OFFICE OF SURGEON-GENERAL
WITH THE GOVERNMENT OF MADRAS,
FORT ST. GEORGE, 11th June 1885.

No. 272 $\frac{a}{b}$.

From

M. C. FURNELL, Esq., M.D., F.R.C.S.,
Surgeon-General with the Government of Madras,

To

THE HON. E. F. WEBSTER,
Chief Secretary to Government, Public Department.

SIR,

I HAVE the honor to submit, for the information of the Right Honorable the Governor in Council, the annual report on the Civil Hospitals and Dispensaries in the Madras Presidency for the year 1884.

A.—DISPENSARY STATISTICS.

2. At the close of 1883 the number of hospitals and dispensaries was 287, and by the end of 1884 it had increased to 299.

3. New dispensaries were opened in the districts of Anantapur, North and South Arcot, Bellary, Madura, Tinnevely, and Trichinopoly, while three dispensaries were closed during the year, viz., one in Tanjore and two in Nellore.

4. CLASSIFICATION.—The hospitals and dispensaries, classified according to the instructions of the Government of India, conveyed in G.O., No. 1014, of 19th May 1883, stand as follows:—

							No.
Class I	...	...	...	...	...	...	18
Do. II	...	...	...	...	...	...	267
Do. III A	...	...	...	...	...	...	6
Do. III B	...	...	...	...	...	...	8

5. The following table shows the existing number of dispensaries in the several revenue districts :—

Districts.	Population according to census of 1881.	Number of taluks.	Number of dispensaries.	Districts.	Population according to census of 1881.	Number of taluks.	Number of dispensaries.
Anantapur ...	599,889	7	8	Kurnool ...	709,305	9	8
Arcot, North ...	1,817,814	16	14	Madras ...	405,848	8	10
Arcot, South ...	1,814,738	8	11	Madurai ...	2,168,689	8	30
Bellary ...	763,807	9	12	Malabar ...	2,365,035	11	11
Canara, South...	959,514	6	8	Nellore ...	1,220,236	13	12
Chingleput ...	981,381	6	14	Nilgiris ...	91,034	6	5
Coimbatore ...	1,657,690	10	12	Salem ...	4,599,595	9	12
Cuddapah ...	1,121,038	11	10	Tanjore ...	2,130,383	9	36
Ganjam ...	1,503,301	16	10	Tinnevely ...	1,699,747	9	21
Godavari ...	1,780,613	13	17	Trichinopoly ...	1,215,083	5	6
Kistna ...	1,548,480	13	16	Vizagapatam ...	1,790,468	14	16

6. AGENTS IN CHARGE.—The total number of agents employed on Medical relief during 1884 was 299 against 287 in 1883, viz.:—36 Commissioned Medical officers in charge of the Presidency hospitals and head-quarters of revenue districts, 3 Warrant officers holding honorary commission, 1 Native Surgeon, 20 Military Apothecaries temporarily lent to the Civil department, 87 Civil Apothecaries, 105 Hospital Assistants, 43 pensioned and private medical men, and 4 Missionary agents.

The eleemosynary education for the grade of Civil Apothecary was discontinued from 1st January 1885 (*vide* G.O., No. 1966, Financial, of 25th August 1884), and from that date no students will be allowed to be entertained on stipend, or given a gratuitous medical education.

Civil Hospital Apprentices already entertained will be maintained under the terms of their agreement, and will supply vacancies in the establishment till June 1888, after which date Municipalities and Local Fund Boards will have to make their own arrangements for securing agents for the charge of the civil dispensaries which may be established after that date.

The following classified table shows the agents in charge during the last two years :—

Grade of Medical Officers.	Number in each year.	
	1883.	1884.
Brigade-Surgeon	2	4
Surgeon-Major from 20 to 27 years' service	4	2
Do. 12 to 19 do.	16	18
Surgeon from 5 to 11 years' service	12	11
Do. 1 to 4 do.	3	1
Honorary Surgeon	4	3
Native Surgeon	1	1
Assistant Surgeon	...	...
Senior Apothecary, Second Grade	...	1
First-class Apothecary	3	4
Second-class do.	2	2
First-class Assistant Apothecary	13	13
Second-class do.	1	...
Civil Apothecary	77	87
First-class Hospital Assistant	29	32
Second-class do.	28	21
Third-class do.	45	52
Pensioned and Private Medical men	43	43
Medical Missionary	4	4
Total ...	287	299

7. HOSPITAL BUILDINGS.—Of the 299 hospitals and dispensaries in existence during the year, 213 were conducted in buildings specially designed for them and 86 in houses rented for the purpose.

8. STATISTICS OF PATIENTS.—As an immediate consequence of the increase of dispensaries, there has been an increase in the total number of patients treated during the year. The numbers amounted to 1,696,809 in 1883 and to 1,753,898 in 1884.

The following table shows the number of in- and out- patients treated during the last five years :—

Years.	In-patients.	Out-patients.	Total.
1880	38,870	1,274,434	1,313,304
1881	37,323	1,412,269	1,449,592
1882	37,456	1,501,120	1,538,576
1883	38,447	1,658,362	1,696,809
1884	39,826	1,714,072	1,753,898

The daily average attendance of both in- and out- patients for the year is shown below :—

Men.	Women.	Children.	Total.
7,192	3,295	3,415	13,902

SEXES.—Of the total number of in- and out- patients treated in 1884, the number of "men" was 830,582, of "women" 381,674, and of "children" of both sexes 491,535, making a total of 1,753,898.

9. IN-PATIENTS.—In the year under review there has been a decrease of 26 in the daily average number of in-patients treated. The proportions of men, women, and children are shown in the following table :—

Table showing the Daily Average of In-patients.

	1882.	1883.	1884.
Men	1,304	1,263	1,245
Women	615	637	620
Children	101	95	104
Total ...	2,020	1,995	1,969

10. MORTALITY.—There were 3,100 deaths from all causes amongst 39,826 in-patients treated during the year, the rate of mortality being 7.78 per cent. against 7.55 in 1883.

The number of deaths amongst out-patients has been excessive compared with that of 1883, viz., 6,907 in the year under review, against 3,688 in the preceding year.

This great increase in the rate of mortality in the class of out-patients is in a great measure attributable to the prevalence of cholera, and partly due to a better and more correct record of deaths during the year.

The following table contrasts the deaths of in- and out- patients for the last two years, showing the cause of mortality :—

		In-patients.				Out-patients.			
		1883.		1884.		1883.		1884.	
		Treated.	Died.	Treated.	Died.	Treated.	Died.	Treated.	Died.

11. PRINCIPAL DISEASES.—The public health of the Presidency was far from satisfactory during the year. Cholera of a virulent type broke out in most parts of

the Presidency and committed considerable ravages in the Southern districts, North Arcot, Cuddapah, and Coimbatore.

The districts of Ganjam, Godavari, Kistna, Nellore, Bellary, and Kurnool were only subjected to a mild and limited attack, as was also Salem. Vizagapatam was quite free from this disease, and with the exception of Malabar the Western Coast may be said to have been exempt from this dire calamity.

Small-pox was also excessive during the year; but there was a slight decrease in the prevalence of fevers, except in South Canara, where the rate of mortality from this cause was unusually heavy.

The seasons were favorable to agriculture, food, and water-supply. The districts of Trichinopoly and South Arcot, however, suffered much from heavy rains during the latter end of 1884.

12. CHOLERA.—The epidemic of 1881 has shown no tendency to disappear from this Presidency. There were indications that it was on the decline in 1883, but in 1884 it again raged severely.

The dispensary returns show that 14,558 cases of cholera were treated during the year under report with 5,735 deaths. Of these numbers, 748 were in-patients with 425 deaths and 13,810 out-patients with 5,310 deaths.

The total numbers in 1883 were 10,384 treated with 2,750 deaths.

The District Medical officers, in co-operation with the local authorities, spared no pains and exertion to arrest the progress of the disease, and satisfactory arrangements, as far as practicable, were made for the treatment of those attacked both in the town and villages.

There has been a decided improvement in the registration of deaths during the year, compared with 1883, and it is hoped that the results of future years will be still more correct than anything hitherto attained.

13. SMALL-POX.—The number of cases treated in 1884 was 961 against 750 in 1883. This shows an increase in the prevalence of the disease during the year. The number of deaths amongst 624 in-patients was 171.

14. FEVERS were rather less prevalent than in the preceding year, except in the districts of South Canara, Malabar, Kurnool, and Tinnevely, where it has shown a tendency to increase.

The following table compares the number of fever cases treated with the results of the former years :—

Fever.

Years.	Number of dispensaries opened.	Total cases of fever.
1880	218	207,553
1881	255	200,906
1882	275	176,380
1883	287	186,689
1884	299	179,576

15. BOWEL DISEASES—DYSENTERY AND DIARRHOEA.—The dispensary returns show that there was a slight increase in the number of admissions and deaths from bowel diseases as compared with former years.

Table showing the Admissions and Deaths from Dysentery and Diarrhoea of both In- and Out- Patients for the last five years.

Years.	Dysentery.		Diarrhoea.	
	Admissions.	Deaths.	Admissions.	Deaths.
1880	19,990	403	25,967	497
1881	21,642	282	28,874	425
1882	22,064	293	31,699	436
1883	24,789	299	35,745	482
1884	27,867	333	41,613	515

16. VENEREAL.—The following statement shows the number of admissions and deaths from venereal diseases as compared with former years. Syphilitic diseases have shown a tendency to decrease for the last two years :—

Table showing the Admissions and Deaths from Venereal Diseases in comparison with former years.

Years.	Syphilitic affections.		Gonorrhoea and its complications.			
	In- and Out- Patients.		In-Patients.		Out-Patients.	
	Admissions.	Deaths.	Admissions.	Deaths.	Admissions.	Deaths.
1880	24,335	36	1,400	29	22,937	5
1881	27,131	40	1,413	28	24,899	5
1882	28,489	42	1,301	33	24,413	1
1883	26,461	41	1,640	34	24,534	12
1884	25,566	43	1,458	41	23,933	6

17. PARTURITION.—The number of labor cases attended, including those seen by midwives in their homes, was 6,925, of whom 187 died.

Table showing the Number of In- and Out- Patients for five years.

Years.	Cases of Parturition.	Deaths.
1880	4,321	119
1881	5,541	110
1882	4,740	125
1883	5,544	160
1884	6,925	187

18. SKIN DISEASES.—The admissions under this head are yearly on the increase, due in a great measure to the increase in the number of dispensaries.

The following table shows the number of admissions for the last five years :—

Years.	Admissions for Skin Diseases.
1880	96,383
1881	109,288
1882	121,616
1883	154,878
1884	161,356

19. ULCERS.—The admissions under this head also have been considerably on the increase as shown below :—

Years.	Admissions for Ulcers.
1880	120,310
1881	122,636
1882	133,406
1883	158,390
1884	171,462

20. SURGICAL OPERATIONS.—There has been a steady increase in the number of both major and minor operations. Those classed as "Major" have increased from 3,262 in 1883 to 3,358 in 1884, and the "Minor" operations from 45,918 to 49,889.

Table showing the Number of Surgical Operations performed during the last five years.

Years.	Major Operations.	Minor Operations.	Total.
1880	1,836	28,851	30,687
1881	2,572	37,788	40,360
1882	2,811	39,405	42,216
1883	3,262	45,918	49,180
1884	3,358	49,889	53,247

21. CASTE OR NATIONALITY.—The caste or nationality of the patients treated in 1884 is shown in the subjoined abstract:—

Years.	Europeans.	Eurasians.	Hindus.	Muhammadans.	Other castes.	Total.
1882	7,205	40,221	1,095,747	206,999	188,404	1,538,576
1883	7,165	43,616	1,231,137	214,514	200,377	1,696,809
1884	7,170	48,081	1,254,818	232,643	211,186	1,753,898

B.—ADMINISTRATION.

22. The following extracts from the administration reports of the several District Surgeons will be found of public interest:—

23. ARCOT, NORTH.—The district maintained 14 dispensaries during the year. Surgeon J. Lancaster, M.B., the District Surgeon, makes the following remarks in regard to the health of the district:—

“Cholera had broken out in the latter part of 1883 at Kálahasti and Tirupati. It continued into 1884 with disastrous results at Chittoor and Vellore.

“In Tirupati, where all things are favorable to its spread, it remained with various fluctuations for several months.

“Tirupati stands a serious menace to the health of the district until its sanitation is rapidly and extensively improved.

“During the year cholera appeared twice in Chittoor: in the early part continuous with the outbreak at the end of the previous year 1883, and again near the end of the year 1884 after a lapse of eight months. The first case was that of a constable who came in from Tirupati where cholera was prevalent; the second case was that of a man living next the constable's; the third, fourth, fifth, and sixth cases were all close to each other. No cholera had appeared in this suburb of Chittoor for several years, and there was no cholera at the time in Chittoor: the constable had contracted it on the way and brought it into Chittoor.

“Cholera then broke out irregularly at Gudiyátam, Palmanér, Árni, Arcot, Pólúr, Wandiwash, Vellore, and Chandragiri. The total number of cases treated during the year was 3,827 with a mortality of 2,462.

“On the 27th December cholera again appeared in Chittoor. On inquiry I found that a batch of Moplahs arrived here on their way from Árni and Vellore. On the night of the 28th two of the Moplahs were attacked with cholera and died in twenty-four hours: a third was shortly after attacked and died in hospital.

“The next cases occurred in a parcharry from whence it spread through several parts of the town.

“The water-supply of Chittoor is very unsatisfactory: it is chiefly from a river that runs along the town and is open to pollution and is polluted.

“I have taken the means of affording help to all villages and towns where cholera has broken out. Hospital Assistants, when available, were posted to nearly every place where required, and Hospital Assistants already in charge of dispensaries were directed to do all within their power to attend cholera cases in their respective charge: where Hospital Assistants were not available I deputed Vaccinators with the simpler cholera remedies to attend to cases.

“During the year the following Hospital Assistants were on cholera duty:— Second-class Hospital Assistant Chengleroya Moodelliar, No. 1145; Second-class Hospital Assistant Ramasawmy Moodelliar, No. 1129; and Third-class Hospital Assistant S. E. Winslow, No. 375, all of whom worked satisfactorily.

“Ague was common in nearly all the taluks of the district.

“The excessive wet cultivation in and around Chittoor, Gudiyátam, Árni, and several of the smaller towns and villages is, I think, one of the factors, at least, productive of intermittent fever.

“Small-pox prevailed to a serious extent in the district. There were 3,257 deaths from small-pox.

“Very few Vaccinators take a real interest in vaccination. Their pay is small and their work unpopular with the people.

“There are two Deputy Inspectors of Vaccination in the district and the following Vaccinators:—

	NO.
First-class Vaccinators	9
Second-class do.	9
Do. do. for Wálajah Municipality	1
Probationers	4

“During the year the conservancy staff of the towns where there are civil dispensaries has, as a tentative measure, been brought under the Hospital Assistants in charge of the dispensaries, and I think the plan is working well.

“During the year the Vellore and Chittoor circles were amalgamated.

“The dispensaries at Arcot and Kuppam were opened during the year.”

24. ARCOT, SOUTH.—The number of dispensaries in the district was 11, Surgeon J. Kernan, the Acting District Surgeon, makes the following observations in regard to the health of the district:—

“Cholera was prevalent in the district during the whole year, except in the months of April and September, and caused great mortality in the Chidambaram and Cuddalore taluks. The greatest number of deaths from this disease was in the first and last months of the year. Out of 4,538 attacked 3,501 died. Hospital Assistants were sent with medicines to the infected localities.

“Only one minor dispensary has been opened, viz., that at Chengam during the year.”

25. BELLARY.—Surgeon-Major H. G. Archdall, the Civil Surgeon of Bellary, who also exercises medical and sanitary supervision over the district of Anantapur, reports as follows:—

“Judging from other sources than dispensary statistics, I am glad to say that the general health of the public in Bellary and Anantapur districts has on the whole been satisfactory. Cholera made its appearance in an epidemic form in Brucepettah, Harpanahalli, Alúr, and Hadagully in the Bellary district, and in Dharmavaram and Tadpatri in Anantapur.

“At the end of the year there were 20 dispensaries, of which 5 were newly opened, viz., at Siruguppa, Hadagully, and branch dispensary in the Bellary district, and at Hindupur and Dharmavaram in Anantapur district.”

26. CANARA, SOUTH.—Surgeon Lee, the District Surgeon, makes the following observations on the results of the year's work:—

“The year was marked by the widespread prevalence of malarious fevers, the mortality from which greatly exceeded that of the two previous years.

“Large numbers of fever patients resorted to the Local Fund dispensaries for treatment, but many died unaided in distant villages, out of reach of medical relief.

“The total number of deaths from fevers was 10,385, of which 4,227 or 41.26 per cent. were registered in July, August, and September, the period of maximum rainfall.

“The mortality from other causes exceeded that of the three preceding years, as may be seen from the subjoined tables exhibiting the vital statistics of the district for those years as well as for the year under review:—

“Births.

Years.	Population according to census of 1881.	Males.	Females.	Total.	Birth-rate per mille.
1881	959,514	13,040	12,223	25,263	26.33
1882		13,047	12,483	25,530	26.60
1883		13,537	13,074	26,611	27.73
1884		13,823	13,390	27,213	28.36

“Deaths.

Years.	Cholera.	Small-pox.	Fever.	Bowel - complaints.	Suicides.	Accidents.	Wounds.	Snake-bites.	Killed by wild beasts.	All other causes.	Total.	Death-rate per mille.

“The district has again for the second successive year been free from cholera.

“The deaths from small-pox were 677. This disease is generally introduced by coolies returning to their villages from above the Western Ghats.

ANNUAL REPORT ON THE

"Vaccination was carried on as successfully as can be expected as long as the operation remains optional. The following table shows the number of vaccine operations in 1884:—

Number of Vaccine Operations.

	Population.	Total vaccinated.	Successful.	Unsuccessful.	Unknown.	Number vaccinated under 6 years of age.
No. I Circle	601,594	26,515	25,311	540	665	9,001
No. II Circle	354,248	9,892	9,323	294	275	2,898
Total	...	36,307	34,633	834	940	11,899

27. *Chingleput*.—Surgeon Nailer, the District Surgeon, makes the following remarks regarding public health:—

"The general health of the district for the past year has been bad. Cholera, which broke out in the latter part of the previous year, continued well into the first half of the present. It declined in the months of May and June. In July the disease increased to a large extent. After a further period of varying intensity the disease that was abating again increased in the month of December and caused heavy mortality since. In the towns of Conjeeveram, Pulicat, Arni, Pariapolliem, Sriperumbudur, Wajajabad, Nagalapuram, Chingleput, and Madurantakam there was a sharp outbreak; the north and western parts of the district suffered more than the east and south.

"Small-pox also prevailed; the taluk of Saidapet suffering most. In the months of September, October, and November there was a mild general outbreak of ague in the weaver villages near Conjeeveram. The mortality, however, from this was very little."

28. *Coimbatore*.—Surgeon-Major Fitzpatrick, the District Surgeon, reports as follows:—

"During the year under report the general health of the district of Coimbatore compared with the previous year has not been satisfactory.

"The following statement shows the total number of births and deaths for the past five years:—

	1880.	1881.	1882.	1883.	1884.
Total deaths	18,739	21,237	25,953	29,527	32,240
Do. births	32,681	35,052	42,170	41,716	43,633
Death-rate per mille	11.3	12.8	15.6	17.8	19.4
Birth-rate do.	19.7	21.1	25.4	25.2	26.3

"Cholera prevailed throughout the year, more particularly in the months of January, February, March, and December. The disease was more prevalent in the southern division of the district, especially in the villages along the banks of the Amaravati river. The use of new grain, bad food, insufficient clothing, and exposure had a very considerable share in the production of the disease, as mostly the poor classes alone suffered. Extra medical aid was sent to affected localities and cholera medicines were freely distributed to Tahsildars with instructions printed in Tamil. The district authorities spared no exertion to check the spread of the disease. During the year, I visited all the affected taluk head-quarter stations and many villages and hamlets and conferred with the authorities as to the best means of arresting the spread of the disease.

"The following statement shows the deaths from different causes in the district:—

Years.	Cholera.	Small-pox.	Fevers.	Bowel-complaints.	Injuries.	All other causes.	Total.
1880	...	229	9,878	948	477	7,209	18,739
1881	432	505	10,888	1,000	720	7,692	21,237
1882	1,461	2,073	11,225	1,120	598	9,546	25,953
1883	3,089	1,371	12,562	1,356	635	10,521	29,527
1884	3,458	779	12,898	1,832	731	12,492	32,240

"During the year small-pox was prevalent in a very mild form and caused 779 deaths against 1,371 in 1883 and 2,073 in 1882. It prevailed in an epidemic form to a certain extent

CIVIL HOSPITALS AND DISPENSARIES.

xi

in Dhárápura taluk. An extra vaccinator was then temporarily employed for upwards of six months to itinerate in the affected taluk.

"The following statement shows the number of cases vaccinated for the past two years:—

Years.	Total vaccinated.	Successful.	Unsuccessful.	Unknown.
1883	42,300	41,119	551	630
1884	48,808	47,658	660	590

29. *Cuddapah*.—The Civil Surgeon makes the following report:—

"The public health of the district during the year has been comparatively good. Cholera, however, prevailed in an epidemic form in the town of Cuddapah and in some of the taluks of the district during the months of November and December.

"The disease appears to have been brought on, by the pilgrims from Tirupati, where the scourge had been prevailing at the time.

"On the outbreak of the epidemic in the town of Cuddapah, the municipality have, at my suggestion, adopted every possible precautionary measure to arrest the further progress of the disease, by improving the general conservancy and sanitation of the town. All the houses in the infected localities were thoroughly cleaned out by an especial establishment, the houses white-washed and fumigated with sulphur. Particular attention was also paid to the drinking water, and the sale of unwholesome articles of food in the market strictly prohibited. During the prevalence of the epidemic five medical subordinates were deputed to go to the infected localities to afford medical aid to the affected people and attend to the general sanitation of the places."

30. *GANJAM*.—The District Medical officer makes the following remarks:—

"The general health of the district was good. The rainfall, which was abundant, and 10 inches above the average last year, has been 4 inches below the average during the year under review. Considering this, food has been cheap enough.

"Registration of vital statistics is still very defective, but there are signs of improvement in some parts of the district.

"Cholera prevailed to some extent, also small-pox: the figures as far as they are available contrasting favorably with the two preceding years:—

	Number of deaths from	1882.	1883.	1884.
Small-pox	...	2,530	702	348
Cholera	...	1,133	110	80

"When cholera appeared to be threatening to become pretty general, a circular was published in the District Gazette, calling on all revenue and medical officers to give their particular attention to the sanitary condition of villages in their divisions; especially to the subject of drinking water sources, and their reservation; with full instructions of what to do in the way of disinfection, &c. The statistics after this showed an immediate and marked fall in the number of cholera cases, and in many instances infected villages became free from the disease."

31. *GODÁVARI*.—The remarks of the District Surgeon in regard to the health of the district are appended:—

"Deaths.

Diseases.	1881.	1882.	1883.	1884.
Cholera	2	73	7	855
Small-pox	125	127	183	11,325
Fevers	12,018	14,366	14,221	16,857
Bowel-complaints	441	741	717	812
Injuries	552	573	567	494
Other causes	9,783	11,602	12,694	13,325
Total	22,911	27,482	28,389	43,669

"In comparing the registration of deaths for the years 1881, 1882, and 1883, it will be seen that there is a steady increase in the casualties registered. The total number of deaths

or, more correctly speaking, revivals of the disease. The first epidemic broke out in October 1883. This epidemic was for the most part confined to the Tanjore, Kumbakonam, Shiyali, Nannilam, and Mayavaram taluks. The second outbreak or revival of the epidemic commenced in May 1884 and for the most part was confined to the Nannilam, Mannargudi, Tiruturaiundi, and Negapatam taluks, which escaped the first visitation of the disease. It continued until the end of September, when it commenced to decline. The third epidemic broke out in December and continues at the present time. So far the disease is not so widespread as in the epidemic at the same time in 1883.

"The cause of the prevalence of this disease is not far to seek. Unfortunately for this district, the water-supply of all the large towns and villages is obtained from rain-fed or river-fed tanks which are open to contamination and which are polluted in a wholesale manner by the people washing their dirty clothes and bathing in them. I have heard of the clothes of patients who had suffered from this disease being washed in them, and I have no doubt that the tanks from which the water-supply is drawn are poisoned in this way and the disease disseminated. I consider that this district will be liable to outbreaks or visitations of this disease until more wells are dug or constructed and the practice of using tank water for drinking purposes is stopped.

"The branch dispensary in the municipality of Mannargudi was closed on 1st April 1884, as the attendance of patients was small and the community preferred going to the parent dispensary."

40. TINNEVELLY.—Dr. Hyde, the District Surgeon, makes the following report:—

"The total average rainfall as registered in the Collector's office during the year was 35.08 against 31.67 in the preceding year.

"Public health was not satisfactory. Cholera, which commenced in November 1883, was prevalent in a virulent form in the beginning and at the end of the year under report.

"The total number of births, including three municipalities in the district during the year under report, was 47,769, of which 24,567 were males and 23,202 females, while the deaths from all causes amounted to 54,935, being in excess by 16,649 of the number of deaths in the previous year. The ratio of births to population was 28.10 per mille and that of deaths was 32.31 per mille. Of the 54,935 deaths, 16,449 were from cholera, 1,401 from small-pox, 6,449 from fevers, 2,535 from bowel-complaints, and the rest from all other causes.

"Small-pox was more or less prevalent in all the taluks, giving rise to a mortality for the year of 1,401, being 844 in excess of the previous year.

"Fevers also were more prevalent than in the previous year, the mortality under this head exceeding that of 1883 by 511.

"Bowel-complaints.—There was a slight increase of mortality under this head.

"During the year this district would appear to have suffered from two distinct epidemics of cholera, and, as has been before observed on several occasions, the second epidemic has been more severe than the first.

"The first epidemic appears to have originated in the town of Tinnevely in November 1883 in the persons of the wife and child of a Muhammadan who had been on a visit of condolence to some cholera-stricken relatives at Madura, which was then undergoing a visitation of the disease. The disease was most prevalent during this epidemic in the taluks of Tenkasi, Tinnevely, Tenkarai, and Ambasamudram.

"On the 18th July the annual festival of Adoni took place, and it is estimated that about 15,000 pilgrims attended in addition to the usual population of 18,256. A Brahmin pilgrim, who is supposed to have brought the disease with him from Tanjore, was seized with cholera during the night and was dead before morning. The second case was also that of a Brahmin who was staying in a house in the same street as that in which the first case occurred. The disease subsequently spread throughout the town and to the neighbouring taluk of Sankaranai-narkoil, giving rise to a mortality of 176 in the month of August and 201 in September in these two taluks. Though it lulled during the early part of October, it broke out with renewed virulence during the latter part of that month in a group of three villages—Sivagiri, Rajagiri, and Visvanadapur.

"This outbreak was very severe, the people in these villages being said to be in a state of utter panic. Many fled, houses were quite deserted, and labor in the fields was brought to a stand still. The propagation of the disease is attributed by the inhabitants in this case to the unhealthy dampness caused by the unusually heavy rains which fell in October. From these villages it appears to have travelled in the early part of November to Rajapolium and Satur. It culminated in December in a mortality of 4,485 in these taluks and of 9,431 for the whole district.

"These two taluks, therefore, which as before mentioned, suffered the least in the first epidemic, suffered by far the most severely in the second, the mortality in them being nearly as high as all the other taluks put together, amounting to 13.61 per mille of population.

"The dispensary at Virukeralampudur, sanctioned in G.O., No. 1683, dated 6th August 1883, was opened on the 1st March 1884."

41. TRICHINOPOLY.—The District Surgeon, Dr. Nanney, reports as follows:—

"The rainfall was above the average for ten years (35 inches).

"Cholera made its appearance in November, commencing in a sporadic form and then becoming rapidly diffused. The first case was that of a traveller returning from Valanganey

festival. Those attacked were, as a rule, occupants of the dirtiest houses in the towns where filth and overcrowding prevailed.

"I cannot help remarking that impure water plays an important part either as a predisposing or exciting cause, and that this element in Trichinopoly is largely contaminated by sewage matter.

"The special attention of the Commissioners was directed towards increased conservancy and protection by watchmen of the chief water-supply for drinking purposes. The houses were whitewashed and latrines tarred; houses where cases occurred, cleansed and disinfected. The number of cases attacked was 1,193, and out of this 977 proved fatal against 929 attacks with only 480 deaths in 1883.

"Small-pox has not, I am glad to say, been prevalent. There have been a few cases here and there, but it has not appeared in an epidemic form.

"The attention of the municipality is being directed towards the carrying out of a scheme for providing Trichinopoly with a pure water-supply by sinking large wells in the bed of the Cauvery and conveying it from thence in pipes over the town.

"Two dispensaries have been opened during the year—one by Local Fund Board at Lalgudi, the other by the S.P.G. Mission at Putur."

42. VIZAGAPATAM.—The District Surgeon's remarks are appended:—

"The following table shows the amount of rainfall compared with other years:—

Years.	Inches.
1882	47.920
1883	46.725
1884	43.238

"The number of births was 38,340.

"Fevers.—From this cause the enormous number of 18,813 was registered.

"Bowel Disease.—The number of deaths from this class of disease was 312.

"Total number of deaths 23,371.

"No cholera.

"Small-pox prevailed over the whole district throughout the whole year."

C.—FINANCE.

The cash balance at the opening of the year was Rs. 19,947-10-4. Contribution from Government towards the cost of the Medical Administration amounted to Rs. 2,95,820-15-8 and from Local and Municipal Funds to Rs. 4,90,490-10-11. Income from all other sources aggregated to Rs. 84,769-7-8. Thus the total income amounted to Rs. 8,91,028-12-7.

The following table shows the heads of expenditure during the year:—

	RS.	A.	P.
Establishment	4,36,331	1	3
Bazaar medicines	23,357	2	1
European do.	94,264	13	7
Diet of patients	1,31,705	14	11
Miscellaneous charges	70,000	2	0
Buildings and repairs	95,866	7	5
Invested during the year	12,957	2	1
Total	8,68,192	11	5

Cash balance on 31st December 1884 Rs. 22,836-1-2.

The following abstract shows the principal sources of income of the hospitals and dispensaries in 1884 as compared with three previous years:—

	1881.	1882.	1883.	1884.
	RS. A. P.	RS. A. P.	RS. A. P.	RS. A. P.
From Government	2,79,736 0 0	2,73,167 0 6	2,88,944 1 6	2,95,820 15 8
" Municipal and Local Funds	4,62,234 10 7	4,89,672 3 8	4,72,004 3 6	4,90,490 10 11
" Interest on capital	22,903 10 5	18,011 13 5	20,075 7 1	18,516 6 0
" European donations and subscriptions	15,633 13 9	12,381 4 3	11,538 15 2	13,132 2 10
" Native donations and subscriptions.	12,725 0 2	17,828 5 4	11,277 4 2	10,721 4 2
Total	7,93,133 2 11	8,11,060 11 2	8,03,539 15 5	8,28,681 7 7

It will be observed from the above statement that there has been a slight increase (Rs. 7,176-14-2) in the amount of contributions from Provincial Funds. The explanation for such increase has already been afforded in the last annual

registered in 1884 exceeded the number of deaths registered in 1883 by 15,280. The cause of this great increase in the number of deaths was due to the prevalence of small-pox, the number of deaths from this cause alone amounting to over 11,000 more than in the previous years. There was also an increase of 2,636 from fevers. There was also an increase of cholera, bowel-complaints, and other causes.

"The general health of the people during the year was not good.

"Cholera first made its appearance in Ellore on the 28th August 1884 and was imported from Bezvada by canal boat. From Ellore it spread to the adjoining taluk, Bhimavaram, on the 9th September, and then to Rajahmundry taluk and town, after which cases occurred over the whole district. The total number of attacks from 28th August 1884 to the last case, which occurred on 17th December 1884, was 1,237, of which 855 died.

"During the prevalence of cholera three Hospital Assistants were sent to those places infected. The Vaccinator of each taluk also was ordered to suspend his legitimate duties and distribute cholera pills and superintend the sanitary improvements of the villages.

"*Small-pox.*—Deaths from small-pox were reported in every month during the year and from every taluk. The total number of deaths reported was 11,325. The greatest number of deaths was reported in June, July, August, and December, whilst the lowest number occurred, viz., 274, in January.

"In addition to the permanent staff of Vaccinators, 12 temporary Second-class Vaccinators were employed for periods varying from three to eight months.

"There has been no special outbreak of fever in any part of this district. I think the increased number registered is due to more efficient registration.

"*Registration of Births.*—There has been a slight increase in the number registered during the past year, but still the number of deaths during the year exceed the births by 6,509. The number of males born is in excess of that of females by 758. The number of children born dead is 268, of which 105 are males and 163 females."

32. KISTNA.—The District Surgeon's notes on the subject of public health are appended :—

"The general health of the district was indifferent. Malarious fevers were prevalent. Taking the district as a whole, there has been a decided increase in the prevalence of fevers. Quinine distributors were employed during the year, who visited the villages on their several beats and distributed quinine, &c.

"Small-pox was very prevalent in this district during the year; and the type is reported to have been a severe one. Additional Vaccinators were appointed by the Local Fund Board.

"There was an epidemic of cholera, mainly confined to this fort and villages surrounding. The disease then spread to the town, but not to any great extent. Sanitary arrangements were promptly adopted by the municipality; bonfires were lighted; houses ordered to be whitewashed. Special attention was paid by the local authorities to sanitation and prevention of pollution of drinking water throughout the district, and other prophylactic measures against cholera were instituted."

33. KURNOOL.—The District Surgeon makes the following observations on the public health of the district :—

"During the early part of the year under report, malarious fevers prevailed to an alarming extent in some places of the district, notoriously in Cumbum, Nandyal, and Markapur. The effects of this outbreak were felt throughout the year.

"Epidemic cholera showed itself in Sirvel and Pattikonda taluks; in the latter in April and November and in the former in November and December, the first case in the former taluk occurring in the person of an old woman in the village of Nullavagoopally, said to have been imported from Tadpatri. From thence it was carried by a washerwoman into Mootoolore, a village about one and a half miles from the former, and thence by a blacksmith into Narsapuram, a village close by. 28 cases occurred altogether, of which 16 proved fatal. In Pattikonda taluk also the first case was from Tadpatri. It confined itself only to one village called Boorgula."

34. MADURA.—The remarks of the District Surgeon in regard to the public health of the district are appended :—

"The public health during the year has not been as good as usual. Cholera and small-pox were prevalent, chiefly towards the latter part of the year, but not to so great an extent as last year.

"*Madura Town—Cholera.*—The severe outbreak which occurred in October 1883 persisted till March 1884, after which no cases occurred until the 22nd October 1884, when the epidemic again broke out and continued on unto the year 1885. From 1st January 1884 to 9th March, 535 cases occurred, of which 307 died, and from 22nd October 1884 to 31st December, 733 cases occurred, of which 403 died. It is curious that the epidemic in 1884 commenced on exactly the same date as it did in 1883, that is, on 22nd October in each year; but the

epidemic was not so severe this year (1884) as in 1883, 733 people having been attacked from 22nd October 1884, while 1,798 people were attacked during the same period in 1883. The first case was a Muhammadan merchant who came to Madura about a fortnight before his attack from Diindigul. During the outbreak special care was taken to keep the town in as sanitary a condition as possible. Three Hospital Assistants were deputed to attend to any cholera cases which might occur.

"The new water pipes leading from the water works in the middle of the river were displaced by the floods and the supply of water from the works cut off during the latter months of the year. The drainage of the town is being improved gradually; but in such a large town as Madura much necessarily remains to be done.

"*Malarious Fevers* were not as prevalent during the year under report as they have been of late years.

"Three new dispensaries were opened during the year."

35. MALABAR.—Dr. Cook, the District Surgeon, reports as follows :—

"The climate during the year has been much the same as last year. The total rainfall for the district was 1,337.29 inches. Giving an average of 95.52 inches at 14 stations, the maximum fall (at Vayitri) being 152.95 inches, the minimum fall (at Palghat) being 59.57 inches.

"The health of the district has been fair. Cholera appeared in four taluks: 456 deaths have been recorded for the year in Palghat taluk, 137 deaths in Walawanad taluk, 126 deaths in Ponani taluk, and 2 deaths in Ernad taluk. The disease was imported by pilgrims passing to and from the Pulneys.

"Small-pox has been rife all over the district: 4,902 deaths have occurred in the district (exclusive of municipal towns). The greatest number of deaths occurred in Ponani taluk.

"There has been, and is, an epidemic of a most virulent form of fever in the Ernad and Walawanad taluks. It is malarial in its character and remittent in its type.

"There have been 23,847 deaths recorded from fever in the district, of which 9,548 have occurred in Ernad and Walawanad taluks."

36. NELLORE.—The District Medical officer makes the following observations on the state of the public health :—

"Public health of the people was not good during the year in the district generally owing to epidemic prevalence of cholera and small-pox, but was fair in the town of Nellore until the latter months of the year when cholera in a sporadic form appeared in the town.

"Deaths from cholera and small-pox, as registered, were 658 and 1,613 respectively.

"Vital statistics for the past three years.

		1882.	1883.	1884.
Births	...	25,819	27,530	26,141
Deaths	...	15,193	16,346	17,423

37. NILGIRIS.—Surgeon-Major Farquhar, the Senior Medical officer, writes :—

"The health of the Gúdalur district has been on the whole good, excepting that in December a few cases of cholera occurred. One case came under treatment and two other fatal cases were reported. The disease was supposed to be brought from the low country by cartmen whose halting place (for twenty-four hours) is at a bandy-stand near to the estate where the above cases occurred. Steps were taken to arrest the progress of the disease.

"There was a great diminution in the number of cases of malarious disease during the year.

"The health of the Devála district was unsatisfactory during the first half of the year, the number of fever cases being unusually large. There was no epidemic."

38. SALEM.—Surgeon-Major Ratton, the District Surgeon, reports as follows :—

"The public health of the district during the past year was exceptionally good.

"On the 11th October 1884 cholera appeared in the Hosur taluk. From Hosur it spread to Kristnagiri, Dharmapuri, and finally to Salem on the 11th December. It did not occur, however, in severe epidemic form anywhere.

"Owing to the failure of the south-west monsoon rains, the water-supply of the country was very scarce. In consequence of this and some attendant scarcity, fever prevailed a good deal in those months.

"The births registered in the district amounted to 55,298 and 7,161 over 1883, and the deaths to 29,650 and 1,487 over 1883.

"The rainfall registered in the Meteorological Observatory, Salem Town, was 39.34."

39. TANJORE.—The remarks of the District Surgeon (Dr. Ritchie) on the state of the public health of the district are as follows :—

"The public health of the Tanjore district during 1884 was very unsatisfactory, there being a very heavy mortality from cholera in all the taluks. Although this disease was never absent during the year, yet the returns of mortality show that there were three separate epidemics

report, namely that Government has recognized its liability to bear a proportion of the salaries of medical staff lent to local authorities for conducting police and judicial inquiries and attending on Government servants.

The contributions from Local Funds and Municipalities have increased by Rs. 18,486-7-5 as compared with those of last year, and this is chiefly due to the establishment of twelve new dispensaries during the year under review.

The amount of subscriptions and donations of Europeans also increased from Rs. 11,538-15-2 in 1883 to Rs. 13,132-2-10 in 1884, but there was a slight falling off in the amount of native subscriptions. The decrease is not, however, such as to call for any explanation.

The total cost to local authorities for maintaining their civil dispensaries during the year was Rs. 6,40,624-10-9. This does not include the hospitals maintained by Provincial Funds.

The following table shows the cost to local bodies for the last five years :—

Years.	Number of Dispensaries.	Total treated.	Total cost to Local Bodies.	Cost of European and Bazaar Medicines.
1880	218	1,313,304	Rs. 5,25,688 9 3	Rs. 1,05,308 14 8
1881	255	1,449,592	5,56,521 11 10	1,04,040 13 1
1882	275	1,538,576	5,68,490 7 5	1,05,647 15 8
1883	287	1,696,809	5,80,468 6 3	91,605 8 4
1884	299	1,753,898	6,40,624 10 9	91,339 3 8

D.—PRESIDENCY HOSPITALS.

