Retreat on Radicalism?

WHAT emerges out of the discussion that Central Congress leaders had in New Delhi last week on the land ceilings issue is the belated realisation among them that they had perhaps gone too far in the race for radicalism and must now look to the Chief Ministers to help them out of an extremely difficult and awkward situation. Otherwise, there seems to be hardly any justification for calling the Chief Ministers once again to the capital for considering the report of the nine-man panel on land ceilings. The panel was set up by the conference of Congress leaders in May and its report practically endorses the recommendations of the Central Land Reforms Committee on ceilings for different categories of land. Where the panel has gone further than the Committee is in recommending that lands irrigated by private tubewells and pumpsets should also be subjected to the same ceilings law, although with some marginal weightage.

If the discussion in the Congress Working Committee is any indication, it is evident that several Chief Ministers and Central leaders are opposed to even proposals that were once presumed to enjoy their support. For instance, the Haryana Chief Minister, Mr. Bansi Lal, is believed to have expressed himself strongly against the recommendation of the panel that the laws on ceilings should be given retrospective effect from 26th September, 1970—the date on which a conference of Chief Ministers first decided to refer the ceilings issue to the Central Land Reforms Committee. In fact, the C.L.R.C. had also favoured giving retrospective effect to its recommendations from this date and no Chief Minister had earlier opposed this suggestion publicly. That was evidently because few had the courage of conviction to speak out on an issue that had assumed an emotional

overtone in the ruling Party. With radical ideas taking a formal shape, many now feel that they must stem the tide before they are swept off. There is, undoubtedly, a lot of logic in Mr. Bansi Lal's contention that any law should have force only from the date of its enactment. But why was the Haryana Chief Minister fighting shy of giving expression to his views earlier? Was it because he feared he would be branded a "reactionary"? Appearing to make some concession to the radical elements in the Party, the Madhya Pradesh Chief Minister, Mr. P. C. Sethi, is stated to have suggested that the ceilings laws should be given effect from 18th January this year when the Congress election manifesto was released. According to Press reports, this suggestion was favoured by several others. Obviously, whether one goes by the suggestion of Mr. Bansi Lal or Mr. Sethi, the results would be more or less the same—that is, all transfers that have taken place in the last two years will be validated and will thus escape the penal provisions of the new laws.

The intentions were made abundantly clear when the U.P. Chief Minister, Mr. Kamalapati Tripathi, made a fervent plea for validating all "genuine land transfers". He argued that many farmers might have sold some chunks of their land holdings due to financial distress and that such transfers should not be taken into consideration in determining the ceiling. Certainly, Mr. Tripathi has a point but why did he not make it all these months? If the Chief Ministers had come out with their reservations earlier, instead of keeping hypocritical silence, they would have not only been honest to themselves but also to the electorates they represented. It is perhaps because of this large volume of opinion against some of the recommendations of the panel that the Working Com-

HERE IS A BOUQUET FOR ENTREPRENEURS

Special concessions offered by Government for starting or expanding industry in specified backward districts and areas:

mittee decided to call all the other Chief Ministers of Congress-ruled States for a discussion before taking a final decision. This will mean that the two non-Congress Chief Ministers of Tamil Nadu and Kerala will have no say in the matter and the Centre may take a decision on the basis of the consensus among Congress Chief Ministers alone. Tamil Nadu is already sore that its views are not taken into consideration by the Centre in taking decisions on subjects of interest to the States and what is proposed to be done will only add weight to that complaint.

The discussion at the Working Committee last week also provided an insight into the thinking among Central leaders, who had so far preferred to keep mum on this vital issue. It is reported that the Central Finance Minister, Mr. Y. B. Chavan, sought to link the ceilings issue with the question of imposing similar curbs on urban income and pleaded for caution in taking a decision on treating the family as a single unit for purposes of determining the land ceiling. Mr. Chavan is certainly right in pointing out that when the husband and wife in urban areas are not clubbed together for income-tax purposes, they should not be treated as a single unit, along with their children, minor or major, for determining the amount of land they can hold. But where was the wisdom of Mr. Chavan when this question was being discussed earlier at various forums, including Congress Party meetings? In raising the issue now, the Finance Minister certainly gives the impression of finding devices by which he could stall the move for a radical lowering of the land ceilings. It is a pity that prominent people in power should hesitate to speak out and give expression to views that they hold to be right and good for the country.

It is true that if the recommendations of the panel on definition of the family and enforcement of the ceilings laws with retrospective effect are not accepted, there would be considerable watering down of the reform and the number of people that would benefit, as a result, might be substantially lower. According to Mr. K. D. Malaviya, the panel's recommendation for fixing the ceiling at 27 acres for lands with a single crop would mean that there would be nothing left to distribute as surplus in a State like U.P. It is not

known whether Mr. Malaviya speaks on the basis of facts or on his own predilections but one is amused at his assumption that the primary objective of the new ceilings laws should be to rob Peter to pay Paul. If, in the view of the panel, whose radical composition cannot be questioned even by Mr. Malaviya, 27 acres should be the minimum holding in areas where a single crop is cultivated, then the question of distribution of land to others arises only if surpluses are available. It cannot be that for the sake of providing land to the landless and backward classes, the ceiling is further lowered, without any consideration whatsoever to the economic size of a holding in different areas.

On the question of weightage to privately-irrigated lands also, there appears to have been differences of opinion among members of the Congress Working Committee. The Chief Minister of Madhya Pradesh was of the view that the ratio of 1 to 1.15 proposed by the panel for fixing the ceiling of

lands, irrigated by Government and private sources, should be raised from 1 to 1.25. He told the Committee that the total area under irrigation in his State was 7.5 per cent and it was proposed to raise it to 25 per cent in the next two years. He, therefore, wanted a higher weightage to be given to land irrigated by private sources so as to give an incentive to farmers to install more pumpsets. According to the Central Ministry of Agriculture, over Rs. 2,000 crores had been invested by farmers on tubewells and pumpsets in the last 20 years and the programme for extending the area under private irrigation in the Fourth Plan envisages an equally large investment. It is for these reasons that the Agriculture Ministry soft-pedalled on the question of including land with private irrigation in the ceilings law but when it was confronted with stiff opposition from radical elements, it caved in. The entire debate on the ceilings issue thus shows an utter lack of honesty and regard for high principles of public policy.

The Summit : The Next Move

THE signing of the Simla agreement is perhaps a fit occasion even for the prosaic political observers in both countries to allow a little rein to the imagination and take a hopeful peep into the future. This is so because the agreement is nothing but an act of faith. It signifies the determination of the leaders of both countries to end the era of hostility and usher in an era of peace. The few "concessions" that each side has given to the other are no more than gestures of goodwill. The essence of the agreement lies in the future behaviour of both countries and it is by their future acts that the agreement will have to be judged. If the two sides keep the faith they have professed in the Simla accord, the possibilities are great indeed not merely in political and economic terms but also in the sphere of human relations. Poets, artists and writers with all their fertile imagination cannot exhaust the human benefits that can flow in the lives of the nearly 700 million people of the sub-continent, should the latent potentialities of the Simla accord materialise. If, on the other hand, the agreement fails for one reason or the other, or is deliberately subverted for

petty political gains, the human tragedy that could follow would be equally difficult to record.

Simla is far more historic than Tashkent. It opens up vistas hitherto undreamt of. Tashkent was conceived to resolve a stalemate resulting from an indecisive war. It was held virtually under duress, in a third country and with the help of mediators who acted as referees. Its object was no more than to turn an indeterminable war into an uneasy peace. Few indeed expected that peace to last. The Pakistani regime then was a military dictatorship and a colonial power (ruling what is now Bangladesh under the false bogey of a "threat from India"). Both these compulsions made the perpetuation of belligerency towards India inevitable. Pakistan then lived under the illusion of its military invincibility in relation to India. It believed also that at least two of the Big Powers, the U.S.A. and China, would fight its battles with India. All these illusions have been shattered and what is now left is a chastened and truncated Pakistan living under compulsions that are very different from those which

during the last 25 years brought it into a state of permanent confrontation with India. As a result of all these traumatic changes, Pakistan has undergone a psychological revulsion against military rule. For the first time, there is a popularly elected Government which promises to bring prosperity through peace, democracy and socialism. The feudal character of Pakistani society is to be changed.

It would have been foolish on India's part not to recognise the new situation in Pakistan. With half the country gone for ever, even physically it is no longer the same Pakistan which threatened to "conquer" Delhi nor the same Mr. Bhutto who talked of a thousand years' war with India. To refuse to come to an understanding with Pakistan for fear of a future attack from it would be absurd, if not also cowardly. After the crushing defeat it received from India leading to its dismemberment and the capture of about 90,000 of its soldiers who are still in Indian hands, its potential for mischief is small. It would have been equally vain in this age of Big Power politics to expect Mr. Bhutto to feel so demoralised and humiliated as to come to Simla crawling on his knees and fall at Mrs. Gandhi's feet. For India to take such a high and mighty attitude would amount to throwing Pakistan back into the lap of the Big Powers and perpetuate tension on the sub-continent.

All this leads to but one conclusion. India and Pakistan must either choose an honourable peace or an indefinite war. Mrs. Gandhi and Mr. Bhutto have both rightly interpreted the Simla agreement as "a good beginning". They are obviously conscious that both countries have a long way to go. Their first objective is one of turning the wheels of history of the last 25 years. But their long-term objective has to be to reverse the historic trends of the last 700 years during which Hindus and Muslims on the sub-continent have lived in water-tight compartments of their own and, when not actually hostile, have looked at each other with extreme mistrust and suspicion. Such attitudes are totally out of place in the modern world but it needs leaders of courage and vision in both countries to see the need of a new perspective and try to enforce it. Such a gigantic change in human relations cannot be accomplished overnight. It has to be wrought step by step. The initial

steps have necessarily to be small but firm. The Simla agreement is thus a necessary first step and only the future will tell how far Mrs. Gandhi and Mr. Bhutto are able to go along together on the road to peace.

With all its historic value for the sub-continent what happened in Simla cannot claim the virtue of uniqueness; it merely conforms to a well-established international pattern. As the world shrinks with the virtual disappearance of the distances of time and space, the nations of the world are finding it hard to sustain their old feuds with their neighbours. National boundaries are becoming more and more brittle. Nationalism in the classical sense is fighting a losing battle against the sweeping forces of internationalism. What seemed to be impossible in international relations till only a few years ago is fast coming into the realm of probability. The recent summits in Peking and Moscow show how fast mankind is moving from the postwar equations. The emergence of a united Europe as a coun-

ter-poise to the two Big Powers between whom it is hemmed in, now seems a certainty. The countries of south-east Asia are fast submerging their petty squabbles within the common identity of A.S.E.A.N. But the crowning achievement of internationalism in recent years is perhaps the latest announcement from the two Koreas which have declared their intention to reunite without external help.

The peoples of India and Pakistan, together with those of Bangladesh, are chips of the same block. If only they could reunite into some sort of a common market—or even a confederation—they could pull their full weight in the comity of nations, do away with wasteful defence expenditure and speed up the gigantic task of giving their famished peoples two square meals a day. If, on the other hand, they continued to measure their relations in terms of square miles of territory and their respective military prowess, they would be returning to the slavery from which they emerged only 25 years ago.

State Trading : Where to Stop ?

THERE are times in the life of a nation when an idea spreads like forest fire and anybody who is somebody in policy-making swears allegiance to it—some with conviction, some reluctantly because of circumstances and some others purely from the opportunistic point of view. In the past few years, one idea which has found many admirers is State trading. It is the magic wand which can cure all the ills of the earlier trading system. When the State takes over the trade in a particular item, profiteering is supposed to disappear and the commodity concerned is supposed to be made available to its users at reasonable prices and in adequate quantities. There can be no other objectives for State entry into trade nor can any rational man oppose these broad objectives. But the main question is: how often are these objectives realised?

One of the corner-stones of policy of the present Government is to achieve a commanding height for the State in the import and export trade of the country. There is also growing evidence that the State will also like to take over the internal trade in selected commodities. The Cot-

ton Corporation of India, apart from taking over imports, is eventually expected to buy and trade in indigenous cotton too. The State Trading Corporation is already active in the domestic rubber market, when necessary, to ensure a minimum support price to small growers. At the recent meeting of the Consultative Committee attached to the Central Foreign Trade Ministry, Mr. L. N. Mishra, Minister-in-charge, said that the Jute Corporation of India would buy at least 900,000 bales of raw jute in the coming season. He added that private trade in raw jute would be ended in about two years. All this is being done obviously to help small growers of cotton, jute and rubber.

It was also announced at this meeting that the Government had decided to take over the import of dry fruits and canalise the export of coir products. The high profit in the dry fruit trade and the high level of prices at which dry fruits are sold in India were the reasons which had forced the Government's hands to take over this trade. If necessary, a separate Fruit Corporation of India will be formed to look after imports

of dry fruits. At the time of writing, it is not known whether the proposed Fruit Corporation will concern itself only with imports, leaving internal sales to the existing trade channels. If this is to be so, it remains to be seen whether the public at large will get dry fruits at prices cheaper than are existing now. The Government cannot possibly put out of business the thousands of shopkeepers all over the country. This means they will continue to be in this trade. If past experience is any guide, when the Government canalises the import of an item, it does not show any aversion to appropriating to itself the huge profits which the private trade was making before. Therefore, it is still an open question whether the common man will benefit from the State's entry into the dry fruit trade.

As for coir exports, it was stated that the State Trading Corporation has already been asked to prepare itself for the take-over "within the next few weeks." The take-over, it was explained, was intended to improve the competitive position of coir products in world markets, put the industry on a sound and healthy footing and help the small-scale manufacturers of coir products. While Mr. Mishra was announcing the canalisation of coir exports, the Deputy Minister of Foreign Trade, Mr. A. C. George, was telling the Members of Parliament that coir exports had reached an all-time high of Rs. 15 crores in 1971-72. Even so, there obviously is still room to improve the "competitive position of coir products in world markets" and who else can bring this about better than a subsidiary of the S.T.C.?

In an egalitarian society which India is trying to build up, it cannot be denied that State intervention is necessary at times to protect the interests of the weaker sections of society. For instance, assuring a minimum and remunerative price for growers of cash crops is certainly very necessary and State trading in these items has, therefore, to be welcomed from this point of view. But what often happens is that the small grower does not reap the benefit of a remunerative price because the agencies which a State corporation uses to make purchases take a share of the price. The State corporation cannot reach every small grower nor is the latter in a position to approach the State agency everywhere. Similarly, when

it comes to selling an item whose imports are canalised, the State trading channels have not shown any particular inclination to sell those products at prices cheaper than what private trade had been charging before.

In the export field also, while State monopoly in items like iron ore is understandable, exclusive State participation cannot be a panacea for the other items. For instance, the Government is also committed to a take-over of textile exports. Whether the State's entry in the export of these items is necessary is a debatable question. While Government intervention is necessary at

The Sugar Muddle

IT is a pity that whenever New Delhi decides to speak to the sugar industry, it chooses a language of threats. The burden almost always has been that unless the industry does this or that, the Government would come banging down on it and teach it how to behave. This, to be sure, is not the healthiest way to treat an industry as vital as sugar. And it is rather difficult to see what the industry has done to arouse such governmental ire and indignation. Leaving aside a few black sheep who are always there in any industry or trade, sugar manufacturers have, by and large, co-operated with the Government and have exercised considerable self-discipline. But an untenable combination of the Government's wrong policy and non-policy has created a situation which even a most well-behaved industry would find difficult to cope with. Thus, after years of planning, the Government is yet to come out with a long-term policy for, say, even a period of three years or so. The industry has consequently been driven from pillar to post and when the inevitable has happened—sugar prices have risen—the entire blame has been squarely put on millowners. This has been the pattern all through, and this continues to be the pattern even today.

The latest instance of an exercise of this nature has been provided by the speech of the Central Food Minister, Mr. Fakhruddin Ali Ahmed, at the recent annual general meeting of the Indian Sugar Mills Association. Mr. Ahmed has warned the indus-

tries not to raise the free sale sugar price following the reimposition of statutory partial decontrol. The consumer, who expects the price of an essential item like sugar to be reasonably cheap, would greatly welcome the ministerial statement. But the price of sugar—and for that matter of any commodity—cannot be fixed independently of certain basic constraints like supply and demand and cost of production. Possibly, the sugar industry would be the happiest if it could produce enough sugar and sell more and more of it cheaply. After all, no industry likes to have a running feud with either the Government or the consumer, and would be happier if it can raise a reasonable degree of profit through a small margin on a larger turnover. The fact is that with the total production expected barely to touch 3.2 million tonnes in the current year (and with 60 per cent of it being handed over to the Government for distribution under voluntary or legal arrangements), the free sugar supply is bound to fall short of the demand, and even under the most ideal conditions, it is difficult to see how prices can be kept under check.

Additionally, the new levy prices, fixed on a regionwise basis, are such that producers in many States cannot possibly break even with the returns they will get on that part of production which is being taken away by the Government and will be induced to make up the loss through the sale of the residual amount in the free market. The point has been stressed with an unexpected sting by

none other than a Minister of the Maharashtra Government who has described the new policy as "unscientific". The point that Mr. Y. J. Mohite, State Co-operation Minister, has tried to emphasise is that the policy virtually seeks to penalise the States which are producing more sugar because they are more efficient—and this is true.

It is high time, therefore, that New Delhi realised that the threats of nationalisation and of stricter control, which it had hurled at random at the sugar industry, could not after all override the far stronger economic compulsions. What is needed is a long-term rational policy, and Mr. Bansi Dhar, president of the I.S.M.A., has tried precisely to spell out in his speech the essential ingredients it must have. (A fuller version of the speech appeared in last week's issue of *Capital*.) The point he has stressed is that such a policy must embrace all the three sweetening agents sugar, *gur* and *khandsari*. Any policy that deals only with sugar is bound to fail in view of the large diversion of sugarcane to the production of *gur* and *khandsari*. Besides the difficulties it causes to sugar production, such diversion amounts to a large

national wastage as the rate of extraction of available sugar in the case of *gur* and *khandsari* is only about 50 per cent, against well over 90 per cent in a vacuum pan sugar factory. Mr. Dhar has also rightly stressed the importance of building up a buffer stock, of regulating monthly releases in an imaginative way, and of avoiding early and late crushing.

The views expressed by Mr. Dhar are nothing if not sensible, but it would only be fortuitous if they make any impact on New Delhi's thinking on a long-term sugar policy which is supposed to be on the anvil. Whatever lies ahead of the industry, its problems will never be over till its production capacity has been raised. New Delhi has expressed its disapproval of the slow pace of implementation of the licences issued so far. Admittedly, the gap between the licensed and the installed capacity is rather wide at the moment, but with the Government brandishing all sorts of threats, it is not surprising that licensees have tended to develop cold feet. And the situation is unlikely to improve till the future of the industry has been clearly spelt out and the factors that have constrained the implementation of licences have been removed.

Blackmail and Black Money

IT is difficult to agree with the recommendation of the Direct Taxes Enquiry Committee to continue the system of informers in order to check tax evasion. The committee has pointed out that informers constitute "an important link in the intelligence and investigation chain". It says that the system of purchasing information and giving rewards to informers is generally resorted to by all departments and agencies dealing with intelligence work and that the Central Board of Direct Taxes has also been following this practice for some time now. But the committee has not argued convincingly the case for continuing the system. It admits that criticism has been voiced by industrial and commercial organisations against the practice of giving monetary reward on the ground that it tends to encourage blackmailing. It agrees that the system is capable of being misused by blackmailers and that the Income-tax Department is also frequently pestered by informers in possession of no more than

"vague, exaggerated and even cooked-up information". Nevertheless, the committee says that the information supplied by informers has led to the successful detection of concealment in quite a number of cases.

It has not, however, been revealed whether the amounts involved in such cases are really substantial and to what extent the big tax evaders have been caught. The committee argues that in view of the prevailing large-scale tax evasion, it would not be desirable to end the practice of giving monetary inducements. But since it has made a series of other recommendations for eliminating tax evasion like a drastic reduction in the maximum marginal rate of income-tax, the elimination of unnecessary controls, tightening up of tax administration, and an effective check on donations to political parties, is it really necessary to continue the system of tax informers? If these and other recommendations of the committee are strictly enforced,

tax evasion is bound to be reduced substantially without the need to encourage the system of informers.

The committee has made a number of suggestions for strengthening the intelligence wing of the Income-tax Department. Although the wing came into existence only five years ago, it has already many achievements to its credit. Between 1966 and 1969, its four units in Calcutta, Bombay, Madras and Delhi reported 826 cases. These included 150 cases involving concealed income of about Rs. 42 crores and the tax sought to be evaded in each of these cases was in excess of Rs. 10 lakhs. The searches organised by the wing are said to have led to a breakthrough in rackets involving inter-State ramifications. The committee has proposed a reorganisation of the intelligence wing by recruiting competent people who will act as specialists to guide investigation in important businesses and industries like iron and steel, engineering, mines, minerals, textiles, banks, paper, cement, sugar, chemicals and pharmaceuticals, speculation, and import and export trade agencies. These officers are expected to have a thorough knowledge of the working processes, stages of operation, proportions of yields, wastages, by-products, major technical, commercial and administrative difficulties, the peculiar accounting methods pertaining to particular businesses and the special tax dodging devices prevailing therein. If this proposal is effectively carried out, where is the need to continue the system of informers?

The committee has proposed that the provisions of Section 182 of the Indian Penal Code may be invoked in flagrant cases of informers furnishing false information. It has also suggested that the existing rewards should be made more flexible. For instance, there should be no fixed percentage for the payment of rewards. At present the rewards are payable up to 10 per cent of the tax revealed as a result of the information furnished, and interim rewards are also given, pending the disposal of cases in appeal. The committee has recommended that the rules may stipulate that if the information furnished by the informer is correct, and leads to additional tax collection, or is otherwise useful in checking tax evasion, the Commissioner of Income-tax and the Central Board of Direct Taxes may, at their discretion, pay rewards up to Rs. 5,000

and Rs. 25,000, respectively. It has also been suggested that the rewards given to informers should not be liable to tax so that this would not only continue the inducement available to them but also preserve the secrecy of information and anonymity of informers.

If tax evasion is an evil—as undoubtedly it is—it should surely be the patriotic and sacred duty of all honest citizens to expose and eliminate it without expecting any monetary reward. If, however, the Government feels that those who furnish information should be rewarded, it can be done in other ways than by giving them money. A word of praise from the Central Finance Minister, a certificate, or a national award should suffice. This task should be looked up as a kind of service to the nation and not as a money-making profession for some people. The Direct Taxes Committee says that tax evasion has become endemic and that it manifests itself even in quarters where it is least expected. It observes significantly: "In recent years the extent of black money and

tax evasion has assumed such dimensions that no section of the community seems to be immune from their virulent grip. Even an enlightened class like the members of the legal profession does not seem to be free from this malady". The committee quotes the opinion of Mr. M. C. Setalvad who says in his autobiography: "Standards of professional conduct have woefully fallen and tax evasion is freely practised by prominent seniors".

In view of the widespread prevalence of black money, can informers really prove effective in checking tax evasion? On the other hand, there is every possibility of unscrupulous people freely resorting to blackmail as a regular source of earning their livelihood. Informers are obviously motivated not by their anxiety to curb the anti-social practice of tax evasion but solely by the prospect of monetary reward. It seems strange that the Direct Taxes Enquiry Committee should not only recommend the continuance of the system of informers but also suggest that their rewards should be exempt from taxation!

lems of technical, administrative and financial character.

A high-powered body in this context would be of great help. Such high level bodies have been set up in many countries of the world, including the United States, the U.K., Canada and Australia in the recent past. The high powered body will deal with a number of issues including the examination of problems connected with the conservation, control, utilisation and development of water resources. The Central Ministry of Power, which has strongly advocated the high-powered body, also expects it to lay down long-range plans for water resources development as compatible with national plans for overall economic and social development as well as to conduct a periodical review of such plans in view of the changing conditions. The consultative committee of members of Parliament attached to the Central Irrigation Ministry has endorsed the plan for such a high-powered body and the Government would, therefore, be well advised to go ahead with this proposal so that it is constituted as early as possible.

CURRENT COMMENT

WATER RESOURCES

High-powered Body Needed

The recent conference in Srinagar of State Ministers of Power and Electricity has focussed attention on the need to formulate a comprehensive national water resources policy. Dr. K. L. Rao, Central Minister for Irrigation and Power, rightly stressed the need to amend the Constitution to enable the Central Government to treat water as a national asset so that it could undertake the responsibility for executing projects on rivers which are under inter-State dispute. It is a well-known fact that as a result of disputes between States over allocation of waters and their use, several of the important projects are held up. These disputes are before tribunals constituted by the Central Government at the request of the States concerned and, as long as the matter is *sub judice*, it is incumbent on States to maintain the *status quo*. The disputes between Andhra and Mysore and Maharashtra, Mysore and Tamil Nadu, and between Gujarat and Madhya Pradesh are before tribunals for quite some time now.

The surface water resources of India are assessed to be on an average about 1,350 million acre feet. Out of this, there is a large volume of unusable water due to unfavourable topographical features. For example, the Brahmaputra carries 400 million acre feet annually, much of which cannot be used. Ground water too is limited since two-thirds of the country are covered by hard rock. It is likely to be plentiful only in the Indo-Gangetic alluvial plains and in some coastal areas. This also calls for a judicious use of the limited ground water resources. It is only in the last two decades that the process of development of water resources has gained momentum and it is estimated that by the end of 1970-71, 200 million acre feet of surface water and 80 million acre feet of ground water would have been utilised for irrigation. Although the stage of shortage of water on a national scale has not been reached, it would be unwise to be complacent in the matter. The easier projects are all exhausted and new utilisation of waters involves difficult works like construction of high dams, large storage reservoir, and interlinking of rivers which pose complex prob-

TAMIL NADU

S.I.D.C.O.'s Progress

The Tamil Nadu Small Industries Development Corporation Ltd (S.I.D.C.O.) has made a steady progress in diversifying its activities. The first phase of work of the Corporation was to construct work-sheds and allot them to small-scale entrepreneurs on an instalment basis. And now, S.I.D.C.O. is establishing a technical consultancy cell for preparing project reports for new industries, and this is expected to benefit particularly the unemployed engineers willing to set up new industries. The chairman of S.I.D.C.O. is convinced that this step, apart from ensuring the development of backward areas, would help in identifying profitable channels of investment. S.I.D.C.O.'s new service will be particularly useful for inexperienced small-scale entrepreneurs. In the sphere of diversification, S.I.D.C.O. contemplates the bulking of import licences of small industries for securing economies of scale and passing the benefits to entrepreneurs. It will also help entrepreneurs in finding channels of export as well as internal markets. The problems of many small-scale manufacturers not only

relate to the identification of profitable projects but also to the production and sales sides. S.I.D.C.O. has a proposal to establish a P.V.C.-oriented industrial estate near Sahupuram or Tuticorin, a textile industrial estate in Coimbatore and another functionally-oriented industrial estate in Tiruvarur.

PAKISTAN

Summit Pact Welcomed

The Pakistan National Assembly, which met in a special session on Monday to consider the ratification of the Simla agreement, has by and large, welcomed the pact. Only two members, one belonging to Mr. Bhutto's Pakistan People's Party and the other to Jamiat-Ul-Ulema-e-Pakistan who participated in the discussions on the motion, opposed the agreement. On the eve of the special session of the Pakistan National Assembly, the National Awami Party, the Jamiat-Ul-Ulema-e-Pakistan and the Muslim League (Council group) have reportedly announced their decision to support the ratification of the summit agreement with India.

The Congress Working Committee has also hailed the Simla agreement between the Prime Minister, Mrs. Indira Gandhi, and President Bhutto as heralding a new chapter in the relations between the two countries. From the trend of reactions to the joint declaration made by the two Heads of Governments, it is apparent that there has been a general welcome to the decisions reached. As has been pointed out by some of the top leaders on the Indian side, it is difficult to assess the value of the agreement by trying to find out who has gained more. It is not merely a question of profit and loss; the main point to be considered is whether the agreement would result in a durable peace in the sub-continent. If this happens, the Simla summit should be considered a success for both the countries. India being the victor in the recent war with Pakistan had perforce to make certain concessions to President Bhutto and one would have to understand the significance of India's readiness to withdraw from the Pakistani territory in this context. It has never been the intention of India to make a territorial gain and, as such, there was never any move to regularise occupied territory.

MANAGEMENT

Training Programme

A management training programme for the Bank of America on a regional basis was discussed at a recent seminar in Singapore which was attended by the bank's senior executives from major south-east Asian cities. They discussed and analysed the career development and management training needs of the bank's staff in India as well as countries of south-east Asia and then made recommendations on how best to organise a full-scale management training programme on a regional basis. "Although other seminars might be held in the future, significantly, the purpose of this first seminar is to draw up a comprehensive plan to train and develop the future management of the Bank in the area," said Mr. R. J. Gillis, Assistant Vice-president, Operations, who was also the seminar chairman.

INCOME-TAX

Mass Communication Drive

Addressing a function organised by the Income Tax Department in Calcutta a few days ago, Mr. R. D. Shah, chairman, Central Board of Direct Taxes, said that the stage to break the usual "bureaucratic approaches" had come now, so that taxpayers might be interested in the tax collecting people. Mr. Shah said that the Income Tax Department was now trying to find newer approaches to have close liaison with taxpayers with a view to getting rid of the perpetual complications. Certain steps had been taken to remove the difficulties such as the summary assessment, allotment of permanent account numbers and the tightening of the enforcement machinery. Mr. Shah urged the people to realise that taxation was necessary for the prosperity of the country. Earlier, welcoming the guests, Mr. R. N. Bose, Income Tax Commissioner (Central), explained the objectives of the mass communication programme of the I.T.D. and said that tax paying could become easy if there were fair deals on both sides.

JOINT VENTURES

Scope in South-east Asia

Addressing a Press conference in Calcutta a few days ago after the return of the Engineering Association of

India's delegation from a two-week tour of south-east Asia and Japan, Mr. M. K. Jhawar, the Association's president, who led the team, expressed his optimism about the vast potentialities for joint ventures in a number of engineering fields in Malaysia, Singapore, Thailand and Hongkong. In Malaysia, a number of Indo-Malay joint ventures are already operating to the great satisfaction of the Malaysians and their Government. This process should be accelerated. In Malaysia, the emphasis is on labour-intensive industries as great employment opportunities are sought to be created for the population of the country. So is the case with Thailand. However, in Singapore and Hongkong the emphasis is on high technology-oriented industries as the land area is limited and the population is small. The development programmes which these countries have embarked upon make demand for a number of engineering goods and services. Mr. Jhawar pointed out that another avenue for joint co-operation lay in the field of consultancy services which India had developed in many directions.

KOREA

Scope for Joint Ventures

Welcoming the Korean Ambassador and Consul General, Mr. Shinyong Lho, at a reception held recently in his honour, Mr. P. M. Singhvi, honorary Consultant to "Kotra", Government of Korea, stated that the business community in India was taking considerable and sustained interest in promoting economic relations between the two countries. A reference was made by him to the remarkable rate of growth in trade achieved in recent years between India and South Korea. He expressed the hope that a number of Indian industrialists would be able to establish industrial joint ventures in the Republic of Korea the climate for which was very favourable. A number of Indian industrialists had evinced keen interest in setting up in Korea various industries, such as cement plant, rayon staple fibre, filament yarn, pulp and paper, china clay and engineering items and accessories. He made a particular mention of the promising prospects that existed for setting up industrial joint ventures in both the countries based on mutual co-operation and invited Indian industrialists to visit Korea to see things for themselves and avail themselves of the various opportunities.

WAGON-BUILDERS

Worries over Steel Shortage

The wagon building industry is deeply concerned over the recent pronouncements of the Central Railway Minister, holding the industry responsible for the poor outturn of wagons in the country, says a Press release of the Indian Engineering Association issued a few days ago. In fact, for the past few years, the industry has been desperately drawing the attention of the Railway Ministry to its pathetic condition—a condition brought about by lack of adequate orders and for lack of adequate steel to execute even the paltry orders meted out. All its appeals have unfortunately gone unheeded and the industry has been allowed to languish till several firms have been obliged to close down and others are on the verge of liquidation. The Railway Board had all the time been setting out an impressive array of statistics bemoaning the declining traffic and the consequent curtailment of further capital expansion inhibiting the acquisition of more rolling stock. Furthermore, as the Railway Board had convinced itself that it did not need the wagons, it did not shirk from awarding patently un-

remunerative prices which discouraged the wagon-builders from seeking more orders.

While some orders have no doubt been planned on the wagon-builders, it is surprising how the Ministry is choosing to turn a blind eye to the acute scarcity of matching steel which is currently frustrating higher levels of production. In contemplating production of wagons in railway workshops to make good the alleged shortfalls of the established wagon-builders, the Railway Board is now merely adding insult to injury. Given an adequate quantity of matching steel, the industry is fully confident of meeting the full requirement of the Indian railways. If shortage of steel is the basic deterrent, conversion of railway workshops into production units will in no way solve the problem. The Association has urged the Ministry, therefore, to concern itself with a speedy solution to the basic problem of steel scarcity when the industry would assure it of an adequate outturn on its own while the railway workshops can continue to look after maintenance alone, without burdening themselves unnecessarily with additional production responsibilities, now sought

to be thrust on them, says the Press release.

DEVELOPMENT REBATE

A Memorandum

A memorandum jointly submitted by the Andhra Pradesh State Board of the All India Manufacturers' Organisation and the Federation of Andhra Pradesh Chambers of Commerce and Industry to Mr. Y. B. Chavan, Central Finance Minister, a few days ago said that the proposal in the last Central Budget to withdraw the incentive of development rebate for industries was being viewed by the Chamber with apprehension. The development rebate served the useful purpose of making industry provide for its own development. If this system had to go for whatever reason, it would be necessary to include a suitable depreciation allowance, calculated as per replacement value, as otherwise industry would face obsolescence on a large scale, and growth and modernisation would be adversely affected.

MONEY MARKET

Tight Conditions

The short-term money market has remained tight this past week. The call rate initially quoted at 3½ per cent. The banks are apparently preparing themselves to subscribe to new Central loans which are to be floated on 15th July and are conserving their funds for the purpose. Towards the close, the rate has, therefore, gone up to 3¾ per cent. The supply of tea and gunny bills has been moderate. The demand for remittances has been small. The pound-sterling has strengthened somewhat against most major foreign currencies during the week.

The latest statement of the Reserve Bank of India for the week ended 30th June, 1972, shows a rise of Rs. 8.94 crores in deposits of scheduled commercial banks with the Reserve Bank to Rs. 282.99 crores, compared with the previous week. Their borrowings from the Bank have increased by Rs. 7.72 crores to Rs. 42.11 crores, of which advances against usance bills have amounted to Rs. 1.45 crores, against Rs. 1.65 crores. Balances held abroad by the Reserve Bank in the Banking Department show a drop of Rs. 18.64 crores to Rs. 196.11 crores.

A Ditcher's Diary

POLITICALLY, IT HAS BEEN A rather listless week. Except in Tamil Nadu, State politics has produced little excitement; and even in Tamil Nadu the curious combination of the Congress, Congress (O), C.P.I. and Swatantra may have realised that it did not cover itself with glory by its anti-Government agitation. On the national scene, the listlessness is perhaps natural after the excitement of the Simla summit. Attempts to work up an excess of enthusiasm or indignation over the Simla accord could hardly have much success. The starry-eyed optimists cannot have really believed that the agreement would immediately lead to dramatic changes in Indo-Pakistani relations. Visions of a "momentous transformation" do not seem to have inspired the general public. But talk of an Indian surrender at Simla has not generated much concern either. The Jana Sangh has tried to work up some hysteria, but few except the Party faithfuls have paid much attention. There was some interest in reactions in Pakistan, but these too have been unsensational. It seemed unlikely that Mr. Bhutto would have any difficulty in having the agreement ratified by the National Assembly. Mr. Bhutto himself must have been more concerned over the language riots in Sind. In the post-Simla climate his difficulties at home are viewed in this country with much greater sympathy than before. India has no interest in instability

in Pakistan; and no parallel needs be drawn between the language agitation in former East Pakistan and the move to make Sindhi the official language of Sind. Things have been relatively quiet in Bangladesh; and Dacca is being wise in postponing the war crimes trials. I hope Mr. Bhutto will make things easier by recognising Bangladesh without delay, which could be immediately followed by talks on the proposed trials, the prisoners of war, the Bengalis in Pakistan and the non-Bengalis in Bangladesh. I also hope that Mr. Connally has not advised him to be difficult. Neither in India nor in Pakistan did Mr. Nixon's special emissary say anything that merits much attention. Apparently, the Nixon administration is not yet ready to correct its mistakes in this part of the world; the President probably thinks that his "successes" in Moscow and Peking are good enough to vindicate his foreign policy for purposes of the November election. He has certainly received valuable assistance from Messrs Brezhnev and Chou En-lai; but I am not yet sure that the Vietnamese communists will be equally obliging. We should know from Paris before long.

THE FIFTH ANNIVERSARY OF THE six-day Arab-Israeli war came and went without it seeming particularly worth while to comment on. Five years is a long time these days for

enemies to show no sign at all of wanting to cool the quarrel between them. But apart from that abortive American peace initiative a year or two ago, which I am still not convinced the State Department intended seriously, there has been virtually no attempt to establish a more permanent peace. So war could break out again at any moment, is indeed regarded as inevitable by both sides, and the Suez Canal—India's main stake in the whole sorry business—remains firmly closed. I have been trying to find out something about the Canal, whether or not it is already so full of blown sand that it can ever be cleared again within a reasonable period. But nobody seems quite to know, which I suppose is hardly surprising when even a cursory examination of what is going on there could lead to an artillery duel lasting days, and perhaps worse. The best guess I have heard so far is that it might take about a year to open the Canal to small-scale, shallow-draught traffic, but up to five before the larger tankers could use it again. To build the second Canal that has been projected would take near enough to ten years from the date of starting work. So the bulk of India's international trade looks like having to use the Cape route, or pick its way through the Malacca Straits, for many years yet. Perhaps it is fortunate that the world's oil trade learnt to do without the Suez Canal so rapidly, and probably permanently. A combination of larger tankers and the increased pipeline capacity has really left the Canal redundant to the traffic which once provided its

THE CALCUTTA DINNER

OUR London correspondent writes: "The Calcutta dinner which was held at the 'Cecil' on the 18th, was a great success. About 170 old Ditchers foregathered and the spirit of Job Charnock, if he hovered over the feast, must have rejoiced at seeing such a comprehensive representation of the city which he founded. In Sir Montagu Turner we had a chairman who as usual had spared no pains to do justice to the occasion, and in Mr. Wallis, Mr. E. C. Russell and the committee we had an executive who by their individual exertions had succeeded in bringing together about twice the number who assembled to do honour to the greatest commercial city in Asia last year. The chairman gave the toast of Old Calcutta in an historical and interesting

speech and in referring to the change of capital vented the opinion that Calcutta had nothing to gain from being the chief seat of the Government, but that on the other hand the Government would find that they had lost a good deal by losing touch with Calcutta, an opinion which seemed to find unanimous approval. Among ancient Ditchers one of the most venerable and certainly one of the most lively was Tommy Jones. He bears his eighty-two years with the juvenility of half his years, and his infectious laugh kept us uncommonly merry at the table where I was fortunate enough to be seated. Peter Swan was very diligent in inculcating his X Y theory of Tariff Reform, but I do not think he will set the Thames on fire, whatever he may have done to the Hooghly.

main source of revenue. But for the more general sea-borne trade, and in this we can now include the rapidly-growing container shipping, the Suez route would still offer opportunities of cost-saving on a large scale. There is no harm in continuing to hope.

I AM WRITING AT LEAST 24 HOURS before the delayed Fischer-Spassky match is due to begin in Reykjavic Iceland, and I shall not be surprised if the schedule is further upset. At one stage, Bobby Fischer's tantrums threatened to wreck all arrangements for what had been billed as the greatest chess event of this century, if not of all time. He haggled over money, fussed over the venue, and insisted on a variety of difficult conditions. After these had been settled and the start of the match fixed for 2nd July, Fischer kept everybody waiting well beyond that date. Could he be lured by more money? Apart from other profits, the winner was in any case going to get £30,000 and the loser £20,000 in prize money. A London banker added another £50,000 to the total. It is not clear whether this did the trick, for there was also a report that Fischer wanted a postponement on medical grounds. Anyway, he did turn up in Reykjavic; and it was then Boris Spassky's turn to be a little difficult. He could hardly be blamed; the reigning world champion had been kept waiting. In any case, he has behaved with much greater dignity than the 29-year old American who is widely believed to be the greatest chess genius of this age. Fischer may well be the greatest chess wonder of all time, but in many respects he is also a cad. He is also a bit of a maniac; talking of the opponents he has beaten he once said: "I like to see 'em squirm." Other masters of the game may be equally aggressive; but there is in them an intellectual sublimation as well. It is this combination of the aggressive and the cerebral that makes chess such a fascinating game. According to one theory, Buddhists invented chess as a substitute for war. But if the game originated in India, it is rather sad that there is no distinguished tradition of chess in this country. Excellence in the game has not always been a Russian monopoly. Persia was once a great centre; and in recent times Grand Masters have belonged to different European nations. Iceland itself has a respectable tradition; and this cannot be because the game prospers only in countries with long polar nights. Havana, with its tropical climate,

was once the world centre. Why then is there no International Master in India, let alone a Grand Master? Edward Lasker, a Grand Master, once wrote a book called *Chess for Fun and Chess for Blood*. With our dedication to peaceful co-existence we may hesitate to play for blood, but in chess there must be a time when the pursuit of fun becomes transformed into a determination to draw the opponent's blood.

IF ANYBODY REQUIRED FURTHER proof after what had happened recently in Stockholm that ecological matters are now firmly established as yet another source of international misunderstanding, then they could have profitably visited London in the last week of June. The subject for discussion there was the conservation of the whale, and I cannot think that the poor animals have much to congratulate themselves on at being the main topic in two successive such ecological wrangles. Their friends turned out to be as emotional as they were ineffective in gaining concessions which would not have been forthcoming anyway for reasons of simple economic self-interest. Their enemies, meaning those countries who are hunting them to the point of extermination, were equally spiteful on the other side, although it struck me that the arguments they used had much more sense in them. For instance, it was perfectly consistent to argue in one breath that whales were not in danger of extinction and in the other that hunting could continue at an agreed rate for a few more years yet.

In my opinion the conservationists came nowhere near meeting this kind of logic, and indeed seemed to boil up with exasperation whenever the economic problem was raised at all. I cannot think that this approach, satisfying as it may be to all lovers of nature's miracles, is going to help the unfortunate whale in any way.

IN HIS "LONDON NOTEBOOK" in the *Statesman*, Mr. James Cowley recently wrote about the trial of Graham Frederick Young, a young man who murdered two of his workmates by dosing their tea or coffee with thallium. There was an uproar after the disclosure that Young had committed both murders after being prematurely released from Broadmoor; he had been sent there when he was just 14 after confessing that he had administered poison to his father, sister and a friend. This is a matter for the British Government and public to worry about. What I find much more interesting is a detail in *The Times* report of the trial. After his release from Broadmoor, Young got a job as an assistant storekeeper in a photographic instrumentation laboratory in Bovingdon; and very soon he was up to his old poisoning tricks again. But when a spate of illnesses followed in the factory, doctors did not suspect poisoning; some of them thought that the illnesses were due to a mysterious virus known to have affected people in the area. It was only after two of Young's victims died that a pathologist suspected thallium poisoning. And—this is the really interesting part—his suspicion was aroused because he had

read Agatha Christie's *The Pale Horse*, a detective novel about a case of thallium poisoning. One effect of this particular poison, as vividly described by Miss Christie, is sudden and drastic loss of hair; the pathologist who suspected thallium poisoning by Young had noted that the victims had lost much of their hair and the rest could be plucked out easily. Is this then a case of nature imitating art? There is nothing to show that Young got his idea from Agatha Christie, or from Ngaio Marsh who presents a case of thallium poisoning in *The Final Curtain*. But doctors and detectives of fiction came brilliantly to the aid of real-life investigation in Bovingdon. Miss Christie may well consider this to be the crowning achievement of her professional career; and both medical men and policemen may now develop greater respect for crime fiction. Police officers may hereafter hesitate to say: "Oh, that sort of thing happens only in detective stories." In Dorothy Sayers's *Strong Poison*, the poison is arsenic and the symptoms are similar to acute gastritis. If gastric discomfort came to be invariably associated with arsenic poisoning, perhaps half the people of Calcutta would be looking for a poisoner in the family or among friends.

DID YOU KNOW THAT A CERTAIN Government department in West Bengal was instructed to destroy all old documents and correspondence going back more than five years, but, of course, after making copies of them first?

How Management Can Benefit from a Product Group Type of Set-up

By K. Hartley

Managing Director,
Indian Oxygen Ltd

Departmentation on the basis of product groups is steadily growing popular among larger enterprises which have several lines of products. Indian Oxygen, which until recently had a functional type of organisation, has accordingly switched over to the product group type.

As organisations grow in size and as the number of people to be managed increases, departmentation obviously becomes essential. Since the number of people who can directly be managed is inevitably limited, the size of enterprises would become very restricted were it not for the device of departmentation. Dividing the activities and the employees connected with them into different departments makes it possible to manage effectively the functions to be performed, no

matter what the size of the organisation. The basis for departmentation, however, differs from enterprise to enterprise and different types of departmentation have been adopted by different organisations depending on their requirements and size. The bases for departmentation usually are (a) functions, (b) product groups, (c) territories, (d) time, and (e) numbers. There are of course combinations of these different types and even organisations which are basically of one type adopt other types at various lower levels of the organisation.

The most important of the various types are the functional and the product group. But what are the considerations that impel an organisation to adopt one or other of these types? Each has its own advantages and disadvantages. The most important ad-

vantage of functional departmentation is that it is a logical and time-proved method. Moreover, functional departmentation follows the principle of operational specialisation thereby making for efficiency in the utilisation of manpower. Despite these advantages, in certain situations the claims of other methods are stronger.

Growing Popularity

Departmentation on the basis of product groups is steadily growing more popular in larger enterprises which have several lines of products. Usually product group organisations have originally been through a phase of functional-type organisations and have changed when managerial problems became more complex and when it became necessary to limit the span of management of the chief executive/s. A product group type of organisation allows maximum scope for specialised skills and knowledge and enables profit responsibility to be pinpointed. This also enables top management to assess and evaluate product group managers more effectively.

A case study of Indian Oxygen which until recently had a functional type of organisation and has very recently switched over to the product group type may be of general interest in this connection. Indian Oxygen Ltd (I.O.L.) was incorporated as a private-limited Company in 1935 and was converted into a public-limited Company in 1958. Originally, the Company dealt primarily with the manufacture and sale of industrial and medical gases like oxygen, acetylene and nitrous oxide. The Company also dealt with liquid oxygen explosives—an explosive for removing overburden in open cast mines. Later, the Company started manufacturing electrodes—consumables required for electric welding. At a further subsequent stage, the Company undertook the manufacture of equipment and accessories required for both gas welding and electric welding as well as for medical purposes.

The Original Set-up

Since 1961, a basically functional pattern of organisation structure had been in existence in the Company. In designing the Company organisation structure at that time, certain fundamental principles of organisation were followed such as the Company objectives, the need for an apex, a sound departmentation scheme on the basis of functional specialisation, unity of direction, unity in command and a balanced degree of centralisation and decentralisation. Originally, there were

six functional divisions as follows: (1) engineering, (2) marketing, (3) commercial, (4) finance, (5) personnel, and (6) secretarial. Additionally there was an electrodes and equipment division which was a manufacturing division as well as two product departments—liquid oxygen explosives (L.O.X.) and special projects (dealing with certain specialised activities)—each under the charge of a departmental manager, both reporting to managing director.

There were seven districts and branches which operated the Company's 12 gas factories and which served as the sales outlet points for all the Company's products (except L.O.X. and Special Projects). District or branch managers were responsible functionally to the head of functional divisions at head office for the satisfactory discharge of the relevant functions in their respective areas and were also accountable to managing director for the total performance of their respective district or branch and for the lateral co-ordination of the various functions on a regional basis.

Need for a New Structure

This organisation by and large had served the Company well over the years. Since 1961, however, the Company has grown substantially and its operations have gained in complexity because of the qualitative change in the socio-economic environment which is reflected in Government policies in respect of industrial licensing, concentration of economic power, issues of capital, foreign collaboration—to mention only a few—which have undergone major changes in the recent past, thereby introducing many constraints which had to be taken into account in planning the future development of the Company. The growth in the dimensions of the Company's business and the increasing complexities of its operations called for a greater delegation of profit responsibility and accountability than was envisaged by the Company organisation introduced in 1961. A look at some of the figures relating to the Company's years ended 30th September, 1961, and 30th September, 1971, respectively, gives an indication of the Company's growth.

	(Rs. in crores)	
	1961	1971
(a) Turnover	7.56	20.52
(b) Profit before tax	1.07	2.01
(c) Fixed assets at gross book value (without capital projects in progress)	6.39	16.12

Furthermore, under the functional organisation structure the span of control of the managing director was far too wide. It was felt that the managing director should have more time to devote to matters of major importance for the Company's future. Another consideration was that district or branch managers had, under the functional set-up, multiple accountability which is not normally regarded as a sound organisational practice.

New Organisation

By 1970, it was clearly felt that a stage had been reached in the development of the Company where the need for reorganisation had arisen. Considerable thought was given as to how best the Company's organisational framework could be restructured to attain the objectives mentioned earlier and it was felt that the new organisation should be based on the principles of profit responsible product groups. Ample consideration was given to the fact that the size of an organisation was a very important factor in determining the extent to which a product organisation could be effective without leading itself into an uneconomic one.

Taking all factors into account, it was decided that with effect from 1st April, 1972, the existing functional organisation structure of I.O.L. should be altered and this was done on the following basis:

Trading Divisions	Responsible for
Electrodes and equipment division	Development, production, marketing (excluding sales), accounting, personnel, materials management
Gases division (comprising all the 12 gas factories)	Development, production, marketing, sales, accounting, personnel, materials management
Special products division (comprising liquid oxygen explosives, air separation plant/cryogenic equipment, including plant manufacturing shop and major pipeline installations)	Development, production, marketing, sales, accounting, materials management
Trading Department	
Export department	Marketing, sales
Corporate Divisions	
Finance division	Corporate finance, corporate accounts, taxation, internal audit, company budget and five-year plan, E.D.P., central O and M. financial services to all other divisions or departments
Personnel division	Management staff and management development, industrial relations, training, personnel services to all other divisions or departments
Secretarial division	Company law, legal matters, secretarial matters, insurance, patents and trade marks, central materials management, staff provident fund/executive staff pension fund, general administration, services in all these matters to all other divisions or departments

(i) The heads of the three trading divisions, the export department and the three corporate divisions report direct to managing director.

(ii) Public relations department and Delhi office under public relations officer and Delhi

representative, respectively, continue to operate under managing director.

(iii) Districts or branches now form part of gases division and district or branch managers are now responsible for the total performance of their regions to the head of gases.

Some notable features of the new organisation, which may be of special interest, are mentioned below:

(i) All trading divisions and departments have been made responsible for their respective product-group profitability.

(ii) Products of electrodes and equipment division will be sold through the gases division sales outlet points in the interest of economy. Gases division will obtain the products of electrodes and equipment division for this purpose at agreed discounted prices.

(iii) There will be one integrated sales force to cater for both gases and electrodes and equipment division products, again in the interest of economy, the sales force forming part of gases division.

(iv) All corporate divisions will also function under a strict budgetary control system.

As for the rôle of the corporate functions under the new structure, corporate divisions will formulate corporate policies in their respective functional areas, where necessary in consultation with the heads of other divisions and/or with the approval of managing director. In the interest of uniformity in practice, other divisional heads will be responsible for the implementation of these policies in their respective fields. The two governing principles in

this respect are uniformity and economy. In effecting this reorganisation the management of I.O.L. expects that the new organisation structure will impart to all levels of management in the Company greater resilience in facing the challenges of the 'seventies.

SENIOR APPOINTMENT

A prominent Public Limited Company in Andhra Pradesh requires a Chief Chemist in connection with its diversification/expansion programme. Minimum educational requirements M. Sc. / Ph. D. in Inorganic Chemistry and five years' Production experience. Age under 45 years. Attractive salary and perquisites offered.

The Simla Summit : Bangladesh Reacts with Cautious Optimism

(By a Special Correspondent)

Dacca has reason to be satisfied with the outcome of the Simla summit. This is because India had refused to be drawn into any commitment on such issues as are vital to Bangladesh.

SHEIKH Mujibur Rahman is yet to comment on the Simla summit. But the Bangladesh Foreign Minister, Mr. Abdus Samad, has expressed his cautious optimism—a feeling shared by a significant section of the Bangladesh public. Dacca has cause for satisfaction, at any rate no reason to feel let down. On all matters vital to her, India has refused to be drawn into any commitment without her concurrence. It is to be hoped that Simla is just a necessary stopover on the way to a further summit where Bangladesh, armed with Islamabad's recognition, will also take part in the parleys. The one tremendous gain from the Simla cool—Pakistan's abjuring of the use of force and acceptance of bilateral talks as a means of securing an "ironclad" durable peace, as a British weekly calls it—should make the next lap of the journey markedly less bumpy.

Bangladesh approached the summit with an air of cool detachment—as her decision not to sit in as an observer shows—except when nettled on highly charged issues. She expected nothing much to happen. For the simple reason that nothing much could happen with one side of the triangle missing. The Prime Minister, Mrs. Indira Gandhi respects Bangladesh's independent thinking and would not allow any formula, no matter where thought up, to be thrust upon her. All that Mrs. Gandhi looked for was the minimum cordiality to quicken the impulse for making a detente which should be equally in the interest of Dacca. She does not want the present freeze to continue. Nor does Russia who has started soundings in the relevant capitals. Nothing happened in Simla to hinder a thaw; on the contrary, the modest gains should help.

Bangladesh's satisfaction should arise not from the positive but the negative achievements of the Simla negotiations. Both India and Pakistan—once the initial tetchiness was gone—agreed to restrict their accord to matters in which Bangladesh had no direct involvement. Which means the outstanding problems affecting Islamabad and Dacca remain unsolved. What is called for in that thorny area of disagreement is not so much "normalisation of relations" as the building up of a new relationship based on mutuality, right from scratch. It seems that the name Bangladesh is yet to enter Pakistan's vocabulary of politics; President Mr. Bhutto has settled for "Muslim Bengal", a somewhat sectarian compromise and not much of it at that. Sheikh Mujib has said, not without logic, that he is not unduly exercised about Pakistani recognition of an accomplished fact accepted by the greater part of the world. Bangladesh may arguably refuse to regard the prospect of Islamabad's recognition as reason enough to make even the minimal adjustments in her stand. Yet such recognition, which seems a question of time, should remove any remaining uncertainty about Dacca's world standing. That achieved, Bangladesh will pretty well sail into the U.N. As things stand, the odd man out can still be in the way with China doing his dirty work for him. On the other hand, as soon as Islamabad lifts the barriers, goods and goodwill may be expected to flow to Bangladesh from the Islamic lands in West Asia.

The main sticking point has all along been the fate of the P.O.W.s. Feelings run high. Practically every family in Bangladesh has a nasty taste in its mouth. International legal opinion may be given to hair-splitting on the Geneva Convention and miscellaneous knotty points. But Bangladesh wants a trial of the war criminals and believes that on this question, what she says goes. India agrees. However, difficult as it may seem—more in alluvial Dacca than in rocky Simla—a measure of "dispassionate" rethinking is perhaps

necessary. President Bhutto is on a sticky wicket at home, his delusion of permanence notwithstanding. Tikka Khan, schooled in an abstemious discipline, is a force to reckon with. Mr. Bhutto may or may not terribly mind if a few war criminals are punished but that will not endear him to his army. That Mr. Bhutto left the issue alone for the present shows he is playing it cool. Meanwhile Sir Alec and Mr. Popov have put in a word or two in Dacca in favour of moderation. If Pakistan plays ball on other crucial matters, Bangladesh may conceivably mellow about the trial.

The crucial matters are, of course, the fate of the Bengalis in Pakistan and of the "Bihari" Muslims in Bangladesh. On the first issue, President Bhutto has equivocated more than once and on the second he has tried, not without success, to pull the wool over foreign eyes, including the U.N.'s. Bangladesh wants the 400,000 Bengalis in Pakistan to come home and not merely for the services they can render the infant State. President Bhutto once told the world he would let the Bengalis in his country sail home. But they are still mired in their unhappy exile and President Bhutto says now they had better remain basking in the dubious glory of Pakistani citizenship. No such spirit of resignation marks the President's fustian about the alleged misery of the 1 million or so Bihari Muslims. Even if there be not a murmur of complaint among most of them and even if Sheikh Mujib has taken them in his arms, talks may very well start about the reluctant ones. Mr. Bhutto has so far shown no desire to welcome them, assuming they would wish to go to Pakistan. But it is definitely up to him, this self-styled champion of the oppressed, to set the ball rolling. With the Simla breakthrough, his job should be a jolly sight easier. Behind the scene moves may contribute to getting hurdles out of the way.

One other thing, often forgotten. President Bhutto is continually pressured by the 22 big capitalist families who have their hackles up about writing off their massive investments in Bangladesh. They do not want to give up in a supine fashion. Bangladesh with her commitment to large-scale nationalisation and determination to break with the odorous past will naturally have none of it. President Bhutto would perhaps also like to see a

IOL spent many man hours and money making this Electrode—then rejected it

That's IOL building in "Quality-Plus"

The leadership that IOL electrodes have had and always will have is the result of many hours of specialised hard work. Hard work in choosing very carefully at the raw materials stage. Hard work at each and every manufacturing stage, where IOL puts added emphasis on quality. And hard work at the checking stage where the electrodes are given hours of attention by specialised IOL

technologists who are far ahead of their times. All this, coupled with the world-wide expertise and latest know-how and processes, build into each IOL electrode the well-known IOL "Quality-Plus". A coupling of the finest materials built into the finest products with the help of the most advanced welding technology which others can't beat!

IOL builds in "Quality-Plus" others can't beat.

division of Pakistan's pre-war liabilities. One takes a dim view of such hopes yielding fruit. As to that bit of rough patch, Simla frankly has not helped any. Meanwhile, Dacca remains true to her friendship with New Delhi. If there is a degree of youthful resentment there about the

lingering miasma of the P.O.W.s or about the gaga stuff turned out by a section of the Indian Press on President Bhutto's pride and joy, few share Maulana Bhasani's Cassandra-like prognosis that the final answer will be hammered out in the battlefield, with China in the thick of it.

Will an Expanded Monopolies Commission Promote Growth with Social Justice?

By M. R. Hazaray

Differences of opinion in the Monopolies Commission have become so frequent that the Government is thinking of expanding it in order to ensure industrial progress. But will an expanded Commission help promote growth with social justice?

TIME and again, the Monopolies Commission is reported to be running into difficulties. The differences of opinion in the Commission are becoming so common today that the Government has thought its expansion inevitable in the interest of industrial progress. A broad-based Monopolies Commission perhaps may be more convenient and accommodative as a broad-based Cabinet for the Government, but that is not the point at issue. The crucial point is what should come first? Growth or social justice? Which of the two should be assigned a primary rôle in the larger national interest. If past experience is any guide, it becomes plain that mere growth, irrespective of the consideration of social justice, has merely brought economic concentration in its wake for the last quarter century or so. Hence it is imperative to put social justice before growth which, in other words, means service before self on the part of the business community just to spur the growth of the economy so far stunted under the dead weight of economic concentration.

The A.I.C.C. Programme Committee, it should be remembered, had outlined the strategy for transformation of the imperialistic economy into a socialistic one by keeping out large businesses in order to protect the small ones through taxation, ceilings, removal of development rebates and finally through public financing. That was as far back as 1948. But unfortunately that

could not take place as business acumen could always get an upper hand over political acumen. The practical-minded business community always remained far aloof from the national ideology although there were a few notable exceptions. However, during the last two decades, under planned economic development of the country, the business community undeservedly got the advantage of an unprecedented capital appreciation, a sort of an unearned economic rent with the result that wealth got accumulated in the hands of a few both in the urban and rural areas.

It is needless to say that the Monopolies and Restrictive Trade Practices Act and the Monopolies Commission are eminently suited to take care of this new problem; for the benefits of capital appreciation must be passed on from a handful of the business community to the community at large in accordance with the Directive Principles of the Constitution. The only answer to oligopolistic trends in the economy, therefore, is to replace private family business with capable professional managers, not drawn from the upper segment of society but specially trained for the purpose, without, however, giving birth to a monolithic bureaucracy which is often inclined to join hands with the private sector through corrupt practices.

It is also worth while to examine closely the behaviour of the private sector. How many units in this sector have reinvested their profits on Research and Development? Out of a total expenditure of Rs. 168.69 crores on R and D in 1970-71, the private sector accounts for a paltry sum of Rs. 6.6 crores and this amount looks even smaller when compared with the huge profits they

have been able to earn. How many of them again have reinvested the profits they make year after year in the core sector in the overall national interest? Is it not a fact that instead they reinvested them on speculative deals of all kinds and blatantly laid the blame for the creeping inflation at the Government's door? On the other hand, almost all of them have taken the opportunity to bask in the sunshine of foreign collaborations, low rates of interests and vied with each other to exploit the protected home market. The investment pattern, tilted at present in favour of production of luxury goods, must be rectified if increasing labour unrest is to be tackled and full utilisation of created capacity is to be fully ensured.

The controversy over the character of the Monopolies Commission—whether it is a quasi-judicial body or an advisory body to the Economic Committee of the Central Cabinet—is also regrettable. The Monopolies Commission's power to change the basic structure of industries is unnecessarily called into question. Section 28 of the Act clearly lays down the guiding principles for the Central Government and the Monopolies Commission in the matter relating to concentration of economic power. These, among other things, are aimed at increasing production through efficient and economic management by encouraging new enterprises, reducing regional imbalances and using material and human resources of the country for the common good.

Even Professor G. C. Allen, in his analysis of the 20 years' working of the Monopolies Commission in the U.K., observes that whether the Monopolies Commission should adopt judicial or administrative processes or any judicious combination thereof is a matter of expediency; but economists have generally grave doubts about the interpretation and analysis of evidence. In 1956, the U.K. established Restrictive Practices Courts and thus transferred the responsibility for irksome decisions in particular cases from the Government to the judiciary. It can in this way interpret the law without regard to the influence exerted by the groups or concerns affected by their decisions. It also obviates the long delays by the Board of Trade. However, some of the judgments of the court may sound odd enough when exposed to an economic analysis.

At present the Monopolies Commission in India consists of three members—Justice A. Alagiri Swamy, Mr. D. Subramaniam and Dr. H. K. Paranjé, an economist. Whether the recomposition of the present Commission would include more jurists, or economists or administrators or more politicians is not known. But it is to be hoped that it would take quick decisions in order to accelerate the pace of industrial progress of the country.

One cannot, however, expect too much from the Monopolies Commission even in a developed country like the U.K. The reasonable achievement of the Monopolies Commission over the last 20 years has been described by Professor Allen in the following words: "Critics of the administrative and judicial machinery

set up in the U.K. to deal with monopoly and restrictive practices should not look in vain search for an ideal world. It is true that so far the activities of the Monopolies Commission and Restrictive Practices have not made British industry as a whole vigorously competitive, nor outstandingly more efficient than in the past. But they have at least succeeded in some degree during the last 20 years in changing the attitude of British business men towards competition and monopoly. They have certainly helped to loosen up a formerly very rigid industrial structure and they have done something towards enabling the enterprising to make their way in markets, once tightly controlled and that is a very reasonable achievement. The change in the attitude of business men is indeed a great achievement."

mand for industrial raw materials and ores.

India's imports continue to be developmental in nature, namely, electrical machinery, transport equipment, chemicals and compounds and iron and steel. India also imports fertilisers, yarn and thread of synthetic fibres. Commodities like iron ore, raw cotton, oilseed cakes and unmanufactured tobacco constitute about three-fourths of India's exports to Japan. Although several new items like iron and steel, engineering goods, fish and cashew kernels have been added to the export schedule, their share in total exports is still insignificant. The future growth of Indian exports to Japan would depend upon the export performance of non-traditional products.

Iron ore is the single largest export item to Japan, making up nearly 45 per cent of India's total exports to that country. India supplies about one-fifth of Japan's total iron ore imports. Under a long-term contract, signed in 1970, India will supply about 61 million tonnes of iron ore from Bailadila alone during a period of ten years. This does not include iron ore exports from Goa, Bellary-Hospet and other areas. However, Australia is offering tough competition due to its lower cost of production and possession of bulk carriers. Australia has entered into 28 long-term contracts with Japan for a total supply of over 357 million tonnes worth of ore to be supplied during 1965-1985. Besides Australia, the Latin American countries like Brazil, Chile and Peru as well as the west African and the east European countries are also striving hard to enter the Japanese iron ore market in a big way. The Indian export marketing strategy, therefore, calls for measures to develop and further mechanise ports, and introduce bulk carriers.

Of India's total exports of raw cotton, Japan takes about 75 per cent. However, India's share of Japan's total import of raw cotton is not sizable. Russia and Nicaragua are the main suppliers. India can explore the possibilities of utilising raw cotton in the country to manufacture mattresses for Japan. This will not only increase the unit value realisation but will also open up new employment opportunities. Japan used to import 300,000 tonnes or 500,000 tonnes of salt from India

Scope for Raising India's Exports to Japan

(By a Special Correspondent)

Japan offers a growing market for India's labour-intensive industries. Success in exports will depend on India's ability to satisfy the exacting requirements of a highly developed economy.

JAPAN today is the third richest country in the world, next only to the U.S.A. and Russia. Its G.N.P. increased from \$37.8 billion in 1959 to \$196 billion in 1970 and it is expected to rise to \$440 billion in 1975. Its foreign trade has also witnessed a spectacular expansion during the last decade, rising from \$8.5 billion in 1960 to \$38.2 billion in 1970. In its rapid growth in sophisticated industrial development, Japan has started experiencing the shortage of labour and increasing labour costs. It offers, therefore, a growing market for India's labour-intensive industries, as the overall increase in the demand for such items is expected to be met by imports.

In India's foreign trade, Japan occupies a very important position. It has emerged as India's major trading partner in the E.C.A.F.E. region, accounting for 31 per cent of India's imports from and 50 per cent of its exports to the area. Japan accounts for 5 per cent of India's global imports and 13 per cent of its total ex-

ports. The expansion of trade between the two countries has been mutually beneficial due to the complementary nature of their economies. This pattern of trade with changes to suit the new requirements of both the countries can be further expanded. India can make a headway into the Japanese market by developing contact with the Japanese trading houses which at present handle nearly 75 per cent of their country's imports and 80 per cent of exports.

The growth of trade between the two countries during the last two decades has been influenced by various factors. Due to the miraculous recovery of its economy, Japan has emerged as one of the major export-oriented industrial world powers. The demand for India's industrial programmes was to some extent met by Japan and the latter, in turn, lifted ores from this country. During the First Plan period, imports were fluctuating, but exports showed a continuous rise. During the Second Plan, the position was reversed, with India's imports rising by 120 per cent and exports by 30 per cent. During the Third Plan, India continued to have an unfavourable balance of trade. The last four years have heralded India's export surplus in relation to Japan mainly due to the increasing Japanese de-

every year but in 1970 it turned to alternative sources. India has lost this market due to the high cost of production.

Engineering goods constitute a small part of India's total exports to Japan. There exists immense scope for increasing engineering exports due to Japan's increasing need for securing labour-intensive items from other countries because of the rising labour costs and shortage of labour in the country. The magnitude of the rise in the wage level in Japan during the last five years is obvious from the fact that while the average annual increase had been 4.6 per cent during 1955-60 and 7.4 per cent during 1960-65, the corresponding figure for 1965-70 was 13.5 per cent. The wage spurt is likely to continue in the future. There is scope for exporting selected components—both as original fittings and replacements—of automobiles, sewing machines, bicycles, electronic equipment, machine tools and industrial machinery. There are bright prospects for industrial tools for use in several engineering industries. India's export performance will depend upon the capacity of its industry to satisfy the exacting requirements of the Japanese market. A rigid process of selectivity in organising supplies to the Japanese market seems to be essential.

In addition to trade, several joint ventures have been set up in this country with Japanese collaboration, covering a wide range of items like vacuum flasks, fountain pens, cables, nylon materials, PVC, electric meters, lamps, dyes, industrial machinery and electronic components. The Japanese assistance is generally confined to the provision of technical know-how. An enduring relationship between the two countries can be developed on the basis of financial participation in joint ventures. At the recent meetings of the Business Co-operation Committee, it was agreed that relations between the two countries should assume the form of industrial partnership. The Japanese participation can be made in such fields as petrochemicals and electronics, the sphere of co-operation extending from simple consumer goods to the sophisticated ones. There is also a definite scope for collaboration in setting up joint ventures in India in export-oriented industries. Trade and development ventures with third countries could be pursued by India and Japan jointly.

A New Chapter in Indo-Pak Relations

(From Our New Delhi Correspondent)

The peoples of both India and Pakistan have greeted the agreement which the Simla summit has produced. The most significant achievement has been the two countries' resolve to settle all their disputes bilaterally.

LIKE the India-Bangladesh agreement which has heralded much goodwill and co-operation, the Simla agreement is also indicating towards a normalisation of India's relations with Pakistan. In India, only the Jana Sangh has characterised the agreement as a "sell out"; all other parties have welcomed it. The demand for summoning Parliament to ratify the agreement is meaningless since, under the Constitution, Parliament does not have to ratify such agreements. It is another matter whether the Government provides time for a debate when Parliament meets for its monsoon session on 31st July. It is not surprising either that the Congress Working Committee has endorsed the agreement and acclaimed it as one heralding a "new era of peace". This was only to be expected. What is important is that the people on the other side of the border have also greeted the agreement.

On India's part, anticipating the Pakistani ratification of the Simla agreement, the Government is considering the release of 3,000 Pakistani prisoners of war who had surrendered to the Indian Army on the western sector. Since Bangladesh's Mukti Bahini was not involved in this surrender, India does not have to seek the approval of that country for the release of these prisoners. And, India's prompt action in releasing them will at least convince Pakistan that India is not standing on prestige or on any "legal fiction" as Pakistan would like to think in regard to the release of the 93,000 prisoners who surrendered on the eastern front. Even in the case of these prisoners, it is only a matter of time before they are released. A high Pakistani official had indicated in Simla that Pakistan had no alternative but to recognise Bangladesh which would automatically solve the prob-

lem of the release of at least the bulk of the prisoners of war. Once the prisoners of war issue is thus over, one of the major irritants between India and Pakistan will be removed.

Then remains the question of Kashmir and the withdrawal of forces from combat positions to either side of a mutually recognised border. This, of course, bristles with difficulties since this is also linked with an overall settlement of the Kashmir question. In fact, if the talks appeared to be failing in Simla a day before the agreement was signed, it was on the issue of an overall settlement of the Kashmir question. How and when the two Heads of Government will solve this question remains to be seen. Suffice it to say that for the present, President Bhutto has signified his concurrence on three broad principles governing Kashmir and, for that matter, any other dispute between the two countries. First, a solution will be found through peaceful means. Secondly, there will be no third-party intervention and, lastly, the two Governments have agreed to find a solution as early as possible.

If all these three principles are adhered to by Pakistan and India, there is no reason why a solution cannot be found. President Bhutto had referred to various alternatives that had been considered during the Bhutto-Swaran Singh talks in 1964, perhaps to suggest that one of them could be reconsidered now. To this India's immediate reaction was that those discussions were held in a different context which did not hold good today. But even this reaction was given two months ago when the Summit conference had not been envisaged. Now that the situation has changed, it should not be surprising if the two Governments got together and went through the various alternatives *de novo*. The coming few months will be crucial for both India and Pakistan since there can be no permanent peace between the two countries until they both have agreed on a practical solution of the Kashmir problem.

SPOTLIGHT ON STATES

Move to Improve Farm Education and Research in Bihar

(By a Special Correspondent)

The Rajendra Agriculture University in Patna has already done some good work in farm research. With the installation of a popular Ministry in the State, it is expected to get more support from the Government than it has received in the past.

AGRICULTURE universities are among the key instruments envisaged for quick extension of improved agricultural practices. The Punjab Agricultural University with its campuses in Ludhiana and Hissar played a major rôle in ushering in the "green revolution" in wheat cultivation in Punjab and Haryana. In western U.P. and Terai, the Pantnagar Agricultural University is performing a similar rôle. The Education Commission had recommended the establishment of at least one agriculture university in each State. The Rajendra Agriculture University was formally inaugurated in December 1970 at the Patna Veterinary College campus. The agriculture university of this backward State of Bihar is often in the news because of lack of proper support from the State Agriculture Department.

Three agriculture colleges located in Sabour, Dholi and Ranchi, the Veterinary College in Kanke, four agricultural research institutes in Patna, Dholi, Sabour and Kanke and the Sugarcane Research Institute in Pusa were transferred to the new University under a Presidential Act (Bihar was under President's Rule) with effect from 1st February, 1971. The cattle farm in Pusa and the animal production research station in Birauli were transferred to the University from May 1971. The Animal Husbandry Department of the State Government, however, retained some facilities like farms, hospitals and some posts and buildings which formed part of the veterinary colleges by transferring them to the Department before the issue of the notification. The Agriculture Department transferred all the research institutes except the Field Experimental Service. But subsequently, by an order issued in June 1971, the State Agriculture Department held

that 13 district farms and the Mithapur research farm had not been transferred to the new University. Except for the two district farms in Chinanki and Bikramganj, which the Department did not want to take back, and the Mithapur research farm which is the main centre for co-ordinated rice and sugarcane research in the Patna region, the rest of the district farms have been taken over by the Directorate of Agriculture. The question of transfer of the Field Experimental Service has not been finally settled.

A master plan for the development of the University has been drawn up in consultation with the I.C.A.R. and the F.A.O./I.B.R.D. The setting up of the Rajendra Agriculture University has been necessitated because the pressure from the agricultural sector in the State for trained graduate manpower to staff the various development programmes and activities and to organise agricultural research and specialised extension work. The reorganisation of Statewide agriculture education and agricultural research within the new University is in part a reflection of these pressures. The predominant agricultural economy of Bihar where 86 per cent of the people are dependent on agriculture requires concentration of effort on practical research and speedy extension of improved seeds and techniques. The research establishments of the State Government had clearly failed in the past in meeting the needs of the State. An I.B.R.D. team had earlier assessed the needs of the State and outlined the development programme of the Rajendra Agriculture University.

The University at present has two faculties—agriculture and veterinary science and animal husbandry. It is proposed to have two additional ones, namely, the faculty of basic science and the faculty of home science (for girls), as early as possible. The University has decided to adopt the "trimester" system both at the undergraduate and post-graduate levels. Curricula are being worked out to make the teaching more field-oriented and job-oriented. Interneeship has

been introduced to give specialised training to graduates in farm management, handling of agricultural machinery, fertiliser promotion, animal and poultry keeping and the like. A "earn while you learn" scheme is also being introduced. The extension training scheme is also being strengthened. Students are being attached to farmers in the extension block for intensive training in farm management. And one of the most important responsibilities of the University is to establish an agricultural research programme in the State and to undertake a large number of research projects. Special attention has been given to field-oriented research on dry land agriculture, horticulture, etcetera.

The rice variety "bala" has been found to be the most outstanding of the upland rice varieties with a maturity period of 90 days which is the same as that of "gora" paddy. Maize culture which matures in about 65 days has been found to be quite promising and may lead to a major breakthrough in maize cultivation. Cotton hybrid-4 was found very promising with a yield potential of 40 quintals a hectare. Soyabean has been successfully grown as a kharif crop in the Chotanagpur uplands. The Russian variety of sunflower has also been found quite promising. Various experiments on important vegetables and fruits are in progress. Multiplication of vegetable seeds has been started. Management of fruit trees for high yields and control of irregular bearing has yielded good results. Two successful hybrids of mango have been evolved. A relatively virus free variety of papaya of good quality and yield has been developed.

Irrigation research is being carried out primarily on frequency and phasing of irrigation water for major crops. A scheme for in-service training for irrigation engineers and agricultural extension officers has been drawn up and is proposed to be implemented in the next financial year. Agricultural extension education is now the responsibility of the University and not of the State Agricultural Department. But progress in this sphere is rather slow because of the alleged non-cooperation of the State secretariat. The new popular Ministry is conscious of the rôle that a good agriculture university can play in revolutionising the economy of this problem State. And there is no doubt that the Rajendra Agriculture University will play an important part in the economic development of Bihar.

Reforming the Tax Structure for Preventing Evasion

By B. S. Kothari

It is apprehended that the Government may accept only those proposals of the Wanchoo Committee which will increase revenue. The pressing problem, however, is not the leakage of revenue through legal loopholes but the unaccounted transactions and black money.

IT is being felt by every section of the public that "black money" has assumed such size and dimension that it is causing great economic and social harm to the country, as the monetary, fiscal and distribution policies of the Government are not able to bring necessary discipline in the economy due to the wide circulation of such money. It is due to the urgency and magnitude of this problem that an interim report was submitted by the Direct Taxes Enquiry Committee towards the end of 1970 recommending some important steps of a radical nature. The said report has not been published or made known to the public. It is understood that the committee had recommended demonetisation of the currency notes. For over the last one and a half years, there have been rumours from time to time that the Government would demonetise the notes of Rs. 10 and above. The Government denied in Parliament any proposal to demonetise although it admitted that the Wanchoo Committee had recommended such a measure. Since the interim report has not been made public as yet, it is thought that the matter of demonetisation is still under the active consideration of the Government.

Demonetisation of currency notes is a very drastic step as it will entail hardship to millions of people and will shake their faith in the currency. It is due to these rumours that there has been such a great rush for gold leading to an all-time high in gold prices. It is doubtful whether demonetisation can bring out any appreciable quantum of black money as such money is not usually kept in cash. It is invested in gold, diamonds, land, buildings, ownership flats, commodities or has been sent outside the country. The recent

raids on the residences and offices of film artistes, producers, and directors have not brought out any worthwhile quantity of cash. This shows that demonetisation will not be a solution to the problem.

The committee has in its final report recommended increasing use of the powers of search and seizures and establishment of a direct taxes settlement tribunal for unearthing black money. The settlement tribunal can prove effective and useful only provided the cases referred to it are decided promptly and fairly. The present machinery for settlement under Section 271(4A) of the Income Tax Act has failed to inspire confidence among taxpayers as the applications made for settlements to the Commissioners of Income-tax were in many cases kept pending for a long period and then summarily rejected. The settlement tribunal can help in inducing people to make disclosures of large amounts of unaccounted money which would otherwise be difficult to unearth. It cannot be denied that the disclosures made under Section 271(4A) have brought forward along with them a mine of information in respect of the *modus operandi* of evasion which helped the Income Tax Department in checking its continued practice. It would, therefore, be advisable to create a machinery for settlement which will bring revenue, reduce litigation and will enable the Department to concentrate on investigation in other suitable cases.

The committee has suggested many measures to check the emergence of black money. The punitive measures alone cannot stop the emergence of black money unless the causes which lead to this evil are also removed. The committee has rightly observed that it would be difficult to resist temptation to evade taxes when the marginal rate of income-tax is as high as 97.75% and the net profit on concealment can be as high as 4,300 per cent of after-tax income. With the additions made to the returned income on account of

disallowances of expenses, statutory or otherwise, or for estimated profit, the tax can conceivably exceed the returned income. Even without such an effective marginal rate of tax, taking income-tax and wealth tax together, tax may exceed 100 per cent of the income. The committee has, therefore, recommended a reduction in tax rates.

Mr. N. A. Palkhivala has said that the high rates can only reduce the gap between the poor and the honest rich, but not between the poor and the dishonest rich. The high rates of taxation has not only eroded the moral fibre but has made the people indifferent to cost consciousness and efficiency and has led to conspicuous consumption. It is, therefore, most desirable that the Government should heed the recommendation of the committee and bring down the rate of income-tax from 97.75 per cent with suitable reduction at the middle and lower levels also. Professor Kaldors and Mr. Boothalingam had both in their reports suggested reduction in rates of taxation but the Government has been too much preoccupied with the thought of increasing the revenue and has never thought seriously of reducing the rates and promoting savings and investments and thus boosting the economy. It is apprehended that the Government may accept only those proposals of the committee which will increase revenue, such as clubbing of income of minors with the parents, irrespective of the source of the income of the minor, higher rates of tax for Hindu undivided families and the minority's recommendation of treating a family as the unit for taxation.

The seminar of economists organised by the Government has suggested that a reduction in rates of taxation will not lead to checking of evasion as evasion is practised at not only the higher level but at all levels. Although it is true that evasion is practised at all levels, there is a difference of degrees and the suggested improvement in administration and the effective utilisation of punitive powers will not make it worth while at the lower levels to risk penalties and prosecution for tax evasion. Tax in a welfare State is bound to be progressive but it should not be made so stiff that it will kill all the initiative and drive of the person concerned.

In its crusade against tax evasion which is morally as well as legally wrong, the Government is serious thinking of bringing in measure

of reforming the very structure of taxation. This will have far-reaching consequences. Some of the proposals which are being contemplated are really very revolutionary and will mean heavier taxation. The Government is thinking seriously of clubbing the income of husband, wife and minor children and making a family as the unit of assessment. This will considerably reduce the savings in the hands of the people and will mean far higher rates of taxation than the present ones. The leakage of revenue through legal loopholes has continued unchecked. Such money cannot be categorised as black money because it is accounted money. It is only a split-up of income and the incidence of tax on the family members due to tax planning is lower. Such money is not doing harm to the economy as black money is doing.

The concept of taxable income has already been enlarged by the recent amendment making the windfall income from lottery, bets, horse races, etcetera, taxable. While there can be no objection in checking the technical loopholes which are not intended, fundamental changes in respect of the of taxation throwing new and substantial burden should not be made

when the rate structure is so high. It is not desirable to confuse tax evasion with tax avoidance. The revenue lost due to legal loopholes is subject to the discipline of the Government's measures. The pressing problem is not the leakage of revenue through legal loopholes but the unaccounted transactions and black money.

The most important problem facing the country is the boosting of the economy. The Government should, therefore, accept the recommendations of the Wanchoo Committee and establish a national development fund for encouraging voluntary savings for taxpayers other than companies and a reconstruction and stabilisation reserve fund for promoting expansion and development of companies and grant rebate for increased productivity and for increasing employment. The Government should also immediately announce the appointment of a Committee of Experts as suggested by the Wanchoo Committee to enquire into the utility of all existing controls, licensing and permit systems and suggest elimination of such of these as are no longer considered necessary.

There cannot be any valid objection in bringing discipline to commercial

and industrial working by introducing compulsory maintenance of accounts, compulsory audit and a uniform accounting year as suggested by the committee. To reduce social tension, it is desirable that ostentatious expenditure on consumption should be curtailed which is at present mostly being made out of black money. There is no need for this purpose to introduce the expenditure tax; the same purpose can be achieved by introducing a provision in the Income Tax Act itself enabling the income-tax authorities to tax the unexplained expenditure.

The working of the Income Tax Department also needs to be streamlined. Too much time of the assessing officer is lost in completing the small cases with the result that the Income Tax Officer has no time to go in depth in cases where he ought to devote time and correlate the cross-information obtained from various sources. It is necessary to inspire confidence among the small tax payers so that persons having small marginal income who are at present afraid of coming forward would feel proud in paying taxes by becoming assessee.

Should the Operations of Chit Funds be Controlled by a Central Law ?

(By a Special Correspondent)

Suitable provisions should be made to the effect that nobody other than a licensed body corporate should be allowed to conduct chit fund business. The Central Government should, therefore, consider enacting a uniform law for the entire country to control the activities of chit funds.

[N recent months there has been a spate of advertisements issued by various chit fund companies soliciting deposits and chit subscriptions from the members of the public. It is understood that they have been able to attract a very large number of subscribers,

particularly those in the middle and lower-income groups. Some serious allegations about their working are also in the air. It is in this context that a review of their working appears to be called for. A "chit fund" or "chitty" is a co-operative form of undertaking and has been in operation from time immemorial in the southern parts of India, more particularly in Kerala and Tamil Nadu. It provides services to its members, to investors (for the fruitful employment of their savings) and to borrowers (as a cheap source of financial assistance for the redemption of the existing debt or for the employment of funds in more profitable avenues such as financing purchase of houses and other properties).

In a chitty, a number of persons must agree to contribute a certain sum of money for a certain instalment and each instalment's collections would be disbursed to a particular member to be determined either by drawing lots or by auction. For the smooth functioning of the scheme, the chit subscribers must elect a member as a leader. The leader commonly known as foreman will be charged with the task of collecting subscriptions and disbursing prize money after deducting reasonable charges for the services rendered.

Thus, to establish a chit fund, a number of people must agree to trust the foreman with a fixed number of periodical deposits commonly known as subscriptions. The total sum of collections on each occasion is to be advanced to the prize-winning member against the security acceptable to the foreman. Such an advance is automatically amortised through the usual subscriptions, as a member, irrespective of whether he wins a prize or not, is required to pay the periodical subscriptions regularly as provided in the original deed of agreement.

When there are several persons desirous of securing a loan on a particular

occasion and an auction is held, a large number of members who may not be in need of the loan for the present may also bid in order to prevent the actual borrower from securing the loan at too low a rate of discount. The result of the auction is the declaration of the prize to the successful bidder. The person who offers to bid the highest amount (i.e., the discount) gets the prize. There is also a system of side auction whereby the foreman has the option of taking up the prize money himself and then relending the money to any member of the chit fund at a higher rate of interest or discount. The foreman is fully liable for recovery of the side chit.

As adequate or proper security is generally obtained before disbursing the prize money and as the dues from the prized subscribers comprising future subscriptions are payable within prescribed dates (in default of which they have to pay penal interest), the foreman should not normally experience any undue difficulties in realising the subscriptions. In an ideal chit no money should remain with the foreman as he is expected to disburse the periodical collections to a winning member on each occasion.

With the popularity of "chit fund", which started its march as a village co-operative form of financial transaction, it soon broke its village boundaries and started playing its rôle in larger arenas. By this time various self-styled chit organisers or foremen also appeared in the scene which included individuals, firms and bodies corporate. They started enrolling chit subscribers over a wide range through their numerous branch offices. To provide an wider appeal to the largest cross-section of society, they started chit schemes of various durations and denominations.

Attracted by the lucrative means of making money, there have been large-scale intrusions of unscrupulous persons too in the business of chit fund in the recent past. These persons employ various nefarious means to make money for their kith and kin and dupe the members of general public. Very often they do not serve proper notices to the subscribers in respect of the date, time and venue of drawing lots or holding auctions. Moreover the foreman devices such methods that most of the prizes are drawn, at the

initial stages, only by his relatives and friends at the cost of other subscribers. It has also been reported that on many occasions after paying the prizes to his own men, the foreman disappears to the dismay of a large number of general subscribers.

Yet another method of duping the public is to bungle with the security offered by the subscribers. Under the chit agreement, a foreman is to pay the prize amount to a subscriber only when the subscriber can offer a security acceptable to him. In case a prize is drawn by a person who is not his own man, the foreman generally makes several flimsy objections about the security offered by him. As a result the person concerned is bound to go in for side auctions and get the amount of the prize at a much higher rate of discount than was originally fixed by auction or by lot, as the case may be. There is also a wide range of allegations that foremen very often divert the fund so collected in various businesses conducted by them and any loss in such businesses brings in misfortunes, not for the foremen but for the general members.

The Banking Commission, which recently studied and reported on various aspects of banking operations and the activities of the non-banking financial intermediaries in the country, has also pointed out various irregularities observed in the working of the chit funds. It has, therefore, suggested that a unified code should be made for the operation and conduct of the chit fund business all over the country. It is, therefore, suggested that for the smooth functioning of the chit funds, suitable provisions should be made to the effect that nobody other than a licensed body corporate should be allowed to conduct chit fund business in the country.

There should also be a separate legislation covering chit fund business under which the chit funds should be licensed. In such circumstances, those companies will be under the effective surveillance of two authorities, viz., the Registrar of Companies under the Companies Act, and the Registrar of chits under the chit legislation. Moreover, to plug the diversion of funds to other businesses, it may be specifically provided by legislation that chit assets can be utilised only for meeting chit liabilities and that a separate set of accounts should

be maintained for chit business if the company engages itself in any other business.

At present, there are separate chit fund legislation only in the States of Kerala, Tamil Nadu and Mysore and the Union Territories of Delhi and Pondicherry. Since these State Acts are operative only within their own boundaries, certain chit funds have found it convenient to extend their tentacles to other States so as to avoid the restrictions imposed by these State enactments. Moreover, there are wide disparities among these State laws. A uniform law for the entire country is, therefore, the need of the day.

It is understood from a recent judgment of the Madras High Court that the chit transactions fall in the Concurrent List of the Constitution of India and as such, both the Central and State Governments can enact laws to regulate the chit business. One, therefore, can only hope that some urgent steps would be taken by the Central Government to enact such a

law so that the unwary public can be saved from the mischievous dealings of the so-called chit funds.

PEOPLE AND PERSONALITIES

Mr. H. P. Bhagat of Carew and Co. Ltd and Mr. D. B. Sethi of Harbertsons Ltd have been elected chairman and deputy chairman, respectively, of the Wine Spirit and Beer Association of India for the year 1972-73.

Dr. B. V. Bhoota has been elected president of the All-India Manufacturers' Organisation for the current year.

Mr. M. L. Apte and Mr. Pradeep Narang have been elected president and vice-president, respectively, of the Indian Sugar Mills Association for the year 1972.

Mr. S. K. Jhunjhunwala of Shalimar Rope Works Ltd and Mr. Sudhir Jalan of W. H. Harton and Co. Ltd have been elected president and vice-president, respectively, of the Indian Rope Manufacturers Association for the year 1972.

Training in Tourism : Role of the New Institute

(By a Special Correspondent)

The Government of India's decision to set up an Institute of Tourism is welcome. If the new Institute plays its rôle well, it will help the country to promote tourism in a big way.

THE Department of Tourism of the Government of India is planning to set up an Institute of Tourism. The details of the scheme are not yet available. But it is understood that the Institute will provide training in all aspects of the tourist industry on a regular basis. It is stated that the Institute will cover the needs of the various segments of the travel trade, such as hotels, travel agents, airlines, transport operators, guides, Government tourist organisations and other bodies. Its activities will include research in several problems of tourism. Its services will also be available for consultation. The Department of Tourism has been promised assistance from the International Labour Organisation and the United Nations for setting up the Institute.

The decision to establish the Institute is another indication of the eagerness of the Government of India to promote tourism in a systematic way. Many developed and developing countries are deriving substantial benefits from tourism which has now emerged as the world's largest and fastest growing industry. But India has not yet been able to attract tourists on a large scale. Only 300,995 tourists came to India in 1971, compared with 280,281 in 1970, an increase of 7.2 per cent. It is true that last year the flow of tourist traffic to this country was affected by

the Indo-Pakistani conflict. But even after allowing for this factor, it cannot be said that India is doing all that it should to maximise the earnings of foreign exchange from tourism. In this context, it will be worth while to consider to what extent the proposed Institute will help to give a boost to the promotion of tourism.

The main work of the Institute will be to provide training facilities to the personnel serving the tourist industry. At present such training is being given by the Department of Tourism by organising courses of three months' duration for tourist guides and refresher courses for approved guides and information assistants through its field offices. Language courses in French, German and Japanese are organised at the Indian Institute of Mass Communications, New Delhi, and the Max Muller Bhavan, Poona. Training courses are also provided by the Tata Training Centre, Poona, and the Administrative Staff College of India in Hyderabad. Besides, officers of the Central and State Tourist Departments avail themselves of the facilities provided by the International Centre of Tourist Studies in Turin, Italy, and by the United Nations' agencies. The Government of India perhaps feels that, in addition to these facilities, it is necessary to set up an institute so that proper training can be given on various aspects of tourism.

It is said that the Institute will also conduct research on tourism. But no amount of research studies will be of use to develop tourism unless the Government improves the infrastruc-

ture and provides foreign visitors with the basic amenities to make their stay comfortable. Therefore, the Government should see to it that the funds allotted for tourism are effectively spent and not frittered away on what is considered to be research work. For example, a survey was conducted by the Tourist Department in 1971 among the passengers transitting Palam airport in order to ascertain the reasons why a number of foreigners were bypassing India. The survey revealed that 68.4 per cent of the persons interviewed stated that they had no time to visit India during their current trips, 6 per cent had visited India previously, and 5.1 per cent were not interested. Do not such surveys seem superfluous and superficial? If tourists bypass India, it is obvious that either they have no time or not interested to visit this country. Was a survey required to prove this? It is hoped that the proposed Institute will study problems in depth and not try to establish facts which are already well known.

The Department of Tourism is also considering a proposal to introduce fellowships for a doctoral thesis in tourism at an Indian university. If this scheme proves useful, it will be extended to other universities in the country. In some European countries tourism is taught as a special subject in the universities. For example, the Zagreb University in Yugoslavia has set up a separate department to study tourism. In India also, it may be worth while to teach tourism in the universities. But, perhaps, this may be done with better results at a later stage when there is a real boom in India's tourist traffic and the universities are also better equipped to handle this new responsibility efficiently. Meanwhile, the Government would do well to start the Institute of Tourism at an early date and ensure that it does some useful work.

It is not known where the Institute is going to be set up. Darjeeling will be an ideal place to locate it. Darjeeling is a tourist centre of international fame. But unfortunately, in recent years, it has not been able to attract an increasing number of tourists due to various reasons. The Government of West Bengal should give proper attention to the improvement of the tourist facilities in Darjeeling, especially in regard to accommodation, transport, electricity and water supply. The State Government should also urge New Delhi to locate the Institute in Darjeeling. This will help to give a boost to tourism in the eastern region whose tremendous potential has received inadequate attention till now.

Prospect of More Unit Trust Investment in Equities Cheers Operators

TRADING on the stock markets this past week has continued to be characterised by restricted turnover and narrow fluctuations. With the pace-setter Dalal Street remaining unofficially closed till the last day of the week, the markets elsewhere have also preferred to mark time. While caution has been the keynote of trading, the general tone has been quietly steady. Net changes over the week have been small and they show a mixed pattern but gains have outnumbered the losses. While it is the scarcity of offerings which has contributed to the improved tone, selective support has also been in evidence. Perhaps the most important factor contributing to the improved sentiment is the general feeling that the recent Indo-Pakistani agreement will pave the way to peace and friendship between the two countries which in course of time will make possible a substantial cut in defence expenditure and enable them to devote much greater attention to programmes of economic development. The stock markets, however, have not allowed themselves to be carried away by the Simla accord as they do not expect any spectacular results in the very near future.

The week's corporate news has been quite encouraging. Tensile Steel, Tata Yodogawa, Kumardhubi Engineering, Binani Metals, Transformer and Switchgear, Tubes and Malleables, Velimalai and the Unit Trust of India—all these have had good news for their respective shareholders in one form or the other. The increase in the Unit Trust's income despite substantially lower sales of units during the year ended June 1972 reflects largely the improved performance of the corporate sector during the year. And the stock markets have reason to feel pleased with the statement of the Unit Trust chairman, Dr. James Raj, that the Trust will be steadily stepping up its investment in equity shares raising its proportion from the present level of 44 per cent to 60 per cent over the next five years. The markets will thus be assured of larger institutional support in future.

Sentiment has also been aided by the marked improvement in the outlook for *kharif crops* following the rapid and encouraging progress of the

south-west monsoon. Some of the more recent official statements have been helpful from the viewpoint of the stock markets. There have been hints that the joint sector concept envisages a more liberal approach towards units coming up under the purview of State Governments. The Central Minister for Company Affairs, Mr. K. V. Raghunath Reddy, has hinted at several "meaningful changes" in the company law. Although trading sentiment has improved a little, the market is undecided about its next major move. This is because it has still to reckon with a number of uncertainties in regard to the Cabinet reshuffle and the Government's new industrial policy expected to be announced shortly. The markets may like to mark time until these uncertainties are cleared.

Gilt-edged securities have remained dull this past week and the volume of turnover has been restricted. The 3 per cent Conversion loan 1986 is quoted at Rs. 59.95. The State Government loans have received selective support. Turnover has remained restricted.

The Calcutta stock market has been quietly steady this past week. But turnover has remained restricted because operators are reluctant to extend their commitments in view of various uncertainties. The signing of the Simla summit agreement, the prospect of resuming U.S. aid to India and the West Bengal Government's effort to revive industrial activity have improved the outlook for the stock market. Among engineering shares, Kumardhubi, Escorts and Guest Keen Williams have improved. Among jute shares, Bally, Birla and Kinnison have been better. Among coal shares, Pench Valley and West Bengal have been transacted. Among paper shares, Ballarpur and Orient have been firm. Among miscellaneous shares, G.E.C., Mohan Meakin Breweries, Union Carbide, India Steamship, Metal Box and Electric Construction have been supported. Among tea shares, Sarugaon and Ranicherra have been transacted.

Trading on the Bombay Stock Exchange has remained unofficially suspended for yet another week because

of the strike by the employees of stockbrokers. Very little activity has been reported in *kerb* and the general tone appears to be steady. The 26-day strike—perhaps the longest in the history of the Bombay Stock Exchange—has been called off at the intervention of Maharashtra's Labour Minister, Mr. N. M. Tidke.

The Madras stock market has remained quiet this past week. Among planting shares, Consolidated Coffee and Sheveroy have met with business. Nelliampathy and Midland have attracted enquiries. Cochin Malabar and Be Be Rubber have, however, met with business at lower rates. Textile shares have shown little change, although investment support has been meagre. Madura, Travancore Rayon and South India Viscose have been done. Loyal Textile and Anglo-French

Unit Trust of India Raises the Dividend Again

THE Unit Trust of India has raised its dividend for the year ended June 1972 from 8 per cent to 8.25 per cent. It is for the fourth year in succession that the distribution is being stepped up. The proposed increase in dividend is part of the Trust's three-pronged drive to make units attractive and reverse the tide of declining sales which has been in evidence over the past two years. Aggregate sales of units which had touched a high of Rs. 22.83 crores in 1969-70 dropped to Rs. 18 crores in 1970-71 and still further to Rs. 15 crores last year. Applications for units declined from 61,500 in 1970-71 to 58,558 in 1971-72.

Despite the decline in sales from Rs. 18 crores to Rs. 15 crores, the Trust's aggregate income increased during the year from Rs. 8.41 crores to Rs. 9.62 crores. After the allocation of this income between the initial capital contributors and the unitholders and allowing for expenses chargeable to unit capital in accordance with the provisions of the U.T.I. Act, the net income allocated to unitholders amounted to Rs. 8.72 crores, against Rs. 7.58 crores in the previous year. Apart from the inducement of a higher dividend, the Trust has announced a cut in the

margin between the sale and repurchase prices of units from 4 per cent to 3 per cent (from 40 paise to 30 paise) and reduced the special offer price for the month of July to Rs. 10.45, against Rs. 10.60 for July 1971. These measures are aimed at boosting the sale of units. An important factor behind the decline in sales of units over the past two years is that investment in units of the U.T.I. no longer enjoys any special tax relief; the tax exemption in respect of income up to Rs. 1,000 from investment in units was abolished under the Finance Act, 1970. The tax exemption limit has been raised from Rs. 1,000 to Rs. 3,000 but now income from other specified categories of investment, such as dividends and interest on bank deposits, have been clubbed together with income from units.

The increase in the Trust's income, despite a decline in aggregate sales of units, has been attributed to the higher income from the underwriting business and enhanced profits from sales of investments. The Trust repurchased during 1971-72 units of the value of Rs. 2.59 crores, against Rs. 3.19 crores in the preceding year. At the end of June 1972, units sold and outstanding with the public

amounted to Rs. 104.65 crores, with the number of unitholders totalling over 425,000. The total amount re-invested under the reinvestment plan was Rs. 69.30 lakhs by 18,000 unitholders, against Rs. 50.44 lakhs by 15,700 unitholders in 1970-71. Sales of units under the children's gift plan were Rs. 46.28 lakhs, against Rs. 56.32 lakhs in 1970-71.

The U.T.I. chairman, Mr. James S. Raj, has indicated that in order to augment income, the trustees have decided gradually to increase the proportion of Trust's investments in equities. In the next five years, this proportion is expected to rise from the present level of 44 per cent to 55 per cent or 60 per cent. At present investment in debentures represents nearly 43 per cent of the overall investment and preference shares account for another 13 per cent. The Trust will also be taking a more lively interest in buying and selling securities in the market to raise its income. The chairman has visualised better prospects for the Trust as investment opportunities continue to increase and the private corporate sector will keep growing over the year, the expanding rôle of the public sector notwithstanding.

STRAW PRODUCTS

Another Prosperous Year

ADDRESSING the annual general meeting of the Straw Products Ltd recently, the chairman, Mr. Hari Shankar Singhania, said that the Company had marked another year of successful operation in 1971. (A fuller version of the speech was published in last week's issue of *Capital*.) Sales and other income have reached a record figure of Rs. 9.09 crores—an increase of 18.41 per cent over the 1970 level. Pre-tax profits are higher at Rs. 1.36 crores. The gross block stood at Rs. 14.10 crores at the end of the year, showing an increase of Rs. 4.55 crores over the previous year. The Company's production was higher at 36,380 tonnes, against 34,626 tonnes. A taxable dividend of 13 per cent, against 12 per cent, has been proposed.

The chairman said that the increase in production of paper mills was mainly contributed by the output of the M.G. paper machine which was commissioned towards the end of 1970. He referred to the Government levy and other servicing charges which are rising steadily. Wages and salaries and costs of various materials and

services have also risen substantially. Inevitably, there was a considerable increase in the cost of production which was only partially met by the increase in the price of paper. There had been considerable delay in delivery of the indigenous equipment for the third paper machine from Utkal Machinery Ltd. Efforts are being made to ensure that the third paper machine is commissioned during the third quarter of this year which will add an annual manufacturing capacity of 7,500 tonnes of M.F. tissues and specialties to the range of the Company's products. Orders for plant and machinery to manufacture 4,500 tonnes of coated paper have already been placed on an indigenous machinery manufacturer. Negotiations are going on with financial institutions for loan and the Government has been requested to issue the requisite capital goods import licence. The Company has adopted progressive labour relation policies and consistently endeavoured to improve the service conditions of all employees.

BENGAL PAPER

Scarcity of Raw Materials

AT the annual general meeting of the Bengal Paper Mill Company Ltd held recently in Calcutta, the chairman, Mr. N. D. Bangur, said that the Company's production for the year 1971 was 38,208 tonnes, against 40,251 tonnes. (A fuller version of his speech was published in last week's issue of *Capital*.) The chairman said that the decrease in production had been due to reasons beyond the management's control. The Company's sales realisation was Rs. 9.18 crores—almost the same as in the previous year. "SSS" map litho printing, which is the Company's special variety of paper, has gained much popularity and the demand for it is increasing steadily. Mr. Bangur said that the supply position of raw materials was far from satisfactory. The scarcity of bamboo, the essential raw material, is causing great concern. The State Government should find out an immediate solution for easing the shortage. The situation is particularly crucial for West Bengal since raw materials from neighbouring States are not allowed to move freely into this State. The introduction of the "pre-payment freight scheme" is another unhealthy move retarding the growth of the paper industry.

The Government of India has granted an industrial licence to the Company for increasing its production capacity by 15,000 tonnes a year. The

Company's foreign exchange requirement of Rs. 87.50 lakhs has also been approved. Arrangements for the installation of a new paper and board machine purchased from an indigenous source are in progress and it is hoped that it will be commissioned by September this year.

INDO-BURMA PETROLEUM

All-round Progress

IN his chairman's speech at the annual general meeting of the Indo-Burma Petroleum Company Ltd held recently, Mr. Kamaljit Singh, said that the Company had continued to make all-round progress during 1971. (A fuller version of Mr. Singh's speech was published in last week's issue of *Capital*.) Mr. Singh said that the association of the Company with the Indian Oil Corporation commencing from January 1970 had helped improve the working results. The Company's sales have increased from 279,000 tonnes in 1970 to 371,000 tonnes in 1971. The profit, before tax, has improved substantially from Rs. 53.77 lakhs to Rs. 74.66 lakhs. A total dividend of 18 per cent, against 17 per cent, has been recommended for 1971. As compared with 1970, sales of automotive fuels have risen by 39 per cent, and sales of all products by 32.8 per cent. A turnover of Rs. 31.5 crores has been achieved. Besides consolidation and progress in the oil trade, the Company has also made plans for development in other fields. The Company has entered into a technical collaboration agreement with a Belgian firm in March 1972 for the manufacture of sophisticated bottle filling equipment used in the aerated water,

soft drink and beer industries. The Company's retail outlets have been renovated in 1971.

GUJARAT STEEL TUBES

Setback Suffered

GUJARAT Steel Tubes has suffered a setback in its working for the 15-month period ended March 1972. With the change in the accounting period, the results are not strictly comparable with those of the previous year. But the decline in margins indicates the deterioration in performance. Sales during the 15-month period (1971-72) are placed at Rs. 5.67 crores, against Rs. 4.59 crores during the previous 12 months of 1970. But the gross profit is appreciably lower at Rs. 58.61 lakhs, against Rs. 83.94 lakhs in 1970. After providing Rs. 19.57 lakhs (against Rs. 12.60 lakhs) for depreciation, Rs. 1 lakh (against Rs. 3.70 lakhs) for development rebate reserve and Rs. 15 lakhs (against Rs. 35.32 lakhs) for taxation, the net profit amounts to Rs. 23.04 lakhs, against Rs. 32.32 lakhs. The dividend proposed at Rs. 12.50 a share for the 15-month period, against Rs. 10 a share paid for 1970, will absorb Rs. 15 lakhs.

The setback in working is attributed to labour trouble and the shortage of raw materials. The Company's plant could not work to the rated capacity due to the acute shortage of imported steel in the earlier part of 1971 and the working during the latter part was adversely affected by labour trouble. The steep rise in the prices of rolled steel strips and zinc

MACNEILL AND BARRY : PROFIT RISES

THE pre-tax profit of Macneill and Barry Ltd has amounted to Rs. 26.45 lakhs for the year ended December 1971, against one of Rs. 19.27 lakhs in the previous year, after providing Rs. 10.55 lakhs (against Rs. 11.25 lakhs) for depreciation. After providing for a dividend on the preference share capital and other required appropriations, the balance available is such that the directors are unable to recommend a dividend on the ordinary share capital. A sum of Rs. 2.99 lakhs has been transferred from excess provision for the capital gains tax in respect of

previous years. Important allocations include 10.48 lakhs (against Rs. 10 lakhs) for taxation, Rs. 12.57 lakhs (against Rs. 3.31 lakhs) for capital reserve, Rs. 96,400 (against Rs. 33,600) for development rebate reserve and Rs. 8,700 (against Rs. 33,600) for development allowance reserve. After making other adjustments there remains a balance of Rs. 10,434 which is proposed to be carried forward, against Rs. 19,835 brought in. Sales have amounted to Rs. 14.12 crores (against Rs. 14.52 crores).

affected the Company's profitability and exports.

INDIAN HOTELS

Profit Declines

INDIAN Hotels Company has reported an increase of 13.5 per cent in its turnover during the year ended March 1972—from Rs. 2.71 crores to Rs. 3.08 crores. And this increase has been achieved despite a loss of business of over Rs. 10 lakhs on account of the Indo-Pak conflict which seriously affected the flow of foreign tourists, and because of a number of rooms remaining out of commission under the renovation programme. The gross profit, however, is slightly lower at Rs. 30 lakhs, against Rs. 30.43 lakhs in the preceding year. This is attributable to heavy interest and other charges incurred on the programme of expansion and renovation; interest charges alone demanded about Rs. 7 lakhs more at Rs. 19.52 lakhs. As forecast in the prospectus, the equity dividend is being skipped.

After providing Rs. 20.54 lakhs (against Rs. 18.13 lakhs) for depreciation, Rs. 2.92 lakhs (against Rs. 3.12 lakhs) for development rebate reserve, and Rs. 2.80 lakhs (against Rs. 4.50 lakhs) for taxation, the net profit for 1971-72 amounts to Rs. 3.74 lakhs, against Rs. 4.68 lakhs in the preceding year. The entire net profit has been transferred to general reserve out of which the preference dividend absorbing Rs. 3.73 lakhs (against Rs. 63,250) will be paid. The Company's gross block has increased over the year from Rs. 3.98 crores to Rs. 6.97 crores, reflecting the progress of the renovation and expansion programme. The programme of development of a chain of hotels in collaboration with local associates is getting into its stride. The management has decided to add a beach hotel in Goa to the prospective chain of hotels. This hotel is expected to be opened in the winter of 1973-74. The proposal for a large hotel in Delhi is still at the discussion stage. The Taj Intercontinental is scheduled to be opened this month. This will help improve the Company's profitability.

TENSILE STEEL

Results Impress

TENSILE Steel has turned out excellent results for the year ended March 1972, with production, sales

and profits setting new records. The equity dividend has been raised from 12 per cent to 15 per cent. With the improved availability of indigenous as well as imported raw materials, the Company was able fully to utilise its installed capacity during the year. Production increased from 8,241 tonnes in 1970-71 to 10,320 tonnes in 1971-72 and the volume of sales was higher at 10,926 tonnes, against 7,777 tonnes. The Company's turnover has risen by about 50 per cent from Rs. 2.04 crores to Rs. 3.07 crores and so has the gross profit from Rs. 39.43 lakhs to Rs. 58.67 lakhs.

After providing Rs. 11.13 lakhs (against Rs. 6.07 lakhs) for depreciation, Rs. 9.80 lakhs (against Rs. 51,000) for development rebate reserve and Rs. 15 lakhs (against nil) for taxation, the net profit for 1971-72 amounts to Rs. 24.75 lakhs, against Rs. 32.85 lakhs in the preceding year. The surplus of Rs. 24.70 lakhs (against Rs. 16.84 lakhs) has been transferred to general reserve out of which the proposed dividend absorbing Rs. 6.75 lakhs (against Rs. 5.40 lakhs) will be paid. The diversification project for the manufacture of fine wires (plain and galvanised) has been substantially completed; commercial production has already commenced. The expansion project also has made considerable headway. Facilities for the manufacture of 2,500 tonnes a year of primary products of the Company have been installed during the year.

CHEMOPULP TISSUES

Allotment of Shares

CHEMOPULP Tissues Ltd has approved the allotment of 120,000 shares to the applicants on the following basis: 100 per cent of the shares to all the applicants up to 350 shares; 350 shares each to the applicants for 400 to 500 shares; 400 shares each to applicants for 550 to 1,000 shares; 450 shares each to the applicants for 1,100 shares to 2,000 shares; and 550 shares each to the applicants for 2,050 shares and above.

BALMER LAWRIE

Loss Incurred

IN their latest report for the year ended December 1971, the directors of Balmer Lawrie and Co. Ltd

say that the Company suffered heavy losses during the year on account of the setback in its tea warehousing activities. There was also a sharp decline in the turnover of the tea buying department arising from the strike in the warehouses leading to the cancellation of several contracts. Another adverse factor was the full impact of the loss of several remunerative agencies. The Company has incurred a loss of Rs. 20.58 lakhs against a pre-tax profit of Rs. 23.64 lakhs, after providing Rs. 3.6 lakhs (against Rs. 4.15 lakhs) for depreciation. In view of the Company's losses, the board has not recommended the payment of any dividend. After transferring Rs. 18,800 (against Rs. 16,452) to development rebate reserve, the loss for the year is Rs. 20.77 lakhs which is proposed to be transferred to general reserve. Sales declined from Rs. 6.91 crores to 4.77 crores. The Company purchased 15,000 ordinary shares of the Bengal Flour Mills Co. Ltd from the Life Insurance Corporation of India for Rs. 5.03 lakhs. Subsequently these shares were sold at the best available price of Rs. 2.63 lakhs which resulted in a loss of Rs. 2.40 lakhs.

INDIAN OXYGEN

Supply of Liquid Oxygen

THE Hawker Siddeley Harrier, the world's first operational vertical take off and landing (V.T.O.L.) jet, is currently in India on a demonstration programme. The demonstration flight in India would not have been possible but for the special arrangement made by Indian Oxygen to supply liquid breathing oxygen that is specially needed for the aircraft. Every Harrier aircraft carries a five litre L.O.X. container which is usually filled on the airfield by specialised ground equipment. But as this is not available in India, arrangements have been made to fill this container from I.O.L.'s establishments with the help of specially prepared equipment.

UNITED BANK

Rural Campaign

UNITED Bank of India recently undertook an intensive rural publicity campaign in 24 Parganas (south) with the object of educating people in the use of banking facilities and encouraging growth of savings. In course of the campaign the audio-visual unit

of the bank moved from village to village in order to explain the banking facilities to people who were denied these before. The publicity unit organises exhibitions at *hats*, distributes leaflets and informative folders, plays on a recorded programme of songs and drama on the theme of savings and initiates group discussions. A series of group meetings with cross-sections of the people in rural areas has also been arranged. U.B.I.'s commitment and involvement in the economy of the district is steadily growing. The bank has at present 19 branches in 24 Parganas (south). Out of these, 11 branches were opened after bank nationalisation in July 1969. Of the 19 branches three are at urban centres, eight at semi-urban centres and the rest at rural centres.

MADRAS ALUMINIUM

Stress on Expansion

THE chairman of Madras Aluminium Co. Ltd, Mr. R. Venkateswamy, told the shareholders at the annual general meeting that it had been the policy of the Company to plough back its profits after paying reasonable dividends. The ploughed back profits have been utilised to increase the Company's productive capacity. The chairman said that the Company had made strong representations to the Government of India to reconsider its decision and allow the Company more remunerative prices. It is stated that the prices of all raw materials like calcined petroleum coke and pitch caustic soda have gone up considerably. The cost of raising steam is higher to the Company when compared with other aluminium producers, because it uses a costly fuel like furnace oil. The chairman said that technical innovation and increased production with diversification alone could improve the working of the Company in the coming years. In view of this the directors have been going ahead with the expansion programme.

SOUTH INDIA VISCOSE

Expansion Plan

AT the annual general meeting of South India Viscose Ltd, the Chairman said that the Company had obtained a letter of intent for installing a polynosic staple fibre plant. Orders for the plant and machinery

required for this expansion are expected to be placed shortly. One significant feature is that most of the equipment will be indigenously procured or fabricated with the drawings provided by the collaborators. The plant will replace substantially the import of Egyptian cotton. It is also pointed out that the capacity of the pulp plant is only 60 tons a day which does not make it an economic unit. So the Company has made an application to the Government of India to increase its capacity. As the future of man-made fibre is bright, the need for encouragement and assistance from the Government has been emphasised by the chairman. It is felt that the working of the Company will be encouraging in future years, and the expansion programmes will be carried out by maximising the utilisation of indigenous equipment and with minimum borrowings.

SOOM TEA

A Bad Year

THE Soom Tea Co. Ltd has incurred a loss of Rs. 92,413 for 1971, against a profit of Rs. 44,211 in the previous year, after providing Rs. 1.10 lakhs (against Rs. 92,981) for depreciation and Rs. 8,400 (against Rs. 600) for development rebate reserve. In view of the poor performance, the ordinary dividend has been skipped. The Company had paid a taxable ordinary dividend of 5 per cent in the previous year. The total crop has amounted

to 151,859 kilograms (against 152,922 kilograms) and the average sale price has declined from Rs. 14.56 to Rs. 13.29 a kilogram. The 1972 crop is estimated at 155,000 kilograms at a cost of Rs. 12.95 a kilogram.

LEDO TEA

Better Results

IN their latest report for 1971, the directors of Ledo Tea Company Ltd say that trading results show an improvement, compared with those of the previous year, and this is attributable to an increased crop and also a better sale price obtained for the garden's produce. The Company has made a pre-tax profit of Rs. 2.53 lakhs, against one of Rs. 1.86 lakhs, after providing Rs. 1.92 lakhs (against Rs. 1.47 lakhs) for depreciation. The taxable ordinary dividend of 10 per cent has been maintained, absorbing Rs. 65,000. This offers a yield of 11 per cent at the present price of Rs. 9.12 a share of Rs. 10 each. Allocations include Rs. 1.65 lakhs (against Rs. 1.15 lakhs) for taxation, Rs. 7,000 (against Rs. 6,500) for development allowance reserve, Rs. 9,000 (against Rs. 3,000) for development rebate reserve and Rs. 70,000 (against Rs. 55,000) for revenue reserve. The total crop harvested was 436,051 kilograms (against 523,000 kilograms) and the average price realised was Rs. 5.93 (against Rs. 5.30) a kilogram. The 1972 crop is estimated at 430,000 kilograms at an outlay of Rs. 27.78 lakhs.

BINNY : PROSPECTS IMPROVE

THE performance of Binny Ltd for the year ended December 1971 has worried its shareholders. The heavy loss in working, including the brought-forward deficit, has to be wiped out before the Company can resume the payment of dividend. The passing of even the preference dividend for the year 1971 reflects how difficult has been the Company's working. One encouraging feature is that the Company's performance has since improved. At its annual general meeting, the chairman, Mr. N. S. Bhat, told the shareholders that the Company made an encouraging start in 1972. The improvement

in its working, which was visible during the last quarter of 1971, has been maintained so far during the current year. One big advantage has been the reasonable price level of cotton. Mr. Bhat expects that the results for 1972 will be satisfactory provided all the units of the Company work uninterruptedly and provided no additional levies are imposed. On the question of paying dividend on ordinary shares it is pointed out that this can be considered only after the carried-forward deficit has been wiped out and the Company's obligations under the debenture trust deeds have been met.

STANDARD BATTERIES

Sales and Profit Rise

STANDARD Batteries has reported improved results for the year ended June 1971. Sales have risen from Rs. 5.41 crores to Rs. 6.41 crores and the gross profit has gone up from Rs. 25.63 lakhs to Rs. 29.45 lakhs. The dividend has been maintained at 10 per cent. After providing Rs. 16.64 lakhs (against Rs. 18.11 lakhs) for depreciation, Rs. 2.14 lakhs (against Rs. 4.68 lakhs) for development rebate reserve and Rs. 6.50 lakhs (against Rs. 1.50 lakhs) for taxation and after making certain adjustments, a sum of Rs. 2.25 lakhs has been transferred to general reserve. The proposed dividend will claim Rs. 8.20 lakhs and will be paid out of general reserve.

STATE BANK

New Local Head Offices

THE State Bank of India will be serving the people of Bihar and Madhya Pradesh better by meeting their growing banking needs more promptly. This will be possible through the establishment of two new local head offices, one in Patna and the other in Bhopal. The former has been inaugurated by Mr. Kedar Pandey, Chief Minister of Bihar, on 1st July, and the latter will be inaugurated by Mr. P. C. Sethi, Chief Minister of Madhya Pradesh, later this month. This is part of the bank's programme to decentralise its administration progressively, and thus be able to give closer attention to local economic problems.

Under the direct authority of each local head office, all types of banking services will be made available to the people of the region served by it. This, it is hoped, will contribute towards quickening the pace of progress of that region, especially by encouraging and promoting the growth of small-scale industries, agriculture and small business.

BLUE STAR

Export Award Won Again

BLUE Star Ltd has won, for the second successive year, the Engineering Export Promotion Council's award for outstanding export performance during 1970-71 for airconditioning and refrigeration equipment. The Company is stepping up its export

drive during the current year in the markets of Africa, the Middle East and south-east Asia, where Blue Star products traditionally face fierce competition from those manufactured in the U.S.A., Japan and Europe.

HIND RECTIFIERS

Shareholders Rewarded

HIND Rectifiers has raised the dividend for the year ended March 1972 from 8 per cent to 12 per cent. This follows an impressive improvement in the Company's performance during the year. Sales have gone up by about 90 per cent from Rs. 1.14 crores to Rs. 2.15 crores and the gross profit has shot up from a mere Rs. 6.23 lakhs to Rs. 25.93 lakhs. The ratio of profit to sales has improved from around 5.5 per cent to 12 per cent. After providing Rs. 4.39 lakhs (against Rs. 3.84 lakhs) for depreciation, Rs. 1.26 lakhs (against Rs. 29,636) for development rebate reserve and Rs. 12.25 lakhs (against Rs. 1.74 lakhs) for taxation and after some adjustments, the surplus of Rs. 7.69 lakhs has been transferred to general reserve out of which the proposed dividend amounting to Rs. 3.60 lakhs (against Rs. 2.40 lakhs) will be paid.

S.L.M.-MANEKLAL

Better Results

S.L.M.-MANEKLAL has reported considerably improved results for the year ended March 1972 and the dividend has been maintained at 15 per cent on the increased capital resulting from a one-for-five bonus issue. Sales at Rs. 2.45 crores show an increase of 14.4 per cent over the 1970-71 figure of Rs. 2.14 crores and the gross profit is up by 15.5 per cent from Rs. 55.12 lakhs to Rs. 63.68 lakhs. After providing Rs. 18.72 lakhs (against Rs. 16.36 lakhs) for depreciation, Rs. 2.92 lakhs (against Rs. 2.19 lakhs) for development rebate reserve and Rs. 24.50 lakhs (against Rs. 20.40 lakhs) for taxation, the net profit for 1971-72 amounts to Rs. 17.54 lakhs, against Rs. 16.17 lakhs in the preceding year. After adjustments, the surplus of Rs. 16.93 lakhs (against Rs. 16.75 lakhs) has been transferred to general reserve out of which the proposed dividend will be paid.

The current year holds out the promise of further improvement in the Company's performance, with sales estimated to rise to around Rs. 3.25

crores. Sales in the first three months (April to June) are placed at Rs. 55 lakhs, against Rs. 33 lakhs in the same period last year. The Company proposes to spend about Rs. 25 lakhs on its various expansion plans. The prototype of Kautex-Blow moulding machine has been prepared and is under testing. Commercial production of this machine is expected to start shortly. An industrial licence for the manufacture of plastic injection moulding machines has been received. A technical collaboration agreement with Toshiba of Japan is under consideration of the Government. The manufacture of compressors for railways in collaboration with Brown Boveri will start by the end of this year. A combined compressor-cum-vacuum pump has been developed for printing machines.

SESHASAYEE INDUSTRIES

Prospects Improve

THE chairman of Seshasayee Industries Ltd, Mr. S. Narayanaswamy, told the shareholders at the annual general meeting that he was aware of the disappointment caused to the shareholders by the working results of the Company for 1971. The Company's working was badly affected by a prolonged spell of labour unrest that preceded the strike. The Company was able to achieve the anticipated increase in production only in the last month of the year. The chairman referred to the past working of the Company, mentioning the many difficulties through which it had been passing. The chairman was, however, optimistic about the Company's outlook for the current year. It is stated that production and sales during the first five months of the current year are encouraging. The production was to the tune of Rs. 99 lakhs and sales amounted to Rs. 92 lakhs. Of this, about 20 per cent represents new products. This compares favourably with the sales figure of Rs. 1.58 crores for the whole of the previous year. The production during the remaining seven months of the year is expected to amount to Rs. 140 lakhs.

LAKSHMI MILLS

Dividend Cut

DUE to a decline in profit for the year ended March 1972, the directors of Lakshmi Mills Company Ltd have recommended a lower dividend of 10 per cent, against 12 per cent paid

for the previous year. The gross profit, before depreciation, amounts to Rs. 75.57 lakhs (against Rs. 83.78 lakhs). Provision for depreciation amounts to Rs. 40.16 lakhs (against Rs. 30.31 lakhs). Development rebate accounts for Rs. 10.45 lakhs (against Rs. 8.92 lakhs). Provision for taxation is smaller at Rs. 11 lakhs (against Rs. 21 lakhs). Transfer to general reserve is Rs. 11.27 lakhs (against Rs. 13.70 lakhs). A sum of Rs. 5 lakhs (same) is transferred to debenture redemption reserve. The dividend will be paid out of general reserve. Sales for the year amounted to Rs. 14.27 crores (against Rs. 13.21 crores).

COROMANDEL FERTILISERS

Steady Progress

THE chairman of Coromandel Fertilisers Ltd, Dr. Bharat Ram, gave a comprehensive review of the opera-

tions of the Company at its annual general meeting. The marked improvement in the profitability of the Company, according to the chairman, reflects its steady and progressive growth during the last four years. Many of the inhibiting factors affecting production have been considerably minimised. What is more, capacity utilisation has been steadily improving and the management is finding ways and means to achieve higher targets. Although the Company's products have been well received in all the major States in the country, the shortage of wagons affected the timely movement of goods. In the circumstances only 55 per cent of the Company's products could be moved by uncovered wagons.

Commenting on two significant and interrelated factors—profitability and price reduction—the chairman noted that the Company faced its own problems, besides extraneous factors. It is

noted that in the first two operating years, production was seriously hampered by unstable power and interrupted water supply. Sales were low due to excessive imports and also due to difficulties in getting a sophisticated product accepted. Dr. Ram referred to the fact that the Company primarily produced phosphatic fertilisers, while the Indian market had been used to a nitrogenous mixture or straight nitrogen like urea. As for expansion, it is said that the preliminary negotiations on the technical and financial aspects of the phase of expansion were deferred in the light of the ammonia plant's performance last year. The directors felt that the expansion plan required to be reassessed and revised. Fresh technical studies on the ammonia, phosphoric and sulphuric acid plants are under way.

N.S.E.

Results Improve

THE working results of New Standard Engineering Co. for the year ended March 1972 show a fair improvement over the previous year's performance. Sales have increased from Rs. 4.15 crores to Rs. 4.89 crores and the gross profit from Rs. 37.49 lakhs to Rs. 42.07 lakhs. The dividend has been kept at 11 per cent. After providing Rs. 16.94 lakhs (against Rs. 15.84 lakhs) for depreciation, Rs. 2.44 lakhs (against Rs. 57,000) for development rebate reserve and Rs. 5.15 lakhs (against Rs. 3.50 lakhs) for taxation and after some adjustments, the surplus of Rs. 19.07 lakhs (against Rs. 17 lakhs) has been transferred to general reserve. The equity and preference dividends absorbing Rs. 11.91 lakhs will be paid out of general reserve. The Company continued to book business at a satisfactory rate and it had orders of over Rs. 5 crores in hand. During the year, the Company's exports amounted to over Rs. 60 lakhs.

SOUTH INDIA SHIPPING

Profit Declines

THE working of South India Shipping Corporation Ltd for the year ended December 1971 has resulted in a lower profit of Rs. 176.97 lakhs, after providing depreciation of Rs. 120.40 lakhs. This compares with the previous year's profit of Rs. 218.61 lakhs, after providing depreciation of Rs. 113.80 lakhs. Adding to the year's profit a sum of Rs. 6.38 lakhs, being

OPPORTUNITIES FOR OVERSEAS CONTRACTS

INTERESTING international bid invitations from the developing countries of Asia and Africa have been received in the Directorate of Exhibitions and Commercial Publicity, Ministry of Foreign Trade, during the week ended 24th June, 1972. The names of the tender inviting authorities with respective commodities and closing dates are given below.

Algeria: Algeria State Enterprise for Construction Material, Algiers; equipment for brick-cum-tile work; 30th July, 1972; Ministry of Information and Culture, Algiers; wood work machine and accessories; 15th July, 1972. **Algerian Television Radio Diffusion Organisation,** Algiers; photographic, sound and film equipment; 31st July, 1972. **Burma:** Ministry of Defence, Rangoon; pile driving machine; 18th July, 1972. **Myamma Bawdwin Corporation,** Rangoon; spares for vehicles; 15th July, 1972. **Greece:** Ministry of National Economy, Athens; construction of ground water development project; 17th July, 1972. **Hongkong:** The Government Supplies Department, Hongkong; surgical dressings; 28th July, 1972; Controller of Stores, Hongkong; cotton drawn sheets; 28th July, 1972; unbleached calico; 4th August, 1972. **Libya:** Electricity Board, Tripoli; wooden poles; closing date not indicated. **Malawi:** The Government Medical Stores,

Blantyre; surgical dressings; 27th July, 1972. **Malaysia:** Pengraph Parit dan Taliayer Negari, Ipoh; lifting mechanism, 10th July, 1972. **Ministry of Health, Petaling Jaya;** laboratory apparatus; 25th July, 1972. **Syrian Arab Republic:** The Housing Corporation, Damascus; financing and constructing housing units; 31st August, 1972. **Thailand:** The Metropolitan Electricity Authority, Bangkok; distribution substation; 30th August, 1972. **Electricity Generating Authority of Thailand,** Bangkok; main control board equipment; 28th August, 1972. **Turkey:** P.T.T. Genel Mudurluga, Ankara; function generators; 17th July, 1972. **Karayolli Mudurluga,** Ankara; machine tools; 17th July, 1972. **Azot Sanayil T.A.S.,** Ankara; nitrogen compressor; 18th September, 1972. **Basbakanlik,** Ankara; printing plant equipment; 29th July, 1972. **Devlet Su Isleri Genel Mudurluga,** Ankara; fuel dispensing pump; 31st July, 1972; photographic supplies; 1st August, 1972; radio spares; 2nd August, 1972; extensometer; 4th August, 1972; electric motors; 7th August, 1972; cable; 9th August, 1972; thermograph; 10th August, 1972; tungsten carbide insert; 11th August, 1972. **Uganda:** Ministry of Agriculture, Kampala; construction materials; 15th July, 1972. **Zambia:** Central Supply and Tender Board, Lusaka; duct, plating thick wall; 21st July, 1972; dog licence badges, vaccines and sera; 28th July, 1972.

receipts relating to prior years and provisions no longer required, there is a total of Rs. 183.35 lakhs. After deducting from this a sum of Rs. 1.96 lakhs, being prior years' expenses written off and after transferring Rs. 110 lakhs (against Rs. 111.50 lakhs) to development rebate reserve, there is a profit balance of Rs. 71.39 lakhs. With Rs. 44,179 brought forward, there is a total available surplus of Rs. 71.83 lakhs. Out of this, the interim dividend of 10 per cent absorbed Rs. 10 lakhs. A sum of Rs. 61.50 lakhs (against Rs. 105 lakhs) is transferred to general reserve. The balance of Rs. 33,090 is being carried forward.

The interim dividend was paid on the then existing paid-up capital of Rs. 1 crore. Subsequently, the paid-up capital of the Company was raised from Rs. 1 crore to Rs. 2 crores as at 31st December, 1971, by converting the 50 per cent partly paid shares into fully paid shares, for which purpose a sum of Rs. 1 crore was transferred from general reserve to the share capital account. The directors have now recommended a final dividend of 10 per cent on the increased equity capital of Rs. 2 crores. This will be paid out of general reserve absorbing Rs. 20 lakhs. There is no income-tax liability for the Company in respect of its profit for the year.

TRAVANCORE CEMENTS

Sales Up but Profit Down

TRAVANCORE Cements Ltd has maintained the equity dividend of 6 per cent for the year ended December 1971, although the profit is lower at Rs. 7.07 lakhs, after providing depreciation of Rs. 2.46 lakhs. This compares with the previous year's profit of Rs. 8.40 lakhs, after providing depreciation of Rs. 2.72 lakhs. Adding to the year's profit a sum of Rs. 27,253 brought forward, and Rs. 7,444 being excess provision, there is a total surplus of Rs. 7.42 lakhs. Out of this, the dividend claims Rs. 3 lakhs. A sum of Rs. 7,186 (against Rs. 6,684) is transferred to rehabilitation reserve. Provision for taxation amounts to Rs. 3.75 lakhs (against Rs. 4.20 lakhs). The balance of Rs. 59,556 is being carried forward. Sales amounted to Rs. 111.38 lakhs (against Rs. 107.39 lakhs).

VAIKUNDAM RUBBER

Same Dividend

THE directors of Vaikundam Rubber Co. Ltd have maintained the total equity dividend at 15 per cent for the year ended December 1971. The profit

for the year amounts to Rs. 5.65 lakhs, after providing depreciation of Rs. 49,704 and taxation of Rs. 2.20 lakhs. This compares with the previous year's profit of Rs. 4.99 lakhs, after providing depreciation of Rs. 37,713 and taxation of Rs. 2.27 lakhs. Adding to the year's profit of Rs. 5.65 lakhs a sum of Rs. 34,279 being excess tax provision, there is a total surplus of Rs. 5.99 lakhs. Out of this the interim dividend of 7½ per cent absorbed Rs. 1.85 lakhs and the proposed final dividend of 7.5 per cent claims Rs. 1.85 lakhs. A sum of Rs. 24,881 (against nil) is transferred to gratuity reserve. Capital reserve gets Rs. 1.18 lakhs (against Rs. 4,942) and general reserve Rs. 87,102 (against Rs. 1.42 lakhs).

McDOWELL

Dividend Maintained

THE directors of McDowell and Co. Ltd have maintained the equity dividend at 7½ per cent for the year ended December 1971. The profit for the year is Rs. 9.19 lakhs, after providing Rs. 11.78 lakhs for depreciation and Rs. 12.19 lakhs for taxation. This compares with the previous year's profit of Rs. 10.56 lakhs, after providing Rs. 12.12 lakhs for depreciation and Rs. 6.40 lakhs for taxation. Adding to the year's profit a sum of Rs. 1.66 lakhs, being refund of tax and excess tax provision and also after making small adjustments in regard to unclaimed dividends and doubtful debts, there is a total surplus of Rs. 10.87 lakhs. Out of this, Rs. 41,400 (against Rs. 3.45 lakhs) is provided for development rebate. General reserve gets Rs. 10.14 lakhs (against Rs. 6.71 lakhs). The interim preference dividend absorbed Rs. 15,600 and the final preference dividend accounts for Rs. 15,600. The equity dividend will be paid out of general reserve.

METTUR CHEMICAL

Dividend Raised

THE directors of Mettur Chemical and Industrial Corporation Ltd have recommended a higher dividend of 12.5 per cent on ordinary shares for the year ended March 1972, against 12 per cent paid for the previous year. According to the preliminary figures available, total sales for the year have moved up to Rs. 799.00 lakhs (against Rs. 759.33 lakhs). The profit, before depreciation, amounts to Rs. 157.49 lakhs (against Rs. 112.76 lakhs). Out of this, provision for depreciation amounts to Rs. 60.75 lakhs (against

Rs. 61 lakhs). Managerial remuneration accounted for Rs. 1.07 lakhs (against Rs. 1.06 lakhs). There is a net profit of Rs. 95.67 lakhs (against Rs. 50.70 lakhs). There is a total available surplus of Rs. 113.01 lakhs which includes the brought-forward sum of Rs. 17,585, Rs. 10 lakhs being development rebate written back and Rs. 7.16 lakhs being refund of income-tax. Out of the total surplus of Rs. 113.01 lakhs, the directors have transferred Rs. 45.50 lakhs (against Rs. 25 lakhs) to development rebate reserve and Rs. 5 lakhs (same) to gratuity reserve. Provision for taxation amounts to Rs. 25 lakhs (against nil). Donations amounted to Rs. 82,625. The preference dividend absorbs Rs. 4.35 lakhs and the equity dividend claims Rs. 31.25 lakhs (against Rs. 30 lakhs). The balance remuneration to ex-managing agents for the year ended March 1970 amounted to Rs. 77,966. The balance of Rs. 30,785 is being carried forward.

COIMBATORE FERTILISERS

Loss Incurred Again

THE working of Coimbatore Pioneer Fertilisers Ltd for the year ended March 1972 has resulted in a loss of Rs. 3.05 lakhs, after providing depreciation of Rs. 3.09 lakhs. This compares with the previous year's loss of Rs. 3.69 lakhs, after providing depreciation of Rs. 4.06 lakhs. Adding to the year's loss of Rs. 3.05 lakhs the brought-forward loss of Rs. 23.81 lakhs, there is a total deficit of Rs. 26.86 lakhs which is being carried forward. Total sales for the year amounted to Rs. 58.48 lakhs (against Rs. 54.31 lakhs).

RAMNARAYAN MILLS

Sales and Profit Down

THE working of Sri Ramnarayan Mills Ltd for the year ended December 1971, has resulted in a smaller profit of Rs. 2 lakhs, after providing Rs. 6.60 lakhs for depreciation and Rs. 82,215 for development rebate reserve. This compares with the previous year's profit of Rs. 6.05 lakhs, after providing Rs. 8.19 lakhs for depreciation and Rs. 2.72 lakhs for development rebate reserve. Sales of cotton and yarn amounted to Rs. 84.03 lakhs (against Rs. 95.81 lakhs). Adding to the year's profit a sum of Rs. 1.30 lakhs, there is a total surplus of Rs. 3.31 lakhs. Out of this, provision for taxation is Rs. 90,588 (against Rs. 3.09 lakhs). Taxes for prior years written off amount to Rs. 40,033. The equity dividend of 10 per cent claims Rs. 2 lakhs.

COMMODITIES

Jute Mills Suffer Production Losses Due to Irregular Power Supply

POWER supplies would return to normal within a week, said Mr. Abdul Ghani Khan Choudhury, West Bengal Minister for Irrigation and Power, in the State Assembly on Friday last. Supplies had already started improving since that day, Mr. Choudhury added. After a review of the situation by the Minister for Irrigation and Power and Mr. Zainal Abedin, Minister for Public Undertakings, with representatives of the four power-generating organisations, the C.E.S.C., S.E.B., D.V.C. and the D.P.L., at a conference in Calcutta earlier that day, there emerged a consensus that with the gradual improvement in power generation, there would be no need for any further load-shedding on a drastic scale. It was decided at the meeting to set up a small cell comprising experts from the four generating organisations to check readings of power production and distribution from different sources. As for the D.P.L., it was stated that its output had risen to 85 megawatts by Friday. By the next week, the output would rise further to some 105 megawatts. For the Greater Calcutta industrial area, about 560 megawatts of energy was needed daily. Of this the C.E.S.C. produced some 290 megawatts, S.E.B. 170 megawatts while the balance was supplied by the D.V.C. and the D.P.L.

An I.J.M.A. Press note, issued in Calcutta earlier during the week, complained that the power supply position in West Bengal jute mills had suffered a sharp setback after recording a modest improvement between the third and fourth weeks of June. Mills were thereafter being frequently subjected to unannounced power-cuts of varying duration at all hours of the day. On three days alone—30th June, 1st and 3rd July—eight to 15 mills, representing on average 17 per cent of the industry's productive capacity, had to be kept idle for nine hours a day, resulting in a loss of production to the tune of 775 tonnes. Between 5th June and 3rd July, jute mills lost about 9,000 tonnes in output worth about Rs. 3.50 crores.

Unless electricity distributing agencies enforced a measure of discipline in their regulation of power, the note

stated, the industry would continue to incur production losses, disproportionate to the actual shut-down of power. This was attributed to the fact that although restriction on power supply might be enforced for a specified number of hours in a particular area, in practice it invariably affected the operation of two consecutive shifts, throwing the production programmes of both shifts out of gear. The Press note said that sometimes mill managements might not be able to get the workers back to duty for a subsequent shift once a majority of them had been laid off and had left the mill compound. Furthermore, on many occasions after the power-cut was officially withdrawn, mills had to go without power much longer than the announced duration due to the failure of the various sub-stations of the C.E.S.C. and the W.B.S.E.B. to instruct the mills promptly to switch on. The I.J.M.A. said that in order to inform the workers in time, it was imperative that mills should receive proper notice from the power-supply organisations about the approximate time of the commencement of load-shedding and its duration.

Jute Mill Agencies

Jute mills agencies should be allowed to operate in the raw jute market simultaneously with the Jute Corporation of India, observed Mr. S. N. Mundra, chairman of the Jute Mills Agencies Association, in Calcutta on Friday last. Speaking at the annual general meeting of the Association, Mr. Mundra held that "this will be advantageous both to growers and the jute mills industry." Jute mills agencies were not middlemen, for they bought raw jute for direct consumption by the mills, he added. Over the years, the agencies had been successful in supplying jute to mills according to the requisite standards and effecting regular deliveries in spite of erratic market fluctuations. Citing the price trend during previous years, he showed that prices last season had ruled much higher than the official support levels. While the minimum support price for raw jute in 1965-66 was Rs. 30 a maund, f.o.r. Calcutta ready, basis Assam Bottoms, the average market price was Rs. 54.66.

Against the official support price of Rs. 40 in 1968-69, the average market price was Rs. 68.39. The average price in the market last season was Rs. 53.79, against the official support price of Rs. 42.50. Mr. Mundra also mentioned that raw jute grading was a vital job in which the experience of the agencies should not be ignored or underestimated. They were in a position to maintain timely and uninterrupted supply of fibre to the industry.

Mr. Mundra appealed to the authorities to offer scope to the agencies to function in the interest of the industry with which the fate of growers was indissolubly interlinked. He foresaw a severe shortage of fibre in the current season and said that imports on a large scale would be indispensable to meet the industry's requirements of 7.6 million bales. Commenting on the setting up of the Jute Corporation of India, which was to take over the entire trade in raw jute in stages, Mr. Mundra said that "no one could question the wisdom of a policy aimed at ensuring fair prices to growers for their produce." But the vital issue, according to Mr. Mundra, was "whether centralised buying of raw jute would help growers in obtaining better prices for their produce or not."

Meanwhile, Mr. D. L. Mehta of Thomas Duff and Co. (I) Private Ltd and Mr. M. C. Goenka of Hukumchand Jute Mills Co. Ltd have been elected chairman and vice-chairman of the Jute Mills Agencies Association for 1972-73.

Bearishness in Gunnies

With hessian and sacking reacting on a broad front, the Calcutta gunny market ruled exceptionally bearish on the report that a major portion of the bulk Sudanese tender on an extended delivery schedule had gone in favour of Bangladesh. Besides, the current stalemate over Indo-Sudanese balance of payments position also ruled out the prospect of Calcutta being able to benefit to any worthwhile extent even though a larger share had come to it. It was reported that the Bangladesh Jute Mills Association quotations were about Rs. 10 lower over Calcutta's in respect of 100 yards of 40in. 10oz. hessian and Rs. 25 less for 100 bags of B Twills. The report that Bangladesh jute mills had been rapidly returning to normal operation induced caution in Clive Row. Overseas buyers had started awaiting offers from Bangladesh before tapping the Calcutta market. Export deals were also affected due to the flotation of the pound-ster-

ling. Although the Reserve Bank of India had allowed dealings in forward sterling, shippers were cautious in extending their commitments due to the erratic movement in international currency parities. The fresh threat to overside loading, posed by the reported decision of bargemen at Calcutta port to strike from 16th July in an effort to enforce the implementation of the Wage Board award, induced caution among shippers. Unless the dispute was solved amicably, standstill conditions might develop in shipments from the port, affecting exports. The alarming projections, reportedly made by the industry-Government joint trade team after a tour of the major world markets, had caused concern among industry and trade. It had held that it would be impossible to arrest the shift from jute goods to substitutes in the U.S.A. unless gunny prices were reduced substantially. But with an increase in the official support levels for raw jute and rise in wage bills, production costs had soared. Frequent load-shedding has also caused an indirect spurt to production costs. Industry and trade circles believe that they still could make a desperate bid to retrieve the lost ground had the authorities reinforced their move by abolishing the export duties which posed a heavy burden. These factors produced an adverse impact on market sentiment. Even the issue of the D.G.S.D. order on mills preempting a monthly quota of 12,500 tonnes of Standard B Twills till the end of year for meeting the packaging requirements of the F.C.I. and the fertiliser units failed to prop up the sagging morale. With the onset of the monsoon, the internal demand for jute goods slackened appreciably while industrial consumers also showed a lack of interest,

awaiting a decline in prices to more realistic levels. Turnover was also restricted due to the reluctance of either side to reduce their commitments in view of various inhibiting factors. Turnover was small. The closing undertone was hesitant.

Small Turnover in Fibre

The alternate spells of sunshine and comfortable showers in the interior growing areas produced a bearish impact on raw jute prices in Calcutta and the agencies. Industry and trade circles hoped that the seasonal crop might not be as bad as it had been projected earlier, for desperate efforts were being made by farmers to tune up the plants by the adoption of agronomic aids. Upcountry arrivals improved somewhat but the holders of the new crop were reserved in their offerings. Larger new crop arrivals induced the holders of the old crop to turn keen sellers of their seasonal residues at some discounts over the preceding week's levels. Mills, however, continued to be extremely selective in their offtake, absorbing only small lots at quoted prices. Around mid-week, fibre prices tended to react further in Calcutta due to the lack of interest from the industry. But the downward drift was arrested on higher advices from the upcountry agencies where prices still ruled much above Calcutta parity levels. Turnover was small. The closing undertone was cautious.

TEA

Good Demand

A Special Correspondent writes: The offerings at last week's tea auction in Calcutta met with a good demand. The plainer varieties in all categories were readily absorbed at around the previous week's levels. Orthodox teas came to an irregular market, with the tippy varieties being further discounted by the buyers. There seems to be virtually no demand for the "blanketed" tippy grades and the teas which were selling last year at between Rs. 80 and Rs. 100 are now realising about Rs. 30 lower. The highest price so far this season has been Rs. 71.70 in the previous week's sale whereas a similar tea last week sold at Rs. 45. The flavour Darjeeling teas once again sold well. The medium and better C.T.C. varieties were cheaper by up to 50 paise. A few selected best liquoring C.T.C.s, however, sold well.

Your small-scale industry needs capital to grow on.

Where is it going to come from? UCOBANK

If you are a small-scale industrialist, UCOBANK offers you top priority for financial assistance. The kind of assistance that helps you get ahead in business. In life.

We know your needs. You need money to invest in your industry to get more out of it. We help

you buy machinery or raw materials. Set up an industry or expand. We even help you with a loan to run your industry or renovate it. All this, and at a reasonable rate of interest too.

At UCOBANK, we help you to help yourself.

For further details and expert advice, visit your nearest UCOBANK branch.

Meeting the needs of the people.

Banks: The Challenging Task

THE country's 14 nationalised banks celebrated the third anniversary of their nationalisation with a great fanfare during the past week. The occasion did provide them an opportunity to indulge in a bit of heart-searching about what success they have achieved during the three years of nationalisation and the directions in which they have failed and why. During the third anniversary celebrations, the nationalised banks have undoubtedly appreciated that theirs is not a primrose path for easy success or glory. It goes without saying that before nationalisation, commercial banks in this country had shown a deep attachment to the moneylenders' approach towards creditworthiness with the result that bank lending was mainly confined to certain restricted, conventional channels. It is no wonder, therefore, that banks were unable to take a broader view of their operations. The Government's current anti-poverty campaign undoubtedly gives a very significant rôle to commercial banks, with the emphasis now being placed on the priority sectors which banks are supposed to finance in a big way so that the objective of growth with social justice may be achieved quickly.

In the days following nationalisation, the Government's emphasis on combining welfare banking with commercial banking did create a lot of confusion because the Custodians of nationalised banks were urged to provide liberal credit facilities to such priority sectors as agriculture, small industry and exports. Furthermore, in order to create fresh employment opportunities in the economy, artisans, technicians and other categories of self-employed people were to be provided with liberal bank finance so that they could stand on their own feet without looking for jobs elsewhere. It goes without saying that the emphasis on welfare

banking made many Custodians, who are bred in conventional banking principles, feel rather sceptical about the ultimate outcome of the effort. The nationalised banks have admittedly achieved some breakthrough in providing more credit facilities to the priority sectors, in opening new branches in unbanked centres, especially in the rural areas, in ensuring a higher deposit growth and finally in giving a radical reorientation to the country's banking structure in many significant directions. But the task ahead bristles with tremendous difficulties, which can only be solved with a purposeful direction of policies. The Central Finance Minister, Mr. Y. B. Chavan, has done well to point out recently that banks need not be charitable institutions and should, in fact, continue to be commercial organisations. But as commercial organisations, they too have their social responsibilities. Mr. Chavan has also said that the major task for banks following nationalisation is to see to it that the benefits extended by them reach the common man.

Admittedly, it will tax the ingenuity of the Custodians of nationalised banks as to how to maintain, or even improve upon, the profitability of their banks while, at the same time, discharging their welfare obligations. But as the banks were celebrating the third anniversary of their nationalisation, they could have the smug satisfaction that in the sphere of deposit mobilisation, credit allocation and branch expansion, the worst fears of the critics have been belied and that they could be reasonably proud over their achievements during the short period. In fact, branch expansion of banks during the three years of nationalisation has been most remarkable. In the 'sixties, the Reserve Bank tried to introduce an element of compulsion on commercial banks to open bran-

ches in the semi-urban and rural areas through its branch licensing policies. During the three years of nationalisation, banks have branched out in a break-neck speed and have also been successful in giving a rural bias to their branch expansion programme. Between June 1969 and December 1971, the number of offices of commercial banks increased by 4,701 or about 56 per cent. The most striking fact is that the share of rural branches in the country's commercial banking system increased from 22.42 per cent in June 1969 to 37.65 per cent at the end of December 1971. The nationalised banks have also achieved some progress in implementing the lead bank scheme under which they were allotted districts in various States. The scheme was prepared in such a manner that they could take greater interest in the development of backward districts on which they were required to undertake socio-economic surveys on their own. Although some of the reports compiled so far have fallen pathetically short of expectations, it has got to be realised that they had to undertake the task literally from scratch since no ready-made socio-economic surveys were available which could give them a helpful guidance about how they could play a useful rôle in developing the districts.

In a relatively short period of three years, banks have also done some good work in providing credit to the priority sectors. There has been a five-fold increase in the number of agricultural credit accounts from about 139,000 to 652,000. Furthermore, advances of nationalised banks to small-scale industries have increased from Rs. 148 crores to Rs. 263 crores and the number of credit accounts has more than doubled from 36,000 to about 75,000. Their advances to retail trade similarly increased from Rs. 19 crores to Rs. 59 crores, professional and self-employed people from Rs. 33 lakhs to Rs. 10 crores and to road transport operators from Rs. 7 crores in June 1969—immediately before nationalisation—to Rs. 38 crores in December 1971.

True, banks can undoubtedly play a more significant rôle in providing more credit facilities to the priority sectors now that they are flush with funds. As it is, their deposits are swelling week after week while the demand for funds from industry remains slack for the simple reason that the country is now passing

through a phase of acute industrial stagnation, with the growth rate last year estimated at no more than 3.4 per cent. During the week ended 14th July, 1972, aggregate deposits of scheduled commercial banks have increased by Rs. 85.84 crores to Rs. 7,683.25 crores, thus crossing the Rs. 7,600-crore mark. In the current slack season, deposits have, in fact, increased by as much as Rs. 476.21 crores, compared with the rise of Rs. 308.81 crores during the same period

of the 1971 slack season. As the banks have a comfortable resources position, it should be the task of the Central Finance Ministry and the Reserve Bank to give them the necessary guidelines as to how they can utilise their surplus resources more profitably. But until the tempo of economic growth picks up, what else can the banks do but to lend more to the neglected sectors, regardless of the contribution of such activities to their overall profitability?

The Mini Cabinet Reshuffle

THE Prime Minister, Mrs. Indira Gandhi, has at long last announced certain changes in the Central Cabinet. From the nature of the very marginal alterations she has made, it can be safely assumed that there is bound to be a bigger reorganisation at a not-too-distant future. Mr. D. P. Dhar, who was heading the Foreign Policy Planning Committee, has now become the new Central Minister for Planning in the place of Mr. C. Subramaniam, who has been shifted to the Ministry of Industrial Development. The other major change relates to the Railway Ministry which is entrusted to Mr. T. A. Pai, a Member of the Rajya Sabha from Mysore. It is perhaps a matter of coincidence that he has succeeded another leader from Mysore as the Railway Minister. Mr. I. K. Gujral, Minister of State for Works and Housing, is shifted to the Ministry of Information and Broadcasting, a portfolio he held a few years ago. A minor change that has been effected is that of Mr. Jagannath Pahadia who has now been attached to the Ministry of Communications as a Deputy Minister. Formerly, he was in the Ministry of Agriculture.

Even a casual look at the changes will reveal that there is nothing startling about the reshuffle. But there are certain vital questions which still remain unanswered. It is not clear as to why Mr. K. Hanumanthaiya has been eased out of the Cabinet. He was inducted into the Cabinet less than two years ago and ever since he became the Railway Minister he had been doing his best to tone up the entire railway system. Mr. Hanumanthaiya was at one time chairman of the Administrative Reforms Commission and in that capacity, he had made several recommendations concerning the function-

ing of various Ministries. Obviously, in a task like this, he has had to face stiff resistance and in the process he has antagonised quite a few persons in top positions. But being an outspoken man who does not believe in niceties, he was not able to survive the pressures that were brought to bear on the Prime Minister against him. This is not to say that Mr. Hanumanthaiya was the best Railway Minister the country ever had. He proved tactless which ultimately led to his exit. The manner in which he dispensed with the services of Mr. B. C. Ganguli, former chairman of the Railway Board, did not enhance the prestige of the Minister. Reports have it that the Prime Minister too was very unhappy about the treatment meted out to a senior officer of the Government known for his efficiency and honesty but she wanted to drive home the point that in a parliamentary democracy, the Ministers are supreme and their decisions are final.

It is now to be seen whether Mr. Pai would do better. Ever since he resigned as chairman of the Life Insurance Corporation to contest for the Rajya Sabha from Mysore, it was known that he would join the Council of Ministers. But it was thought that he would be given a portfolio for which he was suited. Mr. Pai has been connected with banking and insurance for well over 25 years and it was even said that he would be asked to head the Department of Banking in the Ministry of Finance as an independent Minister or under the overall supervision of Mr. Y. B. Chavan. This did not happen and this could be due to certain other political reasons. Mr. Pai will have a tough time in the new Ministry. The railways are the country's biggest public undertaking and if he could improve their effi-

ciency without impairing their profitability, he would have rendered a signal service.

But what is surprising is the manner in which Mr. C. Subramaniam has been shifted from the Ministry of Planning. He was the person who has formulated certain basic ideas about the Fifth Plan and he has done considerable spadework in preparing the approach to the Plan. The Fourth Plan too has been recast largely following his efforts and, today, he finds himself heading another Ministry. Mr. D. P. Dhar who succeeds him, it is said, is not new to planning as he was dealing with this portfolio in his home State of Kashmir. But the problems connected with planning are certainly different at the Centre and in the States and it is to be seen how far he will succeed where stalwarts like Mr. Asoka Mehta have not succeeded. The Yojana Bhavan is nothing more than a departmental office with all the restraints of red tape and it would indeed be difficult, if not impossible, to put life into the whole structure. A Minister for Planning needs, besides ideas, a capacity to take with him persons of varying temperaments and promote a team spirit of an enduring nature. Mr. Dhar is known to be a man of many parts and that might make things a little easier for him.

It was expected that besides the changes in the Council of Ministers, there would be a reorganisation of Ministries on a rational basis. The A.R.C. had made a number of suggestions in this regard but no action has been taken so far. Mr. C. Subramaniam, who is shifting to the Ministry of Industrial Development, will also look after the Department of Science and Technology which he was handling as the Planning Minister. It is not clear as to why he is still continuing to hold charge of this Department unless it be to bring better co-ordination between science and industry. A better arrangement would perhaps have been to create a separate Ministry of Science and Technology. At present, the Prime Minister is in charge of atomic energy, space research and electronics. All these subjects could have been brought together and placed under a full-fledged Cabinet Minister. The Prime Minister is also in charge of Home Affairs and Information and Broadcasting and is thus saddled with quite a large number of portfolios. This runs counter to the many proposals made by the

A.R.C. on the functioning of Government. There is no indication as to when a serious attempt would be made to reorganise the various Ministries.

Mr. H. R. Gokhale, Central Law Minister, is also in charge of Petro-

Raising Exports to the E.E.C.

THE efforts India has been making for the past several years to get a dialogue started on a comprehensive trade agreement with the European Economic Community before its enlargement appear to have at last borne some fruit. Nearly two years after an *aide mémoire* was presented to the Community, the European Economic Commission has stated that talks could begin now for the conclusion of a long-term and comprehensive trade agreement covering a wide range of products between India and the E.E.C. The Commission's decision, however, to be approved by the Council of Ministers, but this is considered a formality. The negotiations for arriving at an acceptable commercial co-operation agreement between India and the E.E.C. will still be arduous and time-consuming, but to the extent the Commission's decision shows a shift in its stand, it is welcome. Informed sources in Delhi have already described the Commission's announcement as "an important breakthrough" in India's relationship with the E.E.C.

India has been seeking a comprehensive and long-term trade agreement with the E.E.C. for several reasons. First, for the past few years, she has been having a continuous adverse trade balance with the E.E.C., her exports being roughly half of what she has been importing from the Community members. Secondly, her present arrangement with the E.E.C. covers only a limited number of products. And even in relation to some of these commodities, the E.E.C. has not been taking a helpful attitude. For instance, on carpet-backing cloth, a main item of Indian exports, the present agreement provides that the Community will not object to the ceiling mentioned in the agreement being exceeded in case of additional demand in the Community market. However, despite proven demand in many member-States, imports of carpet-backing cloth from India have not been allowed to increase beyond the ceiling.

leum and Chemicals, although the two portfolios are poles apart. The Department of Company Affairs continues to be independent, although it could have been attached more appropriately either to the Ministry of Industrial Development or the Ministry of Law.

India has also a legitimate complaint that the problems she would face following the enlargement of the Community by Britain's entry have not been fully appreciated. There is an assumption that the Generalised Scheme of Preferences (G.S.P.) of the E.E.C. would take care of most of India's problems and, therefore, it is not necessary to worry about India's problems. This assumption is incorrect since the product coverage as well as the nature of the E.E.C.'s offer under the G.S.P. is different from the import regime in the U.K. under which most of Indian goods have preferential and unrestricted duty-free entry. Even comparing only the G.S.P. schemes announced by the U.K. and the E.E.C., India would be sharing with other developing countries preferences, which she currently enjoys in the U.K. market, on her export trade of about Rs. 53 crores (based on the export figures for 1967-78). As against this, the E.E.C.'s offers under the G.S.P. provide for preferences for India's exports of a value of Rs. 24 crores only. India had, therefore, taken the stand that it was important that both the E.E.C. and the U.K. should find solutions to India's problems before enlargement of the Community takes place, and not thereafter.

In the *aide mémoire* submitted to the E.E.C. in September 1970, India has outlined the broad objectives of a commercial co-operation agreement between her and the E.E.C. The overall objective will be to increase the trade exchanges between India and the E.E.C., so as to create an adequate trade surplus for India to enable her to rectify the present imbalance in trade exchanges, to repay her debt liabilities and to maintain a rising level of imports from the E.E.C. In order to achieve this objective, India had suggested the improvement of the G.S.P. offer by the E.E.C. so as to include all items of export interest to this country. Special assistance to sensitive sectors like cotton textiles, jute goods and coir goods, relaxation in out-dated non-tariff barriers to

permit enlargement of Indian exports, technical assistance for product adaptation and export promotion of Indian goods, untangling of financial aid and co-operation in third countries are some of the

The Narmada Accord

THE accord reached by the four western States on sharing the waters of the Narmada river undoubtedly marks a good beginning in settling other river disputes that have unfortunately held up several important irrigation projects and generated unnecessary inter-State bitterness and animosity. The Narmada accord is not complete but the decision of the Chief Ministers of the four concerned States—Gujarat, Madhya Pradesh, Maharashtra and Rajasthan—to abide by the verdict of the Prime Minister, Mrs. Indira Gandhi, on the major points of dispute augurs well for the future. It is not known whether the accord is the outcome of the persuasive charm of Mrs. Gandhi or of the threat that the Centre has recently been holding of "nationalising" all major rivers. Whatever may be the case, the accord must be welcomed by all.

The Narmada dispute arose over 12 years ago when all these four States were under Congress rule. Hence, it is wrong to assume that a single party rule has facilitated the accord that had eluded the Chief Ministers all these years. The fact is that all the four States and more especially Gujarat and Madhya Pradesh, which get a larger share of the river waters, have lately grown impatient with the legal process of settling the dispute. The tribunal to hear the dispute was set up over three years ago and it is plain for everyone to see that it has not made much of a progress even in collecting the necessary data and framing the issues involved in the dispute. At this rate, the concerned States will be constrained to sleep over their development projects, in the field of irrigation and power generation, for years, thereby denying to their people the fruits of settlement through co-operation and understanding. It is this awareness that has helped to bring the four Chief Ministers of western India together to find a settlement of the Narmada dispute.

It must be noted here that a similar accord has already been

other elements suggested to achieve the overall objective of better trade exchanges. If there is a spirit of co-operation, it should not prove difficult for India and the E.E.C. to reach an agreement on the above lines.

reached in regard to the Cauvery waters by the three southern States of Tamil Nadu, Mysore and Kerala. Accordingly, Tamil Nadu has withdrawn its case on this issue in the Supreme Court and the three States have agreed to settle the dispute concerning the sharing of the Cauvery waters through negotiations. The fact that the Chief Ministers involved in this dispute belong to three different parties should give lie to the line advanced by some that a single party rule is essential for resolving disputes of this kind. What is more important is the recognition that disputes concerning the assets of the nation cannot be resolved through recourse to law courts.

The basic accord on the Narmada allocates 250,000 acre-feet of water to Maharashtra and 500,000 acre-feet to Rajasthan, out of the 28 million acre-feet of water that is available from the Narmada for about nine months in a year. The allocation of the remaining 27.25 million acre-feet of water between Gujarat and Madhya Pradesh will be done on the basis of the formula to be recommended by the Prime Minister. Mrs. Gandhi will also give her verdict on what should be the height of the Navagam dam in Gujarat. The power potential of the river is so tremendous that engineers believe that 32 dams could be constructed on the Narmada to benefit all the four States in the region. As a token of their earnestness, the four Chief Ministers have agreed to the proposal of the Central Minister for Irrigation and Power, Dr. K. L. Rao, that they should begin work on one of the Narmada projects on 15th August this year.

What is now needed is quick follow-up action to translate the newfound goodwill among the Chief Ministers into concrete benefits for the people of their States. The agreement, signed by them recently, itself concedes that co-ordinated development of the Narmada basin

"will result in irrigating millions of acres, the development of hydro-power in a region dominated by thermal and nuclear power, excellent waterways for navigation cutting across the country and accelerated development of rich mineral resources available in the basin and the vicinity." The entire development of the river, which can provide excellent waterways across the country and its mineral resources is estimated to cost Rs. 1,200 crores.

The Fourth Plan has made provision for comprehensive river basin planning. For integrated development of water and land resources, master plans have to be prepared for long-term development of irrigation in each river basin, including inter-State rivers. The Fourth Plan document says that in preparing these plans, the optimum economical development of a river basin has to be kept in view, covering various aspects such as irrigation, flood control, navigation and soil conservation. The development of ground-water resources would also need to be co-ordinated. Differences could arise among the concerned States in drawing up such programmes. For instance, work may have to be executed in one State for the benefit of the other. These plans will have to be co-ordinated and included in the Central sector so that the States could concentrate on projects which are of exclusive benefit to them. This would again mean that the Centre should take a greater initiative in the matter and set up agencies with representation for States for drawing up river basin programmes and implementing them. Otherwise, the execution of the programmes may get delayed due to differences at lower levels.

Cauvery and Narmada have shown the way. Other inter-State river disputes such as the disputes on the sharing of the waters of the Krishna and the Godavari in the south and of some rivers between Madhya Pradesh and U.P. in the north could also be settled the same way. If the States involved in these disputes do not take advantage of the present mood for compromise and settle their differences, then they may find that they have been left behind in the race for development, for those States that are able to settle their river water disputes will definitely receive higher priority in the alloca-

tion of Central resources for the integrated development of their river basins.

A word must be said to the credit of the Central Minister for Irrigation and Power, Dr. K. L. Rao, whose quiet diplomacy and objective presentation of the issues involved in the Narmada dispute have been largely responsible for the accord of last week. If the politicians in power

Inflation: Impact on the Pound

THE floating of the pound did one good thing for the British (or most of those who are concerned with economic affairs): it compelled them to look earnestly at the past effects and future tendencies of their inflation. Other nations can relate the particular problem of Britain and the pound to the general problem of currencies, and consider whether any monetary system can be permanently stable while nations' inflation rates diverge. The pound was formally devalued in November 1967 (in a flexible system it would probably have been devalued years earlier) because British costs and prices had risen more than major competitors'. It was informally devalued in June 1972 because all the corrective effect of the formal devaluation had been lost through further above-average inflation. If the pound was overvalued in mid-November 1967, it was overvalued in mid-June 1972. The official argument that only "speculative pressures" unfixed the pound from "realistic" rates was nonsense; and the official argument that reserves were massive and could have supported the pound if the authorities had been willing to use them ignored the intrinsic weakness of reserves of which a large part represented short-term deposits.

In Britain, the Chancellor of the Exchequer, Mr. Anthony Barber, was commended for not futilely resisting the pressures, but significantly little was said about his "redemption of a pledge" (in his Budget speech last March) that the economy would not be "distorted" for the sake of "unrealistic exchange rates". It might be supposed—and evidently Mr. Barber hoped—that business men, assured that "unrealistic" rates would not be maintained by the kind of deflation that would make them "realistic", would contemplate continuous growth of the economy. In fact they were forced to recognise that continuous

leave the follow-up work to be done purely on techno-economic considerations, then they would have done well not only for themselves but also for the people they claim to represent in Parliament and State legislatures. It is time they realised that the people are not interested in agitations over river waters but in development that will raise the standard of living, if not theirs, at least of their progeny.

above-average inflation implied continuous sinking of the pound, which the world would not tolerate. It is widely believed in Britain that the Government's idea of a "realistic" rate is the "pre-Nixon" rate of about \$2.40 (the allusion is, of course, to "the Nixon bombshell" last August) instead of the "Smithsonian" rate of about \$2.60 (fixed in the Smithsonian Agreement last December), rates against most other currencies—particularly the European Community's—being adjusted accordingly. A suggested procedure is to let the markets establish a true level without official interference, then intervene to stabilise that level for an experimental period before officially refixing the rates. But the procedure for refixing the rates is obviously less important than the implication of refixing them—that they must be adapted to the inflation that has already occurred, not left free to adapt to whatever inflation may occur in future.

So Mr. Barber's concept of "continuous growth" facilitated by "flexible exchange rates" is an illusion. A Government pledged to reduce the rise in prices "at a stroke" (those famous words that Prime Minister Edward Heath must curse himself for uttering in 1970) tried to subdue inflation by words and moral pressures; without practical restraint on either incomes or the money supply, it allowed inflation to accelerate. Alarmed by the growth of unemployment and the stagnation of industrial investment, it put economic expansion at the top of its priorities; yet when the pound collapsed the level of unemployment (though declining) was still abnormally high, industrial investment was still stagnant, and there was little evidence of economic expansion generally. It may be deduced that the floating of the pound was intended not simply to avert conventional restraints on the economy but also to inject addi-

tional growth factors into it. Stimulating exports and suppressing imports, by adjusting the pound, would not only improve the fast-deteriorating balance of payments but also increase demand, abroad and at home, for British industry's products.

Yet the central problem is inescapable. Inflation, although somewhat moderated (more by the Confederation of British Industry than by the Government) was too fast in mid-1972; the decline in the exchange value of the pound—raising the cost of imports—and the intended application of value-added tax—raising the cost of living—would accelerate it. As the pound could not be allowed to decline indefinitely, inflation had to be checked. The problem is social/political rather than merely economic. Most of the people whose assets appreciate, or whose incomes rise more than the average, may be unaware that inflation is redistributing wealth in their favour; but they are aware that—despite the rising cost of living—they are becoming more affluent. People who have borrowed for long periods may not calculate that the real value of their repayments is diminished by inflation; but they experience the lightening of their burden. Such favoured groups cannot be dedicated to oppose inflation; and they are typically more influential than the underprivileged. Their resentment against such policies as are deemed necessary to control inflation can be very damaging politically. And even the underprivileged (who equally have votes) become resentful if deflationary policies deprive them of employment.

The significance of this social/political factor is in the difficulty of adjusting a country—any country—whose inflation is out of line. The question why Britain's inflation is specially prominent is very important to Britain and the pound; but more important to the world generally is the question whether any monetary system can be stable while inflation generally is much faster than it was a decade or two ago, and uneven, and difficult to regulate by acceptable methods. The problem of unstable currencies is aggravated—but not caused—by the huge increase in the quantity of funds that can be transferred internationally. Whatever Mr. Heath and Mr. Barber may profess to believe, a massive flow of these funds is rather an effect than a cause of weakness or strength of a currency.

CURRENT COMMENT

STATE LOANS

Good Response Assured

Soon after the Central Government has raised from the market the first instalment of its loans, the States are preparing to go ahead with their public borrowing programme for the current year. Fifteen State Governments are expected to announce their loan programmes in the last week of August and come to the market with their issues on 4th September. The loans are likely to be on a cash-cum-conversion basis with a rate of interest of 5.75 per cent and a maturity period of 12 years. In view of the easy financial position of the main institutional buyers, they are assured of a good response.

Meanwhile, the first tranche of the Central Government's borrowing for the current financial year, consisting of three new loans, which were put on sale on 15th July, was promptly oversubscribed the same day. This was expected as most of the institutional buyers are known to have a comfortable margin of investible resources. Cash payment accounted for Rs. 149.70 crores and conversion of two earlier loans for Rs. 236.91 crores, making a total of Rs. 386.61 crores. The issues put on sale were 4½ per cent loan 1979, 5 per cent loan 1983 and 5½ per cent loan 2002. The second tranche is likely to be floated towards the end of 1972. In the last Central Budget, a provision was made for gross borrowing of Rs. 515 crores during the current year. That means unless New Delhi decides to raise the amount of borrowing, the second tranche will have to be limited to raising about Rs. 130 crores, including 10 per cent oversubscription. Two earlier loans for an outstanding amount of Rs. 45.38 crores are to mature later this year. In view of all this, there is a section of opinion which feels that the resources of institutional buyers being what they are, a larger market borrowing scheme could be supported without much difficulty.

TAMIL NADU

Technical Training Scheme

Technical education in Tamil Nadu may receive a fresh impetus soon as the State Government is going ahead with its scheme to

modernise it. According to the scheme, it is proposed to open a technical training programme in Ennore, taking advantage of the offer made by the industrial house of Kothari, out of the Kothari Charitable Trust. The main object of reorganising technical education is to make products readily employable in industry. In other words, the present official thinking underlines the importance of bringing about a closer co-ordination between technical education and industry. It is obvious that the narrowing of the gap between education and industry will improve industrial efficiency, while producing a salutary effect in the field of employment in general. A committee appointed by the Central Government is already studying ways and means of reorganising technical education in the State. It is interesting to note that the State Government has a proposal to start a petro-chemical technician course shortly, with the assistance of the Madras Refineries Ltd. Production-oriented training to labour should, in course of time, increase the tempo of industrial development in Tamil Nadu.

FLOUR MILLS

Acute Shortage of Wheat

The flour mills in West Bengal fear that they will have to close down if wheat supplies do not improve in the next few days. In a Press note issued by the Calcutta Flour Mills Association (C.F.M.A.), it is pointed out that while there is a huge backlog of wheat to the extent of 75,000 tonnes to be delivered by the Food Corporation of India to the flour mills for most of which financial arrangements have already been made, and another 50,000 tonnes of wheat is due against the current month's quota, the mills are on the verge of closure as the F.C.I. has practically no wheat stocks and its godowns are empty. The monthly requirement of wheat by the flour mills is around 45,000 tonnes, but during the last few months, the supply has been very irregular. For some time past, the Food Corporation of India, Food and Supplies Department of the Government of West Bengal and the C.F.M.A. have been working out emergency programmes to maintain immediate supply but the result has not been encouraging at all and the mills have had to sus-

pend production intermittently. It is apprehended that the supply of wheat to flour mills will remain irregular for quite some time and the situation is unlikely to improve before November.

SHAREHOLDERS

Protection of Interest

In its memorandum submitted to Mr. K. V. Raghunatha Reddy, Central Minister for Company Affairs, the National Forum of Shareholders, Calcutta, suggested certain important amendments to the Companies Act with a view to redressing the grievances of shareholders. The memorandum says that of late, it has been noticed that various industries are being nationalised. The compensation by the Government is paid to the companies concerned, with the welcome exception in regard to insurance companies where the compensation has been made payable directly to shareholders. Company managements, as happened in the case of the nationalised banks, do not refund the amount of compensation to shareholders and use them in their own concerns. To mitigate this difficulty permanently, it should be provided in the Companies Act that in case where a company has been nationalised, the compensation received by the company would be refunded proportionately to those shareholders who would like to have the same refunded. The management should not have any right to delay the payment of compensation allocable to such shareholders. On the question of return on investment, the memorandum says that it has often been found that no dividends are at all recommended by company directors even when there are profits and reserves. The law should provide that where a company has profits and reserves of more than 10 per cent of its share capital, it shall be necessary for such a company to declare dividend at least to the extent of 6 per cent of its share capital.

MILK SUPPLY

Gradual Deterioration

In a statement released to the Press a few days ago, Mr. B. S. Kothari, president, Consumer's Association of India, has expressed concern at the gradual deterioration in the working of the Haringhata milk depots. He has pointed out that the system of open delivery of milk from the milk

depots is a source of serious malpractices. First, the supply is never given for the full bottle on the ground of handling loss, although it is understood that in respect of such open supplies adequate provision is made for the same. Secondly, the quality of the milk is very much below standard and the possibility of it being mixed with water during transit or at the depots cannot be brushed aside. Since the system of open supply has been continuing for some time, Mr. Kothari feels that by now the Government should take effective steps to put a stop to this practice.

FERTILISER

High Costs

The cost of fertilisers to the manufacturer has gone up since 1967 by about Rs. 232 a tonne of urea, according to an article published in the latest issue of *Fertiliser News*. On the other hand, the controlled price a tonne of urea was Rs. 840 on 1st April, 1967, which was raised by Rs. 20 in 1968 and by Rs. 83 in 1969. Subsequently, there has been a reduction of Rs. 20 in 1971 and an increase of Rs. 36 from 30th March, 1972, i.e., a net increase of Rs. 119 a tonne. The effect of these various factors is that the cost of production and distribution to the primary producer has gone up by about Rs. 113. This is the quantum of the additional burden that he has to carry. In a normal competitive market, this distortion would have been taken care of by the regulatory forces of supply and demand. This mechanism is not operating in the country in the case of fertilisers for which price is statutorily controlled by the Government because of its laudable desire to prevent an increase in the price of this essential commodity to the farmer. But the result is that the manufacturer is being squeezed by the upward push in costs without being able to adjust his selling price. Under such circumstances, a way has to be found to make the operations of the manufacturer viable.

