

Most Common Diseases.

Diseases.	Out-door.	Diseases.	In-door.
Ophthalmia	3,595	Ulcers	90
Ulcers	1,971	Syphilitic affections	64
Skin diseases	1,904	Dropsy	59
Fevers	1,409	Fevers	40
Injuries	1,140	Injuries	36
Rheumatic affections	1,032	Skin diseases	30

Inspection.—The dispensary was inspected by the Civil Surgeon on the 22nd April 1880.

Attendance of Patients.—The number of patients treated during the year is 755 in-door and 19,113 out-door, being an increase of 68 in the former and 1,257 in the latter over that of the previous year.

SIVAGANGA.

Extracts from the Annual Medical Report by Civil Apothecary C. JANAKIRAM NAIDU.

Dispensary Buildings.—In September last the dispensary buildings were repaired at an expense of Rupees 215. The latrines and the out-houses were put in complete repair, and the roofing of the main building was repaired in places where it leaked the most.

Most Common Diseases.—The most prevailing diseases among out-patients were sore eyes, ulcers, worms, constipation, ague, and rheumatic affections. Among in-patients syphilis, injuries, ague, general dropsy, and dysentery formed the most common.

Attendance of Patients.—The attendance among the in-door is 0.28 more than last year, and the average daily attendance among the out-door is 8.92 less than last year, which is due to the decrease in the number treated by 1,100.

General Remarks.—A mild form of ague prevailed in the town and its suburbs during October, November, and December, and most of the people in the villages bought quinine as a cure for their malady. Forty-five cases of child-birth were attended to during the year by the midwife attached to the dispensary.

TIRUSHULI.

Extracts from the Annual Medical Report by First-class Hospital Assistant C. T. VENKATARAYALOO NAIDU, No. 621.

Dispensary Buildings.—The building requires repair.

Most Common Diseases.—Ague, rheumatism, anaemia, conjunctivitis, inflammation of the memb. tympani, bronchitis, dyspepsia, and worms.

Attendance of Patients.

USILAMPATTI.

Extracts from the Annual Medical Report by Civil Hospital Assistant T. MUTHU CUMAROO PHILLAY.

Dispensary Buildings.—The building consists of a room and a hall, and it is not only badly ventilated, but also very inadequate for its purpose.

Dispensary Committee.—Meet once in every month at the Sub-Collector's Office, Dindigul.

Most Common Diseases.

	1879.	1880.
Fevers	2,284	419
Conjunctivitis	464	516
Disease of stomach and bowels	179	686
Ulcer and other cutaneous diseases	955	782

Inspection.—Inspected by the Zillah Surgeon on the 10th March 1880.

Attendance of Patients.—There is a considerable decline in the attendance of patients when compared with the previous year; this is probably due to the healthy state of the seasons and the absence of epidemic disease.

General Remarks.—The Midwife Nullammal attached to this institution has successfully treated 58 cases of labor during the year, showing an excess of 11 cases over the past year.

UTTAMAPOLLIUM.

Extracts from the Annual Medical Report by First-class Hospital Assistant R. ARBOY, No. 596.

Dispensary Buildings.—The same old building, wholly unsuited for a dispensary and so often condemned by superior authority, is still occupied on a rent of Rupees 4 per mensem, as the new dispensary, the construction of which was undertaken about eight years ago, has not as yet been finished. Furniture wanting. No bedding and clothing for patients.

Dispensary Committee.—Meetings are held at Dindigul once every month.

Most Common Diseases.—The common diseases among out-door patients treated in the year were malarious fever, inflammation of the external ear, conjunctivitis, neuralgia, bronchitis, dysentery, diarrhoea, ulcer, and itch. Among in-patients the common diseases were fever, ulcer, starvation, dysentery, and wounds.

Epidemics.—Four cases of sporadic cholera have been treated in this town, and all of them recovered. Measles, chicken-pox, and hooping cough also broke out, but deaths from these diseases were very few.

Inspection.—Inspected by the District Surgeon on the 8th April 1880.

Attendance of Patients.

MALABAR DISTRICT.

ANJENGO.

Extracts from the Annual Medical Report by Civil Hospital Assistant J. D'JORDAN.

Dispensary Buildings.—The dispensary is in a rented building, which is in good order, and suitable.

Most Common Diseases.—Malarious fevers, rheumatic, syphilitic, nervous and respiratory affections. Anaemia, debility, worms, dysentery, diarrhoea, ulcers, &c.

Inspection.—Inspected by the Residency Surgeon, Trevandrum, in July and December.

Attendance of Patients.—The attendance of patients during the year under report has been larger than previous years, the daily average being 11.15, whereas that for the previous ten years is 7.33. The total treated for 1880 was 1,359 and that for 1879 was 447.

BADAGARA.

Extracts from the Annual Medical Report by Civil Apothecary P. BAPPU.

Dispensary Buildings.—The present dispensary building is Government property and was originally meant for the accommodation of prisoners who are now kept in the subsidiary jail if attacked with any epidemic diseases.

Most Common Diseases.—Rheumatic, syphilitic, and respiratory affections, anæmia, dysentery, diarrhœa, constipation, colic, and worms.

Attendance of Patients.—Since the opening of the dispensary (on the 8th September 1880) the number of patients amounted to 2,251 and they were all out-door patients. The average daily attendance was 19.57.

CALICUT.

Extracts from the Annual Medical Report by Surgeon-Major W. H. ROBERTS, M.D.

Dispensary Buildings.—Dispensary buildings in fair state of repair.

Dispensary Committee.—Under the Municipality meetings are held every fortnight.

Inspection.—Deputy Surgeon-General [illegible] Small-pox is endemic.

Attendance of Patients.

CALICUT LEPER HOSPITAL.

Extracts from the Annual Medical Report by Surgeon-Major W. H. ROBERTS, M.D.
The total number of cases treated in this hospital during the year 1901 was 1,000.

The total number of cases treated in this hospital during the period under review amounts to 34, of which 5 died.

The average daily number of sick has been 14.70. The hospital in the year 1878 was permitted to afford shelter to 15 patients only of both sexes. The restriction in number is owing to the inability of the Municipality to provide funds for the support of more. The menial establishment has also been

The menial establishment has also been reduced. The following varieties of leprosy were treated in hospital :—

The result is 16 relieved, 1 absconded, 5 died, and 12 remaining. The treatment is chiefly, I may say, palliative.

The Lazaretto scheme is still in abeyance. The bedding and clothing are sufficient.

CALICUT SMALL-POX HOSPITAL.

Extracts from the Annual Medical Report by Surgeon-Major W. H. ROBERTS, M.D.

The following table shows the working of this hospital:—

The admissions are fewer as compared with the previous year.

The admissions are fewer as compared with the previous year. The deaths in proportion to total treated are 19.56. These cases are invariably unvaccinated and confluent. Bedding and clothing sufficient.

CANNANORE.

Extracts from the Annual Medical Report by Surgeon W. A. LEE.

Most Common Diseases.—Worms, malarious fevers, bronchial and intestinal catarrh, rheumatism, ulcers, skin-diseases and abscesses. The chief mortality being from dropsy, debility, diarrhoea, respiratory affections, and injuries:—

Attendance of Patients.—From the above table it will be seen that there is a diminution in the number of patients treated as compared with previous years.

General Remarks.—The indiscriminate distribution of medicines to individuals in comparatively good circumstances is in my opinion a great abuse of what should be regarded as a public charity for paupers only. The matter has been brought to the notice of the Municipal Commissioners, who (if only for selfish reasons, as they are heavily in debt for medicines,) I hope will be led to see the advisability of introducing a sliding scale of payment for drugs by all except the poorest class.

COCHIN.

COCHIN.
Extracts from the Annual Medical Report by Surgeon-Major W. H. MORGAN.

Dispensary Buildings.—The dispensary buildings are in good repair.

Most Common Disease.

APPENDIX TO REPORT ON THE

Epidemic.—Epidemic small-pox, which has been noticed in the reports of 1878 and 1879, died out in the first quarter of 1881.

Diseases.	1880.				1879.				1878.

Attendance.

Average daily attendance.	In-patients	Out-patients	1880.	1879.	1878.
			17.39	20.08	26.34
			47.63	50.68	72.09

General Remarks.—Water from the old polluted sources is still freely indulged in, and the suggestions of the Sanitary Commissioner about utilizing the abundant rainfall can only be carried out by degrees. The Municipality pay due attention to the ordinary conservancy requirements of the town. Vaccination is carried out, though as of old (and until the operation becomes compulsory) children in arms are, by the apathy of their parents, still deprived of the prophylactic. The number vaccinated by the Medical Subordinates (four) was 53, and by the Municipal Vaccinator 554. Of these 464, or 76.44 per cent., were successful. The Municipal Vaccinator was specially urged to pay attention to the young, but parents do not fall in as readily with our views as could be wished.

DEVALA.

Extracts from the Annual Medical Report by Assistant Apothecary P. CRUMMEY.

Dispensary Buildings.—Owing to the want of funds the repairs of the building had to be postponed, but, now that the subscriptions have increased, the Committee at the last monthly meeting was enabled to allot the sum of one thousand rupees for the repairs of the building and for the purpose of flooring the old building with Portland cement, the floors hitherto being of mud.

Dispensary Committee.—The Hospital Committee, which consists of a President, Secretary, and six members selected from the subscribers, meets as a rule once a month, when questions regarding the working of the institution are discussed.

Most Common Diseases.—Malarious fevers with their sequelæ—anaemia, dropsy, and enlarged spleen—were most common, respiratory affections were also frequent, and a rather large number were treated for worms, which in Wynaad are a frequent cause of suffering. Among the cases of pneumonia treated ten proved fatal; the total number of deaths among in-patients for the year was 20 compared with 18 for the previous year.

Epidemics.—Small-pox in an epidemic form visited the vicinity in March; it chiefly attacked the Kurumbars, a people who live in the forest and are unprotected by vaccination; the disease assumed a very grave type, and of the 27 cases that came under treatment 13 died.

Inspection.—The Deputy Surgeon-General, Indian Medical Department, Southern Division, inspected this dispensary in the month of March.

Attendance of Patients.—The attendance of out-patients is still very irregular, especially during the monsoon; with incessant rain it is too much to expect the sick to come for treatment, living as they do from two to ten miles from the dispensary; to compensate for this, the Superintendents in the various plantations obtain quantities of prepared medicines from the dispensary and administer them to the sick laborers under their charge when necessity arises.

GUDALUR.

Extracts from the Annual Medical Report by Civil Apothecary HENRY WALE.

Dispensary Buildings.—The Local Fund Board have sanctioned the expenses about to be incurred in asphaltting and repairing the hospital and in building quarters for the Apothecary.

Dispensary Committee.—This dispensary is under the control of the Local Fund Board of the Nilgiri Circle.

Most Common Diseases.—Malarious fevers—most prevalent during the hot season, ulcers of a sloughing nature, skin diseases, dropsy, respiratory affections, dysentery, and diarrhoea.

Epidemics.—Three cases of small-pox were treated at the dispensary; of these one proved fatal.

Inspection.—The Annual Medical Inspection of this dispensary by the Deputy Surgeon-General took place on the 21st March 1880.

Attendance of Patients.—One thousand four hundred and fifty-seven sought relief as out and 236 as in patients exclusive of the Police, who number 98, thus making a total of 334 in-patients, and showing a decrease of 247 in the number of out and 24 in the number of in patients compared with the previous year.

MANANTODDY.

Extracts from the Annual Medical Report by Dr. A. HAWSTON, M.D.

Dispensary Buildings.—Roof and floor, which have been in a very unsatisfactory condition during past two years, have not been repaired and are now in a very bad state, and considerable portion of roof of dead-house has fallen in.

Most Common Diseases.—Among out-door, malarious fevers, constipation, worms, respiratory affections, diarrhoea; and in-door, malarious fevers, diarrhoea, dysentery, and dropsy.

Attendance of Patients.

Treated in 1878.		Treated in 1879.		Treated in 1880.	
In.	Out.	In.	Out.	In.	Out.

MANJERI.

Extracts from the Annual Medical Report by First-class Hospital Assistant SHAIK MADAR, No. 639.

Dispensary Buildings.—The building was not repaired during the year, but was white-washed.

Most Common Diseases.—Among in-patients were fevers, rheumatism, syphilitic affections, anaemia, general dropsy, respiratory affections, and dysentery. Among out-patients ophthalmia, diarrhoea, worms, constipation and skin diseases. The total deaths were 9 against 32 of last year.

Attendance of Patients.

Years.	In-patients.	Out-patients.
1879 ...	410	13,064
1880 ...	368	10,035

Moodelliar, were opened in May 1880, and as they become known will be very useful to the inhabitants of the densely populated northern districts of the town.

23. SKIN DISEASES.—The figures of the past year seem to indicate an increase in skin diseases :—

Years.				Skin Diseases.
1877	...	...	...	56,893
1878	...	...	...	68,177
1879	...	...	...	84,873
1880	...	...	...	96,386

It must be remembered, however, that a large number of the poor in 1877 and 1878 were treated in famine camps, the returns of which are not included in dispensary statistics.

24. ULCERS.—Notwithstanding the long period since the disappearance of famine, ulcers continued to be very prevalent, though not so common as in the preceding year. The following abstract shows the number of admissions in the past four years :—

Years.				Admissions.
1877	...	...	...	81,892
1878	...	...	...	98,936
1879	...	...	...	120,421
1880	...	...	...	120,310

25. SURGICAL OPERATIONS.—The following abstract shows the number of surgical operations performed during the last four years :—

Years.				Major Operations.	Minor Operations.	Total.
1877	...	...	...	1,950	22,633	24,583
1878	...	...	...	1,860	24,816	26,676
1879	...	...	...	1,893	59,585	61,478
1880	...	...	...	1,836	28,851	30,687

It will be seen in regard to surgery that notwithstanding the yearly extension of the dispensary system and the opening out of new centres of medical relief, that the number of surgical operations do not increase in proportion to the extension of the system of dispensary relief. In 1879 there seems to have been an unusual number of minor operations (probably owing to the prevalence of boils and abscesses), but the major operations are fewer in 1880 than in 1877.

26. In looking through the individual reports of dispensaries for 1880, I have been much struck by the absence of any record, in a very large proportion of them, of any important surgical proceeding, and of an apparent want of interest in surgical practice. It is quite true that in Southern India we rarely meet with calculous affections, which in Northern India and Bombay give rise to so large a number of "major" operations in surgery, but with all allowances being made, I think we fail in a great measure in bringing within the reach of the people that practical knowledge of surgical practice which the poorest and most ignorant of the population are capable of appreciating.

27. This is a point of great practical interest, because there can be no doubt that the people of India estimate European medical treatment more by what they see of the skill of our Surgeons than by any professed faith in the value of our treatment of internal disease. To this day Physicians have to compete with old women and exorcists, and have not yet so demonstrated to the native mind the superiority of their practice, that they can command implicit faith in it. In surgery, however, the native population do admit the advantages and superiority of European methods, and it seems to be a matter for regret that in this particular our dispensary practice should be so prominently weak.

28. In comparing the surgical practice of dispensaries in South India with that in Bombay, the North-West and Punjab, it must be borne in mind that the latter provinces have sent out for practice amongst their countrymen a large number of highly trained Assistant Surgeons whose qualifications have been tested by University Examiners, whereas in Madras a large proportion of our dispensaries have been officered only from the lowest grade of the Subordinate Medical Department, who have never been educated to undertake important surgical operations. But it is not only the uneducated Hospital Assistants who shirk surgical practice, many of the Apothecaries, whose training have been of a more practical character, and even some of the Civil Surgeons, I regret to say, seem, by the results of their hospital work, to pay very little attention to the surgical relief of the people. There is no district in the Presidency in which operative skill, for the relief of the blind for instance, would not be appreciated; but it is astonishing to see how little is done in that way, in connection with Mofussil Hospitals, even by Civil Surgeons.

29. The root of the defect in regard to surgical skill and practice is the same in men educated in Europe as in India. No man ever becomes a skilful Surgeon who is not a practical Anatomist. In the present day there is too much of learning Anatomy by books, plates and diagrams with the object to satisfy examiners, and not enough of the actual study of the human body and the relation of its various organs in the dissecting-room. This is a common defect of medical education in Europe, but it is worse in India, owing to the natural difficulties surrounding the study of Practical Anatomy in a tropical climate. These practical difficulties must be looked in the face and surmounted before Indian Schools of Medicine will succeed in turning out a body of practitioners capable of benefitting the people by the practice of modern surgical principles.

From returns before me I am satisfied that the pupils of the Medical College do not spend a sufficient portion of their educational course in the work of the dissecting-room to justify the hope that they can ever make good practical Surgeons, and I bring the subject prominently to notice in this place as a substantial reason why the surgical work of the Civil Hospitals and Dispensaries of this Presidency is so much below the mark.

30. It is always an advantage to know how or why we fail in any particular, and that the surgical practice of Southern India is a comparative failure I am forced to conclude from the results shown by the returns. I trust that by directing attention to the subject those who are qualified to pursue surgical practice will give increased attention to it, bearing in mind how much the native mind is influenced by good or bad results of surgical treatment, and also that the education of the future practitioners of the country may be so conducted as to ensure a supply of men thoroughly trained in the practice of Anatomy and Surgery. I do not expect any general improvement in the development of surgical practice until the medical institutions of the Mofussil are placed under the charge of men who have been so taught and trained.

31. *Caste or Nationality of Patients.*—The following abstract gives the nationality of the patients treated in Civil Hospitals and Dispensaries for the past three years :—

Year.	Europeans.	Eurasians.	Hindus.	Mahomedans.	Other Castes.	Total.
1878	7,624	39,862	763,941	167,606	161,191	1,140,224
1879	5,900	35,634	892,155	200,646	175,891	1,310,226
1880	6,117	37,280	898,777	191,423	179,707	1,313,304

B.—ADMINISTRATION.

32. The year 1880 has been noticeable for changes in the system of medical administration. Formerly the Deputy Surgeons-General of divisions inspected and exercised professional control over the various Civil Hospitals and Dispensaries within their circles of administration, but subsequent to the Government Order

PALGHAT.

Extracts from the Annual Medical Report by First-class Hospital Assistant C. VEERAWGOO, No. 628.

Dispensary Buildings.—The buildings are in good repair. Furniture and fittings are complete and serviceable.

Dispensary Committee.—It has been proposed by the Vice-President to hold a Sub-Committee once or twice a month for the management of this institution.

Most Common Diseases.

Diseases.	1878.				1879.				1880.

1879 ...	...	281	6,927	17-05
1880 ...	...	318	8,455	19-79

During the year under report there have been 8,455 admissions as out and 318 as in patients, showing an increase of 1,528 on the former and 37 on that of in-patients of the past year.

PALLIPORT.

Extracts from the Annual Medical Report by Surgeon-Major W. H. MORGAN.

Dispensary Buildings.—The buildings call for no special remark; just before the south-west monsoon all necessary attention is paid to the roof. The dispensary fittings are in good repair; two cots have been added to the furniture. The patients take some interest in the garden referred to in former reports.

Most Common Diseases.—The most common diseases among the inmates of this hospital have been fever, bronchitis, dysentery, and ulcers, and the sickness has been less than in former years without any death.

In-patients.	1880.	1879.	1878.	1877.	1876.	1875.
Total Treated—True Leprosy ...	35	43	43	54	46	58
Total Died—Do. ...	...	4	4	6	3	3

Epidemics.—Measles and chicken-pox prevailed to a slight extent in the neighbourhood, but there were no cases in the Lazaretto.

Inspection.—Visited once a month by the Civil Surgeon of Cochin.

Attendance of Patients.—Up to the fourth week in November 34 cases (of whom 23 were male and 11 female) were maintained in the Lazaretto, but since then a female somewhat improved in health obtained permission to return to her friends.

	1880.	1879.	1878.	1877.	1876.	1875.
Average daily attendance of in-patients ...	33-84	33-1	33-5	33	34	31-5

General Remarks.—Of the 34 cases reported on the 1st January 1880 one male left hospital, and in his place another case was admitted. In November the female above alluded to left, and her place has not been filled since.

Gurjon Oil.—Of 11 cases under treatment by gurjon oil, one asked to have the treatment changed to chaulmogra oil and appears to have been benefited by it. Five tubercular and five anæsthetic cases are under this treatment; of the former, two show some reduction in the size and number of the tubercles and in a healthy condition of ulcers which appear from time to time; of the five anæsthetic cases sensation has partly improved.

Chaulmogra Oil treatment has been tried in 12 cases, and of these 5 are reported better by the Hospital Assistant; this remedy appears to be finding favor among the patients as it does not require so much perseverance in its application as gurjon oil and is not as troublesome as the fumigation by carbolic acid.

Carbolic Acid Fumigation.—Of 13 cases under this treatment there has been nothing specially worthy of note. The Hospital Assistant finds some difficulty in getting the patients together for fumigation.

The search for the *filaria sanguinis humanis* has been continued in those patients as were not examined last year, but with no result.

PONANI.

Extracts from the Annual Medical Report by First-class Hospital Assistant DAVOOD BEG, No. 402.

Dispensary Buildings.—The dispensary building is a new one erected in 1874; it leaks now and then. A large almirah is necessary for the safe custody of medicines as many of them are kept openly on a shelf.

Dispensary Committee.—The Local Fund Board meet once a fortnight at Calicut.

Most Common Diseases.—Small-pox, diarrhoea, dysentery, fevers, diseases of the lungs, skin, and kidneys, wounds and injuries.

Epidemic.—Small-pox was prevalent to some extent throughout the year amongst the inhabitants of the adjoining villages and proved fatal to some.

Attendance of Patients.

Years.	In-patients.	Out-patients.	In-patients.		Out-patients.	
			Increase.	Decrease.	Increase.	Decrease.
1878 ...	266	3,250	143	...	...	91
1879 ...	154	3,029	...	112	...	224
1880 ...	115	3,261	...	39	232	...

General Remarks.—The employment of a trained midwife is absolutely necessary, and I have applied, although unsuccessfully, for one for the last three years.

separating the Military and Civil Medical Departments, the Deputy Surgeons-General of circles have been restricted to purely military duties.

33. Endeavors have been made to remedy the withdrawal of superior supervision by placing the inspection of minor dispensaries in the hands of the Civil Surgeons of the districts. As a temporary measure, and pending the issue of orders on this subject by Government, I have taken upon myself the responsibility of directing the Civil Surgeons to inspect, as often as their station duties will permit, the various hospitals and dispensaries established within their respective districts. They have also been authorized to receive the returns of the various hospitals, to examine and check all indents, and generally to perform all duties of supervision and control which formerly fell to the lot of Deputy Surgeons-General.

34. These duties have on the whole been satisfactorily discharged by Civil Surgeons of districts. The distinct recognition by Government of their new position in regard to outlying dispensaries is, however, much to be desired, as in some instances Local Fund Boards have objected to pay the Civil Surgeons' travelling allowances for visits of inspection, and in other instances have employed Inspectors of their own who are in no way connected with the Medical Department.

35. The need of inspection and control by qualified officers of the Medical Department is so apparent, and has been so long recognized by Government and the Revenue authorities, that I need offer no arguments in support of the principle. It is the more necessary in the Madras Presidency, where so many of our dispensaries are administered by members of the Hospital Assistant grade, whose professional qualifications are admittedly of a low order. Frequent inspection and professional control ought to be the very backbone of our system of medical aid. Without it there is always the risk of doing more harm than good by the establishment of new dispensaries.

36. In regard to the management of a large proportion of the Civil Dispensaries, the reports of the District Surgeons show that they are very creditably conducted, and that they are doing good, but in some others the reports are not so favorable, owing to the inexperience, indifference or low professional qualifications of the men employed.

The chief failings brought to notice are—

- (a.) Tendency to lavish expenditure of medical supplies. In one instance recently investigated a native doctor (not on the establishment) was in the habit of entering in his prescription book 5 ounces of castor oil as an ordinary dose!! A very considerable improvement, however, has taken place in the last year in this respect, and as the District Civil Surgeons acquire more experience in control, there will be less cause of complaint.
- (b.) The retention of in-patients of beggars, &c., with chronic diseases. As local authorities find the funds for dieting and clothing in-patients, the abuse of the privilege is always subject to local control.
- (c.) The deputing of the proper work of the medical officer to hospital servants. On this subject I have found it necessary to issue a stringent circular.
- (d.) Neglect of dispensary vaccination. On this point also I have had to issue a warning.
- (e.) The failure of a large number of the officers in charge of dispensaries to inspire the public with a faith in their surgical skill.

This is no doubt a grave failing. I have already alluded to it under the remarks on surgical operations.

37. The large hospitals at the Presidency and at the headquarters of districts have generally been administered to my entire satisfaction.

38. The new system of medical administration leaves the inspection of the large Civil Hospitals of the Presidency in the hands of the Surgeon-General with the Government of Madras.

In 1880 no budget provision had been made for the Surgeon-General's travelling allowances, and the sanction of Government of India to the same was

only received in May 1881. Consequently the inspections of the Surgeon-General in 1880 were restricted to the Presidency Town Hospitals, to those on the Nilgiris, and Coimbatore. In future, efforts will be made to inspect the headquarters of districts once a year, though this will necessitate an amount of travelling and absence from headquarters which will seriously interfere with office administration.

C.—FINANCE.

39. Although the number of dispensaries had been increased by 22, the total cost of the medical institutions was less than in the year 1879 by nearly Rs. 80,000 (actual Rs. 77,444).

40. This satisfactory condition of things has been brought about chiefly by the following circumstances:—

- (1.) By a favorable rate of contract for provisioning the Government institutions at the Presidency.
- (2.) By greater attention to the actual wants of the various hospitals in the way of medical and surgical supplies, and by insisting on the use in certain proportions of the cheaper Chinchona febrifuges instead of Quinine, and generally by the controlling action of my own office and department over the medical expenditure of Local Fund Boards and Municipalities. For instance, the value of medical supplies issued from Government stores to Civil Hospitals and Dispensaries was in 1879 Rs. 1,47,999 and on bazaar medicines Rs. 19,858, while in 1880 the cost of European medicines was Rs. 1,09,858 and of bazaar medicines Rs. 15,019. In these two items alone there has been a saving in the past year of nearly Rs. 43,000 as compared with the actual expenditure of the preceding year. I have not the least doubt that these items of expenditure are susceptible of still further diminution, and that by careful control and supervision it will be possible for local authorities to very considerably extend their system of dispensary aid without material enhancement of cost.

41. But to effect this, local authorities must leave professional details to professional control. When I assumed charge of the administration of the Civil Medical Department I found that the practice was to pass, unquestioned, all requisitions countersigned by a Secretary to Government or the Board of Revenue. There was in fact no professional scrutiny of demands made by any inexperienced Hospital Assistant in Local Fund or Municipal employ. I at once saw that a persistence in this system would lead to gross waste and extravagance, and that it would lead to financial embarrassment of local authorities, and sudden check to their schemes of medical relief, and accordingly, in the interests of those local authorities, I felt called upon to exercise a control over issues in which the demands appeared wanton or extravagant. The result is now apparent, in the saving of Rs. 43,000 for a portion of the year 1880, and this notwithstanding a larger number of patients treated than in the preceding year.

42. I am firmly convinced of this, that in the medical relief of the people of India economy of administration must go hand in hand with the extension of the system of relief.

In a large number of instances the expenditure of money in hospital buildings is quite unnecessary, certainly in all cases where the relief is confined to out-patients. A native house in a convenient situation offers sufficient accommodation for out-patients, and in many cases for the few cases of injury or acute disease it may be necessary to retain. Many of the Mofussil Hospitals spend more on diet and miscellaneous charges than is really essential. Over these charges the Surgeon-General has no control, but the Civil Surgeons of districts, when their position in regard to these dispensaries is recognised, will be able to restrain extravagance and encourage sound economy in administration.

43. I should wish local managers of hospitals and dispensaries especially to bear in mind that the difference in pay between a qualified and unqualified medical man is a matter of little or no importance in comparison with the question of

TELLICHERRY.

Extracts from the Annual Medical Report by Surgeon-Major H. HYDE.

Dispensary Buildings.—The building is in good repair, possessed of all necessary furniture fittings, &c., and is capable of accommodating 81 in-patients.

Most Common Diseases.—Among in-patients were, as usual, ague, rheumatism, ulcers, dysentery, diarrhoea and injuries, and among out-patients ague, rheumatism, injuries, abscess, worms, and syphilis.

Attendance of Patients.—The number of in-patients during the year was 270 and out-patients 5,947 against 309 and 5,204 respectively in the preceding year, showing a decrease of 39 in-patients and an increase of 743 out-patients.

General Remarks.—Vaccination is encouraged as much as possible, three Vaccinators being maintained by the Municipality and a reward of four annas given to each child who is brought to me after having successfully undergone the operation. During the year under report there were 1,557 vaccinated; of these 1,321 were successful, 145 unsuccessful, and in 91 the result was unknown.

VAYITRI.

Extracts from the Annual Medical Report by Civil Apothecary W. J. NUGENT.

Dispensary Buildings.—The Local Fund Board have sanctioned 500 rupees for a house for the Medical Subordinate, which is being constructed. The latrines are not used as such on account of their close proximity to the main building and inability to clear the night-soil. The patients at present resort to the waste land adjacent to the hospital. The hospital and out-houses were repaired in the month of August last and are in good condition, but the dead-house requires to be freshly thatched. Furniture and fittings are complete and sufficient for the wants of the sick.

Dispensary Committee.—All matters connected with the hospital being reported to the Local Fund Board at Calicut.

NELLORE DISTRICT.

NELLORE.

Extracts from the Annual Medical Report by Surgeon-Major A. M. ROSS.

Dispensary Buildings.—The contagious diseases wards, four in number, noticed in my last year's report, were finished shortly after the beginning of the year now under notice, and proved very useful during a rather extensive epidemic of chicken-pox and measles which broke out in the early months of the year, as well as for the segregation of other cases which it was not desirable to admit into the ordinary wards. They are known as the "Grose" contagious diseases wards in commemoration of the great interest taken by the President, Local Fund Board, in all good works.

