OFFICE OF SURGEON-GENERAL
WITH THE GOVERNMENT OF MADRAS,
OOTACAMUND, 25th June 1886.

No. 0-196.

From
G. BIDIE, ESQ., M.B., C.I.E.,
Acting Surgeon-General with the Government of Madras,

To
THE HON. E. F. WEBSTER,
Chief Secretary to Government, Public Department.

SIR,

I HAVE the honor to forward, for the information of the Right Honorable the Governor in Council, the report on the working of Civil Hospitals and Dispensaries for the year 1885. The delay in its submission has been due to the difficulty in getting the statistical returns accurately completed, but measures have been adopted to secure punctuality in future. It has further to be stated that, as I only took charge of the office in April 1886, I am not personally conversant with the transactions of the year under review.

A.—DISPENSARY STATISTICS.

2. NUMBER AND INCREASE OF HOSPITALS AND DISPENSARIES.—At the close of 1884 there were 299 institutions in existence, and during 1885 there was an increase of 9 and 1 closed, bringing the total to 307. The dispensary which was closed was situated at Sirvel in the Kurnool district. New dispensaries were opened in the following districts:—

District.	Number	Town in which located.
Bellary	1	Kanakal.
Godavari	1	Viravāsaram.
Kurnool	1	Chagulmuri.
Madura	1	Tiruvadanai.
Malabar	2	Cherpālcheri.
		Nelambūr.
Nellore	1	Kanigiri.
Tinnevelly	1	Christianagaram.
Tanjore	1	In this district two were formerly treated as one, but are now dis-joined.
• Total ...	9	

3. DISTRIBUTION OF DISPENSARIES.—The following abstract shows the number of dispensaries in, and their ratio per 1,000 of the population of each of, the Revenue districts. Judging from the proportion of dispensaries to population the districts in which the extension of medical relief is most needed are South Arcot, Ganjam, Malabar and Trichinopoly. Further details will be found in table f of Appendix:—

30045

329

Years.	In-patients.	Out-patients.	Total.
1881	37,323	1,412,269	1,449,592
1882	37,456	1,501,120	1,538,576
1883	38,447	1,658,362	1,696,809
1884	39,826	1,714,072	1,753,898
1885	40,564	1,854,372	1,894,936

7. The daily average attendance of both in- and out-patients in 1885 was 5,551 against 13,902 in 1884. Of the average in the past year, 7,569 patients were men, 3,444 women, and 3,538 children, the corresponding numbers in 1884 having been men 7,192, women 3,295, and children 3,415.

8. IN-PATIENTS.—The extension of medical relief to women and children has ways been a leading feature in South Indian dispensary work, and the following abstract, giving the daily average of in-patients for each of the past three years, shows the amount of success that has been achieved in that direction:—

Table showing the Daily Average of In-patients.

	1883.	1884.	1885.
Men	1,263	1,245	1,333
Women	637	620	620
Children	95	104	104
Total ...	1,995	1,969	2,057

GENERAL RESULTS.—Of the 40,564 in-patients, 27,398 were cured and 3,095 died, giving ratios, respectively, of 67·5 and 7·63 per 100 treated. Of the remainder, 5,007 were relieved and 3,411 discharged otherwise. Of the out-patients, 1,639,526 applied personally for relief and 224,846 were represented by friends. The average daily attendance in the out-patient department was 12,493·66.

9. DISEASES TREATED.—A summary of the diseases amongst both in- and out-patients is given in the following table:—

Classes of Diseases.		In-patients.				Out-patients.			
		1884.		1885.		1884.		1885.	
		Treated.	Died.	Treated.	Died.	Treated.	Died.	Treated.	Died.
Zymotic diseases.	Small-pox	624	171	217	54	337	27	127	11
	Fever	3,471	118	3,538	91	176,105	336	175,092	251

	Injuries, &c.	3,714	186	3,894	190	71,206	80	80,162	74

Years.	Cases of parturition.	Deaths.
1881	5,841	110
1882	4,740	125
1883	5,544	160
1884	6,925	187
1885	7,165	203

10. The subjoined table shows that there has been a continuous increase in the number of both major and minor operations, and that the total number performed in 1885 was 59,858 against 53,247 in 1884:—

Years.	Major.	Minor.	Total.
1881	2,572	37,788	40,360
1882	2,811	39,405	42,216
1883	3,262	45,918	49,180
1884	3,358	49,889	53,247
1885	4,365	55,493	59,858

11. The subjoined statement shows the caste or nationality of the patients, and that there was an increase in numbers under every head except that of Eurasians:—

Years.	Europeans.	Eurasians.	Hindus.	Muhammadans.	Other castes.	Total.
1882	7,205	40,221	1,095,747	206,999	188,404	1,538,576
1883	7,165	43,616	1,231,137	214,514	200,377	1,696,809
1884	7,170	48,081	1,254,818	232,643	211,186	1,753,898
1885	7,678	45,112	1,362,937	254,326	224,883	1,894,936

B.—ADMINISTRATION.