FOREIGN TRADE

Structural Changes

Addressing the seventh session of the diploma programme in international trade at the Indian Institute of Foreign Trade in New Delhi a few days ago, Mr. L. N. Mishra, Central Minister for Foreign Trade, said that he had decided to introduce structural changes in the country's foreign trade policy with a view to achieving the national objectives. He

was happy to say that India's commercial relationship with the socialist countries of Europe generally and with Russia in particular had not only expanded considerably but was also assuming new dimensions in industrial and technological co-operation. The Indian commercial community should now gear itself and take active steps to secure for the country's manufactured goods a legitimate share of these markets. The socialist countries of Europe have stood by India in times of her need and the Indian Government was keen on encouraging expansion of commercial and economic relations with them. India's State trading organisations had been appropriately advised about it.

I.L.O.

Bangladesh: New Member

The People's Republic of Bangladesh was elected on 22nd June, 1972, to membership in the International Labour Organisation by the International Labour Conference meeting in Geneva. Bangladesh is a member of the World Health Organisation, the United Nations Conference on Trade and Development and the International Monetary Fund, but not of the United Nations itself, and for this reason its application for I.L.O. membership required a decision by the International Labour Conference. The I.L.O. now has 123 member States.

WANCHOO COMMITTEE

Gujarat Chamber's Views

The Gujarat Chamber of Commerce and Industry, Ahmedabad, in a memorandum submitted to Mr. Y. B. Chavan, Central Finance Minister, a few days ago, embodying its views on the major recommendations of the Wanchoo Committee has emphasised that high rates of taxation constitute the foremost reason for tax evasion. "Confiscatory" rates of taxation kill a person's initiative and reduce his capacity to save and invest. It is stressed that the tax system should be viewed in the context of economic and social environment of the country and as such there is a great deal to be said for keeping the rates of taxation low not only to give a much-needed boost to the economy but also to reduce tax payers' temptation to circumvent tax laws. When the experiment of reduction in tax rates has proved by and large successful in countries like

Germany, Japan and the U.S.A., it is urged that the Government of India should take a bold decision in the matter and give a fair trial to the proposal of the Wanchoo Committee for a reduction in tax rates. The Chamber also feels that there seems to be no rationale behind the dissenting note given by some members of the committee for clubbing the income of husband, wife and minor children.

EXPORTS

New Trends

In a survey of India's exports for 1970-71, released some time ago, the World Trade Department of the Indian Chamber of Commerce has highlighted some significant developments in the country's export trade in the last fiscal year. The survey points out that in 1970-71, the export of sugar, including sugar preparations and honey, more than trebled at Rs. 29.5 crores compared with Rs. 8.94 crores in the preceding year. The export of meat and meat preparations more than doubled from Rs. 1.43 crores in 1969-70 to Rs. 3.05 crores in 1970-71. The increase was mainly in fresh, chilled or frozen meat. India's total exports of food products and live animals were valued at Rs. 41.27 crores against Rs. 34.56 crores in 1969-70. The export of rails, and railway tract construction materials of iron and steel reached a record level of Rs. 6.52 crores. The export of rails alone was valued at Rs. 5.38 crores. Burma, Argentina, Iran and Egypt were the main buyers. India also exported feature films to about 80 countries valued at Rs. 5.32 crores. The U.K. was the largest importer, her share being Rs. 1.9 crores.

RURAL ROADS

Importance Stressed

As 75 per cent of Asia's population lives in rural areas, direct and immediate economic considerations need not be the foremost factors in determining rural road requirements, a United Nations study suggests. In proposing greater emphasis on rural roads, a preliminary report prepared for a meeting of the United Nations Economic Commission for Asia and the Far East (E.C.A.F.E.) which opened in Bangkok on 16th May cites the need for more attention to overall human aspects. For example, rural road development could help reduce the current migra-

tion from farms to cities, the report indicates, since greater accessibility of rural areas should encourage the spread of industry, facilitate the provision of education, health services and security and "provide mobility for people, products and natural resources". The paper expresses belief that the classic method used for the economic evaluation of road projects by aid-giving financial agencies, based almost entirely on the cost benefit ratio, is "somewhat inadequate for planning rural roads". "The rôle of rural roads in rural development needs to be gauged as something much more than just savings in time and in operational expenses of the existing, generated and induced traffic," the report says. India, among other countries, affords a good example of the benefits of rural roads. A 12-foot tarred-road has made it possible for cash to enter the village of Wazipur daily through the sale of vegetables, whereas previously the village obtained cash from the outside only twice a year at harvest time. The vegetables there now provide substantially larger returns an acre and the volume of milk sold to neighbouring towns has been increased.

U.S.A.

Study of Labour Scene

Three Indian trade union leaders ending a month-long cross-country

tour of the United States are amazed at the general zeal of workers and management for raising the standard of living and for continued application of more refined production techniques. The Indian visitors stressed the willingness of American workers to increase the *per capita* production by the use of automation.

"The workers do not resent automation in the United States as much as workers do in India," said Mr. Damodar Pandey, general secretary, Bokaro Steel Workers Union. The visitors have talked with officials of the A.F.L.-C.I.O. and representatives of labour and management in the metal and mining industries. They visited steel mills, metal working plants, mines and a variety of fabricating companies in a programme conducted and arranged by the U.S. State and Labour Departments. The visitors had a number of discussions with people of middle-age in the middle-income group. They agreed that there was often close co-operation between workers and management to improve the lot of all.

WORLD BANK

Study on Tourism

Developing countries face a number of important issues in promoting the

tourism industry as part of their economic growth efforts, according to a sector working paper just published by the World Bank. The World Bank Group—which includes the Bank, the International Development Association and the International Finance Corporation—has been directly financing tourism projects for only five years. During that period the Group has assisted 13 projects with financing totalling almost \$80 million. And, through intermediary institutions, it has provided an additional \$32 million for 79 tourism projects. The sector paper describes the growth of tourism throughout the world, the various factors which have affected this growth, and the prospects for developing countries to benefit more fully from tourism. It outlines the World Bank Group's rôle in encouraging the establishment and extension of the tourism industry in developing countries as well as indicating its future plans in this sector. In the 1972-76 period, the Group expects to more than triple the number of its tourism projects with a fourfold increase in financing. The sector paper consists of five main sections: a review of the sector, World Bank Group operations in tourism, other external financial and technical assistance, future Bank Group operations, and data tables.

MONEY MARKET

Easier Trend

The short-term money market has remained extremely easy this past week. The call rate initially quoted at 3 per cent but it has later come down to 2½ per cent. Towards the close, the market has closed squarish. The demand for remittances has been small. The supply of both tea and gunny bills has also been small. The pound-sterling has remained steady against most major foreign currencies during the week.

The latest statement of the Reserve Bank of India for the week ended 14th July, 1972, shows a rise of Rs. 2.97 crores in deposits of scheduled commercial banks with the Reserve Bank to Rs. 301.43 crores, compared with the previous week. Their borrowings from the Bank have declined by Rs. 1.90 crores to Rs. 2.10 crores, of which advances against usance bills amounted to Rs. 40 lakhs, against the same. Balances held abroad by the Reserve Bank in the Banking Department show a drop of Rs. 13.10 crores to Rs. 173.96 crores.

A Ditcher's Diary

I THOUGHT THAT PEOPLE HAD ceased to bother about the Nuclear Non-proliferation Treaty. But apparently the Americans and the Russians are still worried over the possibility of a further spread of nuclear weapons. After the Super-Power camaraderie recently displayed in Moscow, the United Nations Associations of the two countries have published a policy "exchange" on the problem of "safeguarding the atom". They seem to fear that countries like Israel and India could be a threat to peace because of their potential for making the bomb. This implies that the atom is fully safeguarded in the vast numbers of fully operational nuclear and thermonuclear weapons in the American and Russian arsenals, which could destroy the world at a moment's notice, and what needs to be safeguarded is the plutonium that is being produced as a by-product of a research reactor at Trombay. This hypocrisy is sickening. I think that India's bomb-making potential is exaggerated both in official claims in this country and in non-official estimates abroad. But, even assuming that India has a credible potential, I cannot quite see it presenting any kind of threat to the world. New Delhi's repeated declarations may not be regarded as a sufficient guarantee, but the direction of the Indian atomic programme should be clear to all with some idea of the work being done. Yet the Super-

Powers refuse to be fully reassured unless India signs the N.P.T. I do not belong to the "bomb lobby"; an Indian nuclear weapons programme can serve no purpose in the foreseeable future. But I see absolutely no reason why India should surrender her option. This is not so much because of the unforeseeable needs of unforeseen circumstance as because of the unequal, indeed unethical, nature of the treaty. It is plainly immoral of the Super-Powers to preach what they will not practise. If it is undesirable for India to make the bomb, it is also undesirable for America or Russia to possess it. Much fuss was recently made over the French nuclear tests in the Pacific; but much more radioactivity was released in the atmosphere by the U.S.A., Russia and Britain before they signed the partial test ban treaty than can be done by France and China for a long time to come.

ONE IMPORTANT ITEM IN THE CODE OF behaviour for English gentlemen, or so the story goes, is that the pressure for change should be resisted as long as possible, then yielded to graciously and in a manner calculated to give an impression of unbounded generosity. That way ensures the best of all worlds. I do not know if there is any truth in this, although it sounds a sensible enough philosophy to me. But anybody interested in such things

could do worse than study the recent decision of the London Stock Exchange to admit women to full membership. This exclusion had been a grievance with Britain's feminists for years, and not without good reason. From small beginnings—women admitted to stockbrokers' offices and to the floors of provincial exchanges—the attack on London has been built up gradually since the second World War. By 1967, when the women were last excluded by a full vote of male members, the question had become inflated to the proportions of a minor national scandal. The yellow Press splashed the news, and even *The Times* expressed itself mildly displeased at such evidence of continuing exclusiveness in the country's economic life. But the Council of the London Stock Exchange managed to declare itself in favour, although reputedly on the principle that the best way to ensure a prospective club member is blackballed is to propose him yourself. And now the citadel itself has surrendered in that inimitable way which permits everybody to join in celebrating the victory. Just like conceding India her freedom all over again, you might say. But seriously, it all seems to have worked out very well, and as a method of handling human problems one must admire it. The women have got their way, as inevitably they must some day, and nobody is resentful about it, at any rate not in public. Perhaps one thing that has helped is the prospect of rapid expansion in the future. As a German banker pointed out the other day, in an enlarged European Community the London Stock Exchange will be easily the largest and most important. It already

IMPROVEMENT OF CALCUTTA

A CORRESPONDENT writes in Current Coin: The first scheme of the Improvement Trust has been hailed with delight except by those most concerned, namely, the inhabitants of the houses that are to be wiped out. It is a matter for great satisfaction that the Trust has at last a definite plan before it, and is about to start with the pickaxe and shovel. At the same time, there may be a certain amount of danger in making a scheme for a single small area; presumably the Trust has formulated a scheme for the whole of the condemned area and considers it wisest to deal it out piecemeal to the public; this method

may have advantages, but if public opinion should veto any of the small schemes, it might be found that the general scheme was thereby spoilt. It is somewhat surprising that in the first scheme just published, nothing is said as to how the people dispossessed of their homes are to find fresh ones. It is certainly right and also politic that the Trust should influence such people in the choice of a new locality in which to settle. In the present instance, if the people are allowed to turn to the districts around that which they are leaving, no great improvement will be made by the scheme.

handles nearly four times as much business as all eight of West Germany's stock exchanges put together.

IT HAS SUDDENLY BECOME VERY fashionable to talk about chess. I find the spread of the fashion in Calcutta absolutely fascinating. Not that the game was unknown in this part of the world before the Spassky-Fischer sensation. In the old days it used to be a principal diversion to spice the abundant leisure of the landed gentry. Not that the game is particularly lively in outward expression; but people with nearly interminable time on their hands found it useful to keep themselves occupied after a fashion. Times have changed and leisure is scarce. But considerable idleness is still enforced by physical infirmity or involuntary unemployment. So chess has continued to be played by many old people who have retired from work and by some young people who are unable to find any work. And, of course, there have always been some people seriously interested in acquiring professional excellence in the game. But the situation now is altogether different. Pompous intellectuals who have hitherto looked upon all games, whether indoor or outdoor, as slightly vulgar are busy explaining the challenge of chess in highly esoteric terms. Several of my friends have bought chess boards during the past fortnight. I do not know whether they have learnt to play the game, but some pretend to be following the Reykjavic moves on their newly-acquired boards. I must confess that I have also been bitten by the bug; when the morning paper comes, I now let the sports page take precedence over the front-page headlines. But what explains this craze? After all, a world championship chess match is not being played for the first time. One explanation, I think, is the drama attending the Reykjavic event; and many people must have been impressed by the big money involved. Bobby Fischer's tantrums, no less than his dazzling play, have naturally heightened the drama; and the way the contest has occasionally been presented as a cold war event has created further excitement. A friend of mine maintains that all this was secretly agreed upon at the Moscow summit; he says that President Nixon and Mr. Brezhnev decided that a highly publicised contest in chess would be symbolic of peaceful competition in place of any military confrontation. In fact,

he suspects that it was also secretly decided who should win the match, indeed who should win which game.

ON A READING OF THE FACTS WHICH foreign newspapers have been publishing about Calcutta recently, it would seem that in terms of population, including that of Greater Calcutta, we are now the largest city in the world. Bigger even than Tokyo, New York or London. This is unlikely to come as a great surprise to the average claustrophobic ditcher, who will doubtless remark that whatever the number of people here the simple fact is that there are too many. Besides, nobody really knows what our population is, and there is no justification for quoting a straight 16 million even as a rough guess. All that it is safe to say is, to paraphrase I forget who, it has increased, is increasing, and ought to be diminished. However, policies for reducing the growth of population in cities are notoriously inclined to dismal failure, and that is not only true of India. About the only exception to this rule seems to be London, where after more than a decade of trying to stop the numbers growing, it has suddenly been realised they have actually fallen. A cause for rejoicing and congratulation all round, you might suppose. Not a bit of it. In fact, the news has touched off something of a panic, and the successful policies have been put sharply into reverse. It has now been decided that office accommodation in London is to be more than doubled in the next ten years or so with the deliberate intention of attracting more people back to the metropolis. Perverse, no doubt; but the change of heart is being justified on the grounds that

London could soon become like New York, where the flight of population to the suburbs and beyond has left the city with impossible financial problems. I suppose the fact has to be faced that in the world as we know it cities are just bound to go on growing, whatever the consequences.

I AM GLAD THAT THE WEST BENGAL Government's reported plan for a national theatre on the Calcutta Maidan has not been hailed with universal rejoicing. There has been quite sharp criticism in at least two leading newspapers, and I hope that this will induce some rethinking in official circles. I am not sure that Calcutta needs a national theatre; if the old theatres in the city's northern part or the newly-improvised ones in the south are inadequate, surely Rabindra Sadan could be made available for all deserving performances. The elegant and spacious theatre which was recently built on what was once Theatre Road may be exclusive, or its rental prohibitive for many theatrical groups, but Rabindra Sadan could certainly accommodate more performances for a reasonable fee. In any case, the main point is not that another "national theatre" is unnecessary, but that the Maidan is not the place for it even if it is necessary. Much of the Maidan has already disappeared under temporary and permanent structures; violation of another five acres opposite the Indian Museum would be a gross violence not only to aesthetic sense but also to such vestigial breathing space that this overcrowded city still contains. Curzon Park, once popular because of its proximity to the Esplanade

tram depot, disappeared long ago; the enlarged depot also ate into the green expanse to the south. This may have been a necessity, but surely the Hawkers' Corner should not have been allowed to perpetuate itself as Maidan Market. Further north, the sprawling exhibition structures are not only an eyesore; they are also a source of considerable aural torture. The triangle around St. Paul's Cathedral is now permanently lost; and what has filled the open space is no architectural delight. Not that the area near the river has fared much better. It was once a pleasure to drive along Lower Circular Road, skirt round the Race Course, cross the tram line near the Kidderpore bridge, and then go straight towards the river, with a vast open expanse on one's right. But a large many uninspiring buildings, presumably officers' quarters, have disfigured this open space. A national theatre opposite the Museum would be a major piece of folly. Soon after taking over as the State's Chief Minister, Mr. Siddhartha Sankar Ray promised that Calcutta would be turned into a city of gardens and parks. New parks may be too much to ask for; but let us be spared the few we have.

AS BANKS ARE FLUSH WITH FUNDS in the current slack season, a Custodian has confided to me that he is seriously thinking of putting up a hoarding on Chowringhee with the following words: "Neither a borrower nor a lender be, but if you must be a borrower or a lender, be a borrower for God's sake. Nationalised banks do take good care of you."

How Management Personnel Can Participate in West Bengal's Economic Revival

(By a Special Correspondent)

Fresh thinking is needed to develop a method of perspective planning for West Bengal through the association of experienced management personnel. On the part of managers themselves, the development of a suitable machinery for rendering coherent advice is needed.

AFTER four years of non-growth, the economy of West Bengal is showing signs of revival. Whether the tempo will be maintained over a long enough period remains to be seen, but even the most carping pessimist will admit a hope and a potential for progress. Is there any scope for trained management in the process of economic and social revival? There are signs of participation by intellectuals, academicians, and business men in a debate on what is to be done, and how. During the last three or four months there has been a surfeit of ideas. Not all of them are easily convertible to practical achievement, but this could be said of the economic scene all over the country. There is no disagreement on the desire for achieving a better economic situation, but when seen in some depth a number of weaknesses strike an observer. An important doubt which West Bengal has to contend with is on the interface of the State and the country as a whole. When the economy of West Bengal was stagnating, other States were going ahead, and developments now in West Bengal in economic affairs cannot be divorced from the all-India context of the total economic picture on products and services. Any major decision based on a wrong premise can play havoc with the State's plans for immediate and long-term future, for if plans do not catch fire as projected, the loss of morale resulting from disillusionment will inhibit future progress. It is, therefore, important to set practical targets and avoid generalised forecasts which become difficult to translate into reality, even with the best will and effort.

Management people all over the world emphasise the distinction be-

tween potential, forecasts, and targets when directing business effort on short and long-term goals. It is desirable to follow the same precept when looking at the growth plans in West Bengal. Planning contains an element of intelligent crystal-gazing with accompanying hazards. When future projections are also riddled with political imponderables, the job becomes complex. No wonder, therefore, that the Government of India has been emphasising decentralised planning through the creation of State Planning Boards. Decentralisation of planning has become a popular concept in Delhi, but the success of any ideas will depend on effective systems to collect reliable data for accepted plans and their implementation through the State agencies who must bear the primary responsibility.

New Methodology Needed

Viewed from New Delhi, a question which arises immediately is whether the overall expertise available to the West Bengal Government is adequate, both in quality and quantity, to meet the objectives. The creation of a Planning Board with multiple sub-agencies on the pattern of the Indian Planning Commission can be expensive, when almost all States are running deficit Budgets. The States must, therefore, adopt and adapt some new methodology to assist policy-makers in arriving at practical plans that can be geared through common objectives to the all-India perspective.

According to a recent Press report, some members of the West Bengal Planning Board have been discussing a few aspects informally with non-Government experts. It is noted that not only production, but the marketing of industrial output from West Bengal received attention. This is a healthy awareness in that it breaks away from the obsession with production alone without regard to the marketability of goods. Long-term economic viability of industry, old or new, is much more important than

any spot euphoria generated by instant improvement through the rehabilitation of existing capacity.

A planner's requirements today are economic and statistical data relating to demand, consumption trends, imports or exports, production capability, and overall marketing potential of available goods and services. All these aspects cannot be integrated without contributions from a number of disciplines, with appropriate experience and background. It requires new thinking to develop a method for perspective planning through association of experienced management personnel. Without this association it might be difficult to arrive at an articulate plan that would carry conviction from all standpoints, and pass muster with the Planning Commission who will have such plans from all States.

Availability of Personnel

The availability of qualified personnel would pose no problem. From what is seen in Delhi at various seminars and symposia some of the trained executives in the private sector seem to be itching for contributing constructively to the endeavour, both in States and at the Centre. What probably stands in the way is an allergy of Government organisations to seek advice and act on it. On the part of managers themselves, the development of a suitable machinery for rendering coherent and specific advice on problems is needed.

Dealing with the first aspect of Government machinery, the muscles of bureaucracy are not easily flexed to respond to advice from any outside body—even a sister department within the Government, and left to themselves any bureaucratic structure would like to be self-contained. It is unthinkable that in addition to the day-to-day problems, it could undertake specialist work outside its routine norms. However, to be effective, any organisation must be able to depart from normal practices and take account of all moving economic factors bearing on the environment. It is here that trained and experienced managers can help. Such manpower is spread very thinly in Government departments but can be had in well-established organisations who have been building up appropriate executive talent for many years. Unfortunately, the leading organisations are those who are currently compelled to operate in the

West Bengal : Ensuring Co-ordination for Achieving Economic Revival

(By a Special Correspondent)

The Government of West Bengal is making serious efforts to achieve the State's economic revival. But what is of utmost importance is to ensure proper co-ordination between the different development agencies.

THE Government of West Bengal deserves to be complimented on taking up in right earnest several measures for speeding up the State's economic progress. But one wonders whether proper efforts are being made to ensure effective co-ordination among the different development agencies in order to secure the best results. For instance, are the Planning Board and the Department of Commerce and Industries working together in close co-operation? Doubt arises in this regard because of the manner in which committees and working groups have been set up to deal with the various problems of planning. The Commerce and Industries Department has constituted four "high-powered committees". These are the Industrial Planning Committee, Resources Committee for Money and Materials, Industrial Capacity Utilisation Committee and the Power Review Committee. It would be interesting to analyse briefly the objectives, composition and functions of these committees.

The Industrial Planning Committee has been entrusted with a wide variety of functions. These are: (i) to prepare a master plan for development of industries in the State of West Bengal indicating different types of industries and projects, by development of which the targets for creating employment opportunities for 1 million people in the industries sector by 1976-77 can be achieved; (ii) to assess the amount of investment required for creating direct employment of 1 million people in the industries section; (iii) to suggest the distribution of the projects mentioned in (i) above among the different districts of the State having regard to the feasibility of implementing such

projects in such districts; and (iv) to suggest development of infrastructure necessary to be built up in the different districts for such projects as may be selected for them with particular reference to the requirement of following; namely, acquisition and development of land; water supply, power supply, roads and transport; telephone; wireless and teleprinter service, post offices and railway lines and sidings.

The Chief Secretary is the chairman of this committee and its other members are the representatives of the Planning Board, Development and Planning Department, Indian Investment Centre, Calcutta, Industrial Development Bank of India, chambers of commerce, and the United Bank of India. No doubt, the committee has been well constituted. But can it do the job within two months, which is the time allotted to it? Perhaps, it would have been better if the committee had not been saddled with the responsibility of suggesting how to build up infrastructure in the districts in such a detailed manner. Moreover, one fails to understand why the Chief Secretary who is heavily burdened with his day-to-day work should be made the chairman of the committee.

The functions of the Resources Committee for Money and Materials are: to determine resources available with the State Government; to indicate the probable contributions by the public financial institutions, nationalised banks and the State Bank of India for development of industries and for direct employment of 1 million people in the industries sector by 1976-77; to indicate the pattern of assistance referred to above that may be available if the industries are developed in the public sector, joint sector, and the private sector; to assess the impact of the existing terms of credit facilities and the financial assistance by the public financial institutions, nationalised banks and the State Bank of India on the growth of new indus-

tries in West Bengal and to suggest relaxation of the credit terms required for attaining the targets of creating new employment opportunities for 1 million people in the industries sector by 1976-77; to recommend the pattern of financing of industrial projects by the State Government, public financing institutions, nationalised banks, West Bengal Financial Corporation, and the State Bank of India in relation to the object of creating employment for 1 million people; and to determine the availability of raw materials in West Bengal in particular and the country as a whole and the quantity of such raw materials required to be imported for the target growth of new industries by 1976-77 in the State.

For this committee also, the terms have been prescribed too widely inhibiting it to do its job quickly. It would have been better if this committee was asked to deal only with financial resources and not with raw materials. How can the committee be expected to determine the availability of raw materials not only in West Bengal but in the country as a whole? and how can it indicate the quantity of such materials required to be imported for the target growth of new industries by 1976-77? There are various types of raw materials, indigenous and imported, and it is not clear at all as to how this question is going to be tackled. The chairman of this committee is Mr. B. K. Dutt, Custodian of the United Bank of India, and its other members include representatives of the State Planning Board, West Bengal Finance Department, chambers of commerce and financial institutions like the I.C.I.C.I., I.F.C., and the L.I.C.

The functions of the Industrial Utilisation Committee are to make a survey of the existing industries relating to capacities installed, capital invested and employment generated; to determine the installed capacities lying idle at present and new employment that would be generated if all the installed capacities could be operated in full; to find out the reasons for the existing installed capacities lying idle and the proportion of underutilisation of the installed capacities; to suggest the measures required to be taken to step up production according to the installed capacities; and to ascertain how far the existing industries can expand their capacities and to indicate the requirements of funds, raw

Simulation of a real dynamic system circumscribed by linear and non-linear equations with constant and variable factors, can be well performed by ANALOG COMPUTER, model MN-18M.

The order of equations done by one computer is up to 10.

The MN-18M control system is suitably employed in an analog-digital system, as well as in a complex of ten MN-18M computers handling multiplex problems.

Space occupied by the computer is mere 0.63 sq.m.

An MN-18M can be coupled, if necessary for supervision or recording of computer findings, to tube digital voltmeter, loop oscillograph, electronic beam indicator, DPR-5 bico-ordinate recorder, or a section of SUSS21-type follow-up system.

materials, power, etcetera, for the expansion programme and the additional employment opportunities likely to be created in such expansion.

This committee is headed by the Secretary to the Department of Commerce and Industries and its other members include representatives of the Planning Board, State Electricity Board, West Bengal Financial Corporation and the Industrial Reconstruction Corporation. Is this committee really necessary since it is well known that underutilisation is caused by several factors like scarcity of raw materials, power, wagons, orders and finance as well as mismanagement and labour unrest? Idle capacity prevails mainly in the engineering industry. The two Engineering Associations in Calcutta have enough data about the idle capacity. The Government could have ascertained all the facts from the Associations concerned without setting up a separate committee.

The Power Review Committee is headed by the Power Commissioner and includes representatives of the Electricity Board, Planning Board, Calcutta Electric Supply Corporation, Damodar Valley Corporation and chambers of commerce. This committee has been asked to determine precisely the present availability of power, to assess the additional demand for power, to suggest the additional generation of power to meet the demand by 1976-77; to estimate the requirements of funds for generating more power, to indicate the requirements of steel, cement, plant and machinery for the power plants and the transmission line; and to assess the prospects of immediate import of plant and machinery for expediting the implementation of the power programme. This committee should also have been asked to go into the causes of the present crisis. Unless these are ascertained, it is not possible to plan realistically for the future.

Power shortage has been crippling industrial production in West Bengal for nearly two years now; but no one seems to know why this is persisting for so long and so acutely. All sorts of reasons are given, such as faulty maintenance, labour indiscipline and lack of co-operation from neighbouring States, and there have been hints also of sabotage. Is it not necessary to get at the real truth? Moreover, what about the rates at which electricity is to be provided to

consumers? How do these rates in West Bengal compare with those in other States? The committee could have been asked to look into these aspects also.

It is relevant to recall in this connection that a few months ago, the Government had set up two important committees—one to study the prospects for a petrochemical industry and the other to examine the scope for developing the electronics industry in the State. It is not known when these committees are likely to complete their report. Meanwhile, the State Planning Board has constituted a large number of working groups to deal with various aspects of planning. Each working group is to set up many task forces and each of the latter will also form several cells to study the problems in depth. The Planning Board maintains that there is no conflict between its work and that

of the Department of Industries. It is pointed out that all the data collected by the committees set up by the Department of Industries will be used by the Planning Board. This does not necessarily mean that there will be effective co-ordination.

Unless the West Bengal Cabinet has clear ideas about planning and gives proper guidelines to the Planning Board, there is the danger of valuable time and even resources being dissipated. The members of the State Planning Board are, no doubt, persons who are eminent in their respective fields. But many of them lack practical experience in regard to planning as well as industry and trade. The Chief Minister, Mr. Siddhartha Sankar Ray, should, therefore, take a personal interest in the work of the Planning Board and see to it that it is able effectively to fulfil the objectives with which it has been set up.

Tackling the Problem of Multiplicity of Unions in an Industrial Unit

By M. R. Meher

Three central trade union organisations have suggested a formula for tackling the problem of multiplicity of unions in an industrial unit. A decision on this matter is expected to be taken when the Central Government brings a comprehensive legislation on industrial relations.

AT a seminar on multiplicity of unions and its effects on industrial relations and productivity held recently in Bangalore, all the participants were agreed that multiplicity of unions had a deleterious effect on industrial relations and productivity. The President, Mr. V. V. Giri, who inaugurated the seminar, warned that inter-union rivalries would cut at the root of the movement and expressed his faith in "one union in one industry".

Mr. Giri's suggestion was that the Chief Labour Commissioner be first authorised to scrutinise the *bona fide* membership of the unions in industries, with the respective representatives of trade unions assisting him in the task. The genuine membership of the different unions should then be listed in a register. Thereafter the unions should agree to have, under

the supervision of the Chief Labour Commissioner or a person authorised by him, a secret ballot on the basis of proportional representation by single transferable vote, for election of a new representative body which could negotiate with the employers on behalf of the workers on basic issues like wages, bonus, and conditions of service.

In the States, the Labour Commissioners should be authorised to take action along these lines. Mr. Giri added that if his suggestions were accepted, other conditions would have to be fulfilled to promote the cause of one union in one industry. He suggested that a minimum percentage of a union, say, about 10 of the total strength of the workers in a plant, should be insisted on. That would incidentally help workers to form a union at the plant level.

In this connection, it may be mentioned that the Central Minister of Labour, Mr. R. K. Khadiolkar, had, at the informal conference with trade union leaders in May 1971, appealed to them to find a solution to the problem of multiplicity of unions and trade union rivalry, and to evolve an agreed formula for determining the bargaining agent for the workers, who

could enter into agreement with the employer on behalf of all the workers in the industry or establishment. At this conference there was a consensus that multiplicity of unions was not desirable and hampered collective bargaining. There was, however, difference of opinion as to the method of determining the bargaining agent, whether by the system of verification of membership or by secret ballot. The Minister asked the unions to consider the matter further and give concrete shape to the proposals for eliminating inter-union rivalry as also on the machinery for settlement of disputes.

After this, a working party consisting of representatives of the I.N.T.U.C., A.I.T.U.C. and H.M.S. was formed to go into these questions. After several meetings, these representatives came to a tentative agreement on the formula for determining the recognised union for the workers in an industry or establishment. The formula was that where more than one union claimed to be the majority union, the question was to be decided by an independent Government authority by verification of membership. Where the verification showed that the difference was marginal, there would be a secret ballot of all workers for determining the representative union. Where the lead of the majority union over its rival or rivals was only marginal, it would associate them also in the negotiations for collective agreements with the employers.

It was further agreed that no category or craft union should be given recognition. The agreement was to be finalised at another meeting after consulting the executive bodies of the three organisations, but it was not finalised because of difference of opinion between the three organisations on the application of the formula to those States which have already a statutory provision for selecting the representative union in industry by the system of verification of membership. It is understood the Central Government would be bringing a comprehensive legislation on industrial relations, including this subject, after taking into consideration the above-mentioned discussions between the three central trade union organisations, the recommendations of the National Labour Commission and the views expressed at the recent State Labour Ministers' conference.

The formula tentatively hammered out by the three organisations, referred to above, appears more workable and is to be preferred to the proposal made

out by the President. It is calculated to reduce inter-union rivalry and the multiplicity of unions. It would also invest the recognised union with greater responsibility. Where the lead of the recognised union over its rival or rivals is marginal, only the recognised unit would associate the other union or unions in bargaining negotiations with the management, but the bargaining agent will be the recognised union. On the other hand, Mr. Giri's proposal may not lead to harmony when a body representing all unions is made the bargaining agent. There would be every possibility that while some union representatives may take a responsible attitude, others would be intransigent in extravagant demands on the management to outwit their rivals and sustain their hold on the workers. In such a body the minority unions would, in effect, have a veto. On the other hand, if decisions are to be taken by the majority, there would be trouble. This arrange-

ment would leave the problem multiplicity of unions and inter-union rivalry as it is.

As for the proposal of the three central trade union organisations that craft and category unions should not be recognised, it may be noted that the National Labour Commission also has recommended that they should be discouraged. The recent Act passed by the Maharashtra legislature, Recognition of Trade Unions and Unfair Labour Practices Act 1971, which has received the assent of the President makes provision for the method of selecting the bargaining agent in undertakings to which the State Industrial Relations Act does not apply. It does not recognise craft or category unions for the purpose of bargaining with the management. But it allows unrecognised unions to discuss with the management grievances of their members regarding termination of service, discharge, removal, etcetera.

Role of the E.C.G.C. in Export Credit Insurance

(By a Special Correspondent)

India has made a sound institutional arrangement for export credit insurance. The Export Credit and Guarantee Corporation, which is in charge of these operations, has introduced many new forms of credit insurance in the last few years.

INDIA is one among those 38 countries of the world where a sound institutional arrangement for export credit insurance has been set up. The Government of India introduced the scheme of export credit insurance to afford protection against risks of foreign trade. On the recommendations of the Export Credit Guarantee Committee (1956) and

following this scheme, the Export Risks Insurance Corporation (E.R.I.C.) was set up on 30th July, 1957. Later on, in the light of the recommendations of a study group (1962), the Government transformed the E.R.I.C. into the Export Credit and Guarantee Corporation (E.C.G.C.) on 15th January, 1964.

The Corporation "serves a two-fold purpose of promoting exports by protecting exporters against payment risks and by facilitating financing of exports." A number of commercial and political risks of payment are insured and the advances of financing agencies are guaranteed by the Corporation. Immediately after the es-

TABLE I
FUNCTIONING OF THE E.C.G.C., 1968-70
(Rs. in crores)

	Years		
	1968	1969	1970
Risk value on policies	71.5	100.8	110.3
Risk value on guarantees	108.8	166.5	207.9
Total risk value	180.3	267.3	318.2
No. of policies issued during	1,353	1,537	1,774
No. of policies in force at the end	2,277	2,834	3,361
No. of shipment policies and guarantees issued during	2,234	2,976	3,532
No. of shipment policies in force at the end	2,277	2,834	3,361
No. of guarantees in force at the end	823	1,578	1,326

establishment of the E.C.G.C., two guarantee schemes, viz., the post-shipment export credit guarantee scheme and the export finance guarantee scheme were introduced. In 1966, export production finance guarantee and, in 1967, the export performance guarantee scheme were also started. Now the Corporation also covers the payment risks in invisible exports (such as consultancy and professional services) and construction works contracts.

Besides introducing new forms of credit insurance, the E.C.G.C. has also liberalised the terms of credit. "The percentage of loss covered under policies was 80 for commercial risks and 85 for political risks, when they were introduced in 1957. It was raised to 90 for both the types of risks in 1969." The finance made available by banks on the strength of the E.C.G.C.'s guarantees has recorded a good rise from Rs. 3.9 crores in 1963 to Rs. 20.6 crores in 1970. The Corporation offers to make good a major portion of any loss that a financing agency, such as banks, may suffer in respect of pre-shipment and post-shipment credits extended to exporters. As Mr. R. V. Vardachary, chairman of the E.C.G.C. and the managing director of the State Bank of India, has said, the E.C.G.C. "views the transaction not from the safety angle alone but from the export promotion angle as well."

To broaden the scope of Indian exports, especially non-traditional ones, the E.C.G.C., has been playing an important rôle. The Corporation, which works on a "no profit no loss" basis under the Government's directive, has introduced rationalised premium rates. As a result, the premium income on account of policies in 1966 was Rs. 14.90 lakhs for a total risk value of Rs. 35.47 crores, against Rs. 18.14 lakhs (2.2 per cent more over 1966) in 1967, although the risk value covered was Rs. 55.47 crores (56 per cent more over the preceding year). (Data for other years are given in Table 1.) The total amount of claims paid in 1970 was Rs. 10.97 lakhs, against Rs. 9.47 lakhs in 1969. Of this amount, Rs. 4.16 lakhs were due to exchange transfer delays and Rs. 1.81 lakhs were paid under the backing credit guarantees. During 1970, recoveries amounted to Rs. 4.10 lakhs, against Rs. 3.37 lakhs in 1969. Thus, the net value of claims paid during 1970 was Rs. 6.87 lakhs. No claim admitted during 1970 remained unpaid as in December 1970.

Mini Reshuffle of the Central Cabinet

(From Our New Delhi Correspondent)

The mini reshuffle of the Central Cabinet gives the impression that the Prime Minister has postponed major changes to a future date. The reorganisation of the economic Ministries will probably have to wait until then.

THE mini reshuffle of the Central Cabinet is now over. After many existing and prospective Ministers were kept in tenterhooks for over a month—at least by newspaper reports—the Prime Minister, Mrs. Indira Gandhi, has confined the changes in her Cabinet to just three at the senior level and two at the lower level. The only two new entrants are Mr. D. P. Dhar as Planning Minister, and Mr. T. A. Pai as Minister for Railways. Mr. C. Subramaniam's walkover from Planning to the Industrial Development Ministry is only consequential in as much as he has only changed his portfolio. These changes were also consequential to the exit of Mr. K. Hanumanthaiya and Mr. Moinul Haque Choudhury from the Cabinet. It was generally known that Mrs. Gandhi would keep the strength of her Cabinet to the minimum, not more than 15 in any case. For the present, at any rate, the strength remains at 13. For Mrs. Gandhi, this is not an "unlucky" number. She does not believe in auspicious days or timings. Had it been so, she would not have chosen a Saturday for the announcement of the changes. At the lower level the only two changes are the transfers of Mr. I. K. Gujral from Housing to Information and Broadcasting and of Mr. Jagannath Pahadia from Agriculture to Communications.

The sum total of all the changes is that Mrs. Gandhi has just trimmed up the Cabinet before the opening of the monsoon session of Parliament on 31st July. Even here there have been no new appointments at the Cabinet level to fill the vacuum created by Mr. Siddhartha Sankar Ray, who shifted to West Bengal as Chief Minister, and two Ministers of State, Mr. P. C. Sethi and Mr. Ghanshyam-

das Oza, who have become Chief Ministers of Madhya Pradesh and Gujarat, respectively. While Mrs. Nandini Satpaty's place as Minister of State for Information has been taken by Mr. Gujral, there is no replacement for Mr. Gujral in the Housing Ministry.

The mini reshuffle gives the impression that Mrs. Gandhi has postponed a major reshuffle of the Cabinet to a future date, probably after the monsoon session of Parliament. This is expected to affect some senior Cabinet Ministers and possibly a reorganisation of the economic Ministries. There has been no promotions either of Ministers of State to the Cabinet level or of Deputy Ministers to the level of Ministers of State. Some of the Ministers, notably Mr. L. N. Mshra and Mr. I. K. Gujral, had met the Prime Minister before the reshuffle. This gave the impression that either they were being promoted or they were being shifted to some other Ministry. Of them, only Mr. Gujral has found a change.

Looking back on Mr. Subramaniam's transfer from Planning to Industrial Development, it appears that Mr. Mishra's discussions were connected with Mr. Subramaniam's own ideas about industrial development. Reports have been current in the capital that while agreeing to take over Industrial Development, Mr. Subramaniam wanted jute, textiles and sugar to be added to his Ministry so that there could be a co-ordinated approach to industrial development. Of these, jute and textiles are with the Foreign Trade Ministry while sugar is with the Food and Agriculture Ministry. Presumably the talks Mrs. Gandhi had with Mr. Mishra were connected with Mr. Subramaniam's demand for the inclusion of jute and textiles under the Industrial Development Ministry. While Mr. Mishra, according to reports, was himself angling for a promotion, he could not have entertained the idea of his powers in the Foreign Trade Ministry being chopped.

SPOTLIGHT ON STATES

Andhra Pradesh : Need for a Rational Rice Procurement Policy

The difference between the Food Corporation of India's procurement price for rice and the price at which millers are selling it in the open markets is too wide in Andhra Pradesh. This anomaly should be rectified through a rational procurement policy.

SPURRED by the "green revolution", both farmers and the State Governments have been making combined efforts to increase farm production, improve quality and ensure equitable distribution. What are the limitations for a State to achieve these objectives? There are many angles to the rice production in Andhra Pradesh and its distribution. It will be interesting to examine the general policy pursued by the Andhra Pradesh Government on this matter. It will also be interesting to examine how the activity of the Food Corporation of India has been influencing not only the price of rice but also its storage, maintenance of quality and general distribution.

The report that 18,000 tonnes of boiled rice is lying with millers in Andhra Pradesh for the last one year without being distributed or sold has caused some concern. It is obvious that keeping boiled rice in godowns for such a long time results not only in shortages but also causes a serious deterioration in the quality. According to the millers, these stock should be removed quickly, as otherwise they are likely to be damaged. Both the State Government and the Centre should see to it that those stocks are distributed forthwith before much damage or deterioration is caused. More so, because the price of rice in Andhra Pradesh is going up. Boiled rice is not generally consumed in Andhra Pradesh where people prefer raw rice. Therefore, the emphasis on disposing of boiled rice quickly is quite clear. An investigation should be made into the causes that kept as much as 18,000 tonnes of boiled rice lying in the storage for an inordinately long time and steps taken to prevent similar occurrences in future. The Chief Minister of Andhra Pradesh has rightly said that the disposal of the stocks of boiled rice is to be treated as a national issue.

normal red-tape and delays associated with Government machinery prove costly, especially when matters connected with the storage of food articles, are involved.

The present prices of rice in Andhra Pradesh are considered the highest in recent years. It is important to examine why prices have gone up and why production and distribution could not be geared up further. According to the State Government's present policy, procurement is made by it through rice millers on the basis of a levy system. Millers in Krishna and Godavari districts have to surrender 75 per cent of their turnover at a fixed price while in the rest of the State the proportion is 50 per cent.

There is an obvious lack of logic in the procurement policy now followed by the Government in the Delta area and the rest of the State. It is clear that the procurement prices, which are out of tune with the open market prices, have caused the latter to rise further. The present price in the market is about Rs. 55 a bag of 75 kilograms, but the procurement price in the Delta area is about Rs. 38 a bag of 75 kilograms of paddy. The loss, which is incurred by the millers because of their having to surrender 75 per cent of their turnover at the fixed price, is perhaps expected to be made up by selling the balance of 25 per cent of their stocks at a high price in the local markets. The glaring gap between the procurement price of the F.C.I. and the price at which millers are selling rice in the open market needs to be reduced considerably by the adoption of a more rational policy.

It may be worth while to review the prices at which the Food Corporation of India procures rice from millers and the prices at which the State Government purchases rice from the Corporation. There is much difference between these two prices which is

For a nominal charge CAPITAL's
Statistical Department can provide
you with a certificate of share prices

again due to the incapacity of the State Government to buy rice direct from millers due to the lack of storage capacity. It appears that the State

Government's rice policy calls for a re-examination with a view to maintaining its price at a reasonable level and ensuring equitable distribution.

Farmers' Agitation in Tamil Nadu : Lessons for the Congress and the D.M.K.

(By a Special Correspondent)

The farmers' agitation in Tamil Nadu has served a lesson to the Congress Party which should now realise that politics in the State is somewhat different from that in other areas. At the same time, it is necessary for the D.M.K. Government to improve its image in the State.

THE revolt raised by the ruling Congress against the D.M.K. Government in Tamil Nadu has almost died a natural death. The eagerness with which the Congress Party tried to enter the fray and take advantage of an agitation raised by farmers against increased power tariffs in the State only showed that it is bent on bringing about the downfall of the only non-Congress Government in the country. Only last month, the coalition Government in Orissa was eased out by the clever manoeuvres of the Congress Party which did not have any strength in the State Assembly. By a studious process of defections arranged by the Congress Party which is by now a well-known story, the Swatantra Party was split and the Utkal Congress *en masse* joined the ruling Congress. Mrs. Nandini Satpathi, a Central Minister, became the Chief Minister of the State. One more State in the country came under Central administration as it were.

A similar game was played in Tamil Nadu too. The D.M.K. Government raised the power tariffs in the State on a direction given by the Central Finance Ministry as part of a programme to raise additional resources and as a means to tap rural wealth. But the farmers were in no mood to pay, although such an increase was quietly accepted by the agriculturists in other States. Several protests were made by the farmers' organisations in the State, but the Chief Minister, Mr. M. Karunanidhi, was not prepared to concede the demand of farmers. There is no doubt that the Chief Minister was talking from a position of strength. Nor did Mr. Karunanidhi imagine

that the protest made by farmers would ever attain political tones. It was here that he made the mistake and if he had persisted in observing an obstinate policy, it would certainly have resulted in his Party being thrown out of power. Such was the intensity of the agitation against him and his Party and Government.

The first to take advantage of the agitation was the C.P.I., now a close ally of the ruling Congress. But when it appeared to the Congress Party that the entire political advantage would accrue to the Communist Party of India, it too entered the scene and actively supported the agitation against the D.M.K. Government. In the process, the merits of the case were completely forgotten. When the farmers' organisation announced they would observe a *bandh*, all the political parties opposed to the D.M.K. gave their support. The D.M.K. Government was not slow to act and police repression was let loose in the State to suppress the *bandh*. As a result, more than 15 persons were killed and over a hundred were injured. The Congress Party at the Centre considered the political situation in Tamil Nadu and expressed horror at the excesses committed by the police. According to it, at least 48 persons were killed and scores of others injured. Several hundred Congressmen were put in jails and their houses raided by the police. It was also said that the Congress workers were the main target of attack. A three-man delegation of Congress M.P.s was sent to Tamil Nadu to make an on-the-spot study of the situation.

The D.M.K. Government regarded this as an intervention by the Congress Party in its affairs with a view to discrediting the Government. Mr. Karunanidhi wrote a long letter to the Prime Minister, Mrs. Indira Gandhi, explaining the genesis of the trouble and pointed out that the power tariffs were raised only at the behest of the Centre. It was, therefore, unfortunate that her Party men

should have supported an agitation which was started by vested landed interests. There is much sense in what the Chief Minister has said and, naturally, it became a little difficult for Mrs. Gandhi to come out openly in support of what her Party men did in Tamil Nadu.

However, at her Press conference, when this question was raised, the Prime Minister made it clear that the opposition of the Congress was not to the rise in the rates, but to the manner in which the D.M.K. Government had handled the situation. And, yet, when a D.M.K. Minister, Mr. K. Rajaram, met her the following day for a discussion of the situation in the State, Mrs. Gandhi did not say a word to him about how the situation was handled by the Government. Mr. Rajaram said that the Prime Minister gave him a patient hearing and to him it appeared she was quite convinced that the agitation was politically motivated. And, now, the Chief Minister held talks with the representatives of farmers in the State and an agreement has been reached. All those who were arrested were released. As part of the agreement, the State Government has brought down the power tariff and farmers in turn have given up the demand for a judicial enquiry into police firings. It is not very relevant, however, whether the power rates have been reduced or not but what is more important is that a rapport has been established between the Chief Minister and the aggrieved party. This should have been done much earlier for this would have prevented all the sound and fury that took place in the State. But this has served a lesson to the Congress Party which has now realised that politics in Tamil Nadu is somewhat different from other States.

All this goes to prove there are no short-cuts to power. Perhaps the ruling Congress will have to wait for some time more before it can prove its *bona fides* in Tamil Nadu. Meanwhile, it is necessary for the D.M.K. Government too to improve its image in the State. There is talk of widespread corruption at all levels and if this is true, it will prove disastrous for the Party. The record of the State Government has been none too bright and unless it takes progressive steps to improve efficiency all round and initiate measures which really serve the common man, a day might come when the people will stage a revolt against the Government and unseat the D.M.K.

INDUSTRY

State Take-over of Sick Textile Mills : Need for Modernisation

(By a Special Correspondent)

The National Textile Corporation was created with the specific purpose of reopening and rehabilitating sick textile mills. But there should be no hesitation on the part of the Government in granting the Corporation more money to modernise the mills.

A PUBLIC-SECTOR undertaking which has done somewhat well—and that too in a very short period of four years—is the National Textile Corporation, formed in 1968 to run and supervise mills whose management had been taken over by the Government. As of date, the number of mills whose management had been taken over either because of closure or sickness is 50, and the Corporation has recommended that the management of seven more mills might be taken over. In addition, six more cases are presently being investigated. Management of 50 mills—17 directly and the remaining through authorised controllers—is no easy job, particularly considering the fact that all these mills are ailing ones. The Corporation's chairman-cum-managing director, Mr. K. K. Dhar, announced at a Press conference last week that out of 26 mills, which had been under Government management for over a year, 24 had made gross profits. This is not a bad record at all because most of these mills have a backlog of problems.

The Corporation's performance has to be considered sympathetically because it was created with the specific purpose of reopening and rehabilitating sick textile mills. If the 50-odd mills had been allowed to be closed, over 100,000 workers would have been without jobs. Apart from the employment aspect, the 50 mills account for about 10 per cent of the total spindlage in the country and 15 per cent of the loomage. Cotton yarn and cloth output from these mills, when in full production, would be worth about Rs. 175 crores a year, yielding the Government about Rs. 20 crores annually by way of excise and sales taxes. This level of production would have been lost to the country had these mills been allowed to remain closed.

It goes without saying that almost all the mills taken over by the Government need considerable repairs and replacement of machinery if they are to be worked to their full capacity. This is a task the Corporation has taken up in earnest. It contributes 51 per cent of the monies needed for modernisation, and programmes for modernisation have been prepared in respect of 33 of the 50 mills. The estimated outlay for this purpose is Rs. 14.5 crores. Since the Corporation has been allotted only Rs. 17.5 crores for modernisation of the mills, this total Plan provision is expected to be consumed within the current financial year. It has, therefore, asked the Government that the Plan provision of Rs. 17.5 crores should be increased to Rs. 34.5 crores. As there is very little likelihood of the mills being returned to the original managements after they are put in proper shape using public funds, there should be no hesitation in granting the Corporation more money to modernise the mills. Having taken over the management, it will be in the Government's own interest to run them on modern lines.

The Corporation's activities have also helped the Government in increasing the availability of controlled varieties of cloth consumed by the common man. During June 1971 to May 1972, the mills under Government management produced 94.3 million square metres of controlled varieties of cloth. Although a retail network is yet to be organised to sell this output, the Government-managed mills have so far opened 33 retail shops in predominantly rural areas. It is interesting to note that for the period ended March 1972, the mills had earned export orders worth about Rs. 4.5 crores. Some of the Government-managed mills have been exporting about 40 per cent to 45 per cent of their production. The mills have also taken some share (the extent is not known) of the Russian cotton for conversion and re-export to the Soviet Union.

Although the take-over of the management of the sick units have

not been as much influenced by ideological considerations as in the case of other industries, control over 50 textiles mills and possibly more in the near future, gives the Government a clear entry into this oldest industry. As things stand today, it is highly improbable that these mills will ever be returned to the original owners. In other words, one can safely presume that 10 per cent to 15 per cent of the capacity in the industry has already passed into Government hands.

(Continued from page 136)

limbo of economic activity for consideration of politics. It is a fact of history that about 90 per cent of trained managers are to be found in the top industrial houses contributing, probably less than 3 per cent of production or turnover, calculated on an all-India basis. Unless there is an evening out of talent there is no escape from taking help where available.

Economic Consultants

An alternative which is being tried by some other States, including Maharashtra, is the engagement of economic consultants for specific jobs to identify through detailed investigation, and recommend certain lines of action to the State Government whose ultimate responsibility it is to co-ordinate and plan their affairs. In either case the bureaucratic machinery must accept the rôle of experienced managers to render competent advice, without affecting the prestige or responsibilities of the various departments within the State Government.

A few weeks ago, the Chief Minister of West Bengal, Mr. S. S. Ray, stated that a number of offers had been conveyed to him from high-paid executives who were willing to work for promotion of the Government's projects. Without attempting to underplay the significance of such offers it may be pointed out that even competent individuals need organisation of supporting management to have an impact on the economy, and leaders without organisation are as much handicapped as organisations without effective leadership. The problem of imparting managerial expertise to the organs of Government is thus not easy, and a solution must be found through a combination of alternatives. Let West Bengal take a lead and establish a "joint sector" through modern consultative machinery, instead of the worn-out method of committees, panels, and sub-committees consisting of part-time officials and non-officials.

Has There Been a Slow-down in Bank Advances to Small-scale Units ?

(By a Special Correspondent)

The number of small-scale industrial units being financed by banks is on the increase. But in terms of unitwise and accountwise advances, the flow of funds to the small-scale sector seems to be slowing down.

IN his inaugural address at the annual session of the Indian National Committee of the International Chamber of Commerce in Bombay on 21st April, 1972, Mr. S. Jagannathan, Governor, Reserve Bank of India, has said: "For the industrial sector, we have now a large number of special institutions providing medium and long-term loans, underwriting facilities, credit guarantees, export guarantees, export finance and even equity participation. These facilities have come to be utilised more and more by enterprises of all sizes; even so much scope still exists for enlarging the small and medium industries' recourse to industrial finance".

Contrary to this statement, the Reserve Bank's survey conducted by 21 universities and premier research academic institutions for the Banking Commission has reported that the small-scale industries could not fully utilise their productive capacities and increase their level of production, even after bank nationalisation, on account of paucity of funds and lack of insti-

tutional credits. This contradiction has been further substantiated by the statistics available on the bank's advances to small-scale industrial units.

A glance at Table I reveals that although the number of industrial (small-scale) units being financed by banks is on the increase, that has not kept pace with the increase noticed in the year following bank nationalisation. While 31,473 new units were financed with the additional help of Rs. 128.45 crores in 1970, only 23,075 units with extra Rs. 83.81 crores of finance were assisted by the banks in 1971. The average amount a unit was Rs. 52,000 in June 1969; that fell to Rs. 48,000 in June 1970 and to Rs. 46,000 in June 1971.

Banks, on their part, feel complacent about the figure of increased advances to small-scale industrial units, but it is the amount a unit as well as the amount an account that shows that the tempo of providing adequate finance to new industrial units has not been maintained by the banks in the recent past. It is, however, heartening to find that a committee constituted in April 1971 by the Reserve Bank to study the problem of payment of bills by large and medium industries to small enterprises in respect of supplies

made to them and to work out suitable arrangements so as to ensure a speedy settlement of claims has since finalised its report and has made a number of useful and practical suggestions.

The committee observed that payments to small-scale industries did not form any significant proportion of the total expenditure of the big companies. A large number of reporting small-scale units have complained that there was undue delay in inspection of goods which has caused delay in the payment of bills. Another factor causing delay in payments was that not enough care was taken by supplies in submission of relevant documents such as invoice and bills. A third factor was the lack of adequate budgetary provision in respect of payment to small-scale industries by State Governments and public-sector undertakings. The committee has also mentioned that the impact of the delayed payments was particularly large on small-scale industries because either they had a slender capital base which weakened their bargaining position or they did not have comfortable sundry credit position.

The committee's recommendations, if implemented, are definitely going to remove the financial strains experienced by small-scale industrial units. With a view to helping a unit tide over its financial difficulties, the State Bank of India has also opened a management consultancy service at some of its offices. This should prove to be an important step in the direction of improving the lot of small-scale industries. It is reported that some of the units experiencing difficulties do not refer their problems to management consultancy service centres spread over the country for the fear of high administrative charges asked for by these centres. But this fear is baseless because it would never be proper to postpone remedial measures. Small-scale entrepreneurs should realise the fact that prevention is always better than cure.

PEOPLE AND PERSONALITIES

Mr. James R. Sankey has been elected vice-president of Goodyear International Corporation, succeeding Mr. Marshall F. Gillespie.

PRAGA

What's in a name?

A great deal when it's Praga.

May we spell it out for you? We started nearly three decades ago, with a limited programme to manufacture high speed cutting tools and measuring instruments in India. This was in 1943 and since then our growth has been impressive, to say the least. Our manufacturing activities now cover a wide range of machine tools, accessories and forgings. Not to mention the several items that we manufacture for the Defence Department.

We are also famous for the company we keep! Technical collaborations with such world-renowned organizations as Jones & Shipman of the U.K. to manufacture our Cutter & Tool Grinder and Surface Grinder; Gambin SA of France to

produce the Praga Gambin Milling Machine; Escofier & Co., also of France, for the Thread Rolling Machines; George Fisher of Switzerland for Copying Lathes; Kearney & Trecker CVA and Pratt & Co., both of the U.K., to produce drill chucks and lathe chucks respectively. Incidentally, we are the largest producers of lathe and drill chucks in the country. It is not surprising therefore that Praga (a public sector undertaking) is in the best-selling forefront at home and is finding ready and willing markets abroad. Our associates are world famous and their names speak for themselves. Need we say more?

For Precision Machine Tools the name is **Praga**

New West Bengal Tax on Entertainments Will Hit Hotels

(By a Special Correspondent)

The West Bengal Government seems to think that it is only the affluent people who will be affected by its new levy on entertainments. But Calcutta's hotel industry fears that the impost will hit it hard.

THE implications of the West Bengal Entertainments and Luxuries (Hotel and Restaurants) Tax Act, 1972, do not seem to have been properly appreciated by the State Government. It has been assumed by the Government and the State Assembly that since the taxes under this Act have to be paid only by the affluent people, there cannot be any objection to its provisions. But Calcutta's hotel industry fears that the Act will hit it hard. If it does, it will ultimately affect the common man also. The hotel industry in Calcutta has passed through a difficult phase in the last few years because of the deterioration in law and order and the sharp fall in tourist traffic. The industry has been looking forward to improving its prospects after the formation of a stable Ministry in the State. But the Entertainments and Luxuries Tax Act is likely to affect the industry's prospects. The Act applies to the whole

of West Bengal. But, in the first instance, it will apply only to Calcutta.

The statement of objects and reasons of the Act says that there is scope for augmentation of revenue by the levy of taxes on luxuries and entertainments provided by hotels and restaurants. But no estimate is given of what is likely to be the revenue from this source. The Government seems to think that the hotels and restaurants can easily absorb the new levies. How far is this assumption justified? Under the Act, "entertainment" means any exhibition, performance, amusement, game, sports, cabaret, dance or floor show and includes performance by any singer, musician or bandsman provided in any hotel or restaurant; and "luxury" means provisions for air-conditioning through air-conditioner or central air-conditioning or any other mechanical means provided in any of the rooms, or in any part of a building which constitutes a hotel or restaurant. A restaurant is said to include also an eating-house. The mode of taxation is laid down under Sections 3 and 4 of the Act as follows:

Section 3 says: An entertainment tax shall be payable by every person who is admitted into or enters any place, within either a hotel or restaurant, which is provided with luxury, where an entertainment is provided, and such tax shall be calculated at the rate of 10 per centum of the hotel sum paid or payable by such person for all the services including food and drink supplied to him and also including any fee for admission into such place of entertainment: provided that where payment is charged for admission to the place of entertainment, the entertainment tax under this Section shall, in no case, be less than 25 per centum of such payment for admission to the place of entertainment.

Section 4 says: There shall be charged, levied and paid to the State

Government a luxury tax by the proprietor of every hotel and restaurant in which there is provision for luxury and such tax shall be calculated at the rate of an annual sum of Rs. 100 for every ten square metres or part thereof in respect of so much of the floor area of the hotel which is provided with luxury.

The Act provides for a fine not exceeding Rs. 500 on any person who fails to pay the entertainment tax or the luxury tax within the prescribed period. If the offence is a continuing one, there will be a further fine not exceeding Rs. 5 for every day during which the offence continues. The Act is causing concern to the hotel industry of Calcutta because of the possibility of some of its business being diverted to clubs. Cabaret shows are not really as popular as the Government appears to think. If the hotels stop this form of entertainment, it will result in unemployment of dancers, singers, musicians, bandsmen and other connected with it.

It is also pointed out that the Government is already charging a high excise literage fee on the sale of liquor. So, an additional 10 per cent tax on the sale of liquor is considered unfair. Swimming pools do not bring revenue but hotels have to keep them to maintain international standards. The Act has brought swimming pools also within "entertainment". The hotel industry has sought clarification as to whether the luxury tax will apply to guest rooms and function rooms which are not occupied and whether piped music will come in the category of entertainment.

The Government of India has been urging hotels to aircondition their rooms and provide all modern facilities with a view to attracting more tourists. Even one-star hotels are required to aircondition at least 10 per cent of their rooms. This emphasis on airconditioning is understandable in view of Calcutta's humid climate. The Central Government has also been persuading the State Governments to lower the electricity charges for hotels and restaurants so that they can offer better service to the tourists. Against this background, will the Entertainments and Luxuries Act help the hotel industry in West Bengal to flourish and expand, which is necessary in the interest of creating more employment as well as promoting tourism?

Has the Importance of Black Money Been Overplayed ?

By P. Chattopadhyay

It is possible that the importance of black money has been overplayed. Perhaps the Income Tax Act could be better patterned if the suspicion of the existence of black money and tax evasion were disregarded, and instead good faith was made the basis of assessment.

IN many ways, the search for black money has become highly philosophical. Metaphorically, it has indeed become a search for something in a dark room with eyes blindfolded. For some time past, discussion on black money has engaged all sections of the thinking public in this country. Recently, the Wanchoo Committee Report also threw some arguments on either side of the subject. What impresses one most is that analysts have many a time attempted to measure the extent of black money in some exact terms. The committee observes that black money is found widely used for conducting concealed business transactions, smuggling gold and luxury articles, purchasing illegal quotas and licences at premiums, financing secret commissions, giving donations to political parties, acquiring assets in benami names, etcetera.

Behind the vulgar display of wealth which is evidenced by ostentatious living and lavish expenditure on weddings, festivals, etcetera, is this scourge of black money (Cf. Direct Taxes Inquiry Committee *Final Report*, page 167). On the other hand, Dr. D. K. Rangnekar in his Minute of Dissent has given an estimated order of Rs. 1,150 crores of tax-evaded income in 1961-62. His estimate of black income for 1965-66 is of the order of Rs. 2,350 crores as against Rs. 1,216 crores mentioned in the Wanchoo Committee Report. There are of course points to be mentioned in favour of such analyses. It is, however, necessary to stress here that one may raise suspicion that not all this so-called black money or tax-evaded income is really black or tax-evaded. In many cases, even the U-sector consumption is financed by tax exempted income accumulated over long years for specific

purposes. The genuine leakages in the act of "pump-priming" should not be couched in such harsh languages as black money or tax-evaded income. While tax research on the lines suggested by the committee may indeed go a long way in tracking down the flow of incomes in different directions it is necessary that the Government approached the matter with an open mind and give the assessee the benefit of doubt.

While there is little reason to let the tax dodgers go scot free, it is possible that the discussion on the subject has been overmade and the importance of black money overplayed. At least, such assertions as "the magnitude of 'black money' is large and rigged deals are growing in volume and complexity at an alarming rate" are on insufficient basis. Indirect evidence such as conspicuous consumption is, however, a clue that makes one suspect the existence of black money but it fails to give an idea of the magnitude of "black money" in the country. Perhaps, the Income Tax Act could be better patterned if the suspicion of the existence of black money and tax evasion were disregarded and, instead good faith was made the basis. The important point is

that if the extent of black money available in the country could be measured accurately, black money would cease to be black!

Tax evasion and the penal measures provided for in the Income Tax Act smack of distrust of the authorities of the body of assessee. Apart from other factors, suspicion and distrust also create an administrative burden on the authorities, in so far as the assessee are themselves required to prove the *bona fides* of their cases with vouchers, documents, etcetera. There have been instances when legitimate expenditure has been disallowed by the Income Tax Officers in accordance with the discretion allowed to them under the Act. The case laws on the subject have gained a lot in volume. The provision for summary assessment is, therefore, a step in the right direction, albeit a rather belated action. It is necessary that such summary assessments should be extended to all classes of assessee, including companies, subject to acceptable authentication of the tax returns or such other checks and balances deemed appropriate. In many cases, tax evasion takes place not because of a lack of desire on the part of the assessee to pay tax but because of the paraphernalia attending on the assessment and payment of direct taxes. The bother of it all must have been experienced by almost all assessee of different categories in some form or other.

It has been mentioned by some analysts that undisclosed income or black money may arise from income arising from illegal sources and in-

come arising from legal sources. The key point is disclosure of income from any source. The disclosure of all incomes earned and expenditure directly incidental to the earning of these incomes should go hand in hand and should be found simultaneously acceptable, one corresponding to the other, at least for certain classes of assessee where incurring expenditure is a precondition for earning such income. If only the disclosure of income is accepted but not the other part, the assessee is unnecessarily subjected to all kinds of harassment. The motivation to disclose income only in part and lower than that actually arising during a previous year can be substantially linked with the irritation resulting from disallowing expenditure which has been incurred in the process of earning income and the pervading suspicion in which the assessee is held.

High rates of income-tax act as a damper against the earning of income above a certain range. This has been generally applicable in all cases of income from business, profession or

vocation. Income from certain sources arises only when an assessee has already reached a certain stratum of income, depending on the position that he occupies either in business or in other works of life, including teachers in universities or people in the professions such as law and medicine. The damper caused by high rates adversely affects the quality of services ultimately rendered by such people when the best persons in the line decline to render certain services because they have no motivation to earn more. The second best or even the not-so-good only are available for the purpose. This kind of a situation is fairly common in the professions, including the legal profession, the medical profession and even the consultancy profession.

In such situations, it is necessary for the authorities to consider whether for the sake of improving the qualities of services ultimately received by different sections of society tax rates should be reduced or not. Secondly, when such people earn their income

against the damper of a high rate of tax, it may so happen that they spend the money in a way that would not be in the best interest of society. U-sector consumption owes a good deal to this. It is, therefore, necessary that in the light of the expansion in the tertiary sector during the era under planning, tax rates should be considerably reduced for certain classes of assessee to encourage better quality of services to be rendered by people who have already reached a status of success and are already on a high-income bracket. It is possible to think of certain incentives that may be granted by the Board of Direct Taxes to people who disclose their income to the maximum in conditions where they had opportunities to hide a portion of such income to avoid the high rates of taxes at higher income levels.

Contrary to a widespread belief that tax evasion takes place on a large scale, it is necessary to take into account the fact that many people pay taxes much higher than they should, in view of the procedural matters attending on the claims for deductions or rebates or incentives provided for in the Income Tax Act. As a matter of fact, most people, whose only source of income is salary, pay taxes higher than they should because of these difficulties and also because of their desire to avoid the tentacles of the Income Tax Department in the context of grant of such reliefs or rebates. Even copies of returns forms are not available easily.

A close look at the revenue coming to the Central exchequer on account of income-tax every year *vis-à-vis* the provisions therefor in the Budgets would reveal that there is in fact realisation in excess of the Budget figures. The cost of collection of such tax is of course a different matter. From the point of view of the assessee, a consciousness has been growing on a wide scale that income-tax should be paid from incomes generated under different sources. However, where the basis of assessment is income accrual and not actual receipt, it spells disaster to even otherwise flourishing concerns which have to pay advance tax on the basis of accrual and have to wait much longer for realisation of the income due. There is no provision in the Act for the redress of hardships of such assessee, even in cases where their entire income arises from the export of goods and services.

INVESTMENT

Take-over Fears Depress Share Prices

THE stock markets have developed pronounced weakness this past week. With fresh support virtually absent and selling persistent and quite heavy at times, equity prices have suffered an all-round decline. Losses have not only been widespread but also heavy in many counters, both cleared as well as non-cleared. Few shares have been able to wind up the week with plus signs. This week's downswing has carried the market to a new low for the year. That the markets should have dived below the earlier mid-March low after a very sizable recovery is considered to have important implications, according to many analysts. The markets' recent overall behaviour shows a marked deterioration in sentiment. Apart from the continuing stagnation in the economy, it is the uncertainties created by the craze for take-over of industrial units that has seriously undermined investors' confidence.

No less disturbing is the uncertainty about compensation in the event of eventual nationalisation. The quantum of compensation indicated in the General Insurance Business Nationalisation Bill has caused considerable disappointment among investors. They are naturally wondering about the future of management of private-sector concerns. Investors seem little impressed by the Government's assurance that the take-over will improve Indian Iron's fortunes as the State-run units are not faring well. The Government has still to establish reputation for efficient management of undertakings under its control. Fears of nationalisation of electricity companies and reports suggesting the possible take-over of Hindustan Aluminium, Sirpur Paper and Sirsilk have made investors nervous. It may be mentioned here that the Delegated Legislation Committee of the U.P. Vidhan Sabha has strongly recommended the take-over of Hindustan Aluminium and in Andhra Pradesh the State Government has been urged to take over the management of Sirsilk and Sirpur Paper as these units have been incurring losses.

The general trading sentiment being very much unsettled, the markets have taken no notice of good corporate news and of the announcement of a rise in steel prices for selected categories. The increase in prices falls far short of steel producers' demands and it is the public-sector units which stand to gain the most. The engineering industry seems greatly worried over the escalation in costs of production which apart from undermining the industry's competitive position in international markets will add to domestic inflationary pressures. The stock market's reaction to the changes in the Central Cabinet has been quite mild. New Ministers have been selected to man Planning, Railways and Industrial Development. The stock markets seem to approve of Mrs. Gandhi's choice but in their present mood, they are unlikely to take any big risks merely on the hope that things will soon change for the better. The downward drift may continue till there are some positive signs of a favourable shift in the Government's policies and the economy starts picking up.

Gilt-edged securities have remained quiet this past week and the volume of turnover has been restricted. The 3 per cent Conversion loan 1986 has been quoted at Rs. 59.85. The State Government loans have received selective support but turnover has remained restricted.

Prices in the Calcutta stock market have shown a dull trend this past week. This is because the market has received a severe jolt due to the dramatic management take-over of the Indian Iron and Steel Company. Operators are apprehensive of the State take-over of the management of such key industries as cement, sugar, textile, paper, automobile and electric power. Among engineering shares, Guest Keen Williams, Bihar Alloy, Simon-Carves, Escorts and Kumardhubi Engineering have been quiet. Among jute shares, New Central and Kelvin have declined. Among coal shares, Western Bengal and Bengal have been transacted. Among paper shares, Straw Products,

Ballarpur, Orient and Sirpur have been easier. Among miscellaneous shares, Goodyear India, Hindustan Aluminium, G.E.C. and Woolcomers of India have retreated. Among tea shares, Assam Brook and Dhelakhat have been transacted.

With fresh support conspicuous by its absence and sellers dominating the scene almost throughout the week, Dalal Street has retreated sharply and struck a new low for the year. Both cleared and non-cleared securities have come under pressure and popular counters being easier to sell have been the worst sufferers. Good corporate news and the steel price hike have had little effect on sentiment which has been extremely unsettled mainly by take-over fears and partly by the likelihood of far-reaching changes in the Companies Act. The declaration of *benami* shares is proposed to be made obligatory. Investors' confidence has sunk to a very low level at a time when the economy requires a big increase in investment to accelerate the pace of industrial growth. Steels, cotton textiles, rayons, engineering, cement, paper and chemicals—all sections have followed a similar pattern and have registered substantial declines. Shares which have suffered the worst include Indian Iron, Tata Steel, Motor Industries, Hindustan Motors,

Ahmedabad Electricity, Sirpur Paper, Century Enka, National Rayon, Century Mills, Hindustan Aluminium, Indian Dyestuff, Synthetics and Chemicals, Polyolefins, Gujarat Fertilisers, West Coast Paper and Ceat Tyres. Tata Oil, Bayer (India), Hindustan Lever and South India Viscose have been among the steady features.

Prices in the Madras stock market have moved within narrow limits due to the lack of sustained investment enquiries. As a result, turnover has remained restricted. In the planting section, rubber shares have been subdued with Be Be Rubber and Gokak remaining quiet. Cochin Malabar, Manjushree, Nelliampathy and Nonsuch Tea have, however, received investment enquiries. In the textile section, South India Viscose have met with selling pressure while Venkateswara Mills and Mettur Beard-sell have been traded. Sugar shares have been featureless. Deccan have remained dull while E.I.D. have met with some business. In the miscellaneous section, Mettur Chemical and Aluminium Industries have received investment enquiries. India Cement and S.P.I.C. have remained steady. Among bank shares, Indian Bank have risen on dividend announcement. Indian Overseas Bank have also met with support.

Metal Box Earns More : Dividend Raised

THE chairman of the Metal Box Company of India Ltd, Mr. Bhaskar Mitter, said in his statement that the Company's sales had increased by 7.6 per cent to Rs. 36.4 crores during the past year. (A fuller version of Mr. Mitter's speech was published in last week's issue of *Capital*.) Excluding the effect of excise duty and price increase arising from three changes in tinsplate prices, the real increase in sales was 3.5 per cent. The chairman said that the further investments made in capital, technology, managerial resources and productivity measures had made this growth possible despite heavy odds. The addition of more sophisticated equipment will add to the Company's ability to supply high quality paper packages and laminated products. The profit, before tax, is Rs. 185 lakhs or 9.6 per cent more than that of the previous year. The directors have proposed a dividend, includ-

ing the interim, of 9 per cent, against 8 per cent.

The Company's finances have been greatly stretched. Arrangements have been concluded with the I.C.I.C.I. for a foreign exchange loan of Rs. 18 lakhs and discussions are continuing for a further loan of Rs. 21 lakhs. The chairman regretted that there had been a deterioration in law and order in and around Madras city, seriously disrupting industrial production. The long-term agreements with the workers in Calcutta are under negotiation. Productivity bonus schemes have been introduced for the first time at the paper units in Bombay and Cochin. As for tinsplate packaging the chairman said that the Government should play a more dynamic role in its capacity as the largest producer of tinsplate in the country. He said that the Hindustan Steel, along with other

tinsplate producers, should give top priority to producing lighter substance material and nitrogenised steel, double reduced plate and tin free steel. The Company's operations suffered due to a serious accident at the Rourkela steel plant and also due to the recent war with Pakistan. The chairman said that unless Rourkela made a substantial improvement in its performance, tinsplate would remain either scarce or too costly.

T.E.L.C.O.

All-round Progress

MR. J. R. D. Tata, chairman, Tata Engineering and Locomotive Company Ltd, said in his statement that the Company had continued to make good progress during the past year. (A fuller version of Mr. Tata's speech was published in last week's issue of *Capital*.) Mr. Tata said that production in excess of the rated capacity and the highest turnover on record has been achieved in spite of many difficulties, including irregular supplies, labour indiscipline and shortage of power. Production is marginally higher at 25,075 vehicles, while the production and sale of spare parts have risen by 30 per cent over the previous year. The chairman mentioned the "continuing inflation in costs" which has prevented the ratio of profit to turnover from improving. The Government of India has approved the Company's expansion project. The chairman has expressed his dismay over the conditions the Government has chosen to impose on the issue of a licence. Subject to clarification of some points, the conditions are acceptable to the Company and the chairman hopes that an industrial licence will be issued to the Company in due course. On the completion of this programme, the Company will have powerful centres of production in both Jamshedpur and Poona, equipped with the most modern plant and machinery. T.E.L.C.O. will spend on the Jamshedpur unit some Rs. 25 crores on expansion, improvements and replacements. On the completion of the expansion programme the country will have a unique engineering complex.

VICKERS SPERRY

Dividend Raised Again

VICKERS Sperry has turned out substantially improved results for the year ended March 1972 and

the dividend, raised last year from a maiden 10 per cent to 11 per cent, is being further stepped up to 15 per cent. Sales at Rs. 1.92 crores show an increase of 51 per cent over the previous year's figure of Rs. 1.27 crores and the gross profit has increased by 54 per cent from Rs. 41.93 lakhs to Rs. 64.60 lakhs. After providing Rs. 15.68 lakhs (against Rs. 12.87 lakhs) for depreciation, Rs. 3.83 lakhs (against Rs. 4.30 lakhs) for development rebate reserve and Rs. 31 lakhs (against Rs. 11.75 lakhs) for taxation and after making some adjustments, the surplus of Rs. 13.03 lakhs (against Rs. 12.44 lakhs) has been transferred to general reserve out of which the proposed dividend absorbing Rs. 7.62 lakhs will be paid.

GWALIOR RAYON

Margins Squeezed

THE Gwalior Rayon Silk Manufacturing (Weaving) Company has suffered a setback in its working for the year ended March 1972. Even so, the dividend has been raised from 18 per cent to 19 per cent (from Rs. 1.80 to Rs. 1.90 a share). Despite an increase of about 6.3 per cent in sales from Rs. 59.93 crores to Rs. 63.71 crores, the gross profit has declined sharply by 22.3 per cent from Rs. 10.83 crores to Rs. 8.41 crores, bringing down the ratio of profit to sales from 18 per cent to 13.2 per cent. Profits have been adversely affected by certain extraordinary factors. The Company had to write off as much as Rs. 1.28 crores being the aggregate value of industrial plantation in Nilambur following the take-over of private forests by the Kerala Government. It had also to put up with heavy loss in production resulting from a 72-day strike at the pulp plant. The pulp production declined sharply from 64,120 tonnes in 1970-71 to 42,493 tonnes in 1971-72. The production of staple fibre was only 59,231 tonnes due to the shortage of pulp. The Company also experienced difficulties in obtaining the required quantities of caustic soda and had to make purchases from the open market at higher prices. Margins were further squeezed by the all-round rise in costs.

After providing Rs. 178.27 lakhs (against Rs. 201 lakhs) for depreciation, Rs. 19.98 lakhs (against Rs. 15.06 lakhs) for development rebate reserve and Rs. 392 lakhs (against

Rs. 484 lakhs) for taxation, the net profit for 1971-72 amounts to Rs. 250.76 lakhs, against Rs. 382.46 lakhs for the preceding year. A sum of Rs. 20 lakhs (against Rs. 15 lakhs) has been transferred to preference share redemption reserve and Rs. 230.76 lakhs (against Rs. 352.46 lakhs) to general reserve. In the previous year, a sum of Rs. 15 lakhs had been transferred to contingencies reserve. The equity dividend absorbing Rs. 125.40 lakhs (against Rs. 118.80 lakhs) and the preference dividend of Rs. 31.52 lakhs (same) will be paid out of general reserve.

The long-awaited C.O.B. licence for the pulp plant was issued to the Company in February 1972 and the production of rayon grade pulp commenced in May by commissioning one digester. The complete plant is expected to be ready by March 1973. The work on the caustic soda project in Nagda is progressing quite satisfactorily and the factory is expected to be ready for trial runs by October 1972. The Company's application for an industrial licence for setting up a plant for the manufacture of paper and caustic soda in Mysore has been referred to the Monopolies Commission. Its application for setting up a staple fibre plant in Harihar is still pending with the Government.

DUNCAN BROTHERS : DIVIDEND MAINTAINED

IF the profit of Duncan Brothers and Co. Ltd for the year ended December 1971 has declined, it is mainly due to the fact that the National Textiles Share Company, Ethiopia, has gone into liquidation; its assets are not sufficient to cover most of its liabilities, including the amount advanced by Duncan Brothers which has now been written off as bad debt. Increased shipments during 1971 by the Company's tea export department to overseas markets resulted in earnings being approximately 38 per cent more than in the previous year. The Company's tea warehouse department was hard pressed during the year to meet the storage requirement due to the unprecedented floods resulting in the dislocation of rail and road communications. Exports of jute goods fetched Rs. 10.29 crores in 1971, against Rs. 13.15 crores in 1970.

INTERNATIONAL TRACTOR

Good Results

INTERNATIONAL Tractor Company of India has turned out substantially improved results for the year ended March 1972, although margins have been under pressure. Turnover has risen by 51 per cent from Rs. 13.71 crores to Rs. 20.76 crores and the gross profit has gone up by 27.6 per cent from Rs. 121.59 lakhs to Rs. 155.20 lakhs. The dividend has been kept unchanged at 10 per cent. After providing Rs. 91.57 lakhs (against Rs. 78.05 lakhs) for depreciation and Rs. 23 lakhs (against Rs. 34 lakhs) for development rebate reserve, there is a net profit of Rs. 40.63 lakhs, against Rs. 9.54 lakhs in the preceding year. The Company has no tax liability. After adjustments the disposable surplus of Rs. 40.63 lakhs (against Rs. 24.77 lakhs) has been transferred to general reserve out of which the equity and preference dividends amounting to Rs. 30.18 lakhs will be paid. The Company produced a little over 9,000 tractors last year but the capacity is now geared to produce 12,000 tractors during the current year. The Company has started the manufacture of a new tractor with more sophisticated features and expects to market 3,000 such tractors in the current year.

HINDUSTAN FERODO

Sales Up but Profit Down

HINDUSTAN Ferodo has maintained the dividend for the year ended March 1972 at 23 per cent, made up of 13 per cent final and 10 per cent interim. The preliminary figures released by the Company along with the announcement of the final dividend show that while sales are better at Rs. 6.93 crores, against Rs. 6.78 crores in the preceding year, the gross profit has declined from Rs. 1.69 crores to Rs. 1.57 crores. After providing Rs. 23.73 lakhs (against Rs. 22.68 lakhs) for depreciation, Rs. 1.63 lakhs (against Rs. 1.08 lakhs) for development rebate reserve and Rs. 82.35 lakhs (against Rs. 77.12 lakhs) for taxation, the net profit for 1971-72 amounts to Rs. 49.55 lakhs, against Rs. 68.10 lakhs in the preceding year. With a write-back from previous excess provisions for taxation amounting to Rs. 14.84 lakhs, the surplus of Rs. 64.39 lakhs (against Rs. 68.10 lakhs) has been transferred to general reserve. The total dividend distribution amounting to Rs. 57.08 lakhs (same) will be made out of general reserve. The directors state that they find it difficult to comment on the prospects for the current year with any certainty due to rising costs and material procurement problems. Strenuous efforts are being made to overcome these problems and some improvement is expected.

COLOUR-CHEM : BONUS ISSUE PROPOSED

THE directors of Colour-Chem have maintained the dividend for the year ended March 1972 at 12 per cent and, in addition, recommended the issue of bonus shares on a one-for-four basis on a date to be fixed after the receipt of the approval of the Controller of Capital Issues. The previous bonus issue was made by the Company in 1969 in the proportion of four shares for every seven shares held. The preliminary statement from the Company on its working results for 1971-72 shows an all-round improvement over the previous year's performance. Production, sales and profit—all are higher than in 1970-71; only margins have been under some pressure.

The value of production increased only modestly from Rs. 9.20 crores

INDIAN BANK

Performance Highlighted

IN celebrating the third anniversary of nationalisation of banks, the Calcutta main office of Indian Bank has highlighted its performance. It has been financing exports of tea, jute goods, textiles and other engineering goods. Also, it has been helping small-scale industrialists, professionals, technocrats and students.

CENTRAL BANK

Remarkable Progress

SINCE the nationalisation of banks, Central Bank of India has made remarkable progress in all departments of its activities, particularly in the direction of assistance to the priority sectors. Its advances to the priority sectors now exceed Rs. 117 crores out of which advances to agriculture account for over Rs. 41 crores, spread over 78,000 accounts. Advances to small-scale industries amount to over Rs. 40 crores, spread over 8,800 accounts, while advances to self-employed persons are over Rs. 1.35 crores, spread over 4,900 accounts. Advances to retail and small business amount to over Rs. 5 crores, spread over 3,900 accounts. Total deposits exceed Rs. 700 crores and total advances exceed Rs. 480 crores.

The bank's branches are as many as 1,048 out of which 300 are in rural areas, 390 in semi-urban areas and 357 in urban areas.

E.I.D.-PARRY

Profit Earned

IF the results of E.I.D.-Parry Ltd for the half year ended March 1972 are any guide, it must be said that the Company has turned the corner. The profit, before depreciation, amounts to Rs. 111.22 lakhs, against the loss of Rs. 19.02 lakhs in the corresponding period of the previous year. Provision for depreciation amounts to Rs. 63.28 lakhs (against Rs. 62.72 lakhs). Sales were higher at Rs. 45.79 crores (against Rs. 38.55 crores). There was an improvement in the working of the merchanting division with a rise in sales. The performance of the pottery and fertiliser division was also encouraging. The sugar mill in Nellikuppam contributed substantially to the profit, thanks to the higher sugar prices in the open market. The amount of sugarcane crushed was 226,000 tonnes (against 235,000 tonnes) and sugar production was lower at 18,884 tonnes (against 19,713 tonnes). The sugar recovery declined to 8.35 per cent (against 8.38 per cent). The loss brought forward from the previous year is Rs. 173.08 lakhs.

VEGETABLE PRODUCTS

Sales and Profit Decline

THE profit of Vegetable Products Ltd for the year ended December 1971 has declined. The *vanaspati* unit of the Company is still facing serious selling competition. Moreover, the increase in costs of tin containers, chemical and other stores has affected the Company's trading results. The profit has fallen from Rs. 7.81 lakhs to Rs. 5.07 lakhs, after providing Rs. 1.67 lakhs (against Rs. 1.97 lakhs) for depreciation and Rs. 300 (against Rs. 32,039) for development rebate reserve. A taxable ordinary dividend of Rs. 10 a share has been declared, absorbing Rs. 1.50 lakhs. General reserve is allocated Rs. 1.70 lakhs (against Rs. 2.30 lakhs) and taxation Rs. 2.80 lakhs (against Rs. 5.53 lakhs). After making other adjustments, a sum of Rs. 633 is carried forward, against Rs. 6,316 brought in. Sales declined from Rs. 5.26 crores to Rs. 4.85 crores.

McLEOD

A Bad Year

McLEOD and Co. Ltd shows disappointing results for the year ended December 1970. The Company has incurred a loss of Rs. 1.25 lakhs, against a loss of Rs. 8,352 in the previous year, after providing Rs. 74,001 (against Rs. 86,602) for depreciation. The dividend has been skipped. A sum of Rs. 9.71 lakhs has been written back from provision for taxation no longer required. General reserve is allocated Rs. 8.33 lakhs (against nil). After making other adjustments, there remains a balance of Rs. 59,173 which is carried forward, against Rs. 46,689 brought in. Sales declined sharply from Rs. 2.63 crores to Rs. 25.73 lakhs.

DELHI CLOTH

Desk Calculators

THE Delhi Cloth and General Mills will be coming out shortly with a range of electronic desk calculators, including sophisticated scientific calculators and programmable machines. The Company has been granted a licence to manufacture 2,000 calculators a year. Designed and produced by the Company's young engineers, the first model is expected to be in the market by about the middle of September. The Company's factory is located in Najafgarh, near Delhi.

B.I.G.I.

Better Results

BRITISH India General Insurance has reported improved results for 1971. The net premium income is only a shade higher at Rs. 4.62 crores, against Rs. 4.58 crores, but the pre-tax profit has risen sharply from Rs. 5.80 lakhs to Rs. 11.39 lakhs, after providing Rs. 13.20 lakhs (against Rs. 6.35 lakhs) for taxation. A sum of Rs. 10.50 lakhs (against Rs. 5 lakhs) has been transferred to general reserve and Rs. 1 lakh (same) to gratuity reserve. The unchanged equity dividend of 20 per cent (Rs. 2 a share) absorbing Rs. 4 lakhs will be paid out of general reserve. The Company has received Rs. 9.16 lakhs on 7th April, 1972, by way of management compensation for the period from 14th May, 1971 to 29th February, 1972. The Company will get Rs. 37.50 lakhs as compensation for distribution to the shareholders. The total assets of the Company at the end of 1971 were valued at Rs. 6.84 crores, against Rs. 6.20 crores a year earlier.

RAMAKRISHNA MILLS

Profit Declines

THE working of Sri Ramakrishna Mills (Coimbatore) Ltd for the year ended March 1972 has resulted in a profit of Rs. 7.47 lakhs, after providing depreciation of Rs. 3.88 lakhs. This compares with the previous year's profit of Rs. 17.40 lakhs, after providing depreciation of Rs. 4.59 lakhs. Total sales of finished goods amounted to Rs. 181.30 lakhs (against Rs. 191.66 lakhs). Adding to the year's profit a sum of Rs. 12,589 brought forward, there is a total surplus of Rs. 7.60

lakhs. Out of this, balance bonus provision amounts to Rs. 1.27 lakhs. Donations accounted for Rs. 49,900. Development rebate gets Rs. 19,200 (against Rs. 37,000) and gratuity reserve Rs. 1 lakh (against Rs. 2.51 lakhs). Provision for taxation amounts to Rs. 2.10 lakhs (against Rs. 10.30 lakhs). The balance of Rs. 2.53 lakhs is transferred to general reserve. The proposed dividend of 10 per cent (against 15 per cent) will be paid from general reserve. But the dividend of 10 per cent is on the increased capital, including the bonus issue made in February 1972 in the ratio of five for three.

OPPORTUNITIES FOR OVERSEAS CONTRACTS

INTERESTING international bid invitations have been received in the Directorate of Exhibitions and Commercial Publicity, Ministry of Foreign Trade, during the week ended 15th July, 1972. The names of the tender inviting authorities with respective commodities and closing dates are given below.

Arab Republic of Egypt: Societe des Sueresie et de Distillerie Egypte, Cairo; trailer; 22nd August, 1972; steam reducing stations; 18th August, 1972; filter or hydrocyclone; 26th August, 1972. **Burma:** Textile Industries Corporation, Rangoon; sewing cotton in hanks, etcetera; 10th August, 1972. **Inland Water Transport Corporation, Rangoon;** electrical equipment; 22nd August, 1972. **Electric Power Corporation, Rangoon;** switch, fuses and time switches; 29th August, 1972; track type tractor with accessories; 21st August, 1972; electric meters; 22nd August, 1972. **Ministry of Defence, Rangoon;** storing tanks and piping fittings; 15th August, 1972. **Myanma Bawdwin Corporation, Rangoon;** conductors and accessories, etcetera; switch-gears, isolating links, transformers, insulators, etcetera; 5th August, 1972. **Myanma Oil Corporation, Rangoon;** empty tins; 14th August, 1972. **Canada:** British Columbia Hydro and Power Authority, Vancouver; electric generating set; 15th August, 1972; static excitation systems; 22nd August, 1972. **Indonesia:** Ministry of Public Works and Electric Power, Djakarta; dredgers, equipment, attachments, etcetera; 28th

September, 1972. **The Government Estate Enterprise, Delhi:** electrical equipment; 28th August, 1972. **Kenya:** Ministry of Education, Nairobi; equipment for educational institutions; 16th October, 1972. **East African Railways Corporation, Nairobi;** permanent way materials; 11th August, 1972. **Malaysia:** National Electricity Board, Kuala Lumpur; Themengor Hydro-Electric Project; prequalification notice. **Republic of Korea:** Office of Supply, Seoul; stereoplotter; 11th August, 1972; pumping stations; 10th October, 1972. **Sudan:** Sudan Railways, Atbara; hard foundry coke; 6th August, 1972. **Tanzania:** The East African Railways Corporation, Dar-es-Salaam; permanent way materials; 6th August, 1972. **Thailand:** Metropolitan Electricity Authority, Bangkok; electrical items; 5th September, 1972. **Department of Aviation, Bangkok;** spring sleeve; 23rd August, 1972; pig iron; 7th August, 1972. **State Railway of Thailand, Bangkok;** electrical equipment; 9th August, 1972; transformer arc welder; 7th August, 1972. **Tunisia:** Pharmacie Centrale de Tunisie, Tunis; chemicals; 15th August, 1972. **Turkey:** Turkiye Elektrik Kurumu, Ankara; disconnection switches; 22nd August, 1972. **Uganda:** Ministry of Agriculture, Kampala; motor-vehicles; 15th August, 1972; telephone equipment; 17th August, 1972. **East African Posts and Telecommunications, Kampala;** copper wire; advance intimation. **Zambia:** Central Supply and Tender Board, Lusaka; hospital equipment and sundries; 25th August, 1972.

Determined Efforts by India and Bangladesh Will Change the Image of Jute

INDIA'S gains in jute goods exports during 1971 had masked what she had lost, observed Mr. L. N. Mishra, Central Minister for Foreign Trade, in his speech while inaugurating the annual general meeting of the Calcutta Jute Fabrics Shippers Association in Calcutta last Saturday. Due to his unavoidable absence, his speech was read by Mr. S. N. Chakravartee, Jute Commissioner. The Minister had no doubt that the "determined efforts by India and Bangladesh will bring about a welcome change in jute's image in the world market during the 'seventies.'" But he urged the industry and the trade to bear in mind that today the competition is not between India and Bangladesh but between jute and synthetics and that both the countries had to fight it jointly. Continued high prices and supply-shortages, said Mr. Mishra, had displaced jute from many areas where it had been well established over the years, resulting in an overall contraction of its share in the world markets. Taking additional advantage of the disruption of the long supply line to the principal markets by factors like the protracted strike by longshoremen in the U.S.A., synthetic producers

consolidated their grip on the home market by redoubled efforts.

Mr. Mishra referred to the findings of the recent five-man jute delegation, led by Mr. Y. T. Shah, Additional Secretary to the Central Foreign Trade Ministry, to North America, the U.K. and western Europe and said that jute goods had lost a much larger parcel of the market in the U.S.A. where synthetic products were in such a keen demand that their supplies had to be rationed. In western Europe and the U.K., a number of jute spinners and weavers had switched over to synthetics and the trend was picking up momentum. In carpet-backing cloth, jute had lost its share of use in both primary and secondary backings in the U.S.A. While its share had slumped to 49.3 per cent in the former during the first quarter of 1972, its future was also threatened in respect of secondary backings, although it had still been maintaining its grip on 65 per cent of the use.

The Minister said that tufted carpet production in the U.S.A. had steadily been rising, showing a growth rate of some 12.5 per cent. The price

disparity between hessian and synthetic substitutes was so large in the U.S. market that it was difficult to bridge. In this context, Mr. Mishra affirmed that the problem "remains one of price and it is becoming increasingly clear that our future efforts will have to be concentrated more and more on this aspect, besides product-development so that jute can compete with synthetics on equal terms." He also underlined the need for taking adequate and timely steps for maintaining regular supplies of jute goods. He made a passing reference to the constraints on production, like intermittent power-shedding and assured the industry that both the Central and the State Governments had been seized of the issue and were taking necessary steps to minimise the incidence of such power-cuts.

With raw jute supply outlook being what it was and the changed position of the fibre in the world market, the Minister referred to the new problems which had come up on the production front. Preliminary reports on crop prospects indicated the inescapable need for some jute and mesta imports during the current season. He assured his audience that the situation was kept under close watch and that appropriate steps would be taken when ultimate crop prospects became clearer. Mr. Mishra further held that if jute were to maintain a competitive edge over synthetic, India must step up the acre-yield of fibre substantially, in-

directly helping to improve the return to the grower.

A Small Market

Earlier, Mr. Madhav Lal Mehta, chairman, Calcutta Jute Fabrics Shippers Association, referred to the current decline in production and exports of jute goods and said that actual exports in June last were about 50,900 tonnes, against the monthly average of about 75,000 tonnes during the preceding half-year. Although the country's exchange earnings from exports of jute products touched a peak of Rs. 270 crores for the fiscal year 1971-72, he said that one should not overlook the fact that there was an inescapable shrinkage in the world market for jute and jute goods, for in the absence of supplies from Bangladesh, India could not fill the void even to a reasonable extent. He believed that the market thus lost would be difficult to recoup.

The chairman still believed, however, that jute continued to be the preferred medium in packaging and industrial use. It was only in specific and limited markets that synthetics performed better and prices of jute goods had little relevance. In other areas, he continued, it is the high price level, the extreme movement of prices and the instability of supplies which preclude the greater usage of jute. Since price would be the decisive factor in the areas "much will depend on our ability to reduce the prices of jute goods to such a level where they can compete with synthetics".

I.J.M.A. Statistics

I.J.M.A. statements of production and despatches show that working at the maximum level for 2,432 hours in the last season, against 2,248 hours in 1970-71, and consuming 6,641 million bales of fibre, against 5,728 million bales, mills reporting to the Association raised their overall output by 158,900 tonnes over the previous season's level to 1,138 million tonnes. Hessian production showed an increase of only 14,600 tonnes to 331,000 tonnes, due to its falling demand in the U.S.A., sacking by 54,200 tonnes to 498,800 tonnes, carpet-backing cloth by 67,500 tonnes to 218,500 tonnes and other goods by 22,600 tonnes to 89,400 tonnes. With exports absorbing 77,800 tonnes more of jute products over the 1970-71 level to 656,300 tonnes, and the internal offtake registering a satisfactory increase of 33,700 tonnes to 491,500 tonnes, the total offtake for

1971-72 was 1,148 million tonnes, against 1,036 million tonnes in the preceding season. While carpet-backing cloth shipments rose by 37,900 tonnes to 210,500 tonnes, and sacking by 35,500 tonnes to 130,700 tonnes, hessian still continued to account for the maximum export consumption at 274,800 tonnes, against 282,900 tonnes.

Bearishness in Gunnies

With the emergence of some buying interest at the dips touched during the earlier bearish phase gunny prices hardened on a broad front in Calcutta during the past week. The elimination of weak bulls and the clearance of a sizable market load also paved the way for curing the technical imbalance. Both holders and mills turned reserved, refusing to book ready and near-delivery business except at a premium over the quoted prices. Rising prices and reports of some hessian business from the U.S.A., besides scattered enquiries from Russia, some African and east European countries and Chile and brisk buying against the recent Sudanese cotton packs tender induced shorts and shippers to enter the market for covering their immediate and near-term open positions. Fresh and genuine turnover was far from market expectations. The wide price fluctuations were ascribed mainly to a shortage of the floating stocks and a fresh bout of speculative activities. The closing undertone was very firm.

Latest available quotations (in rupees) were as follows:

Fibre Firm

The raw jute market ruled exceptionally firm during the past week on sustained support from mills and mill agents to selected grade fibre both in the Cossipore market and in the up-country agencies. Upcountry arrivals, hovering around 35,000 maunds of new crop a day, were considered much below normal for this time of the season. The weather was not congenial in all areas. The expectations aroused by the emergence of the J.C.I. in the upcountry markets to conduct price support operations induced ulti-

mate growers not to rush to the markets with their fibre. The raw jute statement of the I.J.M.A. for June showed that mills closed the season with an overall stock of some 1.25 million bales of fibre, which was about adequate for meeting their requirements for a little over three months at the June-level of offtake. Turnover was small. The closing undertone was steady.

LEATHER

Export Prospects

The outlook for leather exports from India appears to be encouraging. According to Mr. A. Nagappa Chettiar, chairman of the Leather Export Promotion Council, the leather markets in Europe and the U.S.A. are now showing greater interest in Indian sheep and goat skins. He has expressed his opinion against any steps to restrict the export of semi-finished leather, as this will affect the growing market for Indian goods. Mr. Chettiar says that Indian exporters have done a good job by achieving the export target for the coming year in the current year itself. Unfortunately, the export of leather is now being restricted. It has been pointed out that such restrictions had in the past spoiled the good export market established for Indian reptile skins, resulting in a substantial decline in exports from Rs. 3.5 crores to Rs. 35 lakhs during the last three years. Mr. Chettiar has rightly cautioned against any hasty steps in restricting the export of leather as he does not want E.I. tanned skins to suffer the setback which Indian reptile skins did.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base : August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to June 1972. As compared with May, the June index for

Food shows a rise of 12 points, while those for Fuel and Lighting, Clothing and Miscellaneous remain unchanged at 482, 704 and 402 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 6 points during June 1972.

THE TATA IRON AND STEEL COMPANY LIMITED

CHAIRMAN'S STATEMENT

The following is the statement of Mr. J. R. D. Tata, Chairman of the Tata Iron and Steel Company Limited, for the year 1971-72.

25 Years of Independence

I have for some years given up the practice of inflicting upon the shareholders at the beginning of my annual statement and earlier, of my speeches at shareholders' meetings, a review of events and developments of general interest to the economy of the country but not directly concerned with our affairs, as I found that these were amply discussed by the Chairmen of most other joint stock companies, large and small, and because, in any case, the views of spokesmen of the private sector seemed to make no impact whatever in official circles. If I make a brief exception this year, it is because it marks the significant completion of the 25th year of India's Independence.

2. Tragically, these twenty-five years began and ended not only with a major political transformation of our sub-Continent, but with great human upheavals, including war, which on both occasions compelled some ten million people to flee in terror from their homes to seek refuge in another land, and brought death to thousands and misery to millions. The recent Agreement signed at Simla by our Prime Minister and the President of Pakistan gives hope that this grievous chapter in the relations between our two countries is now closed forever, and that peace, growing understanding and cooperation will henceforth replace the conflict and confrontation which for twenty-five years caused so much suffering to so many on both sides.

3. In this last of the twenty-five years India bore a burden of refugee relief of a magnitude that no country in the world had ever been called upon to bear; it helped in the liberation of a nation of over 70 million people; it fought a victorious war—mercifully a short one; it bore with remarkable equanimity and success the

severe blows which these events inflicted upon its economy; it emerged as a major factor in the Asian power balance, and achieved, under Indira Gandhi, a degree of political integration and stability equalled only by that achieved under Jawaharlal Nehru in the early years of our Independence.

4. It is only right that on such an important occasion we should briefly take stock of our achievements as well as of our failures during these twenty-five momentous years.

Achievements and

5. Politically, we have emerged from our many trials and tribulations as one of the most stable developing countries in the world, confounding in the process the many in India and abroad who feared, or hoped, that we could not survive as a united and politically strong nation.

6. Militarily, we have achieved a capability in manpower, equipment and expertise of a high order and certainly adequate to our defence needs against all but great powers, as well as a capacity for large-scale production of sophisticated military hardware without parallel in developing countries.

7. Economically, we have more than doubled our foodgrains production, more than trebled our industrial production, increased by 25% our real per capita income which had actually fallen in the first fifty years of the century and increased the life-span of our people from 31 to 52 years and their literacy rate from 16.6% to over 29%.

. . . . Failures

8. We may derive some satisfaction from these significant achievements, but we cannot overlook the fact that with all the growth and sophistication of our industrial apparatus, we are still, today a small industrial power

with about one per cent of the world's steel output, one half per cent of the world's exports, and producing in one year no more than what Japan produces in one month; nor the fact that the one per cent annual increase in our per capita income is only one-fourth of the target we set before us when we started planning in 1951; that the great majority of our people continue to live in deep poverty and distress; that unemployment or under-employment continues to rise each year and that, despite the expenditure of some sixty-five thousand crores on development during these 25 years, the standard of living of the bulk of our people continues to be amongst the lowest in the world.

9. Last, but by no means least, we have failed to make any real dent in the rate of growth of our population which, in these brief 25 years alone, has increased by a staggering 200 million, almost the total population of the United States, Western Europe or Soviet Russia.

10. Looking ahead, however, there is no reason to be disheartened or pessimistic about the next 25 years. We now have a versatile industrial base capable of rapid expansion, wide-ranging skills and managerial expertise, a basically sound economy which demonstrated its resilience by the manner in which it absorbed the severe shocks of the past year, and, equally important, we now have a united Government under strong and bold leadership. With such a combination of favourable factors, we undoubtedly have the capability of achieving much faster progress than in the past.

11. While the recent realisation that economic growth, to be meaningful, must make the masses of our people its main beneficiaries, is to be welcomed, I am sorry to say that there is still no sign of any realisation in official circles that the industrial and fiscal policies prevailing today contain major deterrents to rapid industrial growth which alone can provide the financial and material resources to pay for the mass employment and welfare

schemes of any anti-poverty programme.

Concentration of Economic Power

12. Government are still obsessed with the largely mythical bogey of concentration of economic power in private hands which protagonists of the extreme Left have so assiduously and successfully propagated for years. Not content with abolishing the managing agency system, Government have followed the general policy of denying to most individual companies, including small ones which previously were grouped under managing agency firms, opportunities of contributing further to the country's industrial growth. No distinction has been made between companies or groups with an impeccable record of efficiency and integrity and those known for serious malpractices. Because the so-called 'larger houses' represented the largest, most resourceful and most efficient part of the Private Sector, the shrinkage of fresh industrial investment caused by such a policy has resulted in a significant fall in the rate of industrial growth during the past two years. There is now, however, a hopeful indication of a renewed willingness to make use of the material and managerial resources of some of the larger houses in the development of the country's economy, as evidenced by licences or letters of intent recently granted to some of our own sister companies.

13. I believe there has been a real confusion of thought in regard to the true nature and extent of the economic power about which so much fear and suspicion, genuine or politically convenient, has been expressed. With every aspect of large-scale industrial activity almost totally controlled by Government through an all-embracing panoply of controls and regulations, to which is now added a measure of managerial control by Government's monopolistic lending institutions, it is clear that no real economic power is any longer wielded by industrial management, if by 'economic power' is meant the power to make one's own economic decisions. Deprived of the right to decide what and how much to produce, what prices to charge, how much to borrow, what shares to issue and at what price, what wages and bonus to pay, what executives to employ and what salaries to pay them and, in some cases, what dividends to distribute, directors and

top management from the Chairman down have hardly any economic power in our country. Taking my own case, I doubt that there is anywhere in the world outside India any industrial executive in charge of a major enterprise with less real power than I have. In fact, no Government in the world has taken greater precautions to ensure that real economic power is concentrated in their own hands.

14. The confusion, I think, lay in the fact that while Government's restrictive measures have been directed mainly at curbing or destroying managerial freedom, initiative and policy-making powers, thus nullifying the principal advantages of private enterprise management, the real and justifiable target of criticism was, or should have been, the illegitimate accumulation of wealth, particularly in the form of tax-evaded funds in India and abroad and its use for anti-social purposes, including bribery and corruption. I submit that the right policy for a socialist Government such as ours, armed with the immense powers that it has, should be, on the one hand, to take every possible step to curb the acquisition and anti-social use of illegitimate funds and to punish those guilty and, on the other, to release for nation-building purposes all the resources, energies and dedication of those in the private sector whose past record has shown them to be worthy of the nation's trust.

15. I still hope, admittedly somewhat against hope, that this is the policy which Government will one day adopt as being the only one capable of harnessing all available resources to the common effort of achieving maximum growth with maximum social justice.

A Disappointing Year

16. Coming to our own affairs, the results of the year under review were disappointing, as they indeed must continue to be so long as our output remains more or less constant, and, at the same time, the unrelenting rise in cost due to the general and continuous inflation in the country, totally beyond the control of management, is not offset by an increase in prices or savings in costs or a combination of both.

17. Under Indian conditions, and particularly in an ageing plant such

as ours producing at near maximum, the scope for reducing costs through higher production or greater efficiency is extremely small. Excluding the unlikely possibility of a major technical break-through in the world steel industry which would enable steel to be made much more cheaply, there seems to be no escape from a continuous rise in the cost of producing steel in India, as elsewhere, so long as inflationary forces continue to prevail. Consequently, I can see, over the years, no alternative to a slow but continuous increase in steel prices generally corresponding to that of other industrial products if the health and productivity of this most vital of all industries is to be preserved. That is hardly the case today, if by a healthy and productive plant we mean one maintained at a peak of efficiency by continuously replacing worn out or obsolete parts and incorporating improvements in equipment, processes and techniques as they become available.

18. All this costs far more money than available from allocations to depreciation, in view of the enormous increase in the cost of new equipment over the historical cost of the equipment it replaces. In a sound enterprise, the additional funds required must come mainly from retained earnings, temporarily supplemented in times of peak expenditure by borrowings. In our case, because of inadequate steel prices, there have been for many years hardly any extra earnings left to plough back into the plant. The development rebate has materially helped to narrow the gap in resources. Its impending abolition will now leave depreciation allocations as virtually the only source of replacement finance unless more reasonable prices are allowed to the industry.

Steel Prices

19. One must surely hope and believe that sooner or later Government will come to realise that the policy they have been following of squeezing more and more out of the steel consumer in the form of excise duties, while maintaining prices to the producers at a level which is not only substantially lower than in other countries but leaves no margin for essential maintenance, let alone expansion, is a self-defeating one which in the long run can only result in dwindling production and rising costs.

20. Iron and steel are basic raw materials to all industries and there can be no justification for Government to enforce uneconomically low prices on producers of steel in both the Public and the Private Sectors, jeopardising their efficiency and health in the process, while extracting an additional 40% from the consumer in the form of excise duties.

21. I am sorry that we have failed upto now in our repeated efforts to convince Government of the unsoundness as well as the unfairness of their steel pricing policies. The situation is now reaching a critical stage. Steel prices allowed to the producers, as distinct from those charged to consumers, were last increased in January 1970, by an average of Rs. 71 per tonne on our product-mix. Since then, further increases in costs beyond the control of management have been of the order of Rs. 113 per tonne.

22. We, along with the Public Sector, are continuing our efforts to convince Government of the urgent necessity of an upward revision in steel prices allowed to the producers. If they are anxious to hold the price line for the benefit of steel consumers, the increase to producers could be offset by a corresponding reduction in the excessively heavy excise duties. We can only hope that Government will decide, without delay, to place this most basic of all industries on a strong and safe footing.

Production

23. On the production side, I believe that we have at last reached the stage where we may now expect some real progress from the number of steps we have taken in the past year or two to re-establish full production, including those to increase coke, sinter and pellet availability. We, therefore, hope to do better in the current year, but only in 1973-74 can we expect to reach or approach the rated capacity which we last achieved in 1967-68.

24. Our life is not being made easier by constant interruptions in power supply which play havoc with the operations of continuous process plants. We calculate that directly or indirectly due to such interruptions and shortages during the past year, the Company has lost over 20,000 tonnes of steel.

25. The continuing shortage of wagons is another difficulty which is ever with us, causing not only a certain amount of dislocation but also the need for carrying larger inventories, which in turn involve higher interest charges.

Need for Replacements

26. Even if, as I hope will happen one day, all such problems are overcome, we must, as I said last year, face in the long term the inevitable consequences of the increasing age of our plant, about half of which dates back to the early 1920s and is therefore about fifty years old. We have in the past been able to maintain its productivity, although at an increasing cost each year. But this cannot be done for ever. Any major scheme of modernisation or expansion is a long-drawn affair in a steel plant, which takes five years to mature fully. A decision on a long-term programme of action, involving major schemes of replacement, cannot be delayed much longer if production is not to fall once again. We are, however, faced with the basic problem that, owing to inadequate steel prices, the resources available to us are wholly inadequate for the task.

Holding Company

27. In this context, a coming event of great potential importance to your Company is Government's proposal to create a Holding Company to co-ordinate, control and generally supervise the functions and development of the steel, coking coal and refractories industries of the country.

28. The basic objectives of securing a more rapid and rational growth of the steel industry, of increasing its efficiency by integrated planning and supervision and ensuring that its full requirements in raw materials, fuel, power, replacements and other inputs are met, are to be welcomed.

29. Whether, however, these objectives can best be achieved by concentrating power functions and authority in a Holding Company, superimposed on, or replacing, the existing decision-making machinery of Government, or whether they are more likely thereby to be frustrated through the complications and delays that such a scheme might add to the present highly cumbersome and time-consuming machinery,

is something which only experience will tell.

30. Your Company will, I hope, be represented on the Board of the Holding Company and I can assure Government that, within that Board and outside it, we shall do everything in our power to help in making the working of the Holding Company a success, in our own interests as well as those of the industry as a whole.

Expansion

31. One of the prime tasks of the Holding Company, as it is today that of the Steel Ministry, is to plan and assist the further growth of the steel industry. References have been made from time to time in the Press to the possibility of an expansion of our own plant at Jamshedpur. I had myself in a previous Statement to the shareholders pointed out that the infrastructure and organisation existing at Jamshedpur could support a considerably larger capacity than the present two million tonnes. If it were proved that additional capacity can be created at Jamshedpur quicker and more cheaply, and operated with greater efficiency than on an entirely new site, and if Government were to require that this be done in the national interest, obviously we should be prepared to respond. In fact, we would have little choice in the matter.

32. There is as yet no specific expansion project for Jamshedpur within our Company or, to the best of my knowledge, within the Steel Ministry. All I can say at this stage is that we are engaged in a detailed study of the possibility of formulating a viable project. I can assure you that any scheme that emanates from us will not overlook the interests of the shareholders.

33. The most important aspect of any possible scheme of expansion of capacity at Jamshedpur is the question of how it could be financed and its impact on the shareholders' interests. The capital cost of a major expansion programme would be so large that, with the monopoly of investible and lendable capital which Government have created for themselves, Government funds in one form or another or Government-guaranteed funds would be virtually the sole source of finance for the project. These

would be subject to convertibility rights in accordance with the guidelines recently issued by Government to their financial institutions and now in force.

Joint Sector

34. Considering that, directly or indirectly, Government already control 40% of the voting rights in the Company, it is clear that any appreciable increase in their shareholdings would automatically convert the Steel Company into a "Government company" as defined in the Companies Act, and into a Joint Sector company under any possible definition of the Joint Sector about which we hear so much today. In fact, with Government as the Company's largest shareholder, with the right to have three representatives on the Board, with veto powers in the hands of Government or of the financial institutions, and with production, sales and prices wholly controlled by Government, the Steel Company is for all practical purposes already in the Joint Sector.

35. This situation, which has gradually crept upon us over a period of years, whereby the control of the Steel Company has virtually passed into Government hands, is one which need not arouse excessive concern or despondency amongst shareholders. The very fact that Government have already such a large stake in our Company—a stake which in a major expansion, would become a majority of ownership—should normally ensure a greater interest in its welfare than if they had no investment in it at all.

36. I realise that this may not be an argument that will greatly impress shareholders who are well aware of the step-motherly treatment in the matter of steel prices which Government have meted out not only to the Private Sector of the industry but also to Public Sector plants which, as a result, have operated continuously at a loss. In this business, however, one must take a long-term view and I cannot but believe that the time will come when Government will realise the imperative need, through a fair and rational price policy, of safeguarding the health and economic viability of the country's most vital industry.

37. Recent amendments to the Constitution and the use sought to be made of it to justify a scheme of

compensation to the shareholders of the nationalised general insurance industry, which can only be characterised as confiscatory, would seem to confirm the extremely low value attached to shareholders' legitimate rights and interests by those in power. Shareholders may, therefore, feel some doubt as regards the treatment this Sector may now expect in our country. I believe, however, that it cannot be the real intention of our Government to cause heavy and unjustified loss to those who, over the years, have done so much to build up India's industrial and commercial base, as the Bill for nationalisation of general insurance would seem to indicate, and that the Bill which is now before a Select Committee will be favourably amended. If, on the other hand, the Bill were to go through in its present form, there could be no other interpretation of it than as part of a deliberate programme of extinction by expropriation of private ownership in business and industry. The events of the next few months will clearly show what will be in store for us. Until then, I prefer to believe that private enterprise of the right type, managed with honesty and social consciousness, either by itself or in association with Government, has a large and growing role to play in promoting the economic progress of the country and in serving the interests of its people.

Jamshedpur Land Tenure

38. The shareholders were informed in previous Directors' Reports and Chairman's Statements of the Bihar Government's persistent attempts to treat the Company's rights over the land, acquired many years ago under the Land Acquisition Act for the purpose of establishing a steel plant and allied industries at Jamshedpur, as zamindari rights, and to amend the Bihar Land Reforms Act of 1950 so as to bring our lands under the purview of that Act.

39. As mentioned in the Directors' Report, the Bihar Land Reforms (Amendment) Bill, 1972, has been passed by the Bihar Legislature and will become law when it receives the Presidents assent. The main object of the Bill is to delete from the Act the amendment introduced in 1961 which expressly provided that the Act would not apply to lands acquired for industrial

purposes like those held by our Company. The most objectionable feature of the Bill is that it seeks to give retrospective effect to the amendment. Under the retroactive provision of the Bill, the Company's lands may be deemed to have vested in the State from 1956, when the Bihar Land Reforms Act, 1950 was sought to be made applicable to them by a Notification.

40. It is for the first time in the history of India that lands used for admittedly industrial purposes have been sought to be acquired by the State under agrarian reform law. Again, our plethora of laws affords no parallel to the Bihar Bill, which gives retrospective effect for as many as 16 years in supersession of the earlier law which had expressly declared that the agrarian law could not and did not apply to the lands of the Company. Where the legislature intends to bring about a certain change and the law is found to have missed fire, subsequent validating laws have been passed with retrospective effect, but there has never been a case like the present one where

**"You don't look as if you've spent
a long hard day at the office,"
said my wife.**

(Suspicious, that's what women are!)

Why doesn't somebody tell her about Blue Star Packaged Climate Systems?

Understandable. A working woman would know better but the housewife seems to take it for granted that a day in the office ought to make a wreck of any man. Obviously, nobody's told her about highly productive modern offices and Blue Star Packaged Climate Systems!

The result of 30 years' experience and know-how these Packaged Climate Systems are designed to give you perfect working climate throughout the year. So that you work better... harder. And still have energy left to confuse your wife after a long hard day at work!

India's first and finest:

Blue Star Packaged Climate Systems

- Ideal for Banks, Offices, Showrooms, Department Stores, Restaurants, Hotels, Clubs, Canteens, Hospitals, Beauty Parlours.
- Reasonably priced and quality-built to work with amazing efficiency, economy, flexibility.
- Available in 3 capacities—5, 7.5 and 10 H.P.
- Choice of water or air cooled models.
- Dependable and trouble-free in performance; backed by Blue Star's warranty and free service for one year, and a countrywide network of service centres.

legislative intention, specifically expressed in the earlier law, has been reversed with so many year's retrospective effect. A measure such as this would serve as a disastrous precedent and have grave consequences on legislative practices and the rule of law.

41. While I have, in this Statement, been critical of certain policies of Government, it is with pleasure and gratitude that I acknowledge the assistance and cooperation we received throughout the past year from Government in the Steel Ministry which was most helpful in tackling some of our current problems and difficulties.

42. A reference has been made in the Directors' Report to the death of Sir Jehangir Ghandy last April. I would like to add my personal tribute to this esteemed colleague and friend of mine with whom I had been closely associated for 45 years in the work of your Company. We propose to perpetuate his memory by naming after him the fine new hospital building that is under construction next to the Company's old Main Hospital. I am sure the shareholders will wholeheartedly endorse this proposal.

Labour Relations

43. I am glad to be able to report that relations between management and labour at Jamshedpur and elsewhere and with their accredited Unions remained excellent throughout the year. Great credit is due to both the Tata Workers' Union and the management at Jamshedpur for this continuing state of cooperation and cordiality. On behalf of the Board and the shareholders, I take this opportunity of expressing to both our sincere thanks for their cooperation. The relationship established and maintained year after year at Jamshedpur has been a model for the whole country and shows that, with goodwill, sincerity and dedicated effort, there is no reason why conflict and work stoppages resulting in a grievous loss of production should prevail in our country, as it does in so much of Indian industry at so great a cost to the country.

J. R. D. TATA
Chairman.

Bombay, 4th July, 1972.

COMPANY AND PUBLIC NOTICES

JAY SHREE TEA & INDUSTRIES LIMITED

Notice to the Shareholders

NOTICE is hereby given that the Twentysixth Annual General Meeting of the Shareholders of the Company will be held on Friday, the 15th September, 1972 at 3.30 P.M. at "Industry House", 10, Camac Street, Calcutta-17, the Registered Office of the Company and its agenda has been/will be circulated to all members of the Company in time along with the relevant explanatory statement thereon.

The Equity and Preference Shares transfer registers will remain closed from 1.9.72 to 15.9.72 (both days inclusive) for the purpose of payment of dividends.

By Order of the Board,
for JAY SHREE TEA & INDUSTRIES
LIMITED.
B. C. BIYANI,
President.

REGISTERED OFFICE:
"INDUSTRY HOUSE"
10, Camac Street, Calcutta-17.
Dated, the 10th July, 1972.

DUNCAN BROTHERS & CO., LTD.

(Notice under Rule 40 of the Monopolies & Restrictive Trade Practices Rules, 1970)

IT is notified for public information that Duncan Brothers & Co., Ltd. intends to invest out of its funds for the purchase of fully paid Ordinary Shares in Asian Cables Corporation Ltd. and an application under Section 23(4) of the M.R.T.P. Act, 1969 has been made to the Central Government in compliance with the provisions of the said Act.

Any person interested in the matter may make representation to the Secretary, Government of India, Department of Company Affairs, New Delhi, within a fortnight of publication of his Notice stating the nature of his interest in the proposal.

(B. VENKATARATNAM)
Secretary

Calcutta,
Dated the 20th July, 1972.

CAPITAL, 27th JULY, 1972

THE BORREA COAL COMPANY LTD.

NOTICE is hereby given that the Annual General Meeting of the Borrea Coal Company Limited will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Thursday, the 24th August, 1972 at 4 p.m. for the following purposes:—

1. To consider the Profit and Loss Account of the Company for the year ended 31st December, 1971 and the Balance Sheet as at that date together with the Directors' and Auditors' Reports thereon.

2. To appoint Directors in place of those who retire by rotation.

3. To appoint Auditors and fix their remuneration.

SPECIAL BUSINESS:

4. To appoint Mr. G. C. De, a Director, who vacates his seat at this Meeting and to consider, if thought fit, to pass the following resolution of which the prescribed notice has been received by the Company in terms of Section 257 of Companies Act, 1956, the candidate having filed with the Company his consent to act as a Director, if appointed.

"Resolved that Mr. G. C. De be and is hereby appointed a Director of the Company whose period of office shall be liable to determination by retirement of Directors by rotation."

5. To consider and, if thought fit, to pass the following resolution which will be proposed as a Special Resolution:—

"THAT pursuant to the provisions of Section 314 of the Companies Act, 1956 the consent of the Company be and is hereby accorded to Bird & Co. (Private) Ltd., who may be deemed to be holding an office or place of profit under the Company for the consideration payable to them by the Company for the time being Rs. 236/- per month for a period of five years with effect from the 1st December, 1971 for the occupation and use by the Company of office accommodation at the

Registered Office at Chartered Bank Buildings, Calcutta, with all existing facilities and benefits attached thereto in the terms of a letter of offer dated the 19th November, 1971 from Bird & Co. (Private) Limited, a copy of which is submitted to this Meeting along with a copy of the valuation report of Messrs. Talbot & Co., as referred to therein and initialled by the Chairman hereof for the purpose of identification."

The Registers of Members of the Company will be closed from the 14th August, 1972 to the 24th August, 1972, both days inclusive.

By Order of the Board
K. L. DUA
Director

Registered Office:
Chartered Bank Buildings,
21st. July, 1972.

Notes: (1) A Member entitled to attend and vote at this Meeting may appoint a proxy to attend and vote in his stead. The proxy need not be a Member of the Company. A blank form of proxy is enclosed. It should reach the Company not later than forty-eight hours before the Annual General Meeting.

(2) Explanatory Statement pursuant to Section 173(2) of the Companies Act, 1956 is being sent to the Shareholders separately.

CAPITAL

(Founded in 1888 : Published every Thursday)

CAPITAL is India's most widely-read weekly newspaper dealing with economics, industry and public affairs. It has the mature experience of more than 80 years, and is the oldest journal of its kind in the country. Each week, it brings authoritative and comprehensive coverage of the main problem and events affecting the progress of the economy and the growth of industry. It separates the important from the unimportant; it presents simply, clearly and reliably what all informed observers of the economic scene ought to know.

Readers of CAPITAL are mainly people holding positions of vital importance in Government, business, industry and academic institutions. Many of them are intimately concerned with the framing of the country's economic policies. Many direct and control industrial, banking and commercial institutions. Together they represent a fund of economic opinion and buying power that no advertiser can afford to ignore.

The Freedom Jubilee

INDIA has just celebrated the twenty-fifth anniversary of her independence with due pomp and pageantry. As she looks back to the twenty-five years of her freedom, she can legitimately take pride of her achievements despite the stresses and strains that have apparently hindered her progress. But there is no denying that India's democracy has shown enough resilience in the face of numerous trials and tribulations which have proved to be positive hindrances in laying the foundations of a secular, socialist State. It is a tribute to the people of India that they have faced the future with courage and hope and have not allowed their faith in democracy to suffer despite occasional challenges from both within and without. In spite of the differences of language, religion, caste and creed, the people of this country have fought the four external aggressions from Pakistan and another from China like one man. They have also vindicated their firm faith in democracy and adult franchise in the course of five general elections when the triumph of democracy was established time and again. Twenty-five years is too short a period to judge the performance of a nation in the making, more so for a country like India which inherited a lot of legacies after the dawn of independence on 15th August, 1947.

As the nation looks back to the 25 years consisting of triumphs as well as turmoils, it has indeed good reason to feel gratified over the results it has achieved during the period. The nation is apparently pursuing a vigorous, independent foreign policy based on the well-considered principles of non-alignment. The military establishment could not extend its sway over the civil administration, as it so frequently happened in many of the underdeveloped countries despite the opportunities that cropped

up during the past twenty-five years of freedom. Although the nation doggedly adhered to its democratic way of life and its firm faith in a secular society, communal tensions and widespread defections had created difficult situations when it appeared that democracy was being tested through the touchstone of adversities. But the nation has overcome them all and has triumphantly kept the flag of freedom flying. The creation of Bangladesh and Pakistan drastically cut to size have only proved India's ability to take difficult political problems in her stride and maintain a power balance in the sub-continent to her advantage. Admittedly, the Prime Minister, Mrs. Indira Gandhi, has faced ordeals which none of her predecessors had to encounter in the twenty-five years of freedom. The massive majority that the ruling Party now enjoys in Parliament and the image that it has built up among the comity of nations after the historic war with Pakistan is a tribute to Mrs. Gandhi's ability to lead the nation through numerous stresses and strains.

There is also good reason to take pride over the country's achievements in the economic sphere despite the ostensible signs of frustration and failure in some directions. During the twenty-five years of freedom, there has been a doubling of the national income to Rs. 32,000 crores at current prices, in spite of the population growing from 330 million at the time of independence to 547 million now. Besides, in the last two decades, industrial production has more than doubled. The country has achieved what is popularly known as the "green revolution", and foodgrain production has been steadily rising, although there has been a marginal decline of 2 million tonnes or so in the 1971-72 output from 108 million tonnes in the pre-

ious year. Despite the sombre and sorrowful backdrop of a severe drought in as many as 13 States, late rains have restored the confidence that the country will be in a position to take the widespread drought situation in its stride. In the wake of the suspension of U.S. aid, India has also done well to launch an intensive programme for achieving self-reliance as quickly as possible. The anxiety and anguish that the suspension of U.S. foreign aid had created has given place to one of confidence now, and it looks as if that the country will continue its relentless campaign to achieve import substitution and export promotion.

True, the suspension of U.S. foreign aid has not created any insuperable difficulty, even temporarily, in the nation's march towards progress. As it is, India has a foreign exchange reserve of \$1,100 million and the last Paris meeting of the Aid-India Club had pledged project assistance of \$550 million and non-project aid of \$700 million. Although exports are estimated to have increased by only 2.1 per cent despite the Central Minister of Foreign Trade, Mr. L. N. Mishra's claim that they have risen by over 5 per cent if the trade with Bangladesh is included, and although industrial production is unlikely to rise by more than 3.4 per cent in 1971-72, there is good reason to feel that the economic situation is none too bad. If past experience is any guide, the country will be able to absorb the temporary shocks and show enough resilience to take the rough with the smooth. The sluggish industrial growth rate, slight fall in foodgrain production and even the steady rise in the price level should not cause so much anxiety as to thwart the country's effort for building a better future for itself.

It is true that the Government's economic policies have created a lot of misgivings in the minds of private entrepreneurs. The recent amendments to the Constitution, the introduction of the Companies Amendment Bill in the Lok Sabha a few days ago and the takeover of a number of industries after paying only a nominal compensation have made the private sector apprehensive about the Government's next move in its bid to encroach on its legitimate preserves. But as the Industrial Policy Resolution is now being revised, investors do feel that new opportunities will be created for the joint sector where professional management will

and fresh fields and pastures new. But despite the progress that India has achieved during the last twenty-five years of freedom, she will be committing a capital blunder if she entertains any complacency over her performance in various fields. It should rather be the duty of every citizen to mobilise fresh energies with a view to implementing the nation's social priorities.

Independence is certainly not an end in itself, but only a means to an end. As the Fifth Plan outlay is likely to be double the amount of the Fourth Plan and the growth rate is to be further accelerated to 6.5 per cent or 7 per cent in keeping with the Government's anti-poverty campaign, the nation will have to rededicate itself to the larger task ahead. So this is not the time to rest on one's

More Sting in the Companies Act

THE long-awaited Companies (Amendment) Bill has been introduced in Parliament. With the massive majority the ruling Party enjoys, it will not be difficult for the measure to be pushed through in both Houses. Since the current session is anyhow to end in another two weeks, it is quite possible that the final passage will have to be done only during the winter session of Parliament. It is yet to be seen how far the Government will be receptive to suggestions made by the Opposition parties, but considering the mood of the ruling Party, it could be safely asserted that all the amendments proposed would be pursued to their logical conclusion.

Mr. K. V. Raghunatha Reddy, Central Minister for Company Affairs, is the brain behind the entire scheme which is "intended to meet cases of abuse or distortion by the company system". The preamble to the statement of objects and reasons of the Bill has cited the report of the Jenkins Committee in the United Kingdom which said that the "company law is not a field of legislation in which finality is to be expected as the law has to be applied to a growing and changing subject matter and also to the growing uses of the company system as an instrument of business and finance and the possibilities of abuse inherent in that system". The basic assumption thus is that big business interests

have been abusing the whole system much to their advantage and to the detriment of public welfare. The same theme dominates the Monopolies and Restrictive Trade Practices Act also and a Government wedded to the so-called socialistic ideals cannot understandably tolerate this.

The philosophy behind the measure now introduced in the Lok Sabha is that it represents an instrument for the remedial measures that were under contemplation as a result of a comprehensive review of the working of the Companies Act of 1956 in the light of the recommendations of the Administrative Reforms Commission and its concerned working group and in the light of various suggestions received by the Government from diverse quarters from time to time. The A.R.C. has certainly come in handy for the Minister, although it is a well-known fact that several of its studied reports have been thrown into the waste-paper basket as of no consequence.

One of the "unhealthy" phenomena which has appeared in the corporate sector during recent times, according to the Minister, is a trend towards the take over of well-established companies by individuals or groups or combines. The provision of Section 372 of the Companies Act, 1956, or Section 23 of

the M.R.T.P. Act, 1969, is not regarded as quite adequate to regulate the take over of companies. According to the Government, such take overs are often unfair to the non-controlling shareholders, particularly financial institutions, who are kept in the dark while secret negotiations are entered into by third parties with the controlling shareholders in getting a better price for their shareholdings. The non-controlling shareholders are thus constrained to continue with their shares in the company while its control passes into "undesirable" hands. The present Bill seeks to provide safeguards against such take overs.

The most important provision of the measure is thus the new Sections 108A to 108G in the Companies Act which require the Government's concurrence before companies can be taken over either in one transaction or in a series of transactions resulting in the acquisition of shareholding in the aggregate of over 25 per cent by a group or combine having the common intention of acquiring control over the company concerned. This restriction will apply to companies having a total paid-up capital of not less than Rs. 25 lakhs and private companies which are subsidiaries of public companies. The Bill provides for the transfer of shares by every body corporate or bodies corporate under the same management, whether holding singly or in the aggregate 10 per cent or more of the nominal value of the equity share capital of a company.

But where the shares proposed to be transferred are held in a company engaged in an industry covered by the Industrial Policy Resolution, such shares shall, if so directed by the Central Government, be transferred to the Central Government or to such corporation owned or controlled by that Government as may be specified in the direction. Restrictions are also being placed on the transfer of shares in a foreign body corporate having an established place of business in India in cases where the shares proposed to be transferred constitute 10 per cent or more of the nominal capital of the foreign company concerned.

Again, Section 408 of the Companies Act, according to the Minister, was intended as a corrective against oppression and mismanagement in a company but it has not proved effective as the directors appointed by the Government do not have an effective voice in the

management. The proposed amendment, therefore, seeks to rectify this position in the interest of the company and in public interest by empowering the Government to appoint more than two persons as Government directors. The Government has also discovered some other practices which are injurious or undesirable and these are sought to be checked by a number of provisions. One of these is failure to enlist shares with all the stock exchanges mentioned in a prospectus. While legislating on this point, it is proposed to make an incidental amendment to the Securities Contracts Act, 1956. Other practices that the Government intends to curb include invitation of deposits from the public by non-banking companies; *benami* holding of shares; continuation of the same auditors for a company for an indefinite period giving rise to complaints of monopoly of audit work; use of reserve funds by way of dividends to the detriment of the company's interest; non-availability of liquid funds for payment of dividends by the management; and use of unclaimed dividends by management.

The Bill also seeks to amend the concept of the expression "under the same management". In view of the abolition of the system of management of companies by managing agents and secretaries and treasurers, the definition of this expression has been changed so that control by groups in alternative forms or by alternative methods calculated to cause injury to public interest may be avoided. The proposed amend-

ment will, it is claimed, also help the proper implementation of the concept of inter-connected undertakings within the meaning of Section 2(g) of the M.R.T.P. Act. Therefore, an incidental amendment to that Act is also proposed. The Bill also makes it compulsory for large companies to have secretarial assistance. This is expected to encourage the growth of the profession of company secretaries, to which the Government is committed.

An important proposal in the Bill is to put foreign companies of which not less than 50 per cent of the share capital is held by one or more citizens of India or by one or more bodies corporate incorporated in India on par with Indian companies for the purpose of compliance with such of the provisions of the Act as may be prescribed in that behalf. Provisions relating to the inspection of books of accounts of companies and investigation into the affairs of companies will apply to a foreign company having an established business in India. This is supposed to meet the demand that there should be more effective control over the working of foreign companies in India. The amending Bill, Mr. Reddy claimed, will streamline, for a more effective regulation of the working of companies and preventing unhealthy practices, several of the existing provisions relating to inspection, cost of audit, sole selling agency, appointment or reappointment of managing or wholetime directors and the fixing of their remuneration and of contracts in which directors are interested.

The New Food Strategy

THE crash food production programme, formulated by the Central Ministry of Agriculture to meet the crisis on the food front, seeks to augment the output in the current year by nearly 16 million tonnes. At one time, it was officially stated that an additional production of this order would be necessary to make good the loss in *kharif* production. But after the recent rains all over northern India, hopes of retrieving a large part of the *kharif* crop have arisen in *Krishi Bhavan* and the loss may be reduced to a much lower figure than the first estimate of about 15 million tonnes. To some extent, the variation in estimates

cannot be helped because these are not made on any scientific basis. They are more in the nature of guesses which depend very much on the psychology of a given moment. When the dry spell continued unabated, the States were gripped by scare and began dishing out exaggerated estimates of the damage to crops in their areas so as to register well in advance with the Centre their claims for drought relief. With the arrival of rains, the sense of panic has disappeared and a more realistic picture of the situation is emerging.

In any case, there is no room for complacency even now. The *kharif*

production is bound to be much less than expected, although the shortfall may not be as high as 15 million tonnes. With a buffer stock of 9.5 million tonnes, the Centre is, no doubt, well placed to tide over the immediate difficulties. But the question is: what about the future? What should be disturbing is not the present crisis but the uncertainty about the outlook for the future. The claim that Indian agriculture is today much less dependent on the vagaries of weather than a decade ago is itself in doubt now. In fact, this doubt was expressed by the Agricultural Prices Commission in its report for the *kharif* season last year. When the Commission attributed much of the increase in the record output of 108 million tonnes last year to the "bounty of nature", the Central Ministry of Agriculture resented that conclusion and sought to make it out that the increase was largely due to the spread of the "green revolution".

If the Food Ministry's claim is right, then the country should not have suffered the reverse that it has in food output this year. The other day, the Central Agriculture Minister, Mr. Fakhruddin Ali Ahmed, admitted at a Press conference in New Delhi that the food production in 1971-72 would be about 2 million tonnes less than the record output of last year. That this should be so, in spite of the emergency production drive launched during the Bangladesh war and the official claims of a breakthrough not only in wheat but also in rice and other cereals, is surprising and calls for a thorough investigation of the causes of the fall in output.

It is obvious if a real breakthrough has been made in wheat and rice cultivation, the lag is somewhere else. For instance, some States have complained of inadequacy of inputs, especially of fertilisers. There have also been reports that the rupee-payment countries of eastern Europe have been withholding shipments of fertilisers to India in the hope of selling their stocks for free foreign exchange within Europe itself. If that is so, it would seem that India has only shifted from dependence from the vagaries of weather to the whimsicalities of her trading partners. Furthermore, if this is the position in normal times, how is the Government going to tackle difficult situations such as the present one? For the crash production programme is even more dependent on the avail-

ability of inputs than normal crops. Any shortage anywhere can cause considerable damage to the entire programme. The Government, therefore, has to be on its guard.

Quite apart from these practical difficulties, it will be worth while for the Government to appoint an independent body of eminent economists and public men to examine how far the loud talk of land reforms and ceilings has been responsible for the reversal of the upward trend in food production. Whatever might have been the political gains to the Party in power, it seems certain that the proposal to lower land ceilings has had an adverse psychological impact on the cultivator in many parts of the country. This cannot be just explained away as unfounded fears. A study of the benefits that can be directly linked to the land reforms in the past should be revealing from this point of view. Take, for instance, the tubewells. The programme of sinking new tubewells in different parts of the country got a fillip with financial assistance from the Government and many farmers took advantage of the facilities and incentives offered. But today, those who responded to the call of the Government to step up production by installing pumpsets and tubewells are being penalised for their initiative and enterprise, for the exemption that the Central Land Reforms Committee recommended for privately-irrigated lands from the ceilings limit has not been accepted by the Government. These lands are to be treated on par with lands receiving

water from Government sources and the discretion to allow a marginally higher ceiling, within the overall ceiling of 18 acres, for privately-irrigated lands has been left to the State Governments.

Land reforms are certainly necessary to correct imbalances that may have developed in the agrarian economy over the years. But they should be brought about so smoothly as not to disturb the basic structure of the agrarian society and take away the incentives to achieving higher output. Production should be accorded a higher priority over political expedients. In any case, the ruling Party with its massive majority, not only at the Centre but in a majority of the States, does not need to rely on gimmicks to keep itself in power. As a group of 850 farmers from Andhra Pradesh recently told the Prime Minister in Delhi, a vast majority of the people in this country voted her Party to power only in the hope that there would be not only political stability in the country in the physical sense but also a stability of policies. After all, a Party that had, before the elections, pleaded that it could not do many things it wished to because of its slender majority and the consequent uncertainty of its political fortunes, should not create a situation in which cultivators will find themselves in a similar plight. If there is uncertainty in the mind of the producer, whether on the farm or in the factory, it will be futile to expect him to give his best to the nation. Viewed against this background, the new strategy does not go very far.

Free Trade Zone for West Bengal

THE Central Minister of Foreign Trade, Mr. L. N. Mishra, recently stated that the Government of India was considering a proposal to set up four or five large-scale free trade zones around major industrial centres as part of its programme to boost exports. It is hoped that in implementing the scheme, the Government of India will give due importance to West Bengal. Haldia is ideally suited for setting up a free trade zone. In fact, in the past few years some leading industrial organisations in Calcutta had been urging New Delhi to establish a free trade zone in Haldia. But New Delhi has not seriously considered the proposal. The Government of India's reluc-

ance till now to set up a free trade zone in Haldia was understandable because, in the first place, it wanted to be sure that the free trade zone in Kandla worked satisfactorily before a similar new venture was undertaken. Secondly, the political and economic situation in West Bengal till recently had been uncertain, and it was not clear how far a free trade zone in Haldia would meet with a ready response from Indian and foreign entrepreneurs.

But the situation has now changed. West Bengal is having political stability and the State Government is making energetic efforts to revive

the economy. Haldia has been recognised as a growth centre and attempts are being made to locate here many new industries, especially a petrochemical complex and a shipyard. This, then, is the opportune time to set up a free trade zone in Haldia. Moreover, the Government of India has acquired some experience in working the free trade zone in Kandla. Although this free trade zone has not fulfilled the earlier expectations when it was set up over nine years ago, it has recently been able to make progress in some directions. So far, 18 industrial establishments have been set up in the Kandla free trade zone, of which 14 are in production. There are about 50 entrepreneurs in the approved list and it is stated that the names of those who have not taken action for undertaking production have been struck off. A sum of Rs. 80.85 lakhs has been spent so far for development work in the zone out of Rs. 89.55 lakhs that has been allocated for the purpose. In 1971-72 (up to October 1971), import licences for raw materials for the zone were issued for a value of Rs. 32.58 lakhs and for machinery Rs. 3.82 lakhs. The total value of import licences for raw materials and machinery issued for the zone since the inception comes to about Rs. 98.09 lakhs. The total value of exports from the zone since its inception till 31st October, 1971, was Rs. 20.16 crores. The Government of India has set up a Committee in the Ministry of Foreign Trade to consider matters relating to the setting up of industries in the zone.

Having thus acquired some experience, the Government of India should not hesitate to set up a free trade zone in Haldia. It should also study the working of the free trade zones in the other parts of the world and find out to what extent their lessons can be applied to Haldia. Free trade zones have been functioning successfully in many parts of the world such as New York, New Orleans, San Francisco, Seattle, Honolulu, Mexico, Panama, Taiwan, Singapore, Aden, Stockholm, Gothenburg, Copenhagen, Hamburg, Bremen and elsewhere. Many of these free trade zones have been able to contribute substantially to the development of the areas concerned and to the earning of foreign exchange. For instance, it is stated that the free trade port of Kaohsiung, Taiwan, earned foreign exchange of about Rs. 135 crores in 1969, although it came into existence only about three years earlier.

The free trade zones offer a variety of concessions and incentives to those who set up industries there. The facilities include the provision of factory space, equipment for handling machinery and materials, refrigeration, water supply, warehousing services, marketing information and transport services. There are also various types of fiscal concessions. In Singapore, for instance, export-oriented industries are exempted from taxation up to five years from the date of commercial production. There are also incentives in the form of accelerated depreciation, double tax deduction for overseas expenditure for exports, and loans on liberal terms. If Haldia gets a free trade zone, it will help to stimulate the industrial development of West Bengal and enhance its importance in the country's export trade. The zone is bound to attract entrepreneurs even from other parts of the world. Haldia can be an important base for promoting exports to Australia, Japan, Hongkong, Thailand, Burma, Singapore, Malaysia, Indonesia and other neighbouring countries.

The Government of West Bengal should, therefore, strongly urge New Delhi to set up a free trade zone in Haldia; and it should make out a strong and convincing case for it. The Government of India is keen to promote exports in all possible

Are Big Companies a Menace?

"MULTINATIONALISM" is not a new topic of discussion; it may even be tediously familiar. In recent years, economists who have studied the trend have calculated that most of the economy of the capitalist world will be controlled by some 300 companies by the end of this century—or, more precisely, by 1985, Professor Howard Perlmutter predicted. Now two others, less precise in respect of time but more precise in respect of numbers, have suggested that most of Britain's private industry will relatively soon be owned by 21 companies; and this assessment, by Gerald Newbould and Andrew Jackson, coinciding with a new phase of active bidding and merging, has added spice to the controversy on the implications of "bigger and fewer".

ways; and if West Bengal can show how Haldia is ideally suited for a free trade zone, it is bound to get a favourable response. Apart from the free trade zone in Haldia, there is now a proposal to set up an export processing zone near Dum Dum. The Trade Development Authority, sponsored by the Government of India, has initiated discussions with the Government of West Bengal for establishing this zone which will be on the model of the Santa Cruz airport electronics project. The schemes to be started in the Santa Cruz zone are designed to generate an annual export of \$ (U.S.) 13 million. This will be achieved over a period of three years, commencing with \$3 million in the first year. The T.D.A. is understood to have received many applications from foreign and Indian manufacturers seeking factory space in the zone.

The processing zone near Dum Dum is expected to facilitate the export of light mechanical and electrical products such as sewing machines, components, bicycles and parts, light ferrous castings and forgings, industrial fasteners, leather apparel and sporting goods, ready-made garments of cotton and silk, dolls and toys. The Government of West Bengal should impress on New Delhi the imperative need to expedite the formation of the free trade zone in Haldia and the export processing zone in Dum Dum.

The ordinary industrial and commercial implications, mostly concerned with the economics of size, have been extensively but not conclusively debated. Big companies, whether complying with or subtly evading regulations, may restrict competition; or, tremendously strong, they may intensify it—at least until they have overpowered weaker elements in their fields. They may narrow consumers' choice by concentrating their resources on a limited range of products, to achieve economies of scale; or (more likely, American studies suggest) they may feel compelled to seek new products or variants, to keep their sales on an uptrend and their vast organisations fully employed. They may be too bureaucratic to innovate as many (more flexible, so livelier) small firms

do; or they may take advantage of research-and-development capabilities that small firms lack.

Uncommitted observers are willing to conclude that in such matters efficiency—or inefficiency—is not properly measured by size, which—big, medium, or small—is neither a virtue nor a vice, irrespective of a particular company's management and circumstances. But the debate on "multinationalism", as such, is not primarily concerned with size. Not all the companies that are organised "across frontiers" are very big, and numerous medium-size companies (many of them British) are looking for low-cost manufacturing facilities abroad. Naturally, however, the "multinational" operations—reflecting "supranational" policies—that arouse most apprehension are the giants. The most familiar argument against them is that their centralised planning may operate against the interests—and the policies of the Government—of a country where one of their subsidiaries is located. A classic example of conflicting interests occurred in Britain last year when American-based motor companies granted wage increases far in excess of the officially-approved "norm" because—as the scene was viewed from across the Atlantic Ocean—it was more economical to maintain the "multinational" operation at high wages than to suffer disruption of it by long strikes.

The monetary operations of "multinational" companies were more familiar to bankers than to politicians, but this aspect of the problem has been more widely discussed since last year's monetary crisis. The main accusation against the companies is that "hot money" flows and "leads and lags" in payments have been caused largely by their "speculation" in currencies; the extreme accusation is that it was such pressure from the foreign affiliates of American "multinationals" that pushed the dollar off its pedestal last year. The implication that the dollar was secure until "disloyal" American companies operated against it is hardly acceptable, but it is evidently necessary to study not only the ebb and flow of payments generally but also the "multinational" element in it particularly. The men who control a company's money are responsible to the company that employs them. They would not be commended for explaining to their superiors that it would have been "disloyal" to avoid a loss, and gain

a profit, by switching funds from American dollars to deutschemarks. If this kind of operation should be prevented, it should be prevented by official, not voluntary, restraint. Perhaps "multinationals" will force a reconsideration of the conventional ideas that exchange controls are bad in principle and that international investment should be completely free.

"Multinational" industrial companies and the "multinational" banks that have been developed to serve them are keen campaigners for complete freedom to move money—capital (short-and long-term) and interest and dividend payments—and for complete freedom of physical trade. They know that this ideal will not be realised in the foreseeable future; but any advance towards it improves the economics of a system in which interchange—of parts or finished products, and, if appropriate, finance—is a basic characteristic. The system has developed so far that American "multinationals" production abroad has been valued at some five or six times the value of direct American exports and overall "multinational" operations have replaced conventional trade as the

principal medium of international business. There is vast scope (if the prospective "hosts" are willing) for expansion of "multinationalism" in countries where labour is abundant, wages are relatively low, and skills and amenities are developing; and enthusiasts foresee great benefits to these countries as more capital and technology are imported into them.

But, while orthodox economists see the gradual emergence of their desired "one world" through the development of "multinationalism" the actual "world of nations" is not ready for this development. It sees the giants (whose behaviour has not always been exemplary) as alien powers that can influence nations' economies (for better or worse) more than their own Governments can, and that international monetary authorities cannot properly control. The problems of adjustment are receiving attention, on both national and international planes. Yet the world is still discussing the international monetary system and international trade in terms appropriate to the era before "multinationals" appeared—in a semblance of their modern form, about half a century ago.

CURRENT COMMENT

FINANCE COMMISSION

West Bengal's Case

Welcoming the appointment of the Sixth Finance Commission much ahead of time, Mr. S. C. Roy, Working President, Indian Council of Economic Affairs, has, in a statement issued a few days ago, expressed satisfaction that the recommendations of the Commission would coincide with the formulation of the Fifth Five Year Plan and would give an opportunity to have an integrated view of both the non-planned and planned expenditure in allocating Central assistance. Furthermore, the problems arising out of the growing indebtedness of the States and the overdraft problems on which the Centre has recently imposed stringent restrictions may also be successfully tackled by the Commission.

Mr. Roy pointed out that West Bengal was ridden with problems and the proportion of educated unemployment in this State was possibly about the highest. There has been a great

pressure on the economy of the State since the partition of the country and influx of refugees from the then East Pakistan. This has aggravated further in the recent past due to acute industrial unrest, flight of capital and lack of fresh investments. In his opinion, all these problems needed careful handling and would involve large funds if a satisfactory solution was to be found and the pace of development in the State was to be accelerated.

Citing facts and figures Mr. Roy went on to conclude that West Bengal's share of receipts from the Centre in relative terms had steadily declined and this was more so in case of the income-tax distribution. In his opinion, this was due mainly to the adoption of a faulty basis of distribution whereby more emphasis was placed on the population of the States. He added that although almost 25 per cent of the income-tax were collected from West Bengal, it received, according to the recommendations of the Fifth Finance Commission, only slightly above 9

per cent, against 16 per cent by U.P. and 10 per cent by Bihar. Furthermore, while the share of receipts from income-tax for West Bengal has been reduced from 12.09 per cent (Third Finance Commission) to 9.11 per cent (Fifth Finance Commission), the share of Bihar, M.P. and U.P. has considerably increased.

COIR

Crisis in Exports

The coir and coir products industry of Kerala which gives employment to 1 million people and earns foreign exchange worth Rs. 14 crores is in a state of crisis. The European Common Market countries have been the main market for the Indian coir industry. But European countries have started importing coir from India and manufacturing coir products out of that. Although they are not charging any duty for the import of the coir, they levy about 23 per cent duty and other taxes on the coir products. Indian exporters, therefore, cannot compete with their coir products. Their position will become all the more critical with the entry of Britain, Norway, Denmark and Ireland into the Common Market.

Britain is importing coir and coir products worth about Rs. 2.25 crores. No duty has so far been levied on these. As a member of the Commonwealth, India used to get some protection also, in that it levies 20 per cent duty on imports of these items from European countries. With Britain's entry into the Common Market, it is likely to stop the protection and, following the other European countries, may levy 23 per cent duty as well. That means actually Indian products may be subject to a total levy of 43 per cent. It will not only be unbearable for India's coir industry but will be most favourable to European countries engaged in this trade. This situation seriously affects the Indian coir industry and in order to successfully meet the situation, the Coir Board, the Centre and State Governments are exploring suitable ways and means.

FLOUR MILLS

Wheat Shortage

In a Press note issued a few days ago, the Calcutta Flour Mills Association has stated that it has address-

ed telegrams to Mr. Fakhruddin Ali Ahmed, Central Minister for Agriculture, and others urging their immediate intervention to divert wheat specials to West Bengal. Due to acute scarcity of wheat, flour mills in West Bengal have not been delivered their monthly quotas. Even the emergency quotas allotted to the flour mills to tide over the crisis have not been fulfilled by the Food Corporation of India. The Association has expressed serious concern that if the position does not improve there may be dislocation in supplies of wheat products to statutory rationing and modified rationing areas.

CONSUMERS

C.A.I.'s Seminar

At a meeting of the Consumers Association of India held recently in Calcutta under the chairmanship of the Association's president, Mr. B. S. Kothari, it was decided to organise a seminar on "Protection of Consumer Interest in a Developing Country" in September this year. Many eminent personalities, both national and international, are likely to participate in the seminar. The Association will be glad to have papers from the members of the public for being read at the seminar. A souvenir, containing articles from eminent people from various walks of life, is also proposed to be published on the occasion.

W.S.B.A.

Worry over Sales Tax

Liquor will now cost more with the 12 per cent *ad valorem* sales tax coming into effect from 7th August, 1972. The Wine Spirit and Beer Association of India (W.S.B.A.) in a Press note has stated that prior to the imposition of sales tax, the Association had made several representations to the Government of West Bengal urging a re-examination of the proposal. The W.S.B.A. had submitted that hitherto sale of liquor was exempted from sales tax in West Bengal since it already attracted heavy excise duty and, therefore, a stiff rate of sales tax, as imposed, would not only result in consumer reaction but also encourage clandestine trade. The Association had submitted that while it appreciated the need for raising resources to finance development plans, it was submitted

that beer, which is a malt liquor, should be exempted from sales tax since it contained a very low percentage of alcohol. The Association had also pointed out that the liquor industry and trade was already subjected to rigid supervision of the excise, Customs and police authorities and the newly imposed levy in the form of a sales tax would constitute an additional administrative burden. It was suggested that it would be far easier for the Government to collect through one source—through the excise authorities—by a suitable increase in existing excise levies such as literage fee.

CHEMICALS

Multipoint Sales Tax

At the annual general meeting of the Madras Dyes and Chemical Merchants Association, Mr. Jaswant S. Mehta referred to certain problems facing dealers in chemicals and dyes. These relate to the multipoint sales tax, storage of chemicals, supply of raw materials and price distortions at times. Mr. Mehta pointed out the adverse effect of multipoint sales tax, as its incidence had inflated the ultimate prices to consumers. It was wrong to attribute the price rise to speculation. A plea was made to the Government to remedy the situation created by this tax with a view to maintaining prices at a reasonable level. Mr. Mehta also called for greater co-operation between distributors and big manufacturers in important items like caustic soda and soda ash, so that the supply may be maintained equitably without giving rise to undue fluctuations.

MANAGEMENT

National Meet

The first ever National Meet of Students of Management and Labour Studies in India will be held at the Xavier Institute, Jamshedpur, on 8th, 9th and 10th September, 1972. The theme of the meet is: Growth, Social Justice and the Indian Manager. About 250 students from reputed management and labour institutes and 40 top executives from business and Government will attend this meet. The speakers will include Mr. R. K. Khadilkar, Central Minister for Labour and Employment; Mr. T. A. Pai, Central Minister for Railways; Mr. R. S. Pande, Managing Director, Tata Iron and Steel Company; Mr. S. B. Aibara,

Deputy Chairman, India Tobacco Company; and Dr. R. S. Tarneja, President, All India Management Association.

WORLD BANK

Study on Urbanisation

Urban populations in the developing countries are growing at a rate of about 5 per cent a year, or doubling in about 15 years, according to a sector working paper just published by the World Bank. Thus the increase in the urban population will be more than one billion by the end of the century—or about three times the total urban population of the developed world in 1960. Simply to house the projected additions to urban populations, the study says, would require more than 200 million new dwellings over the coming 30 years. Although a high proportion of World Bank lending for transportation, public utilities and industry has been related to urban areas—about \$13 billion, or more than three quarters of total lending to the developing countries—only recently it was decided to focus on urban problems in these countries. And the Bank Group now plans to lend some \$700 million during the 1972-76 fiscal year period for projects directed specifically to urbanisation problems.

The malaise of urban centres in the developing countries is only too evident. With squalor of rapidly growing slums and scattered settlements, the deterioration in many public services, the extreme shortage of housing and overcrowded streets are a constant problem for urban planners. Uneven income distribution in the cities and growing unemployment are less evident but equally pressing problems. The scale and severity of urban problems in developing countries reflect primarily the rapidity of population growth and the acute shortage of resources, human as well as financial, with which to provide for the additions to the urban population. The Bank plans further steps to help developing countries focus attention on urbanisation problems and alternative courses of action, including the balance between rural development and the development of urban centres. In co-operation with other agencies—international, bilateral and private—the Bank may provide technical assistance on development programming and institution building in connection with its expanded activities in the urban field.

MORMUGAO PORT

Ore and Oil Berths

The Mormugao Port authorities have awarded to Essar Constructions

and Carriers Ltd, Madras, the contract relating to the construction of the ore and oil berths which is estimated to cost around Rs. 5 crores. This is the last major contract in the Rs. 40-crore development project of Mormugao port, consisting of several major components. The main objective of the project is to provide modern mechanised ore handling facilities at the Port, so that vessels of 60,000 d.w.t. can be handled alongside the ore berth at all states of tide and vessels up to 80,000 d.w.t. at high tide, at a loading rate of 8,000 tonnes an hour. Both the ore and oil berths now contracted for will have an alongside draft of 43 feet. Essar Constructions and Carriers Ltd will undertake the construction of the ore and oil berths in technical collaboration with Taylor Woodrow International Ltd of the U.K.

SHAREHOLDERS

Seminar in November

The National Forum of Shareholders has decided to hold an all-India seminar in November in Calcutta. The seminar will have four sessions under the following heads: (1) shareholders' problems, (2) protection of shareholders under Company Law, (3) stock exchanges and institutional investors in promoting shareholders' interests, and (4) how to make shareholders' democracy effective and shareholding popular? Mr. K. V. Raghunatha Reddy, Central Minister for Company Affairs, will inaugurate the seminar. The seminar will have participants from all over the country and will be attended by representatives of various shareholders' associations, stock exchanges, concerned Ministries, and financial and banking institutions.

MONEY MARKET

No Transaction

The short-term money market has rather been quietly celebrating the silver jubilee of independence due to the strike at the Reserve Bank which inevitably meant the suspension of clearing. As a result, no transaction took place on Monday and until this writing on Wednesday. Incidentally, the call rate earlier quoted at 3½ per cent before the suspension of clearing. The supply of tea and gunny bills has been small. The demand for remittances has been small. The pound-sterling has strengthened slightly against most major foreign currencies during the week.

A Ditcher's Diary

I DIDN'T EXPECT THAT I WOULD directly experience any difference on the day marking the completion of 25 years of our freedom. But I did. I don't mean the pleasant difference of a Tuesday being a holiday. Even the mildly festive mood was by no means exceptional in a city which has an amazing capacity for noisy gaiety in the midst of all its misery. To me the day was different for a very special reason which only my neighbours can appreciate. The area in which I live has to do without electricity for several hours on every Tuesday and on at least two other days in the week. But last Tuesday there was no cut in power supply; and this I thought was a marvel. On the silver jubilee of independence I was, therefore, able to look upon the nation's future, indeed upon the human condition, with much greater assurance than I would have been on any other Tuesday in recent months. Nature, too, had a more benevolent aspect; after three days of nagging rain the sky had cleared. The circumstances, therefore, were ideal for what, on such occasions, is called a renewal of faith. I am not being facetious. The day, after all, was one for ceremonial remembrance and rejoicing; and the inspiration for a ceremonial effort is easily weakened by physical discomfort. No kind of physical hardship or natural adversity could have made any difference to a spontaneous assertion of powerful feeling. I can still recall the overpowering intensity of general feeling on the night of 14th August, 1947, and on

the glorious morning that followed. None of us would have been even aware of such irrelevancies as rain and storm or a breakdown in power supply on an occasion like that. I don't remember whether the night was hot or the sky was cloudy when Jawaharlal Nehru spoke of the nation's "tryst with destiny". But I still remember the voice, indeed every inflexion in that magic voice, as I do a hundred other minor things, none of which without any relation to my own comfort or discomfort. For that matter, I cannot remember having paid the slightest attention to such subjects as prices in August 1947; but when someone told me last Tuesday that fish prices had touched a record high I could not dismiss the matter as of no consequence. The point to note is that a momentous occasion cannot be recreated, nor its mood recaptured. And there can be something indefinably sad about attempts to do so. What were the thoughts of the ageing freedom-fighters who were hunted out of their obscurity after 25 years and made to undertake a journey to Delhi to receive "tamrapatras"? I am not even thinking of those who are still obscure.

TO SAY THAT THE GOALS OF INDEPENDENT India are yet to be attained is not to suggest that significant changes have not taken place in the last 25 years. Indeed, the changes have been far-reaching; and they are no less de-

cisive in the socio-economic structure than on the political scene. The continuing hardship that afflicts large sections of the population tends to obscure that overall economic advance. Even people who appear to have done reasonably well complain that there has been no real improvement in their condition: inflation has more than eaten away the increase in their income. The grievances are genuine; and I am not given to uncritical enthusiasm over what has so far been achieved to push out "garibi". Yet, looking back at the past 25 years, I cannot but note a striking change in the pattern of living. I am not thinking of those who have suddenly become stinking rich, or even of the larger number of people who have made profitable but legitimate use of the opportunities thrown up by independence. There has been a marked change in the living patterns of even the peasantry and the working class. There has been an unmistakable rise in the level of consumption. If I talk of the peasantry, my leftist friends will lecture me on the growing power of the kulaks and the miserable condition of landless peasants. But was the condition of the landless peasants by any means better 25 years ago? It is still abysmal, but it may have improved in at least a few areas. I do not wish to enter into an economic argument. All I want to do is to call attention to the evidence of one's eyes. People from peasant and working class families now spend more on clothes, consumer goods, transport and entertainment than they did 25 years ago. This is also true of the lower middle class, admittedly the class worst hit by high prices, stagnant incomes and the threat of unemploy-

INDIA'S FISCAL FREEDOM

A CORRESPONDENT writes in Current Coin: "Fiscal freedom for India". That is the most popular immediate shibboleth of the Indian politician, and for him it means no more and no less than protection against foreign, especially British, manufactures. Professor Kale of Fergusson College, Poona, a follower of Ranade, recently collected a number of articles he had written on Indian industrial and economic problems, and Messrs. G. A. Natesan and Co. of Madras published them as a pamphlet to educate the budding Indian politician. We need not examine the Professor's theories which when they are original are extremely crude, and

when not original extremely stale. But we would like to note his concluding paragraph which runs thus: "Only on this basis of fiscal freedom for India can a reasonable scheme of Imperial Preference be framed which will be conducive to the economic progress of this country and the greater solidarity of the British empire". The italics are ours, and we have used them to emphasise the most awful claptrap that was ever written. If fiscal freedom for India means protection, and that as we have seen is the educated Indian interpretation, nothing could more conduce to the disintegration of the British empire.

ment. But how can this be possible? Given their earnings and the present prices, it is a miracle that the lower middle class families manage to survive at all. How can they also manage to buy better clothes or spend more at cinemas than they could afford to before independence? The explanation is largely sociological. There has been a decline in improvident expenditure, the improvidence being associated with a devotion to traditional social obligations. In a sense, family obligations as well, since the concept of the family has shrunk. There has also been a reassessment of priorities. The traditional Bengali obsession with "eating well" has been largely replaced by a pragmatic interest in keeping up appearances in other ways. But it may be possible to stop eating for pleasure; there is a danger of the food prices making it impossible to eat even for physical survival.

WHEN PRESIDENT SADAT FIRST announced that he had invited the Russians to leave Egypt I was, quite frankly, sceptical. Such a contingency, or so it seemed to me, was just what the Brezhnev doctrine is designed to cope with. But it would appear I was wrong. The Russians have left Egypt in sufficient numbers for the President to be entitled to claim that his instructions are being complied with. Of course, things are not altogether what they seem; they seldom are. By holding on to their air and naval facilities, the Russians could now argue that they still have all the advantages of an imperial presence in Egypt with few of the liabilities. Yet it is hard to believe they will be able to retain these for long, especially now that Libya's impressive experience of ejecting foreign military influences from her soil is at President Sadat's disposal. The whole business remains one of the most remarkable retreats from the empire since the second World War. Against all the evidence provided by history, could it just be that the Russians have learned in time the dangers of too forward a foreign policy and the strains to which it gives rise? If so, then Tsar Brezhnev has good reason to congratulate himself on his foresight and wisdom. But that leaves unanswered the question why the Egyptians behaved the way they did. I have heard all the usual arguments about the Russians' reluctance to become embroiled with the United States in another war between Israel and the Arabs. These are plausible enough as far as they go, although if the Egyptians ever honestly believed

that the Russians would take such a risk for the sake of their friendship, then they were being more stupid than they have any right to be. But somewhere beneath the surface there seems to me another reason. Without perhaps quite realising it, President Sadat has rejected dependence on the existing super-power establishment and is reaching out towards a new element in world politics, namely, an enlarged European Community.

IT IS NOT SURPRISING THAT SO MANY people should have come to regard the affair of Senator Thomas Eagleton as a sad one, and not only because it lost a good man the somewhat slender chance to become Vice-President of the United States. Inevitably, the picture became confused towards the end. But basically the reason why Mr. McGovern found it expedient to drop his running mate was because Mr. Eagleton had at one time taken psychiatric treatment. The reason he took it does not appear to have been anything like as important a factor, and indeed never came out clearly at all. In this day and age that is just not good enough. Psychiatry has long since become an accepted branch of medicine, and what it still lacks in respectability can be traced mainly to the fact that it is not widely understood. Why its useful ministrations should be tabooed for candidates for high political office escapes me. Of course, the reason is that most ordinary people still regard a psychiatrist as some kind of magician, and those who consult him—often for nothing worse than simple emotional disorders—as either mad or unstable. Yet that might not be the case at all, and anyway the lack of psychiatric treatment

in the past has not prevented some pretty dubious characters from attaining political power. That is why the Eagleton affair is so saddening; it represents witch hunting in its pristine form, a triumph of superstition over reason.

BEFORE THE "CHESS MATCH OF THE century" began at Reykjavic Bobby Fischer boasted that he would win the 24-game contest in the first 13 games. Since he needs 12½ points, and there is one point for every game won and half a point for a game drawn, 12 of the first 13 games had to be won by him and the remaining one at least drawn if he were to prove as good as his word. He had to lower his sights, however slightly, when he lost the first game and failed to turn up for the second; and at the end of the 13th game last Friday he still needed 4½ more points to wrest the championship from Boris Spassky. But there was then little doubt that he would get them. Indeed, the young American challenger was very much in a dominant position from the fifth game onwards. According to chess experts, Fischer's play in the sixth and tenth games was of the highest order and some of the mistakes made by Spassky were childish. When the reigning champion won the 11th game there was some speculation that the tide might turn; and the speculation persisted after the drawn 12th game. But the 13th game, which Fischer won, was perhaps decisive. Surprises may still be in store, but the record so far does not warrant much hope for the Russian champion. This has caused much greater public dismay than is ordinarily produced by dis-

appointing performance by an acknowledged master of a particular game. Indeed, the successes of a challenger against an established champion are usually greeted with spontaneous rejoicing. But not so in this case, except by professional experts who can delight in Fischer's fantastic brilliance with professional detachment and perhaps by some others who, like President Nixon, are impressed by the young American's fanatically aggressive temper. Even some experts are dismayed, as can be seen from a recent despatch to *The Times* from Mr. Harry Golombek, the well-known chess commentator and himself a Grandmaster. Writing from Reykjavic, he described the drama there as a sombre tragedy portraying the decline of a great player. He commented that in the eighth game Spassky, finding himself gravely threatened, must have felt like saying: "The times have been, That, when the brains were out, the man would die, And there an end; but now they rise again, With twenty mortal murders on their crowns, And push us from our stools." This was an apt quotation from *Macbeth*; Spassky's reaction to the sight of Fischer's menacing forces may well have been like *Macbeth's* at the sight of Banquo's ghost. But Mr. Golombek was evidently so distraught that he thought he was quoting from *King Lear*.

A MASTER MARINER'S WIFE WAS heard saying at a cocktail party in Calcutta the other evening: "I have known my husband all of 40 years, and I still can't fathom him".

CALCUTTA - 1.

Will India be Able to Take the Drought in Her Stride?

By M. B. Lal

Since India has a sufficiently big buffer stock of foodgrains, the drought should not cause any undue alarm. What, however, is a must is to gear up the distribution machinery which appears to be in a shambles.

THE drought is there again after a lapse of five years. It is too early to predict the magnitude of the shortfall in the current *kharif* crop. Good rain in August can still reduce the threatened danger, if not avert it altogether. Almost everybody who knows anything about food production says: "I told you so. It was inevitable. At least one drought in five years is unavoidable. We should have been prepared for it". And so on. This is true too. The Government should have known that a drought was coming, if not this year then in the next. Up to a point the Government has, in fact, been prepared for it. The building up of a buffer stock of 9 million tonnes of foodgrains is no small achievement. There should be another 3 to 5 million tonnes in the pipeline. In addition, farmers' own reserves must add up to a sizable total. Then again, the failure of the current *kharif* crop should not make a physi-

cal impact on grain availability in the market until next winter when it is to be sold.

Drought is a phenomenon common to all countries in the world, including the most advanced. In the U.S.A., Russia, Australia, China and several other countries, failure of rains is known to produce food shortfalls of 20 per cent to 25 per cent. In India too, at its worst the present drought would not involve a loss of more than about one-fifth of the total national output. This means that of the normal 75 million-tonne *kharif* crop about 15 million tonnes may be lost. The loss would not be uniform in all the States. Some may lose more and some less. But loss of the monsoon does not inevitably mean that the winter rains will also be poor. The 35 million-tonne *rabi* crop could still be normal. But if the worst comes to the worst and *rabi* too fails, as it happened six years ago, there would be another shortfall of 7 million tonnes, making a total gap of about 22 million tonnes of grain in the nation's food basket. The production then would be about 90 million tonnes. The present potential is about 112 million tonnes in a good year, although the

Speaking in purely arithmetical terms, a well-planned economy should be able to absorb the entire shock of the drought and there should be no starvation deaths anywhere. Indeed, it should be possible to maintain near-normal food availability. Even the prices of foodstuffs could be kept stable. This is because during the last two or three years of peak production, the actual consumption of foodgrains for all uses—excluding reserves—has been around 100 million tonnes a year. A produce of as low as 90 million tonnes with buffer stocks of 9 million tonnes with the Government and another three million tonnes or so in the pipeline could help the country tide over the current crisis. A crisis would arise if, as happened five years ago, the drought is repeated next year. But this kind of a catastrophe comes rarely, perhaps only once or twice in a century.

Taking an overall view of the situation, the real problem for the present appears to be not of production but of distribution. There is in the country all the food that the country needs but what has happened is that the distribution machinery is cracking and not for the first time. This is something that always happens in a year of acute drought. Long before the physical impact of the failure of rain makes itself felt on the marketable surplus, the free market mechanism breaks down and artificial scarcities appear in the most sensitive areas. The free movement of grain from the surplus to the deficit areas, or from the rural pockets of production to the urban consuming centres slows down or comes to a stop. Pricewise, food being the most sensitive item, this at once leads to inflation. Panic seizes the population of the deficit areas and the urban centres and an atmosphere of crisis is created long before it becomes real.

There is an even more important aspect of the situation that aggravates the crisis to a breaking point in many areas. A severe drought invariably leads to large-scale unemployment and at one stroke takes away the purchasing power of the people. Even if the food is there they have no money to buy it. On the face of it this is a paradoxical situation. If people do not have the money to buy a commodity its prices should fall.

J. K. ORGANISATION
Synthesis of National Talent and Entrepreneurship

But in agriculture a recession and inflation come at the same time. A fall in employment and agricultural activity is accompanied by an immediate rise in the prices of farm commodities. This is because traders, farmers and individual consumers start cornering stocks at the first sight of a famine and prices shoot up out of all proportion to the scarcity.

The Government's task in the present situation is clearly two-fold. It has first to ensure that food keeps moving in the market from surplus to deficit areas. And, what is equally important, it has to put the necessary minimum purchasing power in the hands of all the people, especially the poorest among them. Millions of landless workers all over the country will have no work to do on the farms for months to come because of the failure of rain. There will be no wages to take back home at the end of the day and, therefore, no food for their families. The most immediate task before the Government, therefore, is to see that while there is still food people do not die of starvation merely because they do not have the money to buy food.

It should also be obvious that additional purchasing power should not be put in the hands of the poor by pumping more paper money into the market but by diverting resources from other less critical areas. This would doubtless create much hardship and also some unemployment in sectors that may have to be thus deprived of promised resources. But creating artificial money would be no answer to the problem as it would lead to a continuing price spiral over a long period, jeopardising the Fourth and Fifth Plans and rendering all projections of future growth fictitious. In terms of resources, the effect of the drought will be felt next year when besides foodgrains, cash commodities and agricultural raw materials too would be scarce. If to tide over the present crisis too much money is pumped into the market this year, the effect would be disastrous next year. The disproportion between money supply and goods would further increase. Besides, the Government will not be able to prevent unemployment that would be created by the recession in industry and trade due to the scarcity of agricultural raw materials. The distress of the

unemployed in such an inflationary situation would be even more acute.

If the Government is keen to stabilise the economy and avert the inflationary impact of the famine, it hardly has any alternative to slowing down the pace of the public-sector investments, especially in sectors whose short-term returns are poor. Thus the numerous welfare schemes of health and education included in Mrs. Indira Gandhi's election promises may have to be kept in abeyance for another year or so to meet the food crisis. It may sound harsh to say so but where the rural drinking water projects appear to be too capital-intensive, these too may have to be slowed down or postponed. Fresh investments on new steel plants and the railways may have to be suitably pruned, giving more emphasis to the fuller utilisation of the existing capacity than to the creation of new capacity. The State Governments have considerable scope for economies in their expenditure which is often incurred for no other reason than local pressures.

In the past, the practice has been to put money in the hands of the land-

less workers by employing them on "relief works". These usually consist of earthwork on *kuchha* roads and temporary dams which are usually washed away within a year or two. These works in the past have been notoriously unproductive and the mere mention of the words "relief works" reeks of scandal because of the large-scale misuse to which funds provided for them have been allegedly put in the past. Knowing that droughts are as normal as rain, the Government should by now have with it scientifically worked out projects which it can launch as part of the relief works whenever the rains fail. Such projects should be more durable and productive than the normal run of famine works which are nothing but dole and hardly give any returns. It is obvious that concentration on marshalling the scarce water resources to bring water to the parched fields by digging temporary channels or wells would be a useful means of employing landless workers. But the scope for such activity in years of famine is extremely limited.

The severe famines of 1965 and 1966 should have convinced the Government of the paramount importance of electric power in agriculture. When the rains fail, the water level in the dams goes down, the generation of power falls and tubewells work only part of the time. This further aggravates the food crisis. Power supply to industry also has to be cut down leading to large-scale unemployment. The authorities do not appear to be sufficiently conscious of this severe handicap of hydro-electric power projects. The nation's power plans should be diversified so that thermal and atomic power get the same, if not more, importance as hydel power. A good part of the crisis could be tided over if there was enough power to operate the existing tubewell full time.

