Their report	...	ib.

PART I.—(Continued.)

	PAGE.
General facts established by the evidence	6
The three members go much further, and recommend that the prohibition should be maintained	ib.
Major Archer's views not on record	ib.
Mr. Dawson's dissent	ib.
Mr. J. P. Grant's dissent	ib.
The evils which had attended emigration preventible	7
Recommends opening of emigration to Mauritius	ib.
And, more guardedly, to other British colonies	ib.
The case of Bourbon different	ib.
Difficulties on this point	ib.
Special measures necessary	ib.
General character of legislation needed	ib.
Certain ports to be fixed	ib.
A Protector to be appointed at each port	ib.
The Protector's duties	ib.
More liberal regulations as to space and water recommended	8
Security for return passage	ib.
Imperial legislation necessary for due control of masters and owners of emigrant vessels	ib.
Right of search	ib.
Government of India only to allow emigration to colonies where it was assured the emigrant would enjoy freedom and protection from wrong	ib.
Special points in Colonial law which should be insisted on	ib.
The term of engagement should vary according to the distance of the colony	ib.
Renewal only to be permitted for short terms	ib.
Other essentials for protection of Indians in the colonies	ib.
The views of Members of Government equally divergent	9
Directors decline to relax the prohibition, pending discussion in Parliament	ib.
Parliament, however, drops the subject	ib.
Colonial Office takes steps for resumption of emigration to Mauritius	10
The order in Council	ib.
Its provisions:	ib.
I. And to be remunerated by a fixed salary	ib.
II. Duties of Agents	ib.
III. Checks upon over-crowding on board ship	ib.
IV. Children how to count	ib.
V. Provisions and water	ib.
VI. Length of voyage; a close season may be prescribed	ib.
VII. Agent to survey ship, provisions, and water	ib.
VIII. Provisions for forty-eight hours to be supplied on landing	11
IX. Copies of regulations to be kept	ib.
X. Lists of emigrants to be checked on arrival	ib.
XI. Certificate of Protector in the colony necessary for master of ship	ib.
XII. No money to be payable except on warrant issued under such certificate	ib.
XIII. Protector to keep a register of immigrants	ib.
XIV. Penalties	ib.
XV. Rights of civil action	ib.
XVI. Certain vessels exempted	ib.
XVII. No immigrant to enter into engagement until he has been forty-eight hours on shore	ib.
XVIII. No suit to lie on any contract made before arrival in Mauritius	ib.
XIX. Contracts with emigrants to be regulated by the law applicable to other laborers	ib.
Orders of Colonial Office addressed to Mauritius Government	ib.
Communication to Board of Control	ib.
Despatch from Court of Directors leaves the question to the Government of India	ib.
That Government prepares the legislative measure necessary to permit emigration to Mauritius to be resumed	ib.
Mauritius Government accepts the draft Act	12
Act XV, 1842, passed; its provisions	ib.
1. Repeals previous regulations as far as Mauritius is concerned	ib.
2. Emigration to Mauritius from Calcutta, Madras, and Bombay permitted	ib.
3. An Emigration Agent at each port	ib.
4. Licenses for emigrant ships	ib.
5. Bond to be executed	ib.
6. No emigrant to be embarked without certificate from Agent	ib.
7. Master must produce certificate from Agent showing that the rules have been complied with	ib.
(a). That the Agent has complied with Rule III of the order in Council	ib.
(b). That the directions contained in Rules IV, VI and VIII have been obeyed; and	ib.
(c). That the rules laid down by the Governor General in Council, or President in Council, touching medical attendance and medical stores, kinds of provisions, number of women, and other matters, have been complied with	ib.
8. Length of voyage defined from Calcutta, Madras, and Bombay	ib.
9. Rule IX of order in Council enforced	ib.
10. Penalties	13
11. Taking emigrants on board after clearance	ib.
12. Act on the part of Master fraudulently making certificate inapplicable	ib.
13. Powers of Pilots and Officers of Customs	ib.
14. Punishment for crimping	ib.
15. Special rules for Customs Officers at Calcutta	ib.
16. Penalty for forgery of documents	ib.
17. Penalties how enforceable	ib.
Masters Attendant in Calcutta, Madras, and Bombay, appointed Emigration Agents	ib.
Minor arrangements	ib.
Rules framed for Calcutta; medical examination, medicines, surgeon, dietary, and water	ib.
Proportion of women; a maximum proposed, but disallowed by Court of Directors	ib.
Lord Stanley points out the necessity for an independent Protector besides the Agent	ib.

PART I.—(Continued.)

	PAGE.
Mr. Anderson deputed to India by the Mauritius Government	13
His estimate of the supply of labour required	14
Proposal to limit emigration to the port of Calcutta	ib.
Act XXI, 1843	ib.
Section I. Restricts emigration to the port of Calcutta from 1st January 1844	ib.
Section 2. Authorises the appointment of a Protector at that port	ib.
New Rules	ib.
Dietary, provisions, water, fuel	ib.
State of Indian laborers in Mauritius in 1845	15
Committee in Mauritius in 1845	ib.
Their proposals not accepted by the Governor	ib.
His proposals	ib.
Rejected by Government of India and Court of Directors	ib.
Colonial Office urges re-opening of emigration to West Indies	ib.
Results of previous brief emigration to British Guiana	ib.
Views of the Court of Directors	ib.
Government of India points out the difference between the case of Mauritius and that of the West Indian Colonies	ib.
Modified proposal of Colonial Office	ib.
Court of Directors authorise Government of India to permit emigration to Jamaica, British Guiana, and Trinidad	16
Colonial Office appoints Agents at Calcutta and Madras	ib.
Act XXI, 1844, passed on the understanding that the colonies concerned would take the necessary measures	ib.
Its provisions:	ib.
Section 1. repeals prohibition in regard to Jamaica, British Guiana, and Trinidad	ib.
2. and generally follows the terms of Act XV, 1842, as amended by Act XXI, 1843	ib.
3. identical with section 3, Act XX, 1842	ib.
4. authorises the appointment of Protector of Emigrants at each port of embarkation	ib.
5 to 7, equivalent to sections 4 to 6, Act XV, 1842	ib.
8. length of voyage: close season prescribed	ib.
9 to end, identical with section 8 to end of Act XV, 1842	ib.
Schedule deviates from that of Act XV, 1842	ib.
Lord Stanley takes certain objections to the Act	17
Further minor amendments urged	ib.
Act XXV, 1845, permits emigration to the West Indies from Madras to begin after 31st August	ib.
At Calcutta, Mauritius rules to apply to emigration rules to West Indies	ib.
Arrangements at Madras	ib.
Dietary compared with the Calcutta scale	ib.
No rules passed at Bombay	ib.
No minimum of women prescribed	ib.
Resumption of emigration from Madras to Mauritius	ib.
The measure urged by the Colonial Government, but disallowed	ib.
But the point ultimately conceded	18
Act VIII, 1847, puts emigration from Madras to Mauritius on the same footing as from Calcutta	ib.
Madras Rules	ib.
Emigration from Madras to Mauritius not actually resumed till 1850	ib.
Emigration to Ceylon	ib.
It is pointed out that such immigration is illegal	ib.
Government of India willing to apply legislative remedy under certain conditions	ib.
Conditions accepted by Ceylon Government	ib.
Act XIII, 1847, removes the restrictions on emigration to Ceylon	ib.
Proviso	ib.
Brought into force by notification	ib.
Subsequent relations with Ceylon	19
Relaxation of rules in favor of steamers, 1859	ib.
Proposed emigration from Ganjam to Ceylon	ib.
Mauritius asks to be relieved of obligation to provide return-passage	ib.
Request acceded to on certain conditions	ib.
Government of India permits extension of period qualifying for return-passage from 5 to 10 years in case of British Guiana and Trinidad	ib.
Same policy pursued in regard to further proposals in same direction	ib.
But these latter changes never put in force	ib.
Proposal to allow commutation of right of return-passage for money or land	20
Views of the Court of Directors	ib.
and of the Government of India	ib.
Necessity of Colonial Protectors	ib.
Final result of the discussion	ib.
Narrative of legislation resumed	ib.
Act IV, 1852, extends the open season of West Indian emigration from Calcutta	ib.
legalises emigration from Bombay to Mauritius	ib.
also reduces the minimum height of 'tween-decks	ib.
and substitutes a cubic for a superficial minimum of space	ib.
Madras Government brings to notice the prevalence of illegal emigration to Réunion by way of French Indian ports	ib.
Madras Government urges a representation to the French Government	ib.
Government of India prefers to rely on a vigorous enforcement of the law	ib.
Doubts raised as to the legality of convictions	21
Hence the necessity for Act XXIV, 1852	ib.
Its provisions. The offence of "crimping" defined	ib.
Bond <i>fide</i> immigration to foreign settlements on the mainland exempted from restriction	ib.
General result of the above provisions	ib.
Purport of the remaining sections	ib.
Penalty for crimping	ib.
Penalty for forcing or decoying a native out of the territories of the East India Company	ib.
The Act apparently not efficacious	ib.
Executive measures taken to prevent illegal practices of agents from Réunion	ib.
Opening of emigration to Grenada and St. Lucia, Act XXXI, 1855	ib.

PART I.—(Continued.)

	PAGE.
Effect of the law ...	21
Minor differences as compared with the larger West Indian Colonies ...	ib.
Important clause making the application of the law conditional on the Government of India, declaring itself satisfied with the colonial arrangements ...	ib.
Objections taken under this clause to the St. Lucia ordinance ...	22
Discussion of these objections ...	ib.
The compromise proposed by Emigration Commissioners forwarded to Government of India ...	ib.
Lord Canning's minute ...	ib.
The point conceded as to Grenada and notification issued ...	ib.
But as to St. Lucia, Government of India refuse to yield ...	ib.
Objections to the St. Lucia ordinance ...	ib.
No provision for the inspection of ships ...	ib.
For reception of emigrants ...	ib.
To prevent the separation of families ...	ib.
Deduction made from wages for medical attendance ...	ib.
Contribution towards back-passage ...	ib.
No provision to ensure a sufficiency of work ...	ib.
No provision for return of emigrants incapacitated for work ...	ib.
No provision for inspection of estates ...	23
Ordinances should be amended in regard to contribution to back-passage ...	ib.
Delay in providing back-passages ...	ib.
Certain of these objections inconsistent with previous policy ...	ib.
The reply of the Emigration Board ...	ib.
Views of the Colonial Office ...	24
Emigration to St. Lucia legalised ...	ib.
Power of suspension necessary ...	ib.
Act XIX, 1856 ...	ib.
Temporary suspension of emigration to Mauritius in 1856-57 ...	ib.
Circumstances which led to it ...	ib.
Defence of the Government of Mauritius ...	ib.
Lord Canning's minute ...	ib.
Suspension withdrawn ...	25
Subsequent history of quarantine at St. Louis ...	ib.
Breaches of the Act in 1856 ...	ib.
Instances of evasion ...	ib.
Measures taken in Mauritius and in India ...	ib.
Illegal emigration to Réunion ...	ib.
Mortality on ships from Calcutta to the West Indies in 1856-57 ...	26
Investigations into its causes ...	ib.
Plan of enquiry ...	ib.
Dr. Mouat's conclusions ...	ib.
Emigrants not originally unfit or sickly ...	ib.
Dépôt not to blame ...	ib.
Actual causes ...	27
Causes of superior healthiness of Madras emigrants ...	ib.
Remedies suggested by Dr. Mouat ...	ib.
Improved vessels proposed ...	28
Sickness preventible ...	ib.
Further suggestions as to dietary ...	ib.
Government of India accepts Dr. Mouat's views, except as to the limitation in the number of women ...	ib.
Rules to be prepared accordingly ...	ib.
Code drawn up ...	ib.
Nature of the rules ...	ib.
Its adoption suggested to Governments of Madras and Bombay ...	29
Government of Madras adheres to its own rules ...	ib.
Government of Bombay accepts the Calcutta Code with some modifications ...	ib.
M. Savy's complaints of administration of the law between planters and immigrants in Calcutta ...	ib.
Commission to enquire into them ...	ib.
Considered unfounded ...	ib.
Facts found by the Commission hardly bear out this view ...	ib.
Proposal to introduce labor into British Guiana on private account ...	ib.
Similar proposal in regard to Mauritius ...	ib.
Contracts in India for labor in Mauritius legalised ...	30
Wages fixed by Mauritius Government ...	ib.
Bill brought in to legalise these measures, but not passed into law ...	ib.
Mauritius emigration began to be carried out all the year round ...	ib.
Further changes in the Mauritius law in 1862 ...	ib.
Minor changes ...	ib.
Rules to prevent fires at sea ...	31
Bengal Committee on system of emigration appointed in 1860 ...	ib.
Their report and recommendations ...	ib.
Appointment of a Government Medical Officer ...	ib.
Proportion of women ...	ib.
Limit of natcher ...	ib.
European Surgeons ...	ib.
Minor suggestions ...	ib.
Rules as to side scuttles ...	ib.
Act II, 1860 ...	ib.
Act XI, 1860 ...	ib.
Act XIII, 1860 ...	32
Act XIV, 1860 ...	ib.
History of emigration to French colonies. Réunion ...	ib.
Application in 1851 for leave to recruit in India for Réunion ...	ib.
Governments concerned consulted ...	ib.
Report by Dr. Mouat ...	ib.
Views of the Governments of Bengal, Madras, and Bombay ...	ib.
And of the Government of India ...	ib.

PART I.—(Continued.)

	PAGE.
Negotiations protracted ...	33
Convention negotiated, 1860 ...	ib.
Speedy legislation urged, and the reason ...	ib.
Act XI, 1860 ...	ib.
Provisions of the law ...	ib.
Contracts permissible for labor to be performed in Réunion, Martinique, Guadeloupe and French Guiana, or, on certain conditions, in other French colonies ...	ib.
French Government may nominate Agents ...	ib.
French Agents to have the same status as Agents for British colonies ...	ib.
Duties of Protectors and British Consular Agents ...	ib.
Terms of contract ...	ib.
Arrangements pending emigration ...	34
Estimated length of voyage ...	ib.
Time of sailing fixed ...	ib.
Surgeon and interpreter to be carried ...	ib.
Maximum space to be allowed on board ship ...	ib.
Proportion of women ...	ib.
Existing regulations applied, with one important change ...	ib.
Mode of levying penalties ...	35
Provisions of convention binding on French authorities ...	ib.
British subjects to have right of access to British Consul ...	ib.
Families not to be separated ...	ib.
Operations may be carried on in either French or British vessels ...	ib.
Labor regulations of Martinique to form basis of colonial law ...	ib.
Convention applicable to protected Native States ...	ib.
When the Act to take effect ...	ib.
Convention when terminable ...	ib.
Appointment of Consular Agents at French Indian ports ...	ib.
Modification of the convention and enactment of Act VII of 1862 ...	ib.
Substance of the Réunion regulations ...	36
Protection ...	ib.
Dwellings, food, &c. ...	ib.
Disposal of insubordinate laborers ...	ib.
"Vagabondage" ...	ib.
Proposal to permit emigration to St. Croix (Danish West Indian Colony) ...	ib.
Terms of contract, and nature of colonial regulations ...	ib.
Provisions for redress of immigrants' grievances ...	37
Terms accepted, and Act VII of 1863 passed ...	ib.
Act XLIX of 1860 modifies scale of water-supply ...	ib.
Proportion of women ...	ib.
First steps taken by colonial office ...	ib.
Proportion fixed ...	ib.
Effect of convention upon term of indenture in British Colonies ...	ib.
Emigration to Seychelles, Act XXII of 1862 ...	ib.
Madras Rules of 1861-62 ...	38
Orders of the Government of India ...	ib.
Substance of the Madras Rules ...	ib.
Minor points in the history of emigration up to passing of Act XIII of 1864 ...	ib.
Complaints of Madras Chamber of Commerce ...	ib.
Relaxation of the rules requiring a European Surgeon on French vessels ...	ib.
Fees to be levied at time of recruitment ...	39
French ships allowed to pick up their complement gradually ...	ib.
Professional cooks ...	ib.
Complaints from Réunion ...	ib.
Mortality on voyage to Réunion ...	ib.
Enactment of Act XIII of 1864 ...	ib.
Mr. Maine's statement of objects and reasons ...	ib.
I. Consolidation ...	40
II. Regulation of recruitment ...	ib.
III. Regulation of dépôts ...	ib.
IV. Duties of Protector defined ...	ib.
V. Emigration to French and English colonies, placed nearly on equal footing ...	ib.
VI. Extension of field of emigration ...	ib.
Additional remarks under the above six heads ...	40 & 41
Analysis of the law ...	41
Preliminary ...	ib.
Definition of "emigrant" and "emigrate," and of "British India" ...	ib.
Re-enactment of exemptions ...	ib.
Emigration whither lawful ...	ib.
May be permitted under certain conditions elsewhere ...	ib.
Ports of embarkation ...	42
Length of voyages ...	ib.
Appointment of Agents ...	ib.
Their remuneration to be fixed ...	ib.
Appointment of Protectors ...	ib.
Protector not, without permission, to hold other office ...	ib.
Existing Protectors confirmed ...	ib.
General duties of Protectors ...	ib.
Medical Inspectors to be appointed ...	ib.
Establishment and licensing of dépôts for each colony ...	ib.
Inspection of dépôts ...	ib.
Protectors and Medical Inspectors to be public servants ...	43
Agents and all concerned to aid other officers ...	ib.
Regulation of recruitment ...	ib.
Each recruiter to be licensed ...	ib.
License to be countersigned by Magistrate ...	ib.
Intending emigrant to be brought before Magistrate or Protector ...	ib.

PART I.—(Continued.)

	PAGE.
Examination and registration of emigrants ...	43
Magistrate or Protector to refuse registration in certain cases ...	ib.
Fees on registration ...	ib.
Emigrant's journey to dépôt ...	ib.

INDIAN EMIGRATION.

INTRODUCTORY.

WHEN I returned from leave in 1871, I found that several cases connected with the emigration of labor from India of much interest and importance were either under consideration or likely soon to press for decision. The most prominent were the questions of the condition of emigrants in Réunion and in British Guiana. Under these circumstances it appeared to me that it would be useful to compile a general history of the facts of emigration and of the policy pursued by the Government of India in regulating or controlling the flow of labor across the sea. I therefore began to have papers collected in May 1871; the task has, however, proved somewhat heavier than I expected, and this note has taken nearly two years to finish. Imperfect as it is, it has involved a good deal of labor, for I have had to read a great mass of papers, which, when examined, yielded little of interest in comparison with their bulk. Indeed, in some cases I may be thought to have retained too much detail. In getting materials for the second part I have been much helped by Dr. Grant, the Protector of Emigrants at Calcutta: Indeed, without his kind assistance, that portion of the note would have been very meagre indeed.

I divide this note into three parts. In the first I propose to trace the course of policy pursued by the Government of India in regard to emigration, as illustrated by the laws and regulations framed in India, or by the changes in the mode of dealing with Indian immigrants on the part of the several colonies which (when cognizant of them, for this was not invariably the case) it approved, or at any rate accepted, tacitly or otherwise. In the second part I will enter upon the facts of emigration as it affects the country and the emigrants themselves. In this part I will put together such information as is attainable in regard to the numbers emigrating, their sexes and ages, the tracts from whence they have been drawn, the classes and religions to which they belong, the mortality on the voyage, the number of return emigrants and the amount of their savings, and the like subjects. In the third part I will endeavour, from the imperfect materials at hand, to sketch the present condition of Indian laborers in the several colonies to which they have emigrated.

PART I.

The earliest emigration seems to have taken place from the southern portion of the continent. A Tamil exodus to the Straits Settlements had begun before the end of the last century. And soon after the conquest of the Tenasserim Provinces labor began to flow thither from the other side of the Bay of Bengal. The emigrants to the Straits Settlements were employed both as domestic servants and as agricultural laborers. In Burma the sphere of employment was confined to that of domestic service and the miscellaneous labor of mercantile ports. (It is probable that Ceylon, too, from the date of its European colonization, attracted labor from the south of India. But emigration across the Bay has hitherto been uncontrolled, while, as regards Ceylon, no sooner was the fact of the flow of labor thither ascertained, than emigration was, under certain guarantees on the part of the Colonial Government, freed from the prohibition to which it had for eight years been, in point of law, liable, but which had never been enforced. There is, therefore, no exact record of the number of natives of India who have emigrated in these directions; but it is very considerable, especially in the case of Ceylon. Recent papers shew that for the 10 years ending 1869 an average number of 65,000 persons (of whom nearly 50,000 were adult males) emigrated annually from Madras to Ceylon.) The average number returning in each year was upwards of 48,000. According to the latest accounts from Penang, there were in that settlement 25,000 natives of India out of a population of 150,000.

Captain Birch, then Commissioner of Police, Calcutta, in his evidence before the Emigration Committee of 1838, said that he believed emigration to Mauritius and Bourbon to date from about 1819. But he admitted that he could not speak positively, and I have found nothing to show that such emigration commenced so early. The first instance I have traced belongs to the year 1830,* when a French merchant, by name Joseph Argand, carried some 130 artisans to Bourbon, the Government of India having, on view of the ordinances in force and the contracts made with the emigrants, permitted the departure of the latter, conditionally on each man appearing before one of the Magistrates of Calcutta and acknowledging that he went voluntarily. The contracts, which were for a term of five years, looked liberal enough on paper, Rupees 8, in addition to an

* Dr. Mouat, however, thinks the emigration began soon after 1826.

ample dietary, being fixed as the minimum monthly wage; but in 1832 a petition was received from two of the emigrants complaining that their wages had not been paid. Government, however, after consulting Mr. McFarlan, the Police Magistrate,—who remarked that “it was possible enough the men might be claimed as slaves,”—came to the conclusion that the complaint was not a serious one, and recorded a resolution to the effect that the complainants had been “fully warned of the nature of their contracts, and that Government was under no obligation to bring them away from Bourbon in consequence of their disappointment.”

It is not clear whether other emigrants to Bourbon followed. But the abolition of slavery in British colonies in 1834 was what gave the first great impetus to emigration. The sugar-planters of Mauritius were not slow to perceive that India was their best recruiting ground, and a shipment of about 40 coolies seems to have reached that island in August 1834.*

First attempt to regulate emigration. The only control which it was at first attempted to exercise over this emigration was, as in the case of Bourbon, to require intending emigrants to appear before a Magistrate, to satisfy him of their freedom of choice and knowledge of the circumstances of the case. The contracts were for five years, and generally stipulated for Rs. 5 a month, in addition to liberal rations and clothing, as the wages of an adult male.

Terms of contract.

Inasmuch, however, as there was no penalty for deporting emigrants unregistered, no accurate figures of this emigration are, from the nature of the case, attainable. But as well as I can ascertain, between August 1834 and May 1837, at least 7,000 emigrants left Calcutta for Mauritius. Of these not more than 200 at the outside were women. Nearly one-half of the whole number were “hill coolies” i. e., Dhangars, Kols or Santhals. About 100 men and eight women seem to have left Bombay for Mauritius during the same period.

The Government of Mauritius in 1836 called attention to the necessity for some regulations to ensure the well-being of emigrants on the voyage; but the whole question had already been referred to the Law Commission, in connection with a project of law then under consideration for the protection of Natives generally leaving India by sea. The opportunity was, however, taken to ask the Government of Mauritius for some account of the condition of the Indian laborer in that colony.

Report on emigrants in Mauritius, December 1836. The reply from Mauritius, dated 15th December 1836, is to the following effect:—

The introduction of free labor from India is reported, as far as the experiment had then been tried, to have been attended with very complete success, laborers and employers seeming in general mutually satisfied with each other, misunderstandings arising only from temporary stoppage of articles of subsistence which the master agreed to supply, but which were not for the moment procurable, not from any discontent with the situation in which the Indians found themselves placed, their labor or general mode of treatment. The hours of labor were generally regulated by express contract; where this was not the case, from sunrise to sunset, with two and sometimes three hours for meals, constituted a day's work. The Governor was of opinion that the hours should always be expressly stipulated. The laborers lived under the general laws of the colony, an attempt at special legislation having been disallowed by Her Majesty's Government; but an ordinance was under consideration to give District Magistrates a limited jurisdiction in police and civil cases, with a view to prompt settlement of differences between masters and servants. His Excellency also sent a copy of instructions to persons applying for permission to import labor (for it is to be remarked that permission was necessary) and to persons employing emigrants. These inculcate—(a) the selection of real agricultural laborers; (b) the recruitment of a suitable proportion of women; (c) careful medical inspection; (d) the limitation of advances of wages; and (e) careful measures for the supply of rice. The second circular addressed to employers urges the exact performance of contracts in regard to food, clothing, punctual payment of wages, observance of hours of labor, and other points. With regard to the point (e), Sir W. Nicolay would have medical inspection and vaccination made compulsory. His Excellency would also have the agreements bind employers to provide a return passage, to supply specified daily rations and clothing, and it was requested that agents applying to export labor should be called on to produce their permission from the Mauritius Government, and that the police at the port of embarkation should send to that Government nominal returns with full particulars of all emigrants shipped. Sir W. Nicolay also advocated an inspection previous to sailing of each emigrant ship, in order to ascertain the identity of the emigrants on board and the absence of fraud or force in shipping them.

* It was on the first of this month that slaves passed by Act of Parliament into the position of “apprentices.”

It is to be remarked, however, that this care for the welfare of the cooly was a thing of recent birth in the Mauritius, for in November 1835 two ordinances had been passed bearing so hardly on the immigrant and tending so decidedly to reduce him to the level of a slave that they were disallowed by His Majesty in Council. As remarked by Mr. (now Sir) J. P. Grant, in a paper we shall have to notice presently, in a colony so lately a slave-holding one, this was but natural.

Reports were also received from two members of the Civil Service,—Messrs. Parry Woodcock and T. C. Scott,—who had recently visited Mauritius. These may be considered on the whole confirmatory of the views and statements of the Government of Mauritius; at the same time they clearly pointed out that the system required regulation in certain respects.

Views of the law Commission as to the regulations necessary. The opinion of the Law Commissioners will be gathered from the following extract from their report to Government:—

“On the whole, the Commissioners are of opinion that with respect to emigrants to British or foreign settlements beyond sea, no legislation is advisable, except what may be required for the purpose of supporting precautionary arrangements, such as have been already made, to prevent undue advantage being taken of the simplicity and ignorance of those persons. With this view, a law might be framed by which any Magistrate, within whose jurisdiction the port or place of embarkation may be situated, should be empowered to

The Magistrate at port of embarkation to ascertain that emigrants understood terms of contract and were free. cause the attendance before him of any natives of India who, he may have reason to believe, are about to emigrate to any British or foreign colony beyond sea, under contracts of service, and enacting that no contract of this description shall be held valid unless certified by the Magistrate to have been assented to by the native parties to it, with a full understanding of its provisions.

“The Commissioners think it would be advisable to authorize by the same law the refusal of a port clearance to any vessel taking away such natives, until the contract has been inspected and certified. It also occurs to them that it may be expedient to authorize a like refusal in any case in which it shall appear that proper provision has not been made for the suitable treatment of the emigrants during the voyage. In offering these general suggestions, the Commissioners wish it to be understood that they are not prepared to frame, without further enquiries, the draft of a law containing, in all the requisite detail, the rules which would be necessary to carry them into effect. The Commissioners also desire to add that it would, perhaps, be an improvement on the precautionary steps which have been heretofore taken, if the Magistrate were required to furnish, in every instance, to the Government a copy of the contract under which the emigrants go, and if the Government made it a rule to transmit a copy to the Government of the colony. The Magistrate, of course, ought to take care, on behalf of the emigrants, that all the necessary conditions are distinctly stated in the contract. In the case brought to the knowledge of the Commissioners by the papers before them, of natives of India who went to Bourbon, it appears that the rates of wages to be paid were not specified. If care be taken to ascertain that every essential point is provided for in the engagements; that all the conditions are fully understood and freely agreed to by the emigrating natives; that sufficient provision is made for their suitable accommodation and sustenance during the voyage; and that a copy of the engagement is, in every instance, transmitted to the Government under which they are to live, it does not appear to the Commissioners that there is anything more which the Government of this country can reasonably be expected to do for the protection of that class of persons.”

Steps to be taken to ensure provision for the suitable treatment of emigrants during the voyage.

The Magistrate to see that the contracts specify all the conditions of engagement.

The result of the deliberations of Government was Act V, 1837, which became law on the 1st May of that year. Its provisions are to the following effect:—

The result of these proposals. Act V, 1837: its provisions.

Section 1.—No native making a contract of service to be performed outside* “said territories” is to be received on board any vessel at any place within the territories subject to the Presidency of Fort William in Bengal without an order from the Governor of said Presidency, or a permit from an officer authorized by the Governor to act in that behalf.

2. Before the grant of such permit, the native and the person with whom he contracts, or his agent, must appear before the officer and produce a memorandum of the contract (in English and the mother-tongue of the native, or some language understood by him); the memorandum to specify the nature, the term, and the wages of service.

* This would apparently have put emigration from Bengal to Madras on the footing of emigration to a colony not subject to the Government of India.

3. Contracts are to be determinable on the expiration of one term not exceeding five years, or of successive terms not exceeding five years each, and to contain a stipulation for re-conveyance of the native to the port at which he embarks.

4. The officer is to have power to examine the parties and to explain the terms of the contract to the native.

5. If satisfied that the native understands the contract, and desires to fulfil it, the officer and, if satisfied, to endorse the memorandum of contract. The note is to constitute the permit and to be delivered to the native to be kept during service.

6. If more than 20 emigrants embark on the same vessel, the officer is empowered to summon the person in charge of such vessel and to examine him as to "accommodation," food, and medical attendance provided for emigrants, and to inspect, or cause to be inspected, the vessel itself.

7. He is not to grant permits unless satisfied that "accommodation," food, and medical attendance are sufficient for health.

8. A register is to be kept of each emigrant, specifying name, period of contract, date of permit, destination, and vessel in which embarked.

9. A fee of one rupee for each permit granted is to be levied from the employer, or his agent.

10. The penalty for breach of Section 1 on the part of the master of any vessel is a fine of Rupees 200, or 30 days' imprisonment, for every native allowed to embark without permit.

11. Contracts with native seamen, or menial servants, are exempted from the operation of the Act.

The Superintendent of Police, Calcutta, was appointed the officer to grant permits, and certain rules were laid down for his guidance. They were brief and informal. They required—

(1) that due notice should be given of an intention to ship emigrants;

(2) that the dietary noted below* and five pints of water should be shipped for each laborer for every day of the voyage—the length of the voyage to Mauritius being estimated at from 40 to 65 days, according to the season of the year;

(3) that a medical officer, European or native, with a sufficient supply of medicines, should accompany each ship;

(4) that not more than one laborer for every 1½ tons of actual tonnage should be carried; and

(5) that agreements should specify the name of the employer, the estate whereon the laborer was to be employed, the hours of labor and refreshment, the wages, rations, and clothing allowed.

The Act, as passed, it will have been observed, applied only to the Presidency of Fort William, although the Government of Madras had, in a letter which must have reached Calcutta before the passing of the Bill, advocated the inclusion of that Presidency.

However, as the Governments both of Madras and Bombay subsequently urged the extension of the measure to their territories, recourse was had to fresh legislation, and Act XXXII of 1837 was passed on the 20th of November of that year. It repeals Act V, 1837, and re-enacts it for the whole of the territories of the East India Company; making it further incumbent on the officer granting permits to register the names of the parties with whom contracts are made, of the agents of such parties as appear by agent, and of the masters of vessels on which emigrants are permitted to embark.

The additional clause was intended to prevent the transfer of coolies as chattels from one employer to another,—an abuse which had been pointed out by the Government of Mauritius, but to which the chief Police Magistrate of Bombay had particularly called attention.

The Acts V and XXXII, 1837, did not remain long in force; and, before proceeding to narrate the circumstances which led first to their virtual suspension by an executive order, and then to their formal repeal, it may be as well to put together here such facts as are forthcoming about the emigration which took place under their provisions. It is impossible to reconcile accurately the various accounts; but the emigration of this period from Calcutta, according to what seems the most trustworthy statement, was as follows from the passing of Act V, 1837, to August 1838 :—

To Mauritius, 7,239 men, 100 women, and 72 children, total 7,411 souls.

To British Guiana, 407 men, 7 women, and 10 children, total 424 souls.

To Bourbon, 60 men.

To Australia, 89 men, the first and last direct emigration to Australia.

To Batavia, 4 men.

These last were silk-winders imported to teach their art. Of the emigrants to Mauritius some 150 were domestic servants, and about 100 artificers. The rest, as also the Australian and Demarara coolies, went out as agricultural laborers. I gather that about one-third of this emigration consisted of "hill coolies." The classes and districts to which the rest belonged cannot now be ascertained. Of the batch which sailed to the West Indies, 33 were Musalmans, and (leaving out of consideration about 130 "hill coolies" recruited in Chota Nagpore) the majority seem to have come from Burdwan and Bancoorah. A few belonged to Oudh, Behar, and the lower districts of the North-Western Provinces. From Bombay 139 men seem to have sailed for Mauritius in 1838. I have not been able to get even doubtful figures for Madras. Mauritius alone is said to have imported upwards of 25,000 laborers between August 1834 and August 1838. The Calcutta and Bombay figures taken together would leave a deficit of about 10,000, part of which may be due to emigration from Madras.

In June or July 1838 the echo of the agitation in England against the deportation of Indian laborers to the colonies—an agitation in which Lord Brougham took a leading part—seems to have reached India, and the allegations on which that movement was based deeply stirred the minds both of Lord Auckland and the Members of his Council, and, indeed, of the public generally. Independently, and almost simultaneously, the Governor General at Simla and Mr. Bird at Calcutta recorded minutes on the subject.

Lord Auckland's, dated 3rd July 1838, dwells on the necessity of obtaining fuller information as to the actual treatment of the Indian emigrant, and questions the humanity of allowing him to go to such distant colonies as the West Indian settlements at all. His Lordship seems to have been alarmed by the dimensions which emigration had assumed, and copy of his minute was communicated to the President in Council.

The latter had, however, already taken action, at the instigation of Mr. Bird, who from the first felt strongly on the subject. The Governments of Bombay, Madras, and Bengal had on the 11th July 1838 been directed to withhold permits for vessels carrying emigrants to the West Indies, and to appoint Committees to consider the whole question of emigration, its abuses, and their remedies. The Governments of Mauritius and New South Wales were also asked to appoint Committees to enquire into the condition of the Indians who had emigrated to those colonies. On the 28th November following, the prohibition of the issue of permits was extended to the case of all colonies, intelligence having been received of the issue of orders to that effect by the Court of Directors. The despatch actually containing the orders of the Honorable Court, though dated 1st August 1838, was not received till January 1839. On its receipt a draft Act was at once prepared, and a communication made to the Government of Mauritius requesting its co-operation in carrying into effect the views of the Home authorities. The Marquis de St. Simon, Governor General of the French Settlements in India, was also addressed, and he assured the Government of India that "there existed too good an understanding between the Governments of England and France, and too much community of feeling between the two nations, when the interests of humanity were in question, not to impress him with the certainty that his taking on himself to enter fully into the views of the Government of India would be approved, as regarded the exercise of vigilance to prevent not only Indian laborers from the Company's dominions being embarked at Pondicherry or other French ports, but also those who might furnish proof that they belonged to French territory." Shortly after, however, "His Most Christian Majesty's brig-of-war *Lancier*" arrived in Calcutta with M. Henri Maingard from Bourbon on board. This gentleman came charged with a mission on behalf of the Bourbon Government to arrange for the importation of coolies into that colony. But after a great deal of diplomacy (which is described with much unction in a *verboſa et grandis epistola* to the Court of Directors), the Bourbon emissary returned in "His Most Christian Majesty's brig-of-war," balled by the determination of the Government of India to adhere to the course of absolutely prohibiting emigration; pending enquiry.

Unsuccessful attempt of French authorities to induce Government of India to permit continuance of emigration to Bourbon.

Action taken by the Government at Calcutta.

Permits for vessels to West Indies withheld, and Committees of Enquiry appointed.

Prohibition of permits for emigration to any colony.

Preparation to legislate.

Before the draft became law, a letter was received from the Government of Ceylon protesting against the measure, as it would affect that island, and reciting what had been done there. An Order in Council, dated 30th July 1838, was quoted declaring that in West Indian Colonies and Mauritius no contracts made outside the colony were to be enforced by the Courts, and it was stated that steps were taken to ensure emigrants from Ceylon being made thoroughly to understand this. The Government of Ceylon was asked whether it could pass a law similar to that which would be passed in India; it being obvious that otherwise Ceylon would merely become a depot for Indian laborers and the Indian law be rendered nugatory. No reply to this was received, and the proposed law was, therefore, passed on the 29th May as Act XIV, 1839.

It is a brief enactment;—Section I repeals Acts V and XXXII of 1837. It repeals Acts V and XXXII, 1837;

Section 2 declares that any person contracting with a native of India for labor to be performed in any British or Foreign colony without the territories of the East India Company, or knowingly aiding or abetting a native of India in emigrating from such territories for the purpose of being employed as a laborer, shall be liable to a fine not exceeding Rupees 200 for every such native so contracted with, aided or abetted, or, in default of payment, to imprisonment not exceeding three months.

By section 3 contracts with native seamen, or menial servants, are excepted.) Certain contracts excepted.

Meanwhile the Committee appointed at Calcutta* to enquire into the alleged abuses attending emigration had held sittings, taken the evidence of Natives and Europeans, and examined the written records bearing on the subject. Their report, however, was not submitted till the 14th October 1840, and was signed by only three members, viz., Mr. T. Dickens, Reverend J. Charles, and Baboo Russenoy Dutt. The evidence taken relates altogether to emigration to Mauritius. It is very voluminous, but not very valuable to us now. Broadly it may be said to have proved that very grave abuses had prevailed in India, emigrants having been, in too many cases, entrapped by force and fraud and systematically plundered of nearly six months' wages, nominally advanced to them, but really divided, on pretences more or less transparent, among the predatory crew engaged in the traffic. With respect to the treatment of emigrants on the voyage and at Mauritius, the evidence was conflicting; but did not, I think, prove more than that there were some bad masters in Mauritius, and that some of the ship-captains engaged in the traffic were, from brutality or apathy of character, little fitted for the charge of coolies.

But the three members of the Committee, who signed the report believed that much more was established, and condemned the whole system in every stage. They expressed their conviction that no regulations would avail to prevent the like abuses, and recommended that the prohibition of all emigration should be maintained. If this could not be done, nothing short of putting the whole management of emigration from first recruitment to arrival in the colony under the superintendence of a paid department of the Government service would satisfy them. The expense attendant on any such plan would have been as complete a prohibition as any legal enactment, and this no doubt the Committee perceived.

The three members go much further, and recommend that the prohibition should be maintained. Major Archer, the fourth member of the Committee, went to Europe at an early stage of the proceedings, and I have not been able to obtain his views, if, indeed, he ever put them on record. The fifth member, Mr. Dowson, was himself a merchant interested in the exportation of labor. He, as was only to be expected, refused to sign the report, and recorded a separate minute of absolute dissent. Mr. Dowson's dissent.

But the most valuable document called forth by the enquiry is the minute of the sixth member, Mr. (now Sir) J. P. Grant. I extract the conclusion in which he sums up the practical remedies he would propose:—

"I conclude then that, as far as our information goes, the whole of the evils which attended the export of Indian laborers to our own colonies were casual, and may, by good regulation, be prevented for the future; that the direct advantages of free emigration are immense, whilst the indirect advantages are incalculable, consequently that free emigration from India to our own colonies ought to be permitted under such regulation in India and in the colonies as may afford a reasonable expectation of preventing the recurrence of the evils

The evils which had attended emigration preventible.

are immense, whilst the indirect advantages are incalculable, consequently that free emigration from India to our own colonies ought to be permitted under such regulation in India and in the colonies as may afford a reasonable expectation of preventing the recurrence of the evils

* The Bombay Committee had reported that no such abuses prevailed on that side of India. In fact, emigration from Bombay could hardly then have been said to exist. The Madras Committee had not contributed anything of value. The records of the Mauritius Committee, if it ever sat, are not forthcoming, and no communication whatever seems to have been received from Sydney.

heretofore experienced. As far as Mauritius is concerned, I regard our information as complete, and, therefore, there can, in my opinion, be no reason to delay the opening of that colony beyond the time when the colonial laws and institutions shall be pronounced to be, in all that concerns this question, in a satisfactory state. Not having complete information in regard to our other colonies, I cannot conclude with equal confidence as to them; but I see no reason to suspect that any evils that may have been experienced in those colonies are not remediable by proper measures in the same manner as in Mauritius, consequently my belief is, that the conclusion applies equally to all our colonies. In regard to Bourbon, the only foreign colony to which Indian laborers have gone in large numbers, we have no information. There are, however, strong grounds for suspecting that abuses may exist there in a higher degree than in Mauritius from the circumstance of Bourbon being still a slave colony. In my opinion that fact alone affects the case very materially. The Government of that country has shewn a strong desire to protect imported laborers by the enactment of protective laws. But the state of the law is a small matter compared with the state of the public feeling and the administration of the law, whereof we know nothing. I cannot imagine an island, of which the population consists of a few white masters, a large number of black slaves, and a large number of free black foreigners, being an eligible habitation for the last-mentioned class. The Crown cannot know that the Indian laborer there gets justice in all respects like a French laborer in his own country, and, if he do not, it cannot afford him protection. This is not the case of a few stray laborers leaving their country to go to a foreign land—a case which might certainly be disregarded by the law. But this is a case where British subjects would be annually exported systematically and by thousands. If, therefore, there is need of interference, the importance of the matter demands legislation. Since the prohibitory Act of the Indian Government, the exportation of laborers from Pondicherry has been stopped. If any British ports are again opened, Pondicherry may very probably again be opened. I do not deny that this is a point which is involved in some difficulty, but as our legislation will affect only our fellow-subjects, whose protection is our first duty, we have no right, merely because foreign interests are concerned, to refuse to legislate for them in such manner as is most conducive to their good, whether in the way of restriction or in the way of relaxation.*

Recommends opening of emigration to Mauritius.

and, more guardedly, to other British colonies.

The case of Bourbon different.

have gone in large numbers, we have no information. There are, however, strong grounds for suspecting that abuses may exist there in a higher degree than in Mauritius from the circumstance of Bourbon being still a slave colony. In my opinion that fact alone affects the case very materially. The Government of that country has shewn a strong desire to protect imported laborers by the enactment of protective laws. But the state of the law is a small matter compared with the state of the public feeling and the administration of the law, whereof we know nothing. I cannot imagine an island, of which the population consists of a few white masters, a large number of black slaves, and a large number of free black foreigners, being an eligible habitation for the last-mentioned class. If any British ports are again opened, Pondicherry may very probably again be opened. I do not deny that this is a point which is involved in some difficulty, but as our legislation will affect only our fellow-subjects, whose protection is our first duty, we have no right, merely because foreign interests are concerned, to refuse to legislate for them in such manner as is most conducive to their good, whether in the way of restriction or in the way of relaxation.*

Difficulties on this point.

our legislation will affect only our fellow-subjects, whose protection is our first duty, we have no right, merely because foreign interests are concerned, to refuse to legislate for them in such manner as is most conducive to their good, whether in the way of restriction or in the way of relaxation.*

"I believe, however, that it will only be necessary to prevent British subjects being inveigled or carried by force into foreign territories on the Indian continent. If all persons conducting laborers into these territories are subjected to proper regulations, whereby it may be certain that every laborer so proceeding shall be made aware that he is liable to be taken beyond sea without the protection of the British Government, and whereby the option of turning back shall be freely afforded him, I do not think that any abuse is likely to occur. But, conceiving this to be a point on which the Madras Committee must have a great deal more information than we have, I shall say no more upon it.

"The sort of law which I would suggest, and which, in my opinion, would be sufficient for regulating the system of emigration from India, may be gathered from what I have said when touching upon the several abuses to be guarded against. In India it would be necessary to limit emigration to certain ports which might be conveniently named from time to time by the executive Government. The necessity of regulating the system involves the necessity of limiting it to places where means can be provided for the enforcement of the regulations. At each port of embarkation a Protector of Indian Emigrants might be appointed, having no connection with the police and no power to punish. He might probably conduct his duty with a very small establishment. At any rate the one or two clerks and chuprasces whom he may require should have no interest in the matter. At his office he might examine leisurely one by one, and without the presence of any party interested in the system, every laborer who should come to him professing a desire to embark. After making sure that the laborer fully understands what he undertakes, and that he is acting voluntarily, the Protector might make out a certificate containing a description of the holder's person. A registry of all certificates, containing the date of examination and all particulars, might be kept. The system of passing coolies in batches might be forbidden. It might be the Protector's duty to see that no force, or show of force (such as marching coolies about in gangs under burkandazes), should be allowed, and to make it well understood by

Certain ports to be fixed.

* (See paragraphs 30 to 33 of the Report on this point.)

"The argument of those passages is, that if we permit a free circulation of labor in our own dominions in regard to our Indian fellow-subjects, we shall be in a bad position when we endeavour to persuade Foreign States to abolish the slave trade. I cannot admit this paradox till the freedom I support shall be demonstrated to be slavery. In my opinion the less we interfere with the natural freedom of our own laborers the more effect will our arguments in favor of free labor have with other nations. I hope that we never shall be placed in the trying situation of having to choose between partially enslaving our own laborers in practice, or abandoning the cause of foreign slaves in theory. The argument we are recommended to hold to the emancipated slave colonies to my mind is this: Formerly you had nothing but slave labor. Slave labor is abomination, therefore we shall now do all we can to prevent your having free labor."

all that if any laborer, at any moment, chooses to change his mind as to going abroad, no summary interference with him will be permitted. The certificate might, within a limited time from its date, be a sufficient warrant to any master of a vessel who had obtained authority from the Protector for conveying emigrants to receive the holder on board. The Protector might refuse to grant such authority, unless convinced that the master and officers are, by experience, temper, character, &c., suited for such a duty as the conveyance of Indian laborers. Before the ship breaks ground, the Protector might proceed on board and grant a final permit to the master to sail with such laborers as then and there produce their certificates, and still testify their desire to proceed; provided he be satisfied that all regulations concerning

More liberal regulations as to space, space, food, water, ventilation, medicine, &c., have been duly attended to. In regard to space and water, the regulations might be more liberal in favor of the emigrant than the old regulations. Security, in the

Security for return passage.

Government might frame, and to render breach of the same, on shore or at sea, punishable in any part of the British dominions. To prevent smuggling Indians to foreign parts contrary to law, all vessels trading in British waters, and British vessels everywhere might be liable to search by men-of-war, expressly with this object, and a proper penalty for every Indian laboring man found on board contrary to law might be imposed. If more than a very small number should be found, the

British waters, and British vessels everywhere might be liable to search by men-of-war, expressly with this object, and a proper penalty for every Indian laboring man found on board contrary to law might be imposed. If more than a very small number should be found, the

Government of India only to allow emigration to colonies where it was assured the emigrant would enjoy freedom and protection from wrong.

Special points in Colonial law which should be insisted on.

power to retain laborers within the limits of an estate, nor otherwise to interfere with their liberty out of working hours, nor to inflict corporal punishment upon them, nor to inflict any other punishment upon them otherwise than by the hands of public justice, should, in my opinion, be permitted. Breach of contract on either side should annul the bargain in respect to the party breaking it, except that the contracting employer should be obliged to return the

The term of engagement should vary according to the distance of the colony.

Two years for Mauritius would certainly be ample. Taking the market rate of wages there at Rupees 10, and the contract rate at 5, rations being the same, that would allow the contracting employer Rs. 120 for his expenses in importing and exporting again the contracting laborer.*

"After the first term I think no renewal should be allowed, but employer and working man should be left to make their own bargains for short terms, say, for not longer than six months. All bargains for short terms in anticipation of the expiry of existing bargains

should, I think, be valid. One day of rest in seven, except upon pressing occasion, might be insisted upon. A class of laborers who should work every day of the week would drive laborers who work only six days out of the market.

"In regard to legal procedure, the appointment of competent interpreters would be indispensable. So also, I think, the institution of cheap and accessible courts, competent to give laborers civil damages for ill-treatment on the voyage and in the colony, should be insisted upon. Perhaps a colonial Protector of Indian laborers, to give advice and generally to see that these poor people obtain their rights, to be the medium of communication between the laborer and his family, and to remit money to the laborer's home by a system of public bills, also to report on the arrival of each cooly vessel to the Protector at the Indian port whence it sailed, might be useful to the colony. As in India, I think it would be better to confine the police and all other judicial officers to their proper duty of deciding disputes and punishing offences in cases where Indian laborers are concerned, as in all other cases. Where Indian laborers sue without contracts for our own colonies, it does not occur to me that any measures are necessary, except such as will insure against their being carried off involuntarily by fraud or force. Regulations such as are above contemplated as to be enforced in India would seem to me sufficient for this purpose."

The views of the members of Government were almost as divergent as those of the members of the Committee. Mr. Bird would have chosen to maintain the absolute prohibition. Lord Auckland would have permitted emigration to Mauritius, if he could have seen

* "Because of the disadvantages under which the weaker party to the contract may often labour from his original ignorance of circumstances known to the other party and the nature of the bargain, I think he should have the power of freeing himself on paying the full charges of the other party, as proposed by Lord Glenelg. If this be not allowed, I think there should be no remedy for breach against the weaker party but by regular civil action."

his way to preventing emigration to other colonies at the same time. Messrs. Prinsep and Amos were for permitting a regulated emigration to both British and Foreign colonies. I may remark, *en passant*, that the facts hardly bore out Mr. Amos' views as to the result of an absolute prohibition. There were, it is true, a few cases of violation of the Act, some 25 coolies having sailed for Mauritius from Calcutta and 218 from Cuddalore, besides about 35 shipped from Ceylon. But the Mauritius Government acted very loyally in the matter, and gave the men on arrival to understand that they were free from all engagements, and that it was at their option to go back to India or stay in the colony.

In their despatch No. 22, dated 29th September 1841, the Directors acknowledged the receipt of the minutes of the Governor General and his Council, but declined to allow any relaxation of the existing law till the matter was considered by Parliament.

Meantime the report of the Committee and the evidence taken before it had been laid before the House of Commons, and the enthusiasm, which had from the first had somewhat of a not unnatural exaggeration about it, began to cool down. Ultimately the matter was left to be settled by the Colonial Office in communication with the Board of Control and Court of Directors.*

* I have gone through the debates in Hansard, and may here give, in the merest outline, the parliamentary history of the question from 1837 to 1842.

On the 10th July 1837, Mr. Fowell Buxton asked Sir J. C. Hobhouse how the importation of natives of India into Mauritius and the West Indian Colonies took place, and whether the natives so imported were in any degree regarded as slaves. Sir J. C. Hobhouse, in reply, assured Mr. Buxton that the emigration was perfectly free. "They were no more regarded as slaves than the House of Commons itself." And Sir G. Grey averred that, as far as the colonies were concerned, every precaution was taken to preserve the immigrant laborers in a state of "complete and perfect freedom."

The first note of challenge came from Lord Brougham, as a leading abolitionist and anti-slavery man. In January 1838 he discovered and brought to light a "reluctant" Order in Council of the preceding July, by which the Colonial Office had permitted the introduction of foreign laborers into British Guiana. In the course of a debate on negro emancipation on the 20th February 1838, he described this measure as the establishment of what came a slave trade, and on the 6th March following he delivered himself of a strenuous denunciation of the system of emigration from India, and moved a resolution condemnatory of the Order in Council. A debate in which the Duke of Wellington, Lord Melbourne, Lord Glenelg, and Lord Ellenborough took part. He first maintained that emigration under certain checks might properly be admitted, and Lord Glenelg went so far as to say that these checks were actually imposed by the Act (V, 1837) which had been passed in the Indian Legislature. The Duke of Wellington, in a temperate and sensible speech, described the regulations as considered necessary to put emigration on a safe footing, and blamed the Government of India for only taken action in 1837, though the export of laborers had been going on since 1834. Lord Brougham replied vigorously, declaring that he had "no choice but to act as he had done through the whole of maintaining to the end the implacable enmity with which he had at all times pursued this infernal trade." Information then in Lord Brougham's possession seems to have been supplied by the reports of Messrs. Clark and Scott already referred to in this narrative. It can, therefore, be judged how far his denunciations were on fact, how far on the foregone conclusion that the traffic could not be other than a slave trade, and how to be exterminated root and branch. Ultimately 'the previous question' was, on the motion of the Duke of Devonshire, carried to the extreme indignation of Lord Brougham, who wrote and published a letter to the contrasting with him for the part he had taken in the debate. Lord Melbourne had, however, in the discussion, pledged himself to take into consideration the Duke of Wellington's suggestions for a more strict regulation of the traffic (in fact these tactics had enabled Government to carry 'the previous question'), and on 22nd May 1838, Lord Glenelg moved the second reading of the Natives of India Protection Bill. It seems to have been the supervision of emigration by special officers to be appointed in India.

On 16th of July, Lord Brougham drew attention to the subject. "Had not their Lordships," he said, "the circular of the Messrs. Huson, who had held themselves forth to the public as accomplished and who had bragged that in two years they could furnish to the Mauritius 5,000 hill coolies, including passage money, provision, water, and all other stores, and an advance of six months, 5—these wages being 5 Rupees or about 10 shillings a month, while the wages of a day laborer were instead of 3d. or 4d. a day from 3s. or 4s. a day? These poor and ignorant creatures, the smuggled away under the idea that Mauritius, to which they were going, was a village belonging to the company. He hoped that before this session of Parliament closed, an entire traffic in hill coolies would be passed. He had seen an account of a vessel having carried 15, and as a brag, it was said that only 10 died in the vessel during a voyage of four months, mortality of 1 in 15, which was most hideous and frightful mortality, and an additional reason, why this abominable traffic should be stopped."

He read a third time that session in the Upper House, but not pressed in the House of Commons, given that, pending inquiry into facts, emigration would be forbidden by the Government.

On 30, Lords Brougham and Ellenborough again pressed the subject, referring in the strongest terms to the mortality among natives of India both in British Guiana and on the passage. Lord Brougham used such phrases as "the charnel houses of Demerara," and declared that the "mortality and massacre far exceeded the African middle passage itself." The grossly exaggerated form of these assertions from the figures hereafter given of the result of the emigration of 1838 to British Guiana. The fact as at the same time brought forward by Sir James Graham in the Lower House, and Mr. Labouchere, that there had been great mortality on one estate at Demerara. As for the Mauritius, the accounts on the whole extremely favorable."

On the 4th February 1840, Lord John Russell took occasion from Mr. Vernon Smith's moving for leave to introduce a Bill to extend the Passengers Act, to the British Colonies in the West Indies, to announce to Parliament that Government had come to the conclusion that, as far as Mauritius was concerned, the then existing law against emigration might, under strict regulations, be relaxed. As to the West Indies it was not proposed to interfere. Sir James Graham suggested that the best way to arrive at the sense of the House on the measure would be to bring in a separate Bill. But instead of doing this, Lord J. Russell attached to the Bill Passengers Bill some general clauses favoring the admission of Indian emigrants to Mauritius. A Bill related to emigration from the United Kingdom to the West Indies, the device was somewhat clumsy.

In January 1842 the Colonial Office came to the conclusion that, as far as Mauritius was concerned, there was no necessity for maintaining the prohibition against immigration from India; and on the supposition that the Indian Government would not be unwilling to remove the interdiction, an Order in Council was passed to the following effect :—

After reciting the probability of the resumption of emigration to Mauritius under laws for the protection of emigrants, among which would be a provision for the appointment of officers at Indian ports charged with the "care, protection, and superintendence" of emigrants, also the probability of the enactment of a law at Mauritius for defraying the costs of emigration from the public revenues of the island, and the necessity of a law for regulating such expenditure and preventing abuses in the introduction of emigrants, the Order goes on to enact the following rules, (based, to speak broadly, on the English Emigration Acts) to have the force and effect of law in Mauritius :—

- I. The Governor of Mauritius to appoint Emigration Agents at Indian ports of embarkation and a Protector of Immigrants at Mauritius.
Its provisions: Emigration Agents to be appointed at Indian ports.
And remunerated by a fixed salary.
- II. Agents to be remunerated by a fixed salary.
- III. Agents by personal communication with every emigrant to ascertain that he goes spontaneously and with a knowledge of where he is going to; also, that each emigrant is in good health and not incapacitated for labor by old age, infirmity, or disease.
- IV. Not more than one person to be embarked for every two tons of registered burthen; the tween decks to be six feet high, not more than two tiers of berths allowed, the lower tier being six inches the deck; and 12 superficial feet to be allowed on the lower deck for person.
- V. Two children under 10 years of age to count as one person.
- VI. Five gallons of water and 7 lbs. rice, bread, biscuit, flour, oatmeal, or bread to be provided for each person for every day of the computed voyage. The Governor of India to have power to substitute other articles of food equivalent to the above.
- VII. The computed length of voyage to be fixed by legislative enactment the Governor General in Council which a close season may also be prescribed.
- VIII. The Agent to survey, or cause to be surveyed, the vessel and provisions, and water for crew and passengers a certificate to the master.

However, on the question raised in this strangely indirect way, there was (4th June 1840) marked by a tone of exaggeration and an absence of well authenticated facts. The statements appear to have taken for gospel the extreme accounts of past cruelties, "horrors," being phrases used as freely by Lord J. Russell as by Dr. Lushington.

The upshot of the debate was, that a motion was carried that it should be an instruction that they had power to regulate the intercourse between the East India and Mauritius, an clauses were agreed to in committee and read a first and second time. But on the question the (22nd June 1840), Dr. Lushington moved the omission of the clauses relating to hill coolies, as carried by a majority of 49; 158 to 100.

Thus there ceased to be any legislative measure on the subject before either House.

On the 11th March 1841, Mr. Mackinnon urged the opening of Guiana to immigration; but counted out.

Accordingly the question, as far as the Mauritius was concerned, came to be disposed of except Secretary of State for the Colonies (now, on a change of administration, Lord Stanley) acting in with the Board of Control and the Court of Directors. On the 1st March 1842, Mr. Vernon Smith elaborate attack on Lord Stanley's policy, maintaining that the House of Commons, by its vote of 1840, had virtually declared that Mauritius should not be opened to immigrants. Lord Stanley replied. Both parties now found an ample armoury of weapons in the reports of the Calcutta Committee minutes of Lord Auckland and his colleagues. Mr. Vernon Smith ultimately withdrew his motion, framed in such a way (a call for instructions from the Board of Control to the Governor General, with course, the Board was never in immediate communication), as to allow Lord Stanley to characterise "ridiculous" motion for papers which did not, and, indeed, could not, exist.

A final stand was, however, made on the 26th July, when Mr. Hogg vigorously maintained pressed by the joint report of the three consentient members of the Calcutta Committee; but the motion supported was lost by a majority of 94; 118 to 24.

On the whole the history of the parliamentary discussion throws little light on the question of immigration; combatants on both sides fought equally in the dark till they got the report of the Calcutta Committee

The master to provide every emigrant, his wife and children, with a sufficient quantity of good and wholesome provisions for the voyage and 48 hours next after arrival in Mauritius.

*Provisions for 48 hours to be supplied on landing.

X. Two copies of regulations to be given by the Agent to the master; and one copy to be produced by the master "for perusal" of any passenger.

Copies of regulations to be kept.

XI. The master to deliver to the Agent a list, in duplicate, of the names, ages, and occupations of emigrants; and to receive back a counterpart signed by the Agent, to be delivered to the Protector of Immigrants. The Protector, on the arrival of any ship, to proceed on board and ascertain by personal inspection whether Rules IV and IX have been observed; to be checked on arrival.

number and names with the counterpart list, certifying the total number living, and marking off deaths or differences.

XII. The Protector, if satisfied, to grant the master a certificate.

Certificate of Protector in the colony necessary for master of ship.

XIII. No money to be payable except on warrant issued on such certificate.

XIV. The Protector to keep a register of immigrants.

Protector to keep a register of immigrants.

XV. Penalties leviable from master of ship in Mauritius for breach of rules.

Penalties.

XVI. Rights of civil action reserved.

Rights of civil action.

XVII. Nothing to apply to vessels in the service of the Lords Commissioners of the Admiralty, or to any of Her Majesty's ships-of-war.

Certain vessels exempted.

XVIII. No immigrant to enter into any contract of service till he shall have been 48 hours on shore; any such contract to be null and void.

XIX. No immigrant to be liable to any action, suit, or demand in respect of any debt contracted or any contract made before his arrival in Mauritius.

No suit to lie on any contract made before arrival in Mauritius.

XX. Immigrants only to be capable of entering into contracts for the period, in the manner, and under the superintendence which, by a law in force there, is required in the case of contracts for service made by other laborers in agriculture or manufactures within the island.

Copy of this Order in Council was sent by the then Colonial Secretary, Lord Stanley (late Earl of Derby), to the Governor of Mauritius with a letter setting forth the reasons which had moved Her Majesty's Government to permit the resumption of immigration into the island, and drawing particular attention to the necessity for a secure guarantee for the return passages of immigrants desiring to return to India, at the expiry of their term of service, and for full liberty being given to the laborers to avail themselves of the opportunity of return.

Lord Stanley at the same time addressed the Commissioners for the affairs of India, forwarding copy of the Order in Council, and requesting that the correspondence might be communicated to the Governor General through the proper channel, with instructions to bring the subject under the notice of the local legislature, and to report the result for the information of Her Majesty's Government.

The result was the legislative despatch from the Court of Directors, No. 4, dated 22nd March 1842, which left the whole question to the decision of the Government of India, merely enjoining in the most general terms the necessity for the establishment of proper safeguards to prevent "a project intended to promote the advantage of certain classes of the people of India, by allowing them free command of their labor being perverted to their injury," and for a very careful watch upon the operation of the law, should the existing restriction be relaxed.

The Government of India lost no time in preparing a draft Act and forwarding it to the Court of Directors and the Governor of Mauritius. The latter had, indeed, already, in a letter dated 5th March 1842, urged on the Government of India the removal of the prohibition, representing the great importance of labor to the colony, and promising that the views of the Governor General in Council, in regard to the protection and welfare of immigrants, should be "carried into the fullest and most complete effect." As a guarantee of the desire of the Mauritius authorities to deal liberally with the cooly, copy of an Ordinance was forwarded, establishing a fund of £25,000 yearly for the purpose of providing passages for immigrant laborers, and defraying other expenses incidental to free immigration; and to prove how

the laborers who had already gone to the island had prospered, it was shown that 622 persons had deposited £8,515 in the Government Savings' Banks, though, owing to the preference for secret hoarding, even this sum could not be considered to represent the whole of their economies. And the opportunity was taken to urge an arrangement by which family remittances could be made by those wishing to send money to India.

The reply of the Government of Mauritius to the letter forwarding the new draft Act is dated 20th August 1842. It expresses full concurrence in the proposed enactment, and forwards copy of an Ordinance (No. 11 of 1842) passed to supplement the Order in Council and the contemplated legislation in India. This ordinance enacts penalties against masters of ships infringing the regulations, similar to those proposed in the Indian draft, and makes legal provision for the repatriation of immigrants at the end of five years. Warrants were also forwarded for the appointment of Emigration Agents at Calcutta, Madras, and Bombay, and it was stated that Mr. C. Anderson had been nominated for the post of Protector of Immigrants at Port Louis.

On the 2nd December was passed Act XV, 1842. It is to the following effect:—

Act XV, 1842, passed.
Its provisions.

1. After reciting in full the Order in Council of the preceding January, it repeals Act XIV, 1839, and the Acts thereby repealed, as regards emigration to the Mauritius from the ports of Calcutta, Madras, and Bombay.

2. Emigration to Mauritius from the three ports is permitted under the following regulations:—
Emigration to Mauritius from Calcutta, Madras, and Bombay permitted.

3. The local Government may appoint an Emigration Agent to be nominated by the Government of Mauritius; each Agent is to make monthly reports to Government.
An Emigration Agent at each port.

4. A license for each ship is to be obtained from Government, on payment of a fee not exceeding one rupee per emigrant. The master is to execute a bond, in duplicate, binding himself and owners in a penal sum of Rs. 10,000 to conform to the prescribed conditions. One copy is to go to Mauritius. Any ship conveying emigrants without license is "liable to be forfeited," and the master is liable to a fine of Rs. 1,000 for every emigrant illegally conveyed.
Licenses for emigrant ships.
Bond to be executed.

5. No emigrant is to be received without a certificate from the Emigration Agent, stating name, father's name, age; and unless, having appeared before the Agent, he has declared his willingness to proceed to work for hire in Mauritius.
No emigrant to be embarked without certificate from Agent.

6. Before a vessel can be cleared for Mauritius with emigrants on board, the master must produce a certificate from the Agent shewing—
Master must produce certificate from Agent shewing that rules have been complied with.

(a) that the Agent has complied with Rule III of the Order in Council;

(b) that the directions contained in Rules IV—VI, and VIII, have been obeyed; and

(c) that the rules laid down by the Governor General in Council or President in Council, touching medical attendance and medical stores, kinds of provisions, number of women, "and other matters," have been complied with.

7. The computed lengths of voyages are to be—
Length of voyage defined.

From Calcutta—

April—October, inclusive	...	...	10 weeks.
November—March	...	...	8 "

From Madras—

April—October	...	...	7 "
November—March	...	...	5 "

From Bombay—

April—September	...	...	5 "
October—March	...	...	6 "

8. Enforces Rule IX of the Order in Council.

Rule IX of Order in Council enforced.

9. The penalty for non-compliance with Sections 5, 6, and 8 of the Act to be Rs. 200 for every emigrant illegally taken on board.
Penalties.

10. The penalty for taking emigrants on board after clearance to be Rs. 500 for each emigrant.

11. Any act on the part of the master which fraudulently makes the certificate inapplicable to the ship, its passengers, or other matters to which the certificate relates, to be punishable by fine not exceeding Rs. 5,000, and forfeiture of license bond.

12. Pilots and customs officers to have the same powers for the prevention of illegal embarkation of emigrants as the latter class possesses to prevent smuggling.
Powers of pilots and officers of customs.

13. Crimping made liable to a fine of Rs. 500, or imprisonment for six months.
Punishment for crimping.

14. Calcutta.—The customs officer to countersign the pass of each emigrant, and to keep a register; to remain on board as far as Saugor Roads, and not to come away till crew and passengers have been mustered before him and the pilot. After the departure of the customs officer the pilot may take a muster and require the master to sign the muster-roll. The Custom House officer and pilot to make report with a declaration of observance of rules, and the report to be transmitted to the Emigration Agent. The penalty for false report to be Rs. 500, or, in default, six months' imprisonment.
Special rules for customs officer at Calcutta.

15. Forgery of any document required by the Act made punishable by imprisonment for seven years.
Penalty for forgery of documents.

16. All penalties against master to be enforceable by information laid at the instance of the Emigration Agent, or an officer specially appointed, or by putting in suit the license bond given by the master.
Penalties how enforceable.

The warrants of appointment as Emigration Agents were issued to the Masters Attendant at the three ports. But these officers having other important and arduous duties to perform, it was determined, at all events at Calcutta, to appoint a working assistant to the Agent. The contribution by the Mauritius Government was fixed at Rs. 8,000 per annum, the balance of the amount of salaries being met from the fees leviable under the Act. The proposal of the Mauritius Government as to the remittances of coolies was accepted, and that Government allowed to draw bills for small sums on India at the exchange of the day, undertaking to transmit drafts on England periodically to meet the amount which might be thus drawn in favor of Indian laborers.
Masters Attendant at Calcutta, Madras, and Bombay appointed Emigration Agents.
Minor arrangements.

The rules framed at Calcutta provided for the medical examination of emigrants by the Marine Surgeon or his Assistant, the supply of medicines according to scale, the shipping of a European Surgeon or Native Doctor, and the supply of the following dietary: Rice 28 oz., dal 4 oz., ghee or oil 1 oz., salt 1½ oz., onions 1 oz., tobacco 1 oz., chillies ½ oz., tamarind 2 oz., per diem; and five gallons of water a week. It was at first proposed to limit the proportion of women and children to 12 of the former and 20 of the latter to every 100 men. But the Court of Directors refused to sanction any *maximum*. It is strange that Lord Ellenborough, who, in the House of Lords, was loud in his denunciation of the "abominations" resulting from an insufficient proportion of women, should not have thought it necessary to prescribe a *minimum*.

In 1843 the Court of Directors forwarded copy of a despatch from Lord Stanley, pointing out that the law, as passed, deviated from the scheme contemplated by the Colonial Office, which provided for a Protector of Emigrants as well as an Emigration Agent. This despatch was dated 8th May 1843. Mr. Bird recorded a minute strongly supporting the proposal to have a separate Protector, which he shewed was necessary in order completely to carry out the intentions of Her Majesty's Government, the business of supplying emigrants having under Act XV, 1842, "as it stood, again become a speculation of the Mauritius planters themselves who employed the agency houses of Calcutta to procure emigrants, which houses entertained crimps and duffadars to go into the interior, and, by false representations and other devices, induce ignorant people to agree to emigrate." Another consequence of the Agent's abdication his proper functions for those of Protector, Mr. Bird pointed out to be that the emigrants were deprived of the benefit of those clauses of the Order in Council which were intended to secure them liberty of contracting with whom they pleased on arrival at Mauritius, for the planters formed a combination among themselves and would not interfere with one another's arrangements. And the practice of enlisting prostitutes to fill up the ranks of the female emigrants would also be checked.

In the course of the same year the Governor of Mauritius having considered it advisable to send an officer to India to communicate with the Government of India on the subject of immigration into that island, Mr. C. Anderson was selected and deputed to Calcutta. The objects of Mr. Anderson's mission were to place the Governor General in Council in possession
Mr. Anderson deputed to India by the Mauritius Government.

of well-defined information as to the number of laborers required at Mauritius, the annual supply which would be necessary to meet the reduction owing to ordinary mortality and by immigrants returning to India, and to advocate the adoption of the measures best calculated to encourage the emigration of women and families. It was calculated that thirty thousand laborers would meet the demands of the colony, and that of this number about 29,000 (among whom 2,700 women and 700 children) would have reached Mauritius by the 1st of January 1844. The estimate is thus made by Mr. Anderson, writing in October 1843—

Sailed from Calcutta	13,679
To be despatched up to 30th November	2,500
From Madras	11,000
„ Bombay	1,500
Total	28,679

The annual supply estimated as necessary was then calculated at from 1,500 to 2,000. His estimate of the supply of laborers required. As Calcutta was considered able to supply this amount, as the majority of the women-emigrants had already been obtained from Bengal, as it was not considered necessary to saddle Mauritius with the cost of three Protectorates and three Agencies, and as Calcutta was in most constant communication with Mauritius, it was decided to pass an Act without delay limiting emigration from the 1st of January 1844 to the port of Calcutta and providing for the employment of a separate Agent on the part of the Mauritius Government, and of a Protector on the part of the Government of India.

Accordingly, Act XXI, 1843, was passed on 11th November of that year, and received the full approval of the Court of Directors. It consists of but two sections,—

Section 1 recites the probable reduction in the number of emigrants and the necessity for providing for a larger proportion of women, and enacts that from 1st January 1844 emigration shall only be lawful from Calcutta.

Section 2 authorizes the Governor General in Council to appoint a Protector of Emigrants at Calcutta, and enacts that no emigrant shall embark without a certificate from the Agent, countersigned by the Protector.

A new set of rules was now prescribed. The Protector was by these rules enjoined to see that the ship was fit for the conveyance of emigrants; that the space was sufficient; that she had a competent commander and chief and second mates, chronometers, and a barometer; that the prescribed dietary, water, medicines, &c., were taken on board; that the ship had either a European Surgeon or a Native Doctor certified by the Medical Board to be competent for the charge; and that the necessary bond was executed. His attention was directed to the various returns and lists which he was bound to keep, and he was especially directed to examine each intending emigrant 'touching his acquaintance with the nature of the voyage, the employment he was likely to meet with, and the wages he was likely to get,' and to be 'particularly careful that no one embarked under erroneous notions in those respects.' He was to see that the alleged proportion of women actually embarked. But no minimum was prescribed. Vessels sailing between 15th March and 15th September were to use steam from Garden Reach to Khedgree, if they carried more than one man for every five tons of burthen.

