the European Community.

So the British authorities—under pressure from their new partners—must proceed on conventional lines. While keeping inflation under strict control, they must assess approxi-

mately (they cannot calculate precisely) how the balance of payments will appear when the effects of the recent *de facto* devaluation of the pound by some 10 per cent have worked through the system. The Organisation for Economic Co-operation and Development has predicted that the current account, roughly balanced in 1972, will be hundreds of millions of pounds in deficit in 1973; but the so-called "J-curve" indicates a long-term favourable effect after a short-term adverse effect of devaluation. Events may confirm that a parity of \$2.35 would be appropriate.

The Ethics of Free Enterprise

FOLLOWING (after a damaging delay) the American example, the British Government has formally recognised that in conditions of abnormal inflation companies' freedom to negotiate the wages of their employees and set the prices of their products must be restricted. There are various legal or moral obligations elsewhere involving such matters as dismissal of workers and racial composition of the work force, control of pollution, and disposal of profits. While the Japanese authorities try to fit the private sector's finance and trade into a concept of currencies and payments that the world will—hopefully—accept, such "champions of free enterprise" as the United States and Britain recognise and enforce the principle that freedom of enterprise must be qualified by the requirements of society.

The British Government's "conversion" is especially significant because, the Prime Minister, Mr. Edward Heath, and his like-minded colleagues (some Ministers were never so committed) set out to demonstrate that minimally regulated free enterprise would best serve the community, optimal use of resources being achieved by "market forces", to which the private sector would respond. When Sir Frederick Catherwood, former director-general of the National Economic Development Office, said recently that unusually keen competition had failed to deal with the problem of inflation, and that while the labour market was "left to the competition of thousands of companies operating in their own self-interest" inflation would "continue and accelerate", he emphasised the need to keep costly investment productive.

and the consequent compulsion to submit to demands rather than suffer strikes; and when the Government had committed itself to economic growth it could not impose financial conditions that would make submission impracticable.

Gradually, in varying degrees, Governments are recognising their responsibility for maintaining the value of money, and recognising that control of inflation, by whatever means, involves some interference with free enterprise. Ordinary people are concerned with their security of employment and their standard of living, not with economic theories of maximising utilisation of their country's resources. They will not permanently tolerate a social/economic system that is not serving their aspirations. "The dominant concept today", Mr. P. C. Louwers, chief of the internal audit services of Dutch electrical giant, Philips N.V., said recently, "is that a company holds a franchise from society"; so management is "accountable towards a larger universe than shareholder interests". The management of General Motors, the biggest industrial group in "capitalist" society, may remember wistfully the philosophy that was implied in the dictum "What is good for General Motors is good for America"; or it may recognise that G.M.'s new "social conscience" (reflected in policies of employment, safety, pollution, etcetera) is a condition of its (relative) freedom of enterprise. The bigger the business, more obviously it is "accountable" to society. But it would be cynical to suggest that managements had adapted their policies only to keep their "franchise": a modern management that cares

nothing for the social consequences of its operations is peculiarly unprogressive.

Developing countries—an obvious example is Chile—are far from convinced that this "social conscience" is adequately developed, and they may doubt that it can ever become so. American and British statistics showing remitted profits far in excess of new investments in recent decades confirm suspicions that direct investors require full recovery of their outlay within a few years—and thus raise doubts about the principle of aiding developing countries by private investment (which is often in inessential production). In domestic affairs there are still—in the new mood of scrutiny—harsh criticisms of financial operations, such as "asset-stripping", that seem to serve no social purpose. "Releasing underutilised resources" may be good in principle, but it is no benefit to the community unless the resources are redeployed more productively. However, Britain's veteran "asset-stripper", Sir Charles Clore, has stated that his Sears Holdings group is not now interested in this kind of operation and that all its future acquisitions will be "productive".

Financial institutions (as distinct from finance-oriented companies) are hesitantly adapting to the changed environment. The long-term trend of personal savings from individual investment in stocks and shares to institutional investment through life-assurance and pension funds and unit trusts and deposits has increased in general the institutions' responsibility and in particular their involvement in industry and trade. Both the responsibility and the involvement were emphasised last year when the Bank of England was obliged to organise—in the reluctant City of London—financial assistance for Rolls-Royce, and they were recently re-emphasised (the Bank having in the meantime initiated an investigation of procedures) when the Bank's Governor, Sir Leslie O'Brien, declared himself "particularly interested . . . in improving the means whereby institutional investors can collaborate with industrial managements to secure increased efficiency".

"Increased efficiency" and "social well-being" are not now accepted as synonymous. Institutions, willing, or persuaded, to intervene in management of non-financial business, will be obliged to act as "the social con-

science" of small savers. Traditionally, the institutions' prime responsibility is to the owners of the funds entrusted to them. They invest these funds for asset value and for income; but the new "business ethic" may often require some sacrifice of either or both. In the concept of "ethical free enterprise", the weakest element is capital formation. If in-

CURRENT COMMENT

SHIPPING

The E.C.A.F.E. Region

A special meeting of the members of the All India Shippers' Council, held in New Delhi a few days ago under the chairmanship of Mr. L. N. Birla, was addressed by U. Nyun, Executive Secretary of the United Nations Economic Commission for Asia and the Far East (E.C.A.F.E.). Mr. Birla in his introductory observations suggested, among other things, that the E.C.A.F.E. should constitute a study team composed of representatives of shippers and ship-owners to undertake a survey of the intra-regional trade and shipping services between the countries of the region and to make suggestion for the establishment of a suitable network of shipping services so that there are direct services between the main ports in the region. Mr. Nyun welcomed the suggestions made by Mr. Birla and stated that the E.C.A.F.E. would try to implement them. He emphasised the need for the establishment of strong and active shippers organisation in various countries of the region as well as a regional shippers council so that shippers could face the shipping conferences, which enjoy a monopolistic position, on an equal footing. He felt that there was need for pooling the shipping resources of the countries of the region and the formation of a conference composed of shipping lines of the Asian countries, to serve the region's trade.

TANGIBLE WEALTH

Increase Recorded

The total tangible wealth (at current prices) in India increased by 54 per cent—during the five-year period from 1960-61 to 1965-66—from Rs. 67,939 crores to Rs. 1,04,498 crores, excluding tangible wealth in forestry, according to a study "Estimates of Tangible

come from work (mainly wages) increases more than income from property (including industrial profits available for investment), resources for capital formation are (at least, relatively) reduced unless personal savings increase. Financial institutions must attract more savings—while managing savings more "ethically".

Wealth in India" made by Messrs S. P. Gothoskar and Kripa Shanker of the Department of Statistics, published in the October 1972 issue of the *Reserve Bank of India Bulletin*. The increase was accounted for by both land and reproducible tangible wealth—the value of land rising from Rs. 21,317 crores in 1960-61 to Rs. 31,378 crores in 1965-66 (+ 47 per cent) and the total reproducible tangible wealth from Rs. 46,622 crores to Rs. 73,120 crores (+57 per cent). The real increase in the total tangible wealth obtained by deflating the estimates in terms of the investment-cost index was about 24 per cent over the five-year period.

Although the value of household property (excluding land and assets used in farm business) moved up from Rs. 19,630 crores to Rs. 25,570 crores, its share in the total tangible wealth declined from 28.9 per cent in 1960-61 to 24.5 per cent in 1965-66. The value of the reproducible tangible wealth rose from Rs. 7,518 crores to Rs. 12,037 crores in agriculture and allied activities, from Rs. 7,309 crores to Rs. 14,732 crores in mining and manufacturing, from Rs. 5,825 crores to Rs. 10,362 crores in transport and communications, from Rs. 4,331 crores to Rs. 7,293 crores in trade and commerce, and from Rs. 2,009 crores to Rs. 3,126 crores in Government administration. In the two sectors "mining and manufacturing" and "transport and communications", the manufacturing industries, electricity generation and transmission, railways, roads and bridges, and vehicles recorded considerable increases in their reproducible tangible wealth.

The accent on the expansion of the public sector in the Third Plan is reflected in the rise in the share of reproducible tangible wealth owned by the public sector from 20.4 per cent (Rs. 9,524 crores) in 1960-61 to 25.2 per cent (Rs. 18,453 crores) in 1965-66, the rise being mainly in the manufacturing industries, electricity generation

and transmission, transport, and public land improvement and irrigation works. The share of the private sector declined from 79.6 per cent to 74.8 per cent, although in absolute terms the total value rose from Rs. 37,098 crores to Rs. 54,667 crores.

ORGANISATIONS

Code of Conduct Needed

Addressing a meeting organised by the executive committee members of Lion and the Economic Study Group of the Bharat Chamber of Commerce in Calcutta a few days ago, Mr. Naval H. Tata, president, Employers' Federation of India, said that for efficient operation of any industrial organisation, the top management has to function as a co-ordinator. It has also to discharge a wide range of obligations to employees, customers and investors and to the community. Thus, management has its own responsibilities, and it would be hard to dispute that any responsibility should carry with it the corresponding authority in some form. Without such authority, responsibility cannot be effectively shouldered. On the other hand, any misuse of such authority degenerates into coercion. It is, therefore, incumbent on both management and labour to observe a strict code of conduct. Under this code, labour must learn that every right is accompanied by a responsibility. Correspondingly, under this code the management must understand that every act of managerial responsibility carries with it an obligation to the workers.

COMPANY FORMATION

Figures for Eastern Region

During the quarter ended September 1972, company formation showed a downward trend as 130 companies registered in the eastern region, against 161 in the previous quarter. The total authorised capital with which the companies were registered was Rs. 1,410.15 lakhs, compared with Rs. 4,689.90 lakhs during the previous quarter. Five companies transferred their registered offices from West Bengal to New Delhi, Himachal Pradesh, Haryana, Union Territory of Delhi and Maharashtra and one company transferred its registered office from Haryana to West Bengal. Two companies with an aggregate paid-up capital of Rs. 55.02 lakhs went into liquidation. No company

was, however, struck off the Register of Companies of the Companies Act 1956 during the said quarter. Two companies in West Bengal issued prospects offering to the public debentures and shares to the extent of Rs. 97.12 lakhs.

COMPUTERS

London Exhibition

Britain's Secretary of State for Trade and Industry, Mr. Peter Walker, has predicted that by the end of this century the computer industry may be the largest in the world. Opening London's Computer 72 Exhibition a few days ago, Mr. Walker said it would be the world's third largest industry by 1980. It was currently expanding at the rate of 15 per cent a year. The Minister said Europe was the big new expanding computer market, now growing faster than even the United States. Britain's computer industry, which has a record order-book worth £700 million, is currently involved in talks with the French and German industries with a view to collaborative projects or an eventful merger. More than 200 companies are showing at what is London's second major computer exhibition. Overseas firms include a strong contingent of 58 from the United States.

CANADIAN AID

New Agreements

The Canadian International Development Agency has announced the signing in New Delhi a few days ago of agreements covering the participation of Canada and the Government of India in two development assistance projects. Under one agreement, an additional \$1.9 million has been added to a long-term loan agreement to purchase equipment to handle bulk fertilisers at Indian ports. The \$1.9 million aid has been earmarked for equipping the Haldia dock of the port of Calcutta. The machinery includes two marine loaders, conveyors, reclaiming and storage equipment, pulverisers, dust control equipment, bagging and stitching machines and payloaders. An original loan of \$1.7 million was made to India for the installation of similar equipment at Kandla port. Extension of the agreement to cover the Calcutta dock brings the loan to a total of \$3.6 million for handling fertilisers. Import costs of fertilisers will be reduced

with the improved dockside facilities which will be able to handle large bulk carriers with lower ocean shipping rates and unloading costs. The second agreement provides for a grant of \$300,000 to cover Canadian participation in a feasibility study for the development of extensive copper deposits in Rakha (Bihar).

INFLATION

A Matter of Grave Concern

Mr. K. C. Chaudhuri, former Vice-Chancellor of Visva Bharati University, delivered the Bipin Chandra Pal Memorial Lectures in the University of Jadavpur a few days ago. The lectures were organised by the authorities of the Bipin Chandra Pal Institute. Mr. Chaudhuri discussed in detail the vital problems of the day, such as inflation, the deteriorating administration and the crisis in education. Although there has been considerable growth in the country's industrial and agricultural sectors during the 25 years of independence, new problems and confusions have emerged in certain areas. Mr. Chaudhuri expressed grave concern over the rising prices for which he held Government policies responsible. Unless remedial measures are taken, the present situation will inevitably lead the country to a financial catastrophe. Mr. Chaudhuri analysed the causes of the deteriorating quality of administration and of the steadily falling standard of education. According to him, infiltration into the civil service and the educational institutions of political parties is the main cause. He suggested means by which the rush for higher education by persons who have not the capacity for it could be checked. The real solution is to widen the field of productive employment and not to turn out thousands of graduates whose only ambition is to secure employment under the Government.

W.B.F.C.

Credit Policy

Addressing the members of the Merchants' Chamber of Commerce in Calcutta a few days ago, Mr. M. R. Roy, managing director, West Bengal Financial Corporation, stated that the Corporation's credit policy, despite the security clause in its Act, had now been made rather scheme oriented, depending on the technical

and economic feasibility thereof. It is not a fact that the policy has been made "security oriented".

E.E.C.

Preferential Scheme

According to latest information, the European Economic Community will grant preferences for duty free entry of industrial manufactured and semi-manufactured goods from developing countries also in 1973. This duty free scheme has now been on for nearly one and a half years, having been introduced on 1st July, 1971. The E.E.C. offer, being now limited to 91 independent developing countries—the so-called "Group of 77" to which India belongs—as well as to certain dependent territories, will be extended to a number of other countries in 1973. Bangladesh will be one of the countries being added to list of beneficiaries. The products entitled to duty free entry include all manufactured and semi-manufactured products covered under Chapters 25 to 99 (B.T.N.). Cotton textiles are included in E.E.C.s' preferential scheme restricted, however, to a limited number of countries to whom India belongs. Jute and coir products are not included; negotiation, however, are going on with the main exporting countries. Iron and steel products which fall under the agreement of the European Coal and Steel Community (E.C.S.C.) are also included in the E.E.C. duty free scheme.

AUSTRALIAN WOOL

Indian Imports

India imports more wool from Australia than from any other country. This wool is used for various products which India makes and, in turn, exports mainly to Russia. The trade realised a gain of \$14.5 million in the last financial year. Although these statistics are satisfactory, the Australian Wool Commission believes that India's potential as a wool manufacturing and trading nation is still greater. The Commission believes that there is opportunity for India to significantly increase its exports of wool products, particularly to Russia and India's neighbouring countries and also to increase its domestic usage of Australian wool. This is one of the main reasons for the Australian Wool Commission's participation in the third Asian

International Trade Fair in New Delhi.

STEEL WIRE

Raw Materials Shortage

Addressing the annual general meeting of the Steel Wire Manufacturers Association of India in Delhi a few days ago, Mr. M. L. Bharti, chairman, said that to meet the requirements of different special wires like round and flat cable armouring wire, detonator wire, reed wire, cold heading quality mild steel wire, and telegraph wire, billets for low carbon rimming quality wire rods should be imported and made available to the wire industry to meet the requirements of different specialised wires. It was once assumed that low carbon semi-killed wire rods of suitable specifications which may be produced by Bhilai Steel Plant, might be suitable for some of these products. But the shortage of mild steel wire rods in the country is so acute that it is not possible to get sufficient quantity to meet the requirements of the wire industry for the manufacture of specialised wires for this purpose. He therefore suggested that import of billets or wire rods should be made in bulk which should be allocated to wire manufacturers to

meet the requirements for these types of wires, at least to the extent of 30,000 tonnes a year. Steel wire manufacturers are hardly getting any share of this quality of wire rods being produced by Hindustan Steel Ltd, Bhilai. At least 50 per cent of the low carbon rimming quality wire rods produced by Hindustan Steel Ltd, Bhilai, should be allocated to the wire drawing industry.

ASIAN HIGHWAY

Speeding up Construction

Appeals for international aid in speeding completion of the 14-nation Asian Highway, and rebuilding war-damaged routes in Indo-China, marked the annual session of a ministerial-level co-ordinating committee held recently in Vientiane. Members of the Asian Highway Co-ordinating Committee announced plans for constructing and upgrading sections of the Highway network in their countries, expected to total some \$1,400 million for the network as a whole in the 1971-1975 period. Of this amount, the committee estimates that Governments themselves will provide two-thirds and will need external aid for one-third. The committee requested

the United Nations Development Programme (U.N.D.P.) to extend for another five years (1973-77) the institutional support project which, among other things, has enabled the Bangkok-based Asian Highway Transport Technical Bureau (T.T.B.) to carry out the committee's work, year-round, 1968-72.

MONEY MARKET

Easier Trend

The short-term money market has maintained an easy trend, this past week. The call rate has varied between 3 per cent and 3½ per cent, with small lenders over. The demand for remittances has been small. The supply of both gunny and tea bills has also been small. The pound-sterling has weakened against most major foreign currencies during the week.

The latest statement of the Reserve Bank of India for the week ended 1st December, 1972, shows a drop of Rs. 8.72 crores in deposits of scheduled commercial banks with the Reserve Bank to Rs. 281.31 crores, compared with the previous week. Their borrowings from the Bank have increased by Rs. 6.50 crores to Rs. 13.25 crores, of which advances against usance bills have amounted to Rs. 3 crores, against nil. Balances held abroad by the Reserve Bank in the Banking Department show a drop of Rs. 3.51 crores to Rs. 146.56 crores.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations for the 1972 Funds:

Rs. 50

Indian Engineering Association (Eastern Region)

Rs. 25

K.S.I.

Rs. 10 each

T. K. Banerjee and Anonymous

The Fund totals Rs. 997.41, including a carry-forward of Rs. 902.41

A Ditcher's Diary

CALCUTTA IS GOING TO HAVE A lot of excitement at the end of the year. Although the keynote of the Congress session, according to Mr. Siddhartha Sankar Ray, will be austerity, an estimated expenditure of Rs. 40 lakhs cannot but yield some diversion for the general public. I have not been to the Salt Lake township since preparations for the session began; but I am pleased to see, from a photograph of the newly constructed guest house where Mrs. Gandhi will stay, that some of the planning has been imaginative. The picture shows how austerity can be combined with grace; and the guest house may not, after all, be as austere as might be suggested by its resemblance to a thatched hut. Those who have recently had their own houses built in the township may be looking forward to some spin-off benefits from the Congress session; but evidently no end to the mosquito menace is yet in sight. Even though the delegates have been asked to bring their own mosquito nets, it would entirely be in order to keep a spare stock of 2,000 pieces. I am sure many of the delegates will stay on for the Test match; but I hope that this will not mean an acute scarcity of tickets for the local enthusiasts. There is already some discontent over the procedure adopted for the sale of tickets; and what can happen in a last-minute stampede has been seen before. But, to go back to the Congress session, the political excitement may be limited; speeches and debates in the full sessions tend

increasingly to become routine. According to one newspaper report, the Working Committee is concerned over alleged Opposition attempts to "emotionalise" the economic difficulties of ordinary people. Whatever the word may mean, it does not need any political party to make the people emotionally worked up over their economic problems. Only last week we were officially told that for more than 220 million people the per capita monthly expenditure is less than Rs. 20 at the 1960-61 level of prices; and during the past decade prices have gone up much faster than have incomes. Until a few weeks ago, the C.I.A. would have been held responsible for any outburst of angry emotion at this appalling state of affairs; now it is the so-called "grand alliance". And, apparently, "communal elements" are again active; and the Government is said to have "evidence" about this activity. Nothing has lately been heard about "evidence" the Government was said to possess about the C.I.A.; and some cynics have suggested that this silence is not altogether unconnected with expectations of food supplies from the U.S.A. New scares or new scapegoats will be of no greater help. When things go wrong, an honest admission of mistakes may even earn some respect.

READERS OF THIS DIARY ARE WELL aware where my sympathies lie in any dispute between the drinking

and the non-drinking classes. But, for once, I was not sorry for the Government officers at the Asian Trade Fair in Delhi who were recently instructed to be less prompt in accepting invitations to cocktail parties given by representatives of the foreign countries participating in the Fair. In issuing this instruction, the Special Secretary to the Ministry of Foreign Trade showed no perverse prejudice; the sight of these officers "indiscriminately" attending every cocktail party to which they were invited, or of which they had merely heard, was distinctly vulgar. (Since dog does not eat dog, I shall not say anything about journalists in this connection.) In his circular, the Special Secretary pointed out that the thirsty officers thought nothing of leaving their office "completely empty" whenever there was a chance of getting merry at somebody else's expense. In their defence, it has been suggested that the foreign participants in the Fair "take it amiss" if the officers do not attend their parties. I do not know about these foreigners; but some others have had occasion to admit they will not be inconsolable if their parties are less well-attended, or at least if their guests seem less desperate to consume all they can offer. In any case, the Government, too, can take it amiss if the officers go out to drink during duty hours; and the procedure introduced to discourage this trend is by no means harsh. The martial law administration in the Philippines announced last month that Government officials found on golf courses, in cinema houses and at "other places of amusement" during office hours would be taken into mili-

LIFE INSURANCE IN INDIA

IT is to be hoped that the Government of India is observing with great care the effects of recent legislation for the partial control of life insurance in this country. It is to be hoped also that when revision and amendment become necessary, as will assuredly happen, there will be no avoidable delay in carrying them out. There are signs already that, in at least one direction, the new law is producing just the opposite effects to those it was intended to produce. The provision that a certain deposit should be lodged with the Government by each Indian life insurance company is not working for good alone. This provision has imposed a check on none but the most insignificant companies, those that might almost as well have been left to die a natural death. The initial deposit claimed was small. It had not even to be

paid out of capital. Companies whose life insurance funds totalled enough were able to meet the obligation imposed upon them by the law. What mattered it to them whether their investments in Government securities were lodged with a bank for safe custody or with an official specially deputed by the Government to receive them? They lost nothing by the change of system, nor were they inconvenienced; indeed some of them were able to turn it to good account. In villages and even in towns, agents will now be found who have succeeded in inducing ignorant people to believe that, because certain deposits have been placed in the charge of the Government, the Government itself has become, in some unexplained way, guarantor of the soundness of the companies!

tary custody. Nothing so drastic is ever likely to be done in this country; much milder deterrents would be denounced as undemocratic. If the Houses of Parliament themselves are occasionally almost empty, this is not invariably because more important business is being conducted elsewhere. Attendance is unlikely to improve after the Speaker's recent suggestion in the Lok Sabha that members suffering from heart disease should avoid the question hour, because it produces tension. Even the healthy may wish to avoid tension. The Government, in any case, would be relieved of much tension if the question hour were less busy. The Health Minister has suggested that M.P.s suffering from heart trouble should take yogic exercises, and he has offered to make the necessary arrangements. The idea seems to have infinite possibilities.

THOSE WHO STILL RETAIN THEIR faith in the inexorable progress of civilisation, despite all that has been happening to the world in the past few years, might do well to reflect on the new penal code it was recently reported the Libyan Government had adopted. Normally I am a firm believer in the use of exaggerated caution when judging the domestic behaviour of other countries. It has something to do with the Biblical injunction against he who would throw the first stone. But in a world which boasts such institutions for international busy-bodding as the United Nations, and which we are always being told becomes more inter-dependent with each year that passes, I do feel some slight justification for commenting on a law which, among other things, specifies the amputation of a right hand for premeditated theft. That, I respectfully submit, is a deliberate reversion to legalised barbarism; and I care not that it is being excused on specious religious grounds. Such a thing is bad enough when it is embedded in age-old tradition, and thus difficult to eradicate, as I believe is true elsewhere in the Arab world. But for a country to revert to practices of this kind once they have been abandoned, or allowed to lapse, is surely another matter. In that case I certainly fail to see the justification. But the revival of barbaric punishments is not necessarily restricted to Libya these days. There have recently been reports from numerous west and central African States, of which Nigeria is one, of mass public shootings, bayonetings and such like, whose

victims have been the kind of common thief or pickpocket whose crimes might earn them a year's imprisonment in more enlightened countries. It is not fashionable these days to throw up one's hands in horror; but if anything does deserve such a melodramatic response, this surely does. And what, may I ask, has the United Nations to say about it?

A FEW YEARS AGO—NO MORE THAN five or six—I remember reading *Goldfinger* by the late Ian Fleming and laughing out loud at his idea of somebody stealing an atomic bomb. At the time nothing seemed more preposterous, and thus a better tribute to Fleming's rare imagination. Well, that was a few years ago. Now I see that not only is the theft of an atomic bomb regarded as a possibility in the near future, indeed inevitable by some people, but the time is fast approaching when it will be possible to manufacture atomic bombs virtually in the home. How rapidly life changes these days; and particularly does it seem so when that change is for the worse, as it so often seems to be. At the Pugwash Conference on World Affairs held in Oxford last September it was readily accepted by the 200 distinguished scientists present that provided the necessary plutonium could be obtained from somewhere it is now perfectly within the capability of any would-be atomic terrorist to make a bomb large enough to vapourise a modern city. And getting one's hands on plutonium, one gathers, is nowadays well within the scope of the modern criminal if only because there is so much of the stuff

about. Thus any time now, or so the Conference concluded, we can expect somebody to announce that unless this or that is done, or some ransom paid, London, New York, Tokyo, even perhaps Calcutta, will be erased from the map. There is a refinement there that even Fleming did not think of: his stolen atomic bomb was to be used merely to immobilise the gold at Fort Knox, really quite a gentlemanly thing to contemplate alongside the liquidation of a few million people.

MENNAT-ALI OF IRAN IS CERTAINLY old and possibly grey, but he does not seem to be full of sleep. Whether he is exactly 130 years old may be doubted; such great ages are usually reported from countries which had no proper system for registering births until recently. Yet there is much evidence to show that Mennat-Ali is a very ancient man; the range of his prodigious family is a clear enough indication. Going by the Teheran report published here last week, he was first married when he was 15; when the last of his 18 marriages took place eight years ago, he was 122 and his latest wife only 14. Even this girl has borne him four children; the old farmer did not acquire a new wife to nurse him in senile decrepitude. Apparently he has a total of 360 children, grandchildren and great-grandchildren, which is by no means surprising considering his performance even beyond his 122nd year. Of course, his is not exactly a record; according to another report, a man in Colombia died last week at the age of 148, leaving behind 724 descendants in the form of great-grandchildren

alone. Little is known about his way of life; but it is reported that the 130-year-old Iranian farmer does not smoke or drink and eats mostly milk products. Whether this is the main reason for his longevity is less than certain; and, in any case, if the main effect of his avoidance of alcohol has been his gargantuan progeny, family planning authorities may be led to prescribe compulsory drinking for all. In the course of his 130 years he may have been frequently driven to marriage in the absence of any other diversion; and reproduction may have often appeared to be the only form of recreation to a man who finds no relaxation in a smoke or a drink. A very long life can itself be a bore, which is a problem unlikely to be solved by Dr. Alex Comfort's researches. I am told that, with a better understanding of the process of ageing, it should be possible to slow down the process considerably, if not to check it altogether. But is this really a consummation devoutly to be wished by all? Some scientists have been speculating on another possibility, which I do not find particularly exciting either. I am told that it may one day be possible to keep a living person in a kind of deep freeze, and then re-awaken him to active life after a period of many years. Since the ageing process would be suspended during this period it might thus be possible to spend one's childhood in the first half of the 21st century and be active as a young man in the second half of the 22nd; conceivably, one could further choose to be middle-aged in another century, and old and dead in yet another.

How an Effective Line of Communication Can Help Management

By D. K. Dutt

Communication plays a vital rôle in the evolution of participative management. The success of an organisation depends largely on maintaining an effective line of communication.

COMMUNICATION is a part of the behavioural pattern of management in any organisation at different levels. Mr. Robert L. Blake, an international expert, has held in his book, *Managerial Grid*, that communication boils down to the problem of ensuring understanding between people, who work together, through a two-way exchange of information to understand one another's problems. Being a two-way channel, communication becomes a part of managerial style and behaviour. How well a manager manages depends to a great extent on how well he succeeds in communicating with the people above, below and around him. An organisation which succeeds in motivating its managers to understand each other also succeeds in developing a facile method of communication. Each manager then tries to eliminate the causes of poor communication, and in turn removes the sources of misunderstanding leading to wrong decision making.

A Well-knit Team

When easy communication between different levels of management is established, the entire organisation emerges as a well co-ordinated team united in terms of a common purpose, with each manager entrusted with an area of responsibility. Communication thus becomes an important tool in

For a nominal charge "Capital"'s Statistical Department can provide you with a Certificate of share prices.

knitting the management team together. Based on a two-way exchange of authentic information, the team ceases to be a collection of individuals working at cross purposes. It aspires to attain certain accepted objectives, with concern for organisational requirements matched up with equal concern for people. In this atmosphere, the boss becomes the key to the downward flow of information, while the subordinates become the gateway to its upward flow. Lectures and seminars can hardly ensure this two-way exchange unless both the boss and the subordinates become behaviourally attuned to certain common objectives by sharing information and removing causes of poor communication.

Communication becomes, however, the first casualty in an organisation where motivation is totally absent due to an authoritarian style of management. The boss will bark out orders expecting the subordinates to carry them out, and he will have very little time either to explain or to listen. The entire system then becomes regimented, and the boss and the subordinates begin to pull together in different directions. The organisation then reeks of mutual recrimination. In this atmosphere a senior executive, who is confronted with a breakdown in the upward transmission of information, may ask: "Why did not the subordinates, who knew the facts, report them to me?" He hardly realises that he should have better asked himself: "What is wrong with the management system we are using which causes this breakdown in upward communication, and what corrective steps should be taken?"

The style of communication should, therefore, be spontaneous enough to motivate a person to offer information and to receive information in a participative manner. This will ensure participation of management in management, and subordinates will not be asked to carry out instructions mechanically. Communication plays a vital part in the evolution of this

participative concept. Confidence and trust pervade. Each tries to help the other through the process of communication in an atmosphere of "no nonsense", with different groups knit together through direct and free communication.

An Isolated Individual

A manager, who fails to develop his own style to communicate with his subordinates or colleagues, will ultimately end up as an isolated individual building a barrier around himself. He must not forget that men are neither good nor bad, but only good or bad in certain situations. Each manager must act in a way to gain confidence of his subordinates and colleagues through a two-way exchange of authentic information. With the increasing size of organisational hierarchies and functional groups, the need for increased collateral relationships based on factual communication between different levels has been all the more. A manager must, therefore encourage his subordinates to communicate and interact with their opposite numbers in different departments and should try to ascertain the relevant facts which may help corporate activities. A manager who fails to induce his subordinates to communicate and interact, or discourages them to do so, will gradually limit the area of discretion left to his team members. Consequently there will be lesser delegation and greater concentration of responsibilities in fewer centres, backed up by an authoritarian rather than a participative style of management.

In this set-up, the manager turns into a boss trying to settle disputes between subordinates, each deprived of any commonly accepted corporate objective, and each vying with the other for power, prestige, recognition and personal autonomy. Under such conditions, communication is reduced to a matter of form. The unity of purpose becomes a myth. There are numerous examples of management teams falling apart on account of the failure of communication. The success of an organisation will, therefore, largely depend on how effectively each manager is motivated behaviourally to maintain the lines of communication horizontally, vertically or laterally. Each manager has to be a behaviourist while dealing with others, and in this respect communication should be the best school for education.

Road safety is a matter of light or death.

Philips have the widest range of lamps and fittings for the light that's right for your road.

Every year municipalities all over India are making roads safer for night traffic. They are using Philips lights. Today thousands of kilometres of road have been lit by Philips.

World leaders in road lighting. Philips have been lighting up the busiest roadways in the world. And they have the lamps and fittings to give your roads bright, glare-free, colour-corrected and evenly distributed light.

The right light for every road. You have a wide range to choose from to suit any kind of road.

Mercury vapour lamps of 80, 125, 250, 400 and 1000 watts. The widest range in the country. With fittings to suit all your public lighting needs; be it of a busy junction, a main road, a residential street, a park or a public monument.

Philips also have the brightest range of tubelights in the country with specially designed fittings for streetlighting.

Keep death off the roads with Philips light.

Gaps in the Plan for Industrialisation of Backward Areas

By P. C. Jain

The Government is apparently serious about industrialising backward areas. But if this objective is to be achieved, it should be equally serious in providing the necessary infrastructure.