And lastly, the need for improved arrangements for buffer stocking of farm commodities can never be over-emphasised. These stocks should at any time be equal to 20 per cent of the total national output. The present food stocks are only about 8 per cent of the need and those of other farm commodities negligible. The paucity of sugar reserves has become a national scandal. A sound buffer-stocks policy has to be an essential part of any stable plan of agricultural development in India.

Last Week in Parliament

(From Our New Delhi Correspondent)

Parliament was preoccupied last week with the problem of price rise. The Government's declaration that it is bent on bringing down the prices of essential commodities through a countrywide distribution system is to be welcomed.

LAST week was a hectic week for Parliament with members of the two Houses preoccupied with the country's food and sugar shortages and the price spiral and connected issues, and the Government trying to assure the people that, although the situation was critical, it was not beyond control. M.P.'s, of course, held—and they included some from the ruling Party—that the Government was responsible for the current crisis. Although the remedies they prescribed varied, according to their party predilections, the members were agreed that a crisis of serious proportions had gripped the country. Several members charged the Food Corporation of India with failure to stabilise food prices and demanded an enquiry into its working. The brunt of the burden for defending the Government fell on the Finance Minister, Mr. Y. B. Chavan, and the Food and Agricultural Minister, Mr. Fakhruddin Ali Ahmed. They called for an all-party support in bringing down prices through an effective and countrywide public distribution system and a concerted drive for a *kharif* sowing and a big *rabi* crop.

As could be expected, Mr. Chavan refused to believe that the economy was in a mess and planning faulty, and he assured Parliament that the Government would not hesitate to resort to deficit financing to help the emergency agricultural programme. Mr. Chavan also announced that, if necessary and if international prices were easy, the Government might buy edible oils and pulses abroad to meet the current shortage. On sugar, the demand took the form of nationalisation of sugar mills as a panacea for all the ills. The sugar policy of the

Government, it was alleged, was shortsighted. There was no stock in the pipeline which could have helped to tide over the present crisis. Cane growers were not getting a remunerative price for their crop which compelled them to divert to other cash crops. What was needed, they argued, was a long-term sugar policy, a higher price for sugarcane, and Government take-over of sugar mills. Uttar Pradesh is the most powerful of all sugar lobbies, but this time M.P.'s from that State tried to give the plea for the nationalisation of sugar mills an all-India perspective, saying that this was a national issue.

On both sugar and foodgrains, one firm declaration from the Government was that there was no need for importing any of these two commodities and the Government would be able to face the situation confidently. In fact, it was even given out by Mr. Fakhruddin Ali Ahmed and Mr. A. P. Shinde, Minister of State for Agriculture, that India would fulfil its commitment of sugar export under the global quota. This is understandable, for export opportunities, once not availed of, can mean an irrecoverable loss. There was also the demand for rationing of foodgrains and sugar. This has not been accepted, but a counter-programme of making use of a public distribution system spread all over the country for sale at controlled prices of all essential commodities, including foodgrains, sugar, cloth, and kerosene oil has been promised. The blueprint of this public distribution system has probably been worked out, with a liquid capital of Rs. 100 crores, which means that the proposed Corporation will have liquid cash of this dimension to buy stocks and distribute them on a countrywide basis. The Government has also promised a sugar policy in the course of this month. Apart from levying a larger percentage from the mills for sale at a controlled price, the Government may also announce a higher price for sugarcane.

Fixing Compensation for Nationalisation of General Insurance Companies

(By a Special Correspondent)

The question of compensation to be paid to the general insurance companies following their nationalisation is relevant not only to the industry but also to the future of the investment market. It is only fair to expect that shareholders should be given legitimate compensation.

AFTER over a year of the takeover of the management of general insurance companies, a Bill for their nationalisation is in sight. It has been referred to the Select Committee of Parliament to determine, among other things, the question of compensation, that is, the amount to be paid to the shareholders for the nationalisation. Other questions, like whether there would be one or four corporations, appear to have been overshadowed by

the compensation issue. The question of compensation is relevant not only to this industry but to the entire gamut of economic development of the country. And Members of Parliament appear to be taking extreme sides on this most vital and extremely controversial question. Parliamentary debates show that they have either alleged that the proposed compensation is too much or that it is too low compared with the assets held by the insurance companies.

The political thinking among the lobby that believes in "socialism through short-cuts" appears to be that no solid foundations of socialism can be laid unless the net of nationalisation is cast wide without any compensation. It feels that the Constitution having been amended, why should

the Government pay any compensation at all? On the other hand, economic pundits who see the tremors in the stock markets argue that unless some kind of guarantee is given to the industrial sector on the long-term industrial policy of the Government and unless the limits of the nationalisation spree are defined, industrial development of the country is bound to suffer. The investment market is likely to become increasingly sluggish with the successive takeover of industries.

The question of compensation to insurers is a complex one. As the Government assumes the ownership of the industry, the diversity in the structure, finances, expenditure on wages, and perquisites has to come to an end and uniformity would have to be maintained. One of the most burdensome items is gratuity for which most of the companies have not set apart any funds. At the employees' level, there are the highly paid and skilled staff of some of the companies, side by side with the poor quality staff of mostly smaller companies. The poor quality staff cannot be discriminated against in the new set-up and their wages will have to be raised to a certain minimum level. And all these are, in a sense, the concealed liabilities that have been taken over.

On the other hand, insurers have made initial investments out of the inflow of resources in broadening their companies' structure and in setting up the units on a workable footing. The resources could have been appropriated by way of dividends. To some extent, the difference between the value of investments in Government securities in the past and their present market rate has also reduced their assets. The increase in premium income and the statutory reserves maintained by these companies have again impinged on their financial soundness. Therefore, it would have been in the fitness of things if the Government had come out with the basis of its calculations for compensation rather than take advantage of the technical difference between "amount to be paid" instead of "compensation" to save any legal complication.

The question of adequate compensation should not be considered in the context of the industry alone or from the standpoint of somehow finding a way out. It should be seen in the context of its repercussions on future industrial development which, it is sure, would be hampered if investors are not assured of a fair return on their investment.

Need to Fill the Gaps in Training Schemes for Bank Personnel—I

(By a Special Correspondent)

An elaborate programme for training of bank personnel has been drawn up. But the situation does not seem to have much improved. This is the first in a series of two articles. The second will appear next week.

IN pursuance of the Government's policy on social control over commercial banks, the Reserve Bank of India constituted in December 1967 a working group on training facilities for the senior and middle-level personnel of commercial banks with Mr. B. N. Adarkar, the then Deputy Governor of the Bank as chairman, and six other members, among whom were two bankers, the late Mr. N. M. Choksi, chairman of the Bank of Baroda, and Mr. T. A. Pai, former chairman of the Syndicate Bank. The principal terms of reference set before the working group were: (1) to suggest the lines on which management orientation programmes may be organised for senior and middle-level executives of commercial banks with particular reference to the social and economic objectives of banking, aligning individual bank's credit operations to national credit policies and priorities, and expansion, both functionally and territorially, of banking services; (2) to examine how far the training facilities available to the executive and supervisory staff of commercial banks are adequate to promote the objectives mentioned above and to suggest measures for their improvement and extension, and (3) to suggest measures for (a) the co-ordination of the activities of the training institutions of the Reserve Bank and the State Bank and other commercial banks and (b) the periodical review of the activities thereof.

The working group collected data about the existing arrangements for training senior and middle-level personnel and also sought suggestions from commercial banks on the conduct of orientation and training programmes for their officers and the proposal for the setting up of an all-India institute which would function as an apex institution for training the personnel of commercial banks, organising advanced management develop-

ment programmes, promoting research in banking procedures and practices and training techniques, and arranging the preparation and publication of books or pamphlets on banking and allied subjects. The group submitted its unanimous report in May 1968 setting forth the general considerations for developing the banking profession, an analysis of the existing effort, its scale and nature and the gaps remaining unfulfilled, and on the basis of the gaps thus identified, its suggestions outlining a scheme for organising overall training for the banking industry. It believed that speedy and effective implementation of its various recommendations would go a long way towards developing the banking profession so as to enable it to play its rightful rôle in the economy.

The group gathered data from 42 commercial banks, including 13 foreign commercial banks. According to these data, there were approximately 16,000 officers working in these banks as at the end of 1967. Data were not available for smaller commercial banks and co-operative banks but the total number of officers was estimated at about 20,000. These fall into three broad categories, namely, senior executives, middle-level executives and junior executives. On the basis of the personnel turnover arising from deaths, retirements, expansion of the banking industry, etcetera, the annual recruitment to these cadres was placed at about 10 per cent.

As against this, the capacity of the training institutes at that time was around 1,650 a year. These were run primarily by the Banker's Training College set up by the Reserve Bank in 1954 and 19 training institutions set up by Indian commercial banks; the foreign commercial banks had not set up any training institute for their officers in India. Of the 19 institutes, 15 provided training facilities largely for middle-level personnel and four for clerical staff. The group noted that the facilities available at the B.T.C. and the training institutes of the commercial banks were not sufficient to cover the large number of officers at the middle level for whom training was necessary. At the rate of 1,650

officers a year, it would take about 12 years to cover the middle and junior level officers already in service while the annual additions would create a further backlog. Furthermore, these programmes did not cover the higher levels of banking personnel.

The group's recommendations were accepted and the Reserve Bank established the National Institute of Bank Management in 1969. The Institute took up its tasks in right earnest and a review committee went into the functioning of training institutes of major commercial banks and made specific recommendations on various issues. But the situation does not appear to have improved since then. In March 1971, the chairman of the group, Mr. Adarkar, who had then become the custodian of a nationalised bank, said in a lecture that the training programme and effort were inadequate and the authorities must see to it that the expansion of the banking industry was accompanied by a matching training programme to avoid the risk of inadequately trained or otherwise unsuitable people being placed in charge of branches. But why has the industry been lukewarm towards its own organisational needs?

As the apex body, the Reserve Bank had to do something about it. It took upon itself the responsibility of providing training facilities to middle-level commercial bank personnel when it set up the Bankers' Training College. Initially the faculty of the B.T.C. consisted of representatives from various banks, and there was also a non-Reserve Bank principal once but now the entire faculty consists of the Bank personnel. It is felt in certain sections that to make the B.T.C. an effective and more useful institution and to enable it to play its vital rôle, the Reserve Bank should divest itself of all powers over it and allow it to be run by the commercial banks themselves.

Half the number of seats in every course the B.T.C. conducts are reserved for the State Bank and its subsidiaries and the remaining half out of about 30 or so seats are allotted to other commercial banks, including foreign banks. But the State Bank has its own college and regional training centres, and other public-sector banks should also have adequate facilities for training their own personnel so that the B.T.C. could look after the needs of smaller banks which cannot set up such institutions on their own.

HOPE COMES TO PALI

Pali. A village in Ratu Block of Ranchi district in Bihar. It is like most other villages in India. Life flows at a slow pace as it had done for ages. Farmers raise only one crop. Artisans languish for want of finance.

Things began to look up when UBI recently adopted a cluster of villages in Ratu Block for development. Pali is one of them. UBI has assisted farmers to raise a second crop. Result is encouraging. Now, a big well is under construction. Irrigation water will ensure multiple cropping. Marginal farmers raise poultry with UBI help to supplement their meagre income. UBI also finances basket makers, retail traders, tailors, blacksmiths and silversmiths of Pali.

Pali is only one of many such schemes undertaken by UBI. Village uplift is an important plank of UBI programme of assisting development

The Indian Economic Scene : Twenty-five Years After

By Y. B. Chavan,
Central Finance Minister

At the twenty-fifth anniversary of freedom, India needs to assess the progress achieved so far. She should also take a hard look at the directions where new efforts must be made to solve the massive problems of poverty and unemployment.

INDIA became an independent nation twenty-five years ago. This historic anniversary which we are celebrating should prompt us to take a closer look at the progress attained since Independence. An assessment of past developments will reveal the growing strength and capability of our economic structure; it will also indicate the new directions in which our efforts must now be channelled to provide an effective and rapid solution for the massive problems of poverty and unemployment. An all-round economic progress since Independence has radically altered the character of our economy and brought about a significant increase in real incomes generally. But, the absolute number of those living in abject poverty has scarcely diminished; economic disparities appear to have widened; unemployment has become a seemingly intractable problem. Manifestly, economic growth by itself cannot be expected to resolve these problems; a direct attack has to be launched on the persistent evils of poverty and unemployment. Fortu-

FRIENDSHIP WITH ALL

A QUARTER of a century has since elapsed, during which we have had our share of failures and success, of tragedy and triumph. And yet we can take pride in the undeniable fact that despite the long sequence of challenges, we are today stronger politically, economically, and socially. Our national unity, democracy, secularism and socialism remain strong and firm. Our quest has been friendship with all, submission to none. Our fight was not for ourselves alone but for all mankind. Nor was it merely for political independence in its narrow sense. We were determined to change the old order, to eradicate poverty, to emancipate society from rigid stratification, evil customs and superstition.

INDIRA GANDHI

nately, the Indian economy has now reached a stage which makes this possible.

Eradicating Poverty

Stagnation at a low level of activity had been the characteristic feature of the Indian economy before Independence. To mobilise national resources for the eradication of mass poverty through rapid economic growth thus became the first major task for the Government. Soon after Independence the planning process was initiated under the inspiring leadership of Mr. Jawaharlal Nehru, and comprehensive programmes of development were undertaken within the framework of the Five Year Plans. This determined and systematic effort succeeded in greatly transforming the character of the Indian economy. No doubt, the course of progress was not always a smooth one. Natural calamities and external aggression often threatened to put the clock back. Yet, the economy continued to forge ahead.

National income since Independence has doubled. Despite a rapidly growing population—there are about 220 million more Indians today than in 1947—the output of goods and services a person has increased significantly, even though its distribution often did not turn out to be quite as egalitarian as was

originally expected. The expansion of economic activity has been accompanied by profound structural changes and increasing technological and managerial sophistication. Indeed, the Indian economy is now well endowed enough for us to think today in terms of faster growth and complete eradication of poverty and unemployment in the near future.

In the domain of industrial development our achievements since Independence have been both solid and substantial. Over the last two decades or so, industrial production has more than trebled. Thanks to the diversification of industrial capacity achieved so far, we now produce a wide range of industrial products ranging from simple consumer goods to basic intermediates and a variety of sophisticated industrial equipment. Virtual self-sufficiency has been attained with regard to equipment needed for railways, road transportation and communications. Machinery required by traditional industries like textiles, sugar and cement is manufactured in the country. Since the inception of planned development a little over two decades ago, production of metals has quadrupled; there has been a more than 15-fold increase in the output of industrial machinery; electric power generation has gone up ten times. There has been a substantial expansion in the output of

chemicals, fertilisers and petroleum products. The development of a metals-engineering complex, the phenomenal rise in power output and the expansion of intermediate manufacturing have helped provide a solid base for future industrial development.

Industrial Landscape

Twenty-five years ago, the industrial landscape was dominated by a few industries, processing agricultural raw materials with the aid of a comparatively unsophisticated technology. At the time of Independence, such traditional industries—sugar, vanaspati, jute and cotton textiles, tea processing and tobacco manufactures—accounted for nearly two-thirds of all industrial output. Such has been the transformation that today the rôles have been reversed; and, it is the newer industries, which were set up or rapidly developed after Independence, that produce the greater part of manufactured goods. The growth of technical know-how, managerial talent and operative skills has kept pace with the widening and deepening of the industrial structure. And, this accumulation of knowledge and skills, though not always readily visible, is now becoming an important source of technical dynamism in our economy.

The expansion of the public sector has played a vital rôle in our industrial development. Indeed, massive public investment in the difficult fields of basic industry and machine-building was instrumental in modernising our industrial structure and endowing it, so to speak, with more muscle. The setting up of new capacity in these challenging fields often involved the tying up of sizable investment resources over fairly long gestation periods. And, were it not for State initiative in establishing industrial capacity for steel-making, heavy industrial and electrical equipment, machine-building, petroleum and petroleum products and mining, our industry would have been scarcely more modern now than it was at the time of Independence. Nor would we have had an adequate industrial base for national defence. Today public undertakings—both departmental and non-departmental—employ nearly half the total work force in the organised sectors of activity and public investment has become the most important element

of capital formation. Their share in the total capital investment was only 3 per cent in the beginning of the First Five Year Plan but it stood at 48 per cent on 31st March, 1971.

Process of Growth

The process of growth and structural change has not been confined to the industrial sector alone. Ever since Independence, the production of agricultural commodities, foodgrains and cash crops alike, has been following a rising trend despite periodic ups and downs. It has gathered momentum in recent years, thanks to the success of the new strategy relying, among other things, on greater use of chemical nutrients, pesticides and high-yielding varieties of seeds. The "green revolution", as this shift in agricultural technology has come to be known, has considerably transformed the cereal economy.

Over the 22-year period ending in 1970-71, the production of agricultural commodities, including foodgrains, rose by more than 80 per cent. The output of foodgrains, which in 1950-51 was of the order of 55 million tonnes, hit the record level of 107.8 million tonnes in 1970-71; and, it is estimated to have risen further in 1971-72. A highly welcome consequence of the rise in foodgrain production is the substantial reduction in our dependence on food imports. During the drought year, 1966, these touched an all-time high of 10.3 million tonnes. Even as recently as in 1969, food imports amounted to 3.9 million tonnes. But of late these have been declining sharply; and, this year aid-financed food imports will cease altogether. The overall food position has vastly improved; and, substantial public stocks of foodgrains have been built to provide an effective buffer against uncertainties of fluctuating production.

Viewed against the background of the steadily deteriorating state of agriculture in India before Independence, agricultural progress during the last 25 years is a truly remarkable phenomenon. During the half-century preceding Independence, food production in British India increased at an annual rate of just about one-tenth of 1 per cent. Even this expansion at a snail's pace was made possible by the extension of

the area under cultivation. Both foodgrain output an acre and foodgrain availability a person continued to decline at a sharply accelerating rate. It has been estimated that between 1911 and 1941 the net availability of foodgrains a person fell by as much as 26 per cent. The trends since Independence provide a sharp contrast. Since about 1950, the production of foodgrains, like production of cash crops, has been increasing at an average annual compound rate of nearly 3 per cent. More important still, most of this growth reflects a continuing improvement in the productivity of land. Only about a third of the increase in agricultural production since Independence can be attributed to extensive farming. The net availability of foodgrains a person has risen by about 16 per cent over the last two decades.

Considerable Success

Our efforts to develop and to modernise the economy have thus met with considerable success. This achievement is all the more remarkable as, in keeping with the basic policy objective of self-reliance, we have always borne the major part of the burden of developmental investment and strived to ensure a healthy balance-of-payments position without excessive or indefinite reliance on external assistance. Most of the external assistance received so far has been in the form of interest-bearing credits; and foreign aid, net of repayment of principal and interest, has never exceeded 30 per cent of overall investment outlays in any year. In recent years, this proportion has fallen off sharply; and, over the Fourth Plan period as a whole, not more than 8 per cent of investment outlays are expected to be financed through net inflow of external resources. A stage has now been reached where the inflow of external resources has become quite marginal in character, although productive investment, as a proportion of national income, has more than doubled since Independence.

Our external payments position, which had been increasingly strained by the sharp step up in investment outlays from the middle of the Second Plan onwards, has now greatly improved. By the mid-sixties, the trade deficit had become excessive and foreign exchange reserves had touched the all-time low of \$524

**A faster
development
towards
self-reliance**

**a promise
and a pledge
on the
25th year of
Independence**

Indian Oxygen Limited

IOC-204

million. But thereafter the trade deficit narrowed down considerably and classic reserves (gold and foreign exchange) rose again to \$911 million by the end of 1971-72, even though \$450 million had been repaid over the last few years to wipe off all outstanding short-term indebtedness to the International Monetary Fund.

Growth and Development

India today is vastly different from what it was a quarter century ago. The increased strength of her economy as a consequence of growth and development in the past was fully demonstrated last year when it was able to withstand a series of hard shocks. The capability of the economy needs now to be exploited more fully for faster growth and for directing a frontal assault on the problems of poverty, unemployment, economic inequalities, regional disparities and the concentration of economic power in private hands. The major thrust of economic policies now will have to be in the direction of restructuring socio-economic relations on the basis of social justice. The programmes for ceilings on agricultural land and urban property are, therefore, of prime importance. Such are the new imperatives for those charged with the task of guiding the economic destiny

of this country. While rapid economic growth has to remain one of our concerns, planning and economic management will have to be oriented towards attaining greater social justice and a wider diffusion of benefits of progress. These priorities are fully reflected in the approach to the Fifth Plan as indeed in the annual Budgets in recent years.

The new approach to planning envisages the eradication of poverty through the rapid expansion of employment opportunities to provide a basic minimum level of income from work. It also calls for a specific programme for public provision of goods and services such as elementary education, public health facilities, rural water supply, home sites for landless labour, etcetera, to meet some of the essential needs of the common man. No doubt, the emphasis on faster growth with greater social justice will require a massive resource mobilisation effort; wasteful use of resources will have to be avoided and the more affluent among us will be called upon to cut down spending on conspicuous or inessential consumption. This task, though not an easy one, is well within our capacity. Anyway, this is the least we must accomplish; otherwise we shall have frittered away the opportunities the people have given us.

Food : Progress Towards Self-sufficiency from Scarcity

By Fakhruddin Ali Ahmed,
Central Minister for Agriculture

India has made significant strides in the sphere of food and agriculture. There have been slowdowns or setbacks, but the overall picture can be viewed with a fair degree of satisfaction.

INDIA can be genuinely proud of the achievements in the sphere of agriculture in the 25 years since Independence. There have been periods of progress and slight slowdowns or setbacks, but the overall picture can be viewed with a fair degree of satisfaction. Starting from an era of scarcity of foodgrains, price controls and rationing, as also shortages of cotton and jute for the mills, the country has moved up to a much

more comfortable position in spite of a rise in population and increased per capita consumption levels.

It is common knowledge that food shortages have been endemic in India. In the last quarter of the nineteenth century, the country was hit by some of the worst famines causing massive devastation of human and animal life. In the present century, food shortages as a common phenomenon became more apparent after the cessation of rice supplies from Burma from 1941. A severe famine hit Bengal in 1943. The Government had to take measures on the one hand to regulate supplies of foodgrains and on the

other to give attention to increasing foodgrains production through the "grow more food campaign".

As India gained Independence in 1947, about 30 per cent of the irrigated area went to Pakistan, which had then 18 per cent population of undivided India. The scarcity of foodgrains was accentuated. Besides this, most of the jute producing areas and some of the best cotton areas were also separated from India. To maintain supplies of raw materials to the jute and cotton textile industries, it became necessary to intensify the production of cotton and jute, in addition to the acceleration of the "grow more food campaign".

Important Objectives

Under each of the successive Five Year Plans since 1951-52, self-sufficiency in foodgrains and a consistent step up in the production of cotton, jute, oilseeds and sugarcane have been among the important objectives of development. Up to about 1960-61, increased production was secured through measures like irrigation, reclamation of new lands, use of improved cultural practices and plant protection measures and tenurial reforms for giving greater incentive to cultivators. Thereafter, greater emphasis has been laid on intensive production efforts. To start with, this approach was reflected by the "intensive agricultural district programme" (I.A.D.P.) taken up from 1960-61 in 16 selected districts in various States. This programme implied "package programme approach", i.e., simultaneous attention to the use of quality seeds, adequate doses of fertilisers and adoption of plant protection measures in the areas which were capable of giving quickest results in terms of increased production. Later on, after the experience of food scarcity because of widespread droughts in large parts of the country in 1965-66 and 1966-67, an intensive production effort has been carried on according to the "new strategy for agricultural development".

The adoption of the new strategy can be called a significant landmark in the history of agricultural development in this country. It stresses the need for an increasing use of science and technology for raising agricultural productivity. Its basic ingredients include the cultivation

Swadeshi: the spirit of our freedom

25 years ago, the Swadeshi Movement won us the fight for freedom;
65 years ago, it procured the finance to set up India's first steel plant.

On August 27, 1907, a prospectus was issued appealing to the Indian people to subscribe the capital needed to set up India's first steel plant.

And the money came. Old and young, rich and poor, man and woman, all offering their mite.

And at the end of three weeks, the entire capital required for the construction was secured: every rupee contributed by the people. The Swadeshi Movement is still on. In the form of the country's iron resolve to achieve self-reliance.

TATA STEEL

of high-yielding varieties of seeds coupled with sufficiency of water and fertiliser application, water management and adoption of plant protection measures. In the sphere of commercial crops, the main technique for increased production comprised "package programme approach". In the case of oilseeds, the country is promoting the cultivation of soyabean and sunflower as well.

Production Base Widened

As a result of these efforts, the production base has been greatly widened. The gross cropped area has risen by nearly 50 per cent from about 113 million hectares in 1947-48 to an estimated level of 170 million hectares at present. The irrigated area under all crops is estimated to have doubled, from 20 million hectares to about 40 million hectares. The most notable development in irrigation has been increasing the utilisation of groundwater resources through tubewells, filter points and pumpsets, mainly with the help of institutional credit and investment of private savings. Big strides have particularly been made in the last six years. In this period, the number of private tubewells has increased more than five times to the level of 570,000 tubewells and that of electric pumpsets for irrigation more than three-fold to the level of 1.9 million.

The use of improved seeds is increasingly catching the imagination of Indian cultivators. This process has got accelerated since the introduction of high-yielding varieties of wheat and rice and hybrid varieties of jowar, bajra and maize since 1966-67. In 1970-71, about 18 million hectares of area were covered by high-yielding varieties of cereals. About 30 per cent of the total wheat

area and about 20 per cent of the rice area are presently cultivated with high-yielding varieties.

Use of Fertilisers

The use of fertilisers is widely regarded in the world as an index of adoption of modern technology in agriculture. In India, the quantity of chemical fertilisers used in 1950-51 was less than 100,000 tonnes of nutrients. Consistent efforts to introduce fertiliser use through trials, demonstrations and propaganda led to a steady rise in fertiliser consumption to the level of about 800,000 tonnes by 1965-66. Thereafter, however, with the introduction of seeds of high-yielding varieties, fertiliser consumption has shown a remarkable increase, reaching the level of 2.6 million tonnes of nutrients in 1971-72. The use of pesticides for plant protection measures has also gained considerable popularity. In 1970-71, the area benefited by plant protection measures exceeded 50 million hectares.

Great progress has been made in developing the infrastructure for intensive agriculture. A countrywide network of agricultural extension service has been brought into being. Arrangements for agricultural research and education have multiplied several fold. The amount of agricultural credit advanced through co-operative institutions has increased almost 30 times. Commercial banks have also started increasing their advances for agricultural development.

Remarkable Increases

Remarkable increases in production have been achieved since Independence. The problems are difficult and the struggle that has been waged has been pretty hard. Even though India achieved a growth rate of about 3 per cent a year in the production of foodgrains up to 1964-65, it did not prove adequate because of the rapid growth in population and an increase in demand resulting from growth in incomes in the wake of planned development efforts. But as a result of rapid increases in foodgrains output since 1967-68, this challenge has been largely met. The level of foodgrains production (after making allowance for statistical adjustment in respect of area covered, etcetera) has risen by nearly 80 per cent from about 60 million tonnes in

1947-48 to nearly 108 million tonnes in 1970-71.

At the time of Independence, we did not have an adequate foodgrain supply to meet the demand of less than 360 million people. Presently, we have adequate supplies to meet the demand of over 550 million people, i.e., more than one-and-a-half times the population of 1947. What is still more significant is that the *per capita* availability of foodgrains has risen from the level of 159 kilograms a year in 1948 to the level of about 170 kilograms at present. The demon of scarcity and shortages has been eliminated. Imports of foodgrains which were successively reduced from 10.4 million tonnes in 1966 to about 2 million tonnes in 1971, have been brought almost to zero level. Procurement based on voluntary offers is very nearly in balance with the requirements of the public distribution system. Besides this, the Government holds a stock of nearly 9 million tonnes of foodgrains, which is enough to keep the food economy on an even keel. This represents virtually a state of self-sufficiency.

Commercial Crops

The extent of increases in the production of commercial crops is also highly creditable. The production of cotton which was around 2.2 million bales in 1947-48, has risen to over 6 million bales in 1971-72—a rise of about 170 per cent. The production of jute has risen from 1.9 million bales in 1947-48 to about 5.7 million bales in 1971-72—a rise of 200 per cent. The output of five major oilseeds which averaged 5.2 million tonnes at the time of Independence, has risen to about 9.2 million tonnes in 1970-71—a rise of about 75 per cent. The percentage increase in sugarcane production for the above periods is over 80, from the level of 7.3 million tonnes (in terms of *gur*) to about 13.2 million tonnes in 1970-71. Previously, India was an importer of sugar, but in the past few years she has been exporting sugar to other countries. These figures would show that Indian agriculture has nearly come of age. The Central and State Governments, the agricultural scientists and planners and specially the farmers and the people in general, can certainly look back with pride on the long and hard path they have travelled towards self-reliance and laying a stable base for more rapid economic growth.

The Steel Industry : Progress Achieved

By S. Mohan Kumaramangalam,
Central Minister of Steel and Mines

The progress of the steel industry determines to a large extent the pace of industrial development of a nation. While India has made large strides in this field, she has yet to travel a long way to achieve a reasonable measure of self-reliance and strength.

THE twenty-fifth anniversary of Independence of our country marks a further milestone in the socio-economic transformation of the nation. Political independence, which was achieved 25 years ago, was the end of the struggle against colonial rule. It also represented the beginning of the struggle of a new-born nation for social and economic freedom. As in all subject nations of the world, a long period of colonial rule left behind it the scars of economic exploitation, thus resulting in formidable problems to be faced by an emerging independent country.

Planning for economic independence commenced with the formulation of Five Year Plans. The Plans represented the ambitions and aspirations of the people of a free nation to secure for themselves higher standards of living and greater equality of opportunities. Each Plan enlarged the responsibilities of the State and the people for building up a stronger and self-reliant nation in every sphere of economic activity. Inevitably, steel being one of the basic material for industrial development and agricultural progress, an increase in steel production came to be recognised as one of the important objectives of the Five Year Plans.

The First Plant

It would be useful to recall briefly the history of the iron and steel industry in this country. The first successful iron and steel mill in India was established in 1906 in Jamshedpur known as the Tata Iron and Steel Company. When the setting up of this plant was being undertaken by that great visionary Jamshedji Tata, he was told by a British expert that if Tata could make steel in India the British expert would eat it. But steel was made

successfully and by the year 1917, a four-fold increase in output was achieved. Despite initial difficulties, the Company underwent a continuous expansion achieving an average rate of growth of capacity of 8 per cent during the first 30 years.

The Indian Iron and Steel Co. was founded in 1918 by British interests in Calcutta. Initially, the I.I.S.C.O. restricted its operations to the manufacture of pig iron primarily for export to the U.K. and Japan. In 1926, the Steel Corporation of Bengal was formed by the I.I.S.C.O. management and it undertook the construction of a steel mill adjacent to its blast furnaces.

Another small plant, Mysore Iron and Steel Ltd., Bhadravati, was founded in 1918 and continued to produce charcoal pig iron. In the mid-1930s it added facilities for the manufacture of steel and shortly afterwards, it adopted electric smelting of iron ore. Looking in retrospect, these efforts seem extremely small considering the pace at which industrialisation and steel production were increasing in the advanced countries. For example, in the first half of this century, steel production increased from 3 million tonnes to about 50 million tonnes in Russia; in the U.S.A., from 11 million to about 90 million tonnes; in the U.K., from about 7 million to about 20 million tonnes.

lost in negotiations for foreign collaboration.

Soviet Assistance

Many of the western countries with whom India had its trade and economic relations were hardly helpful in the beginning. Their advice was that the country did not need much steel! India approached the Russian Government and in 1954, negotiations were started for setting up a steel plant with Soviet assistance. It was on 2nd February, 1955, that the Bhilai agreement was signed. The agreement was characterised by unusually favourable terms by way of very low rate of interest (2½ per cent, as against 6 per cent or more charged by western financial agencies), moratorium for the first few years, and repayment in 12 years after delivery of equipment. Soon after the Bhilai agreement was concluded between India and Russia, other nations who had earlier considered that India did not need extra steel, came forward to increase the steel capacity in the country. Germany recommended the setting up of a 1-million-tonne steel plant in Rourkela and Britain came forward with an offer to finance the setting up of a million-tonne plant in Durgapur.

It was the boldness and vision of Prime Minister Nehru that led to the decision to set up simultaneously three steel plants of a million-tonne capacity each in Bhilai, Rourkela and Durgapur with Soviet, German and British assistance. At the same time, it was also decided that the existing steel plants of the T.I.S.C.O. and the I.I.S.C.O. should expand to a capacity of 2 million tonnes and 1 million tonnes, respectively. It was thus that the Second Five Year Plan

ITC steel tubes in Industry and Agriculture playing a bigger role for a better tomorrow

INDIAN TUBE THE INDIAN TUBE COMPANY LIMITED A Tata-Stewarts and Lloyds Enterprise

ITC-12

up in 1964-65. The ultimate capacity of Bokaro is 4 million tonnes. Efforts are being made to complete Stage 1 of 1.7 million ingot tonnes by the end of this year, 2.5 million ingot tonnes by the end of next year and 4 million tonnes stage soon thereafter.

Steel Consumption

It is a matter of concern, however, that while the steel-making capacity has increased six-fold from 1.5 million tonnes to 9 million tonnes, we are still lagging far behind many other countries. The consumption of steel in India is only of the order of 10 kilograms *per capita*, against 600 kilograms or 700 kilograms *per capita* in the highly industrialised countries. Except for a short period during 1965 to the middle of 1968 when the Indian economy was passing through a serious recession, we have continuously been faced with a shortage of steel. The capacity utilisation continues to be poor, with the average production in the range of about two-thirds of the rated capacity. Production has not registered any increase from the level of about 4.6 million tonnes of finished steel at the end of the Third Five Year Plan, i.e., 1966-67 and on the other hand the cost of production has been going up rather sharply.

The imperative need to increase production both from the existing units and through the expansion of units as well as setting up of new units has been fully recognised. Along with this, technological improvements have also to be brought about, taking advantage of the development in this field all over the world. In the recent past, various steps have been taken to identify the deficiencies in our steel plants in more specific terms and to take suitable steps to remove these deficiencies. Better consciousness and stricter scheduling maintenance, imaginative planning for spares, refractories, etcetera, are expected to result in a substantial improvement in the functioning of the plants. Even though there are certain inherent disadvantages that the steel plants in India have to face such as the high ash content of coal and often higher alumina content in iron ore, there is a very large scope of improving productivity in the plants.

In the field of labour relations as well, substantial improvements have to be brought about. Every hour lost in a 2-million tonne plant costs about Rs. 2 lakhs in gross value of

output. What is more, such stoppages can do permanent damage restricting the production from the plants for a long time leading to heavy expenditure on repairs or rebuilding. Sustained efforts are, therefore, necessary in ensuring proper labour-management relations and bring about the recognition of the fact that welfare of labour is only one aspect of the larger question of well-being of the nation which, in turn, depends to a considerable extent on steel production. If the efforts undertaken in removing various bottlenecks prove to be successful, steel production is bound to increase substantially in the coming years.

Operational Problems

Apart from the operational problems concerning the working units, one has to look ahead and plan for the future taking a long-term view of the matter. Considering the long gestation period required for the setting up of steel plants, it is essential that the capacity that should become available by 1985 should be planned for even at present. To achieve a target of 19 million tonnes of ingot steel by 1980 and 29 million tonnes by 1985 would require considerable efforts even at present to plan ahead and remove the rigidities of the existing procedures.

In general terms, it would be said that the expansion of capacity is less time-consuming and perhaps less costly than setting up new steel plants. There are in-built possibilities of expansion in all the existing steel plants as well as in Bokaro. It has been decided to expand Bhilai from 2.5 million tonnes to 4 million tonnes and further to 4.8 million tonnes. The possibilities of further expansion of Durgapur and Rourkela are also being examined closely. Bokaro will be expanded from the first stage of 1.7 million tonnes to a second stage of 4 million tonnes and as an intermediate stage, it is also envisaged that production would be expanded to 2.5 million tonnes. Apart from the public-sector steel plants, expansion programmes of the I.I.S.C.O. and T.I.S.C.O. are also being pushed forward vigorously.

In addition to the expansion envisaged in respect of the existing steel plants, effective steps are being taken to set up new steel plants. The new steel plants in Visakhapatnam in Andhra Pradesh and Vijayanagar in Mysore are each designed for a capacity of 2 million ingot tonnes of

mild steel. The special and alloy steel plant in Salem with a capacity of 250,000 tonnes is expected to be completed within a period of four years. Various measures have been undertaken to secure the maximum economy in costs, reduce the time period for construction and commissioning of the project and optimising the utilisation of the equipment. Taken together, the setting up of the new steel plants, the expansion programmes in implementation and under contemplation and the full utilisation of the capacity of the existing plants are expected to result in a production of 19 million tonnes by 1980. It is proposed to take a series of decisions for preparing the ground for a step up of the order of at least 2 million tonnes a year to reach the target of 29 million tonnes by 1985.

Large Measure of Planning

The setting up of a steel plant requires a large measure of planning for the manufacture of both mechanical and electrical equipment, securing of know-how and design for fabrication of equipment, strengthening of consultancy engineering agencies and adequate organisation for construction. It is in this view that steps have been taken to improve and strengthen the working of public-sector agencies for the manufacture of heavy, mechanical equipment as well as bulk handling and conveyor equipment—the Heavy Engineering Corporation in Ranchi and the Mining and Allied Machinery Corporation in Durgapur. Capacity has also been created in the Instrumentation Ltd, Kota, for the supply of complete instrumentation. Studies have been completed recently on the standardisation of equipment in order to take advantage of the possibilities of rapid manufacture, so that the lead time for the manufacture of plant and machinery is curtailed.

The steel industry is a strategic industry and the progress of the industry determines to a large extent the pace of industrial development of a nation. While we have made large strides in this field in the last 25 years, we have yet to travel a long way before we can confidently say that we have achieved a reasonable measure of self-reliance and strength. However, a foundation has been laid for a massive development in this field and given the will and determination, it should be possible for us to secure phenomenal progress in this field in the years to come.

Years built on toil, pride, grit, steel.

25 years have gone by. Years of hope and agony. Despair and triumph. And today, India looks at the future with confidence.

We, at Hindustan Steel, have had our share of growing pains, of achievements and failures. We started in 1954, and over the years, we have given the country 8.7 million tonnes of iron, 24.7 million tonnes of steel including special and alloy steels. To date, we have supplied from our manufacture more than Rs. 2,650 crores worth of iron and steel and chemical by-products, most of which the nation would have otherwise had to import. In addition, we have earned more than Rs. 216 crores in foreign exchange through exports of our products.

Leading this march towards self-reliance are Hindustan Steel's ever-growing cadres of planners, engineers, designers, technicians, skilled and unskilled workers. They are the moving force behind India's emergence into the industrial era.

HINDUSTAN STEEL

Two Decades of Planning : Is the Strategy Sound ?

By C. Subramaniam,
Central Minister for Industrial Development, Science and Technology

Experience of the past two decades proves that the strategy pursued by the planners has been fundamentally sound. It only needs to be enlarged and modified from time to time in accordance with changing requirements ; the current stress on employment and social justice is an example.

ON this, the twentyfifth anniversary of Independence, one recalls the high ideals and commitments which informed our freedom movement. While political freedom was an end in itself, it was also the beginning of another more important struggle—the struggle against poverty, ignorance, disease and inequalities. Solving these problems has been our primary concern all these 25 years and they will continue to be so in the future. Under Mr. Jawaharlal Nehru's leadership, we chose the path of planned development towards the ultimate goal of a socialist society within the framework of democratic principles and values. We have completed 20 years of this unique experiment. Despite many vicissitudes and setbacks, much has been accomplished. The old stagnation is no longer there. In its place we see a new expectation and dynamism pulsating through the country.

Higher Per Capita Income

One has only to contrast the development of last 20 years with that of the British era to appreciate this fact. During the first half of the twentieth century, our national output barely kept pace with population growth which itself was less than 1 per cent a year. Between 1950 and 1970, population has been rising at over 2 per cent a year. The total addition to population in the last two decades is estimated at 186 million which is about 50 per cent more than the additions during the previous 50 years. And yet *per capita* real income today is about a third higher than it was in 1950.

The picture is one of all-round progress. Rural India has been transformed through agricultural development, largely because of the efforts as part of the Plans to extend

irrigation, enlarge the supply of fertilisers, credit and other inputs, and intensify research to evolve new varieties of seeds and better techniques. The Indian farmer has shown himself responsive to new opportunities which are being constantly enlarged by research. Altogether agricultural production in the last 20 years has increased by 80 per cent, well ahead of the rate of population growth.

Qualitative Changes

The net output of industries and minerals has increased by 170 per cent with the modern factory-type industries growing very much faster. This quantitative expansion has been accompanied by qualitative changes of far-reaching significance. At the time of Independence, our industry consisted mostly of jute and cotton textiles and other rudimentary forms of agricultural processing. Much of the country's requirements, capital equipment and even some of the basic raw materials had to be imported. Today indigenous capacity for producing these commodities is impressive in value, range and sophistication. The base for a self-reliant economy has been built up.

The quality of common man's life has improved even if only in a modest manner. Indicative of this is the appreciable increase in the average *per capita* consumption of food, clothing and other essential articles. Malaria and other epidemic diseases have been brought under control and the nationwide network of primary health centres and hospitals has brought a modicum of medical care within easier reach of the rural population. The extension of road network, electricity, better communications and the vastly enlarged use of bicycles and radios and other similar articles of mass consumption has unquestionably made life of the common man more comfortable. Above all, the manifold expansion of education has raised the literacy rate and greatly augmented the stock of scientists and skilled personnel. Along with measures to promote economic development, we have taken

several important steps to mitigate and reduce the concentration of economic power. Special programmes for the benefit of the weak and the under-privileged and of the backward areas, abolition of the managing agency system, control of monopoly and the nationalisation of banks are among the principal measures towards this end.

These are no mean accomplishments but they are modest in relation to the needs of the people in relation to the promises made, and in the context of the rising expectations of the new generation. The achievements over a wide range of activities have often fallen short of targets. Increases in production have not been commensurate with the financial outlay. Projects take far too long to be completed and brought into full production. The sharp increase in price, especially during the 'sixties, has brought hardship to large sections of the population. Unemployment continues to be widespread. Unemployment among the educated youth including highly trained scientists and engineers is distressingly large and growing. There is a feeling that disparity has widened and social justice is no nearer than it was 20 years ago. The poor record of public enterprises and the vulnerability of the economy due to dependence on large-scale foreign assistance have also attracted criticism.

Failures of Implementation

We are acutely conscious of these problems and have been giving them serious thought. To begin with let me say that our disappointments and failures should not be allowed to distort our perspective. Our failures have however been essentially failures of implementation. We need to do better by improving our organisation and style of work to get the maximum out of our investment, to ensure speedy and efficient implementation of our projects and to make the maximum use of available capacity and manpower. Ultimately it is only through much larger and more diversified economy that we can hope to find a lasting solution to the problem of mass poverty and unemployment. Here the strategy pursued by successive Plans is fundamentally sound. No doubt, it needs to be enlarged and modified from time to time, in accordance with changing requirements and priorities. The current stress on employment and social justice is an example.

Railways Rely on

GLOSTER

- Railway Signalling Cables, Rubber and P V C insulated, Armoured and unarmoured

- Flame Retarding, Coach wiring Cables
- Special Locomotive Wiring Cables
- Inter vehicular Coupler Cables

Manufactured strictly according to Railway specifications and Indian and British standard specifications.

FORT GLOSTER INDUSTRIES LTD.

(Cable Division)

31, Chowringhee Road, Calcutta-16.

Here we need to do much more. Even if we strain our resources to utmost in raising output, it will take an inordinately long time to find jobs and decent life for every one. The people are increasingly impatient and will not wait that long. Therefore, it is imperative that we do something here and now to tackle frontally the problems of mass poverty and unemployment. This is what we propose to do in the Fifth Plan. We visualise a three-pronged strategy: (1) A comprehensive land reform programme, the main element of which would be imposition of effective ceilings on land ownership and the redistribution of surplus land to the poor; (2) a massive increase in investment programmes which will increase agricultural production and at the same time provide diffused large-scale employment opportunities in rural areas; and (3) programmes to ensure a reasonable minimum standard of education, health, water supply and other amenities in all parts of the country.

The Anti-poverty Programme

We want to promote growth to accommodate the anti-poverty programme in the context of a progres-

sively self-reliant economy. While foreign aid has played a useful rôle, excessive dependence on it is not a desirable thing. We have brought the economy to a position where it has the manpower as well as the production capacity to carry forward the development largely on the strength of our own resources. This advantage will be exploited to the fullest extent so that dependence on aid will be reduced progressively.

All this will call for a large increase in domestic savings. We have estimated that in the Fifth Plan, additional resources of the order of Rs. 6,000 crores to Rs. 7,600 crores would be mobilised. This will call for understanding and willing co-operation of all sections of the population and more particularly the well-to-do sections of the community to accept larger sacrifices and a greater measure of discipline all round. On the Government's part, it is obligatory to take all necessary steps to ensure that the prices of essential commodities will be kept reasonably stable. But here again success depends on maximum co-operation from the people. This is a challenging task but it is a challenge which we can ignore only at our peril.

Importance of Non-alignment in India's Foreign Policy

By Sardar Swaran Singh,
Minister of External Affairs

Non-alignment in India was not born suddenly. The country's political struggle for freedom under Mahatma Gandhi, through non-violence and truth, had much to do with the building up of the concept of world peace through non-alignment.

THE policy of non-alignment has been much praised and much reviled in the last 25 years. Most of those who have praised it have been somewhat sentimental and defensive. Most of those who have reviled it have not even troubled to define it for themselves. Nehru who started talking of non-alignment as early as 1946, even while India was preparing to get her independence, said then: "We propose as far as possible to keep away from the power blocs or groups aligned against one another which have led in the past to

world wars and which may again lead to disaster." In December 1947, Nehru said in Parliament: "We have sought to avoid foreign entanglements by not joining one bloc or the other. We propose to keep on the closest terms of friendship with all countries unless they themselves create difficulties. We shall be friends with America and intend co-operating with them. We intend also to co-operate fully with the Soviet Union."

Military Might

In March 1948, he declared: "Let us not be frightened too much of the military might of this or that group. I am not frightened and I want to tell the world, on behalf of this country, that we are not frightened of the military might of this power or that power. Our policy is not a

passive policy or a negative policy." In the same speech he added that India's foreign policy totalled up to our determination to maintain our "independence of opinion and independence of action" in every situation concerning our external relations. I have quoted all these statements of Nehru made between 1946 and 1948 so as to indicate how early this thinking was done, even before Yugoslavia, Egypt and other countries joined us in building up this concept of the policy into a global credo for most of the developing countries of Asia and Africa, and some of Latin America.

This policy was criticised and abused in various parts of the world as "fence-sitting", "neutralism", "refusal to distinguish between black and white, right or wrong, and, freedom and slavery". It was dubbed by certain western commentators and practitioners of diplomacy as immoral, short-sighted, unrealistic and inappropriate. Some of them called it the result of Nehru's "casuistry", "passivism", and the lack of courage for international political involvement. They thought it was a result of confused thinking, an irrational cluster of viewpoints and policies, an amalgam as well as aberration of foreign ideologies. Non-alignment did not find favour with the West. Thus, to its critics non-alignment was an outcome of political expediency. Nehru, and chronologically slightly later, Tito and Nasser, and somewhat later than that, Soekarno, Nkrumah, Bandaranaike and several other statesmen of Asia and Africa emphasised that their joining any bloc would have meant their not expressing themselves forcefully, and adopting views not intrinsically their own. They were thinking, of course, in terms of the power structure as it existed at the time. Accused of not being realistic and of being overtly idealistic, Jawaharlal Nehru asked: "What exactly is idealism?" and he provided the answer himself by saying: "Idealism is the realism of tomorrow." In 1949, when he was attacked, within India, for pursuing what his critics call a negative and neutral policy, he said: "It is a positive and vital policy which flows from our struggle for freedom. When man's liberty or peace is in danger, we cannot or shall not be neutral; neutrality would then be a betrayal of what we have fought for, and what we stand for."

Today, the Bandung concept of Panchsheel is well known. Even in

D.C. MOTORS AND GENERATORS TYPE Q & DY

HEIL, pioneers in the manufacture of Heavy Electrical Equipment, offer DC Motors and Generators (Type Q & DY) designed for general as well as specialised applications.

These machines, besides being tested for performance and reliability under extreme conditions, have all the advantages accruing from long experience, ability to engineer sophisticated equipment and extensive research and development.

SALIENT FEATURES

(A Government of India Undertaking) BHOPAL

Newfields

communiqués between the U.S.A. and China, and the U.S.A. and the Soviet Union, in one way or another, the following five principles get mentioned. These are: (1) mutual respect for each other's territorial integrity and sovereignty, (2) mutual non-aggression, (3) mutual non-interference in each other's internal affairs, (4) equality and mutual benefits, and (5) peaceful co-existence.

It is appropriate to remind ourselves now that these five principles were first mentioned in the preamble to the Sino-Indian Treaty on Tibet which was signed on 29th April, 1954.

As time passed and the number of adherents to the policy of non-alignment, as well as the principles of Panch Sheel increased, these drew the disfavour and wrath of the practitioners of power politics. The First Non-Aligned Conference took place in Belgrade in September 1961. Twentyfive Afro-Asian and one Central European State participated, three Latin American States came in as observers. Speaking on that occasion, Nehru said: "We call ourselves the conference of non-aligned countries. Now the word non-aligned may be differently interpreted, but basically it was used and coined almost with the meaning: non-aligned with the great power blocs of the world. Non-aligned has a negative meaning but if you give it a positive connotation it means nations which object to this lining-up for war purposes, military bloc, military alliances and the like. Therefore, we keep away from this and we want to throw our weight, such as it is, in favour of peace."

A Concrete Programme

At the next meeting of the Non-Aligned Nations held in Cairo in October 1964, the number of participating nations had increased to 47 and of observers to 11, from all over the world. India's Prime Minister, Lal Bahadur Shastri, then put forward a concrete programme for non-alignment. This consisted of five basic points which found acceptance by the Conference. These were: (1) nuclear disarmament, (2) peaceful settlement of border disputes, (3) freedom from foreign domination, aggression, subversion and racial discrimination, (4) acceleration of economic development through inter-

national co-operation, and (5) full support for the United Nations and its programmes for peace and development.

At the third Non-Alignment Summit which took place in Lusaka in September 1970, 54 States participated as members and nine as observers. Combining the idealism of Nehru and the concrete programme of Lal Bahadur Shastri, Prime Minister Indira Gandhi said there: "Today's world is a single entity. We are deeply convinced that by staying out of military pacts, the non-aligned countries can use their collective wisdom and influence to tip the balance of power in favour of peace and international co-operation. The world today is united in peril, not merely the peril from nuclear destruction but the more insidious daily pollution of our environment. We should be united in prosperity, and in the blossoming of the spirit of man. The non-aligned countries must be in the vanguard of the movements to create the world of tomorrow and to enrich the content of human life."

In Support of Peace

Non-aligned nations have often been called, by the critics of non-alignment, a heterogeneous and a disparate group. It has been suggested that they have never taken any concrete action and that they have no permanent headquarters organisation as such. These critics do not understand the philosophy of non-alignment. Also they do not understand the influence that has been exercised by the non-aligned nations in support of peace, and for promoting peaceful solutions of world problems during the last 20 years and more. To put it succinctly all that the non-aligned nations have tried to do is to retain their independence of choice and action by remaining disengaged from the two power blocs. They have thus been able to interpose themselves as catalysts of international public opinion. They have been able to stand up in favour of the rights of those who cannot by themselves ensure that their determination to preserve their independence was not ignored or rejected by the mighty ones of the world. As the late President Nasser of Egypt said: "We live in a world suffering from the strife between two blocs and we cannot imagine that a third bloc should enter the arena and increase

the tension of this strife, instead of easing it."

Economic Co-operation

In the years following 1961, the non-aligned nations have done much to draw the attention of the world, especially the developed world, to the inequalities of the commercial and trading pattern developed by the principal industrial and commercial nations of the world. The rôle of the non-aligned nations in the first U.N.C.T.A.D. (Geneva) in 1964 and the second U.N.C.T.A.D. (New Delhi) in 1968 and the third U.N.C.T.A.D. (Santiago) has done much to win adherence in the developed world to the concepts and generalised scheme of preferences. The old system of the G.A.T.T. needs revision from the point of view of the developing nations. Their influence both in the G.A.T.T. and the U.N.C.T.A.D. has been in favour of peaceful and gradual evolution towards a more equitable system of trade and tariff. They have tried to help the U.N. by assisting in the building up of the U.N.E.D.O., and if today they do not have the same influence in the International Bank for Reconstruction and Development, the International Monetary Fund, and the U.N. Development Programme, it is because even today the "haves" are aligned and the "have-nots" are the non-aligned.

The Indian commitment to non-alignment could be said to stem from the philosophy of Buddha. We have based our policy on our determination not to align ourselves with one bloc and to hate the other, or to play power politics with both. Indeed as the Dhammapada says, "Never in this world does hatred cease by hatred; it ceases only by love. This is the Law Eternal."

Non-alignment in India was not born suddenly. It was inherent in the Indian capacity for assimilation and it can be said, and perhaps should be said, that it takes off from the political philosophy of Emperors like Ashok and Akbar; and from the thinking and precepts of religious teachers like Shankaracharya, Guru Nanak and Kabir. India's political structure for freedom under Mahatma Gandhi, through non-violence and truth, had much to do with the building up of the concept of world peace through non-alignment.

The Role of Mass Media in Bringing about Social Change

By Dharam Bir Sinha,
Deputy Minister for Information and
Broadcasting, Government of India

Mass media have played an important rôle in bringing about social change in the country. They will continue to play an even greater rôle in the years ahead.

INDIA has been undergoing rapid transformation in the last few decades. Now, in every part of the country a minimum level of attainment has been reached and people can hope and invest in the future. Hence, the current preoccupation with social change. The mass media have played a significant rôle in bringing about this change. In the process the mass media have also grown. The circulation of daily newspapers has risen from 2 million in 1953 to 8.42 million in 1970. The number of radio listeners during the last 25 years has increased from 2.8

million to over 110 million, assuming that an average of ten persons are reached through a licensed radio receiver. The number of cinema houses has increased from 1,384 to 7,123. The number of films produced annually has similarly increased from 281 to over 400.

Salient Feature

Perhaps the most impressive salient feature of the change that has come over India since independence is the nation's tangible unity in the face of foreign aggression. A nation that seemed to have inner contradictions, a country that appeared torn in a number of feuding groups, became a solid shield. Mass media played a very important rôle in this too. Press, radio and films have also

played a significant part in changing the people's attitudes towards family planning. The success of the "green revolution" has also been to a considerable extent due to these factors.

To bring about a change in attitude, it is necessary to understand the resistance to change which is found in more traditional cultures like ours. A change introduced a way as to take advantage of rather than clash with the cultural links, is more easily accepted and the results are encouraging. To be able to do this, it is necessary to know the culture and to understand the whole pattern of life of which the proposed change is a part. To bring about social change, it is necessary to use the channels of communication and influence that exist in a community where change is desired. Efficient use of mass media is necessary to accomplish social change. Media used without adequate knowledge and understanding of the local culture tend to be counter-productive. This is true for inter-personal communications also. But in the case of mass media it is more so because they cover large areas, operate from

a distance and get less feed-back from their audiences.

Efficient Use

Efficient use of mass media for economic and social development implies that they should be as local as possible. Their programmes should originate no farther than necessary from their audiences, should be prepared by persons who understand the cultures to which they are speaking and means should be available for audiences to report back to the media. To understand where media can work effectively by themselves and where they can only support inter-personal communications, is the main thing. We in developing countries must learn to get the most out

of modern methods of communication. The problem is not to find jobs for the media to do, but to use mass media for all the tasks the media can do best.

Changes in social attitudes and behaviour patterns sought are being accomplished through the flow of adequate educational information to the people. A whole agrarian economy based on traditional ways of life has to be restructured on modern scientific lines. The Government has to raise the people to a level of social awareness; for participation in developmental activities. We tend to forget how much we learn from common mass media, such as books, newspapers and films. Books have been a source of learning for nearly 300 years; wherever newspapers are

available, people tend to form their ideas of the non-local world largely on what they have learned from newspapers. Our experience illustrates how easy it is to learn from mass media voluntarily as well as involuntarily.

Powerful Instruments

Films, radio and newspapers are powerful instruments to bring about social change and due emphasis has been paid to the development of these media. In India newspapers have a limited readership as the literacy percentage is about 30. Radio is a medium which can reach everybody, even people in the remotest corners. Another great advantage that broadcasting has is that it can entertain and instruct simultaneously. The spoken word also helps to establish a rapport with the audience. It is in this context that the programme content of broadcasts is being oriented to create a sense of involvement among listeners in the development programmes of the country. At the end of the Fourth Plan nearly 85 per cent of the population of the country will be covered by medium wave broadcasts.

TV is yet another modern electronic medium which helps bring the world into the homes of the people. Its unique utility as a mass communicator and mass educator is universally accepted. It is for this reason that expansion of TV in a phased programme at enormous expense to provide a meaningful national service is envisaged in the next ten years. The task of national reconstruction requires a concerted effort in co-ordination with mass media.

Book on Independence

As the silver jubilee celebration of India's independence opened in Delhi, a book entitled *25 Years of Indian Independence* was presented to the President, Mr. V. V. Giri, and to the Prime Minister, Mrs. Indira Gandhi, on behalf of Indian Oxygen Ltd. by its chairman, Mr. A. K. Sen. The book runs into three hundred pages with maps and illustrations and gives an objective account of the developments in the country in the political, economic, social and cultural spheres since independence.

INVESTMENT

Drastic Provisions in the Companies Bill Affect Share Prices

IT has been yet another depressing week for the stock markets. Sentiment has been further unsettled by a number of adverse influences. Equity prices have registered an all-round decline and losses have been quite heavy in many counters. The fall has been due to persistent selling which has been mostly in the nature of anxious bull liquidation. The markets would perhaps have performed much worse but for fairly sizable institutional buying, mostly by the Unit Trust, in a number of selected shares. With this week's decline, the all-India index for equities has lost more than 80 per cent of the rise from its November 1971 low point.

The week's corporate news was as usual quite encouraging and it was also plentiful. Anglo-India Jute, Calcutta Steel, Jay Engineering, Aluminium Industries, Paper Mill Plant, Ramon and Demm, Ahmedabad Electric, Tata Engineering, Dawn Mills, India United Mills, Rohit Pulp, Cochin Malabar and Kalasa Tea—all these have had a message of cheer for their respective shareholders. But neither pleasing corporate news nor reports of beneficial rains in many parts of the country, particularly in the northern and eastern regions, had any noticeable effect on sentiment which remained very much unsettled. Several factors have contributed to the further deterioration in sentiment. The prospect of a sizable setback in agricultural production because of the drought in many parts of the country, growing inflationary pressures and the fear of cost inflation, labour unrest, power shortage, apprehension about tighter control over the cotton mill industry, drastic changes in the company law—all these have tended to further undermine the markets' morale.

It is the drastic changes in the structure of the Companies Act proposed in the Amendment Bill introduced in Parliament a few days ago which have given a rather severe jolt to the stock markets. The provisions relating to share transfers and regulation of dividend payment out of reserves are considered to be harsh. It is feared that the proposed changes are likely to create apprehension in the minds of entrepreneurs which will have a serious effect on the flow of fresh invest-

ment, thereby slowing down the pace of industrial growth. Reports that the Bonus Review Committee will soon be submitting an interim report recommending the payment of a minimum bonus of 8.33 per cent have also caused some uneasiness as it will further inflate wage costs and cause an erosion of margins. A picture of despondency pervades the stock markets as the country celebrates the silver jubilee of its independence. By and large, the markets reflect the unsatisfactory state of the economy. The immediate outlook for equities seems to be far from pleasing as the prospects of a revival in the economy have receded because of the likely setback in agricultural production.

Gilt-edged securities have lacked interest this past week. As a result, turnover has been restricted. The 3 per cent Conversion loan 1986 has been quoted at Rs. 59.90. The State Government loans have received selective support and the volume of business has remained restricted.

The Calcutta stock market has remained dull this past week. The low compensation payment after the recent State takeover of some industries, talk of demonetisation of currency and the introduction of the Companies Amendment Bill in the Lok Sabha have apparently affected sentiment. Among engineering shares, Jay Engineering, Guest Keen Williams, Braithwaite, Sankey Wheels and Escorts have been quiet. Among jute shares, New Central, Bally, Kumardhubi and Auckland have been easier. Among coal shares, East Indian, Bengal and Amalgamated have been transacted. Among paper shares, Straw Products, Ballarpur, Titagur and Orient have receded. Among miscellaneous shares, Aluminium Corporation, Chemicals and Fibres, Philips India, Rallis India and Brooke Bond have been quiet. Among tea shares, Bishnauth, Grob, Dhelakhat and Birpara have been transacted.

Dalal Street continues to have an uneasy time. The downward trend in equity prices, which has been in evidence for many weeks, has been extended further this past week. Despite fairly good buying in quite a few shares by the Unit Trust, leading equi-

ties have registered sizable losses on nervous bull unloading and lack of public support. There have been reports of considerable selling by investors because of the deteriorating economic situation and increasing dissatisfaction with the Government's approach to economic problems. The impression is gaining ground that industry's profit margins will be coming under increasing pressure as a result of cost inflation. The market is also feeling increasingly worried over growing labour unrest. The strike fever has risen high in Bombay where the employees of the civic body's B.E.S.T. undertaking and the State Transport have gone on an indefinite strike. Trading this week has been notable for the pronounced weakness in cotton mill shares which has been attributed partly to the statement of the Congress president, Dr. S. D. Sharma, that textile workers should agitate for the nationalisation of the textile industry and partly to the Foreign Trade Minister, Mr. L. N. Mishra's threat of tighter control over mills. The Government is said to be considering a proposal to stamp prices on all varieties of cloth controlled as well as non-controlled. Steels and

engineering shares have eased on light but persistent selling and lack of fresh support. The performance of rayons, shipping and chemicals has not been any better. Shares recording heavy losses include Century Mills, Standard, Century Enka, Associated Bearings, N.O.C.I.L., Polyolefins, Gwalior Rayons, Hindustan Aluminium, Scindia and Zuari Agro-Chem. Associated Cements have ruled steadier on institutional support.

The Madras stock market has not shown any material change this past week, although investment buying has been selective. Among planting shares, Manjushree have attracted investment enquiries while Consolidated Coffee have improved on the news of a bonus issue, subject to the Government's sanction. Gokul, Marcara and Chandramalai have also come up for business. In the textile section, South India Viscose have remained quiet while Madura have attracted enquiries. Bank shares have been quiet. In the miscellaneous section, India Cement have been bought while Mettur Chemical have attracted some selling pressure. Aluminium Industries have quoted lower while W.S. Insulators have met with better buying enquiries. Among paper shares, Mysore Paper and Seshasayee Paper have met with some buying.

Bank of India Shows Much Better Performance

IN many ways, the Bank of India has put up a vastly improved performance in 1971. It has initiated steps for a bold restructuring of the organisational set-up which might become the pace-setter for the banking industry as a whole. It has progressively increased its business with the priority sectors while fulfilling the commitments to industry and trade. The branch expansion policy has been attuned to meet the needs of the unbanked areas and to promote more equitable regional development. According to the directors' report, "the Bank can now look forward with confidence to meet the new challenges that are being thrown up and play a more active rôle in the development of the national economy". (A fuller version of the report was published in last week's issue of *Capital*.) The basis of such optimism is obvious.

In accounting terms, 1971 was quite rewarding for the bank. Deposits rose by Rs. 75.23 crores to Rs. 588.24 crores

on account of bonus was Rs. 126 lakhs; of it, Rs. 39 lakhs were met by transfer from the contingency fund. The bank paid a total dividend of Rs. 84.46 lakhs, yielding a return of 5.746 per cent on the acquisition compensation amount of Rs. 14.70 crores or 20.85 per cent on the paid-up capital of Rs. 4.05 crores. The corresponding figures for 1970 were 5.528 per cent and 20.07 per cent, respectively.

One of the areas where the bank has made considerable advance during the year has been in the larger support it has lend to the priority sectors and the weaker sections of society. The flow of credit for export promotion and to agriculture, small-scale industries, retail trade, road transport operators, self-employed people and professionals and such other categories has gone up and the outstandings increased from Rs. 74.90 crores to Rs. 91.02 crores at the end of 1971, that is, a rise of 21.5 per cent.

With 510 branches in India (110 were added in the course of the year), 13 offices abroad and two foreign subsidiaries with three offices, the Bank of India represents one of the biggest banking networks in the country. Ever since nationalisation, the bank has been laying increasing stress on opening new branches in unbanked areas, and at the end of 1971, 57 per cent of its branches were located in rural and semi-urban areas. It has also been one of the most enthusiastic promoters of the lead bank scheme. But one of the problems it is facing in its branch expansion programme—a problem to which the directors' report has referred to more than once—is the shortage of trained personnel. In a bid to overcome this drawback, the bank has stepped up its training programme. Simultaneously, it is also going ahead with a scheme for reorganisation of its administrative structure with the accent on progressive decentralisation.

INDIA UNITED MILLS

Prospects Improve

THE latest report of India United Mills, which has been incurring losses for several years, raises the hope that the Company has perhaps turned the corner. The Company is expected to show a "small net profit" for 1972. This is in pleasant contrast to the Company's extremely disappointing performance in 1971 when it incurred a record loss of Rs. 4.07 crores, against Rs. 2.47 crores in 1970. In

the first five months of the current year (January to May), the Company is stated to have suffered a loss of Rs. 72.06 lakhs, against Rs. 194.20 lakhs in the same period of 1971. But in June the Company made a profit of Rs. 5 lakhs, after providing Rs. 5 lakhs for depreciation and Rs. 15.50 lakhs for interest on loans. Sales of cloth and yarn in the first six months of the current year are placed at Rs. 11.69 crores, against Rs. 8.28 crores in the corresponding period last year.

The change in the Company's fortunes is attributed to several steps taken by the management which is vested in the Authorised Controller, Maharashtra State Textile Corporation. These include timely purchases of cotton in a favourable market, better yarn recovery by reducing the card and comb waste, change in the product-mix with increased emphasis on sophisticated varieties and stricter control over costs. The future prospects seem full of promise as the Central Government has sanctioned a programme of modernisation of machinery up to an overall limit of Rs. 4.93 crores. The National Textile Corporation and the Maharashtra Government have agreed to finance 51 per cent and 49 per cent of this programme covering spinning and weaving departments as well as dye works which is expected to be completed by 1974. Orders to the extent of Rs. 1.11 crores had been placed up to the end of June 1972 and the machinery that is received is being commissioned by stages. Installation of new machinery should help improve the Company's profitability. In view of the accumulated loss of Rs. 16.36 crores, it will take quite a few years more before the Company can hope to reward the shareholders with a dividend. The Rs. 10-paid share of the Company is currently quoted at around Rs. 1.56.

DAWN MILLS

Margins Eroded

DAWN Mills has raised the dividend for the year ended March 1972 from 12 per cent to 14 per cent (Rs. 6 to Rs. 7 a share) even though the working results make a poor showing, compared with those in the preceding year. Despite an increase of about 10 per cent in sales from Rs. 3.84 crores to Rs. 4.26 crores, the gross profit has declined by 9.8 per cent from Rs. 31.73 lakhs to Rs. 28.62 lakhs. The contraction in margins is attributed to high prices of raw cotton during the major part of the year, in-

creased interest charges and a rise in other elements of the cost of production. After providing Rs. 12.54 lakhs (against Rs. 12.67 lakhs) for depreciation, Rs. 1.87 lakhs (against Rs. 2.71 lakhs) for development rebate reserve and Rs. 7.82 lakhs (against Rs. 11.51 lakhs) for taxation, the net profit for 1971-72 amounts to Rs. 6.39 lakhs, against Rs. 4.84 lakhs in the preceding year. After adjustments the disposable surplus comes to Rs. 7.91 lakhs, against Rs. 6.13 lakhs. Out of this, a sum of Rs. 2 lakhs (against nil) has been transferred to contingency reserve and Rs. 5.88 lakhs (against Rs. 6.10 lakhs) to general reserve. The proposed dividend absorbing Rs. 5.88 lakhs (against Rs. 5.04 lakhs) will be paid out of general reserve.

KARANPURA COLLIERIES

Profit Rises

THE profit of the Karanpura Collieries Ltd has risen from Rs. 3.25 lakhs to Rs. 4.80 lakhs for the year ended February 1972, after providing Rs. 8.48 lakhs (against Rs. 16.57 lakhs) for depreciation and Rs. 1.02 lakhs (against Rs. 2.20 lakhs) for statutory development rebate reserve. The taxable ordinary dividend has been reduced from 10 per cent to 7 per cent, absorbing Rs. 3.50 lakhs which will be paid out of general

reserve. This offers a yield of 8 per cent at the present price of Rs. 8.75 a share of Rs. 10 each. After writing back Rs. 39,575 (against Rs. 76,800) from statutory development rebate reserve and making other adjustments, Rs. 1.29 lakhs and Rs. 3.99 lakhs have been transferred to capital reserve and general reserve, respectively.

Sales declined from Rs. 1.78 crores to Rs. 1.73 crores. Raisings fell from 564,954 tonnes to 540,513 tonnes, while despatches rose from 525,066 tonnes to 533,078 tonnes. Production had to be curtailed severely due to the accumulation of stocks. The sinking of two deep shafts to work the Sirka seam was completed during the year and since these seams extend over the entire leasehold, the reserves and production potential have been considerably augmented. The compensation received from the Coal Board for special assistance for difficult mining conditions has been considerably lower than in the previous year due to the reduced rates of special assistance and also due to the benefit of settlement of some arrear claims in the previous year. As for coal prices, certain increases have been accepted by the railways with retrospective effect, but these are to a great extent neutralised by the higher wage bill and a rise in costs.

JAY ENGINEERING : SATISFACTORY RESULTS

THE Jay Engineering Works Ltd has reported satisfactory working results for the year ended March 1972. The profit of the Company would have been still better but for a loss at the sewing machine factory and for large discounts that had to be offered on fans on account of a severe competition that has lately developed. The high wage costs tend to exclude the Company from the expanding sector of the market. There was an overall improvement in production. Facilities in Hyderabad and Agra were further developed and these units have been steadily increasing their contribution to the Company's income. The Company's exports registered an improvement over the previous year.

Sales are up from Rs. 13.22 crores to Rs. 20.31 crores and the

net profit has risen from Rs. 20.59 lakhs to Rs. 23.64 lakhs, after providing Rs. 39.48 lakhs (against Rs. 34.05 lakhs) for depreciation, Rs. 5.90 lakhs (against Rs. 3.20 lakhs) for development rebate reserve and Rs. 36.20 lakhs (against Rs. 38.50 lakhs) for taxation. The taxable ordinary dividend of 10 per cent has been maintained, absorbing Rs. 19.74 lakhs which will be paid out of general reserve. This offers a yield of 7.7 per cent at the present price of Rs. 13 a share of Rs. 10 each. The preference dividend at 10 per cent has also been paid, which absorbs Rs. 5 lakhs. After making other adjustments, the entire profit of Rs. 23.64 lakhs has been transferred to general reserve. Current operations of the Company are proceeding satisfactorily and production shows an upward trend.

Equipment for Co-operatives

UNDER a programme of the Marthwada Development Corporation Ltd, 24 co-operative societies have been established to help cotton growers in Maharashtra. Each society has a shed with 96 power looms and each weaver family has been allotted two power looms. Siemens India has supplied most of the electrical equipment for the co-operatives; this includes transformers, loom motors and control switches, power and control cables as well as control boards.

Again, sugar production is being given an impetus in Madhya Pradesh with the setting up of a number of factories in the co-operative sector. Kailaras in Morena district is one such co-operative and the plant has been set up at a cost of about Rs. 2 crores. Siemens India supplied a major portion of the electrical equipment. This included 13 Nos. multi-speed centrifuge motors with sophisticated control gear, main power house boards, a number of cast-iron sub-distribution boards ideally suited for such a plant, lighting and other control equipment.

KUMARDHUBI ENGINEERING : EXCELLENT RESULTS

THE working of Kumardhubi Engineering Works Ltd shows improved results for the 16-month period ended March 1972, compared with the year ended November 1970. The Company has changed its financial year from November to March. Sales have risen sharply from Rs. 4.52 crores to Rs. 7.41 crores, and the profit has increased substantially from Rs. 5.65 lakhs to Rs. 42.20 lakhs, after providing Rs. 17.28 lakhs (against Rs. 10.72 lakhs) for depreciation. Because of better performance, a taxable ordinary dividend of 45 paise a share, including an interim of 22 paise a share, has been declared, absorbing Rs. 11.55 lakhs (against nil). This offers a yield of 9.5 per cent at the present price of Rs. 4.75 a share of Rs. 3 each. The preference shares also get their stipulated rates for the period 1st December, 1968 to 31st March, 1972, amounting to Rs. 3.38 lakhs. After writing back Rs. 77,100 (against Rs. 38,300) from development rebate

Results Improve

TESTEELS Ltd has recorded further improvement in its working results for the year ended March 1972. Sales have risen by 30 per cent from Rs. 1.15 crores to Rs. 1.50 crores and the gross profit has gone up by 38 per cent from Rs. 9.49 lakhs to Rs. 13.12 lakhs. In view of the arrears of depreciation and carried-forward losses, no dividend has been recommended. The directors' report states that the raw material availability is satisfactory. The Company has secured an export order from Malaysia for transmission line towers worth Rs. 22 lakhs b.o.b. and efforts are being made to export to other countries as well.

WESTERN INDIA PLYWOODS**Dividend Repeated**

THE annual report of the directors of the Western India Plywoods Ltd for the year ended March 1972 says that the Company suffered a production loss because of a prolonged strike. A sum of Rs. 19.66 lakhs is being raised by the issue of

reserve and making other adjustments, a sum of Rs. 19.07 lakhs (against nil) has been transferred to general reserve.

The production of castings in the foundry reached 5,077 tonnes for 16 months, compared with 4,695 tonnes in the previous year. This was possible, despite the lack of wagon component orders, due mainly to developments achieved in the manufacture of intricate miscellaneous castings for the steel, sugar and cement industries. Despatches also increased to 5,919 tonnes for 16 months, compared with 5,139 tonnes in the previous year and 4,869 tonnes in the year before, resulting in a substantial reduction in the work-in-progress. The production of mild steel ingots recorded satisfactory progress and the total production was 28,305 tonnes, compared with 7,606 tonnes. Steps have been taken progressively to widen the range of rolled sections.

further equity shares for cash at par to the shareholders. This capital issue is made in order to finance the expanding business of the Company. Sales were higher at Rs. 230.56 lakhs (against Rs. 229.22 lakhs). The profit amounts to Rs. 33.12 lakhs, after providing depreciation of Rs. 12.05 lakhs. This compares with the previous year's profit of Rs. 33.15 lakhs, after providing depreciation of Rs. 14.97 lakhs. Adding a sum of Rs. 528 being excess provision, there is a total of Rs. 33.13 lakhs available for appropriation. Out of this, provision for taxation amounts to Rs. 19.50 lakhs (against Rs. 19 lakhs). The balance of Rs. 13.63 lakhs is transferred to general reserve. The equity dividend at 16 per cent (same) amounting to Rs. 12.58 lakhs and the preference dividend amounting to Rs. 48,165 are to be paid out of general reserve.

LARSEN AND TOUBRO**Export of Sugar Diffuser**

THE first ever sugar diffuser to be exported from India will be supplied by Larsen and Toubro Ltd. It is to be installed in the sugar factory being set up by the State Development Corporation of Negeri Sembilan, Malaysia. Phaltan Sugar Works Ltd of Bombay is providing technical know-how and consultancy to the Malaysian sugar project. Diffusion is the most advanced development in the manufacture of cane sugar. It ensures higher extraction than is possible through regular milling. Cane sugar diffusers, engineered and fabricated by Larsen and Toubro, have been successfully used by leading sugar mills in India.

SUTLEJ COTTON**Profit Down**

THE brief preliminary statement from the Sutlej Cotton Mills on its working results for the year ended March 1972 shows a decline of about 27 per cent in its gross profit from Rs. 79.12 lakhs in 1970-71 to Rs. 57.56 lakhs in 1971-72. The dividend, however, has been kept unchanged at 15 per cent. Appropriations of profits include depreciation Rs. 9.89 lakhs (against Rs. 9.71 lakhs), development rebate reserve Rs. 38,000 (against Rs. 4 lakhs), taxation Rs. 16.15 lakhs (against Rs. 17.20 lakhs), general reserve Rs. 15.39 lakhs (against Rs. 32.46 lakhs) and dividend Rs. 15.75 lakhs (same).

Statutory Minimum Price of Raw Jute To Be Revised Upwards

THE Government of India was going to make an early revision of the statutory minimum price of raw jute over the level of Rs. 115 a quintal, f.o.r. Calcutta ready, basis Assam Bottoms. Speaking in the Rajya Sabha a few days ago, Mr. L. P. Mishra, Central Minister for Foreign Trade, indicated that he did not consider the West Bengal Government's claim of Rs. 135 a quintal as remunerative for the grower, considering the expenses he had to incur on the production of jute. He admitted that the drought had affected the overall crop expectations for the season substantially and the prospect was that prices were likely to rule higher than the revised statutory levels. In fixing the minimum price, Mr. Mishra said that the Government would try to make the price "realistic and genuinely attractive to the grower." The Jute Corporation of India, he added, would absorb some 10,000 bales of fibre from the interior markets as part of its price support operations during the season. He reiterated that the Centre had requested the Governments of Andhra Pradesh, Assam, Bihar, Orissa and Tripura to draw up suitable plans for the setting up of new jute mills in their respective States.

J. C. I. Chief

Mr. Dwaipayan Sen, a former Deputy Minister of the Central Gov-

ernment, has been appointed chairman of the Jute Corporation of India. He is to take charge of the office soon. Industry and trade circles feel that as the head of this key public-sector organisation, he will have to play an important rôle in shaping the agricultural economy of the States in the eastern region where jute is the principal cash crop and the raw material for the largest foreign exchange-earning industry in India.

Jute Delegation's Views

Unless immediate corrective actions were taken, the rapid erosion of the jute markets by synthetics could not be arrested, warned the latest five-man Government-industry joint jute delegation which made a study tour of the North American, U.K., and Belgian markets. This was stated in a written answer by the Government to M.P.s' questions on the floor of the Rajya Sabha last week. The recommendations of the delegation, among other things, related to the reduction in the prices of both hessian and carpet-backing cloth to levels which would make them competitive with synthetics, ensuring price stability and uninterrupted supplies of end-products by the timely supply of raw jute at reasonable prices. The team also emphasised the need for adopting vigorous steps for research and product development, whenever necessary, besides measures to generate funds for export promotion, research and deve-

lopment and the building up of a buffer stock of jute manufactures in India without any further delay.

Trends in Australian Market

It was unlikely that jute would ever recapture the outlets it had been rapidly losing to synthetics, observed Mr. Colin Donaldson in his presidential address at the recent annual conference of the Australian Jute and Allied Goods Association in Perth. He revealed that substitution of jute by synthetics had gained momentum last year in outlets other than cornsacks and woolpacks. Felting and carpet-backing hessians were increasingly losing ground along with other types of bags and sacks which had once been made from jute, he said. He deplored that despite the clear evidence from many markets, jute manufacturers were allowing high prices to rule in the market. These were further aggravated by increased export duties. He wondered if India had already conceded the battle against synthetics. He said that he was driven to this conclusion by the concerted overtures which Indian manufacturers of synthetic bags and sacks had been making to the traditional jute goods trade to promote the sales of their products in Australia as a substitute for jute goods.

Gunnies Quiet

Quiet conditions prevailed in the Calcutta gunny market during the past week due to the continuing lack of enquiries and fresh business from major internal and overseas consumers. There was no indication yet of any prompt settlement of the U.K. dockworkers' strike. Naturally, there was a heavy pressure of demand on

I.J.M.A. STOCK FIGURES FOR JULY

The Indian Jute Mills Association reports the total stocks of jute goods at the end of July as follows:

Description	31st July, 1972		30th June, 1972		Increase over (+) or decrease from (-) last month		31st July, 1971—	
	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)
Asian cloth and bag	7,77.53 (8.50)	22.0 (21.6)	7,49.04 (8.19)	21.6 (21.3)	+28.49 (+31)	+0.4 (+0.3)	9,80.92 (10.73)	28.2 (27.8)
King cloth and bag	9,48.43 (10.37)	41.3 (40.6)	7,96.90 (8.72)	34.6 (34.0)	+1,51.53 (+1.65)	+6.7 (+6.6)	11,18.94 (12.24)	49.8 (49.0)

PITAL, 17th AUGUST, 1972

CAPITAL, 17th AUGUST, 1972

shipping space for the Continental ports. The tea trade absorbed most of the available space. The delay in the completion of gunny-loading on the end-August loaders for the U.S. ports, due mainly to the interruption to free movement and operation of lighters by the spate of bore-tides, induced the U.S. Conference Lines to extend the cease-loading dates by 72 hours at the first instance and by a further 48 hours till 12th August for gunnies. But in spite of the grace period, shippers could not step up loading to any appreciable level. The official announcement of the five-man industry-Government trade delegation to the U.S.A., the U.K. and Belgium on the floor of the Rajya Sabha revived hopes of an early reduction in the export duties on hessian and carpet-backing cloth at least, inducing both the local export trade and the overseas consumers to defer their bookings and offtake for the present. The expectations of a buoyant outlook which had induced bulls to stick to their speculative holdings suffered a setback when the ultimate consumers refused to fall in their trap. The dearth of further credit and the pressure of demand for fresh funds induced them to enter the unwilling

I.J.M.A. PRODUCTION FIGURES FOR JULY

The Indian Jute Mills Association reports the total production of jute goods at the end of July as follows:

(000 metres and 00,000 yds.)			
	July '72	June '72	July '71
Hessian	8,66.61 (9.48)	8,49.47 (9.29)	9,49.49 (10.38)
Sacking	8,87.28 (9.70)	8,53.06 (9.33)	9,64.98 (10.55)
Carpet-backing	1,37.44 (1.50)	1,39.27 (1.52)	1,73.15 (1.89)
(000 tonnes and tons)			
	July '72	June '72	July '71

Note: All figures are at bale-point. N.B.—These statistics are based on replies received and represent all members of the Association, and New Central and Shree Hanuman. The figures in brackets are in British measures.

market as keen sellers of their holdings at rising discounts. Heavy short-selling by bears and lower advices from the fibre market were the additional depressants. The continuing apathy of the authorities to the suggestions, of duty relief and the recent warnings by the Australian Jute Goods Association chairman as to the future of jute and jute goods vis-à-vis synthetics also called for caution. The Central Foreign Trade Minister, Mr. L. N. Mishra's statement in the Rajya Sabha that New Delhi had been thinking of raising the statutory minimum price of raw jute further from the recently fixed level of Rs. 115 a quintal and the revised estimates of a much lower seasonal crop were taken note of. Clive Row, as also the industrial establishments on either bank of the Hooghly, were sorely disappointed to hear of the gradual loss of custom to Bangladesh. Even Russia had turned its attention to Dacca and had reportedly booked sizable contracts on extended delivery schedules with the industry there. The hot and dry spell had impaired the prospects not only of raw jute for the season but also of kharif crops like paddy, wheat, sugar-cane and so on. All these would cause a shrinkage in the offtake of jute goods. With the elimination of the weaker bulls and the clearance of the market load, the remaining holders turned reserved, while mills refused to reduce the rates further. Turnover was small in the spot market and moderate in the hedge market. The closing undertone was hesitant.

Fibre Prices Fall

The raw jute market developed a reactionary trend and prices suffered a decline of as much as Rs. 2 a maund over the preceding week-end levels. Even the New Delhi report that the Central Government was thinking of an upward revision of the recently-fixed statutory minimum price of jute of Rs. 115 a quintal failed to halt the downward drift. Both industry and trade circles argued that the prevailing prices had been ruling much higher than Rs. 135 a quintal, the minimum level claimed by the Gov-

ernment of West Bengal. With almost all jute-growing States suffering a severe shrinkage in sowing and damage to the standing plants due to protracted drought spell, they said that there was no escape from an exceedingly short crop this season in India. Although Dacca had an estimated exportable surplus of some 3.5 million bales and Thailand a crop of some 400,000 tons, there would ensue an inevitable scramble for fibre in the global market from consumers all over the world. Hence, raw jute was sure to rule exceptionally buoyant during the season and the unusually firm spell was likely to be more and more pronounced as the season advanced. Although there was no scope for fresh sowing, good rainfall in the last few days had brightened the otherwise depressing crop outlook. Turnover was small, mainly due to the unencouraging end-products' enquiries and bookings. The closing undertone was easier.

TEA

Fair General Demand

A Special Correspondent writes: The offerings at last week's tea auction in Calcutta amounted to 60,328 packages for which there was a fair general demand. Plain C.T.C. teas on offer continued to sell well at around the previous week's levels but all other C.T.C. descriptions showed a further decline, particularly fannings grades. Plain orthodox broken were steady but similar fannings were easier with much less demand. Assam B.O.P.s and fannings were lower, especially the latter while whole leaf grades sold well at firm rates. There was once again a selective and easier enquiry for tippy teas. The Darjeeling teas on offer came to a good market, especially the better liquoring lines.

COMPANY MEETING

"Nation Orientation means subordinating and enmeshing the objectives of the Company with those of the Nation, in the conviction that the enterprise will progress to the extent that our society and country prosper"

India Tobacco Company Limited

Chairman's Statement at the Sixty-first Annual General Meeting held on Thursday, 10th August, 1972.

INTRODUCTION

I have much pleasure in welcoming you to the Sixty-First Annual General Meeting of your Company. I am sure you will join me in a tribute to our Prime Minister, the Defence Forces and the unsung many whose dedication led to the successful resolution of problems faced by our country in the last year involving refugees, aggression and the situation in Bangladesh.

DIRECTORS

Consequent upon the retirement of Shri B. K. Nehru on April 2nd, Shri S. Ray and Shri S. B. Aibara assumed responsibilities as Vice-Chairman designate and Deputy, Chairman respectively of your Company. We wish Shri B. K. Nehru a happy retirement.

REVIEW-RESULTS

For the year ending 31st March 1972, turnover at Rs. 200 crores was Rs. 32 crores higher than the previous year. Of this increase, Excise Duties accounted for Rs. 22 crores. Owing to the higher rate of duties and the subsequent price increases, sales volume for the industry as a whole and for your Company did not change significantly during the year. Costs continued to rise due to inflation and the impact of this on your Company profit was further aggravated by three Excise Duty increases within the year. Your Board of Directors have been conscious of the need for higher productivity in all directions to minimise inflationary pressures and this is reflected in the performance of your Company despite adverse circumstances.

Although industry volume did not change materially, the progressive trend of Filter Tipped Cigarettes continued and your Company maintained its leadership in this important segment. WILLS Filter remains the largest Filter Brand closely followed by BRISTOL Filter. WILLS FLAKE Filter, introduced in July 1971, was an instant success

and is currently the third largest Filter Brand in the country.

NATION AND CONSUMER ORIENTATION

In recent years it has been my privilege to speak an important aspect of your Company. This year, as our country completes twenty-five years of Independence and moves to the Fifth Plan, it is appropriate to review the progress of your Company towards NATION and CONSUMER ORIENTATION, as future progress depends upon the confidence of the public on the one hand and service to the consumers on the other.

According to economists, enterprise develops through three phases. Beginning at the Village or Community level it progresses to the inward phase of the industrial level and thence emerges to the progressive stage of NATION ORIENTATION. In economic terms, NATION ORIENTATION means subordinating and enmeshing the objectives of the Company with those of the NATION, in the conviction that the enterprise will progress to the extent that our society and country prosper. More specifically, I should like to analyse the progress made in the post-Independence period in those areas of corporate activity as are of vital importance in the context of our country's problems and in the furtherance of Government policies.

INDIANISATION

Firstly, for valid reasons, Government policy requires a process of "Indianisation". Companies such as yours which for historical reasons started with foreign capital. In furtherance of this it is required to progress towards a majority of Indian capital with the directing authority vested in a Board composed of the Chairman and the majority of Directors from amongst Nationals of the country and, above all, to have a Company ethos in which the larger National interests are placed ahead of enlightened self-interest.

Insofar as Capital is concerned, your Directors have declared a sincere and inner-motivated desire to become a majority Indian-held Company and have so advised the Government. To this end in January 1970 Indian shareholding was increased from Rs. 1 crore to Rs. 4.79 crores, entirely voluntarily. This Indian shareholding will soon be almost doubled in conjunction with a proposal of the Company which has been approved by the Government in principle. In the final phase, majority Indian capital will be achieved through the implementation of further projects which will be put up to the Government for consideration in due course.

Through your confidence, coupled with that of your fellow overseas shareholders, the effective operating control and directing authority is vested in an entirely PROFESSIONAL BOARD OF DIRECTORS of whom the Chairman, the Vice-Chairman designate, the Deputy Chairman (as also the two previous ones) and three other Directors making a total of six out of eight are Indian Nationals.

Page 1
All the Directors consider themselves Trustees of this responsibility.

The ethos of your Company is expressed in its Corporate Philosophy which is worthy of repetition with sincere commitment to this culture ensured by the fact that the Company is entirely PROFESSIONALLY MANAGED. The tradition of Professional Management is, perhaps, your Company's most significant characteristic—the foremost feature of which has been the divorcing of ownership from control and the manner in which the Company purposes are viewed. I must, therefore, in the first instance disabuse you of any idea that the profit motive is the only central inspiration of your Board of Directors. We are concerned with profits (in the short and the long term) as the true measure of our performance—that we have maintained the organisation in sound financial condition and have obtained for the shareholder a proper return on his investment representing a fair reward for the contribution made. But we are also concerned with the well-being of the organisation in its totality as we believe that industry is an organ of society specifically charged with the responsibility of organised economic advance through making resources productive. This expresses the basic belief that economic progress can be made into a powerful driving force for human betterment and social justice.

SELF-RELIANCE: IMPORT SUBSTITUTION

A second feature of our country's aspirations is SELF-RELIANCE. Your Company, in every aspect of its operations, has pursued unceasingly and unflinchingly the goal of SELF-RELIANCE. SELF-RELIANCE can be viewed as a four dimensional activity relating to MONEY, MEN, MACHINES and MATERIALS. I have already covered the first and would like to review progress in the remaining three areas.

SELF-RELIANCE in PROFESSIONAL MANAGEMENT has been a vital need. Compared with over 150 Expatriates employed at the time the Company went public in 1954, today there are only 7, of which 4 Technicians are for a specified period. It is significant that the Management has been developed from within the organisation and 33% of it is composed of those who have risen out of Unionised Staff.

In the MACHINES dimension, no cigarettes have had to be imported for domestic consumption since 1951. Apart from having established all its existing manufacturing units by as early as 1942, your Company's single-handed, direct intervention and support has today resulted in near 100% self-sufficiency in Spare Parts and Machinery.

for processing tobacco, making and packing cigarettes. Today only negligible imports are necessary and these should soon disappear.

For MATERIALS, the Printing Factories were established in 1929 and 1949 and by working in collaboration with independent manufacturers, to whom a wide variety of support was extended, all packaging materials became available and no imports have been necessary since as far back as 1952. You are already aware that your Company was responsible for the introduction and development of cigarette tobaccos in conjunction with its inter-connected operations, Indian Leaf Tobacco Development Co. Ltd. Today imports against entitlements to make exports possible are negligible and, in fact, India exports over Rs. 35 crores of tobacco per annum.

Whereas your Company imported the bulk of its requirements immediately post-Independence, including some tobacco worth around Rs. 1.5 crores, today with a turnover of Rs. 200 crores and annual expenditure on Capital account of approximately Rs. 2 crores, on spare usage of Rs. 85 lakhs, on tobacco of Rs. 19.7 crores and on materials of Rs. 17.7 crores the cost of imports is negligible. In 1971 these were Rs. 5.80 lakhs on tobacco for cigarette exports against entitlement, Rs. 7.5 lakhs on Capital account for machinery which should soon become available in the country, on certain special spares of Rs. 8.53 lakhs and on materials only Rs. 2.24 lakhs of which Rs. 0.96 lakhs was again for cigarette exports. The difference between the two can be considered as the true measure of IMPORT SUBSTITUTION.

EXPORT EARNINGS

The record of SELF-RELIANCE and IMPORT SUBSTITUTION today represents a closed chapter in the cigarette industry. The third national need today and for tomorrow, is increasing EXPORT EARNINGS even with traditional items for which international competition is rising. The Government's policy is to intensify such effort and to this end your Company is making a determined effort to earn FOREIGN EXCHANGE. The activities of your Company directly and through its inter-connected Leaf Company, ILTD, began with the first exports of unmanufactured tobacco in 1933. The effort has continued since then and in the 25 years since Independence your Company's Group exports of tobacco have amounted to a total of Rs 152 crores, and in recent years such export to unmanufactured tobacco has averaged around Rs. 10 crores per annum. For this effort ILTD was awarded a Certificate of Merit for outstanding export performance by the Government of India, Ministry of Foreign Trade, in the year 1959.

Consequent upon the need to intensify export promotion, particularly in non-traditional items, your Company started a programme of diversifying its activities two years ago. As a result of these efforts your Company had a successful year in the field of Exports of non-traditional products which reached Rs. 2.33 crores against Rs. 17 lakhs

in the previous year. The evidence of performance to date in the current year suggests that, unforeseen circumstances apart, your Company should be able to improve its exports further by the end of the current year to around Rs. 3.5 crores in non-traditional items alone.

To the above figure of Rs. 2.33 crores for the current year should be added Rs. 11.81 crores of exports of unmanufactured tobacco from your Company's Group activities, including ILTD, making a total for the year between traditional and non-traditional items of Rs. 14.14 crores which represents nearly 1% of the total export earnings of the country.

Looking ahead, the Company has foreign exchange earning oriented proposals, one approved in principle and one under consideration by the Government. These projects have a potential of earning further FOREIGN EXCHANGE in excess of Rs. 10 crores through their fruition in the years ahead.

RESEARCH & DEVELOPMENT

A fourth vital need is investment in RESEARCH & DEVELOPMENT. Raw material self-sufficiency was the first goal of ITC at whose behest ILTD set up a new fully equipped Research Station at Rajahmundry in 1961 having started a Research Dept. as far back as 1928 which was moved to Rajahmundry in 1946/47, to conduct agronomic research on leaf tobacco. This was followed up by establishing a Training School at Hunsur in Mysore State in 1965 in the realisation that the key to successful development is the availability of well trained technical personnel to assist farmers to produce tobacco on scientific lines. The fundamental contributions made by ILTD based on RESEARCH & DEVELOPMENT led to it receiving the FICCI AWARD for outstanding contribution to Agriculture in 1970.

In furtherance of its objective to make its operations self-reliant through the promotion and development of ancillary indigenous industries for supply of other raw materials and developing import substitutions as rapidly as possible, your Company set up a Research & Development wing with a well equipped modern laboratory in Calcutta in 1952. Later this was extended to evaluate indigenous tobacco for cigarette manufacture, product development to meet varying consumer needs and maximise utilisation of available indigenous tobacco.

Model of the ITC Integrated Research Centre at Peenya, Bangalore

Encouraged by the achievements of R&D, the Company is expanding its RESEARCH activities and is setting up an integrated RESEARCH CENTRE at Bangalore at a cost of approximately Rs. 40 lakhs to cater to the growing need for more intensive research and development from tobacco seed to the final product and the entire field associated with the industry. The foundation stone of the new Integrated Research Centre was laid by the Honorable Shri Q. Devraj Urs, Chief

Minister of Mysore, and its completion is scheduled early next year. This Integrated Research Centre has provision for RESEARCH for the projected diversified activities of the Company.

The benefits derived by the Cigarette Industry and indirectly by other industries from ITC's RESEARCH and DEVELOPMENT work have been many, covering a wide range of activities.

INVESTMENT IN HUMAN CAPITAL

A fifth important larger need is INVESTMENT IN HUMAN CAPITAL. Your Company believes that PEOPLE are its most important asset and has greatly benefited by what was said by PROF. SHULTZ: "It may be that these investments in ourselves are the very kinds of capital that makes the greatest return in terms of reward for our efforts". This philosophy pervades your Company without making any dichotomy of Management and non-Management. ITC was one of the first Companies to start its own Training and Development Centre—ALDEEN—as far back as 1956 Organisation and Management Development has been a continuous process following the career of individuals starting with Specialists, then to Tobacco Industry men and finally emerging as General Managers. In-Company and external facilities are widely used and almost every one in Management has gone through this process and will do so repeatedly in his career.

As far back as 1952 TRAINING WITHIN INDUSTRY was implemented at which time the majority of production workers were involved. In December 1970 your Company opened its new Technical Training Centre in Bangalore. Since then 129 Superintendents, Supervisors, Technical Instructors and Technicians have passed through the Centre. In 1971 Branch Training Cells were set up in three Factories and plans laid for the other two in 1972. To date 222 Mechanics and Operatives have completed courses in basic and specialist skills at these Cells. This investment is regarded by your Company as essential for improvement of productivity and enlargement of technical skills.

INDUSTRIAL RELATIONS & PRODUCTIVITY

The sixth national need is to maximise production with the fullest utilisation of installed plant through industrial peace. In recognition of your Company's progressive Industrial Relations Policy your Company was awarded the 1971 award for outstanding contribution in the field of Industrial Relations, from the Federation of the Indian Chambers of Commerce and Industry. Your Company's entry emphasised the positive role that can be played by enlightened and constructive Trade Unions; the virtues of negotiated agreements with recognised Unions; the importance of maintaining an atmosphere of trust and commitment; the

benefits to your Company and the employees that can arise from increasing productivity, the personnel function as a component of professional management and the concept of welfare based on self-reliance.

FICCI Award 1971 in Recognition of Corporate Initiative in Industrial Relations

Increase in productivity measured in terms of cigarettes produced per man-day has increased over 2½ times in the twenty-five years of Independence, despite greater sophistication of the product. This has been achieved not only with the introduction of modern machinery and other forms of capital investment, but with the constant interchange of information and ideas with enlightened Unions and with the full co-operation and commitment of our employees.

EMPLOYMENT—DIRECT AND INDIRECT

The seventh, and perhaps the greatest need of all is to create and generate employment. Your Company approaches this problem through four avenues: direct, indirect, self and special. Direct employment for Unionised employees has risen from around 8400 in 1967 to 10,300 in 1972; an increase of 23% with which there has also been an attendant increase in productivity of 15% over the same period. The diversification projects—one approved in principle and one under consideration by the Government—will lead to another 2500 or more jobs with considerable scope for educated unemployed and, of course, work for many more during the stages of construction. Direct employment in the inter-connected operations of ILTD amounts

to 23,000 including seasonal labour during the tobacco season.

During the past year or so, the diversified export activities, which are also labour intensive, have resulted in the development of twelve small entrepreneurs coming into fuller operation and through these, indirectly, regular employment of around 1100 has already come about; it is planned to increase this activity further in the future.

Yet again, in the post-Independence period, and more particularly in the last decade or so, ITC has been developing its service to consumers through a completely self-reliant and independent distribution net work as a result of which, on record, some 500,000 self-employed retailers and 41,500 independent wholesalers can obtain in lesser and greater measure, regular business out of ITC activities to provide, at least partly, a reasonable livelihood. In addition there are some 500 distributors, entirely independent, who in turn have been able to employ some 2500 people over the past years of development as a result of the business provided by the Company and the decentralisation of its distributive activities. During this same period a number of independent parties have been assisted to set up tertiary and transport services and these have also aided employment.

A very special feature of employment assistance is the Company's scheme of JAI JAWAN STALLS designed specifically to provide employment to disabled servicemen. The first of these was inaugurated by our Prime Minister as early as May 1966. This work continues and the JAI JAWAN stalls are increasingly dotting the country manned by the disabled of all the three Services and more will continue to be established. Also in 1969 the Ex-Services Supply Syndicate was formed originally with 33 members to produce polythene pouches and printed stationery to rehabilitate jobless ex-servicemen and such schemes will be evolved in the future also.

EMPLOYMENT AND DEVELOPMENT SMALL SCALE SECTOR

The eighth need is to develop the Small Scale Sector. Your Company has taken steps to ensure that its own growth and development also contribute to and promote the growth and development of other industries, especially those in the small scale sector. In pursuance of this objective, your Company has over the past twenty-five years contributed towards the building up of 108 small scale units giving direct employment to nearly 4000 persons. These units now have a business turn over of Rs. 12 crores per annum of which your Company's offtake constitutes almost 30%. The tempo of assistance to the small scale sector has been rapidly increasing in the recent past and of the 108 units as many as 75 have been developed within the past five years.

Three main types of assistance have been provided by your Company in helping to develop small scale units. Firstly, technical guidance has been provided by way of drawings, technical advice, help in selection of machinery, provision of exact material specifications, help with import substitution of materials and periodical inspection of products. This guidance has been given without any charge, with a view to ensuring quality production in the small scale units. Secondly, your Company has assisted by filling up order books of the small scale units in times of difficulty, and by lifting their surplus production, even at the cost of sometimes increasing its own inventories. Thirdly, financial help in the form of advances against orders for purchase of machinery and in other ways has been given to some units.

Your Company plans a continuing acceleration in the future of the programme of assistance to small scale industries, as a contribution to the Nation's socio-economic progress. It is proposed to specially concentrate on supporting small units which have export potential and large employment generating potential. The siting of these units is being planned with the view to removing regional imbalances between different areas of the country in consonance with Government policies.

SOCIAL RESPONSIBILITY

A ninth but growing consciousness, in an era of populist thinking, is the need for Industry to participate in the discharge of SOCIAL RESPONSIBILITIES with particular reference to the weaker sections of society in our country. It is said that affluent nations should set apart 1% of their wealth to assist the less well off. Your Company, in the belief, that drops make a stream and streams rivers, has in all humility, adopted this principle, and small as this may be, is employing 1% of its gross profit specifically to assist in this manner.

It can be truthfully said that ITC has been increasingly conscious in this direction and has not failed to lend a helping hand in a number of ways to assist the weaker sections of society for the aid of which it innovates a great deal of its activities and has played its part, albeit humble, in every National emergency and natural calamity. I do not wish to dwell on this subject other than to say that your Company is alive and conscious in this respect.

THE COMPANY GROSS PRODUCT

The tenth and final aspect is related to SOCIAL JUSTICE. The most potent vehicle of this—EMPLOYMENT—I have already covered. It is rightly said that the increase in the Gross National Product is one of the means for more equitable spreading of the benefits that accrue through growth. At the micro-level, the Company Turnover can be considered its Gross Product. The break-down of the turnover for the year under review is as follows:

Gross Turnover	100.0%
All Taxes to Government	67.9%
Residual Turnover	32.1%
Cost of Tobacco/Materials	20.1%
All Expenses including Depreciation	5.1%
Available residual turnover for Distribution	6.9%
All Salaries—Wages—to People	4.9%
Balance Available to Shareholders	2.0%
Distributed to Shareholders	1.4%

It is perhaps worth emphasising one or two aspects. Since 1954 when the Company went Public, as much as Rs. 11.24 crores of available net profits of the Company have been ploughed back by the shareholders into the business to keep the enterprise healthy, thus also aiding the formation of Capital which is another of the scarce resources of our country. Furthermore, in keeping with its philosophy of fair reward for the contribution made by all involved in the Industry, the net profits of the Company are currently at a level of around 10% return on the shareholders' total equity funds indicating a balance between the needs of the public at large, those of the employees who make the enterprise possible and the shareholders.

CONSUMER ORIENTATION
I would now like to turn to the CONSUMER ORIENTATION of your Company and merely highlight a few features as this aspect is covered in the Report and Accounts in your possession. In the first instance I would like to emphasise an irrefutable proven fact, applicable the world over, to consumer goods generally and to your Company products in particular as the brand patronised by a consumer is completely a matter of very personal choice; to think otherwise would be to ascribe wrongly our own shortcomings to others and to consider the consumer naïve. This is, that the CONSUMER is the final arbiter and supreme judge of the quality of your Company products and on him, and him alone, depends the success or failure of your Company—or for that matter any Company—in the context of democratic free choice which we all cherish in our country. Your Company philosophy is based on Pride in the Home Product with Quality, Service and Satisfaction for the Consumer.

PRIDE OF HOME PRODUCT
The genesis of your Company was based on initial purchase of know-how, technology and some trade marks (all of which are the property of ITC in India), as is true for a multitude of goods in the earlier phases of development every where in the world including Japan, today the most rapidly advancing country in the world. But this is buried in ancient history of the "bad old days" which has no relevance today, nor for the future, after 25 years of Independence. The only relevance is that the CONSUMER does not bear any burden on account of know-how, technology or Royalty payments either in rupees or foreign exchange as no payments whatsoever are made by your Company to anyone either in India or abroad.

Indeed, your Company can be proud that by its introduction and development of the basic raw material—cigarette tobacco—it has been responsible for making possible the production of QUALITY HOME PRODUCTS and that, today, all its Brands with any significant sale, have been designed, innovated and developed right here in our own country.

Furthermore, some of these sell in other parts of the world where it has been possible to achieve some exports, thus aiding in some small measure in the earning of foreign exchange. INDIA KINGS is an outstanding example personifying a very high standard of HOME QUALITY as the highest priced prestige brand of your Company which consumers all over India have pride in as their very own in preference to International products.

QUALITY
A second point I would like to stress is that your Company considers it its duty and responsibility to provide consumers with the best quality for the consumer's money. ILTD—ITC's inter-connected leaf operations—is concerned with Quality from the seed stage to the ultimate processing of tobacco leaf for manufacture with the aid of the Research Station in Rajahmundry and ITC carries on this concern from the primary manufacturing stage to the ultimate packaging assisted by the Research Wing in Calcutta. One of the major activities of your Company's Technical Training Centre in Bangalore is inculcating in Instructors and Senior Technicians a concern for Quality.

For still further improvement of quality, modernisation for the processing of tobacco has been undertaken at all the Factories. The existing systems of Quality Control have been further strengthened by introducing a more sophisticated QUALITY INFORMATION SERVICE. Such extensions and up-dating of QUALITY CONTROL SERVICE is continuing confirmation of your Company's belief in the manufacture of quality products and highlights that responsibility for quality is vested in each and every employee of the Company.

The fulfilment of this search for QUALITY has been in the Awards given once again to your Company products at the MONDE SELECTION in Brussels with the GOLD MEDAL award for the fourth consecutive year to INDIA KINGS for outstanding International quality.

SERVICE TO CONSUMERS
A third feature is your Company's belief that CONSUMERS know what they want and should be given what they want. This belief has led to the RESEARCH ORIENTATION in your Company which is translated into CONSUMER ORIENTATION through scientific CONSUMER and MARKETING RESEARCH. The patronage of CONSUMERS to the Brands of your Company rests largely on the scientific investigation and product development made possible by such Research on which your Company spent a sum of Rs. 10 lakhs in 1971.

The distribution system of the Company makes possible the availability of its products at the right price, in the right quantity and in the right place at the right time in prime condition and factory fresh everywhere.

SATISFACTION TO CONSUMERS
The fourth feature in CONSUMER ORIENTATION that I would like to touch upon is your Company's belief that satisfaction to the CONSUMER is best achieved with the CONSUMER exercising his free choice in a competitive situation, for competition is his surest safeguard, and the

CONSUMER must be able to make his free choice with a completely unrestricted supply of every Brand offered to him by everyone in the Industry. The extent of patronage—higher or lower shares of the market by any product or products—is then a true reflection of what the consumer wants as the sales become a translation of satisfaction. In furtherance of this belief your Company welcomes healthy competition, indeed encourages it, and has offered its know-how on technology and marketing to everyone in the Industry. Today competition in the cigarette industry is very keen and the consumer has benefited through constantly improving products of which he has unrestricted choice at all times.

INFLATION
The final and fifth important aspect of CONSUMER ORIENTATION is the battle against INFLATION. Ten years ago the consumer of cigarettes, manufactured and sold by your Company, paid on an average 21½ paise per packet of ten. Today he pays 59 paise, an increase of 37½ paise. But of this increase 29 paise is claimed by the increase in Excise Duties, leaving 8½ paise in added gross realisation to your Company. Against this, in the same period for the average packet, the distributive trade channels have been provided by an extra 3½ paise to cover their increasing cost and pay for additional employment, thus leaving a margin of 5 paise in additional net realisation in 10 years. Increases in price of materials alone have nullified this margin of 5 paise (tobacco prices are 80% higher or 3 paise per packet and other materials 55% or 2 paise), leaving your Company with no margin over the ten years despite substantial inflation. That the prices to consumers have not been increased even further is the benefit your Company has significantly made possible by fighting inflationary expenses through higher productivity, innovation, improved technology and greater efficiency in the deployment of resources. It needs to be emphasised that such benefit to the consumers, in a period of inflation is only possible if there is continuous growth in the industry and every participant in the industry is able to improve efficiency with regular natural growth. It needs to be mentioned that the very rapid and very high increase in excise duties in recent years is not conducive to the steady increase of revenue for the future at minimum cost to the consumer; at the same time a higher rate of growth would have substantial advantages in the greater development of the backward and forward linkages of the Industry.

CONCLUSION
In conclusion, I would like to apologise if, in rejoicing over 25 years of Independence, I have talked on the brighter side of your Company; it shows that your Directors are only too human. This is not to deny that there are weaknesses, that things are not perfect and that much needs to be continually done to be more efficient and to achieve even greater NATION and CONSUMER ORIENTATION. As to the future, I repeat the remark I have made in the past—I look forward to the future with confidence and it is my earnest hope that in facing up to the new diverse challenges, your Company will play its due role and discharge its social responsibilities with vision and dignity in keeping with its philosophy of commitment to India's welfare and to her all-round development. It is, in the fitness of things to say that, in the ensuing years, your Company will be starting a new chapter in its history by doing its best to hopefully implement its diversification plans.

This does not purport to be a report of the proceedings of the Annual General Meeting.

**If 8 out of 10
Indians live in
rural areas...**

**it's time we paid more attention
to them !**

So UCOBANK takes to the country in a big way. Our accent is on service to the nation. Agriculture and rural development have been given top priority,

because a strong rural base means a strong India. That's where UCO-BANK is putting the nation's money to work. Where it counts. Where more than 80% of Indians live.

Meeting the needs of the people.

why do we develop cultural practices

We do not cultivate tobacco. Yet we have done nearly everything to modernise the management of tobacco crop. Why?

Tobacco is a major cash crop. The farmers want to know how to take care of it scientifically. Telling them is the primary responsibility of all who can.

We do. We have developed a package of cultural practices to suit

variations in crop pattern, soil condition and rainfall in different areas. Result? The farmer knows how to fertilise the soil, get healthy seedlings.

He appreciates the benefits of raising successful seedbeds, correct planting, weeding, judicious topping of the crop,

picking the leaves, proper methods of curing and handling them. He knows

how much barn space he should have for the acres planted and how to rotate the crop.

This is the kind of training and attitudes that make him one of the most progressive farmers in the country.

He still needs someone to turn to, if he wants guidance.

if we are not tobacco farmers?

Wanted: Realism in Licensing

LATELY, the leftist Press has been showing unusual interest in the memorandum that Mr. J. R. D. Tata had submitted to the Prime Minister, Mrs. Indira Gandhi, nearly three months ago. The memorandum, according to reports, was prepared by the Tatas at the instance of Mrs. Gandhi herself; she is stated to have told Mr. Tata that instead of making piecemeal suggestions now and then on Government policies, he could submit a memorandum to which the Government could apply its mind seriously. The memorandum has now been with the Prime Minister for quite some weeks, and it does not appear to have received any consideration so far except that it has been circulated by Mrs. Gandhi among her Cabinet colleagues. The leftist lobby is evidently afraid that some of the pragmatic suggestions made by Mr. Tata may be favourably received in the Government. This precisely is the reason for the current high-pressure campaign against the memorandum.

It should be obvious to anyone—whatever be his political hue—that the memorandum cannot contain anything that runs contrary to the basic policies of the Government; nor can it make a plea for a return to *laissez-faire* policies. In fact, in analysing the causes of the present stagnation in industry, the memorandum has relied largely on the findings of study groups in the Planning Commission and the mid-term appraisal of the Fourth Plan. The memorandum also accepts the basic philosophy and social objectives of the Government's economic and industrial policies as sound and unexceptionable. The variation, if any, is only in the remedies proposed. It has not urged the Government to abandon the existing licensing policies or procedures or the scheme of conversion of loans into equity. It only wants New Delhi to exercise

some discretion in the disposal of licence applications within the broad framework of the existing policies. It does not want that there should be a blanket ban on the licensing of new units by larger houses in the non-core industries merely because of the "past misdeeds" of a few business houses. The good should be rewarded and the bad punished. That is, in a nutshell, the strain of the memorandum.

The familiar argument against following a selective policy is that it will be discriminatory, and the Government cannot do that under the Constitution. That is rather too naïve, for it cannot be claimed that there is at present no discrimination in issuing licences to industrial applicants. Does not the Government take into consideration the economic viability of a project, the financial standing of the applicant, the public demand for a product that is sought to be produced and above all, the relative merits of the various proposals received? All that the Tata memorandum has asked for is an extension of this examination and scrutiny to cover larger aspects of the past performance and reputation of each applicant, belonging to the so-called larger houses.

For instance, the Government with its proclaimed concern for social justice with growth, can certainly take into consideration factors like the quality of products of an established company seeking a new licence, its pricing policy, the use it has made of its profits, its management techniques, the help it has given to small and ancillary industries, its export performance, its contribution to import substitution, its expenditure on research and development and its labour policies. Mr. Tata even suggests that the Government may take into consideration how free a large house has been from political intri-

gue. Frankly, this should be no consideration at all, if, on other grounds a large house is found eligible to get an industrial licence. Furthermore, such considerations have dangerous implications and may well strike at the very root of India's democratic functioning under a multi-party system.

New Delhi may be in no hurry to take any decision either way on the various suggestions contained in the Tata memorandum. It will not also like to give the impression that it has been influenced by the memorandum in the shaping of its licensing policies. In any case, there seems to be no move to alter the structure of the licensing policy that is in force now; at best, some modifications may be made here and there to provide for some flexibility, which is undoubtedly called for. The Tata memorandum also lays special stress on the need for flexibility in policy so as to encourage such larger houses as can make a large contribution to stepping up output and accelerating the pace of industrial growth.

The rate of industrial growth is, fortunately, showing some signs of improvement. The growth rate in the first quarter of this year showed an increase of 6.8 per cent, compared with 3 per cent for the whole of 1971. It is evident that the pick-up in industrial production is largely due to the step-up in public investment last year and in the current year. Even though domestic steel production is still far from satisfactory, the total availability has improved because of the steady inflow of imports for which orders were placed last year. This has given a spurt to the engineering industries. In addition, the textile industry has done well this year because of the improvement in the cotton supply position. The wagon-building industry should also show significant improvement with the Government's decision to increase its orders from 27,000 wagons a year to 35,000 wagons.

The improvement in industrial production should not, however, create the smug complacency in the Government that all is well with industry. As Mr. Tata has pointed out in his memorandum, the growth rate in industry can be easily raised to 8 per cent or 10 per cent, provided the right policies and programmes are pursued. From the statements made by various Ministers, it is evident that there are different pulls

at work within the Government. While a few in power affirm that the Industrial Policy Resolution is proposed to be modified, there are others who assert that nothing of that kind is going to happen and there is no need to make any changes in the policy resolution. The public have a right to know the correct position.

In the ultimate analysis, it would appear that what is necessary is not so much a change in policy or programmes as in the outlook and

approach. Today, industry is in a mood to co-operate with the Government to the maximum extent possible and ideas such as the joint-sector concept, which at one time evoked considerable opposition, are today being accepted willingly because of the changed political situation. If the Government fails to grasp this opportunity to step up investment in the joint sector, which will in the long run grow into a national sector, it cannot hope to see in the near future the emergence of a self-generating economy.

The Unwanted Asians

ONCE again the Asian problem has erupted in Africa. This time it is Uganda's turn to throw out the Asians—mainly people of Indian and Pakistani origin. Estimates of the number of people affected by this latest expulsion order—with a deadline in the first week of September—differ. Roughly speaking, they are believed to be between 60,000 and 70,000 and of these more than 55,000 hold British passports. For people in this country the temptation would be irresistible to describe this as nothing short of blatant racialism. Official spokesmen of the British Government view it in the same light. From the African nationalists' point of view, this may appear to be too sweeping and one-sided a description of a situation which has many facets and a long history. But sober elements even among the Africans would perhaps not deny that in its brusqueness the order of General Amin, the Ugandan President, has few parallels. It is too harsh and sudden.

Indians, on their part, must view the problem in a proper perspective. It is now an acknowledged fact of history that Indian migrations during the last hundred years to former British colonies in Africa and Asia were largely induced to serve the interests of British colonialism. In course of time Indian settlements abroad took one of two forms. In most countries of Africa and Asia the Indians formed a small community of aliens. Although not particularly popular with their British masters, they were tolerated and given an important place in the scheme of things. Their rôle was to act as a buffer between the rulers and the ruled and in the bargain make a reasonably comfortable living. Social-

ly and racially, the British kept them at an arm's length. And the Indians in turn remained aloof from the Africans. This three-tier society suited the British admirably. It suited the Africans the least, for not only were they politically subjugated, the gates of economic opportunity were also barred to them by the Indians.

There were, however, other countries where Indian settlements became identified with the natives even though they retained their racial aloofness. This happened in places like Malaysia, Fiji, Mauritius and the West Indies where the Indians constituted a sizable part of the population and were, therefore, too numerous to constitute a privileged class. In Malaysia, however, the position of Indians is still ambiguous. They are about 9 per cent or 10 per cent of the population of 10 million. But lately they have been under pressure from the Malays who form about 80 per cent of the population and the Chinese who account for the remainder. Even so, a mass expulsion of the Indians there is at the moment unthinkable. The problem of Indians in Sri Lanka has been the most acute because of Colombo's move to expel several hundred thousand people of Indian origin, and this is still being sorted out under Shastri-Mrs. Bandaranaike agreement signed seven years ago.

Burma has virtually expelled all Indians, not by a blanket quit order, but by imposing drastic economic sanctions that made their survival in that country nearly impossible. Burma's allegations against the Indians were the same as those of the Africans, namely, economic exploitation of the country of their adoption without any effort at integration

with its people. This complaint is being heard not only from communities to which the Indians regard themselves economically and culturally superior but also from the advanced nations where they have settled in sizable numbers, such as the U.K. and West Germany. Nor are Indians the only community subjected to such pressures or expulsion orders. The Jews have faced this problem the world over, even in Russia. The charge against them is the same: lack of integration with the people of the country of adoption and economic exploitation of the natives. The Chinese have been facing similar pressures in Indonesia, Malaysia, the Philippines and parts of Africa. The Europeans have had to leave *en masse* countries which they ruled for decades the moment these territories became free.

In the light of all this, it would perhaps not be quite accurate to describe General Amin's order of expulsion of all Asians—with a few exceptions—as purely racial. In the interest of truth and a correct appreciation of the situation one would do well to recognise that in this particular case the racial factor is inseparably linked with economic and political issues for which the African rulers cannot be held solely responsible. Indians would do well to recall that in the years following independence this country relentlessly pursued what is known as the policy of "Indianisation" of top jobs in Government, industry and business. As a result, thousands of Englishmen left with their families for their homeland. They had to do this despite the equally acknowledged fact that they served perhaps a useful purpose in the introduction of western ideas and techniques in this country just as Indians played a vital part in the opening up of the African continent under British direction and taking certain essential services and skills to the countries of the "Dark Continent".

With India's own experience and actions as her guide, she would perhaps not be justified in condemning the present policy of Africanisation in African countries. The action may in fact seem quite understandable in respect of people of Indian origin who hold British, Indian or Pakistani passports. They are as much alien in those lands as the British were in India after independence. When at the time of Ugandan independence in 1962 Britain offered

them British citizenship and they accepted it, they forfeited all rights to the privileges to which in any country its citizens have the first priority. They became Englishmen overnight. And having driven out the White Englishmen the Ugandans were under no obligation whatsoever indefinitely to retain in their midst the Brown Englishmen. It should have been obvious to the British Government in 1962 that by offering British citizenship to the Asians in Africa it was inviting a large-scale influx into Britain of people of a different race. The moment could be delayed but not averted.

Coking Coal: Time for a Master Plan

THE coal industry now presents a mixed picture of great expectations and continuing disappointment. The Fuel Policy Committee, which submitted the first part of its report in May, has estimated that the demand for coal, including that needed for power generation, would rise to 165 million tonnes by the end of the Fifth Plan. Production at this rate would require, according to the committee, an additional investment of Rs. 690 crores. It has laid considerable stress on the development of atomic power but the ambitious programme it has outlined for coal abundantly underlines the importance it attaches to the development of the industry. Many others have spoken in the same vein. Only recently the Central Minister for Steel and Mines, Mr. S. Kumaramangalam, has said that the commissioning of the Bokaro steel plant and increase in demand from coal-based thermal power stations and fertiliser plants would lead to a marked rise in the overall demand for coal in the coming year.

All this should assure a future for the industry. But what about the present? The situation as it exists today is not exactly inspiring. The transport bottleneck caused by the shortage of railway wagons shows no sign of improvement, the emergency plans and priority schemes notwithstanding. It is becoming increasingly clear that even if the railways have the will to do something for the industry, it does not apparently have the means. Whatever might have been responsible for it, the coal industry has now virtually resigned to the inevitability of no immediate improvement. If the situation is to turn for the better at all, it cannot possibly come off before the railways

This does not, however, mean that General Amin's action against the British Asians is entirely fair. It is wrong on several counts. First, it is too sudden. The notice of three months is too short for people who have lived in that country for generations. The number sought to be expelled at one go is much too large for any country to absorb, more so for the small island kingdom of Britain. And, what is most important, the stipulation that the Asians be expelled from Uganda without the means to settle in another land and without any compensation for the properties and assets is, to say the least, uncivilised.

have raised their capacities—and that means a fairly long time.

The immediate impact is thus on production which has been steadily declining. Pithead stocks are going up; even the stocks with the Bharat Coking Coal Company (B.C.C.L.) now stands higher than what it was when the coking coal mines were nationalised in October last, and that too in spite of a marginal cutback in production. Producers both in the public and private sectors have been facing financial difficulties due to delayed turnover and blockade of funds. The situation would have been far more alarming had the steel industry—one of the main consumers—operated at its full rated capacity. Indeed, if the steel plants are now to operate at a higher capacity, one of the main problems they are likely to face is the shortage of coal of the necessary grade.

The level of present production is no doubt important but a bigger question is that of preparing a master plan for the conservation of coking coal to meet the future demand. The main consideration that weighed with New Delhi when it nationalised the coking coal mines was to put an end to "slaughter mining" in which some of the collieries were reportedly indulging. The stock of good quality coal is strictly limited and the need to conserve the available supply is obvious. According to the latest estimates of the Geological Survey of India, the total of proved, indicated and inferred reserves of all types of coal comes to 80,952.39 million tonnes. Of this, 21,365.40 million tonnes are proved and 30,759.08 million tonnes indicated, while the rest is inferred. But what is disconcerting is that most of the reserves are

believed to be made up of inferior quality; only 1,810.63 million tonnes are of class one type. The agency recently set up to map out mineral reserves might put in more effort in exploration work which offers scope for greater dynamism. Coal exploration work went ahead well between 1956 and 1965 and since the beginning of the Third Plan, a total reserve of 509 million tonnes of coking and 1,106 million tonnes of non-coking coal has been proved. A time has come to pay more attention to the search for finding out new coal-bearing areas.

A planned co-ordinated approach towards immediate production and conservation is thus badly needed. After the nationalisation, the Government has a direct stake in improving the working and finances of coal mines. Substantial investment has been promised for the industry. The B.C.C.L. has been implementing a proposal to amalgamate, in the first stage, the 214 taken over mines into 70 units. At a later stage, it proposes to set up large units of production at an average level of 1 million tonnes a year. This will enable the Company to introduce modern technology in mines. With the Mining and Allied Machinery Corporation (M.A.M.C.) turning the corner, most of the equipment might be locally met. Foreign technical assistance from Poland, which has made rapid stride in this field, has been offered. The industry has to get ready for meeting the boom in demand that seems to be very much on the cards. The B.C.C.L., for one, seems to be grooming itself for the rôle. When all the blast furnaces now under construction come on stream, the demand for coal might go up by anything like 50,000 tonnes or 60,000 tonnes a month. And since an increase in coal product can only be obtained in a gradual manner, steps have to be initiated well in advance. Besides, by the very nature of the mining industry and on account of the fact that it is a labour-intensive one, it is just not possible to regulate day-to-day production to suit the demands of the metallurgical industry. This explains why some amount of coking coal is even now used by the non-metallurgical industries. All these factors have to be co-ordinated in a long-term plan designed to serve the needs of conservation of the rather limited reserves on the one hand and to meet the existing and growing needs to the full on the other.

Meanwhile, the non-coking coal mines are also engaging considerable attention in official circles. Mr. Kumaramangalam has warned their owners that unless they take imme-

diates measures to improve their working to meet the growing needs of the country, the Government would not hesitate to nationalise them. The West Bengal Assembly, in a resolution adopted some time ago, has urged the Centre to nationalise these mines. Such threats are having an unnerving effect on the industry which is fighting shy about making any fresh commitments. After all,

Rescheduling State Debts

TWO important subjects that have been causing concern both to the Central and State Governments are the increase in the latter's indebtedness to the former in recent years as well as the growing overdrafts by the States to meet their financial contingencies. The outstanding Central loans against the States were of the order of Rs. 6,310 crores in March 1971, as against a modest Rs. 196 crores at the beginning of the First Plan. The massive assistance provided by the Centre for financing the Plan outlays of States over the years as well as for meeting their non-plan requirements was a major factor in contributing to the steady increase in the States' debts. Loans are provided to States for financing their Plan outlays as also Centrally-sponsored and Central schemes. The other purposes are for meeting relief expenditure on natural calamities and as their share of small savings collections and for various non-plan requirements, including the special loan assistance for covering inescapable gaps in resources of certain States. There is, of course, a well-defined procedure for release of loans to States.

The terms and conditions of repayment of loans are not identical for all categories but all the loans carry an effective interest rate of 4.75 per cent. Some two years ago, a scheme of consolidation of Central loans to States and also rescheduling of repayments had been drawn up by the Central Ministry of Finance. Under the scheme, all loans outstanding as on 31st March, 1969, should be consolidated. The consolidated loans for irrigation and power projects would be recovered in 15 years or 20 years or 25 years varying from State to State; the other consolidated loans would be recovered in ten to 20 years, varying from State to State. Small savings and natural calamities loans would be repaid on the existing terms and conditions without

there is always the possibility of converting inferior non-coking coal into good metallurgical coal, and a promising beginning has already been made in this direction. So any plan for the coal industry cannot just leave out the non-coking units. The policy to be followed towards these mines should be clearly spelt out and the present spell of the crisis of confidence ended.

any change. The fresh block loans during the Fourth Plan period, other than *ad hoc* loans and fertiliser loans, are repayable in 20 years with an initial period of moratorium of five years, i.e., no payment during the Fourth Plan period. The *ad hoc* loans given to certain States for clearing overdrafts would be repaid according to the existing terms and conditions.

Many of the States were unhappy over this arrangement because the relief accruing to them thereby was just marginal—Rs. 220 crores for all the States during the entire Fourth Plan period. The fifth Finance Commission did not improve the position at all. Actually, certain genuine difficulties were created for a few States in financing their Plan outlays. The Centre has for these reasons come to the conclusion that any general scheme of rescheduling based on principles uniformly applied to all States, while giving some relief to all of them, would not fully solve the problem of States adversely affected by the recommendations of the fifth Finance Commission. The Centre has also come to the conclusion that any general scheme of rescheduling would have provided additional funds to several States whose finances were already in a comfortable position and which had also benefited substantially from the award of the fifth Finance Commission. The Commission's recommendations resulted in additional burden on the Centre. Considering all this, the Central Finance Ministry opposed any general rescheduling of repayment of State debts to the Centre.

This, however, led to another development whereby special accommodation by way of loans was provided to meet the States' inescapable gaps in resources determined on the basis of annual assessment made by the Planning Commission in consul-

tation with the State Governments. The nine States which were selected for such special accommodation amounting to Rs. 800 crores were Andhra Pradesh, Assam, Jammu and Kashmir, Kerala, Madhya Pradesh, Mysore, Orissa, Rajasthan and West Bengal. Another important reason why a rescheduling of debt repayments has not been done is that the States' debt obligations have been considered by the Planning Commission in assessing their resources for the Fourth Plan and the States' Fourth Plan outlays have been fixed after taking this into account. Even so, the question of rescheduling has been included in the terms of reference of the sixth Finance Commission which has been asked to make an assessment of the non-plan capital gap of the States on a uniform and comparable basis for the five years ending 1978-79. In the light of such an assessment, the Commission is to undertake a general review of the States' debt position with particular reference to the Central loans advanced to them and likely to be outstanding at the end of 1973-74 and suggest changes in the existing terms of repayment.

The persistent increase in the overdrafts of the State Governments on the Reserve Bank of India has also been a matter of concern to the Central Government. These overdrafts are generally due to an excess expenditure on both Plan and non-plan account. The Centre has also the impression that many States have come to regard these overdrafts as a budgetary resource. Discussions were held with individual State Governments and they have been asked to observe financial discipline. Only recently the Central Government devised a scheme under which overdrafts as on 29th April, 1972, were cleared by the Centre partly by giving to the States ways and means advances and partly by releasing in advance the share in income-tax and Central assistance for Plan schemes. In order to provide an adequate cushion against temporary and unforeseen difficulties, the limits of authorised ways and means advances from the Reserve Bank were quadrupled for all States. With effect from 1st May, 1972, no State was to be allowed to have an overdraft and to regard it as a budgetary resource.

Whenever any State has an overdraft on the R.B.I. for more than seven days, the Bank would automatically suspend payments which will be resumed only after the overdraft is cleared. The Centre is quite satis-

fied that this has worked well. But the financial stringency still remains and unless a more co-ordinated scheme is evolved, these measures

will at best prove to be palliatives. The undesirable effects of financial indiscipline on the economy will still continue.

New Trends in Exports

THERE have been some important changes in the direction of India's export trade in the recent months. Although full details for 1971-72 are not yet available, the official figures for January-August 1971 indicate that Indian goods are gaining ground in many markets where till recently they had not been able to penetrate due to various reasons. At the same time, Indian products have received a setback in several countries. For example, Indian exports to Latin America increased from Rs. 2.83 crores in January-August 1970 to Rs. 8.79 crores in the same months of 1971. This is encouraging, considering the fact that till now Indian exporters had given inadequate attention to Latin America because of distance, the high shipping freight, and the unfamiliarity with the market conditions there. It is, however, relevant to point out that the bulk of India's exports to Latin America goes only to one country, Argentina, which accounted for Rs. 4.62 crores in January-August 1971, compared with Rs. 97 lakhs in the same months of the previous year. India's exports to the other countries of Latin America such as Brazil, Chile, Cuba, Mexico and Peru have been negligible. New Delhi should examine to what extent there is scope for increasing exports to these countries. Even to Argentina, most of the exports consist of jute goods. It should be possible to sell several of India's non-traditional products also to Argentina.

India's exports to Canada increased sharply from Rs. 15.67 crores in January-August 1970 to Rs. 23.76 crores in the corresponding months of 1971 and to the U.S.A. from Rs. 128.62 crores to Rs. 180.78 crores in the same period. Higher exports to the U.S.A. were mainly on account of jute goods. At Rs. 87 crores in January-August 1971, the export of jute goods to the U.S.A. more than doubled, compared with that in the same months of 1970. The main factors that helped this trend were the dislocation of supplies from Bangladesh, the possibility of a prolonged strike by longshoremen in September, and the decline in the inventories of jute products with the U.S. bag and carpet makers.

India's exports to the European Common Market increased from Rs. 61.41 crores in January-August 1970 to Rs. 70.51 crores in the same period of 1971. There was an increase in the export to all the countries of this region, but it was rather moderate. For example, to West Germany, exports rose from Rs. 21.27 crores to Rs. 22.42 crores and to France from Rs. 11.93 crores to Rs. 13.17 crores during the period under review. To the U.K. exports went up from Rs. 93.59 crores in January-August 1970 to Rs. 102.93 crores in the same months of 1971. But to many other countries of Europe, like Austria, Denmark, Norway, Portugal, Finland, Greece, Ireland, Spain, Switzerland and Turkey, exports, although showing an upward trend, remained negligible. These countries have received inadequate attention from the Government of India, the Export Promotion Councils and other similar organisations. A careful market survey of these countries is likely to reveal considerable scope for increasing and diversifying Indian exports.

To eastern Europe as a whole, the country's exports increased from Rs. 927.42 crores in the first eight months of 1970 to Rs. 1,051.79 crores in the same period of 1971. But not all the countries of eastern Europe have increased their offtake of Indian goods. For example, exports to Yugoslavia declined from Rs. 24.09 crores to Rs. 19.84 crores and to Poland from Rs. 14.18 crores to Rs. 12.62 crores during this period. But to Russia, the increase in exports was rather substantial from Rs. 121.91 crores to Rs. 141.64 crores. Details, however, are not available as to what extent the country has succeeded in exporting non-traditional goods to Russia and other countries of eastern Europe. Nor is it clear whether higher exports to Russia are really due to India's initiative or due to Moscow's anxiety to buy more of its requirements from this country. In any case, greater attention should be given to the development of the market for Indian goods in eastern Europe.

Apart from Russia, there are other markets which offer considerable scope for India's non-traditional goods.

Yugoslavia, for example, although a market of only about 20 million people, has the potential for absorbing a large variety of engineering and other non-traditional goods. The Indo-Yugoslav trade agreement for 1972 provides for the export of machine tools, wire ropes, automobile parts and ancillaries, domestic refrigerators, jeeps and spares, commercial trucks, cement, synthetic fibres, and handicrafts. Such goods should be in demand also from the other countries of eastern Europe. These markets, therefore, deserve special study from the point of view of diversification of exports.

Among the countries of Asia and Oceania, India's export performance in 1972 was better in respect of Afghanistan, Australia, Sri Lanka, Malaysia, Republic of Korea and Singapore. But it was disappointing in relation to other countries of this region like Burma and Japan. India's exports to Japan sharply declined from Rs. 141.24 crores to Rs. 117.99 crores and to Burma from Rs. 16.27 crores to Rs. 6.60 crores during the period. One of the reasons for the fall in exports to Japan was the lower offtake of iron ore, which declined by nearly Rs. 4 crores. In the case of Burma, lower exports were due mainly to the foreign exchange difficulties experienced by that country as a result of which it had to curtail its imports. As for the African countries, there have been some significant developments. India's exports to Nigeria nearly doubled from Rs. 3.24 crores to Rs. 6.89 crores while exports to the Sudan rose impressively from Rs. 18 crores to over Rs. 28 crores during the period. Many other African countries also increased their offtake of Indian goods, like Kenya, Morocco, Uganda and Zambia.

This analysis indicates that while Indian exporters should give greater attention to the markets in Europe and America, the countries nearer home should be cultivated with special care. There are, of course, handicaps like the inadequate shipping services to countries of this region and the high freight rates. Even so, it should not be difficult for India to capture a larger share of the import trade of many Asian countries by suitably adjusting the selling strategy. For example, it was recently pointed out at a meeting organised by the Federation of Indian Export Organisations that Indian exporters were not promptly responding to the suggestions and complaints from Indian Embassies. The Indian Embassy in Tokyo had suggested that Indian spectacle-frame manufacturers

should adapt their designs to suit the Japanese facial features. But this has not been done and, as a result, Indian spectacle-frames have not been able to penetrate into Japan. There is no

CURRENT COMMENT

BORROWING

New Central and State Loans

In its search for resources, the Government now appears to be keen to utilise the full potential of market borrowing. Thus, against the Central Budget estimate of Rs. 214.78 crores of net borrowing during 1972-73, New Delhi has already made plans for collecting Rs. 323 crores. Soon after the States complete their borrowing programme, the Centre intends to come out with re-issues of the three loans originally floated on 15th July. Subscription for the loans for a total amount of Rs. 215 crores will open on 15th September. Significantly, the re-issues have not been made to coincide with the maturity of any previous loan and so the whole amount would be in the form of net borrowing. Two National Defence Fund loans are, however, to mature later this year.

When the loans which are now being re-issued were first opened for subscription in July, the gross borrowing came to Rs. 386.77 crores, which after repayment of maturing debts, was reduced to a net figure of Rs. 131.93 crores. The extra Rs. 108 crores that is now being raised will be used mainly to meet the unforeseen demands for relief expenditure thrown up by natural calamities this year. A part of the money is also proposed to be used to finance the crash programme the Government intends to launch to retrieve as far as possible the damage wrought to the *kharif* crop by raising a larger *rabi* output.

Before the Centre comes out in the market for the second time this year, the States will complete their borrowing programme. Eighteen States are thus opening their 5½ per cent 1984 loans for subscription on 4th September. Their target for net collection is Rs. 132 crores, out of a gross issue for Rs. 194.25 crores plus 10 per cent over-subscription. (Details appear on a later page in this issue of *Capital*.) Last year, the net amount was Rs. 101 crores. In addition, the State Electricity Boards are also to come into the market for an amount of Rs. 83 crores,

doubt that if Indian exporters make energetic efforts and remain alert to the opportunities, the results in terms of foreign exchange earnings could be more gratifying.

against Rs. 68 crores in the previous year. Thus, the Central and State Governments and the State Electricity Boards together will raise Rs. 538 crores (net) or about Rs. 74 crores more than last year.

COTTON TEXTILES

Exports Rise

Exports of mill-made cotton textiles—piecegoods, yarn, apparel, hosiery and other manufactures—from India during July are provisionally placed at Rs. 11.3 crores, against Rs. 8.65 crores in June—the lowest for any month this year—and Rs. 10.15 crores in May. Excepting apparel, all items have fared better than in June. Exports during the first seven months of this year add up to Rs. 76.87 crores, against Rs. 59.63 crores in the same period last year and Rs. 60.06 crores during January-July 1970. All items have fared considerably better than last year. Exports of piecegoods have risen from Rs. 37 crores (January-July 1971) to Rs. 42.36 crores, yarn from Rs. 7.17 crores to Rs. 11.67 crores, apparel from Rs. 6.07 crores to Rs. 10.89 crores, other manufactures from Rs. 9.24 crores to Rs. 11.74 crores and hosiery from Rs. 15 lakhs to Rs. 21 lakhs.

Zonewise, there has been a decline in shipments of piecegoods to Africa, Asia (excluding Nepal) and Oceania which has been more than offset by larger exports to the European and American zones. Exports to Europe, inclusive of the U.K., have totalled Rs. 78.79 crores, against Rs. 11.91 crores during January-July 1971. This is due entirely to the marked increase in shipments to Russia, from Rs. 1.43 crores to Rs. 9.65 crores. The U.K.'s offtake of Indian piecegoods has been very poor—Rs. 5.7 crores, against Rs. 9.03 crores. Exports to the E.E.C. countries have registered an impressive rise from Rs. 66 lakhs to Rs. 2.32 crores but they are still running well behind the quota. The increase in exports to the E.E.C. is accounted for mainly

by the appreciably larger offtake by West Germany and France.

Exports to the African zone have declined from Rs. 11.12 crores to Rs. 6.51 crores and this is due to the sharp decline in shipments to the Sudan, from Rs. 10.41 crores to Rs. 5.86 crores. Exports to Asian markets, excluding Nepal, have declined from Rs. 2.94 crores to Rs. 2.7 crores but Nepal has lifted larger quantities of Indian cloth—Rs. 3.54 crores, against Rs. 2.91 crores. Exports to the U.S.A. have risen from Rs. 4.69 crores to Rs. 7.41 crores and the Canadian offtake also has been higher at Rs. 93 lakhs, against Rs. 57 lakhs. Exports to Oceania have declined from Rs. 2.72 crores to Rs. 2.36 crores mainly because of a reduced offtake by New Zealand—Rs. 50 lakhs, against Rs. 93 lakhs. Exports to Australia registered a small improvement.

GUJARAT

Good Progress

The Gujarat Industrial Development Corporation, which was started in 1962, is playing an increasingly significant rôle in Gujarat's industrial development. In a booklet recently published by the Corporation, it is stated that its budget rose from Rs. 68 lakhs in 1967-68 to Rs. 165 lakhs in 1968-69, Rs. 420 lakhs in 1969-70 and further to Rs. 7.25 crores in 1970-71. The Corporation's scientifically planned facilities of land and sheds and its generous terms of repayment have enabled the existing industries to expand their units. New entrepreneurs from different parts of the country have been encouraged to set up various industries in the State. The Corporation has been receiving good support from the Government, and financial and other institutions of the State. There has also been a substantial contribution from entrepreneurs which has helped to achieve its growth. The State Government has entrusted the Corporation with the responsibility of providing the infrastructure for a vast fertiliser complex being set up in Kalol by the Indian Farmers Fertiliser Co-operative Ltd and also for a big petrochemical complex near Baroda. It is said that there has been an exceptionally good demand for plots and sheds from entrepreneurs of different States. The Corporation is confident of extending its scope of activities in untapped areas with the help of the State Government and financial institutions.

ENGINEERING

Seminar on Productivity

The Engineering Association of India organised a one-day seminar on "Maximising Productivity and Employment in West Bengal" a few days ago in Calcutta. The seminar was inaugurated by Dr. Gopal Das Nag, Minister for Labour, Government of West Bengal. Dr. Nag expressed the Government's concern over utilisation of the existing capacities. He stated that the Government was keen that the infrastructure and the capacities available with the industry should be fully utilised and that production maximised. He stated that closures and gherao were of advantage to none. He emphasised that in many cases mismanagement was the chief reason for closure as well as inefficient performance. Labour had practically no contribution in bringing closure or making the mills sick. He stressed that the often-quoted criticism that productivity of labour in West Bengal was low was not based on facts. The productivity of workers in Bengal compared favourably with that of workers in other places.

Opening the seminar, Mr. M. K. Jhavar, president of the Association, stated that the country was faced with two great dangers: (i) inflation, and (ii) unemployment. Inflation can be fought by maximising production. The establishment of new industries and expansion of the existing ones would offer increasing opportunities for more and more employment. While all possible steps should be taken not only to expand the existing industries but also to establish new ones, particularly in areas away from the metropolitan district, the Government of West Bengal should persuade the Government of India to establish some of the engineering industries in the public sector.

PROMISSORY NOTES

Arrangement for Payment

Interest on a number of loans of Central and State Governments is due for payment in September and October 1972. To facilitate payment of interest on the due dates, Government promissory notes of the loans in question will be accepted by the Public Debt Office, Reserve Bank of India, Calcutta for preparation of interest warrants one month before the due date of payment of interest, says a Press note issued by the Bank in Calcutta. Holders of Government promissory notes of the loans

are requested to lodge their notes well in advance to facilitate delivery of the notes and interest warrants on the due dates. In view of the heavy work involved, the period for delivering the notes received for payment of interest during the months August to October 1972 will be extended, where necessary, to 15 clear working days.

PHARMACEUTICALS

Exhibition in Bombay

The Indian Drug Manufacturers' Association is organising an exhibition at the time of their eleventh annual day celebrations from 20th to 22nd October, 1972, in Bombay. The exhibition is to focus the industry's achievements and progress during the year and will have four sections: pharmaceutical machinery, formulations, basic chemicals, and packaging and other miscellaneous items used in the pharmaceutical industry. In the scientific and general session, leading personalities in the industry, research laboratories, educational institutions in the country as well as Government departments concerned with the drug industry will participate.

WESTERN INDIA

Credit for Small Units

The Government of India has extended the liberalised provisions of the Credit Guarantee Scheme for small-scale industries in the specified border areas in western region up to the end of December 1972, according to a Press note issued by the Reserve Bank of India a few days ago. Some of the provisions of the Scheme, it will be recalled, were temporarily liberalised on 16th December, 1971, in view of the unsettled conditions prevailing in the specified border areas in eastern and western regions. The liberalised provisions were initially made available up to 31st March, 1972 and extended later up to 30th June, 1972; they ceased to be operative in the eastern region from 1st July, 1972.

F.I.C.C.I.

Eastern Region's Problems

The President of the Federation of Indian Chambers of Commerce and Industry, Mr. Madanmohan Mangaldas, had a discussion in Calcutta a few days ago, with the office-bearers of chambers of commerce and

associations of industry and trade in the eastern region. Among the major points that emerged from the discussion, one was about the widespread shortage of railway wagons which was proving a major road-block in the day-to-day functioning of industry and trade. Another infra-structural deficiency lies in the insufficiency of power. What is of particular concern is that for various reasons installed capacity is being utilised to the extent of two-thirds or so only. West Bengal came for special mention. The feeling was that unless massive investment is made, the problem of unemployment with its socio-political implications will continue to exist. While appreciating the steps taken by the State Government to restore law and order and to energise the productive activity, it was pointed out during the discussions that it was at the same time necessary that a series of programmes and projects, having high employment content, were initiated.

D.A.V.P.

Value of Advertisements

The Deputy Minister, Central Ministry of Information and Broadcasting, Mr. Dharam Bir Sinha, told the Lok Sabha a few days ago that the value of advertisements released

by the Central Government through the Directorate of Advertising and Visual Publicity in the daily newspapers of Calcutta in the large newspapers in 1970-71 was Rs. 25.11 lakhs and in 1971-72, Rs. 22.03 lakhs; in the medium newspapers in 1970-71, it was Rs. 1.05 lakhs and in 1971-72 Rs. 1.47 lakhs; in the small newspapers, it was Rs. 89,086 in 1970-71 and Rs. 63,681 in 1971-72. He also mentioned the quantity of newsprint allotted to the newspapers; in 1970-71, large newspapers got 20,627.11 metre tonnes and in 1971-72, 22,105.55 metre tonnes; in 1970-71 and 1971-72 medium newspapers got 1,313.84 and 1,347.71 metre tonnes, respectively; small newspapers got 634.43 and 536.87 metre tonnes in 1970-71 and 1971-72, respectively. The Minister was answering questions.

I.D.B.I.

Rediscounting Scheme

The Industrial Development Bank of India's scheme for rediscounting of usance bills covering sales of machinery was introduced in April 1965 with a view to facilitating sales of indigenous machinery by providing adequate credit facilities to manufacturers so as to enable them to market their products by offering deferred payment facilities to purchaser-users of

machinery. The scheme, although seller-oriented, enables a purchaser-user of machinery to repay its cost over a period of up to five years. The seller realises the cost of the machinery sold by discounting the bills with his bankers after despatch or delivery of the machinery to the purchaser. The seller's bank in turn rediscounts the bills with the I.D.B.I.

The scheme has proved to be very popular and is being availed of by a large number of parties. Till the end of June 1972, some 275 sellers of machinery and 1,300 purchasers of machinery have availed themselves of the facilities under the scheme through 27 discounting banks, the total assistance availed of amounting to Rs. 135 crores. Actual assistance disbursed in 1971-72 was Rs. 45 crores, against Rs. 29 crores in 1970-71 and Rs. 2 crores in 1965-66.

WOOL

Export Prospects

Representatives of the International Wool Secretariat and the Australian Wool Commission are currently on a two-week visit to India to assess opportunities for assisting the development of the wool textile industry in India. At a Press conference held in Calcutta a few days ago, Mr. K. C. Kothawala, technical manager, India, International Wool Secretariat, said that the Secretariat had had to adopt a more selective approach in making its services more effective to the Indian wool textile industry. He emphasised the vital importance of developing export markets for woollen products, particularly knitwear. He said that at present knitwear exports were concentrated mainly to east European countries, and mentioned that talks were already under way between the Russian Trade Representative and the International Wool Secretariat about higher prices for better quality knitwear exports.

MONEY MARKET

No Transaction

There has been no transaction in the short-term money market this past week due to the suspension of clearing caused by the strike in the Reserve Bank. The supply of both tea and gunny bills has been small. The demand for remittances has also been small. The pound-sterling has weakened slightly against most major foreign currencies during the week.

A Ditcher's Diary

LAST SUNDAY THE HEADLINES IN A Calcutta newspaper said that the West Bengal Cabinet had struck new ground in Suri. That it had certainly done. All ground outside Writers' Buildings must be new for the Cabinet, even if in a figurative sense. There is, of course, no reason why a Cabinet should be stationary; Authority does not derive its sanction from its customary seat. And in these onward-marching times there is surely something to be said for moving Cabinets. But I am told that Mr. Siddhartha Sankar Ray cannot claim originality in this matter. When Mr. P. C. Sen was Chief Minister a Cabinet meeting was held in Taki. But that was at the house of Rai Harendra Nath Chaudhuri; and, judging by Mr. Sen's recollections as reported in the Press, this was something like a country house gathering. A Cabinet meeting at the Suri Circuit House was a different matter. Mr. Sen had to drop further plans for his mobile Cabinet because of the Sino-Indian war. The present Cabinet seems determined to continue its travels if the people approve of them. How does one know what the people really want? A full-scale Ministerial invasion could be a diversion for the people of a district town and neighbouring villages; for ordinary people it could be an exciting show to break the monotony of the daily grind. But the excitement is no guarantee that the people are "with it", or that they think that the Ministers are "with them". Mr.

Ray was reportedly unhappy at Press speculation about the cost of holding Cabinet meetings at district towns. Some of the estimates may well be exaggerated, but I should like to know more about the exact financial implications of such ceremonial mass contacts. Who will pay for what is not the only question at issue; the fact remains that the excursion to Suri was an unnecessarily wasteful operation. Even more than the waste, it is the gimmickry of the whole thing that I find distasteful. It is not the Ministers' temporary physical presence that can make the district people feel that the Government is "with them"; even a minor piece of helpful official action will provide greater assurance. And for such action to be taken it should not be necessary for the entire Cabinet to impress people with direct evidence of its routine exertions. If the Government cannot function through the district administration, there must be something gravely wrong either with procedure or with personnel. There is no magic answer to daunting administrative tasks; but public relations gimmicks tend to give the impression that there is.

WILL THE SECOND INDO-PAKISTANI summit be put off for an indefinite period? I cannot see Mrs. Gandhi and Mr. Bhutto being able to discuss anything of substance until Pakistan re-

cognises Bangladesh. All of us hoped that recognition would be announced in August and a second summit meeting held in September. But evidently Mr. Bhutto has changed his mind. Or perhaps he has been forced to do so. I have never been sure how much of the Pakistani President's unpredictability is part of his own methodical madness, and how much dictated by pressure of domestic opinion. Since the Simla summit, we have been generally inclined to give him the benefit of the doubt. Even now it is being suggested that he himself is in favour of immediate recognition, but that he is being obliged to show further intransigence under pressure from the Punjabi-dominated military-bureaucratic-industrial elite. His position may have been somewhat weakened by the events in Sind, and he may now be anxious to establish his *bona fides* as a national leader. It has been Pakistan's particular tragedy in recent years that national interests have almost always been identified with the chauvinistic demands of an aggressive Punjabi minority. And Mr. Bhutto himself has strengthened this trend by establishing his power base largely in the Punjab. If his options are now restricted, he has only himself to blame; he is a prisoner of his own politics. Yet Mr. Bhutto cannot be unaware that the pattern must change. If it does not, it will be threatened by forces which the Punjabi establishment will be in no position to control. The North-West Frontier Province is already on the war path, and the Pathans will not be the same kind of proposition as the "old Sindhis". Mr. Bhutto's Chinese friends are doing him no

NEW HOWRAH BRIDGE

A CORRESPONDENT writes in Current Coin: At this time of year when there are very high tides, one of the defects in our old Howrah bridge becomes rather pronounced. At high tide the bridge is so far raised above the level of the shore that the inclines on either side become dangerously steep. About ten in the morning or five-thirty in the evening the Howrah bridge is always rather a lively sight; the vehicular traffic is considerable at such times and Babus and natives of many a caste and creed are pouring across from or to the station, and the suburb of Howrah; the footpaths are quite inadequate to accommodate the throng, which overflows and jostles with the traffic on the roadway. If the tide happens to be at its highest at such a time the scene becomes

the more confused. Coolies with ropes are stationed at either end and drag heavy traffic up the incline or lower it gently down the slope; by such primitive means is traffic taken across the one bridge of the premier city of the Indian empire. The old bridge has done good work and withstood wonderfully the strain put upon it by flood and traffic. But as one sees the congested crowd of humanity and vehicles struggling over it, or views from the bank at high tide the thrust up centre, and the low-strained approaches one can but feel that it is curious that such a bridge should have been so long tolerated. The new bridge having been designed, it is to be hoped that there will be as little delay as possible in setting to work on the building of it.

...by ... into a false sense of assurance. A Chinese veto against the admission of Bangladesh to the United Nations would not increase Pakistan's diplomatic leverage. The Russians would perhaps only be pleased to see China use its veto in so unprincipled a manner. And, in any case, the veto would not help Mr. Bhutto in getting back the P.O.W.s. Can he afford to wait for an indefinite period? Perhaps he still hopes that Sheikh Mujibur Rahman will agree to talk before recognition. The Sheikh says that he will not; but his decision to prolong his stay in Europe has prompted fresh speculation. Geneva is a pleasant spot for convalescence; but it is also a place where a V.I.P. can meet strangers without attracting much attention.

IT NOW SEEMS ABOUT AS CERTAIN AS anything can be in international politics that the Russians are going to realise their ambition to convene a conference on European security. The first meetings could be held before the end of this year. Which is what makes it so odd that the Czech Government should have chosen this particular time to go ahead with its trials of former Dubcek supporters. Surely Moscow cannot regard it as being in its interests that this mud should be stirred up now; and the idea that the Czechs are acting without Russian approval is so preposterous that it can safely be dismissed without further consideration. So what is the Kremlin up to? One theory is that it is signalling to the western powers in good time for the conference that whatever other advantages there might be for them in holding it, the weakening of Russian control over its European satellites is not one of them. This is a message which could have special meaning for the West Germans, who are working diligently for an easing of tension in central Europe as one way of drawing closer to their fellow countrymen on the other side of the Berlin Wall. Another suggestion is that the Russians are serving notice on their satrapies that accommodation with N.A.T.O. is not to be taken as an excuse for heresy and deviation from orthodoxy within the Warsaw Pact. Alternatively, it could just be that Moscow foresees more trouble in its European empire, perhaps of the kind which toppled the Gomulka regime in Poland last year, and is anxious to let the potential rebels know what is in store for them.

Anyway, whatever the explanation, it is perfectly clear that the Czech trials, which could be reaching their climax just as talks between East and West begin, are not going to improve the prospects for achieving mutual trust and agreement. As events in Bonn have proved recently, opposition to detente with the Soviet Union remains strong in western Europe, perhaps much more so than is the case in Washington at the moment.

AFTER READING WHAT I SAID HERE recently about the "Reykjavik sensation", a friend has pointed out that admiration for Bobby Fischer can no longer be confined to the excellence of his chess game. It must now be extended to his consummate mastery of that infallible technique for winning any contest in sport as expounded by the late Stephen Potter. How the Grand Master of "Gamesmanship" would have approved the tactics of Mr. Fischer, my friend wonders. I would add that Potter's appreciation of the finer points could only have been heightened by the fact that the game is chess. Nothing elemental and cutthroat like golf or scrabble, let it be noted. But chess, formerly so civilised and intellectual, yet now, thanks to Bobby Fischer, as modern and with-it as all-in wrestling and twice as profitable for the contestants. Oh yes, whether he did it consciously or not, there is no denying that the way Bobby Fischer behaved was a more or less faithful copy of the hilarious rules for ensuring victory as laid down so meticulously in Mr. Potter's various books. Moreover, if the unfortunate Spassky had himself

been a Potter devotee he need never have emerged from his confrontation with Fischer looking for all the world like one of those bewildered victims of the Master's techniques. He might still be the world chess champion today. One can only recommend his fate as a dreadful lesson to the Russian Government who, I should not wonder, has hitherto avoided spending precious foreign exchange on the works of Stephen Potter on the grounds they are too frivolous.

THE CONTROVERSY OVER KISSING IN Indian films seems on the point of being revived. The film industry and State Governments have submitted their views on the recommendations of the enquiry committee on film censorship, and a statement has been tabled in the Lok Sabha. I do not know what these views exactly are. But, judging by Press reports, they seem to betray a certain naivete, both about the contemporary conventions in the popular Indian cinema and about public reaction to celluloid sex. I am not even sure if the views expressed do justice to the committee's recommendations. Surely the main issue is not whether kissing should be allowed on the Indian screen; and the committee cannot have advocated nudity for its own sake. In spite of the existing restrictions, many popular Hindi films manage to incorporate a startling measure of eroticism. The restrictions often serve to make this eroticism much more prurient than it needs to be. Frankness is not necessarily obscene; prurience always is. I do not advocate unrestricted candour;

nor do I agree that what is allowed to be exhibited in an imported film must also be permitted in Indian productions. Let's be honest about it: a scene of physical intimacy in a foreign film cannot affect the audience in the same way as one in an Indian film. We are all aware of a difference in social mores; what seems quite unremarkable in a foreign film may strike one as exceptional in an Indian milieu. Yet it does seem odd that so much righteous passion should have been generated over the prospect of kissing in Indian films when both the censors and the public seem to accept unspeakably crude sex on different pretexts. It was Mr. Justice Khosla who once described a young lady's undulating contortions in an Indian film as "a unilateral act of coitus"; and much grotesque obscenity has since been seen in films in which virtue eventually triumphs over vice—but not before vice has had a chance of showing its many seductive facets. Good taste cannot be ensured by censorship codes; and so long as the prevailing tastes remain vulgar it matters little whether the censors allow kissing or not. Perhaps the most amusing piece of hypocrisy is contained in the opposition by the South Indian Film Chamber of Commerce to "kissing as between lips and lips", which is said to be "completely against Indian culture and decency". Surely the Chamber is not totally ignorant of classical Indian literature and art. Besides, even Shakespeare thought that lips could be sealed with "a righteous kiss"; but let me not encourage more self-righteous nonsense.

How to Make Delegation of Authority and Responsibility Effective

By A. G. Kulkarni

Changing business conditions have necessitated the application of the principle of delegation of authority and responsibility. But to be effective, such delegation should be made within reasonable limits.

A LONG with other factors, technological innovations have changed the environmental conditions under which a business unit has to work. And this has resulted in increasing the volume and complexity of business. Changing conditions have necessitated the application of the principle of delegation of authority and responsibility. This principle is being applied in all sorts of organisations—small, medium and large. An executive has to delegate, within reasonable limits, authority and responsibility to enable him to be effective;

and in the next few paragraphs an attempt has been made to note down the scope of "reasonable limits".

The Extent of Delegation

In view of the fact that an executive has to concentrate his mind on important matters and do some creative work, he delegates authority and responsibility to his subordinates, who perform the job of "doers". While delegating, authority and responsibility should go hand in hand. Whenever there is delegation, an executive has to bear in mind certain points, which will help him to carry out his work effectively. He must know, considering the capabilities of his subordinates, as to whom he should delegate, when he should delegate and the extent of the delegation. Wrong delegation with respect to time or person will increase the volume of work and probably create confusion as well. Also, an executive should imagine as to the extent to which he can delegate and should make sure that he keeps his span of control within manageable limits. This will enable him to keep track of the activities. Furthermore, while delegating, the instructions should be definite and clear-cut, so that subordinates will understand the same without any difficulty and there will not be any ambiguity in receiving the communications. On the part of an executive, he should see that he utilises this weapon very carefully, so that there will not be any occasion of misuse of the powers given to him by the management.

An executive will definitely prove to be effective through delegation of authority and responsibility. First, this will help him to devote his attention to more important matters, which cannot be delegated to others. Thus, he will perform the job of a "thinker" effectively. Secondly, through delegation, his subordinates will learn as to how to tackle the business problems, so that someone among them will become the right hand of the executive. Also, such a person can take care of jobs in the absence of the executive, and

the work will not remain pending for want of decisions. Thirdly, such a process will increase the total output of an organisation and everyone in the organisation will contribute towards its progress. Fourthly, as there will be appropriate job allocations, considering the capabilities of an individual, there will be job satisfaction among all the employees. However, if this principle is not understood properly and misuse is made, there will be immediate repercussions of the same.

An executive will face a lot of problems if he goes on doing all jobs on his own; and in order to avoid this situation, he has to take resort to delegation of authority and responsibility. At this time, he should see whether (a) he is clear about the powers given to him, (b) his subordinates are capable of doing the jobs which will be delegated, (c) his subordinates are "learning" consciously, and (d) the workings are within manageable limits. These points should give him positive answers; and then only he will get a green signal to apply the principle of delegation of authority and responsibility.

In the absence of delegation, an executive will not be able to function effectively, and if he continues to depend on his own in his working, it will result in shortening the period of his usefulness to the organisation, which will not be of mutual interest. Furthermore, if this process is continued much longer, then nobody will be able to substitute him in his absence and in the absence of decision-taking, business will suffer. Therefore, every attempt should be made to make maximum use of the tool of delegation.

Sense of Belonging

Against this background, it can logically be concluded that an executive should do only such things as cannot be delegated to or shared by others. This will be in the overall interest of the organisation. He should try to create a sense of belonging among his subordinates and make them learn consciously, so that they will be able to shoulder more and more responsibilities. Just as an instrument needs regular servicing and replacement of parts, similarly the instrument of delegation needs frequent reviews of its application and, from time to time, it may need replacement of ideas due to changes in business situations and atmosphere.

One way to save money!

Did you know that you pay less for sending cargo to the UK and Europe by BOAC than an exporter from the UK or Europe does for sending cargo to India?

Which is the reverse of what happens when you send shipments by sea.

So by sending your cargo one-way to European or UK destinations with BOAC's Special Commodity Rates, you can save money — as well as time. Your cargo agent will tell you all about the savings you can make with BOAC's Special Commodity Rates. Call him — soon.

Fastest off the ground.

Main Objectives Behind the Revision of the Industrial Policy Resolution

(By a Special Correspondent)

The current exercise on a revision of the Industrial Policy Resolution is expected to be completed in three months. It will, however, be wrong to think that the object of the review is to reverse the earlier resolution.

THE current exercise on a revision of the Industrial Policy Resolution of 1956 is expected to be completed in course of three months. The exercise is being continued despite protestations from the radicals within the Congress Party that the Government is trying to be soft to larger business houses and the private sector in general. The Central Industrial Development Ministry has prepared a paper on the subject to which the Planning Commission has appended a reaction paper. It is reported that the two papers are complementary, and there is no conflict whatsoever between the Planning Commission and the Ministry. The intention is that whatever changes in the Policy are to be introduced should be dovetailed to the overall objectives of the Fifth and the subsequent Five Year Plans.

It will, however, be wrong to think that the object of the review is to reverse the Industrial Policy Resolution of 1956. Official circles emphasise this point, for leading industrialists, like Mr. J. R. D. Tata, have reportedly urged the Prime Minister, Mrs. Indira Gandhi, to make use of the power she has after the massive majority of the Congress in the States and at the Centre to bring about fundamental changes in the industrial policy in favour of the larger industrial houses. It is officially stated, and with emphasis, that the socio-economic objective of the Government will continue to be one of progressively curbing the concentration of the means of production and distribution in a few hands. In other words, the revised policy will impose greater social control over the big business houses. The Government has already enunciated the concept of the "joint sector" and proposes to apply this concept in increasing

measure in future. It envisages a greater degree of participation in management, particularly at the policy level, by the public financial institutions in those projects which have received substantial assistance from these institutions.

The Prime Minister spelt out this approach in her speech at the last annual meeting of the Federation of Indian Chambers of Commerce and Industry when she extended an invitation to the large industrial houses to participate in evolving a vigorous joint sector. She then pointed out that their main scope for expansion existed in the "core" and "heavy investment" sectors where their contribution would be commensurate with their expertise and experience. But even larger houses cannot develop these sectors without substantial assistance from the public financial institutions. This is why the Government is emphasising the importance of evolving a joint sector where the managerial ability of the private sector can be harnessed with the support of the financial institutions.

The exercise over a revision of the 1956 Resolution began some years ago when it became evident that the growth of industrial production was showing a marked tendency to slow down. That this had happened in spite of a good harvest for four years in succession, buoyancy on the export front, and a fairly comfortable position of foreign exchange reserves was a matter of concern to the Government. These tendencies were not the result of the Bangladesh crisis, for some of them, like the trend of rising prices and the decline in industrial production, the country had been facing for long, much before the refugees started pouring into India early last year.

The Government took some snap decisions like permitting units in 54 industries to produce up to twice their licensed capacities, but the response from industrialists has been disappointing. This is for two reasons. First, as far as fuller utilisation of

capacity is concerned, the relaxation is plainly redundant, except in the case of those units where capacity is specified in terms of one or two-shift work. In other cases, the increase in output permitted up to 100 per cent of licensed capacity would involve the creation of additional capacity and not fuller utilisation of the existing capacity. But the Government itself has imposed strict limits on the creation of additional capacity in that installation of additional plant and machinery, whether indigenous or imported, is strictly disallowed.

Industrial units (other than those restricted on a shift basis) could have proceeded to use their excess capacity more fully unless they were faced with shortages of raw materials or of demand for their products. For those units which experience shortage of raw materials, the new policy provides no answer since the policy statement said that "the allocation of additional scarce raw materials for the enhanced capacity will, however, be subject to the same conditions as apply to the allocation of those materials for the existing capacity". For those units which suffer from demand limitations, a mere rise in installed capacity is, of course, no answer.

It is now eight months since the Government announced "liberalisation" in the licensing of expansions on New Year's Day. If the relaxation was intended to be an answer to the immediate problem of stagnation in industrial output, very few of the 54 industries included in the list suffer from capacity constraints. This explains why the response was only from a smaller number of applicants—70 from larger industrial houses and foreign majority firms and about 150 from others. It should not be surprising if some of them turn out to be units which had earlier expanded their output beyond the licensed capacity with the concurrence of the authorities. The Government has now extended the time limit by another two months in the hope that more industrial units will avail themselves of the liberalisation.

This drive for industrial production now seems to be petering out. Therefore, a dispassionate analysis of the existing situation is being undertaken to identify the proximate causes for the poor performance of industry and correct the deficiencies so as to ensure that production expands at a

more satisfactory rate. The policy-makers are now realising whether it is from the point of sustaining agricultural growth itself, or of improving the supply of consumer goods to the masses, or of providing more employment, or of securing larger revenues for the national exchequer by way of taxes to finance development programmes, wider and faster industrial growth is necessary.

The question is how to achieve this objective and how soon, and whether the 1956 Resolution is adequate for this purpose. The current study is aimed at identifying the areas where nothing significant has been achieved by way of the present industrial policy. For example, in

West Bengal : Promoting Industrial Growth through Diversification

(By a Special Correspondent)

One of the main ways in which West Bengal's industrial growth can be promoted is through diversification into new lines of production. The engineering industry can make valuable contributions towards that end.

WEST Bengal has been the focal point of industrial activity in the country and it occupies the privileged position of almost meeting the country's total coal requirements, besides enjoying a unique position in jute textiles and tea and accounting for more than 50 per cent of the total engineering capacity in the country. The barometer of progress of the eastern region, and indeed of the country, is the State of West Bengal. The industrial crisis which hit India in 1967 was felt throughout the eastern region. The brunt of this crisis was borne by the heavy engineering and structural industries, of which there is a concentration in this region. Apart from facing stagnation on the technological front, these industries find a much smaller market today than in the past. Being mostly dependent on orders from the Central and State Governments, the railways and other purchasing organisations, these industries have felt the pinch most due to the drastic reduction in developmental expenditure.

Although the position of the wagon-building industry is somewhat

practical terms, the policy is not employment-oriented. Similarly, although the resolution has talked about development of backward areas, this too has not been achieved. A more clear-cut amplification of the respective rôles of the public and private sectors is also necessary. Again, although so much has been talked about the joint sector in principle, in concrete terms this is yet to be spelt out and implemented. It is not merely accepting this concept in principle but to use it as a tool to reduce the concentration of economic power and to control industries which is vital to the nation. These are the issues which are now being examined while reviewing the 1956 Resolution at various levels.

better now than in the recent past, with the announcement of orders against the Railway Board's rolling stock programme for the year 1972-73, this vital industry is still facing an acute shortage of raw materials, especially of steel. The export potential of this industry has recently been made known with firm orders from east European, east African and South American countries and there is little doubt that with the necessary impetus, the wagon building industry will be a major foreign exchange earner in future. However, the need for diversification into other lines of production by the heavy and structural industries cannot be overemphasised in order to sustain themselves. Although the scope for diversification is extremely limited as the equipment and skills available do not lend themselves to a quick switch-over to the manufacture of light engineering and consumer goods, it is extremely essential to ensure the growth of the State's economy in terms of capital investment and men employed.

A major area of "backwardness" in West Bengal is in regard to the development of consumer industries, which have grown in other regions at a very rapid rate. In identifying industries with growth and employment potential, there can be no doubt that the State, with its vast hinterland and a massive population of actual and potential consumers, is an ideal loca-

tion for consumer-based industries. Whereas the levels of direct and indirect taxation inhibit the growth of "luxury" industries, there is ample scope for new investment in "essential" consumer units. The eastern region, with its past bias in favour of capital goods industries, has largely neglected this sector of the industry. The up-to-date development of consumer industries can be traced primarily to the last 20 years, when the overwhelming bulk of investment and growth has occurred in other regions. There is, however, every indication that the revival of the eastern region's economy is round the corner and the scope for establishing consumer industries is vast. This step would be a positive move away from the traditional emphasis on capital goods industries and a shift towards a much-needed diversification of the industrial structure in this region.

Today this region is served by a large number of ancillary industries located in other States, such as automobile ancillaries, industrial valves, paper-making equipment, plastics processing machinery, moulds and dies, dairy equipment, optical instruments and portable electric tools. A recent survey has indicated that this region has ample scope for the establishment of such industries as will act as a catalyst for the revival of industrial activity which in turn, will go a long way in solving the principal problems of endemic poverty and unemployment.

The investment needed for setting up an automobile ancillary complex would be between Rs. 20 lakhs and Rs. 3 crores depending on the products chosen for manufacture and the capacity envisaged. The unit could possibly undertake to manufacture products such as pistons, piston rings, piston pins, shock absorbers, engine valves, electrical equipment, namely, starter motors and spark plugs, and transmission components like clutch assembly and steering wheels. Foreign investment and technical collaboration are permissible in these fields on account of the sophisticated nature of technology involved in the production of these items. This region has sufficient capacity for the manufacture of steel castings and it should be possible to establish, with the minimum investment, an economic unit for the manufacture of engine valves with an annual output of Rs. 1 crore. The existing level of production of this item is approximately Rs. 6 crores, while the estimated demand

by 1972-74 has been estimated at Rs. 13 crores.

There are a large number of units in this region engaged in manufacturing fans, sewing machines and various other types of equipment, which are among the important users of roller bearings, but there is only one unit in this region serving the requirements of these industries. The manufacture of roller bearings especially needle bearings therefore, offers scope. Similarly the prospects for establishing units in this region for the manufacture of portable electrical tools are bright.

Another high priority course of action, aimed at diversifying the industrial base and simultaneously contributing positively to economic growth, lies in the development of electronics industries. A major impact can be made on the eastern region's economy by the setting up of industrial estates to manufacture electronic components. Considering the fact that skilled personnel are available in plenty, the eastern States should be in an excellent position to participate in this growth industry. Another way would be to set up totally export-oriented electronic component factories, the production being directed towards the developed nations. An experiment of this nature will be initiated shortly by the Trade Development Authority in Bombay. Items which would find a ready market abroad include printed circuits, capacitors, integrated circuits, loudspeakers, carbon resistors and electronic switches.

These are some of the ancillary items which could be established in this region, but it is doubtful as to whether any fresh investment will be made till such time as the first step is taken by the Government in this connection. In order to renew the confidence of entrepreneurs, there must be a certain amount of preliminary pump priming in the form of large-scale public investment. Although work has been undertaken towards establishing a new port in Haldia, completing the Farakka barrage and constructing a second bridge over the Hooghly, these projects are by themselves just starting points and the allocation of additional public-sector projects will give a boost to industrial development generally. There is a special need for public expenditure on the economic in-

frastructure of the region, particularly on the improvement of communications and flood control. Infrastructural investment depends primarily on local resources of materials and labour which are in plentiful supply and this being the position, it can contribute greatly to the creation of additional employment opportunities and it is the best means of stimulating a general revival of industry.

Clearly, if West Bengal is to grasp the widening opportunities of the second Development Decade, there is an urgent need to move into new lines of profitable production. Two such are the fields of consumer and electronics industries, both of which have potential not only for investment and growth, but also for the purposes of generating employment and foreign exchange earnings.

How to Make the Steel Holding Company a Success

By Subhas J. Rele

It is too much to expect that all the problems of public-sector steel plants will disappear immediately after the formation of the holding company. Its success will depend on how far it will be allowed to operate as a flexible organisation.

MUCH confusion surrounds the concept of a holding company. Maybe, this is due to the fact that the Government's idea on this is still not very clear. What Mr. Mohan Kumaramangalam, Central Minister of Steel and Mines, had to say on the concept at a recent Press conference raised more questions than it answered. It is too much to expect the organisational problems that plague the public-sector steel plants to disappear immediately after the formation of a holding company for steel. The success, to a great extent, will depend upon how far the holding company is allowed to operate as a flexible instrument for the development of the industry keeping in view the socio-economic policy of the Government. It would be also wrong to believe that a miracle can be brought about overnight in steel. The maladies of the steel industry are deep-seated.

There is a small section of opinion in the Government which does not share the general optimism about the holding company. Perhaps the best thing about the Government's decision is that it is largely motivated by economic considerations. The main objective is to achieve horizontal and vertical integration and give the much-needed shot in the arm of the vital steel industry. The question is: Will the Government succeed with so

many imponderables and in-built handicaps?