The dietary was fixed as follows :—

Dietary

Daily,—rice 20 oz.;* dāl 4 oz.; ghī 1 oz.; oil 1½ oz.; salt 1½ oz.; turmeric 1 oz.; onions 1 oz.; tobacco 1 oz.; chillies 1½ oz.; tamarind 2 oz. A week's supply of chūrā, gram and sugar, at the following daily rate, to be taken on board in case of bad weather preventing the cooking of ordinary provisions :—

Chūrā 1 ser, gram 4 chhatāks, sugar 1 chhatāk.

Water 5 gallons a week per head.

Water

Fuel

Firewood for 100 men or less 400 lb per diem.

„	„	100 to 200	... 600	„	„
„	„	200 to 300	... 700	„	„
„	„	300 to 400	... 800	„	„

* I find no reason given for the reduction of the quantity of rice from 28 to 20 oz. But in the Calcutta dietary the latter figure was adhered to till 1865, when the daily ration of rice was raised to 24 oz. It was, however, afterwards lowered to 20 oz., an amount which experience has shewn to be sufficient.

I may here notice the substance of a series of reports received from Mauritius in 1845. Owing to the extension of sugar-planting there was great competition for labor. Each ship-load of immigrants was at once engaged, the term of indenture having been fixed at one year. Each adult received rupees 5 per mensem in money wages, in addition to diet and clothing on a liberal scale, hutting, and medical attendance. Laborers of the earlier emigration who chose to re-indenture received rupees 7 a month in money wages, and upwards of 10,000 laborers had so re-engaged themselves. Those who returned to India were, on the other hand, numerous. But the Colonial Government attributed this fact to the facility of intercourse between India and Mauritius, the short term of engagement, the good wages, enabling the laborers soon to amass a little hoard, and in part to the enlistment by the Agents in India of men unfit for agricultural labor. This latter evil soon tended to remedy itself in the then state of the labor market. Many of those returning to India returned, it was said, but for a time, and ultimately found their way back to Mauritius. A Committee was appointed in the island in 1845 to consider the question of an increased labor supply. The majority of that body, representing the planters' interest, advocated an attempt to reduce wages by the introduction of a largely increased number* of Indian laborers and the extension of the period of engagement to five years. Both these schemes Sir W. Gomm (then Governor) opposed. But to reduce the total expense to the colony of imported labor, he suggested that the cooly should be saddled with the cost of his passage to Mauritius, and should forfeit his right to a free return passage at the end of five years, in case he should, at any time within that period, have abandoned agricultural labor for other pursuits. The Government of India, however, strongly resisted the introduction of the change, and was fully supported in that resistance by the Court of Directors.

Committee in Mauritius, 1845.

Their proposals not accepted by the Governor.

He, however, proposes that the immigrant should pay for his conveyance to Mauritius, and forfeit his right to return passage, unless he served full five years as an agricultural laborer.

Rejected by Government of India and Court of Directors.

In a despatch dated 6th December 1843, the Court of Directors forwarded to the Government of India copy of a letter received through the Board of Control from the Colonial Office, urging a re-consideration of the necessity for maintaining the prohibition of emigration from India to the West Indies. Lord Stanley pointed out the critical position of the sugar-planting interest, and expressed a hope that, if the Governor General could satisfy himself that emigration might be permitted with safety to the cooly, the embargo might be removed. The papers enclosed referred principally to the colony of British Guiana; but Lord Stanley also appealed to the experience of Mauritius, as shewing that, under proper checks, emigration was advantageous to all parties, the emigrant himself included.

The papers from Demerara reveal the following facts. Of the 414 adult coolies who had left Calcutta for British Guiana, 18 had died on the voyage, and 236 returned to India in 1843.

The balance of 160 is thus accounted for :—

Deaths during five years of residence	...	...	98
Number absconded	...	...	2
Number electing to remain in the Colony	...	...	60
Total	...	...	160

The returning laborers carried with them upwards of \$20,000 of acknowledged savings, or not far short of Rs. 180 a head. Considerable mortality had occurred on two plantations; but these figures in themselves refute the extravagant statements of Lord Brougham.

The Directors recommended the question to the careful consideration of the Government of India, and advised, as a preliminary, the examination of the returned emigrants. It is not apparent that this suggestion was adopted; probably the return emigrants had dispersed before the receipt of the Directors' despatch.

On the 9th March 1844 Lord Ellenborough's Government replied in a despatch which, while expressing full confidence in the proper regulation of emigration to Mauritius, pointed out the difference in the case of the West Indian colonies. The distance of the latter, the infrequent communication with India, the small size of many of the islands were dwelt upon, and the difficulties which would be created by competition between several Agents, all recruiting in the same tracts and at the same time, were pointed out.

To meet the objection in regard to the smaller West Indian colonies, Lord Stanley proposed that the prohibition should, for the time, be withdrawn only as respected Jamaica, Trinidad, and British Guiana; and, on the point of the possible competition between Agents, he remarked that the

* Till March 1844 no restriction had been put upon the employers wishing to import labor; in fact, the importers had actually received a bounty for each immigrant introduced. But from 1st April 1844 the "contingent" system had been introduced, under which the Colonial Government fixed the number to be imported.

immediate wants of the West Indies* would probably not be more than 5,500 laborers, viz. 2,000 for Jamaica and Demerara, respectively, and 1,500 for Trinidad; at the outside Lord Stanley estimated the total emigration from India, including the Mauritius, at 20,000 persons—an amount of labor which might be provided by one Agent, competition being thus avoided. A memorandum of the preliminaries necessary for the opening of the proposed emigration was also forwarded. It need not be given in detail. Suffice it to say that it contemplated the enforcement of much the same system of supervision, both in India and the colony receiving the emigrants, as had been introduced to control emigration to the Mauritius. It specially provided for the repatriation of the emigrants after five years, should they wish to return. The Court of Directors being placed in possession of Lord Stanley's views authorised the Government of India to permit emigration to Jamaica, Trinidad, and British Guiana from the ports of Calcutta and Madras. The Hon'ble Court took the opportunity to urge that it should be made essential that a percentage of women (say 12 per cent) should accompany emigrants, and that the emigration of children with their parents should be encouraged. It was also suggested as desirable that a qualified Surgeon Superintendent should sail in each ship conveying coolies.

Court of Directors authorise Government of India to permit emigration to Jamaica, British Guiana, and Trinidad.

The Hon'ble Court took the opportunity to urge that it should be made essential that a percentage of women (say 12 per cent) should accompany emigrants, and that the emigration of children with their parents should be encouraged. It was also suggested as desirable that a qualified Surgeon Superintendent should sail in each ship conveying coolies.

The Colonial Office, indeed, acted in anticipation of the necessary legislation, and appointed Mr. Caird, Emigration Agent for Mauritius at Calcutta, to act in the same capacity for the three West Indian colonies, and furnished him with a code of instructions. Shortly after, too, an Agent was appointed for Madras, in the person of Captain Wilson, and it is worthy of remark that in the letter of instructions to this gentleman, dated 31st July 1844, the number of emigrants for the first year is put at 12,500, namely, 5,000 for Demerara, 5,000 for Jamaica, and 2,500 for Trinidad, a notable increase on the estimate of the previous month.

Colonial Office appoints Agents at Calcutta and Madras.

The result of the application to the Government of India was the passing of Act XXI, 1844, which became law on the 16th November of that year. In reporting this measure to the Court of Directors, the Government of India explained that reliance was placed on the good faith of the Colonial Governments to secure emigrants proper treatment in the colonies and a return passage to India on the expiry of their term of industrial residence, as well as due care on the return voyage.

Act XXI, 1844, passed, on the understanding that the colonies concerned would take the necessary measures.

The following is a brief abstract of the provisions of Act XXI, 1844.

Its provisions:

Section 1 repeals Act XIV, 1839, and the Acts thereby repealed as regards emigration from Calcutta, Madras, and Bombay to Jamaica, British Guiana, and Trinidad.

Section 2 legalises such emigration, and generally follows the terms of Act XV, 1842, as amended by Act XXI, 1843.

Section 3 is identical with Section 3, Act XV, 1842.

Section 4 authorises the appointment of a Protector of Emigrants at each port of embarkation.

Sections 5 to 7 are equivalent to Sections 4 to 6, Act XV, 1842, as amended in regard to Calcutta by Act XXI, 1843.

Section 8 lays down the probable length of the voyage as follows:

Length of voyage.

From Calcutta	... 20 weeks
A close season prescribed. „ Madras	... 19 „
„ Bombay	... 19 „

and forbids any ships to sail, except between the 30th September and 1st March.

Sections 9 to end are identical with Section 8 to end of Act XV, 1842.

The schedule, though modelled on the Order in Council embodied in Act XV, 1842, could not follow it throughout. One most important provision is not specially noticed by the Government of India, nor, indeed, in Lord Stanley's memorandum—I mean the provision which, in the case of Mauritius, rendered all contracts entered into before the emigrant had been 48 hours on shore null and void, and barred all suits for debts contracted before arrival in the island. But we may presume that these points were implicitly included in the general insistence upon the enactment of measures necessary to protect the cooly in the colony to which he might emigrate.

* I have throughout written of British Guiana as a West Indian Colony, though, of course, it is not so properly speaking. But it saves cumbersome periphrasis, and no question is prejudiced by the geographical inaccuracy.

When informed of the nature of the Indian legislation, Lord Stanley, while expressing a general approval, remarked that in some respects the adoption of the Passengers' Act would have been preferable; for instance, while the Indian Act allowed one passenger to every 12 superficial feet, the Passengers' Act insisted on 15 feet for intertropical voyages of more than 12 weeks' duration, and this provision the Emigration Board had seen no reason to consider too stringent. Again, though provision had been made for the execution of a bond by the master, on which he could be sued at the port of debarkation, the Passengers' Act would have permitted a more certain and summary procedure applicable to any part of Her Majesty's dominions. The Secretary of State for the Colonies, therefore, recommended fresh recourse to legislation, noticing some minor points in which the Act was susceptible of amendment; and, in conclusion, he drew attention to the fact that the Passengers' Act applied to all passengers departing by sea, both from the West Indies and Mauritius,* and, therefore, fully met the wishes of the Indian Government as to regulation of the re-transport of Indian emigrants to their homes.

In subsequent letters it was further represented (1) that, owing to the heavy surf at Madras in November and December, the season of emigration from that port was virtually reduced to three months; and that it was desirable to allow emigration to commence earlier than the 1st October; and (2) that the age of 10 years fixed as the definition of an adult was too stringent, the age in the Passengers' Act being 14 years.

Further minor amendments urged, all passengers departing by sea, both from the West Indies and Mauritius,* and, therefore, fully met the wishes of the Indian Government as to regulation of the re-transport of Indian emigrants to their homes. In subsequent letters it was further represented (1) that, owing to the heavy surf at Madras in November and December, the season of emigration from that port was virtually reduced to three months; and that it was desirable to allow emigration to commence earlier than the 1st October; and (2) that the age of 10 years fixed as the definition of an adult was too stringent, the age in the Passengers' Act being 14 years.

One of these suggestions, the penultimate, was alone adopted. Act XXV, 1845, passed on the 20th December of that year, so far modified Act XXI, 1844, as to allow emigration from Madras to begin after the 31st August. As to the proposed alteration in the minimum space, it was represented that 12 feet of clear superficies has been found ample; and, in defence of the form of legislation adopted, the Government of India forwarded a minute by Mr. Cameron. The Emigration Board accepted the views of the Government of India as to age and space, but, somewhat inconsistently, urged that hatchways, &c., should not be excluded in measuring the superficial space available.

The rules for Mauritius emigration were at Calcutta declared to apply to emigration to the West Indies, the supply of food, water, and medicines being increased in proportion to the increased length of voyage, and warm clothing was to be provided. In May 1846 the daily rations of oil, salt, turmeric, onions, and chillies were reduced to ½ oz, 1 oz, ½ oz, and ½ oz, respectively, and 1 oz. of gur every other day was added to the scale.

At Madras, the Master Attendant was appointed Protector of Emigrants, and in January 1846 a code of rules got itself passed. The rules are not very exact. The dietary follows that for Calcutta under the Act of 1842, with the addition of 4 ounces of salt fish. Dry provisions, chûrà, gram, and sugar for 18 days' bad weather were also prescribed, and the water-supply was put at ½ gallon per diem, or a trifle over five gallons a week. On the occasion of the resumption in 1856, after an interval of some years, of emigration to Trinidad and British Guiana, the rules were revised, the chief change being the reduction of the daily allowance of rice to 20 ounces, and the ordering of a supply of fresh mutton or goat's flesh one day in the week. The rules were again revised some time between 1856 and 1861. Both these revisions were, strictly speaking, illegal, as they did not at the time receive the assent of the Governor General in Council, to whom from the first the power of making rules was reserved.

For Bombay no rules seem to have been passed under Act XXI, 1844, probably because no emigration to the West Indies ever took place from that port.

It will be observed that none of the codes of rules hitherto noticed provide any minimum proportion of women prescribed.

It was not till 1847 that emigration from Madras to the Mauritius was again made legal. But in 1844 Sir W. Gomm had urged the measure. He represented that the annual supply of laborers required by Mauritius was not less, and would probably be more than 6,000 men, exclusive of women and children; that wages had already risen to Rs. 7 per mensem, a rate he (Sir W. Gomm) considered too high, and that it was absolutely necessary to maintain an open labor market; that the Madras laborers already imported were beginning to return in large numbers, feeling

Resumption of emigration from Madras to Mauritius.

The measure urged by the Colonial Government in 1844, but disallowed.

* Early in 1845 an Ordinance was passed by Sir W. Gomm, then Governor of Mauritius, to give full effect to the Passengers' Act as affecting returning emigrants. Copy of this Act, as also of one relating to the administration of deceased coolies' estates, was received by the Government of India, and both Acts attest the care with which the Colonial Government then looked after the interests of the Indian immigrants.

† Captain Rogers, the Protector at Calcutta, asserts that as the English measurement of 15 feet was obtained by multiplying the extreme length by the extreme breadth of the deck, the Indian 12 feet was at least equivalent to the fictitious estimate so obtained. There is, however, reason to doubt whether Captain Rogers was correctly informed as to the English rule. If he was, the rule was soon afterwards altered, and a mean breadth, calculated on three equal distant measurements, substituted for the extreme breadth.

themselves; as it were, cut off from their friends; and, finally, that the communication between Madras and Mauritius was, during the south-west monsoon, much speedier than between Calcutta and that island. The Government of India, however, pointed out that the emigration for 1844 had been 6,068 men, 1,022 women, 483 boys, 171 girls, and 357 infants under two years of age, and that there would be no difficulty in obtaining the necessary number for 1845. Sir W. Gomm's proposal was, therefore, with the approval of the Court of Directors, for the time negatived.

But the Colonial Government continued to press the point, and it being found, as a matter of fact, that the required number of 6,000 male adults could not be obtained from Bengal alone, the required concession was ultimately made by the passing, on 8th May 1847, of Act VIII of that year. This law simply enacted that emigration to Mauritius might lawfully take place under the provisions of Act XV, 1842, as modified by Section 2, Act XXI, 1842, from Madras as well as from Calcutta.

It was the intention of the Government of India that the rules in force at Madras in regard to emigration to the West Indies should be applied, *mutatis mutandis*, to the emigration to Mauritius which was then re-opened; but the Government of Madras thought fit to introduce a separate set of rules for Mauritius. They were to a great extent based upon the West Indian Emigration rules, but they were worse arranged, and seem on some points (*e. g.*, the amount of water) to be inconsistent. Even when the revision of the West Indian rules took place in 1856, the Mauritius rules do not seem to have been touched, or any consolidation attempted.

Owing to Captain Wilson's unwillingness to act as Agent for the Mauritius as well as for the West Indian colonies, emigration to the former colony from Madras was not at once resumed. Indeed, even when this difficulty was removed in 1848 by the suspension of emigration to the West Indies under orders of the Colonial Office (on account of the great mortality among the first importations), emigration to Mauritius from the Southern Presidency did not immediately recommence, and it was not till 1850 that the first ship-load of laborers of the new emigration left Madras.

In 1847 the attention of the Government of India was drawn to an Ordinance proposed by the Ceylon Government for the protection of Indian coolies in that colony. A letter was, therefore, addressed (6th February 1847) to the Colonial Secretary, pointing out that as the Indian law stood, it was illegal to abet the emigration of laborers from India, except to Mauritius, Jamaica, British Guiana, and Trinidad, but stating that the Government of India was willing to enter into communication with a view to permitting emigration to Ceylon under proper regulations, on condition that the Government of that island would undertake "to give native laborers of India the same protection against emigration from Ceylon as the Legislature of India and the Governments of the respective Presidencies had provided for them in their own country." The grounds of this view are thus briefly given in Mr. Cameron's minute—"With reference to geographical, social, and historical associations, it is mere accident that Ceylon is under a different Government from Continental India. If that accident had not existed, if Ceylon had continued under the Government of Madras, instead of being transferred to the Colonial Office, there would have been no more reason for making it an exception as regards the free migration of laborers, which prevails throughout the territories subject to the Government of the East India Company, than for making the Island of Bombay an exception. The case would clearly be one of migration, and not of emigration."

The Colonial Government accepted the conditions, explaining that the emigration to Ceylon had been spontaneous and free from many of the evils to which emigration to more distant places was liable. Most of the emigrants were Tamils who came by the Madura coast and the line of islands, sands, and shallows forming the imperfect land-passage known as Adam's Bridge. There were, however, some stragglers from Bombay, and a few Dhangars from Bengal. These latter were found superior in "intelligence and activity" to the Tamil laborers, and the colonists were desirous to obtain more of them.

Act XIII, 1847, was accordingly passed in August of that year. It repeals Act XIV, 1839, in so far as it makes liable to penalties every person contracting with natives of India for labor to be performed in Ceylon, or aiding and abetting natives in emigrating to Ceylon. It is provided that the Act is not to come into force till the Governor General in Council notifies that he has been certified that the Legislature of Ceylon has sufficiently provided for the protection of immigrants. On the 5th November 1847 the Government of India received copy of Ceylon Ordinance No. 3, "to prohibit natives of India from entering into contracts in this island for labor to be performed in any British or foreign colony beyond the limits of this island, and without the territories of the

British or foreign colony beyond the limits of this island, and without the territories of the

East India Company, or from emigrating from this island to any such colony for the purpose of employment as laborers," and, under date the 13th idem, it was notified that Act XIII, 1847, had become law.

Though somewhat out of chronological order it may be as well to jot down here the subsequent history of the relations between the Government of India and that of Ceylon in regard to emigration.

In January 1859 the Government of Ceylon reported certain measures which had been taken to "regulate and promote emigrant labor," and, in consideration of the difficulties and risks to which immigrants by the Manar route were exposed, desired to encourage the use of steamers, and with that view asked that the tonnage rule might be relaxed. The Government of Madras was consulted, and reported that it had already taken action to the following effect:—Each steamer was to be licensed under Sections 21 and 22 of Act XXI, 1858, on its own merits, but with a minimum (Section 2, Act I, 1857) of four superficial feet of space per passenger. Inspections were to be made every six months, and the duty of granting certificates was imposed upon the Masters Attendant at Madras, Tuticorin, and Cochin. The Government of India tacitly accepted these arrangements.

In October 1859 the Government of Ceylon proposed to import labor from Ganjam, but the Government of Madras objected. A long correspondence followed, and at length (in 1862) the Colonial Government discovered that the Madras Government had no legal *locus standi* in its opposition, and referred the point to the Government of India. That authority ruled that there was no reason why Act XIII, 1847, should not operate, but stipulated that the Government of Ceylon should keep the Governor General in Council informed of all changes in the law affecting immigrants. It was pointed out to the Government of Madras that in Ceylon there were no Negroes and no traditions of slavery, the colony being thus distinguished from Mauritius and the West India Islands.

In 1851 the Mauritius Government pressed upon the Government of India the consideration of the question whether the colony should not be relieved of the cost of providing return passages for emigrants at the end of five years. At first the Government of India assented under certain conditions. These, however, were considered by the Mauritius Government to hamper the concession so materially as to make it of little use. And, when the subject was again urged, it was agreed that *prospectively* the stipulation of free repatriation need not be insisted on, provided that the colony undertook to provide return passages for those unable from sickness or real destitution to provide their own, and that in case of labor falling short, the duty of the Mauritius Government to repatriate the Indian immigrants should still be recognized. The cheapness of the passage was a material consideration in this decision; it being represented that a coolie could purchase his return to India for £1-7. It seems, however, to have been, both at the time and ever since, overlooked* that a return passage at the end of five years was made legally binding on the colony by Section 1, Act XV of 1842.

Another step in the same direction was carried out in the same year (1853) in regard to certain of the West Indian colonies. Lord Dalhousie, with the support of Sir B. Peacock, consented to accede to the representations of the colonial authorities, and permitted the extension of the period of industrial residence in British Guiana and Trinidad from five to ten years. Mr. Dorin was opposed to the measure. Sir B. Peacock seems, from his minute, to have been influenced by the favorable report then just submitted by Mr. Caird of the state of the coolies in British Guiana and Trinidad, which colonies he had personally visited. But Mr. Caird writes in very general terms, and, perhaps, ought not to have been considered altogether an unbiassed witness. Sir Barnes Peacock argued that it was a question altogether for the emigrant to consider whether it was worth his while to emigrate with return passage not provided till after ten years' residence.

The Government of India held to the same course when it was proposed (1), in the case of Trinidad, to abolish the right to a free return passage altogether; (2), to require the coolie even after the expiry of his ten years' residence to contribute \$35 to the cost of his repatriation; and (3), only to give a free passage to those who should claim it within 18 months of its becoming due. At the same time the Government of India pointed out that the conditions might become so onerous as to interfere with the free flow of labor to the West Indies. Indeed, upon the promulgation of the rule as to contribution towards return passage, this was found to be the case, and the Colonial Governments receded from their position.

* I find that in 1864 the Government of Mauritius *did* bring to notice the discrepancy between the law and practice. But no action was taken in the matter.

In 1857 proposals for the entire commutation of the right of return passage, in consideration either of a money bounty or a grant of land, were forwarded for the opinion of the Government of India. In referring the matter, the Court of Directors observed—"We should view with great jealousy any proposals for depriving the natives of India of the absolute right to a return passage when it was sought to obtain their consent to an arrangement for keeping them in the colony." In these remarks Lord Canning's Government expressed concurrence with some reservation. "If the coolies," said their despatch, "give an intelligent consent to any new conditions of emigration that may be proposed to them, it does not appear to us that there will be any good ground on which to prohibit them from accepting such conditions. At the same time we feel confident that if the officers of the Indian Governments do their duty in the way of explanation, no coolies, or very few, will emigrate without a right to a return passage. To prohibit an Indian laborer from selling to the colony his absolute right to a return passage, after he has actually obtained that right, could only be justified, in our opinion, on the ground that there is great risk of the cooly in the colony being forced, or otherwise unfairly induced, to enter into the bargain by the colonial authorities. And as no such imputation can be made, it appears to us that the laborers should be left to make their own bargain, care being taken to protect them against unfair treatment; and that with this view a Protector of Immigrants should be appointed by the Government of India or Your Honorable Court to reside in the colony. It should also be provided that no contract for commuting the right of a return passage shall be binding on any Indian laborer, unless entered into after full explanation of the effect of the contract being made by such Protector of Immigrants. The Protector of Immigrants, by whomsoever appointed, should be a person thoroughly acquainted with the language and habits of the coolies, and one who is known to take an interest in their welfare."

Necessity of Colonial Protectors.

In 1859 the Secretary of State (Lord Stanley, now Lord Derby) assented, in regard to British Guiana, to any arrangement which allowed commutation of the right to a back passage, provided the voluntary character of the transaction were assured. An Ordinance passed in November 1858 had already permitted such commutation in Jamaica, the consideration being either money or land, or partly money and partly land. In Trinidad the same system was afterwards introduced, and in that colony seems to have reached the widest practical application.

To return to the course of legislation in India. The history of Act IV, 1852, passed in January of that year, is almost sufficiently given in its preamble. Sections 1 and 2 extend the time of sailing for the West Indies from Calcutta, making the open term from 1st September to the end of February. Sections 4 and 5 allow emigration from Bombay to Mauritius, and provide for the appointment of a Protector at that port. These measures were passed without discussion, upon the application of the Colonial Office. They were, in fact, under existing circumstances, not open to objection. Section 3 is a provision of more doubtful expediency. It permits the reduction of the minimum height between decks to 5½ feet, and, for the minimum of 12 superficial feet for each adult laid down by Act XV, 1842, it substitutes a minimum of 72 cubic feet. The minimum by tonnage remained unaffected. This change was made reluctantly, on the repeated and urgent remonstrances of the Mauritius Government. It is, however, now the universal rule, although a minimum of superficies has since been superimposed. The history of the checks on overcrowding will be noticed further on.

It had undoubtedly been among the intentions of Act XIV, 1839, to stop all emigration from the territories of the East India Company, whether directly or indirectly, to foreign colonies. But in 1849 the emancipation of the slaves in the French colonies, a measure carried out the year before, began to make itself felt, and the Government of Madras brought to light a system of emigration from the French Indian ports of Pondicherry, Karikal, and Yanam to Bourbon or Réunion, which was carried under the eyes of the French authorities and, there can be no reasonable doubt, with their direct abetment, and under which natives of the Company's territories were crimped and kidnapped and shipped to French colonies in overcrowded vessels to become, on their arrival, little better than preadial slaves. The Government of Madras, while repressing the indiscreet zeal of the Magistrates of the coast districts, which might have led to political complications, urged a very serious representation to the French Government. The Government of India, on the other hand, did not think such an extreme step necessary, and relied on a strict enforcement of the Act to repress the practices of French agents in our territories. Owing, however, to the great demand for labor in Réunion, and the consequent high prices offered for coolies, as also to the leniency of the punishment awardable under

the Act of 1839, the infamous system continued, in proportions but little diminished. And this, notwithstanding the vigorous exertions of the Magistrates of the coast districts, is attested by long lists of convictions.

In 1850 the Government of Madras forwarded papers which threw doubt upon the legality even of such convictions. In order, therefore, to set at rest the question what acts in connexion with the emigration of natives were really prohibited by law, it became necessary to pass an amending measure. This was accordingly done in the shape of Act XXIV, 1852, of which the following are the provisions.

Section 1 defines the offence of crimping, which Act XV, 1842, left vague. Section 2 defines emigration so as to set at rest any doubt as to whether passage by land out of the Company's territories was embraced in the meaning of the term. The 3rd Section exempts from restriction *bond fide* emigration to foreign settlements on the mainland of India, but takes care to define what should be considered *bond fide* emigration in such case. Thus these three sections remove all doubts as to the jurisdiction of Magistrates in British territory in dealing with French crimps and agents. The remaining sections arm the courts with greater punitive powers. Thus a crimp within the meaning of the Act is made liable to imprisonment for six months and a fine of Rs. 500. Any person who shall, by means of intoxication, false imprisonment or intimidation, or by means of any false promise, pretence, or representation, force or decoy any native of India out of the territories under the Government of the East India Company, or fraudulently cause any such native to depart from the said territories, is made liable to imprisonment for three years. Hard labor may be awarded as an adjunct. Imprisonment for three months for each native contracted with, not, however, exceeding six months in the aggregate, may be awarded under Section 2, Act XIV, 1839; and a second conviction under that section involves liability to imprisonment for one year.

The Act does not seem to have produced any immediate effect, for, within four months of its passing, the Government of Madras reported the continuance of the practice of decoying away British subjects and shipping them to Réunion either from Pondicherry or Karikal, and recommended, as some check upon this practice, that emigration to Mauritius should be allowed to take place from one of the southern ports, as Negapatam or Tranquebar. The question, however, merged in the more general one, then pending, of a removal of the existing prohibition against emigration to French colonies. In the meantime the Government of Madras was allowed to establish a Mauritius branch agency at Karikal, and thus, to some extent, to baffle the French recruiters.

In 1855 an application from the Colonial Office for the opening of emigration to St. Lucia and Grenada, two of the Windward Islands, came under the consideration of the Government of India, and a law was passed on the subject. This law, as Act XXXI, 1855, received the assent of the Governor General on the 14th November of that year, and nearly placed St. Lucia and Grenada in the same position as the other West Indian Colonies of Jamaica, British Guiana, and Trinidad then occupied—a position defined by Act XXI, 1844, as modified by Acts XXV, 1845, and IV and XXIV, 1852. On one point, however, the new Act reverted to the original legislation. The minimum height between decks, which had been reduced by Act IV, 1852, was fixed for voyages to St. Lucia and Grenada at six feet, as in Act XXI, 1844, because, as Mr. (Sir B.) Peacock stated in Council, it had been found that no ships did sail for the West Indies having less than the greater height between decks. Another minor point of variance was that, while the existing law allowed the longer season only to Madras and Calcutta, the new Act extended it to Bombay as well. The point, however, is of no practical importance, as there has never been any emigration from Bombay to the West Indies—a fact which was, doubtless, the cause of the inconsistency in legislation. The most important change, however, was the addition to the law as respected St. Lucia and Grenada of a section (Section 17), declaring that the Act was only to take effect when the Government of India should notify that such regulations had been provided and such measures taken in the colonies as might be considered necessary for the protection of emigrants during their residence, and in respect of their return to India. The St. Lucia Ordinance first forwarded for the information of the Government of India did not seem to fulfil these conditions. The objections taken were,—(1) that the competency for his duties of a Protector or Agent remunerated by a salary of £50 per

annum was doubtful; (2) that no provision was made for the appointment of an officer acquainted with the language and habits of the emigrants; (3) that there was no security for the provision of a return passage; (4) that if the amount of back passage was to be recovered from the emigrant, it should be done by gradual instalments, for which there was no provision; and (5) that arrangements were wanting for the safe custody of property left by emigrants dying in the colony.

The objections of the Government of India were communicated to the Colonial Office and to the Emigration Board. The latter body argued that both the St. Lucia and Grenada Ordinances were framed in accordance with general instructions conveyed by the Duke of Newcastle, and that in point of fact they closely followed certain approved Trinidad and British Guiana Ordinances, respectively, and, therefore, should be held to make sufficient provision for the protection of Indian laborers. With regard to the specific objections urged by the authorities in India, the Emigration Board represented that the function of *protection*, to a great extent, devolved upon the Stipendiary Magistrates, the duties of the Immigration Agent being principally to inspect ships on arrival, to allot emigrants and to keep the necessary registers—duties, the Board maintained, which were fully remunerated in small colonies, such as Grenada and St. Lucia, by salaries of £50 a year. The plan of getting out a Protector from India had, they said, been already tried in other and larger colonies, but had failed. They consented, however, to a clause which should require an interpreter to accompany every hundred emigrants. With regard to repatriation, they pointed out that in other colonies there was nothing more than a generally-worded pledge that Government would provide a back passage, and that there was necessarily some delay in collecting a number sufficient to warrant a ship being chartered. But the Board admitted that laborers should be in some way compensated for the delay, and they proposed a payment at the rate of six dollars for every half year of detention beyond the date on which any laborers might become entitled to a return passage. The claim to a contribution from the cooly towards the cost of his repatriation, the Board pointed out (and we have already seen), had been abandoned. The necessity for some provision for the safe custody of the property left by coolies dying in the colony was also conceded.

This proposed compromise, with copy of the Grenada Ordinance, was, with a very hesitating and conditional support, transmitted to India by the Court of Directors in a despatch dated 17th June 1856. The reply of the Indian Government was chiefly based on a minute by Lord Canning, written, it is to be noted, soon after receiving from Mr. Eden certain very unsatisfactory accounts as to the treatment of laborers on their first arrival at Mauritius. With regard to Grenada, the point was conceded on the understanding that the recommendations of the Emigration Board would be carried out, though a doubt was still expressed as to the sufficiency of the salary proposed for the Immigration Agent. And the necessary notification was issued on the 12th September 1856, from which date, therefore, emigration to Grenada became legal. But in respect to St. Lucia the Government of India refused to yield. A comparison was instituted between the Ordinance of that colony and those of Trinidad, and the following extract from the despatch will show the points upon which the former was considered defective:—

"5. But the case of St. Lucia is very different. Not only is the model Act of Trinidad departed from in respect of the salary of the Agent, but many of the provisions of that Act, designed to protect the immigrants, are either omitted altogether, or less favorably framed. For instance, it is not required that immigrant ships should be inspected either upon arrival or departure. No provision is made for the reception, lodging, or feeding of the unemployed immigrant upon his first landing. No rule is laid down to guard against the separation of families in locating immigrants. A deduction is made from the wages of the immigrants for medical attendance and lodging, while, in other colonies, the employer is bound to find these without deduction. The immigrant is required to pay towards defraying his passage home as a consideration for being exempted from industrial service under indenture after the first 5 years; but, in the other colonies, he is, at the end of five years, free from industrial service without any payment. No means are taken for securing that an immigrant, whose contract with his employer is that he is to be paid according to the quantity of his work, shall be released from his contract if he does not receive work sufficient to enable him to earn a just amount of wages. There is provision for this in the Regulations of Grenada.

Objections to the St. Lucia Ordinance.

No provision for the inspection of ships;

for reception of emigrants;

to prevent the separation of families.

Deduction made from wages for medical attendance.

Contribution towards back passage.

No provision to ensure a sufficiency of work.

"6. We desire further to point out that Section 22 of the Trinidad Ordinance is omitted in that of St. Lucia. By that section the Government may authorize the Agent-General of Immigration to grant a certificate of exemption from industrial residence to any immigrant who, from sickness, accident, or other cause, shall appear to him incapable of labor, and may send any such immigrant back

at the expense of the colony to the port in India from which he emigrated. Similar enactments are contained in the British Guiana Ordinance, Section 54, and in the Grenada Ordinance, Section 56. The provision is a most important one; for, without it, a cooly, who from sickness or accident may be prevented from earning his livelihood in the colony, may have no means of returning to his family and relations in India.

"7. We consider it a very important part of the duties of the Protector of Immigrants, or Immigration Agent, in every British colony, personally to inspect every vessel arriving at or leaving the colony with immigrants on board for the purpose of ascertaining whether the provisions of the law have been complied with, to make periodical visits to every estate upon

No provision for inspection of estates: which immigrants are employed, to inspect the immigrants employed upon such estates, to see that they are properly lodged, fed, and treated by their employers, and to enquire into any complaints which the immigrants may have against their employers. Provision is made by the Trinidad Ordinance for the discharge of these duties, but no similar provision is made in the Ordinance of St. Lucia, which was taken from it, nor are those duties enumerated by the Colonial Commissioners in their letter amongst the principal duties of the Immigration Agent.

"8. It is stated, however, by the Commissioners that a vigilant superintendence is exercised over immigrant laborers in each district of St. Lucia and Grenada by Stipendiary Magistrates, who send in to Government, so long as it is requisite, periodical reports of the treatment and state of immigrants. The Ordinance for St. Lucia authorizes the Stipendiary Magistrates to perform this duty, but it does not require them to do so (Section 22); so also the Grenada Ordinance authorizes, but does not require the Immigration Agent to perform this duty (Section 52); whereas the Trinidad Ordinance requires the Immigration Agent to visit every estate on which immigrants are employed twice, at the least, in every year. For the present we have no objection to act upon the statement of the Emigration Commissioners that the Stipendiary Magistrates do, in fact, exercise a vigilant superintendence over immigrant laborers; but we request that your Honorable Court will obtain through the Colonial Office, and transmit to us, a copy of the rules laid down in each of the colonies for the direction and guidance of the Stipendiary Magistrates with reference to the discharge of this important part of their duties.

"9. The Emigration Commissioners state that the contribution towards back passages Ordinances should be amended in regard to contribution to back passage. has been wholly abandoned for the present. If this be the case, we think it essential that the Ordinances should be amended accordingly; for we are not aware of any resolution binding on the colonies to that effect; and, as long as the Ordinances in force require such contributions, we do not think that the coolies about to emigrate can fairly be told that such contributions will not be required.

"10. With regard to the proposed payment of six dollars for every half year which intervenes between the application for a passage home by a cooly who is entitled to it, and the offer of such back passage, full explanation will be made to every cooly as to the terms upon which he is about to emigrate, as he must not be led to believe that a back passage will necessarily be provided at the end of ten years. We are not disposed to object to the emigration of laborers on these terms, provided they are thoroughly explained and understood by every cooly before he agrees to emigrate; but we think that, if a passage be not provided for every laborer at the time at which he becomes entitled to it, at least three months' notice ought afterwards to be given to him of the time at which the passage will be provided for him, so as to enable him to put an end to any contract of service by which he may have bound himself in the interval between his application for a passage home and the offer of one, and to avail himself of the offer, and that payment at the same rate should be made for the whole of the three months."

It is obvious that two of these objections, viz., those founded on the levying from the emigrant of a contribution towards his back passage and on his being saddled with the cost of lodging and medicine, were inconsistent with the policy before enunciated by the Government of India, which would merely have required that intending emigrants should be made fully aware of these conditions of their contract. This the Emigration Board did not fail to perceive. They discussed at considerable length the objections raised by the Government of India. They explained that the St. Lucia Ordinance was framed in April 1854 on the model of a Trinidad Ordinance of 1850, while the comparison instituted by Lord Canning and his colleagues was between the former and a subsequent Ordinance of Trinidad, not passed till November of the same year. To the objection that no provision was made for the inspection of cooly ships on arrival, the reception and support of immigrants previous to allotment, and the non-separation of families, the Emigration Board replied that these duties were performed by officers acting under the immediate orders of the Executive Government; and "the same kind of answer" was "applicable to the objection that Magistrates were only authorized but not required to inspect and receive complaints upon the estates on which coolies were located." With regard to deductions on account of medical attendance and provision, grounds, the Board remarked that unindentured laborers, by whose earnings those of the cooly were to be estimated, did not receive these boons gratis. The Board pointed out that the Government of India had already acceded to the regulation intended to secure ten years' industrial residence, by requiring a contribution from the cooly towards his back passage in cases where the whole residence had not been "industrial," i. e., spent under indenture, and

that St. Lucia did not stand alone in this respect. The increasing demand for labor in all West Indian Colonies made it improbable, in the opinion of the Emigration Board, that there would be any necessity for a provision to prevent laborers paid by the task being left without work, and, therefore, without pay. St. Lucia being a Crown colony, it was unnecessary to make special provision for the repatriation of Indians incapacitated for work, as the Lieutenant-Governor had a general power of sending any cooly back at the expense of the colony. Finally, with regard to delay in the provision of back passage, the Emigration Board admitted the liability of the colony to afford the cooly means of support during the interval of detention.

The views of the Emigration Board were accepted by the Colonial Office, and the adoption of the amendments proposed by the Government of India, with the exception of that relating to 'payment in lieu of industrial residence, on which the Colonial Office held itself pledged in honor to the colonists not to recede, were urged upon the administration of St. Lucia.' In the Ordinance ultimately passed by the colonial legislature even this last point was conceded.

This Ordinance was communicated to the Government of India in October 1857; but, doubtless, owing to the circumstances of the time, no immediate orders were passed upon the despatch, and it was not till Lord Stanley (now Lord Derby) drew attention to the matter that the necessary notification was, on the 5th November 1858, published, and emigration to St. Lucia legalized.

In the course of this correspondence it had been suggested by Lord Canning that the Government of India should have the power of suspending emigration in certain cases. A measure for this purpose was introduced and became law as Act XIX, 1856. It enables the Governor General in Council, by notification in the *Gazette*, to suspend emigration to any British colony when he has reason to believe that proper measures have not been taken for the protection of emigrants immediately upon their arrival in such colony, or during their residence therein, or for their safe return to India, or to provide a return passage at or about the time at which they are entitled to it. The Governor General in Council may also revoke in the same way any such suspension.

It was, in fact, the report from Mauritius, to which allusion has been made above, that led Lord Canning to represent the necessity for such a law, and the facts soon afterwards fully disclosed furnished the grounds for first putting the law into force. In September 1856 accounts were received of excessive mortality among the emigrants who had sailed from Calcutta in two ships,—the *Hydree* and the *Futteh Mobarick*,—while in quarantine upon Gabriel Island near Port Louis. The *Hydree* arrived on the 5th January 1856 with 272 immigrants, and the *Futteh Mobarick* on the 9th idem with 380. Though there were then no symptoms of cholera, the immigrants were ordered into quarantine on Gabriel Island, where they were landed between the 13th and 18th. Inadequately sheltered,—if, indeed, they had any shelter at all,—exposed to a specially inclement hurricane season, placed in charge of a drunken and incapable doctor, and insufficiently supplied with fresh water and medicines, it is no wonder that these poor wretches fell a prey to cholera, fever, and dysentery. The result was that, when the remnant was released from quarantine on the 6th of May, out of 697 souls landed 284 had perished. The report first furnished by the Government of Mauritius was very meagre, though the naked facts were sufficiently piteous. Further information was, however, obtained from the Honorable A. Eden, who had been on leave in Mauritius, and from other sources; and as it appeared that the Government of Mauritius had it in contemplation to continue to use Flat and Gabriel Islands as a lazaretto, though in bad weather they were quite cut off from the main island, the Government of India determined at once to suspend emigration to the colony. This was done by notification dated the 24th October 1856, and the measure, with the reasons for it, at once communicated to the Government of Mauritius and to the Court of Directors.

The former replied in a voluminous despatch with voluminous enclosures. Into the attempt at self-vindication therein made it is not necessary to enter. The Government of India and the Court of Directors held that neglect was proved. To quote Lord Canning's minute—"The Governor of Mauritius owns that two errors were committed,—the reliance on tents for shelter, and the nomination of Dr. Piesley as Surgeon-Superintendent. A third error is subsequently acknowledged by His Excellency on the part of the chief medical officer, in not having sent to the lazaretto, when the outbreak of disease was declared, a large supply of extra diet and medical comforts. But it is contended that these errors do not show either indifference or neglect. It will profit little to discuss now the source from which they sprung. That the shelter provided was inadequate, the medical officers incompetent, and the medical comforts and diet insufficient, is admitted. Notwithstanding what is stated of unusual inclemency of weather, of the doctor's diploma and qualifications, and of the spirit in which the instructions of the chief medical officer were given and executed, I must be allowed to say that a close examination of the letter under consideration, and of the papers accompanying it, has convinced me that these errors might have been avoided by due care and consideration, i. e., by such care and consideration, forethought, and preparation, as might reasonably be looked for in

the government of a colony eager to receive immigrants and expecting to receive them, but resolved, in the event of their arriving with sickness amongst them, to subject them to a rigorous quarantine on a spot which, then at least, was considered to be of 'extreme inaccessibility.' That the consequences of the error were fearfully aggravated by that inaccessibility, which prevented the timely remedy and even the knowledge of them, is not contested. I find then in this letter no reason to believe that the opinion expressed by the Government of India upon the proceedings of the colonial authorities is not substantially just."

With regard to the future, however, as the Mauritius authorities had been thoroughly roused by this great disaster, and had spent a large sum to make Flat Island less inaccessible, while the quarantine rules were so modified as to allow quarantined vessels to ride at a safe anchorage in bad weather instead of putting out to sea as they had before been compelled to do, the Government of India consented to allow the renewal of emigration, and the embargo was removed by a notification dated the 27th April 1857. Once, afterwards, in May 1859, the Government of Bengal had to complain that an emigrant ship had been detained at Mauritius for 16 days in floating quarantine, and that the crew and passengers had suffered much hardship. A strong representation was made to the Government of Mauritius. In reply, it was explained that there had been an unusual demand for lazaretto accommodation, several vessels with small-pox on board having come in together, and the number of emigrants on board having exceeded 2,300. The delay was due to the necessity for extending the lazaretto; but arrangements had been made for the future to provide accommodation in quarantine on shore for as many as 3,750 persons.

The year 1856 was marked by certain infringements of the emigration laws on the part of employers of labor in Mauritius and Réunion. The first case which came to the notice of the Government of India was that of the *Glanceur*, a French ship, which had been permitted to sail from Aden with 132 emigrants, mostly natives of Bombay, under engagement with a French firm to proceed for purposes of labor either to the Mauritius or Bourbon. On the arrival of the ship at Port Louis, the colonial authorities at first refused to admit the emigrants, but when it appeared that the ship was not in a fit state to proceed, the passengers were permitted to land and absorbed among the India laboring population. The officers at Aden permitted a similar open violation of the law in the case of another French ship, the *Immaculée Conception*, which sailed with 401 natives of Bombay. This vessel seems to have proceeded to Réunion, not Mauritius. A vessel also left Aden about the same time carrying some 60 Arabs, Seedees, and Somalees, not, however, British subjects.

The cases of the *Glanceur* and *Immaculée Conception* were flagrant breaches of the law; that of the *St. Germain* was in the nature of an evasion. The Agents of the Mauritius Dock Company shipped on board that vessel at Bombay some 200 laborers without any attempt to comply with the provisions of the Act, under the pretence that the men were merely passengers, and came under one of the exemptions of the law as it then stood. The flimsiness of this pretence was manifest on the face of the contracts into which these emigrants had been induced to enter, and which stipulated for the payment by them, out of future earnings, of passage-money at the monstrous rate of £16 per head. Any contracts made in India were then null and void by the law of Mauritius. But the Stipendiary Magistrate at Port Louis failed to explain this to the emigrants, who were ultimately left in the hands of the Dock Company at the ordinary wages of labor. The Colonial Government very properly interfered so far as to have it explained to these laborers that the stipulation as to re-payment of passage money was altogether void, and the Magistrate was very severely reprimanded by Mr. Labouchere, the then Colonial Secretary, for his defective appreciation of his duty towards emigrants. As it appeared that an Ordinance of 1812 imposing penalties on violation of the rules as to emigration in force in India had by some oversight not received Her Majesty's confirmation, and had therefore lapsed, a fresh law was passed, subjecting to very heavy penalties any person abetting emigration in breach of the Indian enactments, and upon the master of any ship conveying emigrants without a license. Thus the necessary measures to check the practice were taken in Mauritius. In India the Government of Bombay seemed hardly alive to the obligation which lay upon it, and a rebuke was administered by the Government of India and the Court of Directors, and a stricter enforcement of the law enjoined; a case of the kind which had occurred on the Malabar Coast under the Government of Madras, and in which the master had been sentenced to pay a fine of Rs. 1,200, or in default suffer 12 months' imprisonment, being cited with approval. The apathy of the officials at Aden in allowing the *Glanceur* and *Immaculée Conception* to sail in defiance of the law was strongly condemned; and even in regard to the Arabs and others not British subjects who had been allowed to sail in the third ship, it was pointed out that, though not illegal, such operations should not be directly countenanced.

From certain allusions in this correspondence it would seem that a good deal of illegal emigration both to Bourbon and other French settlements had been going on from the West Coast. But the Government of India hardly thought that the complicity of the French authorities had been proved sufficiently to warrant a representation to the French Government.

Illegal emigration to Réunion.

In a despatch dated 22nd July 1857, the Court of Directors draw the attention of the Government of India to the terrible mortality which had attended emigration from Calcutta to the West Indies during the season 1856-57. What that mortality was will be evident from the following table :—

Name of Ship.	Adult males.	Adult females.	Boys.	Girls.	Infants.	Total souls.	Deaths.	Percentage of mortality.
Wellesley ...	254	84	13	11	20	382	22	5.75

Enquiry was ordered to be made, and the Government of Bengal appointed Dr. Mouat to make it. Investigation into its causes.

The conclusions arrived at by Dr. Mouat and the orders passed upon his report are embodied in the following extract from a letter to the Government of Bengal, No. 2146, dated 23rd September 1858.

"2. Dr. Mouat's inquiries were directed chiefly to the following points:
Plan of enquiry.

- 1st, the state of the people when they were embarked ;
- 2nd, the measures that are taken in Calcutta to ascertain that the emigrants selected are sound, healthy, and fit to undergo the risks of a long voyage ;
- 3rd, the present mode of fitting up ships for coolies ;
- 4th, the recent alterations in the dieting of emigrants ; -
- 5th, the effects of detention in the River Hooghly after the people are on board ; and
- 6th, the reason of the healthiness of the Madras coolies embarked at the same season, and subject to the same regulations.

"3. The general conclusions at which Dr. Mouat has arrived on these several points are as follows:

- 1st.—That the evidence as to the state in which the emigrants referred to were embarked in Calcutta tends to disprove the assertion of some commanders and surgeons, and the strong suspicion of the colonial authorities, that the great sickness and mortality were due principally to the primary selection of sickly and unfit subjects in Bengal.
- 2nd.—That the general and medical arrangements of the dépôt at Bhowanipore are such as to afford every reasonable precaution against the embarkation of persons unfit to undergo the risks of a voyage to the West Indies.

3rd.—That the lamentable sickness and mortality under investigation were caused by the increased proportion of women and children, by the neglect of proper sanitary precautions on board most of the vessels, by the shipment of water of the River Hooghly when it was unwholesome, by the absence of the means of separating the healthy and the sick, by the change in the diet of the emigrants, by the absolute want of suitable food for young children and infants, by the presence of grain cargoes, by the probable foul state of the bilge, and, in some instances, by the inexperience of the medical officers, in others, by their being unable to communicate with the emigrants, and being unaccustomed to the treatment of the diseases of natives of India.

4th.—That the causes above enumerated operated in very various degrees, but that there is no evidence to show how far they were exceptional.

5th.—That the superior healthiness of Madras emigrants seems to be chiefly due to their being an entirely different race to Bengalees, and better suited to a sea-life. The open roadstead of Madras, the absence of the voyage down the Hooghly, and the greater purity of the water laid in, with more suitable diet, may also exercise some influence in producing a favorable result.

4. The remedies Dr. Mouat suggested are—

Remedies suggested by Dr. Mouat.

* "The quantity of provisions allowed to each emigrant shall not be less than the following, two children under the age of ten years being considered as equal to one person only.

Each emigrant per day.

	Oz.		Oz.
Rice ...	20	Turmeric ...	$\frac{1}{2}$
Dal ...	4	Onions ...	2
Ghi ...	1	Tobacco ...	1
Salt ...	1	Chillies ...	$\frac{1}{2}$

			Drm.
Tamarind ...	2	Black Pepper ...	1 $\frac{1}{2}$
Salt Fish ...	2	Mustard Seed ...	$\frac{1}{2}$
Firewood ...	lbs. 2	Garlic ...	$\frac{1}{2}$
Gingely Oil ...	oz. $\frac{1}{2}$	Coriander Seeds ...	2

Water one gallon.

“Fresh provisions.—Sleep and goats equal to one day's supply during every week of the voyage. Yams and potatoes may, in a certain proportion, be supplied as a substitute for pumpkins; and as vegetables must be served out twice a week equal to $\frac{1}{4}$ a lb per man, the whole quantity must accordingly be provided.

"Six sheep or goats to be supplied per every 100 men for the voyage.

"Dry provisions for bad weather, when the usual provisions cannot be cooked.

Each emigrant per day—

" Choora or ayal	...	...	1	Ser	or	2 lbs.
" Or Biscuits-	...	...	$\frac{1}{2}$	"	or	1 "
" Bhut, gram or cuddeley	...	...	$\frac{1}{2}$	"	or	$\frac{1}{4}$ "
" Sugar	...	...	1	chhaták	or	2 oz.

"Eighteen days' stock of the above dry provisions to be laid in for the voyage.

"*Water.*—The water laid in should be of the purest description that can be obtained, and great attention should be paid to the sweetness and sufficient strength of the casks in which it is carried, and, if new, they should be charred.

"The casks should be constructed of staves of at least one inch in thickness for the ground tier, and of not less than three-quarters of an inch for the upper tier."

The only exception Dr. Mouat proposes to the Madras diet scale as regards natives of Behar and Gorakhpur, for whom a supply of flour, he suggests, should be laid in to make the chapatis or unleavened cakes, which form their customary diet. For them, Dr. Mouat would substitute eight ounces of flour for twelve ounces of rice, leaving the rest of the diet as it is in the scale mentioned. This would give them one meal of farinaceous food daily,

1st.—The removal of platforms, and the restoration of the old flush deck.

2nd.—A separate sick-bay, and the further means, when very great sickness prevails, of placing persons suffering from contagious diseases on deck.

3rd.—The adoption of the Madras diet scale,* with the exception noted in paragraph 164 of the report, and the laying in of suitable food for young children and infants.

4th.—The diminution in the proportion of women and children to 25 per cent. If possible, it is desirable not to embark pregnant females, or those who are nursing infants at the breast.

5th.—The absolute prohibition of the water of the Hooghly being pumped in alongside off Calcutta from the 1st of November to the 15th of June.

6th.—The improvement of the ventilation of the hold and between decks in the manner suggested.

7th.—The purification of, and attention to, the bilge of the vessel. A supply of Sir William Burnett's disinfecting fluid should be carried by every vessel.

8th.—It being compulsory on a certain proportion of the emigrants, at least a third, to remain on the deck whenever it is practicable.

9th.—The proportion of topazes being increased to one per cent of the whole number embarked, children counting as units.

1044.—The selection of medical officers with some knowledge of the treatment of the diseases of natives of India, and of such only as are capable of understanding the coolies. Young surgeons fresh from Europe, and youths who have just completed their professional education, should not be employed on this duty.

11th.—An improved system of records, which it should be incumbent on commanders and surgeons to keep, and on colonial emigration authorities to transmit to Calcutta without delay.

12th.—The increase of the amount of solid opium to double the present quantity.

13th.—The placing of the privies securely in the fore-chains outside the vessel.

“5. Dr. Mouat also states that it is deserving of consideration whether it would not be desirable to employ a different class of vessels for the conveyance of emigrants. The experience of the past year, he says, has shown the incalculable advantages of large and powerful screw steamers in the transport of troops, and similar advantages would, in his belief, result from the use of such vessels in the transport of coolies. They could always put to sea in one day, and the rapidity of the voyage would much diminish its risks. Whether it would pay, as a commercial speculation, is a question which Dr. Mouat is unable to determine.

“6. Dr. Mouat further states that he is distinctly of opinion that the great sickness and mortality of 1856-57 need not recur; that, whether exceptional or not, they can be prevented by proper care and attention; and that there is no need to prohibit the continuance of emigration, on grounds either of humanity or of policy; and he suggests that the penalties for neglect of proper sanitary arrangements on board should be more stringent than they are, and that the examination of the condition of both ships and emigrants should be more minute and searching, at the ports of debarkation, than they appear to be at present.

“7. A further report from Dr. Mouat in regard to the mortality on one vessel (the *Wellesley*), which recently left Calcutta with emigrants for the West Indies, is submitted with your letter No. 1537, dated the 17th August 1858. Dr. Mouat considers that the conclusions at which he arrived before this case came under his notice are corroborated. As the deaths on this vessel were principally among children, he suggests the following measure in addition to those already proposed:

“In addition to the ordinary rations shipped, I recommend that for every Native mother with a child at the breast, a pint of preserved milk be allowed daily, over and above her ordinary scale of diet; and for every child under two years of age who has no mother, or whose mother is unable to nurse it, a daily ration of a pint of preserved milk.

“In excess of the above, a stock of suji, oatmeal, sago, and arrowroot should be added to the medical comforts, equivalent to a consumption of six chhatáks daily for every child between two and six years of age, with a proportionate increase of sugar, the whole to be issued entirely at the discretion of the Surgeon, as in the case of the orphans of European soldiers. The quantity of water at present allowed is, I think, sufficient.

“I have already suggested that biscuit rations should be discontinued, and chura or chabani be shipped in its stead, in the proportion allowed at Madras.”

“8. The Honorable the President in Council entirely concurs in Dr. Mouat's conclusions, that the sickness and mortality on board these emigrant ships were not owing to any defects of arrangement at Calcutta, but that they may be attributed to many other causes, all connected with the treatment of the emigrants after embarkation and with the condition of the vessels on which they were embarked.

“9. In regard to Dr. Mouat's recommendations for the future, I am directed to request except as to the limitation in the number of women, that they may all be carried out as soon and as far as practicable, with the exception of the fourth, proposing a reduction of the proportion of women in each vessel, to which arrangement His Honor in Council cannot consent. The prohibition of the use of the water of the Hooghly River between the 1st November and the 15th June should, above all, be most rigidly enforced.

“10. The Lieutenant-Governor will be so good as to cause to be prepared, for the guidance of all concerned in the emigration of Native laborers to the colonies, a revised and consolidated set of rules including those prescribed by law, as well as those to be passed by the Governor General in Council under the provisions of Section 6, Act No. XV of 1842, Section 7, Act No. XXI of 1844, and Section 7, Act No. XXXI of 1855, based on the orders which have from time to time been given on the subject, and embodying the modifications now sanctioned in respect to emigration to the West Indies. These rules when approved by His Honor should be submitted for the sanction of the Government of India, according to law, and will then form a convenient and authentic manual for future reference.”

In pursuance of these instructions a revised code of rules “for the guidance of all persons concerned in the emigration of Native laborers from Calcutta to the West Indies” was submitted by the Government of Bengal, and, on 22nd March 1859, received the sanction of the Governor General in Council.

These rules embody the suggestions above made. The dietary cited above in the margin is prescribed, and a scale of clothing, medicines, instruments, medical comforts, and miscellaneous articles laid down. The rules further provide for survey of the vessel, and of her stores and provisions, for ventilation, cleanliness (both of ship and of emigrants), dry decks, careful cooking of rations, all

in considerable detail. The surgeon must either have a diploma, or be approved by the head of the Medical Department, and vessels must engage a competent tug-steamers down the Hooghly, and the pilot is bound to muster the crew and see that it is efficient. Fire-buckets, boats, and life-buoys must be provided. A third officer must be carried, and an interpreter, if neither the captain, surgeon, nor any of the officers or crew speak both English and “the Native language,” and four sirdars and at least one sweeper must be appointed for every hundred adults. Careful instructions are given for fitting privies in the fore-chains, and it is forbidden to carry gunpowder, vicious dogs, or wild animals. Finally, careful hospital and mortality records are prescribed. The rules relate entirely to the voyage, but are carefully drawn up, and have formed the basis of subsequent Calcutta codes. It may be doubted, however, whether they were at the time of their being approved altogether covered by the then existing law. For instance, the transfer to the Protector of duties then assigned by law to the Agent, the fixing of the quantity of water at seven gallons a week while the Acts only prescribed five gallons, the rule prescribing the employment of steam down the Hooghly, were regulations of doubtful validity at the time, though they have been embodied in subsequent legislation.

The adoption of these rules was suggested to the Governments of Madras and Bombay. The Madras Government, however, preferred to maintain its own rules, which, it was alleged, had worked well and contained all the essential provisions of the Calcutta code. Really they were far inferior to the Calcutta rules, both in substance and in arrangement. The Bombay Government adopted the Bengal rules with some modifications. The most important difference was, that the Government of Bombay determined to retain the use of the platforms, which had been condemned both at Calcutta and Madras as a source of dirt and disease. The Governor General in Council, however, did not interfere with the decision of the Bombay Government on this point.

The action of the Government of India was approved by the Emigration Board and by the Secretaries of State both for India and for the Colonies.

In 1857 a Monsieur Savy, an advocate in Mauritius, brought certain charges against planters and Magistrates in that island, addressing both the Colonial Government and the Government of India. The former appointed a special commission to enquire into the allegations, which were to the effect that wages were habitually in arrear, the Magistrates being interested in sugar-planting, and playing into the hands of the planters.

The report of the commission (which consisted of two officials and two planters, one of the former, Mr. Beddingfield, one of the latter, M. Antoline) was pronounced by the Government of Mauritius to have completely disproved M. Savy's charges, and I think the Government of India must have accepted this assurance without reading the report.

That document, to my mind, disclosed a most unsatisfactory state of things, though M. Savy's charges were shown to be exaggerated, and some suspicion was thrown on his motives. But the report admits that out of eight Stipendiary Magistrates in the colony, three (“only three” says the report) were “interested in colonial industry.” True, one of these “ceased to hold office immediately after the date referred to,” another “only officiated temporarily for three months, and had not since held a similar office,” while the third “was not then Magistrate in the district in which his estate was situated.” But the admission in its very form shows that the colonial authorities were not alive to the absolute necessity for a thoroughly independent magistracy. Again, the report, while finding that the Magistrates had not been proved guilty of throwing obstacles in the way of recovery of wages, bears witness to the existence of a system under which large arrears of wages were habitual, a state of things clearly inconsistent with the well-being of the cooly.

In 1858 the Government of India and the Home Government consented, on certain conditions, to an arrangement for the importation of labor from Bombay into British Guiana “on private account.” These conditions were (1) that the emigrants should engage for service on some particular estate; (2) that they were not to be bound to work on estates considered by the Colonial Government unfit for their reception on account of climate or otherwise; (3) that hospital accommodation and medical attendance should be provided by the employer; (4) that the same protection should be afforded such immigrants as was given those imported by the Colonial Government, and that a back passage should be secured to them. The scheme, however, came to nothing.

In the course of 1858 and the following year, a correspondence took place with the Government of Mauritius on the same subject. It appeared that, owing to the great extension of sugar cultivation in that island, and the consequent increased demand for labor, a practice had grown up under which planters sent their own recruiters to India and through them arranged for the importation of laborers in excess of the number imported by Government for allotment. The planters resorting to this method (which, recruiting being then unregulated, was not illegal so long as the provisions of the law in regard to registration at port of embarkation and the rules on board ship were

observed) paid the whole expense of the labor thus imported. But as the Mauritius law declared that no valid contract could be made by an immigrant till he had been 48 hours in Mauritius, the cooly imported by one planter was often induced to transfer his services to another, the law only requiring the latter to pay to the actual importer the expense of importation plus twenty-five per cent thereon. The clause of the Order in Council on the subject of contracts was embodied in the Indian Law of 1842.

Contracts in India for labor in Mauritius legalized.

Hence, when the Mauritius Government wished to abrogate it and permit the conclusion of labor contracts in India, a necessity arose for a reference to the Indian Government. Without much discussion the change was allowed, even in anticipation of the necessary change in the law; and on 4th April 1859, a notification was published declaring that special agents accredited by the Mauritius Protector of Immigrants, and licensed by the Emigration Agent at any of the three ports of Calcutta, Madras, or Bombay, might at any such port "make with any native of India a contract for labor to be performed in the colony of Mauritius for a period not exceeding three years," provided that the contract should be executed in the presence of the Emigration Agent and Protector of Emigrants of the port. Similarly the Emigration Agent was empowered to make such contracts in the presence of the Protector. This last functionary was especially enjoined to see that the regulations were precisely observed, and that natives entering into contracts fully understood the nature and terms of them, and had not been induced by unfair means to engage themselves. Thus a double system of recruitment arose, viz., (a) by special agents of individual employers; (b) by the recruiting agents appointed by the Emigration Agent. The laborers collected by the latter were allotted in the colony. Part of the scheme was that the Colonial Government should fix annually the rates of wages for various kinds of labor, on a gradually increasing scale according to length of service. The contracts were to be for three years, and the wages as at first laid down were—

Wages fixed by Mauritius Government.

for the 1st year 10 shillings a month,
 " 2nd " 11 " "
 " 3rd " 12 " "

besides rations on the following monthly scale;—45 lbs rice, 2 lbs dal, 2 lbs salt fish, 8 oz. ghi, 8 oz. oil. The Governments of Madras and Bengal were somewhat averse to this part of the scheme.

A Bill was on the 9th April 1859 brought into Council to give legal effect to the above arrangements, but it seems never to have got beyond the second reading. I cannot discover why.

It was also about this time that the Mauritius Government began to carry on emigration operations all the year round. Previously laborers had been recruited for Mauritius during the close season of West Indian emigration. But now separate Agents were appointed by the Mauritius Government, and recruiting began to be carried on throughout the year.

About the same time Mauritius emigration began to be carried on all the year round.

The despatch from the Secretary of State, No. 31, dated 23rd October 1862, forwarded a Mauritius Ordinance (XVI of 1862), the chief change made by which was to lengthen the period of original indenture to five years. It had first been one year, then three years. In 1860, an Ordinance extended these agreements to four and five years, respectively, should neither employer nor immigrant signify to the Magistrate, during the 3rd and 4th year, his wish to terminate the engagement. Minor changes were (1), that it provided for the transfer of the immigrants on an estate, in case of purchase or inheritance of the latter, to the purchaser or heir; and (2), that it legalized contracts with female immigrants. On both these points it followed the law or practice of Réunion. Sections 18 and 19 somewhat modified the law as to unlawful absence. For whereas, before, one of the penalties was the addition to the term of servitude of a period equal to twice the period of absence, the addition was now reduced to a period equal to that of absence. The Secretary of State for the Colonies agreed to sanction the Ordinance on condition that the Protector of Immigrants should be allowed to watch proceedings in court, and that the appeal from the Stipendiary Magistrate should lie to the bench of Magistrates at Port Louis, instead of to the Supreme Court, the Protector being also allowed to intervene. These amendments were embodied in a subsequent Ordinance, No. 11 of 1863, which was communicated by the Government of Mauritius to the Government of India. Mr. Grey and Mr. Maine agreed to accept the amendments as sufficient, and the pair of Ordinances was communicated to local Governments for transmission to Protectors of Emigrants.

Further changes in the Mauritius law in 1862. Contracts extended to five years.

Minor changes.

4th year, his wish to terminate the engagement. Minor changes were (1), that it provided for the transfer of the immigrants on an estate, in case of purchase or inheritance of the latter, to the purchaser or heir; and (2), that it legalized contracts with female immigrants. These amendments were embodied in a subsequent Ordinance, No. 11 of 1863, which was communicated by the Government of Mauritius to the Government of India. Mr. Grey and Mr. Maine agreed to accept the amendments as sufficient, and the pair of Ordinances was communicated to local Governments for transmission to Protectors of Emigrants.

*The same process of gradual extension of the term of indenture is observable in all the colonies. For instance, in British Guiana, when emigration thither first began, the longest term of written contract seems to have been one year. Under an Ordinance of 1846, the first hiring was to be held valid for six months, and no contract made outside the colony was to be for more than three years, and such contracts were terminable at the end of five months, if the laborer could pay the cost of his introduction. In 1848 the Home Government (Colonial Office) allowed indenture for three years certain. In 1862 the term of indenture was extended to five years. In the same way the term of indenture at Natal, which was at first three years, was in 1865 extended to five years. In fact, the French convention, negotiated without previous consultation with the Government of India, by permitting five years' contracts in French settlements, necessitated the same concession in regard to British colonies.

In June 1859 the emigrant ship *Shah Jehan* was burnt at sea, and about 300 emigrants lost their lives. This disaster suggested the necessity of a set of rules to prevent, as far as possible, the occurrence of fires.

Rules to prevent fires at sea. Accordingly certain rules were prescribed, requiring the cargo-hatches to be battened down before the ship sailed and not opened till arrival at destination; all ghi and oil to be carried on the upper deck; no lights to be taken into the hold; and the galley fires to be only lighted between sunrise and sunset. Inflammable cargo was forbidden, and every ship was required to carry five serviceable boats, or, if above 1,000 tons burthen, seven such boats, of which two to be life-boats. The pamphlet by the Emigration Commissioners, entitled "suggestions to masters of emigrant ships respecting boats and fires at sea," was also placed in the hands of all commanders of emigrant vessels.

In October 1860 the Government of Bengal appointed a Committee (consisting of Dr. Chevers, Dr. Payne, and Captain Howe) to consider the whole system of emigration and the amendments called for therein. The Committee submitted their report in May 1861, and it was reviewed by the Government of Bengal, the Governor General in Council, and the Emigration Commissioners. Their most important recommendation, viz., that a Government medical officer should be appointed, was at once approved by all the authorities and acted upon without delay. The duties of the officer so appointed were to be the general supervision of all the depôts both of British and foreign agencies, and the care of the health and physical well-being of the emigrants. The Committee recommended that not more than 25 women to every hundred men should be embarked. This, however, was not approved. But the embarkation of pregnant women and very young children was to be discountenanced. The Committee proposed that not more than 350 emigrants should be embarked in any one ship. But it was held to be sufficient that the existing rules against over-crowding should be strictly enforced. It was agreed that in calculating space children should count as adults. The law was not, however, altered in this sense.

Bengal Committee on system of emigration appointed in 1860.

Their report and recommendations.

Appointment of a Government medical officer.

Proportion of women. Limit of number.

But the embarkation of pregnant women and very young children was to be discountenanced. The Committee proposed that not more than 350 emigrants should be embarked in any one ship. But it was held to be sufficient that the existing rules against over-crowding should be strictly enforced. It was agreed that in calculating space children should count as adults. The law was not, however, altered in this sense.

The recommendation that the ship-surgeons should be appointed from England was met by the transfer to the West India emigration of a number of the Australian emigration surgeons.

European surgeons.

Various minor suggestions, e. g., that the surgeon should keep a full medical diary; that a woollen suit should be supplied each emigrant at the discretion of the surgeon; that platforms should be raised (I presume on the upper deck) to keep the emigrants off the wet deck; that professional cooks should be sent, one for each hundred emigrants; that topazes or sweepers should be shipped, one for each hundred emigrants; that, weather permitting, ships should be white-washed every fortnight; that the ship-surgeon should frequently attend the depôt before sailing; that in case of any remarkable sickness or mortality, an enquiry should invariably be set on foot at the port of debarkation; that hospitals should be on the upper deck; and that the greatest care should be taken as to the purity of the water shipped, were all approved.

Minor suggestions.

About the same time a correspondence took place about side-scuttles. The authorities in Calcutta had insisted on this method of ventilation, which was compulsory in English vessels, being provided in ships carrying emigrants to Réunion. The French Government remonstrated, and the Secretary of State ruled that side-scuttles might be dispensed with in any ship where the responsible officers were satisfied that there were other means of sufficient ventilation.

Rules as to side-scuttles.

In 1860 an Act (No. II of that year) was passed, extending the provisions of the imperial "Passengers' Act, 1855," in regard to treatment of wrecked passengers, to voyages (amongst others) from India to Mauritius "under Act XV, 1842," from India to Jamaica, British Guiana, and Trinidad "under Act XXI, 1844," and to St. Lucia and Grenada "under Act XXI, 1858." This step was taken at the suggestion of Lord Stanley, some legal difficulty having arisen with regard to the recovery of expenses incurred by the Government of St. Helena in forwarding emigrants ex ship *Hanover* which ran a ground on that island.

On the 26th April 1860, the Government of India, on the motion of the Colonial Office, passed an Act (XII, 1860), extending to the island of St. Vincent, one of the Windward group, the provisions of Act XXXI of 1855, and on the 25th May following a notification was published declaring that the Governor General in Council was satisfied that the necessary measures had been taken in St. Vincent, and opening emigration to that island. The St. Vincent regulations were found to follow very closely those of Grenada. It is worthy of remark that the laws of both these colonies contain the provision obliging the cooly to contribute towards the cost of his return passage, which was so much objected to in the case of St. Lucia.

Act XII, 1860, extending to certain voyages certain provisions of the "Passengers' Act, 1855."

On the 26th April 1860, the Government of India, on the motion of the Colonial Office, passed an Act (XII, 1860), extending to the island of St. Vincent, one of the Windward group, the provisions of Act XXXI of 1855, and on the 25th May following a notification was published declaring that the Governor General in Council was satisfied that the necessary measures had been taken in St. Vincent, and opening emigration to that island. The St. Vincent regulations were found to follow very closely those of Grenada. It is worthy of remark that the laws of both these colonies contain the provision obliging the cooly to contribute towards the cost of his return passage, which was so much objected to in the case of St. Lucia.

Act XII, 1860, permits emigration to St. Vincent.

In 1860 was also passed an Act (XXXIII of that year) which, with its subsidiary notification, allowed emigration to Natal under the regulations applicable to the West Indian Colonies, except that the length of voyage was fixed at 12 weeks from Calcutta and at 10 weeks from Madras or Bombay. The colonial laws were mainly based on the St. Lucia Ordinances. They included a provision allowing the deduction of two shillings a month from the laborer's wages for lodging and medical attendance; but the Agent sent by the Natal Government pledged himself that this should not be acted upon, and that the minimum wages should be a clear 10 shillings a month, in addition to food and lodging. The first application for cooly labor had been made by Sir George Grey at the end of 1855; but the Government of India had not then thought fit to accede to it, as the wages were fixed on such a scale as not to be likely to attract emigrants, at any rate from Bombay, whence at that time it was contemplated to introduce labor.

