*Rainfall return not received.

† This sign is shown in the columns for normal rainfall against those stations for which 'normals' have not been established; in the columns for total rainfall and number of rainy days it means that owing to the records being incomplete the totals are not known.

* Rainfall return not received.

† This sign is shown in the columns for normal rainfall against those stations for which 'normals' have not been established; in the columns for total rainfall and number of rainy days it means that owing to the 'normals' being incomplete the totals are not known.

* Rainfall return not received.

This sign is shown in the columns for normal rainfall against those stations for which "normal" have not been established; in the columns for total rainfall and number of rainy days it means that owing to the records being incomplete the totals are not known.

Rainfall return not received.

? This sign is shown in the columns for normal rainfall at these stations for which normals have not been established; in the columns for total rainfall and number of rainy days it means that owing to the record being lost the totals are not known.

*Rainfall return not received.

† This sign is shown in the columns for normal rainfall against those stations for which normals have not been established; in the columns for total rainfall and number of rainy days it means that owing to the records being incomplete the totals are not known.

* Rainfall return not received.

† This sign is shown in the columns for normal rainfall against those stations for which 'normals' have not been established; in the columns for total rainfall and number of rainy days it means that owing to records being incomplete the totals are not known.

CORRIGENDA IN THE TABLE SHOWING THE MONTHLY AND ANNUAL RAINFALL IN CENTRAL INDIA FOR THE YEAR 1928.

District or State.	Station.	Column for	Rainfall.					
			For.			Read.		
			Number of rainy days.	Rainfall.	Normal rainfall.	Number of rainy days.	Rainfall.	Normal rainfall.
Gwalior	Gwalior Residency ..	March ..	..	..	0.3	..	..	0.23
Do.	Pichhore	March ..	..	0.10	..	..	0.80	..
Do.	Khachrod	June ..	..	2.0	..	..	2.10	..
Baghelkhand ..	Sidhi	June ..	..	11.7	..	..	11.77	..

Monthly and Annual Rainfall Statement of the Central Provinces and Berar for the year 1928.

NOTES.—(1) The names of irrigation gauge are printed in italics.
 (2) The total and the average rainfall for all districts have been calculated using the data of only those stations for which normals are available.

Monthly and Annual Rainfall Table of the

Districts.	Stations.	January.			February.			March.			April.			May.			June.

MONTHLY AND ANNUAL RAINFALL TABLE

OF THE

MADRAS PRESIDENCY

FOR THE YEAR

1928.

Notes.—The district averages given in the rainfall tables from January to August 1928 are not comparable with the district normals owing to a difference in the method of calculating the average and normal rainfalls of the district. The district averages were calculated by dividing the total rainfall of the district by the total number of stations in the district. But as there are always some stations for which normals have not been arrived at, the district normal is not derived from the full number of stations in the district, but only by dividing the sum of the available normals by the number of stations for which normals exist.

To make the two comparable, after September 1928, the district averages also have been calculated by dividing the sum of actual amounts of rainfall at those stations only for which normals are available by the number of such stations.

The district averages given in the tables from January to August 1928 have now been corrected and are shown as errata in the appended statement.

Board (Land Revenue and Settlement),
Madras, 15th April 1929.

ERRATA.

Note.—The district averages given in the rainfall tables for certain districts prior to January 1929 are not comparable with the district normals owing to a difference in the method of calculating the average and normal rainfalls of the district. The district averages were calculated by dividing the total rainfall of the district by the total number of stations in the district. But as there are always some stations for which normals have not been arrived at, the district normal is not derived from the full number of stations in the district, but only by

dividing the sum of the available normals, by the number of stations for which normals exist.

To make the two comparable, the district averages have been calculated with effect from January 1929 by dividing the sum of actual amounts at those stations only for which normals are available, by the number of such stations.

Correct figures for 1928 have since been worked out and published as errata.

Revised figures on these lines for the years 1924 to 1927 are published below:—

List of Errata to the rainfall tables for the years 1924 to 1927.