The total number of sick treated during the year in the hospitals of the Presidency town was 102,809. Of these 12,920 were in-patients and 89,907 out-patients. These figures show that there has been a marked increase in the numbers of both classes of patients during the year under review when compared with the results of the previous year.

The health of the Presidency town cannot be said to have been satisfactory. Small-pox, which showed a tendency to increase towards the end of 1883, continued in a severe form for the first four months of 1884. Fevers were generally prevalent, and cholera also prevailed in many localities of the town.

The following table shows the number of in- and out- patients admitted into the various hospitals at Presidency town for the last ten years :—

	1875-76	1876-77	1877	1878	1879	1880	1881	1882	1883	1884	Total.

The number of patients treated in the large Mission dispensary in Black Town increased from 14,770 in 1883 to 14,876 in 1884. Including this number the total number of persons treated at the Presidency town were 117,685.

* Statistics are included in Native Infirmary.

The subjoined table shows the number of admissions into each hospital for the last three years :—

Institutions.	Treated in			Increase over 1883.	Decrease over 1883.
	1882.	1883.	1884.		
Black Town Dispensary	10,248	11,476	10,875	...	601

Total	101,841	104,835	102,509	...	2,026

* Included in Native Infirmary.

The cost of the Presidency hospitals maintained by Provincial Funds was Rs. 2,27,568-0-8. From this will have to be deducted Rs. 9,194-15-10 for hospital stoppages credited to Government, leaving the net expenditure at Rs. 2,18,373-0-10 or Rs. 6,567 less than the actual cost in 1883. This sum, as pointed out in the last report, includes the salaries of the Medical officers connected with Medical education and whose consolidated salaries are charged against the hospitals to which they respectively belong.

The amounts of Rs. 450 and Rs. 200 per mensem respectively on account of the Principal and Professors of the Medical College are, however, debited to Medical College and Schools agreeably to G.O., No. 271, Financial, of 14th February 1881.

The following table shows the actual expenditure in all the Provincial hospitals for the last two years :—

	1883.			1884.			Increase.	Decrease.
	Expenditure.	Hospital Stoppages.	Net Cost.	Expenditure.	Hospital Stoppages.	Net Cost.		
Eye Infirmary	Rs. 27,779 11 10	A. 688 5 0	P. 26,491 6 10	Rs. 24,585 12 6	A. 412 0 8	P. 24,173 11 10	...	2,317 11 0
General Hospital	1,36,104 3 8	6,806 14 7	1,29,337 5 1	1,31,297 14 11	7,327 2 2	1,23,970 12 9	...	5,386 8 4

Total	20,845 3 4	26,946 8 7	6,101 5 3	...

I have the honor to be,

Sir,

Your most obedient servant,

M. C. FURNELL, M.D., F.R.C.S.,
Surgeon-General with the Government of Madras.

10

APPENDIX.

ANANTAPUR DISTRICT.

ANANTAPUR.

Extracts from the Annual Medical Report by Civil Apothecary E. A. HOLMES.

Dispensary Buildings.—In the same state of repair as the previous year.

Most Common Diseases.—Malarial fevers, rheumatic affections, ophthalmia, and ear and skin diseases.

Epidemics.—None.

Attendance of Patients.—69 in- and 3,697 out- patients, against 52 in- and 3,979 out- patients in the previous year, were treated.

General Remarks.—Midwife's services more appreciated. Has attended 57 cases of labor, and also visited outlying villages.

DHARMAVARAM.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
C. RAMASAWMY NAICKER, No. 349.

Dispensary Buildings.—Located in a rented building. Erection of a new building is under contemplation.

Most Common Diseases.—Ague, ophthalmia, ulcers, syphilitic and rheumatic affections.

Epidemics.—Cholera prevailed in the station and its vicinity from the 25th November 1884.

Attendance of Patients.—Dispensary opened on 28th October, since which time 293 out- patients have been afforded relief.

GOOTY.

Extracts from the Annual Medical Report by Second-class Apothecary S. E. CARBAPETT.

Dispensary Buildings.—In good condition.

Most Common Diseases.—Malarious fevers, diseases of the eye, abscess, boils, whitlow, and injuries.

Inspection.—Inspected by the Surgeon-General with the Government of Madras on the 26th July 1884.

Attendance of Patients.—In-patients 52 and out-patients 2,554, against 62 in- and 2,522 out- cases in 1883.

General Remarks.—19 cases attended by the midwife, whose services are appreciated by the people.

HINDUPUR.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
C. M. APPATHORAY MOODELLY, No. 266.

Dispensary Buildings.—Dispensary is rented.

Most Common Diseases.—Fevers, ulcer, and itch.

Attendance of Patients.—Dispensary was opened in November. 2 in- and 157 out- door cases have been treated since.

KALYÁNDRÚG.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
V. PONNOOSAWMY RAJOO, No. 208.

Most Common Diseases.—Ulcers, skin diseases, fevers, ophthalmia, rheumatic affections, and syphilis.

Inspection.—None.

Attendance of Patients.—34 in-patients and 3,046 out-patients, against 71 in- and 3,101 out-door cases in the previous year.

PENUKONDA.

Extracts from the Annual Medical Report by First-class Hospital Assistant
N. PARTHASARATHY MOODELLY, No. 56.

Dispensary Building.—Dispensary is property of Local Funds.

Most Common Diseases.—Malarious fevers, ophthalmia, respiratory, bowel and venereal affections and ulcers.

Inspection.—Not inspected.

Attendance of Patients.—In-patients 79 and out-patients 4,216, against 78 in- and 3,203 out-door cases in the previous year.

TADPATRI.

Extracts from the Annual Medical Report by First-class Hospital Assistant
S. NARAINASAWMY, No. 67.

Dispensary Buildings.—The buildings, though in good order, leak during the rains.

Most Common Diseases.—Fevers, cholera, rheumatism, syphilis, ophthalmia, ear-ache, dysentery, diarrhoea, abscesses, ulcers, and skin diseases.

Epidemics.—An outbreak of cholera occurred in the town in October and continued to the middle of December: 90 attacks and 45 deaths occurred in the town.

Inspection.—Inspected once by the Surgeon-General.

Attendance of Patients.—69 in- and 8,678 out-door cases were treated, against 62 in- and 8,335 out-door in the previous year.

URAVAKONDA.

Extracts from the Annual Medical Report by Second-class Hospital Assistant
N. PUNCHANATHA PILLAY, No. 167.

Dispensary Buildings.—Dispensary is rented.

Most Common Diseases.—Fevers, rheumatism, syphilitic affections, ophthalmia, bowel complaints, and skin diseases. Dispensary opened August 1883.

Inspection.—Nil.

Attendance of Patients.—Out-patients 2,434.

ARCOT, NORTH.

ARCOT.

Extracts from the Annual Medical Report by First-class Hospital Assistant
USMAN KHAN, No. 774.

Dispensary Buildings.—Fair state of repair. The dispensary is a rented building.

Most Common Diseases.—Fevers, rheumatic affections, ophthalmia, ear-ache, diarrhoea, ulcers, and skin diseases.

Epidemics.—Cholera and small-pox were both prevalent in the town and surrounding villages: there were 13 admissions and 3 deaths from the latter.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—The dispensary was opened on the 13th September last; the number treated during the three and a half months of its existence was 1,553.

ÁRNI.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
AMEER HUSSAINE SAIB, No. 201.

Dispensary Buildings.—Repairs needed. The want of a mortuary is much felt.

Most Common Diseases.—Ague, ophthalmia, rheumatism, ear-ache, dyspepsia, ulcers, abscesses, and skin diseases.

Epidemics.—Cholera was prevalent in the early part of the year when 34 cases and 17 deaths occurred. Small-pox was also prevalent.

Inspection.—Inspected twice by the Civil Surgeon.

Attendance of Patients.—6,984 patients were afforded relief, against 8,218 in 1883.

CHITTOOR.

Extracts from the Annual Medical Report by Acting District Surgeon JOHN LANCASTER.

Dispensary Buildings.—In good order.

Most Common Diseases.—Fevers, rheumatic affections, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Malarial fever was very prevalent in the town. The cholera epidemic of 1883 continued till February.

Inspection.—Not inspected.

Attendance of Patients.—334 in- and 11,465 out-door cases have been treated, against 410 in, and 11,214 out-door cases in the previous year.

GUDIYÁTAM.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
MAHOMED ABUZUM, No. 206.

Dispensary Buildings.—A temporary thatched shed for out-patients only. A cook-room is much needed, as well as a mortuary. Sanction has been obtained to erect the latter.

Most Common Diseases.—Fevers, rheumatic affections, ophthalmia, respiratory affections, dysentery, diarrhoea, abscesses, boils, ulcers, and skin diseases.

Epidemics.—Cholera prevailed epidemically in the latter part of the year: 26 cases came under personal treatment, of which number 13 died.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—5,268 have been treated. The dispensary was opened on 27th September 1883.

KÁLAHASTI.

Extracts from the Annual Medical Report by Second-class Hospital Assistant
S. Y. NARRAINSAWMY NAIDU, No. 141.

Most Common Diseases.—Syphilitic and rheumatic affections, injuries, and skin diseases.

Epidemics.—Epidemic of cholera at end of year.

Inspection.—Inspected twice by Civil Surgeon.

Attendance of Patients.—No dispensary in existence prior to 15th September 1883. The number treated during the year was 1,735, all out-door cases.

KUPPAM.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
JAGANATHA PILLAY, No. 301.

Dispensary Buildings.—Present building rented. A new building for the dispensary is near completion.

Most Common Diseases.—Rheumatism, bowel-complaints, and ulcers.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—1,074 patients received relief. The dispensary was opened on 31st July 1884.

PALMANÉR.

Extracts from the Annual Medical Report by First-class Assistant Apothecary
M. DEVANBOO.

Dispensary Buildings.—A new dispensary was erected during the year by the Local Fund Board. The previous dispensary was located in a rented building.

Most Common Diseases.—Fever, rheumatic affections, ophthalmia, ear-ache, respiratory affections, abscesses, boils, ulcers, and skin diseases.

Epidemics.—Measles prevailed to a large extent.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—207 in- and 4,005 out- patients were treated, being 33 in-patients and 168 out-patients less than 1883.

PÓLÚR.

Extracts from the Annual Medical Report by Civil Hospital Assistant
A. DORAISAWMY PILLAY, No. 367.

Dispensary Buildings.—Suitable and in good order.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Twice by the Civil Surgeon of Vellore.

Attendance of Patients.—5,750 out-door cases were treated, against 3,940 in the previous year.

RANIPET.

Extracts from the Annual Medical Report by Apothecary J. CHADWICK.

Dispensary Buildings.—A huge edifice, very leaky, and much in need of repairs. A large outlay of money will be necessary to put it in order. Its present condition was often brought to notice, and it is hoped that something will be done this year.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic in the months of January and February. A special report on the outbreak in Sholinghur was sent in.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—335 in- and 6,991 out- door cases, against 405 in- and 9,408 out-door in 1883. The opening of a new dispensary in Arcot has to a large extent relieved the pressure on the Ranipet Hospital.

TIRUPATI.

Extracts from the Annual Medical Report by First-class Hospital Assistant
P. RAMASAWMY NAYAKAR, No. 57.

Dispensary Buildings.—Present building hired, and unsuitable: a new one is being erected.

Most Common Diseases.—Malarious fevers, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, gonorrhoea, abscesses, boils, ulcers, and skin diseases.

Epidemics.—Cholera broke out in the town on 1st October and lasted three months: 23 cases came under treatment, of which 17 proved fatal.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—6,122 cases were treated. Compared with the previous year there is an increase of 258.

VELLORE.

Extracts from the Annual Medical Report by Surgeon G. L. WALKER.

Most Common Diseases.—Ulcers, malarious fevers, respiratory affections, ophthalmia, and disease of the skin.

Epidemic.—of cholera at beginning and end of year.

Inspection.—Inspected by Surgeon-General and by Sanitary Commissioner.

Attendance of Patients.—441 in- and 20,834 out- door cases have been treated, against 458 in- and 17,668 out- door cases in the previous year.

General Remarks.—Lying-in Hospital—75 women were delivered during the year. The matron, a diplomaed European midwife, is well deserving of praise. She is intelligent, hard-working, and well up in her work.

VENKATAGIRIKOTA.

Extracts from the Annual Medical Report by Hospital Assistant A. VEERASAWMY NAIDOO.

Dispensary Buildings.—In fair order.

Most Common Diseases.—Fever, rheumatic affections, ophthalmia, ear-ache, respiratory affections, liver diseases, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—2,590 against 2,303 of the previous year.

WÁLAJÁPÉT.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
G. MAURIAFFEN, No. 224.

Dispensary Buildings.—Require sundry repairs. The buildings leak considerably.

Most Common Diseases.—Fever, rheumatic affections, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, abscesses, boils, ulcers, and skin diseases.

Epidemics.—Cholera prevailed frequently in the town, but not to a great extent: total number treated was 18 with 11 deaths.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—5,288 out-patients were treated, against 5,340 of the previous year.

WANDIWASH.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
ROYALU NAIDU, No. 251.

Dispensary Buildings.—A rented building. Late dispensary fell in during the late rains. The present one is not suitable.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera prevailed: 32 cases and 15 deaths have been recorded.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—5,336, against 3,944 in the previous year.

ARCOT, SOUTH.

CHENGAM.

Extracts from the Annual Medical Report by Third-class Hospital Assistant Z. LEWIN.

Dispensary Buildings.—A private building with insufficient accommodation; very leaky and needing repairs.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, abscesses, boils, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic in December: 39 cases were treated.

Inspection.—None.

Attendance of Patients.—2,408 cases have been treated since the opening of the institution on the 1st May 1884.

CHIDAMBARAM.

Extracts from the Annual Medical Report by Civil Apothecary G. A. W. VELLOMS.

Dispensary Buildings.—Minor repairs required. In other respects buildings in good order. A compound wall is much needed.

Most Common Diseases.—Ophthalmia, rheumatic affections, ear-ache, abscesses, boils, ulcers, and skin diseases.

Epidemics.—Cholera was prevalent in the early part of the year, re-appeared in June, and continued till August: 360 cases with 182 deaths occurred.

Inspection.—None.

Attendance of Patients.—179 in- and 9,106 out- patients have been treated. Contrasted with the previous year there is an increase of 22 in- and 318 out- patients.

CUDDALORE, NEW TOWN.

Extracts from the Annual Medical Report by Acting Zillah Surgeon J. KERNAN.

Dispensary Buildings.—Need slight repairs and limewashing throughout.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera assumed an epidemic form in January, February, November, and December. Small-pox and measles prevailed slightly.

Inspection.—Not inspected.

Attendance of Patients.—227 in- and 12,179 out- door cases were treated. Contrasted with the previous year there is a decrease of 44 in- and 1,695 out- door cases.

General Remarks.—There has been a decrease of 25 in the number of admissions into the lying-in ward. Among the labor cases attended on at their residences there is an increase of 7 this year.

CUDDALORE, OLD TOWN.

Extracts from the Annual Medical Report by Surgeon J. KERNAN.

Most Common Diseases.—Fever, rheumatic affections, ophthalmia, ulcers, and skin diseases.

Epidemics.—Epidemic cholera prevailed nearly throughout the year.

Inspection.—Not inspected by the Surgeon-General.

Attendance of Patients.—In-door patients slightly increased; falling off in the number of out-patients 7,275, against 8,446 in 1883.

KALLAKURCHI.

Extracts from the Annual Medical Report by Civil Apothecary C. F. P. SEBASTION.

Dispensary Buildings.—Require whitewashing.

Most Common Diseases.—Fever, rheumatic affections, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, abscesses, boils, ulcers, and skin diseases.

Inspection.—Inspected once by the District Surgeon.

Epidemics.—Cholera made its appearance at the close of the year, when about 20 persons fell victims to it.

Attendance of Patients.—89 in- and 4,660 out- door patients were treated. Contrasted with the previous year there is a decrease of 9 in- and 318 out- patients.

PANRUTI.

Extracts from the Annual Medical Report by Hospital Assistant K. KACHIAH.

Dispensary Buildings.—In good state of repair.

Most Common Diseases.—Fever, cholera, rheumatic affections, venereal, ophthalmia, ear-ache, worms, abscesses, boils, ulcers, and skin diseases.

Epidemics.—Cholera prevailed epidemically in November and December, when 81 cases and 20 deaths occurred.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—4,750 patients have been treated, which is 982 less than the previous year.

TINDIVANAM.

Extracts from the Annual Medical Report by Civil Apothecary F. W. HARRIS.

Dispensary Buildings.—In good order.

Most Common Diseases.—Fever, rheumatism, respiratory affections, ophthalmia, ear-ache, abscesses, boils, ulcers, and skin diseases.

Epidemics.—Chicken-pox, measles, and ophthalmia prevailed in an epidemic form in the town.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—165 in- and 6,509 out- patients have been treated. There is an increase of 46 in- and 456 out- patients compared with 1883.

TIRUKOILUR.

Extracts from the Annual Medical Report by Civil Apothecary S. CHANDRASAKARA MOODELIAR.

Dispensary Buildings.—In good condition.

Most Common Diseases.—Fever, rheumatic and respiratory affections, ophthalmia, ear-ache, dysentery, diarrhoea, abscesses, boils, ulcers, and skin diseases.

Epidemics.—Cholera prevailed epidemically in the early and latter part of the year: 125 cases with 49 deaths occurred. Small-pox also prevailed in the month of March.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—5,294 in- and out- patients were treated during the year. Compared with the past year there is a decrease of 908 patients. The decrease is put down to the small number of eye cases and skin diseases that prevailed.

General Remarks.—The midwife attached to this institution attended upon 18 parturient women.

TIRUVANNAMALAI.

Extracts from the Annual Medical Report by Civil Apothecary D. JOHN PILLAI.

Dispensary Buildings.—In good repair.

Most Common Diseases.—Malarious fevers, rheumatic and respiratory affections, ophthalmia, ear-ache, dysentery, abscesses, boils, ulcers, and skin diseases.

Epidemics.—Cholera prevailed in the town, but not to a great extent.

Inspection.—Inspected by the District Surgeon on 7th February.

Attendance of Patients.—81 in- and 3,486 out- patients were treated. Contrasted with the previous year there is a decrease of 26 in-, but an increase of 1,715 among out- patients.

VILLUPURAM.

Extracts from the Annual Medical Report by Civil Apothecary S. MUTHUSAWMY.

Dispensary Buildings.—In good order.

Most Common Diseases.—Fever, cholera, rheumatism, ophthalmia, ear-ache, worms, abscesses, boils, ulcers, and skin diseases.

Epidemics.—In the early part of the year cholera prevailed, when 10 cases and 4 deaths occurred; again in the latter part of the year 97 cases with 37 deaths occurred among out-cases: 3 cases were admitted into hospital, of which number 2 died. These are cases that were treated by the Apothecary attached to the dispensary. In addition several cases of cholera were treated by the Hospital Assistant attached to the Sub-Collector's establishment.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—72 in- and 4,839 out- patients were treated during the year. Compared with the previous year there is a decrease of 3 in- and 338 out- patients.

VRIDDHACHALAM.

Extracts from the Annual Medical Report by Civil Apothecary R. FRANKLIN.

Dispensary Buildings.—The roof of the dispensary requires repairs and the walls white-washing. The two thatched sheds for accommodating contagious diseases were blown down during a gale of wind. The erection of new ones has been sanctioned.

Most Common Diseases.—Fever, rheumatic and respiratory affections, ophthalmia, ear-ache, dysentery, diarrhoea, worms, abscesses, boils, ulcers, and skin diseases.

Epidemics.—Cholera prevailed almost throughout the year and small-pox to a slight extent.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—113 in- and 6,435 out- cases were treated. Contrasted with the past year there is an increase of 11 in- and 1,093 out- patients.

General Remarks.—The total number of cases attended to by the native midwife is 56. One of them required instrumental interference, but terminated fatally. The midwife being a successful woman has made herself very popular.

BELLARY DISTRICT.

ADONI.

Extracts from the Annual Medical Report by Civil Apothecary GOVINDARAJULU NAIDU.

Dispensary Buildings.—In excellent order.

Most Common Diseases.—Ague, ophthalmia, rheumatism, inflammation of the ear, diseases of the digestive and respiratory system, and skin diseases.

Epidemics.—Small-pox and cholera were epidemic to a slight extent.

Inspection.—None.

Attendance of Patients.—55 in- and 14,909 out- patients were treated. Contrasted with the previous year there is a decrease of 1 in- and an increase of 188 out- patients.

ALUR.

Extracts from the Annual Medical Report by Civil Apothecary A. GALLYOT.

Dispensary Buildings.—In good order.

Most Common Diseases.—Malarious fevers, ophthalmia, rheumatism, ulcers, and boils.

Epidemics.—Small-pox prevailed: 56 deaths from it were reported.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—42 in- and 2,827 out- patients have been treated. There has been a decrease of 18 among the in-patients and an increase of 238 among the out-patients compared with the previous year.

BELLARY.

Extracts from the Annual Medical Report by Surgeon-Major H. G. ARCHDALL.

Dispensary Buildings.—A spacious and splendid building, a gift by Mr. A. Sabapathy Moodelly, is now almost ready for occupation.

Most Common Diseases.—Fever, cholera, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—Cholera broke out epidemically in July and lasted upwards of a month: 152 attacks with 65 deaths have been recorded.

Inspection.—Inspected by the Surgeon-General.

Attendance of Patients.—349 in- and 5,842 out- door cases, against 453 in- and 6,108 out-door cases in the previous year.

BELLARY BRANCH.

Extracts from the Annual Medical Report by Surgeon-Major H. G. ARCHDALL.

Most Common Diseases.—Fever, rheumatic, respiratory, and abdominal affections.

Epidemic.—of small-pox at end of year.

Inspection.—Inspected by the Surgeon-General.

Attendance of Patients.—Dispensary opened during the year. 4,959 out-door cases have been treated since its establishment.

HARPANAHALLI.

Extracts from the Annual Medical Report by First-class Hospital Assistant J. RAMASAWMY NAIDU, No. 41.

Dispensary Buildings.—The roof of the main building was entirely removed and a substantial terraced one put on. The out-houses were repaired. A wooden gate is being constructed for the compound wall.

Most Common Diseases.—Fever, rheumatic affections, ophthalmia, respiratory affections, dysentery, diarrhoea, ulcers, and skin diseases.

Epidemics.—Cholera occurred in a sporadic form in the month of May.

Attendance of Patients.—7 in- and 3,121 out- patients have been treated, compared with 21 in- and 3,452 out- patients in 1883.

HOSPET.

Extracts from the Annual Medical Report by Civil Apothecary E. STOCKING.

Dispensary Buildings.—In good order. A store-room and a contagious disease shed are needed.

Most Common Diseases.—Ophthalmia, malarious fevers, skin diseases, ulcers, rheumatic and syphilitic affections.

Epidemics.—Cholera broke out in Hospet and the surrounding villages in the month of June. The total number of cases treated in and out of hospital was 25, out of which 5 died.

Inspection.—Inspected twice during the year by the District Surgeon.

Attendance of Patients.—60 in- and 5,663 out- patients have been treated. There is a considerable decrease this year in the number treated, viz., 21 among the in- and 1,164 among the out- patients. The decrease is owing to fevers having been less prevalent during the year.

HADAGALLY.

Extracts from the Annual Medical Report by Hospital Assistant S. ANANTHIAH NAIDU.

Dispensary Buildings.—In fair condition. Ventilation not satisfactory.

Most Common Diseases.—Ophthalmia, syphilis, boils, ulcers, and itch.

Epidemics.—Cholera was epidemic in the surrounding villages: there were 924 attacks and 264 deaths.

Inspection.—Nil.

Attendance of Patients.—208 out-patients were treated since the opening of the dispensary on the 29th October last.

KUDLIGI.

Extracts from the Annual Medical Report by Second-class Hospital Assistant
SYED ABDUOR RAHAMAN, No. 1029.

Dispensary Buildings.—Capacious, but not properly ventilated.

Most Common Diseases.—Diseases of stomach and bowels, ophthalmia, skin diseases, and malarious fevers.

Epidemics.—None.

Inspection.—None.

Attendance of Patients.—832 out-patients were treated, being 156 in excess of 1883.

KAMPLI.

Extracts from the Annual Medical Report by Civil Apothecary D. C. DEROZARIO.

Dispensary Buildings.—The dispensary is a rented one and has ample accommodation for out-patients: in good repair.

Most Common Diseases.—Fever, rheumatic and syphilitic affections, ulcers, and skin diseases.

Epidemics.—Cholera was twice epidemic, viz., in the months of January and June: 20 cases came under treatment, 10 of which died.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—2,686 out-patients have been treated. As the dispensary was opened on the 1st September 1883 the attendance of patients is not contrasted.

RAYADRUG.

Extracts from the Annual Medical Report by Civil Apothecary H. D'ROZARIO.

Dispensary Buildings.—Some improvements have been made during the year and it has now four rooms, each 8 x 10. There are no out-houses. The Local Fund Board has sanctioned Rs. 2,500 for the construction of a new building.

Most Common Diseases.—Fever, neuralgia, bronchitis, ophthalmia, rheumatism, dysentery, diarrhoea, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—2,304 out-patients have been treated. As the dispensary was opened on the 1st September 1883 the attendance of patients is not contrasted.

SANDUR.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
T. M. LUKSHMIPATHI NAIDU, No. 229.

Dispensary Buildings.—In good order.

Most Common Diseases.—Fever, ophthalmia, ulcers, and skin diseases.

Epidemics.—Small-pox was prevalent in the early part of the year, and a case of sporadic cholera occurred at the end of the year.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—2,678 out-patients were treated. Contrasted with the previous year there is an increase of 731.

SIRIGUPPAH.

Extracts from the Annual Medical Report by Second-class Hospital Assistant
T. KUNNIAH NAIDOO, No. 132.

Dispensary Buildings.—The dispensary is a rented native building which is in need of alterations and repairs. The Local Fund Board contemplates building a dispensary, for which the sum of Rs. 2,500 has been sanctioned.

Most Common Diseases.—Fever, ophthalmia, dysentery, diarrhoea, gonorrhoea, ulcers, and itch.

Epidemics.—None.

Inspection.—None.

Attendance of Patients.—824 out-patients were treated during the four months the dispensary was opened.

CANARA, SOUTH.

BANTVAL.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
GOVINDEN NAIR, No. 231.

Dispensary Buildings.—A new building and the property of the Local Fund Board.

Most Common Diseases.—Fever, rheumatic and respiratory affections, worms, abscesses, boils, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—70 in- and 2,169 out- patients were treated, against 112 in- and 2,331 out- patients in 1883.

COONDAPOOR.

Extracts from the Annual Medical Report by Civil Apothecary G. GASCOYNE.

Dispensary Buildings.—The main building in good repair. The latrine tumbled down during the last monsoon.

Most Common Diseases.—Malarious and other fevers, rheumatic and syphilitic affections, anaemia, dropsy, ear-ache, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, boils, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—55 in- and 7,681 out- patients have been treated. Contrasted with the previous year there is an increase of 6 in-patients and 2,947 out-patients, a marked increase of the latter, due almost entirely to malarious fevers.

KARKUL.

Extracts from the Annual Medical Report by Civil Apothecary B. RAGAVENDRA ROW.

Dispensary Buildings.—In good repair. A store-room and bath-room are much needed.

Most Common Diseases.—Malarious and other fevers, rheumatic, syphilitic, and respiratory affections, worms, bowel-complaints, and skin diseases.

Epidemics.—None.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—A large increase in- both the in- and out- door patients: 67 of the former and 2,807 of the latter have been treated, against 40 in- and 990 out- patients in the previous year. The increase is due to the prevalence of malarious fevers during the greater part of the year.

KÁSARAGÓD.

Extracts from the Annual Medical Report by Civil Apothecary THOMAS KORAH.

Dispensary Buildings.—In good order.

Most Common Diseases.—Malarious fevers, rheumatism, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—64 in- and 3,358 out- cases have been treated, against 25 in- and 3,759 out- patients in 1883.

LACCADIVE ISLAND.

Extracts from the Annual Medical Report by Civil Hospital Assistant SYED LAUL, No. 234.

Dispensary Buildings.—The flooring is in need of repairs and the walls require white-washing.

Most Common Diseases.—Rheumatism, ophthalmia, worms, and skin diseases.

Epidemics.—Measles has been prevailing since October.

Inspection.—None.

Attendance of Patients.—390 out-patients were treated, against 201 in 1883.

General Remarks.—The islanders scarcely resort to the dispensary for treatment, and if they do at all it is only in the chronic stage of disease. The moneygar pretends to be a medical man and invites the patients to come to him for treatment; this has caused the attendance to fall short since his arrival in the island.

MANGALORE.

Extracts from the Annual Medical Report by District Surgeon W. A. LEE.

Dispensary Buildings.—Not in good order: rain penetrates during the monsoon and causes much inconvenience and discomfort to patients.

Most Common Diseases.—Fever, rheumatism, syphilis, respiratory affections, worms, and ulcers.

Epidemics.—Whooping-cough was very prevalent among the infantile population during the latter half of the year.

Inspection.—None.

Attendance of Patients.—445 in- and 9,208 out- door cases were treated, against 509 in- and 8,045 out- door cases in the previous year.

General Remarks.—The number of labor cases attended to by the midwife shows an increase, and her services are generally in request by the more intelligent inhabitants of the town.

PUTHUR.

Extracts from the Annual Medical Report by Civil Apothecary F. X. REGO.

Dispensary Buildings.—In good state of repair and well suited for the purpose.

Most Common Diseases.—Ague, rheumatism, diarrhoea, worms, and itch.

Epidemics.—None.

Inspection.—Inspected twice by the District Medical Officer.

Attendance of Patients.—58 in- and 4,495 out- patients were treated, against 21 in- and 1,930 out- patients in 1883.

UDIPI.

Extracts from the Annual Medical Report by Second-class Hospital Assistant G. NARAYANASAWMY NAIDU, No. 86.

Dispensary Buildings.—A store-room for medicines, &c., has been sanctioned, but its construction has not yet commenced.

Most Common Diseases.—Malarious and other fevers, rheumatic and respiratory affections, dysentery, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—Small-pox has been prevailing since June.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—53 in- and 5,093 out- cases were afforded relief, against 57 in- and 3,073 out- cases in 1883.

CHINGLEPUT DISTRICT.

CHINGLEPUT.

Extracts from the Annual Medical Report by Surgeon H. A. F. NAILER.

Dispensary Buildings.—In good state of repair.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera has prevailed more or less throughout the year in the district. In the town and suburbs 34 cases and 15 deaths occurred.

Inspection.—No inspection by Surgeon-General.

Attendance of Patients.—367 in- and 8,873 out- door cases were treated, against 294 in- and 10,450 out- door in the previous year.

CONJEEVERAM.

Extracts from the Annual Medical Report by Civil Apothecary P. B. SUMBUNTHA MOODELLAR.

Dispensary Buildings.—Repaired during the year and in a very satisfactory condition.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, dropsy, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Small-pox prevailed throughout the year: 122 deaths were recorded under this head, against 46 in the previous year. There were three outbreaks of cholera, and the epidemic still continues. 630 attacks and 258 deaths were reported in the town. 440 cases came under personal treatment, of which number 146 died.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—281 in- and 18,900 out- door cases were treated, against 262 in- and 17,798 out- door cases in the previous year.

MADURÁNTAKAM.

Extracts from the Annual Medical Report by Second-class Hospital Assistant P. T. COLUNDASAWMY PILLAY, No. 160.

Dispensary Buildings.—In good order.

Most Common Diseases.—Malarious fevers, cholera, rheumatic and respiratory affections, ophthalmia, ear-ache, dysentery, worms, abscesses, boils, ulcers, and skin diseases.

Epidemics.—Cholera and small-pox were both epidemic during the year.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—6,066 out-cases were afforded relief, against 6,892 in 1883.

General Remarks.—A nurse has been employed since the 23rd October 1884, and has conducted two labor cases in family houses.

NÁGÁLAPURAM.

Extracts from the Annual Medical Report by Second-class Hospital Assistant
A. GOORONATHA MOODELLIAR, No. 1134.

Dispensary Buildings.—Located in the taluk cutcherry. Have been repaired and white-washed during the year.

Most Common Diseases.—Fever, cholera, rheumatic and respiratory affections, ophthalmia, ear-ache, diarrhoea, dysentery, worms, abscesses, boils, ulcers, and skin diseases.

Epidemics.—Cholera has been prevalent since September: 190 cases occurred, of which 105 proved fatal. Small-pox prevailed to a slight extent at the beginning of the year.

Inspection.—Inspected three times by the District Surgeon.

Attendance of Patients.—The dispensary was opened on the 28th September 1883. 3,103 out-cases were afforded relief during the year.

PONNERI.

Extracts from the Annual Medical Report by Civil Hospital Assistant
B. LUTHERAH NAIDU, No. 192.

Dispensary Buildings.—Small, unsuitable, and in a shaky state. Petty repairs have been made.

Most Common Diseases.—Fever, cholera, rheumatism, ophthalmia, ear-ache, dysentery, diarrhoea, worms, abscesses, boils, ulcers, and skin diseases.

Epidemics.—Small-pox and chicken-pox prevailed to a slight extent. Cholera was twice epidemic during the early and latter parts of the year.

Inspection.—Inspected four times by the District Surgeon.

Attendance of Patients.—4,599 out-cases have been treated, against 4,860 in 1883.

POONAMALLEE.

Extracts from the Annual Medical Report by First-class Hospital Assistant
T. VENERAGAVALOO NAIDU, No. 112.

Dispensary Buildings.—In good order, and have sufficient accommodation.

Most Common Diseases.—Fever, rheumatic affections, ear-ache, respiratory diseases, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, boils, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic: 36 attacks with 15 deaths occurred in the town. In the neighbouring villages 169 attacks with 71 deaths occurred.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—5,684 out-cases were treated, against 6,079 in the year 1883.

SAIDÁPET.

Extracts from the Annual Medical Report by Civil Apothecary SYED M. ISMAIL.

Dispensary Buildings.—The building was whitewashed and minor repairs made. The main roof of the building leaks. Accommodation insufficient. A better building should be provided.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory diseases, diarrhoea, worms, abscesses, boils, ulcers, and skin diseases.

Epidemics.—Cholera was twice epidemic in the early and latter parts of the year. Altogether 101 cases occurred with 61 deaths; 51 came under personal treatment at the hospital.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—10,138 cases were treated, against 11,141 in 1883.

General Remarks.—The native midwife has conducted 12 cases, against 8 in the previous year.

SAINT THOMAS' MOUNT.

Extracts from the Annual Medical Report by Brigade-Surgeon C. T. EVES.

Dispensary Buildings.—In good order.

Most Common Diseases.—Inflammation of the external ear, ulcer, respiratory affections, and worms.

Epidemics.—An outbreak of cholera occurred among the civil population on 11th September and ceased on the 24th October. Number of attacks in the bazaar 19, and deaths 10. Nothing special was learnt as to the origin of the disease.

Attendance of Patients.—27 in- and 3,452 out- patients were afforded relief, against 26 in- and 3,633 out- patients in the previous year.

SEMBIUM.

Extracts from the Annual Medical Report by Hospital Assistant M. VENCATASAWMY NAIDOO.

Dispensary Buildings.—The want of a dead-house is much felt. The buildings are in good order but damp.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory diseases, dysentery, diarrhoea, abscesses, boils, and skin diseases.

Epidemics.—None.

Inspection.—Inspected three times by the District Surgeon.

Attendance of Patients.—7,675 out-cases were treated, against 7,207 in the previous year.

SRIPERUMBUDUR.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
PETER SIMON.

Dispensary Buildings.—In good state of repair: a dead-house is required.

Most Common Diseases.—Fever, cholera, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, abscesses, boils, ulcers, and skin diseases.

Epidemics.—Cholera has been prevalent more or less throughout the year in the adjacent villages: 25 fatal cases occurred in the town.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—The attendance of out-patients is 5,835, against 6,238 of the previous year. The decrease is owing to the frequent absence from the station of the Medical Subordinate on cholera duty.

SUTHIAVADOO.

Extracts from the Annual Medical Report by First-class Hospital Assistant
A. MANICKUM PILLAY.

Dispensary Buildings.—A rented thatched building, which was much damaged during the heavy storm of November last. It is at present undergoing repairs. The dispensary for the time being is located in the Sub-Magistrate's Court, which is a pukka and suitable building.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory diseases, diarrhoea, abscesses, boils, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—4,043 out-patients were treated, against 3,745 in the previous year.

TIRUPÓRÚR.

Extracts from the Annual Medical Report by First-class Hospital Assistant
C. T. VENCATAROYLLO NAIDOO, No. 42.

Dispensary Buildings.—The buildings require whitewashing and minor repairs.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, diarrhoea, abscesses, boils, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic for several months: 45 attacks and 17 deaths were recorded.

Inspection.—Inspected three times by the District Surgeon.

Attendance of Patients.—2,928 out-cases were treated, against 3,166 in 1883.

TIRUVALLÚR.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
C. NARASIMMOOLOO NAIDU, No. 191.

Dispensary Buildings.—In good order.

Most Common Diseases.—Fever, rheumatism, syphilitic affections, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, boils, ulcers, and skin diseases.

Epidemics.—Cholera was twice epidemic during the year: 58 cases and 25 deaths were recorded. Small-pox was prevalent in the early part of the year.

Inspection.—Visited twice by the District Surgeon.

Attendance of Patients.—4,831 out-patients were treated, against 5,028 in 1883.

UTRAMALLUR.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
C. ERUSAPPA MOODELLIAR, No. 202.

Dispensary Buildings.—Unsuitable.

Most Common Diseases.—Ophthalmia, ear-ache, respiratory affections, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera prevailed to a slight extent.

Inspection.—Inspected three times by the District Surgeon.

Attendance of Patients.—4,073 cases were treated, against 1,391 in the previous year.

COIMBATORE DISTRICT.

ARAVAKURCHI.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
A. PONNOOSAWMY PILLAI, No. 195.

Dispensary Buildings.—A rented building, which is in need of repairs.

Most Common Diseases.—Fever, cholera, rheumatism, syphilitic affections, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic in the early and latter parts of the year in the town and surrounding villages: 61 cases came under treatment, of which number 22 proved fatal. Small-pox, chicken-pox, and measles also were prevalent.

Inspection.—Visited once by the District Medical Officer.

Attendance of Patients.—3,309 out-cases were treated, against 1,280 in 1883.

BHAVÁNI.

Extracts from the Annual Medical Report by Civil Apothecary P. MADAVAROVEN.

Dispensary Buildings.—In a tolerably good state of repair. The present cook-room is in a dilapidated state and a new one is needed.

Most Common Diseases.—Fever, rheumatic affections, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera broke out in an epidemic form in the early part of the year: 42 cases occurred and 13 deaths.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—9 in- and 4,112 out- cases were treated, against 56 in- and 4,818 out- cases in 1883.

COIMBATORE.

Extracts from the Annual Medical Report by Surgeon-Major J. F. FITZPATRICK, M.D.

Dispensary Buildings.—In fair state of repair. The latrines are about being repaired. A pukka tiled contagious ward is to be erected when funds are available.

Most Common Diseases.—Fever, rheumatism, syphilis, anæmia, dropsy, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, liver, spleen, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic at the beginning of the year, causing 74 deaths. Small-pox also prevailed: 29 deaths have been registered.

Inspection.—Inspected by the Surgeon-General.

Attendance of Patients.—440 in- and 27,043 out- door cases have been treated, against 538 in- and 25,442 out- door cases in 1883.

DHÁRÁPURAM.

Extracts from the Annual Medical Report by Civil Apothecary RAJARAM NAIDOO.

Dispensary Buildings.—In want of repair.