In the same year was passed a similar Act (No. XLI), legalising emigration to St. Kitts, one of the Leeward Islands; and a notification, dated 23rd October 1860, announced that the Governor General in Council was satisfied that the needful steps had been taken in that colony for the well-being of emigrants.

The climate of Bourbon or Réunion, though highly favorable to Europeans, seems history of emigration to French colonies. Réunion. to be prejudicial to Negroes, and the supply of labor was a chronic difficulty in that colony. We have seen that it began to draw on India for labor even before Mauritius. In 1843, a large area had fallen out of cultivation for want of hands to till it, and the colonists addressed the French Government. But the monarchy does not seem to have helped them out of their difficulties. In 1848, the emancipation of the slaves brought matters to a crisis, and the result was the establishment of an emigration from the French Settlements on the Coromandel Coast, which degenerated into the system of kidnapping and decoying British subjects already noticed, and brought about the passing of Act XXIV of 1852.

But while the discussions on this subject were proceeding, the French Government had Application in 1851 for leave (November 1851) applied to be allowed to recruit laborers in to recruit in India for Réunion. India for Réunion. The proposal was at first coldly received by the Directors, who pointed out that there were no such guarantees in the case of a French colony as existed in regard to Mauritius for the due care of emigrants on the voyage and during their engagements, and for their return to India. But Count Walewski pressed the point, forwarding copy of a decree passed by the President of the Republic, dated 27th March 1852, for the protection of laborers, and remarking as a stimulus,—"le désir du Gouvernement français à cet égard est d'autant plus vif, que si cette ressource venait à manquer aux colons français il deviendrait difficile de les détourner, pour faire cultiver les terres, à des engagements sur la côte d'Afrique, parmi des indigènes esclaves préalablement émancipés; engagements faciles et peu dispendieux, mais qui ne vous sembleront sans doute pas moins qu'à nous mêmes avoir l'inconvénient grave de donner comme un encouragement tacite à un odieux trafic."

Thus urged, the Court of Directors, in a despatch dated 23rd June 1852, consulted the Government of India, which, in its turn, asked the opinions of the subordinate Governments of Bengal, Madras, and Bombay. The opportunity was also taken to circulate a letter received from Dr. Mouat (who had recently returned from a visit to Réunion), reporting upon the condition of the Indian laborers who had already emigrated to that colony, and of whom he believed there were about 23,000 on the island at the time of his sojourn. Report by Dr. Mouat. Dr. Mouat briefly described the arrangements in force for the protection of the cooly and in respect to his dietary, clothing, and medical attendance, and distinctly gave it as his opinion that our laborers were on the whole well cared for and kindly treated. The only points on which he was not satisfied were (1st) that he suspected overcrowding on board ship; and (2nd) that the measures for the repression of "vagabondage" or vagrancy were somewhat severe.

Lord Dalhousie, as Governor of Bengal, expressed himself decidedly in favor of the legalizing of emigration to Réunion under proper precaution, as a measure not only less likely to do harm than the existing clandestine emigration, but as one in itself desirable. The Government of Madras proposed that while emigration to Réunion should be legalized, the emigration to the British West Indian colonies should be closed, and recommended the establishment of a joint agency for Mauritius and Réunion, to which colonies emigration should thenceforward be restricted.

The Government of India agreed that emigration might, under proper checks, be permitted to Réunion, but did not desire to extend the measure to French West Indian colonies or to French Guiana. And certain objections were taken to the decree of the 27th March 1852. These were expressed in a minute by Mr. (Sir B.) Peacock, and were to the following effect:—

1st.—That the minimum of space allowing one emigrant for every ton of burthen was altogether insufficient;

2nd.—That there was no provision for a surgeon on board ship;

3rd.—That the dietary and clothing were insufficient or unsuitable;

4th.—That emigration from French ports in the absence of a Protector was undesirable; and

5th.—That provision for a British Protector of Immigrants at the colony of destination was very desirable.

Some further communications were made in 1854, in 1857, and 1858, to each of which the negotiations are protracted. reply was that the question was under consideration or reference to the Secretary of State for Foreign Affairs. The negotiations were protracted, for it was not till June 1860 that Sir C. Wood (Lord Halifax) was able to forward copy of a convention agreed upon between the two Governments, and to urge the speedy passing of a law to give effect thereto. The urgency of the case arose from the fact that the French had again resorted to a system of obtaining negro labor designated in the preamble to the draft convention as a "recrutement sur la côte d'Afrique de travailleurs noirs par voie de rachat," but described by Lord Russell as "a revival of the African slave-trade, however the operation may in terms be disguised." This system, otherwise known as the "Régis Contract," the Emperor could not put an end to till he was assured by a definite conclusion of the convention that his colony would be able to obtain labor from India. But the convention would be a dead letter without the necessary repeal of the Indian law forbidding emigration to French colonies. Hence the urgency of the case. Sir C. Wood's first despatch announcing the "negotiation" of a convention was followed up by two others, the first of which directed that as soon as the Act was passed the scheme should be brought into effect immediately, without waiting for the formal completion of the convention, while the second forwarded copy of a separate convention in regard to Réunion actually "done at Paris, the twenty-fifth day of July, in the year of our Lord 1860." A fourth despatch notified the appointment by the French Government of M. Camia to be Emigration Agent at Calcutta for Réunion.

No time was lost in taking the necessary steps in India, and Act XLVI, 1860, received the assent of the Governor General on the 6th October of that year.

The Act recites, and to a great extent only repeats, the provisions of the convention. Thus Articles I and XXIV of the convention, together with section 1 of the Act, permit contracts to be made with natives for labor to be performed in the French colonies of Réunion, Martinique, Guadeloupe, and its dependencies, and Guiana, or in any other French colony in which a British Consular Agent may be established, and to which the Act may be by notification extended, and emigration to such place from Calcutta, Madras, and Bombay, or from any French port in India is relieved from the legal prohibition.

Article II, section 2.—The French Government may nominate an Agent at each of the three British ports subject to approval by Her Majesty.

Articles III and IV, sections 3 and 4.—The Agents are to enjoy the same privileges, and to conduct their operations of recruitment under the same regulations, as Agents for British colonies.

Article V, section 5.—At British ports the Protector of Emigrants is to perform the same duties in regard to emigrants to French colonies. At French ports the duty is to be performed by the British Consular Agent under such instructions as may be given by the Governor General in Council in that behalf.

Article VI requires the Consular Agent to satisfy himself either that the emigrant is not a British subject, or that his engagement is voluntary, that he has a perfect knowledge of the contract, the place of destination, the length of the voyage, and the advantages connected with the engagement.

Articles VII—X and sections 6—7 relate to the terms of contract. The original contract is to be made in India, and either to bind the emigrant to serve a person designated by name or to serve a person to whom he shall be allotted by the proper authority on his arrival in the colony. It is to stipulate—

- 1, the duration of the engagement, in no case more than five years, at the expiration of which a free back-passage is claimable, and the terms on which it will be competent to the emigrant to commute such claim;
- 2, the number of days and hours of work, not more than six days in seven, and not more than 9½ hours a day;
- 3, the wages and rations, rate of pay for extra work and all advantages promised to the emigrant;
- 4, gratuitous medical treatment, in cases of illness not arising from his own misconduct.

Days of duly proved wilful absence from work to be added to the term of five years; the conditions of task-work and every other kind of regulation for work to be freely arranged with the laborer.

Article XI, sections 8—11.—This article of the convention lays down that the arrangements preceding emigration at British ports which precede embarkation are to be the same as in case of emigration to British colonies. Accordingly the corresponding sections of the Act apply to French emigration the appropriate portions of Act XV, 1842, as modified by Act XXI, 1843, but with the important change that the duties which the earlier Acts throw upon the Agent are now assigned to the Protector. The 11th Article also requires that at French ports the Emigration Agent shall deliver to the British Consular Agent a nominal list of all emigrants who are British subjects, and a copy of contracts made.

Articles XII and XVII of the convention and section 30 of the Act ensure to the immigrant access to the British Consular Agent, and to the Agent the right of visiting the depôts and emigrant ships at all reasonable hours.

Section 12 of the Act regulates the estimated length of voyages as follows:—
Estimated length of voyages.

To Réunion	From Calcutta	From April—October inclusive, 10 weeks.
	Madras	November—March „ 8 „
	Bombay	April—October „ 7 „
		November—March „ 5 „
		April—September „ 5 „
		October—March „ 6 „
To Martinique, Guadeloupe and its dependencies.	Calcutta	20 weeks.
	Madras	19 „
	Bombay	19 „
	Calcutta	26 „
	Madras	19 „
	Bombay	19 „
To French Guiana	Calcutta	20 weeks.
	Madras	19 „
	Bombay	19 „

Provided that the Governor General in Council may extend the Act to any other French colony where a British Consular Agent is established, and in such case may declare the length of the voyage.

For the anomalous length assigned to the voyage from Calcutta to Cayenne, I have not in any way been able to account. I think it must be a clerical error arising from confusion between the figures "6" and "0." But in the first printed draft of the Bill the estimated length is stated in words at "twenty-six weeks." The point has recently been brought to notice officially by the Government of Bengal.

Article XIII, with section 13, permits emigration to colonies east of the Cape at any time of year. Emigration in sailing vessels to other French colonies may take place from the 1st August to the 15th March. But vessels using steam-power may sail at any time of the year. Every emigrant sailing for any colony west of the Cape is to have a double blanket over and above the usual allowance of clothing.

Article XIV and section 14 require each ship to carry a European surgeon and an interpreter. The master is to carry any despatch entrusted to him for the British Consular Agent at the port of embarkation.

Article XV and section 15 regulate the space on board ship. The emigrants are to occupy, either between decks or in cabins on the upper deck firmly secured and entirely covered in, a space devoted to their exclusive use and everywhere not less than 5½ feet high. No compartment in any vessel sailing from Calcutta is to take more than one adult emigrant for every 72 superficial feet, nor in vessels sailing from Madras, Bombay, or any French port more than one emigrant for every 60 superficial feet. An emigrant above the age of ten years is to count as an adult, and two children from one to ten years of age as one adult. A separate hospital is to be fitted up in each ship, and women and children are to occupy compartments distinct and separate from those of the men.

Article XVI and section 28 fix the proportion of women at one-fourth of the number of men. After three years the proportion to be raised to one-third; after two years more to one-half, and after a further two years, to be the same as fixed for British colonies.

Sections 16—27 inclusive follow corresponding sections* of Act XV, 1842, and the Order in Council therein embodied, with the exception that the duties described are imposed on the Protector instead of the Agent. In point of fact it was an oversight not to have done this for British colonies when a Protector was first made obligatory by Act XXI, 1843, which constituted the office without assigning to the holder of it any specific duties beyond that of

* Viz., sections 9—12 and 14—16 of the Act; clauses 6 and 8—11 of the Order in Council.

countersigning emigrants' passes. In section 16 also is introduced the rule allowing a reduction of the quantity of water shipped in such vessels as carried a Normandy's distilling apparatus, which was shortly afterwards made legal for ships sailing to British colonies also.

Section 28 appears here for the first time in legislative enactments on emigration. It allows the levy of fines by distress and sale of the goods and chattels of the offender, or, in case of insufficiency, awards imprisonment for any term not exceeding two months where the fine does not exceed Rs. 50, for four months where the fine does not exceed Rs. 100, and for six months in other cases.

Article XVIII of the convention binds the Governors of French establishments in India to make the administrative regulations necessary to carry out the stipulations of the treaty.

Article XIX requires the Colonial Government, on the arrival of an emigrant ship, to deliver to the Consular Agent any despatches for him; and—

- 1—a nominal list of all laborers disembarked, being British subjects;
- 2—a list of births and deaths on the voyage.

The Consular Agent is to be allowed to communicate with the emigrants, and copy of their distribution list is to be given him. He is to be informed of all deaths and births during the period of engagement, and of all changes of employer, departures, fresh engagements, or renunciations of right of free passage.

Article XX reserves to British subjects their right of claiming the assistance of the British subjects to have right of access to Consul. No obstacle is to be opposed to the laborer's resorting to the Consular Agent, "without prejudice, however, to the obligations arising out of his engagement." A correspondence is now pending on the question whether the provisions of this article have actually been carried out in Réunion.

By Article XXI the separation of husband and wife, or of parents and children under 15 years of age, is prohibited. Emigrants cannot be required to change their employers without their own consent, unless transferred to Government. Emigrants becoming permanently incapable of work from causes beyond their own control are to be sent back at the expense of the French Government.

Article XXII.—Operations may be carried on in either French or British vessels. Operations may be carried on in French or British vessels. British vessels are to comply with all measures of police, health, and equipment which may apply to French vessels.

Article XXIII declares that the labor regulations of Martinique shall serve the basis for all the regulations of the French colonies into which emigrants, subjects of Her Britannic Majesty, may be introduced. No copy of the Martinique regulations was forwarded, and the Government of India is up to the present moment in absolute ignorance of their nature. "The French Government engages not to introduce into these regulations any modification the result of which would be to place the said Indian subjects in an exceptional position, or to impose upon them conditions of labor more stringent than those prescribed by the said regulations."

Article XXV makes the convention applicable to natives of any Native Indian State under the protection or political control of the British Government.

Section 31 makes the Act take effect at once as regards emigration to Réunion, to the extent of 6,000 laborers; in regard to Martinique, Guadeloupe, and French Guiana from the date of the convention being finally concluded and coming into force; in regard to other colonies from such date as the Governor General in Council in extending the Act may determine.

By Article XXVI the convention is to take effect on the 1st September 1861 (subsequently changed to 1st July 1862), and to last 3½ years, and to remain in force thereafter unless notice of termination be given in September of any year (afterwards July) when it shall cease 18 months afterwards. The final clause of section 31 reserves to the Government of India the right of stopping emigration under the same circumstances as would justify the exercise of the right in regard to emigration to British Colonies. In reporting the passing of the Act to the Secretary of State the Government of India drew particular attention to this provision.

A reference was also made as to the appointment of Consuls or Consular Agents at French ports in India, as the Government of India did not consider itself empowered to make such appointments, and attention was again drawn to this point in May 1861 by the Government of Madras. It was ultimately arranged that the Government of India should make these appointments provisionally, subject to approval by Her Majesty's Government. Such approval has never been withheld. At present such Consular Agents are only maintained at Pondicherry and Karikal; but for a short time there was one at Mahé also.

The convention was ultimately not signed till 1st July 1862, and had been modified slightly in the meantime. Besides the change of date, the only important alteration was the insertion in the body of the convention of a clause reserving to the Governor in Council the

right to suspend emigration in the specified cases, a counter-right being at the same time reserved to the French Government, in the event of the Government of India exercising this power, at once to terminate the whole convention. To prevent any legal difficulties, a short Act (VII of 1862) was, on the advice of Mr. Ritchie, passed, reciting the change in the terms of the convention and declaring Act XLVI of 1860 to be applicable to the convention as finally signed and ratified.

Although, as noticed above, the Act of 1860 was passed in ignorance of the nature of Substance of the Réunion the regulations which the convention bound the French Govern- Regulations. ment to adopt in the colonies, the rules, in fact, adopted in Réunion were subsequently communicated to the Government of India. The code provides for the appointment of a Commissaire d'Immigration charged with the general protection of immigrants, and bound to visit and inspect estates, and

Protection. to see that contracts are mutually observed. At the capital town of each arrondissement a "syndicat protecteur des immigrants" is also appointed, consisting of a president (the Procureur Impérial, now National) or one of his deputies, an "avocat" or "avoué" and a municipal councillor. This body is charged with the duty of advising and instructing immigrants in any judicial process in which they may be concerned, and may appear in court on behalf of immigrants. The syndicate may also, on the representation of the Commissaire d'Immigration approved by the Directeur de l'Intérieur, claim cancellation of engagements where the obligations of the employer as to care for the health of immigrants are not fulfilled. A syndic is also appointed as a sort of assessor to each juge de la paix, and is bound to see that the immigrants are regularly paid. And he appears generally expected to perform the part of a local Protector of Immigrants. His functions are, however, entirely confined to matters in which immigrants *still under engagement*

Dwellings, food, &c. are concerned. The employer is bound to provide suitable dwellings for his immigrant laborers, and to provide rations, on the scale noted in the margin* for each person over ten years of age, for those under that age half rations. Two suits of clothing are to be provided annually. Every estate with twenty immigrants upon it is to

have an infirmary and a medical attendant regularly engaged for the treatment of the sick.

Except as otherwise stipulated, the hours of labor to be 12 per diem, including a period for meals "which may extend to 2½ hours," and the immigrant is not held to have fulfilled his contract till he has worked at the rate of full 26 days in each month; days of absence to be supplemented by extra days. An

Disposal of insubordinate immigrant "habitually insubordinate" may be "handed over laborers. to the administration to be employed by it either in a public or a private establishment."

"Vagabondage." The police are apparently vested with power to arrest laborers in the interior "discovered in contravention of the passport rules," and to re-convey them to their employers. The clause requiring 26 full days of labor in each month seems somewhat sweeping. It does not make an exception even in favor of days of sickness.

Slavery was nominally abolished in the Danish West Indian Colonies in 1848. But the legal restraints imposed on the emancipated laborer were hardly consistent with his freedom. The insufficiency of the labor supply seems, however, to have led to a considerable relaxation of these restraints in practice. In 1861 the Danish Ambassador laid before Her Majesty's Government a proposal for permitting the emigration of natives of India to St. Croix. It was desired by Denmark that such emigration should be permitted in anticipation of the needful legislation in the colony; but this Sir C. Wood refused to allow. He also insisted upon the modification in some respects of the draft Ordinance as first submitted by M. de Bille. As ultimately modified, the Ordinance provided for the shipment of the same proportion of

The terms of contract and the nature of the colonial regulations. women as in the case of emigration to other West Indian Islands, for the allotment and registration of immigrants, for the inspection of the ships conveying them, and of the estates

to which they might be assigned. It laid down that the contracts might be for five years, to which was to be added the number of days the immigrant might be proved to have been absent from work without lawful cause; that the working time was to be 9½ hours for six days each week, except holidays to be fixed by the Governor, extra work to be paid at the rates in force for "native laborers," i. e., creoles; that the immigrant should receive a house and medical attendance free; that not more than \$12 should be recoverable from any immigrant on account of advances made before embarkation. As to the rate of wages, the Ordinance was silent, only providing that the rate, whatever it might be, should be entered in the contract. The wages of creole laborers seem to have been very low; the first class only earning 15 cents a day. The form of contract with Indian immigrants stipulates for the allowance of a ration detailed in

the margin, at the fixed cost of 10 cents a day—a cost stated by the Danish authorities to be considerably below the market value of the food. The contracts provided for repatriation at the end of five years, and offered a bounty of \$10 for another engagement of the same length, without forfeiture of the right to return passage. A laborer coming late to work, or absenting himself for part of the day, was made liable to forfeiture of the whole day's pay, and, if absent without reasonable cause

for a whole day, might be fined a day's pay in addition. Absence for two days in the week or habitual absence was made liable to punishment by "imprisonment or hard labor" for 30 days. The clauses securing redress of grievances to the immigrant were very vaguely worded.

Provisions for redress of immigrants' grievances. But both the Courts and the Governor were vested with a power, in "grievous cases," to release an immigrant from his engagement, or even to remove all the immigrants on an estate. There was also a clause securing to the cooly in general terms the right of access to the British Consul.

In forwarding the papers of which the above is a summary, the Secretary of State observed that "it now only remained for the Government of India to take the necessary steps for obtaining legislative sanction to the proposed scheme of emigration," and the Government of the day seems accordingly to have accepted, without comment, the terms proposed, though, perhaps, open to objection, especially in regard to the clauses imposing penalties for absence from work. On the 4th February 1863, Act VII of that year received the assent of the Governor General. It placed St. Croix exactly in the position then occupied by St. Lucia and Grenada, as soon as, under the 3rd section, the Governor General in Council should notify that such regulations had been provided and such measures taken as he deemed necessary for the protection of emigrants in the colony of St. Croix and in respect of their return to India. This notification was made on the 17th of the same month.

In 1860, the Secretary of State forwarded papers showing that in the case of emigrant ships sailing from England, a reduction of one-half in the quantity of water was allowed when a Normandy's distilling apparatus was carried, and Sir C. Wood directed that a reduction of one-third should be permitted in ships similarly provided sailing from India. It was pointed out that the water thus supplied would be wholesomer than Hooghly water. The necessary steps were taken to bring in a Bill, and the law was ultimately amended in the desired sense by Act XLIX of 1860. At the same time tank-boats were built to be used for the emigration service in bringing down wholesome water from some point up the Hooghly twenty or thirty miles above Calcutta.

It has been noticed that, though the Act of 1842 gave the Governor General in Council power to fix a certain proportion of women as the minimum which should sail on any ship carrying immigrants, no action in this direction was taken by the Government of India, which, indeed, proposed at first to fix a *maximum* limit—a proposal, however, disallowed by the home authorities. As far as I can

discover, the first steps towards securing a more adequate proportion of women were taken by the Colonial Office. In 1856, the Court of Directors forwarded copy of a despatch addressed by Mr. Labouchere to the Governor of Mauritius, directing that the "number of males to be introduced in 1856 should not exceed, under any circumstances, three times the number of females introduced in 1855; that the number of males in 1857 should not exceed three times the number of females introduced in 1856; and that for 1858, the number of males should not exceed twice the number of females introduced in the previous year." Analogous instructions had been issued to the West Indian Colonies to which emigration was permitted, the emigration season being substituted for the calendar year. A subsequent Colonial Office despatch so far modified the instructions to the West Indian Governments as to direct the proportion to be calculated between the males and females of the same season. In regard to Mauritius the proportion seems to have been again lowered to 45 per cent. But in 1860, the Duke of Newcastle informed the Calcutta Emigration Agent for Mauritius that no ship should be despatched to that colony without the proportion of 50 per cent of female to male emigrants, unless for the purpose of adjusting any excess of women previously despatched. In the same year, however, the Convention with France was concluded; and as

Proportion fixed at 25 women to every 100 men. Section 29 of the Act (XLVI of 1860) which gave effect to this Convention, laid down the proportion of women at one-fourth for the first three years; the proportion of women emigrating to British colonies was, on the representation of the Agents, and with the concurrence of the Secretary of State, also lowered to one-fourth of the number of men.

Another indirect result of the Convention has already been noticed, namely, the extension of the term of first indenture to five years in *British* colonies. In respect to West Indian Colonies the Government of India does not seem to have been consulted as to the change, or even specially informed of it.

In 1832, on the representation of the Government of Mauritius, an Act was passed (XXII of that year) placing emigration to the "British Colonial dependency of Seychelles" in the position of emigration to Mauritius (or nearly so, for some of the Acts modifying Act XV of 1842 on minor matters seem to have been overlooked). A section is added allowing emigrants for Seychelles to be taken to undergo quarantine at Mauritius, and in such case the emigrants are allowed to contract for service in that island. The Act also contains the usual proviso that it shall only take effect when the Governor General in Council

should notify that the necessary measures had been taken at the place of destination for the protection of emigrants and in respect of their return to India. I have had careful search made for any such notification, but in vain. Nor do the emigration statements furnished by the several Protectors show any trace of a separate emigration to the Seychelles Archipelago.

In 1861 the Government of Madras drew up a code of "rules for observance in the operations connected with the recruitment and despatch of emigrants to Réunion," and forwarded them to the Secretary of State. The latter suggested that, as far as possible, the same rules should be brought into force in all presidencies, and that a reference should be made to the Government of India. While the Madras rules were under consideration, a correspondence was received in which the French Government set forth certain objections to the proposed code, as calculated in some respects to shackle the operations of recruiting agents. These objections were directed against a rule requiring recruiters to be careful not to induce persons improperly to abandon their homes and families, against a rule requiring intending emigrants to appear before a civil officer of the district in which they are recruited, and against a rule limiting the number of emigrants carried in one ship. Sir C. Wood pointed out that the rules proposed for emigration to Réunion were proposed also for emigration to British colonies.

In returning the rules to the Government of Madras with the correspondence about Orders of the Government of India, the objections of the French Government, as also with remarks of the Calcutta Protector of Emigrants, it was observed that the Penal Code might be relied on to check kidnapping, and that males of 14 years of age should be allowed to emigrate if so minded, and it was pointed out that the proposed limitation of the number of emigrants on board any one ship was a measure of doubtful legality, and had not been found necessary at Calcutta. And in order to obviate doubts and remove all ground of complaint on the part of the French authorities, it was suggested that a revised code applicable to all emigration should be prepared. The Secretary of State pointed out that, as legislation then stood, this was not altogether possible. However, the Government of Madras did submit a revised code for application to both cases, and the rules seem to have been passed, although they retained the clauses specially objected to by the Government of India.

The revised rules require recruiters to be licensed for one colony only by the Agent of such colony, and, before proceeding to recruit in any district, to obtain the countersignature of a Magistrate. They are specially warned against recruiting persons who may have improperly abandoned their homes, and against allowing persons under 18 years to embark unless accompanied by relatives of mature age. The Protector is authorised to prevent embarkation in such case. When a batch of emigrants is collected, they are to be brought before the Magistrate and registered and sent down under charge of a peon to Madras, where they are to be kept in dépôt for at least five days. To this dépôt the Protector and Emigration Surgeon are always to have access. As soon after arrival as possible the emigrants are to be brought before the Protector, who is to examine them as to the nature of their engagements, and all contracts are to be executed in his presence and to bear his countersignature. The Protector is to cause vessels selected for emigration to be surveyed, but no license is to be for more than 350 emigrants. Bents are to be provided according to tonnage and number of emigrants carried, and the Protector is to examine samples of the stores and provisions. The ship's surgeon is to be subject to the approval of the Principal Inspector General of the Medical Department, and if he cannot converse with the emigrants in their vernacular an interpreter is to be shipped. In all cases three interpreters must be carried to colonies west of the Cape. Rules are also laid down for ventilation, cleanliness, the provision of hospital and privy accommodation, life-boats, medical stores and comforts, ship's fittings and the like. But the rules are not very precise. The dietary is a revised one, the chief change from that before in use in Madras and adopted in Bengal, as above noticed, on Dr. Mouat's recommendation in 1859, being the increase in the quantity of rice from 20 to 24 ounces. The allowance of firewood was also increased where the numbers were small, and in respect of water the rules go back to what was then the allowance prescribed by law, viz., five gallons a week.

There is not much more of importance in the history of emigration prior to the passing of the consolidating and amending Act of 1864, but I may briefly notice the substance of some trains of correspondence belonging to the period.

In 1862 the Madras Chamber of Commerce complained that the emigration from Pondicherry was very ill conducted, there being, as they alleged, no security for the emigrants being free agents. The French Governor wrote very angrily about it, and an enquiry was instituted which went far to prove the groundlessness of the charge, which was probably (as suggested at the time by Mr. Grey) *motivé* by jealousy of Pondicherry as carrying away the shipping engaged in the coolie trade.

In the same year the Government of India allowed the Government of Madras to relax the rule requiring a European surgeon on each emigrant-vessel sailing to French colonies (a stipulation embodied in the Convention) so far as, in case of necessity, to permit any medical man holding a diploma to be put in charge.

In 1862 the Government of India brought to the notice of the Secretary of State that no fee was levied at French ports of embarkation. Sir C. Wood, with the consent of Lord Russell, directed that a fee should be levied on all emigrants in the district where recruited, and the Government of Madras was directed to take executive action, pending a revision of the law. This practice involved the appearance of the emigrants before the Magistrate of the district, to which, as we have already seen, the Pondicherry authorities objected. In 1863 the Government of Madras so far relaxed the rule as to allow the Consular Agent at Pondicherry to conduct the examination of emigrants being British subjects actually there recruited. But the privilege was abused, and, in spite of the protests of M. Bontemps, withdrawn. Recruiters, too, had been unnecessarily multiplied, and the licenses of the excess number were cancelled. Perhaps, Act XIII of 1864 having not then become law, the legality of these proceedings would not bear very close scrutiny.

In 1863, as it was represented that there was a difficulty in collecting a full complement of emigrants at the smaller French Indian ports, Sir C. Wood permitted French ships to pick up their passengers gradually, touching at Karikal, Yanam, and Mahé.

In 1862-63, complaints having been made of bad cooking of rations on board ship, the Agents at Calcutta were required, after much protesting, to ship professional cooks.

In October 1862, the Secretary of State forwarded some correspondence, from which it appeared that the Réunion planters complained of the feeble physique of the coolies sent from Calcutta, and that a breach of contract had been committed by the employment of these laborers at lower wages than had been stipulated for at the time of their engagement in India. Against this Sir C. Wood had protested, citing Article 21 of the Convention as demanding the repatriation of such laborers at the expense of the French Government. M. de Chasseloup Laubat thought the Article* cited did not apply to the case in question; but issued orders that "the wages of each coolie recruited should be fixed according to his physical fitness, it being optional with him to accept the offer; that in cases where it might be necessary to reduce the wages of emigrants on their arrival at Réunion, it should be left to them to accept or refuse the new offers made to them; and that it should only be on their refusing such offers and at their own request that they should be sent back to India." The Consul at Réunion, however, and the British Government refused to accept this view, and the former was instructed to "guard against any revival of the practice either with or without the sanction of the Government of Réunion."

A long correspondence took place also between the Consul at Réunion and the Government of India about the mortality on board ships from Calcutta. The French authorities alleged neglect of precautions at Calcutta, but the Governments of Bengal and India refused to admit the correctness of this view, and attributed the mortality to bad treatment of the emigrants on the voyage to the colony,—a view that was confirmed by the neglect from which certain return emigrants (rebutés or men rejected for labor) were proved to have suffered on their return voyage. The correspondence had no very definite result. In fact, in dealing with abuses connected with emigration to foreign colonies the Government of India stands at a great disadvantage. The primary impulse of a remonstrance, however vigorous, is lost in its transmission through so many intermediaries, and the hands of Government are held back from bringing into play the only direct engine at its command, by the counter-threat of termination of the convention and revival of recruitment of Negroes "par voie de rachat."

A long correspondence took place also between the Consul at Réunion and the Government of India about the mortality on board ships from Calcutta. The primary impulse of a remonstrance, however vigorous, is lost in its transmission through so many intermediaries, and the hands of Government are held back from bringing into play the only direct engine at its command, by the counter-threat of termination of the convention and revival of recruitment of Negroes "par voie de rachat."

We now come to an important stage in the history of emigration, viz., the passing of Act XIII of 1864. The grounds of this enactment cannot be more clearly set forth than in the following "Statement of Objects and Reasons" by Mr. (Sir H.) Maine:—

"The emigration laws in force in India have for some time past been under the consideration of the Government of India. In preparing a measure for the amendment and systematization of those laws, it has been thought desirable to keep the following objects in view:—

- | | |
|--|--|
| 1. Consolidation; | (1) the consolidation (with the necessary improvements) of the various Acts now on the Statute Book; |
| 2. regulation of recruitment; | (2) the repression of any abuses which may exist in the recruitment of laborers; |
| 3. regulation of dépôts; | (3) the protection of the laborers and the regulation of the dépôts; |
| 4. definition of the duties of Protectors; | (4) the definition and description by express law of the duties of the Protector of Emigrants; |

5. assimilation of law as to emigration to British and French colonies; and,

6. removal of necessity for legislation in particular cases.

- (5) the removal of the discrepancies which exist between the system of emigration to French Colonies and the system under which emigration takes place to dependencies of the British Empire and certain other localities;
- (6) the removal, by well considered general provisions, of the necessity for separate legislation in particular cases.

" I.—With a view to the consolidation of the law, all previous statutes relating to emigration (with the exception of Act XLVI of 1860, and Act VII of 1862, but including the Crimping Act), are repealed. It is supposed that the provisions of the Penal Code as to abduction or kidnapping, and the somewhat severe penalties in this Bill provided to prevent involuntary emigration, will have the effect of rendering the Crimping Act superfluous.

" II. The task of framing provisions for the effectual repression of abuses which exist, or which may possibly grow up in the recruitment of laborers, has been very greatly facilitated by the passing of the recent Bengal Act III of 1863. That Act appears to have been so carefully considered and to be so well calculated to effect its object, that it has been thought desirable to follow it substantially in the part of the present measure now under consideration. The principal difference between the machinery of this Bill and the system which it is intended to supersede, consists in the provision that every recruited laborer shall, instead of being forwarded at once to the coast, be taken before a Magistrate for registration. Previously to registration, the Magistrate will interrogate the recruit as to his comprehension of the engagement and willingness to fulfil it. The recruit, if the examination should prove satisfactory, is then under proper regulations to be forwarded to the dépôt, and there to be at once inspected by the medical officer. The recruit is to be regularly licensed, and the later sections of the Bill provide by penalties of fine and imprisonment against unlicensed recruiting, against neglecting to take the recruit for examination before a Magistrate, and against forwarding the recruit to the coast without registration. Further, in order to punish and prevent malpractices which are said to be not unknown in some parts of India, any person who may falsely represent himself to have Government authority for recruiting, or who may attempt to induce the police to assist him, is rendered liable to imprisonment or fine.

" III.—For the protection of the emigrant when he has reached the coast, dépôts are to be licensed and to be liable to constant inspection. There is to be a medical officer for every place to which emigration is authorized. The Protector is to be present at the first examination of the laborer and at his embarkation. If he is unfit to proceed on his voyage, the Emigration Agent of the colony for which he was intended must send him back to his district. The Bill provides securities (consisting in the Magistrate's registration, the Emigration Agent's certificate, the list of the Protector, the list of the Captain of the emigrant vessel, and the list of the Customs Officer) against any other than registered emigrants being embarked. It further provides for the survey and licensing of emigrant ships, and for their being duly provisioned and supplied with medical stores, boats, and other necessities.

" IV.—The Bill for the first time gives a legal description and definition of the duties of a Protector of Emigrants. Although the Protector is relieved from some of his functions by the provisions for local registration in the emigrant's district, it is assumed that his duties are still sufficiently numerous and important for it to be desirable that the Protector should be an officer with no other avocations. These duties will embrace the general superintendence of the emigrants from the time when they are brought down to the port to the moment of embarkation. It should be repeated, however, that the Protector will no longer conduct the enquiry as to the free will of the emigrant. The responsibility of that investigation is thrown by the Bill on the local Magistrate.

" V.—French colonies have now advantages in their Acts on three chief points.—the time during which their ships may sail for the West Indies, the space required for emigrants, and the proportion of women they are compelled to carry. The Bill proposes to assimilate the general law on the first two points to the French Acts, and gives power to the Governor General in Council to fix the proportion of women. The question whether other Emigration Agents should be paid by fees, as the French Agents may be paid, is resolved in the negative.

" VI.—The advantage of providing a uniform and general system, which may be known to British Colonial Governments and to foreign powers as containing the sole conditions on which emigration from India can be allowed, has been considered to justify a part of the measure which will prevent recurrence to separate special legislation adapted to particular treaties, and will empower the Governor General in Council to authorize emigration, but subject always to the proposed Act, to any new colony or locality. The Bill continues the legality of emigration to those places to which it is now lawful."

A mere enumeration of the Acts, nineteen in number, through which the law on the subject of emigration was then scattered, sufficiently proved the need of consolidation. The necessity

Some additional remarks under the above six heads. Consolidation.

of bringing the process of recruitment under some form of control had long become manifest.

Recruitment. In Madras the practice had been introduced, with the consent of the Agents, of requiring recruiters before commencing operations in any district to obtain the countersignature of the Magistrate to their license, and of bringing intending emigrants before a Magistrate previously to their leaving the district in which they were recruited. And rules to this effect were embodied in the Madras revised code of 1861. In Bengal the attention of Government had been specially called to this part of the system by Mr. Beyts, Protector of Emigrants at Port Louis, who had been deputed by the Colonial Government to enquire into the practical working of emigration in India. Mr. Beyts' suggestions were in the main approved by the Lieutenant-Governor and the Government of India, and were very closely followed in the subsequent legislation. The points of deviation, when of any importance, will be noticed when we come to consider the law in detail. Pending legislation, however, the Government of Bengal was authorized to adopt Mr. Beyts' rules as slightly modified by the Lieutenant-Governor, so far as they could be enforced without express sanction of law. Under Mr. Maine's third head, the legislation for the control of dépôts is almost entirely new. They are not mentioned in the laws before passed, nor in the Calcutta rules. They are briefly noticed in the Madras rules of 1861. Doubtless the legislation embodies the practical experience gained. On the important point of a medical inspection, the law had already been anticipated at Calcutta by executive action. The necessity for a definition of the duties of the Protector had been forcibly illustrated in 1860 by the case of the *Tyburnia*, in which the Secretary of State called for a report on the circumstances attending the embarkation of emigrants. A very unsatisfactory explanation was given by the Calcutta Protector, and it was clear that his supervision was lax in the extreme. It became evident that a separate officer must be appointed Protector, and this was at once done. The duties had, till then, been performed by the Master Attendant with the aid of an Assistant Protector, who was also 3rd Assistant Master Attendant. The registration fee was at the same time revived throughout India. But only eight annas was to be charged on each immigrant above 5,000 recruited in any one year. With regard to the definition of the Protector's duties, the Government of Bengal submitted a report from the committee which had recently sat, and their recommendations, as modified on some points by the Lieutenant-Governor, have been embodied in Act XIII of 1864.

Dépôts. Duties of the Protector. Case of the *Tyburnia*.

On Mr. Maine's 5th and 6th points no further remarks are necessary, and I pass to the provisions of the law, which received the assent of the Governor General on the 18th March 1864.

Analysis of the law. Act XIII of 1864.—Section 1 clears the ground by making an absolute *tabula rasa*, as far as emigration to British Colonies is concerned. All previous laws on the subject of emigration are repealed, except Acts XLVI of 1860 and VII of 1862 relating to French Colonies. Section 2 is a section of interpretation. The only definitions of importance are those of the words "emigrant," "emigrate," and "British India." The change introduced in the definition of "emigrant" and its cognate verb will be seen by comparing Section 2, Act XXIV of 1852, with the corresponding clause in the Act of 1864:—

Section 2, Act XIII of 1864.—"The word 'emigrate' shall denote the departure of any native of India out of British India for the purpose of laboring for hire in some other place; and the word 'emigrant' shall denote any native of India under engagement to emigrate."

Section 2, Act XXIV of 1852.—"The departure of any person out of the territories under the Government of the East India Company by land or water is emigration from the said territories within the meaning of Act XIV of 1839, and of this Act."

The definition of "British India" is only noticeable, because it excludes the Straits Settlements. This exclusion had unforeseen results when these colonies came to be removed from the control of the Government of India.

Section 3 re-enacts the exemptions in regard to (a) emigration to foreign settlements on the mainland; (b) emigration to Ceylon; and (c) sailors and menial servants, contained in Section 3, Act XXIV of 1852, Section 1, Act XIII of 1847, and Section 3, Act XIV of 1839, respectively. It also puts Native States in the same position as foreign settlements on the mainland of India.

Section 4 declares emigration lawful to the British Colonies of Mauritius, Seychelles, Natal, Jamaica, British Guiana, Trinidad, St. Lucia, St. Vincent, and St. Kitts, and to the Danish Colony of St. Croix. Doubtless the intention was to maintain the *status quo* in respect to colonies other than French. But it seems to have been overlooked that, though the necessary legislation had been carried through in the case of Seychelles, the supplementary notification had never been issued. So far, therefore, as that dependency was concerned, the Act did effect a change in the law.

Section 5, 6, and 9 are new. They enable the Governor General in Council from time to time by notification to permit emigration to any other places, provided that such notification shall contain a declaration that the Governor General in Council has been duly

certified that sufficient arrangements have been made for the protection of emigrants, and

May be permitted, under certain conditions, elsewhere.

certified that sufficient arrangements have been made for the protection of emigrants, and

legalise contracts for labor to be performed in such places. Section 9 requires the probable length of the voyage to be notified.

Section 7 restricts emigration to the ports of Calcutta, Madras, and Bombay. This was the existing law. The change proposed by the Lieutenant-Governor of Bengal that Government should have power to open other ports was not approved.

Length of voyages.

Section 8 fixes the probable length of voyages. No change is here introduced.

Sections 10 and 11, provided for the nomination of Agents by the colonies concerned and confirm the existing Agents. These sections practically re-enact those portions of the previous law which bear on the subject.

Section 12 re-enacts the prohibition against Agents being remunerated otherwise than by a fixed salary. In 1861, the Duke of Newcastle, then Secretary for the Colonies, had suggested that, in the case of the smaller colonies at any rate, the prohibition might be rescinded. It was urged that emigration was under much better control than in 1842, when the prohibition was first enacted, and that there being no such rule in regard to French Colonies, British Colonies were placed at a disadvantage. The Government of India, with the assent of the Secretary of State, thought that the rule might be safely rescinded, the appointment of Agents being, however, as in the case of French emigration, made subject to the approval of the local Government. This correspondence would appear to have been overlooked at the time of amending the law, though the matter was specially noticed by the Emigration Board in reviewing the draft Act. Recently the report of the British Guiana Commission brought to light the fact that since 1854 the Agent for that colony had been partly paid by a capitation grant, and it was discovered that the same was the case in regard to Jamaica. Steps have been taken to put an end to what, as the law stands, is an illegal form of remuneration.

Section 13 enables each of the three local Governments concerned to nominate a Protector, and, with the sanction of the Supreme Government, to assign him salary and establishment. The local Governments are also empowered to remove such Protectors. This is somewhat of an expansion of Section 2, Act XXI of 1843, and corresponding sections in subsequent Acts.

Section 14 forbids a Protector, without the permission of the local Government, to hold any other office, or follow any other profession or occupation. This clause was introduced because it had been found in 1860 that the combination of the duties of Master Attendant and Protector had led to the very perfunctory performance of the protectorate work. Section 15 confirms existing Protector.

Section 16 declares that, besides the special duties assigned to him, the Protector shall generally protect and aid all emigrants and inspect return emigrants, and enquire into their treatment both in the colony and on the voyage. The previous laws in no way defined either the general and special duties of the Protector. All he was required by law to do was to countersign emigrants' passes.

Section 17. The appointment of a Medical Inspector of emigrants at each of the three ports of embarkation, which is authorized by this section, was also a suggestion of the Bengal Committee, and had, in fact, been acted on before it thus obtained express legal sanction.

Sections 18 and 19 require the establishment of a dépôt for every colony, each such dépôt to be licensed by the Protector; the license not to be in force for more than a year, and a fee of Rupees 10 to be paid for every license. The necessity for a separate dépôt for each colony had been shown in 1863, when complaints had been made of the recruiters for one colony kidnapping those enlisted for another. The section requiring the emigrant to be at once brought before the Protector was also meant to meet this evil.

Section 20 requires both Protector and Medical Inspector to visit each dépôt at least once a week, and to examine into the state of the dépôt and the manner in which emigrants are "lodged, fed, clothed, and otherwise provided for and attended to." Section 21 binds the Medical Inspector to report the unsuitability of any dépôt, or any case of oppression or neglect of emigrants.

Section 22 constitutes Protectors and Medical Inspectors to be "public servants" within the meaning of the Indian Penal Code.

Section 23 makes it incumbent on Emigration Agents and all persons connected with Agents and all concerned in emigration to aid Protectors and Medical Inspectors. emigration depôts and emigrant vessels to give the Protector and Medical Inspector every facility for inspection, examination, and survey, and to afford them all reasonable information.

Sections 24—29 regulate the operations of recruiters, who now first receive express legal recognition. The Protector is empowered, on the application of an Emigration Agent, to license so many fit persons as he may deem necessary, to be recruiters of laborers. The license, on which a fee of Rupees 10 is payable, is to be in force for one year, and is to specify the colony for which the recruiter acts. Licenses may be withdrawn for misconduct. Each recruiter is to wear a badge and not to recruit before obtaining the countersignature upon his license of the Magistrate of the district, or the Magistrate of a Presidency town, according to his circle of operations. The Magistrate, however, must countersign, provided the license is in force. The Mauritius authorities had protested, but in vain, against the power of licensing recruiters being entrusted to the Protector instead of to the Agent.

Sections 30—35. These sections require the recruiter to appear with his laborers before the Magistrate of the district if he recruits in the mofussil, and before the Protector if he recruits in a Presidency town. The Magistrate or the Protector then, as the case may be, is bound to examine each intending emigrant, and if he appears to understand the nature of his engagement, and to be willing to perform the same, the Magistrate or Protector is to register his name, his father's name, his age, his village, the dépôt for which he is bound, and "the rate of wages and period of service, if any, agreed upon between the emigrant and the recruiter." A copy of the entry in the register is to be furnished to each emigrant. If the Magistrate or Protector be of opinion that the intending emigrant does not understand the nature of the engagement, or has been induced by fraud or misrepresentation to enter into it, he is to refuse to register his name. The Mauritius Government protested loudly against this clause. A fee of one rupee is payable on each emigrant registered, and copy of every registration is to be forwarded by the Magistrate of a district in the interior both to the Protector and the Emigration Agent concerned; when the Protector registers, by him to the Agent.

Sections 36—40. Emigrants are to be taken with as little delay as possible to their dépôt, being attended either by the recruiter or by some person appointed by him and approved by the Magistrate, and being provided with food and lodging during the journey. Their arrival at the dépôt is to be immediately reported to the Agent and Protector. The Medical Inspector also is to make an immediate examination of each emigrant. If satisfied that the emigrant is in a fit state of health to emigrate, the Medical Inspector is to certify the fact to the Agent, if satisfied of his unfitness, to the Protector. In this latter case, or if any irregularity shall have occurred in the recruitment of any emigrant, the Protector may direct the Agent to pay a reasonable sum to enable such emigrant to return to the place where he was registered, and if the Agent refuse, the Protector may pay the amount and recover from the Agent. If not at the time fit to travel, such emigrant may further be kept in the dépôt at the expense of the Agent till he is fit to return. These provisions deviate slightly from Mr. Beyts' scheme. He had proposed that the recruiter should be bound personally to accompany the intending emigrants, and advocated a central dépôt at Calcutta as well as a dépôt at Ráuniganj. These details of his plan were not approved of.

Sections 41—43. Within 48 hours of arrival at dépôt each emigrant is to be personally examined by the Agent, in presence of the Protector, as to whether he has been properly fed and otherwise properly treated on his journey, and the copy of the register in his possession is to be examined. Unless the Agent, with the consent of the Protector, repudiates the contract entered into by the recruiter, the Protector and Agent or the Agent only, as the case may be, shall countersign the copy of the register. If the Agent, without the consent of the Protector, refuses to be bound by the contract he is liable for the expenses of the laborer back to the place of registration, and the Protector may institute a suit for damages for breach of contract; and in such suit the contract shall be binding on the Agent. After the examination above described, the Agent is to deliver to each emigrant, who has been pronounced by the Medical Inspector fit to emigrate, a pass stating his name and age and his father's name, and certifying that he is in a fit state of health to emigrate. The Protector, if satisfied that the necessary enquiries have been made, is to countersign each pass. This pass so countersigned was required by the old Acts XV of 1842, XXI of 1843, and XXI of 1844.

Section 44. An emigrant refusing or neglecting without sufficient cause to embark is not to be forced on board; but may be prosecuted under Section 492 of the Indian Penal Code.

Section 45 regulates the season of emigration. With regard to places east of the Cape no restriction is imposed, the law continuing unchanged. With respect to colonies west of the Cape, the open period for emigration from all three ports was extended to that laid down in the Convention with France, viz., from 31st July to 16th March, both days exclusive. The Government of Jamaica had in 1861 pointed out that, as the law stood, British colonies were placed at a disadvantage. The season was thus lengthened by a month and a-half at Calcutta and Madras; by two months and a-half at Bombay as regards the larger West Indian Colonies. But no emigration from Bombay to the West Indies has as yet taken place. A proviso was also added exempting "vessels using steam-power" from the rule. The change in the open period and the reservation in favor of steamers were both made in order to assimilate the law applicable to British colonies to that in force for French settlements west of the Cape.

Section 46 requires every emigrant ship to be licensed. Such license can only be issued on a certificate by the Protector of Emigrants to the effect that the vessel is in all respects suitable for the conveyance of emigrants; and such certificate can only be issued after survey by a competent person "with a view to ascertain her sea-worthiness, the extent and nature of her accommodation for emigrants, and that she is properly ventilated and supplied with all requisite tackle." In consideration of the license, the master executes a bond, in duplicate, binding himself and his owners in a penal sum of Rupees 10,000 to conform to the several conditions in this Act provided. The principle of the section was not new, but it lays down more precisely the points to be certified before issue of a license.

Section 47 relates to the space to be provided. It requires that, either between decks or in cabins on the upper deck firmly secured and entirely covered in, a space, having in every part a height of not less than 5½ feet, shall be devoted to the exclusive use of emigrants. No compartment is to take more than one adult emigrant for every ten superficial and for every seventy-two cubic feet. The hospital is to be separate and distinct; women and children are to occupy a compartment separate from that of single men. An emigrant over the age of ten years is to count as an adult, and two children from one to ten as one adult. This section introduced some change; but as it was afterwards modified, a connected narrative of the legislation on the point will be given when we come to Act VI of 1869.

Section 48 requires every ship to carry good and wholesome provisions in such quantity and of such kind as prescribed by any rule framed under Section 63: fuel for cooking the same and a supply of water properly stored, at the rate of seven gallons per week for every emigrant, a properly qualified European or native surgeon, and medicines or other stores according to rule. If a vessel intends to stop at any port to water, the water shipped shall be for the estimated voyage to such port; and if she carries a Normandy's distilling apparatus, a reduction may be allowed in the quantity shipped. Both Protector and Medical Inspector are made responsible for seeing personally that the provisions of this section are complied with. The changes here introduced are—(1) the increase of the quantity of water from five to seven gallons; (2) the making it essential to carry a qualified surgeon; and (3) the distinct definition of the duties of the protective officers. The section lays down some very minute rules as to storage of water, but does not adopt the suggestions of the Government of Bengal (of which, however, approval had been expressed in 1862), that the full compulsory supply should be carried in iron tanks, and that every vessel should be bound to carry a Normandy's distilling apparatus.

Section 49 requires an extra double blanket to be provided for emigrants sailing to colonies west of the Cape between 1st March and 15th September. This provision is borrowed from Article 63 of the Convention with France.

Section 50 requires the master of every emigrant vessel to obtain, before clearing out, certificates from the Protector and Agent to the effect that the provisions of the Act and the rules prescribed under Section 63 have been complied with.

Under Section 51 the Protector is bound to ascertain from the report of the Medical Inspector, and by personal communication, that every emigrant is "in good health, and not incapacitated for labour by old age, bodily infirmity, or disease." If the Protector believes any emigrant unfit to undertake the voyage, he may stay his embarkation. The Protector is also to see that each emigrant has a copy of his registration. This section does not seem altogether consistent, either with itself or with the expressed views of the Government of India. It was held by that Government, in concurrence with the Lieutenant-Governor of Bengal, that the Protector should confine his enquiries to the fitness of the emigrant for the voyage. And, indeed, the section, though it enjoins upon the Protector to enquire into the emigrant's fitness for labor, does not empower him to stay embarkation,

except on the ground of unfitness for the voyage. The point was noticed, but after the Act had passed, by the Emigration Board. Their remarks were much to the above effect.

Section 52 requires the Protector to explain to emigrants "in a general way" the provisions of the Act, "so far as they are likely more immediately to affect them."

Sections 53 and 54. The Emigration Agent prepares five copies of a list specifying, as accurately as may be, the names, ages, and occupations, and fathers' names of the emigrants about to embark. These he makes over to the master of the vessel. The master and the Protector compare the list with the passes delivered up by the emigrants as they come on board, none being admitted without such pass. If the lists are correct, the master signs them. Two he delivers to the Protector, who signs both and returns one. Two he delivers to the Agent, who signs both and returns one. This latter is given up at the port of debarkation by the master, who also is bound to return to the emigrants their passes.

Sections 55-57 require the Customs Officer or pilot, whichever is last on board, to call over the roll and note any discrepancies, as also to sign a declaration that to the best of his belief no additional emigrants have been received on board, and that the Act has been generally observed. The muster roll and declaration are to be forwarded to the Protector. These sections are evidently meant for Calcutta only; this is clear from Section 14, Act XV of 1842, whence the provisions are adopted; but is not specified in the Act. They were afterwards repealed as useless checks. By Section 58 the Protector is bound to send a correct and detailed list of all emigrants embarked in any vessel to the proper authority at the port of debarkation.

Sections 59 and 60 require every vessel to sail within 24 hours of embarkation of the first emigrant, and every vessel sailing from Calcutta to go to sea under tow of a competent steamer.

The provisions of Sections 53 to 59 were dictated by experience as more effectual means of checking clandestine embarkation of additional emigrants. Section 60 was to diminish the risk of cholera, to which ships long in dropping down the river were found very liable.

Section 61, which requires two copies of the Act and Rules, together with translations, to be kept on board, is borrowed, with modification, from Section 10 of the Order in Council embodied in Act XV of 1842.

Section 62 merely reproduces Section 4, Act XXII of 1862, allowing vessels bound for the Seychelles to do quarantine at Mauritius, and in that case giving laborers the option of taking service in the latter island.

Section 63 authorises the Governor General in Council to make rules—

- | | |
|--|--|
| <p>(1) as to proportion of women and age of children shipped;</p> <p>(2) as to provisions and clothing;</p> <p>(3) as to medical care of emigrants in depôt and on board ship;</p> <p>(4) as to medicines;</p> <p>(5) as to ventilation, cleanliness, and boats;</p> <p>(6) as to medical record of voyage;</p> <p>(7) and generally to provide for the well-being of emigrants.</p> | <p>(1) to regulate the proportion of women and the age below or above which children shall not be taken;</p> <p>(2) to prescribe the kind, quality, and quantity, of provisions to be carried, and the allowance of food and water to be issued daily, and the nature and amount of clothing to be supplied;</p> <p>(3) to provide for the medical care of emigrants at the depôts and on the voyage;</p> <p>(4) to prescribe the drugs and other stores to be carried;</p> <p>(5) to provide for ventilation and cleanliness of emigrant vessels, and for their being furnished with a sufficient number of suitable boats;</p> <p>(6) to provide for a full medical journal being kept by the ship's surgeon;</p> <p>(7) and generally to provide for the security, well-being, and protection of emigrants.</p> |
|--|--|

Such rules are to be published in the *Gazette of India*, and to have the same force and effect as if contained in the Act. Experience had shown that it was necessary to expand the list of objects for which rules might be framed given in the previous Acts.

Sections 64-67 re-enact, with some unimportant verbal changes, Act XIX of 1856, vesting in the Governor General in Council the power of suspending emigration to any place where proper measures have not been taken for the well-being of the emigrants, and of revoking any such suspension. One of

the conditions, the violation of which by the colonial authorities empowers the Government of India to suspend emigration, is the provision of a return passage. The Government of the Mauritius protested against the enforcement of this condition, the claim to back passage having been formally waived in 1853; but no notice seems to have been taken of the point, and, though the condition was nominally binding, back passages from Mauritius have not been given till the present Governor discovered the flaw, and, under orders from Earl Kimberley, a return passage will now be provided.

Section 68 refers to the mode of bringing fees to account. I may take this opportunity of putting together such notices as I have found of the methods followed from time to time in order to relieve the revenues of India from any charge on account of emigration. At first the colony of Mauritius paid a lump yearly sum of Rupees 8,000. This being found insufficient to cover the charges, Act XV of 1842 authorised the levy of a fee of one rupee on every emigrant shipped. In April 1844 Government decided that the fee should not be levied at the time of embarkation, but that the total of fees due should be debited to Mauritius at the end of the year. In 1851, however, the expenses were found to be less than the fees levied, and the Mauritius Government elected to pay the actual charges. As for the West Indian colonies, each Presidency prepared its account of charges incurred, and submitted it to the Home Government for settlement. In Calcutta, a fee of one rupee per head was levied on emigrants to the West Indies and credited to a "West India Emigration Fee Fund," and against this a proportion of the expenses of the Protector and his Office was debited. In Madras, the actual total charges were debited, no fee being levied. In January 1859 the Financial Department directed that the levy of a fee should be done away with, and each colony charged through the Home Government with its *pro rata* share of the cost of the protectorate. But this plan did not work well, and the fees were re-imposed in 1861 or 1862, and when the Medical Inspector was appointed, his salary was charged to the "Emigration Fee Fund." We shall see that the fund afterwards became bankrupt and the maximum of the fees leviable had to be raised.

Sections 69-73 and 80 contain the penalties for breaches of the various preceding injunctions of the Act. Section 81 permits prosecutions to be instituted on information laid at the instance of an Emigration Agent or a Protector of Emigrants, or an officer specially appointed *pro hoc vice*, before the Magistrate of the district or a Magistrate of police according to the place of occurrence of the offence charged. The same section further lays down the mode of procedure in case of non-payment of any fine imposed. By Section 82 the local Government can authorize any person vested with the powers of a Magistrate, as defined in the Code of Criminal Procedure, to perform the duties and exercise the powers conferred by the Act upon the Magistrate of the district.

Section 79 gives Customs Officers and Pilots the same powers for the prevention of offences against the Act, as may be exercised by the former class for the prevention of smuggling.

Section 83 repeals so much of Section 3 of Act XLVI of 1860 as allows a fee on license of ships. In other respects the provisions of the Act relating to emigration to French colonies are expressly maintained, Sections 19-41, inclusive, of the Act of 1864 being, however, made applicable to recruitment for such colonies.

The exemption of vessels in the service of the Lords of the Admiralty and Her Majesty's vessels is repeated; and the Act is declared to come into force from the 1st July 1864.

Commencement of the Act.

Soon after the passing of the Act, rules were passed for each of the three ports of embarkation. The Calcutta rules mainly followed those already in force, with the addition of a set of rules regulating recruitment and care in *dépôt*, which were mainly a repetition of clauses of the Act. There were also some changes in the dietary of a somewhat unaccountable nature. Thus emigrants to Mauritius were given 4 oz. more rice per diem than emigrants to the West Indies, and changes were made in the proportion of the various condiments, as also in the scale of dry provisions, which, in the absence of any explanation by the Government of Bengal, are not easy to understand. Nor would it be now worth while to make enquiry, as the Calcutta dietaries have since been very carefully revised.

The Madras rules also in the main preserved the *status quo ante*, even to retaining the water scale of five gallons a week, which, under the new Act, was illegal—a point overlooked when sanctioning the rules. In Madras; The chief changes were in regard to recruiting and *dépôts*.

The Bombay Government did not adhere to the old Calcutta rules which it had before accepted, but submitted a new code, which, though considered inferior in arrangement and comprehensiveness to the Calcutta rules, was duly notified. As emigration from Bombay ceased immediately afterwards it would serve no practical purpose to analyse the rules in detail. In Bombay.

The Government of Mauritius in 1866 urged that it would be very desirable if some uniform code of rules for all ports could be introduced, and the Governments of Madras and Bombay were asked if they would accept the Calcutta code, which was on the whole considered the best. They both, however, demurred, maintaining the sufficiency of their own rules, and Madras triumphantly pointed to the low mortality on board ships from the Southern Presidency, as compared with the Calcutta emigration. The fact is patent; but it does not follow that an improvement even on the Madras rate would not have been effected by the adoption of the better considered Calcutta rules; indeed, in one point, as noticed above, the Madras code violated the law. However, it was not thought desirable to press for absolute uniformity, and the question was allowed to drop.

In 1861 the Secretary of State sent out certain papers relating to a proposal to import Indian labor into Queensland, and shortly afterwards the Government of Madras proposed that emigrants should be allowed to proceed thither. But the Government of India refused to permit such emigration until it had under its view the colonial ordinances upon the subject, and Sir C. Wood quite approved of the refusal. Ultimately, regulations were promulgated by the Queensland Government, based mainly upon the Mauritius law then in force, and as soon as Act XIII, 1864, enabled the Government of India to enlarge the sphere of emigration without a special legislative enactment in each case, a notification was published regarding emigration to Queensland and fixing the estimated length of the voyage. No actual emigration thither.

It seems, too, that the Queensland authorities appointed an Agent at Madras. But I cannot find that any emigration to Queensland ever took place, and in the consolidating Act of 1871 this colony is not mentioned among the places to which emigration is lawful. I know not whether this omission was intentional, or an oversight in the reverse sense to that which occurred in regard to the Seychelles in the drafting of Act XIII, 1864.

In January 1865 the Consul at Réunion suggested that, in consequence of the general disinclination of the planters to accept Bengal coolies, emigration from Calcutta should cease. In fact, action in this direction had already been taken by the Colonial Government, and in the following year emigration even from the port of Madras ceased, all subsequent supplies of Indian labor being drawn from French ports in the Southern Presidency.

In 1865 the French Government expressed a desire to modify the convention. The changes proposed were (a) to declare that no regulations should be made which would impose any additional expense on French colonies, (b) to dispense with registration before a Magistrate, (c) to permit the addition to the term of contract of *all* absence from labor; (d) to extend the term qualifying for return passage from 5 to 10 years, (e) to permit the employment of native surgeons on vessels bound to Réunion, (f) to restrict the powers of British Consular Agents within the limits of the "droit commun," (g) to require the English Government to engage to remove all obstacles offered by native princes. The Government of Madras, which was the Government most concerned, vigorously protested against these changes, except (e), the substitution of Native for European medical officers on ships sailing to Réunion. The other changes do not seem to have been pressed.

In July 1865 the Government of India received from the Secretary of State copy of two despatches from the British Consul at St. Croix, alleging the state of things in that island in respect of Indian laborers to be far from satisfactory. The following is a summary of Mr. Rainald's statements. Of 321 emigrants who left Calcutta in 1863, five died on the voyage, and 22 between 15th June 1863 (date of arrival) and 31st December 1864. The deaths in 1864 had been 19, or slightly over 6 per cent, while the mortality among native (i.e., Negro) laborers in 1863, with epidemic fever in the island, was considered excessive at 5 per cent. The health of immigrants had been bad even in 1863, skin diseases being very common. The Consul attributed their unsatisfactory physical condition to change of climate and diet, insufficient food, want of proper medical attendance, medicine, nourishment, and house room. This view he thought borne out by the fact that the mortality was least on the estates whence came the fewest complaints. With regard to diet, the case, according to Mr. Rainald, stood thus—, the contracts provided for a ration, principally of rice, flour, and peas, which should be supplied by employers, at a daily charge of 10 cents. This stipulation had ceased to be observed, and in most cases coolies received all their wages in money. The planters declared that the change was made at the wish of the coolies; who found that by adopting a maize dietary they could feed themselves for less than 10 cents a day. Mr. Rainald, besides objecting to the abandonment of the terms of the contract on the score that the payment of the whole wages in money tempted laborers to stint themselves (an objection the validity of which is borne out by experience in other colonies), contended that the change had been made because the planters had found they could not supply the stipulated ration at 10 cents, had reduced the quantity, and thus driven the emigrants into demanding a purely money wage. He alleged, moreover, that 40 cents a

As to health. Insufficient diet.

week, and in some cases, 60 cents was charged to Indians for a maize and salt-fish weekly dietary which was supplied to Negroes for 25 cents. For the want of sufficient medical attendance and medicines, Mr. Rainalds partly blamed the policy of the Colonial Government. In respect to house room, the Consul alleged that overcrowding was habitual, and that even the sexes were mixed up in the same sleeping rooms. He admitted that when these cases occurred, they were generally remedied after a time; but in no case had penalties for breach of the law been inflicted, and this seemed to be only one symptom of the general weakness of the executive. He pointed out too that the stipulated proportion of one woman to four men had not been introduced, and that no effectual means had been taken to secure the effects of emigrants dying in the colony.

A representation was at once made by Earl Russell to the Danish Government, and the Government of India in asking instructions as to whether a resumption of emigration to St. Croix should be permitted, expressed a decided opinion that unless future accounts were more satisfactory, such emigration should be suspended. The gravest matters, it was well pointed out, were the indications of the general attitude both of planters and Government at St. Croix afforded by the Consul's reports. On the part of the planters there was an evident desire to take unfair advantage of the coolies being bound for five years, and no steps had been taken towards a penal enforcement of the law.

Sir A. Paget's note drew forth from the Government of St. Croix and the Copenhagen Government an elaborate defence. Into the details of this apology it is needless for the purposes of this note to enter. It was pronounced by Sir C. Wood, and the Foreign Office concurred in the opinion, that the statements of the Colonial Governor in no way invalidated those of Mr. Rainalds, though, perhaps, some improvement had taken place since the date at which the latter were made. In regard to the housing of the emigrants the reply was considered especially unsatisfactory, and it was declared that, unless effective measures were taken to provide proper lodging for coolies, no further emigration would be allowed. In point of fact no emigration to St. Croix has since taken place.

In 1863 there were rumours of the proposed sale by Denmark to the United States of the West Indian colonies of the former power, and the necessity for the protection of the interests of Indian emigrants was pressed upon the Secretary of State. The transfer was, however, never ratified, the American Senate refusing even to take the treaty into consideration. In 1868 most of the emigrants returned, viz., 182 men, 41 women, 39 children, in all 255 souls. They brought with them 12,500 dollars of savings or about Rs. 100 per head, 24 re-engaged on the island and one took service in the U. S. S. *Monongahela* in what capacity is not apparent.

In 1864 there was a large mortality from fever on board emigrant vessels from Bombay to Mauritius. The causes were investigated by Dr. Leith, who reported that the mortality was chiefly due to a fever which had been prevalent in the town of Bombay, but the evil effects of which were aggravated by long detention and overcrowding in depôt and by insufficient food. The Mauritius Government had sent a special Commissioner to attend the enquiry, and he was called upon to make arrangements at Bombay such as should meet the approval of Dr. Leith. Meanwhile, emigration from that port was suspended. The Mauritius Government objected to the space (56 superficial feet per head) required by Dr. Leith as the minimum in depôt; and though the Secretary of State for India agreed with the Mauritius authorities in considering the demand excessive, emigration from Bombay has never up to the present day been resumed. Till 1864 the mortality on ships from Bombay had been small. Dr. Leith puts the number of ships for 1856—64 at 54; Statistics were forthcoming for 45 of these carrying upwards of 17,000 emigrants, and the deaths were said not to have numbered 250 or about 1.5 per cent.

It was not till the close of 1865 that the Government of India took any action towards keeping itself informed by periodical reports of the condition of Indian laborers abroad. In November of that year, at the instigation of the Government of Bengal, the Secretary of State was requested to supply copies of the reports of the Protectors of Immigrants in the several colonies. These have been supplied, but not very regularly. The Mauritius reports are the best. The others are of a meagre sort, most of them mere dry bones. From Natal I cannot find that any report has ever been received.

On the 21st August 1865, the *Eagle Speed* was permitted by the Government of Bengal to sail from Port Canning with 457 emigrants on board destined for Demerara. She went down the Mutlah in tow of the tug-steamer *Lady Elgin*; but before she could reach the sea, ran aground and became a perfect wreck, 262 emigrants being lost. A searching enquiry was instituted and the result

reported to the Government of India. The Lieutenant-Governor endeavoured to justify the grant of permission to sail from Port Canning, on the ground that the port might be considered auxiliary to that of Calcutta; but the Government of India did not approve of this departure from strict adherence to the law limiting emigration to the ports of Calcutta, Bombay, and Madras. Setting this point aside, the enquiry shewed that, while the fatal results of the disaster were much aggravated by the want of presence of mind of almost all concerned when the ship once ran aground, the requisite precautions had in many respects been neglected. In the first place, the *Lady Elgin* was clearly proved not to have been a first-class steam-tug, such as the law required, and the Protector was severely rebuked for allowing her employment in this service. In the second place, the officers and crew of the *Eagle Speed* were suffering from sickness, and neither Pilot nor Protector took sufficient care to ascertain their efficiency. The boats had not been properly examined, and the life-buoys were insufficient. The practical upshot of this lamentable case was that the departure of emigrant ships from the Mutlah was forbidden, the employment of none but first-class tugs stringently enjoined, and rules passed distinctly binding both Protector and Agent to muster the crew and ascertain their efficiency, a medical certificate as to the health of the officers and crew being also required. The examination of the life-buoys and boats was also enjoined by a special rule.

In 1865 the Government of Mauritius asked to be allowed to draw labor from other Government of India refuses to ports than Madras upon the Coromandel Coast, but the allow emigration from other ports. Governor General in Council declined to accede to the request.

About the same time the Government of Bengal proposed that coolies should be put to light labor in depôts. It was represented that such labor might be made doubly useful to the laborers, as it would keep them out of mischief, and could be directed to the better sanitation of the depôts. The Government of India at first hesitated, but at length consented on the condition that such work was to be optional with the intending emigrants, and was to be paid for at the rate of 1½ pice per hour.

In 1865 also a reduction was made in the estimated length of voyage in the case of steamers, a class of vessel then beginning to come into use in the Mauritius emigration. For regular steamers the voyage from Calcutta to Mauritius was fixed at 30 or 35 days, according to the season, and for vessels of the "auxiliary screw" class at 45 or 60 days.

A terrible epidemic broke out on board the vessels of the West Indian emigration of the season 1864-65. The figures in the margin will shew how terrible it was. A most elaborate investigation was carried out by the Sanitary Commission, and a somewhat warm discussion followed as to the origin of the disease. The Sanitary Commission maintained that the germs of it had been carried on board, and that it was in fact the typhoid jail fever of India; the emigration officers on the other hand maintained that it was generated mainly by overcrowding on board ship. No very satisfactory conclusion on this point was arrived at, and we are more concerned with the practical changes which were brought about by the discussion. Certain proposals for a purer supply of water, for the provision of a diet scale suited to the habits of flour-eating emigrants, for the disinfection of clothing, for preventing emigrants sleeping under platforms, and for keeping the emigrants on deck as much as possible, were embodied in rules under the Act. It was made a condition of the charter-party that in case of severe sickness appearing the ship should put into the nearest port. The proposal to curtail the emigration season was not approved, and it was thought that existing arrangements for ventilation were sufficient. The Commission advocated a 30 days' detention in depôt for purposes of observation, but the Government of India thought a fortnight sufficient. All parties agreed that the minimum of space should be increased, and this was ultimately done by Act VI, 1869. Meantime the agents under the orders of their respective Governments seem, at any rate in the case of West Indian emigration, to have adhered to the 12 feet standard, which had been apparently followed till the passing of Act XIII, 1864. On the last proposal of the Sanitary Commission there was much dispute. It was that the number of emigrants in any one ship should be limited to 300 or 350. Sir C. Beadon approved the proposal, but the Government of India, on full consideration, came to the conclusion that no case had been made out for the limitation, and it was not enforced.

by the discussion. Certain proposals for a purer supply of water, for the provision of a diet scale suited to the habits of flour-eating emigrants, for the disinfection of clothing, for preventing emigrants sleeping under platforms, and for keeping the emigrants on deck as much as possible, were embodied in rules under the Act. It was made a condition of the charter-party that in case of severe sickness appearing the ship should put into the nearest port. The proposal to curtail the emigration season was not approved, and it was thought that existing arrangements for ventilation were sufficient. The Commission advocated a 30 days' detention in depôt for purposes of observation, but the Government of India thought a fortnight sufficient. All parties agreed that the minimum of space should be increased, and this was ultimately done by Act VI, 1869. Meantime the agents under the orders of their respective Governments seem, at any rate in the case of West Indian emigration, to have adhered to the 12 feet standard, which had been apparently followed till the passing of Act XIII, 1864. On the last proposal of the Sanitary Commission there was much dispute. It was that the number of emigrants in any one ship should be limited to 300 or 350. Sir C. Beadon approved the proposal, but the Government of India, on full consideration, came to the conclusion that no case had been made out for the limitation, and it was not enforced.

In 1866 the Government of Mauritius drew attention to the necessity for the more regular and stricter maintenance of the medical record on board ship, and a rule to that effect was passed by the Government of India for Calcutta.