MUCH concern has been shown for industrialisation of backward regions and development of focal points is being advocated to do so, but so far it has not been defined what facilities would be made available for such growth points, what industries would be established and what contribution these centres should make in industrialisation. Hence, in spite of many pronouncements, hardly anything has been achieved as yet. But if a proper scheme of developing industrial complexes/townships is framed, it can go a long way in achieving industrialisation. Therefore, an attempt has been made here to indicate what facilities should be available at these places so that faster industrialisation of new areas may be achieved.

There are a large number of backward districts/areas in the country, some of which are rich in mineral/forest or other natural resources while others are not so fortunate. Some are well-connected with roads and the railways but others suffer for want of transport and communication facilities. Hence, the problems differ from area to area, but there are certain basic needs which have to be provided for industrialisation of new areas. However, in view of the limited financial resources, neither the State nor the Central Governments can develop focal points in all backward districts. Therefore, to begin with, more promising districts, which are in the vicinity of developed areas or marketing centres or offer better prospects for development because of natural resources, may be selected for industrial towns. Some of the interior areas may also be selected which are either connected with the railways or are near the highways or can easily be linked with rail or road.

There are industrial development corporations in the States and one of

their functions is to develop focal points. But most of them have not drawn up package or facilities. Even when some programmes have been drawn up, either facilities are not created simultaneously or do not come up as planned or they are not adequate because of which development is slow and some growth points have not found entrepreneurs. The right selection of place and facilities is very essential. In the selected places the Government should consider what industries can be best developed bearing in mind the local resources, marketing and communication facilities and infrastructure which can be developed. Moreover, to make these centres really prosperous, medium and small industries should simultaneously be encouraged to grow at the same place. It is difficult to have growth points merely on the basis of small industries. The industries should be so selected that they may either be inter-dependent, i.e., the finished product of one may be the raw material for others or a number of similar industries may be selected so that facilities for materials and marketing may be possible on a co-operative basis and common service facilities may be established easily. Ancillary industries may also be developed at such centres.

For instance, a number of powerloom units may be established at one centre where some units may be put up for dyeing, finishing, processing, etcetera, because it will not be possible for individual units to do so. Such a centre may also have spinning mills. Similarly, these towns may be for electronics, engineering or a combination of industries. They should try to arrange development of their products in such a way that they have a market and reputation for quality, prices or artisanship. If industrial complexes are established for large-scale industry simultaneously, it should be planned to have ancillary units for spare parts, raw materials, components, etcetera. Once the place and the industry are selected, the Government should ensure adequate and continuous supply of power to all those who wish to establish units there. In view of

frequent power cuts and breakdowns, it will be better to establish a thermal power plant to meet the needs of each industrial complex so that adequate power may be ensured throughout the year. These power plants should be started as a first step and ahead of other facilities.

One of the important drawbacks in starting industries in underdeveloped regions is the lack of communication facilities. Therefore, at the focal points, the Government of India should establish adequate communication facilities of telephone and telex. A telephone exchange with adequate lines to meet the needs of all concerned should be installed with a self-dialling system with nearby important industrial/marketing or administrative centres so that there may not be long delays in communication. At present there are instances where, although there are telephone facilities, it takes hours to get a connection with a wanted party. To overcome these difficulties and to facilitate faster and cheaper communication, these centres should also be connected with teleprinters and telexes. To help small industries who cannot afford to install their own telex, post offices of the industrial towns should be equipped with public telexes and those who are prepared to install their own teleprinters or telexes should be given preference over bigger towns.

It has always been a problem to attract trained personnel, whether technical or administrative, from well-developed centres to new places, because of the lack of housing, education, and health and sanitation facilities. To overcome these difficulties, large-scale units at these centres may be asked to build their own houses for workers and staff by providing them long-term cheap credit; and for small and medium-scale industries the State Government concerned should build quarters which should be let out on a reasonable rent. Private construction activity should also be encouraged through special schemes for allocation of land and provision of long-term cheap credit.

Education and health facilities are often neglected or are developed at a much later stage than is required. Hence in spite of offers of higher salaries, it becomes difficult to get suitable staff. To overcome this difficulty at least an intermediate college should be established simultaneously with other infrastructure and should be ready in the first phase of development itself. A good hospital with in-door treatment

Don't waste your country's resources!

AL 3176 A

science" of small savers. Tradition facilities, with at least 50 beds should also be planned and made ready by the time the bulk of labour is recruited. The expenditure on these social facilities may be borne by the Government because if small industries are asked to bear this cost, they will prefer to establish units in already developed areas where they are not required to incur these expenses. If large units are established they may be asked to bear part of the cost. It is not enough to provide these facilities, but they must be developed simultaneously with such infrastructure as roads, power and communication and should be considered essential infrastructure and should not be held up for want of funds. Apart from the growth centre, rural areas in the radius of 15 miles to 20 miles should be able to take advantage of such facilities and the expenditure for creating them should be considered the social cost of industrialisation.

The purpose of diversification of industries and developing focal points in the backward areas is that local resources are utilised and the unemployment problem in the region is reduced. But often this does not happen, because workers are recruited from remote places. Therefore, local people are generally sceptical about industrial complexes, especially if their land is taken over for building them, because they become poorer and do not get alternative employment. To remove such a situation a polytechnic should be established in each such centre which should impart training in those vocations which will help the local people to obtain gainful employment, and such people must be given preference over others.

In the backward areas there are also great difficulties in obtaining construction materials like bricks, cement, iron and steel, building wood, fittings and construction labour. In order to help small industries, the State Government concerned should open construction material depots which should be in a position to supply adequate quantities of essential materials at the same rate as one is required to pay in developed areas. The large-scale units at these centres should be allocated adequate construction materials on a priority basis and should be provided adequate transport facilities to move them to the construction site. To remove the shortage of trained construction workers like masons and carpenters, some training facilities should be developed and industries should not be required to pay higher wages than are paid in

developed areas, or should not suffer for want of construction labour. Simultaneously, a raw material depot should be thought of if the centre is far off from the source of supply of important materials or there is no big market nearby.

Marketing facilities are often ignored in planning focal points because it is taken for granted that the goods produced will automatically find markets. But the new centres suffer from a number of disadvantages, compared with well-developed places. Therefore, marketing facilities should get due attention and if need be, co-operative marketing societies may be established and an effort should be made to link them with big marketing centres. Entrepreneurs in these centres also suffer from the administrative point of view; they are often required to take long journeys involving time and money

for getting sanctions from the State or the Central Government for allocation of materials, loans, import and export licences, etcetera. These difficulties can be overcome to a considerable extent if a mini State secretariat of the concerned department is established at each of these centres with adequate powers to officers for giving final sanction up to a specified amount which should be large enough to meet the requirements of most of the small and medium-scale units.

If these package facilities are provided, feasibility reports are prepared, proper publicity is given and the programme is implemented according to the targets fixed, it is possible to develop a large number of these focal points throughout the country. This will greatly help in diversification of industries and creating employment in the backward areas.

Economists' Approach to Planning : Some Discrepancies

(By a Special Correspondent)

The memorandum recently submitted to the Central Government by a group of economists on the approach to the Fifth Plan contains some useful suggestions. But some of its other recommendations would appear to be unimaginative.

THE memorandum recently submitted to the Government of India by a group of economists on the Approach to the Fifth Plan contains some sensible suggestions for achieving a rapid growth of the country's economy. It has been prepared by the economists at the request of the Gandhi Peace Foundation, the Sarva Seva Sangh, and the Gandhian Institute of Studies. Professor Raj Krishna was the chairman of the group, the other members being Professors M. L. Dantwala, A. K. Das Gupta, P. R. Brahmananda, Gantam Mathur, Amlan Dutta, N. Jha and P. H. Prasad, and Messrs A. Das, T. P. Singh, R. K. Patil and Ranjit Gupta. The memorandum has emphasised the need for proper manpower planning. It says that hitherto efforts have been concentrated on the planning of the flow of investment funds. But in a labour surplus country, manpower planning is more important than in-

vestment planning. It has, therefore, urged that the Fifth Plan should include a manpower plan consistent with the material and financial plan.

The memorandum has stressed the urgent need to reform the administration. This is understandable. But it is difficult to appreciate the suggestion that the Prime Minister, Mrs. Indira Gandhi, should enact ordinances on the advice of a three-member standing committee of experts for the efficient operation of productive enterprises, and that, at a later stage, steps should be taken to reform the rest of Government apparatus. According to the Indian Constitution, ordinances are to be issued only in times of emergency and when Parliament is not in session. But the Central and State Governments have been issuing ordinances indiscriminately even when there is no urgency and the legislatures are to meet soon. The problem of ensuring efficiency of productive enterprises cannot be solved by issuing ordinances. The lack of efficiency in the enterprises is due to various factors like labour indiscipline, unimaginative planning, and ministerial interference with their working. These issues cannot be tackled by hasty measures through ordinances.

Another suggestion of the economists is that "voluntary people's action committees" should be set up in every village to secure "distributive justice" to the poor. These committees are expected to fix definite quotas for small farmers in the distribution of inputs and assistance to small artisans. But is there not the possibility of such committees being dominated by political parties and their decisions influenced by political considerations?

The economists' recommendation to curb the production and consumption of luxury goods is unrealistic. It says: "We must urge that in the next plan, the Government should be more resolute in reducing the rate of growth of the supply of luxury goods for domestic consumption even though it may have to allow some growth of capacity in luxury sectors for export or for producing necessary public goods". The economists do not seem to have defined what they consider to be luxury goods. Besides, it is impractical for industry to produce luxury goods only for export and not for domestic consumption. Such production will be uneconomic and unstable. The foreign demand for luxury goods is bound to fluctuate widely, depending on the intensity of competition, change in fashions, and various other factors. "The real remedy for the curtailment of luxury production", says the memorandum, "lies in a radical redistribution of wealth and income which would reduce the demand for luxuries and a mopping up of black money for investment, for this money is now the greatest single booster of luxury consumption and production".

The economists do not seem to appreciate that the production and consumption of luxury goods contribute a great deal to the creation of employment opportunities as well as improvement in the standards of living of the people. On the other hand, the economists should have suggested measures to augment substantially the production of luxury goods so that they would be within the reach of more people and not confined to a few as at present. The objective of planning should be surely to make more luxuries available to more people and not to deprive even those who have been enjoying some good things of life. The economists should remember that not all those who consume luxury goods own and operate black money. The middle classes and even sections of the working classes are getting accustomed to the use of

luxury goods. Is it right to deny these people the opportunity to consume such goods?

The economists are reported to have suggested that all M.P.s and M.L.A.s and senior Government officers should be made to declare their total assets and pay all their dues to the State. Then it is stated that the politicians and bureaucrats would acquire the moral right to tax big business, rich farmers, and others and finance a "doubled plan outlay". But a mere declaration of assets by legislators and bureaucrats will not help to check corruption and black money. There are various ways in which corruption breeds and black money accumulates. For example, as long as political parties continue to depend heavily on big money to finance elections, it will be impossible to eradicate corruption and

other evil practices. The Wanchoo Committee has made many constructive suggestions to eliminate black money but many of them are unlikely to be implemented for political reasons.

The other proposals of the economists include the raising of taxation of agricultural income, nationalisation of all unoccupied urban land, withdrawal of exemptions in wealth tax, accelerated collection of tax arrears, and auctioning of non-priority foreign exchange and some gold purchases and sales by the Reserve Bank of India. It is not possible to comment on these proposals in detail in the absence of the full text of the memorandum. But from the summary that has appeared in the newspapers it appears that the economists do not seem to have carefully examined the implications of some of their recommendations.

Merits of the Steps Taken to Control Monopolies

By P. Chattopadhyay

Several measures need to be taken simultaneously for the control of monopolies. The enactment of the Monopolies and Restrictive Trade Practices Act and the introduction of various measures for controlling prices are all steps in this direction.

THE problems in the context of monopolies relate essentially to three questions. First, the position that a monopoly organisation occupies in the industry or economic activity concerned. Secondly, the concentration of economic powers in the hands behind the monopoly organisations or houses. Thirdly, the exercise of restrictive trade practices or any other practices tantamount to the restriction of procurement of inputs, production and distribution to the detriment of the common interest of the industry as such and the community at large. In the first case, the problem arising is analogous to potential energy, i.e., the capacity to exercise practices detrimental to the common interest of the industry or the community at large. In the second case, the concentration of economic power is undesirable from the point of view of an egalitarian society that the country is aiming at. Such concentration violates the conditions laid down in the Directive Principles of State Policy and the national desire for establishing a socialistic

pattern of society by granting equitable opportunity to all and by redistributing income for the purpose of common good.

In the third case, particularly in a scarcity-ridden economy, the problem is of several types. It is possible for the monopolist to manipulate supplies in such a manner that would give it a profit much higher than legitimate, or possible in competitive conditions. This may be done by manipulating

IMPALA PT-717

prices or by creating conditions of scarcity in the market irrespective of production or even by restricting production. In this transitional economy, the pressure on consumption has been felt right from the beginning and the people are trying to beat their shadows, so to say, in different ways. The creation of employment and the wide distribution of purchasing power among a much larger section of the people have created pressure on consumption of necessities and luxuries. Production has naturally lagged far behind such spiralling demand for certain commodities. The price rise is natural in such conditions. Inflationary tendencies noticed during the Five Year Plans have been subjected to a long debate, yet inconclusive.

The control of monopolies involves several steps to be taken simultaneously. The Government has taken several measures attempting to control monopolies but all these have come rather late in the day and only after some damage has already been done. On the basis of the recommendations of the Monopolies Enquiry Commission, the enactment of the Monopolies and Restrictive Trade Practices Act has been a major step towards controlling monopolies and restrictive trade practices. The appointment of the Monopoly Commission under the M.R.T.P. Act has been taken in the country with mixed feelings. On the basis of enquiries made under the Commission of Enquiries Act as also under the executive powers of the Government in the Central Ministry of Company Affairs, even the Indian Companies Act has been strengthened towards this effect. Particularly, the Companies (Amendment) Bill, 1972, in-

cludes several provisions aimed at curbing certain practices noticed in the Indian corporate sector since the abolition of the managing agency system.

On the other hand, various measures for controlling prices of different commodities and the establishment of the Bureau of Industrial Costs and Prices apart from the Tariff Commission have been steps calculated to take serious notice of the movement of prices and to deal with the factors responsible for such movement with respect to particular industries. Several other measures have also been taken in this regard, such as the steps initiated by the Reserve Bank of India towards restricting credit to the large-scale industrial sector, nationalisation of the import trade, first with respect to certain commodities but gradually extending to others, and nationalisation of the export trade of textiles.

Reverting to the Companies (Amendment) Bill, 1972, it proposes several restrictions on the transfer of shares and take-overs by the introduction of Sections 108A to 108G in the Act. The amendments proposed relate to preventing a group of persons from acquiring more than 25 per cent of the capital of any public company with a paid up capital of over Rs. 25 lakhs without prior approval of the Central Government. Secondly, checking the transfer of any shares held by corporate bodies to the extent of 10 per cent of the capital of any company without informing the Government. In such cases, the Government proposes to have the power of preventing such transfer or directing that the shares shall be transferred to the Government in case the

transfer relates to the list of industries covered under the Industrial Policy Resolution. Thirdly, the transfer of shares held by corporate bodies or individuals of more than 10 per cent of the capital of a foreign company operating in India. Lastly, the reservation of powers by the Government under the proposed Section 108D to prevent any transfer of a share or a block of shares if it finds that such a transfer may result in a change in the controlling interest of a company.

Here, one should also mention the question of conversion of loans into equities of companies under certain conditions. This provision is expected to open up a window to the Government for having information not otherwise obtainable from companies concerning their functioning. The effectiveness of the provision for controlling undesirable corporate practices, will, however, depend on the extent of sensitivity with which the Government-nominated directors act on the boards of these companies to prevent actions considered inappropriate. The changes that have been effected during the last 25 years have been far-reaching and can be expected to have desirable results only when the provisions in the Act and the executive powers are exercised with the due alacrity.

In this respect, the problems experienced relate to the desirable rate of expansion of the industrial sector, extension of industrial activity to the backward regions as defined by the Wanchoo and Pande Committees and giving a spurt to industrial activity essential for initiating a desirable rate of growth in the economy along with boosting employment. Various relaxations have been allowed by the Government to encourage entrepreneurs to increasingly canalise investments in these regions. These relaxations relate to expansion, establishment of new undertakings and manufacture of new articles irrespective of the M.R.T.P. Act and the Industries (Development and Regulation) Act. In addition, tax holiday, rebates and reliefs under the Income Tax Act, Sales Tax Act, etcetera, have been declared. The response to all these has, however, been lukewarm.

PEOPLE AND PERSONALITIES

Mr. Gordon H. Thring, managing director, Bata India, has recently left the country after four and a half years of service in India. He is succeeded by Mr. Peter Z. Baldik.

SPOTLIGHT ON STATES

The Vidarbha Bandh Call Meets with Little Response

(By a Special Correspondent)

The Opposition parties' call for a Vidarbha bandh evoked little response from the people. It is difficult to understand what useful purpose the bandh could have served when the State Government was fully aware of the problems facing Maharashtra.

THE Opposition parties called for a Vidarbha bandh on the opening day of the session of the Maharashtra Assembly in Nagpur, to call attention to the problems of price rise, increase in the State transport bus fares and famine conditions in Vidarbha. As the State Government is fully alive to all these problems, it is difficult to understand what useful purpose was served by the projected bandh. The bandh received little response except in the city of Nagpur. On the opening day of the session of the State legislature, a motion of no confidence against the Ministry was admitted, but an adjournment motion calling upon the Government to meet the *morchas* taken to the Council Hall on the subject of rising prices and other issues was disallowed by the Speaker after heated exchanges between the Treasury benches and the Opposition. On the rejection of the adjournment motion, the Opposition members staged a walk out.

It is difficult to appreciate how the adjourning of the Assembly and its business to meet *morchas* and hear their grievances could be regarded as the introduction of a "healthy and democratic convention" as stated by some Opposition members. The session of the Assembly was called for transacting business, not for meeting *morchas*. In fact, on that day five *morchas* were taken to the Council Hall in respect of different matters—one of the 70 members of the Godrej Employees' Union asking for the release of their leader who had been charged along with other persons with murder in the course of rioting, and another on the demand by a union for alternative employment for retrenched employees of the Census Department. If the Government had agreed to an adjournment of the business of the House to meet one *morchha*, that would have set a precedent.

In the debate on the no-confidence motion, the Opposition members criticised the Government on the ground of inadequate steps to meet the famine conditions and on other matters. When the Chief Minister, Mr. V. P. Naik, rose to reply, the Opposition members insisted on his first dealing with the demand for an apology for going back on certain assurances alleged to have been given to the members in regard to increases in bus fares and Government-run hospital fees. The Chief Minister said he would reply in his own sequence; the Speaker also said that the Opposition could not ask the Chief Minister to reply in a particular sequence. Then followed a din and bustle and as Mr. Naik found it impossible to speak further, he laid his prepared speech on the table of the House, with the permission of the Speaker. Amidst uproar the Speaker adjourned the House till the next day after suspending a large number of Opposition members for flouting his rulings and obstructing the proceedings.

In the debate on the no-confidence motion, the Minister for Food and Civil Supplies outlined the steps being taken to meet the critical conditions in the State. The Government had already spent Rs. 19.50 lakhs on relief works till 15th November and for the next few months new relief works were projected. In October over 200,000 tonnes of wheat had been made available in the ration shops. Compared with the earlier part of the year, wheat supplies were increased four times during the last four months. The Centre had been approached for more supplies. The snags in transport from north India, however, told upon the supplies. In a bid to add to the speed of the relief works, an additional staff of 50 deputy engineers and 400 overseers were being made available along with a sizable non-technical staff to the *zilla parishads*. Implements and materials necessary for relief works were being procured through the Small-scale Industries Corporation and recently it had been ordered to provide 200,000 hammers and other materials. An endeavour was made to provide work to every person. At present

1.6 million people were employed in scarcity works and in the coming months the figure was expected to go up to 2.5 million. The Government was planning to organise large labour camps to provide work after the present schemes were completed.

About drinking water, the Minister denied the charge that no farsighted plan had been worked out. The Groundwater Survey and Development Agency had been working on this for the last two years. Till October, blasting had been done in 5,435 wells; another 4,516 wells were bored and 7,165 wells were revitalised. This apart, 14 rigs had been in operation to sink more wells. Over 400 holes had been sunk of which 80 per cent had been successful. Another 3,660 were to be taken up in the immediate future. To protect the cattle, the Government planned to open 246 camps of which 85 were already in operation. This apart, 190 grazing grounds had been allotted free to the *gram panchayats*, 537 at concessional rates and 85 grazing grounds had been made available to other agencies. A total of 39,549 acres was being provided for grazing apart from another 57,871 acres from the reserved forests.

How International Trade Influences Economic Development

The Developing Economies and the International Framework. By S. Venu. (Published by Orient Longman Ltd, 36-A Mount Road, Madras 2. Price Rs. 27.50, pages 301.)

The main thrust of the book lies in focussing attention on different aspects of international trade as they affect the developing countries, and on the magnitude of indifference the developed countries show when it comes to stepping up the former's foreign trade. Writing of the book began during the second United Nations Conference on Trade and Development in Delhi and it is thus principally a study of the economic philosophy reflected at the conference. The author has tried to present an eclectic view of different theories on trade and development propounded by various experts, although the treatment appears to be somewhat sketchy. It would have been more useful if some particular aspect or aspects had been probed in detail rather than so many things on the periphery touched upon within the compass of one single book. It is, nevertheless, a well-written work that highlights the problems of the developing countries. But, at the same time, it lacks in authenticity in as much as it is not research-oriented. The sources of data and tables given in the book have not been mentioned.

On the trade between developed and less developed countries, the author points out: "Verbal homage is paid by the developed nations to the virtues of international competition with the equally virtuous corollary of trade liberalisation. In reality, competition often becomes anathema to them and restrictive practices creep in through two basic techniques—high tariff walls or discriminatory tariffs and quantitative restrictions on imports." It has been found that the value of manufactures exported from underdeveloped countries constitutes less than 6 per cent of the aggregate world trade in manufactures and less than 12 per cent of total exports from these countries.

The author's analysis brings to light how the trade between the developed and underdeveloped countries has not increased in the same proportion as the aggregate world trade has. The

developed and centrally planned economies have tended to expand trade within their regional groupings—E.E.C., E.F.T.A. and C.O.M.E.C.O.N.—rather than without. In the context of trade among the underdeveloped countries themselves, it is suggested that India could explore possibilities of supplying machinery, railway vehicles, appliances, and chemicals to Brazil which the latter currently imports from developed nations. In its turn, India can increase its imports of coffee beans, raw hides and skins and raw cotton from Brazil. Capital investment in Brazil also open up a new horizon. He has cautioned that it is possible that developing countries in course of time will compete with each other in third country markets for the sale of identical or substitutable products. "Self-defeating competition is to be avoided; otherwise a tragedy of high intentions will be the sole result."

NAVIN CHANDRA JOSHI

Adoption and Maintenance

Hindu Law of Adoption, Maintenance, Minority and Guardianship. By S. V. Gupte. Associated by G. M. Divekar. (Published by N. M. Tripathi Private Ltd., 164 Samaldas Marg, Bombay 2. Pages 438, price Rs. 35.)

The book contains the texts and gives commentary on two codifying statutes, one relating to adoption and maintenance and the other to minority and guardianship. The commentary by the author, a former Solicitor-General of India and a scholar who had formerly written a learned treatise on "Hindu Law in British India", is lucid and detailed and would be helpful to practitioners having to deal with cases under these Acts. It might, however, be mentioned that the author has strongly criticised certain decisions of the Supreme Court which are to the effect that an adoption by a married woman or a widow where such adoption is permissible is an adoption to her husband as well as to herself. He refers to the decisions of the Supreme Court in the case of *Sawan Ram versus*

Mst. Kalawant and others (*A.I.R.* 1967 S.C. 1761) and in the more recent case of Sitabai and another *versus* Ramachandra (*A.I.R.* 1970 S.C. 343) wherein the Supreme Court approved of the well reasoned decision of the Bombay High Court in *Ankush Narayan versus Janabai* (*A.I.R.* 1966 Bombay 174). The author refers to these Supreme Court decisions as "a flagrant violation" of Section 12 of the Hindu Adoptions and Maintenance Act. This reviewer, however, considers that, apart from the unnecessarily strong language used, the view taken by the author is debatable if not unconvincing for it would lead to anomalies referred to in the Bombay decision.

Mass Media

Mass Media in a Free Society. Edited by Warren K. Agee. (Published by Oxford and I.B.H. Publishing House. Price Rs. 7.50, pages 96.)

Not frequently perhaps would an American thought be applicable to an Indian situation. But Ben H. Bagdikian might as well have been thinking of India when he says: "Our jobs, our education, our housing, our transportation . . . are governed, if they are governed at all, by distant administrators whom we don't know and who don't know us. . . . The bureaucracies in our lives—in Government, business, and academic life—have become massive and complicated and consequently they are slower and less sensitive to the individual." Bagdikian suggests how the new media could and should contribute "to the reservoir of ideas from which public understanding and public policy can find solutions to problems."

Mass Media in a Free Society records the key lectures delivered by six mass media specialists at the William Allen White Centennial Seminar conducted at the University of Kansas in 1968. The speakers explored in depth the issues raised by the vexatious problems of communication and understanding in a mass society and the volume presents "their analyses and predictions, their hopes and fears and their thoughtful estimates of the adjustments that the media must make to help keep our democratic society viable and strong in a rapidly moving world".

Those interested in communication as a means to an end in the demo-

cratic way of life would find the volume interesting. Bosley Crowther in his measure of the rôle of movies in a free society reminds the reader that the movie medium is engineered essentially to provide the people with entertainment, indulgence and escape, but at the same time he emphasises the marginal service movies are doing and should do in bringing enlightenment and enrichment to lives that are presumably needful of these facilities in a crass society. But he is sure that "we'll all keep on going to movies and we'll keep on being shocked".

Most provocative perhaps is Stan Freberg's "perfectly reasonable proposal for the de-escalation of television in a free society". Since India has hardly much of television as yet, Freberg's thesis might temper the authorities' enthusiasm with a bit of wisdom derived from experience and the national advertisers and agencies might ponder over the "tremendous American problem of monumental indifference of consumers towards most advertising". A number of recent surveys by independent and authoritative bodies have indicated that most of the viewers are quite annoyed with the present commercials and many of them "simply can't stand any more commercials". Stan Freberg's de-escalation plan suggests that at least for two days in the week the set should go black and in the centre of the screen should shine the words—read, talk. Is Freberg suggesting that the human being should not be conceived as just a receiving set for electronic communication or a consuming machine for mass produced goods?

B.B.

Employment Contracts

Contracts of Employment. By N. C. Lahiri. (Published by Eastern Law House Private Ltd., 54 Ganesh Chunder Avenue, Calcutta 13. Pages 393, price Rs. 20.)

This book deals with the legal position and the principal problems arising out of the contracts of employment in respect of Government servants and employees of public-sector undertakings and corporations. The conditions of service, requirements to be followed in disciplinary proceedings, powers of removal, dismissal and compulsory retirement, the circumstances in which the court can interfere with such action have been dealt in a lucid manner and illustrated by relevant decisions of the Supreme Court and the High Courts. The book

also cites rules and regulations relating to various services. As observed by Mr. Justice P. B. Mukharji in the foreword, this book is on a subject of increasing importance in the public life and public administration and, in many ways, the work is original in its ideas and method of presentation. The book should be useful to members of the Bench and Bar, law students and others requiring information on the subject. The chapter on "Industrial Workmen" is short as the book primarily deals with the subjects referred to above. But within the limited space, the author's view on the subject of certified standing orders is of interest and may well be considered by the Supreme Court when occasions arise.

The author criticises the decision of the Supreme Court that the certified standing orders are statutory in character, a decision that has far-reaching implications. As observed by the author the certified standing orders cannot be statutory because the very Act (the Industrial Employment Standing Orders Act), makes provision for modification by an agreement between the parties. The Act does not say that the language of the Statute must be followed and the Government has powers to include other matters not necessarily on the basis of *ejusdem generis* rule. The terms of employment may be found in an agreement or in the standing orders or partly in each. The object of having certified standing orders in an industrial establishment is to make certain conditions of service known to the work people. It was not intended to secure hide-bound uniformity in all conditions of service and it is difficult to see why an agreement between the parties on a particular matter, in special circumstances, may not prevail over a condition of service as set out in the certified standing orders.

Administrative Law

Administrative Law. By S. Rajagopalan. (Published by N. M. Tripathi Private Ltd., 164 Samaldas Gandhi Marg, Bombay 2. Pages 427, price Rs. 25.)

Administrative Law in India. By S. P. Sathc. (Published by N. M. Tripathi Private Ltd., 164 Samaldas Gandhi Marg, Bombay 2. Pages 294, price Rs. 22.)

The first named book is a second edition of this learned treatise first pub-

lished in 1965, which grew out of the lectures which the author delivered to post-graduate students in law, seeking the Diploma in Administrative Law of the University of Madras. Many more topics have been included, over and above the syllabus, to make the book a useful work of reference to the lawyer as well as the citizen on this important branch of jurisprudence which provides safeguards against the illegal or arbitrary exercise of powers by the Government.

The concepts of the rule of law, the doctrine of separation of powers, the principles of delegated legislation, of judicial review of legislation, the State's liability for torts committed by its servants, the powers of High Courts and the Supreme Court to issue writs and interfere with the decisions of domestic tribunals, have all been dealt with lucidly, with reference to the constitutional provisions and decided cases. Each subject has been dealt with in the light of its history and evolution in this country as well as the comparative position in England, France, United States and the Dominions. At places, the author has submitted his own views, e.g., that delegation in the sphere of taxation should be confined within the strictest limits, that the tendency to equate a licence fee with a tax should be countered, that the right of the State to withhold documents which had been conceded on the authority of the English case *Duncan versus Cammel Laird and Co.* needs now to be abrogated in view of the latest pronouncement of the House of Lords in *Conway versus Rimmer*.

The second book by the author who is a Reader in the Department of Law of the University of Bombay also contains an exposition of the scope and principles of Indian administrative law. The book does not purport to be an exhaustive commentary on the subject, but aims to acquaint the student with the principles applicable to the various subjects treated. It deals with the kind of power the administration exercises, the procedures followed by the administrative authorities in the exercise of their powers, the limits of their powers and ways in which the administration is kept within those limitations, the remedies against the acts of the administration, etcetera. The liabilities of the State in tort and contract and its privileges and immunities under the law are also discussed.

M. R. MEHER

Agricultural Holdings Tax : The Problems of Implementation

(By a Special Correspondent)

The Raj Committee's proposal to levy the agricultural holdings tax has been welcomed in many quarters. But it is doubtful if the State Governments have the machinery to enforce this levy successfully.

WITH the spread of the "green revolution" in the country, it is but natural that taxation of agricultural income should receive serious attention of the Government of India. The report of the Direct Taxes Enquiry Committee, headed by Mr. Justice K. N. Wanchoo, former Chief Justice of India, has stressed the vital rôle of agriculture in the country's economy and the need to divert a part of the income from this source into the Exchequer. The committee has revealed that although agriculture accounted for nearly half of India's national income, the taxes contributed by it were around only Rs. 113 crores while the contribution by the non-agricultural sector was over six times as much. "In fact," said the committee, "tax burden on the urban income is relatively so high that a tax payer having an income of Rs. 10 lakhs is left after paying income-tax with about as much income as another person having an agricultural income of Rs. 1 lakh only". The committee examined the objections and difficulties advanced against the taxation on agricultural income but it did not consider them as insurmountable. On the other hand, the committee thought that the tax on agricultural income, as any other tax, was likely to motivate farmers to increase agricultural production by the adoption of improved technology for increasing their income to meet the tax liability.

The problem of agricultural taxation has been examined in depth by a committee, set up by the Government of India in February this year, under the chairmanship of Dr. K. N. Raj. The committee was asked to study the present system of direct taxation of agricultural wealth and incomes, and to recommend measures by which such direct taxes could be

used for raising additional resources. The committee has urged the replacement of land revenue by a system of agricultural holdings tax (A.H.T.). This is expected to introduce uniformity and progression in the field of direct taxation. It will be based on the size of the holding and the crop pattern. The committee says that this will be a modified version of taxation of land with an element of progression. The A.H.T. is estimated to yield about Rs. 200 crores a year if it is levied on all holdings with rateable values of Rs. 5,000 and above. The net additional revenue might be about Rs. 150 crores if this tax replaces land revenue and the related surcharge and cesses.