Most Common Diseases.—Fever, cholera, rheumatism, syphilitic affections, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera has been epidemic twice, viz., in the early and latter parts of the year. 174 cases came under treatment, of which number 44 proved fatal.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—63 in- and 4,421 out- cases were treated, against 67 in- and 5,586 out- cases in 1883.

ERODE.

Extracts from the Annual Medical Report by Civil Apothecary C. R. D'SILVA.

Dispensary Buildings.—In good state of repair.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Small-pox prevailed in the town: 34 cases altogether were registered. Cholera was epidemic: 21 attacks and 6 deaths have been registered.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—7,480 out- and 110 in- door cases were treated, against 7,659 out- and 120 in- door cases.

KARÚR.

Extracts from the Annual Medical Report by Civil Apothecary W. BAZELY.

Dispensary Buildings.—In good order.

Most Common Diseases.—Fever, rheumatic and syphilitic affections, scrofula, anæmia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera broke out in the town in the month of December: the number of cases recorded is 65 with 34 deaths. 34 of these cases came under treatment at the dispensary, 15 of which number died.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—96 in- and 6,720 out- cases were treated, against 78 in- and 7,570 out- cases in 1883. The decrease in the out-cases is owing to a branch dispensary having been opened out a few miles from Karúr, and to the smaller prevalence of ophthalmia and cholera this year.

KOILLEGAL.

Extracts from the Annual Medical Report by Civil Apothecary A. JESUDASEN.

Dispensary Buildings.—Accommodation for both in- and out- patients very limited.

Most Common Diseases.—Fever, rheumatic and syphilitic affections, ophthalmia, ear-ache, respiratory affections, worms, spleen disease, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—37 in- and 4,415 out- cases were treated, against 19 in- and 4,554 out- cases in 1883.

METTUPALAIYAM.

Extracts from the Annual Medical Report by Civil Apothecary D. B. GAMBLE.

Dispensary Buildings.—A new dispensary was erected and occupied on the 22nd October 1884. There is no accommodation for in-door patients: this is much felt, as a large number of cases are sent from the plantations for treatment.

Most Common Diseases.—Fever, rheumatic and syphilitic affections, anaemia, ophthalmia, ear-ache, dysentery, diarrhoea, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera made its appearance in the town in December, when 14 cases and 7 deaths occurred.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—48 in- and 5,502 out- cases have been treated, against 109 in- and 5,300 out- cases in 1883.

PALLADAM.

Extracts from the Annual Medical Report by Civil Apothecary ECCADU ANNASAWMY MUDALI.

Dispensary Buildings.—Require minor repairs.

Most Common Diseases.—Fever, rheumatic and respiratory affections, ophthalmia, ear-ache, abscesses, ulcers, and skin diseases.

Epidemics.—None in the town. Cholera prevailed in all the surrounding villages.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—31 in- and 2,517 out- cases have been treated, against 25 in- and 1,852 out- cases in 1883.

POLLACHI.

Extracts from the Annual Medical Report by Assistant Apothecary R. C. D. PRINCE.

Dispensary Buildings.—At present undergoing repairs and whitewashing.

Most Common Diseases.—Fever, rheumatic, syphilitic, and respiratory affections, ophthalmia, ear-ache, dysentery, diarrhoea, worms, spleen diseases, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera prevailed in the early and latter parts of the year: 99 cases occurred with 58 deaths. Small-pox was epidemic in the town and villages: 166 cases and 53 deaths were reported by the village officials.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—377 in-door and 14,174 out-door patients were treated. Contrasted with the previous year there is a decrease of 12 in-door and an increase of 182 out-door patients. Of the in-door patients 42 were self-dieting.

General Remarks.—The native midwife attached to the lying-in ward has attended on 7 in- and 31 out- door cases, against 13 in- and 14 out- door cases in the previous year.

SATYAMANGALAM.

Extracts from the Annual Medical Report by Civil Apothecary T. BALAKRISHNAYYA NAIDU.

Dispensary Buildings.—In a dilapidated condition and require thorough repairs. The buildings are unfitted for a hospital: this has been fully admitted by the Local Fund Board, who are about to take the necessary steps for the erection of another building.

Most Common Diseases.—Fever, rheumatic, syphilitic, and respiratory affections, ophthalmia, ear-ache, dysentery, diarrhoea, abscesses, ulcers, and skin diseases.

Epidemics.—None in the town, but has been twice epidemic in the taluk.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—36 in-door and 4,446 out-door cases were treated, against 58 in- and 5,573 out- door cases in 1883.

UDAMALPET.

Extracts from the Annual Medical Report by Civil Apothecary H. GONSALVEZ.

Dispensary Buildings.—The flooring is worn out: this has been brought to the notice of the Local Fund Board, Hospital Committee, and visitors to the hospital by the District Medical Officer, but no action has been taken up to date to repair it.

Most Common Diseases.—Fever, cholera, rheumatic, syphilitic, and respiratory affections, ophthalmia, ear-ache, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera appeared in the month of December and is still prevailing.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—85 in-door and 4,388 out-door cases were treated. Compared with the last year there is an increase of 4 in- and 862 out- door cases.

CUDDAPAH DISTRICT.

BADVEL.

Extracts from the Annual Medical Report by Civil Apothecary B. COLACO.

Dispensary Buildings.—Require some repairs. The roof of the cook-house fell down during the last monsoon and is about being repaired.

Most Common Diseases.—Fever, rheumatic, syphilitic, and respiratory affections, ophthalmia, ear-ache, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—21 in-door and 4,821 out-door patients were treated, against 15 in- and 6,242 out- door patients in 1883. The decrease is partly due to the healthiness of the seasons and partly to the abolition of the local Munsif's Court which caused a withdrawal of many vakeels and court officials.

CUDDAPAH.

Extracts from the Annual Medical Report by Native Surgeon M. IYASAWMY.

Dispensary Buildings.—In excellent condition.

Most Common Diseases.—Ague, cholera, rheumatic and syphilitic affections, and ophthalmia.

Epidemics.—Cholera prevailed in an epidemic form in the months of November and December. There were altogether 377 attacks and 158 deaths.

Attendance of Patients.—12,447 extern- and 400 intern- patients were treated, showing a decrease of 2,955 extern- and an increase of 19 intern- patients when compared with the previous year.

JAMMALAMADUGU.

Extracts from the Annual Medical Report by Civil Apothecary
P. PARTHASARADHY NAIDU.

Dispensary Buildings.—Located in a special building: a ward for two beds and a cook-room are being constructed.

Most Common Diseases.—Fever, rheumatic, syphilitic, and respiratory affections, anæmia, ophthalmia, ear-ache, worms, gonorrhœa and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera and small-pox prevailed to a slight extent.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—4,601 out-door cases were attended to, against 4,523 in 1883.

KADIRI.

Extracts from the Annual Medical Report by Second-class Hospital Assistant
D. RAJAINTHURM, No. 90.

Dispensary Buildings.—Require a good deal of repair, as a portion of it is in a dangerous condition.

Most Common Diseases.—Fever, rheumatic, syphilitic, and respiratory affections; ophthalmia, ear-ache, dysentery, diarrhœa, worms, gonorrhœa and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—5,291 out-door cases were treated, against 5,137 in 1883.

MADANAPALLE.

Extracts from the Annual Medical Report by Apothecary T. WARD.

Dispensary Buildings.—Require repair. The Local Fund Engineer has been requested to do what is necessary.

Most Common Diseases.—Fever, rheumatic, syphilitic, and respiratory affections, anæmia, ophthalmia, ear-ache, dysentery, diarrhœa, worms, spleen disease, gonorrhœa and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—347 in- and 8,648 out- cases have been treated, against 370 in- and 7,034 out-cases in the previous year.

PILÉR.

Extracts from the Annual Medical Report by Second-class Hospital Assistant
P. JANAKIRAM PILLAY, No. 102.

Dispensary Buildings.—Located in the travellers' bungalow and require some repairs.

Most Common Diseases.—Fever, rheumatic and respiratory affections, ophthalmia, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—3,067 out-door patients were treated, against 2,551 in the previous year.

PRODDUTUR.

Extracts from the Annual Medical Report by Civil Apothecary W. J. J. FREER.

Dispensary Buildings.—In good order. A well in the compound is much needed.

Most Common Diseases.—Fever, rheumatic, syphilitic, and respiratory affections, ophthalmia, ear-ache, dysentery, diarrhœa, worms, gonorrhœa and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Small-pox prevailed in a mild form.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—7 in- and 4,958 out- door cases have been treated, against 4 in- and 4,773 out- cases in the previous year.

PULIVENDLA.

Extracts from the Annual Medical Report by Civil Apothecary C. O. WATKINS.

Dispensary Buildings.—The buildings have been put into good condition since last report. Three thatched sheds, which were kept for special cases, and the thatched latrines have tumbled down.

Most Common Diseases.—Fever, rheumatic and respiratory affections, ophthalmia, ear-ache, diarrhœa, gonorrhœa and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—4,795 out-door cases came under treatment, being 355 over that of the previous year.

PULLAMPET.

Extracts from the Annual Medical Report by Civil Apothecary
KARI THAKKIKKA SIMHACHARI.

Dispensary Buildings.—Slight repairs required.

Most Common Diseases.—Fever, rheumatic, syphilitic, and respiratory affections, ophthalmia, ear-ache, dysentery, gonorrhœa and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera has been prevailing during the last two or three months.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—14 in- and 4,448 out- door patients have been treated, against 8 of the former and 4,566 of the latter in 1883.

RÁYACHÓTI.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
P. VEERAPATHERA PILLAY.

Dispensary Buildings.—In good order.

Most Common Diseases.—Fever, rheumatic and respiratory affections, ophthalmia, ear-ache, dysentery, diarrhœa, worms, spleen disease, gonorrhœa and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Measles and small-pox prevailed to a slight extent.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—4,374 out-door cases have been treated, against 5,214 in the previous year.

GANJAM DISTRICT.

ASKA.

Extracts from the Annual Medical Report by Civil Apothecary E. D'Cruz.

Dispensary Buildings.—Dispensary belongs to Local Fund Board.

Most Common Diseases.—Ague, ophthalmia, rheumatism, ulcers, worms, and skin diseases.

Inspection.—Dispensary inspected by the Surgeon of the district twice during the year.

Attendance of Patients.—1 in- and 5,647 out- patients, against 1 in- and 4,771 out- door cases in the previous year.

BERHAMPORE.

Extracts from the Annual Medical Report by Surgeon J. L. VAN GEYZEL, M.B.

Dispensary Buildings.—Have been lately repaired. It is contemplated to build a new dispensary in the town when funds are available.

Most Common Diseases.—Fever, rheumatism, syphilis, anæmia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—None.

Attendance of Patients.—204 in- and 8,369 out-door cases were treated, against 167 in- and 6,812 out-door cases in 1883.

General Remarks.—A trained midwife has been engaged by the Municipality since May last.

CALINGAPATAM.

Extracts from the Annual Medical Report by Civil Apothecary A. WELLS.

Dispensary Buildings.—Small and inadequate to meet the requirements of the town. An additional room and verandah should be provided. Tiled roofing would be preferred to the present thatched one. The dead-house is sadly in need of repairs.

Most Common Diseases.—Fever, rheumatism, ophthalmia, respiratory affections, ear-ache, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—3,506, against 2,744 in 1883.

CHICACOLE.

Extracts from the Annual Medical Report by Honorary Surgeon R. KINSLEY.

Dispensary Buildings.—The buildings are in good repair.

Most Common Diseases.—Worms, skin diseases, ulcers, malarious, rheumatic, and respiratory affections.

Epidemics.—No epidemics.

Inspection.—Not inspected by Surgeon-General.

Attendance of Patients.—Increased—out-patients by 1,064 on last year, in-patients by 52 on last year.

GANJAM.

Extracts from the Annual Medical Report by Civil Apothecary W. E. WATKINS.

Dispensary Buildings.—In a fair state of repair.

Most Common Diseases.—Skin diseases and ulcers, worms, fevers, and rheumatic affections.

Epidemics.—Of cholera during the months of August, September, and October.

Inspection.—Inspected twice by Civil Surgeon.

Attendance of Patients.—2 in- and 2,753 out-door cases were treated, against 4 in- and 3,722 out-cases in the previous year.

GOPÁLPUR.

Extracts from the Annual Medical Report by Assistant Apothecary F. BLAKE.

Dispensary Buildings.—The buildings are at present undergoing general repairs. The out-houses entirely collapsed during the monsoons and are urgently needed.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—3,660 out-door cases were treated, against 3,843 in the previous year.

PARLÁKIMEDI.

Extracts from the Annual Medical Report by Assistant Apothecary W. A. COLE.

Dispensary Buildings.—In good state of repair.

Most Common Diseases.—Fever, rheumatism, anæmia, ophthalmia, respiratory affections, dysentery, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—Small-pox prevailed to a slight extent in the town and surrounding villages.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—163 in- and 6,954 out-door cases were treated, against 189 in- and 6,922 out-door in the previous year.

SÓMPET.

Extracts from the Annual Medical Report by Civil Apothecary C. PARTHASARATHY NAIDU.

Dispensary Buildings.—The dispensary has been removed to a newly-erected building. An out-house is much needed, and a separate room for treating dangerous police and other cases.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, worms, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—3,783 out-door cases, against 3,034 in the previous year.

SURADÁ.

Extracts from the Annual Medical Report by Civil Apothecary B. FIGEIDO.

Dispensary Buildings.—In good state of repair. There are no out-houses attached, and much inconvenience is felt from the want of them.

Most Common Diseases.—Fever, rheumatism, ear-ache, respiratory affections, dysentery, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—Small-pox has been prevailing throughout the year.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—4,098 out-door cases, against 3,874 in the previous year.

TEKKALI RAGHUNÁTHAPURAM.

Extracts from the Annual Medical Report by Hospital Assistant
N. RUNGASAWMY, No. 181.

Dispensary Buildings.—The roof of the dead-house is in a wretched state and requires attending to.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—3,359 out-door cases, against 3,242 in the previous year.

APPENDIX TO REPORT ON THE
GODÁVARI DISTRICT.

AMALÁPURAM.

Extracts from the Annual Medical Report by Second-class Hospital Assistant
PAUPIAH, No. 128.

Dispensary Buildings.—A pukka building was constructed during the year, and is in very good order.

Most Common Diseases.—Fever, rheumatic, syphilitic, and respiratory affections, anæmia, dropsy, ophthalmia, ear-ache, dysentery, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—Small-pox and cholera prevailed. The latter during the latter part of the year, and the former in a confluent form during the whole year.

Inspection.—Inspected twice during the year by the District Surgeon.

Attendance of Patients.—2,427 out-door patients have been treated, against 2,317 in the previous year.

BHADRÁCHALAM.

Extracts from the Annual Medical Report by Civil Hospital Assistant
Y. RUNGIAH NAIDOO, No. 226.

Dispensary Buildings.—Are rented and quite unsuitable for a dispensary; are in a dilapidated condition.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, ulcers, and skin diseases.

Epidemics.—Small-pox prevailed to a slight extent.

Inspection.—None.

Attendance of Patients.—1,780 out-cases have been treated, against 1,884 in the previous year.

CHINTHELAPUDI.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
G. MOOTHIALU NAIDU, No. 216.

Dispensary Buildings.—Thatched buildings and in need of repairs.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—Small-pox was epidemic both in the town and surrounding villages and still continues its ravages.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—2,238 out-door cases were treated, against 2,916 in the previous year.

COCANADA.

Extracts from the Annual Medical Report by Surgeon-Major L. BEECH.

Dispensary Buildings.—The floor of the wards and verandahs in bad state of repair.

Most Common Diseases.—Fever, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, ulcers, and itch.

Epidemics.—Cholera prevailed more or less in all the taluks: 9 deaths from it occurred in the town of Cocanada. Small-pox prevailed extensively in the station and district: in the station alone 261 deaths occurred.

Inspection.—Inspected by the Sanitary Commissioner.

Attendance of Patients.—358 in- and 8,116 out-door cases, against 404 in- and 7,522 out-door cases in 1893.

General Remarks.—A small room is set apart for lying-in patients. This class of people do not resort to the hospital for treatment in natural labor. The two admitted into hospital were delivered by instruments. 38 cases of labor were attended to at their own houses, of these 16 were delivered by the aid of instruments.

COCANADA SEAMEN'S HOSPITAL.

Extracts from the Annual Medical Report by Surgeon-Major L. BEECH.

Dispensary Buildings.—Seamen and other patients are now accommodated in a building which was formerly called the contagious disease hospital. The roof and flooring of the old place are in bad repair. Sufficient money has been voted to have Portland cement laid down throughout the building.

Most Common Diseases.—Small-pox, ague, respiratory affections, and gonorrhoea.

Epidemics.—Four cases of small-pox were admitted into hospital: all were imported cases from ships.

Inspection.—Inspected once by the Sanitary Commissioner for Madras.

Attendance of Patients.—51 in-door patients were treated, against 29 in the previous year.

DOWLAISHWERAM.

Extracts from the Annual Medical Report by Second-class Hospital Assistant
JACOB PAUL, No. 129.

Dispensary Buildings.—In good order. A leaf shed has been erected during the year for the use of contagious diseases.

Most Common Diseases.—Fever, rheumatic and respiratory affections, ophthalmia, ear-ache, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Small-pox was prevalent throughout the year. An outbreak of cholera commenced on the 18th September and lasted for a month: 38 cases were reported and treated with 11 deaths.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—1,670 out-door cases were treated, against 1,546 in the previous year.

ELLORE.

Extracts from the Annual Medical Report by First-class Assistant Apothecary
THOMAS KIDDLE, L.S.A., LOND.

Most Common Diseases.—Fever, rheumatic, syphilitic, and bowel affections.

Epidemics.—Epidemics of cholera and small-pox.

Inspection.—Inspected by Civil Surgeon, Rajahmundry, and Sanitary Commissioner.

Attendance of Patients.—Increased. 6,938 out- and 196 in- patients were treated, against 6,364 out- and 175 in- patients in the previous year.

NARSÁPUR.

Extracts from the Annual Medical Report by First-class Hospital Assistant
S. RAUMANAH NAIDOO, No. 38.

Dispensary Buildings.—There is no separate building for the dispensary, but a part of the Police Hospital is occupied for that purpose. The sum of Rs. 5,820 has been sanctioned for a new building, but nothing has been done up to date.

Most Common Diseases.—Fever, rheumatic and respiratory affections, anæmia, ophthalmia, ear-ache, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Small-pox was epidemic in the station and in almost all the surrounding villages.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—4,127 out-door cases have been treated, showing an increase of 194 over that of the previous year.

PEDDÁPURAM.

Extracts from the Annual Medical Report by Second-class Hospital Assistant
B. VENKTESAWMY, No. 153.

Dispensary Buildings.—In fair condition.

Most Common Diseases.—Fever, rheumatic, syphilitic, and respiratory affections, ophthalmia, ear-ache, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Small-pox was epidemic during the whole year, and is still prevailing: the mortality has been high, particularly among children.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—4,338 out-door cases have been treated, against 3,321 in the previous year.

PITHÁPURAM.

Extracts from the Annual Medical Report by First-class Hospital Assistant
K. DURMAIAJODLOO, No. 83.

Dispensary Buildings.—In good repair.

Most Common Diseases.—Fever, rheumatic, syphilitic, and respiratory affections, anæmia, ophthalmia, ear-ache, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—5,403 out-door patients have been treated, against 4,116 in the previous year.

RAJAHMUNDY.

Extracts from the Annual Medical Report by Surgeon-Major E. LEVINGE.

Dispensary Buildings.—In fair state of repair. A dead-house and compound wall were constructed during the year.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—A severe epidemic of small-pox: 287 cases have been reported to have died; only 3 cases came under treatment at the dispensary.

Inspection.—Not inspected by the Surgeon-General.

Attendance of Patients.—244 in- and 7,403 out-door cases have been treated, against 199 and 7,721 respectively in the previous year.

RÁMACHANDRAPURAM.

Extracts from the Annual Medical Report by First-class Hospital Assistant
SOORANADEE, No. 81.

Dispensary Buildings.—Excepting some petty repairs that are needed, the buildings are in very good condition, and answer their purpose admirably.

Most Common Diseases.—Fever, rheumatism, dropsy, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—Small-pox has been prevailing almost the whole year. Chicken-pox has also prevailed in certain villages. Cholera visited the station on the 26th September when 12 attacks and 3 deaths occurred. It prevailed in almost all the villages of the taluk. By the end of November the disease disappeared.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—5,328 out-door cases have been treated, against 4,295 in 1883.

SEVACODU.

Extracts from the Annual Medical Report by Second-class Hospital Assistant
M. RAISOOO ISLAM, No. 1090.

Dispensary Buildings.—An old and unsuitable rented building has been taken up for the dispensary. It is also sadly in need of repairs.

Most Common Diseases.—Fever, rheumatic, syphilitic, and respiratory affections, anæmia, ophthalmia, ear-ache, dysentery, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Small-pox prevailed in almost all the villages of the division.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—2,645 out-door cases were treated, against 1,868 in the previous year.

TÁLLAPÚDI.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
T. M. DEVARAJULU NAIDU, No. 241.

Dispensary Buildings.—In good order.

Most Common Diseases.—Fever, rheumatism, syphilis, anæmia, ophthalmia, ear-ache, respiratory diseases, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera and small-pox prevailed in the vicinity: large numbers died from the latter disease.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—2,939 out-patients have been treated, against 1,847 in the previous year.

TANUKU.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
P. SREERAMOOLOO, No. 215.

Dispensary Buildings.—A portion of the Local Fund chuttram has been occupied for a dispensary. Minor repairs are required.

Most Common Diseases.—Fever, rheumatism, syphilis, ear-ache, respiratory affections, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Small-pox and cholera prevailed to a great extent in the taluk. The total number of cholera cases reported is 251 with 131 deaths. The total number of fatal cases from small-pox is 2,381. The number attacked is unknown.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—2,299 out-patients received treatment: 712 were treated last year from 1st July, the opening of the dispensary.

TUNI.

Extracts from the Annual Medical Report by Second-class Hospital Assistant
T. PAUPERAYADOO NAIK, No. 110.

Dispensary Buildings.—In good order, but leak a little.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—Small-pox prevailed both in the station and surrounding villages: 6 deaths occurred in the former and 50 in the latter.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—2,761 out-door cases have been treated, against 2,548 in the previous year.

YELESWARAM.

Extracts from the Annual Medical Report by First-class Hospital Assistant
M. MOONESAWMY PILLAY, No. 37.

Dispensary Buildings.—A thatched building, rented by the Local Fund Board, in good state of repair.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, worms, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—1,711 out-door patients have been treated, against 1,504 in the previous year.

KISTNA DISTRICT.

BEZVÁDA.

Extracts from the Annual Medical Report by Assistant Apothecary J. BROWN.

Dispensary Buildings.—In good order.

Most Common Diseases.—Fever, rheumatic affections, syphilis, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Small-pox and cholera prevailed in and around the town.

Inspection.—The hospital was inspected twice by the District Surgeon.

Attendance of Patients.—260 in- and 6,342 out- door cases have been treated, against 127 in- and 7,333 out- door cases in 1883.

CHELLAPALLI.

Extracts from the Annual Medical Report by Civil Apothecary VENCATRAMIAH.

Dispensary Buildings.—In good condition. They belong to the Rajah of Devarakót.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Small-pox is prevailing in the station.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—1,566 out-door cases have been treated, against 1,542 in the previous year.

CHIRALA.

Extracts from the Annual Medical Report by First-class Hospital Assistant C. SCOBRAVALOO NAIDOO.

Dispensary Buildings.—Present dispensary has been removed from the old building which was too small. The present buildings are convenient for both in- and out- cases.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic in the taluk from October to December, when 101 attacks and 42 deaths occurred.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—3,109 out-door cases have been treated, against 3,193 in the previous year.

DÁCHEPALLE.

Extracts from the Annual Medical Report by Civil Apothecary T. K. RAJCO CHETTIAR.

Dispensary Buildings.—An old Munsif's Court and urgently in need of repair.

Most Common Diseases.—Fever, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Small-pox prevailed both in the station and surrounding villages. Cholera was epidemic in a village 12 miles distant from the station: 19 cases with 5 deaths were reported.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—3,893 out-door cases have been treated, against 3,762 in the previous year.

GUDIVÁDA.

Extracts from the Annual Medical Report by Civil Apothecary F. RODRIGUES.

Dispensary Buildings.—The buildings require whitewashing and the floors repairing. A dead-house and post-mortem table are much needed.

Most Common Diseases.—Fever, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, abscesses, ulcers, and skin diseases.

Epidemics.—Small-pox of the confluent type is prevailing in the station and its vicinity. Choleraic diarrhoea prevailed in the neighbouring villages in August and September.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—Compared with the previous year the attendance of out-door patients is short by 174.

GUNTÚR.

Extracts from the Annual Medical Report by Surgeon P. ANDERSON.

Dispensary Buildings.—The two temporary sheds referred to in my last annual report have been replaced by three well built rooms, with tiled roof—one ward for males, another for females, and a small room for special cases. The two former are intended to accommodate eight patients in each and the latter two.

Most Common Diseases.—Malarious fevers, rheumatic, syphilitic, and skin affections, abscesses, ulcers, and injuries.

Epidemics.—Small-pox prevailed to a great extent both in this station as well as in the district.

Attendance of Patients.—241 in-door and 8,970 out-door patients were treated, showing a decrease of 57 in- and an increase of 655 out- patients when compared with the previous year.

JAGGAYAPET.

Extracts from the Annual Medical Report by Civil Apothecary J. REARDON.

Dispensary Buildings.—In good order. A female ward, kitchen, latrine, and dead-house are required.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, diarrhoea, worms, gonorrhoea and its complications, ulcers, and skin diseases.

Epidemics.—Small-pox was epidemic in the beginning and end of the year. Cholera prevailed epidemically twice, in April and May, and again in July, August, and September. The total number of cases in town was 108 with 45 deaths; of these 38 received medical treatment, of which 12 died. During the second epidemic, diarrhoea and fever were also prevalent.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—67 in-door and 1,781 out-door cases were treated, against 119 in- and 1,906 out- door cases in 1883.

General Remarks.—Last year's report mentions the want of energy in the midwife and that she would have more cases if she improved. For ten months of the year under report she attended to only four cases, for which she was reported and reprimanded by the District Surgeon. During the last two months in the year she has worked harder and has shown better results, having attended to eight cases.

KAREMPUDI.

Extracts from the Annual Medical Report by Hospital Assistant T. V. RUNGASAWMY CHETTY.

Dispensary Buildings.—A rented building, and not convenient.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, ulcers, and skin diseases.

Epidemics.—Cholera prevailed in the suburbs of the town: 3 or 4 fell victims to it.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—2,529 out-door cases were treated.

MASULIPATAM.

Extracts from the Annual Medical Report by Surgeon-Major J. B. THOMAS.

Most Common Diseases.—Among out-door and in-door patients were malarious fevers, skin diseases, syphilitic affections, respiratory and abdominal affections.

Epidemics.—Small-pox and short epidemics of cholera prevalent during the year.

Inspection.—Not inspected by the Surgeon-General.

Attendance of Patients.—More, both in and out, viz., 264 in- and 8,228 out-door cases, against 239 in- and 7,289 out-door in the previous year.

NARSARAOPET.

Extracts from the Annual Medical Report by Civil Apothecary G. VENKATASAWMY.

Dispensary Buildings.—Are under repairs: quite unsuitable for a hospital. Another building is absolutely necessary. A dead-house is about being constructed.

Most Common Diseases.—Fever, rheumatism, syphilis, anæmia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, liver diseases, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Small-pox has been prevailing throughout the year. The number of deaths recorded at the Taluk Cutcherry is 444. Cholera has been epidemic in the taluk. It appeared in the month of August and visited more than twenty villages. 268 deaths are put down to this disease. The station fortunately escaped its ravages.

Inspection.—Once by the District Surgeon.

Attendance of Patients.—3,627 out-door cases have been treated, against 3,006 in the previous year.

NÚZVID.

Extracts from the Annual Medical Report by Civil Apothecary R. NARRAINSAWMY NAIDU.

Dispensary Buildings.—In good condition, but the out-houses require repairs. A post-mortem shed has been sanctioned and is about to be constructed.

Most Common Diseases.—Fever, rheumatism, syphilis, anæmia, ear-ache, respiratory affections, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—None in the station.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—4,173 out-door cases were treated, against 1,535 in the year 1883.

REPALLE.

Extracts from the Annual Medical Report by Hospital Assistant J. RUNGANAYAKULU NAIDU.

Dispensary Buildings.—A new building has been erected during the year and answers present requirements.

Most Common Diseases.—Fever, rheumatism, syphilis, ear-ache, respiratory diseases, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—1,999 out-door cases were treated, against 2,491 in the previous year.

SATTENAPALLE.

Extracts from the Annual Medical Report by Civil Apothecary S. PERAJI.

Dispensary Buildings.—A rented native house and badly situated. Accommodation insufficient. A new building has been sanctioned by the Local Fund Board, but its erection has not yet commenced.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, worms, gonorrhoea and its complications, ulcers, and skin diseases.

Epidemics.—Small-pox was epidemic in the station and adjacent villages. Cholera was also epidemic in the villages, but not in the station.

Inspection.—The District Surgeon visited the dispensary once during the year.

Attendance of Patients.—2,589 out-door cases were treated, against 2,582 in the previous year.

TIRUVUR.

Extracts from the Annual Medical Report by Civil Apothecary B. D'PREZER.

Dispensary Buildings.—In very good order, excepting some minor repairs to the bath-room, which are needed.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, anæmia, ophthalmia, ear-ache, respiratory affections, diarrhoea, worms, liver diseases, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—None in the station. Both small-pox and cholera were epidemic in the division: 33 deaths from the former and 60 from the latter are recorded.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—2,569 out-door cases were treated, against 1,748 in the previous year.

TUMURCODE.

Extracts from the Annual Medical Report by Civil Hospital Assistant T. V. GOVINDARAJULU, No. 162.

Dispensary Buildings.—A new building has been erected and occupied this day. The accommodation is not sufficient for all requirements.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Small-pox was very prevalent both in the station and surrounding villages. Many deaths, particularly amongst children, have occurred.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—2,680 out-door cases were treated, against 2,473 in the previous year.

VINUKONDA.

Extracts from the Annual Medical Report by First-class Hospital Assistant D. VENKATASAWMY, No. 92.

Dispensary Buildings.—In fair order. Accommodation insufficient. The roof of the shed intended for out-door patients is in need of repairs. The post-mortem shed is in a dilapidated condition and quite unserviceable.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Small-pox was very prevalent in the town and its vicinity. Several deaths among children have been reported.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—3,510 out-door cases were treated, against 3,948 in the previous year.

General Remarks.—The services of a midwife are much needed. The Local Fund Board have resolved to make provision for one in the next year's budget.

KURNOOL DISTRICT.

ATMAKUR.

Extracts from the Annual Medical Report by Third-class Hospital Assistant J. DANIEL, No. 253.

Dispensary Buildings.—The buildings are rented and are in need of repairs.

Most Common Diseases.—Fever, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—Small-pox of a virulent type prevailed in the station and its suburbs.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—3,613 out-door cases were treated, against 4,913 in 1883. The decrease in the present year's report is owing to the healthy seasons experienced during the year.

CUMBUM.

Extracts from the Annual Medical Report by Civil Apothecary T. M. CHEMIYAN.

Dispensary Buildings.—Leaks in several places. In need of repairs.

Most Common Diseases.—Fever (7,505), rheumatism, syphilis, dropsy, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, liver diseases, spleen diseases, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Malarious fever was very prevalent in the early part of the year.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—154 in- and 13,296 out-door patients were treated, against 204 in- and 8,497 out-door patients in the previous year.

General Remarks.—The early months of the year were the most unhealthy, malarious fevers being most numerous. Towards the end of the year an increase in the number of fever cases takes place. The sanitary condition of the town is very unsatisfactory. Much of the unhealthiness of the town is due to the water which is polluted with decaying vegetable matter, and is further rendered impure by the people themselves who wash their clothes and bathe their bodies in the water of the channels which is used for drinking.

KURNOOL.

Extracts from the Annual Medical Report by Surgeon M. P. KHAREGAT.

Dispensary Buildings.—In fair state of repair.

Most Common Diseases.—Fever, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, spleen, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected by the Surgeon-General.

Attendance of Patients.—227 in- and 8,913 out-door cases have been treated, against 223 in- and 9,349 out-cases in the previous year.

General Remarks.—The lying-in department of the hospital has not gained as much popularity as was expected last year. This is believed to be owing to the Muhammadan element preponderating (and consequently gosha system prevailing) in the population.

MÁRKÁPUR.

Extracts from the Annual Medical Report by Third-class Hospital Assistant J. ANTHONY, No. 179.

Dispensary Buildings.—The buildings are rented and greatly in need of repairs.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—2,747 out-door cases have been treated, against 2,124 in the previous year.

NANDYÁL.

Extracts from the Annual Medical Report by Civil Apothecary P. A. PIERCE.

Dispensary Buildings.—Badly ventilated and quite unsuitable. The erection of a new building is contemplated.

Most Common Diseases.—Malarious fevers, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, diarrhoea, worms, liver and spleen diseases, gonorrhoea and its complications, abscesses, boils, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—77 in- and 8,781 out-cases were treated, against 73 in- and 8,955 out-cases in 1883.

OWK.

Extracts from the Annual Medical Report by Third-class Hospital Assistant C. VARATHARAJULU NAIDU, No. 288.

Dispensary Buildings.—In good order.

Most Common Diseases.—Fever, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, diarrhoea, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—3,037 out-door cases have been treated during the year, against 2,704 in the year 1883.

PATTIKONDA.

Extracts from the Annual Medical Report by Third-class Hospital Assistant C. M. VADIVALOO, No. 302.

Dispensary Buildings.—The buildings are rented and are in good repair.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera prevailed: 26 cases and 7 deaths occurred.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—2,305 out-cases attended for relief, against 2,029 in 1883.

SIRVEL.

Extracts from the Annual Medical Report by Third-class Hospital Assistant V. COOPOOSAWMI NAIDU, No. 271.

Dispensary Buildings.—Located in a very small ill-ventilated rented building. A dead-house is under construction.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera of a malignant type prevailed in a few villages of the taluk: 25 cases and 13 deaths were reported.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—2,863 out-door cases were treated, against 3,479 in the previous year.

MADRAS.

BLACK TOWN, NORTH SIDE.

Extracts from the Annual Medical Report by Surgeon-Major D. R. THOMPSON, M.D.

Dispensary Buildings.—Have been thoroughly repaired.

Most Common Diseases.—Fever, rheumatism, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Inspection.—Inspected twice by the Surgeon-General.

Epidemics.—Vide Native Infirmary Report.

Attendance of Patients.—1,615 out-door Europeans and Eurasians, against 1,784 in the previous year: 9,260 out-door natives, against 9,692 in the previous year.

EGMORE FEMALE DISPENSARY AND GOVERNMENT LYING-IN HOSPITAL.

Dispensary Buildings.—In great want of repairs. Estimates have been prepared for the repairs, but the work has not yet been undertaken. The attention of the Public Works Department has been frequently and urgently called to this matter without avail.

Most Common Diseases.—Fevers, anæmia, dysentery, and diarrhœa.

Epidemics.—Small-pox, measles, whooping-cough, and cholera have prevailed during portions of the year.

Inspection.—Inspected on several occasions by the Surgeon-General.

Attendance of Patients.—220 in- and 3,543 out- door European and Eurasian patients were treated, being 35 less of the former and 945 less of the latter when compared with the previous year; and of natives 1,616 in- and 14,518 out- door cases, being 2,440 out-door cases less than the previous year. There has been a slight decrease among the in-door cases.

EGMORE HOSPITAL FOR WOMEN AND CHILDREN.

Extracts from the Annual Medical Report by Surgeon-Major W. H. ROBERTS, M.D.

Dispensary Buildings.—Have lately been in the hands of the Public Works Department, which effected a number of surface repairs.

Most Common Diseases.—Fevers, rheumatic affections, respiratory affections, dysentery, and diarrhœa.

Epidemics.—Cholera and small-pox prevailed during the greater part of the year. There were 90 cases of the former and 51 deaths, and 77 of the latter and 19 deaths: of these 19 deaths from small-pox, 10 were not vaccinated, 4 had bad marks of vaccination, and 5 not known.

Inspection.—Inspected twice by the Surgeon-General.

Attendance of Patients.—2,434 in-door cases have been treated, against 1,996 in the previous year.

General Remarks.—The situation of the hospital on the northern bank of the Cooum is bad, rendering it liable to periodical inundations. It was flooded twice between the 8th November and 19th December 1884.

EYE INFIRMARY.

Extracts from the Annual Medical Report by Surgeon-Major E. F. DRAKE-BROCKMAN, F.R.C.S., Superintendent of the Eye Infirmary.

Dispensary Buildings.—The dispensary buildings underwent no repairs or whitewashing during the year, both of which are much wanted.

Most Common Diseases.—Diseases of the conjunctiva prevailed amongst out- and diseases of the lens (specially cataract) and choroid amongst in- patients.

Epidemics.—Small-pox and cholera have been more or less prevalent throughout the year.

Inspection.—Inspected by the Surgeon-General in the month of November.

Attendance of Patients.—The number of in-patients treated during the year was 708, exceeding the total of the previous twelve months by 102. In the out-patients' department, however, there were 3,421 admissions, against 3,669 in 1883, showing a decrease of 248.

General Remarks—Operations.—The total number of operations performed during the year amounted to 648, which, though less than the previous year by 51, is nearly a hundred above the average for the past five years. Of the 648, 476 were major and 172 minor operations. Extraction for cataract maintains its place among the major operations as regards frequency, no less than 220 cases having been operated on during the year with a percentage of success of nearly 80. An unusual number of enucleations was performed during the year for glaucoma and disorganization of the eye following injury to the ciliary region.

FREE CHURCH MEDICAL MISSION, RÁYAPURAM.

Extracts from the Annual Medical Report by Apothecary T. K. ITRY.

Dispensary Buildings.—In good order.

Most Common Diseases.—Fevers, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhœa, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was prevalent at the beginning and end of the year.

Inspection.—None.

Attendance of Patients.—14,876 out-door cases have been treated, which is a slight increase over that of the previous year.

GENERAL HOSPITAL.

Extracts from the Annual Medical Report by Brigade-Surgeon J. KRESS, M.D.

Dispensary Buildings.—The walls, &c., were scraped and limewashed during the year. Part of the new building for out-patients was occupied during the year for the treatment of males. That portion allotted for females will very shortly be completed. The new mortuary was completed and made over for use. Red Hills water has been supplied to all parts of the upper floor (European wards) as well as to the Nurses' quarters.

Most Common Diseases.—Respiratory affections, malarious fevers, diarrhœa, and skin diseases.

Epidemics.—Small-pox prevailed in an epidemic form at the beginning of the year and cholera in July, August, September, and December.

Inspection.—The Surgeon-General inspected the hospital on the 7th April in addition to occasional visits paid by him.

Attendance of Patients.—1,181 in- and 4,983 out- door European and Eurasian patients were treated, against 1,044 in- and 4,939 out- door in 1883. Of natives the numbers were 2,173 in- and 22,506 out- patients, against 2,038 in- and 22,185 out- patients in 1883.

LEPER HOSPITAL.

Extracts from the Annual Medical Report by Surgeon-Major D. R. THOMPSON, M.D.

Dispensary Buildings.—The native female ward referred to in last report has been completed. The female latrine, which fell in during the heavy rains in October last, has not been rebuilt. Three permanent sheds have been constructed and are now in use. The European female ward is very old and dangerously cracked, and the flooring is low and damp. An estimate has been submitted for complete reconstruction of the whole building.

Most Common Diseases.—Debility, diarrhœa, and dysentery.

Epidemics.—None.

Attendance of Patients.—377 in- and 26 out- patients, against 327 in- and 14 out- door patients in the previous year.

NATIVE INFIRMARY.

Extracts from the Annual Medical Report by Surgeon-Major D. R. THOMPSON, M.D.

Dispensary Buildings.—The repairs to the choultry and hospital, which commenced in the latter part of 1883, are nearly completed.