The Government declared that the holding company would be a joint stock company and will command an investment of about Rs. 2,500 crores. It will bring in its fold all the existing as well as future steel plants, iron ore and coking coal mining and development and so on. Among the public-sector undertakings which would come within its ambit are: Hindustan Steel Ltd, Bokaro Steel, Central Engineering and Design Bureau, Bharat Coking Coal, National Mineral Development Corporation, Manganese Ores (India) and Bolani Ores (India) Ltd. The holding company will also be responsible for the working of the steel plants in the private sector, including I.I.S.C.O. whose management has been recently taken over by the Government.

It is argued that the proposed organisation will make for better co-ordination of all related activities and thus contribute to greater utilisation of steel capacity. The pooling of various services that will result from this arrangement will contribute to greater efficiency among the subsidiary companies. Again, the holding company would be in a better position to promote research and development and also inter-firm comparisons. The subsidiaries although answerable to the holding company will have a large measure of autonomy in administration and implementation which will have a bearing on their performance. The question is: What guarantee is there that the Government after having formed the holding company will

not interfere with the day-to-day working of the subsidiaries?

Questions will arise about the holding company's precise relationship with the companies under its umbrella. The most prudent thing would be for the holding company to give broad directions to the operating units. Much of the success of the holding company concept in other countries is due to the clear demarcation of functions. Is the objective of forming the holding company, as in other countries, "to place the functions of the ownership for state-owned enterprises in the hands of a commercial rather than a political body?" The holding company concept is operating with success in many countries. The Government of India got the inspiration from the successful working of E.N.I. (Ente Nazionale Idrocarburi) in Italy. E.N.I. has been endowed with corporate powers to operate with the flexibility of a private enterprise in carrying out the functions of promoting and actuating initiatives of national interests in the fundamental fields of petroleum, natural vapours and nuclear fuels.

There are several disadvantages inherent in the holding company system. Mr. Harry Guthmann in his book *Analysis of Financial Statements* mentions a few like "the increased taxation and the other expenses of maintaining a number of corporate organisations." He further says that "the device has also lent itself to such abuses as (a) unsound financing, it being easier to build a highly speculative pyramid with a complex system of companies than with a single operating system and (b) the mulcting of companies by devious inter company arrangements, (c) the concealment of financial conditions through the complexities of holding company accounts."

Is it possible to avoid some of these disadvantages in this country? The Government is not yet clear about the organisational framework of the holding company, its relationship with subsidiaries on the one hand and the Ministry of Steel on the other. The functions of the holding company and the Steel Ministry need to be defined to avoid conflict. Otherwise, the whole purpose will get defeated. The need to co-ordinate policy while protecting the entrepreneurial independence of individual enterprises is keenly felt. The foremost question is: How much independent would be the holding company from Government control?

Freedom Jubilee in Parliament

(From Our New Delhi Correspondent)

The freedom jubilee celebrated in the Central Hall of Parliament was an occasion for pride for M.P.s. But a little more importance could have been injected into the function had the Government invited Lord Mountbatten and Mr. Rajagopalachari to grace the occasion.

BUT for the drought in several parts of the country and the rise in prices of essential commodities, the midnight function in the Central Hall of Parliament to re-enact the declaration of India's independence 25 years ago would have been a grand affair. If it turned out to be a day of rejoicing and sorrow at the same time it was because, as the Prime Minister, Mrs. Indira Gandhi, said in her stirring oration that night, during a quarter of a century "we have had our shares of failure and success of tragedy and triumph". But the midnight function was also an occasion for pride for, as President Giri said, despite the extreme stresses and strains, India has emerged as a stable, well-knit and self-reliant nation.

The functions in Delhi and in the rest of the country were on an austere scale for Mrs. Gandhi herself wanted it that way. But perhaps a little more importance could have been injected into the function had the Government invited Lord Mountbatten who actually handed over power to India, and Mr. C. Rajagopalachari, the first Indian Governor-General, to grace the occasion. This was the view not only of the Opposition but of those who hold responsible positions in the Congress Party.

The distribution of "tamrapatras", which was an innovation of the silver jubilee celebrations, attracted a good deal of attention for two reasons. One was the inscription of Mrs. Gandhi on them and the other being that inscriptions were made only in Hindi. Opposition members, particularly the Jana Sangh, took exception to the Prime Minister signing the "tamrapatras" instead of the President of India

who is above parties and is the real Head of the State. The reason for Mrs. Gandhi's name being inscribed in the "tamrapatras" was explained by the Minister of State for Home Affairs, Mr. K. C. Pant, who pointed out that the "tamrapatras" were "distributed" and not "conferred" by the State. This was a valid explanation, although the Opposition members could not appreciate it for obvious reasons. On the question of the "tamrapatras" being only in Hindi, criticism came from non-Hindi speaking M.P.s, particularly from Kerala, Tamil Nadu and West Bengal. Here again there was an official explanation—that all citations are in Hindi—and the Government did not want to make a change in this case. However, this gave an opportunity to the D.M.K. leader, Mr. K. Manoharan, to administer a warning that "this great country" would be disintegrated if a systematic encroachment on the rights of the non-Hindi-speaking people was continued.

Of importance to West Bengal was an assurance given in the Lok Sabha by the Irrigation and Power Minister, Dr. K. L. Rao, that the Central Government would take all necessary steps to ensure the navigability of the river Hooghly and preserve Calcutta port. Dr. Rao admitted that a controversy had arisen over the quantum of water to be released from the Farakka barrage to the Hooghly, but he said the best way to settle the dispute was to re-examine the prototype. Dr. Rao indicated that water from the barrage would begin flowing down the feeder canal into the Hooghly from 1974 and that full discharge of 40,000 cusecs would be maintained throughout the year, including the lean months. If there was a delay in the completion of the project, this was due to labour unrest and sustained floods. Notwithstanding this, 80 per. cent of the work on the feeder canal had been completed and the rest was expected to be completed by December 1973. Despite Dr. Rao's long statement, some members from West Bengal, however, remained unsatisfied.

SPOTLIGHT ON STATES

Bombay : Some New Facets of Student Unrest

(By a Special Correspondent)

Student unrest in Bombay seems to have assumed new forms. They include strikes against increases in tuition fees and violent demonstrations against dress regulations.

STUDENT unrest seems to have assumed different forms in Bombay and Nagpur. The students of the K. C. Law College and Siddharth Law College in Bombay went on a strike to protest against an increase in the fees of the law classes. In the K. C. Law College the Principal was also *gheraoed*. The students' contention was that the colleges could manage without increasing the fees, while according to the college authorities the increase was necessitated by the financial position. The students were successful in having the increases withdrawn after a comparatively short strike.

But the strike in the Somaiya Arts and Science College at Vidyavihar in Bombay lasted as long as 11 days and was on a different issue, viz., the dress regulations of the college for boys and girls. The students demanded the ending of the college authorities' ban on tight pants and mini-skirts and the reinstatement of a professor—Head of the Department of Economics—who was suspended by the management for alleged instigation of the students' agitation. Some students also *gheraoed* the Vice-chancellor of the Bombay University in his chamber. Some also broke a glass pane at the entrance to his chamber, deflated the air from the tyres of his car, ransacked the university canteen and consumed the food-stuffs without paying for them. The Vice-chancellor, who also lost two costly fountain pens—which he had received as gifts—acted with calmness and did not call for police help to remove the students from the university premises. Later a complaint was made to the police but the students lifted the *gherao*.

Some members of the students' action committee later apologised to the Vice-chancellor on behalf of the students. The Vice-chancellor accepted the apology. The dispute was

amicably settled after a four-hour meeting between the college authorities and the students' action committee. The management agreed to allow the students to wear trousers having a minimum bottom width of 15 inches, to be relaxed to 14 inches depending on the physical build-up of the students. The minimum width allowed under the regulations before the strike was 16 inches. Under the agreement girl students were to be allowed to put on skirts or frocks which would cover the knees as against the former restriction that they must extend beyond the knees. As for the reinstatement of the professor, the students agreed that it was not a matter concerning them and the institution and the college should thrash out the matter according to the rules. It is a question whether matters of dress should not be left to the good sense of students and their parents. No other college has such dress regulations.

Nagpur Incidents

In the papers published in Nagpur during the last three months, one

found that the topics that had attracted public attention in the shape of letters to the Press, articles and even occasional editorials were not *garibi hatao* nor unemployment but (a) the stir caused by the University of Nagpur cancelling the examinations at four centres on account of mass copying; and (b) eve teasing mainly by students in Nagpur streets. As for (a), the news was even published in a London paper, and comments on it appeared in this section of *Capital* in an earlier issue. As for (b), different opinions have been voiced on the genesis of eve teasing in Nagpur.

The fact that the Police Commissioner of Nagpur, while speaking over the local radio on law and order, referred to molestation of women by various types of people, including students and non-students, shows that the evil complained of appears to have gone to serious lengths. He has set up police squads to arrest such offenders. He has also in a public statement claimed that the success of the drive by the police against eve teasers and women molesters is due to the co-operation it received from the public and the saner section of students and expressed the hope that on reopening of the colleges the new students will extend the same co-operation to the police in putting down this evil which, besides other things, brings bad name to the student community. However, one need not take an alarmist view of the matter. A distinction may be made between some forms of conduct by students which may not be taken very seriously and molestation.

Solving the Fleet Operation Problem of I.A. and Air-India

(By a Special Correspondent)

Indian Airlines does not like the idea that Air-India should continue its operations on domestic routes even after the expiry of the agreement between the two. Unless the fleet operation problem is sorted out quickly, many new difficulties will arise.

THE Central Civil Aviation Minister, Dr. Karan Singh, appears to be facing a Jumbo-sized problem. In spite of many common members on the boards of Air-India and Indian Airlines, co-operation and understanding between the two airlines have not fulfilled expectations. Nor has the Civil Aviation Ministry been able to make the two airlines work in total harmony. The recent acquisition of four Boeing 747 jets by Air-India has created some problems and the measures being considered to solve these have aroused apprehensions in Indian Airlines. I.A. sources feel that what has only been taken into account is to bale out Air-India out of its present difficulties.

Air-India's problem is that with the acquisition of four Jumbo jets, it has developed some surplus capacity

which it is trying to utilise on the domestic trunk routes. In addition to the Jumbos, Air-India has nine Boeing 707 planes and it is estimated that it could spare at least three of the latter aircraft. Already one Boeing 707 is under charter to Indian Airlines. In its latest schedule (August-October), Air-India has planned a total of 13 flights a week between Bombay and Delhi, that is, extensions of its international flights to the domestic leg. Presumably, this is in addition to the flights Air-India is operating, on a charter basis, for Indian Airlines between Bombay-Calcutta, Bombay-Bangalore and Bombay-Madras. The charter agreement between the two comes to an end in the middle of January next year. Air-India is apparently keen on continuing its operations on the domestic routes even after the agreement ceases to be operative.

According to I.A. sources, Indian Airlines will become self-sufficient to cater to the domestic services, with the expected full utilisation of capacity of its new seven Boeing 737 planes, which are admittedly more modern than Air India's Boeing 707 fleet and are more economical to operate. I.A.'s fear is that if Air-India is allowed to continue its operations on the domestic routes, it will not be in a position to take advantage of its own Boeing fleet fully.

Against this, the argument put forward is that Air-India's surplus capacity is also a national asset and should be put to some use. If national interest is the ultimate criterion, others argue, then the economics of operation of Boeing 707s and Boeing 737s should also be taken into consideration. Apparently a Boeing 707 plane consumes two times as much fuel as a Boeing 737. It is estimated that the former aircraft consumes Rs. 2,500 worth of fuel more an hour of flying than the latter. Since an aircraft is flown usually for at least 3,000 hours a year, the additional cost on fuel alone in flying a Boeing 707 aircraft will be Rs. 75 lakhs a year. Since

fuel is imported, there is a hidden foreign exchange drain in operating the Boeing 707 fleet on the domestic routes in preference to Boeing 737 planes, it is pointed out.

When I.A. bought its fleet of Boeing 737s, it traded off 14 of its Viscount planes to the Boeing Company. It is not known why Air-India could not think of a similar arrangement when it bought the Jumbo jets. The Ministry's problem presently is how to solve the clash of interests between the two airlines. It tried to introduce some amount of joint fleet planning, but the experiment has not succeeded. Rightly or wrongly, there is a feeling that the Ministry looks more to Air-India's interests than to I.A.'s. Government sources deny any sort of partial treatment, but the feeling of neglect persists in I.A. circles.

If the Minister has any plan to iron out these differences, no one knows about it. A solution suggested is the merger of the two airlines, but this is a remedy which might create more problems than it could solve. A joint board or a holding company could be another solution, but there is not much enthusiasm in the Ministry for this remedy either. But a solution has to be found to set things in order in the civil aviation field. Any delay in sorting out the fleet operation problem will only create new difficulties.

AIR FRANCE

Order for Concorde

The first of the Concorde jetliners ordered by Air France is approaching the flight-test stage. "You can call it the definitive Concorde—a cleaner, more powerful and slightly longer supersonic aircraft than is at present available," said a spokesman of the British Aircraft Corporation (B.A.C.) in Filton, near Bristol, south-west England. B.A.C. and Aerospatiale of France are the joint builders of the aircraft. The president of Air France, M. Georges Galichon, and the president of Aerospatiale, M. Henri Ziegler, signed recently in Paris for four Concorde at a price of £13,000,000 an aircraft. Air France has an option on four more Concorde. The airline has already announced that it will fly the Concorde on the Paris-New York, Paris-Rio de Janeiro and Paris-Tokyo (via Siberia) routes.

An Important Supreme Court Judgment on Deduction of Wealth Tax as Expenditure

By C. R. Thiagaraja Varma

In a recent judgment, the Supreme Court has held that wealth tax paid by the assessee, a trading company, on assets held by it for the purposes of its business was deductible as a business expense in computing the assessee's income from business. But the Wanchoo Committee has held a different opinion.

IN the course of its review of the various exemptions, deductions, reliefs, etcetera, allowed by the tax laws with a view to their modification, curtailment or withdrawal, the Wanchoo Committee considered, among other things, the question of allowing wealth tax as an admissible deduction in computing the taxable income. However, the committee did not favour any amendment to the law for allowing the wealth tax payable by an assessee as a deduction in determining his total income. According to the committee, "when the maximum marginal rate of income-tax is itself high, allowing wealth tax to be deducted from the income liable to income-tax will virtually amount to exemption from wealth tax in cases where the maximum marginal rate of income-tax is attracted and the relief in all high income cases will be very considerable and in the process the purpose of levying wealth tax will be defeated." While arriving at this conclusion, the committee was also influenced by the Supreme Court's decision in Travancore Titanium Products Ltd versus C.I.T. (1966) 60 I.T.R. 277 where the deduction of wealth tax payable in respect of business assets as expenditure was held to be inadmissible.

There was a feeling in knowledgeable circles that the above view of the Supreme Court required reconsideration. Fortunately, the Supreme Court itself recognised this need and reviewed its decision in Travancore Titanium case in the course of its recent judgment in Indian Aluminium Co. Ltd versus C.I.T. (1972) 48 I.T.R. 735. It is gratifying to note that the Supreme Court itself accepted that the decision in Travancore Titanium case was erroneous. As a review of the decision is not likely to cause any public in-

convenience, hardship or mischief and as the decision will affect numerous assessee, the Court thought it fit to review the decision. As a result, the decision in Travancore Titanium case was modified and overruled in part. The Supreme Court held that the wealth tax paid by the assessee, a trading company, on assets held by it for the purposes of its business was deductible as a business expense in computing the assessee's income from business.

It would be interesting to analyse the judgment briefly in order to understand the basis of the revised conclusion. The point involved was whether the wealth tax paid by the assessee could be deducted as an expenditure laid out or expended wholly and exclusively for the purposes of the busi-

ness. This aspect of deductibility or otherwise of an expenditure has engendered judicial conflict not only in India but also in the U.K. Attempts have been made by eminent judges to formulate correct tests to determine whether an expenditure has been laid out or expended wholly and exclusively for the purpose of business or not. However, no one has been able to find a test in the application of which differences of opinion do not arise.

In fact, the error which crept into the decision in Travancore Titanium case could be traced to an application of one such tests laid down in the House of Lords in Strong and Co. of Romsey Ltd versus Woodfield (1906) 5 T.C. 215 by the Lord Chancellor who said that expenses cannot be deducted in computing profits if they are mainly incidental to some other vocation, or fall on the trader in some character other than that of trader. The nature of the trade should also be taken into consideration.

Applying this decision as well as certain others which followed the same reasoning, the Supreme Court adopted the test in the Travancore Titanium case that to be a permissible deduc-

not interfere with the day-to-day

tion there must be a direct and intimate connection between the expenditure and the business, i.e., between the expenditure and the character of the assessee as a trader and not as owner of assets, even if they are assets of the business. Consequently to the review of this decision, the Supreme Court has qualified the above test by stating that if the expenditure is laid out by the assessee as owner-cum-trader and the expenditure is really incidental to the carrying on of his business, it must be treated to have been laid out by him as a trader and as incidental to his business.

In making this qualification the Supreme Court has been very much influenced by the decision of the House of Lords in *Smith versus Lion Brewery Company* (1910) 5 T.C. 568 and *Usher's Wiltshire Brewery Ltd versus Bruce* (1914) 6 T.C. 399, the decision of the Court of Appeal in *Harrods (Buenos Aires) Ltd versus Taylor-Gooby* (1964) 41 T.C. 450 and the decision of the High Court of Australia in *Mofatt versus Webb* (1913) 16 C.L.R. 120. Of these cases, the last-mentioned case alone was not cited in the Supreme Court when the Travancore Titanium case was assigned.

The Supreme Court felt that commercial practice and trading principles also warrant such deductions of a tax on assets or capital used wholly and exclusively for carrying on trade or earning profits. They may preclude deductions of taxes on net profits but not those imposed on net assets or wealth used exclusively for making profits. Thus the causal connection between payment of tax and that part of net wealth which is used wholly and exclusively for trade and not the mere character or capacity for the possession of which the tax is demanded which determines whether it is an allowable deduction or not.

As rightly pointed out by Mr. Justice Beg in his separate judgment, the Wealth Tax Act was not intended to strike at or check expansion of commercial activities. Its underlying purpose was the removal of disparities of individual or personal wealth and not injury to trade. It is a tax aimed at individuals whose wealth exceeds certain limits. He was emphatic that nothing less than express statutory provision would justify a denial of the right to deduction of wealth tax paid. That part of the wealth tax which falls on what is used exclusively for trade can really be ascribed only to a trading character. To the extent it is a tax on property used for earning profits it must enter into a computation of profits from trading. It is only fair that the burden of proving whether the whole or a part of the wealth tax paid by an assessee is attributable wholly and exclusively to the carrying on of a trade and therefore is an allowable deduction should rest upon the assessee in each case.

As pointed out by the Supreme Court, in the case of individuals who have both business assets and debts, it should not be difficult to evolve a principle or frame statutory rules to find out the proportion of the wealth tax which is really incidental to the carrying on of the trade. In fact, the wealth-tax return form itself requires the assessee to show his business assets and liabilities and non-business assets and liabilities separately. Thus the Wealth Tax Act makes that part of the net wealth separable which can be utilised wholly and exclusively for trade from the remainder of it.

Let it be hoped that even if the Government does not come forward with a specific amendment to provide for such deduction, it will be wise enough not to introduce any amendment in order to supersede the Supreme Court's decision in the Indian Aluminium case.

MONEY AND BANKING

Need to Streamline the Training Programme for Bank Personnel—II

(By a Special Correspondent)

Many big banks have set up institutes for the training of their staff. But they have apparently been established more to meet official requirements than institutional needs. This is the second in a series of two articles. The first appeared last week.

APART from the Bankers Training College in Bombay and the Co-operative Bankers Training College in Poona sponsored by the Reserve Bank of India, Bank of Baroda, Bank of India, Bank of Maharashtra, Canara Bank, Punjab National Bank, State Bank of India, Syndicate Bank, United Bank of India and Union Bank of India have also established their own training colleges. The Central Bank of India and the Dena Bank have sponsored the Sir Sorabji Pochkhanawala Bankers Training College at Irla, Bombay, while the Bank of India and the Bank of Baroda also have a joint college in Bombay, although one of the banks reportedly does not participate in the training programme.

Particulars furnished to the working group indicate that apart from the State Bank of India, the State Banks of Saurashtra, State Bank of Mysore and the State Bank of Patiala have also separate training schools for their officers while the State Bank of Travancore and State Bank of Bikaner and Jaipur have training institutes largely for their clerical staff. Although the State Bank and its seven subsidiaries have separate identities, one does not understand why the bank has not taken steps to centralise all training activities under one roof as is being done by the B.T.C. for the entire banking industry, instead of five of the subsidiaries having separate training institutes. The State Bank also conducts a training school for cashiers and clerks. Perhaps the bank's regional training centres or schools could look after the training of clerical staff of the entire complex including the subsidiaries. More centres could be set up to meet the requirements, and all the officers

could be trained at one centre. This should enable it to make its training programme more effective and purposeful and also minimise expenses and avoid duplication or multiplicity of institutions.

Likewise, although each of the nationalised banks has set up regional training centres all over the country for their clerical staff, they should sponsor joint colleges at various centres to train their officer staff. The experience of the two joint colleges does not, however, appear to be too happy. The National Institute of Bank Management has already taken steps to set up two regional colleges for the smaller banks but one does not know why there should be a distinction between big and small banks or why there should be any sensitiveness about identity even in the matter of training. Whatever the future set-up of banks may be, the N.I.B.M. should now take steps to pursue the recommendations of the working group as also its review committee in the light of the recommendations of the Banking Commission so that it may facilitate the evolution of a banking cadre, besides meeting the urgent needs of the banking industry.

The N.I.B.M. has been in existence for over three years and it is necessary to make its rôle more meaningful and purposeful. It should have an effective control over all training institutes in the banking industry, including the B.T.C. There are indeed certain other institutes concerned with and supported by the banking industry, such as the Indian Institute of Bankers and the Indian Banks Association. The Banking Commission has recommended the merger of the activities of the Agricultural Refinance Corporation and the Agricultural Finance Corporation. Where then is the need for a multiplicity of institutions as long as their goals are the same? They cannot function in isolation and their rôles are not opposed to each other's and, therefore, all such institutes should be brought together under a unified control and should be assign-

ed functional rôles so that there is no conflict or duplication of effort. There is thus a strong case for bringing together the N.I.B.M., the I.I.B. and the I.B.A.

There is also a strong case for examining the structure of the various training colleges now in existence. According to the directory of courses, 1970-71, published by the N.I.B.M., apart from the B.T.C. and the State Bank of India's college, ten of the nationalised banks have set up their own training institutions, two of them a joint college and another two a joint college in addition to their separate colleges. Particulars furnished to the working group show that the State Bank staff training college has a principal who is one of its retired officers and six instructors, all from the bank. It conducts four courses in addition to special courses from time to time and also holds seminars for relatively senior officers and trains about 400 officers in a year.

The joint college of the Bank of India and Bank of Baroda has one principal who is a retired executive of another bank and nine instructors deputed by the banks. It conducts two courses and trains about 168 officers from both the banks. The Bank of India college has a principal and seven instructors all from the bank while the Bank of Baroda college has a principal and six instructors, all from the bank. It conducts one course and trains about 40 officers apart from others. The Central Bank of India and Dena Bank joint college has perhaps the highest capacity with a large building, hostel and residential quarters built at a cost of over Rs. 60 lakhs but it has still to function in full swing, although both the banks have big plans of branch expansion and together account for about 1,500 branches. It had one principal who was a retired official of the Reserve Bank, and four instructors, two from each bank. It had plans to conduct courses all round the year.

The Punjab National Bank college has a principal who was formerly with the Reserve Bank and also served a term as an instructor at the B.T.C., and six other instructors from the bank. It conducts five courses and trains about 90 officers. The United Commercial Bank college conducts a banking course for officers of the level of accountants and junior managers and trains about 19 officers. There are three or

"You don't look as if you've spent a long hard day at the office," said my wife.

(Suspicious, that's what women are!)

Why doesn't somebody tell her about Blue Star Packaged Climate Systems?

Understandable. A working woman would know better but the housewife seems to take it for granted that a day in the office ought to make a wreck of any man. Obviously, nobody's told her about highly productive modern offices and Blue Star Packaged Climate Systems!

The result of 30 years' experience and know-how these Packaged Climate Systems are designed to give you perfect working climate throughout the year. So that you work better... harder. And still have energy left to confuse your wife after a long hard day at work!

India's first and finest:

Blue Star Packaged Climate Systems

- Ideal for Banks, Offices, Showrooms, Department Stores, Restaurants, Hotels, Clubs, Canteens, Hospitals, Beauty Parlours.
- Reasonably priced and quality-built to work with amazing efficiency, economy, flexibility.
- Available in 3 capacities—5, 7.5 and 10 H.P.
- Choice of water or air cooled models.
- Dependable and trouble-free in performance; backed by Blue Star's warranty and free service for one year, and a countrywide network of service centres.

Prasyn 16/72

four regular officers on its faculty. The United Bank of India college conducts five courses and trains about 200 officers. It has a superintendent and three instructors, all from the bank. The Indian Overseas Bank college conducts about six courses and trains about 45 officers. It has a principal who is an outsider and two tutors who are officers of the bank. The Union Bank college conducts four courses and trains about 64 officers. It has a principal, who was formerly with another bank, and four tutors from the bank. The Canara Bank training school conducts a senior course in banking and trains about 80 officers. It has two instructors, sometimes assisted by a third.

The Academic Committee of the N.I.B.M. appointed a review committee on the training programme of commercial banks. The committee made specific recommendations concerning the infrastructure, training programmes, personnel development and management policies and general evaluation. Training programmes in these institutes were viewed in the total context of management development of respective banks. The report of the committee was discussed in a workshop on management development in the banking industry in March 1970 by the principals of training colleges, senior bankers, custodians and chairmen who recommended its adoption.

This committee, like the working group, had suggested an excellent approach to the problem and its views on the subject are unexceptionable. Dealing with the infrastructure, the committee observes: "The nature and quality of instruction provided by these colleges ultimately depend upon the calibre of the teaching staff." It was of the opinion that "in most of the colleges the size of the teaching faculty is somewhat small and in quite a few cases did not exceed two or three in number. A group as small as two or three instructors has its inevitable limitations of not being able to undertake either the type of training activities necessary or on the scale on which training has to be developed. It also makes it difficult for the instructors to develop any type of specialisation or expertise in the various fields of banking operations." All this apparently proves that some of these institutes have been set up to meet official rather than to meet institutional requirements.

(Concluded)

CAPITAL, 24th AUGUST, 1972

INVESTMENT

Steadier Trend in Shares : Turnover Still Restricted

THE stock markets have continued to display a weak tendency this past week. Movements have been irregular but confined within a small range. After a further early retreat, the markets have tended to look up under the influence of some favourable factors, but could not make much headway and near the week-end slipped again to a new low for the year. The price pattern at the close of the week has, however, been a mixed one, indicating that the markets are becoming somewhat reluctant to move further down. Turnover remains small with outside public participation shrinking to a trickle.

Reports, since denied, that the Government was likely to accept the Wanchoo Committee's recommendation forbidding individuals and institutions to hold more than Rs. 5,000 in unaccounted cash at any time made for a shaky start. Selective institutional buying, mostly by the Unit Trust, has imparted a measure of stability. Sentiment has also been aided by a number of other favourable influences. Since equity prices have already registered a big decline, technical considerations have favoured a rally. The outlook for *khari* crops has considerably improved as a result of good and widespread rains all over the country. The corporate news has been reasonably pleasing. The Prime Minister's statement that nationalisation is not the only answer to the country's economic problems has been viewed with some satisfaction as the markets have been becoming increasingly concerned over the takeover craze.

The Central Industrial Development Minister, Mr. C. Subramaniam's defence of the issue of industrial licences for expansion to firms belonging to the houses of Birla and Tatas has created a favourable impression. Reports that the Central Cabinet has decided to increase the compensation for Indian general insurance companies have also helped trading sentiment. The mood, however, remains unsettled and investors' confidence has sunk to a new low. There is general reluctance to make fresh purchases, although the substantial decline in prices over the past

few months is thought to have brought a good many shares to fairly attractive levels. Sellers are becoming increasingly shy.

Gilt-edged securities have remained steady this past week, although turnover has not greatly improved. The 3 per cent Conversion loan 1986 has been quoted at Rs. 59.95. The State Government loans have received selective support, although the volume of business has remained restricted.

The Calcutta stock market has remained quietly steady this past week. There has been a mild rally in cleared securities on short-covering and replacement buying. But operators have generally been reluctant to extend their commitments. So turnover has remained restricted. The introduction of the Companies Amendment Bill in the Lok Sabha, talk of fixing a ceiling of Rs. 5,000 on cash holdings by individuals, Hindu joint families, companies and associations and the Prime Minister, Mrs. Indira Gandhi's statement that radical changes in the industrial structure were inevitable, have affected sentiment. But reports of higher compensation to Indian general insurance companies have been regarded as good news. Among engineering shares, Guests Keen Williams, Sankay Wheels and Simon Carves have been steadier. Among jute shares, Kankarrah, Budge-Budge and New Central have been transacted. Among coal shares, Bengal Amalgamated and East Indian have reacted. Among paper shares, Orient, Titagur and Tribeni Issues have improved. Among miscellaneous shares, Ruby General Insurance, Universal Tyres, B.I.C., Inchek Tyres and Usha Martin Black have been supported. Among tea shares, Hasimara, Huldibari, Teesta Valley and Bishnauth have been traded.

Dalal Street has performed slightly better this past week. After an initial weakness, equity prices have developed a somewhat steadier tone. Reduced offerings at lower levels, short-covering and selective purchases by the Unit Trust have not only erased early losses but many counters have managed to wind up with small gains.

Activity, however, has been restricted and outside public interest has been poor. Despite fairly large institutional support—the Unit Trust has fairly large surplus funds to invest in equities—individual investors are inclined to keep off the market because of the various uncertainties on the economic front. Quite possibly Dalal Street may have given a still better performance but for the strike by the employees of the Municipal Corporation's B.E.S.T. undertaking and the State Road Transport Corporation. The strike fever is still running high and one does not know how the situation might develop. Cotton textiles have maintained a quietly steady tone on ideas of improved corporate results. Except Century, which have been marked a little lower on balance on speculative pressure, other textile shares like Standard and Kohinoor have recorded small gains. Rayons have also fared better with most counters closing with plus signs. Steel shares have ruled steady on scarcity of fresh offerings and short-covering. Engineering shares have made a mixed showing, but net changes have

COMPANY REPORTS

Reports relating to the following companies appear on later pages of this section :

Bajaj Auto

BOAC

Digvijay Cement

Digvijay Woollen

Hindustan Lever

Hindustan Sanitaryware

India Engineering

India Tobacco

Indian Rubber

Larsen and Toubro

Philips India

Ramon and Demm

Star Textile

been small. Chemicals have displayed a slightly steadier tone. Gujarat Fertiliser, N.O.C.I.L., Polyolefins, and Synthetics and Chemicals have recorded moderate gains. Cement shares have ruled easier because of the cement workers' strike. Among shipping shares, Scindia have held distinctly firm while Great Eastern have been subdued.

The Madras stock market has generally remained dull during the past week. In the planting section, Peria Karamalai and Manjushree have been bought. Consolidated Coffee and Kailash have also attracted buying enquiries. The textile shares have recorded little change. Madura Mills and Loyal Textiles have evoked interest. But Travancore Rayons and South India Viscose have declined on selling pressure. In the miscellaneous section, Indian Steel Rolling have declined while Trichy Steel have met with some business. Ashok Leyland and Mettur Chemical have also been traded. Among paper shares, Seshasayee Industries and Mysore Paper have been traded. Among sugar shares, Deccan Sugar have noted business while E.I.D. have declined on selling pressure. Andhra Sugar and Aruna Sugar have declined on selling pressure. There has been very little change in bank shares during the week.

India Tobacco : Steady Progress Towards Self-reliance

IN his chairman's statement at the recent annual general meeting of India Tobacco Company Ltd, Mr. A. N. Haksar reviewed the progress of the Company towards the nation and consumer orientation on the occasion of the country's completion of the twenty-fifth year of independence. (A full text of the statement was published in last week's issue of *Capital*.) The chairman said that the progress of the Company depends upon the confidence of the public on the one hand and service to consumers on the other. He reviewed some important aspects of the Company in the context of the country's problems and in the furtherance of Government policies. Keeping in view the Government's policy of "Indianisation", the Company's Indian shareholding was increased from Rs. 1 crore to Rs. 4.79 crores in 1970. In the final phase, majority Indian capital will be achieved through the implementation of further projects which

will be put up to the Government for consideration in due course. The Company, in every aspect of its operations, has pursued to achieve self-reliance in professional management, machines, and materials. It is making a determined effort to earn foreign exchange. In the past 25 years, the Company's group exports of tobacco have amounted to a total of Rs. 152 crores, and in recent years such export of unmanufactured tobacco has averaged around Rs. 10 crores a year.

The Company set up a research and development wing with a well-equipped modern laboratory in Calcutta in 1952. Encouraged by the achievements of this wing, the Company is expanding its research activities and is setting up an integrated research centre in Bangalore at a cost of approximately Rs. 40 lakhs. It was given the 1971 award for outstanding contribution in the field of industrial relations by the

Federation of Indian Chambers of Commerce and Industry. The Company's philosophy is based on pride in home product with quality, service and satisfaction for consumers. Modernisation for the processing of tobacco has been undertaken at all the factories for further improvement in quality. The Company welcomes healthy competition and has offered its know-how on technology and marketing to everyone in the industry. It is fighting inflationary expenses through higher productivity, innovation, improved technology and greater efficiency in the deployment of resources. Mr. Haksar looks forward to the future with confidence and says that in the ensuing years the Company will be "doing its best to hopefully implement its diversification plans."

BOAC

Operating Surplus

BOAC has announced an operating surplus of £2 million for the financial year 1971-72, but a loss of £1.4 million after deduction of interest, taxation and allowance of net non-operating expenses. This compares with the 1970-71 operating surplus of £5.9 million and a group profit of £3.4 million. BOAC will pay the British Government a dividend of £3.25 million representing a 5 per cent return on public capital invested in the airline. The annual report says that the airline's profitability was adversely affected by a number of factors. The lower rates for the carriage of mail cost around £2 million and uncontrolled proliferation of "charter" flights continued to poach on scheduled traffic. The weakness in the American and British markets was a depressing influence. The vigilance against hijacking was maintained despite the adverse effect on punctuality and costs.

Additional factors were the war between India and Pakistan which disrupted BOAC operations on the eastern routes, the devaluation of the dollar which undermined the fare structure and the imposition of *en route* navigation charges, increase in fuel costs and landing fees. Sir Keith Granville, chairman, said that there were already some positive indications that the major markets were improving and traffic beginning to increase once again. He stated that load factors into and out of the U.K. were already approaching charter levels. He had every reason to hope the Government policies would be successful in finding a viable solu-

tion to scheduled and charter relationship.

BAJAJ AUTO

A Good Year

THE working results of Bajaj Auto for the year ended March 1972 show an appreciable improvement over the previous year's performance. The preliminary figures show an increase of 21.3 per cent in sales from Rs. 12.57 crores to Rs. 15.25 crores and the gross profit is up by 22.4 per cent from Rs. 2.32 crores to Rs. 2.84 crores. The equity dividend has been kept unchanged at 12 per cent. After providing Rs. 51.50 lakhs (against Rs. 46.26 lakhs) for depreciation, Rs. 7.25 lakhs (against Rs. 6.40 lakhs) for development rebate reserve and Rs. 151.46 lakhs (against Rs. 113.20 lakhs) for taxation, the net profit for 1971-72 amounts to Rs. 73.87 lakhs, against Rs. 66.15 lakhs in the preceding year. The surplus has been transferred to general reserve out of which the proposed dividend absorbing Rs. 18.80 lakhs (same) will be paid.

DIGVIJAY CEMENT

Share Offer

SHREE Digvijay Cement has decided to offer its shareholders equity shares of West Coast Paper Mills, a subsidiary, in the ratio of one West Coast share for every ten Digvijay shares. The West Coast share of the face value of Rs. 100 is being offered at Rs. 140 and the entire sale price is payable in full on acceptance of the offer. The offer is sequel to the Company's decision to release 24,938 equity shares of West Coast Paper from its own holding.

HINDUSTAN LEVER

Good Progress

HINDUSTAN Lever has reported improved results for the half-year ended June 1972. The preliminary figures show that sales, profit and margins are higher than in the same period last year. Sales during the first six months of the current year are placed at Rs. 76.80 crores, against Rs. 71.16 crores during January-June 1971, representing an increase of about 8 per cent. The pre-tax profit is higher by about 15 per cent at Rs. 4.32 crores, against Rs. 3.76 crores. After providing Rs. 6 lakhs (against Rs. 13 lakhs) for

expenditure on scientific research and Rs. 2.74 crores (against Rs. 2.10 crores) for taxation, the net profit amounts to Rs. 1.52 crores, against Rs. 1.47 crores during the first half of 1971. During the year ended December 1971, the Company had made a pre-tax profit of Rs. 7.59 crores on a turnover of Rs. 134.10 crores, against Rs. 5.48 crores on a turnover of Rs. 119.21 crores in 1970. Exports are also running at a satisfactory level and the directors expect the Company to exceed last year's record export figure of Rs. 5.52 crores.

INDIAN RUBBER

Sales Up but Profit Down

DESPITE a rise of 10 per cent in sales from Rs. 110.85 lakhs to Rs. 122.47 lakhs, the gross profit made by Indian Rubber Regenerating Company during the year ended March 1972 has declined by about 15 per cent from Rs. 19.79 lakhs to Rs. 16.83 lakhs, indicating pressure on margins because of higher costs of production. The dividend has been maintained at 12 per cent. After providing Rs. 10.43 lakhs (against Rs. 9.36 lakhs) for depreciation, Rs. 1.25 lakhs (against Rs. 2.66 lakhs) for development rebate reserve and Rs. 1.19 lakhs (against Rs. 1.15 lakhs) for taxation, the net profit for 1971-72 amounts to Rs. 3.96 lakhs, against Rs. 6.62 lakhs in the preceding year. After certain adjustments, a sum of Rs. 4.28 lakhs (against Rs. 5.55 lakhs) has been transferred to general reserve

out of which the proposed dividend absorbing Rs. 4.20 lakhs (same) will be paid.

The Company's production of reclaimed rubber amounted to 7,262 tonnes during 1971-72, against 6,456 tonnes in the previous year. Its exports were higher at 801 tonnes, against 276 tonnes. The Company has installed another rotary autoclave as part of its expansion and modernisation programme which along with other balancing equipment will go on stream by October.

HINDUSTAN SANITARYWARE

Sales and Profit Rise

HINDUSTAN Sanitaryware and Industries Ltd has fared well during the year ended March 1972. Sales have improved from Rs. 1.54 crores to Rs. 2.09 crores, and the net profit has risen from Rs. 15.02 lakhs to Rs. 19.33 lakhs, after transferring Rs. 11.81 lakhs (against Rs. 11.04 lakhs) for depreciation, Rs. 45,000 (against Rs. 1.15 lakhs) for development rebate reserve and Rs. 25.82 lakhs (against Rs. 12.40 lakhs) for taxation. In view of higher earnings the directors propose to raise the equity dividend to 10 per cent from the previous year's 8 per cent. This offers a yield of 5.9 per cent at the present price of Rs. 16.87 a share of

PHILIPS INDIA : SHARE ISSUE

THE directors of Philips India Ltd propose to issue 1,330,000 new equity shares of Rs. 10 each at a premium of Rs. 15 a share, as approved by the Controller of Capital Issues on the following basis: (1) 294,000 equity shares to N. V. Philips' Gloeilampenfabrieken, Holland, in conversion of its foreign currency loan to the Company; (2) 420,000 equity shares to the existing shareholders resident in India in the proportion of one equity share for every four shares held; (3) 92,400 equity shares to the wholtime Indian directors and Indian employees of the Company; and (4) 523,600 equity shares to the Indian public. The entire amount of Rs. 25 a share (Rs. 10 on capital account and Rs. 15 on premium account) will be

payable in full on application. It is expected that the new equity shares will be offered to the public early in December this year. The new shares will rank *pari passu* in all respects with the existing equity shares of the Company except that they will not participate in any dividend which may be declared in respect of any period ending on or prior to 31st December, 1972. The issue of the new equity shares will increase the participation of the Indian public in the equity capital of the Company from 31 per cent to 40 per cent. Later this year, the directors hope to declare an interim taxable dividend, not exceeding 12 per cent, on the existing equity shares for the year 1972.

5³/₄ PERCENT STATE GOVERNMENT LOANS, 1984

STATE	Amount of Loan (In crores of Rs.)	Issue price per cent Rs.
1. Andhra Pradesh	20.50	100.00
2. Assam	4.50	100.00
3. Bihar	12.00	100.00
4. Gujarat	12.50	100.00
5. Haryana	7.50	100.00
6. Himachal Pradesh	1.00	100.00
7. Kerala	7.00	100.00
8. Madhya Pradesh	9.00	100.00
9. Maharashtra	19.75	100.00

16. Tamil Nadu	20.00	100.00
17. Uttar Pradesh	19.75	100.00
18. West Bengal	13.00	100.00

All loans will open for subscriptions on Monday, 4th September 1972 and close on Saturday, 9th September 1972 or earlier without notice as soon as subscriptions approximate to the amount of each issue. All the State Governments reserve their right to retain subscriptions upto ten per cent in excess of the notified amounts.

The loans will be redeemable at par after 12 years i.e. on 4th September 1984 and interest will be paid half-yearly on 4th March and 4th September each year. Interest in respect of all loans will be liable to tax under the Income-tax Act 1961. Interest on Government securities along with income in the form of interest or dividends on other approved investments will be exempt from Income-tax subject to a limit of Rs. 3,000/- per annum and subject to other provisions of Section 80L of the Income-tax Act, 1961.

The value of investments in the Loans now issued together with the value of other previous investments in Government securities and the other investments specified in Section 5 of the Wealth Tax Act, 1957 will also be exempt from the Wealth Tax upto Rs. 1,50,000/-.

Subscriptions may be in the form of CASH/CHEQUE.

Securities of the following loans will also be accepted AT PAR for conversion into the new loans of the respective State Governments:—

NAME OF THE LOAN TENDERED FOR CONVERSION	NAME OF THE NEW LOAN ISSUABLE
1. 4 ¹ / ₄ % Andhra Pradesh State Development Loan, 1972.	5 ³ / ₄ % Andhra Pradesh State Development Loan, 1984.

7. 4 ¹ / ₄ % Orissa Government Loan, 1972.	5 ³ / ₄ % Orissa Government Loan, 1984.
8. 4 ¹ / ₄ % Mysore State Development Loan, 1972.	5 ³ / ₄ % Mysore State Development Loan, 1984.
9. 4 ¹ / ₄ % Punjab Loan, 1972.	5 ³ / ₄ % Punjab Loan, 1984.
10. 4 ¹ / ₄ % Rajasthan State Development Loan, 1972.	5 ³ / ₄ % Rajasthan State Development Loan, 1984.
11. 4 ¹ / ₄ % Madras Loan, 1972.	5 ³ / ₄ % Tamil Nadu Loan, 1984.
12. 4 ¹ / ₄ % Uttar Pradesh State Development Loan, 1972.	5 ³ / ₄ % Uttar Pradesh State Development Loan, 1984.
13. 4 ¹ / ₄ % West Bengal Loan, 1972.	5 ³ / ₄ % West Bengal Loan, 1984.

Rs. 10 each. The entire profit has been transferred to general reserve.

The year's production has been 41 per cent higher at 5,002 tons, against the previous year's production of 3,539 tons. Barring unforeseen circumstances, the current year's production is expected to reach the licensed capacity of 5,400 tons. An import licence for a re-fire kiln and other balancing equipment has been received. The increase in prices of raw materials and fuel was supposed to be covered by the increase in prices of finished products last year, but due to the non-availability of wagons raw materials were procured by trucks from long distances and expenses on this account increased substantially.

LARSEN AND TOUBRO

Grass Drying Plant

DAIRY, livestock and poultry farmers can have, for the first time in India, dehydrated grass, rich in proteins, vitamins and minerals. The

first plant in India for drying green grass is being set up for Desai Dehydration Enterprises by Larsen and Toubro Ltd. The latter will fabricate and erect the plant, on a turn-key basis, on the design of Atlas of Denmark. Located at Vapi, in Bulsar district of Gujarat, the plant has an annual capacity to turn 18,000 tonnes of green grass into 5,000 tonnes of meal—to be filled in bags or made into pellets or cubes.

DIGVIJAY WOOLLEN

Good Performance

SHREE Digvijay Woollen Mills has reported substantially improved results for the year ended March 1972. Sales are up by 12 per cent from Rs. 2.34 crores to Rs. 2.63 crores and the gross profit of Rs. 47.18 lakhs shows an increase of 34 per cent over the previous year's figure of 35.06 lakhs. The ratio of profit to sales has improved from around 15 per cent to 18 per cent. Despite these good results, the divi-

dend has been kept unchanged at 10 per cent in order to plough back as much as possible to finance the capital expenditure to be incurred on modernisation and renovation this year and the next.

After providing Rs. 7.24 lakhs (against Rs. 6.32 lakhs) for depreciation, Rs. 1.18 lakhs (against nil) for development rebate reserve and Rs. 27 lakhs (against Rs. 16.50 lakhs) for taxation, there is a surplus of Rs. 11.76 lakhs, against Rs. 12.24 lakhs, which is being transferred to general reserve out of which the proposed dividend will be paid. The Company has received an import licence for Rs. 30.21 lakhs to enable it to implement its modernisation programme. Foreign exchange for this purpose has been arranged with the I.C.I.C.I. and orders for machinery have already been placed. With the installation of new machines by February 1973, the Company will be able to improve the quality of its products and thus meet the demands of the highly sophisticated markets abroad.

5³/₄ PERCENT STATE GOVERNMENT LOANS, 1984—Contd.

Interest on the maturing securities accepted for conversion will be paid at the rate of 4¹/₄% per annum upto and inclusive of 3rd September 1972.

Applications for all the loans will be received at the offices of the Reserve Bank of India at Ahmedabad, Bangalore, Bombay (Fort and Byculla), Calcutta, Hyderabad, Kanpur, Madras, Nagpur, New Delhi and Patna and the branch of State Bank of Bikaner and Jaipur at Jaipur.

Applications will also be received at other places within the respective States as follows:

- Branches of the Subsidiary Banks of the State Bank of India conducting Government treasury work except at Hyderabad.
- Branches of the State Bank of India at places where there is no branch of its Subsidiary Banks conducting Government treasury work.
- Branches of the State Bank of Patiala conducting Government Treasury work within the State of Himachal Pradesh.

Applications for Kerala, Himachal Pradesh, Meghalaya and Nagaland State Government Loans will also be received at Treasuries and Sub-Treasuries in the State of Kerala, Himachal Pradesh, Meghalaya and Nagaland at places where there is no branch of the State Bank of India or its subsidiaries conducting Government Treasury work. Applications for Uttar Pradesh State Development Loan will also be received at the District Treasury, Chamoli.

Applications for Punjab and Haryana State Government Loans will also be received at the State Bank of India, Chandigarh.

Copies of the Notifications and Application Forms may be obtained from any of the Receiving Offices mentioned above.

Applicants tendering applications at the offices of the Reserve Bank of India at Ahmedabad, Bangalore, Bombay (Fort and Byculla), Calcutta, Hyderabad, Kanpur, Madras, Nagpur, New Delhi and Patna will, in the event of over-subscription to the loan applied for, be given the option of transferring their cash refunds to any of the other State Government loans which may still be open for subscription. To avail themselves of this facility, the applicants should complete the "Special Option Form", copies of which can be obtained at any of the offices of the Reserve Bank of India mentioned above and tender the form along with their applications.

PRAGA JACKS

When you require a fast Drilling Machine ask Jacks about Praga

Praga chose William Jacks to distribute their Drilling Machines because they are one of the pioneers in the marketing business. They have operated in India for over 60 years and are specialists in marketing engineering products. Jacks have developed a network of sales and service outlets. A specialist team for providing after-sales service is also maintained and there is an efficient and effective system for stocking and distributing spare parts, to attend to the emergency requirements of customers within a matter of a few hours.

Designed for fast drilling operation and consistent accuracy, these Praga Drills will satisfy the most exacting users with

their performance and durability. They will drill, ream and tap a variety of materials speedily, easily and accurately with their wide range of speeds. Without vibration even minute holes are drilled at 16 spindle speeds with a maximum speed of 12,400 RPM. Call Jacks in and you will learn about the dynamically balanced rotating parts which give vibration-free running and are precise to the highest degree. The running costs are reduced, there is better quality work and faster output.

What more could you ask for?

For Precision Machine Tools the name is **Praga**

INDIA ENGINEERING

A New Venture

INDIA Engineering and Construction Company is a new venture set up to undertake the manufacture of steel tubular poles, swaged and telescopic type. The Company has been licensed to manufacture these poles for a capacity of 39,000 tonnes a year. The plant is being set up in a backward region of U.P. The West German firm of Orgena Walzwerk-technik is providing the technical know-how, designs and drawings. If all goes well, the plant is expected to be completed by the end of this year and it will achieve 50 per cent of the productive capacity during 1972-73. Full capacity production will be achieved in 1974-75. The project is estimated to cost Rs. 93 lakhs which will be met by the share capital of Rs. 30.70 lakhs and loans from financial institutions. The Company is expected to enter the market shortly to raise Rs. 30.70 lakhs consisting of Rs. 25.70 lakhs in equity shares of Rs. 10 each and Rs. 5 lakhs in 9.5 per cent cumulative redeemable preference shares of Rs. 100 each. The Company has a proposal to set up a strip mill plant near the tube mill.

STAR TEXTILE

Setback Suffered

STAR Textile Engineering Works has suffered a setback during the year ended 1st January, 1972 and the dividend has been reduced from 12 per cent to 8 per cent. The dividend for 1971 is partly tax-free, compared with the wholly taxable dividend for 1970. Sales at Rs. 2.07 crores are 18.5 per cent lower than the previous year's Rs. 2.54 crores. The gross profit has shrunk by nearly 42 per cent from Rs. 19.85 lakhs to Rs. 11.65 lakhs. After providing Rs. 5.43 lakhs (against Rs. 6.65 lakhs) for depreciation, nil (against Rs. 21,000) for development rebate and Rs. 3.05 lakhs (against Rs. 3.20 lakhs) for taxation, the net profit amounts to Rs. 3.17 lakhs, against Rs. 9.79 lakhs in the preceding year. A sum of Rs. 2.50 lakhs (against Rs. 9.49 lakhs) has been transferred to general reserve. The proposed equity dividend will absorb Rs. 2.80 lakhs (against Rs. 4.20 lakhs) and the preference dividend Rs. 1.42 lakhs (same).

The setback in the Company's performance is attributed to the critical financial state of the cotton textile industry in 1971, the major customer of the Company's products. The management expects better results this year in view of the improved conditions in the textile industry and the Company's diversification in the field of jute mill modernisation machinery.

RAMON AND DEMM

Dividend Raised

RAMON and Demm has raised the dividend for the year ended March 1972 from a maiden 8 per cent to 10 per cent. According to the

preliminary figures, the Company has earned a slightly lower gross profit of Rs. 101.42 lakhs, against Rs. 105.40 lakhs in the preceding year, even though sales are up by nearly 10 per cent from Rs. 2.39 crores to Rs. 2.62 crores. The decline in profitability is attributed to a substantial reduction in the Company's selling prices. After providing Rs. 20.31 lakhs (against Rs. 25.50 lakhs) for depreciation and Rs. 4.10 lakhs (against Rs. 45 lakhs) for development rebate reserve, the net profit amounts to Rs. 77.01 lakhs, against Rs. 34.90 lakhs in the preceding year. A sum of Rs. 76.67 lakhs (against Rs. 16.60 lakhs) has been transferred to general reserve out of which the proposed dividend will be paid.

GOVERNMENT OF INDIA

4½ PER CENT LOAN 1979 (REISSUE) TO BE ISSUED AT RS. 100.00 PER CENT AND REPAYABLE AT PAR ON 15TH OF JULY 1979.

5 PER CENT LOAN 1983 (REISSUE) TO BE ISSUED AT RS. 99.50 PER CENT AND REPAYABLE AT PAR ON 15TH OF JULY 1983.

5½ PER CENT LOAN 2002 (REISSUE) TO BE ISSUED AT RS. 100.00 PER CENT AND REPAYABLE AT PAR ON 15TH OF JULY 2002.

Subscriptions to the above loans will be received simultaneously and will be limited to a total of Rs. 215 crores (approximately). Subscriptions may be in the form of cash/cheque. Government reserve the right to retain subscriptions upto ten per cent in excess of the notified amount.

If the total subscriptions received for the loans exceed the notified figure plus the amount of ten per cent retainable as aforesaid, partial allotment will be made in respect of the subscriptions received and the balance refunded in cash as soon as possible.

Interest for the period 15th of September 1972 to 14th of January 1973 inclusive will be paid on 15th January 1973 and thereafter interest will be paid half yearly on the 15th July and 15th January. Interest on all the loans now issued together with the interest on other previous Government securities and income from other approved investments will be exempt from income-tax subject to a limit of Rs. 3,000 per annum and subject to other provisions of Section 80L of the Income-tax Act, 1961. The value of the investments in the loans now issued together with the value of other previous investments in Government securities and the other investments specified in Section 5 of the Wealth Tax Act will also be exempt from the Wealth Tax upto Rs. 1,50,000/-.

Subscription lists will open on the 15th of September 1972 and close on 18th of September 1972 or earlier without notice.

Applications for the loans will be received at:—

- Offices of the Reserve Bank of India at Ahmedabad, Bangalore, Bombay (Fort and Byculla), Calcutta, Hyderabad, Kanpur, Madras, Nagpur, New Delhi and Patna;
- branches of the subsidiary banks of the State Bank of India conducting Government treasury work except at Hyderabad; and
- branches of the State Bank of India at other places in India.

For full particulars please apply to any of these offices or branches.

West Bengal Mills Face Fibre Shortage Due to Inadequate Supply of Wagons

IN view of the distressing unemployment situation in West Bengal, it is to be expected that the railway authorities will allot enough wagons expeditiously so that jute mills are not obliged to close down for want of raw jute, observes a Press note issued by the Indian Jute Mills Association in Calcutta a few days ago. The note refers to the extreme shortage of raw jute being faced by many units in the industry due to the "want of sufficient number of wagons to move the fibre held by them or their agents in various despatching stations in north Bengal, Assam and Andhra Pradesh to Calcutta mill stations." It says that the mills had sent their indents for wagons for the transport of jute from various purchasing points "right at the commencement of the current season". It complains that despite the lapse of several weeks, the indented wagons have yet to be allotted in Assam and north Bengal. In Andhra Pradesh, wagons have not been supplied even against registrations made as early as in November and December last. This inordinate delay in the allocation of wagons has compelled many inadequately stocked mills to resort to the costly expedient of hauling raw jute to Calcutta from upcountry markets by trucks at a prohibitive additional cost, or to lift ready delivery raw jute from the Cossipore market at rates much higher than the prevailing upcountry prices. The Press note also points out that "to cut down freight as well as transit time, both of which have an important bearing on the industry's economics, it is essential that the railways transport raw jute to Calcutta from the north-eastern region via Farakka, instead of Garhara as at present, entailing a longer haulage and a needlessly higher cost."

been slightly higher than a month's production at the current levels, and indicated a slump in despatches by 11,200 tonnes to 76,100 tonnes. Carpet-backing cloth exports suffered a major reverse of 4,800 tonnes to the recent low level of 8,200 tonnes, against a small drop of 400 tonnes in output to 14,500 tonnes and a heavy rise in stock of 6,300 tonnes to 23,700 tonnes. The booking position relating to the special purpose construction was reportedly not so bad as that of current shipments. Usually well-informed circles believed that the slackness in overseas shipment instructions had been induced by the prevailing expectations of a handsome relief in export duties on the construction in line with the recommendation of the recent five-man trade delegation. Sacking production showed a rise of 1,900 tonnes to 40,300 tonnes and stocks of 6,700 tonnes to 41,300 tonnes, while their despatches nose-dived by 5,400 tonnes to 33,600 tonnes, despite the absorption of some 15,000 tonnes by Government agencies against their recent long-term phased bookings. Hessian production showed a small increase of 600 tonnes to 25,700 tonnes, and stocks of 400 tonnes to 22,000 tonnes, while its despatches dropped by 500 tonnes to 25,300 tonnes. Miscellaneous goods revealed an increase of 800 tonnes in output to 9,500 tonnes and 500 tonnes in end-July stocks and a small decline of 500 tonnes in despatches to 9,000 tonnes.

Gunnies Depressed

Trading was disrupted in the raw jute and gunny markets during the past week due to the complete suspension of bank clearing in Calcutta since 8th August, following agitation by Class IV employees of the Reserve Bank of India. The nationwide rejoicings on the occasion of the silver jubilee of India's independence also detracted a lot of interest from market activities. With prices drifting downwards due to a slackness in enquiries and an extremely slender off-take, the market was in a depressed mood. In the absence of genuine buyers, business even at quoted rates was difficult. Speculators also turned

Production Figures

Production and stock statistics of mills reporting to the Indian Jute Mills Association for July were announced last week. In spite of a nominal rise in production by 1,900 tonnes over the June level to 90,000 tonnes, end-July stocks with mills revealed a sharp increase by 13,900 tonnes to 94,400 tonnes, which had

cautious, availing themselves of suitable opportunities to reduce their long positions. Internal and overseas consumers were rather disappointed over the Government's persistence in retaining the heavy export duties on jute goods, notwithstanding the positive recommendations of the recent five-man industry-Government joint trade delegation to north America, the U.K. and the Continent. The team had suggested that prices of both hessian and carpet-backing cloth should be reduced to levels where they might compete effectively with synthetic substitutes. Beside price stability, the team also recommended that arrangements should be made to ensure uninterrupted supplies of the products at the consumers' end, if necessary, by the maintenance of a buffer stock of such items as were in regular demand. It also commended the adoption of vigorous measures for product development and research, in addition to brisk export promotion. Clive Row as also the industry were positively worried over the report that Thailand and Taiwan had replaced India and the former East Pakistan in the matter of meeting the demand for jute goods from Australia. Besides, there had been a positive indication of a massive shift to the use of polypropylene by the Australian wool industry and trade, entailing a loss of the sizable 100,000-bale jute bags market for the two countries. The strike by longshoremen in the U.K., although resolved around the week-end, failed to improve shipment prospects to the pre-strike level. It was reported that dissension among the workers made a smooth return to normal operations uncertain. Although 75 per cent of the U.K. ports, including London, were expected to resume normal operations around the appointed date, Liverpool was likely to continue strike-bound. Hence normal shipments were held up at this writing, pending the receipt of final instructions from overseas buyers. Incessant rain in Calcutta during most days of the week also kept cargo-handling activities suspended in the port for long periods. While one U.K. loader left a few days behind schedule, two others were obliged to extend their sailing dates by a week in an effort to complete their loading commitments. In addition to the natural hazard, dock labour, employed on the bulk carriers, decided on resorting to go-slow tactics, prevailing upon other workers in the port to make common cause with them and demonstrate likewise. It affected all

shed operations. With bargemen restricting their activities to daylight hours only, overside loading and unloading were also considerably affected. Overseas enquiries were few and far between as buyers turned to India only when they failed to procure their needs from Bangladesh which continued to offer a discount of some 10 per cent over Calcutta rates, including the export duties. The Dacca radio report that the authorities were thinking of expanding the overall capacity of the industry from the current level of 73 units operating with a rated potential of 600,000 tons a year called for caution. Market sentiment was further affected by the report that shipments to Sudan, which was an important buyer of Indian jute goods, had come to a virtual standstill on account of payments difficulties, as also a hitch over the supply of cotton from that country. Internal demand for sacking was discouraging, as Government agencies had curtailed their offtake following the shortage in foodgrains production. The offtake by the sugar industry had also slumped to much below par due to the decrease in output, while the cement industry had been in the grip of an all-India strike. In the hedge market, B Twills August and November deliveries also suffered a setback in line with the general trend. Shorts briskly covered their open positions in B Twills August at the dips and converted the balance outstanding into B Twills November delivery on payment of the usual contango charges. Around the week-end, the technical position in August delivery contracts was by and large squared up and prices fluctuated narrowly. Turnover was rather small for this time of year. The closing undertone was hesitant.

Fibre Quiet

The raw jute market turned gradually quiet during the past week, suffering a loss of some Rs. 2 over

the previous week-end level. The easiness stemmed from the absence of interest from mills and mill agents in absorbing offers of fibre. The reported bottleneck in the movement of fibre held up in upcountry rail-heads in north Bengal, Assam and Andhra Pradesh due to wagon shortage induced mills to reduce their purchases to the barest minimum levels, made up mostly of selected grade jute in nominal lots at quoted prices. Besides, the prevailing rise in the price of essential commodities, particularly of foodgrains and pulses, and fears of serious food scarcity induced farmers to release their raw jute stocks. Even the Central Foreign Trade Minister, Mr. L. N. Mishra's resolve to raise the statutory minimum price of fibre in the near future could not dissuade them from raising their releases. Reports from Assam and Tripura border areas indicated that the influx of jute from the other side of the Bangladesh border continued unabated, leading to considerable accumulation of stocks in the interior markets. Trade circles were worried over the problem of moving them down to Calcutta. Arrivals in the agencies rose to some 50,000 maunds a day, despite the reported breaches in the feeder roads in the Teesta and Brahmaputra Valleys. A section of the trade appeared to be seriously concerned over the slow clearance of its old crop residues which happened to be mainly of average and sub-standard grades. In an effort to dispose them of the holders turned keen sellers of their stocks even at rising discounts. In view of the prevailing complexities, industry circles were unable to take a precise view as to the shape of demand for end-products, and so they reduced their fibre offtake to bare nominal levels. Besides, the exorbitant price levels

ruled out the advisability of stock-building at this stage. Turnover was small. The closing undertone was quiet.

TEA

Demand Improves

A Special Correspondent writes: The offerings in last week's tea auction in Calcutta amounted to 58,820 packages for which there was a good general demand. Plain C.T.C. descriptions were readily absorbed but at slightly lower rates while medium and good liquoring brokenes were firm, although similar fannings were irregular. Plain orthodox teas sold at about the previous week's rates while Assam brokenes were an irregular feature, with the better liquoring lines selling well. All orthodox fannings were much easier, virtually the only buyer being Brooke Bond. Whole leaf grades continued to sell well and tippy lines showed some improvement.

CAPITAL, 24th AUGUST, 1972

Stc Group*

IN 1971-72—HOLDING COMPANY AND SUBSIDIARIES

STATEMENT BY CHAIRMAN, PRAKASH TANDON, AT THE 16TH ANNUAL GENERAL MEETING.

Before I turn to my main theme, may I place some figures for the past year, which happily reflect a good performance by your Corporation—especially the 136% rise in profits, from Rs. 7.2 to Rs. 17 crores, and yet an expenditure level with last year for the Group but 4% less for STC, the holding company, where 4 years ago it used to rise at the rate of 20.8% per annum.

We are proposing a dividend of 20% on equity, which we hope to further enlarge from Rs. 8 to Rs. 10 crores. This sixth bonus issue in four years means raising equity from Rs. 2 to Rs. 10 crores, and dividend from Rs. 20 lakhs to Rs. 2 crores. We hope now to pay a dividend equal to what the total equity used to be.

We began the year with a well filled export order book of Rs. 106 crores, and current year's exports are running well over 130% of last year.

The results are shown for our Group as a whole, the holding company and its four subsidiaries. The new structure is now well under way and we hope to add more subsidiaries as we grow.

STC Group	1970-71	1971-72	
	Actual	Actual	Provisional
		Rs. crores	
Total Sales	233.8	332.6	328.6
Exports	74.1	98.0	96.8
Imports	154.0	221.8	220.7
Domestic	5.7	12.8	11.1
Expenditure	6.4	6.4	6.1
Profit before tax	7.2	17.0	16.1
		Percentage	
Expenditure to sales	2.7	1.9	1.9
Stocks to sales	15.1	9.0	10.1
Debtors to sales	10.7	7.8	8.2
Profit to sales	3.1	5.1	4.9

Cash position 1st April, 1971 -7.7 1st June, 1972 +10.7

The provisional figures announced on 1st April, 1972 have proved their accuracy when compared with the final figures.

I choose today a somewhat personal theme—running of a public enterprise, which I have had the privilege to serve for four years, but leave today. The personalness lies not in any reference to me or my contribution but to that personal understanding and commitment, if I might use this much misunderstood word, which I feel is essential to running a public enterprise. This task, while it has its fascination, is undoubtedly complex and demanding. Interestingly, it requires ambivalence; a deep organisational and environmental sensitivity along with a cultivated personal insensitivity. An analysis of this experience might be profitable for others; for, ultimately, I do believe that our answers will come more from our own experience in the public sector than from external advice.

To compress growth that has been neglected for one century and half into a few decades, an instrument had to be created with a capacity for service and rapid generation of resources for reinvestment, as well as its self-sustained growth. Short of these aims, it would ill-serve the cause of national growth.

Few know that a mainspring of the public sector was a government white paper of 1944 on India's post-war industrial development. This stated that left to itself, private industry would be inclined to choose the more profitable areas and leave alone the less profitable in which government would then have to invest in order to ensure balanced industrial development. There would be an area reserved for the state, another for private industry, and a third where they would co-exist. The detail with which this principle was enunciated was advanced for its time and was to prove prophetic.

Today we are committed to the public sector in more than half the world. As a twentieth century phenomenon public enterprise is acquiring a central rather than a peripheral role. In two decades, India's public sector first moved to commanding heights and now strides across the entire landscape of the economy, accounting for a near one-fifth of national product.

STC is a good example of a small trader of not so long ago, set up to import and export from state trading enterprises of East Europe and China, today exercising an influence upon the economy far out of proportion even to its not inconsiderable turnover. It is also fast becoming a strategic force moving swiftly into tobacco, rubber or jute, whenever a large crop needs price support; or to organise trade with Bangla Desh; or to step into importing the country's entire raw cashew needs. It is increasingly regarded a force de frappe, which treats with respect the difficult nature of each task it takes on, equally as it is respected for what it does manage to achieve. For instance, it was given just two days to start buying ten million kilos of tobacco. To choose a task force hastily and instal it in the distant districts of Andhra, actually took five days. To me, there was no unreasonableness in the speed demanded, because in an emergency by-your-leave measures are a luxury an elite corps does not expect.

STC, the holding company, has grown rapidly in turnover, profitability and its resources. Where, at a turnover of Rs. 140 crores four years ago, it employed about Rs. 70 crores in stocks and debtors, at a turnover of Rs. 263 crores today the corresponding figure is around Rs. 40 crores. Consequently, its overdraft then of Rs. 14 crores has turned into a cash surplus of Rs. 10 crores.

STC Group	1.4.1968	1.6.1972
	Rs. crores	
Equity Capital	2.9	10.0
Reserves	9.6	13.4
Shareholders' funds	12.5	23.4
Cash	-14.6	+10.7
Resources available	-2.1	+34.1

I will end my first point by suggesting that in STC, like in any other public enterprise, the first and foremost responsibility is to work towards self-sustained growth, and at the same time contribute resources to the exchequer for the growth of the economy, and not become a drain upon it. But profitability is not all; there is also service, constantly improving at a diminishing cost; and exploring new export markets, even at a loss.

Cost of service	1967-68	1971-72
Expenditure to turnover	3.1%	1.9%

My second point is the over-involvement a public enterprise can acquire, almost to the point of obsession, with the constraints upon it. Constraints, there will be many, but all management is at all times working under constraints, never under ideal conditions of its own choosing. Management's task is to overcome constraints and give good results. There is a management dictum worth reiterating—'Are you helping solve a problem or becoming a part of it?' I fear that sometimes we so talk of constraints that the talking becomes a constraint in itself.

Constraints are varied and abundant, and they fall in two categories—a desire for service, preferably free, and for favour. Service is expected with a perfectionism that our customers would not expect of themselves or of others in industry. Once a product is canalised through STC, they expect it to take care of all their problems. We have tried to convince ourselves in STC that while some of those demands may be unreasonable, the customers have the right to expect a service from us, which is as complete as we can make it, particularly when they are a small unit. We are, therefore, trying to create a service that is a whole package of quality control, finance, shipping, development and marketing, and although there are many shortcomings in our services, we have at least accepted our total responsibility.

In demanding service, there can sometimes be an element of unreasonableness, but being public ourselves we cannot be impatient with the public. Each case has its own logic of the compulsion of a demand that needs satisfaction. And the responsibility of the manager in the public sector is essentially different. As someone said: "In Britain the manager in a public enterprise has imposed on him certain distinctive duties that are not imposed upon his counterpart in the private sector. He is subject to special

responsibilities, to a special form of accountability to Parliament and his Minister." The British nationalisation statute defines it thus: "a public enterprise is expected to serve the public interest in all respects."

It has been said that in a free society people have to have a choice, a voice, or an exit; they cannot be denied all three. This is particularly true for STC. As imports are canalised, our customers do not have the freedom to shop around, nor an exit to go elsewhere. If STC, on top of that, were to deprive them of a voice, it would create frustration; and this we try to be sensitive to, and avoid. We have therefore institutionalised the 'voice' by creating 45 odd consultative committees, some at the apex level like FICCI, ASSOCHAM, AIMO, and others at industry and product level, to which belong representatives of trade, firms, government and states. They advise us their requirements quantitatively and quality-wise, and together we plan purchases and schedule deliveries.

The number of meetings in a month with our customers and state bodies all over India, at which we expose our management, from chairman to the middle levels, is indeed large. Once assured of its right to be regularly heard, this voice can be quite strident and demanding, and these consultations to us are most rewarding. To our customers too they must be useful because they soon remind us if a meeting is overdue, and there is growing demand for representation.

Neglected, and without a voice, problems can build up like a wave before they break, and when they do break they can do so with noise and disproportionate retribution. It then creates not so much an improvement, which a voice and self-correction would have done, as instil fear into management and freeze it into inaction.

In a democratic society Press is the voice of the community. While STC has no public relations department, we have tried to foster with the press a frank and non-defensive relationship, a willingness to share information, so that they can present an informed picture. We also discuss and announce our performance regularly, and we are planning to invite them to our consultative committees.

The Review Committee on STC in 1969 advised it thus: Public accountability, in consonance with the practice of releasing operational results to the press each quarter, and a dialogue with industry would be its real 'P.R.' effort. The Corporation should concentrate on achievement and its communications, rather than upon 'P.R.' in the conventional sense. There is perhaps no better public relations than operations self-appraised, results consistently achieved and gently conveyed without stridence, in a low key. The Corporation should take industry into confidence about its practices and plans.

The other constraint that causes us considerable concern is one of favour, where we are asked to do for one what we cannot do for all. But here too, there is a logic which becomes compulsive the moment there is a visible chink in our system or practice. If we make an exception under pressure, or do not have an objective, well functioning, impersonal system fair to all, there will be a demand that the exception be stretched to a larger area and repeated many times. As a commercial enterprise we have to be flexible and helpful, but this must be part of a system, firm and fair, and not born of pressure or favour.

Constraints there always will be, and until the environment evolves new norms, we have to develop our own in order to acquire institutional strength, based upon the integrity of our systems and of the persons operating them. Such after all is the basic expectation of professional management, its skills, but also its values.

A profession has two important attributes: its capacity to evolve and add to the skills and growth of the profession and to create its own norms and value systems instead of waiting to have them imposed upon it by the society. This equally applies to the public sector, if we are to regard it as professionally managed.

May I interpose here a small illustration of responsibility. Each year STC receives the routine enquiry from Government, of progress with the quotas laid down to encourage employment of scheduled castes and tribes. Each year we dutifully explained that we are doing our best; each year the quota remained largely unfulfilled. Recently, we felt that this was poor discharge of our responsibility, and we planned a separate scheme tailored to recruit SC/ST candidates, both at the level of management trainees and experienced managers; a scheme drawn up exclusively for them. From the first attempt alone, and with our standards well maintained, we have selected our first batch of four young probationers. More will follow.

Far too often was it our own case in STC that we blamed our environment, as interfering with our efficient functioning. I have sincerely disagreed with this, and believe that in terms of comparison, purely to illustrate, 85% of how well we perform is within our own control; and even the 15% that we might attribute to the powers that be and circumstances beyond our control diminishes with our better performance, sounder systems and our integrity. It is when we fail in our professionalism that we invite trouble. "Accidents" will of course always happen, and more often in a developing society, but we must possess the courage as professional managers to risk them.

Something has often bothered me—how to make management in a public enterprise take risks totally unafraid of consequences, when consequence may sometimes be disproportionate or undeserved. Frankly, the only answer I have found is supporting management to the hilt both at the personal and the institutional level. Systems honestly followed will produce their own honest and acceptable explanations, but one hopes though that in the long run there will be shown a tolerance and understanding, at least where an organisation and its men have tried genuinely and hard.

But as professional managers, we should also count our blessing in the public sector, in that public enterprises seem never to die. No matter how we perform, we remain afloat, where in the market place we would be driven into liquidation. Such freedom from threat of extinction can of course work both ways; it can either create complacency in us or give the confidence to be venturesome and innovating rather than risk-shy.

Then again, in private industry growth must follow a return to the shareholder. Unless his dividend is assured, he will not normally permit a plough-back for future growth. We have no similar compulsion of dividend, and growth can take precedent; moreover, growth opportunities are assured to us; almost offered on a plate. This relative ease to grow in terms of opportunities and resources can both retard and accelerate our growth-consciousness, depending upon our attitudes as management. We in STC, have tried to make growth our foremost responsibility, especially in exports.

This brings me to my last point about decision-making in the industrial culture that we are trying to introduce in the Corporation. In commerce, a decision has to move quickly with the circumstance of the moment and the market. Buying produce, where markets fluctuate rapidly, sometimes wildly, you have to decide quickly. To wait for dotting 'i's and crossing 't's of formal procedures will inevitably mean buying badly.

Another point of importance is that to obtain results, our consultations and decisions must be speedy, flexible and informal. If a paper has to go up and down with notings, and men have to make appointments with their seniors through their secretaries, the market may have moved too far away for us to have bought or sold well. A quick decision, a quick telephone-call or telex, a quick meeting with the seniors or of a committee, are essentials of the market place. In STC we are learning to cultivate this style and the speed of international trade, which is that of the telex and the jet plane; and to regard our responsibility as a management in the public sector in a total manner. We have to expand our trade globally, to be innovative, to enter areas where other exporters may not, to act as an economic fire-brigade, to keep our costs down and prices low, to create model of systems of accountability, to be socially responsible to our employees, government and industry—especially its small scale units—and with it all to be profitable.

Fortunately, and I say this with all sincerity, our own ministry has given us all the support and flexibility we need to meet these heavy demands. The responsibility therefore lies squarely on us to acquire greater skills, higher motivation, and dedication to international trade, with always the interests of the shareholders and the choiceless and exitless customer foremost.

I do believe that with all the criticism STC often draws—sometimes deservedly and sometimes undeserved—we are at least consciously conceptualising our responsibility. Against whatever little we may have achieved, I am certain that there is a great deal more remaining to be done; many weaknesses removed; many fresh strengths introduced. It will require of the men and women who serve STC a new approach in the future, setting the welfare of the public sector, our shareholders and customers before our own. If I may rephrase the creed of our Military Academy at Dehra Dun—national interest first, customer's next, our own last.

I wish the Corporation and its shareholders well, and may complacency never enter the organisation, and I leave only too conscious of my inadequacies.

THE STATE TRADING CORPORATION OF INDIA LTD.

Value of bringing out SUPPLEMENTS in CAPITAL

Proclaimed as India's leading and most widely read weekly newspaper devoted to economics, industry and public affairs, CAPITAL is considered indispensable by those who constitute the bulk of buying power. They include, among others, people holding important positions in Government departments, public and private-sector projects and undertakings, and commercial establishments of all descriptions.

CAPITAL is a unique medium for bringing out sponsored supplements and features.

Your advertisements in CAPITAL supplements symbolise silent propagation of your goods and services throughout the country. Their impact may not be visible immediately, but they do yield handsome dividends in the long run.

COMPANY AND PUBLIC NOTICES

THE NATIONAL INSULATED CABLE
CO. OF INDIA LTD.

NOTICE OF THE ANNUAL GENERAL MEETING TO THE MEMBERS

NOTICE is hereby given that the Thirtieth Annual General Meeting of the Members of THE NATIONAL INSULATED CABLE CO. OF INDIA LTD., will be held at the Registered Office of the Company, NICCO HOUSE, Hare Street, Calcutta, on Monday the 25th September, 1972 at 4-30 P.M. to transact the following business:—

- (1) To receive and adopt the Directors' Report and the Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1972.
- (2) To declare Dividend.
- (3) To appoint a Director in place of Mr. S. C. Roy, who retires by rotation and is eligible for re-appointment.
- (4) To appoint a Director in place of Mr. S. Singh Roy, who retires by rotation and is eligible for re-appointment.
- (5) To appoint Auditors of the Company and Branch Auditors for Delhi and Madras Offices and fix their remunerations.

The Share Transfer Books and the Register of Members of the Company will remain closed from 12th September to 25th September, 1972 both days inclusive.

BY ORDER OF THE BOARD:
FOR THE NATIONAL INSULATED CABLE CO.
OF INDIA LIMITED,
J. N. BHAN,
Managing Director.

Registered Office:
NICCO HOUSE,
Hare Street, Calcutta-1.
The 31st July, 1972.

N.B. A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and that a Proxy need not be a Member. The Dividend, if declared, will be paid to those Members whose names appear in the Register of Members of the Company on 25th September, 1972, or their mandantees and the Dividend Warrants will be posted from 20th October, 1972, onwards.

*1971

Established 88 years ago, The Titagur Paper Mills Company Limited are pioneers amongst India's manufacturers of papers and Boards. TPM have maintained the lead through constant research and introducing new manufacturing processes. TPM are presently making special papers of different varieties thus substituting certain imported grades. TPM know more about the problems of the market and therefore know more about the demands for specialised papers and boards—and how to meet them.

Self-Reliance —the Punalur way...

In the recent past, relentless research and planning have enabled Punalur to develop *speciality papers*, which were being imported. With an assessment of the current needs and future requirements in mind, Punalur is striving hard to make high strength *speciality papers* of proven quality to save vital foreign exchange and achieve self-sufficiency. Thus pledged to eliminate import dependence, Punalur is geared to produce *speciality papers* to the most stringent specifications for essential defence supplies and industrial consumption. Please write to us about your requirements and we would make it for you.

And this is just the beginning of the role Punalur will play tomorrow. Punalur, at the threshold of expansion, holds a great promise for the future.

Food : Crash Plan Realities

THE Government announced a few days ago an ambitious programme to make good the loss of foodgrains caused by the drought. It needs to be congratulated for thus inspiring confidence in the agitated public mind. But anyone who has been following the progress of Indian agriculture over the past decade would perhaps recognise that there are many flaws in the scheme of obtaining an additional 15 million tonnes of foodgrains from the *rabi* crop. The slogan to give such a tremendous push to agriculture within one season can be a good morale booster in a lean year for the lay public but does not make much sense to farm economists. It has been acknowledged by all farm technologists that output in modern agriculture is directly related to inputs. On a rough estimate, this is calculated to cost Rs. 500 an acre a crop to obtain an average of 1 tonne of food an acre. Accordingly, an additional investment of about Rs. 750 crores is needed to create that potential. So far, there is no indication that provision for so much additional investment during the coming *rabi* season has been made by the Government.

Money alone is not enough. It is also universally accepted that under ideal conditions there is a minimum gestation period of about two to four years for the inputs to show results. Food cannot be produced by raising slogans, making exhortations and distributing money among farmers. Even the most regimented societies in the world have failed to do it. The complex that goes by the name of inputs is by now well known. It includes the raising of a large organisation—not only the human machinery but also the vast appurtenances without which any dynamic organisation is powerless. It is also necessary to have an efficient communications network spee-

dily to transmit information and materials from numerous distribution points to the farms and from the farms to the administrative offices and markets which have to be marshalled in the operation. Experience has shown that all this is a time-consuming process and cannot be accomplished on the planned scale within the short space of one or two months that is now available before the commencement of the coming *rabi* season.

Then there is the question of land. What the scheme stipulates is that there is enough fertile land available all over the country that is not being used to its maximum productive capacity out of indifference or ignorance, even though the means to do so are readily available. This again is a fallacy. A tour of the countryside in any part of India would perhaps show that the prevailing methods of cultivation and land uses are the result of a combination of economic forces which cannot be changed overnight. These may include conditions of tenancy, availability of water, marketing practices, labour situation, soil limitations, pests and the non-availability of the right kind of seeds. No society in the world has succeeded in overcoming these and a myriad other factors of this kind within a few months to be able to raise the crop output by 40 per cent within one season over an area of more than 100 million acres that come under the plough during the *rabi* season.

The crash plan is based on the hope that of the additional 15 million tonnes of grain—over and above the normal produce of 40 million tonnes—about 13 million tonnes will be wheat and rice and the remainder grams and coarse grains. This is more than the combined increase in the output of these cereals during the *rabi* crop over the past eight

years. As far as rice is concerned, its upward progress over the years has been painfully slow. Wheat production has increased by leaps and bounds but the rate of growth is now slowing down because of its overproduction during the last two years. Until now wheat stocks in Punjab and Haryana have been rotting for want of storage space and wagons. A sudden increase in wheat output from the present 26 million tonnes to about 34 million tonnes is most unlikely for many reasons. While Punjab and Haryana farmers do not seem inclined to concentrate too much on wheat alone, a certain resistance to it seems to be building up in western U.P. too. Mr Fakhr-uddin Ali Ahmed, Central Minister for Agriculture, has been pinning his hopes on U.P. But he forgets that this is the year of the great sugar crisis and as usual there will be a natural tendency among U.P. farmers to switch their lands from wheat to sugarcane. The Minister should be lucky if he succeeds in obtaining even a marginal increase in the wheat acreage in U.P.

And the magnitude of the power crisis all over the country being

what it is, India should be lucky if she manages to get a normal *rabi* crop, let alone harvest a bumper crop. This sadly is not a year of making records or of making history in agriculture. It is a year of going steady. The number of problems that the farmer faces are far too numerous. Even major irrigation sources like the Bhakra dam have nearly half their normal reserves of water for the *rabi* crop. The uncertainty created by the land ceilings Bill will dampen the enthusiasm of many progressive farmers.

The sharp increase in the price of tractors which has almost doubled within a few years is yet another disincentive to growth. Prices of inputs are shooting up while the procurement price of grain has remained fixed over the last few years. The farmer gets no share of the profits made in the current price spiral. Unscrupulous traders and a top heavy State agency—the Food Corporation and its agents—are to blame for this. All this leads to but one conclusion. The target of raising the *rabi* output from 40 million tonnes to 55 million tonnes in a single season will prove difficult to achieve.

Plan and the People

THE new Central Planning Minister, Mr. D. P. Dhar, said nothing new when he declared in the Lok Sabha the other day that it was necessary to involve the people “physically and psychologically” in the process of growth and development. Mr. Dhar, who was making his maiden speech in Parliament, however, had the humility to admit that the “total leadership of the country had not succeeded, in the last 20 years, in involving the people at the grassroot level in the process of planning and its implementation”. He accordingly proposed that for the Fifth Plan, the nation should take the bitter lesson of the past and begin the process of planning from below. The new approach is certainly welcome for what it is worth. Although Mr. Dhar has not spelt out how he would go about giving a practical shape to this approach, he did indicate that it would be necessary to go back to the village and the block as a unit for planning and development. He said he would take the manageable rural unit as the base for national planning. If that was done, he was hopeful of the regional imbalances and income disparities gradually disappearing with

the spread of economic development to backward areas.

It is true that the problem of backwardness, both of regions and the people, has so far been tackled in isolation of the planning process. The Centre and the Planning Commission are much less to blame for this than the State Governments and the political parties. There has been no effort on the part of the States to take a deeper interest in the problems of backward regions. Backwardness was viewed as a convenient tool for bargaining with the Centre for larger financial assistance. Few were really interested in getting rid of their backwardness. The political parties have also found it useful to exploit the backwardness of various regions for catching votes. No national party has, for instance, produced a practical programme for eradicating poverty in the backward areas. The Opposition parties have always blamed the Centre and the ruling Congress Party for all the ills of the backward regions. That is why the Planning Minister perhaps thought it necessary to urge all political parties to organise themselves in

a manner that would cut across the barriers of political distinctions and differences of opinion. This appeal is again nothing new, for similar appeals had been made in the past by several leaders, including Mr. Nehru. The fact to admit is that political parties have not evinced any deep interest in the planning process at the grassroot level.

In fact, Mr. Dhar would find it extremely rewarding to have a study made of the contribution that State legislators, even of the ruling parties, have made to the evolution of State plans. The entire planning process in the State is confined to the local secretariat which draws up the plan on the basis of financial targets and outlays rather than on programmes that have a real claim to high priority. The attempt is often to bolster up the demands for various projects and get the maximum from the Centre. Similarly, in Parliament, the obsession of members from different States is with grandiose schemes. They have little background of the economic conditions in their own States and feel satisfied if they have made a vociferous demand for a steel plant or a fertiliser project to be located in their State. How can the involvement of the people in the planning process be secured if their elected representatives do not have that same involvement? Mr. Dhar would, therefore, do well to educate his Party men, and also prevail upon the Party leadership, to select such candidates for election as have demonstrated adequately their interest in planning and done solid work at the *panchayat* or block level. Until this is done, it will be futile to expect the people to get involved in the planning process and in the implementation of plan programmes.

Another equally important aspect of the new approach should be to decentralise planning about which Mr. Dhar did not speak in the Lok Sabha. It is possible that the Minister did not like to dwell on this very sensitive issue but it must be assumed that he believes in the concept of decentralised planning. Barring a few States like West Bengal, Tamil Nadu and Kerala, no State has a planning board to do the necessary homework before coming to the Centre with big programmes for inclusion in their plans. Unfortunately, however, the question of decentralisation of planning is seen more from the point of view of its political implications than from the economic advantages that would flow from it. New Delhi seems seized by a fear that if the States are encouraged to do their

own planning, they might get out of its control. That is why even today the States have to send their representatives to the national capital every time a programme is to be changed or enlarged. The concentration of decision-making powers in the Yojana Bhavan has, undoubtedly, eroded the concept of decentralised planning.

Decentralisation cannot, however, be effective unless it is accompanied by a measure of autonomy for the States. It is perhaps here that the Centre finds it difficult to arrive at a compromise. If Mr. Dhar imagines that he can succeed in ushering in a new era of grassroot planning by making an appeal to various political parties, he is sadly mistaken. This country is too vast and large to be dealt with as a single unit for the purpose of planning. Unless, this is recognised and the States are given greater powers in deciding their own priorities, the new approach will never click.

A Veto against Bangladesh

PRESIDENT Bhutto can shift his ground with the rapidity of a quick-change artist. Hemmed in by hostile forces at home, he has to twist and turn to suit the public mood. This partly explains why the Simla spirit has evaporated so quickly. Hardly a month after the agreement was ratified, the talks with Pakistani envoys in New Delhi have run into difficulties. This by itself would have made the chances of a normalisation of relations between Pakistan and Bangladesh look pretty slim. But bigger things have happened to exacerbate feelings. China has used its veto to block Bangladesh's entry into the U.N. for some time to come. Mr. Bhutto has thus gone back on repeated unstated assurances. What is more, he still talks of the unification of Muslim Bengal with Pakistan. This is a marked departure from his Simla stance which indicated willingness to recognise Bangladesh in a matter of months. He had also at that time more or less reconciled himself to the likely admission of Bangladesh to the world body.

Dacca is understandably indignant. The President, Mr. Abu Syed Chaudhury, has vented his spleen. The students have been on the rampage. The Foreign Minister, Mr. Abdus Samad, was at his caustic best when he ridiculed Pakistani stalling saying that the truncated Pakistan should re-apply for membership of the U.N. But the fact remains that Bangladesh

Mr. Dhar would do well to remember that neither the degree of backwardness nor its nature is uniform in all the States. They are as varied as the food, dress and customs of the people. Therefore, they have to be tackled differently. No patent solution evolved by a set of bureaucrats at the Centre can be successfully applied to all these problems. When Mr. Dhar talks of people's involvement in the planning process, he should realise its fuller implications. If, on the other hand, it is pretended that everything must be decided in New Delhi, in order to ensure uniformity and impartiality, it is just as well to forget about the people and go about planning in the same way as it has been done all these years. People's involvement is something that cannot be bought or commissioned; it is an evolutionary process and unless there is a genuine desire on the part of politicians to secure the people's participation, it will remain an idle dream.

has suffered a setback, for all the nonchalance its leadership may show. The country is far from being in the pink of economic health and admission to the world body would have helped by providing material assistance and goodwill. It is a pity that the recognition of 84 countries and the support of 11 members at the Security Council came to nothing.

There are lessons to draw for Bangladesh. The true nature of some countries with whom Bangladesh was seeking cordial relations has been unmasked. When the Pakistani ambassador to Peking—a Bengali—came to Dacca, China is reported to have taken soundings. It was said that China was ready to buy Bangladesh jute in large quantities. The jute deal never went through. Mr. Chou En-lai wrote to Sheikh Mujib offering friendship conditional upon Bangladesh making it up with Pakistan. When Dacca spurned the offer, Peking in high dudgeon acted contrary to its posturing as the guardian angel of oppressed nations. Whether Mr. Bhutto saw in Chinese truculence a way of getting his own back on the Sheikh or whether China clipped the wings of the Pakistani doves, Bangladesh has drawn a blank at the U.N. The other country which has muddied its name is the U.S.A. First, it tried to persuade Bangladesh to defer its application for membership. Washington probably wanted to avoid a showdown in

which China would put its foot down to U.S. embarrassment. That after initial support to conditional admission, it backed outright inclusion does not establish its *bona fides*. The point has not been lost on Dacca. Due note has been taken also of Japanese dithering.

On balance, however, there is much for Bangladesh to take comfort from. India, Russia and Yugoslavia were safe bets. British backing is important for London acts as a go-between. Belgium, France and Italy are a solid gain as they seem to have got over cold feet to antagonise China. Bangladesh has come a long way from the December days when it did not even get a hearing. There is irony in the Chinese fuss over a resolution taken at a time when Bangladesh was as good as non-existent in the eyes of the U.N. In any event, the key to defusing the crisis lies in the sub-continent itself. Peking does not want peace in these parts. But the three States should. Mr. Bhutto regrettably may be the world's worst prevaricator unchastened by the stranglehold of “dissident soldiers, aggrieved police and hectoring holy-men” as a British paper puts it, but he cannot be blind to this truth. The one difficulty is that his unpredictability is a genuine foible. Had it been calculated, it would have been easier to tackle. He did not lie when he put recognition on the level of feasibility. So he climbed down to call the eastern State Muslim Bengal. He has also revived the multi-Muslim State theory of the Lahore Resolution of the Muslim League of 1940 which was sanctioned by the Quaid-e-Azam himself. This is not a pusillanimous act for hackles have been raised inside his country.

Mr. Bhutto of course has his troubles: the N.W.F.P., Baluchistan and now Sind. Reluctant to live in peace with the Urdu-speaking refugees who also have more than a fair share of commerce and industry, Sind will be a shambles if a settlement with Bangladesh foists the Bihari Muslims on its back as well. Recognition of Bangladesh is not unlikely to cause a Punjabi military coup against Mr. Bhutto either. On the other hand, while playing up to the hawks, he has to come to grips with reality. In his unsigned letter, he talked of exchange of civilians dependent upon Dacca letting up on the war criminals. Bangladesh naturally refused to lump the issues together. Apart from having blown up the Pakistani contention that India alone controls the P.O.W. issue,

it is based on an unfair equation. About the conditions of the Bihari Muslims, the Red Cross has given Bangladesh a clean chit. On the other hand, alarming reports are floating about the Bengalis in Pakistan. The 30,000 Bengalis in the Pakistani armed forces are virtually in concentration camps and in a letter to a British paper one of them has written about the unspeakable horrors of their existence. The civilians—jobless and turned out of their official quarters—are equally at the mercy of the Pakistani authorities with their bank accounts frozen. Above everything else, the correspondence does not touch the heart of the matter. Sheikh Mujibur Rahman will not budge an inch until Bangladesh is given recognition.

Two things Bangladesh need never worry about. The Indian commit-

ment is inflexible. Neither talks over the line of control in Jammu and Kashmir nor the return of Indian civilian internees by Pakistan can push New Delhi from its position that bilateralism does not mean the exclusion of Bangladesh from subsequent negotiations. And Bangladesh cannot participate unless recognised. The Chinese veto has not made a particle of difference to this stand. And on the Pakistani response to this depends the settlement of the question of repatriating the 90,000-odd Pakistani P.O.W.s. The other thing is the unassailability of the present Bangladesh Government. Bhashani's threat of a hunger march in September is little more than a damp squib. Equally insubstantial is his scheme of greater Bengal to stop the straining of his country's resources by the alleged intrusion of millions of Indians.

nature of these formalities, it cannot be said that the Government has always acted with speed. The case of the State Trading Corporation is an example of the Government's inability to take decisions promptly. It is understood Mr. Prakash Tandon, whose retirement from the chairmanship of the S.T.C. was known to the Government much in advance, had urged the Central Foreign Trade Ministry to nominate a vice-chairman so that the transition could be effected smoothly when he retired. The Ministry, however, never responded to the suggestion. The same is the case concerning two directors of the S.T.C. It took the Ministry one full year to reject the conditions laid down by them for their opting to the S.T.C. To blame it all on procedures may be a good debating point but does not absolve the Government of the responsibility for the delay in making the appointments.

The main drawback in the Government's personnel policy is that there is often too much politics in it. Even when the Government is assured of a capable chief executive, a politician is appointed above him as chairman. This makes the job of the chief executive of a project some what difficult. It would be wise on the part of the Government to avoid such situations. Moreover, there is no definition of the word "commitment"—commitment to the Minister in charge of a project, or commitment to the efficiency and profitability of a plant, or commitment to the loosely spelt out social objectives for which an undertaking has been set up? No one has ever cogently argued what a public-sector manager is expected to do. He has too many commitments to fulfil, so much so he often fulfils none. This is the tragedy of the public sector.

As for the procedures for the selection of personnel, even making an allowance for the time-consuming

Hard Facts on Tea

THE fortunes of the tea industry are as much influenced by the domestic demand as by the export market. This is more so in India than in any other tea-producing country. Although exporters should have known by now that there is a delicate balance between world supply and demand, unregulated exports to the London auctions continue. The abundant supply—some of which are unsuitable—is having a depressing effect on prices. Perhaps it needs to be said again that prices at the London auctions will continue to be influenced by the selling policies of the producing countries. Two major producers of tea, namely, Sri Lanka and Bangladesh, experienced grave political crises last year. While in the case of the former, the Guevarista-style insurrection led to a disruption in tea supplies, production in the latter touched an all-time low of 25 million lbs, against the normal level of 70 million lbs. The up-and-coming east African tea-producing countries were hit by a severe drought. Indonesia, which till recently was an insignificant producer, is making determined efforts to become one of the major producers; her progress is not only in the direction of higher production but also improved quality of teas for which there is now strong demand in international markets. An alarming factor is the continuing drop in the consumption of this particular beverage in the United Kingdom. The prolonged dock strike had had its impact on the export market also. Although the Indian tea industry faced certain difficulties, it fared reasonably well during 1971-72 with a record production, higher exports compared with the previous year and better prices realised.

The satisfactory performance is to be attributed to the inherent strength of the industry, continuing rise in the internal consumption and a higher offtake by the bilateral or barter trade agreement countries. The prices realised for Indian teas were higher in 1971 than in 1970. As for the prospects of Indian teas in the current season, Messrs J. Thomas and Co. Private Ltd have observed in their *Tea Market Annual Report* for the 1971-72 season that the price trend will depend on the overall availability of tea in the world. In this connection, two important influencing factors will be the speed of

revival of the industry in Bangladesh and the extent of China's entry into the world tea market following the new era of *détente*. But it does not seem that the travail of the Bangladesh tea industry will soon be over. In the absence of an export policy and because of the uneconomic prices offered at the Chittagong auctions, the stocks at the port warehouses continue to pile up; they now stand at 2 million lbs below the total warehouse capacity of 9 million lbs.

The Bangladesh planters are not willing, and probably for good reason, to dispose of their stocks in the domestic market at a price which could hardly cover a half of the cost of production. The main prop of the industry there has always been the once domestic market in West Pakistan. With the liberation of Bangladesh that market has been lost and in the present state of bitter relations between Dacca and Islamabad, one can hardly think of an arrangement—either direct or through an intermediary—by which the Bangladesh estates can return to their old market. The Government in Dacca is being continuously prodged to announce the tea export policy soon and also to give an export subsidy on a "no profit no loss" basis. Industry circles believe that with the announcement of the export policy, better prices will be offered at the Chittagong auctions. In any case, Bangladesh expects to sell three-fourths of the total produce—the current season's crop is estimated at 50 million lbs—in the overseas market. In its first annual plan, the export earnings from the commodity have been placed at £8 million; but the figure seems to be on the high side because of the rather poor quality of tea grown in the country and the lean international demand for it. There is no doubt that Bangladesh teas will not be sold in the international market at the price West Pakistan used to pay. But as initial difficulties are overcome, the estates are likely to concentrate on the long-term problems like the improvement in quality and a reduction in production costs. China has recently concluded a number of big trade deals with the western countries, and it will not be surprising if some of them lift Chinese teas. Production in Sri Lanka and east Africa is also showing an upward trend and

exporters everywhere are seeing the "spectre of overproduction" and its consequent impact on prices.

A heartening feature of the Indian tea industry has been the continuing rise in the internal consumption which now takes care of more than half of the total production. But there is no room for complacency about the marketability of Indian teas. The constant endeavour should be not only to satisfy the rising domestic demand but also to produce to an extent that the domestic demand does not erode exports. The north-east Indian producers are now fully quality conscious and they are making efforts to increase production by better methods of cultivation rather than resorting to coarse plucking. What is expected of the Government is that it will take some measures to make the industry, which is now plagued by low profitability, more viable. An annual rate of increase of 5 per cent in production is possible only when the industry will be in a position to generate more resources from within and satisfy its credit requirements from the financing agencies. Messrs J. Thomas and Company have observed that it is vital that incentives are given to achieve increased production, and one could be in the form of reduced excise duty. The subsidy for replantation still remains inadequate. Industry circles hope that the recommendations of the Reserve Bank of India Study Group on Tea will be soon implemented. The financial stringency has often compelled some gardens to produce teas of a quality which is below their potential and has encouraged some others to dispose of their produce by direct estate sales to internal buyers for quick realisation of sale proceeds. These are against the interests of the industry as also of the country. If land ceilings were applied to plantations, that should be done with discrimination because large gardens which produce quality teas should not be discouraged from realising a higher unit value on their exports.

As for export prospects, Messrs J. Thomas and Company say that it is reasonable to expect better support from the U.K. where the stocks have generally been low. They have, however, noted that inflation in the U.K. and in other developed countries must necessarily force the importers to keep lower inventories. Teas which are "price reducers" will, therefore, be in great demand. Traditional

buyers are now lifting a lesser amount of tea from this country but this has been largely compensated by exports to countries with which India has barter agreements. It will

CURRENT COMMENT

COMPANIES BILL

C.T.A.'s Views

In a statement released to the Press, Mr. N. K. Jalan, president, Calcutta Trades Association, has stated that the provisions of the Company (Amendment) Bill, 1972, will go a long way in plugging many of the loopholes in the working of the corporate sector. According to him, it is an open secret that the malpractice of diverting company funds is still very much there and this is detrimental to the interest of companies as also of their shareholders. It is, therefore, in the fitness of things that this sort of malpractices in the working of companies should be stopped. However, Mr. Jalan feels that the restrictions proposed to be imposed on the acquisition and transfer of shares, if the total acquisition along with the shares already held exceeds 10 per cent of the total paid-up shares of the company, will put a hurdle on the free transferability of the shares and will, therefore, adversely react on the investment market. If it is the intention of the Government to ensure that managements of companies do not change hands through surreptitious means, that purpose could have been best achieved by making some specific provisions in this behalf without affecting the share transferability. Furthermore, the restrictions proposed on declaration of dividend only out of profits earned during the year and not from the reserve fund created out of the profits earned in the previous years will not be in the best interest either of shareholders or the investment market, for this will lead to wide fluctuations in the prices of shares.

DEPOSIT INSURANCE

Satisfactory Progress

The annual report of the Deposit Insurance Corporation for the year ended December 1971 reveals that about 29.9 million accounts with total deposits of Rs. 4,424 crores had been fully covered under the Deposit Insurance Scheme by the end of

September 1971, against 23 million accounts with total deposits of Rs. 3,411 crores a year before. The number of insured banks was 465—81 commercial banks and 384 co-operative banks. Insurance cover was extended to deposits in 384 co-operative banks in the States of Andhra Pradesh, Madhya Pradesh, Maharashtra and the Union Territory of Goa, Daman and Diu with effect from 1st July, 1971. This followed the enactment by the respective legislatures of suitable amendments to their laws governing co-operative banks as required by the Deposit Insurance Corporation Act, 1961.

The fully protected accounts as a proportion of the total number of deposit accounts as at the end of September 1971 stood at about 96.3 per cent, compared with about 96.1 per cent at the end of September 1970. The percentage of insured deposits in respect of all accounts to total assessable deposits remained around 62. The accretion to the Deposit Insurance Fund during the year was higher at Rs. 3.66 crores, against Rs. 3.17 crores in 1970. The amount available in the Fund at the end of December 1971 was Rs. 20.97 crores, representing approximately 0.5 per cent of the total insured deposits exceeding Rs. 4,224 crores. In view of the good results achieved so far, the premium rate payable by insured banks, which was 5 paise for every hundred rupees of assessable deposits from the inception of the Corporation, was reduced to 4 paise a year with effect from 1st October, 1971.

COAL

Utilisation of Middlings

The Technical Committee on Coal Washeries estimated the requirement of coking coal at 25.1 million tonnes for the existing steel plants and 5 million tonnes for the southern steel plants. As the quality of raw coking coal suitable for direct feed in the coke-ovens is likely to be about 5.65 million tonnes, the balance of 24.5 million tonnes will have to

be washed. The washing of this quantity would generate about 9 million tonnes of middlings on the assumption that the recommendation for conversion of all washeries into three-product ones is implemented. The middlings from the three-product washeries are stated to have a calorific value of 4,500 to 5,000 kilo calories a kilogram and as such would be equivalent to grade III coal. It should be technically feasible to use the entire middlings made available by the washeries in the power stations in the eastern zone. During the Fifth Plan, the thermal power stations in the eastern zone would require more than 9 million tonnes of additional grade III coal.

However, utilisation of middlings by the power generation plants would require very firm policies concerning the pricing of middlings and also the co-ordination of the power development programme in the eastern zone. The Fuel Policy Committee in its interim report has suggested constitution of a standing committee on middlings utilisation with representatives of the Department of Steel, Department of Mines and Metals, Ministry of Railways, Central Water and Power Board, the local regional and State electricity boards, and the Planning Commission, to ensure good co-ordination. It is also necessary that the date of commissioning of the southern steel plants, their requirements of coking coal and the sources from which they would draw it should be decided immediately so that a firm programme for utilisation of middlings could be drawn up keeping in view the time-phased programme of coal washing and power generation.

The pricing of washery middlings to be sold to the thermal power stations is to be decided by the Government on a formula which is agreed upon by the consumers as well as the producers. In an economic sense, the washery middlings, if they are not utilised in power plants, have a negative value as they would lead to the problems of storage and disposal. The power plants located in the eastern zone have easy access to better quality coal and would normally be reluctant to use middlings, unless it is favourably priced *vis-à-vis* raw coal. Experience of utilisation of middlings in certain power stations has shown that it leads to increased wear and tear of the capital equipment. However, with the exclusive use of middlings from three-product washeries, the erosion of capital equipment can be considerably reduced.

The formula for middlings pricing should make due allowance for all these adverse factors. The Power Economy Committee and the Technical Committee on Coal Washeries suggested a formula which basically fixes the price with reference to the energy content in the middlings and gives a further rebate for using an inferior fuel. This recommendation, however, secured the approval of both producers and users. So, the Fuel Policy Committee has urged the establishment of some sort of institutional arrangement for a very quick economic appraisal of the value of middlings from each washery and for fixing prices which should be acceptable to the power plants.

AUSTRALIA

Scope for Indian Investment

An Economic and Trade Delegation sponsored by the Federation of Indian Chambers of Commerce and Industry visited Australia between 14th and 24th May. In a report recently submitted to the Government of India, it says that theoretically, Australia offers unlimited scope for Indian investment. There are, however, two limiting factors: (i) The Government of India does not allow export of capital except in the form of capital equipment, machinery, etcetera. This naturally restricts the scope for Indian investment in Australia; (ii) Although there has been some unemployment in Australia in recent years, that country is short of labour. Labour intensive production which is the forte of intermediate level technology that India has developed has, therefore, hardly any significant scope.

Nevertheless, it is the view of the delegation that lines of production which require labour-intensive components and parts offer promising future for setting up joint ventures for assembly in Australia. Some of the parts can be manufactured in Australia while others exported from India and assembled and packed for local consumption. Sewing machines, household electrical goods, and electrical and electronic equipment are some of the items which can be explored. It would also appear that there may be a larger scope for joint ventures being set up in India to cater to the requirements of labour intensive goods for the Australian market. There are already a few such Indo-Australian collaboration agreements currently in operation in India.

BANKING

New Reporting System

The Reserve Bank of India has accepted the recommendations of the Committee on Banking Statistics regarding the new system of statistical reporting by scheduled commercial banks. This has been conveyed to the banks by Dr. R. K. Hazari, Deputy Governor, in a letter addressed to them a few days ago. The committee was appointed by the Reserve Bank in April 1972. Mr. A. Raman, Director, Credit Planning Cell, Reserve Bank, was the chairman of the committee.

The committee has recommended a rationalised and workable system of statistical reporting by banks in the place of the uniform balance book system which has been discontinued. The new system, designated as basic statistical returns, would provide for a steady flow of information required by the Reserve Bank without undue strain on banks. It calls for basic information on deposits and advances from branches at half-yearly intervals. Branches are also required to forward to the Reserve Bank a break-up of deposits according to the type of ownership once in two years and information on debits to deposit accounts once in three years. The reduction in the periodicity of these returns, it is felt, would go a long way towards reducing workload at the branch level in the preparation of returns.

WOOL TEXTILE

Need to Improve Standards

Speaking at a Press conference in Bombay a few days ago, Mr. K. C. Kothawala, Technical Service Manager, International Wool Secretariat, India, and Mr. G. I. McWhinney, Regional Manager, Australian Wool Commission, said that India had a big potential to enlarge its export of wool products provided the wool textile industry improved its standards to the international levels. Mr. Kothawala informed that for the first time in India four leading wool knitwear units of Ludhiana have been granted licences for the use of Woolmark—the international symbol for quality pure new wool products. This means that a garment knitted in India and bearing the Woolmark label will have the same quality standards as that purchased or manufactured in the U.K., Germany,

etcetera. "This has been made possible through joint efforts of the knitters in establishing adequate in-plant testing and quality control arrangements and the introduction of efficient shrink resist treatments by I.W.S. at Woolcombers of India Ltd, Calcutta and Dhruva Woollen Mills, Bombay. The four Woolmark licensed firms are York Hosiery Mills, Sind Knitweaves, Punjab Kesari Hosiery Factory and Rai Bahadur Knitting Works of Ludhiana", said Mr. Kothawala.

WORLD BANK

New Structural Set-up

The World Bank is to reorganise its operations on a regional basis, it was announced a few days ago by the Bank's President, Mr. Robert S. McNamara. This change results from a study of the Bank's organisation begun in January 1972 under the overall charge of the Vice President, Mr. Mohamed Shoaib. He was assisted by a steering committee composed of staff members. The firm of McKinsey and Co. were employed as outside consultants. Their report was given to Mr. McNamara on 28 July and on 10th August he announced his intention of implementing its core proposal, which was endorsed by the Steering Committee.

FOREIGN TRADE

Per Capita Figures

Only 32 countries managed a positive trade balance in 1970, with the underdeveloped "one-crop" nations scoring the most comfortable surpluses in the group, according to the 1971 edition of *Pick's Currency Yearbook*. As in previous years, the petroleum producers occupied the top rungs in export performance. While exports *per capita* averaged out at the US \$246 level, almost half of the countries reviewed fell below the US \$70 *per capita* range. Moreover, over 45 per cent of the world's population lived in ten nations with exports of less than US \$10 *per capita*, while a mere 2 per cent lived in the 14 countries exporting over US \$500 an inhabitant. The vast majority of countries on the bottom half of the list have chronically run trade deficits. These shortfalls extended from the rational to the ridiculous with South Vietnam and Laos outstanding examples of the latter.

World trade again boomed during 1970, and only a few minor countries showed a reduction in their *per capita* exports. Free world trade was credited with a 14.4 per cent gain over 1969's remarkable 14.1 per cent growth. Japan increased her foreign markets, pushing *per capita* exports up 19 per cent in 1970. She traded aggressively, snatching export business away from many of her biggest competitors, including the United States. West Germany shared honours with Japan for record export expansion. A number of minor countries were also favoured with sharp boosts in their *per capita* shipments, Iceland leading with 35 per cent, Nigeria 34 per cent, South Korea 32 per cent and Taiwan 31 per cent.

LEIPZIG

Autumn Fair

With the participation of 6,500 exhibitors from 50 countries in the 1972 Autumn Fair which will be held from 3rd to 10th September, Leipzig will again attract the international business world. The management of the Fair reckons with visitors from 80 countries, among them a great number of scientists and experts from the manufacturing industries. The profile of the Fair includes eight technical trade groups,

all with a strong international participation. Among them are the large chemical industry complex with the sections for basic chemicals and other base materials, chemical plant, machinery and equipment as well as plastics machinery, displays of textile and shoemaking machinery, paper-making, printing and allied machinery, road vehicles, medical and laboratory equipment, and wood-working machinery.

U.S.-SOVIET TRADE

Great Potential

U.S.-Soviet trade is entering a new era of great potential advantage to both nations, and could enhance prospects for world peace, says the U.S. Commerce Secretary, Mr. Peter Peterson. Just back from Moscow talks with Soviet trade officials, Mr. Peterson issued on 15th August a lengthy report on his personal views of both the prospects and problems ahead. Politics and economics are intertwined, Mr. Peterson wrote. "Admittedly", he said, "there remain many of the differences which led to our (political) division. We are still ideological adversaries." However, he said, the President, Mr. Richard Nixon, has taken bold new moves to "move away from the singular posture of confrontation." Of course, Mr. Peterson said, the United States will not bargain away its secu-

rity in return for trade. "Our purpose is rather to build in both countries a vested economic interest in a harmonious and enduring relationship". Difficult problems remain, Mr. Peterson said—the questions of most favoured nation status, the old wartime lend-lease debts, credit terms, copyrights and others. But the larger vision of peace, shared by both sides, Mr. Peterson said, "gives me confidence that we will succeed in our negotiations."

BANGLADESH

U.S. Aid

The U.S.A.'s relief assistance to war-torn Bangladesh in the first six months of the new nation's independence totalled \$267.5 million, about one-third of the \$800 million given worldwide. According to Mr. Maurice J. Williams, A.I.D.'s co-ordinator of U.S. disaster relief assistance for south Asia, although much of Bangladesh's war-damaged economy has not yet recovered and agricultural production is still below normal, substantial progress has been made. This has been possible because of resilience of the Bengali people to the leadership of Prime Minister Sheikh Mujibur Rahman in establishing a functioning Government, and because of massive relief assistance from many countries. The A.I.D. official's remarks were made in a letter and report he sent to Senator Edward Kennedy, chairman of the Senate's Judiciary Sub-committee on Refugees. In submitting Mr. Williams' letter and report to the Senate, Mr. Kennedy paid special tribute to the "humanitarian contributions" being made by American voluntary agencies. The U.S. Government donated \$19.5 million to these agencies for relief and rehabilitation work. In addition, private contributions from voluntary agencies totalled \$12.5 million since early 1971.

MONEY MARKET

No Transaction

There has been no official transaction in the short-term money market this past week due to the suspension of clearing caused by the continued strike in the Reserve Bank. But in a few stray transactions, the call rate has quoted at 3½ per cent. The supply of gunny and tea bills has been small. The demand for remittances has also been small. The pound-sterling has remained steady against most major foreign currencies during the week.

A Ditcher's Diary

PAKISTANI OFFICIALS MUST HAVE "apprised" the visiting Chinese delegation of their talks in New Delhi. What Mr. Chiao Kuan-hua, the Chinese Vice-Foreign Minister, said by way of comment is unlikely to be made public. Mr. Chiao's first public comment in the Pakistani capital was perhaps predictable; he took the first opportunity attacking the Russians, even though without naming them. Clearly the Chinese veto against Bangladesh's admission to the United Nations had more to do with Peking's obsession with the Russian rôle in the affairs of this sub-continent than with the merits of the specific case. The Chinese cannot be unaware that they have behaved in exactly the same fashion in which the U.S.A. blocked their entry into the world body for so many years. They said that they would not act like a Big Power, but they are learning fast. Even the manner in which a high-powered Chinese delegation descended on Rawalpindi immediately after the U.N. vote is revealing. There is an unmistakable impression of a Big Power dealing with a client State, even if Mr. Mao's emissaries still try to project themselves as friends rather than as masters. The ideological pretensions are becoming increasingly irrelevant. Chinese objections to the Russian or the Indian rôle in Bangladesh can have no

bearing on the new State's claim to U.N. membership. Only the most cynical realpolitik can explain Peking's support for the Pakistani rulers in their disgraceful rôle against the people of Bangladesh. And by its shameless power play China has again injected cold war tensions into this part of the world; Mr. Chou En-lai must have taken a series of very quick lessons from his newly-acquired American friends. But what lessons has Mr. Bhutto learnt? Does he expect Mao Tse-tung's thoughts to show him the light when he tries to cope with regional tensions in Sind, the North-West Frontier Province or Baluchistan? Or does he expect Mr. Chou En-lai's indisputably shrewd brain to yield some magic idea by which the Pakistani prisoners will be back home even before "Muslim Bengal" is recognised as Bangladesh? Apparently Mr. Bhutto tried to start some kind of a dialogue with Sheikh Mujibur Rahman on the pretext of making a long-distance telephone enquiry about the Sheikh's health. But he did not get anywhere with this gambit. In spite of the Chinese veto, therefore, he is still in what some fellow journalists are fond of describing as square one. And he doesn't have all the time in the world to move up quite a few squares. The Chinese perhaps think that they are strong enough to make

a perverse display of their pique; but Mr. Bhutto needs to watch his own position very closely indeed.

CERTAIN AREAS IN CALCUTTA SEEM to be relatively unaffected by the power crisis, but I have always suspected that this has nothing to do with the location of essential public utilities like hospitals. It is now disclosed that hospitals hardly enjoy any immunity from the effects of the power scandal. Apparently patients have stopped complaining because they are getting used to primitive suffering. Newspaper readers may have been distressed to learn that ill-developed new-born babies, whose survival depends on special care in sterilised air-conditioned chambers, now fight for their lives in conditions which are dangerous even for healthy children. But the struggle may give them new strength. In any case, they are learning the futility of complaint remarkably early in life. Ordinary people may have already adjusted themselves to modes of pre-industrial existence. This may be an appropriate development when the West Bengal Cabinet itself is setting an example for a "back to the village" move. The transformation, however, is not yet complete, and there is still a heavy demand for candles and kerosene lamps. The wheel will have come full circle when people will get used to living totally in the dark; fans may, in any case, be considered a luxury in the age of "garibi hatao". What is particularly

COMPANY SOLICITORS

A CORRESPONDENT writes in Current Coin: The question of solicitors has not been dealt with in the Bill or by the Chamber. These very ubiquitous, not to say, useful persons hold a kind of Pooi Bah office in many companies. It is not at all unusual to see the same person as the director and solicitor of the company, and of the managing agents as well. In such cases the difficulty of getting what is called an "independent opinion" is very much increased, and a company often needs independent advice. Solicitors are no doubt "very useful persons", extremely so in times of trouble; but when one seeks their opinion, one looks for an indepen-

dent and unbiased one. It is difficult to see how the solicitor of the company can be in a position to give such, if he is also a director. His views must get warped occasionally, and this may be to the detriment of the company. We are entirely in favour of having a solicitor on boards of directors, but not the solicitor or any member of the firm of solicitors of the company. There is rather too much disposition for some solicitors to ape the *deus ex machina*, and act for all parties. It is rarely successful and sometimes leads to considerable bespattering of mud, as a well-known bank and a high class mercantile firm must know to their cost by this time.

revealing is that the West Bengal Government is no longer promising an end to the power crisis in the foreseeable future. This is a remarkable change from the days when the Government was conjuring up visions of universal bliss. What happened to the jobs which the State's unemployed youth were led to hope for? What, for that matter, happened to the schemes for Calcutta's development? Roads were dug up before the monsoon; and at many places there was quick refilling because of the approaching rains. There will probably be more digging and refilling after the rains; and that will be about all the work done. But even the refilling does not seem to have been thoroughly done; both pedestrians and motorists face special hazards at this time of year. The C.M.D.A., however, has only added to the hazards caused by natural decay which nobody does anything to arrest. Water-logging has not been an acute problem this year only because the monsoon has been mild. Thank God, the Government is no longer promising much relief. The Chief Minister recently said that there would be no end to water-logging in Calcutta in the next five years. But why five years? Will any of West Bengal's problems ever be solved?

THE BEHAVIOUR OF UGANDA'S GENERAL Amin towards his country's Asians will rank among the most squalid examples of racialism in Africa's entire history of this most deplorable of human phenomena. How strident would the outcry have been, one reflects, if South Africa had expelled her Asians instead of Uganda. President Amin's racial policies are worse than anything so far dreamt up by Pretoria, although not so much so, regrettably, that they may not at some future time be copied elsewhere in east Africa. The puzzling question, of course, is why the President acted as he did, what indeed has made him use racial means to achieve what are almost certainly political ends. Internal popularity is the easiest answer. Yet African despots of the Amin variety normally pay scant enough attention to public opinion, nor is it necessary they should. The General's support is, after all, based on the army, which will no doubt enjoy the plunder now available, but might otherwise be expected to think less in racial terms than in those of simple power. The wish to punish the British for something or other, per-

haps a refusal to supply arms for an attack on Tanzania or more likely Kenya, seemed a probable explanation at one time, although the later decision to expel Asians of Ugandan nationality, since reversed, somehow cast doubt on it. The answer seems likely to remain as obscure as African politics. But one thing does appear probable, and that is that President Amin has had outside support for his actions.

WHENEVER I HAVE TAKEN TIME OFF during the past few weeks to read about the interminable racial squabbles that preceded the opening of the Munich Olympics, I have generally found myself fighting an inordinate tendency to burst into tears. For the unhappy organisers as well as poor, mixed-up humanity, my grief has been boundless, although not entirely devoid of criticism at what is after all such tragic stupidity. About all I can say is that if, in future, no country ever again volunteers to offer a home for the Olympics, I should not be a bit surprised. Not every nation is rich enough to shoulder the financial risks over which the West Germans must have been biting their nails recently. And let us not delude ourselves that once the Rhodesian or South African problems have been solved, all is going to be well. On current showing, such international get-togethers as the Olympic Games can look forward to being used as a forum for the parading of this, that or the other human conflict, for about as far ahead as it is possible to foresee. Already, it would seem, the Winter Olympics may be on their way out, although

NOT ONCE NOT ON account of racial disputes.

PARLIAMENT WAS RECENTLY GIVEN A list of 38 persons who were paid, "the maximum amount of honoraria" for talks over All India Radio during 1971, and the list was headed by one Swami Chinmayananda who received Rs. 2,600 for his broadcasts. I do not know what his talks were about; but since he is described as a "Geeta scholar" I should imagine that the talks had something to do with the teachings of the Geeta. I have no objection to religious instruction being imparted by some A.I.R. broadcasts; and, in any case, the message of the Geeta has nothing to do with any sectarian or institutional religion. But it may seem a bit odd that the highest individual earnings for talks broadcast by A.I.R. last year were made by a Swami. Surely he could not have been interested in something so mundane as money; and the Geeta certainly enjoins one not to do anything with an eye to the fruits thereof. But there was no point in spurning the fruits either; they could possibly be put to uses for the common good. As far as A.I.R. is concerned, it must be prepared to pay for the kind of talk it values. That the highest payment was made to a Geeta scholar may be interesting; what is perhaps more instructive is that the amount was no more than Rs. 2,600. The journalists, political commentators and others on the list evidently got less, which means that even a professional expert cannot expect a decent income from radio talks. There is a painful dearth of good broadcasters in this country; and one reason may well be the

absence of a sufficient financial incentive. Of course, there are other reasons as well; A.I.R. does not always seem to encourage either liveliness of content or professional competence in its talks and commentators. But poor payment could well be a further disincentive. I have often wondered if it is possible for one in India to make a decent living from free-lance work as a commentator in the Press and on the radio. Perhaps the Press offers a little more scope, but even so it cannot be easy for one to be assured of a living wage from independent writing. Perhaps our system is too rigid; perhaps there is also a lack of individual enterprise. Some people have lately been moaning that we have no one like Jack Anderson to expose the skeletons in the national cupboard. But we do not even have anybody in the tradition of Walter Lippmann who commented exclusively on published information. As for broadcasting, we hardly have any professionals at all; those employed by A.I.R. are professional more by definition than by temper or practice. I am afraid I am totally uninformed about our T. V.

A HIGH CONSULAR OFFICIAL, NEWLY posted in Calcutta, made the following observation the other day: "Bengalis are a wonderful people. But every Bengali thinks that he could have been a Tagore. His State also could have been a paradise on earth but for an unsympathetic, unhelpful and ungenerous Centre. But nobody ever talks of discipline and self-help."

Developing Executive Leaders : The Key to Successful Management

By V. S. Bhatia

As in India, so in America, there is a constant search for the "ideal executive". It has been said that at lower levels, technical and human skills count more, but at higher levels, effectiveness is directly related to human and conceptual skills.

It is argued that any progress towards professionalisation must assume acceptance of its desirability. Managers operate as a part of a social system, and the overall performance will depend on the quality of the personnel and professional goals. If the latter are ill-defined it must lead to obscurity. What professionals are after is vitally important, and the objectives must be acceptable to the community. Also, professionalism cannot be treated as a catchword as is sometimes used in India today. There is work ahead of the Indian industry to establish its credibility possibly through some better self-regulation. Enlightened industrialists in the U.S.A. have grasped the need to consider today's laws and tomorrow's expectations simultaneously. However, broader definitions of economic opportunity are still to emerge in India.

The "self-concept" is discussed as a filter that screens what one does not wish to hear or see. It is a weakness in organisations (whether they be in the U.S.A. or in India) that not all leaders accept that human beings can change in behaviour along with environment. The realism or non-realism in the self-concept can influence business growth. Self-expectation or motivation are, therefore, important in the pursuit of new directions and broader perceptions. Encounter with disappointment is embedded in life and cannot be escaped, and a section in the book* contains the experience of well known business men and public leaders under the stress of responsibility and leadership. The relationship between personality and leadership is discussed with examples from the careers of Presidents of the United States, to clarify the rôle of

effective information, ideas, checks and balances.

One author discusses, in the writer's opinion on somewhat too philosophical a line, an average man's search for anchors outside himself, and the need for an abiding faith as a nucleus of an integrated and meaningful approach. Rapid developments in the practice of the art and science of management have led to new tasks that hinge on developments in technology, markets and systems. Baffled by the complexity of problems of people, money and machines, executives must perhaps learn to think like philosophers. One can agree that intellectual vision and its translation to operational results requires emphasis on new ideas to provide a central focus, and a broad approach of non-involvement, separating the soft from the hard answers, is useful, but addiction to faith or philosophy alone is unlikely to help. It is stated that few companies and yet fewer individual managers address themselves in a serious and organised way to the aspect of future, although the evolution of economic forecasting is now coming to be recognised as a tool of business. This must lead to improvement through the use of quantitative and qualitative analytical economics, a trend visible in India also.

Coping with the Job

As in India, so in America, there is a constant search for the "ideal executive". Unfortunately, insufficient effort has gone into the analysis of the skills that go to make such individuals. A point well made is that at lower levels, technical (production) and human skills (personnel relations) count more, but at the higher levels effectiveness is directly related to human and conceptual skills. The three skill approach is equally valid here. The rôle of the chief executive is discussed in relation to management of stress, capacity to concentrate, and other attributes, such as the influence of a model for good or for bad. The No. I cannot dither and must say "yes" or "no" and resolve the conflict of codes within the organisational structure and behaviour. All this assumes that he is prepared to do or die, and

does not have to look over his shoulder to enquire who breathes on his neck next, which is the current phenomenon both in the public and private sector industry in India.

The rôle of power and politics in organisational life is described on the bearings of personality factors, pyramidal structures (leading to insufficient number of positions to meet everybody's ambition) and the potency and reality of shifts in authority. How true for the authors to highlight the common error of confusing compliances with commitments; the former is an attitude of acceptance of a directive, but the latter represents motivation. (This could be positive or negative through adoption of the directive or resistance to it). Ingenuity to interpret or implement in order to succeed with one's team is important. Also, the need to accept, on the part of the bosses, the validity of a range of alternatives. Power relationship can lead to coalitions which have a rôle to promote development and progress. Readers will observe the similarity in political structure of democracies where the No. I may not be able to build confident relationship within the first tier of colleagues, but might rely instead on an individual outside the formal apparatus (echoes of the situation in the U.S.A. in 1972). Intelligent use of power without losing sight of objectives is relevant in corporate business and politics.

Management evolution (in the quantitative world) deals with the problems arising out of adaptation of new technology and techniques for solution of business problems, and the authors bemoan that executives in America are not primed fast enough to deal with the computer, although the seat-of-the-pants approach to managerial action is on the wane. If this is so in the United States, one can easily lose hope and confidence about India. Quantitative methods must make new demands on managers and bring in their own discipline, for instance, executive mobility—if the manager becomes professional he achieves the status of a technical craftsman loving his tools and anxious to use them in more than one location rather than let them rust. This is already visible in India to the chagrin of those addicted to traditional mores of corporation loyalty.

Motivation for Growth

By far the most interesting part of the book is the section which deals with the familiar theme that the way managers treat their subordinates can affect their performance, and that the output

Guess who

* *Developing Executive Leaders*. Edited by Edward C. Bursk and Timothy B. Blodgett. (Published by Harvard University Press, Massachusetts, U.S.A. Price \$9.95, pages 191.)

is influenced by the Pygmalion rôle of the manager for good or bad. If growth and future performance are critical for development of managers and industry, one must accept that any young entrant in industry could be made or marred by his first manager. A lesson for India.

The problem of maladjusted managers receives attention, through analysis of a few cases, to highlight the rôle of solving actions *via* controls, constructive advice, etcetera. The authors feel that despite the inroads of psychological consultancy, there does not seem to be a single view on the problems, and solutions can perhaps be best sought through eradication of errors in supervision through attention and sensitivity. Supervision has to do with motivation. Everyone in an organisation looks to his boss for such conditions of motivation that has a meaning at his level, and an acceptable style of supervision must be distributed at all levels. Management failures do not arise from intentional malice, but result from residues of traditions, of too much or too little scientific management; in the former, the jobs get fractionated leaving little room for independent initiative and thinking, and in the latter, one has the example of enlightened ad-hocism.

Style of supervision is an expression of the characteristics of the manager, and inter-personal relationships with agreed goals are important conditions for motivation. However, for these to have their full play, there should be adequate management systems.

Manpower Planning

How to promote better management of management careers is the theme of a separate article, and the burden of the arguments is in relation to manpower planning through scientific data collection, information monitoring and continuous personnel research in reference to the rôle of self-perception, job behaviour, etcetera. Career planning is a participative two-way process, with both the employer and the employee to be aware of the critical considerations affecting a joint march towards objectives. When discussing self-education the authors refer to the threat of personal obsolescence in sophisticated economies like the U.S.A.'s. If it is accepted that creative performance of managers can be improved this must be through opportunity to learn, to talk or write about what is being learnt, so that one's experience can be tested. New knowledge is relevant only when this is integrated with exist-

ing skills. This is sound common sense.

A summary of the experience of American experts in selected countries (India not identified) forms the concluding chapter. The common problems encountered are listed as limited educational opportunity, a small base of leadership potential, a built-in hostility towards private enterprise, and above all a lack of appreciation of the rôle of management in promoting business or industry. To this is added a resistance to personal criticism. Here is something for institutes of management in India to keep before them. A trainee executive of today will be a leader of industry tomorrow, and the broad aspects discussed in the book would be relevant to his development wherever he is placed, whether in the public or the private sector.

The editors present 16 reprints/articles, of which the contents need digestion in an intellectual context. Some of these were originally printed about 16 years ago, but the topics are still fresh. A number of Indian experts continue to write and speak on the changing management scene and style to be practised when pursuing

Companies Bill : Plugging the Loopholes in the Corporate Sector

By H. R. Bose

The provisions of the Companies (Amendment) Bill are mostly intended to plug the loopholes in the working of companies. On a closer examination, it would appear that some of the measures now being introduced are actually in the larger interest of shareholders as also of companies.

IT is rather surprising to note that the introduction of the Companies (Amendment) Bill, 1972, in Parliament a few days ago has depressed the stock markets. Equity prices have registered an all-round decline and losses are reported to have been quite heavy in many counters due to persistent selling pressure. But such behaviour of the stock markets appears to a layman rather queer. The provisions proposed under the Companies (Amendment) Bill, 1972, are mostly aimed at plugging the loopholes in the working of companies, particularly with a view to ensuring and safeguarding the interests of individual shareholders. It is, therefore, rather difficult to understand why the present move should adversely react on the share markets.

It is perhaps reasonable to presume that the provisions relating to share transfers and holding of *benami* shares and regulation of dividend payment out of reserves are some of the factors which have brought about this situation. But this has only proved the correctness of the Government's contention that there were considerable irregularities relating to the transfer of shares, and that quite a large number of shares were under *benami* holdings, giving scope for tax evasion and other financial malpractices. On a closer examination of the provisions relating to the transfer of shares and *benami* holding of shares and the stipulation for banning payment of dividend out of reserves, it will, however, be seen that these measures have been introduced in the larger interest of shareholders as also of companies.

It is provided in the Bill that no individual, group, constituents of a

group, firm, body corporate or bodies corporate under the same management shall jointly or severally acquire, whether in his or in its own name or in the name of any other person, any equity share in a public company, the total capital of which is Rs. 25 lakhs or more without the previous approval of the Central Government, if the total nominal value of the equity shares intended to be acquired exceeds together with the total nominal value of the equity share already held 25 per cent of the paid-up equity share of such a company. Similar restrictions will also apply in the case of acquisition of shares of a private company which is a subsidiary of a public company.

It has been further provided that every body corporate or bodies corporate under the same management holding singly or in the aggregate 10 per cent or more of the nominal value of the equity share capital of any other company shall give to the Central Government an intimation of its proposal to transfer such shares giving full particulars of shares proposed to be transferred, to whom to be transferred, the details of the shareholding of the transferee in the concerned company, etcetera. If the Central Government is satisfied that as a result of such transfer, a change in the composition of the board of directors of the company is likely to take place, and that such a change would be prejudicial to the interest of the company or the public, it may direct that no such share shall be transferred except with its previous approval. In case of certain other companies engaged in any industry covered by the Industrial Policy Resolution, such shares shall be transferred either to the Central Government or to corporations owned or controlled by the Central Government according to its direction against payment of an amount equal to the market value of the shares. Similar restrictions have also been proposed for transfer of shares of a foreign company having an established place of business in India.

The Bill also provides that if the Central Government is satisfied that as a result of the transfer of shares of a company, a change in the controlling interest of the company is likely to take place and that such change is likely to be prejudicial to the interest of the company or to the public, the Government may direct the company not to give effect to the transfer of any such share or block of shares. In case such transfer has already been registered, it can ask the company not to permit the transferee or his nominee or proxy to exercise any voting or other rights attaching to such shares or block of shares. These provisions are not, however, to apply in cases where not less than 51 per cent of the shares is held by the Central Government in corporations or public financial institutions.

It will thus be seen that the much criticised method of surreptitiously handing over the management of a company from one group to another without looking into the broader interest either of the company or of the shareholders has been intended to be checked by this provision. It is a common allegation against share transactions in stock markets that in many cases the shares are held in *benami* so as to evade tax liability and other financial obligations. Various committees set up by the Government of India to suggest methods for checking tax evasion, etcetera, have recommended stoppage of *benami* transaction of shares as one of the steps to be adopted. The Bill, therefore, rightly envisages *de facto* stoppage of *benami* transactions in shares. It has been proposed in the Bill that persons having their names entered in the register of members of a company as holders of shares in that company but having no beneficial interest in such shares shall make a declaration within a specified time specifying the name and other particulars of the persons who hold the beneficial interest of such shares. The person holding a beneficial interest of such shares will also have to make a similar declaration specifying the nature of his interest, particulars of the person in whose name the shares stand registered in the books of the company and such other particulars as may be prescribed by the company. Any charge, promissory note or any other collateral agreement concerning any share or any hypothecation thereof without any declaration as stated above shall not be enforceable by the beneficial owner or any person claiming through him.

MANAGEMENT APPOINTMENTS

This space is available for publicising your Management Appointments.

The Management section in *Capital* is the appropriate medium for advertising such top appointments as company secretaries, accountants, legal and tax advisers, management consultancy staff and personnel officers.

For particulars, please contact the Advertisement Manager, *Capital*, 19 R. N. Mookerjee Road, Calcutta 1. Phone : 23-5825-26-27.

According to the prevailing practice, many companies in spite of earning no profit during a particular year declare dividends out of its previous reserves, thereby maintaining the value of the shares in the market. But on many occasions this facility is reported to have been misused and the financial position of a company has been artificially shown up by declaring dividends in spite of losses. This is a case of gross misrepresentation of the state of affairs and very often the public are misguided. It is now proposed to put a stop to such practice of declaring dividend during a year when the company has not been able to earn any profit. It has been envisaged that if due to inadequacy or absence of profit in any year, a company declares a dividend out of its accumulated profits in the previous years, such declaration of dividend shall not be made except in accordance with the rules laid down by

the Central Government in this behalf.

Furthermore, it has been proposed that the total amount to be declared by a company as dividend to the shareholders should be transferred to a special account within seven days of declaration of the dividend, to be known as the dividend account. If any money transferred to the dividend account remains unpaid or unclaimed for a period of three years from the date of such transfer, it shall be transferred by the company to the general revenue account of the Central Government. Any claim to any money so transferred to the general revenue account may be preferred to the Central Government by the person to whom it is due. This provision appears to be a little harsh and prejudicial to the interest of the shareholders.

Should India Invite Multinational Corporations ?

(By a Special Correspondent)

Because of her vast potentialities, India is likely to attract more attention from multinational corporations in the coming years. She needs to bear in mind that such corporations can help her in a big way to achieve self-reliance.

THE American University Centre in Calcutta organised a three-day seminar recently on the rôle of multinational corporations. The participants included business executives, professors of politics and economics, American scholars, and students. The discussions as well as the background papers circulated in the seminar served a useful purpose in highlighting the strong and weak points of the multinational corporation which has been playing an increasing rôle in world economy. A multinational corporation has been defined as one which owns and conducts business in two or more countries. As an American author has explained, it is an agency of direct, as opposed to portfolio investment in foreign countries, holding and managing the underlying physical assets rather than securities based on those assets. There are many factors which motivate corporations to multinationalise. For example, when entrepreneurs find that their products

cannot be directly exported to certain countries because of the latter's tariff barriers, they think in terms of direct investment. The prospects of augmenting profits are, of course, a major motivating factor in setting up multinational corporations. There are also other considerations.

As Mr. Neil H. Jacoby, an American professor of business economics, has pointed out, "by multinationalising, a company also acquires certain competitive advantages. It can monitor technological developments in many countries. It can borrow at low interest rates in one country to finance working capital shortages in a high-interest rate country. It is able to adjust intra-company transfer prices in ways that reduce total corporate tax liabilities. It can move surplus funds between its multiple basis to minimise the cost of borrowed funds or to take advantage of predicted changes in the existing rates of national currencies. Entry by American firms into Europe, for example, was facilitated by the typically large amounts of credit supplied by European bankers on a limited base".

Some idea of the growth of multinational corporations can be had

from the fact that of the 500 largest corporations in the world, 306 have their headquarters in the U.S.A. The total private direct foreign investment by the U.S. industry has been estimated at over \$65 billion. At the same time, foreign investment in the U.S.A. has also been substantial. It has been pointed out that foreign investment in the U.S.A. has been growing at a faster pace than the U.S. investment overseas and that over 700 U.S. manufacturing enterprises are partly or wholly owned by about 500 foreign companies.

Multinational corporations have played a valuable and even vital rôle, especially in stimulating the growth of the less developed countries. According to an analysis made by the National Planning Association of the U.S.A., American multinational corporations have played in many countries "an innovating and catalytic rôle, founding new industries, transmitting technological and managerial skills as well as capital, and in many cases creating entire social infra-structures of schools, housing, health facilities and transportation in order to conduct its business". But multinational corporations have also come in for strong criticism from the host countries. It has been alleged, for instance, that in some cases multinational corporations have concentrated too much on profit-making and too little on the real development of the economy of the host countries and that they have also interfered in local politics and indulged in questionable practices.

As Mr. A. T. Knoppers, a leading American business executive, has said, some developing nations suspect divided loyalties on the part of multinational corporations. It is the latter who often decide what and to whom a subsidiary may export. Multinational corporations are sometimes considered to be a threat to infant or small local industries. They are also charged with attempts to lure away men of merit by paying attractive salaries and to dry up credit sources by taking away the loan money. "The cumulative effect of such accusations when pushed to the extreme", says Mr. Knoppers, "is that the corporation is seen as a threat to local economic autonomy". But, on the whole, the record of multinational corporations has been constructive and commendable and there is a great deal to be said in favour of encouraging their growth, especially in the less developed areas of the world. If such corporations effectively pub-

licise their contributions to the economic growth of the host countries, identify themselves with the local interests and aspirations, conform to the local business practices as far as possible, and do their utmost to encourage research and employment, there is no reason why they cannot become increasingly popular.

India, in the coming years, is likely to attract more attention from multinational corporations. The vast market, political stability, availability of infrastructure and the prospects of profitable working—all these are bound to create among multinational corporations an interest to invest in this country. India, of course, has to be selective in her policy towards the flow of foreign capital, especially the growth of multinational corporations. A cautious approach in this matter will certainly help to speed up the rate of growth of the country's economy and achieve self-reliance. But multinational corporations will be attracted to India only if New Delhi's attitude to the national corporations

becomes more realistic. The Government of India should appreciate that most of the existing corporations in the private sector are owned by several thousands of shareholders belonging to the middle income groups and not by a handful of wealthy people. Indian corporations are also quite small in size when compared with international standards and, therefore, official policy should facilitate their growth and diversification and not stifle them in the name of checking monopolies and concentration of economic power.

Professor Neil Jacoby has described the multinational corporation as "the most powerful agency for the regional and global economic unity that our century has produced" and that it is "fundamentally an instrument of peace". Although these descriptions may seem somewhat exaggerated, there is no doubt that multinational corporations can play a useful rôle in reducing economic disparities between nations and in promoting better understanding among the people of different countries.

The Growing Importance of the Asian Development Bank

By A. Raman

The Asian Development Bank has been trying to satisfy the financial and technical requirements of the region through its varied activities. It will become a more effective body if its resources are increased.

ASIA needs a Development Bank for certain special reasons. First, there is the Colombo Plan under which financial and technical assistance is made available to the different Asian countries by the developed nations. Secondly, international agencies like the World Bank help in the economic development of the region. However, a special institution for financing development is essential, particularly because of the vastness of the Continent. Asia has 18 countries. Each has its own characteristics; and some of the countries are very backward. A Regional Development Bank can meet the financial and technical requirements of the area in a much better way. An international financial institution like the World Bank, however much it may like to promote economic conditions in Asia, cannot do full

justice to the region as it has to meet the requirements of the entire world. Furthermore, a Regional Development Bank can function in close co-operation with another regional institution, viz., the E.C.A.F.E.

A number of questions arise in respect of the working of the Bank. In the first place, does the Bank have sufficient resources? Here, it has to be pointed out that the requirements of the region are indeed huge. But the resources must come only from the rich countries like the U.K., West Germany, France, Italy, the U.S.A., Australia and New Zealand and of course Japan. The Special Fund of the Bank is used for helping the underdeveloped countries at concessional rates and substantial contributions have, therefore, to come to this Fund. A sum of \$100 million will be contributed to this Fund by the U.S.A. while Japan has already contributed \$70 million and will contribute another \$30 million. West Germany has made available 64 million deutschemarks in 1971. Over the period of five years 1971-75, the contributions of some of

the countries to the Special Fund will be as follows: Italy 125 billion liras, Belgium 90 million francs, Denmark \$300,000 and Finland \$100,000. Although the financial support of these countries will undoubtedly be helpful, this alone is not sufficient. The Bank should, therefore, mobilise more and more resources. In this context, the raising of funds by the Bank in the capital markets of the world assumes importance. It is gratifying to note that an office of the Bank has been opened in Zurich. This will enable the Bank to remain in touch with the capital markets as well as the leading banks of the European countries.

Should the Bank give hard loans or soft loans? The Bank, generally speaking, gives hard loans. For example, of the loans granted in 1970, as much as 85 per cent were purely on commercial considerations. Naturally, the conditions were a bit stiff for the recipient countries. However, the Bank may feel that its resources position does not allow soft loans being granted. But, here again, it may be asked as to whether the utility of the Bank will not be greater if it grants soft loans liberally. Soft loans can be granted only if the resources position is comfortable which is not the case at present. Thirdly, has the Bank helped the more backward among the developing nations? Certainly, the Bank has taken into account the needs and requirements of the backward territories; and a number of the very backward among them in Asia like Cambodia and Laos have received aid from the Bank. The loans taken from the A.D.B. were first to be taken by them from any international institution.

The activities of the Bank have been undoubtedly of great help to the Asian countries during the last three or four years. The Bank agreed to grant till 1970, \$400 million to 15 countries in the form of 59 loans. A number of useful ventures in the economic sphere have been assisted by it. Vocational education and agricultural development banks have also been financed by it. The Bank also provides technical assistance. "Good advice", observed Mr. Takeshi Watanabe, "is more than money". The region is as much in need of technical assistance as money. The Bank has provided technical assistance to the extent of a little more than \$6 million. This, of course, is not much; but it has definitely helped in improving the economic conditions in Asia. The Bank can be helpful in other ways too, such as the liberalisation and promotion of trade within the region. The possi-

bilities of assisting trade through the supply of export credit refinancing are being studied by the Bank. The Bank is interested in undertaking surveys too. An Asian industrial survey has recently been undertaken by the Bank.

The Bank has been able to meet the financial requirements of the area only to a limited extent. In the days to come, the A.D.B. will have a more important rôle to play. This is because the countries of Asia are badly in need of more and more resources for their development but are not able to get sufficient funds. In this context, some special characteristics of the region are to be mentioned. First, the pace of economic growth is rather slow. Secondly, the fairly big imbalance between imports and exports is another difficulty; the gap in the balance of payments of the regional member developing countries increased from \$4,352 million in 1963 to \$5,604 million in 1969. Thirdly, there is the strain of debt servicing.

Speaking on the occasion of the inaugural meeting of the Board of Governors of the African Development Bank in 1964, the late Sir Abu Baker Tafawa Balewa, the then Governor-General of Nigeria, observed: "The sphere of economic co-operation between African countries is still a virgin field. We trust that the African Development Bank will act as a catalyst in this field and thus help to bring about the integration of the much desired African Common Market and the ancillary agencies". These observations hold good for the Asian Development Bank to a certain extent. Of course, the idea of an Asian Common Market is still premature. But the idea of regional economic co-operation in Asia is certainly capable of being pursued, as there seems to be good scope for it. In promoting this co-operation, the A.D.B. is one of the important instruments, along with E.C.A.F.E.

(Continued from page 362)

economic growth, even though the concept of growth itself is losing its traditional aroma. In the situation unfolding in India, it is useful to have a background of knowledge and experience of others. The problems discussed in the book cannot be superimposed here, but are relevant to India's conditions, as improvement of competence and decision-making is valuable to nationalised or private industry.

Saving the Simla Agreement

(From Our New Delhi Correspondent)

The Prime Minister is making her best efforts to save the Simla agreement from proving a failure. It is to be hoped that President Bhutto will not create any problem over its implementation.

THE Prime Minister, Mrs. Indira Gandhi, is making her best efforts to save the Simla agreement from proving a failure. Her recent letter to President Bhutto of Pakistan and the decision of his Government to send a team of officials to New Delhi to review the Simla agreement are efforts in that direction. Mrs. Gandhi had to take the initiative since India's hopes of a smooth implementation of the Simla agreement received a severe jolt following President Bhutto's *volte face* on the issue of Bangladesh recognition and the slow and unsteady progress in the delineation of the 17th December line of control in Jammu and Kashmir. Although Mr. Bhutto had presumably given categorical assurances in Simla about his willingness formally to recognise Bangladesh during the month, the impression in the capital is that, far from doing this, he has sought the help of China to bar the entry of Bangladesh in the U.N.

Recognition of a country by another country is essentially a political decision and India can probably do nothing to force President Bhutto to do just that. But the Pakistani President's response to Mrs. Gandhi's letter suggesting a review of the developments since 22nd July when the agreement was signed, has been prompt, and a team from Rawalpindi was in Delhi during the week-end. For Pakistan, the return of the 90,000-odd prisoners of war is as important as regaining the lost territory, particularly in Sind and Punjab, although not to the same extent in Kashmir. This explains why there has been sufficient progress in the Sind and Punjab sectors and rather slow progress in Jammu and Kashmir. The release of the prisoners of war is essentially linked with Pakistan's re-

cognition of Bangladesh. It is a pity that although Pakistan was in a position to dissuade China from casting its veto against Bangladesh's membership of the U.N., it preferred not to do so. Now that the Jana Sangh agitation has ended, the Government is not unduly worried over the Opposition's attitude to the Simla agreement, but Mrs. Gandhi is anxious that at least Mr. Bhutto does not create problems for the implementation of the agreement. The hope in the capital is that once the Pakistan official team returns to Islamabad speedier steps would be taken to implement those portions of the agreement which have priority over others.

Meanwhile, during the last week Parliament was concerned with some of the internal problems. There was first the civic strike in Bombay over the bonus issue, then the Shahdara disturbances over police excesses and then a major debate over the power crisis in several parts of the country. Since bonus is a Central issue, the Opposition sought to grill the Government for its failure to formulate a uniform policy applicable to the whole country and failing to get a satisfactory reply, the Opposition staged a walk-out. On the Shahdara issue, even the Speaker was prepared to give his consent to an adjournment motion, but the difficulty was that, due to the absence of the D.M.K. members from the House on that particular day, the Opposition could not muster the minimum of 51 members required to support the motion. However, subsequently, there was a short-notice question during which the Government announced the setting up of a judicial enquiry into all the incidents, except the alleged murder of a Home Guards official which sparked off the trouble. As for the power crisis, Dr. K. L. Rao, Central Irrigation and Power Minister, literally expressed his helplessness and said that the only solution to this was a Central authority to regulate the generation and distribution of power.

SPOTLIGHT ON STATES

The End of the Educational Crisis in Kerala

(By a Special Correspondent)

The Prime Minister, Mrs. Indira Gandhi's intervention helped to solve the crisis that was facing private colleges in Kerala for a year and a half months. All the parties concerned can now concentrate on improving the standard of education in the State.

THE collegiate education problem in Kerala which was hanging fire for the last two and a half months affecting the future of some 100,000 students is now amicably resolved. The Prime Minister, Mrs. Indira Gandhi's intervention gave this burning issue a salient touch which expedited the settlement, thus averting an explosive situation in the State. The peculiarity of the educational system in Kerala is that private managements hold the monopoly in this field. Out of the 133 colleges in the State, more than 100 are run by private managements wherein various Christian organisations and the Nair Service Society and Hindu community organisation (led by the late Sri Mannath Padmanabhan) predominate.

The main cause of the recent crisis was the Government's decision to bring down the fees in private colleges so those being paid in Government colleges without increasing the grants-in-aid to cover the resulting deficit; the Government has been meeting 80 per cent of their deficit by way of grants. Following the said decision, 69 private colleges run by the Church and the N.S.S. remained closed after the summer vacation defying the University's order to reopen by 10th July. The University even threatened to de-affiliate such colleges in case of non-compliance with its directive. But the managements were adamant.

The Government, therefore, modified its earlier stand and offered to pay off staff salaries directly if the managements were agreeable to a limited Government control over employment and admission in colleges. The Government's argument was that some sort of control was necessary to stop malpractices. The Liaison Committee of the ruling Party wanted a representa-

mittee for admission and employment. But the managements were prepared to take only an observer from the Government side. The Government later proposed a four-member committee representing the Government the University, the management and the principals but this was also turned down. The Bishops' Council representing various Christian organisations maintained that employment in colleges was a very important issue where the Government should not interfere. The Private School Managements' Association which met in Kottayam declared that it was prepared to meet the challenge posed by the Government.

The six-Party coalition Government found itself on the horns of a dilemma with two of the coalition partners adhering to different courses of action. While the Muslim League pleaded for relaxation in the stand taken by the Liaison Committee, the Youth Congress threatened to withdraw its Ministers should the Government make any concession to the managements. With the two sides sticking to their guns, the situation started taking a violent turn. The K.P.C.C. Joint Secretary, Mr. A. K. Antony, and the pro-Congress Kerala Students Union President, Mr. Sudheeran, were manhandled by pro-management demonstrators near Kottayam on 22nd July. As a sequel to this, students joined the struggle holding protest meetings and demonstrations in Kottayam, Vaikom and other places.

Negotiations were, no doubt, going on at various levels between the Government and the managements but at the same time the Government was planning to make alternative arrangements to provide educational facilities to students affected by the closure of private colleges. They included opening of new colleges in Kottayam, Changanacherry, Thiruvella and Muvattupuzha, introducing shift system in the reopened Government and private colleges and giving necessary aid to the proposed popular college to be set up by the Kerala University in Trivandrum.

In this connection the Governor of Kerala, Mr. Viswanathan, met the Central leaders who in their anxiety to solve the deadlock advised the State Government to make some adjustment to create a favourable climate for settlement. The Prime Minister also advised a socialistic formula. The proposal was for a five-member selection committee consisting of three from the managements' side and two from the Government. The Government representative although fully empowered was to be an observer only as was the managements' demand. Immediately on his return from abroad the Chief Minister, Mr. Achutha Menon, summoned the management representatives for further talks on the above lines. Although the area of differences between the two sides narrowed down, the question of employment remained a stumbling block and there was a complete breakdown of the talks.

As a last resort the managements approached the Centre for intervention. In the final round of talks between the managements and the Government on 16th and 17th August, a settlement was reached on the basis of the compromise formula approved by the Prime Minister. It envisages a five-member selection committee for employment and admission consisting of one each from the Government and the University, two from the management and another to be chosen by the management in agreement with the University from among the Principal, Head of the Department or Professor of the subject concerned. The District Collector or a Secretary shall be the Government representative who will be chosen by the management from a panel of Collectors and Secretaries. It has been agreed by the managements to reopen all the closed colleges by 1st September.

As for the question of admission of students, 50 per cent of the seats are to be filled on the basis of merit, 20 per cent reserved for scheduled caste and tribes, 20 per cent to be filled at the discretion of the managements and the balance 10 per cent reserved for the community which runs the institution. The managements will also withdraw their demand for an increase in grants to make up the deficit arising from the reduction in fees. It is a matter of opinion as to who has won the battle like all compromise cases, but one great benefit is that both the sides can now heave a sigh of relief and direct their energies to more constructive channels while the stranded students can prosecute their studies without interruption.

Should the Number of Public-sector Banks be Reduced ?

By M. R. Meher

The Banking Commission has recommended that the number of public-sector banks should be reduced. The logic behind this proposal is difficult to understand because their present number is hardly enough for a country of India's size.

A MAJOR recommendation of the Banking Commission is the reduction of the number of existing national banks. According to it, the present number of 22 separate banks in the national sector is too large and the distribution of banking facilities provided by them is uneven as between different States. The Commission mentions, among the important considerations on which the reorganisation should be based, that it is necessary to allot a fair proportion of well developed areas and backward areas among

the constituent units and that there should be some measure of equalisation of both the nature and volume of banking business among the different units. As far as possible, the units should be compact ones operating over areas that are geographically contiguous.

It has, therefore, recommended that there should be three all-India banks and five or six formed on broad regional lines. The all-India banks should aim at having branches in all population centres at the level of district towns and above. The other banks, each one of which can work over the areas of two or three neighbouring States, would also have a branch network in the areas of operation of the concerned States. Besides, in order to give a reasonable choice to the public, banks in two neighbouring regions may be allowed to open branches below the level of district towns in each other's regions. Under such a reorganisation, the Commission goes on to say, persons residing in district towns and population centres above the level of such towns can have a choice between the three all-India and at least two, if not more, regional commercial banks. In such a structural reorganisation the total number of banks in the national sector could be reduced to nine, eight or seven.

The State Bank of India and a couple of other banks, which have a fairly well distributed network of branches all over the country, are not proposed to be disturbed. As for the commercial banks in the private sector, it has recommended that only those that show good performance should be allowed to continue. The test of good performance is given as a rate of growth of business at least equal to the average rate of growth of the banking system as a whole and high standards of conduct of business as judged by the Reserve Bank of India. Such of those banks which do not satisfy these criteria are proposed to be amalgamated among themselves or with a bigger bank under a time-bound programme.

The national banks comprise the 14 nationalised banks, the State Bank of

India and its seven subsidiaries. The proposal to reduce the number of national banks is ill-conceived. The U.K. has six large London clearing banks and three others which do most of the banking business. The U.S.A. has about 14,000 banks. In India the development of banking has taken a middle course between the two extremes. For a country of the size of India, the present number of national banks is not too large. Nor is the number an historical accident as stated by the Commission. The number has been evolved to meet the potentialities and requirements of banking facilities.

It is not desirable to reorganise the present set-up into three banks of a higher category and five or six of a lower category and status. Most business men would prefer to deal with banks of all-India status and coverage with which they have been used to deal with rather than with regional banks. The existing national banks with their branches already constitute very large units and there is need for decentralisation of the decision-making function (which has been recognised by the Banking Commission also) rather than reduction of the existing national banks. The existing arrangement also allows some competition between the national banks in the quality and range of service as also in efficiency. It is also not necessary that banks should be distributed in fair proportion between developed and backward areas as suggested by the Commission. It is the amount and potentialities of business available that is the relevant consideration. The proposal of the Commission would also involve serious administrative and practical difficulties which make any such reorganisation not at all worth while. But the proposal of the Commission that where there are too many branches of the national banks in a restricted area the number should be reduced, deserves to be considered.

The recommendation of the Commission in regard to the existing commercial banks in the private sector is difficult to support. The Reserve Bank has extensive power, in the interest of depositors and of sound banking practices, to take appropriate action and, if necessary, secure amalgamation of one bank with another. But to require that the performance of a bank, if it is to be allowed to continue an independent existence, should be such that its rate of growth of business should be at least equal to the average rate of growth of the banking system as a whole, would be an unnecessary and uncalled for restriction.

West Bengal : How to Check Evasion of Sales Tax

(By a Special Correspondent)

The Government of West Bengal is amending the Sales Tax Act with the object of checking evasion of the levy. But will the new measure achieve the desired result ?

SALES tax has been a major source of revenue to the Government of West Bengal, although in recent years the yield from this source has been rather stagnant due to the decline in business activity. However, with the economic revival of West Bengal, the State can hope to derive more substantial revenue from this source. The enhancement of sales tax on certain items in the State Budget for 1972-73 will also help augment the revenue from this levy. Even States like Tamil Nadu, which are far less industrialised than West Bengal, have been able to obtain much higher revenue from sales tax than the latter. Thus in 1971-72, while West Bengal's revenue from sales tax was estimated at Rs. 73.80 crores, the figure for Tamil Nadu was Rs. 93.19 crores. The following table compares West Bengal's revenue from sales tax with some other States.

far, the largest single tax head. Moreover, its receipts have grown faster than the total tax receipts so that its share in the latter has gone up from a 1/3rd in 1960-61 to nearly a half in 1970-71. However, in recent years, even sales tax receipts are growing sluggishly despite frequent additions to its rates and coverage."

In his Budget for 1972-73, the Finance Minister of West Bengal, Mr. Sankar Ghosh, has resorted mainly to the sales tax for mobilising additional resources. Under the West Bengal Taxation Laws (Amendment) Bill 1972, sales tax would be levied at 12 per cent on luxury items like precious synthetic stones (real or artificial), pearls (real, artificial or cultured), golden and silver filigree, furs, marble chips, marble or mosaic floor and wall tiles and articles made of marble or mosaic, laminated sheets like Formica, and perfumes. Furthermore, the Government of West Bengal has decided to levy sales tax at 12 per cent on foreign liquor and at 6 per cent on certain other excisable commodities. The

posed to notify certain such commodities under Section 4A of the Bengal Finance (Sales Tax) Act 1941 so that any person who imports any such commodity will be liable to pay sales tax irrespective of the quantity of import". It is not clear to what extent the West Bengal Government will be able to check evasion of sales tax by the above measure. The problem of sales tax evasion was examined by the Wanchoo Committee. The committee said that the evasion of income-tax was closely linked with the evasion of sales tax. It suggested that the best way to get over the problem would be to replace sales tax levy on various commodities, as far as possible, by additional duties of excise.

As in some other States, in West Bengal also the Government has been using the sales tax refund as an incentive to promote the expansion of the existing industries and the setting up of new ones. For the existing units in the developed areas, with an average Central and State sales tax liability of Rs. 3 lakhs or more a year during the last three years, the following benefits have been assured for substantial expansion:

"(a) The State Government or its agent will sanction a return of the sales tax credited by them during preceding three years.

"(b) Such return will be given in the form of unsecured long-term interest-free loan repayable in three annual instalments starting from the end of 18th year from the date of disbursement of the loan.

"(c) This return will be restricted to a maximum of 25 per cent of the capital outlay on land, building plant and machinery, equipment etcetera, created in the new unit or the existing unit by way of substantial expansion during the next three years".

Incentives on somewhat similar lines have been provided also to industries in the developing areas as well as to the units to be set up in the State. Although this scheme came into effect from 1st January, 1972, it is reported that the Government has not been able yet to implement it effectively for one reason or the other. Maharashtra has used this method of refund of sales tax as a major incentive to stimulate industrial growth. In West Bengal also similar results can be obtained if the Government suitably streamlines the procedures for getting the refund.

		SALES TAX REVENUE (Rs. in crores)		
		1969-70	1970-71 (Revised)	1971-72 (Budget)
Andhra Pradesh	...	43.09	45.30	55.00
Bihar	...	36.37	40.05	43.62
Gujarat	...	54.57	59.00	66.00
Madhya Pradesh	...	37.65	41.25	44.59
Maharashtra	...	129.59	156.69	155.95
Punjab	...	30.71	33.19	33.90
Tamil Nadu	...	72.15	82.62	93.19
Uttar Pradesh	...	58.42	57.95	60.28
West Bengal	...	63.31	70.40	73.80

It is worth recalling that in 1960-61, West Bengal derived only Rs. 17 crores from sales tax. In the subsequent years, there was a steady increase in the revenue from this source. In this connection, it is relevant to quote the following remarks by the Calcutta Metropolitan Planning Organisation in a recent study: "The increase in State tax revenues from 1960-61 to 1970-71 has, almost all of it, been on account of increasing receipts from sales tax. Sales tax has throughout this period been, by

Finance Minister has justified this measure on the ground that so far sales of liquors and certain other excisable items have been exempt from sales tax in West Bengal while in many States, this tax has been levied on such excisable goods in addition to excise duties.

The Government of West Bengal thinks that the present amendment to the Sales Tax Act will help to check evasion. The statement of objects and reasons says: "It is pro-

Wagon Shortage : A Severe Challenge to the Coal Industry

(By a Special Correspondent)

The wagon shortage has hit the coal industry hard. According to some colliery-owners, the supply position remains as acute as it was three months ago.

COLLIERY-owners in West Bengal and Bihar are suffering from prolonged shortages of railway wagons to transport coal. Some coal mines have already cut down production for poor despatches or large pithead stocks. Enquiries in the Jharia-Raneegunj coalfields reveal that the accumulated stocks have remained almost static at 9 million tonnes (against 6 million tonnes in 1969-70) and has locked up a capital of about Rs. 35 crores. In the opinion of some colliery-owners, the wagon shortage remains as acute as it was three months ago. The economy is supposed to grow at the rate of 5.5 per cent a year during the Fourth Plan period and thereafter at 6.2 per cent a year up to 1980-81 (implying an accompanying annual growth rate of 7.7 per cent in mining and manufacturing sectors). But a recent study has concluded that the coal industry, in spite of its steady growth in the last several years, has only reached a level of overall production of 76 million tonnes in 1969-70. The industry has been suffering from an acute wagon shortage since August 1970. It recorded a setback in production to the tune of 5 million tonnes in 1970-71.

The agonies of coal-consuming industries like cement, thermal power stations, engineering units, brick kilns, steel, sugar, textiles and paper are well known in this context. They are bound to close down their units if they fail to replenish their coal stocks in time. Some of them have already curtailed production. Some thermal power stations, for instance, have already suffered for inadequate coal stocks, and the steel industry would also have faced the same music but for the shortfall in production in the five main steel plants. A number of chemical and engineering units in West Bengal had to transport coal by trucks at a cost three times more than the railway charges.

Even the tea estates in north Bengal have not been spared.

The rate of wagon loadings in 1968-69 and 1969-70, according to a study, could not be maintained in 1970-71. The average monthly rate of wagon loadings in the broad gauge in 1970-71 was lower than what it was in 1969-70. Similarly, in the metre gauge, except in April 1971, the rate of wagon loadings from May 1970 to March 1971 was lower when compared with the corresponding months of the previous year. However, according to the railways, the rate of loadings from the Bengal-Bihar coalfields alone in the first three months of 1972 was 16 per cent higher than the 1970 level. Also, the loading of coal from central India coalfields for power-houses has increased from 1,476 wagons a month in 1970-71 to 3,001 wagons a month in 1971 (or an increase over 100 per cent in a year), loadings went further up to 5,073 wagons in April 1972. The railways note that the rate of coal loading of the railways is steadily going up since the middle of January 1972, reaching the level of 8,343 wagons a day in March 1972 (against the 8,176 wagons a day in 1969-70). Interestingly, the railways have carried 4,034 train loads of coal from the Bengal-Bihar coalfields to different power-houses in 1971-72, against 3,620 train loads in 1970-71. The railway authorities also repudiate the criticism that the recent power crisis has been caused by the shortage of wagons to transport coal.

Yet, coal industry circles in the eastern region emphasise that if any industrial unit has to suspend its operations for the coal shortage, then the responsibility does not lie with the coal mines alone. Closing of coal mines and of other industries, leading to more unemployment and social tension, is not the best answer either for West Bengal. But due to the shortfall in the daily allotment of wagons in the Eastern Railway, many coal-hungry industries have been forced to slow down or close their units. They feel that the short-

fall in wagon allotment has been largely due to deficiencies in the scheme of allotment or linkage of wagons to specific consumers. In addition, the discontinuance of directional rake scheme, frequent cuts in wagon allotments with little efforts to make good all the arrears, and wide miscalculation in the demand for wagons have all precipitated the crisis. Coal miners hold that the recent crisis is not due to lack of sufficient demand for wagons. Rather, the perennial short supply of wagons, either for operational inefficiency or unsatisfactory turn-round, especially during the monsoon, has only become a bit worse.

Naturally, colliery-owners in the eastern region are unhappy over the present situation that threatens to paralyse their mines or even the entire coal-based industrial sector. They have to pay at least Rs. 25 lakhs a month as interest alone, leaving aside Rs. 35 crores being locked up in pithead stocks, or suffer loss due to erosion on account of open storage. Truck hauling of coal has more than trebled, but there are not enough trucks for meeting the situation when the pithead stocks have risen to 9 million tonnes, against the normal 3 million tonnes, blocking Rs. 35 crores. Besides, road transport is expensive.

Hence, the demand that the railways should give topmost priority to the coal industry. It is suggested that diesel or steam locomotives, in place of the present electric traction, should be started to avoid bottlenecks caused by theft of overhead wires. In any event, a fall in coal production due to large pithead stocks bristles with innumerable problems. Colliery-owners in the eastern region also fail to see any valid reason as to why they will get only about Rs. 35 for a tonne of coal while the consumers in other parts of the country will have to pay much more due to an artificial scarcity of coal created by the wagon shortage.

PEOPLE AND PERSONALITIES

Mr. Ranjit Chib has taken over from Mr. Robin Sadler as Chief Executive of the Indian Market Research Bureau. Till now, Mr. Chib had been a director of Gallup Poll in the U.K.

Mr. S. S. Mukherjee, former General Manager of the South Eastern Railway, has been appointed General Manager of the Metropolitan Transport Project of Railways in Calcutta.

Uncertainties Restrict Trading in Equities

THE stock markets have put up a quietly steady trend this past week, although prices have reacted somewhat towards the close. The scarcity of fresh offerings at lower levels, short-covering, replacement buying and selective purchases by the Unit Trust have contributed in varying measure to the week's mild rally. Turnover has, however, been restricted and activity has continued to be predominantly professional in nature. While sellers seem reluctant to press sales at lower levels, investors too are inclined to adopt a wait-and-see attitude because of the various uncertainties which have obscured the economic prospect. In view of the fairly big decline in equity prices over the past many weeks which had brought the all-India equity index fairly close to its 1971 low, technical considerations initially favoured a mild rally.

The week's corporate news has been quite pleasing, and the markets have been in a somewhat better mood to respond to favourable influences because of their improved technical position. The announcement of an increase of about Rs. 6 crores in compensation for the take-over of general insurance companies has been welcomed. Trading sentiment has been aided by reports of a pick-up in exports, although the trade surplus during the first quarter of the current financial year, April to June, is attributable mainly to exports to Bangladesh following the massive aid extended to that country. The assurance given by the new Central Planning Minister, Mr. D. P. Dhar, that uncertainties about the Government's thinking on new economic policy will be ended shortly has been well received. The stock markets can adjust themselves to any policy, but they dread continuing uncertainty. For uncertainty kills initiative and tends to paralyse activity. Yet another factor which has imparted a measure of steadiness to the markets is the improved outlook for the *kharif* crop following the recent widespread rains. Of course, the improved outlook only means that the shortfall will not be as big as feared earlier. Reports—and there have been far too many of them—that the Government is keen to boost agricultural and industrial production and also hold the price-line

have also had a favourable impact on sentiment. The stock markets are in a somewhat hopeful mood, but it is difficult to say whether this week's modest rally will mark the beginning of the end of the downward phase.

Gilt-edged securities have remained quietly steady this past week, although turnover has greatly improved. The 3 per cent Conversion loan 1986 has been quoted at Rs. 59.90. The State Government loans have received selective support and changes have been few. Turnover has remained restricted.

The Calcutta stock market has remained quietly steady this past week. Share prices had initially shown a steadier trend, but towards the close there has been some reaction on bull liquidation as operators are reluctant to extend their commitments in view of a large number of imponderables. Although there have been a number of favourable developments, such as the reported increase in the industrial growth rate to 4.2 per cent in 1971-72, an increase in exports to Rs. 882 crores during the first six months of the current year, against Rs. 759 crores during the corresponding period of the previous year and good corporate news, operators have generally ignored them. Among engineering shares, Guest Keen Williams, Burn and Indian Standard Wagon have been quiet. Among jute shares, Bally, Agarpara, India and Ganges have been transacted. Bengal and Western Bengal have been steady. Among paper shares, Straw Products, Orient and Ballarpur have been easier. Among miscellaneous shares, Hindustan Aluminium, Martin Burn, Brooke Bond, Aluminium Corporation and East Anglia Plastics have been quiet. Among tea shares, Baikhal, Tengpani and Rydak have been done.

Steadier conditions have prevailed on the Bombay stock market this past week. Although earlier gains have been pared by corrective profit-taking, net changes over the week still show widespread gains. Replacement buying and short-covering at lower levels have made for a rally, but the market has been unable to make any big headway due to the lack of follow-up support at higher levels. Bulls have been badly beaten recently and they

are in no mood to launch a fresh offensive. But bears too are not aggressive as equities have already registered a substantial decline over the past few months. The outstanding bright features of the week include Indian Dyestuff, Indian Organic, United Carbon, N.O.C.I.L., Mafatlal Fine, Garware Nylon, Gujarat State Fertilisers and Motor Industries. The spurt in Indian Organic is attributable to the chairman's optimistic assessment of the Company's prospects as its polyester fibre plant is expected to start commercial production shortly. Century Mill shares have come under pressure because of the uneasiness over the delay in the disposal of the Company's application for the issue of bonus shares. Indo-Burma Petroleum shares have been marked lower in the wake of reports that the Government has decided to convert I.B.P. into a separate public-sector undertaking. Shipping shares have ruled quietly steady. Hindustan Aluminium have been subdued. Associated Cement have kept steady on institutional support.

The Madras stock market has remained featureless this past week. It

COMPANY REPORTS

Reports relating to the following companies appear on later pages of this section :

Anil Steel
BASF India
Bertrams-Scott
Binani Metal
Birds Jute and Exports
Calcutta Steel
Central India Machinery

T.I.S.C.O. : Inadequate Price Rise Erodes Profit Margins

THE chairman of the Tata Iron and Steel Company, Mr. J. R. D. Tata, had a few words of cheer for the shareholders when he addressed the annual meeting last week. The Company has not done well in the first four months of the current year because of the large-scale absenteeism on the part of labour. But this is a regular feature in the steel industry. The management normally takes advantage of the large absenteeism and effects major repairs to the plant. The Company hopes to be able to produce more during the remaining part of the year. But while production in the current year is expected to be somewhat higher, profits are likely to be a little lower. This is because margins have been eroded by the inadequate price rise allowed by the Government and continuous escalation of costs.

Mr. Tata told the shareholders that the Company had asked for a price rise of Rs. 113 a tonne to compensate for the increase in wages and in other elements of cost. But the price increase allowed by the Government works out to only Rs. 43 a tonne for Tata Steel for a full year. The increase works out to around Rs. 29 a tonne for eight months of the current year. The chairman has, however, assured the

shareholders that the Company will be able to maintain the dividend for 1972-73, barring, of course, any unforeseen circumstances and Government intervention in the context of the proposed changes in the Companies Act with regard to dividend disbursements.

Replying to shareholders' queries, the chairman clarified that he had not made any proposal to the Government to convert the Company into a joint-sector enterprise. The Company is, for all practical purposes, already in the joint sector as the Government controls directly or indirectly, 40 per cent of the voting rights.

PAUL LOHMANN

Change of Management

SOMANIS of Bombay have taken over the management of the Calcutta-based Dr. Paul Lohmann (India) Ltd, a Company engaged in the manufacture of pharmaceuticals and industrial chemicals. Three directors—Mr. S. Sengupta, Mr. R. Choudhary and Dr. S. P. Adarkar—have resigned from the board and their places have been taken up by Mr. S. G. Somani, Mr. S. B. Somani

and Mr. D. L. Singi. Mr. S. G. Somani is the new chairman of the Company.

Dr. Paul Lohmann has reported extremely disappointing results for the year ended March 1972, incurring a further loss of Rs. 13.39 lakhs. This has been attributed to disturbed production and the non-availability of raw materials. For the 15-month period ended March 1971, the Company had incurred a loss of Rs. 19.22 lakhs over and above the loss of Rs. 4.74 lakhs in the preceding year. The accumulated loss at the end of March 1971 amounted to Rs. 44.38 lakhs. The new management proposes to revitalise the Company's production programme by proper planning of raw materials. The current year's results are expected to show a substantial improvement over the previous year's disappointing performance.

HINDOOSTAN SPINNING

Better Results

THE working results of the Hindoostan Spinning and Weaving Mills for the year ended March 1972 show an appreciable improvement over the previous year's performance. Sales and other income are up by 17.5 per cent from Rs. 13.72 crores to Rs. 16.13 crores and the gross profit has risen by about 16 per cent from Rs. 72.71 lakhs to Rs. 84.35 lakhs. The dividend has been kept unchanged at 14 per cent (Rs. 35 a share of Rs. 250).

After providing Rs. 35.81 lakhs (against Rs. 38 lakhs) for depreciation, Rs. 5.95 lakhs (against Rs. 5.96 lakhs) for development rebate reserve and Rs. 24 lakhs (against Rs. 16.50 lakhs) for taxation, the net profit for 1971-72 amounts to Rs. 18.59 lakhs, against Rs. 12.24 lakhs in the preceding year. After adjustments, the disposable surplus amounts to Rs. 21.40 lakhs (against Rs. 14.15 lakhs). The interim equity dividend of Rs. 12.50 a share absorbed Rs. 6.24 lakhs and a sum of Rs. 15 lakhs (against Rs. 7.52 lakhs) has been transferred to general reserve. The preference dividend amounting to Rs. 1.47 lakhs and the final equity dividend amounting to Rs. 11.23 lakhs will be paid out of general reserve. The Company's exports during 1971-72 were valued at Rs. 2.97 crores, against Rs. 2.75 crores in the preceding year. Machinery valued at Rs. 22.47 lakhs was received

and most of it was erected during the year.