ARCOT, NORTH.—The year 1884 closed with *cholera* in several parts of the district, and during 1885 there were 3,859 cases with 2,415 deaths—a heavy mortality.

	1884.	1885.
Total number of in- and out-patients treated.	86,348	100,004
Total number of major operations.	174	232
Do. of minor do.	3,538	3,970

Extra medical aid was provided when necessary, and the opportunity was taken to arrange for the better protection of the water-supply, and the improvement of the sanitation, of the affected villages. The outbreak subsided in March and April. Malarial fevers were also very prevalent, especially in the town of Chittoor, in the early and latter parts of the year. The taluks chiefly affected were those lying north of the Palar, and the total deaths in the district are put down at 15,621. The outbreak in Chittoor was, after the close of the year, made the subject of special inquiry by the Sanitary Commissioner and attributed to the increase of wet cultivation about the town, the use of offensive manure, and the water-logged condition of the soil owing to defective drainage. Small-pox was also prevalent and caused 2,005 deaths. The work of the vaccination staff in the district is said to have been on the whole satisfactory.

The health of the large pilgrim centres, viz., Tirupati, Kālahasti, and Tirutani was fairly good.

The sanitary staff of the larger towns was transferred from the supervision of Hospital Assistants to that of the Tahsildars.

The total mortality from all causes in the district amounted to 38,721, giving a death-rate of 21·3 per 1,000 of population, which is moderate, considering the prevalence of epidemics. The birth-rate stood at 28·94 per mille against 30·17 in 1884.

329

4. AGENTS IN CHARGE OF DISPENSARIES AND HOSPITALS.—The total number of Medical officers and subordinates thus employed amounted to 307 against 299 in 1884, and the following list shows the rank and qualifications of the agents :—

	Number in each year.	
	1884.	1885.
Brigade-Surgeons ...	4	3
Surgeons-Major from 20 to 27 years' service.	2	3
Do. 12 to 19 do. ...	18	14
Surgeons from 5 to 11 years' service	11	11
Do. 1 to 4 do. ...	1	...
Honorary Surgeons ...	3	1
Native Surgeons ...	1	2
Assistant Surgeons ...	...	2
Senior Apothecary, Second Grade ...	1	...
First-grade Apothecaries ...	4	5
Second-grade do. ...	2	4
First-grade Assistant Apothecaries ...	13	9
Second-grade do. ...	...	...
Civil Apothecaries ...	87	89
First-class Hospital Assistants ...	32	31
Second-class do. ...	21	29
Third-class do. ...	52	60
Pensioned and Private Medical men ...	43	39
Medical Missionaries ...	4	5
Total ...	299	307

Owing to military exigencies several Commissioned officers had to be withdrawn and their appointments temporarily occupied by officers of a lower grade. There was a decrease of 2 in the number of Military Warrant officers holding independent charges and an increase of 17 in that of Civil Apothecaries and Hospital Assistants, as compared with 1884. The number of pensioned and private medical men shows a reduction of 4 in 1885.

5. HOSPITAL BUILDINGS.—Of the 307 hospitals and dispensaries at work, 221 were provided with buildings specially designed for them and 86 with ordinary houses rented for the purpose. For the accommodation of in-patients there were 3,371 permanent beds, of which 2,039 were for males and 1,332 for females. The fine new Eye Infirmary in Madras was all but completed, and amongst other new buildings up-country, an excellent hospital was erected at Srirangam at the cost of M.R.Ry. Ramasawmy Moodelliar, C.I.E.

6. STATISTICS OF SICK.—There was an increase of both in- and out-patients as contrasted with the results of the previous year, the number of in-patients having been 40,564 against 39,826, and of out-patients 1,854,372 against 1,714,072, in 1884. The subjoined statement shows the number of patients treated during each of the last five years :—

Taking zymotic and therefore preventible diseases it will be noted from the above abstract, that the admissions were generally less numerous than in 1884. Fevers of a paroxysmal type were, as usual, the most prevalent of the more important diseases, the admissions, in and out, under this head having amounted to 178,630, or 9.4 per cent. of the total treated. Making due allowance for malarial influences, which in some districts are beyond human control, there cannot be a doubt that much of the suffering from fever is due to causes which will cease as sanitation improves and agriculture extends. In the following statement a summary is given of the number of fever cases treated during the past five years :—

Years.	Number of dispensaries opened.	Total cases of fever.
1881 ...	255	200,906
1882 ...	275	176,380
1883 ...	287	186,689
1884 ...	299	179,576
1885 ...	307	178,630

Cholera and small-pox show fewer admissions than in 1884, as the epidemics of both were on the decline. The deaths amongst dispensary patients treated for cholera in 1885 amounted to 4,328 against 5,735 in 1884, and the fatal cases of small-pox numbered 65 against 198. Amongst constitutional diseases, rheumatic and syphilitic affections were the most numerous, but phthisis and dropsy contributed the largest amount of mortality. The subjoined statement shows the admissions and deaths from venereal complaints for the last five years :—