The committee has also recommended partial integration of agricultural and non-agricultural incomes for the determination of the rate of tax on non-agricultural incomes. It has proposed that the wealth tax should provide for a basic exemption limit of Rs. 1.5 lakhs and that all other exemptions should be withdrawn. It has suggested taxation of capital gains tax from transfer of agricultural lands by treating these gains as ordinary incomes and abolition of exemption limit on long-term capital gains. The committee has also favoured the idea of clubbing the incomes of husband and wife for tax purposes. But when the family is made the tax unit, a deduction may be allowed from salary income at the rate of 10 per cent of the joint incomes of the two when both are employed outside the household, subject to a maximum of Rs. 2,000.

The Raj Committee's proposal to levy the A.H.T. has been welcomed in many quarters. But it is doubtful if the State Governments have the machinery to enforce this levy successfully. It calls for a great deal of preparatory work which is also rather complicated. The country is to be divided into a sufficiently large number of climatically homogeneous districts or tracts so as to take into account the differences in productivity. For each such district or tract, norms of output of different crops a

hectare for each year are to be worked out on the basis of estimates of yield for the previous ten years. These are to be valued at the relevant average harvest prices of the preceding three years. The State Governments are expected to notify the markets and post-harvest marketing periods relating to each crop in each district or tract and arrange to collect, record and publish the relevant prices on a regular basis.

The norms derived in this manner are expected to provide the norms of the value of output a hectare of different crops of different districts or tracts. There are also numerous other complicated procedures to be followed. For example, a separate "agricultural holding book" is to be issued to each assessable landholder in which will be entered details relating to members of the family, operational holdings, changes in the area covered by the holding from time to time and crops grown in different seasons each year. The rateable value of the holding, the A.H.T. assessment and the recovery of instalments as also all loan transactions related to the land holdings will be entered in this book. Will the farmers readily comply with all these cumbersome formalities?

It is also not clear to what extent the proposal for partial integration of agricultural and non-agricultural incomes for determining the rate of tax on non-agricultural income will be really in the interests of the Government and the country. The committee does not seem to have considered the possibility of people with large urban incomes giving up their farm holdings; and if this happens, will not agriculture suffer by being denied the talents and resources of the urban sector? It may be that some tax evaders try to dupe the Exchequer by showing a large part of their urban incomes as arising from farms and orchards. But will not the integration proposal impose hardship on the large body of honest taxpayers?

The Raj Committee's recommendation to club the incomes of husband and wife seems unlikely to appeal to large sections of the public opinion. The Wanchoo Committee had not favoured this idea. It felt that the clubbing of the earned income of wife with the income of her husband and minor children would result in unnecessary hardship to lower and middle-class families where women took up employment only out of sheer economic necessity.

Industrial Relations : Implications of the Recent Change in I.D. Act

By S. K. Chaudhuri

Chief Personnel Officer, Lipton Ltd

The concept of master and servant relations and the problem of maintenance of discipline in industry have undergone a major change. This has been brought about through the insertion of a new section in the Industrial Disputes Act.

THE Government has introduced a new Section 11A, effective 15th December, 1971, by an amendment of the Industrial Disputes Act, 1947. This amendment vitally changes the existing legal position in regard to the powers of the Labour Court/Industrial Tribunals when deciding disputes relating to disciplinary action taken by management against an employee by way of dismissal or discharge.

In the Indian Iron and Steel Company's case (A.I.R. 1958 S.C. 130 at

page 138), the Supreme Court considered the Tribunal's power to interfere with the management's decision to dismiss, discharge or terminate the services of a workman. The Court decided that, if disciplinary action was taken after conforming to the principles of natural justice, then no Labour Court would normally interfere with the Company's action. In other words, if an employee was dismissed after following the technicalities of charge-sheet, explanation, departmental enquiry, etcetera, and there was no element of victimisation, unfair labour practice, basic error of facts or perverse findings on materials, then the Labour Court would not sit in judgment over the findings of the management. All that the Tribunal was required to consider was: whether the view taken by the management is a possible view of the matter, regardless

of whether the Tribunal entertains a different view.

This decision weakened the position of trade unions as they could not any longer protect their members, where the employer had conducted the domestic enquiry according to the laid down procedures. The courts also found themselves in a helpless position being unable to interfere with the action of the management, even where—although the enquiry was properly conducted—the punishment given was not justified. The trade unions had thus been agitating since 1962 against the principles laid down in the Supreme Court's decision referred to above, on the ground that it affected the job security of their members. The matter came up for consideration at different tripartite meetings and, in 1966, a sub-committee of the Indian Labour Conference discussed a draft of the amendment proposed by the Government. There was, however, no agreement on the draft and the matter was left to the Government for a decision, after taking into consideration the views expressed by the employers and trade unions.

The trade unions' stand was, however, fortified by Recommendation

ON D. G. S. & D. LIST

No. 119 (June 1963) made by the International Labour Organisation on the subject of "termination of employment at the initiative of the employer" that a worker aggrieved by the termination of his employment should be entitled to appeal against the termination, among others, to a neutral body, such as an arbitrator, a court, an arbitration committee or a similar body and that the neutral body concerned should be empowered to examine the reasons given in the termination of employment and other circumstances relating to the case and to render a decision on the justification of the termination.

Finally, the Government of India, in December 1971, introduced the new Section 11A, which reads as follows: Where an industrial dispute relating to the discharge or dismissal of a workman has been referred to a Labour Court, Tribunal or National Tribunal for adjudication and, in the course of the adjudication proceedings, the Labour Court, Tribunal or National Tribunal as the case may be, is satisfied that the order of discharge or dismissal was not justified, it may, by its award, set aside the order of discharge or dismissal and direct reinstatement of the workman on such terms and conditions, if any, as it thinks fit, or give such other relief to the workman including the award of any lesser punishment in lieu of discharge or dismissal as the circumstances of the case may require, provided that in any proceeding under this section the Labour Court, Tribunal or National Tribunal, as the case may be, shall rely only on the materials on record and shall not take any fresh evidence in relation to the matter.

By introducing the new section, the legislature has given an appellate power to the Labour Court/Industrial Tribunal. The court is now in a position to judge whether the Enquiry Officer has appreciated the evidence adduced before it in its correct perspective and whether the evidence produced and recorded before the departmental enquiry was sufficient and adequate to warrant the maximum punishment of dismissal. On a strict interpretation of the new section it may be stated that the Labour Court shall rely only on the material recorded at the domestic enquiry and shall not take any fresh evidence in relation to the dispute. The second and the more plausible view, however, seems to be that the court will exercise its appellate power only after coming to the conclusion that the enquiry was

fair and proper; and therefore—and this is important—this section does not take away the right of the management to ask the court to decide the case on merits, once the court has come to the conclusion that the enquiry was not fair and proper. Or, in other words, the introduction of this new section does not take away the right of the parties to adduce evidence concerning the merits of the case, if the finding of the court or the pleading of one of the parties is that the enquiry was defective. At the worst, the parties have an option to declare, at the beginning of the court case, whether they would like to restrict themselves to the materials on record or adduce supplementary or fresh evidence on the merits of the case. If this was the intention of the legislature, then the employers have nothing to complain on the score of discipline. In the absence of a Supreme Court decision, however, it is difficult to say as to which view is correct. It is now more important for the management to ensure that domestic enquiries are conducted in a flawless manner.

Historically speaking, the employer had unlimited power of punishment and dismissal under the common law and a Civil Court had no power of reinstatement. It was the Labour Appellate Tribunal of India which decided that the tribunals had the right to interfere with the management's function in the matter of dismissal, but nowhere in the statute books the Labour Court's power to reinstate an employee was mentioned. It is interesting to observe that this is for the first time that a legislature has spelled out that a labour court or an industrial tribunal is entitled to direct an employer to reinstate a dismissed workman.

It appears that Section 11A would operate only in regard to industrial disputes referred for adjudication under Section 10 and not the disputes which may come before the Tribunals under Section 10A or 33. Whether Section 11A will have retrospective effect or not; that is, whether it will apply only to dismissals which took place after 15th December, 1971, or also to those which might have taken place earlier but referred for adjudication after the said date, is a controversial point. It, however, seems that since this section is intended to be a procedural or remedial section enlarging the power of the court to a certain extent it would operate retrospectively in respect of all disputes which were pending on the date the new section came into force.

MONEY AND BANKING

Banks' Busy Season Policy : Accent on Liquidity Control

(By a Banking Correspondent)

The main theme of the Reserve Bank's busy season policy is liquidity control by stipulating higher reserve ratios. But as banks at present keep substantial reserves, much more than the stipulated ones, this control becomes superfluous.

THE first month of the 1972-73 busy season has not failed to show the usual characteristics of a busy season. Bank credit has increased by Rs. 57 crores, against a net contraction of credit of Rs. 15 crores in the first month of the last busy season. Banks' investments in Government and other approved securities have been depleted to the extent of Rs. 41 crores as compared with an addition of Rs. 31 crores in the corresponding period of the last busy season. Borrowings from the Reserve Bank have marginally increased by Rs. 1 crore, against a repayment of Rs. 11 crores to the Reserve Bank in November 1971. Aggregate deposits have increased significantly by Rs. 114 crores, against a rise of Rs. 88 crores in the first month of the last busy season. The busy season trends, at least in the first month of the current season, have been complete in the sense that they have been unmistakably reflected also in a rise in inter-bank call money rate from 3.5 per cent to 3.75 per cent although there is excess liquidity with the commercial banks. This apparent stringency of funds is no doubt temporary and is largely attributed to the banks' subscription to the Rs. 100-crore Central Government loan floated recently. However, simply on the basis of the first month's experience, it is hazardous to estimate the banking trends for the busy season as a whole and to judge the efficacy of the busy season policy announced by the Reserve Bank on 14th November, 1972.

In fact the continued slackness in demand for bank credit during the last slack season, against an impressive rise in bank deposits, has made the Reserve Bank's job of formulating busy season policy quite simpler. And the fact that the Reserve Bank is apparently administering all the

nationalised banks through either its representative on their boards of directors or through the Bank's senior officers working as chairmen and managing directors, or officers on special duty, has made the ritual of announcing a busy season policy quite superfluous. When 95 per cent of the banking system is completely in the hands of the Reserve Bank, which can easily and at any time influence the operations of the public-sector banks without causing slightest delay, protest or even resistance on the part of these banks, a public announcement of a busy season policy naturally becomes redundant.

While formulating the busy season policy, the Reserve Bank seems to have been influenced by two or three considerations. First, as indicated earlier in Madras by the Governor of the Bank, Mr. S. Jagannathan, the Bank was chary of making "any change in policy often and on". The Bank generally preferred to have a *status quo* policy with some marginal changes. Secondly, obsessed more by the threat of inflationary potential of excess liquidity with commercial banks, hanging like a Democles sword over the state of the economy, and not by the problem of its productive utilisation, the Bank's primary concern has been how to mop up the liquidity, which if utilised for credit creation would accentuate inflationary pressures in the country.

Thirdly, although the Bank takes into account rough estimates of credit demand from some important sectors for projecting the busy season trends, its main occupation and concern are to find out how the banking system would be able to meet the busy season credit bulge and to determine the extent of its own credit to be availed of by the banks in case of financial difficulties. The Bank has not attempted roughly to judge the adequate rate of growth in money supply.

Not only India but many advanced countries also are today facing the impending danger of accentuation of domestic inflation as a result of ex-

cess liquid funds with the banking system, with the only difference that in this country the surplus funds are caused by impressive deposit accretion consequent to the Government's resort to deficit financing and by a slack in demand for bank credit, while in foreign countries excess liquidity arises mainly as a result of hot money inflows. However, the central bank's method of mopping up the liquid funds is more or less the same. Apart from instituting strict exchange control restrictions in countries such as Britain, France and West Germany, the foreign liabilities of banks are made subject to the call of special deposits by the central banks, even to the extent of 100 per cent.

The National Bank, the central bank of Switzerland, has recently introduced a system of minimum reserves on domestic bank liabilities to cream off substantial bank funds. The Reserve Bank's strategy to drain the excess liquidity is threefold: first, by asking the banks to invest in Government securities. The recent Government loan mopped up about Rs. 100 crores of banks' funds. Increasing investment in Government securities would not alone restrain the banks from indiscriminate credit creation, as the banks can either sell or borrow against these near-liquid assets from the Reserve Bank. Hence, the Bank has to lever up reserve ratios. Secondly, the Bank has raised the liquidity ratio from 29 per cent to 30 per cent. Thirdly, in order to restrain banks' capacity of credit creation, it is necessary to restrict the quantum of Reserve Bank credit and to raise its cost to the banks. The Bank, therefore, raised the N.L.R. from 34 per cent to 36 per cent, thus reducing its funds available to banks at Bank rate by about Rs. 150 crores.

In short, the main theme behind the Reserve Bank's busy season policy is liquidity control by stipulating higher reserve ratios. And as the banks at present keep substantial reserves, much more than the stipulated ones, this control becomes meaningless or superfluous. However, its psychological impact on banks in dissuading them from indiscriminate and rapid credit creation cannot be denied. Thus the Bank has set a very limited aim of immobilising excess liquid funds instead of planning for their productive utilisation for the various sectors of the economy, which are in need of finance.

Steel Shortage: A Continuing Problem for the Engineering Industry

By K. S. Ramachandran

The engineering industry has played a leading part in the development of indigenous technical know-how. But its contribution would have been far more impressive had it not been handicapped by a continuing steel shortage.

THE Government's emphasis on economic self-reliance for the country is timely and the engineering industry has a big rôle to play in this drive. It is well-known that engineering enterprises are mainly responsible for the development of indigenous technical know-how and it goes without saying that it is the level of a country's technological expertise which determines the extent of its dependence on foreign assistance. It is now quite clear that the net foreign aid which India might receive in future would be very limited and the Fifth Plan approach paper's assumptions in this regard seem quite realistic. The debt relief recently granted might not be indicative of a future inflow of aid on a large scale and the country should be prepared for a great deal of dependence on its own resources. Self-reliance implies a high degree of import substitution. As for steel, the prime steel plants should take steps towards larger capacity utilisation, and in machinery and construction materials, the engineering industry certainly has the needed technical competence as well as the keenness to turn out substitutes for imports.

The Government must help the industry in its efforts through a pragmatic policy on import of technical know-how. In the past, import of foreign technology had been allowed in the name of foreign aid which, in turn, led to import of even such equipment and construction materials that could have been procured from indigenous manufacturers, if only use had been made of Indian engineering expertise in the preparation of designs. This should no longer be so. The Government must ensure that in future there is a maximum utilisation of the available technological know-how both in the preparation of feasibility reports and initial designs and in the construction of plants, be in the private or the

public sector. Once this is done, engineering consultants would find it worth while preparing designs even for the most intricate equipment; on its part, the engineering industry would be keen, in its capacity as a manufacturer, on developing substitutes for imports and, as a consumer, on trying out domestic substitutes of materials required for their own manufacturing operations.

Here, it needs to be mentioned that the engineering industry has generally offered its co-operation in the search for substitutes for imported equipment and construction materials; and it must be said to its credit that industrial self-sufficiency that has so far been achieved has been due mainly to the long and sustained efforts of many an engineering enterprise. It would be fair to claim that if the shortage of steel and of other essential materials had not persisted, the industry would have moved much closer to the goal of self-reliance. That the industry's technological expertise is of a level helpful to greater economic independence has been amply proved by the fact that several developing countries have sought its technical assistance for setting up large complexes.

With the aggregate demand for engineering products rising steadily, there has been a significant increase in the industry's requirements of steel. Since the growing demand for steel has not been matched by larger internal production, increased imports have been necessitated. With last year's domestic production being only 4.6 million tonnes of finished steel, against the rated capacity of 6.7 million tonnes, 1.03 million tonnes had to be imported at a cost of Rs. 185 crores. The corresponding figures for 1970-71 were 0.78 million tonnes and Rs. 148.18 crores. The Government has given an assurance that during 1972-73 imports will be over 1 million tonnes. It must be emphasised here that the engineering industry's efforts towards self-reliance would bear fruit only if there is an adequate supply of steel.

Simultaneously, there has to be peace in industry. First, there should

be a moratorium on strikes in all industrial and commercial establishments, both in the public and private sectors. Secondly, the "one plant one union" rule should be strictly enforced. Thirdly, wages and other payments to labour should be realistically linked to the level of productivity. The implication is that while wages should rise when in a particular year a company records a rise in output and in net profit, they should be allowed to come down when output and profits record a fall. While a specific percentage of the wage should be paid unconditionally, the remaining portion should be linked to the level of productivity. As for workers directly associated with the manufacturing operations, the residue should vary in keeping with changes in output; for other employees it should be determined by the rate of profits. In the case of commercial undertakings, the percentage of wages related to productivity has to be measured in terms of profits alone. Some of these proposals would necessarily imply going back on the Government's bonus formula and on the practice of fixing industrywide wages.

Export is yet another avenue for furthering the cause of self-reliance. The engineering industry's export performance has been remarkable in recent years. The target for 1972-73 is Rs. 200 crores, compared with a mere Rs. 5.37 crores in 1956-57.

EXPORT OF ENGINEERING GOODS

	(In Rs. crores)
1956-57	5
1965-66	30
1968-69	85
1969-70	106
1970-71	116
1971-72	135
1972-73	200 (target)

If the targets could not be achieved in 1970-71 and 1971-72, there had certainly been many factors responsible for the failure. Besides steel shortage, other factors like the blocking of funds with the Joint Plant Committee, delay in shipments and upward revision of shipping freights also created difficulties. Measures like streamlining the working of the Steel Priority Committee and the Joint Plant Committee and provision of adequate shipping facilities can help matters. Currently, the industry's main difficulties are on account of high steel prices and delayed allocations by governmental committees. The industry has suggested that steel should be supplied at the world base prices and that allocations made on an annual basis.

Share Prices Fluctuate Within a Narrow Range

MOVEMENTS of share prices on the stock markets have been slightly irregular but confined within a small range this past week. After a mild early retreat, the markets have tended to look up under the influence of some favourable factors but could not make much headway due to precautionary unloading by marginal bulls. The price pattern at the close of the week has been indecisive with caution and hesitancy becoming the keynote of trading. With operators inclined to take quick turns and investors' attention focussed mainly on new issues, fluctuations in leading equities have been rather erratic. Intermittent profit-taking and lack of fresh investment support at higher levels have checked the rise without causing any marked setback. This inclination for encashing earlier gains is understandable in view of the recent sustained increase in share values.

The week's news has provided a mixed fare. Investors in the capital markets have derived comfort from the Central Planning Minister, Mr. D. P. Dhar's statement that the Indian economy has been poised for a "major breakthrough" in various fields of production. But the take-over of wholesale trade in foodgrains by the Government from the ensuing *rabi* season has been viewed with misgivings. Meanwhile, the finalisation of imports of foodgrains with a view to replenishing the buffer stocks has brought some relief. The proposal to introduce greater flexibility in the operations of financial institutions like the I.D.B.I. and I.F.C. with a view to making the lending policy project-oriented rather than security-oriented has been welcomed. But how far these changes will prove beneficial to the process of economic growth under the present set-up is to be seen. A study conducted by the Credit Planning Cell of the Reserve Bank has revealed that there has been a marked rise in commercial bank advances to the priority sector in the eastern States during the three years after nationalisation of the 14 major banks. Marketmen have welcomed the recommendation of the Reserve Bank's working group on finance for the coal industry for setting up a

coal finance corporation with a view to assisting the industry to come out of its present sorry plight. The accord finally reached between India and Pakistan on the question of the line of delineation in Jammu and Kashmir and on the gradual withdrawal of troops by both the countries has been noted with satisfaction.

Gilt-edged securities have maintained a steady trend. Their turnover has been rather limited. The 3 per cent Conversion loan 1986 has been quoted at Rs. 59.95. There has been little change in State Government loans.

The Calcutta stock market has been quietly steady this past week. Price movements have been limited to a narrow range. Market circles have noted the Press reports that larger industrial houses, particularly those based in West Bengal, might be allowed to expand capacity. This is one of the measures they expect New Delhi to adopt as part of its plan to ginger up industrial activity. Among engineering shares, Guest Keen Williams, Bihar Alloy and Kumardhubi have been steady. Among jute shares, Birla, Bally, New Central and Kamarhattv have changed hands. In the cotton section, Bharat Commerce, Elgin and Sutlej have been transacted. Among coal shares, South Karanpura and Western Bengal have been dealt in. Among paper shares, Ballarpur, Sirpur, Seshasayee, Straw Products and Tribeni Tissues have moved narrowly. In the tea section, Assambrook, Birpara, Gohpur and Teesta Valley have been traded. Among miscellaneous shares, J. K. Synthetics, Indian Explosives, Philips India, English Electric, Union Carbide and Woolcombers have been supported.

Activity on Dalal Street has been characterised by restricted turnover, although share prices have maintained on the whole a steady trend. Bears have generally refrained from pushing their sales and this has helped the recovery move. At higher levels, however, bulls have been inclined to reduce their outstanding commitments as the political and

economic perspective is still considered hazy. Sentiment has been enlivened by the statement of Mr. K. V. Raghunatha Reddy, Central Minister for Company Affairs, that the Government has no intention of putting curbs on companies' profits and dividends. Corporate news during the week has also been quite helpful. J. K. Steel, Carbonundum Universal and Shalimar Wires have raised their equity payment from 3, 12 and 10 per cent to 5, 15 and 13 per cent, respectively. United Carbon and Bajaj Auto have proposed bonus issues on four-for-five and one-for-two basis, respectively, while Dhruva Chemicals have obtained the C.C.I.'s consent for its three-for-ten bonus proposal. Rathil Ispat have planned diversification of their activities by setting up a paper mill, a P.V.C. film plant and a refractory plant. Among other shares, Tata Steel have enjoyed good support while Century Spinning have shown a considerable degree of steadiness. Hindustan Motors have recorded fair gains; and Voltas and Larsen and Toubro have received good investment enquiries.

The Madras stock exchange has recorded limited activities this past

COMPANY REPORTS

Reports relating to the following companies appear on later pages of this section:

Andhra Paper
Balrampur Sugar
Balrampur Sugar
BOAC
Cauvery Sugars
Chloride India
Coffee Lands
Hindustan Cables
Jayant Paper
Jeypore Sugar
J. K. Steel
Kaycee Industries
Kirlampudi Sugar
Kirkoskar Pneumatic
Madura Sugars
M.I.C.O.
Mysore Kirkoskar
National and Grindlays
Phosphate Company
Rohtas Industries

week. Sugar shares have an edge over others in performance. The pressing economic problems of power and raw materials shortage, together with signs of labour unrest in parts of the south, have an effect on the market. In the textile section, Mettur Beardsell and South India Viscose have registered a little rise. In the planting section, Pullangode have been quoted a little higher. In the miscellaneous section, business have been done in Dalmia Cement, Aluminium Industries and Engine Valves.

CLEARED SECURITIES IN CALCUTTA

[The following list shows the range of price fluctuations in clearing shares in the Calcutta stock market during the past week. The figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing date a year ago. The last named is shown

in parentheses. All quotations are in rupees.]
Birla Jute 24/75—24/75—23/60—23/70—(20/90)

Phosphate Company Shows Good Performance

THE working of the Phosphate Co. Ltd for the year ended June 1972 shows considerably improved results. Turnover and production have substantially increased. The production of superphosphate rose from 27,342 tonnes to 42,135 tonnes and that of sulphuric acid from 19,430 tonnes to 25,035 tonnes. The output could have been still higher but for the frequent interruptions in power supply and the dislocation of shipping facilities affecting the flow of improved raw materials during the conflict with Pakistan. The granulation plant's working was badly affected during the second half of the year due to the non-supply of required intermediates from the pool. Sales are up from Rs. 2.69 crores to Rs. 3.17 crores and the profit has risen from Rs. 1.41 lakhs to Rs. 8.56 lakhs, after providing Rs. 8.62 lakhs (against Rs. 7.76 lakhs) for depreciation, Rs. 53,370 (against Rs. 2.51 lakhs) for development rebate and Rs. 10.50 lakhs (against Rs. 80,000) for taxation. In view of the Company's better performance, the taxable ordinary dividend has been

raised from 7 per cent to 12.5 per cent, to be paid from general reserve. This offers a yield of 10.9 per cent at the present price of Rs. 115 a share of Rs. 100 each. After transferring Rs. 3.46 lakhs from tax credit certificate and after making other adjustments, Rs. 12.01 lakhs have been taken to general reserve.

MYSORE KIRLOSKAR

Sales and Profit Rise

THE working of Mysore Kirloskar Ltd for the year ended June 1972 has resulted in a profit of Rs. 37.81 lakhs, after providing depreciation of Rs. 48.76 lakhs, development rebate of Rs. 9.26 lakhs and taxation of Rs. 37 lakhs. This compares with the previous year's profit of Rs. 33.98 lakhs, after providing depreciation of Rs. 46.32 lakhs, development rebate of Rs. 11.26 lakhs and taxation of Rs. 36 lakhs. Sales for the year amounted to Rs. 657.97 lakhs (against Rs. 622.25 lakhs). The total available surplus is Rs. 39.33

lakhs which includes Rs. 4,846 brought forward from the previous year and Rs. 1.47 lakhs being excess provision. Out of this, provision for gratuity amounted to Rs. 7.36 lakhs. General reserve gets Rs. 21.90 lakhs (against Rs. 37.10 lakhs), dividend equalisation reserve Rs. 5 lakhs (against nil) and debts redemption reserve Rs. 5 lakhs (against nil). The balance of Rs. 7,247 is being carried forward. The directors have recommended an equity dividend of 10 per cent as well as 8 per cent and 9.3 per cent on the two classes of preference shares. These dividends amounting to Rs. 15.39 lakhs will be paid out of general reserve.

Sales so far during the current year are slightly higher than in the corresponding period of the previous year. But due to the power cut, the directors say, there is an element of uncertainty. It is also stated by the directors that the demand for the Company's products will depend on the extent to which the engineering industries are affected by the power cut. The Company's subsidiary, Precision Tooling Systems Ltd, has already taken up the manufacture of boring bars. The directors add that the plant and machinery required for the manufacture of microbore tools have been received.

KIRLOSKAR PNEUMATIC

Results Disappoint

KIRLOSKAR Pneumatic has turned out extremely disappointing results for the year ended March 1972. Despite an increase of about 15.8 per cent in turnover—sales and works contracts—from Rs. 8.06 crores to Rs. 9.34 crores, the gross profit has shrunk from Rs. 105.41 lakhs to Rs. 47.90 lakhs. The only consolation that the shareholders have is the maintenance of dividend at 15 per cent. The sharp setback in profitability is attributed to the steep rise in costs by way of enhanced interest charges, increased wage bill, higher raw material costs and adverse conditions prevailing in the market for some of the Company's products.

After providing Rs. 26.92 lakhs (against Rs. 25.72 lakhs) for depreciation, Rs. 4.30 lakhs (against Rs. 4.60 lakhs) for development rebate reserve and Rs. 4 lakhs (against Rs. 39 lakhs) for taxation, the net profit for 1971-72 amounts to Rs. 12.68 lakhs, against Rs. 36.09 lakhs in the preceding year. During the year, the Com-

pany further diversified its activities in all the three industries in which it is engaged, namely, compressed air, air-conditioning and refrigeration and transmission. The Company issued debentures worth Rs. 1 crore during the year. The outlook for the current year is considered to be better. Sales in the first six months have been better than last year's corresponding figure. And orders on hand total Rs. 11.4 crores. The Company proposes to change its financial year ending with March to one ending with June, with effect from 1972-73. The current year will, therefore, cover a period of 15 months.

CHLORIDE INDIA

Handsome Rise in Profit

CHLORIDE India Ltd has produced substantially improved results for the year ended August 1972. It has earned a pre-tax profit of Rs. 241.17 lakhs, compared with Rs. 198.20 lakhs in the previous year. After making a provision of Rs. 5.98 lakhs for development rebate reserve and Rs. 147 lakhs for taxes and after writing back Rs. 1.28 lakhs from development rebate reserve and Rs. 11.29 lakhs for taxes pertaining to earlier years, the entire balance of Rs. 100.76 lakhs has been transferred to general reserve. The Company declared a taxable interim equity dividend of 80 paise a share of Rs. 10 each. The directors have now recommended the payment of a final dividend at the rate of Rs. 1.45 a share, subject to tax, absorbing Rs. 30.80 lakhs which will be paid from general reserve.

NATIONAL AND GRINDLAYS

Capital Issue Oversubscribed

NATIONAL and Grindlays Bank Ltd recently offered in the Eurobond market \$(U.S.) 30,000,000 7½ per cent capital bonds 1987 at 100½ shillings. This issue was managed by White Weld and Co. Ltd, WM Brandt's Sons and Co. and FNCB Euro Securities SA. The issue was substantially oversubscribed. Brokers to the issue were De Zoete and Bevan and Strauss Turnbull and Co.

BOAC

Cargo Record Achieved

A BOAC Boeing 747 passenger jet carried 32½ tons of cargo on a flight from New York to London a few days ago—a load the air-

line believes is a record for cargo carried on any regular schedule passenger flight. There was no heavy individual item on the flight but, appropriately, the largest consignment was 28,000 kilograms of long playing records.

M.I.C.O.

Factory in Nasik

THE construction of Motor Industries Co. Ltd's new factory in Nasik has been started. The new factory is part of a major expansion of the Company, which also envisages a substantial increase in production at the Bangalore factory. Initially, nozzles and nozzle-holders will be manufactured in Nasik. The first stage of construction in Nasik is expected to be completed in another 12 months.

ANDHRA PAPER

Maiden Dividend

ANDHRA Pradesh Paper Mills has reported substantially improved results for the year ended June 1972 which has enabled the directors not only to clear the arrears of preference dividends (1968-69 to 1970-71) but also to declare a maiden equity dividend at the rate of Rs. 10 a share (10 per cent). The Company's production

rose by 15 per cent from 51,179 tonnes to 59,692 tonnes, sales by 25.5 per cent from Rs. 9.58 crores to Rs. 12.04 crores and gross profit by 32 per cent from Rs. 2.23 crores to Rs. 2.94 crores. Together with the surplus of Rs. 52 lakhs brought forward and a write-back of Rs. 13.69 lakhs from tax credit certificate reserve, the disposable surplus amounts to Rs. 3.60 crores. Out of this a sum of Rs. 1.99 crores (against Rs. 1.53 crores) has been provided for depreciation for 1970-71 and 1971-72. After taking into account the payment of preference dividends for 1966-67 and 1967-68 totalling Rs. 13.45 lakhs, the entire surplus of Rs. 1.48 crores has been transferred to general reserve. The total preference dividends amounting to Rs. 38 lakhs and the proposed equity dividend absorbing Rs. 37.50 lakhs will be paid out of general reserve.

JAYANT PAPER

Results Improve

JAYANT Paper Mills has turned out better results for the year ended June 1972 although margins have been under pressure. As against an increase of about 22 per cent in sales from Rs. 1.19 crores to Rs. 1.45 crores, the gross profit has increased by only 6 per cent from Rs. 21.95 lakhs to Rs. 23.29 lakhs. The dividend has been maintained at 12 per

J. K. STEEL : BETTER RESULTS

J. K. STEEL and Industries Ltd has produced improved results for the year ended June 1972. Turnover is Rs. 341 lakhs (against Rs. 325 lakhs) and the gross profit has increased from Rs. 22.61 lakhs to Rs. 23.08 lakhs. A sum of Rs. 10.29 lakhs (against Rs. 10.22 lakhs) has been provided for depreciation while Rs. 8.89 lakhs have been transferred to general reserve, against Rs. 7.86 lakhs in the previous year. The equity dividend has been stepped up from 30 paise to 50 paise a share, besides Rs. 9.10 a share on preference shares.