BERTRAMS-SCOTT

Expansion Plan

THE present management of Bertrams-Scott (India) Ltd took over control in February 1961. Since then, despite the fact that the country passed through a prolonged industrial recession and that the paper industry experienced tremendous difficulties, the Company managed to deliver Rs. 4 crores worth of plant and equipment to the paper industry, including one of the most modern machines in India to Ballapur Paper and Straw Board Mills Ltd, costing nearly Rs. 90 lakhs. The company also has established itself as the foremost supplier of evaporators not only for the paper industry, but to aluminium and rayon industries as well. The first ever indigenous built evaporator for the aluminium industry was delivered to Indian Aluminium Co. Ltd for its elgaum Plant at a cost of nearly Rs. 50 lakhs. Recently, an evaporator worth about Rs. 34 lakhs for handling eucalyptus spent liquor was supplied to Harihar Polyfibers. All efforts have been made to keep the imported components to the minimum. The entire production of nearly Rs. 5 crores worth of plant was carried out by consuming only Rs. 133 lakhs of foreign exchange.

The Company has received a letter of intent from the Government of India allowing it to enlarge the scope of its industrial licence so that it can manufacture paper machines with capacities up to 150 tons a day. It has, therefore, made sure that the required technical know-how would be available for this purpose. Its collaborators, Bertrams-Scott Ltd, J.K., has in turn finalised its arrangements with Escher Wyss S.m.b.H. of Ravensburg, Germany and their U.K. subsidiary, Millsrough Ltd, of Sheffield. The construction of the new factory at Taraola, Calcutta, should be completed by the end of this year.

UNITED WIRE ROPES

Setback Suffered

UNITED Wire Ropes has produced disappointing results for the year ended March 1972. Sales are down by 30 per cent from Rs. 104.32

lakhs to Rs. 72.15 lakhs and the gross profit has shrunk from 10.77 lakhs to Rs. 4.33 lakhs. After providing Rs. 3.85 lakhs (against Rs. 3.86 lakhs) for depreciation, the net profit amounts to Rs. 1.49 lakhs, against Rs. 6.91 lakhs in the preceding year. After writing back Rs. 7.41 lakhs from the development rebate reserve, the surplus of Rs. 8.90 lakhs has been utilised to reduce the accumulated deficit to Rs. 26.14 lakhs which is being carried forward. The setback in the Company's working during 1971-72 is attributed mainly to serious labour troubles in the factory during October-November 1971 and again from February 1972, resulting in loss of production and disruption of delivery schedules both of home and export sales. With labour trouble assuming a serious form, the management had to declare a lock-out on 20th April and the Company reopened only on 31st July, 1972. The prolonged lock-out has left a backlog of orders which is expected to be cleared shortly. The Company has done fairly well on the export front.

CENTRAL INDIA MACHINERY

Good Results

CENTRAL India Machinery Manufacturers has turned out improved results for the year ended March 1972, enabling the directors to clear the arrears of depreciation

and preference dividend thereby paving the way for the resumption of payment of equity dividend next year. The last equity dividend paid by the Company was 10 per cent for 1966-67. While sales at Rs. 8.93 crores show only a small increase over the 1970-71 figure of Rs. 8.44 crores, the gross profit has risen by about 15 per cent from Rs. 47.06 lakhs to Rs. 54.15 lakhs. After providing Rs. 24.09 lakhs (against nil) for depreciation and Rs. 37,000 (against Rs. 75,000) for development rebate reserve, there is a net profit of Rs. 29.69 lakhs. After certain adjustments, the disposable surplus amounts to Rs. 38.15 lakhs. A sum of Rs. 24.17 lakhs has been set aside for depreciation in respect of 1970-71 and Rs. 10 lakhs have been transferred to dividend reserve. The balance of Rs. 3.75 lakhs has been carried to general reserve. Preference dividends for 1970-71 and 1971-72 absorbing Rs. 12.82 lakhs will be paid out of dividend reserve.

The improved results during 1971-72 are attributed to better performance of almost all the divisions. The demand for automatic looms for weaving high density polythylene flat taps and multi-shuttle looms was good. The offtake of automatic looms by the mill sector, however, remained slack. The working of the shuttle division was satisfactory and that of the steel foundry division showed considerable improvement. The structural division is developing

ANIL STEEL : SHARE ISSUE SOON

WITH a view to financing a plant in Jaipur for manufacturing high carbon and low alloy steel strips, Anil Steel and Industries Ltd proposes to enter the capital market soon with a public issue of 320,000 equity shares of Rs. 10 each and 15,000 preference shares of Rs. 100 each at par. The plant, which has a licensed capacity of about 3,600 tonnes a year, involving a capital expenditure of Rs. 2.22 crores, has been so designed as to allow expansion with balancing equipment in future. Of the total plant outlay, the foreign exchange component is about Rs. 84.4 lakhs and the Company will have the benefits of technical know-how from a reputed German steel making firm, Hoechst Werke Hohenlimburg Schwerts A. G., which will act as a consultant.

During the initial stages, the Company will be engaged in hardening, tempering, grading, polishing and edge rounding of high carbon low alloy steel and this will be done for the first time in the country.

On achieving the full licensed capacity, the Company will be able to save foreign exchange to the tune of Rs. 1 crore, as the entire requirements of strips are being imported now. The present estimated indigenous demand for strips is about 5,000 tonnes. It is likely to rise to 6,000 tonnes by 1972-74 and to 10,000 tonnes by 1978-79. The promoter of the Company is Mr. S. N. Khaitan, chairman of the Shalimar Industries Private Ltd.

certain precision and specialised products which are expected to yield better margins. The Company has on hand an export order for 120 automatic looms from Africa and shipments have begun. Efforts are being made to boost export sales to the African and west Asian countries. The management is also exploring the possibilities of securing foreign orders for wagons.

FACIT ASIA

Dividend Maintained

FACIT Asia has maintained the dividend for the year ended March 1972 at 15 per cent. The Company's working results show a small setback. The gross profit is a little lower at Rs. 29.23 lakhs, against Rs. 30.56 lakhs in the previous year, even though sales have risen from Rs. 74.63 lakhs to Rs. 77.75 lakhs. After providing Rs. 2.77 lakhs (against Rs. 2.96 lakhs) for depreciation, Rs. 21,000 (against Rs. 10,000) for development rebate reserve and Rs. 16.70 lakhs (against Rs. 14.40 lakhs) for taxation, the net profit amounts to Rs. 9.55 lakhs, against Rs. 13.10 lakhs in the preceding year. After providing for taxation in respect of earlier years and writing off certain expenditure in respect of tools, jigs and equipment, there is a surplus of Rs. 6.60 lakhs, against Rs. 8.34 lakhs. The proposed dividend will claim Rs. 4.50 lakhs.

During 1971-72, the Company produced 5,352 calculators, against 5,835 in the previous year. Production was hampered for about four months

due to the delay in the issue of import licence. The output of adding machines was higher at 3,603, against 3,029 in 1970-71. The directors expect production of calculators in the current year to show a rise of about 30 per cent over last year's output. The demand for the Company's products continues to be good and the management proposes to step up capacities to cope with the growing demand. An application for expanding capacity has already been made to the Government. The Company's efforts to develop an export market have been successful and over 500 calculators were exported last year.

SURI AND NAYAR

New Locomotive Venture

SURI and Nayar Ltd., which is setting up a plant in Bangalore for the manufacture of diesel hydraulic and battery locomotive of 47 h.p. to 600 h.p., will soon be in the market to raise funds to meet a part of the cost of the project. The Bangalore factory is expected to go into production by about the middle of next year. The project is estimated to cost Rs. 107.80 lakhs which is proposed to be met by the share capital of Rs. 50 lakhs, long-term loans from the I.F.C. amounting to Rs. 49.50 lakhs, deferred payment facilities and generation of funds from the existing unit in Bombay which is engaged in the manufacture of SAN locomotives. When the Bangalore plant with a capacity of 36 locomotives a year goes into production, the Bombay unit will concentrate on the manufacture of machine

parts. The Company has an authorised capital of Rs. 1 crore. The issued capital is Rs. 50 lakhs, made up of Rs. 40 lakhs in equity shares of Rs. 10 each and Rs. 10 lakhs in 9.5 per cent cumulative redeemable preference shares of Rs. 100 each. Of this, the promoters and their associates and friends will take Rs. 20 lakhs (in equity shares) and the Government of Mysore will take up equity and preference shares worth Rs. 5 lakhs each. The balance of Rs. 15 lakhs in equity shares and Rs. 5 lakhs in preference shares will be raised through public subscription.

HONGKONG AND SHANGHAI

Transfer of Indian Business

THE Hongkong and Shanghai Banking Corporation has announced that for administrative reasons it is transferring its Indian business to the Mercantile Bank. With effect from 1st October, 1972, the Hongkong Bank's branches in Bombay and Calcutta will become branches of the Mercantile Bank.

INVESTMENT AND FINANCE

Dividend Skipped

THE Investment and Finance Co. Ltd has made a profit of Rs. 94,643 for the year ended February 1972, against one of Rs. 92,775 in the previous year, after providing Rs. 20,802 (against Rs. 49,732) for taxation. The dividend has been skipped. The entire profit is transferred to general reserve. The Company's portfolio is representative of investments which are quoted on the Calcutta and Colombo Stock Exchanges, with the exception of certain shares costing Rs. 5.14 lakhs for which no quotations are available. The market value of quoted local investments as at 29th February, 1972, was Rs. 5.86 lakhs, against the book value of Rs. 6.45 lakhs, and the market value of Sri Lanka investments on conversion at the rate of exchange current on that date was Rs. 11.12 lakhs, against the book value of Rs. 2.15 lakhs.

BIRDS JUTE AND EXPORTS

Another Difficult Year

THE unsatisfactory working results of Birds Jute and Exports Ltd for the year ended March 1972 was mainly due to the uneconomic work-

ing of the Company's broad looms. The operation of these looms was dependent on yarn supplies from outside and it was found from actual experience that the additional incidence of transport and handling costs on yarn, the resultant extra wastage, extra sales tax and the high cost of shipping from the mill at Dakhindari affected the viability of the unit. A prolonged strike at the Union Jute Mill which supplied yarn resulted in a total closure of the plant and added to the loss. Although sales are up from Rs. 1.17 crores to Rs. 1.48 crores, the Company has incurred a loss of Rs. 12.41 lakhs, against a loss of Rs. 16.61 lakhs in the previous year, after providing Rs. 2.40 lakhs (against Rs. 4.14 lakhs) for depreciation. The dividend has been passed. After making other adjustments, there is a debit balance of Rs. 28.14 lakhs which is proposed to be carried forward, against a debit balance of Rs. 16.14 lakhs brought in.

NORTHBROOK JUTE

Satisfactory Results

THE Northbrook Jute Co. Ltd has shown satisfactory results for the year ended March 1972. Sales are up from Rs. 4.21 crores to Rs. 6.19 crores and the Company has earned a profit of Rs. 26.02 lakhs, against a loss of Rs. 23.05 lakhs in the previous year, after providing Rs. 9.50 lakhs (against Rs. 9.63 lakhs) for depreciation. In view of the Company's satisfactory performance, a taxable ordinary dividend of 25 per cent, including an interim of 20 per cent, has been declared, absorbing Rs. 4.20 lakhs. This offers a yield of 15.4 per cent at the present price of Rs. 16.25 a share of Rs. 10 each. The Company did not pay any ordinary dividend in the previous year. A sum of Rs. 1.21 lakhs (against Rs. 62,000) has been transferred from statutory development rebate reserve. Debenture redemption reserve is allocated Rs. 1 lakh and general reserve Rs. 20.31 lakhs.

BINANI METAL

Profit Declines

THE Binani Metal Works Ltd has earned a pre-tax profit of Rs. 14.68 lakhs for the year ended March 1972, against one of Rs. 23.29 lakhs in the previous year, after providing Rs. 3.59 lakhs (against Rs. 4.34 lakhs)

for depreciation. A taxable ordinary dividend of 10 per cent (against 5 per cent) has been declared which will be paid out of general reserve. This offers a yield of 10.6 per cent at the present price of Rs. 9.44 a share of Rs. 10 each. Allocations include Rs. 8.70 lakhs (against Rs. 65,000) for taxation, Rs. 5.25 lakhs (against Rs. 2.10 lakhs) for general reserve and Rs. 15,169 (against nil) for capital

reserve. After making other adjustments, a sum of Rs. 63,163 is carried forward, against Rs. 5,767 brought in. Sales declined from Rs. 4.51 crores to Rs. 4.21 crores. During the year under review, the Company struggled hard against heavy odds and stiff competition to maintain sales and profitability. It had to incur abnormally high financing charges to purchase raw materials in

OPPORTUNITIES FOR OVERSEAS CONTRACTS

INTERESTING international bid invitations have been received in the Directorate of Exhibitions and Commercial Publicity, Ministry of Foreign Trade, during the week ended 19th August, 1972. The names of the tender inviting authorities with respective commodities and closing dates are given below.

Argentina: The Electrical Services of Greater Buenos Aires (S.E.G.B.A.); copper conductor; underground cable with aluminium conductors; 13th September, 1972. *Bahrain:* Ministry of Development, Bahrain; water transmission plant and pipelines; 2nd December, 1972. *Canada:* British Columbia Hydro and Power Authority, Vancouver; powerhouse bridge cranes; 26th September, 1972. *Cambodia:* Asian Development Bank, Phnom Penh; electrical plant and communication equipment; 19th December, 1972. *Iran:* Iranian State Railway, Tehran; steel round bars and sheet iron; 15th October, 1972. *Kenya:* East African Railways Corporation, Nairobi; mechanical track tools; 12th September, 1972. *Malaysia:* The Malacca Water Authority, State of Malacca; pumping plant and electrical equipment; 14th November, 1972. *Australia:* Department of External Territories, Sydney; sandals; 9th September, 1972. *Morocco:* The National Department of Electricity, Rabat; high tension cable; 16th September, 1972. *New Zealand:* New Zealand Electricity Department, Wellington North; 110 kV circuit breakers; 10th October, 1972. *Papua and New Guinea:* Preece, Cardew and Rider, Brighton (U.K.); supply, delivery and installation and testing of carrier terminal equipment; 10th October, 1972. *Papua and New Guinea Electricity Commis-*

sion, Boroko; communications equipment; 29th November, 1972. *Republic of Korea:* Office of Supply, Seoul; hospital equipment; 11th September, 1972; electronic equipment and spares; 15th September, 1972; HF welder, franking machine, facsimile test sets and electronics instruments; 15th September, 1972. *Singapore:* Public Utilities Board, Singapore; steel pipes; 8th September, 1972. *Singapore:* Public Works Department, Singapore; sewage pumping station; 5th September, 1972; supply and installation of sewage pumping equipment; 29th September, 1972. *Sri Lanka:* The Ceylon Fisheries Corporation, Colombo; copper wire; 14th September, 1972. *Ceylon State Hardware Corporation, Colombo;* steel items; 3rd October, 1972. *Sudan:* Sudan Railways, Atbara; bars and angles; 10th September, 1972; mild steel plates, flats, bars and angles; 10th September, 1972. *The Mechanised Farming Corporation, Khartoum;* agricultural machinery; 16th September, 1972. *Thailand:* Metropolitan Electricity Authority, Bangkok; terminal station; 1st November, 1972. *Tunisia:* Pharmacie Centrale de Tunisie, Tunis; raw materials and ingredients; 30th September, 1972. *Turkey:* Istanbul Gubre Sanayii Anonim Sirketi, Izmit; fertiliser plant; 30th September, 1972. *Milli Savunma Bakanligi, Ankara;* orthodontic supplies; 2nd October, 1972. *Turkish Electricity Authority, Ankara;* disconnecting switches; 21st September, 1972. *Uganda:* Central Tender Board, Entebbe; electric irons, blankets, radio, caps and raincoats; 14th September, 1972. *Zambia:* Central Tender Board, Lusaka; cardigans and pullovers. X-ray folders; 29th September, 1972.

CALCUTTA STEEL : SALES AND PROFIT RISE

CALCUTTA Steel Co. Ltd has fared well during the year ended March 1972. Sales are up from Rs. 2.13 crores to Rs. 3.13 crores and the pre-tax profit has increased from Rs. 10.06 lakhs to Rs. 13.45 lakhs, after providing Rs. 6.13 lakhs (against Rs. 5.78 lakhs) for depreciation. The taxable ordinary dividend of 10 per cent has been maintained, which will be paid out of general reserve. This offers a yield of 11.8 per cent at the present price of Rs. 8.50 a share of Rs. 10 each. A sum of Rs. 35,768 (against Rs. 2.89 lakhs) and another sum of Rs. 3.33 lakhs (against Rs. 5 lakhs)

have been written back from development rebate reserve and excess provision for taxation, respectively. Allocations include Rs. 36,000 (against Rs. 14,000) for development rebate reserve, Rs. 6.78 lakhs (against Rs. 6 lakhs) for taxation and Rs. 10 lakhs (against Rs. 12 lakhs) for general reserve. During the year under review the overall supply of billets to the steel rolling industry from regulated sources recorded an improvement and production at the mills also increased. Increases in costs of labour, fuel, rolls, etcetera have eroded the Company's profit margins.

bulk and also had to hold stocks on occasions.

ROHIT PULP

A Prosperous Year

ROHIT Pulp and Paper Mills has turned out substantially improved results for the year ended March 1972, with production, sales, profit and margins considerably higher than in 1970-71. The dividend has been raised from 10 per cent to 12 per cent. Production increased from 6,000 tonnes to 7,702 tonnes due to the commissioning of the second paper machine in the last quarter of 1970. Sales have increased by about 30 per cent from Rs. 1.54 crores to Rs. 2 crores and the gross profit by 66 per cent from Rs. 18.46 lakhs to Rs. 30.73 lakhs, lifting the ratio of profit to sales from around 12 per cent to 15.4 per cent. After providing Rs. 8.30 lakhs (against Rs.

7.54 lakhs) for depreciation, Rs. 12.82 lakhs (against Rs. 2.82 lakhs) for development rebate reserve, Rs. 1.10 lakhs (against nil) for taxation and after making some minor adjustments, the surplus amounts to Rs. 8.57 lakhs, against Rs. 8.16 lakhs in the preceding year. A sum of Rs. 8.50 lakhs (against 7.90 lakhs) has been transferred to general reserve out of which the proposed dividend absorbing Rs. 3.60 lakhs (against Rs. 3 lakhs) will be paid.

ORISSA TEXTILES

Better Results

ORISSA Textiles has reported an improvement in its working results for the year ended March 1972. Turnover is higher at Rs. 6.24 crores, against Rs. 5.13 crores in the preceding year, and the gross profit has increased from Rs. 23.96 lakhs to Rs. 26.57 lakhs. After providing Rs. 17.56

lakhs (against Rs. 11.96 lakhs) for depreciation and Rs. 4 lakhs (against Rs. 9.77 lakhs) for development rebate reserve, there is a surplus of Rs. 5.01 lakhs, against Rs. 2.25 lakhs in the previous year. Arrears of preference dividends for three years (1954-55 to 1956-57) absorb Rs. 4.88 lakhs. The accumulated deficit carried forward is Rs. 21.16 lakhs.

BASF INDIA

Big Rise in Profit

THE brief preliminary statement from BASF India on its working results for the year ended June 1972 shows a marked improvement over the previous year's performance. Net sales have risen by 22 per cent from Rs. 2.38 crores to Rs. 2.89 crores and the pre-tax profit has gone up by over 220 per cent from Rs. 13.56 lakhs to Rs. 29.89 lakhs.

COMMODITIES

Mr. Mishra Calls for Accord between India, Bangladesh and Thailand in Jute

SPEAKING on the impact of competition from synthetics in the major jute goods consuming countries, Mr. L. N. Mishra, Central Minister for Foreign Trade, expressed the hope in the Rajya Sabha last week, that it would be possible for India, Bangladesh and Thailand—the three major jute and jute goods producing countries—to arrive at mutual understanding to withstand the gathering threat in an effective manner. Such an accord, he said, might pave the way for greater co-ordination in the spheres of research and alternative product developments as well. Synthetics posed most serious threat to jute goods exporting countries, according to the latest survey by the five-man industry-Government joint jute delegation to the U.K., the Continent and North American markets. On receipt of the comments of the Central Finance Ministry on the recommendations of the study team, the Government would take some action in meeting the threat effectively, Mr. Mishra said. But in view of the all-round cost-inflation, he felt that "jute can no longer be used to economic advantage merely as sacking. Various alternative uses have to be developed

to withstand the threat posed by synthetics."

High Export Duties

On the dangers posed by the expansion and consolidation of the synthetic substitutes industry in the U.S.A., the recent study team has reportedly suggested a close examination of the working of the jute industry in this country. It has also suggested the abolition of the high export duties—Rs. 700 a tonne on carpet-backing cloth worth Rs. 4,550 and Rs. 600 a tonne on hessians worth some Rs. 2,300—to raise the competitiveness of Indian goods in the international market. According to the statistics collected by the team, both carpet-backing cloth and hessian—popularly called burlap in the U.S.A.—have suffered a sharp erosion in their offtake due to a multiplicity of factors, including the major one of price disadvantage, while a more than proportionate encroachment has been made in the respective spheres by synthetic substitutes. Against a peak seasonal offtake of 915 million yards in 1965-66, burlap consumption in the U.S.A. has gradually plummeted down to 452.2 million yards in 1971-72

with the lowest ever monthly intake in three decades or so of 27.3 million yards in June 1972. The team has also observed that Indian hessian has lost the U.S. market in competition with synthetics, mainly because of the price disadvantage. A yard of heavy duty, duty free, Calcutta-made 40in. 10oz. hessian is nominally quoted in the New York market at 18.90 cents for spot and afloat and 18.55 cents for August positions, while a yard of synthetic substitute of a comparable quality costs some 13 cents. The only redeeming feature appears to be the gradual broadening of the demand for hessian in Russia, some east European and other developing countries.

Jute carpet-backing cloth has not shared in the boom conditions existing in the tufted carpet industry for quite some time. Price disadvantage to the extent of some 25 per cent in comparison with woven polypropylene and erratic availability have weighed the scales in favour of the latter with the result that consumers of synthetics have been put under a system of rationing. The report, it is said, has indicated in no uncertain terms that jute will lose the lucrative market, should India fail to prune the prices to levels below those of synthetic goods.

No Plan for Export

The Government of India has no plan to export raw jute this season, as the crop prospects had been rendered bleak by the unusually long dry

5 ³/₄ PER CENT

MAHARASHTRA STATE DEVELOPMENT LOAN 1984

Issue Price Rs. 100.00 for every Rs. 100.00

OPEN ON MONDAY, THE 4th SEPTEMBER 1972

THE LOAN WILL BE CLOSED AS SOON AS THE TOTAL AMOUNT OF RS. 19.75 CRORES HAS BEEN SUBSCRIBED AND IN ANY CASE NOT LATER THAN THE CLOSE OF BUSINESS ON THE 9TH SEPTEMBER 1972.

THE APPLICATIONS FOR THE LOAN WILL BE RECEIVED AT—

- the offices of the Reserve Bank of India, Ahmedabad, Bangalore, Bombay (Fort and Byculla), Calcutta, Hyderabad, Kanpur, Madras, Nagpur, New Delhi and Patna;
- the branch of the State Bank of Bikaner & Jaipur at Jaipur;
- the branches of the State Bank of Hyderabad conducting Government Treasury work within the State of Maharashtra;
- the branches of the State Bank of India within the State of Maharashtra except at Bombay and Nagpur and at places covered by item (c).

Full particulars can be obtained at any of the offices mentioned above.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base : August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to July 1972. As compared with June, the July index for

Food shows a rise of 9 points, while those for Fuel and Lighting, Clothing and Miscellaneous remain unchanged at 482, 704 and 402 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 5 points during July 1972.

Compiled and constructed by the Statistical Department of "Capital".

spell, said Mr. L. N. Mishra, Central Minister of Foreign Trade, in the Rajya Sabha last week. The Government was on the look out for imports of fibre to bridge the demand-supply gap, he added. Last season, various considerations like the extension of price support to farmers and the supply of essential fibre requirements to some overseas countries, which had been dependent on supplies of raw jute from East Bengal, induced the Government to export about 24,900 tonnes of fibre, he stated.

Power Shortage

With the machinery remaining idle for six to eight hours a day, on average, due to the power shortage, the jute industry has suffered a production loss of about 4,000 tonnes during the first 17 days of the current month, says a Press note issued by the Indian Jute Mills Association last week. The loss on this account alone in less than eight months this year was 23,000 tonnes, against a loss of 21,000 tonnes for the whole of 1971, the note adds. This situation, the I.J.M.A. maintains, is likely to affect the industry's relation with its labour considerably. While this aspect is important in the case of

all industries, the jute industry has an additional point in being the most export-oriented. The loss in output affects the completion of export commitments on schedule, "a situation which tends to make the competition between India and Bangladesh far more unequal". The note says that mills are worried over the cost inflation resulting from such power-cuts.

Sea movement of jute goods for both export and internal consumption has come to a standstill, says a Press note issued by I.J.M.A. this week. Beginning from 19th August, the crews of barges and launches plying between jute mills and Calcutta port for transport of jute goods have gone on "go-slow" as part of what the Calcutta Port Shramik Union has called an "industrial action" demanding the implementation of the recommendations of the Central Wage Board for port and dock workers. The bargemen have dislocated work at various points and as a result, it has become impossible for the lighterage companies to function normally.

The "go-slow" has affected both loading and unloading and no ship-

ment of jute goods from the port has taken place during the last ten days. The so-called "industrial action", which is entirely a matter between the bargemen and their employers, has hit the industry at a crucial stage in world trade, says the note.

Moderate Turnover in Gunnies

Trading was in complete disarray in Calcutta during the past week, following the virtual stoppage of clearing operations for the third week in succession in the wake of the strike by Class IV employees of the Reserve Bank of India. The raw jute and jute goods markets were also affected and spot activities came to a grinding halt. With prices suffering a downward drift due to a slackness in enquiries and an extremely lean offtake, the market appeared to be in the doldrums. Shipment instructions were poor and operators, as well as mills, were experiencing an acute shrinkage of funds. These, combined with considerations for the impending settlement of end-August accounts, accentuated the bearishness. Besides, it appeared to be difficult to transact any business due to the virtual dearth of genuine buyers. Noting that their earlier optimistic calculations had not materialised, speculators turned hesitant and availed themselves of suitable opportunities to reduce their long positions in an unwilling market. Detecting this weakness of the bulls, bears resorted to short-selling, to a moderate extent, carefully covering their open positions at the dips. Both internal and overseas consumers were disappointed over the Government's failure to maintain adequate power supplies for the smooth operation of the installed capacities. Clive Row referred to the recent F.I.C.C.I. trade delegation's recommendation of a sizable reduction in the export prices of jute goods to help the industry overcome its keen competition with synthetics in the Australian market. It was sore over the continued retention of the export levies in spite of the positive suggestions of a number of trade teams which included Government experts as well. Even the Foreign Trade Minister's assurance in the Rajya Sabha that the Government had still been examining the suggestions made by the five-man team failed to prop up the sagging sentiment. Overseas enquiries were few and far between. It appeared that they turned to India only when they failed to procure their requirements from Bangladesh which continued to offer a discount of some

10 per cent over Calcutta prices which included the burden of export duties. In the absence of any positive action from the parties, Mr. Mishra's opinion that it would be nice if India, Bangladesh and Thailand could come to some sort of agreement in the sphere of jute and jute goods in order to withstand the gathering competition from synthetics failed to produce any perceptible impact. Intermittent heavy showers on most days of the week and the spate of bore tides in the Hooghly interrupted cargo-handling activities in the port for a long period. In addition to these hazards, bargemen restricted their activities to daylight hours only, considerably affecting loading and unloading operations. In the hedge market, bears briskly covered their outstanding open position in B Twills August delivery at the dips on the eve of the due date. The contract was closed in due course on Monday. Thereafter, November delivery B Twills turned easier in sympathy with the trend in the spot market. Turnover was moderate in the hedge market and small in the spot market. The closing undertone was hesitant.

Fibre Quiet

The raw jute market ruled quiet during the past week, suffering an overall loss of some Rs. 2 over the preceding week-end levels. The hesitancy stemmed from the pressure of fresh arrivals, combined with the virtual absence of mill interest in the offers. The recent rise in the prices of foodgrains generated fears of food scarcity in the coming months in spite of the positive assurance by the authorities. Besides, lean cash resources with farmers made it difficult for them to finance the expenses for sowing aman and other hybrid varieties of paddy. These considerations induced farmers to hold on to their grain stocks and release their jute inventories for meeting urgent monetary needs. Despite the bottleneck in the movement of fibre held in upcountry railheads, daily arrivals picked up to some 100,000 maunds. As a result, prices suffered a reaction

in both Calcutta and the agencies. In spite of the downward drift, the Jute Corporation of India preferred to keep a watch on the trend, abstaining from making any price-support or commercial transaction. Turnover was small and the closing undertone was easier.

SILK TEXTILES

Fall in Exports

The export earnings from silk textiles during July 1972 amounted to Rs. 56.94 lakhs, against Rs. 64.97 lakhs in the same month last year, which indicated a fall of 12 per cent. The tempo in exports seems to be fast slowing down particularly in the case of mulberry silk fabrics. According to

present indications, the tasar exports are also poised to put an end to the upward trend seen hitherto in the current year. Although the overall exports have declined, the analysis of countrywise exports revealed that the exports to several countries have recorded significant increases. Exports to West Germany increased to Rs. 13.14 lakhs from Rs. 10.39 lakhs in July 1971. A sizable increase has been noticed in the case of Malaysia, France, Kenya, Sweden and Denmark and a good beginning has been seen in respect of Poland. Exports to the U.K., the U.S.A., Japan and Belgium, however, have recorded a fall.

TEA

Fair General Demand

A Special Correspondent writes: The offerings at last week's tea auction in Calcutta amounted to 62,292 packages for which there was a fair general demand. Plain C.T.C. teas were readily absorbed at around the previous week's rates while medium and good liquoring brokeners were well supported and were about steady but fannings were lower with less enquiry. Plain orthodox teas were firm while Assam brokeners were irregular and a little easier but similar fannings met with a slightly better enquiry. Whole-leaf grades and tippy teas were lower, the former especially so as the sale progressed.

MUKAND IRON & STEEL WORKS LIMITED

CHAIRMAN'S STATEMENT

FOR THE YEAR 1971-72

The following is the statement of Mr. Viren J. Shah, Chairman of Mukand Iron & Steel Works Limited.

At the very outset I would like to pay, on your behalf and mine, our tribute to the memory of my predecessor, Shri Kamalnayan Bajaj, who passed away suddenly and prematurely on the 1st of May this year. He was associated with our Company from its inception and was its Chairman for the past twenty-five years. It is largely to his foresight and business acumen that the Company owes its present position of eminence in industry. But to him business was an act of national service and he always strove to achieve a balance between wealth and intrinsic worth; between the demands of business and high ethical principles. True to his lineage, Shri Kamalnayanji treated wealth as a trust and lived a simple life. He was a man of rare courage, original and unconventional in his thinking, and acted up to his convictions regardless of consequences. He followed the dictates of his conscience at all times. In his demise we have lost an esteemed leader in whose hands the destiny of the Company was safely entrusted. Personally, I have lost a valuable friend to whom I could always turn for advice and guidance.

2. The 15th of August this year marks the completion of twenty-five years of our independence, a stretch of time during which we have had to encounter five wars, a series of droughts and an influx of millions of refugees for asylum in their dark hour of distress. In this period of travail a fresh consolidation of political forces has been carried through under the leadership of Mrs. Indira Gandhi, who has received an overwhelming mandate from our people. Such a situation betokens strength and stability provided we are prepared to pursue unitedly and determinedly a pragmatic path of rapid growth and social justice.

3. The last Indo-Pak war did not result directly so much in the victory of India as in the triumph of popular forces in Bangla Desh. Indirectly, the long-term consequence of the break-up of old Pakistan has certainly altered

the balance of power in the sub-continent and stimulated democratic processes within what remains of Pakistan in the West. Future developments within that country will depend upon the cohesive capacity of the various ethnic and linguistic groups within West Pakistan to hold together rather than upon the letters of formal agreement signed at Summit level by the leaders of the Indian and Pakistani Governments. The recent Simla Agreement would represent a major break-through provided Bangla Desh is brought into tripartite accords and super powers' interference is eliminated. Repeated confrontations between India and Pakistan would only mean a continuation of super power diplomacy in this region and, as everyone knows, be utterly unproductive of benefits to the peoples of both the countries.

4. There is in the country today an unmistakable climate of optimism and soaring aspirations. Hopes of the eradication of poverty—*Garibi Hatao*—have generated an expectation of instant improvement of living conditions amongst the people; but if these hopes are not fulfilled even partially within a reasonable period by an all round increase in production and productivity, there is a great danger that this expectancy might give place to bitterness and resentment. As the Prime Minister put it in her inaugural address of the FICCI: "They (the people) do expect to see things changing ostensibly towards what they consider are their interests".

5. If against this back-drop of expectations we look at the recent economic performance, the picture is none too bright. The real national income rose by only 1½% in 1971-1972 while the supply of money increased by 15%. Deficit financing in 1971-72 amounted to a staggering figure of Rs. 1100 crores. This has to be set against the permissible limit of deficit financing during the entire Fourth Plan period which had been placed at Rs. 850 crores. As a consequence, prices have risen at an alarming rate, with the wholesale price index registering an increase of 7.1% and foodgrains prices of 14.4% over the previous year. If this price rise is taken together with the uncertain prospects of foodgrains

production as a result of the threatened drought, the economic situation does look dismal. The Government, it is true, has nearly nine million tonnes of grains and hopes of tiding over the crisis are pinned on this buffer stock. This stock consists mainly of wheat whereas it is the prices of rice, the coarse grains, pulses and sugar which have risen the most.

6. For a country of our size, the primary responsibility of distribution of available food stocks would fall upon the railways who would have to offer sufficient wagons for transportation. Past experience, however, does not inspire much confidence in this regard. About three years ago when there was a hue and cry about the shortage of wagons, the Railway Ministry denied that there was any shortage; but now this shortage is being increasingly felt. If at that time the railways had ordered more wagons, it would have helped the wagon building and allied industries, particularly in West Bengal, and would have prevented the present shortage of wagons. As it is, if wagons are harnessed for transportation of foodgrains, there is a genuine danger that there would be an acute shortage for transport of essential commodities like steel, cement, coal and chemicals and fertilizers. Unless we give up the habit of moving from crisis to crisis and adopt a well thought out long-term strategy, situations like the present likely to persist.

7. The decline in farm output will drag down the GNP even if industry did not suffer from paralysing restraints. The growth rate in industry has declined from 7.1% in 1969 to about 3% in 1971. The major factors responsible for this disturbing fall are under-utilisation of capacity mainly because of the shortage of raw materials and inadequate power supply, absence of fresh investment due to policy restraints in the field of licensing and price control and labour unrest. As a matter of fact since around 1965-1966, if we discount inflationary exaggerations, there has been little real growth of investment in the economy. The ratio of investments to national income sharply declined from around 13% in 1964-1965 to 9% in

1968-1969. Despite the slight improvement in this ratio during the last two years, it is a matter of concern that by and large our economy has been stagnant since the end of the Third Plan.

8. One of the major constraints on industrial and agricultural growth is the recurring power shortage resulting in frequent interruptions or drastic cuts in power supply in different states. The Central Minister for Irrigation and Power, Dr. K. L. Rao, has recently announced that there may be a shortfall of six million kilowatts in the 4th plan target and that even next year the deficit may be of the order of two to three million kilowatts because of inadequate financial provisions made five years ago in power generation. The power crisis does not merely throw industrial programmes out of gear but also seriously compromises the social and economic objectives of national planning.

9. For a problem of the dimensions we have posed ourselves, namely the eradication of poverty, all-out efforts are called to speed up the growth of the industrial and agricultural sectors. 40% of our population i.e. 220 million people still live below the poverty line despite the twenty-five years of independence. The much publicised crash programmes for rural employment have failed to get off the ground. In any case, mere job creation by itself would not be much use. The real goal has to be a larger volume of production as the only means to provide more jobs and more income to more persons.

10. Not that the Government is unaware of the bottlenecks in production and of the problems in the way of ensuring growth with stability. Yet, the biggest bottleneck is the ambivalence the Government has developed in its attitudes and policies towards the corporate sector. The Prime Minister herself has taken stock of the situation and is aware that the mixed economy holds the best promise of amelioration. As she says in her FICCI speech, "So, we are at a cross-road and it is the time when we have to re-think about everything that we have done before. I do not say that we have to sweep everything off but we do have to make many changes and I must confess that the path is not at all clear and we can only make that path. We can only evolve a policy of change with your co-operation and help in even deciding how to go about". Some of her colleagues, how-

ever, still seem to cling stubbornly to their preconceived notions and prejudices and continue to ride their hobby horses as can be seen from their public pronouncements. Some regard the present mixed economy as a mere passing phase eventually to be replaced by a takeover by the State of all private industrial and commercial activities.

11. Having said that, it needs to be added that the business community has a far more direct stake in the eradication of poverty and expansion of employment than is generally recognised. The fact that 220 million of the country's population live below the poverty line and that as many more have levels of income and consumption barely enough to subsist means that practically 90% of the population is not available to industry as consumers of its products. The potentially vast market for industrial product in this country thus remains substantially unrealized. This consideration is relevant both to those industries which directly manufacture consumer goods as also to those engaged in the manufacture of capital and intermediate goods. Over a period of time the output of capital and intermediate goods has to be sustained by the demand for final consumption goods.

12. The business community can thus claim, without any fear of appearing to be opportunistic, to be in complete accord with the wider socioeconomic objectives of the Government. Unless the economic imperatives remain as much in the forefront as these objectives the atmosphere generated would not be conducive to greater productive efforts. Indeed, it inhibits the Government from taking in time many important decisions which in turn leads to enormous loss of time and resources which the country can ill afford at present. To quote the Prime Minister again, "We do not have all the time in the world. As I have said on an earlier occasion, I think that we must make a dent in the next three years or four at the very most. If we fail for whatever reason, whether it is the mistake of the Government or the mistake of business and industry or any one section feeling more concerned about their rights and needs than another section, we will all suffer together".

13. Government and business are closely intermeshed today. Government is a very powerful factor in the

business sphere and the public sector has acquired a strategic and commanding role in the economy. What we now need, therefore, is a radical approach to the execution of accepted policies and not merely lipservice to radicalism, for that results into negative attitudes. The main problem before us is how to harness the existing administrative structure with its built-in dilatory procedures and decision-making authority concentrated at the top levels coupled with our system of parliamentary accountability to the tasks ahead. It is customary to blame the bureaucracy for all our ills, but by continuous attacks both within and outside the legislatures we have so thoroughly demoralized the bureaucracy that it could hardly be held responsible for the failures.

14. What is urgently required is the injection of professional skills into the administrative apparatus and application of modern management thought and techniques to the whole system of administration. First and foremost, we must strengthen the administration to function at a quicker pace and take decisions at various levels by a proper decentralisation of authority. To achieve this it would be a prerequisite to put an end to all interference by politicians in executive decision-making. Once the policies are laid down, and firm lines of policies can be laid down only at the political Ministerial level, the officers should be free to implement them without let or hindrance. A clear differentiation of political and administrative functions is needed. Only in cases where there is reason to believe that a deliberate deviation from the prescribed policies has taken place should Ministers concern themselves with executive decisions. Again, a drastic reduction is called for in the number of officers and departments required to consider an application even as it is essential that there should be a definite time limit set for intimating final decisions on every proposal or application, especially by the Economic Ministries. We are racing against time and I, for one, firmly believe that unless the Government adopts such a purposeful result-oriented and time-bound way of work, it would not be able to transform the present administrative machinery into an efficient and dynamic instrument for the implementation of its policies.

15. Two important recent developments in the steel industry are the takeover of the management of IISCO by the Government and the decision

to set up a holding company to control the Government's investment in the steel and allied industries. The Government has claimed that the management of IISCO has been taken over principally to stem the deterioration of the plant's working over the past seven years. Irrespective of the merits of this claim, the basic issue involved in this action needs to be properly appreciated. 54 per cent of IISCO's shares are held by public financial institutions and the nationalised banks. With the Government thus controlling a majority shareholding, the takeover could be seen as a step to safeguard its interests and intended to solve the Company's short-term problems and promote its long-term growth. The results alone will however reveal to what extent the purpose behind the takeover is fulfilled.

16. The decision to set up a holding company is also a step in the right direction. The Government's investment in the steel and allied industries already amounts to about Rs. 2,500 crores but the working of these units has been far from satisfactory. The proposed holding company can play a crucial role in toning up their administration and working. The choice of a non-bureaucrat for the Chairmanship of the company is a happy augury and the decision to appoint him simultaneously as Secretary of the Steel Ministry should help ensure proper co-ordination between the Ministry and the company. Much of the success of this experiment will depend on the degree of autonomy that the proposed company enjoys and the degree of political backing it receives.

17. Steel shortage is a major impediment to our industrial development. The shortage was more pronounced last year, the Government having had to resort to massive imports amounting to Rs. 200 crores. This shortage is largely attributable to the underutilisation of installed capacity in the integrated steel plants. Government has taken vigorous measures during the last one year to improve capacity utilisation. Steel production in 1971-1972 was 6.3 million ingot tonnes and the target for the current year is 7.2 million ingot tonnes against the installed capacity of 8.9 million tonnes. The Steel Minister has stated in Parliament that we expect to achieve self-sufficiency in steel by 1975, based on 90% of capacity utilisation and commissioning of the first phase of the Bokaro Steel Plant. We will need to mobilise our best resources

in management and technology to achieve this target.

18. Perspective planning for steel production envisages an installed capacity of 19 million ingot tonnes by 1980 against 12 million tonnes in 1974-1975. This will be achieved only if the expansion plans of the existing plants and the installation of the three new steel plants in the South are completed in time. The long delay in the installation of the Bokaro Plant should serve as a warning of the pitfalls in the implementation of the new projects.

19. The electric steel furnace industry has made a significant contribution to augmenting steel availability in the last few years. Against the liquid metal production of 0.5 million tonnes in 1968-1969, its production increased to over one million tonnes in 1971-1972. The Government has accepted the need for increasing the industry's production by licensing 19 units, including 7 in the joint sector. The need to ensure that the capacity created in the industry is fully utilised cannot be over-emphasised. The availability of the basic raw material, viz. scrap or its substitute, will have to be ensured well in time if the projected supplies from these units are to be achieved.

20. Scrap requirements are likely to increase by 100% by 1975-1976 but the indigenous generation of scrap would not keep pace with this increase. While the collection machinery will have to be streamlined, other measures will also have to be promptly taken. The Working Group appointed by the Government of India under the Chairmanship of Shri Hari Bhushan has submitted a detailed report suggesting various measures to augment scrap availability. I am not aware to what extent these recommendations have been implemented. Sponge iron promises to offer a suitable material as feedstock for electric furnaces in addition to scrap. The Government has issued letters of intent for 3 sponge iron plants in the country. This is welcome step in the right direction but the requirement of scrap in the country is likely to be so high that the Government would do well to encourage a good many entrepreneurs to go in for sponge iron plants.

21. To make our own contribution we had submitted an application for industrial licence to set up a sponge iron plant which has been turned

down. We have nevertheless made a fresh approach for reconsideration of our request. We believe that our application is valid under the Industrial Policy Resolution and hope that the Government will consider our representation in the wider perspective and permit us to create an additional source of raw material for the electric steel making industry.

22. The electricity tariff for power-intensive industries is a vital factor affecting the growth of the electric furnace industry. As has been suggested, the best thing would be to have a national tariff for electro-metallurgical units. At present some states offer a concessional tariff whereas others do not. This causes an imbalance which needs to be removed at the earliest.

23. Power-intensive industries in Maharashtra have had to face great difficulties since the unit cost of electricity is much higher here than in the neighbouring states—Mysore, Gujarat and Rajasthan—and so too are the other input costs. Both the Wagle and the Razvi Committees, appointed by the Government of Maharashtra, have acknowledged the need for a concessional tariff for power-intensive industries in Maharashtra. I would urge the Maharashtra Government to take an early decision on the Razvi Committee report to accelerate the development of these industries in the State.

24. The results of the Company's working during the year under review are given in the Directors' Report already circulated. I would only briefly indicate some of the salient aspects of our performance and the future pattern of growth. Over the years, we have acquired a certain degree of competence and capacity to set up or assist in setting up new industrial ventures in diverse fields by sharing our experience and expertise with others in India and abroad. We have already made progress in establishing a steel foundry in Malayasia in collaboration with a Malaysian company and the local State Development Corporation. Similarly, in India, we have enabled Polysteels (India) Ltd. at Bhavnagar to set up a mini steel plant which has gone into production and is maintaining satisfactory progress. Some other proposals for such collaboration in India are under active consideration.

25. The Government has decided to promote the development of the joint

(Continued on page 384)

THE JAY ENGINEERING WORKS LIMITED

STATEMENT OF THE CHAIRMAN, LALA CHARAT RAM

The following is the statement of Lala Charat Ram, Chairman of the Jay Engineering Works Ltd., delivered at the thirty fifth Annual General Meeting on 29.8.72 at Calcutta.

Friends,

I am happy to welcome you to the thirtyfifth annual general meeting of the Company.

The annual report has been with you for some time and you would have noted that the Company has made a gross profit of one crore and five lacs of rupees. This is better than the profit made in any previous year. To all those who made this possible—workers, supervisors and officers—I wish to convey your felicitations.

Your directors feel that considering the capital facilities of the Company and the operating inputs, the profit is still inadequate and has indeed not yet reached even the level where a reasonable return can be paid to equity shareholders. While therefore we have reason to be happy at the inching up in profits over the last years, we have to be constantly aware that the Company has still a long way to go. For the present, all that we can claim is that a momentum has been generated and we are headed in the right direction.

The principal reason for the improvement in profit position not being as good as one would like it to be, is the sewing machine factory at Calcutta. Operations of this factory have resulted in substantial loss during the year. But what is more important is that we do not yet see any reversal of the trend. As the directors have explained in their report, the national market for upper-price bracked sewing machines has remained largely stagnant for the last several years, while supply of low-priced machines has increased manifold. Ours is a high cost unit and we cannot compete with machines produced in the small industry sector. On the other hand, our costs keep going up as a result of wage increases, government levies and general infla-

tion, and these can neither be recovered by commensurate increase in prices nor absorbed by increased production. The vicious circle tends to make the sewing machine factory a veritable millstone for the Company.

We are meeting at a momentous time. The nation is celebrating the silver jubilee of independence, and satisfactory conclusion of the immediate problems with Pakistan has given a new sense of confidence to the people. In practical terms, this

Lala Charat Ram

has put the government in the saddle after a long lapse of time. The results are discernible markedly in Calcutta, where for the first time in many years, counter-productive activity seems to be under control. As our Company's largest factories are at Calcutta, we have a special stake in the situation here, and I am happy to say that the situation is such that one can look at the future with a degree of reassurance. There have been some incidents, arising no doubt from exuberance of newly emerged forces and partly unfortunately from chauvinistic considerations of which traces can be found in all parts of the country. If these can be kept under control and legitimate enthusiasm can be directed to constructive purpose, we in West Bengal would be able to leave behind us the traumatic experience of the last several years.

Our operations at Hyderabad and Agra are making good progress and

the improved financial result of the year represents in no small measure the contribution of these units.

As you know, Jay Engineering is considered to be a part of Shriram group of industries, due to the historical fact that it was late Lala Shri Ram who gave commercially viable form to the engineering idea—ambitious by 1934 standards—to make sewing machines in India. Jay Engineering is also regarded as a 'dominant' undertaking by reason of the fact that by a combination of individual enterprise and corporate effort, it generated increasing consumer acceptance for its products and outstripped others engaged in the same business. This would ordinarily be considered to be an accomplishment of some distinction, but by a strange inversion of values, these characteristics have lately tended to be a hindrance rather than help in the path of the Company's progress. Manufacturing licenses for various products into which the Company could diversify during a relatively liberalised period of industrial policy have not been available to the Company. Availability of bank finance has also lagged behind the growth of business activity. These are unfortunate developments because they must stand in the way of future growth and maximum current utilisation of our facilities.

The national government is pledged to eliminate poverty and unemployment. Resources for achieving these goals can only come out of productive activity. Anyone who can contribute to the resources should therefore be welcome to do so and a situation in which curbs are placed on the initiative of those who have a successful record in this direction, does not seem consistent with the objectives. It may perhaps be necessary, in the short run, to perform some symbolic acts as a salve to unperceptive masses, but these cannot be a substitute for fundamental, though unspectacular, effort towards growth and higher production. There can be no instant solutions to problems that face the country. Those of us who have adopted productive entrepreneurship as a way of life, therefore, feel bewildered and confus-

ed by constraints which run counter to government's declared goals.

I beg to submit that a distinction needs to be made between freedom of the individual to contribute to the national productive effort, and the return that he can get for such contribution, in terms of money and patronage. Our tax laws and other legislative provisions have already set limits to these, and these limits can be lowered even more if social considerations so require. There should however be no constraint on any individual person or corporate body to participate in productive activity because such a constraint constitutes deprivation both on national as well as individual planes.

No doubt government means well and its measures are aimed at preventing economic abuse. The law governing monopolies and restrictive trade practices is certainly intended for that purpose. Difficulties arise when it also interferes with healthy marketing practices, disturbs normal relationship between manufacturer and the trade, and forbids self-

discipline in pricing and distribution. The Company law is another example. It has the most laudable objects and the newly proposed set of regulations is certainly motivated by the same considerations. For example, the provision regarding unscrupulous takeover bids is bound to have a salutary effect. On the other hand, provisions like further administrative controls, dividends, deposits etc. will further hamstring Company managements. The danger of such regulations is that while aimed at unscrupulous elements, they basically affect the scrupulous because the unscrupulous always find a way to be a step ahead of the regulations.

Another danger is that they make private initiative subject to bureaucratic and political control. Designers of engines aim at minimising internal utilisation of the power generated by the engine so that the power transmitted for productive use would be maximum. If business management today is conceived of as an engine, I shudder to think of the proportion of power that is used up internally in overcoming the friction

arising from restrictive regulations, with the result that the energy available for real productive work is proportionately rather less than the energy absorbed internally just to stay alive.

All of us need to give serious thought to these problems. Fortunately the country is passing through a stage at which the government has the situation in its grip, and does not need to resort to symbolic or demonstrative futilities. Such interludes may well be rare in a democracy and whoever has the opportunity to operate in such a situation must make the best use of the God-given opportunity. Our Prime Minister has shown sagacity and enterprise in all that she has handled. She may well be the saviour of the country and we have no doubt that the authorities operating under her auspices would provide the same leadership in the economic sphere as she has done in the political.

Note: The above statement is not a document purporting to be a report of the proceedings of the Annual General Meeting.

MUKAND IRON & STEEL WORKS LIMITED

(Continued from page 382)

sector by permitting private sector companies to set up industrial projects in collaboration with State Governments. We welcome this development and are exploring the possibility of establishing joint sector projects in steel making and allied engineering fields. One such proposal has already reached an advanced stage of negotiations.

26. We acknowledge that an industrial complex of our size has a responsibility towards the society at large as also to the industry to which it belongs. Awareness of this is reflected in the help we render to ancillary industries and community service projects that are well under way. We have worked out a programme of assis-

tance to promote widespread entrepreneurial activities. Nearly a hundred and fifty factories in the Greater Bombay area and the Thana Belapur belt have benefited by this programme.

27. In the sphere of social work the Company has been making planned efforts to provide diverse services both at Kurla and at Kalwe. We have arranged for and assisted in a programme of periodic medical check-ups, free medicines and expert medical advice at Kalwe village where such help is not readily available. Similarly, during epidemics injections, vaccines and treatment are supplied free to the neighbouring inhabitants at Kurla and Kalwe. I am happy to say that some of our officers and staff members have voluntarily contributed their time to this activity. Recently, free milk and bread have also been arranged for school children at Naupada (Kurla) to supplement their daily diet. We are examining the possibility of involving ourselves more actively in efforts to improve the living conditions of the residents of the slums in our neighbourhood. Equally alert is our interest in the welfare of our employees. We have arranged for mass miniature screening and follow-ups

wherever necessary and have widened the Company's medical scheme to cover employees' families.

28. Our social welfare programmes includes Sarvodaya activities inside the works as well as in the community around. Sarvodaya workers have started their daily contacts to bring about grass-root transformation towards a better way of life. The Company's full time social worker is carrying out a survey of the families of employees with the specific purpose of offering guidance on family planning, monthly budgeting, rearing of children and healthy living. Worker education classes are regularly conducted by worker teachers and by the Sarvodaya team and are meant to synthesise the working environment with the social milieu and to create better understanding and social togetherness amongst the workmen and their families. This I believe will prove to be an effective way of integrating the total personality of the industrial man and accelerating the pace of social development in urban surroundings.

VIREN J. SHAH
Chairman

15th August, 1972.

"Tyre Technology is ever changing and you can be sure that the tyre we build in the 80's will differ even more radically from those we are building today, as today's tyre differs from those we built in the 60's."

Mr Parks Chrestman, Managing Director, Goodyear India Limited, made the following observations at the 11th Annual General Meeting:

1971 Sales Increase

The first half of the year experienced acute power shortages and rationing, hence production suffered badly. Fortunately, in the second half of the year production registered greater improvements and thus we were able to achieve an 11 per cent increase over our 1970 sales. We commissioned our new plant for bicycle tyres and tubes in July and the new automotive tyres and tubes plant in September. The commissioning of these two new plants now doubles your company's production capacity, and the full impact of this growth will be felt in our 1972 operations. It is our desire to further expand... we have filed our application for expansion of tyre production capacity by another 2,50,000 tyres annually.

Industrial Rubber Products Plant

Today, there is an acute shortage in the country of conveyor belting and V belts. Many projects are being delayed for lack of belts, and for urgent needs imports are being permitted due to local capacity being booked for as much as four and five years ahead. Acting on the Letter of Intent for flat belting and V belts granted to us, we have submitted to the Government our application for capital goods, and it is our intention to take speedy action to implement this project.

Technological Development in Tyres

The tyre industry throughout the world has made notable progress in recent years... to meet the needs for extra loads, speeds and safety, tyre designs and components are being constantly improved and developed. Probably the greatest improvements in tyres have involved the use of progressively more sophisticated carcass constructions—from cotton to rayon to nylon, and the improvements made in each of these. In future, we see the change to polyester, fibreglass, drawn wire, spun wire, fibre B and all the inevitable improvements in these materials.

Goodyear USA's Contribution

Our associates, The Goodyear Tyre & Rubber Company, USA, have contributed substantially to these worldwide tyre developments for over 70 years. Goodyear maintains a staff of over 4,000 scientists, engineers and technical specialists in their USA headquarters and Luxembourg research facilities. The cost of setting-up and maintaining such a R & D organisation is prohibitive for a company of Goodyear India's size whereas by paying a service fee of a small percentage of our net sales for this technical assistance, technical innovations and expertise is readily available to your company.

The word "technology" is often used and understood in its restricted sense. It is not always realised that "technology" extends beyond the laboratory and how much it contributes to the day to day operations of a tyre factory. It is our daily concern to improve costs and efficiency. New rubbers, polymers, carbon blacks, rubber chemicals and tyre fabrics are constantly under development which have a great effect on tyre performance. We, in India, are readily informed of these developments by our associates. The technology is ever changing, and you can be sure that the tyre we build in the 80's will differ even more radically from those we are building today, as today's tyres differ from those we built in the 60's.

Research and Development in India

Our local technicians and engineers, aided by their overseas counterparts, work willingly with local engineering firms to develop indigenous production of tyre making machinery and equipment. At our own factories, as well, our engineering team has skillfully constructed equipment in our own workshops.

Our local research and development organisation continues to grow and is well qualified to absorb, implement and adapt technical know-how supplied from all sources. Extensive and impressive work has been done by our research staff in the field of import substitution. Evaluation and testing of tyres are other important functions of our development technicians. At this moment the most interesting and exciting work being undertaken by our research and development staff is the responsibility for planning and fabricating portions of capital equipment now used in the factories and for the proposed expansion of our tyre plants and equipping our new Industrial Rubber Products plant.

Export Support Programme Needed

Your company is fully aware of its export obligations, and we will meet our export requirements with the help of the Goodyear worldwide sales and distribution facilities. It must be borne in mind that the available world markets for tyre exports are rapidly shrinking as a result of one country after another installing its own tyre factories. There is also excess tyre manufacturing capacity in several countries, creating a low price competition for the available markets. Just at this time when the price element has become so important, the Government of India have effected substantial cuts in duty drawback rates, increasing our export costs by as much as 8 to 10 per cent. To offset this cut and assist with the higher cost of local raw materials, an increased cash subsidy is necessary if we are not to incur extraordinary losses on all exports. An export support programme of encouragement and continuity is needed.

50 Years in India

I am very happy to share with you the progress of Goodyear in India since the first office was opened in India fifty years ago. We started our Golden Jubilee Year - 1972, with a public service campaign throughout India to make motorists conscious of the danger of riding on worn out tyres. The campaign, launched in January 1972, which lasted for about two months, was very actively aided by Goodyear dealers, service stations, police departments, civic authorities and automobile associations. Many thousand motorists have been benefitted by this campaign.

1972 Outlook Brighter

You have already seen the Directors' Report which mentioned that the first quarter 1972 sales and profits were very satisfactory. The second quarter was reasonably good despite the record heat-wave and seasonal absenteeism of that period. The third quarter production will be affected by the power cut imposed in August. However, we hope this will be a temporary setback and we fully expect to end the year 1972 with considerably higher sales than in 1971 and some profit improvement.

(This does not purport to be a record of the proceedings of the Annual General Meeting)

COMPANY AND PUBLIC NOTICES

INDIAN OXYGEN LIMITED

"It is hereby notified for public information that M/s. Indian Oxygen Limited, P-34 Taratala Road, Calcutta-53 have given on 2/8/72 a Notice under Section 21 of the Monopolies and Restrictive Trade Practices Act 1969, to the Department of Company Affairs, New Delhi, for their substantial expansion in the manufacture of submerged arc welding fluxes.

Any person interested in the matter may make representation to the Secretary, Department of Company Affairs, New Delhi, within a fortnight of publication of this Notice."

SCHRADER-SCOVILL DUNCAN LTD.

NOTICE is hereby given that the Directors have decided to declare an interim dividend of 10% on 27th September, 1972 in respect of the Company's financial year ended 31st October, 1972, subject to deduction of tax, payable within the statutory period to the Registered Shareholders whose names appear in the Register on 27th September, 1972 or to their mandatees.

Pursuant to Section 154 of the Companies Act, 1956, the Register of members and Share Transfer Books of the Company will remain closed from 13th to 27th September, 1972, both days inclusive, for the above purpose.

By Order of the Board
DUNCAN BROTHERS & CO. LTD.,
Secretaries.

31, Netaji Subhas Road,
Calcutta-1.
24th August, 1972.

THE TITAGHUR PAPER MILLS COMPANY LIMITED

NOTICE is hereby given that the Board of Directors of the Company at its meeting held this day has recommended payment of the following final dividends for the year ended 31st March, 1972, subject to deduction of tax at source in addition to the interim dividend of 4% on 'A' and 'B' Ordinary Shares for the year declared by the Board of Directors on 18th August, 1971.

(a) On First Cumulative Preference Shares at the rate of 10.4% per annum.

(b) On Second Cumulative Preference Shares at the rate of 5.85% per annum.

(c) On Preferred Ordinary Shares at the rate of 13% per annum.

(d) On 'A' and 'B' Ordinary Shares at the rate of 3%—making a total of 7% for the year.

The Board of Directors of the Company at the same meeting has declared an interim dividend on the Company's 'A' and 'B' Ordinary Shares for the year ending 31st March, 1973 at the rate of Rs. 0.40 P. per share, subject to deduction of tax at source.

The Annual General Meeting of the Company for the year ended 31st March, 1972 will be held on Friday, the 29th September, 1972 at 11 A.M. and the Registers of Members of the Company shall remain closed for the above purposes from the 15th September, 1972 to the 29th September, 1972 both days inclusive.

The final dividends as recommended above shall be paid, if approved by the Shareholders at the Annual General Meeting, on or after the 31st October, 1972, to those members whose names shall be registered on the 29th September, 1972 in respect of the above shares of the Company.

The Interim dividend on 'A' and 'B' Ordinary Shares of the Company, as declared above, shall be payable on or after the 31st October, 1972, to those members of the Company whose names shall be registered on its 'A' and 'B' Ordinary Share Registers as on the 29th September, 1972.

BY ORDER OF THE BOARD
KANAK GHOSH
Secretary.

Registered Office:
Chartered Bank Buildings,
Calcutta-1.
Dated, 25th August, 1972.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

NOTICE

NOTICE is hereby given that the Board of Directors of this Company at a meeting held on 24th August, 1972, have declared payment of an Interim Dividend on the Company's Ordinary Stock for the year ended 31st March, 1972, at the rate of 8% gross. Payment will be made on 12th October, 1972, after deduction of appropriate Indian Income Tax to those Stockholders whose names are registered in the Company's Stock Register on 16th September, 1972.

Applications for transfers received in this office before 12 o'clock noon on Saturday 16th September, 1972, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above Dividend.

BY ORDER OF THE BOARD
Sd/- S. K. MITRA
Secretary.

CAPITAL, 31st AUGUST, 1972

CAPITAL

(Founded in 1888: Published every Thursday)

CAPITAL is India's most widely-read weekly newspaper dealing with economics, industry and public affairs. It has the mature experience of more than 80 years, and is the oldest journal of its kind in the country. Each week, it brings authoritative and comprehensive coverage of the main problem and events affecting the progress of the economy and the growth of industry. It separates the important from the unimportant; it presents simply, clearly and reliably what all informed observers of the economic scene ought to know.

Readers of CAPITAL are mainly people holding positions of vital importance in Government, business, industry and academic institutions. Many of them are intimately concerned with the framing of the country's economic policies. Many direct and control industrial, banking and commercial institutions. Together they represent a fund of economic opinion and buying power that no advertiser can afford to ignore.

Rates of subscription payable in advance.

	Free delivery Radius	With Inland Postage	Outside India
Yearly ...	Rs. 60	Rs. 68	Rs. 94
Half-yearly ...	Rs. 32	Rs. 36	Rs. 49

why do we search for new styles of tobacco

We have exported flue cured virginia tobacco for years at a steady level. Yet we are speeding up our search for new varieties of tobacco. Why?

To respond to international competition. We treat it as a primary responsibility. New sources of tobacco have emerged overseas.

At the same time the consumer's taste has changed. So far the emphasis was on brightness in colour. It favoured our flue cured virginia tobacco in the world market. With the swing towards filter tips, international customers now prefer ripe, open-grained tobacco with more positive characteristics and filling qualities.

To satisfy this new taste we are developing alternative areas for tobacco cultivation in Andhra Pradesh and Mysore. Soon this search for new varieties should bring results.

Meanwhile our export—currently a third of the country's total tobacco exports—must resist the pressure of overseas competition. There has to be someone to face it.

if we export traditional varieties successfully?

Growing Importance of Gold

THE detailed contents of the annual report of the International Monetary Fund, to be discussed by the world's Finance Ministers in Washington later this month, are still the subject of rumour and speculation. Yet it is already clear there is a strong possibility that their main feature, if not necessarily the one which gets most publicity, will be a recommendation that the official price of gold be brought more into line with the one now ruling in the free market. This is not to suggest the proposal stands any real chance of being accepted. It has been inserted, predictably, because the French have insisted; and what is equally predictable is that the Americans will reject it. However, in a world where inflation appears to have become endemic, the importance of gold is growing rather than diminishing. The fact that the free-market price is now hovering only just below double the official one is surely adequate proof of that. To bring the two prices more nearly into line would not increase the prestige of gold in anything like the same proportion. What it might do is help slow down the speed at which the yellow metal is assuming an altogether unjustified significance as an oasis of stability in a world of monetary anarchy.

Officially, the policy of the U.S. authorities is to diminish the importance of gold in monetary affairs, even to the extent eventually of demonetising it altogether. This is still the case, although it sits somewhat uncomfortably with the tacit promise made by President Nixon that if he is re-elected, he will remove the ban on American citizens buying, selling and holding gold. This, surely, is tantamount to providing a legal alternative to a rapidly depreciating dollar, and would certainly make nonsense of the official gold price, let alone the still surviving two-tier

the eventual demonetisation of gold, it might significantly increase the prestige and use of the metal. It would, in effect, return gold to its former rôle as arbiter of the world's monetary system, because other countries could not long resist its wider use once the United States had liberalised it. What possible rôle could then be played by S.D.R.s is not easy to imagine. Doubtless the ghost of a not-too-long-dead French President would rejoice. But what the effect might be on international trade and the world economy generally is another matter. Certainly inflation would no longer be the main problem.

The possibility that the gold price might be the main feature of this year's annual I.M.F. report need not, however, be taken to signify an immediate change in the official quotation. The United States will almost certainly demand a great deal in return for conceding it. The administration's general strategy is already fairly clear, and would seem to contain no real departure at all. Briefly, it will be to extract the maximum possible concessions from the Europeans in the application of their common agricultural policy to an enlarged Community. Equally, the policy of the Europeans, and especially France, will be to prevent that happening. For some time now noises have been heard from Washington suggesting that the tactics of the former Financial Secretary, Mr. John Connally, are once again being carefully studied. It may be remembered that Mr. Connally won some spectacular victories a year ago when the dollar was floated, and the United States was demanding freedom to devalue and improved trading prospects in her main markets. It now appears likely that the longer-term costs of Mr. Connally's triumphs, which were considerable, and included a substantial hardening of attitudes in

gotten in what appears to be a growing enthusiasm for his tough style of talking.

The actual approach the Americans will make, as distinct from the tone of voice they are likely to use, is undoubtedly going to include the insistence on a wider scope for the new Group of Twenty than at present envisaged in Europe. There is nothing new in this demand. It has been heard from Washington before, although what is different this time is that the administration appears to be working on the assumption that its views have been accepted. Scarcely anything could be further from the truth. There is virtually no chance at all that the Europeans—particularly the French—will permit themselves to be manoeuvred into the position where the world generally, as represented by the Group of Twenty, can discuss their trading policies objectively and separately from those of the United States. The Common Market does not share Washington's opinion that whereas European protectionism must be scaled down, that practised so blatantly by the United States is sufficiently justified to be allowed to continue. The Europeans see the problem in terms of a bargain, and one best struck without interference from the outside world. It is not altogether easy to condemn them from a detached point of view; their protectionism is, after all, no more to be deplored than that of the Americans. What is regrettable is that the interests of the rest of the world, including India's, should be treated as a bargaining counter in a tussle between two gigantic trading blocs.

It seems unlikely at the moment that the United States' new, and apparently tougher, stand at the coming I.M.F. meeting will include a further demand that the dollar be devalued. The official policy in Washington still seems to be that the Smithsonian Agreement is working well, and can safely be continued with for the time being. It is unlikely the Americans would win much sympathy if their attitude were otherwise. If the Smithsonian dollar parity does eventually bring the U.S. external payments position into balance, it will have accommodated a deficit on capital account currently running at around \$8,000 million a year. This is a substantial sum, especially when seen in the context of the overall U.S. deficit. It serves as a measure of the extent to which American business is still investing outside its own country. Criticism of this is nowa-

days not confined to Paris, but is already shared by American trade unionists who see it as a threat to their own employment. Any demand from the U.S. authorities for greater freedom for the dollar to depreciate will almost certainly be countered by a demand for effective controls on this massive outflow of private investment funds. It is not as if they are making any significant contribution to developing the world's poorer countries. Most of them still seem to find a home in Europe or the richer areas of Latin America.

While the exodus of private capital will go on weakening the United States' case for a further devaluation of the dollar, the continuing expansion of the domestic economy promises to do the same for its claims for more favourable treatment over trade. It is not necessary to be an unqualified admirer of Mr. Nixon to concede the point that the economic policy he inaugurated a year or so ago has proved spectacularly successful in the objects it set out to achieve. These were, simply, to accelerate the growth of the U.S. domestic economy while slowing the rate of price inflation. Both these goals appear to have been attained, although for how long is another question. Once Mr. Nixon is safely back in the White House things could deteriorate rapidly again. But in the meantime the undoubted prosperity of the bulk of

U.S. industry has definitely taken the edge off the demands for increased trade protection which were so strident a year ago. For this small mercy, the entire world can be thankful. International trade now seems to be expanding at much the same rate it was five years ago, and that is a blessing in which India, certainly, can share.

Against this essentially political background of bargaining and trimming, it is easy to forget that this year's I.M.F. meeting promises to be one of the most important international economic events of its kind for some years, at least since S.D.R.s were introduced in 1968. Despite their differences, the major countries are still vaguely dedicated to the principle of continuing reform and of moving towards a more flexible system generally. Apart from any possible advice about the price of gold, the I.M.F. report is expected to deal at considerable length with such important subjects as the adjustment of the Bretton Woods system to something more nearly in line with modern requirements; the convertibility of the dollar; the consolidation of the reserve currency balances—all matters which it is hoped will receive an airing in Washington. It is often overlooked that despite the interminable squabbles which still surround all such matters, real progress does occur, if slowly.

Should Mujib Meet Bhutto?

PRESIDENT Bhutto is fighting on three fronts. On the international front, he is waging a diplomatic war to salvage the wreckage of what was till less than a year ago the largest Islamic nation in the world. Simultaneously, he is engaged in a war of nerves with the powerful military hierarchy which ruled Pakistan for 13 years with an iron fist and which now finds power slipping from its hands. He is struggling at the same time to rebuild the shattered economy of Pakistan which is still reeling under the double blow of a disastrous defeat in war and the breaking away of the eastern half. The task is indeed too big for any leader.

While the ink was still wet on the Simla agreement, language riots broke out in President Bhutto's home State of Sind. This did an incalculable damage to his image as a national leader. This came as a godsend to the military caucus and President Bhutto's politi-

cal rivals. The language issue was merely an excuse. Opinions were freely expressed on his national and international policies. The emotional upsurge over language was exploited to raise doubts about the soundness of his policy towards India and Bangladesh. He was accused of surrender. They had chosen him their leader to lead Pakistan to victory against India and not to sign "on the dotted line" drawn for him by Mrs. Indira Gandhi, his critics argued.

As always happens in such situations, economic difficulties helped to fan the fire of popular discontent. The strain of separation from the former eastern wing was felt in rising prices and dwindling supplies. Food prices rose by nearly 50 per cent within a year. With the closure of the Bangladesh market, industrial production has declined and unemployment has increased. The Government machinery has become too big for the truncated

country. This would mean that there would be no new Government jobs for the youth for many years to come. The prospects of sufficient foreign aid to put the Pakistani economy on its feet again are still bleak. To all this has been added the emotional strain of the absence of some 100,000 Pakistani soldiers and civilians still being away from home in the joint custody of India and Bangladesh and the provocative presence of about a million refugees from areas occupied by India in the recent war. All these remind the average Pakistani of his national humiliation. There are still many misguided fanatics in Pakistan who exploit this sentiment by feeding the public mind on talks of revenge.

The Chinese veto on the move to admit Bangladesh into the United Nations has helped to nourish ambitions in the militant minority that Pakistan could still reconquer Bangladesh. President Bhutto has been quick to remind his people that by no stretch of imagination will Pakistan be able to fight a war with India for another five years and that the good of the people of Pakistan lies in working not for a war but for a durable peace with India. He has also said that his country would implement the Simla agreement in "letter and spirit." For many in his country this sounds like a *volte face*. The crucial question is whether the fanatical minority in Pakistan can convert a sizable majority of the population to its point of view. What are the options before President Bhutto in this crisis? Also what are the options before India to counter this new defiant mood in Pakistan? Is it still possible for Mrs. Gandhi and President Bhutto to work out a joint strategy that would contain the hardliners and dogmatists in both countries and lead the two leaders to their cherished goal, a beginning towards which was made in Simla? Mrs. Gandhi is evidently as anxious as President Bhutto to see that the "first step" they took towards peace in Simla does not become the last.

President Bhutto has so far refrained from using intemperate language in his references to India. This restraint from an impulsive leader like him suggests that he is still trying to see his way through to make the Simla agreement work, although this may take more time than he originally expected. If this is so, then he is evidently playing for time. By taking a tough line on the recognition of Bangladesh and instigating the

Chinese to use the veto, he may only be trying to wear down the resistance of his compatriots to an overall settlement with India.

President Bhutto has thus set in motion a public debate on what Pakistan's relations with Bangladesh should be. His own contribution to the discussion so far has not been entirely negative. He has gone on record to say that everything would be all right if only Sheikh Mujibur Rahman would agree to meet him before Pakistan recognised Bangladesh. The Sheikh sees a trap in this and has persistently refused to see President Bhutto. India supports the demand for an immediate and unconditional recognition but has tendered no public advice to Bangladesh which is admittedly the best judge of its own interests. But if the question of war and peace hinges on a meeting between President Bhutto and the Sheikh before Pakistan recognises Bangladesh, India has perhaps a right—if also not the duty—to offer helpful suggestions to the Bangladesh Premier. No avenue towards peace should be left unexplored. The secret of success in international affairs lies in flexibility and in keeping the options open. It also depends on the capacity of a victorious nation to sift the tangible gains from the intangible ones. The tangible gain sought by India was the independence of Bangladesh and this has been achieved. Another tangible gain was the release of Sheikh Mujib from Pakistani detention.

Parliament: The Monsoon Session

THE monsoon session of Parliament, which has just concluded, was marked by the passage of some economic legislation, including the Bills on general insurance nationalisation and take-over of the Indian Copper Corporation and the Indian Iron and Steel Company. In the case of I.I.S.C.O., the take-over is only of management, whereas in the other two cases, it is of ownership as well on the payment of compensation. In fact, the question of compensation became quite a controversial issue and there was criticism from the left lobby of the increase of Rs. 5 crores provided by the Government in the compensation to the general insurance companies. The compensation to the former owners of the Indian Copper Corporation of Rs. 7 crores was also assailed as being "too high". Evidently, it was all

After these signal victories, the only other tangible gain for both India and Bangladesh to pursue would be peace between the three countries. If to reach that goal it becomes necessary to give some intangible accommodation to President Bhutto, the Bangladesh Prime Minister need not firmly close his options. His place in history will be judged by his success in giving peace and stability to the new nation. What may for a moment look like losing face by giving in on some small points would then be judged as an instance of his habitual magnanimity towards a defeated adversary. It may not be out of place to draw the relevant lessons from the recent behaviour of almost all the advanced countries in readjusting their relations with their erstwhile enemies. President Nixon's dramatic visits to Peking and Moscow and the American willingness to get out of Vietnam suggest that even the mightiest of nations sometimes bow to the weaker countries in the pursuit of long-term national objectives.

This is not an alibi for President Bhutto but merely an attempt to put the whole situation in a proper perspective. Having won the war India and Bangladesh should now ensure that they do not lose the peace, even if this involves some short-term concessions on their part. The effort should not be given up unless the leaders of India and Bangladesh are convinced that President Bhutto is deliberately trying to deceive them and is not straining every nerve to make his people see reason.

stage-managed, for the criticism came also from the ruling Party members. If it was intended only to thwart attempts of the insurance companies or of the former Indian Copper Corporation to go to court on the compensation issue, the Government may be considered to have very nearly succeeded.

On the other hand, if the left elements in the ruling Party and outside honestly believed that after the constitutional amendments, the Government could take over any industry on the payment of a nominal compensation or nothing, they were sadly mistaken. The constitutional amendments are not to deprive the citizens of their property but only to ensure that take-overs in national interest are not stalled due to litigation over the quantum of compensa-

tion. In other words, the Government is well within its power to determine what is "fair compensation", but this does not mean that this can be misused. Nothing will hit so badly the capital market as expropriation of property without compensation that can be considered adequate and reasonable. It is a matter of some comfort that even in this present climate there are people in the Government who agree that as long as the country is committed to the development of a mixed economy, nothing should be done to destroy the investor's confidence and strike at the roots of the capital market.

Even so, the session did hear some Ministers making statements of policy that can well shake the public confidence in established systems and practices. For instance, the Minister of State for Foreign Trade, Mr. L. N. Mishra, very casually stated, in reply to a supplementary during question hour, that the Government had decided to take over textile exports in the public sector. And it was he who had stated a few days earlier at a meeting of the Forum of Financial Writers in New Delhi that he was not in favour of the Government taking over either the textile industry or its exports. All that he wanted at that time was to introduce an element of compulsion in textile exports. It is really odd that important policy statements should be made so casually by responsible members of the Government. Again, the Minister of State for Finance, Mr. K. R. Ganesh, told the Rajya Sabha the other day that public financial institutions were being directed not to give loan assistance to companies which were in tax arrears. Is the Government so helpless that it should resort to this sort of coercion and pressure to make the companies clear their tax arrears? Even if the Government were to take any such action, the wiser thing to do will be not to deny loan assistance, but to deduct the amount due to the Government from the loan amount before it is given to any company in tax arrears. Mr. Ganesh has indicated that some articles of the Constitution may be amended to deny certain rights and protection to those guilty of economic offences. Are the laws of the land not adequate to deal with such offences? The way the Constitution is sought to be amended for every little thing, the day is not far off when it will degenerate into a mere scrap of paper.

Looking back at the four-week session, one finds that both the Government and members of Parliament were indulging only in this kind of hit-the-headlines gibberish and very little time was devoted to any meaningful discussion of either the current economic situation or the policies for the future. The food situation was, no doubt, debated upon but here again, the tendency was to demand nationalisation of the food trade and other drastic remedies. Few viewed it as a problem that has arisen due to natural calamities and came forward with practical suggestions for tackling it on a long-term footing. During the entire session, little was said of the stagnation in industrial growth in the last one year or of the failure of exports to do as well as had been expected. Even the price situation was a matter of only passing interest. The failure is equally of the Government as of members of Parliament. The Government has been dilly-dallying on several important economic issues for long. Even the sugar policy, which was announced last week, is the outcome of deliberations over several weeks. And yet, it does not provide the answer to the basic problems of the sugar industry. This is once again an *ad hoc* policy because the Sugar Enquiry Commission is yet to submit its report to the Government on the controversial question of nationalisation of the industry. The uncertainty will only impede higher production in the coming season.

There are also several other issues on which the Government is yet to make its policy intentions clear. For

Sugar Policy: Mixed Reaction

THE new sugar policy for the 1972-73 season has been more or less on expected lines. That neither total control nor full decontrol of the industry is in the interest of the consumer in a period of scarcity is fully appreciated in all circles. Nobody expects that the new policy will remove all the ills of the industry, but what can be reasonably hoped for is that the higher floor price of sugarcane linked to a lower recovery rate and the Government's determination to improve the quality and quantity of cane production combined with the installation of new capacity for improved crushing by mills will go a long way in increas-

instance, the question of amending the Industrial Policy Resolution has been in the air for over a year and even now, it is not clear whether this is being done or not. The policy towards larger houses and their expansion has not also been spelt out clearly. Much is talked of the joint sector but none in the Government is clear in his mind what the concept actually is. Different Ministers have different views on this question. All these are adding to the problems of industry and are reflected in the slow rate of growth. It is true that industrial output in the first three months of 1972 has risen by 6.8 per cent, against 3 per cent in 1971, but this can turn out to be a statistical illusion if a deeper analysis of the factors contributing to growth is made. It is only but natural that the growth rate after a period of recession is often impressive but this cannot be taken to be a pace-setter.

On the export front also, a lot of confusion has been created by the dishing out of all sorts of statistics by the Foreign Trade Ministry in an attempt to create the impression that the growth rate has been higher than had been expected. Here again, if one goes deeper to find out the truth, it will become clear that much of the increase is on account of supplies made to Bangladesh, as grant or on credit. The tendency to gloat over small gains in short periods needs to be curbed. It is a pity that Parliament found no time to discuss the entire gamut of the economic situation, with particular reference to industry and exports and dissipated its energy on trifles.

ing sugarcane production. While it is the consumer who has suffered most from the periodic fluctuation in sugar prices, neither the millowner nor the producer of sugarcane has benefited from the long period of instability. Only the unscrupulous speculator, taking advantage of the inadequacies in the distribution machinery, has continued to fleece the poor consumer. The stock that is to be carried over to the 1972-73 season is not much, and there is nothing to indicate that sugarcane production next year is going to be a bumper one. In the circumstances, the consumer will do well to heed the advice of the Prime Minister, Mrs.

Indira Gandhi, that one should restrict consumption of sugar. Admittedly, there is at present much wasteful consumption, particularly among the middle class people, during festivals. While hoarders must be punished, wasteful consumption too needs to be discouraged.

The new policy has evoked a mixed reaction among industry circles; while the increase in the minimum price of sugarcane has been welcomed, the rise in the quantum of levy sugar has caused disappointment. As the quantum of levy sugar has been raised from 63.5 per cent to 70 per cent, the mills will be left with 30 per cent of their production to sell in the open market. They will no doubt try to pass on to the consumer any extra burden that will result from the higher sugarcane price. What price the mills will get in the open market will depend on what the traffic can bear. Sugar is already selling at an incredibly high price, and there has been a further spurt in the price following the announcement of the new policy. The Government thinks that it will be in a position to influence the free market price with the higher quantum of levy sugar at its disposal, but all its good intentions will be frustrated unless the activities of speculators are effectively curbed. It is not difficult to find out how levy sugar continues to find its way in the open market. Because of the increase in population and the *per capita* consumption of sugar, the demand for the commodity will steadily rise. If there is any failure on the part of the Government and the industry to increase sugarcane production with a higher sur-rose content and install new capacity, the present gap between demand and supply will widen further.

During the last two decades, all the necessary steps were not taken by the industry to replace the old plant and machinery in time; and the funds allotted for research and development to improve sugarcane production were inadequate. Against the Fourth Plan production target of 5.2 million tonnes, the current licensed capacity stands at 5.3 million tonnes, but of this a capacity of only 3.15 million tonnes has been installed during 1971-72. Even an optimist will not place the installed capacity beyond 4.3 million tonnes by the end of the 1973-74 season, thus leaving a clear gap of 900,000 tonnes between the Plan production

target and the capacity installed. The new policy reintroduces the uniform levy price for the whole country. Last June, incidentally, the Government introduced a differential price system. The more efficient west and south Indian mills were offered much lower prices under the new dispensation than their counterparts in the north. Naturally, there was great resentment among the former mills and it was feared that they might decide to go the way of northern mills to get the benefit of a higher price. The Government has done well to remove the differential price formula which is clearly discriminatory in nature. What now remains to be seen is whether the Government will fix the levy sugar price at a higher level to compensate the mills for any extra money

that they will be paying for their requirement of sugarcane.

The minimum price of sugarcane has been fixed at Rs. 8 a quintal linked to a recovery of 8.5 per cent with a premium of 9.4 paise for every 0.1 per cent rise in recovery. An important feature of the new policy is that the Government has accepted the principle of proportionality in the premium to be paid for higher recovery. Both the Agricultural Prices Commission and the organisations of sugar mills recommended a higher price for sugarcane in order to stop its diversion to *gur* and *khandsari* manufacturers. The new policy announcement has, however, been belated since many farmers had already decided whether to grow sugarcane or any other crop.

Institutional Finance for Industry

RELATIONS between financial institutions and industrial companies vary from country to country. An interesting contrast between Britain and continental Europe, for example, is British insurance companies' equity investment in industry on a scale not approved in Europe and European banks' investment in industry in ways alien to British banking tradition. Developing countries may regard promotion of industry as an obligation of institutions with available finance, whereas in some developed countries the security of such finance seems almost the sole consideration. There is no "proper" relation between finance and industry that is appropriate in all free-enterprise countries in any conditions. But some generally applicable principles are emerging, and current developments in Britain will probably clarify them. It is, at least, significant that in Britain the need to clarify them is appreciated.

Simultaneous initiatives by the Bank of England and the Confederation of British Industry were revealed recently. The Bank arranged discussions "to discover what measure of support there might be for improving the mechanisms through which a wide range of investors can be brought to collaborate with each other and with industrial managements in securing increased efficiency where that seems to be needed"; it had already found "a worthwhile measure of support, particularly among institutional investors". The

C.B.I. formed a committee "to reconsider the responsibilities and accountability of public companies" and "to examine the factors which might be expected to assist the direction and control" of them. A long discussion will follow these initiatives. The most important envisaged outcome of it—conditional, of course, on an adequate "measure of support"—is a consultative body, under the aegis of the Bank, financed by institutions, staffed by experts in management and industry, that will investigate defects and recommend correctives in companies. Such a body would have no legal authority, but its unofficial influence would be wide and strong.

There will certainly be no unanimous agreement that such a body should be formed. Merchant banks have reacted unfavourably to the idea; insurance companies' opinions are divided. But the biggest institutional investor, Prudential Assurance Company, has independently recognised that a major shareholder (the Prudential's resources are such that all its shareholdings are substantial) cannot always disclaim responsibility for the management of an industrial company, and there is probably a majority of institutional opinion in favour of co-ordinating supervision of and (where necessary) intervention in industrial management. A series of misfortunes (notably the financial collapse of Rolls-Royce, Upper Clyde Shipbuilders, and Vehicle and General Insurance)

has demonstrated serious defects in the relation between finance and industry, and some companies (it is discreet to leave them anonymous) in which institutional funds have been invested have performed so badly that intervention has been needed to justify the investments. The conventional argument in such cases is that an institution that has put money into an unworthy company should recognise its mistake and transfer the money to better use, rather than resign itself to a responsibility—improving management—that it is not evidently competent to perform. But the growth of institutional funds, not only absolutely but also as a proportion of total invested funds, has produced a situation where it is often impossible to sell an institutional shareholding at a reasonable price—and even offering it could arouse suspicion of the company concerned.

In respect of institutions' competence, however, the argument is in principle valid. It can, indeed, be elaborated: an institution that has to admit that it misjudged a company's management cannot pretend competence to improve it. So an essential element in the proposed consultative body is a permanent staff of experts competent to expose defects and to recommend correctives. This is not an arrangement for controlling industry through an elite body of managerial and industrial experts, acting for institutional investors. A consultative body is not a supervisory body: it will intervene only when invited to do so. When it has investigated a situation and perceived a need for new management it will seek "the right man for the job", not provide him itself. It will have to act not only competently—any error of judgment or recommendation could discredit the whole concept—but also discreetly—obvious intervention in a company's affairs could cause anxiety as well as resentment.

Individual institutions have in fact intervened (or, if the term is preferred, interfered) more than they will publicly admit. They have recognised an obligation to protect and properly to utilise funds entrusted to them; and at least some of them have recognised that "shareholding democracy" is meaningless if even major shareholders are unwilling to influence management. Yet they are sensitive to the criticism (however unjustified) that the tentacles of their great financial strength are reaching into every major company and that they are gaining a dominant position

in the economy. This criticism, or the fear of it, is a reason for the cautious attitude of some of them towards the Bank's initiative. The two initiatives, the Bank's and the C.B.I.'s, are not directly related, but both are concerned with the functioning of the corporate sector, and both are motivated by evidence that

its mechanisms need modernising. The corporate sector must be seen to serve, not exploit, the community; and the community must be made aware that institutional finance is a necessary and dynamic element in industry. There is no reason why finance should be reticent in a system that is operated by money.

CURRENT COMMENT

FREIGHT

Averting Frequent Hikes

Addressing a Press conference held in Calcutta a few days ago, Mr. Y. S. Kasbekar, Director General of Shipping, and Mr. T. K. Sarangan, Director (Transport), Central Ministry of Foreign Trade, said that it was the Government's policy to restore Calcutta port to its original position, namely, the premier port in the country. There was never any move to divert traffic from Calcutta port. If there had been any diversion in traffic in recent years, it was due to certain physical handicaps. The Central Government is there to help the local authorities to initiate measures which would help overcome the present shortcomings of the port. With the opening of traffic to Bangladesh, the removal of certain transport bottlenecks and unhelpful factors in Calcutta, Assam tea which was once diverted to Kandla port is again passing through Calcutta port. The members of the Eastern India Shippers' Association had a meeting with Mr. Kasbekar and Mr. Sarangan when the problems of shipping space, types of vessels needed for shipping and the regularity of services were discussed. The help of the Centre was promised in sorting out the difficulties. Although the shippers could always expect Central help, they must fight their own battles to get their grievances redressed. Mr. Sarangan reminded the shippers that they should not do anything which could affect their collective bargaining position. The shipping Conferences which are already too powerful should not be given any further lever. The shippers must always remain alert so that the shipping Conferences could not make any further move to protect their vested interests.

Mr. Sanjoy Sen, president of the E.I.S.A., expressed the hope that it would be possible to bring together the shippers and shipowners on the

basis of mutual understanding. After all, in the final analysis their interests are complementary in nature. More than 95 per cent of India's exports move by sea transport. The shipping lines—both national and foreign—must, therefore, serve the country's interests. Indian exporters will be able to fulfil their obligations only if the shipping lines remain sympathetic to the national objective. Mr. Sen said that frequent freight increases had been coming in the way of rapid development of India's export trade. It has been generally recognised that the only real solution available to shippers is to reorganise themselves in a strong negotiating body having the countervailing power to exert effective pressure on the Conferences and thereby get the right type of service at the lowest possible cost. Mr. Sen referred to the attempts made by the powerful maritime interests of the shipowning West to bypass the resolution on the Code of Conduct for Liner Conferences adopted at the U.N.C.T.A.D.-III by rejuvenating the code drafted by the committee of the European National Shipowners Association. He said that every effort should be made to ensure that Indian shipping lines as well as the Conferences of which they were members followed the Code of Conduct for Liner Conferences annexed to the U.N.C.T.A.D. resolution and the recommendations contained in the resolution on freight rates.

PANGLADESH

U. N. Admission

The action of China in vetoing the entry of Bangladesh into the United Nations has not come as a surprise although it was hoped that, following the Simla agreement between India and Pakistan, China might refrain from taking such a drastic step. Almost all leading nations have recognised the new democratic republic of Bangladesh and there were indications earlier that President Bhutto

too would take a similar step. But politics in Pakistan being what it is, Mr. Bhutto has not been able to take this reasonable step. And to please Pakistan, China has now barred the entry of Bangladesh into the United Nations. The attitude of the United States is also perplexing and its rôle has certainly been dubious. It voted in favour of Bangladesh's application for admission to the U.N. but, at the same time, it also voted for a mischievous amendment by Guinea, Somalia and Sudan seeking to link the admission of Bangladesh with the release of the prisoners of war without holding any war crime trial. It was made clear by the Indian Government that the P.O.W. issue was one which could be settled between Pakistan and Bangladesh and it had nothing to do with any overall settlement of the political issues facing Pakistan and India. Islamabad cannot expect the resolution of the P.O.W. issue till the recognition is withheld. It is thus surprising why the United States took an attitude like that.

It is difficult to understand in what way Bangladesh, according to China, does not deserve a place in the United Nations. For over 25 years, China itself had not been admitted into the world body in spite of the support given to her by India and other democratic countries. China has claimed that it will always shun Big Power politics. If China really means what it says, how could it have used the veto to bar the entry of Bangladesh into the United Nations? Here is a country which successfully fought against Pakistani colonialists. There is something common between the Chinese revolution and the revolution in Bangladesh. By deciding to bar the entry of Bangladesh into the U.N., China has revealed the great gap between its precept and practice. Peking said that its decision was dictated by its desire to safeguard the U.N. Charter and maintain peace in south Asia. The Chinese, it would seem, wanted to postpone the issue until India and Bangladesh had fully implemented the U.N. resolutions. The reference obviously is to the demand for the withdrawal of foreign troops from Bangladesh. The Indian delegate answered this point clearly when he said that the wide support that the membership application of Bangladesh had received in the Security Council's membership committee repudiated the extraneous issue that China was introducing in the matter. The argument that there were foreign

troops in Bangladesh was irrelevant, for there were many countries which had been admitted to the United Nations in which there were foreign troops. But in any case, as the Indian delegate said, there were no foreign troops in Bangladesh at the moment and, therefore, China's argument did not make any sense.

BANKS

Guarantee Scheme

With effect from 1st September, 1972, all scheduled commercial banks have been authorised to furnish guarantees or tender fixed deposit receipts, cash certificates and other similar instruments representing any special classes of deposits, without lodgement of cash or Government securities as cover for the guarantees, etcetera, issued in favour of the railways and Central Government departments, as well as State Governments and autonomous bodies which have adopted the scheme, in lieu of security or deposits by contractors. It will be open to Government departments, etcetera, freely to accept such guarantees without confirmatory advice from the Reserve Bank of India. The limits up to which the banks can issue guarantees are also no longer in force after 31st August, 1972. The Reserve Bank has addressed a letter to this effect to all the scheduled commercial banks. The changes follow the Union Government's decision to modify the bank guarantee scheme.

POWER SHORTAGE

The I.E.A. Memorandum

Mr. P. K. Nanda, chairman of the Indian Engineering Association (Eastern Region), has addressed the Chief Minister of West Bengal, Mr. Siddhartha Shankar Ray, submitting a detailed memorandum on the power crisis. This Association has been predicting for several years a severe crisis in power supply and it must be recognised that the shortage is acute and is most likely to last for a considerable time. The Association has submitted its views in detail not only on the extent of shortage, the reasons for the power crisis, the anticipated shortage, but also—and this is the main content of the memorandum—on the medium and long-term measures to be taken.

The Government has decided to introduce a system of mild rationing

to conserve power through staggering of rest days, re-timing of shifts, restricted use of units/water pumps, etcetera. The I.E.A. believes that these measures will not cover the shortfall since the success of the scheme depends on all power systems supplying to their slightly reduced committed levels, which is doubtful. An emergency plan should be drawn up to be put into effect at short notice. The current emphasis on overstretching plant as a short-term measure is most unwise; this will result in major plant breakdowns and a much more severe crisis. Immediate arrangement should be made for importing power from neighbouring States at least to the extent of 10 to 20 MW. Both maintenance and capacity utilisation must be improved.

Among the medium and long-term measures are: (i) The installation of gas turbine generators may be less economic but more effective in meeting the present and future demands. If two gas turbines are installed with a total capacity of 40 MW, these could be operational within one year, subject to "emergency" action. In the long-term these will serve as essential "back-up" units supplementing the total power system. (ii) Until a few years ago, many private generators were in use, especially in coal mines. These should be reconditioned and commissioned with Government assistance. (iii) In view of the urgent need to provide electrification to rural areas and simultaneously release pressure on industrial areas, diesel units should be set up to be operational quickly. (iv) The Santaldih power station is scheduled to be commissioned in 1973-74, but it is already two years behind target. Steps should be taken to commission it, latest by April 1973, by taking special and urgent measures. Similarly, for all the power programmes announced from time to time an early completion is essential. (v) As a matter of practical policy, experiments on plant and equipment, as was done with D.P.L., should be avoided. Conventional, reliable plant, such as at Bokaro, should be used in the future. Long-term expansion plans for generation and distribution should be prepared now and implementation assured in the Fifth Plan period.

COMPANIES BILL

Seminar in Calcutta

A seminar on the Companies (Amendment) Bill, 1972, was held under the auspices of the Merchant's

Chamber of Commerce, Calcutta, a few days ago. The participants were Mr. Ranadev Choudhury, an authority on Company Law, Mr. S. C. Sen, an eminent Counsel and Mr. B. S. Kothari, a leading chartered accountant.

Mr. A. R. Kanoria, who presided over the seminar, said that some of the proposed amendments to the Company Law may act as a brake on the process of capital formation. Inaugurating the seminar, Mr. Justice B. C. Mitter enumerated the main provisions of the proposed amendments. He wondered how far the provision taking away the power of the court to approve alteration in the articles of memorandum and vesting the same on the Central Government would lead to serve the interest of the investing public.

C.I.E.T.A.

Suggestion Accepted

The Calcutta Import and Export Trade Association (C.I.E.T.A.) has welcomed the announcement made

by Mr. L. N. Mishra, Central Minister for Foreign Trade, at the Board of Trade meeting that the Government had decided to apply cuts on import replenishments on a sliding scale in proportion to the export performance of a unit. The C.I.E.T.A. considers that this decision should provide a tremendous incentive for increasing exports, besides serving as a more rational approach. The C.I.E.T.A. had made the proposal earlier at a meeting in Calcutta, with Mr. M. M. Sen, Chief Controller of Imports and Exports, New Delhi. The Association had suggested that instead of having a uniform penalty of 20 per cent cut on all exporters irrespective of whether one had exported 0 per cent or 4.9 per cent, a sliding scale type of penalty be introduced, i.e., 4 per cent per percentage of export obligation, so that an exporter exporting 4 per cent may be subjected to a nominal cut of 4 per cent in licence and an exporter failing to export anything may have his licence cut by 20 per cent. The Government has already introduced another suggestion made by the C.I.E.T.A. that cash incentive allowed to exporters be paid in two stages—75 per cent on submission of documents and the remaining 25

per cent after completion of full scrutiny. The Government has introduced this on a selective basis.

STEEL

Removing Shortage

At the meeting of the Raw Materials Committee of the Engineering Association of India held recently in Calcutta under the chairmanship of Mr. B. K. Jhawar at which Mr. Maheswar Prasad, Joint Secretary (Steel), Ministry of Steel and Mines, officers of the Iron and Steel Control, main producers, J.P.C., B.R.C. S.T.C. and M.M.T.C. were also present, the problems of acute shortage of steel were discussed. The effect of the scarcity of structural steel on the implementation of new projects or projects undergoing substantial expansion was highlighted. Units which have received other categories of steel, but cannot make any progress due to non-availability of small quantities of structural steel in matching sizes and specifications, are in a serious predicament.

It was also brought to the notice of the representatives of the Government as well as the main producers that unless the sick industries in West Bengal were given main raw materials, at least initially, there was no chance of any spectacular increase in production. The situation concerning pig iron supplies is very peculiar. While the plants are producing according to their normal production schedules, the railways have failed to move the pig iron as a result of which foundries almost all over the country are practically starving, although they have large export orders.

MONEY MARKET

Easier Trend

The short-term money market has been extremely easy this past week. Despite the flotation of State loans, the call rate has fluctuated between 2½ per cent and 2½ per cent. Towards the close, the rate has quoted at 2½ per cent. The demand for remittances has been small. The supply of tea and gunny bills has also been small. The pound-sterling has weakened slightly against most major foreign currencies during the week.

A Ditcher's Diary

THE C.P.I.'S SWEET FRIENDSHIP with the Congress coming to an end? The Congress is unlikely to be inconsolable. Its need for a "progressive" mantle has not increased. On the one hand, the mantle is unlikely to appear particularly progressive to other sections of the committed left; on the other, there is a considerable body of opinion, both on the right and at the centre, that considers the mantle irreconcilable with the basic tasks which the Congress, by virtue of its unassailable authority, is now expected to perform. Association with the C.P.I. has not made the Congress more acceptable to the socialists or the Marxist communists; and this association is not only regretted by parties and groups to Mrs. Gandhi's right but regarded as an embarrassment also by some people whose loyalty to the Prime Minister is not in question. In fact, even the committed socialists within the Congress are not all happy about this association. In the result, the C.P.I. finds itself increasingly irrelevant to the formulation or conduct of national policies; and its sense of frustration was acutely expressed at the recent session of its National Council. But it has not lost all hope. It has called for mass action against the "slideback" in Government policies, but it still thinks that the acting masses will include "those following the Congress". The masses are unlikely to follow the dialectical formulations, but it is perhaps hoped that the Congress leaders will see the implications. The

call for "militant mass actions and mass struggles" is an obvious challenge, but I doubt if the C.P.I. leaders seriously expect the Congress to be unduly perturbed by thought of its own followers joining such action. A subtler implication lies in the implied possibility of the C.P.I. falling back on "left and democratic unity" outside the Congress. The National Council refrained from spelling it out, but it was markedly less abrasive than before towards the socialists and the Marxists. In the latest issue of *New Age*, Mr. N. K. Krishnan regrets that the C.P.I. (M) and the Socialist Party did not have "a correct political orientation" towards the political developments of the past five years; and the Marxists now say that their "revisionist" comrades seem to have "realised their political mistakes". The Marxists' view is possibly coloured by much wishful thinking; or perhaps they think that, in view of their own isolation, they have nothing to lose by stressing the signs of the C.P.I.'s disenchantment with the Congress. I cannot see how the two Communist Parties can easily forget their recent, and partially continuing, record of mutual hostility, but some peripheral developments could be interesting.

IMMEDIATELY AFTER THE CHINESE veto against Bangladesh Maulana Bhashani seemed dismayed, but he has made a remarkably quick recovery from doubts about Peking's in-

fallibility. Once again India is the villain of the piece. Great age must have vastly heightened the powers of his imagination. Or could it be that age has a hallucinogenic effect? His recent statement that 3 million "Indian Bengalis" go to Bangladesh every day can only mean, if he said what he genuinely believed, that he is suffering from hallucinations, or that he is no longer able to distinguish "Indian Bengalis" from people of his own country. The latter explanation might provide a psychological clue to his insistent call for the creation of a "greater Bengal". Indeed, he seems to be fast losing all sense of distinction. He recently declared that "Assam is also virtually Bengal"; and last Sunday he urged the merger of West Bengal, Assam, Meghalaya and Tripura with Bangladesh. Let alone Assam and Meghalaya, even Tripura will refuse to lose its identity in the Maulana's "greater Bengal"; in fact, West Bengal cannot have any interest in his lunatic plan either. But such flights of fancy cannot be entirely dismissed as lunacy; the sustained anti-Indian campaign by the Maulana and his assorted followers has already done a lot of mischief. The "hungry masses" who "marched" in Dacca on Sunday had no more than a notional connection with the masses, and few of the jeep-transported marchers can have been hungry. But many ordinary people may be taken in by the Maulana's crusading posture. His close followers at the moment are a dubious lot, from both the extreme left and the extreme right; but simple villagefolk, afflicted by scarcity and high prices, may seek in his slogans an easy escape from their

AIR POLLUTION

A CORRESPONDENT writes in Current Coin: Lord Curzon used to think that the smoke nuisance was to be deprecated because it had a tendency to blacken buildings, particularly white elephants such as the Victoria Memorial. But some scientists have recently been going into this matter and they have a much more serious charge to bring against smoke than the vitiation of air and buildings. It has been noticed and complained of for years past that this world of ours is gradually becoming hotter, and this state of affairs the scientists attribute to the discharge of carbon dioxide from our mills and factories. In fact, if the carbon dioxide in the atmosphere is increased between two and three times its present value, the temperature of the Arctic regions

must rise fifteen degrees "and produce a climate as mild as that of the Eocene period". Another result of this heating process will be that the warmer climate all over the globe will result in largely increased vegetation; and, through this plant life, more carbon dioxide will be concentrated in the soil, leading to an acceleration in the rate of carbonation. To sum up, we are told that the artificial oxidation of coal will probably result in some of the most profound and far-reaching geographical consequences due to the agency of man. And, lastly, dear friends, as the padre says, we have it on excellent authority that, at the present time, some six thousand million tons of carbonic oxide are being annually discharged into the atmosphere.

frustration. Even New Delhi, which would prefer not to take note, is losing its patience, of which due note must have been taken in Dacca. The Bangladesh Government cannot plead total helplessness. Some of the present hardship is plainly due to administrative failings; and some of the misconceptions on which motivated propaganda thrives are due to an insufficient official effort to explain the truth to the general public. I am sure Sheikh Mujibur Rahman is distressed at some of the reports from Dacca he must have received during his convalescence abroad; and possibly President Bhutto is a little pleased. But I do not think that there is any cause for despondency in India as yet. The Sheikh's political opponents at home cannot undermine his relationship with India; and Mr. Bhutto has his own domestic problems to contend with. I hear that the film *Blow Hot, Blow Cold* has been banned in Pakistan; the exercise is perhaps reserved for the President himself.

I COULD NOT IMAGINE THAT WOMEN in West Bengal could be more vocal than men, an impression which I had perforce to give up after I had attended an interesting seminar organised by the Ladies Study Group last Saturday to voice the protest of about 90 other women's organisations of West Bengal against the proposal to club the incomes of husband and wife. Frightened by the appalling rise in prices, the Central Finance Minister, Mr. Y. B. Chavan, does not apparently want to open the Pandora's box by merrily indulging in a spree of deficit financing whose effects on the economy at a time of sluggish agricultural and industrial growth have been disastrous as all of us can now see. But poor Mr. Chavan! He has been pathetically scraping the bottom of his barrel to find out new sources of finance because the Planning Commission has asked him to raise no less than Rs. 6,500 crores or Rs. 7,000 crores during the next quinquennium, no matter whether it affects capital formation in the country. I have my fullest sympathy for Mr. Chavan in his serious predicament, but after attending the seminar of the Ladies Study Group, I carried the unfailing impression that the Amazons of Clive Street, aided and abetted by their enterprising husbands, will make Mr. Chavan's life miserable if he does not give up the proposal of clubbing lock, stock and barrel. To tax and to please is difficult, I know. But I was pretty amused when I heard a lady giving a house-

wife's definition of income-tax and saying amidst cheers: "Income-tax is what the Government takes from your husband to get capital, in order to go into business in competition with him and then take the capital of his business in order to pay for its own loss." Even the hard-headed members of the Wanchoo Committee, I dare say, would have fought shy to make many unrealistic recommendations had it been well aware of this ingenious definition, not to speak of Mrs. Gandhi who spoke like a Messiah a couple of years ago in her Budget speech: "Those who are united in heaven should not be put asunder by a mere tax collector". One knows to his cost these days how pleasant it is to enjoy the privilege of being one of the assessee's constituting 0.5 per cent of the total income-tax paying population. But why club the income of husband and wife when the country has more or less an untaxed income of Rs. 16,000 crores in the agricultural sector and the tax arrears still amount to Rs. 500 crores or so? So women of West Bengal unite to register your massive protest against the mischievous proposal to tax joint incomes. Didn't a wag say that income-tax is another form of capital punishment?

IF YOU CANNOT REMEMBER READING anything recently about what Senator Edward Kennedy has said in support of the Provisional I.R.A., there could be a good reason. Lately he has been careful to keep his mouth shut on the subject, which you might consider a strange thing at a time when the ruthless pursuit of votes in the United States appears to have totally obscured all consideration for anything as inconsequential as human life. I am assured it has no-

thing to do with the Senator's regard for the British Army, although to some extent it is a reaction to the appalling atrocities the Provisionals have committed. No, it seems the real reason goes deeper than that, and is indeed causing a hardening of attitudes throughout the entire American establishment, liberal or otherwise, towards what is happening in Ulster. The fact is that the disease of Northern Ireland is beginning to spread abroad, and rapidly.

THE CHESS DRAMA OF THE CENTURY ended at Reykjavik last Friday, but the denouement was distinctly less exciting than the build-up. Spassky played better in the later games, but this was not good enough against Fischer. The only difference it made was probably in somewhat subduing the young American's aggressive style; or perhaps the challenger finally decided that it was wiser to consolidate his early gain than to take risks in search of more. Few of the experts doubted at any stage that he would win, though some would have perhaps been secretly pleased to see *hubris* punished. Many ordinary people would certainly have been glad to see the gentle Russian retain the title. People in his own country may not consider the impression he made with his charming manners to be a sufficient compensation for what will be widely regarded as loss of national prestige. Other Russian experts have publicly found fault with Spassky's "hesitant" play, and in Stalin's time publication of critical comment in *Pravda* would have been regarded as highly ominous. But I don't think that Mr. Brezhnev will think of despatching

Spassky to Siberia or subjecting him to a session of ideological self-criticism. He may lose some of his special privileges; he may not even be able freely to spend the \$100,000 he will get as prize money for the runner-up. But, in spite of his curious complaints at the end of the match, he may even be a little relieved that the whole thing is over. According to Mr. Reuben Fine, an outstanding American chess player who has turned to psychology, Spassky is a contemplative (depressive in psycho-analytical terms) non-hero; psychologically, Fischer belongs to the class of hero payers, "who use chess to satisfy their fantasies of omnipotence". I am not surprised that President Nixon is an admirer of Fischer's personality; the President would probably have been more impressed if he had known Steinitz, who in his fantasies played against God and beat Him while giving Him a handicap. No wonder Fischer himself has great admiration for Steinitz; as has been aptly observed, Steinitz's notions of himself make Fischer seem humble. But let me not go on about the psychology of championship chess. How about the psychology of amateur enthusiasts? Some of the amateurs play with considerable passion and skill; according to one psychiatrist, chess offers them a scope for the exercise of their intellectual faculties that they do not find in their professional pursuits. But there are a great many people who have been converted to chess by the latest craze; I wonder how long their enthusiasm will survive the end of the Reykjavik excitement. The price of chess boards should soon fall again.

Should Management Treat Marketing Costs as Deferred Revenue Expenditure ?

By P. Chattopadhyay

Director of Research,

Institute of Cost and Works Accountants of India

Capital costs incurred in the construction of a project or in the installation of a plant or in such other items are treated as deferred charges. Expenditure on marketing or promotional efforts should also be phased over a period of time, rather than charged in full against profit in a single year.

THE concept of deferred charges is as old as scientific, organised accounting systems themselves. The concept is highly relevant for different types of activities, especially those in which expenditure has to be incurred today to reap the benefits over a period of time in future. This expenditure pertains to both capital and revenue. There is common acceptance of expenditure during the construction of a project or expenditure directly incidental to the installation of plant and machinery or carriage inward of such items to be capitalised or to be treated as a part of the capital cost of such items. This is logical, even though the actual practice varies from country to country and from industry to industry, depending on the type of expenditure and its magnitude involved and the characteristic features of each enterprise such as its location and objectives.

Revenue Expenditure

A difficulty arises when such expenditure is purely in the nature of revenue expenditure and cannot reasonably be capitalised in the same way that the case referred to earlier would permit. Such expenditure,

For a nominal charge "Capital" 's Statistical Department can provide you with a certificate of share prices.

albeit of a purely revenue nature, cannot be charged against profit of any single accounting year, particularly when the expenditure is disproportionately heavy. Such charging against any particular year's profit would distort the profitability position of an enterprise in several ways. The concept of deferred revenue expenditure owes its origin to the need for phasing such expenditure over a period of time, rather than charging such expenditure in toto against profit in any single year.

Deferred charge has been defined¹ as an expenditure not recognised as a cost of operations of the period in which it is incurred but carried forward to be written off in one or more future accounting periods. It has been an axiom in accounting that expenditure, of the nature of revenue expenditure, incurred during an accounting period but likely to show results over a number of such periods in future should not be charged to the profit and loss account of that period. This is a question of equitable distribution over time. Instead, it should be deferred *pro rata* over the period in which results of such expenditure are likely to accrue. Several types of revenue expenditure would qualify for this treatment.

For the purpose of the present discussion, however, expenditure on marketing and advertising is taken up, especially with reference to the Indian fertiliser industry in the public sector, more precisely, the Fertiliser Corporation of India. Conceptually, the considerations relevant for the fertiliser industry should be similar for other industries where similar types of expenditure will have to be incurred for the purpose of promoting end-uses of the products for which not much previous knowledge existed among the prospective consumers and about which people should know for certain as to the precise benefits that arise from the

¹Cf. E. L. Kohl, *Dictionary For Accountants*, Prentice-Hall, 1970, page 142.

application of these products, particularly in cases where indiscriminate use is known to have harmed rather than benefited the consumers in the long run, in some cases even in the short run.

Marketing of Fertiliser

It is only very recently that one has started hearing about marketing in the context of fertilisers. Even three years ago, one would hear only of selling, particularly because fertiliser was a controlled item sold almost exclusively from the fertiliser pool under the control of the Central Government. The context has changed during this relatively short period. Free market conditions now prevailing in fertiliser distribution have created pressure on the public-sector fertiliser units not experienced before. The marketing requirements of fertilisers are such that unless the efforts are sustained in terms of both time and intensity of campaigns, the results are likely to be indifferent, if not dissipated. This is because the users of fertilisers in India are essentially illiterate farmers not quite accustomed to the ways of scientific, businesslike agricultural operations with optimum crop-mix and sophisticated input-mix.

The public-sector fertiliser units have come to occupy a very peculiar position in the context of the totality of the industry as such. Let the case of the Fertiliser Corporation of India be taken up, for instance. By the time its Sindri, Nangal and Trombay units made their presence felt in the context of supply of different types of fertilisers, the Corporation had several plants at different stages of construction and conception. As yet, it has not been possible for the Corporation to get over the roadblocks of gestation in spite of the fact that some of its units are already quite old in the field and have been supplying fertilisers of different descriptions in varied quantities.

These conditions have thrust several responsibilities on the Corporation. By the time its new units came into production, the Corporation had to assure that the fertilisers produced had a market. Since under free market conditions, production was largely carried on in anticipation of demand and since demand was itself a factor subject to switches and shifts of different intensities, the Corporation had to decide between two essential alternatives. The first was to have its own marketing set-up capable of undertaking the

task of organised and continuous promotion of the use of fertilisers on a sustained basis in the rural areas, establishing rapport with users. The marketing set-up thus had to have a composite of expertise in different branches of fertiliser technology, agronomy, marketing and advertising, sales promotion in the field, transportation management, cost and management accounting and finance. In fact, the marketing-mix of the Corporation has included a wide range of activities, almost all that one gets to know from text books.

Marketing Set-up

Each of these has peculiar, characteristic requirements of its own. To cater to a growing fertiliser market—growing as a result of its own organised efforts—the Corporation could not afford to go slow in the creation of the marketing set-up and in incurring expenditure in anticipation of production and demand in conditions in which several of its plants were scheduled to start production

during 1971-72. If the Corporation did not take these measures in proper time and there was a glut in the market, it would be taken to task, all the same. This has posed a big problem.

In this process, a situation has arisen mainly from the fact that the gestation period of some of the plants under construction has lengthened in the meantime, due to various factors on which the Corporation itself did have little control. When production from these plants did not come and at the same time the marketing set-up had to be maintained with all its activities, a situation was likely to develop in which the expenditure on marketing was to be disproportionately heavy, although not without reason. This expenditure is heavy because of the cost of the marketing organisation and that of the activities carried out by it. The results that were to be expected, i.e., increasing sale of fertilisers, could not be effected mainly because of lack of production in some of the plants which were to

start production much earlier or due to the under-utilisation of capacity in the producing units.

Selling through Agents

The second alternative which the F.C.I. management could perhaps adopt was to appoint a sole selling agent or to function through a number of selling agents and distributors. In this context, the C.P.U. seems to have been inclined in favour of selling fertilisers through agents rather than through the producer's own marketing set-up. The C.P.U. cited the case of Coromandel Fertilisers Ltd, which has adopted the sole selling agency system. It was noted in the report that this Company appointed E.I.D. Parry Ltd as its principal selling agent. It is indeed a point for debate as to whether a public-sector undertaking should go by purely commercial considerations of costs rather than having the social objective of promoting end-uses of products not known to farmers before.

One of the major constraints faced by the Fertiliser Corporation of India has been apparently the fact that the exact gestation period of these plants now under construction could not be accurately estimated on the basis of which the marketing expenditure could itself be phased over time. The picture would change considerably once these plants started production up to full capacity. In the light of realities, it can be mentioned, therefore, that the marketing expenditure incurred by the Corporation has been farsighted as an investment in future and thus should logically be treated as deferred revenue expenditure phased over a period of time, say, till the other plants start production. The circumstances to which the Corporation's marketing activities have been subject justify such a treatment. Marketing expenditure charged completely in one accounting year, to say the least, would distort the real profitability position of the Fertiliser Corporation of India. To discourage such treatment would put a stigma to the marketing activities of the Corporation which may prove costly. To appoint private selling agents would, on the other hand, defeat the objectives behind the establishment of the Corporation. Business prudence with social objectives demands that the incurring of such expenditure and its treatment as deferred revenue expenditure should be entirely within the discretion of the management of the Corporation.

Reviving the Capital Market: Need to Restore Confidence among Investors

By M. R. Meher

The capital market has remained depressed for quite some time. The confidence of investors, which has been badly shaken by the Government's takeover strategy, should be restored to revive the interest in equities.

THE capital market has been in the doldrums for quite a long time. The market having received no shock after another, turnover has been at a low ebb. A number of investors have found it difficult to keep up their establishments. There has been an erosion in the share values of concerns which have large reserves and which are considered blue chips in the investment market. This is the present position, although other industry and agriculture have good potentials for investment. The potentials for the investment market are there, as evidenced, for example, by the rise in deposits of the nationalised banks and the large expansion of life insurance business in urban and rural areas. Although the corporate performance, as shown by recent reports of the working of a number of companies, has been on the whole satisfactory, this has not revived the capital market.

While there is great need for mobilising urban and rural savings or investment in industry, confidence of investors has been shaken by the very low rate of compensation on nationalisation to general insurance companies and coking coal mines. Investors are waiting to see what compensation is eventually paid to the shareholders of the Indian Copper Corporation. The shares of companies which, it is feared, might be nationalised, have touched new lows. If the present setback to investment confidence is to be overcome, it is necessary that the Government should announce some guidelines as to the principles proposed to be followed while deciding the amount of compensation to be paid on nationalisation. In a number of public limited companies, the majority of shareholders are small investors. It has also to be borne in mind that institutional investors like the Unit

Trust of India and the Life Insurance Corporation, which hold the savings of the public, would be put to a loss by a policy which allows only minimal compensation without any regard to the break-up value of shares. The question of reasonable compensation is relevant not only from the point of view of the industry which is nationalised but also from the point of view of its repercussions on future industrial development.

It is hardly necessary to state that for encouraging industrial growth, the investing public should be offered incentives to put their savings in equity shares. Experience has shown that the new issues of established companies offered at below the market rate are readily subscribed. In a large number of cases, such investment is made with a view to make quick gain by selling at a profit after the allotment. As far as issues of new companies are concerned, the market is sluggish. One of the reasons appears to be that investment in shares has to compete with other investments. Savings deposited with companies yield between 8 per cent and 12 per cent, while in the case of equities profits are eroded by the high rate of taxation and other factors, such as shortages of raw materials, transport bottlenecks in some States, high excise duties, and rising cost of capital goods replacement. Although the volume of marketable securities available has shrunk by the virtual disappearance from the investment market of banks and insurance companies, the investment market remains sluggish.

The market sentiment has been affected by statements of Ministers like the one recently made by the Minister of State for Planning, Mr. Mohan Dharia, that the Government might consider nationalising monopoly houses during the Fifth Plan to raise resources for development. It is, by and large, concerns run by big industrial houses which have a record of good performance by way of production, profit and dividends paid to shareholders. The crying

need being higher production of goods and services, all production whether in the small, medium or large-scale sector should be encouraged. Hurdles should not be put on large industrial houses which have the necessary technical and managerial skills for further expanding their activities in many directions. Small industries can be well encouraged without hampering the growth of large-scale industries or expansion of production by big business houses.

It has been suggested by Mr. H. T. Parekh, chairman of the I.C.I.C.I., that as a means of activating the investment market, the Government should adopt the policy of selling a major part of its holdings in good public-sector companies to the public. Thus the Government would be able to mobilise funds which it would not have to repay, once the public takes up the shares. The proposal is, however, open to objection. In the case of existing public-sector concerns, if shares are made available to the public, only the monopoly concerns and few other concerns which are making good profits would attract the public to buy shares, while shares of losing concerns or concerns which have not been giving reasonable returns on the capital invested would not be touched. In the case of the former, there would also be the problem of fixing appropriate share prices.

Again it has to be borne in mind that the overall returns from the public sector have not been adequate in relation to the total investment. A few public-sector concerns with good working results make up to some extent the losses of concerns which have not been doing well. This position would be altered to the disadvantage of the Exchequer and the taxpayer if some portions of the profits from the few concerns are diverted towards dividends to shareholders. It would, however, be a good thing to press on with the present proposal of the Government to develop the "joint sector". Public subscription to the shares up to a certain extent could be invited in new industries started in the joint sector. This would also bring to the service of the joint sector the entrepreneurship and talent available in the private sector. There would be the further advantage that the accountability of the management in the joint sector to the shareholding public would be more effective than the existing "political accountability".

West Bengal : Will Big Business be Given Defence Orders ?

(By a Special Correspondent)

West Bengal has been told that it will get a fair share of the Defence Department's orders. But why the Defence Ministry wants to patronise the medium and small industries and leave out the large sector is difficult to explain.

MR. V. C. Shukla, Central Minister for Defence Production, said in Calcutta recently that West Bengal's manufacturers would be given priority in the purchases made by the Defence Department. About six months ago, Mr. Shukla had given a similar assurance when he addressed the members of the Indian Chamber of Commerce in Calcutta. One would like to know whether the Ministry of Defence Production has drawn up any specific programme for placing orders on the industries in West Bengal or whether such assurances are meant merely to create an impression that New Delhi has a soft corner for this State.

West Bengal's medium and small industries, which Mr. Shukla had in mind when he gave this assurance, do not seem to have any idea at all of the kind of goods that the Defence Ministry would like to buy from them. Even the Government of West Bengal does not appear to be aware of the Ministry's requirements to be purchased from the State. If Mr. Shukla is keen to help industries in West Bengal, he should instruct his Ministry to provide the Department of Industries of this State with the full details of the products it would like to buy, together with specifications and other data. But the Government of West Bengal should not wait indefinitely for New Delhi to send instructions about the purchase of defence stores. The State Government should take the initiative in this matter and press the Defence Ministry to be specific about its requirements. In fact, the

State Government should have started exerting pressure on New Delhi even six months ago when Mr. Shukla gave his assurance to the Indian Chamber of Commerce. The Defence Ministry may also be requested to indicate the Statewise purchase of its requirements of stores and equipment so that West Bengal will know whether it is getting its due share of orders.

West Bengal's Planning Board should also take up this question with the Ministry of Defence. Lack of orders has been one of the major factors which had caused the recession in West Bengal and led to the closure of many small and medium units. The Defence Ministry is one of the largest buyers of engineering and other goods and its purchase policy can considerably influence the economic working of West Bengal's industries. The Planning Board should study in depth the Defence Ministry's requirements over a period of years so that West Bengal can set up, where necessary, new industries to undertake their production. Mr. Shukla clarified that the Defence Ministry would place its orders in West Bengal only with the medium and small industries and not with the monopoly houses. One would like to know what is the economic justification for excluding the monopoly houses from getting defence orders. More monopoly houses operate in West Bengal than in any other State. So, if Mr. Shukla has his way, it would mean that West Bengal would actually get fewer orders from his Ministry than the other States.

It should also be remembered that the medium and small industries will be able only to execute orders of relatively small value. It is only the big industrial units that will be able to undertake the production of

defence stores and equipment which involve large investment and technical skill. Should orders for such items be denied to West Bengal merely because of New Delhi's ideological hostility towards the monopoly houses? If by placing more defence orders on monopoly houses, more employment can be created in West Bengal why should Mr. Shukla object to it? It is also worth pointing out that if the large industries are not encouraged, it will affect the growth of the small industries as well. The volume of orders derived by the small units in West Bengal from the large sector is officially estimated to have fallen from Rs. 1,394 crores in 1965-66 to Rs. 598 crores in 1969-70. This happened because in the last few years the large industries could not function properly due to various difficulties and restrictions. Mr. Shukla, therefore, is wrong in thinking that he can give a boost to West Bengal's economy by placing orders only on the small and medium industries.

Mr. Shukla has pointed out that his Ministry would give more orders to the medium and small industries in West Bengal provided the quality of their output is found to be satisfactory. This condition is understandable. But the Defence Ministry (and the other concerned Ministries) should see to it that suitable conditions are created in West Bengal to enable the medium and small industries to produce goods of the right quality. As long as the availability of raw materials from the indigenous and imported sources continues to be erratic, how is it possible for the industries to maintain the rigid standards set by the Defence Ministry? The sharp and sudden cuts in power supply also seriously affect industry's efforts to increase production and improve quality.

Mr. Shukla has not indicated to what extent his Ministry would be able to maintain continuity in the orders placed on West Bengal's industries. Without some reasonable stability in this regard, it will be difficult for the industries in this State to undertake long-term production to meet the requirements of the Defence Department. The Ministry may say that this problem will be solved by finding an export market for defence items. But this solution is certainly not as easy as it looks.

Although there does not seem to be any threat to India's security in the near future, it is quite obvious that she cannot afford to slacken her

The Moscal 1400 is no doubt the most advanced electronic desk calculator made in India. Though it's no bigger than a portable typewriter, it has the latest in electronic technology incorporated into it. Called the MOS/LSI, these circuit packs contain as many as 1000 transistors each, to give millisecond computational operations which include 14 digit addition, subtraction, multiplication, division, square and square root. An accumulative memory with grand totalling facility makes the MOSCAL 1400 a very versatile machine. Most important of all, the Moscal has no moving parts. So, no wear and tear.

For more information about the Moscal 1400, write to :

Himalaya House (3rd floor), 23 Kasturba Gandhi Marg, New Delhi-1.

mcml/dp/288-c

efforts to keep her defence system at the highest level of efficiency. She has made considerable progress in achieving self-sufficiency in defence stores and equipment. But even so, she continues to depend heavily on imports. No one knows exactly the value of defence items imported from abroad but informed sources estimate that this will be between Rs. 400 crores and Rs. 500 crores a year. There is, therefore, great scope for further import substitution in this field.

Indian industries can play an important rôle in achieving self-sufficiency in defence provided the Government gives them the right guidance, know-how and other facilities. West Bengal is particularly suited to the production of defence items because of the existence of a large and well-organised engineering industry. The Government of West Bengal and the Planning Board should see to it that this State gets a substantial share of the orders from the Defence Ministry on a regular basis.

Growing Urbanisation Necessitates a National Housing Policy

By Mohammad Mohsin

Although the problem of housing is so very acute in India, there is still no national policy on housing and urban development. The Government can effectively promote the development of housing only when it has a comprehensive policy.

THE State has played a major rôle in the provision of housing, particularly housing finance, in almost all countries. This may be the result of a deliberate social and political policy or merely due to the lack of initiative or ability of the private sector to perform this function adequately or equitably. Whatever may be the circumstances, the State has assumed in many cases primary responsibility for the mobilisation and allocation of capital funds for housing and related facilities.

Social housing policies are designed towards some specific objectives. They differ from country to country depending upon the pattern of urbanisation and economic and social development. In countries with a longer industrial history, the social housing policy is directed to assist in the provision of the type, volume and quality of housing corresponding to the range of needs of the different segments of the population. Their towns were already well developed before the Governments made a major contribution to the construction of housing; considerable amount of private capital was also available through appropriate lending institutions to support private building. The municipal authorities were extensively organised to carry major responsibilities in a variety of fields and they often formed a natural instru-

ment for the development of housing policies. In advanced industrialised economies the distinguishing feature of State housing programme is not the number of dwellings built with Government support, but the fact that it is tailored to meet the needs of a specific class of people which has emerged as a result of industrial progress.

In India, despite the sizable growth of urban population, a national housing policy has not yet been evolved. The Government assumed—before it embarked on a building programme of its own—many related responsibilities for the control of land uses, the establishment of minimum standards of buildings and lay-out, the restrictions of rents and the demolition of slum property. But the Government seems reluctant to commit itself to a national policy on housing and urban development. The Central Housing Ministry set up a six-member working group to evolve a national housing policy in collaboration with the Planning Commission's steering committee on the same subject. This was a clear indication of a sense of purpose on the part of the Government. However, the working group has been wound up, and the steering committee mandate has been extended to a variety of other matters. This means that housing will continue to rank low in the Governments' list of priorities.

In view of the unprecedented scale of the housing problem, it may well be necessary for the Government to assume control of the mobilisation and allocation of resources in the sector. An important justification for a national housing policy is the fact that

the housing sector is already crowded by a multiplicity of overlapping and competitive authorities. But to exercise control effectively—whether it be direct production and ownership, or indirectly, through credit control—there must be a comprehensive policy covering such factors as investment, cost-to-income ratio, standards and resource utilisation. Moreover, there must be a machinery for executing the policy, an organisation and institutional structure capable of setting targets that are consistent with the overall national goals.

In a planned economy, the housing needs of a growing community cannot be ignored. Few facets of the human environment influence man's health and well-being more directly than the dwelling in which he seeks shelter, security, comfort and dignity. Housing ranks second after agriculture in the amount of land it consumes. Unless adequate measures are taken to bring order to the process by which land is assembled, numerous problems are bound to emerge. The housing policy has, therefore, to be related with the economic and social policies followed by the State.

In most of the cities in India the location of housing is haphazard because of an excessive reliance on many public and private intermediaries without reference to national urban growth policies or to natural environmental concerns. Consequently, conditions in urban areas in India present environmental problems like that in developed countries. In the cities there are vast areas of despoiled landscape. Poverty is creating unique micro environments, which in turn are significantly affecting the macro environment of cities. Slum, squatters and other forms of uncontrolled settlements now constitute about one-third of the urban population, and this proportion is increasing rapidly. Streams are polluted, land is laid waste and considerable part of it has been eroded through over-crowding and the absence of even the most rudimentary public services.

The deterioration in the human environment is related to three basic factors—accelerated population growth, increased urbanisation, and new and expanding technology, with the associated increase in the demand for funds, space and natural resources. The urban population has grown explosively and out-distanced available economic resources. The population growth has largely resulted from

SEKAI 387

immigration, improvements in public health and the conquest of epidemic.

These conditions have produced unsatisfactory settlements, inefficient use of resources, and increase in development costs. Settlements are also characterised by overconcentration in cities. India has the highest congested dwelling rate in the world. With the present housing stock, 16 per cent to 19 per cent families live in less than 10 square metres of space and 51 per cent to 54 per cent families in less than 20 square metres. Official estimates are that the urban population in mid-1971 was about 110 million and threatening to increase to over 160 million by 1981. The number of towns with a population of 50,000 and over is likely to increase from 250 in 1961 to 536 in 1981. With the growing urbanisation India's housing needs have also increased. In 1951 the total urban housing shortage was 2.8 million units. By 1956 it had increased to 5 million units. Shortages at present, according to official figures, are around 1.3 million units.

Housing shortages persist in India despite considerable increase in private activity in building construction. Private investment is deterred from putting up houses for the low-income and middle-income groups. The affluent sections have confined their investment to the construction of luxury buildings in metropolitan cities where rents are high. They have refrained from constructing houses for the low-income groups because of soaring costs and comparatively poor return. The Government action in solving the housing problem has not been commensurate with the need for housing development in the country. The Government has recognised the importance of housing as a security-cum-welfare function. Consequently, its efforts are largely directed to meet the sectional needs, especially of working classes, rather than to satisfy the effective demand for housing.

A national housing policy should keep in view the pattern of economic and urban development. The type and level of the institutional structure is, therefore, a question to be settled in terms of the needs and resources of the country. The important thing is to establish the principle that it is necessary to begin to develop within the Government a level of technical competence and leadership which is at least potentially capable of dealing with the problems as defined by national objectives. To fall short of this can only lead to continued deterioration in the housing situation.

Success of Delhi Talks

(From Our New Delhi Correspondent)

The Indian and Pakistani delegations, which met in Delhi recently, have succeeded in putting the Simla agreement back on the track. But the ultimate goal of a durable peace in the sub-continent will hinge on Pakistan's recognition of Bangladesh.

THE best interpretation given to the joint Press statement after the five-day meeting of the Indian and Pakistani delegations in Delhi is that the two Governments have recognised that they must ensure the "smooth implementation" of the Simla agreement. The difficulties had arisen both on account of Pakistan's reluctance to the delineation of the line of control in Jammu and Kashmir, and its failure to recognise Bangladesh by 14th August as has been indicated during the Simla summit meeting. Of course, India could not have forced Pakistan to recognise Bangladesh, much less by a specified date, for recognition of one country by another is essentially a political decision, however "real" that country might be. The non-recognition of China by the United States till today is a good example of the difference between recognition and reality.

But Pakistan has been left in no doubt that the release of the 90,000 odd prisoners of war cannot be made without bringing Bangladesh into the picture, which implies that the former must first recognise the latter. India cannot be happy with Pakistan's success in persuading China to veto Bangladesh's entry into the United Nations. But that need not come in the way of Pakistan recognising Bangladesh in its own interest. This time Pakistan has perhaps given no assurance to India that it will recognise Bangladesh by a given date, but as stated by the External Affairs Minister, Mr. Swaran Singh, in his statement in Parliament, India has impressed on the Pakistani Government that any delay in her recognition of Bangladesh would hamper "the process of durable peace and normalisation of relations and delay the achievements set out in the Simla agreement".

The Delhi talks were held on the initiative of the Prime Minister, Mrs. Indira Gandhi, who had written to President Bhutto proposing official-level talks to resolve the problems which had come in the way of the smooth implementation of the Simla agreement. The high mark of the Press statement on the Delhi talks is that there has been no breakdown and that Pakistan has at last accepted India's interpretation about demarcation of the actual line of control in Jammu and Kashmir. For the rest, the statement conceals more than it reveals. For instance, there is no mention of the rôle of the U.N. observers, although India now regards them as redundant. Nor has an issue been made of the Pakistani contention, publicly made, that it has the right to raise the Kashmir issue in the U.N. In other words, Pakistan has not reaffirmed its faith in "bilateralism", a concept propounded at the Simla summit.

If the troop withdrawal comes about by 15th September, as has been agreed to in Delhi, this by itself will be a step forward in the right direction. The Delhi talks have thus enabled the two Governments to put the Simla agreement back on the rails. But beyond that one must sit with his fingers crossed as to what would happen with regard to other issues settled in Simla. This will continue to be as much a worry to India as to Pakistan. Pakistan cannot be happy over the fact that the Delhi talks have not brought the release of the prisoners of war any nearer, nor can India be happy over the Chinese veto, presumably at the instance of Pakistan, to bar the entry of Bangladesh into the U.N. But according to the statement of Mr. Swaran Singh in Parliament, the Pakistani delegation has been told that the question of the return of prisoners of war and civilian internees cannot be settled without the participation and agreement of the Bangladesh Government. This means that Pakistan must first recognise Bangladesh, and if this happens there is hope that the Simla summit will achieve its goal of a durable peace in the sub-continent.

SPOTLIGHT ON STATES

Lessons of the Bombay Municipal Strike

(By a Special Correspondent)

The recent municipal strike in Bombay would not have spread if outsiders were not allowed to lead trade unions. It is time the State Government saw to it that all office bearers of labour unions were from among workers themselves.

THE attempt by the so-called action committee representing the Bombay municipal trade unions to hold the city to ransom proved a flop, for the strike had to be called off unconditionally on the thirteenth day. The strike was first started by the 7,000 engineering staff of the B.E.S.T. on 7th August in support of exorbitant demands for wage increases of 80 per cent to 90 per cent. Their union turned down the management's offer of a substantial upward revision of pay scales, the increases proposed being 20 per cent to 25 per cent, subject to the union agreeing to certain economy and efficiency measures. This was soon followed by a strike of 90,000 municipal workers in support of the demand for bonus equivalent to 8½ per cent of the year's wages. The traffic staff of the B.E.S.T. resorted to the so-called work to rule, in sympathy with the municipal workers and the B.E.S.T. engineering workers. Finally, their union called upon the B.E.S.T. workers to join the strike as a protest against the management utilising the services of State Transport buses to keep the bus services going and engaging outside staff to attend to the B.E.S.T. garages.

The bus strike started on 14th August and, after a break of one day, continued from 16th August, bringing the bus services of the city to a stop. A strike call was also given to 44,000 State Transport workers who had already been promised 8½ per cent bonus, subject to the report of the Bonus Review Committee. The I.N.T.U.C. union accepted the offer but the leftist union wanted unconditional bonus and instigated the absolutely unjustified strike by the State Transport workers. The State Transport strike turned out to be a flop. Towards the end, before the strike was formally called off, 97

per cent of the staff were attending duty. The action committee of the municipal unions was determined at all costs to hold the city to ransom and called upon conservancy and water works workers, hospital workers and fire brigade workers also to join the strike. As the State Government mobilised all resources and efforts to keep essential services going, hundreds of teachers and other municipal workers kept on returning to work. The striking workers were unhappy that their leaders were putting them to a loss of wages; and all the strikes were called off on the thirteenth day when the leaders realised that the game was up.

The Bombay Municipal Corporation, in a generous mood, had passed a resolution to make an *ex gratia* payment of 8½ per cent of the annual wages to all municipal workers. The Corporation had no legal authority to make such payment. The Maharashtra Government brought in a Bill in the Assembly to prevent such unauthorised payments. In the statement of objects and reasons it was said that the financial position of the Corporation was not such as to enable it to make such payment which amounted to Rs. 2 crores. Such payment was also not authorised by law. If such payments were allowed, there would be nothing to prevent other local authorities from making *ex gratia* payments. The Bill sought to make provision in the Bombay Municipal Corporation Act for obtaining the opinion of the Accountant General whether any expenditure of importance was authorised under the Act. The Bill also sought to empower the State Government to rescind any resolution of the Corporation which was contrary to law or in excess of its powers. The Bill has been criticised as infringing the autonomy of the Corporation. For the Government it has been stated that there is no such intention and the Bill has been referred to a select committee of both the Houses of the State legislature. A large number of the Municipal Corporation's councillors

have realised the mistake of passing the resolution about *ex gratia* payment and there is a move now to rescind it.

Apart from the fact that the action of the Corporation about *ex gratia* payment was not authorised by law, the Corporation does not appear to have realised that any such payment would cause a chain reaction throughout the country and provoke similar demands from all Government servants and employees of other local authorities. It was overlooked that bonus to industrial workers was intended to enable them to share in the profits of the undertaking in which they were employed. The Bonus Commission defined the concept of bonus as a share by the workers in the profits of the concern and not as a deferred wage. It recommended a minimum and maximum bonus linked with a system of set-off and set-on in order to avoid large fluctuations in bonus.

It is evident that the concept and scheme of bonus cannot be applied to Government servants and employees of local bodies. The Chief Minister of the State made it clear to the union leaders when the strike was withdrawn that the Government was opposed to the payment of bonus or *ex gratia* payment to employees other than those in industrial and commercial employment. He was, however, generous enough to be prepared to consider any alternatives which were not inconsistent with this policy. The municipal employees were instigated by their leaders to go on strike to compel the Government to give effect to the Corporation's resolution and in this process tried to hold the city to ransom. The strike, which in effect was against the community, evoked no sympathy whatever from the public who took all the hardships in their stride.

An important issue that once again emerges from this strike is whether it is not now high time for the State to do something to free trade unions from the stranglehold of outside leaders. Some time ago, the Maharashtra Pradesh Congress Committee had passed a resolution that the Trade Unions Act should be amended by the State Government requiring that office bearers of trade unions should be from workers alone. This, it was stated, would benefit the labour movement. It is time the State Government acted on that resolution.

How to Make the Summary Assessment Scheme a Success

By Ranajit Chakraborti

The summary assessment scheme suffers from some drawbacks. The income-tax authorities should properly assess the scheme's usefulness so that it might prove to be an improvement over regular assessments.

THE Income-tax Department has recently started playing a more progressive rôle than ever before, and it is hoped that it would gear up its activities to make the summary assessment scheme a success. The framing of a foolproof scheme is no doubt difficult but due considerations of the relevant factors may produce the desired results. For instance, the success of the summary assessment scheme will depend largely on a vigorous mass communication drive. The initiative is laudable but considering certain human tendencies and the gap that remains in requisite tax knowledge, it is doubtful whether it would succeed.

Summary assessment contemplates assessment of income on the basis of particulars shown in the return of income filed by an assessee without calling for books and documents which constitute materials for purposes of assessment. The idea is excellent as it entitles the assessing authorities to shirk their responsibilities in the determination of a correct assessable income and spares the assessee the trouble of running to the tax office and prove the correctness of his return. But does this absolve them of the statutory consequences that may follow?

Before discussing the merits and demerits of summary assessment, the psychology of the assessee needs to be understood. The Income Tax Act, the Wealth Tax Act and other tax laws have laid down stringent penal provisions against concealment of income by an assessee. Parliament could not leave this matter open in

the hands of an assessee as it would have encouraged tax evasion and for that reason the assessing authorities have been vested with the powers to ascertain the correct income of an assessee. The position of taxing authorities is thus like an auditor who acts like a watchdog and probes deep into the matters to verify the facts and figures.

Parliament has not framed different Income Tax Acts for citizens according to social status or rank in office. It has not presumed that although professors, journalists, doctors, lawyers and engineers, are intellectuals of the country, their returns of income are always correct and need no verification. Given opportunities, assessee, irrespective of their status, may be tempted to avoid tax payment. The tax laws are there to curb such temptations. Cases of men in high places not paying tax on income other than that from which tax has been deducted at source, unless served with a notice by the Income-tax Department, are probably not few. It is also not unusual that some assessee encourage others to follow their examples.

Besides, ignorance of tax laws stands in the way of appreciating the aims of the summary assessment scheme. Many do not know how to pay tax, or even what constitutes taxable income under the Income Tax Act. A person living in his own house is under the impression that he derives no income from it and as such not taxable on this account. Under the summary assessment scheme, he will be assessed only on his other incomes, such as salary and dividends except the notional income from house property. Similarly, an assessable person may have a house in his wife's name, built with his money and his feeling that it is her house results in non-disclosure of income from house property in the income-tax return. Detection of such cases of income

escaping assessment would later on bring disaster to the taxpayer in the form of penalty, interest and tax. An innocent taxpayer unknowingly is branded as a tax evader. What is the remedy then? The simple answer is to infuse gradually the tax knowledge among the people—masses have to be educated. This is not to suggest that the summary assessment scheme is bad, but it needs to be stressed that it requires the backing of the tax-law conscious people.

A taxpayer, say, a salaried person, owned a house about four years back and was ignorant about his obligations under the Income Tax Act. On receipt of the notice, he approached a knowledgeable person to help him in filing his income-tax return and that tax adviser asked him to bring the figure of annual municipal valuation of the property for determination of the taxable income. On enquiry it was further known that the taxpayer had recently let out the ground floor of the house at Rs. 400 a month and was using the first floor as his own residence. The municipal valuation of the ground floor, which was used for his own residence before the completion of the first floor, was Rs. 1,200 a year. If the taxpayer declared Rs. 1,200 a year as the gross income on the basis of municipal valuation for the period of his use, he would have committed an error in law.

Although the taxpayer was submitting his return of income for the past four years in July 1972 and he was now completely aware of the rental value of the ground floor, the law did not permit him to adopt the municipal valuation figure of Rs. 1,200. Furthermore, in future the income from the first floor, formerly used for own residence, would also be assessed at a higher figure based on its rent. Many such cases are detected only through proper scrutiny, and summary assessments cannot be of much help here.

The usefulness of the summary assessment scheme, therefore, should be properly assessed. Regular assessments afford an opportunity to both the Income Tax Officer and the taxpayer to sit together and sort out all problems. The summary assessment scheme would be an improvement over regular assessments if it could enlist the backing of tax-conscious and honest people.

Slack in Credit Growth : How Banks Can Tackle the Problem

(By a Banking Correspondent)

Banks at present are confronted with the problem of excess liquidity, the extent of which they have not faced in the recent past. More surprising is that the growth of advances does not show any signs of improvement even though many new credit fields have been opened after nationalisation.

BANKS at present are confronted with the problem of excess liquidity, the extent of which they might not have faced in the past. More surprising is that the growth of bank credit does not show any signs of improvement even though many new credit fields have been opened to them with unlimited scope for lending, such as agriculture, retail trade, artisans, small industries, and public-sector projects both of the Central and State Governments. The first three months of the current slack season unmistakably reflect the continuation of a slack in bank credit growth, which was witnessed during the last busy season. The contra-seasonal credit expansion during the three months of May to July 1972 has been only Rs. 127 crores, as against Rs. 141 crores during the corresponding period of the last slack season. As against this, deposit accretion is quite large—Rs. 410 crores, compared with Rs. 365 crores in the corresponding period of the 1971 slack season. Actually, the contra-seasonal credit expansion is largely on account of a rise of Rs. 223 crores in advances for food procurement operations up to 21st July, 1972, and if this rise in food procurement advances is excluded the current slack season would show its traditional characteristic of credit contraction.

In view of the limited scope for lending, the banks are diverting their surplus funds to investments in securities, their investment portfolio has risen by Rs. 154 crores during the last three months, as against Rs. 62 crores in the corresponding period of 1971. The easy money market conditions are reflected in increased demand for securities and banks are now well-poised to invest in the ensuing issues of Central and State

loans and also of State electricity boards and other semi-Government institutions to be floated in the next few months. Apart from the scope offered by these investment outlets, banks are now engaged in a frantic and desperate search for new and lucrative avenues of lending.

In this context, it is interesting to note that two or three years ago, the British clearing banks were also confronted with a similar situation of excess liquidity caused on the one hand by slackness in the industrial demand for credit and on the other by inflow of foreign funds into the U.K. which swelled banks' loanable resources. These banks, which were then handicapped by an overall ceiling restriction on their advances by the Government, prepared themselves to enter the field of personal and financial institutional loans. In August 1971, the Bank of England came to their rescue and ushered in a new credit policy, which removed all quantitative restrictions on banks, dissociated their rates from Bank rate and allowed them to compete freely not only among themselves but also with other financial institutions like merchant banks, building societies, and trustee savings banks.

The clearing banks introduced novel methods of persuading consumers to borrow from them through hire-purchase scheme and consumer credit cards. The banks have made such a success of their schemes and marketing techniques that they over-lent in the new fields. The high rate of returns on personal lending could not only safeguard bank's profitability but they could announce better working results during the last year. This over-lent position of banks, worsened further by a sudden outflow of hot money from the U.K., landed them into another difficulty of shortage of funds. The banks, which were once competing for customers in order to lend their surplus funds, have at present moved to the other extreme compelling them to compete for deposits. Faced with the problem of meeting the increasing credit

needs in 1970 and the first half of 1971, banks in India had to rely heavily on Reserve Bank borrowings, while today flush with excess funds, they have to look for other avenues of lending.

In the past, banks might not have faced such an acute problem, as the industrialist directors of banks themselves provided ample scope for utilising bank funds for the industrial concerns in which they were interested. This close link between banks and some large established industries sometimes proved fatal and the fortunes of banks varied with those of industries like cotton textile and jute. It is for this reason that bank chairmen used to express concern in their annual statements to shareholders over the situation of these industries. One of the classic examples of bank failure is that of the People's Bank of Lahore, which collapsed in 1913. It was found that out of its total deposits over Rs. 1 crore, Rs. 88 lakhs were advanced to enterprises in which the managing director was directly interested. Now the banks are no more relying to this extent on indus-

es for advancing loans. In fact, the success of the nationalisation of the major banks is usually measured by the extent of diversion of credit effected by the public-sector banks from the traditional industries to priority and neglected sectors.

As for these new fields of operations, although the scope for lending is unlimited, banks' progress is bound to be slow in the initial period due to inadequate branch network, shortage of trained personnel to approach customers and process their requests, the time lag involved in making the new credit schemes popular in the countryside, and the "trial and error" process of learning to anticipate the needs of these sectors. Another lucrative field, which banks had tapped just prior to nationalisation, was consumer credit and hire-purchase finance for the purchase of durable consumer and luxury goods like refrigerators, air-conditioners and modern furniture. But banks have gradually withdrawn from this type of credit as they felt acute shortage of funds during 1971 and also due to the restrictive credit policy adopted by the Reserve Bank, which was aimed at discouraging conspicuous

consumption. It is mainly because of this reason that banks in this country, unlike the British clearing banks, would not be able to launch, in immediate future, an ambitious programme of personal lending in order to utilise the excess funds lying with them.

Very recently, the more enterprising among the nationalised banks like the Central Bank and the Bank of India, which were formerly on the forefront in financing *multani* bankers, have taken a step to reduce the lending rate for *multanis* by $\frac{1}{2}$ per cent to $10\frac{1}{2}$ per cent. Another nationalised bank — Dena Bank, which was prominently dealing in *multani* hundis—is also likely to follow suit. The decision to boost these banks' lending through the *multani* sector definitely constitutes a sharp change in their policy towards this indigenous banking community, who had complained of uncertain and inadequate finance provided by the scheduled commercial banks. Since 1965, when the State Bank of India had completely withdrawn from discounting *multani* hundis and when the Government cracked down on *multanis* to unearth black money

or illegal financial deals, banks have looked upon this class of finance with suspicion and neglect. In 1967, even the Central Bank and the Bank of India froze or reduced the limits granted to *multani* dealers. Moreover, the Banking Commission, after assessing the part played by the *multani* sector in trade and industrial finance, has suggested ways and means of institutionalising these indigenous bankers through regulation and inspection of their lending operations by commercial banks.

The problem of full and profitable utilisation of idle funds with banks has some serious implications. Apart from eroding banks' profitability, unutilised surplus funds may sap the banks' present initiative and drive to mobilise more deposits from the public, thus ultimately reducing the quantum of public savings. Furthermore, this reflects the inadequacies of the credit planning mechanism set up in the Reserve Bank and the Banking Department of the Central Ministry of Finance in not only formulating a policy to ensure fuller utilisation of banking resources for productive purposes but also in correctly forecasting the banking trends.

The Challenge of Management in Indian Industry

Management of Industry in India. By H. T. Parekh. (Published by Vora and Co. Publishers P. Ltd. 3 Round Building, Bombay 2. Price Rs. 7, pages 74.)

While delivering the Professor C. M. Vakil Memorial lectures on the subject of management of industry in India, Mr. H. T. Parekh has stated that good management is a product of teamwork rather than of inspired leadership. The book under review is a collection of three lectures analysing the trends in management in India. Mr. Parekh's speeches abound in such aphorisms; sample: in a business situation, a non-decision can have as wide a repercussion as a positive decision. Defining management, he says that, perhaps of all inputs, it is the most important in that it is the quality of management which determines the profit of an enterprise and its growth

rate as well as the overall growth rate and efficiency of the economy. He goes on to state that the greatest management problem in India in the future will be the management of the growing public sector. The two remedies he has to suggest are defining clearly the relationship between the public-sector units, Government and Parliament, and professionalising management. Mr. Parekh is in favour of splitting the large public-sector units and putting them in charge of separate managements. He argues that the scale of units should be in consonance with the capacity of management. It would be interesting to note Mr. Parekh's reaction to the present trend towards setting up holding companies. He also advocates that shareholding by the public would provide a vigilant check on public-sector managements. Mr. Parekh, however, goes into ecstasy at the idea of the joint sector as a

means to draw into the industrial management field the best talents available in the country.

Tracing the development of the private sector, he states that till recently profit was considered not so much a function of management techniques as of natural advantage in respect of raw materials and lower labour costs. Increasingly it is realised that profit is dependent on greater co-ordination of the various management functions. In fact, the decision-making functions have gradually shifted from an external common-management group to the internal plant-management level. Another development as a result of greater State control on the economy is that adaption to Government policies has come to be one of the prime tests of management efficiency. After 1965, Indian management has learnt the ability to reconcile, at the unit level, shifts in Government policies as well as market behaviour. Also profitability ceased to be a function of the ability to pass on cost increases to consumers in a sellers' market. What prosperity could not do was achieved by adversities. In the three lectures, Mr. Parekh has brought to bear his vast experience in finance and expressed views on a number of popular management concepts. The lectures are eminently readable.

Trade with Bangladesh

Business Guide to Bangladesh. (Published by Indian International Centre, 327 Dr. D. N. Road, Bombay 1. Pages 300 approximately.)

The Indian International Trade Centre has just released a publication entitled *Business Guide to Bangladesh* with a view to promoting the trade and economic links between India and Bangladesh. This is an important publication compiled after extensive market research on Bangladesh. The *Guide* contains, among other things, the latest commercial information, Indo-Bangladesh trade prospects, policies and procedures, names and addresses of Bangladesh manufacturers, importers, exporters, Government agencies, trading corporations, banks, newspapers, etcetera. A special feature of the publication is the numerous business proposals received from Bangladesh for imports, exports and joint ventures.

CAPITAL, 7th SEPTEMBER, 1972

Bankers! You'll love the rough, tough Sergeant-Major Null Control headquartered inside every ASCOTA Accounting Machine you buy!

With Sergeant-Major Null Control on guard-duty in your Ascota, Corporal Wrong Posting doesn't have a chance to creep by. Which is just fine, making Ascota the most reliable accounting machine there is.

'NULL CONTROL' helps you in two ways:

- Warns you the moment an incorrect posting is made.
- Stops the machine instantly and returns the carriage to its starting position.

What more could you ask of such a lovable tyrant?

ASCOTA Accounting Machine comes to you with or without a typewriter, just as it suits you. It will suit you for other reasons too—each you can solidly bank on to render better service to increasing numbers of depositors.

Versatility With a choice of 5, 10, 15, 25, 35, 45 & 55 totalizers, ASCOTA can be custom-programmed to handle a variety of jobs in your bank. Current & Overdraft. Savings. Inward & Outward Clearing. Salary. Provident Fund. Branch Reconciliation. Supplementary.

Flexibility Simply by interchanging pre-programmed Control Panels, in just a matter of seconds, you can utilize the same ASCOTA machine for any number of different jobs.

Speed The blind-touch 10-key key-board and faster automatic totals speed up postings. Cut down operator fatigue. Shoot up productivity.

Service Prompt, expert service rendered by factory-trained technicians free for the first 12 months. Thereafter, under a fixed-price annual preventive maintenance contract.

For a demonstration, contact Blue Star today.

Available to actual users only, against Rupee-payment.

PRESTON/11/71

Is There a Case for Increasing the Minimum Rate of Bonus ?

(By a Special Correspondent)

In a memorandum submitted to the Bonus Review Committee, the Council of Indian Employers has made out a case against any rise in the rate of minimum bonus. It says that the absolute amount of bonus a worker should increase once profits rise.

THE Council of Indian Employers, constituted by the Employers' Federation of India and the All India Organisation of Industrial Employers, in a memorandum submitted to the Bonus Review Committee has made out its case against any rise in bonus from the present minimum rate of 4 per cent. It is the considered view of the Council that the recommendations of the Bonus Commission as well as the provisions of the Payment of Bonus Act would have satisfied workers' expectations about bonus in normal years. Recession and the consequent difficulties faced by industry, however, belied these hopes.

Quoting the Reserve Bank of India's studies on company finances, the memorandum points out the number of companies in which gross profits were negative rose from 175 in 1966-67 to 272 in 1968-69 and declined to 251 in 1969-70. The number of companies in which pre-tax profits were negative moved up from 316 in

1966-67 to 479 in 1968-69 and then declined to 401 in 1969-70. As a corollary this meant that the percentage of bonus was also virtually stationary at 4 per cent and it is this phenomenon which has generated discontentment and a clamour for raising the minimum bonus to 8.33 per cent.

It is further argued that profitability, gross capital formation, etcetera, have considerably been affected to reduce the capacity of industry to pay more bonus. The net capital formation has declined from 10.2 per cent in 1966-67 to 5.5 per cent in 1969-70. The Council has urged the committee to consider whether the rates of capital formation are adequate in relation to the needs of the country. "If these rates were considered inadequate, as they certainly are, it would be highly inopportune to raise the minimum level of bonus at this juncture".

Furthermore, the corporate sector is expected to retain profits and reinvest in the economy. A minimum dividend of 8.5 per cent was considered a prior charge on profits. It was found that 74.3 per cent of the profits was distributed as dividends in 1969-70. The total profits after tax were too inadequate to increase the share of retained profits without affecting the flow of savings from the public to the corporate sector. The Council says: "If this is realised then one fails to see how the minimum level of bonus would be raised."

Industry has also to provide for a number of other needs. These are additional rate of return on capital and reserves (commensurate with the gap between the market rate of return and the minimum rate of return allowed in the bonus formula), finances for repayment of short-term and long-term borrowings, provision for gratuity, reserves for contingencies and strengthening the enterprises generally, replacement, modernisation and obsolescence. These are no doubt the basic needs of industry and it should be left with adequate funds to cover them over time.

According to the study made by the Council, the net balance with industries after deducting from gross profits the prior charges as defined under the Payment of Bonus Act, was negative and that this negative balance increased from Rs. 2.70 crores in 1964 to Rs. 24.70 crores in 1968. It stood at Rs. 13.31 crores in 1970. The balance varied from one industry to another. The cotton textile industry is the worst affected but plantations, iron and steel, engineering and cement industries are no better. It has also been submitted that although the minimum bonus in terms of percentage has remained the same, in absolute terms it has gone up substantially. For instance, in the case of the cotton textile industry in Bombay, it has gone up from Rs. 96 in 1965 to Rs. 136 in 1971. In West Bengal, the wages of unskilled workers in an engineering industry rose from Rs. 107.60 in 1965 to Rs. 215 in 1971. The quantum of bonus has also automatically shot up.

The Council has summed up its case against any rise in the minimum bonus thus: "The scheme incorporated in the Payment of Bonus Act, 1965 with its specified percentages affords the largest common ground for agreement despite certain unpalatable aspects to both industry and labour. The Act has not had a fair trial due to recession and cost inflation in India so far. The absolute amount of bonus a worker has increased and will increase once profits increase, without raising the minimum level; whereas the floor would affect adversely industries in both public and private sectors as well as employment creation in the economy as a whole. In the light of these considerations the Council submits that raising the minimum above the present level of 4 per cent of total wages is entirely unjustified and uncalled for".

Whatever be the employers' stand and however reasonable and logical it may be from their own angle, if the present thinking at different levels is any indication, the management seems to have lost its case. It may well be prepared to pay a minimum bonus of 8.33 per cent if the Bonus Review Committee so recommends in its interim report. The only point that now baffles the Review Committee is the problem of marginal units including some of the sick units taken over and run under the employment relief scheme by the Government.

Erratic Fluctuations in Shares : Turnover Restricted

THE stock markets have displayed a slightly steadier tendency this past week. With both bulls and bears inclined to adopt a wait-and-see attitude, trading has been characterised by restricted turnover and somewhat erratic fluctuations. Bear covering, replacement buying and drying up of offerings at lower levels have made for a rally which, however, could not be sustained due to the lack of follow-up support and emergence of tired bull liquidation at higher levels. Reflecting the indecisive mood of the markets, the price pattern over the week-end has made a mixed showing with gains far outnumbering the losses. Technical considerations alone can produce a fairly good recovery as the preceding decline has been substantial and long drawn out. With considerable institutional buying in selected counters, floating stocks have dwindled further.

But the steadier tone is not due merely to technical factors. The week's news has generally been favourable. The week began with the calling off of the 12-day-old cement workers' strike. The joint communiqué issued after the conclusion of the Indo-Pakistani official level talks in New Delhi, which at one time appeared to have run into serious difficulties, has reaffirmed the determination of both sides to implement the provisions of the Simla agreement in letter and spirit for the establishment of a durable peace in the sub-continent. Pakistan's decision to recognise the new line of control in Jammu and Kashmir has been welcomed by the stock exchange community.

Reports from New Delhi have been a little more favourable in that there are indications of a softening of the Government's attitude towards big business in order to bring about increased production in the industrial sector. Export-oriented units are to be freed from restrictions on expansion and creation of new capacities. The Central Minister for Industrial Development, Mr. C. Subramaniam, has stated that larger units will not, by and large, be debarred from applying for expansion and creation of new capacities. The continuing pres-

sure on prices seems to have persuaded the Government to modify its radical postures to achieve a faster rate of industrial growth through a more helpful policy towards large industrial houses who alone are in a position to deliver the goods more quickly. The general atmosphere, however, remains charged with many uncertainties. The stock market seems inclined to the view that compulsions of the economic situation, which has been complicated by the setback in agricultural production due to the partial failure of *kharif* crops, will force the Government to adopt a more pragmatic approach to economic issues. Such a change is bound to have a favourable impact on equities. It is the uncertainty about official economic policies which is holding the stock market under check. The corporate news continues to be fairly encouraging and a number of industries are now faring better than before. Even the sick cotton mills are now making profit.

Gilt-edged securities have received selective support this past week, although prices have remained quietly steady. The 3 per cent Conversion loan 1985 has been quoted at Rs. 60. The State Government loans have received selective support. Turnover has remained restricted.

The Calcutta stock market has shown a steadier trend this past week. The undertone has been helped by the issue of a joint statement on recent New Delhi talks between the Indian and Pakistani delegations, the end of the Class IV employees' strike of the Reserve Bank and that of cement workers. Among engineering shares, Guest Keen Williams have been easier but Indian Standard Wagon, Burn and Braithwaite have been steadier. Among jute shares, Reliance, Agapara and Birla have been maintained. Among coal shares, Western Bengal and Bengal have been steady. Among paper shares, Titagur and Tribeni Tissues have improved while Orient have reacted. Among miscellaneous shares, Hindustan Aluminium, Union Carbide, Zuari Agro-Chem and Brooke Bond have been supported. Among tea shares, Teng-

pani, Rydak and Tezpor have been done.

Lethargic conditions have prevailed on Dalal Street during the past week. The undertone has generally been steadier. Despite stale liquidation on the rise, equity prices have shown small widespread gains over the week. Turnover has continued to be restricted and activity has been mainly professional in nature. Buyers are still inclined to be very cautious, but there is increasing reluctance to liquidate investments at the prevailing low levels. Steady institutional support for select shares has had a salutary effect on sentiment which has been aided by the generally favourable corporate news. Cotton mill shares have ruled distinctly steadier because of the improving fortune of the industry with an abundant supply of raw material at cheap prices and the offtake of cloth and yarn remaining good. Even the sick mills run by the Government have started making profits. Rayons also have displayed a firmer tendency on steady support at setbacks. Offerings have been small. Steel shares have been rather subdued because of misgivings about the Government's policy. Engineering shares have registered small gains on fresh sup-

port at lower levels. Chemical shares also have fared slightly better with N.O.C.I.L., Gujarat Fertiliser and Synthetics and Chemicals meeting with good demand. Indian Organic have, however, suffered a sizable decline. Cement shares have turned steadier as the strike has been called off. Shipping shares have ruled steadier and so also paper shares. Tyre shares have kept quietly steady.

The Madras stock market has witnessed selective enquiry this past week, but trading has been essentially a dull and tame affair. Among planting shares, Manjushree and Peria Karamalai have met with demand but Cochin Malabar have been dull. Nelliampathy and Consolidated Coffee have, however, received some support. In the textile section, Madura Mills have attracted enquiries while Lakshmi Mills have been quiet. Mettur Beardsell and South India Viscose have gained. In the sugar section, Deccan and Cauvery Sugar have attracted interest but E.I.D. and Kothari Sugar have declined. In the miscellaneous section, Dalmia Cement and India Cement have been transacted. Aluminium Industries and Premier Fertilisers have changed hands. Bank shares have been firm. Indian Overseas Bank have been supported.

Progress of Goodyear India: Production Capacity Doubled

AT the annual general meeting of the Goodyear India Ltd, Mr. Parks Chrestman, Managing Director, said that the Company was able to achieve an 11 per cent increase over its 1970 sales. (A fuller version of the statement was published in last week's issue of *Capital*.) Although production suffered due to an acute power shortage during the first half of the year, there was an improvement during the second half of the Company's operations. Goodyear India has commissioned its new plant for bicycle tyres and tubes in July and the new automotive tyres and tubes plant in September. The commissioning of these two new plants, Mr. Chrestman said, now doubles the Company's production capacity. Goodyear India has submitted its application for expanding the tyre production capacity by another 250,000 tyres a year. Due to the shortage of V-belts, certain difficulties are being faced. Acting on the letter of intent for flat belting and

V-belts granted to it, it has submitted an application to the Government for capital goods. Since tyre technology is ever changing, Mr. Chrestman said that "tyre we build in the 80's will differ even more radically from those we are building today, as today's tyre's differ from those we built in the 60's."

Mr. Chrestman referred to pioneering research and developmental work being done by Goodyear in the U.S.A. and Luxembourg. The expertise of over 4,000 scientists, engineers and technical specialists employed there was available to all the Goodyear associate companies, on payment of service fee, he said. In India at the Ballabgarh factory, he pointed out, developmental work has led to import substitution and a portion of capital equipment for the recent expansion of the tyre plants has been fabricated. Mr. Chrestman welcomed the Government of India's proposal for extensive expenditures

on science and technology and offered to assist and associate with fundamental research and development programmes in the field of tyres. Referring to export obligations, he drew attention to the rapidly shrinking world markets for tyres and made a fervent appeal for the restoration of cuts in duty drawback rates and increased cash subsidy.

REINSURANCE CORPORATION

All-round Progress

THE gross premium income of India Reinsurance Corporation for the year ended December 1971 in all departments was Rs. 26.6 crores, against Rs. 22.97 crores in the previous year. After processing this premium and after fulfilling the statutory and other retrocession obligations to companies, the Corporation wrote a total net premium of Rs. 12.98 crores, against Rs. 10.86 crores in 1970. The total departmental reserves in respect of fire, marine and miscellaneous business totalled Rs. 8.19 crores, against Rs. 6.72 crores in the previous year, thus showing an increase of Rs. 1.47 crores. The total funds of the Corporation (including capital) as at 31st December, 1971, stood at Rs. 11.76 crores, against Rs. 9.45 crores in the previous year.

The fire department's gross premium amounted to Rs. 14.40 crores. The net premium written in this department was Rs. 4.74 crores, (against Rs. 4.36 crores). Net claims paid and outstanding amounted to Rs. 1.78 crores (against Rs. 1.96 crores). The marine department's gross premium amounted to Rs. 6.21 crores. The net premium in this department was Rs. 3.41 crores (against Rs. 2.59 crores). Net claims paid and outstanding amounted to Rs. 2.01 crores (against Rs. 1.64 crores). The miscellaneous department's gross premium amounted to Rs. 6 crores. The net premium in this department was Rs. 4.84 crores (against Rs. 3.91 crores). Net claims paid and outstanding amounted to Rs. 2.69 crores (against Rs. 2.26 crores).

The year's trading resulted in a net profit of Rs. 1.08 crores which is transferred to the general reserve account, against Rs. 95.15 lakhs in the previous year. The directors have recommended a dividend of Rs. 125 a share, the same as for the previous year, subject to deduction of tax, being 25 per cent on the paid-up value of the shares. The

dividend is proposed to be paid out of general reserve.

INDIAN STEEL AND WIRE

Results Improve

THE Indian Steel and Wire Products Ltd has done well during the year ended March 1972. Sales are up from Rs. 4.91 crores to Rs. 5.70 crores and the pre-tax profit has risen from Rs. 86.06 lakhs to Rs. 87.68 lakhs, after providing Rs. 13.95 lakhs (against Rs. 16.23 lakhs) for depreciation. A taxable ordinary dividend of 20 per cent has been maintained. This offers a yield of 7.6 per cent at the present price of Rs. 26.44 a share of Rs. 10 each. Allocations include Rs. 55.50 lakhs (against Rs. 48.75 lakhs) for taxation and Rs. 8,245 (against Rs. 1.82 lakhs) for development rebate. After making other adjustments, there is a balance of Rs. 31.50 lakhs which is transferred to general reserve.

JAY ENGINEERING

Rise in Profit

ADDRESSING the annual general meeting of the Jay Engineering Works Ltd recently held in Calcutta, the chairman, Mr. Charat Ram, said that the Company had made a gross profit of Rs. 1.05 crores which was higher than the profit made in any previous year. (A fuller version of the speech appeared in last week's issue of *Capital*.) The chairman said that the profit was still inadequate and had not yet reached even the level where a reasonable return could be paid to equity shareholders. He said that operations in the sewing machine factory in Calcutta had resulted in a substantial loss during the year. Being a high cost unit, it cannot compete with machines produced in the small industry sector. On the other hand, the Company's costs are steadily going up as a result of wage increases, Government levies and general inflation. These can neither be recovered by a commensurate increase in prices nor can they be absorbed by increased production. The Company's operations at the Hyderabad and Agra units are making good progress. The Company is regarded as a dominant undertaking which would ordinarily be considered to be an accomplishment of some distinction, but in fact it tends to be a hindrance rather than a help to the growth of the Company. In this context, the chairman pointed out the non-availability of bank finance

and also of manufacturing licences for various products.

MUKAND IRON

Joint Ventures

IN his chairman's statement for the year 1971-72, Mr. Viren J. Shah said that Mukand Iron and Steel Works Ltd had acquired a certain degree of competence and capacity over the years to set up or assist in establishing new industrial ventures in diverse fields by sharing its experience and expertise with others in India and abroad. (A fuller version of the chairman's statement was published in last week's issue of *Capital*.) The Company has already made progress in establishing a steel foundry in Malaysia in collaboration with a Malaysian company and the local State Development Corporation. Similarly, in India it has enabled Polysteels (India) Ltd in Bhavnagar to set up a mini steel plant which has gone into production and is maintaining satisfactory progress. Some other proposals for such collaboration in India are under active consideration.

The Company has welcomed the Government's decision to promote the development of the joint sector by permitting private-sector companies to set up industrial projects in collaboration with State Governments. It

is exploring the possibility of establishing joint-sector projects in steel making and allied engineering fields. As a big industrial complex having social responsibility, Mukand Iron has worked out a programme of assistance to promote widespread entrepreneurial activities. As a result, nearly 150 factories in the Greater Bombay area and the Thana Belapur belt have benefited.

UNION JUTE

Profit Earned

ALTHOUGH the general conditions prevailing in the jute industry in India have been very favourable during the past year, the results of Union Jute Co. Ltd for the year ended March 1972 have not been as satisfactory as it was expected. This was partly due to the fact that about 20 per cent of the Company's yarn production had to be sold in the local market and partly to serious labour trouble which results in a huge loss of production. The labour trouble originated from inter-union rivalry leading to serious rioting within the mill premises and the consequent closure of the mill for six months. Frequent load shedding was yet another adverse factor. The loss of production amounted to a little over 1,300 tonnes. But for these adverse developments, the results would have been much better. Sales have improved from

BHARAT STEEL TUBES : SALES RISE

SALES of Bharat Steel Tubes Ltd for the year ended March 1972 have improved from Rs. 9.06 crores to Rs. 11.57 crores but the profit has declined from Rs. 64.31 lakhs to Rs. 27.31 lakhs, after providing Rs. 30.35 lakhs (against Rs. 28.50 lakhs) for depreciation, Rs. 34 lakhs (against Rs. 98 lakhs) for taxation and Rs. 1.52 lakhs (against Rs. 29,000) for development rebate reserve. A taxable ordinary dividend of 12 per cent has been declared, against the previous year's 10 per cent, absorbing Rs. 16.20 lakhs. This offers a yield of 4.4 per cent at the present price of Rs. 27 a share of Rs. 10 each. If the profit has declined despite an improvement in production and sales, it is mainly because of a higher allocation of high cost imported steel and a step-up in the prices of indigenous steel.

The licensed capacity for steel pipes and tubes has been confirmed

by the Government at 144,000 tonnes a year. The pipework engineering division, which was set up in the previous year to undertake complete designing, supply, fabrication and erection of pipework required for various types of industries, has done well. The Company earned foreign exchange to the tune of Rs. 1.18 crores. The Company has again been granted a certificate of export recognition by the Engineering Export Promotion Council for outstanding export performance during the year 1970-71. The scheme with regard to the proposed strip mill project, for which the Company has been granted a letter of intent, is being revised. On account of an increase in the cost of equipment, Customs duty and other expenses, the estimated project cost has gone up substantially—from Rs. 16.5 crores to Rs. 22.5 crores.

CAPITAL, 7th SEPTEMBER, 1972

CAPITAL, 7th SEPTEMBER, 1972

A gas connection is made

An industry advances

and GST lays one more pipeline to progress

Gujarat Steel Tubes contributes to the progress of industrial India with steel tubes and pipes in dia. 15 mm to 100 mm, black and galvanized, threaded and socketed, using TUFFWELD—a High Frequency Induction Welding process. In just eight years, Gujarat Steel Tubes has made its mark in India, as one of the major suppliers to Government, and abroad—as the largest exporter of steel pipes to U.S.A.

Pipelines to prosperity

GST

Grant 11.72

Rs. 2.64 crores to Rs. 3.65 crores and the Company has earned a profit of Rs. 2.72 lakhs, against a loss of Rs. 22.15 lakhs, after providing Rs. 7.30 lakhs (against Rs. 6.59 lakhs) for depreciation. The dividend has been skipped. After making other adjustments, the debit balance of Rs. 34.63 lakhs has been reduced to Rs. 32.20 lakhs.

INDO-SOLEX

Share Offer

INDO-SOLEX is offering 115,000 equity shares of Rs. 10 each for public subscription at par to raise part of the funds for its project for the manufacture of fatty acids and glycerine. The list will open on 11th September. The Company has been licensed to produce annually 165 tonnes of glycerine, 2,200 tonnes of fatty acids and 200 tonnes of stearic acids. The plant which is being set up near Delhi is expected to commence commercial production in November 1972. The project is estimated to cost Rs. 39 lakhs to be met by the share capital of Rs. 18.50 lakhs, a loan of Rs. 19 lakhs from the Haryana Financial Corporation and other borrowings. The Company expects to have an annual turnover of about Rs. 1.15 crores and an operating profit of Rs. 14 lakhs on full production expected to be reached in 1973-74. The directors hope to be able to pay a maiden dividend of 10 per cent for 1973-74.

BISRA STONE

Loss Incurred

THE Bisra Stone Lime Co. Ltd has incurred a net loss of Rs. 2.99 lakhs for the year ended March 1972, after providing Rs. 14.37 lakhs (against Rs. 16.75 lakhs) for depreciation, Rs. 19.87 lakhs for voluntary retirement compensation, Rs. 3.95 lakhs for bonus in respect of the previous year and Rs. 11,991 (against Rs. 4.45 lakhs) for statutory development rebate reserve and after transferring Rs. 1.93 lakhs from statutory development rebate reserve and Rs. 1.22 lakhs being provision for taxation written back. In view of the loss sustained by the Company the dividend has been skipped. A sum of Rs. 2.99 lakhs has been transferred from general reserve to wipe out the entire loss. The total output of limestone fell from 1,278,380 tonnes to 1,104,367 tonnes. Despatches also declined from 1,219,491 tonnes to 1,110,113 tonnes. The total production of dolomite rose from 545,794

tonnes to 551,922 tonnes. Despatches also increased from 523,736 tonnes to 542,433 tonnes.

POYSHA INDUSTRIAL

Sales Up but Profit Down

DESPITE an increase of about 13 per cent in net sales from Rs. 6.22 crores to Rs. 7.04 crores, the gross profit made by Poysha Industrial during the year ended March 1972 is a little lower at Rs. 52.15 lakhs, against Rs. 54.26 lakhs in the previous year. The dividend has been kept unchanged at 10 per cent. The rise in turnover is attributed to the hike in selling prices resulting from the upward revision in prices of tin plate rather than increased production. Margins are stated to have been squeezed by the enhanced wage bill, persistent increases in the prices of tin plates and their inadequate and irregular supply from Hindustan Steel. The Company's new factory in Cochin is in full production. The Government has sanctioned additional capacities in Thana, Ghaziabad and Cochin. The management is going ahead with the establishment of new units in Calcutta and Madras.