Most Common Diseases.—Fevers, diarrhœa, dysentery, ulcers, and general debility.

Epidemics.—Small-pox was epidemic: 77 cases were admitted into hospital and 11 died. Cholera was prevalent throughout the year and 69 cases were admitted: 42 died. The disease commenced in the latter part of 1883 and was pronounced epidemic by the Board of Health.

Inspection.—Inspected twice by the Surgeon-General.

Attendance of Patients.—3,154 in-patients were treated, against 2,776 in the previous year.

TRIPLICANE.

Extracts from the Annual Medical Report by Surgeon-Major A. PORTER, M.D.

Dispensary Buildings.—Much out of repair since the late heavy rains. Municipal authorities have the matter under consideration.

Most Common Diseases.—Fevers, rheumatism, ear-ache, respiratory affections, dysentery, diarrhœa, worms, abscesses, and skin diseases.

Epidemics.—Small-pox in a severe form prevailed from the end of last year till May: 15 cases were brought to hospital, of which 1 died. 26 came under treatment as out-patients; of these 2 died. Cholera became epidemic at the end of August: 57 in- and 107 out- door cases came under treatment; of the former 40 and of the latter 42 proved fatal.

Inspection.—Inspected three times by the Surgeon-General.

Attendance of Patients.—1,039 in- and 15,068 out- door cases were treated, against 864 in- and 14,696 out- door cases in the previous year.

MADURA DISTRICT.

ARUPPUKÓTA.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
M. D. MANICKAM PILLAI.

Dispensary Buildings.—In good order.

Most Common Diseases.—Fever, rheumatism, syphilis, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera, small-pox, and measles prevailed. 34 cases of cholera were admitted; 12 proved fatal.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—5,879 out-door cases received treatment, against 5,324 in the previous year.

BODINÁYAKANÚR.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
V. M. JOSEPH NADAR.

Dispensary Buildings.—A small rented building, quite unsuitable for a dispensary.

Most Common Diseases.—Fever, rheumatism, syphilis, anaemia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, liver and spleen diseases, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—3 cases of cholera occurred in the station, of which 2 proved fatal.

Inspection.—None.

Attendance of Patients.—3,694 out-cases were treated, against 4,539 in the last year.

BUTLAGUNDU.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
V. SAVERIMUTHU PILLAI.

Dispensary Buildings.—A small rented native house. In good state of repairs.

Most Common Diseases.—Fever, rheumatism, syphilis, anaemia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Attendance of Patients.—2,708 out-patients were treated during the year, against 3,341 in the previous year. The dispensary was closed for two months, hence the decrease in the number treated.

DEVAKÓTA.

Extracts from the Annual Medical Report by Civil Apothecary
V. MOHANARUNGUM NAIDU.

Dispensary Buildings.—In good order. A cook-house, latrine, and dead-house are required.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, ophthalmia, ear-ache, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera broke out epidemically in the station on three occasions, viz., in January, August, and December: about 205 cases occurred and 128 died. The disease was also epidemic in surrounding villages and continued so for months.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—65 in- and 6,995 out-door cases were treated, against 41 in- and 6,273 out-door patients.

DINDIGUL.

Extracts from the Annual Medical Report by Dr. E. CHESTER.

Dispensary Buildings.—The new dispensary is now occupied, and is found in every way admirably adapted for the use of out-patients. The old building is utilized for special in-door patients.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, anaemia, dropsy, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, liver, spleen, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera appeared in the town and many of the surrounding villages in the month of November, but was not so fatal or extensive as in the previous year. Small-pox was much less fatal.

Inspection.—Nil.

Attendance of Patients.—In-door 286, out-door 7,610, against 228 in- and 7,441 out-door in the previous year.

General Remarks.—There were 76 labor cases treated in the Lying-in Hospital and town by the two trained diplomaed nurses connected with the dispensary.

ILAYÁNGUDI.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
A. SAMUEL PILLAI.

Dispensary Buildings.—A rented house situated in the bazaar, badly ventilated, and has no private room.

Most Common Diseases.—Rheumatism, syphilis, respiratory affections, worms, ulcers, and skin diseases.

Epidemics.—Cholera visited the station, but made no progress.

Inspection.—None.

Attendance of Patients.—Since the establishment of the dispensary on the 1st December 1884, 589 out-door cases have been treated.

KAMUDY.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
B. SUNDAM PILLAI.

Dispensary Buildings.—A rented building with poor accommodation.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, anaemia, ophthalmia, ear-ache, respiratory affections, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera prevailed in a malignant form in the month of December when nearly half of the cases proved fatal.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—5,863 out-door patients have been treated during the year, against 4,743 of the previous year.

KANNIVADI.

Extracts from the Annual Medical Report by Third-class Hospital Assistant RAJAM.

Dispensary Buildings.—A rented building. The dispensary was opened on the 24th September 1884.

Most Common Diseases.—Fever, ophthalmia, ear-ache, ulcers, and skin diseases.

Epidemics.—Cholera prevailed slightly in the town in the month of December, when 5 cases and 2 deaths occurred.

Inspection.—None.

Attendance of Patients.—This dispensary was opened on the 24th September 1884, since which period 658 out-door cases were treated.

KILAKARAI.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
C. DEVARAJEN.

Dispensary Buildings.—A rented building, in urgent need of repairs.

Most Common Diseases.—Fever, ophthalmia, respiratory affections, diarrhoea, worms, and skin diseases.

Epidemics.—Small-pox has been prevailing up to date.

Inspection.—None.

Attendance of Patients.—This dispensary has been recently established : 259 out-door cases have been treated.

KODAIKANAL.

Extracts from the Annual Medical Report by Civil Apothecary F. LAWRENCE.

Dispensary Buildings.—The building has undergone thorough repairs during the year, and is much improved. A room for private examinations and operations is needed.

Most Common Diseases.—Fever, rheumatism, ophthalmia, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Once by the District Surgeon.

Attendance of Patients.—1,896 out-door cases were treated, against 2,053 in the previous year.

MADURA.

Extracts from the Annual Medical Report by Surgeon F. C. SMITH.

Dispensary Buildings.—In good order.

Most Common Diseases.—Fever, cholera, rheumatism, ophthalmia, ear-ache, respiratory affections, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—A severe and widespread epidemic of cholera, which occurred in 1883, continued till March. It re-appeared on the 22nd October. Total number of attacks registered in the first outbreak was 534 with 207 deaths, and in the second outbreak, 733 with 403 deaths.

Inspection.—Not inspected by the Surgeon-General.

Attendance of Patients.—639 in- and 32,773 out- door cases were treated, against 633 in- and 33,094 out- door cases in the previous year.

MÁNA MADURA.

Extracts from the Annual Medical Report by Hospital Assistant J. APPAVOO PILLAI.

Dispensary Buildings.—The dispensary is a thatched house, the roof of which requires repairs.

Most Common Diseases.—Fever, rheumatism, syphilis, anæmia, dropsy, ophthalmia, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera has been epidemic since November last. The number treated is 41, of which 16 proved fatal.

Inspection.—Nil.

Attendance of Patients.—5,600 out-door patients were treated, against 5,456 in the previous year.

MELÚR.

Extracts from the Annual Medical Report by Third-class Hospital Assistant G. ROWLAND.

Dispensary Buildings.—In good order and conveniently situated.

Most Common Diseases.—Fever, cholera, rheumatism, anæmia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Small-pox and cholera of a virulent type prevailed in the cusba and in most of the villages of the taluk.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—4,952 out-door cases were treated, against 4,186 in the previous year.

PALNI.

Extracts from the Annual Medical Report by Civil Apothecary J. SAMUEL.

Dispensary Buildings.—A suitable building, and at present undergoing repairs.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—There were two outbreaks of cholera during the year, viz., in February and November. A special report has been submitted.

Inspection.—Nil.

Attendance of Patients.—51 in- and 5,474 out- door patients were treated, against 81 in- and 5,787 out- door cases in 1883.

General Remarks.—The native midwife attached to the institution conducted 25 cases of natural labor during the year. Her services are very acceptable by all classes of people. She is useful, also, in dressing venereal cases amongst female patients.

PÁMBAN.

Extracts from the Annual Medical Report by Assistant Apothecary E. AILSWORTH.

Dispensary Buildings.—The buildings are about undergoing repairs.

Most Common Diseases.—Fever, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, spleen diseases, gonorrhoea and its complications, ulcers, and skin diseases.

Epidemics.—Cholera in an epidemic form prevailed in the station and neighbouring villages from August to the end of the year, causing 395 deaths in the circle.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—110 in-door patients and 5,172 out-door patients were treated, against 111 in- and 5,296 out- door cases in 1883.

PARAMAKUDI.

Extracts from the Annual Medical Report by Civil Apothecary P. GIBBONS.

Dispensary Buildings.—In good order, with exception of the compound walls, the cholera shed, and the pandal around the main building. A dead-house is much needed.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, dropsy, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic in November, when 113 attacks and 99 deaths occurred in the station. Twenty-eight villages in the division were also attacked. 453 cases were reported with 315 deaths; of these 193 only were treated at the dispensary with 33 deaths.

Inspection.—None.

Attendance of Patients.—24 in- and 10,940 out- door cases were treated, against 47 in- and 10,452 out- door cases in 1883.

PERIYAKULAM.

Extracts from the Annual Medical Report by Civil Apothecary C. B. RAMA RAU.

Dispensary Buildings.—Were put into thorough repair during the year. A dead-house has been constructed.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, anæmia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—During the first quarter of the year cholera was epidemic, when 43 attacks and 12 deaths occurred.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—88 in- and 7,432 out- door cases were treated, against 59 in- and 7,294 out- door cases in 1883.

RAJASINGAMUNGALAM.

Extracts from the Annual Medical Report by Acting Hospital Assistant V. DANIEL.

Dispensary Buildings.—In good order.

Most Common Diseases.—Fever, cholera, rheumatism, ophthalmia, ear-ache, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera prevailed in September in the station and surrounding villages.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—4,234 out-patients were treated, against 4,425 in the previous year.

RAMESVARAM.

Extracts from the Annual Medical Report by Hospital Assistant J. BACKIYAM PILLAI.

Dispensary Buildings.—A rented building which is in need of repairs.

Most Common Diseases.—Fever, rheumatism, anaemia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, spleen diseases, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera prevailed in the month of August, when 37 attacks and 23 deaths occurred.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—23 in- and 3,040 out- door cases were treated, against 18 in- and 2,925 out- door cases in 1883.

RAMNAD.

Extracts from the Annual Medical Report by First-class Assistant Apothecary L. FEWKES.

Dispensary Buildings.—Damaged by the late heavy monsoon.

Most Common Diseases.—Malarious fevers, rheumatic, ophthalmic, respiratory, and abdominal affections.

Epidemics.—Mild form of cholera on three different occasions during the year.

Inspection.—Inspection by Civil Surgeon.

Attendance of Patients.—Shows an increase of 86 in-patients and 46 out-patients as contrasted with the previous year.

General Remarks.—The midwife, assisted by the female nurse, conducted 62 cases of "labor" in the town; 7 of these were treated in the lying-in wards.

SIVAGANGA.

Extracts from the Annual Medical Report by Civil Apothecary C. JANAKERAM NAIDU.

Dispensary Buildings.—The main building is in good order. A new kitchen is under construction. The latrines have been re-roofed.

Most Common Diseases.—Fever, rheumatism, syphilis, anaemia, ophthalmia, ear-ache, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera broke out in an epidemic form in July.

Inspection.—None.

Attendance of Patients.—123 in- and 6,879 out- cases were treated, against 111 in- and 7,250 out- patients.

TIRUPATUR.

Extracts from the Annual Medical Report by Hospital Assistant C. BREEKENBRIDGE PILLAI.

Dispensary Buildings.—Windows have been added to the building. The gate of the dispensary needs repairs. The want of a well is felt.

Most Common Diseases.—Fever, rheumatic affections, syphilis, anaemia, dropsy, ophthalmia, ear-ache, dysentery, diarrhoea, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—5,295 out-cases were treated, against 5,655 in the previous year.

THUNGACHIAMMAPETTAI.

Extracts from the Annual Medical Report by Third-class Hospital Assistant B. SUNDRAM PILLAI.

Dispensary Buildings.—A rented building consisting of one room only; quite inadequate for all requirements.

Most Common Diseases.—Fever, rheumatism, ear-ache, respiratory affections, diarrhoea, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera has been prevailing in the station and surrounding villages since December last.

Inspection.—Inspected once by the Superintendent, Madura Local Fund Board Branch Dispensaries.

Attendance of Patients.—The dispensary was opened during the last half-year: 351 out-door cases have come under treatment.

TIRUMANGALAM.

Extracts from the Annual Medical Report by Third-class Hospital Assistant D. M. KUNDASAMY PILLAI.

Dispensary Buildings.—A small rented building in need of repairs.

Most Common Diseases.—Fever, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera prevailed to a slight extent in November and December.

Inspection.—Inspected once by the District Surgeon and twice by Dr. Chester.

Attendance of Patients.—3,659 out-door cases were treated, against 3,990 in the previous year.

TIRUPUVANAM.

Extracts from the Annual Medical Report by Hospital Assistant SAMUEL KITTO.

Dispensary Buildings.—A small rented room which was recently repaired. It would be an acquisition to the institution if the room adjoining it is also taken up.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, anaemia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—80 cases of cholera (simple and malignant) occurred in the town and surrounding villages, out of which 14 proved fatal.

Inspection.—Inspected once by the Superintendent, Madura Local Fund Branch Dispensaries.

Attendance of Patients.—5,968 out-door cases were treated, against 6,336 in the previous year.

TIRUSHULL.

Extracts from the Annual Medical Report by Civil Apothecary J. T. MADURANAYAGUM PILLAI.

Dispensary Buildings.—In need of repairs. An estimate for repairs has been sanctioned, but the work has not been begun.

Most Common Diseases.—Fever, rheumatism, syphilis, ophthalmia, respiratory affections, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera prevailed twice in the station. Sixty-two villages were also attacked: 807 cases were reported, out of which 372 died.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—83 in- and 5,525 out- door patients were treated, against 91 in- and 5,693 out- cases in 1883: 39 of the in-patients were self-dieted.

USILAMPATTI.

Extracts from the Annual Medical Report by Civil Hospital Assistant
MUTHUKUMARA PILLAY, No. 203.

Dispensary Buildings.—A thatched building was erected during the year for the dispensary. A compound wall and a well are needed.

Most Common Diseases.—Fever, cholera, syphilis, dropsy, ophthalmia, ear-ache, respiratory diseases, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic twice, viz., in the first and last quarters of the year: 140 attacks and 38 deaths are reported.

Inspection.—None.

Attendance of Patients.—25 in- and 3,886 out- door cases were treated, against 30 in- and 3,952 out- cases in 1883.

General Remarks.—The native midwife attended to 18 cases during the year: all were successful.

UTTAMAPOLLIEM.

Extracts from the Annual Medical Report by Civil Apothecary K. SUBBA REDDY.

Dispensary Buildings.—The building, although recently built, leaks very much when there is heavy rain. The dead-house, latrines, &c., are partly erected. Want of funds prevents their completion.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, anaemia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, liver diseases, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic twice in the station and in its vicinity: 1,001 attacks and 364 deaths are recorded.

Inspection.—None.

Attendance of Patients.—112 in- and 9,575 out- door cases were treated during the year, against 119 in- and 8,451 out- door cases in 1883.

VALLANADY.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
T. VATHANAYAGAM NADAR.

Dispensary Buildings.—A rented building: roof and flooring need repairs.

Most Common Diseases.—Cholera and diarrhoea.

Epidemics.—A few cases of cholera occurred in the station, but in the surrounding villages cholera has been epidemic, 140 cases and 60 deaths having been reported.

Inspection.—None.

Attendance of Patients.—Dispensary established only recently: 281 out-door cases have been treated.

VEDASANDOOR.

Extracts from the Annual Medical Report by Third-class Hospital Assistant A. DAVID.

Dispensary Buildings.—Present building is small; a larger building is to be rented shortly.

Most Common Diseases.—Fever, rheumatism, syphilis, anaemia, ophthalmia, ear-ache, respiratory diseases, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera of a malignant type prevailed in the town and its neighbourhood: 23 cases and 10 deaths occurred.

Inspection.—Inspected by the Superintendent of the Madura Local Fund Board Branch Dispensaries.

Attendance of Patients.—4,879 out-door cases were treated during the year, against 3,427 in 1883.

MALABAR DISTRICT.

RADAGARA.

Extracts from the Annual Medical Report by Civil Apothecary S. MASSILLAMONEY.

Dispensary Buildings.—A post-mortem shed has been added to the present building.

Most Common Diseases.—Fever, rheumatism, syphilis, anaemia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—3,483 out-cases have been treated, against 4,251 in the previous year.

CALICUT.

Extracts from the Annual Medical Report by Assistant Surgeon C. A. LAFRENAIS.

Most Common Diseases.—Fever, rheumatic affections, syphilis and its sequelae, and affections of the respiratory organs.

Epidemics.—Severe epidemic of a peculiar malarious fever in the Walawanad Taluk.

Inspection.—Inspected both by the Sanitary Commissioner and the Surgeon-General.

Attendance of Patients.—In-patients less by 77, out-patients more than last year by 262.

CANNANORE.

Extracts from the Annual Medical Report by Surgeon A. G. E. NEWLAND.

Dispensary Buildings.—In fairly good order. Not well adapted to the requirements of a hospital.

Most Common Diseases.—Fever, rheumatism, respiratory affections, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—41 cases of small-pox were scattered throughout the year, the majority of them being of a mild type.

Inspection.—Not inspected by the Surgeon-General.

Attendance of Patients.—338 in- and 3,921 out- door cases were treated, against 303 in- and 3,863 out- door cases in the previous year.

General Remarks.—There were 7 midwifery cases (all brought in after being subjected to much delay and mal-treatment outside, some of the cases being in articulo mortis) with 3 deaths.

COCHIN.

Extracts from the Annual Medical Report by Brigade-Surgeon W. H. MORGAN.

Dispensary Buildings.—All necessary repairs were effected during the year.

Most Common Diseases.—Fever, rheumatism, anaemia, bronchitis, ulcers, diarrhoea, dysentery, and itch.

Epidemics.—The epidemic of small-pox, which commenced in December 1882, declined in May. The disease is still smouldering in Vypeen and in the southern division of the municipality. Sporadic cases of cholera, preceded by suspicious cases of diarrhoea, showed themselves in the first week of October, but the complaint did not become epidemic till the 8th of November, since which time there has been a succession of cases.

Attendance of Patients.—The average daily attendance was 19.26 internal- and 69.68 external- patients, against 22.03 and 67.73 respectively in the previous year.

MANANTODDY.

Extracts from the Annual Medical Report by A. HEWSTON, Esq., M.D.

Dispensary Buildings.—Buildings need repairs.

Most Common Diseases.—Malarious fevers, skin diseases, respiratory affections, ulcers, and abdominal affections.

Epidemics.—None.

Attendance of Patients.—395 in- and 2,139 out- door cases have been treated, against 311 in- and 2,062 out- door cases in the previous year.

MANJERI.

Extracts from the Annual Medical Report by Civil Apothecary C. KARMAN.

Dispensary Buildings.—Have undergone repairs during the year. The contagious disease shed, which is so essentially required and for which reports had been frequently made, is not yet erected.

Most Common Diseases.—Fever, rheumatism, anaemia, dropsy, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—268 in- and 12,852 out- door patients were treated during the year, against 364 in- and 12,958 out- door patients.

PALGHAT.

Extracts from the Annual Medical Report by Assistant Apothecary T. H. GOVIND SINGH.

Most Common Diseases.—Ophthalmia, skin diseases, ulcers, worms, and fevers.

Epidemics.—Epidemic of cholera for seven months. Small-pox has been, and still is, prevalent to a considerable extent in the town.

Inspection.—Inspected twice by Civil Surgeon.

Attendance of Patients.—214 in- and 12,884 out- door cases were treated, against 171 in- and 9,357 out- door cases in 1883.

PALLIPORT.

Extracts from the Annual Medical Report by Brigade-Surgeon W. H. MORGAN.

Dispensary Buildings.—In good order. Another room is required in the Hospital Assistant's quarters.

Most Common Diseases.—Leprosy.

Epidemics.—None.

Inspection.—The Civil Surgeon of Cochin visits once a month.

Attendance of Patients.—The average in the lazaretto has been 34, except at short intervals following the death or discharge of a case till the vacancy is filled. At this date there are 22 males and 12 females.

General Remarks.—34 lepers remained on the roll on the 1st January 1884; out of these 2 died and 1 left hospital of her own accord. There were 3 admissions during the year, and the full number for which provision has been made by Government has been kept up. It has been observed that change from one plan of treatment to another is attended with temporary improvement.

On Gurjon Oil 12 cases were under treatment: some of them improved in general health. One of these, a female, left hospital of her own accord; the remaining 11 are still under treatment.

On Chaulmoogra Oil 18 cases were under treatment; of these 2 died, and of the remaining 16 about 12 of them seem to be better than on admission, of the other 4 no special remarks could be made. The patients are mostly in favor of this remedy: they dislike gurjon oil, probably because it is not easy to wash off their bodies.

Carbolic and Fumigation.—7 cases were under treatment. The fumigation, according to the accounts furnished by the Hospital Assistant, prevents ulceration to the degree noticed under the other plans of treatment.

PONANI.

Extracts from the Annual Medical Report by Civil Apothecary A. BARBOZA.

Dispensary Buildings.—In good condition.

Most Common Diseases.—Fever, syphilis, anaemia, ophthalmia, respiratory affections, dysentery, diarrhoea, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—128 in- and 3,456 out- door cases were treated, against 185 in- and 5,108 out- cases in 1883.

TELLICHERRY.

Extracts from the Annual Medical Report by Surgeon W. B. BROWNING.

Most Common Diseases.—Syphilis, ulcer, skin diseases, malarial fevers, and worms.

Inspection.—No inspection by the Surgeon-General.

Attendance of Patients.—456 in- and 6,852 out- door, against 339 in- and 10,079 out- door cases in the previous year.

VAYITRI.

Extracts from the Annual Medical Report by Civil Apothecary P. BARRU.

Dispensary Buildings.—In good condition, excepting a few places in the flooring of the verandah and wards that require repair.

Most Common Diseases.—Fever, rheumatism, syphilis, anaemia, respiratory affections, worms, spleen diseases, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—282 in- and 3,855 out- door cases were treated, against 214 in- and 3,766 out- door cases in the previous year.

NELLORE DISTRICT.

ADDANKI.

Extracts from the Annual Medical Report by Third-class Hospital Assistant P. CENCHE REDDI.

Dispensary Buildings.—A rented building and in good order.

Most Common Diseases.—Fever, rheumatism, respiratory affections, diarrhoea, gonorrhoea and its complications, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—451 out-door cases were treated, against 482 in the previous year.

ATMAKUR.

Extracts from the Annual Medical Report by Third-class Hospital Assistant HEDAYEL KHAN, No. 4.

Dispensary Buildings.—A thatched building and quite insufficient.

Most Common Diseases.—Fever, cholera, rheumatism, dysentery, worms, gonorrhoea and its complications, ulcers, and skin diseases.

Epidemics.—None in the station, but prevailed twice in the taluk during the commencement and end of the year.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—2,135 out-door cases were treated, against 1,756 in the previous year.

GUDUR.

Extracts from the Annual Medical Report by Hospital Assistant A. H. ALLEN.

Dispensary Buildings.—A rented building, inconvenient and unsafe.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic in the station and surrounding villages; small-pox was also prevalent.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—2,601 out-door patients, against 2,644 in the previous year.

KANDUKUR.

Extracts from the Annual Medical Report by Hospital Assistant MAHOMED BAWKER.

Dispensary Buildings.—A rented building.

Most Common Diseases.—Fever, rheumatism, ear-ache, respiratory affections, worms, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic in the vicinity of the station.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—1,738 patients were treated; against 2,316 in the previous year.

KÁVALI.

Extracts from the Annual Medical Report by Hospital Assistant J. BENJAMIN.

Dispensary Buildings.—A rented building and quite unfit for a dispensary. A new building is about being constructed.

Most Common Diseases.—Fever, rheumatism, syphilis, ear-ache, respiratory affections, dysentery, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Small-pox has been prevailing.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—2,200 out-door cases were treated during the year. The dispensary was opened on the 11th July 1883.

NELLORE.

Extracts from the Annual Medical Report by Surgeon G. McKEE.

Dispensary Buildings.—In good condition.

Most Common Diseases.—Fever, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—By the Surgeon-General.

Attendance of Patients.—620 in- and 6,563 out- door cases have been treated, against 671 in- and 7,131 out- door cases in the previous year.

NELLORE BRANCH DISPENSARY.

Extracts from the Annual Medical Report by Civil Apothecary A. G. FONSECA.

Dispensary Buildings.—Some portions of it require to be repaired.

Most Common Diseases.—Among out-door patients were fevers, rheumatic and syphilitic affections, ophthalmia, and respiratory affections.

Inspection.—No inspection by the Surgeon-General.

Attendance of Patients.—9,225 out-door cases were treated, against 11,695 in the previous year.

ONGOLE.

Extracts from the Annual Medical Report by Assistant Apothecary B. F. PRICHARD.

Dispensary Buildings.—A new building is to be erected for a dispensary.

Most Common Diseases.—Fever, rheumatism, ear-ache, respiratory affections, worms, ulcers, and skin diseases.

Epidemics.—Cholera and small-pox prevailed throughout the district.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—112 in- and 1,956 out- door cases have been treated, against 118 in- and 2,028 out- door cases in 1883.

RÁPÚR.

Extracts from the Annual Medical Report by Hospital Assistant SYED HOMED.

Dispensary Buildings.—Located in a rented thatched house.

Most Common Diseases.—Fever, rheumatism, respiratory affections, worms, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—1,742 out-door cases, against 1,500 in the previous year.

SANGAM.

Extracts from the Annual Medical Report by First-grade Assistant Apothecary M. PEREIRA.

Dispensary Buildings.—Temporary.

Most Common Diseases.—Ague, ulcers, rheumatic affections, and bronchitis.

Epidemics.—Cholera and small-pox have been prevalent to a slight extent in some parts of the district.

Inspection.—By Civil Surgeon.

Attendance of Patients.—56 in- and 1,799 out- door cases have been treated, against 71 in- and 1,678 out- door cases in 1883.

UDAYAGIRI.

Extracts from the Annual Medical Report by Medical Practitioner MAHOMED SAIB.

Dispensary Buildings.—A rented private building, in fair order.

Most Common Diseases.—Fever, cholera, ophthalmia, respiratory affections, worms, gonorrhoea and its complications, ulcers, and skin diseases.

Epidemics.—Cholera and small-pox prevailed in the months of January and February.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—1,948 out-cases, against 1,637 in the previous year.

VENKATAGIRI.

Extracts from the Annual Medical Report by Hospital Assistant P. A. DAIVASIGAIUM.

Dispensary Buildings.—In need of general repairs and whitewashing.

Most Common Diseases.—Fever, rheumatism, syphilis, ophthalmia, ear-ache, diarrhoea, worms, gonorrhoea and its complications, skin diseases, and ulcers.

Epidemics.—Both small-pox and cholera were epidemic in the surrounding villages.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—2 in- and 2,590 out- door cases were treated, against 2,183 out- door cases in the previous year.

NĪLGIRI DISTRICT.

COONOR.

Extracts from the Annual Medical Report by Surgeon-Major W. E. JOHNSON, M.D.

Dispensary Buildings.—In good state of repair.

Most Common Diseases.—Fever, rheumatism, respiratory affections, dysentery, diarrhoea, worms, and skin diseases.

Epidemics.—None.

Inspection.—None.

Attendance of Patients.—240 in- and 4,243 out- door cases were treated, against 199 in- and 3,853 out- door cases in 1883.

General Remarks.—Subscriptions during the year showed an increase of Rs. 94-6-11 over the previous year. Of this, natives subscribed only Rs. 55-12-0 as compared with Rs. 101-2-0 the previous year. Many estates which contributed Rs. 5 monthly during 1883 withdrew their subscriptions last year owing to the failure in the coffee and tea crops.

The income from sale of medicines was increased by Rs. 162-0-5 over the previous year.

DEVĀLA.

Extracts from the Annual Medical Report by Assistant Apothecary P. CRUMMEY.

Dispensary Buildings.—In good order.

Most Common Diseases.—Fever, rheumatic and respiratory affections, dysentery, diarrhoea, worms, and spleen.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—219 in- and 2,338 out- door cases, against 393 in- and 2,475 out- door cases in the previous year.

GŪDALŪR.

Extracts from the Annual Medical Report by Apothecary H. WALE.

Dispensary Buildings.—The repairs needed in 1883 have been attended to, and the Apothecary's quarters re-roofed with zinc and enlarged. There is no dead-house attached to the hospital. This has been repeatedly represented, but no steps have been taken to meet this demand.

Most Common Diseases.—Fever, rheumatism, respiratory affections, dysentery, diarrhoea, worms, liver diseases, ulcers, and skin diseases.

Epidemics.—Small-pox and measles prevailed to a slight extent in the villages near the station.

Inspection.—Once by the Senior Medical Officer of Ootacamund.

Attendance of Patients.—2,077 out- and 235 in- door cases sought relief, against 2,174 out- and 264 in- door cases in 1883.

KŌTAGIRI.

Extracts from the Annual Medical Report by Apothecary H. ROBERTS.

Dispensary Buildings.—In a bad state of repair and quite unsuited for a hospital. It is in contemplation to build a proper hospital.

Most Common Diseases.—Fever, rheumatism, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected twice by the Medical Officer, Coonoor.

OOTACAMUND.

Extracts from the Annual Medical Report by Surgeon W. R. BROWNE, M.D.

Dispensary Buildings.—The hospital buildings have been considerably added to during the year by the addition of a lying-in ward, constructed chiefly at the expense of R. R. Theroovengadasawmy Moodelliar. The removal of the cook-house and latrines further back has been a great improvement, and less expense was incurred in doing it by the kindness of the late Inspector-General of Jails in granting free convict labor.

Most Common Diseases.—Were respiratory, of which however a notable diminution in the numbers treated for malarious fevers and respiratory affections as compared with the previous year in the spring months. Pneumonia was specially prevalent and fatal. The mortality was relatively larger than in 1883.

Epidemics.—There were epidemics of small-pox, chicken-pox, and measles, but they occurred chiefly in the North District. No Europeans were attacked by small-pox.

Inspection.—Officially inspected by the Surgeon-General, who also paid frequent visits during his stay in Ootacamund.

Attendance of Patients.—783 in- and 12,589 out- door cases have been treated, against 640 in- and 9,817 out- door in the previous year.

SALEM DISTRICT.

ATŪR.

Extracts from the Annual Medical Report by Civil Apothecary G. M. GREEN.

Dispensary Buildings.—In good order.

Most Common Diseases.—Fever, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—A mild epidemic of cholera visited the station during the early part of the year.

Inspection.—Once during the year.

Attendance of Patients.—536 in- and 6,695 out- door cases were treated, against 430 in- and 5,423 out- door cases in 1883.

General Remarks.—A want in the shape of a midwife, which was long felt, has been supplied during the year.

DHARMAPURI.

Extracts from the Annual Medical Report by Civil Apothecary W. J. DUNLOP.

Dispensary Buildings.—The buildings are still leaky.

Most Common Diseases.—Fever, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and boils.

Epidemics.—Cholera prevailed in a village quite near the station in the latter part of the year, when 12 cases and 6 deaths occurred: 42 cases and 19 deaths are reported to have taken place in the taluk.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—68 in- and 5,108 out- door cases have been treated, against 96 in- and 4,799 out- door cases in the previous year.

HARUR.

Extracts from the Annual Medical Report by Second-class Hospital Assistant
B. LAUL SINGH, No. 126.

Dispensary Buildings.—In good order. The dispensary gate has to be replaced.

Most Common Diseases.—Fever, rheumatism, anaemia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, abscesses, ulcers, and skin diseases.

Epidemics.—Measles prevailed in a mild form: about 50 cases occurred. Three cases of simple cholera occurred, 1 proved fatal.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—57 in- and 4,509 out- door cases were treated, against 54 in- and 4,060 out- door patients in the previous year.

HOSUR.

Extracts from the Annual Medical Report by Civil Apothecary B. F. POWELL.

Dispensary Buildings.—In good order. A vacant room adjoining the office is to be converted into a lying-in ward.

Most Common Diseases.—Fever, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, spleen diseases, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera prevailed twice during the year in the taluk. The station enjoyed an immunity from it.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—57 in- and 6,742 out- door cases have been treated, against 80 in- and 6,131 out- door cases in 1883.

KRISHNAGIRI.

Extracts from the Annual Medical Report by Civil Apothecary EUNOOS KHAN.

Dispensary Buildings.—In need of petty repairs. The *post-mortem* examination shed is totally unfit for use. The shed used as a dressing and operating room is very much out of repair.

Most Common Diseases.—Fever, rheumatism, syphilis, dropsy, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—None in the station. Cholera was epidemic in the taluk in November, and continues up to date: 128 cases and 57 deaths have been reported.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—95 in- and 6,355 out- door cases have been treated, against 85 in- and 5,329 out- door cases in the previous year.

NAMAKAL.

Extracts from the Annual Medical Report by Hospital Assistant
SHAIK TIPPoo SAHIB, No. 84.

Dispensary Buildings.—The buildings leak, and are in need of repairs. The cholera shed is in a dilapidated condition.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—None.

Attendance of Patients.—51 in-door and 5,373 out-door cases were treated, against 49 in- and 4,667 out- door cases in the previous year.

General Remarks.—The midwife attached to the hospital attended to 17 cases. She is skilful and gaining popularity.

SALEM.

Extracts from the Annual Medical Report by Surgeon-Major J. J. L. RATTON, M.D.
Dispensary Buildings.—In good condition.

Most Common Diseases.—Fever, rheumatism, syphilis, anaemia, ophthalmia, ear-ache, respiratory affections, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera broke out on the 15th December: 30 cases came under treatment.

Inspection.—The Surgeon-General inspected the dispensary once.

Attendance of Patients.—265 in- and 14,242 out- door cases have been treated, against 328 in- and 15,615 out- door cases in the previous year.

SANKARIDRUG.

Extracts from the Annual Medical Report by First-class Hospital Assistant
NARRAIANSAMY PILLAY.

Dispensary Buildings.—In good order and well suited for all requirements.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, diarrhoea, abscesses, ulcers, and skin diseases.

Epidemics.—16 cases of cholera were admitted into hospital, of which number 4 proved fatal. Small-pox broke out in December in the adjacent villages, and is still prevailing.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—81 in- and 4,662 out- door cases have been treated, against 85 in- and 4,606 out- door cases in 1883.

TIRUPATUR.

Extracts from the Annual Medical Report by Civil Apothecary G. A. LEACH.

Dispensary Buildings.—Most of the walls are cracked, the roof leaks in several places, and the flooring is worn away in some places.

Most Common Diseases.—Fever, rheumatism, syphilis, ophthalmia, ear-ache, respiratory diseases, abscesses, ulcers, and skin diseases.

Epidemics.—A few cases of cholera occurred in the beginning and end of the year.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—138 in- and 4,594 out- door cases have been treated, against 137 in- and 4,603 out- door cases in the previous year.

UTTANKARAI.

Extracts from the Annual Medical Report by Hospital Assistant
V. COOMARASAMY MOODELLY, No. 303.

Dispensary Buildings.—In good order.

Most Common Diseases.—Fever, ophthalmia, respiratory affections, dysentery, abscesses, ulcers, and skin diseases.

Epidemics.—None in the station, but in its vicinity 10 cases of cholera occurred and 5 deaths.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—1,953 out-door cases have been treated, against 2,025 in the previous year.

VANIYAMBADI.

Extracts from the Annual Medical Report by Civil Hospital Assistant
S. STRADY, No. 265.

Dispensary Buildings.—A new building has been rented since last report. It is in good repair.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic in the early part of the year, and again in the month of December.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—4,396 out-door cases have been treated, against 4,856 in 1883.

YERCAUD.

Extracts from the Annual Medical Report by Civil Apothecary S. T. BROWNE.

Dispensary Buildings.—In fair order. Servants' houses have lately been erected, and a house for the Compounder is in course of construction.

Most Common Diseases.—Fever, rheumatism, respiratory affections, dysentery, diarrhoea, and ulcers.

Epidemics.—Small-pox prevailed in two native villages in Yercaud.

Inspection.—Inspected three times by the District Surgeon.

Attendance of Patients.—135 in- and 4,886 out-door cases have been treated, against 137 in- and 4,806 out-door in 1883.

TANJORE DISTRICT.

AMMAPET.

Extracts from the Annual Medical Report by Hospital Assistant
C. GNANAPRAGASAM PILLAY, No. 205.

Dispensary Buildings.—A rented building and in good state of repair.

Most Common Diseases.—Fever, cholera, rheumatism, ophthalmia, ear-ache, respiratory affections, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic in the months of January and February in the station, and in the surrounding villages in the months of November and December, causing, on the whole, 135 admissions and 48 deaths. The epidemic in the early part of the year was the continuance of the epidemic which broke out in the latter part of 1883.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—5,014 out-door cases were treated, against 5,400 in the previous year.

General Remarks.—A midwife has been added to the establishment since last May. She has attended to 25 cases since her entertainment.

ARANTANGI.

Extracts from the Annual Medical Report by Civil Hospital Assistant
N. RUNGASAWMY NAIDU, No. 182.

Dispensary Buildings.—In a rented building, and inadequate for the purpose. The building is in good repair.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Measles and small-pox prevailed in a mild form in the villages. No fatal cases were reported. Cholera broke out in the town in the first and last quarters of the year.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—7,507 out-door cases have been treated, against 8,346 in the previous year.

AVIDIARCOVIL.

Extracts from the Annual Medical Report by Hospital Assistant
P. MOOTHOSAWMY PILLAY, No. 147.

Dispensary Buildings.—A small rented building.

Most Common Diseases.—Fever, cholera, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—130 cases of malignant cholera occurred, of which number 38 proved fatal.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—5,525 out-door cases have been treated, against 3,928 in the previous year.

ATTAMPET.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
A. VISVANADA PILLAY, No. 242.

Dispensary Buildings.—A rented terraced building; very damp during the wet season.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, anaemia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic in the town and its suburbs during the early and latter parts of the year: 62 cases and 18 deaths have been registered.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—4,231 out-door cases were treated, against 6,311 in the previous year.

KUDAVASAL.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
V. A. IVANCUNNOO PILLAY, No. 218.

Dispensary Buildings.—An old rented building with insufficient accommodation. A permanent building for the dispensary is now under construction.

Most Common Diseases.—Fever, cholera, rheumatism, anaemia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—The epidemic of cholera in November 1883 continued its ravages till the beginning of 1884. 145 cases were admitted on the books of the dispensary.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—5,976 out-patients have been treated, against 6,432 in the previous year.

General Remarks.—37 labor cases were conducted by the midwife attached to the dispensary.

KUMBAKONUM.

Extracts from the Annual Medical Report by Apothecary G. ASHWORTH.

Dispensary Buildings.—The main building, which was under construction, is still incomplete. The female wards and other buildings need repairs.

Most Common Diseases.—Fever, rheumatism, anaemia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera of the previous year continued until the end of February. There was a slight epidemic in July and August; it re-appeared on the 1st December, and still continues. There were throughout the year 720 attacks and 398 deaths. Small-pox also was epidemic almost throughout the year. The deaths from this cause were 119.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—471 in- and 6,813 out-door cases were treated, against 510 in- and 7,636 out-door cases in the previous year.

KUMBAKONAM BRANCH.

Extracts from the Annual Medical Report by Hospital Assistant
C. SOOBRAVALU NAIDU.

Most Common Diseases.—Skin diseases, ulcers, injuries, ophthalmic affections, and diarrhoea.

Epidemic—of cholera : 98 attacks and 45 deaths reported.

Inspection.—Inspected by Civil Surgeon.

Attendance of Patients.—Less : 8,690 out-door patients were treated, against 10,217 in the previous year.

KUTTANAILUR.