Years.	Syphilitic affections.		Gonorrhœa and its complications.			
	In- and out-patients.		In-patients.		Out-patients.	
	Admissions.	Deaths.	Admissions.	Deaths.	Admissions.	Deaths.
1881 ...	27,131	40	1,413	28	24,899	5
1882 ...	28,489	42	1,301	33	24,413	1
1883 ...	26,461	41	1,640	34	24,534	12
1884 ...	25,566	43	1,458	41	23,933	6
1885 ...	26,793	73	1,293	49	27,535	13

Of the more serious ailments grouped as local diseases, respiratory affections were more prevalent than in 1884, and so were dysentery and diarrhœa. The following statement shows the admissions and deaths from dysentery and diarrhœa during each of the past five years of in- and out-patients :—

Years.	Dysentery.		Diarrhœa.	
	Admissions.	Deaths.	Admissions.	Deaths.
1881 ...	21,642	282	28,874	425
1882 ...	22,064	293	31,699	436
1883 ...	24,789	299	35,745	482
1884 ...	27,867	333	41,613	515
1885 ...	31,510	348	41,839	531

The number of labor cases increased from 6,925 in 1884 to 7,165, and of the latter, 203 had a fatal termination, giving a death-rate of 2.8 per cent. This is satisfactory, considering that in many instances relief is only sought when the case has baffled the unskilled native attendant and the patient is in extremis. The following abstract shows the number of labor cases treated, including in- and out-patients, and also the deaths for a period of five years :—

There are 14 dispensaries in the district, of which 2, viz., Chittoor and Vellore, are under the charge of Commissioned officers. No new ones were opened during the year. Of the 14 institutions, the 4 marginally-noted receive in-patients, the others only afford out-door relief.

The District Medical officer submits a brief, practical and very carefully-prepared report on the medical administration of his district.

ARCOT, SOUTH.—*Cholera* was epidemic at the close of 1884, and during the year caused 7,883 deaths, of which 5,664 occurred in January and February. During the dry hot months the disease was much less prevalent, but again increased in June and July and thereafter gradually subsided.

Small-pox caused 2,826 deaths against 5,764 in 1884, and of the former total nearly three-fourths consisted of children under 12 years of age.

The mortality from malarial *fever* amounted to 10,349, or nearly one-fourth of the total from all causes.

The births for the year throughout the district were in the ratio of 24·26, and the deaths in that of 23·05, per 1,000 population.

The number of dispensaries in operation was 11, of which all, except that at Panruti, have accommodation for in-patients, both male and female. No addition was made to the number of dispensaries during the year.

BELLARY AND ANANTAPUR DISTRICTS.—*Cholera*—In the Bellary district there were 1,114 cases with 511 deaths, and in that of Anantapur 454 attacks, of which 219 proved fatal. The general health of the public in both districts appears to have been otherwise fairly satisfactory.

In the Bellary district a new hospital, for out-patients only, was opened at Kanakal. The dispensaries previously existing were in number 12, of which 5 receive both in- and out-patients and 7 only out-patients. In the Anantapur Collectorate there are 8 dispensaries, of which 2 are only for out-door relief.

CANARA, SOUTH.—There was a copious rainfall and the year was comparatively healthy. *Cholera* caused 14 deaths, and the outbreak was confined to the families of a party who had recently returned to their homes from a pilgrimage to Tirupati. There was a slight increase in the number of deaths from *small-pox* and *bowel-complaints*, but a decrease in *fever* mortality, the deaths from the last-named cause having been 8,993 against 10,385 in 1884. The deaths from “all other causes” show a considerable increase as compared with the total for the previous year.

The district *birth-rate* for the year was 29·04 against 28·47, and the *death-rate* 26·96 against 26·11, in 1884. On the whole registration in this district shows signs of improvement.

Vaccination made fair progress and the people show no active antipathy to it, but the work is greatly retarded by the frequent sickness of the Vaccinators, brought on by exposure in inclement weather and by working in unhealthy districts.

Dispensaries.—Including 1 in the Laccadive Islands there are 8 institutions in the district, all of which, except that at Amin Divi, receive both in- and out-patients. No new institutions were opened during the year. The *midwife* attached to the dispensary at Mangalore attended 127 cases of labor in private houses, against 87 in the previous year. Her ignorance of the vernacular of the district is said to be rather against her more general employment.

The Medical officer's report on the district is brief, instructive, and carefully prepared.

Chittoor.
Vellore.

Ranipet.
Palmanér.

	1884.	1885.
Total number of in- and out- patients treated	67,995	74,063
Total number of major operations	151	146
Do. of minor do.	1,887	2,208

	1884.	1885.
Total number of in- and out- patients treated	72,737	93,455
Total number of major operations	190	237
Do. of minor do.	2,234	2,742

	1884.	1885.
Total number of in- and out- patients treated	36,013	34,151
Total number of major operations	86	82
Do. of minor do.	815	872

CHINGLEPUT.—*Cholera*—The epidemic of 1884 passed over to the next year but ceased in April. During its prevalence steady efforts were made by the Revenue authorities to improve the sanitary condition of the affected villages.