The foundation-stone of the caste buildings was laid by the Duke of Buckingham, the late Governor, on the 18th January 1880. The building is to be known as the Buckingham caste wards. It will contain accommodation for four families; each suite of apartments is arranged in two storeys consisting of two rooms with bath-room, those on the ground floor each 15 x 12 x 12 feet with bath-room 12 x 6.6 feet. Those on the upper storey are 15.6 x 12 — 6: each room with bath-rooms 7 x 12 — 6 feet. In front of each storey there is an 8 feet verandah, in the centre a courtyard 15 x 15 feet, and an enclosed room or passage behind 9 x 12 feet. Behind there will be double cook-rooms and privies.

On the 9th April the foundation-stone of the Lady Mary Grenville's European Home was laid by the Collector on a high, well-ventilated piece of ground, part of 5½ acres of land adjoining the Civil Hospital, most liberally purchased and presented to it by Mr. Dorasawmy Moodelliar, Acting Sheristadar. The house is in the form of a small bungalow with two rooms, each 17 x 18 feet, with dressing and bath rooms attached, and with an 8 feet 6 inches verandah round it, from which the dressing and bath rooms are partitioned off at the back.

There are cook-rooms and servants' godowns at some little distance behind the bungalow. The rooms are intended to be neatly, although plainly, furnished, so as to maintain, as far as possible, the idea of a home where the sick may be tended with care, in comparative privacy, and with the comforts of home around them.

It is intended for the reception of sick European and East Indian residents in the district or travellers. To these it will be a great boon.

The caste wards will be a great convenience to the wealthier ryots, &c., who come into Nellore for treatment, and who can seldom find suitable lodgings in the town. Both buildings are approaching completion.

The main hospital building was kept in good order during the year. The furniture, fittings, &c., were kept in good repair and condition.

Most Common Diseases.—Malarious fevers 1,220, rheumatic affections 583, ulcer (usually of a very intractable nature, tending to a sloughing or indolent character) 459, skin diseases 354 (many of these were cases of psoriasis and allied diseases, most of which were found on inquiry to be associated with syphilitic taint and a brackish water-supply); gonorrhoea and its complications furnished 308 cases, several of which were bad cases of stricture; of syphilitic affections 281 cases were treated (far fewer than there ought to have been, for a large proportion of the population is infected with syphilis rendered doubly fatal by the treatment of the native vythien); of diseases of the respiratory organs 291 cases were treated. Malarious fevers were much less prevalent than in the preceding year, while rheumatic affections apparently increased; ulcers diminished considerably in number. Dysentery was much less and diarrhoea rather more prevalent. Cases of dropsy were much less prevalent than in the preceding year.

Attendance of Patients.—The attendance of in and out patients was less than in the previous year, when the former amounted to 449 and the latter to 8,388 against 242 and 6,021 in the year under report. The falling off was due to the increased healthiness of the year under report as regards out-patients, and as regards in-patients to the fact that the funds at the disposal of the Municipality had fallen so low that large numbers of applicants for admission had to be sent away. Some 2,000 patients, not entered in the returns, were treated in their own homes.

NELLORE BRANCH DISPENSARY.

Extracts from the Annual Medical Report by Assistant Surgeon S. W. SITHAMBARAM.

Dispensary Buildings.—Hospital buildings are in good repair.

Dispensary Committee.—Under the Municipal Commissioners, who meet once a month.

Most Common Diseases.—Fevers, rheumatic and syphilitic affections, dropsy, ophthalmia, ear-ache, chest affections, &c.

Inspection.—The Zillah Surgeon inspected the hospital seventeen times during the year.

Attendance of Patients.—6,590 were treated in the hospital during the year, all of whom were out-patients. The number treated in the previous year was 7,389, i.e., 799 less in the year under report. The average daily attendance for the year was 33.07 against 33.125 in the preceding year.

conscientious and thoughtful use of the medical supplies provided by them for their hospitals. A man on the smallest salary may in the end prove the most expensive to maintain. If, for instance, a Hospital Assistant uses, or says he uses, 5 ounces of castor oil where one would be ample, it is evident that dispensary practice conducted on such a scale must be disastrous, not only as regards the patients, but to the finances; and there is still unfortunately too much of this tendency to wanton expenditure or misuse which will have to be restrained before the financial aspect of medical relief will be satisfactory. I believe that some good is effected by the head of the Medical Department setting his face against extravagant administration, and by insisting on common sense principles of management, and I think I have a sufficiently clear view of the whole question to assure Government that a general system of medical relief out of the proceeds of local taxation will be impracticable, unless with fair, common sense management, and control over every point bearing on expenditure.

44. The following abstract shows the sources of income in the hospitals and dispensaries for the past four years:—

	1877.			1878.			1879.			1880.		
	RS.	A.	P.	RS.	A.	P.	RS.	A.	P.	RS.	A.	P.
From Government	2,97,090	6	4	3,48,983	0	9	3,04,847	3	3	2,76,266	5	11
Municipal and Local, &c., Funds.	3,91,978	5	6	3,81,072	13	5	4,74,403	5	7	4,52,437	0	7
Interest on capital	18,471	12	4	22,862	1	7	24,830	10	2	17,981	13	0
European donations and subscriptions	11,226	5	7	15,829	12	6	11,574	15	6	13,239	15	10
Native donations and subscriptions.	14,779	11	0	12,247	6	11	36,891	8	11	14,978	8	5
Total	7,32,646	8	9	7,80,995	3	2	8,52,847	11	5	7,74,903	11	9

45. Every year sees a reduction of charges borne by the Provincial Government for medical purposes, and in the past year the Government charges were reduced from Rupees 3,04,847 to 2,76,266. This, as already explained, is due in a great degree to the favorable rates for dieting of patients, &c., and to the smaller number dieted during the year. The Municipal and Local Fund expenditure which up to 1879 had been steadily increasing shows a reduction in 1880 from Rupees 4,74,403 to 4,52,437 in the latter year. The remaining sources of hospital income, viz., "Interest on capital," "European and Native donations and subscriptions," show a decrease during the year.

46. Under orders of the Government of India the capital accounts of the several hospitals possessing capital have been shown in a supplementary statement (Part II of Statement V). This statement shows a balance of capital on 1st January 1880 of Rupees 4,21,234. The amount invested in the year was only Rupees 126, while the deposits withdrawn for construction of buildings, &c., was Rupees 12,237, leaving a balance at the end of the year of Rupees 4,09,123-1-8. Deposits withdrawn were for building new wards at Coonoor, and the construction of a new dispensary at Cuddapah.

47. Many years ago, before Municipalities or Local Fund Boards had come into existence, I had taken an active part in urging the endowment of Civil Dispensaries and Hospitals, and large sums of money were raised from time to time by the exertions of Revenue officials from the people interested in establishing Civil Hospitals. In this way the dispensaries of Calicut, Cuddalore, Cuddapah, Kumbakonam, Madurai, Mannargudi, Palamcottah, Pollachi, Trichinopoly, and Vizagapatam became possessed of considerable funds, which in some cases have been used in building hospitals, and in others the funds remain at interest for the support wholly or in part of the various hospitals. The introduction of the Municipal and Local Funds Acts has in a great measure arrested the growth of these charitable endowments, and as will be seen there is no increase of invested capital.

48. I should mention in connection with this subject that during the year a native gentleman of Madras, Mr. Ramasawmy Moodelly, has erected at his own expense a lying-in hospital in connection with the Monegar Choultry of Madras.

He has also contributed a sum of Rupees 15,000 towards the maintenance and endowment of the hospital. The sum in question is not entered in the financial statement because the Monegar Choultry is an institution under independent management.

D.—PRESIDENCY HOSPITALS.

49. There was a slight increase in the number of patients treated in the Presidency Hospitals and Dispensaries in 1880. The increase, however, was chiefly in the out-patients of the Rayapuram Mission Dispensary, under the charge of Dr. Elder of the Scotch Medical Mission, and in the dispensary connected with the Lying-in Hospital. The population of the town of Madras was generally healthy during the year. There was no cholera, and fevers were not very prevalent. Epidemics of measles and small-pox, however, continued throughout the year.

The following table shows the number of patients treated in the several institutions during the past three years:—

	Treated in 1878.	Treated in 1879.	Treated in 1880.	Increase over 1879.	Decrease under 1879.
Black Town, North Side	13,996	11,800	10,104	...	1,696
Do. Rayapuram Mission	30,400	17,830	21,479	3,640	...

Native Infirmary	3,170	2,318	1,569	...	749
Total	181,371	116,819	118,249	5,814	4,384

50. In the returns for the present year I have omitted the sick treated in the Military Female Asylum and Civil Orphan Asylum, as these institutions do not properly come within the definition of hospitals and dispensaries under Government supervision. The numbers are in each case but few, and do not materially affect the general statistics; but as the institutions are dependent mainly on their own funds for support, it seemed to me that the inclusion of their statistics in the general report on hospitals and dispensaries was misleading.

51. The annexed abstract table gives the number of in and out patients treated in each Presidency hospital for the past ten years. It will be seen that the number of in-patients treated in 1880 was 9,722, when in 1879 the numbers were 10,838, and in the famine year of 1877, 18,443. The out-patients treated in these hospitals were 86,689, or about 1,000 less than in the two previous years. As before observed the Presidency Town was healthy during 1880, with the exception of small-pox, for which the people do not usually seek medical aid.

	1871.	1872.	1873.	1874-75.	1875-76.	1876-77.	1877.	1878.	1879.	1880.	Total.

ONGOLE.

Extracts from the Annual Medical Report by Assistant Apothecary BENJAMIN F. PRICHARD.

Dispensary Buildings.—The dispensary has been located for the past four and-a-half years in a private building rented at Rupees 15 per mensem. As already frequently represented, the building is quite unfitted for a hospital and sadly requires repair. A very limited number of patients can be admitted for in-door treatment, and many who really require it have to be refused admission for want of accommodation. The Police patients occupy a portion of the building, which is too small for the purpose and ill-ventilated. The civil patients were hitherto located in a shed built in the hospital compound during the famine of 1877-78, but this was destroyed in the cyclone of November 1879 and is now uninhabitable.

Dispensary Committee.—There is no Dispensary Committee; the management was transferred in August 1879 to the Municipality, but owing to the low state of the Municipal finances the Local Fund Board have promised to contribute four-fifths of the cost of the institution.

Most Common Diseases.—Malarious fevers, rheumatic, syphilitic and respiratory affections, inflammation of external ear, debility and skin diseases.

Epidemics.—A few cases of small-pox occurred, but only two cases were treated in the dispensary.

Attendance of Patients.—The total number of out-door patients treated during the year was 1,293, being 517 less than the year previous. The total number of in-patients was 114, being 154 less than the year previous.

NILGIRIS.

COONOR.

Extracts from the Annual Medical Report by Surgeon-Major L. C. NANNY.

Dispensary Buildings.—The buildings are in good repair, although the roof, which is only of tiles without mats underneath, leaked very much during the late heavy rains. The whole hospital has been recently color-washed and tarred, and is very clean and comfortable. The furniture is of an inferior description, consisting of tarred wooden cots and teapots with five iron cots for Europeans. Every effort has been made to add to their comfort by putting on coir matting beneath and coir mats above, with a cumby and blanket to each, and pillows stuffed with coir. Some bed-linen has also been obtained and a little clothing for the native patients; more cannot be procured at present for want of funds. European wards which have long been much wanted are in course of erection, and will be ready for use in about four months. The new buildings will consist of a male and female ward with bath-rooms, nurse and store room. They are being erected on the same level as the present hospital, but with a better aspect, as they look towards the church across a beautiful sholah. The iron cots, blankets, &c., have been ordered from England. A small quantity of table and bed linen and cutlery have been procured in the local market, and it is hoped that it will prove of great service to young planters and Europeans of all classes. Other furniture must be procured afterwards as funds will admit.

Most Common Diseases.—Malarial fevers, rheumatic and respiratory affections, dysentery, diarrhoea and injuries. The following table compares sickness and mortality in the last three years, showing a decrease in all diseases except malarial fevers, in which, although the number of cases is large, the mortality is considerably less. There is also a marked decrease in deaths from dysentery and a very large one in those from diarrhoea:—

	1878.		1879.		1880.	
	Admitted.	Died.	Admitted.	Died.	Admitted.	Died.
Malarious fevers	930	12	1,264	7	1,528	4
Rheumatic affections	190	2	245	...	225	...
Respiratory do.	302	2	371	4	248	6
Dysentery	240	18	259	8	210	4
Diarrhoea	353	49	286	24	214	12
Worms	472	...	552	...	297	...
Injuries	234	10	272	1	228	4
Other diseases	2,082	26	1,972	15	1,152	1
Total	4,803	119	5,221	59	4,038	31

Attendance of Patients.—There has been a decrease of 190 in and 993 out patients from the total treated in last year. This is due to the healthiness of the season and the sanitary condition of the station. The following table contrasts the daily attendance of the present with the previous three years:—

Years.				In-patients.	Out-patients.
1877	...	...	...	29.23	40.40
1878	...	...	...	27.06	42.64
1879	...	...	...	20.06	32.78
1880	...	...	...	6.99	29.78

KOTAGIRI.

Extracts from the Annual Medical Report by Apothecary J. NORMAN.

Dispensary Buildings.—The dispensary is still kept in the rented thatched building alluded to in former reports; its situation is all that is desirable, but as a hospital for the treatment of in-door patients it is quite unsuited: there is no cook-room, bath-room or latrines for the use of the sick. The building was repaired and lime-washed in November last. No additional furniture and fittings were received during the year.

Dispensary Committee.—The hospital is a Government institution, placed under the management of the Local Fund Board, Nilgiris.

OOTACAMUND.

Extracts from the Annual Medical Report by Surgeon-Major J. SMITH.

Dispensary Buildings.—No new buildings were constructed this year up to date; the covered way at the back of the hospital has been improved, and all the hospital buildings kept in good repair. Estimates for the construction of a pukka-built pauper ward in lieu of the

52. GENERAL HOSPITAL.—During the year 3,754 in-patients and 23,686 out-patients were treated in this institution. The in-patients were more and the out-patients fewer than in the previous year. Of the patients treated in this institution 6,671 were Europeans or East Indians, and 20,760 were Natives. Of the former class 1,188 were in-patients and 5,843 out-patients; of the latter 2,566 were in-patients and 18,203 out-patients.

53. The principal causes of admission were diseases of the respiratory organs, malarious diseases, dysentery, diarrhoea, worms, and skin diseases. There was no cholera, and only a few admissions for small-pox.

54. The deaths amongst the in-patients were 229, and of these 57 belonged to the class of Europeans, or of persons dieted as Europeans, and 172 were Natives. 47 "major operations" were performed during the year.

55. There have been some changes in connection with the establishment of medical officers. Surgeon-Major Furnell, M.D., was appointed Sanitary Commissioner in April 1880, and was succeeded by Surgeon-Major Henry King, M.B., as Physician to the hospital and Senior Medical Officer. Surgeon Sibthorpe, Resident Medical Officer, proceeded on furlough to Europe in November and was succeeded by Surgeon W. A. Browne, M.D. Mrs. Anderson, Head Nurse, was advanced to and confirmed in her appointment as Matron-Superintendent.

56. During the year the separate wards for contagious diseases were completed, and also quarters for a Head Nurse. The punkahs in the Nurses' quarters were connected with the steam-pulling machinery. Arrangements were made also for the erection of an additional stove in the kitchen for the cooking of native diets. Alterations were made in the medical store-room and dispensary to improve the arrangements for dispensing of medicines. The hospital buildings generally have been kept in efficient repair, and the conservancy of the buildings and grounds has been well attended to.

57. The General Hospital, Madras, is the great practical school of medical education in the Presidency. Regarded in this light it is not so complete or efficient as I should like to see it. It has, for instance, no accommodation for women and children on the premises, all cases of illness of these classes being treated in a separate building, formerly two miles, but now about half a mile distant. The out-patient department is conducted under difficulties, in buildings which are two small and cramped, and the mortuary is too limited in space and light for pathological demonstrations.

Under the expectation that sooner or later the portion of the hospital building now occupied as the European Regimental Hospital of the fort would be available for the reception of women and children, and for the accommodation of the out-patient department, no special representations were made to Government during the year on the subject of improved accommodation; but by desire of the late Governor of Madras (the Honorable W. P. Adam) I placed in His Excellency's hands in Madras this year a memorandum pointing out what had been done, and what remained to be done, to make the hospital practically subservient to medical education and to the wants of the community.

58. In regard to expenditure, the General Hospital was administered at a less cost by 20,936 rupees than in the preceding year. The European diets were less by 179 than in 1879, but the native diets were more by 221. The establishment charges were much the same in both years, and the saving is to be attributed chiefly to a more favorable rate of contract for provisions. The diets in 1879, including wines and spirits, cost Rupees 39,346, while in 1880 the charges amounted only to Rupees 23,722. There has also been considerable saving in charges for European and bazaar medicines as compared with the former year. The recoveries from the superior classes of patients for dieting charges amounted to Rupees 5,721 against Rupees 6,598 in 1879.

The hospital has been worked economically and efficiently during the year, and so keen is the competition by contractors for supplying the institution, that there is reason to suppose that some portion of the gain to Government in the past year has been the contractor's loss. As a rule the diet charges in Madras compare favorably with those in other parts of India, and the standard rates laid

down by the Government of Bengal, of 8 annas for European diets and 4 annas for natives, inclusive of all extras, are rarely exceeded, except in the cases of patients who pay for their dieting.

59. The Nursing establishment of the General Hospital under Mrs. Anderson's management has been efficient. Several patients of the superior class have spoken to me in terms of high approval of the skilful nursing they have received in the hospital. At the same time there are difficulties in keeping up a nursing establishment of women in this country, which should be mentioned. The class of women who engage in nursing naturally look to marriage and its duties as their chief vocation in life. Single women and widows are eligible for employment on the Nurses' establishment, but the greater part of the candidates are young and not of that matured age in which women look forward to permanent occupation in hospital work. Some of the best nurses have married and resigned their employment, and for this and other causes there is a difficulty in keeping the establishment up to its proper strength. The duties involving occasional periods of night nursing are onerous and severe, and seem to be distasteful to East Indian females.

The study and qualification for midwifery duties are much more popular than employment in general nursing.

60. My acknowledgments are especially due to the Physician and Surgeon of the General Hospital and Resident Medical Officer for the careful and orderly administration of the institution during the year.

61. WOMEN AND CHILDREN'S HOSPITAL, VEPEY.—This institution, which for some years past has been conducted in a rented building in Vepery, may be regarded as the female branch of the General Hospital, although under distinct management. Since the end of the year, with the sanction of Government, the rented building has been given up, and the patients have been brought into the old Lying-in Hospital in Egmore, as a temporary arrangement and pending consideration of the question whether the military portion of the General Hospital can be made available for their reception.

In regard to clinical teaching and hospital practice the present building in Egmore is much more convenient for students than the old one, although the actual accommodation is scarcely so good.

62. Nine hundred and ninety-eight in-patients and 9,403 out-patients were treated during the year, showing a considerable decrease on the returns of 1879. The explanation is that the town and district were comparatively healthy. The number of deaths amongst the in-patients was 94, bowel-complaints being the chief cause of mortality.

The expenses of the hospital were less by Rupees 5,559 than in the previous year. Hitherto the charges of the Vepery Hospital formed a debit against the Municipality, but under a recent arrangement, the Municipality will contribute a stated sum as a contribution in aid of all the Madras hospitals supported by Government, and the Women and Children's branch of the General Hospital will, as in former years, before the alteration in the General Hospital buildings, be directly administered under Government control.

63. Several changes have occurred in the medical officers of the second Presidency District, who have the official charge of the Women and Children's Hospital. Surgeons-Major Ratton, Macrae, Fox, and Surgeon Dobson held charge for various periods during the year.

64. Since the removal of the Women and Children's Hospital from Vepery there is no Government or Municipal dispensary for out-door relief to the inhabitants of the extreme west of the town. The nearest dispensaries are now at Egmore and the General Hospital.

A large number of Eurasians reside in the Vepery District, many of whom can arrange for their own medical wants, and the present would seem a good opportunity for establishing a provident dispensary in the locality by a retired or private practitioner.

present thatched shed and pukka-built drains at the back of the hospital buildings have been called for, and when these improvements are finished there will be little left to be desired.

Dispensary Committee.—There were five meetings of the managing committee up to November 12th, the average attendance was four. The ladies' sub-committee met regularly every month; they pay the greatest attention to the internal management of the hospital, and no committee could work better.

Most Common Diseases.—Malarial fevers, chiefly from the plantations in the Wynaad, &c., diseases of the respiratory and digestive systems, and diseases resulting from privation.

Epidemics.—Measles and whooping cough were very prevalent the first six months, both among Europeans and Natives: most of the European children resident in the station went through both diseases; influenza and sore-throats were also very common in the early months more especially; no cases of cholera were reported. There were 7 deaths from small-pox in the town, a few cases occurring in April, August, September, October, and November, but the disease was not prevalent at any time. There were, as usual, a few cases of chicken-pox from time to time.

Inspection.—The hospital was inspected in March by Deputy Surgeon-General H. R. Oswald, M.D., and twice by Surgeon-General W. R. Cornish, viz., in June and September.

Attendance of Patients.

Years.	In-patients.	Out-patients.	Total.
1876-77	...	...	...
1877	584	7,541	8,125
1878	1,058	8,397	9,455
1879	849	9,316	10,165
1880	678	7,564	8,242
	569	8,234	8,803

General Remarks.—The financial circumstances of the hospital are flourishing. The funds in hand after paying all December's bills amount to Rupees 8,224-8-5, including the permanent advance of Rupees 50 in the Government Savings Bank.

SALEM DISTRICT.

ATUR.

Extracts from the Annual Medical Report by Civil Apothecary B. F. POWELL.

Dispensary Buildings.—The dispensary building is in fair order; it however requires some trifling repairs, and the floor should be retarred. It is provided with the necessary furniture, but the clothing requires renewal.

Dispensary Committee.—The Dispensary Committee is supposed to assemble once a month, but during last year there have been in all five meetings only.

Most Common Diseases.—Fever, cutaneous, rheumatic, digestive and ear affections. Fever has been less prevalent than in the year previous.

Attendance of Patients.—The attendance of patients last year as contrasted with the year previous has been very satisfactory. The total treated last year was 3,444 against 2,670 treated the year previous. The in-patients last year numbered 33 against 31 treated the previous year.

DHARMAPURI.

Extracts from the Annual Medical Report by First-class Hospital Assistant A. NARRAINSAWMY, No. 500.

Dispensary Buildings.—The dispensary and in-patient wards which leaked badly are now under repair. The furniture is sufficient, with the exception of a wooden almirah required for poisons, which are now kept in one which is glass-fronted.

Dispensary Committee.—The Local Fund Board meet once a month.

Most Common Diseases.—The following table will show the most common diseases, in order of frequency, and their mortality as compared with other years. The death-rate is smaller than the two former years:—

	Agac.		Ulcer.		Skin Diseases.		Ophthalmia.		Bowel Complaints.		Syphilitic Affections.		Respiratory Affections.	
	A.	D.	A.	D.	A.	D.	A.	D.	A.	D.	A.	D.	A.	D.
1878	...	1,293	...	450	...	478	...	162	...	193	...	190	...	142
1879	...	996	...	515	...	374	...	291	...	80	...	154	...	155
1880	...	858	...	392	...	480	...	357	...	105	...	208	...	264

Attendance of Patients.—The number of in-patients treated shows a decrease as compared with the last two years, which is due to the inadequacy of the funds allotted for dieting such patients.

	1878.	1879.	1880.
In-patients	147	136	99
Out-patients	4,567	4,540	4,968
Total	4,714	4,676	5,067

HARUR.

Extracts from the Annual Medical Report by Hospital Assistant T. VEERARAGAVOOLLOO NAIDOO.

Dispensary Buildings.—The building is in good order; the flooring of the hospital is worn out and requires to be either tampted or asphalted.

HOSUR.

Extracts from the Annual Medical Report by Civil Apothecary P. RUNGASAWMY NAIDOO.

Dispensary Buildings.—They are on the whole in good condition. Furniture sufficient.

Dispensary Committee.—The Local Fund Board members meet once in a month in the Town Hall at Hosur.

65. **LYING-IN HOSPITAL.**—The number of midwifery cases received in this institution was 1,561 against 1,620 in the preceding year, or a decrease of 59. Of these cases 49 ended fatally. Of in-patients other than midwifery cases the number treated was 427, and of out-patients, women and children (all classes of disease), 21,574, being an increase on the numbers of the previous year. Of the total number of patients treated in this institution 2,468 belonged to the European and East Indian class of the population, the number of labour cases of these classes being 161.

66. The new Lying-in Hospital was not ready for occupation during the year, except the new out-door dispensary, which was used, and forms a most convenient centre for the attendance of women and children from all quarters of the town. The old hospital building (since given over to accommodate the Women and Children's branch of the General Hospital) was maintained in fair repair, but requires repainting and whitewashing throughout, and the boundary fence of the property to be put into order, before it will be quite suitable for the reception and treatment of sick women and children of all classes. Arrangements have been made to give over to Dr. Branfoot certain wards in the old building for the reception of women requiring special treatment, as it is not considered advisable to admit any cases of uterine or other disease in the new hospital, which is specially reserved for lying-in cases.

67. The institution has been maintained during the year at a total net cost to Government of Rupees 29,869-15-7, which is less by Rupees 3,247 than the expenditure of the preceding year. This amount includes not only the Medical Officer's pay and that of the establishment, but the maintenance of a training school of European and Native nurses, who are taught the art of midwifery, and after a course of practical study and passing certain test examinations, are given diplomas certifying their competency to practice.

The number of women granted diplomas during the year was 26 and the number of stipendiary pupil nurses remaining 16.

68. The Lying-in Hospital was under the charge of Surgeon A. M. Branfoot for the entire year, under whose administration it is maintaining the public confidence as in past years under the able superintendence of Dr. W. H. Harris. As a field of practical work in midwifery and female diseases, this institution takes the highest place of any in India, and for that matter there are very few schools of midwifery in Europe which possess so great a variety of practice. In the new buildings constructed under Mr. Chisholm's design and superintendence, and which are now in occupation, I hope to see the institution increase and prosper in accordance with the beneficent intentions of Government in finding funds for the buildings and in the maintenance of so magnificent a charity.

69. **LEPER HOSPITAL.**—In this institution 356 persons were treated during the year, of whom 61 died. The daily average number in the institution was 181, of whom 135 were males and 46 females. The buildings are maintained in fair repair, but the temporary sheds require frequent renewal, and it would be advisable to put up in their stead two or three more permanent barracks.

70. There is no law under which lepers can be restrained in an asylum. Many come in for a time and give a trial to medical treatment, but getting tired of restraint leave the hospital, returning ultimately to die.

Of the 61 deaths 41 were amongst those who had been admitted to the hospital before 1880; 20 deaths occurred amongst recent admissions.

The intercurrent diseases which most frequently prove fatal to lepers are affection of the bones, dropsy, or lung diseases.

71. In medical treatment nothing new has been practised, but Dr. Thompson still uses choolamooogra oil and gurjon oil, either locally or internally, as the most useful remedies, in abating certain symptoms.

72. The charges in connection with this institution were Rupees 19,462, which are Rupees 4,607 less than in 1879.

This diminution is due chiefly to the cheaper rate of provisioning the hospital.

Surgeon-Major Thompson, C.I.E., Surgeon, First District, has been in charge of the hospital during the whole of the year.

73. **EYE INFIRMARY.**—This institution, under the able management of Surgeon-Major E. F. Brockman, continues to be one of the most useful of the hospitals supported by the Madras Government.

74. The number of in-patients treated during the year was 508 and of out-patients 3,155. All classes of the population (including special cases sent from the British and Native Regiments) avail themselves of the benefits of this special institution.

75. A large number of surgical operations for the restoration or improvement of vision were performed by Surgeon-Major Brockman. The total of "major" operations on in and out patients was 431, or 494 including major and minor. Of cataract operations the percentage of successful cases was 81.95.

76. The expenses of the hospital amounted to Rupees 25,198 against Rupees 25,218 in the preceding year.

77. There is no branch of surgical practice which is more appreciated by the natives of India than that relating to the eye, and I should much like to see a larger number of the Civil Surgeons of this Presidency devoting themselves to its pursuit. There is an ample field for practice in every district.

Arrangements are made to permit young Surgeons doing duty in Madras, on first joining, to witness the practice of the Eye Infirmary.

78. The following statement shows the cost of the several Government institutions at the Presidency:—

	1879.			1880.			Increase.	Decrease.
	Expenses.	Hospital Stoppages.	Net Cost.	Expenses.	Hospital Stoppages.	Net Cost.		
	RS. A. P.	RS. A. P.	RS. A. P.	RS. A. P.	RS. A. P.	RS. A. P.		
Eye Infirmary	25,973 4 7	454 5 0	26,427 9 7	25,857 3 9	658 11 0	26,515 4 9	...	80 6 10

Leprosy do.	24,070 0 11	...	24,070 0 11	19,462 7 4	...	19,462 7 4	...	4,607 2 7
Lying-in do.	34,915 9 5	1,798 4 10	36,713 13 5	31,376 5 10	1,706 6 3	33,082 11 3	...	2,686 5 7
Vepery do.	17,596 14 1	...	17,596 14 1	12,937 6 2	...	12,937 6 2	...	4,659 7 11
Total	2,57,944 3 2	8,850 11 1	2,66,795 4 3	2,22,808 6 10	8,086 3 1	2,30,894 9 11	...	34,771 4 4

79. The Triplicane Hospital and Dispensary is maintained at the cost of the Madras Municipality. It received 905 in-patients and 18,767 out-patients in the year, and was under the administration of Surgeon-Major A. Porter. It affords medical relief especially to the large Mussulman population of Triplicane, about 10,000 of whom were attended in the year.