The Company would have produced much better results but for the considerable rise in the cost of production, prices of raw materials, stores and spares. Wages

and duties have been continuously rising. Wages have risen steeply without any relation to productivity. The introduction of gratuity and the raising of the amount of minimum bonus have further enhanced the labour cost. Moreover, there has been a steep rise of 95 per cent in the excise duties on various steel items and the Company had to bear the impact of these increased duties as commensurate rise in prices was not possible in a competitive market. The shortage of steel resulted in under-utilisation of the Company's capacity and restricted power supply, coupled with load shedding, restricted products. The Company has started a research and development department and has designed and developed a new electric hoist which has resulted in good orders.

cent. After providing Rs. 6.86 lakhs (against Rs. 4.32 lakhs) for depreciation, Rs. 1.90 lakhs (against Rs. 24,000) for development rebate reserve and Rs. 7.81 lakhs (against Rs. 9.51 lakhs) for taxation, the net profit amounts to Rs. 6.72 lakhs, against Rs. 7.88 lakhs in the preceding year. After adjustments, a sum of Rs. 6.59 lakhs (against Rs. 8.02 lakhs) has been transferred to general reserve out of which the proposed dividend absorbing Rs. 3.60 lakhs will be paid.

Improved results are attributed to an increase in production from 6,722 tonnes to 6,916 tonnes and higher prices realised for paper. The Company has embarked on an expansion programme aimed at raising the capacity from 6,720 tonnes to 15,720 tonnes of paper and boards. The letter of intent has been received and the industrial licence for expansion is awaited. The expansion is estimated to cost Rs. 80 lakhs and it is expected to be completed within two years from the date of the receipt of the licence. It is likely that the Company will issue rights shares to raise part of the finance for expansion.

BALRAMPUR SUGAR

Results Improve

THE Balrampur Sugar Co. Ltd has shown satisfactory working results for the year ended June 1972. Sales of sugar and molasses are up from Rs. 2.53 crores to Rs. 3.17 crores, and the profit has risen from Rs. 1,632 to Rs. 76,906, after providing Rs. 4.39 lakhs (against nil) for depreciation. A taxable ordinary dividend of 8 per cent has been declared absorbing Rs. 1.12 lakhs which will be paid out of general reserve. This offers a yield of 6.2 per cent at the present price of Rs. 3.25 a share of Rs. 2.50 each. The Company had paid no dividend in the previous year. Allocations include Rs. 9,500 (against nil) for development rebate reserve and Rs. 3.75 lakhs (against nil) for general reserve. After writing back Rs. 1.57 lakhs from cane price difference for the previous year and after making other adjustments, a sum of Rs. 23,683 is carried forward, against Rs. 33,989 brought in. Production was shown at 148,460 quintals (against 81,399 quintals). The quantity of cane crushed rose from 860,561 quintals to 1,575,737 quintals and the recovery was 9.42 per cent, against 9.46 per cent.

JEYPORE SUGAR

Dividend Doubled

THE directors of Jeypore Sugar Co. Ltd have announced a substantially higher dividend of 20 per cent for the year ended June 1972, against 10 per cent in the previous year. According to the available figures, the profit, before depreciation, amounts to Rs. 148.55 lakhs (against Rs. 61 lakhs). Out of this, interest charges alone amounted to Rs. 41.04 lakhs (against Rs. 45.8 lakhs). Provision for depreciation is Rs. 24.10 lakhs (against Rs. 24.86 lakhs). The net profit amounts to Rs. 83.31 lakhs. This compares with the loss of Rs. 9.69 lakhs in the previous year. Provision for agricultural income-tax is Rs. 20,000 (against Rs. 53,000). There is no Central tax liability. General reserve gets Rs. 73.20 lakhs (against nil) and development rebate reserve Rs. 10.25 lakhs. The molasses storage facilities fund is allocated Rs. 16,000 (against nil). A transfer of Rs. 44,000 is made to the profit and loss account from development rebate reserve. The directors have also transferred a sum of Rs. 8.60 lakhs from general reserve to make the appropriations.

KIRLAMPUDI SUGAR

Good Results

KIRLAMPUDI Sugar Mills Ltd has produced good results for the year ended June 1972, and an outstanding feature has been the decision of the directors to pay the arrears of preference dividend for 20 years, including the year 1972. A dividend of 6 per cent has been recommended on ordinary shares. The profit for the year amounts to Rs. 25.63 lakhs, after providing depreciation of Rs. 4.26 lakhs. This compares with the previous year's loss of Rs. 6.98 lakhs, after providing depreciation of Rs. 4.69 lakhs. The total available surplus is Rs. 33.20 lakhs which includes Rs. 2.95 lakhs being excess tax provision and Rs. 4.62 lakhs being excess development rebate. Out of this, development rebate reserve gets Rs. 4 lakhs (against nil). Tax provision is Rs. 3.90 lakhs (against nil). Transfer to molasses storage facilities fund amounts to Rs. 9,000. Dividend reserve gets Rs. 9.60 lakhs and general reserve Rs. 2.50 lakhs. After adjusting the brought-forward loss of Rs. 12.89 lakhs, the balance of Rs. 22,418 is being carried forward.

During the year the factory crushed 91,600 tonnes of sugarcane and produced 91,917 quintals of sugar. This compares with 71,963 tonnes of cane crushed and 27,500 quintals of raw sugar and 41,002 quintals of white sugar produced in the previous year. The average recovery was 10.03 per cent (against 9.52 per cent).

CAUVERY SUGARS

Dividend Resumed

CAUVERY Sugars and Chemicals Ltd has done fairly well for the year ended June 1972. The directors have recommended a dividend of 10 per cent on ordinary shares and 7.8 per cent on preference shares from 1970 to 1972. The Company had skipped the equity dividend for the years 1970 and 1971. During the year sales moved up to Rs. 387.35 lakhs (against Rs. 256.56 lakhs). The gross profit, before depreciation and taxation, has recorded a good improvement at Rs. 36.59 lakhs (against Rs. 11.94 lakhs). Provision for depreciation is Rs. 7.63 lakhs (against Rs. 7.92 lakhs). Provision for additional depreciation amounted to Rs. 1.82 lakhs. Total sugarcane crushed amounted to 155,000 tonnes (against 211,000 tonnes). Sugar production was lower at 13,516 tonnes (against 17,851 tonnes). But a higher recovery during the year helped raise the Company's earnings.

MADURA SUGARS

Shareholders Rewarded

THE directors of Madura Sugars have announced a final dividend of 14 per cent for the year ended September 1972, making a total of 20 per cent for the year, including the interim dividend of 6 per cent, against 6 per cent in the previous year. The profit has moved up substantially, the gross profit before depreciation and taxation being Rs. 15.13 lakhs (against Rs. 1.74 lakhs). The higher profit is due to the satisfactory trading conditions. Provision for depreciation is Rs. 1.97 lakhs (against Rs. 1.02 lakhs). Development rebate accounts for Rs. 75,829 (against Rs. 5,964). Provision for taxation is Rs. 4.56 lakhs (against nil). The gratuity fund gets Rs. 1.50 lakhs (against nil). The appropriations have been made after deducting the brought-forward loss of Rs. 3.54 lakhs from the previous year and after transferring Rs. 1.20 lakhs from general reserve.

HINDUSTAN CABLES

Equipment from British Firm

ORDERS for 119 telephone cable insulating machines, worth £170,000, have been placed with a British firm by Hindustan Cables, a Government of India undertaking. Of these, 94 machines are for a factory under construction in Hyderabad, and the remainder for an existing factory in Rupnarainpur, West Bengal. The new factory will start production early next year, and the cable insulating machines, which are used in the later stages of manufacture, will be shipped in two lots, the second of which is expected at the site in April 1973. The machines are manufactured by Crowther Ltd of Thurmaston, Leicester (English Midlands) under licence from a French firm. They are small vertical paper insulating machines which apply special electrically insulating paper to the copper conductor of the telephone cable by wrapping the paper in ribbon form spirally round the conductor.

BHARAT FORGE

Setback Suffered

THE brief preliminary statement from Bharat Forge on its performance during the year ended June 1972 shows a marked setback, reflecting the recession in the diesel engine industry and prolonged strikes at customers' works. Sales and other income have declined sharply from Rs. 7.25 crores to Rs. 5.25 crores and the gross profit has shrunk from Rs. 1.39 crores to Rs. 55.45 lakhs. The directors have skipped the equity dividend but the arrears of preference dividends for the three years ended June 1969 are being cleared. A sum of Rs. 48.31 lakhs (against Rs. 47.29 lakhs) has been provided for depreciation and Rs. 1.50 lakhs for development rebate reserve. After adjustments, the surplus of Rs. 5.64 lakhs is carried forward.

KAYCEE INDUSTRIES

Dividend Raised Again

KAYCEE Industries has reported improved results for the year ended June 1972 and the dividend stepped up in the previous year from 6 per cent to 7 per cent is being further raised to 7.5 per cent. Sales have risen by 23.5 per cent from Rs. 53.99

lakhs to Rs. 66.71 lakhs and the gross profit has gone up by 45 per cent from Rs. 10.39 lakhs to Rs. 15.12 lakhs. After providing Rs. 2.61 lakhs (against Rs. 2.73 lakhs) for depreciation, Rs. 40,000 (against Rs. 60,000) for development rebate reserve and Rs. 8.18 lakhs (against Rs. 4.29 lakhs) for taxation, the net profit amounts to Rs. 3.94 lakhs, against Rs. 2.77 lakhs in the preceding year. The equity dividend will absorb Rs. 1.68 lakhs (against Rs. 1.57 lakhs) and the deferred dividend Rs. 32,000 (against Rs. 26,000).

COFFEE LANDS

Profit Declines

COFFEE Lands Ltd has earned a profit of Rs. 11.44 lakhs for the year ended June 1972, against Rs. 32.43

lakhs in the previous year. After providing Rs. 5.90 lakhs (against Rs. 13.20 lakhs) for taxation, there is a net profit of Rs. 5.54 lakhs (against Rs. 19.23 lakhs). Adding to the profit Rs. 21,298 being refund of income-tax, Rs. 10,521 being unclaimed dividend, Rs. 2.15 lakhs brought forward and Rs. 3 lakhs transferred from general reserve, there is a total of Rs. 11.01 lakhs available for appropriation. Out of this, the preference dividend of 5.31 per cent amounted to Rs. 55,256. The equity dividend of 18 per cent, which is on the increased capital due to the issue of bonus shares, will absorb Rs. 8.64 lakhs. In the previous year the dividend was 20 per cent on the old capital. During the year the Company harvested a total of 538 tonnes of coffee, against 910 tonnes in the previous year. The coffee crop for 1972-73 is estimated at 730 tonnes. It has been valued at Rs. 3.50 a point.

ROHTAS INDUSTRIES : CRASH PROGRAMME

IT is stated in the latest report of Rohtas Industries Ltd for the year ended March 1972 that the increase in the cost of raw materials, stores and spares adversely affected the profitability of the paper division. The Company has taken on hand the crash programme for increasing paper production from the present 60,000 tonnes to 75,000 tonnes annually in the first stage by incurring an expenditure of Rs. 3.75 crores, including foreign exchange. As a result of the Company incurring an expenditure of over Rs. 1.5 crores during the last four years for carrying out several replacements and improvements to the plant and machinery, it has been possible to achieve an annual rate of production of 60,000 tonnes, against the production of 43,500 tonnes during the year 1968-69. The production of 5,479 tonnes during the month of October 1972 has been the highest. It is hoped that the implementation of the crash programme for increasing the production to 75,000 tonnes will considerably increase the profitability of the paper division. Efforts will be made to raise the capacity to 125,000 tonnes.

The Company has incurred a loss of Rs. 57.34 lakhs, after meeting all the expenses of operation and providing for bonus amount-

ing to Rs. 31 lakhs for the year and also for 1968-69 but without providing for depreciation. In view of the Company's loss, the dividend has been skipped again. After writing back the excess provision of Rs. 4.43 lakhs in respect of the previous year and after making other adjustments, there is a debit balance of Rs. 52.91 lakhs which is proposed to be carried forward.

Production of clinker was lower due to the renovation of kiln No. 2. Production of cement also suffered on account of the acute shortage of power and non-availability of empty wagons. Major rehabilitations and renovations have been done to kiln No. 1 at a cost of about Rs. 26 lakhs; as a result it has been possible to achieve production of clinker at the rate of 550 tonnes a day. The abestos cement products unit showed increased production to the extent of over 3,400 tonnes. It has been possible to achieve improved profitability in this unit due to better availability of fibre and improved realisation. The production of *vanaspati* had to be restricted as a result of adverse trends in the market due to larger availability of this product. This, coupled with the Government's unrealistic price policy, resulted in a loss in this unit.

Import of Fibre Only to Build Buffer Stocks, Says Mr. Mishra

NO jute mill in the country should suffer forced idle capacity due to a dearth of raw jute, said Mr. L. N. Mishra, Central Minister for Foreign Trade to newsmen in Patna last week-end. The Government of India had decided to import 360,000 bales of fibre from Bangladesh primarily to "build a buffer stock for meeting emergency requirements", he added. Emphasising that New Delhi was resolved not to allow fibre prices to sag in an effort to safeguard the interests of the ultimate growers, he affirmed that it was "against the Centre's policy to import jute from Bangladesh or from any other country as it would bring down the price of raw jute in India." Mr. Mishra admitted that he had received a letter from the West Bengal Chief Minister, Mr. S. S. Ray, "requesting the Centre to import 100,000 bales of jute from Bangladesh as some mills in the State had been on the verge of closure due to the dearth of raw jute." The suggestion of raising the imports to 1 million bales, he said, "might have been made by the Indian Jute Mills Association in a bid to bring down the price of jute in the country by creating a glut in the market with imported jute."

The steady decline, quarter by quarter, in the uses of jute as tufted carpet-backing cloth for an extended

period cannot be reversed unless the material is made more competitive in price, observes the New York correspondent of the Indian Jute Mills Association's journal in a recent despatch. Users of carpet-backing cloth are sorely disappointed over the fact that there is still no decision to abolish or substantially scale down the export duties, he adds. (The letter was written shortly before the New Delhi announcement of the partial relief of the import in respect of only primary carpet-backing cloth on 31st October.) Consumers are being forced to take a long, hard look at substitutes for any long-term planning, for currently prices of both carpet-backing cloth and burlap have started edging upward after a slow but steady decline. Compared with 1971, the January-August burlap consumption figures registered a decline of 22.2 per cent this year and activity is restricted to purchasing mostly from Bangladesh, against immediate requirements. The passage of time alone ensures "a viability of substitutes that becomes increasingly difficult to combat in the sophisticated and innovative U.S. market," he indicates.

The prime force behind the shift away from jute is the price level, tragically inflated by the export duties. Its effect is evident in the rapidly increasing stockpile of jute backing in Cal-

cutta and the marked decline in production from month to month. According to the U.S. Department of Commerce, says the correspondent, tufted carpet production in the country during the second quarter of 1972 increased by 8.9 per cent over the preceding quarter, in line with the increase in economic activity. He discerns mounting evidence of the fact that the current expansion will be catered to by a large variety of domestically-produced and cheaper synthetics and not by the reliable and proven jute. Already, the use of jute primary backings cloth in the second quarter has registered a decline of 2 per cent over the first and that of secondary backings by 2.6 per cent, according to estimates made by the State Commerce Department.

New Uses of Jute

A West German firm has successfully spun viscose tyre-cord yarn of high tenacity and lower elongation from cellulose, extracted from jute sticks. Jute sticks, fibre and seeds are good sources of useful chemicals. Cellulose from jute fibre and stick can be separated from bonded lignin with little difficulty and used as a good raw material for paper and rayon of good quality. Currently, small quantities of jute cellulose pulp are added to improve the quality of paper produced from wood pulp and other fibre of short chain-length. This addition increases the strength and whiteness of the paper, produced from inferior quality pulp. Bamboo and eucalyptus, among other farm and forest products, have so far been used as a raw material for rayon grade pulp. The ever-increasing

demand for this yarn necessitates intensive investigations on the use of jute sticks on a commercial scale. This cheap but useful material, growing annually to the extent of double the quantum of fibre, is wastefully used as a fuel. Only about 25 per cent of the stick output is converted into viscose yarn. Other uses of jute sticks are the manufacture of particle boards, pressed sheet boards and some chemical by-products. Jute cuttings may also be digested to yield a very good quality pulp which may be added to paper pulp. These may also be treated with suitable adhesive materials for the manufacture of waterproof matting.

While improvements in the conventional uses are to be considered a continuous process, the exploration of areas of diversifying jute uses should also attract adequate attention of scientists and technologists. Like cotton or wool, jute can find a variety of uses as a modified, bonded, laminated and treated fibre. Its potentialities are concealed in its interesting chemical and physical properties. The high modulus and comparatively low density can be utilised to advantage in the construction of small, light-weight boats or canoes. A few layers of jute polyester provide a rigid lamination which can be cast into moulds of required shapes

and sizes. A riverine country like Bangladesh or the deltaic West Bengal, where boat building timber is rather costly and difficult to procure, may well use the substitute material at a cheaper cost. The same material may also be used as a substitute for plywood and timber in a host of other uses. When treated with vinyl latex, and plasticiser mildew-proofer, the jute fabric provides a smooth finish after heavy laundering. Its greater strength and durability and the attractive look of the conventional vinyl products promise a much better performance of the innovation. Of late, their demand has been growing fast in various forms of floor and wall-coverings. One type of floor tile, like linoleum, consists of a cork-base under a layer of jute-hessian with a vinyl top.

Gunnies Firm

Despite erratic price movements on alternate bouts of profit-taking and short-covering with some extent of bull squeeze, the Calcutta gunny market ruled basically firm during the past week. Fresh enquiries and business were virtually absent and both the industry and operators had to depend on conflicting rumours. Poor draft conditions in the Hooghly around the approaches to the port reduced the

pace of loading as most shipping companies had deferred their sailing schedules by about a month to mid-January and thereafter. The continuing rise in fibre prices and the apathetic approach by the Central Government to the issue of importing adequate stocks of fibre from Bangladesh, Burma and Thailand induced mills to be cautious. In spite of the rise in the market rates, mills were not inclined to extend their ready and forward commitments mainly due to the difficulties in covering fresh sales of end products by adequate purchases of fibre at remunerative levels. The statement of the Central Minister of Foreign Trade, Mr. L. N. Mishra, in Patna last week that imports of fibre by the Central Government were meant for building a buffer stock and that brisk imports of jute would not be made lest a glut of such imported fibre might depress raw jute prices impairing the interests of the growers, induced caution in industry and fibre trade circles. They failed to realise as to how the Minister could charge the I.J.M.A. with having pressed for the import of 1 million bales of fibre for causing a crash in the fibre market when the rates had been hovering around the seasonal peak of Rs. 67 a maund f.o.r. Calcutta ready, basis Assam Bottoms, against the statutory minimum price of Rs. 43. Already,

I.J.M.A. STOCK FIGURES FOR NOVEMBER

The Indian Jute Mills Association reports the total stocks of jute goods at the end of November as follows:

Description	30th November, 1972		31st October, 1972		Increase over (+) or decrease from (-) last month		30th November, 1971	
	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)
Hessian cloth and bag	9,06.62 (9.91)	26.2 (25.8)	8,41.04 (9.20)	24.2 (23.8)	+65.58 (+71)	+2.0 (+2.0)	9,67.86 (10.58)	29.2 (28.8)

Meeting the Challenge of Developing Society by Undaunted Entrepreneurship Geared to Generation of National Wealth and Development of National Talent and Employment Opportunities.

J. K. ORGANISATION *Synthesis of National Talent and Entrepreneurship*

Indian costs of production were exorbitant and together with the burden of fiscal impost, Calcutta products were edged out by Bangladesh goods and synthetics. Any further rise in the price of fibre will make the end-products still dearer to the consumers and will hasten the pace of substitution. The trade derived some encouragement from the talk that the D.G.S.D. had increased his earlier indent for 6,000 tonnes of B twills for the current month to 9,000 tonnes and that he was likely to issue requisitions for similar monthly offtake during the next quarter to mills before long. The floating stocks of heavy goods and the anticipated output appeared to be much lower, leading marketmen to envisage an extremely tight position in the construction for the near-term. The market was encouraged over the report of another enquiry from Syria for 15,000 bales of sugar twills on an extended delivery schedule, indicating

L.J.M.A. PRODUCTION FIGURES FOR NOVEMBER

The Indian Jute Mills Association reports the total production of jute goods at the end of November as follows:

(000 metres and 00,000 yds.)				
	Nov. '72	Oct. '72	Nov. '71	
Hessian	9,27,38	8,32,51	9,02,18	
	(10,14)	(9,10)	(9,87)	
Sacking	8,31,43	7,83,98	9,32,11	
	(9,09)	(8,57)	(10,19)	
Carpet-backing	1,21,92	1,07,24	1,87,35	
	(1,33)	(1,17)	(2,05)	
(000 tonnes and tons)				
	Nov. '72	Oct. '72	Nov. '71

that Bangladesh which had bagged the recent tender for an even quantity by underquoting Calcutta was not in a position to cover the entire requirements of the buyers. The comfortable bookings by Dacca for far positions extending to the end of the current jute season induced Clive Row to believe that further overseas enquiries and business would spillover to Calcutta. But the reserve shown by the industry in extending its commitments was the major hurdle behind Calcutta's ability to satisfy export demands in full for the remainder of the season. Besides, the fact that prices had been staying at the peak was a positive deterrent to brisk internal and overseas offtake. The rejection of the industry's suggestion of reducing mill operations to a five-day week failed to produce a corresponding impact on the market. The moderate price fluctuations were ascribed to bull-bear tussle. Turnover was small and the closing undertone was pretty firm.

Fibre Outlook Buoyant

After ruling exceptionally steady around the seasonal peak level for the past two weeks or so, fibre prices reacted somewhat towards the past week-end on realising by speculators, combined with scattered selling by holders of odd lots of suitable grades by both intermediaries and growers. But the outlook continued to be buoyant in view of the possibility of an extremely tight position in fibre supplies around the last quarter of the current season. The prospects of heavy imports from countries like Bangladesh, Burma and Thailand too were bleak for by now they had already disposed of their seasonal surpluses. Besides, the small lots which might have been

procured from third parties would have been much costlier, making their procurement meaningless. In the up-country markets, prices were ruling much above Calcutta parity levels and all offers were easily absorbed at or a shade above the quoted prices. Before taking a view for immediate and near terms, operators were cautious, awaiting the release of the I.J.M.A. production, stocks and fibre offtake figures for the previous month. Turnover was small and the closing undertone was steady.

TEA

Demand Slackens

A Special Correspondent writes: The offerings at last week's Calcutta leaf tea auction amounted to 72,665 packages. There was less general demand. C.T.C. broken, particularly the medium descriptions, tended easier. Fannings of all varieties were firm, with the selected best selling well. Clean plain orthodox B.O.P.s were easier while orthodox B.O.P.s from Assam were neglected and there were heavy withdrawals in this category. Fannings sold at about the previous week's rates. Whole-leaf grades were lower but sold readily, particularly the medium varieties. Darjeeling teas met with a limited demand and there were heavy withdrawals.

STOCK PRICES AND YIELDS

CAPITAL

(Founded in 1888: Published every Thursday)

CAPITAL is India's most widely-read weekly newspaper dealing with economics, industry and public affairs. It has the mature experience of more than 80 years, and is the oldest journal of its kind in the country. Each week, it brings authoritative and comprehensive coverage of the main problem and events affecting the progress of the economy and the growth of industry. It separates the important from the unimportant; it presents simply, clearly and reliably what all informed observers of the economic scene ought to know.

Readers of CAPITAL are mainly people holding positions of vital importance in Government, business, industry and academic institutions. Many of them are intimately concerned with the framing of the country's economic policies. Many direct and control industrial, banking and commercial institutions. Together they represent a fund of economic opinion and buying power that no advertiser can afford to ignore.

Rates of subscription payable in advance.

why do we research tobacco

We do not grow tobacco. Yet we have the oldest and possibly the best leaf tobacco research and development establishment. Costs us Rs. 16 lakhs a year. Why?

Tobacco today is a source of livelihood to nearly half a million people. And a major earner of foreign exchange. All this is the result of pioneering research. Further improvement of yield and quality must follow. So we take research as a primary responsibility. We produce pure seeds for farmers, breed and select plants to evolve disease resistant varieties and new strains of tobacco. Determine fertiliser mixture compositions. Analyse water and soil. Two of the best export varieties, Spl FCV and "16/103" were evolved by our research. We also introduced virginia tobacco and the flue curing process.

There must be someone to do this kind of continuous research.

if we don't grow it?

BOAC moves cargo through London to 11 North American cities faster than anyone.

It's all done by computer.

Your cargo can travel on any of our 17 passenger flights a week, from Bombay, Calcutta and Delhi. Or our all-cargo flights from Calcutta twice a week.

When it arrives at London it passes through our computerised handling facilities (which help move your cargo faster and efficiently).

And then from London your cargo can connect with any of our 80 flights a week to all the major cities of North America. Cargo can also be shipped to as many as 89 different European destinations every day.

No other airline can ship cargo through London faster than BOAC. Because no other airline has it all done by computer.

We'll take good care of you.

BOAC

Britain in the Community

THE date 1st January, 1973, marks the beginning of phase two in the development of what is undoubtedly the most successful experiment in international integration and collaboration since the second World War, perhaps in the whole of human history. The enlargement of the European "Six" into the new "Nine" will not be celebrated with much flag-wagging. The mood in the Community, and especially in Britain, is altogether too subdued, too anti-climatic, for that. Yet the expanded grouping will represent the world's second largest economic unit, its fastest-growing, and its largest in terms of external trade. Despite its unimpressive political image, it cannot fail to assume a vital international rôle with the minimum delay. That is if the new members are assimilated satisfactorily. It is not necessary to recall the prophetic words of a not-long-dead French President to appreciate that the problems of welding together nine disparate nation States into a union as yet incompletely defined, could still end in disaster. The continued survival of the Community now it is being joined by Denmark, the Irish Republic, and most critically of all, by Britain, is by no means assured.

Of all the short-term questions surrounding the enlargement of the European Community, the attitude of Britain at this point of inflexion in that country's long history is doubtless the most difficult to assess accurately. To say that the British public was bubbling with enthusiasm at the prospect ahead would be spectacularly untrue. But so would be the conclusion that they are determinedly opposed to entry. About the most reliable verdict is that they are fatalistically resigned to the idea as perhaps the only expedient not yet tried for solving Britain's chronic economic problems. Certainly there is no support for the stand currently

adopted by the Labour Party, as recent by-election results appear to confirm. It can thus be said without hesitation that unless Community membership turns out to be an even greater disaster for Britain than some of the pessimists are predicting, there is unlikely to be any overwhelming movement to pull out again. At the moment the problems raised for the country's immigration rules appear to be receiving more public attention than the economic ones. The likely effect on living costs is, of course, important. But so far the link with European membership remains a vague one in the public mind; there is a cynical feeling that these days prices rise, and will go on doing so, whatever policies Governments adopt.

This downbeat approach to Europe is not restricted to the Briton in the street. It is prevalent in boardrooms as well. Figures published recently show that in the first three quarters of 1972 industrial investment was more than 10 per cent lower than in the same period the previous year. This does not suggest that British industry has been gearing itself up to seize the opportunities in prospect. Rather the contrary; it would seem that a large proportion of the extra investment undertaken has been inside the existing Community and not in Britain itself. The predictions of Lord Balogh, one-time adviser to the former Labour Government on such matters, that Community membership would touch off a disastrous flight of capital from Britain to continental Europe, would already seem to be coming true. In some sections of British industry there is a cheerful anticipation of good things ahead when the national market is enlarged. But these are few. Among the others, the prevailing mood combines fatalism, doubt, and a general attitude of wait and see. It is not at all what the Conservative Government, for whom Community membership

has been the only consistent policy, had been hoping for.

Mainly what seems to be sapping Britain's vital spirits is the current inflation, now so tragically superimposed on two decades of almost uninterrupted economic crisis. But inflation is troubling the "Six" as well, as witness the moves announced recently by the French and Dutch Governments. Also the chaos which is threatening to wreck the entire fabric of Italy's precarious political set-up. Even the hard-headed Germans are currently beset by the inflationary evil, and equally at a loss as to how it should be dealt with. There are moves afoot to co-ordinate Community policy on inflation, ultimately to produce a co-ordinated programme for control of the money supply, capital movements, prices and incomes, and much else besides. But it is precisely matters of this kind which tend to highlight the Community's lack of political cohesion, and only a wild optimist would predict any success in this vital field during the next year or two. In the meantime, inflation presents a genuine threat to the progress of the enlarged market, and to the development of common institutions. It will inevitably retard the efforts now being made to achieve monetary and economic integration. One obvious example of this is the apparent determination of the British authorities to maintain a floating exchange rate, despite the violence this must do to commitments previously entered into.

This painful pursuit of common policies and institutions threatens to become even more agonising when the Community is enlarged. Even existing ones seem likely to come in for radical reform. The Common Agricultural Policy, for instance. There is little doubt that this particular institution will be the first one to feel the effects of British membership. Interestingly enough, the failure of the Russian grain harvest this year could well strain the C.A.P. to breaking point, even before the British negotiators set about it. And even if it survives this hurdle, there will be more trouble for it when the next round of international trade negotiations opens, as planned, some time in 1973. Indeed, relations with the United States are likely to be the deciding factor in shaping such other Community institutions as the common financial and economic policies as well. The views of Washington will to some extent have to be

accommodated if there is to be any effective reform of the world's monetary system or a further reduction in the barriers to trade in industrial goods. British influence could prove decisive in this, despite London's determination not to fulfil the Gaullist prophecy that once inside the Community Britain will behave as a Trojan Horse for the Americans. Indeed, it can be said with some assurance that the way in which these two mammoth economic units, the United States and the European Community, adjust the inevitable conflicts of interest between them, will decide the level of world prosperity for the remainder of this century.

The influence of Britain must also be felt in the Community's relations with the developing countries, especially members of the Commonwealth, such as India. More important than the trade treaties that are to be negotiated in the near future for the Commonwealth countries are the long-term attitudes the enlarged Community will take to the problems of the Third World generally. At this point of enlargement, the prospects in this field are not altogether promising; there is a real danger that the "Nine" will turn in on themselves as a response to their mutual problems, and that nothing Britain can do will stop them. However, the Community is going to be the world's major trading unit, and for about as far ahead as it is possible to foresee; and this means that external economic relations must be fostered. The inference is that political factors apart—in particular

those involved in France's policies towards her African associates—the enlarged Community will prove fairly responsive to the interests of the developing world. This is fairly reassuring for India, whose interests now seem threatened less by Community indifference than by the advantages which could be secured by trade competitors prepared for a closer degree of association. Sri Lanka is an example here; India's tea could find itself at a competitive disadvantage if, say, Sri Lanka, or Tanzania, were to secure more favourable access to the market by associating more closely.

Thus the picture of an enlarged community, its future prospects and policies, is both indistinct and uncertain. It is virtually impossible to predict what will happen or which course events may take. Of the candidate countries, the most important, Britain, seems altogether too numb, too disinterested, to make much effort in the foreseeable future towards building a successful and prosperous Community. On the continent itself, the mood is too confused, too preoccupied with current problems, to pay much attention to the difficulties and opportunities enlargement must bring. It adds up to a quite remarkably subdued response to what is, after all, one of the major milestones in world history. What happens in Brussels during the next year or two is inevitably going to affect the lives of us all. Yet it would be difficult to appreciate that fact from any close investigation of what is now going on in the capital cities concerned.

Congress at the Crossroads

THE seventy-fourth session of the Congress is on. After about 40 years it has been Calcutta's honour again to host the august assembly. Things have changed beyond recognition in the meantime. In 1933, the Congress breathed fire with its President and his deputy whisked off to jail. Now the Congress is the shield and buckler of the Establishment. The *éclat* at Biddhannagar may seem bewildering to many of the Old Guard. Far from casting a baleful eye on the spectacle, the Government is now the main architect of the pageant. An advertisement was put out unambiguously channelling all participation in the exhibition through a Minister at Writers

Buildings. Ever since independence, it has been the practice of the host State Government to pay most of the expenses. If the public has a thing or two to say about the procedure, the Congress can take it in its stride.

There is another significant aspect. The last Congress held in West Bengal was at Durgapur in 1965. Seven years and a series of trials and tribulations have put a new complexion on the scene. What has pulled off this near miracle is that youth, for long the mainstay of the Opposition, has given the old warhorse a new sense of direction. It is not possible at this writing to foretell

what light and shadows will be cast by the discussions at the current session. For all one knows, the upshot of it all may, as in previous Congress sessions, be a paltry amount. If the 756 members of the A.I.C.C. took part in an intensive debate, the result would be pandemonium. But one hopes there will be a wide enough participation to bring out the sharps and flats of Congress thinking. It is only then that it may be said that the too many cooks in the enormous Biddhannagar kitchen have not spoilt the broth.