	1884.	1885.
Total number of in- and out- patients treated	90,875	93,946
Total number of major operations	73	87
Do. of minor do.	2,288	2,725

Small-pox prevailed only to a very limited extent. The outbreak of *fever*, in the Weaver villages near Conjeeveram, which appeared in 1884 recurred to a certain extent, and there were similar epidemics in some other villages of the district. The great festival at Conjeeveram passed off without accident or disease.

Dispensaries.—No new dispensary was opened. There are in all, including the Government institution at Saint Thomas' Mount, 14 dispensaries in this district, of which 2 receive in- and out- patients and the rest only out-patients.

COIMBATORE.—The rainfall was below the average, but food was abundant and selling at moderate prices. The year opened with an epidemic of *cholera*, which first appeared in November 1884. The deaths from this cause amounted to 3,751 against 3,458 in 1884, but fortunately the disease disappeared towards the close of the year. From *small-pox* there were 339 deaths, being less than half the number in 1884. *Fever* and *bowel-complaints* were also less prevalent and fatal. The *birth-rate* for the district was 27·0 against 26·3, and the *death-rate* 17·0 against 19·4, in the previous 12 months. Registration is, however, notoriously defective in Coimbatore.

	1884.	1885.
Total number of in- and out- patients treated	90,389	94,701
Total number of major operations	158	213
Do. of minor do.	4,514	4,658

Dispensaries.—There are 12 of these in the district, of which 11 receive both in- and out- patients and one only out-patients.

Midwives are attached to 6 dispensaries, but special accommodation for in-lying women is only provided in 2 institutions. The total number of labor cases treated in hospitals was 44 against 46, and the total of outside cases 196 against 153, in 1884. This gives a verage of 40 cases for each midwife, which is a rather poor result, but still it be understood that in primitive districts the aid of skilled agents is only sought in difficult cases. The Medical officer's report shows care.

CUDDAPAH.—The public health in this district was on the whole good. There was a partial outbreak of *cholera*, there having been 157 cases with 97 deaths. *Small-pox* of a mild type prevailed in 3 taluks.

	1884.	1885.
Total number of in- and out- patients treated	58,284	62,354
Total number of major operations	70	64
Do. of minor do.	652	645

Ten *dispensaries* were in operation. Of these but two, Cuddapah and Madanapalli, receive in-patients, but in the others provision is made to admit police sick and emergent cases.

The District Medical officer was absent when the annual report was prepared, so that it is rather meagre in information.

GANJAM.—The rainfall was copious but unseasonable, and thus in some parts detrimental to crops. *Cholera* was epidemic for the greater part of the year and caused 3,321 deaths against over 200 in 1884. During the height of the outbreak there was great scarcity of good water.

	1884.	1885.
Total number of in- and out- patients treated	50,629	49,978
Total number of major operations	47	44
Do. of minor do.	1,106	1,127

Suitable arrangements were made for the provision of extra medical relief and the cleansing of villages. The deaths from *small-pox* numbered 437 against 409 in the previous year. The mortality from *bowel-complaints* and *fever* was much the same as in 1884. The *birth-rate* of the district, exclusive of the Agency tracts, is given at 15·32 per mille of population, which is manifestly incorrect. Registration is very backward in this district.

Dispensaries.—No new dispensaries were opened, and those in existence numbered 10, of which 3 receive both in- and out- patients and the remainder afford merely out-door relief.

GODAVARI.—The total mortality in the district amounted to 47,436 and was therefore 3,767 in excess of that for 1884. This increase was largely due to *cholera*, the deaths from this cause having been 6,012 against 855 in the previous year. *Fever* and *small-pox* show a decline in 1885, as compared with the results for 1884, and the increase in *bowel-complaints* was very small, considering that *cholera* was so prevalent. The district *birth-rate* for the year is given at 21.06 against a *death-rate* of 26.36 per mille. Registration in this district is capable of much improvement.

There were at the end of the year 18 *dispensaries* in operation, of which 1 at Viravāsaram was opened in 1885. Of these but 4 have provision for in-patients.

KISTNA.—Public health was indifferent, as both *cholera* and *small-pox* prevailed and malarial fevers were common and severe in type. The usual measures were adopted for the prevention of *cholera*, and quinine distributors were sent into the fever-stricken parts of the district.

There were 16 *dispensaries* in operation on the 1st January and a new one, belonging to the Baptist Mission and aided by local funds, was opened at Bāpatla. Only 4 *dispensaries* receive in-patients.

KURNOOL.—As usual malarial *fevers* and their sequelæ were the diseases most rife and fatal in this district. The District Surgeon also describes a severe and intractable form of ulceration of the legs which he ascribes to the influence of malaria, acting on individuals with a scorbutic taint. The deaths from *cholera* amounted to 227, while those from *fevers*, *small-pox*, and *bowel-complaints* were, respectively, 10,960, 974, and 276. The general *death-rate* for the district was 23.79. Vaccination is very backward in Kurnool, and amongst other conditions which have been against its success are the superstitious fears of the lower classes. Animal vaccination has now been introduced. Eight *dispensaries* existed in the district at the beginning of the year and one was added and one closed. Of these 3 receive in-patients. The District Surgeon submits an elaborate and interesting report on the health state of his district.