Extracts from the Annual Medical Report by Civil Hospital Assistant
M. MOOTHOSAWMY, No. 210.

Dispensary Buildings.—A rented and very suitable building.

Most Common Diseases.—Fever, cholera, rheumatism, ophthalmia, ear-ache, respiratory affections, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic in January and February, when 40 cases occurred. Another outbreak occurred in June and 10 more cases occurred.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—3,397 out-patients were treated, against 4,380 in the previous year.

MADURUR.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
C. PARTHASARATHY, No. 230.

Dispensary Buildings.—A rented and badly ventilated building, and in need of sundry repairs. A private room for the examination of patients is needed.

Most Common Diseases.—Fever, cholera, rheumatism, ophthalmia, ear-ache, respiratory diseases, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera prevailed : 130 cases and 51 deaths have been recorded in the books of the dispensary.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—5,063 out-door cases were treated, against 5,611 in the previous year.

General Remarks.—36 cases of labor were attended to by the midwife : one was a "difficult labor." The midwife is popular and is much sought for, particularly by the Muhammadan females.

MANAMELGOODY.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
R. OLAGASOONDARUM PILLAY, No. 243.

Dispensary Buildings.—The building is a detached portion of a chuttram, not conveniently arranged.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—An epidemic of cholera occurred in the station and its vicinity in the months of August and September : 28 cases and 13 deaths are recorded. Small-pox was also prevalent, but none came under personal observation.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—3,393 out-door cases were treated, against 2,290 in the previous year.

MANNARGUDI.

Extracts from the Annual Medical Report by Assistant Apothecary J. JOHN.

Dispensary Buildings.—In good state of repair. The wards are spacious, but the ventilation is not good.

Most Common Diseases.—Fever, cholera, rheumatism, ophthalmia, ear-ache, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Small-pox, chicken-pox, and measles prevailed in the months of February, March, and April last. Cholera was epidemic most part of the year both in the town and taluk.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—294 in- and 12,775 out-door cases were treated, against 318 in- and 12,672 out-door cases in the previous year.

MANUMBOOCHAVADY AND KARANTHATANGUDI.

Extracts from the Annual Medical Report by Second-class Hospital Assistant
V. V. RAMASAWMY NAIDU, No. 146.

Dispensary Buildings.—In good state of repair. A new room has been added to the last named dispensary.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, anæmia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—The epidemic of cholera of October 1883 continued till March 1884 and re-appeared in June. The number of cases recorded for the year was 569 with 374 deaths.

Inspection.—Inspected twice a week by the District Surgeon.

Attendance of Patients.—19,405 out-door cases have been treated, against 19,231 in the previous year.

MAYAVARAM.

Extracts from the Annual Medical Report by Civil Apothecary
P. D. S. AMIRTHASAWMY PILLAY.

Dispensary Buildings.—In good order, except the cholera shed, which requires reconstructing.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, anæmia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—The town suffered from three visitations of cholera : the first occurred in October 1883 and continued till February 1884, the second occurred in May, and the last in November and continues still. 100 cases were treated in hospital, but the numbers that were attacked outside were very high. Small-pox was also prevalent for some months and carried off a large number of people.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—167 in- and 5,957 out-door cases were treated, against 134 in- and 6,076 out-door cases in 1883.

MUTUPET.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
M. SANTHAPPA PILLAY, No. 260.

Dispensary Buildings.—Have been recently built. The flooring of the verandah requires attending to as well as several cracks in the walls. A compound wall is very necessary.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, anæmia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera has been twice epidemic, and is still prevailing : 150 cases were admitted and 48 proved fatal. Small-pox has also been epidemic.

Inspection.—None.

Attendance of Patients.—5,285 out-door cases have been treated. The average daily attendance has been 30.48, against 27.19 in the previous year.

NAGORE.

Extracts from the Annual Medical Report by Hospital Assistant P. NAGAPPA PILLAY.

Dispensary Buildings.—A rented building requiring no repairs.

Most Common Diseases.—Fever, rheumatism, syphilis, anaemia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic: 306 cases with 206 deaths occurred in the town. Small-pox was also prevailing: 102 fatal cases were reported.

Inspection.—Inspected frequently by the Civil Surgeon of Negapatam.

Attendance of Patients.—6,815 out-door cases, against 6,994 in 1883.

NANNILAM.

Extracts from the Annual Medical Report by Civil Hospital Assistant N. A. VEERASAWMY NAIDOO, No. 196.

Dispensary Buildings.—The dispensary is in a shed, which is in need of some repairs. A new dispensary is under construction.

Most Common Diseases.—Fever, cholera, rheumatism, ophthalmia, ear-ache, respiratory affections, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic almost throughout the year: 66 cases came under treatment as out-patients, of which number 28 proved fatal.

Inspection.—Once by the District Surgeon.

Attendance of Patients.—4,651 out-door cases, against 4,908 in the previous year.

NEGAPATAM.

Extracts from the Annual Medical Report by Surgeon H. CARRUTHERS.

Dispensary Buildings.—The buildings all leak badly and urgently require looking to.

Most Common Diseases.—Cholera, fever, ophthalmia, worms, ulcers, and injuries.

Epidemics.—Cholera is almost endemic. It was present from 1st January to 2nd April and broke out again on 12th May and continued to 31st December with the exception of about three clear weeks scattered over the time: attacks 821; deaths 564. Small-pox has also been prevalent, there having been 231 deaths.

Attendance of Patients.—The daily average attendance of in- and out-patients was 164 and 775 respectively.

NIMPASAL.

Extracts from the Annual Medical Report by Civil Hospital Assistant LOGANATHA PILLAY.

Dispensary Buildings.—The building is much in need of repairs. The ward for male patients has not been used for three months, and the patients are accommodated in the verandah.

Most Common Diseases.—Fever, rheumatic affections, ophthalmia, ear-ache, dysentery, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera prevailed to a slight extent in the station: 13 cases and 6 deaths occurred at the hospital.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—139 in- and 1,586 out-door cases were treated, against 129 in- and 2,299 out-door patients in 1883.

NIDAMANGALAM.

Extracts from the Annual Medical Report by First-class Hospital Assistant M. LUTCHMANA MOODELLY, No. 78.

Dispensary Buildings.—In good order. Ventilation insufficient and accommodation very scanty. It is in contemplation to build a new dispensary, the site for which has already been selected.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera visited the town and its vicinity: 6 in- and 47 out-door patients were treated; 17 proved fatal. Small-pox was also epidemic in the town and surrounding villages.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—215 in- and 5,607 out-door cases were treated, against 193 in- and 5,377 out-door patients in the previous year.

ORATTANAD.

Extracts from the Annual Medical Report by Second-class Hospital Assistant R. RAJAVALOO NAIDU.

Dispensary Buildings.—Situated in a portion of a chuttram and quite unsuitable. The building is in good order.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—None in the station, but cholera prevailed in the surrounding villages.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—413 in- and 7,523 out-door cases were treated, against 228 in- and 8,500 out-door patients.

PAPANASAM.

Extracts from the Annual Medical Report by Civil Hospital Assistant M. ARBOREE NAIDU, No. 218.

Dispensary Buildings.—A rented building with suitable accommodation.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, anaemia, ophthalmia, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was twice epidemic during the early and latter parts of the year: 57 cases and 17 deaths are recorded.

Inspection.—Inspected three times by the District Surgeon.

Attendance of Patients.—6,689 out-door cases were treated, against 6,409 in the previous year.

PATUKOTA.

Extracts from the Annual Medical Report by Civil Apothecary M. DENADAYALU.

Dispensary Buildings.—Require repairs.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic in the surrounding villages.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—83 in- and 4,277 out-door cases were treated, against 21 in- and 5,215 out-door cases in 1883.

RAJAHMADAM.

Extracts from the Annual Medical Report by Civil Hospital Assistant
V. N. DEVASIGAMONY MOODELLY.

Dispensary Buildings.—There are two separate buildings for in- and out- door patients.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera and small-pox were both prevalent in the station and surrounding villages.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—114 in- and 3,967 out- door patients were treated, against 103 in- and 4,616 out- door patients.

SHIVALLI.

Extracts from the Annual Medical Report by Assistant Apothecary S. ANNASAWMY.

Dispensary Buildings.—Repaired during the year. The dead-house and some of the out-houses are again in need of repairs.

Most Common Diseases.—Fever, cholera, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera and small-pox prevailed during the year, the former in the taluk and the latter in the town and taluk, causing much havoc among the unprotected subjects.

Inspection.—None.

Attendance of Patients.—134 in- and 6,227 out- door cases have been treated, against 99 in- and 6,400 out- door in the previous year.

TANJORE.

Extracts from the Annual Medical Report by Surgeon-Major J. H. RITCHIE.

Dispensary Buildings.—Very suitable. They were repaired and whitewashed during the year.

Most Common Diseases.—Fever, rheumatic affections, venereal, worms, ulcers, skin diseases, ear-ache, and ophthalmia.

Epidemics.—The epidemic of cholera of October 1883 continued till March following: after an interval of two months it re-appeared in the town in June. The number of attacks was 569 with 374 deaths. The number who sought relief from the hospital was 67 out- and 17 in- door patients. The deaths among them were 32 and 10 respectively.

Inspection.—Not inspected by the Surgeon-General.

Attendance of Patients.—653 in- and 16,706 out- door cases have been treated, against 831 in- and 15,393 out- door in the previous year.

TIRUKATTUPALLY.

Extracts from the Annual Medical Report by Third-class Hospital Assistant
C. NARRAINASAWMY NAIDOO.

Dispensary Buildings.—Located in a small and badly ventilated private building, quite unsuitable. The building is not in need of repairs.

Most Common Diseases.—Fever, rheumatism, syphilis, anaemia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic during the first and last quarter of the year: 36 cases were treated, of which number 22 proved fatal.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—8,831 out-door cases were treated, against 9,266 in the previous year.

TIRUTURAIPUNDI.

Extracts from the Annual Medical Report by Civil Apothecary C. A. BAYROD.

Dispensary Buildings.—As they were considered unsafe owing to their dangerous state, the roofs and walls being in very bad order, the buildings were vacated on the 21st October. If not attended to at once they are likely to run into such a condition as to necessitate their being pulled down and erecting new ones.

Most Common Diseases.—Fever, cholera, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—The epidemic of cholera, which occurred in November 1883, continued till May 1884, when it ceased to break out afresh a month after. A few cases of small-pox and measles occurred.

Inspection.—None.

Attendance of Patients.—106 in- and 6,852 out- door cases have been treated, against 164 in- and 7,951 out-door cases in 1883.

TIRUVADAMARUDUR.

Extracts from the Annual Medical Report by Civil Hospital Assistant
K. M. STREESAYASSA NAIDU, No. 219.

Dispensary Buildings.—A rented building and in need of repairs.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, anaemia, ophthalmia, ear-ache, respiratory affections, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—The epidemic of cholera of November 1883 continued till March 1884. The disease again prevailed in the month of November: 76 cases were treated, out of which number 33 died.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—5,155 out-door patients were treated, against 6,093 in the previous year.

TIRUVADI.

Extracts from the Annual Medical Report by First-class Hospital Assistant
C. COOMARASAWMY, No. 66.

Dispensary Buildings.—The building has many defects which have been repeatedly brought to the notice of the authorities. A new building situated in a central locality is very desirable.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera prevailed in a mild form in the station and surrounding villages in the early and latter parts of the year: 15 cases came under personal treatment at the dispensary, of which number 11 died.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—5,487 out-door patients have been treated, against 6,776 in the previous year, showing a decrease this year of 1,289. This falling off is due to the very large number (1,258) of cases of ophthalmia that were treated in 1883.

TIRUVÁLUR.

Extracts from the Annual Medical Report by Civil Hospital Assistant
C. MOOROGASEN MOODELLY, No. 169.

Dispensary Buildings.—The building is a small, dark, and ill-ventilated place, quite unsuitable, there being no private room. It was formerly a bazaar. The erection of a new building is contemplated.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, anaemia, leprosy, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was prevailing for many months in the station and its vicinity: 145 cases were treated at the dispensary.

Inspection.—Inspected once by the Civil Surgeon, Negapatam.

Attendance of Patients.—9,150 out-door cases were treated, against 10,093 in 1883.

TRANQUEBAR.

Extracts from the Annual Medical Report by Honorary Surgeon E. A. MORRIS.

Dispensary Buildings.—Repairs needed. A dead-house and a temporary shed for infectious cases are much wanted. An estimate for the erection of both has been sanctioned long ago, but the work has not as yet begun.

Most Common Diseases.—Fevors, rheumatism, syphilis, anæmia, ophthalmia, ear-ache, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Inspection.—None.

Epidemics.—None in the station. Cholera prevailed in the neighbouring villages; 26 cases and 7 deaths are reported.

Attendance of Patients.—257 in- and 5,300 out-door cases have been treated, against 199 in and 5,582 out-door cases in 1883.

TRANQUEBAR BRANCH DISPENSARY.

Extracts from the Annual Medical Report by Honorary Surgeon E. A. MORRIS.

Dispensary Buildings.—In fair state of repair. The building is the property of Government.

Most Common Diseases.—Fevors, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—20 cases of cholera have been recorded in the books of the dispensary. The disease has been epidemic throughout the year in the district.

Inspection.—None.

Attendance of Patients.—4,655 cases have been treated, against 5,134 in 1883.

VALANGIMAN.

Extracts from the Annual Medical Report by Civil Hospital Assistant C. V. GOVINDASAWMY, No. 238.

Dispensary Buildings.—A rented, ill-ventilated old building, in need of general repairs.

Most Common Diseases.—Fevors, cholera, rheumatism, ear-ache, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera has been more or less prevailing throughout the taluk during the whole year and still continues its ravages: 129 cases came under treatment, of which number 50 proved fatal.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—The total number of out-door cases treated was 5,431, against 5,360 in the previous year.

VALLAM.

Extracts from the Annual Medical Report by Second-class Hospital Assistant T. GANAPATHY PILLAY, No. 125.

Dispensary Buildings.—Have been recently repaired.

Most Common Diseases.—Fevors, rheumatism, syphilis, anæmia, dropsy, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera prevailed for several months: the number of attacks was 21 and deaths 5. The disease was not of a virulent type, and was readily amenable to treatment.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—The total number treated was 7,233, against 7,437 in the previous year.

VEDARNIEM.

Extracts from the Annual Medical Report by First-class Hospital Assistant MANICKUM MOODALLY, No. 111.

Dispensary Buildings.—The building is unfitted for a dispensary and requires a good deal of repairs.

Most Common Diseases.—Fevors, cholera, rheumatism, anæmia, ophthalmia, ear-ache, respiratory diseases, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic in the station and in almost all the surrounding villages: 70 cases came under personal treatment.

Inspection.—None.

Attendance of Patients.—4,343 out-door cases, against 4,161 in the previous year.

General Remarks.—17 midwifery cases were attended to by the midwife. It is a pity that the midwives are transferred so frequently, or a greater number would have sought assistance; there is a hesitation on the side of the public to trust a new-comer.

VELANGULAM.

Extracts from the Annual Medical Report by Third-class Hospital Assistant S. N. VEERAMUTHU PILLAI, No. 380.

Dispensary Buildings.—In bad state of repair and not fit for the purpose.

Most Common Diseases.—Fevors, cholera, rheumatism, ophthalmia, ear-ache, respiratory affections, diarrhoea, abscesses, ulcers, and skin diseases.

Epidemics.—No cholera in the station, but 42 cases occurred in its vicinity.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—192 in- and 2,034 out-door patients were treated, against 122 in- and 1,936 out-door cases in 1883.

TINNEVELLY DISTRICT.

AMBASAMUDRAM.

Extracts from the Annual Medical Report by Civil Apothecary W. J. COOPER.

Dispensary Buildings.—The main building was whitewashed and the out-houses repaired. Extension of the present building and the erection of a ward for in-patients will be undertaken during the year.

Most Common Diseases.—Fevors, cholera, rheumatism, syphilis, anæmia, ophthalmia, ear-ache, dysentery, diarrhoea, worms, liver diseases, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—The epidemic of cholera, which began in December 1883, lasted till March 1884. It again became epidemic in November. Up to the end of the year there have been 923 attacks and 710 deaths, the figures for this station being 77 and 46 respectively. 109 cases came under personal observation. Small-pox also prevailed in the taluk.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—The total number of out-patients treated was 8,330, against 9,849 in the previous year.

IDAIYANGUDI.

Extracts from the Annual Medical Report by Second-class Hospital Assistant S. SIMEON, No. 113.

Dispensary Buildings.—The buildings are rented by the Local Fund Board and are sadly in need of repairs.

Most Common Diseases.—Fever, cholera, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera became epidemic in the month of December and still continues its ravages.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—50 in- and 7,657 out- door cases were treated, against 27 in- and 7,096 out- door cases in 1883.

MEGNANAPURAM.

Extracts from the Annual Medical Report, by Medical Practitioner M. H. COOKSLEY.

Dispensary Buildings.—In good order, excepting the roof which requires new thatching.

Most Common Diseases.—Fever, rheumatism, anæmia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera visited the station three times during the year, but was not epidemic.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—10 in- and 4,758 out- door cases have been treated, against 27 in- and 4,033 out- door in, 1883.

NAGALAPURAM.

Extracts from the Annual Medical Report by Medical Practitioner P. SAVARIMUTHU.

Dispensary Buildings.—In good order.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera, small-pox, and measles prevailed to a slight extent in the station and its vicinity.

Inspection.—None.

Attendance of Patients.—20 in- and 3,485 out- door cases were treated, against 51 in- and 2,755 out- door cases in the previous year.

NANGUNERI.

Extracts from the Annual Medical Report by Hospital Assistant A. CHOCKALINGUM PILLAY.

Dispensary Buildings.—A rented building. A new dispensary is being constructed and will shortly be completed.

Most Common Diseases.—Fever, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera of a fatal type broke out in the month of December, and is still prevailing both in the town and taluk.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—65 in- and 5,033 out- door cases were treated during the year, against 41 in- and 4,225 out- door cases in 1883.

NAZARETH.

Extracts from the Annual Medical Report by Medical Practitioner A. MARGOSCHIS.

Dispensary Buildings.—In good order.

Most Common Diseases.—Fever, cholera, rheumatism, anæmia, dropsy, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic in January: 41 cases with 21 deaths occurred. Cholera again broke out in the latter part of the year and continues up to date.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—52 in- and 9,953 out- door cases have been treated, against 77 in- and 8,068 out- door cases in the previous year.

OTAPIDARAM.

Extracts from the Annual Medical Report by Civil Apothecary T. THYREUM PILLAY.

Dispensary Buildings.—The roof of the verandah leaks considerably. The walls require whitewashing. A post-mortem room, a cook room, and a compound wall are being constructed, and will be completed shortly.

Most Common Diseases.—Fever, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic in the adjacent villages during the first half of the year.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—4,682 out-door cases, against 4,901 in the previous year.

PALAMCOTTAH.

Extracts from the Annual Medical Report by Surgeon-Major H. HYDE.

Dispensary Buildings.—Require repairs.

Most Common Diseases.—Fever, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—There were two distinct epidemics of cholera in the town. One was a continuation of the epidemic of the previous year, which ended in March. The second epidemic occurred in November. In all 271 attacks and 152 deaths occurred.

Inspection.—Not inspected by the Surgeon-General.

Attendance of Patients.—313 in- and 7,120 out- door cases have been treated, against 262 in- and 6,083 out- door cases in 1883.

RADILAPURAM.

Extracts from the Annual Medical Report by Medical Practitioner SAMUEL JOHN.

Dispensary Buildings.—In good condition.

Most Common Diseases.—Fever, cholera, rheumatism, anæmia, ophthalmia, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic in the neighbouring villages: 64 cases came under medical treatment. The disease is still prevailing.

Inspection.—Once by the District Surgeon.

Attendance of Patients.—The total number of out-cases treated was 2,569, against 2,344 in the year 1883.

SANKARANAINARKOIL.

Extracts from the Annual Medical Report by First-class Hospital Assistant S. BASHIEM NAIDU, No. 752.

Dispensary Buildings.—The buildings were constructed during the year and require no repairs.

Most Common Diseases.—Fever, rheumatism, syphilis, anæmia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—A few cases of cholera occurred in the town, but the disease has been epidemic in the adjoining villages since October.

Inspection.—Twice by the District Surgeon.

Attendance of Patients.—7,607 out-patients have been treated, against 5,737 in the previous year.

SÁTÚR.

Extracts from the Annual Medical Report by Hospital Assistant
M. R. SAMUEL PILLAY.

Dispensary Buildings.—In need of repairs.

Most Common Diseases.—Fever, rheumatism, ophthalmia, dysentery, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—1,772 out-cases, against 1,422 in the previous year.

SAWYERPURAM.

Extracts from the Annual Medical Report by Medical Practitioner A. JOSEPH.

Dispensary Buildings.—In good condition.

Most Common Diseases.—Fever, cholera, rheumatism, dropsy, ophthalmia, ear-ache, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera has been epidemic almost throughout the year in the adjacent villages.

Inspection.—Inspected once during the year.

Attendance of Patients.—21 in- and 4,602 out- door patients were treated, against 27 in- and 4,815 out- door patients in the previous year.

SIVAKÁSI.

Extracts from the Annual Medical Report by Hospital Assistant S. DAVID.

Dispensary Buildings.—The building was erected three years ago and is still in an unfinished state.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera prevailed epidemically in November and December: 130 cases came under medical treatment.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—Total number treated of out-door cases was 3,302, against 3,609 in the previous year.

SRÍVAIKUNTHAM.

Extracts from the Annual Medical Report by Civil Apothecary
C. PARTHASARATHY NAIDOO.

Dispensary Buildings.—In good state of repair. A dead-house was recently built. A kitchen is much needed.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, anaemia, dropsy, ophthalmia, ear-ache, dysentery, diarrhoea, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera broke out on the 7th November and is still prevailing. 140 cases came under personal treatment at the dispensary. Small-pox has been prevailing for the past six months.

Inspection.—Inspected twice by the Civil Surgeon.

Attendance of Patients.—6,867 out-door cases, against 8,094 in the previous year.

SRÍVILLIPUTUR.

Extracts from the Annual Medical Report by Civil Hospital Assistant
R. A. PETER PILLAY.

Dispensary Buildings.—The roofing of two rooms and verandahs requires repairs. There is much leakage during the wet season.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, anaemia, ophthalmia, ear-ache, respiratory affections, diarrhoea, dysentery, worms, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—The epidemic of cholera, which broke out in the town and villages in November 1883, continued till March 1884. It re-appeared in July and still continues. The total number of deaths up to the end of the year is 1,300. A special Medical Officer has been deputed to inspect the villages where the epidemic prevailed.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—33 in- and 13,500 out- door cases were treated, against 54 in- and 12,458 out- door cases in 1883.

TENKÁSI.

Extracts from the Annual Medical Report by Civil Apothecary W. NUGENT.

Dispensary Buildings.—In good order. The accommodation is quite insufficient and calls for attention. There is no dead-house, which is urgently needed.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, anaemia, ophthalmia, respiratory affections, dysentery, diarrhoea, worms, liver diseases, gonorrhoea and its complications, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera, which broke out in December 1883, continued till March 1884. It broke out again in the town and surrounding villages in the last quarter of the year. The disease is still prevailing and is very severe in the suburbs of the town. Small-pox, measles, and whooping cough have also been prevalent.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—24 in- and 7,663 out- door cases were treated, against 10 in- and 8,463 out- door cases in the previous year.

TINNEVELLY.

Extracts from the Annual Medical Report by First-class Hospital Assistant P. NULLIAN NAMB.

Most Common Diseases.—Abdominal, skin, and respiratory affections, and fever.

Epidemic.—of cholera at end of year.

Inspection.—Inspected by District Surgeon.

Attendance of Patients.—165 in- and 8,333 out- door cases have been treated, against 150 in- and 7,851 out- door cases in the previous year.

TRIKARUNGUDI.

Extracts from the Annual Medical Report by Hospital Assistant R. M. DOSS.

Dispensary Buildings.—Situated in a chuttram and not suitable: in good state of repair. A dead-house is much needed, and two windows to the front wall.

Most Common Diseases.—Fever, ophthalmia, respiratory affections, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic in the surrounding villages. Small-pox also prevailed slightly.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—3,600, against 4,029 in the previous year.

TUTICORIN.

Extracts from the Annual Medical Report by Apothecary D. O'LEARY.

Dispensary Buildings.—Repairs needed. The cholera shed and some out-houses, which were washed down by the late flood, have not been rebuilt yet.

Most Common Diseases.—Fever, cholera, rheumatism, syphilis, dropsy, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—The epidemic of cholera at the close of the year 1883 continued its ravages till the end of May. In November it again broke out and continues up to date. Out of a total of 435 persons attacked, 251 died. Small-pox also prevailed and caused the death of 23 persons.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—288 in- and 6,925 out- door cases have been treated, against 221 in- and 6,497 out- door cases in the previous year.

VIRUDUPATI.

Extracts from the Annual Medical Report by Civil Apothecary C. SALDANHA.

Dispensary Buildings.—The buildings underwent repairs. Thorough whitewashing is much needed and will be begun shortly.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, diarrhoea, worms, gonorrhoea and its complications, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—66 in- and 4,706 out- door cases were treated, against 130 in- and 6,142 out- door cases in 1883.

VIRUKERALAMPUDAR.

Extracts from the Annual Medical Report by Civil Apothecary C. VEDANTAYYA.

Dispensary Buildings.—The dispensary was opened on the 1st March 1884: in good order.

Most Common Diseases.—Rheumatism, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic at the beginning and end of the year, and is still prevailing: 40 cases came under medical treatment.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—2,350 out-door patients have been treated since the opening of the dispensary.

TRICHINOPOLY DISTRICT.

ARIYALUR.

Extracts from the Annual Medical Report by Second-class Hospital Assistant M. COOFOOSAWMY NAICKER.

Dispensary Buildings.—A rented old building, needing repairs.

Most Common Diseases.—Fever, cholera, rheumatism, ophthalmia, ear-ache, respiratory affections, diarrhoea, abscesses, ulcers, and skin diseases.

Epidemics.—79 cases of cholera occurred in the town. The epidemic ceased in March.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—4,132, against 4,866 in the previous year.

IRUNGALUR.

Extracts from the Annual Medical Report by Medical Practitioner S. MATHURANAYAGUM.

Dispensary Buildings.—The dispensary is located in a large and substantial building. Slight minor repairs are required.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—4,867 out-door cases, against 4,853 in the previous year.

LAIGUDI.

Extracts from the Annual Medical Report by Second-class Hospital Assistant D. N. VATHAPOTHAGUM PILLAY.

Dispensary Buildings.—The dispensary is temporarily located in the building occupied by the police. The permanent building sanctioned for the dispensary is under construction.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was epidemic in the early and latter parts of the year: 70 cases and 21 deaths occurred.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—5,216 out-door cases were treated since the opening of the institution on the 1st January 1884.

MUSIRI.

Extracts from the Annual Medical Report by First-class Hospital Assistant P. R. PAETHASARATHY MOODELLIAE.

Dispensary Buildings.—The dispensary was built during the year, and is very suitable.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was twice epidemic during the year.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—5,807 out-door cases have been treated, against 6,374 in the previous year.

SRIIRANGAM.

Extracts from the Annual Medical Report by Second-class Hospital Assistant C. THIRUMALAY NAIDOO, No. 130.

Dispensary Buildings.—Most of the buildings were accidentally destroyed by fire in the month of May last. Fortunately no instruments or medicines were destroyed. The centre terraced part of the old building, the thatched dead-house, and small-pox shed were the only places saved. The out-patients are treated in the terraced centre. There is now no accommodation for in-patients, who are sent to Trichinopoly for treatment.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Cholera was twice epidemic during the year: 119 cases and 61 deaths have been reported.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—92 in- and 11,693 out- door cases have been treated, against 232 in- and 13,979 out- door cases in the previous year.

TRICHINOPOLY.

Extracts from the Annual Medical Report by Surgeon-Major L. C. NANNY.

Dispensary Buildings.—The annual repairs are now going on, and the cholera sheds that suffered greatly from the recent heavy monsoon have been reconstructed. The buildings generally are in a state of good preservation.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, ulcers, and skin diseases.

Epidemics.—Of cholera at beginning and end of the year: 1,177 attacks and 788 deaths occurred. The epidemic still continues.

Inspection.—No inspection by the Surgeon-General.

Attendance of Patients.—1876 in- and 39,286 out- door cases have been treated, against 1,828 in- and 39,313 out- door cases in the previous year.

VIZAGAPATAM DISTRICT.

ANAKÁPALLE.

Extracts from the Annual Medical Report by Hospital Assistant KAREEM SAHIB.

Dispensary Buildings.—In good order. A compound wall, a latrine for the in-door sick, and a dead-house are required. The want of these has been repeatedly brought to notice, but no steps have been taken to supply them.

Most Common Diseases.—Fever, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, abscesses, skin diseases, and ulcers.

Epidemics.—Small-pox prevailed throughout the year. It was severer in the town than in the villages: 49 deaths have been recorded. 5 cases of cholera occurred in the town.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—100 in- and 6,310 out- cases were treated, against 89 in- and 6,743 out- door patients in 1883.

BIMLIPATAM.

Extracts from the Annual Medical Report by First-class Assistant Apothecary C. G. ROBERTS.

Most Common Diseases.—Skin diseases and ulcers, rheumatic affections, malarial fevers and respiratory affections.

Inspection.—Inspected by Civil Surgeon.

Attendance of Patients.—Rather less than last year, viz., 212 in- and 5,118 out- door cases, against 239 in- and 5,265 out- door cases in 1883.

BOBBILL.

Extracts from the Annual Medical Report by Hospital Assistant C. M. SRINIVASA RAU.

Dispensary Buildings.—In good order.

Most Common Diseases.—Fever, rheumatism, syphilis, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, abscesses, ulcers, and skin diseases.

Epidemics.—Small-pox prevailed.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—34 in- and 8,481 out- door cases were treated, against 36 in- and 6,989 out- door cases in 1883.

CHÍPURUPALLE.

Extracts from the Annual Medical Report by Hospital Assistant A. SEETHARAMASAWMY, No. 244.

Dispensary Buildings.—Repairs were executed to the buildings during the year.

Most Common Diseases.—Fever, rheumatism, leprosy, ophthalmia, ear-ache, respiratory affections, worms, ulcers, and skin diseases.

Epidemics.—None in the station. Cholera was epidemic for several months in distant villages.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—3,292 out-door cases, against 4,069 in the previous year.

CHÓDAVARAM.

Extracts from the Annual Medical Report by Hospital Assistant K. THIRAPATHI RAJ.

Dispensary Buildings.—In good repair. A new dead-house is required.

Most Common Diseases.—Fever, rheumatism, anæmia, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—Small-pox prevailed in the town and its vicinity and caused a high mortality.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—35 in- and 6,479 out- door cases were treated, against 28 in- and 6,187 out- door cases in 1883.

GAJAPATINAGAR.

Extracts from the Annual Medical Report by Civil Apothecary P. KRISTNASWAMY MOODELLIAR.

Dispensary Buildings.—Located in a rented building.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—Total number treated during the year 4,730, against 4,193 in 1883.

GUNIPORE.

Extracts from the Annual Medical Report by Hospital Assistant T. SOORYANARAYANA, No. 300.

Dispensary Buildings.—No special dispensary.

Most Common Diseases.—Fever, rheumatism, ophthalmia, ear-ache, respiratory affections, worms, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—None.

Attendance of Patients.—1,610, against 1,592 in 1883.

ITTIKAVALSA.

Extracts from the Annual Medical Report by Hospital Assistant ABDOLSUBHON KHAN, No. 183.

Dispensary Buildings.—The building is constructed of brushwood and plastered with mud. It is repaired annually.

Most Common Diseases.—Fever, rheumatism, respiratory affections, and ulcers.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—1,251 out-door cases, against 3,181 in the previous year.

NARSAPATNAM.

Extracts from the Annual Medical Report by Civil Apothecary C. MANGAYYA NAIDU.

Dispensary Buildings.—Undergoing repairs.

Most Common Diseases.—Fever, rheumatism, anæmia, ophthalmia, ear-ache, respiratory diseases, worms, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—143 in- and 4,875 out- door cases have been treated, against 134 in- and 4,133 out- door cases in 1883.

PÁLKONDA.

Extracts from the Annual Medical Report by Civil Apothecary G. LOGANATHUM.

Dispensary Buildings.—In need of repairs.

Most Common Diseases.—Fever, rheumatism, leprosy, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—Small-pox prevailed in the town and several villages.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—107 in- and 8,698 out-door cases were treated, against 75 in- and 7,985 out-door cases in 1883.

PÁRVATIPUR.

Extracts from the Annual Medical Report by Hospital Assistant S. SURYANARAYANA NAIDU.

Dispensary Buildings.—In good repair, but require whitewashing.

Most Common Diseases.—Fever, rheumatism, syphilis, dropsy, ophthalmia, ear-ache, respiratory affections, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—5,713 out-patients, against 4,913 in the previous year.

SÁLÚR.

Extracts from the Annual Medical Report by Hospital Assistant P. NARRAINSAMY.

Dispensary Buildings.—Require some repairs. The floors of the store and consulting rooms are to be asphalted.

Most Common Diseases.—Fever, rheumatism, syphilis, leprosy, ophthalmia, ear-ache, respiratory affections, dysentery, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—There was a mild outbreak of chicken-pox in the town.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—6,244 out-door cases, against 5,710 in the previous year. 67 in-patients were also treated, against 9 in 1883.

SRUNGAVARAPUKOTA.

Extracts from the Annual Medical Report by Hospital Assistant MAHOMED HOMER.

Dispensary Buildings.—Have been thoroughly repaired during the year. The compound wall is in a dilapidated condition.

Most Common Diseases.—Fever, rheumatism, ophthalmia, respiratory affections, dysentery, worms, ulcers, and skin diseases.

Epidemics.—Small-pox of a modified form prevailed to a slight extent.

Inspection.—Inspected once by the District Surgeon.

Attendance of Patients.—4,086 cases were treated since the opening of the institution in the beginning of the year.

VIZAGAPATAM.

Extracts from the Annual Medical Report by Surgeon-Major J. SMITH.

Most Common Diseases.—Ulcers, skin diseases, fever, worms, and rheumatic affections.

Epidemics.—Small-pox was epidemic from February to June.

Inspection.—Not inspected by the Surgeon-General.

Attendance of Patients.—Increased, 361 in- and 12,479 out-door cases, against 326 in- and 8,516 out-door cases in the previous year.

General Remarks.—The midwife attended to 43 cases of labor.

YELLAMANCHILI.

Extracts from the Annual Medical Report by Hospital Assistant A. M. SIMON, No. 145.

Dispensary Buildings.—Require repairs.

Most Common Diseases.—Fever, rheumatism, anæmia, ophthalmia, respiratory affections, dysentery, diarrhoea, worms, ulcers, and skin diseases.

Epidemics.—None.

Inspection.—Inspected twice by the District Surgeon.

Attendance of Patients.—158 in- and 5,568 out-patients, against 177 in- and 5,117 out-door cases in 1883.

PROFESSIONAL PAPERS SELECTED FROM THE RECORDS OF THE MEDICAL DEPARTMENT, 1884.

No. I.—GENERAL HOSPITAL.

SURGICAL REPORT FOR 1884.

THIS report embraces the surgical work of the General Hospital for the calendar year 1884. Patients have been equally divided between the Senior Surgeon and the Second Surgeon. The numbers under treatment have been Europeans 309 and Natives 923, showing a decrease of 8 Europeans and 21 Natives as compared with last year.

The Native wards have nearly always been quite full, but the European wards have been little more than half full. There have been no epidemics of surgical diseases, and the hospital has been very healthy.

GENERAL DISEASES A.

Erysipelas.—2 cases—1 European and 1 Native. Both mild cases, one being discharged after eight days' treatment, the other after eleven days.

GENERAL DISEASES B.

Syphilis.—148 cases of syphilis were treated during the year (of whom 108 were Natives and 40 Europeans): 1 European and 2 Natives died.

	Europeans.	Natives.
Primary syphilis	11	39
Secondary do.	29	69
	40	108
Total ...	148	

DEATHS.

Case I.—A European, exhausted by long-standing syphilis, death being accelerated by diarrhoea.

Case II.—A native admitted in a state of extreme exhaustion, the combined result of syphilis, mercurialism, and starvation. He never rallied, and died eight days after admission.

Case III.—A weak, emaciated man suffering from syphilitic ulceration of the leg, dropsy, and chronic diarrhoea. Diarrhoea and exhaustion increased in spite of treatment and delirium set in. He died twenty-one days after admission.

No cases of indurated primary sores were seen. Early cases of secondary syphilis were mostly treated with calomel or corrosive sublimate. The later manifestations were treated with iodide of potassium and tonics.

DISEASES OF THE NERVOUS SYSTEM.

Tetanic Tetanus.—5 cases—all Natives: 2 recovered, 2 died, and 1 was removed by his relatives.

Case I.—Admitted with tetanus of six days' duration, the result of a lacerated wound. Spasms were severe, and there was slight opisthotonos, but no increase of temperature. He recovered and was discharged twenty-six days after admission. The treatment consisted in the administration of chloral and bromide of potassium in 10-grain doses.

Case II.—A boy, aged 12 years, admitted with tetanus of five days' duration, following a contused wound. The wound was trivial and tetanus was probably caused by worms, for after a dose of santanine he passed a large number of the latter. He was treated as well with chloral and bromide of potassium and made a slow recovery. Discharged two months and a half after admission.

Case III.—A man, aged 54, admitted with tetanus of three days' duration, following an abscess of the thigh. Symptoms were severe, and death occurred forty-eight hours after admission, the temperature rising to 105°. Chloral and bromide of potassium were given internally and hypodermic injections of extract of Calabar bean.

Case IV.—A man, aged 30, admitted with tetanus of six days' duration, following severe injury of the right thumb. The patient was moribund when admitted and died in four hours.

Case V.—Admitted with tetanus, following a boil on the cheek. Symptoms very severe. The patient was taken away by his relatives the day after admission.

DISEASES OF THE DIGESTIVE SYSTEM.

HERNIA.

14 cases of strangulated hernia, of whom 7 recovered and 7 died: 5 were reduced by taxis; in 7 herniotomy was performed; and 2 died almost immediately after admission. Of the herniotomy cases, 5 died and 2 recovered. The following are the cases in which herniotomy was performed.

Case I.—A Muhammadan, aged 45. Right inguinal hernia strangulated on the day of admission. Taxis failing, herniotomy was performed and the gut reduced. The sac was ligatured and divided, and the pillars of the ring brought together with cat-gut ligatures. Did well. Discharged forty days after admission. When seen some time afterwards there was considerable thinning of the abdominal wall at the seat of operation, and bulging.

Case II.—A Hindu, aged 21 years. Right inguinal hernia, strangulated three days. Symptoms very urgent. Taxis under chloroform failing, herniotomy was performed. The sac was not opened, but after reducing the gut, a cat-gut ligature was tied round the neck of the former. The pillars of the ring were brought together with silver wire sutures, which were brought out at the external wound. Did extremely well, and was discharged forty-five days after admission. At this period the tissues in the inguinal canal and upper part of the scrotum had consolidated and there was no impulse on coughing.

Case III.—A Hindu, aged 29 years. Right inguinal hernia, strangulated the day before admission. Violent taxis had been applied, followed by hæmorrhage from the bowels. Taxis having failed under chloroform, herniotomy was performed and the gut reduced without opening the sac. The sac was ligatured with cat-gut and divided, and the pillars of the ring brought together with cat-gut ligatures. Did very well until the third day, when he was seized with violent dyspnoea and symptoms of collapse, and died. *Post-mortem* examination showed death to have occurred from thrombosis in the right side of the heart and pulmonary artery.

Case IV.—A Hindu, aged 55 years. Right inguinal hernia, strangulated two days previously. Symptoms urgent. Taxis failing under chloroform, herniotomy was performed and the gut reduced without opening the sac. The sac was then ligatured with cat-gut and divided and the pillars of the ring brought together with silver wire. After the operation patient passed into a comatose condition in which he died. This case promised well. The symptoms were not urgent and the gut was easily reduced without opening the sac. The cause of death was obscure; but evidently not connected with the hernia or the operation.