All through the twenty-five years since independence, the stream of Congress thinking has been disciplined in four clearly regulated directions and the great divide in 1969 isolated the straying tributaries from the main flow. The four angles are secularism, national integration, democracy and socialism. Although the Congress—and except in Tamil Nadu that means Mrs. Gandhi's giant—commands virtually an impregnable position, its line of thinking is not necessarily the last word on all national questions. While viewing the internal functioning of the organisation, it will be enough to train one's sights on the hiatus between the stated objectives of the Party and their realisation. The Congress has according to its own lights failed to live up to its image. One can do no better than refer to a Party organ itself to trace the shadow falling between "the decision and the follow-up action".

On the first two goals, secularism and national integration, the intentions of the Congress high command may be considered unexceptionable. The occasional threats are mostly fortuitous and if the Congress may be accused of having a hand in all that, that has to be limited to sectional levels. True, political expediency can exploit even caste feelings in the electoral horse-trading, especially in backward regions, but with the superb handling of the Bangladesh struggle for secularism under her belt, Mrs. Gandhi can justifiably claim that her *bona fides* in that respect is above criticism. About the question of integration, certain reservations still remain. The recent happenings in Assam and Andhra Pradesh have shown that if these fissiparous trends were encouraged by local interests, the Centre, entrapped by a crisscross of pressure groups, has not been able to come down on them as heavily-handedly as the circumstances would warrant.

Far more important and controversial are the two principal pillars of the Congress programme—democracy and socialism. And it is there that the Party may be said to have fallen down on its job most noticeably. The twin ideals of democracy and socialism—an experiment in a mixture of contradictions maybe—have a tendency to thwart each other and that can be a partial explanation of their uncertain progress. But not only are Congress stalwarts inclined to take a blinkered view of the problem but they try to wriggle out of all embarrassment by transferring responsibility for the muddle to all who draw attention to the obstacles. On both fronts, Congress hands have been stayed by enemies of their making in or out of its own body and the Party does only harm to itself by protecting them. The much-vaunted ideal of democracy in actual practice presents two faces. The Congress has all along shown an admirable willingness to go to the hustings, fortified no doubt by confidence in its overwhelming strength. In doing so, it has always moved like a solid phalanx. But the general elections merely paper over temporarily, not remove, the internal cracks. The recent organisational elections have exposed weaknesses which even the Prime Minister has not been able to wish away. Congress committees at all levels have been more or less "packed" with members of chosen coteries with the wide prevalence of bogus membership making things still worse. The argument for the unanimous choice of P.C.C. leaders has had the opposite effect of sharpening internal rivalries. Things really came to a head in U.P. Mrs. Gandhi has been long exercised about this pattern of irregularities but her move at the Ahmedabad

session to make proposals for reorganisation to remove caste rivalries, unscrupulous manipulations of bogus membership and other malpractices has borne no fruit so far. Talk of reorganisation is again in the air at Biddhannagar.

Socialism in a democratic set-up is a bold exercise unavoidably hemmed in by built-in difficulties. Whether or not the goals set by the ruling Party are best suited to Indian conditions is a matter of debate. But given the Congress terms of reference, the experiment has shown a strange feebleness of enterprise. Socialism as an economic weapon has been honed at successive sessions of the Congress—Delhi 1947, Nasik 1950, Avadi 1955 and finally Jaipur and Bhubaneswar 1963 and 1964. The adoption of the ten-point programme in 1967 followed by the 12-point manifesto in 1971 gave the finishing touches. But what of results? On the Government's own admission, about half the total population of the country live below the poverty line. So much for *garibi hatao*. Land reforms have not worked the expected wonders. The "green revolution" brought about at enormous expense has not benefited the poor peasantry. The resolution for the State take-over of the wholesale trade in rice and wheat has got stuck in the rignarole of committees. Industry in the public sector has added to the evils of ineptitude a good many of the drawbacks for which the private sector is condemned. Unemployment mounts. Not all these failures can be regarded as the growing pains of democratic socialism. There is, in fact, far greater need for "periodic self-criticism" in the Congress than the authors of the current resolution would be ready to own.

The Green Revolution in Retrospect

EVEN sober and sympathetic Americans seem to be gleefully chuckling at the new food crisis in India. The *New York Times* has suggested a direct relationship between the danger of famine in India and this country's sudden softening towards the U.S.A. Americans feel that no country in the world will be able to meet the huge requirements of food of the hungry Indians. The official plan now is to import immediately 2 million tonnes of grain. But eventually the figure may be raised. On top of this comes the report that Bangladesh will be

short of foodgrains by about 3 million tonnes in 1973. If this be true the situation becomes much more complicated. For at least a few years until the Mujib Government is fully in control of the economy there India cannot watch helplessly the spectre of famine in Bangladesh. Whether one likes it or not grave food shortages in Bangladesh will have very wide repercussions on India's internal and external policies.

The exporting countries too may be inclined to take an overall look at food shortages in the sub-conti-

ment. This means that during 1973 they will have to ship a minimum of 5 million tonnes to 6 million tonnes of grain to India and Bangladesh. This is in addition to the massive orders for grain placed by the Soviet Union and China with the major exporting countries. To meet all these orders they will have to dip in their reserves. They would naturally be happy to sell their wares but by the natural laws of supply and demand they would like to dictate their own terms. Already there are disquieting reports that U.S. traders have raised their prices within the last few months and this would mean an extra cost of about Rs. 40 crores for the 2 million tonnes of grain to be imported. For a poor country with little foreign exchange to spare, this can be a crippling burden.

The global wheat situation this year is not bad. The worldwide wheat crop in 1972-73 is estimated to touch 300 million tonnes, the third largest crop ever. The highest figure attained is, however, 320 million tonnes. But international trade in wheat will touch a record figure of between 65 and 67 million tonnes. Australia has not responded to India's request for the sale of 400,000 tonnes of wheat, and it may even find it difficult to meet an order of 4 million tonnes of wheat for China. But Indian officials have reportedly claimed success in negotiations for the import of 1.5 million tonnes of wheat from the U.S.A. and Canada. All this is only a short-term solution, however, and should not be used to conceal the food problem that this country might face in coming years. The harsh reality seems to be that the per capita availability and, therefore, consumption of foodgrains have progressively gone down during the 'sixties. While the population during the decade has increased by about 25 per cent, food production has barely kept pace with it. At the same time large-scale food imports under the P.L. 480 programme have been given up. Over the eight-year period from 1964-65 to 1971-72, increases in food production have been definitely below the growth in population. While the population grew by 20 per cent in this period food output increased by only 16 per cent from 89 million tonnes to 104 million tonnes. The most charitable view one can take of the "green revolution" is that it has just about kept pace with the population growth.

But these figures ignore a colossal tragedy of the Indian situation. The way in which food output has increased has created sharp disparities in its availability. Almost the entire increase during the decade has taken place in wheat alone. All other cereals and pulses have remained virtually static. This means that the wheat producing regions are now better fed, while due to stagnant production in the face of the population explosion, the other regions get 25 per cent less food a head than they did at the beginning of the 'sixties. Only a small part of this imbalance has been corrected through procurement and fair price distribution of wheat in the non-wheat producing areas. It must be remembered that instead of expanding, the public distribution system has shrunk during the years. This means that all the surplus produce of wheat has not been transferred to the non-wheat areas. Of a crop of about 26 million tonnes, only about 4 million tonnes are procured for the fair price system. The great majority of the people in the non-wheat areas have to subsist on their local produce. They do not have the means to buy high-priced wheat in the market.

Thus arises the paradox of a wheat surplus juxtaposed with near starvation within the country. By fixing the procurement price of wheat at the high level of Rs. 76 a quintal over the last five years the Government has on the one hand ensured large-scale production of the grain and, on the other, it has limited its demand because only a small proportion of the people can afford two square meals a day with wheat at this price as their staple diet. The question that stares everybody in the face now is: how long can the people of the non-wheat growing areas face this gradual diminution in their diet? The answer is perhaps obvious: as long as they can bear it. The people of this country have suffered from the pangs of hunger for centuries. They can put with a lot of hardship. But in the modern age of instant communications and worldwide prosperity, their patience seems to be running out. They demand from the Government of the day quick solutions.

It is true that with all its good intentions and slogans of "garibi hatao", New Delhi does not possess any magic wand with which to banish poverty and usher in prosperity in this sub-continent overnight. But it owes it to itself and to the people not to

raise false hopes or to hide the harsh realities. The Government leaders should not say that the food situation is satisfactory when it is not. Nor should they say that the people are better fed today than they were some years ago. A frank confession of the difficulties and limitations will make the officials and Ministers less complacent and more responsive to the human tragedy that stares everybody in the face. The problem as it exists today has not gone out of hand and can still be solved once the authorities realise their mistakes and try to correct them.

The costliest mistake being made today perhaps is that increased production in cereals other than wheat and in pulses is not possible without the use of some magic varieties supported by massive doses of fertiliser and water. While the agricultural scientists in the country must strain every nerve to evolve new varieties in every foodgrain and cash commodity, the picture is not entirely hopeless in the traditional varieties. Before the new varieties came on the scene about ten years ago, vast potentialities were seen in the native seeds with the use of better techniques, such as development of land, soil and water management, mechanised farming, composite manuring and judicious irrigation. This was not mere fancy. Wherever concerted efforts were made yields were substantially increased even from conventional farming. The Ford Foundation-assisted package project in Etawah district of Uttar Pradesh is an example of what had been achieved on an experimental basis before the advent of the new varieties. The Government should, therefore, not give up hope in the other grains but should concentrate on their propagation along scientific lines.

The tragedy of the "green revolution" is that it has tended to obscure and even suppress the many-sided efforts that were going on to increase food output before the advent of the new varieties. Guidance to farmers who do not use the new seed is negligible. Nor are many infrastructural facilities given to them. The Government must also consider whether its vast investments in farm credit and irrigation have not gone astray. It is possible that the large-scale direct and indirect subsidies given to the small segment of rich farmers in the country have not all gone into agriculture. A good part of the money seems to have been diverted by the wealthy peasants into other channels, such as

speculative investments, conspicuous consumption, expensive purchases and even trade and industry.

From this it follows that attention to the small and marginal farmer is essential to pull agriculture out of stagnation. It will help to increase the area under improved practices manifold and reduce the diversion of scarce resources to non-agricultural uses. Finally, the Government would also be well advised to examine the impact of its land policies on agricultural production. There is a strong belief that the new land ceiling Acts in the States have stopped capital formation and large-scale investments in agricul-

The Transfer of Technology

EXPERTS from about 40 countries met in New Delhi recently to consider ways and means by which the transfer of technology from the developed world to the developing world could be made easier and more purposeful. Various views were expressed at the three-day seminar but the consensus was in favour of limiting the transfer of technology only to such areas where indigenous capability was not available. While it is easy for experts to give out an opinion of this kind, in actual practice it is quite difficult to operate such a scheme. India's own experience in the last 20 years has shown that it is not always possible to put severe restrictions on the import of know-how even in areas where this country has developed its own technology. It becomes quite often necessary to borrow from the developed world the latest technology in a given field in order to achieve higher productivity.

This is not to suggest that the seminar did not have any useful recommendations to make. The views expressed at the seminar highlighted the strength of opinion in the developing world to reduce the burden imposed on its meagre foreign exchange resources by the annual repatriation of profits and royalties by foreign companies. As the President, Mr. V. V. Giri, rightly pointed out, developing countries are in a real dilemma on the question of importing foreign know-how. They very well realise that if they are to achieve a faster growth rate and employ modern methods of production, there is no escape from going in for sophisticated technology.

This may or may not be true. If it is, it does not necessarily follow that land reforms should be given up. But it becomes necessary then to find immediate remedies for the adverse reactions of land reforms. India's food potential is many times the present output. The scope for growth is many-sided. Not only can four or five times the present grain output be raised within the next four or five decades, there is also tremendous scope for developing animal foods, poultry and dairy products, forest foods and seafoods and fruits. A multi-pronged attack is needed. It is time the strategy of the "green revolution" was suitably amended to make room for this new many-sided approach.

While larger investments may add to the employment potential, higher productivity can be secured only by employing the best available technology. With 98 per cent of all scientific research being carried out in the developed world, the developing countries have no alternative but to import technology from the advanced nations.

At the same time, it is well known that the price that the developing countries have to pay for foreign technology is quite high because of the heavy burden of royalty payments, and repatriation of profits in cases where foreign parties have also made investments. Furthermore, the import of foreign technology has also aggravated the unemployment problem in quite a few developing countries, including India. Hence, a balance has to be struck between indiscriminate import of technology and going without it. It is this realisation that has lately influenced the policies of developing countries in this regard.

For instance, India herself is now pursuing a highly selective policy in respect of the import of foreign know-how. This country has reached a stage of industrialisation where it is not possible to close its doors to foreign know-how. That can be done only at the cost of future growth and development. At the same time, it is obvious that unless greater emphasis is placed on developing indigenous know-how and skills, India will continue to depend on imported technology for a long time. The Central Minister for Industrial Development, Mr. C. Subramaniam,

made it abundantly clear at the seminar on growth and social justice, organised by the Forum of Financial Writers, that India would import foreign technology only to fill the gap in indigenous know-how. The gap itself will have to be identified on a continuing basis, as technology is fast changing and new gaps may arise as the old ones are being filled. The National Committee on Science and Technology has done some work in this direction and has prepared a science and technology plan on the basis of its findings. The Government will do well to publish the plan so as to allow for a public discussion on it before it is incorporated in the Fifth Plan document.

It is not surprising that the Indian strategy found general endorsement at the seminar, especially by other developing countries. It was agreed that every developing nation should have its own plan and comprehensive policy on science and technology as an integral part of its development plan. While a general statement of this kind is unexceptionable, it must be noted that it is neither possible nor desirable for small countries to develop their own technology when the scope for industrial development is itself limited. Take, for instance, the case of Nepal or Afghanistan. Neither of them has any major industry that calls for the development of indigenous know-how on a large scale. In the case of such countries, it is perhaps cheaper and even profitable to employ foreign technology to secure quick results. However, what they have to guard themselves against is indiscriminate transfer of know-how from abroad. This is essentially a task for developing countries and it is futile to expect the exporting countries to desist from selling whatever skills they have. The seminar would, therefore, seem to have taken a rather unrealistic view while suggesting that there should be no indiscriminate transfer of technology from the developed to developing countries.

In the ultimate analysis, technology is something that cannot be had for the mere wishing. Nor can any uniform standard be prescribed for all developing countries on the conditions and circumstances under which they should go in for foreign technology. Every case within each developing country will have to be decided on merit and considerations such as the urgency of a given project. Take, for instance, the case of fertiliser. India has adequate know-how today to set up a complete fer-

fertiliser plant without foreign assistance. But at the same time, it has to be admitted that the Indian know-how has been outstripped by the Japanese. If, therefore, India is keen to set up a chain of fertiliser plants as expeditiously as possible, there is no alternative except to go in for Japanese collaboration. The best that India can do under such circumstances is to ensure that Indian skills are employed to the maximum extent in such projects and that Indian technologists equip themselves, on the basis of this experience, for future programmes.

In a fast advancing world, technology cannot be viewed as a static subject to be dealt with in an academic way. Large countries like India have necessarily to develop their own technologies in certain essential fields, instead of dissipating their energies over a wide area. Concentration of efforts in such fields as steel, metallurgical, coal, chemical, sugar and textile technologies is bound to yield better results than the present tech-

nique of basic research over a wide field. This is not to undermine the importance of fundamental research but only to stress the greater relevance of applied research for the country's immediate purposes. There must be a proper linking of fundamental and applied research and the results of the former must be capable of being taken to the farm or factory for fruitful exploitation. It is not necessary that every research project should yield immediate results. Even if one out of ten turns out to be productive of good results initially, it can be construed as a success and the expenditure will have been well justified. In fact, any money spent on research must be treated as investment and not expenditure, for in the long run, the yield is greater than imagined. The seminar has only underlined a need that has lately been well recognised by the Government of India and it is to be hoped that the foundations of a sound science and technology plan will be truly laid in the Fifth Plan period.

Second Thoughts on Grains Trade?

THE decision to remit the question of take-over of wholesale trade in wheat and rice to a committee, to be headed by the Central Minister of Food and Agriculture, Mr. Fakhruddin Ali Ahmed, is the least surprising in the context of the serious misgivings expressed by several States at the recent two-day meeting of Food Ministers in New Delhi. From the political point of view, the take-over of wholesale trade in grain may be a convenient slogan. But the States, and to some extent the Centre, have obviously come to realise that translating the slogan into policy can give rise to not only economic but political problems. Since the State Governments are ultimately the parties directly and immediately affected by any dislocation in the present distribution system that might be caused by the take-over, they want to proceed cautiously—a caution understandable except by those ideologically committed. The advantages accruing from take-over of the wholesale trade in grain have never been fully explained. One reason presumably might be the Government's desire to curb speculative activity in such an essential commodity as foodgrain. If speculation is curbed, to some extent the Government can succeed in controlling foodgrain prices. These objectives are laudable indeed,

It is not that the States are not familiar with these arguments or do not appreciate these objectives. They know from experience that there is always a wide gap between precept and practice and that they have to pay the penalty for it.

It is easy to understand the States' difficulties. Some have expressed the fear that the take-over of the wholesale trade in grain might lead to introduction of statutory rationing—a measure which is not likely to be popular. Secondly, even if introduction of statutory rationing is not found necessary, a slight dislocation in the distribution system can create political problems for the party in power in a State. In the situation obtaining in the country today, Opposition parties would be only too glad to make common cause with the displaced wholesale merchants. Thirdly, the States are not exactly flush with money. The farmer who brings his marketable surplus to the "mandi" will expect to be paid on the spot; whereas it will take some time for the public-sector agency concerned to realise the money from the many retailers to whom presumably it will sell at least part of the stocks. This means blocking of money and the States only know too well the frustrations involved in 'knocking at the

Centre's door for funds. Fourthly, when a farmer sells to a public-sector agency, he will demand a reasonable price—a question on which a private trader has more manoeuvrability than a public-sector agency. This does not mean one approves of the wholesale traders' practice of exploiting the farmers, but it certainly adds up to the cost of grain which the consumer has to pay.

Presuming all these difficulties can be sorted out, where do the States store the grain? Do they also take over the storage facilities which the wholesale traders now have? As West Bengal is understood to have pointed out at the Food Ministers' conference, displacement of thousands of wholesale traders can add to the already bad unemployment situation in the State. This is not a happy political situation any State would like to create or face. Mr. Fakhruddin Ali Ahmed is reported to have said after the conclusion of the conference that no State had objected to the take-over measure in principle. If after all the difficulties pointed out by the States, the public is to believe that the States are enthusiastic about the take-over measure, it calls for considerable amount of credibility. Mr. Ahmed is also reported to have talked about the possibility of the process of take-over being completed by the "end of the *rabi* season." Frankly, one must admire Mr. Ahmed's optimism. The committee to examine the question is yet to be appointed at the time of writing. It is to be given six months to examine various aspects of the take-over. Assuming that there is no delay either in the formation of the committee or in the committee completing its assignment, the report should be with the Government in early February. Then it has to be studied by the Centre first. Since the Centre cannot act unilaterally in this matter, another conference of State Food Ministers is likely to discuss the report. Differences will have to be resolved and then the machinery set up in all the States to take over the grain wholesale trade. If Mr. Ahmed thinks that all this process can be completed by the "end of the *rabi* season" (i.e., April), he is welcome to stick on to this happy picture; there will be very few to share his optimism.

Although one would not like to say that reference of the issue to a committee amounts virtually to putting the take-over question on the shelf temporarily, political leaders must sometimes realise that even good slogans cannot always be translated into practical policies. Slogans may help to evade problems, but they can never be a real

substitute to well-thought out policies. The immediate problem before the country is not State take-over of wholesale trade in grain; it is to help the farmer to produce more by giving him all the necessary inputs. When resources are scarce to provide these inputs, it is unwise to divert them to purely trading purposes. For all one knows, in order to live up to the slogan,

CURRENT COMMENT

INVESTMENT

Hurdles in the Way

Speaking at a reception organised by the Merchants' Chamber of Commerce and the Oriental Chamber of Commerce in Calcutta a few days ago, Mr. Madanmohan Mangaldas, president, Federation of Indian Chambers of Commerce and Industry, said that a number of policies like price control, import licensing, industrial licensing and the Monopolies Act have created hurdles in the path of industrial growth. Apart from restricting investment, they involve delays which have widened the time interval between investment decisions and actual manufacture. Industrial licensing was somewhat liberalised recently. But it hardly suits the logic of development. The operations of the larger industries which are capable of giving lead in investment activity continue to be restrained by the insurmountable monopolies angle. Consequently complementary investment has also failed to take place. It hardly needs any discussion to show that development takes the form of a chain reaction. If it is curbed or stifled at any point, the overall results become weak and insufficient. Therefore, in order to give a push to investment the whole policy environment in which industrial growth takes place has to be made more congenial.

Speaking on the occasion, Mr. A. R. Kanoria, president, Merchants' Chamber of Commerce and Industry, said that if the economy was to grow at an annual rate of 5.5 per cent as envisaged in the Fifth Plan approach, the private sector should be encouraged to fulfil its commitments under the Plan. The provision for the private sector being Rs. 15,570 crores out of the total outlay of Rs. 51,165 crores, it must be provided with requisite incentives to take up the challenge it is confronted with. The veil of uncertainty which clouds

the States might eventually agree to take over the wholesale trade. And it is quite possible the same wholesalers might be appointed "agents" for the public-sector institutions entrusted with the task of conducting the trade. This sort of accommodation has happened elsewhere. But that will be a mockery of the public sector's entry into the grain wholesale trade.

the Government's policies should be lifted and the Government should realise that unless individual enterprise was stimulated, investors would hesitate to invest, the lenders to lend and the entrepreneurs to expand.

COAL

R.B.I. Directive

The scheduled commercial banks should take expeditious action in implementing the recommendations of

"Capital" wishes its readers and advertisers a happy New Year.

the working group on the working capital requirements of the coal industry, the Reserve Bank says in a recent letter addressed to them. The group (chairman: Mr. P. C. D. Nambiar, Secretary and Treasurer, State Bank of India, Calcutta) was constituted by the Reserve Bank in February 1972 to study the immediate financial problems of the coal industry and to review the existing institutional arrangements, including bank credit for financing the industry, especially in Bihar and West Bengal. One of the group's recommendations covering grant of credit for working capital needs says that the banks should assess the working capital requirements of individual collieries by taking into account, among other things, the output, normal inventories of coal, stores and spares they have to carry, amount ordinarily locked up in receivables, and resources available by way of sundry creditors for purchases and other liabilities. Although the present practice followed by individual banks for fixing sub-limits against each type of security may continue, there should be a reasonable degree of flexibility in prescribing margins

as well as sub-limits in order that adequate finance could be made available to the industry to meet exigencies arising out of circumstances beyond its control such as accumulation of pithead stocks.

ENVIRONMENT

Concern over Pollution

Inaugurating the three-day all-India conference on the "Abatement of Environmental Pollution" held recently in Calcutta, Mr. Siddhartha Sankar Ray, Chief Minister of West Bengal, expressed grave concern over the dangers of environmental pollution. The conference was sponsored by the Calcutta Metropolitan Water and Sanitation Authority, Jadavpur University and different State and Central Government bodies. In the recent past there has been rapid industrialisation, but the country has to pay a heavy price for progress. Apart from the problem of air and water pollution, the modern life has created many new complications. For example, smoke emitted by heavy vehicles pollutes the atmosphere to a great extent. Mr. Ray said that technical measures should be adopted to stop this "nuisance". He promised that the Government would do whatever was possible to implement the recommendations of the conference. He hoped that the preventive measures suggested by the scientists would be practicable and easy to implement.

Professor D. P. Chattopadhyaya, Central Minister of State for Health, Housing and Urban Development, said that a developing country like India should adopt precautionary measures which would ensure greater harmonisation of pollution control with rapid industrialisation. He suggested a comprehensive survey of the problem and preparation of a map pointing the highly pollution-prone areas. He also recommended the setting up of monitoring points at various industrially congested areas. The use of soft coke for domestic purposes should be popularised. The Planning Commission has set up a national committee on environment and co-ordination to deal with the problem. The Health Ministry is working on comprehensive legislative measures to fight pollution. A Bill in this regard is likely to be introduced in Parliament soon. As for preventing water pollution, a Bill is now under the consideration of Parliament. Mr. T. K. Basu, Executive Engineer of

C.M.W.S.A., said that both immediate and long-term benefits of the apparently progressive installations—like the dams, canals, power houses, airports, roads and motorways—had to be equated against the irreparable damage they caused to the environment and ecology in the long run. Dr. Niloy Chowdhury of the department of Public Health Engineering, Jadavpur University, said that environmental science and engineering should become a regular subject of study in universities.

MULKI RULES

Problem Takes New Turn

The Mulki Rules issue is taking a difficult turn. Nine Andhra Ministers, including the State's Deputy Chief Minister, Mr. Subba Reddy, forwarded their resignations to the Congress President, but were advised not to aggravate the situation. The Prime Minister's "award" on the prickly question of the Mulki Rules has understandably not satisfied either the Telengana region or the Andhra region. Since the "award" restores the *status quo*, it should have been expected that both sides would accept it, but the Andhra region has not, and the M.P.s and M.L.A.s from that region are afraid to face their people. They have not been able to sell the "award" to their people as the best in the circumstances. The

only silver line in the Andhra horizon, for the present at any rate, is that no leader from that State wants a disintegration of the State and both sides are demanding the implementation of the Mulki Rules in such a way that the integrity of the State is maintained. Three years ago, when the people of Telengana had revolted, the people of the Andhra region wanted to present a break-up of the

NOTICE

State. Today, if the same people ask for a division of the State it will indeed look ironical.

But what is the remedy for the Mulki Rules? The fact is that the people of Andhra and Telengana have never been integrated into a common stream. This cannot be done if there are two peoples and two sets of rules in the same State. The Mulki Rules have to come to an end one day. But will they? The example of the reservations for *haryans* is cited as an instance. When the reservations were made in the

Constitution, this was only for ten years, but it is 25 years since India attained independence and the reservations continue. The point to remember is that it is easy to give a concession but it is difficult to take it back. This is why the people of Andhra are agitated. Will there be a full stop after 1977 in the twin cities of Hyderabad and Secunderabad and after 1980 in the rest of Telengana in regard to the application of the Mulki Rules. No one knows. And even for the intervening period, the problem of the Andhra politicians is how to assuage the feelings of their people living in the Telengana region in regard to education, job and other rights.

MONEY MARKET

Call Rate Steady

The short-term money market has been initially tight this past week due to tax payments and the accounting considerations at the end of the year. The call rate has quoted at 4 per cent, and the market has remained more or less steady. The demand for remittances has been small. The supply of tea and gunny bills has also been small. The pound-sterling has been steady against most major foreign currencies during the week.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations for the 1972 Fund:

- Rs. 100**
Governor of West Bengal

The Fund totals Rs. 2,081.41, including a carry-forward of Rs. 997.41

A Ditcher's Diary

AFTER A WHIRLWIND TOUR OVER most of Britain and parts of France, West Germany and Switzerland, I am happy to be back in India—my home, sweet home. But as I had just landed at Calcutta airport, I was given the dreadful news that all printing presses in Calcutta, excluding those of the daily Press, were closed because workers could not patiently wait a little more for the Tribunal award. Despite my hectic programme, I did not fail to notice in Britain that trade unions usually show the same impatience in fighting their employers, but I shall be grossly mistaken if I compare trade unions here with their counterparts in Britain. While workers here are mainly motivated by their sectional interests and are dominated by outside politicians who represent vested interests, there are trade unionists in Britain—the present militancy notwithstanding—who do feel that as the country joins the European Common Market on 1st January next year, there should be a national consciousness for raising productivity all round to enable Britain to hold her own in the face of competition from the E.C.M. countries. There are not a few who still believe that it would have been opportune for Britain to join the European Economic Community as far back as 1962, since it would have enabled her to do a lot of spadework to make her entry more successful. But in my talks with M.P.s, Government officials, newspaper editors, educationists, company directors as well as

workers' representatives, I was much impressed to note a general awareness of the new dimensions of the Herculean task that faces the country as it joins the E.E.C. The problems of prices, cost escalation in industries, stagnant production and the need to maintain a realistic official currency parity are naturally causing much concern to the Heath Government, but I was much impressed with its robust optimism to turn the corner somehow in the New Year by restricting monetary expansion and by raising productivity all round. In London you will find people running faster and faster as there is seemingly no time to waste. Despite the mounting national problems, London as well as other cities in the U.K. had gone gay just before Christmas, and nobody cared to bother about the adverse effects of the spending spree on the country's growing inflationary pressures. Both in France and West Germany, I saw evident signs of prosperity. In Paris, many multi-storeyed buildings are sprouting up here, there and everywhere and prices appear to be exorbitantly high. But I did not find Frenchmen unduly disturbed on that account. West Germany, it seemed to me, has ascended the pinnacle of prosperity. The dazzling brilliance of Frankfurt and West Berlin at night leaves no doubt in one's mind of prosperity in West Germany, although I was pleasantly surprised to see that East Berlin too is picking up—and very fast indeed. Both at the B.B.C. in London and the radio and television network in

France, where I happened to do some broadcasting for India, there were not a few anxious enquiries about the economic and political future of this country. In France, in particular, people were predictably curious to know about India's reactions to General Amin's policies in Uganda and the relations between Bangladesh and Pakistan. But in Geneva and Zürich in Switzerland, people appeared to be deeply obsessed with their own domestic problems without sticking their neck out in others' affairs. But I did not fail to notice their abounding prosperity, although a friend told me in Zürich that the strength of the Swiss franc has declined in recent weeks in the foreign exchange markets. But the Swiss economy, I must hasten to say, is still intrinsically strong.

IT DOES NOT BREAK MY HEART TO learn that man will not travel to the moon again during the rest of this century. At least no American will; and, so far, the Russians have shown no interest. I am not one of those who criticise the Apollo project because of its fabulous cost. What the Americans do with their money is entirely their own affair. There was never any certainty that if \$25,000 million had not been spent on putting a man on the moon the money would have gone into something more worth while. For all I know, it would probably have been used to make more bombs for Vietnam. Many Americans feel that the money could have been more usefully spent to solve some of their social problems. I am not an American taxpayer and have, therefore, no right to

FUTURE OF CALCUTTA PORT

IT is just a year today since we heard the first whisper of the Delhi Proclamation, and, notwithstanding the black outlook that many prophesied then, we are still going strong and are likely to come out on top. The only thing that was overlooked by the designers of the new provinces was the inclusion of Chittagong and district in the Assam boundaries. It is a pity that this was not done; it would have saved both the Governor of Bengal and the Member for Commerce from beating the air during their recent visits to that port. Mr. Clark touched the spot when he said in the course of his speech: "The question of where the water-shed should come dividing off the flow

of trade which sets towards Chittagong and that which sets towards Calcutta, must in the nature of things be highly debatable". He adopted the safe course in answering the question, of stating that in the present flourishing state of jute and tea there is plenty of trade for all ports and that he did not think it should be beyond the wit of man to achieve a satisfactory settlement. When the vested interests of Calcutta are considered, it is not likely that the wits of the men who are employed to achieve that settlement will be used to the detriment of the superior partner. In other words, Calcutta will look after Number One.

suggest anything of the sort. But I had every right to feel bored by the prodigious publicity build-up on every manned flight to the moon. My scientist friends tell me that the scientific value of these flights has often been exaggerated. Some 800 lbs of moon rock and soil will have been collected at the end of the Apollo programme; but the samples already analysed have yielded no answer yet to the unresolved questions about the origin and early history of the moon. The so-called spin-off benefits of the space programme are still more doubtful. In any case, the man-on-the-moon project was not born of any scientific compulsion; it was always a question of national prestige. Although the Russians did not pick up the challenge, the idea of political competition was inherent in President Kennedy's decision and in the way it was later implemented. Not that the project did not have its moments of thrill; but the excitement could not be kept alive for an indefinite period. And attempts to do so became increasingly tiresome; lately even the Americans seem to have been losing interest. The astronauts who have visited the moon have not exactly helped with their monosyllabic expressions of joy and wonder. But then I may be temperamentally prejudiced. I do not even want to live in another part of this globe, let alone leaving this planet to settle on the moon or Mars. Long space flights may become a little more bearable if mixed crews are introduced. Even so, they are not my idea of fun. I know I would feel much lighter on the moon, but I would also feel less secure. Whether life exists in any other part of the universe does not interest me at all. If it does, man should leave it severely alone. The moon looks perfectly glorious from our terrestrial distance; I doubt if its image will improve on closer inspection.