80. The expenses falling on the Municipality were Rupees 8,472, or less by Rupees 4,195 than in the preceding year. This being mainly due to the pay of Honorary Surgeon Moideen Sheriff Khan Bahadur being debited to Government, and to the employment of a Civil Apothecary on Rupees 50 per mensem in room of a Medical Subordinate of the Warrant grade.

81. The Native Infirmary in Black Town (110 beds available) is supported chiefly by the funds of the Monegar Choultry, and the out-patient department, so far as medical supplies are concerned, is paid for by the Municipality.

82. In the Infirmary 1,561 in-patients were received and treated, and 10,104 out-patients were treated in the adjoining dispensary. These numbers are less than in some preceding years, and testify to the generally healthy condition of the Black Town population.

83. As the Native Infirmary receives the sick and helpless from the Monegar Choultry, many of whom are aged and destitute, the mortality of the in-patients is always considerable. 287 deaths occurred during the year, mostly from dropsies, bowel-complaints, debility and old age.

84. The expenses of the Native Infirmary and Black Town Dispensary were Rupees 12,156, or less by Rupees 2,027 than the charges of the year 1879.

Most Common Diseases.—Out-door: ague, chronic rheumatism, chest affections, ulcer and skin diseases. In-door: ulcer, injuries and dropsy.

Inspection.—Inspected by the Zillah Surgeon on 20th November 1880.

Attendance of Patients.

From this table it may be observed that in this year there was a decrease of 56 in-door, while there has been an increase of 66 out-door patients.

NAMAKAL.

Extracts from the Annual Medical Report by First-class Hospital Assistant M. S. MOOTOSAWMY, No. 554.

Dispensary Buildings.—The dispensary buildings and its out-houses have been repaired during the year; they are in good condition; the flooring of the office-room and verandah of the dispensary is broken here and there and requires repair; the thatched building attached to the dispensary and used as a contagious ward and the pandal in front of the dispensary are in a dilapidated state and require repair.

Most Common Diseases.—Fevers, rheumatic affections, skin diseases, venereal affections, ulcers, and ear affections.

Inspection.—The Zillah Surgeon inspected the dispensary on 26th June 1880.

Attendance of Patients.—The following table will show the attendance of the in-door and out-door patients contrasting with previous years:—

	1878.	1879.	1880.
In-door ...	4.95	4.61	3.83
Out-door ...	36.09	33.94	31.93

SALEM.

Extracts from the Annual Medical Report by Surgeon-Major H. J. HAZLETT.

Dispensary Buildings.—The buildings are in fairly good order; the floors and roofs are in want of some repairs. Furniture and fittings are sufficient.

Dispensary Committee.—The affairs of the dispensary are settled at the Municipal Meetings which take place once a month.

Most Common Diseases.

Years.	Malarious Fever, Ague and Remittent.		Respiratory Affections.		Dysentery.		Diarrhoea.		Skin Diseases.		Ulcer.

1880 ...	229	14,144	17.51	103.27

SANKARIDRUG.

Extracts from the Annual Medical Report by Pensioned Hospital Assistant NARRAINSAMY PILLAY.

Dispensary Buildings.—The dispensary buildings are in a state of good order with the exception of the roof, which leaks. Furniture, &c., in sufficient quantity.

Dispensary Committee.—During the year under report there has not been more than three meetings held against seven in the previous year, nor was any of the above meetings attended.

The following table shows the comparative cost of the locally supported medical institutions for 1879 and 1880:—

Institutions.	1879.			1880.			Increase.	Decrease.
	Expenses.	Hospital Stoppages recovered.	Net Cost.	Expenses.	Hospital Stoppages recovered.	Net Cost.		
Triplicane Dispensary	Rs. A. P. 12,607 10 10	...	12,607 10 10	Rs. A. P. 8,472 5 7	...	8,472 5 7	...	4,135
Native Infirmary and Black Town Dispensary	14,133 14 5	...	14,133 14 5	12,156 0 7	...	12,156 0 7	...	2,027 13
Total	26,851 9 3	...	26,851 9 3	20,628 6 2	...	20,628 6 2	...	6,223 3 3

85. In regard to all the Presidency hospitals, I have to express my acknowledgments to the medical officers in charge for zeal, tact and discretion shown in their management. These institutions have all been inspected by me, and being at head-quarters and supported by Government, are of course more directly under my control than the mofussil hospitals, which are under local management.

E.—SANITATION.

86. No orders have yet been received on the proposition to make the Civil Surgeons of districts also sanitary officers, and the question of district sanitary administration still remains in abeyance.

The subject has been for some time under the consideration of Government, and I trust that orders may shortly be issued, defining in this respect the duties of officers of the Civil Medical Department.

I have the honor to be,

Sir,

Your most obedient servant,

W. R. CORNISH, F.R.C.S.,

Surgeon-General with the Government of Madras.

APPENDIX.

ARCOT, NORTH.

CHITTOOR.

Extracts from the Annual Medical Report by Surgeon T. H. POPE, M.B.

Dispensary Buildings.—The present state of repair is very bad, but the contract for putting them in thorough order has been taken, and the work is to begin shortly.

Dispensary Committee.—Under the Local Fund Board, who meet monthly.

Most Common Diseases.—Out-door patients—Fever including ague, &c., ulcers, chronic rheumatism, respiratory affections, inflammation of external ear. In-door patients—Fever including ague, &c., ulcers, syphilis, chronic rheumatism, skin disease, &c.

Attendance of Patients.

	1877.	1878.	1879.	1880.
Out-patients	8,011	10,357	11,036	10,712
In-patients	2,024	2,127	1,214	634

Judging from the hospital statistics there has been a remarkable diminution in the number of out-patients, and still more so in the number of in-patients attending the hospital. The year has doubtless been a much more favorable one as far as the rainy weather and the state of the crops are concerned. The number of admissions for intermittent fever has greatly decreased, but there has been a great increase in the number of ulcer cases.

PALMANER.

Extracts from the Annual Medical Report by First-class Assistant Apothecary M. DEVAMBOO.

Dispensary Buildings.—The building needs no repair. The furniture and fittings are sufficient.

Most Common Diseases.—The most common diseases among in and out door patients were ague, neuralgia, bronchitis, pneumonia, diarrhoea, dysentery, and ulcers. The admission under the head of ague when compared with that of the year previous is less by 320. The mortality among in and out door patients during the year under report was 28 and 6.

Epidemics.—Small-pox of a mild type prevailed sporadically in the town and in its vicinity.

Inspection.—The dispensary was inspected by the Civil Surgeon, Chittoor, on the 18th October 1880.

Attendance of Patients.—There were 219 in and 3,287 out patients admitted into the dispensary, and their average daily attendance was 22.88 and 20.9 respectively. When compared with that of the year previous, the admissions are less by 223 and 340 respectively, and the average daily attendance less by 16.87 and 4.74 respectively. The decrease is chiefly attributable to the diminution under the head of "Fever."

RANIPETT.

Extracts from the Annual Medical Report by Apothecary J. CHADWICK.

Dispensary Buildings.—The male and female wards leaked very much during the last rains. The skylight on the operation room requires early looking to. Excepting an almirah needed for instruments, &c., the furniture and fittings are sufficient. Iron cots for the whole hospital in lieu of the present unsightly wooden ones would be a decided improvement.

by a full audience. When no meeting is held in the month the bills and returns are generally passed by the Deputy Tahsildar of the place.

Most Common Diseases.—Ulcer, skin diseases, fever, conjunctivitis, inflammation of ear. The comparative number of mortality is as follows:—1877, 153; 1878, 17; 1879, 18; 1880, 9.

Attendance of Patients.

	1878.		1880.	
	In-patients.	Out-patients.	In-patients.	Out-patients.
	71	5,240	75	5,355

TIRUPATUR.

Extracts from the Annual Medical Report by Civil Apothecary G. M. GREEN.

Dispensary Buildings.—All in good order.

Most Common Diseases.—Among out-patients are ague, ulcer, skin diseases, and ophthalmia. No deaths occurred this year. Among the in-door patients ulcer, injury, and syphilitic affections. Ten deaths occurred.

Inspection.—Inspected by the Zillah Surgeon on the 19th November 1880.

Attendance of Patients.—The average daily sick for the year under review and three previous years has been as under:—

	1880.	1879.	1878.	1877.
Out-patients	83.04	48.21	40.30	24.12
In-patients	7.27	7.92	8.35	5.09

YERCAUD.

Extracts from the Annual Medical Report by Civil Apothecary G. W. LEACH.

Dispensary Buildings.—This building has been retiled during the past year, but it still leaks. The appearance of the hospital would be very much improved if its walls were plastered with chunam. Furniture and fittings are ample with the exception of a few chairs.

Dispensary Committee.—A committee is convened once every month, consisting of five members.

Most Common Diseases.

Years	Malignant Fevers, &c.		Respiratory Affections.		Etiopathic Affections.		Diarrhoea.		Ulcers.		Liver Diseases.		Dysentery.	
	T.	D.	T.	D.	T.	D.	T.	D.	T.	D.	T.	D.	T.	D.
1878	1,010	6	155	2	171	...	153	2	142	2	21	...	80	11
1879	1,812	6	246	...	177	...	117	1	192	...	56	...	86	6
1880	1,378	4	340	5	222	...	181	1	176	...	102	...	73	...

Inspection.—The annual inspection of this dispensary by the Zillah Surgeon took place on the 24th December 1880.

Attendance of Patients.

Years.	Total Treated.		Average Daily Attendance.	
	In.	Out.	In.	Out.
1876	61	1,789	1.62	18
1877	216	1,644	2.65	7.75
1878	209	3,014	4.68	15.28
1879	139	3,903	3.89	22.86
1880	148	4,063	4.74	28.29

There has been an increase of 9 in and 160 out patients, the excess being due chiefly to an increase in diseases of the respiratory organs and liver affections.

TANJORE DISTRICT.

AMMALPETT.

Extracts from the Annual Medical Report by Civil Hospital Assistant A. SINGARAVALOO MOODELLY.

Dispensary Buildings.—Dispensary building at present is held in a rented house. Furniture complete and in good order.

Most Common Diseases.—Fever, conjunctivitis, ulcers, worms, venereal, rheumatic, and respiratory affections.

Attendance of Patients.—Total number of out-door patients since the dispensary was opened in August 1880 is 834.

ARENTANGI.

Extracts from the Annual Medical Report by Civil Hospital Assistant M. KASIVISVANATHA PILLAY.

Dispensary Buildings.—Dispensary held in a chattram, for which rent is paid.

Dispensary Committee.—Under the Local Fund Board, Tanjore Circle. Meetings held twice a month.

Most Common Diseases.—Fever is the most common disease in the town and its neighbourhood.

Attendance of Patients.—Average daily attendance for the year 1880 is 28 and for 1879 15.

AVADIARKOVIL.

Extracts from the Annual Medical Report by Civil Hospital Assistant T. THOOLOCKANAH AUCHARRY.

Dispensary Buildings.—The building is a rented one at Annas 8 per mensem, and is not a suitable place for a hospital. It was established this year. No in-door patients are admitted.

Most Common Diseases.—Dyspepsia and syphilitic ulcerations.

Attendance of Patients.—The average daily attendance of out-door patients is 8.

AYYAMPET.

Extracts from the Annual Medical Report by Civil Hospital Assistant A. VISVANATHA PILLAY.

Dispensary Buildings.—The dispensary was opened on 1st September 1880 for out-patients only and is situated in a private rented house, which is in need of repair. Furniture sufficient.

Most Common Diseases.—Fever, diarrhoea, ulcers, rheumatic affections, and ophthalmia.

Attendance of Patients.—Eighty-nine patients have been afforded relief since the dispensary was opened.

Dispensary Committee.—Under the Local Fund Board, Chittoor Circle.

Most Common Diseases.—The principal diseases prevalent during the year have been malarial fevers, rheumatic, syphilitic, and gonorrhoeal affections, diseases of the eye, ulcers, dysentery, diarrhoea, worms, and skin diseases.

Inspection.—Inspected by the Civil Surgeon, Chittoor, 19th March and 1st October 1880. Inspected by the Sanitary Commissioner, 28th October 1880.

Attendance of Patients.—Contrasting the attendance of the out-door patients with that of the previous year, there are 1,011 admissions less. In reality there has been comparatively a very large increase in the admissions this year, among the other classes of diseases, as shown in the subjoined tabular statement. There is a considerable fall in the number of in-door sick, due chiefly to the care taken in admitting cases, excluding, as far as practicable, old and broken-down people, who are more suited for the poor-house than the wards of an hospital.

	1879.	1880.
Total admissions	11,367	10,356
Fevers	5,038	1,866
Other diseases	6,329	8,490
Average daily attendance	63.49	66.18

General Remarks.—The dispensary and lying-in hospital, hitherto under the working of the American Medical Mission aided by Local Funds, are now under the sole management of the Local Fund Board. Several changes apparently for the better have taken place in the dieting of the sick under a contract system, and on the whole the hospitals are worked at a considerable less expense without any detriment to their utility. No report is left by the Mission of the working of these hospitals for the first-half of the year, or any explanation for the paucity of admissions into the lying-in hospital for that period. (In short I can find no register of parturient women for the previous years.) I particularly notice this, as from previous annual reports by the Mission Agency, it appears the lying-in hospital since its establishment in 1875 had yearly increased its usefulness, and that "this is the more remarkable as all the others in the district have been failures." During the year under review the aggregate number of accouche-hospital for the year 1880 be divided into portions, viz., from January to June with 43 labor cases under Mission working, and from July to December 64 cases since the Mission relinquished charge, a large preponderance of confinements is registered in the latter half of the year, a satisfactory criterion, I trust of this institution not having lost in popularity. There are 14 women waiting confinement at the end of the year. The aid of the Midwife was sought in 5 out-door cases.

TIRUPATI.

Extracts from the Annual Medical Report by First-class Hospital Assistant C. AMOORTHALINGUM MOODALLY, No. 604.

Dispensary Buildings.—The dispensary on account of its unsafe condition was abandoned last September and removed to the only muntapam then available; this being also in very bad repair it was again removed to another muntapam in November last, where only out-door patients are treated excepting an occasional patient who might be very ill and unable to earn or beg his livelihood.

Most Common Diseases.—Most common diseases among in-patients are malarious fevers, rheumatic and syphilitic affections, debility, diarrhoea, and accidents; and among out-patients malarious fevers, syphilitic affections, ophthalmia, diseases of the digestive system, and skin diseases.

Inspection.—Inspected twice during the year by the Zillah Surgeon of Chittoor, 16th March and 25th October 1880.

Attendance of Patients.—The average attendance of in and out patients was less than last year. The former by 111 cases owing to the non-admission of in-patients from last September on account of the dispensary building being in an unsafe condition, and also from decrease of sickness among the population, and the latter by 1,579 on account of the decrease of sickness alone.

VELLORE.

Extracts from the Annual Medical Report by Surgeon H. D. COOK, M.B.

Dispensary Buildings.—The dispensary was the old European Barracks. The building is in solid repair, but very unfitted for a dispensary in every possible way. It was too far from the town; but now, by my recommendation, the Commissioners have opened a branch dispensary in the centre of the town, and the out-patients have increased to a very great extent.

Dispensary Committee.—The dispensary is under the management of the Vice-President and Commissioners of the Municipality.

Most Common Diseases.—Fever and rheumatic affections always predominate. This is the result of the very cold nights we have in the cold weather.

Inspection.—By Deputy Surgeon-General Colvin Smith, M.D., March 9th, 1880.

Attendance of Patients.

	In-patients.	Out-patients.	Remarks.
1878-79	802	9,228	* Municipality restricted the in-patients to 20.
1879-80	504*	11,363†	† Branch Dispensary opened in May 1880.

It will be seen by the attendance of the out-patients that the branch dispensary has proved a great success, and I have no doubt that next year the out-patients will be about doubled.

General Remarks.—A lying-in hospital has been begun, which I also hope will prove a success. In my last report I recommended this institution, and I am glad to say the work has commenced, though not without some opposition from some of the native community.

ARCOT, SOUTH.

CHIDAMBARAM.

Extracts from the Annual Medical Report by Assistant Surgeon M. PARASARAMA NAICKER.

Dispensary Buildings.—The dispensary is still located in the same rented house as heretofore. About the middle of October last Government sanctioned the plan and estimate for the new hospital buildings at a cost of Rs. 11,000 to be erected on the site selected in the heart of the town behind the Taluk Cutcherry.

Dispensary Committee.—Under the Municipality.

Most Common Diseases.—The most common diseases among the in and out patients during the year were ophthalmia, inflammation of the external ear, constipation, ulcer, skin diseases, abscess, respiratory and rheumatic affections, injuries, and fevers. These diseases prevailed nearly to double the extent they did during the past year, causing 10 and 7 deaths amongst the in and out patients respectively.

Attendance of Patients.—The number of out-patients treated during the year amounted to 10,015, showing an increase of 3,157 over that of the preceding year. 190 patients were treated as in-door sick; this number cannot be contrasted with that of the preceding year, as this institution was only opened for in-patients at the close of the year 1879.

NEW TOWN, CUDDALORE.

Extracts from the Annual Medical Report by Surgeon-Major C. ROBERTSON, M.D.

Dispensary Buildings.—The dispensary buildings are generally in good condition. Some minor repairs are required, and will shortly be carried out.

Dispensary Committee.—The Dispensary Committee assembles at the New Town Dispensary once a month.

Most Common Diseases.—The most common diseases among in-patients have been ulcers, injuries of different kinds, syphilitic affections, and fevers of various types. Among out-patients disorders of the digestive system, fevers, ulcers, abscesses, &c. The past year must be con-

APPENDIX TO REPORT ON THE
KODAVASSEL.

Extracts from the Annual Medical Report by Pensioned Medical Subordinate
T. MOONESAWMY CHETTY.

Dispensary Buildings.—The dispensary was opened on the 1st April 1880. It is held in a rented building.

Most Common Diseases.—Rheumatism (chronic and muscular) and ulcers.

KORATHATANGOODY AND MANAMBOOC AVADY.

Extracts from the Annual Medical Report by First-class Hospital Assistant T.
MATHURANAYAGUM PILLAY, No. 736.

Dispensary Buildings.—The buildings are in a good state of repair, but they were wet and leaky during the late storm, though not otherwise damaged.

Dispensary Committee.—The dispensaries are under the sole control and management of the Municipal Commissioners.

Most Common Diseases.—Bowel-complaints, rheumatic and venereal affections, and sore-eyes, fever, cold, and cough were general, especially in the wet months, but they were not of a serious nature.

Inspection.—The Zillah Surgeon continues to inspect frequently as usual.

Attendance of Patients.—The total number of out-door patients is 12,939 against 12,292 of the previous year. The average daily attendance is 71.9 against 54.4 in the year preceding. It will be seen by this that there is an increase in the total number of cases treated and in the average daily attendance.

CIVIL DISPENSARY, KUMBAKONAM.

Extracts from the Annual Medical Report by Apothecary J. G. ASHWORTH.

Dispensary Buildings.—A store-room has been newly erected and the kitchen repaired. Provision has been made in the next year's budget for general petty repairs and for the re-erection of the cholera shed, which was blow down.

Most Common Diseases.—The subjoined table shows the most prevalent diseases. There were 28 deaths as compared with 33 in 1879 among the in-patients. The number (9) of deaths among the out-patients stands at a very low figure, as only such as remained under treatment up to their demise were noted:—

Diseases.	1879.	1880.
Fevers	784	551
Skin diseases	793	813
Inflammation of external ear	577	643
Injuries	501	483
Ophthalmia	465	508
Worms	379	371

Attendance of Patients.—Three hundred and ninety-seven in-patients were treated against 394 the previous year, and 6,787 out-patients against 7,077 in 1879. Three dispensaries have been opened during the year within six to eight miles of the town; this may account for the slight falling off among the out-patients.

KUMBAKONAM BRANCH DISPENSARY.

Extracts from the Annual Medical Report by Second-class Hospital Assistant
C. FRANCIS, No. 1,010.

Dispensary Buildings.—The pandal and dressing shed were blown down, but have not yet been replaced.

Most Common Diseases.—Fever, rheumatic and syphilitic affections, ophthalmia and skin diseases.

Attendance of Patients.

Years.	Number Treated.	Average Daily Attendance.
1878	6,973	81.84
1879	7,843	82.82
1880	8,244	83.18

MUDUKUR.

Extracts from the Annual Medical Report by Civil Hospital Assistant
C. GNANAPRAGASAM PILLAY.

Dispensary Buildings.—Unsuitable for a dispensary. Furniture supplied in December 1880; the almirah and compounding table are too small.

Most Common Diseases.—Conjunctivitis, rheumatism, skin diseases, dyspepsia, inflammation of external ear.

Attendance of Patients.—The dispensary was opened in August 1880, since which time 1,201 patients have been relieved.

MANAMALKUDY.

Extracts from the Annual Medical Report by Civil Hospital Assistant P. W. AMIRTHAM.

Dispensary Buildings.—The dispensary forming a part of the chattram building is after the fashion of native houses ill-ventilated. The dispensary requires no repair and is white-washed whenever it is necessary.

Most Common Diseases.—Ophthalmia, skin diseases, ulcer, diarrhoea, rheumatic affections, and anaemia.

Attendance of Patients.—The number of in-patients admitted is 176 and that of out-patients 2,420, which shows an increase of 12 and 1,221 patients, respectively, when compared with the last year.

MANNARGUDI.

Extracts from the Annual Medical Report by Native Surgeon P. S. MOOTOOSAWMY MOODELLIAH.

Dispensary Buildings.—A shed has been erected for the use of self-dieting patients by public subscription. Damage was done to the roofs of the buildings in the cyclone of the 21st November.

Dispensary Committee.—All matters connected with the dispensary are discussed at the monthly meetings of the Municipal Commissioners.

Most Common Diseases.

Diseases.	1879.	1880.
Worms	2,653	3,002
Conjunctivitis	1,560	1,672
Ulcers	868	712
Rheumatism	418	504
Partus	59	69
Anasarca	28	10

There were 13 deaths.

sidered to have been an unusually healthy one. Fevers were much less prevalent and dropsy and chronic diarrhoea have been but rarely seen. There were 11 deaths against 25 in the previous year among the in-patients.

Attendance of Patients.—There has been a considerable diminution in the number of both in and out patients, namely, a total of 15,057 as against 17,315 in 1879. As regards the former the budget allotment for the year did not allow of a larger number being admitted. So considerable a diminution of out-patients is most probably due to various causes, but principally I believe to the opening of the new Local Fund Dispensary at Panruti, from which vicinity in former years a large contingent used to arrive.

General Remarks.—During the past year an endeavour has been made by the Municipal Commissioners to extend the usefulness of the institution by the entertainment of two Hospital Assistants, the senior of whom should attend the better class of out-patients at their own houses—a wish for this arrangement having been frequently expressed by the majority of the Commissioners. The arrangement adopted regarding the lying-in ward is found to work satisfactorily, the total number of cases having increased to 62 as against 51 in the previous year. Two pupils have also been instructed and are now ready to join some of the taluk dispensaries.

OLD TOWN, CUDDALORE.

Extracts from the Annual Medical Report by Surgeon-Major C. ROBERTSON, M.D.

Dispensary Buildings.—The buildings are generally in a good state; whitewashing and some minor repairs are necessary, and will be carried out without delay. The furniture, fittings, &c., are also in a good and serviceable state.

Dispensary Committee.—The Dispensary Committee, which assembles at New Town Dispensary once a month, manages the affairs of the institution also.

Most Common Diseases.—The most common diseases among out-door patients have been disorders of the digestive organs, abscesses, and ulcers. Ophthalmia has been unusually prevalent. Among in-patients the principal diseases have been ulcers of various kinds and syphilitic and rheumatic affections. There have been only three casualties, and the diseases which in former years produced so much mortality have been but rarely met with.

Attendance of Patients.—The attendance of out-patients has been very good, and, as contrasted with the previous year, shows a considerable increase. There has been a slight decrease in the number of in-patients owing principally to financial causes.

KALLAKURCHI.

Extracts from the Annual Medical Report by Civil Apothecary R. FRANKLIN.

Dispensary Buildings.—The dispensary is now maintained in a rented thatched building. A hospital is under construction, and the dispensary portion will most probably be ready for occupation about the end of the official year.

Dispensary Committee.—The affairs of the dispensary are disposed of by the Local Fund Board, Cuddalore, at their meetings.

Most Common Diseases.—Among out-patients the most common diseases are, in order, ulcer, ague, rheumatic affections, and ophthalmia.

Attendance of Patients.—The number of out-patients attending the dispensary during the last twelve months has been very little in excess of the number that attended during the previous eight months.

PANRUTI.

Extracts from the Annual Medical Report by Civil Apothecary G. A. W. VELLONS.

Dispensary Buildings.—The Local Fund Board have selected a site for building a new dispensary as the present one is unsuitable.

Dispensary Committee.—The dispensary matters are settled at the meetings of the Local Fund Board, South Arcot.

Most Common Diseases.—Ulcers, boil, ague, and bronchial affections are the most common.

Attendance of Patients.—The dispensary being recently established, the attendance of out-patients cannot be contrasted with previous years.

General Remarks.—This institution was opened in August last for out-patients only; since that time there have been 3,160 cases under treatment and an average daily attendance of 86.87. The people from distant villages resort to this hospital for medical treatment.

TINDIVANAM.

Extracts from the Annual Medical Report by First-class Hospital Assistant C. COOMARASAWMY MOODELIAR.

Dispensary Buildings.—The building leaks in many places, requires retiling, whitewashing, and repair to some of the windows. During the year a dead-house was constructed at a cost of Rs. 200. All the furniture, bedding, &c., are in good condition.

Dispensary Committee.—All the business connected with the dispensary is considered at the meetings of the Local Fund Board at Cuddalore.

Most Common Diseases.—The most prevailing diseases have been fevers of intermittent type, rheumatism, sore-eyes, ear and chest affections, dysentery, diarrhoea, and skin diseases.

Attendance of Patients.

	In 1879.	In 1880.
The number of in-patients treated during the year ...	158	110
Do. of out-patients do. do. ...	8,500	8,600
Total ...	8,658	8,710

TRUKOILUR.

Extracts from the Annual Medical Report by First-class Hospital Assistant V. M. APPAVOO, No. 497.

Dispensary Buildings.—The dispensary buildings are in a good state of repair with the exception of the female ward. The two contagious sheds under erection will be finished shortly. The furniture, fittings, &c., are in good order and sufficient.

Most Common Diseases.—The principal diseases amongst in and out door patients are fevers, rheumatism, syphilitic affections, anaemia, dysentery, diarrhoea, inflammation of external ear, sore-eyes, &c.

Attendance of Patients.—The total number of patients treated both in and out was 5,023, of whom 4,895 were out and 128 were in patients against 5,360 out and 138 in patients in the previous year, thus showing a total decrease of 337.

TIRUVANNAMALAI.

Extracts from the Annual Medical Report by Third-class Hospital Assistant T. M. BALASOONDRUM PILLAY, No. 1,032.

Dispensary Buildings.—There is no separate building as Civil Dispensary. The Police Hospital is in a house rented by a native, where the civil population are also treated. A new civil dispensary building is under construction, which will be ready within a year.

Most Common Diseases.—Malarious fever, rheumatism, ophthalmia, syphilitic affections, respiratory diseases, disease of bowels, and ulcer are the most common diseases that prevailed in the taluk and its suburbs.

Attendance of Patients.—The number of out-patients on the whole is not so large as that of the previous year.

APPENDIX TO REPORT ON THE

Attendance of Patients.

Year.	In-patients.	Out-patients.
1879	342	12,782
1880	353	10,140

Thus showing 11 more in-patients, but a decrease of 2,642 among the out-patients.

MAYAVARAM.

Extracts from the Annual Medical Report by Civil Apothecary D. S. AMIRTHASAWMY PILLAY.

Dispensary Buildings.—The new dispensary, which is called the Webster Hospital in honor of the President, has been constructed at a cost of about Rupees 4,700 raised by means of private subscriptions from the Mirassidars of this taluk and was opened in September. The old buildings having been sold for Rupees 1,000, that sum also is to be laid out in the construction of some more wards and other necessary buildings. Furniture, &c., are all in excellent order.

Dispensary Committee.—Under the management of the local Municipal Commission.

Most Common Diseases.—Among out-door patients fevers, rheumatic and syphilitic affections, conjunctivitis, inflammation of external ear, diarrhoea, worms; and among in-patients syphilitic affections, bowel-complaints, ulcers, and injuries. The midwife has confined 218 cases in the town this year against 190 of the preceding year.

Attendance of Patients.—During the year 4,169 out-patients and 86 in-patients were treated, against 4,606 out-patients and 100 in-patients of the preceding year.

MUTUPET.

Extracts from the Annual Medical Report by Civil Hospital Assistant ABDOL SUBHON KHAN.

Dispensary Buildings.—The present rented dispensary building is a very small thatched one, and great inconvenience is experienced. No furniture has yet been received though indented for five months ago.

Most Common Diseases.—During the last five months were fevers, rheumatic affections, diarrhoea, dysentery, ulcers, and skin diseases.

Attendance of Patients.—The daily average attendance of out-patients was 4.63. No comparison can be shown as the dispensary has been recently established.

General Remarks.—Sanitation is very bad; people commit nuisances in the streets and on the tank-bunds, thereby defiling the drinking water.

NAGORE.

Extracts from the Annual Medical Report by Hospital Assistant P. NAGA PILLAY.

Dispensary Buildings.—The dispensary building is a private house rented by the Municipality. It is in a good state and does not require any repair, but the want of a separate room for operation is greatly felt.

Dispensary Committee.—Municipal meeting is held at Negapatam once a week.

Most Common Diseases.

Diseases.	1879.		1880.	
	Treated.	Died.	Treated.	Died.

1879	6,070
1880	5,328

NANNILAM.

Extracts from the Annual Medical Report by Second-class Hospital Assistant M. MANICKAM MUDALI, No. 959.