At first return emigrants from the West Indian colonies seem to have been compelled to deposit their savings before sailing, and to receive instead bills on London. In negotiating these the exchange told heavily against the emigrants, one ship-load having to pay a discount of 6½ per cent. In 1859 it was agreed to substitute a certificate of the amount deposited, the emigrants on arrival in India receiving the amount which they would have obtained for their savings had they brought them in specie. In 1866, the Government of Bengal proposed that the West Indian colonies should undertake to make coolies' remittances to their friends as done by the Government of Mauritius, and in the following year it was arranged that such remittances should be sent at the fixed rate of exchange of Rs. 2-1-4 = \$ 1, or two shillings = one rupee. It is not altogether clear whether this rule applied to coolies bringing their savings with them on return, but I think it did. Remittances by emigrants not themselves returning have never been numerous.

Towards the end of 1867 the Government of Madras brought to notice that the Proposal of the Government of British Consul at Cayenne had reported a very excessive mortality among Indian emigrants to that colony. "Of the first emigrants sent out," his report said, "at least one-half of the unfortunate creatures died; of the second consignment the majority have died; of the third, 200 men were landed, and the remainder sent on to Guadeloupe." At the time of writing,* there were, according to the Consul, about 500 or 600 alive. He further stated that the demand for labor in the colony was not sufficient to ensure good treatment to emigrants. This report never reached the Government of India till it was brought forward in 1867 by the Government of Madras. Meanwhile, it appears that the Foreign Office, on a representation that emigration from India to French Guiana would be discontinued, had, without consulting the Secretary of State for India, withdrawn the Consul at Cayenne. The Government of Madras pointed out that in fact emigration had continued, and urged the Governor General in Council to exercise his power of suspension. The Government of India, however, pointed out that the Consul's report was of a somewhat old date (but see note on this point), and that the French Government might terminate the whole convention. But the Government of Pondicherry was asked to suspend emigration to Cayenne, and a representation was made to the Secretary of State of the necessity for a Consul there. This was ~~conceded~~ conceded by the Foreign Office in 1871, when it was intimated that emigration to French Guiana would recommence.

A fatal epidemic fever raged in Mauritius from 1866 to 1868. The first intimation of the out-break received in India was an application from the Government of Mauritius for a supply of quinine, as "a fever of an intermittent type, but which had gradually assumed a more fatal character, especially among the population of Indian origin, had manifested itself for some time past." In June 1867, at the suggestion of the Sanitary Commissioner, the Government of Mauritius was asked for further information, and ultimately towards the end of 1868 a voluminous report by the Commission appointed by Sir H. Barkly to enquire into the whole subject was received.

According to the report of the majority of the Commission, the cases of malarious remittent and intermittent fever in Mauritius had, till 1865, been but few, though they had since 1858 increased somewhat, as compared with their very marked infrequency before that date. A fever, however, known as "Bombay fever," had established itself in the island as early as 1838; but this was a continued enteric typhus, and, as its name implies, had been introduced by emigrants from Bombay. It seems to have had periods of outbreak from time to time, and to have raged much among Indian laborers, being highly contagious. Another form of fever, called by the Commission *spurious* Bombay fever, had been almost confined to emigrants, and is viewed as a malarial remittent due to antecedent malarial poisoning. Towards the end of 1865, however, there appeared a marked increase of malarial fever in the Black River district, whence the epidemic gradually occupied the whole littoral, and, although in a less degree, the parts of the island of moderate elevation. On the still higher levels, cases were rare and mild. During 1866 the months of severest sickness were from May to September. In October and November there was a lull. Throughout this first year the type of disease was not severe. But in the second year of invasion "the intensity of the epidemic, the numbers attacked, and severity of the cases were continuously on the increase from December 1866 to May 1867. The subsidence of the epidemic took place slowly, the

* According to the papers, the Consul's letter is dated 1st May 1862; but I think this must be a mistake, as I cannot find that emigration to Cayenne began before 1864. Since this was written a statement has been received from the Consular Agent at Pondicherry, shewing that emigration from that port took place in the years 1856, 1860, and 1861; and even this statement appears to be incomplete. If these emigrants were British subjects, then the proceeding was distinctly illegal.

cases becoming less and less numerous up to the month of October." In the third year the epidemic began to die out. The deaths from fever are given as follows:—

Mortality.	1866	...	...	...	4,913
	1867	...	...	...	31,920
	Half of 1868	...	...	...	8,343

But these figures are admittedly not altogether trustworthy, the registration of causes of death being defective. The figures of total mortality, however, bear strong evidence of the ravages of the fever. The total number of deaths was as follows:—

1866	11,735, or 32 per mille of population.
1867	40,097, or 88 per mille of population.

1868 (first six months) 12,728, or equivalent to an estimated annual rate of 51 per mille.

Port Louis (described as a "noisome town") suffered terribly, the mortality in April 1867 reaching to 6,224 on an estimated population of about 70,000 or 80,000. The mortality among laborers under indenture on sugar estates was very markedly less than among the rest of the Indian population. Efforts seem to have been made to open hospitals and dispensaries; but the resources of the island were insufficient to meet the calamity, and the supply of quinine fell short.

The majority of the Commission held that the fever had been prepared by a gradual débâclement of the island, and the consequent diminution of rain-fall and drying up of springs, reduction of rivers to a lower level, pollution of water, and deposit of alluvial matter in the marshy plains and mouths of rivers. The exciting causes were thought to be mainly the inundation of 12th February 1865 and the great drought, in a lesser degree over-crowding, bad hygiene of dwellings, insufficient scavenging, privation and dearth of provisions. The enumeration of the predisposing and exciting causes assigned sufficiently indicates the views of the majority of the Commission as to the preventive measures to be adopted.

One of the members of the Commission, Dr. Barrault, differed from the view above summarised, and held that the main source of the epidemic was the contagious typhus, a doctrine which found favor in the eyes of the Sanitary Commissioner who sought to identify the Mauritius outbreak with the jail fever of Upper India. It is, however, hardly necessary to enter into the details of this medical discussion. Suffice it to say that Colonel Malleson's letter was sent to Mauritius, and elicited a reply from the chief medical authority of the island, in which he still maintained the malarious nature and non-contagiousness of the outbreak of 1866-68.

The Secretary of State drew special attention to the want of attention to cleanliness, drainage, and the like in Mauritius, and a despatch was accordingly addressed to the Colonial Government quoting the remarks of the Fever Commission, and pointing out that the necessity for enforcing observance of sanitary laws had been one of the reasons put forward by the Governor in justifying the stringent measures of 1867 (of which more hereafter). It was asked what steps had been taken to introduce improved drainage, healthy dwellings and other requisites of ordinary hygiene. In reply, Sir H. Barkly pointed out the great difficulty of "reclaiming from inborn habits of domestic uncleanness and insanitation a class so fatalist and so entrained by the customs of his forefathers as the Indian of the lower class," but stated that an Act had been passed for regulating the building of tenements in Port Louis and the scattered villages of the island; that a system of sanitary taxation had been set on foot; that meanwhile the existing sanitary regulations were being more strictly enforced; that an efficient system of poor relief had been established; and that a general scheme of drainage for Port Louis was under consideration. Since then we have heard nothing further; but the island seems to have been fairly healthy. The legislative result of this fever outbreak will be noticed further on.

In the course of the discussion reference was made to an epidemic of remittent fever, which was said to have broken out in Réunion in 1864, and was attributed to emigrants from Calcutta. The disease abated in 1865, but assumed fresh virulence in 1866. I have not found any report on the subject.

A correspondence covering part of the years 1863-70 took place with the Secretary of State about the substitution of maize for rice in the dietary of coolies in Réunion. It was ultimately arranged that it should, in case of *existing* agreements, be only allowed with the consent of the immigrant, and that the change should be expressly indicated in future agreements. The alteration had, in fact, been silently introduced in Mauritius, where 1½ lbs. rice was held equivalent to 2 lbs. of pounded maize, 2½ lbs. of cooked manioc or 5 lbs. of raw manioc.

In 1869 Mr. Segrave, Consul at Réunion, drew attention to the want of clothing on board vessels sailing from Pondicherry, and the Consular Agents at that port and Karikal were desired to insist on the proper allowance. As the law stands, I hardly see how they have any power in the matter. Mr. Segrave also forwarded complaints by certain emigrants of having been defrauded of so-called advances by maistries.

Complaints of want of clothing and of fraud by maistries of the French emigration.

From a demi-official letter from the Protector at Madras, I fear this grievance still subsists. A strong remonstrance was addressed to the French Government by the Foreign Office.

Acts VI, 1869, and VI, 1870, may be considered to embody the more important improvements suggested by five years' working of the Consolidated Act of 1864. The amendments introduced on the following.

Amendments effected by Acts VI, 1869, and VI 1870.

The estimated length of the voyage from Madras to Réunion, Mauritius or the Seychelles during the season from November to March, inclusive is extended from five to six weeks, the former period having been in practice found insufficient.

Estimated length of voyage from Madras to colonies east of the Cape extended.

The Government of Madras had brought to notice that, as the law stood, British Consular Agents at French ports could not license recruiters, and that such licenses could only be issued by the Protector at Madras. As it appeared that this state of the law merely resulted from the application to French emigration of rules based on the supposition that emigration would only take place from the three Presidency towns,—a supposition no longer true,—it was determined to allow British Consular Agents to grant recruiters licenses, and this measure is carried out by Act VI, 1869.

The refund of the registration fee is permitted should the emigrant desert before embarkation. Registration fee to be refunded if emigrant deserts before embarkation. Under Act XIII, 1864, the refund could only be claimed if he deserted "before reaching the dépôt." The amendment seemed only reasonable.

The Government of Bengal had represented that in cases of emergency it ought to have the power of permitting emigrant ships to sail to the West Indies even after the close of the open season, and that a similar discretion ought to be given it in allowing vessels to sail without the full prescribed proportion of women. "As the law stands," the Lieutenant-Governor wrote, "it comes to be a question sometimes, under exceptional circumstances, whether the local Government should act *ultra vires* in relaxing the law, or whether a whole shipload of emigrants collected and ready to start shall be broken up and dispersed to their homes and the colony be put to great and useless expense in consequence." The Government of India agreed that the dilemma was not one which should be allowed to continue to embarrass the local Government, and Act VI, 1869, gave the Lieutenant-Governor the required discretionary power.

It will be convenient to insert here a consecutive narrative of the history of the checks imposed by law on the over-crowding of emigrant vessels sailing from Indian ports. Act V, 1837, requires the officer granting permit to ascertain that the accommodation is sufficient whenever more than 20 emigrants are embarked on one vessel. The rule laid down at Calcutta under this law forbade the shipment of more than one emigrant for every 1½ tons burthen. Section 4 of the schedule attached to Act XV, 1842, lays down (a) the proportion of one person for every two tons burthen, and the further conditions (b) that the height between decks shall not be less than six feet, and (c) that the number of passengers shall not exceed one person for every 12 superficial feet of unoccupied space on the lower decks. Two children under 10 years of age to count as one person. This law applied only to Mauritius. But section 4 of the schedule attached to Act XXI, 1844, is identical. Thus, then, for Mauritius, Jamaica, Trinidad, and British Guiana, there was the same threefold rule, viz., (1) the number of passengers was not to exceed (a) the number representing the vessel's tonnage divided by two; (b) the clear space on the lower deck expressed in square feet divided by twelve; each child under 10 years counting as only half a passenger; (2) the absolute height between decks was not to be less than six feet. Section 3, Act IV, 1852, lays down a double rule,—

- (1), that whatever may be the tonnage, no greater number shall be shipped than one emigrant laborer for every seventy-two cubic feet of unoccupied space between decks; and
- (2), that the height between decks shall not be less than 5½ feet.

It is perhaps open to doubt whether this rule applied only to Mauritius or to all emigration. On the one hand, the preamble * is quite general in its language, as also the section † itself at its outset. On the other hand, the reduction in height was reluctantly made on the repeated representations of the Mauritius Government, and the proviso ‡ at the end of the section refers only to Act XV, 1842, the Mauritius Act. Sir B. Peacock, however, in the discussion as to opening emigration to St. Lucia, held that the relaxation applied to all vessels, though it was not taken advantage of by those sailing to the West Indies. Section 4 of the

* "Whereas it is expedient to amend the law relating to the height between decks in emigrant vessels,"

† "No ship or vessel carrying emigrants." No destination is specified.

‡ "Anything in Act XV of 1842 *** to the contrary notwithstanding."

schedule to Act XXXI, 1855, legalising emigration to St. Lucia and Grenada, is word for word the same as the corresponding section of the schedule of Act XXI, 1844. Acts XII, XXXIII, and XLII, of 1860, and Act VII, 1868, put the colonies of St. Vincent, Natal, St. Kitts, and St. Croix, respectively, in exactly the same position in this regard. As to French colonies the rule is laid down by Article 15. of the convention, repeated *verbatim* in section 15 of the Act, XLVI, 1860. (1) The cabins or between decks allotted to the

emigrants shall be not less than 5½ feet high, and (2) no compartment shall carry more than one adult emigrant for every 72 cubic feet in vessels sailing from Calcutta, and 60 cubic feet in vessels from the Madras Presidency or Bombay. Children between 1 and 10 count as half adults. In March 1860 the Secretary of State seems to have suggested the reduction of the minimum in case of Mauritius also to 60 cubic feet on vessels from Madras and Bombay. Meantime, it had been decided, on the suggestion of the Court of Directors, to forego the tonnage rule altogether, and on 8th June 1858 Mr. (Sir B.) Peacock was requested to bring in a bill—(1) abolishing both the tonnage rule and the rule as to absolute height, and (2) fixing a double minimum of (a) 10 superficial and (b) 72 cubic feet. No legislative action was, however, taken till 1864. The consolidating and amending Act (XIII) of that year laid down, for all other than French colonies, the following rules:—

(1) all cabins and spaces between decks allotted to emigrants to be not less than 5½ feet high;

(2) no compartment to take more than one adult emigrant (a) for every ten superficial feet on deck, and (b) for every 72 cubic feet of space. Two children between the ages of 1 and 10 years to count as one adult. The case of French colonies continued to be regulated by the convention. The rule as to superficial space seems to have passed in spite of remonstrances from the emigration authorities (including the Emigration Agents), at Calcutta and from the Government of Bengal; and, very shortly after the law was enacted, the terrible mortality of 1864-65 occurred on board the vessels of that season sailing to British Guiana and led all parties to urge an extension of the minimum. Accordingly Act VI, 1869, enacted that no compartment in an emigrant ship should take more than one adult emigrant for every twelve superficial feet on deck, and for every cubic space of 72 feet, or more than one child who shall have completed two, and shall not have completed ten years of age for every eight superficial feet on deck. On the point of space, Act VII, 1871, merely consolidates. The limitations, therefore, now stand thus:—

For French colonies—

- (1) 5½ feet of height;
- (2) 72 feet cubic space in Bengal;

60 " " " in Madras and Bombay, for each adult, an emigrant above 10 counting as an adult, and two children from 1 to 10 counting as one adult.

For all other colonies—

- (1), 5½ feet of height;
- (2), (a), 72 cubic feet for each adult, and (b), 12 feet superficial space for each adult and eight feet for each child who has completed two, but not completed ten years; an emigrant above 10 counting as an adult and two children from one to ten years of age counting as one adult.

Thus, seemingly, to take an example, the second rule would work thus: Let there be shipped 200 " emigrants above the age of ten years," and 50 " children from one to ten years of age," of whom 20 have " completed 2 years of age." Then the minimum of cubic space will be $(200 + \frac{1}{2}) \times 72 = 16,200$ cubic feet; while the minimum of superficies will be $200 \times 12 + 20 \times 8 + \frac{1}{2} \times 12 = 2,740$ square feet.

Section 6, Act VI, 1869, empowers the Governor General in Council or the Local Government to suspend emigration in the cases specified in section 64, Act XIII, 1854, and also in case of "the plague or other infectious disease dangerous to life" breaking out in any place to which emigration is lawful. Any notification published under this section by a Local Government may be cancelled by the Governor General in Council. This clause grew out of the Mauritius epidemic fever of 1866-68, the history of which has been briefly given already. In April 1868 the Government of Madras had reported that, by reason of continued accounts of the prevalence of the epidemic, it had forbidden emigration to the Mauritius, and, though not strictly legal, the measure was under the circumstances approved. The Government of Bengal, however, did not think it necessary to suspend emigration, and the Government of Madras soon after, upon a more favorable account from Mauritius, permitted emigration to be resumed. In order to legalise, in future cases, such action as was adopted by the Government of Madras, the section above cited was inserted in the Act of 1869. But section 64, Act XIII, 1854, was not repealed, though the two somewhat overlap one another.

Reasons for this measure.

Act VI, 1869, declares that in construing Act XIII, 1864, the words "Magistrate of the District" shall include any officer exercising the full powers of a Magistrate. The Calcutta Protector of Emigrants had represented that difficulty arose from the powers conferred by the Emigration Act being confined to but few Magistrates. "Great inconvenience and delay," he wrote, "are frequent under the present rule. In the absence from office of the Magistrate now authorised, which is not unfrequent, when in the performance of other important duties in his district, it has happened that coolies collected for emigration have left rather than await his return. It will also obviate coolies being taken long distances for registration, as under the amended provision they can be taken to the nearest Magistrate."

The fees realized under Act XIII, 1864, had been found insufficient to cover the cost of the Indian revenues of the supervising and controlling establishment. For instance, in Madras, the excess had been about Rs. 50,000. Act VI, 1869, taken together with Act VI, 1870, (which merely remedied an oversight in the wording of the previous measure), permits the increase of the fees under sections 19, 27, 31, and 34 of Act XIII, 1864, provided they be not increased by more than double the then existing amount. In point of fact, they were only raised 50 per cent. A suggestion that the Consular Agents at Pondicherry and Karikal should be dispensed with, which was mixed up with this question, was not approved.

The muster by the customs officer and pilot in the Hooghly was done away with. It was explained by the Government of Bengal that the provisions on this head were relics of old laws, and intended to prevent coolies being clandestinely shipped while the vessel was going down the river; but that they were quite unnecessary in the present state of things, under which emigrants were embarked and disembarked in the presence of a Government officer. Besides emigrant vessels were now bound to take steam down the Hooghly, and it would be easy for the pilot, without any special muster, to detect any attempt at taking extra emigrants on board. Accordingly sections 55—57 and 80 of Act XIII, 1864, were repealed as embodying precautions no longer necessary.

A heavy mortality occurred on board certain ships, of the season 1869-70 sailing to Demerara. The following table will show the details:—

Vessel.	Number embarked and born on voyage.	Proportion of women.	Deaths.	Percentage of deaths.	Length of voyage in days.
India	308	45.55	24	4.03	112
Arima	323	62.31	9	2.78	82
St. Kilda	401	58.56	13	3.24	94
Devonshire	322	62.13	20	6.21	90
Sophia Joachim	424		33	7.78	118
Shand	462		98	21.21	123
	2,330		197	8.45	

Mr. Crosby, the Demerara Agent General of Immigration, sought to make out a general case against the employment of native surgeons; but the attempt rather recoiled upon himself, as it became clear that he had neglected to take that action against masters and owners which the representations of the ships' surgeons should have suggested. The case of one vessel, the *Shand*, was, however, distinct. The terrible mortality, on this ship led the Colonial Government to institute a special commission of enquiry. The Commission attributed the mortality to the following causes:—

- (1), the length of the voyage;
- (2), the debilitated condition of many of the coolies at the time of embarkation;
- (3), deficiency of animal food and fresh vegetables;
- (4), the damp condition of the between decks, due to the vessel having carried salt cargoes.

The Sanitary Commissioner with the Government of India, in reviewing the case, pointed out that the first cause assigned would not explain the case, as the number of deaths (68) which had occurred within the average period of the voyage was in itself very exceptionally large. The proof of the existence of the second cause rested on the allegation of the Surgeon

Adhar Chandra Das,—an allegation the truth of which was emphatically denied by Drs. Partridge and Grant, and this was struck out of the list of exciting causes by Dr. Cunningham. Steps had already been taken to substitute mutton for fish in the dietary, but the Sanitary Commissioner found it difficult to believe that the old dietary could have caused such mortality, as Indians had thriven upon it for years of most successful voyages. Similarly the "salting" of the ship could hardly in itself have caused the high death-rate, especially as Mr. Wadcott testified to the fact that in the Australian emigration little difference was found between salted and non-salted ships. Dr. Cunningham admitted that with the very meagre medical records both of the *Shand* and the *Sophia Joachim*, he was unable satisfactorily to account for the mortality. But he strongly condemned the surgeon of the *Shand* for incompetence and neglect, and thought that emigrants embarking during the rainy season of 1869,—one of unusual sickness throughout great part of India,—had probably suffered from unhealthy influences before starting.

The Government of India, in reporting the case to the Secretary of State, adopted generally Dr. Cunningham's views. The Governor General in Council thought that no case had been made out against the doctors of the *Arima* and *India*, but that on the contrary "the real remedy for most of the evils complained of lay in a rigid enforcement in the colony of the conditions and terms of the charter-party, and that the interests of the Emigration Department would be better secured by a strict application of the conditions of the charter-party against the Commander, than by a too ready acceptance of charges brought with reference to the Surgeon Superintendent by masters and crews, against whom it is one of the most difficult and delicate duties of the Surgeon Superintendent to protect the emigrants." A hope was expressed that benefit would result from the improved dietary and from the rule prescribing that the water-supply should be drawn from the Calcutta municipal hydrants.

The *Shand* had carried a large proportion of children, and the Government of Bengal suggested that the number might in future be limited to 15 per cent on the adults embarked on any ship. But on further consideration it was found that it would be impossible to place such a restriction upon the number of children carried, while the proportion of women remained fixed at 40 to every 100 men. Act VII of 1871, however, adds to the previously existing law a clause empowering the Governor General in Council to prescribe a limit for the number of children.

It has been already noticed that the proportion of women was lowered to 25 to every 100 men, in order that the British colonies might not be placed at a disadvantage as compared with French settlements. In July 1865, the Government of Madras re-opened the whole question. The Government of India, after studying the convention, referred the following questions to the Secretary of State:—

1st.—Was a strict adherence to Article 16 of the convention to be enforced for all shipments of British subjects, whether from French or British ports?

2nd.—From what dates were the terms fixed in that article to count?

The answer to the first question was in the affirmative. In reply to the second, it was said that in regard to Réunion these terms were to reckon from the date of the passing of Act XLVI, 1860, and in regard to the other colonies from 1st July 1862. The Governments of Bengal and Madras were consulted, and the case was put to the Secretary of State under date 31st March 1866 in the following terms:—

"By Article 16 of the French convention embodied in Act XLVI, 1860, the proportion of women is one-fourth for the first three years, one-third till the end of the 5th year, one-half till the end of the 7th year, and after that the proportion shall be the same as may be fixed for the British colonies.

"These periods are to be reckoned in the case of the Island of Réunion from the date of the passing of the Act, viz., 6th October 1860, and in the case of the other colonies from 1st July 1862.

"Under the strict operation of these rules, the proportion of women to be despatched now and from 1st July 1867, respectively, to the French colonies ought to be as follows:—

Date.	To Réunion.	To other colonies.
Now	One-half	One-third.
1st July 1867	One-half	One-half.

"The proposals submitted are to the following effect. The Protector of Emigrants at Madras suggests (the Government of Fort St. George concurring) that a fixed proportion of 35 percentage of female to male emigrants should be enforced, and the present increasing proportion abolished. The Lieutenant-Governor of Bengal and the Medical Inspector of Emigrants at Calcutta, on the other hand, are not prepared to advocate any increase in the present minimum of 25 per cent, while the Protector of Emigrants considers that the proportion of females for all the colonies should be fixed at the minimum standard of 25 per cent, with a discretionary power to the Protector to vary that standard."

On the advice of the Emigration Board, the proportion was fixed at 50 women to every 100 men; but it was not till January 1868 that this was formally notified as a rule under the Act, and almost immediately afterwards the Government of Bengal remonstrated, saying that the rule would not work, involving both the recruitment of a low class of women and dangerous detention in depôt. The Government of India allowed the Lieutenant-Governor to relax the rule, so far as to allow 33½ women to every 100 men to be the minimum proportion, and reported the case to the Secretary of State.

Difficulties in the way of maintaining this proportion.

The decision of the Colonial Office was that 40 women to 100 men should be the standard. This was communicated to the Government of India in Sir Stafford Northcote's despatch, No. 123, dated 30th July 1868, and notwithstanding some protests from Bengal and Madras, has remained the rule ever since. It was at first passed for a year, the Governments of Bengal and Madras being asked to report on its working at the end of that period. The Bengal report was unfavorable, but not that from Madras. The Government of India saw no reason to reduce the proportion, and the same reply was made to a subsequent letter from the Government of Bengal, the Secretary of State approving the course taken. Local Governments are now authorised to permit single ships in cases of emergency, to sail with less than the full complement of women, and the Colonial Office directed that, if in any season women were deficient, the deficiency should be made good in the first ships of the ensuing season.

In April 1870 a proposal to resume emigration to Grenada was laid before the Government of India. It will, therefore, be necessary to go back and enquire under what circumstances emigration to that colony had ceased. "Previous to 1866," to quote a narrative by the Emigration Board, "there had been introduced into Grenada 2,041 immigrants, and no complaint had arisen as to their treatment. The people worked well, and although there was on one occasion a large mortality among some who had recently arrived, there was no reason to suppose that this had arisen from want of care or kindness on the part of employers. A change, however, took place in 1866.

Proposal to resume emigration to Grenada.

Previous history of emigration to that colony.

Proceedings of 1866.

In the spring of that year a body of 260 immigrants was received by the *Countess of Ripon*, and was allotted to various estates. In the following July, it came to the knowledge of the local Government that a great mortality had occurred among those allotted to a particular estate, and upon enquiry it appeared that they had been very much neglected by their employers, and that no proper hospital or adequate medical attendance had been provided for them. The Earl of Carnarvon in consequence directed their removal; but it was found very difficult to carry this instruction into effect, as the owners of other estates combined to refuse them. It at last became necessary to employ them on the public roads. In reporting these circumstances, the Governor of the Windward Islands, who had proceeded to Grenada to enquire into the case, added that there was a great difficulty in finding employment for immigrants generally in Grenada owing to the poverty of the planters, and that it would probably be necessary to support some of them out of the immigration fund. It was also stated that in order to defeat the claim of the immigrants to a free return-passage, the planters refused to re-indenture them, which, under the law in force, was a necessary condition. Eventually, the Governor removed some of the immigrants whom the planters refused to employ to British Guiana,—a step which, though somewhat beyond the law had a good effect in alarming the planters as to the results of their proceedings." These facts were not at the time, as far as I can find, communicated to the India Office. The reports for the first half of 1867 were, however, so communicated early in 1868. Though shewing an improvement in the health of the immigrants, they were far from satisfactory as to the attitude of the Grenada planters towards their employes, and Sir Stafford Northcote proposed that emigration should not be resumed without the consent of the Indian Government. Accordingly, when in 1870 it was proposed to resume emigration, the Ordinance passed in order to put things on a better footing in the island was submitted to the Government of India. Its provisions are thus described by Sir C. Murdoch:

History of 1867.

ment in the health of the immigrants, they were far from satisfactory as to the attitude of the Grenada planters towards their employes, and Sir Stafford Northcote proposed that emigration should not be resumed without the consent of the Indian Government. Accordingly, when in 1870 it was proposed to resume emigration, the Ordinance passed in order to put things on a better footing in the island was submitted to the Government of India. Its provisions are thus described by Sir C. Murdoch:

Proposal to resume emigration, 1870.

island was submitted to the Government of India. Its provisions are thus described by Sir C. Murdoch:

"The Act is in substance a re-enactment, almost verbatim, of the Grenada Immigration Act of 1863, and part of the Act of 1856, with the addition of clauses taken from the British

Guiana Ordinance of 1864. The important alterations are that the salary of the Immigration Agent is raised from £250 to £280 a year, with an allowance of £50 a year for expenses; that the employer is required to secure to the immigrants the benefit of the house and the hospital accommodation which the Act requires him to provide; that a return passage at the expense of the colony is secured to every immigrant who has completed an industrial residence of five, and actual residence of ten years, and that the Government is authorized to transfer to another colony any immigrant who, from the refusal of the planters or any other cause, may be unable to obtain employment in Grenada." The only objection raised by Sir C. Murdoch was to a clause limiting detention in depôt in India to 15 days. But with reference to the previous history of the colony as above described, he suggested that a report should be called for, before resuming operations, as to whether 'if emigrants were sent to Grenada, there was a reasonable certainty that they would find employment at fair wages and that their labor would be valued by the planters.'

The opinions of the Governments of Bengal, Madras, and Bombay were asked. A meagre report for the year 1869 was subsequently forwarded. It shewed that there were on the island, at the end of that year, 902 adult male immigrants, 358 adult female immigrants, 178 boys, 183 girls, and 89 infants, or a total of 1,710 souls. The deaths had been 42 in number, or 2·3·8 per mille; there were 130 men, 49 women, 7 boys, and 1 girl whose terms of indenture had expired, and who had been re-engaged. A despatch was afterwards received enclosing a report from the Governor of the Windward Islands, giving a favorable account of the state of the things in Grenada both as to the condition of the coolies and as to the desire of the planters for labor. The Governments of Madras and Bengal expressed their concurrence in the proposal to renew emigration, and accordingly a notification was issued, permitting operations to commence. I cannot find, however, that they had ever been formally suspended by the Government of India, their cessation having rather been due to the absence of any demand for labor and the action of the Colonial Office in the case. The notification was, therefore, perhaps unnecessary. Earl Kimberley directed the Governor of the Windward Islands to watch carefully the operation of the new Act in Grenada.

Notification issued.

for labor. The Governments of Madras and Bengal expressed their concurrence in the proposal to renew emigration, and accordingly a notification was issued, permitting operations to commence. I cannot find, however, that they had ever been formally suspended by the Government of India, their cessation having rather been due to the absence of any demand for labor and the action of the Colonial Office in the case. The notification was, therefore, perhaps unnecessary. Earl Kimberley directed the Governor of the Windward Islands to watch carefully the operation of the new Act in Grenada.

In 1869 the Trinidad medical authorities called attention to the dietary both in depôt, and on board ship. Careful enquiry was instituted at Calcutta, and improved scales were sanctioned. A revised scale of medicines and medical comforts and appliances was also sanctioned. For West Indian colonies, the dietary in depôt was as follows:—

		oz
For rice-eaters	Rice	20
	Dal	6
	Ghi	1
	Mustard oil	5
	Vegetables	4
	Fresh fish or flesh	3
	Salt	5
	Curry-stuff, &c.	5
		35·5
For flour-eaters	Flour	16
	Dal	4
	Ghi	1·6
	Mustard oil	5
	Vegetables	4
	Fresh fish or flesh	3
	Salt	5
	Curry-stuff, &c.	5
		30

The dietary for the voyage was as follows:—

Scale of provisions for ships carrying Indian emigrants from Calcutta to British and Foreign colonies west of the Cape of Good Hope;—

The length of the voyage is 20 weeks. Water, salt, and tobacco are to be provided for the entire voyage; ordinary provisions that require cooking for 18 weeks.* Dry provisions for bad weather when cooking is impossible, for 2 weeks.

* I doubt the legality of this curtailment.

ORDINARY PROVISIONS.

Daily allowance to each statute adult. Children 2—10 to receive half rations.

CLASS.	ARTICLES.	REMARKS.
Grain	Rice	20 oz.
	or flour	16
	Dal { for rice-eaters	6
	for flour-eaters	4
Oils	Ghi { for rice-eaters	1
	for flour-eaters	1.5
	Mustard oil	5
Meats, &c.	Preserved mutton	2.5
Vegetables	Pumpkins or yams	1
	Potatoes	2
	Onions	2
Curry-stuff, &c.	Garlic	drachm.
	Mustard-seed	...
	Chillies	...
	Black-pepper	1
	Coriander-seed	2
	Turmeric	4
	Tamarind	8
Miscellaneous	Salt	8
	Tobacco, prepared	7
	Firewood	3
	Water	1 gallon.

DRY PROVISIONS.

Total quantity to each statute for adult remaining two weeks to be issued at discretion of Surgeon quantity being really sufficient for about 18 days.

Articles.	Remarks.
Best coarse biscuit	36 lbs.
Churá	45
Gram	3.5
Sugar	2.5

To every hundred adults.

Five sheep, averaging in weight 60lbs. As one sheep weighing 60lbs. yields about 25lbs. of available flesh, this number is equal to about one week's supply of fresh mutton at scale rate, viz., 2.5 oz. per day.
 $2.5 \times 100 \times 7 \text{ ounces} = 1,750 \text{ oz.} = 109\frac{1}{2} \text{ lbs.}$
 $5 \times 25 \text{ lbs.} = 125 \text{ „}$

"The principal difference between the proposed and existing scale of diet consists in the substitution of preserved or fresh mutton for dried fish in both the rice and flour dietary scales, a reduction in the quantity of salt, and a slight increase in the allowance of dal in the rice diet, and of flour and ghi in the flour diet." These alterations were meant to make up the deficiency in carbon and nitrogen in the existing scales. The total additional cost was estimated at £1 per head of adults.

In 1870 a rule was passed for Calcutta making water from municipal hydrants compulsory.

In December 1870 a despatch was received forwarding copy of an Ordinance passed in Brazil, by which the Brazilian Government conceded to a single company the sole right to import Asiatic laborers.

The Emigration Board, however, thought that India was not contemplated as a source of supply, and the Secretary of State directed that no steps should be taken towards permitting emigration thence to Brazil.

In 1871 an Act was passed to consolidate the five Acts* in which the law on the subject was then contained. The Act, however, also introduces some substantive alterations of the law, which I will proceed briefly to notice.

Act VII, 1871.
Mainly consolidatory.
But contains some changes.

* Act XLVI, 1860, Act XIII, 1864,
VII, 1862, VI, 1869,
Act VI, 1870.

(a).—Act VI, 1869, relaxed the previous law so far as to allow any Magistrate with full powers to exercise the functions assigned by Act XIII, 1864, to the Magistrate of the district. Act VII, 1871, (section 3), again imposes a more stringent condition, defining the word "Magistrate" as one exercising full powers, "and in charge of a district, a division, or a sub-division." I have not found the reason for this change. The Act generally abandons the phrase "Magistrate of the district" for the word "Magistrate" as above defined, but by an oversight retains the former in section 85, which empowers the local Government to authorize any person invested with the powers of a Magistrate to perform the duties assigned to the *Magistrate of the district*. This somewhat minute blot was noticed by the Government of Bombay, before the Bill became law.

(b).—Act VI, 1869, allowed augmentation of the then existing fees (which stood at their maxima) up to three times their value. As a matter of fact, they were increased 50 per cent. The new Act embodies the increased fees and allows them again to be tripled. Thus, unintentionally perhaps, the maximum is raised 50 per cent. To take an example;—under Act XIII, 1864, the highest fee chargeable for registration of an emigrant was one rupee. Acts VI, 1869, and VI, 1870, enabled Government to increase this, but not beyond Rupees 3. As a matter of fact, it was raised to Rupees 1.8; under Act VII, 1871, therefore, it may be raised to Rupees 4.8.

(c).—The storage of water in casks is disallowed. This had been proposed by the Government of Bengal even before the passing of Act XIII, 1864.

(d).—The lawful season of emigration to the West Indies is restricted, being made to end on the last day of February instead of the 15th March. The change was introduced at the suggestion of the Government of Bengal, which dreaded cholera in depôt. It has been since pointed out by the French authorities that this violated the convention, and it has been agreed that the French shall take a fortnight at the other end of season instead.

(e).—The power given to the Government of Bengal by Act VI, 1869, to permit vessels to sail in case of emergency, even though the conditions as to time of sailing and proportion of women were not fulfilled, is extended to the local Governments of Madras and Bombay.

(f).—At the suggestion of the Government of Bengal, a clause is inserted permitting the husband, wife, father, brother, or child of any emigrant declared unfit for the voyage, also to refuse to embark.

(g).—The same authority suggested clause 4 of Section 49, Act VII, 1871, which requires the Medical Inspector to be personally present at embarkation, and to test each emigrant's fitness for the voyage.

(h).—The Governor General in Council is empowered to regulate "the proportion of children to be taken with adults." This addition was made at the suggestion of the Government of Bengal, which desired to limit the number of children to 15 per cent. The same Government, however, afterwards declared it impossible to enforce such a limit so long as the proportion of women stood at 40 to every hundred men.

(i).—The local Government is empowered to fix the estimated length of voyage for vessels propelled wholly or in part by steam. It had been found necessary to do this in the case of Mauritius.

(j). The French convention is embodied in the Act as a Schedule, but the section of Act XIII, 1864, extending to emigration to French colonies certain specific parts of the law is not repeated in Act VII, 1871. I am not sure that the change is conducive to clearness. It has been noticed above that the result was a conflict as to time of sailing to West Indian colonies, and a similar conflict exists as to space on board vessels sailing from Madras or Bombay. The whole position of French emigration, especially from French ports in India, is somewhat obscure.

It is perhaps a pity that the opportunity was not taken to expunge from Section 47 the inconsistency (already noticed in connection with Act XIII, 1864) which makes the Protector examine the emigrant as to his fitness for labor, yet gives no power to stop his embarkation should he be found unfit. The Sections 57—61 on the power of suspension might also have been simplified with advantage (see remarks on Act VI, 1869).

Soon after the passing of Act VII, 1871, the conduct of business connected with emigration was made over to the Département of Agriculture, Revenue and Commerce. There have been several trains of interesting correspondence, and I may conclude this portion of the note by giving a brief account of their purport.

Early in 1871 the Government of Mauritius urged the Government of Bombay to permit the resumption of emigration from the Western Presidency. The local Government, however, was opposed to the project, alleging that Bombay wanted all the labor it had. It was pointed out that this was not a sufficient ground for refusing to permit emigration. The Government of Bombay then shifted its ground, and alleged that a proper depôt had not been provided. We have already seen that there was a difference of opinion as to the minimum space necessary in depôt. However, the matter was ultimately left to the Government of Bombay.

I noticed above that Act VII, 1871, made the emigration season for colonies west of the Cape to close on the last day of February. The French authorities represented that, by the convention, vessels for the French colonies might sail up to the 15th March, and proposed that as a compromise the season might be extended a fortnight at the other end. The Governments of Madras and Bengal, and the Sanitary Commissioner with the Government of India, were consulted. The first was ready to accept the proposal, the other two authorities were opposed to the extension of the open season into July. It was remarked that there were objections of nearly equal weight to the extension of the season in either direction. But on the whole, considering that emigration to French colonies had been for seven years carried on exclusively from the Southern Presidency, and was not likely to be resumed from Calcutta, and that the Madras Government, which was most nearly concerned, was ready to accept the compromise, it was recommended that the proposal would be adopted. The recent wreck of the *Souvenance*, which had been allowed to sail near the end of March, and fell in with bad weather off the Cape emphasised this decision. The French Government has now accepted the compromise, and the convention has been modified accordingly.

In March 1870, the Secretary of State had forwarded copy of an Ordinance for Natal, which, though chiefly consolidatory, did introduce some new provisions. For instance, the penalties for absence and desertion were modified, but apparently in the direction of leniency. Hospitals and medicines were also to be supplied whenever the number of immigrants on an estate exceeded 20. On the other hand, the sum payable to coolies waiting for back passage was reduced from 25 shillings to 10 shillings per mensem. No remarks were at the time made, the Ordinance being simply forwarded as the local Governments concerned for information. Otherwise the history of Indian emigrants to Natal was a blank, till in 1871 the laborers began to return.

The very first ship-load of returning emigrants were loud in their complaints of ill-treatment in the colony, and their representations were forwarded to the Secretary of State. An enquiry was instituted in the colony, and the result reported, in a despatch, by the Lieutenant-Governor of Natal. The state of things disclosed was not at all creditable. It was shown that some employers had ill-treated their laborers, and that, too, almost with impunity; that the most disproportionate stoppages were made in case of the laborer's sickness; that wages were habitually left in arrear; and in many cases were never paid at all; that the express stipulation as to the allowance to time-expired laborers while waiting for a return passage had been violated; that the inspection of estates had been neglected, and that the rules as to hospital accommodation had been allowed to remain a dead letter. A strong despatch was written to the Secretary of State, and the Government of Madras was directed not to permit the resumption of emigration to Natal without consulting the Government of India. Earl Kimberley has called for further report on the Indians in that colony, but hitherto (25th January 1873), nothing more has been heard.*

In October 1871 the Secretary of State drew attention to the fact that no sufficient provision was made for the repatriation of the sweepers (or "topazes" as they are called) of emigrant ships sailing to the West Indies, and that consequently these men were often left destitute. The cases complained of had occurred on ships sailing from Calcutta, and the Lieutenant-Governor gave very stringent orders for the provision of a back passage in all cases where the topazes were not "emigrants" under the law.

In 1871, a discussion, which had been going on for some years as to the mode of measuring the deck superficies of emigrant ships, was brought to an end, and the adoption at all ports of "Sterling's rule" prescribed. The rule gives a very close approximation to mathematical accuracy.

In November 1871, a despatch was received from the Secretary of State submitting, for opinion, a draft despatch which the Foreign Office desired to issue to the Minister at Madrid, and in which it was proposed to hold out to the Spanish Government the prospect of obtaining a supply of labor from India in case it should be decided to abolish slavery in the island of Cuba. The Government of India protested very strongly against any such pledge being given on the ground that no sufficient guarantee could be afforded for the proper protection of the emigrant. The despatch expressing the views of Government concluded thus:—"Under these circumstances, we feel that the greatest caution is necessary in extending the field of emigration, even among British colonies, and we should deprecate at present the conclusion of conventions with any other foreign powers than those to which we are already engaged. But, considering how deeply Cuba is imbued with slave-holding and even slave-dealing traditions, and having regard to the political situation both of the island itself and of its mother-country, it would be the last colony to which we should wish to see emigration extended."

In 1872 the Governor of Pondicherry put the question whether, if steamers should be employed in emigration to the West Indies, they would be allowed to follow the Suez Canal route. The Governments of Madras and Bengal were consulted, and both were adverse to the proposal. The papers were referred to the Secretary of State with an opinion that emigration by the Suez Canal should not be permitted till its probable effect on the health of the emigrants was more fully considered. The Governor of Pondicherry was answered in

* A Commission of Enquiry has since been appointed, and an abstract of its report will be found in Part III under the head "Natal."

the same sense. Subsequent enquiry has shown that the Suez Canal fees are so heavy as to make it very unlikely, that this route will be followed by emigrant vessels.

The reports from Réunion have never been altogether satisfactory. But in 1869 Consul Segrave began to formulate a series of complaints against the French authorities, based on alleged breaches of the convention. For instance, in June 1869, he reported that 156 time-expired Indian emigrants had been re-enlisted for service in New Caledonia, and had sailed for that colony. Again, in December of the same year, the departure of 176 more emigrants was reported, and under date 24th June 1870 a despatch was addressed to the Secretary of State, urging that the question of the continuance of this re-emigration should be settled at once, and expressing a decided opinion that "no arrangements would be satisfactory which did not afford to Indian coolies in New Caledonia all the protection which it is found necessary to give them in other British and foreign colonies." The Secretary of State, on the other hand, took the view that it seemed reasonable "that coolies who of their own accord choose to leave one French colony for another should no longer be the objects of that special protection which is accorded under the treaty to those who are embarked from India. All that would appear to be necessary," His Grace's despatch continued, "is first, that precaution should be taken against their being induced to leave the first colony through fraud or misrepresentation; next that, on their arrival in the second colony, they should receive the general protection to which English subjects in a foreign colony are entitled, and with fair regard to their comparatively helpless position. These objects," His Grace did not doubt, "would be obtained by the recent appointment of a Vice-Consul, as far as New Caledonia was concerned."

The same view was expressed with regard to a proposal to recruit time-expired Réunion coolies for Queensland. But only ten Indian emigrants seem to have transferred their services from Réunion to Queensland, and they were said to be earning six shillings a week, in addition to board and lodging, to be well cared for and quite satisfied with their present position.

Another grievance urged by the Consul at Réunion was that coolies recruited in the Bengal Presidency and shipped from Calcutta were, on their coming to claim a return passage, sent to Pondicherry or Madras, and left to find their way thence to their homes. The French authorities did not attempt to deny that they were theoretically liable to re-convey the emigrant to his port of departure, but it was always made to appear that the Bengal coolies returning to Pondicherry did so at their own desire, in preference to waiting for a vessel direct from St. Denis to Calcutta. Thus the French colonists eluded payment of the passage from Pondicherry to Calcutta, and in point of fact direct communication between the latter port and Réunion is not frequent. A proposal that Calcutta time-expired emigrants should be sent back *via* Mauritius, whence there was frequent communication with Bengal, was rejected by the French Colonial Government, nominally on the ground that it would be impossible to predict the length of their stay in Mauritius, but really because it was found that it would lead to a system of inducing time-expired emigrants to transfer their labor from the French to the English colony, instead of re-engaging in the former, a scheme of which the Réunion planters manifested a marked and, perhaps, not altogether unreasonable suspicion.

But the most serious of Consul Segrave's complaints related to the treatment of Indian emigrants in the colony. At first he dwelt especially upon the great arrears of wages and the non-delivery to the emigrants of their "livrets" or books of identification. The subject was afterwards somewhat complicated by a doubt as to the full nature and effect of the livret, which it seemed needed to be backed under certain circumstances by passports or passes to enable the coolie to have access to the British Consul. In his report for 1869 Consul Segrave drew a gloomy picture indeed. Wages years in arrear; more than one-third of the Indian laboring class constantly in prison; 75 per cent of the criminal class taken from the immigrant population, and the coolie practically barred access to the Consul, such were the most salient features of his sketch. The case was forcibly put before the Secretary of State, and it was observed that, unless immediate measures were taken to prove the statements of the British Consul incorrect, or to show that complete arrangements had been made to remedy the evils which he alleged to exist, it would be incumbent on the Government of India to stop emigration to Réunion. This was in June 1870, and soon after the breaking out of the Franco-Prussian war naturally suspended correspondence on the subject. Meanwhile further reports came in from Consul Segrave, some more favorable, others more gloomy; none of them very definite I must admit; and enquiries had, at the suggestion of the Secretary of State, been made from such return emigrants as could be got hold of. Their statements, it must be confessed, did not bear out Mr. Segrave's allegations, but the latter's report for 1871 brought matters again to a head, and in a despatch dated 10th May 1872 the case was thus distinctly placed before the Secretary of State:—

"Your Grace will observe that Mr. Segrave's report alleges that the evils which he has brought to notice on previous occasions continue unabated, and that Indian laborers are

stinted in their food, compelled to work for an excessive length of time, kept out of their wages, ill-treated, and 'robbed' with impunity.

"We are bound to say that the result of the confidential enquiries which we caused to be instituted by the examination of returned emigrants does not at all bear out Mr. Segrave's statements. But in the face of the persistent allegations of the British Consul on the spot,—allegations the *bona fides* of which there seems no reason to doubt,—we think it only our duty to urge the absolute necessity for a thorough enquiry to elicit the true facts as to the condition of Indian laborers in the Island of Réunion." The mode of enquiry was of course left to be decided by Her Majesty's Government, though it was suggested that an enquiry by the Mauritius Committee then sitting, with the addition of a French element, would afford a satisfactory solution of the question. Since then nothing has been heard.

It seems that negotiations for the conclusion of a convention with Holland permitting the recruitment of Indian laborers for employment in Dutch Guiana were set on foot so long ago as 1862. They were, however, then broken off, partly because the Dutch Government offered a draft containing stipulations which could not be accepted, partly because a convention was not thought essential. The subject then dropped. But when the apprenticeship period of the Surinam Negro slaves (emancipated in July 1863) drew towards an end, the Netherlands Government again began to look to India; and early in 1868 Sir Stafford Northcote, at the instance of Lord Stanley (now Lord

an expression of opinion on three points, *viz.*, (1) whether it was desirable to proceed in the matter at all; (2) if so, whether a convention was the proper mode of proceeding; (3) if so, whether the convention should be answered in the affirmative, whether the con-

as were required in the case of the first question in the negative, on the ground that the existing state of the labor market it was not desirable to let labor go out of the country. On a review of their opinions, answer was made to the Secretary of State, to the effect that there was no objection to the negotiation of a convention, but that care should be taken that the regulations should be made to accord with the law relating to emigration to British colonies, as then about to be amended, all powers given by the general emigration law being reserved to the Indian Government, and no privileges conferred on the Dutch Government not given to British colonies. Nothing more was heard on the subject till April 1872, when the Secretary of State forwarded copy of a convention with the Netherlands, to come into effect from 17th of that month. The convention

1872. followed the French convention, with the modifications pointed out by the Government of Bengal as required in regard to space on board ship and proportion of women. But meantime the necessity for some stricter watch upon the treatment of Indian laborers abroad had been unpleasantly emphasized by the case of British Guiana and others, and the Government of India was compelled to point out that before emigration to Surinam could be permitted to begin, a notification must be published containing a declaration to the effect that the Governor General in Council had been duly certified that the necessary guarantees had been provided for the protection of the emigrants. As in the case of Nevis, therefore, the Secretary of State was requested to furnish full particulars on all points which might enable the Government of India to form an estimate of the probable condition of laborers emigrating to Dutch Guiana. The character of the laws, the executive charged with their administration, the rates of wages and the cost of food were specially dwelt upon. In reply, a compendium of the Surinam regulations was forwarded, but it afforded no adequate information. In points of the first importance, notably the rate of wages guaranteed. The Netherlands Government through its Agent at Calcutta has now agreed to accept the main provisions of the draft Ordinance proposed for British Guiana, and under this guarantee the necessary notification legalising emigration to Surinam has been published.

Early in 1872 an application was received from the Colonial Office for permission to recruit laborers for the island of Nevis, a little dependency of St. Kitts. The Government of India took its stand on Section 24, Act VII, 1871, and declined to issue the notification till assured that the necessary guarantees for the due care of emigrants had actually been given. It was in this case particularly pointed out that the wages offered in Nevis were markedly lower than those obtainable in other West Indian colonies, and that it could not be expected that laborers really cognizant of the facts would consent to enlist for service on terms distinctly worse than they could get by emigrating to British Guiana or Trinidad. The action of the Lieutenant-Governor of Bengal in forbidding recruitment for St. Vincent, where the wages offered were much below the minimum of the larger West Indian colonies, was, on the same principle, supported by the Government of India.

It has been already observed that emigration across the Bay to the Straits Settlements dates from before the beginning of the present century, and, in fact, the sugar, spice, tapioca, and cocoanut plantations of Penang have come altogether to depend on Madras for the supply of agricultural labor. This emigration, which in 1871 was said to average 4,000 a year, was chiefly carried on from Nagore and adjacent small ports, and was unregulated by law, except so far as the general act regulating native craft plying in the Bay of Bengal affected the vessels engaged in the traffic.

Unregulated by law. The laborers were partly introduced by agents on speculation and partly by "tindals" or "kanganis" ("garden sirdars" as they call them in Cachar and Assam), sent over by the managers of estates to recruit in and around their native villages. The wages are not very distinctly stated, and the mischievous system of advances seems to have been much in vogue. The term of engagement does not appear to have exceeded two years; and as a large Tamil population has settled down at Penang, and intercourse between that Settlement and Southern India was tolerably frequent, the condition of laborers was probably not uncomfortable. The traffic went on undisturbed till March 1870, when Mr. Hathaway, Sub-Collector of Tanjore, stationed at Negapatam, publicly denounced it as involving a regularly organised system of kidnapping, and issued a notice pointing out the entire illegality of the emigration under the existing law. In fact, it had probably since the passing of Act XIII, 1864, been illegal to abet emigration to the Straits Settlements, for emigration is in that Act defined as the "departure of any native of British India for the purpose of laboring for hire in some other place," and British India is declared not to include "the Settlement of Prince of Wales Island, Singapore, and Malacca." But neither at the time of passing the Act, nor in 1867, when the Straits Settlements were surrendered from the control of the Government of India, was this aspect of the case noticed. The Government of the Straits Settlements did not fail to hear of Mr. Hathaway's proclamation, which, indeed, altogether checked emigration to Penang, and addressed a strong remonstrance to the Madras authorities, disputing the existence of any system of kidnapping in India, and distinctly denying that the female emigrants were destined for a life of prostitution,—an allegation which formed part of the Sub-Collector's case against the traffic. The colony claimed to be put on the same footing as Ceylon. The Government of Madras in reply forwarded a report upon the whole subject by Mr. Stokes, who had succeeded Mr. Hathaway at Negapatam, in which it was maintained that the traffic as conducted did involve kidnapping of women and children, a system of duress or illegal confinement, and, moreover, excessive crowding on board ship. The Government of Madras, therefore, would only go so far as to permit emigration to Penang from the port of Negapatam, insisting upon all the checks of the emigration law then in force.

Remonstrance of the Straits Government. The Governor of the Straits Settlements then turned to the Colonial Office, and in July 1871 a despatch was received from the Secretary of State, forwarding certain correspondence in which Sir H. Ord proposed the adoption of a middle course between an absolutely unfettered emigration such as was allowed to Ceylon, and the enforcement of all the checks of Act VII, 1871. This proposal was that the Government of India should pass a special Act legalising emigration to the Straits Settlements, provided the Colony should establish at any port which, with the consent of the Indian Government, might be opened for the purpose, a Protector of Emigrants and a dépôt whereat intending emigrants could be received before embarkation, and that they should only be embarked on ships which had received the license and approval of the Protector. As the main objection raised by Sir H. Ord to the introduction of the whole machinery of the Act was that of the expense involved, and as this assumed that the emigration must take place from some other port than Madras, it was suggested whether the needful labor supply might not be obtained from the port of Madras, the Straits Settlements paying their share of the expenses of the protectorate. Should this plan, however, not commend itself, it was asked that the specific relaxations desired might be stated. The Government of Singapore rejected the proposal of the Government of India on the ground that the current of emigration would be seriously interfered with if only permitted from the port of Madras, and the Government of Madras agreed to accept Sir H. Ord's proposals, on the understanding that written contracts should be made in India; that all emigrants should be registered under sections 27, 28 and 31 of Act VII, 1871, and that the freest access to the dépôt should be allowed to the local Magistracy.

Views of Government of India. The Government of India, in reply, stated that the Government of India would not assent to the proposal unless the Government of Madras agreed to accept Sir H. Ord's proposals, on the understanding that written contracts should be made in India; that all emigrants should be registered under sections 27, 28 and 31 of Act VII, 1871, and that the freest access to the dépôt should be allowed to the local Magistracy.

Not accepted by Sir H. Ord. The Government of India, in reply, stated that the Government of India would not assent to the proposal unless the Government of Madras agreed to accept Sir H. Ord's proposals, on the understanding that written contracts should be made in India; that all emigrants should be registered under sections 27, 28 and 31 of Act VII, 1871, and that the freest access to the dépôt should be allowed to the local Magistracy.

Views of Government of Madras. The Government of Madras, in reply, stated that the Government of Madras would not assent to the proposal unless the Government of India agreed to accept Sir H. Ord's proposals, on the understanding that written contracts should be made in India; that all emigrants should be registered under sections 27, 28 and 31 of Act VII, 1871, and that the freest access to the dépôt should be allowed to the local Magistracy.

Ultimate solution of the question. Act XIV, 1872. The Government of India, in reply, stated that the Government of India would not assent to the proposal unless the Government of Madras agreed to accept Sir H. Ord's proposals, on the understanding that written contracts should be made in India; that all emigrants should be registered under sections 27, 28 and 31 of Act VII, 1871, and that the freest access to the dépôt should be allowed to the local Magistracy.

Ultimate solution of the question. Act XIV, 1872. The Government of India, in reply, stated that the Government of India would not assent to the proposal unless the Government of Madras agreed to accept Sir H. Ord's proposals, on the understanding that written contracts should be made in India; that all emigrants should be registered under sections 27, 28 and 31 of Act VII, 1871, and that the freest access to the dépôt should be allowed to the local Magistracy.

Ultimate solution of the question. Act XIV, 1872. to the Government of Madras that the arrangements described in the following extract from a telegram, dated 24th May 1872, had been approved:—"All restrictions on coolies proceeding from Negapatam to Straits will be removed for the present. Planters' agents to bring coolies intending to proceed to Straits before Magistrate at Negapatam, and state all particulars as to repayment of cost of passage-money, advances, diet during voyage, wages in Straits Settlements, nature of work, duration of engagement, return passage. Magistrate will enter these particulars in a register, copy of which will be sent to the Colonial Secretary to be reduced in each individual case into a contract on arrival. Magistrate will ascertain that coolies go willingly and with full knowledge of conditions. Magistrate will protect natives from crimping and prevent desertion of families. Passages will be under Indian Passengers' Act." The details of the arrangements proposed have just been reported. An Act in the nature of a simplified Emigration Act is suggested. In permitting this settlement of the question, I think the Government of India was a good deal influenced by the want of circumstantiality in Mr. Stokes' report, and by the fact that, when the Recorder of Madrasmain alleged that evils similar to those asserted to prevail in connexion with emigration to the Straits Settlements attended emigration from Madras to British Burma, the Government of Madras, and specially the Tanjore local authorities, denied the existence of such abuses, and maintained that the Madras cooly was very well able to take care of himself. And indeed the different positions taken in the two cases were not easily to be reconciled.

In February 1871 a flagrant case of kidnapping by recruiters and others was brought to light at Allahabad, and attracted a good deal of attention both in India and in England. The offenders were punished, but the Government of the North-Western Provinces thought the case showed that the Protector of Emigrants at Calcutta did not exercise sufficient care in the licensing of recruiters and a reference to the Government of Bengal proved that such was the fact. The law required the countersignature of the Magistrate to the recruiter's license, and the Protector, regarding this as establishing some sort of guarantee, had been practically in the habit of licensing all persons presented to him by the Agents. In reality, however, the Magistrate had no option but to countersign the license, and thus there came to be virtually no check upon the recruiter's fitness. The Government of Bengal, accordingly, amid much protest from the Agents, directed that the Protector should, before issuing licenses to residents in the interior, satisfy himself as to their fitness by reference to the local Magistrate. At the same time, as the agitation and excitement of feeling raised by the case of February (which by the way was followed by another crime of the same kind in July) had apparently led some officers to offer an undue opposition to operations of recruitment, a warning circular was issued, directing Magistrates to confine themselves within legal limits in the exercise of watchfulness on the movements of recruiters, and only to enforce the checks permitted by law,—checks which were considered amply sufficient.

Of such checks the most important is that of examination of intending emigrants before the Magistrate, and as there appeared reason to suspect laxity in its application, a circular was issued by the Government of India enjoining the necessity of examining each emigrant separately and apart from the recruiter. In regard to women, this was especially insisted upon, as the difficulty of obtaining the required proportion of female emigrants had driven the Agents to offer a high premium for women, and thus had stimulated the inventive rascality of recruiters. It was suggested at the same time, that, if necessary, a rule under the last clause of Section 56, Act VII, 1871, would be promulgated, and on this point the opinion of Local Governments and Administrations was asked. The views of those consulted varied; but I think the balance of opinion was in favor of the existing law being amply sufficient, if only carefully worked.

The most important trains of correspondence falling within this recent period were those relating to British Guiana and Mauritius. The state of things disclosed in regard to those colonies will be dealt with in greater detail in the third part of this note when we come to consider the actual condition of Indian laborers. But it will be necessary here to explain in a general way the nature of the revolutions made, in order to illustrate the action of the Government of India and of Her Majesty's Government.

And first with regard to British Guiana. In May 1870 the Government of India received copy of a letter addressed by Mr. Des Vaux to the Colonial Office, alleging the existence of gross abuses in the law and administration of that colony with respect to Indian immigrants, and of a despatch from Lord Granville to Governor Scott, proposing to appoint a commission to inquire into the truth of the allegations. Such a commission was ultimately appointed, the members being Mr. Fiere, Sir George Young, and Mr. Mitchell. The Aborigines' Protection Society sent out Mr. Jenkins to watch the case; and the West India Association retained the services of Mr. T. H. Cowie, sometime Advocate General at Calcutta. After a most painstaking investigation the Commission submitted an exhaustive report on the whole question, and a copy of this reached India in August 1871 as a parliamentary blue book. Their report. The first part of the report is occupied by an enquiry into the actual charges made by Mr. Des Vaux, and that gentleman is, perhaps, somewhat hardly dealt with, though, doubtless, there was much of exaggeration in his statements. The Government of India, at any rate, owes him nothing but gratitude, for he was the means of

bringing to light the state of things which the main body of the report is devoted to exposing. It was clearly shown by this investigation that the law in British Guiana was both framed and administered in a spirit of substantial injustice to immigrants. A five years re-indenture virtually drove the Indian laborer into a prolongation of servitude, and while under indenture he was at a marked disadvantage, the labor and vagrancy laws being, partly from their intrinsic unfairness, partly from their complication and ambiguity, a potent engine in the hands of the employer, while they afforded no means of summary redress to the laborer even for so vital a wrong as wages unjustly withheld. The administration of the law thus framed was equally unsatisfactory. The Commissioners declare that there was an absolute and universal want of confidence in the magistracy on the part of the immigrants. The magistrates vied with the judges in introducing a spirit of technicality into the interpretation of badly drawn statutes. With an average immigrant population of between 30,000 and 40,000, the number of cases against laborers had been 6,500 annually, while those against employer might be counted by tens. In half the cases brought by employers, convictions followed, but the other half did not consist of true acquittals. The mass of cases were withdrawn; in other words the law was used as a means of putting pressure upon immigrants, and charges were held over their heads in *terrorum*. Thus a system of stoppages from wages was organized, which caused universal discontent, and had in one case led to a violent outbreak. Similarly, the vagrancy law was often worked so as to prevent legitimate access to the immigration department. The penalties awardable were pronounced disproportionate, and those actually awarded excessive. While thus at a disadvantage in his legal position, the immigrant was, partly by the direct action of the Colonial Government, partly by the weakness of the immigration officers, and the gingerly way in which they used their powers, deprived to a great degree of the protection which it should have been the special function of the Immigration Agent General and his subordinates to afford him. The whole system of work and wages was unsatisfactory. The tendency was towards task work, and the tariff was in theory regulated by the wages earnable by laborers not under indenture, working on the same or neighbouring estates. In actual results the Commissioners after a laborious investigation found that the average earnings of able-bodied Indian male immigrants, excepting drivers, artisans, and other headmen, were throughout the colony about 28 cents a day for every day a fair day's work was done, and that about four-fifths of the adult males might be included in this class. Women earned from 16 to 32 cents, but did not as a rule work as many days as men. Children from 10 to 15 years of age earned from 8 to 16 cents per diem; men generally worked from 4 to 5 days out of the seven. Another calculation made by the Commissioners shewed that if the males were taken alone, 40 per cent of those who worked in a given week did not earn so much as 5 shillings each.

As the report of the Commission was received without the orders of the Colonial Office, no immediate action of a general sort could be taken; but, when some delay occurred in ascertaining what had been done by Lord Kimberley, it was pointed out to the Secretary of State for India that the state of things brought to light was very serious, and that unless the Government of India should be speedily assured that remedies had been applied, it would be necessary to proceed under Section 57, Act VII, 1871, and suspend emigration to British Guiana. But on one point specific action was both possible and imperative. It was shewn by the Commissioners, and indeed was manifest on the face of their report, that the rates of wages offered by recruiters in India, and entered in the register of emigrants as the stipulated or contract rate, grossly exaggerated the real wages attainable. Extracts of all passages in the Commissioners' report bearing on the rate of wages and their value in the ordinary necessities of life were, therefore, communicated to all Magistrates, and the Secretary of State was urged to obtain full particulars on this score from the colonies. Statements were in fact afterwards received and circulated. Those from British Guiana did not in any material point impugn the accuracy of the Commission's conclusions.

Recently the orders of Her Majesty's Secretary of State for the Colonies on the whole question have been received, and testify to a cordial desire on the part of His Lordship to co-operate with the Government of India in putting the relations between employer and laborer on a sound basis. A draft Ordinance has in fact been prepared embodying all the main reforms proposed by the Commission, and has been sent, not only to British Guiana, but to all colonies importing Indian labor for acceptance. As I have above indicated the main defects of the existing law of British Guiana, and as I have in another note analysed in detail the provisions of the draft now prepared under the orders of the Colonial Office and as, moreover, the question, though important, is still in an incomplete state, I will not here describe the measure more minutely, but only add that in anticipation of a thorough consolidation of the law the British Guiana Legislature has already made several decided improvements. Among these may be noticed the measures for giving validity to contracts made in India, for establishing a system of rationing on liberal terms, and for securing a minimum wage of 25 cents for a fair day's work. I think the whole question may be regarded as progressing towards a satisfactory solution.

We now come to the case of Mauritius. In 1868 an important correspondence between Sir H. Barkly and the Colonial Office on the subject of a Restrictive Regulation in Mauritius; proposed new immigration ordinance for that Colony had been forwarded by Sir Stafford Northcote to the Government of India. The law was partly to repeal, partly to consolidate, and partly to enact new, and in some cases most important, provisions. I cannot do better than cite Sir C. Munro's analysis of it.

"The ordinance repeals altogether 12 ordinances passed between 1845 and 1861, and parts of two ordinances passed in 1862 and 1865, and generally re-enacts their provisions so far as they were still in force.

"To this part of the ordinance it is unnecessary to refer further. A large part of the new provisions are also so obviously desirable in the interest of the immigrant that it is only necessary to refer very briefly to their object. Such are Sections 7 to 9, which provide for the delivery to an immigrant of a certificate of his engagement, and for contracts with minors; Section 14, which enables an immigrant on showing sufficient cause to obtain from the Stipendiary Magistrate at any period of his engagement the cancellation of his indenture; Sections 19 to 21, which authorize the cancellation of the engagement of infirm laborers and the refusal to sanction fictitious engagements; Sections 22 and 23, which fix the duration of the day's labor and enable the Magistrates to decide disputed questions as to task-work; Sections 25 to 28, which facilitate the recovery of wages and define the laborer's rights, giving him a claim against the real as well as the personal estate of the debtor; Section 63, which requires a declaration by the master of the property of a deceased laborer; Section 65, which with a view to the medical care of the immigrants, imposes a penalty for a false statement as to the number on an estate; Section 66, which constitutes the Protector guardian to orphans and lunatics, and some other minor provisions for the easier enforcement of the law. In all these cases the object has been to afford increased protection to the immigrants, and the provisions appear well calculated for the purpose. I see no ground for objecting to any of them.

"But the Sections 40 to 48 open more important and difficult questions. Their object is to bring old immigrants (*i. e.*, immigrants who have completed their industrial service) under a system which shall compel them to pursue some calling by which they may earn an honest livelihood, and to place them under the immediate surveillance of the police. With this view it is provided that every old immigrant shall be registered, and shall be bound to provide himself with a ticket from the Protector with his photograph on it; that when not under engagement of service, he shall be bound to appear at the police station of his district, and declare his place of abode and occupation, and obtain a pass; that, whenever he shall change his residence, he shall appear before the chief officer of the police of the district to which he may proceed, for the same purpose; that any old immigrant not producing his pass on demand of a Magistrate or the police shall be sent to the immigration depot till it can be ascertained whether he has any visible means of subsistence or not, and that, if he has not, he shall be treated as a vagrant; that any immigrant obtaining a pass by false representations shall be treated as a vagrant, and that any immigrant found in a district where he has no residence shall be liable to arrest. It is further provided that the police may at any time, under a warrant from a Magistrate, enter any premises where an immigrant is employed to ascertain his status, and in case of not being satisfied, may take the immigrant before the Magistrate—and the Governor is authorized to send back to India any immigrant who is a confirmed vagrant, or a member of a criminal association.

"These Sections are no doubt extraordinarily stringent, and introduce a principle unknown to, and inconsistent with, English law. They in fact place the class of old immigrants in the colony under the same restrictions as in this country have of late years been applied to the ticket-of-leave class. It remains to be considered whether the circumstances of the colony require or justify them."

The Governor of Mauritius justified what he admitted to be the somewhat un-English character of these regulations upon two grounds,—(1) that the result of leaving the "old immigrant" class entirely unfettered had been to foster disease, the habits of this class bidding defiance to all sanitary rules; (2) that the police needed to be armed with special powers of surveillance in order to check a special kind of violent crime, apparently of the nature of dacoity, which was alleged to have much increased. It must be admitted that the evidence either to establish the connexion of the epidemic of 1866-67 with any special vices of the old immigrants, or to shew any very marked progress of crime, was not very convincing. But Sir H. Barkly pointed to the case of Réunion in justification of his proposals, and they were supported not only by police authorities, but by the Procureur General and even by the Protector of Immigrants, the latter declaring that the measure would entail "no inconvenience worthy of notice" upon the immigrant living by lawful means, while the checks placed on the idle and dishonest would be beneficial to the community. Moreover, it was promised that both the magistracy and the immigration office would keep a strict watch over the exercise by the police of the extraordinary powers which the Act conferred upon them. Upon the whole, therefore, although the Emigration Board had evidently some misgivings, Sir Stafford Northcote, who was consulted by the Colonial Office, did not oppose the passing of the measure, to which the Duke of Buckingham and Chandos thereupon signified Her Majesty's assent. The Act and connected papers were communicated to the Local Governments in India.

Nothing more was heard upon the subject till 1871, when a copy of a petition purporting to be signed by a large number of Mauritius "old immigrants" was received from a M. dePlevitz, a resident of that island. This petition complained of the restrictive laws in force as framed with the intention of discouraging free labor, and as practically resulting in most grievous oppression. The Government of Mauritius, to which the petition was addressed, was asked to inform the Government of India of the orders that might be passed thereon. In February 1872, we learnt that the allegations contained in the petition were under the investigation of a carefully constituted commission; and in the following June a copy of the report of that commission was received, though without note or comment on the part of the Colonial Government. Meanwhile a despatch had been received from the Secretary of State, enclosing papers from which it appeared that Sir A. Gordon, the new Governor of Mauritius, was by no means satisfied with the existing state of things.

The Police Enquiry Commission. The Royal Commission. a Royal Commission, such as had sat in British Guiana, had been appointed to enquire into the state of Indian emigrants in Mauritius, and the Commission in fact began its labors on 17th April 1872.

The report of the locally appointed Commission was, however, a very startling document, as will be apparent from the following outline of the facts disclosed by the report of the Police Enquiry Commission. found by the majority of that body to be proved, taken from a despatch addressed to the Secretary of State by the Government of India.

"Under the head of abuses on the part of the police, the majority find that violence was at one time systematically used to obtain evidence, and that although the practice has ceased to prevail as a system, occasional instances still occur; that trickery and espionage are still resorted to for the same purpose; that fictitious cases have not unfrequently been got up by detectives; and that bribery and extortion were of frequent occurrence.

"Passing to the grievances of the 'old immigrants,' as those Indians who choose to remain in the colony after expiry of the term of their indenture are called, the report, after going 'through the petition sentence by sentence,' declares, 'as the result of this minute dissection that most of the grievances complained of have a real and substantial foundation, and that although the statement given is exaggerated, and was probably very imperfectly comprehended by not a few of those who signed it, yet that it conveys no unfair representation of the sentiments of the old immigrants respecting the grievances which bear most hardly upon them.'

"The elaborate analysis of the laws and regulations brought to bear on the 'old immigrants,' which the report contains, seems to us fully to establish the statements of the Commission, and to prove that this class of the inhabitants of Mauritius are subjected to most vexatious and unnecessary restraints upon their personal liberty.

"As soon as the term of his indenture expires, the immigrant must, if he wishes to continue in the colony, take out a 'portrait-ticket' from the Immigration Office, and is charged 2 shillings for the photograph which is affixed thereto. If he loses the original, it costs him £1-2s to replace it, and, pending the receipt of the duplicate, he must take out a 'permit to work' at a further cost of 5 shillings. He is bound to produce his portrait-ticket on demand by any officer or constable of police, under penalty of a fine of £2 or seven days' imprisonment.