MADURA.—The health of this district was on the whole good. *Cholera* passed on from 1884, but the mortality was not large and the epidemic practically ended in February. At the close of the year there were 31 *dispensaries* in operation, of which one was opened in July. The number receiving in-patients is 11. To 17 of the *dispensaries* midwives were attached, and the number of cases attended by each varied from 100 in Madura town to 10 in Kamuthi.

MALARAR.—The rainfall was above the average and the prices of food moderate. The public health was indifferent.

Cholera prevailed to some extent and caused 2,231 deaths. The *small-pox* mortality amounted to 4,324, and was therefore somewhat less than in the previous year.

Vaccination was pushed and the total number of operations was 45,891 against 33,201 in 1884. *Fever* was less frequent and fatal than in 1884, the deaths having been 22,590 against 24,833, but *bowel-complaints* show an increased mortality, amounting to 2,767. The total births in the district amounted to 63,255 and the

Do. of minor do.	5,851	7,129

	1884.	1885.
Total number of in- and out- patients treated	87,972	85,977
Total number of major operations	127	273
Do. of minor do.	2,014	2,030

deaths to 54,091, giving ratios per 1,000 population of 26.7 and 22.8 respectively. Drainage and surface conservancy are very backward and the water-supply is indifferently protected in most places. The total number of *dispensaries* in operation was 13, of which 2 were opened during the year. Of those four were under the charge of Commissioned officers, viz., at Cannanore, Tellicherry, Calicut, and Cochin. The District Medical officer has submitted a clear and concise report and takes great interest in sanitation. His remarks while on inspection tours are copied into a book which passes through the local authorities on to the Collector for observations; so that the views of all concerned are elicited, put on permanent record and progress or retrogression brought to light.

NELLORE.—Registration is on the whole backward. The birth and death rates amongst the general population were respectively 27.05 and 15.86 per mille, against 22.38 and 14.32 in 1884. *Small-pox* prevailed throughout the year, and the deaths from this cause amounted to 1,521 against 1,680 in 1884. *Cholera* was

on the increase, as the mortality rose from 485 in 1884 to 978. The deaths from *bowel-complaints* were somewhat more numerous than in the previous year—380 against 319—but were moderate considering that *cholera* was present. The *fever* mortality shows a large increase—8,999 against 8,094. The Medical officer invites attention to the large numbers of deaths ascribed to accidents (209), suicide (86), and snake-bite (76). He observes that “those cases look suspicious,” and, with a view to test their veracity, suggests that in all such there should be a careful *post-mortem* examination of the body.

The *dispensaries* in the district, including the branch institution in Nellore town and a new one opened at Kanigiri, numbered 13, of which three receive in-patients. Vaccination is not satisfactory; but as the present District Medical officer takes much interest in its progress, it is to be hoped there will soon be improvement. His report on the district work is concise and clear.

NILGIRIS.—The health of the Gúdalur district was bad, and there were in it several cases of *cholera* and also of *small-pox*. The health of the Devála sub-district was fairly good. There are five *dispensaries* in the district, of which two, including Coonoor, are supervised by Commissioned Medical officers.

SALEM.—The health from *cholera* numbered 3,062, otherwise the health of the district appears to have been fairly good. The births registered in the district amounted to 57,129, or 1,831 more than in 1884, and the deaths to 33,458, and therefore 3,808 in excess of the mortality of the previous year. There were 12 *dispensaries* open and provision was made in the budget of 1886-87 for opening three more. Of the existing institutions all except two receive both in- and out- patients.

TANJORE.—This district did not suffer so severely from *cholera* as in 1884, but the epidemic which came over from that year lasted till May, when it commenced to decline, and during the last six months of the year there were comparatively few cases. In December 1884 there was a heavy flood which disturbed the public

health in the early months of 1885, as the poor suffered much from exposure and want of proper food. The District Medical officer believes that the *cholera* epidemic was aggravated by these hardships. During the year there were 37 *dispensaries* in operation. On the 1st January there were 24 midwives attached to *dispensaries*, but during the year four were discharged for short work and one resigned.

	1884.	1885.

TINNEVELLY.—The birth-rate for the district was 27·26 per 1,000 population against 28·10, and the death-rate 25·65 against 32·31, in 1884. Public health was disturbed by epidemics of cholera and small-pox. *Cholera* prevailed in a severe form in the months of January and February and lingered on till September, when it finally ceased. The deaths from this disease amounted to 5,784, while those from *small-pox* and *fevers* were respectively 1,723 and 5,901. The mortality from *bowel-complaints* was also heavy, amounting to 2,235. There are 22 *dispensaries* in the district, of which 14 receive in-patients and the rest only out-patients. The district report submitted by the Assistant Surgeon in temporary charge is a very creditable one.