Dispensary Buildings.—This dispensary is still in the famine shed. It was repaired very recently by the Local Fund Board, Negapatam Circle, and is kept in a clean condition. All the furniture and fittings are in good order.

Dispensary Committee.—The Negapatam Local Fund Board at its meetings decides questions relating to dispensary affairs.

Most Common Diseases.—Among out-door patients ague, chronic rheumatism, ophthalmia, inflammation of external meatus, respiratory affections, constipation, dyspepsia, diarrhoea, worms, skin diseases, &c.

Attendance of Patients.—The attendance of out-door patients is somewhat less than in the previous year. The total number of cases treated during the year was 4,534 against 5,845 in the previous year, there being a decrease of 1,311 patients; this was owing to the healthy state of the taluk.

NEGAPATAM.

Extracts from the Annual Medical Report by Apothecary E. A. MORRIS, L.R.C.P. & S.E.

Dispensary Buildings.—Buildings at present undergoing thorough repair. Furniture, fittings, &c., efficient and complete.

Dispensary Committee.—Dispensary entirely supported by the Municipality. Municipal meetings held weekly.

Most Common Diseases.

1880	12.42	81.63

VILLUPURAM.

Extracts from the Annual Medical Report by First-class Hospital Assistant P. RAGAVA ROW, No. 471.

Dispensary Buildings.—The building leaks and requires repair. The furniture, fittings, &c., are in very good condition.

Dispensary Committee.—No meetings were held during the year.

Most Common Diseases.—Malarial fevers, conjunctivitis, rheumatic affections, diarrhoea, dysentery, general dropsy, abscess, boil, ulcers, and skin diseases.

Epidemics.—Small-pox prevailed to some extent in and around the town.

Attendance of Patients.—The total number of in-patients treated during the year was 217 against 221, and out-patients 6,254 against 6,522 in the previous year. From this it will be observed that there was a decrease of 4 in and 268 out patients. Among the in-patients the average daily sick was 7.13 against 7.28, and among the out-patients 43.36 against 38.98 of the previous year.

VRIDDHACHALAM.

Extracts from the Annual Medical Report by Civil Apothecary S. MUTHUSAWMY.

Dispensary Buildings.—The dispensary is in bad repair. One of the contagious sheds has become completely useless, and the other is in more or less a dilapidated condition. The furniture, fittings, &c., are sufficient.

Dispensary Committee.—The dispensary is under the Local Fund Board of the district, which meets once a month.

Most Common Diseases.—Among out-patients ague, skin diseases generally, ophthalmia, and rheumatic affections; and among in-patients ulcers, syphilitic affections, gonorrhoea and its complications, injuries, and anaemia. The mortality was 4 and 6 among in and out patients against 16 and 3 the year previous.

Attendance of Patients.

	Out-patients.	In-patients.
1880	7,646	97
1879	10,440	146

The decrease is due to the healthiness of the season and the non-prevalence of ague and ophthalmia.

BELLARY DISTRICT.

ADONI.

Extracts from the Annual Medical Report by Second-class Hospital Assistant T. KUNNIAH NAIDU, No. 983.

Dispensary Buildings.—The dispensary building is in a state of tolerable repair. It is an old native house quite unsuited for a hospital. A new dispensary on a standard plan is under construction, and it is likely to be completed in course of a few months. Furniture, fittings, &c., are in a fair order.

Dispensary Committee.—Three meetings were held.

Most Common Diseases.—Fever, rheumatism, syphilis, inflammation of external ear, bronchial and splenic affections, diarrhoea, and dysentery. During the year 11 deaths occurred among in-door and one among out-door patients, showing a decrease of 3 in the former.

Inspection.—The Deputy Surgeon-General inspected on the 12th January 1880.

Attendance of Patients.—During the year under report there has been a total 14,622 admissions; of these 14,582 were out-door and 40 in-door patients, showing a decrease of 1,807 in the former and 28 in the latter owing to the absence of epidemic diseases and total disappearance of the residue of famine patients.

Average Number of Sick.

	Years.	In-door.	Out-door.
1877	5.26	87.30	
1878	6.57	120.04	
1879	5.95	179.38	
1880	3.21	143.16	

ALUR.

Extracts from the Annual Medical Report by Civil Apothecary P. JAYARAM.

Dispensary Buildings.—The hospital buildings are in a fair condition except the roof, which leaks. The want of an almirah is very much felt.

Inspection.—Inspected by the Deputy Surgeon-General on the 13th January 1880, and by the Civil Surgeon, Bellary, in October last.

Attendance of Patients.—A marked degree of decrease is apparent in the number of in-patients treated this year, being 100 this year and 653 last year. This, I presume, is owing to the number of famine-camp patients having been included in last year's report. The number of out-door patients has also decreased by 343, the number being this year 3,619 and that of last year 3,962.

ANANTAPUR.

Extracts from the Annual Medical Report by Civil Apothecary E. L. CHALK.

Dispensary Buildings.—The main building is in a state of repair. The Commissioners have resolved to construct a new one when funds are available. The roof of the male latrine and a wall of the contagious shed have fallen down during the late rains and have not been repaired as yet. A dead-house has been lately constructed, but the Board has decided to convert it into a labor ward. The building requires to be plastered with chunam and to be supplied with doors and windows. A store-room has been partially constructed, but owing to the financial condition of the Municipality this work and other repairs have been stopped. The supply of bedding and furniture, &c., are insufficient.

Most Common Diseases.—Ulcers, fevers, ophthalmia, rheumatic and respiratory affections, skin diseases, inflammation of the external ear, injuries, and debility. Ulcers and fevers were the leading diseases during the year, the former having increased, while the latter had considerably diminished since the past year as detailed below:—

	1879.	1880.
Ulcers	596	885
Fevers	2,283	759

Inspection.—The hospital was inspected by the Deputy Surgeon-General on the 14th March 1880.

Attendance of Patients.—There has been a total of 4,548 patients treated in hospital during the year; of these 4,429 were out-patients and 119 in-patients, being a decrease of 1,110 in the former and 19 in the latter.

	In-patients.	Out-patients.
The daily average for the year.. { 1880 ...	43.85	54.67
{ 1878 ...	5.21	40.09
{ 1879 ...	5.02	35.82

NIDAMANGALAM.

Extracts from the Annual Medical Report by Pensioned First-class Hospital Assistant P. VALOYUTHUM PILLAY.

Dispensary Buildings.—The dispensary is held in a building attached to the chattram. It is capable of holding 18 male and 6 female patients, but there are beds only for 6 patients. This building was once whitewashed during 1880. The furniture and fittings are in good order.

Most Common Diseases.—Malarious fever, rheumatic affections, and simple conjunctivitis prevailed to a less extent this year than during the previous year.

Attendance of Patients.—The number of in-patients this year was 600 against 551 last, and the number of out-patients this year was 5,395 against 5,580 last year.

MIMISAL.

Extracts from the Annual Medical Report by Civil Hospital Assistant N. RUNGASAWMY NAIDU.

Dispensary Buildings.—The dispensary was only opened in December 1880 and is situated in a part of the chattram building. No furniture, but a table and two chairs are supplied.

Most Common Diseases.—Dysentery, ague, diarrhoea, dropsy, &c.

Attendance of Patients.

					In-patients.	Out-patients.
1880	...	...	...	...	89	156

ORATHANAD.

Extracts from the Annual Medical Report by Civil Hospital Assistant V. A. IYARUNNOO PILLAY.

Dispensary Buildings.—A portion of the chattram buildings is occupied as a dispensary and wards for in-patients. The wards are two in number, one behind the other, and are incommensurate and not well adapted for the reception of in-patients. Furniture of the dispensary is in good order, and a large almirah and clock will be supplied in due time.

Dispensary Committee.—No Committee, but matters connected with the dispensary are disposed of by the President of the Local Fund Boards, Tanjore.

Most Common Diseases.—The diseases most prevalent in the order of frequency among in-patients were ulcers, rheumatic affections, anæmia, intermittent and other fevers, dropsies, debility, &c., and among out-patients ophthalmia, ulcers, rheumatic affections, intermittent and other fevers, skin diseases, &c. The mortality among in-patients was 13 against 15 in the previous year, and among out-patients only 5 deaths were recorded during the year.

Attendance of Patients.

Years.	Total Treated.			Average Daily Number.		
	In-patients.	Out-patients.	Total.	In-patients.	Out-patients.	Total.

1880	490	4,687	5,177	18	25	43
1880	418	5,032	5,450	16.45	27.72	44.17

PAPAVINASAM.

Extracts from the Annual Medical Report by Civil Hospital Assistant A. RAMANJOSOG NAIDU.

Dispensary Buildings.—The dispensary at present is located in a chattram. It was opened in August 1880 and belongs to the Local Fund Board and suffices for the purpose for which it is intended. Furniture, &c., quite new and in good order; another almirah is required.

Dispensary Committee.—The Dispensary Committee has not yet been selected.

Most Common Diseases.—Fever of intermittent type, diarrhoea, dysentery, worms, throat affections, lung complications, rheumatism arising from syphilitic taint, elcers, and various skin eruptions.

Attendance of Patients.—The attendance of out-patients is gradually increasing, and in the month of December last there has been a daily average attendance of 52.3.

PAROOVALANDAN.

Extracts from the Annual Medical Report by Civil Hospital Assistant V. JAGANATHAN.

Dispensary Buildings.—The dispensary was opened in August 1880. The building is under repair, and the furniture has not yet been supplied.

Most Common Diseases.—Rheumatic affections, skin diseases, conjunctivitis, and ulcers.

Attendance of Patients.—Total treated since August, 496.

PATUKOTA.

Extracts from the Annual Medical Report by Civil Hospital Assistant C. V. KUTHURU NAIDU.

Dispensary Buildings.—The building is in a sound state.

Dispensary Committee.—The entire management is in the hands of the Local Fund Board, Tanjore Circle. The Local Fund Board has recently appointed certain gentlemen of the town as Sanitary Commissioners to form a Committee, of which the District Munsif is the Chairman, and to exercise a certain amount of supervision over the sanitation of the town.

1879	...	...	7,445	32.74
1880	...	...	3,116	30.49

General Remarks.—Some months since the Local Fund Board sanctioned about Rupees 5,000 for the erection of a spacious building to be furnished with wards for 12 in-patients. A midwife is wanted.

BELLARY.

Extracts from the Annual Medical Report by Surgeon-Major A. L. HACKETT.

Dispensary Buildings.—Dispensary buildings are old and in need of repairs; in the event of rain they are sure to leak. Furniture, fittings, &c., in good order.

Dispensary Committee.—The committee meet twice a month.

Most Common Diseases.

Diseases.	1877.				1878.				1879.				1880.			
	In.		Out.		In.		Out.		In.		Out.		In.		Out.

Villagers are said to come from long distances to the dispensary. The results of the famine are passing away as shown by the decrease in in-patients.

HARPANAHALLI.

Extracts from the Annual Medical Report by First-class Hospital Assistant T. RAMASAWMY NAIDOO, No. 606.

Dispensary Buildings.—The dispensary and out-houses are in a bad state of repair, as they leak very badly during the rainy season. The flooring of the verandah is damaged here and there; a portion of the boundary wall has fallen down and requires an extensive repair. Furniture sufficient and in fair condition. The need of a table for the dead-house and a tub for the bath-room is much felt.

Dispensary Committee.—No meetings have been held during the year, though there is a Dispensary Sub-Committee, of which the Tahsildar is the President.

RAJAMADAM.

Extracts from the Annual Medical Report by Civil Hospital Assistant
R. M. STREENIVASSA NAIDU.

Dispensary Buildings.—The building is very inconvenient consisting of only two rooms with a small verandah between them; it forms part of the chattram. The in-patient ward is a thatched building apart from the dispensary, which is very poorly supplied with furniture.

Most Common Diseases.—Skin diseases, malarious fever, and other simple febrile affections, venereal and rheumatic affections.

Attendance of Patients.

Average Daily Attendance.				1880.	1879.
Out-patients	...	...	...	15.2	5
In-patients	...	...	...	6.5	4

General Remarks.—Under instructions from the President, Local Fund Board, Tanjore, a branch dispensary has been opened at Adarampatam, a small town about three miles off this station, and has been supported by this dispensary. I visit the dispensary twice a week and dispense medicines to patients. This branch dispensary building is a hired one, the daily attendance at which has been improving in number.

SHIYALI.

Extracts from the Annual Medical Report by Civil Hospital Assistant
V. PATCHAYAPPA MUDALI.

Dispensary Buildings.—There is a dispensary for out-patients with a store room attached to it. There are two wards for the accommodation of in-patients, but they are so inconveniently situated as to give room for communication between male and female patients.

Most Common Diseases.

Diseases.				1879.	1880.
Ophthalmia	...	...	...	124	837
Worms	...	...	...	256	544
Ulcers	...	...	...	548	525
Fevers	...	...	...	126	317
Rheumatic affections	...	...	...	456	314
Skin diseases	...	...	...	296	251

Attendance of Patients.—The institution has been opened only since the 13th October 1880 for in-patients, and the number of patients treated is 18. Against 5,347 admissions of last year there have been 5,043 cases treated as out-patients during the year under report.

TANJORE.

Extracts from the Annual Medical Report by Surgeon-Major E. L. LLOYD.

Dispensary Buildings.—The new female hospital was opened on the 9th November 1880. It consists of a central block divided into eight rooms—four on each side and a central pathway in a line, and three rooms behind this block and attached to it. There is an upstairs room called "Thomas' Hall" under the charge of the Secretary, Hospital Committee, and used as a Board Room for meetings of the Hospital Committee and Municipal and Local Fund Boards. There are four wards on each side of this block; one is known as Mohanambal Boyyee Sahib's Female Hospital on the right side, and male patients are admitted on the left side. Each ward (length 40 feet, width 18 feet, and height 18 feet) is capable of accommodating eight patients. There are two double detached wards and two single detached wards behind each of these. These detached wards are intended for caste in-patients and lying-in patients. These wards

afford accommodation for 76 in-patients. There are six detached rooms behind the central block in a line for purposes noted in the accompanying plan. This is situated on the outer and southern side of the Fort. The cost of the building was Rupees 65,869-7-11.

Most Common Diseases.—Fever, rheumatic and respiratory affections, inflammation of the external ear, worms, skin diseases, and ulcers.

Attendance of Patients.

1880.				Number.	Average Daily Sick.
In-patients	...	...	...	41	10.5
Out-patients	...	...	...	370	11.5

General Remarks.—This new hospital is still in its infancy, and can scarcely yet be considered in proper working order. The establishment is not yet completed, nor has the supply of new bedding and clothing been received. A further supply of medicines and certain special instruments for use in the new female hospital will be required. The buildings have a fine, noble and imposing appearance, and will be of great service to the station. The first stone of a new Medical School building was laid on the same day as the hospital was opened; the cost of the building of which is met from funds raised on the expected visit of His Royal Highness the Prince of Wales, amounting to Rupees 90,500, and which school is to be called and known as the Prince of Wales' Medical School. This school when completed and opened will, I trust, prove of great value to this and surrounding districts, further particulars of which will, however, be reported at a later date. The funds for the maintenance of the hospital alluded to in Statement No. 5, Part I, is exclusively for the female hospital; those for the male side are at present undivided, and are now obtained from the fund set apart for the old Raja's hospital. Application has been made by the Government Agent to Government for the funds set apart for the Raja's hospital being given over to the Local Fund Board, but the sanction has not yet been received.

TIRUKATTUPALLY.

Extracts from the Annual Medical Report by Civil Hospital Assistant A. PONNOOSAWMI PILLAI.

Dispensary Buildings.—The dispensary, which was opened in August, is not in need of any repair at present; it is rented by the Local Fund Board, Tanjore.

Most Common Diseases.—Malarial fevers, ophthalmia, venereal affections, dysentery, diarrhoea, worms, &c.

Attendance of Patients.—The total number of out-patients treated since August has been 1,866, and the average daily sick is 25.25.

TIRUTURAI PUNDI.

Extracts from the Annual Medical Report by Civil Hospital Assistant N. RUNGASAWMI NAIDU.

Dispensary Buildings.—Buildings in good repair, injured in the late storm.

Dispensary Committee.—The meetings are periodically held under the Local Fund Board, Negapatam Circle.

APPENDIX TO REPORT ON THE
HOSPET.

Extracts from the Annual Medical Report by Civil Apothecary E. STOCKING.

Dispensary Buildings.—The ceiling of the verandah is crumbling and the roof leaks; the out-houses are in good repair. The erection of a dead-house is still under contemplation. The supply of bedding, clothing, and furniture is scanty; the indent for these articles sent in on the 17th May 1880 has not been responded to. The hospital is well furnished with instruments.

Dispensary Committee.—I am informed that there is a sub-committee in the station, but I am not aware of a meeting being convened since my arrival here.

	Treated.		Average Daily Attendance.		Treated.		Average Daily Attendance.	
	A.	D.	A.	D.	A.	D.	A.	D.
1878	...	...	188	12.32	4,715	36.01	...	...
1879	...	...	1,064	51.04	6,773	59.01	...	...
1880	...	...	184	8.67	5,479	58.13	...	...

General Remarks.—Conservancy is very poor; there are no private or public latrines, but all men and women resort to the neighbouring plains for the purposes of nature, and at dusk in the evening they may be seen seated along the sides of the road.

KALYANDRUG.

Extracts from the Annual Medical Report by Civil Hospital Assistant V. PONNUSAWMY RAJOO.

Dispensary Buildings.—The dispensary building is in a bad state of repair. A small almshouse for poisons is also desirable.

Dispensary Committee.—Meetings held once a month.

Most Common Diseases.

Diseases.	1879.				1880.			
	In.		Out.		In.		Out.

—						In-patients.	Out-patients.
1879	...	...	...	...	...	1	2,468
1880	...	...	...	...	...	17	2,837

General Remarks.—For the hundred villages of this sub-division not a single Vaccinator is appointed. A probationary Vaccinator has been here for three months, and he has been transferred to some other taluk. The want of Vaccinator is much felt in the adjacent villages.

PENUKONDA.

Extracts from the Annual Medical Report by First-class Hospital Assistant P. RAMALINGUM PILLAY, No. 533.

Dispensary Buildings.—The buildings have been whitewashed; the roof leaks. Four wooden cots and a lantern are required for the female ward, and two benches for the out-patients.

Dispensary Committee.—Under the Local Fund Board, Penukonda Circle.

Most Common Diseases.—Malarious fevers, ulcers, respiratory and rheumatic affections, abscess, boil, and whitlows.

Inspections.—Inspected by the Deputy Surgeon-General on 3rd March 1880.

Attendance of Patients.

TADPATRI.

Extracts from the Annual Medical Report by First-class Hospital Assistant A. CUNDASAWMY MUDELLIAR, No. 747.

Dispensary Buildings.—The building is in good order, except the roof, which leaks. Furniture sufficient.

Dispensary Committee.—The sub-committee have but once met (on the 13th March 1880) during the year.

Most Common Diseases.—Among the in-door and out-door patients were ague, rheumatism, syphilis, neuralgia, ophthalmia, inflammation of the external ear, and bronchitis. The fatality during the year shows a decrease, being 7 against 9 of last year.

Inspection.—The Deputy Surgeon-General, Mysore and Ceded Districts, inspected the dispensary on the 2nd January 1880.

Attendance of Patients.

Years.				In-patients.	Out-patients.	Total.
1877	...	...	...	313	8,113	8,426

1880	...	...	...	...	...	9,912

TIRUVADAMARUDÚR.

Extracts from the Annual Medical Report by Civil Hospital Assistant
R. OLAGASUNDARUM PILLAI.

Dispensary Buildings.—The dispensary building is a rented one, and needs no repair. It was opened in August 1880.

Most Common Diseases.—Ague, rheumatism, ulcers, abscess, skin diseases, inflammation of external ear, and ophthalmia.

Attendance of Patients.—The daily average attendance of the out-door patients for this year is 31.40.

TIRUVADI.

Extracts from the Annual Medical Report by Civil Hospital Assistant PARTHASARATHY.

Dispensary Buildings.—The dispensary is located in a house rented by the Local Fund Board; it stands in need of repair. Furniture in good order. A small almirah is required to keep poisons in.

Most Common Diseases.—Fever, diarrhoea, rheumatic affections, ophthalmia, ulcers, and skin diseases.

Attendance of Patients.—In 1879 1,650 cases were treated, but the total amounted to 3,861 in 1880.

TIRUVÁLÚR.

Extracts from the Annual Medical Report by Civil Hospital Assistant
M. MOOTHOSAWMY PILLAI.

Dispensary Buildings.—The dispensary is in the main street of the bazaar; the building is quite unfitted for its present purpose. Furniture sufficient.

Dispensary Committee.—The dispensary is under the sole management of the Local Fund Board of the Negapatam Circle.

Most Common Diseases.—Ulcers, worms, eye diseases of a simple nature, rheumatic affections, fevers of different types, and skin diseases have been most prevalent. Fatality among the out-door patients during the year under report was six.

Attendance of Patients.—There is no provision made for the treatment of in-patients.

Years.					Out-patients.
1878	...	...	...	...	4,758
1879	...	...	...	...	4,911
1880	...	...	...	...	4,661

TRANQUEBAR.

Extracts from the Annual Medical Report by Surgeon D. F. DYMOTT, M.B.

Dispensary Buildings.—The dispensary buildings require white and yellow washing, also some minor repairs. Both the male and female latrines require repair. A dead-house is greatly needed. The furniture and fittings are in good condition.

Most Common Diseases.—Among out-door and in-door patients were ague, remittent fever, rheumatism, ophthalmia, worms, abscesses, boils and whitlow, skin diseases, and ulcers. The death-rate for the year was only 8, while during the preceding year it was 23. All the deaths occurred among the in-patients.

Attendance of Patients.

		1877.	1878.	1879.	1880.
Treated.	In-patients	374	358	332	339
	Out-patients	3,534	4,164	5,113	4,991
	Total	3,908	4,522	5,445	5,330

TRANQUEBAR BRANCH DISPENSARY.

Extracts from the Annual Medical Report by Surgeon D. F. DYMOTT, M.B.

Dispensary Buildings.—The dispensary buildings require some repairs, as the roof is cracked and allows rain to penetrate. The walls require rewashing.

Most Common Diseases.—Among out-door patients were ague, rheumatism, ophthalmia, and ulcers. As compared with last year, rheumatism and ophthalmia have been rather more common, while malarious fevers have been much less common.

Attendance of Patients.—The total number of out-patients was 3,706, showing an increase of 395 on the number who attended the previous year.

VEDARNIEM.

Extracts from the Annual Medical Report by Civil Hospital Assistant
N. A. VEERASAWMY NAIDU.

Dispensary Buildings.—The dispensary is located in a tiled house belonging to the temple, obtained at a monthly rate of Rs. 2-8-0. A dead-house and latrine are required.

Most Common Diseases.

Diseases.		1879.	1880.
Fever	...	636	521
Ulcers	...	200	1,007
Rheumatic affections	...	151	286
Syphilitic do.	...	106	110
Diarrhoea	...	105	120
Worms	...	50	131

There were two deaths against one the previous year. The taint of syphilis appears in a very large number of cases.

Attendance of Patients.—Five thousand and seven patients were treated during the year, showing an increase of 1,400 compared with the previous year. The daily average sick was 21.37 against 29.09 in 1879. There are no in-patients admitted.

Remarks.—The midwife who was appointed in January 1880 attended only three cases of labor during the year.

APPENDIX TO REPORT ON THE
SOUTH CANARA DISTRICT.

BANTVAL.

Extracts from the Annual Medical Report by Civil Hospital Assistant M. GOVINDU MENON.

Dispensary Buildings.—A new dispensary is under construction.

Most Common Diseases.—Among out-door patients ague and remittent fevers, worms, rheumatic and syphilitic affections, anæmia, dropsy, diseases of the ear, and respiratory affections. Among in-door patients fevers, dropsy, phthisis pulmonalis, and abscess: 11 deaths occurred.

Inspection.—Visited by the Deputy Surgeon-General on the 27th January 1880.

Attendance of Patients.—The attendance of out-door patients during the year compared with that of previous year was on the whole satisfactory. There was an increase of 67.

General Remarks.—Sanitation is very defective, conservancy by scavengers being unknown in this town. There are no public latrines here; the compounds of houses, if convenient, or the river side taking their place.

COONDAPOOR.

Extracts from the Annual Medical Report by Civil Apothecary T. KORAH.

Dispensary Buildings.—The dispensary and the out-houses are in a good state of repair. The dead-house is too small for its requirements.

Most Common Diseases.—Among in-patients malarious and other febrile affections, general dropsy, dysentery, diarrhoea, and ulcers. Among the out-door patients malarious fevers, rheumatic, syphilitic, and respiratory affections, anæmia, leprosy, and inflammation of the external ear were most prevalent.

Inspection.—By the Deputy Surgeon-General on the 31st January 1880.

Attendance of Patients.

KARAKAL.

Extracts from the Annual Medical Report by Civil Hospital Assistant K. GOVINDAN NAIR.

Dispensary Building.—The dispensary building is a new one. There is no dissection room. A fresh latrine is under construction.

Most Common Diseases.—Ague, rheumatic and syphilitic affections, gonorrhœa, diarrhoea, dysentery, bronchitis, and other respiratory affections.

Epidemic.—Chicken-pox made its appearance in the town in December last, and continued till the end of February.

Attendance of Patients.—The decrease in admission is attributable to the better and the healthier state of the public than in 1879.

KASARAGOD.

Extracts from the Annual Medical Report by Civil Apothecary C. KANNAN.

Dispensary Buildings.—The dispensary buildings are in a good state of repair. A wall round the dispensary compound is much needed.

Dispensary Committee.—The records of the dispensary show that there is a committee for the dispensary; but no meeting has been convened after my assumption of charge, nor does one appear to have been convened since the establishment of the dispensary.

Most Common Diseases.—Amongst out-door patients intermittent fever, skin diseases, ulcers, worms, rheumatic complaints, and respiratory affections, and amongst in-door patients wounds, ulcers, abscesses, intermittent fever, and dysentery. There were 5 deaths among in and 2 amongst out patients.

Attendance of Patients.—Sixty-one in-patients and 2,112 out-patients were treated against 115 in-patients and 3,274 out-patients of the previous year. The decrease among out-door patients is due to the falling off in fever cases, the number of admissions from which had been much smaller than that of the two previous years. A larger number of patients than those admitted sought admission as in-patients, but were refused owing to the restriction of the dieting allowance to Rs. 4 a month.

LACCADIVE ISLANDS.

Extracts from the Annual Medical Report by Third-Class Hospital Assistant SYED ABDUL RAHAMAN, No. 1,029.

Dispensary Buildings.—The western side of the hospital roof was thatched during the year.

Most Common Diseases.—The most common diseases met with in the islands are those of the stomach and bowels, rheumatic affections, diseases of the skin and eye.

Attendance of Patients.—All attend as out-patients. The attendance was more than that of the previous year.

MANGALORE.

Extracts from the Annual Medical Report by Surgeon M. S. EYRE.

Dispensary Buildings.—The hospital and out-buildings are in a good state of repair. The fittings, &c., are now about to be put in a good state of repair. The dead-house used for *post mortem* examinations is small and badly lighted. There are no proper conveniences for making these examinations.

Dispensary Committee.—There is no dispensary committee, though I think it highly desirable that there should be one.

Inspection.—Inspected by the Deputy Surgeon-General on the 23rd January 1880.

Attendance of Patients.

Years.	In-patients.	Out-patients.	Total.
1876	257	7,015	7,272
1877	384	9,256	9,640
1878	326	10,281	10,607
1879	298	9,982	10,280
1880	203	7,147	7,350

There has been a great decrease both in the number of in and out patients treated, and this decrease has taken place in nearly all the various diseases treated, the greatest decrease, however, taking place under malarial fevers. I can attribute this decrease to nothing but the salubrity of the climate of the past year and the consequent good condition of the public health. This may also be seen from the fact of the diminution of sickness in the jail and public hospitals and in the total absence of epidemics during the year.

UDIPI.

Extracts from the Annual Medical Report by Civil Hospital Assistant A. RUMUNNI NAIR.

Dispensary Buildings.—A dead-house has been sanctioned; likewise repair of the floors: neither have been commenced up to date. The compound walls require to be raised; the gate is still lying on the ground; no steps have been taken to set it in its proper place.

VALANGIMAN.

Extracts from the Annual Medical Report by Civil Hospital Assistant
V. N. DEVASEGAMONEY MUDALIAR.

Dispensary Buildings.—The dispensary was opened on the 20th August 1880. The present building is a rented one and not well suited for a dispensary, being much exposed to the public. It has only two small rooms, of which one is used for a surgery and the other for examining and for operations, &c.

Dispensary Committee.—No committee has been appointed for this dispensary.

Most Common Diseases.—Ague, dysentery, diarrhoea, dyspepsia, worms, and respiratory affections.

Attendance of Patients.—No accommodation for in-patients. One thousand one hundred and sixty-five out-door patients have attended the dispensary in the last four months.

VALLAM.

Extracts from the Annual Medical Report by Private Practitioner N. SAMUEL PILLAI.

Dispensary Buildings.—The dispensary is located in a portion of the Local Fund Chatram at Vallam. A large almirah and a large compounding table are quite necessary to meet the increasing stock of medicines.

Most Common Diseases.—Ophthalmia, dyspepsia, ague, ulcer, rheumatic affections, inflammation of external ear, skin diseases, injuries, &c.

Attendance of Patients.—The number of patients who attended the dispensary during the year was 5,757 against 6,455 of the previous year.

TINNEVELLY DISTRICT.

AMBASAMUDRAM.

Extracts from the Annual Medical Report by Second-class Hospital Assistant
P. V. RAMASWAMY NAIDU, No. 963.

Dispensary Buildings.—The present building occupied as a dispensary is a rented one; it was white-washed during the year.

Most Common Diseases.—The most common diseases among out-door and in-door patients are ague, rheumatism, conjunctivitis, abscess, boils, ulcers, and skin diseases.

Epidemics.—Small-pox was prevalent to some extent during the year both in the cusbah station and in the adjoining villages.