"If he is not under engagement by written contract of service, he must also have a police pass, which he is bound to take out within eight days of the expiry of his term of industrial residence. Should he fail to produce this pass on demand, he is liable to a fine of £2 or seven days' imprisonment, without prejudice to any further punishment to which he may be liable for vagrancy. The first duplicate of any such pass costs him 2 shillings, any subsequent replacement, 4 shillings. A new pass must be taken out on change of residence or of occupation, under the same penalty for default as is imposed for non-production of the pass on demand. But this pass cannot be obtained by any 'old immigrant' who declares that he lives on the wages of daily labor, or the proceeds of job work, unless he produces a license. For this license he has to pay £1 annually, and it must be exhibited and renewed under the same penalties as apply to the police pass.

"If, on the other hand, the immigrant re-engages under a contract of service, he gives up his ticket to his employer, and receives in return a certificate of engagement from the Stipendiary Magistrate. This certificate he can be called on at any time to produce, and he is 'in practice' liable to be arrested, 'if he has not a written permission from his employer,' to account for his absence from the estate. 'The old immigrant,' says the report, 'must at various stages be provided with other documents upon which it is unnecessary to dwell,' but for each of which a fee is levied. He cannot even leave the colony and return, at his own charge, to India, without paying 2 shillings for a passport.

"By Section 48 of the Ordinance of 1867 he may be arrested without warrant if he is 'found in a district where he has no residence, or in any house or premises, and is unable to give a satisfactory reason for his being there.' A hawker cannot, for purposes of trade, pass the bounds of the district in which he resides, nor can an 'old immigrant,' resident in one district, visit a friend in another without an endorsement on his pass from an Inspector of police.

"Under warrant from a Magistrate, the police may 'at any time of day or night enter any premises where any immigrant is employed or resides, to ascertain whether such immigrant is under contract of service, or has his ticket and police pass.' The report shows that this section was grossly abused, and raids popularly known as 'vagrant hunts' instituted under cover of its provisions.

"The penalties for 'vagrancy' were excessively severe: twenty-eight days' imprisonment for a first offence, hard labor being 'added,' apparently without warrant of law, 'by the Stipendiary Magistrate.' After two or more convictions within two years, imprisonment for not less than six nor more than nine months might be awarded, and at the end of such imprisonment, if the employer of the immigrant could not be found, the latter might be 'employed on public works for three months longer, and then sent for allotment to a new master. 'The best comment we can make on this provision,' observes the majority of the Commission, 'is that, although carried out previous to 1867, the present Superintendent has declined the responsibility of applying it.'

"What constitutes 'vagrancy' is not altogether clear. But the clause of the law of 1867, which prescribed an enquiry by the immigration office before an immigrant was condemned as a vagrant, seems to have been systematically disregarded by the magistracy. That the law thus constituted was not left unenforced, Section V of the report of the Commission amply demonstrates.

"And while subjected to the rigours of this legislation, the 'old immigrants' lost the aid to which they are properly entitled at the hands of the Protector of Emigrants. The culpable neglect and apathy of Mr. Beyts suffered the Immigration Office to be, in the words of the report, 'transformed from an office where the immigrants may come freely for advice and assistance, into a department by means of which fees are levied from the immigrants, in addition to the ordinary taxation paid by law.' As we have been informed by the enclosures of Your Grace's despatch that Mr. Beyts has neglected altogether his duty of inspecting estates, the only means by which he could effectually protect the interests of immigrants still under indenture, and as he appears to have delegated even the task of levying fees upon 'old immigrants' to his subordinates, we fail to see in what direction the 'experience, capacity, and unquestioned activity' attributed to him in the report, have made themselves manifest.

"It is true that the report of the Commission deals almost exclusively with the grievances of the so-called 'old immigrants,' and does not touch upon the questions affecting the condition of immigrants still under their first contract of service, noticed in the papers received with Your Grace's despatch above cited. But when we read the accounts of the oppressive treatment to which the 'old immigrants' are subjected, we cannot help fearing that there may 'probably be ample foundation for other complaints that have been made. These, however, have, we presume, already been under investigation by the Royal Commission, and we need not further allude to them at present."

Upon careful consideration both of the evidence recorded by the Commission and their report, it was decided to address both the Secretary of State and the Mauritius Government. To the former the facts were set forth, as in the above extract, and it was observed that, till receipt of the report of the local Commission, the Government of India had been disposed to wait the action of the Royal Commission and of Sir Arthur Gordon. But the disclosures of the "Police Enquiry Commission," as it was called, constrained the Governor General in Council to point out the responsibility laid upon the shoulders of the Indian Government by express legal enactment, in Section 57, Act VII, 1871, and to declare that unless effectual measures should be taken within a reasonable time to remove the abuses brought to light and to ensure the proper treatment of all classes of emigrants, it would be necessary to stop all emigration to Mauritius. And with regard to the "old immigrants" it was said that nothing short of the abrogation of all measures which had been framed and administered at the expense of that class for the benefit of other classes of the community would be considered satisfactory. A copy of the despatch addressed to the Secretary of State was also forwarded to the Government of Mauritius, with a letter the main purport of which was that though the Ordinance of 1867 was passed in perfect good faith, its practical working was not foreseen. "In the first place the amount of hardship necessarily involved in a number of minute regulations bearing on every-day life, and enforced by the police of the country, was much under-rated. Secondly, it was not foreseen that the Magistrates who were expected to mitigate the oppressiveness of the law would in some cases, at any rate, augment it; and that not by legal means only. In the third place the character of the Protector of Immigrants was misunderstood. It was expected that he would carefully watch over the interests of immigrants, and would bring to light and protest against any oppression to which they might be subjected, and not that he would wholly abandon his character of Protector and interfere, when he interfered at all, only to place fresh imposts and penalties upon the very people he was bound to protect." This latter point was especially dwelt upon, and Mr. Beyts' own evidence analysed at some length to justify the expression of an opinion that the needful supervision could never be exercised through that officer. A subsequent exculpatory letter from Mr. Beyts was received; but it did not tend to alter the view of the Government of India formed upon attentive perusal of his own evidence. The whole question is still *sub judice*, and I presume will not be decided till the report of the Royal Commission is in the hands of all concerned.

PART II.

We now come to the second division of the subject, that which treats of the facts of emigration as they affect India and the emigrants themselves. The records of emigration previous to 1842 are so scanty that it will be best to begin with that year, in which, as we have seen, emigration to the Mauritius was again permitted, after it had been for more than four years interdicted.

The appended tables A—II show the number of men, women, and children emigrating in each year from 1842 to 1870, from each of the three British ports, and collectively from the French ports, to each British and foreign colony to which emigration has been, at any time during that period, lawful. The figures are those given by the several Protectors of Emigrants. They do not exactly represent facts, inasmuch as the figures for Calcutta are for an official, while those for Bombay and Madras are for a calendar year. But I have not thought it worth while to ask the Protector at Calcutta to undertake a re-adjustment of his figures according to the calendar year.

In table J is shown the total number of souls emigrating, and the several colonies which drew upon India for labor during each year. Table J shows the total number emigrating and their destination.

The embargo upon emigration was only removed in December 1842; this accounts for the small number, 459, emigrating in that year. In the following year the demand for labor in Mauritius, repressed by years of prohibition, again asserted itself, and nearly 40,000 emigrants sailed. Of these about 17,000 sailed from each of the ports of Calcutta and Madras, and the remainder from Bombay; the women were about 18 to every 100 men. In 1844 the number fell to 8,242, all to Mauritius. Madras supplied no emigrants this year, nor did that Presidency again begin to supply labor to Mauritius till 1850. The proportion of women rises to 16 to every 100 men. In 1845 the three great colonies of British Guiana, Trinidad, and Jamaica, enter the labor market, and for the three years 1845 to 1847 constitute, with Mauritius, the sole importers of Indian emigrants. The Mauritius demand stands at about 7,000 souls per annum, all from Calcutta. The West Indian Colonies laid Madras also under contribution. For these three years the percentage of women rose to 21. In 1848 Jamaica drops out of the list, and in 1849 the other two colonies west of the Cape. Emigration was in fact stopped, partly on account of great mortality among coolies, partly owing to a conflict then waging between the colonists and the Colonial Office. In 1849 and 1850 the Mauritius demand slightly increases, and in the latter year Madras again begins to send labor to that colony. The percentage of women falls to 16. In 1851 British Guiana and Trinidad again begin to import Indian labor, and the average emigration to these two colonies and Mauritius for the five years 1851 to 1855 rises to upwards of 18,500 a year. Out of this number more than 15,000 are due to Mauritius, which in 1852 again, after an interval of eight years, begins to draw labor from Bombay. The West Indian emigration of these five years is exclusively from Calcutta. The proportion of women rises to 21 for every 100 men. From 1856 onwards, the three great sugar colonies, Mauritius, British Guiana, and Trinidad, yearly indent for a greater or less number of emigrants. Jamaica is less regular. In 1856 the smaller West Indian British colonies come into the field; but their demand is neither large nor continuous.

The four years 1856 to 1859 may be taken together. Emigration culminated in the year 1858, when 45,838 souls left India. The number in the following year was, however, little less, *viz.*, 43,957. The increase was, we may say, altogether due to Mauritius. Enquiry was made as to the cause, but with no very definite result. I believe the sugar plantations were prosperous at the period, but it was shrewdly suspected that the mutiny had much to say to it, and that many of the emigrants crossed the *kālā pāni* to Mauritius to avoid a compulsory sea-trip to Port Blair. The annual average for the period was upwards of 31,000, of whom 27,000 to Mauritius, from all three ports, but chiefly Calcutta. In 1856 the West Indian colonies began again to draw upon Madras. The percentage of women for this period rises to 37, the Colonial Office having begun to insist on the point.

For the 11 years 1860 to 1870 the annual emigration has been on an average about 18,200. But there has been much variation. For instance in 1861, the emigrants numbered 31,493; in 1867 the number fell to 7,614. The famine in the North-Western Provinces may have had something to do with the large number in 1861. The variations have been mainly due to variation in the number of colonies in the field and in the local demand. In 1860 Natal began to draw labor from India, and continued to do so till 1866. It recruited chiefly in Madras. In 1861 Réunion came into the field, drawing 5,333 souls from

Calcutta. The emigration to Réunion has continued, but in decreasing numbers, and has, since 1865, been altogether carried on from the French Indian ports. In 1862 St. Croix took a ship-load of Bengal laborers, the only emigration thither. In 1864 the French West Indian colonies entered the market; with the exception of one shipment from Madras their operations have been altogether carried on from Pondicherry and Karikal. The Mauritius demands have fluctuated within very wide limits. In 1865, 19,493 souls sailed for that colony; in the following year the number dropped to 3,549; and in the next year a single ship carried the whole Mauritius emigration. This sudden cessation of demand was greatly due to the epidemic fever of 1866 and 1867; the figures for 1868-1870 show a steady but slow increase in the demand for Indian labor. Since 1865 there has been no emigration from Bombay. The West Indian emigration has been tolerably steady, its operations since 1862 having been carried on exclusively from Calcutta. The percentage of women to men for this period has been about 30. It must be noted that all these percentages have been calculated on the number of "adult" men and women respectively. If calculated on the number of females of all ages as compared with males of all ages they would be somewhat higher. But the tables supplied me have not always distinguished male from female children, so I have been obliged to mass together the children and infants of both sexes.

The general results of emigration from 1842 to 1870 may, then, be thus summed up:—

	Men.	Women.	Children.	TOTAL.
To Mauritius from Calcutta	148,669	35,650	24,496	208,815
" " " Madras	72,230	22,066	16,529	110,825
" " " Bombay	22,954	6,743	3,064	31,761
Total emigration to Mauritius	243,853	63,459	44,089	351,401
To British Guiana from Calcutta	46,081	14,497	7,654	68,232
" " " Madras	7,242	2,486	1,731	11,459
Total emigration to British Guiana	53,323	16,983	9,385	79,691
To Trinidad from Calcutta	25,059	8,023	4,445	37,527
" " " Madras	2,971	1,257	764	4,992
Total emigration to Trinidad	28,030	9,280	5,209	42,519
To Jamaica from Calcutta	8,180	2,671	1,526	12,377
" " " Madras	1,842	562	388	2,792
Total emigration to Jamaica	10,022	3,233	1,914	15,169
To Natal from Calcutta	695	194	122	1,011
" " " Madras	3,421	1,269	747	5,437
Total emigration to Natal	4,116	1,463	869	6,448
To minor British West Indian colonies and St. Croix from Calcutta	4,281	1,471	746	6,498
To minor British West Indian colonies and St. Croix from Madras	306	124	93	523
Total to British West Indian minor colonies and St. Croix	4,587	1,595	839	7,021
To Réunion from Calcutta	6,076	1,359	680	8,115
" " " Madras	1,410	491	230	2,131
" " " French ports	3,265	1,089	405	4,759
Total* emigration to Réunion	10,751	2,939	1,315	15,005
To French West Indian colonies from Madras	219	72	39	330
" " " " French ports	10,581	4,046	1,384	16,011
Total emigration to French West Indian colonies	10,800	4,118	1,423	16,341

To condense still further:—

	Men.	Women.	Children.	TOTAL.
The total emigration from Calcutta has been	239,041	63,865	39,669	342,575
" " " Madras and French ports	103,487	33,462	22,310	159,259
" " " Bombay	22,954	6,743	3,064	31,761
Total emigration from India for the period 1842 to 1870	365,482	103,070	65,043	533,595

* See however note to statement G.

The return emigrants for the same period are said to have been:—

Return Emigrants.				
From Mauritius*	...	...	...	97,418
" British Guiana	...	...	...	7,621
" Trinidad	...	...	...	3,981
" Jamaica	...	...	...	1,848
" other colonies	...	...	...	1,310
TOTAL	...	...	...	112,178

The balance against India is therefore 421,417. But the figures of return emigrants are confessedly imperfect,† so much so that I have not attempted to give them in any detail as to each year or even as to the ports to which the emigrants returned.

The Protector of Emigrants for Calcutta has been good enough to send me statements shewing the number of emigrants to each destination, derived from each geographical circle of recruitment. I have not reproduced these in full, but the total results for the years 1842 to 1871 are shown in the following table:—

To	Orissa.	BENGAL.			Behar.	North-Western Provinces, Oudh, and Central India.	Elsewhere.
		Western.	Central.	Eastern.			
Mauritius	3,116	33,131	8,951	1,118	108,156	47,286	3,619
British Guiana	719	14,028	2,166	238	24,681	25,551	1,164
Trinidad	378	8,396	1,305	176	11,278	16,027	853
Jamaica	147	3,214	341	106	4,496	4,654	377
Minor West Indian Colonies	28	* 1,461	266	46	2,405	2,076	100
Natal	2	216	24	...	356	370	16
Réunion	19	1,667	171	29	4,027	4,469	262
	4,409	62,113	13,224	1,713	155,399	100,433	6,391

It thus appears that the province of Behar has contributed nearly one-half of the Calcutta emigration; the North-Western Provinces and Oudh come next (for the number from Central India is very small indeed), and Western Bengal stands third. The quotas from other provinces are very small. It may be said, generally, that the earliest recruiting grounds in the Bengal Presidency were Behar and Chota Nagpur, the so-called "jungles" or "hill coolies"‡ being much sought after. But the number of aborigines gradually decreased, partly from the competition of the tea districts, partly because of the heavy mortality at sea among this class of emigrants. Simultaneously recruiting operations seem to have been pushed further westward into the North-Western Provinces below Cawnpore, and, since the suppression of the mutiny, into Oudh. The tracts which now figure most largely in the lists are Arrah, Gyah, Patna, Allahabad, Ghazipur, and Oudh. In the second rank come Cawnpore, Fatihpur, Jaunpur, Gorakhpur, Azimgarh, Chaprah, and Mungir. Below the last named place and above Fatihpur cases of emigration are so to speak sporadic.

The Protector at Madras thus writes of emigration from the Southern Presidency:—
"The largest number are drawn from Godavery, Vizagapatam, and Ganjam districts, and from Madras and Chingleput. Emigrants from other districts are so rare that each instance might without trouble be noted in the

* Mr. Bayts' report for 1870, however, gives the following figures of return emigrants leaving Mauritius:—

	Males.	Females.	TOTAL.
1834 to 1839	648	33	681
1840 to 1844	8,606	468	9,074
1845 to 1849	13,636	1,477	15,113
1850 to 1854	13,965	1,978	15,943
1855 to 1859	22,570	4,480	27,050
1860 to 1864	11,073	2,862	13,935
1865 to 1870	14,108	4,456	18,564
TOTAL	84,606	15,754	100,360

† At Bombay, for instance, no record was kept of those paying their own way back. As in 1853 the Mauritius was allowed to dispense with the condition of a free return passage, the omission seriously vitiates the Bombay figures.

‡ Probably for the most part Orissa Kols,—the "navvies of India," as Colonel Dalton calls them.

return." In 1857 the Protector named Tanjore, Trichinopoly and South Arcot, in the south, Vizagapatnam, Ganjam and Rajahmundry, in the north, as the main recruiting grounds.

From Bombay I have nothing accurate. The returns, however, show that there was little emigration from the province of Gujrat: a somewhat negative result.

The data are on the whole insufficient to support any generalisation. I hardly think they establish any connexion between briskness of emigration and density of population. More seems to depend on the habits of the population, the recruiters frequenting those tracts the inhabitants of which were already used to leave their homes to seek service in other parts of India.

As to the classes to which the emigrants mainly belong, no records have hitherto been kept to allow of any detailed distribution. As a general rule the Hindus largely outnumber the Musalmans. For the Calcutta emigration, 1842 to 1870, Dr. Grant gives the following figures:—

Classification of emigrants as to religion and caste.

Hindus	...	...	...	218,973
Musalmans	...	...	...	49,860
Aborigines	...	...	...	54,956
Christians	...	...	...	88
TOTAL				323,877*

Of the emigrants from Calcutta the mass belongs to the lower agricultural and laboring castes of Hindus. But there is some mixture of all castes. Probably the emigration of 1857-1859 included many of the better castes whence the sepoy army used to be recruited. From Madras, emigrants are said to be "chiefly Pariahs, with a considerable number of Sudras, and a few Musalmans." The Madras returns, which are, however, on this point imperfect, show about 3·8 per cent of Musalmans. In the Bombay emigration 7·5 per cent were Musalmans. A form has now been prescribed which will secure some classification both as to caste, religion, and "provenance," to use a convenient French word. This form for the four months, April to July 1872, gives the following facts for Calcutta. Of a total of 1,943 souls emigrating from the port (all for Mauritius):—

975	came from Behar.
792	from the North-Western Provinces, Oudh, and Central India.
130	from Western Bengal.
77	Central "
7	Eastern "
15	Orissa.
37	elsewhere.

Of the whole number only 234 or 14·5 per cent were Musalmans. The remaining 1,659 are thus classified:—

Higher castes	...	...	355
Respectable agricultural castes	...	...	633
Artisan castes	...	...	222
Low castes	...	...	449

The records of emigrants' remittances and acknowledged savings have been too largely kept for any complete statement to be attainable. The following figures are given for Calcutta.

From Demerara 4,948* return emigrants of all ages and both sexes are said to have brought with them in Government remittances close upon ten lakhs of rupees (Rs. 9,99,805), besides Rs. 2,19,000 in coin and jewellery, or upwards of Rs. 300 each. From Trinidad 3,478 emigrants returned with Rs. 5,77,000, or Rs. 166 per head. Those from

St. Lucia and Grenada brought about Rs. 87 and 75 a head respectively. The 250 who returned from St. Croix brought nearly Rs. 200 each. For Mauritius and Jamaica there are no records. Specific cases of comparatively recent returns are more striking, and are well authenticated. Thus the *Ganges* from Demerara in December 1869 carried 418 souls, with Rs. 1,40,000 of acknowledged savings, or Rs. 335 a head all round, and in the same year the *Arima* brought 369 return emigrants from Trinidad, with no less than Rs. 1,60,000 in bills and cash, or Rs. 432 a head. The three last ships which have arrived, one carrying return emigrants from Trinidad and Grenada, the other two from British Guiana, have brought about Rs. 5,75,000, distributed between 1,422 return adult emigrants.

The following extract from the last report of the Emigration Board probably condenses most of the information attainable on the subject:—

"But the clearest proof of what can be earned by a frugal industrious immigrant is to be found in the large sums of money and amount of property that some of them carry back to India. We have but little information on this point from Mauritius, but our returns show that from British Guiana, in the eight years ending 1869, the number who returned to India was 2,166, of whom 1,779 were adults. The money and jewellery they took with them was valued at

* This total, however, does not quite agree with that given above.

£64,020 14s. 9d., equal to an average of £35, 19s. 9d. for each adult. In September 1870 the *Ganges* sailed with 421 return immigrants, of whom 10 were Chinese. The amount they deposited for remittance or took with them was £12,290, 12s. 6d. The adult men and women on board were 344. The amount of their property was therefore equal to an average of £35 14s. 6d. for each adult. On the 22nd of September last, the *Wellesley* sailed for Calcutta with 423 return Indians, and one Chinese family, consisting of 15 persons, who paid their own passages. The amount deposited by these people for remittance was £11,174, of which £668 13s. 4d. belonged to the Chinese family. The average amount paid in by each Bengalee depositor was £38 7s. 11d.; by each Madrassee, of whom there were only 6 on board, £8 6s. 8d.

From Trinidad the number who returned to India up to the 31st December 1868 was 3,201, and the amount of their savings was £63,861 3s. 7d., equal to an average of £19 19s. 4d. a head. In 1869, 372 immigrants, of whom 289 were adult men and women, returned, carrying with them money and property to the value of £16,087 14s. 1d., equal to an average for each adult of £55 13s. 4d. In 1870 the number that returned was 408, of whom 313 were adults, and the amount they carried with them was £12,736 12s. 1d., equal to an average of £40 13s. 10d. for each man and woman. In 1871, 159 immigrants, of whom 29 were adults, went back having deposited in the treasury £1,716 12s. 6d., equal to an average of £19 6s. 1½d. for each adult; and four coolies left the colony by the Royal mail steamer to proceed to India *via* Suez, having deposited in the treasury for remittance £1,982 10s., besides carrying with them a considerable sum in gold.

We have no information as to the amount of property carried by immigrants from Jamaica before 1871. In 1871 two ships sailed with return coolies. The first carried 487 immigrants, of whom 362 were adults, and the amount they remitted through the Government or carried with them £13,986, equal to an average of £38 12s. 8d. for each adult. The second carried 433, of whom 314 were adults. The amount they remitted through the Government was £3,274 10s., equal to £10 8s. 7d. for each adult; but they refused to give any information as to the amount of money or the value of jewellery they had upon their persons."

The statistics of mortality at sea are extremely imperfect. The Protector of Emigrants at Calcutta gives tables running back to 1842, but the figures for the earlier years are evidently untrustworthy. The tables supplied by the Madras Protector do not, on the face of them, include one half of the ships which actually sailed, even in the case of Mauritius, and the record in respect of emigration to other colonies is more imperfect still.

The following figures of mortality on the voyage from Calcutta to Mauritius seem, however, to be trustworthy:—

YEAR.	Number embarked.	Deaths on voyage.	Percentage of mortality.
1860	6,091	201	3·3
1861	6,936	132	1·9
1862	2,284	41	1·8
1863	1,822	32	1·7
1864	6,848	113	1·6
1865	15,117	494	3·2
1866	478	8	·6
1867	313	8	1·
1868	1,937	19	1·5
1869	1,499	5	·2
1870	1,937	20	1·
TOTAL	44,562	1,063	2·4

The Emigration Board gives the mortality on the voyage from Calcutta to Mauritius in 1859 as 2.68 per cent. This, however, seems to have included about 300 deaths due to the loss by fire of the *Shah Jehan*, an occurrence noticed in the first part of this note.

The statistics supplied shew that 215 deaths occurred on board 74 ships sailing to Mauritius from Madras in the years 1858 to 1870, and carrying 23,874 souls, less than one-half of the actual emigration in that period. This gives a very low death-rate, only .9 per cent, but is more or less confirmed by the following figures given by the Emigration Board, which, however, I have not been able to reconcile with the numbers of emigrants as stated by the Madras Protector:—

YEAR.	Number embarked.	Percentage of mortality.
1850	4,221	.7
1851	4,078	1.9
1852	5,368	.18
1853	4,525	.4
1854	7,284	.6
1855	6,718	.6
1856	4,937	.9
1857	4,649	1.1
1858	11,006	.4
1859	16,087	.6
1860	4,327	.6
1861	5,029	.8
1862	4,826	.9
1863	3,292	.2
1864	1,867	.2
1865	3,443	.2
1866	3,350	.2

The comparatively high death-rate in 1851 was due to one vessel which met with two hurricanes and had her water-casks carried away. Out of the 80 deaths of the year, 57 occurred from thirst on this ill-fated vessel.

For Bombay the Emigration Board gives the following statistics. Emigration from Bombay has been only to Mauritius.

YEAR.	Number embarked.	Percentage of mortality on voyage.
1857	1,232	1.3
1858	3,317	.6
1859	5,346	.9
1860	2,016	.7
1861	1,816	.6
1862	1,299	.3
1863	1,041	.4
1864	1,351	4.4
1865	1,078	8.2

Neither are these figures reconcilable with those given by the local Bombay authorities.*

With regard to the great mortality in 1864 and 1865, see the first part of this note.

The Protector of Emigrants, Calcutta, gives the following somewhat fragmentary figures of mortality on the voyage from that port to the West Indian colonies, including St. Croix, but not French colonies in that quarter:—

* The Bombay Protector gives the following figures:—

YEAR.	Number embarked.	Deaths.	Percentage.
1859	5,287	19	0.36
1860	1,197	14	1.16
1861	2,172	14	0.64
1862	1,278	4	0.31
1863	706	2	0.28
1864	1,351	60	4.4
1865	1,078	89	8.2

Mortality from Calcutta to West India Colonies.

1870	3,199	48	1.2	2,087	44	2.1	1,382	23	1.6	606	(?)	(?)	7,274	(?)	(?)

We have already seen the terrible mortality of the year 1856, when 17.27 per cent. of the emigrants sailing for the West Indies from Calcutta perished on the voyage. In 1857 the mortality still stood at the high figure of 13.22 per cent; in 1858, it was reduced to 10.43 per cent, and in the following year rose again to 12.6. It then was considerably reduced till the fatal year 1864, when one-fourth of the emigrants from Calcutta to British Guiana died on the voyage.

For the West Indian emigration the Madras figures are altogether insufficient. Statistics are only given for eight ships, carrying 2,972 souls. The deaths on board these numbered 45, or about 1.5 per cent. The Emigration Board states the mortality on voyages from Madras to the West Indies as follows:—

In 1856		98 per cent.
" 1857		1.31 " "
" 1858		1.64 " "

The following figures for Réunion are gleaned from the Consular reports:—

Period.	Source of emigration.	Number of souls embarked.	Deaths on board or in lazaretto.	Percentage of mortality.
1861	Calcutta	6,901	607	8.8
1862	"	1,790	19	1.0
1862	Madras Presidency	3,904	56	1.4
1863	Calcutta	291	9	3.1
1864	Madras Presidency	2,612	5	.2
1864	Calcutta	1,112	36	3.2
1864	Madras Presidency	2,803	5	.17
1865	Calcutta	400	14	3.5
1865	Madras Presidency	1,121	2	.4
1866	"	2,089	11	.5
	TOTAL	23,773	764	3.2

The heavy mortality in 1861 was due to cholera. Since then the mortality has been somewhat heavy from Calcutta, but remarkably light from southern ports, the difference being even more marked than in the case of Mauritius. Figures for the years since 1866 are not forthcoming.

For Natal and the French colonies west of the Cape statistics of mortality on the voyage are so very fragmentary as to be not worth citing.

It is obviously impossible to piece together these fragmentary returns into one general statement, or to draw any very detailed conclusions from such incomplete statistics. But one or two remarks are sufficiently obvious. The Madras emigration has been in a very great degree more successful than that from Calcutta in regard to mortality *en route*, and this whether we compare the Mauritius or West Indian emigration. Ships from Madras appear to have been quite free from those terrible epidemics which have once and again committed such havoc among Bengal coolies. I do not think that the doctors have brought forward any really satisfactory explanation of this. In the case of Mauritius the comparative shortness of the voyage from Madras has no doubt much to do with it. But this cause hardly exists in the case of emigration to West Indian colonies. It was suggested in 1858 that perhaps the large number of "hill coolies" shipped from Calcutta was one of the main causes of the heavy mortality of the Bengal emigration to the West Indies of the years 1856 to 1858, and it is an undoubted fact that this class does suffer greatly even on board *river* steamers. But this would not explain the great sickness of 1864, for, owing to the competition of the tea districts, the number of Dhangars, Kols, and their congeners, sailing to the West Indies, had greatly diminished. Altogether the question is distressingly obscure.

The Bombay emigrants too enjoyed an immunity from any severe sickness till 1864. In that and the following year ships from Bombay suffered more even than in any year from Calcutta to Mauritius. The causes of this epidemic also are still to seek.

TABLE A.

PART III.

We now come to the third part of the subject, namely, the condition of the emigrants in the several colonies to which emigration has from time to time been declared lawful. The sketches, under this head, which I have been able to make are very unequal; the best of them are imperfect, and many of them are mere skeletons. But the materials for such a complete review of the position of the emigrant as I should have liked to be able to submit, have not in any instance been forthcoming, and I have had to do the best I could with what was attainable. It should be remembered, too, that while these sketches have been in preparation, an active discussion has been going on as to the condition of the Indian emigrant abroad, and the whole question of colonial legislation, as affecting immigrants, has been passed through the crucible. When this great question is finally settled, it will be necessary to write a supplement, or series of supplements, to this part of the note. With these remarks, I proceed to enquire into the facts bearing on the condition of coolies in the several colonies, beginning with Mauritius.

MAURITIUS.

The island of Mauritius lies between 57° 17' and 57° 46' east longitude and 19° 58' and 24° 32' south latitude. It is of elliptical shape, its greatest length being 37 miles, its greatest breadth 34 miles. Its area is 708 square miles. It is generally considered of volcanic origin. The centre is occupied partly by ranges of hills from 1,800 to 2,800 feet in height, partly by elevated plateaux. In general, these slope gradually to the sea, but in parts the slope is arrested, and plains, often marshy, and undulating grassy downs form a littoral varying in breadth from half-a-mile to several miles. The island is almost entirely surrounded by coral reefs, at varying distances from the land. The climate is not insalubrious. On the highlands the temperature is said to range from 70° to 80° Fahrenheit; but at Port Louis, the capital, the thermometer stands much higher. The year is divided into four periods: from January to March is the season of great heat, as also of violent hurricanes. April and May I have not found very distinctly characterised. From June to September is the season of south-east wind and rain. From October to December the weather is described as equally, but dry. The rain-fall seems to vary within wide limits both from one part of the island to another, and in the same place from year to year. The soil is fertile and is peculiarly adapted to sugar-cane. To this staple one-third of the total area of the island is said to be devoted, another third being given up to grazing or market gardens, manioc and maize. The soil is ferruginous, and is worked with the hoe. The island has been five times visited by cholera; in 1819, in 1854, in 1856, in 1859, and in 1862. Small-pox has also been occasionally introduced and taken an epidemic extension. But there has been no outbreak since 1865. Dysentery prevails in the rainy season; phthisis is very common and rapid in its progress, and hepatitis is not infrequent. Intermittent and remittent fever had till late years been very rare in the island, but appear to be gradually gaining ground. The epidemic fever of 1866-68 has already been noticed in the first part of this note. But as endemics, fevers both remittent and intermittent appear to be establishing themselves in the island. Syphilis, leprosy and diseases of the lymphatic system are also said to be more frequent and of graver type than they once were, and the Fever Enquiry Commission of 1867 expressed themselves as decidedly of opinion that the public health had deteriorated. Statistics of mortality are quoted in confirmation; thus the death-rate in 1848 was 26·81; in 1865 it had risen to 33. For the whole year 1868 it was 53·6. This was a year of epidemic fever. In 1869 it stood at 33·7, and in 1870 it fell to 22 per mille. These statistics must be taken over a considerable range of time to be of value. The alleged deterioration of health is attributed by the Commission mainly to the gradual *debaissement* of the island, due to the spread of sugar planting, and to the consequent diminution of the water-supply.

The following figures taken from the census report of 1871, shew the population in that year and ten years previous; the term "Indian" including both all Indian immigrants and all persons of unmixed Indian blood.

	MALES.		FEMALES.		TOTAL.	
	1861.	1871.	1861.	1871.	1861.	1871.
Indian	141,615	141,804	61,019	74,454	192,634	216,258
General	61,246	51,771	60,076	48,013	117,401	99,784
TOTAL	202,861	193,575	107,095	122,467	310,050	316,042

These are very remarkable figures. They show that upwards of two-thirds of the population of Mauritius is of from Indian extraction, and that the tendency is towards a still greater preponderance, as the proportion of the women among Indians tends more to equality. The number of agricultural laborers, however, has decreased during the decade, as the following figures show :—

		Males.	Females.	Total.
1861	...	84,727	303	85,030
1871	...	61,993	225	62,218
Decrease	...	22,734	78	22,812

Of the "Indian" population, 109,173 males, and 44,530 females, or 153,703 of both sexes had immigrated under the immigration law, while 1,244 males and 420 females, or 1,664 souls in all, had come over of their own accord, bringing their labor to market. The remainder of 60,891 will represent the number of Creole Indians or persons of Indian blood born in the colony. In the department of agricultural labor the Indians seem to have few competitors. They also hold their own in domestic service, and even in trading pursuits. In this latter sphere their operations are mostly of the petty retail order. But I see that 11 planters and one manager are classed as Indians.

The French took possession of the island in 1721. In 1810 the English occupied it, and it was finally ceded to England in 1815, the French Codes being, however, by an article of the treaty, declared to remain in force. French is the language generally spoken, and in blood and tradition the majority of the planter class are, I imagine, French.

The colony is administered by a Governor, aided by an Executive Council. There is also a Legislative Council composed of the members of the Executive Council and non-official members appointed by the Crown on the nomination of the Governor. I have not found the exact number of members of each class, but Sir A. Gordon remarks that the number of non-official members has been gradually increased till they are nearly two to one of the official members. The non-officials are all directly or indirectly connected with the sugar interest. The Supreme Court at Port Louis consists of a Chief Justice and two Puisne Judges. In the interior, I find district Magistrates and Justices of the Peace, but nothing very definite as to their functions. The "exclusive jurisdiction for the enforcement of all contracts of service and for imposing all penalties for the breach, neglect or non-performance thereof" is entrusted to a distinct* class of Magistrates, the Stipendiary Magistrates of the Order in Council of 1838, and with this class we are most nearly concerned. They appear to be 15 in number, hold office during Her Majesty's pleasure, but may be suspended from office by the Governor, until Her Majesty's pleasure be known. Besides their summary jurisdiction, they may in case of any dispute arising between master and servant as to the meaning of their contract, or the rights or obligations of either party under the same, act as arbitrators, and their award shall be conclusive and without appeal. The fees payable by complainants are, for a summons to party charged, two shillings; for a warrant two shillings; for summons to a witness one shilling. But the Magistrate may, in case of complaint by a laborer, remit these fees. If a complaint be dismissed as frivolous or unfounded, the plaintiff may be condemned to a penalty, if a servant, not exceeding ten shillings, if a master, not exceeding £5. If the complaint be dismissed as vexatious or malicious, the penalty may be £2, or imprisonment not exceeding one month for a servant, and a fine of £20 for a master. Costs are to be paid by the losing party, and fees remitted in favor of the winner. All penalties and costs may be recovered by distress and sale of goods, and, failing sufficient distress, the party may be condemned to imprisonment at the following rate, viz:—when the amount does not exceed £5 to a number of days, not however exceeding 30, equal to the number of shillings due; when more than £5, to any time not exceeding 60 days. An appeal will lie to the Supreme Court, if preferred within 10 days; against any order of a Stipendiary Magistrate, (except when he acts as arbitrator), when the penalty awarded exceeds £2, if against a master, or a month's wages, if awarded against a servant, or when a sentence of imprisonment exceeding 10 days is inflicted.

As to the police of the colony I have no details, but according to the report of the Commission of 1871 it must stand sadly in need of reform. Bribery and the use of the most discreditable means to elicit or concoct evidence seemed to be not uncommon in a force so motley in its constitution and recruited from such questionable sources, that perhaps nothing better could be expected of it.

The special protective establishment in Mauritius has been a complete failure. It is inadequate in strength, armed with insufficient powers and guided by no definite rules in some of its most important duties. Till 1865 it consisted of the Protector of Immigrants and of him alone. In 1865, three Medical Inspectors were appointed, and the chief clerk of the Immigration office was empowered to perform the duties of Protector during the absence of the latter from the dépôt. But by an Ordinance of 1871 the three Medical Inspectors have now been reduced to one, whose appointment, moreover, will not, on a vacancy occurring, be filled up, the Government being at the same time authorised to appoint lay Inspectors; and one such officer has been appointed on a salary of £500 per annum. The Medical Inspectors were never placed in subordination to the Protector, but to the General Board of Health.

* But an amalgamation of the Stipendiary and District Courts seems now to be in progress.

49

It is manifest that, when at its strongest, the protective and inspecting staff was quite inadequate to ensure the proper care of a laboring population of upwards of 100,000 Indians.

The Protector is bound, on arrival of an emigrant ship, to proceed on board and enquire whether the regulations have been attended to; but I have not found any rules for his guidance more definite than the instructions contained in the Order in Council of 1842, which are very generally worded, and are moreover inconsistent with the later Indian legislation. I do not find that he is ever bound to report the result of his examination to the Protector at the port of departure. In the distribution of immigrants the Protector merely performed a duty of routine; once registered and examined by the medical officer they are made over to the requisitionists, the Protector having apparently power to prevent the separation of families, but no other discretion in the matter. I gather that a register, at any rate of immigrants still serving their period of industrial residence, is maintained by the Protector, but I cannot discover by what machinery; for, except that certain transactions connected with the cancellation or renewal of agreements come before the Protector, I cannot find that he is furnished with any means of knowing what becomes of an immigrant when once he leaves the dépôt, unless he is returned as a deserter or vagrant. Immigrants out of work may apply to the Protector, who is to endeavor to obtain them employment, and meanwhile they are fed and taken care of at the dépôt, and put to work there or hired out to temporary employers. The Protector is *ex-officio* guardian of Indian lunatics and orphans; and he may institute cases on behalf of immigrants for damages on account of neglect of official duty, and may intervene in any case of an appeal from the decision of a Stipendiary Magistrate, when an immigrant is a party concerned.

The system of inspection of estates in Mauritius is singularly inefficient. It does not appear that the necessity for any such measure was discerned till 1862. An Ordinance was then passed empowering the Protector, or any person whom he might depute by written order, to enter and inspect "any asylum, hospital, school, camp or other establishment" with Indian laborers, and to enter any estate or premises, except a private dwelling house, to investigate the condition of immigrants thereon. He, or his delegate, is also empowered to require any immigrants to be brought before him. The Ordinance of 1871 gives the same powers to the Inspectors appointed under it, adding, both for Protector and Inspector, the power to call for production of accounts and records. And obstruction of the Protector or other officer is punishable by a fine of £20 or one month's imprisonment. Vagrant dépôts are also open to inspection. But the Protector is armed with no powers to apply a remedy to any evils he may discover, and he can do nothing but report what he sees to the Stipendiary Magistrate or the Governor. The former can do nothing unless a specific complaint is made, the latter may move the Procureur General to take action when anything has occurred that would form ground for actual legal proceedings. In 1864, the Protector was directed to make an annual inspection of every estate; but the order does not seem to have been obeyed. The Stipendiary Magistrates were at the same time, by an executive order, directed to pay half-yearly visits to estates. But they had no power to take action upon the discovery of mismanagement or violation of rules, and do not seem to have been armed with any legal power of entry, though their right was not in fact disputed. Soon after the Medical Inspectors were appointed and bound to make quarterly visits. But all these inspections, even when made at all, appear to have been performed in the most perfunctory way, and to have had no result whatever. Indeed, as the officers charged with the duty could only inspect and nothing more, their visits naturally had no weight. Thus, as we shall see in more detail when we come to consider the position of "old immigrants," the office of Protector came to be "transformed from an office where the immigrants may come freely for advice and assistance, into a department by means of which fees are levied from the immigrants, in addition to the ordinary taxation fixed by law."

We have few details of the sugar industry* in Mauritius, and its mode of management. The number of estates in 1870 was 251,† measuring 122,343 arpents.‡ This gives an average area of 486 arpents to each estate, an arpent being 40,000 square feet, French. According to the Police Enquiry Commission "the agricultural interest has, since 1868, been very prosperous."

* Since the above was written, the evidence of some of the planters taken by the Commission enables me to give some further particulars. If the calculations of Mr. Antelme are to be accepted, sugar-planting in Mauritius ought to be a profitable speculation. He estimates that 100lbs. of sugar, fetching \$ 6 in the market, can be made for a maximum of 4½ dollars. This would be a profit of 33 per cent. Elsewhere, however, he says that 20 per cent. used to be looked on as a fair return for capital invested in sugar, but that less is now expected. According to another planter, the canes, both the white and red (or Belouguet) varieties, have been attacked by diseases. The "bamboo cane" was then tried, though inferior in yield of sugar. It too was attacked by another form of disease, and now efforts are being made to naturalise new species or varieties from New Caledonia. The staff of employés, (a word used in a technical sense in Mauritius), consists of a manager, a book-keeper or assistant, a head overseer, and one or more overseers, besides a "man to mark men's names." The latter is often an Indian, the others are as a rule Creoles or white people. The laborers are divided into two main gangs, the "grande bande" or able-bodied gang, and the "petite bande." According to one planter the wages are regulated by the gang to which the laborer belongs, being one rupee more in the grande bande than in the petite bande. This, however, is denied by other planters. The able-bodied gang does "carting, cane-holing, cane-cleaning, and cutting, and whenever it is necessary to bank up the canes, and there is hard digging to be done, the grande bande is employed." The firemen, stokers, wood-cutters and some others also belong to this gang.

On some estates task work is much affected, on others not; but cleaning, holing and cane-cutting appears to be generally done by the task. In cane-holing a task varies from 80 to 200 holes, according to soil. The holes are 2 feet by 10 inches and from 8 to 11 inches deep. A square or bed is supposed to be 400 square feet (French). The number of holes in the square depends on the kind of cane. The yield of sugar seems to vary greatly, some canes giving 5,000lbs. the acre of 40,000 square feet, and others not more than 1,500lbs. A weeding task varies from 400 to 1,000 square feet; a planting task from 300 to 400 holes. Canes are not renewed every year: the "bamboo cane" will bear 4 or 5 cuttings. The Mauritius planter does not appear to strip the trash off the cane as is done in Demerara.

† I got this number by actually counting the estates as given *nominatim* in the Protector's report. But in his report for 1871 Mr. Beys puts the number of estates at 217.

‡ In 1865 there were upwards of 100,000 arpents under sugar-cane, and the island produced 85,000 tons of sugar.

Upon these 251 estates there were, of laborers and their families, 121,457 souls, thus classified:—

Above 10 years of age.	Males.	Females.	Total.
Indians*	66,792	22,406	89,198
Creoles	3,043	2,945	5,988
Africans, &c.	408	101	509
Children under 10	70,243	25,452	95,695
	12,839	12,923	35,762
TOTAL	83,082	38,375	121,457

This gives an average population of nearly 500 souls for each estate, while there would be about one working hand to 1½ arpent.

The history of emigration to the Mauritius may be gathered in a general way from Parts I and II of this note. The emigration began in 1834, and up to August 1838, the colony is said to have imported about 25,000 Indians. Then came the prohibition, which, as we have seen, was more due to popular agitation than to any abuses proved before the embargo was notified. And, indeed, the worst of the abuses subsequently revealed were abuses in India itself. At the end of 1842 emigration was resumed, and with varying volume the stream has continued to flow (with the one brief check in 1856-57 due to the inefficient quarantine arrangements and the consequent prohibition), till the Indian element now forms, as we have seen, more than two-thirds of the total population of the Island. Till 1844, the Colonial Government does not seem to have interfered to regulate or control the influx of Indian labor. But a bounty on each laborer introduced was paid, seemingly out of colonial revenues, to his introducer. In 1844, the whole management of immigration was taken under Government control, and planters had to send in their requisitions for labor to Government, whence they were transmitted to the Agents in India. Gradually, however, a system of obtaining labor over and above the Government indent came into vogue, and we have seen to what abuses it gave rise, and how, in 1859, it was sought to remedy these abuses by permitting valid contracts to be made in India. We have also seen how the term of contract was gradually extended from one year to five, and how the grant of a free back-passage was abolished. The legislation of 1867 has also been noticed, with the system of repression thereby introduced for time-expired immigrants. On the whole, then, the tendency of Mauritius legislation has been, I think, towards reducing the Indian laborer to a more complete state of dependence upon the planter, and towards driving him into indentures, a free labor market being both directly and indirectly discouraged.

The financial basis of emigration to Mauritius seems to be somewhat as follows:—The first employer is supposed to pay the whole cost of the introduction of men and half the cost of the introduction of the necessary complement of women. But in calculating this cost, the whole expense of emigration does not appear to be included. Thus, in 1864, the cost to Government is made up of several items, viz., half-passage money of the contingent of women, bounties to married women (these have, however, ceased to be paid since 1865), quarantine establishment, return-passages, agencies in India. For the three years, 1862-1864, the Government contribution averaged £25,000 per annum. But it must have been much less of late years owing to the great decrease in the numbers of the emigration. The cost to the employer of introduction of an adult male seems to be steady at about £9-5-0 from Calcutta, and £9-14-0 from Madras. From Bombay, in the last years of emigration thence, it stood at about £7-14-0. According to Mr. Beyts this includes cost of recruitment, food and clothing in India, passage money, gratuities to masters, mates and medical men, and maintenance in dépôt before distribution. At the time of making requisition to Government for emigrants, the employer binds himself and two sureties to recoup Government for the cost of introduction, and the emigrants are only allotted to him on payment of the cost of introduction of the men, and half the cost of that of the women. The requisition may be either for the engagement of coolies to serve the individual requisitioner, or for the allotment of laborers engaged generally in India to serve any employer to whom they

* The Indian population on sugar-estates on 10th April 1871 is thus classified:—

	Male.	Female.	Total.
Immigrants—			
From Calcutta	36,815	12,836	49,651
„ Madras	18,096	9,990	27,176
„ Bombay	5,035	2,143	7,178
Indo-Mauritians	16,192	14,863	31,055
Free Indian passengers	40	12	52
	76,163	38,944	115,112

may be assigned; but in point of fact the latter system is little resorted to, emigrants being “almost universally” engaged for a particular estate. In the former case the applicant must specify the wages and rations he is prepared to give. But these must never fall below the rates declared from year to year by Government. If the application is for an allotment in Mauritius, the Government scale of wages and rations is stipulated for. In either case “proper lodging and medical care” form conditions of the contract. The minimum rates for males under 18 years of age, or for females, are to be fixed by the Protector, but as a general rule women are not specially applied for. The contracts of males are for five years, and bind the emigrant for that term to serve either a specified employer or the employer to whom he may be allotted on arrival, as the case may be, in consideration of wages and rations at rates set forth in the contract, together with lodging and medical care. The contract may also stipulate for repayment, by instalments, of any advance of pay not exceeding one month's wages. On arrival of an emigrant vessel in the colony, the Protector of Immigrants is bound to proceed on board before the passengers disembark and to ascertain that the rules as to space, provisions and good treatment have been attended to. By the Order in Council of January 1842, no money can be paid on account of immigrants except under warrant of the Governor, and such warrant can only be issued on a certificate from the Protector that the rules have been observed. Under clause 15 of the Order in Council, heavy penalties are also awardable for breach of the regulations. Notice is published of the arrival of the immigrants, and the requisitionists appear and have their contingents allotted to them. Should any requisitioner refuse to accept the immigrants procured for him, they may be allotted, for a consideration, to some other employer, the money paid by the latter going to diminish the amount recoverable under bond from the original applicant. The Protector has no power to refuse allotment, but may prevent the separation of families. Upon allotment, a certificate of engagement is given to each laborer and a certificate of allotment to the employer, to whom also are entrusted the number tickets of the immigrant. Upon sight merely of this certificate of allotment, (as well as I can understand), the Stipendiary Magistrate may be called upon to prepare a contract. Even the parties need not be present. Mr. Beyts, however, says that no contracts are made in Mauritius by new immigrants, the contracts made in India being held sufficient.

The employer, having paid the cost of the laborer's introduction, is held, as a general rule, entitled to the labor of the latter for his five years of industrial residence; and should the term of labor be shortened, or the laborer be transferred, except for the fault of the employer, the introducer is held entitled to a proportionate compensation from some quarter. Thus, the time of industrial residence may be completed—(1) by actual residence under written contract for five years; (2) by redemption; (3) by release; or (4) by exemption. Release may be effected at any time by the introducer appearing with the laborer before the Protector or a Stipendiary Magistrate and signing the needful document. Exemption may be given by the Governor upon the certificate of the Protector or a Stipendiary Magistrate to any immigrant incapacitated from labor by infirmity, accident, sickness or other cause, and not being under contract of service, and the Governor may grant such immigrant a free passage back to India. Redemption may be effected either on termination of a contract (though as contracts are for five years, I do not see how this can happen), by payment at the rate of £1-12-0 per annum for the unexpired portion of the industrial residence, or, in special cases, by the cancellation of the contract. In this latter case, the immigrant must lay his special grounds before the Stipendiary Magistrate, who then enquires into the case, and submits the proceedings to the Procureur General. The latter may thereupon direct the discharge of the immigrant from his contract on payment to his employer of a share of the cost of his introduction proportionate to the unexpired portion of his term of service. On the same principle, when a “new immigrant” enters into a contract with other than his original employer, the hirer pays stamp duty in favor of the first introducer, unless the first contract has been dissolved for misconduct of the parties. But the discharge of an immigrant from engagement does not, *ipso facto*, complete the term of industrial residence. He must either *redeem* or *re-engage* within eight days of discharge. Failing this he is sent to the Protector, who endeavors to obtain employment for him; if he will not engage on terms approved by the Protector, he may be sent to the workhouse.

The contracts are obscure as to the nature of work required; the labor is, however, in general terms, that involved in the cultivation of sugar-cane and the manufacture of sugar. Field labor is not to exceed nine hours a day, and only works of immediate necessity are to be required upon Sunday, a provision not always strictly observed. Task work may be assigned at the option of the employer, a reasonable task only being exacted. Of the reasonableness of a task the Stipendiary Magistrate is to judge, assisted, if he thinks fit, by one or two competent sworn appraisers. Upon proof before a Stipendiary Magistrate that a servant has neglected to perform his stipulated work, or has performed it negligently, or improperly, or that by negligence, or other improper conduct, he has injured the property of his master entrusted to his care, the Magistrate may, in his discretion, award any one or more of the following penalties:—(1) a pecuniary penalty for the master's benefit, not exceeding one month's wages; (2) imprisonment with or without hard labor not exceeding 14 days; or (3) dissolution of contract of service. For the “pecuniary penalty” may be substituted a fine not exceeding £10.

Unlawful absence is defined as being absent from work without the leave of the employer or any justifiable cause, and the immigrant guilty of this offence is liable, besides forfeiting wages and allowances for the period of such absence, to pay to his employer one halfpenny for each shilling of his monthly wages for each day of absence. Thus a laborer on 10

shillings a month will, for a day of unlawful absence, lose 9d. in actual cash and a day's rations to boot. "The forfeiture may be applied by the employer in the first instance, but subject to his justifying the same to the Stipendiary Magistrate, in the event of the immigrant complaining that his wages have not been fully paid." Instead of the forfeiture, the employer may prosecute before the Stipendiary Magistrate, who may sentence the immigrant either to imprisonment not exceeding 14 days, or, at the option of the employer, to a prolongation of the contract equivalent to the time of absence. This prolongation may be redeemed by a payment at the rate of six shillings a month. But every form of punishment for unlawful absence is barred if wages be two months in arrear, or if the employer have refused an application for wages lawfully due.* Unlawful absence, when prolonged for three days, if the immigrant also abscond from his dwelling-place, becomes desertion, punishable with imprisonment not exceeding three months. But the offence of desertion is condoned if the employer permit the deserter to resume work without prosecuting him. Deserters may be apprehended by the employer or his servants in any public place,† but must be made over at once to the police, under penalty of a fine not exceeding £10, or a month's imprisonment. Similarly, the police may arrest deserters, but must at once take them before a Stipendiary Magistrate. A record of deserters is to be kept by the Protector, but the employer does not appear to be bound to report desertions.

Imprisonment, except for unlawful absence, and, I presume, desertion, does not count towards the term of contract; but any immigrant imprisoned for breach of contract may be released at the instance of his employer. I am not very clear whether a new immigrant can become a vagrant. The law is somewhat obscure; and in any case it may be best discussed when we come to consider the status of the time-expired, or "old" immigrant.

The reports are meagre as to the actual working of the law. But I find the following figures of complaints by masters in the reports available:—

	1863.	1864.	1870.
Refusing to work ...	579	592	420
Unlawful absences ...	7,077	5,539	1,661
Desertion ...	5,296	6,040	2,574
Malicious injury to property ...	12	6	187
Insubordination, assault, &c. ...	48	71	108
Using false papers ...	351	485	59
Other charges ...	940	396	743
TOTAL ...	14,903	13,129	5,752

The following figures of convictions of immigrants on complaints preferred by employers are given in Mr. Beyts' report for 1871:—

OFFENCES.	CONVICTIONS.		
	1869.	1870.	1871.
Refusing to work ...	282	298	241
Unlawful absences ...	1,719	1,431	826
Desertion ...	3,627	2,240	2,190
Mischievously injuring employer's property ...	3	160	10
Insulting, assault, &c. ...	51	86	27
Using false papers ...	17	49	10
Other charges ...	139	132	87
TOTAL ...	5,838	4,396	3,395

These figures shew considerable improvement in the relations between employers and employed. But the very large proportion of convictions (see the figures for 1870) is not a wholesome sign.‡

* Nevertheless, Mr. Frere says that these conditions have been disregarded and the "double-cut" made when wages were two months in arrear.

† Yet from the evidence of Mr. O'Connor, Inspector of Police, given before the Royal Commission, it appears that managers of estates were in the habit of arresting laborers for desertion even "in camp," i.e., in their own dwellings, and this in the face of the very definition of desertion.

‡ The Police Enquiry Commission notice a similar disproportion in the number of convictions in cases of "contraventions," as infringements of Police Regulations by immigrants seem to be called. The figures are certainly remarkable:—

Year.	Charged.	Convicted.	Number of day's imprisonment.	Fines.
1867	6,890	6,240	1,742	£ 4,188 17 0
1868	9,277	7,710	310	5,478 1 0
1869	10,963	9,234	715	4,591 10 6
1870	17,353	14,114	4,674	6,342 0 0
1871	13,340	11,179	2,055	4,729 5 7

The following figures are given to illustrate the amount of unlawful absence and desertion:—

Daily average of absentees in 1868	...	7,235
" 1869	...	6,003
" 1870	...	5,801
" 1871	...	5,823
Deserters arrested in 1867	...	2,830
" 1868	...	2,649
" 1869	...	2,376
" 1870	...	1,643

The gradual decrease is satisfactory to notice. Mr. Frere observes that he found great difference in the number of desertions; on some estates there were only "individual desertions," on others the deserters could be reckoned "by the score or hundred."

The provisions for the protection of the immigrant seem to be the following. On proof before a Stipendiary Magistrate that an employer has not paid wages, or delivered the articles stipulated for,—or that the articles delivered were not of the prescribed amount and quality,—or that by negligence or other improper conduct of the employer, the contract of service has not been faithfully performed,—or that the employer has ill-used the servant,—the Magistrate may make orders for payment of any wages in arrear, for delivery of the stipulated articles, or for compensation for injury sustained; and if the order be not complied with, execution may be had by sale and distress of the goods of the employer, and, failing sufficient distress, the employer may be committed to prison for any term not exceeding one month, unless compensation be other paid. The real estate of the employer appears also to be liable, and in case of bankruptcy or sale wages are made a privileged claim on the estate. In any of the aforesaid cases the Magistrate may order the contract to be cancelled either in addition to, or in substitution of, any such order. He may, also, in lieu of the compensation, inflict a fine not exceeding £10. If wages be three months in arrear the servant may claim the cancellation of the contract. The statistics of the administration of this side of the law are also imperfect. I have found the following figures:—

	1863.	1864.	1870.
Non-payment of wages ...	4,699	3,743	2,551
Non-delivery of rations ...	813	787	272
Refusal of medical care ...	55	30	47
Non-delivery of tickets ...	357	414	356
Assault and battery ...	260	205	238
TOTAL ...	6,164	5,179	3,464

In 1868 the total number of convictions of masters was 7,733; in 1869 it was 3,936.

Here too we see a diminution in the number of charges. The convictions in 1870 and 1871 number respectively 2,507 and 1,578, of which 2,031 and 1,215 were for arrears of wages.* If we discard this class of cases, we have 390 convictions to 503 acquittals, whereas on the other side the convictions far out-number acquittals in every class of case.

The preceding figures include cases against all immigrants. For the sugar estates the following figures are given in the Protector's report for 1871:—

Cases brought by employers against laborers.

Decided against complainant	...	147
" " defendant	...	1,523
		1,670

Cases brought by laborers against employers.

Decided against complainant	...	284
" " defendant	...	181
		465

Thus the planter won 91 per cent. of his cases, the Indian only 38 per cent.

* In the previous three years the convictions for this offence were—

In 1867	...	3,502
" 1868	...	5,832
" 1869	...	3,518

In fact the system of allowing monthly payment of wages has encouraged larceny in this respect. The Stipendiary Magistrates in 1870 on their inspections found twenty-four estates three months in arrear, six estates four months in arrear, and one estate owing five months' wages. And Mr. Beyts admits that though the contracts stipulate for monthly payments, wages are actually paid only every two months. The inspections of 1871, however, shew considerable improvement in the matter of arrears, and monthly payments are on the increase.

The Protector is empowered to take up on behalf of immigrants, any action for damage arising out of neglect of official duty, as also to intervene in appeals from the orders of Stipendiary Magistrates. But neither he nor the Government appears to be armed with any summary power of removing immigrants for ill-usage or the like. It is but fair to add that Sir A. Gordon, while strongly condemning the defects of the system, admits that "the treatment of immigrants on estates is, as a rule, kind and just."

For new immigrants we have seen that a minimum scale of wages is laid down by the Colonial Government, employers being allowed to send requisitions offering a higher rate.

The latest scale which I have obtained is dated 8th December 1868. It is as follows:—

I.—Wages per month.

	1st year.	2nd year.	3rd year.	4th year.	5th year.
1.—Of New Immigrants.	s.	s.	s.	s.	s.
From 10 to 11 years of age inclusive...	5	6	7	8	9
" 12 to 14 " " " "	6	7	8	9	10
" 15 to 17 " " " "	7	8	9	10	11
" 18 upwards " " " "	8	9	10	11	12
2.—Of Immigrants who came back to Mauritius after having returned to India.					
From 14 to 17 inclusive ...	8	9	10	11	12
" 18 upwards ...	10	11	12	13	14

II.—Allowances.

"1. Immigrants above twelve years of age shall receive the following rations:—

Rice 1½ lb., or 2 lb. pounded maize, or 2½ lb. cooked manioc, or 5 lb. raw manioc	...	per diem.
Dal 8 oz.	...	" week.
Salt fish 8 oz.	...	" "
Ghee or oil 4 oz.	...	" "
Salt 4 oz.	...	" "

"2. Immigrants under twelve years of age shall receive three-fourths of the above-mentioned rations."

The rates of money wage had then somewhat fallen as compared with 1864, when adult immigrants of a new importation could rise to 14 shillings a month. The report for 1870 gives the following as the average wages of old immigrants employed in agricultural labor:—

	Maximum.	Minimum.	Average.
	s.	s.	s.
From 10 to 11 years inclusive ...	8	5	6.6
" 12 to 14 " " " "	10	6	8
" 15 to 17 " " " "	14	8	11
" 18 and upwards ...	20	12	16

with rations* on the Government scale. In 1871 requisitionists began to offer 10 shillings the outset for adults.

For artisans and domestic servants the rates vary greatly. I extract a few instances:—

	Maximum.	Minimum.	Average.
	£ s.	£ s.	£ s.
Carpenters ...	4 0	2 0	3 0
Blacksmiths ...	2 0	0 12	1 6
Masons ...	3 0	0 16	1 18
Gardeners ...	1 4	0 6	0 15
Cooks ...	2 0	0 16	1 8
Table servants ...	1 0	0 2	0 11
Coachmen ...	2 8	0 16	1 12
Grocers ...	1 4	0 8	0 16
Tanners ...	1 16	1 4	1 10
Washermen ...	2 0	0 12	1 6
Sugar-makers ...	3 0	1 0	2 0
Mill-drivers ...	4 0	1 0	2 10

* The money value of the ration is very variously estimated. Sir A. Gordon puts it at 3d.; some planters estimate at more than twice that amount.

Rations, too, appear to be given, the scale varying from the Government minimum to one twice as liberal. It is not, however, clear whether rations are given in all cases. In the table of "rates of wages at which written contracts of service were passed" during 1870, the rates run up as high as £6, and there were 124 engagements at rates above £4. Out of 76,921 engagements, 55,648 were at rates from 12s. to 16s. inclusive; 12,108 at rates below 12s., and 9,205 at rates above 16s. There seems reason to believe that on many estates, besides the cuttings authorized by law a system of illegal fines prevailed. Mr. Beyts remarks that in 1870 wages had an upward tendency.

The terms of the engagements made in the colony in 1870 and 1871, are given as follows:—

	in 1870	in 1871
Less than one year ...	4,877	4,416
One year ...	53,353	53,912
Eighteen months ...	12,300	7,390
Two years ...	4,113	7,506
Three years ...	1,990	2,601
Five years ...	288	

It is to be remembered that this statement does not include the engagements of new immigrants which are made in India and for a term of five years.

We have seen that the first contract with immigrants pledges the employer to provide lodging and medical care. The former is described in the Ordinances as "sufficient and wholesome lodging, according to the usage of the colony." If it be proved before a Stipendiary Magistrate that the lodging of any laborer is insufficient, unhealthy or otherwise unfit to be inhabited, the Magistrate may order its alteration or repair, or the provision of another suitable dwelling; and if the order be not complied with, the employer is liable to a fine not exceeding £5; the contract may also be cancelled. Pending provision of satisfactory lodging, the employer may also be required to give the laborer an allowance of 3d. per diem.

Every employer of thirty or more servants is bound, except in the district of Port Louis, where servants may be sent to the civil hospital, to maintain an estate hospital, to be certified by the Inspecting Medical Officer, subject to appeal, in case of refusal of certificate, to the General Board of Health. It is to contain space for beds for 3 per cent of the servants,* but never less than four in number, at the rate of 60 square feet, and 500 cubic feet for each bed. Medicines are to be provided to the satisfaction of the Stipendiary Magistrate on the report of the medical man in charge, and qualified hospital attendants certified by the latter must be maintained. In case of any epidemic breaking out, the employer may be called on to provide additional temporary hospital accommodation. Failure to provide hospital accommodation renders liable to a penalty not less than £5 nor more than £20; a second offence, to a penalty not less than £20 nor more than £50. An employer may require sick laborers to go to hospital, and any laborer refusing to do so, and at the same time absenting himself from work, may be treated as unlawfully absent. Joint, or "union" hospitals are allowed, but must not be more than three miles from the place where any of the laborers for whom they are intended are employed. For every estate employing more than 30 servants, a "duly qualified medical practitioner" must be engaged, bound under a penalty of not less than £2, nor more than £10, to visit once a week any estate where there are from 50 to 200 laborers; where there are more than 200 laborers, two visits a week must be paid. A medical register is prescribed; and the medical practitioner is declared entitled to recover at the rate of four shillings per annum for each of the servants whom he is engaged to attend.

To supervise the hospitals there were† apparently three medical inspecting officers, with powers of entry and inspection. They were bound to inspect each hospital once a quarter at irregular intervals, and without notice to the employer. The reports did not go through the Protector, but direct to the Colonial Secretary. The Protector has also powers of inspection, and the Stipendiary Magistrates have, since 1864, inspected estates. But the records are very meagre indeed. "Camps" and hospitals inspected by Stipendiary Magistrates are thus classed in the reports for 1869 and 1870:—

	CAMPS.		HOSPITALS.	
	1869.	1870.	1869.	1870.
Very good ...	8	9	14	12
Good ...	166	183	182	171
Tolerable ...	26	13	10	16
In need of repairs or alteration ...	1	4	3	8
Bad ...	14	5	5	1
Very bad ...	4	1	1	—

* Sir A. Gordon points out that as this percentage is calculated, in case of immigrants, only on the number *intended*, there is no provision for women and children.

† This provision seems to be a dead letter. One of the medical officers says "there is no such thing in reality as a hospital attendant." The accountant is generally made the dispenser of medicines.

‡ An Ordinance of 1871 seems to have abolished all but one of these Medical Inspectors, while providing for the appointment of lay inspectors. One such appears to have been appointed.

The evidence before the Commission, however, shews that this classification of hospitals is much too lenient.*

The report for 1869 speaks of the prevalent disregard of cleanliness, and states that great sanitary defects still existed. Yet the records do not show any cases in which the law has been brought into play to enforce the provision of proper lodging and hospital accommodation. I should like to have seen a few cases punished by a considerable fine. It is admitted by Mr. Beyts that the hospitals do not represent the actual disease among emigrants. The daily average of sick (195 in 1869, 146 in 1870) sufficiently shews this, when compared with the laboring population upon estates. The mortality upon estates, however, compares favorably with that of the island generally, even in the years of epidemic fever. Thus, while the number of deaths per thousand of population was for the whole island 33.7, and 22 in 1869 and 1870 respectively, it was upon sugar estates 30.2, and 18.9 in the same years. In 1871 the rate on estates was 21 *per mille*, among the total population 25.8. The death-rate of children on estates is, however, high. In 1869 it was 60.8 *per mille*. The chief medical officer, in order to diminish this mortality, chiefly among newly-born infants, proposed to establish lying-in hospitals and to train Creole women as sick-nurses and midwives. The report for 1870, however, does not notice the point, nor afford figures to estimate the mortality among infants during that year.

When we pass from the estates to compare the death-rate among Indians as a whole class, with that of the general population, the comparison is unfavorable to the former. The rates were—

	1868.	1869.	1870.
Indians	55.1	36.9	22.1
Others	51	28.1	22
TOTAL	53.6	33.7	22

The actual number of deaths being—

	Indians.	Others.	TOTAL.
1868	12,186	6,217	18,403
1869	7,296	3,369	11,295
1870	4,769	2,658	7,426

I fear all the millesimal rates require correction with reference to estimated population, for they do not agree with the figures in a later report from Mr. Beyts.

On the expiration of his term of five years' industrial residence, three courses are open to the immigrant. He may return to India *at his own expense*† (for we have seen that the free back-passage was done away with in 1853); he may re-engage for any term not exceeding five years; or he may continue on the island and endeavour to make his own way as a shop-keeper, artisan, or so-called free laborer. If he elects the first course, well and good.† If he chooses the second, he falls back into almost precisely the same position as before, except that he can make his own terms for wages. In point of fact, the wages of old immigrants, under contract,

* Sir A. Gordon says of immigrants' lodgings and hospitals in Mauritius:

"The houses generally consist of low, dry stone walls from 4 to 5 feet in height, or of miserable palisades composed of aloe stalks, the roof in either case being of thatch. In the better built of stone and lime and roofed with iron are provided, they are usually destitute of ventilation. On one of the finest estates in the colony which I recently visited, the house of each immigrant family consisted of a single small compartment in a long row of similar habitations, without any aperture whatever for ventilation, except the door, and of such moderate dimensions that it resembled rather the cell of a lock-up than a human habitation.

"The hospital Ordinance, although it is, I presume, observed to the letter, is, I fear, too often broken in the spirit. The hospital seldom consists of more than one room, and is consequently useless to females, whilst only a small proportion of the men who are sick apparently make use of it, the cause for which I believe to be the fact that when sick in hospital they are usually dependent on their wives and families, if they have any, for the supply of their food."

According to the same authority there is little treatment out of hospital.

Sir A. Gordon cites a mock prescription, a specimen of several on one estate, as shewing "that there are medical attendants who look or care for sick Indians as a superfluous piece of sentimentality and the requirements of the law as a subject for derision."

The prescription runs thus:—

Nom, Carpen. Maladie, Feb. Int.

"Une douzaine d'huîtres tous les jours à son déjeuner. Arrosez les huîtres avec du Chablis vieux. Filet de bœuf et une aile de volaille rôtie à son dîner: Bordeaux Julien à dose tonique."

† The cost of a back passage is something under £4.

‡ Yet even here, besides having to pay two shillings for a passport, the immigrant is, according to Mr. Beyts, liable to be plundered by unauthorized crimps and touts.

are somewhat higher than the Government scale, as is but natural, their labor being more valuable, and they being themselves more or less acclimatised. He has the same remedies against his employer's wrongs, and is liable to the same penalties for breach of contract as before. The guarantees for his proper lodging and medical care are the same, (such as they are), as in the case of a new immigrant. But should an independent spirit or an honorable ambition lead him to adopt the third course, he at once finds himself hedged about with a network of restrictive regulations.* We have already (in Part I) seen in a general way how this system sprang up. But the following extract from the Police Enquiry Commission's report explains the plan of repression in greater detail:

"Before entering upon a consideration of the petition and the working of ordinance 31 of 1867, we propose first of all to point out the obligations laid by that law as to passes and tickets upon the old immigrant, that is, the Indian coolie who has completed his industrial residence of five years in the colony, and upon whom, therefore, neither the planter who introduced him, nor the colony, have any special claim under the original contract.

"Every† old immigrant must take out a ticket from the Immigration Office bearing his photograph thereon. The tickets are issued free, but the immigrant must pay for the photograph (s. 39). The price of this was formerly four shillings, and is now reduced to two shillings each. By s. 42 no other ticket shall be of any avail, as proof of the status of old immigrants.

"The section 39 expressly states 'no fee shall be charged for any such portrait ticket' but no provision was made for replacing it, in the event of its being lost or destroyed. Accordingly the regulations by the Executive Council originally issued in May 1868, provided that the Protector might grant a duplicate for which the price of £1 is now charged, and two shillings additional for the photograph. By Article 84 of the regulations, when the loss of the original document has been satisfactorily explained to him, the Protector has the power to exempt the applicant from payment, and he may also exempt infirm and destitute immigrants from this and other charges.

"When an application for a duplicate ticket is made, the name of the applicant is advertised in the Government Gazette for one month, and during this period he must take out a 'permit to work' for which a fee of five shillings is charged.

"Should the immigrant not return within three days of the expiry of the permit, he may be imprisoned for fourteen days. Any one employing an immigrant beyond the time specified in the permit is liable to a fine of not less than £1, and not exceeding £5 (Article 70 Regulations).

"Article 58 of the regulations provides that any immigrant not under contract of service who fails to exhibit his portrait ticket on demand, to any officer or constable of police, shall be liable to a fine of £2, or to imprisonment for a period not exceeding seven days, without prejudice to any further punishment to which he may be liable for vagrancy or otherwise. No such penalty or offence are provided for by the ordinance itself, nor were they included in the first or second editions of the regulations issued in May and November 1868. They were first enacted by amended regulations issued in August 1869.

"By section 43 of the ordinance every old immigrant not under engagement by written contract of service, must have a police pass in addition to his portrait ticket, the counterpart of which is to be kept on record at the Central Police Station of the District.

"The ordinance requires a simple declaration by the applicant of his abode, occupation, or other means of subsistence, upon which the pass might issue; but regulation 41 places the duty on the officer authorised to issue the pass, to ascertain whether the statements made are true. It also empowers him to decide whether the occupation of the applicant is such as to warrant the issue of a pass; should he not be satisfied, he may send the applicant before the Stipendiary Magistrate who, in his turn, may convict the applicant as a vagrant if he finds he has no fixed residence or *bond fide* occupation or means of subsistence.