EUROKOTE

Shares Well Received

THE public issue of Eurokote (India) for Rs. 42.99 lakhs comprising 279,930 equity shares of Rs. 10 each and 15,000 9.5 per cent cumulative redeemable preference shares of Rs. 100 each at par has received good response. The Company is setting up a Rs. 1.80-crore project in Vapi (Gujarat), the first of its kind in the country, for the manufacture of 3,000 tonnes of high gloss cast coated paper and boards a year. The collaborators are Messrs Sarrio Compania Papelera De Leiza, S. A. Spain. The management hopes to declare a maiden equity dividend of 10 per cent for the second year of its production, namely, 1975.

INSOV AUTO

New Venture

INSOV Auto Ltd was incorporated with the Registrar of Joint Stock Companies, Calcutta, on 4th July, 1970. A group of middle-class progressive entrepreneurs have ventured to set up a project for the manufacture of light commercial vehicles of the type for which there will be enough demand in the country for the movement of agricultural pro-

LARSEN AND TOUBRO : BRIGHT PROSPECTS

LARSEN and Toubro, which did exceedingly well during the year ended March 1972, earning a record profit of Rs. 3.31 crores on a turnover of Rs. 30.87 crores, against Rs. 2.52 crores on a turnover of Rs. 28.78 crores in 1970-71, expects to show still better results this year. Production and sales are running well above the previous year's levels. Production in the first five months of the current year is valued at Rs. 5.63 crores, against Rs. 4.88 crores in the same period last year. It has a record order-book position of Rs. 15.8 crores, against Rs. 11.9 crores during the corresponding period of 1971-72. If all goes well, production is expected to be 10 per cent higher than in 1971-72. Sales during the first five months are placed at Rs. 8.73 crores, against Rs. 8.52 crores during April-August 1971.

The chairman, Mr. H. Holck-Larsen, told the shareholders

annual meeting the other day that the new shares allotted to the erstwhile Canara Bank Ltd, following its merger with Larsen and Toubro, will rank for dividend for the full year, against six months in the preceding year. He expressed the hope that the Company would be able to maintain the dividend at 14 per cent for the current year. The Company will, however, continue its present practice of a high plough-back of profits into business because of the inflation and uncertain economic conditions. Replying to shareholders' queries, the chairman indicated the possibility of a bonus issue in the not-too-distant future. The Company is awaiting the Government's approval of its proposed acquisition of UTMAL shares on cash payment. The total shareholding of the L.I.C., Unit Trust, nationalised banks and the nationalised insurance companies works out to 27.9 per cent of the Company's total equity capital.

ducts and foodgrains. It has been possible to arrange technical collaboration with the U.S.S.R. in setting up a big project of this nature. A letter of intent was issued to the Company in November 1970 for setting up a manufacturing plant in Uttar Pradesh.

The project envisages the manufacture of light commercial vehicles in the first stage turnover of 12,000 numbers. The vehicles, after assembly, from S.K.D. and C.K.D. components, imported and indigenous, are expected to roll out from the plant in the last quarter of 1973 or 1st quarter of 1974. The manufacturing programme

proposes to bring down the quantum of import to 5 per cent and the target of 12,000 vehicles a year is expected to be achieved by 1978. The total capital outlay of the project will be approximately Rs. 16 crores.

I.D.B.I.

Issue of Bonds

THE Industrial Development Bank of India (I.D.B.I.) has now issued a second series of bonds of the aggregate value of Rs. 15 crores, bearing interest at 5½ per cent a year and redeemable at par after 12 years, that is, in August 1984. The bonds are in

the denominations of Rs. 1,000, Rs. 5,000, Rs. 10,000, Rs. 25,000 and Rs. 1,00,000, or in multiples of Rs. 1,000. The I.D.B.I., it will be recalled, issued the first series of bonds for Rs. 11.50 crores on 20th March, 1972, which was fully subscribed on the very day of its issue. The issue of the second series of bonds will augment the I.D.B.I.'s resources and will enable it to meet the increasing requirement of assistance by industry.

WELLMAN INCANDESCENT

Good Prospects

ADDRESSING the annual general meeting of Wellman Incandescent India Ltd, Mr. B. P. Ray, chairman, said that the note of "quiet optimism" which he sounded at the last meeting was well founded. But it must be tempered somewhat in regard to profitability. As the year 1971-72 progressed, production and material costs rose and eroded the estimated gross margin. Nevertheless, the chairman feels that the Company made a good recovery. He drew attention to certain aspects in the accounts. The contingent liability of Rs. 106,323 which was made in respect of sales tax for the year 1965 was under appeal. The Company has been successful in winning the appeal and this sum can, therefore, be deleted from the accounts as a contingent liability. For the first time, the Company has made provision for retirement gratuity. It has been able to write off 20 per cent of the miscellaneous expenses incurred in the original share capital issue expenses, including brokerage and reimbursement of development expenses.

The Company for the purpose of income-tax was able to set off the losses in 1970-71, against the profit of 1971-72. This resulted in a lower provision for tax. For 1972-73, a considerably higher provision will have to be made. Strict attention has been given to the control of expenditure. Despite a very sizable increase in turnover, many items of expenditure have remained fairly constant from the cost aspect and in some cases have been reduced. The order book position for 1972-73 is full and barring unforeseen developments, a reasonable profit is assured. Although competition has increased the Company is more than holding its share of the market and substantial orders have already been taken for furnaces and ovens for delivery in 1973-74. The chairman is confident that the demand for the Company's products will continue to grow.

COMMODITIES

Go-slow by Bargemen Badly Affects Jute Goods Exports

BESET with a plethora of problems, the Indian jute industry seems to be fast reaching its nadir. It suffers from a convulsion whenever something goes wrong somewhere. For example, the suspension of bank clearing because of the recent strike by Class IV employees of the Reserve Bank of India not only brought trading to a grinding halt but hampered its manufacturing and seasonal procurement operations. In fact, up-country fibre purchases were completely stalled due to the suspension of bank remittances.

The current agitation by bargemen—the third in succession in the course of two years—engaged by the operators of the lighterage fleet has brought export shipments virtually to a standstill. The work-to-rule during the daylight hours in the bore tide season—when midstream loading and unloading operations have, of necessity, to be restricted to ebbside hours only—around the end of the month has reduced the volume of shipments, for most of the outward-bound vessels have left the port without taking a full load of export cargo. This avoidable loss of bottom space not only tarnishes the reputation of the port but also the image of the jute mills on either bank of the Hooghly among their overseas consumers.

Organised labour continues to be pursuing their go-slow tactics and are complaining that some units in the industry have violated the tripartite agreement of May last. There have been some total lay-offs, although for short periods, due to the intervention of the State Labour Directorate. A fresh proposal by the management for revision of the piece rates was interpreted by some unions as an attempt to enhance the workload without conceding a commensurate increase in wages. Failing an accord on the issue at a recent bipartite meeting, the matter was referred to the next week's meeting between the I.J.M.A. and trade union representatives.

Frequent load-shedding by the Calcutta Electric Supply Corporation, causing a breakdown of planned production, is an oft-discussed topic which hardly needs any repetition. Having failed to resolve it the State Govern-

ment has at least permitted some 40 industrial units with captive generating sets to operate the installations for covering the shortfall in their energy supplies. In view of the heavy power consumption by jute mills, the tiny captive sets held by only a few are hardly able to meet the shortfall. The lean ready availability of plants of the requisite power-range, as also fuel, besides the dearth of resources for setting up such standby plants, rule out the possibility of the jute industry deriving any relief out of the latest relaxation of restrictions on the operations of captive sets.

No Fiscal Relief Yet

It is disappointing that the Government of India has not yet taken any decision on the recommendation of a number of joint industry-Government trade delegations, including the recent five-man team to north America and the Continent and the F.I.C.C.I. delegation to Australia, for the outright abolition, or at least a substantial scaling down, of the prohibitive export duties which have been making Indian jute goods dearer in the export markets. Meanwhile, the industry in Bangladesh has not only rehabilitated itself from the shambles to which it had been reduced during the freedom struggle, but it has also been thinking of expanding its annual rated capacity of about 600,000 tons. The short in arm provided by the existence of export duties on Indian jute goods, has helped Dacca in procuring substantial business on extended delivery schedules. Encouraged by the phenomenal recovery and the monthly export of some 45,000 tons during July and August, the Bangladesh Jute Corporation has decided to set a seasonal export target of 500,000 tons worth some 175 crore takas for the current season.

Shortage of Raw Jute

Notwithstanding some crop losses due to the drought and floods and the slow pace of restoration of road, rail and river service links, particularly with the northern and western parts of the country, Dacca has hardly been experiencing any difficulty in meeting the fibre needs of the industry. But

the problem has turned out to be rather intractable for India. The extraordinary drought conditions, extending up to second week of June in some areas, have caused an estimated crop loss of some 1 million bales. Aware of the magnitude of the problem, the Government proposes to import the requisite quantity at a cost of some Rs. 30 crores. But it seems rather strange that beyond the assurance of a supply of some Rs. 3-crore worth of jute against the Indo-Bangladesh trade pact and an expression of the Government's interest in fibre imports, New Delhi has not taken any active step in the matter so far. The earlier indication of an available export surplus of 3.5 million bales from Bangladesh is likely to be reduced following the Government's decision to expand the industry. So, industry circles in Calcutta seem worried over the uncertain fibre supply situation and fear that a scramble for fibre, developing later this season in Bangladesh and Thailand, will take prices to dizzy heights, making it difficult for the Indian industry to procure its bare minimum requirements. These problems should be tackled urgently by the Government.

Jute Goods Exports Rise

Destinationwise export figures for 1971-72 season reveal an increase of 139,000 tonnes over the previous season's total to 792,100 tonnes. The improvement has mainly been ascribed to the virtual absence of the former East Pakistan from the world markets in the wake of the developments in Bangladesh. While carpet-backing cloth exports registered a maximum increase of 63,000 tonnes over 1970-71 to 252,900 tonnes in 1971-72, sacking rose by 43,800 tonnes to 149,200 tonnes, other goods, including speciality products, by 17,200 tonnes to 74,000 tonnes and hessian by 15,000 tonnes to 315,600 tonnes.

The U.K. absorbed 13,400 tonnes, against 8,000 tonnes of hessian, 2,400 tonnes, against 1,200 tonnes of other goods, 1,300 tonnes, against 100 tonnes of sacking and 1,000 tonnes, against 800 tonnes of carpet-backing cloth, making a total of 18,100 tonnes, against 10,100 tonnes. In spite of the serious encroachment by synthetics in the sphere of carpet-backing cloth, the U.S.A. increased its offtake of the construction by 47,800 tonnes over the 1970-71 level to 200,900 tonnes, Canada came next with 12,800 tonnes, against 12,700 tonnes, the Far East 9,400 tonnes, against 4,300 tonnes, Australia 9,000 tonnes, against 7,900 tonnes, the rest of eastern Europe 8,100 tonnes,

Whether it's a clock or a watch that needs repair—bring it to Anglo-Swiss for reliable service at moderate charges.

6 DALHOUSIE SQUARE EAST, CALCUTTA-1.

WATCHMAKERS SINCE 1908

against 4,800 tonnes and New Zealand 4,800 tonnes, against 1,800 tonnes.

The hessian offtake by the U.S.A. rose by 19,900 tonnes to 91,900 tonnes, the rest of western Europe by 5,700 tonnes to 13,000 tonnes, the U.K. by 5,400 tonnes to 13,400 tonnes, the rest of America by 2,300 tonnes to 7,500 tonnes, and Canada by 2,200 tonnes to 26,600 tonnes, while Russia reduced its offtake by 7,200 tonnes to 71,500 tonnes, the rest of eastern Europe by 7,400 tonnes to 19,700 tonnes, Australia by 7,000 tonnes to 13,700 tonnes and Africa by 800 tonnes to 30,100 tonnes and others by an even quantity to 11,100 tonnes.

In respect of sacking, Africa emerged as the most important market for India by stepping up its intake by 20,500 tonnes to 76,000 tonnes (against 26,300 tonnes in 1969-70), the Far East by 12,000 tonnes to 12,800 tonnes, New Zealand by 10,300 tonnes to 11,000 tonnes, the rest of America by 9,600 tonnes to 10,300 tonnes, the rest of eastern Europe by 3,600 tonnes to 5,500 tonnes and the rest of western Europe by 2,200 tonnes to 4,400 tonnes, whereas shipments to Russia shrank by 16,000 tonnes to 16,800 tonnes. As for other goods, the U.S.A. increased its imports by 10,100 tonnes to 53,600 tonnes and the rest of eastern Europe by 5,000 tonnes to 10,800 tonnes, while other markets absorbed 10,000 tonnes, against 7,900 tonnes.

Gunnies Turn Steady

Trading was devoid of interest in the Calcutta gunny market during the past week due to the virtual lack of enquiries and fresh business of a long-term seasonal nature. A spate of bearish factors like the prolonged suspension of cheque clearance operations, the work-to-rule by bargemen operating the lighterage fleet mid-stream and intermittent load-shedding, caused an erosion of interest among both overseas and major internal consumers. Even Government and semi-Government agencies reduced their bookings and offtake. Considering the prevailing prices to be rather on the high side, the cement and seasonal manufacturing industries like sugar hardly evinced any interest in booking their requirements on an extended delivery schedule. The lingering hopes of substantial duty-reliefs also induced overseas consumers to pause for a while. Meanwhile, they extended greater support to Bangladesh. Both mills and operators in Calcutta had been experiencing an acute paucity of funds. The overriding consideration of

squaring-up long positions in August accounts on the eve of the due date induced them to enter the market as keen sellers, further accentuating the price recession. Lower advices from the fibre market acted as an additional damper on sentiment. Because of the weakness of the bulls, bears resorted to short-selling, cautiously covering their open position at the dips. By the week-end, the market seemed to have regained its poise, following the elimination of the weaker bulls and the clearance of a lot of market loan. Mills turned cautious refusing to extend their commitments except at rising prices, while shorts rushed to cover their end-August outstanding positions briskly, thus helping an appreciable reversal of the trend. Besides, Egypt was said to have booked some deals on an extended delivery range, while the renewal of the trade pact with Sudan paved the way for an increase in the offtake of jute goods by that country. The reported strike in the Adamjee Jute Mills in Dacca, the largest unit in Asia, was an additional stimulant. The continued non-clearance of cargo with the resultant rise in stocks, blocking the industry's already lean resources, caused an acute financial strain and impeded manufacturing operations. In the hedge market, B Twills for November delivery suffered a moderate setback earlier in the week on tired long liquidation and some extent of bear-selling in the wake of easier advices from the spot market. But fluctuations, turnover and prices moved within the ranges prescribed by the Forward Markets Commission. Around the close, there was a revival of interest on short-covering. Turnover was small in the spot market and moderate in the hedge market. The closing undertone was about steady.

Fibre Quiet

After ruling somewhat steady earlier during the week on higher advices from the upcountry agencies and a shortage in the offers of selected grade fibre in which buyers were mostly interested, the raw jute market gradually turned quiet during the past week. The post-midweek

easiness was attributed mainly to the paucity of cash resources both in the upcountry markets and with the local trade, following the non-clearance of cheques for three weeks in Calcutta and in the interior as well. The many adverse factors, affecting booking and offtake of the end-products, demoralised the industry and the fibre market operators, inducing them to scale down their fibre procurement operations, taking a seasonal decline in the output of jute goods, and so in raw jute consumption, for granted. With the gradual clearance of some weak holders in the countryside, others turned reserved, refusing to part with their stocks in expectation of a further spurt in prices, following an early revision of the statutory minimum price for fibre. Dealers in Calcutta, on the other hand, were unable to reduce their offers below the dips, for agency rates were ruling much above Calcutta parity levels. In the absence of any worthwhile support from the industry and the trade in Calcutta, turnover was more or less of an end-of-month, squaring up nature and confined mainly to selected grade fibres. The closing undertone was cautious.

TEA

Good General Demand

A Special Correspondent writes: The offerings at last week's tea auction in Calcutta amounted to 67,164 packages for which there was a good general demand. Plain C.T.C. teas sold at fully firm rates while medium broken and fannings were firm but the better descriptions were easier, especially fannings grades. Plain orthodox teas were firm while Assam broken were steady. Fannings in these categories declined, particularly the best liquoring kinds. Whole-leaf grades were an irregular feature while there was more demand for tippy teas which sold well.

Company Meeting :

POYSHA INDUSTRIAL COMPANY LIMITED

SUMMARY OF THE CHAIRMAN'S REVIEW FOR THE YEAR 1971-72

The total sales in 1971-72 for the entire group (Poysha, Kaira Can Company and Colrige) excluding excise, were Rs. 989.29 lakhs, as against Rs. 855.54 lakhs in the previous year. Of this, Poysha's sales excluding excise amounted to Rs. 704 lakhs, an increase of Rs. 52.30 lakhs over the last year's sales.

The Cochin Factory has started production in its new building. Of the proposed new units at Calcutta and Madras, the one at Calcutta will be set up first.

Sanction has been received from the Government for increasing the production of dry battery-cell metal jackets and components to 40 million, 40 million and 150 million per annum respectively, in the existing units at Thana, Ghaziabad and Cochin. The licensed capacity of Colrige has been increased from 13.2 million aluminium collapsible and rigid tubes per annum to 75 million on the basis of maximum utilisation of plant and machinery. Substantial expansion (from 15 million cans to 20 million cans per annum) has been sanctioned to the Kaira Can Company.

Our collaboration with American Can Company of New York, the world's largest can manufacturer will become a practical reality in the next two or three months. This collaboration will mark a turning point in the technique of can manufacture in India and will benefit the food processing and food canning industries in India.

As in the previous years, the increases in the price of tinplate owing to successive levies and inadequacies and irregularities of supply were the two major problems. During the decade 1961 to 1972, the price of tinplate has increased by 130 per cent.

The corresponding increase in the price of non-metal packaging materials

like polythene and paperboard has been much lower. The exorbitant increase in the price of tinplate not only poses a serious threat to the very survival of the tin container industry by pricing it out of competitive existence, but also encourages the use of unsuitable packaging material which is likely to spoil or even ruin the product. On the other hand, an estimated 30% of the total production of fruits and vegetables grown in the country go to waste.

The main Indian supplier of tinplate is Hindustan Steel, a public-sector undertaking. Lack of expertise, indifferent management, continued labour troubles and ineffective control by Government all seem to contribute to create a situation which threatens to paralyse the engineering industry, if not the country's economy. This disappointing tale of a half decade is made worse by the fact that Hindustan Steel still works far below its capacity and its production is erratic and unpredictable. Out of a total order of 8,855 tonnes of tinplate, Poysha received only about 3,020 tonnes in irregular and piecemeal consignments. The plight of the can manufacturer can very well be imagined.

It is also very disappointing to note that India lags behind many developing countries in the production of tinplate. To cite an example, India produced 68,000 tonnes in 1950 compared to Brazil's 37,000 tonnes but in 1969, India produced only 94,000 tonnes and Brazil, a staggering 224,000 tonnes! It is therefore not surprising at all that the per capita consumption of tinplate in India is a mere 0.6 lb., one of the lowest in the world.

CAPITAL

(Founded in 1888: Published every Thursday)

CAPITAL is India's most widely-read weekly newspaper dealing with economics, industry and public affairs. It has the mature experience of more than 80 years, and is the oldest journal of its kind in the country. Each week, it brings authoritative and comprehensive coverage of the main problem and events affecting the progress of the economy and the growth of industry. It separates the important from the unimportant; it presents simply, clearly and reliably what all informed observers of the economic scene ought to know.

Readers of CAPITAL are mainly people holding positions of vital importance in Government, business, industry and academic institutions. Many of them are intimately concerned with the framing of the country's economic policies. Many direct and control industrial, banking and commercial institutions. Together they represent a fund of economic opinion and buying power that no advertiser can afford to ignore.

TPM
THE PEOPLE WHO
KNOW ABOUT
PAPER

Established 88 years ago, The Titaghur Paper Mills Company Limited are pioneers amongst India's manufacturers of papers and Boards. TPM have maintained the lead through constant research and introducing new manufacturing processes. TPM are presently making special papers of different varieties thus substituting certain imported grades. TPM know more about the problems of the market and therefore know more about the demands for specialised papers and boards—and how to meet them.

why do we help in development

Our business is buying and selling of leaf tobacco.
Yet we have helped to bring new areas under tobacco cultivation. Why?

To implement a long-term development plan for the tobacco industry. We treat it as a primary responsibility to think of the future.

The Nagarjunasagar dam will claim a part of the tobacco area in Andhra Pradesh for irrigated food crops.

Alternative areas are to be found to compensate this.

Recent changes in consumer taste abroad call for types of tobacco that require different soil and climatic conditions.

New areas are to be developed and agricultural practices

introduced to grow these types. The farmers are to be trained

to grow what is a totally new crop to them.

A development plan of this

magnitude needs a large field force. It comes from our own training school at Hunsur. What have

we achieved so far? Quite a lot in the East and West Godavari and Kurnool districts of

Andhra Pradesh and certain parts

of Mysore. The varieties successfully

developed include flue

cured virginia tobacco, white burley—

both of export quality—and sun-cured

natu. There has to be someone

to get down to the basics.

if buying leaf tobacco is our only purpose?

Wrong Priorities for Power

WHETHER it is food or power, the approach appears to be one and the same; there is often shocking complacency until a near-famine situation develops. What is more surprising is that just as in food, the authorities have no hesitation to blame natural calamities for the power shortage. The question that goes unanswered is whether this critical situation could not have been averted by better planning of power projects. No one need tell a technocrat like the Central Minister for Irrigation and Power, Dr. K. L. Rao, that the operational efficiency of a hydro-electric project is dependent on the availability of water in reservoirs. And it is well within the knowledge of persons like Dr. Rao that the Indian monsoon is erratic and can let down the country very badly. Should he not, therefore, have taken steps to ensure a balanced distribution of power in areas with hydro-electric projects by locating a few thermal plants for a contingency? His helpless statement that three States—Punjab, Haryana and Mysore—are threatened with a power famine is, undoubtedly, a sad reflection on the performance of his Ministry.

Dr. Rao concedes that the power shortage has already affected production in such vital industries as steel and fertiliser, not to speak of others. Two notable examples of this are the Nangal fertilisers in Punjab and the Rourkela steel plant in Orissa. Since the beginning of this year, the power shortage is also being felt in the western region, including Maharashtra and Gujarat. In March last, the power cut in Gujarat was 25 per cent. In Punjab the cut was as high as 30 per cent for several months. Some of the other States that have been experiencing a power crisis are Andhra Pradesh, Bihar, Haryana, Uttar Pradesh and West Bengal. In the eastern region, the power shortage has affected the operation of not only industrial plants but also coal

mines, which are to supply fuel to the thermal power plants. The jute industry's loss of production due to the power shortage since January last is valued at Rs. 8.5 crores, of which the loss in foreign exchange is Rs. 5 crores. Several other industries, big and small, have been hit by the power crisis. This has been one of the many factors responsible for the low growth rate of 4 per cent in industry last year.

Industrial production has shown signs of a pick-up during the first four months of the current year but if the trend is to be sustained, it is evident that industries, heavily dependent on electricity for their production processes, should be assured of sufficient power supply. For instance, in industries like aluminium, cement, nitrogenous fertilisers, and copper, the cost of power accounts for 20 per cent to 30 per cent of the total cost of production. Power should be made available to them not only in abundance but also at cheap rates. Since the growth in other industries and agriculture is dependent on these basic industries, there can be no rationing of power to units of such vital importance to the economy.

Some of these problems came up for discussion at the two-day seminar held in New Delhi last week by the Federation of Indian Chambers of Commerce and Industry. It is a pity that Dr. Rao, who inaugurated the seminar, came up with no plan for tackling this man-made crisis on an emergency footing. Instead, he still spoke of the long-term programmes, whose successful execution would depend on the completion of the projects already on hand. There was no firm indication from the Minister of the plan of action for tackling the present crisis. He merely sought the co-operation of industry which, in any case, can do little except to abide by the regulations that the

State Governments might impose. Dr Rao did, however, respond favourably to the suggestion of the president of the Federation, Mr. Madan-mohan Mangaldas, that industrial units which required process steam in large quantity be encouraged to install back-pressure turbines in the interest of the economy. In a situation like this, the Government should not also hesitate to permit large private-sector units to set up captive plants for meeting their power requirements, so that industrial production is not hampered due to power scarcity. If necessary, they should be allowed to import power plants from abroad since the public-sector undertakings—Bharat Heavy Electricals and the Heavy Electricals in Bhopal—are not in a position to meet the demand in full.

According to a paper, prepared by the Federation for the seminar, B.H.E.L. and H.E.L. have a capacity of producing seven to eight plants each of 200 megawatts and 100 megawatts, respectively, whereas the need is to have plants for generating additional 4 million kilowatts annually in the Fifth Plan period. The question that arises is whether the electrical equipment manufacturing industry in the private sector can be associated with this programme to cover as much as possible of the gap between demand and domestic production. As it is, there are only two alternatives before the Government, namely, either to import the requirements over and above indigenous production or let the projects suffer for want of machinery and equipment in time. Both are situations that need to be avoided, if that is possible; but if there has to be a choice, it is much better to import the plants and set them up early instead of waiting for production in the public sector to catch up. Otherwise, the help of the private sector should be enlisted in a big way. After all, here is a sector where the Government can even extend the concept of joint sector and achieve its primary objectives.

There are several other factors that have contributed to the power shortage, such as delay in the construction of power stations, low capacity utilisation due to the lack of proper maintenance, non-availability of coal, lack of transmission facilities, leakage in transmission, and labour troubles. The leakage in transmission is said to be abnormally high largely because of improper maintenance. The all-India average loss in

transmission has been estimated to be as high as 16 per cent, compared with 8 per cent to 10 per cent in Europe. It has been estimated that 1 per cent reduction in loss can bring a benefit of Rs. 5 crores to the nation. Inter-connections will make it possible to reduce the wastage of power due to transmission losses. Here again, a lot is talked of a national power grid, but the progress has been tardy so far.

The progress with the Fourth Plan programmes has also been far from satisfactory. The Minister admitted in Parliament recently that even at the end of the Fourth Plan, the country would have a power

shortage of 2.3 million kilowatts. The Plan target of 23 million kilowatts will not be achieved in full and yet Dr. Rao talks of achieving somehow the Fifth Plan target of adding 21 million kilowatts more in a five-year period. It is a pity that a technocrat like Dr. Rao should let his vision be impaired by non-realities. He will cease to be taken seriously unless he can initiate measures immediately to make good the shortfall in the Fourth Plan target before he talks of his grandiose schemes for the Fifth Plan. The power famine should not, in turn, lead to a famine of ideas in the Central Power Ministry and the Planning Commission.

Democracy by Proxy

THE words "I can" appear to have been removed from the vocabulary of the ruling Congress Party. Whenever there is any problem in the States or at the Centre, no leader of consequence in the Party says "I can" or "I will" solve it. Whether it is a Chief Minister grappling with a power crisis or a Central Minister dealing with famine or industrial stagnation, his first instinct is to place all his worries in the lap of the Prime Minister, Mrs. Indira Gandhi, and forget about them. In most cases, when a ticklish problem is brought before the Chief Minister of a State, he can be heard to remark: "Don't worry, your interests are safe in the hands of Mrs. Gandhi. It is not my Government after all. It is Mrs. Gandhi's Government". If there is an inter-State dispute, the Chief Ministers concerned have only to go through the motions of trying to solve it. Whether it is a territorial dispute like that between Punjab and Haryana over Chandigarh and other areas or a river waters dispute as between Madhya Pradesh and Gujarat, the Chief Ministers continue to beat their drums in their respective capitals to satisfy their own people but they emphasise at the same time that they will accept anything that the Prime Minister may decide.

Is the abdication of authority by all the State satraps belonging to the Congress Party voluntary or forced upon them? This is at least partly a confirmation of the fact that during the two consecutive elections to Parliament and the State Assemblies in 1971 and 1972, respectively, the

people by and large voted for Mrs. Gandhi. The Chief Ministers and Ministers in power, therefore, consider themselves beholden not to the Party but to the Prime Minister. Also as a direct corollary of the elections it became the prerogative of Mrs. Gandhi and not of her Party to nominate the Chief Ministers and then let the Party confirm the nominations by a formal vote. This happened in every Congress-ruled State. The Congress has literally become synonymous with one person: Mrs. Gandhi.

It is only natural, therefore, that even those Congressmen who are bitter because they did not catch Mrs. Gandhi's notice when she was distributing responsibilities of office should steadfastly swear their loyalty to the Prime Minister. To oust their rivals in the Party from power, they cannot succeed by engineering a revolt. They have to build a case against them and take it to the Prime Minister. They may not succeed once or twice or ten times. But they must persist until she is convinced. That is their only hope. For, if she disowns them the fear is that the rank and file of the Party too would drop them. If stalwarts like Mr. K. Kamaraj, Mr. Morarji Desai and a host of others could not jointly withstand the rage and popularity of Mrs. Gandhi, where is the chance of lesser mortals doing so? This has resulted in a peculiar dualism in the Congress. On the one hand, every Congressman pledges his "complete and unflinching" loyalty to Mrs. Gandhi and, on the other, the "have nots" in the Party are busy

eroding the authority of her chosen men.

Incipient revolts against the Chief Ministers are now in evidence in several States, if not in all the Congress-ruled States. Unrest is fomenting in the Prime Minister's home State of Uttar Pradesh against the Chief Minister, Mr. Kamalapati Tripathi. Besides a large number of M.L.A.s, a great many M.P.s from this largest State in the country seem to have come out in the open to demand Mr. Tripathi's ouster. They have called on Mrs. Gandhi with the demand that Mr. Tripathi be replaced. The Chief Minister seems defiant and has not yet thought fit to seek the blessing of the Prime Minister in public. The Mysore Chief Minister, Mr. Devaraj Urs, faces a similar threat from Mr. K. Hanumanthaiya who is spearheading a revolt but has so far been wise not to make it appear to be a revolt against Mrs. Gandhi which in fact it is. In Madhya Pradesh, there are loud rumblings of discontent in the Party against Mr. Sethi's Government.

In Rajasthan, the Chief Minister, Mr. Barkatullah Khan, faces a powerful adversary in his predecessor, Mr. M. L. Sukhadia, who though a Governor now is believed to be thirsting for revenge against the manner he was eased out of power. But the question is: "revenge against whom?" Surely not against the poor Mr. Barkatullah Khan who seems to have been merely a pawn in the big game of power politics enacted on a national scale in the Congress Party. Mrs. Nandini Satpathy who was suddenly catapulted to the position of Chief Minister of Orissa in the face of heavy opposition is still facing a heavy weather. So are the Chief Ministers of West Bengal, Bihar, Gujarat and Punjab. It cannot be confidently asserted that all is well with the ruling Party at the Centre. There is still the problem of the so-called Young Turks or the Socialist Congressmen. Occasionally the Prime Minister's trouble shooters, they are currently the troubled men themselves. They are no longer vocal after the snubbing they got over the hue and cry they raised over the land and urban ceilings issue. Ranged against them are the so-called rightists who wish to keep the Party in a more centrist position. Reconciling the two sides is the personality of the Prime Minister who seems to be trying to steer a middle course.

There are also personality problems associated with Mrs. Gandhi's style of running the Government. Erstwhile stalwarts like Mr. Y. B. Chavan and Mr. Jagjivan Ram have been apparently bypassed on vital issues. Among the other Ministers there is none who can be credited with taking independent policy decisions. Whatever collective decisions are taken bear the irrefutable stamp of Mrs. Gandhi's views. All this adds up to one nationwide phenomenon: the total concentration of leadership in one person and its absence at all other levels of the Government. The complaint is today heard that the men who lead the Governments in the States are not leaders in their own right but because the mantle of leadership has been thrust upon them by the Prime Minister.

The emergence of leadership at the middle level is necessary not

only in the Congress but also in the Opposition. All the Opposition parties are in a state of disarray. The question naturally arises: if there is no effective leadership in the ruling Party to inspire confidence among the people at the State level and no effective leadership in the Opposition to canalise its resentment against Government policies and actions, how will the essential processes of democracy assert themselves in the governance of the country? And if these processes are scuttled, will it not lead to a power vacuum? Who will fill this vacuum? So far India has remained an oasis of democracy in the developing world. Will she continue to enjoy that distinction for long if the essential democratic institutions gradually become redundant? An answer to these questions is essential in the long-term interest of democratic rule in India.

Partnership in Oil

AN enterprising M.P. associated with the oil industry for many years has recently submitted a note to Mr. H. R. Gokhale, Minister of Petroleum and Chemicals, on the policy the Government should follow in relation to the foreign oil companies operating in India. The burden of the memorandum is that the situation has changed both in India and in the international oil world and that the time has come for the Government to enforce a participating ownership in the operation of the foreign oil companies in India and gain effective control over their management. The memorandum has stressed the need for unilateral action, through Parliament, to change the terms of the refinery agreements entered into with the three companies in the early 'fifties so as to ensure that when these agreements expire by the end of this decade, the refineries become national property. The note is obviously intended to spark a debate and impress on the Government the need to come to some decision which it has been avoiding to take for almost two years.

Right from the time Dr. Triguna Sen was in charge of the Petroleum and Chemicals portfolio, the country has been given a stock reply: that the Government is considering three alternatives—shareholding, revision of the refinery agreements and

nationalisation. Both Dr. Triguna Sen and his immediate successor, Mr. P. C. Sethi, have left the Ministry; but the three alternatives are still under consideration. One is not sure whether Mr. Gokhale will take a decision. As far as the Government is concerned, presumably there is no sense of urgency to take a decision; there is still a few more years to go before the first of the refinery agreements comes to an end. A habit has been established to take decisions only under pressure and at the last minute. Esso made an offer to enter into a partnership almost two years ago. The public does not know the nature of consultations that have taken place between the Ministry and the oil companies; apparently, no serious dialogue has yet begun. This is partly because of the change of Petroleum Ministers.

It is time that the Government made up its mind about the future rôle of oil companies in India. An anomalous position prevails in the industry today. With their demand for a higher crude price having been rejected, the oil companies have reduced their import of crude. It is estimated that in 1972 the total cut in imports by the three refineries might be about 500,000 tonnes. To the extent of the cut in crude imports by the companies, the country will have to import more of petroleum products—a position which is apparently

acceptable to the Government. This is happening in an essential industry and the Government cannot obviously take any action because of the refinery agreements. Another aspect of the working of the three foreign oil refineries is that between them they have over 2 million tonnes of refining capacity which remains unutilised.

From what little information is available about the offers made by the oil companies—particularly Esso and Burmah-Shell—they are prepared to enter into a partnership. The extent of partnership for the Government in the new set-up and who should exercise management control are issues which can be negotiated, provided the Government takes the decision that it favours partnership to nationalisation. But before taking a decision on partnership with the oil companies, the Government itself will have to make up its mind on a few connected issues: whether it would like to give the oil companies the right to import crude from their own sources, if not, whether it can find an alternative source, the share in refining that is to be earmarked for the private sector, etcetera. If partnership is not favoured, the only other course open to the Government is nationalisation, which is as good as scrapping the refinery agreements. The Government is apparently reluctant to adopt this course because of its international repercussions. Although alternative sources for the import of crude and petroleum products are opening up in the oil world, dependence on the international majors may be unavoidable for some more years. This dependence can be reduced only gradually as India establishes independent sources of supply through commercial deals with oil producing countries and independent oil companies, joint exploration ventures abroad, and by stepping up production at home.

Nationalisation, therefore, involves some difficulties which can be resolved only over a period of years. Meanwhile, partnership might be a solution, which can also be used to end some of the disadvantages suffered by India under the refinery agreements. In any future dialogue with oil companies, one thing has to be kept in mind: they are here to do business. If the Government does not want them any more, it is better to say so openly. It is no use entering into partnerships with reserva-

tions on either side. That they cannot be allowed unlimited growth should be obvious to the oil companies by now. Therefore, if a realistic approach—which gives the oil companies a reasonable rate of growth

and ensures the Government a major say in the running of the refineries in the larger national interest—is adopted, a partnership pattern could be worked out ending the present atmosphere of distrust.

Defining the Joint Sector

IN an informal discussion with members of the Forum of Financial Writers recently, Mr. C. Subramaniam, Central Minister of Industrial Development, announced that his Ministry was working out a definition of the joint-sector concept and that he proposed to present it to the Union Cabinet by the end of this month. The Minister added that four or five concepts were before the Ministry for consideration. He explained that once the joint-sector concept was properly defined and it was known what industries would come under the sector, it would be easy to earmark the other industries between the public and private sectors.

By implication, it would seem from what Mr. Subramaniam said, the Government was thinking in terms of an industrywise approach in defining the three sectors. Defining the three sectors industrywise can lead to several difficulties, as policies, once laid down, cannot be amended easily because of both administrative and political reasons. For instance, the core industries like oil and steel are now reserved for the public sector. Presuming this reservation is reiterated in the new Industrial Policy Resolution that is taking shape now, these industries can never come under the joint sector, thus keeping out private investment in these industries. The Centre has recently taken over the management of Indian Iron and it has been made clear that the Company will not be returned to the earlier management. Although the future set-up is uncertain, it is possible that the I.I.S.C.O. may ultimately be retained as a joint-sector project, thus obviating the need for the Government to find resources to purchase the shares now in private hands.

In the memorandum they submitted to the Government recently, the Tatas had said they "are in the process of formulating a proposal for submission to the Government for joint-sector project aimed at doubling the steel capacity of the Jamshedpur plant". The idea behind the proposal is that while public funds could be used to finance the T.I.S.C.O.'s expansion by

2 million tonnes—the Company cannot do this on its own—the project at the same time can continue to enjoy an experienced and competent management. If steel is not to come under the joint sector, the T.I.S.C.O. will have to retain its present capacity and can be expanded only if the Government takes it over.

There has been a suggestion that since some of the public-sector projects are making profits, the public should be encouraged to buy shares in them. This would enable the Government to transfer some capital to other ventures. This idea also cannot be implemented if industries like oil are exclusively reserved for the public sector. In the Malaviya Committee report on the O.N.G.C., there was a suggestion that since Indian business houses have not reached a stage where they can participate in a high-risk venture like oil exploration, participation can only be by foreign companies. Presuming Indian companies were willing to put money in this high-risk venture, they will not be able to do so, as long as oil exploration is reserved for the public sector. Thus a strict reservation of industries sectorwise may not be an ideal solution.

Mr. Subramaniam also, surprisingly, phoo-phooed the idea of selective encouragement of the larger business houses. He said it would be difficult for the Government to discriminate between industrial houses. If one may say so, if the Government is keen on encouraging joint-sector projects, a selective approach is extremely important. It cannot surely be the Government's policy to join hands with a business house, whether Indian or foreign, just because the project proposed is essential in the national interest. The antecedents of the party is equally important.

Addressing a seminar in New Delhi a few years ago, Mrs. Gandhi had deprecated the unnecessary emphasis placed on various "sectors" and said there was only one sector and that was the "national sector". Much has happened since the Prime Minister made the statement, but the true

meaning of her remark still holds good. Although it is necessary to lay down certain broad guidelines for the joint-sector projects, too rigid an approach in this matter can do more harm than good to industrial development. As it is, the decision-making powers of many aspects of an industrial project lies with the Government—like the level of production, its pattern, the prices at which goods can be sold, wage levels, bonus, issue of shares and debentures, and the terms of such issues. Therefore, whether an industry

is in the private sector or the joint-sector, the Government has a major say in the matter. Its concern, therefore, should be the good management of projects after they are established. If a joint-sector approach can help in this matter, so much the better. Having all the decision-making powers in hand, the Government's main aim should be to get the most out of any project—whether it be public, private or joint sectors. Definitions are less important for this purpose; what is important is a pragmatic approach.

Money in a Changing World

ONE of the causes of the collapse of the monetary system that was devised at Bretton Woods was a vast change in the structure of the world economy in which the system operated. Most obviously, the U.S.A.'s relative position in the economic scale declined as other countries, notably the west European bloc and Japan, developed, and the relative importance of currencies changed (more or less) accordingly. Some economists and bankers (mostly American) argue that "the dollar standard" is still operable and will continue so for a long time, but the majority opinion is that a fundamental change in the status and function of the dollar must be acknowledged in the restructured system. The current debate on the restructuring seems to be concerned with the changes that have occurred since 1944 rather than with those that will occur in the 1970's and after; or, if the changes are (as they should be) regarded not as separate developments but as a continuous process, the debate seems to recognise the present but not project far into the future. It is evidently assumed that a properly devised monetary system, slightly modified sometimes, will adapt to the economic changes of the future more satisfactorily than the Bretton Woods system adapted to those of the past, but it is more realistic to envisage as clearly as possible the conditions in which the system will operate.

Britain's National Economic Development Office is engaged in a deep study of the environment in which Britain will trade; which is, of course, the environment in which the monetary system will operate. The first stage of the study will be completed early next year, and the N.E.D.O.'s Director General, Sir Frank Figgures, revealed some of its

preliminary findings this month. The emphasis is on specialisation, in production and (correspondingly) trade. The N.E.D.O. attributes Britain's inferior economic performance—relative to West Germany's, for example—in the last 15 years partly to the dispersal of resources over a wider range in Britain than in competing countries. The range of goods and services provided throughout the world has become so vast that no country can economically attempt to be nearly self-sufficient or to cover most of the range as an exporter. It is not a simple question of selecting (or letting "market forces" select) one kind of product or another—say, machinery or textiles. Even over-diversified (so underspecialised) Britain is a major importer of some types of machine tools and textiles and a major exporter of other types of both. There are so many variants of goods and services—substantially or only marginally different in design or quality or function—that specialisation is needed for economies of scale, and relative advantages (reflected in or reflecting judicious investment) should appear in relative prices.

The conventional idea of two distinct (and, of course, intermediate) types of country, industrial or primary-producing, is not consistent with this pattern of trade. There is necessarily a continuous exchange of manufactures for materials and foods, but two-way trade in manufactures is increasing, and countries that are conventionally classified as primary-producing (or, more vaguely, "developing") are manufacturing an expanding range of goods that "sophisticated" markets can absorb—if the goods are admitted to them. Conversely, industrial countries are tending to produce more of the materials

that their industries require; mostly not by increasing their own production of primary goods but by making substitutes for natural materials. The most obvious example is synthetic fibres (although cotton is still strongly favoured, and the recent reaction in favour of wool is evidence that the trend towards synthetics is variable). The potential of synthetic leather seemed modest when the world's biggest chemical groups, Du Pont and I.C.I., had abandoned their interests in it, but smaller companies are confidently continuing its development. Plastics have replaced metals or wood in many applications, and this substitution continues; as packaging materials they are encroaching on traditional territories of paper and hard fibres. Foods are now involved in the trend towards synthetic substitution—so seriously that this year's annual congress of the International Association of Seed Crushers was warned of a long-term threat to their interests from synthetic protein.

Conversion of oil or gas into edible matter is an example of advanced technology that can greatly benefit poor countries, importing either the product or the technology; and it is an example of the ever-widening range of the chemical industry, whose technology promotes substitution on a scale that changes the pattern of trade. The recent over-expansion of the world's chemical industry will not deter poor countries from further developing their own. And, of course, they will industrialise more generally. Primary-producing and "developing" are not synonyms, and a relative decline in the importance of primary products is tending—despite its adverse financial implications—to promote industrial development in countries that have relied on such products. Their low-cost competition is, of course, feared in high-cost countries, but widening acceptance of "internationalised" manufacturing (such as "co-production", whereby component-making is contracted-out abroad) will help to keep the channels of trade open. The "developed" and the "developing" countries are tending to converge industrially, while the gap between their living standards remains wide.

It is for a more complex and a faster-changing world than that of 1944 that the new monetary system will be devised. The system must accommodate the multinational in-

dustrial and financial giants (which are looking keenly at "developing" countries) not only as they are now but as they may become—fewer and bigger, if reasoned forecasts are accepted. The system should anticipate—indeed help to create—"one

CURRENT COMMENT

I.R.C.I.

Nursing the Sick Units

The first report on the working of the Industrial Reconstruction Corporation of India Ltd. (I.R.C.I.) for the period 12th April, 1971 to 30th June, 1972, shows the satisfactory progress the Corporation has achieved within a short period. As is well known, the need for setting up the I.R.C.I. as an adjunct to the developmental institutions already in existence in India arose in the context of the depressed industrial climate following the recession combined with various adverse factors like mismanagement, unsatisfactory labour relations and critical raw material position which led to the closure or sickness of many industrial units which would normally not be able to attract institutional finance for their rehabilitation. The position in West Bengal especially aroused serious concern, as Mr. V. V. Chari, vice-chairman of the I.R.C.I., said at a Press conference in Calcutta on Tuesday. In nursing the sick units to health, the Corporation has amply justified the confidence reposed in it.

Since the inception of the I.R.C.I. till 30th June, 1972, it had received 341 applications, out of which the number sanctioned to date is 51, involving financial assistance of Rs. 679.94 lakhs. After study, the Corporation did not accede to 51 requests for assistance as these units did not show any potentiality for viability after revival. Another 67 cases did not come within the operational strategy of the I.R.C.I. and were, therefore, directed to banks and other financial institutions who could, in the usual course, consider providing financial assistance to them. The processing of 32 cases was in hand and the study of 13 cases was held in abeyance for various reasons, such as non-availability of necessary data or lack of co-operation from the parties. The number of cases in hand which the I.R.C.I. has yet to process aggregates 128. About one-third of the assistance sanctioned by the I.R.C.I. was in respect of units loca-

world". So all relevant parts of the still-divided world should be represented in the negotiation of the system. Even the Soviet bloc and China, which are expanding their external trade through the (modified) old system, might be consulted.

ted in notified backward districts. The managing director of the I.R.C.I., Mr. C. T. Das, said that the Corporation was trying to provide more professional management personnel to the assisted concerns.

WAGON-BUILDERS

Criticism Unfounded

Referring to a recent statement made by the Central Minister of Railways, Mr. T. A. Pai, while addressing the Gujarat Chamber of Commerce, the Railway Wagons and Components Division of the Indian Engineering Association has expressed its disappointment over the ill-informed criticism of the wagon industry for the shortage of wagons. In a Press note it has been pointed out that the industry is aware of Mr. Pai's judicious and pragmatic approach to the problems and the division feels that his statement reproaching the wagon builders is a hangover of the past and built on erroneous facts placed before him. The Press note adds that the R.W.C. Division has sought an interview with the Minister to dispel his misgivings and its members have offered full co-operation in meeting the current wagon shortage. The industry has expressed the hope that prompt redress would be coming from the Minister once he is seized of the shortage of matching steel, wheel-sets and other free supply items which is causing severe dislocation in the production programme of the wagon builders and is proving to be a drag on the output.

STATE LOANS

Total Subscriptions

Total subscriptions to the 20 State loans, which were successfully floated a few days ago, have amounted to approximately Rs. 220.63 crores, against the total notified amount of Rs. 197.25 crores. Thirteen States had offered facilities to convert their

respective maturing loans into the new issues, all of which offered 5-3/4 per cent interest for the 12-year loans. Subscriptions by way of conversions amounted to Rs. 44.76 crores. The Reserve Bank of India has announced that subscriptions in the case of seven State loans—including those of Jammu and Kashmir, Manipur and Nagaland who are newcomers to the capital market—have exceeded the notified amounts plus 10 per cent which the States are entitled to retain. In these seven cases, the allotment will be only partial, while all subscribers to 13 other State loans would be receiving full allotment.

The total subscriptions received in respect of individual State loans are as follows: Andhra Pradesh Rs. 22.65 crores, Uttar Pradesh Rs. 22.28 crores, Tamil Nadu Rs. 22.10 crores, Maharashtra Rs. 21.78 crores, Rajasthan Rs. 18.46 crores, Mysore Rs. 15.68 crores, West Bengal Rs. 14.33 crores, Gujarat Rs. 13.80 crores, Bihar Rs. 13.20 crores, Madhya Pradesh Rs. 10.06 crores, Orissa Rs. 9.36 crores, Punjab Rs. 8.80 crores, Haryana Rs. 8.25 crores, Kerala Rs. 8.15 crores, Assam Rs. 4.97 crores, Jammu and Kashmir Rs. 2.25 crores and Manipur, Nagaland, Himachal Pradesh and Meghalaya less than Rs. 1.20 crores each.

BANKS

Branch Expansion

New offices of commercial banks were opened in 359 unbanked centres and 281 banked centres during the first six months of 1972. Of the total 640 new offices, 467 offices were opened by banks in the public sector, that is, the State Bank of India, its subsidiaries and the 14 nationalised banks. With licences granted or allotments made in respect of over 2,500 offices, banks are expected to reach the estimated target of opening about 1,500 offices during the current year. Including the 359 offices opened in unbanked centres in the first half of 1972, the total number of new offices opened in such centres during the three-year period July 1969 to June 1972 comes to 3,416. The share of public-sector banks in this total number is 2,923. In addition, 1,959 offices were opened in banked centres during the above period, making a total of 5,375 offices—4,507 offices by public-sector banks and 868 offices by private-sector banks.

The trend in favour of opening branches in rural and semi-urban areas

continued during the first half of 1972. Thus, out of the 640 new offices opened in this period, 378 offices were in rural centres and 127 offices in semi-urban centres. The number of offices in these two categories of centres increased during the three-year period July 1969 to June 1972 by 3,435 and 1,029, respectively, out of the total increase of 5,358 offices. Following the establishment of 5,375 new bank offices during the three years ended June 1972, the average population served by each bank office has declined. The average at the end of June 1972 was 40,000, against 65,000 at the end of June 1969. The average will be further reduced to 34,000 after offices are opened by banks in centres in respect of which licences have been granted or allotments made.

WEST BENGAL

Sub-contracting Exchange

The industrial sub-contracting exchange which the Government of West Bengal is going to set up with Central assistance would be set off in motion in the first week of November. This was stated by Mr. N. K. Biswas, Secretary to the Department of Commerce and Industries, while addressing the annual general meeting of the Foundry Division of the Indian Engineering Association held in Calcutta on Friday. Mr. Biswas said that the sub-contracting exchange would not only allow the farming out of orders to the small-scale units but the information stored in the exchange could also be used for purposes of international trade. It would help in framing a definite policy for the promotion of small units as ancillaries to large-scale manufacturers. Mr. S. K. Neogi, the Divisional chairman, reported that the pig iron supply position in the required grades had shown a marked improvement in the last few months. But there is no room for complacency as major industrial projects coming up would require various types of light and heavy cast items. Another important raw material is ferro silicon and, Mr. Neogi informed the meeting of the successful way in which the Division had taken up this subject with the Government of India. As a result of concerted efforts, the rise in ferro silicon prices has been checked and the prices have reverted to the October 1970 level. The chairman expressed some anxiety about canalised raw materials, particularly the non-ferrous metals, as the pricing system of the canalising agencies was not very realistic.

The vice-president of the Indian Engineering Association, Mr. P. K. Nanda, commended the work done by the Foundry Division in regularising pig iron supplies and ferro silicon. He suggested that the foundry units should gear themselves up to meet the demand to be generated by the investment in the new steel plants and reported that the spares requirements of Hindustan Steel and Bokaro Steel themselves worked out to Rs. 15 crores each and this posed an important challenge to the industry in the steel development programme. Mr. Nanda underlined the need for modernisation of equipment and an updating of foundry technology and practices. A modernisation programme should be worked out in consultation with the concerned authorities to take advantage of the immense domestic and export opportunities.

EXPORTS

Crossing the Threshold

In his inaugural address at the annual general meeting of the All India Exporters' Chamber held recently in Bombay, Mr. S. Jagannathan, Governor of the Reserve Bank of India, said that the country could not hope to accelerate the rate of economic growth without a sharp and sustained increase in exports. For India this has two implications. One is with regard to the fuller utilisation of productive capacity in a large number of sectors. It appears that the actual capacity utilised is on average only 60 per cent of the total capacity installed in the fields of engineering and chemical industries. If only one could tap the export market for these goods and services, one could have the dual benefit that it would improve the utilisation of capacity at home and at the same time improve exports also. However, this may not be possible unless critical shortages of materials, spare parts and balancing equipment are made good by imports.

Mr. Jagannathan said that from the long-term point of view, it was essential that the industrial projects which were selected for implementation, whether in the public or in the private sector, were such as could be competitive from the international angle. Even with the wise selection of projects, it would be possible for the country to export these products only if the rate of

growth of these industries is substantial so as to generate export surpluses. That is why a rapid growth of industrial output is essential to enable exports on the scale required. Mr. Jagannathan said that even export surpluses with competitive prices and even with competitive quality and delivery dates would not suffice to break into the international markets. It is difficult to sell goods and services in the international market without earning a reputation for ability to manufacture complex and sophisticated goods. In the initial stages to cross this threshold and overcome this psychological obstacle is indeed difficult for the developing countries. What may be required is aggressive salesmanship with terms of exports which are more competitive *vis-à-vis* the developed countries. Thus, it is true that India may have to make extra efforts and provide extra incentives for her exports—a type of efforts and incentives that may not be necessary once the threshold is crossed.

NATIONALISATION

Guidelines Needed

Presiding over the first quarterly general meeting of the Indian Chamber of Commerce in Calcutta a few days ago, Mr. I. B. Shah stressed the need for stability in industrial and economic policies to create confidence among the people. He said that the economic growth was continuously affected by the lack of consistency in official policies. Despite the assurances from the Government on the rôle of the private sector, official policies and the changing approach towards private enterprise were tending to reduce its dynamism and initiative. This was reacting on economic growth. In this connection, Mr. Shah referred to the recent take-over of various industries and the grossly inadequate compensation paid to the shareholders which had no relationship to the net worth of the nationalised undertakings. He said that in India there was now a growing number of small shareholders in the corporate sector who were getting frustrated due to Government policies which were scaring away investment in the corporate sector. He suggested the formulation of specific guidelines for take-over or nationalisation of industries and the basis of compensation payable to those who invested in industrial enterprises.

Conference on Education

The conference of the Association of Managements of Private Colleges held in Madras recently focused attention on the present state of affairs in the education system and also made a plea for a thorough revision of the Madras Educational Rules and the grants-in-aid code to suit the changing needs of higher education. The present pre-university course came up for discussion. It was generally felt that the course should be replaced by a two-year pre-degree course. It was also suggested that the language load should be reduced in the interest of greater concentration on major subjects. The recommendations of the Kothari Commission were examined at the conference and the universities of Madras and Madurai were urged to establish committees to study the feasibility of recognising some colleges as autonomous units as recommended by the Kothari Commission. The need for promoting partnership

between private colleges and the Government in matters of educational planning and development was emphasised.

As for the need for a thorough revision of the Madras Educational Rules in the light of the changes that had taken place since independence, it was pointed out that the managements of private colleges were not fully aware of how the grants were determined. Clear and concise guidelines were considered essential in order to avoid confusion. There was agreement on the point that "autonomous colleges" were necessary in the interest of higher education. There had been a phenomenal increase in the number of students, teachers, universities and colleges in recent years. It was also pointed out that institutions were being multiplied not always on the basis of necessity but on regional and caste considerations with the result that the universities could not show any interest in the development of affiliated private colleges. The issue of collecting donations by educational

institutions was subject to some diverse comments in the State in recent times. While the Government subsidises education to some extent and no fee is collected from the students, it has become a regular feature to collect donations from a student when he is enrolled in an institution.

BANKS

New Profile

Banking Profile, a brochure published by the Reserve Bank of India, presents a synoptic picture of the progress made by commercial banks in India and in different States since the nationalisation of the 14 major banks in July 1969. There has been a pronounced thrust towards geographical and functional spread of banking, particularly in the unbanked areas. The brochure covers almost all the important facets of banking—the number of new bank offices opened since July 1969, establishment of offices in unbanked areas, dispersal of bank offices in the rural, semi-urban, urban and metropolitan centres, population served by bank office, bankwise distribution of offices, etcetera.

MONEY MARKET

Call Rate Easier

The short-term money market has been extremely easy this past week. The call rate initially fluctuated between 2½ per cent and 2 per cent. Towards the close, fresh business has been done at 2 per cent, with some stray lots being done even at 1½ per cent, although the market has been squarish. The supply of tea and gunny bills has been small. The demand for remittances has also been small. Despite slight fluctuations, the poundsterling has been steady against most major foreign currencies during the week.

The latest statement of the Reserve Bank of India for the week ended 1st September, 1972, shows a rise of Rs. 54.37 crores in deposits of scheduled commercial banks with the Reserve Bank to Rs. 274.14 crores, compared with the previous week. Their borrowings from the Bank have remained unchanged at Rs. 2.63 crores, of which advances against usance bills have been nil, against Rs. 1 crore. Balances held abroad by the Reserve Bank in the Banking Department show a drop of Rs. 2.67 crores to Rs. 141.77 crores.

A Ditcher's Diary

I SEE SOME TENSION BUILDING UP between the West Bengal Government, or rather sections of the ruling Party in the State, and the Press. The Chief Minister seems particularly angry with a Delhi-based national newspaper which has expressed concern at some of the activities of the State Congress Party's youth wings. But concern has also been expressed by a leading newspaper based in Calcutta; and a Bombay-based national daily has reported an incident which will raise questions about the extent of freedom that the present Congress regime in West Bengal is ready to allow the Press. Surely Mr. Siddhartha Shankar Ray knows better than to dismiss all these newspapers as partisan. They may have reservations about some of the Congress Party's policies, or about some aspects of the performance of Congress Governments at the Centre or in the States; but none of them has any sympathy for the West Bengal Government's main political opponents. It is, therefore, pointless to look for any political motivation behind occasional criticism of certain trends in West Bengal Congress affairs, which cannot but have a bearing on the State administration. A number of specific cases have been mentioned in the Delhi newspaper which has annoyed the Chief Minister; I am in no position to pronounce on their authenticity, but it is no secret that some of the activities of the ruling Party's youth and student wings have lately caused grave and

widespread misgivings. It is possible that the Party is not responsible for everything that is done in its name; certain undesirable elements may have infiltrated into the Party or may be masquerading in public as Congress supporters. But, if so, it is for the Party to do something about this. Besides, the Party cannot disown responsibility for its factional feuds, which have created not a little confusion. Even some of the open campaigns by the Party's young supporters seem to have been launched without due regard to what is both desirable and practicable. Corruption and inefficiency must be fought, but it is not for young Congress cadres to "apprehend" the corrupt or intimidate the inefficient. Prices should certainly be brought down, but this can hardly be accomplished by a sudden spurt of undisciplined zeal. Much has been made of the campaign against the high prices of fish; but everyone I know complains that the only result of the campaign has been fishless markets. Even if the reported fall is not pure fiction, it cannot but be temporary unless the factors contributing to high prices are controlled by a sustained and comprehensive effort. There is no short-cut except to disorder.

"THE GAMES MUST GO ON", DECLARED Mr. Avery Brundage after the Munich massacre. And they did. But I am far from certain that this was right. I am aware of the argument that the

lation of the remaining Olympic programme some kind of victory for their unspeakable tactics. *The Times* was perhaps right in insisting that efforts to save the lives of hostages held by Arab guerrillas "must stop short of handing over prisoners held in Israel". The choice is agonising; yet it is true that submission to blackmail can only encourage further terrorist acts. But it was a different matter to go ahead with the Games. Cancellation would not have meant accepting any of the terrorists' demands. *The Guardian* thinks that it would have been "an enormous propaganda victory for Palestinian bloodletting"; but even this I doubt. The terrorists needed no greater propaganda than they gained from their bloody acts; a halt to the Games would have more clearly underlined the sense of shock felt by the international community. But all this is perhaps besides the point. The primary consideration should have been one of natural human response. It is chilling that the Games were resumed as if nothing had happened that was fundamentally upsetting. The pretence is dehumanising. Mr. Brundage declared that a handful of terrorists could not be allowed to destroy "the nucleus of international co-operation and goodwill" that was represented by the Olympic movement. Such sanctimonious nonsense is intolerable after the nationalistic and racial hostility displayed in Munich. Indeed, one did not have to wait for Munich to see that the Olympic Games had little to do with international co-operation and goodwill. The Games have long been transformed into an arena for nationalistic aggrandisement; and having seen the results, including the

IMPORTING CHEAP MOTOR-CARS

A CORRESPONDENT writes in Current Coin: Allusion has been made frequently of late to the increasingly large import of American cars into England, cheap cars costing about £100. American builders are said to anticipate reducing the cost to £50. Their encouragement has been the enormous demand for the motor-car luxury in the States, and the characteristic energy of the Americans being prone to take every trade boom on the flood, they seem to be spreading themselves to capture the world's market for vehicles which may bring within the means of those who cannot usually afford a cab, the more fashionable luxury of a privately-owned motor-car. After a time, of course, it will be found that cars of £100 and less are not cheap, that their life is a very short one; but that will not trouble the American maker. He makes the most of the boom while it lasts,

and is probably already preparing to scrap his machinery and go in for something else when cheap cars cease to be a profitable industry. That is the way all inventions are dealt with nowadays. Time and tide wait for no man. Quantity launched on the market at the right moment when the buying mania is at its height is calculated to, and probably does, generally bring in a sufficient profit to permit a loss of scrapped machinery and to supply the means or the credit for the erection of new and better class machinery; for as soon as the uneconomy of inefficient machines is realised, the better class maker comes to the front and remains there, and those who have not handed over the baby, come in for tribulation. The British manufacturer has learned from long and costly experience that it is better to be a fixed star than the comet of a season.

FOR MORE EXPORTS TO FOREIGN MARKETS

The comprehensive banking facilities offered by the CHARTERED BANK ORGANISATION in more than 30 major trading centres all over the World open to the exporter a wider range of export opportunities.

We are always abreast of local financial conditions in these trading centres and are, therefore, in a position to give expert advice on selling or investment, export finance,

market intelligence or potential business prospects. We can make all arrangements for business travel abroad and provide foreign currency in the form of notes or travellers cheques.

To export more to foreign markets take advantage of our vast knowledge and experience that enable us to get things done quickly and efficiently.

latest Pakistani affair, I am beginning to wonder if it is not already time to abolish the Olympics. Even India has ceased to be particularly high-minded. The Munich massacre provoked no more than a mild and somewhat ambiguous condemnation; but both the Prime Minister and the Congress President commented sharply on our performance in hockey.

MANY OF US, AND THAT INCLUDES myself, have lately read more about chess than we have been able to digest. But it has, on the whole, been a lot of fun. Evidently, Mr. Arthur Koestler is determined more to instruct, and possibly to edify, than to entertain. Before the Reykjavic match began he wrote in *The Sunday Times* about the quintessential philosophy of chess, with some history and psychology thrown in good measure. After the match, he has written another article for the same newspaper; and this one is even more heavily laden with Koestlerian profundities. The match is briefly described, but most of the article is about the possibility, or rather the impossibility, of using a computer to play chess. It is not for me to dismiss it as a pseudo-science; what I find tiresome is the profusion of sterile speculation. But knowing some of Mr. Koestler's previous writing I am not really surprised; he has an astonishing capacity for being pedantic about everything. He once wrote about "the cognitive geometry of the comic stimulus"; if that is not clear, let me quote a little more: "In the process of bisociation the junctional concept is connected simultaneously to two association complexes which are habitually incompatible." But Mr. Koestler is in distinguished company; think of how Freud tried to analyse humour by declaring that "the pleasure in the witticism seems to us derived from an economy in repressive energy, comic pleasure from an economy in imaginative (cathexis) energy, humoristic pleasure from economy in emotive energy". Bertie Wooster's reaction, as Verrier Elwin said, would surely have been: "All very true, no doubt; but not the sort of thing to spring on a lad with a morning head." Not even the sort of thing to spring on someone who wants to read about a game. After reading Mr. Koestler on chess, I consider it a mercy that he has not written on cricket as well. Think of what he would have perpetrated in trying to analyse Ranjitsinhji's oriental magic on the occasion of the great cricketer's birth centenary last Sunday. But let me not go on about something

that has not been written; what has in fact been written, though long before this ceremonial occasion, is sheer joy. Ranji's leg glance and late cut have been described in words that are not unworthy of the highest works of art. But the words are not solemn; they are informed by a joyousness that can still be sensed. Sport has inspired much poetic description; but no game has been written about with such leisurely grace and vivid feeling as cricket. Even a Koestler could not have undone what Cardus has accomplished.

IT IS RUMOURED THAT BRITAIN WAS told by M. Maurice Schumann, France's Foreign Minister, when he visited London last August, that sterling would have to be back on a fixed exchange rate before 1st January next, the date set for joining the European Community. After that Britain can be allowed to devalue as often as she pleases, or needs to, although only with President Pompidou's approval. But in future floating is out, despite the fact that it has encouraged the first hope that Britain might not too rapidly become a pensioner on Europe once she has joined. There is no great doubt in London that Mr. Heath will do as he is told. The feeling there is that in order to get Britain across the threshold into Europe he would willingly pawn the Crown Jewels, if indeed he has not already done so. But equally it is felt that whatever parity is fixed for the pound can only be held for a short time after 1st January. So rapidly is Britain's inflation expected to accelerate in the next year or two compared with the average for the rest of the Community, and so slow is her industrial productivity growing,

that there is just no hope of being able to hold any fixed parity for long. It is sometimes difficult to grasp just how much Britain has slipped behind in the industrial race over the past decade or so. Already it is estimated that in terms of wealth per head of population at the current floating rate for the pound, both France and West Germany are now something like 40 per cent ahead of Britain. Within less than a decade their living standards are expected to be more than double hers. Indeed, a section of the latest bulletin from Britain's National Institute for Economic and Social Research, an unofficial body but well thought of, revealed that the only industrialised country in the world where real wages are still lower than they are in Britain, is Japan. But that state of affairs is expected to change within the next two years, leaving Britain right at the bottom. Of course, real wages are not necessarily an accurate measure of living standards, and much depends on how you define "industrialised". Yet the facts remain, and so, unhappily for Britain, do the trends.

THERE WAS A TIME WHEN EXCHANGE bankers showed an abiding interest in Calcutta for building up their commercial career, since the city simultaneously offered many challenges with numerous opportunities. It was not, therefore, difficult for these bold expatriate bankers to take the rough with the smooth and hope for better times in case of continuing stagnation in business. But the times have apparently changed. After the nationalisation of 14 commercial banks, the Central Finance Ministry and the Reserve Bank seem to be treating foreign banks with some

amount of sneaking suspicion, although both in terms of the quality of service rendered and the magnitude of banking business transacted—occasional labour trouble notwithstanding—their importance has not declined a bit even to this day. As foreign banks in Calcutta stand at the cross-roads today, many top-level changes are quietly taking place for which the banks will unquestionably be the loser. Mr. R.E.S. Price of the Chartered Bank is joining its head office in London and is being replaced by Mr. D. C. Porter. Mr. and Mrs. Price have been popular figures among Calcutta's social circles and Mr. and Mrs. Porter, who are no strangers to India, bring with them a measure of ebullience and confidence which, I dare say, will prove valuable to the Chartered Bank at this juncture. It is also sad to record that Mr. W. M. Bennett is leaving Calcutta for a New York assignment and is being replaced by Mr. H. M. Jackson who, like Mr. Bennett, is a practical banker. Both Mr. and Mrs. Bennett have occasionally shown greater local patriotism than many permanent residents here and have evinced great interest in the future of this sprawling city. I am pretty sure they will not forget their many admirers in Calcutta who will greatly miss them in the city's social gatherings.

HEARD AT A PRESS CONFERENCE AT a Calcutta hotel the other day: The difference between a leader-writer and a reporter is that the former makes himself the hero of the story. The latter is just a witness.

How Management Can Ensure Efficiency in a Business Enterprise

By Natesan Subramanian

The evaluation of efficiency in a business enterprise poses an intractable problem. The professional manager, who can improve business efficiency, argues that the indeterminate element in all organisations is the managerial skill available to it to achieve its objectives, whether it is profitability or social good.

THERE has recently been a national concern over industrial efficiency. While the Government has introduced legislation for ensuring that the inefficient are penalised, organised industry in the private sector has appealed for greater efficiency in public enterprises. The Government recently took over a steel plant to "rescue" it from inefficient manage-

ment. The guidelines imposed by the Department of Company Affairs for limiting managerial remuneration in the event of absence or adequate profits are presumably directed towards this objective. On the other hand, Mr. J. R. D. Tata has been consistently pleading that the efficient and the not-so-efficient should not be bracketed together. Nevertheless, there has been unanimity in all quarters that there is need for improving efficiency in Indian industries. When one comes to prescriptions for attaining this objective, however, there are serious differences. It all stems from what is meant by efficiency.

Loose Term

Efficiency is, indeed, a loose term and has different connotations for the engineer, the accountant and the economist. While the engineer talks of the efficiency of the engines, the accountant is concerned with cost efficiency and the economist argues that it is the ability to produce as large an output as possible from a given set of inputs and at economical prices. The common understanding of efficiency perpetuated by accountants has, however, been the profitability of an enterprise. In recent years, this is the view which has been under constant debate whether business success as measured by the rate of return on capital can be considered as an index of economic efficiency. Today a business enterprise cannot be seen in isolation; it is a function of the environment in which it operates. As a result, business has accepted—grudgingly at times—that it has social responsibilities.

In terms of economics, and now Business Management, the *raison d'être* of any business enterprise is its ability to make optimal use of the scarce resources available to it. With the emergence of welfare economics, however, efficiency has acquired a welfare connotation. Thus a distinction has developed between business efficiency and economic

efficiency. The former is a micro concept while the latter has a macro connotation. This needs some elaboration. It is customary in economic theory to lay down certain conditions, the foremost of which is the assumption of the existence of a perfect market. Thus, in ideal conditions of competition and consumer preferences, optimal efficiency in allocation and the utilisation of resources is brought about when in a particular distribution situation anyone cannot be made "better off" without someone becoming "worse off". Thus firms in trying to gravitate to the equilibrium position tend towards maximising profits by operating at minimal costs. Since in an equilibrium position all firms will be doing this, the economy itself can be said to be efficient. In other words, both business and economic efficiencies are achieved simultaneously.

Economic Efficiency

In practice, however, it is common knowledge that such ideal conditions do not exist. All markets are imperfectly competitive and more so those in developing countries. In such situations even if every firm achieves its objective of maximising profitability, which is called business efficiency, the economy may be still operating at a low level of economic efficiency, i.e., using its scarce resources not so efficiently. Furthermore, it is quite conceivable that business efficiency and economic efficiency may be mutually exclusive. For instance, a mining company in trying to maximise profitability may indiscriminately use the natural resources of the country which could lead the economy to be more inefficient in the long run by depletion of scarce resources.

At the imperfect market level, the problems get further complicated. Uncertainty is a major factor to be reckoned with. The business man's information system itself is not so geared to measure when exactly he maximises profits. Government interference in the form of quota, import duties, excise and other indirect taxes also influences the distribution of factors between different uses. The allocation of scarce resources, in particular, is related to opportunity costs—what alternative opportunities were forgone to utilise the resources for their present use. Accounting costs do not provide for this factor. For example, in an economy with a high degree of unemployment, the oppor-

tunity cost of the unemployed resources tends to be zero.

Yet another issue is the distribution of wealth itself. This brings up the major debate sparked off by the advocates of "New Economics" whether the generation of national income assures maximum social welfare. At the outset, there is nothing new in this concept; the newness is its realisation in a particular situation. What follows is that even if economic efficiency is achieved, would it maximise social welfare unless there is efficient distribution of wealth? Thus economic efficiency in itself may be a necessary condition for maximising social welfare, but it is not a sufficient condition. This brings up wider issues beyond the competence of economists. What is obvious is that efficiency will have to be increasingly regarded from a social point of view; the dichotomy that arises is how are the interests of the community and those of private groups who have an interest in an enterprise to be covered. The resolution of these conflicting interests involves the very principles of human nature. After all, any organisational

goals are set by the interaction of the people that it constitutes.

Human Nature

Human nature being what it is, it is difficult to see why the sectional interests of the individual firms would plan and conduct their affairs so as to maximise economic efficiency (social good). As a result, Governments have considered it necessary to regulate the action of these firms so that the sectional interests do not conflict with social good. But as even Governments are directed by the inter-actions of people who compose them, they have always superimposed their own sectional interests on the social interests. To illustrate, let us take a comparable example of Government trading enterprises. It would be reasonable to expect that these enterprises would be motivated to a greater extent than private enterprises by the desire of social good. In reality, of course, they are not any more concerned. At times, they have claimed to operate on a commercial basis and amassed profits by exploiting a monopoly market; at other times they have covered up gross

inefficient use of scarce resources by the euphemistic explanation of "in the national interest". It is further argued that the objective of a public enterprise is to extend services to the public and profits need not be considered the yardstick for such enterprises.

It is true that efficiency is somewhat a relative concept, and when other considerations are added it becomes nebulous. When the setting up of objectives itself involves innumerable hurdles, the valuation of efficiency could almost become intractable. The professional manager, however, offers a clue to the resolution of the problem. He argues that the indeterminate element in all organisations is the managerial skill available to it to achieve its objectives, whether it is profitability or social good. It is the managerial expertise which differentiates between one company and another in the same industry. Increasingly, there is agreement on this point. The beginning should perhaps then be made at this point to achieve the objective of raising and maintaining levels of efficiency in business enterprises.

The Fifth Plan : Implications of the Shift in Priorities

By Amar Nath Dutta

The Fifth Plan Approach Paper envisages a shift from self-reliance to greater social justice. But can the latter goal be achieved without first achieving the former?

THE mid-term assessment of the Fourth Five Year Plan is still fresh in everyone's memory. But no sooner had the ink on it dried up than the planners seemed to have become busy preparing the blueprint of the Fifth Plan. The slogan for a self-reliant economy that kept the country spellbound for some time has vanished. And now *garibi hatao* is to be the centrepiece of the new approach. Elimination of poverty is undoubtedly a laudable objective for any pattern of developmental planning. What is surprising is the sudden discovery of the truth that 220 million people live below the poverty line in this country. Measures to multiply production of consumer goods, intensify employment activities as well as safeguard the pace of sustained growth, are proposed to be taken up as part of a strategy to achieve greater social justice. It is also proposed to adopt an appropriate price and distribution policy for consumer goods and then to provide social services in the form of education, health, nutrition, drinking water, housing, communication and electricity to the common people, up to a minimum standard.

In the new approach, the emphasis on achieving a growing national income has been relegated to the background. The traditional thinking that in the initial stages economic growth should precede social welfare now vies against the new economics, in that if anti-poverty measures and priorities are adequately tackled, G.N.P. will automatically take care of itself. Unfortunately, neither of the two presents a complete picture. As long as there is a built-in mechanism of distribution in the production apparatus and priorities are geared to the production of basic consumer items, sharp increases in G.N.P. will still be possible, in spite of the diversion of resources from the strictly economic

to the social justice areas. It is unfortunate that a dichotomy has been struck. But then, one cannot so easily wish away the rôle of growth that will ultimately provide the resources needed for the well-being of the masses. Where the average *per capita* income is itself low and a large number have income less than the national average (perhaps 50 per cent in India), such magnificent gimmicks are not practicable.

While enunciating the First Plan it was hoped that the real national income would double itself in 1970-71 and the *per capita* real income by 1977-78. According to the present data, the former has just doubled by 1970-71. But the *per capita* real income has increased only by 33 per cent during the period. At the most liberal estimate, it would have increased by about 46 per cent by 1977-78. Again, between 1964-65 and 1971-72, the annual growth rate has been 3 per cent on average. The natural rate of *per capita* income growth has, however, slumped from about 1.5 per cent a year to 0.8 per cent. In other words, the natural rate of growth of the *per capita* income has been exactly halved.

Reduced to fundamentals, the basic approach towards the Fifth Plan rests on two desiderata. The first is the wage-goods thesis and the second is the orientation towards having more employment. The wage-goods thesis should command immediate attention not only from the angle of increased consumption, increased employment and increased investment, but also from the socially desirable objective of diffusing economic power to the widest extent possible. This is deemed necessary also for creating an industrial base within the agricultural sector itself for reducing the regional inequality in income and giving a new impetus to the co-operative form of enterprise. Additionally, industrial units, such as cotton mills, sugar mills, leather-processing units and tobacco manufacturing units, as part of an agro-industrial complex can be conveniently and profitably set up in

rural areas, thereby initiating employment-oriented industrialisation within the rural sector. Moreover, a basic "national minimum consumption" (as envisaged by Dandekar and Rath) will, in fact, call for not a lessening but an acceleration of the current rate of economic growth.

The wide range of anti-poverty measures designed to lift the bottom 30 per cent of the people to the basic national minimum standard will cost over Rs. 1,320 crores a year, or Rs. 9,250 crores over the next seven years. It requires little knowledge to ponder that a faster rate of growth in G.N.P. will help in no small measure to create and release both the financial and fiscal resources needed for the purpose. If the production of consumer goods is to be obtained on the desired scale, that would require a massive investment effort. But the Approach Paper nowhere lays it down as to how this will be done. What is more surprising is the lack of a production-oriented industrial policy that would assure a more plentiful supply of such goods.

Much to its discomfiture, the Government feels that a mere rise in national income cannot always be equated to an overall rise in prosperity. On the other hand, it also remains that a mere grant of incentives in the form of liberalisation of licences, etcetera, does not automatically usher in a rise in the industrial growth rate. In February 1970, the Government initiated a new industrial policy and subsequently liberalised the grant of licences to industries to increase capacity. Contrary to expectations, the growth rate of industrial production declined to 4.6 per cent in 1970 and to 3.1 per cent in 1971, as against 7.2 per cent in 1969. The Government also introduced a measure of doubling capacity utilisation by industry but this too proved abortive. Some are inclined to identify the problem with an imbalance in investment and saving. But here too, statistical realities belie the fiscal belief. Between 1968-69 and 1970-71, the rate of investment ranged from 9.6 per cent to 9.5 per cent and the rate of savings from 8.4 per cent to 8.2 per cent. Such a narrow margin in the two variables cannot account for such a large discrepancy in the growth rate of industrial production as 7.2 per cent in 1969 and 3.1 per cent in 1971.

All these taken together thus justify the urgent need for devising a

Strengthening the grass-roots of the economy

suitable industrial policy which should also entail corrective measures against the shortage of raw materials and power fuel, credit and transport bottlenecks as well as capacity constraints. A bias in favour of small-scale industries in the light of the altered socio-political need of the country is quite understandable. But it is doubtful how far small industries by themselves can grow very fast to meet the basic minimum needs of the people. The widening gap between the demand and supply of some essential consumer goods would clearly bear that out.

The other objective of creating more employment is indeed laudable, keeping in view the adverse impact continuously kept going through increasing joblessness. Caution, however, is needed on two counts. First, in order to have employment as a contributing factor to the national well-being, the creation of jobs has to be made sufficiently productive. Secondly, to be effective such a programme must be large enough. Unless more production is made fairly quickly from the start, measures for employment cannot be sustained without large-scale inflation which would more than nullify the benefit. Outlays on services, even if welfare services have a monetary impact, may absorb a portion of the marketable and even of the investible surplus. It is more pragmatic to note that a high and rising portion of the potential surplus is absorbed in investment in the commodity-yielding line. Schemes for creating rural employment also deserve a careful scrutiny. It is equally necessary to ensure that funds earmarked for specific projects are available in time and to the required extent. It is indeed astonishing that out of Rs. 374.38 crores earmarked for several high priority schemes only a paltry sum of Rs. 65 crores is reported to have been spent. The Approach Paper also gives no indication as to how it proposes to modify the system of education with a view to making it more vocation-oriented.

For all these, a tentative outlay of the order of Rs. 10,500 crores to Rs. 11,500 crores has been visualised "as indicative of the order of efforts . . . towards the objective of Garibi Hatao". For financing the required outlay, "it would seem necessary to raise Rs. 6000 to Rs. 7500 crores by way of additional resource mobilisation. The major tasks will have to be comprehensive direct tax reform to check evasion and to make agri-

cultural income taxable for making the tax system more elastic to income growth". The tragic fact, however, remains that while tax resources have increased from 6.6 in 1950-51 to 14 in 1970-71 as a percentage of national income, these have not been used effectively as a potent instrument to attack poverty and create more productive employment. The Wanchoo Committee has made a major recommendation for reducing the maximum marginal rate of taxation to 75 per cent. It has been estimated that if national income increases annually at the rate of 5½ per cent over a seven-year period, and if taxes increase by only 1 per cent each year, then resources to the extent of nearly Rs. 4,750 crores will be released without having any additional tax effort. It is indeed time to appreciate that tax policy should be more incentive-bearing than witch-hunting.

In the selection of investment and measures of production there could indeed be a wide choice. Techniques

of growth would always provide for a wide range of selection as between varying criteria. It is one thing to say that growth in G.N.P. should not be sought after as a single-dimensional pursuit. It is yet something else to observe that India is far from the goal of multi-dimensional transformation of her socio-economic fabric. Were it not so, how could inflation co-exist with underutilisation of capacity? It is because of some structural imbalances in different sectors of the economy that the country's industrial set-up at present is not self-consistent. No explanation of unemployment is complete which does not take into account the complex interaction between regional disparities, overcrowded urban centres and large stretches of impoverished countryside. Thus a theory of employment and underemployment merges into a theory of regional development and underdevelopment. The newer postulates should be identified with a right ordering of priority oriented towards mass production of goods and services.

Greater Efforts Needed for Developing Backward Regions

By P. C. Jain

The efforts so far made to develop the country's backward regions have met with little success. If these regions are to be lifted from their present economic morass, much more will have to be done.

DURING the quarter century of independence, the country has made considerable progress on all fronts. Considerable capacities for the manufacture of iron and steel, heavy machinery and equipment and spare parts have been created. Many new industries have been started and India has become the most industrialised country among the developing nations of the world. The stage has come now when India can think of self-reliance in the field of machinery and can have larger production of industrial, intermediate and consumer products. Still the country is far from its goal of providing social amenities and a minimum standard of living to the masses. It is estimated that even today 220 million people are living below the poverty line, most of whom are concentrated in the backward regions of U.P., Bihar, Orissa, West Bengal, Andhra

Pradesh, Madhya Pradesh, Rajasthan, Maharashtra and Tamil Nadu. The country cannot be prosperous unless these regions are developed. This has been realised by the planners also and, therefore, a number of schemes had been made during the last two Plans for promoting the economies of the backward regions but as yet their impact has not been felt to any significant extent. In order to make the country prosperous, it is necessary that utmost attention should be given to the question of removing regional imbalances.

It is often thought that it is industry alone which can help in developing the backward regions but this appears far from the truth. Gujarat, Haryana, Punjab, western U.P. and parts of Maharashtra are prosperous both agriculturally and industrially and there is little problem of backwardness. On the contrary, eastern U.P., Bihar, Orissa and Madhya Pradesh, which have not adopted the modern methods of farming, are the most backward regions of the country. Therefore, it is imperative that

A major advance in the history of tubelights.

Philips introduce the triple coil and anode ring for more light and no black ends.

Triple coil and anode ring construction.

Ordinary tubelights have coiled coil electrodes at their ends. The new Philips 40 and 65/80 watt tubelights have a thrice-coiled filament—the triple coil. Around the triple coil there is another new element—the anode ring. Together they give you better fluorescent lighting than ever before.

Brighter, longer lasting light.
Ordinary tubelights lose their

brightness steadily in course of time. The new Philips tubelight is brighter to begin with; and it maintains its brightness higher than ordinary tubelights.

No end blackening.
Ordinary tubelights blacken at the ends, absorbing useful light. The triple coil anode ring construction prevents end blackening.

Good colour rendition.
Philips lamps balance brightness with good colour rendition.

So you see things in the right light. **Modern integrated factory.** Every component of a Philips lamp is made in the Philips factory—the largest and most modern integrated lamp factory in Asia outside of Japan. So quality control is complete.

The next time you need a tubelight, buy the better tubelight. Philips.

Also from Philips: The TLF Reflectalite, a tubelight with a built-in reflector.

PHILIPS INDIA LIMITED

PHILIPS

When a better lamp is needed, Philips make it.

for removing the backwardness, the first emphasis should be on improving the agricultural sector. On the one hand, there is a need for better irrigation facilities and controlling of floods and on the other, farmers should be encouraged to adopt modern methods and intensive cultivation through the use of better seeds, pesticides, fertilisers, etcetera.

States like Orissa, Bihar and Madhya Pradesh which are rich in natural resources and where the major steel plants and a number of large-scale industries are located are still the poorest in the country. This is because heavy industry does not have a "spread effect" and only those persons who are employed in the large industrial establishments have been benefited, and they constitute a negligible fraction of the population of these States. Therefore, if the Government is really serious about developing the backward regions, it should not think in terms of large-scale industries alone; there should be more emphasis on the development of agro-based and labour-intensive industries like breakfast food, vegetables, fruits and food processing, electronics and automobile ancillaries, which can be started on a small scale and which do not require much resources.

In order to reduce the pressure on land which is highest in eastern U.P. and Bihar, it is necessary that there should be intensive programmes of rural works like road and bridge construction, minor irrigation works and house building, particularly because these facilities are sadly lacking in these regions. Poor health, unhygienic conditions, disease, and inadequate facilities for education are also responsible for the backwardness. Therefore, priorities must be given to lift the backward regions from their present morass. At least minimum social amenities should be provided to these regions before any allocation is made by the Centre for similar expenditure elsewhere.

Many of the backward regions like Bihar, Rajasthan, Madhya Pradesh and Orissa are rich in mineral and forest wealth which, if exploited properly, can provide employment to millions of people and can help in reducing the regional imbalances substantially. However, in order that the local resources can be exploited, it is necessary that they should be properly explored, feasibility studies made and the necessary infrastructure provided. No doubt, some of

the financial institutions have made some surveys of the backward regions for industrial potentialities but that is not enough. Both intensive and extensive work is required for which development corporations should be established either on a district basis or on a geographical basis comprising a couple of contiguous districts. These Corporations may be provided with the basic capital by the Centre and the State Government concerned. They should also be helped to obtain loans from commercial banks and financial institutions. Industrial houses in the region may also be associated with these corporations.

Lack of local entrepreneurship is another major factor for the poor growth of these regions. While the establishment of focal points may be of some help, much more intensive and extensive work is required through social reform and education. Health and sanitation schemes and facilities for drinking water and education may go a long way in making the people of backward areas more progressive, but more than that there is the need for acquainting them with the achievements of the progressive areas of the country through better and faster communications and transport and demonstration. The development of marketing facilities, whether for agriculture or industrial products, will also help in

this direction. Such things as rural electrification, land reforms and creating ambition among the people are very necessary.

Fiscal incentives play an important rôle in the development of backward regions all over the world. Countries like Canada, the U.K. and Switzerland are providing liberal facilities for the development of backward regions by way of grants and subsidies. India lags far behind in this respect. In order that backward regions may achieve industrial growth, they should be given concessions in excise and other Central and State taxes. All units where capital investment is up to Rs. 5 crores should be made eligible for grant, against Rs. 50 lakhs as at present, so that medium-scale industries may be encouraged.

If the development rebate is not replaced by any other tax incentives after May 1974, at least in the case of new industries established in backward areas this rebate should be continued beyond that period so that more industries may be established in these areas. Transport subsidy should also be made available to industrial units in backward regions. Last but not least, it is necessary that there should be time-bound programmes for each backward region, taking into consideration the deficiency of the area and its potentials.

The Monsoon Session : Symbolic Gestures to Socialism

(By a Special Correspondent)

The present Government proclaims its commitment to socialism, but its moves in course of the last monsoon session of Parliament have been all in the nature of symbolic gestures. They cannot improve the lot of the common man.

A MOST uneventful session of Parliament has just ended. When one looks at the work that had been transacted during the monsoon session of Parliament, one gets the unmistakable impression that some of the major issues facing the country were ignored. The Government has not come out with any meaningful measures to alleviate the suffering of the common man who is groaning under all kinds of pressures,

most important of which is the rising prices and scarcity of essential commodities. Not even the occasion provided by the silver jubilee of independence has been utilised to put in more cheer into the minds of the people who find that 25 years after freedom has been won, their economic lot has actually worsened. Mr. Y. B. Chavan, Central Finance Minister, made the astounding statement that the value of the rupee has gone down by more than 60 per cent in the last few years which really gives an idea of the economic position of the average citizen.

One would normally have expected that the Government would do something to meet the situation by bold measures. But there was no

evidence of this in all the weeks that Parliament had been in session. Although the Government is committed to socialism, it is giving too much attention to symbolic gestures. The I.C.S. Bill which has been passed by the Lok Sabha is one such. The whole aim is to bring the service conditions of the I.C.S. officers on par with those in the Indian Administrative Service and abolish some of the special privileges the former have been enjoying all these years. A laudable idea indeed but when one goes into the details of the measure, one finds that the entire measure is an exercise in futility, for the average citizen is just not bothered about these superior class of officers, much less their privileges. In any case, all the I.C.S. officers will retire in the next 12 years and the entire service will have died a natural death. But the gusto with which the entire measure has been piloted only shows the tremendous interest the Government is taking in inconsequential matters.

Take for instance the General Insurance Nationalisation Bill which has been passed by both Houses of Parliament. Here again, these firms have been performing functions which do not have any impact on the common man as such. And yet, the Government has thought it fit to deal with these insurance companies just because it was one of the ten points of radical reform proposals adopted by the All India Congress Committee. Equally unwarranted is the decision of the Government to take over the management of the Indian Iron and Steel Co. Ltd. The Bill to replace the Ordinance in this regard has been approved by Parliament. What is amazing is that the very Government which has bungled completely in managing the public-sector units, resulting in loss of hundreds of crores of rupees, blames private managements for "inefficiency". More than 34 public-sector corporations, it has been revealed in Parliament, are without top administrations which only means that nobody is coming forward to man them mainly because it is impossible to improve their functioning. Mr. Mohan Kumaramangalam, Central Steel Minister, defended the take-over of the firm by the Government, but he, more than any one else, knows the major shortcomings of public-sector undertakings. But this is the policy of the Government which swears by what the critics have aptly called "instant socialism". It is yet to be seen how the common man benefits by this take-over.

Rift Within the Ruling Congress ?

(From Our New Delhi Correspondent)

There are indications of a rift developing within the ruling Congress Party both at the Centre and in several States. Among the States where such disruptive tendencies are in evidence are Mysore, U.P. and Bihar.

NOW that the country has settled down after the State Assembly elections and the aftermath of the war with Pakistan over Bangladesh, dissatisfaction among the people and disunity within the ruling Congress Party are raising their ugly heads. The disturbances in Shahdara (near Delhi) over the murder of a Home Guard by a police officer was the first major demonstration of the people's frustration over the deteriorating economic conditions in the country. The Government and the Congress Party tried to explain this away as a local squabble between the public and the police, which is only oversimplifying an alarming situation. Then, there was the civic strife in Bombay and now the engine drivers and firemen of the Southern Railway are on "mass sick leave" to focus attention on their demands. The strike, although local in nature, has affected the working of the entire railway network in the country in the sense that essential supplies and passenger traffic have been dislocated. The Government has taken advance action by invoking the Defence of India Rules in order to ban any strike in the railways for a period of three months.

Assuming that these disturbances and strikes are "politically motivated", there is nothing wrong if political parties take advantage of the discontent among certain sections of the people. If the ruling Congress can claim a "massive mandate", and brag about people being behind the Government, the Party might as well make use of this "massive mandate" in order to put down all disruptive activities of the Opposition. In other words, a political threat must be met politically; otherwise, the ruling Party will only expose itself to the lack of mass support from the people.

Apart from these symptoms of people's grievances and disappointments, there are indications that the ruling Congress itself is showing signs of disintegration. Among the States where such disruptive tendencies are in evidence are Bihar, U.P. and Mysore. While attempts were made hastily to patch up the differences in Bihar and U.P., there is no sign as yet that the trouble is over in Mysore. Mr. K. Hanumanthaiya, former Railway Minister, is bent upon cleansing the Congress in the State of corruption and inefficiency. After his outburst in Bangalore, Mr. Hanumanthaiya met the Prime Minister, Mrs. Indira Gandhi, in Delhi and came out with a further Press statement that there was no reason for any disciplinary action against him. But Mrs. Gandhi is apparently not happy with his public posture over the affairs of the Mysore Congress Ministry. This is a broad enough hint for Mr. Hanumanthaiya either to adhere to the Party discipline or leave it.

Then, there are the groups within the Congress Parliamentary Party. First, there were the Young Turks who were slowly elbowed out by the Congress Forum for Socialist Action which wanted to be more active as a group than as individuals. Since it started dominating Congress Party affairs, the liberals or the "centrists" began feeling the pinch and they have now formed themselves as the Nehru Study Forum. The amazing thing about the two Forums is that they both say they owe allegiance to Mrs. Gandhi. The sponsors of the N.S.F. have now represented to the Congress President and the Prime Minister that a campaign of villification has been launched against them by the C.F.S.A. Mr. P. Parthasarathi, general secretary of the N.S.F., has pointed out that the C.F.S.A. is basically a projection of the communists in the Congress and that it is "trading in the name of socialism". This is the first time that the two groups within the Congress Parliamentary Party have come out in the open and unless both are curbed, the differences within the Party would widen.

Madras Colloquium Highlights Causes of Sluggishness in Exports

(By a Special Correspondent)

The colloquium on exports held recently in Madras has highlighted the factors that are responsible for the sluggishness in India's exports. It is feared that the Government's proposal of compulsory exports would make matters worse.

THE recent three-day colloquium on exports in Madras organised by the Hindustan Chamber of Commerce and the Federation of Indian Export Organisations provided an opportunity to trace the causes of poor export performance. The need for competitive prices in the export markets was stressed at the colloquium as an imperative to boost Indian exports. Mr. L. N. Birla expressed the fear that compulsory exports would depress prices for Indian goods in foreign markets. Will a restraint on domestic consumption provide a long-term remedy for the fall in exports because of competitive prices? The high costs in Indian industry and the resulting high prices have been cited as the main factors responsible for the sluggishness in India's exports. Any restraint on domestic demand, Mr. Birla said, was only a short-term measure which would also create socio-economic problems. The curb on domestic consumption will, therefore, be ineffective in making Indian goods competitive.

Mr. Birla rightly pointed out that in the context of world technology growing fast, India would remain uncompetitive if she did not achieve economies of scale. It was also pointed out that the real push to Indian export effort should come mainly through increased agricultural, industrial and mineral production and creation of ex-

port surpluses. What hindered production and export drive were an unimaginative industrial licensing policy, price controls and export obligations. In any export effort, a study of the needs of the world market was stressed. The whole question of high costs of Indian goods should be solved realistically—through prompt raw materials supply at international prices, removal of export duties, supply of steel according to delivery schedules, and the development of infrastructure.

On the rôle of joint ventures in third countries, Mr. Birla felt that they provided good opportunities to build a new image of India's industrial potential and had also worked well both in developed and developing countries, enabling India to earn foreign exchange through exports of machinery and raw materials, apart from dividends, royalties and technical know-how fees. The fact that about 30 joint ventures are working even in advanced countries like the U.K., West Germany and Canada is no mean achievement. The colloquium made it clear that exports were imperative for expansion and diversification of Indian industry, particularly in the context of the uncertainty of foreign aid. Mr. Birla rightly pointed out that the growth of Indian industry through exports would provide the necessary safeguards for Indian consumers, while providing a check on inflationary trend. What is more, the demand for Indian labour-intensive goods in foreign countries should help to solve the trying unemployment problem in India. It is a matter for satisfaction that foreign countries have recognised that India has the competence and capacity to cater to their needs. India has executed big contracts for a wide range of products and a number of turnkey projects.

While it was conceded that tariff barriers, creation or enlargement of economic blocs and protectionist tendencies in developed and developing countries restrained growth, it was also admitted that built-in limitations of the Indian economy, like raw material shortage and high domestic demand were contributory factors. It is obvious

that under the prevailing limitations, Indian industry can forge ahead if only the Government extends its full support.

Small Chemical Units

There is a programme to establish small-scale chemical units in Tamil Nadu during the next two years. In this connection, the State's small Industries Development Corporation will shortly work out a plan for individual projects for specific areas. This will help technocrats to start their own small units. For this purpose, the State has been divided into six zones.

Tyre Plant

The proposed tyre factory in Tamil Nadu in the joint sector will have General Tyres of America as its collaborator. The collaboration agreement, which was pending with the Central Government, has now been approved. The plant will be located in Tirupattur in Ramanathapuram district.

Multinational Corporations

At the recent four-day seminar held in Madras, the expanding rôle of multinational corporations with particular reference to developing economies was stressed. The seminar was jointly organised by the Madras Productivity Council, the Indo-American Chamber of Commerce and the A.C.C. Dr. Ronald Clifton, a noted American economist, said that multinational corporations might be able to unify the world economy. These multinational corporations originated in advanced countries, but the encouraging aspect of the working of these corporations is that they have adapted themselves to the culture and national interests of the many less developed countries in which they operate. Dr. Clifton added that multinational corporations today account for 25 per cent of the world's industrial production. It is significant to note that as many as 400 multinational corporations are operating in India.

PEOPLE AND PERSONALITIES

Mr. V. Narayanan, Sales Director, Goodyear India, left Delhi early this month for a six-week export promotion tour. He will be visiting the U.K., Continent, including east European countries, and the U.S.A.

Credibility Gap in Awarding Compensation to General Insurers

(By an Insurance Correspondent)

The debate in Parliament on general insurance nationalisation has failed to enlighten the people on a number of crucial issues. The Government should have utilised the occasion to clear the misgivings about its policy on nationalisation and compensation.

THE General Insurance Business (Nationalisation) Bill, 1972, has been passed on a note of protest with the entire Opposition staging a walk-out on a procedural matter in the Lok Sabha. In the Rajya Sabha, the members did succeed in getting more time to discuss the Bill but failed to secure any more information than what the Government was prepared to give and, therefore, many important questions remained unanswered. There was the question of compensation or amounts to be paid to insurers whose business had been acquired by the Government. After the 25th amendment, this was the first important piece of financial legislation before Parliament and, therefore, it was expected that it would be handled on a rational basis. In fact, the Government lost a golden opportunity as it could have utilised the occasion for clearing the misgivings about nationalisation and the position of shareholders. This would have served two purposes: Investors' confidence which has been shaken by the take-over of coking coal mines, general insurance business, and the management of I.L.S.C.O. would have been restored. The Government would have given a proof of its genuine and sincere desire of not misutilising the 25th amendment.

The matter relating to compensation and the increase in its quantum to certain companies has posed two very important questions which should be clarified. The first is the basis of arriving at the compensation figure. As the compensation amounts have been arrived up to the units' place, it is clear that some formula has been evolved. The people should be told about it. A mere one-sentence statement that the compensation is

based on different factors like dividend, profitability and reserves is not enough. The second and more important question is as to what has been the consideration for the Select Committee in increasing the quantum for some Indian companies. If some valid reasons are found for doing so, then the Government machinery which worked out the compensation figures earlier, committed a grave mistake and had the matter not been referred to the Select Committee shareholders would have been robbed of their dues. It had been very widely talked about in the lobbies that all this was influenced by considerations other than financial. In a way, the Central Finance Minister, Mr. Y. B. Chavan, has admitted that Rs. 38.20 crores represent "an amount" and not "compensation".

Analysing the increase in amounts payable to various insurers, the results are interesting and again leave a question mark. Of the increase of nearly Rs. 6 crores, Rs. 2.34 crores have gone to the companies which are already in the Government fold. Another Rs. 84 lakhs have gone to the companies controlled by two big houses, thereby creating doubts in the sincere desire of the Government really to compensate the small insurers. The defence of the Government for paying "the amounts" against the demand not to pay anything has also been rather poor. The Finance Minister has quoted statistics showing that 80 per cent to 98 per cent of the shareholders of the present insurance companies have holdings of less than Rs. 5,000 a person and, therefore, their interests are to be safeguarded. This is really a strange way of arguing in the name of poor shareholders. One would not be incorrect if this is interpreted to mean that had there been rich shareholders or if there are any rich shareholders in any other industries, they would not be given any compensation or their interests would not be protected. Probably, Mr. Chavan has failed to realise the serious repercus-

sions his statement may have when interpreted in the above manner.

Furthermore, if 80 per cent to 98 per cent of the shareholders do not belong to the upper strata, then why stagger the amount payable into three instalments? As provided in the Bill, compensation to foreign insurers and co-operatives is to be paid in one instalment which works out to about Rs. 11 crores out of a total of Rs. 38.20 crores. On the basis of the Finance Minister's statement, it is taken that on average about 10 per cent of the shareholding is such that will have more than Rs. 25,000 to receive, then how much balance will be left to be paid? In that case, will it not be a farce to plead that amounts to be paid have been staggered to three instalments for rich shareholders? The manner in which the whole question of compensation has been dealt with has created doubts in the minds of investors.

EMERGENCY IMPORTS BY LOW FARE CHARTERED FLIGHTS

Perhaps you may have some emergency import requirements, but not quite sure whether air-transportation is the answer. Call Sinclairs up, for a discussion, without any commitment from your side. There is an excellent money saving opportunity, if you avail of a chain of chartered flights coming from Europe to India, stretching from September to November, with a frequency of approximately two flights a week. Further flights can be also arranged, subject to sufficient offering. Sinclairs are in round-the-clock contact with Europe through a hot telex line.

Safeguarding Deposits with Non-banking Companies

(By a Special Correspondent)

One of the objectives of the Companies Amendment Bill is to safeguard public deposits with non-banking companies. The Government should see to it that the acceptance of deposits by mushroom companies are effectively curbed.

DEPOSITS with non-banking companies have become popular in recent years. Since companies offer interest on deposits at rates much higher than banks for comparable periods, many middle and lower middle class people place their moneys with companies by way of deposits. Recently there have been a number of cases of companies failing to meet their liability in respect of interest and principal on such deposits. The Banking Commission has in its report stated that deposits with non-banking companies and with firms have been a traditional source of finance in India but more recently the growth of such deposits has been considerable. While to the depositor the rate of interest offered is higher, the cost of deposits to the company is less than what it would have to pay to a bank.

Moreover, the availability and volume of bank credit are restricted by considerations of margin, security offered, etcetera. The credit available to companies through deposits is not hampered by such considerations. The Commission goes on to say that such deposits are not lost to the banking system since they find their way into it by way of tax payments, payments to creditors or as working balance of companies. But the objections to non-banking deposits are that (1) they distort the interest rate pattern; (2) they encourage non-priority sectors of production; and (3) they are unsecured deposits. In the event of failure of the company the depositors may not get their money back. The Commission has stated that there is need for greater degree of control for safeguarding the moneys of depositors.

At present moneys placed with non-banking institutions are subject to regulation to some extent by the Reserve Bank of India under the

powers conferred by the Reserve Bank of India Act. Under these powers the Reserve Bank issued in 1966 certain directives applying to non-banking financial companies, including chit funds, hire-purchase, housing finance, investment, loan, miscellaneous finance and mutual benefit companies, excluding insurance and stock-broking companies. Another directive was issued to all companies which are industrial concerns or carry on mainly the purchase and sale of goods or commodities other than securities, excluding those covered by the first directive. By the latter notification, the acceptance of term-deposits was limited to the extent of 25 per cent of the company's paid-up capital and free reserves. The directive kept open a lacuna in respect of loans issued by a company with the guarantee by any of its directors.

A subsequent notification by the Reserve Bank, operative from 1st January, 1972, limited the acceptance of loans to the same amount as in the case of deposits. These limits did not apply to secured loans as also any unsecured borrowings from banks, financial institutions and from the directors of the company. In September 1971, the Reserve Bank issued a Press note disowning its responsibility in case of failure by companies to repay principal or interest on deposits if such companies had borrowed funds in compliance with the regulations of the Reserve Bank. It also cautioned intending depositors "to find out beforehand whether the companies soliciting deposits do so to meet their genuine business requirements, whether their financial position is sound and whether the affairs of the companies are being managed efficiently".

The Companies Amendment Bill introduced in the Lok Sabha contains provisions aimed at regulating such deposits and loans to non-banking companies to safeguard further the interests of the people who place their moneys with these companies. The term "deposit" in the Bill includes any amount borrowed by the company but does not include such categories of money as may be prescribed

in consultation with the Reserve Bank of India. The provisions also do not apply to banking companies and any other company as the Central Government may, after consultation with the Reserve Bank, specify.

The Bill empowers the Central Government, in consultation with the Reserve Bank, to prescribe the limits up to which, the manner in which and the conditions subject to which deposits may be invited or accepted by a company from the public. A company is not to be allowed to do this unless such deposits are invited or accepted in accordance with the rules made by the Central Government and the company has issued an advertisement in such form and manner as may be prescribed, including a statement showing the financial position of the Company. If any deposit had been accepted by a company before the coming into force of the amendment which, if the rules made as aforesaid and conditions had been in force when the deposit was accepted, or when any deposit is accepted after coming into force of the amendment Act, the company is required within 30 days or such further time as the Government may, by general order, or where no such order has been made on sufficient cause being shown, allow refund of the amount of the deposit. In the case of a deposit accepted after the coming into force of the amendment Act in contravention of the rules (including the rules relating to advertisement) and conditions prescribed, every officer of the company in default is liable to punishment of imprisonment up to three years and fine which shall not be less than the amount of the deposit. Penalty is also to be imposed on the company and the officer in default if the refund is not made. Except where provisions of the companies Act relating to prospectus are inconsistent with the rules made as above, the provisions of the Act relating to prospectus would apply also to an advertisement relating to deposits or loans.

As stated by the Banking Commission, deposits with trading and manufacturing companies and with firms have been a traditional source of finance in India. It is to be hoped that the conditions and limits which will be laid down under the rules when the Bill becomes law will be such as will not unduly restrict this traditional source of finance while curbing the acceptance of deposits by mushroom companies and adequately safeguarding the interests of depositors.

The Payment of Gratuity Act : A Step in the Right Direction

By S. K. Chaudhuri

Chief Personnel Officer, Lipton (India) Ltd

With the passing of the Payment of Gratuity Act, 1972, by both Houses of Parliament the Central Government has, in fact, introduced a triple benefit for the organised sector of industrial workers. These are : the provident fund, a pension and now gratuity.

THE Employees' Provident Fund Act, 1952, covers all the major industries which employ over 6 million workers and the total fund exceeds Rs. 2,000 crores. The Provident fund is on a contributory basis and provides a very satisfactory retiring benefit for the employees. In 1971, the Family Pension Act was passed by Parliament. And a family pension-cum-life assurance fund was constituted by diverting a portion of the employers' and employees' contributions to the provident fund which was further supplemented by a contribution from the Central Government. This indeed is the first time that the Government made a payment from its revenue towards a social security measure—an estimated amount of Rs. 16 crores to benefit an estimated number of 6 million industrial workers. Out of this pension fund, so set up, a family pension at the prescribed rates is to be paid to the survivors of the employees who died while in service before reaching the superannuation age.

Besides the pension, a compulsory life insurance benefit up to a maximum of Rs. 1,000 was also payable to the family of the deceased employee—the quantum being dependent in both cases on the age of the member at the time of joining the fund. The scheme appears to be particularly beneficial to employees who joined the fund at the age of 25 years or less; and, the monthly pension benefit payable to the employee's surviving family in the event of his death is enormous. But that is about all. The lumpsum cash amount of Rs. 4,000, mentioned in the scheme, is a sum not related to the salary of the employee and, in most cases, would be less than what

he would have received as provident fund if he had not joined the pension fund at all. An employee rendered medically unfit also gets no special benefit from the pension fund. And the life insurance amount is not related, in any way, to the pay group of the employee. Because of these defects, the pension scheme had a very limited response from the workers so much so that only about 15 per cent out of the 6 million workers covered by the provident fund scheme opted for the pension scheme.

Previously, there was no Central Act to regulate the payment of gratuity to industrial workers. The only exception being the working journalists for whom a provision was made by the Working Journalists' (Conditions of Service) and Miscellaneous Provisions Act, 1955. Gratuity was also paid by a large number of employers to their workers under various tribunal awards and agreements signed as a result of collective bargaining. The principles followed by Industrial Tribunals when introducing gratuity schemes have been: financial stability of the concern must be examined before agreeing to gratuity as a form of double retiring benefit; there need not be any scheme of gratuity for persons who are to serve for short periods; infant industries which have not acquired financial stability need not be burdened with gratuity; gratuity is to be linked to basic wages only; different schemes could be framed for clerical and subordinate staff; a successor company would be liable to gratuity for the period served under the previous company; dismissal does not necessarily disentitle a workman to gratuity although financial loss may be recovered. There were also a few ex-gratia schemes in existence.

As far as the States are concerned, the Kerala Government enacted a legislation in 1970 for payment of gratuity to workers employed in factories, plantations, shops and establishments. Later in June 1971, the West Bengal Governor promulgated an

Ordinance prescribing a similar scheme of gratuity. This Ordinance was later replaced by the West Bengal Employees' Payment of Compulsory Gratuity Act, 1971, enacted by the President on 28th August, 1971. Since the enactment of the Kerala and the West Bengal Acts, a few other State Governments also voiced their intentions in favour of enacting similar measures in their States. In order to ensure a uniform pattern of gratuity to the employees throughout the country, it became necessary to enact a Central law on the subject. The enactment of a Central law was also essential for avoiding different treatment to the employees of all-India establishments having branches in more than one State since under the conditions of service, the employees might be liable to transfer from one State to another.

The proposal for a Central legislation on gratuity was discussed at the Labour Ministers' conference held in New Delhi in August 1971. It was also welcomed by the Indian Labour Conference at its October 1971 session. There was general agreement at the Labour Ministers' conference and the Indian Labour Conference that a Central legislation on payment of gratuity should be undertaken as early as possible. The Central Act was drafted more or less on the same lines as the West Bengal Act. Thus an all-India Gratuity Bill was introduced in the Lok Sabha in December 1971, and then referred to a Select Committee. The committee submitted its report in the first week of August 1972. It recommended certain major changes differing from the West Bengal pattern. Both the Lok Sabha and the Rajya Sabha accepted the recommendations and an amendment during the discussion of the Bill. The Bill received the assent of the President on 21st August, 1972, and became an Act. According to Section 1(4) of the Act, its provisions are now to come into force on such date as the Central Government may by notification appoint.

The Act provides for a scheme for the payment of gratuity to employees working in factories, mines, oilfields, plantations, ports, railway companies, shops and other establishments. Under the Act, gratuity is payable to all employees who are employed on wages to do any skilled, semi-skilled or unskilled, manual, supervisory, technical or clerical work, provided the monthly salary drawn by an employee does not exceed Rs.

1,000 (under the West Bengal Act, the salary ceiling was Rs. 750). The coverage of the Act has thus been widened and brought in line with the employees' provident fund scheme. Salary means basic wages and dearness allowance only (overtime allowance, bonus or commission earnings are excluded).

An important recommendation made by the Select Committee has been accepted—if at the time of retirement, an employee is drawing a salary exceeding Rs. 1,000 a month, he will still be entitled to gratuity, in respect of the period he was employed on wages at less than Rs. 1,000 a month, on the basis of the wages received by him during that period, provided that such a period is not short of five years. The definition of "employee" came up for sharp criticism in Parliament since it does not cover teachers, workers employed by local bodies, transport workers, contract labour, construction workers and workers employed in hospitals and religious institutions. It also excluded administrative and

managerial staff even if their salary is less than Rs. 1,000.

To be eligible for gratuity, an employee must have been employed on a continuous service for at least five years. He will be deemed to be in continuous service if he has actually been employed during the preceding 12 months for at least 240 days in the case of a factory or other establishments and 190 days in the case of a mine. An important amendment, moved by a C.P.I. member was accepted by the Lok Sabha. The amendment said that even joining an illegal strike should not have the effect of interrupting the continuity of service of an employee and disqualifying him from gratuity. In accepting this amendment, the Centre has followed the Kerala pattern and not the West Bengal legislation, where the period of illegal strike interferes with the continuous service.

Gratuity will be payable to the eligible employees at the rate of 15

days' salary for every completed year of service or part thereof in excess of six months, provided that the amount of gratuity payable shall not exceed 20 months' wages (the ceiling was 15 months' wages under the West Bengal Act). The Select Committee felt that the higher ceiling would provide "an incentive to employees to work beyond 30 years of service". In the case of piece-rated employees, daily wages shall be computed on the basis of average of the total wages received by him during the preceding three months. This will, of course, exclude any overtime work. In a seasonal establishment, gratuity will be payable at the rate of seven days' wages for each season. Gratuity shall be payable to an employee: (a) On his superannuation (the age of retirement remains at 58 years). (b) On his voluntary retirement or resignation, provided that the employee has completed at least five years of service. (c) On his death or total disablement following an accident or disease (no qualifying period).

No gratuity will, however, be payable to an employee who has been dismissed for gross misconduct causing loss or damage to or destruction of the company's property; for any serious act of violence (riotous or disorderly behaviour); or for committing an offence involving moral turpitude punishable under the Indian Penal Code. This forfeiture section caused a lot of controversy in Parliament; most of the speakers felt that this clause should be scrapped. According to them, gratuity is a sort of deferred wages held in trust by the employer. The Labour Minister, however, turned down the suggestion and quoted recent judgments of the Supreme Court in support. (Delhi Cloth and General Mills and other cases. *Labour Law Journal*, 1969 II, page 755.)

A new clause has been added on the recommendation of the Select Committee, by which complete protection will be given to the gratuity amount from being attached by the execution of any decree or order of any court (just like provident fund). The State Governments have been authorised to appoint a controlling authority to whom an aggrieved employee can apply. The provision of gratuity for workers as a social security measure is a step in the right direction and has been welcomed by all concerned.

INVESTMENT

Shares Lack Lustre : Turnover Still Restricted

THE stock markets continue to have an uneasy time. After moving up and down in an indecisive fashion for nearly three weeks, the all-India index for variable dividend securities has declined to a new low for the year, which carries it quite close to its 1971 low recorded towards the end of November. The setback during the past week has been due more to the lack of fresh support than to any important selling. Conditions during the earlier part of the week appeared to be fairly steady as sellers were inclined to be reserved. But the markets have turned easy towards the week-end. With fresh support lacking, even small selling has been enough to depress prices. The volume of business has been poor throughout the week and activity has continued to be mainly professional in nature. While the markets have wound up the week at their worst level, the price pattern has been mixed. Losses, however, have outnumbered the gains.

The week's corporate news has continued to be fairly encouraging on the whole and quite a few companies—Ganges Manufacturing, Kesoram Industries, United Breweries, Kunal Engineering, Vulcan Insurance, Remington Rand, Tata Steel, and India Link Chain, to mention some names—have had a message of cheer for their respective shareholders. But the markets seem to have become rather immune to good corporate news, although individual shares do respond to some really good news. Reports of a fairly good increase in industrial production during the first four months of the year have also failed to enthuse the markets as the improvement has been restricted to a few selected industries made possible by an increased supply of raw material, and this has not had any appreciable impact on the overall economic and industrial tempo.

Besides, the markets are becoming increasingly sceptical about the improved trend in production being maintained in the face of growing industrial unrest and the likely setback in agricultural production because of the severe drought and floods. The developing power shortage is becoming another serious obstacle in achieving a faster rate of industrial growth. Uncertainty also continues about the

Government's industrial policy. There have been too many ministerial pronouncements recognising the pressing need for stepping up industrial production, but there is little evidence of practical measures to achieve the desired results. No less disturbing is the rising inflationary spiral which has made for increasing labour unrest with consequent adverse repercussions on production. With the consumers' cost of living index moving beyond the 238 mark, the Government will have to raise the dearness allowance to its employees, thereby imposing an additional burden on its finances, which are already under considerable pressure because of the large financial assistance for drought and flood relief. The economic situation thus continues to worsen and there is very little to suggest that the Government is really serious about resolving the crisis of confidence which has overtaken the business community and investors.

Gilt-edged securities have remained quiet, and turnover has been restricted. The 3 per cent Conversion loan 1986 has been quoted at Rs. 59.85. The State Government loans have received selective support. Turnover has been restricted.

The Calcutta stock market has remained featureless this past week. As a result, investment enquiries have declined, since operators are reluctant to extend their commitments. The statement made by the Central Minister of State for Finance, Mr. K. R. Ganesh, that the Government would bring forward a comprehensive legislation to curb the menace of black money has upset sentiment. Among engineering shares, Guest Keen Williams, Bihar Alloys and Sankey Wheels have been easier. Among jute shares, Budget-Budge, Ganges and Agarpara have receded. Among coal shares, South Karanpura have been transacted. Among paper shares, Titaghur, Tribeni Tissues and Orient have changed hands. Among miscellaneous shares, Indian Explosives, India Tobacco and Dr. Paul Lohmann have been easier. Among tea shares, Tezpur, Hasimara, Tengpani and Teesta Valley have been done.

In slow dealings, equities on the Bombay Stock Exchange have moved

irregularly during the earlier part of the week with a steady-to-hesitant tone and later developed a distinctly easier tendency on light but persistent selling, which was mostly in the nature of tired bull liquidation. Net changes over the week display a mixed price pattern, but minus signs have far outnumbered the plus signs. Cotton mill shares have ruled relatively steady due to the improved outlook for the industry because of the abundant supply of cotton and satisfactory realisation on cloth and yarn. Century, however, have been depressed on persistent selling induced by the new margin rule under which stockbrokers have to pay margin on combined sales and purchases in excess of a certain limit. The delay in the official sanction of the Company's proposal for bonus issue has also made for some anxiety. Steel shares have turned weak and have been marked down on moderate selling and lack of support. Engineering shares have made a mixed showing. Voltas have been an outstanding firm feature while Tata Engineering have registered a decline. Associated Bearings and Mahindra Ugine have ruled firm, but Motor Industries and Hindustan Aluminium have ended with moderate losses. Rayons have displayed a weak tendency but Century

Bank of Iran and the Middle East.

Enka have held firm. Automobiles have ruled easier. Cement shares have kept quietly steady. Among shipping shares, Scindia have firmed up on sustained support. Chemical shares have presented a mixed picture. Indian Organic and Synthetics and Chemicals have eased while Tata Chemicals, N.O.C.I.L. and Polyolefins have ruled steadier. Among miscellaneous counters, United Carbon and Ceat Tyres have recorded moderate gains.

The Madras stock market has witnessed narrow fluctuations during the past week, although some shares have met with selective support. Among planting shares, Nelliampathy and Peria Karamalai have met with enquiries while Manjushree have remained steady. Pullangode Rubber have also come in for attention. Textile shares have evoked selective interest. Mettur Beardsell and Madura Mills have been in demand. South India Viscose have received buying enquiries while Travancore Rayons have declined. In the sugar section, Deccan and E.I.D. have met with sustained interest while Aruna Sugar have declined on selling pressure. In the miscellaneous section, Aluminium Industries have receded due to the lack of interest while Dalmia Cement and Mettur Chemical have been bought. Engine Valves have been firm while Seshasayee Paper have been supported at the market rate. Bank shares have

been steady with Indian Overseas Bank gaining investors' attention.

cent and that of profit to paid-up capital from 22.16 per cent to 51.90 per cent. Indian Oil's market participation has increased further from 51.6 per cent to 54.2 per cent.

During the year, Indian Oil's three refineries in Gauhati, Barauni and Jawaharnagar (Gujarat) processed a total quantity of 6.72 million tonnes of crude oil, against 6.34 million tonnes in the previous year. Outlining the progress made in the refining field, the chairman, Mr. Ram Brahmam, told newsmen the other day that the Gujarat refinery was gearing itself to increase the throughput to 5.5 million tonnes. The refinery might undergo expansion by 1976 or the following year and the expansion programme might cost over Rs. 21 crores. The Barauni refinery would be expanded to take its capacity from 2.28 million tonnes to 3.4 million tonnes. The expansion which is estimated to cost Rs. 7 crores might be completed by the end of 1974. The Rs. 67.5-crore Haldia refinery, now under construction, is being financed substantially out of the Corporation's internal resources. This refinery is expected to go into production before the end of 1973. Preliminary work in respect of the north-west refinery proposed to be set up near Mathura with a capacity of 6 million tonnes, involving a cost of Rs. 160 crores, is in progress. The Corporation has also undertaken the work of extending technical collaboration to neighbouring countries.

The Corporation has fixed its sales target for 1972-73 at 16 million kilolitres valued at around Rs. 1,000 crores. The demand for petroleum products is expected to go up to 30 million kilolitres by 1973-74 and Indian Oil's market participation will increase to 56 per cent. The projected capital expenditure is Rs. 40 crores in 1972-73 and Rs. 55 crores in 1973-74.

The Corporation has signed an agreement with the Iraq National Oil Company for the import of 1.95 million tonnes of crude over a three-year period. The supply schedule is 425,000 tonnes till March 1973, 700,000 tonnes during 1973-74 and 825,000 tonnes during 1974-75. The agreement is said to mark a major breakthrough for Indian Oil in diversifying its sources of crude. The first shipment of the Iraqi crude is expected to arrive in Haldia by mid-October and the crude will be carried from there to Barauni through the pipeline.

EXCEL GLASSES

A New Venture

EXCEL Glasses Ltd, which has been licensed to manufacture annually 12,000 tonnes of glass bottles of various types, is expected to enter the market some time in October to raise Rs. 34 lakhs in equity shares of Rs. 10 each to meet part of the cost of the project. The Company proposes to install the latest type of furnace with imported oil burning equipment and also automatic I.S. machines. The furnace design will be obtained from Laidlow Drew and Co. of the U.K. If all goes well, the plant located in Allepey, will go into production in October 1973.

The project is estimated to cost Rs. 1.80 crores which will be met by the share capital of Rs. 70 lakhs, a foreign exchange loan of Rs. 34.60 lakhs from the I.C.I.C.I. and rupee loans of Rs. 65.40 lakhs from the I.F.C. and privately placed debentures of the value of Rs. 10 lakhs to be subscribed by the Unit Trust. The Company will have easy access to raw materials and it does not envisage any difficulty in marketing its products as there is no other glass factory in the region and there is assured demand from breweries and distilleries. The Company expects to have a turnover of about Rs. 1 crore and a gross profit of Rs. 28 lakhs for 1973-74. The turnover and gross profit for 1974-75 are estimated at around Rs. 1.34 crores and Rs. 38.75 lakhs, respectively. When in full production in 1975-76, the turnover and profit will be around Rs. 1.50 crores and Rs. 46.58 lakhs. The Company has an authorised capital of Rs. 1 crore made up of Rs. 75 lakhs in equity shares of Rs. 10 each and Rs. 25 lakhs in 9.5 per cent cumulative redeemable preference shares of Rs. 10 each. The issued capital will be Rs. 70 lakhs in equity shares.

POYSHA INDUSTRIAL

Sales Rise

IN his chairman's review for the year 1971-72, Mr. M. R. Ruia, said that the total sales of the entire group of Poysha Industrial Company Ltd—Povsha, Kaira Can Company and Colrige—excluding excise, were Rs. 989.29 lakhs, against Rs. 855.54 lakhs. Of this, Poysha's sales, excluding excise, amounted to Rs. 704 lakhs. (A fuller version of the chair

man's review appeared in last week's issue of *Capital*.) The Company's new factory, in Cochin has started production. It has received sanction from the Government for increasing the production of dry battery-cell metal, jackets and components in its existing units in Thana, Ghaziabad and Cochin. The licensed capacity of Colrige has also been increased. Substantial expansion has been sanctioned to the Kaira Can Company. The Company's collaboration with the American Can Company of New York is expected to be completed within two or three months. This will mark a turning point in the technique of can manufacture in India. The chairman expressed concern over the exorbitant increase in the price of tinplate, the production which is too low in India. The main Indian supplier of tinplate is Hindustan Steel which is working far below capacity. Out of a total order of 8,855 tonnes of tinplate, Poysha has received only about 3,020 tonnes

in irregular and piecemeal consignments.

JG GLASS

Share Offer

THE subscription list of the fully-underwritten issue of 300,000 equity shares of Rs. 10 each by Jg Glass Ltd will open on 18th September and close on 28th or earlier but not before 21st September. The proceeds of the issue will be utilised for financing partly the Company's modern automatic glass container manufacturing plant in Rishikesh in Uttar Pradesh with an oil-fired regenerative furnace of 35 tonnes a day capacity. The project involves a total capital expenditure of Rs. 1.29 crores, including Rs. 22.85 lakhs by way of working capital. The cost is proposed to be met by the share capital of Rs. 50 lakhs, long-term loans amounting to Rs. 50 lakhs and short-term

Indian Oil Corporation Sets New Records

NOT many public-sector undertakings are doing well, but Indian Oil Corporation occupies pride of place among the few that are. This is not all. Its performance can compare well with that of any well-run private enterprise. Indian Oil's latest report for the year ended March 1972 shows all-round impressive progress; only the dividend has been kept unchanged at 7 per cent—for the fifth year in a row. This is being done to conserve resources for financing new refineries and expanding other activities. The tax holiday enjoyed by the Corporation is over.

Sales of petroleum products by the Corporation have risen over the year by 17.8 per cent from 11.61 million kilolitres to 13.68 million kilolitres. Turnover has increased by 19.7 per cent from Rs. 720 crores to

Rs. 862 crores and the gross profit has registered an impressive rise of 84 per cent from Rs. 26.56 crores to Rs. 48.99 crores. After providing Rs. 12.05 crores (against Rs. 10.79 crores) for depreciation and Rs. 5 crores (against nil) for taxation, the net profit amounts to Rs. 31.94 crores, against Rs. 15.77 crores in the preceding year. The "phenomenal" increase in profits is attributed to "certain advantages" that the Corporation had during 1971-72 following the remedial action taken by the Government to set right several adverse and extraneous factors which had reduced the profits in 1970-71. After adjustments for these "extraneous factors", the net profit for 1971-72 amounts to Rs. 34 crores, against Rs. 23 crores in 1970-71. The ratio of gross profit to sales has improved from 3.7 per cent to 5.7 per

its net worth. It is understood that the Company was asked to submit a balance-sheet for the period from 1st January to 10th March, 1972, the date when the Government took over the management and this balance-sheet reveals the total net worth of the undertaking at Rs. 16.60 crores which comes to Rs. 6.45 a share. If the Company's assets are valued on replacement basis, it would be in the region of Rs. 80 crores or Rs. 90 crores.

It appears that the compensation fixed by the Government is arbitrary and is based on *ad hocism*. It must be remembered that it is the small shareholders who are hit hard by such low compensation. There are about 25,000 shareholders of the Company of which 22,000 small shareholders hold 50 per cent to 60 per cent of the shares. These small shareholders had invested their hard-earned savings in the shares of Indian Copper Corporation which was a poor man's blue chip. Thus the Government policy for paying compensation to nationalised companies has created uncertainty in the minds of investors and their confidence has been shaken. It is high time the Government took notice of this and announced its policy concerning payment of compensation.

The Bill to nationalise the Company provides for a compensation of Rs. 7½ crores which is far below

borrowings and deferred payment arrangements. If all goes well, the plant will go into commercial production by the end of 1972 or in early January. Full capacity is expected to be achieved in the very first year of operation. Barring unforeseen circumstances, the management expects to be able to declare a dividend for the first year of its operations.

CAWNPORE TEXTILES

Loss Incurred Again

THE working of Cawnpore Textiles Ltd for the 15 months ended March 1972 was adversely affected due to a cut in electricity supply and a strike by its workers for 14 days. The Company has incurred a net loss of Rs. 18.57 lakhs, against a loss of Rs. 4.34 lakhs in the previous year ended December 1970, after providing Rs. 18.22 lakhs (against Rs. 14.28 lakhs) for depreciation and Rs. 2.68 lakhs (against Rs. 5.60 lakhs) for development rebate reserve. The dividend has been passed over. The Company had paid a taxable ordinary dividend of 8 per cent for 1969. Sales rose from Rs. 3.89 crores to Rs. 5.11 crores. The working results for the current year are expected to improve considerably.

DALHOUSIE JUTE

A Prosperous Year

THE result of Dalhousie Jute Co. Ltd for the year ended March 1972 has been fairly satisfactory. Sales have improved from Rs. 4.82 crores to Rs. 6.70 crores and the profit has risen sharply from Rs. 5.86 lakhs to Rs. 36.70 lakhs, after providing Rs. 10.36 lakhs (against Rs. 10.58 lakhs) for depreciation and Rs. 3,623 (against Rs. 1.30 lakhs) for taxation in respect of previous years. In view of the uncertain prospect of the jute industry for the current year and the restriction imposed by the Industrial Finance Corporation of India, the directors have not recommended any further payment of dividend on the ordinary share capital of the Company. The taxable interim dividend of 10 per cent on ordinary shares declared in March last has been treated as the final dividend. This offers a yield of 17.2 per cent at the present price of Rs. 58 a share of Rs. 100 each. The Company had paid no dividend for the previous year. A sum of Rs. 4.03 lakhs has been transferred from statu-

tory development rebate reserve. Allocations include Rs. 1 lakh (same) for debenture redemption reserve and Rs. 14.15 lakhs (against nil) for general reserve.

INDIA JUTE

Handsome Rise in Profit

THE trading results of the India Jute Co. Ltd for the year ended March 1972 are satisfactory. Sales have improved from Rs. 8.06 crores to Rs. 10.42 crores and the pre-tax profit has risen from Rs. 37.14 lakhs to Rs. 37.24 lakhs, after providing Rs. 14.88 lakhs (against Rs. 15.58 lakhs) for depreciation and Rs. 2.20 lakhs (against Rs. 16,000) for development rebate reserve. In view of the Company's better performance, the taxable ordinary dividend has been raised from 8 per cent to 12 per cent which will be paid out of general reserve. This offers a yield of 13.6 per cent at the present price of Rs. 11.06 a share of Rs. 12.50 each. A sum of Rs. 6.40 lakhs has been transferred from development rebate reserve. Allocations include Rs. 56.10 lakhs (against Rs. 19 lakhs) for taxation, Rs. 70,273 (against nil) for capital reserve and Rs. 36.73 lakhs (against Rs. 21.15 lakhs) for general reserve. After making other adjustments Rs. 1,182 is carried forward, against Rs. 10,651 brought in.

SIEMENS

MKV Capacitors

THE MKV capacitors developed by Siemens—metalised plastic capacitors with low-loss dielectric—are suitable for sinusoidal and non-sinusoidal alternating currents. The dielectric is of polypropylene. Paper with aluminium evaporated onto both sides is used as an electrode. This design permits complete saturation of the capacitor with impregnating material, thus ensuring high corona onset voltages. Since the paper does not lie within the electric field, it does not compromise the low loss factor of the plastic. Polypropylene has a very high dielectric strength. Furthermore, the thin metal coatings ensure reliable self-healing. These two facts permit dimensions to be kept small. Due to the low losses, self-heating is extremely low. In addition to the technical advantages of MKV capacitors, they bring in many cases quite a considerable cost advantage.

ENGINE VALVES

Bigger Turnover

THE total turnover of Engine Valves Ltd for the year ended March 1972 amounted to Rs. 171.31 lakhs, compared with Rs. 143.08 lakhs, showing an increase of about 19.7 per cent. The profit amounts to Rs. 58.28 lakhs, after providing depreciation of Rs. 15.05 lakhs. This compares with the previous year's profit of Rs. 56.99 lakhs, after providing Rs. 12.81 lakhs for depreciation. After providing Rs. 3.74 lakhs (against Rs. 2.37 lakhs) for development rebate, Rs. 2.21 lakhs (against Rs. 2 lakhs) for donations and Rs. 29.50 lakhs (against Rs. 29.50 lakhs) for taxation there is a net profit of Rs. 22.82 lakhs (against Rs. 27.80 lakhs). Adding to Rs. 22.82 lakhs a sum of Rs. 60,000 transferred from development rebate, there is a total sum of Rs. 23.42 lakhs. Out of this, general reserve gets Rs. 19.10 lakhs (against Rs. 25.29 lakhs). The interim dividend on preference shares and the interim equity dividend of 7.5 per cent amounted to Rs. 4.32 lakhs. The final preference dividend and the final equity dividend of 8.5 per cent will absorb Rs. 4.88 lakhs which will be paid out of general reserve.

The directors state in their report that they have a proposal to issue bonus shares in the ratio of 4:5 to the existing equity shareholders. It is reported that the Company has been granted an industrial licence for substantial expansion from 3 million to 5 million valves a year. The total capital cost of the project is estimated at Rs. 1.18 crores.

GANGES MANUFACTURING

Good Results

THE Ganges Manufacturing Co. Ltd proposes to increase the dividend on the equity shares from 7.5 per cent to 12.5 per cent for the year ended March 1972. The working results for the year are encouraging and show an all-round increase in production, sales and profits. Sales have moved up to Rs. 875.71 lakhs from Rs. 700.81 lakhs in 1970-71, a rise of Rs. 104.90 lakhs or about 15 per cent. The gross profit has increased to Rs. 38.6 lakhs from Rs. 10.44 lakhs in the previous year. Depreciation takes away Rs. 15.26 lakhs, against Rs. 15.42 lakhs and a sum of Rs. 84,000 (against Rs. 34,336) is transferred to development reserve. The tax provision is Rs. 11 lakhs (against nil) and general re-

serve gets Rs. 11.5 lakhs, against a withdrawal of Rs. 7.10 lakhs in the previous year

ESTRELA BATTERIES

A Good Year

ESTRELA Batteries has turned out substantially improved results for the year ended March 1972. The Company has made a gross profit of Rs. 33.70 lakhs on a turnover of Rs. 6.29 crores, against a loss of Rs. 2 lakhs on a turnover of Rs. 4.91 crores. The dividend has been maintained at 12 per cent, including a *pro rata* dividend on new shares. After providing Rs. 15.69 lakhs (against Rs. 7.90 lakhs) for depreciation and Rs. 8.13 lakhs (against Rs. 41,000) for development rebate reserve, the net profit amounts to Rs. 9.88 lakhs, against a net loss of Rs. 10.31 lakhs in the preceding year. After adjustments, a sum of Rs. 10.80 lakhs (against nil) has been transferred to general reserve. The equity and preference dividends absorbing Rs. 6.14 lakhs will be paid out of general reserve. Under an agreement for a loan of Rs. 1 crore, the Company has so far got a loan of Rs. 79 lakhs from the I.F.C.I. to finance its replacement and expansion programme. The entire programme is expected to be completed in the current year.

INDIA UNITED MILLS

Prospects Improve

THE chairman of India United Mills, Mr. D. J. Madan, told the shareholders' annual meeting that the Company, which had been in the red for long, had now started making a profit. The Company is expected to wind up the year 1972 with some profit, after providing depreciation for the year and interest payments of Rs. 1.80 crores on loans from the Central and the Maharashtra Governments. During the first five months—January to May—the Company incurred a loss of Rs. 75 lakhs, after making necessary provision for depreciation. But during the next three months it made a profit of Rs. 22.50 lakhs. The Company expects to make a profit of about Rs. 10 lakhs to Rs. 15 lakhs a month during the remaining period. The Rs. 5-crore modernisation programme which is expected to be completed by 1974, would enable the Company to regain its place among the modern and profit-making mills, earning a pre-tax profit of about Rs. 2 crores a year. The Company's sales of cloth and yarn

during the first six months are placed at around Rs. 11.67 crores, against Rs. 8.30 crores in the same period last year.

DAVANGERE COTTON

Sales Up but Profit Down

DESPITE an increase of about 12.8 per cent in sales from Rs. 4.67 crores to Rs. 5.27 crores, the gross profit made by Davangere Cotton Mills during the year ended March 1972 is down from Rs. 67.27 lakhs to Rs. 62.39 lakhs. The dividend, however, has been kept unchanged at 12 per cent. After providing Rs. 36.04 lakhs (against Rs. 35.91 lakhs) for depreciation, Rs. 5.63 lakhs (against Rs. 1.81 lakhs) for development rebate reserve and Rs. 11.75 lakhs (against Rs. 19.30 lakhs) for taxation, the net profit for 1971-72 amounts to Rs. 8.97 lakhs, against Rs. 10.25 lakhs in the preceding year. The equity and preference dividends absorb Rs. 10.35 lakhs, leaving a sum of Rs. 24,673 to be carried forward, against Rs. 1.84 lakhs brought in. The Company's working during the year was adversely affected by a prolonged strike.

ANGLO-INDIA JUTE

Dividend Doubled

THE Anglo-India Jute Mills Co. has done well during the year ended March 1972. Sales are up from Rs. 12.08 crores to Rs. 15.89 crores, registering an increase of 31.5 per cent and the tonnage produced and sold was 47,189 which accounted for an increase

of 11 per cent over the previous year. The Company has earned a pre-tax profit of Rs. 55.32 lakhs, against one of Rs. 34.64 lakhs, after providing Rs. 30.44 lakhs (against Rs. 29.50 lakhs) for depreciation. In view of the Company's better performance the taxable ordinary dividend has been doubled to 15 per cent, absorbing Rs. 8.86 lakhs, which will be paid out of the revenue reserve account. This offers a yield of 12.5 per cent at the present price of Rs. 120 a share of Rs. 100 each. Allocations include Rs. 68 lakhs (against Rs. 24.75 lakhs) for taxation and Rs. 7.50 lakhs (against Rs. 1.25 lakhs) for development rebate reserve. After transferring Rs. 6.40 lakhs (against Rs. 2.04 lakhs) from development rebate reserve and making other adjustments, there is a debit balance of Rs. 13.68 lakhs which is transferred to revenue reserve.

CENTRAL INDIA SPINNING

Sales and Profit Rise

THE Central India Spinning and Weaving Mills, popularly known as Nagpur Mills, has reported substantially improved results for the year ended June 1972. According to the very brief preliminary figures, sales at Rs. 13.15 crores show an increase of about 16.5 per cent over the previous year's figure of Rs. 11.29 crores and the gross profit has recorded an almost five-fold increase from Rs. 9.61 lakhs to Rs. 47.82 lakhs. After providing for depreciation in respect of 1971-72, estimated at around Rs. 27 lakhs, the balance has been utilised to absorb a part of the arrears of depre-

KINNISON JUTE MILLS : A GOOD YEAR

THE working of the Kinnison Jute Mills Co. Ltd for the year ended March 1972 shows a marked improvement over the previous year, mainly due to favourable trading conditions. During the year there was a big demand for Indian jute goods in overseas markets because of the disruption in supplies from East Bengal (now Bangladesh), which used to meet a substantial portion of overseas requirements of jute goods, with the result that almost all varieties of Indian jute goods fetched attractive prices during the major part of the year. Sales of carpet-backing cloth, which is a major item of production of the Com-

pany, recorded a marked rise. Sales are up from Rs. 6.53 crores to Rs. 9.30 crores and the Company has earned a profit of Rs. 49.11 lakhs, against a loss of Rs. 29.35 lakhs in the previous year, after providing Rs. 16.13 lakhs (against Rs. 16.26 lakhs) for depreciation. The dividend has been skipped. A sum of Rs. 1 lakh is allocated to the sinking fund. After making adjustments, there is a balance of Rs. 45.03 lakhs which goes to offset part of the deficit of Rs. 87.12 lakhs brought forward from the previous year, leaving a net loss of Rs. 42.09 lakhs to be carried forward.

ciation of the past year which amounted to Rs. 1.36 crores at the end of June 1971. Both preference and equity dividends have again been skipped. In view of the heavy arrears of depreciation and of preference dividends for four years, there is little chance of the Company resuming payment of the equity dividend for another few years. The last equity dividend paid was for 1954-55.

JYOTI

Results Disappoint

JYOTI has reported disappointing results for the year ended March 1972. Even though sales are higher at Rs. 6.67 crores, against Rs. 6.30 crores during 1970-71 which covered a period of 15 months, the gross profit has declined sharply from Rs. 43.13 lakhs to Rs. 20.83 lakhs. On a comparable annual basis, the gross profit shows a fall of about 40 per cent despite a 33 per cent rise in sales. The ratio of profit to sales has declined from around 6.8 per cent to 3.1 per cent. The equity dividend has been skipped; the Company had paid a dividend of 12 per cent for 1970-71. The poor results are attributed to the all-round rise in costs of production and lower margins on goods supplied to Government agencies and electricity boards. The prospects for the current year are considered better. Production during the first three-and-a-half months is valued at around Rs. 1.70 crores, against Rs. 1.38 crores in the corresponding period of last year. The profitability also is stated to be better.

LINGAPUR ESTATES

Loss Incurred

THE working of Lingapur Estates Ltd for the year ended March 1972 has resulted in a loss of Rs. 1.02 lakhs, after providing depreciation and taxation of Rs. 20,000. This compares with the previous year's profit of Rs. 1.62 lakhs, after providing depreciation and taxation of Rs. 1.89 lakhs. The surplus brought forward from the previous year is Rs. 11,814 to which is added Rs. 2 lakhs transferred from general reserve, making a total of Rs. 2.12 lakhs. After deducting from this surplus the loss of Rs. 1.02 lakhs, there is a balance of Rs. 1.10 lakhs. Out of this, the interim dividend of 5 per cent absorbed Rs. 21,305 and the final dividend of 7 per cent

accounts for Rs. 29,827. The balance of Rs. 58,888 is being carried forward.

RANE (MADRAS)

Expansion Plan

FOR the year ended March 1972, Rane (Madras) Ltd has earned a profit of Rs. 14.26 lakhs, after providing Rs. 9.75 lakhs for depreciation, Rs. 36,912 for development rebate reserve and Rs. 21.75 lakhs for taxation. This compares with the previous year's profit of Rs. 13.88 lakhs, after providing Rs. 8.51 lakhs for depreciation, Rs. 2.49 lakhs for development rebate reserve and Rs. 17 lakhs for taxation. Out of the profit, the interim dividend on "A" class shares and on 6 per cent preference shares and the interim equity dividend of 6 per cent absorbed Rs. 3.61 lakhs. The balance of Rs. 10.65 lakhs is transferred to general reserve. The final preference dividend and the final equity dividend of 8 per cent will absorb Rs. 4.71 lakhs which is to be paid out of general reserve.

The Company had made an application to the Government of India in December 1970 for a licence to manufacture 60,000 units of steering gear assemblies a year. A letter of intent has been granted and the Company has entered into an agreement with Burman and Sons Ltd of the U.K. for technical collaboration. This is awaiting the approval of the Government of India.

SHREE SYNTHETICS

Change in Financial Year

THE board of directors of Shree Synthetics Ltd has decided to change the closing of financial year of the Company from 31st March to 30th June, and consequently its accounts will now be prepared for a period of 15 months—April 1971-June 1972.

LARSEN AND TOUBRO

Marine Unloader for Kandla

A MARINE unloader is soon to be installed at Kandla port for rapid unloading of raw materials for the fertiliser industry. The unloading rate is 500 tons an hour. Ships will thus not have to wait in the harbour for prolonged periods of up to a month while they are being unloaded. The marine loader is of

Buhler design and will be supplied, erected and commissioned by Larsen and Toubro Ltd. Incorporating advanced technology, it will be the first of its kind in the country. More such loaders are expected to be set up at major Indian ports to reduce unloading time from weeks to days.

GENERAL INVESTMENT

Dividend Repeated

THE General Investment and Trust Co. Ltd has earned a profit of Rs. 26,672 for the year ended February 1972, against Rs. 45,995 in the previous year, after providing Rs. 5,000 (against Rs. 23,213) for taxation. The taxable ordinary dividend of 7½ per cent has been maintained, absorbing Rs. 16,875 which will be paid out of general reserve. This offers a yield of 7.2 per cent at the present price of Rs. 104 a share of Rs. 100 each. The entire profit is transferred to general reserve. The Company's portfolio is representative of investments quoted on the Calcutta and Colombo Stock Exchanges, with the exception of certain shares costing Rs. 1.18 lakhs for which no quotation is available. The market value of quoted local investments as at the end of February 1972 was Rs. 3.74 lakhs, against the book value of Rs. 3.62 lakhs, and the market value of Ceylon investments on conversion at the rate of exchange current on that date was Rs. 40,633, against the book value of Rs. 71,522.

AMALGAMATED ELECTRICITY

Setback Suffered

AMALGAMATED Electricity has reported a setback in its working results for the year ended March 1972. Sales of energy are lower at Rs. 2.82 crores, against Rs. 2.85 crores in the preceding year, and the gross profit has declined from Rs. 46.25 lakhs to Rs. 42.08 lakhs. Even so, the dividend has been raised from 11 per cent to 12 per cent. The provision for depreciation is Rs. 11.96 lakhs, against Rs. 15.04 lakhs. After making some adjustments, a sum of Rs. 8.25 lakhs (against Rs. 13 lakhs) has been transferred to general reserve, Rs. 9.75 lakhs (against Rs. 11.51 lakhs) to taxation and other statutory reserves and Rs. 14.39 lakhs (against Rs. 15.60 lakhs) to dividend reserve. The equity and preference dividends will absorb Rs. 16.43 lakhs and will be paid out of reserves.

COMMODITIES

Expert Team Lays Stress on Irrigation for Raising Raw Jute Output

THE Central team of experts has reportedly approved of the agricultural plan submitted by the West Bengal Government to relieve farmers of their absolute dependence on congenial weather conditions, which often elude them, causing a lot of dislocation not only to the rural economy but also to the industrial set-up. The scheme provides for multiple-cropping, the growing of quality jute and cotton in the Sunderbans and other coastal regions of the State. Expressing its opinion on the jute cultivation scheme under consideration, the team has appreciated the imperative need for stabilising jute production, particularly in the olitorius tracts. It has acknowledged in the most unambiguous terms that this stabilisation in acreage and output can only be ensured through the provision of adequate irrigation facilities during the sowing and early growth-stage of the plants in the drought-susceptible areas of the State. Experts say that with surface and subsoil water available in abundance in the zones, the production of jute in ample quantities and of the appropriate grades can be ensured by arranging casual irrigation of the sown areas during the early stages, particularly when rain fails. The team advocates that rather than leaving the task of growing quality jute "to the vagaries of nature", in an "area where irrigation facilities can be easily developed," it is preferable to depend on the latter.

Useful Measures

Against an optimum annual output of some 3.5 million bales in West Bengal, production was of the order of 3.37 million bales in 1969-70 and 2.662 million bales in 1970-71. The special measures taken under several Centrally-sponsored schemes like the jute package programme, foliar spraying of urea and subsidised supplies of certified jute seeds, besides congenial climatic conditions, proved helpful in stepping up the output to 3.442 million bales in 1971-72.

Jute grown in the State consists of two types, olitorius and capsularis.

The State is classified into three distinct zones: More than 90 per cent of the soil under the fibre in Zone A in Murshidabad, Nadia, 24 Parganas, Hooghly, Howrah, Midnapore, Bankura, Burdwan, Birbhum and Purulia is under the olitorius variety. An even percentage of the total coverage in Zone B in the districts of Darjeeling, Jalpaiguri and Cooch-Behar is under the capsularis type. The percentage is roughly in the ratio of 65 for capsularis and 35 for olitorius in Zone C in Maldah and Dinajpur districts. On average, Zone A contributes 60 per cent of the acreage and 70 per cent of the output, while Zone B accounts for 21 per cent of the area and 16.6 per cent of production and Zone C provides 19 per cent of the former and 13.4 per cent of the latter. It is interesting to note that at least 80 per cent of the State's olitorius output comes from Zones A and C.

The expert team has endorsed the State's case for adequate Central assistance for the provision of minor irrigation facilities in the dry areas to ensure the continuity of jute-growing activities. Emphasising the chronic problem of unemployment in West Bengal, the team has remarked that an earlier sowing of jute will also help timely interculture and related operations in the fields, providing additional employment to some 60,000 persons at 250 mandays a year.

Gunnies Firm

After opening on a hesitant note, the Calcutta gunny market staged a moderate recovery on broadening offtake mainly by shorts and shippers for ready and near positions. Fresh enquiries and bookings were negligible but covering interest against previous contracts appeared to be well-sustained after a pretty long interval. The initial hesitancy was attributed to the report that Bangladesh had set an export target of 500,000 tons of jute goods for the current season. The *Daily Telegraph* report that Pakistan had been briskly

procuring its requirements of raw jute, hides and skins and other industrial raw materials and end-products from Bangladesh through third countries, like Burma and Sri Lanka, mainly to run its industries to capacity levels induced some caution. But the settlement of the dispute with bargemen and the abandonment of the close-out dates procedure in regard to end-August loaders paved the way for brisk shipments, augmenting the offtake by shorts and shippers against their earlier deals. It helped in a reversal of the trend, producing a snowball impact on prices. At the lower levels there was a moderate flow of overseas and internal enquiries and business in spite of the fact that both mills and holders turned reluctant to discount prices any further. As Dacca was practically booked to capacity for the first half of the season, and with the closure of the Adamjee jute mills—the largest in the world—for about three weeks now, shippers were obliged to tap Calcutta for the procurement of their immediate requirements in spite of the rising price trend. A moderate turnover was reportedly done with the Middle East and some African countries. The renewal of the Indo-Sudanese trade agreement, providing for an increase in the turnover of bilateral trade, including jute goods and cotton, also helped in improving the outlook. The reported increase in the consumption of burlap in the U.S.A., by some 3 million yards over the near-time low to 30 million yards in July, aroused hopes of an early revival of U.S. interest in Indian hessian among operators in Clive Row. They believed that the high prices and difficult availability of jute goods so far had forced U.S. bag-makers and other industrial consumers to live on their stocks and resort to the use of second-hand reclaimed bags and substitutes. As they could not entirely dispense with the use of jute goods, the local trade and industry thought, overseas consumers would soon enter the market in a big way to replenish their extremely depleted stocks. The same considerations might induce Russia and other European countries to book their seasonal requirements on extended delivery schedules with the Indian mills and operators. In the hedge market, sentiment was governed by the trend in the spot market. B Twills for November delivery scored handsome gains from day to day after moderate fluctuations on hectic bear-covering and a tight squeeze by the bulls. Turnover was moderate and the closing undertone was pretty firm.

Fibre Steady

The raw jute market opened on an easier note with a loss of 50 paise a maund over the previous week-end level of Rs. 54 a maund, f.o.r. Calcutta ready, basis Assam Bottoms, due to the continuing lack of interest from mills and mill agents in the offers of ready and near-delivery fibre. At the lower levels, some interest developed among the consumers of quality grades, helping the prices to hover around the same level. In spite of the clearance of the transport bottleneck during the week, easing the flow of fibre from up-country markets to Calcutta and mill stations, which was likely to have produced an adverse impact on the price trend, there was no decline in the prices as the arrivals were promptly absorbed by the trade and industry. The trade, in particular, turned exceptionally keen to lift substantial lots of jute from the local market to meet their end-August settlement requirements. The report that agency prices had been ruling much above Calcutta parity levels also influenced sentiment. Worried over the overriding problem of finding an adequate supply of fibre for running the mills to capacity levels during the season, and the rather depleted stocks of fibre, mills started absorbing suitable offers not only for their immediate consumption but also for replenishing their depleted inventories. It was felt that imports from Bangladesh or Thailand, when allowed on a massive scale, would not be cheaper. Yet another report that substantial lots of fibre from Bangladesh were flowing to Pakistan through third countries like Sri Lanka and Burma reduced the prospects of India getting ample supplies from that source. Turnover was moderate and the closing undertone was steady.

PLANTATIONS

Faster Growth Needed

Speaking at the annual conference of the United Planters' Association of Southern India in Coonoor a few days ago, Mr. Theru K. J. Tanna, chairman of the Planters' Association of Tamil Nadu, complimented the Government for its decision to continue to leave plantations out of the purview of land ceiling laws. This decision is bound to give fillip to the industry which was in need of such an incentive for its growth. It is to be hoped that this decision will be allowed to remain undisturbed to ensure the growth of the plantations industry. Mr. Tanna emphasised that to preserve the economic viability of the industry, expansion and growth of individual units to sizes capable of supporting modern management and agricultural practices was necessary. If plantations are to survive rising costs and stagnant prices, they must necessarily produce a larger volume of crops. Internal consumption of certain commodities, especially tea, is rising at a much faster rate than production, thus leaving a wide production gap. In tea it is estimated that to keep exports at current levels a growth rate of 3 per cent is necessary. Where is this extra produce to come from? Necessarily, it has to come from increased acreage as many units are already on the point of reaching saturation point. Besides, as the producer of crops for an international market, the plantations industry faces severe competition from growers the world over. Any attempt to restrict the growth of plantations, thus making them economically less viable, will

be reflected in India's export performance.

In his presidential speech, Mr. A. D. Peacock observed that no industrialist or business man could bury his head within the four walls of his factory or office and say business must go on as before. It was only realistic for him to recognise this fact and apply his mind to the problems of poverty and social justice. The planters should not look upon economic activities as ends in themselves; they must subserve a social purpose which is the well-being of the people. Against this background, the U.P.A.S.I. president referred to the new activities of the Association in the past one year. He said that the Association, which had been concerned with the relatively poor production levels of small growers, had initiated a pilot project in the Nilgiris on a small scale with a view to making an intense field study of small grower indebtedness, field practices, knowledge transfer system, standards of processing and efficiency of marketing. The objectives of the scheme, Mr. Peacock said, were to help the small grower to be self-reliant, achieve higher earning levels and create the necessary environment for the easier absorption of knowledge about modern technology and agricultural management. He felt that the survey, which was coming to a close, would produce a model for all agricultural development processes in the country.

Mr. Peacock also referred to the introduction by the Association of the comprehensive labour welfare scheme on a pilot project basis on three estates in the Nilgiris. The scheme covers workers' health, nutrition, environmental and personal hygiene, occupational health, preventive medicine, child development, craft training, leisure time activities and aspirational patterns. Discussing the progress of the plantation industry in the last quarter of a century, he said it had earned Rs. 3,558 crores in terms of foreign exchange for the country. Taking into account rubber production worth Rs. 328 crores, which would otherwise have had to be imported, Mr. Peacock said, the total earnings or savings in foreign exchange amounted to Rs. 4,000 crores. The production of tea since 1947 had increased from 227 million kilograms to 433 million kilograms, that of coffee from 16,054 tonnes to 110,000 tonnes, and of rubber from 14,680 tonnes to 101,210 tonnes. "The Green Revolution in plantations had come much earlier and is a sustaining and continuing feature", Mr. Peacock said.

Life Insurance Corporation of India

Statement by Shri K. R. Puri, Chairman, at the One Hundred and Ninety-Fourth Meeting of the Members of the Life Insurance Corporation of India held in Bombay on August 31, 1972.

I have the pleasure to place before you the Statement of Accounts and Annual Report of the Life Insurance Corporation of India for the year ended March 31, 1972.

Shri T. A. Pai, our previous Chairman, resigned on March 27, 1972 to seek election to the Rajya Sabha. As you are aware, Shri Pai has since joined the Union Cabinet as Minister for Railways. I should like to take this opportunity of conveying, on behalf of the Board as well as on my own, our warm congratulations to Shri Pai on his new assignment and wish him success. I should also like to pay to Shri Pai sincere tributes in which, I am sure, you will also join me, for the dynamism in the entire outlook, approach and purpose he brought to bear upon the working of the Life Insurance Corporation of India during his tenure of about two years. His biggest contribution was that he enabled us to rediscover our latent capacities and potentialities and to apply them towards the growth and development of our vast organisation.

The other changes in the Board were that Shri N. V. Nayudu and Shri M. V. Sohoni, who were our Managing Directors, retired during this period. The Board places on record its profound appreciation of the valuable services rendered by them.

The year turned out to be an eventful one for the country in more

respects than one. On the political plane, the country went to the polls in many of the States and ruling Congress Party emerged as the largest majority party, which meant an end to the political uncertainties. Secondly, the year saw the country winning, under the able and inspiring leadership of our Prime Minister, Shrimati Indira Gandhi, the war with Pakistan. The Agreement signed recently at Simla by our Prime Minister and the President of Pakistan will, let us hope and pray, usher in a new era of goodwill and cordial neighbourly relations between the two countries, and thus put an end for ever to the tragic events which had bedevilled the relations between them for the past 25 years.

On the economic front, the country had no doubt to go through gruelling conditions in the shape of serious floods and cyclones as also severe strain of sustaining as many as 10 million refugees from East Pakistan, but basically sound and resilient as our economy is, it has been able to absorb these shocks. Let us hope that the years to come will witness the growth and development of our economy at a still faster pace so that the nation's avowed social, economic and political objectives are attained more quickly.

New Business :

The Corporation had achieved a real breakthrough in new business

in 1970-71 when it did a business of Rs. 1303 crores compared to a new business of Rs. 1030 crores in 1969-70. In the year 1971-72 this progress was further accelerated the new business completed in this year was Rs. 1639 crores. The increase in new business over the last two years has been of the order of 60 per cent compared to 47 per cent increase for the Corporation between the period 1963-64 and 1969-70. There has been a considerable rise also in the number of new policies issued, representing a greater spread of insurance. Whereas the number of policies issued in 1969-70 was 14.01 lakhs, in 1970-71 it rose to 16.16 lakhs and in 1971-72 to 19.01 lakhs. Out of the year's total new business, 12.69 lakh policies were issued on the lives of persons insuring for the first time.

Rural Business :

In keeping with the objectives of carrying the benefits of life insurance to the millions of our countrymen who live in the rural areas, the Corporation has been laying more and more emphasis on the expansion of its business in the rural areas. In the awareness that the problems of our country are essentially of the masses whose demands for social justice brook no delay, a number of important steps have already been taken to ensure that the weaker sections of our society are increasingly brought under the protection of life insurance. Among these steps, men-

tion may be made of introductions of non-medical schemes, removal of extra premiums on occupational hazards, introduction of Centenary Policy, scheme for collection of premia through selected Post Offices in rural areas etc.

During the year, 5.99 lakh policies (i.e. 31.6 per cent of the total number of policies) assuring Rs. 376 crores (23.0 per cent) were issued to people residing in the rural areas. These compare favourably with 5.07 lakh policies (i.e. 31.4 per cent) and Rs. 296 crores sum assured (22.9 per cent) of the previous year. Although LIC's achievements in this direction have no doubt been noteworthy, yet, considering the urgent needs of the country as also the vast potential that still remains untapped in the rural areas, we, in the Corporation, have an inescapable responsibility towards further and faster move in this direction.

Non-Medical Business :

During the year 9,81,915 policies (51.8 per cent of the total number of policies issued in India) assuring Rs. 397.46 crores (24.2 per cent of the total new sums assured in India) were issued under the non-medical schemes.

Size of Policy :

The average sum assured per policy (excluding Group Insurance Business) increased during the year to Rs. 7,937 from Rs. 7,574 of the previous year. While 11.99 lakhs new policies issued in the year were for sums assured between Rs. 1,000 and Rs. 5,000, the corresponding figure for 1970-71 was 11.11 lakhs policies.

Group Insurance Schemes :

During the year 1.42 lakh new lives were covered under Group Insurance and Superannuation Schemes for a total sum assured of Rs. 131 crores (as against 72,000 lives and Rs. 79 crores sum assured in 1970-71). During the year New Annuities amounting to Rs. 78 lakhs per annum were effected with a yearly premium payable thereunder of Rs. 2.42 crores (as against New Annuities amounting to Rs. 70 lakhs per annum with a yearly premium of Rs. 2.00 crores in 1970-71).

As you are aware, the Corporation took a number of steps during the year with a view to achieving faster pace of development of Group Insurance and Superannuation Schemes business. A Group and Superannuation Schemes Department was set up at the Central Office with Regional Centres at Ahmedabad, Bangalore, Bombay, Calcutta, Hyderabad, Kanpur, Madras, New Delhi and Poona. The commission rates under the One-Year Renewable Group Term Assurance Plan and Level Group Term Assurance Plan were revised. It was also decided to allow servicing commission subject to certain conditions at the time of renewal of the scheme. Further, the premium and annuity rates under the Deferred and Immediate Annuity Plans offered under Group Insurance and Superannuation Schemes were revised with effect from 1st March 1972. Besides, the underwriting procedure under the One-Year Renewable Group Assurance Plan was simplified. All these incentives, it is hoped, would motivate the agents to take greater interest than hitherto in the sale of group business.

Salary Savings Scheme :

Under the Salary Savings Scheme, the Corporation issued 5,84,490 policies in India during the year assuring Rs. 331.68 crores as against 4,86,113 policies assuring Rs. 252.06 crores of the previous year. The Salary Savings Scheme is operating for State Government employees in as many as 12 States, namely, Andhra Pradesh, Gujarat, Haryana, Himachal Pradesh, Kerala, Maharashtra, Mysore, Orissa, Punjab, Rajasthan, Tamil Nadu and Uttar Pradesh. The Scheme also operates for non-gazetted employees in Central Government Offices throughout India. In the working of the Scheme in some areas and organisations, certain problems, however, crop up from time to time, but the Corporation is fully conscious of them and is taking all possible steps to iron them out.

Business in force :

The total ordinary life insurance business, other than in Pakistan and Bangladesh, in force as on 31st March 1972 was Rs. 8,202 crores under 157.99 lakh policies, out of which Rs. 8,082 crores under 157.11 lakh policies represent the business

in force in India and Rs. 120 crores under 0.88 lakh policies constitute business in force outside India. The total ordinary life business in force as at the end of the previous year i.e. 1970-71 was Rs. 7,067 crores under 147.85 lakh policies. The increase in 1971-72 over 1970-71 represents a ratio of 16.1 per cent in sum assured with bonus and 6.9 per cent in number of policies.

Lapse Ratio :

The Corporation continues to maintain improvement in the lapse ratio. The ratio of lapses to mean life insurance business in force declined further during the year under review to 5.0 per cent from 5.2 per cent in 1970-71, 5.9 per cent in 1969-70, 6.3 per cent in 1968-69 and 7.0 per cent in 1967-68. While the declining trend is satisfactory, let me assure you that the Corporation is determined not to relax its efforts to ensure that its business measure up to the highest standard and quality.

Life Fund :

During the year, the Life Fund increased by Rs. 242 crores from Rs. 1825 crores as at 31st March 1971 to Rs. 2067 crores as at 31st March 1972.

The total assets of the Corporation increased by Rs. 256 crores from Rs. 1989 crores as at 31st March 1971 to Rs. 2245 crores as at 31st March 1972.

Income and Expenses :

The total income of the Corporation for the year amounted to Rs. 448.99 crores made up of Rs. 338.55 crores of premium, Rs. 118.94 crores of interest, dividends, rents (gross), less income-tax thereon Rs. 14.31 crores, and Rs. 5.81 crores of miscellaneous income. The increase in premium income over the previous year was Rs. 46.19 crores. As against this, the amount of total benefits paid to policyholders was Rs. 106.65 crores, expenses of management Rs. 94.27 crores and miscellaneous outgo Rs. 0.77 crores. The gross and net rates of interest realised on the mean Life Insurance Fund were 6.29 per cent and 5.54 per cent respectively as against 6.25 per cent and 5.73 per cent respectively in the previous year.

During the year ending 31st March 1971, we received an amount of Rs. 3.90 crores by way of refund of income-tax relating to earlier year which increased the net interest rate of that year. Without taking into account the refund of income-tax in both the years, the net yield would have been 5.49 per cent for the year ending 31st March 1971 as compared to 5.53 per cent for the year ended 31st March 1972.

Expenses today are a variable factor, control whereof pre-supposes a number of conditions. With inflationary conditions obtaining in the country, working expenses are tending to increase. This can be offset only with larger volume of business and increased premium income. Efforts are being made by the Corporation to effect economy wherever possible or feasible. The renewal expense ratio of the Corporation came down from 14.65 per cent in 1970-71 to 14.36 per cent in 1971-72. The overall expense ratio for the year worked out to 27.85 per cent as against 27.19 per cent of the previous year.

Claim Settlements :

I am happy to report that the Corporation continued to maintain its progress in the settlement of claims. The number of claims outstanding as at 31st March 1972 came down to 22,283 death claims (Rs. 10.99 crores) and 37,735 maturity claims (Rs. 6.82 crores) against the corresponding figure as at 31st March 1971 of 32,142 death claims (Rs. 12.12 crores) and 57,117 maturity claims (Rs. 9.41 crores) respectively.

An analysis of the settlement of claim operations in the past three years, including the year under review, shows a significant improvement. The ratio of outstanding claims to claims intimated during the last three years has shown a progressive downward trend. As at March 31, 1970 it was 29.8 per cent. It dropped to 23.6 per cent in 1971 and is 19.38 per cent as at the end of March 1972.

It will be of interest to mention here that the Corporation has paid claims for amounts exceeding Rs. 800 crores to several lakhs of policyholders and their families over the past 15 years since nationalisation. Currently it is paying, on an average,

1200 claims each working day. The Corporation has accorded the highest priority to the settlement of claims in the interest of the policyholders and claimants.

Reorganisation of Corporation's Offices :

I may recall that the Administrative Reforms Commission appointed by the Government of India had recommended that the Zonal Offices should be abolished and the Divisional Offices should function virtually as Head Offices of the erstwhile insurers excepting for policy making, investments and a few specified functions which would be the responsibility of the Central Office. The object was to make the Divisions all important and responsible for development and servicing of business.

The Committee set up by the Corporation to go into the question of delegation of powers and decentralisation of functions to Divisional and Branch Offices submitted its report in November 1971. The recommendations of the Committee have been studied by the Corporation and the original functions of the Zonal Offices are being decentralised to the Divisional Offices. The control and advisory functions of the Zonal Offices will be taken up at the Central Office by an Officer of the status of Zonal Manager posted at the Central Office to be in charge of these functions in respect of all the Divisions of the Zone. Divisional Offices have been vested with higher financial and administrative powers to enable them to function independently in almost all matters. The Branch Offices have been vested with a number of policyholders' servicing functions and further decentralisation is under consideration.

Agents :

As at 31st March 1972, there were 1,62,357 agents on the rolls of the Corporation out of whom 1,50,859 agents were active during the year. It is pleasing to note that the average production per active agent, excluding group insurance business, was almost Re. 1 lakh during the year as against Rs. 88,997 of the previous year. It is interesting to note here that in 1957—the first year of nationalisation—the per capita production of an agent averaged below Rs. 31,000.

As provided under Section 49 of the LIC Act, the Corporation has framed the Agents Regulations to define the methods of recruitment and the terms and conditions of appointment of life insurance agents after detailed discussions with the two representative bodies of agents and with the previous approval of the Central Government. These Regulations came into force from May 1, 1972.

Another important step taken during the year by the Corporation which is calculated to improve the calibre of its Agency Force is the Career Agents' Scheme under which 13 Branches at Ahmedabad, Bangalore, Bombay, Calcutta, Chandigarh, Gauhati, Hyderabad, Indore, Jullundur, Lucknow, Madras, New Delhi and Visakhapatnam have commenced functioning during the year. This new scheme has been launched to build up whole-time career agents.

It is felt that all these measures, as also the Membership of Clubs at various levels which were introduced from 1971-72, would help the Corporation considerably in improving the calibre, stability and status of agents and in raising their income from the agency profession, and thus building up a more favourable image of the agents in the eyes of the insuring public.

New Offices :

As part of the Corporation's policy of taking insurance to the doorstep of the masses and rendering better service to them, new offices are being opened every year. During the year under review, one new Divisional Office was set up at Raipur in the Central Zone. 49 Sub-Offices and 15 Development Centres were upgraded as Branch Offices and 3 Development Centres were upgraded as Sub-Offices. Besides, 32 Branch Offices, 2 Sub-Offices and 9 Development Centres were newly opened. The total number of offices of the Corporation as on 31st March 1972 stood as follows:

Divisional Offices	...	38
Branch Offices	...	527
Sub-Offices	...	64
Development Centres	...	114

The Corporation has either a Branch Office or a Sub-Office in 261 out of 340 districts in the various States and in 5 out of 9 Union Terri-

tories in India. It also has Development Centres in 20 of the remaining districts.

LIC's 8th Valuation :

The results of the Eighth Valuation as at 31st March 1971 were announced in February 1972. At this valuation, the surplus allocated to the participating policies amounted to Rs. 110.18 crores and the allocation to the Central Government as its share of surplus was Rs. 5.80 crores. Reversionary bonuses were allotted to the participating policies at the rate of Rs. 22.00 per thousand sum assured per annum on Whole Life Assurance, and Rs. 17.60 per thousand sum assured per annum on policies of an Endowment nature issued by the Corporation. Bonuses were allotted to the policies issued by the erstwhile insurers in accordance with the scheme of differential bonuses.

Corporation's Business Abroad :

During the year the Corporation received 5,465 proposals for assurances amounting to Rs. 11.73 crores and issued 4,976 policies for sums assured of Rs. 10.67 crores as against 3,945 policies assuring Rs. 8.51 crores in 1970-71.

General Insurance :

During the year, the Corporation wrote a gross direct premium of Rs. 27.26 crores as against Rs. 23.08 crores in the previous year. Of this, Rs. 4.99 crores were secured under Fire Insurance, Rs. 12.46 crores under Marine and Rs. 9.81 crores under Miscellaneous insurance. The total net premium collection during the year amounted to Rs. 7.19 crores as against Rs. 8.36 crores in 1970-71. The net claims during the year amounted to Rs. 78.51 lakhs under Fire, Rs. 176.18 lakhs under Marine and Rs. 82.12 lakhs under Miscellaneous insurance. The total net claims amounted to Rs. 336.81 lakhs in 1971-72 as against Rs. 318.30 lakhs in 1970-71. A sum of Rs. 217.21 lakhs has been added to the General Reserve. The profits transferred to the Profit and Loss Account were Rs. 360 lakhs from Fire, Rs. 54 lakhs from Marine and Rs. 90 lakhs from Miscellaneous insurance, making a total of Rs. 504 lakhs. After making

adequate provisions for reserves and taxation, a balance of Rs. 52.16 lakhs is payable to the Central Government.

Crop Insurance :

We have recently launched in Gujarat an experimental Crop Insurance Scheme specially devised for Hybrid-4 cotton crop to the extent of the estimated cost of inputs. The main object of the Scheme, which will be implemented under controlled conditions ensured by the effective supervision and guidance by the technical staff of the Gujarat State Fertilizers Co. Ltd., is to promote increased production of cotton by persuading the farmers to incur the heavy outlay involved in the adoption of modern cultivation and plant protection practices. To facilitate this, arrangements have been made by the Gujarat State Fertilizers Co. Ltd. with Bank of Baroda for advancing loans to farmers to the extent of cost of inputs, if necessary. If this pioneering venture succeeds, as we hope, it will become the forerunner of many such schemes covering other crops and areas in the country.

Investments—People's Money for People's Good :

The total book value of the investments of the Corporation as at March 31, 1972 was Rs. 1952.66 crores thereby recording an improvement of Rs. 235 crores over the figures of 1970-71. The total book value of the investments pertaining to Life and General business was Rs. 1926.13 crores and Rs. 26.53 crores respectively. Of the total investment in India of the Life Department, 74.0 per cent (Rs. 1375 crores) was in the Public Sector, 10.9% (Rs. 201 crores) in the Co-operative Sector, 0.2% (Rs. 4.42 crores) in the Joint Sector and 14.9% (Rs. 277 crores) in the Private Sector. The Corporation agreed, during the year, to underwrite and subscribe for 113 new issues to the extent of an aggregate amount of Rs. 33.25 crores.

Although the investment policy of the LIC continues to be governed by the same statutory provisions and regard for safety of the funds coupled with satisfactory return by way of yield thereon, the pattern of investment has undergone a significant change over the years. Socially-oriented investments now claim our

foremost attention. Loans to local bodies for urban and rural water supply schemes and for sewerage schemes of Municipalities, Loans for Housing and Loans to State Electricity Boards—these three channels have been selected by us for our special consideration. Whereas in 1963-64 our investment under these heads was about Rs. 18 crores, in another four years i.e. in 1967-68 it crossed Rs. 50 crores mark—an addition of Rs. 32 crores. Subsequent four years witnessed a further spurt. By 1971-72 the addition itself doubled. During 1971-72 we invested over Rs. 117 crores under these heads. Housing, Electricity and supply of Drinking Water could be considered basic amenities required by a civilised community. These, therefore, claim a preponderant share of our social investments. Within the limitations of the growth of LIC's funds, new avenues under these fields are pursued. In 1971-72, for example, for the first time, massive assistance was sanctioned to a State Government for its programme of constructing low cost houses in large numbers for members of the scheduled castes and scheduled and denotified tribes.

Besides the above schemes, LIC also has schemes for grant of loans for construction of sheds by Industrial Estates and for Co-operative Sugar Factories. They are designed to assist small scale industrialists as also industries in rural areas. As on 31-3-1972, a sum of over Rs. 8 crores has been invested under these two heads.

One interesting feature about our socially-oriented investments has been the catalytic effect it has given rise to. The more we invest the greater is the demand, reflecting the increasing hunger of the people for early satisfaction of their needs. We are happy about this and propose to give Electricity, Housing and Water Supply our continued support.

Building & Housing Activities :

During the year, the Corporation, as a part of its programme to provide more office accommodation, completed projects which included the Zonal Office building at Kanpur, Divisional Office buildings at Patna and Trivandrum, Annexe to Divisional Office building at Lucknow, Branch Office Building at Bulsar, Branch Office-cum-Investment build-

ing at Kota, etc. It also undertook new projects such as Divisional Office buildings at Ahmedabad, Calcutta, Jamshedpur, Machilipatnam, Madurai, Muzaffarpur, New Delhi and additional floors to "Yogakshema" building in Bombay.

Besides, the Corporation has completed construction of 42 staff quarters at New Delhi and Poona. Further 231 staff quarters are under construction at different places such as Calcutta, Durgapur, Gauhati, Madras and Varanasi. Additional 883 staff quarters are under planning. The Corporation has been granting loans to Co-operative Housing Societies formed by its employees and also to individual employees for purchase or construction of houses. During the year loans amounting to Rs. 44 lakhs were advanced to 11 Co-operative Societies of the employees, in addition to Rs. 59 lakhs to 274 individual employees for purchase or construction of houses. So far, in all, 122 societies consisting of 4261 employees have taken advantage of this scheme and have been sanctioned loans totalling Rs. 662.76 lakhs. In all, 970 individual employees have been sanctioned loans amounting to Rs. 167.73 lakhs as at March 31, 1972.