Inspection.—The dispensary was inspected by the Zillah Surgeon, Tinnevely, on the 22nd July 1880.

Attendance of Patients.—The admissions of out-door patients during the year are 3,551 against 1,518 in the previous year, and that of the in-door are 41. No in-patients were treated in the previous year.

IDAIYANGUDI.

Extracts from the Annual Medical Report by First-class Hospital Assistant
M. MOONESAWMY PILLAI, No. 605.

Dispensary Buildings.—Spacious, common thatched buildings rented by the Local Fund Board at Rs. 50 per annum. In good repair, and fitted up with almirahs, shelves, forms and screens.

Dispensary Committee.—Under the Local Fund Board of the Circle.

Most Common Diseases.—Ague, rheumatic affections, conjunctivitis, dropsy, dyspepsia, dysentery, and skin diseases.

Epidemics.—Measles and mumps broke out in an epidemic form amongst the boarding-school children, and its progress was stopped by closing the school for a month. A few cases of modified small-pox appeared here and there.

Attendance of Patients.

Years.	In-patients.		Out-patients.	
	Admissions.	Average Daily Sick.	Admissions.	Average Daily Sick.
1878	63	2.38	3,972	35.81
1879	63	3.32	4,426	39.89
1880	58	2.30	4,405	34.68

MEGNANAPURAM.

Extracts from the Annual Medical Report by Private Medical Practitioner
M. HENRY COOKSLEY.

Dispensary Buildings.—The building is in good repair; the roof was repaired this year.

Dispensary Committee.—Bishop Sargent visits the dispensary at his quarterly visits to the place. A committee was formed at the commencement of this year, who also often visit the dispensary.

Most Common Diseases.—Fever, ulcers, and skin diseases. It is found impossible to obtain a correct return of deaths amongst the out-patients, many of whom come from a distance.

Epidemics.—Small-pox and measles prevailed epidemically.

Inspection.—The dispensary was inspected by the Zillah Surgeon, Tinnevely, on the 22nd October 1880.

Attendance of Patients.—The attendance of patients, both in-door and out-door, were less than in 1879 as contrasted below:—

Years.	In-patients.	Out-patients.
1879	79	3,027
1880	75	2,995

General Remarks by Bishop Sargent.—I inspect this dispensary every quarter, and always find the place clean and in good order. I never have any complaint made to me as if the wants of the patients were not duly attended to; such complaints would be sure to reach me if parties had just cause for dissatisfaction.

NAGALAPURAM.

Extracts from the Annual Medical Report by Medical Practitioner P. SAVARIMUTHU.

Dispensary Buildings.—Thatched house; wants repair; the building Mission property.

Dispensary Committee.—Once in three months visited and checked by the Rev. T. Adamson. No meeting.

Most Common Diseases.—Ulcer, ophthalmia, fever, rheumatic affections.

Epidemics.—Measles, chicken-pox.

Inspection.—It was inspected by the Right Reverend Bishop Caldwell on the 15th of March 1880, and also by the Rev. T. Adamson.

Attendance of Patients.

The number of in-patients	...	55	} 845 less than previous year.
Do. of out-patients	...	2,335	

NANGUNERI.

Extracts from the Annual Medical Report by Civil Hospital Assistant
J. NARAYANASAWMY NAIDU.

Dispensary Buildings.—Subscriptions are gradually being collected up to the sum of Rs. 1,060; an equal amount being given from the Local Fund for a new building.

Most Common Diseases.

Diseases.	1878.				1879.				1880.			
	In.		Out.		In.		Out.		In.		Out.	
	A.	D.	A.	D.	A.	D.	A.	D.	A.	D.	A.	D.

Ulcer ...	3	2	96	...	4	...	126	...	3	...	138	...

Epidemics.—Hooping cough was prevalent.

Inspection.—The dispensary was inspected by the Deputy Surgeon-General on the 1st February 1880.

Attendance of Patients.

	1877.	1878.	1879.	1880.
In-patients ...	49	42	54	83
Out-patients ...	3,443	4,619	2,951	2,843

There is an increase of 29 in-patients and a decrease of 108 out-patients when compared with the previous year 1879. The increase in in-patients was chiefly owing to the greater number of Police Constables admitted as in-patients, which was not the custom in previous years. The decrease among out-patients was owing to the mild form of malarial fever cases, the number being 504 against 1,176 in the previous year, but there was a marked increase in the admission of almost all other diseases.

UPPINANGADI.

Extracts from the Annual Medical Report by Civil Hospital Assistant M. KANNAN.

Dispensary Buildings.—A temporary mud-built thatched building is used as a dispensary for the last six years. Furniture supplied by the Local Fund Board is sufficient to meet the present requirements.

Most Common Diseases.

Attendance of Patients.—The admissions of in and out patients for the year 1879 were 55 and 1,214 respectively, whereas for the year 1880 they were 42 and 1,310.

CHINGLEPUT DISTRICT.

CHINGLEPUT.

Extracts from the Annual Medical Report by Surgeon-Major E. A. TRIMNELL.

Dispensary Buildings.—A new cook-house, dresser's quarters, and contagious disease ward have been constructed during the year, the two former which adjoin are in the hospital compound towards the south, the latter is outside the compound to the north. A new well with good clear water has also been constructed within the compound. The hospital itself has been found leaky during the late rains, and the flooring requires renewal.

Dispensary Committee.—There is a monthly meeting of the Local Fund Board at Saidāpet at which the affairs of the Civil Dispensary are discussed.

Most Common Diseases.

Diseases.	In-patients.	Out-patients.
Malarious fever ...	84	423
Ulcer ...	29	452
Dysentery ...	15	...
Constipation ...	...	828
Conjunctivitis ...	...	741
Asthma ...	17	...

The total number admitted for malarious fever in 1879 was 1,499, while this year it is only 524; this shows a considerable diminution in the number of cases. There were two deaths of in-patients from ague. The disease which caused the largest number of deaths was dropsy (4); this was also the case in the former year (6). The next cause of death was partus—3 cases in each year. The total number of deaths was the same in each year, viz., 27.

Attendance of Patients.

	1878.	1879.	1880.
In-patients ...	743	547	325
Out-patients ...	5,274	7,892	7,113

The attendance of in-patients has diminished considerably since the return of prosperity, but is considerably over the number usually admitted before the famine, the number admitted in the year immediately preceding the famine (1874-75) being 172, and in the previous one (1873-74) 138.

General Remarks.—The treatment of malarious fever by cinchonine, referred to in the preceding Annual Report, has been found very successful, and the saving in the cost of quinine has been considerable. Antiseptic surgery has been carried out as far as possible with success; in one case of compound comminuted fracture of the head of the humerus opening into the shoulder-joint, from which several pieces of bone had to be removed, recovery was rapid under the use of carbolic putty.

CONJEEVERAM.

Extracts from the Annual Medical Report by Assistant Surgeon T. RUTHNUM MUDALLI.

Dispensary Buildings.—The buildings are now undergoing repairs, which will be finished in about a week more. As regards the dead-house, which is situated beyond municipal limits and was not built in connection with the dispensary, the President of the Municipality is about to address Government with a view to its repairs being met out of Provincial Funds under a recent ruling of Government, No. 2,001, dated 22nd October 1880.

Dispensary Committee.—The dispensary is under the direct supervision of the Municipal Board.

Most Common Diseases.—The prevailing diseases among in-patients were syphilitic diseases, intermittent fever, wounds, dysentery, diarrhoea, dropsy, anaemia, and ulcers, and among out-patients constipation, fevers, boils, abscesses, conjunctivitis, otitis, itch, &c. The admissions from fever have fallen from 3,850 in 1879 to 1,839 in the year under reference.

Most Common Diseases.—The most common diseases among out-door patients were malarial fevers, sore-eyes, rheumatic and syphilitic affections, ulcers, diarrhoea and dysentery, &c. Among in-patients general dropsy, fever, ulcers, injuries, and dysentery.

Epidemics.—Ague and small-pox prevailed epidemically throughout the year in some parts of the taluk, but the attacks were not so numerous as in the previous year.

Inspection.—The Civil Surgeon visited the dispensary on the 17th December 1880.

Attendance of Patients.

Years.	Total Admissions.		Average Daily Sick.		Total Deaths.	
	In-patients.	Out-patients.	In-patients.	Out-patients.	In-patients.	Out-patients.
1877	65	4,338	2.43	49.60	2	31
1878	194	9,017	4.75	67.22	16	5
1879	158	7,975	3.37	60.76	23	...
1880	76	7,309	3.87	51.84	16	6

NAZARETH.

Extracts from the Annual Medical Report by Rev. A. MARGOSCHIS.

Dispensary Buildings.—The buildings are in a fair state of repair. The verandah of the dispensary requires retiling, and the roof also needs repair. The furniture and fittings are sufficient. A dead-house for conducting *post-mortem* operations, of which a considerable number are held yearly, is much required.

Most Common Diseases.—The most common diseases under treatment during the past year were intermittent fever, diarrhoea, dysentery, measles, mercurial rheumatism, and ulcer.

Epidemics.—Small-pox has been very prevalent, but people very seldom apply for medical advice for this complaint.

Inspection.—The dispensary was inspected by the Zillah Surgeon on the 23rd October 1880.

Attendance of Patients.

Years.		In-patients.	Out-patients.
1877	...	232	5,964
1878	...	183	6,137
1879	...	243	6,465
1880	...	209	8,101
Daily average sick for 1880		9.9	83.3

General Remarks—Vaccination.—The Government Vaccinators have visited the station during the year twice. Vaccination cannot be regularly carried on at the dispensary, as a fresh supply of lymph is not always available, and when available there is difficulty in obtaining people willing to be vaccinated. All the people inhabiting the Christian villages in this neighbourhood, with very few exceptions, are vaccinated.

The Vaccinators pay flying visits to the villages, and in many cases never return to examine the results of their operations. It seems highly desirable that a more complete system of inspection should be rigidly carried out.

PALAMCOTTAH.

Extracts from the Annual Medical Report by Acting Zillah Surgeon G. T. THOMAS.

Dispensary Buildings.—During the year two latrines, one for males and another for females, were built for the use of caste patients in the compound of the Brahmin shed. The walls of the main building are cracked and require thorough repair. The two latrines attached to the main wards require retiling. Furniture and fittings are sufficient.

Dispensary Committee.—A sub-committee assembles at the dispensary, as occasion may require, to discuss all important matters connected with the dispensary, the Zillah Surgeon being the Vice-President of the Committee.

Most Common Diseases.—Among out-patients fevers, rheumatism, syphilitic affections, general dropsy, and conjunctivitis; and among in-patients general dropsy, diarrhoea, dysentery, ulcer, and skin diseases. During the year there have been 54 deaths among in-patients, the percentage of death to admission being 18.60, less than in 1879, when it was 18.24.

Attendance of Patients.

Years.	In-patients.	Out-patients.	Total.
1876	473	5,843	6,316
1877	656	6,485	7,141
1878	549	7,286	7,835
1879	466	7,037	7,503
1880	397	6,681	7,078

RÁDHÁPURAM.

Extracts from the Annual Medical Report by Medical Practitioner A. JOSEPH.

Dispensary Buildings.—The tiled building in which the dispensary work is carried on and the thatched houses attached to it are all in good condition and require no repair for the present. The dispensary is not supplied with suitable furniture.

Most Common Diseases.—Ague, rheumatic affections, ophthalmia, diseases of digestive organs, skin diseases, ulcers, and different kinds of injuries.

Epidemics.—Measles was prevalent throughout the year in the station and its vicinity, and few cases of small-pox also occurred.

Attendance of Patients.—Two thousand four hundred and ninety-two out-door patients were treated in 1880 against 1,993 in 1879, which shows an increase of 499 in 1880.

SANKARANAINARKOIL.

Extracts from the Annual Medical Report by Civil Hospital Assistant A. PAKIAM PILLAI.

Dispensary Buildings.—There is no special building, but a part of the Local Fund Board Chattram is occupied at present as the hospital. A separate hospital is under construction. The furniture is sufficient and all new.

Most Common Diseases.—Malarious fevers, rheumatic affections, conjunctivitis, gonorrhoea and its complications, ulcers, and skin diseases.

Inspection.—The dispensary was inspected by the Civil Surgeon in November last.

Attendance of Patients.—There have been 5,417 admissions amongst out-patients during the year as compared with 4,650 admissions of last year, showing an increase of 767.

SÁTÚR.

Extracts from the Annual Medical Report by Civil Hospital Assistant J. SAVARIOYA PILLAI.

Dispensary Buildings.—No repair has been done to the dispensary of late, but the building was white-washed once. Furniture sufficient and in good order. The flooring of the dispensary is sadly in want of repair, and a dead-house and well are greatly wanted.

Dispensary Committee.—The members of the Local Fund Board, Tinnevely Circle, convene their meeting once in every month.

Most Common Diseases.—Among out-door patients were malarious fever, ulcers, rheumatic affections, syphilitic and skin diseases, ophthalmia, worms, and gonorrhoea and its complications.

Inspection.—The dispensary was inspected once by the Zillah Surgeon on the 30th September 1880.

Epidemics.—Small-pox cases increased in number in the early months, the total deaths registered being 163 in the year. Measles prevailed to some extent, and there were some scattered cases of hooping cough.

Attendance of Patients.—In-door patients.—The number of in-door patients treated in the year is less by 21 than those of 1879. This is chiefly due to the shortness of the funds available, the admissions being restricted in consequence to urgent and helpless cases. The average sick in hospital was 13.48 against 13.95 in the previous year.

Out-door patients continued to seek advice in large numbers, although there is a decrease of 560 cases in the year. Ague had fallen from 3,850 in 1879 to 1,839 in 1880, whilst syphilitic and cutaneous diseases have much increased.

General Remarks.—Vaccination work in the town shows signs of progress under the continued attention given to it by the President of the Municipality. The number operated by the Municipal Vaccinator is 1,141 against 912 in 1879. The Hospital Assistant vaccinated 30 cases, of which 25 were successful.

MADURANTAKAM.

Extracts from the Annual Medical Report by Pensioned First-class Hospital Assistant J. RAGAVOOLU NAIDU.

Dispensary Buildings.—Two wards of the jail are used for the dispensary.

Dispensary Committee.—The Local Fund Board frequently convene meetings at the President's Office, Saidápet.

Most Common Diseases.—Ague, rheumatic affections, ophthalmia, inflammation of the ear, respiratory affections, and dysentery.

Attendance of Patients.

	1879	1880	Out-patients
...	...	...	8,170
...	...	...	6,034

PONNÉRI.

Extracts from the Annual Medical Report by Civil Hospital Assistant B. LUTCHMIAH NAIDU.

Dispensary Buildings.—Accommodation insufficient, and there is no seclusion. The floor is under repair. Furniture serviceable.

Most Common Diseases.—Constipation, skin diseases, ulcers, rheumatic affections, and conjunctivitis.

Attendance of Patients.—5,087 out-patients were relieved. The daily average attendance was 38.09.

SAIDÁPET.

Extracts from the Annual Medical Report by Civil Apothecary A. JESUDASSEN.

Dispensary Buildings.—No material change has taken place in the building since last report.

Dispensary Committee.—There is no special dispensary committee.

Most Common Diseases.—The following table will afford a comparative view of the most common diseases treated at the dispensary during 1879 and 1880:—

Diseases.	1879.		1880.	
	Total Treated.	Deaths.	Total Treated.	Deaths.
Fever, ague and remittent ..	1,356	6	1,393	1
Eye diseases ...	1,336	...	1,270	...
Ulcer ...	945	...	961	1
Abcesses and boils ...	800	...	801	1
Ear diseases ...	806	...	719	...
Injuries ...	569	...	402	...
Rheumatism ...	405	...	269	...
Skin diseases ...	339	...	421	...
Bowel-complaints ...	398	4	204	1

Epidemics.—Malarious fever is still prevalent at Kunnathúr and its neighbourhood, and consequently at Saidápet also, which is only about six miles from that place; but it was not worse than last year.

Inspection.—Was inspected by the Surgeon-General with the Government of Madras on the 3rd July 1880.

Attendance of Patients.—The attendance of out-patients is still on the increase, the difference being 96 over that of the last year.

Years.	Total Treated.	Average.
1876-77 ...	7,515	63.5
1877 ...	9,313	69.5
1878 ...	8,331	96.35
1879 ...	10,589	72.31
1880 ...	10,685	73.75

SAINT THOMAS' MOUNT.

Extracts from the Annual Medical Report by Surgeon-Major R. DEMPSTER.

Dispensary Buildings.—The dispensary building is in good repair. The accommodation is sufficient for requirements as far as natives are concerned, but no provision is made for reception of European patients; of the latter those unable to attend the dispensary have been visited at their houses and classed as in-patients. Furniture and fittings are complete.

Most Common Diseases.—The most common diseases were as follows:—

Diseases.	Out-patients.	Died.	Average for 4 years.	Died.
Malarious fever ...	648	1	770	5
Ulcer ...	400	...	416	...
Respiratory affections ...	298	1	305	...
Diarrhoea ...	222	1	222	...
Rheumatic affections ...	212	...	232	125
Inflammation of the external ear ...	201	...	179	...
Ophthalmia ...	175	...	131	...
Dysentery ...	116	...	123	1

Inspection.—Inspected by the Surgeon-General with the Government of Madras on the 25th September 1880.

Attendance of Patients.

Years.	In-patients.	Out-patients.
1876 ...	60	7,376
1877 ...	74	5,911
1878 ...	80	4,382
1879 ...	144	3,818
1880 ...	80	4,579

SUTHIAVEDU.

Extracts from the Annual Medical Report by Civil Hospital Assistant C. ERUSAPPA MOODELLY.

Dispensary Building.—Consists of only one room, which is insufficient.

Most Common Diseases.—Constipation, diseases of the stomach and bowels, affections of the ear and eye and ulcers.

Attendance of Patients.—This dispensary was opened in July 1880 for the treatment of out-patients only, since which time 996 have been treated.

Attendance of Patients.—There is no record to show the attendance of patients during the first three months after the dispensary was opened in 1878. The following statement contrasts the attendance of out-patients for the years 1879 and 1880:—

Years.	Number Treated.	Average Daily Attendance.
1879	3,842	28.06
1880	3,096	17.83

There is a decrease of 746 in the number of out-patients treated and a decrease of average attendance of 10.23.

General Remarks.—A dissecting table has recently been supplied to the dispensary, though there is no dead-house attached to the building; and *post-mortem* examinations, though not frequent, have to be made in the open.

SAWYERPURAM.

Extracts from the Annual Medical Report by Private Medical Practitioner G. PARIAM.

Dispensary Buildings.—All in good order; subscriptions are being received for the erection of a new dispensary.

Most Common Diseases.—Intermittent fevers, dysentery, diarrhoea, &c. Their prevalence and fatality are less than last year.

SIVAKASI.

Extracts from the Annual Medical Report by Hospital Assistant S. DAVID.

Dispensary Buildings.—The present dispensary is a little room whose area is 6 by 5 feet. This being the property of Government, the rent is paid by the Local Fund Board. A new dispensary building, which is larger and stronger than the present one, is in course of construction, and is being built by the Mission with the assistance of Local Fund Board subscriptions.

Most Common Diseases.—Fever, rheumatism, ulcer, ophthalmia, and inflammation of external ear.

Inspection.—The Zillah Surgeon inspected on the 2nd October 1880.

Attendance of Patients.—In 1879 the attendance of out-door patients was 2,868; in 1880 attendance of out-door patients was 2,283. There is therefore a decrease of 585. No in-patients are treated.

SRIVILLIPUTUR.

Extracts from the Annual Medical Report by Medical Practitioner J. WERKEY.

Dispensary Buildings.—The dispensary is a substantial tiled building, well ventilated, capable of accommodating eight in-patients. The room for *post-mortem* examination is situated in close proximity to the institution.

Dispensary Committee.—The dispensary is under the management of the Local Fund Board, whose members meet at Tinnevely once in a month.

Most Common Diseases.—Fever, ulcers, skin diseases, worms, ophthalmia, rheumatic affections, and injuries. They were milder in type and yielded to judicious treatment.

Epidemics.—Small-pox and measles prevailed to a slight extent in the town and its suburbs.

Inspection.—The Civil Surgeon inspected the institution.

Attendance of Patients.

Years.	Total Admissions.		Average Daily Sick.		Total Deaths.	
	In-patients.	Out-patients.	In-patients.	Out-patients.	In-patients.	Out-patients.
1876	135	7,822	3.84	48.49	5	2
1877	857	6,141	27.23	36.75	149	7
1878	181	12,839	9.72	69.12	28	...
1879	124	11,749	4.14	64.73	5	1
1880	94	8,020	3.17	37.06	3	2

General Remarks.—The sanitation of the place is very defective, and the staff of the convalescent establishment is very deficient in numbers.

SRIVAIKUNTHAM.

Extracts from the Annual Medical Report by Civil Hospital Assistant R. A. PETER PILLAI.

Dispensary Buildings.—The building is a rented one. This answers very badly. There is some prospect of a new building being erected.

Dispensary Committee.—There is a Local Fund meeting held once a month at Tinnevely, at which subjects connected with the dispensary are discussed.

Most Common Diseases.—Fever, rheumatic affections, conjunctivitis, skin diseases, and ulcers.

Epidemics.—There have been no epidemics during the year. Small-pox and measles occasionally made their appearance here and there.

Inspection.—Inspected by the Civil Surgeon on the 20th October 1880.

General Remarks.—This dispensary was newly opened on the 23rd August last in a chatram, and it is now being removed to an ordinary lodging-house. At the beginning a large number of patients attended the dispensary, but the number decreased gradually.

TENKASI.

Extracts from the Annual Medical Report by Hospital Assistant A. CHOCKALINGUM PILLAI.

Dispensary Buildings.—This Local Fund Dispensary was opened on 6th December 1879, and is in a good state of repair.

Most Common Diseases.—Rheumatism, dysentery, fevers, and skin diseases are very prevalent.

Inspection.—Inspected by the District Surgeon in August 1880.

TINNEVELLY.

Extracts from the Annual Medical Report by First-class Hospital Assistant V. NULLIAH NAIDU, No. 476.

Dispensary Buildings.—The buildings are in good order. Furniture and fittings sufficient. A temporary pandal has been erected around the dispensing and office rooms to lessen the effect of sun and rain, and a new window was opened to give light and ventilation to the office-room.

Dispensary Committee.—A sub-committee composed of six Commissioners, with the Zillah Surgeon as Vice-President, assemble once a month to examine hospital accounts and to discuss any improvements or suggestions for the benefit of the dispensary.

Most Common Diseases.—Fever, rheumatic and syphilitic affections, sore-eye, inflammation of external ear, respiratory affections, diseases of the stomach and bowels, gonorrhoea and its complications were prevalent among out-patients, and fevers, syphilitic affections, dropsy, dysentery, and diarrhoea, ulcer, debility, and injuries among the in-patients.

Extracts from the Annual Medical Report by Pensioned Hospital Assistant
VENKATESAWMY NAIDU.

Dispensary Buildings.—The building is a rented one and unsuitable for an hospital. It was recently whitewashed. The furniture is in good order.

Most Common Diseases.—Among out-door patients, fever, syphilitic and rheumatic affections, dropsy, inflammation of the ear, and respiratory affections.

Attendance of Patients.—No in-door patients are admitted. The number of out-door patients in 1879 was 6,320, and in 1880, 5,598. On the whole there is a decrease of 722 for the year under review.

TIRUVALLUR.

Extracts from the Annual Medical Report by Civil Hospital Assistant C. NARASIMHOOLOO.

Dispensary Buildings.—The building has been much improved during the year.

Most Common Diseases.—Constipation, ague, ulcer, boils, rheumatic affections and conjunctivitis, &c.

Inspection.—Inspected by the Zillah Surgeon, Chingleput, on 24th December.

Attendance of Patients.—Five thousand, eight hundred and seventy-one out-patients sought relief. No in-patients are admitted.

COIMBATORE DISTRICT.

BHAVANI.

Extracts from the Annual Medical Report by Second-class Hospital Assistant
M. SHUNMOOGUM MOODELLY, No. 916.

Dispensary Buildings.—State of building is good, but want of a dead-house and a male ward (instead of a shed now in use) is greatly felt. The supply of furniture, &c. is fair.

Dispensary Committee.—Meeting is held once a week in the office of the Local Fund Board, Coimbatore, and also a Sub-Committee has been appointed for the management and discussion of matters relating to the dispensary at Bhavani.

Most Common Diseases.—Febricula, rheumatism, syphilitic affections, inflammation external ear, sore-eyes, diarrhoea, dysentery, ulcer, &c., were common.

Inspection.—This dispensary was inspected by the Deputy Surgeon-General, Indian Medical Department, Southern District, on the 1st March 1879.

Attendance of Patients.—The numbers of out and in door patients last year (1879) were 5,244 and 104 respectively, the number this year is 3,326 and 104, thus giving a decrease of 1,918 in the former.

COIMBATORE.

Extracts from the Annual Medical Report by Surgeon-Major G. E. WHITTON, M.B., Civil Surgeon.

Dispensary Buildings.—The hospital for females, which was considered quite unsuitable, has been demolished, and a new handsome building, containing two wards with verandahs and bath-rooms, has been erected and completed before the end of the year. It is now fit for the reception of patients. The whole of the buildings and out-houses have lately been retiled and repaired.

Dispensary Committee.—Matters connected with the dispensary are brought to the notice of the Municipal Commissioners, by whom they are discussed.

Most Common Diseases.—Among the out-patients, in order of frequency, malarious fevers 2,512, diseases of respiratory organs 1,083, ophthalmia 815, skin diseases 789, ulcers 642, injuries 547, gonorrhoea 472. Amongst the in-patients malarious fevers 79, ulcers 77, syphilitic affections 63, rheumatic affections 63, gonorrhoea 46, dysentery 40, skin diseases 34. There were 66 deaths recorded amongst the in-patients, and principally from the following causes: dropsy 12, debility 7, dysentery 7, ulcer 6, diarrhoea 5, and fever 5. This is about half what it was in

1879, when the number of deaths was 130. A remarkable increase has taken place in the number of cases of gonorrhoea and its complications and syphilitic affections. In last year the total of these, both of in and out patients, numbered 537, but during the year just ended the total numbers were 978, or nearly double.

Inspection.—The dispensary was inspected by the Deputy Surgeon-General, Southern Division, Indian Medical Department, on the 3rd March, by the Surgeon-General with the Government of Madras on the 17th September, and by the Sanitary Commissioner on the 18th August 1880.

Attendance of Patients.—The total number of in-patients was 655, the same as in the previous year, and the number of out-patients was 14,502, or 2,705 more than the previous year. The hospital has been generally pretty full of sick. With the new ward just completed for the reception of female sick, there is some probability that the number of in-patients will increase.

DHARAPURAM.

Extracts from the Annual Medical Report by Civil Hospital Assistant
S. NARAYANSAWMY CHETTY.

Dispensary Buildings.—The hospital is in need of repairs. An almirah to keep instruments is required.

Most Common Diseases.—Among out-door patients are ague, bronchitis, catarrhal ophthalmia, diarrhoea, dysentery, dyspepsia, gonorrhoea and its complications.

Attendance of Patients.—There have been 89 in-patients treated during the year, more than double that of the previous year, namely 43, while in 1878 there were only 7 admissions. There has also been an increase in out-patients, 6,573 being treated this year, while in 1879 and 1878 the numbers were 6,059 and 5,578 respectively, showing a steady annual increase.

General Remarks.—I have much pleasure to state that the inhabitants of this town are beginning to feel the benefit of vaccination. I have myself vaccinated 117 persons, who voluntarily came to me to undergo the operation; and taking into consideration the conservative views held by Hindus, it is a matter of pleasure to note the steady progress made.

ERODE.

Extracts from the Annual Medical Report by Civil Apothecary C. R. D'SILVA.

Dispensary Buildings.—The dispensary is in a good state of repair; the furniture, fittings, &c. are sufficient and in good order.

Dispensary Committee.—Matters bearing on the working of the hospital are disposed of at the Municipal meetings, which are held twice a month.

Most Common Diseases.—Malarious fevers, diseases of the eye, ulcers, boils, abscesses, skin diseases, inflammation of the external ear, &c. There has been a great decrease in the total number of cases of malarious fevers treated as compared with that of 1879, viz., 1,098 against 2,792, or less than half of the previous year.

Inspection.—The dispensary was inspected by the Surgeon-General with the Government of Madras on the 18th September 1880.

Attendance of Patients.—There has been a decrease of in and out patients during the year. 96 in-patients were treated against 232 of the previous year, and 6,522 out-patients against 9,291. This decrease is probably due to the diminution in the prevalence of malarious fevers and also to the healthy condition of the year. The larger numbers of the previous year were doubtless due in some measure to the famine which had immediately preceded.

KARUR.

Extracts from the Annual Medical Report by Civil Apothecary SAMBUNTHA MOODELLIAR.

Dispensary Buildings.—The building is in good order except the floor, which requires to be laid over with asphalt; certain repairs are also necessary to the glass shutters, &c.

Dispensary Committee.—The Municipal Commissioners form the dispensary committee and assemble twice a month.

Epidemics.—Small-pox cases occurred throughout the year, and the mortality registered was 145: the disease still appears sporadically now and then in the town.

Inspection.—The dispensary was visited daily by the Native Surgeon, and from time to time by the Zillah Surgeon.

Attendance of Patients.

Years.				In-patients.	Out-patients.
1876	...	...	...	259	7,005
1877	...	...	...	719	6,177
1878	...	...	...	558	7,182
1879	...	...	...	262	7,474
1880	...	...	...	139	8,394

TUTICORIN.

Extracts from the Annual Medical Report by Assistant Apothecary D. O'LEARY.

Dispensary Buildings.—The thatched building, hitherto used as dispensing-room and hospital, has been completely altered and renovated. The thatch roof has been removed and a substantial tiled one put on; the two southern rooms have been converted into consulting-room and store-room, and the small room in the back verandah, hitherto used as store-room, has been converted into a clothes-room. The whole building has been whitewashed and thoroughly repaired.