"By the ordinance, section 43, the declaration with a view of obtaining the pass, must be made within eight days of the immigrant's completing his industrial residence, or of the expiry of a written contract, unless he should re-engage under written contract within the eight days. By Article 42 of the Regulations, the Protector, any Stipendiary Magistrate, Superintendent, Adjutant or Inspector of Police, may extend the delay, such extension not to exceed fifteen days. It was not clearly stated whether the fifteen days were to be inclusive or exclusive of the original eight, and in practice the Stipendiary Magistrates have taken different views. No further delay shall be granted, unless in exceptional cases in which sickness or other good reason be shown for a further extension.

* Yet the preface to a collection of the labor laws of Mauritius, published with the imprimatur of the Colonial Government in 1869, is bold enough to say that immigrants electing, on the expiry of their industrial residence, to remain in the colony "enjoy the same rights as the rest of the population."

† This applies also to immigrants adopting the second of our three courses. But upon his re-engaging he obtains a certificate of engagement which exempts him from the further annoyances now to be detailed.

"A duplicate pass may, under article 48 of the regulations, be issued in room of a lost pass on payment of a fee of two shillings for the first, and four shillings for all the subsequent renewals. The Stipendiary Magistrate may exempt from the payments by granting an exemption order.

Duplicate pass.

"The ordinance (s. 44) requires a new pass to be taken out on change of residence, the regulations (article 43) add the words "or occupation." The ordinance contained no penalty, should the declaration on change of residence not be made; but the regulations enacted that in default of reporting his change of residence or occupation at the police office the immigrant should be liable to a fine not exceeding £2, or to imprisonment not exceeding seven days.

New pass.

"By section 46 of the ordinance, any old immigrant not being engaged under written contract, who should fail on demand of any Magistrate, or the police, to produce his pass, was liable to be detained and forwarded to the Immigration Depot for enquiries, to ascertain whether he was a vagrant or not. This provision, and others which follow, containing directions as to the disposal of the immigrant in the depot, have been practically set aside by the Stipendiary Magistrates in virtue of the second paragraph of regulation 42, which provides that any old immigrant, who, within the eight days, or any extended period, shall fail to re-engage under written contract, or to obtain a police pass, shall, if unable to give a satisfactory reason for such failure, be liable to a fine not exceeding £2, or to imprisonment for a period not exceeding seven days, without prejudice to any further punishment to which he may be liable for vagrancy* or otherwise.

Penalty for not exhibiting pass, or obtaining engagement.

"The provisions to which we are about to refer, are not contained in the ordinance, nor, as far as we can see, warranted or suggested by anything contained in the ordinance. Nor were they contained in the first set of regulations issued in May 1868. They first appeared in articles 54 and 55 of the amended regulations published on 11th November 1868; and were still further amended and made more stringent by articles 56, 57, 58, and 59 of the amended regulations now in force, issued in September 1869. Under these clauses no police pass shall be given to any old immigrant who declares that he lives on daily labor, or on the proceeds of job-work unless he shall first procure from the chief clerk of the Senior Stipendiary Magistrate's office, Port Louis, or the district cashier in the country, a license for which the immigrant had at first to pay four shillings, but now under amended regulations of 25th August 1869, £1, per annum.

Special provisions affecting passes of day laborers.

"The license must be exhibited on demand to any officer or constable of police, or to any inspector of licenses under a penalty not exceeding £2, and the day-laborer who does not renew his license at the expiration thereof, is liable to a similar fine; if the fine be not paid, imprisonment is the result. The day-laborer is also obliged to wear a badge on his arm with the word 'job-man,' and the number of his license upon it.

Penalty for not exhibiting day-laborer's license.

"Under the articles of the regulations already quoted, the Protector of Immigrants is required, with the approval of the Governor, to regulate from time to time, and according to the requirements of the locality, the maximum number of licenses to be issued in each district, and to draw up from time to time a tariff of wages to be published with the approval of the Governor. No such tariff has been issued.

Protector to fix number of day-laborers and their wages.

"Under article 59 of the regulations, the day-laborer convicted of contravening any of these regulations is liable to a fine not exceeding £2, or imprisonment not exceeding seven days.

Penalty for non-fulfilment of regulations regarding day-laborers.

"On engaging under written contract of service, the old immigrant, equally with the new, must give up his ticket to the employer, and receives in return a certificate of engagement from the Stipendiary Magistrate. The certificate of engagement must be produced on the demand of any Magistrate or the police, in lieu of the portrait-ticket and pass which are required when the old immigrant is not under written contract of service (section 46 of ordinance). In practice, also, by the construction which is put on sections 49 and 50, if he has not a written permission from his employer, he is arrested. No contract of service can be entered into before a Stipendiary Magistrate, unless the old immigrant produces his portrait-ticket and pass.

Certificate of engagement.

"On completion of the contract, the employer is bound to hand over to the old immigrant his ticket with a certificate of discharge from his engagement (section 6, ordinance 1867).

Certificate of discharge.

"The old immigrant must, at various stages, be provided with other documents upon which it is unnecessary to dwell. In the tariff annexed to the regulations, we find such entries as these: 'For every pass, duplicate

Miscellaneous papers.

* What constitutes vagrancy is very obscure. According to the Acting Procureur General the laborer sentenced to imprisonment for breach of contract becomes, on the expiry of his term, a vagrant in the eye of the law, and a Superintendent of Police deposes to the effect that he arrests as vagrants men found sleeping in the streets without other evidence.

cate pass, or permit issued by Protector, five shillings; for every passport (when about to embark) two shillings. For every certificate of marriage, one shilling; for every duplicate of certificate of engagement, one shilling; for every duplicate certificate of discharge, two shillings; for every search in book or record, six-pence.

"By the 48th section of the ordinance it was provided that any immigrant found in a district where he had no residence, or in any house or premises, and being unable to give a satisfactory reason for his being there, might be arrested without warrant, and brought before the Stipendiary Magistrate of the district in which he should be found, who has the power to forward him to the immigration depot for enquiries. No provision was made for the immigrant making a *bona fide* change of residence. The regulations, articles 44 and 45, permit this, on notice being given to the Inspector of Police, who signs acknowledgment of notice on pass, and a new pass may then be granted in new district. The penalty for not giving notice (imposed by authority of regulations alone) is a fine not exceeding £4, or imprisonment not exceeding fourteen days.

Immigrant to be arrested without warrant if out of his district.

"By the provisions of the ordinance, a hawker could not pass the boundary of the district in which he resided, even for the purposes of his trade, nor could an immigrant visit a friend who lived in another district. Article 46 of the regulations authorises the Inspector of Police, on the application of any old immigrant, to endorse permission on his police pass, the endorsement to be as effectual in the district mentioned in the permission for the period specified, as if the pass had been specially issued for such district. Under colour of this clause, permissions are now issued to hawkers for three or six months to visit other districts, and even for the whole island. The innovation is convenient, but its legality may be doubted. The obligation upon an immigrant, not a hawker, to obtain the permission of the Inspector before he can proceed to another district for a temporary purpose remains in force.

Temporary visits to other districts allowed by Inspector of Police.

"By section 55 of the ordinance, any officer or constable of police, or any other person authorised by the Governor may, at any time of the day or night, under warrant of a Stipendiary or District Magistrate, enter any premises where any immigrant is employed or resides, to ascertain whether the immigrant is under contract of service, or has his ticket and police pass, and in case the person so entering, is not satisfied with regard to the status of such immigrant, he may arrest him and bring him before the Stipendiary Magistrate. Under this section and section 48 have occurred what were termed by the police 'vagrant hunts,' to which we shall have to refer when we come to consider the special cases and practical operation of the law.

Premises where an immigrant resides or is employed, to be entered at any time of the day or night.

"The ordinance 31 of 1867 provided new definitions for vagrancy, in section 46, viz., that the old immigrant shall be deemed to be a vagrant if, upon the result of inquiries made at the immigration depot, it shall appear that he is not following any *bona fide* employment, whether on his own account or in the service of a third party, and that he has no visible means of subsistence. The vagrant laws of the colony, however, were enacted previous to this ordinance, viz., 42 of 1844, and 4 of 1864, and these were not repealed by 31 of 1867. The Stipendiary Magistrates usually condemn to the punishment of vagrancy without sending the immigrant to the Immigration Depot, as required in section 46 of 31 of 1867, when the immigrant has no pass, and by section 48 when he is found in a district where he has no residence.

When condemned as a vagrant.

"By section 13 of 4 of 1864, a vagrant may be condemned to twenty-eight days imprisonment; hard labor is added by the Stipendiary Magistrates. The vagrant, after two or more previous convictions in two years, may, under Section 13, be sentenced to not less than six or more than nine months' imprisonment. The imprisonment is undergone either in the prison of the district or in the vagrant depôts instituted by ordinance 4 of 1846, especially the central depot at Grand River.

The punishment of vagrancy.

"The ordinance 4 of 1864, and the regulations issued by the executive Council of 4th August 1864, authorise the depot sergeant major, should he not be able to ascertain the employer of any unclaimed vagrant, at the termination of the term of imprisonment, to employ the vagrant at public works for three months longer, and then to forward him to the Protector of Immigrants for allotment to a new master, unless it should be proved he was under an unexpired contract. The best comment we can make on this provision is that, although carried out previous to 1867, the present Superintendent has declined the responsibility of applying it.

Three months' detention at vagrant depot after imprisonment completed.

"The vagrant after his punishment, if he be not under contract, is sent to the Protector of Immigrants whose duty it is to provide him with employment. The Protector has informed us, that he has no difficulty in providing such employment, and generally places them under yearly engagements, but occasionally for two or three years.

After punishment as a vagrant.

"By section 14 of 4 of 1864, it was provided that the names and descriptions of all persons undergoing punishment for vagrancy should be published, but this has never been done except in the case of deserters, probably owing to the numbers constantly under punishment.

Publication of the names of vagrants.

"By the regulations, articles 87 and 88, it was provided that when several persons shall be convicted of vagrancy on the same day, the Magistrate convicting them may commit them to prison through a single warrant, although the terms of imprisonment to which they have been sentenced be different; and that in every case where several persons shall be sentenced to imprisonment (not for vagrancy) under the same judgment, their committals may be ordered by the Magistrate through a single warrant, although the grounds of their committals and the terms of the sentences be different. These provisions were apparently to save trouble and labor to the Magistrate and his clerks, when vagrants and other prisoners were to be disposed of in bands.

"The persons subject to the portrait ticket and pass laws which we have described, are the Indian immigrants who have completed their industrial residence, and who have preferred either to work as their own masters, or upon monthly engagements, which require no written contract, or as day-laborers. Of the 29,000 Indians of this description who took out passes in 1868-69, we find that 15,000 were gardeners, *i. e.*, market-gardeners, hawkers, and servants; and 9,700 were monthly and daily laborers. So long as the old immigrant continues to labor on the sugar estates under written engagement, or contracts a written engagement with any master whatever, he requires only to carry his certificate of engagement, and neither portrait-ticket nor police pass. The number of old immigrants (adult males) employed by proprietors of sugar estates in 1870 was 54,383, or about double the number of those who are their own masters, or who work by the day or month.

"The Creoles of the colony, the ex-slaves and their descendants, the natives of Madagascar or the African coast, the aliens of every description, and the Indians, Chinese, Arabs, and others who arrive as passengers, are equally with the Europeans free from the obligations of the pass laws; and an Indian immigrant may free himself from these obligations by taking passage to the neighbouring island of Réunion and returning thence as a passenger. The sons of old immigrants, if they have been born in the colony, require no pass, while the fathers may remain under the obligation. The class of Indian Creoles and Indian passengers is daily augmenting in numbers, and the difficulty, if not impossibility, of distinguishing between these men who are not bound to carry any papers whatever, and the old immigrant who is liable to arrest if his papers are not on his person, is obvious.

"The inequality is especially marked in the case of day and job laborers. A negro and an Indian may live in neighboring huts; the negro is entitled to work when and how he pleases; the Indian must pay a license duty of £1 per annum, and get a pass before he is permitted to work at all, and failing the renewal of his pass he is sent to prison."

Harsh as these restrictions were in theory, they were made still more so by the way in which they were enforced both by the Magistrate and the Police. For instance, the intention of the ordinance was that the non-possession of a pass should not be treated as an offence punishable in the first instance, but as sufficient *prima facie* evidence to warrant the police in detaining an immigrant, and the Stipendiary Magistrate in forwarding him for enquiries to the Protector. But this intention was completely over-ridden by executive regulations of more than doubtful legality; and either the immigrant without a pass has been punished by the Magistrate or the absence of a pass has been taken as a proof of vagrancy, and the immigrant condemned as such. The police, too, abused the already excessive powers given them by law, and a practice arose "of having 'vagrant hunts,' when all the disposable force of the police was employed to scour several districts of country and to take into custody every Indian, whether at work, or in his house, or passing about his avocations on the highway, whose papers were not *en règle*, or might be imagined, to be not *ex règle* by some policeman who could not read, or whose papers might have been in a moment of unsuspected security left behind in his hut."

The result of this relentless pursuit of the factitious crime of vagrancy is thus exhibited for the year 1869:—

Number arrested.	Condemned with hard labor.	Fined.	Reformatory.	Transferred to district.	Sent to dépôt.	Sent to masters.	Discharged.
30,824	12,538	2,070	150	3,615	2,450	3,132	6,869

I must extract the comments of the Police Enquiry Commission upon these figures:—

"It will be seen that of the number captured, about one-fourth were either immediately set at liberty, or discharged by the Stipendiary Magistrates, on being taken before them. The first result of the system, as worked out thus, was that nearly 7,000 persons in one year were arrested as vagrants, who ought not to have been so arrested. But to these must be added

3,615, who are entered as transferred to the districts. If they had been ultimately punished, they would have come under the three heads of punishment; they had been transferred for enquiries, and the result had been found to be satisfactory. We may assume, also, that in the case of the 2,450 sent to the dépôt, the offence of vagrancy had not been proved, or they would assuredly have been punished. Some of them may have been deserters whose masters were not discovered by the police or the Stipendiary Magistrate, but at least we may assume that 1,800 of them were sent because of some trifling defect in their papers, or because of sickness, reasons apart from absolute vagrancy. This result gives us 12,284 persons of the gross total, who cannot in any sense be regarded as vagrants requiring extraordinary means to be adopted for their punishment. Of the 3,132 sent to their masters, we say nothing here, as we are not dealing with the question affecting engaged laborers. Of the 14,758 remaining, we have no doubt that several thousands were punished as vagrants, because they were unacquainted with the requirements of the law of 1867. In 1869 the number who had taken out police passes was 29,000, and in 1871, 36,000." And further on in their report, the Commission remark:—"We fear also that immigrants may be deemed to be vagrants upon very insufficient grounds. The Stipendiary Magistrates do not generally enter in their books the grounds upon which men are held to be vagrants, consequently little information of this description is laid before the Procureur General in the weekly returns; nor could we find out what was deemed to be vagrancy in any satisfactory manner. But there seems to be, in the minds of many of the officials, a distrust of the genuineness of any employment which an Indian may adopt on his own account." In the face of such a law, administered in such a spirit, it is no wonder that the number of vagrants arrested diminished from 30,824 in 1869 to 14,884 in 1871. But it is just to add that the decrease is also in the opinion of the Commission attributable to 'orders issued to the police force, admitting greater latitude to hawkers to circulate from district to district; to the abolition of the right of the police to half the money obtained by fines; and above all to a better spirit which pervades the administration, and which has been imparted to the police; and to the directions given by Sir Arthur Gordon as to the spirit in which the laws are to be administered.'

That the effect of the law* has been to drive the immigrant to re-engage is manifest. The following figures are given of engagements contracted in 1870:—

	With new masters.	With old masters.	TOTAL.
Indian immigrants { New	463	4,504	4,967
{ Old	22,215	88,987	68,202
Other registered immigrants	333	445	778
Creoles	1,450	1,524	3,004
TOTAL	31,461	45,460	76,921

The Creoles here entered are Indian Creoles, who are said to be taking, in increased numbers, to the avocation of laborers on sugar estates.

The accounts of the general prosperity attained by Indians emigrating to Mauritius and of their moral status are very meagre. The criminal statistics afford the following figures. There were of Indians convicted at the assizes;—

In 1866	...	...	...	...	124
" 1867	...	...	...	...	77
" 1868	...	...	...	...	95
" 1869	...	...	...	...	58
" 1870	...	...	...	...	59

The crimes were for the most part murders, manslughters, woundings and larcenies with aggravating circumstances. I suppose this last class includes the "gang-robberies" of which such a bugbear was made in 1867, but which do not seem to have really been very serious either in number or atrocity. They are said to be mostly due to Madrasa immigrants. The number of persons convicted by criminal Courts of all grades in 1870 was as follows:—

Indians	...	...	...	...	6,554
Others	...	...	...	...	1,415

Thus of Indians 3·1 in every hundred was convicted of a criminal offence, and 1·4 in every hundred of the rest of the population. But I rather think that offences against the labor laws, except vagrancy, have been included in these figures.

* Nor do managers seem always to have trusted solely to the law. Mr. Frere, President of the Commission, thus states a case which came to the Commissioners' knowledge. "A band of men whose time was about to expire seemed indisposed to re-engage. A hawker in the neighbourhood had his house broken open; the band were taken up and some of the goods were found in their possession. The manager of the estate bailed them and afterwards re-engaged the band. "Either the whole transaction was a plan to put pressure on the men, so as to make them re-engage, or he had no objection to engage as his servants a band of burglars."

I find the following facts as to deposits in Savings Banks:—

	£
Deposits made in 1864	29,000
" " 1869	22,000
" " 1870	21,716

The total deposits at the end of 1870 were upwards of £70,000, of which more than half belonged to agricultural laborers. At the end of 1871 the deposits had risen to £82,909. Remittances to India in 1870 made through the Immigration Office amounted to Rs. 20,528, and about the same sum in 1871. Education does not appear to be much attended to. In 1869 there were 24 schools, with an attendance of 753 scholars. Little progress was therefore visible since 1864, when the figures were as follows:—

	Boys.	Girls.	Total.
14 Government schools	386	42	428
11 Aided "	230	67	297
25 schools in all	616	109	725

And it is manifest that after full allowance made for the abnormal proportion of adults and of males in the immigrant population, the number of children under instruction is very low for a total sum of 200,000 souls.

Recently attention has been called to the number of suicides. The following figures were given:—

	Suicides.		
	1868.	1869.	1870.
Of Indians	61	89	59
Of others	3	1	8

Of the 59 Indians who put an end to themselves in 1870, 56 were men and 3 women. Enquiries were set on foot to ascertain whether the proportion was much in excess of the number of suicides in India. The Government of Bengal estimated the proportion of suicides at about 40 for every million of population, and the Government of Madras at about 50, either rate being lower than in England. It was generally agreed that the proportion of suicides was greatest among the lowest classes, and that the number of women who resorted to self-destruction in India greatly exceeded that of men. The ratio of deaths by suicide in Mauritius is thus estimated by Mr. Beyts:—Of Indians 280 per million of population, of others 67 per million. Some subsequent enquiries were made under the orders of Sir A. Gordon. The figures were not quite trustworthy, but they went to show that for the 10 years, 1861-70, there had been about 60 suicides a year on an average. The great majority were suicides of men, and men engaged on estates. Sir A. Gordon did not believe jealousy had much to do with it, as the proportion of suicides seemed rather to increase with the augmented population of women. He rather attributed the prevalence of suicide to an intense nostalgia. But this does not explain why suicide should be most prevalent in Mauritius. The very marked preponderance of suicides of males, contrasting with the reverse as occurring in India, is also unexplained by Sir A. Gordon's theory, as women are, I presume at least as liable to "home-sickness" as men.

There is not much to illustrate the relations of the sexes. Women as a rule do not seem to work on the estates as in the West Indian colonies. In fact, according to the report for 1869, only 993 women were so employed. Women are not allowed rations. It appears that a premium was given for the importation of every married woman, and immigrants used sometimes to bring two or three wives each. Mr. Beyts condemns this practice on the ground that a new immigrant *cannot support more than one wife*. It may be inferred from the stringency of the law that the difficulties familiar to other colonies arise out of the low proportion of women are not unknown in Mauritius. Any one enticing away or harbouring the wife of an Indian is liable to imprisonment for six months, or a fine of £5. As in the West Indies, so in Mauritius, liaisons between Indians and Negro creoles are very rare, not so in regard to the Chinese immigrants. The disproportion between the sexes in the Indian population is gradually diminishing. Thus in 1840 the women were only 5 per cent. of the men. In 1850 the proportion had risen to 21 per cent., in 1860 to 40 per cent.; and in 1870 a little above 50 per cent. The causes are (1) births in the colony, for the figures include all *Indian extraction*; (2) the higher rate of mortality among men; (is this due to the fact that women do not work in the field?); (3) the excessive proportion of male departures. It is worth noticing that the excess of male *births* which is inferred from census returns in India proved by registration in Mauritius to occur among the Indian population there.

It has been seen how far the law is from holding out any inducements to Indians who have served their period of industrial residence to settle down as independent citizens in Mauritius. Nevertheless, a considerable number do try their chance, as artisans, market-gardens and petty tradesmen. Many set up as "job-contractors," *i. e.*, contractors for the supply of labor by the job, and the want of solvency or of honesty on the part of these men often involves in hardship those of their compatriots who enlist in their service. The number of laborers under job-contractors appears on the increase, having risen from 3,929 in 1869 to 5,691 in 1871. A few Indians seem to have attained the position of managers and even owners of estates.

BRITISH GUIANA.

THE colony of British Guiana lies along the north coast of South America facing the Atlantic and stretching from 57° to 61° west longitude. Inland it runs southward to the Sierra Acarai, which forms the watershed between the river-system draining northward into the Atlantic and the southward-flowing affluents of the Amazon. A rich alluvial belt of a varying breadth, not generally exceeding 6 miles, skirts the sea. This is succeeded by a narrow reef of coral representing an old coast line; behind this, at a distance varying from 10 to 20 miles, rises a second higher range of sand hills, doubtless a still older beach. The tract between these two ranges becomes in the wet season an extensive savannah, the decaying vegetation of which produces a vegetable mould of considerable thickness. Behind the second reef, the land rises from swampy plains to the mountain chains of the interior. In these are the sources of the rivers Essequibo, Demerara, Berbice, and Corentyn, which now traverse, after having in past years created, the alluvial tract, to which and to the banks of the rivers in their lower course, including part of the islands of the Essequibo, cultivation is entirely confined. That cultivation consists almost exclusively of sugar-cane. Cotton and coffee were once grown, but seem to have dropped out of the list of exports. The climate, though hot, does not seem unhealthy. The year is divided into two wet and two dry seasons. The long rainy season sets in about the middle of April, with westerly winds, and lasts till August. The dry season then supervenes and continues till November. December and January constitute the short wet season, and February and March the short dry season. But the air in the dry season is loaded with unprecipitated moisture, the wind blowing from the Atlantic. The temperature seldom falls below 75° or rises above 90° Fahrenheit. The mean annual temperature of the capital, Georgetown, is 81°; the average annual rainfall, 100 inches.

I have no recent figures of general population.* The census of 1851 gave the following figures:—

Natives of British Guiana	86,451
" of Barbadoes	4,925
" of other West India Islands	4,353
African immigrants	14,251
Maderians	7,920
British, Dutch, and Americans	2,088
Coolies from India	7,682
Unknown	17
Total	127,687

The first heading includes 2,000 aboriginals. The population at the time of census was thus mainly of African descent, liberi or the children of liberi, with a small proportion of immigrants from Africa. The number of coolies has since greatly increased, and an infusion of Chinese has taken place, but I have not been able to ascertain the present number of the other elements.

The country seems to have been first settled by the Dutch in 1590. The English succeeded about 50 years afterwards. The Dutch, however, continued to occupy the greater portion of the tract till 1796, when it surrendered to the English. It was restored in 1802, but again became a British possession in the following year, and has remained so ever since. In 1831 the three settlements of Demerara, Berbice, and Essequibo were amalgamated into one colony.

The constitution of British Guiana still retains traces of its Dutch origin. It is thus briefly described by Mr. Jenkins, author of "The Coolie" (see pages 77 and 83 of that book). "The Governor, as Her Majesty's representative, is the embodiment of executive power. The legislature, called the Court of Policy, consists of ten persons. Five are Government officials, *viz.*, the Governor, the Attorney-General, the Government Secretary, the Receiver General, and the Auditor General. To procure the other five, resort is had to a College of Electors. This is a relic of Dutch times, the College of 'Keyers,' and consists of seven persons elected *for life* by a constituency qualified by property. This qualification is an annual income of £125. Persons of every nationality and pursuit are included in the constituency. The total number of voters in 1865 was 907. Upon a vacancy in the legislature, the College of Electors send up two names to that Court, which thereupon selects one to fill the post. The Court of Policy sits sometimes publicly, but may and does hold secret sessions. * * * In all financial matters the Court of Policy is assisted by a College of Financial Representatives, numbering six, elected in the same way as the Keyers and holding office for two years. Thus the Combined Court, consisting of 16 members, has the important control of the revenue and taxation."

The rest of this section is mainly compiled from a note upon the British Guiana labor question, as discussed by the Commission of Enquiry, and in the subsequent correspondence. This method gives the section a somewhat fragmentary appearance, but has saved me a good deal of trouble.

History of immigration.—The first idea was to import the surplus population of the

* I gather, however, from certain despatches of Governor Scott's, that the census of 1871 showed a total population of about 200,000. He speaks in round numbers of "50,000 Asiatics, one-fourth of the whole population of the colony." I glean the following more exact figures of the Indian population at that date; total 48,362, of whom 23,940 under indentures, 3,823 working not under indenture but on plantations, the rest in towns and villages.

U425-2
M73

West Indian Colonies, but every attempt to introduce negro labor, whether aboriginal or West Indian, has failed. In 1838 two ships arrived from Calcutta with about 400 emigrants, who had been brought over by private enterprise. In the same year the apprenticeship of the slaves was shortened, and a struggle commenced between the colony and the Home Government as to the conditions of immigration; the planters, represented by the Combined Court trying to retain the control in their own hands, a policy opposed by the Secretary of State. Ultimately an immigration from Sierra Leone conducted in State vessels began. Private effort was also made, and Portuguese were introduced from Madeira and Brazil. But from one cause or another all these sources failed. In 1844, preparations were made for a Chinese and Indian immigration, and in the seasons 1844-45 and 1845-46 4,616 persons were imported from India. This was accompanied by a renewal of the Portuguese immigration. Great mortality broke out, the ranks of the immigrants were literally decimated in the process of acclimatization, and immigration from India was for the time stopped, partly on this account and partly as a result of the conflict waging between the colonists and the Colonial Office. In 1851, however, aided by a loan, the planters were enabled to resume operations, and the numbers of immigrants in the four periods 1851-55, 1856-60, 1861-65, and 1866-70 were respectively about 9,000, 14,000, 18,000, and 24,000, of whom in the total period about 7,000 returned to India.

Financial review of immigration.—Up to 1849 there had been spent £155,000 of borrowed money, and £223,000 contributed from the general revenue. For the period 1850-62, the nett cost to the colony amounted to upwards of half-a-million, or about £40,000 per annum. At the close of this period the immigration fund was constituted. An aggregate is formed by adding the expenses of the immigration in the colony and the agencies abroad; of recruiting, transport, and maintenance; of return passages and of bounties paid to laborers re-engaging when they might claim a return passage; and one-third of this total is defrayed out of the general revenues. Another sum, consisting of the duties levied on estates' supplies, is also handed over to the fund, and the rest is paid in the form of a contract duty on allotments, special duties on re-indentures, and insignificant fees levied from coolies, and the paper item of bounties paid to re-engaging laborers. The Commissioners condemn the indirect way by which the contribution of the colony is increased by one-third of the bounty-money, the amount of which third stood at upwards of £6,000 in 1870. On the other hand, they regret the alienation to other purposes of the duties on estates' supplies. Certain charges properly due to emigration are also charged direct to the colony. These are the salary and travelling allowances of the Medical Inspector, certain repairs of the emigration office and the expenditure in district jails in carrying out the experiment of penal labor on estates. The Commission cannot estimate the cost to the colony of immigration, but remark that "if the planters have not been the only class to profit by immigration, the general public has at all events paid a very large share of the expense."

The Immigration Office.—An Immigration Agent was first appointed in 1838, and in 1854 two Sub-Agents were added. In 1859 a Medical Inspector of estates' hospitals was appointed. He was placed in direct subordination to Government. The result of this arrangement the Commissioners believe to have been that the enforcement of the provisions of the law has been but lax. For instance, the Medical Inspector was charged with the inspection of laborers' dwellings; but he confined himself to reporting on their state of repair, and thus, the Immigration Agent considering himself relieved of all care of dwellings, the question of sufficiency of space was altogether neglected. In 1864 the Commissaries of Taxation, an office since amalgamated with that of Inspector of Police, were directed to enter and inspect the condition of yards and grounds around dwellings and hospitals. But this provision had remained a dead letter.

The duties of the Agent as laid down in a series of Ordinances up to 1864, consisted chiefly in the inspection of immigrants on arrival, their allotment and distribution,* inspection of estates, arrangements for re-indenture, commutation, and return passage, the maintenance of a complete register of all imported laborers, and the prosecution of enquiries into alleged cases of non-payment of wages or ill-usage, in which, moreover, he was empowered to lay information before a Magistrate. This last provision, like too many of those of the colonial acts, was defeated by a legal quibble.

The powers of the Agent, say the Commissioners, were, in fact, very extensive. He could not refuse an allotment, but he could say that to the Governor which would inevitably have the same effect,† and his would be the initiative in all cases of resort to the extreme measure of entire withdrawal of all laborers from an estate. • Independently of the Governor,

* In allotment, children under 15 years of age are not to be separated from their parents and relatives; and even friends are, if possible, to be kept together. The allotment is made on board ship, the Agent being assisted in his inspection by the health officer of the port. Upon allotment the Agent causes the immigrants to execute an indenture. The indenture remains in the Agent's office, a certificate of indenture being given to each immigrant, and a list of indentures to the employer. The indenture is in general terms binding to observance of the ordinance. A duplicate certificate of indenture can be had by the immigrant for 24 cents. Minors (i. e., children from 1 to 15 years) are indentured with their parents, and both minors and infants are entitled to the "privileges, advantages, and immunities" of adults. But infants are not indentured; and minors under 7 years of age, though indentured, cannot be called upon to perform service. No indenture can be cancelled whether by mutual agreement or otherwise, except with the consent and sanction of the Governor.

† The Act of 1864 gives the Governor a general power to refuse to allot immigrants "in any case in which he shall see just cause" for so doing. Similarly, he may remove all or any immigrants "on just cause shown to his satisfaction." The case of an employer not providing sufficient work is specified in a separate clause as a ground for cancellation of indenture.

57

he had the whole administration in his hands, and he wielded the very formidable power of prosecuting ill-usage of immigrants, which in itself involved a reflection on a manager scarcely inferior to a punishment." But the history of the office during the time of Sir F. Hincks, as recorded by the Commission, shews that Mr. Crosby was gradually deprived of all independence, all initiative, and reduced to the position of a mere head clerk. The course pursued by the late Governor the Commissioners pronounce to be "a grave administrative mistake." The present Governor has, to a certain extent, retraced the steps taken by his predecessor, but the Commissioners strongly insist on the necessity of putting the Agent in a thoroughly independent and dignified position, with a seat in the Court of Policy.

Colonial Labor Law. Jurisdiction.—The first labor law was a code framed by Sir James Stephen and embodied in an Order of Council of the 7th September 1838. This code gave the Stipendiary Magistrates appointed from England exclusive summary jurisdiction in cases arising out of contract of service, and no appeal was allowed, except for assumption of jurisdiction or for illegality in the proceedings. Two Stipendiary Magistrates and not more than one Justice of the Peace might hold a court of petty sessions. In 1846 this code was superseded, much against the wishes of the then Governor, and for ten years ordinary Justices of the Peace remained vested with the same summary powers as Stipendiary Magistrates. In other words, the planters were made judges in their own or their fellow-planters' causes—a position, I am bound to say, they do not seem to have abused as much as might have been expected. In 1856 this iniquity was put an end to, and jurisdiction re-transferred to Stipendiary Magistrates assisted by "Special Justices" to be appointed by the Governor. The powers of these sitting singly were limited to making an order for payment not exceeding \$ 24, and to fines of the same amount, and to sentences of imprisonment not exceeding 30 days, with or without hard labor. In cases of a second conviction, they could award a fine of \$ 50 and six months' imprisonment. These powers have been somewhat enlarged since 1856, especially by the various Immigration Ordinances. The Stipendiary Magistrates also have jurisdiction in cases of petty debt and petty damage. Ordinary Justices can now only grant summonses to appear before a Stipendiary or Special Justice, and issue warrants of arrest returnable before such a Justice. The power of remanding is exercised by them, but it is doubtful whether legally.

An Ordinance of 1856 created an "inferior court of civil justice" (composed seemingly in the same manner as the "inferior criminal court," viz., one of the Colonial Judges sitting with not less than three ordinary Justices as assessors). This court could take cognizance of claims from \$ 25 to \$ 240. It was urged upon the Commissioners that the fees in this Court bore very heavily on poor men, and they consider the allegation to contain truth; but because the proportion of Asiatics appearing in the court was very small, they conclude that this is not "an immigrant's grievance." May not the deterrently high fees have had something to do with the absence of immigrants from the ranks of suitors?

The Magistrates' decisions are made subject to review before a Judge or Judges of the Supreme Court sitting every Saturday. But there is no provision for re-hearing of evidence or re-opening questions of fact. Counsel's fee, moreover, cannot be allowed in costs. The commission trust "that steps will be not unwillingly taken to throw open to suitors the doors of the Court of Review." But by this recommendation they do not mean that the court should be empowered to re-open questions of fact.

The inferior criminal court appears to the Commissioners at least anomalous. No distinction is made between the voice of the presiding Judge and that of an assessor, and the "amateur Judges" are three to one. Even viewed as a jury, the assessors should not be drawn from one class, and the Commissioners, therefore, urge a change in the constitution of this court.

Among the curiosities of Demerara legislation, the Commissioners notice "an odd clause," in a recent Ordinance, whereby an employer might select his Magistrate in case of any complaint against a laborer. "An influential manager had happened to lay his charge against a deserter in the wrong court, and was cast accordingly. A clause was thereupon, in post haste, stuck into the Immigration Ordinance then before the legislature to guard suitors against the effects of their own carelessness by the help of a device which might have worked the most intolerable oppression." The clause is said never to have been acted upon.

Colonial Labor Law (continued). Duration of Contract.—Sir J. Stephen's Code of 1838 limited the term of contracts in writing to one year, and that of verbal contracts to four weeks. Under the Ordinance of 1846, the first hiring of immigrants was to be held valid for six months, and no contract made outside the colony was to be for a longer term than three years, and all such were terminable after five months at the pleasure of the immigrant, provided he could pay the cost of his importation. In 1848 the Home Government conceded the point of an indenture for three years certain. The first immigration from India had taken place on the agreement that a return passage should be provided at the end of five years, or previously, on payment of a proportional part of the cost of introduction. The renewed immigration of 1850 began under the same condition as to repatriation, the indenture being now for three years. This term the planters desired to extend, but the Home Government would not then listen to the request. A plan was, however, sanctioned, under which certain monthly sums were deducted from those emigrants who would not consent, after the expiry of their first term of hiring, to enter on a second. This device, however, proved "an egregious failure," having cost nearly \$9,000 to extract some \$600 from the coolies, and having

"filled the prisons." In 1854 the Government of India agreed to extend the term of residence from five to ten years. Under this plan a three years' indenture was supplemented by short indentures of one or two years, for which the immigrant might choose his employer. A bounty was given him if he accepted a second service after the expiry of five years, and after five years of industrial residence and five of residence not necessarily industrial, he became entitled to a return passage on payment of \$35 for the whole second five years' period, or \$12 for each year not spent in industrial employment. These sums, although their payment had been consented to by the Indian Government, had to be foregone, as they could not be regularly collected. In 1856 every immigrant entitled to a back-passage was offered a bounty of \$50 for re-engagement. In 1862 a five years' indenture was established in all cases.

Indentures may be extended to cover the period of desertion or imprisonment, if any. The Commissioners object to the provision which makes the estate record of desertions and imprisonments evidence of such facts, and point out that no distinction is made between imprisonment before and after trial, and, in the case of imprisonment before trial, between cases compromised and cases followed by conviction. But though the law "savours of tyranny," the practice was not, as far as the Commissioners could ascertain, tyrannical. But they think the right of extension of indenture should be rarely exercised and strictly limited.

The most important piece of legislation for the last ten years the Commissioners hold to be that which legalizes any number of re-indentures for five years certain. This change, which was certainly contrary to the declared policy of the Colonial Office, seems to have passed unobserved either by the Home Government or by that of India. The remarks of the Commissioners on the whole tendency of this legislation deserve to be extracted in full. "The effect of later legislation has been to keep the immigrant population, as a whole, out of the labor market. It is true that no man is bound to indenture a second time; but care has been taken so to arrange the incidents of the system as to induce him with a very strong inducement to re-indenture. For this purpose the supervising duties of the Immigration Agents have been postponed to the offering of greater facilities for re-indenture. A harsh system of law has been kept up, not so much for use, as that condonation of offences under it might be bartered against re-indenture."

"The position of a free immigrant disposed to remain in the colony has not received that consideration from the legislature which a new country, needing population, should have afforded to such an element; and the bounty—always a questionable means of inducement when employed to persuade those in a dependent position from claiming their independence—has been kept at a high rate, in order that the inducement might be sufficient.

"An indenture, as it seems to us, is justifiable, however contrary to English ideas, to insure payment by the immigrant for services rendered, that is, for his passage out, which payment, it seems, can be insured in no other way. It may be also defended on the ground of his helplessness on arrival in a new country; for, if a man must necessarily be dependent on others for the preservation of his health, there is no harm in recognizing the fact by law.

"It would seem to be a concession that immigration, so far as the coolies are concerned, has failed to fulfil its first purposes if, after being acclimatized, after learning their work and paying for their passage out, they must still be brought under indenture after indenture, and not encouraged to take their station in the country as free laborers.

"The difficulties which attend any change in this respect we hope to deal with hereafter. In the meantime we desire to point out here that the Act of 1863, which passed almost unnoticed at the time, represents, if it did not cause, a great change in the aspect of the problem."

Review of the Labor Law (continued). Work and Wages.—The tendency of the whole system is towards task work. At present all field labor, properly so called, is carried on in this way, while the plan of work in the buildings, though it starts with a tariff of daily wages to each laborer according to the nature of his work, is practically modified by a rule for the general reduction of wages, unless a certain quantity of sugar is turned out. In task work it was ruled by the Ordinance of 1864 that an immigrant should be paid wages at the same rate as creole and other unindentured laborers working on the same estate; or, in case there were none such, or they should not be paid according to the average rate of wages for indentured laborers employed under similar circumstances on the neighbouring plantations, then at the same or the fair average rate of wages paid to such last-mentioned laborers on the neighbouring plantations. This rule, at once rude and complicated as it may seem, the Commissioners believe to be "not far out." To this provision was added one requiring every indentured immigrant to perform "five tasks" in every week. It was, however, often difficult to apply the standard of comparison, either from the absence of creole laborers or because they would not take up the same kind of work as performed by immigrants. The Immigration Department was not possessed of sufficient local knowledge to decide authoritatively in cases of disputed rates, and, in the absence of official valuers of labor, the practice arose of calling in arbitrators. This plan worked well for a time; but as the arbitrators called in were always planters, the laborer naturally came to lose confidence in a tribunal whose decision, moreover, was in no way legally binding on the manager.

It is unnecessary to follow the Commissioners through the maze of British Guiana legislation. Suffice it to say that at present the laborer has no summary remedy for the recovery of wages, except the civil one under the petty debt Ordinance, and no means of enforcing a penalty if

58

wages have been wilfully or wantonly withheld. The civil remedy again is insufficient to meet cases where the dispute is as to the rate of wages, and some Magistrates seem to doubt whether the law, having failed to provide any procedure, does not, if strictly interpreted, cut the immigrant off even from the imperfect remedy which the substantive law appears to provide. The Commissioners at paragraphs 379 and 380 of their report cite a case, the only one of a dispute as to rate of wages in which the immigrants were enabled to recover in the Magistrate's Court. They recovered about \$5 with costs; but before this notable result was reached, there had been "two enquiries and one arbitration on the estate, several complaints from the coolies addressed to all manner of authorities, and a strike of more than a fortnight, during which the loss to the laborers must have been considerable, as well as to the estate."

The provisions for enforcing the performance of the other side of the contract by no means err in defect. Section 116 of the Ordinance No. 4 of 1864 ran as follows:—

"Any indentured immigrant who, without reasonable cause, shall neglect or refuse to attend at the daily calling over of the names of the immigrants on the muster roll, at the time and place hereinbefore mentioned, or shall neglect or refuse to begin the work required of him, or shall leave unfinished any work required to be performed by him, or shall neglect or refuse to finish any work required to be performed by him, or shall be absent from his work without leave, or shall be drunk while employed at any work, or shall use to his employer, or any overseer, or headman, or other person, placed by such employer in authority over him, any threatening, abusive, or insulting words or behaviour, or shall commit any nuisance upon, or in the immediate neighbourhood of any dam or public thoroughfare of the estate, shall, on being convicted thereof, be deemed guilty of an offence, shall pay a fine not exceeding \$24, or be imprisoned with hard labor for any time not exceeding one month; and shall, in addition, if the convicting Justice shall think fit, forfeit the whole or any part of the wages then due to him, not exceeding the wages of one week."

Owing, however, to the practice of not assigning a definite work to each laborer, a custom grew up of preferring charges for "not performing five tasks." But Chief Justice Beaumont ruled, on grounds of a most technical kind,* that such charges could not be maintained, and the "language used in giving this sentence was so sweeping that it became the impression among the planters that no conviction for non-performance of task-work would, under any circumstances, be sustained in review." An ordinance was passed, "under circumstances of hurry and excitement," to remedy this defect, and the "task" was defined to be "a shilling's worth of work," the former estimate of a creole's day's work having been the worth of a guilder or 1s. 4d. This enactment is considered by some to have lowered wages virtually in proportion to the diminution of the prescribed task. But in this view the Commissioners do not concur.

Another blot in the law of 1863 is that instead of allowing the convicting Magistrate the option of declaring the laborer to have forfeited the whole or a part of wages due, it lays down that if the work neglected has been finished by other hands, the defaulting laborer shall not be entitled to receive any payment for his bad or unfinished work. This point will be further considered in connection with the subject of stoppages. Again, the Commissioners justly object to that provision of the ordinance of 1863, which allows the Government to authorize managers to substitute for the public roll-call the private note-book of the overseer as a record of presence at, or absence from, work. Other sections of the ordinances of 1864 and 1868 also, in the opinion of the Commissioners, "contain grave legislative blots."

The Sugar Estate and Staff.—The number of sugar plantations in the colony is 153, forming practically 136 estates. On 123 plantations there are indentured immigrants,† and on one plantation estate. On only 14 or 15 is a proprietor or part-proprietor resident. Eighty-five are entirely owned by persons not resident in the colony. Some 40 of those 85, and these the "largest, finest, and best cultivated" estates, are owned by the great sugar-houses of London, Liverpool, and Bristol. These also hold mortgages, though it is not known to what extent, over some of the remainder, and the general tendency of the industry is to become a purely commercial speculation with nothing of the patriarchal and almost aristocratic tone of the old the slave-holding planter. The manager then fills the most important place, and his duties and qualifications as farmer, manufacturer, trader, and employer of labor are graphically described by the Commissioners. The manager is responsible, if the proprietor be non-resident, to the latter's attorney, who is generally a resident of Georgetown or New Amsterdam, either a partner in the colonial branch of one of the houses engaged in the sugar trade, or else exclusively devoted to the business of attorneyship. By the constitution of the colony he holds the owner's proxy and votes on his behalf in the elections for the College of Kiezers (or Choosers), who again elect the non-official members of the Court of Policy, or Legislative Body.

There is thus a division of responsibility injurious to the laborer. But even to enforce the responsibility so divided, the present machinery is cumbersome. "In default of any initiative in the Immigration Office there remains only 'the personal action of the Governor.'" But neither he, nor any court of law or other authority, "can declare an indenture cancelled, and the indenture fee forfeited, however flagrant the misconduct brought to light." The weapons of the executive are (1) the power to refuse an allotment of laborers, (2) the power to withdraw all laborers. But these are too ponderous, and even the first has rarely been brought

* Mr. Jenkins, himself a lawyer, calls the decision "a fine stretch of technical art."—('The Coolie,' page 258.)

† On few estates are there less than 300 coolies, while some employ numbers varying from 400 to 1,000.

into play. The appointment of deputy managers and changes in the managership are noticed by the Commissioners as tending to lessen the concentration of responsibility.

"The manager," write the Commissioners, "decides what work is to be done on the estates, and distributes it among the various labor-gangs, with their several drivers or foremen. There will be, perhaps, a task-gang of negroes engaged in digging or deepening a trench; others of the same or of Chinese delving the soil, either with shovel or fork, round the cane stumps, clearing out the small drains, or drilling; others again, chiefly of the more weakly coolies and all the women who can be got into the field, weeding and filling up the mould among the young canes, or weeding among the high canes, and tearing down the 'trash' from their stems. If the buildings are at work, a proportion of the hands must be withdrawn from field labor for that purpose. It is the manager's business to arrange the various gangs who attend the different parts of the machinery; and, in many cases, a good manager will spend much of the day in the boiling-house during crop-time. It is very important that he should be present at the pay table on Saturday; managers who are not above paying the wages themselves are far less troubled with disputes afterwards.

"In private life the manager, wielding all the resources of an estate, in a country consisting solely of estates and negro villages, is of course a very influential person. About one-third of the Justices of the Peace are resident managers of estates, and in many parts of the country the functions still left attached to that office have to be performed exclusively by them." One of these functions is that of coroner. There is nothing in the law to prevent a planter sitting as coroner at an inquest upon one of his own coolies. Common decency, however, has prevented this. But the Commissioners rightly object to an inquest held by a neighbouring planter with a jury of the employes of the estate on which the death which forms the subject of investigation has taken place.

The Commissioners think that assaults* by managers upon immigrants are rare, and that there is a wholesome progress of opinion among the majority which acts as a check upon the evil disposed minority. At the same time they quote some cases, one sufficiently gross, which undoubtedly "shew that it is inexcusable, either in the Government or the authorities of estates, to relax as yet their utmost vigilance in securing protection for the indentured immigrants."

"In regard to pecuniary dealings with immigrants," the Commissioners "notice with pleasure Mr. Sheriff Fraser's emphatic declaration, that in the whole course of his experience he never knew a manager attempt to cheat an immigrant. In our researches we have noticed here and there an excessive indulgence in the practice of arbitrary stoppages and some scattered instances on the estates where the practice did not seem so common, of which no satisfactory explanation was afforded us. We have read accounts of several investigations of complaints made in respect of wages, in which the conduct of the manager indicated a disposition, to say the least, to make the money go further than was fair. On the other hand, we notice the unanimous testimony of Magistrates and Immigration Agents to the readiness of managers to pay any higher rate of wages than that complained of, if found to be due by a competent arbitrator or other authority. From this we have found but one exception, which also ranked worst among the cases of insufficient wages, that, namely, at Waterloo, which we shall quote hereafter.

"The overseers are the subaltern officers of the management," and are mostly young Scotchmen, looking forward to be themselves some day managers. "They have generally had fair opportunities of education, and are expected, except here and there under a manager who prides himself unwisely in belonging to the 'old school,' to maintain the position of gentlemen, and observe the rules of polite society. * * The duties of the office involve the seeing in person to the performance of all work which is likely to be scamped, from getting up at four to see horses fed to staying up till four to see the last copper 'boiled off.' The greater part of the day, except with the overseer whose place or turn it is to watch the sugar manufactory, is spent in the field. They have to go from field to field and take down the work, marking the quantities done by each individual field-hand, and noting if it be done properly or must be overhauled once more." In estimating work he is assisted by the driver, and if he condemns any work, must warn the laborer concerned that his work has been "shut out." When the staff of overseers is insufficient, the tendency is to encourage men to take up tasks which will last two or three days, and hence a serious abuse of the provision of law relating to unfinished work. On all well managed estates, however, each man's work is taken down each day. The overseer also generally pays the wages under the general supervision of the manager. He has likewise to appear in cases before the Magistrate, and the Commissioners seem to think that he sometimes too nearly approaches to the position of a professional witness.

They state that it is "not at all uncommon for overseers, and even managers, to form temporary connections with coolie women, and in every case with the worst possible consequences to the good order and harmony of the estate." At the same time they admit that opinion on this subject has much improved, and still shews signs of improvement. But they strongly condemn the practice, the evil consequences which, especially among a community where the women are to the men as one to three,† are sufficiently obvious.

* Ill-usage of an immigrant renders the employer guilty thereof liable to a fine of \$48, or imprisonment with or without hard labor for two months, or both.

† Not quite so much. From Mr. Gallagher's report for the half-year ending 31st December 1870, there seem to have been of Indians 38,007 males to 12,788 females.

The drivers are what an English navy would call "gangers," or an Indian cooly "sirdars." Most of them are negroes. But the Chinese generally have a Chinese driver. Indian drivers are mostly Madrasses; "they are generally men of strong character and thriving circumstances, separated in interest from the great mass of 'Calcutta coolies,' and much trusted by managers." The "driver" is the weak point of the labor system, and his power is liable to abuse. The negro is apt to be brutal, the Indian corrupt. Drivers should have as little as possible to do with the pay table, and some practical suggestions are made as to the mode of paying wages. The practice of paying the wages of the gang in a lump sum into the driver's hands has, "except in the special case of punt-loaders," been put a stop to. Not so the practice of allowing them to keep shops either in their own names or "benami." The Commissioners most justly condemn the practice, and urge that the aid of the Commissioners of taxation might be enlisted in suppressing it. The driver, too, is sometimes treasurer of a fund which the coolies get up among themselves. This leads to charges of peculation, whether true or false, and should be discouraged.

The Commissioners give a brief sketch of the four classes of laborers employed in the colony, viz., Portuguese, Africans, Indians, and Chinese.* The Portuguese have mostly taken to trade and wood-cutting. The Africans are either immigrants or creole Negroes. As field-laborers they can get through most work in a given time. But they will not work continuously. They work from eight to ten hours a day, but seldom for more than three or four days in the week. "Most of the trenching and cane-cutting is done by Negroes, though some coolies and Chinese are pretty good hands at it. * * By far the greater number of artisans employed throughout the colony, of the police, of the sailors of coasting craft, of jobbers or porters about the wharves, and of boatmen on the rivers, are Negroes." * * *

"The class of Indian immigrants at present in the colony cannot, as a rule, earn more than half as much in the same time as the Negro." The love of saving is, the Commissioners think, the great stimulus to work among the Indians, who on task-work generally labor in the field for six or seven hours a day, and for four or sometimes five days in the week. In the buildings they some times work six days. The Commissioners notice the air of independence which the coolies acquire. The Indian and the Negro mutually despise one another. The Indians seldom marry or live with women of another race, though there are a few instances to the contrary. I infer, however, from some of the cases cited by the Commissioners in another chapter that Musalman men not unfrequently live with Hindu women, and Hindu men with Musalmanis.

The Chinese are more intelligent than either Indian or Negro. They quickly learn to manage machinery and are neat and careful in their work. As a class they are inveterate gamblers and opium-smokers. "It is worthy of notice that in places where the Chinaman has other careers open to him besides that of working as a field-laborer for wages, he invariably chooses one where he can work for himself. He either rents a piece of ground near town or starts a provision or retail shop as soon as possible."

Wages.—It may help to the understanding of the somewhat dry details to preface them here by extracts from Mr. Jenkins' more popular account:

"From the far north-west on the Aroebisce coast to the extreme south-east on the River Coentyn, the shores and river-banks are fringed with estates laid out in lines long and narrow. From end to end you would be hard bested to find a hillock, and on the east and west coast, which I could see from the lighthouse, the ocean was walled out by dams. Those called the *front dams* constitute the high roads to the estates. They lie between the cultivation and the sea, and the burthen of maintaining them in good order, as public highways, lies on the adjacent estates. The carking sea is constantly eating his way into these huge works, so that

* The latest available figures give the following as the number of these various classes on 30th June 1871:—

	Males.	Females.	TOTAL.
INDIANS—			
Indentured	25,239	9,200	34,539
Non-indentured	5,493	3,675	9,168
Both classes	30,732	12,975	43,707
AFRICANS—			
Indentured	134	25	159
Non-indentured	703	386	1,089
Both classes	837	411	1,248
CHINESE—			
Indentured	4,475	408	4,973
Non-indentured	1,141	393	1,534
Both classes	5,616	891	6,507
WEST INDIANS—			
Indentured	512	347	859
PORTUGUESE—			
Indentured	423	423	846

thousands of pounds have been spent by the Colonial Company alone in resisting his encroachments. As there is no stone within fifty miles, the roads are topped with clay roughly burnt in'o brick. On either side of the dam are broad, deep trenches or canals. Into these on the land side strike at right angles the *middle dams* of the estates with their two long drainage and navigation trenches.

"The plantations vary in breadth, but I was told there were some as narrow as two hundred rods. Their lines run 'back' a prodigious length—four, five, or even six miles to the savannah;—no pleasant meadow but a great watery swamp, covered with rank yet magnificent vegetation—wilds where man rarely if ever roams, and where in the rainy season sweeps down a deluge of brown brushwater. Against this incursion the cautious manager erects his *back dam*. The intermediate space of the quadrangle between this and the front dam is crossed at regular intervals by side trenches, cutting the estate into rectangular fields for the canes. These fields are sub-divided again by smaller trenches and drains, till the wonderful system brings you at last to a *bed*—a space nine feet wide by thirty-six feet long;—and here, with the drainage and drilling to make it comfortably dry, grows the juicy cause of all this labor and of the coolie question in Demerara. It is said that on one estate alone there are 60 miles of trench work. No nation but the Dutch would ever have attempted so gigantic a water-system on such a mudbank as the one stretched out below me. This water-system prevails throughout the whole colony, and there are many abandoned estates on which you may mark the remains of the Dutchman's marvellous energy to this day. * * *

"The 'buildings' consist of large sheds protecting the machinery from the weather. * Long ranges of open sheds on each side of the 'megass' yard are filled with what look like dried shavings, which bare-legged coolie women and boys are carrying swiftly in baskets to a row of fires where men thrust them in with long iron feeders. This is megass. Entering the grinding-room, we see at once what megass is, for here is a huge machine at work. From the shed to the adjacent canal, on an incline, stretches a covered way. A punt load of canes fresh from the fields is discharging. The canes vary in length from two to five feet, and are one to two inches in diameter. Coolies in the punt lay the canes on a broad traveller, up which they pass slowly, other coolies meanwhile picking out the defective stalks and trash. At the top they are gripped by two iron rollers, which draw them into their ponderous jaws, and with titanic force squeeze out the juice, leaving a flattened fibre—megass—to pass out beyond. Coolies receive it in large boxes and wheel it away to the megass *logie* or shed.

"From the sides of the machine runs out the slaty-coloured liquid into a well, whence it is pumped up to clarifiers, which are heated with steam-pipes. Indian and Chinese men, with boy assistants, all reeking with the damp sweater, manage the clarifiers, and when they have prepared the juice, allow it to run down wooden troughs to the copper-wall—a range of brick furnaces, 30 feet or more in length, in which are sunk huge iron hemispheres called 'coppers.' We ascend the stage and watch the juice boiling violently, while the naked Chinese deftly sweep away the scum with large flat blades of wood. All this boiling is produced by the burning megass. Up into the pitch of the shed rises the shining dome of the vacuum-pan, whither the syrup is pumped from the copper-wall and where it is boiled again. Re-descending to the floor, we find the result in a tank of thick brown matter. Take up a pinch on your finger, you see among the molasses the sugar crystals; and swartly Chinamen fill their wooden troughs here, and empty them into the centrifugals—a row of hollow drums, which, revolving rapidly, drive the crystals to the side of the drum and the molasses through its sieve-like lining, until the pure white sugar is left there clinging to the side like a snow-drift. Other workmen empty the drums and convey the contents to the sifting-room, where—shall I tell it?—I saw a couple of naked fellows walking about in the piled-up sweetness as they worked the sifter. Our sugar is now ready for its huge hogsheads. I need not follow the molasses to its cisterns, or the dregs to the rumstill. The very sweepings of the floors are made available."

The following passage describes what Mr. Jenkins saw in 'going back,' (*i. e.*, up the middle walk to the back dam through the cultivation), at Windsor Forest Plantation:

"We have been passing fields of young cane, and the light gangs, consisting of women and weakly men, are weeding among them. I have explained that a bed is a space about nine by thirty-six feet. Through this again lengthwise run shelving drains dividing it into spaces. The canes are planted along these in what are called cane-holes. On one side is a clean bank, on the other a trash bank. You may take the field, therefore, to be reduced to three feet spaces. Mr. Russell in his evidence shewed how this simplified calculation for wages or expenses:—'The fields are always laid out in three feet spaces, and to those who understand decimals, it is a nice way of calculating work. There are 100 such beds to an acre; so if you pay one cent for each bed it amounts to one dollar an acre; eight cents per bed to eight dollars an acre.' The young canes may be two or three feet high. The weeders hoe out the weeds from the nine feet space and lay them on a three feet space adjoining. Weeds in British Guiana are incredible plagues—vicious, pertinacious, domineering, tolerant of no other vegetation beside them, growing out and up and over everything with rankness and rapidity. The work is done generally by the task. A man or woman agrees with the overseer to do one or more 'openings' for a sum certain. An opening is the number of nine by thirty-six feet spaces across the field, *i. e.*, twelve of these beds taken in a straight line. At this work a new immigrant working steadily might make, on a good estate, one shilling sterling in about six hours; or, supposing him to work from 6 A. M. till 12 noon every day but Sunday—and few will do more than five days' work—his earnings would be six shillings. * * * A couple of miles back we

came across the cane-cutters. They are the strongest coolies on the estate, or more frequently African creoles. They also take their work by the opening. At each end of the opening runs the canal, and our cutter must pile his canes on the bank ready for the punts. Stripped to a rag, he takes his cutlass,—a peculiar weapon in one piece,—and cutting off the cane near the ground, trims away the long leaves and head. This head forms the plant or seedling to supply again the fields from which it is cut, or new lands brought into cultivation. The leaf-trimmings, called *trash*, are gathered up by the weeding gang and laid on the bank alongside the cane-holes. There it dries and rots, and is then buried in the middle of the trash-bank as manure. When he has cut one hundred canes, the cutter, gathering them into a bundle weighing, perhaps, 100lb., carries them on his head to the canal.

"If he is cutting in the middle beds, he has to cross and re-cross five beds and the intermediate drains to the water and back again. No wonder he streams with the sweat of toil. At such work as this a strong man may make, it was said, two or three guilders or more a day; a guilder is 1s. 4d. Some of the coolies were magnificent men. Several had been sepoys in India. A few of such men I saw elsewhere engaged in another operation, trench-digging. The sub-soil is like London blue-clay. Digging out a trench seven feet deep and twelve or fifteen wide you see a dozen mud-spattered fellows, with convex (*sic*) shovels like long scoops, having handles six feet in length. Standing firmly on his feet, every muscle in tension, the labourer drives the scoop into the clay by the action of his arms and shoulders, lightly throwing it twenty feet or so out of the trench. Good hands are fond of this work, and earn a dollar a day at it."

To return now to the report, and first as to the rates usually paid for the performance of given quantities of work. On arrival at an estate the emigrants are divided into the shovel-gang and the weeding-gang—the latter including the women and weaker men. The building-gang is composed of laborers withdrawn temporarily from the field-gangs, and their work in the buildings is regulated according to their qualifications, mental and bodily. Field-work is paid for by the task. For digging trenches 12 feet wide and 5 feet deep, the earth being thrown on both sides, the usual payment is from 80 to 96 cents for a rod of 12½ feet. These and trenches 14 feet wide are the most commonly dug, and the rates for other trenching work may be calculated from them, making allowance for the distance the earth has to be thrown. Digging new small drains two feet wide by two feet deep, the land being cleared, is paid for at the rate of four to eight cents a rod, according to the soil and state of the field. From five to six cents is the usual price. Clearing out small drains one foot or one shovel costs one to two cents a rod. The usual rates are 1½ or 2 cents. Shovel-ploughing banks and drilling vary according to the nature of the soil and the frequency of the operations. Shovel-ploughing clean banks varies from \$2.20 to \$1.40 an acre—average price between \$2.80 and \$3.50. Drilling one shovel deep and two feet wide is done at the rate of eight cents for three rods almost everywhere. Sometimes the drills are 18 inches wide by 18 inches deep: they cost about the same. Weeding and moulding and weeding and trashing cost everywhere on estates in high cultivation from \$2 to \$2.50 the acre. When weeding is less frequent, the work when done is heavier and costs sometimes as much as \$3.50 the acre. "Relieving," or hauling out the trash after canes have been cut, costs from \$2.10 to \$2.50 an acre. Cane-cutting is generally paid for at so much a bed according to the weight of canes on the ground. Sometimes it is paid for by the cord (= 16' x 4' x 4') of canes cut. The rate per cord varies from 48 to 54 cents. The above rates cannot be regarded as fixed rates. They all vary according to the state of the weather, the nature of the soil, and the condition of the field. In the "buildings" laborers are paid according to the kind of work they perform. The rates are not uniform, being generally higher in the estates near Georgetown and on the large estates. The work in the buildings, though called time-work, is really task-work. A certain number of clarifiers of cane juice, or of "boxes" as they are called, having to be made in the day, and the pay of the gang being diminished if this amount is not reached. On most plantations too, when the prescribed number of boxes is exceeded, the men are paid extra. If an accident happens to the machinery, the wages are reduced, unless the laborers choose to finish the day's work in the field. If the accident happens late, they have no choice but to have their pay cut. The Commissioners condemn this as unfair. At any rate it shews conclusively, as they say, that work done in the buildings must be regarded as task-work. This task-work by a gang is, however, not recognized by law. Still the employers get on without difficulty, because work in the buildings is better liked than field-work. This is due, partly to the little perquisites, such as cane-juice and liquor, and partly to the fact that the men work under shelter. Advantage is taken of this to exact too much labor, sometimes without extra pay. "It is not uncommon, especially on Saturdays and last days of a bout of work, for fire to be put to the engine at 3 A. M. or even earlier; for the gangs to be called at 4, and to be kept working till near midnight." In one case at least the Commissioners found that a gang had been kept at work for 23 hours consecutively. They distinctly recommend that payment by time should be enforced in the buildings.

The work and pay of those employed in the "buildings" vary greatly. The calculations of the Commission may be thus epitomized:

- The pan-boiler, who looks after the vacuum-pan,—from \$1 to \$2;
- Engineers, carpenters, coopers, and other artisans, from 60 cents to \$1 per day;
- Head boilermen from 56 to 64 cents a day;
- Firemen from 40 to 48 cents;

Mill-feeders from 32 to 40 cents;
 Cane-throwers from 24 to 32 cents;
 Box-men, who carry off the megass after it has passed through the rollers, 32 to 40 cents;
 Lads employed on the liquor-pumps from 20 to 32 cents;
 Lads employed on the clarifiers from 16 to 40 cents;
 Porters work by the job and earn from 32 to 48 cents a day. They take the sugar to the "stelling," and ship it on the lighters.

Men attending the centrifugals earn from 32 to 40 cents, but are sometimes paid by the hoghead of sugar.

Women earn from 24 to 40 cents a day by carrying sugar from the coolers, in factories where muscovado or "common process" sugar is made; they also earn from 24 to 32 cents as megass carriers. But negro women, from their superior strength, are paid 40 cents. Those who pack the megass in the logies received generally 32 cents a day; and a gang of convalescents and children spread the megass in the sun, earning from 12 to 24 cents. Punt loaders are paid by the punt loaded. The Commissioners found that in some cases the record of each man's work was not accurately kept. Excepting pan-boilers, head boilermen, and other artisans, the rates of wages in the buildings may, therefore, be taken to range from 12 to 48 cents, including in the calculation women and children. The average number of hours of work in the buildings is 15 a day, but, as we have seen, is sometimes greater.

The amount of earnings.—The Commissioners have made a most laborious investigation into this point, and have arrived at the conclusion that the average earnings of able-bodied Indian male immigrants, excepting drivers, artisans, and other headmen, throughout the colony, are about 28 cents a day for every day they do a fair day's work. About four-fifths of the adult male immigrants may be included in this class. Women earn from 16 to 32 cents, but do not, as a rule, work as many days as the men. Children 10 to 15 years of age earn from 8 to 16 cents a day. The men generally work from 4 to 5 days out of seven. Another calculation of the Commissioners shows that even if the males are taken alone, 40 per cent. of those who work in a given week do not earn five shillings and upwards.

It is strange that neither in the Commissioners' report nor in Mr. Jenkins' book can I find anything definite on the purchasing power of the wages earned,* though it is clear that at any rate for the Government of India to form an estimate as to the benefit of emigration to the laborer some such information is necessary. In the resolution of the Court of Policy cited at paragraph 176 of the Report, the price of a full supply of food for a man is stated at eight pence per diem.† This is at the rate of 4s 8d. a week. At this rate the man earning 5s. a week would have barely a full subsistence for himself, not to mention the women or children probably, to some extent, dependent on his labor. But, perhaps, 8d. is more than the cost of a good ration for an Indian immigrant.

Some further light has since been thrown on this question, though the general conclusions of the Commissioners are not in any material point invalidated. We have seen (Part I) that the passages in the Commissioners' report bearing on the question of wages were circulated to the officers concerned by the Governments of India and Bengal. A copy of these circulars having reached the hands of the Agent for British Guiana at Calcutta, he communicated with the colony, and Governor Scott appointed a commission consisting of the Government Secretary and two other gentlemen to report on the condition of Indian immigrants in British Guiana. The report of this Commission states that, whatever may have been the case formerly as to the possible wages held out as an inducement to emigrants, the Emigration Agent has of late years confined himself to a promise of from 7 to 10 annas (10½d.—15d.) a day for agricultural labor, an amount which a healthy laborer certainly can, and less than many do, earn; that the absence of a contract before the emigrant leaves India has been, and could be, no detriment to him, as it is impossible to conceive his being unable to obtain regular employment; and that the labor required by the British Guiana law is only 35 hours a week, considerably less than is required by the Trinidad and Jamaica laws; that for this amount of labor the immigrant is entitled to 5s., and the fact that he does not earn more, which the Bengal Government urges as an argument against the planters, is in reality the principal grievance which the planter has against the immigrant; that the planters are only anxious that the immigrant should by additional labor earn more, and that he could do so is proved by the large amount of property which immigrants acquire, calculated in money in savings banks, live-stock, houses, &c., at \$1,389,840 (£289,550) for those now in the colony, in addition to what has been carried away by return coolies. But earnings of even 5s. a week would, it is said, be more than a bare subsistence, as the Chairman of the Enquiry Commission, who had large experience in India, was of opinion that the dietary fixed in the Ordinance of 1868, which cost 4s. 8d. a week, might with advantage be replaced by a dietary which it is estimated would cost only 2s. 9d. It is further alleged that the report of the Enquiry Commissioners, if taken as a whole, shews that the condition of an Indian laborer is much improved by emigration, while the children born to them in the colony are described as a very satisfactory feature of the system.

* The tables in the appendix show the average market prices at Georgetown of wheat-flour and rice taken over a period of 13 years to have been respectively \$8.10 per barrel and 4½ cent. (=2½d.) per lb. But these are wholesale prices.

† This agrees with the estimated cost of the rations which now may be given for four months.

In further proof of the success of emigrants, the Commissioners enclose (1) a copy of the *Official Gazette* of the 20th January last, containing 17 conveyances of land to 32 Indian immigrants; (2) a letter from a planter* stating that five of the immigrants on his estate had earned from \$3-16 to \$4-28 each in six days; (3) returns from 27 estates showing that in the quarter ending 31st of March last 521 Indians had earned on an average \$2-56 a week; and (4) a memorandum to the effect that an Indian and his wife, between 5th June 1869 and 12th April 1872, had accumulated property to the amount of \$260, although the woman, from pregnancy and other causes, had worked only eight and a half months. The Commissioners add that the question of providing land for immigrants in lieu of return passage is being considered in a spirit of the utmost liberality.

Subsequently two Ordinances have been passed, putting the question of wages on a more satisfactory footing, though they are avowedly of a temporary character, and only intended to set things right pending the more thorough and radical reforms suggested by Lord Kimberley, in the form of a complete revision and consolidation of the law relating to immigrants. The first of these two Ordinances expressly validates contracts made in India. The second, besides the provisions as to rationing, noticed further on, contains some important clauses upon the general question of work and wages. It is provided that every adult immigrant (and an adult is defined as one of the age of 12 years or upwards) shall, except in case of illness or of other good cause beyond his control, be bound to work for six days in each week and for nine hours a day, except on Sundays and public holidays, provided that this shall be no bar to mutual arrangements for over-time. Every such adult immigrant, if a man of 16 years or upwards, shall be paid day wages at not less than 25 cents a day, males between 12 and 16 years and females over 12 years of age receiving a minimum of 18 cents. These wages are to be paid weekly, after deduction of the authorised charge, if any, for rations. Each immigrant is to do a fair day's work, age, sex, and strength considered, every working day; and the Stipendiary Magistrate, assisted if he chooses by appraisers, is to decide in case of dispute as to what constitutes a day's work. The employer on the other hand is bound to give work on every working day; failing this the immigrant may nevertheless claim the day's pay. Failure, in the absence of reasonable cause, to work on working days or to do a fair day's work, subjects the immigrant on conviction before a Stipendiary Magistrate to forfeiture of wages for each day's default, or fine not exceeding three days' wages for each day's default, or imprisonment with hard labor for one month, which latter may in case of a second conviction within 12 months be increased to 2 months. If the accused be acquitted, the Magistrate may award compensation for time lost, as well as costs and expenses. Stipendiary Magistrates are authorised to hear cases for non-payment of wages, and to inflict a fine not exceeding \$200 on the employer if the case be proved. But the ordinance does not seem to warrant an order for payment of wages. With the consent in writing of an officer of the Immigration Department, or a Stipendiary Magistrate, an immigrant may elect to work at task-work or day-work under existing Ordinances; and in no case does the new Ordinance apply to immigrants introduced before 1st September last.

Enforcement of the labor system.—"In considering the administration of justice in the Magistrates' courts," write the Commissioners, "we are brought face to face with a state of things the gravity of which it is folly to extenuate. Wherever we went we heard the immigrants loudly protesting a complete want of confidence in the Magistrates' impartiality, and they accounted for it by appealing to the terms on which the Magistrates associated with their masters and employers." Though the Commissioners believe the cause really to lie deeper, in the nature of the law the Magistrates have to administer, they are of opinion that it has become the duty of Magistrates when on circuit to refuse the hospitality of planters. To enable the Magistrates to avoid the appearance of evil, the Commissioners think that the Government should in some form consider the expense they have to incur, and provide them with decent accommodation at stations.

The Commissioners next point out the disadvantage at which the immigrant stands in the Magistrates' courts.

(1).—He is ignorant of the language of the Court. The original intention of the Colonial Office, that a considerable proportion of the Stipendiary Magistrates should at least know Hindustani, seems never to have been carried out, and the interpreters are ill-educated men on a salary of \$24 a month. A re-organization of the interpretation department has taken place in the higher courts, and the Commissioners express a hope that the measure may be extended to the courts of Magistrates.

(2).—He is unacquainted with the forms of English law, administered, the Commissioners might have added, in a spirit of the utmost technicality.

(3).—The Magistrates, unacquainted with Asiatics, are too apt to reject *en masse* the evidence of fellow-laborers of the immigrant in court, instead of trying to sift out what truth there may be amidst much exaggeration.