TRICHINOPOLY.—During the first two months of the year the epidemic of *cholera* which came over from 1884 continued, and during this period the resident Assistant Apothecary at the Municipal Hospital and subsequently the Assistant Collector of the district fell victims to the disease. The outbreak lingered on in the rural parts of the district till near the end of the year. The total mortality from *cholera* was 3,269 against 3,825 in the previous year. *Small-pox* prevailed to some extent, but was not epidemic. The deaths from it numbered 444 against 705 in the previous year. The fever mortality also shows a decrease, the deaths having declined from 5,975 in 1884 to 5,008; but *bowel-complaints* were more fatal than in 1884, the deaths having been 827 against 705. The working of the *Vaccination* department was fairly satisfactory, the total number of operations having been 25,694 (successful 24,747) against 24,338 (successful 22,953) in 1884. The *birth-rate* for the district was 28·91 per 1,000 population against 29·84 in 1884, while the *death-rate* stood at 23·62 against 24·42. In Trichinopoly town the birth-rate was 21·27 and in Srirangam 33·02. Crops and rainfall were somewhat below the average. There are but six *dispensaries* in the district, of which two are located in the two Municipal towns. Of the others one is an aided Mission dispensary, so that practically the District Board only supports three institutions. This paucity of medical relief is not creditable to a large district like Trichinopoly. The Acting District Surgeon submits a concise and excellent report.

VIZAGAPATAM.—The health of this district was disturbed by *cholera* and *small-pox*, both in epidemic form. The number of dispensaries in the district was 16, and of these 12 receive in-patients.

C.—FINANCE.

EXPENDITURE.—The subjoined statement shows the amount of expenditure under each head, and from this it appears that the total amounted to Rs. 8,43,311 against Rs. 8,68,192 in 1884. Over one half of the whole was devoted to the pay of establishment, but taking into account the increase in the number of dispensaries, the results are satisfactory, inasmuch as the total charge for salaries was only Rs. 9,859 more than in 1884. The cost of bazaar drugs was Rs. 2,765 in excess of the corresponding charge for 1884, but on the other hand that of European medicines was Rs. 9,113 less, making a net saving of Rs. 6,348. Apparently therefore the small extra expenditure on country supplies effected a substantial saving in imported articles. The cost of dieting patients was greater by Rs. 9,779 than in the previous year, which is partly accounted for by the increase of 738 in the number of dieted patients. Miscellaneous charges aggregated Rs. 74,066 against Rs. 70,660 in 1884, and include Rs. 7,980-5-0 of stoppages recovered in Presidency hospitals and paid into the Bank. On building and repairs the expenditure was less by Rs. 30,024 than in 1884, while the amount of capital invested during the year was Rs. 1,403 against Rs. 12,957 in 1884. Eliminating hospital stoppages,

investments and sale-proceeds of European medicines and instruments from the total expenditure for the year we have a product of Rs. 8,32,851. Properly speaking buildings, being extraordinary expenditure, should also be removed from the net cost and only repairs included, but the present form of account does not admit of this. It will be convenient to deduct the charge for Presidency hospitals amounting to Rs. 2,42,528, which leaves a net expenditure on up-country institutions of Rs. 5,90,323. This therefore represents the cost of treating 27,789 in- and 1,768,329 out-patients and gives a mean charge of Rs. 0-5-3 per patient.

The following table shows the heads of expenditure during the year :—

	RS.	A.	P.
Establishment	4,46,240	4	11
Bazaar medicines	26,122	6	6
European medicines	85,151	11	6
Diet of patients	1,44,485	11	9
Miscellaneous charges	74,066	7	10
Buildings and repairs	65,841	8	5
Invested during the year	1,403	8	5
Total	8,43,311	11	4

Further details will be found in Statement No. V, Part I of Appendix.

INCOME.—The cash balance at the opening of the year was Rs. 22,836-1-2, but this is an item which will not appear in future reports, as the income of dispensaries is exactly what they require to meet expenses, and any surplus that may remain of the annual allotment lapses at the close of the year. The following abstract shows for the last four years the various sources of income and the amount derived from each, and further information will be found in Statement V of Appendix :—

	1882.			1883.			1884.			1885.		
	RS.	A.	P.	RS.	A.	P.	RS.	A.	P.	RS.	A.	P.

„ Native donations and subscriptions	17,828	5	4	11,277	4	2	10,721	4	2	19,028	2	3
Total	8,11,060	11	2	8,03,539	15	5	8,28,681	7	7	8,16,887	5	2

The Government contribution in the year under review amounted to Rs. 3,19,972 against Rs. 2,95,820 in the previous year. The chief items under which the increase took place will be seen on reference to the marginal figures in which annas and pies have been omitted. The two items showing the largest increase are diet charges and salaries. As regards the former the rise in cost was partly due to the enhanced cost of dieting patients in the Presidency hospitals, which will be alluded to hereafter, and partly to the crediting of a sum of Rs. 14,200 for the diet of the inmates of the Leper hospital in its proper place, instead of under “special allowances” as was done with the corresponding charge in 1884. The rise under salaries was chiefly due to the opening of new hospitals, thereby increasing the obligations of Government, and to the changes in the rank of existing incumbents.

Municipalities and Local Boards contributed Rs. 4,45,206 against Rs. 4,90,490 in 1884. The marginal figures contrast the payments made by the respective local bodies in each of the past two years.