Case V.—A Hindu, aged 30 years. Left inguinal hernia, strangulated four days. Symptoms very urgent. Taxis failing under chloroform, herniotomy was performed and the gut reduced without opening the sac. The latter was ligatured and the ring closed in the same manner as in the preceding cases. The patient died twenty-eight hours afterwards. Vomiting continued, and bloody discharge from the rectum. *Post-mortem* examination showed extensive contusion of the abdominal wall and scrotum, diffuse peritonitis, and a gangrenous condition of the intestine—a hopeless case.

Case VI.—A hopeless case in which the patient was in the last stage of exhaustion. Herniotomy was performed and the gut, which was gangrenous, was left in the wound. Died an hour afterwards.

Case VII.—A Hindu, aged 20 years. Left inguinal hernia, strangulated five days. Symptoms urgent. Herniotomy performed and the sac opened. Patient never rallied and died twenty-two hours after admission.

Of these cases the first two were successful and the third promised well, but was carried off by cardiac thrombosis. In the fourth case the fatal result, as related, is inexplicable. The last three were obviously hopeless. In five cases means were adopted to secure a radical cure. In the first case the result was not satisfactory, as the ligatures ulcerated out and resulted in thinning and bulging at the seat of operation. There was, however, no tendency for the hernia to enter the scrotum. In the second case the result was very satisfactory. In all these cases antiseptic precautions were used.

The following case of hernia was met with. A Hindu, aged 55 years, had suffered from hernia for twenty years. A year before admission the hernia became irreducible, the parts sloughed, and faeces escaped, and finally a portion of gut protruded through an opening in the scrotum. When admitted into hospital a loop of gut protruded through an opening in the

scrotum and faeces escaped from an opening in the intestine. A dissection was made exposing the whole hernia and an attempt made to reduce it, but without success. As the patient was in a very bad condition, it was not thought advisable to excise the protrusion, so it was fixed to the adjoining structure with cat-gut sutures. Two days afterwards the patient was removed by his relatives, as they would not consent to any further operation.

Three operations were performed for the radical cure of hernia. These will be detailed among the operations.

DISEASES OF THE ORGANS OF LOCOMOTION.

GANOGENE.—None.

LOCAL INJURIES.

FRACTURES.

4 cases occurred among Europeans and 45 among Natives, with 5 deaths among the latter. They may be classified as follows:—

	Number.	Deaths.
Skull	1	...
Face	1	...
Spine	3	2
Scapula	1	...
Ribs	2	...
Pelvis	1	1
Clavicle	1	...
Humerus	4	...
Fore-arm	6	...
Hand	2	...
Femur	15	1
Patella	2	...
Leg	8	1
Foot	2	...
Total ...	49	5

The following cases are of interest:—

Case I.—A native admitted for fracture of the skull at the junction of the occipital with the right parietal; caused by an iron bucket full of water falling on his head from a height of 20 feet. Through the wound brain substances escaped. Patient made a good recovery and was discharged cured, after remaining under treatment for two months.

Case II.—A Hindu, toddy-drawer, aged 37 years, was admitted with fracture and dislocation of spine, the result of a fall from a palmyra tree 15 feet high. The accident occurred four days before admission. On admission there was complete loss of sensation and motion of the lower extremities, and anaesthesia of the lower part of abdomen and back attended with involuntary evacuation of urine and faeces. Pain and tenderness from the third dorsal to the second lumbar vertebra. Crepitus detected about the fourth dorsal vertebra. Gradually his lungs became affected, bed-sores formed, diarrhoea set in, and he sank twenty-two days after admission.

Case III.—This patient fell into a deep drain a week previous to his admission into hospital. On admission there was complete loss of sensation and motion below a line drawn horizontally two inches above the nipples. Gradually his breathing became affected (hurried and difficult) and he died twenty days after admission. After death there was found to be a comminuted fracture of the fourth, fifth, and sixth cervical vertebra, with slight displacement of the second dorsal vertebra. Bladder ulcerated; serum in both pleurae; old adhesions at the apices of both lungs; all internal organs congested; nervous system engorged.

Case IV.—An old case of ten years' duration with complete paralysis of both lower extremities, bladder, and sphincter ani, and anaesthesia of lower portion of abdomen and lower extremities. He remained in hospital for fifty days, during which time no change took place in his condition.

Case V.—The patient was admitted six days after the receipt of injuries, the result of a fall from a picottah, 15 feet high. He was examined under chloroform and the femur was found to be fractured immediately above the condyles, the upper fragment appearing through the tendon of the quadriceps. The condyles were split asunder and the spine of the tibia broken off. The soft tissues in the neighbourhood were gangrenous and swelling and effusion extended up to Poupert's ligament. The limb was amputated at the hip-joint with anterior and posterior flaps. The patient never rallied, but died shortly afterwards.

OPERATIONS.

12 Europeans and 89 Natives were subjected to operations: 2 of the former and 16 of the latter died. This list does not include many minor operations:—

	Number.	Died.
I. Amputations, 43.	13	...
Penis for cancer	3	1
Elephantoid scrotum	1	...
Upper arm	1	...
Fore-arm	1	...
Metacarpal bone	10	...
Finger	1	1
Hip-joint	4	1
Thigh	6	1
Leg	3	2
Toe	6	1
II. Removal of tumours, 15.	1	...
Cancerous	1	...
Fatty	1	...
Polypus	2	...
Malignant growth of scrotum	3	...
Fibroma	2	...
Sarcoma of thigh	5	4
III. Operations for stricture and retention of urine, &c., 21.	5	...
Cock's	5	...
Perineal section	6	...
Internal urethrotomy	3	...
External urethrotomy	1	...
Removal of calculus from bladder	1	1
Bladder tapped over pubes	1	...
IV. Reduction of dislocation of femur	2	...
V. Castration	3	...
VI. Operation for radical cure of hernia	6	4
VII. Operation for strangulated hernia	5	...
VIII. Removal of dead bone	1	1
IX. Incision of hæmatocele and removal of sac	1	1
X. Trephining	1	...
XI. Ligature of femoral artery	1	...
XII. Operation for hernia testis	1	...
XIII. Subcutaneous section of tendon	1	...
Total ...	101	18

The following cases are of interest.

I. AMPUTATIONS OF ELEPHANTOID SCROTUM.

Case I.—A European, aged 18 years, admitted with elephantoid scrotum of nine months' growth. The scrotum and skin of the penis were removed; the testicles were stitched to the edge of the wound and to each other. The patient was discharged cured three months after the operation.

Case II.—A Hindu, aged 34 years, admitted for elephantoid scrotum of three years' duration. He was operated on for the same disease eight years ago. The scrotum measured 14½ inches at the greatest circumference. A week after the operation the patient fell into a typhoid condition, the wound took on sloughing action, and he gradually sank and died a fortnight after operation.

Case III.—A Hindu, aged 50 years, admitted for elephantoid scrotum about the size of a coconut. The scrotum and skin of the penis were removed. The testicles were stitched to the edge of the wound. Discharged cured two and a half months after operation.

II. AMPUTATION OF THE UPPER ARM.

One case, a native with caries of the elbow-joint, the result of secondary syphilis. The arm was amputated by the circular method at the middle of the arm. The patient is still in hospital and doing well.

III. AMPUTATION OF THE FORE-ARM.

One case, a Hindu, aged 26 years, suffering from cellular inflammation of the hand and fore-arm, resulting from onychia: made a rapid recovery.

IV. AMPUTATIONS OF THE THIGH.

Case I.—A Hindu, aged 25 years, weak and anæmic, suffering from chronic disease of the left knee-joint. The patient was placed under chloroform and the sinuses explored. Extensive disease of the lower end of the femur being discovered, a circular amputation was performed. The patient did not do well. He gradually sank and died three days after the operation.

Case II.—Amputation for elephantiasis of leg. Admitted for elephantiasis of the leg of six months' duration. The dimensions of the leg were as follows:—Round the knee-joint 15½ inches, round the calf 15½ inches, over instep 19 inches, round the ankle 13½ inches. Amputation was performed at the junction of the lower and middle thirds with anterior and posterior flaps. The patient is doing well.

Case III.—A Hindu, aged 32 years, admitted with two ulcers on the inner side of the left foot, the result of an abscess of one month's duration. The swelling extended as high as the knee and the leg was elephantoid looking. Amputation of the thigh at the lower third was performed with long anterior and short posterior flaps. The amputated leg was found to contain abscesses in several parts of the soft tissues. Discharged cured one and a half months after operation.

Case IV.—A Hindu beggar, admitted for disease of the knee-joint of one year's standing. Amputation was performed immediately above the joint by the modified circular method. The patient did well.

V. AMPUTATIONS OF THE LEG.

Case I.—Amputation for fracture of both bones of the right leg. Made a good recovery.

Case II.—Compound fracture of both bones of right leg followed by sloughing. Secondary amputation was performed fourteen days after admission; but the patient died of exhaustion eleven days after the operation.

Case III.—Amputation of the right leg for mycetoma. Made a good recovery.

Case IV.—A Hindu, 60 years of age, admitted with a severe lacerated and contused wound of the foot. Amputation through the lower third of the leg was performed. Recovery was retarded by the sloughing of the flaps, but he ultimately made a satisfactory recovery.

Case V.—A Muhammadan, aged 53 years, suffering from extensive necrosis of the tibia and tarsus. Amputation was performed through the knee-joint. Recovery was retarded by sloughing of the anterior flap, but he is now progressing satisfactorily.

Case VI.—A lad, aged 12 years, admitted for caries of the right tibia of one year's duration. A fortnight after admission amputation was performed through the upper third of the leg. Patient is still in hospital, doing well.

VI. REMOVAL OF TUMOURS.

5 cases—1 European and 4 Natives.

The following cases are of interest:—

Case I.—A European, aged 64 years, who had been operated on for epithelioma below the lobe of the left ear three months previously and was discharged with a tender raised spot in the cicatrix. From this point induration spread rapidly and the raised pimple gradually increased until it attained the size of a lemon. The growth was removed a second time under chloroform. In order to remove it a deep dissection between the ramus of the jaw and the mastoid process was necessary. The external carotid artery was exposed and a portion of the parotid gland removed. The patient made an excellent recovery, and up to date (about twelve months since the operation) there has been no return of the disease.

Case II.—A cancerous growth in the left cheek extending downwards from the zygoma to the body of lower jaw, inwards to the margin of the nose, and backwards to the external meatus. Surface irregular; consistence elastic; great pain in the left half of the head and face; eye ball slightly protruded; vision lost; lower lid everted and swollen. Was operated on a week after admission. Three incisions were made, the hard palate sawn through, the nasal process and zygoma divided; the malar bone and orbital process sawn through, and the whole of the superior maxillary bone removed. It was then found that the tumour extended backwards to the pterygoid process and body of the sphenoid bone, and it was found impracticable to remove the whole of it. The edges of the wound were approximated by means of hare-lip pins. The patient never rallied and died at 5 p.m. the same day. There was no vomiting or hæmorrhage, but suppression of urine followed operation.

Case III.—Operation for epithelioma of the foot. An emaciated middle aged man was admitted with epithelioma on the plantar surface of the foot of six months' duration. The tumour measured 2½ × 3½ inches in diameter; was flattened, spongy, vascular and deeply pigmented. It was at first treated with salicylic acid without benefit. It was eventually successfully removed and the patient made a good recovery.

Case IV.—A Native, aged 30, admitted with a circular growth on the inner aspect of the right thigh. It was an oval mushroom-like growth with a constricted base protruding through the skin, the surface smooth and covered with thin slough, soft and elastic consistence and painless. The inguinal glands were not enlarged. The growth, which was attached to the sheath of the sartorius muscle, but otherwise free, was easily removed and the patient made a good recovery.

Case V.—A large sarcomatous growth growing from the sheath of the tensor vaginæ morcis. Easily and successfully removed.

VII. COCK'S OPERATION.

There were 5 cases—2 among Europeans, both of whom died, and 3 among Natives, 2 of whom died.

Case I.—An East Indian, 42 years of age, admitted with retention of urine. Catheters failing, Cock's operation was performed. The operation was followed by fever and delirium and the patient died nine days afterwards.

Case II.—An East Indian, aged 34 years, admitted with a narrow and irritable stricture with which no progress was made. Cock's operation was performed, but was followed by collapse and the patient died twenty-four hours afterwards.

Case III.—A Hindu, aged 32 years, admitted for fistula, the result of sloughing of scrotum and perineum due to extravasation of urine. Cock's operation was performed a month afterwards and patient passed urine through the opening thus established. The urethra was gradually dilated until No. 12 catheter was passed, the orifice in the perineum becoming proportionately contracted. About two and a half months afterwards he was able to pass most of his urine through the urethra.

Case IV.—A Hindu, aged 50 years, admitted with sinuses in the scrotum and perineum of one year's duration. Cock's operation was performed eleven days after admission. Patient died eleven days after operation.

Case V.—A Hindu, aged 50 years, admitted with retention of urine and with swelling of scrotum, penis, perineum, and lower part of abdomen almost in a sloughing condition. He was given a dose of brandy and incisions made over penis and scrotum. Cock's operation was performed, but patient gradually became worse and died two days after the operation.

VIII. PERINEAL SECTION.

5 cases—1 European and 4 Natives: all of them were discharged cured.

Case I.—An old case of stricture of fourteen years' duration with several urinary fistulae and perineum much indurated. Operated on four weeks after admission. A month after operation No. 11 catheter could be passed with ease, fistulae all healed, the wound made in perineum had closed.

Case II.—Had stricture of one year's duration. Was operated on two weeks after admission. Was discharged cured a month after admission.

Case III.—A European patient was put under chloroform five weeks after admission and perineal section was performed. Discharged cured three weeks after operation.

Case IV.—A case of recent stricture in a Muhammadan, aged 45 years, operated on a fortnight after admission. A month after admission the wound in the perineum healed and No. 11 silver catheter passed.

Case V.—A Hindu, aged 30 years, was admitted for ulceration and sloughing of penis. Perineal section a month after admission. Patient remained in hospital for a week after the operation, during which time there had been slow progress. He was discharged at his own request.

IX. INTERNAL URETHROTOMY.

6 cases—2 Europeans and 4 Natives. No deaths.

Case I.—A European admitted with history of stricture of seven years' duration. Stricture was divided with urethrotome. Discharged cured.

Case II.—A European patient admitted with multiple stricture. Five weeks after admission patient was chloroformed and a stricture at the meatus cut through; No. 4 silver catheter was then passed. A week afterwards he was again chloroformed, the internal strictures were cut through with Teevan's urethrotome. Discharged cured six weeks afterwards.

Case III.—A Native aged 25 years. History of four years' stricture. Twenty-five days after admission stricture was divided by Teevan's urethrotome. No. 12 gum elastic catheter retained. Discharged cured two and a half months after admission.

Case IV.—Admitted for stricture of three months' duration. After six days No. 4 catheter passed and a staff urethra grooved was passed under chloroform, and the stricture divided with urethrotome in two places, and gum elastic No. 10 passed and retained for two days. Was discharged cured one month after operation.

Case V.—Admitted for stricture of six years' duration. Teevan's guide passed, then urethra staff grooved, and the stricture divided 5 inches from the meatus, and No. 12 catheter passed. Discharged cured twelve days after operation.

Case VI.—Admitted with stricture and fistula of five years' standing. Has two strictures, one at the meatus and the other 5 inches from it. Internal urethrotomy was performed two and a half months after admission. He is still in hospital, doing well.

X. EXTERNAL URETHROTOMY.

3 cases: all Natives.

Case I.—A butler, aged 40 years, admitted for perineal fistula. External urethrotomy was performed and gradually the urinary passage was dilated by catheters until No. 12 passed easily and patient was able to pass nearly all his urine through the urethra. Discharged four and a half months after operation.

The second case was in a lad of 14 years of age. Passed stones from bladder through the urethra on two occasions. Admitted for difficulty of passing urine. On examination stone in the urethra was detected, and a fortnight after admission the stone was removed by external urethrotomy. It was about the size of a small almond, weighing ten grains. Discharged well (the wound in the perineum healed) eleven days after operation.

Case III.—Admitted for epithelioma of penis and operated (amputation of penis) upon on the fourth day. After the wound healed up the urethra contracted and closed up in spite of attempts to keep it open (so much so that it was not detected after close search under chloroform); then by external urethrotomy communication with membranous portion of urethra was established. Was discharged cured four months after amputation of penis and two months after external urethrotomy.

Removal of Calculus from Bladder.—Patient, an emaciated old man, anæmic, admitted in 1882 for stricture. Cock's operation was performed and a female catheter introduced. For the last two years he has been passing urine through the opening in the perineum, which is now contracted and urine is dribbling through it. On examination calculus in the bladder was detected. The opening in the perineum was enlarged and the calculus was removed by a forceps. It was friable and found to contain phosphates. Discharged cured ten days after operation.

Bladder tapped over Pubes.—One case. A native had a fall from a picottah on his perineum, followed by bleeding from urethra and difficult micturition. A month afterwards he was admitted into hospital for retention of urine. The bladder was tapped above the pubes with an aspirator needle, which was retained. The abscess in the perineum opened and plugged with carbolised lint. Next day at 2 p.m. suddenly seized with difficulty of breathing; temperature 102.4°; abdomen tympanitic and tender. Died at 3.30 p.m.

XI. REDUCTION OF DISLOCATION.

Dislocation of left femur into the obturator foramen, caused by a bag of rice falling on the hip-joint. Reduced by manipulation and kept in hospital with sand bags on either side. Discharged quite well twelve days after admission.

XII. CASTRATION.

2 cases—1 European and 1 Native. Both did well.

Case I.—A European, aged 31 years, admitted for hæmatocele of five years' duration. Seven weeks after admission he was operated on; the tunica vaginalis being dissected out with the atrophied left testicle, the spermatic cord tied with cat-gut ligature. Discharged cured six weeks afterwards.

Case II.—A Hindu, aged 37 years, admitted for hæmatocele of the right side of two months' duration. Large sloughing ulcer, measuring 4 × 5 inches, was situated over the scrotum. Three days after admission two incisions were made into tunica vaginalis under chloroform, but derived no benefit. After twenty days the right testicle was removed with the sac. Discharged cured a month after admission.

XIII. OPERATION FOR RADICAL CURE OF HERNIA.

Case I.—A European lad, 15 years of age, admitted with left direct inguinal hernia (reducible) of twelve years' duration; the inguinal ring much enlarged. Operated on five days after admission. Cat-gut sutures passed through both pillars of ring. Sac not opened. Perfect closure of the ring ensued with a small space for passage of the cord. Patient was discharged cured four weeks after operation.

Case II.—A cooly, aged 25 years, with reducible right oblique inguinal hernia of nineteen years' duration. The tumour was about the size of an egg; external abdominal ring enlarged; four cat-gut sutures passed through both pillars of the ring. Discharged cured a month afterwards.

Case III.—A Hindu, aged 20 years, admitted for reducible right inguinal hernia of nineteen years' duration. Sac opened unintentionally. Pillars brought together by three cat-gut sutures passed through both pillars and centre of the sac. Discharged cured two months after.

XIV. OPERATION FOR STRANGULATED HERNIA.

6 cases among Natives with 4 deaths. Already given under Diseases of Digestive System.

XV. OPERATION FOR REMOVAL OF DEAD BONES.

5 cases: all did well.

XVI. INCISION OF HÆMATOCELE AND REMOVAL OF SAC.

Case I.—A Hindu, aged 40 years, admitted for hæmatocele of left side of two years' duration (not traumatic). Operated three days after admission. The day after admission slight trismus was noticed, which gradually increased with high temperature, rapid pulse, and hurried respiration. Hypodermic of Calabar bean and chloral and bromide by the mouth was given. Tetanus set in, increased in severity, and the patient died four days after operation.

XVII. TREPHINING.

One case died. A Hindu, aged 35 years, admitted with a punctured wound in the head at the anterior angle of the left parietal eminence of three months' duration, caused by a sickle falling on his head and piercing through the bone. Patient became unconscious.

Examination.—Probe passes 1½ inches; periosteum loose. The scalp is swollen. On the thirteenth day after admission patient became worse, a little unconscious, pupils dilated, tongue paralysed and turned to right side. Under chloroform T-shaped incision was made 2 × 1 inch, exposing the opening in the skull ½ × ¼ inch. The duramater was thickened; no pus; no bone pressing on the brain. The wound was closed and boracic lint applied. Two days afterwards patient became unconscious, hiccup set in, and he died at 2.30 a.m.

XVIII. LIGATURE OF FEMORAL ARTERY FOR POPLITEAL ANEURISM.

A cooly, aged 50 years, admitted with an elastic swelling, about the size of a clenched fist, occupying middle of the left popliteal space. It is smooth, well defined, and pulsating (with bruit); compression over the femoral artery does not reduce the size of the tumour. The leg is swollen and cedematous; the left knee measures 19 inches; the right, 14. A week after admission was put under chloroform and an incision 3 inches long was made in Scarpa's triangle: femoral artery tied with cat-gut ligature. Patient was discharged cured seven weeks after operation.

XIX. OPERATION FOR HERNIA TESTIS.

A European patient, admitted with the left testicle protruding through an opening in the scrotum, like a fungus, of three months' duration. Had gonorrhœa a year ago, followed by orchitis. Under chloroform the scrotum was dissected to some extent and brought over the testicle and sutured. The wound healed and patient was discharged, well, ten days afterwards.

XX. SUBCUTANEOUS DIVISION OF TENDON FOR CONTRACTED KNEE-JOINT.

A Hindu, aged 48, admitted for contraction of both knee joints of two years' duration. Had gonorrhœa followed by rheumatism; pain in the joints disappeared and contraction of knee-joints remained. Twelve days after admission, under chloroform, the tendons of the Hamstring muscles and thickened fasciæ were divided, the legs forcibly extended, and put on splints to keep up extension. Patient is still in hospital and is doing well.

(Signed) JAS. J. L. RATTON, M.D., M.C., Surgeon-Major,
Senior Surgeon.

MADRAS,
1st May 1885.

No. II.—GOVERNMENT LYING-IN HOSPITAL.

ANNUAL MEDICAL REPORT OF THE GOVERNMENT LYING-IN HOSPITAL
FOR THE YEAR 1884.

The number of admissions during the year was as follows :—

Delivered in hospital, including abortions	1,524
Do. on the way to hospital or brought in immediately after	28
Died undelivered	2

Diseases of pregnancy treated	Total ... 1,554
	244

Total ... 1,798

The following scheme shows the labours classified according to Denman's system :—

Class.	Division.	Sub-Division.			
I. Natural	Purely natural	Born occipito-anterior (307) *	1,091

The total number of confinements shows a decrease of 16 compared with 1883. The monthly average has been 129.51, this being a decrease of 1.02 per cent. compared with 1883, and an increase of 5.3 per cent. compared with the average of the five previous years.

The smallest number of deliveries was 95 in February and the largest 158 in December, the usual seasonal fluctuation being well marked.

As regards the mortality, this has been larger than in the previous year, the numbers being 1,570 labours with 43 deaths in 1883, and 1,554 labours with 53 deaths in 1884.

The repairs which it was stated in the last annual report are required to keep the buildings in a state of good preservation have not been executed, but estimates have been prepared, and it is hoped that all necessary repairs may be executed before the next rains.

Races and Castes.—The percentages of the various races and castes seeking relief into hospital vary very little from year to year. There has been this year a slight decrease in the admissions of caste Hindus. As has been frequently stated, caste natives do not, as a rule, seek admission until reduced to the last extremity, and the percentage of admissions among them has not in any way increased since separate wards and separate accommodation have been available for their use.

Europeans	...	15 or	09 per cent.
East Indians	...	161 or	10.16 do.
Native Christians	...	211 or	13.27 do.
Muhammadans	...	40 or	2.27 do.
Hindus	...	313 or	20.04 do.
Pariahs	...	814 or	54.17 do.
Total	...	1,554 or	100.00

The deliveries may be thus classified:—

Natural labour	...	1,099 or	70.72 per cent.
Difficult do.	...	158 or	10.17 do.
Preternatural labour	...	44 or	2.84 do.
Complex do.	...	197 or	12.67 do.
Abortions do.	...	56 or	3.60 do.
Total	...	1,554 or	100.00

Of these, 1,171 were delivered at or near full term, 289 were premature, 37 were delivered of decomposed children, 56 were abortions, of which 1 died undelivered, and 1 died undelivered at full term.

The percentage of births in successive quinquennial periods again shows the greatest fecundity among women of all classes to occur between the ages of 20 and 24 years.

Ages ...	15 to 19	20 to 24	25 to 29	30 and above.
Number of women ...	360	526	300	368

I.—NATURAL LABOUR.

There were 1,099 cases in which the head presented, and the case terminated by natural powers and without complication within 24 hours. This proportion shows an increase of 3 per cent. over last year. The percentage of primiparæ was 22·8, and the average duration of labour 7·7 hours. An increase in the ratio of primiparæ is invariably accompanied by a corresponding increase in the average length of labour.

Mortality in this class was 2—*vide* Cases I and II.

The approximate ages, number of pregnancy, and number of hours in labour are shown in the following scheme:—

Ages	...	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32	33	34	35	36	37	38	39	40	44	Total 1,099.
Number of women	...	25	41	97	70	161	50	139	43	83	27	85	18	52	36	45	19	36	9	42	3	3	3	5	3	3	1	

Number of pregnancy	...	1	2	3	4	5	6	7	8	9	10	11	12	13	Total 1,099.
Number of women	...	250	233	201	120	104	65	59	31	16	10	5	2	3	

Hours in labour	...	1 to 2	2 to 3	3 to 4	4 to 5	5 to 6	6 to 12	12 to 18	18 to 24	Unknown.	Total 1,099.
Number of women	...	17	69	124	153	99	511	77	42	7	

II.—DIFFICULT LABOUR.

In this division, in which the head presented and labour lasted over 24 hours and required artificial aid to terminate it, there were 158 cases, an increase of 7·4 per cent. on the previous year and of 27·4 on the average of the five previous years.

(a.) Order I.—*Tedious Labour.*

In 9 cases the labour was extended over 24 hours and delivery accomplished by natural powers: the delay occurred in the first stage. 5 were premature, 8 children were born alive, 4 males (3 premature) and 4 females (1 premature); 1 was born still (premature, male). Mortality in this order *nil*.

(b.) Order II.—*Laborious Labour.*

In this class the head presented in 145 and the face in 4 instances without complication and required artificial delivery.

The ages, number of pregnancy, and duration of labour are noted in the following table:—

Ages	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	32	33	34	35	36	39	Total 149.
Number of women	8	10	29	16	11	13	4	8	1	13	2	4	3	11	7	1	5	1	1	1

CIVIL HOSPITALS AND DISPENSARIES.

Mode of Delivery.	Number of Cases.	Mothers		Child alive.		Child still.		Percentage of Mortality.	
		Recovered.	Died.	Male.	Female.	Male.	Female.	Mothers.	Children.
Natural powers over 24 hours.	9	9	...	4	4	1	...	...	12·4
Barnes' elastic bags	3	3	...	3	...	...	...	...	...
Forceps	135	131	4	67	50	6	12	2·9	13·3
Version, podalic	1	1	...	...	1	...	...	...	...
Do. do. and forceps	3	3	...	...	1	2	...	...	66·6
Do. do. and craniotomy	1	1	...	...	...	1	...	...	100
Cephalotripsy	6	4	2	...	...	4	2	66·6	100

The proportion of male to female children delivered artificially is 1·25 to 1.

If preternatural and complex labours and abortions be excluded, the proportion of artificial deliveries is 1 in 8·4.

Six cases, or 4·03 per cent., were fatal.

The following table gives a brief analysis of these cases:—

Number of Case.	Number of Pregnancy.	Cause of Difficulty.	Condition on Admission.	Condition of Child.	Cause of Mother's Death.
III.	First	Head in fourth position.	Forty-eight hours in labour; temperature 100·4° F.; pulse 116, weak.	Still	Puerperal septicæmia; secondary hæmorrhage; sloughing of vagina.
IV.	First	No apparent cause...	Profound exhaustion present; three days in labour; uterus rigid; pulse small, 154.	Putrid	Exhaustion.
V.	First	Head in fourth position.	Two hours in labour; os two-fifths dilated; membranes entire.	Alive	Septicæmia; pleuro-pneumonia.
VI.	First	Contracted pelvis; head in fourth position.	Ten hours in labour; liquor amnii decomposed; temperature 102°; pulse 120.	Still	Septicæmia; secondary hæmorrhage; pleuro-pneumonia.
VII.	Second	Hydrocephalic foetus.	Signs of protracted labour and exhaustion; temperature 97·4° F.; pulse 140, small; delivery by cephalotripsy.	Still	Septicæmia; peritonitis.
VIII.	Second	Contracted pelvis; head in the third position.	Eight hours in labour; os four-fifths dilated; membranes absent; delivery by cephalotripsy, forceps failing.	Still	Septicæmia; peritonitis.

In 4 of the cases the subjects were primiparæ and 50·3 per cent. of all the artificial deliveries were women in their first labour.

The average duration of labour in this class before delivery was effected was 17·7 hours.

III.—PRETERNATURAL LABOUR.

There were 74 labours in which some other part than the head presented; 44 of these were uncomplicated and 30 are included under complex labours.

The results in the 44 uncomplicated cases are shown in the following table:—

Presentation.	Number of Cases.	Mothers		Children		
		Recovered.	Died.	Alive.	Still.	Decomposed.
Breech	19	17	2	12	4	2
Foot	16	16	...	6	1	6
Transverse	6	6	...	3	1	2
Head and arm	3	3	...	2	1	...

Delivery took place by natural powers in 16 instances, viz., breech 10, foot 6. It was terminated artificially in 28 instances, viz., extraction 14, breech 6, foot 8. Forceps to breech 1, forceps to after-coming head 2 (breech), craniotomy after extraction of body 2 (breech 1, foot 1), podalic version in 8 (arm 6, head and arm 2), 1 terminated by craniotomy, cephalic version and forceps 1 (head and arm).

Mortality of mothers 2—*vide* Cases IX and X.

Excluding deliveries in which the child was decomposed, in inverted labour 18 out of 27 children were born alive, or 66·6 per cent.; in arm presentation 3 children were born alive; the remaining children were known to be dead, one being putrid.

IV.—COMPLEX LABOURS.

Labour complicated with some accidental or unusual condition involving danger to the mother or child. Of these, there were 197 cases, a decrease of 37 compared with 1883. The cases are thus classified:—

Plural births	...	...	...	...	...	...	...	...	27
Hæmorrhage	...	...	...	...	...	...	...	...	40
Retained placenta	...	...	...	...	...	...	...	...	12
Puerperal convulsions	...	...	...	...	...	...	...	...	17
Ruptured uterus, &c.	...	...	...	...	...	...	...	...	5
Prolapse of funis	...	...	...	...	...	...	...	...	19
Other complications	...	...	...	...	...	...	...	...	77
Total	...	...	...	...	...	...	...	...	197

(a.) Plural Births.

Twenty-seven women were delivered of twins: 31 of the children were male and 23 female; 46 were born alive (27 male, 19 female) and 8 were born still (4 male and 4 female, 1 being decomposed). In 10 instances they were both males; in 6 they were females; and in 11 instances they were male and female. Besides the above, 1 case is included under post-partum hæmorrhage, 1 under puerperal convulsions, and 3 occurred among abortions. Plural deliveries occurred once in 53·6 labours.

The presentations in these cases were as follows:—

Double Cranial.	Head and Breech.	Head and Head and Arm.	Head and Arm.	Feet and Feet.	Feet and Head.	Feet and Hand, Feet and Funis.	Feet and Funis and Head and Hand.	Total.
12	4	1	1	1	6	1	1	27

Artificial means of delivery were required in 14 instances, viz., forceps 4, extraction 9, version 1. In 1 case of arm presentation delivery took place by spontaneous evolution.

Mortality of mothers 2—*vide* Cases XI and XII; one included under post-partum hæmorrhage and the other under puerperal convulsions.

(b.) Hæmorrhage.

Forty cases are reported, of which 6 died.

The cases are classified thus:—

Accidental hæmorrhage	...	...	...	...	...	...	...	8
Unavoidable do.	...	...	...	...	...	...	...	5
Post-partum do.	...	...	...	...	...	...	...	27
Total	...	...	...	...	...	...	...	40

Besides the above, 1 case of accidental hæmorrhage and 3 cases of unavoidable hæmorrhage are included under abortions.

Accidental Hæmorrhage.—8 cases are reported; 4 were delivered by natural powers, 1 by version, 1 by decapitation (arm), and 2 by cephalotripsy. One child was born alive and 7 still. Mortality of mother 1—*vide* Case XIII.

Unavoidable Hæmorrhage.—5 cases are reported, of which 1 died—*vide* Case XIV. The cases were delivered by—

Natural powers	...	...	...	...	...	...	...	4
Extraction and craniotomy	...	...	...	...	...	...	...	1
Total	...	...	...	...	...	...	...	5

In one of the cases terminated by natural powers artificial dilatation by Barnes' hydrostatic dilators was necessary.

Of the children, 3 were born alive and 2 still.

Post-partum Hæmorrhage.—27 cases are reported, and these include all cases in which the loss of blood after the birth was in any way excessive. In 18 cases the loss of blood was trivial and not such as to affect the convalescence of the mother, in 5 cases the loss of blood was sufficient to affect the mother's pulse, and in 4 instances active measures were called for to control a considerable loss of blood.

The mode of delivery in these cases was by—

Natural powers	...	...	...	...	...	...	...	17
Forceps	...	...	...	...	...	...	...	4
Extraction	...	...	...	...	...	...	...	4
Version	...	...	...	...	...	...	...	1
Do. and craniotomy	...	...	...	...	...	...	...	1
Total	...	...	...	...	...	...	...	27

The mortality was 4—*vide* Cases XI, XV, XVI and XVII. In 4 cases solution of perchloride of iron was used to arrest bleeding, and in 2 cases hot-water irrigation was employed and acted efficaciously.

(c.) Retained Placenta.

Twelve cases are recorded under this head. In 7 there was simple retention and in 5 there was morbid adhesion. One of the women was confined at her house and brought in with retained after-birth.

Mortality of mothers nil.

(d.) Puerperal Convulsions.

There were 17 cases of puerperal convulsions. Delivery was effected in these cases by—

Natural powers	...	...	...	...	...	...	...	9
Forceps	...	...	...	...	...	...	...	2
Version	...	...	...	...	...	...	...	2
Extraction	...	...	...	...	...	...	...	4
Cephalotripsy	...	...	...	...	...	...	...	—
Total	...	...	...	...	...	...	...	17

The following table shows the ages of the women and the number of the pregnancy. It will be seen that 82·3 per cent. of the number were primiparæ.

Ages of women	...	...	...	16	17	18	19	20	21	23	28	29	Total 17.
Number of women	...	...	...	1	2	6	1	3	1	1	1	1	
Number of pregnancy	...	...	...	1	3	4	1	1	1	1	1	1	Total 17.
Number of women	...	...	...	14	1	2	1	1	1	1	1	1	

Mortality 11—*vide* Cases XVIII to XXVII and XII.

This mortality—64·7 per cent.—is very high.

A short abstract of each fatal case and also of some severe cases which recovered is appended.

Number of Case.	Condition on Admission.	Mode of Delivery.	Condition after Delivery.
XVIII.	First pregnancy; 12 hours in labour; unconscious; urine three-fourths albumen.	Forceps ...	Convulsions continued. Removed in a dying state 8 hours after delivery.
XIX.	Third pregnancy; unconscious for 10 hours; temperature 102° F.; pulse 140; one-eighth albumen in urine.	Artificial dilatation and forceps.	No fits; remained unconscious; died on seventh day, temperature rising to 106·2° F.
XX.	First pregnancy; 14 hours in labour; temperature 100·4° F.; pulse 108; two fits before admission; unconscious; urine three-fourths albumen.	Delivered readily by forceps.	A fit occurred 22 hours after delivery; did not regain consciousness; died 36 hours after admission.
XXI.	First pregnancy; several fits before admission; unconscious.	Artificial dilatation and cephalotripsy.	Fits continued after admission; died soon after delivery in convulsions.

Number of Case.	Condition on Admission.	Mode of Delivery.	Condition after Delivery.
XXII.	First pregnancy; moribund; temperature 105° F.; pulse too rapid to be counted.	Delivered without difficulty by cephalotripsy.	Removed soon after delivery by relatives.
XXIII.	Fourth pregnancy; seventh month; 5 hours unconscious.	Delivered by extraction, head and foot presenting.	Continued unconscious; died 23 hours after admission.
XXIV.	First pregnancy; 8 hours in labour; unconscious; pelvis contracted; urine two-thirds albumen; temperature 102.6° F.; pulse 152.	Tarnier's forceps, Simpson's failing.	Remained unconscious; no fit after delivery; died 52 hours after admission.
XXV.	First pregnancy; 17 hours in labour; semi-comatose; temperature 101.4° F.; pulse 138; urine one-fourth albumen.	Forceps	Remained unconscious; died 4½ hours after delivery.
XXVI.	First pregnancy; semi-comatose; temperature 103.6° F.; pulse 138; urine one-fourth albumen.	Delivery by cephalotripsy.	Fits continued after delivery; died 8 hours after delivery.
XXVII.	First pregnancy; temperature 101.6° F.; pulse 156; semi-conscious; conjunctivæ anæmic; eight months pregnant.	Delivered by extraction, foot and funis presenting.	Remained unconscious and died 8 hours after delivery; fits continued.
XII.	First pregnancy; 16 hours in labour; temperature 101.6°; pulse 100; contracted pelvis; semi-conscious; general anasarca; twins.	Delivery by forceps after artificial dilatation.	No fits after delivery; diarrhœa occurred; tenderness over abdomen; offensive lochia; regained consciousness to a great extent, but became unconscious before death, which occurred on the fourth day after delivery.

The following cases recovered:—

Number.	Condition on Admission.	Mode of Delivery.	Result.
1	First pregnancy; 20 hours in labour; face puffy; urine one-eighth albumen; semi-conscious.	Forceps	Made a good recovery; no fits after delivery.
2	First pregnancy; 11 hours in labour; semi-conscious; trace of albumen in urine; excess of liquor amnii.	Forceps	More fits occurred soon after delivery; made a good recovery.
3	First pregnancy; 26 hours in labour; temperature 102° F.; unconscious; no albumen in urine; fetal heart inaudible.	Cephalotripsy	Made a good recovery; no more fits.
4	Fourth pregnancy; semi-conscious; 3 hours in labour; temperature 99.2° F.; pulse 102; urine entirely solidified by heat and nitric acid.	Version, forceps failing.	No more fits; made a good recovery.
5	First pregnancy; 15 hours in labour; semi-conscious; temperature 99° F.; pulse 132; urine had a trace of albumen.	Delivered readily by forceps.	Severe fits occurred after delivery; made a good recovery ultimately.

(e.) *Ruptured Uterus and Vagina.*

Five cases are recorded under this head, viz., ruptured uterus 2, ruptured vagina 2, laceration of vagina 1.

The ages, number of pregnancy, and duration of labour in these cases are shown in the following table:—

Ages of women	20	22	26	30	38	Total 5.
Number of women	1	1	1	1	1	

Number of pregnancy	2	3	5	6	Total 5.
Number of women	1	1	1	2	
Hours in labour	6	8	11	15	Total 5.
Number of women	1	1	2	1	

The presenting part in all these cases was the head.

The mode of delivery was forceps 1, version 1, gastrotomy 2, and extraction 1. Of the 5 cases 4 died and 1 was remaining under treatment at the end of the year.