Dispensary Committee.—There were no meetings of the Dispensary Committee during the past year.

Most Common Diseases.—Among in-patients the mortality from dropsy, dysentery, and diarrhoea still keeps very high, the remote effect probably of the starvation through which the people passed two years ago. The total number of deaths amongst in-patients has been 54, being in the ratio of 178·81 per mille of total treated. This, though still very high, compares favorably with the past year, when the ratio stood at 258·87 per mille. Among out-patients the ratio of deaths per mille of total treated is 5·64. Last year the ratio stood at 2·90. The increase this year is due probably to a more careful registration of the deaths of out-patients rather than to any actual increase in the number of deaths.

Diseases.	1879.				1880.			
	In-patients.		Out-patients.		In-patients.		Out-patients.	
	T.	D.	T.	D.	T.	D.	T.	D.
Malarious fevers	28	3	992	...	10	1	636	...
Rheumatism	7	...	355	...	12	...	470	...
Syphilis	13	...	636	...	24	...	573	...
Dropsy	37	18	90	3	16	6	35	...
Respiratory affections	10	2	401	1	11	...	582	1
Dysentery	27	8	185	2	18	8	202	4
Diarrhoea	50	17	255	5	49	25	268	9

Epidemics.—Hooping cough has prevailed more or less throughout the year, but not with any great severity. Small-pox has been prevalent since the month of September. There were only two cases of this disease admitted to treatment, but several cases occurred in the town, and the deaths have amounted to 21.

Attendance of Patients.—There is a decrease of 38 in-patients and 184 out-patients as compared with the preceding year.

General Remarks.—The conservancy of the town is fairly well carried out, but the establishment is barely adequate. The latrine accommodation is not sufficient. The disposal of the nightsoil is satisfactorily carried out.

The water-supply is very abundant at present, but there is always the risk of its failing during the hot months of the year. It is derived from the Korampullam lake, and comes a distance of four miles in an open channel subject, of course, to every chance of pollution. Much

of the water is lost by percolation before it reaches Tuticorin. A scheme is in contemplation to construct a masonry channel the whole way, but as it will cost a good deal of money, its completion is very doubtful. The water is of very fair quality.

VIRUDUPATI.

Extracts from the Annual Medical Report by Hospital Assistant M. V. SAMPSON APPAVOO NAIDU.

Dispensary Buildings.—The Virudapati Dispensary, built at the public cost and handed over to the Local Fund Board in 1877, has been reported, in the returns and official correspondence, to be wanting in repairs. Twenty new and strong cots are required.

Dispensary Committee.—The Local Fund Board meets once a month in Tinnevely.

Most Common Diseases.—Among out-door patients ulcers, fever, rheumatism, ophthalmia, skin diseases, &c., and among in-door ulcers, fever, rheumatism, dropsy, ophthalmia.

Inspection.—The Zillah Surgeon inspected the hospital on the 22nd December 1880.

Attendance of Patients.

Years.				In-door.	Out-door.	Total.
1877	...	...	...	29	2,025	2,054
1878	...	...	...	525	7,363	7,888
1879	...	...	...	286	7,243	7,529
1880	...	...	...	381	8,968	9,349

In the year under review there have been 7 deaths among in-patients and 3 among out-patients.

TRICHINOPOLY.

ARYALUR.

Extracts from the Annual Medical Report by Hospital Assistant M. S. RAJANTHRUM.

Dispensary Buildings.—The dispensary was removed to a new building rented for Rs. 5 per mensem; it is more spacious. No progress has been made in the works of the building intended for the dispensary.

Dispensary Committee.—Entirely supported by the Local Fund Board of the Circle.

Most Common Diseases.

Diseases.	1878.	1879.	1880.
Fevers	2,800	684	639
Rheumatism	392	256	199
Skin diseases	324	216	300
Diseases of the stomach and bowels	113	165	269
Abscess, boils, and ulcers	358	546	440

There were 9 deaths among the out-patients against 6 the previous year.

Inspection.—Inspected by the Civil Surgeon on 21st August.

Attendance of Patients.—No in-patients are admitted. Three thousand seven hundred and eleven out-patients were treated against 3,705 in 1879.

Most Common Diseases.—Malarious fevers, ulcers, ophthalmia, skin diseases, ear complaints, venereal affections, abscess, stand in their order of frequency in the list of out-patients. Among in-door patients venereal complaints, bowel diseases and injuries, arranged according to their frequency, account for more than half the admissions. General dropsy and labours of various kinds form a seventh of the total; the other diseases make up the rest.

Attendance of Patients.—The total number of admissions was 8,075 against 10,760 of the past year. Of 8,075, 7,987 was the number of out-patients and the remaining 88 was that of the in-patients. Last year the number according to the above order was 10,679 and 81, so it may be seen that there is an increase of 7 in the in-door admissions and a decrease of 2,692 in the out-door sick. This decrease in the out-door list is accounted for by the few admissions for malarious fevers and ophthalmia, which give a total of 2,157 as differences between the numbers of the past and present year of those diseases.

General Remarks.—The Commissioners have made provision in the budget of the ensuing official year for the employment of a midwife, who is wanted greatly here.

KOLLEGAL.

Extracts from the Annual Medical Report by Hospital Assistant T. V. NEELAMUGUM PILLAY, No. 1,065.

Dispensary Buildings.—The dispensary and cook-room are sadly in want of repair. Recommended that a ward for in-patients and a latrine be erected. Furniture and fittings are in good condition.

Dispensary Committee.—All matters relating to the dispensary are discussed at the Local Fund meetings, which are held twice a month at Coimbatore.

Most Common Diseases.—Among in-door and out-door patients were as follows: ague 792, rheumatic affections 124, ophthalmia 175, respiratory affections 198, dysentery 61, diarrhoea 64, abscess, boils and whitlow 118, skin diseases 228, ulcer 246, and injuries 249. There were only 2 deaths among the out-patients, one from cancer of the mouth and the other from asthma.

Attendance of Patients.—The total number of cases treated was 3,271 of out-patients and 37 of in-patients, showing a decrease of 47 in the former and an increase of 29 in the latter over that of 1879.

METTUPALAIYAM.

Extracts from the Annual Medical Report by Second-class Hospital Assistant J. SOVERIAPPEN, No. 929.

Dispensary Buildings.—The dispensary buildings are two in number: one is a dispensary room with a small ward to accommodate four beds, which is at present used as a male ward; another separate building within a few yards distance (which was once a latrine of the sub-jail) is now converted and made use of as a female ward. These buildings were not intended for hospital purposes but for sub-jail. They are not provided with sufficient ventilators. Though in good condition, the roofs are leaky in some places and need repair.

Most Common Diseases.—Among in and out door were fever, rheumatism, venereal complaints, ophthalmia, respiratory affections, dropsy, dysentery and diarrhoea.

Inspection.—The annual inspection of the dispensary was made by the Deputy Surgeon-General in March last.

Attendance of Patients.—The attendance of patients as compared with previous years has been great. The number of out-door during the past year was 4,457 and in the year previous only 4,017; in-door only 73, and 15 deaths.

PALLADAM.

Extracts from the Annual Medical Report by Second-class Hospital Assistant P. MARISAWMY PILLAY, No. 868.

Dispensary Buildings.—The building at present occupied as Local Fund Dispensary was intended as a hospital for prisoners in the sub-jail. A pandal has been erected in front of the dispensary, also two sheds for the accommodation of in-door patients, each capable of containing two beds.

Dispensary Committee.—A sub-committee has been formed for the management of the dispensary.

Most Common Diseases.—Fever, rheumatic affections, diseases of the eye, ear and skin. No fatality during the year.

Attendance of Patients.—The number of out-patients treated from 16th May to 31st December 1879 was 1,532, and the average daily attendance 21.58, whereas in 1880 the total number of out-patients was 1,533, and the average daily attendance 17.53, thus showing a decrease in admissions as well as in attendance. There were no in-door patients treated in 1879, but in 1880 three cases were treated in the month of December.

POLLACHI.

Extracts from the Annual Medical Report by Assistant Surgeon P. MOONESAWMY.

Dispensary Buildings.—The terraced roofing of the main hospital building has become very leaky. The out-houses are also in a bad state of repair. An estimate amounting to Rs. 230 was submitted by the hospital committee for repairing these buildings, and the Local Fund Board has sanctioned the amount.

Dispensary Committee.—Four additional members have been appointed to the existing committee as the members were few, and it was found difficult to convene meetings when required. There were held three meetings during the year.

Most Common Diseases.—Malarious fevers, ophthalmic affections, cutaneous diseases, chronic diseases of the ear, abscess, ulcers and injuries. Intermittent fever was not so prevalent as in the previous year, but catarrhal ophthalmia widely prevailed, and the greatest number of admissions occurred under this head. The mortality in the year under report was 58 against 61 in the previous year.

Epidemics.—Whooping cough and chicken-pox prevailed to a small extent in the latter part of the year.

Inspection.—The hospital was inspected by the Civil Surgeon of the district on the 28th of August 1880.

Attendance of Patients.—The total number of cases treated during the year was 9,401, of which 445 were in-patients and 8,956 out-patients. This shows a slight increase of 5 in-patients and 12 out-patients in the year under report as compared with the total number treated in the previous year.

General Remarks.—The lying-in ward, which has been a long time in contemplation, has at length been sanctioned, and the work when completed will greatly add to the usefulness of the institution.

SATYAMANGALAM.

Extracts from the Annual Medical Report by Civil Hospital Assistant S. M. JESUDASEN.

Dispensary Building.—Was lately under repair.

Dispensary Committee.—The members of the sub-committee meet here occasionally.

Most Common Diseases.—Conjunctivitis, fever, rheumatism, syphilitic and respiratory affections, skin diseases, abscesses, and ulcers.

Inspection.—Inspected by the Deputy Surgeon-General.

Attendance of Patients.—There were 2,381 out-door patients admitted during the year. This shows a decrease of 957 when compared with the previous year. This was owing to the non-outbreak of fevers in an epidemic form.

UDAMALPET.

Extracts from the Annual Medical Report by Second-class Hospital Assistant F. GOPAULSAWMI NAIDU, No. 898.

Dispensary Buildings.—The building needs repairs in some parts of the floor. A latrine is required, and also a dead-house.

Most Common Diseases.—Among out-door and in-door patients were fevers, venereal affections, diseases of the ear and of the eye, diseases of the digestive system, abscess, ulcers, and other affections of the skin.

APPENDIX TO REPORT ON THE
ERUNGALORE.

Extracts from the Annual Medical Report by Medical Practitioner S. MATHURANAYAGUM.

Dispensary Buildings.—The dispensary is located in a building of eight rooms with a spacious hall in the middle; this was originally a boys' boarding school; in the year 1874 this was converted into a dispensary. Four of the rooms of the eastern side are occupied by the Medical Practitioner in charge. The hall and the western four rooms with a long verandah facing the south form the dispensary. The buildings are in good condition. Lack of accommodation for self-supporting in-door patients is greatly felt. The erection of a few decent huts, at least half a dozen in number, for the people who come from 30 and 40 miles off in search of medical aid is highly necessary.

Dispensary Committee.—The management of this institution is duly conducted by the Rev. Mr. Kohlhoff. In matters of an important character he consults the S.P.G. Committee at Madras and the President of the Local Fund Board, Trichinopoly.

Most Common Diseases.

Names of Diseases.	1878.	1879.	1880.
Febricula ...	268	437	501
Ague ...	298	978	954
Chronic rheumatism ...	211	241	267
Conjunctivitis ...	109	181	203
Dyspepsia ...	113	219	204
General debility ...	156	195	224
Injuries ...	90	208	280
Ulcers ...	157	264	286

Inspection.—Inspected by the Civil Surgeon, Trichinopoly, on the 7th April 1880.

Attendance of Patients.—The number of admissions of out-patients during the year was 4,881 against 5,389. Although the number of applicants for medical aid is short by 507, the nature and result of diseases are noteworthy: most of them were chronic and serious cases requiring a much longer course of treatment, and the result on the whole was very satisfactory. During the year under report the number of Brahmins and other respectable classes of people admitted for treatment were more than in any of the previous years.

General Remarks.—Six major and 206 minor operations have been performed during the year under report against 4 major and 196 minor operations of the previous year.

MUSERI.

Extracts from the Annual Medical Report by Pensioned Hospital Assistant
MADURANAYAGUM PILLAY.

Dispensary Buildings.—Located in a portion of the travellers' bungalow. Furniture sufficient. The new dispensary has not been commenced yet.

Dispensary Committee.—Under the Local Fund Board, which meets twice a month at Trichinopoly.

Most Common Diseases.—Fever, rheumatism, ophthalmia, bowel-complaints, ulcer, and skin diseases.

Inspection.—It was inspected once by the Civil Surgeon of Trichinopoly.

Attendance of Patients.

Years.	Total Treated.
1878	7,247
1879	7,399
1880	7,174

SRIRANGAM.

Extracts from the Annual Medical Report by Second-class Hospital Assistant
C. THIRUMALLAY NAIDU, No. 990.

Dispensary Buildings.—The dispensary buildings are in very good condition. The thatched roofs of the male ward and the small-pox shed and the windows of the male and female wards require slight repairs. The dead-house is in want of front and back doors.

Dispensary Committee.—There is a Dispensary Sub-Committee consisting of five Municipal Commissioners, who meet on the 5th of every month to discuss fully every thing connected with the hospital. The bills for each month are passed in the fortnightly Municipal Meetings.

Most Common Diseases.—Fever of various types, bowel-complaints, e.g., diarrhoea and dysentery, rheumatic affections, syphilis, boils, abscess, and injuries.

Inspection.—The dispensary was inspected by the Civil Surgeon on the 10th April and 8th October last.

Attendance of Patients.—The number of cases admitted during the year under the head of out-patients has been 13,915, which, with 85 remaining in the previous year, makes up a total of 14,000, showing a decrease of 1,387. Under the head of in-door patients 283 cases were admitted, which, with 13 remaining in the previous year, makes a total of 296, showing a decrease of 75. The slight decrease of the in and out patients is partly to be attributed to the paucity of pilgrims and partly to the severity of the rainy season in the latter part of the year.

TRICHINOPOLY.

Extracts from the Annual Medical Report by Surgeon-Major J. B. THOMAS.

Dispensary Buildings.—The buildings are suitable, but the accommodation is insufficient, although recently the diarrhoea and venereal cases were transferred to the buildings formerly occupied by the Lock Hospital and now in charge of the Municipality. Separate wards for the reception and treatment of European and East Indian patients as well as for the Native caste patients are much needed, but owing to the deficiency of funds the Municipality is not in a position to supply this want at present. The male and female latrines in use are insufficient for the number of patients of either sex under treatment, but sanction has been accorded for the construction of additional latrines. I hope they will be soon completed. The buildings are in good repair. The supply of bedding and clothing is sufficient, but two almirahs are required to complete the furniture. This has been provided for in the budget for the ensuing year and will be duly supplied.

Dispensary Committee.—During the year under report there were no meetings of the Dispensary Sub-Committee, but all subjects requiring attention in this regard are discussed at the weekly meetings in the Municipal Office.

Most Common Diseases.—The prevailing diseases during the year were as usual fever, rheumatic and venereal affections, conjunctivitis and bowel-complaints, skin diseases and abscesses and ulcers. Wounds and injuries were also causes of frequent admission into hospital. The mortality has been comparatively below the average compared with the deaths recorded during the previous year.

Attendance of Patients.—Compared with the previous year there has been a slight falling off in the number of admissions amongst the out-patients, viz., by 1,247, and this is attributable to the heavy rains of October, November, and December last, which prevented patients from resorting to the dispensary to seek medical aid, and also by the fact that employment was now easily obtained. Amongst the in-door patients there was a decrease of 670 admissions into hospital as compared with the previous year, and this is better explained when the return to their villages of the famine-stricken patients is taken into consideration, as well as the present condition of the low prices of food grains. An additional cause is the greater economy exercised in diets, extravagance being reduced to an actual necessity in case of wines and spirits, &c.

General Remarks.—The lying-in wards and the wards for the caste sick and self-supporting patients continue to be utilized as usual, but occasionally accommodation is found insufficient for the reception of Native caste patients as already noticed. The temporary sheds for the treatment of famine-stricken patients were closed on the 21st November 1880, as on that date those sheds were blown down by the cyclone. Patients suffering from diarrhoea and venereal affections were, however, immediately transferred to the old Lock Hospital building, where they are now being treated. The cost of the maintenance of this institution has been somewhat reduced as compared with the expenditure of the previous year. The sanitary condition of the station is generally fair, but the burial of the Mahomedan dead in the very centre of the thickly populated places and in the close vicinity of tanks, which are utilized by the majority of the population for drinking purposes, is a matter for urgent consideration; and, unless immediate steps are taken to prevent the continuance of this nuisance, the results in coming years may

CUDDAPAH DISTRICT.

BADVEL.

Extracts from the Annual Medical Report by Pensioned Hospital Assistant D. BAULIAH.

Dispensary Buildings.—Once a private bungalow: suits its present purpose. A dead-house is required. The verandahs, latrines, and medical subordinate's house need repair. Furniture sufficient.

Most Common Diseases.—Ague, rheumatic and respiratory affections, conjunctivitis, and skin diseases.

Attendance of Patients.—4,268 out-patients were treated against 4,294 the year before, thus showing a slight decrease.

CHITWAIL.

Extracts from the Annual Medical Report by First-class Hospital Assistant T. NARAYANASAWMY, No. 569.

Dispensary Buildings.—The dispensary is in good condition. Furniture sufficient.

Most Common Diseases.—The principal diseases treated during the year were fevers, rheumatic and syphilitic affections, and skin diseases. There were 4 deaths among the out-patients and none among the in-patients.

Inspection.—Inspected by the Zillah Surgeon during the year.

Attendance of Patients.—Four in and 3,314 out patients were treated during the year.

CUDDAPAH.

Extracts from the Annual Medical Report by Native Surgeon M. IYASAWMY.

Dispensary Buildings.—The new dispensary is still under construction. It will however, I think, be finished in four or five months more. The hospital furniture and fittings are sufficient and in good order.

Dispensary Committee.—The institution is under the direct management of the Municipal Commissioners: three of the members form the committee, and visit the dispensary occasionally.

Most Common Diseases.—Intermittent fevers, ulcers, rheumatism, diarrhoea, dysentery, chest and venereal affections. Intermittent fever of a mild type prevailed to a small extent in some taluks, and it was for the most part very amenable to treatment. Since the cold season set in several cases of pneumonia of a severe type occurred and proved fatal in many instances.

Inspection.—The Deputy Surgeon-General of the division inspected on the 12th March 1880.

Attendance of Patients.—The total number of cases treated during the year was 15,127, of which 14,641 were out-patients and 486 in-patients, showing an increase of 2,676 out-patients and a decrease of 408 in-patients over the preceding year. The decrease amongst the in-patients was due to general healthiness of the district and favorable season.

KADIRI.

Extracts from the Annual Medical Report by Second-class Hospital Assistant D. RAJARATHNUM, No. 887.

Dispensary Buildings.—Building requires some repairs; but, as the dispensary is to be removed shortly to another building, outlay of money on these repairs is unnecessary. Furniture sufficient.

Most Common Diseases.—Malarious fevers, rheumatic and syphilitic affections, skin diseases, diarrhoea, dysentery, and ophthalmia. Deaths among in-patients were 5, viz., 1 remittent fever, 1 sloughing phagedæna, 1 paralysis, 1 burn, and 1 general dropsy; and among out-patients 6. Prevalence of sickness and its fatality during the year was considerably less than in the previous years.

Inspection.—Under orders from the Local Fund Board the dispensary was inspected by Rev. J. Chamberlain, M.D., a Member of the Local Fund Board, on the 15th and 16th December 1880.

Attendance of Patients.

		1879.	1880.
In-door	...	99	113
Out-door	...	8,692	6,465
Total	...	8,791	6,578

showing an increase of 14 in-patients and decrease of 2,227 out-patients over the preceding year. The decrease is owing to non-prevalence of malarious fevers during the usual feverish season of the year.

MADANAPALLE.

Extracts from the Annual Medical Report by Apothecary T. WARD.

Dispensary Buildings.—The building (originally the travellers' bungalow) in which the Police sick are located is under repair. All other buildings are in good order. Furniture and fittings complete.

Dispensary Committee.—There were five meetings of the Dispensary Committee.

be very seriously detrimental to public health. The recent heavy rains have, it is alleged, done serious damages to the wet and dry crops, but the prices of grains and other necessities of life continue stationary.

VIZAGAPATAM DISTRICT.

ANAKAPALLE.

Extracts from the Annual Medical Report by Hospital Assistant KAREEM SAHIB.

Dispensary Buildings.—It was reported last year that the dispensary building was in want of repairs, but it has not as yet been touched. An allotment of Rs. 300 has been provided by the Municipality in the budget of 1881-82 for the necessary repairs. Furniture, &c., are in good order.

Dispensary Committee.—Matters concerning the dispensary are settled by the Municipality at their usual meetings.

Most Common Diseases.—Among out-patients dyspepsia, constipation, colic, dysentery, diarrhoea, itch, and other skin diseases. Among in-door patients ague, general dropsy, ulcer, itch, rheumatic affections, diarrhoea, and dysentery.

Attendance of Patients.—The daily number of in-patients is just the same as last year, being 541 in the year 1879, and 596 in the year 1880. The daily attendance of out-patients is more satisfactory than the last year, being 54.67 against 42.75. The number of in-patients treated in the year 1879 was 123 and in the year 1880 102. The number of out-patients treated in the year 1879 was 4,754 and in the year 1880 6,182. The decrease of in-patients is owing to the fact that the number of Police Constables from Rampa admitted is not so great as that of the last year.

General Remarks.—The Native Midwife attached to the dispensary conducted 25 natural, 4 tedious, and 1 premature labor, with mortality of one mother and two children. Out of four tedious labors, in one both the mother and the child died, and in premature labor the child died. The cases she conducted being only among the lower order, and the number being very few for such a large town as this, I understand that her work is not liked by the people.

BIMLIPATAM.

Extracts from the Annual Medical Report by Assistant Apothecary C. ROBERTS.

Dispensary Buildings.—The dispensary is in fair order. The furniture and fittings are ample and in good repair. The contagious ward that has been asked for year by year has not been built yet, owing, I believe, to the low state of the Municipal funds.

Dispensary Committee.—The Municipal Commissioners meet once a month, and items connected with the hospital are disposed of.

Most Common Diseases.—Ague, worms, ulcers, skin diseases, rheumatic affections, and respiratory diseases.

Epidemics.—Two cases of cholera were admitted to hospital during the year.

Inspection.—Deputy Surgeon-General Colvin Smith inspected the hospital in January last.

Attendance of Patients.

		In-patients.		Out-patients.	
		Total Treated.	Died.	Total Treated.	Died.
1879	Europeans ...	12	...	904	...
	Natives ...	144	8	6,941	...
1880	Europeans ...	24	1	615	1
	Natives ...	153	8	4,965	...

The decrease in out-door patients is owing to the non-prevalence of ague in an epidemic form as in the past year, when nearly three times the present number of fever cases were admitted. There is a slight increase in the European and Native in-patients.

BOBBILL.

Extracts from the Annual Medical Report by Hospital Assistant C. M. SRINIVASA RAU.

Dispensary Buildings.—The buildings were lately repaired. Furniture, &c., complete and in good order.

Most Common Diseases.—Among out-patients, fevers, rheumatism, conjunctivitis, otitis, dyspepsia, constipation, diarrhoea, worms, and among in-patients syphilis, dropsy, and ulcers were most largely treated.

Epidemics.—Small-pox prevailed epidemically.

Inspection.—The Civil Surgeon inspected the dispensary on the 10th February 1880.

Attendance of Patients.

		1878.	1879.	1880.
In-door	...	74	58	50
Out-door	...	4,841	5,206	5,722

CHIPURUPALLE.

Extracts from the Annual Medical Report by Civil Hospital Assistant A. SEETHARAMASAWMY.

Dispensary Buildings.—The dispensary building was repaired by the Local Fund Engineer Department, but has not yet been handed over to the Medical Department. The present building is a rented one. Furniture and fittings are all good.

Most Common Diseases.—The most common diseases were fevers, rheumatic and respiratory affections, skin diseases, ulcer, and diseases of the digestive system.

Epidemics.—A mild form of small-pox appeared here and there in the town and suburbs, but caused no mortality.

Attendance of Patients.—No in-patients. The number of out-patients treated during the year was 4,903. Compared with last year these figures exhibit an increase of 3,913, which was only nominal, because there was no hospital during the first nine months of that year.

CHODAVARAM.

Extracts from the Annual Medical Report by Hospital Assistant K. TIRAPATI RAJ.

Dispensary Buildings.—The dispensary requires to be repaired.

Dispensary Committee.—Under the Local Fund Board, who meet once a month.

Most Common Diseases.—Fevers, rheumatic, syphilitic, and respiratory affections, ophthalmia, dysentery, and other disorders of the digestive system, abscess, boils, &c. The fatality as compared with that of the last year shows an excess of three among out-patients and a decrease of one among in-patients.

Epidemics.—A few cases of small-pox occurred in the neighboring villages, but no epidemics appeared in the station.

Attendance of Patients.—Four thousand eight hundred and eleven out-patients and 88 in-patients have been treated during the year against 4,475 out and 59 in patients treated during the previous year. The above shows an excess of 336 out and 29 in patients.

General Remarks.—A Probationary Vaccinator, hitherto under the Deputy Inspector of Vaccination, has been attached to the dispensary from 1st February 1880 to learn and carry on vaccination; he is also paid from Local Funds. One hundred and thirty-eight children have been successfully vaccinated.

The large decrease of 4,086 among out-patients was entirely due to the good condition of the public health. The number treated for malarious fever alone was less by 3,814 than in the previous year. The healthiness of the year to a small extent caused a diminution in the number of in-patients, but the great difference between 1,176 and 491 was from the large number of famine cases remaining in 1879.

PRODDUTUR.

Extracts from the Annual Medical Report by First-class Hospital Assistant TEKERAM, No. 544.

Dispensary Buildings.—The dispensary is in good order. There is a good supply of furniture and other necessities.

Most Common Diseases.—Fever (1,694), ulcers (353), skin diseases (351), and rheumatic affections (233) were the most common.

Inspection.—The Deputy Surgeon-General inspected the dispensary on the 14th January 1880 and the Zillah Surgeon on the 29th December 1880.

Attendance of Patients.—The attendance of out-patients is 4,268 for the year. As compared with last year there is a diminution of 1,747 patients. The reduction is attributed to the healthy condition in general.

PULIVENDLA.

Extracts from the Annual Medical Report by Civil Apothecary M. P. RAGAVA CHARI.

Dispensary Buildings.—The building is a rented one and is a miserable, dark, and ill-ventilated house. Furniture is still wanting.

Most Common Diseases.—Intermittent fevers of quartan type, ulcers, ophthalmic diseases, and rheumatic and cutaneous affections. The prevalence of the diseases was nearly the same as in previous years.

Inspection.—The Civil Surgeon made his inspection on the 15th August 1880.

Attendance of Patients.—The attendance of patients as contrasted with the previous years shows a decrease of 645 patients, as there were 4,642 patients during the year against 5,287 patients of the previous one. There is no sanction for in-patients.

RAYACHOTI.

Extracts from the Annual Medical Report by Second-class Hospital Assistant C. D. SIGAMONEY PILLAI, No. 992.

Dispensary Buildings.—The dispensary was opened on the 27th July 1880. The bungalow in which the dispensary is established is said to have been lately put in repair, but during the late rains the verandah and the hall leaked. The out-houses require whitewashing and repair.

Most Common Diseases.—The most common diseases treated during the past five months and five days were ague (quartan type) ulcers, rheumatic affections, and skin diseases.

Epidemics.—There were a few cases of measles in the vicinity of the station.

Attendance of Patients.—Three thousand one hundred and four out-patients were treated. No in-patients.

GANJAM DISTRICT.

BERHAMPORE.

Extracts from the annual Medical Report by Civil Hospital Assistant B. RAMAKRISTNAMA.

Dispensary Buildings.—The dispensary buildings throughout require to be whitewashed. The wood-work of the doors and windows are in need of some repairs and of being painted. The roof leaks in a few places, and some of the rafters have been eaten by white-ants: in the floors there are some holes that should be filled up with cement. The thatch of the cholera

shed is crumbling away and requires renewal, and it would be well if the posts of this building were tarred in order to prevent the ravages of the white-ants. The cook-rooms require windows to give more air and light. A wall round the hospital compound is wanted.

Dispensary Committee.—Under the Municipality.

Most Common Diseases.

1880 ...	524	3	370	...	621	3	496	...	188	...	23	2	275	...	265	...	181	3

Epidemics.—An epidemic of cholera prevailed in the station from the 6th June to 21st August; there were 62 cases reported in the town, and of these 22 were said to have been fatal. Five cases were treated in hospital, of which two proved fatal.

Small-pox was prevalent during the early part of the year; only one case came under treatment. Venereal diseases are very common among the inhabitants of the town.

Inspection.—Inspected by the Deputy Surgeon-General in January 1880.

Attendance of Patients.

	—	1878.	1879.	1880.
In-door ...	...	698	238	170
Out-door ...	...	3,534	4,289	4,801

As compared with the previous year the year under review shows an increase in the attendance of out-patients, while the number of in-patients has diminished. If a hut for caste persons was erected the number of in-patients might be increased and the dispensary rendered more useful.

CHICACOLE.

Extracts from the Annual Medical Report by Surgeon P. KINSLEY.

Dispensary Buildings.—The building is still in a state of disrepair and measures are only now being taken to make it comfortable for the sick, such as retiling, &c. The finances of the Municipality would seem to be, and to have been, the great drawback to thorough repairs being made to the buildings, as also to completing the supply of furniture which is sufficient, except an almirah for keeping instruments, which now, as heretofore, have been kept in a dealwood box.