The other sources of income were interest on investments and European and Native donations and subscriptions. The first of these shows a slight decline, but

the voluntary contributions, both from Europeans and Natives, were larger than in 1884.

The following abstract shows the actual cost of up-country hospitals to local bodies, as well as the charges for medical supplies during each of the past five years, and, considering the increase in the number of the institutions, its results are satisfactory. It has to be explained that the sum of Rs. 5,92,803 given as the actual charge for 1885 includes as in former years the sums invested as capital and the sale-proceeds of medicines, but deducting these, the net cost will, as already stated, be Rs. 5,90,323. In future reports investments and money received for medicines sold will be excluded from this minor statement :—

Years.	Number of dispensaries.	Total treated.	Total cost to local bodies.		Cost of European and bazaar medicines.	
			RS.	A. P.	RS.	A. P.

1885	307	1,894,936	5,92,803	4 6	83,408	6 4

D.—PRESIDENCY HOSPITALS.

Public health in Madras was better than in 1884, but in the earlier months of the year under review there were some cases of cholera, and throughout the year bowel-complaints were prevalent. Only a few cases of small-pox came under treatment, but malarial fevers were very prevalent and will continue so till domestic sanitation is in a more satisfactory state. Imperfect drainage and overcrowding are also factors in the causation of paroxysmal fevers in Madras, which ought to be free from such diseases.

The total number of patients, in and out, treated was 98,818 against 87,530 in 1884, and of the former aggregate 12,775 were received into hospital and 86,043 treated as out-patients. The total increase of sick relieved in 1885 was therefore 11,288, and of these 250 were in- and 11,038 out-patients. The institution showing the largest increase of in-patients is the Hospital for Women and Children (202) and next to that the General Hospital (119). In the Triplicane Dispensary there was an increase of 4,897 of persons seeking out-door relief, but a decline of 192 in the in-patient department. The Native Infirmary also shows a decrease (30) of in-patients. The following abstract shows the number of patients treated in each of the Presidency Hospitals during the past ten years :—

—	1876-77.	1877.	1878.	1879.	1880.	1881.	1882.	1883.	1884.	1885.	Increase over 1884.	Decrease over 1884.

* Statistics are included in Native Infirmary.

Judging from the reports and figures before me, the Presidency Hospitals appear to have done very good work during the year; but, as I had no opportunity of making myself personally acquainted with their management, I am unable to offer any special remarks on this occasion.

The subjoined statement contrasts the cost in 1885 of such of the institutions as are supported by Government with that of the previous year, from which it appears that they were worked at an increase of expenditure amounting to Rs. 24,155 :—

—	1884.			1885.			Increase.	Decrease.
	Expenditure.	Hospital stoppages.	Net cost.	Expenditure.	Hospital stoppages.	Net cost.

Deducting hospital stoppages the net cost of the institutions was Rs. 2,42,528 against Rs. 2,18,373 in 1884. The following remarks show under what heads the increase took place in each hospital :—

General Hospital.—The increase amounts to Rs. 13,020 and took place under establishment, European medicines, and diet. The most obvious cause of the rise as regards medicines and diet is the larger attendance of sick, there having been an increase of 119 in- and 3,173 out-patients. As regards establishment there was increased expenditure in consequence of a Commissioned officer having been on leave, and owing to the employment of Warrant officers of the grade of Apothecary in lieu of Assistant Apothecaries. Some extra servants, whose pay was formerly charged to contingencies, were also transferred to the permanent establishment.

Lying-in Hospital.—The increase in expenditure amounts to Rs. 5,642, and the chief causes of the rise were the increased rank of the Medical officer in charge and the grant of a special monthly allowance of Rs. 50 to the Apothecary for teaching. The extra charges for diet, &c., were due to the increase of sick, viz., 66 in-patients at the hospital and 1,026 out-patients at the attached dispensary.

Women and Children's Hospital.—The excess expenditure in 1885 amounted to Rs. 2,422, and was due to the transfer of extra servants, who were formerly paid from "contingencies," to the permanent establishment and to the increased attendance of patients (202).

Eye Infirmary.—This institution shows an increased expenditure of Rs. 2,241, which took place mainly under the heads of diet and miscellaneous charges, due to an increase of 85 in- and 593 out-patients.

Leper Hospital.—The increase amounted to Rs. 828 and took place under the headings of establishment and diet.

The following abstract shows the financial working during 1884 and 1885 of the Triplicane Dispensary which is supported by the Municipality, and of the Native Infirmary which is attached to the Monegar Choultry :—

Institutions.	Expenditure in 1884.		Expenditure in 1885.		Increase.	Decrease.
	RS.	A. P.	RS.	A. P.	RS.	A. P.
Triplicane Dispensary	8,631	2 1	12,467	13 6	3,836	11 5
Native Infirmary and Black Town Dispensary	18,315	6 6	14,485	12 9	...	3,829 9 9
Ramasawmy Lying-in Hospital	Cost included in Native Infirmary.					
Total	26,946	8 7	26,953	10 3	7 1 8	...