(4). The great majority of cases are cases in which the immigrant is a defendant. Yet, since even if the charge be for breach of contract, the case is treated as a criminal case, the immigrant's mouth is shut. "If the converse case of the rule," the Commissioners pertinently remark, "came within their experience, if they were in the habit of bringing charges against managers,

* The planter referred to, Mr. Bascom, bears the same name as one of the Commissioners, though it is not stated whether there is any connection between them.

and of seeing them tongue-tied whilst their characters was being sworn away, they might recognize an even-handedness, if not an equity in the law. But as a matter of their daily experience, a few exceptions set aside, the penal enforcement of the labor law has hitherto been an enforcement against the laborer alone. The total number of cases before Magistrates under the immigration laws for five years ending 30th June 1870 was 32,876, out of which "certainly not a hundred, perhaps not a score,* were cases by immigrants or by others in their behalf against employers, and the charges brought by officials against employers under the same Acts may be counted on the fingers of one hand." The steadily high proportion, upwards of 20 per cent., which the immigration cases bear to the total number of cases before Magistrates, is another sign of the absence of proper relations between employers and their indentured laborers. And from recent reports the number seems to be increasing. For instance, the percentage of cases to indentured immigrants in the first half of 1868 was 6.17, in the first half of 1869, 6.14. In the first half of 1871 the proportion of cases had risen to upwards of 10 per cent.

The law puts two weapons into the hand of the employer;—(1) the Labor Law Proper; (2) the Vagrancy Law.

And first of the *Labor Law Proper*. The principal provisions are those providing penalties (a) for non-performance of five tasks, (b) for neglecting or refusing to work, and (c) for being absent from work. There are other provisions less frequently appealed to, as those against bad or unfinished work, against absence from muster-roll, against breaking hospital, against abusive language towards a person in authority, against inciting to refuse to work, a clause put in motion sometimes to punish ringleaders of strikes. The Commissioners find that of the 32,000 odd cases brought within the last five years one-half resulted in convictions. The rest were entered as dismissed or withdrawn. But by far the greater proportion were withdrawn, the immigrant paying the cost of summons and promising to labor better. The proportion of true acquittals is very small.† Even of the acquittals, most were on technical grounds. Sometimes, too, a man is found to be sick and is sent to hospital instead of to gaol. "But with these exceptions, to be prosecuted is with an immigrant almost the same thing as to be convicted and sentenced. Practically, therefore, and without casting imputation on the Magistrates, the labor law in its operation must necessarily appear to immigrants as a mere instrument wielded by the manager for their chastisement, and not as an intelligent arbitration between them and him." The practice of making charges and then compromising them, at any rate pushed to the extent to which it at present prevails, they most strongly denounce as "among the causes which have destroyed the confidence of the immigrants in the administration of justice." With regard to the charge of non-performance of five tasks, the Commissioners point out that it is objectionable, because there are many immigrants, as shown by the estimate of wages earned, liable to prosecution who never are prosecuted. More than half the immigrant population would be liable to punishment under this clause alone. The second form of charge for neglect or refusal to work is read subject to the proviso as to the performance of five tasks, and is chiefly employed in cases of illness or recusancy in the buildings. The third charge is for absence from work. More than half the convictions were obtained under this form of charge, and the Commissioners prefer it because of its simplicity, it easily admitting of proof or disproof. As the law stands, however, it is inconsistent with the five tasks clause, and the Magistrates have consequently struck out a middle course, not taking cognizance of the amount of work done, unless specially pleaded.

The Commissioners discuss the effect of the provision on the subject of leaving work unfinished. A legislative mistake was committed in taking the discretion to enforce the penalty of forfeiture of wages for bad or incomplete work out of the hands of the Magistrate. There are, indeed, certain restrictions imposed upon the employer before he can make a charge under this provision; but they are restrictions with which he would, if a good man of business, naturally have complied in the regular course of work; and as the laborer who complains of wages unduly stopped is almost necessarily in the position of having neglected or refused to work, the manager can bring a countercharge. Thus "the immigrant may win his case and recover six-penny worth of wages without prejudice to the manager immediately winning his, and so subjecting the immigrant to a month's imprisonment or a fine of \$ 5." The number of cases actually brought into court under this section is not large; it is the weapon held *in terrorem* over the heads of immigrants to enable the employer to work out the whole system of "stoppages." "After the general grievance that wages were too low, the most common complaint that reached us was of their being stopped on pay day;" and the case cited by the Commissioners shews that the practice of making arbitrary and illegal stoppages is but too general. It was a stoppage of this kind that led to the outbreak at Leonora, which so alarmed the planters, and was one of the events leading to the appointment of the Commission.

2. *The Law of Vagrancy*.—This "which is rightly characterised as an *adscriptio glebe*, binding the immigrant while under indenture to the soil, is enforced, like the labor law proper, by a

* Perhaps not strictly accurate. But it is only within the last two years that the reports of the Immigration Agent notice this side of the question at all. In the half-year ending 3rd June 1871, there were 94 complaints against employers.

† In New Amsterdam 377 convictions to 41 acquittals. On Corentyne Coast 213 convictions to 4 acquittals. In Barbice River District 706 convictions to 23 acquittals, and so on. The more recent statistics are not quite so bad as these. For instance, out of 4,061 cases against immigrants in the first half of 1871 there were 1,872 convictions to 567 acquittals, 1,416 cases being withdrawn.

series of enactments which in some degree cross and overlap each other. There is first the old-fashioned muster-roll, the calling of which was incumbent on the employer under Section 108 of Ordinance 4 of 1864, while the attendance of the immigrants was enforced by Section 106 of the same Ordinance; absence without leave from the daily muster and from work for seven days consecutively constitutes desertion, an offence punished with double the penalty assigned to offences against the labor law proper, and liable, as an alternative, to involve an extension of indenture equal to twice the period of desertion; even without conviction a desertion, which can be proved to satisfaction of the Immigration Office, involves an extension for an equal term, and it seems that a further term of extension may be added equivalent to the period of confinement to which a man may have been sentenced for the same desertion." The law binds managers to give notice to the police of desertion. This provision was originally passed in the interest of the cooly, but it has become almost a dead letter. The police, however, have power to arrest without a warrant and carry back to the estate to which he is *adscriptus* any emigrant found more than two miles from such estate during the hours of labor and without a pass. The muster-roll clause seems to have been a farce. In the larger and better-regulated estates the field-book of work has been substituted for the muster-roll, and the Commissioners recommend that the substitution should be made compulsory. As to extension of indenture for desertion, the Commissioners would confine it to cases of conviction before a Magistrate, and would substitute extension for the exact period of desertion coupled with a moderate fine, for the present alternative of extension for double the period of absence. At the same time they admit that the planters have shown moderation in their prosecutions for desertion, and, in consequence probably, the number of desertions has been gradually diminishing. The authority of the police to arrest vagrants rests, however, on a somewhat precarious footing, as it is difficult for them to determine whether at the time of arrest an immigrant is bound to labor or not. Hence, the rule has been very variously applied, and the Commissioners condemn it. It has been, in several cases caustically described by the Commissioners, so used as to prevent immigrants obtaining access to the Immigration Office for the statement of legitimate grievances. It is pointed out that the Stipendiary Magistrates should have the power of granting passes for this purpose. Indeed, the necessity for such a provision was so obvious that some Magistrates have granted passes which, though of no legal validity, were probably respected by the police. And a decision of one of the Magistrates has laid down that immigrants are not liable to be imprisoned for desertion for leaving an estate in the exercise of their right of making a complaint at the Immigration Office.

Penalties.—Imprisonment with hard labor, however inefficient as a punishment for men living by the sweat of their brow, has always been the alternative for fine. In the Demerara county "district jails" have been erected, whither only immigrants convicted of breach of the immigration laws are sent, and whence they are sent out to work on neighbouring plantations. The Ordinance makes a sentence to so many days' hard labor equivalent to a sentence to perform so many daily tasks, the task being put somewhat higher than for free laborers. As a matter of fact the laborers in jail on an average do not perform more than half a task in the day. In other words, viewed as a sentence of imprisonment for a certain number of days, the interpretation clause has just doubled the average sentence awarded. When the "district jails" are full, immigrants convicted of breach of the labor laws are sent to the Georgetown, Barbice, and Capoey Jails. The latter is "not a satisfactory edifice." Some of the lock-ups are also condemned by the Commissioners.

The result of a careful analysis of punishments awarded is that, "an average of five dollars fine and 20 days' imprisonment over the whole colony, until this last year (1870), when the severity of punishments seems to have somewhat decreased, cannot be far out. This average fine somewhat exceeds the average amount of a month's wages. It is noteworthy that a 'month's wages' was fixed as a maximum fine in the code of 1838. The 20 days' average sentence of imprisonment in a still greater degree exceeds the fourteen days' maximum fixed in the same code. We submit with confidence that the imprisonments, more especially in Demerara, since the establishment of the district prison system, are too long; that the proportion who prefer going to prison is, in Demerara, too high; and the cause of this is that the average of fines is very much too high." It appears that Governor Scott has already "by a circular" taken steps to mitigate the severity of punishments, especially in the case of women.

The loss to the planter caused by imprisonment of the laborer has led to various suggestions for the substitution of other modes of punishment. The Commissioners mention two—(1) the establishment of private lock-ups on estates, (2) the extension of indenture in all cases of imprisonment; but only decisively to reject them.

Re-indenture.—Out of about 40,000 immigrants whose term of first indenture has expired, between 17,000 and 18,000 have, in consideration of the regular bounty of \$ 50, increased sometimes by the planter in his desire to obtain acclimatized laborers, re-indentured. The existence of some 3,000 or 9,000 free immigrants shews that there is no absolute necessity for re-indenturing. "But the free coolies," say the Commissioners, "are men of good laboring ability who have saved a little money, and can afford to look about them. For the great multitude there is nothing open but a re-indenture on the statutory footing (i. e., as we have seen, for five years certain). There is no provision for settling the people on the soil, and trade or special calling can be said to be open to them. They are here to fill up one gap in the social system as agricultural laborers, and agricultural laborers they must remain." Such being the case, the Commissioners unhesitatingly condemn the extension years certain. But a compromise has had to be accepted at this point.

Mortality and Acclimatisation.—"The mortality returns of the Immigration Office are not, at least till within the last three years, to be depended on as calculations, involving as they do a large element of mere estimate." So say the Commissioners, and the remark is not flattering to the Immigration Office, one of whose most important duties was supposed to be the maintenance of an exact register of immigrants.

For the three years 1867-69, the estimate* of the Commissioners for Indians is as follows:—

	Population.	Death.	Death-rte.
1867	31,274	1,333	4.3 per cent.
1868	33,579	985	2.9 "
1869	36,860	1,106	3.0 "

Though not absolutely good, this rate contrasts favorably with that of 1845 to 1851, when the mortality of East Indian immigrants was not less than ten per cent annually. Governor Scott has, as appears from the last report, been instructed to refuse allotments to estates where the mortality exceeds twice the general average of five preceding years, or seven per cent. among immigrants of less than five years' residence. The greater proportion of deaths among more recent arrivals is sufficiently marked. Among the devices to lessen this are—(1) the allotment of the earliest arrivals to the least healthy estates; (2) the observance of the rule that emigrants should be shipped from India so as to arrive in the colony not later than the end of April,† (if necessary, the Government of India could limit the emigration season so as to ensure the observance of this rule); (3) the placing the newly arrived on rations for a time.

The scale of dietary prescribed by the Governor is as follows:—

Biscuit	...	...	4 ozs.	} For "chhota haziri."
Sugar	...	...	1 "	
Rice	...	...	12 "	
Dal	...	...	4 "	} For "breakfast."
Ghi, or mustard oil	...	...	1 ½ "	
Onions	...	...	1 "	
Some curry powder and salt.	...	...	...	} For "dinner."
Salt-fish	...	...	2 "	
or, if no dal	...	...	4 "	
Cooked plantains	...	...	24 "	
Pork	...	...	2 "	
or butter	...	...	1 "	
Salt-fish	...	...	4 "	
Onions	...	...	1 "	
5 or 6 biscuits.	...	...	...	

Tobacco to be issued at regular intervals. The cost of the daily ration for 25 men is put down at \$ 4 or 16 cents per head. The supply of rations was at first (by Ordinance 9 of 1865) optional with the employer. A recent Ordinance prescribes the supply of rations for six months to all newly arrived immigrants. The scale is as follows for each immigrant above 12 years of age: 1½ lb. rice, 4 oz. dal, 1 oz. ghi, ½ oz. spices, 2 oz. sugar, and salt *quantum sufficit*; half this scale for immigrants between 1 year and 12; the cost of the ration to be fixed by the Governor, but not to exceed 60 cents a week; the cost as fixed to be charged against the immigrant. The ration must be supplied in kind, and directly by the employer. After 3 months the Immigration Agent may, on the application of any immigrant, sanction the discontinuance of rations, if he be satisfied that such immigrant is earning enough to supply himself with a sufficiency of wholesome food.

Dwellings.—The Commissioners record their personal experiences on this point. They shew that the clause which binds the employer to provide his laborers with suitable and sufficient accommodation has been very laxly enforced. But the Commissioners admit that an "immense start" has been recently made, and that "proprietors are putting out considerable efforts just at present to make the state of their immigrants' dwellings a credit to themselves and to the colony." It is for the administration," they add, "to see that the good work is not allowed to flag." The Government has already approved a plan for rows of single-storeyed cottages, all facing the sea-breeze, and no new allotments are made till such accommodation is provided. "This, however," the Commissioners remark, "is not quite all that is necessary to be done; the exclusive insistence on accommodation to be provided, of a special kind, for the new immigrant has, in some cases, operated to the disadvantage of the old." We have seen above how it came to be nobody's duty to take care that the lodgings were not overcrowded.

* Mr. Gallagher, in his report for the half-year ending 31st December 1870, gives the following percentages:

1865	...	...	5.4 per cent.
1866	...	...	4.39 "
1867	...	...	4.13 "
1868	...	...	2.9 "
1869	...	...	2.81 "
1870	...	...	3.06 "
1871	...	...	3.65 "

(plantations.)

Pasequillo is the most healthy district; Berbice comes next; while Demerara is worst in this respect.

Sir C. Murdoch states that the Calcutta Agent has been instructed in this sense.

As a natural consequence, over-crowding is not uncommon. The Commissioners recommend that in this regard should be made a specific duty of the Medical Inspector, and that a statement showing the amount of accommodation provided should be kept up on each estate.

ge.—It seems to be only within the last three or four years that any improvement in this respect has been attempted. That improvement has been "unmistakeable;" but there is room for much more to be done. The law makes the manager nominally responsible for the proper state of yards and grounds around dwellings and hospital buildings; "but he is exempted from punishment, if he can prove that he used due diligence in enforcing another section of the law, whereby the duty of actually cleaning the houses and yards is transferred from his shoulders to that (sic) of the emigrants." As a matter of fact, however, managers have paid for cleaning as for work on the estate. The Commissioners recommend that the law should be brought into conformity with the actual practice on this point. The inspection of the Medical Officer seems to have been careful; but he had no powers to enforce the remedy of defects discovered. On the other hand, the Commissaries of Taxation were vested with compulsory powers; but this provision of law has remained a "dead letter." The Commissioners would not continue these powers, as the Commissaries, in their capacity of Inspectors of Police, "have other arduous duties to perform, and it does not tend to the efficiency of a police force that the officers of it should be unnecessarily burthened with unpopular functions." The special "lees nuisance" has engaged the attention of the legislature, and an Ordinance has made it compulsory to carry the drainage of the distillery to a river or the sea, unless special license be granted for a "lees-pond." A report just received says the "lees nuisance" has been put an end to.

Water-supply.—The main water-supply is the bush-water from the Savannah. This, though highly coloured, is sweet and in general wholesome. It is not, however, to be depended on in the dry season, and in a drought is apt to fail altogether. Much has been promised and is being effected in the way of providing sufficient storage of rain-water. The Commissioners "hope that the time has now nearly arrived when the Government will feel itself able, with general approval, to insist that a sufficient supply of rain-water for drinking, during the continuance, at least of an average dry season, shall be provided in first class tank accommodation." They would expect this to "have a most beneficial effect on the new-comers, by way of reducing the number of cases of dysentery and diarrhoea, which they ascribe themselves to the fact that 'their drinking-water is changed,' meaning that the trench-water disagrees with them till they become accustomed to it."

Health, Sickness, and Infancy.—The most common diseases are ulcers and chronic dysentery. Cases of the former have greatly diminished, and this improvement is ascribed to better hospital treatment, more careful supervision of the immigrants in their dwellings, and the allotment of small numbers at one time. Inhabitants of India changed to another climate seem peculiarly liable to this evil. For instance, at Port Blair it has caused many deaths, and is still an important element among the sources of mortality. Dysentery will probably be lessened by a better water-supply. "Cases of starvation and debility," say the Commissioners, "such as we sometimes found entered in the case-book, are, no doubt, for the most part, attributable to the incorrigible laziness of the patient." Such entries have, however, an ill sound. Leprosy, elephantiasis, and yaws are also known in the colony. The last two are, in the opinion of the Commissioners, preventible with care and cleanliness. Accidents have sometimes occurred from want of proper fencing of machinery. On this point the suggestions as to a stricter inquest are considered by the Commission sufficiently to meet the case. In the five years ending June 1870 there had been 40 suicides among Indian labourers. "Though our attention," says the report, "was early directed to the matter, we have not satisfied ourselves that any suicide has occurred of late, which could be ascribed to ill-treatment or oppression on the part of the management." And as to the children, the Commissioners write—"The jolly appearance of the cool children born in the colony attracted our attention. The epithet is the most appropriate we can use, and the promising appearance of the rising generation on estates is one of the most satisfactory features of the immigration, both to the employers and to ourselves, as Commissioners."

They then proceed to show the grounds of their assertion, already noticed above, that pregnant women are always treated with consideration. From an elaborate examination of pay lists and registers of births, they show that "women with child almost invariably leave work three or four months before their time, and that, if their child lives, they do not return to work within from six months to a year afterwards. We were constantly informed, and we see no reason to doubt, that pregnant women are allowed to 'sit down,' as the phrase is, whenever they please. No complaint was ever made to us by a cooly of women being forced to work when not in a fit state. As soon as the attention of the mother can be dispensed with, she is generally 'warned to go to work,' the young children being looked after, in her absence, by nurses paid by the estate for the purpose. On some estates there were 'creole houses,' *crèches*, for the reception of young children, erected in the times of slavery; but these are not generally used. Instances of neglect on the part of these nurses require to be pointed against. In fact, a negro woman is not in general to be trusted, but of course a white woman can always be found, and is in most cases employed for the purpose. Upon this recognizing that care is absolutely necessary for the protection of the lives of children and mothers, we are glad to be able to say that, as far as we have observed, there is to be wanting in this respect. The managers are proud of the good conduct."

their estates, and the desire to keep women after their indentures have terminated is to be indulgent in enforcing labor upon them. We see no necessity for recommending legislation in this direction."

Immigrants becoming permanently unfit for labor, whether from disease or may, with the sanction of the Governor, be given a certificate of exemption from be sent back to India at the expense of the colony.

Hospitals.—This point is most minutely and elaborately reported on by the facts of each examination being given in detail. I shall not attempt to follow them into such minute particulars, but will endeavour to summarize briefly their conclusions and recommendations.

Ordinance 17 of 1859, as re-enacted in the consolidated Ordinance of 1864, is the law now in force on the subject of hospitals and medical attendance. Under it a committee was appointed to frame a scale of medicines, hospital accommodation, and diet, and the scale so framed was published in a circular.

The visits of the medical practitioner were to be once in forty-eight hours, not including Sundays, except in cases of emergency. The Stipendiary Magistrate was to make quarterly visits to the estates' hospitals, and a Medical Inspector was appointed to make half-yearly visits, who, if he found anything amiss, was to require the manager or medical practitioner to amend it within a certain time, or to appeal within a week to the Governor and Court of Policy, whose decision was to be final. Dr. Shier was appointed Medical Inspector, and entered on his duties in January 1860. When the consolidated Ordinance was passed in 1864, a new committee was appointed, who, however, reported that the provisions of the Ordinance as it stood were sufficient. The result, a curious one for a colony where they so stickle for legal technicalities, was that the scale prescribed by the committee of 1859 was held to be binding. The circular embodying that scale requires that a kitchen be attached to each hospital, that there shall be a bath-room, a tub, and sufficient supply of water; a water-closet on the same floor as the hospital, and two movable night-chairs; that the hospital shall have separate accommodation for males and females, and that each estate with not more than 50 immigrants shall have hospital accommodation for 10 beds, from 50 to 100, 15 beds, and 5 per cent for every additional hundred. Between the beds there is required to be a space of three feet, and when the beds are placed in rows, a space of six feet between the rows. Each patient shall have a minimum of 1,000 cubic feet of space. Each bedstead is to have a bed and pillow-rack with suitable dry material for stuffing, together with two sheets and a blanket. Every bed is to be supplied with a wash-basin, chamber utensil, tin cup and plate, and to have attached to it a black board for the record of the patient's case; also to have at its head a small shelf. There being no rules as to the construction of hospital buildings, it was natural that the Commissioners should find buildings of every kind used for the purpose. But their testimony to the general goodness of the accommodation in this respect should be given in full. "Happily," they write, "the old, ill-adapted buildings are being superseded by hospitals built for the purpose; and instead of the close, ill-ventilated cells which the rooms in a private house make when they are altered into wards in a hospital, and the steep break-neck stairs which, when the wards are enlarged, replace the former staircases, we find fine open wards with broad verandahs mostly built on a single floor, and well raised on pillars from the soil; and though, as will be seen from the notes of our visits to estates, we found several bad hospitals, and defects in every department, yet the system taken as a whole must be considered a credit to the colony, the misfeasance and defects a discredit to those only who are concerned in them. Dr. Shier in his 12th report, says—'It will be found that the estates' hospitals and dwellings of the immigrants are generally in a satisfactory condition; and where they are not so, it will be principally found that it is on the estates on lease, estates in the market to be sold, estates partially or wholly in the Administrator-General's hands.' The same was very much our own experience."

The Commissioners then proceed to record their experience of hospitals, and first as to accommodation.—Even the primary rule that there shall be at least two wards,—one for males and one for females,—has not been always observed. But the Commissioners believe that it is not now and will not in future be infringed. Many instances are given of an insufficient amount of space, involving of course infringement of the rules as to space between beds and rows of beds. Hospital kitchens seem to have been found satisfactory on the whole. The cooks employed are, however, generally negro women, who are "slatternly and careless." Indian immigrants are recommended as cooks. In Demerara there are no objections made on the score of caste, and the Commissioners even record an instance where they found a Mahomedan "cooking pork and serving it out to his fellow-countrymen and co-religionists with greatunction."

It is clear that the law forbidding the allocation of immigrants to estates without sufficient accommodation has been too laxly administered, the plea of want of means being too listened to. "We find the disposition," says the report, "when retrenchments are recommended with the hospital; and that, until embarrassed circumstances can be tidied up and conveniences of the immigrant are postponed to the convenience of the estate of things that certainly ought not to be allowed. As soon as an estate is in a better state of things as to prevent the proprietors fulfilling all the requirements towards the immigrants, the latter ought to be removed from the estate."

either from the Commissioners' own experience or recent reports of Dr. Shier.

They ought not to be called upon to sacrifice any of their rights to assist in saving the estate from bankruptcy, or to aid it in extricating itself from difficulties. Assistance in that direction should be sought from free agents and not from indentured immigrants."

2. *Baths and Privies.*—The requirements of the law as to baths and bath-rooms were found to be "utterly neglected." The provision of privy accommodation was often insufficient. The Commissioners "recommend the system of deodorising at *Leonora* for general consideration, and that the provisions of the circular should be upheld; and that when a hospital is of two or more storeys, there should be a water-closet, or whatever may be required of that kind, on every storey, as is the case at *Enmore*."

3. *Beds.*—Under this head are recorded instances more or less numerous of infringement of every one of the provisions of the circular; insufficient supply of beds, absence of bed and pillow sacks, insufficiently-stuffed beds and pillows, insufficiency of sheets and blankets. The circular does not prescribe any form of bed. The Commissioners recommend one of canvas stretched across an iron folding frame.

4. *Clothing.*—Neither the Ordinance nor the circular makes the supply of hospital clothing a duty of the manager. But it seems to have been accepted as such in theory, though the duty was not very faithfully performed. Even where "shirts" were supplied, they seemed ill-suited to the habits of the immigrants. The Commissioners found that in certain plantations where the women were furnished with a skirt and bodice and the men with a shirt and pair of drawers there was no difficulty in getting the patients to abandon their own clothing on entering the hospital.

5. *Utensils.*—This requirement is not more strictly observed than any of the others. The circular of 1859 requires the keeping of a list of medicines and surgical apparatus and appliances. These the Commissioners as "laymen" did not examine; but they never heard any complaint of want of medicines. In this connexion it is pointed out that hospitals must be classed otherwise than according to the quantity of medicine kept in store, as the estates near Georgetown can always get fresh medicine from the shops in that town, and need not keep such a supply as the more distant plantations.

6. *Stocks.*—"There was formerly," say the Commissioners, "and continued to be down until nearly the middle of 1870, an instrument in several of the hospitals not included in the circular of 5th November 1859, either among the medicines, apparatus, and surgical appliances, or hospital accommodation and appliances, but which we may as well mention here. We refer to the stocks." Indeed, they were not all removed at the time of the Commission. "At *Leonora* they had been retained for our inspection, though if that was the sole cause of their retention we could not see the necessity of retaining three for that purpose, as one would have sufficed." The modern application of this "relief of the old régime," in other words of slavery, is discussed by the Commissioners in a dry satiric way. It is enough to say here that the use of stocks in any way has now been definitely prohibited by the Governor.

7. *Diet.*—The already often-quoted circular gives four tables of diet, which the doctors prescribe *pro re nata*.

(a) Ordinary diet *viz.*—

- 8 oz. bread.
- 8 " salt-fish (for which 8 oz. fresh beef or 4 oz. salt beef may be substituted).
- 1 oz. butter or 2 oz. pork.
- 2½ " cooked plantains.
- 2 " sugar.

(b) Coolie diet, *viz.*—

- 8 oz. rice.
- 4 " salt-fish.
- 4 " pease.
- 1 " butter, or 2 oz. pork.
- 1 dr. curry stuff.
- 8 oz. biscuit.
- 2 " sugar.

(c) Spoon diet, *viz.*—

- 4 oz. bread.
- 4 " sago or arrowroot.
- 4 " sugar.

(d) Milk diet, *viz.*—

Spoon diet with the addition of 1 pint fresh milk.

The Commissioners found it "painfully evident that the diet is not invariably issued according to the prescribed scale." Indeed, after an exhaustive examination of upwards of sixty cases, they put the fact much more strongly, saying "patients hardly ever get the diets prescribed."

8. *Hospital Enclosures.*—The erection of these, so insisted on by Dr. Shier, does not appear to the Commissioners of any vital importance, nor is it mentioned in the Ordinance or in the circular.

9. *Improper use of Hospitals.*—The rule reserving hospitals solely for the treatment of the sick seems to have been often violated. Indeed, throughout this section, it is manifest that partly owing to the feebleness or excessive mildness of Dr. Shier, and partly to the degradation of the Immigration Office to a position of absolute dependence, no attempt has till lately been made to enforce with a strong hand the rules, sufficient as on the whole they were theoretically, in regard to hospital appliances.

10. *Lock-ups.*—Among the most objectionable forms of misappropriation of hospital room is the employment of a portion of the building as a temporary lock-up for the drunk and disorderly, or the like. Yet of this the Commissioners record several instances, of course with emphatic condemnation. "There are," they say, "or ought to be, rural constables on all estates; and if a man is so riotous that he need to be put in confinement, the rural constable should at once take him to the station, whatever time of day or night it might be, and not lock him up anywhere until it suits his convenience to take his prisoner there."

11. *Hospital Rules.*—In default of rules by the committee, which (see above) 'thought itself wiser than the law and declined to act,' managers seem here and there to have framed rules. It is manifest that these cannot take the place of rules sanctioned by an express law, and the infringement of which is made punishable by a fine.

12. *Convalescents.*—The Commissioners recommend the practice followed on some estates, of forming convalescent gangs employed on suitable and moderate labor, under the frequent inspection of the medical man in charge of the hospital.

13. *Sick Nurses.*—The Ordinance requires two nurses,—one male and one female; in cases of unusual sickness the medical practitioner may call on the manager to employ additional nurses. In this respect, too, the law is not always observed. Neither the duties nor the qualifications of sick nurses are defined by the law, and the provision that unless they have certificates of competency from the Colonial Surgeon-General, or the Medical Inspector, the medical practitioner shall compound his own prescriptions, is a "dead letter." In the qualifications of this class of attendants as actually existing there appears to be much room for improvement. The Commissioners could not perceive much difference between trained and untrained nurses, but are "decidedly of opinion that in order to make trained nurses not only efficient in themselves but of real service in the hospitals it is not sufficient to give them education and training in the Colonial Hospital or other schools; but when they leave the Colonial Hospital, the authorities there should not lose sight of them. They now leave the hospital with their licenses, which they ought to send for countersignature every six months, but we have seen this never has been done. There is no record kept of dispensers who hold certificates, nor where they are at present employed; in fact, nothing is known of them after they leave the Colonial Hospital. No report even is made of a licensed sick-nurse being dismissed. Under such circumstances, it is no matter of surprise that managers make the same complaints against the trained nurse as they do against the untrained."

14. *Medical Practitioners.*—These must be medical men holding a diploma from some university. They are bound to visit each hospital in their charge once in every 48 hours, Sundays excluded. Even this fundamental rule is not always observed. The rules requiring the medical man to keep the register and case-book in his own hand, to make up the medicines where there is no certificated nurse, and to inform each patient of the diet ordered him, are, it appears, systematically neglected, while the duty of taking care that the hospital and its appliances are clean and in good order has been very laxly interpreted and very perfunctorily carried out. As to the actual treatment of the sick, the conduct of the medical practitioners seems to have been on the whole not open to objection.

15. *Medical Inspector.*—The duties of this functionary are to visit each estate twice a year, and to see that the provisions of the Act as to hospitals and medical attendance are carried out. Dr. Shier, who has continuously held the office, is shown to have pushed the "policy of conciliation" to the most preposterous lengths. "We cannot find," write the Commissioners, "that he ever enforced an observance of his instructions by means of the law, or that he ever by mentioning a time within which an alteration was to be made took pains to put himself in a position to enforce it." The fact that every rule of law which it was Dr. Shier's duty to see enforced was over and over again, and in many cases habitually, violated, sufficiently justifies the Commissioners' censure of the weakness of his administration. His visits, moreover, were too short to be of real use.

16. *Joint Hospitals* should on no account be encouraged.

Alms-house.—Within three months of allotment an employer may represent that an immigrant is permanently unfitted for labor by incurable disease, and, if the allegation be proved, the immigrant may be sent to the alms-house, the employer receiving back the amount of indenture fee paid. On the 19th January 1871, there were 13 Indian immigrants in the alms-house, blind, idiotic, maimed, or paralytic. A record of those under indenture should be kept at the Immigration Office. It does not appear to have been kept hitherto.

Material condition and prosperity.—The fact that there are thousands* of immigrants, who have been 15 or 20 years in the colony, and who have not availed themselves of the privilege

* A rough estimate puts them at 20,000. The Governor says that not more than one-fifth of these entitled to back-passage assert the right. In a recent report, of 4,315 re-indentures 2,135, or about half, were re-indentures of laborers entitled to back-passage.

of repatriation proves to the Commissioners that they consider their position in British Guiana at least equal to what it was in India. There are, however, but few openings except agricultural labor. Still a few immigrants make their living by keeping carts, cows, lodging-houses, small shops, and by making coconut toddy; several have joined the police, and a few old sepoyas have been admitted into the West India regiments, in which many more are anxious to enlist. As an exceptional case, the Commissioners mention a "Mr. Parahoo," who came as an immigrant, and is now a thriving livery stable-keeper. The coolie generally puts his savings into the form of jewellery. "There seems," says the report, "to be some need of legislation to remove doubts as to the ownership of property in such trinkets. The marriage law is loose among these people, and it is not clear that either a wife or 'reputed wife' ought to be allowed, if she leaves her consort, to carry away with her all the treasure he has accumulated upon her person." Cow-keeping is a favourite investment; but the privilege of pasturing cows seems to be capriciously awarded on some estates.

At present the crown lands of the colony cannot be sold in smaller lots than 100 acres. This at 10 dollars an acre is prohibitive to the immigrant who may wish to purchase land. Drainage is also an expensive matter in the tropical Holland which Guiana seems to be. Hence the laborer can only purchase when there are in the market private lands for which the drains have been already constructed. An Ordinance of 1850 allowed the immigrant to commute his right to a return passage for a piece of crown land. The provision, however, seems to have been a dead letter. But for 20 years ending 1870 the colony has paid some £100,000 for return passages, and the amount paid under this head is yearly increasing. A recent report shows that Governor Scott is considering the feasibility of settling Indian "villages" on the crown coast lands, Government maintaining the sea-face embarkment, and the village community the internal drainage works. Any such high land as would not require drainage is, as we have seen, situated at such a distance from the settled parts of the colony that it would not be suitable for the location of Indians.

Including both Indians and Chinese, 300 have taken out licenses for provision shops, 600 for dogs, 90 for carts and horses or donkeys, and three more for carriages for hire; a few hold licenses to retail opium and coconut toddy. The total sum paid for such licenses by immigrants is between \$4,000 and \$5,000 per annum. Some lend money to Portuguese shopkeepers; the interest is not high and the security is bad. The Government savings bank has not branches enough to make it generally useful; the interest too is only three per cent.; but on 13th June 1870* there were 1,817 immigrant depositors, with deposits amounting to \$138,425, or something over \$70 a head. The Commissioners estimate the value of the cattle owned by Indians at \$636,885.

The Commissioners doubt the possibility of an accurate estimate of the amount of savings carried away to India. But the amounts *officially* remitted on account of 2,828 immigrants who returned between 1834 and 1869 was nearly £95,000, or about £34 a head. "It seemed" to the Commissioners "to be the fathers of families who had thriven best; but we did not succeed in finding any one who had made a large sum of money without having been aided to his wealth by trade and having lived for some time in the colony as a free laborer." One of the most successful was a Brahmin who had accumulated an acknowledged sum of \$300 in 18 months by *begging*. On this point of savings such figures as are available have been given in Part II.

Comfort and luxury in our sense of the words are not to be looked for among the Indian immigrants, nor does their absence imply extreme poverty. Gardens cultivated by the immigrants are rarely found. The Commissioners think some care expended in encouraging their formation would not be thrown away.

Moral condition and improvement.—Under this head the Commissioners first notice the "great prevalence of wife-murder." In an Indian population, where the men are to the women nearly as three to one, and where the restraints of caste and even of religion seem to be completely relaxed, it is not wonderful that sexual relations should be the cause of a large amount of crime. The "panacea for all disputes and quarrels between men and women," or between men about women, seems to have been "the removal of somebody." The Commissioners think that the penal law even as existing has not been administered with sufficient severity. The remarks of the Commissioners on the subject of marriage seem to me to shew that the Immigration Office has something to answer for in its mode of treating the bond of marriage. It "appears to ignore all marriages." The Commissioners recommend that people claiming to be man and wife by virtue of a marriage contracted in India should be required to register their marriage without delay, and that greater facilities should be given for the marriage of indentured immigrants in the colony. (At present they must go to Georgetown to be married.)

The Tadjah festival (meaning, I suppose, the taziah, i. e., the muharram) seems to be a sort of amalgamation of the Muhammadan festival with the Hindu Holi, and is observed at "any time in February and March." It seems to be a disorderly business. Riots are, however, not common, but violent assaults on managers and overseers sometimes occur. "In other respects the immigrants are an order-loving people. The failing of the coolies is in the direction of common assaults, that of the Chinese in the direction of larceny." Missionaries do not seem to have been active among the immigrants, or to have met with much success. On the other

* A more recent report shows 2,501 Indian depositors with savings amounting to £47,055, or upwards of \$230,000.

† But in point of fact the statistics on the subject are of the meagrest. An enquiry was made in India, which resulted in the general conclusion that of the total number of persons murdered one-fourth were women, while of these again about half were wives murdered by their husbands.

hand, "except in the most remote parts of the colony, both coolies and Chinese appear to have abandoned all outward observance of their religion. We noticed but one Hindu temple in the Island of Wakenaam, and one high up the Berbice River." The exception seems to me curious. Governor Scott in some recent letters notices that among the Indians much demoralisation results from drink, and I deeply regret to see that he thinks the vice of drunkenness on the increase. I fear the temptation of cheap rum and the obliteration of caste have developed the habit of drinking, even in laborers of classes abstinent from alcohol in India.

The Commissioners estimate the number of children under 10 years at nearly 5,000. The Planters' Committee's returns shewed 1,300 attending school. But this estimate the Commissioners could not accept, and it is clear from their report that no real school system exists. This is not, however, altogether the planters' fault, for the temptation afforded by the facility the children have of earning 6d. a day by light work is too strong for the parents.

The Creole question. Comparison of wages, past and present.—This is chiefly discussed from the point of view of the Negro laborer. But as the immigrant's wages are by law made to depend on those of the creole, it is a subject of much importance for us too. The conclusion the Commissioners arrive at, from such data as are available, is that "the rate of wages is lower now than it was sixteen or twenty years ago," and that there is very little difficulty in tracing the cause of this to the introducing of immigrants whereby the command of the labor market was taken out of the hands of the Negro." But the fall in wages has been slight during the last 10 years, and "with a little care in regulating the number of immigrants to be imported annually according to the requirements of the colony," the Commissioners do not expect a further fall, supposing the extension of cultivation to continue. Comparing the present with a period of 20 years ago there has also been a considerable rise in the prices of provisions and the necessaries of life generally, and this has been in a great degree due to the imposition, within that period, of import duties on articles in common use. This form of impost was adopted at a time of great depression in order to catch in its meshes the creole laborers, then the most prosperous class in the colony. This justification of the import duties no longer exists, and "the colonial tariff" assuredly, as the Commissioners observe, "offers a fine field to some future financial representatives." Since 1857, however, the prices of the articles of common consumption have been pretty steady; the tariff has varied but little. On the other hand, "the amount contributed by import duties, excluding wine and spirits, is, when compared with the increase of population during the same period, far too nearly at a stand-still to shew a healthy condition of colonial finance."

The colonial question. Present condition of the Sugar Industry. Colonial subsidy to immigration.—These subjects are somewhat sketchily reviewed. But the conclusion of the Commissioners with which we are concerned seems to be that the sugar industry of Demerara does stand upon a stable basis, and that there is no such probability of a sudden collapse as would make it desirable to check immigration on the ground of a possible *décaissement* of a large number of laborers. The condition attached is, however, one that should be insisted on. "It should be carefully ascertained year by year how far the taking up of new land keeps pace with the introduction of immigrants; and when this is found to flag, the other ought to be checked." It is suggested by Mr. Jenkins in his book "The Coolie," and to my mind pertinently enough, whether the best check upon an 'unhealthy forcing' of immigration would not be supplied by making the planters pay the whole cost of immigration, instead of only sharing it with the general public of the colony, including the immigrants themselves.

It is but right to add that the question of remedying the state of things disclosed by the Commissioners' report has been vigorously taken up by the Colonial Office, and a draft Ordinance prepared under Lord Kimberley's instructions by Sir G. Young, a member of the Commission, has been forwarded to British Guiana. The provisions of that Ordinance have been explained in a separate note, but as we are now dealing with the past, or at most the present, I have not referred to them in detail here.

TRINIDAD.

The materials at hand for a sketch of Trinidad are very scanty; the *Encyclopædia Britannica* (edn. 1860) gives a brief account from which I extract the following facts:—This island lies off the coast of Venezuela between 10° 5' and 10° 50' N. lat. and 61° and 62° W. long., and has an estimated area of about 2,000 square miles. The northern, eastern, and southern coasts are steep and lofty and indented with few creeks, or harbours, but the Gulf of Paria on the west forms one vast harbour, and on this side the coast is low, the ground rising towards the interior. Three chains of hills traverse the island from east to west, thus forming two wide plains. The most rugged and lofty is that fringing the northern shore; it is interrupted by many valleys and passes, and in some places reaches the height of 3,000 feet. The central and southern chains are lower, consisting of rounded hills or knolls from 600 to 1,000 feet high. The surface between the ranges is occupied by plains and undulating tracts, and along the west coast lies a low sandy region partly interrupted by marshes. The island is well watered and the soil is generally fertile. The climate is esteemed healthy for the West Indies, though the heat is considerable, the temperature ranging from 70° to 85° Fahr. The island is exempt

* This is certainly the case if Mr. Caird's statement made in 1853 be accurate, viz., that an able-bodied coolie working seven hours a day could easily earn from 20 to 40 cents.

† One seems, however, to have occurred in 1870.

from drought, and the winds blow regularly. The rainy and dry seasons are well marked, the former lasting from June to November, the latter occupying the rest of the year. The following passage apparently relates to the year 1856: "About 60,000 acres are in cultivation. Sugar, coffee, and cocoa are the most important productions; cotton, tobacco, and indigo are also raised. The principal articles exported are cocoa, raw cotton, sugar, molasses, rum and hides, and the total value of exports in 1856 was £574,767." The exports of sugar seem to have risen steadily from 483,000 cwt. in 1852 to 752,000 cwt. in 1867. The settled portion* of the colony is divided into eight counties, and the administration is conducted by a Governor, an executive council of three and a legislative council of thirteen members, all appointed by the Crown.

The island was discovered by Columbus in 1498, and first colonised in 1598 by the Spaniards. In 1676 the French held it for a short time, but it was speedily restored to Spain; and in 1797 it was taken by the British, who have retained possession of it ever since. The population in 1851 was 68,600†, of whom about 40,000 were natives of the island, 1,810 Africans, about 4,000 East Indian coolies, and 720 of British extraction. Beginning in 1783, a large immigration from the French West Indian Islands took place, and the descendants of these creoles, white and black, probably contributes largely to the 40,000 "natives" of the census of 1851. The law is partly Spanish, partly English, and is administered by a Chief Justice and a Puisne Judge.

The Trinidad law relating to emigration was consolidated into one Ordinance in 1870, and exhibits some points of difference from the legislation of the other cooly-importing colonies. The Ordinance is not express as to the financial basis of immigration in Trinidad, further than stating that an indenture fee of £5 is payable by each employer of labor for every immigrant indentured to him. Whether the balance of the cost of introduction and other charges are met from the general revenue, or, as is the case in most other colonies, from a special export tax, is not apparent.

The Immigration Department seems to consist of an Agent General and two Inspectors‡ or Sub-Agents, but I am not quite certain as to the number, or whether a Sub-Agent is the same as an Inspector. The Agent is charged with the usual duties, viz., inspection of immigrants upon arrival, allotment to estates, and inspection. Every estate must be inspected by the Agent, or in case of his being prevented by illness or other cause allowed by the Governor, by one of his subordinates, once in every six months. According to Canon Kingsley, "one of these officers, the Inspector, is always on the move, and daily visits, without warning, one or more estates, reporting every week to the Agent General." The powers of the Agent far exceed those assigned to the corresponding functionary in any colony. He may, "in case it shall appear" to him "that any immigrant has been ill-used by his employer, or in case of any neglect of duty or breach of contract in the part of such employer, by notice in the *Royal Gazette*, cancel the indenture of such immigrant; and no immigrant shall be allotted to such employer under any application previously made by him." In allotments the Agent has discretion, but must not separate husbands and wives, nor children under the age of fifteen years from their parents or natural protectors.

Contracts are for five years. The immigrant binds himself to work for 280 days of nine hours each in each term of twelve calendar months, for wages at the same rate "as may be at the time paid to laborers not under a written agreement residing on the same plantation or in the neighbourhood, for every day on which such immigrant shall work or be willing to work." "But" says Mr. Kingsley "for this system task-work is by consent universally substituted." Recently an Ordinance has been passed prescribing 25 cents as the minimum wage of an adult male for a day's work of nine hours. If the immigrant is unable to work on account of sickness, he is to be supplied by the employer with "such allowances as the state of his health may require, or as may be prescribed by any regulation issued or to be issued by the Governor." It is not quite clear whether days of certified sickness count towards the 280 days of work required in each year. Wages are to be paid fortnightly and in money, and may be recovered in a summary manner before any Stipendiary Justice of the Peace. Absence from work without lawful excuse§ involves a penalty on conviction of seven days' imprisonment for a first, and thirty days for a second or subsequent, offence, in case of a man, and of fine not exceeding ten shillings, or in default one month's imprisonment, in the case of a woman. And the convicting Justice is bound to order the immigrant to make good the days of absence by an equal number of days of work after expiry of indenture. Copy of this order is sent to the Agent General and by him endorsed on the immigrant's indenture. Each employer is bound to keep a "labor book" or record of the labor performed by every laborer, and the quarterly returns by employers include, among other items, a record of labor performed. When from such returns or otherwise it shall appear that 15 per cent. of the adult male immigrants on any estate have earned less than 6d. a day for every day in any year, no further allotments are to be made to such plantation. The provisions of the law as to "vagrancy" are very stringent. Any immigrant found outside the land or house of his employer may, without warrant, be stopped by an officer of the Immigration Department, or by any person authorised in writing by such officer to do so, or by any public constable (indeed the latter is "required" to exercise this

* The estates employing coolies all lie on the west coast of the island, and are more or less contiguous.

† Mr. Kingsley says, it is "now far larger." The census of April 1871 is said to shew 22,890 Indian immigrants of all classes, as compared with 13,488 in 1871. To the first figure must be added 4,545 children born in the colony of Indian parents, thus giving a total population of Indian extraction of 27,435 souls.

‡ An Assistant Inspector has also been lately appointed.

§ In the absence of any commentary it is hard to understand how this is interpreted. Can a cooly absent himself from work for the first eighty-five days of the year?

power), and unless the immigrant stopped can produce a certificate of industrial residence, or of exemption from labor or a ticket of leave signed by his employer, he may be taken before the nearest police station and detained till he can be taken before a Stipendiary Justice of the Peace. If it be discovered to what plantation the man belongs he may be sentenced to seven days' imprisonment with hard labor; but if it "shall not be made to appear to such Justice in respect of what plantation the services of such immigrant are due," and the immigrant cannot shew that he has completed his industrial residence, the imprisonment may extend to three months. The Magistrate is bound to order the immigrant on expiry of sentence to be taken back to his plantation; if known, I suppose. Employers are bound under a penalty of £20 not to grant leave, except for special cause to be stated in writing for more than twenty-six days in the year, or than seven days at any one time. The penalties against harbouring immigrants not under indenture to the person harbouring are also very severe. This phase of the Trinidad legislation appears to be due to the practice on the part of "squatters" on the island, and cocoa planters on the Spanish main of enticing away indentured immigrants.

For the first two years of indenture the employer is bound to supply rations. For each immigrant above ten years of age the daily ration is 1lb. rice, 4 ounces dal (or such equivalent quantity of vegetable food as the Agent may allow), 1 ounce cocoanut oil or ghi, and 2 ounces of sugar; for each child between five and ten years of age half the above. For rations to those above ten years of age 4d. for each day may be deducted; those to children under ten are given free. After twelve months of rationing the immigrant may apply to have his wages paid him in money, and the Agent may make an order in writing to that effect.

The Act empowers the Governor to make regulations respecting the lodging, medicine, and medical aid, food, and clothing to be provided for immigrants, and to fix a penalty not exceeding £10 for breach of such regulations; also to make regulations for enforcing the observance by immigrants of cleanliness in and about their dwellings under penalty of a fine of 5s. But copies of the regulations framed under this clause are not forthcoming. As to hospitals the law is express. No emigrants can be allotted to an estate, unless a hospital sufficiently ventilated and otherwise fit for the accommodation of patients is provided, sufficient to hold 10 per cent. of the number of indentured immigrants on the estate at the rate of 800 cubic feet per man. "Medical visitors" are appointed by the Governor and are bound to visit every certified hospital in their respective circles at least twice a week. Overcrowding of a hospital or neglect to send a sick immigrant to hospital render the employer liable to a fine of £10; and if the medical visitor shall report that any hospital is unfit to be used as a hospital, the certificate may be withdrawn and all immigrants on the estate removed. An important clause enables the Governor by notice in the *Gazette* to "cancel the indenture of any immigrant if the Agent General shall report that the accommodation provided for such immigrant is bad or insufficient, or that any immigrant requiring medical care and treatment has not been sent to hospital or received proper medical treatment, or if the Governor shall on any other ground consider it requisite so to do." When the deaths upon any plantation amount to more than 7 per cent. in any year, no more immigrants are to be allotted.

On completion of the five years of indenture, together with any days of absence duly endorsed upon the indenture, the immigrant is entitled to a certificate of industrial residence, and on completion of ten years' actual residence to a free return passage. The fee for replacing a lost certificate (£2-1-8) seems unnecessarily high. An immigrant may redeem the last two years of his indenture by payment at the rate of 5s. a month for the unexpired term, plus 2½d. for every day of absence from work endorsed on the indenture. He is then entitled to a certificate of industrial residence. He may also commute his back passage for a ten-acre grant of crown land.

A clause in the Act empowers the immigration officers to enter upon any plantation, and enquire into any breach of the peace or offence against the Ordinance which may have taken place on the plantation, and to administer oaths and issue warrants. But it does not seem that they have further power to try any case. The Act appears to contemplate the Stipendiary Magistrates having jurisdiction in all cases of "breach of contract or neglect or violation of duty" by the immigrant, as well as in the specific cases on either side to which penal consequences are attached. But without some explanation of the working of the law the subject remains rather obscure.

The last report for Trinidad appertains to the year ending 30th September 1871. According to that report there were then employed on estates in the colony the number of Indians shown in the margin. It is to be remembered that in Trinidad no immigrant under ten years of age is indentured; hence all boys and girls under that age are entered among the unindentured. Of the 10,616 under indenture, 8,787 were under the first indenture of five years, the remainder 1,829 were re-indentured on bounty for one year. Among the indentured the mortality was 474 or 4.46 per cent. There were also 53 deaths of children; but as it is not clear what proportion of the children belonged to the families of the indentured, among whom only is the registration of deaths maintained, the percentage calculated by the Agent upon the whole number, though apparently very favourable (1.44 per cent), is quite valueless. The Agent has no statistics of mortality among free resident coolies, but believes that a compilation of deaths

Indentured	Men	7,437	10,616
	Women	3,179	
Unindentured	Men	3,017	7,940
	Women	1,254	
	Boys	1,391	
	Girls	7,940	
TOTAL		18,556	

among this class, as well as of those among the coolies absorbed in the general population, would shew very satisfactory results as to the sanitary condition of the Asiatic after acclimatization.* But the Agent's own table of deaths among arrivals of the years 1867-1871 inclusive, shews that the process of acclimatization is very severe. I extract the table as a remarkable one:—

	1867.	1868.	1869.	1870.	1871.	
Arrived	2,402					
Died	107					
Rate	6.4					
Remained	2,235	Arrived. 1,655				
Died	134	126				
Rate	6.4	7.4				
Remained	2,101	1,529	Arrived. 1,829			
Died	78	109	75			
Rate	3.7	7.1	4.1			
Remained	2,023	1,420	1,744	Arrived. 2,211		
Died	47	66	162	77		
Rate	2.3	3.9	9.3	3.4		
Remained	1,976	1,364	1,582	2,134	Arrived. 1,823	8,879
Died	33	46	83	165	70	402
Rate	1.9	3.4	5.2	7.7	3.8	4.5
Remained	1,938	1,318	1,499	1,069	1,753	=8,477

It will be observed that since 1869 the mortality in the first year has fallen considerably, but that in the second year there seems to be a re-action. The Agent attributes this double result to (1), the rationing system being made compulsory for the first year; and (2), its undue relaxation during the second year. On the whole the mortality seems to have been rather on the increase, if the following figures, taken from such reports as are available, be trustworthy:—

YEAR.	Number under indenture.	Deaths.	Percentage.
1863	10,072	258	2.56
1864	9,787	334	3.41
1865	—	—	2.5
1870	10,247	492	4.80
1871	10,516	474	4.46

As to the wages generally earned, the information afforded is not very definite. From the report for 1870-71, it seems that "a task," i. e., a day's task, was paid for at the rate of 25 cents to a free laborer. But a practice had grown up of paying the indentured coolie only 20 cents for the same amount, unless six tasks in the week were performed. The Agent, however, says that at the time of report this practice has been discontinued. Governor Longden, in a despatch dated 25th May 1872, says that the general rate of wages had risen, and puts it at from 30 to 40 cents a day. We have already seen that a minimum of 25 cents has been established, but this does not preclude agreements to work by the task. It is admitted that under the old rule as to rate of wages, in many cases, the immigrant in the first year did not earn enough to pay for his rations, or in other words, 4d. a day for every day of the year, and embarked on his second year of service "with a considerable debt" on his shoulders. On the other hand, return emigrants carry away considerable savings. The Emigration Board reports that 3,201 emigrants have returned, carrying on an average nearly £20 each. In 1869, 372 carried away £16,087; in 1870, 408 returned with £12,736; and in the following year, 159 sailed with £1,716, besides four who returned *via* Suez at their own expense, carrying nearly £2,000 in bills, and "a considerable sum in gold."

* Dr. Mitchell, however, in his report for 1869-70, seems to accept a death-rate of 3 per cent. for the whole Indian population resident on estates.

The number of absentees seems to be diminishing. Thus in 1864 there were 600 such cases; in 1870-71 only 279. The decrease is said to be due partly to the rationing clauses, perhaps, also, in part to the stringency of the regulations on the subject of "vagrancy."

The number of convictions of immigrants for breach of contract in 1870-71 was 745, a figure of somewhat sinister significance. Of cases against employers, there is no record. There seems little serious crime, but there were 418 cases of misdemeanour.

In the two years, 1869-70 and 1870-71, 253 immigrants redeemed either one or two years of their period of service. The system of commuting back-passage for grants of land seems to have been much in favor in Trinidad, and up to the end of 1871, 285 such grants had been made. In the Montserrat Ward, that most affected for this purpose, there were 357 adult men, 199 women, and 246 children settled on such lots, and the death-rate was said to be but 1 per cent. Some trouble seems to be taken to give these settlements a good water-supply and carefully laid out dwellings, and to provide for the comfort of the settlers. For instance, areca palms and betel vines are supplied gratis from the botanical gardens. Comparing the figures of the census with those of the report of the Emigration Agent, there would appear to be, besides the Indians on estates, about 9,000 absorbed in the general population. The Emigration Board calculates the number of those who, having become entitled to back-passage, have foregone the privilege for one reason or another, as upwards of 7,000. Some attention is being given to education, though the average daily attendance in 1871 was only 131. The Agent records the somewhat curious fact that, the coolies of San Fernando and the neighbouring estates had subscribed some \$700 towards the erection of a building for the performance of Christian worship.

JAMAICA.

JAMAICA lies between 17° 40' and 18° 30' N. Lat., and 76° 10' and 78° 30' W. Long. Its extreme length is 140, its extreme breadth 50, geographical miles; its area, about 6,400 square miles. The island is traversed longitudinally by a range known as the Blue Mountains, rising in places to heights of 7,000 and 8,000 feet; this range, again, is intersected by other high ridges, and the whole central mass of highland is surrounded by a lowland margin. The main staples of export are sugar, rum, coffee and pimento. Cocoa, cotton and indigo were once among the number, but the industries have dwindled, or, as in the case of indigo, disappeared. The sugar-cane and pimento tree seem grown mostly in the lowlands; coffee upon the higher hills, while the table-lands of the west and south, with their luxuriant growth of guinea-grass afford capital grazing, and form the site of the "breeding-pens," where cattle and horses of excellent quality are said to be reared. The Immigration Act of 1858 specifies, as the fields of labor, "any sugar, coffee or other plantation, breeding-pen or pimento-walk."

The population of the island at the last census was found to be 506,174 souls, of whom 9,797 were of Indian extraction. I imagine that at least four-fifths of the total population consist of pure-blooded negroes, but I have no recent figures.

The history and traditions of the colony can hardly be considered such as to make it *prima facie* a favorable resort for laborers of the dark races. From the extermination of the mild aborigines by the Spaniards, to the severities of Governor Eyre, the white man has ever been in a hostile attitude to the black on the soil of Jamaica. Sir J. P. Grant admits that in 1863 the state of things in the Emigration Department had been so bad that he became convinced that if it could not be thoroughly reformed, the whole system must be abandoned. The colony fought hard against emancipation, and it was not till 1845 that Indian immigrants were introduced. In that and the two following years, India sent upwards of 4,000 souls. Emigration then ceased for 12 years, the colony being torn by intestine disputes, and its commerce, meanwhile, diminishing. In 1859 emigration was resumed on a small scale, and in the 12 years 1859-70, about 9,000 souls sailed from Calcutta, and about 500 from Madras.

The expenses of importing cool labor seem to have been met by loans, which again were met partly by export duties and partly by specific payments by employers of the labor imported. Under these circumstances the duties must, I think, have fallen on the producers. At present the employer pays a direct contribution of £1-10-0 for an adult, and 15 shillings for a non-adult for each year of indenture.

The present state of the law and practice in regard to immigration cannot be better described than in the following extract from a despatch from Sir J. P. Grant to Earl Kimberley, dated 9th April 1872. I have added as notes any additions which the other available papers may have suggested:—

"When an immigrant ship arrives in Jamaica, the immigrants are allotted by a responsible officer of the Immigration Department to such of the managers of estates as may have previously made application for them, under an indenture of service for five years.*

"But before any immigrants are allotted to any estates, or before any increase in the number of indentured immigrants is sanctioned, the Sub-Agent of the district in which the estate may be situated, is required to inspect the quarters in which it is proposed to place the

* A clause of the Act of 1858 seems, however, still to be in force reserving contracts for not more than three years made outside the colony if fully attested. Probably the clause is never applied in case of Indian immigrants.

immigrants, and to report to the Agent-General of Immigration the description of buildings provided; whether they be new or old; whether the site is on dry ground and properly drained; whether the buildings are properly ventilated, and whether they are in a proper state of repair. And in all cases in which the accommodation has to be built, the Sub-Agent is instructed to urge upon the employers to provide detached cottages for residences, in preference to barracks, the cottage system being found to tend more to the health of the coolies and to be preferred by them, and such description of dwelling being, moreover, what they have been accustomed to at home.

"As a matter of fact the planters have most readily met my wishes in this respect, and the building of barracks has ceased. All fresh accommodation now provided for the immigrants is upon the detached cottage system. In his Annual Report dated the 10th November 1871, the Agent of Immigration observes 'the new system of building detached cottages, seems to have improved the condition of the immigrant. I am glad to say that, generally speaking, these cottages have been carefully erected by the different employers, and they are considered a great improvement on the barrack system.'

"With regard to this remark, as to the manner in which the cottages have been erected, I am given to understand that, on some of the estates, particularly the Holland Estate in the parish of St. Elizabeths; the Frome and Fontabelle Estates in the parish of Westmoreland; the Augusta Vale, Gray's Inn, and Orange Hill Estates, in the parish of St. Mary's, and the Plantain Garden River Estate, in the parish of St. Thomas, not only are the cottages well built and comfortable, but pleasing as well as healthy localities have been selected for their site, and that the scattered groups, in which form they have in some instances been distributed, present a cheerful and picturesque appearance.

"The law in respect of indenturing is the 27th Vic. (Session 2), cap. 5; and it provides that it shall be lawful for the Immigration Agent to 'allot and assign' any Indian immigrant for 'any term not exceeding five years'; but the practice ever since the passing of that law has been to indenture the immigrant to one employer for the full term of five years. This practice seems to work well, and no complaints are made against it.*

"The provisions as to cancellation of indentures are contained in the 24th and 25th sections of the Act 22nd Victoria, cap. I. The Immigration Agent is empowered, with the sanction of the Governor, to cancel the indenture of any immigrant who shall not have been duly paid, or who shall have been ill-used by his employer, or in case there shall have been any neglect of duty or breach of contract on the part of the employer; and the Immigration Agent may also, with the sanction of the Governor, at the request of the employer and immigrant, cancel any indenture for the purpose of re-indenturing the immigrant.†

"By law 34, of 1869, section 4, the employer is bound to issue rations in kind, uncooked and including fuel, to each immigrant, according to a scale set forth in the law. The cost of these rations is fixed for each locality by the Governor, from time to time, by notice in the *Jamaica Gazette*, and the employer is allowed to deduct the amount of such cost so fixed, and no more, from the monthly wages payable to the immigrants.

"There is no doubt as to the sufficiency of the scale of rations, and no complaints, in regard to that scale, have been made. The cost may be taken at 3s. 6d. a week, or 6d. a day. This is the smallest amount which an indentured immigrant obtains, under any possible circumstances, unless he happens to be in prison, or unless he deserts. Desertion is now rare. And this amount is equivalent to four annas a day for every day in the year.

"The law requires that rations in kind shall be supplied to every immigrant under indenture; and if no special order is passed, this rule applies for the whole term of his five years' indenture. The law also requires, absolutely, that rations shall be supplied for at least

* Pending allotment, the Immigration Agent provides food and lodging. The same officer also is bound to keep up a full register of immigrants under indenture, the employers being required to report births and deaths. In 1859, the first term of indenture had been fixed at two years, capable of extension for three successive terms of one year each. In 1864 the five years' system was introduced. The law makes provision to prevent the separation of husbands and wives, nor are children under 15 years of age to be separated from their parents or natural protectors. The services of immigrants for the remainder of their term of indenture pass with the estate.

† Sir J. P. Grant seems to have overlooked the local Act 23 Vic., Cap. 31, which still further extends the power of cancellation. "If the Agent-General shall report that the accommodation provided for any immigrant is bad or insufficient, or shall report any proved misconduct of the employer towards any immigrant; or if, on any other ground, the Governor shall consider it requisite, the Governor may direct the said Agent-General to cancel the indenture of any immigrant; and also if he shall so think fit, of every other immigrant indentured to such employer."

‡ The present scale seems to be for each adult, i.e., each person over 12 years of age:—

1½lb. rice, or 2½lb. ground maize, or 2½lb. cooked manioc, or 5lb. raw manioc, or 4lb. raw yams or raw coccons, daily.
8lb. peas, monthly.
6lb. salt-fish or 8lb. mutton, beef or goat's flesh, monthly.
1lb. ghi, or 1 pint sweet oil or cocoa-nut oil, monthly.
1lb. salt monthly.
2oz. pepper or pimento monthly.
Sufficient for 1.

For every non-adult immigrant above the age of 1 year, half the above. The rations must be given in kind, or by order on a shopkeeper.

§ The cost chargeable to the immigrant, as at present notified, varies according to the district from 3s. to 3s. 3d. a week.

three months after arrival in Jamaica. But if at any time after the expiration of three months, the Agent-General of Immigration is satisfied that the immigrant is regularly earning and receiving, if a male, 6s. a week, or if a female, 4s. 6d. a week, and is further satisfied that the immigrant can, without difficulty, obtain a sufficiency of wholesome food, then the Agent-General, on the application of the immigrant may, by a written order, direct that the immigrant shall no longer receive rations, but shall receive the whole of his or her wages in money, payable weekly. If at any time after thus being permitted to provide his or her own food, the immigrant shall cease to earn and receive regularly, whether in the case of a male or female, at least 8s. 0d. a week, the Agent-General or the Sub-Agent of the district is required to revoke the order taking the immigrant off the ration list, and by written order again to place him upon it.

"By these provisions it will be seen that a supply of good and wholesome food, such as he has been accustomed to, is secured to the immigrant for, at the very least, three months after arrival, embracing the most critical period of his residence; and that it is only when an immigrant who is actually earning wages much more than sufficient weekly to enable him to purchase his own food according to his own tastes, has the opportunity readily to procure such food, that the estate is relieved from the obligation of providing good, wholesome, and customary food for him; and, further it will be observed, that whenever the immigrant may cease to earn such an amount of wages as shall be sufficient to enable him to purchase a proper amount of good and wholesome food, no matter from what cause soever, whether sickness, or bad weather, or leave, or misconduct, or any other reason, good or bad, then the obligation of the estate to provide him with such food is again imposed. Out of 4,608 indentured immigrants there were, on the 12th of February last, 513 receiving rations in kind; the rest, at their own desire, having been permitted by the Agent-General of Immigration to provide themselves with food under the circumstances before explained.

"When the immigrants are first allotted to the estates, the employer is required to issue gratis to each man a shirt and a pair of trousers, and to each woman a jersey with sleeves and a petticoat.

"Every immigrant is bound by law to work for his employer for six days in each week, and for nine hours of each day, Sundays, Good Friday, and Christmas Day excepted, and except in case of sickness, such

bad weather as prevents field-work, or other cause beyond his control. The working day is fixed at nine hours, as was also nominally the case under the old laws. But in practice the indentured laborer on day wages goes home whenever he has done what is here recognised as a fair day's work, which is all that is incumbent on him to do; and this is accomplished in much less than nine hours by a man who does not waste his time. The employer is bound to give work for the immigrant to do for six days in the week, unless the weather be so bad that field-work is impossible, under penalty of having to compensate the immigrant for every day's wages lost to him through having no work given him to do. For each day's work an immigrant is entitled to be paid, if a male adult, not less than 1s. a day; if a female adult, not less than 9d. a day; and the immigrant on his part is bound, in consideration of such payment, to do every working day a fair day's work of nine hours, having regard to age and strength. By mutual consent, however, leave for one or more days may be given and taken, and for such days no wages are payable. But, should both the immigrant and his employer desire it, an agreement may be entered into for working by task. The rates of task-work, in this event, must be sanctioned by the Agent-General of Immigration; and this officer is bound, before recognising the agreement, to ascertain that it is freely and intelligently made by both parties; and, further, the Agent-General has to satisfy himself that the rate of task-work is sufficient to afford wages of at least 1s. a day, with only ordinary exertion. This agreement can be put an end to at any time by the Agent-General of Immigration, should he find sufficient cause for so doing. Out of 4,608 indentured immigrants there were, on the 12th of February last, 1,056 upon task-work, the remainder being upon day-wages.*

"It is necessary here to state that when under the Jamaica Law XXXV of 1869, 'day wages' are mentioned, day wages are meant. Under the old Jamaica laws and indenture bonds the only stipulated pay was day wages. But in practice neither day wages nor anything having a resemblance to day wages were known. Thus, when a man was too weak to do the day's work of a strong man, he was half-starved, or more than half-starved, and so was made weaker still, recovery of strength being often made impossible to him. By the new law, if a weak man works fairly in proportion to his strength for working hours, he gets not only his full meals but his full day's wages. It is not his fault if weakly men are imported from India.

"No employer of an indentured immigrant has any power in his own hands to stop an immigrant's wages, either for a day or for any portion thereof. For every working day upon which work could be performed, and the immigrant was not on leave or sick, or on task-work, the employer is bound to pay the full amount of the day's wages, 1s. in the case of a male, or 9d. in the case of a female. The employer is not permitted to be the judge as to whether the work was performed and the money earned or not; but in cases of failure to work fairly, the employer's remedy is by complaint to

* The Immigration Agent says a good workman can at task-work earn, 1s. 8d. or 2s. 0d. a day without fatigue. But from these figures it appears that the average earnings by task-work are lower than by day-work. He gives the following statistics for March 1872: average weekly earnings (calculated on each district) of male day-laborers 5s. 2d. to 5s. 11d.; of female day-laborers 3s. 2d. to 4s. 0d.; of male task-laborers 1s. 1d. to 6s. 3d.; of female task-laborers, 3s. 1d. to 4s. 8d.

the immigration officer upon his periodical visit to the estate, who, after a summary investigation, on being satisfied of the justness of the complaint, may adjudge the offender to forfeit to his employer one day's wages (exclusive of rations), or such portion thereof as may appear to be proper for every day's default or portion thereof; and the immigration officer is entrusted with the further power of sentencing and committing the offender to the nearest prison for any term not exceeding one month with hard labor: and in cases of persistent idleness and determined breach of agreement, for which the limited powers of the immigration officers may be considered insufficient, the offender can be brought before the district court, and may be punished by a fine not exceeding an amount equal to three days' wages for every day's default, or by imprisonment with hard labor for a term not exceeding two months, or both penalties may be inflicted, and besides the offender being adjudged to forfeit to his employer the whole, or a portion of the wages payable for the days on which default was made; and in cases of a second conviction before a district court the term of imprisonment with hard labor may be extended to four months*. I am not aware, however, of one single instance in which a case of complaint has been brought before the district court. I believe that all the cases of complaint which have occurred have been disposed of, and, as the absence of resort to the district court would tend to show, satisfactorily disposed of, by the officers of the Immigration Department †.

"While, therefore, the law carefully protects the immigrant, and compels the employer to pay him the stipulated rate of wages, whether he considers those wages to have been earned or not, and does not permit the employer to be the judge in his own cause, so does it protect the employer, and furnish him with the means of recovering wages paid, but not earned, and of punishing an immigrant's idleness or misconduct by means of a summary and quasi-judicial process conducted by a disinterested officer.

"Due provision has also been made in 'Law XXXIV of 1869' for the protection of the immigrant against his employer in cases where the employer shall, to the injury of the immigrant, commit a breach of any requirement of the immigration law. Besides the power of fining the employer given to the officers of the Immigration Department by the old laws, the Agent-General of Immigration, or a Sub-Agent of Immigration, is empowered, under the 14th section of the new law, in cases of complaint made by any immigrant laborer for non-payment of wages, or for breach of any requirement of the immigration law, or for any injury or damage sustained, to file an action, on behalf of such immigrant, in the Court of the District Judge, at the risk and cost of the immigration fund. And in cases of persistent breach of the requirements of the law by any employer of immigrants, the officers of immigration may have recourse to the District Court without any complaint being in the first instance made by any immigrant laborer; and, should the employer be adjudged guilty of such breaches of the law, he is punishable by a fine not exceeding £50 with costs.

"I am happy to say, however, that I believe there is but one instance on record in which any necessity has arisen for putting this provision of the law into force; and in that instance, although the case was entered for trial, it was afterwards withdrawn by the immigration officer, as, before it could proceed for trial, the wages claimed by the immigration officer on behalf of the coolies were all paid up.

"The care of the sick is provided for in Jamaica by sections 21 to 31 of the new law. The provisions for this purpose are upon a new principle, as making the medical attendant of the coolies a Government officer, instead of a servant of the employer. They empower the Government to establish and maintain union hospitals, that is, hospitals common to several estates lying near together. There are already eleven of these union hospitals in Jamaica, by which medical care of the indentured immigrants on forty-four estates is provided for. Every estate not connected with a union hospital is required to provide its own hospital on the estate. Government medical officers are appointed to attend to every estate. The medical officer is required by the law to

* If the accused immigrant is acquitted, the judge may award compensation for loss of time as well as costs and expenses.

† Sections 27, 28, 42 and 43 of the Local Act of 1858, seem, however, still to be in force, though they are not noticed by Sir J. P. Grant. Desertion or absence, except from illness, for more than a month in any year has to be made good by extra service of equal length or by a money payment. Absence under imprisonment comes under this head. But if wages have been abated for absence the immigrant cannot be called on to serve extra time. Employers are bound to give the police notice of desertion, and it is lawful for "the employer or any servant of his, or for the Immigration Agent or any police constable, or person enrolled as a rural constable, to stop without a warrant any immigrant, who shall at any time (except Sundays or holidays) be found during the ordinary hours of work at a distance of more than two miles from the estate in respect of which his services may be due," and if the immigrant cannot produce a certificate of industrial residence, or a ticket of leave signed by his employer, he may be reconveyed to the estate, or, if he will not disclose the name of the estate, may be brought before a Justice of the Peace, who may commit him to prison for 30 days.

‡ The "old laws" however seem very much superseded by section 15 of the Act of 1869, which declares that "the Agent-General and Sub-Agent shall have power to try and determine, in a summary manner, all cases of alleged breach of this or of any other immigration law, where he may be of opinion, when an indentured immigrant is defendant, that imprisonment with hard labor for a term not exceeding one month will be a sufficient penalty, and when an employer or any attorney, agent, or servant of an employer is defendant, that a fine not exceeding £5 will be a sufficient penalty; and these officers are hereby authorised, in all such cases to inflict the penalties authorised by law to such extent." This, with Section 50 of the Act of 1858, seems to give jurisdiction to the Immigration Department, in all but serious cases of breach, whether of agreements or of the immigration laws.

visit every estate to which he is appointed at least once every fortnight, and where there may be no union hospital attached to such estate, as much oftener than once a fortnight as may be necessary in case of sickness occurring. He is also bound to attend at any time when summoned by the person in charge of the estate on account of the sickness of an indentured immigrant. The medical man being no longer the servant of the employer, but a Government officer, has nothing to influence him except his professional feeling of interest in his patients, and thus he becomes an unimpeachable witness in all cases turning upon questions of health.