(f.) *Prolapse of the Funis.*

This complication occurred in 23 instances, 4 of which occurred in other labours. Delivery was effected in the remaining 19 cases in the following manner:—

Natural powers	2
Forceps	2
Podalic version	7
Do. do. and forceps	2
Cephalic version and forceps	1
Decapitation	1
Extraction	3
Cephalotripsy	1
Total	19

The presentation and results to children are shown in the following table:—

Presentation.	Number of Cases.	Children born		Children on Admission	
		Alive.	Still.	Alive.	Still.
With head	6	4	2	4	2
Do. arm	5	...	5	...	5
Do. feet	4	3	1	3	1
Do. head, hand and foot	1	...	1	...	1
Do. head and foot	1	...	1	...	1
Do. head and hand	2	1	1	1	1

Mortality of mother 1—vide Case XXXII.

Eight children were born alive and 11 still; the latter were all dead on admission; no fetal heart could be heard.

(g.) *Other Complications.*

Nature of Disease.	Number of Cases.	Died.
Albuminuria; anasarca	2	...
Anæmia; anasarca	13	3

Simple continued fever	1	1
Twins	3	...
Vaginitis	1	...
Vesicular mole	1	...
Total	56	8

The deliveries classified under general complications and abortions show 21 deaths, or 39.6 per cent. of the total mortality. The most fatal complications have been anæmia and anasarca, diarrhoea and dysentery—*vide* Cases XXXIII to LIII.

DISEASES OF PREGNANCY.

In addition to these cases a large number of pregnant women have been admitted and treated in the hospital. The diseases treated are shown in the list which follows the classification of labours at the commencement of this report. There were 11 deaths; 7 from cholera, 1 from heart disease, 1 from dysentery, 1 from diarrhoea, and 1 from acute pneumonic phthisis.

DEATHS.

The causes of death are classified under the following headings:—

- I.—Accidents of child-birth.
- II.—Puerperal causes.
- III.—Non-puerperal causes.

I.—Accidents of Child-birth.

Puerperal convulsions	...	...	...	...	...	11 (1 twins).

It will be seen that with regard to age—

24.90 per cent. of the total mortality occurred in women under 20 years of age.	
41.50 do. do. do. above 20 and under 25 years of age.	
15.09 do. do. do. do. 25 do. 30 do.	
18.51 do. do. do. do. 30 years of age.	

The ratio of mortality to cases was—

Under 20 years	...	...	...	...	...	3.3 per cent.
From 20 to 24 years	...	...	...	...	...	4.2 do.
From 25 to 29 do.	...	...	...	...	...	2.7 do.
Above 30 years	...	...	...	...	...	3 do.

With regard to pregnancy—

43.40 per cent. occurred in first pregnancy.	
17 do. do. second do.	
7.55 do. do. third do.	
7.55 do. do. fourth do.	
5.60 do. do. fifth do.	
9.45 do. do. sixth do.	
9.45 do. do. after sixth do.	

In proportion to cases the ratio of mortality was—

First pregnancy	...	...	...	...	...	5.4 per cent.
Second do.	...	...	...	...	...	2.8 do.
Third do.	...	...	...	...	...	1.5 do.
Fourth do.	...	...	...	...	...	2.6 do.
Fifth to eighth pregnancy	...	...	...	...	...	$\left\{ \begin{array}{l} 2.2 \\ \text{to} \\ 5.2 \end{array} \right\}$ do.

Respecting the duration of labour, excluding abortions in the fatal cases—

In 91.12 per cent. labour was terminated in less than 24 hours.	
In 4.44 do. do. do. between 24 and 36 hours.	
In 4.44 do. do. do. above 48 hours.	

In proportion to cases the mortality of women was—

Under 24 hours	...	...	...	...	...	2.9 per cent.
24 to 36 hours	...	...	...	...	...	5 do.
Above 48 hours	...	...	...	...	...	25 do.

REMARKS ON FATAL CASES.

There were 53 deaths. Of these 2 died undelivered, viz., small-pox 1, the woman being admitted moribund and died half an hour after admission; and privation 1. In this case the woman was very low when admitted, was six months pregnant, and died 12 hours after admission. The remaining 51 cases show a mortality of 32.8 per mille against a mortality of 25.4 in 1883. Unusual mortality in puerperal convulsions, post-partum hæmorrhage, and puerperal septicæmia all contribute to this result.

Of the 1,554 labours, 924 are classed as out-cases, that is to say, cases admitted in labour, and 630 as in-cases, cases kept under observation for a time averaging 20 days before labour set in. Among the former 49 deaths occurred, while only 4 deaths occurred among the latter—5.3 per cent. in the one to 0.63 per cent. in the other. The significance of these facts, which are observable every year, have been frequently commented upon.

PUERPERAL FEVER.

With regard to the health of the hospital in the matter of puerperal septicæmia, this has still continued good.

The following tabular form shows the number of deliveries in each month throughout the year and the cases of puerperal septicæmia, with the blocks in which they occurred:—

Month.	Deliveries.	Blocks in which Cases occurred and Number.	Total in each Month.
January	110	B 2 Cottages ... 4 D 2 ... 2 D 1 ... 1 D 2 ... 1	8
February	95	B 1 Cottages ... 1 E 2 ... 1 B 1 ... 1	1
March	107	B 1 Cottages ... 1 E 2 ... 2 B 1 ... 1 B 2 ... 1 E 2 ... 1	4
April	100	B 1 Cottages ... 1 E 2 ... 1 E 2 ... 1 Cottages ... 1	4
May	119	B 1 Cottages ... 1 A 1 ... 1 Cottages ... 1 E 2 ... 1	4
June	124	E 2 Cottages ... 1 Cottages ... 2 D 2 ... 3	3
July	144	Cottages ... 2 E 2 ... 1 A 2 ... 2 Cottages ... 2	6
August	148	E 1 Cottages ... 1 A 1 ... 1 E 2 ... 1 B 2 ... 2	5
September	145	D 1 Cottages ... 1 B 2 ... 2 D 1 ... 1 Cottages ... 2	5
October	154	D 1 Cottages ... 1 B 2 ... 2 D 2 ... 1 E 2 ... 2	5
November	150	E 2 Cottages ... 2 D 2 ... 3 E 1 ... 1 B 2 ... 1	8
December	158	E 1 Cottages ... 1 B 2 ... 1 B 2 ... 1	5

It will be observed that the cases are distributed all through the year in a nearly constant ratio, and fairly equally, through the various blocks, showing an absence of anything approaching to epidemic tendency.

The total number of cases treated was 58 in 1,554 deliveries, or 3.7 per cent.; the number in 1883 was 54 in 1,570 deliveries, or 3.4 per cent.

In natural labour there were 9 cases, 2 fatal—*vide* Cases I and II. In both of these the origin was undoubtedly autogenetic. In one case the symptoms were those of mania with hyperpyrexia in a woman who had previously suffered from mania, and there were no evidences of putridity of the discharges. No other case of fever is reported in the same block in that month. In the other there was low attachment of the placenta and retained membranes adherent to the wall. This also was the only case of fever in the block during that month. In the remaining 7 cases of natural labour, 4 occurred in January, 2 in March, and 1 in December. In most of these the symptoms of fever and offensive lochia only lasted from 2 to 4 days, the average in seven being 5 days, and convalescence was not affected. All the other cases were cases of morbid labour; 15 occurred in the cottages which are specially set apart for such cases. It should be noted that 13 of the fatal cases were out-cases.

The following abstract shows the nature of the labour in the 15 fatal cases:—

Natural labour	...	...	...	...	...	2
Difficult labour, forceps	...	...	...	...	...	3
Do. do. cephalotripsy	...	...	...	...	...	2
Preternatural labour	...	...	...	...	...	2
Complex labour, post-partum hæmorrhage	...	...	...	...	...	1
Do. do. funis presentation	...	...	...	...	...	1
Do. do. anæmia; anasarca	...	...	...	...	...	1
Do. do. diarrhoea	...	...	...	...	...	1
Complex labour, dysentery	...	...	...	...	...	1
Abortion, pelvic peritonitis	...	...	...	...	...	1
Total	...	...	...	...	...	15

CHILDREN.

The produce of 1,497 deliveries (*i.e.*, excluding the case at full term that died undelivered and 56 abortions, the remaining case that died undelivered being included among abortions) was 1,526, there being 29 twin-births; of these, 1,173 were born at or near full term, 316 were premature, and 37 had undergone changes or become putrid.

Sex.—806 were males and 720 were females, a proportion of 111.9 males to 100 females.

Live and Still-births.—1,386 children were born alive and 140 still, including the 37 decomposed children.

The percentage of live births is 90.8.

The ratio of still-births, exclusive of decomposed children, was 6.7 per cent.

Sex of Still and Decomposed Children.—Of the 103 still-births, 54 were males and 49 females, and of the decomposed children 17 were males and 20 females, a slightly higher ratio for males than females.

The following table shows the classes of labour in which the still-births occurred:—

Class of Labour.	Number of Cases.	Still.		Decomposed.	
		Male.	Female.	Male.	Female.
Natural labour	1,099	11	6	8	9
Difficult do.	158	12	13	2	1
Preternatural labour	44	6	4	3	8
Complex do.	197	25	26	4	2
Total ...	1,498	54	49	17	20

DEATHS OF CHILDREN IN HOSPITAL.

During the year 53 children have died in hospital within the first 10 days of life in 1,386 cases, an increase of mortality over last year, when 43 deaths occurred in 1,366 cases. The causes of death have been:—

Asthensia	1
Atelectasis	9
Congestion of brain	3
Contusion of head	1
Cyanosis	2
Premature birth	33
Do. and atelectasis	1
Spina bifida	1
Syphilis	1
Trismus	1

Total ... 53 in 1,386

OBSTETRIC OPERATIONS.

Two hundred and sixty-one women were assisted in their labours—1 in 6 nearly.

Acceleration of Labour.—Labour was accelerated in the first stage by Barnes' elastic bags in 10 cases. Of these, 7 were delivered without further interference; in 2 cases of puerperal convulsions delivery was completed by forceps in 1 and cephalotripsy in 1, and in 1 case of heart disease delivery by forceps was had recourse to.

Mortality 4—vide Cases XV, XIX, XXI and XLIX.

The forceps was employed in 171—in 1 in 9.08.

The following table shows the class of labour and the result to the mother and child:—

Class of Labour.	Number of Cases.	Mothers died.	Children	
			Alive.	Still.
Difficult	138	4	118	20
Preternatural	4	1	3	1
Complex	29	10	21	8
Total ...	171	15	142	29

For fatal cases *vide* Nos. III to VI, X, XII, XVII to XX, XXIV, XXV, XXX, XXXII and XLV.

The proportion of still-births in the children is 1 in 5.9.

In comparison with previous years the following table shows the result obtained:—

	1880.	1881.	1882.	1883.	1884.
Proportion of cases in which the forceps was used ...	1 in 14.3	1 in 13.4	1 in 11.7	1 in 10.5	1 in 9.08
Proportion of still-births in these cases ...	1 in 3.8	1 in 6	1 in 5.2	1 in 6.21	1 in 6.1
Percentage of live-births, taking all cases during the year ...	90	90	91.2	90.6	90.8

Version was performed in 33 instances—2 cephalic and 31 podalic; of the cephalic versions, the head and arm presented in one, and arm and funis in the other; the former was terminated by forceps and the latter by cephalotripsy, the child being dead.

Of the podalic versions, 5 were cases of difficult labour, in 3 of which delivery was terminated by forceps and in 1 by cephalotripsy; 8 were cases of preternatural labour, in 1 of which delivery was terminated by cephalotripsy; 18 were complex labours, *viz.*, twins 1, accidental hæmorrhage 1, post-partum hæmorrhage 2 (1 terminated by cephalotripsy), puerperal convulsions 2, ruptured uterus 1, funis presentation 9, *viz.*, head and funis 3 (2 terminated by forceps), arm and funis 4, head, hand and funis 1, hand, foot and funis 1. In 1 case of prolapse of the uterus and in 1 of syphilis, version was also the mode of delivery.

The character of the labour and results are shown in the following table:—

Character of Labour in which Podalic Version was performed.	Number of Cases.	Terminated by Forceps.	Terminated by Craniotomy.	Mothers		Children	
				Recovered.	Died.	Alive.	Still.
Difficult	5	3	1	5	...	2	3
Preternatural	8	...	1	8	...	4	4
Twins	1	...	...	1	...	1	...
Accidental hæmorrhage	1	...	...	1	...	...	1
Post-partum hæmorrhage	2	...	1	2	...	...	2
Puerperal convulsions	2	...	...	2	...	1	1
Ruptured uterus	1	...	...	...	1	...	1
Funis presentation	9	2	...	8	...	3	6
Other complications	2	...	...	2	...	1	1
Total ...	31	5	3	29	2	12	19

In 17 of the cases the children were known to be dead, and out of the remaining 14 cases 12 were born alive.

Craniotomy was resorted to in 22 cases. Delivery in all of these was effected by the Calcutta craniotrix. In 20 of these the foetal heart was inaudible at the time of operation; in 7 the labour is classed as difficult, in 3 of which the forceps had been used without success; in 3 the labour was preternatural (breech 1, foot 1, head and arm after cephalic version 1), and in 12 it was complex, *viz.*, accidental hæmorrhage 2, placenta prævia 1, post-partum hæmorrhage 2, puerperal convulsions 4, head and funis 1, and other complications 2.

Mortality of mothers 8—vide Cases VII to IX, XV, XXI, XXII, XXVI and XXXVI.

Decapitation was performed in 2 cases of arm presentation, *viz.*, accidental hæmorrhage 1 and arm and funis 1. The child was known to be dead in both cases on admission.

Extraction was performed in 35 instances: 24 children were born alive and 11 still.

Gastrotomy was performed in 2 cases of ruptured vagina, and both died.

Induction of labour was practised in 2 instances, anæmia and anasarca 1 and excessive vomiting of pregnancy 1; both recovered.

Spontaneous Evolution.—In one case of plural birth arm presentation delivery took place by natural effort.

INTERNAL ECONOMY AND MANAGEMENT.

Surgeon-Major W. S. Fox was in charge of the institution and the attached duties from the 4th March to the 14th December, when he was relieved by Surgeon-Major Branfoot, who resumed charge.

During the year the Resident Apothecary, Mr. S. E. Falconer, obtained six months' leave without pay to proceed to England to obtain a medical and surgical degree. In this he was quite successful, and he also took the degree of L.M. at Dublin. This officer has continued to render valuable service to the hospital. During his absence Assistant Apothecary T. H. Bonner performed the duties of Resident Apothecary in an efficient manner and was well assisted by Civil Apothecary V. Verghese.

The total expenditure of the Lying-in Hospital and Egmore Female Dispensary, including the Superintendent's salary and repairs and additions to buildings, &c., but excluding hospital recoveries, has been Rs. 28,269.

The daily cost of dieting each European and East Indian pregnant and confined woman has averaged 6 annas and 2 pies, and the average cost of the diet of each in-patient confined or suffering from diseases of pregnancy has been Rs. 4-14-2.

The daily cost of dieting each native puerperal woman has been 3 annas and 4 pies, and the average cost of each in-patient confined or suffering from diseases of pregnancy has been Rs. 2-6-10.

The recoveries as hospital stoppages from European and East Indian patients amounted to Rs. 520-13-0, or 43.1 per cent. of the total cost of dieting.

No recoveries have been made from native patients.

MIDWIFERY CLASS.

The expenses of this class amounted to Rs. 2,446-14-6. Nineteen European and East Indian and seventeen native pupils have obtained diplomas as midwives. Rs. 84 have been recovered as diploma fees. Under G.O., 7th January 1884, No. 1222, the Senior Apothecary now draws Rs. 50 per mensem for the work of lecturing to and instructing this class.

Five women have been entertained as unstipended nurses. Besides the above, seven women were trained for Local Fund Boards or other bodies.

Five native and two East Indian midwives obtained appointments to up-country stations and dispensaries.

Two East Indian and European and two native pupils have been dismissed.

Nine European and East Indian and nine native pupils remain under training.

(Signed) A. M. BRANFOOT, M.B., Surgeon-Major,
Superintendent, Government Lying-in Hospital
and Egmore Female Dispensary.

MADRAS,
1st January 1885.

APPENDIX.

CASE I.—*Labour Natural, Low attachment of placenta, Retained membranes, Puerperal septicæmia.*—Thoyee, æt. 24, Hindu, pregnancy fifth. An out-case, admitted 20th September in the ninth month of pregnancy, with a bloody discharge from the vagina of three days' duration. On examination, the uterus corresponds to full term, uterine souffle heard below umbilicus on left side, foetal heart audible. The patient was kept quiet and the discharge ceased. Labour set in on the 27th and was terminated by natural powers in three hours, the third stage being reported natural. On the following day secondary hæmorrhage occurred, which was controlled by ergot. The temperature in the evening was 101.6°, pulse 136, respirations 50. The fever continued on the 29th, and on the 30th lochia were very offensive, and, on examination with a speculum, a portion of the membranes was seen in the cervix, which could only be partly removed owing to the great tenderness present in the abdomen. The uterus was irrigated freely, but the woman became worse and died of septicæmia on the 30th September at 11 A.M., the fourth day after delivery.

CASE II.—*Labour Natural, Puerperal mania, Septicæmia, Hyperpyrexia.*—Theroovathay, æt. 23, Pariah, pregnancy fourth. An in-case, was delivered on the 27th May by natural powers, and did well up to the morning of the 30th May, the fourth day, when temperature was 100.4°; there was no tenderness or pain over uterus, which was not large; lochia were pale, but not offensive. On the 31st May the temperature was 101.4° and she was restless. On the 1st June maniacal symptoms showed themselves and she was removed to the cottages, where she became very violent. On enquiry it was elicited from her friends that she suffered from mania after the previous two confinements. On the 2nd the temperature was 102.4° F., pulse 136, full. On the 3rd the temperature was 102.8° F., pulse 116 in the morning, but rose to 105.8° F. in the afternoon; the lochial discharge had ceased. She became worse and died at 10.45 P.M., the same day, eighth day after delivery, fourth day of fever.

CASE III.—*Labour Difficult, Laborious, Forceps, Puerperal septicæmia, Secondary hæmorrhage.*—Minchee, æt. 24, pregnancy first, Hindu. An out-case, admitted 11.45 A.M., 14th July 1884, 48 hours in labour with her first child at full term of pregnancy. Temperature 100.4° F., pulse weak, 116, foetal heart and uterine souffle faintly heard below umbilicus on left side, head presenting in cavity of pelvis in the fourth position with a large scalp tumour. Delivery was effected easily by forceps, a still male child being extracted. Incisions were required one on each side of the vulva to prevent laceration of perineum, which was threatening. The third stage was natural. On the 15th temperature was 100° F., on the 16th it was 99° F., pulse 84, the lochia were scanty and offensive, soft parts were in a sloughy state, and there was great tenderness in the abdomen. The fever continued with offensive lochia, and secondary hæmorrhage occurred on the 23rd July from separation of sloughs in vagina, when about a pound of blood was lost, and the patient was brought very low. She rallied, however, and the temperature on the 24th was 103° F., pulse 140. She refused her nourishment and the tenderness in the abdomen was worse. She became worse and died at 3 P.M.

CASE IV.—*Labour Difficult, Laborious, Forceps, Protracted labour, Exhaustion.*—Thoyee, æt. 19, Pariah, pregnancy first. An out-case, admitted 12.40 noon, 16th March, 3 days in labour with her first child at full term and in a very low state. Pulse 164, small, uterus in a state of spastic rigidity, hands and feet cold, the head was presenting and pressing on the perineum. She was given half ounce of brandy and delivery effected easily by forceps, a putrid female child being extracted. Some oozing of bright blood now occurred, and the placenta being partially separated, was expressed, and the oozing continuing, an examination was made and the cervix found lacerated. It was swabbed with the neutral solution of the perchloride of iron and all further hæmorrhage arrested. She was freely stimulated, but she did not rally and died at 9.10 P.M. eight hours after delivery.

CASE V.—*Labour Difficult, Laborious, Forceps, Puerperal septicæmia.*—A. I., æt. 22, East Indian, pregnancy first. An out-case, admitted 9 A.M., 25th October, 2 hours in labour with her first child at full term of pregnancy. Os was two-fifths dilated, membranes entire, head presenting in the brim. Delay occurring, the head remaining in the fourth position and the second stage having lasted 3½ hours, delivery of a living male child was effected by forceps. There was slight bleeding after the placenta was cast. A drachm of tinct. ergot was given and clots removed from the uterus, when the uterus contracted firmly. On the 26th the temperature was 100.4° F. and she was restless. On the 27th the lochia were offensive, and on the 28th tenderness over the uterus was present. The fever continued with offensive lochia, and on the 31st pleuro-pneumonia was detected on the left side. She became worse and died of septicæmia the sixteenth day after delivery.

CASE VI.—*Labour Difficult, Laborious, Contracted pelvis, Puerperal septicæmia before admission, Forceps, Secondary hæmorrhage.*—Mooneamah, æt. 23, Hindu, pregnancy first. An out-case, admitted 2 P.M., 18th November, said to have been 8 hours in labour with her first child at full term. The uterus was in a state of tonic contraction, foetal heart audible, temperature 102.2° F., pulse 120, os fully dilated, membranes absent, not known when ruptured, head presenting with a large scalp tumour in the brim and in the fourth position, promontory of the sacrum very forward, liquor amnii decomposed. Delivery was effected by forceps. A male child was extracted asphyxiated and with a deep indentation on the left side of forehead; attempts to resuscitate the child failed. The third stage was natural. The fever went down, and she did well up to the 21st, when the lochia were offensive. On the 23rd secondary hæmorrhage occurred and she became collapsed. Brandy was freely given and she rallied. On the 24th temperature was 101.2° F. and the lochia continued offensive. On the 26th temperature in evening was 102.8° F., and on the 27th 103.8°, when pleuro-pneumonia set in. She became worse and died at 2 P.M., 29th.

CASE VII.—*Labour Difficult, Laborious, Hydrocephalic fetus, Cephalotripsy, Puerperal fever, Peritonitis.*—Ramoyee, æt. 24 years, Pariah, pregnancy second. An out-case, admitted 5.15 P.M., 2nd June, 17 hours in labour with her second child at full term. On admission temperature was 101.4° F., pulse 140, small, os fully dilated, membranes absent, having ruptured 11 hours previously; head presenting in the cavity with the sutures very wide and fluctuation detected; foetal heart and uterine souffle inaudible, good deal of tympany present, from which cause the uterus could not be made out. Delivery was easily effected, a large quantity of fluid escaping from the head on perforation. The third stage was natural. On the 3rd the temperature was 99.4° F., pulse 124, uterus was tender and tympany still present. On the 4th the temperature was 101° F., pulse 168, lochia scanty and slightly offensive. The tenderness and tympany increased and lochia became more offensive. She died on the 10th June, 10.30 P.M. On post-mortem examination the lower portion of the uterus was found in a sphacelous condition.

CASE VIII.—*Labour Difficult, Laborious, Forceps failed, Cephalotripsy, Puerperal septicæmia, Peritonitis.*—Vecramah, æt. 18 years, Hindu, pregnancy second. An out-case, admitted 4 A.M., 3rd September, 8 hours in labour with her second child at full term. Foetal heart and uterine souffle audible below umbilicus on left side, membranes absent, not known when ruptured, promontory of sacrum very forward, os four-fifths dilated, head presenting in the brim in the third position. At 5 A.M. os was fully dilated, and at 5.15 A.M., as no further progress was

made, delivery was effected by cephalotripsy (forceps having failed to bring down the head after traction for ten minutes). The placenta was cast immediately after, followed by some large clots, and uterus contracted firmly. At 10 A.M. same day temperature rose to 101.6° F., pulse 120, and at 11 A.M. to 104.2° F.; she was very restless. On the 4th she complained of great pain and tenderness in abdomen. On the 5th the temperature was 102.6° F., pulse 120, tenderness in abdomen less, lochia were natural, pneumonic symptoms present. On the 7th the lochia were offensive, tenderness in lower abdomen increased, and pneumonic symptoms more decided. On the 9th, at 8 A.M., she refused nourishment, and became insensible soon after. She died the same day, seventh day after delivery.

CASE IX.—*Labour Preternatural, Inverted, Breech, Extraction and Cephalotripsy, Puerperal septicæmia.*—Ramookah, æt. 15 years, Pariah, pregnancy first. An out-case, admitted 6 P.M., 28th April, 6 hours in labour with her first child at full term. Fœtal heart and uterine souffle above umbilicus, os two-fifths dilated, membranes had ruptured three hours previously, pelvis generally small. Cervix dilated tardily in spite of tepid water irrigations, and at 10 P.M. os was four-fifths dilated. She was put under chloroform and delivery effected with difficulty by extraction and the head required to be crushed before it could pass through the pelvis. The third stage lasted five minutes and was natural. In the evening temperature was 100.8° F., and uterus was noted to be large. On the 1st May temperature in the evening was 102° F., lochia were offensive. On the 3rd lochia continued offensive, temperature rose to 105° F. and fell to 102° F. during the night, pulse 164, small. The fever continued and the lochia remained offensive. She died on 6th May, ninth day after delivery.

CASE X.—*Labour Preternatural, Inverted, Breech, Forceps, Septicæmia.*—Ponnamah, æt. 18 years, Hindu, pregnancy first. An out-case, admitted 2.45 P.M., 10th November, 32 hours in labour with her first child at full term of pregnancy. Uterus was in a rigid condition, fœtal heart and uterine souffle audible, os fully dilated, membranes absent, said to have ruptured 15 hours previously, breech presenting in the cavity in the fourth position, pelvis generally small. Under chloroform attempts were made to deliver by bringing down a foot, both feet being extended; these attempts failed. Forceps was applied to the breech and delivery effected, a still female child being born. The third stage was natural. On the 11th there was tenderness over uterus, and on the 12th lochia were offensive and temperature 102° F. On the 13th the temperature was 100° F., lochia very offensive, and soft parts noted to be much bruised. The lochia continued offensive, and on the 15th both forearms were painful, which, on the 18th, were much inflamed. On the 19th she was delirious, the left arm was very much swollen, temperature 102° F., pulse 140. She became worse and died at 11 A.M. the same day.

CASE XI.—*Labour Complex, Twins, Post-partum hæmorrhage.*—Mariamah, æt. 20 years, Native Christian, pregnancy first. An in-case, admitted into the labour ward 4.30 P.M., 7th December, 2 hours in labour with her first child at full term of gestation. Fœtal heart and uterine souffle were audible on left side, os hardly admitted a finger. The cervix dilated and she was delivered by natural powers of a male child. The abdomen being still large, an examination revealed the presence of the membranes of a second child, which presented by the feet. A tight binder was applied, and, as some bleeding occurred, two grains of ergotine were injected hypodermically and delivery was effected by extraction. Hæmorrhage still continuing, the placenta was extracted; about a pound of blood was lost. The woman became soon collapsed, vomited frequently, and sank and died at 9.45 P.M. This woman was reported to have had no food all day till admitted into the labour ward.

CASE XII.—*Labour Complex, Twins, Puerperal convulsions, Forceps, Contracted pelvis.*—Govindu, æt. 20 years, Pariah, pregnancy first. An out-case, admitted 12.40 P.M., 4th October, in a semi-conscious state, having been 16 hours in labour and had several convulsive seizures. Present state: abdomen and legs cedematous, fœtal heart and uterine souffle inaudible. On vaginal examination os was two-fifths dilated, membranes entire, head presenting at the brim, temperature 101.6° F., pulse 100. Two fits occurred before 2 A.M. The cervix was dilated artificially; two more fits occurred before 3 A.M., and at 3.12 A.M. delivery was effected by Simpson's forceps, a female child was extracted alive with face to pubes, the head coming through the brim with a jerk. The perineum lacerated during the birth of the head, being in an cedematous state. The uterus being still large, an examination revealed the presence of a second child, and, as some bleeding occurred, two grains of ergotine were injected hypodermically and delivery of the second child effected by forceps. On the 6th she had regained consciousness to a great extent, the breathing was laboured and she was very restless; the bowels were moved several times involuntarily. No fits had occurred since delivery; temperature 100.6° F., pulse 144, feeble. The diarrhoea continued, and on the 7th tenderness over the uterus was present. On the 8th the lochia were offensive and the cervix, on examination, was found to be lacerated, temperature 103° F., pulse imperceptible. She became unconscious and spasms of muscles of upper extremity were observed. She died at 11.45 A.M. the same day.

CASE XIII.—*Labour Complex, Accidental hæmorrhage, Arm presentation, Decapitation.*—Chinnacannoo, æt. 32 years, Pariah, pregnancy sixth. An out-case, admitted 7.15 P.M., 23rd June, 7½ hours in labour with her sixth child in a low state. Temperature 97.6° F., pulse small, 132. On examination the arm was found protruding through the vulva and much bruised by native midwives before admission. During examination a large quantity of dark blood and clots were

expelled. Brandy was given and delivery readily effected by decapitation with the single-wire ecraseur. The placenta lying loosely in the uterine cavity, was removed by the hand before the head was extracted by the Calcutta craniotrix. She was freely stimulated, but did not rally and died at 8.55 P.M.

CASE XIV.—*Labour Complex, Placenta prævia, Septicæmia.*—Sarabee, æt. 30 years, Muhammadan, pregnancy sixth. An out-case, admitted 9.30 A.M., 24th October, 24 hours in labour with her sixth child at full term, in a low state, having had profuse hæmorrhage from vagina before admission. Face is pale, conjunctivæ exsanguine and the patient is very restless, pulse small and quick, temperature 99.6° F., uterus is rigid, os three-fifths dilated, membranes entire, head presenting in the brim. The os dilated and she was delivered by natural powers at 10 A.M. of a male still child. The placenta was extracted ten minutes after. No further bleeding occurred. Temperature was 102.6° F., pulse 136, respirations 40. On the 25th she was restless, had had a bad night, temperature 102° F., pulse 140, and the lochia were offensive. On the 26th she had slight tenderness in the uterus; on the 27th the temperature was 101° F., pulse 140, she was very restless, and the abdomen was tympanitic obscuring the uterus. She became worse and died at 11 P.M. the same day.

CASE XV.—*Labour Complex, Contracted vagina, Incisions, Cephalotripsy, Post-partum hæmorrhage.*—Thoyaramah, æt. 23 years, Hindu, pregnancy second. An out-case, admitted at 4 P.M. on the 5th May, in labour with her second child in the seventh month of pregnancy. She was delivered by instrumental aid of her first child and was very ill at home with puerperal fever subsequently. On examination the vagina is found much contracted by cicatricial bands: one almost at the ostium vagina completely encircled the entrance; another an inch above it in the posterior vaginal wall, and another in the anterior vaginal wall; above the last an opening is found which communicates with the bladder; only a finger could be got through these constrictions, the os being felt high up almost two-fifths dilated, the cervix thick and unyielding, membranes present, presentation could not be made out. Temperature normal, pulse 84. At 5 P.M., under chloroform, several superficial and deep incisions were made into these bands and the vagina dilated with Barnes' hydrostatic bags. The cervix also was incised as it did not yield under the hydrostatic pressure; the foot was found to present, the membranes were ruptured artificially, and delivery effected after considerable traction, the head requiring to be crushed. Free bleeding took place not only from the incisions in the vagina and cervix, but also from the uterine cavity; the placenta was removed and the uterine cavity washed out with solution of perchloride of iron, which arrested the hæmorrhage. The woman was greatly weakened and half ounce of brandy was administered by mouth and half drachm ether hypodermically. She rallied somewhat, but hæmorrhage occurring again from the incisions in the vagina, she became collapsed, and although freely stimulated, she did not rally and died at 2 A.M., 6th May.

CASE XVI.—*Labour Complex, Post-partum hæmorrhage, Puerperal septicæmia.*—Kotee, æt. 26 years, pregnancy fifth, Pariah. An in-case, admitted 4.30 A.M., 13th July, in labour with her fifth child at full term of pregnancy. Fœtal heart and uterine souffle audible, membranes entire, os three-fifths dilated, head presenting. The second stage progressed naturally and a female child was born at 5.35 P.M.; the placenta was cast 15 minutes after, and soon after the uterus was found to be large and soft, several clots were removed, and the uterus remaining relaxed and hæmorrhage continuing, the uterus was washed out with solution of perchloride of iron, no effect being produced by hot-water irrigation, and all hæmorrhage ceased. On the 14th the temperature was 103.4° F., pulse 140, and the lochia were offensive, uterus small, patient was very restless. At 4 P.M. she became very excited and the bowels were moved frequently involuntarily. On the 16th she became unconscious, the lochia continued offensive, temperature ranged from 101.2° to 106° F., pulse 140. The heart's action failed and she died at 11 P.M. the same day.

CASE XVII.—*Labour Complex, Anencephaloid fœtus, Forceps, Post-partum hæmorrhage, Secondary hæmorrhage.*—Rungam, æt. 35 years, Hindu, pregnancy seventh. An out-case, admitted 11 A.M., 14th August, 17 hours in labour with her seventh child at the full term of gestation. On examination fœtal heart and uterine souffle audible, face presenting in the cavity. Delivery of the head was effected easily by forceps, but the shoulders required considerable traction force to bring them through. Profuse hæmorrhage now occurred, the placenta was expressed, and two grains of ergotine injected hypodermically, but hæmorrhage continuing, the uterine cavity was washed out with solution of perchloride of iron, after which there was no bleeding. The pulse was scarcely perceptible from the loss of blood. On the 16th the temperature was normal, pulse 80, and uterus contracted. On the 17th temperature was 101° F., pulse 80, lochia were offensive, was restless at night. At 12 midnight secondary hæmorrhage from the vagina occurred, about 8 ounces of blood being lost, the patient becoming collapsed. Solution of perchloride of iron was used to arrest the bleeding. Another attack occurred at 1 P.M., after which the patient sank in collapse.

CASE XVIII.—*Labour Complex, Puerperal convulsions, Forceps.*—Hazram Bee, æt. 30 years, Muhammadan, pregnancy fourth. An out-case, admitted 8 A.M., 27th February, in an unconscious state, 12 hours in labour and having had several convulsive fits. On admission she was very restless, uterus corresponds to full term of gestation, os two-fifths dilated, cervix thick, membranes entire, head presenting in the fourth position, urine contains three-fourths albumen, uterine action

good, convulsions were frequent and the foetal heart, which had been audible, became inaudible after a fit at 9 o'clock. The cervix dilated naturally and delivery was effected of a still female child by forceps at 9-30 A.M. The third stage was natural. Fits continued after delivery and she was removed by her friends in a dying state at 5-45 P.M. the same day.

CASE XIX.—*Labour Complex, Puerperal convulsions, Forceps.*—Chengamah, æt. 28 years, Hindu, pregnancy third. An out-case, admitted 10-30 A.M., 5th May, in an unconscious state, 10 hours in labour with her third child in the eighth month of gestation, and said to have had several convulsive fits. Os two-fifths dilated, membranes absent, head presenting in the fourth position. Fits continued after admission. Cervix was artificially dilated and delivery effected by forceps. Five convulsive seizures occurred subsequent to delivery and she remained unconscious. On the 7th the temperature was 99.6° F. No fits had occurred during the past 24 hours, but she was still unconscious. She continued in the same state with high temperature, being 104° F. on the 11th evening, and died on the 12th at 7 A.M.

CASE XX.—*Labour Complex, Puerperal convulsions, Forceps.*—Krishnamah, æt. 16 years, Hindu, pregnancy first. An out-case, admitted 12-30 P.M., 8th May, 14 hours in labour, in a semi-conscious state, at full term of gestation. Had two fits before admission. Temperature 100.4° F., pulse 108, urine contains three-fourths albumen, os two-fifths dilated, membranes absent, head presenting, foetal heart audible. She was delivered at 2 P.M. by forceps of a living male child. One fit occurred at 11 P.M. and she remained unconscious and very restless, and died at 5 A.M. on the 10th.

CASE XXI.—*Labour Complex, Puerperal convulsions, Barnes' bags, Cephalotripsy.*—Thoyee, æt. 18 years, pregnancy first, Pariah. An out-case, admitted 4-15 A.M. in a comatose state, having had several convulsive fits before admission. Is nine months pregnant, foetal heart and uterine souffle audible, temperature normal, pulse 136, os admits tip of finger, head presenting in the brim, pelvis small. The cervix was dilated artificially; during the dilatation, which took two hours owing to the rigid condition of the cervix, she had 14 convulsive seizures, which were mitigated considerably by chloroform. She was delivered at 9 A.M. by cephalotripsy, forceps failing. A fit occurred immediately after delivery, during which the heart ceased to beat.

CASE XXII.—*Labour Complex, Puerperal convulsions, Cephalotripsy.*—Ammacunnoo, æt. 22 years, Hindu, pregnancy first. An out-case, admitted 4 P.M., 18th June, in a moribund state, having had several convulsive fits. Temperature 105° F., pulse too frequent to be counted, uterus corresponds to full term, urine one-fourth albumen. Half ounce of brandy was given and delivery effected at 4-55 P.M. without difficulty by cephalotripsy. The placenta was expressed at 5 P.M. She did not rally, and was removed by her relatives at 5-45 P.M.

CASE XXIII.—*Labour Complex, Puerperal convulsions, Head and Foot presentation, Extraction.*—Chinnamah, Hindu, æt. 26 years, pregnancy fourth. An out-case, admitted 11 A.M., 18th October, in an unconscious state, in the seventh month of gestation. Four convulsive fits occurred before admission, os two-fifths dilated, membranes entire, head and foot presenting in the brim. Artificial dilatation by Barnes' bags was resorted to; fits continued to occur; delivery was effected at 4-45 P.M. by bringing down a foot. The cervix was slightly lacerated. She did not recover consciousness and died at 8 A.M., 19th October.

CASE XXIV.—*Labour Complex, Puerperal convulsions, Forceps.*—Patchay, æt. 20 years, Hindu, pregnancy first. An out-case, admitted 1 P.M., 22nd October, 8 hours in labour, in an unconscious state, having had several convulsive fits before admission. Temperature 102.6° F., pulse 152, os was fully dilated, membranes absent, head presenting in the brim with a large sculp tumour, pelvis contracted, urine two-thirds albumen. A fit occurred at 1-30 P.M., and delivery was effected under chloroform at 2 P.M. by Tarnier's forceps, Simpson's forceps having failed. A male child was extracted still. Remained unconscious after delivery. Fits continued and she died at 5 P.M. the same day.

CASE XXV.—*Labour Complex, Puerperal convulsions, Forceps.*—Thoyee, æt. 20 years, Hindu, pregnancy first. An out-case, admitted 10 P.M., 5th November, in a semi-comatose state, 17 hours in labour with her first child at full term of gestation. Is stated to have had six convulsive seizures before admission. Temperature 101.4° F., pulse 148, small, head presenting at the outlet, perineum and vulva oedematous. Delivery was effected at 10-40 P.M. by forceps, a male child being extracted alive. She had no more fits, but remained unconscious and died at 3 A.M., 6th November.

CASE XXVI.—*Labour Complex, Puerperal convulsions, Cephalotripsy.*—Gos Bee, æt. 16 years, Muhammadan, pregnancy first. An out-case, admitted 12 noon, 14th December, in a semi-conscious state, having had ten convulsive fits during the past 10 hours. Uterus corresponds to full term, foetal heart inaudible, temperature 103.6° F., pulse 138, urine contains one-fourth albumen, os two-fifths dilated, membranes entire, head presenting. Fits continued and delivery was effected at 1-45 P.M. by cephalotripsy. She remained unconscious. No more fits occurred, and she died at 10 P.M., 15th.

CASE XXVII.—*Labour Complex, Puerperal convulsions, Foot and Funis presentation, Extraction.*—Nagamah, æt. 18 years, Hindu, pregnancy first. An out-case, admitted 12 midnight, 26th December, in a semi-conscious state, having had several convulsive fits before admission. Uterus corresponds to eighth month of gestation, foetal heart inaudible, temperature 101.6° F.,

pulse 158, os three-fifths dilated, membranes entire, left foot and funis presenting. Delivery was effected at 12-20 midnight by extraction. After delivery she was very restless, did not regain consciousness, and died at 8 A.M., 27th, the day following.