THE VIETNAM WAR HAS GONE ON for so many years that almost every cliché has been used to describe something about it; and I am sure it will now be concluded that the peace talks are now back to square one. Of course, Dr. Kissinger has not said so; he has used other clichés. He does not think it will be right "to engage in a charade with the American people"; but he will not be "stampeded" into an agreement. The U.S.A. has chosen to be stampeded into an escalation of the war; that is perhaps considered the way to "peace with honour". All such

phrasology has a familiar ring. But let it be noted that some of the jargon has changed with time. About three years ago, the U.S. military in Saigon issued a directive entitled "Let's Say It Right", listing several "incorrect" terms and their "correct" substitutes. For example, it was stated that withdrawal of U.S. troops was an incorrect expression for re-deployment or replacement. This was perhaps to assure Saigon that it would not be left to fend for itself. More interesting was an instruction that a Vietcong defector or deserter must be referred to as a rallier or returnee. Not elegant, but presumably considered good for morale. And there was to be no further reference to the hearts and minds of the people; instead, there would be calls for developing the community spirit. Search and Destroy became Search and Clear, which is almost as chilling a euphemism as pacification. Of course, Vietnamese communists, too, have their own jargon; particularly popular at the moment seems to be national concord. It is difficult to say how much verbal coinage of the Vietnam war will have a permanent place in the American or the English language. People still meet their Waterloo or are guilty of a Munich; salami tactics still have military and other uses. After the birth of Bangladesh, liberation is no longer suspected to be necessarily associated with communist subversion. A durable peace is not yet certain, but there is much less talk about it now. So long as Mr. Bhutto is in charge in Pakistan, there will be much blowing hot and cold in the same breath; and from his end, the Sheikh will go on stressing the reality of Bangladesh. But it is not only war

and its aftermath that produce such jargon; peacetime jargon is just as profuse. Most painful of all is pseudo-intellectual jargon; and nothing is quite so meaningless as the jargon of the so-called social sciences. Not unnaturally, social scientists are always calling a meaningful dialogue between all kinds of people.

IT USED TO BE AN ESTABLISHED tenet of economic wisdom that inflation discourages personal saving. It is rational enough: why should people save their money when they have to pay for the privilege through its fall in the purchasing power? Thus inflation was always equated with a steeply rising volume of circulation as money was deprived of its rôle as a store of value. Yet one of the surprising features of the current inflation surge in both Britain and the United States is that this has not happened. Instead of responding to inflation by parting with their money more quickly, people have been holding on to it longer. Indeed, the main reason why the last British Budget was so bountiful was simply because the reflationary intentions of its predecessors had been sabotaged by too much saving and not enough of the spending required to revive economic activity. All very puzzling? Not really. Britain is not South America where nobody has ever had much faith in the official currency anyway. The British have traditionally respected their money and their reaction to the uncertainties of inflation is to save a little more of it for the approaching "rainy day". So must we now reverse the doctrine that a high level of personal saving is incompatible with inflation? Pro-

bably not, at least not all together. There was a period round about 1968-69 when it looked very much as if the British people were about to make a "flight from the pound". That could happen again. Moreover, personal savings may have risen, but so have the prices of those other traditional hedges against inflation, houses and such like. There has, in fact, been a rush into a whole range of assets of which personal savings are only one.

AFTER FIGHTING A VALIANT BATTLE for life, Mr. C. Rajagopalachari, grand patriarch of the Indian political scene, has breathed his last. In his demise, the nation has lost a veteran statesman and a great patriot who, because of his courage of convictions, was never afraid to speak out the truth, however unpalatable it might be. The Prime Minister, Mrs. Indira Gandhi, did not exaggerate a bit when she said that with the passing away of Rajaji, India "has lost a sage, indeed a force". Rajaji has been described as the last of the titans, and rightly so. I am pleased to recall here that the old titan had a soft corner in his heart for *Capital*. In a very well-written article for the annual survey of this newspaper in 1959, he described the planners' obsession for megalomania and all that went with it. God had given him long life to see what this obsession for gigantism means for the Indian economy. The good wishes he expressed for *Capital* in 1948 as the Governor of West Bengal are still preserved in this office as a precious memento.

Management of Retail Inventories: Its Importance in the Economy

By K. K. Taimni

Retail trade holds a crucial place in the economy, for it constitutes a significant element of cost in the distribution process. Efficient management of retail inventories thus becomes a matter of utmost importance.

ONLY a few, if any, experts have ventured to study the problems of retail trade in this country, although it is one of the largest "industries" providing employment to millions of people. Two major reasons explain this serious lapse: retail trade as a field of study is perceived as a field of low-status endeavour, and everybody has been concerned with production of goods and services and marketing has been by and large neglected. Retail trade nevertheless holds a crucial place in the economy, for not only it makes it possible for the community to enjoy the fruits of technology and production, but also constitutes a significant element of cost in the distribution process of goods and services. Efficient management of retail inventories in a competitive setting, where costs tend to mount every day, thus becomes a matter of utmost significance. Unlike industry, the retailer when he buys and stocks an article takes considerable risk for he

does so in anticipation of demand which may or may not materialise. Again, unlike industry, the demand in the retail market is influenced by so many factors that no single retailer can decisively influence this demand—factors like location of shop, the range of stocks, internal and external environment, pricing policy, the range of services offered, behaviour of the sales staff and a host of others.

Profile of the Consumer

Experience of successful managers of retail institutions, reveals that effective retail inventory management must start with building up the profile of the average consumer in the catchment area, which the retailer seeks to cover. It is by now widely known that no retailer can meet the requirements of all the customers in a given catchment area and that no retailer can decide what to sell merely on the basis of what he thinks the consumer can buy. Thus the retailer seeks to segment the catchment area and develops a profile of the average customer from this segment and then finds out as to what actually the customer buys and not what he can buy, given his income, family size, preference, etcetera. Clientele identification and profile building are important because it is these aspects which enable the retailer to take relevant decisions in the four major policy parameters: assortment policy, pricing policy, trading level, and type of services that he must offer to satisfy the clientele.

The second crucial aspect of retail inventory management is formulation of assortment—the decisions relating to the range, variety and width and depth of groups of articles that he must buy and sell in order to satisfy the customer and earn a given return on investment. Many factors are taken into consideration while formulating the assortment policy: location and size of the shops, the type of clientele, the nature of competition, the pattern of costs and the retailer's overall objectives, especially concerning the return on capital.

Normally the retail assortment is classified into three major categories: convenience goods, shopping goods and speciality goods. Shops located in residential areas, away from the main marketing centres of the town, generally deal with convenience goods—goods of low unit value and purchased very often by the customers. But shops located in main marketing centres mainly sell shopping goods/speciality goods—goods of high unit value and purchased only after comparison of price and quality, and such purchases are made infrequently. This particular aspect along with the pattern of cost has a decisive bearing on the selection of assortment of the retail shop. After a careful study of all these factors, the retailer often draws a master stock list—a list of the probable articles that he has decided to purchase in order to sell.

The purchase decision itself is often influenced by the competitive environment and sales of different groups of articles in the past. The purchase price decision is often taken after working backward from the likely selling price of the articles in market and subtracting all likely costs incidental to purchases, the various taxes, etcetera. Then the retailer calculates the maximum price which he can pay for the product to the supplier. It helps him in fighting competition. On quantity, selective control is exercised and the "bread and butter" article—"A" articles—are purchased more frequently. And as the rate of turnover of different goods or articles declines, the frequency of buying also declines. The other aspects are decided keeping in view the nature of the clientele and its expectation.

Stock Leakages

One delicate problem that a retailer often faces in the field of inventory management is stock leakages, for which the customers as well as the employees can be responsible. Excessive control on inventories tends to discourage sales and dampens the customers. Thus, most of the retailers learn to live with the leakages, although through intelligent lay-out and placement of the goods, the incidence of stock leakages can be checked. Because of changing tastes and preferences of customers, and the entry of new products in the market every day, the retailer has to be on his toes, as it were, to retain his competitive advantage.

UBI NOW INTRODUCES

Monthly Income Fixed Deposit Scheme

ENJOY INTEREST INCOME
EVERY MONTH AT
FIXED DEPOSIT RATES

All you have to do is to deposit with UBI Rs. 3,000/- or above for a minimum period of 3 years. You start getting the benefits from the very next month.

- ★ Draw interest every month; no more waiting for longer periods.
- ★ Ensure regular income month after month...
- ★ Supplement your income.
- ★ Enjoy fixed monthly income keeping your principal intact.

What Should be the Government's Approach to Sick Units?

(By a Special Correspondent)

Preventing "sickness" of industrial units should be the responsibility of the entire Government, not of any particular agency. Industrial units often fall sick because of wrong policies pursued by the Government.

THE problems arising from the closure of sick units have been receiving a great deal of attention from the Centre and several State Governments. Among the recent measures adopted by the Government of India to tackle this issue are the enactment of the Cotton Textile Companies (Management of Undertakings and Liquidation or Reconstruction) Act which has empowered the Government to take over sick textile mills, the establishment of the National Textile Corporation to provide finance and management to these mills, and the amendment to the Industries (Development and Regulation) Act which empowers the Government to take over the management of other industries. The Committee on Unemployment, set up by the Government of India under the chairmanship of Mr. B. Bhagavati, in its interim report, has suggested other measures also to deal with the closure of sick units.

The committee says that suitable action requires to be taken by the Government even at an earlier stage "before the malaise becomes acute". It points out that the closure of a unit is generally the culminating point in a series of events, involving mismanagement, lack of finance and raw materials, obsolescence of machinery, tension between labour and management, etcetera. All this is well known. But it is difficult to agree with the committee's recommendation to set up a separate agency "charged with the duty of overseeing the economic health and the state of affairs obtaining in such industries where closures have taken place or are apprehended".

The committee has described the functions of the proposed agency as follows: "Such an agency should organise a proper system of timely

reporting for this purpose and it should keep the Government apprised of the developing situation from time to time to enable the Government to take effective steps to prevent the situation from deteriorating further. This monitoring organisation should have the power to get periodical reports relating to the selected industries and the units therein. We suggest that the Ministry of Industrial Development should initiate to identify the industries which require to be brought within the scope of such organisation from time to time. It is also important that remedial and timely action by the authorities concerned in the matter may not be stalled on account of the non-availability of requisite financial resources, adequate provision for which should, in our view, exist. We would recommend the setting up of a separate corporation for the purpose with adequate revolving fund".

The above suggestion is unlikely to prove effective. The responsibility for preventing units from becoming sick and their ultimate closure should depend not on any particular agency or Central Ministry but on the entire Government. The sickness of units seldom arises suddenly. It is often the cumulative result of the adoption of wrong policies. Unfortunately, when the Government takes major economic decisions relating to taxation, wages, bonus, or other matters, it does not carefully consider their possible impact on various industries. For example, when the Central Finance Minister, Mr. Y. B. Chavan, frames his Budget proposals, he takes into consideration mainly the revenue that the Exchequer will derive from them. He often ignores or underestimates the effect of his taxation measures on the health of industries. Similarly, the Railway Ministry increases almost every year the freight rate of various commodities without a proper appreciation of its incidence on industries. The wages and other fringe benefits given to the workers are raised steeply without due consideration of the ability of industries to pay as well as of productivity. It is, there-

fore, hardly surprising that generally, industrial units fall sick because of factors beyond control.

What is wanted is an effective co-ordination of the economic policies, especially those relating to taxation, transport, labour and foreign trade. The Central Cabinet has a Co-ordination Committee but, for one reason or the other, it has not been able to function properly. Nor has the Planning Commission been able to do anything positive or constructive to prevent industries from falling sick. It is a sad commentary on the working of the Planning Commission that for the last three years or more, the economy has been faced with an acute shortage of many essential commodities and numerous industries all over the country continue to be sick due to various reasons.

The underutilisation of capacity in many industries has been highlighted in recent years. Unless this problem is solved, more units are likely to become sick in course of time. The Committee on Unemployment has attributed underutilisation of capacity to the following factors: insufficient demand; shortage or irregular supply of raw materials, components and spares as well as of power; and disturbed industrial relations and other management problems. These industrial units have been put up at great cost involving the use of scarce capital and still scarcer foreign exchange; it is essential that these should be put to the best use.

The better utilisation of installed capacity and the prevention of sickness of industrial units should receive high priority in the programme for tackling unemployment. Measures such as "crash programmes", "raw materials banks" and "revolving funds" are unlikely to provide a lasting solution to the problems arising from unutilised capacity and closure of sick units. Nor will the formation of separate corporations be of much use. What is wanted is that, as far as possible, industries should be free to function within the overall economic policies framed by the Government of India. But after the Companies Amendment Bill is enacted, industries will have to depend heavily on the bureaucracy for the approval of many decisions which do not involve policy matters.

There should be closer and cordial relations between the Government

what have CARBORUNDUM UNIVERSAL got to do with IAS?

Plenty!

'I' is for INTEGRATED

...the key word in systems engineering. What it means? Integrating all the factors, from choice of raw material to use of the right tools and techniques. What it achieves? Finished products of the highest quality at the lowest unit cost. This is the 'system' we promote — Carborundum Universal offer you abrasives, contact wheels and machines, all properly matched to your operation...to give you predictable and profitable results every time!

'A' is for ABRASIVE

...produced to meet your precise needs, equal in quality to the best manufactured anywhere in the world. What's more: we offer you the widest range. Remember, there's a Carborundum Universal abrasive to suit your every grinding operation... always guaranteed to produce the exact results you want.

'S' is for SYSTEM

...and the comprehensive service Carborundum Universal is best qualified to offer you. Advice on latest tools and techniques. Methods to cut down costs and improve quality. This is service from us—backed by the vast experience of our world-famous associates: the Carborundum Company, U.S.A. No matter what your grinding problem is—call the man from Carborundum Universal. He is always ready—and qualified—to help you.

CARBORUNDUM UNIVERSAL LTD.

Manufacturers of Quality Bonded and Coated Abrasives,
Abrasive Grains, Calcined Bauxite and Super Refractories.
Madras . Calcutta . Bombay . New Delhi

Service-conscious suppliers of basic tools for industry

and industry. The Government of India has set up various advisory bodies consisting of official and non-official representatives, such as the Central Advisory Council of Industries, the Board of Trade and the Advisory Council of Trade. But these bodies do not meet as frequently as they should; and when they do, their recommendations are rarely given the weight, importance, and the urgency they deserve. Had the Government been prompt and sympathetic to the genuine grievances of industry, and at the same time been firm in dealing with mismanagement of companies, the economy

today would have been in a much better shape.

The State Governments have also a special responsibility to prevent industrial units from falling sick and to encourage them to maximise their capacity utilisation. Particularly in West Bengal, the State Government should give attention to ensure adequate supply of electricity, to develop other aspects of infrastructure, and to improve relations between labour and management so that the State's industries can revive and create more employment opportunities.

International Seminar of Economic Journalists: Some Highlights

(By a Special Correspondent)

Much of the discussion at the international seminar of economic journalists related to investment policy. It was said that Governments should enter trade and industry in a big way to speed up economic growth and also to ensure the attainment of social objectives.

AS part of the third Asian Trade Fair recently held in Delhi, the Forum of Financial Writers thoughtfully arranged an international seminar of economic journalists which brought together not only some 50 journalists from foreign countries, but also a number of policy-makers of the Central Government. For six successive days, the seminar heard Central Ministers, administrators, business men and industrialists on various aspects of "growth with social justice" as also debated in commissions the issues involved and the objectives to be pursued. What emerged from the seminar was a "statement" embodying the week-long discussions and conclusions, which the Central Planning Minister, Mr. D. P. Dhar, had said he was looking forward to read. Special questions studied in depth and incorporated in the "statement" related to: (1) principal growth industries—steel, aluminium, oil, fertiliser, (2) investment policy and price stability, with particular reference to the rôle of the private capital in growth processes with social justice, and (3) international trade and economic co-operation.

The most significant pronouncement related to the investment

policy. The seminar recognised that there was need and justification for Governments entering trade and industry in a big way, both to speed up economic growth and to direct it firmly towards basic social goals. At the same time, it was recorded that private capital "could and should" make a large contribution to development under the disciplines of social purposes. What the seminar arrived at in regard to policy issues are applicable not only to India but to many developing countries in Asia, Africa and Latin America. For instance, the seminar cautioned that while the transfer of resources, including capital and technology, from the affluent countries to those with less affluence was "legitimate and necessary" for international understanding and peaceful global process, the latter should be "selective" in their use of foreign private capital. While offering reasonable terms to foreign investments, the developing countries should take care to see that these investments were employed in ways which were "consistent with genuine national needs or priorities". The induction of technology from industrialised countries, again, had to be treated in a discriminating and constructive manner.

The developing countries were cautioned on another ground. The need for or the usefulness of transfer of technology might be greater than the flow of foreign private capital as a supplement to domestic savings. This is significant from viewpoint of India for what New Delhi is now

emphasising is on the import of technology. On the development of growth industries, the seminar recognised that the increasing consumption of steel was a corollary to a rising standard of living. Here again, the general conclusion was that the necessity of steel plants in developing countries would vary. For instance, countries like India and Egypt must of necessity develop their own steel industries. But where the requirements were small and the economies of scale in the setting up of steel capacity would not be available, the installation of large-scale integrated steel plants would not be advisable.

The seminar went out of the way to deal with aluminium as a basic industry. It said that this metal had a great future in India as a saver of foreign exchange through import substitution which was as high as Rs. 196 crores in 1972. The seminar agreed that power being a major input in this industry deserved to be supplied at economic rates as was the case in other industries. Other thoughtful observations of the seminar related to the use of oil and sources of fertiliser. On oil, it said that its use should be avoided wherever possible as India was short of oil. Furthermore, the precept oil exporting countries were going to increasingly control this commodity. As for fertiliser, the seminar was of the view that coal deserved to be exploited fully for the manufacture of this agricultural input. It was, however, emphasised that in order to attain the goals set by the planners in regard to fertiliser production, India should not hesitate to import inputs wherever necessary and if the utilisation of indigenous resources was likely to delay projects.

On the investment policy, the seminar had some interesting suggestions to make, particularly relating to foreign capital. It said that the rôle of foreign private capital should be limited to meeting the saving gap. But here again foreign capital should be invited "on terms and in areas determined by national priorities". As for national private capital, it was said that this should be encouraged to enter the areas permitted to it, which should include the field of mass consumer goods. On trade, the most important recommendations related to three areas:

(1) preferences between industrialised countries should be reduced to the

minimum; (2) reverse preferences should in no circumstances be used simply to benefit the industrialised countries; and (3) the G.A.T.T. should be asked to ensure that the 1973 round of tariff negotiations provide the greatest possible margin of preference in the markets of the developed countries for the products of the developing countries. On economic co-operation, the main recommendation was that both creditor nations and the World Bank should work out long-term debt relief arrangements for developing countries in case of need. Also, developing countries of a region should have greater economic co-operation with a view to developing complementary economies.

The Scope for Increasing India's Exports to Malaysia

By Attam Parkash

Malaysia offers an excellent export market for many Indian products. Indian exporters have an advantage in this market because the range of products they can offer is already known there.

MALAYSIA, with its high propensity to import, offers a lucrative market for many Indian products. The demand for consumer goods and capital machinery and equipment is rapidly growing consequent on rising income and a heavy programme of economic development. The marketing of goods in Malaysia is easier for India as the range of products it can offer and the extent of sophistication it has achieved in a number of product lines is better known because of a number of import houses of Indian origin operating in the trade. Geographical proximity as well as the traditional friendly relations between the two will help Indian exporters. While the Malaysian market offers excellent prospects for Indian products, it is extremely price and quality conscious as goods from all over the world enter the country under a non-discriminatory tariff. It, therefore, calls for tremendous and sustained efforts on the part of Indian exporters to offer competitive terms and quality products. They should always maintain a high standard of business ethics.

Malaysia also offers immense opportunities for setting up industrial joint

Encouraged by the success of the first experiment with international co-operation among economic journalists, the seminar decided to set up an international body to keep the co-operation alive. For this purpose, there will be a standing committee functioning in New Delhi with associates in countries participating in the seminar. Also, there should be an international seminar of economic journalists every two or three years. It has also been decided to set up institutes for training and research in economic journalism at the national and regional levels. Mr. E.P.W. da Costa, president of the Forum, announced that one such institute would be set up in India within a year.

ventures with Indian collaboration. In addition to the provision of several incentives to Indian collaborators, the intermediate level of technology, evolved in India, is suitable to the pattern of development that is taking place in Malaysia. India's participation in industrial joint ventures, already established, bears a testimony to the fact that such collaborations are advantageous to both the countries. Malaysia is one of the wealthiest nations in Asia. With a per capita income of \$ (Malaysia) 1,080, the country has one of the highest standards of living on the continent. Agriculture, on which depends 60 per cent of the population, is the most important component of the economy. The principal agricultural products include timber, rubber, rice, palm oil, copra and coconut oil. The agricultural sector accounts for 30 per cent of gross national product. Malaysia produces several valuable ores, such as tin, iron ore, bauxite, gold, manganese and petroleum. Natural rubber and tin are very important to the country's economy as they account for nearly 56 per cent of its total foreign exchange earnings. Timber, iron ore and palm oil are the other important export items.

The Malaysian economy is being developed and diversified under the stimulus of an economic development programme. The first Malaysian Plan (1966-70) laid emphasis on the growth of the industrial sector. Industries like fertiliser, chemical, steel, rubber pro-

ducts, cement, pharmaceutical, paint and textile have been developed, mostly with the help of foreign assistance and enterprise. Greater attention has been paid to the processing of agricultural products, such as rubber, rice, copra, tea and palm oil. Malaysia's foreign trade has shown buoyant trends during the last few years. The increase in exports from \$ (Malaysia) 3,260 million in 1962 to \$ (Malaysia) 5,100 million in 1969 is attributed to a substantial rise in the offtake of major commodities, such as rubber, tin and timber. A small increase in imports from \$ (Malaysia) 3,071 million in 1962 to \$ (Malaysia) 3,600 million in 1969 is ascribed to increasing import substitution as a result of the country's industrial development programme. Imports largely consist of food, beverages and tobacco—all the three accounting for 26 per cent of total imports. Imports of manufactured goods make up nearly 23 per cent, mineral fuels 13 per cent, chemicals 8 per cent, and machinery and transport equipment 21 per cent. It is quite evident from the composition of Malaysian imports that India can meet most of its requirements to the advantage of both the countries.

The U.K., together with other Commonwealth countries, plays a leading rôle in supplying these items. Japan and the east European countries, including Russia, have also cultivated the Malaysian market. In recent years, emphasis is being placed on expanding trade relations with co-developing countries of Asia. Malaysia's participation in the A.S.E.A.N. (Association of South-east Asian Nations) to foster regional co-operation bears testimony to this fact. India's trade with Malaysia has declined by nearly 50 per cent during the last five years mainly due to the unilateral withdrawal of Commonwealth preferences by the Malaysian Government as also due to the dislocation of trade caused by the devaluation of the Indian rupee in June 1966. However, India and Malaysia have agreed to accord bilateral tariff preferences to each other. While Malaysia, in particular, is interested in preferences for its palm oil, rubber and copra, India is eager to obtain preferences for cotton textiles, engineering goods and manufactured goods. India imports from Malaysia mainly tin which accounts for nearly 75 per cent of her total imports from that country. Other items in order of importance are: natural rubber, palm oil, hides and skins, and natural gums and resins.

India's exports to Malaysia still comprise mostly traditional items. The

share of new items, such as engineering goods, iron and steel, cinematographic films, does not exceed 35 per cent in the total exports. However, in the wake of expanded developmental activities, the scope for India's engineering items and iron and steel has considerably widened. The demand for builder's hardware in Malaysia has considerably grown consequent on the special emphasis on constructional activities. Malaysia's imports of builder's hardware increased from \$ (Malaysia) 9.3 million in 1965 to \$ (Malaysia) 12.3 million in 1969. India can compete with Japan, China and the U.K. because of the cheap labour advantage. Besides, with the growing emphasis on agricultural development, Malaysia imports considerable quantities of agricultural machinery, including power-driven pumps, mainly, centrifugal and reciprocating. It also imports simple hand tools, such as drills shaping machines, hand saws, circular saws and leather and general purpose hand tools. Indian hand tools have obtained the acceptance of the market because of their good performance. But competition from China is very stiff as their prices are very competitive.

The demand for iron and steel items for the railway traffic equipment and signalling apparatus, which are not domestically produced, will continue to be met by imports. Furthermore, in view of the strong industrial development schedule under the Second Five Year Plan (1971-76), the demand will grow for semi-finished products, such as flat iron, billets, blooms and slabs in addition to rail track-laying equipment. In addition to trade, as a result of the initiative taken by some Indian industrialists and the facilities provided by the Indian Government and the incentives extended by the Malaysian Government, a number of industrial ventures with Indian collaboration have sprung up in Malaysia. They cover a wide range of fields.

Malaysia actively encourages foreign investment by providing several concessions. To serve the special needs of entrepreneurs looking for opportunities in Malaysia, certain promotional agencies have been set up. Among them are the Federal Industrial Development Authority (F.I.D.A.), National Electricity Board (N.E.B.), Federal Land Development Authority (F.L.D.A.), Federal Agricultural Marketing Authority (F.A.M.A.), and the Majlis Amanah Raayat (M.A.R.A.). All the agencies have been created to provide necessary facilities in their respective fields.

Vacillation over Industrial Policy

(From Our New Delhi Correspondent)

After the Gandhinagar session of the A.I.C.C., the Government is apparently going slow with its decision to announce a new industrial policy. And it is a pity that during the winter session Parliament did not find the time to hold a debate on this subject.

THERE is no indication yet as to when the long-awaited revision of the Industrial Policy Resolution of 1956 will be made public. Obviously after the Gandhinagar session of the A.I.C.C. where the Central Minister for Industrial Development, Mr. C. Subramaniam, met with a reverse, the Government is going slow with its announcement. It should not even be surprising if the announcement is delayed until after the Calcutta session of the Congress. The winter session of Parliament came to an end on Friday. In view of the Government's tight schedule, a discussion on industrial policy and growth was ruled out. This does not mean that there is no concern over the economic situation and the need to arrest frustration among the people as is evidenced by the countrywide student unrest, the raising of fissiparous tendencies in the form of linguistic and regional feelings—all arising from the lack of employment opportunities.

Now that the problem of delimitation of the border with Pakistan has been got over with the accord by the two army commanders in Lahore and the signing of the maps in Suchetgarh, the next steps will obviously be taken by the two Governments to restore normalcy. This should enable the Government of India to turn inwards to look at the economy at close quarters. As it is, the Central Government is satisfied that there has been a marked improvement in industrial production in the last six months, with a sustained growth rate of 7.5 per cent. This should set the tone for similar strides in other sectors of the economy. In the agricultural sector, too, the revised estimates for 1972-73 are reported to be relatively better than what was feared a couple of months ago when the

Government decided to import foodgrains to meet the anticipated shortfall.

The decision to import food is a reversal of the Prime Minister, Mrs. Indira Gandhi's own earlier pronouncements that there should be no import of food or sugar, but the unpalatable decision had to be taken. As the Central Finance Minister, Mr. Y. B. Chavan, explained in Parliament, the import of food was not meant for "current consumption" but as a measure to prevent a further increase in prices. Although the Government is going ahead with the projected import of 1.5 to 2 million tonnes at a cost of Rs. 150 crores (Mr. A. P. Shinde, Central Minister of State for Food, has announced that the ships will start arriving in Indian ports next month), it is reasonably confident that the country will be able to tide over the expected shortfall without completely running out of the depleted buffer stocks, which have come down from 9.5 million tonnes to 3.6 million tonnes. This confidence emerges from the belief that unlike the *kharif* crop which is heavily dependent on the south-west monsoon during the June-September period, the *rabi* crop can manage with a couple of showers in December-January before it is harvested in February-March in most of the northern States.

Meanwhile, the Government is also placing reliance on the inputs necessary to increase food production. Already a Japanese team is in the country to negotiate with the Government on a long-term agreement for the supply of fertilisers, mainly urea, from Japan. With the suspension of U.S. aid, which resulted in a depletion of the import of fertilisers, the Government is naturally using free foreign exchange for the import of this vital commodity. In this process, the Government is not hand-bound to import fertilisers from any particular country. Commercial considerations alone will be the governing factor and, whether it is Japan or the United States, it will all depend on who sells fertilisers cheap.

Tamil Nadu : The D.M.K. Raises an Important Constitutional Issue

(By a Special Correspondent)

In a letter to the Prime Minister on the Opposition's charges against the D. M. K. Ministry, Mr. M. Karunanidhi has raised several important issues. He has said that it would be subversive of the Constitution if a State Cabinet is sought to be subjected to a commission of enquiry constituted by the Centre.

THE Tamil Nadu Chief Minister, Mr. M. Karunanidhi, has raised several important issues in a letter to the Prime Minister, Mrs. Indira Gandhi, answering the charges levelled against him by the A.D.M.K. leader, Mr. M. G. Ramachandran and the C.P.I. Two separate memoranda were submitted several weeks ago to the President of India, Mr. V. V. Giri, listing a number of charges against the Chief Minister and his colleagues and these were later forwarded to the Prime Minister, who in turn, sent them on to Mr. Karunanidhi for his comments. In fact, it has now become an established procedure for the Prime Minister to forward such allegations to the Chief Minister concerned and after eliciting his views have the whole matter studied at the Centre with a view to finding out whether there is any *prima facie* case or not. It is only then that the question of appointing a commission arises.

This very procedure has been adopted in the case of Mr. Bansi Lal, Chief Minister of Haryana, against whom a number of allegations have been made by the former Chief Minister, Mr. B. D. Sharma, who is now a prominent leader of the Organisation Congress in the State. Mr. Sharma's allegations, in one of the memoranda submitted by him, were found baseless and as such they were dismissed as of no consequence. He has submitted another list of charges; this has been forwarded to Mr. Bansi Lal for his comments. The next step will be taken after the reply of the Chief Minister has been received. In this context, the question was also raised whether the reply of the Chief Minister should be made available to the complainant and the

Prime Minister has made it clear that this could not be done. What the Chief Minister says is for the benefit of the Prime Minister.

Mr. Karunanidhi has, however, raised a constitutional question in regard to the demand by the Opposition for the appointment by the Centre of a commission of enquiry to go into the whole matter. The Chief Minister has said that the Constitution is not unitary but federal in structure, the essence of which is that the constituent States are not subordinate to the Central Government, each State being autonomous within certain defined limits. Every State has parliamentary system of Government and the Cabinet is collectively responsible to the legislative Assembly of the State. He has further pointed out that there is no provision in the Constitution which makes the State Cabinet accountable to the Centre; and as such it would be subversive of the entire scheme of the Constitution and the system of responsible Government if a State Cabinet is sought to be subjected to a commission of enquiry constituted by the Centre.

There is much force in what Mr. Karunanidhi says. As long as commissions of enquiry are appointed by the Centre in respect of Chief Ministers who belong to the same political party as in power at the Centre, there is really no problem. For instance, the former Chief Minister of Punjab, Mr. Pratap Singh Kairon, meekly submitted to a commission of enquiry appointed by the then Prime Minister, Mr. Jawaharlal Nehru. The commission after a good deal of labour lasting more than a couple of years found him guilty of several charges with the result that Mr. Kairon had to step down. He never went to court challenging the decisions of the commission nor did he raise any fundamental objection to such enquiry. But Mr. Karunanidhi is not subject to any control by the Prime Minister because he belongs to a different political party. The moot question, therefore, is

whether in his case the Prime Minister will appoint such a commission.