"It is satisfactory to find that these measures have not been without good result. Last year the average death-rate of indentured immigrants, which had been in Jamaica much higher, was not more than 2.6 per cent; and on 41 estates, upon which 1,575 indentured immigrants are employed, out of the 87, no deaths at all occurred.

"In Jamaica, on the 12th day of February 1872, there were on the books of the Immigration staff. 4,608 indentured immigrants. These are employed on eighty-seven estates, which are allotted into six regular districts, each district being in charge of a Sub-Agent of Immigration. There are besides two small outlying districts in which the Government medical officer acts as Sub-Agent. It is the duty of the Sub-Agent to visit such estates at least once every month, although as a matter of fact, estates are visited oftener. Travelling charges being allowed to Sub-Agents on the principle of mileage, there is no difficulty in securing their frequent visits. Indeed it has been found advisable to desire them not to visit estates without special necessity oftener than twice a month, whilst they are required to visit all their estates at least once a month. The Sub-Agent on his visits examines the books, to see that all the wages that should have been paid have been paid; he hears and adjudicates complaints both on the part of the employer and employed; he ascertains that the rations have been duly furnished; he inspects the hospitals; he is required to keep up a 'Summary case book,' and a general note book in the form of a diary; and, in short, it is his duty to examine minutely and carefully into the general condition of the indentured immigrants, and especially to ascertain whether the law has been fulfilled in all its provisions, or not. The result of his investigation, in regard to earnings and health, he records in monthly returns. These returns are rendered to the Agent-General of Immigration, who, after examination, and calling for any further report or explanation that may be necessary, sends them up to the Governor with a certificate that the wages have been duly paid to the indentured immigrants according to law, and that in cases where the full weekly amount is shewn not to have been paid, the deficiency is owing to lawful causes duly ascertained. As the visits of the Sub-Agent for the above purposes must never be less frequent than monthly, except in consequence of his insufficiency or negligence, no abuse can have long existence: and it is for the Agent-General to see that the Sub-Agents are neither inefficient nor negligent.

"After the five years' term of indentured service has expired, the immigrant is then at liberty to follow any occupation he may please. As a fact, the great majority continue to work as free agricultural laborers on the estates; but some become shopkeepers, and several have amassed considerable sums of money in following this pursuit. In my opinion this period of five years' free labor is by far the most valuable feature in the whole system, not only in respect to the immigrant himself, but also in respect to the planters of the colony as a body. There are planters who employ free immigrant labor largely, who have no immigrants indentured to them. After a residence of ten years in Jamaica, every Indian immigrant becomes entitled to a free passage back to India, or he may forego this right by accepting a grant of ten acres of land, or a money payment of £12, or a proportion of each; and every immigrant who becomes entitled to a return passage, and claims it, is entitled to a payment on account of demurrage, at the rate of 25s. for every six months he may be detained for want of a ship, after he has become entitled to his return passage.

"Last year 2,140 of the Indian immigrants in Jamaica were entitled to back-passage; and of these 925 took advantage of the opportunity and returned to India; and 1,215 commuted their claim for a payment in money, preferring to settle in Jamaica as permanent colonists. This year the proportion who will elect for bounty is expected to be very much larger.*

"Return passages are also granted to immigrants at any time during their industrial term of ten years, who from chronic sickness, or from accident, or from other cause, become incapacitated for labor. In certified cases of this nature an estate is relieved from an indentured immigrant thus incapacitated, and the invalid is removed to the coolie depôt, established in Spanish Town, where he receives careful medical treatment, and all his necessary wants are supplied, until an opportunity occurs for returning him to India. The depôt is also open for the reception of all non-indentured sick and destitute Indian immigrants; from amongst whom, also, incapacitated invalids out of indenture, but still in their term of ten years' residence, are sent back to India. During the year ended on the 30th September last, 311 immigrants were treated in this institution,

*The total number of immigrants introduced up to the end of 1871 was 14,409; of those returned to India, 2,778. There left the island in 1871, 925 Indians, carrying ascertained property of the value of upwards of £17,000.

viz., 241 male adults, 47 female adults, 13 male children, and 10 female children. Out of these 209 were discharged cured, 40 were relieved, 9 died, and 53 were still in the depôt on the 30th day of September 1871. About one-half of these last will be sent to India in a ship now in Kingston Harbour, chartered to convey returning immigrants to Calcutta.

"I have every reason to believe that the laws, and the practice followed under those laws, as now existing in Jamaica, in respect of Indian immigrants, are such as give pretty general satisfaction. They are certainly such as are just and equitable, both to the employer and to the employed. On the part of the employer I am not aware of the existence of any complaint; and on the part of the employed it is believed that the vigilant supervision that is exercised by the Government, through the Immigration Department, effectually secures to the immigrant his full rights, and fulfils all the expectations that are legitimately held out to him in India."

Though the climate of Jamaica, when free from yellow fever, is not considered unhealthy, the death-rates among coolies of late years have certainly been high. Thus, of immigrants introduced in the season 1868-69, 4.54 per cent. died before 30th September 1869; among the same batch in the following entire year (30th September 1869 to 30th September 1870), the mortality was 7.91 per cent.; in the third year (ending 30th September 1871), the mortality among them fell to 2.5 per cent. The immigrants of 1869-70 lost 7.23 per cent. in the first fragment of a year, 7.29 per cent. in their second (a whole) year. Of the coolies introduced in 1870-71, 1.88 per cent. died in 5 months, equivalent to an annual percentage of 4.51. This slight improvement Sir J. P. Grant attributed to the improved hospital arrangements. But the table proved that the district of St. Thomas was exceptionally unhealthy, and it has been decided to refuse allotment of new immigrants to any estate there situated. Lord Kimberley has also urged the adoption of the rule refusing immigrants to any estate showing a mortality exceeding 7 per cent.

ST. VINCENT.

St. VINCENT is one of the Windward Group of the Antilles, and lies between N. Lat. 13° 10' and 13° 25' and W. Long. 61° 10' and 61° 20'. It contains an area of 130 square miles. Historically it seems, since its colonisation in 1714 by the French, to have shared the fortunes of Grenada. The appearance of the island is thus described by Mr. Carlyle (Life of John Sterling, Part I, Chapter XII) "an interesting isle; a place of rugged chasms, precipitous gnarled heights, and the most fruitful hollows; shaggy everywhere with luxuriant vegetation; set under magnificent skies, in the mirror of the summer seas; offering everywhere the grandest sudden outlooks and contrasts." The island is volcanic and apparently liable to hurricanes (from which, by the way, Grenada is said to be exceptionally exempt). An eruption of the huge crater of the "Soufrière" took place in 1812, and Mr. Carlyle extracts Sterling's graphic description of a tornado in 1831. The climate, however, though moist, is said to be healthier than that of any other of the West India Islands. In 1835, the extent of cultivated land was 21,000 acres, the productions being the sugar-cane, arrow-root, cocoa, and cotton. The annual export of sugar seems about 14,000 hogsheads. The population, by the census of 1871, numbers more than 35,000, of whom 14,500 are put down as laborers. Subordinate to the Government of the Windward Islands, the colony is administered by a Lieutenant-Governor with a Council, at once legislative and executive, of twelve members nominated by the Crown.

The financial basis of emigration is described in the law of St. Vincent as the payment of two-thirds of the cost by the planting interest, and of one-third from the general revenues of the colony. The planters appear to pay their share partly in the form of a direct contribution of one-fourth of the cost of importation of the coolies allotted to each estate, and partly in the form of a special export tax upon sugar, and the other products of the cane.

Contracts can now be made in India. The first term of indenture is for three years, upon the expiry of which the immigrant must either re-indenture for another two-years, or redeem this latter term by the payment of £5. Five years' "industrial residence" entitles to a certificate from the Agent, and upon completion of three years' further residence the immigrant upon payment of £7-5-10 is entitled to a back-passage. If, however, he shall have served his last three years of residence under indenture, he is exempted from any payment, and can claim an allowance at the rate of £2-10-0 per annum for the interval before provision of the means of return. Further, he may commute his back-passage for a bounty, and re-indenture again, in which case, except as to rations, he is placed in the position of a new immigrant. The bounty offered is on the following scale:—

	£	s.	d.
If the re-indenture be for 1 year ...	2	1	8
" " " 2 years ...	3	6	8
" " " 3 " " ...	5	4	2
" " " 4 " " ...	7	5	10
" " " 5 " " ...	10	0	0

This does not seem a very equitable arrangement, as a back-passage must, in any case, be worth more than £2-1-8 to the laborer.

The minimum rates of wages are fixed by law. For this purpose all immigrants are divided into three classes according to age; the first class embracing all over sixteen years of age; the second those between eight and sixteen years; the third all under eight years of age. The wages of the first class are not to be less than 10d. a day, the day consisting of nine hours. If the ordinary task performed by unindentured laborers be completed

by the immigrant in less than nine hours, such task is to be considered a day's work. If a cooly is able, and chooses to undertake "heavy work" he is to be paid at the same rate as Creole laborers performing such work. Immigrants of the second class must receive not less than 5*d.* a day; if they perform more than half a "task" they are to be paid at the rate of 10*d.* a task. Immigrants of the third class are not to be put to work without the consent of their parents, and are to receive 3*d.* a day. Extra time is to be paid at a rate not less than 2*d.* an hour. The Agent is directed by law to give the preference in allotment of laborers to those estates "where the highest wages are paid, and where there is least dissatisfaction among the immigrants." Wages are to be paid monthly in cash without deduction for stores supplied. An exception to this, however, occurs in the second and third month of indenture. For the first month the employer is bound to supply rations in addition to the money wage; for two following months he may, with the special permission of the Governor, keep his immigrant labourers on rations, and deduct from their cash wages the value at a rate to be laid down by the same authority. The ration for the first month is as follows:—10 lb. rice, 3 lb. salt-fish, $\frac{1}{2}$ lb. butter or ghee per week for each first class immigrant; two-thirds of this for each immigrant of the second, and one-half for each of the third class.

An Immigration Agent is appointed on a salary of £100 a year. On arrival of a ship carrying immigrants he is bound to go on board, and jointly with the health officer of the Government report on the observance of the rules during the voyage. Bounty to the Commander and Surgeon is only paid on his certificate. He is bound to maintain a register, it being the duty of planters, under a penalty for default, to send in half-yearly returns of all immigrants on their estates, and to report births, deaths, and desertions. The Agent receives applications for labor, but accepts none unless the employer satisfies him that "comfortable and sufficient accommodation, with a suitable hospital and medical attendance according to law, has been or will be provided." Immigrants are located with the approval of the Governor on such plantations as they may prefer, or if they have no preference, are distributed by the Agent. Wives and husbands, children and parents must not be separated, and a contract must be entered into upon allotment. The Agent is bound by law to inspect all estates in January and July of each year, and to pay special visits when ordered by the Governor. A right of entry and inspection is reserved to him, and a penalty of £10 attached to the offence of obstructing him in his duties. He does not seem to have any assistants; but the law empowers the Governor to retain in the island the services of the interpreters who, in the proportion of one to every hundred souls, are supposed to accompany immigrants on board ship.

Arrived on an estate the immigrant is bound, except in case of illness, to work nine hours a day except Sundays, Good Friday, New Year's Day, Christmas Day, and such other holidays as the Governor may fix. On the other hand, the employer is bound to provide sufficient work for those able to work, and to provide a proper dietary for the sick. A daily muster-roll is prescribed by law, but I am not sure whether it is not, as in British Guiana, superseded by the pay list. 'Absence without reasonable cause from roll-call, or from work, neglect or refusal to finish work, drunkenness, wilful disobedience of orders, insolence, neglect of duty, misconduct, or desertion of service' are breaches of contract punishable by forfeiture of wages due, not exceeding the wages of one week, and fine not exceeding £1, or imprisonment with or without hard labor for thirty days. In charges connected with absence from work, the muster-roll must be produced, and, if that document be not found *en règle*, the charge is to be dismissed. A later law provides specially that in the case of women absent from work on account of pregnancy, sickness, or other physical cause shall not be punishable. And the penalty for absence without reasonable cause is thus laid down for women: fine not exceeding 10*s.*, or in default imprisonment not exceeding one month, together with extension of indenture for every day of absence. Such extension does not seem to be contemplated in the case of male immigrants. Wilful damage done by an immigrant to property or live stock is punishable by fine or imprisonment within the same limits, and in case of complaint by an immigrant the value of time of absence, or of damage done to property or stock may be set off against any award made as against the employer. Desertions should be reported to the Police within twenty-four hours of their occurrence. The employer, any servant of the employer, or any policeman, may apprehend without warrant any immigrant found on a day on which he is bound to labor at a distance of more than two miles from the estate to which he is indentured, without a ticket of leave signed by his employer, and may cause such immigrant to be taken back to the estate. Or he may be taken before a Police Magistrate or two Justices "to be dealt with according to law." The meaning of the last phrase is not clear to me. On complaint against an immigrant for breach of contract he may plead "ill-usage or other good and sufficient cause." Ill-usage by employer or any of his subordinates is punishable by a fine of £10. And if any employer be convicted of "gross or repeated ill-usage or ill-treatment of any immigrant," the Governor may direct either such immigrant or all immigrants indentured to the particular estate to be released from their contracts. In any case of complaint whether by employer or immigrant, the Magistrate may, in addition to any legal award, make order for payment of wages due, or may order wages to be withheld or may release *either party* from their contract. All complaints are to be heard by a Police Magistrate, or by two Justices, and they must be made within thirty days of the occurrence complained of, no abatement of damages being allowable for misconduct which may have taken place at any time exceeding thirty days before complaint.

The law expressly declares that every estate having immigrants upon it shall be provided with "comfortable and sufficient dwellings and with a proper hospital and hospital furniture, medicine and nurses." Neglect of this provision renders the employer liable to a fine of £4 and a like sum for every fortnight of persistence in default. If a planter be twice convicted

of breach within three months, all immigrants may be removed from the estate. Until lately the planter was also bound to provide a licensed medical practitioner; but a recent law has divided the island into five medical districts, each with a *Government* medical officer, bound, among other duties, to attend immigrants and to visit and inspect plantations. The salary of each of these medical officers is not to be less than £200, and the total salaries of the five not to exceed £1,200 per annum. But they receive fees for some of their duties, whether for attendance on immigrants, I cannot clearly make out. The planters are bound to contribute towards the charge on account of these doctors, to the extent of 12*s.* 6*d.* a year for each immigrant above eight years of age in their employ. The Governor in Council is empowered to make rules as to lodging, medicine, medical attendance, care, food, clothing and general treatment, and such rules are to be held as forming part of the contract. Brief rules have accordingly been laid down. Most of them have been noticed in their place. It only remains to notice that the houses provided are required to be white-washed, clean, floored, and waterproof, with an allowance of 50 superficial feet to each immigrant and a separate room for each married pair. Under the old practice of medical attendance provided by the employer without Government intervention, the medical man was bound to visit each estate not less often than once a week. Any person permanently unfitted for labor by sickness or other cause receives a certificate of exemption from labor, and may by order of the Governor be sent back to India at the expense of the colony.

Such is an abstract of the regulations. The reports, of which there is no regular series, are very meagre and obscure, and do not throw much light on the condition of the immigrant in St. Vincent. I collect such facts as they do yield. In 1864 the earnings are stated to have been nearly \$4 a month on an average; but this is doubtful, for during the first half of 1867 a total number of 1,223 souls appear to have earned \$8,321, or only an average of \$7.21 for the half year. More recent reports show a higher average; for instance, during the second half of 1871, 1,442 immigrants appear to have earned upwards of \$18,000 or \$12.65 a head all round. But the earnings of the two sexes and the different classes not being distinguished, an estimate of the earnings of an able-bodied man cannot be made. From the brief notices in reports the wages question does not seem in a very satisfactory state. For though the Attorney General has stated that the immigrant working nine hours a day to the best of his ability is entitled to the minimum wages of his class, the planters lean towards task work, and at one time only paid newly-arrived immigrants half the stipulated minimum. Similarly, though the law officer declared that only the Magistrate could sanction any deduction from the minimum wage, it has been the practice for the employer to make stoppages, a practice certainly sanctioned by one of the rules passed by the Governor in Council. The report for the second half of 1870 observes that, though the law makes 2*d.* an hour the minimum payment for extra time, Creole labor can be got at a cheaper rate. Hence in "the buildings," i. e., in sugar manufacture, Creoles as a rule are employed. But coolies have in some instances agreed to accept Creole wages and work in the buildings. These wages are said to be from 30 to 36 cents a day; but the hours are not stated. Clearly they must be long hours, or Creole wages would not be cheaper than a rate of 24 cents for the first nine hours and 4 cents for each subsequent hour.

Convictions for breaches of contract seem generally to be few. There were—

In the 2nd half of 1867	...	...	...	5 cases.
" 1st " 1868	...	...	...	4 "
" 2nd " 1870	...	...	...	21 "
" 1st " 1871	...	...	...	8 "
" 2nd " 1871	...	...	...	16 "

These cases seem all cases against immigrants. The punishments consisted of imprisonment for terms varying, in the last period of report, from twelve days to one month. The marked increase in the number of cases in 1870 is attributed by the Agent to the excitement among the coolies owing to the investigation into certain "cases of cruel treatment" on one estate. No further particulars are given. The report for the 2nd half of 1870 mentions complaints, well-founded seemingly, of insufficient accommodation, short wages, and "rough" treatment. And, at any rate under the old system, the doctors' visits seem to have been both hurried and irregular.

There is little crime among the Indian population, though one or two cases of arson appear in almost every report. As to return emigrants' savings little is known; thirteen coolies by the *Harkaway* carried £334 of savings. Of about 500 souls, who in 1870-71 became entitled to free back-passage, twenty elected to return to India, 225 re-indentured on bounty, and 239 settled in the island as traders or laborers.

The island has certainly maintained its reputation for comparative healthiness; the death-rate has never been high for the West Indies. The following figures give an approximation, but a close one, to the rates of mortality. The population has not, however, been calculated with great nicety, that at the close of the period being taken to work with—

Period.	Population.	Deaths.	Percentage of mortality per annum.
First half of 1864	550	9	3.26
Year 1865	...	...	3.32
Year 1867	1,223	13	1.06
Year 1868	...	...	2.58
Year 1869	1,181	12	1.01
First half of 1871	1,126	12	2.12
Second " "	1,442	20	2.76

The comparatively high death-rate in the second half of 1871 is due to twelve deaths among newly-arrived coolies, whose voyage (in the *Dover Castle*) was protracted to 108 days. The last report available gives the following as the Indian population of St. Vincent on 31st December 1871:—

Men	...	...	...	...	795
Women	...	...	...	...	338
Boys	...	...	...	...	98
Girls	...	...	...	...	77
Male infants	...	...	...	...	67
Female "	...	...	...	...	67
Total souls	...	...	...	...	1,412

Yet the Lieutenant-Governor, in March 1872, writes of the coolies as yielding nearly 2,000 "laborers." There must be a mistake somewhere.

St. LUCIA.

We next come to St. Lucia, also in the Windward group, lying somewhere about 13° 50' N. Lat. and 61° W. Long., with an area of 235 square miles. Volcanic like St. Vincent, its configuration seems similar. But the climate is said to be very moist and unhealthy. The temperature, however, does not seem to range very high. The *Encyclopædia Britannica* gives the range as from 71° to 83° Fahr., and the average rain-fall at 94 inches. Though larger than Grenada and St. Vincent, its population seems less. In 1854 it stood at 24,123, viz., 947 whites and 23,176 persons of colour. The cultivation was put at 4,500 acres (probably an under-estimate), almost all in sugar-cane.

Settled by France in 1650, it seems to have been alternately in French and English hands till 1803, when it became a British colony. It is subordinate to the Government at Barbadoes, and is administered by a Lieutenant-Governor (Administrator?) and a Legislative Council of five official and five non-official members. The general law seems to be old French law, unreformed by the Code Napoléon.

The legislation of the island on the subject of immigration is in some respects peculiar and noteworthy. The St. Lucia consolidated Ordinance of 1865 seems, though by no means perfect, yet clearer and more stringent than the laws of several of the other West Indian Colonies.

The financial scheme appears to be much the same as in St. Vincent. A contribution of one-third of the expenses of immigration is made from general revenues, while the remaining two-thirds fall upon the planters either indirectly in the shape of an export tax on sugar, rum, and molasses, or in the form of direct contributions on allotment of laborers. These latter are called "indenture fees" and are levied at the rate of 25 shillings for each year of indenture for every adult immigrant, and half that sum for each non-adult.

An Immigration Agent is appointed on a salary of £150 a year, with £30 for travelling expenses. His duties are to inspect all ships arriving with immigrants; to maintain a register of all immigrants (in which the planter is bound under penalty to assist by rendering certain prescribed returns); and "to assign immigrants arriving to such planters as shall be ready to employ them in such manner as shall be directed by the Governor; provided that the wages payable to the said immigrants shall be equal to the wages paid to laborers not receiving gratis medical attendance or provision grounds; and provided also that in such allotments the wishes of the immigrant shall be as far as possible ascertained and attended to, and that in no case whatever shall any husband and wife nor any parent and child be allotted to different employers." Immigrants are thereupon to enter into indentures before a Stipendiary Magistrate and in the presence of the Immigration Agent. The Agent is bound by law to visit every estate employing laborers once in every quarter, to ascertain whether the coolies are properly treated and to enquire into any complaints made by either side. And the Agent may, with the sanction of the Governor, cancel the contract of any immigrant who, being paid by the task, shall not have received work sufficient in the opinion of the Agent to enable him to earn a reasonable amount of wages. The Stipendiary Magistrates are also bound to inspect every estate in their district at least once in two months, and the district hospitals at least once a fortnight. The Agent is also empowered to visit the district hospitals.

The contracts are for five years, but the immigrant may redeem the last two years by a payment of £2-10, or the last year by a payment of 25 shillings, half these sums being charged in the case of a non-adult. Upon completion of five years' industrial residence, the immigrant is entitled to a "certificate of discharge," and three years' further residence entitles to a free back-passage, pending provision of which the immigrant may claim an allowance at the rate of 50 shillings a year. The free return passage may also be commuted for a piece of land or for a money bounty not exceeding £10. The Governor has the power of terminating a contract "in any case when he shall see fit."

The body of the law seems to contemplate a certain freedom of contract; but the form prescribed in the schedule is non-elastic in some points. The immigrant is bound to work for 9 hours of each day "Sunday, Good Friday, Christmas Day, New Year's Day, and Corpus Christi excepted," as also such other holidays the Governor may permit. Wages are to be paid twice a month at the same rate as paid to laborers not under indenture and are not to fall short of the following rates:—for male adults 1s. 4d. a day if employed in the mill or boiling-house, or one shilling if not so employed; ten pence a day for female adults

For those under 16 years of age, such rates as may be fixed as a fair proportion to the age of the laborer. The employer is also bound to provide "good comfortable lodging" and at least half an acre of "provision ground." The Immigration Agent is bound to keep up a register of desertions, imprisonments and absences with a view to excuse, and if it appears that any immigrant has been absent in the aggregate for six or more for each year of indenture, the Agent is to endorse the fact upon the indenture, and the immigrant is thereupon bound to make up the lost time; provided that no such addition is mentioned in respect of any week in which the laborer has performed five days' work or the days' task according to any scale of tasks approved by the Governor, or in respect to absence from sickness or other lawful cause.

Immigrants are to be rationed by their employers for the first three months of their indenture according to a tariff to be paid by the Governor, who is also to fix the price of such rations to be deducted from the immigrant's wages.

Absence from work without lawful cause is punishable by forfeiture of two days' wages for each day of absence, or imprisonment with hard labor not exceeding fourteen days. The employer, his servants, or any constable, may apprehend without warrant any immigrant found at a distance of more than two miles from the estate, without a ticket of leave from the manager, and cause such immigrant to be taken back to the estate. The Immigration Agent, any Stipendiary Magistrate, Justice of the Peace, Police Constable or Superintendent of Police may stop any immigrant wherever he may find him, and the owner, or servant of owner, of any land or house may stop any immigrant found on such land or in such house, and, if the immigrant fails to produce a certificate of discharge or a ticket of leave, he may be taken before a Stipendiary Magistrate, and unless he can show that he has obtained a discharge or is absent with leave he may be sentenced to imprisonment with hard labor for a term not exceeding 14 days. "Misconduct, fraud, or deception in the performance of work" and injury by negligence of property or live-stock subject to fine (in the Magistrate's discretion seemingly) or imprisonment, with or without hard labor, for a term not exceeding 30 days.

Wilful ill-treatment of any immigrant, or neglect to provide any immigrant with sufficient nourishment when sick, to pay him wages or supply the rations stipulated for at the times prescribed, or to provide good and comfortable lodging and half an acre of provision ground, renders the employer liable to a fine not exceeding £10, or in default of payment, imprisonment for 30 days, with payment of wages due. And it is at the same time lawful for the Governor to cancel the contract of the immigrant complaining, and also of all immigrants on the estate. All complaints for non-payment of wages are made triable by the Stipendiary Magistrate, subject to appeal. But the law is not explicit as to the court trying other offences under this section. Cases against the immigrant appear distinctly to be triable by the Stipendiary Magistrates. Immigrants under indenture are exempt from imprisonment for debt, and their wages be attached nor execution be had on their goods and chattels. This provision does not, as far as I remember, appear in other colonial Ordinances.

For the medical treatment of immigrants and others, three general hospitals are maintained by the colony and placed in charge of licensed medical officers, who are, moreover, bound to visit estates and treat immigrants there, at such intervals as may be prescribed by the Governor. The managers of estates are bound to bring before the medical officer all immigrants in need of treatment, and such immigrants may be compelled to resort to hospital for treatment. The planters are required to contribute towards the expenses of hospitals and medical attendance at the rate of 10 shillings per annum for every adult, and 5 shillings for every non-adult immigrant, in their employ.

Such are the main provisions of the St. Lucia Immigration Act. But as no immigrants have been imported from India since 1862, the Act is practically in abeyance, no immigrant remaining under indenture. Mr. Des Vœux says all the Indians have accepted the terms of the Ordinance of 1871, entitled "an Ordinance to provide for the passages to India of certain Indian immigrants, in return for their residence in the colony." Under this Act, the Superintendent of Police is empowered, on behalf of the colony, to enter into agreement with any immigrant to provide such immigrant with a return-passage to India, provided he shall reside in the colony eight years continuously from the date of the agreement, and shall for that period work as an agricultural laborer, when not prevented by sickness or other reasonable cause. The Act applies also to the children of immigrants. A careful register of immigrants who shall have availed themselves of the Act and who are termed "resident immigrants," is to be maintained by the Superintendent of Police, and all such immigrants are bound to report themselves on every half-year to a Magistrate. Resident immigrants come under the provisions of the Ordinance of 1871 for regulating the respective rights and duties of masters and servants. The main provisions of this Ordinance are as follows:—Unwritten contracts of service (more than one month are invalid. Written contracts may be made for nine months, but to be valid must be signed before, and attested by, a Stipendiary Magistrate. Such contracts must specify the nature of the employment, the number of hours of daily service, the nature and amount of remuneration, and the times of payment. Except in case of laborers by the task, every contract of service, in the absence of express stipulation to the contrary in writing, is to be held to be by the week for agricultural laborers, by the month for others; and to be terminable at three days' notice in the former, a fortnight's notice in the latter case. Should an employer discharge a servant without such notice, a week's or a month's wages, in addition to wages due, may be claimed. Wilful absence from service or refusal to perform a contract without reasonable cause, or damage to the property of employer by negligence or improper conduct, may

punished by fine not exceeding £5 or imprisonment with or without hard labor for 30 d "wilful misconduct" subjects to a fine of £2 or imprisonment for 14 days. The Magis may award forfeiture of wages due, nor do wages accrue for the period of imprisonment. usage of any servant or failure to deliver any articles, wages or other, according to cont subjects the employer to a fine of £10; discharge without reasonable cause before expir contract, to a fine of £5; in the latter case the whole or part of the fine may be award compensation. But any servant guilty of misconduct or wilful omission or neglect of duty, be discharged without notice, as on the other hand, ill-usage may be pleaded by the servant valid ground for breach of contract. On any complaint by master or servant, the Magisti may, in addition to any order in the case, discharge either party from the contract. Agr ments may also be made by the task, and breaches of these are punishable by a fine of 2 shillings, awardable in whole or in part to the aggrieved party. All complaints for breach c contract, and all disputes as to wages up to £15, are to be heard by the Stipendiary Magistrates subject to appeal by either party. Both complainant and defendant, moreover, may be examined upon oath.

We have no report from St. Lucia of later date than that for the first-half of the year 1868, and the series before that date is very defective. Or

Men	...	529

Total souls ... 902

the 30th June 1868, there were in the colony 1,079 Indians, of whom there were located on estates the number noted in the margin. The wages paid during the half-year amounted to £2,814, giving an average of about £4.4 or 18s. 4d. a month for each adult. "Men," writes the Agent, "receive one shilling per day and women 10 pence." This statement taken in connection with the accompanying statement hardly to be reconciled with the accompanying statement that the immigrants were "fully and regularly employed." The figures seem to show that they could not have worked more than four days in the week at the outside. The Agent, however, says that this colony is a cheap place to live in, and that the coolies have advantages in the way of cheap land and the like, which they have not in other colonies. Yet I find in one half-year 122 emigrants left the island for Trinidad and British Guiana.

The mortality in 1860 and 1861 seems to have been considerable. For instance, the deaths in the first half of 1861 were 58 in a cooly population of about 1,100, and the Colonial Office decided not to indent for more labor till the arrangements for treating the sick were placed on a better footing. This led to the establishment of the Public Hospitals, and the legislation on the subject of medical treatment briefly noticed above. Of late years the colony seems to have been healthy for Indians. The record, however, is far from complete. The figures I have been able to find are the following:—

PERIOD.	Number of immigrants.	Deaths.	Percentage of mortality per annum.
1864	1,316	18	1.37
1st half of 1865	1,069 (?)	10	1.87 (P)
1866	(?)	21	(?)
2nd half of 1867	1,207	10	1.65
1st half of 1868	1,079	11	2.04

Crime seems to be slight. I have found no record of breaches of contract. Of the immigrants, 1,535 in number, who were introduced before June 1862 (and there have been no importations since), though all had become entitled to back-passages, only 298 in 1860, and 102 in 1871, or a total of 460 had claimed it. In 1868, 425 accepted bounties averaging upwards of £7-0-0.

GRENADA.

Grenada, the most southern of the Antilles, lies between north latitude 11° 58' and 12° 20' and west longitude 61° 20' and 61° 35'. Its area is but 133 square miles. Discovered by Columbus, it was not occupied till 1650 when an expedition was organised by the French Government of Martinique, the island seized and the Caribs who inhabited it deliberately extirpated with circumstances of combined treachery and cruelty. In 1762, Grenada was taken by the English, but was re-taken in 1779. By the peace of 1783 it was, however, restored to Great Britain, of which it has since remained a dependency. The island, like most of the group to which it belongs, consists of a mountainous interior gradually sloping to the sea. Cultivation is probably confined to the coast. Coffee, cocoa, cotton and sugar, as also indigo and tobacco are named among the products; but I believe sugar is now the chief staple. In 1853, 17,722 acres were under cultivation with various crops. In the same year, Grenada, including the small group of islands lying between it and St. Vincent and called the Grenadines, exported 11,293,851lb. sugar, 32,680 gall. rum, 10,972 gall. molasses, 9,818lb. cocoa, 73,633lb. cotton.

* The average for adults for the previous half-year is even lower, viz., £3-12-0.

The population in the same year was estimated at 34,000. The island is subordinate to the Governor of the Windward Islands, whose head-quarters are at Barbadoes.

The legislation of Grenada on the subject of immigration follows very closely that of St. Vincent. The main points of deviation are the following. They are chiefly due to the influence of *British Guiana* legislation. The employer contributes directly to the amount of one-half the cost of passage in the case of males, and one-fourth in the case of females; it is not apparent whether he also contributes indirectly in the form of an export tax on sugar and rum. The first indenture is for 5 years, and any number of re-indentures for 5 years are permitted, the bounty being £10. A back-passages is earned by five years' industrial residence and 10 years' total residence. The scale of wages differs slightly from that of St. Vincent: Immigrants are arranged in three classes, but the second class consists of these from 10 (not 8) to 16 years of age, and the third of these under 10 years. The minimum daily wage of the second class is fixed at 8d. The salary of the Agent is put at £280 per annum with £50 for travelling expenses, and he is to hold no other office. The Governor has power to refuse allotment for any just cause, and the separation of relatives, and even friends, is not to be made, where it can be avoided. No indenture can be cancelled even by consent of parties without the sanction of the Governor. Absence from work due to desertion or imprisonment, if it exceeds more than a month for each year of indenture, must be worked out by extra time. The Governor may cancel any engagement on the ground of ill-usage or breach of contract by the employer. The St. Vincent law gives this power to the Magistrate. The medical practitioners attending estates are in Grenada still paid by the employers of labor and not by Government. The Agent is given the power of instituting proceedings on behalf of immigrants; and finally, the Governor is empowered in certain cases to deport any immigrants to other colonies. The reasons for this clause we have seen in Part I.

The report for 1871 shows that there were on the 31st December of that year 1,863 Indians upon 46 estates, besides some "free settlers" whose number is not stated, but does not seem to be large. Details of the indentured immigrants are given in the margin. The

		1,863

deaths had been 52, giving a death-rate of 2.67 per cent. Grenada is said to be healthy. But in 1863 the deaths numbered 115, which must have been a heavy mortality though I have not the means of ascertaining the exact Indian population then. In 1864 the mortality is said to have been 2.39 per cent. In 1866 a very heavy death-rate occurred, chiefly among the arrivals by the *Countess of Ripon*. Of 260 coolies by that vessel who landed in January 1866, no fewer than 49 were dead before the end of June 1867, or about 12 per cent per annum. Much of this was due, as we have seen, to gross neglect on the part of the employers, and emigration was for a time put a stop to by the Colonial Office. In 1867 the deaths were 70 in an Indian population of 1,700 or 4.1 per cent. In 1868, 49 out of about the same number, or less than 3 per cent. In 1870 the death-rate was 2.3 per cent.

The convictions for absence from work or breach of contract were 40 in 1871. The calendar of crime proper mostly consists of petty cases.

Though the law permits re-indenture for 5 years, the clause does not seem to be generally resorted to, and verbal or monthly contracts are the favourite mode of engagement among immigrants who have served their term of 5 years' industrial service. It is said that an able-bodied coolie can earn by task-work 1 shilling to 1 shilling and 3 pence a day, but for the most part the immigrants work by the day at the stipulated minimum of wages. Even on these they continue to amass some savings. In 1860, 40 men, 19 women and 17 children returned to India with economies amounting to nearly £1,300, and of 580 immigrants entitled to back-passages more than two-thirds accepted bounty and remained in the colony. Still the poverty of the planters and the want of capital in the island makes Grenada a crucial instance of the drawbacks of the smaller West Indian Colonies as fields for Indian labor. Most of the disadvantages may be traced to this source. The estates are small, and do not employ more than 30 coolies each on an average; about 70 being the maximum number on any one plantation. For coolies thus scattered in small groups it is difficult to provide adequate medical care and hospital accommodation. This evil it is, however, proposed to remedy by establishing district hospitals under the care of medical officers paid by the colony. Again there is little extension of cultivation, little demand for labor and consequently a low rate of wages. Possibly the competition of Trinidad, whither a good many Grenada coolies seem to migrate, may tend to lessen this disadvantage.

ST. KITTS.

The only British colony of the Leeward group which has drawn labor directly from India is St. Christopher's or St. Kitts. The island, named after the patron saint of Columbus, lies about lat. 17° 20' N., long. 62° 40' W., and is 20 miles long by 4 broad. It was settled jointly by French and English, and suffered many calamities in the wars between the two nations. At the peace of Utrecht it was ceded to Great Britain; in 1782 re-taken by the French, but restored to England in the following year. Volcanic in formation, it contains some 44,000

acres of land of which half is said to be cultivated, mainly with sugar-cane. The population in 1842 numbered 23,177 souls. It enjoys the presence of a Lieutenant-Governor, and sends 10 members to the House of Assembly of the Leeward Islands, meeting at Antigua. I can find no record of the fate of Indian laborers in St. Kitts, except a very brief report of 1865. In that year there were 235 Indians on the island exclusive of children under 6 years of age, and the condition of the emigrants was declared in general terms to be satisfactory.

NATAL.

Natal is a tract on the south-east coast of Africa, about 200 miles long by 100 broad, with an area of about 17,000 square miles. It lies between lat. 28° and 31° S., and long. 29° and 31° E. The country rises from the sea in a series of terraces and hence presents a remarkable variety of climate, soil and scenery. It may be generally divided into three zones or strips. (1) Along the Indian Ocean is a belt of land about 15 miles in breadth, a tract of rounded knolls and small valleys, for the most part interspersed with vast masses of lofty and abrupt hills and deep ravines. This tract seems sub-tropical in climate. Sugar-cane, coffee and indigo flourish along with the mulberry, olive and vine; oats, beans and potatoes thrive and the maize grows luxuriantly both here and in the other belts. (2) The second main terrace is more temperate in climate, and seems well adapted for the growth of cereals and for horse and cattle breeding. (3) Within this tract the hills rise more massive with a longer and bolder sweep, covered with grass but generally bare of wood. They are frequently flat-topped, and sometimes expand into table-land. To the west the hills get more rugged, till the country is bounded by the Kahlamba range, rising abruptly to the height of 8,000 feet above the sea, and nearly 4,000 above the country at its base. This tract is well fitted for sheep and cattle, for cereals and fruits of a temperate climate. The whole country is well watered. The transitions of spring and autumn are short, so that practically the year may be divided into a hot and cold season. Rain is frequent during the former; in the latter the sky is generally serene. In the lower belt of country the average temperature in the summer is 77° to 85°. In winter it ranges from 58° to 70°. In the second division of country, at Pietermaritzburg the capital, the range of the thermometer in the summer is from 61° to 75°, and in winter from 45° to 60°.

The country was discovered by the Portuguese on Christmas Day, 1498, whence its name of Natal, but no attempt at European settlement was made for more than three centuries. Nor, indeed, was much known of the country till 1810, when a Zulu Chief named Chaka arose and nearly depopulated the Natal country, till then inhabited by a number of small Kafir communities. In 1824 a small party of British emigrants from the Cape settled in the country, and were well received by Chaka. The Dutch Boers, who followed in 1837, were, however, viewed with suspicion by Dingaan, the brother, murderer and successor of Chaka, and a bloody war raged for two years, resulting in the triumph of the Dutch, who established a republic in Natal. The unfriendly relations between the Boers and the Kafirs seem to have furnished the Cape Government in 1842 with a pretext for military occupation of the country, and a large number of the Dutch left the colony. This policy was, however, reversed in 1848, and endeavours made to conciliate and retain the remnant of the Boers. Natal was at first administered in subordination to Cape Colony. But in 1856 it was made independent, and representative institutions were granted. The legislature consists of the Lieutenant-Governor and four chief officers, who are ex-officio members, and of 12 members elected by constituencies formed of all holders of freeholds worth £50, or occupiers of property of an annual rental of £10. The law of the colony is the Roman-Dutch law; trial by jury has, however, been introduced, and a distinct system of law appears to apply to the Kafir natives. In each county there is a resident Magistrate, and a Supreme Court, presided over by a single Judge, sits at the capital. The total population was (in 1860 apparently, for I cite this account from the Encyclopedia, Britannica, edition of that date) 125,000, of whom 8,000 were whites. Of the white population about one-third were Boers. In the ten years—1848 to 1858—the value of the exports had risen from £15,900 to £54,000. The export of sugar began in 1856. Cotton and indigo have also been tried with some success.

We have seen (in Part I) that no periodical reports have been received from Natal, and that attention was first drawn to the fact in 1871, by the complaints made by return emigrants. The first report from the colony was not satisfactory, but a Commission of Enquiry was afterwards appointed, and the report of that Commission has been received since the first part of this note was written. An Indian officer of high character sat upon the enquiry, and the following summary of the Commission's report will give the best available picture of the present state of Indian emigrants in Natal.

There have been no arrivals since 1866. No exact record of deaths is attainable, but the commissioners (whose report is dated August 1872) estimate the immigrant population at 5,700 souls, of whom all have served out their period of industrial service. One-half of this number is calculated to be employed in sugar and coffee estates and in various other situations in the neighbourhood of the coast. The extent of country in which estates lie is "say 120 miles in length." The remainder are distributed over the colony as servants, traders, shop-keepers, gardeners, fishermen, and so on. In one place the Commission report they found some coolies jointly occupying a farm of 120 acres, for which they paid £1 an acre as rent, and which they cultivated with sugarcane and maize. From 300 to 400 Indians are said to have gone to seek their fortune at the diamond fields.

The wages given are 15 shillings a month for ordinary workmen; skilled workmen receive from 30 shillings to £2, and an instance is recorded of an Indian earning as much as £1 a month.

On the Durban Railway able-bodied coolies get 20 shillings to 30 shillings a month. In all cases rations are given in addition to the money wage.

The hours of labor are from sunrise to sunset, with one hour for dinner, and generally half an hour for breakfast. Extra pay is given for work beyond hours, and no work is exacted on Sundays. Payment is made generally once every two months, and this plan is said to be liked by the coolies better than monthly payments. This I take leave to doubt. No complaint of irregular payment was made to the Commission. Under the local Act II of 1870 a penalty of £10 is incurred by any employer failing or neglecting to pay wages due to immigrants.

"Free coolies," i. e., immigrants who have served their term of industrial residence, can, under the Masters' and Servants' Ordinance sue summarily for arrears of wages or other breach of contract before the Resident Magistrate. If destitute, they may sue *in forma pauperis*. The award is recoverable by distraint, and, failing sufficient levy by this process, the employer may be imprisoned for one month.

Complaints were frequent of deductions from pay being made by masters on account of sickness and absence without leave. Commonly one shilling was deducted for every day of absence for whatever cause, sometimes 1s. 6d. for absence without leave. The rations, however, were not reduced. On some estates these cuttings amounted to one-third of the nominal wages; on others they were less than 5 per cent. In many cases it was said that no deduction was made for absence by reason of real sickness.

The law on this subject seems to be as follows: Under the law of 1859 the Magistrate alone could award deductions equal to two days' pay for each day of absence. But an Act of 1865 permitted the employer to retain from the wages of any immigrant under indenture the wages and allowances of every day of absence *plus* 1d. on every shilling of his monthly wages for each day. Thus a cooly on 15 shillings a month would lose a day's pay, *plus* 7½d. *plus* the value of rations, say 4d. But Indian laborers now come under the ordinary law of master and servant. Under this the servant is liable to deduction of a reasonable proportionate part for each day's absence without leave, and the deduction may be made by the master. This the Commissioners calculate at 11d. per diem for a laborer on 15s. a month. A sick servant forfeits his claim to wages during sickness, but not, seemingly, to rations.

The rations are generally on the following scale:—

2lb. of mixed rice and maize flour in proportions slightly varying, per diem.	
2lb. fish	...
1lb. ghee or oil	...
1lb. salt	...
	... per mensem.

No complaint was received as to issue of rations. But there were complaints that the maize flour, or "mealie-meal" as it is called, was unpalatable and unwholesome. It may, say the Commissioners, have been unpalatable to the Indian taste, but they always found it of excellent quality, and the healthy appearance of the immigrants and their children belied the charge of unwholesomeness.

The medical attendance and hospital accommodation are very imperfect. By law any estate employing more than 20 indentured immigrants should have a hospital, and the employer is bound, under a penalty of £10, to retain the services of a medical practitioner. But these provisions do not apply to "free coolies," a category under which all Indians now in the colony seem to fall. Hospital buildings were found on three estates, but they appeared to be rarely used. Near Durban all serious cases are sent to the General Hospital. In more remote estates a medical man is retained to pay periodical visits, and to come when sent for in urgent cases. He is paid by the estate, and no deduction on this account is made from the coolies, who are treated in their own huts. In point of fact, the climate seems wonderfully healthy, though perhaps the following figures are not to be altogether accepted. According to the Commission, out of 6,445 arrivals up to 1866, there have been only 339 deaths.* In 1860 the mortality is put down at 1.74 per cent, in 1861 it exceeded 2 per cent, and that was the highest in any year. The Commissioners speak of the "fine healthy looks of the coolies' children," and remark that "the death of a child is of very rare occurrence; children live and thrive better than in India." Colds, fevers, and dysentery or other bowel complaints do occur, but they are usually of a mild type. Venereal disease is not uncommon. The Emigration Commissioners, writing in 1864, say: "The report of the Immigration Agent on the condition of the coolies is very satisfactory. It appears that their health is generally good; that the whole number of deaths during two years and a half that they have been in the colony has only amounted to about 4½ per cent, and that, during the first six months of 1863, to which the report extends, there had been among upwards of 1,000 people returned as on estates, 24 births and only 6 deaths."

On a few estates barracks of stone roofed with zinc or iron have been built, but the coolies are generally given their materials and allowed to house themselves. Some of the dwellings built by the Commission wanted space, but in most cases they found "comfortable though instructed houses, remarkable cleanliness, good drainage and abundance of water." Garden grounds are generally given, and on these the coolies will sometimes grow for sale. One man and his wife had 1,000lbs. of tobacco of their own growth stored in a shed. On one estate only did the Commissioners receive any complaint of scarcity of fuel.

* Another account says 275 deaths in seven years on an original number of 6,307.

There are four schools in the colony for cooly children, which are aided by Government to the extent of £68 per annum.

There has been but one case of re-indenture. Hence all the other immigrants now come under the general law of master and servant. Under that law a servant may be punished for the offences (amongst others) of neglect or refusal to work, insolence, drunkenness, or other gross misconduct, by imprisonment for one month, or whipping not exceeding 12 lashes, or a fine of £5. Apparently, as a rule, the contracts are terminable at a very short notice, but there are allusions in the evidence to longer terms of contract,—one year and even three years. I cannot, however, make out anything definite.

The Commissioners give the following table for the year ending April 1872 :—

JURISDICTION.	Number of cases by masters against coolies.	Number of cases by coolies against masters.	Number of coolies flogged.
Durban	32	1	...
Alexandra	2	...	...
Tugela	2	...	...
Inanda	54	8	20

The Commissioners very properly condemn the whipping clause.

As to the general conduct of employers, they say : "a few instances of assaults of coolies by managers or assistants on estates came under our notice, but they appear to be quite exceptional." Two specific cases are, however, given, where employers were grievously to blame. In one the manager enjoined his laborers into a most iniquitous engagement, in the other, the manager was "in the habit of ill-treating his coolies."

There has never been any proper inspection of estates.

Sexual relations are somewhat unsatisfactory among the immigrants, there being but 33 per cent of women. The women used to be engaged as laborers at from 5 shillings to 8 shillings a month and rations; they do not seem to work now. The savings' banks shewed immigrants' deposits to the amount of nearly £6,000 due to 231 depositors. This represents but a small portion of the capital actually saved. Much has been invested in the colony. Vegetable and tobacco growing is a thriving trade, and many coolies have set up as boat-owners and fishermen. Others have retired from the position of laborers, and settled in the neighbourhood of estates, where they grow sugar-cane, sending the cane to be crushed at the estate mill.

The employer paid £3 yearly for the services of an indentured immigrant, the revenues of the colony bearing the rest of the cost of importation, which is put at about £18 per head. As emigration to Natal has ceased, and will not be resumed without a thorough remodelment of the system (a question now under consideration in the colony), it is unnecessary to analyse in detail the local Immigration Act of 1870, which, as we have seen, does not govern the case of those Indians now remaining in Natal.

REUNION.

About 90 miles W. S. W. of Mauritius, and in S. Lat. 21° 30'; E. Long. 55° 30' lies the Isle of Bourbon, Napoléon, or Réunion, as it has been successively called. Elliptical in shape it is about 40 miles long by 27 miles broad, and may be described as one vast mountain of volcanic origin. The mountain is, however, split into two peaks, the northern rising to about 10,000 feet above sea level, the southern a still active volcano, reaching but 7,000 feet. Cultivation, and indeed habitation, appears to be confined to the fertile sea-margin, which has, at one time or another, grown coffee, cotton and cloves, but which is now chiefly devoted to the sugar-cane and to manioc, the staple food of the negro population. The harvest season is from December to March; the mean temperature for the whole year is given as 78° Fahrenheit. The climate on the whole seems not insalubrious, though according to Dr. Mouat, unfavorable to the negro.

The population in 1869 was stated at 180,090. We have not figures to shew its distribution according to nationalities in that year, but the Consul's report for 1863 states that in 1862 of the previous year there were in Réunion 72,595 foreign laborers (including women ren), of whom 46,411 were Indians,* 25,771 Africans (including, I imagine, Mal natives of Madagascar), and 413 Chinese. Presumably the rest of the population French colonists, and of Creoles of blood either purely French or more or less mixed African strain.

* A report of 30th June 1861 thus distributes the then estimated Indian population of 39,662;—33,444 women, 1,102 male children, 515 female children.

The island, which was then uninhabited, was taken possession of by France in 1646, and, after one or two abortive attempts to colonise it, was made over in 1661 to the French East Indian Company. In 1710 a regular administration was organised, and African slave labor seems to have been introduced from an early period of the island's history. Indeed, the traditions of slavery got such strong hold upon the settlers, that when emancipation was announced as one of the principles of the French revolution, Bourbon, or as it had then been just rechristened, Réunion, refused to accept the gospel of *liberté, fraternité, et égalité* for the negro. Some opposition to the dominant party would, however, seem to have arisen, and matters at length went so far that the slavery faction proceeded to deport a number of their antagonists to the Seychelles. It is said that the ship which carried these martyrs to consistency was attacked by an English frigate and sunk with all the souls on board. The island itself was occupied by the English in 1810, after an obstinate resistance, and held till 1814. It was again occupied for a short time in 1815, but restored to France by the treaty of Vienna. It is thus essentially French in its history.

According to the Encyclopædia Britannica (edition of 1856) it was then managed by a Governor, aided by a council elected from inhabitants of French blood paying 200 francs in direct taxes. I have no recent figures of the number of the electoral body; in 1837 they numbered 1,145. According to the same article there was a chief court at St. Denis, two courts of assize, two tribunals of first instance, and six juges de paix, and the island was divided into two arrondissements, 6 cantons and 11 communes. From a recent consular report, the communes now seem to number 12.

I have already in Part I (pp. 32 and 33) given such a brief history of the earlier emigration as I have been able to glean. Immediately before the convention of 1860 there appear to have been nearly 40,000 Indian laborers in the island, mostly "Malabars," or emigrants from the Southern Presidency of India. The great majority of these being British subjects, their emigration must have been distinctly illegal. The legal emigration first began from Calcutta; but the coolies suffered much in health and the scene of operations was transferred to Madras, and a languid emigration now goes on from French ports in the south. The figures of the emigration, as supplied by the Protector, will be found in Part II; but I am not at all sure of their accuracy. The colony does not grant any subvention in aid of immigration, and the applicant for foreign labor must deposit the full amount of the cost of introduction of laborers before any are allotted to him. The cost of passage and incidental charges varies from 300 to 400 francs. The last employer must pay for the back-passage of the laborer. The strictness of these rules seems of late to have been so far relaxed, in consideration of the chronic state of depression in which the sugar industry of Réunion is plunged, as to allow planters to pay the cost of introduction of labor by instalments.

Contracts are made in India. They bind the laborer to serve any person to whom he or she may be allotted, and to perform "tous travaux de culture ou de fabrication sucrière ou tous autres d'exploitation agricole ou industrielle, et enfin tous travaux de domesticité." As Consul Segrave puts it, the laborers are engaged "à tout faire," and he complains that the most incongruous and uncongenial employments are sometimes assigned to immigrants. The attention of the Local Governments has been called to this matter of the excessively general terms of the contract.

The working day is not to exceed 9½ hours; on Sundays and holidays works of necessity may be exacted. Every day of absence from work or "cessation volontaire de travail sans motif légitime" subjects not only to loss of pay for the day, but to the deduction of a second day's pay "à titre de dommages-intérêts." The employer may apparently, as in Mauritius, make this deduction of his own motion, subject to an appeal to the juge de paix in case of contestation. I have not obtained a table of the existing rates of wages. In 1862* they were thus stated

* The Calcutta Protector in a letter dated 26th September 1864 gives the following as the wages then offered by the Agent for Réunion :—

Ages.	1st year.	2nd year.	3rd and following years.
	Rs. As.	Rs. As.	Rs. As.
From 10 to 13 years	2 0	3 0	4 0
" 13 to 16 "	3 0	4 0	5 0
" 17 to 20 "	4 0	5 0	5 8
" 21 upwards	5 0	5 8	6 0

by the Consul :—

For Calcutta Coolies :—

Men over 21 years of age	Rs. 5 0 0	per mensem for the first three years.
Do. do.	" 5 8 0	do. for the fourth year.
Do. do.	" 6 0 0	do. for the fifth year.

Younger males "in proportion."

Women from Rs. 4 to Rs. 5 per mensem.

For Pondicherry Coolies.

Men from 16 to 36 years	Rs. 5	per mensem.
Women " 14 " 30 "	" 3 "	" "
Boys " 11 " 15 "	" 2 "	" "
Girls " 10 " 14 "	" 2 "	" "

In addition to the money wage, the employer is bound to supply rations, clothing, lodging and medical care.

The minimum daily ration is as follows :—

{ Cod fish (" morue ") or salt-fish	...	...	214 grammes.
{ or meat (fresh or salt)	...	...	200 do.
Husked rice or manioc flour	...	...	85 centilitres.
Salt	...	...	20 grammes.

All immigrants above 10 years of age to receive the above rations; those under that age half the amount. Upon a certificate from the Immigration Commissioner that the articles named cannot be had, dry vegetables may be substituted for the whole or part of the prescribed ration. For the sick, rations are fixed by the medical attendant. Some discontent was caused by the substitution of maize for rice, the price of the latter, which has to be imported, ruling high. I believe maize is now entered in the contracts as an alternative diet. The scale of clothing is per annum, for men, two shirts, two pair trousers, one kerchief; for women, two shirts, two " robes ou jupes," four kerchiefs. The lodgings are to be suitable "au point de vue de la division et de la salubrité," and to include "toutes les installations de couchage élevées d'au moins 50 centimètres au dessus du sol." The "division" may be according to sexes or according to families. Besides the general clause in the contract, the law binds the employer of 20 laborers to provide an infirmary properly "approvisionné et installé" and a regularly engaged medical attendant. I may mention that the obligation to provide medical care is shackled with the proviso, "à moins que les soins médicaux ne soient réclamés par des maladies provenant de leur mauvaise conduite," an objectionable reservation to my mind, but allowable under the convention.

The term of engagement is for five years. But the law of the colony requires 26 day's work in any month, and days of absence beyond this limit, from whatever cause, must be made good. This seems to be in addition to the double penalty already noticed; if so, the rule is eminently unjust. At the end of five years' service thus calculated, the laborer is entitled to a back-passage for himself, his wife and children. Those permanently incapacitated for labor are also to be repatriated.

The special arrangements connected with immigration are the following :—A standing Immigration Committee is formed consisting of the "Directeur de l'Intérieur" as president, a member of the "Conseil Général" nominated annually by the said Council as Vice-President, the Immigration Commissioner, a resident planter and a merchant, the two last nominated annually by the Governor. An "employé" in the office of the Directeur de l'Intérieur is added as Secretary. This body is chiefly concerned with the preparation of the lists of distribution of laborers. The principle of distribution is to satisfy, as far as possible, the demands of the sugar industry, according to the relative importance of the various estates. Other demands are treated as secondary. The lists of allotment are finally approved by the Governor, on the recommendation of the Committee. An employer may be excluded from the distribution—(1) if he has failed to provide for return-passage of immigrants previously assigned to him; (2) if he has allowed his laborers to become a public charge; (3) if he has been convicted of cruelty (sévéces) towards his laborers, or of failure to comply with the obligations of the contract. It does not appear that this regulation has been put in force.

Side by side with the Government immigration, the Réunion law recognises the right of individuals to import laborers with the authorization of the Governor, and on condition of complying with the rules. But this system appears to be discouraged.

"Le Commissaire de l'Immigration est chef d'un bureau institué à la direction de l'Intérieur. Ce bureau a pour attributions spéciales tout ce qui touche au service de l'immigration," the control of the introduction, the conclusion of the agreements, the provision of return-passage, the forwarding of remittances to India, and, generally, the Commissioner performs the duties of a "Protector of Immigrants." He is directed to visit estates to see that rules are observed and contracts fulfilled on both sides. But he is expressly declared to have no power of "action de police administrative ou judiciaire sur les immigrants." Upon the arrival of any ship carrying immigrants, the Commissioner proceeds on board with the Inspecting

Surgeon and sees that the rules as to provisions, accommodation, and hygiene have been observed. No immigrant can be landed without his permission under a penalty of 25 to 100 francs for every immigrant so illegally disembarked, and 5 to 15 days' imprisonment. The Commissioner submits a report (dresse procès-verbal) on the state of each ship. The immigrants are then landed and kept in "isolement" for 10 days. They are then registered and receive "un bulletin d'immatriculation, que vise leur engagiste et qui leur tient lieu de passeport à l'intérieur." When pronounced by the Surgeon "valides," the immigrants are distributed in groups, care being taken not to separate wives and husbands, or children under 15 years of age and their parents, and then distributed by lot to those applicants who have paid down the costs of introduction. All renewals and cancellations of engagements, all births and deaths, are reported or should be reported to the Commissioner, who is supposed to keep up an accurate register of all Indians coming under the convention.

The position of the laborer on the estate is very obscure. The police seem, however, to have very wide powers of arrest, and as the objectionable system introduced in Mauritius in 1867 was modelled on that of Réunion, we may infer that the vagrancy law of the latter island is very stringent. Consul Segrave says the police may arrest an immigrant and detain him for 24 hours on the vaguest suspicion. The law says the police may arrest for breach of the rules as to "passeports à l'intérieur," but what those rules are is not apparent. An immigrant so arrested should be forwarded at once to his "domicile," but may, in case of necessity, be detained 24 hours.

The question of the livret is also somewhat difficult. Apparently each laborer should possess such a document and it should show both the terms of his contract and his position under that contract at any moment. In practice, however, such documents have not yet been generally given, notwithstanding frequent remonstrances on the part of the Consul and promises of reform on the part of the Governor. The employer is also by law bound to give the laborer a half-yearly statement of account, but this clause also seems to have remained a dead letter. For habitual insubordination an immigrant may be returned to the administration and employed "soit dans un atelier public, soit sur une habitation domaniale." The Government, too, may deport any immigrant in the interests of public order.

At the capital of each arrondissement is constituted a "Syndicat Protecteur," consisting of the Procureur Impérial (national), an "avocat" or "avoué" nominated by "the Court" and a municipal councillor nominated by the Governor. This Syndicate is represented in the court of each juge de paix by a Syndic. This protective organisation is empowered to carry on all processes on behalf of immigrants, and may press for cancellation of contracts upon proof of violation by the employer of the provisions of law as to "salubrité et hygiène," or of the express stipulations of the contract. In these cases, however, a warning should be first given to the employer in fault by the Immigration Commissioner. The Syndics are directed generally to watch over the due performance of contracts on both sides. All references are first made to them, and they may be deputed by the Commissioner to visit estates and may make local enquiries in all cases of complaint. They are instructed to act as mediators between employers and laborers, and to arrange disputes amicably, when possible. They report monthly to the Commissioner all complaints made to them, and *visa* the passes of immigrants requiring to pass the bounds of their "circonscription" to lodge complaints with the Commissioner. We have only *ex parte* statements as to the working of this machinery, so perfect in theory. But according to successive Consuls, the Syndics are of little help to the immigrants. Mr. Hay Hill, in his report for 1862, regrets "the facility with which men are sent to the 'atelier,' or as it is more generally called 'macadam,' almost at the discretion of the master, sometimes for the most trivial causes and with little or no real strict and impartial judicial investigation, at least in our sense of the word." And Mr. Hill's *locum tenens* in 1866 illustrates the system in the case of one of his own servants, who was sentenced to three months' imprisonment on no evidence whatever. Consul Segrave repeats the same charge, pointing out that a commissaire de police can send a man to the 'atelier de discipline' for a hundred days almost at discretion. The system "is, however," says Mr. Hill, "applied to all Indians, Caffres and Malagaches under engagement," and the punishment of the atelier was "inflicted for such acts as could not come under the Penal Code."

There remains the Indian's right to apply to the British Consul, and the successive reports of that functionary contain statements of the number of such complaints. In 1862 there were about 400; in 1863 they were "few;" in 1864, 107; in 1865, 105; in 1866, 238; in 1867, 400. In 1868 they rise to 425, thus classified by the Consul :—

Nature of claim.	Number of claims.	Proved.	Dismissed.	Result unknown.
Non-payment of wages	212	109	93	40
Ill-treatment	75	16	37	22
Others	108	40	46	22
Of all sorts	425	165	176	84

For 1869 the statement is as follows:—

Nature of claim.	Number.	Amount.	Recovered.	Lost.	Proved.	Dismissed.	Result unknown.
Non-payment of wages ...	277	Francs. 39,390	Francs. 21,634	Francs. 11,906	...	...	33
Ill-treatment ...	96	...	...	...	15	77	4
Others ...	142	...	...	...	81	42	19
	515	39,390	21,634	11,906	96	119	56

Captain Segrave remarks on this occasion that the sums claimed do not represent more than 15 or 20 per cent. of the actual arrears; that there was no summary procedure open to an immigrant; that arrears were allowed to run from six months to even three or four years; that the Syndics, being connected with the planting interest, utterly neglected their duties; and that in fact the laxity in payment of wages had led to serious outbreaks on three estates, which had to be repressed by armed force.

In 1870 the complaints to the Consul numbered 1,361 : 74,671 francs of arrears were claimed in 621 complaints; of this amount 26,389 francs were recovered. The other complaints were thus classified:—

Nature of complaint.	Number.	Convictions.	Acquittals.	Result unknown.
Ill-treatment ...	422	121	56	245
Others ...	308	176	28	94

In 1871 there were 771 complaints to the Consul. Of these 319 were for non-payment of wages; 30,649 francs being claimed, and 6,530 recovered. There were 230 charges of ill-treatment, in 6 of which convictions were obtained, and 137 charges of breach of contract with 55 convictions. The results in the remainder, as in 85 cases of "minor claims," were not ascertained. In these last two years the complaint of excessive hours of labor being exacted is distinctly formulated by the Consul.

Manifestly complaints made to the Consul only exhibit the extremest cases. And there is reason to believe that the powers of the police were called into play to prevent access to the Consul or to punish those who asserted their right. But as the reports are admittedly one-sided, and the Secretary of State has been urged to have the whole question investigated, it will be well not to dogmatise here. The following figures, however, speak for themselves. In 1868 there were 19,069 committals to jail, while 10,694 persons were sent to the 'ateliers de discipline.' That is to say, there were 29,763 cases of punishment out of a population of 180,000. According to Capt. Segrave 75 per cent. of these cases occurred among laborers, and 80 per cent. of the laborers were Indians. He estimates that more than one-third of the Indian population was continually in jail. This must perhaps be taken. *'cum grano.'*

When he has worked out his five years' engagement, calculated as described above, the immigrant can claim a back-passages. Considerable delay, however, generally occurs in providing it, and, as we have seen, the Calcutta coolies seldom get forwarded further than Pondicherry. If he chooses to re-engage he obtains a bounty and retains his right to back-passages. "Ceux qui à l'expiration de leur engagement justifieront d'une conduite régulière et de moyens d'existence, pourront être admis, à rester dans la colonie sans engagement, mais dès ce moment ils n'auront plus droit au rapatriement gratuit." According to Mr. Hay Hill—"Though Government sets its face against the settlement of Indians without engagement, there are many instances of Malabars who are well to do and proprietors of small lands, gardens, and shops." At one time there was some emigration of time-expired laborers to Mauritius, but it seems to have died away. The re-emigration to New Caledonia has already been noticed (Part I). Nor do the planters look favorably on the Indian immigration. True to their traditions, they would gladly return to the importation of Africans, and among the enclosures of one of Mr. Hill's despatches was an amusing extract from a local French paper denouncing the policy of "perfidie Albion," as merely dictated by jealousy of the prosperity (!) of Réunion, and winding up with a "timeo Danaos."

The figures of mortality are avowedly untrustworthy. Such as they are, I extract them. In 1862,* 709 deaths among 7,993 Bengal coolies, or 88 per mille; in 1863,* 45 per mille of

* Mr. Hay Hill gives other figures in a subsequent report, viz:—
1862, 825 deaths among 10,837.
1863, 354 " " 12,900.

coolies, and 25 per mille of "Malabars;" in 1864, 200 deaths among 16,465 laborers under the convention, or about 12 per mille. In 1865, the deaths are given as 357 among Calcutta coolies, 135 among "Malabars." In this year the island suffered from the reported "Bombay fever." In 1866, the reported deaths fell to 137 among Calcutta, 49 among Madras coolies. The fever abated in that year. The next year the reported deaths were 131, and in 1868, 210 on an estimated number of 19,402 souls. This, if trustworthy, would give a death-rate of less than 11 per mille, too good to be true. In 1869, the deaths are set down at 287, in 1870 at 211, and in 1871 at 216. Captain Segrave admits the figures to be unsafe, but declares the general health of Indians good.

As to the general well-being of immigrants there is little on record. Captain Segrave, an adverse witness, testifies to the "remarkable physical improvement" visible, and speaks of the "well-dressed sturdy men" to be seen on Sundays and holidays in the streets of St. Denis. The petty tradesmen and small employers of labor are, he thinks, the worst masters; but the great arrears of wages constitute a real and general grievance, and occasional cases of brutal ill-treatment do occur. We have nothing definite as to the relations of the sexes or the state of education.

CEYLON.

At Ceylon we know little. Indeed, it was only recently that the Government of India became aware of the importance of the emigration to the colony. The following extracts from the despatch from the Secretary of State, No. 70, dated 4th July 1872, sum up the information we have on the subject:—

I think, from the constitution of the population of Ceylon, that a Tamil emigration thither must have begun many years ago, and probably never altogether ceased. But a fresh impetus was given to it by the extension of coffee cultivation in 1842 or 1843.

The history of the correspondence between the Governments of India and Ceylon up to 1862 has been given in the first part of the note.

In accordance with the request of the Government of India, the Ceylon Government did forward a copy of the Ordinance No. 11 of 1865, which was recorded without comment. And about the same time a report on the condition of emigrants was furnished. But I have not been able to obtain it.

The Ordinance of 1865 still forms the law which regulates the relations between employer and employed in Ceylon. I may very briefly summarize its chief provisions.

Verbal contracts of service are not to be valid for more than one month. Written contracts may run for three years, but must be entered into in presence of a Police Magistrate or Justice of the Peace. Certain officers of Government are, however, empowered to make contracts for five years, and contracts in India are made valid in Ceylon, if valid according to the law of India. (In point of fact, contracts for labor in Ceylon do not appear to be made in India, but in the island.)

Contracts are determinable by mutual consent, or in case the employé is convicted of an offence, or becomes permanently disabled for the completion of the contract. In the latter case, the employer is bound to provide the employé, if his contract be for not less than one year, with the means of returning to his own country. Refusal or neglect to work, without reasonable excuse, drunkenness, disobedience of orders, insolence, gross neglect of duty or other misconduct, or abandonment of service without leave, renders the employé liable to forfeiture of wages due, if not exceeding the wages of one month, and to imprisonment with or without hard labor for three months, on conviction before a Police Magistrate, provided that no such punishment shall be inflicted if wages are more than a month in arrear. Deserters also may be sent back to work instead of being punished, should the employer wish it.

On complaint by a laborer, the court may deduct from any sum awarded, wages for time of unlawful absence from work, or the value of breakages or damage done by laborer.

An employer refusing payment of wages due may, in addition to such payment, be fined and imprisoned for three months. Wages are made a first charge on the estate. Periods of imprisonment and unlawful absence are not to count towards fulfilment of the term of contract.

Any laborer incapacitated by sickness from labor is "entitled to lodging, food, as well as medical care, at the expense of such employer during such incapacity."

In 1869, Dr. Van Dort, Assistant Colonial Surgeon, took occasion, in submitting a report upon the Gampola Civil Hospital, of which he was in charge, to go into the question of mortality among Tamil immigrants in Ceylon. He quoted from the Ceylon Directory the following figures as those of immigration and return for the years 1843-1867:

Immigrants	...	1,446,407
Returns	...	839,897
Balance to be accounted for	...	606,510

Estimating the number of those who had settled in the island at one million, there remained a balance of about 350,000 due to mortality, an enormous number of deaths, if accepted as the truth, on a total immigration of less than 1½ million, spread over 25 years. Dr. Van Dort attributed much of the mortality to the uncleanly immoral habits of the Tamils. There can, however, be little doubt, that his picture is greatly exaggerated.

His report, together with the remarks of the Emigration Board upon it, was circulated to the Ceylon Government to the district officers concerned. The points especially noticed were—(1) the possibility of improved arrangements along the routes followed by emigrants so as to prevent sickness and mortality *on the journey*; (2) the possibility of introducing a system of rationing by employers on estates, to check the alleged foul-feeding habits of the coolies.

The officers consulted all agreed that the rationing system was uncalled for, Dr. Van Dort's figures not being such as could be accepted as shewing the actual mortality. They also point out that considerable efforts had been made to provide proper accommodation, water, and medical attendance along the main route followed by coolies from the coast to the districts. One officer suggested certain improvements in the same direction, which are not necessary here to particularise. He appends to his letter figures for the year according to which the arrivals and departures were for that period as follows:—

ARRIVED—

Men ...	...	...	...	...	491,136
Women ...	...	...	...	...	126,912
Children ...	...	...	...	...	38,432
Total	...	...	...	...	656,480

DEPARTED—

Men ...	...	...	...	...	393,814
Women ...	...	...	...	...	63,388
Children ...	...	...	...	...	26,176
Total	...	...	...	...	483,378

Excess of arrivals over departures	...	...	...	...	173,107
------------------------------------	-----	-----	-----	-----	---------

But even these figures Mr. Twynam (the officer referred to) does not think altogether trustworthy, while on those for earlier years he places no reliance whatever.

The Planters' Association was also addressed, and letters from the Association and several individual planters were elicited. They all indignantly repudiate Dr. Van Dort's conclusions as to excessive mortality. The Agents' letters confirm the statements of the Association as to the considerate manner in which labourers are treated on the estates. To the letter from the Secretary to the Association are appended two sets of tables. One set shows the mortality in 1868 and 1869, according to certain returns submitted to Government. These include 100 estates, and show for these estates a mortality of 36.4 per mille in 1868, and 26.6 per mille in 1869. The second set includes statistics obtained by the Association for the same years from 325 estates, and exhibits a mortality of 33.6 per mille in 1868, and 28.0 in 1869. It is true that an Ordinance of 1862 makes the submission of returns of births and deaths binding on the planters, but it seems not to have been duly enforced.

Sir Hercules Robinson took very much the view expressed above as the *sensus* of the Magistrates consulted. He also described the arrangements made on the route taken by immigrants, and shewed that the improvement of the system, where possible, had the sanction of the Colonial Government. Lord Kimberley did not press the point of rationing on estates, but suggested that something might be done towards supplying food *on the route*. The Colonial Government, however, was strongly opposed to this as unnecessary, and likely to lead to gross abuses. But orders were issued to secure the supply of sufficient provisions to enable them to reach the districts where they could bring their labour to market. Sir H. Robinson was not equally satisfied with the medical aid supplied *on estates*, and steps have been taken to remedy this defect.

OTHER COLONIES.

For the Straits Settlements we have no detailed information. Such particulars as are to be found in the first Part, few Indian immigrants are mentioned.