In addition to the above schemes, the Corporation continues to advance loans direct to State Governments for financing a variety of their Housing Schemes like the Low Income Group Housing Scheme, Middle Income Group Housing Scheme etc. Loans are also advanced to Apex Housing Finance Societies; ultimate beneficiaries under these schemes are the Primary Co-operative Housing Societies. Total amount of loans under these schemes as at 31st March 1972 exceeds Rs. 237 crores.

Realising the acute shortage of housing in the country, and also the fact that it is not feasible for the State alone to meet the growing demands for houses for the millions, the Corporation has embarked upon the task of providing housing to the policyholders on a large scale keeping, however, in view the safety and yields of its funds. In pursuance of this plan, the Corporation has started construction of a township at Borivli, a suburb of Bombay. Projects of similar townships at Bangalore, Hyderabad, Delhi and Ahmedabad are also under planning.

A sum of Rs. 375 lakhs has been spent by the Corporation during the year on its new constructions. Projects costing in all Rs. 170.43 lakhs have been completed during the year. In addition to its own buildings and staff quarters, the Corporation has constructed an Investment building on National Indian plot at Connaught Circus, New Delhi, during 1971-72. Projects estimated to cost about Rs. 9 crores were under construction during the year. A sum of Rs. 3.93 crores was sanctioned during 1971-72 for more building projects at different centres.

"Own Your Home" and Other Schemes :

The Corporation's "Own Your Home" scheme intended to help the policy-holders for owning houses was earlier extended to places where the Corporation has either a Branch Office or a Sub-Office. It was operating, thereby, in 424 centres. Since September 1971, our Zonal Managers were empowered to extend the scheme to further centres under their respective jurisdictions. The total number of centres where the scheme is in operation comes to 488 now.

During the year, 1668 loans amounting to Rs. 488.45 lakhs were sanctioned to policyholders for construction or purchase of houses. So far, in all, 8901 loans amounting to Rs. 2574.86 lakhs have been sanctioned under the scheme.

The Corporation's total contribution to housing development in India by way of loans to State Governments, Co-operative Housing Finance Societies and loans under other schemes, as also its own building

constructions upto 31st March 1972 amounted to over Rs. 359 crores.

Before I conclude I would like to place on record my deep sense of gratitude for the cooperation and advice I have been receiving from the Members of the Corporation and my colleagues in the Corporation. Several experts also outside the Corporation, through the various Committees, have been associating themselves with the Corporation and giving us the benefit of their knowledge and experience. I would like to place on record also my sincere thanks to every member of the staff working within the Corporation, both on administrative and development sides, for his enthusiasm and wholehearted support in reaching the targets. Our agents, throughout the country, have also contributed substantially to the achievement of our goals. Within the Corporation we have to face several problems, but they are problems of growth and with the unstinted support from everyone working within the Corporation, I feel confident that we shall be achieving in larger measure the noble objectives towards which we have been working. The message of life insurance is yet to be taken to millions of people in the country. In fact, we have been endeavouring to change the concept of life insurance from that of classes to that of masses. Through our Salary Savings and Group Insurance schemes we have been endeavouring to reach larger number of people who badly need insurance protection. We have a great task before us and so long as every insurable person has not been brought under the protective cover of life insurance, our task will remain unfulfilled. It is our duty to re-dedicate ourselves to this great task and see that the objective with which life insurance was nationalised is achieved as early as possible.

UNIT TRUST OF INDIA

EXTRACTS FROM THE STATEMENT OF SHRI J. S. RAJ, CHAIRMAN, UNIT TRUST OF INDIA

The Unit Trust of India completed, as of June 30, 1972, its eighth year of operation and its accounts have now been audited and published.

Unit Scheme 1964

2. During the year under review, the income of the Trust amounted to Rs. 9.68 crores as against Rs. 8.41 crores in the preceding year. Total expenses, rose to Rs. 80.53 lakhs as against Rs. 80.00 lakhs in the preceding year. The share of the Trust's income allocated to Unit Capital worked out to Rs. 924.09 lakhs and that of Initial Capital to Rs. 44.12 lakhs. The share of expenses amounted to Rs. 46.20 lakhs and Rs. 11.72 lakhs, respectively, after setting off Rs. 22.61 lakhs representing recoveries towards management expenses.

3. The net income allocated to unit holders amounted to Rs. 877.89 lakhs. This amount, together with the balance of Rs. 12.93 lakhs in the Unit Capital Appropriation Account—in all Rs. 890.82 lakhs—is available for distribution to the unit holders whose names were on the Register of the Trust as on June 30, 1972. The Board has decided to increase the income distribution to unit holders to 82.5 paise per unit i.e. 8.25 per cent (as against 8 per cent in the preceding year). The Board has also decided to make an income distribution of 5.5 per cent to the initial capital contributors.

4. Sales of units in 1971-72 were lower at Rs. 15.08 crores under 61,405 applications as compared with Rs. 18.00 crores under 61,741 applications in 1970-71. About 99 per cent of the sales came from individuals, the balance being from institutions. As on June 30, 1972, units sold and outstanding amounted to Rs. 104.72 crores held by over 4.34 lakhs unitholders.

5. Sales of units to non-residents were Rs. 40.50 lakhs under 427 appli-

cations as against Rs. 42.93 lakhs under 440 applications last year.

6. Repurchases by the Trust were lower at Rs. 2.60 crores under 10,049 applications during the year as against Rs. 3.19 crores under 12,724 applications in 1970-71. This year's repurchases worked out to only 2.5 per cent of the aggregate funds invested by unitholders as against 3.5 per cent last year.

7. The Reinvestment Plan of the Trust is gaining popularity among the existing unitholders and 17,972 unitholders participated in the Plan in respect of the income distribution relating to the year ended June 1971, the amount invested being Rs. 69.30 lakhs. In respect of the 1971-72 income distribution 5,230 new applications for reinvestment were received involving 22,06,350 units.

8. Voluntary Savings Plan 1969 attracted 152 new applications during the year and the total sales under the Plan amounted to Rs. 1.66 lakhs. As on June 30, 1972, the number of members participating in the Plan was 753.

9. Total applications received under the Children's Gift Plan were 1,817 for the purchase of units aggregating Rs. 46.29 lakhs. Units of the face value of Rs. 4.25 lakhs were allotted against dividend for the year ended June 30, 1971. Thus the total sale during the year amounted to Rs. 50.54 lakhs.

Unit Scheme 1971

10. The Trust framed its new Unit Scheme 1971 from October 1, 1971. The accounts of the 1971 Scheme are kept distinctly separate from the 1964 Scheme. Under this Scheme, a new ten-year contractual savings plan with built-in-life insurance cover was also formulated viz. the Unit-linked Insurance Plan. The object of the Plan is

to provide investors, especially from the relatively small and medium income groups, a facility for regular savings and investment of these savings in the units of the Trust, combined with the advantage of life insurance cover during the period of the Plan.

11. During the nine months ended June 30, 1972, a little over 500 persons joined the Plan with an initial contribution of Rs. 3.27 lakhs and a target amount of Rs. 40.7 lakhs.

12. The income available, as reduced by the expenses to be charged during the 1st accounting year, amounts to Rs. 18,164. The Board has decided to declare an income distribution of 52.5 paise per unit for the nine months period which works out to 7 per cent for the full year.

Investments

13. Total investments of the Trust (Unit Scheme 1964 and Unit Scheme 1971) as on June 30, 1972 amounted to Rs. 119.26 crores as compared with Rs. 105.14 crores at the end of the previous year. During the year, the Trust's underwriting operations increased from Rs. 3.05 crores in respect of 16 capital issues in 1970-71 to Rs. 4.58 crores in respect of 14 issues in 1971-72.

Other Matters

14. As against 2,756 approved agents last year there were 3,070 agents at the end of the year under review. The number of brokers was also increased from 320 to 334 and units continued to be on sale at about 11,000 bank offices and 18,000 post offices. The Trust continued its drive at mobilising savings and popularising its units as a medium of investment among the general public.

COMPANY AND PUBLIC NOTICES

INDIAN OXYGEN LIMITED

It is hereby notified for public information that M/s Indian Oxygen Limited, P-34 Taratala Road, Calcutta-53 have given on 2/8/72 a Notice under Section 21 of the Monopolies and Restrictive Trade Practices Act 1969, to the Department of Company Affairs, New Delhi, for their substantial expansion in the manufacture of filler wires for tungsten inert gas-shielded (TIG) welding and metal inert gas-shielded (MIG) welding.

Any person interested in the matter may make representation to the Secretary, Department of Company Affairs, New Delhi, within a fortnight of publication of this Notice.

INDIAN OXYGEN LIMITED

It is hereby notified for public information that M/s Indian Oxygen Limited, P-34 Taratala Road, Calcutta-53 have given on 11/8/72 a Notice under Section 21 of the Monopolies and Restrictive Trade Practices Act 1969, to the Department of Company Affairs, New Delhi, for their substantial expansion in the manufacture of oxygen, argon neon, krypton and xenon.

Any person interested in the matter may make representation to the Secretary, Department of Company Affairs, New Delhi, within a fortnight of publication of this Notice.

SCHRADER-SCOVILL DUNCAN LTD.

(Notice under Rule 4A of the Monopolies & Restrictive Trade Practices Rules, 1970)

It is notified for public information that Schrader-Scovill Duncan Ltd. which has applied for an Industrial Licence for the manufacture of Automobile Tyre Tube Valves and Accessories thereof intends to give notice for substantial expansion of its activities in Form I under Section 21 of the Monopolies & Restrictive Trade Practices Act, 1969 to the Central Government in the Department of Company Affairs, New Delhi.

Any person interested in the matter may make representation to the Secretary, Government of India, Department of Company Affairs, New Delhi, within a fortnight of publication of this Notice stating the nature of his interest in the proposal.

SCHRADER-SCOVILL DUNCAN LTD.
R. P. GOENKA
Director.

Calcutta-1,
The 8th September, 1972.

MANAGEMENT APPOINTMENTS

This space is available for publicising your Management Appointments.

The Management section in *Capital* is the appropriate medium for advertising such top appointments as company secretaries, accountants, legal and tax advisers, management consultancy staff and personnel officers.

For particulars, please contact the Advertisement Manager, *Capital*, 19 R. N. Mookerjee Road, Calcutta 1. Phone : 23-5825-26-27.

CAPITAL

(Founded in 1888: Published every Thursday)

CAPITAL is India's most widely-read weekly newspaper dealing with economics, industry and public affairs. It has the mature experience of more than 80 years, and is the oldest journal of its kind in the country. Each week, it brings authoritative and comprehensive coverage of the main problem and events affecting the progress of the economy and the growth of industry. It separates the important from the unimportant; it presents simply, clearly and reliably what all informed observers of the economic scene ought to know.

Readers of CAPITAL are mainly people holding positions of vital importance in Government, business, industry and academic institutions. Many of them are intimately concerned with the framing of the country's economic policies. Many direct and control industrial, banking and commercial institutions. Together they represent a fund of economic opinion and buying power that no advertiser can afford to ignore.

Established 88 years ago, The Titaghur Paper Mills Company Limited are pioneers amongst India's manufacturers of papers and Boards. TPM have maintained the lead through constant research and introducing new manufacturing processes. TPM are presently making special papers of different varieties thus substituting certain imported grades. TPM know more about the problems of the market and therefore know more about the demands for specialised papers and boards—and how to meet them.

GEC YOUR GUARANTEE

The advantages of GEC capacitors : • Substantial reduction in KVA demand, saving of money. • Reduced transmission losses. • Reduced voltage drop in lines—better performance of your electrical equipment. • Designed to super-tropical temperature category, to ensure longer life.

GEC CAPACITOR BANKS (HIGH VOLTAGE/LOW VOLTAGE)
GEC can provide, according to your needs, High Voltage Capacitors with specially suited series reactor and Controlgear.
Capacitors upto 132 KV range are available. Presently, over a lakh KVAR GEC Capacitors in the high and low voltage ranges are giving satisfactory service all over India.

Red Signal from Reserve Bank

THE 1971-72 annual report of the Reserve Bank of India has done well to hoist the red signal for the Indian economy. A perusal of the latest report will inevitably give the impression that the country's economy is sliding down through a perilous slope and that timely action is necessary to arrest the deteriorating trend. It is a truism that the economy was perched precariously last year due to the huge exodus of refugees on the one hand and the subsequent Indo-Pakistani war on the other. It is no use blaming the Reserve Bank that it should have cautioned the Central Finance Ministry at the right time about the ultimate consequences of a spree in deficit financing which was estimated to have been well over Rs. 400 crores in one single year. As it is, faced with an unprecedented emergency, it was the patriotic duty of every citizen to shoulder an onerous burden, regardless of the degree of hardship. The Reserve Bank's annual report has realistically spoken of the resilience that the economy has shown under conditions of great stresses and strains. The fiscal burden being what it was last year, it should be a matter for small consolation that things did not take a far more serious turn than they threatened to do and completely upset the applecart, bringing in its trail widespread misery, sharp increase in prices, a colossal volume of deficit financing and a far more back-breaking burden of taxation.

This is not to say that the magnitude of the problems faced by the economy in 1971-72 and their impact on it this year should be belittled. As it happens, the Reserve Bank's annual report has entertained a lot of forebodings about the evil effects of the policies which have been pursued so far. If this makes the report an exercise in pessimism, it has got to be appreciated that it has had to be so because a lot of imponderables are hanging heavily on the economic horizon. Consequently, there is an under-

tone of anxiety, if not of alarm, which runs like a red thread throughout the report. Any casual reader of the report cannot, therefore, be blamed if he jumps to the conclusion that the picture portrayed by the Reserve Bank is one of gloom and despondency. In fact, the major economic indicators have pointed to difficult portents which need to be surmounted expeditiously so that their disquieting features may be effectively countered well in advance. For one thing, agricultural production, which had increased at an average rate of 7 per cent during the preceding two years, is likely to show a small rise during 1971-72. This could indicate that the earlier foreboding about agricultural production is going to prove true. It is still anybody's guess what will be the total foodgrains production during 1972-73, since large areas have suffered from the drought havoc in various parts of the country, with the prospect of a substantial shortfall in the country's *kharif* crops. But according to a conservative official estimate, there might be a shortfall of 15 million tonnes, which is proposed to be made up by an increased production of the *rabi* crop of the same order.

But the cause for concern is the sluggish tempo of industrial growth, which has declined from 7.1 per cent in 1969 to 4.9 per cent in 1970 and slid down further to the pathetic figure of 2.9 per cent in 1971, which is pitifully less than even half of the Fourth Plan target of 8 per cent to 10 per cent. The Reserve Bank's annual report has sought to explain the declining trend in the industrial growth rate due to the shortages of power and raw materials as well as demand constraints. But one has to go deeper to find out the root causes of the current stagnation. The Government's strategy of reckless take-overs with or without compensation, uncertainty concerning the revision of the Industrial Policy Resolution, high taxation and its occasional policy pro-

nouncements on the restricted rôle for the private sector, regardless of the effects on the economy as a whole, have virtually created a crisis of confidence which will be difficult to remove unless New Delhi creates a helpful climate by pursuing more favourable policies. The Reserve Bank's report suggests, as a counsel of despair, that to achieve the Fourth Plan target of 5.5 per cent, the national income will have to grow at a rate of about 7 per cent in the remaining two years. This should appear to be a Herculean task in view of the setback in agricultural and industrial production as well as the sluggish trend in exports which, excluding shipments to Bangladesh, did not register a rise of more than 2 per cent last year. Although industrial production and exports during the first four months of the current year have shown a favourable trend, economic portents suggest that it will indeed be a formidable task to achieve the growth rate envisaged in the Fourth Plan. In fact, the growth rate of the country's real income has fallen from 4.7 per cent in 1970-71 to less than 4 per cent in 1971-72.

The Reserve Bank report has also referred to the disquieting price prospects, since the wholesale price index number rose by 6.8 per cent during 1971-72, which was more than double the rise in the previous year. During the first eight months of the current year, prices have merrily ascended further, showing a rise of no less than 8 per cent so far, although in the last week of August, they have registered a marginal fall. But there is no cause for complacency on this score, as higher wages and bonus, unrelated to productivity, will fan the fires of a galloping price inflation. The Reserve Bank has done well to point out that during the past 12 months, there has been the sharpest rise in prices in any single year recently. To make matters worse, the money supply with the public expanded by a record 13.7 per cent in 1971-72, against 12.5 per cent in the previous year. The main feature of the monetary expansion has been the sharp rise in net bank credit to the Government amounting to Rs. 1,001 crores, against Rs. 831 crores in 1970-71. There has also been a sharp rise of 16.5 per cent in total disbursements, including loans and advances, of the Central and State Governments in 1971-72, compared with 11.4 per cent in 1969-70 and 9.5 per cent in 1970-71. "Developmental outlay rose by 17.4 per cent, but the increase in non-developmental outlay at 19.8 per cent was much sharper". To add to it, the outstanding overdrafts of 11 States, which

had totalled Rs. 371 crores as on 28th June, 1971, reached a level of Rs. 642 crores at the end of April 1972, with as many as 12 States having overdrawn on their accounts. The impact of this spending spree by the State Governments on the Indian economy has been to upset its financial balance and accentuate inflationary pressures. Fortunately, a new scheme has been brought into effect from 1st May, 1972, requiring that overdrafts be discontinued from end-April 1972. Simultaneously, in view of the increased volume of budgetary transactions of State Governments, the limits for clean or unsecured ways and means advances from the Reserve Bank have been enhanced to four times the previous levels, in addition to what they can borrow against the security of their investments. Furthermore, under the new policy, no overdrafts are allowed by the Reserve Bank except for purely temporary periods of not more than seven days.

Licensing : What Price Ideology?

THE Central Government's recent admission that out of a total of 120 letters of intent, issued to the State Industrial Development Corporations, hardly eight have materialised is nothing, if not self-condemnatory of the whole industrial licensing policy. In a note for the conference of State Industries Ministers in New Delhi, the Centre has sought to analyse the causes of the failure of the State Corporations to convert their letters of intent into licences but the question is whether the Centre was not aware of their limitations at the time of issuing the letters of intent. One of the major difficulties faced by the State Corporations, according to the note, is the inadequacy of financial resources. Most of them are reported to have depended almost completely on State budgets for funds. Were letters of intent issued to these bodies without even a formal scrutiny of their proposals and how they intended to finance their projects? While one could understand the Centre's desire to promote the joint sector by encouraging the State Corporations to set up new industries, was it not obligatory for New Delhi to satisfy itself that the State bodies were in a position to undertake the task assigned to them? Alternatively, were any steps taken by the Centre to check periodically with the States on the progress made by them on the projects for which letters of intent had been issued? It is nothing but a

scandal that more than 90 per cent of the letters of intent issued to the State Corporations were allowed to pre-empt capacity for other applicants. That the economy is in a perilous plight is also evident from the fact that the net capital formation by the Central Government for 1971-72 was Rs. 516 crores, representing an increase of Rs. 88 crores over the previous year. But the net saving was only Rs. 211 crores, thus showing a gap of Rs. 305 crores. Faced with a grave predicament at this juncture, what the country should do is to maximise production to mitigate the rigours of inflationary pressures, reduce unproductive expenditures on both Central and State accounts, broaden the tax base in the agricultural sector and hasten slowly with the redistributive aspects while, at the same time, concentrating more on increasing the size of the national cake. The Government's current ideological obsessions have already done more harm than good to the economy. It is high time that New Delhi called a halt to its ideologically-inspired policies in favour of pragmatic ones.

scandal that more than 90 per cent of the letters of intent issued to the State Corporations were allowed to pre-empt capacity for other applicants.

As the note itself points out, the letters of intent in a large number of cases were issued for the setting up of industries of critical importance to the country's economy. Some of the industries in which the State Corporations had proposed to set up units were caustic soda, soda ash, chlorine, automobile tyres and tubes, cement, synthetic detergents, nylon filament yarn and sophisticated electronic items. On the other hand, of the eight licences issued in the last five years to the State Corporations, two were for the manufacture of beer! It is true that of the total 120 letters of intent, only 42 were issued till the end of 1970 and the majority—as many as 66—were issued only last year. It may, therefore, be contended that it is too early to judge the performance of the State Corporations in the field of industrial development. But what is disconcerting is not so much the delay in the conversion of letters of intent into industrial licences as the Centre's tendency to hinder rather than help the State Corporations to implement their schemes.

Take, for instance, the question of finance itself. It is widely admitted that the resources at the disposal of

the States are limited and the State Corporations have not had any assistance from any outside sources. Only recently, they have become entitled to assistance from Central financial institutions in the same way as private undertakings. This will, no doubt, remove a major constraint, but even for securing loan assistance the State Corporations must have an adequate equity base and reserves. And if they are to take up major projects, they should also be able to mop up resources from the private sector. It is here that unfortunately ideological considerations have crept in. The Centre has looked with disfavour the tendency among the State Industrial Corporations to seek the aid of the larger business houses for setting up joint industrial undertakings. The Centre's note says that industrial licences meant for the State Industrial Corporations "are not supposed to provide a cover for the entry of the larger houses or foreign majority companies into sectors for which they would normally not have got licences in their own names". What else should one call this other than ideological obsession?

It is well within the knowledge of the Central Government that the so-called larger business houses have been accumulating surpluses which they are not in a position to invest in useful projects. What is wrong if the State Corporations make use of these funds on terms and conditions, allowed by the Centre, under its industrial licensing policy? According to the guidelines issued under the policy, the State Industrial Development Corporations should hold not less than 26 per cent of the equity of any company that may be formed to implement a letter of intent issued to them. The guidelines also stipulate that the State Corporations should not allow any other entrepreneur or business group an equity shareholding beyond 25 per cent in undertakings where they have an equity investment of 26 per cent. It is, however, stated that the State bodies should seek the Centre's permission before letting the larger business houses or foreign majority companies invest even up to 25 per cent of the capital in any joint undertaking. That is different from asking the State bodies not to take financial assistance from the larger business houses for setting up industries to which the latter are normally denied fresh entry.

What is most amazing about the Government's policy is its refusal to take note of the factors that it has

itself held responsible for the lack of growth in the State sector. For example, the note says that the State Industrial Corporations are handicapped by a "general dearth of management skills available in the country". The difficulties of the State Corporations in this respect are admitted to be even greater than those of the public-sector projects with the Centre. The note also points out that the State Corporations experience difficulty even in getting persons of the requisite calibre for drawing up project reports, not to mention the actual running of industrial undertakings. And yet, the instructions to the corporations are clear—treat the larger houses as "untouchables". What price ideology indeed!

It is thus evident that the joint-sector concept is still very nebulous and is interpreted often to discourage

Congress and C.P.I.: Political Panorama

THE C.P.I.'s policy of playing safe for the last few years seems to have landed it in a muddle. Rumbles were heard at the recent National Council meeting in New Delhi. The state of euphoria generated by the election results in March has to an appreciable extent given way to doubts and rethinking. High words were used at the meeting criticising the Congress—Mrs. Gandhi not excluded—and some of the C.P.I. topbrass. It looked as if the jargon of opportunism or political calculation could no longer paper the cracks in the ideological base. The theoretical dilemma should be especially harmful to the Party's effectiveness because it is said to have acquired a monopoly of the brains of the old organisation when it split.

The C.P.I. is caught between a number of contradictory pulls. First, it has never questioned the infallibility of Moscow, an article of faith it has inherited from the undivided Party. This unswerving allegiance has had two powerful results. The Party accepted the Muscovite line of working with in order ultimately to win over the progressive elements in the national bourgeoisie and forge a progressive democratic alliance. This theoretical plank is solidified by a top-level political policy embodied in the Indo-Soviet treaty which makes Mrs. Gandhi not only an ally but almost a leader. An indication of

rather than encourage industrial development. The difficulties experienced by the State Industrial Corporations in floating viable industrial projects should only highlight the need for a more flexible approach to industrial licensing and larger houses. It would be nothing short of an unpardonable crime if the authorities at the Centre should deny to the States, for ideological reasons, the use of funds at the disposal of every section of society, whether such funds belong to the larger business houses or the small-scale sector. The object must be to move forward as speedily as possible and not to stagnate or go behind. If the Centre continues to pursue a rigid policy, the day will not be far off when the States may demand more autonomy in the field of industrial development as Tamil Nadu is already asking for. Wisdom lies in taking the right action at the right time.

this lasting sanction of the *status quo* was the recent statement issued following discussions between the C.P.S.U. leaders and the C.P.I. leaders in Moscow. Thus, while Mrs. Gandhi has received a few brickbats at the National Council meeting, Moscow keeps on showering bouquets on her. And this contradiction puts the C.P.I. in something of a quandary.

Apart from the international picture, developments on the national scene since the March elections have not quite conformed to C.P.I. calculations. For some time, the C.P.I. strategy has been directed against right reaction on the one hand and what they call left opportunism on the other. After the thumping success of the Indian Congress in last year's Lok Sabha elections, right reaction may be said to have bowed out. The C.P.I.'s subsequent alliance with the Congress, therefore, had only one target—the C.P.I.(M). That limited objective has been largely achieved. The C.P.I.(M) fell from its power and glory in Kerala in 1969 and in West Bengal it is now in almost total disarray. But this collapse has not exactly enhanced the C.P.I.'s reputation or political control. The only result has been the triumph of the Congress. It may not be too uncharitable to say that the C.P.I. has thus lost its grip even on the only

remaining Leninist principle it hung on to—its power-drive.

Instead of drawing large chunks of the progressive sections in the Congress towards its leftist programme, the C.P.I. has been reduced to an adjunct where it is in alliance with the larger Party and to an ineffectual and occasionally noisy pressure-group where in Opposition, as in the Lok Sabha. Its alliance with the Congress is based on three uncomfortable sets of relationships, more of which seems capable of being altered in the foreseeable future. In Kerala, it heads a Government but is quite at the mercy of the Congress support. In West Bengal, it supports the Congress Government without being associated with it and its backing is by no means essential to the ruling Party. And at the Centre, it is the largest Opposition group without sufficient strength to throw its weight about. The balance of political forces being what it is, the C.P.I. cannot extricate itself from any of these positions at the relevant places. At the same time, presenting three different faces simultaneously is not an enviable lot.

What is more, the C.P.I. has not made any noticeable impact on Congress thinking. So far from Congress progressives moving towards the C.P.I., the opposite has happened. Former communists in the Congress fold are developing an allergy to fashionable radical talk. Mr. Mohan Kumaramangalam, Central Minister for Steel, seems to have switched from Marx to the joint sector with a big bang. "The Nehru Study Forum"—a right wing band of theoreticians in the Congress—has emerged to stand up to the attitudinising (for what it is worth) of the Forum of Socialist Action. Mrs. Gandhi's "garibi hatao" has got enmeshed in the machinations of what is termed bourgeois-landlord gang. In the rural areas, even the Congress Party machine has succumbed to the pressure of these vested interests. Recent occurrences should not raise undue hopes in the C.P.I. about Congress radicalism. The take-over of the I.I.S.C.O.—a measure of doubtful wisdom—may not make up for the stamping out of the Bombay strike in the C.P.I.'s view. The fulminations against the C.P.I.'s rôle in the student disturbances in Patna by the Bihar Chief Minister have certainly done nothing to sweeten Congress-C.P.I. relations.

The C.P.I. has also failed to win over large numbers of disillusioned

adherents of the C.P.I.(M) and the C.P.I.(M.L.). Its gestures of goodwill to some Naxalites have been singularly unproductive. The Congress it is that has gained. The Congress student front is going from strength to strength and complaints against its adoption of methods not dissimilar from the C.P.I.(M) tactics of terror have not done the least bit of good to the C.P.I. The Party is also steadily losing ground in what should be the backbone of its political work—the trade union movement. Its rôle as a voice of caution and restraint has also been made superfluous by the growth of healthy criticism inside the Congress—the emergence of a sort of ginger group in the legislatures and of a dynamic force on the mass level. Even in parliamentary debates, it was not Mr. Indrajit Gupta but Mr. D. P. Dhar who raised the vital question as to whether the economy in West Bengal continued to be colonial or not.

The C.P.I. has to step up its leftist campaign to preserve its identity. At the parliamentary level, it can be of only marginal importance. All it can do is to promote the Indo-Soviet collaboration at this juncture when the Fifth Five Year Plan is taking shape. Money is in short supply here and Russia is willing to help. What diminishes the C.P.I.'s importance in this matter is that its assistance is not strictly necessary. New Delhi is popular enough; that Mr. D. P. Dhar has put Moscow at the top of his itinerary is ample proof no doubt. And it does not look as though there

would be any change in this official commitment for some time to come.

The other field where the C.P.I. could put its mettle to the test is organising these movements. There nothing much has happened except slogan-mongering. Even the steep rise in prices in West Bengal has not produced any agitation of the real C.P.I. complexion. What has been done finds the Party as a junior partner. It is not easy for the C.P.I., placed as it is, to move independently in criticism of the ruling Party. For one thing, this cannot be accomplished by making occasional noises and threatening mass *satyagraha*, Statewide *bandhs*, picketing and similar other exercises in futility. The gentle art of having it both ways has its disadvantage too which the C.P.I. has discovered to its chagrin. The big problem is that it has no weapon in its armoury to make the unassailable Congress amenable. There is no reason why the Congress should fall in with the C.P.I. conception of its progressive metamorphosis enabling an "end to the exclusive control of governmental power by the bourgeoisie" and the replacement of "the present Government with a Government of left and democratic unity at the Centre". On the other hand, letting things slide will confirm the impression among some of its young following that the top leaders are drifting towards affluent soft living. All said and done, however, the C.P.I. just cannot afford to break away from the Congress bandwagon. If it does, it may be a case of the dog that bit who died.

Big Success in Small Savings

ABOUT the growing vigour of the small savings movement in India, there can hardly be any doubt today. The year 1970-71 marked a breakthrough for the campaign and since then, it has been growing from strength to strength. Net collections in that year at Rs. 188.36 crores showed a rise of Rs. 61 crores over the 1969-70 figures. The increase in 1971-72 was of the order of Rs. 37.33 crores, but then the year was far from normal in more than one sense. First the Bangladesh refugees and then the Indo-Pakistani war disturbed the working of the economy, and a large amount of additional resources had to be mobilised through taxes and duties. Still, with a net collection of Rs. 225.69 crores, the year has set a new high, and aroused considerable optimism

for the future. The Fourth Plan target has already been revised upwards from Rs. 769 crores to Rs. 1,000 crores. In the first three Plan years, the net collection has amounted to Rs. 541 crores, and to hit the target, Rs. 229.50 crores will need to be raised during each of the last two years. Going by the trend in the collection figures, this seems to be eminently within the bounds of possibility.

Admittedly, the amount of money already raised through the small savings scheme is larger than what has been done through other means. The total outstandings under the scheme on 31st March, 1972, were Rs. 2,446.74 crores. The total savings deposits in all the scheduled commercial banks were Rs. 1,814.31 crores (in January

1972); the savings lying with the Life Insurance Corporation at the end of March this year amounted to Rs. 2,052 crores and with the Unit Trust of India Rs. 102.50 crores. In the drive for resource mobilisation, the small savings scheme has thus pride of place and the coming years are likely to witness a further accretion not only to its collection, but also to its importance.

One of the significant determinants of the success of the scheme is the attitude of State Governments. The States are paid two-thirds of the net collections as loans for development purposes on fairly liberal terms. In 1971-72, they got Rs. 152 crores under this head, compared with Rs. 97 crores in the previous year. But as long as they had unlimited access to the Reserve Bank's overdraft facilities and other special assistance funds, their interest in the small savings programme was at best lukewarm and at worst vague. But now that New Delhi has decided to restrict overdraft provisions and has urged States to meet their financial requirements from within their own available resources, it is expected that they would take a little more interest in the running of the small savings scheme. This should be good for them, but more so for the country.

Already the scheme is trying to make inroads into rural savings which so far have by and large remained outside its coverage. Studies conducted in certain States present a picture of uneven success in this campaign. Thus, in Gujarat, 43.83 per cent of gross deposits in post office savings bank in 1971-72 was accounted for by rural savings; in Kerala, it was as high as 59.38 per cent. But at the other end, in Jammu and Kashmir, it was only 33.70 per cent and in Thanjavur district of Tamil Nadu, 29.30 per cent. In some other States, it is believed to be even lower; the corresponding percentage for West Bengal is reportedly no higher than 19. Apart from the varying degrees of success, what is most appalling about rural savings is the very high proportion of withdrawals. In most of the States all but the whole of the savings is taken out by the rural people for meeting their agricultural and other expenses and the deposits are greatly depleted. This is due partly to the seasonal nature of agricultural activity and partly to the absence of any second line of employment. But now that the scope for subsidiary work is being enlarged, it would be reasonable to hope that the incidence of withdrawals will be reduced and net collections will steadily grow.

If saving is a function of income, it is also a matter of habit. There is thus much to be said in favour of a systematic drive to make the people saving-conscious. Publicity for the savings scheme is carried out both by the Central and State Governments. For some time, the national savings scheme has been enlisting the services of agents in its drive. There were 37,810 agents on roll in 1971-72, against 32,243 in the previous year. The collections through the agents are also going up, underlining the possibility of developing this line in a much more systematic way. The agents helped to collect Rs. 65.92 crores in 1971-72, against 36.84 crores in the previous year. If this strengthens the case for having a developed cadre of agents—something on the line that the L.I.C. has—there should also be steps to make such agency attractive for the people. If general publicity has a big rôle to play in inculcating the savings habit in the people, a man-to-man approach can still be a very powerful influence.

At a time when prices are rising fast, overtaking the rise in income, savings become the obvious casualty. A period of inflation thus in general

erodes the inclination for savings, and more so in a country like India where the overwhelming majority of people live on or close to the poverty line. There is thus a need not only to make savings rewarding but also to make it look so. Spokesmen of the Central Finance Ministry have said that the mix of small savings securities available to the public is constantly being reviewed to see if any improvement or innovation can be made. The securities now on sale are tuned to suit varying preferences and means. But the same schemes which are open to urban savers are offered to rural depositors also. There is scope, and indeed need for devising special schemes for the two broad categories, keeping in view their characteristics and requirements. The national savings scheme has till now covered only about 6 per cent of the total population. While most of this number is made up of people belonging to small and medium income groups (for the more well-to-do sections generally prefer to keep the money in banks and other forms of investment), there is the need to bring other classes also within the fold of the savings drive. The small savings scheme has covered a long distance, but a longer one lies ahead.

The Bonus Bonanza

THE Central Cabinet has had to give in on the issue of the enhanced rate of bonus after an unsuccessful attempt was made to persuade the trade unions to accept the deferred payment of the increased amount. It has now been decided to raise the minimum bonus from 4 per cent to 8.33 per cent for workers in both profit-making and losing concerns; and the entire amount is payable in cash. A significant departure has been made in the case of the public sector. Till now competitive undertakings paid bonus and non-competitive units made *ex-gratia* payments to employees. But from now on employees of both competitive and non-competitive undertakings are to get the enhanced rate of bonus. The increase in the quantum of bonus is to take effect from the accounting year 1971-72. In order to check inflation, it has been decided that in the case of those workers who got more than the new minimum last year, the possible difference between that amount and the payment this year will be credited to their provident fund accounts.

In retrospect, it was obvious from the beginning that the Bonus Review Committee's report, instead of proving a helpful document to the Government in taking decisions on the vexed issue, would lead to many difficulties. After a year's labour, the committee of eight wise men could not come to any agreed formula; yet the trade union representatives wanted the Government to take "early and effective action", meaning thereby the promulgation of an ordinance to implement their recommendations. They had threatened an agitation if the Government failed to act. Even the I.N.T.U.C. passed a resolution calling on its affiliates to be ready for an agitation if the Government did not take effective action within ten days. It appeared to be of no concern to the labour leaders that the committee had been equally divided on its major recommendation.

What was to be the minimum? Even the trade union leaders should have realised that there could not be two minimum rates. The employers'

representatives on the committee went half way to meet labour's mounting expectations; they agreed to a higher minimum in the case of profit-making concerns, raising the bonus from 4 per cent to 8.33 per cent as demanded by the unions. In the case of losing concerns also, 1 per cent increase in the minimum rate was accepted by employers. Against such a flexible attitude, the labour leaders took a rigid stand. Being itself a major employer—the number of manufacturing units in the public sector is increasing every year—the Government could not ignore the additional financial burden involved in increasing the minimum bonus to 8.33 per cent. But who cares about the mounting financial burden of the Government? The workers must have a 8.33 per cent bonus; whether the employing organisations can afford it is none of their business.

With the prices of almost every item of consumption rising and the Government's inability to supply them at reasonable prices, there is a justification on the part of organised labour in demanding a bigger share in the profits of industry. But by insisting on a higher minimum bonus from undertakings which made no profit at all, labour was not being reasonable. Even from a practical point of view, doubling of the minimum rate of bonus may not provide much relief. A more reasonable demand would have been the provision of items of common consumption at fair prices. Once there was a reasonable assurance that a major part of their daily and essential requirements would be met by employers at fair prices, there could not be much justification in insisting on a higher minimum bonus—at least from losing concerns.

When bonus is to be paid even by non-profit-making concerns, the payment can no more be described as bonus. It is a simple and straightforward increase in wages. Workers should realise that such an increase in wages will not result in any material benefit to them. It was, therefore, expected that in its own long-term interest, labour would have looked at the bonus question from a different angle. But unions have so far sacrificed the long-term benefits of labour for their own short-term political gains. If the union leaders had laid greater stress on the provision of goods and services at reasonable prices, the working class

would have benefited more. Furthermore, it would have forced the Government and industry to pay more attention to the production of goods and creation of better services. The undue concentration in getting the monetary income of the working class increased year by year has contributed not a little to the spiralling prices. By forcing the Government to concede a higher minimum bonus, the trade union leaders have once

CURRENT COMMENT

SHIPPING SPACE

Shortage Hits Exports

One of the purported justifications of the shipping Conference System is that it ensures regularity of service and adequacy of shipping space. That this is always not the case has now been proved by the failure of the member Lines of the Bay of Bengal/Japan/Bay of Bengal Conference to provide adequate shipping space for carriage of cast iron products to Hongkong and Singapore. In fact, the non-availability of shipping space is today the single most important deterrent which is standing in the way of timely shipments of cast iron exports to Hongkong and Singapore, thereby resulting in loss of valuable foreign exchange. It has been estimated that the space requirements for Hongkong and Singapore for the current month are approximately 1,500 tonnes and 1,800 tonnes, respectively, whereas the member Lines are prepared to provide space for only 700 tonnes and 500 tonnes, respectively.

The difficulties arising out of the perennial shortage of shipping space for the two destinations has been repeatedly brought to the attention of the Bay of Bengal/Japan/Bay of Bengal Conference by the Eastern India Shippers Association. The E.I.S.A. is greatly disappointed that no positive steps have yet been taken by the Conference to meet the situation arising out of the shortage of space. At a recent meeting between the two, the representatives of the Conference took a completely negative attitude and pleaded helplessness on the ground of paucity of vessels. While the Conference has been pleading paucity of vessels for quite some time, no indication is available as to whether it is aware of the disastrous effects on the country's ex-

again committed the old mistake. The extra income the organised workers are to get from a higher minimum bonus will be wiped out by a corresponding increase in prices. They will not be the only people to suffer in the process; the entire mass of unorganised labour will be caught up in the mess, without any hope of relief. There is no one to give succour to it or plead its cause.

port efforts of this continuous shortage of shipping space.

CALCUTTA PORT

Review of Administration

Criticism is all too frequently levelled against the Calcutta port administration whenever anything goes wrong with the port's working. But unfortunately the criticism is not based on a proper appreciation of the port administration's responsibility on various issues. As for example, the administration is being criticised for the recent go-slow by the bargemen, drop in import and export cargoes, low labour output, and the general apathy towards efficient management. Mr. N. M. Trivedi, Manager of the Scindia Steam Navigation Co., has made an attempt to dispel the wrong notions and put the records straight. The bargemen had a dispute with bargeowners for 66 days about two years ago and at that time the then Central Labour Minister solved the dispute. This time, therefore, the Labour Ministry should have been involved immediately in this dispute and settled the matter which was ultimately done by the West Bengal Labour Minister after 16 days. In any case, the port administration could not have settled this matter on its own, because bargemen are not direct employees and also they are not "dock workers" and, therefore, not under the Dock Labour Board Scheme. It is mentioned that because of the go-slow, 75 per cent of cargoes suffered and some vessels with import cargoes were diverted to other ports. This is not true, and the only interest which suffered is the shipping.

Labour in Calcutta port has been working on an incentive scheme and quite often very satisfactory output

figures are obtained. But trade interests are often unable to give export cargoes in time. As for imports, generally, labour gives very good output, provided the cargo is homogeneous and stowed all over in the lower holds and tween decks. Port administration is geared to all-round improvement. This can be seen from the recent experience when only Calcutta port worked all the three shifts during the December emergency.

INTERNATIONAL STANDARDS

India's Contribution

Mr. D. C. Kothari, vice-president of the Indian Standards Institution, participated in the council meeting of the International Organisation for Standardisation as an Indian delegate. The meeting was held recently in Geneva. The aims and objects of the I.S.I. include preparation of standards relating to products, commodities, materials and processes and the promotion of their general adoption on national and international level. The I.S.I. has been doing this work with great credit. The work at the international level is organised through I.S.O. and the International Electrotechnical Commission (I.E.C.). The international trade has to depend on standard specifications mutually acceptable to the countries concerned. The international standards, therefore, are prepared by the technical committees on which are represented all those countries which have trade interests in a particular subject. The I.S.O. was established in 1947 with India as one of its founder members. Its membership has swelled from 25 to 70. There are nearly 1,200 technical bodies. On average, something like 10,000 working documents are circulated to the participants.

STEEL IMPORT POLICY

Simplification Urged

The Engineering Association of India in a communication to the Ministry of Foreign Trade has expressed apprehension about the effects which the import policy for steel as envisaged in Public Notice No. 56—I.T.C.(P.N.)/72 dated 18th April, 1972, would have on large exports of engineering goods from India. The Association considers that the procedure outlined in the Notice is so cumbersome and time consuming that the advantage which the Government thought would accrue

to the industry out of speedy disposal of applications for import licences would be nullified. It has, therefore, suggested the appointment of a small committee consisting of representatives of the Engineering Export Promotion Council, the Directorate General of Technical Development and the Iron and Steel Control. The committee should meet every fortnight to dispose of applications. Such meetings could be held alternatively in New Delhi and Calcutta. On the recommendation of such meetings duplicate certificates should be issued to the applicant for making his application to the C.C.I., copies of which could be sent to Hindustan Steel Ltd which should proceed to arrange for import without waiting for actual release orders from the office of the C.C.I. and E. Unless the procedure is simplified and import of steel arranged expeditiously, production for export of engineering goods would continue to be inhibited.

CONSUMERS

The Prevailing Plight

In a memorandum submitted to the Prime Minister, Mrs. Indira Gandhi, Mr. B. S. Kothari, president of the Consumers' Association of India, has drawn attention to the prevailing plight of consumers. Apart from the rise in prices of essential consumer goods like rice, edible oils, fish and pulses which has hit the consumers by eroding their purchasing capacity, Mr. Kothari has made reference to the problem of large-scale adulteration, supply of sub-standard goods, and use of faulty scales. In spite of all preventive laws, adulteration continues in the country unchecked, which apart from causing a financial loss to buyers causes very often health hazard. The next problem relates to the procurement of goods of standard quality. A consumer makes purchases without knowing what actually he has paid for. Referring to the problem of short weight, Mr. Kothari said that according to the estimate of the Maitra Committee if 1 per cent is assumed as the error in weight, consumers are cheated to the tune of Rs. 160 crores every year.

FURNITURE

Exhibition in Calcutta

The beauty of natural wood needs no embellishment. An interesting exhibition of Taaru furniture was

held recently at the Academy of Fine Arts, Calcutta. The designers have intelligently exploited modern ideas. Furniture, such as dressing table, chairs, cocktail cabinet and dining table have been some of the attractive items of the exhibits.

POWER

Grave Situation

The president of the Engineering Association of India, Mr. M. K. Jhavar, expressed concern at the deteriorating power supply position to the engineering industries. He said the reported statement of the West Bengal Power Minister that there would be no necessity for the staggering of factory hours till after the Pujas as he expected better results from different power generating agencies ran counter to the Chief Minister, Mr. Siddhartha Sankar Ray's impression that the power situation was grave. Even the State Power Minister has admitted that there is no chance of a lasting improvement in the power situation before the commissioning of the Santaldih power plant in May-June 1973.

At the meeting convened by the Chief Minister last month, it was indicated that there was a shortage of about 50 megawatts or 60 megawatts. In order to enable the industries to work smoothly, the Chief Minister indicated that the Government would stagger shifts and announce days of closure for industries. To the great disappointment of the industry, no action has been taken in this direction so far. As a result, industrial production is greatly affected and the industry is carrying high percentage of idle manpower. Mr. Jhavar feared that due to constant dislocation caused to industrial production, the forced lay-off may lead to a law and order problem.

WEST BENGAL

Accelerating Development

Addressing the members of the Ladies Study Group, Indian Chamber of Commerce in Calcutta a few days ago, Mr. Sankar Ghosh, Finance Minister, West Bengal, said that the urgent need of the State is an all-round development—agriculture and industry. Agriculture in West Bengal needs modernisation as in Haryana and Punjab. There

should be multiple cropping with the help of irrigation, fertilisers, better seeds, credit facilities, etcetera. The rural electrification scheme of the Government will help to revive the village economy to a great extent. In the industrial sector, the Finance Minister said, what is needed today is to help the closed and sick units to revive their activities. The West Bengal Government has already taken steps in this regard and many factories have started re-opening. He, however, pointed out that industries in West Bengal are old, as compared with industries in other States. So they require modernisation. In this connection, he suggested that there is enough scope for developing petro-chemical and electronic industries in the State. Unemployment is another big problem of the State. At present, 2.8 million people are unemployed. This demands that planning should be labour-intensive and not capital-intensive.

ZINC OXIDE

Raw Material Shortage

Addressing the annual general meeting of the Indian Zinc Oxide Manufacturers Association held in

Calcutta recently, Mr. K. N. Sahaya, president, said that the industry was experiencing utmost difficulties in getting adequate supplies of zinc, the principal raw material. In view of its inadequate availability, there was substantial idle capacity in the large-scale sector of the industry which had also affected exports of zinc oxide. The industry was now operating under conditions of a severe cost inflation, particularly with the rise in the prices of both imported and indigenous zinc. This has already had adverse repercussions on several industries consuming zinc oxide, as well as on its exports. Mr. Sahaya said that the indiscriminate licensing of small-scale zinc oxide units by several State Governments in recent years had greatly affected the organised sector of the industry

WORLD BANK

Farm Assistance

The World Bank Group has greatly increased its assistance for agricultural development in developing countries in recent years. A recently published sector working paper on agriculture states that in the five years ending June 1973, the Bank expects to lend \$2,400 million

for this purpose. At that level, the lending would be four times as large as in the previous five years. Agricultural investment in most developing countries will continue to receive high priority, the paper says. The financing of agricultural projects can be a useful way of increasing transfers of capital. Since bilateral lending for agricultural projects is relatively small, there is a substantial rôle to be played by multilateral aid agencies such as the Bank. Over the five years through June 1978, therefore, the Bank proposes to lend about \$4,400 million for agricultural development, or a little less than twice the total for the current five-year period.

The paper discusses the rôle that agriculture can play in achieving the key development goals of increasing production, exports and employment, and improving the distribution of income; but it does not underestimate the difficulties involved. It reviews the current trends in thinking on a number of major issues, such as pricing policies, assisting small farmers and land reform. It draws attention to linkages between price distortions and unemployment; discusses the effects of technological change on employment, income distribution and land holding size; and analyses the economies and diseconomies of scale in agriculture.

MONEY MARKET

Call Rate Rises

The short-term money market has tightened this past week. The call rate initially fluctuated between $4\frac{1}{2}$ per cent and $4\frac{3}{4}$ per cent. Towards the close, it was quoted at $4\frac{1}{2}$ per cent, with small lenders over. The demand for remittances has been small. The supply of tea and gunny bills has also been small. The pound-sterling has been steady against most major foreign currencies during the week.

The latest statement of the Reserve Bank of India for the week ended 8th September, 1972, shows a rise of Rs. 14.47 crores in deposits of scheduled commercial banks with the Reserve Bank to Rs. 288.61 crores, compared with the previous week. Their borrowings from the Bank have increased by Rs. 2.32 crores to Rs. 4.95 crores, of which advances against usance bills have amounted to Rs. 50 lakhs, against nil. Balances held abroad by the Reserve Bank in the Banking Department show a rise of Rs. 1.18 crores to Rs. 142.90 crores.

A Ditcher's Diary

PRESIDENT BHUTTO HAS MANY breathtaking performances to his credit, but he excelled himself in his speech at a dinner in Karachi last Friday. Few heads of State can have been so frank in admitting national weaknesses, but the tone was not one of sober reflection. There was a curious flamboyance even in the most abject confessions. It had suddenly occurred to him that the flag of any country should not be dishonoured in any circumstances; and he openly apologised to West Germany for the insult the Pakistani hockey players had done to the flag of the Federal Republic. This was undoubtedly a courteous gesture, but the Pakistani President could have formally apologised to Bonn immediately after the incident and perhaps followed this up with a public statement. Why did he have to bring up the subject at a dinner gathering of some 2,000 business men? Had it been explained to him that these people, or at least some of them, could ill afford a deterioration of relations with West Germany? His apology was received by his audience with loud applause; I wonder if a public rally in Punjab would have reacted in the same way. But then Mr. Bhutto did not spare the Pakistani public. He admitted that Pakistanis could not do anything without putting on airs; that the slightest success made them swollen-headed; that when Pakistan beat India in Munich the Pakistani team "behaved as if they had really taken Delhi".

For the President of a country, this is a remarkable analysis in public of the character of its people; but still more remarkable were Mr. Bhutto's personal confessions. He said that he had received a wrong impression of what happened in the hockey final, and as a result had become "furious", "mad as hell". Then followed an even more astounding disclosure. The first account of the match, evidently with allegations of partiality by the Argentinian umpire, had so infuriated him that he called the Foreign Secretary and said that he wanted "to break relations with Argentina tomorrow". Later, of course, he had a correct account, and "felt ashamed". But are we to assume that diplomatic relations with Argentina would have been broken off if Mr. Bhutto had been left with the impression that the Argentinian umpire had been less than fair? Such an assumption would induce furious thinking in many capitals of the world about the durability of diplomatic ties with Mr. Bhutto's Pakistan. And Sheikh Mujibur Rahman may wonder if diplomatic recognition by Pakistan is really worth much, when de-recognition could follow Pakistan's defeat in a football match against Bangladesh or in a match with a Bangladesh referee.

I AM GETTING TIRED OF PREDICTIONS about an end to the Vietnam war. And who is not, except perhaps those who go on making them? Mr.

Nixon and his principal aides may have reasons of their own to make optimistic forecasts in an election year; and the military spokesmen in Saigon must keep up the pretence that the communist fighting machine is on the point of collapse. The South Vietnamese forces have recaptured Quang Tri city; but an excess of jubilation may be premature before their control of the city is demonstrably secure. Besides, however big a boost the recapture may give to Saigon's morale, areas in the countryside effectively under President Thieu's control have considerably shrunk during the past one year. The result has been a massive migration to the cities, with attendant social and economic problems. The communists are also said to have found new allies in the countryside; at this stage it matters little whether this is due to pressure or persuasion. The Thieu regime is certainly not the most persuasive on earth; and it is rapidly shedding even its vestigial democratic pretensions. This is not to suggest that the communists are on a mission of spreading sweetness and light. It is too late in the day to pronounce on moral claims and counter-claims; what matters is the fighting that shows no signs of coming to an end. All other issues have become academic; the irreducible reality is death and suffering, the devastation that has no precedent in history. Is an end to all this any nearer after Dr. Kissinger's talks in Moscow and Paris? Mr. Nixon's *eminence grise* has at last discovered "a certain seriousness" in the communist negotiators, a discovery which has hitherto eluded the American representatives at the Paris talks. But

NEW MARWARI COLLEGE IN CALCUTTA

A CORRESPONDENT writes in Current Coin: The Marwari community is to be congratulated upon raising the necessary funds and laying the foundation-stone of the first Marwari college in Calcutta. The ceremony of laying the foundation-stone was performed last Sunday by Sir Asutosh Mookerjee, Vice-Chancellor of Calcutta University. One may feel some surprise that the wealth of the Marwaris has not raised such a college before. Of that wealth, the speeches at the opening ceremony gave some testimony. No less than Rs. 9 lakhs have been obtained since 1908, and no little self-sacrifice and industry have been displayed by the leaders in the scheme in raising so large an amount. Two zealous gentlemen, indeed, took a vow not to put on

their *puggrees* until they had raised Rs. 2 lakhs and in less than a year the money was obtained. Well-wishers of the new college will hope that it will not be devoted to commercial training alone. Amid a plethora of barristers we would not suggest a training that would add Marwaris to the legions of Indian barristers, but the education of the college will hardly satisfy if it be commercial alone. Nor can merchants princes be turned out of a college as one speaker appeared to think. Unless born to a wealthy position, the merchant prince is only made by years of experience and toil. There are probably people also who consider that the average Marwari is born with sufficient commercial knowledge and ability of a kind.

Targett and Co. Ltd, 19 R. N. Mookerjee Road, Calcutta 1. Please place your order early. No copies can be sent by V.P. Post.

surely seriousness alone offers no certainty of agreement; indeed, chances of a compromise can only recede when opposing sides pursue their aims with equal seriousness. Are they pursuing identical aims, even when discussing "peace"? Few words have generated greater confusion; there is considerable imprecision even in what appears to be more specific phraseology. Much is being made of the latest Vietcong proposal for "a provisional Government of national concord that shall be dominated by neither side", as if it were a new compromise formula. The communists have never said that they want to dominate an interim coalition; and both Saigon and Washington have always suspected that this is what they will eventually do. Perhaps there are shades of difference in emphasis; but these are immaterial until Mr. Nixon is prepared to modify, if not altogether to abandon, some of his basic premises.

THE QUESTION CONCERNING THE fate of Senator George McGovern in the coming U.S. Presidential election is still anybody's guess. But like all candidates before the election with uncertainties writ large in the political panorama, Mr. McGovern must be thinking about his own future if he is defeated in the U.S. Presidential election. But my sporting instinct leads me to hope that he may surprise us all yet—nothing is less satisfying than an election certainty. There will certainly be quite a few who will like to "pick Nick", because Mr. McGovern's views are so wildly different from theirs. It can only be explained in terms of their fear that he might just try to do some of the things he has promised, and about which, they think, he knows so little. But will President Nixon come back to power for another four years? It is not particularly good news for India, although at least it is a question of having to deal with the devil we know. For the rest of the world? Well, it might not be too bad at all, because it should mean the U.S.A. being able to extricate itself from the Vietnam disaster without too much loss of face, or damage to national morale. One of the McGovern promises was to end the Vietnam war on what would obviously have been surrender terms, coupled with an open invitation to Hanoi to take over the rest of Indo-China. This way at least the North Vietnamese might be persuaded to content themselves with merely gobbling up South Vietnam. I suspect also that

with Mr. Nixon safely back in the White House, the Russians will be more anxious to compromise over their aid to Hanoi. There are rumours originating in the Kremlin that Mr. Brezhnev still wakes up screaming from a nightmare which has something to do with Chairman Mao being cheered through the streets of Washington en route to the White House for the signing of a treaty of friendship and mutual military assistance.

THE SEARCH FOR OIL HAS ALWAYS PROVIDED a powerful stimulus to technological innovation. The problems that have to be solved, and the money which is usually at stake, all help to concentrate the ingenuity wonderfully. But nowhere does this promise to be more true than in the case of the new oilfields off the western coast of Europe, and especially in the northern part of the North Sea between Britain and Norway. The latest to be discovered there, which it is estimated could be supplying 15 per cent of Britain's domestic oil needs by the late 1970s, lies beneath nearly 500 feet of permanently rough water in a region where the weather is as unpredictable as anywhere in the world. Yet not only has the oil to be drilled for, from giant platforms weighing and costing as much as an ocean liner, it also has to be transported more than 100 miles to the nearest land. Eventually it is planned to do this by means of a pipeline laid along the sea bed to the Shetlands, the most northerly of the British Isles. But until this is built, it is hoped to load the oil into tankers from an under-water reservoir looking something like a huge sub-

merged bottle. I believe there is already one of these operating in the Persian Gulf. But there the waters are calm and relatively shallow, while the weather is rarely stormy. But in the North Sea the conditions are altogether different. Not only will the drilling rigs be constantly in danger; at least one has already been wrecked by storms. But the reservoir is going to need a lot of anchoring to the seabed if it is to stay in one place undisturbed by the weather and the tides. The risks of "bottle wreck" and pollution, perhaps arising from collision with shipping, are going to remain a persistent problem.

THERE ARE MORE THAN THREE WEEKS to go before the Pujas begin, but the first of the "Puja numbers" have already made their glittering appearance at Calcutta newspaper stalls. Not only the principal Bengali dailies and weeklies but also a large variety of relatively obscure periodicals have special numbers at this time of year; in fact, certain publications seem to appear only as Puja specials. Apparently, all are assured of fairly large sales. Of course, these vary from one publication to another; but the market seems good enough to sustain a wide range of journalistic enterprise. The purely literary or high-brow enterprise need not be considered with the rest, most of which aim at combining some quality with popular appeal and can hence be described as "qualipop". The proportion naturally varies; but it is to be noted that even the popular cinema magazines, whose immediate attraction is in stellar illustrations and gossip, take care to include in their Puja numbers a few novels

and short stories by established writers. Apparently, popular literary names are a big draw in the celluloid world as well. The successful novelists and short-story writers make a prodigious effort to meet publishers' demands before the Pujas, and the results are often pot-boilers even by unexacting standards. Even so, these people cannot always cope; and cases have not been unknown in which Mr. X or Mr. Y have had to inform their fans that a particular novel in a Puja special is written by a different X or a particular short story by a different Y. There is no easy safeguard against an obscure writer sharing the same name with a celebrity, or even using that name as a pseudonym. These are among the hazards of the literary sellers' market that prevails at this time of year. The popular writers cannot have many grievances; they seem to exploit this market almost as successfully as the publishers. Not infrequently, it is the readers who have reason to complain that they were promised more than what they have got. But the disappointment is forgotten well before the next Pujas. In any case, not all promise is illusory; some outstanding fictional writing in recent years first appeared in Puja specials, some of which also show considerable interest in creative innovation. This year, for example, two of the best known Puja numbers will carry the first novels by a few established Bengali poets, and some successful writers of fiction will probably display their talent for poetry. These publications have not yet appeared; and I look forward to them mainly to see the results of the interesting experiment.

How Management Can Control High Cost of Absenteeism

By Ganesh Kulkarni

The high cost, unreliability and an ever-increasing incidence of absenteeism is one of the reasons why an Indian entrepreneur prefers capital-intensive equipment to labour. Yet India, as a nation, has no shortage of manpower. It is necessary, therefore, to contain the cost of absenteeism in an enterprise.

It is necessary to examine the problem of absenteeism from a management accountant's point of view. Personnel officers, social psychologists, industrial engineers and other professional people have already had a go at the subject. Their treatment has been mostly analytical. They regard the problem as a direct consequence of socio-economic conditions, indiscipline and/or bad

morale. Absentee percentages are available year by year, by industries, regions, types and causes. However, reference to statistical data on absenteeism does not provide any worthwhile guidelines for action. Such recommendations that have been made to reduce its incidence have been largely ineffective. Quite often the causes are outside the management's sphere of influence and over which it exercises no control.

In fact, it is very difficult to establish cause and effect relationships. The same set of causes may lead to contradictory results. For example, young men should fall sick less often. At the same time, they tend to take life easy and stay away from work at the slightest pretext. An employee whose home town is at a distance is likely to overstay his leave. The local employee, on the other hand, is likely to visit his home town more often. Higher emoluments should improve morale and theoretically remove one of the important causes of high absenteeism. However, higher wages unaccompanied by an improvement in the standard of living provides a disincentive to work. A worker on marginal wages cannot afford to stay from work. The following are the three important features of the problem: (i) High level of absenteeism; (ii) progressive increase in its incidence, and (iii) substantial month-to-month fluctuations.

Although the Factories Act provides for only one day paid leave for 20 days worked, i.e., about 15 days a year, leave facilities in most of the reputable organisations are much more liberal. Total leave enjoyed by employees could be three to four times the number, split up as follows: Earned leave 21 to 30 days, casual 7 to 10 days, sick leave 15 days, and maternity 60 days. Besides this, workers take another six to eight days unpaid leave and a day or two off on the grounds of death of a celebrity, *bandh*, etcetera.

The incidence of absenteeism is increasing progressively. According

to one set of statistics, there was a phenomenal rise in absenteeism from 7 per cent in 1957-58 to 20 per cent in 1966-67. In some seasons and places, it is as high as 30 per cent and 40 per cent. If absenteeism was equally spread over the year, the employer would have faced a simpler problem. He could then have a leave reserve equivalent to average absenteeism. In practice, however, if average absenteeism is, say, 15 per cent, no month will have this level of absenteeism. It will be either 8 per cent or 22 per cent. If the employer decides in this case to have a leave reserve of 15 per cent, he would be carrying surplus labour for part of the year. During the rest of the months, he will suffer from a labour shortage and resultant adverse consequences on business.

It is necessary to suggest measures, not to stop absenteeism totally but to contain its cost in an enterprise. Various methods of reward, punishment, and persuasion used to reduce absenteeism can be found in any standard book on industrial psychology and personnel management. If the rising trend is any guide, these may be regarded as largely ineffective. The first step in the direction of controlling costs is to know what the true costs are. This applies to cost of absenteeism also.

Cost of Absenteeism

The cost of absenteeism is much more than what the employer pays out in the form of leave wages. It is possible that for want of a key man or men, an entire crew of workers or a machine worth lakhs of rupees is rendered idle. Also unanticipated high absenteeism may result in delayed deliveries, customer dissatisfaction and consequent loss of business. When an employer offers leave facilities, he assumes they will not be fully utilised. If ten days' casual and 15 days' sick leave are agreed to, he is prepared only for 10-12 days' absence. Only when the leave facility is fully (mis) utilised, does he become aware of what he had not bargained. For it can be assumed that in the long run, the level of absenteeism will be the total of all categories of leave plus 3 per cent unpaid leave! Another factor which leads to miscalculation of true costs is month-to-month variation in the level of absenteeism. In order not to lose business on account of a labour short-

BOAC moves cargo through London to 11 North American cities faster than anyone.

It's all done by computer.

Your cargo can travel on any of our 18 passenger flights a week, from Bombay, Calcutta and Delhi. Or our all-cargo flights from Calcutta twice a week.

When it arrives at London it passes through our computerised handling facilities, (which help move your cargo faster and efficiently).

And then from London your cargo can connect with any of our 80 flights a week to all the major cities of North America. Cargo can also be shipped to as many as 89 different European destinations every day.

No other airline can ship cargo through London faster than BOAC. Because no other airline has it all done by computer.

We'll take good care of you.

The Munich Massacre : Israel Reacts in the Wrong Way

By M. B. Lal

The Israeli reaction that the massacre in Munich has pushed the issue of peace to the background cannot but please the Arab commandos. But Israel should have known that the elimination of the terrorists depends on finding a peaceful solution to the major issues in the area.

IT is difficult to say whether the massacre in Munich of 11 Israelis by the Arab commandos was an act of terrorism or defeatism. With the withdrawal of Russian presence from Egypt, the balance of power in west Asia has clearly shifted in Israel's favour. It is a pity that Israel should have fallen into the terrorists' trap by declaring a war against them and announcing that the cause of peace had been pushed to a second place. This emotional response is precisely what the terrorists want. Their game is to draw Israel into a military operation that would inevitably provoke response from the Arab Governments and reactivate an area which has lately shown signs of cooling off. The Palestinians do not want a settlement short of the annihilation of Israel. They are determined not to recognise the reality of the Jewish State and they feel that if there is peace, their cause will be lost. In this context, it is difficult to understand the violent and highly emotional Israeli retaliation against the Arabs. The Arab Governments have answered in kind. The question is: will this decisively reverse the trend towards peace and lead to a full-scale war?

To try to examine the implications of the new tension in west Asia following the Munich tragedy, one has to find answers to two important questions: The first is how far will Israel and the Arabs be willing to play into the hands of the terrorists and jeopardise the hopes of peace? The second question is that should the Arabs and the Israelis be so foolish as to blast the hopes of peace over the Munich incident, would the two Super-Powers allow themselves to be dragged in a renewed conflict despite their avowed policy of working towards peace in the region?

The second question needs to be answered first. It seems most unlikely that the Americans and the Russians will behave in the manner of the Arabs and Israelis. There appears to be a direct relationship between the Super-Power attitudes to the crises in west Asia and Vietnam. The Russians' stubborn refusal to be hustled by the Arabs into a war in the Mediterranean is directly related to the Americans' repeated declarations that they will withdraw from Vietnam by the end of the year. If the two Big Powers now get actively engaged in an Arab-Israeli war, it is bound to have repercussions in the Far East and the Americans might examine the wisdom of leaving another strategic area exposed to Russian expansionism. This is not all. Tension will increase in other sensitive regions.

Thus if a war breaks out between the Arabs and Israel, the dormant interests of the Big Powers may start reasserting themselves in the form of local confrontations. Besides fresh difficulties arising between India and Pakistan and between Pakistan and Bangladesh, the moves for the reunification of the two Koreas could suffer a setback and the proposed European Security conference and the theme of Ostpolitik in Europe may be scuttled. The S.A.L.T. negotiations may not progress any further.

Unfortunately, all these inhibiting factors may not be enough guarantee against Big-Power involvement in the west Asian crisis should it develop into a war. This is because, despite its disappointment with the Arabs, it is doubtful whether Russia would permit its investments of over \$7,000 billion in Egypt to go down the drain. Already the Russian leadership is under strong attack from within for the apparent failure of its policy in the area. It may require a much stronger man than Mr. Leonid Brezhnev to survive a complete collapse of Russian interests in the strategically vital Mediterranean region. The present leadership may not be spared if American supremacy is decisively established over the region between the Suez and the Gibraltar. Any power that rules

these two waterways will eventually rule the Indian Ocean which is today considered the single most important region from the point of view of global military strategy. The Russians simply cannot afford to lose this battle. It appears certain that in case of a major war they simply will have to support the Arabs. President Anwar Sadat has, therefore, taken a calculated risk in asking the 15,000 Russian experts to quit his country.

Should the Arabs and Israelis, therefore, be bent upon precipitating a war, the only power that may still be able to save the situation is the U.S.A. The Israelis enjoy a decisive military superiority over the Arabs, thanks to the massive U.S. arms aid. It will be up to the Americans to restrain Israel. The Jewish influence in the U.S.A. being what it is, this is easier said than done for an American President seeking election within the next two months. Although the major share of the responsibility to prevent a fresh war in the Middle East appears to lie with the Big Powers, the attitude of the Arab Governments and Israel is of no small importance. By now there is hardly any Government among the 14 Arab countries which does not recognise the reality that Israel has come to stay in their midst. Israel, likewise, knows that its present territorial claims may be a good bargaining counter but cannot be sustained in any settlement that ensures an honourable peace for all concerned. Permanent peace can be brought about only around a formula based on the Security Council resolution of June 1967.

If both sides are fully convinced that their conflict can never be resolved through war and will have to be settled across the negotiating table, the only uncontrolled factor that remains is the terrorists. It is obvious that the Arab countries which harbour and support the terrorists must share part of the blame for the sinister activities. The extremist guerilla organisations of the Arabs are concentrated mainly in Syria and Lebanon but the Israelis have strong reasons to believe that such elements are very active in Egypt too. There are two ways of looking at the problem. One is to force the Arab Governments on the point of a gun, as Israel seems to be trying to do now, to suppress and banish the terrorists from their lands. The second is to realise that once an overall understanding is reached between the Arabs and the Israelis on the wider issues of war and peace,

ge, an employer carried a leave reserve higher than what the average percentage would signify.

Here are some factors which result in high absenteeism over which the management has some control, at least initially:

(1) Generous sick leave. Although the employer makes a substantial contribution to the E.S.I., he continues to offer generous sick leave. It is common knowledge that doctors' certificates can be had for the asking and this facility is largely misused. It satisfies a genuine need only in the case of a few people.

(2) Payment of leave wages in advance. Workers quite often take leave so that they can get leave wages to tide over their monetary difficulties. Perhaps by agreeing to advance money against wages, the incidence of absenteeism arising from this cause could be reduced.

(3) Laxity in enforcing discipline. In the initial stages, no one tends to be strict. Consequently, a higher level of absenteeism becomes part of the "culture" of the organisation. It then becomes impossible to improve matters. It is not necessary to sanction every

leave application that is presented. The easiest method of getting leave is to send a medical certificate. If the employer scrutinises each medical certificate, he would find that many of them are suspect. A medical certificate produced in support of the extension of privilege leave can almost always be questioned.

Leave Reserve

Another method of containing the cost of high absenteeism is to contrive to have only one peak instead of two as it happens in organisations which make the full quota of leave available in January. Consequently, absenteeism is high in January as well as in May when the schools are closed. By "crediting" the leave, say, in April, there will be one peak of high absenteeism from April to June instead of two—one in January and again in May and June. It is then possible to have a leave reserve equivalent to the low absentee percentage, say, 8 per cent. During the three months of very high absenteeism, the following remedial measures can be taken: (1) Recruitment of college students during their annual holidays, (2) building up of stocks when absenteeism is low, (3) use of differential pricing (when manufac-

turing is against customers' specific orders) so that the demand is properly spaced, and (4) close down a few departments and operate the rest at normal levels, instead of being behind schedule in all the departments.

Encashment of leave is not elaborated because it finds a mention in most of the published literature. Encashment of leave puts more money into the pockets of employees and acts against enforced idleness. But the practice is not popular because it is widely assumed that people prone to take full advantage of leave facilities will in any case stay away whatever the cash incentive. The other set of workers do not need cash incentive as there is nothing to complain about their attendance. The employer will pay in the long run the wages which he can afford for the productive work. As the gap between the days paid for and days resulting in productive work widens, the overall wage structure gets depressed. A regular employer thus suffers for no fault of his. The high cost, unreliability and an ever-increasing incidence of absenteeism is one of the reasons why an Indian entrepreneur prefers capital-intensive equipment to labour, although India, as a nation, has surfeit of manpower.

MANAGEMENT APPOINTMENTS

This space is available for publicising your Management Appointments.

The Management section in *Capital* is the appropriate medium for advertising such top appointments as company secretaries, accountants, legal and tax advisers, management consultancy staff and personnel officers.

For particulars, please contact the Advertisement Manager, *Capital*, 19 R. N. Mookerjee Road, Calcutta 1. Phone : 23-5825-26-27.

combing out the extremists would be a matter of a few weeks.

This, in fact, seems to be the best course to follow. The Israeli declaration that the cause of peace has been pushed to the background and the first objective is to crush the terrorists in their hideouts is putting the

cart before the horse. The elimination of the terrorists itself depends on finding a peaceful solution to the larger issues. Whatever the provocation there is little justification for the Israeli attacks now. Israel seems to have lost the moral victory it won in Munich by over-reacting to the situation.

Right Priorities Needed for Promoting Industrial Growth

(By a Special Correspondent)

The present industrial policy is responsible for the country's sluggish industrial growth. Unless the policy is drastically changed, India will have to reconcile herself to the position of a third-rate country in south-east Asia.

AT a time when the Government of India appears to be groping in the dark over how to revive the country's economy in order to promote industrial growth and create more employment opportunities, Mr. R. Venkataraman, former Member of the Planning Commission, has made some valuable suggestions. Mr. Venkataraman's plea is for a fresh and open-minded review of the industrial policy, for he considers the one pursued since 1956 out of date and obsolete. Speaking recently at a meeting of the Rotary Club of Madras, Mr. Venkataraman argued that the present industrial policy was responsible for not only the starvation of goods and services in the country during the last few years, but also the stagnation of industrial growth and consequent loss of production. Unless the policy was drastically changed, India would have to reconcile herself to the position of a third-rate country in south-east Asia.

Mr. Venkataraman contended that his experience as the Minister for Industries of Madras for over ten years and Member in charge of Industrial Development in the Planning Commission for four years had convinced him that a country could progress where genuine entrepreneurial talent was properly mobilised and sufficiently encouraged to organise industries which could meet the growing requirements of consumer goods for the people. "No country progressed without a plethora of goods and services; no country pro-

gressed on shortages—this is the lesson I have learnt", he said.

Stating that the time had come for a complete review and reappraisal of the Industries (Development and Regulation) Act to see how many industries could be freed from it, he pleaded that any continued restriction on industrial growth could not only act to arrest growth but would also result in a definite setback. Even the Swaminathan Committee report had advocated the delicensing of all consumer goods industries. In fact, as a result of that report, 44 industries were actually delicensed; and this was a step in the right direction. In the Fourth Plan, for the drafting of which Mr. Venkataraman had played a part, it was suggested that all industries which did not require any foreign exchange either for capital goods or for raw materials should be completely freed from any kind of Government control, regulation and licensing. For, anyone who invested his money ought to know which goods would be sold when produced. No expert body, however brilliant, could forecast the demand for particular things, especially consumer articles. The only issue with which a Government ought to be concerned was the regulation of scarce foreign exchange. Even here, he was of the view that if a party was able to earn foreign exchange for the spare parts he required or for the capital goods of any new industry he wished to put up, he should be enabled to do so, so that the country could progress rapidly.

Mr. Venkataraman did not deny that in the heavy industry sector, a certain measure of regulation was unavoidable, since it made very heavy demands on the financial institutions of the country. But he insisted that the time had come when encourage-

ment of industrial production would undoubtedly help to increase the total volume of wealth in the country. On the other hand, any restrictions continued without sufficient reason could only promote stagnation and cause deterioration to the well-being of society. According to Mr. Venkataraman, an article in the Constitution which says that the economic resources should be deployed in such a way that it did not lead to any concentration of wealth "to the detriment of the welfare of the people", had been wholly distorted to bring about changes in the industrial licensing policy which had proved harmful to the interests of the nation. He felt that if the Government had really wanted to prevent the concentration of wealth, strict enforcement of the taxation measures—already in force in the country—would have brought about the results. By wrong interpretation of this sort, the Government was only preventing the expansion of the big industrial houses without any advantages accruing to the nation. He did not see any rhyme or reason in a policy of encouragement to those who could not deliver the goods. For, it was only the big industrial houses and such others who had the necessary expertise and managerial talent to start new industries and organise them properly. Otherwise, "it would amount to supplying spectacles to the blind and refusing to give light to the men who could see."

Mr. Venkataraman had his own reservations about the joint-sector concept. The policy-makers in authority today had not yet spelt out what exactly it meant and how they thought this would work to benefit the country. If it really meant associating financial institutions in the directorship of such companies, there was nothing new in it, for, the Madras Government had already been doing it for over 20 years. If, on the other hand, the joint sector meant joint management of an industry or business, it would simply mean "too many cooks spoiling the broth". Mr. Venkataraman was sorry that the policy-makers in the Government were knowingly or otherwise putting the cart before the horse. They must plan to end the starvation of goods and services without which there could be no real economic progress for the nation. Industrial growth had reached a new low while the population of the country was twice as much. It did not matter who produced; what was needed was production of goods and services in an ever-increasing measure.

Evolving a New Strategy for Export Promotion

By M. R. Hazaray

India's export performance in recent years has fallen short of the targeted rate of growth. What is needed today is a new strategy for export promotion.

BY and large the export promotion measures implemented in the past have failed to produce the expected results. On the contrary, they have given rise to certain new problems. Hence the necessity of a new approach to the problems of export trade. The country's export performance on the whole has fallen short of the targeted rate of growth of 7 per cent. On the other hand, the growing accent on self-reliance in the event of declining foreign aid, makes it all the more important to boost up exports to a much higher level. In fact there is no other way for a developing country but to step up its export earnings considerably in order to pay for the mounting bill of essential imports and amortisation charges and thus achieve the objectives of

growth and self-reliance. Indeed the degree of self-reliance is in a way a measure of economic growth.

From this point of view India's export performance during the last five years leaves much to be desired. The Foreign Trade Minister, Mr. L. N. Mishra, has rightly thought of bringing about some structural changes in the pattern of the country's foreign trade. Given the unfavourable factors along with the favourable ones, one finds the export performance is subject to many vicissitudes. The table on page 491 clearly brings into focus the need for a new strategy of export promotion. There must also be a restructuring of the pattern of export trade.

The vicissitudes in export earnings seem particularly glaring against a speedily rising import bill which tends to widen the gap between the two. Even if allowance is made for several adverse factors, the average

rate of growth of 5 per cent achieved in exports does not make encouraging reading, as against the targeted 7 per cent. It is true that the recessionary world trend in the production of steel affected iron ore exports. Similarly shortages of steel and cotton were responsible for slowing down the export of engineering goods and cotton yarn. The international currency crisis caused much confusion. Finally, the attitude and policies of the E.C.M. and the U.S.A. became tougher towards the developing countries during the last two years. The Indo-Pak war also created many difficulties.

Fortunately, however, there is a silver lining. The rupee trade agreements have increased India's trade with east European countries from 7.8 per cent to 23 per cent which has just balanced the decline in trade with west European countries. The share of the developing countries in the world trade has remained more or less constant at 26 per cent. Raw tobacco and cashew nuts and shrimp enjoyed high world prices. The take-over of textile, mica and coir exports is likely to produce beneficial results in future. All these favourable changes, although of a temporary nature, suggest a future line of

action in certain fields of export trade. It seems that there is ample scope for augmenting the export of non-traditional items like diamonds, electronic goods and tourist services. The development of forest and sea wealth can also be systematically tapped to boost up the total exports to a much higher level for the purpose of achieving the Fifth Plan target. Not only the composition of trade but its direction can also be beneficially changed more towards the Third World, including Bangladesh. Only the possibilities must be explored thoroughly and as early as possible through Indian embassies and trade commissions abroad.

Year	Export earnings (Rs. in crores)	Rate of growth
1967-68	1,169	4%
1968-69	1,358	13%
1969-70	1,413	4%
1970-71	1,535	8.3%
1971-72	1,610 (estimated)	5%

Besides these short-term measures (they are short-term because the composition and direction of trade will always be in flux in this dynamic world), some long-term measures must also be undertaken to improve the price competitiveness of Indian goods, and to strengthen the institutional support, i.e., infrastructure for trade. The scheme of compulsory export obligations on certain selected industries in this respect promises the export-growth industries a better future. They should be weaned away from a sheltered home market into the world of competition with the help of preferential treatment and raw materials made available to them at international prices. Compulsion to create an exportable surplus may not be so much resented if industries are actively encouraged to grow and compete in the international market.

Indian joint ventures overseas may be another rich source of earning foreign exchange. So far 30 such ventures have been established overseas while another 50 are to be launched soon in about 25 countries. Up till now they have not been able to repatriate any substantial amount of foreign exchange because of political troubles, labour unrest and exchange control. However, it is possible for the Government to make them partners in export promotion, for they are eminently suited for the export of capital goods. Compulsory reporting of their activities to the Reserve Bank of India may help to highlight their problems.

Indira-Mujib Talks : Identity of Views

(From Our New Delhi Correspondent)

Last week's New Delhi meeting between Mrs. Gandhi and Sheikh Mujibur Rahman gave the two leaders an opportunity to review the Indo-Bangladesh relations. The fact that there was identity of views between them should help strengthen the Indo-Bangladesh tie.

THE Prime Minister of Bangladesh, Sheikh Mujibur Rahman's brief stop-over in Delhi last week and the confidential talks he had had with the Prime Minister, Mrs. Indira Gandhi, have undoubtedly helped not only in further cementing the Indo-Bangladesh relations but also in greater understanding of the problems confronting the sub-continent. Many developments have taken place after the two leaders met in Dacca, which led to a treaty of friendship and mutual co-operation. Since then, India and Pakistan have been trying to settle their outstanding issues through negotiations, and the Simla summit was the first major attempt in this direction. But with the connivance, possibly, of the United States and China, Pakistan has been backsliding from its Simla commitments and, consequently, there has been no progress in regard to delineation of the border as it existed on 17th December last year. Without this there can be no withdrawal of the forces on either side of the border. The 90,000-odd prisoners of war have also remained a burden on India and their release becomes more difficult as Pakistan becomes more intransigent with regard to the recognition of Bangladesh. During his stop-over in Delhi, Sheikh Mujibur Rahman was asked about this crucial issue and he declared that his stand in regard to it was firm.

In a nutshell, the attitude of the Sheikh is that not one of the 90,000-odd prisoners of war, who surrendered to the joint Indo-Bangladesh command, could leave for Pakistan without Bangladesh coming in the picture. This means that there must be some official contact between Pakistan and Bangladesh. This

again can happen only when the former recognises the sovereignty of the latter; in other words, official recognition of Bangladesh as a member of the United Nations. For some unspecified reasons, President Bhutto of Pakistan has been wanting to meet Sheikh Mujibur Rahman before Pakistan recognises Bangladesh. But the Sheikh has been resisting this, and very rightly.

At his news conference, before leaving for Dacca, Sheikh Mujibur Rahman was asked about President Nixon meeting Premier Chou En-lai and Chairman Mao Tse-tung even before the United States recognised China. This analogy, he said, does not hold good for Bangladesh and Pakistan. Bangladesh has come into being from out of former Pakistan after a heroic revolutionary struggle by the overwhelming majority of the people living in one wing of the country. In the case of China, U.S. recognition only means a symbolic legal action by another country, and this can wait as U.S. recognition has already been delayed for over 25 years.

Bangladesh was in ruins when it was born and the nine months since its liberation are too short a period for putting the nation on an even keel. Although India has every sympathy for the aspirations of the people of Bangladesh, she has been careful in not going out of her way in extending economic assistance to the new nation unless the Government there made a formal request for help. This is for the simple reason that the Government of India does not want to give any impression to other countries or to the people of Bangladesh that she has only replaced West Pakistan in terms of economic or political domination. Sheikh Mujibur Rahman understands this policy very well and repeatedly told newsmen that his talks with Mrs. Gandhi were "very satisfactory" and that there were no differences over issues in which both India and Bangladesh were interested. This should augur well for better Indo-Bangladesh relations.

J. K. ORGANISATION Synthesis of National Talent and Entrepreneurship

PNB directors' report-1971

Extension of banking services to rural and under-developed areas is one of the major objectives of nationalisation. From July, 1969 to December, 1971, offices of commercial banks increased from 8,284 to 12,985. During 1971, 1,805 new offices were opened as against 2,137 in 1970. This slowing down of the tempo of branch expansion may be ascribed to various factors like limited trained manpower resources, urban-oriented staff, non-availability of suitable premises, etc., etc.

During the year under review, the performance of the banking system in the mobilisation of deposits was much better than the preceding year. Over the year, aggregate deposits of all commercial banks increased by Rs. 1,238 crores or 21.8% as against Rs. 808 crores or 16.6% during the preceding year. This faster growth in deposits may be ascribed partly to increase in monetary resources and partly to intensification of efforts by banks at deposit mobilisation, massive branch expansion and creation of the banking habit amongst the rural population.

There was lower credit expansion during 1971 than in the preceding year. Scheduled commercial banks' credit during the year increased by Rs. 595 crores as compared to Rs. 837 crores during 1970. While there was larger increase in credit to the priority sectors than in the preceding year, the demand for funds by larger industries was smaller due to various factors, including lower production of certain commercial crops like sugarcane, oilseeds, etc., and scarcity of raw materials. Another important factor for smaller credit expansion was that advances for food procurement operations did not increase to the anticipated level due to accelerated sales by the Food Corporation of India.

In pursuance of its policy of credit restraint, the Reserve Bank of India raised the Bank Rate from 5% to 6% in January, 1971 and the net liquidity ratio from 33% to 34% with effect from January 29, 1971. The refinancing facilities were, by and large, kept intact, but for some marginal changes in the matter of refinancing for food procurement.

The Credit Guarantee Scheme for advances to small industries was liberalised and advances in the border areas were exempted from the operation of selective credit controls. Another important development during the year was the coming into operation of the Credit Guarantee Corporation of India (Small Loans) Guarantee Scheme with effect from April 1, 1971. The scheme aims at providing guarantee cover for bank lendings to small borrowers. As a result, the banks have been able to offer larger financial assistance to small needy borrowers.

PNB'S OPERATIONS

During 1971, performance of the Bank was gratifying in every sphere of its activity.

DEPOSITS: Deposits of the Bank rose from Rs. 443.9 crores as on the last Friday of 1970 to Rs. 537.2 crores as on the last Friday of 1971, thus recording an increase of about 21.0%. During the calendar year 1971, however, our deposits showed a growth of Rs. 77.5 crores as compared to Rs. 68.6 crores during the last year, registering an increase of 16.7% as compared to 17.6% during 1970.

The Bank introduced a number of new schemes for deposit mobilisation such as Students Deposit Scheme, Old Age Provision Deposit Scheme, Automatic Extension Deposit Scheme, Scheme for Cashless Payment of Salaries and Wages and Special Fixed Deposit Scheme. 'Deposit Mobilisation Fortnights' were celebrated at about 120 offices during the year, as a result of which the Bank was able to secure about 31,000 new deposit accounts. Special Deposit Mobilisation Cells were established at certain potential centres to mobilise savings of the people and channelise idle and unproductive money to the organised sector. To infuse a spirit of active participation amongst members of the staff in the Bank's deposit mobilisation drive, various new incentive schemes were formulated and introduced during the year with satisfactory results.

CREDIT EXPANSION: At the end of 1971, loans and advances of the Bank stood at Rs. 341.9 crores as against Rs. 303.2 crores as on December 31, 1970, registering an increase of Rs. 38.7 crores or 12.8% as against Rs. 76.6 crores or 33.8% in 1970. Lower percentage of increase in the credit expansion of the Bank was in keeping with the general trend in the banking industry during 1971-72 as a whole. Fall in the production of sugar from about 38 lakh tonnes to around 31 lakh tonnes during the last crushing season particularly affected the advances portfolio of the Bank, which is financing this industry to a fairly large extent. Advances of the Bank to sugar mills fell from Rs. 25.5 crores as at the end of 1970 to Rs. 14.8 crores as on December 31, 1971, i.e., by 42%. Notwithstanding this steep fall, the Bank's percentage of credit expansion at 12.8% did not compare unfavourably with that of the banking system at 13.4%.

INVESTMENTS: Investments of the Bank in Central and State Government Securities and other Trustee Securities stood at Rs. 155.3 crores on December 31, 1971 as against Rs. 134.7 crores at the end of the preceding

year. The Bank made larger investments in Government and Trustee Securities, partly to comply with the RBI requirement to maintain a higher liquidity ratio and partly to make optimum utilisation of its surplus funds due to slower rate of credit expansion.

ADVANCES TO PRIORITY SECTORS: Although the rate of overall credit expansion of the Bank during 1971-72 was slower, increase in credit to the priority sectors and the hitherto neglected sections of the society was quite impressive. During the year under review, loans and advances of the Bank to the priority sectors expanded from Rs. 46.5 crores to Rs. 58.3 crores and the number of loan accounts in these sectors increased from 35,385 to 44,907. Thus, there was an increase of about 25% in the aggregate amount of outstandings and about 27% in the number of loan accounts as at the end of 1971. Viewed from both the angles, the Bank's rate of growth was considerably higher than the growth rate for all the public sector banks during the year. The table giving a break-up of our lendings to the priority sectors at the end of December, 1970 and December, 1971 is given below :-

Priority Sector Advances

(Rs. in thousands)

Sector	Number of accounts		Outstandings		Increase in Out-standings*	
	1970	1971	1970	1971	Amount	Per cent
(1)	(2)	(3)	(4)	(5)	(6)	(7)
Agriculture :						
(i) Direct	25,491	31,399	10,55,37	13,73,36	3,17,99	30.1
(ii) Indirect	536	477	7,73,97	7,51,60	(-22,37)	(-2.9)
Small-scale Industries	2,707	3,305	12,74,65	15,74,24	2,99,59	23.5
Transport Operators	1,884	4,453	3,91,74	8,51,91	4,60,17	117.5
Retail Trade	3,780	3,746	1,97,82	1,77,22	(-20,60)	(-10.4)
Professionals for purchase of equipment	179	316	5,23	7,77	2,54	48.6
Artisans	391	696	4,75	9,15	4,40	92.6
Education	82	114	1,76	3,19	1,43	81.3
SUB-TOTAL	35,050	44,506	37,05,29	47,48,44	10,43,15	28.2
Exports	335	401	9,46,49	10,81,42	1,34,93	14.3
TOTAL	35,385	44,907	46,51,78	58,29,86	11,78,08	25.3

* (—) represents decline

AGRICULTURE: The number of farmers directly financed by us during the year increased from 25,500 to 31,400 and the outstandings in such loans/advances amounted to about Rs. 14 crores. Having regard to the fact that on the eve of nationalisation we had only 600 loan accounts in the agricultural sector with total advances of about Rs. 26 lakhs, efforts made by the Bank in this field would appear to be encouraging. It may also be mentioned that as at the end of 1971, 41% of the number of farmers financed by the Bank belonged to the marginal and small category with holdings of 7.5 acres and below. Bulk of the beneficiaries were financed for irrigation purposes such as digging of wells and purchase of pumpsets and other machinery. Other purposes for which financial assistance was given included purchase of inputs, i.e., seeds, fertilizers and pesticides, and dairy, poultry, felling, bunding, etc.

In order to step up its assistance to small and marginal farmers, the Bank proposes to actively associate itself with the Small Farmers' Development Agencies and Marginal Farmers and Agricultural Labour Agencies created by the Government. It is expected that as a result of this co-ordination it would be possible to further appreciably increase our advances to the small and marginal farmers during the year 1972.

For proper appraisal of the credit needs of the farmers and to educate them to make productive use of the available bank credit, the Bank recruited during the year more Technical Field Officers having sufficient experience of agricultural techniques. With added strength of trained officers, the Bank is proposing to go ahead in a more concerted manner with its village adoption programme during 1972. It is also proposed to introduce various consultancy services in the near future.

SMALL-SCALE INDUSTRIES: The Bank continued to make sustained progress in financing small-scale industry. The number of small-scale units financed by the Bank stood at 2,168 at the end of 1971 as compared to 776 at the end of the previous year. The outstandings in loan accounts so increased from Rs. 12.7 crores to Rs. 15.7 crores, showing an increase of 23.5% during the year. Amongst the new schemes formulated during 1971 for providing financial assistance to the weaker sectors may be mentioned schemes for the extension of credit to artisans engaged in the manufacture of carpets and various types of handicrafts, primarily for export; financing of powerloom/handloom weavers; and giving financial assistance to entrepreneurs for establishing industrial estates.

The Bank continued to lay stress on diversification of its lendings to the small-scale sector. As a result, larger credit was extended to new lines of manufacture such as wearing apparel, light engineering goods, metal products, electrical goods, plastic and rubber products, ceramics, chemicals and pharmaceuticals, etc., etc.

In order to ensure timely assistance to the needy borrowers, authority for sanction of loan proposals was further decentralised and higher powers were delegated to the officers in the field, so that unnecessary delays were avoided. A new cadre of Technical Field Officers has been created to peruse loan proposals of small industries from the point of view of economic and technical feasibility of the projects rather than laying too much stress on the 'security' aspect. It has also been decided to create separate cells at Regional Offices to deal expeditiously with loan proposals relating to the priority sectors, including small-scale industries. Separate cells are also contemplated to be created in different branches which have one a sizeable business in financing the priority sectors or have potential for the same. It is expected that as a result of these steps it will be possible for the Bank to have a better share of this business during the year 1972.

TRANSPORT OPERATORS, PROFESSIONALS & ARTISANS:

During 1971, the Bank provided credit facilities on a rapidly increasing scale to transport operators, professionals and artisans. The beneficiaries ranged from truck operators to cycle rickshaw-pullers. The number of transport operators financed by the Bank increased from 1,884 to 4,453 with outstandings at about Rs. 8.5 crores as on December 31, 1971. It may be mentioned that credit extended by the Bank to this category of borrowers is the highest among all the public sector banks.

Credit facilities have been provided by the Bank to cycle rickshaw-pullers in Punjab and at certain centres in Bihar. The loans allowed by the Bank are repayable in easy instalments so that the borrowers become owners of the vehicles in about 20 months.

The Bank adopted suitable measures to step up its lendings to professionals and artisans during the year. The number of borrowal accounts relating to 'professionals' increased from 179 to 316 and the outstandings registered an increase from Rs. 5.2 lakhs to Rs. 7.8 lakhs. We are conscious of the fact that much more remains to be done. The number of accounts and outstandings relating to 'artisans' also increased significantly during 1971. We have formulated certain special schemes for financing individual artisans in J & K, under which persons engaged in a variety of small industrial pursuits such as wood carving, shawl making, embroidery, etc., are eligible for bank credit.

EXPORT FINANCE: The turnover of the export business handled by the Bank during 1971 registered an increase of about 39% over that of the preceding year. Pre-shipment and post-shipment credits outstanding at the end of the year were about 14.3% higher than the outstandings as at the end of 1970. Extensive credit facilities were granted to manufacturers of woollen hosiery for export. Credit assistance was also made available on an increasing scale for export of various other commodities such as jute manufactures, hides and skins, textiles, sugar, cement, manganese ore, sports goods, etc. Export of coffee was handled by the Bank for the first time during the year under review.

LEAD BANK SCHEME

Survey of all the 28 districts allotted to the Bank under the Lead Bank Scheme was completed and reports published by October, 1971. 262 unbanked centres were identified for opening new offices for providing banking facilities in these lead districts. These centres have been allotted to various nationalised and non-nationalised banks. During 1971, the Bank opened offices at 71 centres allotted to it in the lead districts. The Bank has also set up Co-ordination Committees in 11 Lead Districts in collaboration with the local district authorities and other banking institutions to draw up integrated programmes for economic development of the concerned districts. Special attention was paid to backward districts and out of the 71 offices opened in lead districts, 56 were set up in such districts.

BRANCH EXPANSION

Whereas the pace of branch expansion by the banking industry as a whole slowed down during the year, our Bank opened 99 new offices in 1971 as against 91 and 88 opened in 1970 and 1969 respectively. Out of the 99 new branches opened during the year, 71 were established at rural centres having a population of 10,000 or below. Of these, 67 were opened in unbanked centres.

As a result of the new orientation given to branch expansion, the Bank's semi-urban and rural base has been growing fast. Thus, the proportion of rural and semi-urban offices of the Bank to its total number of offices stood at about 68 per cent as against 63 per cent in 1969. A spread-out of the

bank's branches in different areas for the last three years is given below :

Centres	Number of offices as at the close of		
	1969	1970	1971
1. Metropolitan	89 (14.4)	93 (13.1)	98 (12.1)
2. Urban	141 (22.8)	145 (20.4)	163 (20.2)
3. Semi-urban	283 (45.7)	305 (43.0)	310 (38.4)
4. Rural	106 (17.1)	167 (23.5)	238 (29.3)
TOTAL	619 (100.0)	710 (100.0)	809 (100.0)

Figures in brackets represent proportion to the total.

The Bank's experience with regard to mobilisation of deposits at the newly opened offices in rural/semi-urban centres is fairly satisfactory. As on December 31, 1971, deposits secured by new offices opened during the course of the year totalled about Rs. 3.1 crores giving an average of Rs. 4.1 lakhs per office.

PUBLICITY

During 1971, the Bank's publicity programme was further streamlined and given a new direction. In addition to the conventional media of publicity through newspapers, new modes of publicity were introduced with satisfactory results. These included display of posters and hoardings, depicting distinctive backgrounds of the various States, and opening of stalls/publicity counters at rural fairs and exhibitions all over India for display and distribution of publicity material relating to our various deposit and credit schemes. The Bank also started, as an experimental measure, libraries cum reading rooms equipped with books and periodicals of general interest and a radio set in some rural areas in Bihar, Haryana and U. P. The Bank's publicity material such as posters, folders, etc., were also displayed in these libraries cum reading rooms for the benefit of the rural population. We are happy to say that this experiment has proved useful and beneficial.

ORGANISATION & PERSONNEL

A separate Management Development Department was set up at the Head Office in November, 1971 to look after manpower planning, executive inventory, recruitment, training and development, appraisal and succession planning.

To meet the increased demand for trained manpower and to cope with new responsibilities, the Staff Training College organised special courses on Small-Scale Industries, Agricultural Finance, Foreign Exchange and Export Finance, and organised 11 workshops on Agricultural Finance at different centres. The Bank also availed itself of the training facilities offered by The National Institute of Bank Management, The Banker's Training College, The Administrative Staff College of India, The National Institute for Training in Industrial Engineering, etc.

WORKING RESULTS

The working results of the Bank for the year 1971 showed a significant improvement over the previous year. The gross income of the Bank at Rs. 39.1 crores was higher by Rs. 6.9 crores or 21.4% as compared to an increase of Rs. 5.3 crores or 19.8% in the previous year. The expenditure on salaries and allowances rose from Rs. 11.6 crores to Rs. 13.2 crores or 13.6% as against an increase of 25.8% in the previous year. The net profit of the Bank, after making usual and necessary provisions, amounted to Rs. 245.2 lakhs as compared to Rs. 214.0 lakhs in the previous year. After providing Rs. 129.0 lakhs for bonus to staff and transferring Rs. 55.0 lakhs to Reserve Fund, the balance amount of Rs. 61.2 lakhs has been transferred to the Central Government in terms of Section 10(7) of the Banking Companies (Acquisition and Transfer of Undertakings) Act, 1970. This forms a return of 6.00% on the amount of compensation paid by the Government as compared to the corresponding figure of 5.98% in 1970.

Before concluding, the Directors wish to thank the officers and other members of the Staff for their hard work and co-operation and would like to place on record their appreciation of the high sense of devotion to duty and loyalty to the Institution displayed by members of the staff working in border areas who steadfastly stuck to their posts during the difficult period of hostilities with Pakistan.

For and on behalf of the Board of Directors

PUNJAB NATIONAL BANK

Andhra Pradesh : Important Changes in Land Reforms Bill

(By a Special Correspondent)

The Andhra Pradesh Government has proposed important modifications in the Land Reforms Bill. The modifications now proposed have been effected in deference to the views expressed by a large number of party legislators.

THE Andhra Pradesh Government has proposed important modifications in the Land Reforms Bill at the Joint Select Committee stage. The changes have raised the ceiling fixed for different categories of dry and wet land irrigated by tubewells. But there is a lowering of the ceiling on grape gardens from 54 acres to 18 acres. The lowering of the ceiling is expected to bring about diffusion of ownership, but the overall profitability of the gardens will be affected in the long run. The lower ceiling, meanwhile, is being opposed by the owners of grape gardens. The new changes, now proposed, aim at fixing the ceiling in respect of double crop wet land at 10 to 18 acres (compared with 12 to 18 acres proposed in the original Bill).

In respect of single crop wet land, the new ceiling is put at 15 to 27 acres (compared with 18 to 27 acres in the original Bill). The amendment also disregards, for the purposes of the Bill, all divorces and adoptions after 4th January, 1971. What is more, all conversions of agricultural lands into non-agricultural lands made within five years of the notified date would not also be recognised. In respect of dry land under five categories, the ceiling is fixed at 30 acres, 40, 45, 50 and 54 acres (as against 30 acres, 36, 42, 48, and 54 acres, respectively, earlier).

Apart from these changes, there is a major concession given to farmers in the coastal delta districts. This concession defines double crop wet land as "land on which two crops a *fasli* year have been raised, with the use of water from a Government source of irrigation in any four *fasli* years within a continuous period of six *fasli* years" immediately before a specified date. This definition excludes the large acreage under the Krishna and Godavari delta which gets water for a second crop by rotation once in two years and once in three years.

Another important change proposed is that the land is divided into 11 categories in the place of eight categories originally proposed. One important aspect from the point of view of land-owners is the change in the proposed compensation payable. When the total land revenue payable on the lands vested with the Government is less than Rs. 50, the compensation will be ten times the amount, as against 50 times proposed previously. When the amount of land revenue exceeds Rs. 50 but does not exceed Rs. 150, 50 times the amount is payable, subject to a minimum of Rs. 5,000. When the land revenue exceeds Rs. 150 but does not exceed Rs. 500, the compensation is 20 times the amount, subject to a minimum of Rs. 7,500. When the land revenue exceeds Rs. 500, the amount of compensation will be ten times the revenue, subject to a minimum of Rs. 10,000, and a maximum of Rs. 1 lakh.

The new classification of lands is stated to have been made on the

basis of yield. It may be mentioned that the modifications now proposed have been effected in deference to the views expressed by a large number of party legislators. One important modification in the Land Reforms Bill related to *stree dhanam* property. According to the change in relation to the property held by a woman, it is mentioned that where any land is held in the name of any female member of a family, it shall be presumed, unless the contrary is proved, that she is the owner of such land. The effect of the change is obvious and in the case of land held by a woman member of the family, the burden of proving that the property was not hers rests on the person who wants to prove that it was not her property. This particular change is generally appreciated in certain circles because of the shifting of the onus of proof to other persons than the woman who holds the property.

New Sanskrit University

The question of language which has been so vital a subject since independence is sometimes rooted in mere sentiment and sometimes based on prejudice, hatred or other such causes. But it is not always conceded that the language has got a vital rôle to play in moulding the moral, economic and intellectual life of the people. The latest proposal of the Andhra Pradesh Government to start a Sanskrit University which will be the first of its kind in the south, has evoked considerable interest in the region. The proposed Sanskrit University in Andhra Pradesh will be the third in the country, although first in the south. The other two Sanskrit Universities are in Varanasi and Dharbanga. The State Government is establishing the university because there is an imperative need to preserve and develop the rich national heritage in Sanskrit. The proposed Sanskrit University in Andhra Pradesh has a plan to try to do a great deal more than what is now being done by the Sanskrit departments of the existing universities. In the proposed multifaculty university, Sanskrit will not be the subject of study in isolation. The study of English and Telugu would also be provided. It is interesting to note that the university will have ten faculties, namely, (1) Veda and Vedanga, (2) Humanities, (3) Science, (4) Law, (5) Medicine, (6) Education, (7) Fine Arts, (8) Religion and Philosophy, (9) Yoga and (10) Commerce.

L. I. C. : Steps Taken to Diversify Activities

(By a Special Correspondent)

The task of the L.I.C. will remain unfulfilled as long as every insurable person has not been brought under the protective cover of life insurance. It is trying to promote social justice through its various policy measures.

THE Life Insurance Corporation of India is keen on changing the concept of insurance from certain classes to the masses. To quote the new chairman of the L.I.C., Mr. K. R. Puri, "We have a great task before us and so long as every insurable person has not been brought under the protective cover of life insurance, our task will remain unfulfilled". Naturally, the Corporation now rededicates itself to the objective which led to the nationalisation of the industry. One may recall here that the life insurance business was nationalised with the object of spreading the gospel of insurance to the remotest villages and to mobilise public savings. Life insurance is a powerful weapon to mobilise savings for development projects and for protecting each and every family.

No wonder, the Corporation now lays greater emphasis on expanding business in the rural sector in order to carry the benefits of life insurance among the teeming millions. In 1971-72, the Corporation issued 599,000 policies or 31.6 per cent of the total number of policies (against 507,000 policies or 31.4 per cent of the total in 1970-71). The Corporation now feels that the problems of India are basically of the masses and their demand for social justice should be satisfied without any further delay. Hence, the L.I.C. has already introduced several steps (like non-medical schemes, centenary policy, premium collection from selected post offices and removal of extra premium on occupational hazards) for the purpose.

In addition, socially-oriented investments now receive the Corpora-

tion's foremost attention. That is why the investment policy of the L.I.C., governed by the statutory provisions with due respect for safety of funds and satisfactory returns therefrom, is now significantly changed. To illustrate: loans for housing or loans to the State Electricity Boards or to local bodies for rural or urban water-supply schemes or for sewerage schemes of municipalities have already received special attention. L.I.C. investments under these heads have increased from Rs. 18 crores in 1963-64 to Rs. 117 crores in 1971-72. The Corporation has sanctioned for the first time massive assistance in 1971-72 to a State for implementing schemes of low cost houses for members of scheduled castes or tribes. Furthermore, to assist small-scale industries or industries in the rural sector, the Corporation has invested (as on 31st March, 1972) over Rs. 8 crores. There are schemes to grant loans for the construction of sheds by co-operative sugar factories and industrial estates.

The Corporation finds from its experience that to promote agricultural production it is necessary to induce farmers to incur the heavy outlay to adopt techniques of modern cultivation and plant protection practices. As such, it has launched an experimental crop insurance scheme for Hybrid-4 cotton crop up to the estimated cost of inputs. The scheme aims at promoting increased production of cotton through effective supervision and guidance of the Gujarat State Fertiliser Co. Ltd which has already made necessary arrangements with the Bank of Baroda to advance loans to farmers. And any success of this pioneering venture, about which the Corporation is optimistic, will no doubt open new vistas for other schemes of identical nature covering other crops in all parts of India.

The Corporation is also conscious of the acute housing shortage in the

country. It appreciates that it is almost impossible for the States alone to meet the increasing demand for houses. Imbued with the spirit of social justice, the Corporation has, therefore, come forward to provide housing to its policyholders on a large scale with due care for the safety and yields of funds. For instance, the L.I.C. authorities have already started the construction of a township in Borivil, a suburb of Bombay. There are other township projects for Bangalore, Hyderabad, Delhi and Ahmedabad. Besides, the Corporation now advances loans direct to the States concerned for financing their low income group or middle income group housing schemes or to apex housing societies and the total amount of such loans exceeded Rs. 237 crores as on 31st March, 1972. Total advances by the L.I.C. as loans to State Governments, co-operative housing financing societies or other schemes and its own building activities exceeded Rs. 359 crores as on 31st March, 1972. Again, in 1971-72, 1,668 loans amounting to Rs. 488.45 lakhs were sanctioned to policyholders for construction of houses and till now 8,901 loans amounting to Rs. 257.49 crores have been sanctioned for the purpose. Of course, the rate of L.I.C. investments in the private sector has declined—from 19.5 per cent a few years ago to 16.5 per cent at the end of March 1970. The Corporation has been careful in lending in certain directions in the private sector.

The investment policy of the L.I.C. strikes a balance between the interests of policyholders and broad national objectives. Judged in statistical terms or the range of activities, the Corporation has made vast expansion of its business. Yet, to fulfil the nation's expectations and translate into reality the Corporation's high ideals, the L.I.C. will have to achieve much more in future. More so, when it will have to carry the message of social security through insurance to millions of Indians by laying more emphasis on persons than on policies, particularly when according to the report of the Talyarkhan Committee, the rural areas account for only 20 per cent of the small savings collections and only 7.5 million people are insured in India or the ratio of life insurance in force to the national income a year is only 19 per cent in India, against 195 per cent, 164 per cent, 110 per cent and 98 per cent in Canada, the U.S.A., Japan and the U.K., respectively.

Setting up Rural Roads Commissions to Improve Communication Facilities

(By a Special Correspondent)

The Indian Roads Congress has suggested the formation of rural roads commissions both at the Centre and in the States for improving communication facilities. The Government is reportedly taking keen interest in the recommendation.

THE Indian Roads Congress, which met for its annual meeting recently, rightly stressed the importance of rural roads and their integrated development. There are still vast rural areas where proper road communications are lacking and a lot of ground yet remains to be covered to bring the people living in the villages into the mainstream of national life. The factors to be considered to tackle this massive problem are essentially adequate finances, proper organisational support and maintenance. Constitutionally, the development of all roads, other than the national highways, is the responsibility of State Governments. Rural roads thus fall within the sphere of State activities. Even so, an all-India approach is necessary; and the Fourth Plan realised this adequately when it said that the development of rural roads needs to be given priority as it will help in increasing agricultural production. Commercialisation of agriculture, which is a condition precedent to intensification of productive effort, cannot become universal without an adequate system of rural roads.

It was in this context that the Sinha Committee set up by the Central Ministry of Transport and Shipping suggested that for meeting the requirements of rural roads, about 400,000 miles of low grade all-weather roads will have to be provided involving an expenditure of Rs. 1,430 crores in the next 20 years. It is observed that the target of 400,000 miles is the same that has been arrived at in the Chief Engineers' 20-year plan for the period 1961-81 and is based on the objective of every village in a developed and agricultural area being brought within four miles of a metalled road

and 1.5 miles of any kind of road; in a semi-developed area within eight miles of a metalled and three miles of any kind of road and finally in an undeveloped and uncultivated area within 12 miles of a metalled road and five miles of any kind of road.

However, with the success of the "green revolution", this figure of 400,000 miles is bound to go up. Furthermore, with the rise in construction cost, as also demand in certain regions for better road specifications, the financial outlay to be involved for the total programme is also likely to go up. All this makes it possible that the size of the total programme will become quite enormous. As early as 1966, the Planning Commission addressed a letter to all the State Governments to the effect that they should earmark specifically for rural roads at least 20 per cent of the State Plan allocation for roads. Of this 20 per cent, 40 per cent was to be given as Central grant. The Transport Development Council also discussed the question of rural roads and made a number of important recommendations. It wanted that against the present 20 per cent, the earmarking of funds for rural roads by the State Governments should be raised to 25 per cent. Measures should be devised for ensuring that the amount earmarked for rural roads is actually spent on them and not diverted to other programmes. This plea was later endorsed by the Indian Roads Congress which also demanded that the Ministry of Food and Agriculture should set apart a portion of its allocation for rural roads connecting villages with markets. All rural works in a State should be looked after by a separate engineering organisation and, where work load is sufficient, by a full-fledged engineering department, preferably headed by a chief engineer. In matters concerning the execution of works, the opinion of the technical staff should be accepted. The Congress also demanded that high-level boards should be set up in the States for developing rural roads.

Unfortunately, the present position is that there is no machinery to ensure that the Plan allocation of 25 per cent is set apart for rural roads by States as has been suggested by all these bodies. It is also true that in spite of the general provision in the Fourth Plan, not all States, due to their preoccupation with many other problems, are able to provide for rural roads to the extent of 25 per cent of their road plan allocations. There is also no machinery to stop the diversion of this amount to other projects. The planning of rural roads does not appear to be proceeding on sound lines. Even the 20-year district maps which had been required to be prepared, presumably with Central assistance, are not being followed in letter and spirit with which the same has been drawn up for observing the concept of laying out a well-thought-out network. While some States have established rural roads organisations, a majority have not done so. To add to the confusion, there are a multiplicity of organisations in some States engaged in rural road works.

It does not need too much of an emphasis that rural roads are necessary for the development of India's economy. The Centre is now thinking in terms of rural roads commissions at the suggestion of the Indian Roads Congress whose main function will be to lay down policies regarding the works and to distribute funds. Such commissions could be set up both at the Centre and in the States. They could be given the responsibility for providing a better network of rural roads consistent with the approved engineering principles. These commissions will also form an effective agency to render financial assistance on a sustained basis and also to ensure that the money is rightly spent. They will also see that the rural roads are properly maintained.

The Congress has recommended that the rural roads commission at the Centre should be allocated 60 per cent of the Central road fund. This will be augmented by increasing the allocation from the excise duty on petrol and diesel oil so that the yield will be Rs. 66 crores a year. The Central Ministries of Food and Agriculture, Irrigation and Power and Industrial Development will also make contributions to the commission. The Congress has also made suggestions to augment the sources of revenue by the rural road commissions in States.

Achieving Co-ordination Between Banks and State Financial Corporations

By Suhas Joshi

Competition between the State Financial Corporations and the public-sector banks is becoming increasingly stiff because of the fact that both have been assigned much the same rôle. The Reserve Bank's decision to formulate new guidelines for the S.F.C.s is a step in the right direction.

THE recent announcement of the Deputy Governor of the Reserve Bank of India to set up two study groups to suggest ways of reorganising the State Financial Corporations (S.F.C.s) and achieving better co-ordination between them and commercial banks reflects the extent of confusion that has been created in financial institutions, particularly as a result of the Government's policy of creating too many financial institutions for undertaking the same type of job. Although many S.F.C.s do accept term deposits from the public, competition between them and banks is more keenly felt in respect of their lending operations. This competition for lending, which first resulted from the introduction of social control of commercial banks, has become more fierce and unfair too since the nationalisation of 14 major scheduled commercial banks in July 1969. Banks, particularly the public-sector ones, with abundant resources, a large network of branch offices and trained personnel and with greater experience in lending and in attracting customers could easily outbid the S.F.C.s. They are also in a better position to offer various types of services and facilities.

This competition between the S.F.C.s and the public-sector banks, which seems to have assumed an "unhealthy" character from the point of view of the S.F.C.s, has arisen mainly because of the official policy of assigning more or less the same credit programme to these institutions. Commercial banks are asked increasingly to finance small-scale industries and also to extend term finance, although previously there was a clear-

cut demarcation between the functions of the S.F.C.s and banks. It would be interesting to note that the State Bank of India was prohibited initially from giving term finance for periods exceeding six months and against the primary security of fixed assets. Hence the State Bank of India Act was amended in 1957 enabling the bank to extend medium-term credit to industries in the private sector and to accelerate the process of industrialisation as envisaged in the Second Five Year Plan.

Since then the State Bank entered the field of financing small industries in a big way by setting up a separate department and by launching pilot projects initially in selected cities and bigger towns. Since 1967, commercial banks were also compelled to enter this field in accordance with the scheme of social control, and after nationalisation the public-sector banks started putting in strenuous efforts to provide all the credit needs of the small industries sector. The financing of the small industries sector has become very competitive as is evident from the report of the Banking Commission. Thirteen different institutions, the Central and State Governments, co-operatives and various corporations like the L.I.C. are engaged in providing financial assistance to this priority sector. The Commission has remarked, "Among the organised financial institutions, commercial banks and S.F.C.s are by far the most

important in financing the short and long-term needs of small industrial units. The record of commercial banks in particular has been good in this respect." And the performance of the public-sector banks is more encouraging as they have given loans to about 90 per cent of the units which received commercial bank credit. However, the Commission has not gone into the effects of this competition between banks and the S.F.C.s.

After nationalisation of the 14 banks, major commercial representatives of the S.F.C.s became more vociferous in complaining that the nationalised banks, in order to fulfil the target of extending financial assistance of Rs. 250 crores to the small industries sector, are "poaching into the territory of S.F.C.s." It is pertinent to point out here that even the former Governor of the Reserve Bank, Mr. L. K. Jha, seems to prefer the original arrangement of compartmentalisation between the S.F.C.s and banks. While speaking before a seminar organised by the S.F.C.s in Madras, he felt that banks should confine themselves only to the provision of short-term credit, leaving the field of term finance to financial non-banking institutions like the S.F.C.s.

In addition to the common fields of small-scale industries finance and term finance, the S.F.C.s were asked to adopt districts for intensive operations, like the public-sector banks under the lead bank scheme. Further-

more, the S.F.C.s are also entrusted, like banks, to introduce a scheme for identifying local entrepreneurs and to assume greater responsibility for promoting industrial development in backward areas. They have been asked "to make efforts in spotting entrepreneurial talent, indicating to them the opportunities which exist, and convince them of the merits of the projects, which can be successfully set up." The S.F.C.s are facing competition not only from banks but also from the National Small Industries Corporation and Small Industries Development Corporations in every State, as they also provide finance, machinery and technical know-how.

It is true that the scope of operations for the S.F.C.s was gradually widened and measures were taken to strengthen their resources position. The S.F.C. Act, 1951, was amended in 1962, empowering them to grant financial assistance to public limited companies and co-operatives up to Rs. 20 lakhs instead of Rs. 10 lakhs. The hotel and transport industries and construction of industrial estates were also included in the list of eligible industries. A working group appointed by the Reserve Bank in 1962 made a number of recommendations to improve the working of the S.F.C.s and to enable them to function more effectively. Many S.F.C.s, on their own, took an important step of acting as the agent of the State Government for routing block loans to small-scale industries under the State Aid to Industries Act and also of the State Bank for disseminating on their behalf information relating to their activities and routing the loan applications received from mofussil parties, disbursing loans, collecting loan repayments, etcetera. Although these measures helped the S.F.C.s to step up their loan operations and to bring about co-ordination, the industrial recession of 1967 and the subsequent recessionary psychology not only slackened the demand for S.F.C. assistance but also created the problem of mounting overdues from Rs. 42 crores in 1968-69 to Rs. 81 crores in 1970-71.

The industrial policy of 1970 expanded the scope of the S.F.C.s, allowing them to provide assistance to public-sector projects on the same terms as for the private sector. Another study group under Mr. Talwar submitted its report in January 1972 and the group has made

a number of suggestions for fully utilising the funds of the S.F.C.s, raising their capital participation to a ceiling of Rs. 30 lakhs (instead of Rs. 20 lakhs as at present) in the case of limited companies and Rs. 15 lakhs in the case of co-operatives. It is not known as to why a new study group has now been appointed, when the recommendations of the earlier study group are still under the consideration of the Reserve Bank.

The problems of the S.F.C.s have become more complicated at present not only because of the concurrent fields of operations both for them and the public-sector banks resulting in keener competition for business but also because of the growing accumulation of idle funds with the S.F.C.s and banks as well. Two years ago, when banks' resources came under heavy strain in meeting the credit needs of the productive sectors, it was possible to suggest that the S.F.C.s should lend their funds through public-sector banks, but now such a suggestion has become irrelevant. Perhaps, it is this sort of a situation that seems to have swung the Reserve Bank into action for formulating some new guidelines for the S.F.C.s, ensuring full and productive utilisation of their funds.

PEOPLE AND PERSONALITIES

Mr. Q. L. Wood has been elected Finance Director of Goodyear India, at the annual general meeting of the Company held in Calcutta last month.

A trade mission representing the British Paper Machinery Makers Association will pay a four-day visit to India from 8th October to 19th October on its return journey to the U.K. from New Zealand and Australia. The mission will arrive in Calcutta on Sunday, 8th October, and will leave for Bombay on the evening of the 10th. While in Calcutta the mission, which includes nine leading British paper machinery manufacturing firms, will assess the potential of the Indian market for paper-making machinery. The mission will also meet the leading manufacturers. Mr. P. J. N. Sherman, chairman of the British Paper Machinery Makers Association and managing director of Vickers Ltd, will lead the trade mission.

Export markets in Malaysia? Opportunities for investment? Our man-on-the-spot® in Kuala Lumpur has an eye open for you.

In fact, Bank of America has a Man-on-the-Spot in all the major capitals of South-east Asia—Bangkok, Singapore, Manila, Djakarta—and 74 other countries around the world. And it's easy to get to any of them through the Bank of America branch nearest to you.

Bank of America customers in India have the advantage of this network of branches for help in developing export contacts, locating buyers, credit checking, letters of introduction—the full range of banking services.

Bank of America can also assist Indian concerns

investing in these markets by introducing local collaborators and arranging for finance to export capital goods.

Will Arbitration Become Popular in Settling Labour Disputes ?

By M. R. Meher

The Central Minister of State for Labour, Mr. R. K. Khadilkar, is laying much stress on arbitration in settling industrial disputes. But it is doubtful whether this method will find an easy acceptance, for recourse to arbitration means submitting to the dictates of a third party whose decision may or may not be wise.

At the recent meeting of the National Arbitration Promotion Board in New Delhi, the Central Minister of State for Labour, Mr. R. K. Khadilkar, urged that arbitration should be eminently preferred to the tortuous processes of industrial adjudication and the bitter and expensive methods of strikes and lock-outs. He went on to say that what had radically altered the general scene was the growing expansion of the public sector and the need for maintaining the continuity of production in the interests of economic development. It should be realised by all that an atmosphere free from internal strife and discontent could alone ensure rapid growth and it would be suicidal on the part of anyone to act in a manner that would stall or retard the pace of the country's progress. A list of 300 suitable arbitrators well versed in industrial arbitration is being released

and it is proposed to have Arbitration Promotion Boards in the States to promote arbitration of industrial disputes.

It is not likely that arbitration will be promoted much by exhortation to employers and unions and pointing out its advantages. Neither employers nor unions are enthusiastic about arbitration, although as far as unions are concerned, there is much lip-service in favour of arbitration; but recourse to strike is at all times preferred if it promises greater advantage. When arbitration is spoken of, what is meant is voluntary arbitration, but arbitration ceases to be voluntary if it is forced on an unwilling party. There are a number of reasons why voluntary arbitration has not made much headway, and has not been preferred even by unions. In the first place, recourse to arbitration means, in effect, submitting to the dictates of a third party whose decision may or may not be wise. An agreement between the parties themselves who are well acquainted with the situation and all the circumstances, albeit after a strike, is preferred to an award of an outsider.

As has been aptly observed by Professor Kuhn in his book *Labour Insti-*

tutions and Economics, "bargaining power is forfeited the moment the stipulation to arbitration is signed and the technique changes from persuading the opponent to persuading the arbitrator to whom all power is transferred. Even to the weaker party the risks of a strike seem safer than reducing one's bargaining power to zero—even if the opponent's power is also reduced to zero. . . . The risks of arbitration are probably greater for management than the union since the impact is more concentrated on management than on workers and in extreme cases bankruptcy is a more incisive loss". From the point of view of employers, arbitration has the further disadvantage that there is no remedy against a perverse award which may be crippling to the concern, while a perverse award by a tribunal can be successfully challenged in a writ proceeding by way of special leave to appeal to the Supreme Court. On the other hand, since such appeals involve great delay, unions are up against appeals by employers against awards.

Arbitration has some other disadvantages. It involves an increase in importance of minor issues in industrial relations. Unions expect that an arbitrator is not likely to incur the odium of rejecting all demands, but will grant some at least. Or the arbitrator may grant one major demand and reject a number of small demands. In a number of cases, there is mere padding of a large number of demands of a nature which would not remotely justify a strike.

While there is no dearth of suitable arbitrators, there is one difficulty, viz., agreement on the selection of the arbitrator. Unions would agree to an arbitrator who is known for his "liberal" awards. If an arbitrator has given one or two major awards against labour, the latter would never agree to his appointment. On the other hand, the employer would not agree to an arbitrator who is known to be pro-labour. This difficulty may be met by each side appointing an arbitrator; and if there is disagreement, the two arbitrators may refer the dispute to an umpire. But this would involve delay and would be more expensive and, therefore, less likely to be acceptable to labour, particularly if it has to bear a part of the cost of the arbitration. At the meeting of the National Arbitration Promotion Board one member proposed that the Government should bear the cost of arbitrations. If this is done, there might be a little in-

crease in the number of disputes referred to arbitration which would otherwise go for adjudication.

If the parties know that arbitration may have to be agreed to in the event of failure to come to an agreement, it would interfere with free bargaining by removing the pressures on the parties to reach agreement. The employer would hesitate to make offers which would be treated as a minimum or a springboard over which the union would vehemently press demands before the arbitrator and he may be expected to split the difference.

Notwithstanding all the disadvantages of arbitration, employers would still be agreeable to a general agreement for arbitration of disputes if the concerned union would agree not to resort to strikes and other forms of direct action for the settlement of disputes. But trade unions have made it clear on every occasion that they will not give up the right to strike even for the limited period of the emergency. In the circumstances, the employer cannot be expected to agree to arbitration whenever it suits the union. Arbitration is more suitable for individual disputes, such as dismissal and discharge, which have not been settled by collective bargaining or disputes about interpretation of agreements. Arbitration, however, is not quite suitable for disputes which are frivolous or vexatious, or which involve a substantial question of law, or where new rights are sought to be created which would have wide repercussions, or where very large financial stakes are involved for the employer. This has been recognised in the model principles for reference to arbitration under the code of discipline.

There is more scope for resort to arbitration in the public sector, not because in this sector there is more realisation by labour of the necessity of continuity in production or that labour is more conscious of its responsibilities since the public sector directly serves the community, but because the constraints that make the private sector hesitate to resort to arbitration are not there in the public sector. There is no question of a public-sector concern closing down on account of losses. The losses can be borne by the taxpayer. The managers have no personal stake. They cannot be sacked as in the private sector if things go wrong. They have nothing to

lose, however perverse or crippling an award of an arbitrator against the concern may be.

Furthermore, in the public sector labour expects too much from the "model" employer. Labour has more votes than the employer and political pressure can be brought more easily to bear on the employer. The union and workers expect the model employer to give in with good grace to demands, reasonable or otherwise. Strike is preferred to arbitration even in essential industries and the cir-

cumstance that in these industries strike is really against society has not given labour the smallest concern. Arbitration may be more readily agreed to by labour on demands which would not remotely justify a strike or on demands which are so unreasonable that the management has taken a stand not to give in and the strike appears to be failing. In such cases, labour has nothing to lose by taking an additional chance before the arbitrator, but the employer cannot be expected to agree to arbitration.

INVESTMENT

Shares Erratic Despite Good Corporate News

THE stock markets have continued to present a dull appearance this past week, reflecting a general disinclination on the part of operators to enter into fresh commitments in the face of continuing uncertainties on the economic front. Interest has been getting increasingly selective. A redeeming feature of this week's trading has been that the markets have managed to keep above the previous week's low. Short-covering and cautious replacement buying induced mainly by technical considerations have imparted a measure of steadiness, but with follow-up support lacking and tired bulls inclined to lighten their holdings, the markets have been unable to make any noticeable headway. The price pattern over the week has been mixed but plus signs have far outnumbered the minus signs. The overall trading pattern suggests that the markets are still in an indecisive mood with the undertone remaining subdued.

The corporate news has continued to be fairly encouraging, but its impact has depended on the prevailing mood of the markets. Quite a few companies, namely, Orient Paper, Delhi Cloth, Mohan Meakin, Supreme Industries, Standard Motors, Premier Cables, Indian Dyestuff and Mettur Beardsell have pleasing news for their respective share-holders in one form or another. New Delhi's increasing concern over the stagnation in industrial production and the worsening price situation and frequent official assurances about appropriate remedial action have failed to bring any cheer to the stock markets. This is because there is no clear evidence of positive action, let alone results. Since the liberalisation of licensing permitted many months ago in respect of 54 critical industries has achieved very little, New Delhi's reported decision to expand the list by four more items has failed to enthuse market men. The stock markets continue to feel uneasy as reports keep circulating that the demonetisation of notes of the denomination of Rs. 10 and higher is only a question of time. Speculation is also rife about the possible measures that the Government intends to adopt to unearth black money, which has been running a parallel economy and playing havoc with prices.

The Reserve Bank's latest annual report has drawn attention to the deteriorating economic situation. The increase in the real national income was somewhat less than 4 per cent in 1971-72, compared with increases of 5.3 per cent and 4.7 per cent, respectively, in 1969-70 and 1970-71. The outlook for the current year seems to be worse because of the likely setback in agricultural production and slow rate of industrial growth. The deteriorating price situation has led to growing industrial unrest. The rise in the cost of living index has compelled the Central Government to grant interim relief. This, along with assistance for drought and flood-hit areas, will impose considerable strain on the Government's budgetary resources. The Centre has also decided to enhance the minimum bonus from 4 per cent to 8.33 per cent for workers in all concerns, losing or profit-making. With the economic situation showing no signs of improvement, the immediate outlook for equities does not appear to be bullish. But since the markets have already staged a very sizable retreat, the prospects of any major decline are generally discounted.

Gilt-edged securities have lacked interest and turnover has remained restricted. The 3 per cent Conversion loan 1986 has been quoted at Rs. 59.85. The State Government loans have received selective support. Turnover has been restricted.

The Calcutta stock market has remained quietly steady this past week. As a result, turnover has been a shade better. The mild rally in share prices has obviously been more due to technical factors than any basic improvement in the prospects for the Indian economy. Corporate news too has been helpful. Among engineering shares, Britannia Engineering, Bihar Alloys, Kumardhubi and Gontermenn-Peipers have improved. Among jute shares, New Central, Ganges, Agarpara and Birla have receded. Among coal shares, Amalgamated, Western Bengal and Pench Valley have been transacted. Among paper shares, Tribeni Tissues, Ballarpur and Straw Products have been steady. Among miscellaneous shares, Alkali and Chemical, B.I.C., Brooke Bond, Avery India and Dr. Paul Lohmann have

been supported. Among tea shares, Hasimara, Tengpani and Nagri Farm have been traded.

Quietly steady conditions have prevailed on the Bombay Stock Exchange this past week. Buying interest has been poor and has been very selective but sellers too have been reluctant to press sales at lower levels. Apart from the somewhat improved technical position of the market, sentiment during the week has been aided by reports of beneficial rains in many of the drought-hit areas. The corporate news too has been helpful. Cotton textile shares have evoked fair support at setback on a favourable assessment of the industry's performance in the current year. Standard, Century and Svadeshi have registered moderate gains on balance, although the week's levels have not been held. Rayons have made a mixed showing. National Rayon, Century Enka, and Gwalior have fared better while South India Viscose, Garware and Indian Rayon have suffered small losses. Steel shares have ruled quietly steady with a poor turnover. Indian Iron, however, have eased. Among engineering shares, Voltas have been a bright spot. Sustained support for Voltas is based on ideas of the improved performance of the Company. S.L.M.-Maneklal have suffered a setback. Other engineering shares have kept rather subdued. Among automobiles, Hindustan Motors have eased while Premier Automobiles have been steady. Ship-

COMPANY REPORTS

Reports relating to the following companies appear on later pages of this section :

Citric India
Dempo Steamships
Hind Cycles
Hindustan Wires
India Steamship
Larsen and Toubro
L.I.C.
Polygas
Rajapalayam Mills
Sangameshwar Coffee
Sumitomo Bank
Titagur Paper
Unit Trust

ping shares have displayed a steadier tone on modest support and poor offerings. Chemicals have made a mixed showing. Bayer have recorded an impressive rise on good support. Indian Dyestuff, N.O.C.I.L. and Gujarat Fertiliser have shown small gains. Tata Chemicals and Polychem have eased a little. Among miscellaneous counters, Camphor and Allied, Hindustan Lever and Tata Oil have registered small losses while Motor Industries, Premier Construction and Ceat Tyres have scored modest gains. Paper shares have displayed a steadier tone. New India Assurance have kept subdued.

Activity in the Madras stock market has shown some improvement this past week. Among planting shares, Non-such Tea have improved due to scarcity of offerings. Manjushree and Consolidated Coffee have also improved due to better buying enquiries. Among textile shares, South India Viscose and Madura Mills have been supported. Rajalakshmi and Super Spinning have also gained. In the miscellaneous section, Aluminium Industries have improved while Mettur Chemicals have attracted buyers at the market rate. Seshasayee Paper and S.P.I.C. have also been transacted. Sugar shares have remained quietly steady and Sakthi Sugar have improved due to better buying enquiries. Among bank shares, Andhra Bank have gained while Indian Overseas have also been bought.

Hindustan Wires : Sales and Profit Rise

THE working results of Hindustan Wires Ltd for the year ended March 1972, shows a substantial improvement over the previous year's performance. With the increase in sales, there has been a consequential increase in profit. This would have been higher had not the Company faced certain difficulties in the matter of procuring raw materials, particularly M.S. wire rods. Sales are up from Rs. 3.76 crores to Rs. 6.83 crores and the pre-tax profit has risen substantially from Rs. 38.66 lakhs to Rs. 70.57 lakhs, after providing Rs. 16.60 lakhs (against Rs. 12.44 lakhs) for depreciation and Rs. 7.60 lakhs (against Rs. 4.10 lakhs) for development rebate reserve. A taxable ordinary dividend of 10 per cent has been declared, absorbing Rs. 9.75 lakhs. This offers a yield of 6.1 per cent at the present price of Rs. 16.37 a share of Rs. 10 each. Taxation is

allocated Rs. 31 lakhs (against Rs. 17 lakhs) and general reserve Rs. 40 lakhs (against Rs. 21 lakhs). After making other adjustments, Rs. 33,374 are carried forward, against Rs. 76,711 brought in. The demand for the Company's products during the current year continues to be good. The Company has proposed to capitalise Rs. 32.50 lakhs out of the sum standing to the credit of general reserve by issuing fully paid-up bonus shares in the ratio of one bonus share to three shares held.

L.I.C.

Record New Business

IN his chairman's statement at the annual general meeting of the Life Insurance Corporation of India recently held in Bombay, Mr. K. R.

Puri said that the real breakthrough in new business which the Corporation had achieved in 1970-71 was further accelerated during 1971-72. (A fuller version of the chairman's statement was published in last week's issue of *Capital*.) New business has risen from Rs. 1,303 crores in 1970-71 to Rs. 1,639 crores in 1971-72, which means that an increase of nearly 60 per cent has been achieved in new business during the last two years. The chairman said that there had been a considerable rise in the number of new policies issued. In 1970-71 it rose to 1.62 million and in 1971-72 to 1.90 million. He said that the message of life insurance was yet to be taken to millions of people in the country. The Corporation has been laying more and more emphasis on the expansion of its business in rural areas. It has already taken some important steps to ensure that the weaker sections of society are increasingly brought under the protection of life insurance.

The lapse ratio has shown a downward trend. During 1971-72, it had come down to 5 per cent from the level of 5.2 per cent in the previous year. There has also been a fall in the ratio claims outstanding at the end of the year to claims intimated in the year. Within three years, this ratio has come down from 29.8 per cent to 19.38 per cent, showing that the settlement of claims is now much faster than in the past. The increase in the premium income of the Corporation over the previous year was Rs. 46.19 crores. The increase in the premium income is also reflected in the increase in the book value of investments which has risen by Rs. 235 crores to Rs. 1,952 crores. Of the total investments in India, Rs. 1,375 crores or 74 per cent were in the public sector, Rs. 201 crores or 10 per cent in the co-operative sector, Rs. 4.42 crores or 0.2 per cent in the joint sector and Rs. 277 crores or 14.9 per cent in the private sector. The Corporation is now paying greater attention to socially-oriented investments.

UNIT TRUST

Higher Income Distribution

IN his chairman's statement for the year ended June 1972, Mr. J. S. Raj said that under the Unit Scheme, 1964, the income of the Unit Trust of India amounted to Rs. 9.68 crores, against Rs. 8.41 crores. (Extracts from the statement was published in last week's issue of *Capital*.) The

share of the Trust's income allocated to Unit capital worked out Rs. 924.09 lakhs and that of initial capital to Rs. 44.12 lakhs. The net income allocated to unit holders has amounted to Rs. 877.89 lakhs. The chairman said that this amount, together with the balance of Rs. 12.93 lakhs in the Unit capital appreciation account—in all Rs. 890.82 lakhs—is available for distribution among unit holders whose names were on the Trust's register on 30th June, 1972. The board has decided to increase the income distribution to unit holders from 8 per cent to 8.25 per cent. It has also decided to make an income distribution of 5.5 per cent to the initial capital contributors. Sales of units in 1971-72 were lower at Rs. 15.08 crores under 51,405 applications, compared with Rs. 18 crores under 61,741 applications in the previous year. Sales of units to non-residents were Rs. 40.50 lakhs under 427 applications, against Rs. 42.93 lakhs under 440 applications.

Under the new Unit Scheme, 1971, a ten-year contractual savings plan with built-in life insurance cover has been introduced. The accounts of the 1971 scheme are kept separately from the 1964 scheme. During the nine months ended 30th June, 1972, a little over 500 persons have joined the Unit-linked insurance plan with an initial contribution of Rs. 3.27 lakhs and a target amount of Rs. 40.7 lakhs. The board has decided to declare an income distribution of 52.5 paise a unit for the nine-month period which works out to 7 per cent for the full year.

POLYGAS

Share Offer

POLYGAS is offering for public subscription at par 150,000 equity shares of Rs. 10 each to raise part of the funds for its project to set up an oxygen plant in Bhavnagar (Gujarat). The list of the fully-underwritten public issue will open on 9th October and will close on 19th or earlier but not before 11th October. The plant with a capacity of 140 cubic metres an hour is expected to be commissioned by the end of 1973. The plant is located near the factory of Polysteels which will consume a sizable portion of the Company's output of oxygen. There is a good demand for oxygen from other neighbouring units. Marketing, therefore, is not expected to present any problem. The manage-

ment expects to declare a maiden dividend for 1974. The project is estimated to cost Rs. 58.50 lakhs which is proposed to be met by the share capital of Rs. 25 lakhs and deferred payments and borrowings amounting to Rs. 33.50 lakhs. Out of the share capital of Rs. 25 lakhs, equity shares of the value of Rs. 10 lakhs have been taken up by the promoters and their associates.

DEMPO STEAMSHIPS

Results Disappoint

DEMPO Steamships has turned out disappointing results for the year ended March 1972. The gross freight and charter hire earnings have declined from Rs. 5.58 crores in 1970-71 to Rs. 4.80 crores in 1971-72 and the gross profit has shrunk from Rs. 2.28 crores to Rs. 1.07 crores. The dividend, however, has been kept unchanged at 10 per cent. The chairman, Mr. Vasant Rao S. Dempo, has attributed the poor performance to the general contraction in world trade and its consequent adverse impact on tramp shipping. Margins were also squeezed by the rise in operating costs. Moreover, the devaluation of the U.S. dollar and the revaluation of the Deutschmark also affected the Company's earnings. The international tramp freight market continued to be depressive and even now the freight rates are quoted at uneconomic levels. After providing Rs. 90.99 lakhs (against Rs. 83.55 lakhs) for depreciation and Rs. 4.25 lakhs (against Rs. 1.03 crores) for development rebate, the net profit for 1971-72 amounts to Rs. 11.64 lakhs, against Rs. 41.20 lakhs in the pre-

ceding year. The equity dividend absorbing Rs. 10 lakhs will be paid out of general reserve.

SUMITOMO BANK

S.F.E. Group

THE Sumitomo Bank Ltd, Okasa, will join the S.F.E. group (Société Financière Européenne) which then will have eight shareholders, namely, Algemene Bank Nederland N. V., Banca Nazionale del Lavoro, Bank of America N. T. and S. A., Banque de Bruxelles S. A., Banque Nationale de Paris, Barclays Bank Ltd, Dresdner Bank A. G., Sumitomo Bank Ltd. The shareholders participate equally in the Luxembourg holding company of S.F.E., of which the capital stock will be increased simultaneously with the entry of Sumitomo from 140 million Swiss francs to 160 million Swiss francs and in the Banque de la Société Financière Européenne Paris, a medium and long-term bank, with a capital of 50 million French francs. Sumitomo Bank Ltd. was founded in 1895. With a balance-sheet total of \$17.6 billion, it is one of the major banks of Japan. The principal overseas subsidiaries of the bank are the Sumitomo Bank of California in San Francisco and the Banco Sumitomo Brasileiro S. A. in Sao Paulo. Sumitomo operates a network of 189 offices in Japan and overseas and offers a full range of banking services.

With the entry of Sumitomo Bank into the S.F.E., the combined parent bank's assets of the group exceed \$130 billion and the parent banks have some 10,000 branches throughout the world. This makes S.F.E. the big-

TITAGHUR PAPER : RESULTS IMPROVE

THE working results of the Titaghur Paper Mills Co. Ltd for the year ended March 1972 show an improvement over the previous year's performance. Although sales were satisfactory, the advantage of higher selling price was offset to a large extent by the increase in manufacturing cost, as a result of the spiralling commodity costs and dislocation in rail transport. Sales are up from Rs. 16.25 crores to Rs. 18.93 crores, and the profit has risen from Rs. 22.99 lakhs to Rs. 90.25

lakhs, after providing Rs. 47.21 lakhs (against Rs. 49 lakhs) for depreciation. In view of the Company's higher earnings, the taxable ordinary dividend has been raised from 4 per cent to 7 per cent, including an interim of 4 per cent. This offers a yield of 9.1 per cent at the present price of Rs. 7.69 a share of Rs. 10 each. Allocations include Rs. 18.15 lakhs (against Rs. 10.50 lakhs) for general reserve and Rs. 4.10 lakhs (against nil) for statutory development rebate reserve.

gest multinational banking group in the world. Since its foundation in 1967, S.F.E.'s activities which entail medium and long-term finance and mergers and acquisitions show a remarkable development, with Sumitomo as the eighth partner bank. S.F.E. which in 1971 has already financed investments in 26 countries will get access to the important Japanese industry and has further possibilities to enlarge its activities.

HIND CYCLES

Results Disappoint

HIND Cycles has turned out disappointing results for the year ended March 1972. The Company has incurred a loss of Rs. 27.10 lakhs on a turnover of Rs. 4.33 crores, against a gross profit of Rs. 9.14 lakhs on a turnover of Rs. 6.95 crores, during the preceding 18-month period. No provision has been made for depreciation and development rebate reserve requiring Rs. 8.76 lakhs and Rs. 1.49 lakhs, respectively. The poor results are attributed to the all-round rise in costs, labour unrest and uneconomic selling prices of cycles fixed by the Government. The industry's plea for a price rise to compensate for the rise in costs of production has not yet been acceded to by the Government. The Company is making efforts to boost its sales abroad. During 1971-72, it exported 38,638 complete bicycles valued at Rs. 48 lakhs. Exports during the current year are expected to be much larger. The Company has finalised an export contract for 60,000 bicycles with an American party and also secured orders for the supply of 82,000 bicycles to Indone-

sia against which shipments have commenced.

LARSEN AND TOUBRO

New Contactors

FOR the first time, Indian industry can have off the shelf indigenous contactors rated 300A. Developed and tested by Larsen and Toubro Ltd, these contactors are suitable for motors up to 225 h.p. (168 kW) for AC3 duty. Designated ML 12, these are the only contactors in India specially designed to take the larger aluminium cables. This is a distinct advantage since the cable industry has now switched over to aluminium due to the acute scarcity of copper. The Company now offers the widest range of contactors in India with ratings from 10A to 300A.

CITRIC INDIA

Handsome Rise in Profit

THE working results of Citric India for the year ended March 1972 show a marked improvement over the previous year's poor performance. Sales have risen from Rs. 37.98 lakhs to Rs. 61.25 lakhs and the gross profit has increased from Rs. 2.71 lakhs to Rs. 10.77 lakhs. The profit has been utilised to reduce the outstanding deficit to Rs. 49.11 lakhs which is carried forward. The improved results are attributed to an increase in production of citric acid from 393 tonnes to 571 tonnes. The production could have been still higher but for the shortage of calcium citrate—the principal raw material—which had to be im-

ported from Belgium. The dividend has again been skipped. In view of the heavy arrears of depreciation and accumulated deficit, there is little chance of the Company declaring a dividend in the near future. The Company is going ahead with the rehabilitation of the plant by installing fermentation chambers. It has incurred capital expenditure of nearly Rs. 10 lakhs for the purpose. The Company is experimenting with the production of citric acid directly from molasses which alone can bring about a real change in its fortunes.

RAJAPALAYAM MILLS

Sales Up but Profit Down

DESPITE higher sales for the year ended March 1972, the net profit of Rajapalayam Mills Ltd has declined. But the dividend has been maintained at 7.5 per cent. The profit for the year amounts to Rs. 3.69 lakhs, after providing depreciation of Rs. 10 lakhs. This compares with the previous year's profit of Rs. 7.07 lakhs, after providing depreciation of Rs. 8.81 lakhs. Sales of finished goods amounted to Rs. 326.59 lakhs (against Rs. 241.52 lakhs). Adding to the year's profit a sum of Rs. 38,345 transferred from development rebate reserve and Rs. 70,000 transferred from general reserve, there is a total available surplus of Rs. 4.78 lakhs. Out of this, donations amounted to Rs. 35,394 and the balance bonus for 1971 absorbed Rs. 2,297. Development rebate reserve gets Rs. 2.26 lakhs (against Rs. 1.91 lakhs). Provision for taxation is Rs. 12,588 (against Rs. 2.24 lakhs). The dividend accounts for Rs. 2.02 lakhs.

SANGAMESHWAR COFFEE

Dividend Repeated

THE working of Sangameshwar Coffee Estates Ltd for the year ended March 1972 has resulted in a profit of Rs. 1.24 lakhs, after providing depreciation of Rs. 78,691 and taxation of Rs. 95,000. This compares with the previous year's profit of Rs. 1.45 lakhs, after providing depreciation of Rs. 85,686 and taxation of Rs. 1.27 lakhs. With the amount of Rs. 2,467 brought forward and with Rs. 25,000 transferred from general reserve, there is a total sum of Rs. 1.52 lakhs available for appropriation. Out of this, the preference dividend absorbs Rs. 24,500 and the ordinary dividend which is maintained at 10 per cent claims Rs. 1.20 lakhs. The balance of Rs. 7,455 is being carried forward.

COMMODITIES

High Prices Affect the Demand for Indian Jute Goods

THE abnormal increase in the prices of raw jute and jute goods and the continuing high incidence of export duties have resulted in a persistent erosion of internal and overseas interest in them. With Assam Bottoms ruling at around Rs. 42 a maund, f.o.r. Calcutta ready, 40in. 10oz. hessian was quoted at Rs. 82 a 100 yards for ready, Rs. 75.75 for October, and Rs. 71.25 for October-December positions a year ago, while B Twills were transacted at Rs. 196.50, Rs. 189.50 and Rs. 182.50 a 100 bags, respectively. Besides, there was an impost of Rs. 200 a tonne on hessian, canvas, webbing and tarpaulin, Rs. 150 a tonne on sacking, other goods, twist and yarn, rope and twine and Rs. 300 a tonne on carpet-backing cloth. Cotton bagging, wool sacks and specialities, however, were exempted from such duties. The liberation struggle in Bangladesh obliged that country to stay out of the overseas markets, enabling India to receive a regular flow of business in ready and near-positions. Even Thailand and Taiwan entered the world market, bagging sizable orders on extended delivery schedules from Australia for woolpacks and cornsacks.

Bangladesh in Better Shape

Following the restoration of almost normal operating conditions in the 73 mills in Bangladesh, currently

producing around 500,000 tons a year, the industry has not only been able to book regular orders for ready positions but also for the first half of the current season. Dacca has been selling its end-products at a sizable discount over the prices ruling in Calcutta, for there is no incidence of export duty in Bangladesh. Since 13th December, Indian export duties were raised by Rs. 200 a ton on hessian to Rs. 600 and by Rs. 300 on carpet-backing cloth to Rs. 700. Currently procuring its raw jute requirements at Rs. 55.50 a maund, f.o.r. Calcutta ready, basis Assam Bottoms, and bearing the heavy incidence of enhanced wages under the tripartite agreement of last May, the Indian industry has been selling 40in. 10oz. hessian at Rs. 100 a 100 yards for ready, Rs. 98.50 for October and Rs. 96.50 for October-December positions and B Twills at Rs. 253.25 a 100 bags for ready, Rs. 255 for October, and Rs. 256.75 for October-December deliveries. Hence, there is little to be surprised over the rather bleak outlook for the industry.

It appears that the drastic curbs on speculative activities in cereals, oilseeds, sugar and the rather lean turnover and trading conditions in the stock markets have driven a section of the speculative fraternity to turn their attention to the raw jute and jute goods trade. Despite rigorous trading restrictions, imposed by the

Forward Markets Commission and administered through the East India Jute and Hessian Exchange Ltd, they are said to have succeeded in speculating briskly in Pucca Delivery Orders in respect of T.S.D. and N.T.S.D. contracts. Bullish rumours, intentionally circulated by their agents from time to time, help them in misleading the bears to follow the rise in covering their immediate open positions in panic, creating a vicious circle in which the industry also gets entangled. Such speculative activities not only raise spot market prices for ready positions but also those for longer positions. They never brought any advantage to the mills, for at the time of the quotations, the mills were already sold. Because of all these handicaps, the trade and industry have long been urging upon the authorities to remove the prohibitive export duties and also to introduce foolproof trading norms and practices. Only when this is done will Calcutta be placed at par with Dacca, enabling both to secure adequate business from abroad and effectively to meet the challenge posed by synthetic substitutes.

Outstanding Payment

With mounting pressure on the jute industry's finances, the Indian Jute Mills Association has deplored that an amount of some Rs. 8.5 crores "payable to mills by the Government should remain outstanding for a long time." The money, says a Press note issued by the Association, is owed by the Government on account of supplies of 120,000 tonnes of B Twills bags to the Directorate-General of Supplies and Disposals (D.G.S. and D.) between January 1970 and March 1971 and another

I.J.M.A. STOCK FIGURES FOR AUGUST

The Indian Jute Mills Association reports the total stocks of jute goods at the end of August as follows:

Description	31st August, 1972		31st July, 1972		Increase over (+) or decrease from (-) last month		31st August, 1971	
	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)

CAPITAL, 21st SEPTEMBER, 1972

507

INDIA STEAMSHIP : SATISFACTORY RESULTS

THE working of India Steamship Co. Ltd for the year ended March 1972 has shown satisfactory results. Freight earnings have risen sharply from Rs. 14.20 crores to Rs. 16.97 crores, an increase of 19.5 per cent, the highest amount of freight earned by the Company surpassing all previous records. The Company has earned a profit of Rs. 74.82 lakhs, against a loss of Rs. 22.56 lakhs, after providing Rs. 95 lakhs (against nil) for development rebate reserve and Rs. 1.57 crores (against Rs. 1.27 crores) for depreciation. Be-

cause of the Company's better performance, the directors have recommended an ordinary dividend of Re. 1 a share, subject to tax, absorbing Rs. 24.75 lakhs which will be paid out of general reserve. This offers a yield of 12 per cent at the present price of Rs. 10 a share of Rs. 8.31 each. The dividend was skipped in the previous year. A sum of Rs. 1.32 lakhs has been transferred from excess provision for taxation written back. After making other adjustments, Rs. 84.87 lakhs have been transferred to general reserve.

VOLTAS

**If you are in the market
for quality machine tools
then Voltas can tell you
all about Praga.**

As a leading distributor of machine tools in India, Voltas is vitally interested in the progress of the machine tool industry and is well-placed to understand the needs of the buyer. That is why Praga chose Voltas to market their machines —

1) The Praga-Jones & Shipman 540 Precision Surface Grinders.

2) The Praga Cutter and Tool Grinders. 3) The Praga 137

Column Drilling Machines. 4) The Praga-Gamlin Milling

Machines. 5) The Praga/ + GF + Copying Lathes. Complete technical details of all these machines are available with the Machine Tool Division of Voltas. Its country-wide sales and service organisation is fully geared to supply, install and service Praga's sophisticated machine tools wherever you want them. An unbeatable combination—Praga quality machine tools, distributed and serviced by Voltas.

For Precision Machine Tools the name is **Praga**

(61,000 tonnes between November 1971 and May 1972 on a cost plus basis. Payment of the difference which was to be determined by the Tariff Commission has been held up by the authorities, pending the acceptance of the recommendations of the Commission. It will be recalled that these supplies were made by the industry, even when the market was ruling pretty firm on the basis of a fair price to be refixed by the Commission allowing the industry its cost price and a fair return. The industry received an on account payment of Rs. 200 a 100 bags, the official ceiling price then prevailing.

Gunnies Steady

But for a short-lived spell of easiness around Thursday, induced mainly by profit-taking, the Calcutta gunny market ruled pretty firm, scoring a substantial gain for both hessian and sacking for all positions. The small decline in overall output to 1,200 tonnes over the July level to 88,800 tonnes and the disproportionate rise in end-August stocks by 10,500 tonnes over the preceding month's level to 104,800 tonnes should have normally produced an extreme-

I.J.M.A. PRODUCTION FIGURES FOR AUGUST

The Indian Jute Mills Association reports the total production of jute goods at the end of August as follows:

	(000 metres and 00,000 yds.)		
	Aug. '72	July '72	Aug. '71
Hessian	8,66,55 (9,48)	8,66,61 (9,48)	8,58,51 (9,39)
Sacking	8,67,74 (9,49)	8,87,28 (9,70)	8,67,18 (9,48)
Carpet-backing	1,23,49 (1,35)	1,37,44 (1,50)	1,51,16 (1,65)
	(000 tonnes and tons)		
	Aug. '72	July '72	Aug. '71
Hessian	26.2 (25.8)	25.7 (25.3)	26.3 (25.9)
Sacking	39.3 (38.7)	40.3 (39.6)	39.2 (38.5)
Carpet-backing	12.8 (12.6)	14.5 (14.3)	16.3 (16.1)
Others	10.5 (10.3)	9.5 (9.4)	6.4 (6.3)
Grand Total	88.8 (87.4)	90.0 (88.6)	88.2 (86.8)
Hours worked:	208.0	208.0	208.0

Note: All figures are at bale-point.

N.B.—These statistics are based on replies received and represent all members of the Association, and New Central and Shree Hanuman. The figures in brackets are in British measures.

ly bearish impact. But the moderate increase in actual shipments by 2,000 tonnes to 78,300 tonnes and the heavy setback to shipments caused by incessant rains, a spate of tidal bores and the long go-slow by bargemen during August, induced marketmen to believe that the end-August inventories with the industry included a lot of August-delivery goods. While hessian output rose by 500 tonnes over the July level to 26,200 tonnes, stocks fell by 300 tonnes to 21,600 tonnes and despatches rose by 1,100 tonnes to 26,500 tonnes. Sacking output showed a decline of 1,000 tonnes to 39,300 tonnes, but despatches rose by 1,300 tonnes to 34,600 tonnes and end-August stocks by 4,700 tonnes to 46,100 tonnes. Carpet-backing cloth production dipped by 1,700 tonnes to 12,800 tonnes, despatches by 600 tonnes to 7,600 tonnes and stocks shot up by 5,200 tonnes to 28,900 tonnes. As for other goods, their output registered a rise of 1,000 tonnes to 10,500 tonnes, despatches of 200 tonnes to 9,600 tonnes and stocks of 900 tonnes to 8,200 tonnes. The abandonment of the close-out dates procedure by the U.S. Conference Lines early this month had helped a lot in clearing up these held-over shipments. Market circles believed that the impact of this off-take would be reflected in a substantial decline in inventories at the end of the current month. Both industry circles and holders of P.D.O.s were extremely cautious, showing a positive reluctance to extend their commitments except at a premium over the current levels. This squeeze induced a positive consumer resistance with the result that fresh enquiries and business were for bare minimum lots. The current talks with Egypt in New Delhi would, it was believed, lead to a broadening of demand for jute goods from that country. In the virtual absence of other countries, African nations showed renewed interest in heavy goods from Calcutta. Clive Row still believed that the ball was in New Delhi's court. The next meaningful move, namely, the outright abolition, or at least a partial scaling down of the export duties, should precede the entry of India's major customer, the U.S.A., into the Calcutta market. Otherwise, the nominal rise in burlap consumption by 3 million yards in that country during July would hardly produce any impact on U.S. consumers. From their long experience in the trade and in the ways of the ultimate consumers, they still maintained that in order to be acceptable to them jute must

not only be cheaper than the competitive products but must also be available on a regular basis, ruling out the need for the consumer to carry large spot and afloat inventories and substantial long-term commitments overseas. Yet another fact was that the prevailing rates were so high as would compel the consumers and the trade to reduce their commitments to the barest minimum and so the industry could never hope that it would be carrying a comfortable order-book on extended delivery schedules. The industry was also worried over routine troubles like power-shedding and go-slow by workers. Following the announcement of the interim recommendations of the Bonus Review Committee, the Bengal Chatkal Mazdoor Union has raised its demand steeply above the agreed tripartite level of 7 per cent to 20 per cent and threatened to launch an immediate agitation. Industry circles in general, and jute mill managements in particular, were watching what would ultimately happen to the existing bonus agreements in view of a much higher percentage being conceded by the committee. Of course, most of the jute mill companies did not make much profit as an analysis of their quinquennial results would show. Hence a lot depended on the crucial tripartite talks being held in New Delhi over the committee's recommendations. In the hedge market, trading was devoid of interest as the technical position was more or less balanced. Transactions were mostly of a squaring-up nature and turnover and price movements followed the strict limitations imposed by the F.M.C. Turnover was moderate in the spot market and small in the hedge market. The closing undertone was steady.

Fibre Firm

In spite of a gradual erosion of effective bookings and off-take, raw jute prices gradually firmed up in Calcutta and in the agencies. It

appeared that intermediaries had, meanwhile, built an extensive bull position for them, controlling substantial stocks of ready and near-delivery fibre of average and selected grades. Crop arrivals were estimated at around 150,000 maunds a day, much below par for this time of year. With only four weeks to go for the Pujas and the festive season and with the prevailing bullishness in paddy prices, holders of jute should have normally been in the market with their fibre by this time. Although Jute Corporation circles said that they were very much in the market, they were nowhere to be seen. The same fraternity of middlemen and *fariahs* were operating in a much bigger way this season, apparently oblivious of the ultimate impact of the current bullishness in raw jute on the prices of end-products. The industry had been holding comfortable stocks for their current consumption and so it had been making most of its purchases in the upcountry agencies. The arterial and feeder roads linking the interior areas with the trunk routes and the railheads and assembling points were in a good condition, except in parts of Orissa. The bullish spree had also been ascribed to reports that the current crop might have been as low as 5 million bales, against the earlier estimates of 7 million to 8 million bales. Taking account of the carryover of 1,569 million bales from the previous season and the current monthly off-take of around 540,000 bales in July, there might be no fibre shortage for the season, although around the close mills might experience some shortage of batching fibre and close the season with a scanty carryover. Hence the industry was keenly awaiting the Government's next move in the matter of substantial fibre imports from Bangladesh and Thailand. Turnover was small and the closing undertone was firm.

TEA

Term Finance

The Reserve Bank of India, in a letter to the scheduled commercial banks and State Financial Corporations (S.F.C.s), has advised them to endeavour to meet adequately the developmental finance of tea gardens. The letter is based on the recommendations concerning term finance made by the working group under the chairmanship of Mr. B. K. Dutt, Custodian of United Bank of India. The Reserve Bank has pointed out that, while the magnitude of term finance needed by the tea industry is within the capacity of the financial institutions, what is really important is the evolution of suitable systems and procedures for canalising the credit in adequate measure.

The banks and the S.F.C.s have been advised to take action on the following lines: (1) The tenor of loans should be suitably related to the purpose, repaying capacity, size of loan and other relevant factors. (2) The tenor of the loan should be long enough to suit the repayment capacity of the assisted unit, wherever there is considerable time lag between the outlay and its fruition. (3) A moratorium on repayment of principal up to five years may be provided in the case of plantation loans to allow for the gestation period; a moratorium on payment of interest may be considered in exceptional cases. Provision of term finance at a concessional rate of interest is not considered necessary.

Endorsing the working group's recommendations regarding consortium arrangements, the Reserve Bank observes that a consortium arrangement enables the parties to meet the security requirements of the institutions providing different types of credit without any difficulty. The Agricultural Refinance Corporation will also have no objection to its eligible institutions having a *pari passu* charge on the security, along with other participating institutions which are not eligible for refinance in respect of term loans granted under a consortium arrangement. However, the risk for the loan will be that of the primary lenders wholly and the refinance from the A.R.C. will be available only for the portion of the loan provided by the eligible institutions. The consortium would entail advantages to lending institutions because of the distribution of risks and to borrowers a lesser interest burden because of the participation of institutions like the Tea Board and the A.R.C.

COMPANY AND PUBLIC NOTICES

INDIAN ALUMINIUM COMPANY, LIMITED

1 Middleton Street
Calcutta-16

MEMBERS of the Company who acquired ordinary shares in the rights issues of February 1963 and April 1968 and have subsequently paid all call moneys are hereby requested to send the Company's Registrars their partly-paid share certificates for replacement with fully-paid share certificates, if they have not done so already.

P. K. PAL
Assistant Secretary

CAPITAL

(Founded in 1888; Published every Thursday)

CAPITAL is India's most widely-read weekly newspaper dealing with economics, industry and public affairs. It has the mature experience of more than 80 years, and is the oldest journal of its kind in the country. Each week, it brings authoritative and comprehensive coverage of the main problem and events affecting the progress of the economy and the growth of industry. It separates the important from the unimportant; it presents simply, clearly and reliably what all informed observers of the economic scene ought to know.

Readers of CAPITAL are mainly people holding positions of vital importance in Government, business, industry and academic institutions. Many of them are intimately concerned with the framing of the country's economic policies. Many direct and control industrial, banking and commercial institutions. Together they represent a fund of economic opinion and buying power that no advertiser can afford to ignore.

If 8 out of 10 Indians live in rural areas...

**it's time we paid more attention
to them !**

So UCObANK takes to the country in a big way. Our accent is on service to the nation. Agriculture and rural development have been given top priority.

Meeting the needs of the people.

because a strong rural base means a strong India. That's where UCObANK is putting the nation's money to work. Where it counts. Where more than 80% of Indians live.

World Bank : Tackling Poverty

IT should be flattering to Mrs. Gandhi and her Partymen that their slogan of "garibi hatao" has travelled far and wide and found warm reception in the cool climes of Washington, where the World Bank and the International Monetary Fund had their annual meetings this week. If the presidential address of Mr. Robert S. McNamara to the Board of Governors of the World Bank sounds familiar to the people of this country, the credit for this may go partly to the Prime Minister, Mrs. Gandhi. Her slogan gave her not only a massive majority in Parliament but also worldwide publicity. Perhaps few will suspect that Mr. McNamara might have himself been the author of this slogan, for his visit to this country a couple of years ago was followed by certain swift changes in the Planning Commission and in the planning concept.

Whatever may be the link between the thinking of Mrs. Gandhi and Mr. McNamara, it should be gratifying to note that there is today greater appreciation of the need to eradicate poverty and raise the income level of the people who are still below the subsistence level. Few will question the importance of a new strategy, designed to reduce inequalities and give a better deal to the down-trodden. In fact, that has always been the avowed objective of development plans and if India has failed to achieve that objective, even partly, it must seriously look for the reasons and not abandon the growth-oriented programmes. The fundamental question is whether there is a conflict between rapid overall growth and comparable improvement in the incomes of the poor. Mr. McNamara believes that there is; so does Mrs. Gandhi.

But what is the basis for the World Bank chief's firm belief? According

to him, there is a natural tendency for growth to be concentrated in the modern sectors of the economy with little current benefit to the lowest income groups. Such data as there are—while admittedly incomplete—indicate that this pattern of growth has developed in many countries. At the same time, Mr. McNamara admits the validity of the argument that in the long term, rapid growth will increase productivity and furnish the resources which can be distributed to those who cannot yet be accommodated in the high-productivity, high-wage, modern sector. Even in the short run, he says, it is possible to reduce the conflict between rapid growth and more equitable income for the poor by shaping an economy which provides proper incentives, which prices labour and capital correctly, which strengthens the fiscal system and which emphasises the right adaptive technologies. And yet, the World Bank chief favours a shift in emphasis from growth to social justice.

Mr. McNamara's contention is that while a decade may be a rather short term for a development planner, "it is the long term for a subsistence tenant farmer whose children are most likely to die before the age of five, whose diet is already so inadequate that he cannot stave off chronic ill-health, whose illiteracy limits his future ability to learn new skills, and whose perpetual indebtedness to the money-lender and dependence on the land-owner leave him neither options nor hope". His advice, therefore, is to design policies with the explicit goal of improving the conditions of life of the poorest 40 per cent of the population in the developing countries and he believes that this can be done without "unacceptable penalties to the concomitant goal of national growth". Without specific emphasis on such programmes, he feels, there will not be

significant progress in reducing poverty within acceptable time periods.

The strategy is good in so far as it seeks to ameliorate the conditions of the poor but it offers no solution to the overall problem of growth and development. The desire of the developing countries to industrialise themselves rapidly and raise their standards of living will never be fulfilled, if their limited resources are to be used to promote social justice rather than growth. As Mr. McNamara himself says: "Outside agencies can only assist and not solve such problems". But when assistance itself falls short of commitments, how do the developing countries evolve a proper mixture of growth and social justice? The World Bank chief, no doubt, promises larger assistance from his organisation for works undertaken to reduce poverty and income inequalities, but refrains from asking the affluent nations of the world to do their duty to the less developed.

In his report to the World Bank group, Mr. McNamara admits that "there seems little likelihood that during the first half of the current decade, official development assistance will exceed .37 per cent of G.N.P.—only half of the second Development Decade target." While regretting this, he says "we must be realistic". That is, try to assess the effects of this massive shortfall in concessory aid. It needs no economic pundit to say that reduced aid flow will condemn the poorer nations to so slow an economic advance over the decade that hundreds of millions of individuals in these countries will be able to detect virtually no improvement whatever in their desperately low standards of living. What is amazing is that the prospect of such a development does not seem to shake the conscience of the developed world. Those who advise on what should be done for the poor must also remember their own obligations in a narrowing world. If West Germany and Japan can rebuild themselves from a scratch after the second World War, there is no reason why countries with a developed infrastructure and vast potentialities of growth cannot. All that is needed, as Mr. McNamara says in a different context, is the political will.

The World Bank is not to blame for the developing apathy among the rich nations to raise their levels of assistance to the developing coun-

tries. Aid, as Mrs. Gandhi often points out, is a misnomer for the credits given by the developed world. It can be called help or assistance that is mutually beneficial. But when developed nations tend to equate aid with charity, self-respecting countries in the developing world cannot but resent the attitude. What is worse is that no distinction is sought to be made between countries that have made good use of aid and those who have frittered away the assistance on extravagant programmes. For instance, Mr. McNamara cites the example of 20 developing countries spending their scarce foreign exchange on the import of private cars rather than public buses, but fails to note the severe restrictions imposed by countries like India on imports of luxury goods.

And finally, the World Bank chief warns the developing countries that if they postponed social and economic reforms on grounds of political expediency, they would be inviting "political extremism". To remain

indifferent to social frustration, says, is to foster its growth. He, therefore, calls for a decisive choice between the political costs of reform and the political risks of rebellion. Mr. McNamara must, however, remember that the responsibility for any rebellion will lie no less with the developed world than with the Governments of developing countries. On his part, the World Bank President has promised to raise the level of assistance from his group from \$30 billion between 1969 and 1973 to \$50 billion in the next quinquennium. But by then, the population in the underdeveloped world will have also increased and the benefits of increased assistance from the World Bank group may not accrue to a larger percentage of the populations of the poorer countries. What they need is massive assistance in areas where they have potentialities for growth. And that will have to be done without political strings. As long as the rich nations fail to do this, the disparities—global and national—will remain unchanged.

Civilising the Civil Service

THE Central Government's reported decision to set up a 16-member advisory council to modernise the Central services has not come a day too soon. The council will advise the newly formed Department of Personnel Administration in the Home Ministry to evolve a fresh policy on the relative status of the various Central services along the lines suggested by the Administrative Reforms Commission. So far such policies have been framed almost exclusively by the I.C.S. and I.A.S. and the case of other services for equality has suffered by default. The council will have three members each from the I.C.S. and I.A.S. and the remaining ten will be from other services and public life. It is well known that the A.R.C. had recommended a higher status for specialists, such as engineers, doctors, educationists, technocrats and economists. It should be possible for the brightest among them to rise to the highest positions now held by members of the I.C.S. This is the right time when the imbalance should be corrected.

About 35 of the senior-most I.C.S. officers are to retire from service within nine months. There is a view that such a big shake-up at the top may harm the administration. This may be only partly correct. In the years to come when a complete balance-sheet

is drawn of the performance of the I.C.S., it may not show the service in a very good light. The members of this service have in their own way managed to maintain some sort of continuity in the administration. More than continuity, their contribution is represented by the unrestricted expansion of the Government machinery to more than 20 times of what it was at the time of independence. Two other things have grown in geometric progression. These are inefficiency and corruption. It is no coincidence perhaps that, along with the growth of these forces, there has also been an increase in the unwritten powers and privileges of the members of the I.C.S. and I.A.S.

This is not the fault of the individual members of the service, many of whom are the finest specimen of humanity. It is the fault of the system. A centralised all-powerful bureaucracy is an anachronism in the modern age of specialisation. No one, however competent, can run everything. A steel factory, an agricultural university, a town planning organisation, an oil refinery, a shipyard and the administration of a district cannot all be ruled by the same kind of expertise. The I.C.S. in India have so far been successful in perpetuating the nineteenth century myth that by

entering the service its members have earned some kind of divine right to rule over every institution and every person. No sphere of activity should be outside their domain. Slowly but steadily over the last 25 years the long arm of the service has extended to spheres that were beyond its reach in the past.

The I.C.S. and I.A.S. officers are now vice-chancellors of several universities, including those giving instruction in agriculture and engineering. The whole machinery of finance and planning is their close preserve. They have been administering some of the country's mightiest river valley and power projects. If an industry is declared sick, it is their job to take charge of it and bring it back to health. If a complicated deal involving the purchase and import of the most modern machinery costing several crores of rupees is to be struck, it is one among them who is sent abroad to accomplish the job. It is these men who determine where a factory is to be located, who is to be granted the licence to run it and what are the restrictions and facilities that should govern the growth of industry in the country.

It has been the common belief for a long time that alongside the rule of the Ministers, the top I.C.S. in the country have been running a parallel Government of their own. There have been quite a few cases where senior Ministers have tried their best to get rid of their I.C.S. Secretaries whom they did not like but without any success. A similar parallelism in the Government is noticeable in the States. It would be unfortunate, therefore, if the Government allowed this opportunity of the *en masse* retirement of the top men of the bureaucracy in the coming months. This is perhaps just the time for undertaking a major administrative reform in India. Beginning with the Appleby Commission in 1952, a number of committees and commissions have been appointed to put India's administration on a sound footing. Almost invariably, on one pretext or the other, the I.C.S. and I.A.S. have stood in the way, for in most cases some form of decentralisation and greater delegation of authority to the other services has been recommended by the experts.

The marathon efforts of the Administrative Reforms Commission that was headed by Mr. Morarji Desai and later by Mr. K. Hanumanthaiya have met with the same fate. Whenever an attempt has been made to inject specialisation into the ad-

ministration and replace the bureaucracy by some measure of technocracy to give a scientific bias to the Government, the I.C.S. and I.A.S. have intervened. The intervention would be welcome if the I.C.S. as a service was not somewhat archaic in its outlook. It was trained to maintain the *status quo*. Its whole inclination is towards checking any kind of motion or commotion. But progress has its own laws of motion and change is possible only when the *status quo* is disturbed, sometimes rudely. The administrator of today has to deal not merely with files and subordinates whose obedience a colonial administrator could take for granted but also with a mass of data of a highly technical nature and with thousands of people charged with new ideas about their rights and duties. Each branch of activity has its own type of problems and requires a high degree of specialisation by the men at the top. An all-purpose administrator can only curb the initiative of the specialists without making any contribution of his own.

What is needed in today's conditions is not one cadre but a number of them.

Licensing Policy : A Selective Approach ?

THE Central Minister for Industrial Development, Mr. C. Subramaniam's statement at the State Industries Ministers' conference in New Delhi that the Government would soon announce a "clear cut" policy to end uncertainties in fresh investment should be welcomed to the extent that it showed an awareness that all is not well with the present policy. There is much truth in his analysis of the causes that have led to a slower rate of industrial growth. The quantitative progress in the matter of issue of letters of intent and licences has not been translated into any appreciable growth in investment on ground. The utilisation of existing capacity continues to be poor due to inadequate power supply, shortage of raw materials, transport difficulties, etcetera. Top priority, therefore, has to be given to capacity utilisation and expeditious completion of projects under way. In this context, Mr. Subramaniam's announcement that he has asked officers in his Ministry to help parties who had already been given licences is welcome. As he himself pointed out, some officers thought they were being progressive by putting every possible hurdle in the way of big business. This out-

Each Ministry or department should have its own hierarchy of officers who should be able to reach the top of the pyramid. Some grouping is possible between Ministries covering the same type of activity. Thus the Ministries of Finance, Trade and Planning can perhaps do with one pool of economics-oriented officers. Their expertise is complementary. The Ministries of Industry, Steel, Mining and Petrochemicals, likewise, may have a cadre of technocrats. Then there are Ministries such as Health and Family Planning, Education, Information and Broadcasting, Housing and Telecommunications which cannot be easily grouped. Each may have to have its own cadre. This kind of administrative decentralisation of the Government into different services would also help to loosen the stranglehold of a single service on the country's administration. The Secretaries to the Ministries would then be men from different disciplines and different services. And what is most important, the administration will then be action-oriented and not glued to the concept of the *status quo* in a fast changing world.

look must change, the Minister said and added that once a business house had been given a licence, every effort should be made to speed up the execution of the project.

Where, however, the Minister's pronouncements did not reveal a pragmatic approach towards ensuring industrial growth was his references to the rôle of larger industrial houses. Mr. Subramaniam agreed that the financial and managerial resources of the large houses needed to be harnessed but in the same breath he added that this went against the policy of preventing the growth of concentration of wealth and economic power. Happily, this obsession with the concentration of wealth and economic power was not shared by every Minister who attended the conference. Maharashtra's Industries Minister, Mr. N. M. Tidke, pointed out that rigid restrictions on the growth of big industrial houses were bound to prove detrimental to the rapid industrial development of the country. In a different context, West Bengal's Chief Minister, Mr. Siddhartha Sankar Ray, said that since the big industrial houses accounted for a substantial part of the investment in his State, curbs on their growth would

result in industrial stagnation there. While discussing the failure of the State Industrial Development Corporations to implement licences given to them, it was explained by the spokesmen for the States that the major difficulty they faced was finance. Under the existing guidelines, at least 26 per cent of the equity in a new company must be subscribed by the S.I.D.C. The State Ministers suggested that it should be enough if the contribution of the S.I.D.C. and financial institutions put together came to 26 per cent.

It is too early to say whether the States' views will be incorporated in the new licensing policy being evolved by the Centre. Mr. Subramaniam said that the new policy would be "selective." It had to be so because the Minister felt that "infant mortality continues to be high in the case of letters of intent, and perhaps the very large number of weak babies we produce itself stands in the way of our ability to tend them properly." Yet, all available indications are that the Government would rather increase the birth of more weak babies in order to ensure that the strong babies do not become stronger. It is obvious that if the managerial and financial resources of the large houses are to be harnessed, they have to be

permitted some amount of growth. That this permitted and pre-meditated growth cannot come in conflict with the socio-economic objectives of the Government should be obvious to a person like Mr. Subramaniam, because every aspect of this growth is controlled by the Government in one form or the other.

As if what he stated at the State Industries Ministers' conference was not adequate proof of the Government's distrust of big business, Mr. Subramaniam, in an interview to a Delhi newspaper, is reported to have expressed the view that some industries now in the private sector might have to be nationalised because they had become "centres of further economic growth" and increased production could further strengthen concentration in private hands. It may be that the Minister has not been correctly quoted, but the Government has succeeded in killing all initiative by the organised sector in industry. As if the curse of the caste system on the social front was not enough, a caste system is now being created on the industrial front also. One can only hope that the "selective" policy the Government has in mind will give a fair rôle to everyone who is interested in contributing to the industrial growth of the country.