Dispensary Committee.—Under the Municipal Commissioners who meet once a fortnight.

Most Common Diseases.

Inspection.—The dispensary was inspected by the Deputy Surgeon-General of the Presidency and Northern Districts on the 17th January 1880.

NARSAPATNAM.

Extracts from the Annual Medical Report by Civil Apothecary C. A. BAMFORD.

Dispensary Buildings.—The larger building has undergone repairs during the year. Furniture and fittings complete.

Dispensary Committee.—Matters relating to the dispensary are settled by the Local Fund Board at their meetings.

Most Common Diseases.

Diseases.	Out-patients.		In-patients.	
	Treated.	Died.	Treated.	Died.
Ague	1,149	...	270	...
Ulcers	430	...	42	1
Rheumatic affections	118	...	40	...
Respiratory do.	203	...	17	...
Dysentery	25	...	10	3
Skin diseases	368	...	15	...
All other diseases	157	...	38	...

The great increase in the number of in-patients this year over the preceding is attributable to the Rampa disturbance, the greater portion of the admissions being Police Constables. This being the nearest station on the plains from the hills, all men falling very ill in the latter have been sent here for treatment. Besides Police Constables, many sepoys belonging to the detachments of Native Infantry which served in the hills have been sent here sick for treatment.

Attendance of Patients.—During the year 488 persons were treated as in-patients and 3,939 as out-patients, showing an increase of 117 of the former and 1,610 of the latter as contrasted with the previous year.

PÁLKONDA.

Extracts from the Annual Medical Report by Hospital Assistant P. NARAINSAWMY.

Dispensary Buildings.—The dispensary buildings stand in need of repairs, and reports were made several times to the President of the Local Fund Board. The cholera shed was sold by public auction.

Venereal do.	20	154
Constipation	...	732

Epidemics.—Small-pox was very prevalent. It may be stated that scarcely any house in the town or any village in the taluk was free from the disease. The disease is still prevalent in the town and taluk; measles also spread, but not to the same extent.

Inspection.—The Deputy Surgeon-General inspected the dispensary in the very early part of the year.

Attendance of Patients.—During the year there were under treatment 136 in and 5,010 out-door patients, being a decrease of 28 in and 315 out-patients as compared with the previous year in which the attendance was exceptionally high, as many Policemen were treated who had contracted sickness in Rampa.

PÁRVATIPUR.

Extracts from the Annual Medical Report by Hospital Assistant S. SURIANARAYANA NAIDU.

Dispensary Buildings.—Both the hospital and out-houses are in very good repair. The furniture and fittings are likewise in good order and complete.

Most Common Diseases.—Both among out and in patients ague, rheumatic affections, ulcers, ophthalmia, skin diseases, respiratory affections.

Epidemics.—Small-pox prevailed epidemically both in the village of Belgám and the town of Párvatipur in the early part of the year, but comparatively few died from the disease. The disease was probably imported from the neighbouring hill tracts.

Inspection.—The dispensary was inspected by the Civil Surgeon of the district in February last.

Attendance of Patients.—During the year 59 in-door and 4,253 out-door patients received relief at the dispensary, which, contrasted with that of the previous year, show a decrease of 19 cases among in-door and 286 among out-door patients.

SÁLÚR.

Extracts from the Annual Medical Report by Apothecary J. MILLS.

Dispensary Buildings.—The dispensary, a thatched building, is in good repair. The furniture is in a good state.

Dispensary Committee.—Dispensary affairs are brought before the meeting of the Local Fund Board when necessary.

Most Common Diseases.

Diseases.	Out-patients.
Ague	720
Rheumatic affections	437
Skin diseases	399
Ulcers	400
Ophthalmia	290
Respiratory affections	151

Epidemics.—Small-pox and measles prevailed to some extent in the town and adjacent villages.

Inspection.—The Civil Surgeon inspected the dispensary on the 11th February 1880.

Attendance of Patients.—Five in-door patients were admitted against 14 the year before. The attendance of out-door patients was 3,722; this shows a decrease of 117 compared with 1879.

SRUNGAVARAPUKOTA.

Extracts from the Annual Medical Report by Hospital Assistant MAHOMED HOMER.

Dispensary Buildings.—The buildings need repair. Furniture and fittings, &c., are in good condition.

Dispensary Committee.—Under the control of the Local Fund Board, Vizagapatam Circle.

Most Common Diseases.

	Out-patients.		In-patients.	
	1879.	1880.	1879.	1880.
Malarious fevers	584	432	37	84
Rheumatic affections	204	369	15	10
Dropsy	28	12	13	5
Respiratory affections	175	172	4	3
Dysentery	42	67	1	7
Ulcer	408	213	6	9

Epidemics.—Small-pox in a mild form was prevalent.

Attendance of Patients.

Years.				In-patients.	Out-patients.
1879	...	...	...	146	6,199
1880	...	...	...	158	5,594

This shows a slight increase of 12 in the number of in-patients and a large decrease of 605 among the out-patients. This is due partly to new dispensaries being established near Chicacole, and partly to the healthiness of the year.

GANJAM.

Extracts from the Annual Medical Report by Civil Hospital Assistant M. APPALA NARASAYYA.

Dispensary Buildings.—The out-rooms are in a dilapidated state and there is no latrine, the want of which is much felt. The situation of this institution being rather far from the town and having no open road, much difficulty is felt by the sick to attend the hospital regularly. The furniture and fittings are in good order and complete.

Dispensary Committee.—The Local Fund Board meet at Chatrapur once in a fortnight.

Most Common Diseases.

GOPALPUR.

Extracts from the Annual Medical Report by Second-class Assistant Apothecary ROBERT COLLINS.

Dispensary Buildings.—The present dispensary building was occupied at the close of last year; it has only recently been built, is in a good state of repair, and is at present being white-washed. The out-houses, which are thatched, are in a dilapidated condition; the owner intends rebuilding them shortly. The furniture and fittings are in good condition.

Dispensary Committee.—A local sub-committee nominally exists. The general management of the dispensary is conducted by the Local Fund Board at their periodical meetings.

Most Common Diseases.—The most common diseases among out-patients, ranged in their order of frequency, have been—

1. Ague	...	627	5. Worms	...	220.
2. Skin diseases	...	321	6. Rheumatic affections	...	147
3. Ophthalmia	...	292	7. Respiratory do.	...	122
4. Injuries	...	248	8. Syphilitic do.	...	88

Malarious fever, as in former years, caused the largest number of admissions to hospital, but it has not been so prevalent as in the previous year, the total treated falling short by 328 of the number treated in 1879. Cases of ophthalmia were very common from May to October. Syphilitic affections are rife among the inhabitants; the total treated has increased by 33 per cent. as compared with last year.

Epidemics.—Several cases of cholera were reported in the month of January 1880. The first case that came under observation occurred on the 5th January 1880 on board the S.S. *Culna*. Nine days subsequently cholera broke out among the boatmen of this town and neighbourhood; seven men were attacked on the night of the 14th January, three of whom died before the morning. Active measures were adopted to prevent the spread of the disease, and in the course of a fortnight it subsided. Fifteen cases in all were reported. Hooping cough and measles were epidemic, the former from January to April, and the latter from July up till the present time.

Inspection.—Inspected by Deputy Surgeon-General on the 26th January 1880.

Attendance of Patients.—The following comparative statement exhibits the working of the dispensary during the past four years:—

Years.	Total Treated.		Average Daily Sick.	
	In.	Out.	In.	Out.
1877	...	23	1,999	77
1878	...	18	2,194	93
1879	...	3	3,589	17
1880	...	3	3,337	08

The total treated shows a decrease of 252 patients as compared with the preceding year; this is due to the itinerant work having been discontinued. The average daily attendance however shows an increase of 4.37 over that of 1879. The dispensary has been closed to the admission of in-patients since the beginning of 1879, but, owing to the severe nature of the injuries sustained by three men in consequence of a landslip, an exception was made and the cases were admitted into hospital.

General Remarks.—On the occurrence of small-pox in February many individuals who had previously refused to allow their children to be vaccinated voluntarily made application to have the operation performed. In one part of the town named Chikadapetta every unprotected person, even the youngest aged 20 and 25 days, respectively, underwent the operation; 216 cases in all were vaccinated, 188 of which proved successful.

PARLAKIMEDI.

Extracts from the Annual Medical Report by Civil Apothecary J. REARDON.

Dispensary Buildings.—The dispensary buildings are greatly in need of repair. The roof and floor require renewing, the walls whitewashing, and the doors and windows painting.

Dispensary Committee.—The dispensary is a Local Fund Institution and the members meet monthly.

Most Common Diseases.—Malarious fevers (1,207 cases and 3 deaths), skin diseases (394), worms (347), ophthalmia (329), ulcers (289), respiratory affections (217), rheumatic affections (164), debility (96 and 5 deaths), injuries (93 and 1 death), syphilitic affections (58 and 1 death), dysentery (57 and 1 death), diarrhoea 44. In 1879 the following were the most common:—Malarious fevers (2,201 cases and 4 deaths), worms (643), ulcers (393 and 1 death), ophthalmia (370), skin diseases (275), rheumatic affections (225 and 2 deaths), respiratory affections (173 and 2 deaths), injuries (124), syphilitic affections (87), diarrhoea (77 and 1 death), dysentery (76 and 4 deaths), debility (69 and 6 deaths).

Epidemics.—Small-pox, chicken-pox, and measles were very prevalent during the second quarter of the year, and at present small-pox is still found.

Inspection.—The hospital was inspected by the Deputy Surgeon-General on the 20th January 1880 and again on the 29th November 1880 by the Zillah Surgeon, Chicacole.

Attendance of Patients.

	1879.		1880.	
	In.	Out.	In.	Out.
Total treated	99	3,350	145	3,634
Average daily attendance ...	3.34	26.77	6.67	31.10

VIZAGAPATAM.

Extracts from the Annual Medical Report by Surgeon A. N. ROGERS-HARRISON.

Dispensary Buildings.—The dispensary buildings and furniture are in good order. Many of the instruments require repair.

Dispensary Committee.—The committee meet every quarter or when necessary.

Most Common Diseases.

Malarious fevers	1,157
Ulcers	985
Skin diseases	784
Rheumatic affections	505
Worms	414
Respiratory affections	323
Inflammation of external ear	288
Gonorrhoea	159
Anæmia	150
Injuries	224

Malarious fevers, rheumatic, respiratory and syphilitic affections, dysentery, diarrhoea, leprosy, and debility have all been less prevalent, particularly malarious fevers, dysentery, diarrhoea, and syphilis, than during 1879, which points to a general improvement in the health of the populace. The increase in the admissions for skin diseases, wounds and injuries shows the increasing popularity of the institution.

Epidemics.—Measles was prevalent in the town during January and February, and a few cases of small-pox occurred during December.

Attendance of Patients.

Year.	In-patients.	Out-patients.	Total.
1877	500	6,292	6,792
1878	729	6,165	6,894
1879	929	8,938	9,867
1880	718	7,375	8,093

The decrease in the total treated between 1879 and 1880 may be attributed to there having been 1,377 admissions less under the heading of malarious fevers, and 127 cases of dysentery, 90 diarrhoea, and 118 rheumatic affections less than during 1879.

General Remarks.—The two midwives (natives) attached to the dispensary have attended 78 cases in different parts of the town during the year; of these 62 were natural and 16 difficult or complicated. This is not a large amount of work, but shows an improvement on the previous year, when only 60 cases were attended.

YELLAMANCHILI.

Extracts from the Annual Medical Report by Second-class Hospital Assistant P. SUDANANDAM PILLAY, No. 936.

Dispensary Buildings.—The hospital building is an old Travellers' Bungalow. It was repaired and whitewashed in 1879. Furniture complete.

Dispensary Committee.—Under the Local Fund Board, Vizagapatam.

Most Common Diseases.—Malarious fevers, rheumatism, syphilitic affections, general dropsy, ophthalmia, dysentery, diarrhoea, and dyspepsia. There were 11 deaths during the year among both classes of patients.

Epidemics.—Three cases of cholera occurred in the commencement of the year among travellers.

Attendance of Patients.—One-hundred and twenty-four in-patients were treated during the year, and most of them were cases of ague, from which the policemen suffered after their service in the hill tracts during the Rampa rebellion. The total number of out-patients treated during the year is 3,168 against 3,762 of the past year, and consequently there is a decrease of 594 cases, which decrease is chiefly attributable to the subsidence of the late famine in the district.

KAMPTEE.

Extracts from the Annual Medical Report by Surgeon W. H. BOALTH, F.R.S.

Dispensary Buildings.—The dispensary buildings are undergoing the annual repairs and whitewashing. The building is not adapted for a hospital; being originally a jail, it was built more for the safe custody of prisoners. There is no bath-room, nor is there a dead-house attached to the building. For performing operations or for the examination of cases requiring privacy there is no proper room.

Dispensary Committee.—The dispensary committee did not meet during the year.

Most Common Diseases.

Diseases.	Out-door.						In-door.

Other local diseases	2,371	1	2,400	2	2,914	...	23	5	13	4	30	6

Epidemics.—Chicken-pox prevailed as an epidemic in the lines of the 2nd Regiment M.N.I. during the year. With the exception of one case that occurred in a hospital servant who lived in the 2nd Infantry lines, there were no other admissions into the Civil Dispensary from this cause.

Inspection.—The hospital was daily visited by the Surgeon in medical charge during the year and by the Deputy Surgeon-General about once a week.

Attendance of Patients.—The following table will show the attendance of patients as contrasted with previous years:—

Admissions.	1877.	1878.	1879.	1880.
In-door patients	333	414	205	202
Out-door do.	25,505	20,370	15,268	14,431

In.	Out.	In.	Out.	In.	Out.	In.	Out.	In.	Out.	In.	Out.
236	5,959	151	6,109	119	4,893	10.95	31.11	7.92	45.36	8.75	32.09

SÓMPET.

Extracts from the Annual Medical Report by Civil Apothecary C. PARTHASARATHY NAIDU.

Dispensary Buildings.—This institution was opened on the 24th of September 1880, and is held in a tiled house rented at Rs. 3 per mensem. More furniture is required.

Dispensary Committee.—The Local Fund Board meet in Chatrapur once a month, and the general management of the dispensary is conducted by them.

Most Common Diseases.—Among out-door patients, ranged according to their frequency, have been neuralgia 139, itch 86, dyspepsia 78, inflammation of the external ear 78, ulcer 75, ringworm 71, ague 63, and general debility 51.

Malarious fever is reported to have been prevalent throughout the district. The disease appeared in an epidemic form in surrounding villages about the close of November, and it is now increasing in severity.

Epidemics.—Cholera appeared sporadically at the beginning of December at Ichápur, a town 15 miles off from Sompét.

Attendance of Patients.—The total number of out-patients treated during the year is 875, and the attendance has been satisfactory. The dispensary was closed during the month of November for want of medicines, and in December as I was treating cholera patients at Ichápur.

TEKKALI RAGHUNÁTHAPURAM.

Extracts from the Annual Medical Report by Civil Hospital Assistant SYED LAUL.

Dispensary Buildings.—Dispensary held in a rented room; is only for out-patients.

Most Common Diseases.—Malarious fevers, bowel complaints, and rheumatic and syphilitic affections.

Epidemics.—Small-pox and cholera prevailed epidemically in the town and vicinity.

GODÁVARI DISTRICT.

AMALÁPURAM.

Extracts from the Annual Medical Report by Civil Hospital Assistant G. MAURHAPPEN.

Dispensary Buildings.—The dispensary at present is held in a suitable rented house. The furniture for the dispensary purposes has not yet been supplied.

Most Common Diseases.—Respiratory diseases and bowel complaints, rheumatic and venereal affections and skin and ear diseases.

Attendance of Patients.—The total number of out-door patients treated during the year was 493.

CHINTALAPUDI.

Extracts from the Annual Medical Report by Civil Hospital Assistant T. H. NARAYANASWAMY.

Dispensary Buildings.—Two small thatched huts are used for a dispensary.

Dispensary Committee.—Under the Local Fund Board, Ellore Circle.

Most Common Diseases.—Ague, ulcers, boils, dysentery, diarrhoea, respiratory affections, syphilis, and rheumatism.

Attendance of Patients.—The attendance of patients last year was 324; but this year 1,529 cases were admitted. Only out-door cases are treated.

COCANADA.

Extracts from the Annual Medical Report by Surgeon G. L. WALKER, M.D.

Dispensary Buildings.—The dispensary buildings were thoroughly repaired, painted, and whitewashed about the middle of the year and are in good order. The fittings and furniture are complete and in fair repair.

Most Common Diseases.—The most common diseases amongst the in-door patients have been in order of frequency—

	Out.	In.
Ulcers	...	28
Skin diseases	602	...
Malarious fevers	533	...
Worms	349	...
Respiratory affections	312	...
Rheumatic do.	...	23
Syphilitic do.	251	20
Bowel complaints	232	18

Attendance of Patients.—The following table exhibits the attendance of patients as contrasted with former years:—

Years.	Out-door.	In-door.	Total.
1880	5,542	248	5,790
1879	5,823	257	6,080
1878	5,032	320	5,352

This table shows a decrease of the total treated in 1880 as compared with 1879, which is easily accounted for by the decrease in fever cases consequent on the withdrawal of the troops from Rampa.

General Remarks.—The dispensary is supported chiefly by the Municipality, aided by a yearly contribution of Rs. 1,200 from the Local Fund Board. The private subscriptions amount at present to about Rs. 170 per annum. The Rajah of Pithápuram in July last withdrew his annual subscription of Rs. 480.

The lying-in ward, accommodating two beds, was occupied during the year by four cases, of which one was delivered by version and one required craniotomy. The Municipal midwife attended on 27 cases of labor at their own homes during the year. This does not appear a large number, but the people do not care to call for the services of the midwife unless the cases are difficult or protracted.

COCANADA SEAMEN'S HOSPITAL.

Extracts from the Annual Medical Report by Surgeon G. L. WALKER, M.D.

Dispensary Buildings.—The Seamen's Hospital, Cocanada, consists of the two north wards of the Municipal Dispensary, the smaller accommodating two officers and the larger six seamen. The wards are in good order, and the furniture and fittings complete.

Most Common Diseases.—The diseases and accidents are those usually prevalent amongst European seamen in this country, and no change has been observed in their relative frequency and fatality.

Attendance of Patients.—The number of admissions is to a great extent regulated by the number of ships entering the port. There were 26 admissions during the past year as against 39 in 1879 and 59 in 1878. This decrease in numbers I attribute to the increased proportion of steamers amongst the ships entering the port and the decreased proportion of sailing vessels.

SECUNDERABAD.

Extracts from the Annual Medical Report by Surgeon-Major E. S. CLEVELAND, M.D.

Dispensary Buildings.—All have been recently repaired and lime-washed, and are now in good order. Furniture and fittings are in good serviceable condition.

Dispensary Committee.—Two meetings of the sub-committee and several meetings of the cantonment committee were held during the year, and the general working of the institution was considered most satisfactory.

Most Common Diseases.—The principal and most prevalent diseases have been as follows: fevers, rheumatic, respiratory and bowel affections, skin diseases, ulcers and injuries. There has been much less sickness during the year 1880 as compared with that of 1879.

Epidemics.—Twelve cases of small-pox were admitted, and among them two cases proved fatal. There was no epidemic during the year under review.

Inspection.—The Deputy Surgeon-General inspected the Civil Dispensary weekly up to 31st March 1880.

Attendance of Patients.—The number of cases treated during 1880 as compared with the number treated in 1879 shows an increase of 194 in the in-door patients and a decrease of 210 in that of out-door patients.

STATEMENTS I—V.

General Remarks.—From 1872 to 1879 this institution received an annual grant of Rs. 1,404 from the Port Fund, but this was withdrawn at the commencement of this official year (vide G.O., dated 12th April 1880, No. 749, Financial Department), leaving the Seamen's Hospital to be looked after and supported as best it might. To decrease its burden on the Municipal Funds the Municipal Commissioners ordered that the fees charged for seamen patients be increased as follows, viz. :—

Officers of vessels	from Rs. 2 per diem	to Rs. 3 per diem.
European sailors	from „ 1 „	to „ 2 „
Native lascars	from As. 8 „	to As. 12 „

ELLORE.

Extracts from the Annual Medical Report by Assistant Apothecary T. KIDDLE.

Dispensary Buildings.—The hospital building is new and strongly built. The buildings require their annual whitewashing. The furniture and fittings are in good order.

Dispensary Committee.—Matters bearing on the hospital are disposed of by the Municipal Commissioners at their meetings held twice a month.

Most Common Diseases.—Among in-patients fevers usually complicated with anæmia and enlarged spleen, rheumatic and syphilitic affections, dropsies, chronic ulcers, and general debility. Among out-patients inflammation of the external ear, respiratory affections, and bowel complaints were common in addition to those above enumerated. Compared with the previous year there was a marked decrease in fevers. All other diseases show a slight increase.

Attendance of Patients.

	1879.		1880.	
	Daily Average Attendance.	Total Treated.	Daily Average Attendance.	Total Treated.
In-patients	2	26	7.59	107
Out-patients	16.89	6,169	52.16	6,624

NARSAPUR.

Extracts from the Annual Medical Report by First-class Hospital Assistant C. PEDDASAH, No. 477.

Dispensary Buildings.—There is no separate building for the dispensary, but a portion of the Police Hospital is occupied for that purpose. Rs. 8,520 were sanctioned for the construction of a Civil Dispensary according to the Standard Plan No. 2, but the building is not commenced as yet.

Dispensary Committee.—All matters relating to the institution are discussed at the Local Fund Board meetings held once a month.

Most Common Diseases.—Fevers, rheumatic and venereal affections, diseases of the nervous system, eye and ear diseases, bronchitis, dysentery, and diarrhoea.

Attendance of Patients.—The institution does not provide accommodation for in-door patients. The total number of out-door patients attended during the year was 3,975 against 4,322 of 1879, showing a decrease of 347 cases.

PITHAPURAM.

Extracts from the Annual Medical Report by Civil Hospital Assistant T. RUNGIAH NAIDU.

Dispensary Buildings.—The pavement of the floor stands in urgent need of repairs. The furniture and fittings are in good order.

Most Common Diseases.—There are no in-door patients. The most common diseases among out-door patients are malarious fevers, rheumatic affections, skin diseases, respiratory and syphilitic affections, &c.

Inspection.—The dispensary was inspected on the 27th February 1880 by the Civil Surgeon of Cocanada.

Attendance of Patients.—The number of out-door patients has been 1,809 during the year, giving a daily average of 34.35, whereas in the previous year the number of patients was only 1,008.

General Remarks.—The dispensary was only in working order on 185 days of the year, owing, first, to the illness of one Hospital Assistant, and, secondly, to the removal of another, there being no others available to fill the vacancies.

RAJAHMUNDRY.

Extracts from the Annual Medical Report by Surgeon S. M. TYRRELL, F.R.C.S.E.

Dispensary Buildings.—The dispensary buildings are in a fair order of repair. The floor being but a chunam one, cannot be kept in good order, and the wards in consequence look dirty. The surgery is unprovided with shelves for medicines, and all the medicines in the reserve stock room have to be kept crowded in one almirah and a box. The poisons are also kept in a box, which is nothing more than a packing case. The instruments are kept in a third one. The lying-in ward is in a disgraceful state of disrepair, and is not built on any sanitary principle. It is built on the native plan. I have brought all these defects to the notice of the Vice-President, and it is to be hoped that what is necessary will be provided in the next official year.

Dispensary Committee.—Matters connected with the hospital are discussed at the meetings of the Municipal Commissioners.

Most Common Diseases.—Fevers, rheumatic and syphilitic affections, ear and eye diseases, chest affections, dysentery, diarrhoea, dropsies, scrofula, leprosy, itch, and other cutaneous diseases, debility, and wounds.

Attendance of Patients.—There were 231 in and 5,081 out patients treated against 397 in and 4,206 out door patients in the year preceding. The increase in the out-door department shows that the dispensary is fairly popular among the people.

General Remarks.—The sanitary condition of this town was found by me on my arrival here to be very bad. It is still in the same condition. I wrote several reports to the Municipal Commissioners bringing to their notice all the defects I noticed in connection with their conservancy arrangements of the town, public and private latrines, bazaars, and markets, and recommending what should be done to remedy the existing state of affairs.

RAMACHANDRAPURAM.

Extracts from the Annual Medical Report by Civil Hospital Assistant C. H. COOROOSAWMY NAICKER.

Dispensary Buildings.—The dispensary is located in a rented house. The Local Fund Board, Cocanada Circle, have proposed the erection of a dispensary building on the standard plan.

Most Common Diseases.—Fevers, respiratory, rheumatic, and eye affections, dysentery, worms, anæmia, skin diseases, ulcer and injuries.

Inspection.—Inspected by the Acting Civil Surgeon, Cocanada, on the 25th March 1880.

* Omitted Military Female Asylum and Civil Orphan Asylum.

TALLAPUDI.

Extracts from the Annual Medical Report by Civil Hospital Assistant T. M. DAVARAJULU.

Dispensary Building.—This at present is in a rented house.

Most Common Diseases.—Malarial fevers, respiratory affections, skin diseases, and ulcers.

Attendance of Patients.—There are no in-door patients. Out-door patients attended very irregularly, but the average number is greater than that of the previous year.

TUNI.

Extracts from the Annual Medical Report by Second-class Hospital Assistant T. PAUPARAYODDOO, No. 942.

Dispensary Buildings.—Dispensary slightly in need of repair. Furniture insufficient.

Most Common Diseases.—Fevers, rheumatic and respiratory affections, and ulcer and skin diseases.

Inspection.—The Civil Surgeon, Cocanada, inspected the dispensary on the 28th February 1880.

Attendance of Patients.

	November and December 1879.			1880.

KISTNA DISTRICT.

BEZVADA.

Extracts from the Annual Medical Report by Assistant Apothecary T. H. BONNER.

Dispensary Buildings.—A thatched shed for the accommodation of six men and six women is provided for by the Local Fund Board. The furniture, &c., is in good order.

Most Common Diseases.—Amongst the in-patients general dropsy and debility show the largest mortality; last year diarrhoea, dysentery, and debility were the diseases causing the largest number of deaths. *Out-patients.*—The causes of deaths amongst the natives from certain diseases cannot be relied upon as recorded by the kurnum, but from certain bad cases which came before I should think that diarrhoea, dysentery, dropsy, and fevers are principally the causes of death.

Inspection.—The dispensary was inspected by the District Surgeon, Masulipatam, on the 27th December 1880.

Attendance of Patients—Out-patients.—There has been a decrease of about 1,900 patients as compared with 1879, and an increase of 3,000 as compared with 1878. The attendance is very good, 125-19. *In-patients.*—88 were treated during the year against 120 for 1879. The attendance was 12-00 as against 12-10 for 1879.

CHIRALA.

Extracts from the Annual Medical Report by Second-class Hospital Assistant R. JAGANAICALOO, No. 835.

Dispensary Buildings.—The building requires no repair. It was whitewashed twice in the year.

Most Common Diseases.

Diseases.	1878.		1879.		1880.	
	Number treated.	Number died.	Number treated.	Number died.	Number treated.	Number died.

* Omitted Military Female Asylum and Civil Orphan Asylum.

GUNTÚR.

Extracts from the Annual Medical Report by Honorary Surgeon P. ANDERSON.

Dispensary Buildings.—Are in good order and the usual whitewashing will be shortly attended to.

During the year the Commissioners resolved to build a Lying-in Hospital at an estimated cost of Rs. 3,577-7-3. The building is to consist of two portions—one-half for caste and the other for non-caste patients. Each half is to contain a ward for four patients, a labor room, a special ward, and a bath-room with a verandah all around. The walls of this building have been already built up to the required height and occupies the site on which the Hospital Assistant's quarters existed.

Attendance of Patients.—There have been 283 in and 8,617 out door patients treated during the year under notice against 554 and 11,916 of the previous year, thus showing a decrease of 271 and 3,299 respectively. This I find can partly be accounted for by it being noted that malarious fevers prevailed largely in the town as well as in the district during 1879; and to the fact that an error in figures was made in framing the annual return for 1879. Instead of the number of admissions in each month with those that remained on the 31st December 1878 being given as the total treated for the year. The totals treated of each month were added together to form the total treated for the year, so that for 315 in-door patients actually treated 554 are shown, making a difference of 239, and of the out-door patients for 10,385 actuals 11,916 were recorded, making a difference of 1,531 in this class:—

	1876.		1877.		1878.		1879.		1880.	
	Treated.	Died.	Treated.	Died.	Treated.	Died.	Treated.	Died.	Treated.	Died.
In-door ...	190	29	159	33	309	72	554	50	283	42
Out-door ...	4,906	10	5,770	8	7,207	3	315 11,916 10,385	2	8,617	1

JAGGAYAPET.

Extracts from the Annual Medical Report by Civil Apothecary B. D'PRAZER.

Dispensary Buildings.—The dispensary at present is held in a private building, but a new one is being built and nearly ready.

Most Common Diseases.—Ague, guinea-worm, ring-worm, and syphilis. No in-patients are admitted.

Attendance of Patients.—The total number of cases treated during 1879 was 2,995, during 1880 3,242, showing an increase of 247 cases.

MASULIPATAM.

Extracts from the Annual Medical Report by Surgeon-Major C. R. G. PARKER.

Dispensary Buildings.—In fair order. Furniture and fittings good.

Dispensary Committee.—None.

Most Common Diseases.—Malarious fevers have, as usual, furnished the largest number of cases treated. Skin diseases come next, then respiratory affections, dysentery, and diarrhoea. 2,799 cases of malarious fever were treated during the year 1880, against 3,489 in 1879.

Attendance of Patients.

Years.	In-patients.		Out-patients.	
	1879	1880	1879	1880
...	...	...	187	8,756
...	...	...	136	7,052

NARSARAOPET.

Extracts from the Annual Medical Report by Civil Apothecary J. A. FRANKLIN.