The increase of Rs. 3,836 in the cost of the Triplicane Dispensary in 1885 was due to the repair of the buildings.

For the current year Medical officers in charge of Presidency hospitals have been asked to exercise in every way the strictest economy, and I feel confident that they will do so as far as may be consistent with efficiency.

I have the honor to be,

Sir,

Your most obedient servant,

G. BIDIE, M.B., C.I.E.,

Ag. Surgeon-General with the Govt. of Madras.

* Difference between the opening and closing balance of the Invested Capital is owing to the omission of certain items in Tranquebar and Kurnool, &c., in previous reports.

GOVERNMENT OF MADRAS.

PUBLIC DEPARTMENT.

READ the following paper :—

From the Surgeon-General with the Government of Madras, to the Chief Secretary to Government, dated 23rd August 1886, No. O-411.

ABSTRACT.—Forwarding the annual report on Civil Hospitals and Dispensaries for the year 1885.

ORDER—dated 6th September 1886, No. 1866, Public.

The delay of two months between the completion of this report and its submission to Government is attributed to the difficulty of getting the statistical returns accurately completed. The Government trust that the measures adopted by the Surgeon-General will have the effect of securing greater punctuality in future.

2. During the year 1885 the number of hospitals and dispensaries rose from 299 to 307. One local fund dispensary in the Kurnool district was closed, but on the other hand nine dispensaries were opened, of which eight are local fund institutions situated in the marginally-noted districts and one a mission dispensary in Tinnevely. The Government note with satisfaction the opening of two new dispensaries in Malabar, where, as in Ganjam, South Arcot, and Trichinopoly, there would appear to be, judging from the proportion of dispensaries to population, the greatest need for the further extension of medical relief.

3. The following table shows the agency in charge of these institutions during the last five years :—

		Commissioned Officers.	Native Surgeons and Apothecaries.	Hospital Assistants.	Private Practitioners.	Medical Missionaries.	Total.
1881	...	39	77	94	41	4	255
1882	...	40	86	102	43	4	275
1883	...	41	97	102	43	4	287
1884	...	36	111	105	43	4	299
1885	...	31	112	120	39	5	307

Owing to military exigencies several commissioned officers were withdrawn and their places temporarily filled by officers of a lower grade, who appear to have been replaced by hospital assistants. Every effort should be made to substitute for the latter class of officers the more efficient agency of civil apothecaries.

4. There was a satisfactory increase in the number both of in-patients and of out-patients, the daily average attendance comparing as follows for the past three years :—

		In-patients.	Out-patients.	Total.
1883	...	1,995	11,622	13,617
1884	...	1,969	11,933	13,902
1885	...	2,057	12,494	14,551

Of the in-patients only 30 per cent. were women against 31.5 per cent. in 1884 and 36 per cent. in 1883.

5. Of 40,564 in-patients 3,095 died, giving a percentage of 7·63 against 7·78 in 1884 and 7·55 in 1883. The number of deaths recorded among out-patients was only 5,519 out of 1,854,372 persons treated against 6,907 out of 1,714,072 in 1884. The decrease as compared with the previous year is probably due to the diminished prevalence of cholera, but it is obvious that both figures fall far short of the facts and that efforts must be made to secure greater accuracy.

6. The cholera epidemic, which began in 1881, declined rapidly during 1885. It prevailed chiefly in the south of the presidency, but was also severe during the earlier months of the year in Ganjam, Godáviri, and Kistna. Of the 12,144 cases treated in dispensaries 4,328 ended fatally. Small-pox also underwent a marked decline as compared with the previous year, the number of cases treated being 344 and of deaths 65 against 961 and 198. Fevers were, as usual, very prevalent, but were apparently of a less virulent character than in 1884, the number of deaths among dispensary patients being 342 against 454.

7. Bowel complaints were unusually prevalent, the admissions and deaths numbering 73,349 and 879, respectively. As in previous years, however, the recorded mortality among out-patients is obviously far short of the reality.

8. There was a considerable increase in the number of cases treated for skin diseases, ulcers, and venereal complaints. The following table compares the figures for the last three years :—

	1883.	1884.	1885.
Venereal Diseases	52,635	50,957	55,621
Skin Diseases	154,878	161,356	178,761
Ulcers	158,390	171,462	187,569

9. The number of labour cases treated rose from 6,925 to 7,165, the proportion of deaths being about the same as usual, viz., 2·8 per cent. The Government would be glad to receive information in future reports as to the number of institutions having midwives and lying-in wards attached to them. Similar information might also be furnished as regards wards for particular diseases or particular classes of the population.

10. There was a marked increase in the number of surgical operations. Of 4,365 major operations 1,837 were performed by civil surgeons and 2,528 by subordinates, the resulting cures numbering 1,429 in the former case and 2,053 in the latter. The number of deaths under treatment was 157.

11. The total receipts from all sources during the year amounted to Rs. 8,16,886 against Rs. 8,28,681 in 1884 and comprised the following items :—

	1884.	1885.
	RS.	RS.
From Government	2,95,821	3,19,972
„ Municipal and Local Funds	4,90,491	4,45,206