CASE XXVIII.—*Labour Complex, Rupture of vagina, Version.*—Maryanne, æt. 22 years, Native Christian, pregnancy second. An out-case, admitted 5-45 P.M., 27th May, 5 hours in labour with her second child, in the seventh month of pregnancy. On admission pulse was 84, temperature 99° F., uterus rigid, os almost fully dilated, membranes entire, head presenting above the brim, foetal heart and uterine souffle inaudible. The membranes were ruptured and a small quantity of blood-stained liquor amnii escaped. A stimulating enema and a tight binder were ordered. At 8 P.M. there were no pains, some dark blood coming away, head still high up. Delivery was effected easily by version and a putrid female child was extracted, a large quantity of dark blood escaping during and after delivery. The placenta was found to be in the abdominal cavity, having escaped through a transverse rent in the posterior vaginal wall. The abdominal cavity was sponged out as much as possible with carbolic sponges. Her pulse now was weak and two drachms of brandy was ordered every hour, one grain opium every three hours. She did fairly well for the first three days, but on the 31st the temperature was 103.2° F. and much distension of abdomen was present. She became worse and died at 1-55 A.M., 5th June, the temperature before death rising to 106.2° F.

CASE XXIX.—*Labour Complex, Rupture of vagina, Gastrotomy.*—Ponee, æt. 30 years, Hindu, pregnancy sixth. An out-case, admitted 7-45 P.M., 16th June, from Pallavaram in a moribund state, 12 hours in labour with her sixth child at full term. Temperature 100° F., pulse 136, small, form of uterus not made out, limbs of fœtus felt distinctly under abdominal walls, uterus felt contracted into a ball in right iliac fossa, a large loop of funis paleless, prolapsed from vagina, head presenting above the brim, promontory of sacrum very forward, presentation receded from examining finger, and a large quantity of dark blood escaped. Gastrotomy was performed, and the child and placenta removed from abdominal cavity and the rent in vagina closed with continuous carbolic silk sutures and the abdomen was closed in the usual way. She was freely stimulated, but did not rally, and died at 9 P.M., 17th June.

CASE XXX.—*Labour Complex, Rupture of uterus, Hydrocephalic fœtus, Forceps.*—Joosa Bee, æt. 34 years, Muhammadan, pregnancy third. An out-case, admitted 9-40 A.M., 1st October, in a moribund state, 20 hours in labour with her third child at full term. On admission she was exsanguine, pulse imperceptible, very restless, foetal heart and uterine souffle inaudible, abdomen irregular and tender; os fully dilated, head jammed in the cavity. Delivery was effected easily by forceps, a hydrocephalic fœtus being extracted still. The hand passed into the uterus now detected a longitudinal rent at the right side of the fundus; the placenta was removed; she was freely stimulated, but died an hour after admission.

CASE XXXI.—*Labour Complex, Rupture of uterus, Hydrocephalic fœtus, Gastrotomy.*—Thirupatham, æt. 20 years, Pariah, pregnancy third. An out-case, admitted 5-45 P.M., 31st August, 15 hours in labour with her third child at full term. On admission she was in a state of collapse, temperature 99.4° F., pulse 103, small, face exsanguine, abdomen irregular and limbs of fœtus easily made out by palpation under parities of abdomen, os fully dilated, membranes absent, head large and hydrocephalic, presenting above the brim. She was given brandy and the fœtus and placenta removed by abdominal section. A rent was found running from cervix upwards and backwards to the fundus uteri; the abdomen was cleaned out as much as possible and then closed in the usual way. She did not rally and died at 2 A.M., 1st September.

CASE XXXII.—*Labour Complex, Head, Hand and Funis, Version and Forceps, Pelvic cellulitis, Septicæmia.*—Allamaloo, Pariah, æt. 28 years, pregnancy seventh. An out-case, admitted 5-30 A.M., 14th February, 27 hours in labour with her seventh child at full term. Foetal heart and uterine souffle on the left side, os two-fifths dilated, membranes entire, pains feeble. Ten minutes after admission membranes ruptured spontaneously, and the head, hand, and funis were found presenting. Dilatation of the cervix was accelerated by Barnes' bags and delivery effected by version, the head requiring to be extracted by forceps, considerable difficulty being experienced owing to the spastic condition of cervix uteri and to forwardness of the sacral promontory. On the 15th had pain above symphysis pubis, temperature was 97.4° F., pulse 120. On the 17th the temperature was 102.8° F., pulse 90, soft, tenderness over symphysis much increased, lochia slightly offensive. On the 20th some distension and tenderness present over bladder. On the 24th complained of pain in left side of trunk and both knee-joints, temperature 99° F., pulse 65, weak. On 25th the bases of both lungs were dull on percussion, and tubular breathing and bronchophony present. On the 26th, a large superficial bed-sore made its appearance on the sacrum. She complained on the 29th of pain in both ankles and hip-joints, temperature 101° F., pulse 80. She continued to have fever, but symptoms did not improve, the swelling and tenderness of joints remained the same, and she died in a low state by her relations on the 7th March.

CASE XXXIII.—*Labour Complex, Anæmia and Anasarca, Septicæmia.*—Mooneame, æt. 18 years, Pariah, pregnancy first. Admitted 18th August with anæmia and anasarca of a month's duration, with a history of privation, and in her seventh month of pregnancy. Conjunctivæ and tongue extremely pale. Under treatment she improved considerably. She was prematurely

R
L:14.211 x M84
M85

delivered on the 12th September. On the 14th she had fever, temperature 100.4° F., the lochia were natural. The fever continued with headache and delirium, the temperature keeping high, 105° F. on the 20th. She died on the 25th September.

CASE XXXIV.—*Labour Complex, Anæmia and anasarca, Exhaustion.*—Joannah, æt. 22 years, Native Christian, pregnancy second. An out-case, admitted 6 p.m., 9th October, 2 hours in labour, in a very low state, with anæmia and oedema of lower extremities. The legs were much inflamed by irritant medicines applied outside, temperature 100° F., pulse 118, os two-fifths dilated, membranes entire, head presenting. Labour progressed and delivery was effected by natural powers at 12-15 midnight, the placenta requiring to be removed by the hand, expression failing; no hæmorrhage occurred. She did not rally, and died at 10 a.m., 11th October.

CASE XXXV.—*Labour Complex, Anæmia and anasarca, Cardiac syncope.*—Lonisa, æt. 18 years, Native Christian, pregnancy first. Admitted 10th May, eight months pregnant, with anæmia and anasarca of a month's duration. She improved under treatment, and on the 17th labour set in, the pains were ineffectual, and she required free stimulation with ammonia and brandy as she several times fainted during the first stage. The second stage was completed by natural powers at 4 p.m., a female child being born alive. The placenta was expressed as some bleeding occurred, and the cervix, which was lacerated, was swabbed with solution of perchloride of iron, but hæmorrhage to a slight extent continued, and, as she could not afford to lose any blood, the cavity of the uterus was washed out with solution of perchloride of iron. No further hæmorrhage occurred, but she soon sank and died at 5-45 p.m.

CASE XXXVI.—*Labour Complex, Cholera, Cephalotripsy.*—Thoyee, æt. 23 years, Pariah, pregnancy second. Admitted 8 a.m., 8th February, in the algide stage of cholera, seven months pregnant. Os one-fifth dilated, membranes entire, head presenting. The cervix dilated slowly, and as there was delay in the second stage, delivery was effected by cephalotripsy at 9-15 p.m. She sank and died at 1-45 a.m., 9th February.

CASE XXXVII.—*Labour Complex, Diarrhœa.*—Rohun Bee, æt. 20 years, Muhammadan, pregnancy first. An in-case, admitted into the labour ward 28th January and delivered by natural powers of a living female child, the vulva requiring incisions to relieve tension of perineum. She is stated to have had diarrhœa before admission, which continues. On the 29th the temperature was 103° F., had three loose motions, lochia natural. The diarrhœa increased up to the 3rd February and then became better, but she became weaker and gradually sank from exhaustion and died on 6th February.

CASE XXXVIII.—*Labour Complex, Diarrhœa.*—Uruptham, æt. 30 years, Hindu, pregnancy sixth. An out-case, admitted 6 p.m., 25th February, an hour in labour with her sixth child at full term. Is in a very low state, having suffered from diarrhœa for the past four weeks. Labour was terminated by natural powers at 9-35 p.m. The diarrhœa continued and she sank and died at 7-15 p.m., 2nd March.

CASE XXXIX.—*Labour Complex, Diarrhœa, Puerperal septicæmia.*—Mrs. D., æt. 24 years, East Indian, pregnancy third. Admitted 6th October 1884 into the cottages, suffering with diarrhœa of three months' duration. She left hospital against advice after remaining three days, and was re-admitted on the 24th October in labour. Delivery was terminated by natural powers on the same day. Diarrhœa continued with great weakness, and she fretted much when the child died, which weighed 190 tolas ($3\frac{1}{2}$ lbs.). On the 31st October the temperature was 100° F., the left breast was very hard and painful. On the 2nd November the temperature was 101° F., pulse 144, the breast had suppurated, the lochia were offensive. She sank and died on the 4th November.

CASE XL.—*Labour Complex, Dysentery.*—Panpahmah, æt. 32 years, pregnancy seventh, Hindu. Admitted 17th June 1884 in the ninth month of pregnancy and suffering with dysentery of three weeks' duration. She was delivered by natural powers on the same day of a living female child. The dysentery continued and she was removed by her friends in a precarious state on the 25th June, ninth day after delivery.

CASE XLI.—*Labour Complex, Dysentery, Pneumonia, Septicæmia.*—Ninee, æt. 21 years, Pariah, pregnancy first. Admitted 17th November 1884 in the seventh month of pregnancy, suffering with dysentery. She was delivered by natural powers on the same day. The dysentery continued, pneumonic symptoms set in with fever and offensive lochia, and she died on the 15th December, twenty-ninth day after delivery.

CASE XLII.—*Labour Complex, Heart disease, Aortic regurgitation.*—Ammayee, æt. 19 years, Hindu, pregnancy first. An out-case, admitted 8-30 a.m., 24th July, in labour with her first child, suffering with dyspnoea and with a history of having had rheumatism three months ago. Foetal heart inaudible, os two-fifths dilated, membranes entire, head presenting, area of cardiac dulness increased, apex beats in the sixth intercostal space a little to outside of mammary line, impulse very feeble, only felt when patient leans forward. On auscultation a diastolic murmur is present, best heard at right second intercostal space near sternum, but lost at apex of heart, pulse is jerky, 102. Labour progressed tardily and was accelerated at 10 p.m. by Simpson's forceps. On the following day pleurisy of the right side was detected with dulness at bases of both lungs; dyspnoea had increased much. She became worse and died at 9-30 p.m.

CASE XLIII.—*Labour Complex, Intermittent fever.*—Chinnathungah, æt. 25 years, Pariah, pregnancy fifth. An out-case, admitted 1st January, seven months pregnant, in a very weak state, having suffered from intermittent fever of the tertian type for the previous three months. She was delivered by natural powers and did well up to the 5th January, when her temperature rose to 104° F., the lochia were natural, uterus fairly contracted. Diarrhœa set in on the 7th and the temperature ranged between 102° and 103.2° F., and she was much weaker. On the 9th the lochia had ceased, and the left breast was inflamed and the skin over it had an erysipelatous flush. She became worse towards evening, was delirious, and died 6-10 p.m. In this case the woman had been greatly weakened before admission by intermittent fever, and there is every reason to believe that the pregnancy was terminated prematurely by the disease. The nature of the fever in the puerperal state is open to doubt, but it was probably of a septic character at the last, though there was not at any time any ground for suspicion that absorption of septic matter had occurred from the uterus.

CASE XLIV.—*Labour Complex, Small-pox.*—Syedma Bee, æt. 20 years, Muhammadan, pregnancy second. An out-case, admitted 9-15 a.m., 22nd January, in a moribund state, with a history of having had fever for the past three days with vomiting and pain in the back. She died seven minutes after admission. On inspection an eruption of minute purplish spots is observed on the back, hands and feet. She had been three days in labour, and on a vaginal examination head and arm were presenting.

CASE XLV.—*Labour Complex, Vomiting, Exhaustion.*—Mrs. J., æt. 23 years, European, pregnancy eighth. An out-case, admitted 5-30 p.m., 22nd September, in a low state, having been incessantly vomiting for the past six days. Pulse 112, feeble, respirations 24, voice husky, eyes sunken, uterus corresponds to full term, foetal heart audible on the right side. The vomiting continued on the 23rd, and she was delirious. Labour set in at 2-30 p.m., was accelerated by Barnes' bags, and delivery was accomplished by forceps, a female child being extracted still. The placenta was expressed 20 minutes after. She sank and died at 12-20 midnight.

CASE XLVI.—*Abortion, Cholera.*—Oonamallay, æt. 25 years, Hindu, pregnancy first. An out-case, admitted 11 a.m., 23rd August, in the algide stage of cholera. Has been ill for 10 hours before admission. She continued in this state on the 24th, and at 1-30 p.m. on 25th aborted, a still foetus of six months being expelled. She sank and died half an hour after delivery.

CASE XLVII.—*Abortion, Cholera.*—Sooboo, æt. 26 years, Pariah, pregnancy second. An out-case, admitted 11 a.m., 24th December, in the algide stage of cholera, having been ill for three days previously. Is five months pregnant. She aborted at 1 p.m., and died eight hours subsequently.

CASE XLVIII.—*Abortion, Dysentery.*—Thoyamah æt. 23 years, pregnancy fourth, Pariah. An out-case, admitted 24th December 1884 in a low state, suffering with dysentery of two months' duration. Is anæmic, feet oedematous, tongue large, pale and indented. Five months pregnant. Bowels moved several times a day, motions contain slime and blood. The dysentery continued, and she aborted at 7-30 a.m., 27th December. She sank and died at 5 p.m. the same day.

CASE XLIX.—*Excessive vomiting, Abortion.*—Mrs. M., European, æt. 19, pregnancy first. This patient came into hospital when six weeks' pregnant, having been landed very ill from a steamer. Under treatment the vomiting entirely ceased and the patient was able to return home. She remained well about one month, when she had an attack of cholera and was re-admitted seven days afterwards, the 30th January, in a low state. On admission, she had been fed almost entirely by rectal alimentation for several days, was very emaciated, eyes sunken, conjunctiva tinged yellow, urine scanty and dark-colored, containing bile-coloring matter and a small quantity of albumen. Under the action of morphia and by careful rectal alimentation she rallied somewhat, but it was deemed advisable to empty the uterus, as no nourishment could be retained when given by the mouth. Uterine action, however, came on spontaneously with sharp hæmorrhage; a small hydrostatic dilator was used as a plug to arrest hæmorrhage and dilate the cervix. The placenta, which was found to have a low attachment, was removed first by the fingers and the foetus afterwards by ovum forceps. After the emptying of the uterus the patient was very weak and not quite conscious; urine was secreted in very small quantity and contained a very large quantity of albumen and bile-coloring matter. The vomiting continued, and she became quite insensible and sank on 5th February two days after the miscarriage.

CASE L.—*Abortion, Heart disease, Induction.*—Vencatamah, æt. 18 years, Hindu, pregnancy first. An out-case, admitted 3rd July 1884 with dyspnoea and anasarca of four months' duration. Suffered from rheumatism two years ago. Is six months' pregnant, area of cardiac dulness increased, apex beat at sixth intercostal space, a little to outer side of mammary line. On auscultation a systolic bruit is heard at apex, muffling the first sound and traceable to inferior angle of scapula, pulse small, weak, irregular; urine contains one-fifth albumen. She did not improve under treatment and abortion was induced on 9th July, a six months' foetus being expelled. She became worse and died at 10 p.m., an hour after delivery.

CASE LI.—*Abortion, Retained placenta, Metro-peritonitis.*—Govindamah, æt. 30 years, Hindu, pregnancy fifth. Admitted 7-45 a.m., 9th June, in a moribund state, having aborted three days before admission. Was five months pregnant, temperature 98.6° F.; pulse 136, weak,

tenderness over lower abdomen, tongue dry and brown, os admitting one finger and a small piece of placenta was removed; the discharge was offensive. She was ordered quinine and opium. She became worse and died 1-45 P.M. the same day.

CASE XLII.—*Privation, Died undelivered, six months pregnant.*—Chinnamah, æt. 34 years, pregnancy seventh, Pariah. Admitted 5 A.M., 6th February, in a low state, with a history of having suffered privation for the past ten days and had convulsive fits. Is six months pregnant, eyes sunken, very emaciated, semi-conscious. She remained in the same condition during the day. Pains set in at 2 P.M., when the os admitted one finger; at 3 P.M. the membranes were ruptured, and at 5 P.M. the os was three-fifths dilated. The exhaustion increased and she died at 5-30 P.M. undelivered.

CASE XLIII.—*Abortion, Simple continued fever.*—Bungaroo, æt. 19 years, pregnancy second, Hindu. An out-case, admitted 22nd September in a very low state, in the sixth month of pregnancy, suffering with fever of a continued type. She aborted on the 4th October and became collapsed soon after, and died two hours after delivery.

MADRAS,
1st January 1885.

Egmore Female Dispensary.

MEDICAL REPORT OF THE CASES TREATED IN THE GYNÆCOLOGICAL WARDS OF THE HOSPITAL FOR WOMEN AND CHILDREN ATTACHED TO THE LYING-IN HOSPITAL FOR THE YEAR 1884.

There were 111 Europeans and East Indians treated as in-patients, with 1 death, and 155 natives, with 6 deaths, a decrease in both instances from the previous year.

The following table gives an abstract of these cases:—

Class.	Diseases.	Europeans and East Indians.		Natives.	
		Number treated.	Number died.	Number treated.	Number died.
Displacements of the uterus.	Anteversion	3	...	...	...

Out-patients.—A large number of out-patients continued to be treated at the Egmore Dispensary for Women and Children. Altogether 18,061 were seen during the year, 3,543 being Europeans and East Indians and 14,518 natives, a decrease of 3,365 compared with last year.

Surgeon-Major W. S. Fox was in charge of this department from 4th March to 14th December, and Surgeon-Major Branfoot for the remainder of the time.

MADRAS,
1st January 1885.

SPONTANEOUS EVOLUTION.							
...		Arm and fanis	...	...	1	1	1

The total number of confinements for the year was 448, showing an increase of 6, or 1·35 per cent. compared with last year, and a monthly average of 37·33. The smallest number of admissions was 25 in the month of February, and the largest number was 49 in the month of December.

The following table shows the percentages of admissions in the different races and castes, in which it will be seen that there is a larger number of admissions among the Hindu caste women owing to the advantage of separate accommodation and attendance being provided for them :—

Races and Castes.	1882.		1883.		1884.	
	Number.	Percentage.	Number.	Percentage.	Number.	Percentage.
Hindus	198	41·51	208	47·05	185	41·29
Pariahs	185	38·78	157	35·52	178	39·73
Muhammadans	11	2·31	4	·91	6	1·34
Native Christians	83	17·40	73	16·52	79	17·64
Total	477	100	442	100	448	100

Deliveries and their Classification.

Natural labor	...	...	...	...	346	77·23 per cent.
Difficult do.	...	...	...	...	41	9·15 "
Preternatural do.	...	...	...	...	18	4·02 "
Complex do.	...	...	...	...	32	7·14 "
Diseases of pregnancy	...	...	...	...	11	2·46 "
Total	...	...	...	...	448	100

Of these 333 occurred at or near the full term, 104 prematurely, and 11 abortions. The percentage of cranial presentations to all other labors, excluding abortions, was 92·63.

The percentage of births during successive quinquennial periods shows the greatest fecundity in natives to occur between the ages of 20 and 24.

Ages	15 to 19.	20 to 24.	25 to 29.	30 and upwards.	Total.
Number	121	127	90	110	448

I.—NATURAL LABOR.

There were 346 cases of natural labor giving a percentage of 77·23 showing 8 or ·75 per cent. cases more than last year. Of these 85 were primiparæ with a percentage of 24·56, showing a decrease of 7 cases, or 2·66 per cent.

The mortality in this order was *nil*.

The average duration of labor was 10·63 hours.

Ages of women ...	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32	33	34	35	36	37	38	39	40	41	42	} Total 346

Number of women ...	2	8	18	24	31	134	92	37	

II.—DIFFICULT LABOR.

There were 41 cases of difficult labor, with a percentage of 9·15 to other classes, and they are classified as follows :—

Tedious labor	...	...	...	...	...	...	...	...	14
Laborious do.	...	...	...	...	...	...	...	...	27
Total	...	...	...	...	...	...	...	...	41

(a.) Order I.—Tedious Labor.

The 14 cases under this heading extended over 24 hours, and the delivery was completed by the natural powers unaided after admission into the hospital. The delay was in the first stage. Twelve children were born alive and at the full term of which 9 were males and 3 females, and 2 still born, both females. All the children weighed over 5 lb.

The mortality of mothers was *nil*.

(b.) Order II.—Laborious Labor.

In this class there were 27 cases, in all of which the head presented without any complication, but required artificial delivery. Ten children were born alive—4 males, 6 females. Of the 17 that were born still, 10 were males and 7 females.

The proportion of male to female children delivered artificially is 14 to 13, and the mortality is 1 in 1·58.

The mortality of mothers was 3 or 11.11 per cent., and the average duration of labor before delivery was effected 21.11 hours.

The following table shows the ages, the number of the pregnancy, and the duration of labor:—

Ages of women	...	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32	33	34	35	36	37	38	39	40	41	42	43	} Total 27.

Version	...	1	1	...	...	...	1	...	...	7.14	100																			

III.—PRETERNATURAL LABOR.

There were 18 labors in which the presentation was other than the head, but without any danger or complication. Delivery was accomplished by the natural powers in 9, breech 4, foot 4, head and arm 1. Artificial help was afforded in 9 cases—extraction 1 (breech 1), version 8 (arm 8). The proportion of live births in inverted labor was 6 out of 9 or 1 in 1.5, or 66.66 per cent. in cross, and in compound labors 1 out of 9 or 11.11 per cent. The mortality of mothers was 1 or 5.55 per cent.

The result is shown in the following table:—

Presentation.	Number of Cases.	Mothers		Children			Mode of Delivery.	
		Recovered.	Died.	Alive.	Still.	Putrid.	Natural.	Artificial.
Breech	5	5	...	3	2	...	4	1
Foot	4	4	...	3	1	...	4	...
Transverse	8	7	1	...	8	...	...	8
Compound	1	1	...	1	...	...	1	...
Total	18	17	1	7	11	...	9	9

IV.—COMPLEX LABOR.

There were 32 cases of labor complicated with some accidental or unusual condition involving danger to mother or child, giving a percentage of 7.14 to all other labors, viz.:—

Plural births	...	...	...	...	...	11
Hæmorrhage	...	...	...	...	...	5
Puerperal convulsions	...	...	...	...	...	5
Prolapse of funis	...	...	...	...	...	8
Other complications	...	...	...	...	...	3
Total	32	...	...	...	...	...

The following table shows the results to mothers and children. The mortality of mothers is 28.12 per cent., and of children 53.48 per cent.:—

	Number of Cases.	Mothers		Children				Percentage of Mortality.	
		Recovered.	Died.	Alive.	Still.	Male.	Female.	Mothers.	Children.
Plural births	11	10	1	17	5	10	12	9.09	22.72
Hæmorrhages	5	1	4	1	4	3	2	80	80
Puerperal convulsions	5	3	2	1	4	3	2	40	80
Prolapse of funis	8	7	1	...	8	5	3	12.50	100
Other complications	3	2	1	1	2	3	...	33.33	66.66
Total	32	23	9	20	23	24	19	28.12	53.48

(a.) Plural Births.

Eleven women were delivered of twins. The children were 10 males and 12 females; 17 were born alive (males 8, females 9), and 5 were born still (males 2, females 3). In three instances the children were both males, and in four instances both females. The proportion of plural births was 2.45 per cent. to all other labors, or 1 to 40.76. Help was required to effect delivery in three instances. In one instance the mother was admitted in a comatosed condition, suffering from puerperal convulsions. The forceps was used and both the children—males—were born still, and the mother died two hours after delivery. In another version was resorted to on account of the delay in the birth of the second child, and in the last instance extraction.

The mortality of mothers was 1 or 9.09 per cent.

Caste.	Age.	Number of Pregnancy.	Hours in Labor.	Cause of Death.
Hindu	38	10	4½	Puerperal convulsions.

The following table shows the presentations:—

Double Cranial.	Head and Breech.	Head and Feet.	Head and Arm.	Total.
2	2	6	1	11

(b.) Hæmorrhage.

Five cases were attended with hæmorrhage, and are classified as follows:—

Accidental	...	...	...	...	...	1
Unavoidable	...	...	...	...	...	1
Post-partum	...	...	...	...	...	3
Total	...	...	...	...	...	5

In accidental and unavoidable hæmorrhages the mortality of mothers and children was 100 per cent. This shows how fatal these complications are to mothers and children when admission into hospital is delayed, while in post-partum hæmorrhage one child was born alive. Of these, 2 cases were confined outside, brought in with retained placenta in a state of great exhaustion and 1 of them died. One case was attended with morbid adhesion, the placenta and the membranes came away in pieces, and the mother died of septicæmia. Three were delivered naturally, and 2 artificially (forceps, craniotomy). The mortality of mothers was 4, or 80 per cent.

The following table shows the results to mothers and children:—

	Number of Cases.	Mothers		Children			
		Recovered.	Died.	Alive.	Still.	Male.	Female.
Unavoidable	1	...	1	...	1	1	...
Accidental	1	...	1	...	1	1	...
Post-partum	3	1	2	1	2	2	1

(c.) *Puerperal Convulsions.*

Five cases of labor were complicated with puerperal convulsions and the delivery was effected in the following manner:—

Forceps	...	...	...	...	...	...	...	1
Craniotomy	...	...	...	...	...	...	...	3
Barnes' bags	...	...	...	...	...	...	...	1
Total	...	...	...	...	...	...	...	5

The mortality of mothers was 2 or 40 per cent. Of the 5 cases admitted, 2 were Hindus and 2 Muhammadans; they were brought to hospital after considerable delay and neglect, 2 succumbed shortly after delivery; 1 child was born alive and 4 were born still—2 males and 2 females.

The following table shows the ages of the women and the number of the pregnancy. All were primiparæ:—

Ages of women	...	15	16	17	18	19	20	Total 5.
Number of women	...	2	...	...	2	...	1	
Number of pregnancy	...	1	2	3	4	5	6	Total 5.
Number of women	...	5	...	...	...	...	...	

(d.) *Prolapse of Funis.*

There were 8 cases of labor attended with this complication, and delivery was effected in the following manner:—

Natural powers	...	...	...	...	...	...	...	3
Version	...	...	...	...	...	...	...	2
Extraction	...	...	...	...	...	...	...	1
Cephalotripsy	...	...	...	...	...	...	...	1
Spontaneous evolution	...	...	...	...	...	...	...	1
Total	...	...	...	...	...	...	...	8

The mortality of mothers was 1 or 12.50 per cent. The presentation and the results to mothers and children are shown in the following table:—

Presentation.	Number of Cases.	Mothers		Children		Percentage of Mortality.	
		Recovered.	Died.	Alive.	Still.	Mothers.	Children.
With head	2	2	...	...	2	12.50	100
Do. arm	3	3	1	...	3		
Do. breech	1	1	...	...	1		
Do. feet	2	2	...	...	2		

(e.) *Other Complications.*

There were 3 cases attended with complications not previously mentioned. The mortality of mothers was 1 or 33.33 per cent. The following table shows the nature of the complication and the result to mothers and children:—

Nature of Disease.	Number of Cases.	Mothers		Children		Percentage of Mortality.	
		Recovered.	Died.	Alive.	Still.	Mothers.	Children.
Dysentery	1	1	...	1	...	33.33	66.66
Albuminuria	1	1	...	...	1		
Anasarca	1	...	1	...	1		

V.—PREMATURE LABOR (ABORTION).

There were 11 cases of labor in which the duration was calculated less than seven months and the weight of the child less than 2 lb., and are classified as follows:—

Abortion	...	...	...	...	...	...	...	6
Puerperal convulsions	...	...	...	...	...	...	...	1
Retained placenta	...	...	...	...	...	...	...	2
Albuminuria	...	...	...	...	...	...	...	1
Jaundice	...	...	...	...	...	...	...	1
Total	...	...	...	...	...	...	...	11

The mortality of mothers was 1 or 9.09 per cent.

DEATHS.

The causes of deaths are classified under the following heads:—

- I. Accidents of child-birth.
- II. Puerperal causes.
- III. Non-puerperal causes.

I.—*Accidents of Child-birth.*

Plural births	...	...	...	...	...	...	...	1
Unavoidable hæmorrhage	...	...	...	...	...	...	...	1
Accidental hæmorrhage	...	...	...	...	...	...	...	1
Post-partum hæmorrhage	...	...	...	...	...	...	...	2

CHILDREN.

The result of 437 deliveries, excluding 11 abortions, was the birth of 448 children, there being 11 twins; of these 337 were born near the full term, 104 were premature, and 7 were putrid. All children weighing over 5 lb. are considered to be at full term; those weighing less than 5 lb. above 2 lb., premature; and those below 2 lb., abortions.

SEX.—There were 239 male and 209 female children, giving a proportion of 114.35 to 100.

Live and Still Births.—383 were born alive, 58 still, 7 putrid. Percentage of live births was 85.89. Percentage of still births, excluding putrid, was 12.94.

Sex of Live Births.—383 children were born alive, of these 198 were males and 185 females.

Sex of Still and Decomposed Children.—Of the 58 still births 36 were males and 22 were females, and of the 7 decomposed births 5 were males and 2 females.

The following table shows the classes of labor in which the still births occurred:—

Classes of Labor.	Number of Cases.	Still.		Decomposed.	
		Male.	Female.	Male.	Female.

Total ...	...	...	...	...	...	...	...	25

OBSTETRIC OPERATIONS.

Forceps.—Forceps was used in 15 cases—1 in 29.86.

The following table shows the classes of labor and the results to mothers and children:—

Class of Labor.	Number of Cases.	Mothers Died.	Children		Percentage of Mortality.	
			Alive.	Still.	Mothers.	Children.
Difficult ...	12	2	10	2	33.33	33.33
Complex ...	3	3	...	5		

Version.—Version was performed in 12 cases—1 in 37.33.

The following table shows the classes of labor and the results to mothers and children:—

Class of Labor.	Number of Cases.	Mothers Died.	Children		Percentage of Mortality.	
			Alive.	Still.	Mothers.	Children.
Difficult ...	1	...	...	1	16.66	100
Preternatural ...	8	1	...	8		
Complex ...	3	1	...	3		

Cephalotripsy.—Cephalotripsy was performed in 21 cases—1 in 21.33. The fetal heart was inaudible in most cases. Hicks' cephalotribe was invariably used to hasten delivery.

The following table shows the classes of labors and the results to mothers and children:—

Class of Labor.	Number of Cases.	Mothers Died.	Children		Percentage of Mortality.	
			Alive.	Still.	Mothers.	Children.
Difficult ...	14	1	...	14	19.04	100
Complex ...	7	3	...	7		

Extraction.—Extraction was performed in 3 cases—1 in 149.33.

The following table shows the classes of labor and the results to mothers and children:—

Class of Labor.	Number of Cases.	Mothers Died.	Children.		Percentage of Mortality.	
			Alive.	Still.	Mothers.	Children.
Preternatural ...	1	...	...	1	Nil.	100
Complex ...	2	...	...	2		

Barnes' Bags.—This was used in a case of puerperal convulsions—1 in 448. The child was born naturally.

INTERNAL ECONOMY.

The daily cost of dieting each native patient was Annas 1-10. The average cost of each confinement was Rs. 1-2-10.

MADRAS,
May 1885.

(Signed) D. R. THOMPSON, M.D.,
Surgeon, First District, &
Supt., Ramasawmy Moodelliar Lying-in Hospl.

GOVERNMENT OF MADRAS.

PUBLIC DEPARTMENT.

READ—the following paper :—

From Surgeon-General M. C. FURNELL, M.D., F.R.C.S., Surgeon-General with the Government of Madras, to the Chief Secretary to Government, dated Coonoor, 8th August 1885, No. O-310.

ORDER—dated 23rd September 1885, No. 2229, Public.

This report, although dated the 11th June 1885, did not reach Government till the 10th August. The Surgeon-General will explain the delay.

2. The bulk of the report might be largely diminished. In future not only should the appended extracts objected to by the Government of India in their letter recorded in G.O., dated 15th August 1885, No. 1925, be omitted, but also the long extracts from the reports of District Surgeons (paras. 22-29), the matter contained in which comes before Government in individual Municipal and Local Fund reports. Anything of importance may be mentioned with any comments or suggestions the Surgeon-General may have to make. The extracts referred to do not in any case form the text on which any representation is now made. The sanitation of Tirupati, to take the first instance, has been the subject of the anxious consideration of Government, and every possible measure has been taken for its improvement. Other instances could be given in which the mere mention of a subject disposed of in another connection is misleading.

3. The number of hospitals and dispensaries rose during the year from 287 to 299, new dispensaries having been opened in the seven districts marginally noted. On the other hand, one dispensary in Tanjore and two in Nellore were closed during the year. Classified in accordance with the instructions of the Government of India the increase appears only under class II (Local Fund and Municipal institutions).

	1883.	1884.
Class II	255	267

It will be observed that one of the new dispensaries has been opened in Trichinopoly, the backward condition of which district as compared with others was noticed in the review of last year's report.

4. Medical Agents.—The following table shows the nature of the agency in charge of the institutions during the last five years :—

	Commissioned Medical officers.	Native Surgeons and Apothecaries.	Hospital Assistants.	Pensioned and private medical practitioners.	Medical Missionaries.	Total.
1880	41	55	89	30	3	218
1881	39	77	94	41	4	255
1882	40	86	102	43	4	275
1883	41	97	102	43	4	287
1884	36	111	105	43	4	299

As in the previous year the increase has been almost entirely in the apothecary grade in furtherance of the fixed policy of Government to substitute agents of this class for the class of hospital assistants.

5. *Patients treated.*—With the increase in the number of dispensaries there has

	In-patients.	Out-patients.	Total.
1880 ..	38,870	1,274,434	1,313,304
1881 ..	37,323	1,412,269	1,449,592
1882 ..	37,456	1,501,120	1,538,576
1883 ..	38,447	1,658,362	1,696,809
1884 ..	39,826	1,714,072	1,753,898

* 36 per cent.

part of the women to avail themselves of medical aid, for the proportion of females to males for the whole Presidency is 505 to 495 in every 1,000 of the population.

6. *Mortality.*—Of the number of in-patients treated 3,100 died. The percentage

	Number treated.	Number of deaths.
1883.. { In-patients ..	38,447	2,903
{ Out-patients ..	1,658,362	3,688
1884.. { In-patients ..	39,826	3,100
{ Out-patients ..	1,714,072	6,907

of deaths is 7.78 against 7.55 in the previous year, the largest increase being under the head of Cholera. A very large number of deaths amongst out-patients is recorded as compared with the corresponding figure of the previous year. This is ascribed mainly to the prevalence of cholera, and partly to a more correct record of deaths in this year due no doubt to the repeated instructions of Government. Efforts to secure more accurate returns should not however be relaxed.

7. It is stated that the seasons were favorable to agriculture, food and water-supply. Several districts, however, suffered from drought, while others experienced excessive rain. The unsatisfactory condition of public health during the year is to be accounted for in a great measure by these facts.

8. *Cholera.*—This disease prevailed in most parts of the Presidency and made itself severely felt in the southern districts and in North Arcot, Cuddapah and Coimbatore. Of 14,558 cases treated in the dispensaries 5,735 terminated fatally, viz., 425 deaths among 748 in-patients and 5,310 deaths among 13,810 out-patients respectively.

	Number treated.	Number of deaths.
1883 .. { In-patients ..	452	239
{ Out-patients ..	9,932	2,511
1884 .. { In-patients ..	748	425
{ Out-patients ..	13,810	5,310

	Number treated.	Number of deaths.
1883 .. { In-patients ..	490	181
{ Out-patients ..	260	13
1884 .. { In-patients ..	624	171
{ Out-patients ..	337	27

	Number treated.	Number of deaths.
1883 .. { In-patients ..	3,285	127
{ Out-patients ..	183,404	189
1884 .. { In-patients ..	3,471	118
{ Out-patients ..	176,105	336

9. *Small-pox.*—This epidemic prevailed to a greater extent than in the previous year, and a larger number of patients were treated. The percentage of deaths was however smaller.

10. *Fevers.*—Though this disease was less prevalent, it would appear from the number of deaths resulting that it was of a more virulent type than in the previous year.

11. *Dysentery and Diarrhoea.*—There is a considerable increase in the number of cases treated as well as in the number of deaths registered; but from the small percentage of the latter it is doubtful whether the statistics of mortality among out-patients can yet be relied on.

12. *Venereal and skin diseases.*—There was a considerable increase in the number of ulcers and skin diseases treated, but syphilitic affections fortunately show a tendency to decrease.

	1882.	1883.	1884.
Venereal diseases ..	54,203	52,635	50,957
Skin diseases ..	121,616	151,878	161,356
Ulcers ..	133,406	158,390	171,462

13. *Parturition.*—The number of labor cases treated rose to 6,925, the largest number of the last five years.

	1883.	1884.
Major operations ..	3,262	3,358
Minor do. ..	45,918	49,889
Total ..	49,180	53,247

14. *Surgical operations.*—The number of surgical cases treated has continued to increase, but hardly to the extent that could be wished in respect of major operations. Of 3,358 cases treated 2,684 resulted in cures.

15. *Finance.*—The total receipts from all sources amounted to Rs. 8,91,028 chiefly made up of the following items:—

	1883.	1884.
From Government ..	Rs. 2,88,644	Rs. 2,95,820
Municipal and Local funds ..	4,72,004	4,90,490
Interest on capital ..	20,575	18,516
European donations and subscriptions ..	11,539	13,132
Native do. do. ..	11,277	10,721

16. The increase (Rs. 7,176) in the amount of the contribution from Provincial funds is ascribed to the fact that Government has recognised its liability to bear a proportion of the cost of the medical agents it lends to local authorities, but an increase of Rs. 15,477 was ascribed to this cause in 1883. The Government would prefer to see the explanation illustrated by figures, but refrain from making any comments on the expenditure generally as a report on the subject has lately, at the instance of the Government of India, been called for from the Surgeon-General (G.O., dated 15th August 1885, No. 1925 P).

17. The total expenditure during the year was Rs. 8,68,192, of which sum, however, Rs. 12,957 were invested. Excluding hospitals maintained by Provincial funds, the cost to local bodies during the year was Rs. 6,40,624 against Rs. 5,80,468 in the previous year. No explanation is given of the additional expenditure which is due however to the establishment of twelve new dispensaries, to the increased number of patients treated, and to the cost incurred on repairs and buildings.

18. *Presidency Hospitals.*—There was a decrease and not as stated an increase in the total number of patients treated in these institutions. The total figure of 102,809 for 1884, given at page xvii, includes the patients treated at the large Mission Dispensary at Black Town. The total of 117,685 given in the previous paragraph is therefore incorrect. The health of the capital during the year was unsatisfactory. Small-pox prevailed in a severe form in the early part of the year, and fever throughout it, while cholera appeared in many localities. The cost to Provincial funds of the Presidency hospitals was Rs. 2,18,373, or Rs. 6,567 less than in the previous year.

19. The population of Salem has, inadvertently no doubt, been entered as 4,599,595 instead of 1,599,595 in paragraph 5, part A of the report. The totals of in and out patients given in part D, viz., 102,827, do not agree with the figure 102,809 of which they form the constituents. The total cost of maintaining civil dispensaries to local bodies is stated to be Rs. 6,40,624, while the contribution from Municipal and Local funds is Rs. 4,90,490. This is not understood. The report should present a clear statement of the financial operations of the year.

20. Two statements are given in part D—one of the number of in and out patients for the last 10 years, and another of the number of admissions for the last three years. They might with advantage be amalgamated.

21. The objections taken by the Government of India in their letter, No. 385, dated 31st July 1885, to statement V in last year's report, apply equally to the corresponding statement of the report under review.

22. In the report called for by G.O., 15th August 1885, No. 1925, the Government hope to receive a brief financial statement drawn up in clearer forms than those embodied in the present report.

(True Extract.)

W. WILSON,

for Chief Secretary.