Dispensary Buildings.—The building is in a proper state of repair. An iron cot for the examination of out-door patients is sadly needed, and also an almirah for medicines.

Most Common Diseases.—The most common diseases among the out-door patients have been malarious fever, rheumatic affections, ophthalmia, inflammation of the external ear, and worms.

Attendance of Patients.—The dispensary has been only one year in existence; the total treated was 2,376.

NÚZVÍD.

Extracts from the Annual Medical Report by Civil Apothecary H. C. HITCHCOCK.

Dispensary Buildings.—As the new dispensary building is still under construction, I carry on my work in a grain godown belonging to the Zemindar of this estate, which is not suitable for the purpose. The dispensary was opened on the 15th December 1879.

Most Common Diseases.—Ague, rheumatism, asthma, bronchitis, ear and venereal affections, constipation, and boils.

Inspection.—The dispensary was inspected by the District Surgeon on the 31st December 1880.

Attendance of Patients.—There were 2,407 out-door patients treated. No in-door patients admitted.

RÉPALLE.

Extracts from the Annual Medical Report by Civil Apothecary F. RODRIGUES.

Dispensary Buildings.—The dispensary is at present in a rented building.

Most Common Diseases.—Fever, skin diseases, and respiratory affections. The dispensary being only since December 1879 in existence, no comparison can be made.

General Remarks.—Skin diseases are extremely prevalent. A building, as a dispensary, is required, also quarters for the Medical Subordinate, as none are available in the station.

SATTENAPALLE.

Extracts from the Annual Medical Report by Civil Apothecary S. PERAJI.

Dispensary Buildings.—The dispensary was first opened at Krósúr on the 10th December 1879. The building being utterly unsuitable for the purposes of a dispensary, and a better one not being available in the town, the Board sanctioned the transfer of the dispensary to Sattenapalle, a more important and populous place, where it was opened on the 21st of August 1880.

Most Common Diseases.—Skin diseases, rheumatic affections, and malarious fevers.

Attendance of Patients.—The attendance of patients has been increasing since the transfer of the dispensary from Krósúr to Sattenapalle. In the former place the average attendance was from 9-17 to 14-21 per month; in the latter from 22-74 to 37.

VINUKONDA.

Extracts from the Annual Medical Report by Second-class Hospital Assistant D. VENKATASWAMY, No. 902.

Dispensary Buildings.—The dispensary is small, the shed requires a new roof, and a dead-house is greatly needed. There is no accommodation for in-door patients.

Most Common Diseases.—Ague, rheumatic and respiratory affections, ophthalmia, dysentery, diarrhoea, and worms.

	Private ...	...	...	...	...
	Total ...	1	...	...	1

Epidemics.—Measles are said to have prevailed to some extent in the station and in some of the villages of the taluk.

Attendance of Patients.—The number of patients treated during the year is 2,182 against 4,921 of last year and 4,123 of the year before last. The decrease is chiefly due to a less prevalence of intermittent fevers, ophthalmia, and ulcers.

KURNOOL DISTRICT.

CUMBUM.

Extracts from the Annual Medical Report by First-class Hospital Assistant SYED NIZAMUDDIN, No. 534.

Dispensary Buildings.—The dispensary building is at present in a fairly good condition of repair. Furniture, fittings, &c., are sufficient and serviceable.

Dispensary Committee.—The Managing Committee has regularly assembled once in a month.

Most Common Diseases.—The most prevailing diseases among the out patients were malarial and simple fevers, conjunctivitis, inflammation of the memb. tympani, respiratory affections, diarrhoea, and dysentery. Fever, rheumatism, bowel complaints, and general debility were the most common diseases among the in-door patients.

Attendance of Patients.—Two hundred in and 6,385 out patients were treated during the year, showing a decrease of 5 in and 484 out patients to that of last year. The average attendance has been 18.33 in and 81.54 out patients during the year against 17.97 in and 87.09 out patients last year.

General Remarks.—The dispensary is appreciated by all classes of the community. The only complaint is that the accommodation it affords is not adequate to meet the requirements of the patients; this defect, however, has been brought to the notice of the Local Fund Board by Mr. Tate, and the Local Fund Board has sanctioned Rupees 1,800 for additional improvements in the dispensary. The old cook-house which had fallen down owing to the recent heavy downpour has been since repaired at a cost of Rupees 117.

KURNOOL.

Extracts from the Annual Medical Report by Surgeon W. G. KING, M.D.

Dispensary Buildings.—The roofs of the verandahs and wards are not water-tight; the ward for females is decidedly bad in this respect. The furniture and fittings are as scanty as well can be; there is not a sound chair belonging to the hospital. The District Magistrate has taken steps for the removal of the *post mortem* room used for judicial purposes from the vicinity of the hospital, where its presence has proved a constant source of annoyance.

Dispensary Committee.—Matters connected with the hospital are discussed at the ordinary fortnightly meeting of the Municipality.

Most Common Diseases.—Ague, ulcers, diarrhoea, dysentery, and various forms of skin diseases. Asthma, cases of malarial fever complicated with bronchitis, pneumonia, and pleurisy were more than usually prevalent during the last two months of the year.

Inspection.—Deputy Surgeon-General Wilson inspected the institution on 9th March 1880.

Attendance of Patients.—There has been an increase of both in and out patients compared with the last year thus: 1879—in-patients 669, out-patients 11,435; 1880—in-patients 755, out-patients 16,802.

NANDYÁL.

Extracts from the Annual Medical Report by Second-class Hospital Assistant M. BAUBOO, No. 874.

Dispensary Buildings.—The Department of Public Works have prepared an estimate and a plan for a new dispensary, and they have sent them for the sanction of the Superintending Engineer, Madras. The site they have proposed is situated to the west of the Nandyál tank and has been approved of by the Local Fund Board, Kurnool. I am of opinion that this site is unsuited on sanitary grounds, as it is almost surrounded by wet cultivation throughout the

year. This I think will be injurious to the inmates of the hospital, chiefly during the rainy and cold seasons.

The present buildings used as dispensary and patients' ward are in good repair and the furniture and fittings we now have are sufficient for the present requirements.

Dispensary Committee.—A President and six members were appointed by the Local Fund Board, Kurnool, for the management of the dispensary at Nandyál during the year, and the Committee meet at the dispensary once in a week or such times as may be necessary.

Most Common Diseases.

Patients.	Fever.		Rheumatic Affections.		Ophthalmia.		Respiratory Affections.		Dysentery and Diarrhoea.		Worms.		Ulcers.	
	Treated.	Died.	Treated.	Died.	Treated.	Died.	Treated.	Died.	Treated.	Died.	Treated.	Died.	Treated.	Died.
1878 ... { In ...	1	...	...	...	...	...	1	...	3	1	...	...	...	...
1878 ... { Out ...	4,676	4	429	...	167	...	181	...	260	...	394	...	1,352	...
1879 ... { In ...	3	...	...	...	...	...	...	...	...	...	...	...	54	26
1879 ... { Out ...	4,331	...	471	...	505	...	382	...	90	...	501	...	1,492	...

Attendance of Patients.

Years.						Europeans.	Natives.
1877	...	...	...	...	...	1,562	7,858
1878	...	...	...	...	...	1,480	12,516
1879	...	...	...	...	...	1,020	10,780
1880	...	...	...	...	...	950	9,154
Total ...						5,012	40,308

The total number treated this year was less than in the previous one, which is due evidently to the improvement in the health of the population. Those remaining in the town who had suffered from the famine and such diseases as were brought on by it were admitted into the Native Infirmary for treatment.

EYE INFIRMARY.

Extracts from the Annual Medical Report by Surgeon-Major E. F. BROCKMAN, F.R.C.S.

Dispensary Buildings.—During the past year the hospital buildings were white and color washed, the walls painted, and several minor repairs executed at a cost of Rs. 1,137-14-10. The limewashing of the ceiling, however, is capable of improvement; the wash as now laid on very rapidly deteriorates and fails to adhere effectually. Falling off in cakes, it adds much to the disfigurement of the wards and to the great discomfort of patients suffering with eye diseases, as the fine lime has a great penetrative property. The out-patients' shed, which was remarked in the last report to be in a very dilapidated state, is now, after urgent representation, being replaced by a substantial structure at an estimated cost of Rs. 740; the work was put in hand on the 4th December 1880, and will be completed shortly. The furniture and fittings are sufficient and in good order.

Most Common Diseases.—Diseases of the conjunctiva, lens, and choroid have been the most prevalent, but not to any special degree to call forth comparison.

Inspection.—The hospital was officially inspected by the Surgeon-General with the Government of Madras on the 17th December 1880.

Attendance of Patients.

Years ...				1878.		1879.		1880.	
Class of Patients ...				In.	Out.	In.	Out.	In.	Out.
Average daily sick ...				35.26	53.54	31.60	68.69	27.63	63.88

There were 487 admissions amongst the in-patients during the year, showing a falling off of 32 as compared with 1879; this has been caused by the adoption of greater care in the selection of cases for admission on account of the allotment made in the budget for diet being insufficient for the requirements of the hospital. Of out-patients there were 3,057 admitted against 2,972 in the previous twelve months, showing an increase of 85; the average daily attendance, however, was nearly less by 5. Generally speaking the past year has been a favorable one from an ophthalmic point of view.

General Remarks.—The total number of operations performed amounted to 494, being 19 in excess of the number in 1879. Sclerotomy was performed to a greater extent in the past year as a mode of treatment in glaucoma with varying degrees of success. Of cataract operations the percentage of successful cases has been 81.95 against 83.74 attained in the previous year. I have introduced a novel procedure in the steps of the operation for cataract extraction, viz., in rupturing the capsule of the lens prior to making the corneal incision. I have not sufficient material from which I can draw any conclusion as to the advantages or otherwise of this method of procedure.

GENERAL HOSPITAL.

Extracts from the Annual Medical Report by Surgeon-Major H. KING, M.B.

Dispensary Buildings.—The hospital buildings and grounds are in good order; some important improvements have been effected during the year, others are being carried out, and others it is hoped will be sanctioned. The contagious wards have been finished; quarters for a Head Nurse have been erected; punkahs in the Nurses' quarters have been connected with the steam-engine. Alterations in the kitchen are proceeding, which will put an end to the present most unsatisfactory arrangements for the cooking of native diets. The Apothecary's store-room and the dispensary-room are undergoing alterations which will be improvements.

Most Common Diseases.—At the dispensary 5,483 cases of "Europeans" were treated, of which 1,060 were affections of the respiratory organs and 818 results of malaria, 137 were treated for dysentery, and 296 for diarrhoea. 18,203 Natives were treated, of which 2,559 were cases of malarious diseases, 1,270 of worms, 1,251 of skin diseases, 1,067 affections of the respiratory organs, 248 of dysentery, and 195 of diarrhoea. European in-patients were 1,188—159 were cases of malarious fevers, 114 of gonorrhoea, 74 diseases of respiratory organs, 65 dysentery, 50 hepatic affections, 48 rheumatic, and 46 syphilitic. The deaths in hospital were 229—57 Europeans and 172 Natives—4.80 and 6.70 per cent. respectively. In 1879 the percentages had been 3.37 and 6.99.

Inspection.—The Surgeon-General with the Government of Madras has occasionally visited and inspected the hospital since April 1880.

	1876-77.		1877.		1878.		1879.		1880.	
	Europeans.	Natives.	Europeans.	Natives.	Europeans.	Natives.	Europeans.	Natives.	Europeans.	Natives.
In-patients	1,410	3,227	1,874	4,310	1,562	2,536	1,367	2,345	1,188	2,566
Out-patients	4,096	11,958	5,292	13,281	5,880	18,549	4,939	19,441	5,483	18,203
Total	5,506	15,185	7,166	17,591	7,442	21,085	6,306	21,786	6,671	20,769

General Remarks.—Some changes in the hospital staff took place during the year. Surgeon-Major Furnell, M.D., becoming Sanitary Commissioner, was relieved of his duties as Physician on the 6th April 1880 by Surgeon-Major Cockerill until the arrival of Surgeon-Major H. King on the 5th May 1880. Surgeon Sibthorpe proceeded to Europe on furlough on 18th November 1880 and was succeeded by Surgeon W. R. Browne, M.D. Mrs. Anderson, Head Nurse, who had been Acting Matron Superintendent for a considerable time, was confirmed in the appointment. The Nursing Department under Mrs. Anderson works well and smoothly. The Linen Woman resigned, being aggrieved at being placed under the superintendence of the Matron Superintendent (according to the intentions of Government), and was succeeded by Miss Law, who performs her duties satisfactorily.

LEPER HOSPITAL.

Extracts from the Annual Medical Report by Surgeon-Major D. R. THOMPSON, M.D.

Dispensary Buildings.—The buildings require small repairs and white-washing; an estimate for white-washing the buildings, &c., and repairing the pavilions is now ready and will be forwarded to the Surgeon-General.

The diseases which prevailed most frequently were ulcers, debility, diarrhoea, dysentery. There were 61 deaths this year and 31 in the previous year.

Most Common Diseases.

Diseases.	1880.	1879.	1878.	1877.	1876.

1876	...	...	...	470	15

GOVERNMENT LYING-IN HOSPITAL AND EGMORE FEMALE DISPENSARY.

Extracts from the Annual Medical Report by Surgeon A. M. BRANFOT, M.B.

Dispensary Buildings.—There are no special buildings for dispensary in-patients. They are treated in the same wards as the puerperal women from want of other accommodation. Other patients are seen in the Egmore Female Dispensary. The furniture is old, but in fair order. Buildings are in fair repair.

Most Common Diseases.—The only diseases treated among in-door patients are diseases of pregnancy, displacements of the uterus, and other affections of the generative organs. Among out-patients the most common diseases have been diarrhoea and dysentery, fevers, bronchitis, catarrh, and worms. The percentage of deaths of in-patients has been 3.13, which is an increase of 0.24 as compared with last year. Among out-patients one death has been recorded, and among Europeans and East Indians the percentage of deaths of in-patients has been 2.03, which is an increase of 0.72 as compared with last year. Among out-patients two deaths have been recorded.

Inspection.—Inspected by Surgeon-General with the Government of Madras on the 3rd May and 9th December 1880.

Attendance of Patients.—In-door patients show a decrease of 34 as compared with the previous year, in which the admissions were the largest on record. Out-patients show a considerable increase, there being 1,055 patients more than last year. Among Europeans and East Indians in-door patients show a decrease of 8 as compared with the previous year, in which the number of admissions was the largest on record. Out-patients show an increase of 84 as compared with last year.

MEDICAL MISSION DISPENSARY, RAYAPURAM.

Extracts from the Annual Medical Report by Dr. WM. ELDER, L.R.C.P. and S.E.

Dispensary Buildings.—In good order and well furnished.

Most Common Diseases.—Febrile, rheumatic, and abdominal affections. In the treatment of ague we found the salts of quinine and cinchonidine when combined with Fowler's solution to be as efficacious as quinine. When the alkaloids are administered in large doses—10 to 15 grains—they produce vomiting and purging. We generally give from 2 to 5 grains per dose, which quantities are seldom accompanied by any gastric disturbance.

Attendance of Patients.—Better than last year.

NATIVE INFIRMARY.

Extracts from the Annual Medical Report by Surgeon-Major D. R. THOMPSON, M.D.

Dispensary Buildings.—The Northcote Ward leaked very much during the heavy rains in October and November last, became very damp, and required frequent warming by large fires; this state of the building has been brought to notice and it has been repaired. The other buildings are in good repair. The furniture and fittings are serviceable.

Dispensary Committee.—The Executive Committee meets every month for the transaction of business.

Most Common Diseases.

Diseases.	Admitted.		Died.	
	1879.	1880.	1879.	1880.

Wounds and injuries	314	234	16	6

Inspection.—The institution was inspected by the Surgeon-General.

Attendance of Patients.			
Years.	In-door.	Years.	In-door.
1876	2,382	1879	2,318
1877	5,524	1880	1,569
1878	3,170		

General Remarks.—As noted in another column of this report, the rainfall during the months of October and November was heavy, and the wards of the hospital became very damp in consequence. Diarrhoea, dysentery, and tetanus prevailed amongst the surgical cases that were then in the wards which required more than the ordinary necessary care to prevent these diseases spreading. The use of large fires in the wards helped very much to keep the damp away, and the timely supply of condemned clothing, which was received from time to time, helped in keeping the patients warm and lessened the expenditure of the institution.

The total number of deaths during the year was 287, whilst the total in the previous year was 376; but the percentage of deaths to the total treated in the year under consideration was larger, as the total treated in 1879 was more. This increase in the death-rate was due to the condition of those who were admitted for treatment, a large proportion of whom were extremely aged, and were from amongst those who had suffered from the famine and had lingered about the city since the famine period. Wounds and injuries also, as in the previous year, furnished a large proportion of the admissions into the wards, the number this year being 234. It will be observed that there are only six deaths amongst these admissions. Under this head the fracture of the long bones of the extremities treated during the year amounted to 37. Of these there were fifteen fractures of the fore-arm and eleven of the femur, affording sufficient opportunities for practical instruction to the pupils of the Auxiliary Medical School.

The number of large surgical operations was few; conservative surgery was strictly adhered to in every case of injury; but the knife was freely used when the timely removal of any part that could not be saved was found necessary, as when parts of the hands or feet were smashed, when abscesses had to be opened and large sloughs required removal. A large list of successful reduction of dislocation is recorded in the return of the out-door department, where these cases as a rule were attended to and then sent to their homes.

TRIPPLICANE.

Extracts from the Annual Medical Report by Surgeon A. PORTER, M.D.

Dispensary Buildings.—Buildings now under annual repair; furniture and fittings in good order.

Epidemics.—Small-pox and measles rather prevalent, and croup more frequent than usual.
Inspection.—By Surgeon-General on 10th December and 4th May.

Attendance of Patients.

Years.	In.	Out.	Total.
1875	908	17,867	18,775
1876	826	16,917	17,743
1877	938	15,597	16,535
1878	1,048	18,774	19,822
1879	1,001	17,829	18,830
1880	905	18,767	19,672

General Remarks.—During the latter part of the year several cases came under treatment of a fever resembling dengue; these were all among Europeans.

VEPERY.

Extracts from the Annual Medical Report by Surgeon A. F. DOBSON, M.B.

Dispensary Buildings.—The wards of the main building were blue-washed in June and the flooring repaired where necessary. Some panes of glass were also fitted to the doors and windows. The expenditure for the foregoing was supplied by a stoppage of one month's rent. The contagious diseases wards and the two bamboo sheds were repaired during the year. Owing to the leaky state of the Nurses' quarters the nurses had to be shifted to the special ward.

Most Common Diseases.—The diseases which gave the greatest number of admissions among out-door and in-door patients were malarious fevers and respiratory affections; of the former 841 and 818 of the latter were treated. As compared with previous years these diseases were not more prevalent or fatal.

Epidemics.—None. A few isolated cases of small-pox were reported from time to time.

Inspection.—The Surgeon-General inspected the hospital on the 30th April and again on the 27th December of the same year.

Attendance of Patients.—Nine hundred and ninety-eight in-patients and 9,403 out-patients were treated during the year as compared with 1,253 of the former and 10,272 of the latter in 1879. The decrease in both cases may be considered as due to the following causes:—First, absence of epidemics of all kinds; second, the disappearance of famine and its attendant effects on the people; third, under G.O., dated 28th April 1879, persons of certain classes receive medical advice and obtain prescriptions for medicines, which are made up at their own expense; consequently such persons (a numerous class) do not appear in the returns.

MADURA DISTRICT.

DINDIGUL.

Extracts from the Annual Medical Report by EDWARD CHESTER, M.D.

Dispensary Buildings.—Enough money has not yet been collected to complete the new dispensary building. The present building was repaired during the year.

Dispensary Committee.—There is none. The Medical Officer of the dispensary is a Municipal Commissioner and meets the Vice-President of the Municipality and the other Commissioners twice each month at the regular meetings of the Commissioners.

Most Common Diseases.—Ague, dropsy, dysentery, guinea-worm, ulcers, and injuries.

Attendance of Patients.

	1880.	1879.	1878.
In-patients	202	228	234
Out-patients	7,728	9,870	8,956

The two trained Native midwives working in the hospital and the town have had a total of 48 cases.

KODAIKANAL.

Extracts from the Annual Medical Report by Civil Apothecary P. B. GIBBONS.

Dispensary Buildings.—The dispensary is quite unsuited for its present use as it is too small and is always damp. The furniture and fittings also are not very extensive; the want of another almirah for stores is felt.

Most Common Diseases.—The most common diseases are fevers, rheumatism, diarrhoea, and catarrhal affections.

Epidemics.—During the year a few cases of measles occurred in the station.

Inspections.—The dispensary was inspected by the Zillah Surgeon of Madura on 5th April 1880.

Attendance of Patients.—The total number treated during the year was 1,998, showing a decrease of 754 when contrasted with the previous year, which was 2,752. The dispensary is only an out-door one and has no hospital. The greatest number admitted was during the season, i.e., from March to September.

MADURA.

Extracts from the Annual Medical Report by Surgeon J. LANCASTER.

Dispensary Buildings.—At present the buildings are in good condition. The Lying-in Hospital has been put in thorough repair during the year; the furniture and fittings are sufficient and in good order. The Municipality supplies us liberally.

Dispensary Committee.—The affairs of the dispensary and its management are discussed and regulated at the fortnightly meetings which are held in the Municipal Office.

Most Common Diseases.—The most common diseases among out-door patients were fevers (ague chiefly of a mild type), rheumatic and venereal affections, country sore-eyes, ulcers, and skin diseases. Among in-patients the principal were fevers, rheumatic and venereal affections, dropsy, dysentery and diarrhoea, and ulcers. The mortality has been less this year than in the past.

Attendance of Patients.

	1879.	1880.
In-patients	902	585
Out-patients	38,927	28,759
Total	39,829	29,344

General Remarks.—The sanitary condition of the town has been improved during the year, and the drainage, though not good, has been improved; the sanitary condition of the town cannot make any decided advance unless the Police and Municipal regulations are stricter in regard to the conservancy of the sides of streets and open spaces and topes which are now often used as latrines. Among the major and minor operations during the year I have the satisfaction to state that there has been no single fatal case.

PALNI.

Extracts from the Annual Medical Report by Second-class Hospital Assistant THONDARAYANA PILLAY, No. 894.

Dispensary Buildings.—The whole of the buildings, &c., require a thorough repair. The furniture and fittings, &c., are sufficient.

Dispensary Committee.—The dispensary is under the management of the Local Fund Board, Dindigul Circle, whose members assemble every third Friday of each month.

Most Common Diseases.—Ague of quotidian type and country sore-eyes have prevailed to a certain extent throughout the year. Ulcer, skin diseases, rheumatic and venereal affections, with their various complications, and diseases of the stomach and bowels formed the large bulk of diseases treated during the year.

Attendance of Patients.

	In-patients.		Out-patients.	
	Total Treated.	Died.	Total Treated.	Died.
1877-78	64	2	3,463	6
1878-79	135	10	4,857	1
1879	85	9	5,938	...
1880	90	5	4,505	...

General Remarks.—The Native midwife attached to this institution has conducted 33 cases of natural labor successfully during the year. Her services are readily accepted by all classes of people when in need.

PAMBAN.

Extracts from the Annual Medical Report by Assistant Apothecary E. AILSWORTH.
Dispensary Buildings.—The dispensary buildings are in good repair and kept clean. The furniture is sufficient and in serviceable condition.

Most Common Diseases.—The most common diseases have been malarious fevers, febricula, chronic rheumatism, ophthalmia, bronchitis, diarrhoea, worms, and various forms of skin affections, but none of them prevailed to any great extent; on the contrary there has been less sickness among the inhabitants as compared with previous years.

Inspection.—The dispensary was visited in last April by the Zillah Surgeon of Madura.

Attendance of Patients.—The total number of patients treated during the past year has amounted to 6,016, of which 111 were in-door and 5,905 out-door patients; contrasted with the previous year there is a decrease of 26 among the former and 669 among the latter.

PARAMAKUDI.

Extracts from the Annual Medical Report by Second-class Hospital Assistant C. VEERASAWMY NAIDU, No. 995.

Dispensary Buildings.—The Local Fund Board have sanctioned Rupees 1,575 for the erection of a new building; the work will probably commence about the early part of next official year. In the mean time a temporary shed has been put up in the hospital compound for the use of the self-supporting patients.

Dispensary Committee.—All subjects regarding this institution are discussed at the Local Fund Board meetings held at Madura twice a month.

Most Common Diseases.—Fever, rheumatic affections, diseases of stomach and bowels, sore eyes, and ulcer.

Inspection.—The dispensary was inspected by the Zillah Surgeon of Madura on the 21st April 1880.

RAJASINGAMUNGALAM.

Extracts from the Annual Medical Report by Private Practitioner DAVAPEERAM.

Dispensary Buildings.—The dispensary is a temporary thatched building. Furniture is sufficient.

Dispensary Committee.—No separate committee except the S.P.G. Mission at Ramnad.

Most Common Diseases.—Among out-door patients conjunctivitis, ague, dyspepsia, ulcers, and injuries; their prevalence and fatality are less than those of the previous year.

Attendance of Patients.—The number of out-patients treated during the year was 5,280, being an increase of 292 over that of the previous year.

RAMNAD.

Extracts from the Annual Medical Report by Native Surgeon Y. ANTHONY PILLAY.

Dispensary Buildings.—Buildings are in good condition. Furniture and fittings sufficient.

Dispensary Committee.—There is no separate committee.

GOVERNMENT OF MADRAS.

PUBLIC DEPARTMENT.

Read the following paper:—

From Surgeon-General W. R. CORNISH, F.R.C.S., C.I.E., Surgeon-General with the Government of Madras, to the Chief Secretary to Government, dated Ootacamund, 2nd September 1881, No. 0-106 [Current No. 1835].

ABSTRACT.—Forwards dispensary report for 1880.

ORDER THEREON, 3rd October 1881, No. 1338.

This report is dated the 30th June 1881 and reached Government on the 3rd September 1881, a result which the Government note with great satisfaction.

2. The total number of dispensaries rose during the year under review from 198 to 218, and of the new institutions no fewer than 12 appear to have been opened in the district of Tanjore alone. The number of dispensaries administered by medical men unconnected with the public service fell from 47 to 33. There was thus a total increase of 34 in the number of hospitals and dispensaries provided for by the Subordinate Medical Service. The Government note with satisfaction that no fewer than 30 dispensaries were in the charge of Civil Apothecaries as against 13 the previous year, and they trust that the general substitution of officers of this grade for the Civil Hospital Assistants at present in independent charge may be speedily accomplished.

3. The Government have more than once remarked on the meagre provision hitherto made for the medical requirements of the people by the Local Fund Boards of North Arcot, Nellore, and Kurnool. It was understood last year that measures were in progress in North Arcot for opening several new dispensaries during the year under review, but nothing appears to have been done. Taking the Presidency as a whole, the average ratio of dispensaries per mille of population was '007.

4. The number of persons treated during the year was 1,313,304, showing a small increase over the previous year. The number of in-patients fell from 49,644 to 38,870, the reason being doubtless the improved condition of the people and the healthiness of the season. There was a marked absence of cholera as evidenced by the following figures:—

	RS.
Number treated in 1877	21,800
Do. 1878	4,433
Do. 1879	548
Do. 1880	94

5. The number of cases of small-pox treated shows also a considerable diminution. The disease was as usual most prevalent on the Western Coast and in the City of Madras.

6. There was a diminution of malarial fever cases from 294,729 in 1879 to 207,553, the lowest figure reached in any year since 1877.

7. No very perceptible change occurred in the number of admissions from dysentery and diarrhoea, but there was a considerable decrease of mortality from these complaints, the number of deaths standing as follows:—

	1879.	1880.
Dysentery	632	702
Diarrhoea	403	497

8. Under venereal diseases, skin diseases, and ulcers, all of which were very largely extended by the famine, but little improvement is as yet observable. The

further progress of these disorders appears, however, to have been checked, and it may be hoped that in a year or two they may again be brought within their normal limits. The Government are glad to observe the steady increase in the number of labor cases attended to and treated.

9. In regard to Surgery the Surgeon-General remarks that, "notwithstanding the yearly extension of the dispensary system and the opening out of new centres of medical relief, the numbers of surgical operations do not increase in proportion," and he attributes this result, in the case of the subordinate grades at least, to their ignorance of anatomy and to the want of practical experience in the dissecting room. In the opinion of the Surgeon-General "the pupils of the Medical College do not spend a sufficient portion of their educational course in the work of the dissecting room to justify the hope that they can ever make good practical surgeons." As the matter is one of very great practical importance, the Government resolve to refer the remarks of the Surgeon-General for the consideration of the Committee appointed by G.O., dated 24th September 1881, No. 314.

10. The year 1880 was the first of the new administrative system, under which the duties formerly devolving on the Deputy Surgeons-General are now performed by the Civil Surgeons of districts. The Government are glad to learn that these duties have on the whole been satisfactorily discharged. The arrangements for the inspection of outlying dispensaries are as yet imperfect, but material improvements in this respect may be looked for as soon as the scheme now under consideration can be introduced.

11. The total income from all sources amounted to Rs. 7,74,903 as exhibited in the following abstract:—

	Rs.
From Government	2,76,266
Municipal and Local Funds	4,52,437
Interest on capital	17,982
European subscriptions	13,240
Native do.	14,978
Total	7,74,903

showing a total diminution of expenditure of Rs. 77,444 as compared with the previous year, a result due in great part to the firmness of the Surgeon-General in restraining waste and extravagance in the use of European medicines and to the substitution of ordinary bazaar medicines as advocated by him in the report for 1879. The Surgeon-General is entitled to the thanks of Government for the energy displayed by him in this respect.

12. Paragraphs 39 to 43 of the report should be perused by the Presidents of Local Fund Boards and Municipalities and other local managers of hospitals and dispensaries.

13. The Government note with satisfaction the success which continues to attend the Lying-in Hospital and the Eye Infirmary.

(True Extract.)

R. DAVIDSON,
Chief Secretary.