It is clear that Mr. Karunanidhi will not take any decision of the Centre to appoint a commission of enquiry lying down. Already, the Prime Minister has asked the Central Law Ministry to examine the whole position in the light of the Chief Minister's assertion in his letter. This will to some extent sidetrack the whole issue relating to charges of corruption against Mr. Karunanidhi. But he has in his reply to the Prime Minister described the charges as extremely frivolous, vexatious, false and malicious. Mr. Karunanidhi has also said "that Ramachandran, the actor that he is, has truly enacted a political stunt both at Madras and New Delhi on the eve of his presentation of the petition to the President". The political Machiavellism of the C.P.I., according to the Chief Minister, is an attempt to lend a colour of realism and respectability to the political gimmick.

It is, however, difficult to prejudge the whole issue but the fact that will have to be noted is that there is large-scale discontent in the State against the ruling Party. If Mr. Ramachandran has been able to canalise the discontent, it should be a pointer to the ruling Party not to be complacent about the whole affair and dismiss all this as of no consequence. It is too early to say whether there is any constitutional crisis in the State but here again much depends on the court's ruling on the no-confidence motion against the Speaker. The Speaker's petition against the action of the Governor in proroguing the Assembly has been set aside and this has established the right of the Governor to summon and prorogue the Assembly as laid down in the Constitution.

PEOPLE AND PERSONALITIES

Mr. K. K. Dhandhanian has been elected president and Mr. D. C. Bagri vice-president of the Jute Brokers' Association for the year 1972-73.

Mr. Robert Shearer will be retiring as Managing Director of the Overseas Banking Division of National and Grindlays Bank Ltd on 31st December, 1972. Mr. R. S. Rees, at present deputy to Mr. Shearer, will succeed him.

Is a Managing Director's Commission on Gross Profits Taxable as Salary?

By C. R. Thiagaraja Varma

The Supreme Court has recently given its decision on the question of whether the commission payable on gross profits of a company to its managing director is taxable as salary or as business income. Although the Court has not laid down any general rule, its decision has considerable significance.

THE questions whether the managing director of a company is a servant or agent of the company and whether the remuneration payable to him could be assessed as "salary" or "business income" came up before the Supreme Court recently. Although no rule having general application has been laid down by the Supreme Court in this regard, the facts of the case as well as the decision and its basis should be of interest to all concerned with similar problems. The judgment has been reported in a recent issue of the *Income Tax Reports*. [Ram Prashad V.C.I.T. (1972) 86 I.T.R. 122 (S.C.)].

The remuneration which a director or a managing director may receive from the company may either fall under Section 15 of the Income Tax Act, 1961, as salary or under Section 28 as business income or under Section 36 as income from other sources, according to the terms of the agreement. It is not the name of the office in relation to which the income is derived which would determine the true nature or the head of the income but it is the powers and duties of the office-holder under the terms of the agreement with the company that would be decisive in the matter.

In the case under consideration here, the assessee and his wife owned a large number of shares in a private limited company engaged in the business of running hotels. By virtue of article 109 of the articles of association of the company, the assessee became the first managing director on terms and conditions agreed to and embodied in an agreement dated 20th November, 1955 between himself and the company. Under that agreement, the assessee was entitled to receive Rs. 2,000 a

month, a fixed sum of Rs. 500 a month as car allowance, and 10 per cent of gross profits of the company as commission. In addition, he and his wife were also entitled to free board and lodging in the hotel. One of the clauses of the agreement gave him the liberty to resign his office upon giving three months' notice. The company was also given powers to terminate his services, in general meeting, before the expiry of the 20 years' period, if the assessee was found to be acting otherwise than in the interests of the company or was found to be not diligent in his duties.

Under article 136 of the articles of association of the company, the general management of the business of the company was in his hands. Article 139 enabled the managing director generally to work for and contract with the company and specifically to do the work of agent of the company. Article 140 empowered the board of directors to exercise control over the managing director in certain specific instances. Under Article 141, he was in charge and custody of all the property, books of account, papers, documents and effects belonging to the said company wherever situated. Article 142 provided that the managing director shall work for the execution of the deci-

sions arrived at by the board of directors of the company from time to time.

For the accounting year ending September 1955, relevant to the assessment year 1956-57, the assessee was entitled to receive by way of commission a sum of Rs. 53,913, representing 10 per cent of the gross profits of the company. But the assessee gave up the commission soon after the accounts were finalised but before they were passed by the general meeting of the shareholders. The assessee gave up the amount because the company would not be making net profits if the stipulated commission was paid to him. The assessee claimed that the amount given up by him was not liable to be included in his total income because the amount had not accrued to him at all, at any rate, in the accounting year ended March 1956, and that even assuming that it had accrued in the accounting year ended March 1956, it was not taxable under Section 7 or Section 10 of the Income Tax Act, 1922 (corresponding to Sections 15 to 17 or Sections 28 to 44 of the 1961 Act). The Income-tax Officer, the Appellate Assistant Commissioner, the Tribunal and the Delhi High Court have all held that the 10 per cent commission on gross profits was taxable as "salary" and that the income had accrued to the assessee during the previous year.

When the matter went to the Supreme Court, the only question that was left to be resolved by it was whether the 10 per cent gross profit payable to the assessee under the terms of the agreement appointing him as the managing director was liable to be assessed as salary or under the head

Wanted Agents

"income from business". It is to be noted that for the purposes of the Income Tax Act, the term "salary" includes commission, wages, perquisites, etcetera. Mr. A. K. Sen, a senior advocate of the Supreme Court, who appeared on behalf of the assessee contended that in order to assess the income as salary it must be held that there was a relationship of master and servant between the company and the assessee and for such a relationship to exist it must be proved that the employee was subject to the supervision and control of the employer in respect of the work that the employee had to do. Where there is no such supervision or control it will be a relationship of principal and agent or an independent contractor. Applying these tests, it was submitted on behalf of the assessee that his appointment as a managing director was not that of a servant but as an agent of the company and accordingly the commission payable to him was income from business and not salary.

The Supreme Court observed that for determining whether a person is a servant or an agent, a rough and ready test is whether under the terms of his employment, the employer exercises a supervisory control in respect of the work entrusted to him. A servant acts under the direct control and supervision of his master. An agent, on the other hand, in the exercise of his work is not subject to the direct control or supervision of the principal, although he is bound to exercise his authority in accordance with all lawful orders and instructions which may be given to him from time to time by his principal. The Supreme Court made it clear that this test is not universal in its application and does not determine in every case, having regard to the nature of employment, that he is a servant. As an illustration it was pointed out that a doctor may be employed as a medical officer and although no control is exercised over him in respect of the manner in which he should do the work nor in respect of the day-to-day work he is required to do, he may nonetheless be a servant

if his employment creates a relationship of master and servant.

A person who is engaged to manage a business may be a servant or an agent according to the nature of his service and the authority of his employment. The nature of the particular business and the nature of the duties of the employee will require to be considered in each case in order to arrive at a conclusion as to whether the person employed is a servant or an agent. Although an agent is not a servant, a servant is generally for some purposes his master's implied agent, the extent of the agency depending upon the duties or position of the servant.

The Supreme Court pointed out that "a director of a company is not a servant but an agent inasmuch as the company cannot act in its own person but has only to act through directors A managing director may have a dual capacity. He may both be a director as well as an employee. In the capacity of a managing director he may be regarded as having not only the capacity as *persona* of a director but also has the *persona* of an employee, or an agent depending upon the nature of his work and the terms of his employment. Where he is so employed, the relationship between him as the managing director and the company may be similar to a person who is employed as a servant or an agent, for the term 'employed' is facile enough to cover any of these relationships. The nature of his employment may be determined by the articles of association of a company and/or the agreement, if any, under which a contractual relationship between the director and the company has been brought about, whereunder the director is constituted an employee of the company; if such be the case, his remuneration will be assessable as salary."

In this context a number of cases have been cited before the Supreme Court; but the Court pointed out that the conclusion in each of the decisions turned on the particular nature of employment and the facts disclosed therein and in each of these decisions the "context played vital part in the conclusions arrived at."

After considering a catena of decisions as well as passages from Halsbury's Laws of England, Bowstead on Agency, and Treatises on Company

Law by Palmer, Gower's Pennington and Buckley, the Supreme Court came to the conclusion that the test for determining whether the person employed by a company is a servant or agent is not solely dependent on the extent of supervision and control exercised on him. The real question in this case, according to the Court, is one of construction of the articles of association and the relevant agreement which was entered into between the company and the assessee. If the company is itself carrying on the business and the assessee is employed to manage its affairs in terms of its articles and the agreement, and he could be dismissed or his employment could be terminated by the company if his work is not satisfactory, it could hardly be said that he is not a servant of the company. The terms in the article and agreement, already referred to, are inconsistent with the plea that he is an agent of the company and not a servant. The control which the company exercises over the assessee need not necessarily be one which tells him what to do from day to day.

According to the Supreme Court, that would be too narrow a view of the test to determine the character of the employment. Supervision did not imply that it should be a continuous exercise of the power to oversee or superintend the work to be done. The control and supervision was exercised and was exercisable by the board in terms of the articles and the company in its general meeting. Since the board of directors are to manage the business of the company they have every right to control and supervise the assessee's work whenever they deem it necessary. The powers of the assessee had to be exercised within the terms and limitations prescribed in the articles and subject to the control and supervision of the directors which was indicative of his being employed as a servant of the company.

In view of this position, the Supreme Court held that the sum of Rs. 53,913 was payable to the assessee as salary and was chargeable under Section 7 of the Income Tax Act, 1972 (corresponding to Section 15 of the Income Tax Act, 1961). It is obvious that once the income is assessed as salary, the assessee cannot avail himself of the various deductions that are available in computing the business income. Similarly the position regarding carry-forward and set-off of losses will also greatly differ and the various provisions that are applicable to business income will have no application to the assessee.

MONEY AND BANKING

Banks' Performance in the Financing of Exports

(By a Special Correspondent)

Banks' credit to the export sector has been steadily going up. To a large extent, this process has been helped by the liberal refinance facilities extended by the Reserve Bank.

FINANCING of exports was recognised as a priority task sometime in 1968 when the National Credit Council chose three main sectors to receive proper and adequate attention from the banks, viz., agriculture, small-scale industries and exports. These sectors were said to be complementary in as much as each one of them could help the development of the other sectors. It was also felt that if banks could pay adequate attention to financing of these sectors, that would smoothen the growth of the Indian economy as a whole. It was, therefore, intended to make special efforts to boost exports and banks were inclined to provide sufficient credit to help such efforts.

To have an idea of banks' performance during the past four years in this respect, it would be pertinent to compare the figures of scheduled commercial banks at the pre-shipment and post-shipment stages separately. The table below gives information on total export credit granted by banks and also export bills purchased and discounted by them, the latter indicating mainly the extension of credit facilities at the post-shipment stage. It would be seen from the export credit figures that banks have been granting facilities on an extensive scale.

The table gives an idea of the efforts banks are making to help the export

trade. Banks have been advised by the Reserve Bank to extend liberal and cheap credit facilities to exporters. It has prescribed a ceiling of 6 per cent rate of interest on export credit which has recently been raised to 7 per cent. The Reserve Bank has also extended liberal refinance facilities to banks in this respect; with the help of the liberal refinance arrangements, banks, it is expected, will be able to hold higher export advances in their portfolio. This has been corroborated by the figures of refinance availed of by banks from the Reserve Bank. Under Section 17 (3A) of the Reserve Bank of India Act, the Reserve Bank has granted as much as Rs. 109 crores as refinance for export credit at the end of March 1971. Corresponding figures for 1969-70 and 1968-69 were Rs. 79 crores and Rs. 27 crores, respectively. But it was only Rs. 19 crores at the end of March 1968. In other words, the liberal refinance system operated by the Reserve Bank has helped the banks in extending export credit facilities on a much larger scale.

The same fact is also evident from the figures of percentage variation over the years shown under columns 5, 6 and 7 of the table. It may be observed from the figures that although annual export of merchandise has shown a decline in 1970-71, export credit and export bills purchased or discounted by banks have shown a rise of 16 per cent and 11 per cent, respectively. So it seems that there is hardly any necessity to set up a new institution for export credit as long as the Reserve Bank continues to grant liberal refinance to banks on a regular basis.

FINANCING OF EXPORTS BY SCHEDULED COMMERCIAL BANKS
(Rs. in crores)

	Annual exports of merchandise	Export credit (At the end of respective years)	Export bills	Column (3) as percentage of column (2)	Percentage variation over the year in column (1)	(2)	(3)

***MSFC's Technicians Scheme provides finance for the technically qualified**

Are you technically qualified — by study or experience? Have you contemplated starting on your own? But been frustrated due to lack of finance?

The Mysore State Financial Corporation will financially assist you, if you have a feasible project worked out. And have the determination, enterprise and ambition to reach your goal.

The MSFC Technicians Scheme requires :-

- Adequate experience and knowledge in the field.
- Active participation in the working of the industry concerned.

The scheme is applicable to small scale industries

geared towards consumer or industrial needs, excluding industries such as rice and oil mills, cotton ginning and pressing mills, hand and power looms, hotels and restaurants, transport of goods or passengers and industrial estates.

The maximum amount of loans disbursed is upto Rs. 2.5 lakhs (relaxable in special cases), at low rates of interest, with a rebate for prompt payment.

In collaboration with the Small Industries Service Institute and the Mysore Small Industries Corporation, which provide comprehensive assistance, MSFC will undertake the financing of projects of widest scope and variety.

INSURANCE

The L.I.C.'s Approach to Investment in the Private Sector

(By a Special Correspondent)

The L.I.C.'s investment in the private sector has continued to increase. In fact, it is now the single largest holder of equities.

COMMENTING on the investment policy of the Life Insurance Corporation of India in the private sector, Mr. T. A. Pai, an ex-chairman, once observed: "When it grants loans to industry, its claim for a right to convert a part of this loan into equity is again not a matter of ideology but a claim of the policy-holders to share the prosperity in the industries in which their monies are invested." He further noted that if insurance were in the private sector, then the investors would have demanded more rights in the industries financed. Guided by the philosophy of "people's money for people's good", socially-oriented investments now claim the foremost attention of the Corporation. Which is why L.I.C. investments under heads of loans for housing, loans to the State Electricity Boards, and loans to local bodies for rural or urban water supply schemes have increased from Rs. 18 crores in 1963-64 to Rs. 117 crores in 1971-72.

The L.I.C.'s investment in the private sector (in debentures and preference and ordinary shares) has also recorded an increase. For instance, investments in the engineering, cotton textile, electricity, iron and steel, cement, electrical goods, aluminium, dyes and chemical, paper and boards, sugar and breweries, textile (other than cotton) and "other industries" reached the figures of Rs. 42.10 crores, Rs. 23.03 crores, Rs. 17.43 crores, Rs. 17.35 crores, Rs. 11.04 crores, Rs. 10.80 crores, Rs. 9.42 crores, Rs. 9.13 crores, Rs. 8.52 crores, Rs. 7.31 crores, Rs. 6.12 crores and Rs. 50.58 crores, respectively in 1970. Here, one has to note that the L.I.C. is under statutory obligations to invest at least 50 per cent of its investible funds in Government securities. Some critics, however, point out that such investments in Government securities invariably exceed 70 per cent and that in 1970-71, the L.I.C. had to invest 74.8 per cent of its funds in Government securities. Investments in such securities exceeded as at 31st March, 1971,

Rs. 400 crores. But the truth also remains that the Corporation is the single largest holder of equity shares of public limited companies in the private sector.

A study by the Reserve Bank of India of share ownership in joint stock companies has concluded that within six years, the proportion of ordinary share capital possessed by the L.I.C. has increased from 5.8 per cent to 9.2 per cent. Another study by Dr. Hazari shows that out of 1,000 public and private companies the L.I.C. owned, even in the past, 14 per cent preference share capital and 3.6 per cent of equity share capital. Besides, a sample study of the equity holdings in T.I.S.C.O., I.I.S.C.O. and T.E.L.C.O. proves that the Government has now taken the rôle of a prominent share-holder in the private sector. For instance, the Government has already participated with the aid of top financial institutions in the equity of these three industrial giants and such participation amounts to 31 per cent (or Rs. 24 crores) of the total equity capital. Also, total investments of the L.I.C. in the large business groups, as at 31st March, 1971, amounted to 64 per cent of private-sector investments. The rate of L.I.C. investment in the private sector has of late declined partly because of (a) classifying the loans with the Government backing out of this sector and (b) care and caution taken to grant loans in certain directions. Naturally, it is feared in certain circles that the reluctance of the Corporation to make fresh investments in major projects in the private sector would put a brake on further industrialisation.

It has to be conceded that life insurance business is a service industry that exists for policy-holders and the Corporation is keen on earning more on its investments to serve better the masses. Besides, it has an obligation to make insurance attractive among the common man for investment purposes. Hence, it makes continuous efforts to study its investment portfolio and even within the statutory obligations tries to in-

crease the yield. The Corporation has to conform to the national needs. No wonder, its vast funds are now invested in socially-oriented schemes.

It is relevant to note here that during the busy seasons in the past, the Corporation supplied funds to commercial banks and, according to some financial experts, the sharp fluctuation in the call rate during the busy season would have remained unchecked but for the timely intervention of the L.I.C. through the supply of its surplus funds. Banking interests seem to believe that any additional benefit accruing to the L.I.C. through the inter-bank call money market will, in turn, yield benefits to policy-holders. The Reserve Bank of India permitted this entry of the L.I.C. in the call money market to improve the liquidity of the banking system.

In any event, the Corporation is now conscious that in a developing economy, the flow of credit needs regulation considering the credit needs of an expanding trade and commerce. It wants more earnings from its investments to divert urban savers to insurance. The Corporation is also mobilising resources in rural areas.

Will the Government Go Ahead with the Proposed Scheme of Hotel Tariff?

(By a Special Correspondent)

The Government has deferred its decision to introduce a new scheme concerning payment of hotel bills in rupees. It is hoped that the proposed tariff pattern will not be implemented in the interests of smooth running of the hotel industry.

THE Central Minister for Tourism and Civil Aviation, Dr. Karan Singh, said at a convention of hoteliers held in October that from 1st November, 1972, foreign tourists would have to pay their hotel bills in foreign exchange; those paying in rupees would be required to pay a surcharge of 33.33 per cent. This revision in the hotel tariff, applicable to about 100 hotels with a single occupancy tariff of or above Rs. 60 a day, became necessary, according to some observers, to earn maximum foreign exchange or to check possible leakages. To illustrate, two top hotels, according to official sources, had foreign occupancy rates of 89.5 per cent and 68 per cent, respectively, in 1971, against the corresponding payment rates of 30 per cent and 20 per cent, respectively, in foreign exchange. This only proved that the bulk of such foreign exchange went into wrong hands instead of accruing to the Government. Statistics of 20 top hotels show that only 30 per cent of foreign residents paid their hotel bills in foreign exchange between January and June 1972, against the corresponding figure of 43 per cent in 1971. This fact called for an urgent solution to the problem of leakage. It is understood that of the total tourist spendings in India, viz., Rs. 42 crores, at least Rs 16 crores are paid solely to meet hotel bills.

The Department of Tourism has informed the hotels concerned that (a) foreigners, except certain categories, and Indians resident outside should pay their hotel bills in foreign exchange; (b) foreigners so exempted should pay 33.33 per cent in addition for bills paid in rupees; and (c) anyone, including Indians paying in rupees, is required to pay

33.33 per cent more. However, on 31st October the Department withdrew such a surcharge on rupee payments and by a subsequent modification of rules, hotels and restaurants were relieved of the unnecessary insistence on foreign exchange payments. Hotel services are exempted from essential commodity. Hence, hotel interests are sceptical about the enforcement of the proposed surcharge. More so, when States like Maharashtra and Mysore, through specific legislations, debar hotels from increasing their tariff unless necessary permission is obtained from the States concerned. Besides, can any tourist be enforced to pay in foreign exchange if he refuses to do so? It is felt that this additional tariff of 33.33 per cent for Indians would only bring "ruin" to the industry but the payment of hotel bills in foreign exchange by foreign tourists will be in the interest of the country.

Some hoteliers point out from experience the practical problems in case such a surcharge is imposed. These problems are: (a) verification as to whether an Indian is a resident or not; (b) training about dealing in foreign exchange transactions in tourist lodges with inadequate staff; (c) hotels in areas without banking facilities; (d) delay in arriving at decisions about the convertibility of a particular currency; and (e) unnecessary insistence on foreign exchange payments in case of legal conversion of a currency by a visiting tourist. In addition, some posh hotels, that accommodate most of the foreign tourists, will have to maintain dual sets of tariffs for (a) the enhanced rates for bills paid in rupees by Indian residents and foreign nationals exempted from the operation of the new procedure and (b) rates applicable to foreign guests paying bills in foreign exchange.

The new hotel tariff has been supported on the ground that posh hotels are mainly built for attracting more foreign visitors to enable the

country to earn foreign exchange. Items like liquors, asparagus and caviar are imported to offer facilities to foreign tourists. Naturally, the new measure, in the opinion of some observers, has been a right step to dissuade Indians from occupying such luxury hotels, particularly when in 1971 about 40 per cent passengers overflowed India on the apprehension that no suitable accommodation for staying in India was available. This new tariff, mainly aimed at plugging the leakage of foreign exchange, has some merits. Yet, the scheme, if implemented, is bound to cause confusion in the tourist trade. No wonder, some hoteliers feel that for promoting tourism, the emphasis must not be on collecting such a surcharge but on offering discounts where payment is made in foreign exchange. Fortunately, the Centre has now deferred the decision to raise the rupee tariff through such revised rates. And the hotel industry hopes that the new directive will never be implemented to ensure smooth running of Indian hotels for developing tourism in the long run.

BOAC

Record Passenger Total

BOAC has already carried more passengers into and out of Britain in the first seven months of the current financial year than in the whole of the previous year. The figure is over 1½ million and the airline expects to top the 2-million mark for the first time by the end of the financial year in March. Passenger numbers to and from Britain are more than 40 per cent up and this is attributed to the new lower air fares introduced in many parts of the world this year.

AIR FRANCE

Reducing Air Pollution

In a move to cut down air pollution, Air France has decided to modify the engines of its fleet of 25 Boeing 727-200 jetliners. By installing an extra combustion chamber on each of the JT 8 D engines powering this type of aircraft, the fumes emitted on take-off will be eliminated. This modification programme will cover 17 aircraft or a total of 51 jet engines. Already fitted with the anti-fume device are the 24 engines powering eight of the latest type of Boeing 727 delivered to Air France recently.

Selective Steadiness in Shares: Corporate News Helps Sentiment

THE stock markets have been in good form this penultimate week of the passing year, although the volume of business has been on a restricted scale, mainly due to Christmas holidays. Attention has largely been focussed on selected cash shares, having growth prospects. Encouraged by the continued flow of good corporate reports in the shape of higher profits enabling many companies to step up their dividends and a spate of bonus and new issues, operators have generally overlooked the prevailing uncertainties on both political and economic fronts. Lyons Range and Dalal Street have vied with each other to steal the show, but it was the latter which has provided the lead. Gains recorded by the popular scrip in the cleared and non-cleared lists have been fair for a single week. Improved technical position, scarcity of fresh offerings and increased institutional buying have helped to accelerate the upward trend in equities, although top gains have somewhat been pared due to intermittent profit-taking by marginal bulls.

Operators have been eagerly awaiting the outcome of the four-day A.I.C.C. plenary session at Bidhanagar in Calcutta which commenced from 26th December. In a pre-emptive move to meet criticism of the respective rank and file, the Congress Working Committee has adopted a concrete time-bound economic programme of action for the next 15 months. Operators have also derived comfort from the report that the Government has been considering a proposal to supply steel to the Small-scale Industries Corporation at a concessional price for distribution to small-scale units. The prospect of getting larger credit by the coal industry from commercial banks implementing the R.B.I. recommendation has been welcomed. The priority accorded to sectors like power, irrigation, agriculture and industry by the Planning Commission while finalising Annual Plans for 1973-74 has been considered a step in the right direction. Operators have also been encouraged by the favourable results of an analysis made by the Central Finance Ministry on the

tempo of investment in the private sector which picked up in 1971-72, compared with the previous year's level. The analysis reveals that consents of capital issues other than bonus issues, which had declined from Rs. 102.03 crores in 1969-70 to Rs. 57.42 crores in 1970-71, rose to Rs. 167.75 crores in 1971-72. Similarly, the amount of capital raised which fell from Rs. 66.43 crores in 1969-70 to Rs. 46.81 crores in 1970-71 went up to Rs. 59.31 crores in 1971-72. Registration of new companies, number of letters of intent and licences issued also showed a steady increase.

But the unfavourable demand-supply gaps in cement, fertiliser and sugar, notwithstanding Governmental pronouncements for massive investment programme in these industries in the Fifth Plan, have been viewed with misgivings. The continued load shedding hampering industrial production has been another restraining factor. The Central Foreign Trade Minister, Mr. L. N. Mishra's warning that textile mills would be taken over if their owners refused to modernise them has been viewed with concern.

Gilt-edged securities have remained steady this past week, although turnover has remained restricted. The 3 per cent Conversion loan 1986 has been quoted at Rs. 59.95. The State Government loans have received selective support.

The Calcutta stock market has been in a holiday mood this past week. As a result, shares have been selectively steady, although turnover has been restricted. The prospect of a revision of the industrial policy and the Central Finance Minister, Mr. Y. B. Chavan's assurance that the Government would favourably consider the resumption of forward trading have created optimism in the stock market. Among engineering shares, Sankey Wheels, Kumardhubi Engineering, Simon-Carves and Electrosteel Castings have been steady. Among jute shares, Birla, Gourepore, Kinnison and Reliance

have changed hands. Among coal shares, South Karanpura and Western Bengal have been dealt in. Among paper shares, Orient, Seshasayee, Ballarpur and Tribeni Tissues have been supported. In the cotton section, Bharat Commerce have received attention while Elgin, Bowreah and Jayshree have been transacted. In the miscellaneous section, India Tobacco, Fort Gloster, Inchek Tyres, Shaw Wallace, Woolcombers of India, B.I.C. and Philips India have been firm. Among tea shares, Bishnauth and Rydak have been traded.

Trading on Dalal Street has been characterised by selective steadiness. Operators are generally optimistic that the new economic and industrial policy expected to be announced soon will be pragmatic and conducive to the faster growth of the country's economy. This, combined with the good performance of the cash section, seems to have emboldened the speculative bulls to lend support to their favourite scrip. In the non-cleared list, Chemicals and Fibres, Garware Nylon, Shree Synthetics, Swadeshi Polytex, Gujarat State Fertilisers, Bayer, Polyster, Bharat Forge, Siemens, Blundell Eomite, Vulcan Loyal, Rallis India, Bajaj Tempo, Kirloskar Brothers and Albright Morarji have come into

institutions, insurance companies and leading share-brokers. The financial institutions have sanctioned term loans amounting to Rs. 266 lakhs, including foreign currency loans of Rs. 146 lakhs.

Mr. Raunaq Singh, president of the Company, said at a Press conference in Calcutta that this project had been promoted by Raunaq and Company Pvt. Ltd and Bharat Steel Tubes Ltd, which are the leading manufacturers and exporters of steel tubes and pipes. Bharat Steel Tubes has an excellent record of achievements and has received several recognitions for outstanding export performance. The Company is one of the best managed projects in the country. The Rs. 10-equity share of the Company is being presently quoted on the stock exchange at about Rs. 26. Bharat Steel Tubes has also declared bonus issue in the ratio of one share for one equity share held. Mr. Singh informed that the Company has been licensed to manufacture 1,000 tonnes of spiral bevel, straight bevel, spur and helical and worm gears. The Company will manufacture these automobile gears for all types of vehicles. A major portion of the gear manufacturing equipment is being supplied by Gleason Works of the United States which is an internationally reputed manufacturer of gear plant equipment.

It has been estimated that in India by 1973-74 the annual demand for gears of various types in the automobile and tractor industry alone will be about 17,000 tonnes, against an indigenous production of barely 5,000 tonnes at present. There is thus a wide gap between indigenous production and demand. Keeping in mind the future growth of vehicle population in India and the consequent rise in demand for automobile gears, which is estimated around 8 per cent a year, the prospects for this industry are very promising. Mr. Singh pointed out that the country is at present spending considerable amount on the import of quality gears. The industry has, therefore, rightly been included in the list of priority industries. Bharat Gears will hence be another step towards import substitution. Against and initial foreign exchange requirement of about Rs. 1.46 crores, the plant will save much more amount every year by cut in the import of quality gears.

BHARAT GEARS

Share Issue

BHARAT Gears Limited has made a public issue of 960,000 equity shares of Rs. 10 each and 30,000 9.5 per cent cumulative redeemable preference shares of Rs. 100 each, both at par. The total cost of the project is Rs. 460 lakhs which is being financed by the raising of equity capital of Rs. 160 lakhs and preference capital of Rs. 30 lakhs. The promoters and their nominees have subscribed to equity shares of the face value of Rs. 64 lakhs. The entire public issue has been underwritten by the financial

F.A.C.T.

Another Difficult Year

THE working results of Fertiliser and Chemicals Travancore Ltd for the year ended March 1972 show that the Company has incurred a bigger loss than in the previous year. Although sales have moved up from the previous year's level, various adverse factors like the strike, maintenance problems and failures of some critical equipment have affected the overall results. Although sales touched a figure of Rs. 3,422.96 lakhs (against Rs. 3,170.12 lakhs), the net loss increased to Rs. 382.41 lakhs, after providing depreciation of Rs. 172.18 lakhs, from the previous year's loss of Rs. 189.38 lakhs, after providing depreciation of Rs. 151.86 lakhs. Barring superphosphate, the production of major items recorded an improvement over the previous year's level. There was a cut in the production of superphosphate due to an abundant supply of complex fertilisers in the market. The heavy shortfall in production in the second half year was due to maintenance problems and failures of some critical equipment.

While the prices of straight nitrogenous fertilisers were controlled, the

cost of production increased due to a rise in the prices of raw materials, and higher wage bill, excise duty and freight. The Company has approached the Government for an increase in the price of ammonium sulphate. One disturbing feature is the mention in the report that shortages of stocks were found to the tune of Rs. 67.39 lakhs up to 31st March, 1972. The erection of the new ammonium phosphate plant in Udyogamandal has been completed; its commissioning has been delayed because of labour trouble. The cryolite plant has also been completed and it is expected to go into production at an early date. The Cochin fertiliser project phase I was affected by a strike. Also, there were defects and deficiencies in equipment. The project cost has increased substantially due to the delay in the commencement of production. The Cochin fertiliser project phase II has passed the initial stages. It is scheduled to be completed by the last quarter of 1974. A sudden shutdown of the plants has caused damage to equipment. The strike has cost the Company as much as Rs. 2.5 crores. Adding the year's loss of Rs. 382.41 lakhs to the brought-forward deficit of Rs. 365.68 lakhs, there is a total deficit of Rs. 748.09 lakhs which has been carried to the balance-sheet.

AMERICAN EXPRESS

Dividend Declared

THE board of directors of American Express Company has declared the regular quarterly dividend of 12 cents a common share. The board has also declared the regular payment of 57½ cents a share on American Express's \$2.30 preferred series, 50 cents a share on its \$2 preferred series and 37½ cents a share on its \$1.50 preferred series.

PHILIPS INDIA

Share Issue Oversubscribed

THE issue of 523,600 equity shares to the public for which the subscription list opened on 4th December, 1972 and closed on 6th December, 1972 has been 12 times oversubscribed.

WEST COAST PAPER

Same Dividend

THE working of West Coast Paper Mills Ltd for the year ended June 1972 has resulted in a net profit of Rs. 46.75 lakhs, after providing depreciation of Rs. 66.90 lakhs, de-

ASP/LIC/Z-97

velopment rebate of Rs. 31 lakhs and taxation of Rs. 36.50 lakhs. This compares with the previous year's profit of Rs. 54.06 lakhs, after providing depreciation of Rs. 62.10 lakhs, development rebate of Rs. 8.25 lakhs and taxation of Rs. 78.50 lakhs. Total sales for the year amounted to Rs. 895.76 lakhs (against Rs. 813.26 lakhs). Adding to the year's profit a sum of Rs. 115 brought forward, Rs. 6.43 lakhs being tax credit certificates and Rs. 25,000 being development rebate no longer required, there is a total surplus of Rs. 53,43,460. Out of this, Rs. 53,43,000 is transferred to general reserve. The balance of Rs. 460 is carried forward. The 6 per cent preference dividend absorbs Rs. 7.02 lakhs and the equity dividend of Rs. 13 a share (same) claims Rs. 31.20 lakhs. These dividends are to be paid out of general reserve. Production during the year amounted to 43,098 tonnes (against 42,651 tonnes). Sales amounted to 44,016 tonnes (against 42,176 tonnes). It is also stated that the profitability of the Company has been affected due to the increase in the prices of chemicals and stores, higher wage bills, war risk insurance, etcetera.