Foreign Exchange Bill : Curbing Exports

THE Foreign Exchange Regulations Bill, which was introduced in the Lok Sabha last month by the Central Finance Minister, Mr. Y. B. Chavan, is likely to have some adverse effects on the country's export trade. The main objective of the Bill is to prevent the leakage of foreign exchange in various ways. The Bill has been drafted mainly on the recommendations made by the study team on the leakage of foreign exchange through invoice manipulation, and the report of the Law Commission on the trial and punishment of social and economic offences. The Government's anxiety to conserve foreign exchange resources is, of course, justified. But in trying to achieve the objective, it is introducing many new restrictions and regulations on the export trade. For example, Clause 17 of the Bill lays down that the exporter shall furnish a declaration in the prescribed form, indicating the full export value of the goods or the value which he expects to receive in the overseas market. The exporter is to affirm that the full

value of the goods has been or will be paid in the prescribed period and in the prescribed manner. The Bill also says that the exporter shall not, except with the permission of the Reserve Bank of India, authorise or allow in any manner the sale of goods for a value less than that declared.

These provisions will make it difficult for exporters to compete effectively in the foreign market. It may sometimes become necessary for exporters to sell their goods for a value less than what was originally fixed but even in such *bona fide* cases, they cannot do so without the permission of the Reserve Bank. The Bill says that when under Clause 17 an exporter seeks permission and the Reserve Bank does not communicate its decision within 60 days from the date of receipt of the application, it is to be presumed that the Bank has granted such permission. It is obvious that this clause will cause considerable delay and difficulty to exporters and restrict their freedom to

adjust their selling strategy promptly to suit the changing conditions in the international market. The Bill also empowers the Reserve Bank to direct from time to time that the exporter shall, prior to the export of goods, comply with any or all of the certain conditions, namely, that any contract or other arrangement for sale of goods shall be registered in such manner and with such authority as may be specified, that the payment for the goods is caused by an irrevocable letter of credit or by other arrangement as may be specified, and that any declaration to be furnished to the prescribed authority shall be submitted to the Reserve Bank for its prior approval which may be given, or withheld, or may be given subject to such conditions as the Bank may impose. The Bill also imposes certain restrictions on the export of goods on a consignment basis. It empowers the Government to prohibit the export of any product to any destination if it thinks that the full export value of the goods is not likely to be brought back to the country in the prescribed manner and within the prescribed period.

It is feared that these provisions are likely to affect the smooth flow of exports. Much will, of course, depend on the nature of the rules that are to be prepared for implementing the Bill. Even at present, the export trade is subjected to too many regulations and restrictions. Exporters have to comply with numerous formalities not only for selling their goods but also for claiming the concessions available under various export promotion schemes. In the last two years, the Government has done much to simplify the procedures in regard to export promotion. But under the Foreign Exchange Bill, the Government and the Reserve Bank are being given more powers to enable them to direct exporters to do or not to do certain things. Especially for such items as tea whose prices are determined in the auctions by international factors, it will be difficult for exporters to know in advance at what prices they will be able to sell. The Bill will create more uncertainty among the existing exporters and discourage newcomers.

The Bill also restricts foreign travel. It provides that no person shall, without the permission of the Reserve Bank, remain outside India beyond the prescribed date or period or travel to any place outside India other than such place or places as are specified by the Reserve Bank. There is, of course, the provision to

empower the Reserve Bank to exempt any person from these restrictions. But these restrictions will make it hard for business men to undertake export promotion tours in an effective manner. Sometimes, it may become necessary for a business man to extend his stay to complete negotiations or to visit some other country *en route*. In such cases, it will be difficult to obtain permission from the Reserve Bank. If Indian exporters are to compete successfully in the world markets, they should not only be permitted but encouraged to undertake frequent foreign tours, stay for reasonably long periods, and be provided with liberal foreign exchange. After all, they have to compete with business men from the highly developed countries. India cannot, therefore, afford to be too restrictive or niggardly in the matter of permitting people to travel abroad. Such restrictions may

help to save small sums of foreign exchange, but in the long run, they will act as a stumbling block in augmenting foreign exchange earnings.

It is surprising that the Bill is being rushed through without giving adequate opportunity to the public to study and express its views. Although it was introduced in the Lok Sabha on 18th August, copies of it were available in Calcutta only in September. But the Joint Select Committee of Parliament, to whom the Bill was referred, asked for the views from the public by 25th September. How did it expect the public to examine the Bill critically in such a short time? In view of the far-reaching implications of the Bill, adequate time should be given to the public to offer its comments and the Government should carefully consider them so that the country's export trade may not suffer.

Near the End of an Epoch

IN July last year the former British Chancellor of the Exchequer, Mr. Roy Jenkins (a fervent "European"), made a controversial accusation against the Australians, that they had threatened reprisals against the sterling system if the British Government restricted the flow of British money into Australian investments. In June this year the British Government (a different one) applied to the sterling area essentially the same restrictions as were already in force in respect of investment in foreign countries and in foreign shares. Differences of procedure are not negligible: whereas it may be obligatory to finance a proportion of foreign direct investment through the investment-currency market (where the so-called "dollar premium" adds to the cost), unlimited finance at the ordinary market rate is available for direct investment in the overseas sterling area, and, whereas 25 per cent of the proceeds of sales of foreign securities must be surrendered to the authorities at the market rate of exchange, no such "surrender rule" applies to sterling-area portfolio investment. But in substance the overseas sterling area has suddenly become "foreign": direct investment in it must be formally approved by the Bank of England, and purchases of securities in it must be financed with investment currency.

The City of London was not deceived by the pretence that applying

exchange control to the sterling area was a temporary precaution against loss of funds through it and that "normal" conditions would be restored when the pound had been re-established. It regarded the sterling area as effectively terminated—not by the Australians or any other "defectors" but by the British themselves—and the floating of the pound as a convenient pretext for doing it. Overseas "sterling" countries' reactions—or non-reactions—to the float demonstrated how profoundly the system had been modified in recent years. In Britain as well as the overseas territories, the sterling area was a subject of controversy throughout those years. Critics insisted that it was a useless and irksome survival from the imperial past (Britain, said economist Susan Strange in a highly-regarded book, *Sterling and British Policy*, "lost an empire but was left with an imperial financial system"), and the European Community—especially France—would not tolerate it in the group that British politicians had chosen as their nation's destiny. To assert that the sterling area "has outlived its usefulness" is not to deny—indeed, it implies—that the system has been useful in the past. It was the basis of London's status as an international financial centre and of the pound's status as an international currency; and—so the French, at least, believe—it allowed Britain almost limitless credit to maintain that status of the pound. Its main benefit to overseas members was

privileged access to a major capital market. Much of the capital provided there was converted into British visible exports; and substantial invisible earnings were derived from London's financial services to the area.

Yet there were grave disadvantages in a system that made Britain responsible for other countries' reserves when Britain was incapable of fulfilling that commitment. In the light of recent events it may seem that the obligation to maintain a reserve currency was a needed discipline; but through years of intermittent restraint on the economy many business men and economists became convinced that the obligation was too burdensome, that the thousands of millions of pounds of sterling balances should be (somehow) "offloaded", and that the pound's function as a reserve currency should be "phased out". The City had in the meantime become aware that its expertise could be used as profitably in Eurodollars as in sterling, and that London's status as an international financial centre was not necessarily based on the pound. From the overseas countries' point of view, the pound was a distressingly unsatisfactory reserve currency, and it forfeited any claim to respect as such when it was devalued in 1967. It was temporarily propped by the Basle Agreement of 1968, when non-sterling countries provided a big standby credit (thereby partly internationalising Britain's commitment), Britain guaranteed the dollar value of the balances (although not totally) against any further devaluation of the pound, and the sterling-area countries agreed to retain specified proportions of their reserves in sterling. A new sense of security, combined with attractive interest rates, brought more sterling balances to London; but "diversification" of the countries' reserves continued.

In a situation of compromise and controversy, a situation in which the intrinsic quality of the pound was manifestly inadequate for its functions, the negotiation of Britain into the European Community was decisive. Years before it was started (on a practical plane) the Community had judged that commitments to its system and to the sterling area were incompatible, and last year Britain's negotiators were told that they must choose the one or the other. This year the "unwinding" of the sterling area has been accelerated and the system is essentially finished; although completely "international-

lising" the sterling balances is a complex residual problem. The British Ministers were significantly reluctant to disclose what they had "conceded" to the Europeans in respect of sterling. They were acutely sensitive to accusations that they had "traded" an international currency for a unit in a regional monetary system. Yet the sterling area's disintegrating tendency was already evident in the

CURRENT COMMENT

BONUS

Chambers' Reactions

Commenting upon the decision of the Government of India to concede to the trade unions' demand for an increase in the minimum bonus from 4 per cent to 8.33 per cent, Mr. Madanmohan Mangaldas, president of the Federation of Indian Chambers of Commerce and Industry, has observed: "That the Government had acceded to the demand of the trade unions is not surprising, particularly after the Central Labour Minister himself fanned the demand in the earlier stages. The acceptance, however, is a dangerous spin. One can predict the unhappy results. Not only will prices go up but worthwhile schemes of expanding employment may have to be abandoned. The problem may soon resolve itself into a clash between a few million who are employed and the very much larger number of the unemployed and underemployed."

In a Press statement, Mr. Hari-shankar Singhania, president of the All India Organisation of Employers says: "Although we have been living with the bonus problem for many years now, every year it has been growing in number and complexity. The latest decision of the Government of India to concede to the demand for increase in the minimum bonus from 4 per cent to 8.33 per cent opens a yet new confusing chapter in the bewildering Bonus Act."

In a Press release, the United Planters' Association of Southern India has noted that in deciding to raise the minimum bonus from 4 per cent to 8.33 per cent, the Central Government, after giving initial hopes of taking an objective decision in the larger interests of the country, has

years when it seemed unlikely that Britain would ever merge with Europe, and the City itself, though dissociated from political criticism of the sterling system as "inhibiting" and not exuberantly optimistic regarding the prospect of business in Europe, was ready for the withdrawal of sterling from its international monetary (as distinct from trading) rôle.

again succumbed to pressure tactics by organised labour.

I.R.M.A.C.

Operations Reviewed

The operations of the Industrial Raw Materials Assistance Centre (I.R.M.A.C.) was reviewed at a meeting held last week. It was sponsored by the Calcutta Import and Export Trade Association and the Purchase Officers Association of India. The meeting was somewhat unique in the sense that the I.R.M.A.C. delegation led by Mr. M. N. Misra, Director of the S.T.C., and consisting of Mr. B. R. Bhandari, Chief Marketing Manager, and Mr. L. K. Vadera, Deputy Marketing Manager, also participated in the discussions. Mr. M. N. Misra stated that the I.R.M.A.C. in the S.T.C. was set up for extending benefits of bulk buying to actual users and exporters for non-canalised items, purely on a voluntary basis, selling goods in stock against surrender of import licences and importing under free competitive market conditions. Judging by the operations in the last two years, this experiment had a fair degree of success. He said that the major advantage of importing through the I.R.M.A.C. was that it could arrange advance imports against its own licences, thus saving substantial time to the actual user, who would be required to surrender his licences to the I.R.M.A.C. only at the time of delivery of the materials. Answering questions, Mr. Misra stated that the I.R.M.A.C. was already offering up to 90 days credit facilities to customers under the bill market scheme with prior agreement. To a suggestion made by the C.I.E.T.A. that the I.R.M.A.C. operate as a clearing house for various credit licences, Mr. Misra said that it was already acting on these lines in a limited manner.

PAPER MACHINERY

Idle Capacity

The Paper Machinery Manufacturers Association, which is the representative body of the paper machinery manufacturers in the country, met in Calcutta a few days ago. In a message to the chairman of the Development Council for Paper Pulp and Allied Industries, which met in Srinagar on 23rd and 24th September, it has said that the order backlogs of the pulp and paper machinery manufacturers are the lowest in recent years and that a large part of the installed capacity is now idling or is being diverted to other products. The machinery manufacturers positively need orders for complete pulp and paper plants as also for individual items of machinery. This industry can immediately accept orders for integrated pulp and paper board plants having an annual output of paper/board of about 160,000 tons divided into paper machinery units of up to 150 tons a day capacity of normal quality paper and board. Because of the lack of orders and the long lead time required before major orders can reach the shop floors, it can now be predicted that the machinery industry's output in 1973 will be less.

REROLLERS

Worry over Billet Supply

In a memorandum submitted to the Development Commissioner for Small-scale Industries, Government of India, the president of All India Steel Rerollers' Association, Mr. B. L. Kanodia, has drawn his attention to the discrimination in the matter of allocation of rerollable scrap as between the members of the S.R.M.A. and the rerolling units registered with the State Directorates of Industries. It has been pointed out that under the current distribution policy, only 96 rerolling units who are members of the S.R.M.A. are allotted 33 per cent of the total arisings of scrap, whereas the remaining 67 per cent is distributed to the units registered with the State Directorates of Industries whose number is about 700. As a result, the rerolling mills that are members of the S.R.M.A. are fortunate in getting three-and-a-half times more materials than the units registered with the State Directorates of Industries. This runs counter to the Government's declared policy to encourage the small sector. In 1961-62,

when there was a surplus of billets, the billet reroller members of the S.R.M.A. could not lift the supplies offered by the plants. At that stage the units registered with the State Directorates of Industries were requested to lift such materials on the assurance that the supplies of billets would be continued to them. Relying on this assurance, such units lifted the materials. Now, in spite of the appreciable increase in the production of billets, it is unfortunate that no allocation has been made so far to the units registered with the State Directorates of Industries. The All India Steel Rerollers' Association has, therefore, asked that allocation of billets to the rerolling mills registered with the State Directorates of Industries should be seriously considered and they should be allowed to have supplies of billets in a reasonable proportion.

FLOUR MILLS

Complaint against F.C.I.

In a Press note issued recently, the Calcutta Flour Mills Association, (C.F.M.A.) has expressed concern that large amounts of money have been blocked with the Food Corporation of India on two accounts: first, the flour mills have made financial arrangements for monthly quotas of wheat allocated to them by the State Government but the F.C.I. has not been able to deliver adequate wheat. Secondly, they are being constantly pressurised to make financial arrangements on various other depots which clearly shows lack of co-ordination at the F.C.I. The finances of the flour mills have also been seriously affected by the uncompromising stand taken by the F.C.I. with regard to road transport charges for wheat transported from the various depots to the mills. According to the agreement reached between the F.C.I. and the flour mills, the former is required to reimburse the cost of transport of wheat from its depots to the mills. The F.C.I. has delayed reimbursement of road transport charges on the grounds that in terms of the recent agreement it would reimburse road or rail charges whichever is lower. In the case of the Calcutta mills, even though not one grain of wheat has been moved by rail from its local depots, the F.C.I. insists on reimbursement on the basis of rail freight. It is common knowledge that the railways do not provide wagons for short haulage. The C.F.M.A. has expressed concern that this

blockage of funds would have a very serious impact on the flour mills.

FERTILISER

Firm Import Policy Needed

To meet the crisis in agricultural production caused by the extensive drought and the damage to the *kharif* crops, the Government of India has decided to go in for large-scale imports of straight and complex fertiliser from all over the world. A high-level purchase mission led by the Central Supply Secretary, Mr. K. Ram, has just left for Tokyo. Reliable reports suggest India will not be able to procure more than 200,000 tonnes of urea (46 per cent) nitrogenous fertiliser from Japan this year while the country's requirement is much greater. An analysis of Indian purchases of fertiliser during the last decade shows that India not only goes for wrong type of fertilisers low nutrient types, like ammonium sulphate or calcium ammonium nitrate) from the world market but also enters it at wrong times thus pushing up prices. Purchase of low nutrient fertiliser also increases shipping and transport cost.

Over the years, the Central Ministry of Agriculture has developed preferences for D.A.P. (diammonium phosphate 18:46:0) type complex fertiliser under pressure of intelligent U.S.A.I.D. sales promotion campaign. Although American aid is no longer available and purchases have to be made in free foreign exchange, Krishi Bhawan still seems to prefer D.A.P. for unexplained reasons. In the last few years, a group of European fertiliser manufacturers has successfully promoted the A.N.P. (ammonitrophos) type of complex fertiliser branded as "suphala" in West Bengal and the adjoining States. Still, the bosses at the Agriculture Ministry are reluctant to order A.N.P. fertiliser from France and Germany. Following intense parliamentary questioning and pressure from the Petroleum and Chemicals Ministry, Government purchase teams abroad have now contracted for a limited quantity of European A.N.P. complex fertiliser. It may be mentioned that the proposed Haldia fertiliser plant will produce this type of complex fertiliser.

There is another undesirable aspect in the country's fertiliser shopping list. Most of the European manufactures produce N.P. complex with 33 per cent water solubility. But

without little scientific justification, the Agriculture Ministry demands 50 per cent water solubility of phosphate in N.P. complex while shopping in Europe. This naturally leads to demands for higher prices. As there is little prospect of increasing indigenous production to meet the ever-increasing demand, India is going to be dependent on massive imports for at least another six years. Considering this, it would be wiser to enter into a long-term (for three years, for instance) contract with foreign suppliers in the free world and in the Soviet bloc. That would reduce the price in comparison with annual purchases as foreign manufacturers will then be able to utilise their full capacities. A firm and bold fertiliser import policy should be framed at an early date in the long-term interest of the nation and its agriculture-dependent economy.

POWER

Planning for a Surplus

In his address at the seminar on power development held recently under the auspices of the Federation of Indian Chambers of Commerce and Industry, Mr. K. N. Modi, vice-chairman of Modi Enterprises, said that one could not expect a higher rate of industrial and agricultural growth when adequate and uninterrupted supply of power could not be arranged for the existing industries. For solving the problems of power the country must plan for a surplus, avoid breakdowns and fluctuations in the power voltage and should ensure that power is generated and distributed more economically. Power is such an essential input for industry, agriculture and essential services that the country must aim for surplus generation so that if there is any underestimation in demand or there are unexpected breakdowns or failure of rains, shortages can be avoided. The constraint of financial resources or lack of foreign-exchange should not come in the way of power development. The authorities must consider the import of more power-generating machinery from rupee payment countries as well as from free foreign exchange sources. The lack of foreign exchange should not come in the way of establishing new capacity or proper working of the existing plants. The main reason of power cuts by the State Governments has been the failure of hydro systems due to deficiency of rains. The dependence on hydro system should be reduced by developing more atomic

power stations and encouraging the installation of thermal stations.

WORLD BANK

Sectoral Review

The International Bank for Reconstruction and Development has announced the publication by the John Hopkins University Press of a book entitled *World Bank Operations: Sectoral Programs and Policies*. The volume analyses the World Bank Group's experiences in less developed member-countries in the areas of agriculture, industry, transportation, telecommunications, electric power, water supply and sewerage, education, population planning, tourism and urbanisation and outlines some of the prospects and problems involved. The authors, all members of the staff of the World Bank Group, note that "the malaise . . . in the developing countries is only too evident in the squalor of the rapidly growing slums and unauthorised settlements, the deterioration in many public services, the extreme shortage of housing, and the congestion in the streets. Less imme-

diately evident, but certainly no less important, are the growth of unemployment and the worsening of income distribution". The sectoral analyses in this volume were not originally intended for publication. But as stated in a preface by President Robert S. McNamara, "as the preparation of these papers has concentrated our thoughts on the lessons of our experience, and our plans for the future, their publication will be useful for all those who are engaged in development." Each review contains relevant statistical information on the economic sector, and the Bank's involvement therein.

U.S.A.

India's Export Prospects

Speaking at the Indian Chamber of Commerce in Calcutta recently, Professor J. H. Lindaur, a noted American economist, predicted dramatic increases in the near future in Indian exports to the United States. According to him, there are good reasons to expect that the ability of the Indian exporters to sell in the U.S.A. in the

future will not decline any further even if that country continues to stagnate. More importantly, it is quite possible that when the United States begins to climb out of its present stagnation, its present severe recession, Indian export sales there will rise dramatically—far more than is being estimated at the present time by Indian planners and firms with export sales orientation. Mr. Lindaur said it was up to the Indian exporters to capture some markets and increase their sales to the U.S.A. as a percentage of the latter's total purchases abroad. He expressed optimism that a dynamic growth was going to occur in the U.S. economy so that the lost ground could be made up. "Sooner or later, I think we are going to run far ahead of the other nations", he added. When such an expansion in the U.S. economy occurs, he said India and all the exporting nations are going to participate in a huge sales increase and such an increase in sales, he felt, is "absolutely necessary" for the United States to recover.

U.K.

Aid for Bangladesh.

Mr. Richard Wood, British Minister for Overseas Development, told the House of Commons recently that Britain had promised £9,000,000 for relief in Bangladesh and had committed about half of it. Mr. Wood, who was replying to a question on British aid to Bangladesh, added: "We are providing a wide range of items to restore communications, and employing a Singapore firm to remove the damaged spans of the Hardinge and King George VI railway bridges. The firm will also survey some of the sunken vessels which are obstructing navigation in the rivers, so that they can be salvaged. Apart from this relief, we have signed loan agreements for £4,800,000 in order to assist economic development in Bangladesh.

MONEY MARKET

Easier Trend

The short-term money market has been easier this past week. The call rate initially fluctuated between 4 per cent and 3½ per cent but towards the close, the rate has come down to 3¼ per cent with lenders over. The demand for remittances has been small. The supply of tea bills has been below average while that of gunny bills has been small. The pound-sterling has weakened against most major foreign currencies during the week.

A Ditcher's Diary

WHAT DID MR. SIDDHARTHIA Sankar Ray have in mind when he said in Burdwan last Saturday that some people were trying to overthrow his Government? Surely the Congress cannot be thrown out of office in West Bengal, and the allegation can only refer to some factional move by unspecified people. I have not heard of any such move; nor can I see how it can succeed. Mr. Ray was the obvious choice for the office of Chief Minister when the Congress swept the polls in March; and the political circumstances have not basically changed. I do not think that there is any point in speculating further on the subject; perhaps more relevant is Mr. Ray's assessment of his Government's performance during the first six months. The assessment, published as a Government advertisement in the Calcutta newspapers last week, is remarkably modest. It would be unfair to recall Churchill's famous comment in this context: when someone said that Mr. Attlee had the virtue of being modest Churchill readily agreed and added that, after all, the Labour leader had a great deal to be modest about. The West Bengal Government, too, may have much to be modest about, but it can justifiably claim that it was hardly possible to present a record of all-round achievement after the first six months. And it can take credit for a marked improvement in the state of law and order. It can also argue that if this improvement has not been accompanied by an up-

surge of constructive activity, this is largely due to the enormous complexity of West Bengal's accumulated problems. The Government needs to be judged more by the direction of its effort than by what it has or has not already achieved. Unfortunately, Government spokesmen, including prominent Ministers, started with extravagant claims and promises; it is curious to be told after six months that more has been done by this Government than was achieved under the United Front regime. Even if this claim is correct, it is quite irrelevant at this stage. It would be more pertinent to examine if West Bengal has already been put on "the road to recovery". There are not many signs of an economic recovery, perhaps not even the beginnings of an industrial revival. There seems to be some doubt whether the ruling Party is playing an entirely healthy rôle on the labour front; and prospective investors would like to be sure. And can one be encouraged to start a new industry when the existing units are so severely crippled by ceaseless "load-shedding"? These problems are unlikely to be solved by a peripatetic Cabinet. It is time for the Government to settle down, both literally and metaphorically.

IT WAS ONCE FASHIONABLE FOR communists to see a C.I.A. conspiracy behind every kind of trouble; Congress leaders seem to have acquired the habit with remarkable ease.

The thesis appears to be that whoever criticises the present Government is a C.I.A. agent. This apparently omnipotent agency would thus appear to have gained control of all ground both to the right and left of the Congress. The C.I.A. ought to be flattered. If it is responsible for every expression of discontent or every agitation over popular grievances, millions of Indians must be C.I.A. agents. The concept has a Dullesian simplicity. Even the Americans have stopped suspecting a communist plot at every trouble spot in the world; and neither the Russians nor the Chinese are any longer inhibited from doing business with the Americans by fears of "U.S. imperialism". But political clichés are never out-dated in India; and the most persistent of all clichés is "conspiracy". West Bengal's United Front Governments never stopped complaining of "the Centre's conspiracy" against them, and they seemed also to imply that the C.I.A. was somehow involved. The Congress now seems to suspect that not only parties like the Swatantra or Jana Sangh but also the Socialists and Marxist Communists take their orders from the ubiquitous American agency. Some of the wild charges would have been highly diverting if they had not been made by senior Congress leaders like Dr. Shankar Dayal Sharma. A statement made by the president of the ruling Party cannot be treated merely as an individual's personal opinion; and surely Mrs. Gandhi does not want such a statement to affect State relations in a manner she has no reason to welcome. But let me not be ponderous; it should still be possible to enjoy the whole thing as a joke. Apparently, Dr. Sharma does

EVOLUTION OF JOURNALISM

A CORRESPONDENT writes from London: The evolution of thought power and its effect upon the physical structure of the human brain is well described in a small book entitled *Man's Destiny*, by John Fiske. The evolution of the journalist, considered by the same method, affords an interesting study. The wider spread of education has provided more readers and more hunger for information. The reticence and exclusiveness of the family group, which characterised social relations in the day of unlettered self-sufficiency, have had to give way to the advancing demand upon the means of livelihood, and journalism has been spontaneously accessory to an evolution, which has had the double effect of supplying a growing appetite for information and opening up a wider field for profitable employment. Journalism is the advertisement of current events and has contribut-

ed to the fortunes of a rapidly increasing number since the days of Holloway's Pills. The expansion of advertisement has cheapened journalism and created in it a considerable political power, an evolution which is at present rather precocious. That is, there appears to be an overshooting of the mark when advertisement, to attract attention, aims more at sensation than at truth. The exaggerated form of advertisement is unfortunately not confined to trade. Exaggeration has become a marked feature in the advertisement of current events, so much so that there are probably not half a dozen journals in any country that confine themselves to simple truth in their relation of current political events. The emulation for popularity by means of sensationalism is one of the results of a democratic age, the process of levelling down, the appeal to the ignorant mob.

not have much faith in our own security apparatus. He said in Calcutta last week that C.I.A. activities in India and Bangladesh were so obvious that he did not have to consult C.B.I. reports about them. Evidently, these activities are to be discerned in both "Right reaction and Left adventurism". Dr. Sharma seems to be fast picking up some familiar jargon; but I never thought that he was a darling of the Congress Left. In fact, the Congress radicals were particularly annoyed at his association with the recent inauguration of the Nehru Study Forum, which they consider decidedly "reactionary". Is he now trying to acquire some radical respectability? But ordinary people are tired of being told that all their problems are due to sinister plots by mysterious foreign agents.

SURELY ONE OF THE MOST WELCOME pieces of news for a long time is that John Masters is back again writing about India. As an incurable Masters enthusiast myself, I am looking forward to his latest book, *Raven Lancers*, the first he has written with an Indian theme for some years. It gather it is already in its second reprint, before it is even published, which must be gratifying for an author who was once told he was wasting his time because nobody wanted to read about India these days. Just how wrong can one be? Of course, Masters is something of a phenomenon when it comes to understanding this country and its people. Not even Kipling, in literary terms a much greater genius, has ever revealed quite the same empathy as Masters in all matters Indian. Yet one gathers from *A Pilgrim Son* Masters' story of how he went to the United States and became a writer, that his early efforts were regularly rejected because the publishers believed they would not sell. Apparently, *The Nightrunners of Bengal*, *Bugles and a Tiger*, and even *The Deceivers*, still my favourite, were all turned down by innumerable publishing houses on the ground that their subject was of little interest and the treatment outdated. A classical instance, you might say, of the experts not knowing their own business. In fact, the public loved them, which does not seem to have been the case with Masters' other books, notably his non-fiction ones. Now, it seems, he is being told that stories about Spain do not sell although in this case there is much evidence to prove it, namely, poor sales at the bookstalls. Personally I

have enjoyed many of Masters' non-fiction works; his *Road Past Mandalay*, in my opinion, is one of the best accounts of the war in Burma ever written.

THE WEAKEST POINT OF THE ENVIRONMENTALISTS' argument, it has always seemed to me, is their determination to link pollution inextricably with economic growth. It is something which throws doubt on their real motives, not to mention the soundness of their reasoning. I was reminded of this the other day while perusing the latest edition of the U.N. statistical year-book. The figures which struck me concerned the increase in industrial production in the developed world during the period 1958 and 1970. At the top of the league table, of course, was Japan, with an impressive 449 per cent and there is no denying the truth that this country's pollution problems have certainly grown on much the same scale. But looked at the other way round, the country at the bottom of the table, Britain, with only 48 per cent, has pollution problems which are scarcely less, and certainly not fewer in that proportion. It would just be untrue to say that because Britain's economic growth is the lowest of any industrialised country in the world, her environmental difficulties have been less than anybody else's. I think that the key to the pollution problem is really awareness. I think it is particularly important that we in India should grasp this point. It is worth while giving considerable attention to the need not to antagonise the international environmental lobby, which I feel is likely to grow larger and more vociferous in coming years. It should cost us little to tackle the

problem at source; and the dividends could prove well worth having.

WHAT HAPPENED TO FISH FROM Bangladesh? I have not seen any in Calcutta, nor do I know of anyone who has. Immediately after the December war, West Bengalis started looking forward to supplies from across the border. They were then told to wait for a formal trade arrangement. This was finalised several months ago; and since then there have only been periodic reports about the probable date on which the supply would begin. Even firm dates were announced, but the schedule has been repeatedly revised. The latest date, I believe, was last Monday; but, as far as I can see, Calcutta is still waiting. Indeed, the entire season has been a long and fruitless wait for the Padma *ilish*. Some prefer the Ganga variety, but this must be from a small stretch of the river near Calcutta; the river yields some *ilish* even in northern India, but the *cognoscenti* do not approve of it. Nor can one be ecstatic about what passes as hilsa in western India or on the shores of the Chilka; and what is available abroad as shad is a very poor relation indeed. But the Padma variety is uniformly good; indeed, most Bangladesh fish is superior to what is available in West Bengal. Some of my friends who visited Bangladesh immediately after liberation came back with stories of fabulous fish courses; but lately, I am told, there has been a relative scarcity even there, and the prices have risen considerably. As in almost every other case, all this is being blamed on India; indeed, as early as last March a friend of mine

was told in Dacca that fish had become scarce and expensive because of large-scale supplies to India. I wonder what kind of stories will circulate there if the supplies really start. It may not, therefore, be an altogether bad idea if we are kept waiting for ever; the price to be paid for Bangladesh fish may not be wholly in cash or goods. In any case, I doubt if supplies from Bangladesh will make any appreciable difference to the Calcutta markets. Not much may be left of the original quality after cumbersome and inefficient transportation; the volume is unlikely to ensure anything like plenty; and all prices have a habit of rising regardless of elementary economic laws. When the recent movement to bring down fish prices tended to drive the commodity out of the market, some people thought that both wholesalers and retailers would eventually be forced to resume business at lower prices. But apparently their staying power is greater than the consumers' capacity for self-deprivation. Fish is still in short supply, and the lowered prices which are responsible for the reduced supply are nowhere in force. The whole thing is decidedly fishy. I wonder if the young campaigners have learnt anything; but the general public may have learnt to be less passionate about fish.

"YOJANA BHAVAN" IN NEW DELHI was often sarcastically called "Sojana Bhavan" as it appeared to be in a somnolence in the days of Plan holiday. But under the leadership of Mr. D. P. Dhar, new Planning Minister, there is a feeling that it is waking up, although only slowly.

Value Analysis: A Helpful Method for Cost Reduction

By M. V. R. Rao

Value analysis is an advanced cost improvement technique which is finding increasing use in production and distribution activities in different parts of the world. But unless the results of value analysis are put into practice, the expenditure incurred on such studies will only add up to production cost.

IN the world of competitive product marketing, the object of any firm is to maximise profit or at least to maintain the current profit level. By adopting cost improvement techniques, the profit can be maximised when the price is a constant factor or the current profit level can be maintained when the price is a variable factor. A programme of cost improvement involves a reduction in unit cost either by slashing down expenditure in relation to a given output level or by improving productivity of all the means of production, or by application of both the methods.

Value analysis is an advanced cost improvement technique developed by purchasing functionaries in the U.S.A., and now it has gained entry into all areas of production and distribution activities in different parts of the globe. In fact, manufacturers in advanced countries have welcomed this technique much more than any other new technological innovation, as they can stabilise their production and distribution activities by price cuts against cut-throat competitive world market conditions. They can even expand markets for their products by offering reduced prices. This is possible only when one can reduce the unit cost of production. The defence departments of these countries are also applying this technique, thereby economising huge amounts. Then what is this wonder technique?

The Scope of Value Analysis

Dr. Dean Ammer, an American specialist in value analysis, defines the technique as "the study of the relationship of design function, and cost of any part, material or service with the object of reducing its cost through modification of design or

material specifications, manufacture by a more efficient process, change in supply or possible elimination or incorporation into a related item". In simple terms, it is an organised attempt to identify unnecessary cost and to find ways and means to eliminate such costs. Value analysis is a planned and systematised study. This technique may be applied in large, medium or small organisations; the size of the firm or the manufacturing unit is not a criterion as long as the object is to save cost. Saving does not simply mean slashing down expenditure indiscriminately but is only a process of elimination of such of the expenses which are not necessary without infringing upon the quality and performance standards of the product.

As the object of the programme is to bring in considerable amount of savings in cost, a product which has high potential for savings shall be selected. A product or a sub-assembly will have a number of intricate parts or components. And every part or a component in a sub-assembly will have a particular function to perform in the main assembly. Such parts or components have some functional value in the main assembled product. For example, the cast iron stand in a non-rotating type of table fan has some functional value: a solid stand constructed to bear the impact of the rotary movement of motor, a place for the switch panel and a housing for the motor which drives the fan—all in one piece.

Superfluous Function

Then one can speculate which of the function of the stand is superfluous. Once it is decided that some part or component is really superfluous, it has to be thought of as to how to achieve the same functional effect by eliminating such a part. Even when a particular part is essential and is retained to form part of the sub-assembly it has to be considered whether such parts need all the features they have or whether some of them may be eliminated. A change in the design may help, but it must always result not only in re-

ducing the number of features of a part or the number of components but shall also bring about savings in the number of machining operations and a reduction in processing time. This results in a saving of labour cost.

In some cases a good but cheaper substitute material may have to be thought of. For example, in the electricity industry today, aluminium conductors are used where copper conductors were used as it is found that the former have almost the same physical and mechanical properties as the latter but are available at an attractive price differential. A change in the production process may also bring about a reduction in cost. Suppose two pieces of castings form one sub-assembly. If both can be casted as one single piece, there will be reduction in cost of casting, besides savings in labour and related cost of assembling of two pieces, say, by rivetting.

The Next Step

The next step is to collect the data pertaining to cost. It is necessary to ascertain what it costs to manufacture an item and how it is manufactured and whether it pays to manufacture it with bought-out components and so on. A speciality supplier may be able to supply components at a lower cost as it enables him to reach the full capacity of his plant and he spreads the fixed overheads over a larger number of units. But how far such a supplier is reliable has to be verified. The next step is to rank all the processes, materials and mixes in the order of their cost savings.

However, it is incumbent on the part of the value analyst to test all the alternatives in the light of performance, otherwise a change may prove harmful and the performance may not be satisfactory. For example, a substitute material may bring about substantial savings, but it will not be economical to use if it lacks performance value. After all, the object of value analysis is not to lessen the performance standards of components or of sub-assemblies, as such new designs, materials, parts, components, etcetera, shall be tested as for their reliable performance before being proposed as substitutes. Unless the result of value analysis is put into practice, the very object of this technique is defeated. It must be borne in mind that value analysis study also costs something to the firm and without its application, such cost adds up to the unit cost of the products manufactured.

A tap is turned

A city receives water

and GST lays one more pipeline to progress

Gujarat Steel Tubes contributes to the progress of urban India with steel tubes and pipes in dia. 15 mm to 100 mm, black and galvanized, threaded and socketed, using TUFFWELD—a High Frequency Induction Welding process. In just eight years, Gujarat Steel Tubes has made its mark in India, as one of the major suppliers to Government, and abroad—as the largest exporter of steel pipes to U.S.A.

Appointment of Auditors: Will the Changes Proposed in Companies Bill be Helpful?

By M. R. Meher

The Companies (Amendment) Bill seeks to restrict the right of companies to appoint auditors of their choice. But frequent changes of auditors may give rise to many problems.

THE Companies (Amendment) Bill restricts the right of companies to appoint auditors of their choice. It provides that a retiring auditor, i.e., an auditor whose term of office expires on the conclusion of the next annual meeting of the company, shall not be appointed without the prior approval of the Central Government if he or the firm in which he is a partner has been the auditor of the company for three consecutive financial years preceding the year in which the annual meeting is held or ought to have been held and an application for such approval shall be made in such form as may be prescribed. By another clause, it is provided that in a company where 25 per cent or more of the subscribed capital is held by a public financial institution or a nationalised bank or a general insurance company, the appointment or reappointment of an auditor shall have no effect unless approved by the Central Government.

In the notes to the clauses of the Bill, it is stated that under the existing Act there is no restriction on the reappointment of the same auditor for a number of years. This has resulted in concentration of audit in a few established firms of auditors and has tended to create a close association between the auditors and groups of companies. Section 244 of the existing Companies Act provides that at any annual general meeting a retiring auditor shall be reappointed unless he is not qualified or is unwilling to be reappointed or a resolution is passed at the meeting appointing somebody instead of him or urging that he shall not be reappointed.

There has been for a long time a move by junior chartered accountants against the concentration of audit in a limited number of big firms. Some time back, a deputation of young

chartered accountants, led by a former president of the Institute of Chartered Accountants, submitted a memorandum to the President of India demanding an amendment of the Companies Act so as to lay down a ceiling on the number of audits that an auditing firm should be allowed to handle. It was stated that there were about 6,000 practising firms and that 20 per cent of them do audit of about 80 per cent of auditable transactions and this monopoly should be broken. There are obvious objections to laying down any such ceiling, since the quantity of auditing work that a firm can do efficiently would depend on the number of partners and their qualified assistants and staff. Besides companies differ in size, the volume of their transactions, number and location of branches, etcetera.

The proposed amendment seeks to achieve the aim in a less objectionable manner but the legislation may not have a marked impact on the distribution of auditing work since a company, after its auditing firm has completed a term of three years, could appoint another large firm as its auditors. In the case of other professions also, those who need their services have to be allowed to engage the men whom they consider most suitable. So companies also have to be allowed to engage the services of an auditing firm whom they consider most suitable having regard to the size and volume of transactions of the company and the standing and experience of the firm of auditors to be appointed. It has to be borne in mind that auditing does not consist in merely checking the accounts but also in seeing that the requirements of the Companies Act, taxation laws, etcetera are complied with. Companies and shareholders have no interest in creating a monopoly in the auditing profession. If the proposed amendment becomes law it is not likely that approval will ever be given by the Government to the continuation of an auditor of the company after three years in the case of large auditing firms. While the company may have to appoint

another auditor, it may find it necessary to continue to engage the services of the old auditing firm for income-tax and other matters.

It is true that in the public sector there is a system of rotation of auditors, but with a large number of concerns in the public sector it is feasible for the controlling authority for public-sector accounts to do this. It is, however, understood that in this respect public-sector companies and corporations have not the same advantage which concerns in the private sector have of continuing the auditor who is familiar with the circumstances of the company. Under the proposed amendment the auditing work of companies may suffer as they would not have the advantage of continuity and of the work being done by the auditors who have done their previous audits and have been familiar with the circumstances of the company and its modes of business, transactions and accounts. A new auditor may become fully familiar after one or two annual audits and he would then have to be changed after the third year. In fact section 244 of the Companies Act referred to above contemplates that normally there will be continuity in the appointment of auditors of a company. Furthermore, apart from the fact that senior auditors belonging to large firms have longer personal experience, such firms have adequate qualified and trained staff to cope with the heavy work of auditing large companies, which newer and junior auditors' firms would not have.

As for the statement in the notes to the clauses of the Bill that the present arrangement has tended to create a close association between the auditors and groups of companies, there is no evidence that the large and experienced firms of auditors which have a large number of audits are hand and glove with the boards of companies. On the other hand, they can afford to be more independent than small firms which work for two or three companies only.

On balance it would appear that the proposed amendment has disadvantages, while the aim of wider distribution of work among auditors is not likely to be achieved for the reasons given above. As in other professions, some come to the top with ability and experience, while some others lag behind and there are difficulties in providing distribution of work by legislation. However,

one possible way which might be considered is that a company which wants to continue its auditor after three years may be required to appoint an additional auditor. The other provision in the Bill that in a company where 25 per cent or more of the subscribed capital is held by a public financial institution or a nationalised bank or general insu-

rance company, the appointment or reappointment of an auditor has to be approved by the Central Government stands to reason and is unobjectionable. But even here the primary consideration in giving approval must be the interests of the corporation and not the provision of more work for juniors in the auditing profession.

A Plan for Educational Reform: Need for the Concurrence of States

(By a Special Correspondent)

The Centre has drawn up a comprehensive programme for educational reform. But it cannot be introduced without the concurrence of the State Governments.

THE Central Ministry of Education has prepared a comprehensive programme for educational reform, the main purpose of which is to help social transformation, promote economic growth and accelerate the nation's progress towards socialism. This is not the first time that this realisation has dawned on the Ministry. A national policy of education was evolved quite some years ago after a good deal of debate and discussion, but it has remained so only on paper. The excuse given by the Central Government for not being able to implement the national policy is that education being a State subject, the Centre has not been in a position to impress its views on the States. The Central Education Ministry thus knows fully well that any plan for educational development that it may propose must have the concurrence of the States which are expected to put it into force. In the absence of any eagerness on the part of the States to take the Centre seriously, it is doubtful whether an educational plan evolved by the Central Government has any meaning. However, this has not deterred the Education Ministry from preparing a grandiose plan for the development of education during the Fifth Plan period. The detailed financial implications of the programme constituting the plan have just been worked out and they envisage a total outlay of Rs. 3,200 crores.

As early as 1966, the Education Commission had emphasised in its report that the present educational

system needed radical changes if it was to meet the purposes of a modern democratic society—changes in objectives, in content, in teaching methods, in programmes, in the size and composition of the student body, in the selection and professional preparation of teachers, and in organisation. In fact, in the national policy of education that was enunciated two years later, all these aspects were incorporated. But in view of the fact that nothing startling did happen, the Ministry has once again made use of these documents to reiterate a fresh programme for educational development. The Ministry wants to transform the entire educational system since "it is essential to make education a powerful tool of social transformation, economic growth, modernisation and national integration". It is claimed that the policy to be formulated will lead to a radical transformation of the content of education accompanied by such related reforms as the adoption of improved methods of teaching and holding examinations.

But when one goes through the programmes actually outlined to achieve these objectives, one finds the same old prescriptions which means that nothing concrete is going to be achieved. For instance, it is said the inculcation of values should be emphasised at all stages and the cultural content of education needs much greater emphasis. It is difficult to understand what this means in real terms. The story of India's struggle against the British imperialism, the achievements of the post-independence period, the national objectives and programmes of development with special emphasis on popular participation and the problems that face the country in different fields are to be taught at all

stages, as part of education for citizenship, the courses being graded to suit the age and maturity of students. But one could pertinently ask whether this is the first time in the last 25 years that this realisation has come about. All this is being done in one form or the other and if an effort is made to understand what exactly is being done at present in various States, it would become clear that there is nothing new in what the Education Ministry has said. The real problem is as to why these have not been realised after several years of experimentation in this direction.

The Education Ministry emphasises that at the primary stage, the curricula should be closely related to the environment so that they appear relevant and significant to children. Programmes for work-experience related to the local development programmes will have to be included. It is also said that improved teaching of languages, science and mathematics should be emphasised. It is common knowledge that during the last 15 or 20 years, the entire programme for education in the States has been revised and redrawn. Text-book committees have been set up by the State Governments and a lot of work has been done to bring out new text-books with a new content and a new sense of purpose. And, if now the Education Ministry says that the curricula should be revised to attain certain objectives, it only means that the performance in this direction has been tardy, halting, slow and purposeless. The Ministry should have concentrated on evaluation work and help the States to improve the position instead of starting *de novo* the whole process of educational reform.

The Ministry has in its programme talked eloquently about what should be done for the restructuring of courses at the under-graduate stage. It says that the first degree should provide broad general education with three components. The first component is an awareness of the world around the students, a sense of values, and a commitment to the ideals and practical goals which the country has set for itself. This implies, according to the Ministry, a knowledge of human affairs at the level of individual, society and history, the main elements of philosophy, fine arts and literature. The second component is the promotion of communication skills which implies training in language, speech and writing; and the third compo-

ment is an academically-oriented study of some selected subjects. At the post-graduate stage, greater emphasis will have to be placed on promotion of research and on a symbiotic combination of teaching and research.

All this makes fine reading but is it not expecting too much from any State Government? Why should a student know all about everything? If the basic aim is to turn out good students, all that should be done is to improve teaching methods, reform the examination system, provide textbooks at the right time and make educational institutions places which will attract students. In any case, words are no substitute for action. The programme outlined by the Education Ministry is full of clichés. It will serve no purpose unless there is willingness to follow up the programme by vigorous action. No one will have a quarrel with the Education Ministry when it proposes to improve the quality of education in the country. In a vast country like India where the number of school-going students is very large, quality is bound to suffer.

It is for the Central Government to start model institutions in every State at all levels which will cater to the more intelligent sections of the student community. Such institutions will give an opportunity to the brilliant students to learn better. In other words, excellence will have to be promoted and this can be done only when special institutions are started for the talented young persons. The Central Government has a plan to start model secondary and primary schools in all districts. This is a welcome move and if it is taken to its logical conclusion, there will be special autonomous institutions in the universities also. In fact, the Centre will do well to concentrate on this aspect of the problem.

Another significant aspect that will have to be taken note of is the strengthening of the administrative machinery. The plan envisaged by the Education Ministry has allotted Rs. 33 crores for this. It is proposed to establish a text-book printing press in every State for which Rs. 20 crores have been allotted. If, as envisaged, a total allocation of Rs. 3,200 crores is made available in the Fifth Plan, the annual expenditure on education will increase from 3.2 per cent of the national income to 4.5 per cent. If to this is added the expenditure on educational programmes incurred by other Ministries, the total educational

expenditure may come up to about 4.7 per cent of the national income. This will have to be in keeping with the decision to increase educational expenditure to 6 per cent of the national income by 1985-86. An important aspect that will have to be

considered by the Central Education Ministry is the making of education a Concurrent subject. Now that the States in the country are mostly under the Congress rule, it should not be difficult to persuade the Chief Ministers to agree to this.

Liberal Licensing: The Best Way of Achieving Industrial Growth

By M. S. Dabke

The Government's unimaginative licensing policy has been largely responsible for the sluggish industrial growth. And things will not improve unless it decides to issue industrial licences more liberally.

SOME time ago, the Prime Minister, Mrs. Indira Gandhi, strongly defended the grant of industrial licences to some large business houses. She plainly told the Rajya Sabha—while replying to the debate on the President's address—that the granting of such licences was necessary because the medium and small sectors were not inclined to come forward. Denial of licences to the larger industrial houses in such a situation would hit production, Mrs. Gandhi concluded. By these forthright observations, she apparently sounded a note of warning that if poverty were to be removed, production could not be allowed to suffer merely because of certain political dogmas. Mrs. Gandhi's statement naturally led one to believe that realism would at last guide the Government's industrial policy.

The Central Planning Minister, Mr. D. P. Dhar's recent dialogue with leaders of industry was encouraging. As Press reports suggest, Mr. Dhar told the F.I.C.C.I. delegation that the Government was keen to ensure that production increased side by side with social justice. The implication of this stand is that while the Government will encourage production, it will not countenance any concentration of economic power or dominance by big business houses. Although the social responsibility of business could not be altogether denied, the key rôle in ensuring social justice must be assigned to the Government itself, because it is the Government that has the huge and complex machinery and all the powers to do so.

Although Mr. Dhar is reported to have shown understanding of the problems faced by industry and the solu-

tions suggested by the representatives of the F.I.C.C.I., the Central Minister for Industrial Development, Mr. C. Subramaniam, it is learnt, kept virtually quiet during the dialogue. Normally, his silence should have served as a warning to those who made a case for speedier licensing—a case that had quite a few convincing points and considerable relevance in the present situation of a slow-down in industrial production. Probably, the F.I.C.C.I. delegation felt itself braced up by the pragmatic approach shown by the Prime Minister and hence did not take a particular note of Mr. Subramaniam's silence.

Coming close on the heels of Mrs. Gandhi's statement and Mr. Dhar's dialogue with the F.I.C.C.I., the recent statement of Mr. C. Subramaniam before the Forum of Financial Writers gave a severe jolt to the climate of confidence that had started generating slowly in the industrial field. What in essence Mr. Subramaniam said was that pending the completion of studies in progress on the concept of joint sector and reformulation of the Industrial Policy Resolution, the policy of liberal licensing launched a few years ago was being given up. What could possibly be the reason behind Mr. Subramaniam's somersault? Is it because he has now become the captive of his own dogmas? Or, is it that the rift within the Cabinet ranks has found public expression through Mr. Subramaniam's statement? Whatever may be the reason, if what Mr. Subramaniam has said is correctly reported, there is a distinct change for the worse in the Government's policy.

One could readily concede that industrialists do not ask for liberal licences on philanthropic motives. But sheer common sense prompts one to feel that perhaps at no other time in the economic life of the country was the need for liberal licensing greater than it is today. Announcing that the era of liberal licensing had ended, Mr.

Subramaniam told the Forum that some means were being found to utilise the capacity of larger industrial houses. Constraints imposed by foreign exchange and raw material shortages expected, liberal licensing would be essential even to utilise the installed capacity of a number of industries because capacity utilisation beyond a certain point needs a licence. It is not clear as to how Mr. Subramaniam could be tight-fisted about licences and, at the same time, ensure maximum utilisation of existing capacity. Secondly, Mr. Subramaniam gave a pat on the back of the younger generation of industrialists. If, as said by Mr. Subramaniam himself, the younger generation is more progressive in its outlook, certainly he should consider it worth while to maintain a *status quo* pending the completion of the study on the concept of the joint sector.

The imperatives of the situation hardly affords any other option. The very fact that industrial production has been either stagnant or sluggish for some time now would make the policy-makers sit up and think of ways of issuing licences more speedily. Moreover, according to Mr. Subramaniam's own admission, the capital goods sector is sluggish and this has hampered the growth in other sectors too. By its very definition, the capital goods sector is capital-intensive. Few industrial houses—most of them falling under the category of large industrial houses—have the financial capacity and the managerial capability to enter into this arena and succeed. Hence, the slow growth of production in the capital goods sector too underlines the need to liberalise licensing.

Thus, on every count, it appears necessary to continue the liberal approach adopted a few years ago and to improve upon it. One need not go to the other extreme to suggest that industrial licensing should be altogether scrapped. At the same time, there is need to be liberal in a much wider area. The incomplete study on the joint sector need not haunt the policy-makers. The concept of a joint sector was first mooted by the Industrial Policy Licensing Committee as early as 1969. The Government has already wasted three years finalising its views on it. Let that study take its own time. In the mean time, let licensing be as liberal as possible. To make the black sheep among industry behave, the Government has adequate executive and fiscal powers. There is a need to evolve a clear-cut industrial licensing policy that should ensure greater industrial production which, in turn, would help achieve social justice.

New Industrial Policy

(From Our New Delhi Correspondent)

One of the major points that has emerged from the State Industries Ministers' conference in New Delhi is that the Centre will soon announce a new industrial policy. The main purpose of the new policy will be to remove all uncertainties in the industrial sphere.

A CONFERENCE of State Industries Ministers followed by a meeting of the Small Scale Industries Board in Delhi last week brought out the entire industrial situation in the country in all its perspective. The timing of the two meetings could not have been more appropriate, for the discussions and the conclusions arrived at will find a place in the formulation of the Fifth Plan as far as industrial development is concerned. Two major points that emerged from the meetings were that a new industrial policy would soon be announced which would end "uncertainties" in the way of fresh investment, and that, as far as the small-scale sector is concerned, there would be an immediate survey of the existing industries, the requirements of raw materials and the demand position in the country so that the expansion of this sector could be accomplished within the framework of the overall economy.

The talk of revising the Industrial Policy Resolution of 1956 has been in the air for some time now but it was only at the State Industries Ministers' Conference that the Central Minister for Industrial Development, Mr. C. Subramaniam, publicly admitted that the recent take-over of some industries (Indian Iron and Steel Company, for instance) had led to uncertainties and that a "definite and clear-cut" policy to remove all doubts was necessary. Mr. Subramaniam no doubt justified the take-over of I.I.S.C.O. but he pointed out, particularly to the so-called radicals who are against any revision of the policy, that it was the existing industrial policy that had led to the emergence of the larger houses and concentration of economic power. A revision of the

policy was, therefore, all the more necessary. The main ingredients of the new policy, according to Mr. Subramaniam, were a clear demarcation of the areas meant for the public sector, enunciation of the joint sector with a view to making use of private expertise and resources in line with the Government's socio-economic objectives and, lastly, the rôle of the private sector with particular reference to the large business houses. The same applied to foreign companies as well.

Mr. Subramaniam said many other things which went to confirm that the industrial situation was really bad. First, industrial production would be significantly short of the Fourth Plan target. Although the licensing policy was being blamed for it, the hard fact was that unutilised capacity existed in many industries due largely to raw material and power shortages, transport bottlenecks and disappointing industrial relations. As a result, prices had risen beyond the "tolerance limit" and the only answer was production and more production.

The conference was not intended to discuss the industrial policy of the country, but specific issues like the employment of engineers, development of backward districts and the rural industries project. These were the concern of the States in the sense that they felt the need for quick answers to all these issues. A discussion on them brought out three or four broad features. One was that the Hindi-speaking region (U.P., Rajasthan, M.P. and Bihar in particular) harped on subsidy for the development of industries. But the more progressive ones like Mysore, Maharashtra and Gujarat were more concerned with the availability of funds. It cannot be said that the Industries Ministers' conference or the Small Scale Industries Board found answers for the many issues they discussed. But they certainly identified the problems and heard from the Centre what it could do to solve them. In that sense, the two conferences were both a necessity and a success.

Uttar Pradesh: A Big State Makes Tardy Economic Progress

By Indra Dev Gupta

Because of long negligence, the economy of Uttar Pradesh presents a dismal picture. Both the Centre and the State Government should join hands to lift U.P. from the economic morass.

UTTAR Pradesh, which accounts for one-sixth of India's population, is one of the most backward States. Its *per capita* income which in 1950-51 at Rs. 259.6 (at 1948-49 prices) was 5 per cent higher than the national average of Rs. 247.5, was lower by 20 per cent at the end of the Second Plan at Rs. 245.9, compared with Rs. 310 for all India (at 1960-61 prices). The *per capita* income of the State declined further to Rs. 227.6 in 1966-67, compared with the all-India average of Rs. 313.1—a shortfall of 27 per cent. While the national income, on average, increased by 5.8 per cent, that of U.P. has grown at an annual rate of 2.5 per cent only. Similarly, the all-India *per capita* income, on average, has increased by 2.1 per cent but that of U.P. has risen by only 0.7 per cent.

According to the latest national sample survey of 1969-70, the *per capita* monthly expenditure of 6.4 per cent of the population in U.P. was Rs. 15 and 54.9 per cent had its monthly expenditure ranging from Rs. 15 to Rs. 34; 27.3 per cent was in the range of Rs. 34 to Rs. 55 and only 11.4 per cent had more than Rs. 55 as its monthly expenditure. It has also been estimated that in U.P. about half the number of families incurred a maximum *per capita* consumption expenditure of Rs. 31.41, and in 90 per cent families the *per capita* monthly consumption expenditure was Rs. 64.97.

In a study on inter-district and inter-State income differential in 1955-56 relating to 289 districts of the country, the N.C.A.E.R. found that of the 29 most backward districts with a *per capita* income of Rs. 146, as many as 11 were in U.P. In another group of 29 districts with the *per capita* income between Rs. 147 and Rs. 173, 11 were in U.P. Thus Uttar Pradesh had 22 of the 58 poorest districts of the country in 1955-56.

Even today the position is almost the same.

The *per capita* Plan outlay and the *per capita* Central assistance have also been much lower for Uttar Pradesh, compared with other States. The State's economy is primarily agricultural as about 75 per cent of the total workers are employed in agriculture. Agriculture generates about 56.3 per cent of U.P.'s income. Although agriculture is the main occupation of the people living in U.P., not all is well on the farm front. Despite a large and rich alluvial tract in the Gangetic plains with a net sown area of 58.6 per cent (of the total reported area), as against 44.8 per cent of the national average, U.P. had to import food. However, in recent years there has been a substantial rise in agricultural production but that is due more to the area under cultivation than to an improvement in productivity. The absence of irrigation and power facilities, small uneconomic size of holdings, erosion, lack of agricultural education, defective cropping pattern, inadequacy of farm machinery, god fertilisers, pesticides, etcetera, shortage of credit, and inadequate warehousing and marketing facilities are some of the major causes of unsatisfactory agricultural productivity.

As for industrial development, there has been very little progress due to the basic shortage of iron and coal in U.P. Industry contributed only 10.2 per cent to the total income of the State in 1960-61. Even after eight years, the share rose only to 11.5 per cent. The only industrial activity on a large scale has been in sugar and textile. According to the N.C.A.E.R. study, the absence of basic minerals and entrepreneurial class are the main factors inhibiting the industrial progress of the State. And now, the shortages of power can be added to the list of adverse factors.

Financial institutions too appear to have ignored U.P. The Industrial Development Bank of India invested in U.P. only 4.7 per cent of its total investment during the period

1964 to 1968. In the case of the Agricultural Refinance Corporation, the percentage for U.P. up to 1968 comes to 3.1. The Industrial Finance Corporation invested in the State only 7.2 per cent of its total investment during the period 1948 to 1968. While U.P. contributed 7.9 per cent of the total deposits in commercial banks, its share in the bank credit was 4.1 per cent in 1967. Out of a total investment of Rs. 9,000 crores in the country's private sector as a whole in the first three Plans, an investment of Rs. 680 crores or 7.6 per cent is estimated to have been made in U.P.

Uttar Pradesh has been particularly unfortunate in respect of entrepreneurship. It must be admitted that entrepreneurship does not grow and flourish everywhere. It is largely confined to certain areas and communities. But if the Government creates a proper economic climate; there is no reason why entrepreneurs will not be attracted to backward areas. In fact new entrepreneurial classes—small, medium and large—can be attracted if only adequate facilities and incentives are provided. Unfortunately the industrial and fiscal policies of the State have not been conducive to entrepreneurial ventures.

The State lags behind in infrastructural development. As for the rural electrification programme, 12,926 villages or only 11.5 per cent of the villages in the State were electrified by March 1969, as against 72.1 per cent in Kerala, 62.1 per cent in Tamil Nadu, 23.2 per cent in Mysore and 22 per cent in Haryana. By end-March 1971, 20,719 villages in the State were reported to have been electrified. At present, only one-third of the net cultivated area is irrigated in U.P. In 1951 the figure was 28 per cent. This shows that even after 20 years of planning, the spread has been far too small. It highlights the need for investment in power-driven pumps. Besides, natural calamities cause havoc to the crops. Some concrete steps are required to remedy this situation.

There is thus an urgent need to widen and strengthen the industrial base of the State. And here the State Government should give the lead. It should not hesitate to impose agricultural income-tax on the rich farmers to raise the resources needed for the State's economic development. Furthermore, there is a strong case for more Central assistance for the State in order to ensure a balanced regional development.

The Relationship of Management with Research and Development

Dynamic Management — Research and Development. By M. Srinivasan. (Published by Somaiya Publications Private Ltd, Bombay. Price Rs. 45, pages 324.)

For a pretty long time since the industrial revolution, the factories and offices had been headed by individuals or groups of individuals who performed the managerial functions in the light of the knowledge and experience available to them. But with the passage of time, companies grew larger and larger in size which gave rise to the problems of organisation, supervision, etcetera. It was beyond the capacity of the owners to perform a multitude of functions that management imposed on them. Gradually the functions were transferred to managers who were employees of the company. Thus, management became a function distinct from ownership. And today, management plays a very important rôle in the economic activities in any country of the world and, as such, management study is assuming greater and greater significance along with the scientific development and sophistication of the means of production and the channels of distribution. Research and Development have also a great bearing on dynamic management.

The author has discussed in details the different aspects of management and its relationship with research and development in three parts. In the first part he deals with management. The second part is devoted to research and development and his conclusions are summed up in the third part. The book will be of great help and interest to the students of institutes of management and research scholars.

H. R. Bose

The World of Tea

The World Tea Economy. By Goutam K. Sarkar. (Published by Oxford University Press. Price Rs. 25, pages 237.)

The book is a useful addition to the literature on tea, its worldwide

consumption, production and export problems. Being a valuable foreign exchange earner for a number of countries, most of whom are underdeveloped, a broad-based economic study on tea is always relevant. The Indian context, however, is not brought out with clarity, considering that tea has a pivotal position here servicing a growing domestic demand and earning valuable foreign exchange (about 10 per cent of the total annual earnings). Comprising eight chapters and an epilogue, the book begins with a survey of production and consumption and ends with a discussion on long-term policies.

Indian readers interested in practical economics will miss the detailed reference to likely changes in patterns in the mid-seventies; export today comprises roughly 50 per cent of Indian production, with the United Kingdom remaining the single largest buyer of Indian tea. Like other products exchanged in the market place what the U.K. does in future would be important for not only tea-growers in India but also in Sri Lanka, Kenya, and Indonesia. China might suddenly decide to bid for the export market, and this could cause repercussions on Indian exports. In the peculiar situation in the world today one could not rely exclusively on international agreements and stabilised prices, and every country will have to actively promote increased consumption, may be at the cost of other beverages. That living standards alone do not promote tea consumption is seen from the growing coffee habit in Punjab and Haryana which have the highest *per capita* income in India. This might have relevance to other countries also.

As the book was intended to be an economic study, comments on marketing of Indian tea would have been well justified, especially when tea is the most industrial of India's agricultural crops, sensitive to new farm technology and industrial norms of productivity; this means capital intensity through heavy investments in working capital, housing, credit and the constantly increasing costs of packaging, machinery, fertilisers and

pesticides. A return of 8 per cent or 9 per cent today is more a rule than an exception, and must be regarded as low compared with other industries, some of which do not earn as much foreign exchange. Yet there is the constant need for rehabilitation, research, and product development. How to find the money for the latter would have been a fit subject for inclusion. Another visible gap in Mr. Sarkar's thesis is the future rôle of marketing channels in India and overseas. Tea has its peculiar and specialised culture and financial problems in terms of costs as well as markets; these cannot be brushed under the carpet of international regulations. To some countries like Sri Lanka, exports are a life and death problem, but not so to India. Is the country heading towards a state where in the 'eighties it shall consume all its tea (as well as jute) and give up reliance on exports? This particular aspect also needed a discussion in detail.

S. B.

Company Law

The New Frontiers of Company Law. By S. S. Sen. (Published by Eastern Law House, Calcutta. Price Rs. 40, pages 423.)

On company law, many books have been written. This one is not just another book. The emergence of the modern corporations in the wake of the natural development of the industrial revolution has been described in a precise manner. The serious controversy as to whether law should essentially follow and not lead social thinking or whether it should create new norms in a changed social context has been brought out by the author. How the older concept that law was found and not made yielded place to the new concept that law purports to regulate the new norms of social behaviour has been stressed by the author with special reference to the corporate sector in an economy. The author tries to prove that existence of a fact in a society is ultimately recognised in law of that society.

The changes in corporate laws through the ages have been discussed against the history of social and religious evolution. The influence of monopoly on corporate laws has also been stressed. In this context, the

references to the East India Company and the "South Sea Bubble" are interesting. At the conclusion of the discussion on corporate laws, the position of the corporate sector in the Soviet Union has also been discussed. It is shown how in Marxist concept, the old corporate sector has reappeared in a new form. The law on Government companies has been discussed in Chapter XIV. The views of Indian and foreign experts have been brought out in these discussions. It has been also shown how judicial, ministerial, parliamentary and public controls are exercised on these companies, especially in India.

There are discussions on oppression, misconduct and reliefs. Chapter XVI discusses winding up by courts. The grounds for winding up have been given with proper elucidations in respect of their applications. Chapter XVII highlights the various aspects of workers' participation in management in West Germany, U.K., U.S.A. and India. The chapter on monopolies and trade practices in many countries is stimulating and thought-provoking especially in the context of Indian conditions.

A. C. MUKERJEA

Pre-industrial India

Kin, Clan Raja and Rule. By Richard G. Fox. (Published by Oxford of California Press, California, U.S.A. Review copy received from Oxford University Press, Mercantile Building, Calcutta. Price Rs. 40, pages 187.)

The Centre for South and South East Asia Studies of the University of California has sponsored a number of studies dealing with India's socio-political problems. The one under review is the latest addition to the series of publication of this centre. Pre-industrial India has always been a matter of interest for investigators and research scholars, since it presented a peculiar relationship between the State and the hinterland, and between a region and a locality. The present study by Mr. Richard G. Fox is based on the premise that historical investigations looking beyond the local community can answer many anthropological questions about social institutions and social processes in complex societies like that of pre-industrial India.

In the chapter on "Ethnographic Uses of the Past", the author rightly stresses that if anthropology in complex societies is to study the linkage between the local and the larger society, then history is a necessary ingredient. Here he has described the peculiar feature of the pre-industrial agrarian States. The next four chapters, namely, "Clan Raja and States", "The Cycle of Rajput Lineage", "Kinship and the State", and "Community and States in Northern India", deal with various interesting social, political and economic features of the regions. The study is supplemented by maps and charts, wherever necessary. A good bibliography on the subject is another attraction of the book.

V. SHOBHA CHOPRA

Company Meetings

Company Meetings and Resolutions. By C. R. Dutta. (Published by Eastern Law House, Calcutta. Price Rs. 30, pages 373.)

This is a comprehensive book on different types of meetings conducted in connection with the management of a company. The rôle of the company secretary including his appointment and dismissal has been discussed. In Chapter II the author discusses board meetings. In this connection, the questions of periodicity of meetings, issuance of notice (objection thereto and contents thereof), and of agenda have all been discussed in detail. The quorum for meetings and the absence of it have also been dealt with. Other points covered include proxy, delegation, constitution of board, and passing of resolutions. All these complicated points have been discussed in a very simple language.

Chapter III discusses statutory meetings. This chapter is very useful and the points discussed herein are of frequent use in the management of the corporate sector. The next chapter deals with annual general meetings. This chapter is expected to be of much help for those who are concerned with this aspect of management functions. Chapter V discusses extra-ordinary general meetings and chapter VI requisitioned meetings. Chapter VII discusses another important and new type of meetings held following Section 106 of the Companies Act, 1956. This is the shareholders' class meetings.

These meetings relate to a particular class of shares, such as ordinary shares and equity shares. The limitations and restrictions in this connection have also been discussed. The following other subjects have been covered in detail: (a) compromises and arrangements with their limitations and restrictions, (b) meetings of members and creditors' voluntary winding up; (c) debenture holders' meetings; and (d) liquidators' meetings of creditors and contributories.

A. C. MUKERJEA

Kothari's Directory

Kothari's Economic and Industrial Guide of India 1972. (Published by Kothari and Sons, 20 Nungambakkam High Road, Madras 34. Price Rs. 85.)

The twenty-ninth edition of this publication shows a distinct improvement over the previous one. Since it is not merely an investors' guide but also covers the entire range of industrial and economic progress in the country, it has appeared under a new title to signify the change in coverage. A complete revision of the book has been made, eliminating the redundant information and adding new data. It contains the usual reviews of the major industries and numerous statistical tables.

Investors' Guide

Bangalore Stock Exchange Investors Guide. (Published by Bangalore Stock Exchange Ltd, Indian Bank Buildings, Kempegowda Road, Bangalore 9. Price Rs. 15.)

The publication gives comprehensive information about the majority of companies listed on the Bangalore Stock Exchange as well as other stock exchanges in India. The areas covered are the management, capital structure, objects, latest abridged balance-sheets, and working results for the last five years of the leading companies. The book also includes particulars about Central and State Government loans, agricultural income-tax, estate duty, schedule of income-tax, wealth gift tax, besides important Government notifications. There is also a note for investors and a write-up on balance-sheet. The book will be of immense use to investors.

TAXATION

Need for an Effective Education Programme for Taxpayers

By C. R. Thiagaraja Varma

Many honest assessee often fail to fulfil their tax obligations because of their lack of awareness of tax laws and procedures. It is, therefore, necessary to introduce an effective taxpayer education programme for developing tax consciousness among the assessee.

IN a developing economy like ours there is a continual expansion of economic activity and with increasing opportunities to grow, more and more people and enterprises come within the scope of taxation. The tax administration, has in the context of a growing tax-paying population, necessarily to depend to a large extent on their voluntary compliance with the tax laws. The greatest need of the hour is to generate tax consciousness in the minds of public to ensure that tax laws are complied with as an act of civic consciousness. These observations of the Central Finance Minister, Mr. Y. B. Chavan, form part of his inaugural address at a seminar on taxation held in Delhi recently. True, planned education and assistance programmes can go a long way in generating tax consciousness. Such programmes, if well executed, will naturally result in good public relations between the tax collector and the taxpayer.

It is doubtful whether the principle of "ignorance of law is no excuse" can still be justifiably applied in the context of the complicated tax laws. The response of a taxpayer decreases in direct proportion to the complexity of the procedures he has to go through. Complicated procedures repel tax compliance and many assessee with a sincere and honest desire to fulfil their tax obligations find it difficult to go through the prescribed procedures. This leads to default and default instils a fear driving the assessee to the fold of tax evaders. The situation can be remedied to a large extent, with the help of taxpayer education and assistance programmes.

Every committee or commission which enquired into the functioning

of the tax administration in India has emphasised the importance of good public relations. The Wanchoo Committee has strongly recommended the intensification of public relations campaign and taxpayer education and assistance programmes. It was right when it said that the "lack of finance can at best be only an excuse. It is the taxpayer's money that supports and runs the Government and any money spent on providing them reasonable facilities cannot be considered as waste of public funds." A well-planned taxpayer education programme will feed the taxpayer with a sense of responsibility. It will explain to him the necessity of a particular tax. He will be psychologically equipped to overcome the artificial fear towards tax matters. The education will bring to the notice of the taxpayer the obligations cast on him by the statutes, the concessions and incentives provided therein, the conditions that have to be satisfied to avail them and the penalties for not complying with the statutory requirements. Such a programme will also increase the confidence of the taxpayer in tax authorities and smoothen the tax administration. He will become an alert citizen with a better understanding of moral obligations towards tax matters.

The Wanchoo Committee has admitted that the efforts made in this country in the direction of taxpayer education and assistance programmes have so far been only rudimentary. In all progressive countries, considerable thought, effort and money are being spent on a well-developed taxpayer assistance programme. It is high time the Government in this country drew up suitable tax assistance programmes. The publication of a series of tax guidance pamphlets, each focussing attention, in as simple and non-technical language as possible, on the different direct tax laws is a proper step in this direction. Such literature should bring out clearly the tax obligations and rights of different classes of taxpayers. Of course, the Income-tax Department has brought out publications like *Income-tax for*

Layman, and *Gift Tax for Layman*, but unfortunately they have not received adequate publicity. Some of them are now out of date due to the plethora of amendments.

In fact, the working group of the Administrative Reforms Commission on Direct Taxes Administration has urged the Department to bring out revised editions and to publish small booklets explaining particular aspects of the law and the rules which may be of assistance to the taxpayer. These booklets should be published not only in Hindi and English but also in all regional languages and must be available to each assessee at the beginning of the year in a folder modelled on the lines of the "Business man's Kit" issued in the U.S.A. Forms of return of income and such other forms as are to be filled in by the taxpayer may also be placed in the appropriate folder of the kit. A paper jacket can also be prepared and issued giving prominently the various due dates which an assessee has to keep in mind for complying

The Working of Banks and S.F.C.s: Report of the Ramanujam Group

(By a Banking Correspondent)

The Ramanujam Group set up by the Reserve Bank has made some important recommendations for toning up the working of the State Financial Corporations and banks. But will they be implemented?

THE recommendations of the Reserve Bank's Working Group on State Financial Corporations (S.F.C.s) under the chairmanship of Mr. K. N. R. Ramanujam of the Reserve Bank, which were published recently, are aimed at three important aspects of the working of the S.F.C.s: (i) to expand both their resources and scope for lending, (ii) to demarcate their line of activity, and (iii) to improve their competitiveness as well as profitability. The S.F.C.s have suffered from keen competition from the public-sector banks, Central and State institutions like the National Small Industries Corporation, small industries development corporations in many States, etcetera. The Reserve Bank from time to time has tried to expand the scope of operations by allowing them to finance many new industries like hotel, transport, and public-sector units.

The working group has suggested further expansion of their lending activity by recommending that the ceiling limit on loans and advances by the S.F.C.s to private companies (proprietary and partnership) should be raised from the existing Rs. 10 lakhs to Rs. 20 lakhs, and that they should be allowed to finance servicing and repairing workshops and consultancy services, which are not at present included in the list of eligible industries. The group has further suggested, like the earlier study group, that the total of loans and loan guarantees sanctioned to a unit should not exceed Rs. 30 lakhs in the case of a company or a co-operative society and Rs. 15 lakhs in the case of other types of concerns.

However, in the case of individual loans to public companies and co-operative societies, the group is oppos-

ed to raising the ceiling limit of Rs. 20 lakhs for two reasons. First, more finance to public companies and co-operatives would reduce the availability of funds for the small-scale industries sector and, secondly, there are many all-India financial institutions catering to the credit needs of more than Rs. 20 lakhs for bigger units. It is rather difficult to understand the logic behind the group's opposition to the raising of the loan limit of Rs. 20 lakhs in the case of public companies and co-operatives, because the group itself has raised the total of loan and guarantee limits to Rs. 30 lakhs in the case of public companies and co-operatives and a ceiling on loan limit from Rs. 10 lakhs to Rs. 20 lakhs in the case of private companies, which might also cause diversion of funds from the small industries sector. Here, another flaw is noticed: when the ceiling on loan limit in the case of private companies is to be raised from Rs. 10 lakhs to Rs. 20 lakhs, how can the group fix the total of loan and guarantee limits at Rs. 15 lakhs?

The reluctance of the working group to raise the ceiling of Rs. 20 lakhs on loan limits to public companies and co-operatives could perhaps be explained by the fact that the group seems to be keen on making the S.F.C.s a more effective and prominent agency for financing the small industries sector. The group has fixed the target for S.F.C.s' lending to small units at two-thirds of their total disbursements during the remaining period of the Fourth Plan, instead of about half of the assistance given at present to this preferred sector. It is pertinent to point out that it is particularly in this field that the S.F.C.s face keen competition from the public-sector banks.

The S.F.C.s together had assisted only 6,818 units with outstanding loans of Rs. 32.13 crores at the end of March 1970 compared with 81,380 units with outstanding to the tune of Rs. 369.5 crores by the public-sector banks as on 30th June, 1970. The group seems to have realised that it is asking the S.F.C.s to plunge in a

they are already facing keen competition from banks, because the group has further stressed that "since the long-term credit needs of small units cannot be met by S.F.C.s alone, financial assistance to a limited extent will have to be provided by commercial banks, the N.S.I.C. and others." As regards this competitive aspect, it is reported that an expert panel has been set up to consider the areas of co-ordination between banks and the S.F.C.s.

In respect of the third aspect of augmenting the resources of the S.F.C.s, the group has made a number of recommendations such as liberal I.D.B.I. credit, raising of the ceiling limit on term borrowings from the Reserve Bank, and issue of bonds of shorter maturity at a lower cost. The group has made two more interesting recommendations—the S.F.C.s should be allowed to create a special class of capital bearing no obligation for payment of a minimum dividend to be contributed entirely by the State Governments, the Reserve Bank and the I.D.B.I. and, secondly, the State Government, Reserve Bank, and the I.D.B.I. should forgo the dividend on their shareholdings in the S.F.C.s, the amount being credited to the special reserve fund of the S.F.C.s. In fact, the second suggestion is not a new one for it is worth pointing out that in order to share the losses incurred on opening new branches in rural areas by the State Bank of India, an Integration and Development Fund has been created out of the dividends due to the Reserve Bank.

As for the suggestion of creating dividend-free capital for the S.F.C.s, it is necessary to remember that the banks are at a greater advantage as they derive nearly one-third of their resources in the form of interest-free current deposits. The group's suggestion is also fully justified by the fact that the enlargement of the S.F.C.s' lending operations would certainly involve greater risk, and adversely affect their profitability. It is only hoped that unlike the Talwar Committee's report which was submitted in January 1972, the Reserve Bank would soon implement the recommendations of this working group and pave the way for the S.F.C.s to fulfil their twin objectives of fostering the development of small-scale industries and initiating industrial development of backward regions.

with the various provisions of law. As recommended by the Wanchoo Committee, during the return filing period and when advance tax instalments fall due continuous message should be carried to the taxpayer about the due dates and the errors to be avoided in filing returns. Here, one should compliment the Department for issuing Press notes reminding the taxpayers about the due dates for advance tax payments, etcetera. As in the U.K., a special pamphlet titled *Paying Tax for the First Time* can be published in this country also for the guidance of the new and prospective assesseees.

In addition, publication of periodical public information bulletins as are published in New Zealand drawing attention to executive instructions issued by the Central Board of Direct Taxes and rulings emanating from the courts will also prove very useful to the taxpayer as well as to tax administrators in keeping themselves abreast of current developments. In view of the importance of this type of publication work, the Wanchoo Committee has recommended the creation of a separate cell in the Directorate of Publications and Public

Relations for drawing up taxpayer education programmes and bringing out attractive brochures and publications which should be regularly updated. The committee has suggested that officers posted in public relations organisations should be given an orientation training course. It should be remembered that mere publications will not help if wide publicity is not given about their availability.

In addition to publications, the taxpayer education programme can take other forms also. In the U.K. a school scheme has been introduced to help schools to teach the students about taxation before they join the ranks of taxpayers. In this country also such a scheme can be introduced. Again, tax educational centres can be established to provide regular personal guidance to taxpayers. Refresher courses, seminars and symposiums can be organised to enlighten taxpayers on frequent amendments. The media of television, radio, feature films, news reels, exhibits, and display can also be made use of to spread tax education. A system of giving advance rulings is also one form of taxpayer assistance. Coun-

tries like the U.S.A. and Sweden are successfully trying this scheme. Advance rulings are an excellent device for fostering and encouraging the self-assessment system (to which the Government of India is committed) and would contribute to good relations between the administration and the taxpaying public. An advance ruling is a statement in writing to a taxpayer from the prescribed tax administering authority which interprets and applies the law and regulations to a specific set of facts and states a conclusion as to the tax consequences of that particular transaction.

Opinions differ as to the utility of a system of advance rulings and its introduction in this country. However, the Wanchoo Committee has rightly recommended that the Central Board of Direct Taxes should be authorised to give advance rulings, on payment of a prescribed fee, on specific cases referred to it. For this purpose, the committee has suggested the formation of a self-contained unit in the Board which would include officers of the rank of commissioners. Such rulings issued under the authority of the Board would be binding on the Government in the particular case only. However, it will not bind the taxpayers. If the rulings have general application and do not reveal confidential or secret information the Department would do well to publish them for the benefit of all. That will be again, another form of taxpayer education. In conclusion, it may be stated that tax advisors and assessing officers have also got a crucial rôle to play in the area of taxpayer education and assistance.

PEOPLE AND PERSONALITIES

Mr. D. J. Phillips has been appointed chairman of International Nickel Ltd. He succeeds Mr. P. J. R. Butler, who is retiring after 35 years with the Company. Mr. Phillips will combine the office of chairman with his present position of managing director and chief officer.

Mr. Raunag Singh, president of Bharat Steel Tubes Ltd., was elected the new president of the Federation of Indian Export Organisations at the elections held in New Delhi last week. He succeeded Mr. Narielwala, who had been the founder-president for last seven years.

SERVICE WORLD-WIDE

THE HONGKONG BANK GROUP

undertakes banking transactions of all kinds through its net-work of branches and correspondents located in all main financial centres of the world.

In India we shall be happy to give you personal attention at any of our many branches in Bombay, Calcutta, New Delhi, Delhi, Madras and Visakhapatnam.

Task before the West Bengal Tourism Development Board

(By a Special Correspondent)

It is not enough that the reconstituted Tourism Development Board should give its advice to the Government only when it is asked to do so. The members of the Board will have to take a great deal of interest and initiative in promoting tourism in West Bengal.

IN August this year the Government of West Bengal announced the reconstitution of the Tourism Development Board. With Mr. Tarun Kanti Ghosh, Minister of Commerce, Industries, and Tourism as the chairman, the Board consists of 34 members. It includes representatives of the chambers of commerce, Air-India, Indian Airlines, railways, Government of India, travel agents association, hoteliers and restaurants association, automobile association and the newspapers. The function of the Board is to recommend the measures necessary to promote tourism in West Bengal. It will give special attention to the development of places of tourist interest within the State, transport, publicity, accommodation, and recreational and other facilities.

But the Board has been made rather unwieldy. There is no reason why there should be as many as 34 members. A smaller and a more compact body would have been desirable. The Government's notification, announcing the reconstitution of the Board, says that it will meet at least twice a year. If so, the Board will hardly be able to make any impact on the promotion of tourism. It is essential that it should meet at least every two months. It is not enough if the Board just gives its advice to the Government only when it is asked to do so. The members of the Board should take a keen and lively interest in the development of tourism and should show a great deal of initiative. West Bengal's tourist potential is enormous. Its proper exploitation will give considerable impetus to the growth of the State's economy and the creation of more employment.

The Government of West Bengal is reported to have drawn up several

schemes worth Rs. 25 crores for the promotion of tourism in the State. The objective is to attract not only the affluent but also the middle income groups, especially students and youths. It is proposed to divide the State into four zones, namely, Calcutta and its neighbourhood, Darjeeling, Kurseong, Kalimpong and the Terai regions, places of pilgrimage, and the rest of West Bengal. For Calcutta the schemes envisage the construction of a multi-storied five-star hotel, an amusement park, a floating restaurant on the Hooghly, a wax museum, an open air zoo, steamer trips to the Sunderbans, development of bird sanctuaries, and helicopter services to show the tourists round the city. Other proposals include facilities for various types of games in Darjeeling, construction of hotels in Siliguri, Farakka, Raigang and Asansol; development of places of pilgrimage; and holding an annual festival during the Pujas.

Before finalising the above schemes the Government of West Bengal should consult the Tourism Board as well as other organisations interested in the subject. The viability of the projects should be critically examined before investing in them. For example, does Calcutta really need another multi-storied five-star hotel when many of the existing hotels are finding it difficult to attract an adequate number of customers? Will it not be more desirable to build hotels to cater to the tourists of the middle income groups? Again, will it be economical to run helicopter services to show the tourists round the city?

In any programme to develop tourism, it is important to give high priority to measures to keep Calcutta clean. Despite the efforts of the Calcutta Metropolitan Development Authority (C.M.D.A.) and the supercession of the Calcutta Corporation, things have not improved much. Many important areas of Calcutta remain filthy while the inadequacy of transport and other essential services continues. Therefore, unless immediate and effective measures are taken to improve the civic conditions in Calcutta, attempts to tempt tour-

ists by expensive publicity programmes are unlikely to produce the desired effect. The West Bengal Government's efforts to develop tourism will produce better results if an attempt is made to enlist the co-operation of the other States in the eastern region. Orissa, Bihar, Assam, Nagaland, Manipur and Tripura have also vast and varied tourist attractions. It will, therefore, be in the interest of all the States in the eastern region to co-operate actively in a vigorous drive to develop tourism. There is already a regional tourist committee for the eastern region. It has so far held four meetings when problems relating to publicity, accommodation, travel and transport and hotels were discussed. The Government of West Bengal should effectively implement the committee's recommendations relating to this State.

It seems unfortunate that while West Bengal has been making serious efforts to promote tourism, some actions of the State Government are likely to discourage the flow of tourists. For example, Calcutta's hotel industry has expressed concern at the imposition of the West Bengal Entertainments and Luxuries (Hotels and Restaurants) Tax Act, 1972. It is stated that this tax is likely to affect the business of hotels and restaurants, many of which have already suffered from the economic stagnation and the deterioration in the law and order situation. The hotel industry in West Bengal needs positive incentives for development, such as financial assistance in various forms, help to procure building materials, prompt availability of telephone and telex connections, and electricity at concessional rates.

The proposal of certain political parties to start a civil disobedience movement to protest against the people's grievances is likely to affect the promotion of tourism. West Bengal's effort to promote tourism in a big way will succeed only if the political parties co-operate. The Chief Minister, Mr. Siddhartha Sankar Ray, would do well to enlist the support of the Opposition parties. Meanwhile, the Government of India should intensify the publicity campaign in foreign countries to promote tourism with special emphasis on West Bengal and the other States of the eastern region. The Tourism Board should satisfy itself that West Bengal is given its due importance by the Central Government not only in the matter of publicity but also in the allotment of funds for the promotion of tourism.

V/O "Elektronorgtekhnik" offers all-purpose Electronic Computer, model "NAIRI-3" destined for solving of various scientific, engineering, planning, economic and statistical problems in works' laboratories, design bureaus, universities, computing centres, automatic control systems, experiments in the physics field and in complex computing systems.

The small-sized "NAIRI-3" is a simple and operationally reliable electronic computer employing integrated hybrid circuits.

Particular features of "NAIRI-3" are the concept of microprogram control and variability of command system implemented in the design enabling to solve problems programmed in command systems of other machines, i.e. electronic computers, models "NAIRI-2" and "MINSK-22"

"NAIRI-3" internal storage capacitance of a minimum set is 4,096 words incrementable to 32,768 words, whereas the capacitance of the permanent storage is 32,768 words. The

word length is 37 binary digits. Double length can also be handled.

A "NAIRI-3" minimum set contains an arithmetic unit, an external unit, internal and permanent storages. The external unit comprises of printer, tape puncher, photo input unit and digital printer.

A minimum set may, if necessary, be supplemented by devices for information input from cards and output to cards, fast close printer, chart plotter, matcher for remote terminals to serve upto 64 users simultaneously, 16 magnetic drum storages with the total capacitance of 16x8,000, 37-digit words, 8 magnetic tape storages with the total capacitance of 8x3.10⁶, 37-digit words, 7 internal storage units of 4,096 words each and by a permanent memory for 16,000 words.

V/O "Elektronorgtekhnik" renders assistance to buyers in assembly, alignment and launching of the equipment, in establishing and running the maintenance services, as well as in training the personnel.

Factors Responsible for a Shortfall in Engineering Exports

By K. S. Ramachandran

The Engineering Export Promotion Council has listed the factors responsible for the shortfall in engineering exports during 1971-72. While the Government can be blamed on certain grounds, the industry would do well to undertake a thorough self-scrutiny.

NOW it is known that engineering exports during 1971-72 have been of the order of Rs. 135 crores, against the target of Rs. 175 crores. The Engineering Export Promotion Council has also brought down the target for 1972-73 from Rs. 210 crores to Rs. 175 crores. In 1970-71 too, the export achievement was only Rs. 116 crores, compared with the target of Rs. 140 crores. These are in contrast to the excellent results achieved during 1968-69 and 1969-70.

Among the reasons listed by the E.E.P.C. for the shortfall in exports are the stoppage of shipments to Egypt, shortage of steel, blocking of funds with the Joint Plant Committee, dislocation of shipments during December 1971 and increase in ocean freights. Out of these, to be fair to the Central Ministry of Steel, it must be said that the steps taken to facilitate an adequate supply of steel have been both comprehensive and quick. Import licences and release orders for steel issued together under the usual import policy and the Government's Public Notice No. 140 were for a total import of steel worth Rs. 206 crores by the end of December 1971. Subsequently the Government announced its decision to have a "steel bank" and has now followed it up with a policy of bulk import of steel. Supply is now to be made available to engineering exporters at either the world price or that fixed by the Joint Plant Committee, whichever is lower. But, as representatives of the engineering industry pointed out at the last meeting of the Iron and Steel Advisory Council, allocations made by the Steel Priority Committee were often delayed and as a result, an engineering unit's requirement for a particular quarter was recommended by the Committee for a much later period.

Even earlier, many engineering units had questioned the usefulness of the Joint Plant Committee, exasperated as they were by its bureaucratic ways of working. As their representatives confess, liaison with the Committee, the branch sales offices of steel plants and the plants themselves was proving to be a costly affair and the smaller consumers often found it cheaper to buy their requirements in the "black" market. The experience with the Steel Priority Committee has not been any better. Therefore, in the engineering industry, the feeling is growing that while in respect of domestic steel, consumers should be free to make purchases directly from the steel plants, in the case of imports, supplies should be made straight to the consumers and not routed through Government canalising agencies. But it is now certain that the Government would neither do away with the two Committees nor exempt steel from canalised import.

Thus, while the consumers should keep pressing the Government to improve the working of the Committees and to arrange for supply at the lowest possible price, which would mean that funds need no longer be blocked with the Joint Plant Committee under a reimbursement scheme, the steel plants should concern themselves with the task of raising their present rate of capacity utilisation to the international average of 90 per cent. As for the other factors referred to by the Council, the Government's capacity for corrective action may be quite limited and the engineering exporters might be wasting their time if they continue to harp on the problems facing them.

The industry itself has a lot to do in improving its position and in this context, one cannot help mentioning certain facts which might show the industry in a poorer light than it perhaps deserves to be. The value of India's engineering exports is still only a fraction of the annual international trade in engineering goods which is put at Rs. 4,800 crores. Also, few engineering units in the country have realised that curtailment of imports is as good as exports and the industry's contribution

inadequate.

The country's import of engineering goods during 1969-70 was as high as Rs. 573 crores, of which non-ferrous metals and prime steel together accounted for Rs. 145 crores, although machinery items contributed a massive Rs. 393 crores. While the Government's somewhat weak-kneed policy relating to import of technical know-how has certainly been responsible for the large import of machinery, part of the blame must rest with the engineering enterprises themselves. Most of them have often advocated the use of their own products in preference to imports, but they are not always ready to try indigenous substitutes of machinery and other materials required for their manufacturing operations.

With the present emphasis on self-reliance, the engineering industry should begin to view import substitution more seriously than it has done before. Besides, it is also time for the various units in the industry to undergo a thorough self-scrutiny, covering the cost structure, operational techniques in use and productivity of the labour force. There is need for such a scrutiny considering that quite a few enterprises often find themselves in a condition suggestive of financial difficulties. Even in the procurement of steel, sometimes what mattered was whether the interested buyers could find the necessary amount of ready cash to make the purchases. Although it is true that the nationalised banks are now offering less credit to engineering companies, which do not come under the category of "sick mills", and the chairman of the State Bank of India recently advised them to rely less on bank advances, it needs to be said that they do not always plan the allocation of resources judiciously. Even units with a high record of sales and profits frequently face an acute shortage of funds either due to an excessive transfer of their current receipts and the bank credit for their expansion programmes or a large provision for current expenses. The practice of keeping a portion of the bank overdraft for meeting emergency demands is still far from common.

Much care in resources allocation is now called for, considering that the Government is unlikely to accept the recommendations of the Wanchoo Committee on Direct Taxes relating to the removal of the surtax and lowering of the maximum rate of income-tax, which alone could encourage a large flow-back of corporate profits for expansion purposes.

INVESTMENT

Talk of Curbs on Profits and Dividends Disturbs Operators

THE stock markets have continued to present an uneasy look this past week. They displayed pronounced weakness initially with the equity price index touching a new low for the year. Later the markets have turned a little steadier and in the rally that has followed, most of the earlier losses have been made good and quite a good number of shares have managed to wind up the week with plus signs. The volume of business has continued to be on a restricted scale and outside participation in the markets has shrunk to modest proportions. It was the Central Labour Minister, Mr. R. K. Khadilkar's statement that the Government had decided in principle to impose curbs on company profits and dividends which touched off considerable anxious selling. Since profits and dividends have a very important bearing on the outlook for equities, any kind of freeze there is sure to undermine investors' confidence. Nothing could be worse than this at a time when there is an urgent need to stimulate investment in order to accelerate the pace of growth.

The markets also take a bearish view of the Government's decision to step up the minimum bonus from 4 per cent to 8.33 per cent, irrespective of whether a company is earning profit or incurring losses. Whatever the merit of a higher minimum bonus, it is bound to impose an additional burden on many units and seriously affect their margins. The stock markets do not share the view that an enhanced bonus will lead to industrial peace. Trading sentiment during the week has also been unsettled by reports that the Congress panel had recommended a ceiling of Rs. 5 lakhs for urban property for each family. If strictly enforced, such a ceiling can have serious repercussions which are not all too easy to assess.

In their depressed mood, the stock markets have paid little attention to corporate news which has been quite encouraging on the whole. The recovery during the latter part of the week has essentially been technical. Lower levels have induced short-covering as well as replacement buy-

ing. Moreover, offerings have tended to dry up at lower levels. Sentiment has also been helped by the statement of the Central Minister for Industrial Development, Mr. C. Subramaniam, that the new industrial policy which the Government is busy formulating would end all uncertainties by clearly defining the rôles of the private and public sectors as well as the joint sector. The markets have taken some satisfaction from the fact that the Minister has conceded that the takeover of some companies like Indian Iron has created an uncertainty in the minds of industrialists which is coming in the way of fresh investments. This has been interpreted as an indication of the Government's desire to revive investment activity which is necessary for achieving an accelerated pace of industrial growth. The stock markets are still in an indecisive mood and the undertone remains soft. No important recovery seems likely unless the economy begins to show more positive signs of improvement.

Gilt-edged securities have attracted small selective interest and turnover has remained restricted. The 3 per cent Conversion loan 1986 has been quoted at Rs. 59.85. The State Government loans have received selective support. Turnover has been restricted.

The Calcutta stock market has remained erratic this past week with alternate bouts of buying and selling. As a result, turnover has remained restricted. The most disturbing news which has upset sentiment is the talk of fixing a ceiling on profits and dividends. The Government's decision to raise the minimum bonus from 4 per cent to 8.33 per cent has also depressed operators. Among engineering shares, Britannia Engineering, Bihar Alloys, Simon-Carves and Gontermann-Peipers have improved. Among jute shares, Birla, Kanknarah and Ganges have been supported. Among coal shares, Bengal, Pench Valley, Amalgamated and Rewa have been transacted. Among paper shares, Orient have eased while Straw Products and Titagur have been done. Among miscellaneous shares, Hindustan Alumi-

nium, Chemicals and Fibres, Ruby General, Mohan Meakin Breweries and India Tobacco have been supported. Among tea shares, Bishnauth, Dibrugarh and Assam Brook have been traded.

Dalal Street started the past week on a shaky note. Fears of restrictions on corporate profits and dividends led to nervous bull liquidation and some bear selling which pushed many counters to new low levels for the year. Later the market has developed a hardening tendency on short-covering and selective buying induced mainly by technical considerations and has wound up the week with a mixed price pattern. Cotton mill shares have fared the best and have recorded fair net gains on reports that the industry is enjoying a spell of prosperity it has not known for years. Even the sick units run by the Government are now earning profit. Good mills are doing really fine. Century Mills' higher interim dividend, although widely anticipated, has been well received. All the popular counters have been well sup-

COMPANY REPORTS

Reports relating to the following companies appear on later pages of this section :

Anil Steel
Assambrook Estates
Brooke Bond
Burma Mines
Ceat Tyres
Chemicals and Plastics
Gontermann-Peipers
Graphite India
Guest Keen Williams
Hindustan Sanitaryware
India Tobacco
Jaipur Metals

Punalur Paper
Punjab National Bank
Standard Motor
Supreme Industries
Swadeshi Mills
Tacalemit (Hind)
Tanfort Tyes

ported. Rayons too have displayed a steadier tone and early losses have been recovered fully. Steel shares have remained subdued for want of support. Engineering shares have been slightly easier. Voltas, Tata Engineering and Larsen and Toubro have registered modest losses. Hindustan Motors have improved a little while Premier Auto have been slightly subdued. Chemicals have displayed a steadier tone with Indian Dyestuff, Gujarat Fertilisers and Zuari Agro-Chem recording fair gains. N.O.C.I.L., Chemicals and Fibres and Synthetics and Chemicals have ruled a little easier. Shipping shares have kept distinctly firm on steady support. Among tyre shares, Ceat have recorded a good rise on an optimistic assessment of the Company's prospects. Miscellaneous counters have made a mixed showing but net changes have been confined within a narrow range.

The Madras stock market has remained quietly steady this past week. In the planting section, business has been done in Coorg Tea and Lingapur. Ossoor have been supported while Vaikundam have receded on selling pressure. In the textile section, Coimbatore Cotton and Vasanta have gained. In the miscellaneous section, Ashok Leyland have improved while Mettur Chemical and Amalgamations Repco have also been transacted. Among other shares in this section, Binny have been firm while there has been stray business in India Forge. In the sugar section, Aruna Sugar have slightly declined while E.I.D. and Deccan have re-

mained unchanged. In electrics, South Madras have received investment enquiries.

CLEARED SECURITIES IN CALCUTTA

[The following list shows the range of price fluctuations in clearing shares in the Calcutta stock market during the past week. The figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing date a year ago. The last named is shown in parentheses. All quotations are in rupees.]

Punjab National Bank Achieves All-round Progress

IN their report for the year 1971, the directors of Punjab National Bank say that its performance was gratifying in every sphere of activity. (Fuller details of the report were published in last week's issue of *Capital*.) Deposits have risen from Rs. 443.9 crores to Rs. 537.2 crores, recording an increase of about 21 per cent. The bank has introduced a number of new schemes for deposit mobilisation. Special deposit mobilisation cells have been established in certain potential centres to mop up savings of the people and canalise them to the organised sector. Loans and advances amounted to Rs. 341.9

crores, against Rs. 303.2 crores, registering an increase of Rs. 38.7 crores or 12.8 per cent. The lower percentage of increase in the credit expansion of the bank has been in keeping with the general trend in the banking industry as a whole during 1971-72. Loans and advances to the priority sectors have risen from Rs. 46.5 crores to Rs. 58.3 crores and the number of loan accounts in these sectors has increased from 35,385 to 44,907. Efforts made by the bank to meet the credit needs of farmers appear to be encouraging. The outstanding loan accounts in respect of small-scale industries have increased

from Rs. 12.7 crores to Rs. 15.7 crores, showing an increase of 23.5 per cent.

The export business handled by the bank has registered an increase of about 39 per cent over that of the preceding year. Extensive credit facilities have been granted to manufacturers of woollen hosiery for export. Credit assistance has also been given to other commodities such as jute manufactures, hides and skins, textiles, sugar, cement, manganese ore and sport goods. The survey of all the 28 districts allotted to the bank under the lead bank scheme has been completed. Some 262 unbanked centres have been identified for opening new offices for providing banking facilities. As for branch expansion, the bank has opened 99 new offices in 1971. Of these, 71 are in rural centres having a population of 10,000 or below. The working results of the bank have shown a significant improvement over the previous year. The gross income at Rs. 39.1 crores is higher by Rs. 6.9 crores or 21.4 per cent, compared with the increase of Rs. 5.3 crores or 19.8 per cent in the previous year. The net profit, after making the necessary provisions, has amounted to Rs. 245.2 lakhs, against Rs. 214.0 lakhs.

STANDARD MOTOR

Dividend Skipped

THE annual report of the directors of Standard Motor Products of India Ltd for the year ended March 1972 says that in July 1971, the factory undertook the manufacture of bodies on Standard 20 chassis with a view to offer Standard 20 as a complete commercial vehicle-station wagon, pick-up van, minibus and ambulance. It is stated that one commercial vehicle body is equivalent to three-fourth of Herald in terms of Standard man hours. After the reopening of the factory, the Company faced considerable difficulty in procuring components. The target for the year was 2,750 Herald and 1,000 Standard 20 chassis. The actual production was 1,922 vehicles. Out of the total loan of Rs. 1 crore applied for by the Company from the Industrial Development Bank of India, the total amount so far made available is Rs. 45 lakhs. The directors have not recommended any dividend on ordinary and preference shares. The loss for the year amounts to Rs. 5.08 lakhs after providing Rs. 27.56 lakhs for depreciation which includes Rs. 25.24 lakhs relating to prior

years. Adding to the loss of the year a deficit of Rs. 40.08 lakhs brought forward from the previous year and Rs. 1.05 lakhs transferred to development rebate reserve, there is a total loss of Rs. 46.22 lakhs which is carried forward. It is said that the working has improved in recent months with a steady demand for Standard 20 vehicles and better results are expected for the current year.

TANFORT TYRES

Share Offer

TANFORT Tyres, which is setting up a plant in Bangalore for the manufacture of tyres for scooters, motor-cycles and light vehicles in the first phase—with prospects of manufacturing car and truck tyres in subsequent stages—is likely to come to the market on 4th October to raise Rs. 28 lakhs in equity and preference shares to meet part of the cost of its project. The issue which is fully underwritten and is being offered at par consists of 220,000 equity shares of Rs. 10 each and 6,000 9.5 per cent cumulative redeemable preference shares of Rs. 100 each. The project cost, estimated at Rs. 70 lakhs, is proposed to be met by the share capital of Rs. 50 lakhs and a loan of Rs. 20 lakhs from the Mysore State Finance Corporation. The promoters and the Mysore Government have subscribed Rs. 22 lakhs in equity shares. The balance is being offered for public subscription. Production of scooter and other tyres envisaged in the first phase is expected to commence by December 1972. In the first year of production, sales are expected to be around Rs. 1.20 crores, rising to around Rs. 1.60 crores in the second year. The management hopes to be able to declare a maiden dividend for 1974, the second year of operations.

ANIL STEEL

Good Business Prospects

ADDRESSING the Press in Calcutta on Monday the chairman of Anil Steel and Industries Ltd, Mr. S. N. Khaitan, has said that he anticipates a good response from the investing public to the Company's share issue. In order to obtain a licence, especially where considerable foreign exchange is required, the Company had to satisfy the Government that there is an actual demand for the product, which is now wholly

imported. The production programme as mentioned in the prospectus is, according to the Government's investigation and licence, a very realistic one.

The chairman said that his studies indicated that the business of Anil Steel would be a profitable one. Three leading financial institutions of the country have examined in great detail the basis on which the Company has estimated the minimum profitability. The underwriters have likewise made a study of the Company's project and they too have expressed their confidence in the future of the Company by underwriting the entire capital offered for public subscription. The chairman firmly believes that the Company's shares will prove to be a good investment.

The Company's production should encourage the development of certain sections of industry. The production of hardened and tempered strips indigenously will open up new export

possibilities because indigenous industries have so far been unable to compete in export areas because of the lack of such strips. Trial production should begin about a year from now and the Company will go into full commercial production as soon as the inevitable minor troubles have been ironed out.

GUEST KEEN WILLIAMS

Interim Dividend

UP to 1966 it was the custom of Guest Keen Williams Ltd to declare an interim dividend on consideration of the first six months' working. This practice was discontinued when the Company went out of the dividend list in 1967 and 1968. The directors have now returned to the earlier practice and have declared an interim dividend of Re. 1 a share. For the first six months of 1972, the unaudited accounts of the Company show sales of Rs. 27.34 crores and a profit of Rs. 4.70 crores before deduction of depreciation and tax.

PUNALUR PAPER: ATTRACTIVE SHARE OFFER

PUNALUR Paper Mills, which is engaged in the manufacture of speciality papers like sack kraft, abrasive base, match paper, cable insulation paper and various other chemically impregnated and treated packing and wrapping papers and has a record of good progress to its credit, is expected to enter the market early in October to raise Rs. 1.52 crores, through the issue of equity and preference shares at par, to meet part of the cost of its expansion programme. The proposed expansion, which will raise the Company's capacity from 12,500 tonnes to 33,000 tonnes a year, is estimated to cost Rs. 6.06 crores of which Rs. 4.23 crores will be spent on machinery. The imported component of machinery is valued at Rs. 2.26 crores. The foreign exchange requirements have been fully covered by loans from the I.C.I.C.I. and the I.F.C. and by a cash licence under U.K./India Capital Investment Loan of Rs. 35.50 lakhs. Apart from the foreign exchange loan of Rs. 2.26 crores, the cost of the project is being met by the proposed share capital of Rs. 1.52 crores and internal resources of

about Rs. 2.28 crores. The expansion programme is expected to be completed by 1973-74.

The Company has been doing very well. Its working results for 1971 showed a gross profit of Rs. 58.29 lakhs on a turnover of Rs. 2.38 crores. According to the preliminary figures for the first seven months of the current year (January to July), sales are placed at Rs. 1.42 crores and the gross profit at Rs. 27.94 lakhs. The dividend of 10 per cent paid for 1971 was covered nearly five times. Barring unforeseen circumstances, the directors expect to declare a dividend of 10 per cent from 1972 onwards on the entire capital, including the new equity capital. The Company hopes to be able to make a gross profit of Rs. 3.52 crores a year after the completion of the expansion programme. The proposed capital issue which is being made at par consists of 1,016,000 equity shares of Rs. 10 each and 50,000 9.5 per cent cumulative redeemable preference shares of Rs. 100 each. The public issue will be fully underwritten.

GRAPHITE INDIA

Setback Suffered

GRAPHITE India Ltd has suffered a setback in its working for the year ended December 1971. The downward trend in the profitability is due to various factors, such as labour unrest, frequent power interruptions and, last but not least, the steep rise in the cost of major raw materials, spares and services over which the Company has no control. Sales have declined from Rs. 4.06 crores to Rs. 3.98 crores and the profit has also dropped from Rs. 93.74 lakhs to Rs. 44.87 lakhs, after providing Rs. 30.01 lakhs (against Rs. 28.70 lakhs) for depreciation and Rs. 33.75 lakhs for development rebate reserve. A taxable ordinary dividend of 15 per cent has been declared, against 5 per cent for the previous year. This offers a yield of 5.9 per cent at the present price of Rs. 25.50 a share of Rs. 10 each. General reserve is allocated Rs. 44.83 lakhs (against Rs. 86.20 lakhs). After making other adjustments there is a carry-forward of Rs. 24,493, against Rs. 21,158 brought in.

JARDINE HENDERSON

Sales Up but Profit Down

THE working of Jardine Henderson Ltd shows disappointing results for the year ended March 1972. Despite an increase in sales from Rs. 6.50 crores to Rs. 15.70 crores, the pre-tax profit has declined from the previous year's Rs. 15.68 lakhs to Rs. 12.13 lakhs, after providing Rs. 1.54 lakhs (against Rs. 1.73 lakhs) for depreciation. The ordinary dividend has been skipped but the usual preference dividend has been paid which absorbs Rs. 2.50 lakhs. Allocations include Rs. 6 lakhs (against Rs. 4.61 lakhs) for taxation, Rs. 17.09 lakhs (against Rs. 9.06 lakhs) for general reserve and Rs. 483 (against Rs. 3,484) for development rebate reserve. The decline in profit is mainly attributable to reduced dividends from the subsidiary companies. The schemes of amalgamation of three of the wholly-owned subsidiaries, namely, Mangaldai Tea Co. Ltd, Diamond Products Ltd and Meameco Ltd with the Company are still awaiting the sanction of the High Court of Calcutta.

GONTERMANN-PEIPERS

Sales and Profit Rise

GONTERMANN-PEIPERS (India) Ltd has reported improved working for the year ended April 1972, in spite of an all-round steep increase in

the cost of materials and spare parts. Sales are up from Rs. 1.51 crores to Rs. 1.76 crores—an increase of 16 per cent—and the net profit has risen from Rs. 16.85 lakhs to Rs. 18.64 lakhs, after providing Rs. 10.70 lakhs (against Rs. 10.31 lakhs) for depreciation. A maiden taxable ordinary dividend of 10 per cent, absorbing Rs. 9 lakhs, has been declared, which will be paid out of general reserve. This offers a yield of 7.3 per cent at the present price of Rs. 13.62 a share of Rs. 10 each. After making other adjustments, there is a balance of Rs. 19.80 lakhs which is proposed to be transferred to general reserve. There is good scope for export of the Company's products to east African and Middle East countries.

INDIA TOBACCO

International Awards

FOUR brands of cigarettes developed and manufactured indigenously by India Tobacco Company have been awarded medals for excellence at the 1972 Monde (world) selection in Switzerland. India Kings F.T. is the first Indian cigarette to have won five gold medals in succession, two at international Monde selection contests (1968 and 1969 gold medal in Brussels, 1970 gold medal in Rotterdam, 1971 gold medal in Brussels). Windsor F.T. has won its first gold medal this year, having won awards at three contests earlier. Both Simla F.T. and Lex, previous award winners, have received silver medals this year.

ASSAMBROOK ESTATES

Sharp Fall in Profit

THE Assambrook Estates Ltd has made a pre-tax profit of Rs. 4.18 lakhs for the year ended June 1972, against one of Rs. 8.75 lakhs for the previous year. In view of the lower profit, the taxable ordinary dividend has been reduced from 10 per cent to 1 per cent, absorbing Rs. 35,000 (against Rs. 3.50 lakhs). This offers a yield of 1.3 per cent at the present price of Rs. 7.45 a share of Rs. 10 each. The usual preference dividends have been paid. After providing Rs. 1.49 lakhs (against Rs. 3.95 lakhs) for taxation, the net profit has amounted to Rs. 2.69 lakhs (against Rs. 4.80 lakhs). Allocations include Rs. 12,958 (against nil) for capital reserve and Rs. 49,000 (against Rs. 41,500) for development rebate reserve. After making adjustments, there is a balance of Rs. 8,176

which is proposed to be carried forward, against Rs. 5,399 brought in.

BROOKE BOND

Dividend Maintained

THE net profit of Brooke Bond India Ltd has declined from Rs. 1.86 crores to Rs. 1.82 crores for the period 27th June 1971 to 1st July, 1972, after providing Rs. 3.07 crores (against Rs. 2.71 crores) for taxation. A taxable ordinary dividend of 20 per cent has been maintained, which will be paid out of general reserve. This offers a yield of 8 per cent at the present price of Rs. 25 a share of Rs. 10 each. After adding Rs. 87,895 (against Rs. 1.85 lakhs) being the profit on disposal of assets, Rs. 2.50 lakhs (against Rs. 85,000) being development rebate reserve no longer required and Rs. 41,733 (against Rs. 12.36 lakhs) being other provisions no longer required, there is a surplus of Rs. 1.86 crores (against Rs. 2.01 crores) available for appropriation. Allocations include Rs. 2.50 lakhs (against Rs. 5.50 lakhs) for development rebate reserve, Rs. 87,895 (against Rs. 1.85 lakhs) for capital reserve and Rs. 1.83 crores (against Rs. 1.94 crores) for general reserve. Sales rose from Rs. 93.54 crores to Rs. 95.79 crores. The increase in sales was entirely due to a very good export performance. Domestic tea sales continue to be adversely affected by the increase in packet excise.

HINDUSTAN SANITARYWARE

Good Export Prospects

AT the annual general meeting of Hindustan Sanitaryware and Industries Ltd, held in Calcutta recently, the chairman, Mr. H. L. Somany, informed the shareholders that up to now in spite of the power cut, the Company had maintained production slightly above the corresponding period of last year. Export orders have been received from new countries and it is expected that exports will be 50 per cent higher than last year. The performance of the current year could have been better but for the drastic power cut in Haryana.

CEAT TYRES

Sales Rise

AS against the first half of 1971, sales of Ceat Tyres of India Ltd in the first half of 1972 show an increase of Rs. 5.18 crores—a rise of over 40 per cent. The Company has

already effected sales worth Rs. 17.25 crores this year.

BURMA MINES

Half-yearly Results

BURMA Mines Ltd has earned a pre-tax profit of £165 for the six months ended June 1972, against a loss of £1,919 in the corresponding period of the previous year. Foreign tax unrelieved accounts for £286 (against £412). No interim dividend has been declared. The loss, after taxation, amounts to £121 (against £2,331).

LARSEN AND TOUBRO

Bulldozer Assembly

THE supply of bulldozer attachments for caterpillar earthmoving equipment in the country is no longer fully dependent on imports alone. Larsen and Toubro Ltd has achieved import substitution by manufacturing this equipment locally. The bulldozer attachment in front of a tractor acts as a heavy workhorse in clearing virgin land, levelling uneven surfaces, building access roads, and wherever land development work is in progress. A major part of the bulldozer is made indigenously. Suitable for crawler tractors of 65 to 385 h.p., the assembly comprises blade groups, brace groups, C-frames, trunnions and hydraulic cylinders. The Company plans, with further development of indigenous sources of supply, to reduce imported components to a minimum.

KUNAL ENGINEERING

Maiden Dividend

KUNAL Engineering has produced encouraging results for the year ended March 1972 and the shareholders have been rewarded with a maiden dividend of 12 per cent. Sales have risen from Rs. 44.93 lakhs to Rs. 52.97 lakhs and the gross profit has gone up from Rs. 6.41 lakhs to Rs. 12.09 lakhs. After providing Rs. 2.77 lakhs (against Rs. 2.44 lakhs) for depreciation, Rs. 2.50 lakhs for development rebate reserve and after some adjustments, the surplus of Rs. 1.61 lakhs has been transferred to general reserve out of which the proposed dividend will be paid.

SWADESHI MILLS

Results Disappoint

SWADESHI Cotton Mills has turned out extremely disappointing results for the year ended March 1972. Despite an impressive rise of 50 per cent in turnover from Rs. 20.33 crores to Rs. 31.04 crores, the gross profit has declined by 9.7 per cent from Rs. 48.59 lakhs to Rs. 43.87 lakhs. After providing Rs. 72.48 lakhs (against Rs. 56.25 lakhs) for depreciation and Rs. 6.20 lakhs (against Rs. 19.25 lakhs) for development rebate reserve, the year's working shows a net loss of Rs. 34.81

lakhs, against Rs. 26.91 lakhs in the preceding year. After making certain adjustments the deficit of Rs. 43.33 lakhs has been transferred to general reserve. The preference dividend amounting to Rs. 14.99 lakhs will be paid out of general reserve. The equity dividend has again been skipped.

The disappointing results for 1971-72 are attributed to the rise in costs of production and labour unrest. The outlook for the current year is considered to be better. Despite further increase in wages, the imposition of 25 per cent power cut by the U.P. Government with effect from

JAIPUR METALS : RESULTS IMPRESS

THE working results of Jaipur Metals and Electricals for the year ended March 1972 show an impressive improvement over the previous year's performance. This has enabled the directors not only to wipe off the entire outstanding deficit but also to clear the arrears of preference dividend for three years ended March 1970. Sales turnover at Rs. 6.28 crores shows an increase of only 7 per cent over the 1970-71 figure of Rs. 5.93 crores but the gross profit has nearly doubled from Rs. 27.09 lakhs to Rs. 53.30 lakhs. The ratio of profit to sales has improved from around 4.6 per cent to 8.5 per cent. The marked improvement in results is attributed mainly to a better meter market and increased efficiency in various spheres of the Company's activity.

After providing Rs. 8.59 lakhs (against Rs. 8.65 lakhs) for depreciation and Rs. 10.46 lakhs (against nil) for development rebate reserve, the net profit for 1971-72 amounts to Rs. 34.25 lakhs, against Rs. 18.45 lakhs in the preceding year. After making some adjustments, there is a surplus of Rs. 37.81 lakhs. A sum of Rs. 32.61 lakhs has been utilised to erase the entire outstanding deficit and the balance of Rs. 5.20 lakhs has been transferred to general reserve. Preference dividends for three years (1967-68 to 1969-70) will absorb Rs. 6.70 lakhs.

The directors' report holds out the promise of still better results

for the current and future years. The metal division has a very healthy order position. The market for ACSR conductors, which had been experiencing a slump during the previous years, is showing hopeful signs of revival. The Company has received orders for the supply of ACSR conductors valued at Rs. 1.45 crores from various electricity boards. It is negotiating further orders worth Rs. 2.50 crores. The Company has also received substantial conversion orders from various public-sector undertakings. As on 1st April, 1972, orders of the meter division amounted to Rs. 1.02 crores.

In view of the fluctuating home demand for the Company's products, the management has been making protracted efforts to develop export markets. And export orders for ACSR conductors valued around Rs. 8 crores have been received from various countries in the Middle East (Rs. 4 crores during 1971-72 and Rs. 4 crores so far in the current year) in the face of keen global competition. The Company is also making all efforts to develop markets abroad for its meters. Some orders have been received from south-east Asian and Middle East countries. The Company started the production of poly-phase meters during 1971-72. It has received a letter of intent for the manufacture of electrical stampings and laminations. This will help broaden the activity base of the Company.

6th August and the imposition of voluntary price control on staple fibre yarn, the working results of the Company are expected to be reasonably satisfactory. The textile mill which is being set up in Rae Bareilly is expected to go into production by the end of the current year. The Company has been pursuing its policy of modernisation, renovation and expansion and it spent a sum of Rs. 38.85 lakhs during the year. Contracts aggregating Rs. 20.48 lakhs remained to be executed at the end of the year. Further orders for machinery worth Rs. 1.20 crores have been placed during the current year. The Company has decided to promote a new company under the name and style of Swadeshi Fabrics for the manufacture of knitted fabrics with foreign collaboration.

TECALEMIT (HIND)

Results Improve

THE working of Tecalemit (Hind) Ltd for the year ended February 1972 shows an appreciable improvement over the previous year's performance. The substantial increase in sales and profit was mainly contributed by new lines of product which were sold during the year to the steel industries in India for the first time. The Company has been installing more and more general-purpose machine tools for the manufacture of critical and important components. For the first time, the Company has entered the export market. A consignment for about Rs. 2.67 lakhs was supplied to Sri Lanka during the year. Sales are up by 28 per cent

from Rs. 66.92 lakhs to 85.58 lakhs, and the profit has risen by 71 per cent from Rs. 6.48 lakhs to Rs. 11.08 lakhs, after providing Rs. 1.95 lakhs (against Rs. 1.92 lakhs) for depreciation. After making other adjustments, there is a debit balance of Rs. 2.75 lakhs which is proposed to be carried forward.

SUPREME INDUSTRIES

Dividend Raised

SUPREME Industries has raised the dividend for the year ended March 1972 from 11 per cent to 12 per cent even though the Company's working results show a small setback. Sales have declined from Rs. 94.53 lakhs in 1970-71 to Rs. 88.24 lakhs in 1971-72 and the gross profit is down from Rs. 13.43 lakhs to Rs. 12.98 lakhs. After providing Rs. 6.97 lakhs (against Rs. 6.38 lakhs) for depreciation, Rs. 1.32 lakhs (against Rs. 75,000) for development rebate reserve and Rs. 2.69 lakhs (against Rs. 3.57 lakhs) for taxation, the net profit for 1971-72 amounts to Rs. 2 lakhs, against Rs. 2.70 lakhs in the preceding year. After adjustments, there is a surplus of Rs. 1.62 lakhs which has been transferred to general reserve. The proposed equity and preference dividends absorbing Rs. 1.40 lakhs (against Rs. 1.31 lakhs) will be paid out of general reserve.

CHEMICALS AND PLASTICS

Good Progress

THE report of the directors of Chemicals and Plastics India Ltd for the year ended March 1972 says that the Company has achieved all-round progress during the year, with production and sales of the various products showing an increase over those in the previous year. The Company's performance would have been still better but for the stringent limitations imposed on the supply of alcohol, consequent on the lifting of Prohibition in Tamil Nadu. With the diversion of considerable quantities of alcohol to potable drinks, the supply of industrial alcohol to the Company was drastically cut down, and this affected its working results. The Company has, however, received from the Government firm indications about increased supply of alcohol during the current financial year. The substantial improvement recorded by the Company in the production of P.V.C. pipes and fittings offset to a large extent, the adverse impact of the scarcity of alcohol.

COMMODITIES

Agitation by Workers Affects Production of West Bengal Jute Mills

WITH workers and their unions agitating over issues which are fully covered by the recent tripartite settlement, industrial relations in the jute mills in West Bengal have suffered serious deterioration, leading to frequent work-stoppages and loss of production, complains the Indian Jute Mills Association in a Press note issued in Calcutta a few days ago. Considering the substantial rise in wages and fringe benefits conceded under the latest tripartite agreement, the note adds that the industry had been rearing the modest and very reasonable hope that workers would strive to maintain industrial peace and a satisfactory level of output. But the same has been belied so far. The I.J.M.A. complains that between 8th May when the settlement became effective and 2nd September, work was totally suspended in ten mills, accounting for 20 per cent of the industry's rated potential, for 80 days, causing a loss of 5.5 million man hours, 6,500 tonnes in output, and Rs. 2.5 crores in terms of money. Besides, some 30 mills in the State, representing 55 per cent of the industry's capacity, were affected by partial strikes, go-slow, and other types of labour unrest for various periods.

The Press note describes it as "extremely unfortunate" that the sudden stoppages "are caused basically by inter- and intra-union rivalry." For instance, night shift operators have been demanding reduced hours and higher wages in many cases, despite the categorical stipulation in the agreement that workers will be paid three hours' extra wages as night-shift allowance for the normal schedule hours of the mills. The agreement provides that mills are to maintain 90 per cent working complement as permanent and another 15 per cent as special *budhis* with guaranteed employment. The industry is thus already committed to maintaining a total working complement of 105 per cent, a tremendous load for an export industry, subject to sharp fluctuations in demand. Not satisfied with the industry's compliance with this extremely rigorous condition, the unions have been agitating for the regular employment of casual workers, not covered by the terms of settlement.

Seasonal Character

The Press note reiterates that employment in the industry is governed by the seasonal character of the de-

mand for certain traditional lines or manufacture—a contingency which has made a degree of mobility in the deployment of labour unavoidable. Inter-department transfer of workers has, therefore, been a long-standing practice and has become indispensable by the contingency of mills having had to employ a permanent complement of 105 per cent. The agreement also lays down that "in view of the special nature of the industry, workmen may be transferred from one department to another". In spite of this express provision, managements are meeting with stiff resistance—often leading to rowdy demonstrations or stoppages of work—from workers when some of them are transferred from one department to another.

The note says that mills have been facing stiff opposition from the unions in converting the existing system of weekly wages payment to fortnightly or monthly disbursements which had been agreed upon "in principle" at the time of the tripartite settlement. The I.J.M.A. points out that the industry can hardly meet the extra annual financial liability to the tune of Rs. 22 crores, following the implementation of the terms of the costly settlement, unless a satisfactory level of production was maintained in the industry in an atmosphere of reasonable industrial peace. It emphasises the importance of sustained drive for productivity with the unstinted co-operation of workers and their unions as the only means of the industry's survival—in the face of a sharp wage-cost infla-

METTUR BEARDSSELL: SALES AND PROFIT RISE

A SUBSTANTIAL rise in sales and profit highlights the working results of Mettur Beardsell Ltd for the year ended March 1972. The dividend has been raised by 1 per cent to 20 per cent. The directors report that the Company's textile marketing operations have been further expanded and a special section to deal with merchant converting of both mill-made and powerloom cloth has been formed. The Company expects to use its marketing experience to increase its merchant converting operations and for this purpose, it is intended to modernise and develop the processing capacity at the mills.

In the field of marketing, there has been some recovery in the demand for expanded polystyrene products following the general improvement in the air-conditioning and refrigeration trade. The directors add that further development of expanded polystyrene products continues and further expansion of manufacturing capacity has been programmed. The textile consultancy division has again made significant contribution to the overall profits. There has been considerable demand for resin finishing technology. The prospects are reported to be excellent. The Alexander Thread Company, in which Mettur Beardsell has 50 per cent interest, faced difficult trading conditions during the year. The relocation of the

plant in Mettur resulted in loss of production. The position is expected to improve.

The export performance during the year was encouraging and sales exceeded Rs. 67 lakhs. The report adds that the handloom division continues to develop handloom techniques in order to improve the marketability of its cloth. New types of production for Europe and America have been planned. The Company has submitted an application to the Government for a licence to process high density polyethylene. Although the year had been a difficult one for the textile industry as a whole, the results of the mill section have been satisfactory. The profit for the year amounts to Rs. 55.15 lakhs after providing Rs. 7.02 lakhs for depreciation. This compares with the previous year's profit of Rs. 50.49 lakhs after providing Rs. 6.51 lakhs for depreciation. After providing Rs. 26.73 lakhs (against Rs. 27.04 lakhs) for taxation, the net profit is Rs. 28.42 lakhs. The total available for appropriation is Rs. 28.42 lakhs, including Rs. 295 brought forward from the previous year. Out of this, development rebate reserve gets Rs. 95,000. (against Rs. 50,000). Goodwill reserve gets Rs. 15,000 (against Rs. 22,500). A sum of Rs. 27.32 lakhs (against Rs. 22.73 lakhs) is transferred to general reserve. The balance of Rs. 284 is carried forward.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base : August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to August 1972. As compared with July, the August index for

Food shows a rise of 9 points, while those for Fuel and Lighting, Clothing and Miscellaneous remain unchanged at 482, 704 and 402 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 5 points during August.

545

tion and severe competition from synthetics—can hardly be over-emphasised.

Synthetic Bag Industry

In a Press note issued this week, the Indian Jute Mills Association views with alarm the Government's policy of continuing to license new capacity, in different parts of the country, for the manufacture of woven as well as non-woven heavy-duty P.V.C. and high-density polyethylene sacks which will compete directly with jute sacks. The Association is also aware of a decision by the Fertiliser Corporation of India to have a captive unit, attached to each of its new fertiliser plants, for producing plastic bags. In all, it is understood, some 94 units, spread over different parts of the country, have been licensed. Many of these factories are already in production, with many more expected to be on stream.

Gunnies Close Steady

After opening on an extremely hesitant note on tired long liquidation in an unwilling market and a moderate extent of short-selling, jute goods prices staged a moderate recovery around mid-week. But the higher levels induced intermittent profit-taking as a result of which the top gains were somewhat pared towards the close. The earlier recession was ascribed to the extremely lean interest shown by major internal and overseas consumers in Indian goods. The release by the D.G.S.D. of some 6,000 tonnes of heavy goods, against a total of 12,000 tonnes, requisitioned earlier from the mills also disturbed the technical position and led to a heavy decline in prices. Mill circles were concerned over the unhelpful attitude of organised labour. The promulgation of the minimum bonus Ordinance by the President on Saturday pegged the floor at 8.33 per cent for all organisations. Although the jute industry's standing agreement of 1970 ensured a bonus of 7 per cent, extremist unions were spoiling for a showdown demanding a bonus of 20 per cent. The labour situation is likely to remain strained in the near future till a settlement has been reached on the bonus issue. Meanwhile, the impending Puja festival and the continuing stringency of credit combined with the persistent delay by the Government of India in conceding the much-needed and overdue relief in export duties, have unnerved the bulls. Besides, under instructions from the Forward Markets Commission, the Vigilance Committee of the East India Jute

and Hessian Exchange had clamped rigorous restrictions on the implementation of the terms of the T.S.D. and N.T.S.D. contracts, ruling out the possibility of their being used any more as a speculative counter. The elimination of weak bulls and the clearance of a lot of the market load helped in reducing prices to the dips. Mills and holders turned reserved, refusing to extend their commitments by conceding any further discount. The persistent firm trend in the fibre market was another stimulant. Clive Row was reassured over the conclusion of the Indo-Egyptian bilateral trade agreement, ensuring an annual turnover around Rs. 31 crores and also by the fact that Cairo had agreed to take more jute goods from this country in exchange of its long staple cotton. Turnover was moderate. The closing undertone was steady.

Fibre Steady

The raw jute market ruled steady and unchanged around the preceding week-end levels during the past week. Crop arrivals in the upcountry agencies were estimated around the recent level of 150,000 maunds a day. While a section of the trade in Calcutta held that the seasonal crop had mostly passed on to the hands of strong holders during the preceding recessionary phases, circles close to the Jute Corporation and the Block Development organisations claimed that growers' renewed confidence in the Government's genuine intention of holding the price-line had induced them to hold on to their stocks. Repeated spells of cyclonic weather and squal over large tracts in the Midnapur and Orissa coastal belts had disrupted the line of communications in the areas. Industry and trade circles appeared to be reconciled to a much lower crop of some 5 million bales for the season, against the earlier hope of some 7 million to 8 million bales. Turnover was confined to available lots of selected grade fibre at a shade above the quoted prices. The closing undertone was fairly steady.

TEA RESEARCH

Application of Results

In his chairman's address to the annual general meeting of the Tea Research Association held in Calcutta last week, Mr. S. K. Mehera said that the T.R.A. had a vital contribution to make towards the prosperity of the tea industry and in actively assisting it to achieve its objectives of increasing production and improving quality. The T.R.A. is trying to do this through its twin functions of carrying out result-oriented research and by providing advisory services to its members. The advisory department assists tea estates in all possible ways to deal with their day-to-day problems. It is also the duty of the advisory officers to advise the estates on the application of the results of research which are carried out by the various technical departments at Tocklai. There is, however, one field where Tocklai is deficient—knowledge of the economic realities of growing tea. In this context Mr. Mehera said that the primary duty of the Tocklai officers was to serve the industry, and the T.R.A. must endeavour to see that they were made increasingly and consistently aware of the financial side of producing and marketing tea.

Mr. S. K. Dutta, Director of the Tocklai Experimental Station, said that in spite of continued fiscal limitations the institution made another year of excellent progress. The services of the advisory departments of Assam and West Bengal continued to be in big demand. The widespread and unprecedented hailstorms in West Bengal in March to May consistently featured in the reports of the advisory officers of West Bengal.

CAPITAL, 28th SEPTEMBER, 1972

Public Sector has greater role in achieving economic freedom

M. Rama Brahmam, Chairman, Indian Oil Corporation Limited

Gentlemen;

It gives me great pleasure to welcome you to the 13th Annual General Meeting of the Indian Oil Corporation Limited. The Report of your Directors and the Audited Statements of Accounts are already in your hands. With your permission, I shall take them as read.

Before I turn to the main theme which will be in the nature of stock-taking about the performance and productivity in relation to the problems and challenges that were posed during this year, a little consideration about the institutional changes and their consequent impact on the environmental conditions might provide an adequate back-drop to assess your Corporation's growth in its proper perspective.

As you know the year under report has been one of trials and tribulations, effort and achievement for the nation. Indianoil as one of the premier public enterprises had an active part in all these phases and is happy to share with the people of the country the satisfaction and a sense of achievement. The nation has given its massive mandate for undertaking major changes to bring about elimination of poverty, equality of opportunity and a planned, sustained and steady growth aimed at a vibrant economy based on self-sufficiency and self-reliance. Public Sector which has already reached commanding heights, has been assigned a greater role in achieving economic freedom and an egalitarian society.

Problems of Growth

With a sense of personal pride, I report to you that Indianoil which has already become a pace-setter in the Public Sector, is well poised to play its assigned role in the fulfilment of the national aspirations and objectives. Your Corporation is faced with the problems of growth of an enterprise which has already established itself as the biggest oil refining and marketing organisation. It has also become the largest profit-yield-

ing organisation both in public and private sectors. While the success and growth have been in the context of ensuring a reasonable return on the capital invested, generating internal resources for further development at the same time your Corporation has identified itself with the weaker sections of the community,

Shri M. RAMA BRAHMAM

even if it meant an erosion in its profits.

It was a proud day for your Corporation, when the Prime Minister Smt. Indira Gandhi launched Indianoil's scheme to rehabilitate war-widows and wounded jawans after the recent Indo-Pak conflict. We could take legitimate pride that your Corporation was the first to introduce a comprehensive scheme to provide a ray of hope for those who had given their best in defending the country's freedom and integrity.

Strain Due to War

Before I describe the working results of your Corporation for the year, it will be appropriate to dwell briefly on the challenges your Corporation had to face all of a sudden when fighting started on the frontiers both in the East and the West.

The challenges which consisted in maintaining supplies under difficult conditions at the frontiers were grave and sometimes in the nature of throwing out of gear our earlier plans and projections based on normal market conditions. It was a mighty challenge for Indianoil, a national undertaking engaged in fighting shoulder to shoulder with the defence forces in difficult conditions.

Indianoilmen met the challenge fairly and squarely at great odds and personal risks. I am proud of the fact that they rose to the occasion with a rare sense of dedication and unflinching devotion to duty. The spirit of camaraderie established over a decade with men of the Armed Forces was further strengthened during the year. Encomiums poured in from the Government and from all corners including defence services and Indianoilmen richly deserved them.

Crude for Bangladesh

The aftermath of Indo-Pak war resulted in the birth of Bangladesh, a new friendly neighbour. The birth of a new vibrant nation has been given more than a conventional welcome by us. Your Corporation has been provided a unique opportunity to help Bangladesh resuscitate its oil industry. Your Corporation had the privilege of arranging for the import of crude oil for the Chittagong Refinery in Bangladesh. Vitrally-needed petroleum products were rushed to Bangladesh immediately after its emergence as a free country.

Working Results

During the year, the three refineries at Gauhati, Barauni and Baroda processed a total quantity of 6.72 million tonnes of crude oil, as against 6.34 million tonnes in the previous year. The sales turnover of the Corporation for the year amounted to more than Rs. 862 crores as against Rs. 720 crores last year, resulting in an increase of 19.7% over

the previous year. The quantity of products sold also registered a 17.8% increase, going up from 11.61 million kilolitres in the previous year to 13.68 million kilolitres. The market participation of your Corporation increased from 51.6% to 54.2%.

Increased Profits

The total profits during the year, before providing for depreciation and interest, were Rs. 53.42 crores, as against Rs. 31.32 crores in the previous year. After providing for depreciation and interest, the profits amounted to Rs. 36.94 crores during the year, as against Rs. 15.77 crores in the previous year. The increase in the profits has been phenomenal. It may be recalled that last year several extraneous adverse factors had decreased the profits of that year. Some of these adverse factors which needed remedial action were recently set right by the Government of India. Thus, the Government of India recently allowed the oil industry to reimburse to itself (through the medium of surcharge on the price) the under-recoveries on sales-tax, which your Corporation had suffered on the sale of the products of the Cochin Refineries Limited and the Madras Refineries Limited. The Corporation was also allowed reimbursement of the non-recoverable element of duty (devaluation duty) which it had to pay on imports.

The paid-up capital of your Corporation stood at Rs. 71.18 crores as in the previous year. Since 1964, your Corporation had earned net profits totalling more than Rs. 105 crores and had also generated other internal resources of about Rs. 29 crores. These are in addition to the sum of about Rs. 1,500 crores collected and paid to the Government as customs and excise duties since 1964. Your Corporation has also repaid, according to schedule, a substantial part of the loan, viz. Rs. 59.77 crores taken from the Government since 1964. The loan capital has now been reduced to less than Rs. 35 crores. During the year, the total outstandings due from customers, etc. were also reduced from Rs. 33.57 crores to Rs. 31.67 crores; keeping in view the increased turnover, the outstandings at the end of the year represented only about 12 days' sales.

The Haldia Refinery is now under construction at an estimated cost of Rs. 67.50 crores, and is being financ-

ed substantially out of your Corporation's own internal resources. It is expected that the Refinery will be able to go into trial production before the end of 1973.

North-West Refinery

The Government of India have recently decided to build a new six-million tonne refinery near Mathura. This will have, as its adjunct, a pipeline approximately 1200 kilometres long, for supplying crude oil from the West Coast to Mathura. The project is estimated to cost more than Rs. 160 crores, besides the cost of township and other facilities. In handling this project, your Corporation will be called upon to shoulder increasing burdens, involving a high degree of technical know-how, the latest trends in refinery design and correspondingly large financial commitments. These call for adequate planning and mobilisation of all types of resources, including men, materials and money. As such, in spite of the increased profits during the year, your Directors, have recommended to you to maintain the dividend at the same rate of 7% on paid-up capital as in the previous years. During the last six years including the year under review, your Corporation will have contributed to the Government by way of dividend an aggregate sum of Rs. 28.85 crores.

Refining Achievements

You may also be interested to know some of the other salient features of the working of your Corporation. On the refining side, your Corporation's three refineries were working satisfactorily with the actual throughputs being more than the capacity designed for the Gauhati and Gujarat Refineries. The Gujarat Refinery is also gearing itself to increase the crude throughput to 5.5 million metric tonnes, when more quantities of crude become available. During the year, the Gauhati Refinery eliminated the production of inferior kerosene and thus improved the quality of the product supplied to the consumer. The Barauni Refinery started manufacture of calcined coke thereby saving foreign exchange on the import of this material. The Gujarat Refinery commissioned a new plant to ensure better treatment before the disposal of the effluents from the refinery and the township. The refineries continued to take several steps towards import

substitution and also gave, liberal technical help to small-scale industries for the manufacture of more components and spare parts, which were hitherto imported.

Your Corporation has plans to expand the Barauni Refinery, so as to increase the present throughput of about 2.28 million tonnes per year, in stages, to 3.4 million tonnes per year in 1975. One special feature of this expansion is that the additional crude oil (over and above what is available from Assam) has to be imported. The import will be made through the Haldia port and the present Barauni-Haldia Product Pipeline will be used for handling the movement of imported crude from Haldia to Barauni. A pipeline has been constructed from Haldia to Baradabar, and this will be linked with the existing pipeline to Maurigram, enabling product movements to Calcutta area.

Pipelines Performance

As regards pipelines, the Gauhati-Siliguri, the Barauni-Kanpur, the Barauni-Haldia and the Koyali-Ahmedabad Product Pipelines transported a total quantity of 3.23 million tonnes of products, which represented an increase of 22.9% over the previous year. While the pipelines were normally designed to handle white oil products, the Barauni-Kanpur Pipeline was used for the transport of Light Diesel Oil also (a black oil product) as a regular arrangement and even during winter months, when the product normally shows a tendency to drag. The Haldia-Barauni Section also managed to pump various products directly from the ocean tanker to the pipeline without the use of intermediate tankage on shore. Several indigenous materials for use in the construction and maintenance of pipelines were also developed; this augurs well for the additional technological effort which your Corporation will have to make, for the designing and construction of the pipeline from the Gujarat Coast to Mathura.

Progress in Marketing

During the year, the Marketing Division of your Corporation also recorded impressive all-round progress. The Division has a network of 16 port installations, 8 pipeline installations and one inland installation besides 117 bulk depots. During the

year, the Naval installation at Port Blair was taken over by your Corporation; with this take over, your Corporation will also meet the civil trade developing in the Andaman and Nicobar group of Islands. The Division improved the tank-wagon decanting facilities at many depots, to enable the railways to make a more efficient and intensive use of the limited tank-wagons available with them. Additional facilities, to the extent possible, have also been commissioned at major ports, and suggestions have been made to the concerned port authorities to augment and improve the facilities from their side. Your Corporation also developed additional facilities to handle the Aviation Fuel trade and in particular, commissioned special giant size refuellers (tank-lorries) which can quickly meet the massive fuel requirements of jumbo jets.

Indane Clientele

The sale of Indane, the popular cooking fuel, has also increased by 56% over the previous year. Indane was made available to 38 additional towns and the clientele list increased by almost 1.7 lakh new customers.

Your Corporation conducted several training courses and conventions for the benefit of the dealers and also entered into several marketing tie-ups with companies selling related products, thus increasing the sales and improving the image of your Corporation as a service-oriented Company.

Due to the increasing demand for petroleum products in the country, the total quantity of petroleum products imported by your Corporation increased during the year. The Marketing Division successfully handled 123 tankers, as against 56 tankers in the previous year. Your Corporation believes that continuous study and efforts are necessary for effecting further improvements in its working in order to gear itself for its increasing responsibilities. Accordingly, various aspects of the work were continuously studied with a view to improving operational efficiency.

A special Technical Audit Cell was also set up to reduce costs in the refineries, especially in the use of additives and utilities; I am glad to say that these efforts have met with

considerable success as reflected in the improved profitability of your Corporation.

prove adequate to meet all our future needs.

Research & Development

Another field in which we have taken significant steps during the current year is in the establishment of a Research & Development Centre. On the basis of a world-wide search for talent we have been able to select senior personnel to take up key positions in the Research & Development Centre. It is hoped that this Centre will during its initial operations within the next few months, train up the junior personnel also in routine tests. By the time the full-fledged building is ready with all equipment, there will be not only a team of senior experts who can adequately guide its activity but also sufficient number of junior and middle level technologists to give the back up necessary for effectively translating the work of this Unit into useful results.

Technical Collaboration

One new field of activity in which your Corporation entered this year is in extending technical collaboration to a neighbouring country. At the request of the Ceylon Petroleum Corporation we have deputed four experienced engineers to help in the operation of their refinery and training of their personnel. We have also entered into a technical collaboration agreement wherein we have offered all help in solving some of their problems in operation and maintenance of their refinery. Opportunities for similar type of technical collaboration with other developing countries also exist. Apart from doing our bit towards accelerating the progress of other developing countries, I believe such technical collaboration also improves our own technical skills, and managerial abilities by the diversity of exposure it affords to our engineers, besides providing better understanding between the people of different countries. The first step which we have taken in this direction, will, I hope, lead to further activity in this new direction.

As a major oil company, your Corporation also associated itself with several local and public activities like Vintage Car Rallies, Treasure Hunts, Boat Races, etc., and took the lead in organising campaigns, for road safety; developing films like "Rom-

Value of bringing out SUPPLEMENTS in CAPITAL

Proclaimed as India's leading and most widely read weekly newspaper devoted to economics, industry and public affairs, CAPITAL is considered indispensable by those who constitute the bulk of buying power. They include, among others, people holding important positions in Government departments, public and private-sector projects and undertakings, and commercial establishments of all descriptions.

CAPITAL is a unique medium for bringing out sponsored supplements and features.

Your advertisements in CAPITAL supplements symbolise silent propagation of your goods and services throughout the country. Their impact may not be visible immediately, but they do yield handsome dividends in the long run.

ance of the Road" and in distributing attractive book labels to the student community.

Welfare measures for the employees continued to engage the attention of all Units. The industrial relations were also by and large satisfactory.

Your Corporation as well as its employees have also made substantial contributions to the Prime Minister's Relief Fund, National Defence Fund, Bangladesh Relief Fund, besides cash donations for helping cyclone victims in Orissa.

Employee Participation

It is a truism to say that an organisation is as good as the men and women that constitute it. It is the enthusiastic participation and sustained efforts of all your employees, dealers and others that have contributed to the progress of your Corporation. I take this opportunity to place on record the appreciation of their work during the year, both on behalf of the Board of Directors and on my own behalf. I am sure that their sense of involvement and dedication will continue and grow so that your Corporation can successfully face the bigger challenges, and take full advantage of the several opportunities in the coming years.

In conclusion I would like to say that the level of performance of your Corporation for the year under review was more than adequate. Your Corporation is well set to meet the challenges that lie ahead of us. A leading organisation like yours, in my view, has to be constantly aware of the environmental changes that call for adoption of sound managerial practices so as to create a climate where the corporate and individual objectives find fruition and the company maintains robust health as a model organisation.

With these remarks, I now propose that the accounts be adopted.

This is the speech delivered by the Chairman Shri M. Rama Brahmam at the 13th Annual General Meeting of the Company held on the 6th September, 1972 at the Registered Office of the Company at Bombay,

This does not purport to be a record of the proceedings of the 13th Annual General Meeting of the Company.

INDIA STEAMSHIP CO., LTD.

CHAIRMAN, MR. K. K. BIRLA'S ADDRESS

The following is the Address of Mr. K. K. Birla, Chairman, India Steamship Co., Ltd. delivered at the Annual General Meeting of the Shareholders of the Company on the 26th September, 1972.

GENTLEMEN,

The Audited Accounts and the Directors' Report for the year ended 31st March, 1972, have been with you for sometime and with your permission I shall take them as read.

As stated in the Directors' Report, Sir A. Ramaswami Mudaliar, who was the Chairman of the Company since 1947, retired in November 1971, due to indifferent health. Apart from his contribution towards the development of this Company and for the attainment of its present state, his advice and guidance were also constantly sought by the Government of India and the business community alike on various matters pertaining to shipping. He spared no pains in espousing the cause of Indian Shipping at all times and the shipping industry as a whole benefited immensely by his keen intellect and penetrating insight into its economy and working. It is, therefore, gratifying that he has agreed to continue his association with the Company as an Adviser and his valuable views are being availed of on all important matters relating to your Company.

During the year under review 36 voyages were completed in the Liner service and 8 voyages in the Coastal trade as against 42 round voyages in the overseas trade during the preceding year. As mentioned in the Directors' Report, the freight earned during the year was Rs. 16,96,76,703/- considerably outstripping the freight earned in all earlier years.

After providing a sum of Rs. 1,57,08,990/- for depreciation and meeting all other normal charges, a balance of Rs. 1,69,81,725/- is left in the Profit and Loss Account. Out

of this amount, a sum of Rs. 95,00,000/- has been provided for Development Rebate. The balance amount together with other amount stated in detail in the Directors' Report, has been transferred to General Reserve.

Last year, the Directors were most reluctantly compelled to withhold the payment of dividend on Preference Shares. This year, the Directors have pleasure in recommending payment of this arrear dividend out of the General Reserve and also in recommending a sum of Rs. 1,62,500/- for distribution as dividend to the Preference Shareholders at 5% grossed up for the current year and Rs. 24,75,000/- to the Ordinary Shareholders at Re. 1/- per Share, subject to deduction of tax.

The year under review was a momentous one and replete with events of great significance. The tragic developments in Bangladesh led to a short but decisive war with Pakistan in last December which was quickly followed by the emergence of a friendly new State on the Eastern Border of the country. In the domestic scene, as a result of the Assembly elections in March 1972 the Congress Party has emerged as the strongest party and has secured an absolute majority in almost all the States, resulting in a political stability so essential to economic progress. The comfortable majority of the ruling party both in the Centre as well as in most of the States, offers ample scope for revitalising the economy and ensuring growth at a faster rate. The outcome of the recent Summit Meeting between India and Pakistan also augurs well and there is every reason to look forward to a period of political stability with a certain degree of uniformity, coherence and consistency in various economic policies.

The vital role of the Mercantile Marine was once again brought into full focus during the last war that was thrust on India and which happily ended with such great glory

to our country under the inspiring leadership of the Prime Minister Smt. Indira Gandhi. The satisfactory outcome of that war was in no small measure due to the perfect co-ordination in the mobilisation of resources from the different sectors and this achievement was to a great extent made possible due to the ceaseless efforts of the Merchant Navy. Although there was hardly any danger to ships and cargoes at the Indian ports during the war period, the Conferences governing the U.K./Continent and U.S. trades decided to impose an exorbitant surcharge. The Indian Lines firmly refused to abide by the Conferences' decision which ultimately led to the withdrawal of the unreasonable surcharge.

The volume of growth in world trade during 1971 was the smallest over the entire past decade, but the increase in the seaborne trade was still less while the supply of tonnage during the year was greater than demand, thereby leading to an inevitable slump in the tramp freight market.

In the Liner sector, conditions were far from satisfactory with soaring cost of operations, slower turn-round in various ports, losses due to labour strikes, dollar devaluation and currency readjustments. These were some of the major problems with which the shipping industry was confronted and in such a complex situation, it was difficult to evolve satisfactory solutions.

The shipping industry, as is well-known, is more vulnerable to changes in international conditions and competition than shore-based industries. The operations of the shipping industry, not being confined to this country alone, are subject to escalating costs over which it has no control, both within the country and abroad. As may be readily appreciated, the cargo handling costs, which constitute a major portion of the direct operating expenses of a Liner service, are rising considerably

in the Western Countries with the industry having no say in this matter. The same is true of another major item of expenditure also namely the bunkering charges. All these expenses which are uncontrollable are imposed upon the ship-owners without any negotiation or even discussion. Understandably, there exists a deep rooted resentment over any increase in the Conference freight rates to cover the enhanced cost of operation. To circumvent this situation many maritime countries extend to their shipping companies such measures which add to their internal strength and enable them to maintain their operating ability. The absence of this facility in this country has placed the Indian shipping industry at a disadvantage.

The Government's decision to withdraw the facility of Development Rebate effective from the 1st of June, 1974, will have adverse effects on the profitability and growth of the shipping industry as a whole. Moreover, the industry being a highly capital intensive one, is incapable of generating internal resources. With the exorbitant rise in the cost of new ships, the time is not propitious for acquisition of new tonnage. Therefore, before any final decision is taken by the Government on the crucial issue of Development Rebate, I would request them to kindly bear in mind that the availability of development Rebate went a long way in enabling the shipping industry to mobilise Rs. 140 crores during the Fourth Five Year Plan for its development.

The vital role played by the Calcutta Port, in the country's export-import trade as well as the shipping industry cannot be minimised. This port has always been the prime outlet for jute products, tea, mica, engineering goods, all of which form the bulk of the export trade of the

country, besides serving a largely industrialised hinterland. Being a riverine port, the Calcutta port has its own problems of which the steady increase in the siltation of the Hooghly river affecting the available draft, is the major one. This is mainly due to the diminution in the head water supply. For solving this problem the essential requirement is to provide adequate quantity of water and to undertake suitable measures to reduce the silting of the river. In order to ensure this, round-the-clock dredging operations in the river Hooghly are being carried out. With a view to moderate and prolong the present passage for ships and to reduce the entry of coarse sand, Farakka Barrage has been constructed. A feeder canal system to deliver upto 40,000 cusecs of water into the Bhagirathi river from the Farakka Project was also undertaken for the proper preservation of the Calcutta Port. At present an unfortunate controversy is going on as to the requirement of the quantity of discharge from the Barrage; it is, however, hoped that the problem will be considered in its proper perspective and the task of saving Calcutta Port, which is a national problem will be given the full attention that it deserves.

For sometime past, the shipping industry was confronted with an acute problem in the form of shortage of trained floating staff officers, particularly on the deck side. Fortunately, there has been some improvement in the situation in the recent months, with the commissioning of the Training Ship, "Rajendra". The new Training Ship, with its modern features and up-to-date training facilities, is equipped to provide for an increase of over 50% in the annual intake of Cadets. Turn-out of more trained cadets will take care of the problem of personnel for Indian and other Flag shipping.

The new 3-year Agreement effective from 1st January, 1972, has been concluded between the Maritime Union of India representing the floating staff officers employed on Indian ships and the Shipowners, revising the last Agreement signed in 1969. As a result of the new Agreement, the expenditure of the shipping companies on account of floating staff officers will increase by about 45% to 50% taking into considera-

tion the rise in their basic wages and other benefits. This is stated here only by way of information and also to illustrate that this industry, unlike other industries, has not the unlimited freedom to increase freight rates for augmenting its income commensurate with the rising cost of operations.

I have already dwelt on the depression that is now prevailing in the shipping trade in general and any recovery from the present recession will depend entirely on the extent of the recovery made in world trade. This, in turn, largely depends on the improvement in the economy and trade of the industrially advanced countries of Europe, U.S.A. and Japan. There are, however, few encouraging signs in that direction, as yet. A vigilant watch has therefore to be kept up to find out whether the increase in world trade will be adequate to absorb the expansion in world shipping tonnage. So far, the situation has not taken a definite shape; only fluid conditions prevail. In the circumstances prospects for shipping, continue to remain uncertain as of now.

Recently Sri S. K. Datta, Secretary in the Ministry of Shipping and Transport and Sri R. Doraiswamy, Director General of Shipping, retired from service. I wish to express my sincere and grateful appreciation of their co-operation and assistance to the shipping industry and to our Company. I would also like to express my thanks for the help and guidance received by us all along from the Ministry of Transport and the Office of the Directorate General of Shipping.

I wish to thank all the staff, both afloat and ashore, for the care with which they have looked after the affairs of the company during the year and I sincerely appreciate their devotion and diligence in carrying out their duties.

Thanks are also due to our Agents both in India and abroad for attending to our ships' requirements. Last but not least I would like to thank the shippers both in India and abroad for their continued support and co-operation extended to us.

Thank you all.

COMPANY MEETING

INDUSTRIAL RECONSTRUCTION CORPORATION OF INDIA LIMITED, CALCUTTA

Speech delivered by Shri V. V. Chari, Vice Chairman, IRCI, at the First Annual General Meeting of the Corporation held on the 12th September, 1972.

Objectives

IRCI was set up as a public limited company in April, 1971 and commenced business on 24th April, 1971. The need for setting up IRCI as an adjunct to the developmental institutions already in existence in India arose in the context of the depressed industrial climate following upon the recession combined with various adverse factors like mismanagement, unsatisfactory labour relations and critical raw materials' position which led to the closure or sickness of many industrial units which would normally not be able to attract institutional finance for their rehabilitation. The position in this regard in West Bengal particularly was calculated to arouse serious concern. The rehabilitation of the ailing and closed units was of vital importance having in view their importance to the economy of the country and the need to revive and/or safeguard employment of a large number of people. At the instance of the Central Government, the Reserve Bank of India took the initiative in setting up a specialised institution, viz.; IRCI charged with the task of reviving and revitalising the sick and closed industrial units.

IRCI is an all-India institution with its Headquarters at Calcutta. Having regard to the particularly serious position of industry in West Bengal, IRCI during the period under review, confined its activities mainly to that State. Efforts are being made gradually to extend its activities to other States.

Though the objectives of the Corporation are couched in wide terms in its Memorandum of Association, its primary objective so far has been to revive and/or revitalise industrial units which have closed down or are likely to face closure, but show promise of viability of being operated economically with suitable assistance and subject to sufficient safeguards. In attempting to achieve this objective, it

functions not as a mere lending institution in the ordinary sense but as a reconstruction agency which interests itself in the diagnosis and the removal of the short-comings which had led the unit to its present unfortunate condition. This rôle includes the restructuring of the management, pro-

Shri V. V. Chari

viding technical and managerial guidance either through its own staff or by helping in procuring suitable personnel from the market, acting as a catalyst in securing assistance from other banks and financial institutions and Government agencies. Restructuring the financial base of the companies assisted, insisting on the solution of labour-management problems as a pre-condition for providing assistance, advising the management with regard to product-mix and allied matters, a close follow-up of the course of reconstruction by watching, guiding and assisting in the operation of the assisted units—all these also fall within the area of the Corporation's functioning.

In the field of finance, assistance has taken the form of soft loans and guarantees. Substantial moratorium on repayment of instalments and interest has been provided. Reconstruction loans are not intended just for the repayment of existing debts and releasing involvement of other institu-

tions. They are granted for meeting essential capital expenditure, extinction of pressing liabilities to the extent necessary for the purpose of reconstruction and filling the liquidity gap. Working capital finance has essentially to be arranged through banks, although IRCI may provide margin for the same either through loans or guarantees. With a view to conserving resources IRCI has been following the practice of issuing guarantees to banks in respect of margin money for working capital which it undertakes to provide under its scheme of reconstruction. However, in certain cases where the payment of margin money has been insisted upon in cash, IRCI had to provide such cash.

Limited companies, co-operatives, partnership or proprietary concerns—all are eligible for assistance. However, for purposes of control, IRCI generally suggests conversion of proprietorship and partnership concerns into limited companies. Cases of units where more than 50% shares are held by State or Central Government are not intended ordinarily to be taken up for assistance from IRCI.

Financial Terms in Regard to Assistance

IRCI normally charges interest at 8½% per annum, with half-yearly rests on its term loans. However, in the case of units in the small-scale group or those located in backward areas, it charges interest at concessional rate of 7½% per annum and 7% respectively. On the amounts of guarantees executed, charges are levied at 1% per annum.

In view of the weak financial position and need for relief in rehabilitating sick/closed units IRCI does not levy any commitment charge in respect of loans sanctioned by it.

There is no rigidity in fixing repayment of IRCI's loan. The repayment of loan normally depends upon the facts of each case and has varied between four and twelve years. Depending on cash generation IRCI has granted moratorium periods of varying durations with regard to payment of principal and/or interest.

For a nominal charge "Capital"'s Statistical Department can provide you with a certificate of share prices.

As IRCI's reconstruction assistance is in the nature of a salvaging operation which ultimately helps to improve prospects of recovery of dues of other financial institutions, which had already become sticky, IRCI asks for a first charge on all the fixed assets of the assisted unit, ranking pari passu with charges already created/to be created in favour of the financial institutions. This is done not so much with an eye on security but mainly to see that IRCI's control over the fixed assets of the assisted units is not interfered with during the period of reconstruction. Further, IRCI's approach in this regard is justified on the ground that reconstruction operations are in the nature of joint venture, where IRCI takes the lead, and in all fairness, none of the financial institutions involved should be better or worse off than the other. It also obtains a second charge on moveable assets, first charge thereon being of bankers providing working capital. However, IRCI follows a certain degree of flexibility in these matters to accommodate other financial institutions for mutual benefit and helping the course of reconstruction.

The authorised capital of IRCI is Rs. 25 crores of which Rs. 10 crores have so far been issued and subscribed to by IDBI, LIC, ICICI, SBI and the 14 nationalised banks. (IFCI's subscription for the present is held by IDBI pending amendment to the Industrial Finance Corporation Act, enabling the IFCI to make the subscription). The paid-up capital amounts to Rs. 5 crores. This has been supplemented by an interest-free loan of Rs. 10 crores from the Central Government (out of which only Rs. 5 crores have been drawn in January, 1972), repayable in 15 equal annual instalments commencing after the expiry of a period of 15 years from the date of receipt of the loan by the Corporation. IRCI will have also access to Reserve Bank of India and IDBI as also the market for its borrowing operations.

Management

The management of IRCI is vested in a Board of Directors whose number shall not be less than nine and not more than fifteen. The first Board of Directors of IRCI comprised the following:

Shri B. B. Ghosh (since deceased)
Shri V. V. Chari
Shri C. T. Das
Shri B. K. Datta

Shri S. N. Hada
Shri H. T. Parekh
Shri C. D. Khanna
Shri Abhijit Sen
Shri R. B. Shah

Shri B. B. Ghosh passed away on 27th October, 1971. On Shri R. B. Shah resigning with effect from 18th November, 1971, Shri V. R. Desai, Custodian of the United Commercial Bank was co-opted from 28th December, 1971. Shri B. C. Randeria, Chief of Investments, Life Insurance Corporation of India, and Shri B. B. Lal, Secretary to the Ministry of Industrial Development, were co-opted as Directors with effect from 28th December, 1971 and 29th March, 1972 respectively. Shri Abhijit Sen resigned with effect from 25th February, 1972.

The first Board will hold office until the close of the first Annual General Meeting of IRCI.

So far, the Board of Directors have held seven meetings.

With a view to facilitating a smooth working and expeditious disposal of reconstruction assistance, applications received by IRCI and other matters, an Executive Committee comprising some of the Directors has been constituted.

The present members are as under:

Shri V. V. Chari.
Shri C. T. Das.
Shri V. R. Desai.
Shri C. D. Khanna.

The Executive Committee has been empowered to grant reconstruction assistance up to a maximum of Rs. 50 lakhs in any individual case and the total reconstruction assistance so granted shall not exceed Rs. 50 crores at any one time. All cases of reconstruction assistance sanctioned by the Executive Committee are reported to the Board. The Executive Committee meets generally once in a month or earlier, if so required. It has held 10 meetings so far.

The day to day affairs of IRCI are looked after by the Managing Director who is assisted by the General Manager.

Appraisal and Follow-up

A pre-requisite for the sanctioning of assistance is, of course, a careful appraisal of the viability of the scheme

of reconstruction proposed after making a detailed study of the circumstances relating to the unit seeking assistance. Reconstruction studies ordinarily cover two phases—the first one being the one at the end of which the unit reaches the break-even level of production with the existing plant capacity supplemented by some balancing equipments, if necessary. At the end of the second phase, the unit is expected to reach stable economic viability through a programme of modernization. While the first phase takes care of the immediate employment, the second phase stabilises and improves on such employment. An important aspect of study is to identify the past deficiencies in management—in the technical, financial and administrative fields. The study also takes particular care to locate other deficiencies like leakages and diversion and misutilisation of funds. Remedial measures are suggested for dealing with all such deficiencies.

For carrying out the appraisal work, the Corporation has on its staff a number of technical and financial officers. In some complicated cases, the services of outside consultancy firms or independent experts are also requisitioned. In taking up cases for scrutiny, the units which are passing through a crisis and are facing closure are given priority. Next in line are the cases of units which are capable of cutting down cash losses early because of their use of relatively modern machinery and techniques and the existence of a satisfactory order-book position. These are followed by cases where there are chances of regaining economic viability through a process of reconstruction over a period of years. In the overall assessment, however, units which are comparatively labour-intensive are given special importance. The problem of reconstruction, varying as they do in accordance with the nature and extent of the various past deficiencies of the units assisted, cannot all be handled by the application of simple formula. Each case has to be dealt with on the basis of its facts and post-sanction follow-up action has to be programmed accordingly. IRCI has been laying great stress on the post-sanction supervision and control of the assisted concerns. The control is exercised through Disbursement and Follow-up Department. The various important control measures adopted by IRCI are as under:

(a) Transfer of Share—In cases where a majority of the shares is held

by a single group presently in control of the company, IRCI generally asks for the transfer in its name of 51% shares or more. This is done with a view to ensuring that the programme of reconstruction is not thwarted by voting out the measures recommended by IRCI. IRCI has adopted this measure in 26 out of the 48 cases sanctioned up to the end of June, 1972.

(b) Appointment of nominees on the Board of Directors of assisted companies—IRCI appoints its nominees on the Board of Directors of the assisted companies to keep a close watch on all the policy matters relating to the working of assisted units. Where considered necessary, it is ensured that the composition of the Boards is such that the necessary support for the course of reconstruction will be forthcoming. The directors appointed by IRCI comprise its officers and reputed professional managers and industrialists.

(c) Appointment of key managerial personnel—Before reopening a unit, IRCI carefully studies the organisational and management structure and where found necessary the same is restructured. The important areas of management, invariably taken care of are marketing, production, research and development and finance. Any deficiencies detected are removed by selections from outside with the approval of IRCI.

(d) Purchase and Sales Committees—IRCI, wherever necessary, appoints Purchase and Sales Committee in the assisted units. The members of the Purchase Committee comprise a nominee of IRCI, a representative of the management and the Works Manager appointed with the approval of IRCI. The Committee decides about the purchase policy of raw materials, stores and spares, etc. It ensures that the purchases are made at the most economical prices. IRCI also helps to procure raw materials which are in short supply by taking up the matter with the authority concerned so that the production programme may not suffer. The Sales Committee which deals with the sales policy includes an officer of IRCI.

(e) Periodical Progress Report—IRCI keeps a close watch on the working of the assisted units by calling from them monthly progress reports on their working in prescribed

forms. These reports are carefully examined as soon as received, particularly with a view to knowing whether the production and profitability expected of the unit is being achieved or not. Wherever the working results fall short of the performance projected, the reasons for the departures are immediately studied with a view to adopting remedial measures.

(f) Visit to the plant—IRCI officials, both technical and financial, pay frequent visits to the units at almost weekly intervals with a view to ascertaining the difficulties that are being experienced by the units and generally discussing matters on the spot with the persons concerned. The remedial measures necessary are taken forthwith on the basis of steps suggested by IRCI's officers either on the spot or after discussions with their Technical Advisers.

(g) Frequent Review of the Working—Selected officers of IRCI are each made responsible for looking after the working of one or more assisted units. They are in touch with all the affairs of the units. A committee comprising the Managing Director, the General Manager and the Technical Advisers, holds meetings with individual officers every week. The problems posed by individual officers are placed before the Committee for guidance. Special visits by a senior technical/financial officer are arranged, where necessary, for advising proper course of action. Where necessary outside experts are also associated for dealing with intricate problems. Controllable factors causing deviations-departures from the projection, made after original studies for reconstruction have to be examined thoroughly and remedial measures taken without avoidable delay.

(h) Inter-Unit Service—IRCI helps its assisted units in obtaining their requirement of such raw materials as are products of other assisted units. For example, IRCI has made arrangements for supply of coal to its assisted units from an assisted coal mining unit. An electrical motor manufacturing company assisted by IRCI caters to the work of repairs of such motors and supply of new motors to other assisted concerns. In another case, a textile machinery manufacturing company is being helped in obtaining orders from the assisted textile units. It has been arranged to supply industrial fabrics required by

an assisted rubber goods manufacturing company through assisted textile units. This service helps not only in obtaining timely supply of the requirements at reasonable cost but also ensures the quality of the materials. As the volume of inter-unit services increases, this itself will take care of several problems of reconstruction of many assisted units.

IRCI started its operations at a time when the industrial and political climate in the State of West Bengal was none too happy and there were severe problems of management indifference, labour unrest and unemployment. Many units had been lying closed and several others were on the verge of closure.

IRCI did not lose time in starting its operations. Even with a skeleton staff, it set itself to work by taking assistance of knowledgeable persons in the field of industry and utilizing the services of outside professional consultants, chartered accountants, etc. Between April 24, 1971 and June 30, 1971, IRCI processed and sanctioned half a dozen cases involving assistance (including guarantees) aggregating Rs. 147.65 lakhs. This comprised 2 units each in engineering and textile industries and one each in coal and steel casting and re-rolling industries, altogether employing about 13,000 workers. Of these six units, 3 units had been lying closed while the remaining 3 units would have been closed but for timely assistance provided by IRCI which took steps expeditiously for the disbursement of assistance without which the position of the concerned units would have further deteriorated. It had to complete various formalities such as making arrangements with the banks for working capital funds, arriving at a suitable arrangement with them about the irregularities in the accounts and deciding the security aspects along with other financial institutions. It had also to negotiate agreements with the workers' unions including the workload to be accepted after reopening the units. Essential legal formalities had to be complied with and in some cases suits filed by creditors, etc., needed to be settled in or out of the court. All these involved considerable expenditure of time and energy. IRCI could, therefore, make its first disbursement of loan in August, 1971 although it had issued guarantees as early as May, 1971.

During the period July, 1971 to June, 1972 IRCI sanctioned assistance (including guarantees) to a further 42 units for sums aggregating Rs. 596.10 lakhs. The total amount disbursed, which was partial in every case according to the actual requirement of each unit, amounted to Rs. 266.23 lakhs. Besides the reconstruction assistance sanctioned by IRCI, it arranged through banks financial assistance for working capital requirements, etc., to the tune of Rs. 514.20 lakhs. These cases covered employment of about 25,300 workers.

At the end of June, 1972 the total sanctioned assistance (including assistance sanctioned prior to 1st July 1971) to the 48 units stood at Rs. 743.75 lakhs and the total amount utilized/guarantees outstanding stood at Rs. 266.23 lakhs (including Rs. 96.31 lakhs in respect of guarantees) covering a work force of 38,300. About one-third of the assistance sanctioned by IRCI was in respect of units located in notified backward districts.

Since the inception of IRCI till 30th June, 1972 it had received 341 applications (mostly requests in the form of simple letters) out of which the number of applications sanctioned is 48. After study IRCI did not accede to 51 requests for assistance as these units did not show any potentiality for viability after revival. Another 67 cases did not come within the operational strategy of IRCI and were therefore directed to banks and other financial institutions who could in the usual course, consider providing financial assistance to them. The processing of 32 cases was in hand and study of 13 cases was held in abeyance for various reasons such as non-availability of necessary data or there was lack of cooperation from the parties. The number of cases in hand which IRCI has yet to process aggregate 128.

Industry-wise Classification of Reconstruction Assistance

A table giving the industry-wise classification of reconstruction assistance sanctioned by IRCI and other relative information is given below. For the purpose of convenience, industries are divided into 3 major groups, namely, Engineering, Textile and Miscellaneous industries. The Miscellaneous group includes paper, glass, chemicals, ceramics, coal, etc.

Industry	No. of units	Total amount sanctioned	Assistance released	Amount arranged through banks	Employment involved
Engineering	24	249.09	94.03	184.18	10685
Textile	6	204.20	73.06	105.01	6783
Miscellaneous	18	290.46	99.14	225.01	20858
	48	743.75	266.23	514.20	38326

Engineering Industries

In this group are included 7 units, a textile machinery manufacturing unit in the State of Tamil Nadu, a bicycle manufacturing company with its four associated concerns and the remaining one, an aluminium manufacturing unit. The total assistance sanctioned to these 7 units amounted to Rs. 151.73 lakhs out of which the amount utilized amounted to Rs. 70.77 lakhs. This provided employment to 7500 workers. The remaining 17 cases fall under the small scale group. The assistance sanctioned to these units amounted to Rs. 97.36 lakhs out of which amount utilized was Rs. 23.26 lakhs. This helped to restore employment of about 3200 workers. The smaller units are mainly manufacturers of fans, cycle accessories, mechanical handling equipment, power transformers, dynamos, nuts and bolts, etc.

Textile

At the time when IRCI came into being, the State of West Bengal did not have any State Textile Corporation nor had the State any working arrangement, as now, so that textile concerns could not avail themselves of finance provided by the Central Government through National Textile Corporation (NTC). Thus, IRCI, among other cases, took up examining applications of sick/closed textile units as well. Out of 36 applications received by IRCI from textile units, 6 cases were sanctioned including one spinning mill which was on the verge of closure, 4 composite mills which had been closed and one small processing house. One of these composite mills has subsequently been taken over under the Industries (Development & Regulation) Act, as its management failed to comply in time with the terms and conditions stipulated by IRCI. Thus, at present, 4 textile mills are being run with IRCI's reconstruction assistance. Subsequent to the sanctions referred

to above, and as per arrangements made between the Central Government and the Government of West Bengal, NTC has opened a Regional Office at Calcutta. Thereafter, 6 cases have so far been taken over by Government of India under the Industries (Development & Regulation) Act and entrusted to NTC. Two other cases are also stated to be under their consideration. The application of one powerloom factory is being processed at present. Further, rehabilitation of more powerloom cooperative societies in the State of West Bengal is also under the active consideration of IRCI.

In fulfilling the task of reconstruction, IRCI has to associate itself very closely with the various operations of the assisted textile units. In the case of three units, it directly supervises purchase of cotton stores, spares, etc. The costly system, quality control measures, preparation of pattern of production based on market study and budgetary controls have been introduced. IRCI has also arranged to appoint professionally qualified persons at plant level and in administrative offices of assisted units for toning up general supervision and control. As a result of these measures all the four assisted units have turned the corner and ceased making cash losses.

Textile Cell

With the manifold activities which IRCI had, perforce, to carry out directly to help the assisted textile units in various facets of their working like purchase, sales, production, labour settlement, etc., IRCI has created a separate "Textile Cell" in its office since June, 1972 for regulating these functions properly.

Central Processing House

In the State of West Bengal most of the textile units (except those

controlled by large groups) with their out-dated equipment produce grey cloth such as dhotis, sarees, markins, etc., which leave very small margin of profit. These units are at a relative disadvantage compared to the textile units in the Western and Southern regions as they do not have the necessary processing facilities worth the name in this region. There has been a long felt demand for a good processing house which could help the textile units to diversify their production according to the changing pattern of demand of the present day. IRCI set up an Experts' Committee under the chairmanship of Shri S. N. Hada, one of its Directors, to study the feasibility of setting up a Central Processing unit. Based on the recommendations of the Committee, and taking into account the prevailing industrial climate, IRCI is itself taking steps to promote a modern processing house with a processing capacity of 1.5 lakhs metres of cloth per day. The preparation of project report has been entrusted to a leading textile consulting firm of Bombay who have already submitted the preliminary report.

Miscellaneous

The number of units assisted in this group is 18. The amounts sanctioned and utilized so far are Rs. 290.46 lakhs (including guarantees aggregating Rs. 23.38 lakhs) and Rs. 99.14 lakhs, respectively. These units provide employment to about 21,000 workers. Of the 18 units, 6 units are of medium size and the assistance sanctioned to them amounted to Rs. 87.63 lakhs. This helped to restore employment to about 18,800 workers. The 6 units comprised one casting and re-rolling mill, a coal company, one ceramics, one building construction company and 2 chemical and pharmaceutical companies. The remaining 12 cases falling under this group were in the small scale sector. This includes 3 paper units, 2 glass manufacturing units, one biscuit factory, one pencil factory and one dairy. The assistance sanctioned to these units amounts to Rs. 85.70 lakhs and the amount utilized Rs. 11.51 lakhs. It has given employment to about 2,100 workers.

Collaboration with other Concerns

In the case of a steel casting and re-rolling unit, collaboration has

been secured from Garden Reach Workshop Ltd., a Government of India Undertaking. The collaborators apart from their financial and technical involvement, have also spared the services of their professional managers for the proper supervision and control over production.

Size of Loans

A table giving classification of loans sanctioned by IRCI according to their size is given below:

Classification of Loans Sanctioned According to their Size

Size of loans (Rs. in lakhs)	No. of units	Loan sanctioned (Rs. in lakhs)
Less than 0.50	1	0.12
From 0.50 to less than 1.00	1	0.55
From 1.00 to less than 5.00	19	63.14
From 5.00 to less than 10.00	5	29.37
From 10.00 to less than 25.00	15	268.15
From 25.00 to less than 50.00	4	159.48
Over 50.00	3	222.94
	48	743.75

Assessment

IRCI was established at a time when the industrial climate in West Bengal was most disheartening though of course it was this very climate which made its appearance necessary. It had to act quickly at the requests received from the managements besides those received from labour unions, financial institutions, banks and Government and collection of all the necessary data for study, particularly in the face of indifference, and often reluctance of some managements was not an easy exercise.

Reconstruction study involving expert diagnosis of the various ills of an ailing unit and suggestions for remedial measures is by itself a difficult task. The post-sanction exercises or overseeing the implementation of the course of reconstruction are more onerous. Tackling creditors who, in many cases, have already instituted legal proceedings, statutory authorities to whom the units have made defaults, reconciling the discontented

labour thrown out of employment, sorting out of legal formalities as between various institutions already involved, have all been strenuous and time-consuming processes. Arranging working capital finance from banks and persuading them to nurse their earlier often insecure involvement entail protracted and lengthy negotiations and so in several cases disbursements had inevitably been delayed. Similar delays have occurred in obtaining clearances from Government authorities in respect of statutory dues, etc. In spite of these hurdles IRCI's performance may not be considered unsatisfactory.