The Andhra Pradesh Paper Mills Ltd (in which West Coast Paper has investment) achieved a higher production of 59,692 tonnes during the year. The improved working results are clear from its having declared a maiden dividend of Rs. 10 a share on the equity capital. The increased trend of production is being maintained during the current year. Andhra Pradesh Paper has decided to issue rights shares in the ratio of 1.5 at par in order to meet part of the capital cost of expansion by 15,000 tonnes under the crash programme scheme.

As for expansion, the directors' report says that the Company has received an industrial licence to increase the capacity from 45,000 tonnes to 60,000 tonnes a year. It has been decided to capitalise Rs. 60 lakhs by issuing 60,000 equity shares of Rs. 100 each as bonus shares in the ratio of one share for every four shares held. It has also been decided by the directors to raise the equity capital by issuing 60,000 rights shares of Rs. 100 each at a premium of Rs. 40 a share.

MYSORE PAPER

Dividend Maintained

THE directors of Mysore Paper Mills Ltd have maintained the equity dividend at 15 per cent for

the year ended March 1972. The profit for the year amounts to Rs. 96.06 lakhs, before providing for depreciation. This compares with the previous year's profit of Rs. 99.55 lakhs. Sales amounted to Rs. 501.04 lakhs (against Rs. 447.67 lakhs). Adding to the year's profit a sum of Rs. 5,486 brought forward and Rs. 4.15 lakhs transferred from tax credit certificate, there is a total surplus of Rs. 100.26 lakhs. Out of this, depreciation amounts to Rs. 37.38 lakhs (against Rs. 36.25 lakhs). In the previous year, arrears of depreciation amounting to Rs. 12.42 lakhs were also provided. Transfer to development rebate is Rs. 67,677 (against Rs. 12.12 lakhs). General reserve gets Rs. 62.15 lakhs (against Rs. 42.30 lakhs). The balance of Rs. 5,056 is being carried forward.

During the year, production amounted to 24,076 tonnes (against 23,788 tonnes). It is said that despite the increase in costs of raw materials, there has been no significant fall in the gross profit and this is due to increased sales realisation and higher production. Out of the borrowings of Rs. 450 lakhs to finance the expansion scheme, the Company has so far repaid Rs. 301 lakhs, leaving a balance of Rs. 149 lakhs. The directors state that the

full benefit of enlarged production capacity due to the last expansion has enabled the Company to produce satisfactory working results. The directors have been considering the possibility of stepping up production to achieve further economies.

GOODYEAR TYRE

Capacity Expanded

THE Goodyear Tyre and Rubber Company is augmenting its capacity for truck tyre production in the United States. According to the Company's president, Mr. Charles J. Pilliod, the proposed expansion of the Danville plant will be implemented at a cost of \$11 million. The expansion, the sixth since the Danville plant began production in 1966, is expected to be completed by the end of 1973. On completion, the plant will become the single largest unit, covering nearly 34 acres of space.

KELVINATOR

Big Export Order

KELVINATOR of India Ltd has signed an agreement with a Polish buying team for the export of 10,000 Tropicana refrigerators through its

BURN AND COMPANY : PROSPECTS IMPROVE

THE working of Burn and Company Ltd shows progressive improvement for the year ended April 1972, compared with the preceding years' results which were affected by the recession and unsettled labour conditions. Production at the Howrah works during the year continued to be hampered due to the non-availability of raw materials. On completion of the export order for bogie tank wagons from the East African Railways, the Company is currently manufacturing rolling stock for Yugoslavia. The delays in the finalisation of formalities between the financing banks and the State Trading Corporation adversely affected the progress of this export order; however, the first shipment has now been completed. In the context of the recent revival of demand for rolling stock from the Indian railways, the Company expects to receive an equitable share of the orders at reasonable prices. The Company has secured, in collaboration with other fabricators, an order for the

new Hooghly Bridge which would provide workload for the structural section. The workload in the foundry and railway material sections also is satisfactory.

The Company's operations have resulted in a loss of Rs. 19.03 lakhs, before providing for depreciation but after charging bank interest amounting to Rs. 29.34 lakhs. The loss is mainly due to an extra provision of approximately Rs. 15 lakhs in respect of bonus payable retrospectively to the Company's workmen. The total loss for the year amounting to Rs. 46.33 lakhs, after transferring Rs. 4,359 to development rebate statutory reserve and Rs. 1.26 lakhs to reserve for capital profits, together with the loss brought forward from the previous year, aggregating Rs. 1.18 crores, has been carried forward. In view of the continued loss, the dividend has been skipped again. Sales were shown at Rs. 9.58 crores, against Rs. 9.46 crores.

port subsidiary Expo Machinery Ltd, elhi. The Company claims that this by far the largest single order ever neded by any Indian manufacturer of frigerators for export to any country. xpo Machinery has so far exported ropicana refrigerators to over 25 untries.

Government's declared policy. The Company has received disbursement of the loans from the Industrial Development Bank of India and the Industrial Finance Corporation of India.

SOUTH INDIA STEEL

Dividend Resumed

SOUTH India Steel and Sugars Ltd has produced good results for the year ended June 1972. This has enabled the directors to announce a dividend of 9 per cent on ordinary shares after a lapse of two years. The profit for the year amounts to Rs. 16.91 lakhs, after providing depreciation of Rs. 15.33 lakhs. This compares with the previous year's loss of Rs. 21.42 lakhs, after providing depreciation of Rs. 14.93 lakhs. Adding to the year's profit a sum of Rs. 14 lakhs transferred from general reserve, there is a total of Rs. 30.91 lakhs available for appropriation. Out of this, development rebate reserve gets Rs. 95,000 (against Rs. 1.55 lakhs). The 9.3 per cent preference dividend absorbs Rs. 4.92 lakhs and the equity dividend claims Rs. 8.48 lakhs. After wiping off the brought-forward deficit of Rs. 16.33 lakhs, there is a surplus balance of Rs. 21,694 which is carried forward. During the year, 207,245 tons of cane were crushed and 18,528 tonnes of sugar produced. The recovery was 8.93 per cent. The Company earned Rs. 9.63 lakhs as rebate on excise duty for increased production.

In the steel division purchases and sales of iron and steel materials were 8,068 tonnes and 7,783 tonnes, respectively. In the previous year the

corresponding figures were 6,454 tonnes and 6,227 tonnes. Although sales of the steel division were higher during the year, the profit came down to Rs. 3.29 lakhs from Rs. 5.87 lakhs. The reason for this is that receipts from the steel plants were reduced to a trickle and the Company was compelled to make bulk purchases from local re-rollers and dealers at much higher prices than J.P.C. prices.

B.S.T.

Bonus Issue

THE board of directors of Bharat Steel Tubes Ltd has decided to recommend the issue of bonus shares in the ratio of one bonus share for one equity share held. The issue of bonus shares is being declared by capitalising a sum of Rs. 11,893,063 out of the general reserve of the Company, a sum of Rs. 1,599,000 standing to the credit of capital redemption reserve, a sum of Rs. 7,937 standing to the credit of profit on reissue of forfeited shares. The bonus shares will be distributed among the shareholders of the existing 1,350,000 equity shares of Rs. 10 each whose names stand on the register of members on a date to be fixed by the board of directors after seeking the approval of the members at the general meeting and after receiving the consent of the Controller of Capital Issues. After the issue of bonus shares the total paid-up capital of the Company will be Rs. 2.99 crores divided into 270,000 equity shares of Rs. 10 each and 14,010 9.3 per cent cumulative redeemable preference shares of Rs. 100 each and 15,000 9.5 per cent cumulative redeemable preference shares of Rs. 100 each. After the issue

PUBLICITY SOCIETY

Better Results

THE Publicity Society of India Ltd has reported improved working results for the year ended March 1972. Income from advertisements re up from Rs. 15.73 lakhs to Rs. 7.64 lakhs and the profit has risen from Rs. 2.24 lakhs to Rs. 3.74 lakhs, after providing Rs. 17,973 (against Rs. 16,191) for depreciation. In view of the Company's better performance, the taxable ordinary dividend has been raised from 10 per cent to 1.25 per cent which will absorb Rs. .03 lakhs (against Rs. 91,564). This offers a yield of 9 per cent at the present price of Rs. 5 a share of Rs. 1 each. Taxation is allocated Rs. 2.15 lakhs (against Rs. 1.60 lakhs) and general reserve Rs. 1 lakh (against Rs. 20,000). A sum of Rs. 44,903 (against Rs. 42,250) is written back from special bonus reserve. There is a carry-forward of Rs. 4,641, against Rs. 3,421 brought in.

SHREE SYNTHETICS

Good Progress

THE profit and loss account of Shree Synthetics Ltd, after providing Rs. 1.20 lakhs (against Rs. 40,029) for depreciation and Rs. 43,700 (against nil) for taxation, shows a debit balance of Rs. 32.02 lakhs for the period from 1st April, 1971 to 30th June, 1972 under the head "Project and Pre-operation Expenses" which will be allocated between capital and revenue in due course. The Company's financial year has been changed from March-February to July-June. Having erected the plant and equipment in a record period of 17 months, the Company has commenced trial runs and hopes to achieve the rated capacity at an early date. The test results in the laboratory are satisfactory and the yarn produced has been well received in the market. With the commencement of trial runs, it is expected that the Government will soon permit the Company to double the capacity as it is in line with the

KOTHARI SUGARS : SHARE ISSUE

KOTHARI Sugars is offering for public subscription 211,423 equity shares of Rs. 10 each at par. The subscription list opens on 28th December and will close on 3rd January, 1973. The issue is fully underwritten. The funds raised by this share issue will go to finance the Company's new factory in Mysore State. It may be noted that in May 1972, the Company offered 800,000 equity shares of Rs. 10 each to the existing shareholders, of which 588,577 were subscribed. The balance of 211,423 shares are now offered to the public for sub-

scription. The existing sugar factory at Kattur, Lalgudi, Triuchi district, is expected to crush 250,000 tonnes of cane in 1973 and about 300,000 tonnes in 1974. The factory is expected to start crushing by the end of 1973. The combined operations of the two factories are expected to result in an annual crushing capacity of about 600,000 tonnes within the next four years. The equity shares now offered will not be entitled to participate in any dividend or cash bonus declared for the year ended August 1972.

of bonus shares the reserves of the Company will stand at Rs. 10,475,478 which comes to about 35 per cent of the enhanced paid-up capital. Mr. Raunaq Singh, president of the Company, is confident that the Company will be able to maintain the dividend on the enhanced equity capital. The Company has declared dividend on equity shares at the rate of 12 per cent for the last two years.

FLEXTRAC NODWELL

Tracked Vehicle at Asia 72

ONE of the exhibits in the Canadian pavilion at Asia 72 was sent by Flextrac Nodwell of Calgary, Canada, and featured one of its universally known low-ground pressure tracked vehicles. A low-ground pressure vehicle is capable of negotiating terrain which is impassable to conventional wheeled vehicles. When one considers that the ground pressure of the Flextrac Nodwell 60 (on display) with full payload is approximately three times less than that of a normal-sized man walking, the capability of such a machine to cross swampy terrain can be easily recognised. Flextrac Nodwell vehicles are available in payload classes varying from 1,000 lbs to 60,000 lbs and all have the same low-

ground pressure characteristics and operate equally smoothly in deserts, deep snow, dense vegetation, mud or remote mountain regions. The sale of these vehicles in India is handled exclusively by their sole agents, Escorts Ltd, which renders all after-sales service and stocking of spare parts. Flextrac Nodwell equipment will soon be appearing at the four international airports in India to be employed in the rôle of fire-fighting or crash rescue tenders for use in crash rescue work where accidents occur away from paved surfaces.

INDIA FORGE

Results Disappoint

INDIA Forge and Drop Stampings Ltd has produced disappointing results for the year ended June 1972. The Company has incurred a loss of Rs. 4.82 lakhs, before providing for depreciation. The loss is the same as that incurred in the previous year. The loss has been adjusted against general reserve. Sales for the year amounted to Rs. 145.18 lakhs (against Rs. 152.04 lakhs). Due to the loss in working both the ordinary and preference dividends have been skipped. During the year the Company produced 2,255 tonnes of salable goods,

against 2,894 tonnes in the previous year. Despatches amounted to 2,096 tonnes (against 2,615 tonnes). The directors say that the working of the Company was adversely affected in the second half of the year as a result of reduced demand from the automotive industry in south India, consequent upon prolonged labour strikes in the larger units whose normal offtake accounts for 50 per cent of the Company's annual turnover. The Company's production had to be restricted in order to avoid accumulation of goods. The directors say that the increased capacity of captive units of the bigger customers on one side and competition to secure residual business on the other side resulted in prices falling to uneconomic levels. This was mainly responsible for the loss which the Company has sustained.

Referring to the prospects for the current year, the directors say that there has been considerable improvement so far. Production during the first five months compares favourably with the figures for the corresponding period of last year. The improvement in sales is reported to be about 50 per cent. But the power cut from October 1972 has inhibited the Company's production programme.

COMMODITIES

Maximum Statutory Prices of Sacking Bags Fixed

THE Central Government has fixed the maximum statutory prices of two constructions of sacking bags—B Twills and D.W. Flour—on the basis of the reworked estimates of fair costs of production by the Tariff Commission, subject to the proviso that no allowance will be permitted in respect of the minimum bonus of 4 per cent in the computation of costs. The authorities will, says a Government resolution on the report of the Commission, fix the statutory prices of the above two categories for each month from December 1972 onwards after determining the raw jute cost in the line of the formula suggested by the Commission. The Government's resolution on the report and the report on the fair cost structure of jute goods, laid recently on the table of the Rajya Sabha, says that the prices of carpet-backing cloth and hessian, of which a bulk of the indigenous output is exported, are governed by the normal conditions of supply and demand.

The Government had referred the question of price structure of certain varieties of jute goods to the Commission in July 1969. The Commission submitted its report in April

1971. Subsequently, the Commission, at the instance of the Central Government, reworked the estimates of the cost of conversion of B Twills. A further reworking of cost estimates of all types of jute goods had to be undertaken by the Commission following the changes in the wages structure of jute mill workers. In working out the estimates, the Commission has taken into account, among other things, the raw jute price at Rs. 50 a maund for Assam Bottoms, the element of compulsory bonus at 4 per cent as part of the costs of production and a return on capital of 15 per cent for carpet-backing cloth and 13.5 per cent for other goods. The Commission has also recommend a formula to regulate the batch cost of raw jute. The assessment of the costs of conversion of raw jute into jute goods, says the Government resolution, has been of considerable assistance to the Government. It may be recalled that in terms of an agreement with the industry, the Central Government resorted to the expedient of procuring its requirements of heavy goods direct from mills on a cost plus basis, making an on-account payment for such supplies. The ulti-

mate price structure was subject to determination by the Tariff Commission. The industry supplied 120,000 tonnes of goods between January 1970 and March 1971 and another lot of 161,000 tonnes between November 1971 and May 1972.

Bank Credit to Mills

The Reserve Bank of India has imposed restrictions on commercial bank advances to the jute industry, as indicated by the Jute Commissioner in Calcutta at a Press conference some time ago. The curbs are in the shape of powers of withdrawal from banks under its credit authorisation scheme to grant credit facilities to big jute mills without prior approval of the Reserve Bank beyond the limits in force during the 1970-71 season. Now banks will have to seek prior authorisation from the Bank even if they want to extend a nominal advance in excess of the 1970-71 sanctioned limits of Rs. 1 crore or more for the borrowing mills. The Reserve Bank had relaxed these restrictions in September 1971 and permitted banks to grant increased credit limits to enable mills to hold larger jute stocks during the 1971-72 season. Among major commercial banks, the State Bank, Central Bank of India, Punjab National, Bank of Baroda, United Commercial, Canara Bank, United Bank, Union Bank, Allahabad, First National City Bank, National and Grindlays, Chartered Bank, British Bank of the Middle East and Mercantile Bank had ex-

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base : August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to November 1972. As compared with October, the November index for Food shows a

rise of 3 points, while those for Fuel and Lighting, Clothing and Miscellaneous remain unchanged at 482, 752 and 402 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 2 points during November 1972.

THE BANK THAT MAKES YOU FEEL AT HOME

Most people who think seriously about investment look for safety of capital, higher return and easy encashability.

Units, as you know, offer all these plus tax concession. Units are a good buy all round the year.

UNIT TRUST OF INDIA

dayp 72/438

tended bulk accommodation to the jute industry.

In terms of the latest restrictions, the Reserve Bank has advised commercial banks not to sanction funds to jute mills for purchases of raw jute beyond their consumption needs for eight weeks. The step has been taken on the advice of the Jute Commissioner. Against an estimated fibre production of around 5.7 million bales this season, there is likely to ensue a shortfall of some 750,000 bales. There lingers a particular apprehension of an acute scarcity of selected grade fibre, the prices of which have been showing indications of an unseasonal spurt for quite some time. The Reserve Bank has, however, made it clear that the curbs have been imposed on fibre advances and not in respect of export finance for the industry. It has urged commercial banks to exercise their discretion and extend adequate export credit facilities to the mills. But jute goods exports are unlikely to reach the 1971-72 level of Rs. 286.63 crores. Knowledgeable circles feel that the Reserve Bank seeks to utilise the opportunity to force mills to adopt the usance bills system on letter of credit basis, while procuring advances against fibre purchases. Besides reducing double financial accommodation currently availed of by some mills, the departure from the standing practices will enable commercial banks to draw Reserve Bank assistance under the Bill Rediscounting Scheme.

Ceiling on Stocks

In view of indifferent arrivals and persistent buoyancy in the fibre market, Mr. S. N. Chakravartee, Jute Commissioner, invoked the relevant provisions of the Jute (Licensing and Control) Order, 1961, restricting from 15th December the purchases of raw jute to stocks adequate for consumption by individual mills up to a ceiling of eight weeks. The Commissioner also advised the Reserve Bank of India to issue necessary instructions to the commercial banks to limit further advances against jute stocks of mills to the same ceiling. He also enjoined mills with less than eight weeks' consumption requirements of fibre to continue fresh buying in the raw jute market till their holdings reached the ceiling and others—some 19 mills—holding surplus stocks to commence their fresh purchases when their holdings dropped below the limit. Explaining the

reasons behind the latest move at a Press conference in Calcutta last week, Mr. Chakravartee, who also happens to be the managing director of the Jute Corporation of India, said that the measure had to be taken to arrest a hectic scramble for fibre among mills in what looked like a predominantly sellers' market in a short crop season. An analysis of fibre holdings of the 62 mills in the industry, said Mr. Chakravartee, revealed that 19 of them had been holding heavy stocks which might enable them to continue uninterrupted production well up to March next at the current levels, while others had been holding inventories adequate for running their units for various periods extending to eight weeks and even less.

The Season's Output

Although not quite sure about the precise size of the crop, the Jute Commissioner estimated this season's output around 5.7 million bales, against a normal crop of some 7 million bales. Adding a carryover of 1.1 million bales and imports of 227,000 bales, the total quantum of fibre available for the industry during the season was some 7.07 million bales. Against this, current estimates of seasonal consumption by mills of 7.1 million bales, exports

to east European countries of some 50,000 bales and the rural off-take of about 200,000 bales would absorb 7.35 million bales, leaving a seasonal deficit of some 280,000 bales. Since the industry had to build an adequate carry-forward for continuing production uninterruptedly during the first quarter of the next season, Mr. Chakravartee felt that "the total shortfall cannot be more than 750,000 bales." He did not believe that the shortage of supplies was serious enough to cause any worry, adding that forces had been operating to corner the stocks. He was sure that the enforcement of the latest restrictions would help in regulating the market.

The Jute Commissioner said that despite the talk of raw jute shortage and the gathering competition from Bangladesh and synthetics, India was sure to earn Rs. 250 crores in foreign exchange this season against exports of jute products. He ascribed the peak earnings of Rs. 280 crores last season to "very special circumstances." As for the performance of the Jute Corporation of India, he said that starting its operations "under many limitations" in September, the Corporation had so far purchased 76,000 bales of fibre. He hoped that this year's experience would help the J.C.I. to function

IISCO STANTON PIPE & FOUNDRY COMPANY LIMITED.

The Board of Directors of IISCO Stanton Pipe and Foundry Co. Ltd. have been reconstituted as under at the meeting of Directors held at the registered office of the Company of 24th November, 1972. Mr. Arabinda Ray was appointed Chairman of the Board of Directors.

Mr. Arabinda Ray — Custodian—The Indian Iron & Steel Co. Ltd.

Mr. K. V. Ramanathan—Jt. Secretary, Department of Steel.

Mr. D. K. Chakraborty—General Manager, Foundry Forge Plant—Heavy Engineering Corporation.

Mr. C. H. Wilson —General Manager, Stanton & Stavelly, U.K.

Mr. S. L. Dass —Chairman—Stewarts & Lloyds of India Ltd.

Mr. C. G. Mackie —Director—British Steel Corporation.

Alternate Director

Mr. W. Burt —Managing Director—Stewarts & Lloyds of India Ltd.

more efficiently in future to mop up a sizable share of the seasonal crop. Besides, the managing director said, the Corporation had plans to acquire "sick" jute mills, set up new and modern ones and also to enter the export market.

Twin Problems

India, Bangladesh and Thailand should put their heads together to find an enduring solution to the serious threat posed to jute products by synthetics in the U.S.A., its biggest market, suggested Mr. L. N. Mishra, Central Minister for Foreign Trade in the Lok Sabha last week. Replying to a member's question, he said that the industry had been facing the twin problems of fibre shortage and keen competition from synthetics in the overseas markets. He ruled out any major threat from Bangladesh or Thailand. As for exports of raw jute and jute products, he reiterated that a joint Indo-Bangladesh Study Group had been assigned the task of evolving a common strategy for the two major producing countries. Asked about the progress in the implementation of the Central Government's standing proposal of setting up new and modern jute mills in the major jute producing States other than West Bengal, Mr. Mishra indicated that the Governments of Andhra Pradesh and Tripura had submitted proposals for setting up new and modern jute mills in their States.

Brokers' Difficulties

Central and State Government imposts, combined with increases in the costs of conversion, had seriously affected the competitive capacity of the industry, observed Mr. K. K. Dhandhanja in Calcutta on Saturday. Addressing the annual meeting of the Jute Brokers' Association as the chairman, Mr. Dhandhanja said that the high cost had an adverse repercussion on India's exports. Besides, the industry had also been experiencing serious competition from synthetic products. The chairman emphasised the need for stepping up the output of raw jute in the country both by extending the acreage under the fibre and also by raising the unit yield. As for the jute broking trade, he complained that lean credit facilities from commercial banks constrained the optimum operation of units. He appealed to the authorities to remove these hurdles for ensuring maximum productive employment of the brokers.

Fed by the stimulus of a keen export demand, jute cultivation has been expanding fast in Burma. The quality of fibre has been very satisfactory. Starting from a mere 50,000 acres in 1962-63, the area under fibre has expanded sharply to 220,000 acres in 1971-72, ensuring an yield of 60,000 tonnes of selected grade fibre. This season the acreage has raising expanded to 330,000 acres, raising crop expectations to some 80,000 tonnes. The credit for the steady expansion has been attributed to the Burmese Agricultural Corporation which has been urging farmers to grow more jute.

Divergent Trends in Gunnies

After opening on a steady note on brisk short and shipper-covering against ready and near positions, the Calcutta gunny market developed divergent trends during the past week. The initial firmness was also reinforced by the report that the Government of India was likely to requisition some 12,000 tonnes of B Twills for January-March positions accentuating the shortage in the floating stocks of the construction. But since mid-week there was a reversal of the trend following hectic unloading by bulls on the report that the Central Government had accepted the reworked estimates of the Tariff Commission on the prices of jute goods, subject to the proviso that no allowance would be made in respect of the 4 per cent bonus admitted by the Commission in computing the cost structure. The Government, it was stated, had decided on fixing up statutory ceiling prices in respect of the two types of heavy goods, B Twills and D.W. flour bags, absorbed in bulk by it for official and semi-official agencies. The prospects of large-scale foodgrains imports failed to prop up the drooping sentiment. Industry circles were not at all happy at the Government decision on the statutory prices. Fibre holdings of mills were also inadequate and in spite of the theoretical estimates of adequate fibre supplies during the season, industry circles had already started feeling the positive problem of balancing their stocks with right grades and quantum of quality jute. Hessian hovered around the dips for about two days and turned firm, repairing the mid-week losses on talks of a substantial Syrian tender for an extended delivery schedule. The shortage in selected grade fibre supplies induced mills

to turn cautious. Fresh enquiries and business from overseas were few and far between and were ascribed, in part, to the Christmas recess. In the hedge market, the trend was mixed, following the pattern of trading in the spot goods market. The technical position appeared to be more or less well balanced towards the close after moderate fluctuation. Turnover was smaller for this time of the season. The closing undertone was basically firm.

Small Turnover in Fibre

The raw jute market suffered a moderate reaction, easing by some Rs. 2.50 a maund over the preceding weekend level to Rs. 64.50 f.o.r. Calcutta ready, basis Assam Bottoms, last week on renewed offerings of lower grade fibre by weaker holders in an unwilling market. Mills and mill agents were conspicuous by their absence, while intermediaries turned cautious against increasing their holdings on the apprehension that the authorities might impose further curbs on the fibre trade. In view of the much higher costs of imported fibre, and the prospect that the Jute Corporation was likely to add reasonable profits thereon, Clive Row was sure that internal market prices of fibre would not fall much from the prevalent levels. Turnover was small and the closing undertone was cautious.

THE SCINDIA STEAM NAVIGATION CO., LTD.

SPEECH OF SHRI KRISHNARAJ M. D. THACKERSEY

Summary of Speech of Shri Krishnaraj M. D. Thackersey, chairman, The Scindia Steam Navigation Company Limited, made at the 53rd Annual General Meeting of the Shareholders on Wednesday, the 20th December, 1972 at Atkar Hall, Bombay-1.

I am glad to inform you that the company's earnings during the year as considerably improved as compared to last year. This has resulted in higher profits for the year by Rs. 1.90 crores. Due to the higher profits the board of Directors have, after due consideration of all aspects, recommended a cash bonus of 25 Paise per share over and above the dividend of Rs. 1.25 per share, both subject to tax. The Income-tax Officer has determined the percentage of dividend exempt under Section 80K at 33.88%.

After due consideration of the desire of the shareholders, the Board of Directors have now decided, subject to your concurrence and Government approval, to issue bonus shares in the ratio of one bonus share for five shares held by the shareholders.

The substantial increase in the freight earnings has to a large extent been offset by the increase in the cost of operation notably in stevedoring and crew charges. During the year stevedoring cost has increased from 10 to 20% in USA and U.K. trades and the crew cost has also shown considerable increase of about 40% as compared to last year. Further, strikes and delays and delays at various ports have now become a factor to be reckoned with in shipping operations.

The total number of ships in our fleet at present is 45 including one bulk carrier viz. m.v. "Narottam Morarjee". Four new ships have been delivered to the Company during the year and two ships after the close of the year. Your Company has continued diversification of its trade and is accordingly endeavouring to build a fleet of bulk carriers. At present we have on order two bulk carriers, one each from Emden and Lithgow, and one OBO from Sweden.

Indian Shipping presently carries only about 20% of our Overseas trade and our country has to depend upon foreign shipping to carry the balance of our trade, resulting in an outflow

of foreign exchange to the tune of 180 crores of rupees. There is dire need to develop our shipping as fast as possible.

Foreign Exchange

Shipping is an instrument of export promotion, earner and saver of foreign exchange, contributing substantially to the foreign exchange earnings of the country. Shipping deserves to be treated as an industry of vital national importance.

We are half-way through the Fourth Five Year Plan and acquisition of tonnage has not progressed fast enough to reach the target of 4 million GRT by March, 1974. It is reassuring to hear that the Government of India has been doing its best to make up the shortfall and to fix a bold overall target of 10 million GRT for the Fifth Five Year Plan. Shipowners will continue to extend full co-operation in realising the target.

All maritime countries of the world have been subsidising their shipbuilding and shipping industry by various concessions like incentive allowance, high rate of depreciation, tax free holiday, low rate of interest on shipbuilding, investment grants and repairs subsidy. In India the shipping industry has a valuable concession in the form of Development Rebate which has helped the industry to conserve and plough back their resources for the purpose of acquiring ships urgently required to carry our trade. Unfortunately, the Government has announced that this concession will be withdrawn from May, 1974. If this decision is implemented, it will be extremely difficult for shipping companies to conserve their resources for purchase of more ships and thus retard the growth of Indian Shipping. I sincerely hope the Government even at this late stage will reconsider this decision.

Although the Government had announced sometime back that they would release 70% of the purchase price of the ships in foreign exchange for down payment, they have curtailed this free foreign exchange release to 10%. I feel that in order to encourage speedy development of Indian Shipping, the Government should take a firm decision and release 70% of the price of the ship in foreign exchange for down payment.

Inordinate Delay

The Monopolies and Restrictive Trade Practices Act is also being applied to the shipping industry. As and when applications for purchase/construction of ships are made by shipping companies they have to get the clearance from the Company Law Board under the Monopolies Act. This takes considerable time and at times a proposal is lost due to inordinate delay. It is suggested that the shipping companies should be exempt from the application of the Monopolies Act and if it is not possible to do so at least shipping companies should be allowed to increase their tonnage up to a reasonable level without making any application to the Company Law Board under the Monopolies Act.

I must draw your attention to a new condition that Government now imposes on any loan granted by the Shipping Development Fund Committee requiring the shipping companies to agree to a part of the loan being converted into equity capital at the discretion of the Government. I have found it difficult to understand why Government has considered it necessary to impose this condition when they possess all powers necessary in order to control and regulate the shipping industry. Thus for instance, Government financial institutions hold a substantial number of shares of our Company; we have to obtain the approval of the Government every time we want to purchase a new or sell an old ship; their approval is necessary to the routes on which our ships may ply; and finally Government nominates two representatives on our Board of Directors.

I take this opportunity to thank the Minister for Shipping and Transport, Shri Raj Bahadur, for his help to the Indian Shipping. I also take this opportunity to convey our special thanks to the Deputy Minister for Shipping and Transport and officials of the Shipping Development Fund Committee and the various departments of the Government of India for their co-operation and assistance. I also thank our patrons shippers and other well-wishers of the Company and the Management, officers, and staff and agents at various ports.

N.B. The above does not purport to be the proceedings of the Annual General Meeting.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividends. Months against names of companies indicate approximate time of payment of dividends. T means that dividend tax is deducted at source.

[illegible]

CAPITAL, 28th DECEMBER, 1972

CAPITAL

(Founded in 1888: Published every Thursday)

CAPITAL is India's most widely-read weekly newspaper dealing with economics, industry and public affairs. It has the mature experience of more than 80 years, and is the oldest journal of its kind in the country. Each week, it brings authoritative and comprehensive coverage of the main problem and events affecting the progress of the economy and the growth of industry. It separates the important from the unimportant; it presents simply, clearly and reliably what all informed observers of the economic scene ought to know.

Readers of CAPITAL are mainly people holding positions of vital importance in Government, business, industry and academic institutions. Many of them are intimately concerned with the framing of the country's economic policies. Many direct and control industrial, banking and commercial institutions. Together they represent a fund of economic opinion and buying power that no advertiser can afford to ignore.

Rates of subscription payable in advance.

	Free delivery Radius	With Inland Postage	Outside India
Yearly	Rs. 60	Rs. 68	Rs. 94
Half-yearly	Rs. 32	Rs. 36	Rs. 49

Established 88 years ago, The Titaghur Paper Mills Company Limited are pioneers amongst India's manufacturers of papers and Boards. TPM have maintained the lead through constant research and introducing new manufacturing processes. TPM are presently making special papers of different varieties thus substituting certain imported grades. TPM know more about the problems of the market and therefore know more about the demands for specialised papers and boards—and how to meet them.
